Authority in America

Established
August 14
1873

TY COBB Famous Ball Player, says:

"Tuxedo is a good, pure, mild tobacco and makes a wonderfully pleasant pipe-smoke."

Ty Cobb

The World's Greatest Ball Player Smokes the World's Best Tobacco

There isn't a cross-roads village in the entire country that doesn't know and respect the name of Ty Cobb. This man has aroused the admiration of an entire sport-loving nation by his wonderful mental and physical alertness in the cleverest outdoor game man has yet devised. Ty Cobb has the two qualities most highly prized by Americans—Brains and Speed. He leads his league in batting; he is the champion base-runner; and all the time his wits and muscles work in perfect co-ordination.

Tuxedo

The Perfect Tobacco for Pipe and Cigarette

Ty Cobb's approval of Tuxedo is added to that of thousands of other prominent Americans who testify that here is a wholesome, beneficial, pleasing tobacco.

Tuxedo has made thousands of men happy, temperate and comfortable converts to the pipe, because it has made pipe-smoking not only possible but pleasant to them.

There isn't a speck of irritation, scorch, sting or bite in a pound of Tuxedo. All that is removed by the famous original "Tuxedo Process"—a process that has had imitations galore—but the original "Tuxedo Process" is still the best.

YOU CAN BUY TUXEDO EVERYWHERE

Convenient, glassine-wrapped, moisture-proof pouch **5c**

Hand-trap ready to throw target

Throw targets from along shore while you and your friends pick off the clay "ducks" and "shore birds" as the hand-trap sends them winging their way over the water

NEW WAYS TO THROW "CLAYS"

THE Du Pont Hand-Trap answers the call of shooters for a simple, practical and easily-operated target throwing device. It embodies all the requirements of portability, durability and utility. Weighing only six pounds, composed of a few simple parts, and very compact in form, it can be used wherever trapshooting is feasible.

Experts Endorse the Du Pont Hand-Trap

Beginners find it an excellent means of learning trapshooting under most favorable surroundings.

Our Free Booklet Tells How

a famous wing and target shot discovered clever, unique and practical ways of using the Du Pont Hand-Trap. He tells how to throw 70-yard straightaways, extreme angles, overhead targets, "curvers," and "skimmers," which fool the cleverest of the experts. Get this booklet. Learn the new ways to throw clays with the Du Pont Hand-Trap.

Using the hand-trap in the Boat

NEW YORK BUYS ANOTHER GAME FARM.

Under the act of the Legislature appropriating \$15,000 for the establishment of a game farm on Long Island, the New York Conservation Commission has decided to purchase two farms on Long Island.

The Commission after a thorough examination of property suitable for a game farm on Long Island, selected this tract of 139 acres splendidly adapted to the propagation of game birds. It is protected on all sides by woodland and cannot be swept by hard winds. The sandy soil is well drained. Scrub oaks will furnish shade and cover for the young birds. A river frontage in addition to a small stream running through the farm provide ideal water conditions. On the property there are buildings, which can be utilized advantageously. The Commission will have the Long Island farm fully equipped, stocked and in operation by spring.

GAME CONDITIONS IN ILLINOIS.

Game is decreasing each year in Illinois, according to a report just issued by President Dittmar of the state fish and game conservation commission, not because of excessive shooting, but rather because the great increase in land values has compelled more intensive farming. "Our thickets and other cover are fast disappearing," the report continues, "and our lowlands are being brought under a high state of cultivation, so that there is very little suitable ground left for the wild birds."

To offset this procedure the commission has adopted the plan of establishing game preserves in each county, renting tracts of 1,000 acres at the nominal sum of \$1 per year. On portions of these tracts the commission plants suitable grain, which is left standing for the use of the birds during the winter weather. These reservations can be maintained for about \$50 per year, the report declares, and will result in the propagation of game to a large extent when tracts are set aside in each of the state's 102 counties.

The report declares that the sixty deputies, under the direction of six wardens, have been doing effective work, but the force is inadequate to cover the entire state. A deputy warden for each county is recommended to give better police protection against violators of the game laws.

The commission has become self-sustaining, the report declares. During the fiscal year there was received from the sale of game licenses \$146,756.42; from the sale of fish licenses, \$6,072.78; fines collected, \$5,415.13; from other sources, \$1,772.39; making a total of \$160,016.73. Disbursements during the year totaled \$153,909.53, leaving an unused balance in the treasury of \$6,107.20.

Forest and Stream

WILL PRESENT

Fifty Silver Cups

To Successful Anglers in 1915

FOREST AND STREAM takes pleasure in announcing that it will continue during the fishing season of 1915 the prize cup contest which proved so successful last year.

The angler fortunate enough to capture the largest fish deserves a prize and FOREST AND STREAM will see that he (or she) gets it. There will be no red tape about the contest. This paper will place fifty handsome silver cups in as many public camps or summer hotels conducted for the angling fraternity in different sections of the country.

The cup in each case will go to the person who catches the record fish during the season of 1915, as verified to FOREST AND STREAM by the management of the hotel or camp.

The contest is open to all, subscribers and non-subscribers as well. Where different varieties of fish are caught in the same section, the management of the camp or the hotel can determine to which variety the cup will be limited, or it may be that arrangements will be made later for cups to be given for different species of fish.

More definite announcement of the contest will be made in an early issue, together with a list of summer camps to which the cups have been consigned.

FOREST AND STREAM

22 Thames Street, New York

TRIPS THROUGH THE GREAT SOUTHWEST.

Forest and Stream has received from one of its old time correspondents in the southwest, a letter the contents and purpose of which may prove of interest to many readers. The letter explains without wasting words just what the writer has in mind, and we append it herewith:

Editor *Forest and Stream*:

The writer, a mining engineer, has been put out of business by the war in Europe.

I would like your advice on the best means of getting up camping parties through the southwest. As you probably know there is little opportunity for hunting.

My object is to take people to the out-of-the-way-places of our country.

Through the Great American Plateau Region lately described in part by Kolb Brothers in the *National Geographic Magazine*, down the Grand and Colorado rivers. I would do it with pack outfit and wagons; also the Natural Bridges in South Utah, the Goose Necks of the San Juan River, Monumental Valley, North Arizona, the Navajo Reservation, the Naoke snake dance, the Indian Pueblos and pre-historic ruins of the southwest.

These are big scenic trips, requiring discrimination when to make them and much experience to make them successful. One would have to depend on parties of three to four weeks duration at least, five or six parties per year, at an expense of \$8 per day for each person in order to give first class accommodation, horses, and everything necessary included.

The writer is thoroughly familiar with this country described, having blazed its trails for twenty years.

The question with me is the best way to get the people to make these trips; how to reach them?

Above all do you think it feasible? Could the right men and women be interested? It's the biggest and most interesting section in this country but I fully realize it requires people of certain temperament to make a trip of this kind.

The desert and its wonderful land sculpture, its life and atmosphere are beyond the comprehension of the ordinary luxury hunting traveler used to the Pullman car and automobile.

It seems to me in order to make five or six parties it will be necessary to have a representative in the East make them up and time them for different seasons and locations. If you can consistently do so, kindly give me your opinion on the subject and confer a great favor.

W.

New Mexico, December 16, 1914.

The writer of the letter is a member of a number of scientific societies, and if among the readers of *Forest and Stream* there are any who wish further information, we will gladly supply the name of our correspondent on request. Certainly he opens possibilities of a most wonderful trip to people who have never seen the desert land of the southwest and its scenery, which surpasses anything else of the kind in the known world.

BEAVER IN THE ADIRONDACKS.

The beaver has been restored to his favorite haunts, the Adirondacks, by means of restocking and effective protection, according to the reports of systematic observations of protectors and others received by the Conservation Commission

WM. H. HALL won Kentucky State Championship (Not Interstate Event), 96 x 100, with Nitro Club Speed Shells.

CHAS. NEWCOMB won Pennsylvania Challenge Championship with record score of 100 x 100 for Championship, 192 straight, all at 18 yards, using Arrow Speed Shells.

REMINGTON ARMS-UNION METALLIC CARTRIDGE CO.
299 BROADWAY, NEW YORK

of New York. These investigations show that there are to-day between 1,500 and 2,000 beaver in the wilds, which the Iroquois Indians called "Koh-sa-ra-ga," "The Beaver-Hunting Country." The Adirondacks to-day are again entitled to their old Iroquois name.

The Legislature of 1903 appropriated \$500 to begin the restocking of the Adirondacks with beaver and in 1905 three pairs were liberated. In 1905 there was reported to the Fish and Game Commission the existence of a "small native colony of beavers, the last of the remnants of the original stock, inhabiting the waters north-

west of Upper Saranac Lake." In that year the commission placed a "conservative estimate of the beaver in the Adirondacks" at "about forty."

In 1906 the Legislature appropriated \$1,000 for continuing the restocking of the Adirondacks with beaver and in the following year seventeen were obtained from Yellowstone Park and distributed. The commission gave the beaver census that year at 100. Reports recently received by the Conservation Commission show that beaver are multiplying rapidly and are taking possession of their ancient heritage in many different parts of the Adirondacks.

THE BEAUTY OF MAGUERROCK AND ITS LAKES.

By Edward D. Fisher.

Maguerrowock is a vast wilderness in a lake country of that name, and I will mention one of the lakes in that region, the East Maguerrowock, in the heart of these woods, one that has the most attractions for the people who visit its vicinity, in the fall of the year mostly when the woods begin to take on that blue and gold color. Oh—that splendid country, the pictures that are burned in my memory, never to be forgotten.

They who understand the wilderness only can ever learn to appreciate nature at her best; it has to be born not bred. One who is acquainted with that country may at any moment make a mental picture of the beauties that surround that lake and numerous others that are in the immediate vicinity, and see nature as no one has ever seen her before in her glory.

The reader of this narrative may now mentally go from the lake and take a stroll, from a little winding path that leads from the lake itself, and to a small hill called Sugar hill, reaching the top, going the while in a southerly direction and taking a glimpse from there behold some of the other lakes, namely the Goulding, W. Maguerrowock, the Rand in the extreme distance and about midway the small one called Rouge Lake, almost a pond, it is so small but beautiful, for on its surface always calm can be seen the reflections of the surrounding woods, real pictures that are seen in reality by those only who realize that nature has a calling and those who answer that calling will be amply repaid for their troubles.

For the hunter this region especially presents itself, as in it game abound; few moose, but deer, rabbits, partridge and several species of the cat family may be found. If one is good with his gun and it happens to be in the open season, he need not go home empty-handed.

Let the reader follow the hunters' trail that leads from this picturesque country and vast wilderness, nearer civilization, and we come to more lakes just as charming as the others. As we continue to follow this trail with now and then a rabbit darting from the underbrush, we may hear a slight sound. Now if a hunter is at our side, he will listen intently for a moment; we would take it as an ordinary confusing sound of the woods, and pass on, but a hand detains us, we stop. The hunter has sharp ears, he can detect these slight sounds as a locomotive engineer can detect the sound of a loose brake, a flying piston, a broken rod, amid the roar of the speeding train. His gun is ready, the novice wonders until he hears the sharp report of a gun, and the sound of something falling heavily. The hunter points toward the spot where the thud was heard, and behold, one of the wildest denizens of the woods, a fallen deer. With the report of the gun a loud whirring if heard and a partridge seeks the shelter of more friendly trees.

By this time we have traveled very near to civilization, and the novice is beginning to feel some of the mysteries of nature, he is nearing home, but is contented with the day in the woods as he has seen some of nature and heard some of her calls. Now he hears the friendly "Caw-Caw" of a crow in a nearby tree, he is home and regrets it, but lays the thought aside with the hope that when he enters the woods again that he will learn some more of nature.

"ALBION" WADERS

The only Perfect Waders

We have tried for many years to obtain a line of Waders that would give satisfactory service. We have now marketed these goods for three years and they have given UNIVERSAL SATISFACTION. The material of which they are made has proven to be the most DURABLE, DEPENDABLE and WATERPROOF on the market.

The medium weight are the most satisfactory all around Wader made. They are lighter than the domestic goods and more flexible.

The light weight are very light (a pair of stockings weighing only 22 ounces) yet they are quite durable and can be safely used for a long time by a careful angler.

No. 1

Old Wisdom—The Sand Lake Bass

By Robert Page Lincoln.

THE full flush of Spring was abroad in the northern Minnesota country. But shortly ago there had lain over that immense territory a blanket of glittering snow, some feet deep, and the wild norther had ravaged the pines and the open stretches where no pine grew. It had been a severe winter, as winters go, but the relieving sunshine had come back to the world again, and gradually, as though a veil had been lifted, the ermine had disappeared; then the country lay waiting for a time while the rains fell heavy upon the earth's carpet; the sun came out again, the grass blades undoubled, and the ash trees took on a delicate cloak of greenery. Spring was at hand. The prisoning ice quickly went off the lakes and a month, passing hastily by, left the nearby world much different indeed than it shortly had been. The returning birds from the southland were soon putting in their appearance. A black bear, out of his winter sleep stumbled down to the shores of the lake, weak from his long rest, beset with an overcoming appetite. The pickerel were now on the verge of spawning. Day in and day out in the shallows they disported themselves; seeming half giddy and powerless in

the awakening of their sex passions. Hither and thither they swam, lolling weakly from side to side; and some, reckless, yet wishing to deposit their spawn inshore as far as possible actually lay splashing on the sands of the beach. The black bear made a rush on one of these occasions and returned to the woodline the possessor of an eight pound female pickerel which he greedily devoured with a grunt of satisfaction. Overhead swung the eagle-eyed fish-hawks; darting now and then into the lake with a crashing splash, returning sky-ward as often with their prey held in vice-like claws. The Sand Lake pickerel were on the spawning grounds many days. Other fishes also were busy with the duties of reproduction. It had been a prime spawning year. The season had not been backward, and the operations went forward without a hitch. The pumpkin seeds and the blue-gills were also concentrating on that one great purpose. With their smooth bellies, and aided by their fins they had brushed out small spawning beds, some but a foot across and perfectly round, others larger. These beds were carefully set in the bottom with gravel and large pebbles carried in from outside. They were made in the order of a colony. So skillfully apparently had they been laid out it would cause one wonderment to look upon them.

The female sunfishes were now dropping their eggs and the males were approaching in their wake, fertilizing them. Soon the duty of the female would be ended. Then the male would take absolute charge over the spawning bed, the female would be driven from her home and would never again return; or if returning she would be set upon by the anger-permeated male, and driven away with the rest of the intruders. Now might be seen in every round hole a veritable sentinel on guard, with watchful eyes scanning the vicinity of his precious domain. Come life, come death—there he would remain, to guard his offspring till they were of a size that they might care for themselves. These, the minute creatures, coming from the eggs would for weeks live solely upon the tiny yolk-sacs on their breasts; and when these would eventually disappear, shrink and dry up, they would have to hunt in the water for their nourishment, as presented in the innumerable inconspicuous parasites that tenaciously clung to life in the waters. At this stage the male sunfish would instinctively lose all interest in his progeny. His duty would then be conclusively fulfilled. He would know to a day when the tiny fishes were able to shift for themselves. Then he would drive them from their home, the spawning hole—and they would

never again return there but must hunt a home for themselves, in among the weeds, beside the rocks, or run inshore where the shallows were a protection against the inroad of the larger preying fishes.

Quite much alike the spawning preparations and aftermath were the attentions given to reproduction by the large-mouth black bass. The father and mother of Old Wisdom had in the days gone by paid court to each other. There had been some rivalry in the case, but the male parent fish was a strong individual, and after some compromising, the bonds of holy fish matrimony were duly adjusted and the ways of Nature were fulfilled. Wisdom appeared from a tiny round egg as large as the head of a pin. He was burdened down with a round lump, forward of the stomach, the yolk-sac in question and upon this his voracious system drew for nourishment in no little quantity. This yolk-sac had veins and pulsed with life much the same as the rest of the body. The life of the young fishes was spent close in the spawning hole which lay in about two feet of water, in between some protecting lily-pads. Over the little fish hovered the parent, his fins trembling in an element of fighting aroused by the singular and protecting spirit of parenthood; he was intent upon letting nothing disturb the objects of his creation. Wisdom grew quite rapidly for a small fish and in three week's time the yolk-sac had dwindled alarmingly, but one might also have noted the more rounded proportions of the body that fed now so hungrily upon that precious fluid. Wisdom, as I have noted, grew rapidly. Others, his kindred, were in varying degrees of health and efficiency, though the major portions of them were weak and were undoubtedly destined to give up their lives in that battle for existence, so fixed and relentless in Nature—the survival of the fittest. Thus is it that some of a family of fish live through, seeming to have the greater portion of the united male and female parents' strength while others have been utterly neglected, unconcentrated upon.

Wisdom was early an adventurous sort of a fellow and he was destined to be one of the largest of his kind in secluded Sand Lake. He was the first of that little family to forage abroad for fare when the yolk-sac had been depleted, and when hunger set the vitals burning in the clamor to be appeased he was the earliest to mouth the succulent parasites that gyrated through the water in a thousand ludicrous attitudes and postures. Gradually others, his brothers and sisters, acquired the taste and not a day but that they were away from the hole, braver and braver as they preyed upon the queer wriggling, animated affairs that tasted so well and filled one so full of warm blood and contentment. Now happened a queer thing to this little foraging family. Instinctively they had come to rely up-

on the parent fish above them as their protector. His fluctuating shadow would lie always upon the bottom of the spawning bed by day, or would shift and be gone for some time, when hunger drove him in quest of fare. But otherwise, throughout the day his shadow cast downward from above bred in the young the security demanded, banishing all encroaching fear. But now for one whole day the little family lay in the spawning bed terrified. The shadow was gone. Only up above the sun shone down, golden and penetrating, but the shadow did not come back. A day passed; a night; and the next day arrived and yet no shadow fell mellow and compromising upon the floor of the spawn bed. The par-

the water cleared and the pickerel had gulped down his prey, nothing could be seen of the survivors. They had been scattered to the four winds of the lake it seemed. But Wisdom escaped. Foremost in the crew, he yet was missed by a hair and instantly dove into the thick of the weeds where he lay half-stricken, his heart palpitating, his whole tiny consciousness permeated with the demon Fear. But the large pickerel did not again show up, though in the days that were to follow Wisdom lay low and was more than ordinarily watchful and alert.

Wisdom soon became aware of one singular fact that stamped itself irrevocably on his minute brain. It was the instinct that other larger fish prey upon smaller fish, even as he preyed upon the water parasites, with such set determination, such vim, and now there grew in his life a watchfulness, indeed the personification of the name. It was a quality that grew in him the older he became; and many times, though he was set upon by larger fish, many a time by mighty muscullonge, yet he always managed to get away unscathed. He knew the world of the water now almost entirely. Above him there was light or there was dark. When darkness lay over the water he subsided into quietude and rest lying very still wherever chance found him; but as a rule he stayed very close to his home territory.

So now then came winter with its enveloping sheet of ice above; and the cold of the north set in, penetrating and bitter in its firm clutch upon all things; and with the coming of this season Wisdom found himself sluggish, and not at all hungry. On warmer days he would bestir himself, when the relieving light of the sun lent a gray glow even to the water, through the heavy snow that lay on the ice above. The larger, depredatory fish, upon these warmer days came inshore out of the deep to prey upon the minnows that then also bestirred themselves, for then also the parasites that clung to the vegetation bestirred themselves, and the various succulent crustaceans wiggled even so lit-

tle to betray their hiding places. On these days, instinct, alertness, and ever-present watchfulness were qualities to be carefully considered by young Wisdom; for there was always the pervading fear that intruders were in the neighborhood and meant him grievous harm. Thus was the winter passed and once more throughout the Minnesota county Spring spread her innumerable witcheries; the world became one of rejuvenation and delicate greenery; the loon shrilled out again his devilish laughter down the far reaches of the lake; birds began to arrive, and warm day succeeding warm day replaced the months of desolation that had been winter. Now then with the removal of the ice, Wisdom began to know life from still another angle. Experience opened a measurable book of knowledge before him. There were nooks and byways he knew and a thousand others that he did not know and that he wished now insatiably to know.

Old Wisdom Was a True Entomologist.

ent fish, having fulfilled his duty in the eyes of omnipotent Nature, had departed, nevermore to return!

Lazily fanning the water one day a large pickerel swam inshore near the home of the young basses of which Wisdom was the now apparently accredited leader. This family had gradually come to forget the fact that they were parentless, and were full-fledged barbarians—cannibals as far as that goes. They still continued their operations against the myriads of water beings that clung along the sides of the vegetation. Now it happened that our friend the pickerel noted this little band on forage bent. He stopped perfectly still, only his caudal fin holding his body half afloat. Scarce discernible he backed into a cozy obscure nook and lay in wait. On came the bass minnows, and still on. Then there was a lightening-like action in the water; a living bolt hit their far from formidable array, and when

His greenish body, darkly tinged here and there, and having the well defined median line; and his spacious mouth bespoke him as being one of the specie, the large-mouthed bass (*micropterus salmoides*). But there was about him something independent; some hint of aristocracy easily discernible and perhaps it was after all only the well proportioned outlines of his energetic body that would cause in one this singular belief. But, nevertheless, he was courageous enough, and soon essayed his journey to the upper reaches of the lake. Here he met others of his kind, and was now of such a respectable size as to be free from being set upon. The various large-mouthed denizens lay along beside the sunken logs, or deadheads, in clans of from six to ten; they were now arranging to spawn, and were in a spirit of feverish energy; very restless and always moving about. Wisdom kept himself well enough away and inspected with careful eye the various domains he entered. On one of these days a thrill of fear flashed through him. A great shape passed silently by as he lay there in the kindly concealment of a log. It was an immense shape, a great muscullonge that would run in weight well over thirty-five pounds. Wisdom saw him pass like a sentinel upon his way; and knew by the hideous look of the menacing eyes that the fish was preying bent.

Nor were the muscullonge alone among the greater preying fishes. There too, as he swam along could be seen the great northern pike, even more menacing in their appearance; and even more treacherous and cannibalistic, for they destroyed and consumed their own kind—in fact their own offspring. In such places, in such more or less detrimental environments was Wisdom to live his life of caution. Here he must contend with fish whose hungry lives were fed by the smaller creatures of the water; they were the fittest by virtue of their greatness, their immense destroying power.

One day while lying beside a deadhead watch-

ing and resting a strange thing happened. The bay where he had ensconced himself was of most tranquil proportions. The water was sheeted over with a mirrorlike serenity; and no wind stirring, not a wave ruffled that expanse. There stole into the bay what might have been easily known to human eyes as a boat. The boat contained fishermen. They were bent upon one purpose, and if Wisdom had known perhaps he would have been wiser. But he did not. All at once, as he lay there, there came a splash near at hand. The water cleared and he saw glide by him a beautifully arrayed creature, of blending, merging colors, having all the wonderful hues of the rainbow, but he did not know that this was an artificial minnow and that it had hooks in abundance upon its sides. He saw only the glittering, attractive front spinner revolving; and in all fascination knew only one instinctive impulse. He would snap it up. He was curious—curious beyond name. So as it began to spin away he darted forward, lunged at the side and the next moment felt the barb run through his lip. He leaped out of the water and fairly danced upon his tail such was his sprightliness, winning exclamations of wonder from the fishermen. The hook would not come out. It clung to his lip with a tenacity that boded ill; he plunged and tore, but insistently he was impelled toward the dark hulk on the water. Nearer and nearer and suddenly a net encircled him and he was lifted from the water gasping and wiggling and flopping. Then a hand grasped him lightly and he was lifted out of the net. The fishermen commented enthusiastically upon him.

"Husky little creature isn't he," said one. "In a few years more he will be a thing to really contend with."

"Every bit of that," responded the other. "You note how he fairly seemed to dance on his tail. I bet he leaped five distinct times. Let him go George—let him go, before he loses his wind."

"Out you go then little *salmoides*, and when

we visit you again be here to pay us welcome. Goodbye—goodbye!"

Wisdom, with a fluttering intake of his breath got his bearings; poised uncertain, hesitatingly; then with a glad, wavering thrill to feel the waters again, he sped away, and still kept on swimming in exultation at the thought of his regained freedom. The sensation had been an extraordinary one. Here was another thing to combat. By all the laws of instinct and fish observation the gaudy, glittering creature he had seen had been a water parasite of uncomprehended gender and origin; but he knew now, somewhere in his minute brain, that it had been a lie, a fake, a sham, built so to lead him on to destruction. It caused him fear, and instinctively he watched day after day for other such creatures to appear but saw none. His experience was not repeated for everything he ate thereafter was first duly inspected and painstakingly mouthed before being swallowed.

The animals of the earth and the fishes of the water possess, as far as we know, no distinguishing intelligence such as is the gift of human-kind; fishes and animals possess only an instinct, heightened, necessarily if brought in contact with man and civilization, or remains at its average level if remote from the neighborhood of its great enemy—Man. Possessing not a wonderful intelligence the mightiest resource at the command of the minor earth beings is instinct, sharpened by constant, often trying, experience. Some blunder, some perilous happening, in which the life was nearly lost serves to immeasurably stamp itself upon the brain, through what agencies, and with what degrees of understanding we can only leave to the imagination. Wisdom had no human intelligence; his instinct was of the ordinary; but he was learning through experience the value of careful study of the things that preyed upon him.

(Continued on page 60.)

Pioneering Quebec's New Game Country

A Description of "Canuck's" Recent Exploratory Trip into Northwestern Quebec for Forest and Stream

By S. E. Sangster ("Canuck.")

PRIMARILY my visit to the new game country of northwestern Quebec was with the idea of pioneering its possibilities for the outer, so that I might later be able to introduce it accurately to them—for it is not at any time a wise thing to attempt advising sportsmen regarding territory of which one has no actual "been there" knowledge. Always, since early boyhood, it has been my object to get into really unknown stretches—to put my canoe into waters not mapped or known—to feel the real elation of being where none have passed before.

This new Game Hinterland remains still as virgin as it ever was; outside of scattered Indian parties I doubt if any have explored it, save a very few Hudson Bay employes. A few government timber cruisers and surveyors have cruised portions in the work of sizing up

to the Indians; bear practically unknown." The Indian bands further this impression as much as possible, as they presumably desire nobody to hunt on what they have considered their own country. Even when I reached the Nottaway Station I was given the same tale.

It was because I knew from long contact with the Woods Indian of this peculiar trait of his—his desire to impress visitors with the fact that the country where he traps is not worth getting into for big game—"is 'no good'"—that I took along my own guide and complete outfit, determining to go it "on our own" as it were—to rely on no local Indian probably to lose me somewhere in the muskeg and convince me of the "no game" policy of these self-interested fellows.

As was stated in the preliminary description in *Forest and Stream* of December 5th, the territory selected by me was that contiguous to the Bell River and Shabagama lake waters, on the Nottaway—James Bay route. With the opera-

remained a *terra incognita*. Its eastern and northeastern districts have been cut up by large areas leased to clubs, that the ordinary sportsman is practically prevented from getting results there. The northwestern portion, many hundred miles in extent, is now for the first time opened to outers with the advent of the new steel, and still remains not only government land, but absolutely unknown and virgin. The game laws of Quebec give one a pretty wide range as to both open season and game allowance, while the non-resident license is the lowest in the eastern Provinces. The season opens here September 1st and remains open for moose and deer until December 31st; for caribou it is open until January 31st following. The license is only \$25 and permits one here to take one bull moose, two deer and two caribou. Bear are open to license holders. During September the speckled trout season also remains open, which is an added attraction for the earlier hunting sportsmen.

The Trip.

From Ottawa I went east via Montreal to Hervey Junction, where the National Transcontinental grade crosses. I later discovered that it would have been better even then to have gone to Cochrane and from there travelled east; but in August I could get no satisfactory details regarding transport to the Nottaway save from the eastern end. As I did not wish to rely on local Indians as guides (knowing their penchant for misleading one and keeping them off the game haunts) I took along Charles Lewis, my regular guide who accompanies me on all my lengthy trips; my point of view was that I could better cruise the new country thus and find out the game areas myself. Also my complete outfit accompanied me, including a new "CS" grade "Old Town" canoe, 17 foot (I never saw a better built canoe for such work as was here encountered), my fishing tackle and the rifle I have used for three years on all big game, i. e. the Savage .22 H. P. An Indiana man was given the opportunity at the last moment to accompany me.

It was a hard luck start; our whole outfit of canoe, clothing, food supplies and even my rifle was sent to Quebec City through error of the baggage master and consequently missed us at Hervey Junction. The construction train leaving on our arrival (the "Muskeg") was the only train going up the new steel for five days and we were in a deuce of a fix. By good luck an inspection "Special" happened to be running right through the following day and, after considerable telephoning, arrangements were made to bring along the baggage. We were tied up over the night of October sixth just past LaTuque, losing almost twelve hours—everything was sure looking blue.

However, we finally got to Mileage 360, (the East Megiskan), where in the early dawn of a cold October morning we transferred to another construction train that ran us twenty-four miles

The Click of the Shutter Brought Only Mild Surprise.

timber and mapping the areas close to the new steel, but in limited sections only have even these pioneers yet blazed their trails.

As indicative of how little is actually known of the country five miles away from the grade, I might state that all along the route none of the construction engineers or employes had any knowledge whatever of game conditions. I was told repeatedly that there was no game: "Moose very few and far between, or spots known only

tion of the new National Transcontinental line, this virgin Height of Land wilderness will be pretty easy of access. From Toronto to Cochrane (479 miles) is some 20 hours direct run in the most modern sleepers and chair cars; from Cochrane to the Bell river (Nottaway Station) it is some 180 miles east; probably a train run of 4 1-2 hours. This will be the logical route, for central and eastern states sportsmen.

For the big game sportsmen Quebec has long

westward to the Bell River (Nottaway Station). Here we had breakfast and killed three hours' time, waiting the arrival of our outfit on the Special. Finally it got in and after a quick change and a portage of everything down to the "putting in" place we were off, "Northward Ho," for an unknown country with its unknown possibilities.

From where the big National Transcontinental steel bridge crosses the Bell one paddles about half a mile to a widening of the river. The current is north, as we are above the height of land, on the direct route to James Bay, 200 miles away. For almost sixty miles one can run without a carry—surely some route for through cruisers. The widening of the river is only about two miles long, when it swings between two points of big boulders into a fairly wide stream that in turn, two miles further north, comes into a widening that is really a long arm of big Shabogama lake. It was rapidly getting dusk as we came into this, so we made camp for the night in a burned-over forest of birch that blackened everything that came into direct touch with it.

Up for an early breakfast next morning (October 9th) we were soon off for the further north waters of Shabogama lake proper. We were now in green timber. It was a typical clear October day—the lake was calm as a mill pond and in the crisp autumn air points seemed less than half the actual distance ahead. Away above we could hear a fusillade, which we found out later was due to two canoes of Indians attempting to kill a bunch of duck—result of at least ten shots was one Scoter.

By noon we had scouted some seventeen miles northward and decided to return south about two miles to a lovely location that looked unsurpassable as a site for a permanent camp. Here we located and here I selected a location for a camp for sportsmen for next season, reference to which is made below.

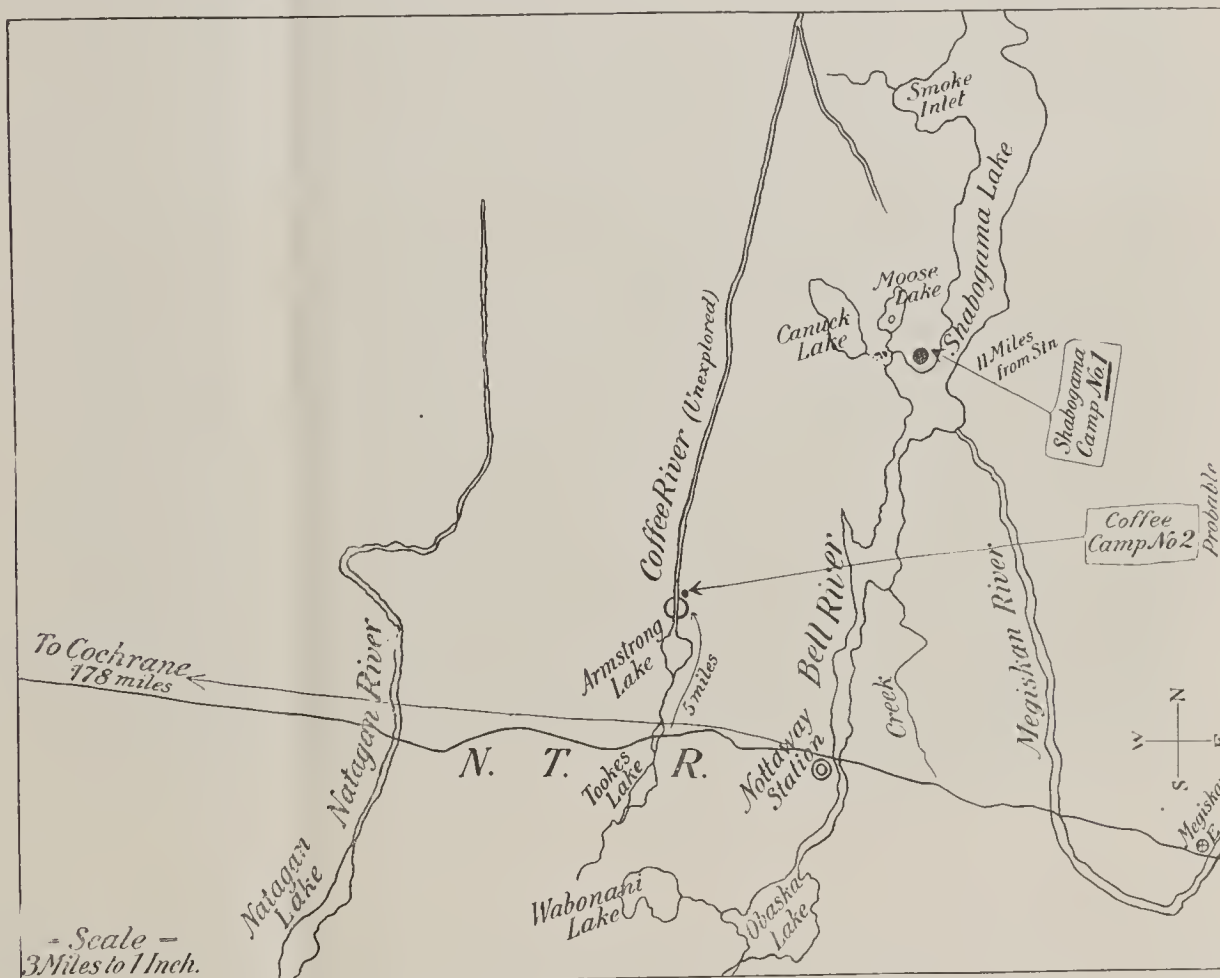

Essentially my time was given to cruising, as it was possible to locate the country only in this way. The map of the National Transcontinental Commission proved absolutely unreliable, once the steel was left. I spent considerable time following into big bays and in turn going up small streams that lead to unmapped lakelets. Again, bush hiking, traveling only by compass, was resorted to, and we found hidden waters. One exceptionally beautiful sheet of water, stretching some three miles in length and about one mile across at its widest point, I named "Canuck" lake. Another is Moose lake, into which flowed a creek about 1,000 yards in length, called Moose Creek. Everywhere was moose and bear sign; the first day we got in on Moose lake we just missed a big bull that hoofed it for 300 yards or more over the clay flats at the far end of the lake less than an hour ahead of us. A big bear had crossed the creek just ahead; the water still muddy from his paws.

On Thanksgiving Day in Canada (October 12th) we spent the day exploring and hunting in the vicinity of Moose lake. At noon we "biled the kittle" at its far end and had a warm lunch. Separating, I explored a number of dried-up creek bottoms that led westward, while O. D. struck into the bush and Charley, after accompanying me for an hour, struck back to the upper end of the lake to where he had cached the canoe. Toward evening I returned to the foot

of the lake and took a stand on the off-chance of a big bull showing up. The previous two days had been wet and cold and the game was just beginning to move again. O. D. came out across from me about 600 yards and trailed the shore toward Charley and the canoe; I decided to follow up, as it was getting pretty dark. In the meantime a big bull and his cow came out from a neighboring deadwater and down to the shore of the creek just about 150 yards above where Charley stood. He looked them over and waited for O. D.'s arrival, hearing him coming along the shore. Then they both stood and looked—it was just dark and the bull stood well in against the bush. Anyway, without being able to see his sights and simply "browning" the big fellow, O. D. pumped somewhere around twelve shots from his .35 Remington Auto at his majesty. By this time I had arrived and slipped the canoe into the water. Charley came back and we both drove the canoe down the creek and landed; it was now pitch dark, and a cloudy night. A bark flare was soon gotten and lit and we trailed the bull to the edge of the bush—blood showing in spurts at every step. Everything looked favorable to locate him next day, so

On the evening of the 13th I sat in a shore blind and watched for some forty minutes an immense cow and two yearling calves play in the creek and on its clay shores, at times within forty yards of me. An old bull stopped behind me less than 100 yards in a thicket of alders and grunted until he got my wind, when he struck off toward "Canuck" lake. Finally a two-year old bull came out on mischief bent—his motto was *cherchez la femme* and the big cow was not far away. I decided, owing to need for meat in camp and as it was imperative that more cruising be done during the balance of the trip—thus preventing further hunting—to take him; one shot with the "Imp," just missing the head, did the trick. We opened him, removed the viscera and after considerable trouble got him into the canoe and to camp, where we skinned out and cut up the meat; I never tasted nicer meat than this fellow provided; his liver gave us a grand supper that night.

Everywhere we cruised fresh sign was seen. Repeatedly fresh bear tracks were crossed in the early morning, the claw marks showing sharply in the ice-coated clay and bogs. One big fellow

Map Showing Territory Described in This Article.

we all hiked for camp and supper. Sad, sad to relate, it proved not as easy as it looked. Trailing for some 800 yards was easy, as blood was plain, on the ground and on the tag alders where he pushed through; here he bedded and undoubtedly it was from this spot we started him again, in company with four or five other moose. He had stopped bleeding now and the others appeared deliberately to cross trails, thus making it impossible to follow further. It was a sore touch—a "bore" as O. D. expressed such disappointments—but all a part of the game. That he died within a mile of his bed I am positive—he was staggering badly, the trail told its story plainly.

with a broken claw on his rear off-foot had been within fifty yards of our camp during the darkness of the preceding night.

Robins were noticed on October 20th; a great many large hawks, ravens and horned owls were regularly seen whenever we bush-cruised. Snowshoe rabbits were jumped in numbers and quite a few grouse, both the Canadian ruffed grouse and the spruce partridge; ducks were plentiful. Foxes were also numerous, while muskrats and mink were always seen.

One could well spend two or three months exploring this immense district. Owing to my limited time, only one small area was properly

American Cannibals

The Fierce Seri Indian Tribe of Sonora—Mexico's Eternal Foes

By Charles Frederick Holder

ANY one who has followed the history of Mexico for the past few years must at least give credit to Diaz for good generalship, as this last revolution of the insurrectos is but one of many which have harassed the government and gnawed the frazzled edge of Mexican peace. For years the Yaqui Indians were a thorn in the flesh of the body politic. They were defeated after long years of guerilla warfare, and have always terrorized the loyal Mexicans with revolts and wars or threats of wars. So far as their attacks were concerned, they were the Apaches of Mexico, though in reality a fine type of natives. But the enemies who have really terrified Mexico, especially Sonora, are the Seri Indians of Tiburon, off the coast of Sonora.

That these natives have been cannibals within twenty years there can be no doubt, and that for a century they have been at war with Mexico is well known, the story of their excesses reading more like a tale of the mediaeval ages than of 1900.

The Seris claimed the desert island of Tiburon ages ago, and for years have attacked and killed, when possible, all aliens in their vicinity, being without any question one of the most savage and debased of all native races with habits and customs which place them, or should place them, on the lowest round of the human ladder.

Tiburon island, their headquarters, lies in latitude 29 deg. near the shore, in the Gulf of California. It is almost thirty miles long and from twelve to twenty wide with an added 1,500 square miles of adjacent desert on the mainland, across shark infested El Inferillo.

It is a hilly barren desert without the slightest encouragement to hold out to a normal human being, yet the savages have lived here from time immemorial, have flourished under seemingly impossible conditions, having a fondness for their home, which amounts to an absorbing vital passion, and a tribal rule regarding marriage with alien races that has preserved the type, strong and insistent.

For years until to-day they have been gradually killed off and shot down without warning by the Mexican troops and this has decimated their numbers to a pitiful number, yet they are still Seris, full blooded, savage, ugly, treacherous, everything that is wrong from the educational standpoint, and apparently ready to dine on human flesh, whenever the opportunity offers for its accomplishment in safety.

My reason for this opinion is based on a singular experience I had.

For twenty years I had heard of the Seris. Occasionally news would drift into California that someone had gone down to Tiburon and had never been seen again, then the Mexican troops would go over to the island and have a killing; but the Seris always survived as a tribe, and always returned again to their Apache-like habit, so well known in old Sonora, of killing

and robbing everybody on principle. Several times I was almost on the verge of going to the Seri country to see to what extent the conditions had been exaggerated.

In 1893, I received an invitation to join in equipping a party which proposed to start from Yuma, and only pressing business prevented my going, possibly a fortunate circumstance, as I might have been added to some nocturnal menu of these interesting people. I was at the time desirous of obtaining accurate data about the entire country from the delta to Tiburon, and I entered into an arrangement with Lieutenant Robinson of Yuma, for a series of papers on the country with photographs, undertaking in return to defray a share of the expenses of the expedition and to join it if possible. It finally started, and in due time I received the first report relating to the lore at the delta and the old post of Santa Isabel, which I published. The next contribution was to be on the Seris. I had warned Robinson that it was, in my estimation absolutely necessary to go well armed, and in force, and to take no chances. I suggested that a guard of Mexican troops be asked to accompany him, joining him at Hermosillo or Guaymas, quoting to him the different disappearances, and my private opinion that the Seris should be watched every moment and that no chances should be taken, which meant, in plain English, to shoot at the slightest indication of trouble, and discuss the question later. In brief, I believed it was a dangerous undertaking, one worth while, yet to be followed out with intelligent precaution. Lieutenant Robinson assured me that his party would be fully armed, and that some of the party would be constantly on the alert, so I felt I was not leading men into a danger without their fully understanding it; indeed the proposition of the expedition came from Robinson, who knew that I had contemplated visiting the island some time.

Time passed and I heard nothing in reply to my repeated letters and I began to think I had been treated rather cavalierly, when after days of waiting, I received a letter from one of the party who stated that "I would have to excuse Robinson for not sending the report as the Seris had made way with him in their usual fashion." This meant that they had eaten him.

This certainly exonerated Lieutenant Robinson, and I at once took the matter up with various authorities in Sonora and Mexico, as did others in Arizona, the people of the territories being enraged. Several attempts were made to raise a force to go down and wipe out the entire tribe, but this would have resulted in actual complications and the Mexican government finally acted, killed all the Seris it could find and returned.

Lieutenant Robinson did not go with the force, I supposed he would, there were but four in the party. He wrote me in his first report that the sloop, the "Dart" had been badly injured by a tidal wave in the delta.

The story of the tragedy, which I received at

the time in answer to my letters to Lieutenant Robinson, was, that some of their ammunition was lost at the mouth of the Rio Colorado, that the number at Tiburon was not well equipped and short of water. According to my informant, Robinson and another of the party went into the interior and never returned, the third man who remained by the boat on the beach went in search of them but was driven back by the Seris. He then went aboard and with his companion went ashore but were driven off by an overwhelming force, so they sailed for Guaymas for aid. The discovery of the bones of the men in a peculiar connection justified the assumption that they had been devoured. Various other stories were published at the time, one that the party loaned a rifle to the Seris who killed Robinson with it. This seemed incredible when it is known that Robinson understood the situation, knew that he could take no chances and had been warned to be constantly on hand. That this ex-officer or any of the party should deliberately loan a Seri his gun seems beyond comprehension. Most of the information came from the natives through interpreters, and was, of course unreliable, but the facts remain that the two men disappeared as others had before, and it was the consensus of opinion in Sonora that they met the fate suggested.

The Seris would consider the killing of a white man as a sort of rare sport to be indulged in for the pleasure of the thing. Murder has no significance in the Seri language. Pity or sentiment akin to it is absolutely unknown. With the same absolute lack of feeling the reader of this paper has in killing a mosquito that annoys him, the Seri has in killing an intruder on his land or the stranger who has something he wishes.

In April 1909, I spent some time in Sonora, and was told by a Mexican who knew the inside facts that there was no question but that the Seris ate Robinson and that there were scores of things which they were known to eat far more repulsive than human flesh. The Seris of course gave many reports regarding the case, they acknowledged having killed the men, but denied the cannibalism. Of course, their testimony on any subject was, and is worthless.

I have an acquaintance in Sonora, one of the most influential, wealthiest and best known men in the State who has made the experiment of taking a Seri girl of ten or twelve and bringing her up under Christian influences. So far the experiment is successful and I saw and talked with the girl who was an interesting Indian. Her hair was remarkable for its brush-like thickness. I could think of nothing but the bristles of a Peccary I had handled in the same way in the Yaqui delta a few days before. It was black and seemingly as coarse as horse hair and it did not require much imagination to see hair of this kind rising like the hair of a dog or peccary on the heads of Seri warriors in the blood lust in which they are said to indulge.

Every tooth in the Seri girl's mouth was dou-

ble, which, however, had no significance. She was shy and modest and appeared very much like an ordinary white girl would who was having her two rows of double teeth examined by several people.

She had been educated to believe Americans monsters, not even human beings, but livid bloodless aliens to be killed if the occasion appeared.

The little Seri was under the circumstances a curiosity, but what interested me the most concerning her, was a statement she made regarding her people to the effect that they *ate human flesh when they could get it*, and she seemed to think there was nothing remarkable in the custom. So on this evidence, and the singular and absolute disappearance of many unfortunates, with their bones and the well known fact that the eating habits of the Seris are fouler than those of a dog, compared only to that of swine, leads me to believe that there have been cannibals along the Mexican line in times past, and that the reason there are none there now, lies in the fact that their numbers are so decimated.

But if one wishes to see one of the most primitive savage races on the globe, if not the lowest type, take the train from Nogales to Hermosillo in Sonora, then drive to the coast and with a party ride over the Encinas desert to Tiburon, or if one wishes to know how it seems to be devoured go to Tiburon, alone and unarmed, and wander about among its sun-baked canons. This is not an ethnological thesis but merely the opinion of a layman who believes that such an exploitation of Seriland will not be disappointing.

The Seris are from this and other reasons among the most interesting people in any land. They are passing rapidly and are no longer the slightest menace, as no one goes to Tiburon and the Seri do not wander away from the scenes of desolation they seem to love; again there are too many Papagos, Mexicans and Americans who would kill them on sight just as anyone would kill a snake and all Mexico is well guarded, hence the time of the Seri is short. The next time anyone is missed the troopers of Mexico will go to Tiburon on a hunt and the end will come.

The extraordinary vitality of the Seris is well illustrated by the fact that since the time of Cortez and the fall of Montezuma the Spaniards, and after them the Mexicans, have waged what is practically a war of extermination against them.

There were then possibly two thousand Seris; to-day they number approximately two hundred and seventy, about one-half of which are warriors; and it can be said that while overwhelmed they have not lost an iota of the savage nature which has made them stand out with startling distinctness among American Indians.

Like the Yaquis they have never surrendered to Spanish or Mexican. The rule has been to kill every intruder, anyone who approaches the island by land or sea, and the greatest honor that could come to a young Seri is the opportunity of killing an Indian of another tribe, or an American. In Mexico at large where practically the people are still Indians, marriage is often not considered necessary and a group of children will display every possible tint or shade and grades between Indian, Caucasian and Span-

The Author At His Favorite Sport.

iard (Mexican). With the Seri the reverse holds. The most lasting disgrace for a community is to have a man or woman marry or consort with an alien, hence the type is pure Seri, a remarkable one, and the men are strong, large, active, ideal primitive men, animals of the lowest type, when judged by their habits and life.

How primitive the Seris are is shown in their absolute savage nature or ferociousness. It is said the Papagos look upon them as one would a mad dog; would shoot them on sight. A good Papago was asked why he was so anxious to accompany a party to Seri land. His answer was that the Seri had killed all his relatives, and he hoped while the party was examining the island to have a chance to kill off a few of his enemies.

In their habits the Seri are like animals. They live on shell fish, turtles, fish, bird and cacti of various kinds, and while some things are

cooked, they prefer their food raw, tearing at an animal with teeth and fingers, after the fashion of a coyote, and if it were permissible in respectable print to even mention some of the food, and the feasts they make no one would doubt for a moment that they would draw the line at cannibalism.

They have not even the economic side of laying up stores of food possessed by the desert rats they kill, but wander about, not even establishing their rude homes in the vicinity of water, the woman bringing it from long distances. In the summer they go to the mainland, fatten on the fruit of the cactus, the tuna, saguaro, Pitayah, saguesa or nopal, camping in hollows in the sand beneath the giant cactus and living in the forest as long as the fruit lasts, gorging themselves as swine do upon fallen nuts. They make a flour out of the

Shooting and Gaming Along Southern Waters

A What to Take and How to Use it Article

By Dick Swiveller.

GOOD many years ago, more than I care to enumerate now, I was living in Southern South Carolina, and as the seasons passed, enjoyed the good shootings then to be had. My dear friend Sam was my companion; a big man, good natured. Sam's smile was illuminating. I never knew him to be vexed except once, and that was excusable indeed. Alex, the colored boy, our paddler, let fall overboard Sam's \$250 gun in ten foot of water, as the boat was landing. I shouted and almost followed the gun. Sam pulled me back; his face wrinkled. Alex, from black turned "yaller," and dropped in the bottom of the boat.

"Oh, Sam," said I, "what will you do without your favorite gun?"

"Use the other," said he. "Don't worry about it; there are other guns. Alex you are careless."

The gun was recovered. That was Sam's temperament. And what a beautiful shot he was on all kinds of game. So good, so kind, my memory of him will forever in this life be green. Often and often, I am with him in retrospect, and I know, almost know, he is at my side and is with me again afield. His hand has been stilled these many years, and the time is growing nearer and dearer, when indeed he will be at my side forever and we will again have the joys of shooting or their equivalent of happiness.

Now had the season returned
When the nights grow colder and longer,
And the retreating sun, the sign of
The scorpion enters.

Birds of passage sailed through the
Leaden air from the ice-bound
Desolate northern bays to the shores
Of tropical islands.

—Longfellow.

This was the time we had been looking for and had prepared for a three week's camp hunt. The boats were ready—two of them—one a long, roomy batteau, which carried the mess chest, containing, coffee, sugar, a pound or so of tea, self-raising flour, pilot bread, a big side of smoked bacon, mess pork, beans, two large "AI" hams, a bag of dried peaches, plenty of potatoes, a goodly showing of onions, for what would the camper do without this aromatic vegetable—the big white Bermuda variety preferred; salt, pepper and a bucket of good butter. Enough of all these to supply four camp appetites for about three weeks filled the old mess chest full.

The knowledge of just how much to take in the way of provisions is of great advantage. In fitting out, the writer has found the army ration a good basis. And for good, plain living, the ration itself is good and satisfying. The ration is herewith given in ounces, being one ration for one day for one person:

Flour, 18 ounces; corn meal, 20 ounces; hard

bread, 16 ounces; rice, 2 ounces; hominy, 2 ounces; peas and beans, 2 1-2 ounces; salt, 3-4 ounce; tea, 1-4 ounce; sugar, 2 1-2 ounces; bacon, 12 ounces; pork, 12 ounces; fresh beef, 20 ounces; soft bread, 18 ounces; coffee, 1 1-2 ounce.

It is understood that there is usually but one meat ration and bread ration issued at one time, i. e., if pork or bacon is issued, fresh meat is not, if hard bread, (hard tack), soft bread is not. This ration will give an idea of how to proportion the provisions to the number of people going into camp, and thus avoid taking too great a quantity of anything.

Then came the camp kit bag of heavy canvas, which could boast of a two and a half gallon camp kettle, a couple of mess pans, two frying pans—one large, with long handle, old-fashion waffle irons, with long handles, that bake one big, square waffle, at a time; waffle irons of Colonial times were they, and still in use in many parts of the South and old states. I think now, and always will think, that a square waffle is far superior to the round waffle served in quarters. Think of the old-fashioned square waffle done to a delicate, crispy brown, the gilt-edge butter running down and into those little brown squares, then the maple syrup, and hot coffee—Java of course. Well, we feel this old world contains some things to live for.

There were the tin dishes, plates and cups, knives, forks and spoons, a couple of axes—blades protected by leather caps—a camp hatchet, some nails, a ball of strong twine. There are lots of things that are handy in camp, and when the distance is to be traversed in a boat they may as well be carried.

There was a tent of ample dimensions to accommodate the party. The waterproof box containing the ammunition, plenty of heavy blankets, rubber overcoats, two rubber blankets, in fact everything to insure comfort in all kinds of weather.

My friend and I had a kit bag between us containing extra outer and under clothing, for the duck shooter, even in Southern waters, must go not only warmly clad, but be prepared to change his clothing, as he is occasionally exposed to a drenching rain or an involuntary bath in the river.

The batteau carried all this plunder neatly stowed, and was captained by the irrepressible Joe, our cook.

The second craft was built with a sharp bow plenty of room amidship, flat-bottomed, and arranged for two shooters to sit forward in the cockpit, one behind the other, the gunner aft to rise and shoot, and the shooter forward to keep his seat. Alex a big-headed, thick-lipped negro with an enormous mouth and contagious laughter, paddled this boat.

The stars were beginning to pale in the east,

when, with boats, plunder and "darks" loaded on two wagons we directed our course south for Horse Creek, five miles distant, a small, rapid stream on which we would launch the boats and be carried to the Savannah River, about two hundred miles by river above the city of Savannah.

"Mars Dick, did yer hea dem ganders, dis yer mawnin?" said Alex, as we started off.

"No, how many were there?"

"Dunno; spect dar was a heap on em; I coodent see um; dey was a cacklin' big; pears like dey must be sort ob makin' up der minds fer ter light; spect dey seed de ribbar, an was a holdin' a meetin' about getting down outen high places."

"What time did yer hea dem ganders, boy? Haint ben no ganders go over sense fo' clock; den dare am no niggers what gits up afor dat time, onless dars sumfin' werry perticular; haint gitten up fo' enny good."

"Look a hea, Mista Josef! I was on a perticular chore for de ole woman, fer ter cut some wood afore I jined you uns in de village. Taint none of yo' bisnis. Yer kin put dat in yer pipe and smoke it."

"Mebbe taint none o' my bisnis. I was a givin yo advice, nigger, fo' ter point out de way an de path what yo outer walk in. Dar was a culdered individual onct dat made right smart of hisself, dressed all up in fine clothes and puttin on a heap of style in de church, an' outen de church, and when all de congerigation was a shoutin' hallelou! hallelou! glory sinners; bress de Lawd; I'se a gwyne to fine, I'se a gwyne to fine de army ob de Lawd, an thar was nuff sperit ter move any nigger ter come forward ter de mourner's bench onless he was so alfred bigety, an de hardness ob de heart wuz so ompressable dat he couldn't see his way clear jist den ter make his lection sure. Dis bigety nigger ed just set an set, an nebber moved a mussil ob de face, an looked like he wanted ter say: 'What's all dese niggers makin' sich a time fur, a hol-lerin, and' a gronin, and a stampin ob de feet?'

"I sort ob kept my eye on dat bigety nigger, an wen Mars Posey wuz a loosin' cawn by de sackful at nite, an' one night when a sack what wuz took wuz busted an de man what took the sack an toted it wid de hole down and didn't know noffin' bout it, an de cawn trail all along de groun. In de mawnin bimeby, whin de sun wuz riz, Massa Posey seed de corn scatted all along on the ground, he jis follered hit up like a pinter dog, an bimeby he com to de place whar de big-headed, bigety, alfred proud dress-up nigger lived. Den dat nigger come down offen de high hoss an go befo de esquire to be axed, 'Who done took de cawn?'

"Now, boy Alex, yo jist mind de way yer a giyan in dis world, an' allers have a spect fo dem what givs yo advice."

"Hold on to that boat, Joe, it is slipping; keep your scrmons for some other time," said Sam.

"Dick, it will be 11 o'clock by the time we get the boats launched and loaded. What say you if we have dinner on the bank right under those trees, and while Joe is getting it ready we will launch the boats and have all in ship shape for the start."

This arrangement was carried out. Joe soon had hot coffee, flapjacks and bacon.

The batteau had been put in the water; loaded and made fast to the bank. The shooting boat was then launched. I held the rope, and in looking for a place to tie the boat I went near the edge of the bank, and at that moment the boat gave a tug, that caused me to lose my balance and I dropped into ten feet of ice cold water. Sam was near enough to reach me, and while pulling me out, begged me to hang on to the rope—

I did—This was accident number one, for this camp hunt. Of course, I was obliged to change all my clothes, and was soon in dry, warm garments.

By 12 o'clock we were prepared to run the rapids and dangerous Horse Creek. Sam, with Joe in the shooting boat, well loaded, started two hundred yards in advance. Then Alex and I in the heavily laden batteau, swirled away from the bank and instantly found ourselves doing battle with a powerful current of water, and sharp points of land armed with fallen tree tops, snags and partially submerged stumps and

logs. It was very exciting and the pace fast. Each man armed with a paddle placed one at the bow and one at the stern. As the craft would sweep around one point the next on the opposite bank would appear. Skill and coolness were necessary to successfully run these points, to say nothing of the hidden dangers in the way of stumps and snags a few inches under water. The banks on either side are for most part too high, offering but few places to land and rest. Such an attempt, anyway, would be hazardous.

The distance had been two-thirds run and I began to congratulate myself that we would get through safely, when rushing around a particularly dangerous point we saw a fallen tree projecting nearly half way across the stream and only about three feet or so above the surface. I struck my paddle in the water to go around the tree and Alex at the stern paddled to go under it. In an instant we found our mutual mistake. I had only time to dodge the branches as the batteau swung by and under the tree top, expecting the next moment to go over, or at least have most of the outfit swept overboard within reach of the terrible trunk. I looked back; the batteau had swung under the tree trunk, and its motion for a moment was arrested. Alex had "ris" superior to the situation, he thought; and grasped the tree trunk in his powerful arms, vainly endeavoring to stop the batteau and force its bow into slack water to the right bank near the roots of the tree. It was of no use. The powerful current carried the heavily-loaded boat

against Alex' feet and legs with such force as to literally boost him up and over the tree trunk and drop him in the water head first. The whole thing was so quickly and completely done, and the situation of the darkey so supremely ridiculous, that I simply rolled off my seat in a paroxysm of laughter. I think now, as then, if one weak effort on my part would have saved the boat from wreck, I would have been unable to make that effort. I imagine, that to my last hour, I will not forget the expression on that darkey's face as he paused for one brief moment over that tree trunk, head down, eyes protruding and enlarged by terror, his enormous feet encased in No. 12 shoes, high in the air, gyrating in a vain and frantic endeavor to save himself, his big hands stretched out within a few inches of the water and his fingers working with the energy of despair. He took the plunge in fifteen feet of water with a yell of anguish. Coming to the surface near the batteau, fortunately he grasped the side and clambered in, a soaked, frightened nigger. Seeing my face and quickly realizing the situation, the air was at once filled with vocal explosions that might have been heard a half mile.

"I tell yo Mars Dick, dat wuz a clus call fur me, an' when I see I was at de pint ob goin' in shur, I wuz jist mighty glad I was a member ob de church, fur I spected I wuz agwine to see dis yer world no mo. Laws, but I wuz a scart nigger! Now, I spects Mista Josef will have

Sharing the Noonday Meal.

FOREST AND STREAM

January, 1915

THE NEW FOREST AND STREAM.

OUR promise of last week herein becomes a reality. This is the first issue of the new *Forest and Stream*—a monthly publication, with at least twelve objects in view, during the coming year and each one beneficial to sportsmen. Since our preliminary announcement, hundreds of letters have come to us commending the change from weekly to monthly, and offering valuable suggestions toward making *Forest and Stream* what the "big percentage" of sportsmen want. The consensus of opinion, among our correspondents, is that every issue should have at least one suggestion, to each subscriber, that will make the magazine worth the price of his subscription—this we intend doing. The general idea will be to avoid fiction, keeping strictly to suggestive articles. Our readers have noticed the series on the "new game country" that has been running in the weekly issues. This country was explored by our own representative, and he has much more information in store for you. This finding of new country seemed imperative to us, because of the decrease in big game opportunities in United States and Canada's beaten paths. When we have finished with this section we will go after new, comparatively near territory, of which there is much, requiring time and money to find. This is only one of the helpful tasks we have undertaken.

The much neglected salt water angler will be taken care of from now on. Salt water angling, surf casting and northern tuna fishing is remarkably interesting and wholesome sport, and more should partake of it, as they would did they know more of it. The Canoeist needs his inning, and we will give it him; we will "put 'em over the plate" in such a way as to make every item a hit. Trips, long and short, cruises, incorporating shooting and fishing possibilities, will stand out boldly. Field, fowl, and smaller quadruped hunting will be handled with a "where and how to" flavor. Trap and rifle shooting and how to take care of your gun and rifle, will find a generous position. In other words, we intend talking to men who want to know and want to go. We know YOU are one of these—tell your friends about us—give them a copy of the paper.

DEER AND RABBIT MUST GO IN JERSEY?

ELSEWHERE in this issue appears a note from one of our New Jersey field correspondents, wherein appears an opinion from the State Forestry Commission to the effect that deer and rabbits must be exterminated that forest fires may be avoided in the state. Appended to our correspondent's letter is a com-

munication from Ernest Napier, president of the Fish and Game Commission. The president finds that railroads are principally responsible for the past season's disastrous fires, and there is little question but that his conclusions are correct. It was proved beyond conjecture that forest fires in New York state, as those in other states, were started by fire from locomotives until railroads were compelled to take every precaution to keep sparks within their own highways. A little more legislation compelling railroads traversing New Jersey to guard against setting fires and a little less loose speculation by the forest commission will result to the satisfaction of most of the residents of the state that has suffered so heavily, this year, from fire and flood.

THE SHOOTING AND FISHING LICENSE.

IT IS conceded pretty generally among sportsmen, that there should be a shooting and fishing license in every state in the Union. To our way of thinking there is no doubt about it. We advocate a combination license, at one dollar a year—plus clerks' charges—that will enable a man or woman to shoot or fish or both, for one year for a dollar. It would not be fair to compel the man who shoots only, or the man who fishes only, to pay a double license, while on the other hand, it is unreasonable to tax the shooter with a license, part of the money from which goes to fish hatcheries and planting, for the upkeep of fishermen's sport. Each should pay his way. We never have known a day's fishing, no matter how small the catch, that was not worth a dollar, and we doubt not every one of our readers feels the same way. The question of a fishing license will come up at the January meeting of the legislatures in seventeen states, and it is our earnest hope that the combination license, at one dollar, will become a law in all of these states, before the fishing season opens next Spring. A few lines to your representative will make next year's laws much more practicable than is the case in many states that have passed game legislation during the year just past.

ONLY THE GET TOGETHER BRETHREN GET THERE.

NO STATE has a better game record than Pennsylvania; in no other state has there been a more determined effort to promote successful hunting and fishing through the enactment and enforcement of good laws. We regret, therefore, after results so happily accomplished and promise of better ones to accrue, that our Pennsylvania brethren seem for the moment to have agreed, like Mr. and Mrs. Betsy, to disagree.

Forest and Stream has given in rather complete detail both sides of the controversy now raging in the Keystone commonwealth. It was, and is, a task the necessity of which we deplore, but now that each side has had its say, may we be allowed to exercise the thankless prerogative of a mutual friend and well-wisher and remind the belligerents that no matter what they may think personally they must, willy-nilly, stick together in the cause of real game conservation, if they expect to accomplish anything worth while and preserve privileges dearly won. The futility of "liaring and dam liaring" is never so well illustrated as in cases like this. We might also paraphrase an oft-quoted proverb and say that when just men fall out the devil reaps his dues—in brief, the market-hunter, the poacher and the

game law breaker are rejoicing now over the prospect that the future opens for them if Pennsylvania sportsmen do not patch up their differences and work in harmony. Benjamin Franklin, a one-time citizen of Pennsylvania, who is not altogether forgotten by this generation, wrote a number of pertinent observations covering situations such as the one we are talking about, that might be repeated here, did space permit. Our advice to the sportsmen of Pennsylvania—and this applies to other states with equal force—is to get together, pull together and stick together, if they desire to preserve the hunting and fishing that they now enjoy.

THE OPEN SEASON ON FOR THIS OFFICIAL.

ONE of the Department heads at Washington is trying to interest Congress in a scheme to erect a "model village" in the Glacier National Park. He claims that he can thus avoid incongruity in architecture, etc., and is of the opinion that the National parks should be made self-supporting; that if they are not now, the people of the country will sooner or later demand that they shall be.

Who told him so? Has there been objection offered to keeping inviolate the magnificent Yellowstone Park, or other National reservations? If so, it must have been made in a whisper to the eager-eared official in question. No doubt his idea of a National park is a Coney Island resort, with the usual carousel and popcorn attachments. But the people of the United States will not agree to the proposition that the greatest and most wonderful breathing spots in the world shall be degraded to make a summer side-show holiday. If there are, anywhere on this terrestrial sphere, localities where "every prospect pleases and only man is vile" these are to be found in the great National parks of the United States. Make them self-supporting? The man who would try to do that in the sordidness of a mercenary spirit would cut the statues of our country's heroes into small bits and sell them as souvenirs.

KEEP AN EYE ON THIS CONVENTION.

NATURE lovers and conservationists won a great victory in New York State twenty years ago, when they succeeded in putting into the constitution a proviso that the forest and wild lands should always be regarded as inviolate against commercial destruction. That little clause has saved the Adirondacks and other sections from deforestation and has held for the people an immense area for their enjoyment and recreation. Attempts to root that clause out of the constitution have been made on several occasions without success.

We are moved to write on this subject for the reason that New York has voted for a revision of the constitution as a whole, and the convention to take up the work will assemble within the next three months. We have not heard of any special campaign to eliminate the reservation clause, but beyond question somebody will bob up representing interests hostile to it. It will pay the sportsman, the nature-lover and every citizen who appreciates his heritage to keep an eye on the convention when it assembles and watch that nothing sinister is allowed to slip through which will result in the destruction of the Adirondacks or other public territory.

CANOEING

Along The Shores to Somewhere Else

By Alfred P. McArthur.

Photos by the Author.

DOZEN days gleaned during the charm of Indian summer. Only twelve days; but what bunches of gratification, enjoyment and comfort can be leisurely crowded into them, if your faith in the Red Gods is devout and your spirit zealous to go out, to do and to see things.

Frequently during the week, had I fretfully turned from my desk, to the office window, and gazed out over the city's roof, to the blue and the purple haze of the beyond and—Somewhere Else. A nomadic temper possessed me, I was restless, absent minded to business surroundings and fanciful. I yearned for the beyond and the untrammelled freedom of the open. I was craving for—

"The long trail, the old trail, the trail that is always new." The feathered creatures of the air, on beating pinions, singly, in flocks and in column formation were going. The migration was on, and I longed to join the flights.

The suggestion of this trip was proposed in jest. On the impulse of the moment it was agreed upon. The camp-chest and duffle-bags taken from their respective niches, and with the old sixteen-foot canvas canoe, tagged and made ready for the depot.

With pleasure, the next morning, we procure a supply of fresh ammunition and photograph films and secure good seats in the—"Smoker"—and are carried across the miles of gleaming rails to New York City. In fact, within eighteen hours from the first hint of the proposition, the good ship P——, with our expedition on board, is breasting the waters of the Narrows.

A raw, rain laden easterly wind greets us from the old Atlantic as we steam adown the Lower Bay. Our fellow-passengers of the upper harbor have vanished; but we with our chairs in the lee of the upper-deck house and beneath the shelter of the canvas awnings, are alone on the deck, watching the rain, the white capped waters of the Bay, the shore lines and ships going by.

After dinner, you could have found us in the

same chairs, as with pipes aglow and sparks flying, we watch the lights winking at us from the Jersey shore, as our vessel, rolling slightly, drives through a moderate sea, down the Atlantic coast.

A night of undisturbed slumber, lulled to rest by the rhythmic throb of the engines below and the swash and beat of the waters oversides. Awakened to the same symphony, fresh as larks to greet, out on deck, a clear fresh morning, the sun's first peep above the horizon and the tall, white tower of the light-house of Cape Charles, plainly discernible through our glasses over the starboard-bow.

Breakfast, with the mellow sunlight pouring through the port-holes of the Saloon; after which the water-proof bag, open in the Social Hall greets us to receive its contributions of newspapers and magazines for the crew of the Light-ship, a red staunch vessel, tugging at her heavy anchor chains, as she tosses and pitches on the swells, a few miles ahead. The broad expanse of Chesapeake Bay with its guardian capes Charles and Henry, Hampton Rhoads, with old Fortress Monroe basking in the sunshine, Old Point Comfort and the disembarking at Government Wharf of part of our passengers; then on again, crossing the mouth of the James to Elizabeth River and Norfolk—our point of departure.

We're done with the city and toil,

Away with your linen and tie.

We're done with the things, where coin on change rings—

Our roof is the broad open sky.

Get into your old flannel shirt,
And com'fy old headgear of felt.

With axe, gun and rod, we'll live on the sod—
The same as our patriarchs dwelt.

Less than five dollars procures our provisions over in the town. Out on the pier the camp-chest is packed. This chest is indispensable, as into its secret in'ards go fractional quantities of all our provisions to be got at, on the instant, at meal times, besides containing the cooking-outfit,

folding reflector baker, etc.; but I anticipate, come along with us this cruise and see for yourself.

The freight office makes a dandy dressing-room where conventional dress is discarded for real raiment. Woolen bathing suits become our underwear and with flannel shirts, woolen trousers, woolen socks, light-weight tennis shoes and old felt hats, our get-up is complete.

The two one-quart thermos bottles are filled with cold water from the companies' cooler. The Steamship management tender us every courtesy, and direct us to a low flat lighter in the slip where we can embark, and stand-by to help, and to see us off.

Before launching the canoe, she is turned on her nose and examined and into all suspicious spots is rubbed a small quantity of pure white lead ground in oil. This canoe never leaks, we won't let her.

Our outfit looks some bulky as it lays scattered over the lighter and causes the remark from one of our standing-by friends—"How are you-all fellows goin' t' a get all this y're stuff in that little thing?"—

After launching, the largest water-proof bag containing the tent and sleeping-bags is stowed under the forward brace and bow-seat, the chest comes next behind, then the bags containing the reserve grub—(the smallest, but heaviest of all) stows athwart the bottom abaft the chest. The two bags containing our personal outfits and spare clothing, find snug lodging in the tumble-home of the waist at each side of the chest, the thermos bottle case wedges firmly in the bow, the extra paddle with three piece mast (and also tent pole), with sail goes along the starboard run forward, the fishing poles likewise on the port side, the combination rifle and shotgun in its case, is secured on the top of the chest and ready for instant use, while the ever ready camera goes into its water-proof pocket on the after brace and the canvas water panner, with our extra supply of fresh water goes under the after seat. See how it's done!

The crew, with paddles in hand, follow the outfit and stow themselves respectively, bow and

stern. This crew totals three hundred and twenty-five pounds, provisioned for two weeks the outfit adds two hundred pounds more. Five hundred and twenty-five pounds complete and all snugly stowed, with room to spare in a craft weighing itself but fifty-eight pounds and with said load drawing three and five-eighths inches of water.

We're off! The paddles dip to a few short strokes and then rise to wave a farewell to the unfortunate toilers left behind, then fall again to the steady cadence of dip and swing, that will carry us to Somewhere Else.

With measure, swing an easy blade,
Hold steady through foul or through fair.
Strange waters we'll ride, at new camps abide—
'Long shores that we long for—Some-
where.

With the sun three hours past meridian, the first of our dozen days passes into history. The chill of declining afternoon adds zest to the paddling as we cross to Berkley and round the point. Here our light craft bobs like a chip amid the ugly broken wash from the many ferry boats shuttling the harbor. A fussy little steam launch from the Navy Yard at Portsmouth, swiftly passing us close aboard, pitches us skyward and bottomward, in most unholy and unnatural manner as we take her wake; but we are fast leaving this chaos and turmoil behind.

A mile above the last railroad bridge, we pass Deep Creek, the entrance to the Dismal Swamp Canal and beyond, naught reigns but the peaceful river, the evening breeze gently ruffling its surface and its waters tenderly lapping among the reeds bordering its low flat shores, while from the higher banks the melodious crooning from the groves of pine trees, greets our ears with their low, sweet vesper hymn.

At a bend in the river we disembark and cross to the shore over the oscillating surface of a log-boom and fill our large canvas pannier with water at the mill pump; then on again with paddles dipping the smooth stretch of quiet water aglow with the gold and crimson fires of sunset, and still on, until purple twilight softly settles over all; when with the romping, darting swallows, we skim the surface of the river and circle in toward the shore and a grove of cedars, where on a sandy knoll, carpeted by stag fern, wilted by the earlier frosts of autumn, we pull out and make our first camp.

The canoe grates gently on the sand, Montie climbs out over the bow, but not before he has picked up the mast, extra paddle, fishing poles and thermos bottles and taken them along with him. He pulls the canoe out a bit further and I come over the top of the duffle with a bag of reserve grub and the water pannier. We both draw her well up out of the water on to the beach and the rest of the duffle is carried up the bank in jig time and the empty canoe taken ashore and turned on her nose with her bottom to windward and the outfit placed beneath or handily near.

Montie and I have camped for years with this outfit and our embarking and disembarking is always the same, each handling the same duffle on every occasion and the speed of our leisurely methods is really surprising.

Taking the big axe from its pocket on the side of the chest, Montie is off for dry hard-wood, while I with knife and small axe, shave and curl-notch the kindlings and split a bit of small

wood. The small fire is burning briskly as Montie fetches in the heavier supply and as I lay the fire, he is off again to provide the pile for the night. Less than six minutes has elapsed since the canoe first grated on the beach, no word spoken and no hurry. Often for days there will be no word between us, each occupied with his own line of thought and interests, and when moving double in the canoe, proceeding with uniformity and concord. Montie calls it—Indian. While I, well I term it recreation.

While the fire is burning down to cooking condition, I open the mystic chest and lay out the cooking outfit, first driving a stake to support the open lid horizontal and instantly I have a table.

"Give us this day our daily bread." I put the reflector oven together, grease and dust the bake pan, and stand it aside. The first smoke fuss of the fire has passed and I find Montie has cut and placed the fire-forks, laid the bar and notched a few pot-hooks, so I fill the large kettle and hang her on to b'ile.

High in the eastern sky the moon is lighting our surroundings with splendor; but to add in closer detail, I unfold and prime the candle lantern and start her off with no thought of a mosquito, as their season has long passed with that of the fly and other pests.

At the chest again, I place two heaping cups of flour into the large bowl, add a dash of salt and some baking powder. The shortening follows, water is added and the whole stirred to a soft dough which is turned out on the baker-board and rolled to a half-inch thickness and a batch of biscuits cut out with the top of the mixer. What mixer? Why a tall round, tapered German silver affair. Ask any white jacketed lad who works before a mirror amid his array of crystal glasses which he polishes with a towel from time to time. The chest contains a mixer complete, and proves a mighty handy asset to a camp-kit. Flap-jacks and omelets are shaken together in a jiffy and mixed to the queen's taste, and there's many a handy wrinkle performed with this little coadjuter.

The batch of dough cuts just ten creamy white discs, which fill the bake pan completely with a little round ball left over, occupying the center of the pan. At the fire I find the kettle boiling, so I make the tea and hang her up to brew and keep hot. Next a hunk of pork is scalded and placed in the smaller kettle and hung over the fire to simmer.

After a glance at the biscuits, which I find doing nicely, I turn from the fire to find Montie coming in with the last sticks of wood, which he commences to cut into fire lengths; but stops to sniff. "Gee, Mac!" He exclaims, "The wif of them biscuits sure make me feel empty like, how soon do we eat?"

"As soon as I peel the potatoes, get 'em boiled and shoot off the head of a tin can and warm up its contents!" I answer, as I pick up the baker-board and bowl and go down to the river to cleanse them. An owl hoots at me from the other shore and a huge carp jumps within ten feet of me, while some small fry of the finny tribe, nibbles at my fingers as I work in the water.

Back again at the fire I turn the biscuit pan, as the contents are browning nicely. The tea I find is settled to the bottom, so I pour the brew off carefully into the big bowl, throw out

the tea leaves, rinse the pot with a little hot water and pour the cleared concoction back into the pot and again hang near the fire to keep hot.

The pork is cooking nicely, and I add six peeled potatoes, with it for company, then turn out the golden brown biscuits into the large friction tip tin in the chest and get out two little cubes of compressed essence of bovine, which I place in the soup bowl and sing out to Montie—"Set the table!"

Montie sets the board and arranges the seats by getting out the cylinder folded sleeping bags and places them at each end of the table, then strolls over to the fire and looks us over with inquiring glances.

A prod into the pot and the potatoes are found fit. Montie brings the bowls with the little cubes and each receives its portion of scalding water from off the pork and potatoes. The pot is then drained of all surplus water and in its stead goes the contents of a can which I open. It smells good, but however, it will get good and hot with the steam of the pork and potatoes, so we will hang the pot again near the fire while we start to commence—"Supper's ready, Montie!"

Our seats at table are restful and com'fy, you can lean back with every requisite at hand and no waiters to bother and help yourself.

First course soup, ha! A dash of Worcestershire can be added if you wish from the narrow, tall receptacle in its leather loops in the chest. Hot foamy biscuits steam when you break 'em in two, and butter from its crock in the chest at your elbow. Such an environment, the moon, the stars and the orchestral symphony of the Great Master, the wind in the cedars, in the reeds, the call of His wild creatures and the low voice of the river, all blending in harmony.

Next! The amber tea is poured, the biscuit and butter continue, the steaming pot is uncovered, the pork divided, also the now steaming hot stuff from the can, the remaining potatoes mashed and served. Go to it!—I say. Did you ever have saur-kraut and pork with mashed potatoes in the woods? Well. On fall and winter trips it's very much to the good'ski, and sustaining for out door work.

Desert—Oh! You mystic camp chest! Unfasten the airtight jar and—lay it on. Home-made apricot marmalade spread on your biscuit. Sigh, lean back. Take your ease. Load your old pipe, get her going and lay back and study astronomy, gaze at the moon, content. You've had your supper.

We had heard human voices, low and distinct, though subdued by distance, all during the evening, and as we are cleaning up, the well defined sound of oars reaches us. A boat is coming down river and shortly we have company in camp. They have seen our fire and had come down to investigate. We found we were on their ground, and for a time it would have been hard to determine whether we were welcoming them to our camp or they extending the noted southern hospitality of Virginia and welcoming us. Montie is still perplexed as to who was host.

They were three gentlemen from Norfolk who had built a shack—as they called it—on the river shore of an extensive plantation and spent their idle hours about its environment fishing and gunning. Our outfit was open and strewn about over a portion of their territory, so a demon-

stration was in order to prove to them how it all nested, compressed and compacted into a whole and came up the river with us in the canoe. Their wonder they made manifest.

At the very start they would have it no other way, but that—"You-all chaps come to the house and spend the night with us!"—Which courtesy, required some very delicate handling on our part to enlighten them as to our very earnest desire to occupy our own camp for the night; but during our later camp fire chat, we accepted their hearty invitation to take a trip through the corn fields back from the river and have a crack at the wild doves, in the morning.

The moon is descending in the southern sky

hanging the sleeping bags to the limbs of the cedars with their dew damp coverings to the south to dry in the sunshine. Launching the canoe we are off up the river to the house, which we find to be a neat commodious bungalow and our hosts astir, whose jovial greetings are hearty and sincere.

Preparations for the shooting are quickly dispatched. The average Southerner is brisk and prompt in matters appertaining to sport afield or afloat; but his procrastinating behindhand methods are marked by a personified listlessness along other lines, especially so of his process of going about his sunny country, his unexpeditious mode of travel requiring his carriers to conform to his disburdened convenience.

behind the shocks with the flight in view, mark it down, stalk it, flush it and blaze away.

It is early afternoon when we again assemble at the team. My bag is two brace, Montie has nine birds, the whole bag of fourteen brace and a single, twenty nine birds in all. We pluck them on our way back to the house leaving a trail of feathers flying from our chariot as we jolt through the woods.

With solicitude we await the conclusions of the darkey chap in the kitchen. The delectable odors wafted to us from his sanctum augmenting the vacuous sensations beneath our belt buckles.

The sun is a descending ball of fire in the west when we are finally ushered into the dining room to dinner.

An Easy Portage.

ere we unroll our sleeping bags over a mattress of ferns and crawl into them for the night.

Roll in your blankets soft and warm,
In the open under the sky;

Lulled to your rest by the strains you love best—
The croon of the stream's lullaby.

Astir in your bed at dawn, you note the crystal beauty of the dew glistening pendants in their settings of bronze, green and gold. The water-proof cover of your bag is silvered with them, the soft breezes of early morning whisper through the withered grasses and undergrowth about you and frisk with the mist on the river, your blankets are cozy and you snuggle down in them to doze until rosy sunshine calls you to be up and doing.

Breakfast over, we set the camp to rights,

We assemble at the barn, each with his ordinance in hand, to board the plantation wagon, drawn by mules, our conveyance to the fields of slaughter. Gleefully we vibrate over the crude hewed roads through the forest where we have a glimpse at intervals of a dilatory lumber industry taking place among the pines. Clearing the woods, the corn fields stretch their expanse of parched, vapid vistas in sear gray shocks, amid their short spear-like stubble throughout the fields to the distant blue of the sky beyond.

We tether the team to the trees at the edge of the clearing, the hunt is without dogs and we separate to cover the field, with instructions to cross the road beyond to the next, cover it and return. The going is a stumble over the old corn-hills with your gaze on the skyline, to seek cover

Pray, gentlemen, come sit ye down
Partake of God's bounty, His earth,
Has furnished her yield from wildwood and
field—

Be thankful—and dine ye with mirth.

Steaming soup—Perch and smoking sweet potatoes, the fish fried to a golden crispness that permits one to split them in halves, lift the back bone, scrape away the thin belly parts leaving naught before you but a creamy white boneless cutlet. Then our own game broiled; boiled rice served with a rich gravy, crimson sweet peppers, filled with a cold-slaw, and finally, home made wine from the juice of the wild scuppermong grape.

Later, on the moon-lit porch, with cigars
(Continued on page 64.)

Description of "Nessmuk" Canoe

By C. L. Johnson.

The "Nessmuk" Canoe in Action.

Select a canoe that fits you just as you would a coat or hat as "Nessmuk" said, and this is the canoe that I consider about right for a man from 150 to 175 pounds. I built her as much like the original as I could with the exception of being a little larger and stronger. I tried to keep her weight down as much as possible also, but 35 pounds complete was the best I could do.

Her dimensions are: Length, 12 feet; beam,

26 1-4 inches; depth amidships, 10 1-2 inches; at stems, 15 inches, with her keel sprung down 1 inch in the middle in a fair line from the ends, which is a decided advantage over a straight keel; ribs, 3-16 x 3-8 inches of white oak one inch apart, an inch tumble home; plumb stems of hackmatach or red cedar; keel and keelson white oak, clinker built of white cedar planking in seven streaks on each side. She is fastened

throughout with copper rivets and brass screws. Finished with two coats of linseed oil and three coats of best spar varnish.

One of these will be found to be the handiest kind of a one-man canoe and can easily and safely carry two even when it is beginning to get rather rough, but with one for her crew she can go practically any place and in any weather. When filled with water she is very buoyant, easy to right and bail out, and even to get back into over the side after you have had a little practice. She sits just far enough down in the water to get a grip on it so in a strong head or beam wind she makes little or no leeway, and I do not hesitate to say she behaves perfectly under all conditions. Anyone who is used to paddling a 16 or 17 foot canvas covered canoe which with the ordinary load sits right on top of the water cannot imagine the ease with which one of these canoes can be paddled into a head wind and sea.

I use an 8 1-2 foot double blade paddle with the blades turned at right angles, of course, so they will feather and offer the least resistance to the wind, and for a seat use either a cushion or low canoe seat, which can be made by stretching canvas over a wood frame and rest it right on the bottom of the canoe.

The Laurentide Company of Quebec, producers of pulp and pulpwood, is reforesting its non-agricultural out-over lands. It is also importing reindeer from Newfoundland, to see if they can take the place of dogs in winter woods work.

12 foot x 26 inch "Nessmuk" Canoe, designed and built by C. Lowndes Johnson, from the description in "Woodcraft"

Scale 1/2" = 1 foot

BOOK REVIEWS

EVER perennial, Dan Beard is out with a new book (*Shacks, Shelters and Shanties*, — Chas. Scribner's Sons, New York) designed to teach the young idea of the nation, and older codgers as well, how to chop and build the fifty-seven varieties of rustic things which Dan originated and which have been used, for these many years, by his ardent pupils from coast to coast. The present volume embodies all that the author has given before, and a great many new crooks and turns and angles. Dan is a genius in this line. No doubt he could have taught Eve in the Garden of Eden how to make a complete dress out of a fig leaf, and judging from the time Dan has been with us, he may have done so.

The new book is illustrated to the last degree of perfection with the author's plain and simple outline drawings, so that even he who is a bungler at woods carpentry can, at the expense of a few saplings, a pail full of nails, a loop or two of rope and a few bunged-up fingers, achieve some wonderful results in sheltering himself against imaginary storms under more or less imaginary conditions.

"*Eheu fugaces!*" The good old days are gone, but even we who have been around here for a longer time than we care to admit to the insurance companies, cannot remember when Dan was not telling us in our earlier days how to build shacks and shelters, boats and other contraptions, that added joy to existence, even though they scared our good mothers out of ordinary peace of mind.

If the writer remembers correctly, Dan, while an idol with the boys, did not enjoy such a high reputation among the elders. Between them and our versatile author it was something like the sentiment expressed by the elderly spinster lady to the new minister.

"Dear Pastor, how we enjoy your ministrations. Why, we did not know what sin *was* until you came among us."

So when axes were spoiled, fine tools put out of commission and the adjoining shrubbery hacked to provide saplings, parents were wont, after having invoked the usual corrective measures on the culprits, to express a wish that "the man who started all this sort of thing" were near for just a minute.

But let that not bother Dan now. He provides joy to many who recollect those days with a tender memory almost of pain, and he is still doing it for the men of to-morrow.

The writer cannot think of any boy of his acquaintance who was ever drowned or seriously hurt by carrying out Dan's ideas, but can recollect distinctly hanging perilously from tree-tops, amid the wreck of an amateur effort to build one of the eerie coops that Dan told us how to construct and can recollect also having gone through the bottom of some of Dan's boats in the middle of a

rather largish lake. That was not Dan's fault at all. It was simply the bungling carelessness of the boy builders.

And what a difference there was between engaging in one of those architectural dreams of Dan's, and doing as a penance the same sort of chopping in the backyard at the request of stern parents, and with the utilitarian object of building up the wood pile! Though the same axe was used, and the same motions employed, how the poetry did run out of the axe-handle and buck-saw, and how tantalizing it was to realize that all nature was aquiver with spring, and the *skee-re-lee* of the red-wing blackbird down by the river just coaxing the boy population to a swim.

Looking over Dan's book now, the twinge comes instinctively in an old codger's shoulder as he thinks about living in one of Dan's sod houses or bank caves. And yet that was the one thing that used to appeal to us in the days of Mr. Beadle, whose literary efforts in the way of adventure and buccaneering tales are not known to a present mollycoddle generation.

How we used to build those caves and enact the scenes and adventures of the passing Beadle hero! Probably as you, gentle reader, look back, you can picture the thing yourself and remember how Our Hero, pursued by pretty much all the Indian population left after he had got through killing off the greater part of them in the previous installment, suddenly dived, with the arrows whizzing about him, into some concealed hole and emerged a moment later into the underground cabin, decked with furs and fawn-skins, and how the beautiful Senorita and her aged father, whom he had rescued a chapter or two before rose to greet him. Just write the rest of this yourself. You can do it, as the Irishman says, "with your hands tied behind your back."

Dan Beard is a genius in construction. He ought to have been Edison; he ought to have invented the flying machine, but it is enough that his uncanny wizardry with the axe has made two generations of boys happier. Give Dan an ordinary-sized porous plaster, a few sheets of tin, a can full of nails and a couple of pieces of string and he will produce a pretty good model of a phonograph. Why he did not do it before anyone else thought of the idea still remains a mystery. His ideas run to practical matters however, and he does not as a rule, try to interest his boy audiences in a lot of things not worth while, like fiddling two sticks together to produce about once in ten times a spark of fire—a very foolish thing when we come to think of it, as long as there are matches to be had and perfectly good pants on which to scratch them.

To compare Dan Beard with *Peter Pan* is not quite right, for Peter brings up the thought of effeminacy, and anyway *Peter* was not a real character. Dan is the embodiment of Yankee ingenuity; there is nothing fairylike about him.

Dear old Dan! The thatch on his own roof of thought must be pretty well weatherbeaten, and

where it has grown thin, repairs by the use of a second-hand tomato tin and a pot of white lead are impossible. That does not matter, for as long as he remains with us, he will be the Youngest Boy on earth and yet the Oldest one alive.

THE END OF THE TRAIL.

IN THE opinion of not a few people capable of expert judgment, the best American book of travel written in the last quarter of a century is "The End of the Trail," by E. Alexander Powell (Charles Scribner's Sons, \$3.00 net.) The author is a brilliant writer, with powers of observation that lend weight to what he says. Better yet, he possesses a poetic imagination, and clothes it on occasion with a vocabulary as rich and varied as the coloring of the Grand Canyon of Colorado and the desert scenery through which he takes the reader. The book in brief is the record of a trip by automobile from the extreme southwestern part of the United States almost if not quite to Alaska. It is a volume that every lover of America should read; even more, it is a book that the jaded European traveller should go over carefully, if only to learn that his own country possesses a history and a wealth of beauty that cannot be found abroad. Now that European travel is cut off, Mr. Powell has opened to his countrymen the route of a journey that surpasses any other trip in the world almost, and one that will make better citizens of all who have the time and means to undertake it.

His is a book that can be warmly commended, and one that ought to be read by every American citizen. When Mr. Powell says that much of our American scenery makes that of the rest of the world puny in contrast, he knows whereof he speaks, for there is scarcely a foot of the habitable globe which this adventuresome and keen-witted traveller has not penetrated himself.

ROMANCE OF THE BEAVER.

IN the "Romance of the Beaver," by A. Radclyffe Dugmore (J. B. Lippincott, publishers, price \$2.50 net) we have a new book by a respected and authoritative author, which deserves reading as much from the standpoint of economics and conservation as for the entertaining features it affords. The beaver is an animal so common that everybody thinks he knows all about him, but as a matter of fact, less is known of this interesting little mammal by those who come in contact with him in his home environment or by students of natural history than almost any other of our diversified North American fauna.

Mr. Dugmore has treated his subject in a manner that leaves no room for criticism. On the other hand there is much in his book to be praised, and much that will repay reading. The author has a world-wide reputation as a wild life photographer, and in the present volume he has brought to bear all his ingenuity and familiarity with that are toward giving us pictures of the beaver in his home surrounding. Not only that, he writes with a grace and style that characterize all his contributions to our literature. Mr. Dugmore spent many weeks studying the beaver in northern Canada, and naturally his best photographs were obtained under right conditions. He gives us flash lights of the beaver cutting trees at night, swimming in the water and—probably something that never before has been accomplished—he shows a beaver in the act of making the splash with the tail that precedes his dive, and which is supposed to be to warn others of the beaver colony of danger. How the beaver made this splash, which many of our outdoor readers have heard in the wilderness, has been a matter of dispute. Mr. Dugmore's photographs indicate that the smash of the tail on the surface of the water is made while the animal's head is above water; something that will surprise not a few woods life observers, for it has been held heretofore that the beaver made the smashing blow of his tail after he had started for the bottom, and while his body is submerged with the exception of the tail.

Captain Cartwright, that strange character who about the time the American colonies were battling for their independence, settled in Labrador, and established himself as an early lord of the manor, and whose diary was a few years ago carefully edited by Professor Townsend, wrote one of the best histories of the beaver ever printed until Mr. Dugmore's book appeared. It is rather strange that Mr. Dugmore has not referred to this work, for he is extremely liberal in giving credit to every source of authority to which he had access. At any rate Cartwright, although his diary is now 131 years old and over, did much to clear up the popular superstitions and misconceptions prevailing with reference to an animal which in addition to yielding millions of dollars of profit to the world has another value to this generation. Even so great a naturalist as Buffon wrote that the beaver had a scaly tail because he ate fish. Cartwright sagely

observed that if a fish diet produced such results, Buffon himself should have had a similar appendage, since he probably had eaten more fish in a year than all the beavers in the world had consumed in one hundred years. And the misconceptions of Buffon and his successors in the field of natural history have extended over all the years that have intervened.

It is well that a man like Dugmore should have come to the front with such an honest and painstaking effort to tell us what the beaver is and how he lives. Dugmore has added another chapter showing how shortsighted civilization has

and what is worse, the white men to whom they sell their furs, pay little attention to these laws. Readers of *Forest and Stream* may have noted in recent numbers that contributors, writing of the new country being opened by railway in the northern portions of Quebec and other provinces, have mentioned that beaver are becoming scarce, because persecuted at all seasons of the year, and beyond all reason. When these sections were in the firm control of the Hudson's Bay Company the taking of beaver was strictly regulated, and the supply maintained. As the grip of the great fur corporation was broken, the Indians followed

How the Beaver Works. (Watch Contrasts Size.)

been in almost exterminating or permitting the extermination of the beaver, which as a conservationist has performed a work, the interruption of which we see to-day in the terrific floods of water bursts that are costing America immense sums of money. Congress thinks nothing of appropriating millions of dollars in engineering projects to hold back the water at head sources, in order to prevent floods. It will cost America hundreds of millions before this is accomplished, for the floods are becoming worse year by year as deforestation proceeds.

If the beaver had been allowed to exist in numbers, as he did before civilization touched him, the dams he built across streams would have done much to hold back the terrible onrush of waters that now devastate portions of our fairest and most fertile valleys. It has been argued learnedly that cutting down the forests prevents the holding back of water, but is it not true that there are two facts to be considered here? As the forests are cut down, and the land settled, the beaver is destroyed and his conservation work is stopped. The point is well worth thinking about.

And the beaver is being destroyed more rapidly than we think. Some of the Canadian provinces have protected the little animal for periods running from two to five years, but the Indians,

no set rule in this particular, and as their grounds were invaded by outside trappers, the whole plan of procedure finally degenerated into a murderous onslaught on one of the most valuable animals in North America, and with disastrous results. It is time that this was stopped. Mr. Dugmore even complains bitterly that in the great Algonquin Park, set aside by Canada as a playground for the continent, the government is so anxious to derive a revenue from the park, that its rangers officially are permitted to take beaver in quantities that are depleting the supply. If this is true, it is little less than a crime.

The early settler and pioneer on this continent found that in innumerable instances the beaver had done much to make things easy for the beginning of farming operations, the beaver dam old and new, having brought about the clearing of lands through the destruction of timber and by the drowning process, and also by building up low swampy places into a condition where a little draining or no draining at all created a ready-made farm. The North American continent owes more to the beaver than to any other animal. It was in quest of his valuable pelt that explorations were pushed outward into the wilderness. The beaver it was that determined the political destiny of the future. Well may he be the emblem of our neighbors to the north.

Some Queer Things Happen in the Woods

John and His Zero Weather Frog and His Self-Shaving Beavers Only Second to Pete's Belief in Pre-Glacial Monsters

IN LOOKING over a new book on the beaver, by a very capable author, I was impressed again with how much might be written on the natural history of this little animal and how little has been contributed in the way of literature on the subject. Indian legends, or to dignify them by a title better known, Indian mythology, are saturated with the beaver. Who can wonder at this, when the intelligence of the animal is considered? No doubt a lot of foolishness has appeared in print on the subject, but to me the most interesting tales are those which, while seemingly incredible at first hearing, are capable of logical deduction, or find their foundation in absolute fact.

I recall a few years ago having gone into the woods with John ———, a lumber foreman who at that time was well known all over the upper Gatineau and Ottawa River country. John had expressed a desire to take a "day off," as he called it, during the summer and so we went wayfaring together with a small outfit into new and unvisited and unvisited regions. Sitting one day at lunch on the shore of a lake that even the timber cruisers had not discovered, John took up a stick which a beaver had been gnawing. Space will not permit repeating John's natural history lecture on the beaver, but he did know the animal both from personal observation and from years of contact with the Indians. Winding up his expressions of admiration of the beaver's intelligence, he said:

"And they even shave themselves."

"They what?"

"Well," continued John, "they shave each other."

He then went on to explain. "If you trap a beaver near his house and find the whiskers grown to their natural length, you can make up your mind at once that no other beaver dwells there, but if you catch a beaver with whiskers partly gnawed off, you may be pretty sure that there are other beaver in the same colony."

This was a staggerer. I had never trapped beaver myself. John had, and as he was always a truthful man, it was not for me to express incredulity.

John was always seeing things. He told me a story one day of the strangest thing he had ever seen in the woods. According to his tale, he was crossing the ice on a lake near where his men were working and all at once he noticed a puzzling trail which he could not read—and the trail that John could not read was some mystery.

"I knew it was not a bird," said John, "and it must have been a queerish animal, so I followed the tracks up for two or three hundred feet, and what do you think I found? Nothing but a big bull-frog, frozen stiff. How did he get there? I don't know, for the thermometer was just about hitting zero."

John and I discussed the matter for some time and I put this proposition to him.

"Suppose, in the mud at the bottom of the

WATER CONSERVATION BY BEAVERS IN CANADA.

Note the Beaver Dams and the Different Levels of Water in the Three Ponds.

lake, a frog had buried himself for the winter. Suppose again that a big hungry pike—for pike do not hibernate—was rooting around in the mud and uncovered the frog. We will have to suppose again that even though sluggish the frog, to save himself from furnishing a supper for Mr. Pike, shot upward through the water and happened to have the good luck, or bad luck, to strike an air hole or an open spring-hole at the top. He could climb out on the ice and make a few hops before the cold got him."

John agreed that this might be possible, but he evidently preferred to hang to the theory that the whole thing was a miracle. At any rate, he had seen the frog.

A year or so after, I was out in company with Pete, a very capable and efficient half-breed Indian citizen of the Dominion, and I put to him the new fact in natural history concerning the beaver, first expounded by John.

Pete was impressed with the story but, even imbued as he was with the taciturnity of his race, Pete indulged himself in the luxury of a laugh.

"John sell 'um razor, mebbe?" he queried.

Pete and I then tried to thresh out the matter. "You know, Pete," I said, "or at least you believe you know because you have opened beaver houses, that beaver sleep on a platform, and I have heard you say that they leave their tails hanging in the water for the purpose, as you imagine, of knowing when the water in the dam falls and so they can get out at once and make repairs."

"Yes," said Pete, "that's right."

"Now," I went on, trying to state the case like a lawyer for the defense, "if they sleep on a round platform with their tails in the water they must sleep with their noses pretty well together?"

Pete did not offer any objection to this and the rest of the defense was forthcoming.

"If, Pete," I said, "they have their heads pretty well together, is it not natural that, like ninety-nine animals in every hundred, there would be more or less 'nuzzling' and biting in play or otherwise and pulling out of whiskers?"

Pete as a jury was not convinced, for he had not noticed the thing particularly, so the case will have to be decided on appeal to better authority.

Speaking of Pete, it is strange how environment changes the character of a man. More than once as I had looked at Pete, sitting patiently in the wetter end of a wet canoe, on a wet day, I had experienced something of a pang of conscience to observe his rather insufficient clothing and lack of protection against the elements. True, everything he wore bore marks of the painstaking and even pathetic industry of Mrs. Pete, to make her husband look presentable while out with *M'sieu*, but there were lots of little Petes to provide for and pork and other things were going up and work was not always to be had. So I had regarded Pete as rather abject. How he regarded me I cannot say, but perhaps from his point of view the taking of superfluous trout from a wet lake on a wet day just to bring the fish to the canoe and turn them loose again, must have seemed rather foolish, particularly when one could have been more comfortable and better occupied in a dry tent with a brisk fire burning in front and a soft

balsam bed and plenty of warm blankets to lie on, not to mention the little but important tasks to be attended to, and a splendid library in the shape of a battered cook-book to read.

If I have described Pete in the rain, it is due him to tell of the change that came over him when he came into his own, so to speak. Pete and I were headed through the Tomasine country toward the Barriere Post in upper Quebec. I had noticed that we were swinging in a circle rather than going in a straight direction but as Pete was choosing the way, I said nothing. On our return some days later, Pete looked at me one morning and said a little hesitatingly:

"If I take you straight and save a day, you say nothing where you go through?"—in other words, Pete had taken me around his own trapping district and now that we were a little better acquainted, he proposed going through it but did not want me to talk too much about it to others. It was an intensely interesting trip. For the first time I came in actual contact with colonies of beaver that had been carefully protected and conservatively trapped. Pete was no longer abject. He was boss here. Very proud he was of his own particular country and he showed me more about the beaver in two days than I had learned in all my life before.

The promise to Pete still holds and the location of his colony will not be disclosed although, to tell the truth, not much harm would come of it now, for others invaded Pete's trapping district and took more than their toll; worse yet, Pete in a desperate effort to reap the harvest he had watched and saved from marauders, went to the length of buying for himself an evil-countenanced mongrel dog with an uncanny knack of being able to scent beaver under the ice and even following them to shore where, as a rule, they met destruction at Pete's hands.

It was going around a little lake in this locality that I suddenly broke through the subterranean home of a "bank" beaver—that is, a beaver which holes instead of building a house. As I climbed out, expressing sundry observations to Pete, that stolid specimen got even with me on the "John" theory of whiskered beaver. After looking at me wringing water and scraping mud off myself, he asked without a smile,

"When you go down you see 'um beaver with *barbe*, mebbe?"

I noticed another thing while on this trip that may in part explain some of the peculiar controversies that break out once in a while on the question of nature faking.

Pete sincerely believed, as did all his friends and acquaintances that I ever talked to, that some huge animal or monster had, not so many years ago, gone through that portion of the country, leaving a path of destruction in its wake. What it was no one could say, but Pete solemnly assured me one day that if I would go over a mountain with him he would show me the swath left through the forest by the mysterious beast. I believe that the story was simply one of the numerous *Nenebojo* legends of the Ojibways, but the strange part of it was that it had probably been told first as a legend by a past and gone generation to white trappers, and then retold by them and accepted as a white man's story by the younger Indians as an occurrence of recent date, or at least within the memory of

living man, for as the Indians forsook their tribal ways and drifted under the influence of white people and fur traders, they lost much of their own mythology.

A curious illustration of this acceptance of modern dates for incredible events happened after I had regaled Pete one night before the camp-fire with an account of the Greek myth of Theseus and Adriadne and the slaying of the Minotaur. The story had been brought out to match something that Pete had been telling me. Probably you remember, even some of you older readers who have been out of school for a long time, the stately rhythm of the poetry, although none of us ever translated it so perfectly

Gnarled, swinging his arms, like some cone-burthened
pine tree,
Oozing the life from his bark, that, riven to heart by
the whirlwind,
Wholly uprooted from earth, falls prone with extrava-
gant ruin,
Perishes, dealing doom with precipitate rush of its
branches,
So was the Cretan brute by Theseus done to destruction
E'en so, tossing in vain his horns to the vacuous
breezes.

and so forth and so forth. I did not tell it to Pete in that language, but nevertheless he was impressed, for I heard him some time later getting it off very eloquently and impressively before a listening group of his friends. In answer to their queries as to when all this had been, Pete said he did not know, but "he think it was year before las' but he would ask *M'sieu*."

Perhaps in another issue of *Forest and Stream* I may be able to tell, using Pete's own language, the new version of this Greek fable. It will surely astonish the ordinary reader. If Homer nodded, Pete didn't.

Now the point to all this is: a story that is a legend becomes to people like Pete, an incident of fact. Their own legends have had a powerful impress on their daily life. Animals to them are not the ordinary creatures as we see them, but there is a tinge of connection between persons and wild life. The curtain that divides creation is to the Indian very thin. Why, for instance will he when away from civilization, but well acquainted with it, carefully take the bones of the beaver and sink them in water or put them where dogs cannot get at them, and why will he leave some portion of the bear he has killed, not to mark the locality, but as some act to propitiate the spirit of Bruin?

When the superficial white man gets among the scenes of a life and incidents he little understands, he is apt to put things together wrongly and when he returns to civilization, is still more apt to give us some of those interesting stories that lead the scientific world to denounce him as a high-toned but nevertheless accomplished liar. The trouble is that he does not know how or when to differentiate between truth and fiction.

As well might we have denounced the gentle author of the Uncle Remus' *Brer Rabbit* stories for toying with natural history, or sling aspersions at the long forgotten Ayran originator of the Red Riding Hood story so dear to every child, for perverting the mind of the young on natural history.

But here I have wandered along telling pretty much everything and yet not much of anything that I started to write about. That will have to go into a future number of *Forest and Stream*.

OLD CAMPER.

SEA AND RIVER FISHING

ALBINO RAINBOW TROUT.

By Dr. Leonard Keene Hirshberg, A. B., M. A.,
M. D. (Johns Hopkins).

TRUE albino rainbow trout are a possibility of the near future. They will be bred at the New York Aquarium and developed at one of the fish hatcheries. It will be the first time any attempt at scientific breeding of an albino food fish has been made. Sportsmen may not be able to wet a line in waters containing them for several years, if at all.

Some twenty such trout now occupy a tank in the Aquarium. They are all "sports" from several schools of otherwise regularly colored rainbow trout, products of the Vermont State hatcheries and presented to the New York Aquarium as freaks of the fish world. Chalk white they are, with pink eyes, and so true albinos.

Should these fish show any indication of being with spawn, Capt. C. H. Townsend, Curator of the Aquarium, will have them stripped and see if they will reproduce white trout or "throw back" to the color of their parents. Should they produce parti-colored trout, which they probably will if the Mendel law of heredity applies to fish as well as to fowls and animals, two other generations of fish, with careful selections of parent fish, will have to follow before the pure white and true albino type of trout can be certainly fixed. As an experiment in Mendelism, the breeding of albino trout will be worth while from a scientific standpoint.

That the creation of a breed of albino trout would be of commercial value is wholly problematical, hardly possible, unless the trout could be confined in waters that none of their natural enemies could reach. Nature's principal means for a trout to evade its enemies—the protective coloration—would be missing and the fish would fall victims to natural enemies should the fingerlings or yearlings be distributed in streams where there are other fish. But in the well-sheltered and screened ponds of the State fish hatcheries there is every chance that they would live as long as the darker colored trout. Fishermen believe they would retain their natural gameness, breed true, and be no more susceptible to disease than any trout. But they would be the objects of ready attack from hawks, snakes and other birds and beasts of prey who occasionally like a fish diet.

With such perfect facilities as it has at its command for trying out the Mendelian law as applied to fishes, it is hoped by sportsmen and naturalists interested in fishes and fish culture that the Zoological Society will carry the proposed experiment through to a definite end. The law has proven true with birds and minor beasts, but never has been tested scientifically with fishes, as there has been no pressing scientific or commercial reason for doing so.

A veteran fisherman said that he never knew of an albino trout being taken with a fly, though he has often seen small albino trout in artificially hatched batches that have been distributed in the

streams. It has always been something of a mystery to him why none have lived long enough to be taken. He has shot albino prairie chickens in Iowa, an albino partridge in the Adirondacks just south of Loon Lake, near what is now called Lake Kushaqua and saw a party that killed an albino deer near the Richardson Lakes in Maine. How these and other albinos of their breeds happened to survive while the white trout vanished seems rather strange.

Central Park lakes have furnished the nearest approach to proof that a breed of albino fish, normal in every other way—which the white cave fishes are not—can be developed. The pearl roach which breeds there and is not known elsewhere in the world is a near-albino, but not a perfect one. A tank of these peculiar fish is in the southwest gallery of the Aquarium. These have a white skin, scales with the iridescent coloration of mother of pearl shell, and pink tipped fins and tail. The eyes are the dark eyes of the common roach of the country streams and not pink as in the true albino.

The pearl roach is a graceful, shimmering, and dainty fish, and was accidentally discovered in a little pond where it has bred for twenty-five years, probably longer. That pond was stocked with common roach when it was built, for it is an artificial "lake," though fed in part from the same underground stream that caused so much trouble when the present home of the New York Athletic Club was in process of erection. The presumption is that a number of "sports" or albino roach must have appeared in some school hatched in the early history of the lake, and that the pearl roach are the descendants of these "sports" through natural processes. Save in coloring they differ in no detail from the common roach. Therefore they are a distinctive type which reproduces itself certainly and naturally. Had a

scientific selection of parents been made in the early stages of the development of this type, fish culturists believe there would have been developed a perfectly true albino roach instead of the present hybrid.

What the roach has done for itself under ideal surroundings that is with no enemies to interfere with the development of the type, pisciculturists believe could be done with the rainbow trout under the very favorable conditions for trying out the experiment existing at the Aquarium. So a true albino trout is a certainty of the future.

CLOSER PROTECTION FOR BLACK BASS.

Several fish and game protection and propagation bills will be introduced at the coming legislative session in Ohio. The fish and game division of the state agricultural commission will be behind them.

Two bills in the interest of bass fishing have been drafted and it is expected they will be offered by Representative A. H. Etling of Wayne county. These measures limit the size and number of bass that may be caught.

"Whoever in any one day takes or catches more than eight black bass or more than thirty-six calico bass or strawberry bass, croppies or rock bass, in any of the inland waters of the state, shall be fined not less than five dollars nor more than twenty-five dollars, or imprisoned, not more than ten days, or both."

The other bill provides that no black bass less than ten inches in length shall be taken, and that none of the other kinds of bass shall be taken that are less than five inches in length. This includes the strawberry bass and the croppie or rock bass. These varieties of fish may only be taken with hook and line, with bait or lure.

Another bill which it is proposed to offer will

game preserves, probably in southern Ohio, where more land can be purchased more cheaply than in other parts of the state. It will provide for the establishment of forest, bird and set aside approximately \$25,000 of the proceeds from the hunters' license fees for the purchase of territory for the preserve.

The commission had hoped to put the project into effect this year, supposing that money from this fund could be used for such a purpose, but the attorney general's department ruled that specific action by the legislature would be necessary before the money could be so used.

Some months ago the agricultural commission appointed a committee consisting of H. C. Price, member of the commission; Charles E. Thorne, director of the Wooster state experiment station; J. Warren Smith, chief of the weather bureau station at Columbus; John C. Speaks, state fish and game warden, and B. W. Gayman, secretary of the commission to investigate reforestation, and this committee has reported in fa-

vor of the establishment of a preserve to provide for this and for fish and game propagation.

THE BIGGEST MUSKALONGE.

State Fish and Game Warden John C. Speaks failed, last week, to secure for mounting and preserving what is believed to be the largest Muskalonge ever taken in Ohio waters. The fish was taken by the Post Fish Co. of Sandusky, in a trap-net by Cassidy and Welch, two Kelley Island fishermen, near Kelley's Island. It measured four feet, five and one-half inches in length and weighed just 43 pounds. Years ago muskalonge were taken frequently in the bays of Lake Erie, but lately they have been rarely found. There is no record of a fish of this size, however, and General Speaks, to whom the matter was reported, was anxious to secure the specimen for mounting and preservation, but before his request reached the fish company the monster had been sold to a caterer in Sandusky, who served it at a dinner.

History of the Kentucky Reel

In a small and dingy room up a narrow stairway in Lexington, Ky., an old and gray-haired man once told me the story of the Kentucky reel. The room was littered with the machinery and the debris of the metal-worker's craft, the stairway was not overly clean, and the faded little blue sign which informed us that J. L. Sage dwelt above gave small promise to my two friends and myself of anything extraordinary. Yet I found something which was quite new to me, at least, and which in some of its features may be new to readers of *Forest and Stream*.

"They tell us, Mr. Sage," said we, "that you know something of the life and adventures of the Kentucky reel. Is that so?"

"Well, supposing it is?" said the old gentleman.

"Why, we want to know all about it, and if you don't mind answering a few questions, we will just trouble you for a little while, for the sake of a paper that loves good reels of all kinds."

The old gentleman laid down a reel which he was finishing—for he himself was a maker of fine reels of a sterling local reputation—and took off his hat. "If you will just be still," said he, "and let me begin at the beginning, I will tell you all about it."

We promised, and although our eagerness often interrupted him, he went on, beginning as he said, at the beginning.

"A good many people," said he, "have the idea that the Kentucky reel is the product of one man, or at most the product of two firms, and that there is a patent covering a certain definite form of it. This is not the case. There are several parties who have made or are making the Kentucky reel, and these reels are nearly as good one as another. Their general resemblance in mechanism is a matter of following a type. This type was established long ago, and there has not been so much change in it as you might think.

"In old times, you know, things were different from what they are now. Tradesmen worked about from place to place more, and a man

of any trade often did parts of work belonging to other trades. Thus the old-fashioned silversmith used to make and repair clocks, and mend watches, and do pretty much all sorts of fine tinkering. It was a silversmith who made the first Kentucky reel, and indeed the making of the best specimens of that reel has pretty much always lain with workmen, skilled in the watchmaker's trade. That is why they are so fine and delicate and accurate.

"The man who made this first reel was named Sneider, and he was a silversmith watchmaker, probably from Switzerland. The Clay family, over around Paris, in Bourbon County, were all great fishermen, and I reckon it was some of these Clays who first got Sneider to make a reel.

"That was in 1837. Then Sneider got to making reels for the Blairs, the Bibbs, the Morrisseys, McCurdys and Holemans, all Frankfort men. There are some of these old reels there and in this town yet. I can show you a Sneider reel to-day that is as good a casting reel as you need ask, although it is a good deal more than forty years old. You men talk about a reel wearing out in two or three years, so it has to be fixed or be worthless; I tell you a good reel will outlive a man, and if you don't believe it, you can try one of these old reels yourself.

"Well, Sneider made good reels, and he died. Bear in mind that to him is due the credit of the first Kentucky reel, and that it was well and honestly made.

"Sam Ayres was a Lexington watchmaker, and after the fashion of his kind, he had to move, and so he went over to Danville. Jonathan F. Meek was apprenticed to Ayres, and learned his trade there. Then Jonathan Meek left Ayres and went over to Frankfort and worked for Loomis. Meek was a fisher himself, and loved the sport. At that time the Kentucky river was a pure and undammed stream, and the fishing for bass and jack—or pike, I suppose you Northerners call them—was all that could be asked. This was in 1839, and about this time Meek left Loomis, rented a little shop, and set up a watchmaking business for himself.

"Old Judge Brown and Meek used to go out hunting and fishing together a great deal, and one day the old Judge said: 'The fish are biting splendidly, Jonathan, I reckon I'll have to send over to Sneider and get another reel. But tell me, why can't you make me a reel? You're a pretty good workman.'

"Jonathan Meek did make the Judge a reel, and it was a mighty good one, a better one than Sneider made. It was a very small and long reel, and you will remember that was the old form of the Kentucky reel. Meek cut out his own driving-wheels at Frankfort, but he had to go back over to Danville to get at a machine to cut his cogs. He finished up the reel with his watch tools.

"Along about 1839 Jonathan's brother, Benjamin F. Meek, was also apprenticed to Ayres. Ben was a prodigal son, and went wild. After a while he went over to Frankfort, and Jonathan took him into the business with him. Jonathan worked at the watchmaking trade, and put Benjamin at working the reels, for which there began to be a demand. They worked this way along about 1842. They followed the Sneider pattern of reel pretty closely. It was about this time that Jonathan made a reel, the end plates of which were silver dollars.

"In 1843 there was, up in Louisville, a silversmith by the name of Hardman. He was a good workman, but he was a visionary fellow, what you call 'cranky,' I believe. He was an inventor, and if he happened to take a new notion, he would drop his work and everything else, and sit and study; then when he got a thing half worked out, as like as not he would throw it away and never finish it. Hardman made a few reels. He made a 3-bar reel, shorter by one-third than the old Sneider model. He ornamented his reels. The Kentucky reel of to-day is practically the same thing as the old Hardman reel. That is the existing type.

"It was about now that the Kentucky river was dammed and locked. The boats used to lie up at a lock, and the passengers would get out and go fishing. A great many of these used the Hardman reels. Benjamin Meek, thus happened to see a Hardman reel. He dropped the old Sneider model, and at once began to follow the Hardman model. Benjamin Meek made a perfectly finished reel. He put on a knurled rim to his plates. But he made a 5-bar reel, and he did not screw through the plates into the bars, as Hardman did. Barring that, the best reels of to-day are practically Hardman reels. These older reels nearly all had the "click" made of a piece of goose-quill. This makes a pretty good click, but one that will only wear about a month.

"Benjamin Meek made reels in the firm of J. F. and B. F. Meek at Frankfort, till 1850. Then the boys failed in business, and had to give up their old shop. Jonathan went to Louisville to work at his trade at watch repairing. Benjamin took in B. F. Milam as a partner at Frankfort. Milam was formerly an apprentice of Loomis, afterward worked for Benjamin Meek and then became his partner. In the new firm Meek made the reels and Milam made the watches, but Milam made poor watches, so they traded work, and Milam made the reels.

"Things ran on in this way till 1864, and then Benjamin Meek and Milam dissolved partnership. Milam went on making reels, and Meek kept up the jewelry business. At length Benja-

Where Lake and Mountain Meet.

min Meek went to Louisville, selling out his shop to Milam. That was in 1883.

"Now how about yourself, Mr. Sage?" we asked. "You are leaving yourself and your reel out."

The old gentleman smiled. "Well," said he, "you can see my reel for yourself. As for myself, I was apprenticed as a gunmaker and maker of fine mathematical instruments. I worked at such work as this at Frankfort until in the '50's. Then I went into the gas and water works, and did rough work, like gas-fitting, from 1853 to 1865. Then I went to Paris, and with Mr. Jeffrey, whom you know, built the gas works there. I went back to Frankfort then, and worked as United States gauger. You see I have led a varied life. It was 1848 when I made my first reel. I was making some of the old Morse telegraph instruments then, and I used my tools on the reel work. In 1883 I went regularly into reel-making, and you can see some of the reels I have made here. I followed the old Hardman type in general form. Some of my old reels are in Frankfort now, and they will run, sir—they will run!"

"How about putting jewels in a reel, Mr. Sage?"

"Well, jewel points are no hurt to a reel, but they are not the benefit that it is commonly thought they are. Most people don't know how these reels are made, and think the full bearing

is jewelled, or that the spindle of the reel works on jewels. That is not the case. You see this little plug, that screws in. Its tip just rests against the point of the spindle. There is very little friction at the end of the spindle; that comes mainly on the sides, where the spindle rests in its bearings. Now, the jewel is put right in the end of this little plug. All it can ease is the end-friction, and that is not so very great a saving."

"What is it, then, that makes the best reels run so smoothly?"

"Nothing but the perfect workmanship, and the perfect material. The steel used is of the best and finest tempered. Of course you know the steel spindle works in a brass box. One hard and one soft metal together is the rule in machinery, you know. They will wear longer together than two hard or two soft metals."

I asked Mr. Sage about the advisability of using oil on the bearings of a reel, having in mind a friend who has bored a hole in the end plate of his reel, and carries a little oil can in his kit. "That is all nonsense," said he, bluntly; "you should never use oil on a fine reel, or not oftener than once a year. A reel that heats and sticks from a day's use, no matter how hard, is simply a badly made reel. The perfect reel has no provision made for oiling without taking the reel apart, nor should it have. It is true you oil

a threshing machine, but you don't oil a watch very often. Well, you should compare a good reel to a watch, and not to a threshing machine."

"That's so," said one of my companions. "I oiled my reel once, and it wouldn't run at all. It clogged right up."

"Exactly, so would a watch or a clock. Oil should be used on a reel only with the greatest care, and very rarely."

I had noticed also that the balance-handled reel, so universally popular in the North, was little seen in the stocks of reels I examined in the South, and that there seemed a prejudice against it among Southern anglers. I asked Mr. Sage about this.

"Well, I suppose that is largely a matter of fashion," said he. "Our anglers think a single-crank reel looks less awkward. It doesn't make much difference in the running of a reel. When I cast with a reel, I turn the handle upward with a turn of the wrist toward the end of the cast. The plates thus lie parallel to the earth, and the gravity of the handle doesn't cut so much figure, so that the reel runs easier that way."

I think that most anglers who have used the balance-handled reel will prefer it to the single-crank, however; while as to the side turn of the reel in the cast, that is beyond the amateur. He will have quite enough to do with his thumb, without watching his wrist.

Hawaiian Fishes at the Panama Pacific Exposition

By James C. Crawford.

HAWAII'S pavilion at the Panama-Pacific International Exposition is in readiness to accommodate the "rainbow" fishes that are to be brought from Honolulu by the liner *Matsonia*, and the beautiful exhibit will be installed by Mr. Fred A. Potter, superintendent of that city's world-famous aquarium, who has spent six months collecting the various specimens and arranging for their transportation and care while on show.

That has not been a trifling task, for the fishes are delicate as well as eye-ravishing, and in order to keep them in good form, while crossing the Pacific, constant attention will be necessary. Aboard the *Matsonia*, a number of galvanized-iron tanks, especially designed for the purpose, will contain water incessantly undergoing change and maintained at a temperature of seventy-two degrees; and for the carnivorous fishes, the food to which they have been accustomed—mostly worms and small crustacea—must be doled out in specified quantity and at regular intervals, while their vegetarian neighbors may consume all the seaweed they desire. At all times an attendant will be ready to segregate the sick or remove the dead and see to it that the water does not cool or the food supply cease.

Experience has taught Mr. Potter that too much vigilance cannot be exercised while his charges are en route, because the first time he attempted to transfer a similar exhibit from Honolulu to San Francisco, during the Midwinter Fair in the latter city, about twenty years ago, every fish was dead before he entered the Golden Gate. Since then, however, he succeeded in depositing 130 live fish at the Seattle exposition, where they flourished until the fair was over, and then were presented to the University of the state of Washington, where their bodies now occupy bottles. His success was repeated three years ago, when a tank, containing "painted" fish was surrounded by tables, at a banquet given by the Hawaiian Sugar Refining Company in the Bohemian Club of San Francisco. Those specimens are now preserved by the University of California.

Nor will vigilant care relax after the coming consignment has been divided among the ten big glass-fronted exhibition tanks provided for it at the Panama-Pacific Exposition. Water for the receptacles will be brought from about twenty-five miles beyond the Golden Gate by a steamship specially equipped for that service, and the pure aqua thus secured is to be kept stored in sufficient quantity to maintain a constant flow in the exhibition tanks. The food supply will be brought from Honolulu.

To describe in detail the marvelous variety of

color and form of the seventy-five different kinds of fish, that Mr. Potter has collected for this exhibit, would simply be impossible, for in shape they are an aggregation of eccentricities and their markings are the despair of artists who have tried to transfer them to canvas. All the hues of the rainbow, with some shades exclusively their own, are found on these piscatory freaks.

There, for example, is the *hinalea*, nick-named the "bird fish," because of the beak-like formation of its mouth and the dominance of peacock-blue in its coloring. Also may be mentioned the *alaihi*, or "squirrel fish," whose eyes are just as disproportionate as those of the animal it is nick-

named. "Wait awhile," Mr. Bryan responded, "until this fellow has collected his thoughts and starts to speak." Since then the *oakupai* has been usually introduced as "the slow-witted orator."

Another funny-behaving fish is the *lae-nihi*, that looks like a blunt nosed dirigible, painted light blue and bespattered with crimson and yellow. Atop of his head is a single fin that lies flat until he catches somebody looking at him, when it sharply rises and remains erect, like an interrogation mark, while his saucer-like eyes fairly blaze mingled resentment and inquiry. He is a bashful chap, but irascible when roused.

With brilliant purple spots all over his crimson body, and a yellow tail, the *akilolo* is also afflicted with shyness, for when he detects a human eye leveled at him, he burrows into the sand like a frightened rabbit until every bit of him is covered. Mr. Potter says the *akilolo* spends his nights completely immersed in the sand, and seems to experience no difficulty in breathing there with as much freedom as if he were in clear water. His penchant for burrowing, has earned for him the side-title of "rat fish," and the shape of his head strengthens the aptness of the nickname.

Along the broad dappled sides of the *awela* are double rows of square blue-bordered indentations, and because of them he is mostly alluded to as the "harmonica fish." He is very pretty in form and coloring, the rich yellow and deep red of his body markings being relieved by ultra-marine fins and tail tips.

With a snout like a woodpecker, the little *kikakapu* bores into the coral in quest of food, and is ever the busiest fish of the collection. He is mostly yellow and black with a blue tail, and heavily armored with spikes the entire length of his back. As he ignores all food, but that which he excavates for himself, neither hook or net could capture him, so Mr. Potter caught him by means of a trap.

Most curiously formed and marked of all the Hawaiian fish is the *kala*. He looks like an inflated bladder with a forked tail attached, the two prongs of the fork streaming behind him to a length of several feet. His dorsal fin is alternately striped and barred with black, white, yellow and blue, and his ventral fin is dazzling yellow. The body is splashed a variety of delicate shades.

There is a "Moorish idol" fish that eclipses all the others in brilliancy, with black and yellow bands around the body and a dorsal fin tapering into a long plume that is several times the length of its owner.

Several varieties of "trigger fish" are so called because their dorsal fin can only be lowered by pressing a small protuberance behind it. And there are also several varieties of "convict fish," with

Half Dome, Court of the Four Seasons at the Panama-Pacific International Exposition at San Francisco. To the Left a Glimpse of the Top of the Tower of Jewels is Seen. The Height of This Structure is 432 ft., and the Sphere Surmounting it is 117 ft. in Diameter.

named after. Admiring tourists have called it the "candy fish," on account of the vari-colored stripes of its body resembling those of a candy stick. Of the *kapuhili*, or "butterfly fish," there are twelve varieties, in coloring, the prettiest of them having a yellow ground with red, blue, black, white and gray markings. It is of the perch family, with back armor that bristles like a row of bayonets.

But the queerest-acting fish of the lot is the *oakupai*, a big fellow, shaped like a cod and splashed with a dozen different hues, all glaringly brilliant. He has a sturdy ventral fin, and it is his wont to utilize it as a prop while he perches, so to speak, upon a coral rock and stares straight ahead of him with lusterless eyes that protrude like hat-pegs. He has been known to pose thus from morning until night, without apparent motion of any member, and the sobriquets, thus earned by him, are numerous, varied and more or less apt, most of them signifying laziness. When William Jennings Bryan visited the Honolulu aquarium, before he became Secretary of State, he exchanged stares with an *oakupai* until a member of the party suggested that they move on

"Kingfisher" and Starbuck in Real Life—A "Reminiscent"

By Will C. Parsons.

Some time ago I mentioned to one of the *Forest and Stream's* family that, 'way back, I had known Alexander Starbuck and also the "Kingfishers." From what I said he evidently got the impression that I was a "bos'm" friend of theirs, and had white whiskers like Santa Claus, and so he requested me to write something in a "reminiscent mood" about the men.

That frightened me! I peeked into the glass and saw there a good deal of gray, and some white hair. Then I made a dive for the collegian's school dictionary and rapidly shuffled the deck until *Rem* turned up from the bottom. Here is what the dictionary man said: *Reminiscence*—That faculty of the mind by which ideas formerly received into it, *but forgotten* (the italics are mine) are recalled or revived in the memory.

Nothing doing, for the *ideas were not forgotten*.

Let's see, "reminiscent" now?

"*Reminiscent*—one who calls to mind and records past events." That's all right: I'm "an *reminiscent*."

In the eighties I was attending old Farmer's College (where Murat Halstead, the editor-author, and also another fellow who made a fortune out of the manufacture of a patent medicine got their rudiments); and this institution of learning was situate at College Hill. That village is now a suburb of greater Cincinnati.

Forest and Stream was one of the chief ends of my week—and it is now, for that matter! I read it from cover to cover, advertisements and all, and the more gun and dog ads the paper carried, the more I liked it!

It was two miles and a half down hill to Cumminsville, where one took the mulemobile to Cincinnati, and it was two million miles and a half up hill when one returned from the city! It took over an hour to "hoss" car it down to Pop Hawley's in Vine street where the good old paper was sold. If Pop happened to be out of the issue when I hit there, gloom a foot deep settled over the landscape, and my Sunday was all shot to pieces. Pop had other publications, but none "just as good" as *my paper*!

Alexander Starbuck, "Ned," and the north shore of Lake Superior were *then* but words upon paper for me; but the number of names Mr. Starbuck could call a speckled trout, and not spell "trout" with five letters set my immature brain gyrating.

"An iridescent leaper of the nectarious waters" was a comparatively simple name for the trout in those days!

I don't know where Mr. Starbuck got all those adjectives but—*he had 'em!*

In cold type I followed the canoe of this penmaster, and the jovial "Ned," from the "Soo" to Thunder Cape, and back again. He made his readers *see* the leap of the trout from his lair among the jagged rocks: made them *hear* the

song of the reel, and *feel* the writhing of the good old split bamboo. He let his readers "in" on the comments that flew from one canoe to another as the "big one" sawed the leader and broke away.

At night, he let us sit by the camp fire, and as the sparks snapped heavenward, we listened to the two Solomons of the fishing clan. At that time mental negatives of the region were so clearly set in my brain that in after years, when good fortune allowed me to visit the locality, lo, it was the work of but a moment to take one of Mr. Starbuck's *negatives* out of its cerebral cavity, and have a *contact print* either by sunlight or by the camp fire!

A man who could picture a scene as he did—and truthfully—was a master writer!

College days past, the grind in the newspaper

Remember the voyages in "Old Ironsides?" Remember "Sairey Ann," "Old Sam," and the cheery song of "an' airey a picker-ell?"

In fancy I camped with this jolly party; dipped into the "blue gill" pockets (*holes* he called 'em); tore my way through the "bresh" along the trout brooks; and met the wall-eyed pike, and other candidates for the pan. I sat, as the camp fire flickered, and (mentally) took part in the josh and chaff of this premier band of campers.

I was still in Cincinnati, but had visited many of the places made famous by "Kingfisher" in his stories printed in *Forest and Stream*. I ventured to write something that attracted the attention of the party's chronicler and he called upon me.

What an honor! I had been admitted to the

A Picture That Proves the Beaver an Adjunct to the Agriculturist.

mill began. The old Cuvier Club's room in Longworth street was the Mecca.

There, at some of the big game suppers and banquets, I saw Mr. Starbuck, and had the pleasure of shaking him by the hand, and tried to tell him in a stammering, bashful way, what good he had done the callow youth. I met him as a vassal would a king. Our spheres were different; and revolved in separate orbits! I was a 22 calibre "pill" while he was a "14-inch mortar" throwing lyddite! But—I had met him; I had shaken hands with my hero!

Men *listened* when that sage spoke!

I can see him yet; can hear his voice; but above all stands out that wonderful series of words paintings he gave us so long ago. Their colors cannot fade.

And then, there were "The Camps of the Kingfishers."

blue lodge of fishery! I can see him now; a quiet, gray-headed gentleman, wearing spectacles. He worked in the Cincinnati post office, and if I "reminiscent" correctly, made no claims as an author. He *was*, though!

He did his work for amusement and pastime. I wonder if he ever knew the good he accomplished? I tried to tell him!

Is he dead? If he is he has left a monument behind him more enduring than stone!

His tales of the "blue gills," the small-mouths, the grouse, and the red squirrels will live long after marble has crumbled and granite disintegrated.

"Kingfisher" held the mirror up to nature, and caught her reflection! As a boy, I loved him; as a man reverence him. *Reminiscent—NOT reminiscence!*

Nature Studies Close by Yellowstone Park

By George B. Pastor.

LATE last year, I spent two months and more in a little cabin on the Continental Divide, in Wyoming, not far from the Yellowstone Park. The elevation was about 8,500 feet, and at that altitude, the jay known as "camp-robber" was very plentiful, and I saw a good deal of them, and took note of some habits of theirs which interested me greatly.

The birds are said to breed very early in the year, in February or March, when the snow in that altitude in the Wyoming Rockies lies many feet deep on the ground. Now their natural food is undoubtedly of animal origin exclusively. I do not think they ever touch seeds or the like. In summer they subsist on grasshoppers, beetles and such provender. But in the late fall, when the cold has killed all this sort of insect life or driven it to shelter under ground, the birds work as assiduously as ever. In fact, they put in longer hours than any feathered creatures I know anything about. I have seen them working until it was almost too dark to discern them.

They almost always work on the ground, and apparently in October and November upon the chrysalies of bugs and the eggs or frozen bodies of hoppers. Whether this food passes at once into the stomach or craw, to be regurgitated, or whether they have a pouch or extension of the gullet, I do not know. But it is certain that when they are "chuck up," they fly to a tree not far away, "cache" the load and return and repeat the process.

They invariably work in pairs, male and female, uttering the while, faint, soft, purring notes to each other. They fiercely resent the intrusion into their bailiwick of another pair, and more than one pair is seldom seen in the same place. They are very tame and harmless, and must do an immense amount of good, through the destruction of wood-boring beetles, grasshoppers, and other cicadae. But their sinister name doubtless leads many a thoughtless person to shoot them on sight.

This jay really does no harm about camp that is worth mentioning, and he is so companionable that I like very much to have him around. To be sure, he is inordinately devoted to the purveying of fresh, clean meat, especially the fat, and when any is exposed about camp, he will undoubtedly give it his most careful attention. But he toll that he levies is so trifling, and he is so clean about it that I never interfere with him.

Last fall, the pair that haunted the cabin were

so tame that they would sometimes alight on me, if I stood quietly near the elk quarters hanging on the shady side of the door, before lighting on the meat. And when before meal-time. I threw out meat trimmings, there was always a scramble. It was astonishing what storage capacity they had.

Tame as they were, they would never let me see in what tree or in what crevice they stored the plunder. If I followed them, they simply sat and watched me, without doing anything, no matter if they were so filled, as was often the case, that they could not close their bills together, until I had gone away. Or they would fly farther on, out of my sight.

While at work, they sometimes "coughed up," so to speak, the dejecta of previous meals. But it was the hard shells of bugs, or the overings of pupae, never any shred of the meat and fat they were so busily storing.

Repeated observation has convinced me that the number of these birds in any locality has a causal relation to the recent climatic conditions. That is, a severe winter and late spring seems to make serious inroads upon them, and the natural increase also is apparently curtailed. This has led me to believe that all this provision is exerted on behalf of the expected nestlings.

I take it that the blue jay, which in winter lives almost entirely upon the larvae and eggs which he finds in trees, has a hard time of it, and that this is in part at least why he is so comparatively scarce in the Rockies, where he is greatly outnumbered by the "camp-robber," in comparison with whom the jay is as the grasshopper, in Aesop's tale, to the ant. For while the blue jay does occasionally store away fragments of meat, it is only, I believe, when he happens to have more on hand or in sight than he can eat, and he then disposes of the surplus, by hiding it, just as an overfed dog does with extra bones.

Everyone who has camped in the Rockies is familiar with the short-tailed wild mouse. He is a great nuisance about camp, delighting to explore the recesses of every sack, and always taking to its interior the shortest route, using his teeth for the purpose. About this cabin, which was a one-roomed affair, with dirt floor and roof, full of holes, he was a veritable pest. He loved at night to burrow his way around through the roof, made of pine saplings, with earth loosely thrown on, and this not only made a great racket, but invariably led to a plentiful shower of dry dirt on my face.

With a small trap, I used to catch one specimen every night, but the supply never seemed to

diminish in the slightest degree. Every morning, the carcass of the last victim was thrown out, and much to my surprise, it was evidently regarded by the "robbers" as the greatest tit-bit of all, for no sooner did it strike the ground, than it was pounced upon, not matter how attractive and numerous the scraps of meat within reach, and borne off bodily to be secreted in manifest triumph. It had never occurred to me that mice might be preyed upon by a bird like this, though it may easily be that this is the case. No stranger this, than that I had a few weeks previously taken from the maw of a black-spotted brook trout weighing less than two pounds a very large mouse.

Alongside my camp-robbers, there often worked about the cabin, a number of the Jays known as cedar-birds. These were much shyer and less attractive. Though I cannot vouch for it, I was convinced in my own mind, that they stole the treasures which the camp-robbers had laid up for themselves. The cedar-bird I never saw storing anything. But he is equally fond of fresh meat, and I have seen him prowling around the scene of the robbers' activities, and taking scraps of meat and fat from crannies in trees, which I am very sure he never garnered up himself.

But, curiously enough, though camp-robbers will attack another pair of their own kind, that ventures upon their preserve, they seem to have no feeling whatever about the cedar-birds, and both will feed peaceably together.

The frozen elk meat was a source of temptation not alone to the Jays, but perhaps most of all to the little striped ground-squirrels. They simply could not keep away from it, and as they were not so nice in their habits I rather resented their depredations. But it was useless. I hung the meat on the end of ropes from the roof-beams projecting over the end of the shack. This puzzled them for perhaps half a day, but not longer. They simply ran out on the beams, down the ropes, and were so tame that they would nibble away, when I was standing at less than arm's length away. I caught one by the end of his tail, but he promptly vamoosed leaving me with the tuft of bushy hair adhering to its thin sheath of skin, between my fingers. The figure he cut thereafter, running about with the end of his tail bare to the bone was rather ludicrous. Aesop tries to make us believe that the fox which lost his tail, encountered the derision of his fellows, but this little chipmunk never seemed to mind his loss a particle.

During my absence the magpies used to pay a

visit, but as their habits are altogether filthy, I determined to end that, if possible. So I "played 'possum." The door, which like Robinson Crusoe's, was made of thick planks or slabs, hewn and squared by hand with an axe, from the solid trunks of trees, swung on leather straps for hinges, and was kept closed with a short piece of rope. Ensnared behind a crack, I killed a couple of the magpies, and again like Crusoe, with the birds that were destroying his grain crop, exposed their bodies, and never was bothered with another magpie again.

They are very wise birds, these magpies, and are not at all easy to kill. When one of their number is killed, and the rest of the tribe, for like gypsies, they usually band together in the fall, discover the remains, though it be a day or two after the fatality, they hold a sort of wake over the deceased, gathering about him, and setting up a loud squawking and cawing, which lasts for a minute or more. Thereafter in that neighborhood, for a while, it is all but impossible to get a shot at one except from ambush, and then with difficulty for at the slightest sound or movement they are off.

Other visitors were the ravens, but they never really intruded. Scenting the meat afar off, they would pause in their flight, and take a

perch upon the top of some dead pine nearby, emitting that peculiar note which they never utter except when the mouth is watering at the sight of something to eat—a curious sound it is—a sort of compromise between the gurgling of water from a jug, and a hoarse chuckle. They are said to attain the age of one hundred years, and certainly they embody the wisdom of long and varied experience, for it is almost impossible to get near enough to watch their behavior, to say nothing of a shot. They have learned to know that in the fall, a man on foot or horseback, carrying a gun, in the game country, is quite likely to have casual relation to a killing and a subsequent feast. So that they seldom see a hunter but they circle him, soaring above his head, until they have satisfied themselves as to how the matter stands.

Man's presence and activities do not always spread fright and woe among dumb wild brutes. Until they "holed-up" in September, gophers were plentiful about the cabin, and nowhere else in that region. The reason was, of course, that the coyotes killed them off almost to the last one elsewhere, and the coyote is too suspicious to venture close to man's habitation except by night, and then the gopher is safe in his burrow. I never saw such presumptuous little

wretches. They came and went in the cabin at will, either through holes which they burrowed beneath the logs, or through the door which was always open, for the admission of light and air, for the cabin had no windows. And how passionately fond they were of flour. There were scores of them and so fearless that when my sudden entry surprised some fat old depredator with his head and half his body sunk in the hole he had tunneled in the flour sack, he would not bother to run, but backing out, would eye me, though not two feet away from him, stolidly and with manifest disapproval, as if he meant to challenge my right to interfere. But my patience was not proof against this, and one day the sight of perhaps a dozen gophers, scuttling around the cabin, with their whiskers full of flour, moved me to wrath, and the little short-barreled Stevens .25, a mighty handy gun.

They never forgave me, and whereas the chipmunks continued to dance over the dirt floor until the very last, the gophers after my summary execution of sundry of their number, *pour encourager les autres*, as Las Casas said of the Indians whom the Spaniards tried to convert by burning at the stake, they gave me a pretty wide berth, and would run whenever they saw me.

Though the gopher is supposed to be a pretty

A Difficult Bit of Nature Photography.

strict vegetarian, I learned that he is not such, and that he will not only eat meat, but that he will, in the midst of plenty, turn cannibal. Every time I shot one, I saw other gophers feeding on his dead body within a few minutes, and that, too, though there was a superabundance of other provender all about.

Near the cabin ran a branch of the Gros Ventre river, in which small trout were very plentiful even in November. How they managed to survive the bitter cold, I could never surmise. The little brook had rather a swift descent, and was seldom frozen over except on the level reaches. Even when the mercury dropped below zero, the fish did not run downstream into the deep holes, but in the severest weather were plentiful in water not over a foot deep, and often much shallower, and so far from being dormant or sluggish, were as lively as in summer. A tem-

A White Man's Burden in Pinehurst.

perature approximating zero in the atmosphere must be conducted to a large extent through a foot of water, even though the water be running too swiftly to permit of its congealing. How they stood it was always a puzzle to me.

The country was infested with wolves, and I saw their tracks wherever I went by day and their howling I heard by night—not the coyote's, whose evening concert, given at dusk, when he leaves his lair, for the night's foraging, I love to hear. That curious barking and yapping is rather a pleasant sound than otherwise. Not so the howling of a pack of wolves. I never hear it, far or near, but it makes my flesh creep and my hair bristle. It is a gruesome thing—like a chant of lost souls, without time or melody, wails of unspeakable trouble, and anguish and despair. The deep, hoarse, full-throated bass of the elders, while it does not harmonize with the shrill, clear, strident peals of the young fry, does in a measure blend into a sort of chorus. And they keep it up for an hour or more, always in the middle of the night, and often close

to camp. I have never known anybody to venture out to disperse them. Probably they would turn tail and run away, perhaps not.

I have often wondered why they do it; some say they make the noise to call together scattered members of the pack, preliminary to the nightly killing, which is nearly always made just before or at dawn. Mowgli's foster-brothers had a different plan but then that was in India. A barbarous killer the gray wolf is. No one who has seen his work wants ever to see it again, or needs any additional incentive to slaughter the brute on sight.

The onslaught is made usually by the leader of the pack, and is not killing at all. The victim is attacked from behind, hamstringed and dragged to the ground. Then the pack eat out his hams, and seldom touch anything else, going away leaving their victim to die a lingering and horrible death.

While their natural prey is wild game, they prefer cattle, of which there were not a few, ranging for the summer about the cabin, and belonging to ranchmen living in Jackson's Hole. They were in charge of an old time Montana cow puncher, whose imprecations upon finding a fine calf so maltreated, but still alive, are better imagined than described. The killings continuing, he "laid for" that pack early and late until one morning, when it was still so dark that he could barely see the sights of the gun, he got the leader, and the pack then turned its attention to the elk.

It was quite a feather in M.'s cap, to have bagged the big dog wolf, for they are a wary, crafty beast, nocturnal in habits, seldom seen even by those who are much in the mountains. Riding thousands of miles on horseback, in the Rockies, of several different states, I have seen but three. The cattlemen say that five full-grown wolves will average a killing every night, and so the bounties on the wolf's head rise sometimes to nearly \$100. Yet as he covers a wide territory, killing here to-night and perhaps miles away to-morrow, he manages to survive, and seems actually to increase in numbers for some time after the advent of the settler. This was the rule with the coyote, which now is a tremendously destructive pest in regions where he was unknown prior to the settlement of man. It is my positive conviction that the practical extermination of the white and black-tail deer in large parts of Wyoming and Colorado, was due more to the destruction brought by the coyote than to all other causes combined.

Long association with my furred and finned and feathered friends has taught me something of the hard conditions which they have to combat. It is a relentless struggle with them even to exist, to keep bare life in their bodies. So I have come, as all must whose nature has in it any milk of human kindness, to deal gently with all helpless wild creatures and never to take life, except from the predacious, if it can be avoided. One does not need to be sanctimonious to believe that "he prayeth best, who loveth best, all things, both great and small."

UNITED ANGLERS LEAGUE.

We have perused a booklet from United Anglers League, in which, interestingly, is outlined the policy and workings of the organization. Its objects are to promote and protect the interests of

all anglers by uniting them in a progressive body, to see that the laws are enforced and in promoting laws beneficial to the angling fraternity. One important object in view: A demand on behalf of salt water fishermen for as much recognition by the state, and union, as are given fresh water anglers, without curtailing theirs. Meetings are held first Thursday in each month at 302 Madison avenue, New York City, third Thursday at 671 Bushwick avenue, Brooklyn. Salt water anglers would do well to drop in and get acquainted with these briny linemen.

SPORTSMEN OF PENNSYLVANIA TO FORM NEW ORGANIZATION.

Hunters, fishermen, nature lovers, canoeists and persons interested in the welfare of the forests, streams and birds and wild life generally in Pennsylvania are back of the plan to form an entirely new organization to cover the state and provide actual live-working bodies in every community. There are several existing organizations, but their form of government lacks ties between the individual members and the state organizations, and thus has greatly hampered the usefulness of the organizations.

The new organization, to start with, is expected to enlist at once practically the entire strength of the United Sportsmen west of the mountains, and this is estimated at twenty-three organizations, with a total membership of close to 1,300.

It is understood that the new organization will be launched formally within the next 30 days. While the name, the Out-Door League of Pennsylvania, has been suggested and met with favor, the title has not yet been selected. The plan of organization will be based on the established civic divisions of the state, namely community, county and state leagues, closely affiliated with the representatives to the county governing bodies elected by the local clubs or organizations, and those of the state governing body elected by the county organizations. The work of the new association will be broad enough to attract more than hunters and fishermen, covering the whole field of wild life conservation and recreation.

Demand More Reserve Here.

In view of the immense amount of practical conservation legislation that is to be considered by the coming Legislature, the necessity of guarding the great resident hunter's license fund of almost \$600,000 from being used for other purposes than those for which it was contributed, the crying demand for a synchronous small game season and the proposed increase of the state's game and fish propagation and planting, it is regarded as essential that strong local organizations be formed in every town and county in order that the necessities of each region may be given proper consideration and the state be enabled to furnish facilities for out-door recreation without discrimination in favor of certain sections.

The forestry department is also planning to greatly extend the forest reserve system, and as Western Pennsylvania now has only 9,000 of the 1,000,000 acres of forest reserve, the lovers of wild life in this section demand that most of this extension be made in this end of the state, which will require some additional legis-

(Continued on page 41.)

the big game laws and that many of the offenders are among the most prominent citizens of the town.

"Minnesota will never receive the best work from its game wardens until the game protection service is taken out of politics and placed on a civil service basis," declared E. A. Cleasby, Federal inspector of migratory birds, at the state capitol to-day. "Game wardenship should be a profession and not a job. Under the Minnesota system a game warden likely as not may be displaced just about the time he has mastered the duties of his office and come to be of real value to the state.

Civil Service Proposed.

"Six states already have civil service for state employes and in the departments with which I am familiar, as in the game protection and for-

ing is not allowed in Michigan, but the deer are steadily decreasing in number.

How does he know that "City Feller" hires the best shots to shoot everything they see until they get a good buck for him? These best shots must be local men, friends of Peter Flint's Farmer; and they must tell him their experiences. Who is breaking the law, and who is accessory after the fact? Why are there so many does in evidence with all this slaughter? How did Peter Flint's Farmer *et al* get those fine bucks he mentions so quickly and easily? Why were those bucks so fat? With the rut and the pestering of hunters the "few" bucks should have been lean. Peter Flint's Farmer's buck was running when he first saw him, and Farmer pumped lead as fast as he could through the brush, yet he knew it was a buck, all right.

nate them, but efficient wardens can keep them in check.

Set aside a few sanctuaries where no deer of any kind shall be killed at any time. We cannot eat our cake and have it, too.

Would not "City Feller" and "Best Shots" and "Peter Flint's Farmer" kill several deer to get a good one just the same if there were no "Buck Law?" Would a change of law change their natures? "Can a leopard change his spots?"

Winter in the Woods.

est service, I know that better results are obtainable than under the old system."

Mr. Cleasby is inspector in charge of the lake district, comprising the states of Michigan, Wisconsin, Minnesota and Iowa, and devotes most of his time to supplementing the work of the state authorities, by instruction and device.

REFERRED TO PETER FLINT.

Mohawk, Mich., Dec. 22, 1914.

Editor *Forest and Stream*:

In a recent issue of your paper you print a supposed interview which Peter Flint has with a farmer. In this interview the farmer objects to the "Buck Law."

He starts by saying he hasn't seen so many deer before in forty years as this year. Hound-

Three-fourths of the hunters in Michigan try to live up to the game laws. I believe this is true in New York also. "City Feller" and "Best Shots" that he hires belong to the other fourth. They are the answer to the question, "Why is a game warden?" Are there no wardens in New York?

Does do not all breed every year anywhere. A farmer owned a tame doe in a part of Michigan where there had been no wild deer for many years. In the fall she disappeared. He gave her up for lost, but in December she returned. In the spring she had a fawn. The nearest wild deer known were thirty or forty miles away.

There will always be game law violators, and game hogs who shoot everything they can without regard to size or sex. No law can elimi-

ciate it. I have been a reader of it ever since it was published, and have always felt the spirit of its writers touched a responsive chord in my heart. The writings of the old timers are particularly pleasing, especially "Nesbuk" as he hunted and fished over the part of Pennsylvania most familiar to me. The Black Forest Club, located in the mountains of Lycoming County, close to the borders of his old home, Tioga county, Pa., and also adjacent to Potter county, and Clinton county, Pa., has members who remember him and many times is he spoken of as the best writer who ever hunted and fished in this section when trout, grouse, deer and bear, yet furnish the finest sport to those who love the Allegheny mountains best of all.

C. W. YOUNGMAN.

GAME BAG AND GUN

Woodcock in Corn

By Theodore Gordon.

The time has gone by when we could take advantage of the woodcock's habit of visiting fields of tall, low lying corn, in August and September; but in its day it was fascinating sport and gave one some very difficult snap shooting.

I never made a really large bag in this way, but I knew one man who made a sort of specialty of cornfield shooting. He made some large scores, as birds from a distance came into the local fields in August attracted by rich feeding in the corn.

Our friend prided himself upon not being "fussy," upon using any old gun and any kind of ammunition. With two of the finest breech loaders in his gun cabinet, he frequently shot an old 10 gauge muzzle loader, common black powder, and newspaper leaves, or any trash for wadding. He was a strong advocate of large charges of powder and very fine shot; and killed all kinds of game birds with "Mustard" seed, (No. 12, the finest shot manufactured, except "Dust." The last is used by collectors for humming birds, and other tender things). Of course the pattern must have been wide, but anyhow, he claimed to have bagged 49 woodcock in corn, and to have killed them "Straight," not missing a shot.

I never saw more than one-quarter that number in the corn, in one day, and do not remember killing more than 8 birds in such places. I know that I made long journeys to districts where the birds were by no means plentiful, for a little of this shooting. I know that I went to Ohio, because I had noted what appeared to be fair breeding ground, when quail shooting the previous autumn. The land was rich, and the corn immense, towering far above one's head. I found woodcock in fields where there were low damp spots, and one could say very quickly, after inspecting these if there were birds about. The borings and chalks were easily seen.

One day early in September, I had tramped my legs weary for three cock, before returning to mine inn, but I was not dissatisfied; a few woodcock are enough when they are not plentiful. In conversation with one of the men seated on the front porch he asked me if I had tried a field of magnificent corn that seemed to be within the village limits, and I said that I had not. "Well," he said, "That strikes me as the most likely place I know of for a few woodcock."

The field was only a few squares away, so I resolved to try it at once and proceeding thither found that the portion nearest the village was on high ground, but that it gradually sloped away to a considerably lower level.

My dog was a slow worker and in corn never ranged more than 20 paces in advance of me which was all right for this shooting.

In a low spot near the far fence I found the tell-tale borings; plenty of them, and a moment later a fine cock flushed and was cut down, as he disappeared from view. We started and bagged

three birds, and I heard the whistle of another. As all the woodcock had flown in the direction of the high portion of the field, I beat in that direction. On that day I was trying the mustard seed shot, and it seemed quite as effective as number 10, the size usually preferred; but the ranges were short. We had worked back and forth to within a short distance of the fence next the village, before we put up the other cock, and

making no complaints, and treating the accident as a joke, but I felt much more serious. I was thinking of their eyes. I carried them off to the only drug store for soda water, and never shot in that field again. Woodcock arrive from the South, early in spring and the eggs are hatched the first week in May. The young birds are usually full grown before July 1st. They scatter from the breeding grounds in August.

CONDITIONS ON GAME RANGES.

The following are extracts from the annual report of the Bureau of Biological Survey, United

Deer Being Shipped From Mackinaw, Mich.

it flushed a bit wild, but by good luck it followed the lane of stalks in which I stood, and I could see it just topping the corn.

I fired one barrel and the bird set its wings, hard hit, so I gave it the left to make sure, and at once a shrill yelling came from the fence. Hastily gathering my bird, I hurried to the place from which the outcry proceeded, and found the village gang of boys in some excitement. They had been well peppered with No. 12 shot. It seems that they heard my first shot and at once raced to the highest point on the fence surrounding the field, where there was an entrance with high posts and bars. By standing on the bar next the top they could overlook the corn, the flying woodcock and the effect of my shots. They had marked down the last bird, but retained their position, boy-like never thinking of danger. The woodcock flew directly at them and both charges of shot were well sprinkled over their persons. The only real danger was to the eyes, as the tiny shot stung hands and faces without penetrating the skin. The boys were very nice about the affair,

States Department of Agriculture, referring to the game reservations other than those for the protection of birds.

National Bison Range. With an addition of 19 calves born to the herd of buffalo on the National Bison Range, Montana, during the past year, the total number of the herd is now 115. It is difficult to ascertain the number of elk on the range, but 25 head have been observed by the warden in charge, an increase of one over last year. There were nine antelope on the range at the end of the fiscal year, but the number of young born in the past spring is not yet known. No animals have died during the year.

Weather conditions during the spring were ideal, and an abundance of bunch grass and other feed was the result. Many improvements have been made, roads have been repaired, trails cleared, and a telephone line two miles long constructed to connect with the Flathead Company's lines.

Elk Refuge in Wyoming. Negotiations have been practically consummated for the purchase

of a tract of land for a winter elk refuge in Jackson Hole, Wyoming, authorized by act of March 4, 1913, but title to the land has not yet been secured.

Niobrara Game Reservation. Conditions on the Niobrara Reservation, Nebraska, have been exceptionally favorable, and all the animals are in good condition. The reservation continues to be an attraction to citizens of the State, as is evidenced by the large number of visitors. The 37 animals now on the reservation include ten buffalo, twenty-three elk and four deer. Since their arrival there has been an increase of two buffalo, seven elk and one deer. The only loss so far reported was that of a young elk, which died during the winter. The additional deer was purchased from the park department of Council Bluffs, Iowa.

Wild Cave Game Preserve. Through co-operation of the American Bison Society, fourteen buffalo, seven males and seven females, donated by the New York Zoological Park, were successfully shipped by express on November 25, 1913, to the Wild Cave Preserve, near Hot Springs, S. Dak. Sufficient land has been acquired and added to the preserve to insure a permanent water supply. With the twenty-one elk transferred from Jackson Hole, Wyoming, and a deer recently purchased, there are now 36 animals on the preserve. Contracts have been let for the construction of a strong woven-wire fence, 88 inches in height and 8.67 miles in length, to inclose 4,160 acres of the preserve.

As a result of the unusually mild winter in the Jackson Hole region in Wyoming, the migration of elk to the feeding grounds was not large. Feeding the elk began January 30th and ended March 28th, with a total of 6,150 elk fed. Two hundred and forty-one elk were captured in Jackson Hole for distribution to National and State game reservations. Fifty head were distributed in the National Forests in Colorado; 46 in the National Forests in Utah; 23 to the newly created State preserve in Custer county, S. Dak.; and 21 to the Wind Cave game preserve near Hot Springs, S. Dak.

Reports indicate that there were but slight winter losses among the elk not fed.

In co-operation with the Department of Interior and Treasury, the project of stocking the reindeer part of the Aleutian Islands Reservation was begun in the Summer of 1913. Owing to very rough weather, a number of reindeer aboard the Manning, which left Portage Bay with 65, refused to eat. As a result, eight died. It was therefore determined to place a herd of 21 on Dutch Harbor Island and to land the remaining 36 head at Umnak.

DEER AND RABBITS MUST GO.

Jersey Too Densely Populated and Hunters Cause Fires, Says Board.

Trenton, Dec. 17.

Virtual extermination of deer and rabbits in New Jersey is planned by the state forestry commission as the only effective means of protecting the state woodlands against forest fires such as destroyed nearly \$200,000 worth of property during the first two weeks of the present gunning season.

The argument advanced by the forestry commission is, that New Jersey is becoming too

densely populated to make it much longer available as a game refuge. As the commission holds that the presence of gunners in the field in large number is principally responsible for forest fires, the members contend that the state should devote its efforts to savings its forests, even at the expense of its game.

That the action of the forestry commission will stir up the opposition of most of the 70,000 hunters with which New Jersey is credited seems almost certain. On the other hand farmers who claim that their crops are destroyed by deer and rabbits may line up on the other side and make the fight an interesting one.

Trenton, Dec. 22, 1914.

Dear Mr. Beecroft:

I have your letter of Dec. 18th, and in reply to the same would say that the Fish and Game Commission will strongly oppose any measures looking to the removal of protection from rabbits and deer. There is no proof whatever that the recent forest fires were started by gunners. In fact we are very certain that the railroads were responsible for a number of them. I personally do not believe that any law looking to the extermination of deer and rabbits will be passed by the next Legislature.

ERNEST NAPIER, President.

State of New Jersey Fish and Game Commissioners.

THE NEW QUEBEC GAME REGION.

One Who Has Been There Advises What Portions to Avoid—Indians Killing Off Game.

Hanover, Pa., Dec. 21, 1914.

Editor *Forest and Stream*:

I was much interested in several articles lately published in *Forest and Stream* relative to the new North, or properly, the new country opened by the Transcontinental road in northern Quebec.

With reference to this new big game country which, to some extent, has been exploited, I want to sound a word of warning to prospective hunters for the coming year.

"All that glitters is not gold," neither is all of this north country a game paradise—not any more.

The country is virgin enough, but the section north of the Abitibi Lake, fifteen to twenty miles north from steel, has been hunted, and well hunted at that.

With a companion and two Indian guides I spent two weeks northeast from White Fish in October, and no matter where we went, we found evidences of the country having been recently hunted. All good camp sites held their tepee poles and recent beds. Before leaving the railroad a Hudson's Bay man informed me that the Abitibi Post Indians had already killed seventy or more moose and that at that time, October 13th, most of them were out hunting meat.

The Hudson's Bay Company have not and will not advance outfits nor extend credit to any of their Indians this year and have instructed all of them to hunt meat this winter.

It simply means, that you must get at least fifty to seventy-five miles from any Hudson's Bay Post in the future.

They tell you that there are no deer in the north Abitibi country, very few bear, caribou being so infrequent, that they tell you there are none.

I went east eighty-six miles from Cochrane to

White Fish River. The time limit prevented me from going north on the river, which route entails an eleven mile portage into Turgeon River waters, so was compelled to choose the south course from the track to the mouth of the river, then across the northeast area of Abitibi Lake to Fish River, then north about fifteen miles, hunting this country north by canoe and overland with results as mentioned.

The Bell River region farther east on the line; seems the ideal country, easy to reach from east or west, and with very little portaging north from steel. The country is virgin and, from the best information at hand, contains moose and bear in plenty. This section will be well opened in 1915, will contain good new hunting camps and guides and should surely appeal to the man in search of a good head.

A trip north from steel on the Harricanaw River—midway from White Fish and Bell River—while it entails numerous portages—opens magnificent big game country, and I am told, the small lakes contiguous and the tributary streams, contain all kinds of trout.

It is, all of it, surely great and virgin country. But yet away from steel and particularly, from any Hudson's Bay Post.

J. A. MELSHEIMER.

AN OLD CONTRIBUTOR IN PRINT.

Forest and Stream acknowledges with pleasure the receipt of a handsome booklet "Wild Western Scenes" by C. L. Stratton of Chattanooga, Tenn. Mr. Stratton states as his "excuse,"—although the book needs no apology or excuse of any nature—that the articles were written for and published by *Forest and Stream* and have been reproduced mainly for the purpose of preserving some scenes and incidents of happy memory. This purpose has been well accomplished and the stories in the book are as interesting, and some of them more interesting now, than when first written. Mr. Stratton has been a *Forest and Stream* contributor for many years and thousands of readers still recall with pleasure some of the exquisite little things he has published in these columns. The pamphlet is for private distribution and bears no price mark, but it deserves a wider circulation than intended by the author.

THE CALL OF THE WOODS.

By James B. Carrington.

O, take me away from the town to-day,
For it's dull and dreary and stale and gray,
And I hear afar the murmur of trees,
The music of waters afloat on the breeze.

Let me drift once more in the old canoe,
Where the skies are pure and the stars are true,
Where the wood folk stare at the camp-fires
glow,
And the trout leap high in the pools below.

Away from the noise and hurry and strife,
Away where the pines are the breath of life,
Where the blue hills dream in the fading light,
And the loon's wild cry echces down the night.

It Was Just Like This in the Olden Days.

Pennsylvania Game Law Changes

The United Sportsmen of Pennsylvania are going to ask the legislature this winter to amend in a number of particulars, the present game laws of that state, and when they ask for amendments they will show by the result of test ballots, that hundred of hunters and fishermen in the different counties are in favor of the suggested changes. The law that they desire will contain the following provisions:

Open season for gray, black and fox squirrel, gray rabbit and hare, wild turkeys, ruffed grouse, Virginia partridge, commonly called quail, woodcock, Mongolian, Chinese and ringneck pheasants, during the month of November of each year. This includes all small game in a uniform season.

Open season for bear, November 1 to December 15, both days inclusive.

Open season for deer, December 1 to December 15, both days inclusive.

No hunting to be allowed in the forest or waste lands or on agricultural lands for any purpose during the months of September and October of each year, for red squirrels, groundhogs or any other unprotected animals or birds, excepting web-footed wild water fowl, snipe, shore birds and other migratory game birds as provided by law.

The sale of no native game birds or animals killed in Pennsylvania to be permitted. This adds squirrels and rabbits to the list of game which may not be sold.

The bag limits proposed are: Wild turkey, one in one day; two in one week or two in one season.

Ruffed grouse—Five in one day; 20 in one week; 25 in one season.

Squirrels—Six in one day; 20 in one week; 40 in one season.

Quail—Ten in one day; 30 in one week; 40 in one season.

Rabbits—Ten rabbits or five hare in one day; 30 gray rabbits or 20 hare in one week; 60 gray rabbits or 30 hare in one season.

Woodcock—Thirty in one week; 40 in one season.

Deer—One in a season, which in every instance must be a male deer with horns or antlers extending not less than two inches above the hair.

The deer limit would remain the same, but reductions on other season bags would be heavy, the present limits now being: Ten in one day on rabbits for as many days as the shooter hunts, reduced to 60 in a season; quail reduced from 75 in a season to 40; ruffed grouse reduced from 50 in one season to 25; squirrels reduced from six in one day for any number of days to 40 in one season.

In addition to this, it is proposed to amend the law for closing territory to the hunting of deer or elk so that from one to five contiguous counties may be closed to the hunting of any one or all of the species of native game birds or animals. By this system it will probably not be necessary to establish any more closed periods of years on quail or turkey, as enough counties may always be closed to insure a good stock of birds.

The present law is mandatory upon aldermen.

justices of the peace and others having jurisdiction in cases of game law violation so that the magistrate must impose the penalties fixed whenever a conviction is secured. But in several instances justices of the peace have had convictions, or even pleas of guilty, and discharged the defendants without penalty and without any excuse to justify such action.

Fishermen, farmers and sportsmen who believe there are too many dogs running about the woods are strongly urging the repeal of the law which protects the raccoon as a game animal. He is not included in the list of game animals for which seasons are fixed above. In case hunting is prohibited in September and October two months will be cut off the coon season anyway.

GAME CONDITIONS IN WESTERN CONNECTICUT.

The close season on birds practically closed in this section on the 19th instead of the 23rd of November, as it was useless to try to hunt with any expectation of success on account of the snow and cold.

There was a crust on the snow that would warn a partridge of the approach of danger two or three gun shots away. Very few were brought to bag after the snow came.

It no doubt saved hundreds of partridge. From reports from rabbit hunters who have been out since the season on birds closed, there is more birds left over than usual. Almost every hunter plans to go all they can the last week, as it generally is the best time to make good bags. In the past I have killed as many partridge the last week as I would all the rest of the season. This year I got one in the four last days. This was the case with dozen of others whom I personally know and hunt with. Four of us were foolish enough to go up to Litchfield County in an auto the last day. It was a trip you will not forget. We struck six inches of snow and so cold you had no feeling in your hands. We all had some good shots, but could not handle our guns and, after an hour, there was a young blizzard raging and we made for the auto in quick time most frozen. We vowed never to tackle that country in snow again. It took about an hour to run to New Milford and we killed more birds in Tom Young's hotel than we did any day this season.

From my own experience and what I can learn from the sportsmen I have come in contact with the past season has been as good, if not a little better than last year. In some localities where you would not find any birds in the last two or three years, they would be quite plentiful. The quail has certainly increased. I moved four flock in one day, which was unusual. The dry season no doubt, saved a good many birds, as there were very few days when the conditions were right for good dog work, the birds being wild on account of the noise in the leaves. The introduction of the pheasant has made better shooting in Connecticut, as the game commission liberated 6,000 in the State. You hear a good many say they ought to be protected, but as long as they can be propagated on the game farm and liberated each spring, it gives the sportsman

something to shoot and helps to protect our native game birds, which we have not been able to raise successfully up to now.

I know of parties who have spent a whole week chasing pheasants, whereas they would have been hunting partridge and quail.

On account of the dry season the woodcock shooting has not been up to the standard. On Dec. 2 I was out for a walk with my dogs and moved one. Now the season is over and we have had our fun, let us devote a little thought and time in looking after the beavies of quail we know are left and see that they are fed and cared for this winter. Get in touch with the nearest farmer where the quail hang out and see that he gets some feed. If he has a son get him to go with you to locate and build a shelter, where you can scatter feed, so they will get the habit of coming there for their meals. Our partridge will take care of themselves, as they will bud when they cannot get their other food. Another matter that every sportsman should take an interest in, is the Legislature at Hartford, where the laws are enacted. I have been on the legislative committee to attend the hearing before the Fish and Game Committee ever since the Pahquioque Rod and Gun Club was organized sixteen years ago. There is more good legislation started from this club in that time than all the rest of the state combined. The commissioners gave our committee the credit for starting the license law, Senator Bailey of Bethel, introducing the first bill which was defeated that year but the next session there were several bills introduced from different sections of the State which was through the efforts of this committee. Every sportsman should take an active interest in the fish and game laws. Now the duck law is taken care of by the Federal authorities which seemed to be the bone of contention for the last few years. Now we can go there united on the best laws to be enacted.

The present law on game birds is giving good satisfaction with those who want to see game increase, or hold its own, while others want to see a longer season.

We all know what that would mean under the present conditions with the auto to take you to any cover which was impossible to make before, unless two or three days were spent in going and coming. It is going to be hard in the future for our game to hold its own with the modern things to get it with.

The rabbit laws certainly should be improved on. There should be a limit placed on the number taken in a day, the season should be shortened, then there would not be any such slaughter as we read about once in a while. A party of rabbit hunters went for a week's hunt this fall and came back with 100 rabbits. They were not satisfied with getting that many but had to put it in the local paper. A man in the town where they hunted saw it and was furious over it. He sent the piece to one of the farm journals, and of all the call-downs you ever saw anyone get, it was the hunters in general. Any man from Danbury has got a black eye in that town now, no matter what he hunts.

I do not suppose the rabbit hunters will like it but it seems all the kicks you hear from the farmers is due to the rabbit hunters tearing down the walls to get a measly little rabbit instead of trying to find another. The law gives them the

use of a ferret more for that reason than any other, but still they persist in doing it.

This man said that inside of three years there would not be any land in that town but what was posted.

We all know if it was not for the farmer we could not hunt, then why not use him as we would like to be used and show him that it is for the sport and recreation we are after and not to cause him trouble, and very few will refuse to let you hunt.

E. H. BAILEY.

HUNTING IN THE ARCTIC AND ALASKA.

MARSHALL SCULL is one of the outdoor writers who understands how to tell his experiences in print. His new book, "Hunting in the Arctic and Alaska," (John C. Winston Company, \$2.50 net), will attract attention, first because it relates the experience of a most unusual hunting trip, and secondly because the book is so thoroughly well done. It gives the summary of a season's cruise down the Yukon River, through Bering Strait to Herald Island and Northeastern Siberia, and by Bering Sea to the Alaska and Kenai Peninsulas. Mr. Scull's party was the first one successfully to accomplish a hunting trip into this part of the Arctic. There have been many successful trips made into the Arctic Ocean on the eastern side of North America, but, because of the difficulties and great distance to be covered, hunting trips north of Eastern Siberia have not previously been attempted or successfully concluded. In this book Mr. Scull tells the story of a big game hunt, of which the trophies included practically all the game to be met with in Alaska, the western Arctic Ocean, and the shores of Siberia. But he does more, for the adventures which befell the party overshadow in interest the chase of polar bear and walrus. Incidentally he gives personal impressions of the important places in the interior and around the coast of Alaska.

Mr. Scull's party travelled altogether something like 17,000 miles, counting the trip across the continent from Philadelphia and to Alaska and return. Some of the readers of *Forest and Stream* may have had the pleasure of witnessing, through the medium of moving pictures taken by Captain Kleinschmidt, some of the thrilling incidents of Mr. Scull's journey, but the trip was not a moving picture expedition, and was conducted along the highest plane of true sportsmanship, and for the purpose partly of making collections for one or more American scientific institutions.

FAVOR GAME PRESERVES.

The Ohio State Agricultural Commission expects to ask the legislature to allow an appropriation of \$25,000, to be taken from the hunters' license fund, for the establishment of a game preserve in southern Ohio, in territory which includes Scioto, Pike, Ross and Winton counties. A special committee to investigate this project, reported to the commission Tuesday, favoring it.

A strong array of feature articles are scheduled for the big February number. It will be on sale on all newsstands. Do not miss it.

The Rise of the "China"

Give the English gentleman sportsman the privilege accorded the Oregon gunner, in bird shooting during the few months last past, and countless would be heard the exclamation "B' Jove! Some sport."

At the season's opening and for some time following, the beautiful pheasant, accustomed to protection, was slaughtered almost at will, but quick to learn its unexpected peril, the bird developed a cunning and a gameness satisfying both the amateur shot and the crack professional as well.

All are familiar with the method of hidden traps as practiced by some eastern rod and gun clubs at a clay pigeon shoot. Substituting the round whirling clay for the brilliantly feathered rooster and the limited park enclosure for the entire Willamette valley, one will then realize the delights offered when the state of Oregon removed the ban on killing its great game bird.

The China, the wild and undomesticated at heart, loves the cultivated fields and the adjacent shelter of low shrubs and other natural valley growths. Although he is met at times about the favorite dusting grounds of the upland quail, more often his red bobbing head is seen amidst the grain stubble and abundant fern fronds close the buildings of some valley farmer, as some clumsy sow or nibbling angora frightens him, clucking sharply away from a hidden spot in their fenced-in pasture.

The Boy and I had awakened early. To-day I was to be initiated into the delights of China shooting. As I pulled on my high topped boots, I shivered with the morning dampness. To waddle about in that wet growth and mud, which appeared from the open window and ever seems to affect this country out of doors, would surely grow webs between my toes at last, like all native sons are said to have acquired.

"Well Boy! bet I miss the first China," I offered. He made no reply but with a knowing grin completed his preparation and swung open the door.

Down a long sticky lane, leading to the big timbered pasture, we plodded some distance, then rolled over the rails and entered a big field to our right. It was a crop of knee high fern covering a long gently sloping hillside.

"Hold on till I pick up my ammunition," I commanded, leaning my gun against the fence, and stooped to gather up some fifteen odd scattered shells that had merrily bounded from the pocket of my hunting coat as I displayed my athletic ability as regards fences.

"All right," Bang! the Boy replied and pulled at the same wink of eye. Down tumbled a plump bird.

"What th—!" I commenced.

"Wake up!" he cut me short. "They are liable to be anywhere."

And certainly he was right. Just as sure as my attention would be occupied with some special attraction of nature, I would raise a clattering bird of bright colors, which would sail swiftly and smoothly away. If in the open I felt ashamed to miss but when at sharp angles amidst under-

brush and trees, the eye and finger had to be unusually active.

Sometimes several pheasants would rise together and but one red head among the hens. How careful must be the aim, for to bring down a hen was to break the law. Rather ticklish shooting. They seemed wise to the fact and would continually and swiftly dart across each other's line of flight. More often, however, the method of group flight would be different. Upon approaching near to the place of hiding one would be suddenly stopped and brought to position by the quick rise of a single bird. As it settled another would rise and so on until all had flown. Possibly a rooster would take one of the turns; you never knew.

Poor and bungling a hand as I consider myself with the trap gun, I easily bagged two handsome birds in the short few hours of that morning's walk. In the excitement of the hunt and the beauty of the damp sparkling morning, I had almost forgotten the Boy, though conscious of the report of his gun occasionally. He had covered much more ground than I, as is so often the case when I hunt with others. And truly he had been repaid. Four Chinas and two valley quail bulged his gaping coat sides.

Ridiculously feathered out he was. Long, black and yellow barred, tail feathers protruding in all directions.

Nor is the pleasure ended with the day's shooting. No better wild game is placed upon the table or cooked in the camp of any hunter or lover of wild meat, than that afforded by the China pheasant. Rich, dainty and tasty. It is indeed a far better, a more suitable prize of good shooting than is a silver match case, a box of New Club or some untried pump gun.

J. VAN VALIN, Salem, Oregon.

WORLD'S RECORD ON A CARTER ROD.

A. Carter & Co., fishing rod and tackle manufacturers, 11 South Molton St., Bond St., W. London, call attention to the fact that the world's record tuna of 710 pounds, the capture of which was noted in *Forest and Stream* some weeks ago, was brought to boat with one of their split cane rods. They also claim the world's record of 4,000 pounds of fish caught on two of their rods in eleven days. The announcement which Messrs. Carter & Co., make in another column of *Forest and Stream* will be interesting to American anglers, particularly the statement in their card that they have been established in business over two hundred years. This means that they were selling fishing tackle at least two generations before the American colonies had become independent. Messrs. Carter & Company will be glad to send catalogue to any American angler on request.

The Extermination of Bucks Threatened

By Henry Chase.

Bennington, Vt., Dec. 21, 1914.

Editor *Forest and Stream*:

In your issue of December 19 there was an article by your correspondent, Peter Flint, in which he gave an interview with a woodsman of Essex County, New York, who advocated the repeal of the present deer law of that state and the passage of one permitting the killing of does as well as bucks during the open season for deer. In this article Mr. Flint says, in conclusion, that he submits this interview in order to develop discussion between "the *theoretical* men, naturalists, etc., and the more *practical* men of the deer forests, who judge purely from local conditions."

This writer's idea that naturalists are merely *theorists* is a little far-fetched, to say the very least. The truth is those field-naturalists who study the wild life carefully in its haunts usually do so with unbiased minds and are the most practical men in the world on questions of proper conservation measures. To call such men mere theorists is a mistake. They are the very best authorities we can find to follow in such matters. They are observers with trained eyes and intellects, whereas the ordinary woodsman only sees things with one eye, half opened, as it were, and the premises on which his conclusions are based are usually false and wrong. Experience has proved that, while the evidence of such men is often worthy of consideration, yet, as a rule, it is not a reliable guide for the enactment of constructive legislation to conserve the wild life, because such men are generally more interested in easy methods of procuring game than in preserving it.

If there is one thing that has been thoroughly established by the practical experience of the past it is that the females and young of the deer should have practically permanent protection unless it is desired to exterminate the whole species. It is quite too late for some woodsman to now come forward with a great discovery that this theory is a mistake. He is simply going over ground and discussing something that is about definitely settled against his notions.

This argument of Mr. Flint's lumberman friend we have heard before. Only a few years ago it was revived here in Vermont when a law was passed permitting the killing of does. But two years operation of that measure proved that the deer would be very quickly exterminated unless it was repealed and all reasonable sportsmen were convinced that as a permanent law it would be a serious mistake. So we returned to the buck law at once. Every year new evidence is being brought forth which tends to show that the only safe deer law is one that permits the hunter to kill and take but *one* deer and that a buck with horns at least three inches in length. Two or more deer to the hunter is too much, and no one but an outright game-hog wants more than one.

Reading this interview of Mr. Flint's through carefully one soon discovers that the speaker therein quoted is begging the question and fully answers his own argument by his admissions. In the first place he admits that the deer are in-

creasing rapidly in his section—there never were so many before—but he will not or cannot see that the buck law has anything to do with this, but attributes it to eliminating hounding, a measure which has been in force for many years. He complains, however, that the bucks are threatened with extermination and he sees nothing but does and fawns in the woods. Now, just how the deer can be increasing so rapidly while there is such a great dearth of bucks is enough to perplex any man of common sense.

Again, this man says the majority of the does are "dry" or barren. How does he know they are barren? Why, simply because they were not all accompanied with fawns when he saw them in the summer. This simply shows the fallacious grounds upon which his argument is based. To find out whether a doe is barren without killing her and performing a post-mortem examination is a very difficult task. Practical field-naturalists always find this to be true, because it requires a long series of careful observations and then even one may be fooled about it. Of course, it is to be conceded that some old does are barren—naturally so, and is might be perfectly safe and even good policy, after many years of a stringent buck law to permit a short open season for killing one deer of either sex. But to allow any such measure to exist for any length of time means certain and inevitable extermination of the deer. There is no question about this.

It is a matter of common knowledge that where the deer are in a rather limited and confined territory the bucks are highly polygamous and one will serve a dozen or more does. True, it is possible that the bucks may become so decimated from over-hunting as to be reduced beyond the proper limit for normal reproduction in a given territory. In that case, however, it is a suicidal policy to advocate the killing of does. What should be done is kill fewer bucks; shorten the open season and allow only one buck to the hunter. This will eventually restore the natural balance of supply without weakening the

breeding stock. But allowing the does to be taken certainly won't have that effect.

That portion of this woodsman's argument with respect to guides killing deer promiscuously in order to get bucks for their patrons is the old story. It is the same stock argument we hear everywhere, and is on a par with the one by fishermen about the inefficacy of the six-inch trout law—how all small fish are killed when pricked with the hook and are thrown back into the water dead, etc. What nonsense! If it be true these guides are thus violating the game law, is that any reason for changing the law to accommodate them? Will such a concession conserve the deer supply, or will it not provoke these guides to violate other laws?

Also, just note this argument, by this woodsman: Allow each hunter to kill one full-sized deer of either sex. Then your city hunter would be satisfied with the first deer he got, etc. So, it is the city hunter who is causing this extermination of the bucks, is it? And each and every one of them always goes home with a buck, and the guides kill several does and fawns before they get a buck for these patrons? The absurdity of this as a general proposition is apparent upon its very face. According to this man there are now some 15 or 20 does to every buck in the woods, and yet if the law permitted the does to be killed as well as the bucks this would be a measure of conservation and the aggregate number of deer killed annually would not be increased. What rot!

In spite of these old stock arguments we always hear wherever a good buck law prevails, most of the states are adopting it as a settled policy that only one deer may be killed during the open season and that deer must have horns distinctly visible—in other words, a buck more than a yearling in age. All this with excellent results and upon the argument and the evidence brought forward by field-naturalists who are just as practical as any woodsman and possessed of considerably more real understanding of the true situation.

In Defense of the Pennsylvania Commission

Johnstown, Pa., Dec. 26, 1914.

Editor *Forest and Stream*:

You usually have such good stuff in your magazine that it spoils my Christmas to see you publish the efforts of Frank G. Harris, ex-State treasurer and attorney, and president of the Springs Rod and Gun Club, to discredit sportsmen like John M. Phillips, Game Commissioner, and Dr. Joseph Kalbfus, secretary of the Game Commission, by a garbled, unfair and unsportsmanlike account of the notorious Dickinson case, in which lying was as common as in an East Side gunman case, and which was won by the defense largely because it refused to identify the head presented in court as the head of the deer killed by Dr. Dickinson.

Mr. Harris fails to explain that his club, of which the defendant was a guest, inched up as close to state forestry lands and a game preserve as it was allowed to do. He also fails to say that the club was on trial, rather than Dr. Dickinson, and that its members were the fellows who caused delays innumerable in the evident hope of tiring out the Game Commission. He does not explain why the first trial judge in the case was reversed without ceremony by the Superior Court, which sent it back for retrial. The first judge said the good doctor was not guilty because the law had been changed since he committed the act for which he was indicted. Changing the law to let out some friend has been tried before, and

maybe since, but not with great recent success in this state.

Lawyer Harris also fails to say that in the trial which resulted in acquittal the testimony of the states experts on deer was not accepted, or that the express tag records on the dead baby deer showed that the weight of the animal was considerably less than 75 pounds.

This letter is not intended to supply you what Mr. Harris omitted. It is to respectfully suggest to you that an attorney in the case, and the president of the club which entertained the defendant, can hardly be expected to tell more than one side of the story, and that the other side is certainly entitled to a hearing. Also that his conclusions from the verdict, that Pennsylvania will not stand for a game commission which tries to enforce the law without fear of clubs of millionaires, is very much wrong. Pennsylvania will stand for no other sort of a game commission.

The Game Commission last year bought over one hundred deer from a private preserve in Clearfield County, the abode of Mr. Harris and his club, for stocking four closed counties. At the urgent request of Clearfield county sportsmen, who were all right, some of those deer, intended for closed territory, were turned loose in Clearfield county, upon promises galore that they would be protected. Several of them were shot as soon as the season opened. Dogs ran others. A justice of the peace, trying a dog case, had the confession of the owner of the dogs that a deer was run. A proper complaint had been made and a deputy game protector had all the evidence needed. There had been many complaints from the same neighborhood. That justice of the peace, although the law makes a fine mandatory, accepted the confession and discharged the defendant. In Clearfield county they can find no way to get at that justice except that the judge promised to call him into court and reprimand him.

That is the sort of influence exerted by the Harris crowd. That is the backing given a deputy game protector who tried to enforce the law. We could give you other instances to show what brand of persecution is handed out to "hunting camps of reputable citizens, clean sportsmen, and men who have never been charged with any violation of the game laws." We are their neighbors and we know how they protected the deer the state bought for us and gave to them because we were good enough sportsmen to agree to it.

That will be all about that. We expect Pennsylvania to revise its game laws this winter. Get in the game and help. That will atone for this Harris stuff. There are 300,000 licensed hunters in the state and 100,000 more who are exempt as owners of lands. They are getting together with the game commission and will ask for the legislation they want. It is a big state, and lots of room for argument on seasons, bag limits and other regulations, but no room for knocking the game commission or for wasting space and tears over things like this Dickinson case. The doctor is all right but if the sportsmen of the state listened to some people it would not be five years before the public at large would be paying the bills and clubs like his would have all the hunting.

JOHN E. GABLE.

President, Johnston Camp, United Sportsmen.

PENNSYLVANIA SPORTSMEN.

(Continued from page 32.)

lation that will permit the acquirement of surface only or the expenditure of more than \$5 per acre, to get the land in fee simple.

The counties in the western end of the state also furnish the greater proportion of the hunter's license money, and the men who are paying this want to see the state establish "protected areas," if necessary, on leased lands in large areas to which all hunters will have access. In the centers of these large areas the game can be propagated by the game commission for restocking the covers about and planting in other sections where the game is depleted.

To co-operate with the fish, game and forestry departments in this phase of the work and that of properly planting fish, protecting streams from pollution and dynamiting and enforcing the laws, it is necessary that strong, active local organizations be built up which will have a voice in determining the general policies of the state departments through a state organization and which will be enabled to advise and help the various state commissions in reference to matters concerning their respective districts.

United Sportsmen Split.

The United Sportsmen of Pennsylvania are practically split asunder through disagreements between the president and members of the organization in the southeastern, central and western counties. The following three out of four directors elected have resigned: H. E. Brooks, Jr., of Pittsburgh; H. F. Ward, of Washington, and P. J. Little of Ebensburg. The other director, E. A. Weimar of Lebanon, has not yet resigned, so far as the western camps have heard.

An effort is being made to secure a strong representative from each county on the first state governing board of the new organization, and it is expected that at least half the counties will be organized by April 1, as the intention is to place several field organizers at work without delay, because the legislative program is important and pressing.

The new organization proposes also to take the qualifications of candidates for the appointments to the 47 new game protectorships, and 20 new fish wardenships that the Legislature is expected to create, and to insist on the appointments of high class men who know the woods and the streams and whose honesty and sportsmanship is beyond question. It is expected that there will be at least one game protector in each county and the local organization of the league in that county will be expected to recommend the proper man for the place.

The question of an adequate and thoroughly safeguarded bounty system is also to be taken up and the new organization will see that money is provided to pay bounties and that the bounties on the wild cats are increased to the point where it will be made worth while for residents of mountain districts to engage in hunting down systematically these pests which are killing hundreds of deer and turkeys and thousands of grouse and rabbits every year.

All in all, the new organization promises to fill a long-felt want for a live, active, fighting organization for wild life protection and to extend over the state and accumulate a membership of at least 100,000 in a few years. The

dues will be small and government plan such that every member will know what is going on in the organization and will be given definite work to do to help along the cause and will have a voice in its affairs.

GROW GOLDEN SEAL.

Speaking of plants that may be cultivated with little trouble and with profit to the grower, a writer in Green's Fruit Grower advises those who have a bit of unused woodland or underbrush to plant golden seal. He considers it one of the most remunerative of plants to raise, and says that it requires very little care.

The roots of this plant sold fifteen years ago at thirty cents a pound. The price has steadily advanced; the root is now worth five and one-half dollars a pound, and the dry leaves and stems now sell for twenty-five cents a pound. It is one of the most widely used drugs known to the modern pharmacopœia.

At the end of three years, you can sort out the mature roots from the young ones, and wash and dry them for sale, while you put the young roots back in the ground. At the end of three years the grower has a yearly crop of roots, and, beginning with the first year, he has a yearly crop of leaves and stems. This is one of the crops on which there is an absolute certainty of a market that will run after you as soon as any golden seal buyer knows you have the goods to sell. Go and ask your druggist, or your doctor, about the value of golden seal.

Forest and Stream is an Honorary Member of the Interstate Association for the Promotion of Trapshooting.

DRIVERS AND TWISTERS.

Tid Bits of News and Gossip.

having decided to join New Rochelle Yacht Club and shoot "reglar."

The scheme of running the trap department monthly, instead of weekly, will be a great advantage to shooters and clubs. It will enable us to furnish the full month's scores, a ready reference in one book, and, instead of lifting scores and story from the newspapers, as is generally done by the weekly trap papers, we will be able to get scores and story direct from the different clubs, and will have time to get them whipped into original style and lend a bit of originality to what the general reader complains of as "dry junk, which keeps space that should be devoted to hunting and fishing." We hope to be able to offer trap shooting in a form that will entice every reader of this paper to the trap columns and make every reader a trap shooter, as well as every trap shooter a fisherman and field shooter. Our only suggestion is that shoots to be announced should be sent us as early as possible. We are ready for you, now shoot.

We present, in another column, an original sketch by Mr. Frank G. Drew, sales manager Winchester Repeating Arms Co. This was made at the last Interstate meeting, while one of the interesting discussions was going on as to whether it was legal to use the new hat of the treasurer-manager to collect the ballots. The original of the drawing was, well some say Tom Keller, who puts "steel where steel belongs" and Peters where Peters belong. We ask brother Keller's pardon for the proximity of a libel.

The plans for Long Island Sound Championship are shaping up. Dates have not been set but likely it will be in February. Last year's championship was won by Hazen Hoyt of Manhasset Bay Yacht Club. A *Forest and Stream* trophy will be shot for at this series. Full particulars may be obtained from George H. Granbery, New Rochelle Yacht Club.

As an indication of the drag trapshooting has on its devotees, an instance is cited in the case of Fred Howard, who won the handicap event at New Rochelle a few days ago. Fred thought he would not shoot and, on being urged, said:

I am afraid to start again as business keeps me pretty close to the wheel, and while it's a cinch to cure the drink habit—not that Fred ever had it—it's pretty nearly impossible to get over the awful desire to crack your entire income away at the elusive aerosaucer. The habit is back, Fred

It is interesting to note that fifteen *Forest and Stream* trophies were shot for on Thanksgiving Day, making nineteen already awarded. Nine thus far are scheduled for Christmas shoots. This trophy is a very handsome one and is offered on a basis that enables every club to shoot for it. Let me tell you how to go about it. It is a silver cup, 13 inches high, made for us by International Silver Company.

The novice event at New York Athletic Club is proving exceedingly popular. It brings out two or three new shooters each week and the handicaps are so well arranged that a tie invariably results. Other clubs would do well to schedule an event of this sort.

W. G. BEECROFT.

WHITE PLAINS GUN CLUB.

President Guy Ward Again on Deck.

Owing to the inclemency of the weather only fourteen shooters faced the traps at the White Plains Gun Club, Gedney Farms, White Plains, N. Y., on Saturday afternoon, it being the last shoot of the year.

At times it was impossible to see the targets on account of the heavy mist and rain. Guy Ward, president of the club, who is slowly recovering from a case of infection, caused by a splinter of steel in his left hand, came out and shot 25 targets. Things seem to work perfectly when Guy shows up at the club, and aside from the fact that he weighs almost 250 pounds, he is as lively and active as some of the less fortunate when it comes to size. Harry Allyn who has just re-

turned from a week's hunting down on Long Island, showed his ability as Field Captain to good advantage, by having all events over before it became dark. Mr. Frederick C. Sayles of Irvington, N. Y., a new member of the club, has improved in his shooting so much so that he had to shoot off two events winning one, and losing the distance handicap. T. L. Lawrence won the High scratch Take-home trophy with a score of 86. C. H. Hadlock won high handicap event also a leg on the Bond Trophy, with a score of 98. F. C. Sayles won second high handicap trophy, with a score of 93. J. B. Talcott tied with J. T. Hyland for third high handicap trophy, score 88, Mr. Hyland winning in the toss of a coin. In the Distance Handicap F. C. Sayles tied with J. B. Talcott with a score of 19, Mr. Talcott winning the shoot-off.

YESTERDAY AND TODAY

rooms. A fine representation of the county's leading sportsmen were present and everyone before he left was a member.

The election of permanent officers for the year was in order: The following being the result of the ballot casting: President, D. Newton Henson; vice-president, Clarence Gaylor, Williamsport; secretary, Gorman S. Buzzard, also secretary of the Hagerstown Board of Trade; treasurer and field manager, Samuel B. Haines.

The secretary was instructed to write L. R. Worthington, secretary of the State Organization with the object of this club becoming members of the Inter-State Association anticipating a registered shoot here during the coming summer, when it is expected several hundred of the leading trap shots throughout the East will assemble here and compete in a several day's handicap. The secretary was instructed to draw up suitable constitution and by-laws concerning the privileges of members.

PINEHURST CLASSIC.

Pinehurst, N. C., Dec. 26, 1914.

Four days originally, Pinehurst's eighth annual midwinter handicap scheduled for January 19 to 23, now occupies the full week. For several years past, the regular program has been preceded by informal sweepstakes, and this year a large number will arrive on the Saturday preceding.

The big entry list is growing daily and bids fair to very materially advance last year's record which exceeded the hundred mark, and as representative and classy a field as the sport alluring has ever called together.

Workmen have been busy at the grounds for a week past in anticipation of the event, and thus early private ammunition has been received in large quantities.

HERBERT L. JILLSON, Secretary.

ESSEX COUNTY CLUB.

Weather Too Much for Trap Springs.

A trifling temperature didn't keep the Jersey crackers from trying to break clays to-day, but the trap springs refused to work in the cold so after three events, during which the traps threw anywhere from ten to forty yards, without warning, the shoot was declared off:

The summaries:
 Take Home Prize, 25 Clay Birds (Handicap).—James A. Hart, 21; C. H. Daly, 22; G. H. Hyatt (3), 22; R. Riker (8), 19; Peter Hauck, Jr. (3), 22; Paul Heller (3), 20; T. H. Gillespie (8), 11; S. H. Harris (8), 11; C. E. Van Vleck (8), 24; L. E. Wanner (8), 19.
 Monthly Prize, 25 Clay Birds (Handicap).—Hart, 11; Daly, 23; Hyatt (3), 21; Riker (8), 20; Hauck (3), 23; Heller (3), 21; Gillespie (8), 12; Harris (8), 11; Wanner (8), 12. Shoot-off at 25 birds, Hauck won with 21 to 17 for Daly.
 Season's Point Prize, 25 Clay Birds (Handicap).—Hart, 16; Daly, 17; Hyatt (3), 19; Riker (8), 15; Hauck (3), 19; Heller (3), 16. Shoot-off postponed to New Year's Day.

CINCINNATI REVOLVER CLUB.

The Red team mustered nine members for the match on December 23, being opposed by only six of the Blues, and consequently had an easy victory, with a margin of 599 points. A readjustment of the teams seems necessary, so that they may meet on a more equal footing in regard to attendance. The Reds also carried off high individual honors, Yungblut putting up a score of 213, with 21 shots in the black, six of them centers. Col. Hake, Captain of the Blues, was second with 206. On his third target he had a fine group of four ten's and a nine, and captured the coveted 5-shot button, with the season's record score, 49, and one that will be hard to beat.

He shot out of the black ten times, but his other shots were well placed, nine of them being centers, five in the 9- and one in the 8-ring. Elmer Hake, who was home for the holidays, shot with the Blues, and made third high score, 205, placing 19 shots in the black, getting four centers, nine 9's and six 8's. K. Stevenson was not quite back in form, although he went over the double-century mark. A. Kenan got a poor start, his first target spoiling his chance to finish in the flight, and his third being below his average. But for these two he would have been at the top. J. Stevenson started off well with three centers, and a total of 45 on his first target, but he failed to keep up the pace, and was tied with

Kenan on 197. The club is very much elated over winning the team match with the Chicago Club, and another race, in fact several, will be arranged for during the winter. The next meet will be on Jan. 6th, when the annual meeting and election of officers will be held.

WINCHESTER

SELF-LOADING SHOTGUN

12 GAUGE, MODEL 1911

The Winchester Self-Loader is the wild fowl gun par excellence. The recoil ejects the fired shell, feeds a loaded shell from the magazine into the chamber, cocks the hammer and leaves the gun ready to be fired again. In wild fowl shooting the game often comes fast and when least expected. Shoot a Winchester Self-Loader and you can always be prepared for a series of shots, for the loading and firing of this gun are controlled by the trigger finger. As the recoil in this gun is used to operate the reloading mechanism, the "kick" of heavy loads is minimized, making the gun very pleasant to shoot. It is a hammerless, two-part take-down, five-shot repeater that works well with all standard loads. The working parts being made of Nickel steel, make it strong and safe. Ask your dealer to show you the Winchester that's

LOADED BY RECOIL, CONTROLLED BY THE TRIGGER FINGER.

Take Stock in "Piper"

Says the broker: "You want to chew tobacco to get the real juicy sweetness out of it—and you want to chew "PIPER" to get the top-notch plug chewing of the world. Down in Wall Street we use it all the time. "PIPER" not only saves our time—it multiplies our tobacco enjoyment."

PIPER Heidsieck

Chewing Tobacco—Champagne Flavor

The greatest distinction about "PIPER" is to a man who likes a smacking good relish to his chew is the famous "Champagne Flavor." The winey taste mingles on his tongue with the natural, mellow sweetness of the ripest, richest, carefully selected tobacco leaf. "PIPER" is the highest type of chewing tobacco in the world—wholesome, healthful and satisfying.

FREE Send 10c and your tobacco dealer's name, and we'll send a full-size 10c cut of "PIPER" and a handsome leather pouch FREE, anywhere in U. S. Also a folder about "PIPER." The tobacco, pouch and mailing will cost us 20c, which we will gladly spend—because a trial will make you a steady user of "PIPER."

Sold by dealers everywhere, in all size cuts from 5c up—also in handy 10c tin boxes.

NEW REVOLVER CLUB, CINCINNATI.

Some changes in place were made at the third shoot of the club on Dec. 22, Daniels taking the lead with a score of 181, while Anderson, who held first place at the previous meets, was second with 175. The novices showed improvement on their first efforts, though not shooting an even pace. Daniels and Meinburg tied for high 5-shoe score on 41, with Anderson a close second with one target of 40. Before the season closes, the club should be able to pit a five-man team against one of the Cincinnati club, with a fighting chance of winning a match.

OSSINING GUN CLUB.

Ossining, N. Y., Dec. 25, 1914.

The following scores were made at a regular practice shoot of the Ossining Gun Club to-day. The thermometer stood close to the zero mark and the shooters were bundled up so scores suffered in consequences. Earl Rich, another new member, shot a shot gun for the first time and connected with two out of ten targets. New Years Day a prize shoot will be held in the morning, starting up at 9:30 and a prize shot gun

The "Old Reliable"

PARKER GUN

Try a 20-bore PARKER Gun if you wish to truly enjoy shooting. They are light, handy, and powerful shooting little guns. Just the thing for ladies' use, and for those who wish the maximum of pleasure in shooting, coupled with the minimum weight to be carried afield.

We specialize on 20 and 28-bore guns.

C. G. BLANDFORD, Captain.

PORT WASHINGTON YACHT CLUB. Events Pretty Evenly Distributed.

The pre-Christmas shoot was fairly well attended. On the weekly cup H. H. Shannon came over high with 23 from 3 unshot skalers, being tied by D. S. Cornwell. Monthly fell to the chilled of a triple tie, Shannon, Smull and Prankard. Limb on yearly passed up to Smull with a neat 24 from one gratis target. Dan Smith with 2 up made 24 for the special, which was tied by Thompson from a handicap of the same dimensions.

Totals:

Weekly—L. B. Smull (1), 22; D. E. Smith (2), 18; C. M. Prankard (5), 20; F. Winslow, prof. (0), 8; C. E. Hyde (3), 18; C. L. Thompson (2), 21; H. H. Shannon (3), 23; F. Steiner, visitor (0), 11; D. NATIONAL RIFLE ASSOCIATION.

Thirty-Six Clubs Shoot at Opening Tournament.
Washington, D. C., Dec. 26.

The opening of the rifle club gallery championship this week was remarkable. It brought a representation from thirty-four states, thirty-six teams shooting. Bridgeport, Conn., won in Class A event beating Manchester, N. H. 990 to 962. Second high score in all classes was made by Kings Mills, Ohio (class A) with 988. Complete scores follow:

Class A.—Bridgeport, Conn., 990, vs. Manchester, N. H., 962; Kings Mills, Ohio, 988, vs. Adrian, Mich., 932; District of Columbia, 979, vs. Dickinson, N. D., 951; Warren, Pa., 985, vs. Stillwater, Minn., 934; Cleveland, 986, vs. Boston, 935; Bucyrus, Ohio, 977, vs. Birmingham, 965.

Class B.—Hopkins, Minn., 958, vs. Madison, Minn., 932; Hoosier Club, Indianapolis, 930, vs. Tacoma, Wash., 925; Marion, Ohio, 959, vs. Des Moines, 930; Bangor, Me., 980, vs. Youngstown, Ohio, 950; St. Louis, 945, vs. Milwaukee, 943; Watertown, N. Y., 947, vs. Louisville, 916.

Class C.—Buffalo, 962, vs. Kane, Pa., 914; Watertown, S. D., 973, vs. Tucson, Ariz., 921; Ogden, Utah, 956, vs. Louisville, 903; Salt Lake City, 932, vs. Corinna, Me., 704; New Haven, Conn., 951, vs. Detroit, defaulted; Albion, Ind., 894, vs. Payette, Idaho, 883.

JERSEY CITY GUN CLUB.

George Piercy Shoots an 81 Per Cent. Clip.

Jersey City, N. J., Dec. 19, 1914.

This was a disagreeable day at the traps, a mixture of rain and snow and of course, the scores were in keeping with the weather. Geo. Piercy was high gun with an average of 81 per cent and Baldwin and Dixon tied for second with 80 per cent. Pretty poor shooting boys, but considering the elements, we'll excuse you this time.

Scores made in strings of 25:

Culver	18	20	19	16

NEW REVOLVER CLUB, CINCINNATI.

Anderson High With 183.

Eleven members were on hand December 15th for the club's second practice shoot. The scores made averaged a trifle lower than at the first meet. Anderson was again high man, with 183, one point lower than his initial record. His third target showed 42, which was high 5-shot score for the evening. Daniels landed in second place with 170, and was also second high 5-shot man with 40 on his last target. The club has not yet settled on a name, the question being deferred until it is decided whether, or not, it will affiliate with the South-western Ohio Fish and Game Protective Association.

Anderson	37	38	42	36	30-183
Phillips	23	22	30	27	29-131

Spencer	4	18	8	14	8-52

SECRETARY.

CINCINNATI REVOLVER CLUB.

H. D. Eustis Gone to Do Real Shooting.

Thirteen members showed up at the range on December 16, the Reds having seven men to the Blue's six, and, naturally this team made the best showing, and scored another victory. The Reds will be a man short the balance of the season, as H. D. Eustis, the 45-automatic man, has left to join the fighters in Europe, where he will

undoubtedly give a good account of himself. The Blues had high man of the evening, H. Cox recording a total of 204. Fifteen of his shots were in the black, and seven of them centers. His third target was his best, showing a nice group for a total of 45. Next to him came A. H. Kenan, of the Reds, with a total of 201, but although he put 19 shots in the black, he failed to find the center but once. J. Stevenson of the same team, was third, with 198, six shots in the center. The Reds won the match by 93 points, in the total which included penalty scores. The telegraph match with a team of the Illinois State Revolver Association, Chicago, was won by the home team with a margin of 8 points. At the end of the first round the Chicago boys had a lead of 5 points. The scores were not so good as usual owing to the frigid temperature in the range room. The high 5-shot button was won by K. Stevenson who scored 47 on his second target. McCarthy was next with 46.

UNITED STATES REVOLVER ASSOCIATION.
A. P. Lane Wins Grand Aggregate Prize With 1,242 for Four Matches.

Awards of national championship prizes and State championship medals have been announced by the United States Revolver Association in connection with the recent outdoor contests, which were held contemporaneously in different sections of the country. Although bad weather prevailed during many of the competitions, the results were satisfactory. Following are the national medal winners in each class:—Match A,

A. P. Lane, New York; match B, George Armstrong, San Francisco; match C, C. McCutcheon, Denver Revolver Club team; match F, Dr. J. H. Snook, Columbus, and the grand aggregate prize for scores for four of these matches was awarded to A. P. Lane for a total score of 1,242.

Among the double winners of State championship medals in classes A and B were the following:—George Armstrong, California; Dr. O. A. Burgeson, Colorado; Dr. Harry E. Soars, Massachusetts; A. P. Lane, New York; Dr. J. H. Snook, Ohio; Dr. William E. Quicksall, Pennsylvania, and Fred E. Spooner, Rhode Island.

MARINE AND FIELD CLUB.
One Event All Weather Allowed.

Gravesend Bay, Dec. 26, 1914.
Rigors of the weather permitted only five target wreckers to attend to-day. Only one event was pulled, that being President's Cup, won by E. H. Lött, with a rattling score of 92 from scratch, on 100 scalars. Other breakage was: Dr. Hopkins, 8-91, L. H. Steadman, 15-85, P. R. Towne, 10-84, E. Fassett, 10-75.

NEW ROCHELLE YACHT CLUB.
Four Interesting Meets Recorded Herein.

These have been busy days in the trap shooting branch of the yacht club. On the 16th an invitation shoot filled the scores. Some surprise

was caused when Fred Howard, who years ago was one of the foremost crackers, but who has not shot any in several years, kopped the main handicap event with 87 actual smashes. High scratch man was D. F. McMahon. The team event was a sail over for New York Athletic Club, the only entry. The formidable array from Travers Island put the chloroform to the ambition of the other dried mud destroyers.

On Saturday (19th) the entry list was light but the scores classy. George Granbery topped the salts on the number of wins as well as on excellence of scores. He won leg on December cup with 48 from 6 gratis saucers, after a tie with B. R. Stoddard, shooting from 6. Each got credit for a line on the cup. For take home trophy Granbery and H. S. Bullock each went straight, shoot off went to Granbery. Bullock with one gratis scaler scored on accumulation cup with 24. Granbery went straight on ten bird scratch event and Bullock took 15 rock scratch pull with 14.

Sunday (20th) brought out a cracking crew of crackers. Once more George Granbery topped the bunch, getting high gun with 90x100, and 25 from one in a tie with B. R. Stoddard for Monthly cup, a leg went to each. Joe Donovan with a straight won 25-bird handicap, shooting off with Fred Howard. H. S. Bullock won handicap shoot with 21 from 20 yards, shooting off with Howard and Moore.

NEW ROCHELLE YACHT CLUB.

New Rochelle, Dec. 24.

Seven members of the New Rochelle Yacht Club faced a biting wind to-day to compete in their holiday shoot at the traps. Before the contests ended they had their trigger fingers almost frostbitten, but C. A. Marsland had little cause for regret, for he won four of the six prizes, including the Christmas Day Cup.

THURSDAY.

SATURDAY.

December Cup (Handicap). Fifty Clay Birds.—G. P. Granbery (6), 48; B. R. Stoddard (6), 48; H. S. Bullock (4), 47; A. Stoddard (10), 44. No shoot-off, Granbery and Stoddard each winning a leg on trophy. Accumulation Cup (Handicap). Twenty-Five Clay Birds.—H. S. Bullock (1), 24; B. R. Stoddard (0), 20; A. Stoddard (4), 22; G. P. Granbery (0), 20. Take Home Trophy (Scratch). Twenty-Five Clay Birds.—G. P. Granbery, 25 straight; H. S. Bullock, 25 straight; A. Stoddard, 22; B. R. Stoddard, 21. Shoot-off won by Granbery. Fifteen Clay Birds (Scratch).—H. S. Bullock, 14; B. R. Stoddard, 13; G. P. Granbery, 13; A. Stoddard, 9. Ten Clay Birds (Scratch).—G. P. Granbery, 10; H. S. Bullock, 9; B. R. Stoddard, 7; A. Stoddard, 6.

SUNDAY.

Monthly Cup (25 clay birds; handicap)—B. R. Stoddard (2), 25; G. P. Granbery (1), 25; C. C. Moore (5), 25; D. Giriat (4), 24; J. P. Donovan (4), 23; F. W. Howard (3), 23; H. S. Bullock (2), 22; A. Stoddard (6), 21. Legs won by B. R. Stoddard and Granbery. Accumulation Cup (25 clay birds; handicap)—J. P. Donovan (0), 25; F. W. Howard (3), 25; G. P. Granbery (0), 23; C. C. Moore (4), 23; H. H. Todd (7), 23; B. R. Stoddard (0), 22; H. S. Bullock (0), 22; D. Giriat (3), 21; J. A. Mahlstedt (7), 20. Won by Donovan. Distance handicap (25 clay birds)—H. S. Bullock (20 yards), 21; F. W. Howard (19), 21; C. C. Moore (17), 21; J. P. Donovan (18), 20; H. H. Todd (16), 19; D. Giriat (18), 16; A. Stoddard (16), 16; B. R. Stoddard (19), 15. Won by Bullock on shoot-off.

CHRISTMAS.

Holiday Cup (Handicap).—Fifty Clay Birds. C. A. Marsland (14), 50; A. E. Eldredge (12), 48; H. S. Bullock (6), 44; G. P. Granbery (6), 42; B. R. Stoddard (6), 41; A. Stoddard (12), 40. Accumulation Cup (Handicap).—Twenty-five Clay Birds. C. A. Marsland (2), 25; A. Stoddard (7), 24; A. E. Eldredge (6), 23; B. R. Stoddard (0), 19; H. S. Bullock (0), 19; G. P. Granbery (0), 17. Distance Handicap.—Twenty-five Clay Birds. G. P. Granbery (19 yards), 19; C. A. Marsland (16 yards), 18; J. A. Mahlstedt, Jr. (16 yards), 17; B. R. Stoddard (19 yards), 16; H. S. Bullock (19 yards), 16; A. E. Eldredge (17 yards), 16; A. Stoddard (16 yards), 16. Fifteen Clay Birds (Scratch).—B. R. Stoddard, 14; H. S. Bullock, 13; A. E. Eldredge, 12; G. P. Granbery, 11; C. A. Marsland, 11. Ten Clay Birds (Scratch).—C. A. Marsland, 9; G. P. Granbery, 8; A. E. Eldredge, 8; B. R. Stoddard, 7; H. S. Bullock, 7.

MINNEAPOLIS ROD AND GUN CLUB.

Good Scores Made on New Range.

Fort Snelling, Minn., Dec. 19.

Good scores were made possible by the quiet weather at the new shooting range of the Minneapolis Rod and Gun Club in the weekly Sunday shoot at Fort Snelling. M. R. Thompson and F. Jones were high amateurs and J. E. Dickey was high professional. The shoots at the new range are open to all followers of the sport as the club wishes to interest other clubs in the new range, looking to a centering of all the clubs at that point.

The scores yesterday:

*R. R. Barber, 75, 67; F. S. Furote, 100, 79; M. R. Thompson, 150, 138; D. Quimleven, 50, 36; D. H. Wilson, 75, 38; C. G. Stone, 75, 52; Mrs. Barber, 50, 41; Z. H. Austin, 100, 84; H. B. Clark, 50, 29; E. J. McDonald, 75, 58; J. C. Famechon, 150, 131; *J. E. Dickey, 125, 104; *C. E. Robbins, 100, 91; H. Hupper, 75, 44; W. W. Richard, 100, 85; W. R. McKinnon, 75, 52; J. A. Lawson, 75, 60; Dr. Hanley, 75, 50; W. H. Mitchell, 100, 81; H. P. Bend, 50, 43; T. E. Covington, 30, 18; C. T. Schuneman, 30, 14; E. Hertogs, 3, 17; A. Jurgens, 50, 38; Evjin, 50, 29; J. M. Burdick, 100, 88; C. L. Purcell, 50, 30; F. Jones, 125, 114.

*Professionals.

BOSTON ATHLETIC ASSOCIATION.

Kidder Kaptures King Kale.

Shooting from a handicap of twenty gave Kidder a full score on one hundred rocks, the same being high score for the day. On actual breaks Snow was high with 91. Second score in handicap was Farmer, with 97 from eight. Williams and Burr tied for second high actuals with 90 per piece. Murray Ballou was third handicap man with 94 from seven.

Scores:

Name	Broke	Handicap	Total
Kidder	81	20	100
Farmer	80	8	97
Ballou	87	7	94
Marston	72	22	94
Lynch	85	6	91
Snow	91	.	91
Williams	90	.	90
Burr	90	0	90
Osborn	87	0	87
Blinn	86	.	86
Carlton	66	20	86
Clark	79	7	86
Ellis	86	.	86
Heintz	68	15	83
Tucker	74	8	82
Dickey	80	.	80
Davis	78	.	78

C. C. CLAPP, Captain.

FAVOR GAME PRESERVE.

Prominent sportsmen of Cincinnati and vicinity favor the proposed legislation of taking \$25,000 from the hunters' license fund to establish a ten-thousand-acre forest, bird and game preserve in Southern Ohio. Recommendation favoring this legislation was made to the Agricultural Commission at Columbus, Dec. 15. The Forestry Committee is credited with the statement that if the Legislature acts favorably upon this bill the game preserve will be an actual reality in Ohio by next fall.

TWIN CITY TRAP SHOOTERS ASSOCIATION FORMED.

Minneapolis, Minn.

Representatives of gun clubs of St. Paul and Minneapolis met recently at the Traffic Club and organized the Twin Cities Trap Shooters' Association. Seven clubs were represented. The constitution and by-laws were discussed, but no final decision was reached. Election of officers also was postponed.

Dr. R. G. Josling of the Minneapolis Rod and Gun, J. C. Famechon of the Minikahda, Fred Richter of the Interlachen, H. Austin of the Minneapolis Athletic, E. C. Shafer of the Athletic and Boat, Emil Novotny of the St. Paul Rod and Gun and M. W. Thompson of the Hazel Park clubs were among those present.

DU PONT TRAPSHOOTING CLUB.

St. Nicholas Shoot Brings \$50 to the Needy.

Wilmington, Del., Dec. 19, 1914.

The first St. Nicholas Shoot held thus far to-day was pulled off, and it was intended that the proceeds should go to help make Christmas more enjoyable and pleasant for those who are unable to do so for themselves.

The members of the duPont Trap-shooting Club responded nobly to the appeal made upon them and more than \$50 was realized.

The main event of the day was the contest in each class for Coleman duPont spoons, and it fell to A. B. Richardson of Dover to win the Class A spoon with a score of 25 straight—the only one made during the day. John H. Minnick, J. T. Skelly and Ward Hammond also registered scores of 24 out of 25, while several were able to register a 23.

The result of the day's work show that Mr. Richardson made the high score of 100 targets, getting a total of 89. W. G. Wood was high man in the 25 target average, with 22 out of 25. The totals stand:

A. B. Richardson	89-100
James T. Skelly	88
Ward Hammond	87
L. D. Willis	84
W. Coyne	60-75
T. E. Doremus	53
W. C. Popp	40
T. W. Mathewson	46-50
J. H. Minnick	44
W. Tomlinson	44
W. C. Corey	43
W. D. Sillitoe	38

BIRMINGHAM, ALA., GUN CLUB.

Birmingham, Ala., Dec. 17, 1914.

C. J. Barr led the shooting at the Birmingham Gun Club and won the trophy at the regular weekly shoot making a total of 89 out of his 100, a very good score on so dark a day. John Fletcher and Dr. I. J. Sellers were tied for 2nd place with 86. Mr. Bennett and Mr. Moore were visiting shooters, Bennett from Greenfield, Ind., and Moore from Kansas City, Mo.

Scores were made as follows:

	Shot At	Broke
C. J. Barr	100	89
John Fletcher	100	86
Dr. I. J. Sellers	100	86
Lee Moody	100	84
Mrs. Garl	100	83
Tom Morriss	100	71
Moore	50	31
Bennett	25	20
Garl	25	18

BENSONHURST YACHT CLUB.

Gravesend Bay, Dec. 19, 1914.

In spite of a drizzling rain which wet them almost to the skin, seventeen gunners were on hand for the regular weekly shoot on Saturday, Dec. 19th. Several novices were among the number and in spite of the adverse conditions many good scores were made. Only two events were decided, the Take Home Prize and the monthly cup. In the former, A. H. Beedle and G. W. Gowenbonen were tied with perfect scores. The shoot-off was won by Mr. Cowenbonen, the prize being a handsome coat sweater donated by Mr. Hendrickson. For the monthly cup Mr. Beedle tied with Dr. Webb, each having 23 birds out of 25. The tie in this event was not shot off.

The following are the scores:—

The following are the scores:

LAUREL HOUSE GUN CLUB.

Frank Vanderhoef Takes the Laurels.

Lakewood, N. J., Dec. 19.—Frank F. Vanderhoef, of New York, won the Saturday afternoon shooting event of the Laurel House Gun Club

with 90, from a handicap of 12. Other scores were:—Fred Kimball, 67—16—83; Harvey Newman, 69—12—81; J. S. Wolley, 66—16—82; "Phil" Randolph, Jr., 66—8—74; "Phil" Randolph, Sr., 70—12—82; F. A. Potts, 69—8—77; Dr. C. Kayser, 63—8—71.

MIDWINTER HANDICAP.

Pinehurst Offers Many Attractions.

Every mail is bringing its entries for the eighth annual midwinter handicap, January 19-23. It is pleasing to note that many of the contestants will bring their wives and their families, and that a number are also planning to linger after

the shoot for the enjoyment of the diversified attractions which the village offers and among which quail shooting plays an important part.

Socially, numerous affairs are being planned with dancing every night at the Carolina and formal balls on Wednesday and Saturday evenings, Country Club teas and various excursions to numerous points of interest as special features.

TROPHY PLEASES NEWPORT GUN CLUB.
Newport, Dec. 27, 1914.

Editor *Forest and Stream*:

I have received the cup that you sent, being the winner of our shoot on Thanksgiving Day, as was suggested in your paper previous to that date. It is very handsome and worth going after. I wish to extend my sincere thanks and wish you every success in future. I think the boys are all receiving their papers. Wishing you a Happy New Year.

I am, WILLIAM A. DRING.

FRED GILBERT ANNIVERSARY EVENT PLEASES SHOOTERS THROUGHOUT COUNTRY.

Many Voice Their Approval of Appropriate and Unique Manner of Honoring One of the Greatest Shots and Most Likeable Characters in the History of the Sport.

The announcement of the plans to honor Mr. Fred Gilbert, the veteran professional trapshooter, with a twentieth anniversary shoot and dinner at Wilmington, Delaware, and to give gun clubs throughout the country an opportunity of holding local shoots in his honor, has met with widespread approval. The offices of the Du Pont Powder Company, Wilmington, Delaware, with which company Mr. Gilbert has been associated for twenty years, are flooded with letters from shooters in all parts of the country voicing their approval of the appropriate and unique manner of holding a nation-wide celebration for one of the grandest characters the game has ever known.

From Mr. Gilbert's home town of Spirit Lake, Iowa, Fish and Game Warden E. C. Hinshaw writes, "I notice the action taken by your company to honor Mr. Fred Gilbert of this city, and assure you that this will be appreciated by the sportsmen in this section of the country. They will take advantage of it in a way that will make the event long remembered."

Have Known Gilbert for 20 Years.

Mr. F. P. O'Leary of the Little Falls Country Club, of Little Falls, N. Y., in a communication addressed to Mr. Simon Glover, New York State representative of the Du Pont Powder Company, says, "I have just been reading in this week's issue of the sporting papers where the Du Pont Powder Company are going to hold a Fred Gilbert twentieth anniversary next March. Knowing Mr. Gilbert well for the past twenty years, I will be glad to co-operate with their company and hold a shoot during that week on our Country Club grounds, in honor of the occasion. If your company sees fit to send on a Gilbert cup, so much the better, but in any event, we will celebrate with a nice little shoot, and will be glad to have you with us." Miles Taylor, of the Analostan Gun Club of Washington, also addresses a most interesting communication somewhat along the same lines, saying, "We would

like to make application for one of the Gilbert cups to be contested for next March. I can assure you that the conditions will be complied with to the letter, and that nearer 20 than 10 will be in the competition for the trophy. This is a great stunt and most pleasing one. I am from the West and knew of Fred Gilbert before he came East. When he did and met Jack Brewer, et al at Baltimore, I was there and saw him win the match. He was quiet and unobstrusive. I rejoiced with him and his friends then and I am jubilating a little over this testimonial to him. I have one of Brewer's shells, the kind he used on that occasion. It is the long, green, U. M. C., make and loaded with 4 1-2 drams of Du Pont—some load for a 12 gauge, but it was a Greener and weighed 9 pounds. Those loads whistled like a rifle bullet that had been upset. It was so noticeable that I asked him for one of them and about the load."

Fred C. Whitney, the veteran Iowa Winchester representative also expressed his approval of the plan as follows: "I have just returned from my Eastern trip and see that you are going to give "Fritz" Gilbert a shoot in March. Wish I had put off my trip to the factory till then, as I sure would like to be in on this."

Mr. Chas. E. Hyde, Chairman of the Shooting Committee of the Port Washington Yacht Club has announced that their organization would be glad to stage a Fred Gilbert event in connection with their twelfth annual tournament which is scheduled for March 17th, and of course, have been advised that this would fit in nicely with the original plans. The State College Gun Club of State College, Pa., are also going to stage a Fred Gilbert Event during the week of March 17th, and will have a cup to shoot for. They say, "We will be glad to have

a 'Fred Gilbert Trophy' for our club and will bend every effort to make it a success."

Mr. P. B. Plummer, the live wire secretary of the Tennessee Trapshooters Association, who holds forth at Chattanooga, has issued an announcement concerning the plan to all the clubs in the state affiliated with the association, urging them to get in line for a "Fred Gilbert Shoot," and in addition to using it as a means of inaugurating a successful season for the clubs in that state, they will also assist materially in fittingly honoring one of the most popular shooters who ever put a gun to his shoulder.

The above are typical of the many letters which have been received by the Du Pont Company, and indicate more interest in the Fred Gilbert Anniversary on the part of shooters throughout the country than in any trapshooting feature staged in a long time. Certain it is, that by the time March 17th, rolls around there are going to be thousands of shooters lined up at the traps awaiting the signal to "pull" on the clay birds with the idea of winning a "Gilbert Cup."

MOOSE IN NOVA SCOTIA.

The following statistics of moose shot in Nova Scotia for the last seven years may be interesting to big game hunters. In 1909 the game laws were amended by placing cow moose on the protected list and it has worked out very satisfactorily as the following figures will prove.

In 1908 total moose reported shot including cows were	688
In 1909 bulls alone.....	405
1910 bulls alone.....	509
1911 bulls alone.....	617
1912 bulls alone.....	678
1913 bulls alone.....	705
1914 bulls alone.....	1,000

The Hercules Calendar.

Allowing for moose illegally killed and not reported to the Chief Game Commissioner and for others which were wounded and got away to die, I believe that no game country in the world of the same area can make a better showing.

Mr. W. K. Boylston of Princeton, Mass, a noted big game hunter, and at one time a professional guide in Maine hunted with me this fall in Digby County and he informed me that although he has hunted moose in Maine, New Brunswick, and every country they inhabit, except Norway he has never found these animals so plentiful (acre for acre), as they are in this province.

H. A. P. S.

Digby, Dec. 24th, 1914.

DEER SEASON IN MASSACHUSETTS.

Boston, Mass., Dec. 24, 1914.

Editor *Forest and Stream*:

You may be interested to have the official record of deer killed in this state during the last open season, copy of which is enclosed. Had it not been for the bad weather the record of the previous year of 1,596 might have been equalled.

In addition to this we are enclosing a statement of deer shot by the farmers in protecting their crops.

The amount paid during the year past by the state for damages to crops by deer will amount to something over \$10,000.

G. W. FIELD,

Chairman Commissioners on Fisheries and Game.

The record furnished by Mr. Field follows:

NUMBER OF DEER KILLED BY FARMERS IN THE ACT OF DAMAGING CROPS.

1907	16	1911	232
1908	17	1912	313
1909	198	1913	195
1910	327	1914	211

Section 17, Chapter 92, R. L. as amended by Chapter 307, Acts of 1907; further amended by Acts of 1908, Chapter 377; Acts of 1909, Chapter 396; Acts of 1910, Chapter 545; Acts of 1912, Chapter 388.

PIERCE, 663 Main Street, Buffalo, N. Y.

CHRISTMAS SHOOT OF THE "T. B." TRAP AND GUN CLUB.

U. S. Naval Hospital, Las Animas, Colorado.

The weather on Christmas was ideal for trap-shooting. The club acknowledges a pleasant visit by the Las Animas Gun Club. One turkey was awarded for each five entrants and the score sheets showed that fifteen shooters had appeared at the firing line. The members of the club were divided into two classes, the beginners and those with less experience than the Old Guard were placed in Class B. Connolly, Hartzell and Joan were tied for Class B. turkey, each having a perfect handicap score of 25. The score for actually broken birds was as follows: Joan 20, Connolly 19, Hartzell 20. Some of the more experienced shooters might even take pride in scores as high as the above. On the shoot off, Joan won the turkey with a score of broken birds of 19.

In Class A., Dr. Grieve, Chief Engineer Palrang, Hospital Steward Rupert and Seaman Plony were tied with a perfect handicap score of 25. The score for actually broken birds was as follows: Palrang 21, Rupert 21, Dr. Grieve 19, Plony 18. On the shoot-off, the chief engineer made an easy get-away by breaking 24 in fine form and carried away the Turk.

Only five members of the Las Animas team entered the contest. Chief Hudnall proposed that the Las Animas members fire a practice string in order to arrange the handicaps. The chief showed his lack of practice by breaking 25 straight. The scores for the Las Animas contingent on the practice string was as follows: Hudnall 25, C. Thomas 22, E. Thomas 18, Hassinger 22, Moore 5.

The Las Animas members finished with a tie of 22 for Mr. C. Thomas, Mr. E. Thomas and the Chief of Police. On the shoot-off, Mr. E. Thomas won the turkey with a score of 21 broken birds. The scores for the morning were as follows: Hudnall, 88x100; C. Thomas, 80x100; Hassinger, 58x75; E. Thomas, 56x75; Plony, 38x75; Palrang, 45x50; Rupert, 39x50; Dr. Grieve, 34x50; Hartzell, 20x25; Joan, 20x25; Connolly, 19x25; Hamby, 17x25; Lieut. Wallace, 16x25; Morgan, 11x25; Moore, 5x25. Mr. Moore's score represents "first time up." Thirty strings and 750 targets were fired, and all participants pronounced the shoot a grand success.

We missed many of the members of the club who were present last winter at the last Christmas shoot. Our old members are gone but not forgotten, and "T. B." Trap and Gun Club takes this method of extending to all of our old members, scattered about the world wherever they may be, through the sporting newspapers, heartiest best wishes for a very happy New Year. The club wishes all our members, who are to be found in every clime on both sides of the world, all success and prosperity during the new year, both at the traps and in all the future undertakings of the new year, be they business, social, educational, or otherwise.

SALEM ROD, GUN AND YACHT CLUB.
Night Event a Success.

December 26, 1914.

The Salem Rod, Gun and Yacht Club has the distinction of holding the first Night Shooting Tournament in the United States. The tournament last night was a grand success, far beyond the most sanguine hopes of the committee in charge of the affair. Several years ago the Crescent Athletic Club, of New York, tried a system of lights with very little success and it was also tried at the Sportsmen's Show at Madison Square Garden, New York City, but professional shooters who were in Salem Saturday night complimented the local club on having a decidedly better light than was shown in New York. Or to use the words of E. Fred Slear, the popular professional shooter for the Remington Company, "You have beat them all to it and left the other clubs in darkness."

The lights were turned on promptly at six o'clock and the regular program started as advertised and proceeded just as smoothly as a day tournament. The targets were shown from the time they left the trap until they fell on the ground to the satisfaction of the shooters and the good shooting gives evidence, there being fifteen straight scores of 10x10; thirty-one scores of 9x10; and twenty-nine scores of 8x10. In fact the shooters all made as good scores as in daylight shooting, notwithstanding that all were skeptical, not a shooter entering in the sweepstakes for money, all shooting for targets.

After the regular program, the cashiers and scorers could not accommodate the crowd—everyone was convinced that they could see the targets and all wanted to shoot.

To the spectator a night tournament is more satisfactory than a day shoot, as a broken or even a dusted target can be seen better than in daylight. The club house and grounds were taxed to their capacity to accommodate the crowd that gathered to see this new and novel addition to the sport of trapshooting.

Neaf Apgar, the representative for the Peters Cartridge Company, was high professional with 47x50, with W. S. Colfax, of DuPont Company, a close second.

J. H. Minnick, of Wilmington, was high amateur and was awarded the gold watch for his score being 45x50. He was closely followed through all the shooting by Chester A. Glaspey, of this city, who broke 44x50.

The scores of the evening in detail were:

REGULAR SUNDAY MORNING SHOOT OF THE "T. B." TRAP AND GUN CLUB.

U. S. Naval Hospital, Las Animas, Colorado,
December 27, 1914.

Sunday morning witnessed the close of the present contest for a six months' subscription to the Pueblo Star Journal, daily and Sunday, awarded by this enterprising newspaper. Dr. Grieve won the third and last leg, winning the prize by an exhibition of fine marksmanship. Dr. Grieve won all three legs in succession. The scores for the morning were as follows: Dr.

Cruising and Camping in Southern Waters

(Continued from page 15.)

suffin' to say bout de wicked in dis world, and will laff and laff fit ter bust hisself, I recon. Sposen he bin on dat log in dat situation, wood de Lord a bin wid him in de angerish ob de minute any more dan wid enny odder? Reckon not. Enny nigger in dat situation hes gotta depend on hisself."

"Well, Alex, go in the bow and I will go aft; we will soon reach the river. You must do something to get warm. We will make camp by 4 o'clock, somewhere below Sandbar Ferry."

The exciting journey was recommenced and in the course of a quarter of an hour or so we reached the broad waters of the Savannah River, where the leading boat was found, awaiting us. The cause of delay was explained and provoked mirth from the whole party. Joe had no time or opportunity to moralize then.

The river current was slow and easy; we floated and paddled until nearly 4 o'clock, then camped on the sandy beach a hundred yards or so from the river. Stakes were driven and boats securedly fastened, and this was very fortunate. The tent was put up in a trice, gun cases and camp plunder housed, the fire was soon glowing and supper well on the way, and plenty. Sam and I were seated enjoying a bountiful meal at the hands of one of the best camp cooks I have ever known. Before supper was finished rain began to fall and drove us inside the tent. Soon the short winter day ended and night shut down like the lid on a kettle. The camp fire was kept up and the end flaps of the tent partially open. We sat on our blankets, smoked and talked of the morrow's work, and about where we would begin to find ducks. Nine o'clock found us fast asleep, thoroughly tired

out, sleeping a sleep known only to those who court the open air with the gun in the woods, in the fields and on the streams.

I awoke once during the night and heard the rain drumming on our canvas roof. The thought of the dismal and wet condition of things outside made us more appreciative of the warmth and snugness of things inside. I again was wooing the drowsy god with that delicious feeling of comfort and security, just on the verge of forgetfulness, that moment when the mind wanders into oblivion, when Sam announced that it was 6 o'clock.

I immediately arose. Hastily dressing and going out I looked upon a dull, leaden sky and rain. The wind blew the mist and rain in from the river with chilling effect. Pools of water here and there surrounded the tent, the corn stalks in a neighboring field looked woebegone and dripping. A crow, sitting in the branches of a persimmon tree, gave a despairing croak and shook his sable plumage in apparent disgust—A dismal camp that comes to a sportsman and is received cheerfully, knowing it to be a part of his fortune afield.

Presently, Joe had a good fire going, and under its influence camp grew more cheerful.

"What are you going to give us for breakfast?" asked Sam.

"I recon, Mars Sam, dare'll be some biskits and fried ham an' 'scaip! scaip!" "Snipe, by glory," said Sam, "over there on the flats by the cornfield. Snipe for breakfast."

I rushed into the tent and limbered up the 12 gauges. Alex opened the ammunition box and supplied us with shells loaded with No. 9 shot. All three of us ran up the bank and over

the fence, Alex to assist flushing and marking down the dead birds. Twenty steps from the fence, three birds flushed, Sam made a fine double and I killed one. We separated two hundred yards or so. The birds rose within fair range, and by the time the field was crossed we had bagged ten and a half brace. Once I wiped Sam's eye, and that gave me a feeling of pride that lasted for some time. Sam missed with one barrel a long range shot, turning the bird my way. Had our dogs been with us, and the ground worked well, we would have added more birds to the bag and enjoyed seeing the dogs work, which is fifty per cent. of the sport.

Returning to camp we found breakfast about ready.

"How many ob de long bills did you alls git?" inquired Joe.

"Right smart lot; dar wuz a heap on em ober dar an hit wuz jist bilin' fun fur bout hafen owah," replied Alex, who already had a number of the snipes dressed. Presently Joe had half a dozen birds spitted before the glowing coals, and not many minutes elapsed until they assumed that tender, dark brown color, which pronounced them cooked. But these birds eaten "green" did not compare in flavor and tenderness with birds hung up in a dry, cold place for four or five days, yes a week. All game birds should be so treated in order to have them on the table at their best.

(To be continued.)

Night Fishing

A Bass Fishing Story of Westchester County

By W. F. Smith.

"Those bass ought to bite like mad as soon as this storm passes," said Ed., as we sat just inside the door of the camp watching the rain swirling and roaring through the woods, to the accompaniment of crackling branches and swaying tree tops and incessant crashes of thunder and flashes of lightning.

"They certainly should," I replied. "I fished steadily from six o'clock last night until ten o'clock this morning and not one strike did I get in all that time, and I don't believe any fish have been caught during the day either. I'll bet the fish felt this storm coming and simply refused to feed with all the electricity in the air. You know they are effected by changes like that, such as the rising of the moon, changes of wind and all that. What do you say if we stay up to-night and have a try at them?"

It was a Sunday afternoon in late September, and we were spending the week end at our camp on Peach Lake in Westchester County. We had planned starting home that afternoon but had been interrupted by the thunderstorm, and were then waiting in the camp for it to blow over.

"I'm willing," said Ed., answering my query. "But it will be hard to start off early enough in the morning to make that long journey and get to business in the city on time."

"Oh, what does being sleepy one day amount to when we can get a good string of fish. We can sleep the clock around to-morrow night if we want to, and make up for lost time."

So we settled it, and forthwith changed back to our fishing clothes and got our tackle in readiness to start as soon as the storm let up.

This did not happen until quite late, nearly six o'clock, but then it blew over toward the east leaving the western horizon a clear blue in which the sun set in a blaze of glory, giving promise of a beautiful night.

We sallied forth through the wet underbrush to the shore, and then almost gave up in disgust. Our boats were filled to the gunwales with rain water, and even after they should be bailed out, would still be too wet to be comfortable, for the sun had set and there was no wind to dry them. And wet seats in a hot mean, as every fisherman knows, "the seven years itch" as Ed. called it.

However, we set to work, and after a hard half hour's work, had them as dry as it was possible to get them, and set off across the lake.

The storm had not entirely disappeared from the sky as yet, as we could see from our open position in the middle of the lake. Far over in the East, over Long Island Sound we thought, the black clouds continued to hover, flashes of lightning flitting from end to end, and very faint rolls of thunder coming to our ears. The air too seemed charged with electricity, and neither of us felt good; it seemed to have a depressing effect on us both, what with being tired out from fishing all the night before, and the realization that we were the only people for miles around, and black night coming on. It may be a strange feeling for two grown men to confess, but let

any one on such a night place themselves on a big lonesome lake such as we were on and I think they will feel pretty much as we did.

On the north shore of the lake we ran up into a sort of small river and looked for frogs. I intended to depend on pork rind, but wanted a few frogs for emergency.

It was dusk by now and the frogs hard to see, but after a protracted search I managed to catch five on my side of the river and put them in a wooden minnow box I had in my boat.

We then separated, Ed. going east and I west, heading for a huge cliff about a mile down the shore, where in the deep water, I felt sure I would strike something at that hour.

When I arrived, as I thought, opposite the cliff I rowed toward shore intending to get within casting distance. Of the shore line I could see nothing whatsoever. The cliff being black and the night black I could see no division between the water and the shore, and could only tell where it was by the faint lapping of the water on the cliff base.

Within thirty yards I picked up my rod and cast high and hard to cover the distance. But strange to say there was no sound of the bait striking the water when I stopped the reel, and I reeled in feeling no weight on the end of the line. I knew something was amiss, but just what I could not guess. I shook the rod, and what was my amazement to hear the hooks rattle directly over my head not three feet away. I was right in against the face of the cliff and the hooks had caught on a branch straight up in the air.

"Now starts my hard luck" I thought, as I backed out after untangling the gear. "Confound this darkness anyway, I never could fish nights unless the moon was up."

I cast past the cliff without a strike and got into shallower water, and here, at the second cast I was hung up on the bushes on shore. I shook the rod, it held fast, so I pushed in again, to find that the line was caught ten feet up on shore, so I stepped out, dropping an oar overboard as the boat began to drift away and I scrambled wildly into it again and recovered the oar. Once more I pushed ashore and hauled the boat well up, only to find that the bait was caught on the bushes out in the water and twenty feet further along.

I loosened the half hitch from around the twig and pushed off again. This time the boat acted like a live thing and started for the middle of the lake at race horse speed, and I dropped my rod and hustled back to the rowing seat, starting it once more in the desired direction, and at last located the bait by the whiteness of the pork rind and recovered it.

"Enough of the darkness," I resolved. "I'll go ashore and sit there until the moon comes up."

I figured that the moon would rise in another hour, after which the fishing would very likely improve. So to the shore I went, seating myself on a big flat rock under the cliff.

I sat there smoking my pipe and soliloquizing,

THE HORTON MFG. CO. 84 Horton Street, Bristol, Conn.

occasionally glancing toward the east to see if there were any signs of the moon. The storm had by now entirely disappeared from the sky and one or two stars had appeared, lighting up the lake a trifle but not enough to help much.

There was not a sound to break the intense stillness, except once in a while the screech of an owl far back in the woods.

Not one splash of a fish breaking water did I hear, and this discouraged me greatly, for usually at this hour splashes were plentiful enough.

What had become of Ed, I did not know, but I presumed he had found the fishing poor also and had retired to the bank and was waiting for the moon too, as that was a regular proceeding of ours. Although, he being of a more patient and complacent nature than I, was most likely taking an hour's snooze.

The silence was getting on my nerves, and I was half wishing I had not come out on the lake at all, when suddenly I heard some small stones rattle on the cliff over my head. I glanced up quickly, but in the dim light from the stars I could see nothing, finally concluding it had been only a rock that had dislodged itself and slid a short ways, resumed my meditation, when, without any warning, a large rock smashed down at my feet, missing my head by but a few inches.

I jumped up in alarm, gazing at the rock in astonishment, and then once more examined the face of the cliff, but as before could make out nothing.

My gaze again returned to the rock, and I could hardly believe my senses when I saw that it was slowly moving toward the edge of the water, finally falling in with a loud splash.

At this I came to life, and stepping to the edge, struck a match, holding it close to the surface of the water and peered at the bottom.

What I saw there caused me to sit back and laugh heartily at my fears. It was a large turtle.

But the incident had made me feel more nervous

than ever and I was glad enough to see the rim of the moon appear above the horizon a minute later. It rose rapidly, lighting up the water and woods as though a curtain had been drawn aside.

It put new heart into me and I jumped into the boat and rowed for a favorite little cove of mine on the east shore. Arriving there in ten minutes or so I found the conditions ideal for fish. A

but to be sure, I held it taut for an instant and felt the unmistakable fish signal, the rod trembled a trifle, then I struck and struck hard, all the tackle would stand.

Instantly a small cyclone broke loose. Up into the air five feet above the surface he shot flinging the water in every direction, the hooks rattling like castanets in his jaws as he shook himself to

The Moon Showed Me This Likely Place.

faint ripple on the water, and although most of the lake shone silvery from the moon's glow, the cove was in deep shadow cast by the tall pines along the shore.

I examined my tackle, found everything tight, and began to cast in earnest.

At the third or fourth cast I felt the line tighten very gently as if it had touched bottom,

throw them out, down again and half way around the boat standing on the tip of his tail and churning the water into a white froth, in the flash of an eye.

I saw there was no use in trying to play such a mad creature and reached wildly for the landing net, knowing full well that it would be only luck if I managed to get him into the boat while the

Beautify your home, office or lodge, NOW, with a perfect head, mounted true to wild nature by the best known methods of moth-proof, lasting taxidermy. Large winter killed Moose, Elk, Caribou and Deer

heads. Whole body specimens. Sets of Horns and Tusks. They don't cost you a penny unless you accept after examination. I ship express prepaid, duty free, on approval anywhere in U. S. A.

EDWIN DIXON,
Ontario's Leading Taxidermist,
UNIONVILLE, ONTARIO

tackle remained whole, but in the instant I had taken my eyes off the rod to glance at the position of the net, he had started for the boat like a streak of light, and was under it with a slack line. My heart gave a bound as I felt the tension ease and I reeled wildly, giving a sigh of relief as I felt him still there. Up he came again right alongside the boat and I made a quick and blind scoop with the net and yanked him into the boat. A four pound small mouth.

I sat in the boat and gloated and feasted my eyes on his beauty as I repaired the damage that had been done to the tackle.

Soon I was at it again, but the next one I struck, which was not two minutes later, I made a miscalculation. I thought it was the bottom. But that it was not, I soon found out. I struck very gently, so as not to break the hooks on a rock, only to feel the fish dash for the boat and under it, dropping the hooks as he went.

That taught me a lesson, and the next one, which proved to be a poor little nine inch bass, suffered for the crime of his elder brother. I struck so hard I fairly made the rod creak, and the little fellow came into the boat almost paralyzed from the shock. I detached and placed him in the water as gently as possible and was glad to see that he still had strength enough to swim away as if he enjoyed life.

The next one was another four pounder and put up even a harder fight than had the first one. I only landed him through sheer blind luck, nothing more. I had fought him perhaps five minutes, when he broke water close to the boat. As he shot down again the lower of the two hooks caught on the bottom edge of the boat, the force of his rush breaking the one in his mouth and he was gone, but only for an instant, for I received a resounding thump on the back, and there he was smashing around like a stricken horse in the bottom of the boat. The sting of the hook as it broke must have caused him to break water even after he was free, and in doing so he struck my back and fell into the boat. From this incident I began to regard it as my lucky night, and so it proved, for from then (about ten o'clock), until three I landed nine others, making eleven in all, three of which weighed four pounds apiece.

Well, we made our train all right, and although we were tired enough the next day we both regarded it as small payment indeed for the pleasure we had had.

SOUTH PHILADELPHIA GUN CLUB.

Outshooting a field of one dozen live bird devotees, enabled Joe Jackson to carry off the 15-bird event of the South Philadelphia Gun Club over the club's traps at Third and Wolf streets. Charley Bobbs and L. Steinhagen gave Jackson a close argument for the honors, with 12 kills each. In the 5-bird test Bobbs, Jackson and Warner tied with clean scores and on the shoot-off under the miss-and-out rule Bobbs and Warner ran five each, Jackson going out on his first bird. The two gunners then tossed a coin and Warner guessed the coin and won the shooting coat. Scores:

BUYERS' GUIDE

An Index to the Sporting Goods Trade

THE idea of this ready reference was brought to us through the many inquiries as to where sportsmen's necessities could be purchased, in different localities. Many of those patronizing the guide, regularly use display space in *Forest and Stream*, while others are only occasional big space users. The question comes often to us as to "reliable" dealers. We answer the proposition by **unqualifiedly recommending** those whose names appear in this directory. It is well to know how to purchase goods right and right goods—this you may rely on "Buyers Guide" to enable you to do. Should you need something not listed herein, write us—we can tell you where to get it—or better yet—we shall be glad to have our experts make purchases for you. Do not hesitate to write us should you, at any time, require our assistance.

NEW ROCHELLE YACHT CLUB.

Clay Target Tournament, January 27th, 1915.

Open to amateurs.—Members of all neighboring clubs are cordially invited to participate. Entries by mail will be appreciated. Club secretaries are requested to furnish their club handicaps of their respective men not later than January 25, to enable the committee to arrange a general handicap for this occasion.

Program.—100 targets, 16 yards rise, thrown from two Leggett traps. Shooting will commence at 1:00 p. m. Shooting up will be permitted until the arrival of 1:05 p. m. train from New York. Traps open for practice at 11:30 a. m.

Entrance Fee.—\$3 including targets. Shells of standard loads, 65 cents per box. Practice targets 2 cents.

Sweepstakes.—Scratch, optional, \$1 on each string of 25, and \$1 additional on the total 100 targets. Moneys to be divided 5, 3, 1. Ties decided by result of following string. Ties at finish of program decided by an additional string of 25 birds.

Prizes.—Prize for high scratch gun. First,

second and third prizes handicap. A shooter is limited to one prize.

Trains leave Grand Central Depot, N. Y., at 9:18, 10:05, 11:03 a. m.; 12:07, 1:05 p. m. The time to New Rochelle is about forty minutes. Take cab or Hudson Park trolley to shore station of New Rochelle Y. C. Allow about twenty minutes from station to club house. Returning trains leave New Rochelle 4:35 and 5:42 p. m. for Grand Central. Frequent other trains between New Rochelle and New York by Boston & Westchester Ry. and N. Y., N. H. & H.—Harlem River Branch.

Send entries to G. P. Granbery, Shooting Committee, 29 Broadway, New York City. Phone, Rector 3890.

Members of recognized clubs are welcome to shoot with us any Sunday or Holiday at 10:30 a. m. The New Rochelle Yacht Club will also hold an open Tournament on March 3rd.

The DuPont Powder Company has presented a trophy to be shot for by teams representing the yacht clubs on Long Island Sound and New York bay. There will be three matches for the trophy, each at 100 targets, 16 yards rise. Each club may have up to 10 representatives, the scores of the best five from each club to be con-

Haig & Haig

Old Wisdom.

(Continued from page 9.)

In the month of June he returned again from the other end of the lake to the tranquil bay where he had fallen foul of the artificial minnow. He was fanning along in the center of the bay when a sound above caught his attention. He did not flee but rested, waiting to see what it was. A shadow fell over the water, and passed. He knew it to be a boat, and shortly thereafter there came trailing along an apparition that fixed his eyes firm. It was a different appearing creature than the artificial minnow he had struck at; it was a spoonhook, and to it were fastened strips of red flannel. Wisdom watched it but made no move. Barely had the spoon whirled by when there loomed up behind it that gigantic shape he had once seen in that bay before. It was the giant muscallonge!

This creature was inordinately attracted to the spoon; he followed it wonderingly at first, then suddenly gathered speed, and with wide-open jaws hit the lure. And the next moment he realized his dismal mistake, drew back, made a curving wide-sweep, and at the end of a taut line broke water returning to it with a floundering crash; there began a battle royal that sent the terrified Wisdom far away to his accustomed hiding places, close up on the shallows and the protecting dead-heads. Wisdom never again saw that shape loom up before him. He never again had fear of those grimly suggestive jaws and those singularly penetrating eyes. Somewhere far away in a city, in a certain aristocratic home, in a certain angler's den, he hung upon a certain wall upon a certain panel, the final word in the art of taxidermy; and there were yet the flashing, cruel eyes, the wide-open jaws, and stretched from the corner of the mouth was a line, and at the line's termination was a certain spoonhook with strips of flannel upon it!

Much of a young fish's life is spent in deliber-

ation and conjecture. With laborious exactness each question is threshed out; days upon days, or weeks and months being allowed things to develop, for, lacking intelligence, the vital distinguishing intelligence, only instinct, aided by experience can be counted upon to decide the right or the wrong of a thing. Wisdom passed many seasons in that one lake and then one spring day, in the flush of young fish maturity came the desire to mate. It was an irresistible impulse that burned in his veins, and his now well proportioned, energetic body was carried with all the lordly grace and determination of anticipated parenthood. He was now mingling promiscuously with his kind. They were courting in the manner of fishes and pairing off with methodical, clocklike regularity. To the intense fascination of Wisdom he found himself in the presence of the fish damsel of his choice. It must have been love at first sight for both Wisdom and the lady found in themselves much to adore. Naturally they did no talking. Wisdom swam up and bowed—at least we so suspect, though how it was done is open to conjecture. At least they found themselves very much alike; their views upon life were practically the same; they ate the same variety of food, and knew the life of caution about equal; and they had one object in consideration that Mother Nature had firmly impressed upon them that they must fulfill. It was an object devoid of sickly sensational aspects; it was a purpose, honest, final, and deliberate. The world of bass must never be diminished—and the *micropterus salmoides* population in Sand Lake had been depleted anyhow by the fishermen; additions were not to be scorned.

The spawn eggs of Wisdom's demure little wife were cast in a belly-brushed-out hollow in the sand, and the bottom was studded with pebbles brought in from a short ways off. When the spawn was cast Wisdom mechanically followed close to her side and threw over the eggs the precious milt that was to bring animation to the eggs, creating in them—fishes. These eggs were mostly composed of an albuminous matter, a small portion of which contained what is known scientifically as the vitallus, which holds the life-energy, the basis of creation. A tiny, inconspicuous opening near this vitallus might have been seen through a microscope, in the shell. When the eggs entered the water they at once began to expand and to absorb water, and as a natural sequence the milt that had been delivered upon them. This milt contained thousands upon thousands of animated, wiggling creatures, the spermatazoa. In the absorbing process, through the micropyle (the tiny opening in the egg shell) one of these thousands of mites would, or should, enter each egg. Directly it would be communicated to the vitallus—and the work of creation was begun. Weeks upon weeks of forming would be the result. And in time, in each impregnated egg would be seen the outlines of a fish, the backbone, and still later, two singularly well-defined black dots; these were the eyes. The greater portion of the egg would now be the yolk-sac, and from this yolk-sac the growing body must take its nourishment. At first the head and the tail would be connected to it, but in the last stages of its development these would come away from the sac, and lastly the sac would be gathered, forward of the stomach, upon his breast. A tiny heart would then be seen pulsing,

and minute blood veins might be seen from the body adhering to the yolk-sac.

After the official spawning Wisdom instinctively took possession of the spawn hole and virtually mounted guard. Even as he had once been guarded by his parent, so now he guarded his own offspring; and even as his parent left him and his finny brothers and sisters, so now Wisdom left his offspring. Wisdom and the mate of his choice were now more than ever mated. They swam together; hunted together; preyed upon minnows with all the cunning craft of the preying kind. In the upper end of the lake, in a secluded bay there was a wilderness of lily-pads. Here Wisdom was wont to lay, lazily fanning, watching with careful eye the water surface above. Insects coming down were sucked into the mouth with practiced tact; and many a large butterfly, dizzily essaying a flight across the pads was caught even in the air by the watchful fish. On one of these days he was startled by hearing a noise some distance by. He had just a few moments before risen, and had sucked down an insect, when through the air there spun a creature, all of white, with two red wings. Something back in his inferior consciousness told him it was no insect; for he had never mouthed that kind. He felt an impulse to spring upward for it, but did not. The apparition fell to water, slid away from him, throwing two rolls of water up over the red wings; slid by and was gone. Wisdom did not strike; somehow faintly he understood the fact that it was unreal. It was another enemy with hooks upon it.

In the boat from whence had come the artificial minnow, connected as it was to a soft-braided silk line, a disgusted fisherman cast automatically, and finally sat down, wiping his brow.

"No use, George," he said, shifting to another minnow. "I have fished here for years but I can never remember of having the poor luck I have this year. The lakes are getting tame. Too many have penetrated into the north, and the fish are becoming wary; why hang it all they are becoming civilized."

"You are right there," replied the other taking up the oars, to row over to another point. "But why, O why don't you shift bait? Why don't you use live frogs. You know that live bait wins where those dead things, all wooden and unreal at that, will not register a kill. Now suppose you had used a live, kicking, animated frog over there, in the weeds, upon a good weedless hook with a bronze spinner on it. I suppose you would not have gotten your bass?"

"Well, no matter," frowned George, drawing the line tight on the minnow. "I believe first, last and all of the time in humane methods. I know what you have said about frogs being cold-blooded—not having the nerve system and warm-blood, and feeling of the human—still it will be a long time before I stick a hook through a frog's head, and cast him around, kicking and wiggling in agony. I have too much respect for that, thank you!"

"Some day you will forget all that trash you have in that box and return to live bait as the one and only way of successfully getting them," said the man at the oars, with a friendly laugh. "There are big bass in this lake. People may have come in here, but these lakes are yet far from being civilization-ridden. Use live bait and they will come to you."

Wisdom did not see any more of the artificial

minnows that month; but later on, while in com-
pany with his mate, he was lying alongside of
some deadheads when the thing occurred. There
was a splash in the water and the oddest look-
ing creature he, or his mate, had ever seen be-
gan to twirl by. This unlordly apparition took
to diving, and swimming side-ways, and plump-
ing up and down in the manner of a wounded
fish. This was an artificial minnow. It was
built with the eye of human experience. Some-
one invested in scientific observation knew that
preying fish are naturally attracted to a minnow
or fish that has been wounded; and they will
kill it instantly, not through humanitarian rea-
sons, but for the fact that it tries to get away;
it arouses in them the spirit of blood lust. Wis-
dom felt just this pang of desire. At the time,
his mate was lying concealed at the other end of
a log. When the artificial minnow slipped by
her, diving and quartering, plumping up and
down, she rose like a bolt of lightning and
struck it, hard and firm. A silk line was jerked
taut, and Wisdom's mate leaped far out of the
transparent waters of beautiful Sand Lake, and
like a bulldog shook her head to loosen three
hooks that had completely fettered her; followed
a pugnacious battle but it was of no use. Wis-
dom's demure wife never again returned to the
waters of Sand Lake.

Just what were Wisdom's feelings none will
know. But it served to impress itself upon his
mind, inferior as it was, that artificial minnows
were by far the most deadly of the creatures of
the deep. And still remembering his own ex-
perience, in the actual hands of fishermen, so
now was caution redoubled in him. But he
seemed to feel that the mate would return. So
he haunted the deadheads where she had left
him, but day succeeding day and week succeeding
week, still witnessing no return, finally he went
upon his way, a widower of fins. This sudden
leavetaking had a serious effect upon Wisdom.
It took much of the vim and sprightliness out of
him, and in the months before the sheeting over
of the lake with a crystal blanket he had become
glum and slow-moving. He may have sorrowed;
he may have felt the depression and lack of
comradeship that had hitherto been constant.

Two seasons slid by and still Wisdom held his
place among the inhabitants of Sand Lake. His
body was now in perfect trim; beautiful, easy-
going, accomplished; broad, and corpulent; with
the wide jaws that told his kind. Upon the
scales he would have gone six pounds, and six
pounds in the history of bass weight is a tempt-
ing figure. Each season Wisdom impregnated
spawn fulfilling Nature's set law, but never did
he retain a mate after the spawning was com-
pleted. When the season for reproduction ar-
rived he would mate, would enact his part, and
would then retire to the secluded nooks, going
his way like the serene philosopher he was, and
taking life much in the manner of one thor-
oughly resigned to the inevitable. He was now
as wise as they make fish. Experience had been
a sharp teacher; he had learned. Many times he
had seen those artificials but never did he rise
for them. In these days of his mature age one
of his most pleasing pastimes had been to catch
frogs that were known to live at the water's
edge. With all the cautiousness innate in him he
would stalk these frogs and with a rush would
sometimes catch his equally sly victim.

These frogs had been provided by a coating of
scum upon their backs, of such a nature that
one might look as much as he willed and yet, un-
less they squirmed or moved, so perfectly were
they colored to match their surroundings, one
could not perceive them. Yet the eyes of the
depredating fish caught every suspicious move-
ment and beware the moment they stirred.

Wisdom grew so fond of the frog killing pas-
time that it became one of his daily feats. And
therein was contained the beginning and end of
his reign.

One day he was idly fanning about in the bay,
and was at the moment close in on the shallows.
Some moments before he had risen high for an
insect and had fallen to water with a splash.
Having mouthed and swallowed the insect he lay
idle there for a long time. Now happened a
thing that stirred him to the heart. No noise
had he heard around him. Of that he was sure.
Therefore he was far from being prepared for
what was to happen.

There fell in the water some object. The wa-
ter stilled. Much to his profound amazement he
found it to be a frog, and it was not coated over
with the brown, slimy scum at that, but it was a
perfectly green frog, with a white belly and it
was more than ever alive.

He did not note, in that moment of bewilder-
ment, that one of the legs had upon it a hook.
No; no! The frog started to swim, pushing
with its free leg. Wisdom thought it was time
to prevent any such thoughtful endeavors.
Therefore he promptly swallowed the frog and
also made very, very sure that he swallowed the
hook, so the next moment—

Somewhere far away in a city, in a certain
aristocratic home, in a certain angler's den there
hung a certain six pound large-mouth, varnished
bass upon a varnished panel, the final word in
the art of taxidermy; and he had his jaws wide
open, and his eyes had the glint of warfare in
them; and stretched from the corner of the
mouth was a line, and at the line's termination
was a certain hook—a very sharp hook!

A man entered the den, bit the end off of a
cigar, lit it thoughtfully, the while he surveyed
the bass upon the panel. Another man entered
and paused with a smile, having witnessed the
other's silent appraisal.

"Live bait, George," he said, smiling wider
than ever. "Live bait; Sand Lake; unsportsman-
like system; sunk your bait; did not troll it;
hooked your frog in the leg. George—by the
way, how did you say you caught that bass when
you wrote it up for that sporting magazine prize
contest?"

"Shut up, idiot," replied George, testily. "You
know I caught him with a fly-rod, upon the
Grizzly King lead-fly. Beautiful specimen isn't
he? He must have been wise in his day to have
escaped baits so long—I wonder!"

The New Rochelle Yacht Club will also hold open tournaments on Wednesday, January 27th, and Wednesday, March 3rd.

CLEARVIEW GUN CLUB.

Powell Outshot Field With Score of 93, Winning Special Handicap Prize.

With the thermometer flirting with the zero mark and a cold wind which cut to the marrow the shooting conditions at Darby yesterday, where the Clearview Gun Club conducted its special handicap prize shoot, were far from being alluring to those who fired at the lifeless clays. In fact it was the worst day of the season for shooting and every one of the seventeen marksmen who participated in the events suffered severely from the intense cold. With benumbed fingers and tear dimmed eyes it certainly required the aptitude of an Eskimo to stand out in the open and blaze away at the 100 targets. Yet despite the severe handicap Old Dame Nature inflicted upon the gunmen there were some very creditable scores hung up for the afternoon's performance. Powell proved to be practically immune from the cold for he led the field in actual breaks and total scores, smashing 85 of his 100 and having a handicap of 8 reached the high score, 93 all. This gave him the silver dish offered by the Clearview Club for the high man of the day. Powell stood back at the 18-yard mark. Harry Fisher firing from scratch cracked 83 of his century, a poor score on his last 25 preventing him from equalling Powell's high actual mark. Hutchison won the spoon offered for the high visitor, he cracking 70 of his 100. Paul Greene and Fisher were runners up to the dish winner with 83 each, the former reaching that total aided by a handicap of 8 birds, his actual shooting running to 75 dead ones. Greene killed 71 then bounded to the 83 mark because he carried one dozen donations. Bonsall broke 77 and with 5 to fall back upon stepped to the 82 total, these being the only participants to get 80 or better. Not a straight score was made in any event, Davy Paul coming the nearest with 24, made in his third event. Had Paul been able to fire with such accuracy in the other three events he would have cleaned up the field, but his shooting in the other tests did not warrant a score of even 20 dead ones. Scores:

	Ah.	Total
Fisher	83	83
Bonsall	77	82
Killian	5	79
Paul	8	83
Simmonds	6	74
Powell	8	93
Young	10	50
Founds	9	77
Garrett	12	74
Hutchinson	*	70
Worrall	*	65

MIDWINTER HANDICAP.

Pinehurst Classic Looks Big.

"Looks like a two hundred crowd for your eighth annual midwinter trapshooting handicap, January 19-23," writes an inter-state association official. "Hear it talked about everywhere and a new feature is going to be club squad attendance." The statement is but in line with advance entries and inquiries received by the local Gun Club secretary. They cover all sections and the list of fast ones is classy enough to make even the premier Grand American sit up and take notice. Tuesday, Wednesday and Thursday, January 19, 20 and 21, will be devoted to sweepstakes leading up to the Preliminary on Friday and the Handicap on Saturday, the 22nd and 23rd. The big attraction continues to be the lavish added money, exceeding \$2,500.

Of this amount, the Handicap winners are guaranteed six moneys—\$350, \$300, \$250, \$200, \$150 and \$100, and the Preliminary winners five moneys—\$150, \$125, \$100, \$90 and \$75. The total additional value of the trophies offered is \$600 and in addition to those in Preliminary and Handicap there are cups for the four highest scores in as many classes made by those who shoot the first five hundred targets of the program; Preliminary and Handicap winners being barred. There is also a gold medal for the high amateur average and a trophy for the average of the entire program. The sweepstakes with regular and additional optional entrance offer attractive opportunities for winning and there are also optional sweeps on all hundred-target events exclusive of Preliminary and Handicap. Luther J. Squier will again manage the shoot, interstate rules will govern and the Squier money-back system will be in effect.

BEIDEMAN GUN CLUB.

Director of Public Safety Porter Makes Great Finish at Beideman Shoot.

By a remarkable finish under very adverse conditions Director of Public Safety Porter tied with Dr. Jones for first honors in the weekly 100-bird shoot at the Beideman Club. Despite the intense cold and the wind which swept across the river, Dr. Jones, who has won the last three contests, smashed 80 of the bluerocks, and as the Director needed a perfect score on his last 25 to catch up with Jones, it was regarded as a foregone conclusion that the doctor was again the victor. Porter proved equal to the emergency, getting every one of the 25 targets.

A CLUB MINNOW CAR.

Buffalo, N. Y., December 31, 1914.

Editor *Forest and Stream*:

Several members of our club have been interested in your paper for some time, and belong to a fishing club in Canada. We are desirous of getting plans or sketches of a minnow car—that is a good size one that would be large enough to hold the minnows for the entire club. Can you put us in touch with any such sketch or drawing?

The above request from a subscriber presents a problem that many other clubs have had to handle. *Forest and Stream* will be pleased to receive suggestions from its readers on the subject, and will gladly publish plans, descriptions, etc., that cover the requirements mentioned above. Do not be afraid to send in your plans and descriptions, as you may be rendering a valuable service to your fellow sportsmen.

AMERICAN CANNIBALS.

(Continued from page 13.)

mesquite bean; but their favorite food is the burro and the horse which they steal from ranchers, a dead animal of uncertain age and condition attracting them as it would vultures.

Their arms are spears for fish and turtles, and bows and arrows the latter poisoned by a decoction of putrid meat, and scorpion, and centipedes, according to common report; and for this they are dreaded by all the Sonorans, as men and horses wounded by their arrows have often died horrible deaths. Exactly what the poison is, is not known but there is no question as to its effectiveness.

When alone they go comparatively naked, but will wear clothes if they have them. An acquaintance of mine who stopped at the island in the winter of 1909, gave them some old clothes which they took and wore with great gusto. Normally, they wear pelican skins which hang from the waist to the knee, or it may be a piece of cotton cloth. In their houses they display a degraded type. A gorilla will build a nest in a tree, but he deserts it. The bushmen of Australia like many animals, have homes where they happen to be, but the Seri builds a house that is but little above these, a most impossible place made by thrusting skatilla branches or mesquite in the ground bending them over, on the sides and top and then piling turtle shells and sponges on the roof and at the sides. I have in mind a bird that builds a similar house, but better and even beautiful, while this house or jackal of the Seri is a horror keeping out neither wind, cold, rain or sand and indicating the low nature of the maker.

In one of these dens a family or two, or a man with two or three wives and children will live, lying together all night, pulling the rags and pelican skins over them. Swine of the human type. The life in these miserable huts is not alluring. In summer, the midday heat ranges from 95 to 110 deg. sometimes to 120 deg. in the shade, and on the night of such a day it is likely to fall to 60 deg., and make a daily change of sixty degrees, while during the winter months it often freezes in the low places. In such a climate the Seri lives in his house without the wit to copy even the clever wood rat which fills the trees with its nests and has more comforts.

They have no horses and cannot ride. A Seri knows nothing about the riata, the horse appears to him as game only.

A family of this race living in a miserable hut on the shore near our camp on the Gulf of California had several dogs, as all Seris have, half breed coyotes which snarled at me when I approached the hut. They never fed these "pets" which were half starved. This is a Seri trait; they keep dogs, but if the latter cannot feed themselves they starve, and gross cruelties practiced by these people would not bear printing.

They have a mystic religion; believe that ancient pelicans created all things, and have some gods suggested by the animals about them, as turtles, pelicans or the sun or moon. But if they worship the pelican, it is to kill him and use his skin as bed and dress; or if the turtle is a god there is no hesitation in spearing him, tearing him in shreds with their big white teeth, using the shield as a roof tile. I have seen Indians of many tribes from Florida to the Northwest, on deserts and in mountainous regions, but

I never appreciated what a savage really was, until I tried to bribe a family group of these people to permit my photographer to take them. They eyed us like snakes. The dogs snarled and showed their teeth, and the expression of the eyes of the whole family from the oldest bel-dame down to the baby, was the kind of a glance that makes a man feel for his gun. That night, lying out on a shell heap, a few rods away it was sort of a pacifier to see one of my companions put his six shooter under his head while the other drew his rifle down by his side into his blanket, perhaps a habit. I had my fists and several times during the night I was tempted to reach out and grasp one of their wolfish dogs by the throat, as an outlet to my feelings, as the beast circled around near my head. Even our mules were nervous and snorted their distrust at the foul odor of Seri, that came down the wind.

(To be continued.)

PIONEERING QUEBEC'S NEW GAME COUNTRY.

(Continued from page 11.)

cruised; but in that itself I found fresh sign of both moose and bear sufficient to warrant the statement that there are enough of both game species to supply heads—and some immense bulls undoubtedly home here—to all the sportsmen caring to hunt for them, with any kind of luck. We got out late in October to the steel at the Nottaway, only to find no train would go east to Mileage 360, where the through construction service of Macdonnell & O'Brien commenced, for four days. Through the courtesy of Mr. Cassidy, superintendent of the Martin-O'Brien Company, we got a hand-car and, leaving the outfit to follow on the train later, we pumped twenty four miles out in a drizzling autumn rain to the Megiskan. Here we caught the "Muskeg" late that night and slept in her four miles further east, pulling into Doucette early Sunday morning. On the assurance that the train would not leave for some time we availed ourselves of the invitation of the Divisional Engineer, telephoned down to me the previous day, and went to the engineers' residence for a decent breakfast.

Alas! our confidence in the word of all conductors was shattered. We came out, our inner man satisfied, to see the "Muskeg"—that we had pumped a hand car twenty-four miles in a rain to catch—pulling out across a series of half-built sideage tracks over which nobody could pass save at the expense of much slow and careful travel. She quickly faded around a sharp rock-cut and we were once more up against a situation that required prompt adjustment. In Doucette this bright Sunday morning not a big gasoline speeder was to be had—the engineers happened to be out with them. After considerable trouble, through the exceptional courtesy of Mr. Campbell, the resident engineer we were given two one-cylinder speeders and two men to take my party of three east forty-seven miles to Mileage 305, where Mr. Bolger was stopping and where I hoped we could secure his big speeder to chase the train to Parent, 107 miles to the east. We had a pretty cold ride, but made Mileage 305 for dinner and soon, once the big car got under way, reached Parent. Here we boarded the Muskeg once more and stayed on her "sleeper" right through.

Everything considered, it was a unique trip in

Shooters — This is Your Book!

It's about a wonderfully interesting hobby—the experimental study of arms and ammunition—the loading and reloading of rifle, pistol and shotgun cartridges.

Many shooters know very little about guns and cartridges until they get the Ideal Hand Book. Then they find the modern metallic cartridge is a surprisingly simple thing—a high grade brass shell, primer, powder and a bullet, the shell crimped on to the bullet to hold it in place.

They find the strongly and perfectly made empty shell (the principal item of expense) can be reloaded from 10 to 30 times each. The book tells exactly what primer, bullet and powder charge to use; it is easy to reload; you can reload 100 cartridges in half an hour. You cut your ammunition expense immensely; factory .32-40 H.P. cartridges with jacketed bullets usually cost \$3.42 net per 100; reloaded same as new, you save \$2.07 on 100 cartridges.

FREE The Ideal Hand Book tells all about the powders, bullets, primers and Ideal reloading tools to use; tells how bullet moulds are made—how to cast your own bullets—measure powders—how to save money and do better shooting. 160 pages of information every shooter needs. Sent free to any shooter for three stamps postage by

The Marlin Firearms Co.

27 WILLOW STREET, NEW HAVEN, CONN.

many ways; best of all, however, my purpose in going was amply filled. I went to explore new country and a certain actual game and fish conditions. What I found I indicated in the previous article—one of the finest Moose and Bear districts on this continent, still virgin and un-hunted, save by scattered Indians in certain limited areas; a new Hinterland that is as yet only the Woods Indian Country, with all the romance and history of the Hudson Bay Company and their red-skinned employes woven into it. Yet next season will find it most ready of access in around twenty-four hours from Toronto and with the actual game country less than four hours' paddle from steel.

Hunting and Fishing Camps.

As was intimated in my previous description of this new Quebec Gameland, comfortable, cozy camps will be built, under the writer's direct supervision, for sportsmen. Personally selected guides, accommodation and wholesome food, et al. will be supplied, and a series of two weeks parties placed in the Shabogama camp and possibly in a couple small camps on the Coffee river; parties leaving for camp on September 1st and at subsequent two week intervals, the cost being on a per diem estimate, a lump sum for fourteen days per member.

Any further details regarding these camps and parties for each of the several trips may be had upon inquiry. This is about the last unknown North that offers game worth going after and that can be gotten into by the average business man, whose vacation is necessarily limited to two or three weeks. In addition to its big game, its fishing and canoe cruising stretches are likewise well worth visiting. I consider the Nottaway route to James Bay unequalled for a three or four weeks cruise by any of the more western routes. As indicated in my former article, there is excellent trout fishing available here from July until the end of September.

SAFETY FIRST

You hear it everywhere. The Safety is one of the superior points of the "Gun that Blocks the Sears." The Safety which makes accidental discharge impossible.

ALONG THE SHORES.

(Continued from page 19.)

aglow, we learn of the fish and game conditions of the section. Our hosts also describing the lay of the adjacent waters and with grave misgivings, predict calamity for us and disaster for our little craft on the broad waters of the distant beyond.

On the shore of the moonlight river we bid our hosts—"Good Night"—and are soon back in camp, in our blankets and in dreamland.

The mist, chased by a gentle breeze is lifting and drifting off the river as we pull out the next morning. Off the bungalow we fire a parting salute to our friends, who appear at windows and doors and answer in like manner. The shot from one of their barrels, sprinkles the river astern as we wave and shout our final farewells.

(To be continued).

MARYLAND SEASON ENDS.

Hagerstown, Md., Dec. 29.—Last Thursday saw the end of the hunting season in Washington county and throughout the State of Maryland. Under the new state wide law the season which began on November 10 closed the day before Christmas.

The season had been shortened considerably by the new law and it is said was far from being a successful one. Under the old law the season opened for squirrels on September 1, and for rabbits, partridges and pheasants and other game on November 1. It ended the same time as under the present law. In this manner the squirrel season was shortened about 10 days.

While there were quite a few rabbits killed earlier in the season, yet, judging from reports, there were but few squirrels and partridges to find their way to the huntsman's bag, and in this respect the season was a disappointment. It has been pointed out that the partridges have been a scarcity in Washington County for years past, and that this year was not worse than those of the past. The season's success in hunting for squirrels was just what was expected—a disappointment. When the season for killing this wily little animal opened on November 10, the leaves were so far off the trees that it was useless to hunt. When the leaves are off the trees no protection is afforded the hunter and the squirrel has all the opportunity to see an approaching hunter. As a result the squirrel hunts the hole in the tree where he makes his home. Long before the hunting season opened reports

HAWAIIAN FISHES

(Continued from page 28.)

stripes of different colors around the body. The "flag fish" has blue stars on his head and red stripes on its body.

By way of contrast to the beautiful fish, there will be a tank occupied exclusively by octopuses or devil fish, which are pretty neither of form nor coloring. The largest of these unlovely creatures has tentacles two and one-half feet in length, but is a pigmy in comparison with the great cephalopods that could be exhibited if there was room for them. A collection of sea turtles may also be included in the exhibit.

Pending the arrival of the "rainbow fish," the tanks intended for their occupancy are being tried out, with fish taken from San Francisco bay. By this means will be ascertained the existence of any poisonous matter from the tank linings and its source removed before the more precious tenants are installed. Each tank will be equipped with sand and coral rocks from Honolulu harbor. In fact, nothing is to be left undone that could possibly make the transplanted fish feel as if they were still in their native waters.

There will be other piscatory exhibits at the Panama-Pacific Exposition, but none to rival in eye-pleasing splendor the one in the Hawaiian pavilion. Oregon will show how salmon are captured and canned along the Columbia river, Washington will display the fish life of Puget Sound and its tributaries, and the United States Bureau of Fisheries promises to have the most exhaustive show it has ever attempted at an international exposition, including two live fur seals, from the Pribyloff Islands, and other specimens of marine and fresh water life, that will be distributed between thirty large tanks and three pools, to say nothing of fish hatcheries in actual operation.

But each of these exhibits is entitled to a separate story.

came to Hagerstown that the law was being violated and that squirrels were being killed. People took the view that if they were to kill any squirrels at all they had to do it before the leaves fell from the trees, and for this reason the law was probably violated.

What interfered with the hunting season probably more seriously than anything else was the outbreak in the county and state of the foot and mouth disease, which led to the proclamation of a quarantine by the Governor and the forbidding of hunting with dogs. This caused great inconvenience to hunters, and little game

was bagged on account of their inability to use dogs to find the game. The ban on hunting with dogs was received here with much regret by sportsmen. Lovers of game see in the present cold spell and snow the death of many of the remaining partridges in the county. This kind of weather has always been hard on game here, and particularly on partridges. With the ground covered with snow the birds cannot obtain food. At the same time it has been so extremely cold that with no shelter afforded it is feared that many of the birds have frozen. This has happened many times before in this county and account, in a measure, for scarcity of game here. There have been times, however, where persons living in the country have taken care of the birds, feeding them and giving them shelter. In many cases the birds hardly ever stray from the farm and in this way are cared for throughout the winter, and remain on the same place very often during the summer and fall. Sometimes hunting on those farms is prohibited by the owner, and in this way the birds increase in number.

DANIEL BOONE GUN CLUB.

Marthasville, Mo., Dec. 29, 1914.

Cold weather and a hazy sky with a wind from the back made the targets difficult to break at the Daniel Boone Gun Club shoot at Marthasville, Mo. Fourteen shooters faced the traps in the first event, of which there were five at 10 targets each. C. Kite had a remarkable score of 49x50, missing his thirty-ninth bird and won the gold quail pin donated by the DuPont people. Mr. Harbaner, a visitor of the Warrenton, Mo., Gun Club, was high with 45x50, who with Mr. Wilson, our former secretary, drove down in the cold to shoot with us. The following were the scores made: C. Kite, 49x50; Wm. Harbaner, 45x50; A. F. Ahman, 43x50; Otto Pronstrup, 43x50; G. Lichtenberg, 42x50; J. Wyatt, 40x50; J. Mutert, 39x50; E. E. Suhre, 39x50; O. Berg, 37x50; F. H. Suhre, 36x50; J. O. Wilson, 33x50; R. Gardyne, 20x40; W. Gardyne, 10x20; F. Koelling, 4x10.
E. E. SUHRE, Sec'y.

FORD HIGH GUN.

Manoa, Pa., Dec. 26.—Ford was high gun at the Meadow Spring Gun Club here to-day with 89, winning a spoon. Other scores were: Coyle, 87; Williams and Sloane, 85 apiece, and H. H. Roberts, 74. With a handicap of 4½ Williams captured the club spoon by breaking 44, and Sloan, for high actual shot in 50 also won a prize.

Born 1820

The 1914 OFFICIAL TRAP-SHOOTING AVERAGES
Both Amateur and Professional were won with

Peters "Steel Where Steel Belongs"
Factory Loaded SHELLS

The superior skill of MR. WOOLFOLK HENDERSON, and his equally superior ammunition, which were the sensation of the 1914 Grand American Handicap, have very consistently scored another great victory. Mr. Henderson *leads all Amateurs and Professionals* in the 1914 Averages with the fine percentage of **96.63**.

Among the professionals MR. L. H. REID, formerly of Ohio but now located on the Pacific Coast, *wins the highest honors with 96.44*. He has also won the Pacific Coast High Professional Average *three successive years*.

A Fitting Close for a Year of **Peters** Victories, including

The 1914 Grand American - - - - -	98 ex 100 from 22 yds.	} All Won by Mr. Henderson with PETERS Shells
The 1914 Amateur Championship—Single Targets—	99 ex 100 " 16 "	
The 1914 Amateur Championship—Double " —	90 ex 50 prs. " 16 "	

The Five Big Honors of the Year, All Bagged with the **P** Brand!

4 out of 6 U.S.R.A. 1914
Outdoor Championships

Won by users of

Peters AMMUNITION

The annual Outdoor Championship Matches of the U S. Revolver Association for 1914 show another marvelous record made with PETERS cartridges. The following victories and new records were made with the **P** brand 38 S. & W. Special and 38 Long Colt ammunition

Match C — won by	C. M. McCutchen	— score	627	— a new world's record!
" D — " "	Dr. J. H. Snook	— " "	221	— a new world's record!
" E — " "	Denver Team	— " "	798	— a new world's record!
" F — " "	Dr. J. H. Snook	— " "	214	— a new world's record!

Peters Cartridges not only WIN, but are constantly making new records possible and enabling Peters shooters to forge their way upward toward perfection

IF YOU WANT ACCURACY AND GENERAL EXCELLENCE

BUYERS' GUIDE

An Index to the Sporting Goods Trade

THE idea of this ready reference was brought to us through the many inquiries as to where sportsmen's necessities could be purchased, in different localities. Many of those patronizing the guide, regularly use display space in **Forest and Stream**, while others are only occasional big space users. The question comes often to us as to "reliable" dealers. We answer the proposition by **unqualifiedly recommending** those whose names appear in this directory. It is well to know how to purchase goods right and right goods—this you may rely on "Buyers Guide" to enable you to do. Should you need something not listed herein, write us—we can tell you where to get it—or better yet—we shall be glad to have our experts make purchases for you. Do not hesitate to write us should you, at any time, require our assistance.

application

MICHIGAN GAME REPORT.

William R. Oates, Michigan State Game, Fish and Forestry Warden, has favored *Forest and Stream* with a copy of his biennial report just made to the Governor. The eighty pages of the report are filled with an interesting mass of matter dealing with Michigan game and fish life

and a discussion of amendments to the law, etc., etc. Mr. Oates argues vigorously in favor of the buck law; he believes in it from first to last and some of the contributors to *Forest and Stream* who have been debating this law for a long time past, will no doubt find something to their advantage if they write Mr. Oates for a

copy of his report. The past history of Michigan so far as the destruction of forests and game is concerned is that of all other states, but fortunately the era of wantonness has been superseded by one of conservation and while the remnant left is not large, an increase may be looked for. Michigan was the first state, we believe, to employ a salaried game officer. Under Mr. Oates it is establishing many game refuges and following the provision of the 1913 law, more than twenty-four thousand acres have been thus set aside with good results. We are glad to see that Michigan has taken steps to stop auto hunting, that is, the indiscriminate, sneaking hunting which is proving so obnoxious in other states. Altogether, the Michigan report affords interesting reading and deserves more mention than space here permits.

BIRDS AROUND COLUMBUS.

Birds around Columbus, Ohio, have cause to feel that the new year is starting well for them. In four of the municipal parks feeding stations have been erected through the efforts of the Audubon Society and the boys in the Mound Street Manual Training School, who constructed the devices.

Two of the stations are in Franklin Park and one in Goodale, Schiller and Livingston Parks. Others soon will be placed in Iuka Park and on the campus of Columbus School for Girls. A large station will be erected on Ohio State University campus.

Spring Fishing number of *Forest and Stream*, published April first, will be chock-a-block with tackle talk, taking trips and telling tales. Get it.

"ALBION" WADERS

The only Perfect Waders

We have tried for many years to obtain a line of Waders that would give satisfactory service. We have now marketed these goods for three years and they have given UNIVERSAL SATISFACTION. The material of which they are made has proven to be the most DURABLE, DEPENDABLE and WATERPROOF on the market.

The medium weight are the most satisfactory all around Wader made. They are lighter than the domestic goods and more flexible.

The light weight are very light (a pair of stockings weighing only 22 ounces) yet they are quite durable and can be safely used for a long time by a careful angler.

Some Virgin Canoe Cruising Waters

In the New Hinterland of Northwestern Quebec Lie a Number of Unknown Lakes and Rivers That Offer Much to the Live Canoeing Enthusiast

By S. E. Sangster (Canuck) Special Commissioner for Forest and Stream

HIS is not a description of canoeing possibilities that is likely to prove of much real interest to the arm chair class of canoeists, but rather is for those with the essential red corpuscles in the blood—the man who seeks new routes into the virgin unknown. Incidentally, like virgin big game territory, such canoeing routes are becoming mighty scarce on this continent, but in this new Height of Land Country of Northwestern Quebec now accessible, both the big game districts and the splendid going, paddeways actually do exist and are worth a long trip to reach.

I indicated briefly in the last number of *Forest and Stream* the moose and bear areas I explored here last autumn, and how excellent were the prospects found for such game—so good, indeed, that modern, cosy hunting camps are being established for sportsmen visiting the Bell River and Coffee River sections this autumn. In a recent letter from Dr. A. R. Warner of Cleveland, Ohio, one of the real cruising brotherhood, he says, in referring to my recent descriptions of this new hinterland: "Evidently the country is very similar to that just south of the divide and the new railroad, and I can attest that all you wrote of its game, its wilderness, of the fish and the beauty are the gospel truth."

I might add that Dr. Warner is an old cruising visitor to the Upper Ottawa waters, south from Grand Lake Victoria.

From the point where the Bell River, coming north from the waters above the Height of Land

at the head of Grand Lake Victoria, crosses the new National Transcontinental grade, 180 miles east of Cochrane, one has a choice of several routes going south, as well as those north, or rather down, the Bell towards James Bay. Two specific cruises travelling southward might be given, viz.:—

(a) From Bell River Crossing (Nottaway Station) up stream (south) some 10 miles into Obaska Lake, which lake is some twelve to fourteen miles in length. From the southern end of this lake a run of eleven miles on the Sleepy River brings one into Simeon or Simon lake, another body of water four miles long in itself, but including its extension which is really the same lake, it is about twelve to thirteen miles in length. About three and one-half miles down Simeon Lake, the route turns north and east into Sifton Lake, which in turn leads east out into Garden Island Lake, where the route points south again through a stream unnamed, into Mitchi-Manitou Lake; down this lake a run of about eight miles brings one to a portage that leads into waters that are really the Upper Ottawa feeders. To this point from steel at the Bell Crossing it is approximately forty-two to forty-five miles and the trip can be continued right through to Timiskaming; or

(b) Following No. 1 route to Simeon Lake, but instead of going northeast to Garden Island Lake, continuing straight south about nine miles to a lake with an Indian name (unspellable); thence in turn by a stream, or rather river, fifteen miles long (good going) into Kawastagula Bay, the northeast extension of Grand Lake Vic-

toria. From here to the Hudson Bay Post on the lake itself (Grand Lake Victoria) is some twenty miles, the entire distance from the Nottaway Station being approximately eighty-five miles. From Grand Lake Victoria one can continue by direct route southward to Lake Timiskaming and the steel, or he can swing east and north by the Kanimitti River into the feeders of the Ottawa that lead directly into No. "a" route and back to the "put in" point. Likewise "a" route can be continued for return by retracing of "b" waters back to the new steel.

(c) At Hurricanaw Station (this being some forty-eight miles west of the Bell waters) one can go south a distance of six miles into Okikeska lake and seven or eight miles down it into Askikwaj lake; from a long arm about six miles down this stretch on the western shore a two mile portage carries one over into Newagama lake and this, four miles north and west, in turn leads into Lake Kewagama. Just what Newa and Kewa mean I am not certain; "gama" in all these lakes, such as Shabogama, Kewagama, etc., simply is Wood Indian for "lake," thus "Shabogama" means "Duck lake," "Akigama" being country of lakes, etc.

From Kewagama one directly strikes the Kinojevis river waters that lead right through to Lac des Quinze and Timiskaming, a route described in *Forest and Stream* of December 12 last. This is a long route, but can be undertaken by a party who have at least three weeks available and do not mind fairly strenuous "going" in places.

The northern routes from Bell River Crossing include, first, the through trip of some 250

miles to Rupert Bay; (James Bay); this leads straight north from the Nottaway Station down the Bell into Shabogama Lake which in turn narrows into the Bell again some twenty-nine miles north; twelve miles further north the Coffee River, which the new steel crosses just six miles west of the Nottaway Station and has paralleled the Bell waters closely, empties into the latter and near here one encounters the first portage required—a distance of forty-one miles clear going from steel. From the point where the Coffee and Bell waters junction, it is approximately seventy-two miles to Mattagama Lake and from here through to the waters of Rupert Bay by way of the Nottaway River proper, it is an additional 140 miles—a total from steel to salt water of approximately 253 miles. Going north it can be done easily in from ten to twelve days; returning it would require from fourteen to sixteen days, being up stream.

One of the best shorter cruises that particularly appeals to the writer, especially for a cruising-fishing outing, is that north by way of the Coffee (reached six miles west of Nottaway Station) to its junction with the Bell, forty-one miles north and returning up the Bell and Shabogama proper back to the Crossing. This (about eighty-two miles of a cruise) would make a splendid two weeks trip; or it can be shortened by going north only twenty-one miles and portage across from a feeder into Smoke Inlet and Shabogama Lake itself. This would make a trip of only forty-five miles, easily done in a week of ten days.

Trips Especially Recommended for 1915.

It would hardly be advisable to attempt some of these routes before 1916; for this August, however, two or three are quite feasible. The Nottaway Station is the point to leave train for routes up or down the Bell. As has been already stated in my former reference to the big game conditions in this territory, the writer purposes building a series of hunting and fishing camps north of the grade and a lease of all hunting and fishing rights in the territory surrounding these, on the Coffee and its feeders, to prevent molestation of the game and fish therein, by any but sportsmen at the camps.

Likewise no outfits will be obtainable at the Nottaway other than the canoes and supplies provided by the camps, nor can guides be had here that I know of aside from the staff of guides engaged at these camps. The writer can this year possibly supply necessary canoes and outfit and guides for two or three parties of two or four members each, for the cruises north via the Coffee and back via the Bell-Shabogama for trips starting the first week in August. I do not know of any local guides obtainable for the route from Hurricanaw down the Kinejevis, but some may be had from the Hudson Bay Co. or Revillon Freres at their Abitibi Posts or from Grand Lake Victoria Indians. Guides might also be obtained from the Hudson Bay Company at Cochrane to take one south to Grand Lake Victoria or through the Kinejevis route to Timiskaming; also canoes, equipment and supplies for these trips would have to be secured at Cochrane. I have no doubt but that outfits and guides for cruises through the Abitibi Lake region and from Hurricanaw south through the Kinejevis waterway to Timiskaming can be had at Cochrane from the Hudson Bay Co.

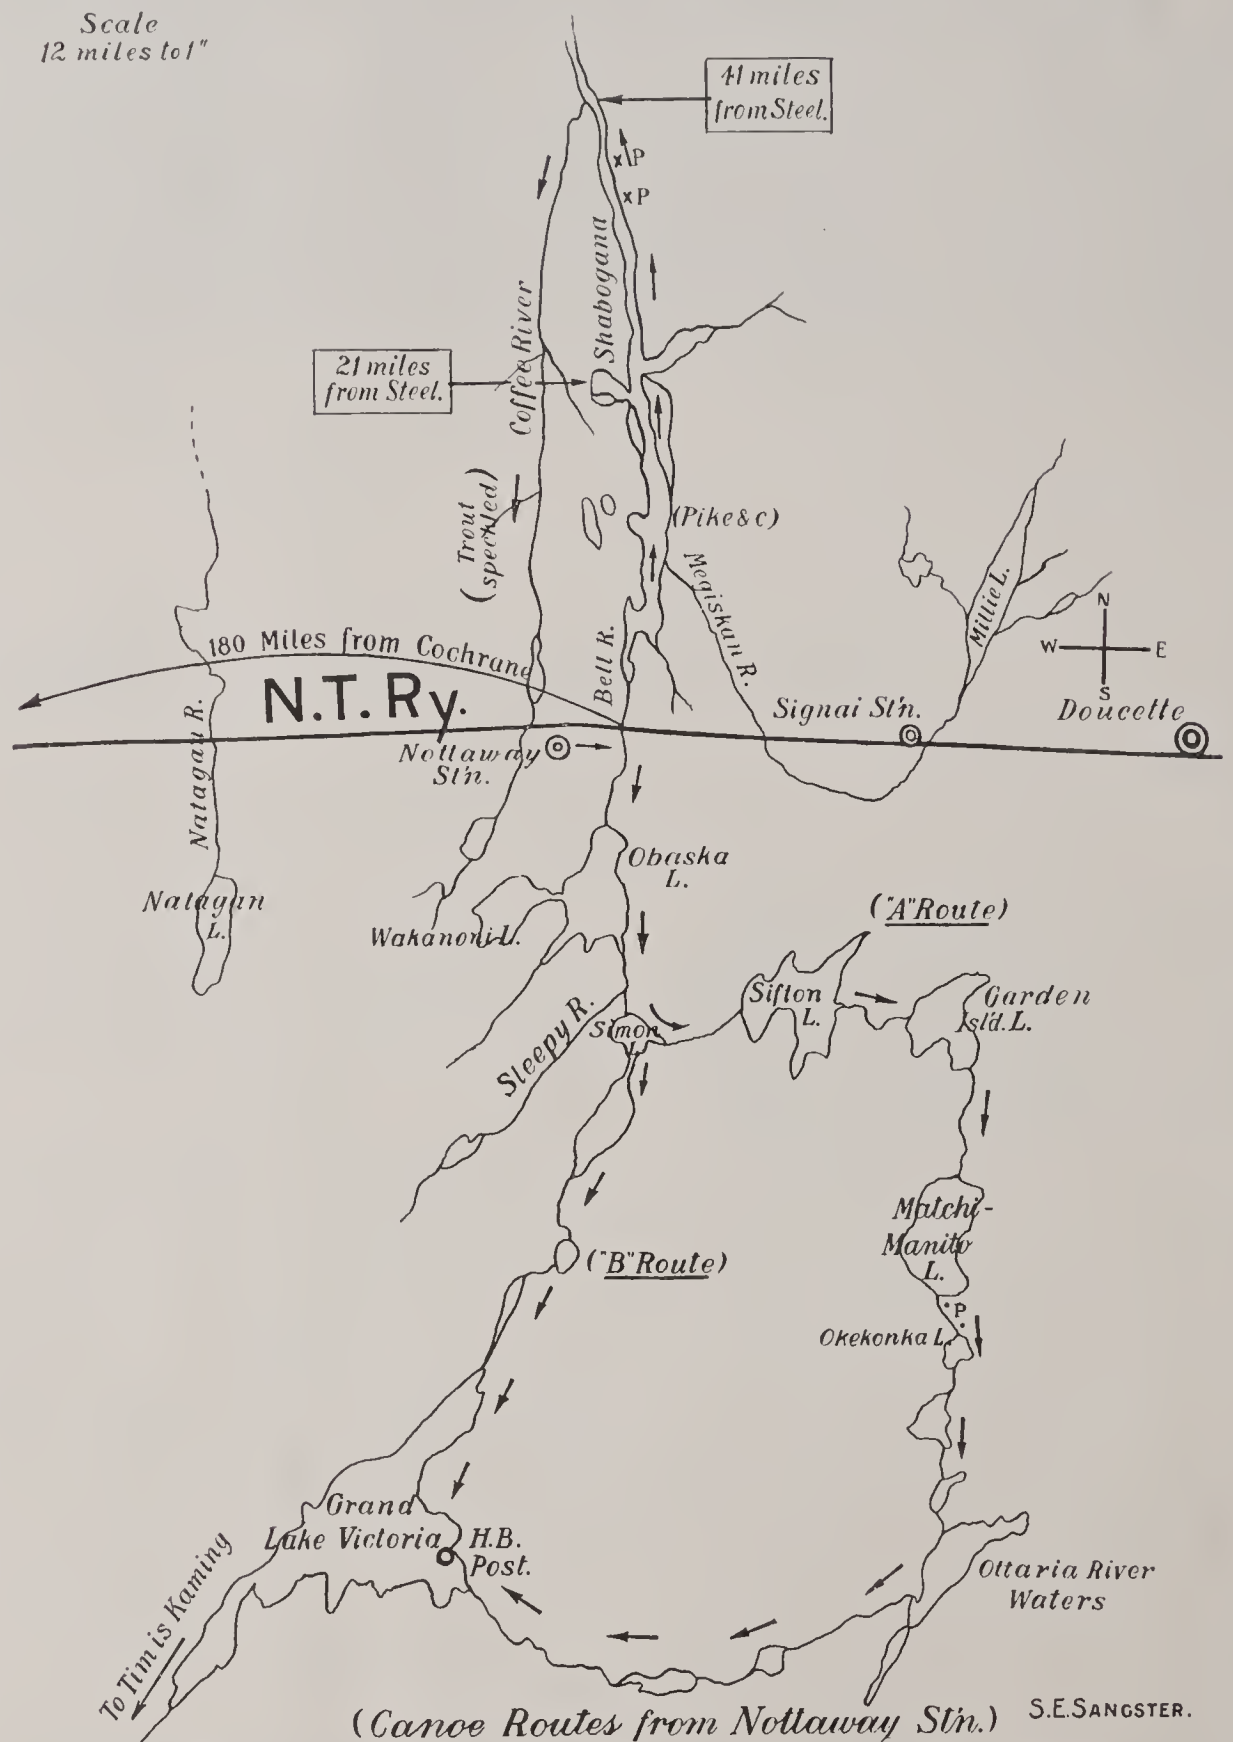

Several inquiries that have come to the writer

relative to the Hurricanaw route to James Bay lead me to strongly advise against it, as being so hard going with bad carries every mile or two that it would spoil all possibility of enjoyment for even the greatest canoeing enthusiast extant.

The Fishing in Waters Outlined.

In those waters included in A. and B. routes

whitefish, the latter can be taken (at least the Indians so state), on a spoon, and are gamey fighters. In the Coffee river feeders and in those of the Megiskan as well, speckled trout are reported as very plentiful, which although not of large weight or size are bonny fighters and splendid table fish. The trout season here is open

Map Showing Canoe Routes in Region Covered by Mr. Sangster.

south from steel at Nottaway Station the fishing is in main pike and pickerel; possibly some lake (grey) trout may be found at the southern end, but I cannot say.

In the Bell-Shabogama waters proper the fish include immense Northern pike and pickerel and

throughout September, thus offering an extra attraction to big game sportsmen hunting here during that month.

In the Upper Ottawa waters musky and some bass are found, in addition to pike and pickerel, but so far as I can say as yet, no musky home in

A Hudson Bay Post in the James Bay Country.

any water which is contiguous to the new steel.

It might be pointed out, in closing, that an exceptional opportunity will be found on August cruises for getting good photographic chances at moose. This should appeal strongly to outing visitors, to which the Indian life to be encountered along the various paddeways adds a further kodak or camera attraction.

For trips prior to September a rifle need not be toted, in fact it would be far wiser to leave it at home, as the probability is its presence might often lead to infractions of the game laws. A good belt gun, .32 or .38 cal., would be all the firearm necessary and I very much doubt the necessity of even this. If cruisers do take along a .22 rifle, for the sake of all saneness, refrain from potting at such game as moose or other large animals with it. I mention this because I have too often seen tourists in the North during

the fly season spitting little .22 pills at everything they run across.

In conclusion possibly it might be well to point out further that these are absolutely virgin cruising areas and much yet remains to be learned from "been there" exploration as regards actual conditions; it is quite possible that musky, for instance, may be found in waters they are not now suspected of inhabiting. To attempt any lengthy cruise from steel without a guide that can be relied on would be very unwise, even risky, and I would urge prospective visitors to consult a competent source of information in arranging for outfit, guide and route for their contemplated cruise. *Forest and Stream* inquirers may have the benefit of any assistance I can extend in planning cruises in any section of this new district. Do not be afraid to ask questions. They will be answered to the best of our ability.

On the Coffee River, Favored by Speckled Trout.

Items of Outfit.

As this region is practically unknown and up to the present, one might almost say, not on the map, items of one's outfit must in main be brought in. Cochrane is the nearest village to the Bell River District where any selection of supplies and outfit can be secured.

Canocs.—Undoubtedly the ideal canoe for this region, and in fact for all Height of Land waters, is the canvas-covered type. The Hudson Bay Company at Cochrane can supply canoes for cruises of the Abitibi District, as well as tents, blankets, etc. The new camps will have new Old Town 17 foot canoes, because the writer has picked this type as being unsurpassed for cruising and hunting purposes. The 17 foot length has proved to be quite as easily handled and quite as fast, if not faster, than the 16 foot length, at the same time carrying fully 50 per cent. more duff. No keels are recommended for this region, as many of the smaller paddeways are shallow.

Tents.—Unless one brought his own tent, these

At Height of Land, N. W. Quebec.

can be secured also at Cochrane. For two-man parties, using a small size, say 7 x 7, I strongly recommend ordinary duck, as the silk tent, paraffined or otherwise coated, in these small sizes especially, when closed up, gives no ventilation and the air in it soon becomes close and unhealthy. If bringing one's own tent, there is no better model for cruising than the Baker type, and in this the silk material can advisedly be used. This type is, of course, a little more bulky, but this is more than offset by the favorable factors found in the open-front make up, both for sleeping purposes and for heating without a stove.

Blankets.—The nights are always chilly in this region and two pair of heavy blankets can always be used per man. There is no better blanket made for such trips than the regular Hudson Bay 3½ or 4 point. These cost in Canada around from \$6.00 to \$7.75 respectively, fluctuating slightly according to current price of wool. An allowance of two double blankets should be made for each member in party. Many prefer sleeping bags and, especially for cruising, personally I

prefer them. They take up considerably less space, weigh less and are warm and comfortable.

Field Glass and Kodak or Camera.—A powerful but preferably small field glass is one of the most important items of personal outfit and at least one should be with every party. Its worth is incalculable repeatedly, both for summer cruises and in big game hunting. Likewise a Kodak or camera with a really good lens is equally valuable. While many sportsmen prefer the smaller sized models, for such a field as scenery and live game photography the writer has, after exhaustive experimenting, picked as his own choice what is known as the post-card size, which in the Kodak type is not unduly bulky and gives splendid negatives, with a good lens, under all conditions. The larger box style cameras are not fitted for carrying on cruises in such country as here encountered, where every pound materially figures.

Clothing.—For August wear for outer cloth-

ing—a waterproofed duck is suitable for general wear. For wear after September 1, Mackinaw trousers, shirt and coat cannot be surpassed. For summer a good weight military flannel shirt and for canoe wear at all times soft moccasins are my choice. For hunting a 12 or 14 inch waterproof shoe or rubber foot and leather top boot, of which there are a number of good ones available. A warm coat-sweater is at all times advisable in one's outfit. Medium-weight flannel underwear in August and both medium and fairly heavy weight in September and October is recommended, one suit of each. Heavy woolen socks, at least three pair in the dunnage bag for each person, is the best foot covering.

There may be individual preference of special articles of outfit not covered herein, but as a general thing the above items will be found to answer satisfactorily and provide comfort under all weather conditions.

to walk on." Arthur good-naturedly picked it up, and put it on the seat again.

Uncle Sam smoked and joked, and didn't seem to care whether he got any fish or not. Mr. Sayles got one croppie, when Mr. Warren said, "Let's move on; this place is no good."

The next place wasn't much better, and Mr. Warren's exasperation increased. He was civil enough to his brother and the other two men, but he did take it out on Arthur; "Arthur, what did I tell you? You turn around, and throw your line out of our way. You are a perfect nuisance. There you go on my coat again. I've a mind to land you on shore."

Arthur paid about as much attention to these remarks as if a mild breeze were blowing his way. He obediently hauled up the anchor, and his father rowed with suppressed anger and fierce energy to the other side of the lake.

They had thrown out their lines again, when Arthur started whistling. "Arthur, you'll scare off what fish there are. Can't you keep still?"

The afternoon was pretty well gone, when Mr. Warren said, "We might as well give up trying to get a decent string of croppies. Let's troll for pike awhile."

They did, and Mr. Sayles got a fine four-pounder—a wall-eyed pike, and Mr. Lawrence got two pickerel, but Mr. Warren got tired rowing, and suggested, "We will go over by those rushes and get some bass."

Mr. Lawrence and Sayles got one apiece, and Arthur got two in a short time. Mr. Warren finally got a strike, but just as he was reeling in, Arthur yelled, "Oh, papa, I've got a big one. Help me land him." Mr. Warren did make an effort to help Arthur, but in the end he lost both fish, and his and Arthur's lines got completely tangled up. Mr. Warren worked with what patience he could to untangle them, but jerked out his knife and cut the lines. "If I ever take you fishing again, Arthur, I'll know it."

"Well, I can't help it, if the other boat is gone." Arthur protested.

Still they persisted trying to catch something until sunset, but their poor luck continued. Mr. Warren, Arthur and Uncle Sam came home with half a dozen croppies and a few rock bass; while Mr. Lawrence and Sayles had eight croppies, some rock bass, two nice black bass, and the pike and two pickerel, but no more than they could use in their own families.

That night there was no fish distributed around camp, and no big stories of how "you could pull them out as fast as you could bait your hook and throw it in," in fact, Mr. Warren did not mention to anyone the fact that he had been over to Cullen fishing that day.

NEW YORK CONSERVATION REPORT.

The fourth annual report of the Conservation Commission of New York went to the legislature January 15th. It is a document of about 57 printed pages, and is filled with reports of the work of the commission during the current year. The commission refers specifically to the coming constitutional revision convention, and urges that all who are interested in keeping intact the wild life and forests of the Adirondacks should watch the proceedings of the convention, as there will be sinister efforts to grab the forests for commercial purposes. During the year the commission made 2,296 successful prosecutions for violating of the law.

Not "Three Men in a Boat"—But Five

By Lillian S. Loveland

ONE evening up at Pelican Lake in Northern Minnesota, a man in our camp said to some others in a group, "Let's get up a party, and go fishing at Cullen Lake to-morrow."

"All right," spoke up Mr. Warren, "count me in." There were seven men who wanted to go, but Mr. Eiler, who knew the conditions, explained that there were only two boats to be rented at Cullen, and as two were as many as could fish to advantage in one boat, the party was cut down to four.

When Arthur Warren, the twelve year old son of the Warrens, heard of the expedition, he teased to go, as he was very fond of fishing and usually had excellent success.

"You can go, Arthur, if you want to, but you can't fish," Mr. Warren told him.

"Why can't I go in the boat with you and Mr. Eiler, papa?"

"Three men in a boat is as bad as three men in a bed. It's no fun for anybody. You needn't tease, I tell you."

Arthur, of course, did not care to go since he couldn't fish. The men had splendid luck, and came back to camp with one hundred and fifty croppies—Cullen was a noted croppie lake—some wall-eyed pike and pickerel, and three fine large black bass.

A little later in the season Mr. Warren's brother, Sam—a big good-natured "Uncle Sam"—came up to the lake; also Mr. Lawrence, a friend of the Warrens, who was visiting the Sayles'. One calm, cloudy morning, an ideal fishing day, Mr. Sayles asked the Warrens to go over to Cullen with him and Mr. Lawrence, and they accepted heartily.

Mr. Sayles and Mr. Lawrence had just finished catching a fine lot of shiners for bait, when Mr. Warren came over to their cabin with a rather rueful countenance, "I am afraid we can't go. The Jenkinsons are entertaining for their guests to-night, and Mrs. Warren is expecting us to go

with her over there. We couldn't get back from Cullen in time. I am ever so sorry."

"Perhaps Arthur would like to go with us," Mr. Sayles suggested. "He can show us the good fishing holes."

"Yes, I am sure he would like to go, if you want to be bothered with him."

When they were all ready, Mr. Lawrence stopped at Warren's for Arthur. The three men folks and Mrs. Warren were all on the porch.

"Are you ready, Arthur?" asked Mr. Lawrence. None of the men said a word. Finally Mrs. Warren snapped out, "They are *all* going."

Uncle Sam said sotto voice, "Any man can change his own mind, but it takes a pretty smart man to change his wife's mind."

They all started out in high spirits, carrying their bait and fishing tackle the three miles; but when they reached Cullen Lake, they found that Mr. Lundborg, the owner of the boats, had taken the smaller one and gone to Nisswa, and would not return until evening.

Mr. Warren looked pretty disgusted, but they all got into the one large boat remaining. Arthur sat in the bow; Mr. Warren, who did the rowing, on the next seat; big Uncle Sam and medium-sized Mr. Lawrence sat back to back on the next seat, and Mr. Sayles, who was also big and fat, had the back seat.

"We will get what croppies we want first," said Mr. Warren, rowing to a favorite place. "Then we will go after bigger game. An hour's fishing ought to give us croppies enough."

The favorite place seemed deserted, and not a bite did they get, but Arthur did succeed in getting his line tangled up with his father's, to that person's great annoyance.

Then they tried another locality, and Mr. Warren and Lawrence got a couple croppies apiece.

"Now, Arthur Warren," exclaimed Mr. Warren suddenly, "you are treading all over my coat. I put it down there for you to sit on, not

A Wily Old Buck

The Story of a Deer That Knew How To Baffle The Hounds

By William E. Simmons

WHETHER animals reason may still be a mooted question with some, but those who know animal life intimately can have scarcely any doubt on the subject. For my own part, I was long ago convinced that in mat-

ters concerning self preservation, many, if not all animals, reason relatively almost as well as men. In a recent number of *Forest and Stream*, Mr. Lincoln recalled the story of a famous fox that invariably eluded the dogs at a certain fence corner. I can cite from my own experience the case of an old buck that displayed almost human intelligence.

In the latter part of the sixties, I was living on a plantation on the coast of South Carolina, about 20 miles southwest of Charleston. One day, riding to the post-office, I noticed an exceptionally large deer track on the road. It was evidently the track of a newcomer to the locality because I had never seen it before, and it was too conspicuous to be overlooked.

At the post-office village I met Dick King, a relative and hunting companion, who had a fine pack of hounds. I had a few hounds myself, but seldom went deer hunting without Dick. As soon as I told Dick of my discovery, we arranged a hunt for the following week. The meeting was for sunrise at the place where I had seen the track. There it was again, and every one in the large party, about a dozen, expressed astonishment at its size. It was fresh, evidently made during the night, and its direction indicated that the lair of the buck was in a swamp on the south side of the road. The "standers" were sent off to their posts. When they had time to reach their various destinations, Dick and I, who remained with the dogs, put them on the track. It was so fresh they went off at full cry.

For about a mile the dogs never hesitated, and Dick and I had some difficulty in following them through the thick underbrush, for it was mid-summer, with all the luxuriance of the Southern woods. But in the heart of the swamp, the dogs came to fault. They trailed in circles, widening and narrowing, for hours, and, at last, about 10 o'clock, were completely baffled.

Reluctantly we abandoned the quest for the day, but determined to resume it in the succeeding week. Our second attempt was almost an exact repetition of the first, and, indeed, we hunted that deer with the same disappointing and puzzling result, almost every week, during the remainder of the Summer. Even in the early Autumn we had no better success. Always we found the track about the same place; always the dogs followed it at full cry into the heart of the swamp, and always about the same place they came to fault.

It may be readily believed that enthusiasm in the pursuit of that particular deer waned. One by one the members of the hunt dropped out of the hunting, until only a few beside Dick and

myself were left. Some of our former associates made themselves disagreeable by inquiring when we expected to jump the phantom buck; others were offensive enough to hint that the tracks were planted; while the superstitiously inclined shook their heads and said the devil had been known at various times to assume the form of animals.

Cotton planting had proved a failure for me, and I was about to leave the parish for good, but I was loth to depart without another try at the phantom buck, so, about the end of November, Dick and I arranged a final meet. The dogs performed the same old stunt, and we found ourselves at the same old spot, watching the dogs as they vainly tried to make out the trail. The chill of Autumn had stripped the foliage from all except the hardiest shrubs, so the outlook was clearer than on any of our previous hunts.

Less than fifty yards from where Dick and I sat upon our horses, was a thick clump of gum bushes surrounding the stump of a fallen pine. The trunk had broken off about fifteen feet from the ground, but remained attached to the stump. It was a large tree and the leafless crown rested fully sixty feet from the stump. The stump with its clump of gum bushes was the center of the circle described by the dogs. After awhile I said to Dick:

"I believe that deer is in that clump of gum bushes."

"Impossible," returned Dick, "the dogs have been all through it."

"You are mistaken," I persisted, "the dogs have been all round it, but not one has been through it."

As I was speaking, Countess, a large bitch with bluish and tan patches on grey fur, distinguished for both nose and speed, leaped upon the log near the crown. Plainly she was not guided by scent for she looked round as if seeking an elevated point of view. A moment later she walked a little way up the inclined trunk and then sniffed it for the first time. With a cry of surprise and triumph that at once attracted the other dogs, she trotted swiftly up to the stump, keeping her nose all the while on the trunk. At the stump she gave a quick downward look, a wild yell, and plunged into the gums. The whole clump swayed as if swept by a sudden wind, and out sprang the largest buck I had ever seen.

The mystery of the phantom buck was solved at last. That wily lord of the forest had thoroughly learned the ways of the hounds and devised an ingenious plan to outwit them. He approached his lair in narrowing circles to a convenient distance, then leaped upon the trunk, walked up the incline and dropped into his bed. His clever reasoning was displayed no less in lying quiet with dogs giving tongue all round him, than in his manner of retiring to rest.

Either Dick or I could have killed him, but, as we were "drivers" the etiquette of the hunt did not permit us. Besides, he made straight for one of the standers. Soon the woods reverberat-

ed with two reports of a shot gun, following each other in quick succession. When I came up shortly after to the fortunate stander, his hat was off, his hair on end, and he was swinging his arms wildly. In a voice hoarse with excitement, he exclaimed:

"The biggest deer I ever saw in my life!"

"Did you kill him?"

"No, but I hit him!"

"Which way did he go?"

"Back in the drive."

There was a ridge in the swamp and I opined he would follow that, westward, to gain a larger and denser swamp. More than a mile to the westward, a road crossed the swamp. If I could gain the ridge by that road ahead of the buck, I could get a shot at him. My mount was a small, swift, mare, well trained for hunting. Off as soon as I gave her the rein, she stretched herself to the run until the tall pines fairly whirled around us. The wind whistled noisily in my ears but I could hear the baying of the hounds and feel I was gaining on them. Still there was one solitary, sonorous, note in advance, that of Countess, which had left the pack far behind, and the deer was ahead of her. When the little mare wheeled into the cross road the odds seemed to be against us, but she felt the fervor of the chase as well as I and valiantly strove to win.

We were just taking the rise of the coveted ridge when the mare stopped with a suddenness that nearly sent me over her head. She had seen the deer before me. There he was, broadside on, loping easily, about 60 yards away. When I fired the first barrel, he swerved to the left, and dropped his tail, so I knew at least some of my shot had found their mark. I gave him the other barrel at his quarters and saw him wince again. Then I touched the mare with the spur and she darted after the deer. We had gone barely a hundred yards when Countess flashed by us. She had evidently leapt up at the sound of my gun, caught sight of the deer, and taken up the chase by sight. Within a quarter of a mile she seized him by a hind leg and pulled him down. I came up to find he had pinned her to the ground with his antlers.

In a moment I had thrown myself from the mare and was rushing forward to free the hound. But while I was yet a few yards off, I caught a danger-gleam in the buck's eye and suddenly remembered my gun was unloaded, for that was before the day of the breech-loader in our parts. My gun was about half loaded when I looked at the buck again and saw his eyes were glazed. I lifted his head and freed the bitch. The points of his antlers had struck in the earth and held the dog fast, but the antlers themselves were so broad she was entirely unhurt. The vitality of that buck was as remarkable as his cleverness. Six shots from my first barrel passed clear through his chest, three through the heart. Many shots were also buried in his haunches, and yet he ran more than a quarter of a mile before the dog pulled him down.

American Cannibals

The Animal-Like Seri Indians of Sonora, Mexico and Their Feats of Strength and Speed.

(Continued from the January *Forest and Stream*.)

By Charles Frederick Holder

THE Seris began early to assault the Spaniards and doubtless they killed many before they made long raids into the interior, attacked their victims, at night, and retreated to the Sierras of their island. The victims generally died from the poisoned arrows, and the Seris became known by this and were hated and feared by all tribes.

In reading old Spanish books the Seris and their ferocity is an ever recurring subject, and while it seems incredible that a handful of savages could for two hundred years or more defy a great nation, it is essentially understood by those who have visited their country. The approach is the Ensinas' desert, a most arid and forbidden region, death to those who do not know the exact locations of water. The island, equally a desert, is separated from the land by a dangerous channel infected, at high tide, by sharks. The Seri, when followed, dash over this awful desert with the fleetness of deer, reach the coast where they board their hidden balsas of reed, and put for the island where they separate and hide in the mountains; their followers as has often been the case, almost perishing for want of water, and being shot down or picked off with poisoned arrows until they become demoralized and retreat.

The Jesuits in 1700 probably were the first to trail the Seris to Tiburon. Padre Melchor Escalante after one of their raids, followed them to their mountains and took a number prisoners, while Salvatierra and Kino tried to convert some of them; but there is no evidence to show that the Seris experienced a change of heart.

When a powerful force appeared they cringed like dogs, when defenseless persons came their way they were brutally killed, and it was suggested that such victims always disappeared; there was nothing left after the Seris had completed their raid. As Dr. Magee the ethnologist says:

"Weaker parties venturing into the purlieus of Seri land never returned; they disappeared and left no sign. The Padres claim to have made converts of some Seris, but it is a question whether they did not make a pretense of confession that they might loot the country more easily, as according to Rudo Ensayo, the Seris in six years previous to 1763 stole from the Mexicans four thousand horses and mules all of which they devoured."

This, despite the fact that the Padres founded the mission of San Pedro de la Conquista de Seris for the conversion and imprisonment of the Seris, at what is now Hermosillo in the Rio Sonora, Tiburon being near the mouth of this river.

The Governor of Sonora in 1749 was Colonel Diego Ortiz Porilla. When the Seris objected to his orders, he promptly sent part of them to

Guatamala and to various parts of Central America—exactly what Governor Diaz was obliged to do in 1908 with the Yaquis who were shipped to Yucatan. Some of the Seri objected to this, and they declared war on every one, raided Sonora and committed many brutal crimes, killing so many Spaniards that the Governor, believing them cannibals, determined to exterminate the entire race. He proceeded to Seriland with five hundred men and after two months returned with twenty-eight women and children. Most of the men escaped to the mountains and before long the raids were continued.

The ferocity of these people depleted by constant attacks, is one of the extraordinary features of the race. Orders were repeatedly given out to exterminate them by various Spanish officials, but in almost every instance they would ambush the Spaniards and, as in one instance, the "Spaniards were found half eaten by animals," and there was a question in the minds of many whether coyotes or Seris were the animals. In 1760 an extraordinary effort to exterminate them was made by Governor Mendoza at Cerro Prieto. The Seri chief, El Becerro, fell wounded but shot Mendoza with an arrow as he went down. A year later Governor Guerrero led four hundred and fifty men against the Seri at Tiburon, killed forty-nine and captured sixty-nine, but in 1763 the then Governor, Don Juan de Pineda, having his army worn out by the Seris who separated, distributing themselves all over the country in towns and manchierrias, endeavored to make peace with them thus confessing his inability to conquer them.

The Seris pretended to acquiesce, but they never gave up and were really the cause of disputes which resulted in the expulsion of the Jesuits from Mexico in 1767. The church could not convert nor could the army subdue them, and the raids, punishments and shootings continued through two centuries down to to-day, depletion not having quelled the barbaric spirit of these people, who intimidated the whole state and nation, and made their name a synonym of terror and horror.

The Jesuits having failed, the Franciscans now attempted the conversion of the Seri, and in 1772 Fray Juan Crisostomo Gil de Bernabe took charge of the Rancheria de Los Seris. From here the wily Seris lured him nearer to Seriland and finally accomplished their purpose.

Bernabe disappeared one day, and it was found later that he had been stoned to death.

It seemed impossible to crush this hydra headed race, and at least fifty wars with them and the Mexicans followed. In one as late as 1844 the Mexican army and navy proceeded conjointly against them, killed a number, burnt their balsas and jackals and captured the entire tribe. Some authorities express the belief that the Mexicans made the mistake here of not shooting them down—men, women and children

—like rats. Instead of this three hundred and eighty-four were marched overland to Hermosillo and for the first time in a thousand years at least Tiburon was safe to those who wished to land. As the troops approached the city with the Seris, a scene was enacted similar to that when the Yaquis were rounded up at Guaymas last year. The entire populace turned out. Hundreds of Mexicans came into town to kill a few in revenge for the loss or "disappearance" of friends, bells were rung, and the beautiful city was given over to a fiesta in honor of the ending of a two century war with the Seris. The children were distributed about the city in Mexican families, the men and women placed in the jail of the Pueblo Seri.

All went well for a few weeks, then they were set to work gathering fuel and before the authorities knew it they had rounded up their children and were retreating to Tiburon down the Rio Sonora murdering everyone they met on the way. The authorities were now in despair again, as the country about the city was in a panic and in danger of their raids. Cavalry troops were sent against them, and a few Seris brought in, and from that time until to-day their number has gradually decreased. But they have in no sense lost their savage nature and during the last half century there have been many disappearances on and about Tiburon. In a word, the resentment these people have always had against all other people has not abated. They do not make such exhaustive raids, and do not kill so many people as of yore, merely because their own numbers have been decimated.

A modern German writer, Pajeken thus described the Seris as he found them:

"The state could not restrain these Indians or prevent their murders. The Seris appear not to grasp the idea that they are human. Like beasts of prey of the wilderness they go out to slay men and animals. They slay to satisfy a lust for slaughter."

That their methods were those of hyenas is well illustrated by the experience of Don Pasqual on the Encinas ranch on the borders of Seriland where a band of Seri squaws killed one of his horses by breaking its neck, sucked its blood, gorged its intestines and buried other parts that they might "ripen" for a feast. Don Pasqual declared war against them in 1860; a Seri head was taken for every horse or steer they killed and it soon became a war to the death. His vaqueros were ambushed, his horse was shot but not before he had laid out over seventy of the "demons of Seri." So terrible was the warfare Don Pasqual Encinas carried on against them, that they sued for peace to save themselves from extermination and the old Spaniard who had made a most commendable philanthropic effort to civilize them, consented to call off his vaqueros and try them again, as he had many times before.

Don Pasqual testified to the United States

Government that in his personal war with them he killed over half of the entire race. One of his vaqueros had a record of seventeen Seri heads and this only a few hours travel from the American line—true material for a thousand dime novels of the most lurid character. These continued raids and murders, the fact that the Seris seemed to really enjoy slaughtering aliens, men, women and children, either with rocks or poisoned arrows, their horrible, indeed revolting, personal habits and lack of cleanliness amounting to positive aversion to water, produced in the centuries since the conquest a racial aversion which I found all over Sonora. The very name Seri made one man instinctively reach for his gun, and the average vaquero of northwestern Sonora up to within a year or two would shoot a Seri on sight just as they would a Gila monster.

Dr. Magee of the Smithsonian, who has made the most careful scientific study of the Seris, says regarding the relations of the Seris and the whites: "The toleration was almost precisely on a par with that between the rancho and the vulture flock that scavengers his corals, and when depredations began, the toleration was of a piece with that between the householders and their unwillingly domiciled rodents." In a word, they were rounded up and killed like rats, the survivors stealing away to begin their raids as sure again as the sun rose. As fighters they cast a spell of terror on many enemies. They had no especial system of fighting except low cunning, stealing into a camp at night, and crushing the heads of sleepers with stones. When they fought in the open they first shot their poisoned arrows, the slightest wound of which meant horrible death; then with wooden clubs or rocks rushed upon the enemy, demons crazed by the lust for blood and actuated by a cannibalistic desire beyond question.

Concerning their ferocious appearance at this time when they attempted to brain their enemies with rocks, break their necks or crush their chests by jumping on them. Senor Encinas states, according to Magee, that the "rushing warriors are transfigured with frenzy, their eyes blaze purple and green, their teeth glisten through snarling lips, their hair half rises, like a bristling mane, while their huge chests swell, and their lithe limbs quiver in a fury, sudden and blind and overpowering, as that of a puma springing or charging peccary." Of the successful assaults says Magee, "the ghastly end is rarely recorded though whispered, large in the lore of Sonora." In a word, the consensus of opinion among the Sonorans, is that the Seris are cannibals who make no invidious distinction between a gringo, a Mexican or a horse in their dietary when alone and in the fastness of the Sierra Seris. A survivor of a hand to hand fight with the Seri, one Jesus Omada of Bacuachito, was attacked by one warrior who nearly tore his arms to shreds before he killed him. The Seri had no weapon but his teeth which he used, as would a coyote, with terrible results, and but for timely aid would have torn Omada in pieces, and, doubtless, had they been alone Omada would have "disappeared."

In appearance the Seris are tall, well built, powerful and large in proportion. Many of the men are not ill looking but nearly all have a surly, snarling expression, which is not misleading, as when approached men, women and

children snarl, mutter and growl like dogs, while their beady black eyes glitter in a menacing fashion. It is precisely the feeling of aversion a dog exhibits and doubtless is just as natural. In trying to induce an old Seri woman to lower her zerape for my photographer she drew it over her head hissing all the time exactly like a Gila monster and every bit as venomous. At least from what I know of the two I would rather take my chances with the poisoned-tooth lizard than the poisoned-arrow Seri.

No very old Seris are seen and it is believed they dispose of them. Cripples and useless men or women and drones also disappear, so that the clan or tribe always represents men and women perfect physically. The women are sometimes comely, some even attractive, in feature, though their square shoulders give them a masculine type. The men have no ornaments but the women paint the face in a peculiar way, depending upon the clan they belong to—the Turtle, Pelican, etc. This is often a broad black or white winged band across the face or a snake patter of red, blue and white, effective against the deep-copper skin. The women build the huts and appear to have more recognition as women than the sex obtains in many tribes, older women especially being the advisors and seemingly the owners of the homes. They do most of the work; building huts, carrying water for miles, preparing food and acting at times as decoys to trap enemies within reach of the arrows of the men. As to their habits and customs almost nothing is known, due to the complete isolation of their lives and the ferocity with which they resent any attempt to interfere with them or their privacy. Parties landing with an armed guard are not molested, but the unwary prospector or the unfortunate mariner cast on their shores even to-day would in all likelihood "disappear."

The Seris stole thousands of horses, but never had the wit to ride or use them, in fact they did not use them as a Seri cannot ride a horse. With a quick motion they would break the animal's neck and with rocks, hand and teeth tear and lacerate the flesh, piling great masses of flesh on their backs and run so swiftly that even the vaqueros of Don Encinas in a posse on the best horses could not catch them, in a word, the Seris from their wandering, walking habit have undoubtedly become the most remarkable runners in the world. They have been known to run down horses, coyotes, deer and other game. Magee cites an illustration of a number of Seri boys who caught a flying bird by the tail although the bird had the advantage of a start. Half grown boys catch jack rabbits by running them down while half a dozen Seris can throw a horse, breaking its neck, a scene often witnessed at the ranch of Senor Encinas. The latter saw a Seri run a deer down and drive him to the Encinas rancho. The native with marvelous speed continually headed the deer off driving on and on, until when near the ranch the Seri rushed in on it, seized the stricken animal and carried it to the corral—a story almost beyond belief.

At the Encinas ranch the experiment was made to test the speed of a Seri, a horse being offered to them if they could catch it, single handed within six hundred feet of the start. The animal was frightened by a vaquero in a corral, then suddenly released through the bars at full

speed. The runner the Seris had selected, dashed after it, and despite the fact that the frightened animal was running away, caught up to it, leaped like a jaguar to its withers and with one hand on the jaw, the other in its mane, bore it down and broke its neck at the fall, while the rest of the brood crowded around sucking its blood, tearing it like coyotes, and buzzards. Indeed there is much of the buzzard in the Seri. They like decayed meat. A putrifying leg of a horse was seen on the top of a hut which was to be taken down, and torn by the teeth of the Seri women. Senor Encinas states that a Seri squaw whose child was sick, ran from the hacienda Costa Rica to Molino del Encinas between dusk and sunrise, forty-five miles, bearing the child, hoping to find medical aid. To pay the white medicine man she had in the night run down a jack rabbit. These women thought nothing of going from the hacienda of Costa Rica, thirty miles in a night with a child on the hip and a heavy olla of water on the head, to the coast.

In Mexico on the Sonoran coast and in the vicinity of the Seri country about Hermosillo, I heard remarkable stories of the running powers of the people. Governor Torres of Sonora as we were walking through its attractive garden related an incident when a coach ran for one hundred and fifty miles, or more, and there being no room for the men inside they ran often at the top of their speed, wore out the horses and were evidently in no way disconcerted at the finish. It is believed that the word Seri- *Se-erreroi* means the speed of the person who runs. Magee likened their running that of the antelope; refers to their peculiar lightness of feet, "skimming the plain in recurrent impulses of unseen hoof touches, or that of the alert coyote, seemingly floating early about the slumbering camp. It is the habit of the errant Seri to roam spryly and swiftly on soundless tiptoes, to come and go like fleeting shadows of passing cloudlets, and on detection to slip behind rock or shrub and into the distance so lightly as to make no audible sign or visible trail, yet so fleetly withal as to evade the hard riding horseman."

Some of the natives of Sonora have records that would put modern marathon runners to the blush. The Yaqui runner which Major Burnham took with him as a guide on one of our trips through the cactus forest thought nothing of running thirty miles in a few hours carrying his water and zerape. The Yaqui, Opata and Tarahumaei (foot runners) are all famous racers. According to Bartlett, they have been known to run two hundred miles in twenty-four hours. One man ran from Guazapares to Chihuahua with a letter and back in five days. The distance was eight hundred miles. They think nothing of running down wild horses and deer, all of which is accomplished by keeping at it with almost superhuman endurance, and when they come in, fresh and by no means "winded," the horses are exhausted.

Just how many Americans and Mexicans have been murdered and utilized in an economic sense by Seris in modern times it would be difficult to say, but the list of the killing is a long and ominous one. In 1896 five prospectors landed in Tiburon; one escaped to tell the story. Later two Americans landed and were shot down, but not before they had killed five Seris. The ex-

perience of these two men, George Parker and John Johnson of San Diego, was proved by Captain Mendez of the sloop Otila, and the newspapers on his authority reported that the two men had been eaten. The matter was taken up with the State Department and the Mexican Government, sent a force to the island, which was met by Chief Mudo, who was "seven feet high," and who made the defense that the Americans had invaded his country. In a word, the Americans in landing had committed a capital crime and were shot down and doubtless eaten.

It is difficult to imagine a more interesting study to the layman or ethnologist than these people, unique among the races of the American aborigines, so different in almost every sense

that the conviction is forced upon one that they are different from the others; a race stranded at Tiburon, or brought there in the remote past upon which the isolation has played a sorry trick, making them entirely unresponsive to the advances of the Franciscans, Jesuits or Spanish soldiery. But the end is in sight. No native race has been able to stand civilization; the finest types of aborigines have gone down like cards before the tide of human progress as represented by American civilization. The gate of Sonora is open, the impedimenta of two centuries is removed, and the Seri, despite his isolation, will before the end of another half century be but a memory in the building up of a great agricultural principality.

of a drive, and as they flew along over the ground others joined them till the pack had gathered over twenty together. With the best of fortune only a brace could be taken from each pack, and, when one was expected to kill cocks, that always could not be accomplished. On a return drive the packs were not as much in evidence, proving that the birds split up once more on having passed the butts.

Many Runners.

Another fact was very noticeable as regards this driving late in the season, and it was that if one knocked down a runner early in a drive very excellent work by the retrievers was necessary before the running bird could be brought to hand. An August grouse seldom goes far, but a November grouse is evidently strong on leg as well as on wing, and, if time allows, is able to get a long distance. Very wide casts by the retrievers were necessary, and we recovered one runner a good two hundred yards from where it was dropped, the bird still being lustily on its way. It requires a very hard blow to penetrate the plumage of these fully adult grouse, and a big percentage were only brought to hand solely because wings were broken. It was certainly excellent practice for the retrievers.

About the Sport.

November grouse-driving is very different to that experienced early in the season. First of all, it is apt to be cold, and a long wait in the butts is not an event to be anticipated with delight. The outlook also is cold and dreary, the heather being brown and all bloom disappeared. The trudge to the butts is also troublesome, as the ground is sodden with rain, and he who ventures to lean on the butt and take a rest soon learns that he had better stand upright. The sport, too, is not prolonged throughout a drive, as the appearance of the drivers puts birds on wing half a mile distant, and all are soon over the butts. The shooting is sharp and quick while it lasts, and each gun has to keep on the alert or he will lose lots of chances. Always take a second gun to a November drive.

Clever Flanking.

It is lovely to see a November pack of grouse compelled by clever flanking to pass along the whole line of butts, and to note that each keen shot has selected and dropped therefrom his own brace of black old cocks. Such a thing does not often occur in November, and when it happens is a source of general satisfaction. The flankers are responsible for the most important work at these late season drives, as the attempts of the grouse to break right out are doubly persistent, and twice as difficult to defeat. Often they refuse to be denied, and go over a flanker in a stream, his scarlet flag meanwhile waving frantically.

NEW OYSTERS PINK.

Washington, D. C.—Pink oysters are the latest freak of nature under investigation by experts of the department of agriculture. The rosy-hued bivalve comes from beds in Long Island sound, looks like a regular oyster when gathered, but turns up pink on the plate of the ultimate consumer. Frightened epicureans besieged the bureau of chemistry with inquiries and a volunteer squad found the pink oyster not only harmless but delicious. The chemists have a theory that the oysters are turned pink either by a wild yeast bacillus or by other micro-organisms.

Queer Things a Gun Dog Will Do

Some gundogs of every variety appear to possess a great and inexplicable predilection for creatures which the sportsman does not always regard as game and has little desire to bag, especially when better game is available. In this way a dog is often capable of causing considerable annoyance, and not all the correction, physical and verbal, lavished on it from time to time ever seems to succeed in inducing it to ignore such quarry and confine its attention to what its master prefers. A writer in the *Sporting Times* says that he owns a setter, a splendid dog on snipe and woodcock, and thoroughly dependable on a bog till it detects the scent of a waterhen, and that waterhen it persists in pursuing till the bird is eventually forced to take wing. At no time has a waterhen been shot over this dog; its attempts with such quarry always evoke a rating or a cut with the whip, and yet the lesson is never learned. The same thing will occur on the next occasion.

Retrievers and Waterhens.

There is nothing more annoying than to wing a duck, which falls into its natural element, and to find that a retriever, instead of searching for the duck, is engaged in a hunt after a useless waterhen; and yet there is scarcely a reader of this journal to whom this has not occurred. A winged duck must be recovered without delay or the chances of retrieving it become very small. Certainly, a waterhen brought to hand is little compensation for its loss. This partiality of dogs for waterhens can only be explained by the fact that the birds evidently emit a very powerful and attractive scent, which must be of a very gamey nature. Many breakers often make the great mistake of training a youngster to retrieve with a dead waterhen, and such lessons do not appear ever to be forgotten.

Setters and Small Game.

We have had setters which stood as staunch on the moors during August to titlarks as they ever did to grouse, and this often occurs early in the season with the best trained animals, although the latter soon get over it. We have all had experience of a landrail in a crop of clover, which draws the setters on and on till they finally flush a good covey out of shot. The landrail must possess a scent as strong as that of a motor-car. Rabbits, too, are frequently a great cause of annoyance in turnips, till they are

finally nosed into some drain or burrow. It is best never to shoot at a rabbit, even if it is forced to show, but directly the quarry is detected the dogs should be lifted and well admonished.

When You Know Your Dogs.

The reader who is accustomed to his dogs is generally able to decide when they are engaged on undesirable quarry. Their movements and attitude when setting what is before them betray what is afoot, and some go about it in a shamefaced manner, as if conscious that they are hardly doing right. After a disappointing day, during which little game has been found, the best of dogs are given to devoting attention to small game, and we once saw a splendid setter end up a perfectly blank day by setting a frog. Such an occurrence is more likely to call forth a laugh than evoke punishment. The only course to take is to keep dogs as closely as possible to legitimate game, and never shoot over them, however great the temptation, anything but legitimate game.

Grouse-Driving in a Gale.

Early in November the writer took part in a grouse drive, which began in perfect weather, and before the second lot of butts were reached half a gale was blowing. Kills before had averaged about three out of five shots, but when wind interfered they dropped to about two in six shots. And yet the grouse came to the butts as freely as before, the only difference being that their pace was nearly doubled as they approached with the gale. The error of the guns evidently was that each failed to swing sufficiently in front, and the shot passed harmlessly behind. It would be difficult to conjure up a more exacting shot than a November grouse flying with a gale. Should the gun not be correctly aligned on touching the shoulder, there is not time to find correct aim, as the bird has at once passed out of shot. The writer felt very proud of each grouse he brought down on that windy day.

Why Did the Grouse Pack?

During some of the drives all the ground taken by the drivers was visible from the butts, and a question arose as to whether grouse are aware that danger is reduced when they are able to pass the butts in considerable numbers. We saw half a dozen grouse rise at the commencement

A New Game For Rod Casters

Described for Forest and Stream by Benjamin M. Kutz,
President Golf Casting Club of America.

Casting golf, a new game, has just been evolved, is attracting widespread attention and already has many enthusiasts. Instead of striking a ball by aid of a club as in golf, the round piece of lead, of three or four ounces, as is optional with the player, is attached to a fishing line, which is wound around a reel and attached to a casting fishing rod. One might say that it is a captive golf ball, with the difference of projection.

Holes at a designated distance have been provided, as have certain hazards. Thus accuracy and long distance efforts are closely co-related, and a caster may by accuracy accomplish that which his limitations in casting prohibit. So far only four holes have been provided, thus enabling the course to be laid on a fairly small ground, but the game is being developed as the players are attaining the proper spirit of it. Several well known surf casters and golf enthusiasts have formed the first club, called the Golf Casting Club of America, with headquarters at the Staten Island Fair Grounds, at Grant City, S. I., and a number of very interesting matches have been played. The course is mapped out with suitable flags and covers a plot of ground 350 feet square, the reader being referred to the accompanying diagram for the laying of the course.

Every Sunday during the past fall and present winter the club has met, barring bad weather, thus giving its devotees all the open air and practice casting possible. The holes are placed 350 feet, within one-half foot of the present casting record held by Dr. Carleton Simon, thus making each cast in the open field a practice cast for the record.

The following rules have been adopted, and include the provisions for properly laying out the course:

To play the new game of Casting Golf, a square plot of ground, either with or without turf is measured, each side of such square being 350 feet long.

Upon each corner of such square a flag is inserted in the ground. Over this flag an iron or wooden hoop is passed and laid upon the ground, such hoop being 18 inches in diameter. This is called the hole.

A forty foot circle is drawn around the flag, being twenty feet in all directions from the flag. This is called the circle.

From the starting hole to the first hole there should be a clear field.

From the first hole to the second hole a plot of ground is marked off by flags, by stakes or by lime, to represent a river, which imaginary river is to be exactly 240 feet from the first hole and to be twenty-five feet wide, or its furthest line to be 265 feet from the first hole.

From the second hole to the third hole there should be a clear field.

From the third hole to the fourth hole or back to the starting hole, there should be a plot of ground marked off by flags, by stakes or by lime which plot is designated as the mount, and which

should be 25 feet wide by 25 feet long, the nearest line of which should be exactly 200 feet from the third hole, its furthest line 225 feet from the third hole.

Rules of Playing.

The players must be provided with a rod and reel, the selection of three or four ounce lead sinker to be optional with the player, said lead to be oblong or pear shaped, without swivel, attached, but of the variety commonly known as bank-sinker. With such lead a linen line is to be used. Players may compete with half or ounce weight, in the event of which bait casting rod may be used and silk line, but such contestants are not permitted to compete against those having a heavier lead or salt water tackle but must remain in their own class.

The least number of casts that the entire

Diagram of the Course.

course is covered in to be decided the winner. Each cast to count as a point. When the lead strikes the ground it is not to be pulled in any direction, but a bounce natural to the force of cast is permissible as unavoidable. Any intentional moving of lead constitutes foul and contestant must go back to where the cast was made and forfeit one point. Any throwing off of lead to count as a cast, player then trying again from his position. Any snapping of line to likewise be considered a cast. With a snarl, the player to accept the position where his lead strikes the ground. Two or three contestants may play for one hole, each awaiting his turn but must wait at the holes cast for, until it is reached by all players participating, thus going over the course together and decreasing any danger from flying lead.

Manner of Play.

Player is to cast from the starting point as close to the fourth hole as convenient, such starting being on one side of the flag, and as a hole is reached a similar rule to prevail. He is to cast in the direction of the first hole. Should his lead drop into the first hole, he is to start for the next hole. Should he cast within the twenty

foot circle without going into the hole, he is to go back to the edge of the twenty foot circle and then try for the hole until he succeeds in reaching it. He may, however, cast from any point of the twenty foot circle, after once going within the boundaries of said circle. This to apply to all the circles of the course.

When he has reached the first hole he is to cast for the second hole in as many as he wishes to use, which rule likewise applies to the entire course. Should the player go within the boundaries of the river, or in a line of extension of that river across the field, he is to forfeit his cast and go back to the position of his last cast. The idea is to go over the river and not into it. When once over the river he is to attempt for the second hole.

From the second hole to the third hole, is a clear field and when the third hole is reached, the player essays for the fourth hole.

Casting from the third hole to the fourth hole, he must place his lead upon the mount and if he casts over the mount or upon the side, he cannot proceed until he has cast upon the mount, being allowed to cast from any position he may be without the necessity of going back to the third hole. From the mount he is to cast in the direction of the fourth and last hole.

[We believe that there are possibilities in this game. The rules as drawn apply to surf casting or to regular bait casting, but with a little effort the game might be made available for fly casters as well. The advantages of the game are that it affords pleasant practice, both as to length and as to accuracy and permits playing in company with a definite object in view. Angling clubs, or in fact outdoor clubs of all kinds, can easily lay out the course necessary within a small space of ground. We would not be at all surprised if every outdoor association in the country sooner or later would take up the new game, which affords not only sport, but practice that otherwise could not, or would not be attempted—Ed.]

FEDERAL GAME BILL.

Editor *Forest and Stream*:

We understand that the sportsmen of Indiana, Illinois, Iowa, Nebraska, Kansas, Missouri and Oklahoma feel they have been "handed a lemon" in the Federal Game Bill, and propose to get State game wardens to take some step to start a movement to have the Federal law amended so as to put these States in a third zone. These States have very little shooting in the fall and were willing to stop spring shooting, understanding that to be April, but the Federal authorities cut out all winter shooting as well. There is nothing left, the sportsmen believe, except to trade their guns off for a brush pile, and then burn the brush pile.

The United States District inspectors now claim that they are going to get yachts, to patrol the Illinois and Mississippi rivers, and state that they will make cases and that a few heavy penalties will put a stop to killing wild duck in seasons that are closed by the Federal law.

This is a peculiar stand for the Federal Government to take, as it sounds like a spirit of revenge by the Federal authorities rather than the pure enforcement of the law. It is hardly possible that the judges will inflict punishment to satisfy the deputies' desire for revenge.

J. R. HICKMAN.

Secretary Missouri Fish and Game League.

In Quest of the Prairie Chicken

Wood Hollow Days—How Three of the Elusive Birds Were Bagged After a Still Hunt, and the Mysterious Disappearance of the Rest of the Covey

By Robert Page Lincoln

THE encroaching tide of civilization spells more or less a tale of destruction to the wild game contingent; this for the reason principally that it brings with it an added number of the hunting element, who kill in season and out, without any exceptional regard for the continuation and perpetuation of specie or species of anything connected with fin, fur or feather; also, and greatly so, from the fact that the settlers and those agriculturally inclined do away with the valuable cover and feeding grounds so much a necessity to the perpetuation of the birds.

The hard winters of the north are therefore greatly a drawback, and they inevitably work havoc among the ranks of the feathered folk; and since protective laws do not tend to give them any help the gradual, very perceptible withdrawal of these wonderful minions of nature resolves itself, conclusively, into one thing, so dreaded by the true sportsman and lover of nature—oblivion. And yet for all that, clinging tenaciously to the edges of civilization, these same game birds will hold out for a long time, coming as they do, often in beavies, if it be quail, and greater covies, be it of partridge and of that supremely excellent individual, the prairie chicken.

The latter bird in some sections is never noted, and yet in other places they will be found in goodly numbers. I have found that they occur in places where they are sometimes least expected, and where they are most unhindered in their life. Drawing in close on civilization, Nature provides them with a happy faculty for attenuated alertness that is a most estimable safeguard to them against destruction. This alertness provides them with the sense, first, of choosing just the right ground at critical times, such as during an open hunting season, and such as, when winter closes down is rigid and forbidding. In parts of the west it has been found that the prairie chickens gathered together have become a veritable scourge as destroying the farmers' grain on field and in sheaf—this uttered not upon authority but upon fairly well appreciated information. Leastways be it said that the prairie chicken in our north country, in this decade, is far from actual obliteration, and with good laws enforced for their protection we will yet have them with us in round numbers.

Easy means of transportation, from place to place, of a great number of hunters with trained dogs to scent out and locate the game has meant a fearful setback to all game birds in the present day, the principal sufferer being undoubtedly the aforementioned prairie chicken. Were man to hunt solely upon his own native ingenuity there would be a wide difference in our bird census, but no such thing is the universal rule. Given a skillfully bred bird dog, with a line of

true royal blood back of him, is it any wonder that slowly but surely the last birds are making their stand against the inroads of Man.

The motor cycle, the automobile, the trains take hordes of hunters forth, and where success is not attained in overflowing measure surely it serves to make the birds more flighty than ever and more separated in their natural, time-allotted districts—this remark serving to draw the attention of the reader to the fact that these birds, may, therefore, be found in the most unlooked for spots. It also brings out the fact that we were given one trial at this hunting while at Wood Hollow. It had been our idea from the first at Wood Hollow to get as much variety of hunting as possible, for as many individual members of the furred and feathered tribe as we could locate, though we would kill no more than careful discrimination would allow. We had thus far sampled a number of the delights of the Wood Hollow Country and meant yet to find more before we called the halt and made for our home retreats.

I was shaving bacon for our morning meal one day, and was putting the finishing touches to coffee and other delicious things when Daniel, who had been absent for two days, entered without much ceremony and I could tell from the looks of him that he had news on hand of no mean order. It may be mentioned in passing that we had heard some days before, from a farmer down the line, that prairie chickens had been seen close in on his stubble. He gave us this information much for the reason of our friendship and the fact that much of our spare game had gone to his table. At first I doubted the veracity of this assertion and dispatched Daniel to find out the truth of it. I now suspected what he had up his sleeve.

"It is true, then?" I queried.

"Sure," said Daniel, a rosy, daybreak-smile surmounting his beneficent countenance, the while he took a deep breath. "I found those chickens just where he said they were. They have been there now for at least a week, he says, and he don't recollect ever having seen them here before, but that's all wrong. I have seen many of them here, and only last year shot some. It is quite a hike down there, but if you fellows want another bit of variety, just come, I will show you where they are."

"Has Brown hunted for them at all?" I asked. "Of course he has tried."

"He couldn't hit the side of a barn," responded our youth. "And no. He hasn't tried in the least. They are there and if we are any hunters at all, then we get them sure."

With determination I went out and shouted to Fred. His early morning ax was resounding down the glade as he built backlogs and firewood for the night fires. He came in bearing a log, of cominous dimensions.

"Would you mind hunting something that you

do not get a chance to hunt every day?" I demanded of him.

"Name it," urged Fred.

"Guess what?"

"Well," drawled Fred, shifting his cud thoughtfully and with determination the while he searched Daniel's illuminated features. "I may suspect what it is. Perhaps you have located those chickens."

"You guessed it," I assured him, "Just that, and much more. Prairie chickens. That not only puts the final crimp to it, but it will make another delightful reminiscence to weave into durable shape for this winter as we toast our shins before the fire. Just that—prairie chickens. Daniel has spotted a covey, he says, down on Farmer Brown's stubble."

"Good enough!" said Fred firmly, sinking his double bitted ax deep in the log. "That's what I call business. So you got a line on them, Dan?"

"Bet your life," responded Daniel. "They were there when I was last on the ground, un-hunted, and they didn't seem over shy at that. I flushed ten of them and they were only a short distance before they dropped again to ground. There is no reason why they are not there now."

"Well, let's get to going then," encouraged Fred. "It is a quite a hike there and we ought to strike them before high noon is upon us. Let's make the breakfast as speedily as possible and get under way."

We circled the table and soon had our breakfast where it would do its work to utter satisfaction, and then donning our coats, and taking our guns and loading up on ammunition we sallied forth our thoughts leaping into life at the bare intimation of what was to be. I knew we had planned something that might be an entire failure. To still hunt, practically, for chickens is one thing. To hunt them over the setters or the pointers is another. In choosing the former we complied with all the rules and regulations of modern sportsmanship.

On the way to our destination Daniel took us by way of the creek and showed us the den of a mink that he intended garnering in among his furs for the coming winter. In the yet soft mud was plainly showing the track of the occupant.

"I have a bait house down here a ways," explained Daniel. "I have kept it baited with fish a long time. Many animals have come to it. This bait house is in the water and there is only one entrance. The bait is in back. I always wade in the water when I go there so as to leave no scent. I have had traps set there in the doorway of that bait house for a month or more, but I have had sticks thrust in between the jaws and the pans, you see, so that they will not snap. Thus the animals have become used to stepping on them. Some day, though, I will take out those sticks and when some nice mink steps on the pan it will go off. See?"

"I used the same system," I said, "when I

trapped with Old Jim some years ago. It is a fine method and if you work it right there is no doubt but that you will get them. Good luck, anyhow, Dan. I will be up this Winter for sure and we will enjoy many days together here. Eh?"

In due course of time we struck in on the premises of old Farmer Brown, a man of excellent character and of a pleasant, even temperament that made friendship an assurance. We went directly to the house without much discussion upon events in the world about us made known our mission.

"Yes, yes, he breathed—"the chickens. Sure, Daniel here says there is a flock of them around that he has located. You are entitled to shoot as much as you please, boys. Help yourselves. Those ducks certainly came in fine, I'll tell you. I am not forgetting that of course, which is not the least. By all means help yourselves."

With this foundation of good will satisfactorily imbedded we went about our plan of circumventing the flighty ones, and it was a ticklish, yet withal highly exciting adventure. The field located, we decided to encircle it, each choosing a certain point, and from this point gradually drawing in on them, so that any way they would fly they would, or should, come within range of our guns. Plans laid, we proceeded about our little undertaking.

Now off from the center of the field there was a depression in the ground where the grain had not been cut and it instinctively impressed me as being just the place where such birds would keep themselves. I first satisfied myself that the boys were in place and then started forward. My eyes, very quick, as a rule, to note things, from long association with Nature, by investigation and study, kept raking my surroundings with the hope that I would spot the quarry. But I covered the place in vain. The elusive ones were not there. I noted also that the boys were doing no special cannonading; but I kept steadily on hoping one or the other of the two would start the ball rolling. The situation eventually resolved itself into a patient, painstaking consideration of every bush and bunch of grass, for it seems they lay pretty close in hiding. And so it proved to be.

For as I stepped cautiously forward at a tempting place, half surrounded by brush, there was a thunder of beaten wings at my right and up rose four of the kingly feathered ones. Never have I clipped in two shots as quickly as those from the double gun that day; it was an instantaneous, simultaneous exhibition, and being close bunched I got the two of them, and breaking gun reloaded with very shaking hands. The other two thundered away and happened to pass near to Daniel's long reaching single barrel. Followed a sharp, shattering detonation upon the silenced air and down tumbled the forward one.

While this was going on, up rose some ten others at various intervals at the side of the patch, out of the reach of Fred's gun, though he shot swift—but scored nothing.

Three chickens were bagged safe and sound and were tucked into the hunting coat pockets. We drew together and consulted as to what our next performance should be, and how we should

Easier Hunting With the Dogs.

successfully go about it. I had a dandy specimen for mounting purposes, to be placed eventually with my collection in the city.

We had noted the general direction of the other members of the covey and thither we now proceeded, spreading out so as to take in all of the ground thought as possible cover for the ex-

All the Regular "Fixin's" for Hunting Prairie Chicken.

tremely sensitive ones. I held the center, while the boys went, each on one side slightly ahead, proceeding much in what one would call, "fan-shape formation." Thus, any rising in the center, if not rounded in promptly by the central man, the other two would possibly catch out of mid-air.

The oddity of this hunt lay in the fact that though we covered carefully, thoroughly, the territory thought to hold our prey we still found no trace of them. This seemed mysterious, for

certainly I had seen them sail on spread wings downward at practically a point which the center of our present hunt would have taken in.

"Might have risen and flown on," suggested Daniel, with the keen sense of speculation bred of insight. "I thought sure they would be right in around these bushes here."

"Queer," said Fred, biting off a hoof of Piper. "I tell you now, it seems to me they can't be so very far off at that. Perhaps they are right ahead. They are wild sort of now and may have run ahead quite a distance."

"Well, we will go onward as before," I said. "At any rate we can hunt and hunting is half of the pleasure."

We ranged out as before and with guns at ready searched every nook and cranny for the game we sought; and listened with keen ears for twitter or rustle of preparation to rise but found them not, covering something like a half mile in our jaunt. We again drew together.

"Odd," said Fred, bending a bush with an ounce of diluted Heidsec. "They certainly have vanished into thin air, or where are they, that's what I want to know."

"Tell you what," Daniel made bold to suggest. "We will spread out more. They may have gone either to one side or another and thus escaped us. Then again, while we saw them seem to drop down here they may have turned aside."

This seemed a reasonable sidelight to the proposition and we took it up, but though we hunted vigorously and enthusiastically, up and down, not a prairie chicken did we see. Somewhat mystified we returned three hours later to Farmer Brown and told our tale.

"Yes, they certainly must be wizards, them birds," said Brown. "At best I reckon you are lucky at hitting into the brand here at all—because I never knew them to hang around here to any noticeable extent. Seems the fires over in Dakota has chased them this way. If they be flighty there is a good reason for it. Now like as not, having dogs, good at the scent, you would strike into them." "Are your dogs any good at this sort of work?" asked Fred, of Daniel.

"Not very," returned Daniel; and went on to explain that while one had setter blood in him the best he could get out of him was genuine fur trailing; the trailing blood being dominant to

the bird-locating quality. We stayed that night at Farmer Brown's meaning to have another try at the elusive ones in the morning.

With this thought firm in our minds, on top of a big supper we waited for daylight. At daylight we hustled into our coats and were out in the morning air, ready again to try our luck. The same field we again hunted, spreading out so as to cover the ground carefully; but though we hunted, not only that field but all the adjacent territory, still we found no

signs of the shy ones. This was of course discouraging, to say the least, but we had to put up with it and leave it at that. Our hunt gave us three chickens and we never saw feather again of the rest of them, nor did Farmer Brown, nor yet Daniel.

"I can't for the life of me understand it," uttered Fred as we trudged bravely homeward close on evening of that day. "There they were, right at our feet, you might say. We saw them rise, and we thought we saw them come to earth, and yet when we hunted there we could not see them, hide nor feather."

"There is only one reasonable answer to the proposition, Fred," I said, having weighed my conclusions carefully. "The birds might have stayed here had they been unmolested, but they know what chilled shot is. It is safe to believe, isn't it, that they have continued their migration to whatever point they had in view before they lit here."

The night settled down very chilly, and when the last rays of light were going out in the far west, a wind arose that swept the land with a forbidding tone that sent a thrill tingling through me. The storm winds! How the tall trees around our cabin swayed and sighed that night; and how the moan went down the chimney, but the fire held its warmth and we smoked on, still talking and thinking of our success and failure with the chickens. But best of all I now let my thoughts run to the days to come—the winter days at Wood Hollow. As I sat there by the fire I could see myself saying good bye to the marts of men. I could see myself again entering Wood Hollow cabin. I could see a roaring fire, while without the land lay overspread with a crystal white blanket. I could see tracks in the snow, and could hear again the trees swaying out their old tunes. I could see—but my pipe had gone cold!

More About The Kentucky Reel

Editor *Forest and Stream*:

I read with much interest the authentic and truthful account of the "History of the Kentucky Reel," in the January number of *Forest and Stream*. The facts and data were obtained by the writer of the article during an interview with my old friend, J. L. Sage, of Lexington, Kentucky. The account agrees exactly, so far as it goes, with the history of the Kentucky reel as given in my "Book of the Black Bass."

During my residence in Cynthiana, Kentucky, many years ago, I became quite familiar with the origin and evolution of the Kentucky reel from information derived from many old anglers of the "Blue Grass" region. Years afterward, when soliciting exhibits for the Angling Building of the Chicago World's Fair, I called on all of the makers of the Kentucky reel, among others, Mr. J. L. Sage, who gave me, in almost the exact words, the account as given in the article referred to.

In this connection I might add that I bought and borrowed a large and complete series of Kentucky reels, which was exhibited in the *Forest and Stream* booth in the Angling Building.

This exhibit was composed of reels of the several makers, in various sizes, in brass, silver and German silver. It is a pity that the collection could not been kept intact, and deposited in the United States National Museum. Owners of some of the borrowed reels, however, would not have parted with them under any consideration, regarding them as precious heirlooms.

As stated in the article cited, George Snyder (not Sneider), made the first reel, and I might add, the first multiplying reel in the world, as

all English reels at that time, and down to the present day, were, and are, single-action reels.

George Snyder was born in Bucks County, Pennsylvania (not in Switzerland as Mr. Sage imagined), and went to Kentucky in 1803. His son, David M. Snyder, was a druggist in Cynthiana when I resided there. He often talked with me about his father, and the invention of the reel. He owned his father's favorite reel, a jeweled one, which I had in my possession until his death, I sent it to his nephew, also a druggist, in Louisville, Kentucky, after the Chicago Fair.

George Snyder was an ardent angler, and was President of the Bourbon County Angling Club, in 1810. After his death, his two sons continued making reels occasionally, one of which is now in my collection. I beg to refer any one interested, to the account in the "Book of the Black Bass," wherein is shown correct and careful drawings of the different reels, together with the gearing and working parts. Also portraits of several of the oldest reel makers. I might add that in my collection is a brass reel made by Mr. Sage, the smallest that I have seen, being classed as No. 1, just the reel for a lady, or any one preferring a very light rod. It is perfect in every respect. I have also probably the first reel Mr. Sage made, a brass click reel, marked 1848, which he used in fly-fishing for black bass, in which art he was an adept. Mr. Sage was not a watchmaker like the other reel makers, but he was a good mechanic, and often made reels for his friends.

JAMES A. HENSHALL.

New Bird Sanctuary at Fairfield, Conn.

Fairfield, Conn., has 10 acres of hilly country, set apart for birds and entirely given over to them.

This bird reservation has been placed under the friendly care and protection of Mrs. Mabel Osgood Wright, author, for it was through her fondness for birds and her labor for them that the place came into existence. It has been named "Birdcraft Sanctuary."

The first precaution necessary to safeguarding was the building of a cat-proof fence about the whole place. The strong wire meshes extend below the ground, where it is firmly anchored, five feet up into the air, where the top is turned back away from the grounds, preventing any animal from surmounting it. The gateway is of granite, representing an old English cathedral tower in miniature. In the top of one post of the gateway are to be found eight complete and separate apartment houses for the birds. The other post is much lower and its top is hollowed out, forming a high and safe drinking basin and bathing place for the birds.

Just within this gateway is an artistic low structure, or bungalow, fitting so perfectly into its surroundings that it may seem to have grown

there. This bungalow is the home of the caretaker, whose province it is to keep all birdland well guarded and well supplied with food. There are many little birdhouses on or near the bungalow, and lunch counters, too, all ready to serve meals of corn, crumbs, suet, seeds or nuts at any hour.

On going through the wire fence, one finds the nesting places of cat-birds and thrushes hidden in the low bushes near the ground. Suddenly a peabody bird darts out from a bush at one side and flies to a nearby tree, where he can watch the callers as they follow the winding trail down to the pond, where the water birds may build in the rushes or the tall tangles. There are birdhouses of all sizes and kinds fastened to the trees, from one small enough for the tiny house wren to one large enough for an owl or a duck. There is food everywhere. Suet is tied to the branches and there are large lunch counters on the ground, sheltered from the weather by a thick shield of cornstalks. These enclosures resemble a tent with the front thrown open to the warm sun. On this snug floor are to be found sand, cracked corn and nuts. There are berry-bearing trees and shrubs in large variety which furnish the birds with many a favorite meal.

Besides the pond of running water provided by the city of Bridgeport, there are rocks hollowed out and kept filled with water.

Although part of the mission of the "Birdcraft Sanctuary" is to interest and to instruct the people of the surrounding country in regard to its bird life, its primary object is the preservation of native birds, both for the sake of their beauty and their song and because of their economic value. In order that the feathered tenants of the sanctuary homes may be left in perfect quiet during the nesting season, the grounds will be closed to the public in the spring and early summer.

Undoubtedly the most beautiful and ingenious and one of the most useful applications of nitro-cellulose was that developed in 1889 by Count de Chardonnet in the manufacture of artificial silk which far surpasses the product of the silk worm in brilliancy and luster. In the Charonnet process cotton or purified wood fiber is nitrated, dissolved, forced under heavy pressure into filaments by extrusion through fine orifices into a setting bath and finally treated to remove the nitric acid and restore it to the condition of cellulose. Dyed and woven into tissues and fabrics of surpassing beauty it has become one of the chief adornments of Everywoman.—The Little Journal.

Shooting and Gaming Along Southern Waters

A What to Take and How to Use it Article

By Dick Swiveller.

(Continued from the January Forest and Stream.)

PUR, kase de golden gate ull be shut afore yo gits thar."

"Yass," said Alex, "an in dat crowd on de outer side ob the gate whar dey is a walin' an' a wepin' an' a nashin' an' a cussin,' I spect I'll hear yo voice amongst de big hips. ('Mass'

Dick what is dat, I want ter say? "Hipocrits, dat's hit, in de loudest lammingations. Dunno what dat is, spect hits sumfin wuss."

The religious argument was continued for some time much to our amusement and ceased when the dark belligerents began their breakfast. Both then naturally grew mellow and good natured, and even confidential.

We smoked, watched the fire, the rain and the dull sky, hoping for a break in the clouds, for there was no use to go further down the river until the wind changed and the weather cleared.

The manner of shooting ducks on the Savannah is somewhat different from any practiced in other parts of the country. The weather should be clear and cool, and then the water fowl will be found feeding and preening themselves under the bending willows and bushes close to the edge of the water; or as the boat rounds one of the points of this notoriously crooked river, flocks of mallards, teals, broadbills, widgeons and occasionally black ducks and Canada geese will suddenly be met with in the open water, some distance from the bank, within range of the gun, offering fine shots and good sport as they take wing.

All day long it rained hard, and when night closed in there appeared to be no signs of it clearing up. Flocks of ducks and occasional bunches of geese were observed from time to time during the day high in the air flying southward, causing anticipations of sport ahead. Sam and I spent the time talking on a variety of subjects, among which guns and ammunition were interesting topics. On this trip we were using 12-gauges instead of 10-gauges as heretofore on ducks, having realized that for this shooting and work generally the 12-gauge was in all respects the most satisfactory—using a 12, 30, 7 $\frac{3}{4}$ for heavy work and 12, 28, 7 to 7 $\frac{1}{4}$ for upland shooting. I remember we agreed that notwithstanding the then popularity of 10-gauges for all kinds of shooting, the 12-gauge would eventually become the standard gauge, and the 10-gauge relegated to extra heavy work, and in most sections not used at all. This prophecy has come true. One scarcely hears of a 10-gauge now, and there are many of the younger shooters who never saw a 10-gauge, and a greater number never saw a muzzle-loader. There are many, too, who never shot a double-barrel breech-loader, their experience being with the pump and automatic guns. Our 12-gauges were all we anticipated; it was delightful to handle a 7 $\frac{3}{4}$ pound

12-gauge for this shooting, instead of a 9 $\frac{1}{4}$ pound 10-gauge. Never since that time have I used any but the 12-gauge.

We talked shells and loads and patterns. We has done a good deal of targeting. Then we drifted to game laws and the ethics of true and good sportsmanship, both deploring that the word "sport," was often confounded with the word "sportsmen." We agreed that the word "sport" has been more abused, ill treated and misapplied than any other word in our language. Of a high, noble and keen signification, it is often misapplied and debased to unworthy objects. Of a restricted and refined significance, it has been extended to a mass of improper matters, and from its natural elegant appropriateness it has been degraded to vulgar and dishonest associations. The creature who lives upon the most contemptible passions and with practiced skill creates all who may come his way, be they sharpers or honest men, winning by unfair means and rules in so-called games of chance into a certainty, calls himself a "sporting man" and should not be mentioned with a "sportsman." There is as much difference between the sportsman and sporting man, as there is between the brightest day and darkest night.

The man who loves the woods, waters, mountains and deep forests; whose whole being is in sympathy with Nature and her works; who loves the dog used for sport; who pursues game for pleasure and not for profit, and shoots on the wing, taking in moderation of the game that Nature offers—such a man is a "true sportsman."

"That is the way I look at it," said Sam, "and I only wish the whole country knew the difference and did not confound honest men with black-legs."

"Well, Sam," said I, "you and I understand it; we are pretty good sportsmen and we will teach others the real meaning of the word sportsman."

Snug in our blankets that night we were lulled to sleep by the incessant drumming of the rain on the canvas, little thinking that before dawn our camp would witness the greatest stampede and fleeing before the rush of water within our memory and experience as duck shooters. It does not take long for one of these narrow southern rivers to rise beyond its banks, and those unfortunate enough to be in its path have little time to save life and property.

We slept, all unconscious that the river was rising, stretching out its long, watery arms, nearer and nearer, hungry to engulf and exterminate us.

It was about 2 o'clock a. m., when Sam awoke and was at once aware that the river was up by the sound of rushing water, known only too well by him. Springing from the tent and toward the river a glance at the nearness of the water, im-

perfectly seen through the rain and darkness, showed the peril of the camp.

My first intimation of danger was when I was seized by the arm and dragged from the blankets.

"Dick! Dick! for heaven's sake get up and put on some clothes. Alex, Joe, Joe, Alex, Alex. Confound those niggers; can't they awake?"

I was by this time thoroughly aroused from sound sleep and frightened. Jumping on the poor darkies, I called: "Get up, get up! Tumble out! the river, men; the river. Secure the boats."

Ah, the boats! What will we do if they are gone? Lose our property and maybe our lives.

The boys realized the situation and terror-struck, sprang toward the river in the direction of where the boats had been made fast. Sam lighted the lantern. It gave but faint light in the darkness. There was a half minute of suspense as Alex and Joe disappeared in the gloom.

"Are the boats safe?"

No answer.

A moment more and perhaps our worst fears were realized.

"Can you reach the boats; if not, hurry this way."

Then through the storm and darkness came the cry: "We's got 'em both; an we's waste deep in de wata. Mighty good dem stakes wuz drove so good or we'd nebber seen dese er boats no mo. We's a acomin'; we's acomin!"

Presently the brave fellows came, towing the little ships. I had started a fire; and kept adding fuel. The blaze leaped up lighting the scene and showing us a maddened, seething stretch of water advancing rapidly upon us. The tent was struck, and two men working to each boat, piled the camp plunder and "duds" generally into them. It was quick work; the water was already up to the camp fire. I boarded the shooting boat and seized a paddle. Joe followed me. At this moment the bulky form of Sam, armed with a frying pan and a pair of boots (the last load), waded to the bottom and stepped in. We were comparatively safe now. As the water rose we pushed the boats toward the bank of the cornfield as near as we could calculate until they grounded, constantly watching that we were not carried into rapid and deep water and swept down the river and to almost certain death. Thus we held out until daylight, which found us a short distance from the bank and a hundred and fifty feet or so from our camp site.

Safe in the boats the paddling and pushing toward the cornfield bank began. We were not long in discovering the ridiculous position in which we found ourselves.

Here we were pressed by a dangerous flood in the middle of the night in open boats, in a torrent of rain, in darkness, clothing soaked through and awaiting anxiously the dawn. Who

Camping Teepee Style.

would not give up all he hath and go duck shooting?

Rugged men, frail men and strong men face dangers by sea and river in open boats in all kinds of weather, day and night in most trying conditions, and all for the pleasure and excitement of duck shooting; go year after year and grow more rugged as they are exposed to weather and breathe the life-giving air. On the bosom of the river, on the heaving sea, in the grand old forests and fields, bathed in the sunlight, fanned by the breezes, blown and tossed hither and yon by the gales. In all this is found the true elixir of life—the fountain of youth. You men who sit in your offices the year round, go about with bent forms; you men who can see nothing but dollars and continue to dig, delve, work and toil in life's treadmill, will you not see the way open to a new and beautiful life physically? You men with narrow chest and drooping shoulders, with dark lines on your faces, with sunken eyes, weak limbs, all of you maphap hardly at the meridian of life. The majority of you were born in perfect health, why abuse this blessed boon, good health.

Look at those whose occupations are out in the air; mark the fair, brown cheek, the bright eye, the free swinging gait, the general healthy tone. Does it pay to work indoors ten or twelve months in the year, and die at forty-five or fifty? Does it pay to work eleven months in the year and consume the twelfth in idling around a fashionable Summer hotel? Go out, be out; cultivate a taste for some out-door pleasure that will take you out. Make some sacrifice in the beginning of the outings of business and time, and very soon it will be found to be no sacrifice, but on the contrary, when returned to business from the fields and forests, the whole system is rested, renovated, oiled; the cob-webs are swept out of the brain, the heavy head has gone and the eye is weary no longer.

Parents should teach their children early—soon as they can understand—the value of keeping up all through life out-door recreation. The boy

should be taught how to handle the gun. This taste once formed will take him out as a man when all other incentives fail. Let your boys and girls go out all they will; encourage in them a cultivation of field sports. The boy and gun of to-day is not the boy and gun of thirty years or more ago, so far as the danger of handling the gun is concerned. The breech-loader of to-day is safe, so safe indeed that the boy or man who cannot be trusted with it should not be trusted with anything. The excuse that "it is dangerous" fails since the old muzzle-loader has disappeared, and is kept as a relic of the past in fond remembrance of the delightful days afield in the long ago.

Yes, here we were waiting for the dawn, and the morning that would bring a cup of hot coffee, and we hoped, clearing weather. The water rose and the boats were pushed toward the high bank of the cornfield. The rain had almost ceased, at 4 o'clock and the wind changed around to southwest; soon a star appeared; presently a number of them. We filled our pipes with renewed hopes, smoked and chatted. The muse of music moved Alex, and he began one of those unrivaled plantation melodies, keeping time with his hands and feet. We all joined in the chorus, and the dark southern forest away across the waste of waters caught up and re-echoed the sound in many reverberations. By dozens the stars came out, the clouds moved on and away, until at last the blue firmament of heaven reigned supreme over the storm king. As the millions of stars began to pale in the heavens, we turned our eyes toward the east and beheld the first faint streaks of the morning. Pushing the boats to a landing a fire was started. Your old camper knows how to do that in wet weather. Joe assisted by Alex proceeded to get breakfast, Sam and I the while getting things in the boats in some sort of order. Soon Joe served us with most welcome hot coffee, hot biscuits and fried ham. The recollection of that breakfast, particularly the coffee, has lingered with me all these years.

After the "darkies" had eaten and all camp plunder put in shape, guns were uncased, cartridge bags filled, the boats pushed on the hurrying waters and in a few moments we were whirling southward on the bosom of the flood, Sam and Joe in one boat taking the lead, Alex and myself in the other following some three hundred yards or so away. We did not expect to get much shooting until the water was down but were looking for a good and pleasant place to camp. Perched on the mess chest with my 12-gauge across my lap, I watched the heavily wooded shores as we hurried on. It was grand, the speed, the situation and the spice of danger exhilarating. At times our craft would approach near the shore. The great swamp oaks loomed up, stretching out their long arms covered with that parasite, funeral moss, hanging from every stem and branch their long, mournful festoons swaying to and fro with the wind. Hundreds of cypress trees could be seen; many canebrakes and deep, dismal swamp places that suggested reptiles in the hot days of Summer.

Again the river broadened, and we would be floating on a lake giving the idea of the land under this flood of water. Rich bottom land dear to the heart of the cotton and corn planter. So interested was I in this nature panorama that I had forgotten the possible proximity of game, when Alex's sharp, quick cry of: "Mark! Now dey is a comin' down the ribber; one, two, three, four, nine mallards. Alex's strong arm sent the boat in close to the shore. The birds were evidently about to alight. Now their green heads could be seen glistening in the sunlight. Aiming well forward of the leader, I pressed the trigger killing the duck next to him, and brought another down with the second barrel wing-broke; a long shot.

"Mars Dick yo' didn't spect dem ducks. Sort curus fer ducks to be flyin' 'bout dis kind o' wata. We's git no good shootin' till dis ribber goes down, and dat will take three days or mo."

Down the river came the muffled boom of a gun. "There Alex, that's Mr. Sam's gun. He, too, has an unlooked for shot, and I reckon has a bird or so. Seldom he misses anything like a fair shot." Sweeping around the next point my friend's boat was sighted.

"Ship ahoy!" "Where away!"

"How many ducks did you kill?"

"Two," said I, "how many have you?"

"Three."

"Good enough, a bird apiece for dinner and one to spare."

"I reckon, Dick, we had best go into camp now; there's a good place just below here a few miles. There is no use to try for any kind of shooting at this stage of the water; the ducks are for most part away back in the woods and will not appear until they are obliged to follow the receding water. If we go further now we will pass over what later will be good ground."

We camped on a high bank, a pleasant spot with plenty of fire wood handy. An hour or so later we were discussing toothsome mallard, pone bread, coffee and a desert of waffles and sugar syrup.

We had just finished dinner and started to clean our guns, when we were startled to hear the tramp of horses' hoofs in the woods behind the tent, and the next moment a gentleman on horseback appeared in the light of the camp fire. The reader can judge of our surprise. Here

we were camped on a lonely place on the river, the rolling waters in front, the heavy forest reaching back for miles, knowing, from our knowledge of the country, that the nearest house was five miles away, and so was the railroad, yet here was a young man riding out of the dark woods mounted on a thoroughbred, English saddle, double bridle, curb and ring, straight steel bit, rider dressed in fine style, black leggins, cavalry jacket, gloves—right out of Central Park into the pines of Carolina. A merry laugh, a "good morning, gentlemen!" Sam and I must have looked surprised.

"I hope I do not intrude," our visitor said.

"Certainly not, will you dismount and join us for awhile."

"I will be happy to, I am sure."

who we had for neighbors. You see there is quite a party of us camped back a mile or so from here. There are twelve persons, being two families, including servants and the chef. We were all over at Aiken. My aunt was not getting any better, and friends advised us to come here and go into camp for some time. I never saw a camp like this of yours; it's just like those you read about; roughing it some, but being comfortable too. Now our camp is all fixed up. There is the big living tent, the dining tent, five sleeping tents, the kitchen tent and stable tent, though they are building a log stable. We will have four horses over there."

"Are you doing any game shooting?"

"No. I never shot a gun in my life. I now wish I knew how to shoot. The only arms we

Next morning about 10 o'clock, Edwin, accompanying his father and aunt came to visit our camp. We told them all about our trip thus far and how far we intended going down the river, and the game we expected to find. All this was new and novel to them. At no time in their lives hitherto had they known of a camp hunt, or guns, or dogs. Before leaving us Edwin had his first lessons in handling the gun and the names of books on guns, and a lesson on ammunition—one good American boy turned—"the right way."

I was glad we camped there, if only to have added this recruit. Three years later I heard of Mr. Strang; he then owned seven guns, two of them high grade English guns. A gun crank like the rest of us.

Two Methods of Transportation—Thole Pin and Paddle.

"Where are you from? What brought you here straight from an afternoon canter in Central Park, for indeed it would seem you're just from there?"

Our visitor laughed, dismounted, shook hands with us, accepted a camp stool, and introduced himself as Edwin G. Strang, a New York Dutchess County name. I had heard of the family. Mr. Strang was a young man twenty-four, perhaps.

"Well, you see," said he, "we heard guns on the river and were anxious to meet gunners, and later we saw the smoke of your fire, so I thought I would come over and make a call, and see

have in our camp is a 38-calibre revolver and a .22-calibre rifle.

"Have you found much game?"

We explained the situation.

"I should like to visit you again. I think I will be going."

We gave him a cordial invitation to come and make himself at home, and to bring his friends. I also promised to teach him how to handle the gun.

It fairly grieved me to see this fine type of a young American ignorant of how to manipulate a gun.

So he mounted and rode away.

A Mr. Gibbs lived some five miles back from the river. I knew he had pointer dogs, and I sent him a note to come and see us and bring a dog. This he did and knowing where to find some birds we had a good day's sport and sent the sick lady a dozen nice quail.

Here Edwin saw for the first time dogs working on game, pointing and retrieving. He was amazed "that such things could be." He has owned seven good dogs since then. I have always been glad to open up the realness of true sportsmanship to those who have had no one to help them. Sometimes I would take a little

One Day in the Adirondacks

A Jud Smith Story

By Switch Reel.

THIS is the story of one day in the Adirondacks—one day out of many filled with joy. It was Saturday. We had hunted faithfully since Monday and killed two deer on Friday. Therefore we voted to rest up until Monday.

But it was hard to rest up where Jud was. Jud was born for stormy times and excitement. Rest was a word he had not yet learned to spell and he had spent the fifty years of his life in the woods and on the lakes and by the streams of the wilderness.

Time was hanging very heavy on Jud's hands out back of the cosy little woods hostelry when Miss Maggie went over and whispered earnestly to him for a few moments. Miss Maggie was the chief engineer of the household at this little best of all places tucked away in a grove on the shores of a beautiful lake. Her skill, her kindness, her wisdom had won for her a high place in the esteem of all with whom she came in contact and it is needless to say that Jud was one of her most willing slaves.

Not stopping to reply to her he shot his six feet of bone and muscle into the air and came at Bill and me with a roar.

"Hey, you fellows! Get out yer rods. We're a-goin' a-fishin'. There's a drivin' party comin' here from Schroon fer dinner an' they want bass. Maggie hain't got none."

As we were anxious to be numbered among Miss Maggie's slaves we threw "rest" to the winds, rushed for the tackle case, grabbed our rods off the hooks on the porch and made for the boat.

Jud met us there with some fine frogs and off we pushed. Bill got the stern seat and left me to sit on the fish can under the 'midships thwart.

"Ther' hain't goin' to be no foolin' about this," said Jud in positive tones, "it's nigh ten o'clock an' they'll be here at twelve. We got to git fo' fine fish an' git back. I'm gwine right after some good ones. I'm gwine whar they be."

Jud was a wonderful man. In the summer he fished. In the fall he hunted. When winter came he trapped and when sugar time came he was in the sugar camps. Between sugar and trout he filled in his time making repairs to the telephone line around the lakes, a line of work which his brother guides claimed he followed only that he might spy out the bass beds from the tops of the telephone poles. To this charge, Jud would answer in disgusted tones, "Aw, pooh!"

Be it as it may, when we reached the further shore of the lake and gingerly entered a small bay with the top of a log showing just above the surface in about twelve feet of

water there was a fine telephone pole in view in the road not fifty feet away.

"Thar!" said Jud, "drop yer frogs both side o' that log close up." We did. A buckshot on each leader caused them to sink slowly. The light enameled lines curved gracefully from the rod tips to the unrippled water, dark under the overcast skies. Where they entered there appeared to be an abrupt angle in the lines due to refraction. Upon this angle two pairs of eyes rested—Bill's eyes on his, my eyes on mine and Jud's eyes on both.

"Hit him, Bill," sang Jud, "you've got him!" There was a walloping lilt in his tones that told how well he knew the fish would grace Miss Maggie's table, for when Bill bent his split bamboo on a bass it never straightened up until Jud lad the net under him.

Oh, yes, there was the usual nest of snags and roots on the bottom, but Jud batted the lake a few times with his oars and danced the little skiff out into clear water and in a few moments I got up off the fish can to admit the first occupant.

Off we flitted to the next cove where a great tree overhung a huge boulder whose face dropped sheer into deep water. A storm years before had uprooted this giant and doused one large branch in the lake. With a few roots still clinging to their native earth the tree was living precariously, while its under water por-

last fight. Here Bill got his hook into another and compelled me to rise a second time. Up at the split rock my turn came but at the next two stops Bill scored and I had gotten up off the fish can four times for him and only once for my own fish. The five fish, however, weighed about eleven pounds and Jud declared it was enough, much against our wishes, although it was high noon and we knew we should head for home.

Miss Maggie was much pleased with the fish and her driving party were loud in their praises of their dinner.

After we had eaten, Jud came around to the front of the house and took us off to one side.

"If you fellers will gwup the lake with me," he stage-whispered, "I'll show you sumthin' ye hain't never seed before."

"What is it, Jud?" we asked in the same breath.

"You come 'long o' me an' don't ask no damphool questions."

"Is it fish, Jud?"

"Yaas, its fish."

With that I took a lead of about a rod toward the boat and yelled back. "Come on, Bill." We started on a run but I beat him by a nose and got the stern seat, leaving him to sit on the fish can in revenge for the way he had talked at the dinner table about my hard luck in the morning. Jud got a couple of bait pails and

loaded them with 50 or 60 of the liveliest pretty little green backed bull frogs about as large as the first joint of your thumb.

Off we went up the lake. Its surface was like glass. Above the mid-September sun hung a dull white ball in the high mists above the mountain tops while the lower atmosphere was perfectly clear. Half an hour of Jud's brisk strokes brought us to a grassy bay lying between the low hills and his keen eye scanned its surface. Far ahead a slight ripple broke the mirror-like water and Jud pushed for it. In a few moments a gulping sound called our attention to the port bow and there just ahead was the growing circle of a break.

"See that?" asked Jud with quiet triumph in his tones.

"Perch," said Bill with the downward inflection of contempt.

"Naw, bass," insisted Jud in an eager whisper. "Watch right thar," indicating the direction with a nod.

In an instant "plops" and a slow lazy sarie broke the mirror.

"Now," came the orders from the old wizard, "when ever ye can reach one o' them breaks drop yer frog into it an' ye'll git a bas. Take off them buckshot."

"Poor old Jud," we said to each other. "He's

"He Broke Again in the First Widening Circle."

tion provided a fine home for one after another of the big fellows we had lured to their

stringing us and thinks he can get away with it. For whoever saw a fish take a bait when they're playing on the surface like this—and not a ripple to hide our motions! He knows they won't take the frogs, and so, we can't prove that they're not bass."

"You gwan do what I tell ye," he insisted, indignantly, "or I'll throw yer both in the lake. You're gwine ter see sumthin' ye hain't never seen before."

Its useless to try reason on a pig-headed old party like that, so as the first break was on my side of the boat, not 30 feet away, I dropped my frog into it before the circle was three feet in diameter, and then the unbelievable thing happened. There was a swift sarie and the line came taut. Just giving the first the bend of the tip, I twitched and struck the hook home. Whoop la! out comes a small mouth of a pound and a half all bristling!

"Haw, haw!" laughed the old "sun fish guide," as he loves to call himself, "perch, be they! Won't take the frogs, eh?"

The fish was boring for the bottom after two or three husky leaps and rushes, and he threatened to get into the grass which existed over the entire bay in great patches, broken here and there by hedges of rocks.

"Hold him up thar. Keep 'em out th' grass, I won't have yer tearin' up all the hay in this here hay field o' mine!"

By this time Bil was into one—a two pound big mouth. I was glad of this for then Bill had to withstand the batteries of old Jud's decision. And he was unmerciful.

"Yer better go back to Noo Yawk an' read summere o' them printed books about bass fishin'. I' a showin' ye sumthin' ye haint never seen before. We helped ter build this here lake an' we pop'lated with bass. We know 'em all by their first names. I an' Charlie do. This here is where the blacks an' oswee's hold their fall commotion and wind it up with a barbey cue. See them 'an brown flies there. The's a hatch on all over this bay. Them flies come to the top and float around till their wings stiffen up ef the ole bass don't git 'em fust. I an' Charlie owns that 'ar hay field down thar on the bottom and we let them insecks use it fur bredin' pupposes without chargin' 'em any rent jist so's our bass kin have a good time once a year in the fall. I got a tellygraf deespatch that the flies was a comin' up this afternoon an' I knowed the bass proper 'ud be here to the party. That's why I fetched you two fellers up to see the fun."

Certainly there was something uncanny about Jud. He seemed to be fully informed upon all that was transpiring in the depths of the lake as well as along the secret aisles of the forest. He was on intimate terms with all the wild people and understood their languages and lives. Where the eye could not trace he sent his mind and brought back the news to put into his own picturesque words. To one appreciating his style he was and is the most vivid of word painters but that appreciation comes only to those whose hearts are *en rapport* with Jud's.

In proof of the clarity of his mind's eye take this. Along in the afternoon after Bill had arisen several times to admit my fish to the fish can

and a few times for his own—for I was squaring the morning's account beautifully—we heard a small dog yapping away excitedly over on the thickly wooded point to the east which lay between the bay and the main arm of the lake. In a few moments a shot rang out and then another sent its echo ringing through the hills. To me it sounded exactly as though a little terrier had treed a partridge or two and they had fallen to the gun. I said so.

"I dunno," spake the sage, "I don't calclate them shot was at no partridge."

We were too busy with the fish to argue and the subject was dropped. Drifting slowly about the bay, a stroke now and then by an oar, we were picking out our breaks as a sharpshooter picks his mark. When one came within casting range we fired if it looked like a sizable fish. If not, we drifted on. At least three times out of five the fish having taken the living insect would

"There Lay a Handsome Buck."

turn to the little frog. Big mouths and smaller mouths came indiscriminately to the bait. By giving close attention to the swirls we took no fish under size. When the round ball, which was the sun, approached the hill tops, we turned toward home with nineteen fish, fourteen of which fell to my rod and five to Bill's, as Jud had gamely refrained from wetting his line.

"Naw, naw," he protested, "ye'll git too many as 'tis. I haint gointer fish."

As we left the bay I got out the camera. The great round ball behind the mists, that was the sun, was near the hill tops. Its shimmer on the surface was broken by the ripples of our progress. Astern a fish broke. I got the circle into focus and just as the shutter snapped he broke again right in the center of the first widening circle. Jud went to the oars and we swished onward. A great contentment filled my heathen soul. I was gloating over the revenge to be mine when I got Bill to the supper table. The whole hunt—the guns and the ladies—were to understand I had beaten Bill 14 to 5. Jud's loving josh went off like water from a duck's back as

he plied the oars with his untiring strength for we had two miles to go. Bill was feeling fine, also, having no idea of my intentions, but he wouldn't have worried, anyway. It was dark when we reached the hotel and supper was on. But the folks left the table to admire the fish as we weighed them and received congratulations. They tipped the scales at 39 pounds.

Our toilet was a lick and a promise for we were hungry and I was in a hurry to put Bill on the gridiron. Just as the fire was burning brightly and expectantly under my poking, references to the morning's work and a few reminders of the way Bill had rubbed it into me at dinner and I was about to lay him on iron to sizzle, the rattle of a buck-board was heard and the next minute Uncle Willie, the landlord, poked his head into the dining room and broke up supper the second time.

"If you'd like to see a fine buck," he said, "come outside. One of the boys from Grassville has brought in a dandy."

Right there Bill slipped off the hook. I know in my heart I'd never be able to work up the right interest in what I had up my sleeve for him after that buck arrived, and meekly I followed the rush out to the lawn. There laid as handsome a buck as one would want to see through the sights of a Winchester. In his neck were the marks of a charge of buckshot and in the white spot below was the hole of a bullet.

"Where'd you get him, Rube?" we asked.

"Up on the point across from Wolf Rock. Smith Persons and I saw where he went into the lake this morning and we went over this afternoon an' got him. When we jumped him he came right toward us. I give him one barrel o' buckshot and he kept on a comin'. Smith stopped him with a rifle bullet."

"We heard it all! We were up in the bay fishing. We heard the dog when he started and then the shots came! We thought somebody'd got a partridge, but Jud didn't."

"Huh! that wasn't our dog. That was Dorsett's dog and he did have a partridge up a tree. He was behind the deer and that was why he came toward us."

"Thar ye be!" chimed in Jud. "I didn't think them shots was at no partridge."

Well, why didn't he?

The following bulletin was issued recently by George A. Lawyer, president of the New York State Forest, Fish and Game League:

"In view of the unusually heavy snowstorm, something must be done for the protection of the pheasants put out or they will perish. Usually the winter approaches so gradually that they accustom themselves to getting a supply of food from barnyard stacks or otherwise. This year it has come too quickly and too severely to give them any opportunity for this.

"Refuges, like empty boxes, should be set on the southerly side of natural wind-breaks. If refuges have already been placed, they should be visited to see that they are not blocked with snow. The birds are hardy enough to stand our winters if they can get food and protection from the wind."

In the Land of Fish and Lobster

A Deep Sea Fishing Story of the Coast of Maine

By Halsted DeNike.

GOIN' fishin'?" "Betcher life! soon as it warms up a little." That's what we hear about the time the tail end of the winter kicks in. Yep! the spirit of our old friend Izaak is getting busy. We hear the honk of the goose in its northland flight and the little birds are beginning to crack open and blink at the sun. Everything says live! and our pulse quickens to the call of the little "Red Gods." We have been waiting for this time when we can again visit that "favorite place," the charm and completion of which we feel nature has left nothing undone to add pleasure to the true lover of God's great "out-o'-doors." Once more we overhaul our tackle and joint up our rods to get the feel, although we have done the same thing a dozen times before, and when you see a man fussing over his fishing tackle you can feel sure he has been stung by the bug alright. He is a hopeless case, though easy to diagnose, for it's a form of insanity known as "fish-anity" and seventeen elephants could not hold him back from his "greatest place ever." "Cure"? I know of none, but most of us afflicted with this trouble know when and where to get relief. For the benefit of the brotherhood, the author will tell of one of those favorite places offering such inducements, that when the fever rages we hit for the tall and uncut of Maine.

After a night's rest in the old town of Portland, the Forest City, first known as Machagonne; we take the morning boat for the picturesque sail out through the 365 islands of Casco Bay which vary in size from treeless wave-beaten rocks, to islands many square miles in area. The shores on every hand are indented with romantic coves, and inclosed by pine and birch. Were there ever woods so green, or hills and mountains so clear cut in outline? Was ever any air so pure, or any that held a sweeter cordial of blended odors of pine and hemlock?

Eighteen miles out from Portland nestles an emerald isle called Bailey's, in the midst of other gems of lesser or greater magnitude; and this same island is to be our haven of rest. We round the point and as we sail up Mackerel Cove, see the usual crowd on the wharf to meet the steamer: They are a jolly gathering, with sleeves rolled up, displaying a deep coat of tan

we are prone to look upon as a synonym of health. Grabbing our suit cases, we step onto the wharf where we see many familiar faces; and after the noise is over, we take ourselves up the hill where our host is waiting for us with the glad hand. Our room is waiting for us and we are informed that presently the mid-day supply of rations will be ready. Grub! That sounds good—but the realization is the whole thing. A change to easy clothes before dinner is a good idea, or as the French say "chacun a son gout," so acting on the impulse we get out our working togs, for no one wants to go down to Bailey's for style, for that odious word, and everything that goes with it, seldom have a "look-in" down

lights disappear, and gradually the island is in slumber.

Responding to the "call of the wild," we arise early and find the weather has changed. It is rainy, but we care little about that so take our fishing tackle and walk down to Mackerel Cove, where we fish for kunnners, a salt water perch that resemble our small mouth bass in color but do not as a rule run as large. They make a splendid pan fish and considering the vast numbers it is strange they are not used more. Perhaps it is owing to the fact that it is almost as easy to catch cod, pollock and other fish running up to twenty pounds or more. The fisherman may cast his line in Casco Bay with the assurance of a good catch, whether he tries his luck from the wharf, some rocky shore or from a boat on the deep-sea fishing grounds. With a light rod, an "F" line and 10 or 12 hook, one can have a barrel of fun catching kunnners, and this outfit I had taken along in the expectation of a few days "chucking the bug" for micropterus bolomien, further north. Kunnners can steal bait as fast as you put it on. Cover well the point of the hook with the toughest part of a periwinkle, strike fairly hard and quickly, and the fish are yours for the taking. We now cross the outside of the island where the big ones swim, and the tide is just right as it is not yet

Bringing in the Fish Pound.

in that land of rest. One can dress up if they prefer, but during the day, for tramping or taking things easy, the old clothes with the addition of a good warm sweater—for the wind blows most of the time—and rubber-soled shoes is the proper outfit.

I could write at length of the island, of those haunts so familiar to us, but this is a fishy story and I must refrain, hard as it is.

As the evening draws near; the sun sets in a cloudless sky, throwing out in bold relief the Presidential Range of the White Mountains, bathed in the red glow. Night so silently weaves her dusky veil upon the great loom of the tree-clad islands and the deepening shadows settle over the bay. Faintly falls the evening breeze and as we gaze about us we see the flash of Seguin Light and the other light-houses as far south as Cape Elizabeth. Bedtime comes at last, even when you are at Bailey's. We light our pipes and have our evening smoke and talk. A few crickets set up their chatter; lamps and

high. Well, honest, its like picking fish off the bushes, for every blessed time you cast you catch one. The water is actually alive with large kunnners and occasionally you hook onto something still larger. They seem to bite on anything, the mere suggestion of bait. The periwinkles getting a little scarce, I put on a piece of sea-weed and cast out—when "b-z-z-z-z-z!" sang the reel and I hauled in the largest of the catch. We had a fine string, so started for the house, our appetites keeping apace with our enthusiasm, when some one remarks, "say I wonder what we're going to have for dinner?" That's what we are all thinking about but we don't have to wait long for as we top the brow of the hill we see Mr. Proprietor carrying a box, just returning from the fish market down on the wharf—and what is in that box? Why that box is full of fresh lobsters only taken from the waters about the island one hour before, or maybe it contains fresh clams just dug from the sands along the shore—some-

thing to tempt the appetite. They never had to try very hard to tempt my appetite and I noticed there were others who needed no coaxing. One's taste seems to run toward the abundant fish, the succulent clams and lobsters, all of which are prepared in such a savory way as to satisfy the most exacting connoisseur. As we leave the eat emporium, we remember we have been counting on a deep-sea fishing trip; but we must find a fellow to take us out, so we wander on down to the wharf where we find Bern Johnson cleaning up his boat. To introduce Bernard Johnson, he weighs around two hundred pounds, stands over six feet and is just as good natured as he is big—perhaps more so. His laugh is a tonic for tired nerves, once heard, always remembered. Bernard is too long a name so everyone calls him Bern, a small name for so big a man. We find he has no party for the following day so acquaint him with the fact that we would like to try our luck at deep-sea fishing. "Well—let's see," says Bern, "I got to take a crowd over to Casco Castle this afternoon. Yes, I guess I can fix things for to-morrow. I've got a party of five up from Boston for day after to-morrow and I've offered a dollar a bushel for bait. Yes, I'll run up to Orr's Island for bait and will be waiting for you. Be down early, for the sooner we start the better." The bargain is clinched at "one buck" each, Bern furnishing the tackle and bait—not the kind in a bottle). As we return to the house it starts to rain, but who cares? To-day is not to-morrow so we turn in early. All sounds are now stilled, all except the sighing wind and the patter; patter, of the rain which are pleasant sounds sinking into one's senses, bringing a deep peace of mind. We sleep as though there were no troubles in the world; certainly there are none waiting for us in the morning, for the day breaks fresh and fair. The sheen of the bay is coming back from where it retreated the night before and across the receding shadows a flock of gulls wing their way along the shore for a morning meal.

By the time inner man has been satisfied with a goodly portion of fried sword-fish—ever had any?—the bay is all a glitter. Bern is waiting for us at the wharf. Then all aboard Cap'n, let'er go! The motor hums and as we turn the lower end of the island, breast the first gentle swells of the Atlantic, passing Jaquish Island on the right, off which Bern has a fish pound. What is a fish-pound? Listen, and I will try and tell you. This one is sixty-five by ninety feet square, made entirely of net, the four sides being fifty feet deep. The pound is anchored well off shore away from the rocks and running out from the shore to one of the sides is a heavy rope called the "lead." This also has a deep net dropped from it and where it meets the side of the pound is a door. The fish follow the lead and so through the door into the pound. The hauls are made twice a day—weather permitting. One side is worked up at a time starting from the corner and the fish are brought to the side of the boat. Bern told us that one season, he and his partner made a thousand dollars between them in a little over two days' time, mostly mackerel and butter-fish. It is not always clear profit though for occasionally a pound is destroyed by a storm and the outfit costs about five hundred dollars. A fisherman never knows

what the sea has in store for him as was demonstrated one day the past season when Johnson found in his haul, taken off Half Way Rock, a sea mouse measuring nearly fifty inches in length, the largest ever taken off Portland. The sea mouse is a free moving marine annelid of the family Aphrodite, the most highly organized of the "world of worms." The body is oval, the head is provided with tentacles and two eyes, and the back is covered with scales which by their expansion and contraction provide for the admission and expulsion of water from the gills. The most noticeable feature, however, is the beautiful iridescent hues of the hairs along the sides of the body. The length of the average sea mouse is not over three inches and they are seldom caught along this coast.

But to come back to the subject, mile after mile we sail until the mainland and islands merge into one, and presently as we pass Ragged Island, little objects appear on the horizon. These we find to be fishing boats that started earlier; and, drawing nearer, in one of them we see two men busily occupied in paying out a baited line which we are told is a trawl. "Hello, Ben!" cried Bern to one of the men, "any dogs around?" (meaning dog-fish). Yep, a few," is the answer, and Bern decides to go further out—perhaps a mile or so. For those who are not familiar with the workings of a trawl, I would say that it is one continuous line, sometimes three miles in length. At every six feet on this line a shorter drop line is attached with a baited hook at the end. The line is coiled up in a tub at the back of the boat and payed out slowly, as the boat is propelled along, and at certain distances apart the line is attached to a float, or keg. It is some work setting a trawl but harder still pulling in the catch. The fish hook themselves, and some days the catch is very heavy. The anchor is now cast overboard and Bern gets the lines ready. We use what is known as a 5b. b. Burnham cotton line with No. 10 gravitation hook and a 1¼ pound sinker—some sinker. Squid bait is used and from one to three fish put on a hook, just a mouthfull for a large pollock. Lines are thrown out and soon, someone feeling a bite, gives a quick pull and in comes the line with a twelve pound cod at the end. "Hello, its my turn, I feel something on my line!" another quick pull and although it keeps me busy, he is finally landed and I find I have a twenty pound pollock. Things are getting very busy when someone slips a remark—better left untold. Why is he not pleased? Well because he has landed a large dog-fish. Dog-fish are good for nothing so with the aid of Bern's fish-knife, things quiet down again, when someone yells, "what's that?" and looking in the direction indicated we see the knife-like fin of a shark cleave the water and disappear beneath the boat. Shortly I feel something, and giving a pull, the line draws tight—nothing doing. "Well Bern, I've got the anchor-rope or the bottom this time. No, it's giving a little. Guess you'll have to lend a hand." "Don't break your line! let it go a little," he replies, "and I'll come over with the gaff." By a good bit of pulling I get whatever it is to the surface, and then we find it to be the shark we saw a few seconds before. And did Bern jab him with the gaff? Well, he gave that shark the jab of his life. There was fish

gore over everything but Mr. Shark was all in, proving to be a seventy-five pounder—not as large as some but plenty large enough for me. Here is where the old clothes come in. Old woolen trousers or oil-skins and a shirt you are not afraid of spoiling, for things get very slimy and wet. The dogs became so numerous the fishing was spoiled for the rest of the day; and as we had near two hundred pounds of fish, up comes the anchor; chug, chug goes the motor and we start for the island.

Few of us who sit down to a broiled live lobster, little realize what the lobster industry really means to a place like Portland. One would hardly believe the vast numbers handled each season at this city alone. All out through the islands, the water is dotted with lobster buoys marking the location of lobster traps at the bottom. Each lobster fisherman has his own particular buoy that he easily distinguishes from the rest. The legal length of a lobster is 4¾ inches, and it is a common sight to see the fisherman out in his motor boat or dory pulling in the traps, measuring the lobsters, keeping the big ones and throwing back the little fellows. Kettle Bottom and Cashes Ledge are two of the deep-sea grounds where many of the finest lobsters come from. Considering the fact that the annual catch of lobsters at Bailey's Island alone is 140 thousand, one would hardly conceive the vast numbers handled at Portland. But—pshaw, what's the use? you would not believe it.

Our vacation draws to a close, it is our last day and we must make the most of our time. The wind has been blowing hard for two days and we, knowing what awaited us, walked to the outside of the island where the cliffs are exposed to the full sweep of the Atlantic. What a glorious sight it was. Time and again the spray went completely over the top of the rocky heights. I can see it now, as it comes rolling and tumbling in over the rocks, throwing its spray high in the air, dashing so madly against the high barriers beyond which Nature has said "Thus far and no further:" But we must take our last look, then hurry back and pack up for the afternoon boat. Regretfully we turn away, as one comes back from a vacation; leaving behind the woods and green fields. Yes, Bailey's, with its picturesque scenery and restful atmosphere is a charming spot to live in anticipation of. It is a place of quiet recreation to those who find joy in living close to nature, away from the noise and turmoil of the busy city; a place where we are constantly led by an unseen power toward health and strength and a greater confidence in ourselves and love for the Almighty. As the boat left the wharf, there was the usual "good bye" and as we sailed down Casco Bay we took our last look at Bailey's. A softness in the clear air robbed the islands of their rocky crags. The sun sank lower and lower, the voice of nature was hushed, and as the dusk of evening crept up and closed in about us we found ourselves again in Portland.

When one thinks of Portland, it brings to mind the poetry by Longfellow:

Often I think of the beautiful town
That is seated by the sea;
Often in thought go up and down
The pleasant streets of that dear old town,
And my youth comes back to me.

Along The Shores to Somewhere Else

The Inert Waters of the Canal

By Alfred P. McArthur.

(Continued from the January Forest and Stream.)

THE morning sunlight of a perfect day gleams about us as we leisurely paddle along the quiet stretches and around the bends of the serpentine course, each turn bringing new vistas of wooded shores to view, some sections changing to far reaching savanas of cut-over timber lands.

Idle and languid with paddles inboard we drift past a humming saw-mill with its log-booms stretching along the shore, its stack of shingles silhouetted against a background of evergreens, while the sweet scented odor of burning cedar reaches us from a huge knoll of slowly burning saw-dust beyond the mill.

Idleness is oft to be courted amid such secluded by-ways; but this inaction on our part is plain rank laziness, which latter state of being, is brought to our notice by the canoe drifting in among the grasses of the opposite shore, where we not only see, but hear in the shallow red cedar water:

Shrimps and shrimp'ses by the dozen's,

Fathers, mothers, aunts and cousins,
sporting amid the roots on the hard sand bottom.

Now shrimp means bait and bait means fish, so we get busy with the shrimp, and out on the river again we get out our tackles and as the canoe drifts we cast oversides for perch, and catch chub. Well

Now ox is beef and pig is pork,
And sheep is oft lamb on the dish;
But with a full creel, whether perch, chub or eel
—Bi' gosh darn! By gum! Fish is Fish.

It is past the noon hour as we reach the lock of the Albemarle and Chesapeake Canal, in its sequestered setting amid a sparsely wooded grove of hard woods and the picturesque domicile of the lock-keeper. We dodge it by the advice and direction of our friends at the bungalow. Turning our bow to port, our paddles dip the tortuous thoroughfare through a marsh for

quite a mile where we find a boat-slide, used by the owners of small boats of the vicinity. Here we portage to the canal above, thereby saving a ridiculously high fee charged all style of shipping or small craft locking through.

The canal is a quiet, seldom frequented bit of water, stretching straight away almost due east for eleven miles. Its sandy banks are confined by old piling and sheathing fast decaying, with no sign of recent repairs. Its one time tow-path on the north bank is choked with second growth timber and underbrush, through which an array of slender posts sustains a single telephone wire throughout its length.

Paddling a mile to the first draw-bridge spanning the canal and disembarking, we learn we have reached Great Gate. A granite shaft on the South shore denotes the fact and also that a battle was fought on the grounds during the Revolution. Across the dusty road, the customary general store and post office, minus paint, stands on its low piles above the mud of the road-side. The rural mail has just arrived and the postman is reading a newspaper to a group of natives whose teams cluster about the edge of the dingy porch.

For the time being we are done with the news

of the world of whatsoever kind and tarry only long enough for Montie to procure a bit of Tuxedo.

About three quarters of a mile further on we glide beneath the dark heavy iron structure of a single track railroad draw on the other side of which in the sunlight we pause a moment to chat with an old negro mammy who is fishing from the bridge abutments. She is struck with amazement at the apparent exposure of our arms and shoulders, our upper structure being clothed in naught but swimming shirts. "Yu'uns 'ill sure don' tu' ailing, if yu' don' gone 'kiver up," is her parting advice as we paddle on our way. No breath of air stirs and the sun's rays are as mellow as a June afternoon.

In a small cove formed by the giving way of the canal timbers, we rest the paddles for a spell and refresh the inner man with luncheon from the chest. How quiet! How still! the tranquility of nature for the time is impressive. No twig or dry leaf moves, no chirp or song of bird, no moving cloud in the sky. The inert waters of the canal a polished mirror, reflect the sky and the gaunt poles and bare limbs of the trees on either bank, edged by the russet and bronze leaf covered shores. The hush of Nature's own cathedral is over all as we partake of her bounties.

Three miles further on we reach Seven Mile Draw—a yellow flimsy structure, an unadorned, though useful span across the water-way. At the pump of the negro tender's squalid quarters we replenish our water supply, but later discard its sulphurous offensiveness for the purer Cedar water of the canal.

Disburdened of effort, our paddle strokes undulate the smooth surface of the canal, stretching its narrow ribbon-like scope straight away before us for miles. But with the lengthening shadows of approaching evening, a breeze from the east sets all in motion, the naked boughs swaying along the sky line, fanning the water into a sparkling avenue of agitated wavelets, driving myriad of dead dry leaves in scattering

A Road to Somewhere Else.

flights, strewing, frisking and scudding with the wind as they romp over the surface about us, and we find ourselves actually working, to make headway amidst it all. A brace of duck get up ahead of us, and then another and another, and like bolts from a catapult, sail over the distant tree tops into the darkening sky of the vast beyond.

The setting sun, straight up the narrow confines of the canal is tinging the waters like molten gold as we pull out on the north bank and go into camp. With the fire going and the wood supply in for the night, Montie cleans the fish at the water's edge. Steaming kettles are bubbling right merrily as I arrange the frying pan in a bed of coals and heat her up for future doings and dinner.

In the lantern's glow, the flame of the camp-fire and moon shedding her radiance over all, we partake of our open air repast. The wind humming through the wild grape vines, arousing the dead leaves to a rustling accompaniment and the lapping waters along the banks all in harmony of crescendos and softest pianissimos, is an orchestral contribution, befitting such a banquet and we would be loath to change our seat at table with any husbandman, ruler, prince or king on God's footstool.

Later with the friendship fire sparkling cheerily, Montie in moving a short heavy girth log nearer the fire for a back-rest, discovers a colony of grub-worms within its former decomposed bed. He turns to his fishing tackle at once and shortly after, leisurely occupies himself swinging glistening, struggling catfish out of the moon-lit waters to me at the fire, where I, with hands protected by buckskin gauntlets remove them and rebait the hooks. Some are huge; others, but wee fellows; and for an hour this sport continues and no doubt could be kept up all night.

We select the medium sizes only for our wants and return the balance to the canal.

Delicious! Is the verdict at breakfast, as we partake of their toothsome flesh, fried to a dry flakiness, amid the sparkling dews of the breezy sunlit morn.

Flannel shirts feel com'fy as we paddle off, a brisk breeze in our faces, sweet with the odors of Autumn. At North Landing, the last draw-bridge and terminus of the canal, we learn the day is Sunday. Really! How forgetful of such matters one can become when sojourning with Nature, though blessed with the sanctity of sabbatical impressiveness each day that we spend beneath God's blue sky and amid His wooded cathedral spires and moss or leaf strewn aisles.

North Landing River we find a gradually broadening water course, winding between its thickly wooded banks. A literal forest stream, with its shores garnished with all the rustic beauties of the season. For from two to three miles the woodland vista continue, when gradually the forest shores recede to the background, giving way to shores of low flats and finally, wild rice and reed grown marsh.

A brisk southerly wind, direct in our faces compels more power to our blade work, with practically no lee shores to take advantage of.

On the North Shore We Camp.

We plug away for miles through the marshes with no wee bit of hospitable beach to greet our view. Surely an undesirable stretch of going to be caught in, toward the close of day when looking for a camp site; but it's a long stream indeed, that has no jumping off spot.

Reaching Pungo Ferry we learn there are excellent beaches a mile beyond and at early afternoon go ashore on a hard, broad, sandy beach shelving a pine grove about a mile north of Bell Acre.

In the lee of the pines the sun is scorching hot, and the welcome shade of the grove is refreshing. During our preparations for dinner, visitors stroll into camp and we learn of a lumber camp near us back in the woods, which we look up and at the mill pump procure a supply of excellent cool water. Being Sunday, the mill is idle, and lazily we pass the afternoon in company with the idle toilers, who are very much interested in our canoe, the first canvas affair they had ever seen and they term it, "A good little trick." Away to the southwest, in the distance, they point out to us a ridge of deeply wooded hills, which they call the Tulis Tract, and contend among themselves that it is untouched, seldom visited and teems with bear, deer and smaller game. Longingly we gaze and hypothetically picture its solemn solitudes and secluded glades.

The sun is setting, as we pack the canoe and paddle off, to the regret and wonder of our new found friends of the lumber camp. The wind is dying to zephyrs with the declining day, the moon, the alluring charm of evening is decoying us to the beyond and Somewhere Else.

Canoe Dunnage Stowed for the Night.

Silently we glide around the reverse bend of the river to the broad expanse of the stream, where with the last ray of sunlight, sinking beneath the horizon, the beacon lights open their eyes to beam upon us through the thickening twilight. Later, the moon gleams o'er all and we float on a silver sea, margined by shadowy, opaque shores.

North Landing River here broadens to miles in width; but we hug the shallows of the eastern shore and pass along, keeping the bank well in view and on going ashore to investigate a strip of sandy beach, our outfit is charged by an angry bull. We back off in a hurry and leave Mr. Durham to his respected regime.

The progress of our voyage is uninterrupted until a black hump, with long dark shadow puzzles our eyesight considerably out in our immediate front; but on nearer approach we outline a long, low pier with a shed at its outer extremity. On climbing out upon the shore end, we are confronted by a train of electric cars, dusky and silent on their steel ribbons, that stretch away into the inky blackness of the forest.

Accosted by some of the inhabitants, who stroll down the track on hearing our voices, we learn that we have reached Munden. Oh, well, something else is Somewhere Else, and we are soon off again on our quest; but not before our accosters have predicted all manner of dire calamities for our dainty little craft and its crew in the magnitude of the ever broadening waters beyond. We were unable to give them our destination exactly, as we did not know it ourselves and were not in any hurry to reach it. As their forms are swallowed up in the shadows of the pier astern, their voices reach us clear and distinct, estimating the foolhardiness of our venture and closing with the final verdict: "A pair of fools lacking sense enough to come in out of the dark."

They had informed us that we could find good camping grounds on a strip of beach a little further on, which we could locate by an old cornfield that was close to the water. The opposite shore was distant and but faintly perceptible; the eastern shore which we held close aboard was densely wooded through tracts, interspersed with open rolling farm lands. We not only ran across one corn field bordering a strip of sandy beach close to the water, but at least twenty.

Somewhere along this stretch of water, as we leisurely paddle on through the night, we pass from out of the jurisdiction of Virginia into that of North Carolina. It is nearing midnight ere we decide to hunt up a place to spend the balance of the night. The sky has become overcast with blotches of thin clouds diffused in intermingling dark and silvery intersections edged by long curving streaks of vapor, whose reflections tinge the waters about us in an undulating mass of burnished steel. The wind, in fitful puffs, is straggling in from the east and we are reminded of the sailor's adage in doggered:

"Mackerel sky and mare's tails,
Make lofty ships carry low sails."

We finally turn in on a narrow strip of yielding sand beneath the lee

Breaking the World's Casting Record

By Dr. Carleton Simon.

I was at Midland Beach Pier, Staten Island, a trifle over seven years ago that I first used a rod and reel. I still remember with what consummate confidence my first cast was made and the feeling of chagrin that swept over with me when my lead went over a telegraph line some thirty feet over my head, my fishing line entangled in a knot around my reel. With the laughter of the spectators ringing in my ears at my ludicrous attempt, I made a resolution to become proficient in the art of casting and master the persistent habit the line had, of backlashing.

Standing near me, was Mr. Dan Kirschbaum whose casting ability I thought then, as now, nothing short of artistic. He took me in hand, explaining the necessity of thumbing the reel and of winding the line upon the spool evenly, admonishing me not to use force but to endeavor to cultivate skill. It is remarkable how ready a fisherman is to teach a beginner the use of rod and reel and it is an evidence of the unselfishness that the art of fishing engenders.

That fall my improvement was noticeable.

I was using a heavy rod and reel more suited for deep-sea fishing, so I decided that the following summer would see me better equipped.

From "Gus" Dirkes, a reliable tackle dealer, I bought my first surf casting rod, a six foot tip and a butt or handle of 29 inches. This rod I still possess and highly treasure.

John Dutil—long may his tribe increase—selected my first free spool surf reel, a "Julius Vom Hofe." Incidentally I wish to say that Mr. Dutil who has fished the surf nearly forty years taught me many things, not only in the manner of casting but as well in the art of fishing, all of which has been of great value to me.

Thus ready with a new rod and reel, I impatiently awaited the coming of spring, when I applied myself, week ends, to surf fishing in which sport I found great recreation. In these trips I made the acquaintance of Mr. David A. Kelley, who was a veritable encyclopedea upon fishing tackle and as well an advocate of surf fishing, and whose encouragement stimulated me to improve myself. His confidence in my progress has even been unshaken. He would insist upon measuring my longest cast and when, one warm sultry day I had gone 256 feet, earnestly advised me to enter the tournament of the Asbury Park Fishing Club, which was to be held that Summer.

I did so. In that first of contests I felt strange and unseasoned, attaining third prize, a silver copper loving cup. This I brought to Mr. Dutil,

telling him to retain it until I would redeem it some future day with a First Prize Cup and I mention this incident solely for the purpose of bearing witness to my determination to get to the top.

At that time I had cultivated the habit of letting my lead rest upon the ground behind me, starting the same forward with a sudden stiffening of the arm and body, calculated to bring into action the strong back muscles. I am convinced that the use of this method of casting gave me an experience with the thumbing of the reel that later, when I changed my cast, proved of great value.

It is also well to state here that with the exception of the Anglers Club of New York, the various clubs hold their tournament upon the sand or on grass, the distance being measured from where the caster stands to where the lead drops, the choice of three or four ounce lead being optional with the contestant except in those events that specifically called for a stated weight. This lead is oblong or pear shaped and is supplied by the various clubs, no other lead being allowed. The use of 2½ ounce lead has never been in favor with surf casters, for it is foreign to the weight used in fishing the surf, as is also true of the use of a silk line and which is barred from tournaments.

The rod must measure within nine feet when assembled and no mechanical thumbing device is permissible. A sponge and a pail of water are usually provided, by which means the line may be wet, for a great deal of heat is generated as the line is checked with the thumb. A thumb protection may be used if desired, such as a thumb stall or strips of adhesive plaster.

My method of casting at that time was with a wet line, which was that in popular vogue, and still is, with many who have not learned the advantage of a dry line.

The following year I again competed at Asbury Park, casting off my lead continually which decided me that I was using a too great initial force and that a different method of casting was necessary. Gradually I changed my "style" until I attained the proficiency sought. This "swing" is one that I still use and is being further evolved by me. It consists of passing the rod in front, with a few inches of hanging line, that as the rod is passed back, in a semi-circle, runs out to about five feet, when it is suddenly snapped forward in an overhead and shoulder direction, not unlike the method employed by hammer throwers.

It was at about this time that I found that Mr. Ernest Holzmann made an especially fine running reel, whose casting qualities was its

chief recommendation. The fact that he was the greatest caster that I had ever met and should be experienced in knowing just what I desired, also decided me to buy his reel. I made an immediate improvement, going in practice 285 feet. The record was then held by Mr. W. Day at 284 feet, a very fine performance, as Mr. Day used an ordinary reel and rather poor rod. This distance was, however, replaced by Mr. W. E. Rice, who cast 305 feet, which was done with a silk line, if my memory serves me right.

In 1910 I was ill with inflammatory rheumatism and could not participate. It was at this time that Mr. W. J. Moran startled the casting world by "hoisting" the record to 314 feet 10 inches, a really remarkable performance, when the diminutive size of Mr. Moran is taken into consideration. This record stood for four years and was the goal to which all casters tried to reach. In fact there was a deep rooted belief that it could never be excelled.

In 1911 a trip to Europe occupied most of my Summer and I attended no tournament. In 1912 I won the 2½ ounce event of the Anglers Club of New York, held that year in Central Park Lake, my average of five casts being, I believe 243 feet, the measurement being taken where the lead struck the water, an uncertain method.

During 1913 I entered a number of tournaments, the earliest being held at Long Beach, where my son, Carlton, Jr., a lad of sixteen years, engrossed my entire attention. Although a constant fishing companion, he had never entered a tournament, yet won the 2½ ounce event by a record cast of 284 feet. He also won the three ounce event by casting 298 feet, quite a victory against a field of seasoned veterans. I won second place twice that day. I was below form and in the words of my friend "Bob" Corson "did not have the wallop."

During July, 1913, I attended the Belmar Fishing Club Tournament, in which I used a sponge provided, in the pail of water for the wetting of lines. This was contaminated with a tar-like substance which smeared my hands and line with a sticky ooze, depriving me of my chances of competing.

This incident was the turning point in my casting career. Disgusted and discouraged at my many failures, knowing that my procedure of casting should attain me better results, I at last realized the years that I had wasted with my peculiar "swing" upon half wet and tacky line, and which could not be otherwise with poor facility of wetting, and resolved in future to use either a line thoroughly wet or absolutely dry, protecting my thumb with a woolen stall or strips of adhesive plaster.

One week later I cast for the first time in my life with a dry line in the Asbury Park Fishing Club tournament, coming second in two events, my average of ten casts in both being some 279 feet, a distinct encouragement.

About a month later while fishing with John Dutil in one of his "secret" haunts upon Long

Island and while waiting for the tide to turn, I made a cast of 331 feet, indifferently measured, with a dry line of 18 threads. This showed me that I was upon the right track and also the possibilities of a light line with my method of casting.

In my dilemma I conferred with Willis M. Finch, an expert upon fishing tackle in general and casting in particular, and he drew up the specifications of a fishing and casting rod, suitable to my height, which is six feet.

John Landman constructed every inch of its slender and strong lines with "malice afor-thought," the rod when assembled being 8 feet 10 inches, only two inches longer than the one previously used by me. It is a No. 2 split bamboo of eight laminations and although used by me all summer, to the exclusion of any other rod, is as straight as the proverbial fiddle string. It went forth with John Landman's good wishes, and that indeed should be incentive to any sportsman.

At the further suggestion of Mr. Finch I got in touch with Mr. A. J. Crandall of the Ashaway Line and Twine Manufacturing Company, who told me to go the "limit" and that he would assist me in turning out the best line he was capable of producing.

All last spring I experimented with all kinds of lines, some with the fuzz burnt off and others with a high polish produced by their being passed over hot rollers and after a long series of results based upon trial casts in the open field, came to the conclusion that the undressed 15 thread 100 lee line, and called the Surfman Line, was the apotheosis of perfection. This line has always proven uniform and dependable. Last spring lines were "burnt" up by me.

Gradually I worked up my average until the high marks were reached, for I felt that with a general high average I could afford to let out for a special long cast, when I had proper control of the reel. In April 1914 I made 341, 342 and 343 in three consecutive casts. Later I made 330 feet average of ten casts. Every other day I would practice for two hours at Grant City, S. I., my good friend Benj. M. Kurtz coaching me and watching that each cast be identical in its delivery, with the others. In these practices Mr. Kurtz naively remarked that I lost enough lead in that field to supply a regiment with bullets; in which I must humbly acquiesce.

The spring ripened into early summer and upon June 20, 1914, the Midland Beach Fishing Club held their spring tournament. The day starting with sunshine and ended in a cold drizzling rain. My son in the Club event succeeded in casting 319 feet, at last breaking the record of Mr. Moran which had stood four years against many onslaughts. In the next, the open event, though sorry, I felt compelled to deprive him of this honor by casting 322 feet 6 inches. Both casts were really a feat considering that cold nasty day.

In July 1914 the Belmar Club held their tournament. I found that I had, in the vernacular, become stale or overtrained, hardly being able to negotiate 300 feet. To aid to my troubles the place of contest was in a low sandy hollow, a hot inferno, the ground being covered with worms and my line in casting falling into a small lake immediately adjoining the field, the line being

A Day's Fishing in France.

wet in spots. The best I did was 284 feet, average of five casts, winning from my nearest competitor by the small margin of one inch. I was sorry to deprive this gentleman of the prize, upon seeing the look of disgust on his face that such unheard of fraction of space should relegate him to second place.

A week later, or it may have been two, the Asbury Park Fishing Club held their tournament and having become a member of this club participated in all events. At this affair, John C. Clayton made a cast of 348 feet, thus replacing my record made several weeks previously. Mr. Clayton is a well liked, unassuming sportsman, a very experienced caster, being very steady and a fine judge of distance. He has the faculty of smashing his line as I have of snapping my lead, both the result of too much initial force at the moment of delivery. My best cast was 337 feet, winning, however, the average event and the accuracy event, and by reason of snapping lead coming second and third in two other events, and also winning the Grand Prize Cup which went to the one that made the greatest average in all events of the day.

I felt that though Mr. Clayton had hung up the record pretty high, that I could tip it a trifle higher, never having essayed in tournament what I did in practice, my "pitching" arm just beginning to come back in "form."

With undismayed confidence, a week later, I went to the first tournament of the Ocean City Fishing Club, where I met a class of gentlemen whose welcome and courtesies well repaid me for the distance traveled and which greeting will always be a pleasant memory.

The course was laid out upon the sand, a very good idea, for it prevented the lead from jumping ahead, and thus made the casting accurate; but it was some ten feet up grade. Were it not

for this fact the 348 foot mark would have been reached. As it was I made five casts during the day of over 340 feet, the longest being 344 feet 8 inches. Three records were established by me, 318 feet in a lane of thirty feet, 306 feet 10 inches as an average of five casts in a V shape lane and a record in the open field of average of five casts of 327 feet 5 inches.

On September 20, 1914 at the fall tournament of the Midland Beach Fishing Club I again tried for the long distance record and in the club event succeeded in doing so, going 348 feet 8 inches, replacing this record in the open event by casting 349 feet 1½ inches, also improving my record of five casts made at Ocean City by going 331 feet 1 1-5 inches.

This completed my work for the year. During 1914 I have cast in competition twenty-six times above the old mark of 314 feet 10 inches, cast fourteen times over 325 feet and eight times above 340 feet.

Many of my friends have asked me what in my opinion is the limit and in reply I would say that 375 feet will be reached within the next few years, if the various tournament committees will allow contestants to re-enforce their linen line at the lead end, the same as they did three years ago. Distances that have been reached under favorable conditions, convince me that this will be attained. Casting is just coming to the fore-ground and every club has its array of experts and it is from one of these gentlemen that I expect my record to be beaten. Prominent among these are John C. Clayton, W. E. Sylvester, J. J. Yates, W. Day, J. W. Moran, W. M. McCutcheon, Robert Corson, George Smitherman, Frank H. Stewart, Churchill Hungerford, C. T. Maginnis, Sidney Rice, and Fred Fech.

I have been requested at various times to state what particular things make most for successful casting, and I wish to say that a study of the curve of the lead in the air—the line of trajectory—the initial pressure and the velocity must all be studied, not only upon paper but must be assiduously and indefatigably practised with the mastering of the thumbing of the spool, so that no lost motion interferes with the cast. A high degree of average should be desired for this teaches control and permits of a special long cast. Casting for distance requires no special mental qualification or physical ability. It is the "sticking" quality that helps most, a persistent endeavor that plucks victory out of defeat in the keen analysis of one's faults. Aptitude is a quality which develops in time.

There is no other sport that I know of where the greatest deliberation and planning will prove so futile—by the snapping of line, by the turn of the wind, by atmospheric conditions and by some unforeseen accident to tackle. In contests the spoils do not always go to the strong.

In conclusion, I wish to say that the practice of the art of casting is a healthy recreation and that it has attracted to it a class of clean sportsmen who are willing to help each other with kind thoughts and good tackle and furthermore, that every contest is viewed not by the narrow spirit of rivalry, but the broad gauge of comradeship.

This is one of a series of interesting articles for fishermen which will appear in *Forest and Stream*. Switch Reel writes of "Fishing In The Jersey Surf." A where to and how to article of interest to all anglers.

MOUNTAIN CITY LODGE, HUNTERS' AND ANGLERS' ASSOCIATION SUGGEST STREAM TROPHY.

By Thomas L. Sullivan.

It was great good luck that persuaded the largest Muscallonge caught at Pine Cone Camp last summer to strike at my spoon. My luck still held when a few days ago I received the beautiful cup presented by *Forest and Stream* to me because of landing such a fish. In telling about it the delight cannot be put into words. The thrill that comes to the fisherman must be experienced and cannot be described.

For many years it has been my good fortune to be able to spend several weeks each season among the pine woods and lakes of Northern Minnesota and Wisconsin. Of late years I have gone to Pine Cone Camp, Minnesota.

When you are finally seated in the Great Northern train in the depot at St. Paul, the realization comes to you that you are approaching the place of rest and quiet and peace. True enough you will stay on that train until it has traveled two hundred miles further, but there are no more changes. Your responsibilities are over and the air has begun to charge itself with qualities that soon will make you eat like a hired man and sleep like a dead one. If you have fished for muscallonge in other states you will be most interested in the decided air of prosperity that covers the farms and towns as you see them from the car window. For two hundred miles directly north from St. Paul you pass through a farming country that you will say compares favorably with the farms of my own State of Indiana. This is not true of any other "Muskey" locality I have ever seen. The big fish and crops go together in Minnesota. Elsewhere you cannot have both.

Dorset is a small place, but you have great regard for Dorset because there you leave the train and get into the wagon for a drive of two miles to Pine Cone Camp.

Pine Cone Camp is owned by three brothers, Clark, Lenord and Charley Thomas. One of these brothers will meet you at Dorset. They will all meet you at the camp. Anybody will feel at home in ten minutes. The whole place impresses you with the notion that it is run for your special benefit, and if you personally have a good time then the Thomas's have done what they are there for.

The camp is situated on a chain of lakes called "Sand Chain." About one mile on each side of this chain is another chain, making three chains in all, about one mile apart and lying almost parallel with each other. The peculiar thing about it is that the "Sand Chain," which is the center chain, affords fine muscallonge fishing, the best I have ever seen, while no muskies whatever are found in either of the other two chains. In the other two chains you will find walleyed pike, pickerel and Great Northern pike in great abundance, while in the center chain there are none of these fish at all. The only game fish that flourishes in all the chains is the bass. The guides of Pine Cone are men who understand their business. My guide last summer prefers to be called Willie rather than a more high sounding title, and I can testify to his skill and efficiency both on the water and in the camp.

The morning of the day the big fish was caught, we were fishing in one of the sand lakes

about five miles from the camp. I was casting about the lily pads for muscallonge or bass. The rod was a split bamboo four feet long and weighing less than five ounces. Of course most of your readers will say it is too short. However, I like it. It was made for me by the Montague City Rod Company of Montague, Massachusetts. I have used it for two seasons and am entirely satisfied with it. The line used is called "Duplex line," 24 lbs. test made by Chas. Mayer & Co., Indianapolis. The feature of the line is that it actually has a braided core. The reel a No. 3 Meek. The artificial lure used is new in this part of the country, though doubtless many of your readers know of it. A No. 5 spoon with a slot in the center, the single hook is pushed through the slot from the convex side, so that two-thirds or more of the hook shows on the concave side. When a fish is struck the hook comes out of the slot, thus getting the spoon out of the fish's mouth, lessening any leverage in the fish's favor. The hook being in the spoon is exactly where the fish hits it, and last, but not least, the spoon is practically weedless.

It is also claimed for the lure that when the hook comes out of the slot it fastens the fish more firmly. This seems to be so provided the fisherman has struck the fish so that the hook will only come out of the slot and not out of the fish's mouth also.

With such tackle I was casting toward the shore and came to a bed of lily pads some twenty feet wide; between the lily pads and the shore was a narrow strip of clear water. A cast was made over the lily pads into the clear water, when like a bolt from a clear sky, with a rush and a swirl that can only be imagined, a 27½ pound muskie had hit my spoon. Of course no force could be used beyond simply trying to fasten the fish. The immediate problem was to get the fish through the lily pads into deep water. This the fish himself solved. Fortunately the fish was in a narrow and shallow strip of water and not liking such conditions he started with a rush for the lily pads, tore through them in the direction of the boat—at no time could there have been more than forty feet of line in use. When the fish got through the lily pads he hesitated and stopped, and it was by no means difficult, though unusual, to persuade him gently near the guide who promptly and skillfully put a bullet through his head. Such was the catching of the big fish. Mostly good luck, but an experience not to be forgotten, and an experience worth a journey of many miles to have enjoyed.

FOREST AND STREAM TROPHY.

The Accompanying Cut Shows Mrs. C. H. Dixon and Seven Small Mouth Black Bass, Taken at Lake View Resort, Bellaire, Mich. Mrs. Dixon Won FOREST AND STREAM Trophy With the 4 Pound Bass in Middle of String.

MOUNTAIN CITY LODGE, HUNTERS' AND ANGLERS ASSOCIATION SUGGEST CHANGES IN PENNSYLVANIA GAME LAWS.

At the annual election of officers of the Mountain City Lodge, Hunters' and Anglers' Association, held recently in Altoona, Pa., the following officers were elected:

Samuel C. Bowen was re-elected president, it being his fourth term. First vice-president, William Huber; second vice-president, George Fasic; secretary, H. L. Smith; directors, Fred Strohmeier, S. H. Glenn and J. H. Hill.

Want Laws Changed.

The committees appointed to suggest changes in the fish laws reported that they favored limiting the number of fish caught, but not the size, claiming that many fish were lost each year because they are pulled from the water and then thrown back on account of being undersized.

They suggested that the laws be changed to permit twenty trout of any size to be caught in one day. The other changes suggested, follow: Wall-eyed pike and salmon, twenty-five in one day, any size; white, red and calico bass and yellow perch, twenty-five in one day, any size; black bass, twenty in one day, any size.

The committee on game reported as favoring a law permitting a hunter to kill one buck and one doe deer in a season, and six rabbits in one day instead of ten, while a law to permit wild turkeys to be shot next year was also favored.

Seek Later Seasons.

It was recommended that all game seasons start on Nov. 15 and continue until Dec. 16, as during this season the leaves are off the trees and there is less danger of men being shot in the woods. A law placing a bounty on skunk and red fox was also recommended.

The reports of these committees were all adopted by the organization and the legislative representative of Blair county will be asked to support measures containing the above changes.

J. E. Pfeister, one of the leading members of the Harrisburg camp of sportsmen, was present at the meeting, and gave an address, in which he declared that the changes in the game and fish laws suggested by the Altoona sportsmen were about the same changes as the Harrisburg men favored.

THE MIGRATORY BIRD LAW.

WHAT degree of activity may we expect from the Federal authorities in the way of enforcement of the migratory bird law from now on? The closed season is at hand and spring shooting time is near. The most ridiculous phase of the situation is that many people—and particularly those who wish to break the law—regard the migratory bird law as unconstitutional, because some ambitious village Dogberry in Arkansas said so in turning loose a man who had shot a few birds out of season.

Let us carry this analogy to a logical conclusion, even though some of our more learned readers of legal attainments and knowledge may scoff. Suppose that some citizen should suddenly decide that the Income tax did not apply in his case, or that, mayhap, he could not be compelled to put revenue stamps on his product, or in similar manner he might evade other requirements of the Federal law. Suppose, to go into higher comparison, some railroad should suddenly make up its mind that it need not follow the provisions of the Interstate Commerce act.

If any of these suppositious cases became real, and some lower court should decide that the man or corporation was right, would the Federal Government at once suspend enforcement of these laws and render them inoperative until leaden-heeled Justice should have delivered her final fiat?

Not exactly—not while your Uncle Samuel possessed the strength in his good right arm, as represented by his prosecuting forces, to reach forth and grasp these offenders metaphorically, if not literally, by the scruff of the neck and lay them by the heels.

Yet somebody has started the idea that because an Arkansas justice of the peace has overridden, by means of the mysterious reasoning processes of his own mind, the dictate of Congress and of the President—the dictate really of one hundred million people—then the migratory bird act must be suspended in operation and, ergo, everybody is to have a chance to slaughter ducks this coming spring, law or no law.

If the Federal authorities do not mean to enforce the migratory law, it is because they do not wish to perform their duty, and officials who seek that avenue of escape are as much subject to other laws governing inefficiency or dereliction of office as the humblest citizen who transgresses a local ordinance. We hope that the hundreds of thousands of sportsmen in this country who believe in the migratory bird law and want it to be enforced, will see that a few red-tape department officials or servants are not allowed to shirk their work.

The migratory bird law is the best piece of legislation which the real conservationists and sportsmen of this country have ever been able to obtain. If enforced it means the preservation of wild bird life indefinitely in the future. As an illustration of its wide-reaching and beneficial effects, we maintain that the migratory bird law

of itself is sufficient to drag the people of California partially out of the mess they have gotten themselves into through voting under misapprehension the legalizing of the sale of game in that state. The man who exposes a wild duck for sale in California during the coming spring should be apprehended for the offense under the terms of the Federal act; the man who shoots the duck and the railroad which transports it should also feel the heavy hand of the law.

Do not let some Federal service official tell you that the migratory bird law is a dead letter. If he won't act on evidence at hand, write his immediate superior about it; and if that official in turn does nothing, keep on writing even if you have to address the President of the United States directly.

BUT—

WHILE the migratory law, being a law, must be enforced, this does not mean that those who are not in agreement with its provisions should be afforded no opportunity of asking amendment. The way to secure amendment nevertheless is not hastened by violation. On the contrary the best way to repeal an objectionable law, quoting the words of General Grant, is to enforce it. The best way to amend a law also is to enforce it, and we trust that the sportsmen of the middle west, who are said to be more or less in revolt against the law, because it places them in the wrong zone and therefore deprives them of all shooting or at least any shooting when ducks are thickest, will think twice before holding that the law is inoperative. Any real grievance they may have can be legally adjusted and if injustice has been done them, the square-dealing people of the country will be on their side. Let the sportsmen of the middle west agitate the question of amendment in every possible manner; that is perfectly proper, but as long as the law remains a law, it ought not be broken. That course will help nobody, and least of all the very men who are now working for a more reasonable interpretation.

BRER BRYAN AND BRER RABBIT.

OUR distinguished Secretary of State has brought himself within the possibility of the law by going rabbit hunting in Virginia on Christmas Day. It seems that one cannot hunt rabbits in Virginia while the ground is covered with snow, but Mr. Bryan, not being familiar with this fact, shouldered his more or less rusty or rusty gun on Christmas morning and went forth for a little recreation. Poor man, between war in Mexico and war elsewhere, not to mention the million other cares and worries of office, he no doubt needed a few whiffs of fresh air, and none would have begrudged him a bunny or two had he been fortunate enough to have encountered one. But Brer Rabbit "he lay low," and the Secretary of State came home gamely enough, but gameless.

Now, on more than one occasion we have had as visitors in the editorial offices of *Forest and Stream* gentlemen from Virginia, who have sworn to us solemnly and even profanely that the man is not living who can interpret the Virginia game laws correctly. Some of these careful students have even expressed to us their candid opinion that the statutes were drawn by men whose knowledge of hunting was confined to the

midnight chase of the illusory and yet deadly rabbit of Welsh extraction, with its side accompaniments, and that the application of this knowledge must have been made immediately after, or the morning after, such experiences. Be that as it may we hope, even though it comes perilously near condoning the breaking of game laws, that Mr. Bryan may be allowed to go bunny hunting whenever he feels like it, snow or no snow on the ground. A man as zealous as Brother Bryan has shown himself to be in guarding the Dove of Peace against being popped at by enemies, deserves the luxury of being allowed to do a little popping himself at other forms of game, occasionally.

STARVATION OR THE SHOT GUN.

FROM all parts of the country we hear complaints from non-sportsmen and women decrying the killing of game birds by the shooter. In Massachusetts it is the pheasant that shoot is exterminating, in Pennsylvania the cry is for the ruffed grouse. Apparently these laymen and women do not stop to realize that lack of food, caused by cold weather and snow is killing more game birds than are the gun users. We find only a few instances where these self-styled game protectors have gone into the woods and fields and fed the birds. This is something that man or woman could do with little expense and effort, yet it is not done. The pestiferous English sparrow will fly to the window sill for crumbs but the game bird must have the food taken it. It is easier to complain of the sportsmen as the game destroyer thus justifying a conscience that should be guilty for not helping preserve the bird supply than to get out and feed the starving feathered sufferer. Pennsylvania birds, particularly, need food, the winter has been unusually severe.

DEATH OF MARY ORVIS MARBURY.

Editor *Forest and Stream*:

The angling guild will be sorry to learn of the death of Mary Orvis Marbury, which occurred at Manchester, Vermont. She had not been in her usual good health for a few months previous to her passing away, which was finally caused by congestion of the lungs. It seems but a very short time since I sat up with her half the night revising an edition of the copy of her famous book, "Favorite Flies."

The fame and popularity of the "Orvis" artificial flies was due to the skill and intelligence of Mrs. Marbury, who superintended every phase of their construction before they were packed for sale. She personally examined every fly, and permitted no one to apply the shellac to the head of the fly but herself, so that no particle of the shellac should touch the snell, which would otherwise be made water proof, and remain brittle, while the rest of the snell was soaked and pliable when fished. While apparently a very small matter, none the less it was of vital importance.

Her father, Charles F. Orvis, of the *Forest and Stream* "Old Guard," is now in rather feeble health, being upward of eighty years of age, and will soon cross the dark river, to the regret of his many friends. The memory of Mrs. Marbury will long remain green in the hearts of all good fly fishers.

JAMES A. HENSHALL.

What Subscribers Think of the New-Old Forest and Stream

AN OLD FRIEND'S COMPLIMENT.

Elmira, N. Y., Jan. 2, 1915.

Editor *Forest and Stream*:

Reading your announcement in the December 26 number, of the new idea of making our *Forest and Stream* a monthly and at \$1 per year, was a very agreeable surprise to me and I wish to congratulate you on your good business foresight in so doing.

As a reader of *Forest and Stream* since 1873 I am delighted to know that my old tried and true friend *Forest and Stream* will soon be in the hands of so many thousands more of my shooting and fishing friends who will never miss a number if they can raise the one dollar, and I hope you attain the impossible—that is to get as readers everyone of the four and a half million sportsmen who took out a license in 1914 in the United States. I recently left in a shop here fifteen years of *Forest and Stream* to be given to the farmers of our county for their winters' reading.

EDWARD H. KNISKERN.

MARYLAND STATE GAME AND FISH PROTECTIVE ASSOCIATION.

Baltimore, Md., Jan. 8, 1915.

Editor *Forest and Stream*:

I am in receipt of my first copy of the "monthly," and want to congratulate you on sense you display in this change. I am sure it will be a better and a bigger magazine in every way. I have often found that the four papers coming each month did not arrive always at the moment that I wanted or had time to read and enjoy. When a paper did come at the right moment there was not enough of it. Under the present arrangement it can be set aside until the proper time and thoroughly enjoyed. The current issue is certainly a good one. My father subscribed for and read *Forest and Stream* before I was born, which is just 38 years ago.

TALBOTT DENMEAD.

YOU ARE GOING TO HIT THE MARK.

Editor *Forest and Stream*:

I think you are going to hit the mark on the head when you put the old *Forest and Stream* in the monthly column. You know how to run a paper better than I do—but cut out the "I took my 12 qua Fox in hand and as the moon was slowly rising mended my way noiselessly into a neighboring coodcock cover—when I could hear the noble bird a boring"—in other words the balderdash of individual wanderings in commonplace stubble and duck marsh don't interest the ordinary man worth a darn. Written by an artist, Yes! but not a recital of John Smith and his brother-in-law Bill Williams. And then the kennel—"go to it" that department alone properly run will put the *Forest and Stream* first and sufficient. Start a series "Dogs I have shot over" get Bob Cornell to write of Sensation; Williamson of Ladies gladstone; Titus of Joe Cumming Plain Sain, etc. Give the ladies a corner. I have a family feeling for the *Forest and Stream*. I remember it when Wild Bill and Dr. Carver shot mucilage bottles in the old mailing room at 111 Fulton street, and I would like to see it go back to its palmy days.

E. N. WILBUR.

Cincinnati, Jan. 7, 1915.

Editor *Forest and Stream*:

Enclosed please find P. O. order for \$1.00 in payment of my *Forest and Stream* for 1915.

I have often wished that *Forest and Stream* was a monthly, and was glad to see in your issue of December 26th that it will become one.

GEORGE E. HUGHES.

12 BITES BETTER THAN FIFTY-TWO.

Worthington, Ohio, Jan. 10, 1915.

Editor *Forest and Stream*:

When your proposition to change the publication of the best paper on earth from fifty-two bites a year to twelve, I was heart sick. When your beautiful January number came to hand, I was completely cured. It was a dandy! I can see now, what you have in mind.

I wish to thank you for the January treat and to congratulate every-one from the galley boy to the president of the company. I do not see where any lover of the big and beautiful outdoors has any complaint now.

An evening spent with that January number certainly files the chains that hold us to the eternal daily grind.

Success to *Forest and Stream* in its new clothes!

WILL C. PARSONS.

FOR SALE ON ALL NEWSTANDS.

Swanton, Vermont, January 9, 1915.

Editor *Forest and Stream*:

No mistake has been made in dropping the weekly and changing *Forest and Stream* to monthly.

I have often wondered why the change was not made. Now it is a magazine and can probably be found at the newstands.

When my stuff has appeared the local news dealer ordered through the American News Company, he told me, and re-ordered, selling around 75 copies.

T. M. TOBIN.

THE SPORTSMAN'S AUTHORITY.

Capitola, Cal., Jan. 14, 1915.

Editor *Forest and Stream*:

I am just in receipt of the January, 1915, number of *Forest and Stream*.

I congratulate you on your splendid work, and assure you that *Forest and Stream* merits the reputation of being the sportsman's authority in America.

Reading Will. C. Parson's article has caused me to become a reminiscent, and calls to my mind that I first began to read *Forest and Stream* about 1874.

I was at the time about twelve years of age, and was the proud carrier of a "Moore and Harris," double barreled, muzzle loading shot gun, "Dixon" powder flask and shot pouch, wad cutter, tube wrench, and a well trained setter dog.

On the banks of the San Giogrio, a beautiful trout stream in the county of San Mateo, California, was located a cabin.

This cabin was the home of two hunters and fishermen, Alex and Jim Butchart, Scotchmen by birth; and as true sportsmen as ever pulled a trigger, or wet a line. There it was that I first

became acquainted with *Forest and Stream*, and with its contributions "Kingfisher," "Nesmuk," and others.

Oh! for those happy by-gone days, with my gun, rod and faithful dog, the Butchart Brothers, and *Forest and Stream*. When the hills and valleys of California were alive with deer, quail, and wild life, the streams filled with trout, and the great red wood forests were in their primeval beauty, thirty or forty years ago. With best wishes for the success of *Forest and Stream*,

WALTER R. WELCH.

MR. SHANER LIKES THE NEW FOREST AND STREAM.

Pittsburgh, Pa., January 11, 1915.

Editor *Forest and Stream*:

Your letter of January 8th is at hand and I note how the "mix-up" occurred in the report of our last annual meeting which appeared in *Forest and Stream*. Let us forget all about it. I can understand how things of this kind are liable to happen.

If the future of *Forest and Stream's* issues are kept up to the same standard as that for the month of January, I can see no reason why it should not be a "howling" success. It is very seldom that I read much more than the editorial and trap departments in any of the Sportsmen's journals, but I read nearly all of *Forest and Stream* yesterday (Sunday) and enjoyed it very much. I wish you every success in your efforts to secure one hundred thousand new subscribers within a year.

Reciprocating your wish for a prosperous year, and Reed joins me in this, and with every good wish, I remain

ELMER E. SHANER, Treasurer and Manager, The Interstate Association.

THE BEST OUTDOOR MAGAZINE PUBLISHED.

Jan. 10, 1915.

Editor *Forest and Stream*:

Dear Brother Sportsman:

The first copy of your monthly magazine at hand, and it is the best copy of any sportsman magazine I ever saw, bar none.

J. H. KELLOGG, M.D.

LET US HEAR FROM YOU.

For many years *Forest and Stream* has been a forum for the exchange of the best thought in outdoor matters. The contributions which have been made by our friends constitute a veritable literary repository of natural history, exploration, and experiences that have proved helpful to every reader. In its new form this paper will have more room than ever to devote to such contributions and we invite our readers to continue the pleasant custom of sending us matter which will interest their brother sportsmen. While we believe in amity and good fellowship, and the extension of the hand in friendship rather than with a club clutched in it, we still must admit that literary controversies now and then do no harm, and often are of value. But we must insist that *Forest and Stream* shall be the final judge as to the time of shutting off debate. You are hereby invited to pitch in.

GAME BAG AND GUN

Get-Together Meeting in Missouri

Fishing and Gun Clubs Well Represented in St. Louis Gathering to Discuss New Game Bills

By J. R. Hickman, Secretary Missouri Fish and Game League.

THE Legislative Committee of the Missouri Fish and Game League held a State meeting at the Marquette Hotel, St. Louis, Tuesday, Dec. 20th. Representatives of the different hunting and fishing clubs, throughout the State, attended this "get together" meeting.

The object of this meeting was to go over the game laws and clear up some of the sections that had caused trouble on account of their wording, and also make a few changes and additions that would strengthen the admirable laws the State of Missouri has on the statutes. This convention developed the idea that the State of Missouri is awake to the fact that state game conservation can be brought about by unity of action.

The framing of a game bill that will meet the demands and conditions of residents of the prairie lands of North Missouri and at the same time meet the approval of residents of the swamp lands of southeast Missouri, or the Ozarks in Central Missouri, is practically impossible, but this difficulty was overcome by the sportsmen getting together on a give and take basis, and when the meeting adjourned, the entire action of the day's proceedings was indorsed by representatives from all sections of the state, who will work for the passage of the bills at the next session of the Legislature.

The Interstate Sportsmen's Association, an organization of about two thousand members scattered over the states of Missouri, Kansas, Iowa, Nebraska, Oklahoma, Illinois and Indiana, sent delegates to the convention. Representatives from gun clubs from the great duck shooting clubs along the Mississippi, met with the fishing clubs of Southeast Missouri; Kansas City and Missouri River duck shooters' clubs, helped boost the pet hobbies of the Ozark Fishing clubs or quail shooters. Thus, Missouri sportsmen will go before the next session of the Legislature as one body, and the entire state is going to back the bills that were recommended at the St. Louis conference.

The convention stood as a solid body for more active enforcement of the state game laws. The Federal game bill, protecting migratory wild fowl had the hearty support of the Missouri, Illinois, Indiana, Iowa and Nebraska sportsmen, who were led to believe that when the Federal Department took hold of the proposition, it would be handled in a safe and sane and business-like way, and that the sportsmen of this section would be given due consideration.

These states are neither in the breeding or the wintering zone, and there is very little shooting in the fall, as the sloughs are dry and the birds go further south. In the spring, the winter snows

fill the marsh lands, and there is a short season when the ducks are here in the spring, but the Federal authorities will not permit shooting at this time. This Federal law may be declared unconstitutional and the sportsmen of this section of the country do not know where they are at. The Government will not make arrests or prosecute outlaw hunters and the sportsman that wants to observe the laws, has to stand idly by and watch the "outlaws" go after the birds.

This section of the country should be placed in a "third zone" or passing zone, as it is neither a breeding or wintering zone and the seasons are variable.

Under the circumstances, this convention decided not to make any changes in the state laws covering the season on migratory birds.

Among some of the changes suggested, that of seasons and bag limit may be the most important. The present law permits one to kill two turkeys and ten other birds of each kind, or to have in possession four turkeys or fifteen birds of any other family. It is proposed to limit the kill on one calendar day to one turkey and fifteen birds of any other family, or not to have in possession at one time, more than two turkeys and twenty-five birds of each and any other family.

The squirrel season has been lengthened from July first to November thirtieth to June first to December thirty-first. Woodcock has been closed the entire year for a number of years, but it is proposed to have an open season the same as quail.

The present open season on quail is December first to December thirty-first; the season has been moved up to November tenth to December tenth, so as to give shooting before the ground is covered with sleet and snow.

The dove season, now September first to December thirty-first, will be changed to August first to December tenth, closing at the beginning of the quail season.

Selling of game is now prohibited, but a new provision will make it a penalty to store game in any commercial establishment, and a clause has been added, making it a misdemeanor to advertise for, or solicit legal game birds in or out of season.

The contaminating waters from mills, or industries, flowing over land to the streams of the state will be placed under the supervision of the State Game and Fish Commission.

A new section covering the size of fish that can be taken for commercial purposes will be added to prevent undersized fish being sent to the market, the idea being that the fish should be permitted to spawn once before they are caught for commercial purposes.

A new section will make it unlawful to sell frogs during the months of May and June. It will be unlawful to operate a game farm without first taking out a license. A game warden will be permitted to inspect the clothing of a hunter, if he has reason to believe game is being concealed.

The fee for a non-resident license will be reduced from \$25.00 to \$10.00, and special identification marks must be shown on all licenses, or state that there are none.

The \$5.00 state or \$10.00 county hunter's license will also permit one to fish with artificial bait, or a special license to fish in the state with artificial bait will cost \$2.00. An unnaturalized citizen may not obtain a license to hunt, until after he has taken out his "first papers."

One dollar will be added to all court costs in prosecutions, in order to pay the clerk for making out report, which is to be made to the Fish and Game Commissioner, as a matter of record.

It will be unlawful to catch more than twenty-five legal game fish in one day with artificial bait, or to have more than fifty fish in possession when so caught.

A copy of the above proposed change will be sent to each hunting and fishing club in the State of Missouri.

"REYNARD AN ARTFUL DODGER."

Editor *Forest and Stream*:

The description of a red fox hiding in a hollow tree by Robert Page Lincoln in your issue of December 19th is so nearly like one of my own experiences with sly reynard that with your kind indulgence I will relate in as few words as possible a similar one. In a certain spruce swamp fringing a meadow lived one of the foxiest, if not quite, the foxiest fox I ever met during my twenty-five years of fox hunting. It was no trouble to start this particular animal any day, for he was always to be found in the above mentioned spruce thicket. To the right of this thicket rose a sharp hill or mountain some 500 feet high covered with a hard wood growth of beach and birch. A snake pole fence wormed across this mountain's cone shaped crest and converted part of it into a sheep pasture. Whenever the hounds jumped this particular fox he led them straight up to the top of the Mountain's peak and by the time I could scramble after them to the summit, the dogs would invariably be at fault. This fox got on my nerves, and I studied him faithfully but could find no solution of the problem he had set me, in fact there was something uncanny about the whole business. At this time I owned some fifteen trained fox hounds, among them as fine dogs as ever put their nose in a track, including Ben Butler, than whom no finer trailer or truer driver ever lived. One frosty morning in November I took Ben out alone and before sunrise his powerful rich voice echoed and re-echoed against the Mountain's breast, from the little meadow at its base, where old reynard had been

mousing. Trailing to the same spruce swamp referred to Ben's ringing angry notes proclaimed the start. One circle around the old sheep pasture and straight to the summit they flew. By the time I put in an appearance, puffing and blowing the chase had ended. Ben was circling wider and wider with outstretched muzzle feeling for the scent, but his silence convinced me that his best efforts were useless. Moseying along the pole fence until I came to an old leaning hollow beech tree I leaned my back against its huge trunk while regaining my breath and cogitating. Above me scolded a red squirrel, until I fancied I could detect a sound of derision in his notes. Picking up a hardwood stick I turned to throw it at him, but my arm dropped instantly. There between us and about thirty feet above my head was the ear, eye, and nose of a fox! He was watching me intently from out a hole where a large limb had broken off the old beech. My first impulse was to shoot him through the head and let him slide down inside the hollow tree, but upon second thoughts the ridiculous side of the situation appealed to me. I could fancy without much imagination the squirrel (now my friend) scolding and swearing at me exclaiming "Look up you fool, here is the fox" with a lot of cuss words interwoven. Just then a distant note from Ben floated back to me, and by its well known tell tale tone I knew that another hot trail had been found. Turning away I left my fox in his lofty position (no doubt much to the disgust of my friend the squirrel) and hastened with sturdy stride to a well known runway in the hopes of a sporting shot. That night I told the story of the day's hunt to my friend and hunting companion who the very next morning ran the cute old fox in and shot him. It was certainly mean of him and I told him so. He offered as an excuse that he had run a long sapling up inside the old tree and tickled reynard with it until he crawled out on a stub beneath the peak hole and made a leap, claiming the distinction of being the only man who ever shot a flying fox.

Sometime afterward I became acquainted with a fox who tried to drown the hounds by running back and forth across thin ice covering a rapid river "but that is another story."

H. A. P. S.

Digby, N. S., December 28, 1914.

CARIBOU COME BACK TO MAINE.

Game Wardens Discover Large Herd in Northern Part of State.

Augusta, Me., Jan. 8.—That immense herds of caribou such as years ago roamed the wild lands of this State and constituted a picturesque part of Maine's animal life will, within a few years, inhabit our forests is the hope and even the belief of many of the State game officials as the result of numerous reports, which have been received from hunting guides and game wardens, in the northern part of the State and along the Canadian border.

Herbert Spencer, a warden located in the vicinity of the St. John waters, a visitor at the office of the commissioners at the State House, told a story that corroborated the reports that have been coming in for the last two years. Mr. Spencer states that this winter he has observed a herd of about thirty of the animals which is staying around a certain section of the Maine side of the St. Lawrence River. The variety is

THE IDEAL QUAIL SHELTER.

Above is an illustration of a most practical quail shelter. There are hundreds of just such locations in your vicinity where these can be placed, the opening to the South. Be very sure that the gravel as well as the feed is continually kept under these covers. Quail may be easily enticed into these coverings by small feed leaders of grain. Quantities of chaff are found to be very attractive, but the main feed is buckwheat, cracked corn, rye and oats.

The shelters may be made of old boards, with quantities of cedar brush on top. The size of the opening is about 6 feet high and 8 feet wide, the roof running to the ground in the back.

CONNECTICUT STATE BOARD OF FISHERIES & GAME,
JOHN M. CRAMPTON, Supt.

known as the woodland caribou, which is not characterized by the wandering and migrating propensities of the Newfoundland caribou.

Six years ago Mr. Spencer saw a herd of six or seven of the animals, and he believes that those which he has seen this winter are related to the same herd which, having been unmolested, has been rapidly increasing. He frequently finds antlers of the species and has a large collection of the same at his camp. Maine game officials and sportsmen have some doubt as to whether the herd is a remnant of those which were with us many years ago or whether within recent years they have encroached on the Maine borders from New Brunswick.

Editor *Forest and Stream*:

The item you refer to—regarding one of our deputy wardens, Mr. Herbert Spencer, stating that he had seen a number of woodland caribou in the northern part of this State recently, gave correct information. This deputy, who is on duty along the Canadian boundary in northwestern Maine—in Somerset and Aroostook counties—was at the office the last week in December, having come down from the boundary but a few days before that time, and he stated that as recently as six weeks previous to his coming to Augusta, he had seen the herd of caribou along the boundary, which he has seen at intervals for the past year or so. He states that in his opinion there are at least thirty caribou in the

herd. He was given special instructions by this Commission to secure photographs of the caribou, or some of them, if possible to do so.

When we receive further information from him in regard to these caribou, we shall be glad to advise you regarding same.

HARRY B. AUSTIN, Chairman of Commissioners of Inland Fisheries and Game, State of Maine.

BETTER PROTECTION FOR GAME BIRDS PROPOSED.

Resolutions instructing the introduction of a bill to the Tennessee state legislature, which provides for the protection of all game birds were adopted at a called meeting of the East Tennessee Audubon Society held recently at Knoxville, Tenn., President Dr. J. F. Massey being in the chair. John M. Brooks, L. H. Spilman and others spoke in favor of the resolution. The bill will be drafted at once by J. Bailey Wray and Judge Von A. Huffaker.

President Massay read an article before the society on "Birds, the Farmer's Best Friend," which was very interesting and highly appreciated. The article was written some time ago by the state game warden.

Six new members were received into the organization, which is growing rapidly.

In speaking in favor of the new bill to be presented, Mr. Spilman also stated that he favored the protection of all young birds.

NATURAL HISTORY

THE DEER'S ANTLERS.

A correspondent writes us from Long Branch, New Jersey, asking the following question: "Does an elk or moose shed his antlers every year and get a new set?" Our reply is "Yes, all our deer shed and renew their horns annually."

The deer—represented in North America by the caribou, moose, elk, Virginia or white tail, and mule or black tail deer—are, of course, clearly distinguished from the other group of hoofed and horned animals which contains the cattle, sheep and antelope. All the deer have horns, and the character of these horns differentiates them from all other families.

The horns of the cow or the sheep are permanent bony outgrowths from the frontal bone of the skull, and are enclosed in a horny sheath which under ordinary conditions is a permanent covering, the only exception being our pronghorn antelope, which sheds its horn sheaths annually. The bony outgrowth which form the core of the horn are full of holes, called air sinuses, and from this the *Bovidae* have been called hollow-horned *Cavicornia*. In the deer family, however, the horns are constructed on a different plan. They are still outgrowths of bone from the frontals, but the outer sheath—the velvet—encloses them for a short time only, and as soon as their growth is complete is shed. The perfect horn—commonly spoken of as an antler—is now mere dead bone. For a few months it remains firmly attached to the skull and then drops off, to be renewed again the following year. From an article printed in the *Century's* "Sport with Gun and Rod," edited by Prof. Alfred M. Mayer, we quote a popular account of the reproduction of the deer's antlers. The article is entitled "The North American Cervidae," by George Bird Grinnell, and says of these antlers:

"Their method of growth is as follows: From each of the frontal bones there arises a short, stout process, growing outward and upward, forming what is called the pedicel. This pedicel is covered with ordinary hairy skin, except upon the upper flat circular surface of its extremity, on which the horn of the preceding year was supported. Here the skin is naked and black. In the spring, usually about May 1, the time varying somewhat in the different species, and even in different individuals of the same species, this flat surface becomes convex, gradually swells outward, becomes longer, and soon takes the shape of a short spike. At first, it is straight and swollen and is shaped somewhat like a cucumber. It is now little more than a mass of coagulated blood inclosed in a sack of thin skin, which is covered by a coat of fine brown hair called 'velvet,' and during the first part of its growth there is but little trace of bony structure apparent in it. The horn is soft to the touch, and may be somewhat compressed in the hand or bent a little in any direction. It is hot and feverish, too, and the pulsation of the

arteries which supply it with blood may be felt. It is also extremely sensitive and tender, and the deer is extremely careful to avoid striking it against the trees or undergrowth near which he may pass.

"When the point is reached at which the first tine is to be put off, the extremity of the growing horn becomes somewhat flattened from side to side and then divides, the tine at first being quite small, and increasing in length much more gradually than the beam. The same thing takes place with each of the succeeding branches, so that the beam and all the tines attain their full length at the same time. During the whole period of their growth, the horns are abundantly supplied with blood-vessels, three distinct sets of arteries, according to Caton, passing up through and without the pedicel. The horns grow with very great rapidity, usually attaining their full size in about three months. Huxley, in speaking of this marvelously rapid growth, refers to a pair of antlers, weighing seventy-two pounds, which were produced in ten weeks. As might be imagined, the production of such a mass of osseous tissue in so short a time is a severe drain upon the animal's system, and in most species the males at this time become very thin and weak. During the growth of the horn a circular notched and jagged ridge makes its appearance at the base of the horn just above the pedicel. This 'burr' serves in a measure to protect the blood-vessels which pass along beneath the skin of the pedicel, and these take their way through it and between its projections, and thence along the channels in the surface of the horn beneath the periosteum—the membrane which incases the living bone.

"The horns reach their full size in August, and, from being at first very soft and afterward spongy, have at length become quite hard. They are, however, still covered with the 'velvet,' and beneath this the blood continues to circulate, but now more slowly than at any time since the horn began to grow. The time at which the horn becomes fit for use as a weapon of offense or defense varies slightly in the different species of our deer, but is usually about September 1. The animal's head now appears to trouble him, and to be irritated like a healing wound, and he rubs his horns violently in the bushes or against the branches and trunks of trees. The tender 'velvet' is thus torn off and hangs in bleeding strips about his horns and head, but he continues to rub for several days, until at length the antlers are quite free from skin, their tips white and polished, and the inequalities about the burr filled with finely crushed fragments of bark. He is then ready for the rutting season, which immediately ensues.

"The horn is now dead, and at its connection with the skull—the extremity of the pedicel—absorption begins to take place, and in the course of four or five months the attachment to the frontal is so weakened that the horn drops off of its own weight. The end of the pedicel bleeds

a little at first, but almost at once heals over, and until the following spring is covered with the black skin already mentioned.

"As a rule, these weapons are borne only by the male deer; but the female caribou always has small horns, and in very rare instances the female Virginia deer has been killed with a single spike, or a pair of straight, short, and scarcely branched horns. The horns of all our North American deer become fit for service in September, and they are shed at various times from December to March."

WHEN DO MUSCALLONGE SHED TEETH?

Editor *Forest and Stream*:

I venture to ask *Forest and Stream* a question which may be of interest to your readers. When do Muscallonge shed their teeth? There is no question, but they do shed their teeth, but when? Is it once a year and if so do they all shed at the same time, and what month or months or is it at a certain age of the fish, and but once? Among fishermen and guides there is great difference of opinions.

As far as I know there is no discussion of this matter in print. However, judged by what we know of the loss and replacement of teeth in other fishes it would seem quite improbable that the muscallonge sheds its teeth with any regularity. As far as I know there is no known case of the regular moulting of the teeth in any fish. They are shed irregularly after being in place for an indefinite time and are replaced by others which grow up in the same or a nearby location.

It is a very common experience in studying those species of fishes in which the teeth are used for identification to find one or more teeth absent from the series and represented merely by a space or by a partially erupted tooth.

I am therefore practically certain that the muscallonge will be found to follow the general rule and that at no period would all the teeth be shed at once.

RAYMOND C. OSBURN, Assistant Director
New York Aquarium.

HOW TO GROW TROUT WITH PINK FLESH.

About thirty years ago Mr. P. D. Malloch sent me from Scotland, in water, in a large tin can like a big oil-can, some thousands of freshwater shrimps, with which I hoped to stock a small lake, but in the long journey from Perth to Croydon the majority of the shrimps (*gammarus*) had died; there were a few hundred still alive. What struck me as curious was that while the live shrimps were of a semi-transparent dark olive color, most of the dead ones were opaque and almost of the color of boiled prawns, quite pinkish in appearance. I had put some trout in the water and hoped to get a stock of live shrimps established in the Canadian weed and other weeds—crowsfoot, vallisneria, etc. It

then struck me that the pink flesh of salmon and of some trout must have been caused through eating prawns and similar crustaceans which turn pink. The natural live prawn is like a bit of animated transparent glue, and yet boiled it becomes perfectly opaque and white in flesh, with a brilliant pink skin. In the Fishing Gazette I have often suggested that freshwater shrimps probably helped to give a pink color to the flesh of trout. The matter has now been definitely proved by experiments carried out by Professor Leger at the Piscicultural Laboratory and Faculty of Sciences at Grenoble, France (where those grand Grenoble walnuts come from—the walnut trees were planted to get walnut wood for gun stocks).

For a full account of the experiments see the Bulletin de la Societe Centrale d' Agriculture, published at Grenoble. From this it appears that alevins of brook trout from the eggs of one female were divided into two lots. One of these batches of small fry was fed exclusively on freshwater shrimps, and the other lot on milt (*rate*). At the end of the second year the former had all flesh strongly salmon-colored (*une chair fortement saumonée*), while that of the other lot was completely white. "We are thus," says the report, "in a position to affirm definitely (*peremptoirement*) the salmon color of the flesh is due to the nature of the nourishment, and that in our streams the freshwater shrimp provides this nourishment." This is very interesting, and it is important to fish-breeders. Think of the demand any breeder would get and the price if he could guarantee

Trout for Stocking Which Cut Pink Like Salmon!

Another thing I have noticed and often referred to in the Fishing Gazette for thirty years past is that trout and grayling grow big and strong in streams where the freshwater shrimp abounds. I do not mean where it exists, as that may mean nothing comparatively, but where it abounds as it did formerly—for instance, in the Wandle at Beddington Corner and Mitcham; in the Test above and below Horsebridge; in the Itchen, especially at and near Highbridge; and in the little Costa Beck in Yorkshire, near Pickering. And yet the curious thing is that in these streams many trout and every single grayling I ever caught in them had white flesh. In the Wandle, in the good old days, before Croydon made it an open sewer, dangerous to man and beast, by running its dirty sewage-farm refuse into it, I have seen the trout simply browsing on the shrimps swarming along the campsheathing among the flannel weed.—By R. B. Marston in Fishing Gazette, London.

RECOMMENDS SALE OF FORESTRY LANDS.

Rhineland, Wis., Dec. 19.—Recommendations for the sale of all forestry lands that could be used for agricultural purposes, for consolidation of several of the state boards with the forestry board and the discontinuance of the purchase of forestry lands will be made by the Wisconsin legislative forestry committee in its report to the legislature next month, according to Senator Tompkins, chairman, and Assemblyman Axel Johnson, secretary, who with other members of the committee meet here to-day.

The report, which was made public for the first time, recommends that the lands which are to be sold for farming purposes be sold to settlers only

and at a minimum price. It is recommended that twenty years be allowed the purchasers in which to pay and that not more than 80 acres be allowed to each family.

The board also urges that the department of fish and game, state fisheries, state parks, state conservation, state public lands and state forestry be consolidated under one board of three members to be appointed by the governor. The committee would have this board made up of a practical forester, practical engineer and an experienced fish and game man.

BREEDING SKUNKS FOR FUR.

Trappers Alone Make \$3,000,000 Annually From Skins.

Washington, December 24.—Experiments in breeding skunks in captivity are highly recommended by the United States Department of Agriculture. In recommending the practice, the Department experts point out that this animal is one of the most useful of native mammals, and a most efficient help to the farmer and the orchardist in their warfare against insect and rodent pests. As a source of fur, it is also a commercial asset, the skins netting trappers about \$3,000,000 annually. Therefore, says the Department, as the skunk is valuable in its activities, as well as for its fur, experiments in breeding the animals in captivity are recommended. The propagation of fur-bearing animals has been the subject of investigation by the Department for some time, and the results of the experiments have been so gratifying that raccoons, skunks and foxes probably will be added to the minks and martens already the subjects of research work.

Moleskins have been extensively used in this country during the last few years in making fur garments, and practically all of the supply has been imported from Europe. In the belief that the common mole of eastern United States produces fur of equal value, skins were submitted to professional furriers, who stated that the quality is superior to the foreign product. The mole inhabiting the Northwestern coast is larger than the common Eastern species, and a number of these have been collected to obtain a report on the quality of the pelt. If this little animal can be trapped profitably for its fur, say the experts, the problem of freeing agricultural areas from its ravages practically will be solved.

QUAIL DISEASE APPEARS AGAIN.

Washington, D. C.—The third known outbreak of quail disease has been discovered by the Bureau of Animal Industry in quail, sent for examination from the National Zoological Park. These birds were received a few days ago from two of the principal importers in widely separated parts of the country. Most of the quail now on the market are imported from Mexico and are entered at the port of Brownsville, Texas. Under these circumstances all outstanding permits have been cancelled and further importations suspended for this season.

Quail disease, a highly infectious malady, to which all our native quail are apparently subject, was discovered in 1907 and was traced to a number of States. A second outbreak occurred in 1912, but was checked through the suspension of importation of birds from Mexico from which most of the supply of birds was

SNAPPING A WILD SQUIRREL.

Six Days to Get Used to the Camera, Then Three Days of Watchful Waiting to Make the Exposure.

drawn. Last year practically no birds were imported from Mexico and no quail disease was reported. This year a limited number of birds have been permitted to enter at Brownsville subject to quarantine maintained through the cooperation of the Biological Survey and the Bureau of Animal Industry. All birds which were suspected of having the disease were examined at Brownsville or forwarded to this Department, but not until January 5 were the first undoubted cases of disease detected. Game commissioners and sportsmen who are interested in the introduction of quail or who may have purchased birds for re-stocking this season are requested to advise the Department if any of the birds are known to have died from disease of any kind. As a measure of precaution any birds now in captivity should be kept under close observation for a period of at least ten days and in case any of them die the bodies should be forwarded to the Bureau of Animal Industry of the Department of Agriculture for examination.

WHITE WOLF KILLED.

Pierre, S. D.—The big white wolf, which has been a terror to stockmen along Antelope and Cedar creeks for several years, has met his match in cunning. Ira Whalen, a young rancher, has the wolf's hide and is entitled to the bounties of about \$150, which were offered for the animal by stock owners. The huge brute had pulled down and killed full grown cattle.

Live Notes From The Field

Being Reports From Our Local Correspondents

BACKWOODS SURGERY.

Two physicians in a party of hunters near Kelliher, Minn., by their prompt action and resourcefulness saved the life of Harold Holt, a homesteader. The story is told by Dr. F. G. Mitchell of St. Paul, who is just back from the hunting trip. Holt's gun was discharged when he slipped and fell from a stump. The muzzle was pressed against his breast, but a metal snuff-box deflected the charge. Two buckshot entered Holt's lungs near the heart, and seven lodged in the flesh. His companions hurried him to a nearby lumber camp used by Dr. Mitchell's hunting party, and found Dr. Mitchell there. The doctor went back with them, made a rude stretcher, and after four hours of struggling through brush and swamps they got Holt to the camp. Dr. E. H. Marcum of Bemidji was also in the hunting party, and though neither of the surgeons had any instruments they set to work. They whittled some green birch twigs, with which they probed for the buckshot, getting all but the two lodged in the lungs. Boiled sheets were used to make lint for bandages and when the doctors left the patient seemed to be doing nicely.

DEER FREE FROM DISEASE.

Marquette, Mich.—William R. Oates says there is absolutely no truth in the widespread rumor that deer of upper Michigan are infected with the hoof and mouth disease. He bases his statement on reports from every deputy in the peninsula.

HILLS AND DALES MAY BE STATE GAME PRESERVE.

Dayton, O.

That state officials, advocating the appropriation of \$25,000 from the hunters' license fund for the establishment of a forest game and bird preserve, may desire to make arrangements for the use of Hills and Dales, the estate of John H. Patterson, president National Cash Register Co., as a state game preserve is not thought improbable. Mr. Patterson's efforts to protect and propagate game and game birds in Hills and Dales have been carried on at considerable expense and have proved satisfactory. Recommendations for legislation paving the way to establishing a forest game and bird preserve, were presented to the state agricultural commission last week. A bill probably will be drafted providing for the purchase of about 10,000 acres of cheap hill land in southern Ohio for the preserve. The statement was also made in connection with the

recommendations to the agricultural commission that hundreds of families are now squatting on state lands in Scioto, Pike, Ross and Vinton counties that could be well used as game preserves. The advantage in utilizing Hills and Dales as a state preserve would be the fact that it has long been recognized as a place where hunting would be severely prosecuted, and hence it could be used as a safe haven for game without great expenses in hiring game wardens to guard it.

BIRD CENSUS GUESSWORK.

Baltimore, Md.

Editor *Forest and Stream*:

The so, but falsely called bird census is utterly without scientific value, and is destitute of even approximate reliability. I happened to receive this very morning a letter from a correspondent in which the statement is made touching the inexactness of the methods employed. It is not a census, but a bad guesswork. The method was to employ estimators, who were supposed to be trained observers, who estimated the number of pairs per acre in various sections of the country. These estimates were averaged and the aggregate made up from these averages. The results reached are impossible of acceptance, as even indicating possibilities, much less probabilities.

Those who understand bird life know full well that if a sharp-eyed observer were placed in the center of each five acres throughout the state, a single day's observation would not give reliable results, as birds have a most provoking way of hiding and appearing, according to no apparent law. As indicating the extent of this habit, a page from my own experience will not be out of place. On a fine December day I walked along the escapement of one of the ridges of the Alleghanies for a distance of 15 miles. Five miles showed no particular bird phenomena. On the last miles of the tramp I started, without dog, 49 grouse after I commenced to count. In one 30-acre field covered with small oak and waste brush 11 birds started. I do not shoot. Three days later I advised a friend as to the conditions. He made the same trip with a fine bird dog and started nine birds. This variability shows the impossibility of reaching results by any crude method of estimation.

The only possible way to reach anything like an accurate estimate would be to select nesting time and seek out and count all nests. I personally doubt that the gun cuts much figure in the total of bird life. Disease, the changing of the terrain by culture, the gleanings of the busy hen,

all have their effect in limiting the numbers at any one point. The telegraph wire is a mighty raider of bird life. Some years ago in three subsequent days I gathered 14 birds of various species from beneath a stretch of about one mile and a half of telegraphway.

However, no one will question seriously the conclusion that bird life needs all the possible protection which can be thrown about it by law.

E. B. T.

BEAR AND DEER IN A DAY.

Bagging a bear and a deer in one day is the record of E. L. Eylar, who brought his double kill to Minneapolis. The animals were shot at Lake Kapatagoma, near Ray, in northern Minnesota. The bear was found in a brake just after daylight, the hunter stumbling on him almost by accident. Not until dusk was there any trace of other game and then Mr. Eylar caught sight of the deer running through the open about 75 yards away. One shot .35 rifle laid the animal low. Mr. Eylar said that the northern woods were filled with Minnesota hunters who formerly looked for their game in Wisconsin, but who were compelled to keep to their own state this season on account of the hoof and mouth disease quarantine, which prevented the interstate shipment of deer.

SAYS BUCK LAW IS NOT PRACTICAL.

Detroit, Mich., Jan. 4, 1915.

Editor *Forest and Stream*:

A hunter is always a "bug" when it comes to his part, convinced that the exigencies of his pet diversion overshadow all other considerations. Nevertheless, with the legislature about to convene, I hope that I may be pardoned for dwelling on a subject near to the hearts of thousands of Michigan men.

Game Warden Oates in his annual report recommended that a law limiting the deer to be killed to one for each hunter, and that an adult buck. It was argued that such a law would not only halt the extinction of deer in this state, but would do away with the danger of hunters shooting one another. Other states, Mr. Oates said, had adopted such a law and greatly reduced the number of casualties in the woods.

I think that the majority of deer hunters in this state will agree with me when I say that a buck law would have an effect exactly opposite to the one hoped for. In the thick timber, second growth and swamp land frequented by deer in Michigan, it is rarely that one gets a standing shot and still more rarely that the shooter

is able to tell anything about the sex or age of the animal he is shooting at.

If the deer season were several months long instead of less than three weeks, if every hunter could spend the entire fall in the woods and if self-control were developed to a super-human degree among sportsmen, the buck law might work. But the man who spends a considerable sum getting into the woods for a few days' vacation, is going to let fly on chance when he sees deer fur. About all that can be expected of him is to refrain from shooting at commotions in the brush without waiting to glimpse game. The suggested law specifies that bucks should have horns five inches in height. A quick eye for measuring certainly would be called for.

The result of a buck law would be that does and fawns would be killed in as large numbers as they are now and left to the foxes or ravens.

In open country, a buck law may have its value; in Michigan it would be worse than useless. It is time that the deer limit was reduced from two to one, which would serve the purpose of conservation, but if all the old-timers could be called on for an opinion I feel sure that their conscientious verdict would be against a buck law.

DR. A. B. WITTE.

DEER AND SMALL GAME SUFFERING.

Waynesboro, Pa.—Fred Gallion, superintendent of the Rouzerxille Water Company, at Pen-Mar, says that he saw a pretty young deer on the mountain on Sunday. The Blue Ridge Mountains have been covered with snow and sleet for the past three weeks, and deer are coming out into the fields and barnyards in search of food. Rabbits and birds are suffering from the cold and for want of food, and many have died from starvation.

At the annual meeting of the Board of Fish and Game Commissioners of New Jersey, the following officers were re-elected: President, Ernest Napier, of East Orange; treasurer, Wm. A. Logue. B. M. Shanley, Jr., of Newark, who had been appointed ad interim commissioner, caused by the resignation of Percival Chrystie, took the oath of officer as commissioner for a term of four years.

HUNTERS BARRED FROM 1,600-ACRE TRACT IN GENESEE VALLEY.

James W. Wadsworth, says that the game preserve to be established at Genesee will consist of 1,600 acres. It is the old Wadsworth homestead, owned by James W. Wadsworth, and Austin Wadsworth.

All that it is proposed to do, is to prohibit hunting upon the land. It will not be cultivated, but cattle will be allowed to graze upon part of it. Experience has shown that wild fowl and other birds will establish breeding places where they are protected.

Game and song birds, which were abundant in the Genesee Valley, have become scarce from constant hunting. The security of the preserve is expected to cause a return of old conditions. There are ponds on the tract, which are even now visited by wild ducks and geese in their migration.

While there will be no hunting upon the pre-

serve, its existence should be productive of sport in other parts of the valley, as the birds will go beyond its borders as they increase in number.

SLAUGHTER OF GAME HAS BEEN OUTRAGEOUS.

Winchester, Va.—With the close of the old year, the hunting season in all the Virginia counties west of the Blue Ridge Mountains also came to an end, and it will be unlawful to hunt, kill or capture the various game birds and animals mentioned in the game laws of the State from now until the first day of next November. The season just closed is said to have witnessed more open violations of the hunting laws than in any one season in many years. Principally because there are so few game wardens in that portion of the State west of the Blue Ridge Mountains, and the apparent inability of the courts to induce residents of the towns and counties to act as deputies. The Virginia Game Protective Association is carrying on a campaign of education and doing all in its power to acquaint the people with the provisions of the laws relating to game. President Todd, of the association, says the vast majority of Virginia people do not appear to know anything about the game laws. The General Assembly, which meets this month, probably will be asked to make more stringent laws, as a great many of the game birds and animals are almost gone, having been killed in large numbers by hunters and then smuggled off to the markets of the Eastern cities, where birds in particular command high prices. The slaughter of game in the adjoining State of West Virginia is also reported to have been the most outrageous ever known of, and this, too, in spite of the fact that a number of the birds are now supposed to be protected by the government. Some arrests have been made and fines collected in the Federal courts, but they are said to have been small and insignificant in comparison to the number of flagrant violations of the State and Federal game laws.

THE MIGRATORY BIRD LAW.

On the first of October of last year regulations for the enforcement of the Federal Migratory Bird Law were issued. More than a year has now passed, and in that time, say officials of the Department of Agriculture, there has been a gratifying improvement of wild life. The law is soon to be put to the final test.

Early in its history opposition appeared in the hunting regions of Arkansas. It is declared that this has been promoted by sportsmen and professional hunters from Kansas City and other points near the Arkansas forest and meadows. A test case is pending before the United States Supreme Court, and probably will come up for argument next spring. The Government lost the suit in the lower court, which held that Congress had no right, under the Constitution, to enact such prohibitory legislation.

The Department of Agriculture and Audubon societies everywhere are not fearful of the issue. Even if the case is lost they believe that the cause of protection will be won. Dr. T. S. Palmer of the Geological Survey, who is in charge of Federal game preservation, is quoted as saying: "The law has had a wonderful effect upon public sentiment in all parts of the country, and in consequence the States are beginning to adopt the regulations made under it for bird protection."

This is true in a way, for the passage of the law—and the malevolent attacks made on the proposal—attracted attention to the birds. Yet the passage of the Federal law was in itself an effect, not a cause. If the birds had not already had a host of friends no favorable sentiment could have been found in Congress.

The difficulty in protecting migratory birds is in the fact that they are migratory. Essentially, protection must be a State affair, and it is gratifying to observe the favor with which many States are regarding proposals for such protection. Birds go South in great numbers in the fall months. Millions literally cloud Louisiana, and that State has been the scene of much pothunting. Louisiana has been glad, through its Legislature, to pass such laws as will protect the birds whether the Federal law stands or falls. The establishment of several bird refuge islands off the Louisiana coast indicates the number of friends the birds have in this Southern State. Action in Louisiana shows the trend.

GAME PROTECTION LAWS ARE NEEDED.

Biwabik, Minn.—"Unless steps are at once taken to protect partridge from unscrupulous hunters, the game birds will soon be extinct in Minnesota," said Game Warden Geo. E. Wood. "There is a small army of big game hunters up this way and every one I have talked to says that he has seen very few partridge or other game birds. Something ought to be done at this winter's session of the state legislature to stop the killing of partridge.

"I attribute the scarcity to two things. One is shooting of partridge from automobiles before the season opens as the birds run along the roadways, and the other is the alien hunter who has no regard for the game laws.

"Range sportsmen are planning to present a bill at St. Paul so drawn as to stop up the loopholes and it ought to pass.

"Even more serious than the extinction of the partridge is the rapid decline in the number of moose. They are becoming uncommon in this section of St. Louis county where they used to range the hills by thousands. Every foreigner has a higher power gun."

LAKE MINNETONKA A PRESERVE.

Minneapolis, Jan. 9, 1915.

Editor *Forest and Stream*:

Perhaps you will be interested in knowing that we have recently succeeded in getting Lake Minnetonka, a large lake with over 100 miles of shore, located within 15 miles of Minneapolis where Minneapolis people have homes and spend the summer months, many of them, set aside as a game refuge or preserve, including the lake and from a mile to a mile and a half of shore line around it.

The Game Protective League here are very much pleased over its success. This means that no shooting and no carrying of guns will be allowed inside of this district. It means the protection of ducks and birds of all kinds in the future. The residents are all interested and they will see that the law is enforced; that game wardens are provided. This does not restrict fishing, however. In a very few years we will have a quantity of wild ducks, partridges, pheas-

ants, quail and all kinds of singing birds in this preserve, which will add materially to the attractiveness of the location as a summer home, besides doing splendid work in the protection of wild birds.

C. D. VELIE.

SHOOTING GOOD IN MARYLAND.

Baltimore, Jan. 9, 1915.

There were more good ducks in Maryland the first of this season than for some years, although shooting was not at its best; many ducks left here earlier than usual this season, due in my opinion to the power boat shooting at the head of Chesapeake, made legal by the recent Legislature, I have seen more red heads and canvas backs this year than for many years, but up to the last week or two there has been a great scarcity of the lesser scaup, called here little black head.

The partridge season was about the average; owing to the foot and mouth disease spreading among cattle a quarantine was placed on hunting with dogs. I am sorry to say that outside of stopping the man who had to transport his dogs from county to county, shooting went on just the same and we can look forward to no increase in our bird supply due to this apparently additional closed season.

The State wide closed season opening our bird and rabbit season uniformly on Nov. 10 has worked well, and we sincerely trust the next Legislature will not change its uniformity.

With best wishes for a successful year, I am
Yours truly,
TALBOTT DENMEAD.

TROUT NURSERIES LOCATED.

Deadwood, South Dakota.—Game Warden Hedrick has been in the Hills locating fish nurseries which are expected to increase greatly the number of available trout for fishermen next summer. It is proposed to construct dams and reservoirs to keep the small trout safe until they attain proper growth. One site in Spearfish canyon and one in Rapid Creek have been selected and the game warden hopes to have the nurseries ready for spring.

WOULD ABOLISH A STATE DEPARTMENT.

Helena, Mont.—An effort to abolish the game warden's department and transfer the duties to the sheriffs of the several counties, will be made at the coming session of the legislature, according to Joseph Kirschwing of Great Falls.

"The game warden's department is all right when the purpose for which it was created is observed, but when it simply becomes a big spoke in a political machine, it is time for it to be wiped out," said Kirschwing.

Men are touring Montana working up agitation for the abolishment of the department. In addition to the game warden, there are about 23 deputy wardens. The expense of maintenance does not affect the general taxpayers, but only hunters and fishermen. All men, citizens of Montana, who hunt or fish, are required to obtain license costing \$1. Non-residents and aliens pay more, and this money is used for the upkeep of the department.

Several candidates for the legislature made abolishment of the game warden's office one of the planks upon which they ran.

NEW JERSEY HUNTING AND FISHING LICENSES.

Summary and Full Text of New Hunting and Fishing License Law, Effective Jan. 1st, 1915.

Summary.

In effect January 1st, 1915. Applies only to fresh waters as to fishing. All licenses to be obtained from any county or municipal clerk or salaried fish and game warden.

Resident's Hunting and Fishing License.

(a) Resident males and females above the age of fourteen (who must be citizens of the United States, who actually and bona fide reside in this State at the time of application for a license and who have actually and bona fide resided in this State for one year immediately prior thereto) must secure a "Residents' Hunting and Fishing License" in order to hunt with firearms any protected or unprotected wild bird, animal or fowl, which license also entitles the holder to fish.

(b) Resident males above the age of fourteen, who are citizens of the United States and who have the above resident qualifications, must secure a "Residents' Hunting and Fishing License" in order to fish for any fish in the fresh waters of the State by the method commonly known as angling, which license also entitles the holder to hunt.

(c) The "Residents' Hunting and Fishing License" entitling the legal holder thereof to hunt and fish shall cost \$1.15.

No license to fish is required of:

- (1) Resident females.
- (2) Males under fourteen years.

No hunting license shall be issued to any person under fourteen years. Persons under this age are therefore prohibited from hunting unless they come within the exceptions noted below.

Non-residents' and Aliens' Hunting and Fishing License.

(d) Non-resident and alien males and females above the age of fourteen must secure a "Non-residents' and Aliens' Hunting and Fishing License" in order to hunt any protected or unprotected wild bird, animal or fowl, which license also entitles the holder to fish.

(e) With regard to non-residents and aliens who desire to fish only see (g), (h) and (i) below.

(f) The "Non-residents' and Aliens' Hunting and Fishing License" entitling the legal holder thereof to hunt and fish shall cost \$10.15.

No hunting license shall be issued to any person under fourteen years. Persons under this age are therefore prohibited from hunting, unless they come within the exceptions noted below.

Non-residents' and Aliens' Fishing License.

(g) Non-resident and alien males above the age of fourteen, who desire to fish only and who have not taken out a "Non-residents' and Aliens' Hunting and Fishing License," must secure a "Non-residents' and Aliens' Fishing License" in order to fish for any fish in the fresh waters by the method commonly known as angling.

(h) The "Non-residents' and Aliens' Fishing License" entitling the legal holder thereof to fish shall cost \$2.15. This license does not entitle the holder to hunt.

(i) No license to fish is required of:

- (1) Non-resident and alien females.
- (2) Non-resident and alien males under fourteen years.

Exceptions.

Exceptions: "Nothing in this act contained shall prevent the occupant of any farm in this

State, who actually resides thereon, or the immediate members of the family of such occupant who also reside on said farm, from hunting for, taking, killing or pursuing with a gun or firearm, on said farm, any wild bird, animal or fowl, or from taking fish on said farm with hand-line, or rod and line, in the manner provided by law at any time when it is lawful so to do, without being licensed hereunder; provided, however, that the exemption contained in the foregoing provision shall not apply to any person residing on said farm or in any tenant house thereon who is not a member of the family of such occupant, nor to any servant of such occupant."

OREGON SPORTSMEN ELECT OFFICERS.

At the annual meeting of the Oregon Sportsmen's League the following officers were elected: President, H. B. Van Duzer, Portland; first vice-president, W. N. Matlock, Pendleton; second vice-president, Dr. J. G. Gill, Lebanon; secretary-treasurer, S. C. Bartrum, Roseburg; executive committee, district 1, L. W. Humphreys, Portland; district 2, W. W. Goff, Forest Grove; district 3, A. Crandall, Brownsville; district 4, George P. Putnam, Medford; district 5, Leo A. E. Scharno, The Dalles; district 6, G. I. La Dow, Pendleton; district 7, Charles Riley, Klamath Falls; publicity committee, C. A. Riddle, chairman, Walter Backus, E. F. Averill, Henry Veatch, M. H. Bauer; nomination committee, E. C. McFarland, chairman, G. I. La Dow, J. H. Driscoll, George Putnam, A. Crandall; resolution committee, L. W. Humphreys, chairman, L. E. Bean, I. P. Gardner, E. J. Boot and Dr. J. G. Gill.

MINNESOTA BIG GAME RETURNS.

Duluth, Minn., Jan. 6.—The 20 days open season in Minnesota mounted into thousands. Probably 500 deer and moose came to Duluth alone. Coincident with the conclusion of the open period for deer and moose, members of the Northwestern Gun Club will consider a number of recommendations by game wardens to shorten the season on big game and game birds to 10 days.

Eleven dead hunters and 12 wounded is the toll of the hunting season in Minnesota. The number of deer and moose killed is the largest in the history of the state. Hundreds of nimrods from eastern and middle west cities obtained licenses in Minnesota this year. Game was abundant in far-away localities, but scarce where it abounded in former years.

OFFICERS ELECTED BY FREEPORT GUN CLUB.

At the annual meeting of the Freeport, (Ill.) Gun Club, the following officers were elected: President, Russel Weir; vice-president, Ralph Rosenstiel; secretary, C. L. Bossmeyer; treasurer, Jean James; field captain, Herman Jansen, H. D. Swartz, Dr. C. L. Karcher and Ralph B. Rosenstiel were appointed a handicap committee.

DOUGLAS COUNTY GAME PROTECTIVE ASSOCIATION.

The Douglas County (Ore), Game Protective Association has elected the following officers: President, J. H. Sykes, vice-president, A. J. Liburn; secretary-treasurer, T. A. Rafferty; executive committee, S. C. Bartrum, Rev. Paul J. Lux and George Neuner.

NEW BOOKS FOR SPORTSMEN

DR. W. T. HORNADAY'S WORKS.

No man in the United States has labored more earnestly and with more enthusiasm in the conservation cause than Dr. William A. Hornaday, Director of the New York Zoological Park. His pen and voice have been devoted freely to this work, and while, like all men of firm purpose and zeal he has made enemies and stirred up controversy with people who otherwise are with him, his motives have never been questioned nor impugned. We believe also that the world is indebted to Dr. Hornaday for what he has done already, and more particularly that future generations will be under a much greater debt for what will have been saved in the way of game and wild life, through reform and amendments of the law inspired by him.

Dr. Hornaday has recently issued in the form of four volumes an amplified and more complete form, his fireside edition of *American Natural History*. The books are published by Charles Scribner's Sons at \$7.50 per set, and are done in the usual perfect Scribner way. They contain over 400 illustrations, and quite a few colored pictures of wild game, etc.

The distinguished author needs no commendation at the hands of *Forest and Stream*, nor will we enter into a technical but useless discussion of the books in the way of splitting hairs over minor matters or disputed points in natural history. The work is written in a style that will make it popular with young people, but it must not be inferred that the books are juvenile, for they are quite as interesting and instructive to the ordinary man or woman as to the younger generation.

The usual natural history is about the driest and dearest contribution to literature that can be imagined. It is either too scientific or it falls into the foolish form of half romance, made popular by some of our imaginative wild life writers. Dr. Hornaday's is a straight out natural history, written in plain language.

Now, a natural history, while it may be either of the two descriptions named above, is not complete, if we are to judge from what Dr. Hornaday has given us, unless it contains also what might be termed a history of present conditions of wild life and prospects of its future existence or extermination. Therefore he has incorporated in the work a number of chapters along the lines of his well known "Our Vanishing Wild Life," and shows beyond peradventure of a doubt that unless something is done to stop the destruction of our game, the next generation will have none worthy the name. Perhaps there are people who might hold that a natural history is not the place to write such matter, but when we come to think about it, what better vehicle could be employed for the purpose?

Therefore, if Dr. Hornaday's book presses home the fact that the animal or specimen discussed is liable to become extinct within an altogether too brief period, through the foolishness of man, the warning will not have been in vain. We wish

that a set of Dr. Hornaday's new edition could be placed in the hands of every growing boy in America who is at all interested in outdoor matters. It would be a fine thing if the fathers of these boys would read and study the several volumes also.

Dr. Hornaday as stated, is a man who has been called over-zealous, but all great causes need the over-zealous. They have made possible reforms that have benefited mankind; the world is better because such men are born into it. We might soften the harshness of some of the distinguished author's criticisms and statements by setting forth that much that he asks for in the way of conservation is already being accomplished, but that is not to the point. Strong language is needed to advance strong issues. His may be a voice crying in the wilderness—certainly it is crying for the perpetuation of the things of the wilderness—but encouragement is essential in this case rather than criticism. We commend therefore the efforts of Dr. Hornaday, and hope that his new books will find a circulation worthy of their high purpose and real value.

BIG GAME FIELDS OF AMERICA.

The George H. Doran Company, of New York has just brought out a book by Daniel J. Singer that is a happy combination of natural history and big game hunting that has not been before seen. As the title implies it is restricted to the American continent and handled, as is the subject in this work, one needs no wider range for sufficiently varied hunting. The primary charm of the work is that undoubtedly it was a history made from a trip and not a trip made from a story. Mr. Singer went shooting for pleasure and found so much of unusual interest that he kept ten notes, which he wove into a book upon his return. The scope of the book, geographically, ranges from British Guinea to Wrangell, Alaska. The much hackneyed South American hunting is gracefully and originally handled. In addition to shooting experiences a chapter is devoted to the natural history of the Jaguar—a subject heretofore only glossed over. The author has done his best work in telling of Alaskan hunting. This territory has never before

A HANDSOME, SLEEK YOUNG MURDERER.

(Illustration From "Big Game Fields of America." Courtesy of the Geo. H. Doran Company.)

been treated so simply and yet with such compelling interest. It furnishes a Baedeker for any sportsman with his eye on northern shooting. Mr. Singer has proved himself equally well versed in getting his game and getting the attention of his readers, of whom this book entitles him to many.

An interesting chapter from this book entitled "The Prowler of the Night," will be given in next month's *Forest and Stream*.

I'm a-longing for the dear old hidden ways.
In my dreams their hallowed spots again I see.
Then I live once more those by-gone camping days.

And anew, I catch the forest mystery.

George Washington As An Angler

The late George H. Moore, librarian of the old Lenox Library, of New York, an erudite scholar and an authority of high standing respecting scarce Americana, was also a devoted angler, and out of the rich stores of his knowledge of men and things in the early days of our country's history he prepared a monograph entitled "Washington as an Angler, with Extracts from His Diaries, 1787-1789." The study was dedicated to Grover Cleveland in 1887, in this neat way:

To Grover Cleveland, President of the United States:

It is known to me that there have been skillful fishermen, more than one, among the Chief Magistrates of the nation. Your immediate predecessor has left an unsurpassed record among them, and it is with no ordinary pleasure that those of us who profess the faith and follow the precepts of "The Complete Angler" have been assured that you are inclined to indulge in similar recreation betimes. No good fisherman was ever a bad man, and history will bear out the assertion that the best Presidents have been the best fishermen. No one of the many biographers of the first President of the United States has done justice to the character of Washington in this important feature, and the present publication of extracts from his diaries is intended to be a timely tribute to his fame as a man among men, a fisherman among fishermen, in which it will be no disparagement to you to share. In the first century of this nation's life he was the first and you have been called the last President. I trust that the beginning of the new era will find as good a fisherman as you are in office, and that the line may continue to stretch out, like that of the blood-boltered Banquo, till the crack of doom. George H. Moore.

Lenox Library, July, 1887.

To which Mr. Cleveland made response:

Executive Mansion, Washington, July 31, 1887.

Dr. George H. Moore:

My Dear Sir—Please accept my thanks for the little book you sent me entitled "Washington as an Angler."

I am much pleased to learn that the only element of greatness heretofore unnoticed in the life of Washington is thus supplied.

I am a little curious to know whether the absence of details as to the result of his fishing is owing to bad luck, a lack of toleration of fish stories at that time among anglers, or to the fact that, even as to the number of fish he caught, the Father of his Country could not tell a lie. Yours—very truly, Grover Cleveland.

With which by way of preface we give Dr. Moore's presentation of George Washington in his character of angler:

Mr. Sparks, in his life of Washington, has mentioned the report of tradition that he displayed in his boyhood a passion for active sports and a fondness for athletic amusements which he did not relinquish in mature life. Other writers have repeated this general statement, but no one has pointed out his claim to be recognized as a "Brother of the Angle." Among his manuscripts

hitherto unpublished, he has left a very interesting record of his recreations at a period of his life when he was engaged in a service hardly less important to his country than that of his military career. Without him there would have been no United States to need a Constitution, and without him no Constitution would have been formed or established. He was the savior of his country in peace as well as in war. As President of the Federal Convention at Philadelphia, in the Summer of 1787, he was punctually in his place during the arduous deliberations of that renowned assembly. After a very close application to business for more than two months the convention appointed a committee of detail to whom they referred the results of their previous action, with orders to prepare and report them in the form of a constitution. The convention then adjourned on Thursday, the 26th day of July, until Monday, the 6th day of August, 1787.

It was duly reported in the newspapers of the day that on "Monday last (July 30, 1787) his Excellency, General Washington, set out for Moore Hall, in order to visit his old quarters at the Valley Forge."

Moore Hall was the ancient stone mansion of William Moore, who has been characterized as "the most conspicuous and heroic figure in the county of Chester" in his day and generation. The building is still standing, overlooking the Schuylkill and, three miles distant, the Valley Forge. Judge Moore, who was born in 1699, died in 1783, leaving a widow who survived him several years. An advertisement in the Pennsylvania Gazette of Feb. 2, 1791, offered:

"Moore Hall. To be rented. Mansion house, farm and mill, in the township of Charlestown, in the county of Chester, situated on the River Schuylkill, distant twenty-three miles from Philadelphia. Two hundred acres. Mill on a never-failing stream called Pickering. Feb. 1, 1791."

This ancient homestead, known in 1787 as "the Widow Moore's," was the objective point of Gen. Washington's outing when he set out to visit his old quarters at the Valley Forge. What a flood of recollections must have overwhelmed him as he fulfilled this purpose and reviewed those scenes of past trials, sorrow and distress, in the great light of patriotic hope after the hours of triumph! The contrast must have been more impressive than that presented in the suggestions of his visit to Lexington—neglected by historians—when, in his first vacation as President of the United States, he "viewed the spot on which the first blood was drawn in the late glorious war" where

"Once the embattled farmers stood

And fired the shot heard round the world."

But historic places and reminiscences were by no means the only thing in view upon this excursion—perhaps not the main thing. What it all was cannot be better told than in Gen. Washington's own brief, sententious records of each day:

"Monday, 30th July.—In company with Mr. Governr Morris went into the neighborhood of the Valley Forge to a Widow Moore's a-fishing, at whose house we lodged.

"Tuesday, 31st July.—Before breakfast I rode to the Valley Forge and over the whole Cantonment & Works of the American Army in the Winter of 1777-8, and on my return to the Widow Moore's found Mr. & Mrs. Rob. Morris. Spent the day there fishing, etc., & lodged at same place.

"Wednesday, August 1.—Returned abt 11 o'clock with the above company to Philadelphia.

"Friday, 3d Aug., 1787.—Went up to Trenton on a fishing party with Mr. & Mrs. Robt. Morris & Mr. Govr. Morris. Dined and lodged at Colo Sam Ogden's. In the evening fished.

Saturday, 4th (Aug., 1787).—In the morning and between breakfast and dinner fished. Dined at Gen. Dickinson's and returned in the evening to Colo Ogden's.

"Sunday, 5th (Aug. 1787).—Dined at Colo Ogden's and about 4 o'clock set out for Philadelphia—halted an hour at Bristol and reached the city before 9 o'clock."

These were very notable fishing parties. The companions of Washington were old, tried and constant friends, always true and never found wanting.

Gouverneur Morris, of New York, one of the noblest of her sons, a great man and a good citizen, who could truly say that the welfare of his country was his single object during a conspicuous public career. He never sought, refused nor resigned an office, although there was no department of government in which he was not called to act; and it was the unvarying principle of his life that the interests of his country must be preferred to every other interest. Such a man was Gouverneur Morris, the inspired penman of the Federal Constitution.

Robert Morris, of Pennsylvania, the great financier of the Revolution, whose services to his country have never been justly appreciated, for his biography has never been justly written.

Mrs. Robert Morris, whose charming face, in the most beautiful and well-preserved portrait of a woman ever painted by Gilbert Stuart, smiles on the vain effort of the writer to tell what is the real secret of its winning grace and lasting impression on every visitor to the gallery of the Lenox Library, which is now its permanent home, and of which it is one of the principal ornaments.

The Widow Moore, the loyalty and devotion of whose husband is the best testimony to her merits. He has left the record in his will—"happy woman, a pattern of her sex, and worthy the relationship she bears to the Right Honorable and noble family from whence she sprang."

Gen. Philemon Dickinson, a distinguished officer of the New Jersey line, a brother of that famous writer and patriot who was the author of the "Farmer's Letters," both "Petitions to the King," and the "Declaration of the Continental Congress on taking up Arms in 1775."

Col. Samuel Ogden, the brother-in-law of Gouverneur Morris, and, like Dickinson, a worthy representative of that grand army of the Revolution, whose practical lessons of disinterested patriotism are so full of wisdom and rich in instruction to every true-hearted American.

Truly this was a goodly company for any place or pursuit, with much of profitable entertainment therein for all concerned. Indeed, it may well be doubted whether anything recorded in the annals of angling anywhere can challenge it for distinction, all things considered. Certainly no American fishing party hitherto described can vie with

it, for a moment, in historical interest and importance.

Another fishing excursion is mentioned in a later diary of Washington. When he made his great northern and western tour, already alluded to, in 1789, Portsmouth, in New Hampshire, was the extreme point of his journey. While he was there he was taken out to view the harbor, and to try his skill and luck in salt water. On Monday, Nov. 2, they went down to the outer harbor beyond the fort and the lighthouse, where, as he says himself:

"Having lines, we proceeded to the Fishing Banks, a little without the Harbor, and fished for cod; but it not being a proper time of tide, we only caught two, with which, about 1 o'clock we returned to town."

His visit to Lexington, to which I have alluded, took place on his return toward New York. He had intended to go to that historic locality while he was yet in Boston, but on the day appointed, Monday, Oct. 26, his record is:

"The day being rainy and stormy, myself much disordered by a cold and inflammation in the left eye, I was prevented from visiting Lexington, where the first blood in the dispute with G. Brit'n was drawn."

Returning from Portsmouth, he left that place on Wednesday, the 4th of November, passing through Exeter, Haverhill, and Andover, where on the 5th he was received and escorted by the Hon. Samuel Phillips, Jr., President of the Senate of the town. He made a short visit to Mr. Phillips, who attended him as far as Lexington, where they "dined and viewed the spot on which the first blood was spilt in the dispute with G. B. on the 19th of April, 1775." His further route was continued through Watertown, and by what was known as "the middle road" to Hartford, Conn. He arrived in New York on Friday, the 13th November.

Future research may or may not reveal particulars of these fishings in the Schuylkill and the Delaware or their tributary streams, the character and weight of the catch, the methods of the sport in those days, and all the incidents which crowd such fleeting hours of charming recreation. I am content to have been the first to claim for George Washington his rightful place as an angler—a genuine disciple of Izaak Walton.

REVIVAL IN HUNTING ATTRIBUTED TO WAR.

That the European war exerts a power of suggestion on the minds of those who use firearms is the belief of County Auditor A. P. Erickson. In that way he accounts for the issuance of 7,423 hunting licenses this season, the largest number ever issued at the Minneapolis office. He said that he actually believes a great many who obtained hunting licenses did so to test their shooting ability as game was not so plentiful as a year ago when 6,036 hunting licenses were issued.

IOWA CONSERVATION SOCIETY.

The Iowa Conservation Society, formerly the Iowa Park and Forestry Association, at a meeting recently held in Des Moines, elected officers as follows for the ensuing year: President, T. C. Stephens of Sioux City; vice-president, Fred Lazell of Cedar Rapids; secretary, G. B. McDonald of Ames; treasurer, Mrs. H. J. Taylor of Sioux City.

On the Prairie in the Great Northwest

Worcester, Mass., Jan., 1915.

Editor *Forest and Stream*:

Having recently returned from a four weeks' visit to my nephew, a homesteader in the Province of Saskatchewan, the middle of the Prairie Provinces, perhaps a little account of this great grain producing territory of Canada may interest some of your readers.

What a transformation from the New England landscape! A vast rolling prairie of waving wheat, flax and oats as far as the eye could reach in all directions. Mortlach is a thriving little town of about 350 inhabitants, has three or four grain elevators, several stores, a church, good school house, Masonic and Odd Fellows lodge-rooms, post-office and two banks—branches of the Bank of Toronto and the Bank of Hamilton. About all the government land adjacent to Mortlach has been taken up by homesteaders, but between the bad land west of Montreal and the Canadian Rockies there is room enough for 100,000,000 people.

The uncultivated portion on the prairie is a perfect garden of wild flowers, roses predominating, mushrooms are also very plentiful and of the best variety, and in the ravines there are lots of wild gooseberries and currants. Game, consisting of wild ducks, geese, prairie chickens plover and Wilson snipe is plentiful and can be shot almost in one's door yard. One morning, while I was there, there were five prairie chickens on top of my nephew's rustic summer house, and on going out I flushed a covey of about thirty a little further away. That was in September, before the law was off. The shooting season on these birds opens October 1, and closes Oct. 15. Resident bird license, \$1; non-resident \$25. As I left for home on Oct. 2, I had only one day's chicken shooting, but I killed a good bag of those strong fliers with my little Parker 24 inch barrel brush gun on the opening day; killing them all on the wing, of course, and without the aid of a dog.

I had great sport all through September with the ducks which are to be found in all the little sloughs. I shot mallards, black ducks, spoon-bills, American widgeons, pintails and teal, all with the same little gun—consequently we had roast duck nearly every night, for dinner during my four weeks' visit. The ducks feed on the wheat in the fields in addition to what they get in the water, and as there are no fish in these little ponds, they are of most excellent flavor.

A dinner of fat, grain fed, roasted duck with mushrooms, and all kinds of vegetables fresh from the garden, with appetite sharpened by a good outing in the bracing September air, followed by a fragrant cigar is not a bad wind up to a day's hunt on the prairie of Saskatchewan.

One day late in September while we were duck shooting the sky became very black toward sundown, and in a few minutes a blizzard struck us and when we reached home the ground was covered with snow, yet on the fifteenth of October, I hunted prairie chickens all day with a coat on and was uncomfortably warm, with mosquitoes much in evidence.

It is very easy for one not familiar with the locality to get lost on the prairie. I frequently

hunted alone and one afternoon, being busy with the ducks until after the sun went down it grew dark before I got back, but I had my compass with me, and by the light of a match I got my bearings and headed due north, knowing that if I kept that course I would reach the house all right, but before long I found myself traveling in the wrong direction. I soon had my bearings again and located the house by the light in the window. The night was warm and I probably would not have been very uncomfortable if I had been compelled to sleep out, but there were quite a lot of prairie wolves about and although they are harmless, unless extremely hungry, their howling at night gives a tenderfoot the creeps. I saw several of them on different occasions and heard some that I did not see.

The mounted police force of the Canadian northwest beats the world. When a "mounty" gets after a crook he might as well come right in as he will get him if it takes years to do it. They are a fearless lot of men. I was told of one who, on coming up with his man, had to look into the muzzle of a loaded gun, but instead of throwing up his hands he sprang off his horse, knocked the gun out of the man's hand and made the arrest.

Having a camera with me I secured a number of interesting souvenirs of my trips to this great grain-growing Province of Canada and when the day came to exchange corduroys for "glad rags" and travel east I said to myself: "This seems to be a suitable place to plant a sprig of acacia in memory of one of the most enjoyable outings I have ever experienced."

GEORGE H. BURTIS.

Advancement of interest in the preservation of protected birds, wild animals and fish by means of an educational campaign is given as the object of the Ohio Fish and Game Inspectors' Association, has been organized at Columbus, Ohio. The members are the deputy fish and game wardens of the State.

The officers elected are: C. C. Acton, Cincinnati, president; Harry Crosley, Sandusky, vice-president; A. C. Baxter, Columbus, secretary, and Charles Becht, Columbus, treasurer. The following committee was appointed to draft a constitution: Herman Nohr, Russell's Point; A. C. Wagner, Tiffin; Charles Haines, Lima; Charles Ruckel, Akron, and Sherman Conover, Dayton.

An educational campaign, the members believe, will be of material assistance in the enforcement of the game law. The meeting was held in the office of J. C. Speaks, chief state game warden.

WERNERSVILLE ROD AND GUN CLUB.

The newly elected officers of the Wernersville (Pa.) Rod and Gun Club are: President, H. G. Sensinger; vice-president, William Spatz; financial secretary, P. J. Guinther; recording secretary, W. V. Hassler; captain, U. Lamm; trustees, William Ochs, Irwin Brossman and Rufus Brossman.

KENNEL

"JACK:"—"WITH SOME REFERENCE TO FITS."

A Practical Article on Home Treatment of Your Dog.

Did you ever have an excitable dog that was subject to fits? All kinds of dogs have fits, but I am now referring to finely bred animals of high strung, nervous organizations, whose brains are very active, and which are apt to be too ambitious. Some years ago, a good friend of mine came to me and said that he wished to buy a well trained setter dog. He was prepared to pay a fair price, but not an extravagant one, and asked me to see what I could do for him. The autumn previous I had had one day's shooting in Ohio, with a well known trainer and breeder, who had impressed me as being a first rate sportsman and honest man. His kennels contained many dogs, trained and untrained. I wrote to him at once, and among the dogs offered was a Red Irish setter, quite young, which had been worked on quail and woodcock, and was well trained. The price was \$75, and if not satisfactory "Jack" could be returned. This dog hit my friend's fancy and he promptly mailed a check, which brought Jack the long journey from North to South, in good condition. M— was delighted with his purchase, as the dog was extremely handsome and had a fine disposition. M— loved to have Jack with him on the road, but ran the dog too far and fast when he had ladies with him. We tried him out on quail, and his work was very satisfactory. He was quick in all his actions, ranged and quartered his ground well, and fell into his points without preliminaries or hesitation. It was late in the season and Jack did not have much work in the field. The next summer my friend drove a great deal, and on one occasion reported that the dog had nearly died in a fit, after a long run on a hot day. About September he went abroad, and begged me to take charge of his dog. I had one of my own, and was spending the summer and fall in the country, using the suburban railway service to go to and return from my business in the city.

At that time the quail season nominally began on the 1st of October, but I had practically given up shooting until the first light frosts. There were a certain number of diamond backed rattlers in the country, and a setter or pointer is in very great danger. A friend of mine lost a fine setter within four miles of the city. Dogs are fools in their dealings with deadly snakes, and are apt to charge right in on them, after trailing them up. If struck, however, they seem to realize the situation.

I knew that there was a bevy of quail across the road, back of the house, not a quarter of a mile away, and late one afternoon, after returning from business, I thought that I would give the dogs a run, and possibly, bag a couple of birds on the rise, if we found them. The animals were delighted, and Jack worked his

ground beautifully. In a few minutes he found and stanchly pointed the birds, and on the rise, sure enough, I dropped two quail. I had scarcely bagged these when Jack rolled over in a horrible fit, frothing at the mouth, twitching and kicking. It was a warm evening and the attack seemed a very bad one. Most persons when they see a dog in this condition raise the cry of "mad dog," and many dogs are killed every year as mad, when they have fits. If the fit is comparatively light so that the dog can run about, it is pursued and prosecuted, when probably seeking retirement. I felt very badly, as I thought the dog was surely dying. Suddenly I remembered some doggy advice I had read in an old book. I pulled out my pocket knife, which had a sharp blade for a wonder, and snipped off the end of Jack's tail. Instantly the red blood started in a fine spray, and he came out of the fit at once. He was very weak and had to be assisted to the house, but next day seemed in good health. You may be sure that I took no more chances until cool weather, but when this came, and I could take a day off I went shooting. My friend's return to this country was long delayed, and he wrote me asking that I give Jack some work when I could. I found that the dog was intensely excitable, and that when first cast off in open fields, or a snipe bog would range far and wide. He was stanch and his work in open country so beautiful, that one was tempted to allow him to speed off this first high pressure, before he settled down for the day.

But; presently, he had another fit, and I had to snip off another piece of his tail; then bandage it with a handkerchief, so that the end looked like a drum stick. He was not so weak this time and was able to work quietly, but he had what is sometimes called "a merry tail." He switched this appendage right and left, and striking bushes and briars the end was soon very bloody. Now, I had no wish to restore my friend's dog to him when he returned, with a docked tail, and decided that I must see if there was not something that would prevent fits, stop them before they started. A surgical operation was also objectionable every time the dog had one. I therefore took Jack to my physician and gave him a full account of the attacks, the symptoms, and the causes that I fancied, brought them on. The doctor gave the case full attention, and said that the trouble originated in an excitable brain. Some fits were caused by stomach troubles, particularly in pet dogs. He advised me to buy a bottle of "Bromide of Potassium," with a table spoon when I went shooting with Jack. Before casting him off I was to administer a full dose of bromide, or if he seemed much excited I was to use it occasionally. In fact a dose now and then during the day would do no harm.

Behold me, therefore, with a big bottle and table spoon, dosing the dog religiously while in the field. It may have been the prescription, I

know not, but Jack did not have another fit while he was with me. He did much good work for me as his master was apt to send him around to the house if he heard that I was going shooting. As by this time I had two dogs of my own, and another friend had a dog he always wished me to work, I was well supplied, but I love to have them, any number, if they are accustomed to my ways, and can get rid of jealousy.

Jack lived for several years, but died in a fit, after an 18 mile run with his master's drag, on a hot summer's day. He was a charming animal, and all women quite fell in love with his nice ways and handsome appearance.

For stomach troubles and constipation, I have found Homeopathic "Nux Vomica" very useful. The dogs like it, and the little pills are easily administered. After a dose or two, shake the bottle at them and they will come and sit up for their medicine. Remember it is the Homeopathic sort. The stuff is poison, (Strychnine) and in any other form it is too strong. A friend of mine killed two fox terriers with the regular drug store preparation. Dogs seem to be as easily affected as young children, yet I have had my dogs horribly overdosed when I was a young sportsman. I gained much valuable information from a book "Kennel Diseases by "Ashmont."

With fever and congestion I found that two doses of Homeopathic Aconite, one-half to one hour apart, in the evening, before settling the dog for the night was often very good. The effect was mild, and did not weaken as the regular preparation does.

WESTMINSTER KENNEL CLUB SHOW.

The thirty-ninth annual show of Westminster Kennel Club will be held February 22, 23, 24, 25. The meeting place has come back to Madison Square Garden, after a try last year at Grand Central Palace, where facilities were lacking for this classic event in dogdom. The show committee will consist of William Rauch, Richard H. Williams, Winthrop Rutherford and Lewis A. Eldridge. The indispensable James Mortimer, will have the superintendency. Thirty silver cups, to be won outright, are offered. These trophies are open to all.

Judges.

Dr. Henry Jarrett, Chestnut Hill, Pa.—Bloodhounds, Mastiffs, Newfoundlands, Old English Sheepdogs, Chows, Samoyedes, Boxers, Scottish Terriers, West Highland White Terriers, Toy Poodles, Maltese Terriers, Chihuahuas, Variety Classes and Unclassified Specials.

Dudley E. Wateres, Esq., Grand Rapids, Mich. St. Bernards.

Otto J. A. Grassi, Esq., New York, N. Y.—Great Danes.

TRAP SHOOTING

Forest and Stream is an Honorary Member of the Interstate Association for the Promotion of Trapshooting.

DRIVERS AND TWISTERS. Tidbits of News and Gossip Among Shooters.

It is with a good deal of pleasure I note that Hayes Keller has been appointed sales manager of the Hunter Arms Co. This is a fitting happy new year to a man who has worked diligently and faithfully in the interest of his company. T. H. Jr. like his old dad, who is mistaken for his own grandson at times, is a friend maker of sincere type. He is popular through personality as well as through the merit of the L. C. Smith single trigger. Hayes, physically, doesn't cast much of a shadow but when it comes to selling guns, that same shadow eclipses many a gun salesman of much more generous pulchritude. May T. H.'s shadow never grow less.

Almost every gun club has a shoot scheduled for Feb. 12 and 22, and the majority of the events will be made especially attractive.

A decidedly attractive brochure has been received from E. Reed Shaner, Secretary, Interstate Association. It indicates care and painstaking effort on the part of the busy bees of the association, those who live in Pittsburgh. Excerpts from the booklet is re-printed on another page in this issue.

We have received a number of requests for calendars issued by arms and ammunition companies. We would suggest sending direct to the company whose calendar you want, and if it is possible for them to supply you they very gladly will do so. A word to the wise goes a fishin, sometimes.

Every club in the country will hold shoots on Feb. 12 (Lincoln's birthday) and Feb. 22, (Washington's Birthday) so that no shooter need go begging for a place to shoot on either of those days as most clubs are glad to welcome visitors.

W. G. BEECROFT.

PORT WASHINGTON YACHT CLUB.

Trap shooting popular this year with good scores by many shooters.

Attendance during the month at the Port Washington Yacht Club has been above the average, the old standbys being on deck to pass the horny hand of welcome to newcomers—down there they call it passing the "Buck." H. H. Shannon has been chief custodian of the silver and plate. His cup cabinet is beginning to take on the appearance of Ralph Spotts across the sea. Somebody better pull the handicap rope on this youngster, else he will start in the wholesale silver business. Scores Jan. 2nd:

Weekly—L. B. Small (1), 20; D. S. Cornwell (5), 16; F. Winslow, prof. (0), 12; C. E. Hyde (3), 22; C. L. Thompson (2), 23; D. E. Smith (2), 19; H. Funke (3), 19; C. M. Prankard (5), 23; H. H. Shannon (3), 22.

INTER-YACHT CLUB TOURNAMENT.

The first of three Inter Yacht Club championship shoots was pulled over the traps of New Rochelle Yacht Club, Harrison Island, on January 16th. The home team won the first leg with 445, Marine and Field being second with 442, Bayside Yacht Club third with 431. John H. Hendrickson and Hazen L. Hoyt tied for individual high gun with 95 x 100, but Hoyt, who generally is there on a shoot-off, fell down badly, getting only 21 of his 25, while Hendrickson went straight. This gives Hendrickson a leg on *Forest and Stream* trophy, which goes to high average gun for the entire series. High man on the winning team was Dr. G. H. Martin with 93. High breaker for Bayside was F. W. Kent on 89, while F. E. Elliott took top honors for Bensonhurst, with 82. The next shoot will be held at Bayside Yacht Club Feb. 27 and the final crack at Marine and Field Club March 20. Fifty gunners blazed away at New Rochelle.

The summaries:
Inter-Yacht Club Championship, First Shoot, Individual Event (Scratch), One Hundred Clay Birds.—John H. Hendrickson, 95; Hazen L. Hoyt, Jr., 95; Dr. G. H. Martin, 93; E. H. Lott, 92; F. W. Howard, 91; Z. C. Offutt, 91; F. W. Kent, 89; E. L. Haas, 89; H. O. Allyn, 89; G. P. Granbery, 88; H. F. L. Funcke, 87; M. Deisler, 86; Tracey H. Lewis, 86; J. F. James, 86; F. R. Long, 85; H. H. Shannon, 85; C. R. James, 85; J. S. Fosdick, 84; P. R. Towne, 84; S. P. Hopkins, 83; E. L. Hatch, 82; F. E. Ellcott, 82; W. M. Collins, 80; T. H. Lawrence, 80; C. P. Requa, 79; H. S. Bullock, 79; E. MARYLAND TRAPSHOOTING LEAGUE.

Hagerstown, Md., Jan. 11.—Two teams are still tied in the Maryland Trapshooting League as a result of the victories scored by the Baltimore Shooting Association and the Havre de Grace Gun Club last week. The former defeated

the Prospect Park Gun Club at Prospect, 355 to 335, while the latter won from the Maryland Country Club, 359 to 343.

Edward Bartlett was high man for the day, missing only one target out of 50. W. Poplar led the Havre de Grace shooters with 48, and Hawkins topped the Baltimore Shooting Association marksmen, he too, only missing two targets.

The scores:
Baltimore Shooting Association—J. M. Hawkins, 48; Graham, 47; J. W. Hawkins, 46; Eyer, 45; Howard, 44; Whiteford, 43; Davis, 39; Ledlum, 39; Malone, 39; Dr. Kantz, 39; Hargest, 39; Brooks, 39; Rosenberry, 35; Leland, 37; Morgan, 34; and Getty, 33.
Prospect Park Gun Club—Tracy, 47; Hensman, 45; Gice, 42; Reynolds, 41; Allen, 43; Woods, 40; Bando, 39; Dickey, 38; Brehm, 33; Ruth, 36; Thompson, 35; Register, 26; Powell, 31; Messenger, 33; Pohlman, 38; Johnson, 31; Mason, 27; and Dr. Corse, 35.
Havre de Grace Gun Club—Joslyn, 45; W. Poplar, 48; C. Colburn, 42; N. Mitchell, 46; Michael, 44; Whitney, 44; Cole, 47; R. Poplar, 43; Dr. Bay, 36; E. Poplar, 40; Osborn, 40; Jackson, 37; Macemore, 28; Hart, 39; Busey, 39; Walker, 42; Lawder, 40; Walstrom, 30; Vandiver, 38; and T. Mitchell, 38.
Maryland Country Club—Lassell, 41; Edward Bartlett, 49; Worthington, 46; Brinkman, 39; Holland, 44; Mallory, 46; Mordecai, 38; Marly, 40; R. Gill, 31; G. Gill, 35; Hiss, 29; Wagner, 33; Brian, 37; Waller, 38; Long, 32; Dr. Smith, 36; T. Offutt, 30; N. Offutt, 30; and Armstrong, 29.
Professionals (not competing)—Wells, 44, and Wheeler, 32.

CAMDEN FIELD CLUB.

Kling Wins Turkeys.

John Kling was the winner of two turkeys in the Camden Field Club shoot. Kling won the first event at 25 targets, shooting from the 20-yard line, breaking 23 birds. In the second event Kling made a total of 21. Kling won the third event with 20 targets, but liberally donated the gobbler to the second man. For second place Pfeffer and Johnson were tied, and on the shoot-off Johnson shot ten out of a possible 12 and received the turkey.

WHITE PLAINS GUN CLUB.

Eighteen shooters shot the program through at the first shoot of the year 1915 at the White Plains Gun Club, at the club grounds, Gedney Farnus, White Plains, N. Y.

Paul A. Raymond, the all around champion of the United States with the pistol, revolver, 22-calibre rifle, U. S. Springfield, who has just joined the club, found the conditions a little strange as he succeeded in breaking 80 out of his 100. It is always with much pleasure that the boys all welcome Miss Laura Boles and her sisters at the club shoots. Miss Boles' score of 79 shows what perseverance at the traps will do. The true sportsman's disposition is truly shown in Miss Boles' work. H. K. Curtis and "Chubby" Bill Webb came over from Chappaqua and helped make the afternoon a pleasant one. Bill's experience at the first indoor trap shoot, held at the Garden always causes quite some laughter. Nobody can tell it as well as he can so for the benefit of those who had not already heard it he recalled the occasion and told how the referee asked him to be a little more careful in aiming at the targets as his last two shots had gone

NEW YORK

through the roof, one of them having taken several of the electric lights with it. Dr. and Mrs. Ogden and Mrs. Paul Raymond were among those present at the club during the afternoon. The high scratch trophy for the day went to Harry Allyn with a score of 90. The high handicap trophy event was won by Mr. F. C. Sayles who won it in a shoot-off having tied Mr. R. M. Jesup with a perfect score. In the shoot-off Mr. Sayles succeeded in smashing 20 to Mr. Jesup's 16.

Sweepstakes Event won by Mr. Curtis.

ANALOSTAN GUN CLUB.

A Successful Season Was 1914.

Washington, D. C., January 2, 1914.

The year 1914 was a most prosperous one for the Analostan Gun Club. There were numerous additions to the membership and a lively interest was manifested by the members all through the year. The average attendance at more than 40 shoots was 19 and during the year 82,890 targets were trapped.

Commencing in April contests were held every two weeks for a challenge cup presented to the club by Mr. George A. Emmons. At the final shoot held on October 31st those who had won the trophy once or more were eligible to compete. E. W. Ford, Dr. E. S. Ford, Dr. J. C. Wynkoop and R. D. Morgan, each had two wins, while Jos. H. Hunter, P. J. Stubener, M. D. Hogan, Dr. A. B. Stine, J. A. Brown and Miles Taylor were credited with one winning. Those who participated in the final shoot-off were

Messrs. E. W. Ford, E. S. Ford, Wynkoop, Hunter, Taylor, Stubener, Hogan and Stine. Those who had won twice shot from the 22-yard mark while the others were on the 21-yard mark. E. W. Ford won the trophy on a score of 78 ex 100. The conditions were bad and the shooting poor.

The spoon shoots were continued during the year and five of these were donated every other week. Several merchandise shoots were also had, the club donating the prizes.

A DuPont trophy was carried over and a tie is to be shot off for it soon. Messrs. Bradford, Culver, Stine, Hogan, C. S. Wilson and Miles Taylor being the contestants.

Between now and April 1st the club will decide the ownership of the Steven's Arms trophy, the Hercules Powder Co.'s watch fob and several prizes donated by Rev. W. W. Barnes, souvenirs of his trip abroad last summer.

During the year an added bird handicap affair for a trophy donated by Edwards & Zanner, an enterprising jewelry firm, was shot for. Our experience with added birds demonstrated that the good shot has to take a back seat in contests of this kind. W. C. Blundon won the trophy with 10 wins to his credit; Jas. M. Green, 8; G. A. Emmons, 7; W. S. Duvall, 7; Dr. A. B. Stine, 6; Dr. W. D. Monroe, 6; E. S. Ford, 5; E. W. Ford, 5; J. A. Brown, 5; M. D. Hogan, 5; Dr. A. V. Parsons, 4; Dr. J. C. Wynkoop, 4; M. Taylor, 3; Hal Remington, 3; J. McL. Seabrook, 3; G. D. Kirkpatrick, 3; C. S. Wilson, 3; J. H. Hunter, 3; P. J. Stubener, 2; C. S. Pittman, 1; Dr. Fenton Bradford, 1; R. T. Livesey, 1; R. D. Morgan, 1.

We opened the season of 1915 with a rattling good shoot on New Year's day. Twenty-five members responded to the call. The shooting was rather difficult but before the day was over some good scores had been hung up, notably that made by W. C. Blundon, one of the new men at the traps who scored 116 out of his last 125. Dr. E. S. Ford also shot well scoring 65 ex 75 in a match with Blundon who bested him by scoring 69 ex 75.

Following are the scores:

Names	Shot At	Broke
E. S. Ford	100	87
M. Taylor	100	87
Dr. A. B. Stine	100	83
W. C. Blundon	100	83
Geo. A. Emmons	100	82
Dr. J. C. Wynkoop	100	81
Joe H. Hunter	100	80
W. W. Barnes	100	80
J. McL. Seabrook	100	80
R. T. Livesey	100	79

E. W. Ford	100	79
S. A. Luttrell	100	79
A. V. Parsons	100	78
W. M. Willis	100	73
M. D. Hogan	100	73
C. S. Wilson	100	72
W. Hitchcock	100	72
J. A. Brown	100	69
W. D. Monroe	100	63
Wm. Lowe	85	56
W. A. Seabold	75	40
Dr. Jesse Shoup	50	42
R. M. Graham	50	39
W. S. Duvall	50	28

E. W. Ford's gun was out of commission and shooting a strange gun accounts for his poor score. W. S. Duvall, one of our regulars, was out for the first time for several months. He has been under the weather and cashed in when he shot fifty.

The spoon shot was an interesting affair. Taylor was accorded the high average spoon for his 87; E. S. Ford having won the A spoon with 46. Blundon, Hunter and Wynkoop tied for C spoon and will shoot the tie off at another meeting. Each scored 36 ex 50. J. A. Brown won the B spoon with 41 and Luttrell the D spoon with 31.

The merchandise prizes were divided into three lots A, B, and C. E. S. Ford and Taylor shot off the first choice in A. Ford won—23 to 22. Stine and Blundon also tied and shot off. Blundon won 23 to 21. Other ties were decided by lot.

MILES TAYLOR, Sec.

NONESUCH GUN CLUB.

Whitney Wins Leg on Trophy.

December 26, 1914.

The intense cold didn't prevent 20 shooters from competing at the Nonesuch Gun Club's grounds yesterday afternoon. John Whitney won the leg shoot in the match for the Stevens' trophy, the score standing as follows: Whitney, 48; D. L. Robinson, 46; H. Brackett, 46; Henry Cash, 46; E. H. Dyer, 45; James Whitney, 41; Edgar Thurston, 25; Harold Ward, 20.

The other matches were small affairs and in all about a thousand targets were used.

A Freeze-Out Shoot.

On account of the extreme cold yesterday morning the annual Christmas shoot on the traps of the Portland Gun Club was not pulled off, although several enthusiasts were out and shot an informal program of 75 birds and nearly froze while doing it.

W. G. Hill	23	23	22-68
O. P. Weymouth	18	21	22-61
A. N. Read	18	21	22-61
Dr. F. L. Hayden	19	20	21-60

DISCUSS NEW GUN CLUB.

St. Paul Postpones Action on New Trap Shooting Association for Twin Cities.

December 26, 1914.

Representatives of several of the leading gun clubs of the Twin Cities met last night to discuss plans for the proposed Twin Cities Trap Shooting Association. Emil Novotny of the Hazel Park and M. W. Thompson of the Rod and Gun clubs, both of St. Paul, and Dr. Chapman of the Rod and Gun and V. Austin of the Athletic Club of Minneapolis were among those present. The Minneapolis clubs decided to enter the new organization, but the St. Paul men, although expressing themselves favorably to the proposed association, voted to postpone action until their annual meetings, which will be held in the near future.

LOCK HAVEN GUN CLUB.

Lock Haven, Pa., Jan. 4, 1915.

With the ringing down of the curtain of 1914, the Lock Haven Gun Club closed one of the most successful years in the history of the Club, and the desire of the members is, that they could shake the hand of all their friends, and wish them a happy and prosperous New Year.

The 11th annual meeting and complimentary banquet of this hustling up state club was held at the New Commercial Hotel January 19th, when a vigorous campaign was launched for the 1915 season. It is the intention of the Club to hold their 11th annual tournament on August 4th and 5th, next, and the shooting fraternity may look forward to this tournament with much interest, as it promises to be some shoot.

C. A. JOHNSON, Sec'y L. H. G. C.

DANIEL BOONE GUN CLUB.

Marthasville, Mo., Jan. 2, 1915.

NEMOURS (LADIES) TRAP SHOOTING CLUB.

Major Ramsay's Trophy Permanently Awarded. Becomes Permanent Possession of Mrs. Charles E. Springer, Who Won the Medal Eight Times During the Calendar Year 1914. January 7th, 1915.

At the regular meeting of the Nemours Trap-shooting Club yesterday afternoon, Mrs. Chas. Springer was presented with the 1914 Ramsay Trophy, having won it eight times during the year. This is the second trophy that Major Ramsay has presented to the club to be shot for weekly under a handicap system, the high handicap score each week winning the medal until the next regular shoot. Major Ramsay suggested this handicap system as he wanted to give all the shooters in the club an equal chance of winning the medal. Major Ramsay also, stated that the shooter winning the medal the greatest number of times during the year should become the final owner. Mrs. Springer's nearest competitor was Mrs. E. L. Riley, who held the medal six times during the year.

Mrs. Springer also won sixth place on the Willis Cup yesterday.

A WORLD'S RECORD ON A CARTER ROD

The winter weather is responsible for the small attendance at the traps on Wednesday afternoons, but as soon as the pleasant spring weather sets in, the ladies will be out in full force again.

Yesterday there were only three women at the firing line, but several of the gentlemen present filled up the squads and the shoot was enjoyed by every one.

"BLUE BIRD."

BENSONHURST YACHT CLUB SHOOT.

January 9, 1915.

Many sportsmen gathered to-day as participants and onlookers at the weekly shoot of the Bensonhurst Yacht Club at its Club grounds on Gravesend Bay. The weather conditions were not of the best for clay bird shooting, as a dull leaden sky and sharp puffy wind made the targets at times behave in the most erratic fashion. The scores, notwithstanding, were extremely good. Dr. Hunter won the major part of the prizes and Mr. Fincke and Mr. Hewens, proved the winners in two other events.

Our novice class is fast coming to the front under the able coaching of our Dr. Elliott and many of them will, without doubt, make some of our veteran shooters look to their laurels before the season ends. Appended are the scores:—

	25 Birds Monthly Shoot		25 Birds Take Home		25 Birds Special Shoot		25 Birds Special Shoot	
	H.	T.	H.	T.	H.	T.	H.	T.
E. B. Magnus	1	21	1	20	1	21	1	12

Dr. Webb	3	17	3	19	3	11

Monthly Shoot and Take Home, won by Dr. Hunter; Special Shoot, won by Mr. Fincke; Special Shoot, won by Mr. Hewens.

BIRMINGHAM, ALA., GUN CLUB.

E. M. Cornwell Wins Holiday Handicap.

Jan. 2, 1915.

E. M. Cornwell won the Holiday Handicap at the Birmingham Gun Club on Jan. 2.

Cornwell shot from the 19 yard mark which

makes his score all the more creditable. The conditions were not the best.

E. R. Holt, professional, tied Mr. Cornwell with score of 88 out of his 100. Holt shooting from 21 yards.

Lee Moody was a close second with 86 out of his 100.

Mr. Hodges came out too late to finish his shooting.

This is the annual Holiday Handicap of the Gun Club, and owing to the bad conditions the scores were very low for our shooters.

Mr. Delony of Margrett, Ala., paid us a visit but shot below his average.

Scores as follows:

	Yards	Shot At	Broke
E. M. Cornwell	19	100	88
E. R. Holt	20	100	88
Lee Moody	17	100	86
Dr. I. J. Sellers	19	100	79

R. H. Baugh	17	100	67
I. C. Delany	17	100	66
R. M. Leland	17	100	66
H. B. Hodges	17	40	30

HUDSON GUN CLUB.

The appended scores was made Dec. 27 at the Hudson Gun Club traps, with 14 shooters taking part. The morning was cold and with a stiff wind that was blowing across the traps, made it very hard to get very many good scores. The feature of the morning was a match at 100 birds between A. Mack and B. Coulton, two expert rifle shots of the Fourth Regiment, who have had very little practice at the Blue Rock game, and considering conditions their scores was very good, Coulton winning by 12 birds over Mack, and on January 10th, our next shooting date, they will try again to see if they can improve their scores, as they intend to take part in the tournament at the Sportsmans Show on the roof of the Crystal Palace.

It seemed like old times at the Hudson Gun

Club grounds this morning, Jan. 10 to see the bunch of old vets that assembled to try their skill at breaking the Blue Rocks, against some of our younger members. Lou. Schortey, Henry Pape, Carl von Lengerke, Jack Williams, Dave Engle, C. W. Phelps, who thought that he had the secret of getting them all, and last but not least, old man Joe. Whitley of clam chowder fame, all gray and grizzled, who has been shooting at the Hudson Gun Club since the early eighties, was on the job as anxious to show us what they could do. The scores showed that Dave Engle and C. von Lengerke was the best at the game with 80 per cent. to their credit, and we all take off our hats to the champion of the old guard, Another old timer who was a visitor to-day was

Jack Fanning. There was something wrong with his scores

DEER HERDS WITH CATTLE.

Farmer Who Butchered It is Fined \$1,000 and Costs.

Miller, S. D.—Deputy Game Warden, C. J. Kelley had G. G. Eschenhausen, a farmer living six miles southwest of Miller, arrested for shooting a deer. The defendant was fined \$100, besides \$9.35 costs. The deer came to Eschenhausen's yard with the cattle, having been hunted and frightened there from the southwest. It weighed 600 pounds. About 15 years ago a deer was killed near the same farm, but since then none has been seen.

While hunting Pheasants near Hansrote, W. Va. Mr. W. M. Kefauver killed a deer with his

LEFEVER 20-Gauge Loaded with No. 5 Shot

"The deer was running toward me at an angle," he writes, "and at the first shot I broke its shoulder, knocking it down. With the second shot, killed it dead with a charge back of the head at a distance of *about 25 yards*."

"Also killed two turkeys and I was absolutely astounded at the remarkable shooting strength of your 20-gauge gun."

Shooters Averages For 1914

Pittsburgh, Pa., January 2, 1915.

Editor *Forest and Stream*:

Following herewith is the Interstate Association list of Amateur and Professional trap-shooting averages for 1914, with names of contestants, total number of targets shot at in Registered Tournament, total number of targets scored, and percentages.

The averages for both Amateurs and Professionals are based on a minimum of 2,000 targets, as per The Interstate Association ruling to that effect. The scores made at the Tournament given at Fulton, Ky., August 7th, are not included in the list, as the club holding said Tournament failed to live up to its agreement covering registration.

The averages for double targets are computed on the Interstate Association Tournaments only, and they are based on taking part in two Tournaments as a minimum, as per the Interstate Association ruling to that effect.

THE INTERSTATE ASSOCIATION,
E. REED SHANER, Secretary

Averages for Single Targets.

ITHACA ONE BARREL TRAP GUN

Here is a new one — a high grade **Single Barrel Trap Gun** made especially for the trapshooter.

It has two lugs at top and one at bottom, bolted at each of these three points, giving a triangular form of fastening and especially designed to stand the continuous strain of heavy nitro powder loads.

It is equipped with our lightning lock, automatic ejector and ventilated rib.

Built in twelve gauge only in the following grades:

No. 4 Ejector,
Special net price, \$ 85.00

No. 5 Ejector,
Special net price, \$160.00

No. 6 Ejector,
Special net price, \$235.00

No. 7 Ejector,
Special net price, \$310.00

Send for Brand New Catalog— describes fully our No. 5E, One Barrel Trap Gun here shown, as well as 18 grades of double guns.

MAXIM SILENCER

Why Don't You Get One?

You know about the Maxim Silencer—but you can't realize how much it really adds to the pleasure of your hunting trip or target practice until you attach one to your rifle. It silences the report noise, stops flinching. Makes your aim more accurate.

WRITE FOR FREE BOOK, filled with actual experiences of scores of your fellow-sportsmen with the Maxim Silencer. It's mighty interesting reading. Ask your dealer for a Silencer. If he has none, tell us his name and we will arrange to supply you.

MAXIM SILENCER CO., 12 Huyslope Ave., Hartford, Ct.

E. K. ROBERTS
Brig. Gen'l United States Army
"Tuxedo is recognized as the favorite of all tobaccos. Its mild and fragrant qualities are unequalled."

E. K. Roberts

KING BAGGOT
Famous Moving Picture Star of the Universal Film Co.
"Tuxedo tobacco in a sweet crusted old briar pipe is my favorite source of relaxation. No other tobacco compares with Tuxedo."

King Baggot

G. W. ATKINSON
Associate Justice U. S. Court of Claims and former Governor of West Virginia
"The fragrance of Tuxedo is extremely pleasant to the smoker and those about him. Exceptional mildness and mellowness are other attractive properties of this excellent tobacco."

G. W. Atkinson

For "The Smoke of Battle" and the "Pipe of Peace"

HERE are today's marching orders: Turn in at the first tobacco shop, get some Tuxedo and "fire-up" at will. It's good for you when you're going into action—and when you're at peace with the world.

Watch the men that do smoke Tuxedo and you'll find they're all brainy fellows, full of the old "get-there" spirit, and feeling bully all the time.

Tuxedo

The Perfect Tobacco for Pipe and Cigarette

Money can't buy a better tobacco than Tuxedo—made from the cream of the Burley crop, chosen for its superb mildness—treated by the famous "Tuxedo Process" which takes out every particle of bite and sting.

The "Tuxedo Process" is the original and best. Don't be sidetracked by any imitations that have come along later and claim to be "just as good." Nothing that's "just as good" is ever the best.

Get yourself some mellow Tuxedo today. Smoke all you want, pipeful after pipeful. You'll come up smiling every time!

YOU CAN BUY TUXEDO EVERYWHERE

Convenient, glassine-wrapped, Famous green tin, with gold

Pinehurst Classic a Tremendous Success

By Herbert L. Jillson.

Pinehurst, N. C., Jan. 23

S. A. Huntley of Omaha, the National doubles champion, was the bright and particular star of the 8th annual midwinter handicap trap shooting tournament at Pinehurst, North Carolina. Not only did he capture the chief trophy but he also tied for the Preliminary and he won both the high average for the 800 targets of the entire program, totaling 759, and the average for the 600 of the 16 yard sweepstakes with 575. J. D. Platt, Jr., of Dayton, was the Preliminary winner in a tie shoot off with not only Huntley but H. W. Heikes of his own town and G. N. Fish of Lyndonville, N. Y. Huntley also landed in the class event of the Preliminary for the leading prize with A. E. Ranney winning B Class, D. W. Baker C Class and Vincent Oliver D Class. In a similar event in connection with the Handicap J. B. Lallance, Jr., C. W. Billings, David Wardsworth and Isaac Andrews, captured the trophies, all in all an event which continues to take front rank among America's classic meets.

Some Class to the Field.

Some class in the field? Yes, some: Ralph L. Spotts of the New York Athletic Club, amateur champion of America; S. A. Huntley of Omaha, amateur champion on doubles; F. S. Wright of South Wales, the New York State champion; A. B. Richardson of Dover, the Delaware State champion; George L. Lyon of Durham, N. C., the new Long Island champion; B. M. Higginson of Newburgh, amateur champion in 1913; Charles H. Newcomb of Philadelphia, the Handicap title holder; John Philip Sousa, the bandmaster; and others from here, there and everywhere.

The Midwinter Handicap.

Huntley's tie for the Preliminary trophy resulted in his being moved back from the 22 yard mark to the 23 yard limit, but he started right after the trophy with a clean break of 20 on the first string followed by three more of 19 each, and ending up with an 18 for a total of 95. David Wardsworth, 3rd, was close after him at the 17 yard mark, but he made his 20 at the end of the string recording 19 before that which was preceded by an 18 a 19 and an 18 for a total of 94, which never gave him a vantage point which made him dangerous.

C. W. Billings at 18 yards, once winner of the Handicap, C. H. Newcomb at 22 yards, the 1914 winner, and J. B. Lallance, Jr., at 19 yards, were bunched in a triple tie for second, and it was a pretty race throughout as the following tabulated scores show:

Billings	18	19	18	19	19-93
Newcomb	18	20	17	18	20-93
Lallance	19	19	19	17	19-93

Isaac Andrews, a 16 yard man, and George L. Lyon, 21 yards, made 92 each with J. I. Brandenburg and W. H. Patterson each 18 yards, and A. B. Richardson 21 yards tied at 91.

Quadruple Tie in the Preliminary.

Eighty-nine bunched J. D. Platt, Jr., 18 yards, H. W. Heikes, 20 yards, G. N. Fish, 20 yards and Huntley, 22 yards, in a tie for the Pre-

S. A. Huntley, Winner Midwinter Handicap.

liminary trophy. In the shoot off Platt broke them all, Huntley missing one, Heikes three and Fish fifteen. The race was even money throughout, a 20 straight on the last string bringing Platt into the tie when he appeared to be out of it. The scores:

Platt	17	18	18	16	20-89
Fish	18	18	19	17	17-89

Heikes	17	17	19	19	17-89
Huntley	18	17	19	18	17-89

A. E. Ranney made 88 at 18 yards for fourth position and 87 bunched D. W. Baker 17 yards, C. L. Frantz 19 yards, and W. M. Foord 21 yards.

Class Shooting Makes a Big Hit.

The class shooting feature inaugurated last year proved to be a big card on the program. In the Handicap event 93 landed the trophy for Lallance in Class A, and Billings won the Class B trophy in the shoot off at the same figure with Newcomb breaking 17 to 16 for his opponent. Wardsworth's 94 won Class C and Isaac Andrews got the Class D trophy with 92. In a similar event in the Preliminary, Huntley won the Class A trophy in the shoot off for the Preliminary prize with Fish and Heikes. Platt's 89 placed him at the head of Class B, but he couldn't take two prizes and A. E. Ranney's 88 was good. D. W. Baker won Class C with 87, and Vincent Oliver Class D with 84.

Sweepstakes Precede the Big Events.

The program opened with practice sweepstakes on Tuesday, preceding the regular sweeps on Wednesday and Thursday. A. B. Richardson, the Delaware State Champion, recorded 192 for the lead on Tuesday, C. D. Coburn second in 191 and F. M. Edwards third in 189.

Wednesday, W. H. Jones recorded 192 for the lead, Huntley tying Wright at 191 for second and third plays, and Coburn finishing in 190.

In the sweepstakes preliminary to the Handicap on Saturday, Huntley only missed one target and Newcomb and Wright recorded 99 each. In a similar event which led up to the Preliminary on Friday, Wright was first in 97, Huntley second in 96 and Al Heil third in 95. Spotts got under the wire at 92 which was about as good as he made during the week.

Professionals Swap Honors.

The professional delegation swapped honors throughout the week. In the Handicap, O. R. Dickey and Walter Huff at 18 and 20 yards were first in 92, and in the Preliminary LeCompte made 87 at 19 yards and Gibbs 82 at 22 yards. In the sweeps which led up to the Preliminary Storr was first in 97, and Joslyn second in 94. In a similar event connected with the Handicap,

A REAL GUN

L. C. Smith New Designs With Hunter One Trigger For TRAP and FIELD

With the characteristics of the Thoroughbred written all over it. This means it will win. Kindly let us mail you our new catalogue showing perfect illustrations and descriptions of all grades

PRICES \$25.00 TO \$1,000

Manufactured by **HUNTER ARMS COMPANY Inc.** No. 776 Hubbard St. FULTON, N. Y.

Says the Successful Traveling Man—

“Sure, I chew; and I chew the best there is. My brand is PIPER Heidsieck. I use “PIPER” and, tell you the truth, I’ve found it the most soothing and satisfying way of using tobacco.”

PIPER Heidsieck
CHEWING TOBACCO—Champagne Flavor

The rich, wine-like flavor of “PIPER” satisfies the tobacco-hunger as *nothing else can!*

“PIPER” is a revelation to the man who tries it for the first time—a never-failing source of enjoyment thereafter. Try “PIPER” once and you will understand why the use of this famous plug tobacco has been for years the wholesome helpful habit of thou-

sands of prominent Americans—lawyers, doctors, statesmen, *thinkers* in every profession and business. “PIPER” is winning the favor of more tobacco users every day.

The ripest, richest, carefully selected tobacco leaf—clean, sweet and mellow—gives “PIPER” the quality that distinguishes it from other Plug Tobaccos.

FREE Send 10 cents and we will send a full-size 10-cent cut of “PIPER” and a handsome leather pouch FREE, anywhere in the U. S. Also a little folder telling about PIPER Heidsieck tobacco. The tobacco, the pouch and mailing expenses will cost us 20 cents and we are glad to spend the money to get you to try “PIPER.” We know that once you have started, you will become a permanent friend of this wonderfully wholesome, healthful and satisfying tobacco. In writing please give name of your tobacco dealer.

Sold by dealers everywhere, in all size cuts from 5c up—also in handy 10c tin boxes

THE AMERICAN TOBACCO COMPANY, Room 1170, 111 Fifth Avenue, New York City

Visitors Delighted With Pinehurst.

Socially many informal pleasures continued through the week among them the usual dances at the Carolina and a dinner tendered by Mr. and Mrs. R. L. Spotts in honor of the birthday anniversary of Mr. G. W. Lembeck. Other guests were Mrs. Lembeck and Messrs. Church, McMahon, Newcomb, Delahanty, Lyon, Higginson, Hammond and Leahy. The number of ladies in attendance was unusually large in addition to Mrs. Spotts and Mrs. Lembeck, Mrs. B.V. Covert, Mrs. James Craig, Mrs. A. B. Richardson, Mrs. W. H. Keats, Mrs. J. D. Platt, Jr., Mrs. F. A. Seibert and Mrs. John Ebberts.

Squier, Todd and North a Star Trio.

Luther Squire, as general manager, J. W. Todd as cashier and Charles North keeping an eye on the traps, formed a star trio, which overlooked not a single detail. High winds bothered Wednesday and Thursday, playing strange pranks with the targets, but conditions Friday and Saturday were as nearly ideal as one could hope to find them.

1916 Will Be Bigger and Better.

“Bigger and Better” is the slogan for 1916, when with America recognizing that the European war is of no consequence as far as this country’s prosperity is concerned, an entrance well along toward the 200 mark is anticipated. The Country Club Secretary will be glad to book your name now for the program which will be ready early in the summer.

The Summary.

Scores 80 and better in Handicap and Preliminary follow:

Pinehurst, N. C., January 20, 1915.

Storr led with 97 and Hawkins and Goodrich were second in 96.

In Wednesday’s sweepstakes, Hawkins was high gun at 192, and Huff second with 188. Tuesday Storr made 189 and Daniel 185.

Close Handicapping Pleases The Field.

The selection of the Handicap from the field of contestants continued as a popular feature of the event, and they did their work well and with fairness and accuracy which pleased the contestants. George L. Lyon, Dr. W. F. Clarke, D. F. McMahon, W. H. Jones, E. C. Southey, J. E. Cain and G. V. Dering.

FOX GUN

Grade X Fox Trap Gun

Made with an elaborate amount of hand work, which is the only way to produce a really accurate and high-

A. H. FOX GUN COMPANY, 4658 N. 18th Street, PHILADELPHIA

grade gun. The barrels are specially picked out, and then carefully reamed, polished and tested until the pattern becomes perfectly even and gives the choke desired with standard loads. Automatic ejector, Silver’s Recoil Pad and Lyman Sights, Fox-Kautzky single trigger. An ideal trap gun. Write us at once for full particulars. Please give dealer’s name.

STEVENS SINGLE BARREL TRAP GUN

The Trapshooter who wants a good gun at a moderate price and the beginner doing his first trapshooting, find in the STEVENS No. 182 a splendid gun at an extremely low price.

It is hammerless, with automatic ejector. Full choke bored barrel, matted full length, 30 or 32 inches, chambered for 2 3/4 shells. (Modified choke if desired.)

A gun's capacity to break targets lies in the barrel and its boring. The barrel of No. 182 has the necessary weight and distribution of suitable gun barrel steel to insure pattern, long range and penetration. No man has money enough to buy any gun with a barrel that will give better results than can be obtained with this STEVENS Gun, which may be bought for \$15.00 of any retail dealer in United States, East of the Mississippi River.

Has new style, positive cocking mechanism with large parts which are practically unbreakable. Frame is beautifully blued and ornamented with neat scrolls. Stock of walnut, with drop at comb 1 3/8 inches, drop at heel 2 1/4 inches — the best dimensions for the average shooter. Fore-end is extra large, well-shaped and checkered. Gun weighs about 7 pounds.

It is only by manufacturing in large quantities, all alike, that a gun of such value can be offered at so low a price. We do not make this gun to order or to any other measurements than those given.

Send for circular with complete description.

Reload Your Shells

160 Pages FREE

The .32-40 High Power factory cartridges sell for \$34.20 net per thousand. By reloading the same shells with factory primers, factory bullets and the same powder charge, your expense is \$13.46;

You save \$20.74 on 1000 cartridges.

The .32-40 low power smokeless factory cartridges cost \$28.80 per thousand; when you reload, your expense is only \$11.31, making a saving of \$17.49. Factory .32-40 smokeless short range cartridges cost \$25.20 per thousand; by reloading your shells, they cost you only \$7.65 per thousand. Make your own bullets and you have 1000 short range cartridges for \$3.80.

You wouldn't throw away your pipe after smoking it once; you waste money if you throw away your expensive high-grade shells without reloading.

FREE—The Ideal Hand Book tells all about the tools and methods for reloading all standard rifle, pistol and shotgun ammunition; 160 pages of practical information for shooters. Mailed free to any shooter interested enough to send three stamps postage to

Hand-trap ready to throw target

Throw targets from along shore while you and your friends pick off the clay "ducks" and "shore birds" as the hand-trap sends them winging their way over the water

NEW WAYS TO THROW "CLAYS"

THE Du Pont Hand-Trap answers the call of shooters for a simple, practical and easily-operated target throwing device. It embodies all the requirements of portability, durability and utility. Weighing only six pounds, composed of a few simple parts, and very compact in form, it can be used wherever trapshooting is feasible.

Experts Endorse the Du Pont Hand-Trap

Beginners find it an excellent means of learning trapshooting under most favorable surroundings.

Our Free Booklet Tells How

a famous wing and target shot discovered clever, unique and practical ways of using the Du Pont Hand-Trap. He tells how to throw 70-yard straightaways, extreme angles, overhead targets, "curvers," and "skimmers," which fool the cleverest of the experts. Get this booklet. Learn the new ways to throw clays with the Du Pont Hand-Trap.

SHOTGUNS

Know the right gun to buy

A well-made gun lasts a life-time. It pays to be particular—buy the right gun!

Buy a Marlin! For 45 years the *Marlin* has been the thoroughbred in sporting firearms. We make high-grade repeaters only—up-to-date guns at moderate prices—splendid repeating rifles and shotguns in so many calibres, gauges and styles, you have a wide choice of guns for any branch of shooting. They all have the modern solid-top, side-ejecting safety construction; and the deep, clean-cut Ballard rifling is famous for its wonderful accuracy.

Buy the right Marlin! It takes only a few days to get this 128-page book into which we have put that practical information on guns and gunning which you need in buying a gun. Then it's easy to select exactly the one best gun for you. Send us 3 stamps postage today—you get the book by return mail. Illustration shows a *Marlin* lever-action repeater for big game. All popular calibres.

Marlin Repeating Rifles and Shotguns—a gun for every purpose.

J & R LAMB

STUDIOS

23, 25 and 27 Sixth Avenue NEW YORK

To Sportsmen! For Immediate Sale!

Magnificent hunting and fishing property, comprising 104 acres of good land and lake of 35 acres abounding in trout, including furnished house, boats, fishing tackle, etc., together with exclusive fishing rights in the two adjoining lakes, Pitre and Rouge, both teeming with salmon trout. Surrounded as it is by a hunting territory full of large game, it makes the ideal country residence and hunting lodge.

Is isolated and yet in easy communication, being in the valley of Matapedia, Province of Quebec, seven miles by good carriage road from Amqui Station of I. C. R. Title perfect. For particulars, plans, photos, etc., address

F. X. FAFARD,
Parliament, Lands & Forests, Quebec, Canada.

Salmon Fishing

The salmon fishing rights on the York River, County of Gaspé, Canada, the property of the late George L. Peabody, are for sale, or to be leased for one year with option of purchase.

Also his summer residence in village of Gaspé, consisting of comfortable stone house with 40 acres of land, may be purchased.

A fine opportunity for sportsmen looking for good fishing and a summer house.

Address JOHN D. PEABODY, 2 Wall Street, New York City, N. Y.

Small-Mouth Black Bass

We have the only establishment dealing in young small-mouth black bass commercially in the United States. Vigorous young bass in various sizes, ranging from advanced fry to 3 and 4 inch fingerlings for stocking purposes.

Waramaug Small-Mouth Black Bass Hatchery. Correspondence invited. Send for Circulars. Address HENRY W. BEAMAN - New Preston, Conn.

RAINBOW TROUT

are well adapted to Eastern waters. Try stocking with some of the nice yearlings or fry from our hatchery, and you will be pleased with the results.

PLYMOUTH ROCK TROUT COMPANY

Colburn C. Wood, Supt., Plymouth, Mass.

Brook Trout of all ages for stocking brooks and lakes. Brook trout eggs in any quantity. Warranted delivered anywhere in fine condition. Correspondence solicited.

THE PLYMOUTH ROCK TROUT CO.

Plymouth, Mass.

Brook Eyed Eggs for Sale

N. F. HOXIE,

TROUT, R. F. D., PLYMOUTH, MASS.

Sixty dollars for rent of 4 room furnished cottage, balance of season. Lake front, in orange grove, shooting and fishing.

C. H. STOKES, Mohawk, Florida.

Ross Sporting Rifle, brand new, never used or shot, latest model, 280 calibre with copper tube expanding bullet, in a class by itself. Price in New York, \$55.00. First \$38.00 takes it. Will trade for new gun and cash. Ross Luck, care of Forest and Stream.

WANTED—Subscriber desires to purchase Volume 9 of FOREST AND STREAM, bound or unbound. Address, Volume 9, care of FOREST AND STREAM OFFICE, New York City.

LEATHER PILLOW TOPS AT COST.

Send for price list of leather goods, etc. H. T. Leather Co., Dept. 1, Elmhurst, Ill.

Live Pheasants

In large or small quantities for stocking game preserves. Now very cheap owing to war. Prices include all freight to and live arrival guaranteed at any of the Eastern ports of the United States.

J. CARLTON HUNTING,

The Gaybird Pheasant Farm, Great Missenden, Bucks, England.

CAMORA GUN CLUB.

The sportsmen of Camora, S. D., have organized a gun club and elected the following officers: President, H. H. Shaeffer; secretary-treasurer, E. H. Snow.

ARCHERY

Forest and Stream is Official Organ of the National Archery Association

How Can Archery Be Popularized?

Archery is undoubtedly the oldest sport in existence. For centuries it was practiced by the youth and manhood of our civilized and semi-civilized nations, because it was a necessary training for the profession of arms. With the introduction of gun powder, archery began to decline. The incentive was missing.

After all these thousands of years the sport is still in existence and practiced ardently by a select few, who have learned to love it and to prefer its difficulties to those of our more favorite games.

Archery as a sport will never compete with baseball or football, as it lacks those crucial moments that appeal to the crowd. It will also never be popular as golf and similar fashionable games, because of the many difficulties that must be overcome before a contestant can become even a fair archer. From the very nature of the sport it will always be handicapped and practiced only by those who have the hardihood and patience to practice for years before efficiency can be attained.

Another handicap is the difficulty in obtaining the proper archery tackle, especially the necessary bows and arrows. Our leading sporting goods dealers handle a very inferior and somewhat shop-worn series of impediments. The only way to obtain suitable tackle is directly from the manufacturer. There are but two of these, whose supplies are of satisfactory grade—one in America and one in England—and it takes from one to two months to obtain what is desired. Furthermore these manufacturers do not advertise in our leading sportsman's journals. A possible convert is thus apt to lose his desire to try the noble sport of archery because he can not discover the source of supply, or is not willing to wait some months, if through some fortunate accident he learns where it can be secured.

Serious as these handicaps are there is still another of even greater psychological importance—the lack of the proper incentive to repay for months of earnest practice. Our golf clubs have learned the need and wisdom of many local, semi-local and more extended tournaments, to give their members an incentive for practice and key them up to their best endeavor. Few objects are attained in this world without the proper incentive. Sport for sport's sake is a dead issue, always was and will remain so until the millenium. Archery needs for incentive a greater chance for competition.

To be sure we have our annual national tournament where the best archers of the country compete. This meet holds but little hopes for victory to anybody but a select few. The rest attend for social reasons, because they know that a good time with pleasant associations will result. These meets are held in different cities and all too frequently the necessary expense is prohibitive. Interesting and profitable as this meet has always proven to be, it

offers few inducements to the archer who has not yet gained a fair amount of efficiency—and he it is who constitutes the great majority of our guild.

Tournaments in Archery Centers Like Boston.

What then is the proper solution to this question of furnishing the necessary incentive to our archers? The answer is an extended series of local tournaments in archery centers like Boston, Chicago, Philadelphia, Pittsburgh and San Francisco, about the first of June, to stir up the proper interest for the national tournament during August, and another about the middle of October to continue this interest to the end of the season.

Several objections might be urged against this plan, especially against the local June tournament. Some archers would probably maintain that it would interfere with the attendance of the national tournament. Our experience has always been that the national tournament acted as a great incentive and caused continuous enthusiasm for the following two months of the archery season. In a similar way the June tournament would react on the national. It would get our archers out early in the season, give them the psychological training in self control that is so necessary in a large meet and above all would give the archer not yet proficient a chance to compete in his own locality with some chance of success. A little task of victory would lead to an attempt in wider fields.

Another objection might be the cost of these local tournaments. Being local, the traveling and hotel expenses would be eliminated. Every club has its grounds and sufficient targets, so that the only expense would be in prizes. These could be printed ribbons—red, blue and white—for the first three places in of the two events in which the ladies and gentlemen compete.

A third possible objection might be the question of time. These local tournaments could be held on Friday and Saturday afternoon—the ladies selecting either the National or the Columbia round and the gentlemen the American or the York, shooting one round each afternoon. As every archer must necessarily have his Saturday afternoon free, this would mean the sacrifice of but one afternoon from our necessary pursuit of earning a living.

These local tournaments would not only act as an incentive to the beginner, but also to the tried and veteran archer. The consequent newspaper publicity would bring the sport before the public eye.

Archery in practically the only sport in which we Americans do not hold the world's records. There is that wonderful York round record of Ford's of 235-1,251 that we never have been able to attain in tournament, and only barely approached on but two occasions. Why not give the American archers a fair chance at breaking this record in tournament work? Among the archers that have been developed during the last few years there are several who have surpassed this record in their daily practice. There are several who might turn the trick if given a fair opportunity. One meet a year, handicapped by the intense heat and strong winds that have marred our recent national tournaments, combined with insufficient practice under tournament conditions does not give our American archer a fair chance. Why not give ourselves a fair deal?

The English archers have learned the wisdom of having many local tournaments. Let us follow suit. Archery can easily be made a more popular sport, but the correct methods for adding the proper incentive must be considered. Let each club adopt a June and an October tournament and give the game the chance it so much merits.

The greatest handicap to archery is after all our apathy and lack of scientific study of the needs of the sport.

“TOX.”

1913 THANKSGIVING ARCHERY SCORES.

In sending for publication such Thanksgiving archery scores, as I had, for years previous to 1914, I omitted those made in 1913.

I cannot account for this oversight. Dr. Hertig, of Pittsburgh, was kind enough to call my attention to it, and to send me the accompanying list of archers, and their scores. Please consider this an important addition to those printed in your issue of December 26, 1914.

EDWARD B. WESTON.

NEWFOUNDLAND

A Country of Fish and Game. A Paradise for the Camper and Angler. Ideal Canoe Trips.
The country traversed by the Reid Newfoundland Company's system is exceedingly rich in all kinds of Fish and Game. All along the route of the Railway are streams famous for their Salmon and Trout fishing, also Caribou barrens. Americans who have been fishing and hunting in Newfoundland say there is no other country in the world in which so good fishing and hunting can be secured and with such ease as in Newfoundland. Information, together with illustrated Booklet and Folder, cheerfully forwarded upon application to
J. W. N. JOHNSTONE, General Passenger Agent, Reid Newfoundland Company, St. John's, Newfoundland.

6881, Ernest L. Geffine, 1315 E. 82nd St., Cleveland, O., to Central Division from Western Division.

TYPE OF CANOES MAY BE CHANGED.

January 26th, 1915.

Editor *Forest and Stream*:

Will you kindly publish the enclosed letter from Mr. Hilding Froling, in order that its contents may be brought before the members of the American Canoe Association, and also to comply with the rules, before action is taken upon it by the Racing Board.

I find much of interest and merit in Mr. Froling's suggestions, and will endeavor to arrange a meeting at one of the local clubs in the near future, for study and discussion of the matter.

GEORGE P. DOUGLASS,
Chairman Racing Board, American Canoe Asso.

SUGGESTED CHANGES IN RULES.

Geo. P. Douglass, Esq.,
Chairman Racing Board,
American Canoe Association.

Herewith you will please find suggestions for changes in the rules of classifications and the following reasons for making these changes are respectfully offered.

1. The present rules for decked canoes produce a craft useless for anything but a few hours of racing.

2. The present type of canoe cannot be said to be the best even for racing, practically compelling the canoeist, as it does, to a limitation of 30 inch. of beam, due to the restriction of sail area.

3. While a reaction has taken place in the sister sport, yachting, due to the unsafe and unseaworthy type of yacht as a result of the extreme development under the Seawanhaka and other rules, and which reaction culminated with

the introduction of the Universal Rule in the United States and the International Rule in Europe, little or no improvement has taken place in canoeing as far as the rules governing the building are concerned. It may be said, that in this respect canoeing in the United States has practically been at a standstill for the past twenty years.

4. In Great Britain sweeping changes in the building rules have been made lately. These changes greatly improve the type of the canoe.

5. Canoeing in United States as far as organized sport is concerned, is considered dead by canoeists in European countries, where the sport is practiced with much vigor and enthusiasm.

6. While in one European country more than one hundred sailing canoes have been built from one design alone, within three or four years, only about half a dozen boats have been built in the United States during the same period of time. At present but one sailing canoe is being built here.

7. The reason for the decline in building may be found in the assumption that canoeists do not care to build to the present rules. Because of the general conditions under which canoeing is carried on, it is very difficult to interest new men in the sport.

8. Therefore it is necessary to adopt more liberal rules, permitting variety in size, appointment and rig. This would satisfy the individual need of the canoeists.

9. The rules governing the open canoes should be changed so as to permit the building of an open boat from the same lines and molds, used for decked canoes. This would produce an open canoe more roomy and seaworthy and of more modern design, yet without any marked increase in price. It might even make it possible to change an open canoe to a decked one, should this be desired.

Each class should be given such restrictions as would insure the building of a useful, seaworthy and wholesome canoe, thus preventing the building of a mere freak.

Respectfully submitting the classifications shown below, for the consideration of your committee.

HILDING FROLING.

Arlington, N. Y., January 2, 1915.

***CLASS II. DECKED CANOES.**
(For One Man.)

A. For Paddling and Sailing. (Racing and cruising.)

Length, 16 feet; Beam, 32 inches.

Sail area for racing, 90 square feet; for cruising, 75 square feet; maximum area in one sail for racing, 65 square feet; for cruising, 50 square feet.

B. For Paddling and Sailing. (Cruising.)

Length, 16 feet; beam, 36 inches.

Sail area for racing, 105 square feet; for cruising, 85 square feet; maximum area in one sail for racing, 75 square feet; for cruising, 55 square feet.

*This class includes canoes 16 feet long, 30 inches wide, built before February 1, 1915, and complying with all restrictions found in the 1914 year book.

Canoe Season Here Soon

If you knew the pleasure an "Old Town Canoe" brings at such small cost, you would own one. Any stream or lake becomes your playground—fishing, hunting, camping, vacation and picnic trips are just a few forms of canoeing sport.

"Old Town Canoe"

should have one. Will keep your Matches, Cigarettes, Tobacco, Money, Jewelry Water-Proof, Dust-Proof Burglar-Proof. Small and compact, made of Brass, Nickel Plated, Gun Metal or Oxidized, and furnished complete with fancy canvas belt. Sent anywhere on receipt of \$1.00.

HYFIELD MFG. CO., 48 FRANKLIN STREET, NEW YORK CITY

TALKING OF GUNS,

The "Old Reliable" PARKER GUN,

at Pinhurst, N. C., Jan. 23, 1915, shot by Sam Huntley, won the Mid-Winter Handicap from the 23 yd. mark, 95x100

In the Preliminary Handicap, four men shooting PARKER Guns tied with 89x100. J. B. Platt, Jr., of Dayton, Ohio, won in the shoot-off with 28 straight.

THE GUN, and not luck makes scores like these.

Send for catalogue and free booklet on 20 gauge guns

PARKER BROS., Meriden, Conn.
 N. Y. SALESROOMS, 32 WARREN ST.

CLASS III. DECKED CANOES.

(For One or Two Men.)

A. For Paddling and Sailing. (Racing.)

Length, 17 feet; beam, 34 inches. Sail area for racing, 95 square feet; for cruising, 90 square feet; maximum area in one sail for racing, 70 square feet; for cruising, 55 square feet.

B. For Paddling and Sailing. (Cruising.)

Length, 17 feet; beam, 38 inches. Sail area for racing, 110 square feet; for cruising, 95 square feet; maximum area in one sail for racing, 80 square feet; for cruising, 60 square feet.

CLASS IV. DECKED CANOES.

(For Two Men.)

A. For Paddling and Sailing. (Racing and Cruising.)

Length, 18 feet; beam, 36 inches. Sail area for racing, 100 square feet; for cruising, 85 square feet; maximum area in one sail for racing, 75 square feet; for cruising, 60 square feet.

ing, 85 square feet; maximum area in one sail for racing, 75 square feet; for cruising, 60 square feet.

B. For Sailing. (Cruising, Motor.)

Length, 18 feet; beam, 40 inches. Sail area for racing, 115 square feet; for cruising, 95 square feet; maximum area in one sail for racing, 85 square feet; for cruising, 65 square feet.

CLASS V. OPEN CANOES.

For Paddling and Sailing. One or Two Men, Cruising.)

† A. Length, 16 feet; beam, 32 inches. Sail area, 42 square feet; deck forward, 4 feet; aft 3 feet.

B. Length, 17 feet; beam, 34 inches. Sail area, 45 square feet; deck forward, 4½ feet; aft 3½ feet.

C. Length, 18 feet; beam, 36 inches. Sail area, 48 square feet; deck forward, 5 feet; aft 4 feet.

†This class include the present open canoes, complying with the present rules.

GAME WARDEN DYCHE DIES OF GILA MONSTER BITE.

As we go to press one of our correspondents wires: "Topeka, Kans., Jan. 21. L. L. Dyche, state fish and game warden, died to-day, ten days after being bitten by Arizona Gila monster." It is with most sincere regret this news is received by editors and readers of *Forest and Stream*. Mr. Dyche's work of fish and game propagation and protection has won for him a national reputation. The state of Kansas owes to him whatever game and fish are left in the woods, fields and waters of that state. His writings in *Forest and Stream* and other outdoor magazines are well known to outdoor persons.

Of the Gila Monster, W. T. Hornaday says: The Gila Monster is perhaps the most famous lizard of North America, and its first name is pronounced He' la. It is odd looking and very showy, a large specimen has a total length of 20 inches, girth around the middle, nine and a half inches, and weighs 43 ounces. This lizard inhabits the desert regions of Arizona and adjoining state of Sonora, Mexico. It is more sluggish in its movements than a box tortoise.

UNITED ANGLER'S LEAGUE TO EXHIBIT.

The United Angler's League although now in existence twelve years has during the past year, received a new impetus of life, and is doing work that is bound to prove of great value to the salt water angler.

They have now some 500 active fishermen enrolled and hold two meetings monthly, one in Brooklyn and one in New York City.

They have accomplished a lot of good work during the past year, among these being the passing of Jamaica Bay Netting Law, having game protectors appointed to patrol Jamaica Bay and adjacent waters. They have had many violators of the game laws prosecuted and convicted. Through their insistence the Conservation Commission has planted in the waters around Greater New York sea bass, black fish, fluke, flounders, tom cod and crabs.

They are now presenting before the New York State legislature five bills which will have the support of every fisherman. One of these makes it a misdemeanor to catch striped bass in New York State during the spawning season whether by rod or net. Another part of this bill seeks to prevent net fishing for striped bass in the Hudson River at all times. If this bill passes it will only be a very few years until the Hudson will teem again with striped bass and shad as of yore.

At the coming Sportsman and Travel Show at Grand Central Palace, February 20 to 27. The United Anglers League will have a booth in conjunction with The Midland Beach Fishing Club and The Golf Casting Club of America. The new game, Casting Golf, will be demonstrated to all interested.

Mr. Louis Rhead, the well known authority on fishing matters and a member of The United Anglers League will deliver two lectures on Fresh Water and Salt Water Fishing and Tackle.

The officers of The United Anglers League are: Dr. Benj. M. Briggs, president, 106 Willoughby street, Brooklyn; Howard S. Pratt, vice-president; Charles Noehren, treasurer, and Gus Christman, secretary, 107 Bushwick avenue, Brooklyn.

HUNTERS' LODGE!

Good Quail Shooting.
 Choice Accommodations
 for Ladies and Gentlemen

Best Chef South of the Potomac

VERMILAX

Supreme

DOG REMEDIES

(Dr. DELANEY'S)

See the VERMILAX EXHIBIT
at the Sportsman's Show
and Westminster Kennel
Club Show.

The name VERMILAX stands as a synonym for high quality, safety, economy and effectiveness in the most famous kennels of the country. The VERMILAX SUPREME DOG REMEDIES are the outgrowth of Dr. T. Delaney's third of a century of successful veterinary practice. They embody long experience, careful research, elaborate tests and proven results.

There are 27 remedies, made from the best materials money can buy or experienced skill can compound. Among them is a Distemper remedy, beyond comparison with any on the market—a marvelously effective Mange remedy that will not stain—a Shampoo so effective that it is

used by women on their own hair—a collection of unsurpassed cake and paste Soaps and in short, a supremely efficient remedy for every dog ill. Then last but not least is VERMILAX, the Supreme Worm Remedy and Conditioner, known and used from coast to coast, the main dependence of prize winning kennels and an army of individual dog Owners.

Our remedies are sold in the best drug stores, sporting goods stores and pet shops, or are sent direct by Parcel Post, prepaid.

Send for Dr. Delaney's new book on DOGS or write him for any special advice desired. Both are FREE.

Shooting in Southern Waters.

(Continued from page 85.)

stroll. Lighting my pipe I walked back of the camp to the higher ground and saw the moon rise, flooding the forest with a soft light and casting a silver sheen on the river far below us. Seated on a log I enjoyed the beauty of the scene, watched the shadows grow shorter as the moon rolled up toward the zenith. Sitting thus in this solitude, alone with nature and myself, thought followed thought in rapid succession and leaped over years of time in retrospection. I thought of success, lost opportunities, disappointed hopes, friends I had known—good and true—friends who have passed beyond, and others who live steady and true in all things.

My pipe had gone out. I walked slowly back to camp and dear old Sam was waiting for me to have the second pipe with him. And thus, after awhile discussing the situation, we grew drowsy. Presently all sounds of camp ceased, and profound slumber reigned, and oh, what a restful, satisfying sleep we had.

(To be concluded.)

**SAVE YOUR FACE
OIL YOUR RAZOR**

Rust causes razor dullness. 3-in-One absolutely prevents rust on the minute "teeth" of every razor blade. Always do this before and after shaving; Draw blade between thumb and forefinger moistened with a little 3-in-One. If an "ordinary" razor, oil strop, too. Then —strop and have the most luxurious shave of all your life. Oil blade again before putting away.

3-in-One is sold every where in 3 size bottles: Trial size, 10c; 3-oz., 25c; 8-oz., (half pint) 50c. Also in Handy Oil Cans, 25c.

FREE—Generous sample and scientific "Razor Saver" circular.

Suggestions for the Outdoor Man

A NEW SINGLE TRAP GUN.

Clay target destroyers have a treat in store for them. A new single trap gun. This surprise will be put out by Ithaca Gun Company. The new

single stick improves greatly on the only other American single trap gun and has some advantages over the best imported single target arm—and it is made in U. S. A. The single trap iron has taken a fair hold on the aerosaucer smasher and this innovation will lead many more shooters toward a gun adapted to a specific purpose. The gun weighs about eight pounds, is made with 30, 32 and 34 inch barrel, full, half or straight grip with ejector. It carries the popular ventilated rib. The tested and found satisfactory, lightning lock used on the double Ithaca, is used on the new gun. An attractive feature is the triple lug, triangular fastening. The barrel is taper choke bored under direction of Bob Edwards, a master gun borer. Those of us who have shot the Ithaca field gun can realize what it means to have an improvement on it, and this new target gun is a great improvement on that sterling field piece, excepting that it is made for trap use only. Catalogue may be had upon request and the catalogue itself is a work of art, well worth having.

ment on it, and this new target gun is a great improvement on that sterling field piece, excepting that it is made for trap use only. Catalogue may be had upon request and the catalogue itself is a work of art, well worth having.

POWHATTAN ROBINSON WINS FIRST PRICE AT TERCENTARY CELEBRATION.

Among the floats in the gorgeous pageant at the recent Tercentary of New York City celebration there was one that stood out preeminently. It was an Indian float, picturing, with live subjects,

the Indians of 1614 camped at one end, preparing their meal with the crude utensils of that time, while at the other end were Indians of this century cooking over a sporting goods store camp fire with modern weapons of cookery strewn about, while in the middle were displayed Indians of the latest model for transportation—the Indian motor cycle. This float was the exhibit of New York Sporting Goods Company and took the \$500 prize for the best commercial display—and it was a happy award.

AN ATTRACTIVE FISH LURE.

The Detroit Glass Minnow Tube Company, of Detroit, has just put on the market another attractive bait—a live minnow hook, but different from anything before shown, or used by sportsmen either here or abroad.

This new live bait carries a double hook, to which is mounted a snap live minnow holder. The minnow is securely held by the upper fin, in a natural swimming position.

It is not in any way mutilated or injured. It is free to move in any direction, or at any depth.

The bait will be found to be an exceeding attractive lure. It is, of course, more economical to use than the regular hook. It keeps the minnow alive and in an upright position. Fishermen who have used it say that it works well.

The bait is now being manufactured in quantity, and will be shown in the spring in all the large sporting goods houses.

AUTOMOBILE SKATE.

A decided novelty has come to us from Canada. It is an ice skate with a genuine steel runner. In weight it comes under by ounces the best American skate, while nothing has been sacrificed in substantiality in reducing weight. It is of the tubular, screw on variety with unusually graceful lines. The steel blade, in demonstration, shaved

the edge from the runner of one of the popular American brand of skate and stood the test of pounding on an iron pipe without nicking or denting. Already the Automobile Skate has been adopted by the St. Nicholas Hockey team. The American representatives are Ellis and Turrell, of 477 Fifth Ave., New York City. It is for sale by all sporting goods dealers.

HAY'S KELLER COMES INTO HIS OWN

We take pleasure in announcing that Mr. T. H. Keller, Jr., has been appointed our sales manager. The former very happy experience of Mr. Keller in the selling of Smith guns promises much for his success in this broader capacity.

We bespeak for him the same courteous consideration which you have always accorded us, and assuring you of our appreciation, we remain,

Yours Most Cordially,

THE HUNTER ARMS CO., Inc.

Fulton, N. Y.

MARLIN TWENTY GAUGE.

We have just been playing with the pretty little Marlin twenty and to say that it is a joy leaves the most unsaid. As a pattern maker she would be the envy of May Manton, so perfect are the outlines of her figure. At forty yards a more perfect quail gun has not been made. She tucked 302 shot into a thirty inch circle, with uniform distribution. At thirty yards she would make a pretty good duck gun, and while we would not suggest this calibre as a regular ducker, she would, if you fell onto a bunch of mallards, take pretty good care of the bag. For southern shooting these seven pounds of pump would be a killer.

SHARPS REVOLVER CO. NON EST.

We do not know who is doing it but there have been a number of requests for the address of the F. A. Sharps Revolver Company. This concern has been out of existence for some years, the mind of man, etc.

CANADIAN CAMP DINNER.

The Thirteenth Anniversary Dinner of the Canadian Camp will be held at the Hotel Astor, New York, Tuesday evening, February 23rd. It had been hoped that Sir Douglas Mawson, the Antarctic employer, would be the guest of honor, but his engagements in the west will deny the club that pleasure. However, Mr. Lee Keedick, Dr. Mawson's manager, will show the wonderful pictures taken by the Doctor while at the South Pole. Among the other speakers scheduled are Edward S. Curtis the authority on the North American Indian; Col. J. C. "Buffalo" Jones of Las Vegas, New Mexico, will tell about roping the gorilla in the French Congo; Commander Harold Bartlett of Newfoundland; Dr. John D. Quackenbos, New York, and many others. Most of the after-dinner talks will be illustrated by motion pictures and wonderful color illustrations and altogether the Club Dinner will probably be the finest yet given. G. Lenox Curtis, M. D., is president and Dr. H. T. Galpin, 57 West 57th Street, New York, treasurer. The price of the dinner tickets is \$5.00 and any surplus left after expenses are paid, will be donated in the name of the Canadian Camp to the Red Cross fund for sufferers in the European war. Information as to tickets, etc., may be obtained by addressing the treasurer. It is hoped that the attendance will exceed five hundred guests.

Along the Shores to Somewhere Else

(Continued from page 92.)

of hot rice and rasins adorned with maple sugar—What the ——!

With satiety and drowsiness of after dinner, we lay back with cosy comfort and with the rhythmic cadence of the storm growing fainter in our ears we doze off and nap until late afternoon, when on arousing we find the wind has completely blasted our fire and swept the hearth clean and bare of the remotest particle of cinder.

On coming ashore our intention was to procure a meal and then seek less exposed quarters for the night; but our shelter is proving so trim and snug we are loath to pull stakes so late in the day, and pursue more favorable ground through the stress of the raging wind and rain.

We therefore get busy and stake the foot of the cloth down more secure, placing the canoe along the back of the base as a further rear protection, and, as our guys are soaked and shrunken about all they can be, we stake out firmly on our front and haul all taut and solid and lazy-sheet our upstanding paddles supporting the ridge.

A supply of firewood for the night is next in order. This we procure back on the shore in a grove of standing deadwood, and we soon have our hearth glowing and raging again, fanned by the gale, which means pile on huge logs of fuel and lay them close and compact.

I make a fresh batch of biscuits toward evening and brew a pot of tea and as the shadows of night descend upon us, we feel—"All hunky"—and confident as we sip our hot beverage and have our supper.

I unroll my sleeping-bag and turn in early; but Montie is interested in looking at the storm and searching through the darkness for the different beacons that we should be able to pick up from our position; but all he can locate are the lights on the pier at Knotts Island and the flashing at uniform intervals of Carrituck Light, about ten miles distant on the dunes of the ocean beach.

I fall asleep with Montie, glasses in hand still on the lookout and seeing things in the dark. What time he finally crawled into his blankets, I have no knowledge of; but at some unholy and

sinister hour of unilluminated doom and condemnation, I awake amid an impetuous commotion of all fury broken loose, and Montie shouting from out of the depths of somewhere, "Mac! Mac!—Wake up, D!!—n it! The tent is going to H !!—!"

My first impression is, that it has already arrived there. I could not see my finger if I stuck it in my eye, and something was smearing me in the face, while the roar of a hurricane, the thrash of heavy rain and the pounding of a heavy sea in my ears, and, a clatter and banging of other noises I failed to locate. My bed is cosy, dry and warm, so I knew I am still on the land,

"What the H ——!" I shouted.

"The tents down!" roared Montie in the dark. "Lovely night, O! Lovely night."

*** * * * *

With the wind and rain a beating,
And our cosy tent a fleeting,
Soon our weary eyelids ope—
And slumber is no more—Goode dope.
O! Our weary eyelids ope',
To thrashing cloth and lashing rope.

The wind had shifted to the southward and had lifted and under-tripped our paddle supports and the ridge is down with the foot still holding I shouts to Montie to grab his side of the camp-chest and grabbing the side nearest me, yanking it up nearer, we thus gain a bit of head room and hold a shouting confab, with the now pealing hurricane bellowing about us, the seas pounding and booming, the rain thrashing and smiting and the loose end of our shelter with the paddles attached, beating the long roll.

In our water-proof sleeping-bags we are warm and dry, but the tent has to be attended to and set up conical to resist the storm, and we decide to go to it. I turn to my side to procure the mast, which is also our tent pole when the tent is erected with center peak, while Montie turns to his side to procure the axes.

Reaching out of my sleeping bag I commence groping in the dark for the mast, and if my hand comes in contact with our thermos-bottles once,

I think I must have moved and handled them a dozen times until it seems to me that my side of the camp is full of bottles, when I hear Montie shout from his side, "Say, Mac! How many coffee-pots we got in this outfit?"

"One!" I shout back.

"Must 'a had pups during the night! There's a whole litter of 'em here now!" he shouts back.

I get my hooks on the mast at last and roll over with it to find Montie had one axe but still groping for the other.

Having been out in the rain the greater part of the day before, the only real dry clothing we have is in our sleeping bags with us, where we have placed them for pillows, so we remove our underclothes, and kick them well down into the bottom of our bags and turn out naked, rolling up the bags to keep out the weather both they and we are about to encounter; and then we crawl out from under our flapping tent.

Whiff! Whiz! Whop! Talk about your needle-baths! Cold! Whcw! Grab the dancing paddles, pull the guy stakes, walk into the base with folds of wet silk. rip up the foot, swing the canoe a bit to windward, tuck the sleeping bags beneath, erect the tent. How provident that the stakes are stable, and attached to the grummits.

In the or'ful nasty darkness,
Veiling modestly, our starkness;
With the hurricane a stinging,
On our skins the goose-flesh bringing,
Straining every nerve and muscle,
As with silk we tug and tussle.
Hold her! Axes swing and stake her,
Lordy, spume, spray upon us driving,
While with peg and rope we're striving,
And the tempest, tempest roaring,
Cold and chill, our in'ards goeing.
Guy her! Tie her! Firm and steady—
Dive inside—Fine! Done already.

My! How warm the shelter of the tent feels in comparison to the smite and pelting of the storm; but we remain only long enough to recover our breath and then dart out again for our sleeping bags, personal bags and the chest and bear them safely under shelter.

After a good rub-down, dry underclothes and a nip of brandy, how comfy our blankets feel, as we lay snug and listen to the roar of the tempest about us, and though we drop into a doze from time to time, there is no more real sleep for us during the balance of the night.

(To be Concluded.)

Born 1820
—Still going strong.

Mr. Unsophisticated (to waiter) : "WHISKY, PLEASE."

Mr. Wiseman : "MY DEAR FELLOW, NEVER SAY THAT. THE MAN WHO SIMPLY ORDERS 'WHISKY' DESERVES WHAT HE GETS—BUT THE MAN WHO ORDERS 'JOHNNIE WALKER' IN THE NON-REFILLABLE BOTTLE GETS WHAT HE DESERVES."

The knowing ones have learnt to say "Johnnie Walker" instead of whisky—that's much the safest, but when you add "in the tamper-proof bottle, please," mortal man can do no more. Every drop of "Johnnie Walker" Red Label whisky is over 10 years old.

GUARANTEED SAME QUALITY THROUGHOUT THE WORLD.

BUYERS' GUIDE

An Index to the Sporting Goods Trade

THE idea of this ready reference was brought to us through the many inquiries as to where sportsmen's necessities could be purchased, in different localities. Many of those patronizing the guide, regularly use display space in *Forest and Stream*, while others are only occasional big space users. The question comes often to us as to "reliable" dealers. We answer the proposition by **unqualifiedly recommending** those whose names appear in this directory. It is well to know how to purchase goods right and right goods—this you may rely on "Buyers Guide" to enable you to do. Should you need something not listed herein, write us—we can tell you where to get it—or better yet—we shall be glad to have our experts make purchases for you. Do not hesitate to write us should you, at any time, require our assistance.

MADE IN AMERICA!

Beautiful Navajo rugs, the work of the Navajo Indians of Arizona. Genuineness guaranteed. All colors and sizes, from small mats to large exhibition pieces, at very reasonable prices. Nothing better for the country home, bungalow, or summer camp. Will last a lifetime. No two alike; every piece an individual work of barbaric art.

Part of this collection is now on view at FOREST AND STREAM office, New York, where I will be pleased to meet intending buyers.

I am also showing a collection of Indian basket work, Navajo silver jewelry, ornaments, etc.; every piece personally selected on the Navajo Indian reservation.

Address, JOHN G. WORTH, care of FOREST AND STREAM, 22 Thames Street, New York.

THE MARKET PLACE

This department offers the small advertiser an exceptional opportunity to get in touch with live prospects. Numerous interesting items are here offered for sale and exchange. If you have anything to sell or exchange or are in the market for something and do not know where to find it, place your advertisement herein at nominal cost of two cents a word—small investment, big opportunity—cash must accompany your order as the low charge for this space precludes expense of bookkeeping. April forms close March fifteenth. Cash enclosed with orders at our risk.

"ALBION" WADERS

The only Perfect Waders

We have tried for many years to obtain a line of Waders that would give satisfactory service. We have now marketed these goods for three years and they have given UNIVERSAL SATISFACTION. The material of which they are made has proven to be the most DURABLE, DEPENDABLE and WATERPROOF on the market.

The medium weight are the most satisfactory all around Wader made. They are lighter than the domestic goods and more flexible.

The light weight are very light (a pair of stockings weighing only 22 ounces) yet they are quite durable and can be safely used for a long time by a careful angler.

Three Polars and a Cree

The Cree Had the Worst of it at the Start—Story of a Remarkable Hunt in the Hudson Bay Country

By R. J. Fraser

Samuel's mixture of English and Cree is intelligible only to one who has lived with him for a time I shall have to tell his story for him. Samuel Miles is the name he is known by, though he is a full-blooded Swampy Cree. A strange combination, you think? Maybe, but one hears and sees many strange things in the old North where truth is often far more incredible than fiction.

Sam has a native name—Wapeestan—which is the Cree for "The Marten," and like that animal he is a true runner of the wilds. He is one of the nerviest guides and hunters with whom it has been my good fortune to have lived.

Samuel Miles has the unique record of having shot more polar bears on the Hudson Bay Coast between the Nelson and the Churchill than any other hunter in that section. During the past twenty-five years he has accounted for sixty of these animals, an average of two and a half bears a year—if one can be said to have killed half a bear. Some of those which Sam only half-killed made very ugly customers. It is of some of his adventures with these polars that he would have me write.

One fall I had attempted to strike a trade with him offering him a gun for some furs to which I had taken a fancy. He was going off to hunt caribou for me and asked to be allowed to take the rifle along and try it out. If satisfied with its shooting he would gladly pay my price. It would have been a good gun had it shot

Big Game Hunter at Hudson Bay.

straight, but it didn't. No matter how one adjusted the sights it always fired a foot high at a hundred yards. With the loan of the rifle I gave Sam a whole box of ammunition and told him to give the gun a fair trial.

In five days he was back. He brought a small

deer and a polar bear skin, all the game he had seen—but his ammunition pouch was empty.

He had gotten the deer when three days out—six shots at very close range. Returning south down the coast he espied the polar out on the mud flats grubbing for food. At the first crack of the rifle the bear, instead of making for the water, bolted for the woods. Like a scared rabbit he galloped past within fifty yards of the Indian who for a moment thought himself about to be attacked. Even at that short range the soft-nose slugs flew harmlessly over the animal's back and he got inside the tree line.

"Gun dam bad!" exclaimed Samuel in disgust. He dropped his load on the beach and took up the chase. The Indian was no slouch on his feet and the polar never got out of sight or range, and Sam, stopping occasionally to blaze away, plunged through the soft muskegs on the white bear's trail. At each miss he grew more disgusted with the gun but more determined than ever to get the bear. He stopped and threw away his coat for running in the woods was warm work. Then he threw away his vest and sweater, and each time that he halted to refill the magazine he cursed the gun anew.

When the barrel of the rifle had become too hot for comfort he ceased firing and grimly settled down to run the bear to earth. He did it, too, and not until the beast turned and faced him did he fire again. Then within three yards of his quarry the Indian pumped as many shots through its head and ended the long, hot chase.

"One bear—thirty-seven shots," said Samuel.

Samuel Was Ready for Number Three.

as he tossed down the skin at my feet and handed me the much-abused rifle.

"Gun no good; no wantem."

I still have the gun.

One year, late in the fall, Samuel was trapping on the coast near Owl River, fifty miles south of the Churchill. For some days there had been little doing and so when he came across the tracks on the beach of three white bears he decided that their skins would be worth going after. The trail led inland and was not more than two days old. The Indian's keen eyes read the signs of the wild which told him the bears were starving. That meant a dangerous hunt for one man but the Cree had taken such chances before. He had not yet become the owner of a magazine rifle but was dependent on his old single-barrel muzzle-loader and with this and his grub and blankets on his back he took up the trail of three.

One day's tramp brought him through the woods that fringed the coast and onto the open muskeg plains of the interior. Scattered clumps of sickly-looking stunted juniper were spread about on the barrens and the intervening stretches were dotted with small ice-covered ponds. It was near the end of the second day when Sam espied the bears—the three of them sporting in the center of one of the small lakes on which they had broken all the thin ice sheeting.

No sooner had he emerged from the junipers

than the animals' sharp eyes spotted the Indian. They started through the water toward him, one well in advance of his mates.

"I must get them one at a time," thought Samuel, "and each with a single shot. If they

come along one well behind the other I can do it, for that will give me time to reload. If they come in a bunch I'm done for."

There was not a tree for miles around that would bear the hunter's weight. Thus Samuel

Cree Rapid Transit at Owl River.

explained to me how he had laid out his plan of campaign. As bear Number one emerged from the water he emitted a roar of delight—here was food for himself and his mates. The Indian looked to the priming of his gun and waited coolly. He could take no chances on a long shot and so he let the bear come on within easy range. With much satisfaction he saw that it was the dog, for well versed in the nature of beasts he had hoped that the mother would be the last. Growling and snarling, his eyes flashing in anticipation, water slavering from his jaws, the bear galloped up to within four yards of the Indian. Then the latter took careful aim and fired. The shot went true, but Samuel did not wait to see. He turned like a flash and ran for all he was worth away from the spot, reloading as he went. As he had hoped, the mother bear and the third one—a large cub—stopped for a moment to sniff at the fallen one. That allowed Samuel time to halt and carefully prime his gun. Then he was ready for Number two.

He turned to see, with great dismay, the two come on together, the cub but a yard ahead of its mother, which was now enraged at the death of her mate. How could he get the one and escape from the other? Would the old one stop again if he managed to kill her cub or would she come right on for him?

Samuel had little time to worry over his chances of escape and for a moment he thought of trying a long range shot. He raised his gun to his shoulder. But no, that was too risky—close range was the surest and he would take a chance on the last of the brutes. He ripped open his vest and disengaged one arm—his pack had been dropped when he had first sighted the animals. Then the two were almost upon him. Carefully, as before, he fired and the cub dropped in its tracks. The Indian needed not to look back to know that the old bear was on his heels. Her roar of rage and the crashing of the bracken warned him of his peril. It was difficult to reload for he did not dare to slacken for a moment and he was now running at the top of his speed. Quickly the bear gained upon him and the sudden snarl at his very heels warned him of her leap. He sprang aside just in time and the clumsy brute—for the polar is very slow in turning—plunged on for several yards before she could check her terrific way and come about. This gave Sam the opportunity he had looked for. He paused just a second to tear the vest off his arm and fling it behind him, then he raced on as before. It was his last hope of escape.

The polar, furious at missing his prey, stopped at the bait thus thrown to her. She paused only long enough to slap one paw viciously upon the garment and with an upward fling of her head

Winter in the Northland.

ripped it to pieces; then she plunged on in pursuit. But that pause was enough for the Indian—he halted, ramméd his load home and flung the rod from him. With shaking fingers he pressed the primer down and Samuel was ready for Number three.

He had scarcely turned about when she was upon him, open-mouthed and fearful to look upon.

"No time for aim—no time raise gun," said the old hunter, as he told the story. "Just push muzzle into her mouth, pull trigger, and jump aside."

Here he showed me the second finger of his right hand which was gnarled and distorted. "Gun no on shoulder," he explained, "Kick bad—break finger. Bear just slap gun once and break it. Then roll over and lie dead. Gun over there."

Samuel pointed into the corner of the shack where an old muzzle-loader lay, the barrel doubled over like the frame of a snowshoe, and, as I examined the wreck, I fully realized what the tough old Cree had been up against.

ORIGIN OF THE MULTIPLYING REEL.

London, February 15, 1915.

Editor *Forest and Stream*:

In your very fine issue of *Forest and Stream* for February I see that on page 82 my friend Dr. James A. Henshall (I wish we were as young as when we first met!) says "George Snyder made the first multiplying reel in the world, as all English reels at that time, and down to the present day, were, and are, single action."

Dr. Henshall is not quite correct in this statement. The brass multiplying reel was made in this country and was in fairly general use in the eighteenth century. I forget at the moment which authors first refer to it, but there is a fine

engraving of a multiplying reel in Daniel's "Rural Sports" published about 1800 to 1805. It is not spoken of as any novelty; he says, "You can get it at any of the fishing tackle makers." It is a long barrel reel, just the shape of modern American multiplying reels.

In one of the scarcer and most original of works in our great literature of angling, published also about 1800 entitled "The Fly-Fisher's Legacy," by George Scotcher, he tells us that it is the result of many years experience. He says on page 10, "I would advise by all means the use of a reel on your rod, as you can then lengthen or shorten your line as occasion requires, and the multiplying reel is the best, provided you are careful to keep it well in order, as without that care, it is very apt to grow faulty." S. Howitt in his "Angler's Manual" 1808 says, "Multiplying reels are preferable because you can wind up your line quickly."

I possess fine English made brass multiplying reels, some of which are probably over 100 years old. All my first ten years of fly-fishing was done with an excellent multiplying reel. They are found in the advertisements of our fishing tackle makers for more than a century.

But for the last half century the best multiplying reels have undoubtedly been made in America.

R. B. MARSTON,

Editor *Fishing Gazette*.

"The Explorer's Route"

An Article That Tells of a New Scenic Wonderland and Game and Fish Paradise on the Backbone of This Continent

By B. W. Mitchell.

WHO is not affected by the spell of the new and the unknown? There is a thrill in scenes that are strange to human eyes. That great maze of mountains and of wilderness of northwestern Canada at last conquered by the steam horse offers to the true traveller a region of rare beauty and interest. Here, indeed, is an explorer's and sportsman's paradise, with numberless lofty peaks, many a "river of doubt" and not a few jewels of lakes which have long been hidden from man. Now all these, thanks to the work of the railway pioneers, have been made accessible to the pack-train traveller.

Not only to the gentleman rover is opened this enticing territory. The achievements of women explorers have attracted wide attention and some of the best work in the exploration of the Canadian Rockies has been accomplished by women; notably Mrs. Mary T. S. Schaffer of Banff and Miss Mary L. Jobe of New York. The life of the wilderness trail is not exhausting in these latitudes as it undeniably is in the tropics. On the contrary, it is exhilarating in the highest degree. As a matter of hazard, there are more real "hair breadth escapes" in a day's dodging of automobiles in a city street than one would experience in a year's travel in the wilderness, granting adequate preparation and proper precaution.

The new regions into which the newly opened Grand Trunk Pacific leads are the sources of the Athabaska River, first visited by the author and Henry G. Bryant, F. R. G. S., of Philadelphia, accompanied by four ladies during the summer of 1914. Properly equipped for the journey a similar party would probably cross the Athabaska by the newly constructed pile bridge and proceed up the right (east) bank of the Athabaska. This is indeed a glorious pathway. Magnificent mountains lie on either hand; on the right bank, Mt. Hardisty, the Hardisty range and the singularly regular serrations of the Endless chain; on the left bank, the splendid Selwyn Range with its crowning peak of Mt. Geikie, nearly 12,000 feet in altitude and as yet unclimbed and including also Whirlpool Peak and the Galleon, the latter a huge strangely formed triple peak shaped like some great Spanish treasure-ship of the olden days; the mast of which—an enormous perpendicular tower of black rock, apparently a volcanic eruption—will one day clip ambitious wings for many an Alpinist. High points on the trail along the slopes of Hardisty give splendid vistas up the untravelled Whirlpool River and of the snow fields around the famous peaks of Mt. Hooker and Mt. Brown. From the last camp before fording the Sun

Wapta, one of the main tributaries of the Athabaska, can be seen far away the two giants of the central group of the Rockies, Mt. Alberta and Mt. Columbia. Once across the Sun Wapta, a somewhat serious ford, quite impracticable in a high stage of water, the march continues up the main Athabaska. From the high foothills on the left over which the trail leads can be seen the superb masses of snow and ice and rock which form the goal of the expedition. There is the ice-crowned Blackfriar with Fortress Peak opposite, and between them in the extreme distance a spotlessly pure white mountain armored with solid ice and snow between 11,000 and 12,000 feet in altitude, first visited in 1914 and named Queen Mary's Peak.

The trail now lies alternately high along the

water to muskeg and a perfect network of fallen timber lying in enormous slashes, the logs heaped eight to ten feet above the ground and utterly impassable for horses. The march can then be made up the river bars, fording channel after channel with always the somewhat exciting possibility of an occasional swim. Unfortunately, horse feed is lacking up this branch of the river and any dash to Mt. Columbia must be made in haste and with much hardship to the horses. However, the trip will well repay the temporary hardship as the mountains are of surpassing grandeur and game abounds, black tailed deer, caribou, goat and bear. Mt. Columbia is believed to be the only mountain in the world whose snows drain into three oceans; the Atlantic through the Saskatchewan, the Arctic through

Horses Swimming the Athabaska at Swifts, Jasper Park, Canadian Rocky Mountains.

fire-swept flanks of the range and along the river where bits of muskeg and quivering atoll rims of shaky mud and sand between the rushing river and bottomless bogs of muskeg offer a precarious trail only from three to five feet wide.

A few days marches of this character bring the party to another great tributary river, the Mt. Columbia branch, sweeping fiercely down from the great peak and ice field, 220 square miles of ice from 500 to 1,500 feet in thickness. Mt. Columbia is nearly 13,000 feet in altitude, a perfect pyramid of rare beauty, and a glorious group surrounds and protects the giant—the Dome, the Twins, Mt. King Edward VII and many others. The detour here offered to Mt. Columbia is of considerable difficulty except in extreme low

the Athabaska and the Pacific through the Bush River, a tributary of the Columbia.

The main river above the junction with the Mt. Columbia Branch is known as the Chaba, although it is the main Athabaska both in volume and direction. The march is made up this stream usually in the bars in practicable stages of water to the beautiful Fortress Lake, lying exactly on the Continental Divide and discharging into the Athabaska by a subterranean outlet discovered in 1913, and into the Pacific Ocean by the Wood River, a tributary of the Columbia. A few hours march up the bars, mindful of the quicksands, brings the party to the confluence of the two forks of the Chaba. At this point the horses must be sent back to Fortress Lake under suitable guard as there is no feed for them along

either branch. The southwestern branch presents many canyons which necessitate a sharp climb over the great spur which forms the canyon wall ere the foot of the superb Queen Mary glacier is reached. This noble glacier sweeps down from the snows of Queen Mary's peak and from its grotto gushes forth a stream turbid with glacial silt. The foot of the glacier lies about three miles above the camp and the scenery is of the grandest and wildest description. The surface of the glacier is broken with superb serraco and the peak presents snow and ice climbing of the first order. The southeast fork of the Chaba likewise gushes from the grotto of a great glacier falling from a tongue of the Columbia Ice Field back of Mt. King Edward VII. The approach to it is through virgin forest along the brink of a deep canyon which ultimately falls away into a fairly broad valley where the river widens and is broken by gravel bars, a characteristic feature of these northern rivers. The length of this branch is from six to eight miles and the trail lies through the forest intersected by innumerable game trails along which the black tailed deer ranges in great numbers. The parent glacier to this stream lies in the extreme head of the valley, flowing in a gentle slope with comparatively smooth surface, though there are some dangerous crevasses.

Much new work remains to be done around these lately discovered sources of the great river. It is of special importance that the two glaciers and their parent peaks be ascended in order to determine the problem of the possible continuity of their ice fields, and whether continuous with the Columbia Ice Field as well as to obtain a view over the divide into the totally unknown country on the Pacific side. Fortress Lake is still to be navigated to its head and the region explored between Wood River and Misty Mountain on the one hand and the Committee's Punch Bowl and Athabaska Pass on the other. This in the old days was the scene of the annual fur exchanges between the more northern Indians and the Hudson's Bay men from Henry House. It has never since then been visited and no record or map has been left by these old *coureurs de bois*.

Another delightful trip for the amateur explorer is to follow the same route as above from Jasper to the Sun Wapta; thence up the Sun Wapta either to the Pobokton, following this up to the Jonas Shoulder and returning via Maligne Lake, or the Brazeau; or one could march up the Sun Wapta to its source on Wilcox Pass, the scenic center of the Canadian Rockies. The latter portions of these two routes have been traversed but seldom, and much that is new and valuable may be accomplished in the way of mapping and photography. Starting again from Jasper, one may reach practically new country by crossing the Athabaska, passing the marvellous Maligne Gorge where the entire river emerging from a long subterranean flow dashes in fury through a deep and narrow canyon, contracted in many places to five or six feet in width. Thence a detour is made to Medicine Lake whose changes of level, sudden and startling and sometimes as much as sixty feet in a season, form one of the marvels of the region. These extraordinary changes are supposed to be due to the alternate choking and opening of the subterranean channel of the Maligne. Jacques' Lake is then visited where is found probably the most wonderful fly

A 300-Pound Sturgeon Caught With Line in the Nechaco River, near Vanderhoof, B. C.

fish fishing for trout in the world. The most hazardous feature of the journey is the progress up the practically unknown Rocky River to its source in a tremendous pass lined with perpetual ice and snow and supposed to be over ten thousand feet high. If aneroid measurements confirm this, it will probably prove to be the highest pass in the Canadian Rockies practicable for horses. So far it has been visited only by a hunting party.

Another magnificent trip offering great opportunities for climbs and side expeditions afoot is to be had by rail from Jasper to Grant Brook and thence up the Moose River to its source amid the glories of Moose Pass. The Moose River has been traversed a few times but it is an extremely difficult route because of the endless muskegs. A route must ultimately be found high along the mountain sides in order to avoid the worst of these traps. However, even as it is the trip will repay the hardships endured if only to see the superb flower-starred avenue of approach to the pass. Twenty-nine varieties of flowers in bloom have been counted crossing this pass without dismounting from the horse. The timber on Moose Pass is magnificent. On other high passes the timber gradually decreases in size with the increase in altitude. On the northwestern slope of Moose Pass particularly, the heavy timber continues close to the timber line and ceases as suddenly as if cleared by hand. A great maze of unknown and unnamed peaks surrounds the traveller on this splendid pass and the eye may wander far to the north down the valley of the Smoky and to the absolutely unknown beyond. This valley was penetrated for the first time in 1914 by Miss Jobe to the distance of about one hundred miles, the expedition resulting in the discovery, mapping and partial ascent of an extraordinary new peak. This journey is of the first order of difficulty and the region, with the exception of the one hundred miles of the waterway as well as everything to either side back from the river, has not been penetrated. Unknown country may also be reached afoot with shoulder packs over the Mural Glacier near Mt. Robson. Horses cannot be taken into this section.

As one descends the Grand Fork of the Fraser River, far to the southwest is seen a wonderful mass of peaks with great display of snow and ice. They are the peaks of the Gold Range and the Caribou country beyond the Big Bend of the Columbia. Veritable "terra incognita" are these forbidding peaks, and owing to the tremendous timber and impenetrable underbrush of the Pacific slopes of mountains here, it is probable that they will never be explored except on foot. This is a journey which should be attempted only by experienced men. Further to the west, unknown and untravelled country of the utmost interest—both geographical and ethnological—opens up, especially to the northward of the railway. The Babine Lake and river, swarming with the fine salmon and steelhead trout, may be reached from Hazelton by a trail journey of about seventy miles. This is a particularly fascinating journey due to the presence of the quaint Babine Indians; an interior tribe of totem Indians of which anthropologists for a time denied the existence claiming that all totem Indians were maritime. These Indians present a curious mingling of barbarism and primitive customs with a bit of Hudson's Bay Company civilization and traces of missionary influence in earlier times.

Further toward the coast the great ranges stretching ever northward beckon the adventurer with their lure of mystery. If all the new country now opened up to the sportsman and nature lover was to be described in detail, this sketch would expand into a volume, but enough has been said to show that the name earned by the latest American transcontinental line, "The Explorer's Route" is well merited.

AN APPRECIATION FROM FLORIDA.

Wabasso, Fla., Feb. 21, 1915.

Editor *Forest and Stream*:

So many writers have given their O. K. to your making *Forest and Stream* into a monthly that it is with fear and tremble that I venture to give my views. Ever since 1898 your journal has brought to me, as no other magazine or paper ever has, the true spirit of the outdoors. Its pages reek with the odor of the pines, of the smoke of the hunter's camp fire and with the keen air of the mountains. The tang of the salt sea pervades its pages, and the call of the Red Gods is never ceasing. It is a paper which for forty years has been the true sportsman's journal of America.

I am disgusted with most present day sportsman's magazines, which by the way should be known rather as "Sporting" journals, but dear old *Forest and Stream* remains the same.

I like the paper in its monthly form but there are now 40 weeks in the year when I shall miss it. It is like having to call on your best girl once a month, instead of in the good old fashioned once a week style. I am pleased with your review of latest outdoor books. With best wishes to our old friend in its new form.

C. A. VANDIVEER.

To Save the Pronghorn Antelope

The Boone and Crockett Club Takes Steps to Preserve a Rapidly Disappearing Animal

THE growth of the sentiment in behalf of game protection is more rapid and more permanent than most people understand. We know through many sources of the continued efforts in behalf of birds by the Audubon Societies, in behalf of game by the American Game Protective and Propagation Association, in behalf of wild life generally by the New York Zoological Society, but in addition to these, there are other associations that are working more quietly and yet accomplishing a vast deal of good.

The Boone and Crockett Club, of which little is heard, has taken up the pronghorn antelope, and is making great efforts to keep that unique species from extermination. Once the antelope's range extended from the Missouri River west to the Pacific Coast and from the Saskatchewan south into Mexico. In early days it was, in the belief of many an old-timer, more abundant on the plains than was the buffalo. When white people began to move into the western country,

and to establish farms and build fences, this great range began to contract, and before long the antelope began to disappear. Laws urged by far-sighted people to protect the species, like many other game laws, were not enforced. For years the antelope has been steadily decreasing in numbers, so that it is no longer found over most of its old range. This is a great misfortune.

Several years ago the Boone and Crockett Club determined that new herds of antelope ought to be established on certain Government reservations. Permission was secured from the Secretary of the Interior to have some antelope caught alive in the Yellowstone Park, and two shipments were made, one to the Wichita Game Preserve, in Oklahoma, the other to the Bison Range, in western Montana, the Club paying the cost of capturing, crating and transporting the antelope. Again, this year, the Club secured permission from the Canadian authorities to capture some antelope in Alberta, had the work done, and shipped a small herd to the Wind Cave National Park, in South Dakota—an old antelope range where the animals are assured of protection from the hunter, and should do well.

There are thus now two new herds of antelope in the west which we may hope to see increase. Each of these herds is located in country where the animal is native, and each is under fence, and yet has ample range. It is to be hoped that they do well and increase, for, except in Nevada and Arizona, the antelope is now an almost forgotten species.

The efforts made by the Boone and Crockett Club to preserve this rapidly disappearing species cannot be too warmly praised. They furnish an example of persistent, well-directed effort which may well be imitated by other game protectors in this country. G.

THE annual meeting and dinner of the Boone and Crockett Club was held on the evening of Thursday, February 4th, at the University Club, New York. About fifty members and guests were present.

The officers elected for the ensuing year were Major W. Austin Wadsworth, Geneseo, New York, president; Arnold Hague, W. B. Devereux, Archibald Rogers, Geo. Bird Grinnell and Madison Grant, vice-presidents; Henry G. Gray, secretary; W. Redmond Cross, treasurer; mem-

Pronghorn Antelope in Yellowstone Park.

Group of Mounted Antelope.

bers of the executive committee to serve until 1918, Elton Clark, Framingham, Massachusetts, and J. Coleman Drayton, New York; the Game Preservation Committee and the Editorial Committee were continued.

Of committee reports the most important was that of the Game Preservation Committee, of which Charles Sheldon is chairman. The report reviews the work of the committee for the past two years, the passage of the migratory bird law, fur seal legislation, game refuges, National and state, the game situation, Alaska game law, big game in the north and the relations there of Indians and white men, the work done by club members and others in investigating big game animals, and various other matters.

The preservation of the antelope and bear present serious problems. Antelope should be increased by breeding in refuges, and laws should be passed to protect bears. More game refuges are necessary, and all the National forest reserves should be made game refuges. For the most part the game laws that we have are very

good, but are ineffective because not properly enforced. Therefore, most of the means and energies of game protectionists should be directed toward the enforcement of the game laws.

The great danger of the extermination of the unique pronghorn antelope has long been recognized by the Club, and four years ago the committee obtained permission to have some antelope caught in the Yellowstone Park and shipped to the Wichita Game Preserve and to the Montana Bison Range. For this it paid all the costs. Owing to lack of knowledge on the part of those who captured the animals, many of these antelope were injured, and of the twelve sent to the Montana Bison Range only five survived, but within the last two years seven young have been born to these five. The attempt to stock the Wichita National Game Preserve was not encouraging, only two animals, both does, surviving. Nevertheless, it seemed important that these efforts should be continued, and after a permit had been obtained from the Canadian authorities for the capture of a limited number

of fawns, a contract was made with a resident of western Canada to undertake this work. He succeeded in capturing three buck and three doe fawns, and these, together with four bucks and three does additional—all over a year old—were delivered to a representative of the Biological Survey at the border, inspected, passed, and safely delivered at the Wind Cave National Park, near Hot Springs, South Dakota, as a gift from the Boone and Crockett Club to the United States. The total cost of the matter—paid from the club's game preservation fund—was \$1,338.84. The Secretary of Agriculture acknowledged to President Wadsworth in a very cordial letter the club's generous gift, which he said "marks an important step in safeguarding the future of that animal."

The committee justly calls the passage of the Migratory Bird Law the most important and far-reaching result yet attained during the progress of game protection. It believes that the principle here established will ultimately be extended over game animals.

The report of the committee sent to the fur

seal islands to study that much discussed subject had not been made public when the report was written. It has recently been handed in, and may be made public before these lines are in print. It is known at least that the committee and the expert agents from Canada and Japan who were present on the Island with the American scientific men, agreed with them in all conclusions, and it is not doubted that the repeal of the law forbidding the killing of surplus males will be recommended in the report.

That the forest reserves generally should be made game refuges is recommended in the report. This ground was taken in the first book of the Boone and Crockett Club, as long ago as 1893.

Many bills to set aside National Parks and game refuges are on the calendar of Congress, but on most of them no action has been taken. Nevertheless, last August Congress accepted the session by the state of Montana of the exclusive jurisdiction of the lands embraced in the Glacier National Park. This insures Federal control and protection of game, and will be effective, as shown by the fact that last October a young man was arrested for killing a bear within the Park, and was fined \$100 and sentenced to ninety days in jail.

The game situation is fully discussed. Elk sent out from the Yellowstone National Park seem to have done well wherever set free under proper conditions. An interesting experiment was made in Arizona where elk were turned out in the Sitgreaves forest. Eighty individuals were held for a short time in a small enclosure, and then, when the feed gave out, they were turned loose. During the first season they scattered, some of them wandering one hundred miles north, but in 1914 almost all of them had returned to the original district where natural conditions are favorable. Only six or eight of the cows were old enough to produce young in 1913, but four calves were born, and they are likely to do well. The number of elk to be shipped

from the Yellowstone Park and Jackson Hole herd makes no impression on the increase. There are supposed now to be about 55,000 head there. The constant increase of the herd results in a continual shortage of food supply and death of the animals through starvation. "The Committee believes that in addition to those killed by sportsmen several thousand should be killed each year," in order to establish a balance between the food supply and the numbers of the elk. It is recommended that the killing be done by officials under proper regulations.

Bison are safe from extermination, but the antelope are going very fast. Mountain sheep are much more numerous than has been supposed. The Queen Charlotte's Island caribou are on the verge of extinction. The musk-oxen are growing fewer, because of the traffic in meat for whalers wintering in the Arctic, and the use of modern firearms by Indians and Eskimos.

Grizzly bears are growing fewer, and should be protected, following the suggestions of J. A. McGuire, Editor of *Outdoor Life*, in Denver. Constant efforts are being made to commercialize the skins of the Alaska brown bears, but it is hoped that the people of Alaska can be brought to see that these bears are more valuable to them living than dead. This suggests the Alaska Game Law, which needs changes to secure the support of the public there.

Much good work has been done by members of the Boone and Crockett Club and others in the way of securing interesting scientific specimens for the National Museum, the Biological Survey, the American Museum of Natural History, and others. Among those who have taken an active part in this matter are Theodore Roosevelt, Dr. W. L. Abbott, Elton Clark, George L. Harrison, Jr., Theodore Lyman, Messrs. Pratt and Proctor, Hon. Geo. Shiras, 3d., Lincoln Ellsworth, W. H. Osgood, Charles Sheldon, Dr. L. C. Sanford, and others.

The report refers to books published by mem-

bers of the Club which tend to arouse interest in the wilderness and so to conserve the spirit which makes for game protection. Of these there are two by Mr. Roosevelt, three by Mr. Grinnell, one each by Messrs. Hepburn and Sheldon, and the composite book of the Boone and Crockett Club, "Hunting at High Altitudes," to which the venerable Col. W. D. Pickett contributed by far the greater part of the matter. Dr. Allen's monograph of the Musk-Oxen, Mr. Hornaday's Wild Life Conservation, with a contribution by Mr. Walcott, and Mr. Selous' contribution to two great works on sport, complete the list of strictly outdoor publications.

The committee insists again on a better enforcement of the game laws, which means more liberal appropriations for warden's service, and greater care in appointing the men selected for this work. It advises also laws restricting the sale of trophies, pointing out that traffic in trophies tends toward the extermination of game as traffic in plumage tends to exterminate birds.

At the meeting Madison Grant made feeling reference to the death within the year of John L. Cadwalader, a very old and valued member of the Club, and an earnest sportsman. Col. Roosevelt spoke with feeling of the death of Hon. W. W. Rockhill, the explorer who was so long in the diplomatic service of the United States, and who was one of the Club's most famous members.

At the conclusion of the dinner which followed the meeting, Mr. W. H. Osgood, who has recently returned from the Pribiloff Islands, showed an extraordinarily interesting series of motion pictures of fur seal life. His talk was devoted wholly to the natural history side of this life, for his official position, of course, precluded any discussion of policy until the publication of his report. Resolutions were passed urging continued protection of the Alaska brown bears.

A Peg-Legged Pointer

A bunch of brokers were reciting stories of their hunting and fishing experiences during the dull season, while the ticker was slumbering. The manager of one of the Chicago bond houses, with offices in this city, capped the climax with his yarn of an experience while after game in the woods in the extreme north of Minnesota. He asserted his willingness to make affidavit to the facts in the case before a notary and to wager that investigation would prove his story to be true to the last improbable feature.

"While in Superior we picked up as a guide an old chap named Tom Billstein," he said, "who was to take across the line with him an outfit of bird dogs that he guaranteed were fit to point anything in the way of game we should find in the woods or along the borders of the lakes. Tom turned up all right with a string of a half dozen dogs he had broken himself and which were guaranteed to be old hands at the game.

"Among them was a liver and white pointer with one of the most intelligent faces I had ever seen on a dog. He was a companionable chap and made friends of every one in the party, partially, I think because we all sympathized a bit with the dog. His left foreleg was an artificial

limb, and he naturally had a bit of a limp as he strolled about the camp when we were first introduced to him. Of course, we geyed Tom a bit about bringing a pet dog along to the woods with him.

"He ain't no pet more'n any of the other dogs in the bunch," snarled Tom. "He's a hunter, he is, and they ain't no dog in the bunch can beat him flushin' a grouse, nor retrievin' of him after you've shot him, if you fellows can shoot. Wait till you get out in the stubble and see him work's all I got to say."

"When we hit a bit of good ground for birds that peg-legged bird dog took on a new lease of life. He had a nose that would scent a covey of birds quicker than any other dog in the bunch. He was as rigid as one of Prince Troubetzkoy's statuettes on the point, with both his nose and his tail, and that game leg of him sticking out like a weather vane. He flushed the birds like an artist, and when a lucky shot stopped a couple of grouse out of the covey, and he was ordered to do so, retrieved them like a spaniel. That artificial leg wasn't in his way at all as he nosed his way through the underbrush to where the birds fell, and he came back with his prey like

a sprinter. He kept up his work all day, and when we got back to camp was apparently the least tired of any dog in the lot, in spite of the fact that they had four good legs to work with. I've shot over quite a bunch of dogs up in those woods in my day, but none of them beat that peg-legged pointer for good all-around work.

"That night Tom told how his dog happened to have that artificial limb. Tom had him out in the winter of 1913 and the dog stuck his foot into a trap set for muskrats. For several hours before Tom heard his yelps for assistance the dog was held in the trap and when Tom reached him his leg was frozen and had to be amputated then and there. Tom got back to civilization as soon as possible, bent on saving so good a hunting dog if it was possible. He tried a half dozen schemes and finally took him to an artificial limb maker in Milwaukee and had the new foreleg made for him. It took the dog only a couple of weeks to get used to it after the stump had healed. Now I'm willing to bet there isn't a bird dog in all Wisconsin, or Minnesota for that matter, can beat that peg-legged, artificial-limbed pointer in finding birds in any stubble field you can put him down in."

"Horns Versus Pedicles" Again

Game Commissioner Phillips of Pennsylvania Gives his Version of the Celebrated Dickinson Deer Case

Game Commissioner John M. Phillips, of Pennsylvania, in the article below, presents the Game Commission's side of the famous Dickinson deer case, which has stirred up so much controversy in Pennsylvania and elsewhere. FOREST AND STREAM in an earlier issue printed the other side of the case and now, having given both sides, feels that it has done its full duty, and so far as this paper is concerned, the debate must be regarded as closed. The sportsmen of the United States, having thus had all the facts placed before them, can form their own conclusions as to whether the prosecution was justified or not.

Pittsburgh, Pa., Feb. 22, 1915.

Editor *Forest and Stream*:

My attention has been called to an article entitled "Horns vs. Pedicles, the Famous Dickinson Pennsylvania Deer Case," in your issue of December 26th, 1914, written by Mr. Frank G. Harris, President of the Crystal Springs Rod and Gun Club of Clearfield, Pa. This refers to the case of a Pittsburgh physician who was accused of killing a fawn in Clearfield County on November 20th, 1911, in violation of a law of the State of Pennsylvania which reads that no deer "except a male deer with horns visible above the hair" should be killed. As one of the Game Commissioners of Pennsylvania, I wish to make a plain statement of the case.

When this case developed, I was out of the State, and the first I heard of the matter was upon my return to Pittsburgh on December 14th, 1911, when I found a letter from Mr. Harris complaining that one of our Game Protectors, accompanied by a State Policeman, had invaded the property of the Crystal Springs Club over trespass notices and examined a yearling spike buck hung on the porch of the clubhouse, which they claimed was an illegal deer.

I was not acquainted with the accused, but upon communicating with him he assured me that he had killed a legal buck with horns, that it had been passed in Pittsburgh by a State Policeman, and that he had placed the head in the hands of his taxidermist, Mr. Gustav A. Link of the Carnegie Museum, for mounting. So I felt confident that our officers had made a mistake, as during the first year of life male deer have no horns, but before censuring our officers I arranged with the accused to see the head so that I could speak with assurance, and he instructed his taxidermist to allow me to examine it. When Mr. Link notified me that he had brought the head from his private workshop and had it at the Museum, in company with others I inspected it and found it to be the head of a male fawn, 6 to 8 months old, as indicated by the small head, fragile bones and the pedicles or buttons which projected less than $\frac{3}{4}$ of an inch above the frontal bone, and on which the horns grow and from which they are shed annually. We noted also that the hair had been removed from off and about the pedicles to make them visible.

I immediately placed the case in the hands of Dr. Kalbfus, the Secretary and Executive officer of the Game Commission. When he arrived in Pittsburgh, we interviewed the accused and informed him that he had killed an illegal deer and

submitted to him the option of settling as allowed by law or going to trial. The accused stated that he was aware the deer in question was a fawn and that if he was the only one concerned he would pay the fine but inasmuch as the Club

the accused and I was called on the telephone by Governor Tener asking for information on the subject. I informed him of the result of the investigation when he naturally directed us to do our duty. The next development was a letter

THE EVIDENCE IN THE CASE.

The Upper Head is That of the Fawn as Offered in Evidence by the Commonwealth. The Lower Head That of a Mature Buck Killed in the Same Region.

had told him not to do so and that it would take care of the matter he asked for time to consult the Club, which was readily granted.

Mr. Harris, as President of the Club, immediately took an active part in the defense of

written by Mr. Harris on February 8th, 1912 to Senator Oliver complaining of the action of the Game Commission, claiming that the law was intended only for the protection of female deer, that the members of his Club were fighting Re-

publicans, that he wanted Dr. Kalbfus and the Game Commission "called off," and also that the case was being tried in Allegheny County, which would involve a big expense to the accused and the Club, as their witnesses were all in Clearfield County. Like the Governor, the Senator referred the matter to the Game Commission. When the case was tried in Clearfield County, Mr. Harris, as an attorney for the defense, used this against the Commission, claiming that it was attempting to put the costs on his County.

Mr. Harris wrote the Game Commission that: "the law was primarily intended to protect does and should be so amended that if a deer has testicles, horns or no horns he is a lawful kill."

Mr. Harris also wrote a letter to one of the officers of the Commission from which I quote: "As for Dr. Dickinson. He is head and shoulders above any one of the Game Commission. He is a gentleman sportsman and has violated none of the contemptible laws for which they are responsible."

Yet Mr. Harris was a member of the Commission when the "Buck Law" was passed by our Legislature, a member from his own County, Clearfield, being sponsor for the bill.

Mr. Harris was State Treasurer and later Game Commissioner under the Pennypacker administration, but upon the expiration of his term Governor Stuart refused to reappoint him.

While Game Commissioner, Mr. Harris was trusted by his colleagues to locate a Game Preserve in accordance with the law, "within the State lands" in Clearfield County, about 7 miles from his home, where deer were extinct. Upon these sanctuaries, no hunting is permitted by any person at any time. At that time, the State owned or held options on many thousand acres of land surrounding the Game Preserve located by Mr. Harris which consisted of about 3,200 acres, marked with a single wire so that game could come and go at will, with fire lines outside the wire. A man was put in charge of this sanctuary by Mr. Harris and it was stocked with deer and later with elk at the State's expense.

It was not until Mr. Harris became active in the defense of the accused that the discovery was made by the Commission that Mr. Harris and his associates had acquired 420 acres of land adjoining the State sanctuary and extending to the marking wire, organized a club of 50 members, and posted the lands. When the Commission learned of this state of affairs, its first thought was to abandon the sanctuary entirely, but owing to the impossibility of moving the game, it was finally decided to cut off one end so that the public and hunters could pass around it without trespassing on the Club's property. It was on one of these fire lines surrounding the sanctuary that the accused killed the fawn in dispute, the only deer killed in 1911 by this Club, while in 1914 six mature bucks were hung on the clubhouse porch.

The case was tried on December 11th, 1912 before J. C. Barclay, Justice of the Peace of Clearfield, who had offered to him in evidence the head of the fawn, and he found:

"No man could see horns on this baby deer and any man who would kill it is not only exterminating our deer but is endangering human life in the woods."

From the Justice's fine of \$100 and costs the defendant appealed, and on August 26th, 1913 the Grand Jury found a true bill against him. On

Made-in-America Scenery

By John G. Worth

(For illustrations, see page 149)

The following article, written by John G. Worth, of Albuquerque, New Mexico, gives but a faint idea of the wonders of the great American Southwest Desert. The photographs on page 149 show perhaps better than words the marvels of this region.

The great American plateau region of northern Arizona, western New Mexico, southern Utah and southeastern Colorado undoubtedly contains more natural wonders, scenic variety, and real prehistoric and present life of primitive man than any other section on the North American continent. The land sculpture resulting from thousands of years of erosion in the great sandstone plateau has left many curious and interesting monuments of the harder material standing and lying in great fantastic shapes, equalled nowhere else. The best entry for this immense region is Gallup, N. M., on the south, and Dolores, Colo., on the north.

From Gallup the Navajo Reservation is first entered. This reservation is inhabited by a tribe of nomads who range their sheep over an immense stretch 400 to 500 miles from east to west and 300 to 400 miles north to south.

The Navajos are perhaps the most interesting Indians to-day. They make beautiful blankets and are splendid in barbaric silver work ranging from small rings and ornaments to great belts and bridles of solid beaten silver.

From Fort Defiance the land sculpture commences immediately. Zilt-Fusayan Butte, then Monument Canyon, and the splendid Canyon de Chelly and Canyon del Muerto with their wonderful coloring and impressive silence, one might say, of lights and shadows. To the east, the great Tunitcha, and Lukachuki Mountains to a height of 10,000 feet, rising 4,000 to 5,000 feet direct from the Plateau are seen, while to the northeast rise the beautiful Carriso Mountains to about 12,000 feet, from the top of which the writer obtained one of the most beautiful sights some fifteen years ago. For hundreds of miles in every direction the country is an open panorama—the great San Juan Mountains of Colorado to the north and east, the great isolated peaks of the Utah plateau region, Elk Ridge, Abajo Mountains, Henry Mountains standing like sentinels guarding the silence, while far to the west stands Navajo Mountain on the edge of the Grand Canyon near the mouth of the San Juan River and the great mesas, deep canyons, and table lands stretch for miles to the southwest.

After leaving Canyon del Muerto one enters the Chin-lee Valley passing many ruins and cliff houses of primitive man. The life, color, and

land sculpture are most wonderful all the way; it is real magnified fairy land. Next one enters Monumental Valley, a great Gardens of the Gods, stretching for more than thirty miles to the San Juan river. Great monuments rise straight into the heavens, 300 to 800 feet, assuming all shapes and colors. Big fingers, big frogs, faces, squaws with babes on back, great battleships with bristling turrets, locomotives, great palaces have been hewn by Nature in a way that cannot be painted, photographed, or properly described.

It all must be seen to be appreciated. At the crossing of the San Juan river we enter Utah, and see the wonderful Goose Necks carved by the river into islands whose banks are a thousand feet above the river bed. We then cross Grand Gulch and at night camp in a great cave that will hold hundreds of horses at a time. A little water comes from the rocks and is accumulated in troughs built by an enterprising ranchman. The next day with the Great Bears Ears Mountain constantly in sight we cross the table land to the head of White Canyon and camp at the first or Edwin Bridge for the night. This is a beautiful bridge with wonderful coloring and perfect in outline. We climb on top, examine its wonderful structure and wonder how old the world must be, to take time to carve the beautiful arch so little at a time, a little rain or wind, the cold night and hot days gradually chiselling out the hard sandstone.

Next day we ride leisurely through the canyon and camp for a midday meal at the Caroline Bridge, huge in proportions, so large that it cannot very well be photographed, and after a pleasant hour in exploration we pack up and ride to the magnificent Agusta Bridge to camp for the night. This is probably the most interesting bridge of all, being 2,300 feet over all, and about 350 ft. span in the arch.

Numerous pools have been carved near it making fine bathing, and a small stream cuts beneath it. The ruins here are also interesting and after supper as we watch the moon rising under the arch and gradually over it, the sensation of being part of these wonders is simply beyond description.

The return is made the same way, noon at Caroline, and another night at the Edwin Bridge. The next morning we start for the south to the San Juan into Arizona again for the Snake Dance of the Mokis, one hundred and fifty or more miles to the south, every mile opening new and interesting wonders.

September 23d, 1913, the defendant succeeded in having the indictment quashed on a technicality and the Commonwealth took an appeal to the Superior Court of Pennsylvania, which reversed the lower Court, and the case was brought to trial in Clearfield on November 7th, 1914, when the accused was acquitted by a jury of his peers.

In the trial, it was shown by disinterested witnesses as follows: Taxidermist G. A. Link of the Carnegie Museum positively identified the head as the one delivered to him personally by

the accused, and stated that it was a fawn and that it had no horns, and he so told accused, in fact, only accepted the head when assured that it had been passed by the State authorities, and further that it was the only fawn head he had ever received for mounting as a trophy. Chief Taxidermist Santens of the Carnegie Museum who was present when the accused delivered the head, corroborated Mr. Link's testimony. Albert Smith, the expressman who received it, and

(Continued on page 192)

The Mystery of the Maine Blueback

Have the Rangeley Trout and Landlocked Salmon Finished Him or has He been Translated into the Sunapee?

EVERYBODY is familiar with the disappearance of the passenger pigeon and the depletion if not total extinction of other forms of wild life before, and even contemporaneous with the present generation. In this connection it might well be asked:

What has become of the little Blueback trout, which once inhabited the Rangeley lakes of Maine in immense quantities? The Blueback was not a

streams are actually filled with this crowding, springing multitude, gathering as do smelts and alewives, to deposit their spawn. They do not make a 'spawning bed,' like the salmon and trout, but deposit their eggs in all parts of the stream, remaining about ten days, when they return to the lake, and are never seen until the 10th of October the following year."

In *Forest and Stream* for December, 1874, Mr. E. S. Merrill says: "Five or six years ago I spent the month of October in the Maine woods,

we last met at Rangeley, some four years ago, Mr. R. waited with deep interest the advent of the Bluebacks. They came at the appointed day in millions. Our friend had caught nearly every species of fish that swims in salt or fresh water, and he insisted that these beauties could be tempted by the gaudy fly. So day after day he stood on the apron of the old dam and fairly exhausted the treasures of his famous fly book. I shall never forget his overflowing enthusiasm and boundless joy as he entered camp, bearing a

Young Specimen—Oquassa, Aureolus, Marstonii or Fontanalis?

sportsman's fish; it did not rise to the fly, and only occasionally was it captured on a hook by some patient and persistent angler. When one of the latter succeeded in taking the Blueback, he felt rather proud of his skill—although the achievement did not bring him anything extraordinarily good in the line of an edible capture or even a fish which fought desperately.

At any rate the old flies of *Forest and Stream* contain reference now and then by some distinguished contributor to the catching of a Blueback, with full account of the circumstances as a rare event. It was not because of his scarcity so few fell victims to the angler's lure—it was because he would not bite.

A most "peculiar" variety of fish was the little Blueback, with strange habits and mysterious ways. Once a year, usually three days either side of October 10th, he and his tribe appeared in almost inconceivable numbers in some of the streams running into the Rangeley lakes and sought their spawning beds. In *Forest and Stream* of November 26th, 1874, appears the following:

"On the 10th of October—or within three days of that date—the outlets of Gull Pond and Dodge Pond, both emptying into Rangeley Lake at points six miles apart, and the outlet of Rangeley Lake, six miles from Dodge Pond, are thronged by myriads of this exquisite fish. The waters of the

and for the first time saw the Blueback trout, of which I had heard. This was in Androscoggin River, between Indian Rock and the dam. The trout came from the Cupsuptic or Mooselucmagantic Lakes. They came up from Indian Rock to the dam. In the pool below the dam there were myriads, the water being literally black with them, and under every stone, slab, or log in the stream, scores would shoot out when disturbed; you could scarcely step anywhere in the stream without starting some, and so of the streams emptying into Rangeley Lake."

Another *Forest and Stream* correspondent, Mr. George Shepard Page, in 1874 wrote:

"Notwithstanding the great number of anglers who have frequented the 'Rangeleys' during the recent years, fishing all portions of the lake with all manner of bait on the surface and down in the deep, no one has ever caught a Blueback. They have never been at the surface. Among the settlers the 'Blueback mystery' has been an annual subject of discussion at the husking, quilting and fishing parties, and the country store, for over forty years. They never take a fly or bait. I state this as a fact, notwithstanding the possibility of contradiction by as good an authority as our worthy president of the American Fish Culturist Association and my esteemed friend, that expert angler, Hon. Robt. B. Roosevelt. When

single Blueback attached to a diminutive fly hook. He loudly declared 'the beauty bit' but we who had watched the angler casting the trio of sharp baited lures among the swimming thousands in the pool, wondered that such exquisite skill in casting had not resulted in hooking out three at a time."

Again quoting from *Forest and Stream*, Mr. J. G. Rich states:

"In 1844 they were taken in large quantities by the Rangeley people, mostly the poorer classes. The fish were never fished for with a baited hook but either netted or speared. The method of netting was usually with 'nets' consisting of bags with ash bows and handles which were set at the ends of sluice ways made for the purpose of guiding the fish into the nets. In this way several bushels would be secured by each man in a night." In the *American Angler* of April 14, 1883, Mr. Rich says that they run up the brooks at night and back in the morning, so that the only time to get them was during the night, and large quantities of them were secured. Fish ways were made through which they had to pass, and improvised hand nets were used, and an equal chance was given all the settlers that went for them. Mr. Rich continued: "These fish were sometimes taken with a baited hook, so I am informed by our Fish Commissioner, Mr. Stanley; yet I have tried them time and again

with fly and bait, but never succeeded in taking one or even attracting their attention."

Now there never has been a time on the American continent within history where an abundance of fish or game has not led to indiscriminate slaughter by settlers or others. From the foregoing it may be judged with what zeal the taking of the little Blueback was prosecuted whenever he appeared out of his mysterious environment and came to the surface. It was the practice of settlers, as noted above, to scoop him up in bags full, and he even found his way to New York and other markets, as reference to old *Forest and Stream* files will show. Some who passed on his toothsome claim that he was superior to common brook trout; others did not like him so well, perhaps for the reason that his food consisted of lower forms of microscopic aquatic life—in a word he must have had some of the habits of the mud eating fishes.

Nevertheless little *Salvelinus oquassa*—for that is what the scientists called him—was rather a handsome fish. As a rule he weighed about five to the pound. In more recent years he grew heavier, but of that something will be said later. As to his appearance, Fish Commissioner Stanley of Maine wrote in 1874:

"This beautiful little fish takes its name from a bluish tint on the back, not unlike the bloom of a plum. They are spotted like a trout, and to the casual observer the difference in a basket of fishes would not be noted. But like the toad they have only the yellow and black spots but not the red. Their tints and coloring are very beautiful, particularly in the male, the pectoral fins rivalling in color the autumn-tinted maple leaves; like the dying dolphin, their brilliancy of color is lost or fades away with their lives. They are more delicate and symmetrical in shape than the brook trout and have the tail forked."

So much for *oquassa* in his earlier days of plentitude. What of him later? The best history that has been written of him is to be found in Vol. 8, No. 1, *Memoirs of the Boston Society of Natural History*. (The Fishes of New England) by Dr. William Converse Kendall, Scientific Assistant, United States Bureau of Fisheries. The distinguished author went to great trouble to establish the coming and going of the Blueback,

and it is rather complimentary to *Forest and Stream* that no less than twenty references are made to articles which appeared in its columns dealing with the Blueback.

Dr. Kendall goes on to tell of the subsequent exhaustion and what amounts almost to extinction of the Blueback. He writes that in the nineties a comparatively rapid decrease was noticed in the number of fish, and this became so marked that protective legislation was made, but it was not until 1899 that a law was passed prohibiting further catching of Blueback in any waters of Maine. But the "stable door," to quote the doctor, "was not locked until after the horse had been stolen." The Blueback had gone forever, and since 1905, none have been taken in the Rangeley streams.

But now comes the most wonderful part of the history of the Blueback. Some time in the late nineties, the state fish commission of Maine planted smelts in the Rangeley lakes for the purpose of providing food for the land locked salmon. It is the opinion of scientists and practical fish culturists that the trout of the Rangeley lakes derived much of their size from the fact that food in the form of Bluebacks was so common, the monsters of eight and ten and twelve pounds which formerly were caught in the Rangeleys having waxed and grown fat on a Blueback diet.

When the salmon of the Rangeley lakes began to multiply they also recognized the succulent quality of the Blueback, and as the salmon and the Blueback both were deep water fish, the latter went under in the unequal struggle. Hence soon there were fewer Bluebacks; finally were none at all. But the Blueback himself, with a little longer chance, might have made himself over again, as it were, into a larger species, for strangely enough he began to feed on the newly hatched smelts, and it is a fact of established official record that the last Blueback caught, instead of weighing from three to five ounces, ran as high as two to two and one-half pounds—in a word they had discovered the secret "On what meat doth this our Caesar (the big Rangeley trout) feed, that he hath grown so great," and were themselves taking advantage of it when the last of them were eaten by the salmon or died of old age without further reproduction.

Here is another queer circumstance in the history of the Blueback that scientists are still puzzling themselves about. In 1878 and in 1879 the New Hampshire Fish and Game Commission introduced in Sunapee Lake several thousand young Bluebacks. Shortly after that came the discovery of the white trout or golden trout *Salvelinus aureolus* now famous the world over, and of which Dr. Quackenbos and other talented anglers have written so charmingly. Dr. Kendall does not say that the Blueback, by reason of continued feeding on smelts in Sunapee Lake, is now none other than our friend *Salvelinus aureolus*, or the far famed Sunapee trout, but speaking of the Sunapee, he says:

"There is no record of the introduction of any other fish than the Blueback which could possibly account for its presence. It has been absolutely proved that none of the products of European Saibling eggs ever reached Sunapee Lake. If not a Blueback or a Saibling and not indigenous, where did it come from? It is quite possible that the Sunapee White Trout was once, before

the smelts were introduced, small like the Blueback of Rangeley Lakes and on that account never took the hook and was never observed as it did not attain a large size until after the introduction of smelts; yet there is no way to prove it."

Dr. Kendall evidently does not want to commit himself on the proposition, but he can again be quoted as follows with reference to the little Blueback:

"It is closely allied to the Sunapee Lake White Trout and the Canadian Red Trout, (*Salvelinus Marstonii*) the latter having been designated by some ichthyologists as a sub-species of the Blueback, and it was at one time contended by many that the former was derived from Bluebacks that had been planted in the lake. It has been suggested that all of the nominal species of this group are really specifically identical but subject to considerable local variation in form, color and habits."

What are we to conclude from all that has been written above? The first fact is that the Blueback has gone from the Rangeleys and is probably extinct so far as that chain of waters is concerned. He is to be found in a few isolated bodies of water in Maine, so that he has not disappeared utterly from the earth or the waters thereof. Perhaps he is to be found also in far northern lakes, for he is of Arctic origin. Mayhap, in a sublimated or translated form he is now the glorious, golden Sunapee trout, for having been given a chance to show what he can do under proper circumstances, he has gone about it, to the great joy of the present day angler.

He was always a mysterious little fish. In the great economic laws of nature he did not amount to much, from our modern worldly way of looking at things, but for all that, he played his little part in the drama of existence, and only when the exquisite poise of nature was disturbed did he fall behind in the great struggle of the survival of the fittest.

The Blueback it was that helped make the enormous Rangeley trout; the Blueback involuntarily sacrificed himself to multiply the number of land locked salmon in the same Maine lakes. It may not be science, but at least it affords a pleasant thought that in a new environment, even though through the result of accident, the Blueback has perpetuated himself "by a change into something rich and strange" as the beautiful *Salvelinus aureolus* of Sunapee.

Confessions of a Market Hunter

A Story of Years of Game Slaughter and the Shipment of Tons of Birds

By "Old Camper."

RESUMING somewhat on the privilege usually extended an old subscriber I would like to ask a little space in your columns to make a few quotations from a book I was reading the other evening, and which may be a revelation to the present generation of American sportsman.

I will not weary your readers preaching a long sermon on the extracts I intend quoting, nor will I moralize over them, for the lesson is so clear that no sermon is necessary.

In 1904 there was published in Chicago a book of some four or five hundred pages, under the title "The Shadow of a Gun." The author, H. Clay Merritt, had for years pursued the occupation of supplier of wild game to the city markets. The stories of slaughter told in that book go far to explain why it is that so few birds are left to-day. In the quotations I give below, I will not endeavor to make a connected story. The period runs from wartime and before, down to 1895, when Merritt, and dozens of others in the same business found, like Othello, their occupation gone. Just read some of the following:

"On this trip we killed over one thousand birds (woodcock) and delivered nearly all of them safely in New York, but the prices were only thirty cents per pair at the highest. More sold at twenty-five and some at twenty."

"From Erie we went to Savannah and spent a large part of the summer hunting on the Island across the river and on the bottoms below the town, and in August, when we left, we thought we had killed about all the birds that were there. Our total birds made us a profit of over a thousand dollars that year."

"The spring came again. We packed about twenty thousand birds. We shipped half of them or more and endeavored to carry the rest until the summer, or when they were called for. Prices were good in May and June at about \$2.50 to \$2.75, but we were confined entirely to orders if we maintained our price, and the orders came now only from A. & E. Robbins that year."

"In the fall the season was wet, so that we added a good many more (snipe) and when the spring opened we had nearly fifteen hundred dozen. This was about 1875 or '76."

"Later in the latter part of the eighties, we received an order from A. & E. Robbins for a barrel at \$1.50 per pair, and he liked them so well he continued ordering till he had received thirteen hundred pair, all of which arrived in good order and were promptly paid for. Very many barrels were forwarded and sold in those years between 1878 and 1885 for over three hundred dollars per barrel."

"One year prices did not go up above one dollar and I did not sell. I put them in barrels and carried them over till 1884 and then shipped a carload of all kinds of game at once, in September, including canvasbacks, red heads and snipe, and we packed the car in ice and it arrived well and sold well, except the woodcock, which sold only a barrel or two at half price, and we had them returned to us in cold weather, but we never were able to dispose of them."

"We had a good many barrels of the early

snipe which we had carried over from the year preceding, and they were getting mouldy, and I could not place them on orders. We rubbed the mould off the fat birds and they sold well."

"I had at this time a large supply of fresh grass plover and I sold about a thousand dollars' worth of birds within an hour after he (the buyer) had arrived. He took what fresh snipe I had at \$3.00, a good many barrels of grass plover at \$2.00, the small mouldy snipe at eighty-five cents, and the sand snipe at twenty-five cents."

"I had a few barrels of Dow birds. They seemed to keep better as they were very fat,

when the last barrel had gone we found that we had a net profit between twenty-nine hundred and three thousand dollars on the thirty-six barrels."

"In this trip we killed and shipped fifteen hundred pairs of woodcocks."

"In 1873 our actual labors in the field, by wood and stream, ended. We had carried a gun for fifteen years and we now laid it down, never desiring to take it up again. We had in that time seen the finest flocks that ever inspired a hunter, pass out of existence. Henry County was practically denuded of game. The States west of the Mississippi River were no better off, but beyond

Why Game is Scarce To-day.

and what little mould there was, rubbed off easily enough. These brought me six dollars and a half a dozen when winter came, and I had now reduced my stock of old birds so low that I only had twenty-five or thirty barrels left of all kinds, and I considered it the best time I would have to rebuild my freezer."

"We took four or five hundred dozen quail that we had left in the spring and packed them in cans and sealed them the best we knew, and they cost us \$1.50 per dozen."

"I sent a buyer to the Illinois River in March, who gathered up, with a little outside help, thirty-six barrels, red head and canvas, six barrels being canvas and the balance red head. The canvas cost about \$6.50 a dozen and the red heads \$2.50."

"The market was in such a delicate state we could only sell one or two barrels at a time, but

the Missouri lay a great country full of every description of birds we had here except woodcocks and partridges, and these were found only in the lands further north, beginning in Wisconsin and running through Minnesota and Montana and the Dakotas, and here we turned our attention for twenty years more until 1893."

"I have seen more birds fly up in one field at one time in October, than are now living within the limits of this State (Nebraska) and in one instance in Stark County on a cold day in early winter I have seen acres covered with the birds as thickly as they could sit. Along low valleys like the Edwards River, the birds would gather at the approach of snows in such quantities, that they covered ground for a distance of a mile in length, and in 1861, north of Mt. Pleasant, some fifteen or twenty miles, I have seen the fences at the first fall of snow covered with chickens

for a whole mile in a straight line without a break."

"We kept them in limits as much as possible, killing the outside birds first, and in this way many flocks slept their last sleep. Many times a day we would secure a whole flock, or nearly a whole one, at one firing, and fifty to seventy birds was a usual day's hunt."

"In the fall they sold promptly at \$1.00 per pair. Then I put up more partridges, five barrels, placing them alongside of frozen turkeys. When the turkeys were sold I did not realize on two cars as much profit as I did on the five barrels of birds, when I discontinued packing poultry entirely. Along after the early 80's Col. Bond was buying large quantities of frozen partridges from Minnesota, and they were whole birds, but the market was full of them. I commenced buying of him and packed away several thousand pair at about 16 to 20 cents each. They sold well in the fall following at \$1.25 per pair, and later at \$1.50 before the fall price dropped again. Markets had now improved so much, trade was stimulated and a new dealer appeared in St. Paul with whom I connected later, and who, in a few years, monopolized the North-western trade. I took several thousand pairs of him at \$1.25 per dozen."

"The Great West has seen but one happy

Chariton Bottoms, immense numbers were killed. At Beardstown and Burlington thousands were shipped. Only in the last ten years have the numbers commenced to fall off. You will not now collect in the whole State of Illinois as many as we used to get in one week in Henry County in 1860."

"Somewhat about 1885 we had our last flood of ducks. They were in surfeit, mostly mallards. The waters of the Mississippi were congested with them. The same occurred along the Chariton in Missouri, and doubtless many other points. The birds were not hard to reach. It was winter time and the slaughter kept up until it was nearly spring. As one flock was destroyed new ones came in. Whole carloads were killed and sent to market and sold at ridiculously low prices. Where freezers were to be had, hundreds of barrels were carried over into the next year. If you can believe that short time destroyed them altogether as it did the pigeons a little later, then you have no need of hunting or of laws."

"The best hunters killed as high as one hundred birds each in one day and in one season when a swivel gun was brought into use it was reported that fifty or more blue wings were often killed at one shot. Good teal shooting was then

the same trade, and that his tales of shipment of thousands of dozens of birds, could be duplicated hundreds of times over!

When our younger sportsmen ask where the game has gone, let them pick up books such as the one I have been quoting from; let them go over the early files of *Forest and Stream* and then if they feel that the laws now are too repressive and that ducks, for instance, should be shot during the spring season, they may understand why it is that stringency of statute is absolutely necessary to preserve the small amount of wild life we have.

What might have happened had it not been that *Forest and Stream*, more than twenty years ago, succeeded in forcing on the statutes of this country the non-sale of game proviso, that put Merritt and his class out of business, is only to be conjectured, but so nearly a certainty that it may be said that the lead taken by *Forest and Stream*, supported by thousands of true sportsmen the country over, is the sole reason we have to-day for thankfulness that any game is left. The older sportsmen of America know what your good journal has done; the younger ones realize it only imperfectly, and become impatient sometimes at your editorial attitude of conservation, but if the truth could be put before them they ought—and doubtless would—want to take off their hats to the grand journal that has saved them something for their enjoyment to-day.

GUIDE BOOK TO GLACIER NATIONAL PARK.

Because of the increasing interest in Glacier National Park the United States Geological Survey has just published, as Bulletin 600, a guide to its geology and scenery, by Marius R. Campbell. The scenic features of the park are truly alpine in their character, consisting of a wonderful combination of rugged mountains, valleys bounded by almost vertical walls from a few hundred to more than 4,000 feet in height, glaciers perched among the summits in protected places, beautifully timbered slopes, leading down by graceful curves to the bottoms of the valleys, and scores of lakes that are unsurpassed by any to be found in sunny Italy or the more rugged regions of Switzerland. This rare combination of scenic beauty is found not alone in one valley of the park but is characteristic of them all, and it is difficult to select any particular part that is more beautiful than the others.

IT IS THE CAT!

Naturalists statistically rank the *felis domesticus* as third in the bird destroying agents, holding every roaming cat responsible for the lives of at least fifty birds a year. A game warden who reports 200 quail killed by a mother cat in less than a year on the game preserve, advocates the wholesale extermination of cats under the supervision of a game warden. The value of the cat to catch mice or rats is disputed by a bird enthusiast, who maintains that this Nero of the animal world will hush forever the joyous song of any little feathered chorister, simply for his own amusement when not in need of food. When he dines he goes after a cold bird in preference to any other delicacy, and will catch mice or rats only as a last resort.

Taking the Spoils to Market—A Later Method.

hunting ground. We do not know where it will ever find another. Henry County, in the valley of the Mississippi, has held more game than any land of its size in the world. If the myriads that have possessed it should lift up their wings like the cherubim in Ezekiel, the thunders of their voices would drown Niagara."

"We calculated there was killed in Illinois in those thirty years no less than two thousand dozen each year, and the market was large enough to take and consume them all at paying prices."

"The question might be raised whether the summer shooting has not done more harm than all the laws have done good. The killing of summer birds has run into the millions in Iowa and Nebraska, and Minnesota, and in Illinois has approximated a ratio nearly as great."

"There is no country where greater bags have been made than in Henry County. Many times have one hundred (jack snipe) been taken in a day and exceeded. In one case a hundred and thirty were killed in one day with a muzzle loader on Mud Creek. Southern Illinois was a fruitful haunt for them many years. The Carlyle Bottoms were famous. In Missouri, along the

the rule in October until away along in the 80's."

"In October the quail were put on the market, a large amount of them, and sold well. Prices continued high all the season, the highest for chickens and quails at that time we had ever known. Buyers took stock readily and put it into consumption. By the time the spring opened we had realized out of it over \$20,000."

And so on, in sickening detail, the pages of the book from which the quotations above were taken, go on to tell of a business that ruined the greatest game country that ever existed in the world. Now, there is no need to excoriate H. Clay Merritt individually. The picture of him published in his book shows him to be an amiable, mild sort of citizen, something after the Uncle Sam type. He pursued, so far as the law was concerned, a legitimate business, and probably felt that he was doing no more evil than the ordinary stock farmer or poultry raiser. But just stop to think that he was only one of dozens and perhaps hundreds of men following

“Whippin’ The Cat”

A New Uncle Lisha Peggs Work Shop Story

By Rowland E. Robinson

An unpublished story by one of Forest and Stream's most famous former contributors, now deceased. The manuscript was discovered recently in Forest and Stream's library. The story will prove a treat to the admirers of a writer the popularity of whose books is steadily increasing. "Whippin' the Cat," it may be explained, is a Yankee term for one who traveled around the neighborhood working at his trade.

UNCLE LISHA PEGGS, the old cobbler, was sweeping the floor of his shop, which was an unusual occupation for him to be engaged in. It was not that feminine hands sometimes performed it, for they were never permitted to disturb the disorderly order of the place, nor subjected to the temptation of sacrificing one precious scrap on the altar of neatness. The sweeping was never done by anyone but himself and then only when there was nothing else to do. He was not making what could be called by any stretch of courtesy a “clean sweep” but only clearing the accumulated litter from the main lines of travel and the places most frequented by customers and guests. From such parts of the floor the rubbish was pushed with the shop broom, which through varied service had become more a scraper than a sweeper, into a heap in an especially allotted corner and in lesser piles under the fixed articles of furniture, the shoe bench and the box stove. Now he stooped laboriously, using the broom as a support, to pick up a scrap of sole leather or bit of upper leather that might serve for a lift or patch and tossed them into their appointed place.

As he turned about and viewed with satisfaction the ground he had gone over, the door opening into the kitchen was pushed ajar and the

kindly old face of Aunt Jerusha appeared, wearing an expression of amused interest.

“Wal, Lisher, haow be you gettin’ along?” she asked. “Why! you’re slickin’ up turrribly.”

“Oh, I do’ know,” he said, still reviewing the result of his labors with modest pride, “It don’t pay over ’n above tu be tew slick.”

“You le’ me sweep aout for ye, father,” she said, venturing a step beyond the threshold.

“No, I won’t nuther, let nob’dy. It don’t want tu be swep’ aout, only jest swep up, an’ not get ev’thing scattered hither an’ yon so nob’dy can’t find nuthin’. I wouldn’t be a foolin’ away my time a sweepin’ if I had a stitch o’ work tu du, but I han’t an’ I do’ know what ’s the matter ails all the folks erless they made up the’ minds tu go a barefoot.”

“Wal, father, I s’pose most ev’ybody’s busy a hayin’. They’ll be comin’ tu get shod up for winter afore long.”

“I do’ know ’bout ’t. I consait it’s them durn’d store boots an’ shoes ’ats tu the bottom on’t; them ready made, half made, slung together consarns, folks hes took tu wearin’. I sh’d think ’spectable folks ’ould be ’shamed tu be seen with em on, the paigs a grinnin’ julluk a Jessie* cat ’twixt soles an’ uppers, afore they be’n wore a week. But they haint, an’ I do’ know what the country ’s comin’ tu.”

—
*A Yankee conception of “Cheshire cat.”

“O, it’ll all come right, Lisher, you see if it don’t,” Aunt Jerusha said with exasperating hopefulness.

“Good airth an’ seas! What’s a goin’ tu—” he began in impatient outburst which his wife suddenly suppressed by a cautionary motion and word.

“Hark! Who is ’t a hollerin’?” Both of them now realized that the rumble and clatter of an approaching wagon had ceased in front of the house and some one was calling lustily with variations of emphasis.

“Lisher Paiggs! E—lisher, E—li—sher Paiggs!”

“Why, if ’t ain’t Joel Bartlett.” Aunt Jerusha looked across the kitchen through the open outer door and saw a middle-aged man in Quaker garb of coarse brown cloth and ingeniously ugly pattern. The sleeves of the single-breasted, straight-collared coat were short and scant. Its cut away skirts narrow, stiff and angular. It was evidently the owner’s best, for no other would be worn with the well-kept broad brimmed hat of fine drab fur. The shrewd expression of his smoothly shaven face was considerably lessened by the manner of wearing his hair combed down over the broad forehead and cut straight across an inch above the shaggy brows, beneath which his keen gray eyes shone with a gleam of impatience. He stood in the wagon holding the reins with one hand and resting the

other on the back of the treble armed wagon-chair while he awaited an answer to his hail.

"What on airth is Joel a makin' sech a haowdedu for?" Uncle Lisha asked, tossing the broom into a corner. Then he went out to the road, while his wife hovered near the door with ears alert.

"Wal, I say for 't, Lisher, I should think thee an' thy folks was a gittin' hard o' hearin'," said Joel.

"You didn't stop a puppus tu tell us on 't did ye, Joel? No, mother an' me was both on us in the shop, and Huldy's took Bub an' gone a barryin' an' the men folks is down in the medder finishin' up hayin'."

"It's time for folks tu be done hayin'," said Joel. "We got all slicked up day 'fore yist'dy an' yist'dy I went down to Leakefield tu the fact'ry with my taglocks an' pulled wool. They're a makin' cloth at's very suitable for Friends; fullcloth for men folks an' flannel for women folks, betwixt butt'nut color an' copp'ras color an' the sheep's gray is plenty good enough for world's people tu go tu mill or steeple hausen in. Thee tell Samm'l he'd better take his refus' wool down there an' let 'em work it up on sheers; he'll du full better 'n tu sell tu the wool buyers."

"But that ain't what I stopped tu tell thee. I staid last night tu my cousin's, John Bartlett's. We aint in unity but I'm allus welcome tu his haouse an' he tu mine an' Rebekker is an amazin' good cook. Jemimer ain't no better 'thaut 'be its rye 'n enjin, an' I don't b'lieve in kerryin' religious diff'ances tew fur."

"Not when it comes tu choosin' 'twixt free lodgin's u' a tavern," the old shoemaker suggested.

Joel blandly ignored the interruption and continued, "An' I felt clear 'at my hosses would be well took care on. But that ain't what I stopped tu tell thee, Lisher. We sot up late last night. I should say it was nigh ontu ten o'clock afore we went tu bed, a talkin' about Friends 'at ben cool toward one side an' t'other sence the Separation, an' one an' t'other on us, havn't knowed much an' 'em sence."

"But this hain't what I stopped tu tell thee, Lisher. The fact on 't is they be turribly on 't daown there in John's neighborhood for someb'dy tu go 'raound an' make up the boots an' shoes. The man 'at they've allus had shoemaker for 'em hes hed trouble in his fam'ly an' give way tu drink, an' half the time is so disguised in liquor 'at he can't du no work, an' t'other half he do' want tu. Naow I reckoned thee hed n't no gre't stress o' work on hand jest naow, an' I tol' 'em I thought like 'nough thee'd go daown an' get em shod up. Thee can think it over, but I can tell thee aforehand they're honest, clean folks if they be Hicksites an' thee'll be paid promp' an' well kep'."

"Why, Lisher, it is just a streak o' luck," cried his wife.

Uncle Lisha stooped laboriously and picked up a scattered stalk of timothy hay and pulled the dried head to pieces while he considered before he answered.

"Wal, Joel, if them 'ere Hicksites 's any tougher 'n your breed o' Quakers, I guess I hed n't better resk.it."

Joel did not notice the twinkle in his eyes, nor Aunt Jerusha's admonition, "Lisher Paigs,

you quit a foolin'," but took his words sincerely and sat down in the wagon chair to explain.

"Wal, naow, I'll tell thee, Lisher, they hev ben led astray by Elias Hicks an' run arter strange idils an' they du set at naught sartain plain teachin' 'o Scriptur' an' many formerly but they be well meanin' folks in the main an' hold to the usages of ancient Friends in plainness of speech an' dress an' bear testimony ag'in war an' hirelin ministry an' so fo'th an' so fo'th. If thee shet thy ears tu false doctrine thee won't run no resk."

"Good airth an' seas!" Uncle Lisha roared, "What ye s'pose I keer for the dry bones you an' them is a pickin'? Sho! I han't afraid o' none o' your doctrines. I was a thinkin' it 's a good many year sen' I 'whipped the cat' an' don't scarcely know 'bout startin' in again."

"Why, I don't see why thee won't be just as comf'table workin' in other folks' haouses as in thy shop."

"You c'n go jest as well as not," Aunt Jerusha urged.

"What be the folks up here goin' tu do, go barefoot?" asked Uncle Lisha, seeking further objections.

"Let 'em du 's they kin. They've hed time enough," his wife announced.

"I guess thee'll conclude tu go." Joel said, gathering up his reins and tightening the habitual pucker of his mouth to chirrup to the horses. "Yes," he repeated as Uncle Lisha shook his head dubiously, "I think thee'll go; Jerushy's willin'," and he drove away satisfied that his errand was well accomplished.

The old couple watched Joel's lumbering homeward progress as far as the turn of the road and then took the path to the house, Uncle Lisha leading the way at the deliberate pace of one pondering a weighty question, while his wife, throwing her checked apron over her head to shelter it from the slanted rays of the August sun, followed close at his heels.

"I do' know 'baout leavin' folks here tu the massies o' that 'er shoemaker tu the village an' Clapham ur' his mis'able ready made stuff," he said as he reached the door and faced about.

"The idea o' makin' up shoe leather 'ithaout takin' no b'dy in particular's measure for it! 'Tain't a usin' folks so well as hosses, but they'll go an' buy the durned hove-together paigs an' split luther shinin' showy things."

Jerusha absently regarded the flight of a locust that arose with a dry clapping of its husky wings till it alighted in the dust of the road and resumed its shrill celebration of the drouthy day, before she replied.

"Why, Lisher, the' won't nob'dy 'at you've made for go nowhere else, you may depend. It 's no wonder them folks daown tu the lake wants you tu come there, for I da' say they han't hed a comfortable boot or shoe tu the' foot sen you whipped the cat there."

"I never done no work for them Quakers," said he.

"Wal, then, they hain't never hed none, an' it's high time they did."

The judicious praise so honestly rendered that it was not flattery and a final word that—" 'twas reely his duty tu go," so far influenced Uncle Lisha's decision that it scarcely needed the confirmation of the family conelave that evening.

"Why, if you want tu go, it's jist what you was mournin' for this mornin'—some shoemakin' tu do," Huldah declared, while Sam said:

"Seems 's 'ought it wouldn't hurt none tu set still a spell. You paig away pretty stiddy, Uncle Lisher. It's tew bad the' haint no fishin' naow—fishin' an' huntin' comes when the work is piled up."

"No, the' hain't no fishin'," the old man responded, "and when the' hain't, I e'n rest full better wi' my awl an' a waxed end in my hands n' some good luther tu use 'em on, 'an I can a settin' still suckin' my thumbs. I do' know, I guess mebbly I'd better go an' try it."

"Wail, if you think so, there's one thing 'at favors it. We're a goin' tu finish toppin' aout the stacks tu morrer, an nex' day I'll load up you an' your kit an' the tag locks an' pelts an' take ye all ri' daown tu one job."

On the morning of the appointed day the lumber wagon was at the door, loaded with Uncle Lisha's leather-seated bench, a brass nailed hair trunk containing his tools and working clothes, a flat baie of wobbly pelts, some bundles of tag locks tied up in blankets and a fleece each of black wool and white for carding up for stocking yarn. Sam was already in the wagon and he cast a critical glance upon the cargo while he awaited the embarkation of his traveling companion who was now taking leave of the family. For all his previous extensive travel, the old man was a good deal upset by the prospect of the journey so suddenly undertaken and suffered much anxiety lest some necessary article had been forgotten. This was not lessened by his wife's many injunctions and enquiries.

"You got your handana han'kercher, hain't you, father," she asked, and he looked into the bell crown of his beaver to assure himself that the article was bestowed in its proper place.

"Wal, the's tew so'yd'y cotton han'kerchers in your trunk an' the's tew clean dickeys for Sundays an' one extry white shirt besides the one you got on," said she, taking account of his outfit on her fingers, "an' a pair o' new socks for best an' a pair o' ol' ones, an' a ball o' yarn if you need any mendin', but you won't a settin' still. The's a darnin' needle stuck in to 't. An' le' see: Have you got your shavin' tools? You want tu shave ye twice a week."

"Good airth and seas! Mother, you don't want tu hev me make 'em think I'm a widower, du ye, a dressin' up an' a shavin' my face tew times a week?"

"Wal, it don't signify, Lisher, you be a nice lookin' man when you're fixed up, an' allus was, an' you want tu du yourself jestic," she said, fondly regarding him with a slow and careful inspection from the crown of his head to the bottom of his scant trowsers, dwelling longest and with most pride on the brass buttoned blue coat whose high collar and tight sleeves and the demeanor suitable to its splendor, were constant discomforts to the wearer.

"That coat looks e'ena'most as well as 't did fifteen year ago, 'an' you du, full better, Lisher," she said in final approval.

"An' I feel jest abaout as well in 't as I ever did an' that hain't a sayin' no gret," he sighed, craning his neck to relieve it from the friction of the collar. "I swan tu man, I'll be glad an' thankful tu get intu shirtsleeves an' luther apron ag'in! Yes I got my razor an' my strop an' my brush an' soap all in my trunk an' naow I b'lieve I've got ev'y'hing, we might as well be a goin'. Good bye, mother, ta' keer o' yourself."

He shook his wife's hand and she looked wistfully in his face but she knew he would not kiss her in the presence of witnesses. He had never done that since the old romping games at paring bees and huskings.

"Good bye, Timor'ly, goo' bye, Huldy, an' you, tu, Muther. But haow be Bub an' me a goin' tu git along wi'aout one'n' other?"

He took up the little boy in his arms and lavished Aunt Jerusha's kisses upon the chubby berry-stained cheeks. Then he put down the wondering child and climbed over the wheel into the wagon and without looking behind was driven away at a brisk pace.

"Lisher! Lisher Paiggs!" Aunt Jerusha lifted up her voice shrilly till she made it heard by the occupants of the wagon above the clatter and rumble of the vehicle and Sam drew rein.

"The's a—bag—o' boneset—for—you—tu—take in the back—left—hand corner—o' your trunk if you kitch cold or git—bilious," she called, measuring the words in a high keyed monotone. "An' a bottle—o'—opodildoe if ye—sprain ye or anything an' a—roll—o'—Conklin salve—if ye cut ye."

Uncle Lisha looking backward nodded three slow signals of comprehension. "Wal, I guess that's all an' you e'n go 'long Samm'l," he said after a moment's watching and waiting and then with tender contempt as the wagon resumed its noisy progress: "Good land! she's as fussy 'baout me as if I wan't more'n ten years ol'!"

Presently Aunt Jerusha called again quite as loud but failed to make herself heard.

"I'd outo ha' tol' him tu tell 'em tu put more bed clo's on if he slep' col'," she said in a tone of self reproach after watching intently till the failure of her attempt to call another halt became evident. "He wouldn't never as' for 't if he froze but mebbly they'll think on't ef they sense 'at the nights is a gettin' fallish, if the days be hot."

"Oh, they'll take good care of him, I'll warrant ye," said Huldah, confidently. "Quakers is g'ret hands for makin' folks eom'table."

"Yes, I spo' so—if folks is members," Aunt

Jerusha admitted, "but s'posen' they're world's people?"

"It don't make no difference to 'em," Huldah answered. "Ev'b'dy knows though she was turrible shy o' lettin' it be known haow Jemimy Bartlett russed that frozen footed runaway black man, all winter, an' he wa'n't no Quaker, Methodist 'or Babtis' I guess, by the way they said he use' tu holler an' sing which was dre'ffle tryin' tu her an' Joel, which they be turrible sot ag'in' singin' except the tone their preachin' is set tu."

"An' distressin' sort o' music it is, but the' hain't a better woman a livin' what Jemimy Bartlett is, go where you will, an' the's sights o' good folks 'at is wus 'n Joel."

"Uncle Lisher 'll be took good care of, jist as he is," Huldah again asserted. "An' I shouldn't wonder a mite if they made a regular Quaker of him, an' he come back wearin' a broad brim hat an' a shad belly coat an' theein' an' thaouin' like all possessed."

Aunt Jerusha held up both hands in pretended consternation. "An' I shall hafter wear one o' them sugar scoop bonnets!"

Thus discoursing, the women watched their husbands' departure till the wagon was but a black speck on the dusty road, and its noise felo to a faint disjointed clatter, scarcely distinguishable from the clattering of a kingfisher that echoed along the shrunken thread of Stony Brook.

Then, accommodating their steps to those of the little boy who toddled before them and climbed the threshold on all fours, they entered the silent home.

The deserted shop was pervaded by a Sunday silence broken like that by the idle buzzing of flies, and the rustling wing beats of an impounded dragon fly that ineffectually battered at the dusty window panes.

"Ho humm, suzzy day!" Aunt Jerusha sighed as standing in the door, she regarded the untenanted room. "It doos look lunsom wi'aout father, but it's some comfort to smell the luther—an' say, Huldy, he can't hender me a blackin' that stove naow. It's redder 'an a pieny."

The travelers had not gone far on their way when they descried the familiar figure of Antoine Bissette at a little distance before them, picking on the fence corners of the roadside with short jerky impatient clips of his scythe, till, having conquered the herbage in one of those cribbed confines, he indulged arms and eyes in the luxury of a few full sweeps that laid wide ranks of scattered timothy, crowding ferns and thistles and startled a flock of gold finches to sudden flight, like a flurry of wind blowing yellow leaves.

"Wail, if there han't Ann Twine," said Uncle Lisha, "an' I'm daoun glad on 't, for it lets us off kinder gradu'l, a meetin' someb'dy 'at b'longs in the neighborhood 'fore we get clean out 'o sight on 't. Hellow, you critter! what you doin' way off here?"

When the sound of the approaching wagon outgrew the cropping swish of the scythe and attracted Antoine's attention, he found it necessary to whet his blade, facing the coming vehicle and keeping his eyes as much upon it as on the course of the rifle along the scythe edge, for he was as inquisitive as any native and as curious concerning the "pass."

He recognized the travelers before Uncle Lisha's stentorian hail gave proof of identity and

stood staring at them with the rifle dropped at arm's length. This companion piece of the now almost obsolete scythe was not a fire arm, but a flat piece of wood coated with sand or emery, and used like a whetstone. In its earliest form, it was encased with tallow and dipped in sand as often as used, but later, the rough surface was made more enduring by an undercoat of glue.

"Bah gosh! Onc' Lasha! Where you go, all dress up so for? Been meetin's, fun'ral's? vis'tin'? Ah do' know, me," he shouted as the wagon stopped in front of him.

"Wal, you guessed thrice times an' hain't hit it ary once," said the old man. "You hain't much of a Yankce, Ann Twine. 'I'm a goin' daown to Lakefield a missionaryin' 'mongst the Quakers, a workin' on the' soles, so tu speak. They sent for me, Ann Twine."

"Bah gosh! that Quaker's pooty bad up, 'ant he? Well, he sent you back pooty quick, prob'ly. Ah hope so, 'cause all me goin' be lonesick for you. An't it, Sam?"

"Oh, I'll be back tu rights—but du ye call it hayin,' Ann Twine?"

"Yas, dat was be de nem of it," Antoine replied as he complacently regarded the short swathes of mixed herbage. "Dey was more brake an' t'istle as he was hay, but he mek heat for mah caow more better as snow hank, prob'ly, ant he?"

"Yes, I s'pose so. Wal, Ann Twine, ta' keer o' yourself till I get back tu ta' keer on ye. Go ahead, Sam'l."

They passed familiar homesteads and came to those concerning whose present ownership they were in doubt—but of whose past history the elder man could inform the younger, till at last the road led them over lessening hills and widening levels where slower streams meandered, to a strange region whose inhabitants stared curiously at them between whom and them there was only guesswork as to each other's business and identity. The fields and woods with familiar crops and trees were more like old acquaintances. Homelike swallows launched forth from barn eaves, skimmed the shorn meadows or billowy grain fields, meadow larks sang the old song from stack peaks and fence stakes and the cackle of the flicker echoed along the woodside.

A little after noon they made an abrupt descent into a narrow valley through which ran a stream that had not yet forgotten its joyous song of the mountains that were its birthplace and here they came to the factory. This was a naked weather-beaten wooden building staring with rows of blank windows at green fields, bright waters and wooded banks. Inwardly it was shaken by the throb of looms and continual jar of carding and spinning machines and filled with an atmosphere burdened with a heavy odor of wool and woolen stuffs.

The two men ventured into the noisy interior with considerable trepidation, running the gauntlet of machinery and the eyes of a dozen widows, spinsters and girls before they found the proprietor and arranged for the disposal of the wool.

It was good to get into the fresh outdoor air again where the clash and whirl of looms and spindles was overborne by the pleasant sound of falling water and bubbling rapids.

"Good airth an' seas!" said Uncle Lisha after refreshing himself with several long-drawn breaths of pure air. "Jest think o' women 'at was raised on a farm a smudderin' in such a tormented rattle trap. I'd a durn'd sight 'd ruther du haouse work for my bread 'an milk kickin' crows in the rain."

"I s'pose they think it's respectabler," Sam suggested, whereat the other snorted contemptuously and repeatedly, till his thoughts were diverted from the subject by new objects of interest in the neighboring hamlet, through which they now passed.

When the hill top was gained, the horses, pleased with the unaccustomed level road took a brisker pace. Now and then the travelers ran through openings in the eastern hills, the noble outline of their familiar Camel's Hump, far away in the August haze, while to the west, Lake Champlain shimmered between long stretches of forest on either side and beyond rose range upon range of the sharp Adirondack peaks.

"That 'ere lake looks so high up, seem's 'ough this crik water 'ould git discouraged tryin' tu reach 't," said Sam.

"Lak 'nough water hereabouts does run up hill," said the other. "Everybody uster call it an'

I p'sume tu say they du yit, goin' up tu Cannedy an' daoun tu Fort Cassin an' Craoun Pint."

"Wall, there's the maouth o' Little Otter an' Lewis Crik's is close by, an there's Garden Islan' an' them big pines wi' the cranes nes's showin' in the tops. Mr. Bartlett tol' me 'at when he was a young man, he'd caounted fifty nes's f'm his front door, more'n three miles away. By the Gret Horn Spoon! I'm glad tu see this all ag'in," and Sam's eyes wandered over the beautiful scenes with satisfaction. "Yes, it does look neat, I can't deny, but I do' know as any better'n your brooks an' woods an' clus by hills tu hum. I was just summisin' 'at Bub hed waked up f'm his arter dinner nap an' was stubbin' on't in 't the shop, 'baout, naow," and the old man looked longingly toward Shillhouse mountain, and the eastern sky.

"Wal, here we be," said Sam, drawing into the yard around to the back of the well-kept Bartlett homestead.

"Ev'ry thing's been swep' n' dusted," said Uncle Lisha looking over the neat premises and brushing the dust off the left sleeve of his blue coat. "I shan't das't tu wear my ol' clo's an' luther apron, I know I shan't."

The hearty welcome given them by Friend Bartlett and his placid-faced wife soon placed the newcomers at their ease.

When the morning dawned Uncle Lisha, after some uneasy pondering, declared to Sam, who was his bed-fellow, "I'm a good min' tu chuck the hull kit back ont' the wagon an' go hum wi' you. Good airth an' seas! It's a month o' Sundays sence Jerushy hollered arter me 'baout the boneset an' things."

"Wal," said Sam, drowsily, awakened from the luxury of a morning nap, "I'll be daoun again, arter ye, afore a month of any kind raly goes by."

Two hours later, a few weeks in the lowlands seemed a different affair. The familiar shoe bench was established near an eastern window of the big kitchen. Rolls of leather were brought down from the garret and duly unpacked. A small tub was filled with water, and the edge of the cutting knife was tried to see if it was properly keen. At ease in his working clothes, the old shoemaker saw Sam start on his homeward journey with but a faint homesick longing, and then turned cheerfully to his work.

Shooting and Gaming Along Southern Waters

A What to Take and How to Use it Article

By Dick Swiveller.

(Concluded from February Forest and Stream)

SATURDAY, Sunday and Monday found us in camp waiting for the river to go down. Sunday evening there was a very perceptible diminution in the water. Monday morning showed us we must make ready for an early start Tuesday, and shortly after daylight that morning found us under way, Sam, Alex and myself in the shooting boat, and Joe in the batteau loaded with the camp plunder, who was instructed to keep half a mile back of us, and thus not disturb the ducks that might come from up the river toward the shooters. Sam took his seat forward, Alex was seated in the stern, paddle in hand, and I seated myself behind Sam. Smoothly and silently the craft drifted down with the easy current, skirting willows close to the bank. Everything was propitious for a good day's sport. Silently, for half a mile or so we floated, when Sam's sharp eyes detected a bunch of mallards fifty yards away under the willows and an instant later I saw them. Alex's strong arm kept the boat on her course, with scarcely a ripple; we glided on toward the birds; twenty-five yards or so was reached and at this moment the ducks, alarmed, flushed from under the cover, presenting their sides, a fatal position. Quickly selecting a bird I fired, and instantly I carried another to my left towering among the wateroaks. As I glanced along the rib of my gun, there were two ducks in line, and as the trigger was pressed two fine mallards pitched down. In the same glance around I saw Sam make a beautiful shot with his second barrel. The duck, a mallard drake, flew straight away for forty yards or more, curving to the left. At the report of Sam's gun the bird fell, killed stone dead in the air, and lay motionless upon the water, proving the perfect aim of the shooter, for at that distance it was necessary that the bird be in the center of the pattern to be killed so clean.

Scores of ducks were now flying; mallards, teals, spoonbills, wood-ducks, a few black ducks, widgeons and pintails. Canada blacks and red-head ducks do not frequent the Savannah River and some other southern rivers.

We hugged the point we had now reached, and, well screened, took the wing shots as they were presented. A bunch of teals flying low, thirty yards away, left five of their number behind. Next a flock of mallards charged our position, and in the confusion of retreat forgot to carry off from the field three dead and two wounded. All were retrieved. A mallard drake, flying down stream fifty miles an hour, was caught by Sam, a splendid shot fully forty yards away. Sam said he held ten feet or more ahead

of that bird. A very large flock of mallards next made an attempt to dislodge us by a flank movement from the shore side. We saw them just in time. For an instant the situation looked serious for us, but alarmed at the close proximity of the enemy our fire was delivered with so good effect as to destroy their line and leave four of their number dead and one wounded. Sam and I both made fine double shots on this flock. It was great sport and continued for half an hour or so.

A lull now occurred in the firing, and as we had almost made up our minds to drop further down the river to the next bend, opposite bank—"Marse, marse! fo de lan sake flatten out; marse, down the ribber," came in a nervous whisper from Alex. We looked and counted seven Canada geese coming straight up the river twenty feet or so above the water, and, by all indications, looking for a place to alight. We all crouched low, out of sight, and with suppressed excitement watched the great birds fly up within a hundred yards or so of us, and strike the water with loud "honks" of satisfaction. That they had not seen us was evident.

Now commenced a season of patient waiting and watching for the geese to swim within range, and a tantalizing indifference on their part as to how long we should wait. Ten, fifteen, twenty minutes passed, still they swam, dove, fussed and washed themselves. At last the leader gave the signal to go ashore. Then, with heads erect, and stately mien, they made for a point not forty yards from us. A gander was apparently leading the flock.

Suddenly, as if overcome with a feeling of fear or wonder; as though the dread presence of death hovered in the air, he paused, and gave a brief penetrating glance over our way. The wary bird discovered something that caused him to stretch his pinions and at the same instant give the alarm note that sent the whole flock into the air. Something impelled me to look back at this moment—a slight movement, as it were, at the instant the birds left the water—and there was Alex partially elevated on one of the boat seats. In the excitement to observe the movements of the geese he had permitted himself to be seen.

"Alex, haven't you—"

"Massa Dick, I's a—"

"Have you not been on these trips enough to know?"

"Ise agwan ter tell yo, Mars Dick, dat dem ganders wuz a—"

"Never mind, Alex," said Sam, "do better next time. I do think though, if you had kept out of sight we would have had a couple of shots. Think of the roast goose you would have had. Let the boat float along."

Slowly we drifted, and at some distance fur-

ther on crossed to the opposite side. Rounding a point further down we came on a flock of greenwing teal and bagged five as they flushed.

Blue and greenwing teal afford fine sport, and as a table bird are excelled only by the canvas-back and redhead, wild celery fed.

Keeping close to the shore for half a mile further, we located eleven ducks—six mallards, two wood-ducks, and three black ducks, and had a number of shots in which we failed to score. Drifting, looking for a good camping place, we rounded a sharp point and came upon half-a-dozen broad bills at the mouth of a small creek. They arose from the water about twenty yards distant. Sam killed two in beautiful style—right and left quartering. I missed an easy bird with my first shot and killed clean with my second, forty yards away, a far more satisfactory shot than if I had scored a right and left at half the distance. At this moment, turning to give Alex some instructions, I found him staring at the sky, mouth open, eyes glistening. I turned in time to see Sam make a beautiful and sensational shot, and bring down a solitary Canada goose that at that moment came around the point high in the air, coming up the river. "I take off my hat to you, Sam. Quick eye; center of the choke-bore pattern; killed clean." Retrieving our game we landed on the Georgia side and made camp by 4 o'clock. Joe soon hove in sight. An hour later we had a good supper; then wood was added to the fire and before its brightness and warmth we smoked the blessed pipe of peace and comfort, recounting the happenings and sport of the day. Happy days in the long ago, now gone forever. Now I can hear the sighing of the wind in the pine tree tops and branches, the rippling of the water that lulled me to sleep those nights on the banks of the river. Happy days and times cannot go on forever in this world. So then, in the midst of trouble and stress let us be thankful for the happy hours allotted to us and make the most of them.

The next morning, invigorated by perfect rest and sleep, I walked to the river and bathed; watched the sun rise gloriously, giving token of another fair day. It was the beginning of a good day's sport we had two miles below our camp of the night before. No shooting was had to speak of until we reached the edge of a vast cypress swamp on the Carolina side of the river. The swamp was flooded, making it possible to penetrate it some distance with the boat. As our party approached the east shore, the quacking of ducks could be plainly heard away back in the swamp, and numbers were seen from our position. We worked our way in to a huge fallen tree a dozen yards from the river. There were now hundreds of ducks in sight, feeding, preening and enjoying the pleasures and ameni-

ties of amphibious life; too far away to shoot and provokingly near to look at. We remained silent watchers for the space of ten minutes or so, endeavoring to conjure up some plan to get the birds within range. I noticed the current of the water set quite strongly to the east by south, showing it must have an outlet into the river further south of us. Joe, having seen our signal of departure in shore, was now within speaking distance. Being a river man in different capacities, he at once solved the problem.

There was an outlet less than half-a-mile below us, the mouth of a creek, up which at this stage of the water a boat could be paddled. It was soon arranged. Joe was to take the shooting boat, it being easiest to handle, go below and enter the outlet, get on the other side of the water fowl and drive them up to our position. The driving required skill and judgment, the idea being to paddle on the ducks just fast enough to keep them moving and at the same time not cause them to take wing. It did not seem possible that this could be done with so wild a thing as a wild duck. It certainly was beyond my experience, yet it succeeded.

The transfer from boat to boat was quickly made, and Joe disappeared. We waited, watched the ducks dimly seen far in advance, and the numerous colony of black squirrels in the trees nearby. These squirrels were the largest I had ever seen; their black, glossy coats and long bushy tails were very beautiful. One great, handsome fellow came down a tree trunk, occupied a post of observation not twenty feet away and examined the strange party to his entire satisfaction, after which, having us believe he was terribly alarmed, ran with great swiftness up to nearly the top of the tree, out on a limb, sprang from thence to a neighboring tree full thirty feet away, ran into a hole with a flash and immediately turned around and looked out.

Joe had been gone fully two hours. "Sad day iz a comin' yer day shu. Mista Josef hab made de pint," said Alex in a whisper. Ten minutes more passed, then it was plainly seen that the birds were leisurely paddling toward us. Five minutes more and we were amazed at the number of ducks. It was momentarily expected they would take wing. Well screened, we sat in the batteau and watched with much satisfaction the distance lessening. It was a goodly sight. Nearer and nearer they came in solid columns, rank on rank, spreading out and lengthening the lines as they approached the river. The moment came, and the reports of our guns reverberated through the woods. In an instant the air was filled with flying birds, frightened and fairly demoralized. Above the roar of their wings could be heard Alex's yell of victory and the crack, crack of the 12-gauges. Shot after shot was made at single birds when the bulk of the great flock became scattered, as they flew here and there, trying to get out of the woods. The first duck I aimed at was climbing up through the tree branches. I caught him, and the next moment killed another left-quartering bird. Quickly picking up the second gun, I killed two more. Sam killed five, getting two in line with the barrel of his second gun. One mallard that was always thereafter remembered as the "fool mallard," came with a rush and struck the water less than ten feet from the boat, and spinning round, dazed, demoralized and evidently unaware of his close proximity to danger, was spared

for the laughter he caused. The whole manoeuvre resulted in nine ducks; a remarkable experience and lots of fun.

While Joe was getting supper the rest of us selected and prepared the ducks we wished to send up the river to home and friends by the next steamboat. The little steamer was expected at the landing below us by 7 o'clock. We had just finished supper when she rounded the point. Alex and Joe put off and delivered the ducks, including a brace of mallards for the captain, a friend of ours.

We arrived at the Esty plantation Friday evening and by Saturday evening had camp tidied up and all comfortable. The major came and stayed a couple of hours with us and left an invitation to take dinner with him Sunday which we heartily accepted.

The fire was bright and cheerful; we felt in accord. Reclining comfortably on the blankets with the pipe to soothe and comfort we went over our adventures thus far, and concluded we were having a pretty good time though fraught with danger that brought death rather near. The major said it was a wonder we escaped.

So far as a turkey hunt was concerned we simply had to wait until Bobby found a gang that were coming regularly to the bait, and that might be a week, more or less. He had found one flock and they took the bait, but did not return. Something had startled this flock, or else they were ranging and feeding over an extensive territory, in which event we must exercise patience as to their return.

Monday the major invited us to a horseback ride around the country. Sam begged to be excused, seldom riding, being fleshy and weighing about two hundred pounds. So he joined the ladies on the veranda, the major and I departed. The ride took us through the timber by cultivated fields, to the Thomas plantation house where we made a brief and pleasant call, the major accepting for his guests an invitation from Mr. George Thomas to arrange a day to take supper at his house and spend the evening. "Evening" in the south is anywhere from two o'clock to ten p. m.

Sam and I accompanied by a colored boy and pointer dog went down the river to the sweet water marsh, in hopes of getting some woodcock shooting, after which go for the quail. We had a very substantial noon lunch in our pockets; equipped for an all day tramp and shooting.

We expected to find some fair woodcock shooting. The dog was cast off and entered the thick cover of second growth trees and bushes, and immediately pointed. I motioned to Sam to be ready. I went in by the dog and almost to him when two long bills flushed. Sam killed one, but missed his second. We worked the thick cover and open marsh and raised four more birds, two killed by Sam and two by myself and this was all we could find.

Rather disappointed at not finding more woodcock we went to the higher ground for quail. There were big brown sedge fields, old fields, some open timber, rail fences with good cover at their foot, so the ground looked good. Soon two big coveys were well scattered. The dog worked well on covey and single birds, but did not retrieve very well. The dog made up for this, his sharp eye marking dead birds. We had good sport up to lunch time and for a couple of hours later when we turned homeward, four miles or

so away. And now something happened after we had walked a mile or so. We had all climbed over an old rail fence, the dog trotting ahead. Suddenly he raced away, head well up, stopped, nosed the ground, licked his chops, advanced, stopped; and then fairly bolted to the left down through the woods. There was a flap of wings, accompanied by "Put-put" and we counted eight turkeys flying far away through the tree tops, and more we did not see, all out of range even if we had the proper loaded shells. We looked at each other, almost solemnly, then smiled, then roared. "The idiosyncrasy of *meleagris gallopavo*" said I. And said Sam: "Wouldn't that jar you."

The fine weather ruled since the storm that caught us camping on the beach. This morning we awoke to find a light rain and a dull leaden sky—a poor outlook for a day's shooting at anything but ducks.

The storm had cleared. It was about half past three, a. m., and two horses and a mule stood saddled awaiting, while Sam, Bobby and I were having hot coffee, eggs on toast, cooked and served by Aunt Tamer, an old fashioned plantation cook, and such a cook—well words fail here in any description. The recollection of Aunt Tamer's good things, will never be forgotten. Half a dozen ham sandwiches, big ones, "cut all around the loaf size," some coffee, three tin cups, all went into a haversack, so we could have a hot drink and something to eat after the shooting. Thus we fared forth to meet the most wily of game bird, to pit our intelligence against his sharp eye and ear with the chances about even of success either way.

It was starlight. Bobby led the way, we marching by file. It was very dark in the woods, we could not at times see our file leader, the horses simply followed the mule. An hour and a half later we arrived at the blind. Bobby examined the ground in front of it and found corn all right for the birds might be expected to come for the bait by the first streaks of day.

Bobby mounted the mule and led the horses back a mile or more, to remain there until he heard the guns, so sure were we that the game would come to the bait.

It was cold, the air smelt and felt frosty; we had wisely brought a double blanket; this we spread on the ground and being warmly clad in woolen jackets and cord coats we kept fairly warm. But it was chilly waiting in that long vigil, not being allowed to take exercise. Simply sit in the blind, watch and wait and converse in low tones, whispers in fact. Your true sportsman puts up with inconveniences and disappointments, he makes them a part of the sport and laughs them aside, and makes the best of the weather be it foul or fair, hot or cold.

Time passed; the long winter night was almost spent, the woods grew darker, there was an added chill in the air—the signs of coming day. A half hour passed, the woods lightened, objects could be faintly made out; in the east the gray light came and brightened. Now was the minute, the hour waited for. They might come any moment.

Daylight and the game not in sight—another half hour and then the first rays of the sun—no turkeys yet; the sun fairly above the eastern horizon and not a sign of a bird. We kept very still, knowing full well they were liable to come any moment for the next half or three-quarters

of an hour, and after that we might as well come and try it again—and that is what we did.

Bobby came an hour after sunrise. He saw at a glance the situation, thought possibly there had been firing, and he had not heard it. The canteen of water was soon converted into hot coffee. Something had happened to disturb the birds and send them in another direction. There was a great possibility, however, of their coming for the bait some time that day before going to roost; it might be any time. Sam and I concluded to remain on the ground and later walk back to the plantation house. We both knew something of forest travel. Bobby gave us some general directions and left with the horses for home. He was to return to the blind during the afternoon to see if the corn was taken and bait the ground again if necessary, and we were to try again next morning or the morning after.

We extinguished the remnant of the fire, sat in the blind, smoked, made the most of our bad luck, and finally as the air grew warmer and the sun higher we drowsed off in sleep. It was eleven o'clock when I awoke. I immediately peered out to see if turkeys were coming. No signs. I went out and examined the ground to see if the bait was taken—found it still there. On a former occasion turkey shooting, the turkeys came and took the corn while my companion and myself were sound asleep in the blind.

We awoke refreshed, ate the balance of the sandwiches and started for the house and camp.

We were to travel northwest by north; this was very plain during sunshine; but when the heavens became overcast we were not entirely sure of the right direction. Had we passed over the ground going south to blind in daylight we would have remembered land-marks and been guided by them on the return.

We traveled for an hour or so and knew if in the right direction we should be near the best plantation and the river. Finally realizing that we were in the deep forest and not near any place of abode for miles, we sat down on a fallen tree trunk. We looked at each other and grinned, and mutually admitted we were lost. We had been cognizant of this for some time, but pride would not permit an acknowledgement one to the other.

"Well Sam, my dear fellow, here we are; no grub, plenty of tobacco, no compass." "Yes," said Sam, "and a chance to stay out most of the night, and when they find we have not returned, the whole country-side will be alarmed, everyone will turn out who can blow a horn or shoot a gun, and when found there will be a great fuss over us, and a wonder why two such experienced sportsmen should lose their way. I reckon we might as well stay here until found; there is water, we will not die of thirst; there is tobacco to smoke; there are matches, we will not freeze to death—now if we had some rashers of bacon and Joe's pone bread and hot"—"Don't say any more, Sam—don't mention the real unobtainable—the good things of this life now." We knew that Bobby and others would be looking for us in time, and we would be hunted up. It was the chance of staying out all night and until noon to-morrow, without anything to eat, or hot coffee to cheer.

It was a little after four o'clock of the short wintry day; soon the woods would be darkening.

To our left the ground was rising, and the timber somewhat open. The tree trunk, on which

we sat faced that way; we were conversing very little, and had made no movement for some time. The guns were leaning against the tree trunk to Sam's left—loaded, and somewhat screened by the fallen branches.

Then something remarkable happened. I turned my head to speak and noticed Sam's face flushed and eyes staring; he said in a dead tense whisper:

"See the side of that ridge, don't move, great Caesar's ghost, they are turkeys!" Moving in almost uncertain light was a gang of the birds full hundred and fifty yards away. In this exciting moment and under the extraordinary conditions we did not know for the moment what action to take to prevent an alarm. The mental process worked fast.

Slowly—very slowly, we leaned backward until clear of the tree trunk. Steadily, surely, Sam drew the guns over and placed them on the ground near at hand. We were now fairly well hidden by the tree trunk and branches. Slowly bringing our eyes to the level of the trunk—at first we thought they had turned completely away from our location. I felt sick at heart. Had we missed them? Sam nudged with his elbow, "You take the bird to the right, if the Lord will let them this way," he breathed. We could now see them quite plainly, moving slowly, pecking here and there, probably seventy-five yards away and headed for our place of concealment; the guns were in hand across the trunk. Would they ever get nearer—what if they should turn off and away or take wing, a case of buck "agate." Nearer—nearer. I could feel Sam tremble, and I think I was fumbling for the trigger in front of the trigger guard. Nearer—forty yards—thirty yards, we selected our birds. Sam pressed my arm (the signal to fire), the two reports were almost together. Instantly I covered a second bird—he fell with a broken wing—and made off at a lively pace. Sam gave the turkey his second barrel. This turned him completely around and he ran directly toward us, though we were in plain sight, and fell over dead a few feet away. We afterward found this turkey was hit in the head, and blinded undoubtedly at the time of his queer antics.

Three dead turkeys. "Yes," said Sam, "the idiosyncrasies of *meleagris gallopavo*—Victor Hugo said 'It is the unexpected that happens,' and Charles Dickens has given us the blessed assurance that 'good things come when least expected.'" The excitement had been excessive; nerves strung to the limit, underclothing damp from perspiration. It was now getting quite dark; a fire was made, wood collected, preparations to spend the night in the woods.

We made a "lean to"—stripped some boughs for a pillow. We smoked and smoked to drive away hunger, and at last stretched out on the soft pine needles we slept.

It was a little after midnight. I awoke chilled through. I kicked up the fire, threw on a lot of wood and had things looking cheerful and myself thawed out. I thought it best to sit up and "nap it" and keep the fire going and not take cold. I kept a good fire going; this helped Sam to sleep, for he needed the rest. About four o'clock we heard the report of a gun. "What is that?" "Someone out looking us up." "Fire a gun"—this was done—and the fire heaped up with dry-stuff to make a big blaze. Another report somewhat nearer we answered. Out of the dark-

ness came Bobby and Alex; we were mighty glad to see each other. "Done see yo fire along befo we fire the gun," said Bobby. "I make some coffee, got some biscuits and bacon—warm up de bacon on a stiek befo the fire and soon have de coffee bilin'. Yoo alls must be powerful hungry, just at dis time." and pretty soon Sam and I were of the belief that "good things really come when not expected." Bobby went into paroxysms of delight when he saw the three turkeys, and heard the whole story of the accidental meeting.

Sam's foot having improved, we crossed the river one morning to get some snipe shooting. The place was a mile below our camp. By the time we arrived at a landing the sky became overcast, accompanied by a strong wind. The ground was a meadow marsh; across it back from the river was thick corn bushes, and second growth timber and small cane brake. We worked up wind. The birds flushed rather wild, under the influence of the heavy wind. We did fairly well, picking up eighteen birds. Many flushed out of range—some long and difficult and very satisfactory shots were made. The dog worked pretty well, handled by Bobby. I had looked for fat, lazy birds, getting up at short range. The wind and cold caused them not to lie very close. At the first report of the guns quite a number of birds flushed in different parts of the meadow. Most of these birds came back to the feeding ground, and later we bagged a few more.

Working up to the cover of second growth and bushes the dog went in and immediately came to a point. Sam went to the left of the dog and in among the trees. At once two woodcock rose; he killed them both—two beautiful snap shots.

Fifteen miles or so down the river we went into camp, a beautiful place in a beach grove. Here we had some pass duck shooting half mile above the camp. We had come to this place to further enjoy camping and camp life, and eventually take the up-river steamer from here, it being a good place to handle the boats and outfit aboard. Sam and I would walk about the country, sometimes across the river. On one of these trips we found a turkey roost, and on two occasions went there well blinded, waiting for the birds to come in. They never came; we saw one fly across the river. We concluded the only way we could get turkey was to make no preparation, but just tramp through the woods, get lost and trust to the great birds coming our way.

With a sigh of regret we turned our faces homeward. Sam's noble heart has been stilled these many years; his hand—the hearty clasp, I can feel now—gone forever. Over and over I think of him, and the dear old days we were together in camp, afield and afloat. All past forever, and I am left alone to retrospect.

THEN TIME TO STIR.

Thomas Edison once set out to invent a perfect coffee machine suitable to use in camps or on hunting trips. Asking the advice of a former guide as to the requirements of such a thing, the man, who was a Swede, gave him this recipe:

"Der ban only von vay to cook coffee. Take von trip into woods up on Flambeau River; build fire vid pitepine knots; put von quart water and two handful coffee in coffee pot, and sit on cover so she can't boil over. Ven cover get too hot for pants coffee she done."

The Record Salmon of Gulquac

By R. A. Worstall.

JULY the second, 1914, dawned for me at least just like any ordinary day. As I dressed for breakfast I had no premonition that this was to be a red letter day in my life. In fact, when we were all ready to start out for the day's fishing, and I found I had drawn what we regarded as the poorest pool on the stretch, I can take oath I had no idea of catching anything.

We were at the Ogilvy camp—Gulquac Lodge—on the Tobique River, New Brunswick, and my guide and friend, Jack McKellar, having launched the canoe, stood patiently awaiting my coming. My wife, also without any hunch, decided not to go out with us, to her subsequent sorrow. So I took myself with rod, camera, and accessories, to the canoe, and we shoved off.

We had a long way to go up stream, and Jack spat out ruminative remarks at times punctuated by the clank of the iron shod pole on the rocky bottom. "I'd laugh"—clank, clank—"if we'd put one over"—clank—"on those other fellows,"—clank—clank—"often happens"—clank—"that the fellow that gets the bum water,"—clank—clank—"gets the best fish."

No answer. I always was somewhat of a pessimist, anyway, and I had no hopes of any such pleasant ending to the morning. Anyway my attention was taken just then by the sight of Blue Mountain, bluer than usual, reflected in the calm water, and I wanted the picture. So I had Jack pole in to shore. He, no ways loath to have a few minutes rest, leaned on the pole and watched my preparations. Those of you who have taken natural color photographs, be they Lumiere or Paget, and I took both this time, will understand that Jack had plenty of time to rest. First the camera must be made comfortable on the tripod, then its pulse, temperature, and previous condition of servitude noted. The lens, cautiously approached, must be quickly and firmly muzzled with the ray filter. The sun was then courteously but firmly interviewed as to how strong he felt that morning. A few revolutions of a dial, and I got the answer. Click! went the shutter, then click! again and the plate was exposed. More of the same business, and the second was done. I might say in passing that both turned out well.

We reached our destination finally—the upper dead pool—paddled up through the edge, and anchored beyond. After waiting a few minutes, we dropped down toward the head of the pool, anchored again, sat quietly ten minutes, then I began casting. The sun was bright and full on the pool, and not a ruffle stirred the surface. I was using a number six Brown Fairy, and even that looked big under the conditions. When we had made several drops, and were

about half way down the pool, as I reached the limit of my cast, Jack, as well aware of my limitations as I, had turned around and was lifting the anchor, preparatory to another drop. Before reeling in, I made a final cast over to the left where a darker pocket showed in the shallow water, and as the fly swept over this shadow there came a surge like a submarine. I struck as hard as I could, for I had out a long line, and as the hook went home, with the shock a great salmon leaped high in the air, splashed back, and shot out a hundred and

Jack and the 27½-lb. Salmon.

fifty yards with that speed that seems incredible until you have experienced it. Jack appraised by the splash and the screech of the reel, dumped the anchor in the bottom, grabbed the pole, and as we shot after the fish he exploded eagerly "Is he a good one?" "Some fish, Jack," I said. "Well, it's twenty to eleven now," said Jack. "Give it to him and we'll land him in twenty minutes." I was using a light Leonard Grilse rod, and the leader had originally been tested and broke at ten pounds, but as I had been using it two days I questioned just how much strain it would stand. However, I did give it to him hard as he rushed, then sulked, then jiggled. In about fifteen minutes Jack, who had not yet seen the fish, poled in to shore preparing to gaff the salmon, while I grinned to myself at his optimism. However, I dutifully worked him in

as close to Jack as I could, and they glimpsed each other at the same moment. "My!" gasped Jack, "You've got a river hog!" while the salmon tore off nearly two hundred yards in a straight rush across the river, then leaped spasmodically high in the air.

There is no use in boring you with details of that fight. Up and down and across the stream, up in the air in frantic leaps, down deep in sulking spells that Jack broke by thrashing the water with the pole. Gradually the fight drifted down stream. Jack was keeping track of the time; now half an hour, now an hour, now an hour and a half, now two hours. Four times we had landed and tried to beach him, but the strain on the tackle was too much, and each time he had rushed again. We had come a mile and over down stream, and were approaching bad water. Jack reached over and tucked into his pockets the ray filters, etc., lying loose in the bottom of the canoe. "What you doing?" I asked. "Going to gaff him from the canoe," said Jack. "do you mind a spill?" "Not if you'll recover the camera," I replied.

The salmon was now about all in, making only short, feeble circles, about the canoe. As we danced into the first waves of a gentle rapids, Jack slowly and carefully reached over him, and drove the gaff home, drawing the struggling fish up against the side of the canoe. For a few moments it was touch and go whether the salmon would come to us, or we go to him. But a final heave brought him aboard, and a sharp blow settled his struggles. I was too busy then to think of the camera, but I'd give a lot to-day for a picture of Jack as he stood braced in the stern of the canoe, the salmon thrashing the water over us, or of the expression on his face as we shook hands over the result. It was now 1:13 p. m. Just two hours and thirty-three minutes of constant fighting.

Jack let out a mighty yell. "Shut up," I said, let's have some fun." We had drifted so close to the camps I was afraid they would hear us but we shoved the salmon up into the bow, covered it over with my coat, and picking up the paddles we raced down stream.

I knew our absence from lunch would lead them to suspect we had tied into a fish. Sure enough, as we swept around the island toward the dock, they all came running out, and hailed us. Jack and I with glum faces looked down our noses and made no reply. We docked in silence, and I picked up my rod and camera, and climbed the bank. Here, ringed by a circle of inquiring faces, I mutely held up the fly which Jack had broken off at the barb in extracting it. "Look at that," I finally said, "Over two hours on the rod, and the hook broke!" Business of commiseration for some minutes but Mrs. Mac, who had been evincing me intently, broke out. "You're a liar. You've got a fish." And at that Jack lifted the salmon from the canoe, while the crowd descended on me with whoops and thumps of unselfish joy.

The salmon measured 41¾ inches in length,

21 $\frac{3}{4}$ inches in girth, and weighed 27 $\frac{1}{2}$ pounds. It was the largest that has so far been caught at this camp, and beautifully mounted it has the place of honor in my den. I may some time catch bigger fish, and have bigger thrills. I may, I say. But I doubt it.

OCEAN AND STREAM FISHING CLUB.

Newark, N. J.

The Ocean & Stream Fishing Club held its regular monthly meeting at its headquarters, 69 Bank street, January 29th. President Howard Kain was unanimously re-elected as presiding officer. Colin H. Webb was chosen as vice-president; Chas. E. Kenyon was re-elected unanimously as treasurer, and Nat W. Lawson was selected as secretary. Jeff. Diganard was re-appointed the official guide of the club.

Discussions of plans for the coming season brought out many interesting suggestions, which will be acted upon at the next meeting. The club enters upon its second year with every indication of a prosperous season. Anglers are cordially invited to make the club their headquarters when visiting Newark.

BLACK BASS FISHING NEAR NEW YORK.

If the angler will take an Ontario & Western train some day in July or August and ride to Summitville, where he will transfer to the New York & Monticello division, getting off at a little hamlet called Cuddebackville, and then walk one-half mile west and one mile north, he will come upon a little basin which was once upon a time a part of the old canal that used to run from Honesdale to Rondout. Here he will find his pleasure, I am pretty sure, if he will try live frogs on a Cincinnati bass hook, leader three feet, single gut and No. 6 green Cuttyhunk line.

Row gently around edge of basin and into the inlet. Keep a moderate distance from shore. The best time is from about sunset until 9 or 10 p. m. Troll from back of boat. Do not cast. There are many great mistakes made in fishing for these devil raisers.

There are only two instances where I know casting is sometimes successful, and that is when the bass can be seen jumping or breaking at surface for flies, insects, etc. Then, and only then should one cast either with black bass flies or one of Jim Heddon's Dowagiacs, green back, white belly. Try, and if you don't succeed, try again.

E. C. HASLEHURST.

Shad and Striped Bass Disappeared Together

New York, Feb. 2, 1915.

Editor *Forest and Stream*:

Twenty years ago shad were plentiful in the Hudson; so were bass; now the constant cry is Where have they gone? As shad ceased to come to our local waters, so began the disappearance of the gamiest fish that swims. It was little noticed at first, but soon became certain that fishing was on the wane. The hue and cry went up: "Stock the Hudson." This was done, not once but many times without avail. It is said, and has been proven, that bass and salmon are the only two fish with the migratory lust, that always return sooner or later to their spawning ground. It did not prove true in these many trials, for bass, large and small, school, and where ever the schools go, so go the bass, and as their natural food supply "shad roe" was cut off, by the disappearance of shad, so the once King of the Hudson eventually forsook us.

When "shad roe" was not obtainable, the fish came closer to shore to feed on shrimp, seed oysters. This also, a natural food, is dying away; due to pollution and the visits of the seed oystermen. While the water is clear and apparently clean to look at on top, and in shore, seventy-five and one hundred feet from land you begin to get into the muck that is stirred up by the tide, and never settles solid. This is being constantly added to by sewerage which covers the small oysters, clams, and mussels, preventing the ground vegetation (which is the fishes' medicine) from cultivating, and also making it harder for the fish to find small worms, etc. Couple this with the increased traffic and the never ceasing, chug, chug, of motor boats on the water, drives the few fish into the channel or frightens them inshore.

All the big fish that I have seen caught or heard of being caught were hooked and taken less than fifty feet from shore.

Not satisfied that our only game and protected fish was fast leaving the Hudson, the netters half way up the river decided to use more nets than ever and use them oftener, so as to get the benefit of both tides, night and day.

As the season for what is left of our striped friends will soon be with us, the smell of varnish taints the air, the old rod is scraped, oiled, threaded, varnished and glued to be in readiness for a big one.

The baits that I would advise using in the spring are not many. Shad roe is the best if obtainable. Make up a little mesh bag of silk, or common cheese cloth, fill it with the roe and press it till the eggs in the roe ooze out. It is then ready for the hook.

Bloodworm is the next best bait and is the angler's spring stand-by, as it is easily purchased and is in fact harder to pull from the hook than the more liquid bait. Sandworms of the heavy red variety are also used. These are your spring baits. For the fall add shrimp and crabs. Shrimp preferably are the best. Hooks are something that every man differs, so everyone to his taste; for myself, I as a rule use a No. 2 or No. 3 sproat, or a long shank weak fish

hook; this gives me ample satisfaction, but as I said before every one differs.

It is best, in rigging for bass, to use either a two or three foot leader; depending of course upon your knowing whether the fish are feeding off bottom or not. This depends much upon the atmospheric conditions. If you have an offshore breeze kicking up enough to ripple the surface, you can lay a bet that as the bottom is clear inshore, your fish are feeding on bottom. A two foot leader then is just the thing.

If the wind is blowing inshore the constant beat of the waves and tide stir up enough food, so the bass naturally enough, has not to forage the bottom. A small piece of cork on a three foot leader will, I think, answer the purpose this time.

You are now apparently waiting the much coveted strike. It comes! zizz! goes the reel. You give the fish the barb of your hook and the fight is on. Before going further it is best to describe how bass as a rule bite. If your fish is hungry, he will not nose the bait, but will try to take it on the fly, and he can strip a hook from the back just as easily as from the front; that is why the sudden convulsive pull often results disastrously to the angler, as he is caught unawares and frightens his fish.

The other is when your quarry noses, and pushes the bait before he can make up his mind what to do. You feel a little tug once, twice, possibly three times, before your fish strikes. Now is the time to be on the alert; if fishing from a boat, the best method is to take in a little line, say six inches or so, then let the tide take it back. This usually gets your fish, for he strikes and the wallop is, as a rule, hard. Now it's up to you to do the rest. Fishing from shore you can reel in a little line at a time. Keep your bait moving and so hoodwink your bass.

The manner of fight he puts up depends altogether upon the way he is hooked. If the bait is gorged you may have a heavy, steady, pull, nothing else, for it apparently hurts and he seldom fights.

Being hooked in the long part of the head or mouth makes it different and he displays remarkable vigor, fighting every inch of the way in a most savage manner, first heading one way then another. One favorite method, which very often fools the angler, is the slack line as he heads for shore in an attempt to unhook himself. Turning quickly he often fools the best and if not given his head, often breaks the line to the dismay of the angler.

E. A. DONNELLY.

THE CHEAP WATERPROOF MATCH BOX.

More than one economical woodsman has found that the ordinary nickel shaving stick box makes a pretty good match box if nothing better is to be had. The shaving stick box may not be called absolutely waterproof, but a man can fall out of a canoe with one and if he crawls on dry land inside of five or ten minutes, he will find the box still dry, and one that will stand a soaking rain all day.

MY FIRST YELLOW TUNA.

For many years I have cast a fly over trout streams in the Colorado and Wyoming Rockies and nobody could convince me that any angling could equal the delights this season holds within it. My method has always been: Worms, for spring; flies for summer and minnows for fall. Whether that is sportsmanlike or not, is an unsettled question. It gets a few fish and much pleasure.

Many times my friends have told me of the sport to be obtained deep sea fishing on the Pacific coast. So when the fall of 1914 found me at Long Beach, California, for a six months' enforced stay, my first investigation was of the chance for some fishing. My newly acquired piscatorially inclined friends immediately made me acquainted with the fact that Tuna were being caught in large numbers about twenty to thirty miles off Long Beach. Ascertaining the tackle necessary to procure it was selected with much care. Rod—a six foot split bamboo. Tip—five feet, two inches, and weighing six ounces. Butt—twelve inches and weighing three ounces. Reel—Montague City, five inch Tarpon. Line—ninethread Cuttyhunk. Piano wire in five foot lengths, swivels, sinkers and hooks, finished the outfit, and the next morning at 7:30 o'clock I was on the pier ready to join my new friends in an attempt to annex one of the prize buttons given out by the Long Beach Tuna Club.

Embarking on the forty-five foot gasoline boat, Eagle, I was introduced to Captain Anderson, and his first question was: "Have you ever caught big fish on that light an outfit?"

With a laugh at my "No," he said: "Well you sure will smash things."

Clearing the pier at eight o'clock, the time for the next hour was spent by me in listening to the tales of the big ones caught on other traps. Then a cry from the Captain, "Lines out" and I watched carefully the experienced fishermen baiting their hooks with six or seven inch sardines and fastening the bait on the hooks with a nose wire—the baiting of my hook being accomplished with help. I set my reel with about a four pound drag; let the line out for two hundred feet; set the click and awaited developments.

Very shortly, "Strike!" yelled Dad Fessel and then "Strike!" from Thad Stevens and the launch was stopped and engine reversed. I became conscious of a sound, a shrill "Whee!"—the line running out from the two reels.

The captain instructed us all "lines in" and we all reeled up and watched the fight the fish were making—ten minutes and it was over. Two eight or ten pound skipjacks gaffed aboard—beautiful fish, and great little fighters but the meat is dark in color and not considered very good.

Lines out again and we were scarcely on our way when I called "Strike!" and strike I guess it was—my reel screeching and the line taut, entering the water two hundred and fifty feet from the stern of the boat. By the time the boat was stopped a thousand feet of line was run off my reel and it was slackening. I commenced to reel in as fast as possible amidst the cries of the other fishermen of "Tuna! Tuna!"—"Doctor's got a big one on"—and I realized that I sure did have a big one on. I would retrieve a few hundred feet of line and out it would go again as the fish made another run against all the strain I dared put on the light outfit. My knees

were trembling; my arms were tired; and I felt that were it not for the fact that I must have that fish, I would give \$10 if someone would cut that line. Gradually, I had been gaining line in the struggle and soon I could see surging up from the deep sea a Tuna reflecting the sunlight in many bright colors as it rolled from side to side. Upon sight of the boat down the fish went with a last desperate rush for two hundred and fifty feet and then I gradually pumped the Tuna up to the gaff—fifty pounds of beautiful fish—ali fighter. Nearly two hours

coloring gut. I could not judge of the colors from one, so sent for three or four more. This gentleman manufactures nothing but these special leaders and claims to use only the very best gut that can be bought. He is very strong in faith in his theories, which are roughly something like the following: It is most important that the leader should harmonize and agree with the surroundings. If the sky is intensely blue and sun bright and warm, then the sky blue leader is indicated. If there is much green grass and moss along the stream, a pale green one.

In Season Soon.

of hard fight and I was nearly as "all in" as Mr. Tuna was.

I have caught and lost many Tuna since that but never again will I have that same feeling of exhausted contentment.

Do I still enjoy trout fishing the same as of old? Surely! Just the same, but now I consider that other piscatorial delights, equal trout fishing.

D. O. NORTON.

LEADERS COLORED TO SUIT WEATHER.

Liberty, N. Y., Feb. 5, 1915.

Editor *Forest and Stream*:

Through the attention of Dr. Breck, a manufacturer sent me a sample of a peculiarly colored leader, with some remarks on his system of

The favorite color, however, which meets the needs of the angler is orange, none dark but shading from medium to light orange. This is on many days almost invisible to the fish. There is a whole lot to the business but the above covers the ground sufficiently for practical purposes. I messed with the leaders but I was so accustomed to something very different that I could not bring myself to use them for the finest dry fly work. It is almost impossible not to cherish small prejudices when one has been fishing with the fly all of his life (nearly). I wish the colored leader man well. He has good testimonials and says that his business is rapidly increasing. I do not mention name and address as he should have advertised in this periodical.

THEODORE GORDON.

Conservation—or Conversation?

THE policy of this journal with reference to game conservation is so well established as to require no new enunciation. It is a creed the actual and lamentable necessity of which is being demonstrated day by day. Whether it has proven popular or not is beside the mark.

But while we hold to this creed, we do not deny our columns to those who disagree with us. The man who thinks we are wrong is afforded an opportunity to express his views, if they are worthy of expression. We do not believe in controversy; we do not invite it, but our opinion is that the best way to settle a disputed point is to have the matter thrashed out in the open. That is why we so often publish both sides of a case, even though our contributors are frequently over frank in expressing their disagreement with the views held by this paper.

In the present issue will be found communications on the migratory bird law that may be received with a sentiment of wrath and open dissent by many people. But let us analyze or look further into the motives, or rather the other work of the large group of men whose views are expressed, we will say, by the Interstate Sportsmen's Association. These men, and as a matter of fact similar associations in other states, are fighting the migratory bird law because they feel that an injustice has been done in placing them within a zone where they do not belong.

The Situation Peculiar.

THE situation is peculiar, in that the very men who are protesting against—but still, as good citizens, observing the migratory bird law—are engaged at this very moment in the fight of their lives to protect the game within the states from destruction by indifferent and hostile legislatures.

What are we to think when a member of the Missouri Legislature arises in his seat and offers publicly to defend without charge any violator of state game laws? What sort of sentiment is it that inspires the introduction in the California Legislature of a bill removing all protection from meadow larks? What sort of state legislation, or lack of legislation, permits a man to shoot from their roosts 800 robins, as cited by a correspondent in another column? If, as argued by some *Forest and Stream* correspondents of legal profession, the game belongs to the State, then it is high time that the states make a more creditable effort in protecting it.

The State and Posterity.

BUT in a larger sense, does the game belong to the State? Does it not belong to posterity quite as much as the present generation? We urge every sportsman into whose hands this paper falls to read

carefully and ponder over the article "Confessions of a Market Hunter" published on another page. Aside from the horror of butchery which it outlines, whole sermons on game conservation might be drawn from it. If the State owned the game which the market hunters swept from the face of the earth, the people of the State certainly derived no revenue from legal possession. Their property was stolen outright, and a crime equally great committed against the present generation.

Which Class Do You Prefer?

CAN we think kindly of a policy which deprived the people of to-day of an opportunity to enjoy legitimate sport and recreation in the field? Sportsmanship aside, the economic blunder, and as a corollary the graver blunder which is destroying America's power of defense by depriving its people of an opportunity to become good marksmen and therefore good soldiers are equally indefensible. To put the matter in a word, will you, reader, shoot ducks in the Spring when your own common sense teaches you that such shooting means extermination? Will you allow your state protective laws to be repealed while wasting your time in a useless argument whether the game belongs to the State or to the Nation? Will it be said of you in the next generation that you were of a class adhering to the theory, "after us the deluge" or do you desire to leave to your children and successors a heritage of some game and a memory of having been considerate of posterity and the needs of the Republic in making possible the maintenance of a trained reserve of men familiar with arms and capable of repeating if necessary the glorious record of their ancestors who by skill in marksmanship and outdoor life saved this Republic on more than one occasion? The answer rests with you, and you cannot evade the responsibility.

Eels and Law in Tangled Knot.

ANCIENT Athens was the seat of learning, art and other distinguishing characteristics, but modern Athens (New York State) not to be outdone by its Grecian namesake, has produced a legal puzzle that may induce more controversy and more scratching of legal heads than the first casual reading may indicate.

It appears that one Chas. Cripps, having unlawfully taken a number of eels with a spear in hand (we are quoting from a transcript of the docket) from the waters of the Hudson River in the town of Athens, at or near a certain point known as the McCabe Ice House, was promptly pounced upon by a deputy game warden and brought before Orin Q. Flint, Justice of the Peace. The defendant pleaded guilty to the charge of taking eels in such manner, but denied that the same was illegal. The Court, after due deliberation, agreed that the defendant's point was well taken and held itself bound "to take judicial notice of the fact that eels are a migratory food fish of the sea in that it has been determined that invariably eels are born in the salt waters of the sea and ascend the fresh waters of creeks and rivers tributary to the sea, and again return to the sea, as defined by sub-division 2, Section 177, part 3, Chapter 508 of the Laws of

1913, and as such are exempt from the provisions of this article."

Forest and Stream will not attempt to say whether the law as laid down by Justice Flint will hold, but it is bound to maintain that Mr. Flint, who by the way, has been a regular reader of *Forest and Stream* for many years, has his natural history down pat. His feet there are on solid ground, so solid in fact that even a plaguey eel can not wiggle through.

March.

MARCH, the Blusterer, is here. Few signs are there in the north that winter is ending, for the brooks and lakes are still fast in the iron grip of winter, and snow covers the ground which rings under the footstep. But one feels intuitively and even tangibly that the sun is warmer. He is swinging north again; the days are longer, and there is a friendlier and a softer gleam on the landscape. It is not impossible to find, buried deep in the swamp, the unmistakable sign of that unpoetic but sure harbinger of spring, the skunk cabbage. The snow is melting on the exposed places, revealing to the close observer the architectural ruins of the marvelous little dwellers under the snow, who have tunneled incredibly long distances in search of food. Within a week or two, if the sun be shining brightly, the twitter and the warble of the first song sparrow may be heard. Overhead the wedges of water fowl flying north may be seen. Thanks to enlightened sentiment these sadly diminished aerial squadrons can wing their way in safety to breeding grounds in the far distant places. The farmer's boy, blest of all mortals, knows that spring is near, if only because of the thousand extra tasks that are being imposed on him in the busy preparation to open the sugar camp. Sap will be running; the flickering fire in the woods will reveal the activities of "boiling off," a process now so mechanically improved as to have lost its earlier crude woods flavor, but still a red letter time in the boy's life. Sap also will be running soon in the city angler's veins. It is a recurrent feeling, symptoms of which may be pleasant or unpleasant, depending largely on the circumstance whether the angler will be able to go fishing this spring, but a symptom which is welcome, nevertheless. It may be cured at times by an overhauling of the tackle book and an examination of the fly rod, but who wants to cure it? A disease this is, that ought to be made more catching.

More Money Needed for Parks

NO FAULT can be found with the development of our National park system idea, but the administration of these areas of recreation and natural wonders by a dozen different bureaus at Washington is to be criticized, if only for the reason that it destroys the hope of any coherent plan of development. At present Congress is appropriating about three hundred thousand dollars a year for the protection of National parks, which contrasts very unfavorably with the seven hundred thousand dollars Canada expends for similar purposes. The scenery of Switzerland is estimated to be worth more than two hundred and fifty million dollars a year to the people of that little country, and the scenery of Switzerland cannot compare with that to be found in many of our own wonderlands.

Opinions by Young and Old Friends of Forest and Stream

THE MONTHLY SUITS HIM.

Roseburg, Oregon, Jan. 25, 1915.

Editor *Forest and Stream*:

Enclosed \$1.00; send me or rather renew my subscription to *Forest and Stream*. I have the January, 1915 number. *The monthly suits me.*

F. D. OWEN.

THE CHANGE A GOOD ONE.

Wilkes-Barre, Pa., Jan. 23, 1915.

Editor *Forest and Stream*:

Find check for \$2.00 inclosed. Please advance my subscription to *Forest and Stream*. I think the change from a weekly to a monthly publication, is a good one.

R. H. COATS.

WATCHFUL WAITING NOT IN VAIN.

Buffalo, N. Y.,

Editor *Forest and Stream*:

Enclosed please find P. O. order for \$1.00 to pay subscription for 1915.

I have taken your paper for a number of years and think you have made a wise change in making it a monthly. \$3.00 per year in these days of "watchful waiting for more money" looks big to many of us.

E. P. REYNOLDS.

LIKES THE NEW IDEA.

Philadelphia, Pa., Feb. 2, 1915.

Editor *Forest and Stream*:

Please find enclosed \$1.00 in payment for one year's subscription beginning March, 1915.

I like the new form and idea and hope you will get lots of canoeing news from the people who have it, most of them appear loath to give it up.

I wish you luck and success.

W. H. LOGAN, Jr., Rear Commodore, Atlantic Division, American Canoe Association.

AN EXPRESSION OF APPRECIATION.

Akron, Ohio, Jan. 19, 1915.

Editor *Forest and Stream*:

Inclosed please find \$1.00 for one year's subscription of your magazine, which I think is awfully good.

F. A. WILKIE.

WILL STILL BE A WELCOME VISITOR.

Dubuque, Iowa, Jan. 7, 1915.

Editor *Forest and Stream*:

Enclosed find check for the continued call of the *Forest and Stream* whose weekly visits I shall miss very much and would much rather pay the difference for the weekly. However, I shall be glad to get the monthly and wish it a long and prosperous career.

W. A. HARKETT.

ONLY OBJECTION IS THE WAIT.

Fond du Lac, Wis., Jan. 18, 1915.

Editor *Forest and Stream*:

Please find enclosed \$1.00 to renew my subscription to *Forest and Stream* for 1915.

I like the new monthly *Forest and Stream*--the only objection is having to wait so long for it. Wishing you all success in this new venture.

I am

C. F. LARZELEVE.

THEY BEGIN YOUNG AND REMAIN FOR LIFE

FROM A SEVENTEEN YEAR OLD READER.

Zion City, Ill., Feb. 9, 1915.

Editor *Forest and Stream*:

I want you to know I am glad *Forest and Stream* has changed from a weekly to a monthly. When I read your notice in the last weekly issue that it was going to be a monthly, I was very much upset. But when I received January's number, you don't know how pleased I was.

I see you knew what you were doing when you made the change. *Forest and Stream* as a monthly is far superior to the weekly.

I am only 17 years old but I enjoy *Forest and Stream* more than any other magazine. Sportsmen who do not read *Forest and Stream* don't know what they are missing.

HARLEY HALL.

A SUBSCRIBER FOR 33 YEARS.

West Berlin, Mass., Jan. 9, 1915.

Editor *Forest and Stream*:

As I have been a subscriber to *Forest and Stream* since 1882, I don't see how I can give it up, at this late day. I have enjoyed the paper these many years with its valuable information.

Please find enclosed \$1.00 for your monthly paper.

ALFRED G. LARKIN.

FROM TWO OF THE "OLD GUARD."

Washington, D. C., Feb. 9, 1915.

Editor *Forest and Stream*:

Enclosed find Post Office money order for one dollar, in payment of another year's subscription to *Forest and Stream*.

As a reader of the paper for more than twenty years I'll admit the change to its new form pretty nearly knocked the wind out of me, but a look at the January number heartened me up considerably, and the February edition has just about completed the job. After all, it is the same old friend, just changed a little in appearance, and like other old friends, growing nearer and better with the passing years.

Here's wishing you good luck, and hoping you will gather in every one worth having.

CURTIS I. GILBERT.

A READER FOR THIRTY YEARS.

Worcester, Vt., Feb. 3, 1915.

Editor *Forest and Stream*:

Received the February number of *Forest and Stream* to-day but have not received the January number. Will you kindly send the first issue, as have had the paper for thirty years, and don't like to miss them.

I think the monthly is an improvement on the paper.

W. E. BRUCE.

FOREST AND STREAM TOO EFFECTIVE.

Stuart, Florida, Jan. 22, 1915.

Editor *Forest and Stream*:

My letter regarding the fishing possibilities of the waters adjacent to Stuart, published in *Forest and Stream*, was read by Prof. John D. Shroy, of 1012 N. Broad St., Philadelphia, District Superintendent of the public schools of that city, who devoted his one week of a holiday vacation to a fishing trip to Stuart, Florida, and came into my law office with *Forest and Stream* in his hand "hunting the man who wrote the article" as he said, and I, though in the hardest kind of professional work, took time to put Prof. Shroy in the hands of a personal friend, who provided the entertainment, and I enclose a photo of that friend with nineteen sheephead, caught by the two of them in less than two hours fishing and several of the catch weighed from five to eight pounds.

The publication of that letter, has brought to Stuart fifteen people, who are here now, and have rented rooms for a month or more and others write me they are coming from Wyoming, Iowa, and several other states, even Maine. I am glad that the *Forest and Stream* is now a monthly, so that you cannot print this letter and photo next week, or I would have to quit the law practice and give my time to the entertainment of my brother sportsmen.

W. F. RIGHTMIRE

"SO LONG AS IT GETS THERE."

Lufkin, Texas, Jan. 7, 1915.

Editor *Forest and Stream*:

It's going to be a bit awkward to have your valuable journal come monthly instead of once a week as we have been getting it for so many years, but any old time will do just so it gets here.

J. L. PHILLIPS.

INCOMPARABLY THE BEST.

Cambridge, Mass., Feb. 5, 1915.

Editor *Forest and Stream*:

To have completed my set of *Forest and Stream* by securing from you the only number that it lacked, gives me exceeding joy and gratitude for the kind trouble you have taken.

Of course I read, as well as take, the journal—and have from the very first. To my mind it is incomparably the best publication of its kind that exists—and has been ever since it started.

WILLIAM BREWSTER.

AN IRRESISTIBLE APPEAL TO THE JEANS POCKET.

Liberty, N. Y., Jan. 30th, 1915.

Editor *Forest and Stream*:

You should soon have a very large circulation. One dollar is such a small sum that few persons will hesitate to go down into their jeans for the bill. I am sure that I wish you prosperity.

THEODORE GORDON.

GAME BAG AND GUN

Old Hunters Oppose the Buck Law

Observations of Three Seasoned Sportsmen on the Letter of Mr. Henry Chase in January Forest and Stream

PRACTICAL VS. THEORETICAL GAME CONSERVATION.

Eagle Lake, Ticonderoga,
Essex County, N. Y.

February 3, 1915.

Editor *Forest and Stream*:

I read with much interest the letter of Mr. Henry Chase, published in the splendid first number of your new journal.

The only way to improve hunting and fishing conditions, and increase the size and quality of game animals, birds and fishes in the Adirondacks is to study *local conditions* very closely and learn, if possible, just what benefits have been derived or losses occasioned by legislation restricting a man's natural rights to take native fauna whenever he sees fit to do so.

With this end solely in view, and not for the exploitation of any theory or crochet of my own, I have spent the last eight months at my lodge in one of the best sections of this state, for a study of the habits of deer, grouse, hare, and trout, and am gathering facts and circumstances at first hand, which at the proper time will be placed at the disposal of your many readers, and for the benefit of those catholic minds which have neither local or personal hobbies to promulgate, nor too fixed opinions on a subject generally so little understood, and so likely to be retarded by jumping at conclusions, as practical game conservation.

Mr. Chase takes me to task for giving the honest opinion of an every day practical man, who had just finished his fall hunt and taken the two deer allowed by his New York State license. He had hunted several days before good fortune smiled, and he knew that what he said about the scarcity of bucks in this section is backed up by the general observations of all local guides and the sportsmen from neighboring towns and cities who hunted here last fall.

Mr. Chase brushes aside with apparent contempt the sincere remarks of those who have been observing the effects of the Buck Law in our rough and mountainous section since its enactment. He does not claim to have made any close study of our peculiar situation, but at once falls into the common error of applying to our hunting, rules applicable probably to Vermont, Massachusetts and other thickly settled New England States, where much of the woodland is surrounded by large tracts of cultivated or cleared pasture lands, and where the deer are almost as tame as the domestic cattle upon the farms. In such places, a bunch of deer can be located with comparative ease, and during the few days when hunting them is allowed, it is comparatively a simple matter for a sportsman

to select the very animal he wants, shooting it frequently at long range.

In our country, however, all is different. Few deer are observed in the open. The hunter must walk early in the morning through the "burnt timber" in a "slash" of dead "popple" and other tree tops, or through the dense underbrush of a new forest. Suddenly, up jumps a big deer, or perhaps two or three deer. He usually has only about five seconds in which to cock his rifle, aim

How Can You Tell?

and fire, and how can he, in that space of time, tell whether a buck has horns 3 inches long or 4 inches long? It is clearly impossible under the circumstances. The man has probably hunted several days in search of his winter venison, and how can he be reasonably blamed for firing in such a situation as I have just described? He simply does the best he can, and if the horns happen to be a little short, or if a mature doe should fall, how can the hunter be seriously blamed? Under the present Buck Law, a deer cannot be lawfully taken out of the woods, unless he has horns at least four inches long. Why not three inches long as well? An inch would make no difference. Had the law prescribed

antlered bucks, that would have given the hunter a better chance to decide in the moment given for his snap shot.

There a temptation to "take a chance" that the quarry will come within the law, and the hunter can hardly resist it when jumping a deer in thick brush, and when the leaves are thick. He is not breaking the law by *firing at the running deer*, but *only* when it proves to be a doe or short horned buck. The consequences of his act cannot be known until he follows up the game and finds it dead or gives it *le coup de grace*. Then and only then, can he learn that he is a lawbreaker and in danger of arrest by a game protector, for he has until then had no opportunity to estimate the length of horns or even to see any horns at all.

The trouble with much of our game legislation has been, that our lawmakers have often listened to the advice of men from Maine to Texas, full of ideas gathered from their own local game conditions, and *not* to the practical suggestions of the all the year residents of our section, who, I claim, know much better than any outsiders, no matter how well informed generally, *what laws* are best for the protection and increase of deer and other game in their own neighborhood. It should not be a difficult matter to decide whether the present Buck Law, if continued, is, on the whole, likely to increase the number of deer in this section of the Adirondacks.

Up here, we are *all* of the opinion that its enforcement is *too costly* to the deer supply, and that, in the struggle to get a deer that will pass the law, many short horned bucks and some does are needlessly sacrificed and left to spoil in the woods.

There was never yet a law passed for game preservation that could not be improved, and, as all laws rest upon the consent of the governed, it is no more than fair that our people should have a voice in the making of their own laws, and they propose to do so in future. In proof of this I need only say that a large delegation of sportsmen representing many of the hunting and fishing clubs of the Adirondacks, met in Plattsburgh, about Jan. 1, 1915, and formed a permanent organization called the Adirondack League of Fishing and Game Clubs, for the protection of the forests and the passage of better laws governing hunting and fishing throughout the State and particularly, in this section. Among the objects, we find the very one employed in my contribution to the *Forest and Stream* of Dec. 19, 1914, for which Mr. Chase calls me to task. "Third: The securing of intelligent legislation which shall be *practical rather than theoretical*, for the benefit of forests, fish and game, and *rational enforcement* of the same."

The "Ticonderoga Sentinel" of Jan. 5, 1915, reporting the formation of the League states:—"At the present time practically all the legislation affecting hunting and fishing is directed by clubs in the western part of New York State,

and such clubs and their members know practically nothing of hunting in the Adirondacks. As one member of the new organization expressed it at the meeting: "The only deer ever seen by the members of the clubs in the western part of the State are confined in the Zoo at Buffalo." The League went on record as absolutely approved to the present Buck Law, and in favor of a law which will limit the number of deer killed in any season to one for each person, the hunter being permitted to kill either buck or doe."

By a strange coincidence too, this resolution of the new club, representing as it does, more than eleven clubs and more than 1,000 sportsmen, is in exact line with the farmer's suggestion published in *Forest and Stream* and which Mr. Chase is pleased to designate as "rot."

To show further the great interest now being taken in this subject here, the Lake Champlain Valley Forest Fish and Game Club was organized at Port Henry last Thursday. Its president is Hon. Walter Crafts Witherbee, former Collector of the Port at Plattsburgh, who has for many years taken a great interest in the propagation and planting of game fishes in Lake Champlain and its tributary trout streams. It is intended to build up a strong membership by seeking for members in each village in Essex County, and to accomplish extensive work in the preservation and propagation of game. This club is a member of the above-mentioned Adirondack League, and will act as host at an early meeting of that organization at Port Henry.

It would seem, therefore, that the residents of our section are about to take a step which even Mr. Chase himself admits might be a good one; namely, to allow one mature deer, buck or doe, to each licensed hunter, next year, to see if this present waste of female deer and fawns cannot be avoided.

PETER FLINT.

A DESTRUCTIVE LAW.

Poughkeepsie, N. Y., Feb. 1, 1915.

Editor *Forest and Stream*:

Having noticed in the January number of *Forest and Stream* an article by Mr. Chase of Vermont regarding the "buck law" as we call it in New York state, I take it that his observance of the deer has been either not at all, or in some private preserve or park. The writer, although he never killed a deer, has been in the deer country in the Adirondacks more than once, and while there observed the animals in their wild state and also investigated and mingled with the guides, who depend upon the deer hunters for a livelihood during the hunting season. Without any exceptions, I have found that the "buck law" is looked upon by the natives as the most destructive that has ever been handed over. How many wild deer has Mr. Chase ever been able to tell had horns three inches long; how many points, or whether the deer had horns at all or not? I'll wager not one in twenty-five. From a number of guides I have mingled with, I have yet to find one who will admit that any person can tell a buck from a doe when running through the woods. They all agree that when a deer is running through the woods, said deer holds its nose straight out, so that the head, neck and back arc in line and if the animal has horns, they are astride the neck so that it is impossible to

see them. I have discovered the same characteristics among the wild deer and was always unable to tell bucks from does, when running.

I think that it is very safe to say that there is not one in ten deer seen stationary where it is possible to see the head of the animal. It nearly always happens that the animal is facing away from the hunter or else the head is behind some obstruction. If one will spend some time in the woods among the wild deer, and give same his personal attention, he will be able to understand the foolishness of the "buck law" as we who have been in the wilds, have found out. Nearly all hunters and guides will agree that the only sure way to tell a buck with three inch horns is to run said deer to water or else kill

Too Young to Shoot.

the deer and then make the inspection; and I'm sorry to say that is what they are doing. There is more deer meat wasted by being shot and then left to rot because it was a doe, than there are bucks taken out of the woods or consumed while camping.

The only way to protect the deer so that we will have any in the future, will be to make it one deer only to a hunter, either buck or doe, and the hunting season not to exceed one month, November or from the middle of October to the middle of November, and *enforce the law*.

The deer are growing scarcer than they were before the buck law was put in force and not

only the bucks but the does, for the simple reason that at least ninety-nine out of one hundred hunters, guides included, will kill a running deer or one that they can not see the head of, rather than lose the chance of getting a buck; and if, after killing the animal, it proves to be a doe, which about half of them are, it is left to rot or is cut up and brought in at night, but which ever it may be, the doe doesn't count and the same thing is done over again until the buck is killed.

VAN.

BUCK LAW AS VIEWED IN CALIFORNIA.

Exeter, Cal., January 20, 1915.

Editor *Forest and Stream*:

In the January issue of your good magazine I read the article on the "Extermination of Bucks Threatened." In this article, Mr. Chase seems to express his opinion of the guides and woodsmen. He seems to think the man that has hunted all his life doesn't know anything about making game laws or anything else, as far as that goes. He talks the least bit like he might be a theorist (naturalist) himself.

Out here in California we are allowed two bucks a season. The law is made to suit the sport. The two open months are July and August. The right time for the deer season is September and October. But the city sportsman cannot get away from his business except in July or August. Mr. Chase seems to think it an outright game hog that wants more than one deer a season. One buck a season would do for the city hunter, who is hunting for horns, and not for the meat to live on. I don't exactly call myself a game hog. Out here we take cattle to the mountains in the summer to save the feed in the valley. We have to take all our things and grub on pack animals. The only meat we can take is bacon or ham. When we get there, fresh meat is a very desirable article. We go out and kill a buck. He will last us a long time, for we do not waste any. We try to keep fresh meat all the time but we never kill over the limit and seldom do we kill the limit, for we do not need it.

Then comes the city man with his automatic elephant gun. He sees a band of deer, so turns loose his automatic. He may hit half a dozen before they get over the hill (most likely more does than bucks, for there are more of the former), but the bullet not entering a fatal spot does not drop them right away. As long as this city hunter doesn't see any fall he thinks he has missed, so goes on to find and slaughter another band.

Another thing—it seems to me (not saying that I have an extra quick eye) that the woodsman and guide who has spent all his life in the woods ought to have the least bit keener eyes than the man who learned all he knows at college. So to save the deer is to teach the city hunter how to hunt.

EMMETT ANDERSON.

SAID THE PTIMID PTARMIGAN.

"O, I never shall go near a pfarm again!
For a dog, man, and gun
Made me so fly and run
That I thought life would never hold pcharm
again."

—BLANCHE ELIZABETH WADE.

The Sinai Ibex For America

By John C. Phillips, Wenham, Mass..

IT is a wise rule for Americans to stick closely to their own fauna and not attempt to introduce foreign species, save under very exceptional circumstances. I believe in this rule as much as anyone, but I am tempted to say a few words in favor of an animal which I believe combines some exceptional qualities from the standpoint of the sportsman.

On the little triangular bit of land that juts out into the northwest corner of the Red Sea, the Sinai Peninsula, there dwells a mountain goat that since the time of Moses and the Israelites has succeeded in maintaining itself on the desert mountains of that interesting region. In plain sight from the Peninsular and Oriental steamers as they take you to far away India, rise the rugged outlines of Um Shomer, the Gebel Katerina group, and a little north, the famous Mt. Serbal, identified by many students as the mountain of the Law Giving. About these peaks, from 6,000 to 8,500 feet in height, dwells the Sinai ibex, a small representative of the ibex of Central Asia and Northern India. Let us consider him for a moment. On this little tract of country of only a few thousand square miles, this wonderful goat is pursued by the following enemies. First, by a population of 5,000 or 6,000 Beduins, say at least five hundred hunters, who are armed mostly with very fair single-shot Remington rifles of the "75" model. Every man has a gun and carries it with him always. No matter where he is, either traveling from one village to another, or tending his flock of goats high up on the mountain side, his Remington goes with him, and to people who rarely get enough meat to eat, an ibex of any size or sex is mighty welcome at any time of the year. Moreover, in the spring the natives run down all the young kids that they can, either with their own legs or with their dogs, for they think the new born ibex has a special medicinal value. Several were offered to us alive when we were there in April, 1914.

Second, the leopard is a constant hunter and killer of ibex, and from the signs I saw I should say that these prowlers were by no means rare. I found a good many tracks and other travellers have often reported finding leopard kills, consisting of the remains of an ibex.

Third, there are a good many birds of prey, mostly eagles of the Golden type, or species closely related to our Golden eagle. How much harm these do, I was not able to learn.

Fourth, in dry seasons almost all the available food is cropped off by domestic goats that reach the most inaccessible crags in their attempt to support life. What is left for the ibex it is hard to say. Last winter was the end of a long

drought period and all domestic animals were half starved.

Add to these enemies the fact that water is absent over most of the country and that what little there is cannot possibly be available for ibex, and you have an animal that I believe must be wholly independent of water like the addax of the Sahara Desert.

How then do these ibex manage to maintain themselves? That is a question I often asked myself, but I never could formulate a satisfactory answer. Nevertheless, I did find out a few things. In the first place, they were very shy indeed, so shy that I only obtained a glimpse of four animals in three days' hunting (all the time I had). Also, the country was very noisy to travel over, and much of it was strewn with loose, flat, clinker-like bits of rock that made a noise if you so much as touched them. Then again, I believe these ibex were the hardest animals to see of any beasts I ever hunted. Our mountain sheep is an easy mark for the eye beside these spectral goats. Of that I am sure, and besides, I think these ibex probably fed mostly at night, and used eaves and ledges to hide away in during the day. I saw many shady caves with ibex beds in them.

But we need hardly inquire further. In his own home, at least, the Sinai ibex manages to exist under conditions where our own mountain sheep would vanish in a few years. The ibex also is without a doubt being slowly reduced, but he still exists along the cliffs of the Dead Sea basin even up to and within sight of the Mount of Olives. His distribution in Arabia is of course not well known, but I was assured last spring that there were plenty near Mecca.

Would it not be worth the effort if some sportsman's association, or possibly some state commission could bring over a number of these animals and try them out on some of the isolated mountain ranges of our Southwest? The animals could, I believe, be obtained very cheaply in Sinai during the spring season and then there are a good many in the Government Zoological Gardens in Cairo, where I believe they breed well. It seems at least, as if the venture could do no harm, and it might result in great things.

SQUIRREL PESTS CURED WITH FLY PAPER.

By Kango.

In one of our near by cities an incident occurred which is worthy of print. In the fall and winter of 1913, a small army of gray squirrels made havoc that threatened to be quite an expensive and annoying tirade. Under the eaves

of one of the palatial residences of the city, they had gnawed quite a large hole and entered the attic room in which was stored all sorts of boxes, bedding and general household effects that had been placed there subject to removal to a summer cottage. In among these mattresses, pillows, etc., the squirrels had nested and raised their young and the house seemed to be literally over-run with them. The city and state ordinance forbade their destruction and the occupants were at their wits' end to know how to get rid of them. To the chief of police they related their story and asked for permission to destroy the pests, but he could find nothing in the laws whereby he could give them permission for their destruction, saying that gray squirrels were under the jurisdiction of the Fish and Game Commission, to whom they then appealed for protection. Quite a thorough investigation was made by the officers in charge who found that the damage would run into hundreds of dollars. Wire traps were resorted to but with little result, capturing only seven of the miscreants. They tried to avert their attention by placing all kinds of feed and nuts at a distance from the house, but it only seemed to multiply their numbers, and the commissioners were about on the point of allowing them to shoot or poison the invaders, but a happy thought occurred to them which they at once put into effect that was laughable in the extreme. They detailed a deputy to cut into small pieces of about one-half an inch square, numerous bits of ordinary fly paper having the sticky side up. Every hair that came in contact stuck, and their antics were laughable to behold.

Up one tree, down another and chased by the fortunate ones who didn't happen to come in contact with the seare, made a picture that a moving picture company would be very glad to obtain. In less than forty-eight hours their winter quarters were deserted and not a squirrel could be found in the section and if any house thus infected will try the experiment, I think it will meet with the same results.

THE ECONOMIC VALUE OF WILD BIRDS.

During the past summer in many parts of Oregon there has been an unusual pest of grasshoppers. The farmers in some parts of eastern Oregon have complained especially on account of the damage done to crops. According to Mr. Lewis Scholl, Jr., Justice of the Peace at Echo, Umatilla county, the much-despised crows gathered in the alfalfa fields by the hundreds and devoured large numbers of grasshoppers.

It is a most interesting fact that in Klamath, Lake and Harney counties where the California and ring-billed gulls nest in large colonies, about Klamath, Goose, Warner and Malheur lakes, these birds spread out in the fields along the sage-brush plains miles away from the water and live almost entirely on grasshoppers. It is rather a strange sight to see these web-footed birds hunting a living so far away from the water. The Brewer blackbird, which is com-

monly recognized by the whitish eye, is often seen during the latter part of the summer feeding upon grasshoppers. After the nesting season, these birds gather in flocks and skirmish about wherever grasshoppers seem most abundant. Sparrow-hawks, pheasants, quail, meadowlarks and many other birds live largely upon grasshoppers and other insects when they are abundant and thus assist man in the protection of his crops.

The Chinese or Denny pheasant is the most abundant game bird in Oregon. We sometimes hear the complaint from gardener or farmer that this bird is damaging crops. It is very true that the pheasant eats corn, peas, potatoes and grain, but at the same time, he devours many injurious insects. A male pheasant killed October 15, 1913, had its crop and gizzard filled with grasshoppers, weevils, soldier bugs and cutworms. The crop of another pheasant contained thirty-four grasshoppers, three crickets and eleven beetles.

In the vegetable and animal world, all living things are bound together in many ways. In the struggle for existence, every species is related closely to many other species, each acting as a force in itself to hold the equilibrium which is called the balance of nature. This natural law of our world may well be compared with that which keeps our solar system in operation. Each species is a powerful force within itself to live and multiply and in turn is held within bounds by the forces and actions of every other species. There is an intense natural competition to keep this balance even.

The natural checks upon insect life are the wild birds that live in our fields and forests. If we were to kill off the birds of a certain locality, we should immediately overthrow the balance of nature and there would be a corresponding increase of insects.

Without the wild birds, our forests would be swept as by a blast of fire. Our trees would look like an army of telegraph posts. The importance of bird life in conserving our forests is well known. Four hundred different species of insects are continually working on the oak tree alone. The birds of the forests are constantly catching and consuming these insects. On the willow trees, one hundred and eighty-six different kinds of insects are constantly at work; on the pine, one hundred and sixty-five species; on the hickory, one hundred and seventy; on the birch, one hundred and five; and on the elm, eighty. Careful analysis of the stomachs of thousands of woodpeckers, titmice, creepers, kinglets, wood warblers, wrens, flycatchers, swallows, nuthatches and other birds show that they do nothing else but eat these devastating insects. This is their life work. Destroy our wild birds and you destroy our forests.

Birds work more in conjunction with man than any other form of outdoor life. Nature has given them the special task of holding insect life in check in order to protect plant life. Do not let any fruit grower think, however, that birds alone will keep his orchard free from insect pests; birds will only help in the fight in orchards, gardens and forests.

In a day's time, the bush-tit and chickadee have been known to eat hundreds of insect eggs and worms that are harmful to our trees and vegetables. A brood of three young chipping sparrows were watched during one day and they

were fed a hundred and eighty-seven times by the parents. A family of four song sparrows, seven days old, were fed seventeen grasshoppers and two spiders in sixty-seven minutes. The flycatchers and swallows destroy vast numbers of flies and gnats that annoy horses and cattle. The food of the flicker or woodpecker consists largely of ants which protect the aphides or plant lice which are so destructive to gardens and orchards. Three thousand of these ants have been taken from the crop of a single bird. The food of the meadowlark consists of seventy-five per cent. of injurious insects and twelve per cent. of weedseed, which shows it is a bird of great economic value. A single robin has been known to eat a hundred and seventy-five caterpillars. One bob-white that was killed had over a hundred potato bugs in its craw. Another had eaten two spoonfuls of chinch bugs. After the day-flying birds have ceased their work and gone to sleep, the nighthawk is busy catching untold numbers of mosquitoes, moths and other insects.

W. L. FINLEY.

A Wild Weasel Sits for His Photo.

This view of a wild weasel caught with a set camera is most unusual, as the animal is seldom abroad in daylight. Photo by Howard Taylor Middleton, Harnesport, New Jersey.

LOUISIANA'S SPLENDID GAME RESOURCES AT FAIR.

To show what a sportsman's paradise Louisiana is and how conservation measures are preserving the great variety of wild game found in that southern State for the years to come, the Conservation Commission of that State is planning a most unique display that will be housed in the space Louisiana will occupy at the Panama-Pacific International Exposition in San Francisco.

While all of the natural resources of that State will be shown in the space allotted, the Conservation Commission, President M. L. Alexander, of that body, has decided to make a special appeal to the sportsman so that he may learn what game is to be found in the Pelican State and at the same time see how the modern conservation measures, now most rigidly enforced, are causing almost unbelievable increase in the migratory and resident game.

To this end a number of panoramic groups are in course of preparation in which the actual specimens of wild life will be on view in the environment of the South. The one given over to the wild duck and geese will depict a scene on the immense State Game Preserve showing every species of duck and goose that find a haven there from the market hunters' guns during the winter months. An expedition, headed by Stanley Clisby Arthur, the commission's ornithologist, and E. A. Tulian, superintendent of the fisheries department, left New Orleans during the middle of January for the wild game havens which include the State Game Preserve, 60,000 acres; Mrs. Russell Sage's Marsh Island, 78,000 acres; the Ward-McIlhenny tract of 50,000; the Rockefeller Foundation preserve, 85,000, and the smaller ones along the Gulf of Mexico total in all over 300,000 acres, to collect specimens, study and survey the birds seeking refuge there.

These game conditions will be photographed by "still" and motion pictures so that visitors at San Francisco will gain an idea of conditions in the middle of winter when the open season is on in full in other parts of the State and many of Mr. Arthur's pictures will be used for backgrounds of the scenes to be replicated at the exposition. The taxidermist of the Louisiana State Museum accompanied the party and only the actual birds found on the preserves will go into the groups. Another display will be that devoted to showing the upland game birds and the conditions under which they are found will be faithfully duplicated at San Francisco.

The recently acquired game "farm" on Avery's Island will also be given a prominent position in the exhibit of the Conservation Commission and the methods of breeding will be given a thorough exposition. The protection given the egrets that are now nesting by the thousands there every summer, and the other birds that neared total extinction a short year or two ago, will be explained to all who visit the exhibit.

Photography will be largely used by Conservation Commissioners Alexander, Dayries and Leche in showing what inducements the State offers the sportsman who longs for days in the open under matchless Southern skies, and abundance of game, but who must observe the bag limit and the other protective measures the commission has fixed on. Stanley Clisby Arthur, who has spent weeks at a time catching the wild life of Louisiana on the plates of his camera and the film of the motion picture, is well known as a photographer of wild life and some of the pictures he has secured in the Louisiana lowlands are as unique as they are beautiful and enlargements from many of his negatives will adorn the walls of the Louisiana booth.

BUTCHER PERILS BUFFALOES.

Learning that two buffaloes from the Scotty Phillips herd in Pittsburg, S. D., had been sold to butchers in St. Paul for meat and that the entire herd is for sale for any purpose, the purchasers may desire. Carlos Avery, executive agent of the Minnesota game and fish commission has asked the state to buy some of the animals and would recommend that park boards and estate owners do the same to prevent the extinction of the herd. After the death of Phillips, the heirs, many of them half-breeds, demanded that the estate be turned into cash.

Live Notes From The Field

Being Reports From Our Local Correspondents

GOOD TURKEY SHOOTING.

Albuquerque, New Mexico, Jan. 15, 1915.

Editor, *Forest and Stream*.

No doubt you have inquiries from readers, or beyond question not a few of your readers are wondering where in the United States they can obtain the best wild turkey shooting. If you will look on the map and find El Rito, New Mexico, about 61 miles north of Santa Fe, you will see a country which I believe to be one of the best game regions in the United States. There is nothing north of the place named to speak of to the Colorado line, except the Carson forest reserve, a vast wilderness with the finest turkey shooting in the world, plenty of bear, deer, lion and other game, while the rivers and adjacent streams are splendid for trout fishing. For miles east, west and south it is also practically one vast wilderness—in fact the center of a great game country with a climate unequaled anywhere.

I know my West fairly and there is nothing like this from Canada to Mexico. We have an all the year country, while Wyoming, Montana, and Idaho are open only a short time winter or summer.

J. G. W.

PENNSYLVANIA ELK SHOT.

Warden E. N. Kelly of Western Pennsylvania, reports the inexcusable and illegal shooting of a big buck elk, one of the herd turned loose by the State in Clearfield, Clinton and Center counties, and is after the perpetrators of this crime. Writing of the incident, Mr. Kelly says:

"The fellow who killed this knew exactly what he was doing, for he was shot in wide open country and was looking directly at its slayer at short range when he put a 'punkin ball' from a 12 gauge shotgun through its breast. The ball passed through the heart and ranged back lodging in the hind quarter. The animal will weigh possibly 700 pounds, about three times the size of a big buck deer, and as it had a fine set of antlers, could not have been mistaken for a deer.

"The elk was killed about one-half mile from the Crystal Springs Club-house and if I get my hands on the fellow who killed that elk he is going to pay the full penalty. The whole countryside up here is stirred up by this thing, for the people who live here have been mighty pleased to see the elk put in, and to have a dirty skunk deliberately shoot as fine a specimen as this, right out in the open where he knew exactly what he was doing, is an outrage."

FAVORABLE FOR SMALL GAME.

Independence, Kan., Feb. 7, 1915.

Editor *Forest and Stream*:

This has been a very favorable winter for small game in this locality as we have so far had less than one inch of snow altogether and the coldest weather two above zero. As you know, quail are protected until 1921 and they are already showing considerable increase in numbers. I believe they will win out all right if we can only teach the farmers their value to them and induce them to protect them. One of my customers, seven miles out was complaining in my shop last week that he had been raided twice in the night when he was absent from home by parties in autos who would go over the fields farthest from the house, as their tracks showed plainly where they had thoroughly quartered the

ground. He had several fine covies of quail but after these visits they have all disappeared. It is supposed from appearances that the raiders were after quail and rabbits. He says he is going to lay for them with his Marlin, No. 12.

E. B. WHITE.

SPRING SHOOTING OF MIGRATORY BIRDS ABSOLUTELY PROHIBITED.

Washington, D. C.—From the number of letters which they have received on the subject recently, officials of the Department of Agriculture believe that sportsmen may unintentionally violate the provisions of the Federal Migratory Bird Law, which it is the purpose of the Government to enforce rigidly. Under the provisions of this law no water fowl can be shot in the northern or breeding zone after January 15, except in New

LUCK IN THE ADIRONDACKS.

Elmira, N. Y., February 4, 1915.

Editor *Forest and Stream*:

Your monthly magazine is certainly O. K.—the best out. Am sending you a small photo of myself and brother sportsmen, showing our luck last fall in the Adirondack mountains. From left to right: G. H. Allen, C. O. Geiger, M. H. Dunbar, C. A. Washburn, H. M. Weigle, C. F. Artley and G. F. Blair, all from Elmira. Success to *Forest and Stream*.
G. F. BLAIR.

Personally I believe it is the greatest game law ever passed and I want it upheld. As a lawyer I am bound to say that following the decisions of the Supreme Court it can hardly be held constitutional. It will take some very tall wabbling from their other decisions to uphold the law.

But the way to get it upheld is not by abuse of the judges who try to follow the law as they

see it. It is to carry a case up and fight it in the Supreme Court with good counsel and try to reverse the circuit courts.

The law is needed. Only this morning I read in the Gazette about one man who killed 800 robins on the roost, and no state law to prevent it.

But we can't win out by abusing the courts. I congratulate you on the fine appearance of your journal.
J. M. ROSE.

Licensed Hunter and Migratory Bird Law

In the February issue of *Forest and Stream* an article appeared that was intended to support the Federal law, and, at the same time, "call down" in a nice way, the hunters of the Middle West, who are said to be more or less in revolt against the law, because it placed them in the wrong zone, and, therefore, deprives them of all shooting or at least any shooting when ducks are thickest.

The writer of the above article did not have a clear understanding of the conditions in the Middle West, and it is not at all surprising, as certain writers in the East have been free users of pen and ink, and let their minds run riot, when they start to write on their pet hobby. They would like to deny to others even the right to think, much less to express an opinion that does not accord with their radical views. This was illustrated only last week, when Dr. W. Hornaday replied in the *Sportsmen's Review* to a letter received from Mr. L. M. Gietzer of Columbus, Nebraska, written under date of Jan. 12th, 1915. Mr. Gietzer explained the hardship the Federal law placed on hunters in Nebraska and asked for help to have the law properly

amended, and that, in return, the hunters of Nebraska would see to it that the law as amended would be properly enforced.

Let us review the situation. When the leaders in the Migratory Bird Law were seeking aid, to have this law passed, they did not solicit the help of the Arkansas or Louisiana market hunters, but they did appeal to the sportsmen who had been instrumental in having game laws put on the books in the states of the Middle West. It was only possible to get help from people who favored a limit on the game bag, and a short open season. It is hard to get a good game law on the statute books, but the work is nothing as compared with trying to enforce that law.

The Migratory Bird Law promoters used this as an argument to the hunters of the Middle West, to secure their co-operation, "that the laws of the states are attacked every two years, but with Federal regulation, we will put a shorter season, and stop spring shooting, and when the season closes, the Federal authorities will see to it that the season will be actually closed."

According to the *American Cyclopaedia*, "spring" is defined as follows: "Spring, in as-

Jersey where the season extends to February 1. In most of the southern or wintering zone the season closes February 1, but extends to February 15 in Florida, Georgia, and South Carolina. These regulations were proclaimed on October 1, 1914. No change has since been made in them and no change is likely to be made until the constitutionality of the law has been passed on by the U. S. Supreme Court. As a matter of fact, the law provides that all changes in the regulations must be considered for a period of 90 days, and then must be approved and signed by the President, before they become effective. It is thus evident that there is no possibility that the prohibition of spring shooting will be in any way modified this year.

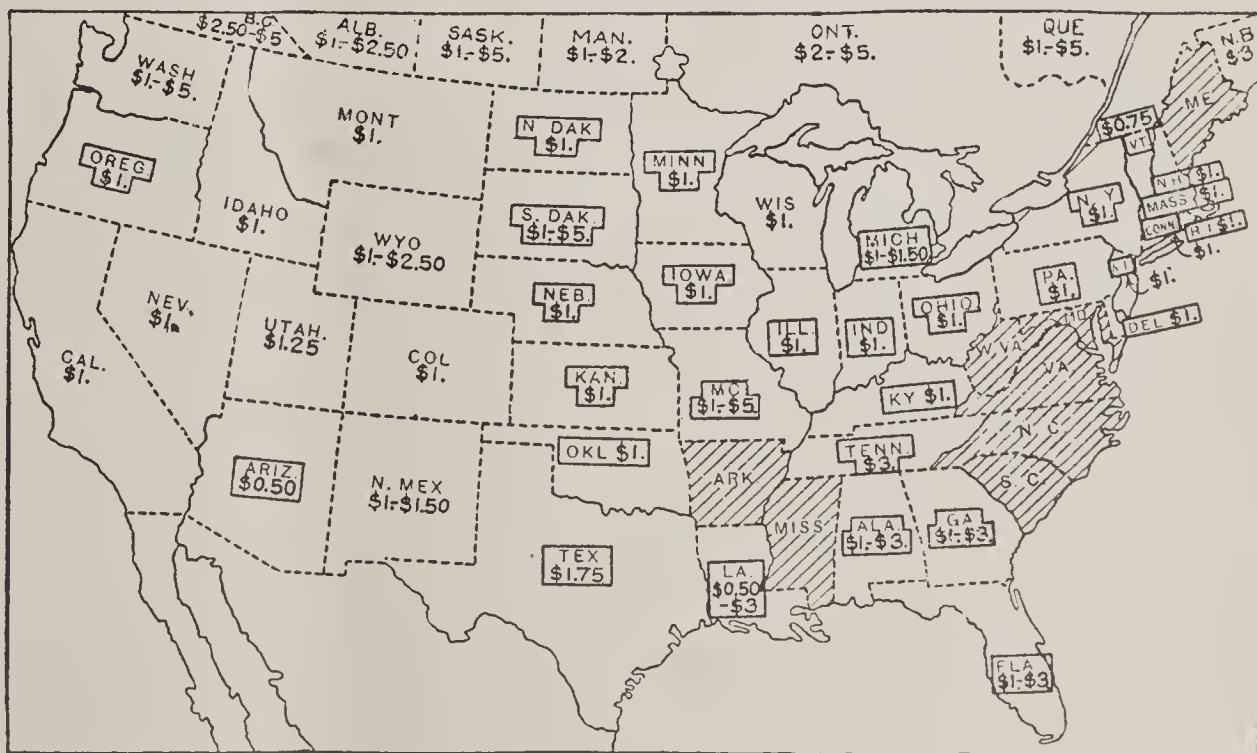

The officials of the U. S. Department of Agriculture who are entrusted with the enforcement of the law are anxious that these facts be impressed upon the people because it is the intention to investigate carefully all reports of violations made to the department's inspectors and wardens and to prosecute all such violations in the Federal courts. In this connection it is pointed out that prosecutions may be instituted at any time within three years of the offense.

THAT ARKANSAS DECISION.

Little Rock, Ark., Feb. 12, 1915.

Editor *Forest and Stream*:

I have read your editorial about the migratory bird law. I can understand your feelings about the law for I am a firm believer in it and hope it will be upheld. But you are wrong in your denunciation of the Arkansas decision. It was made by Judge Trieber of the United States Court. Judge Trieber is a learned and upright judge and personally in favor of the law. The decision is his opinion on the constitutionality of the law and not his opinion as a man. The law will be held unconstitutional by other United States judges and will not be finally binding till the question is settled by the Supreme Court of the United States. That Court has held so often that the game is the exclusive property of the State that it is hard to get any logical reason why the United States has anything to do with it.

States and Provinces which required residents to obtain hunting licenses in 1914.

Resident hunting licenses are now required in 40 States, in 8 Canadian Provinces, and in Newfoundland. In New Brunswick, Ontario, and Quebec these licenses are required only for hunting big game, and in Tennessee only for hunting on land without written permission of the owner. Nova Scotia and Newfoundland require resident licenses for hunting caribou only. In Michigan, Minnesota, New Mexico, and South Dakota separate resident licenses are required for hunting big game. In 30 States, following the French method, landowners are permitted to hunt on their own property without license. (These States are indicated on the map by black lines inclosing their names.) In 10 States, mainly in the West, following the English method, everyone who hunts is required to secure a license. In Connecticut, Delaware, New Jersey, New York, Ohio, Oklahoma, Pennsylvania, and Rhode Island an additional fee varying from 10 to 25 cents is charged for the issue of the license.

onomy, one of the four seasons of the year, beginning for the northern hemisphere at a time of the vernal equinox or on March 21st and ending at the time of the summer solstice or June 21st."

This publication was issued and compiled by Harvard Professors, U. S. Army and Naval officers and scientific men of national and international reputation.

The framers of the Federal migratory bird law cast the work of scientific research aside and on the spur of the moment, or on something even less material, they made a new calendar, and shoved spring back into *bleak and dreary winter*. It is surprising that they did not complete the job by making the sun rise in the south and set in the north, and thus make breeding grounds extend from pole to pole.

When the law was framed up and passed, the hunter woke up and found he was cut out of winter shooting and naturally felt that he had been double crossed.

Now, if he buys a state license to hunt, its only use is to give his name and address in case he is injured in a train wreck, but it is of very little use as a license to hunt, when the birds are here during the winter months in which the Federal act prohibits shooting.

The hunter proves that he recognizes the law, as is evidenced by his taking out the hunting license; he is a law-abiding citizen and not a "game hog," "gangster," or the outlaw that Dr. Hornaday of New York Zoological Park would like to paint him. In Dr. Hornaday's reply to Mr. L. M. Gietzer's letter, which he had published in the *Sportsmen's Review* of January 30th, he states "that the spring shooting advocates (winter shooting), who live in Illinois, Nebraska and a circle around Kansas City (he does not define the size of the circle) have made up their minds to rule or ruin the whole Federal Law. For the Kansas City gang, I have not the slightest sympathy. I am against men who feel that way and I enjoy fighting them."

He states that no exception could be made to Nebraska, as similar claims from twenty-five other states would have to be considered, if one exception was made in Nebraska. One of the "gang" who lives within a circle embracing the State of Nebraska and twenty-five other states, remarked that he was surprised that Hornaday would publish such a letter, admitting he advocated a law so unpopular.

The facts in the case are that the hunters of the Middle West will stop shooting, if compelled by law to do so, but as long as they observe short "open season and small bag limit," they fail to understand why it is such an unpardonable crime for a "gang" sportsman in Nebraska and twenty-five other states, to kill a few ducks when the Federal authorities permit wholesale slaughter in the southern states by market hunters.

The other states in the Union, that have not complained to Dr. Hornaday, are evidently the southern states, that have loose game laws and permit market hunting; does Dr. Hornaday propose to close the northern zone to benefit the market hunters in the winter zone?

On the other hand, the man who pays a license to hunt in the Middle West, will not shoot

out of season, whether it be State or Federal law.

The hunter of the Middle West has been vilified because he has insisted that the Federal Law should be enforced. This, the Federal authorities have so far refused to do.

The licensed hunters of this section have always upheld the Federal law, but when people who will not take out a hunting license can go out and kill game and not be molested, the licensed hunters called the Federal officers attention to the violations. The Federal officers say they have no authority to make arrests or prosecute.

The licensed hunter then took the stand that if the law was a dead letter and would not be enforced, the embargo should be lifted so that those who paid the states a fee to hunt, could do so without breaking the law.

On the other hand, if the Federal authorities will not permit an open season when the birds are here, why not make the same rule effective in the south, where the market hunters operate, and where the *sale of game* is sanctioned? Why make a horrible example of the people who have made the Federal act possible, yet legalize the wholesale slaughter of game in the South?

The writer of the article in the February number of *Forest and Stream* states that the "revolt against the Federal law in the Middle West was started by someone because an Arkansas justice of the peace has overridden, by means of the mysterious reasoning process of his own mind, the dictate of Congress." Possibly it started because the justice of the peace, *did* think Congress *did* have power to regulate. Possibly the one arrested did not agree with the rulings of the justice of the peace, and appealed the case; possibly the judge in the higher court thought the justice of the peace was correct in his rulings; otherwise, how would the case have reached the United States District Court for the Eastern District of Arkansas?

Judge Trieber is an able lawyer, and an authority, and has had wide experience in matters of this kind. He ruled the act unconstitutional.

If the Beef Trust or Standard Oil secured a similar ruling, they would have secured an injunction preventing further interference pending final decision in the United States Supreme Court, and would have continued to do business at the same old stand in the same old way.

The eastern writers had better beware of placing all their eggs in one basket, by thinking there is no difference between the ability of Judge Trieber, and the average justice of peace.

It is possible that because the promoters of the Federal act do know of Judge Trieber's ability, that that is the reason they have instructed their deputies not to make any arrests or start prosecutions until after this case is finally determined.

The licensed hunters of the west are taking no chances, and are using every effort to strengthen their state game laws, so as to have something to fall back on in case the Federal act is declared unconstitutional.

The Hornaday attack on the licensed hunters of the Middle West was certainly ill advised, and uncalled for. In trying to incite the licensed hunters to start a fight against him personally, in order to advertise W. T. Hornaday, he is

simply aiding the unlicensed and market hunters, in place of strengthening the cause he pretends to champion.

Missouri, Illinois and Arkansas are in the midst of a hot fight, not only to prohibit the storage and sale of game, but to keep the game laws on the books.

The unlicensed hunters and market shooters have representatives in the assembly that are battle scarred, and are past masters in legislative cunning, and will stop at nothing to win their point.

Bills have been introduced at Jefferson City to eliminate the Deputy Game Gardens of Missouri, and still another bill seeks to wipe out the game department absolutely, and turn all property and moneys over to the good roads fund.

Dr. Hornaday could have selected no better time to hurl a bomb into the camp of the licensed hunter, if his object was to create a feeling to resent the Federal law.

With the Federal law declared unconstitutional, and the state laws wiped off the statute books, there would certainly be a fine situation to look upon. When a representative of the people of the state of Missouri gets up on the floor of the House, as did Mr. Fulbright of Ripley County, Mo., last Thursday, Feb. 4th, and demands the passage of a bill to abolish all Deputy Game Wardens, and to state that *he had a standing offer to defend free of charge, anyone charged with violating the fish and game laws of the State of Missouri*, we will leave it to the readers of this paper to determine whether or not the licensed hunter of the Middle West needs all the help he can get.

This is no time for Dr. Hornaday to attempt to seek personal notoriety. The hunters of the Middle West have and are still supporting the Federal act, but it is far from perfect and in order to get a law that is equitable, and just, they have advised that it be properly amended.

They feel that they are within their rights and care nothing about the exaggerated hobbies of Dr. W. T. Hornaday. When he can not back up his side of the question with substantial reasons, when he attempts to brand the sportsmen of the West as a "bunch of law breakers," he adds nothing to the strength of an unjust Federal law, which legalizes wholesale slaughter and sale of game in the southern states, and prohibits limited game bags in northern states.

The licensed hunter of the middle West has fought many a battle in the state legislatures to place and keep the present state laws on the books and is still fighting to do so.

He made possible the passage of the Federal Migratory Bird Law, and still supports the Federal act, but believes that by amendment, it could be made still more popular and effective.

The licensed hunter of the Middle West deplores the fact that foreigners and unlicensed hunters can kill migratory game birds, without fear of arrest or conviction, on account of the inactivity of the Federal officers. It is a farce the way our State Wardens act, but nothing so far has been accomplished by the Federal officers that shows any improvement over state control.

How To, Where To, When To, What To

Knicks and Knacks for the Sportsman's Comfort and Pointers for his Pleasure

WHAT TO TAKE INTO CAMP.

There are lists and lists of necessary things to take into camp. Here is one that while not complete in every particular—for the wants of men and women are mysterious as the things Solomon wrote about—is suggestive and might be kept for reference. No one will take all these things into camp, but everybody will take some of them. The list follows:

Bacon, baking powder, baking soda, etc., beans, dried; beef extracts, beverages, biscuits, bread, breakfast foods, butter, tomato catsup, cheese, chocolate, sweetened; cocoa, coffee, condensed milk, confectionery, etc., currants, corn meal, curry powder, eggs, extracts, fish, flour, fresh fruits, fresh fruit in tins, fruits, dried, fruit juice, gasoline, gelatine, hardware, ham, honey, jams, jelly, kerosene oil, lard, macaroni, marmalade, meats, meats, potted; medicine kit; mustard, olives, olive oil, paprika, pepper, pickles, potatoes, rice, salad dressing, salt, sauces, soaps, etc., soups, sugars, syrups, teas, vegetables, in tins, vinegar.

If you can see anything omitted from the above that you think is necessary, kindly let us know.

GOOD HUNTING IN EAST AFRICA.

New York, Feb. 18, 1915.

Editor *Forest and Stream*:

I have some interesting hunting and war news which I think will be of interest and benefit to your readers. I have received a letter from Nairobi, head office of Newland Tarlton & Co., the well known Safari outfitters, stating that the hunting grounds in British East Africa are practically unaffected by the war and the scene of hostilities is almost entirely in German East Africa. The obtaining of native porters is assured and there is no danger of delay for any one wishing to arrange a shoot. Any one contemplating a hunt in Africa may feel assured of its perfect safety for in British East Africa they are practically unaffected by the war as far as risk is concerned.

DAVID T. ABERCROMBIE.

AN INTERESTING NEW BRUNSWICK TRIP.

Norfolk, Conn., Feb. 16, 1915.

Editor *Forest and Stream*:

For the last two years, being pressed for time and wanting some very good fishing, I have gone into New Brunswick to Chatham which is easily accessible from Boston on a through ticket and have engaged there an old man named John Connell as guide. This John Connell is the man who, acting for the English authorities, captured a car load of moose alive by roping them in the snow and took them to Newfoundland to stock up the island. Mr. Connell is the lessee of a river by name Tabusintac and has interests on another river called the Bartibogue. At any time during the summer, but especially between the middle of July and the middle of August, the fishing for sea trout in both of these rivers is the best I have ever seen, excepting in New-

foundland. There is no limit to the number of trout which can be got, and they run in good sizes up to four pounds. Last year I had the best fishing of my life there for fish of this size, and the year before nearly as good, although we were much later. This trip costs a very moderate amount and it should extend long enough to give a man at least a week on the river in order to cover all of the pools and fish the streams thoroughly. The region is like the best parts of Maine, being heavily timbered and very interesting indeed. Mr. Connell takes ladies also, but it is rather a rough trip and accommodations are hardly such as ladies would care for inasmuch as it is 23 miles in the woods. It takes one day to get in from Chatham. If you want a sea trout trip without hardships and with very few flies, to men who are good enough sports so that they are willing to put up with more or less rough fare in the woods, recommended this.

Anyone going to Connells should take tent and bedding. Provisions and cooking are looked after.

R. B. STOECKEL.

TO PREVENT RUST.

Those who desire to use a rust preventive will find that if the tools are wiped with a cloth slightly saturated in mercurial ointment, they will obtain the best results possible. It is not necessary to leave more than a trace of the ointment on the steel. A cloth so impregnated that it will smear a pair of spectacles a little will answer.

This ointment is the very best possible to use on guns, to prevent them from rusting. It will also prevent the barrels from leading and will remove lead from the rifles. It has no action whatever on the metal of the barrel.

PRESERVED MINNOWS.

Fond du Lac, Wisconsin, Feb. 15, 1915.

Editor *Forest and Stream*:

I believe some of the many anglers who read *Forest and Stream* will be interested in an experiment the writer tried out last season in preserving minnows dry for use in trout fishing.

I boiled about a pint of water and when cold added all the salt it would dissolve, then stirred in as much corn meal as the brine would take up and set it aside for two weeks, when it was found to be as sweet as when first mixed. I then dried the corn meal on a square of paper, pulverizing all the lumps and granulating thoroughly.

Four dozen minnows from 2 inch to 3 inches long were then procured and left to die in a small amount of water, after which they were fairly well dried off by rolling gently on a paper, and a tin box of suitable size was packed with alternate layers of meal and minnows.

Now, if memory serves me right, this box was packed about April 10, and was carried on every trouting trip until well along in August, when

the few remaining minnows were found to be as fresh and sweet as when packed four months before. They were firm and solid, not easily whipped or nipped off the hook, and were the cleanest lot of bait one ever handled. Try it.

C. F. LARZELERE.

A NEW KNIFE.

The Marble people, up at Gladstone, Michigan, designers of handy things for the woods and stream man, are working on a new knife, which will be on the market some time this spring, probably in April. It is a knife that will find a wide range of usefulness, for it combines not only the good qualities of the other excellent grades that the Marble Company make, but it is somewhat of a novelty in having a curved blade—an uncommonly thick blade—and made with a handle after the usual Marble pattern, giving a

The New Marble Knife.

balance that makes the whole affair seem feather-weight in the hands of the user. A picture of the general style is given herewith, but the dimensions will vary somewhat. The Marble Company have very kindly sent *Forest and Stream* a sample of the forthcoming style, made according to general specific directions of the man who wished to use it, and it is no exaggeration to say that the knife as it lies before us is not only a thing of beauty, but an article of utility and life-long usefulness. Watch for it among the spring styles for sportsmen, to be announced shortly.

HOW TO COOK THE WINTER BUNNY.

E. D. Nauman, Sigourney, Iowa, has sent *Forest and Stream* the following which may be new to many readers who have looked upon the winter bunny as pretty poor sport and mighty poor eating.

"During the winter months after the open season on quail, grouse, squirrels, etc., has closed, the Cotton tail furnishes a welcome opportunity for the continuation of the sportsman's expeditions into the fields and woods. Furthermore it requires almost as much skill to topple over Mr. 'Bunny' as he flies over the snow at that terrific speed with which he starts, as it takes to bag the flying bobwhite or grouse.

"This rabbit also makes a very palatable dish if the following directions for his preparation are carefully observed. The moment he is shot, cut off his head; then split open the abdomen from the vent to the ribs, carefully removing the

stomach and entrails which always contain a large amount of substance. This can be done easily if the rabbit is held, front feet up, after opening as above directed.

"After the entrails are removed, place the rabbit on his back and fill the cavity full of snow and leave him thus for a few moments. Next shake out the snow, wrap in sheet of paper and drop in your game bag. The skin can be removed after the day's hunt. By this treatment you remove all taint from the meat and you will be surprised at its fine flavor."

MAKING A FISHERY AT SMALL COST.

By Theodore Gordon.

There are many farms in the mountainous regions of the east on which it would be easy to make a fishery, or if preferred build a trout hatchery, although this would entail more expense. These farms are blessed with many strong springs of pure cold water, and not infrequently the formation of the land is such that by building a small dam a fine sheet of water can be created.

For instance, I know of a man in a good trout country, but where the fishing is often quite indifferent, who made a first rate fishery and scarcely knows that it cost him anything in cash. He has a small boarding house in summer and allows his guests to fish but they do not kill a great many trout with worms, the bait they most favor.

An expert angler and friend of mine, has been to this place twice. The charge for non-boarders is two dollars per day and this is reasonable enough if conditions are favorable. The fishery was well stocked and the trout grew and bred well. Like most waters over new lands the place was well stocked with food, and the supply has been more than maintained by the growth of water weeds and moss which harbor and breed great quantities of the larva of insects and other trout food. The fish are all native brook trout (*Fontinalis*), I can not describe the water. It seems to be a long winding slough, with ten feet of water and possibly more in some parts of it.

All the trout I have seen from there were killed on floating flies, the expert referred to being the fisherman in both cases. The first time, I think there were about ten good fish for natives, say one-half to three-quarters pound. The last time only three fish were killed; the angler and his wife were on a little excursion and tried the trout for a while. It was not a good day, being very warm and still; scarcely any breeze. At last he saw a good trout rise just once, and spotted it as accurately as he could. He put up a spinner I had tied and given him and after very careful work he rose and hooked the fish. It put up a fine battle and when landed proved to be a lovely brook trout 18 inches long and weighing 2½ pounds. He brought the fish to show me and the flesh was very pink. The stomach as I remember it, was well filled with immature insect life.

The owner of this property has, I imagine, doubled its value with little cost to himself. If a small comfortable hotel or inn was built it would be well patronized by fishermen, as it is superior dry fly water.

There are lots of anglers who would gladly pay two dollars and a good rate for board

to have really fine fishing with the floating fly near hand. Then the trout are all native brook and run to a large size. It is claimed that there are some very heavy fish in this winding slough and the water is very suitable for the floating fly. When there is a good rise of insects they say trout are rising everywhere.

I must try it myself, in spite of the distance.

GO FIXED.

All old campers, and new ones who have "bit" will usually cuss at the mention of the word "camp stove." So called "camp stoves" have made their appearance from time to time with slight changes only to disappear from the market as failures, or at best somewhat disappointing; cause: lack of one or more desirable qualities; and on the whole a competition among manufacturers for cheapness instead of satisfac-

Two Views—Boxed Up, and Ready for Business.

tion. After knocking about as a camper and tourist for about fifteen years and "finding fault," or no satisfaction, like the rest of the boys with so called camp stoves," W. E. Baxter invented in 1890 or earlier the Baxter Telescope Stove and Outfit, always keeping away from the name "camp stove," and has from time to time improved the former invention until he now has the Baxter Portable Stove—the only stove having the metal Crate-Support, water reservoir, and carrying, when wanted, a cooking and serving outfit—making the one package compact, complete, convenient, suitable alike for indoors, outdoors, or anywhere by anybody; the small amount of fuel necessary to operate always being found on hand; the only package suitable, on the market to-day, for automobilist, tourist, camper, boatman, cottager, etc. The Baxter Portable Stove without the outfit retails at \$7.50.

THE CHESTNUT CANOE.

The canoe problem is already at hand, and in this connection the Chestnut Canoe Company of Fredericton, New Brunswick, make announcement that they have completed arrangements for delivering, duty paid in the United States, any of the dozen styles of this famous canoe that may be ordered by American customers. The Chestnut canoe has a world wide reputation for staunchness, lightness and speed and as it is the universal selection of people who require hard service, Chestnut canoes have gone into the far places of the earth; they have been taken thousands of miles from civilization, and brought back again in good condition, and yet with all this, they are lighter, handsomer and speedier than most of the fancy canoes designed for what might be called park purposes. The Chestnut Company will be glad to send you a catalogue for the asking.

STEEL RODS IN DE LUXE FORM.

Anglers will be interested in the announcement that the Bristol steel rod is to be adapted in appearance and otherwise to a "De Luxe" form. The new rods will be on the market about April 1. One will be a fly rod 8½ ft. long, fitted with snake guides, agate guide and tip, and an extra tip. It has a cork handle with locking reel band. The finish is a silk winding the entire length. The joints are reinforced with other silk windings, and the guides wound on with silk. Over this is a waterproof finish, and on top of the waterproof finish the very best finish similar to that used on the very highest grade split bamboo rods. This, it is said, adds about 40 per cent. more strength to the rod. On the fly rod this silk winding finish takes away the extreme flexibility of the steel, formerly criticised in a steel fly rod.

WATCH AND COMPASS COMBINED.

Have you ever—of course you have—busted your good gold chronometer while out on a fishing or hunting trip, and have you not also said things on such occasions that might not appear well in print? The answer, as all outdoor men have agreed, but unfortunately have never followed to a right conclusion, is to put your good watch in—a safe place—when you start for the woods and wear a cheaper one. Now a cheaper watch is usually an abomination, but *Forest and Stream* in its search for all things that make life for outdoor people pleasanter, has uncovered a watch that can be sworn by, and not at—a watch that is not only a watch, but carries in the head of the stem a real marine compass. Thus you can have a watch that will keep time, a

watch with a crystal face that you cannot break with ordinary carelessness, and a watch with a compass that will point you home safely. Read about it in another column, and let us send you one. Next to a box of matches it is the most essential thing that you ought to carry on your person.

New Way To Ship Live Fish

The difficulty in transporting fish fry and adult fish from one place to another has never been altogether overcome, but the California Game Commission which has faced the problem of shipping fish for hundreds of miles over mountainous territory and through utter wildernesses, has finally found a plan that has worked well and which will prove valuable to fish culturists and clubs all over the United States.

Experiments having demonstrated that canvas containers offer added advantage over tin in the carrying of trout, a new packhorse fish "can" has been evolved by deputies of the Fresno office, which apparently is the acme of perfection in fish carrying receptacles in regions where ice is unavailable and where aeration must be obtained without the aid of artificial methods. The size and shape (oblong) of the usual packhorse can has been retained. The tops and bottoms of the new containers are of pine five-eighths of an inch thick; a throat of tin is inserted in the top, provided with a removable screen as in former cans. A strip of canvas of special design, eighteen inches wide, the ends lapped and sewed in such manner as to make an open envelope, is fitted to the wooden top and bottom and secured thereto by means of clothes-line wire drawn in such manner as to press the canvas tightly into grooves which encircle the boards. To give rigidity to this container, a galvanized iron shield is provided with hangers which, when bolted top and bottom to the "can," makes it to all intents and purposes as rigid as though the whole container were of metal. This shield does not completely encircle the can, covering only the back and ends, and to it are attached straps for hanging the container to the pack-saddle. For packhorse work the new device has many advantages. First, just enough water exudes through the canvas to keep down the temperature within the container by evaporation; second, aeration of the water is infinitely better; third, the fish are not liable to injury by striking against canvas; fourth, the cans may be carried "knock down," and set up at any time without the use of tools; one packhorse can carry a dozen or more of these "knock down" containers, leaving the rest of the packtrain to carry barley and other necessary supplies for the expedition. A few extra canvas envelopes, which occupy little space, can be carried for emergency

repairs, and in event of an accident to a can on the trail a new canvas form substituted for the injured one. To avoid infection, the canvas envelope may, at any time, be removed and placed in boiling water. The cost of this new type of packhorse can is 50 per cent. less than for a well constructed tin can. The details of the new fish-carrying device were worked out and 14 pairs of the "cans" were constructed by Deputy D. H. Hoen of the Fresno Division.

This new method can probably be adapted to man-packing as well as horseback packing, and the experiences of the California Commission have shown that even adult live fish can be transported to almost inaccessible places and kept alive for days at a time.

NOVA SCOTIA APPRECIATION.

Digby, N. S., Feb. 5th, 1915.

Editor *Forest and Stream*:

The monthly *Forest and Stream* is a "ripper." I was wondering how I was going to do without

"A SURE SIGN OF AN EARLY SPRING."

The Fisherman's Club of Chicago will hold its Annual Dinner at the Auditorium Hotel, Chicago, Saturday, March 27, at 6 o'clock p. m. Some of the foremost speakers in the country are booked, and a first-class program has been arranged.

A REMARKABLE SHOT.

The flimsy little newspapers which some of my German relatives send me each week are not very satisfactory nor illuminating as to what is going on at present over there, but there will be, once in a while, an item so unusual as to be worth translating.

The following account is of a quite remarkable and well-attested rifle-shot which ought to interest your readers. The article is called: "A shot which deserves to go on record" and tells of a French rifle-ball which had been shot into a German gun-barrel, where it met and exploded the cartridge to the great detriment of the gun and the man—the German infantry man—who was aiming it at the enemy.

Disbelieved, defended, ridiculed and solemnly attested by reporters, soldiers and experts this news-item has been going the rounds of German local papers; and at last came to the eyes of Dr. Linz—an army-surgeon, home on sick-leave and wading through the accumulated war-literature, his good wife had been collecting for him. Dr. Linz, strange to say, was the very surgeon who had bandaged and treated the eyes of the badly-damaged man whose rifle had been so queerly hit, and he positively affirms the absolute truth of the story. French bullet—much elongated and badly deformed—and German rifle had been examined very carefully by him, his assistant, and many bystanders and were found to be of 7.91 millimeter calibre for the German Mauser and 7.8 millimeter for the French gun. "The Frenchman's aim (?)" concludes Dr. Linz, "was truly wonderful; of a straightness and a directness quite marvelous. The bullet must have hit the German rifle-muzzle plumb in the middle of the center. And we are all hoping that the German lad who had the ill-luck to fire just a hundredth part of a second too late is doing at least as well as can be expected."

KATE H.

"Bluff"—a Good Tolling Dog.

my weekly number, but now I am quite willing to postpone the pleasure until the first of every month.

I am enclosing you photo of "Bluff," my best tolling dog, taken with his winter coat on, I have had so many inquiries about tolling dogs since my article appeared in *Forest and Stream* describing these dogs, that I thought you might think it worth while to publish a picture of a good specimen of the breed. To my mind, "Bluff" is the best retriever and fastest swimmer that ever looked through a collar.

H. A. P. SMITH.

The Day After A Freshet

How Success Attended the Skill of the Dry Fly Fisherman

By Theodore Gordon.

WHEN we have a heavy flood in any of our mountain streams, many trout are forced out of the torrent and run up the little estuaries of small streams or rather brooks. In old times these were known as Bennie-kills, bennie I believe meaning small and kill stream; hence the Beaverkill, one of our finest rivers.

The trout seem to know that they are much exposed when lying in these brooks and drop back into the main stream as soon as the water falls. I saw about a bushel of good fish, almost in the village of Claryville, after a tremendous freshet in August, 1912, and think that plans had been prepared for their destruction that night, but the water fell so rapidly that they were all back in the stream by 5 o'clock, p. m. Most of these fish came from posted water below.

This was on Sunday and on Monday I had very pretty sport with good trout of 12 to 14 inches. The number was only half a dozen but all I wished for to send to a woman friend who was in bad health, but very fond of fresh trout. The water was clear as crystal, quite cold and the fish caught in great style. Only two days since the fresh water came down but they were different in appearance. They had fed freely and really seemed to have plumped out. They certainly were much brighter in color.

I killed two and lost another in a pool only a stone's throw from my quarters. This pool had been curiously changed by the heavy waters, but more by the rush of water worn stones. These last produce extraordinary effects, tearing, gouging and filling up.

I knew that there would be at least five persons sitting down at my friend's table on Tuesday, possibly six, so I wished to kill that number, but when I came in I had but five. They were very handsome, nevertheless I needed one more and the stream had been well fished that day by many anglers. Directly after supper I toddled down stream to what was now in this stage of water, a fine pool. I went over it twice and was almost discouraged when a good 12 inch trout took the pale delicate fly I was offering. This completed a very agreeable day. I had fished probably five hours. Two in the morning, the same in late afternoon and one hour after tea.

The stream above was a bit peculiar in some respects. It seemed to be full of very small native trout and local fishermen caught quantities of these, while I stuck to the larger brown trout that were not plentiful. I would come in with three or four fish and be informed that some local man had basketed thirty or more. After I understood and saw the miserable little trout I was no longer puzzled. I had a real hard time of

it catching or trying to catch the big trout I had marked down. They had become very timid and smart during the six weeks of low water, and would run for their dens at the first alarm. The only thing to do was to crawl up from below, after you knew the habitual lie of the fish when he was out feeding or taking the air. I assure you one feels quite proud of even a pound trout taken under these conditions.

Two or three days after the freshet my landlord hitched up his old white horse and said that we would go a fishing. He drove down the river about three miles, thus passing over a lot of posted water, and getting down to where it was free. This being below the junction of the East and West branches of the Neversink, the stream is much larger and the pools were still in fine order. My companion devoted his attention to the shallows where he took a good many eight inch trout, natives and brown trout mixed, and very nice fish for the pan, but not my motion of sport-giving trout. I worked quite hard for five or six trout and then walked up stream seeking a deep pool near the road, into which a riprap of logs and stone had been built. Any one who saw the place knew that it must hold a big trout or two. There was eight to ten feet of water in the deepest hole below the logs, and the rapid ran into the pool and threw itself against the obstruction. As it became quiet I spotted a lovely spot for a big feeding fish to lie. However, I fished every part of the water below, then put up a perfectly new

fly and oiled it. At the second cast a trout started from the bottom at least six feet from the fly and took it savagely; after a desperate struggle it was safely landed and joined the others in a stout piece of wrapping paper in the big pocket of my shooting coat. Wading across, I climbed up the riprap and began studying the bottom to learn more of the pool. I had noticed a large tent in the distance and presently a greatly excited individual appeared from that direction, and angrily told me that I was on leased and posted land and must go at once.

I departed cheerfully but was very sorry that I could not return to that deep pool. It was by far the most attractive of any for miles. At one time there was any quantity of the finest kind of dry fly water, from the junction down, but the floods had spoiled many of the best pools. One in particular almost made me weep. From a distance it appeared unchanged, at least 300 yards of beautiful flowing water, from two to eight feet deep but when one arrived on the spot it was seen to be silted up, the bottom was sand and small gravel; not a hiding place in sight, and not more than two feet of water anywhere. No one could tell me of the lies of big trout, yet ten years before I never passed through Claryville without being informed of enormous brown trout that had escaped from all the native anglers, sometimes even after they had a snare around the body. However, I enjoyed the summer and had enough sport to satisfy my reasonable demands.

I Knew It Must Hold a Trout or Two.

TRAP SHOOTING

Forest and Stream is an Honorary Member of the Interstate Association for the Promotion of Trapshooting.

FIXTURES.—REGISTERED TOURNAMENTS.

May 11-13.—Memphis, Tenn.—The Interstate Association's Tenth Southern Handicap Tournament, under the auspices of the Memphis Gun Club; \$1,000 added money. Winner of first place in the Southern Handicap guaranteed \$100 and a trophy; winner of second place guaranteed \$75 and a trophy and the winner of third place guaranteed \$50 and a trophy. Several other trophies will also be awarded. Elmer E. Shaner, Manager, Pittsburgh, Pa.

June 15-17.—St. Louis, Mo.—The Interstate Association's Tenth Western Handicap Tournament, under the auspices of the Missouri Athletic Association Gun Club; \$1,000 added money. Winner of first place in the Western Handicap guaranteed \$100 and a trophy; winner of second place guaranteed \$75 and a trophy and the winner of third place guaranteed \$50 and a trophy. Several other trophies will also be awarded. Elmer E. Shaner, Manager, Pittsburgh, Pa.

August 16-20.—Chicago, Illinois.—The Interstate Association's Sixteenth Grand American Handicap Tournament, under the auspices of the Chicago Association of Trap Shooters; \$3,500 added money. Winner of first place in the Grand American Handicap guaranteed \$500 and a trophy; winner of second place guaranteed \$400 and trophy; winner of third place guaranteed \$300 and trophy; winner of fourth place guaranteed \$200 and a trophy, and the winner of fifth place guaranteed \$100 and a trophy. Numerous other trophies will also be awarded. Elmer E. Shaner, Manager, Pittsburgh, Pa.

PHILADELPHIA TRAP SHOOTING LEAGUE.

Maintaining their hold on first place in the Philadelphia Trap Shooters' League by defeating Highland, the Meadow Springs Gun Club increased its chances to win the championship in the target scramble. The Manoa gunners, however, had to win this match from the Highlanders to hold their lead, for both the S. S. Whites and Camden teams won their contest, the former defeating Clearview after the most hotly contested match of the day, while the Jerseymen succeeded in walloping Glen Willow without exertion.

The Whites and Camden are but one point behind Meadow Springs and have nearly as much a chance to win the title as the Manoa men. With these three clubs in the thick of the running, and Lansdale, Clearview and duPont but one point behind the second place holders, and but two behind the leaders the race for the championship is proving to be one of the best ever held by the league.

In the other match yesterday duPont won from Lansdale.

High individual scores prevailed in the four matches, George S. McCarty, of the Camdens fir-

ing the high gun with 40 dead ones. Severn, Eyre and Newcomb, of the Whites, each shattered 48, while Shuster and Wiltbank, of Clearview, A. B. Richardson, of duPont, and Bender, of Lansdale, all cracked 47. Sloan, of Meadow Springs, and S. M. Crothe, of Highland, scored 46 apiece. The points scored and targets broken, follow:

	Points scored.	Targets broken.
Meadow Springs	8	1752
S. S. White	7	1822
Camden	7	1770
Lansdale	6	1688
Clearview	6	1674
duPont	6	1757
Glen Willow	4	1633
Highland	4	1504

BEIDMAN GUN CLUB.

Ten marksmen participated in the weekly 100-target race at the Beidman Club, and once again Director of Public Safety Porter gave a fine exhibition of target shooting. Breaking 88 blue rocks, he was only one target behind Selinay, who carried off the honors with 89 breaks. Superintendent Robinson and Dr. Jones tied for third place, with 83.

	25	25	25	25	T.

NATIONAL SCHOOLBOYS' SHOOT.

Washington, D. C., Feb. 16.—Thirty public high schools, from Maine to California, began a series of rifle competitions this week for the championship of the United States and the War Department Trophy. The matches are held under the auspices of the National Rifle Association and supervised by the army and National Guard officers. Iowa City reported the best score, 962 out of a possible 1,000.

Scores:—

Scores:
 Class A.—Portland, Me. (Deering), 944, vs. Salt Lake, 916; District of Columbia (Tech.), 927, vs. Stoneham, Mass., 902; Auburn, Cal., 920, vs. New York City (Morris), 924; Portland, Me. (High), 934, vs. Baltimore, 953; Iowa City, 962, vs. Brooklyn (Tech.), 894.
 Class B.—Springfield, Mass., 925, vs. Jamaica, L. I., 426; District of Columbia (Western), 852, vs. New York City (Stuyvesant), 830; Tucson, 815, vs. Utica, 552; Warren, 748, vs. Grand Rapids, defaulted; New York City (De Witt Clinton), 841, vs. St. Louis, 681.
 Class C.—New York City (Curtis), 925, vs. Gilroy, Cal., 817; Northfield, Vt., 706, vs. New York City (Commercial), defaulted; Ogden, 898, vs. Brooklyn (High), 884; Sacramento, Cal., 777, vs. San Francisco, 727; District of Columbia (Eastern), 860, vs. New York City Commerce, defaulted.

INTER-CLUB GALLERY SHOOT.

Washington, D. C., Feb. 16.—Cleveland and Bridgeport each scored 995 out of a possible 1,000 in Class A in the fourth week's matches for the interclub gallery rifle championship of the United States. Marion made top score, 974, in Class B and New Haven topped Class C with 970.

Scores:—

Class A.—Cleveland, 995, vs. Manchester, 970; Dickinson, 956, vs. Boston, 949; Warren, 994, vs. Bucyrus, 983; Birmingham, 961, vs. Adrian, 955; District of Columbia, 992, vs. Stillwater, 952; Bridgeport, 995, vs. King's Mills, 993.

Class B.—Madison, 960, vs. Youngstown, 956; Marion, 974, vs. Hopkins, 944; Tacoma, 959, vs. Watertown, N. Y., 943; Milwaukee, 954, vs. Indianapolis, 941; Des Moines, 959, vs. Louisville (Swiss), 953; Bangor, 976, vs. St. Louis, 971.

Class C.—Buffalo, 967, vs. Ogden, 949; Tucson, 947, vs. Kane, 933; Detroit, 949, vs. Fayette, 914; New Haven, 970, vs. Salt Lake, 962; Watertown, S. D., 966, vs. Albion, 942; Louisville (Rifle), 926, vs. Corinna, 861.

JERSEY CITY GUN CLUB.

This was another day at the Jersey City Gun Club that was more like one in April than January, and fifteen of the boys were on hand to take a hand in the different events. Dr. Pinkerton was the big noise to-day, and won high average easily with an average of 84 per cent. Doc has adopted the proper style now of facing the trap and he is going to make the rest of us sit up and take notice in the future. Mrs. Randall was with us again to-day and put up a mighty good score, considering the little practice she has had at the trap shooting game:

Scores in strings of 25 follow:

Dixon	18	20	19	19
Tewes	18	17	20	19
Dr. Moeller	17	18	18	19
Engle	21	14	19	19
Piercy	18	20	21	19
Mrs. Randall	20	18	18	18
Phelps	16	14	19	14
Kearney	14	15	14	20
Dr. Hoening	8	10	7	8
Dr. Pinkerton	23	22	22	17
Harvey	19	22	16	16
L. Piercy	18	18	20	16
Brown	8	10	11	11
Jones	9	14	19	14
Brady	6	7	8	4

Strangers will kindly remember that we are glad to see them, and that they will be taken care of in good shape.

CAMDEN-GLEN WILLOW.

By a margin of fifty-one targets, the Camden Shooting Association defeated Glen Willow in a Philadelphia Trapshooters' League match, the score being 425 to 374. The contest took place over the Parkside traps of the Camden Club under conditions anything but favorable.

ST. PAUL ROD AND GUN CLUB.

Forty members of the St. Paul Rod and Gun Club attended the annual business meeting and banquet at the Dispatch Tea Rooms. Dr. F. J. Plondke was elected president; M. W. Thompson, vice-president, and L. J. Pleiss, secretary and treasurer. The following were elected directors: H. S. Johnson, I. Seddon, B. W. Parsons, Dr. C. A. Van Slyke and J. J. McGraw.

SARATOGA GUN CLUB.

The monthly shoot of the Saratoga Gun Club brought out a fair field of shooters and among them were many new devotees of the sport. Count Mankowski, owner of the fast motor boat "The Ankle Deep" was among the new ones and tho' trap shooting is a new game to the Count he piled up a very good score and no doubt after some practice will rank with our best amateurs. The New Years' Day shoot fell to Green who led Chamberlain by two targets. Chamberlain led in the DuPont event and Green in the Stevens with the rest of the shooters close on their heels. The following show the percentages shot:

	Per Cent.
Count Mankowski	85
Dr. Downs	80
Harry Ide	73
Dr. Mason	70
Albert Cluett	70
Harry Ludlow	48

J. M. COREY, Secretary.

TRAP SHOOTING YOUGHIOGHENY COUNTRY CLUB.

McKeesport, Pa.

The mild weather brought out a goodly number to the practice shoot at the Youghioghenny County Club, Saturday afternoon. J. F. Calhoun did some remarkable shooting, only missing one bird out of the 50 bird event. Dr. Aber followed him closely with 42 out of 50 and Dr. Heisey with 40 out of 50. The events were as follows. In the preliminary event out of 25 birds shot at:—

First Event—Cornelius, 12; Byard, 20; Gretzner, 4; Wilson, 17.
 Second Event—Byard, 19; Gretzner, 10; Morningstar, 14; Wilson, 16; Cornelius, 11.

Third Event—Heisey, 13; Aber, 21; Wilson, 15.
 In the regular fifty bird event, scores were as follows:

		Total
J. F. Calhoun	25	24
Dr. Aber	21	21
Dr. Heisey	19	21
G. Byard	18	19
Dr. Ord	17	17

J. Morningstar	17	12
P. Gretzner	10	18
W. A. Cornelius	13	14
J. A. C. Sword	11	15

INTERSTATE ASSOCIATION.

Registered Tournaments.

The Interstate Association at its annual meeting in 1914 made very few changes in the conditions governing registered tournaments. The plan of 1914 was so successful in its working that the directors decided to continue it in force during the year 1915.

Like every radical move made by the association in the twenty-two years of its existence, doubt was cast upon the decision, made at its annual meeting in 1913, to favor that class of sportsmen who indulge in trap shooting for the sport's sake only by making its contributions to registered tournaments part in trophies, instead of all in cash. It is worthy of note that the change met with popular favor, and that the results fully justify the wisdom of the departure. The records show that 881 trophies were well distributed among 626 contestants—479 different contestants winning one trophy, 88 winning two, 34 winning three, 11 winning four, 8 winning five, 2 winning six and 4 winning seven—all of whom, no doubt, feel proud of the emblems they received as rewards of merit.

The scheme whereby the several state amateur championships were brought together at the 1914 Grand American Handicap Tournament to compete for the National Amateur Championship also received the stamp of approval from the trapshooting world. Thirty-five of the thirty-six states that held registered state tournaments previous to the Grand American Handicap had a representative present to compete for the honor. The contest attracted much attention throughout the entire trap shooting season, and it was a feature event of the Grand American Tournament. This departure was so eminently successful that it has been continued without change for 1915.

Trophy Plan for 1915.

While the trophy plan of 1914 was very satisfactory, it is the intention this year to inaugurate an entirely new idea in the distribution of trophies. In brief the plan is as follows:

Arrangements have been made with one of the foremost jewelers and silversmiths in the country which will permit each trophy winner to select from a choice list of merchandise the particular article which appeals personally to the successful contestant, this article to be suitably engraved and forwarded, charges paid, to any point.

The trophies will be illustrated and described in a four-page folder, which will be sent in advance of tournaments to club secretaries and others interested. The club secretaries will also be furnished with forms to be filled in with names and addresses of the winners, trophies desired and other data.

The buying power of the association is such that most attractive trophies are assured. Among the trophies The Interstate Association is to feature sterling silver table ware, giving contestants an opportunity to eventually win complete sets of that useful merchandise. While The Interstate Association trophies will be more or less special in design, arrangements have been made with the manufacturers to handle any orders at their regular retail prices which may be sent them. This will enable prize winners to complete sets of silverware or secure duplicates of any trophy won. This method, briefly outlined, shows, we believe, many desirable features which will appeal to the tournament contestant. The scheme is offered with the hope that all trapshooters will find it acceptable.

New Ruling for 1915.

The principal change made for 1915 was the fixing of a time limit for the filing of applications carrying requests for contributions. In 1914 the association was obligated for the entire amount of its Registered Tournament Fund by March 15th, and many applications for contributions were received after the fund had been exhausted. Failure to secure contributions caused more or less ill feeling among the clubs that were too late in applying. To obviate this in 1915, February 15th has been fixed as the date on or before which applications carrying requests for contributions must be filed to be considered, and no application will be passed upon before said has expired. This applies to all applications carrying requests for contributions, with the exception of applications for state tournaments. Inasmuch as all state tournaments are provided for alike in respect to contributions, such applications may be filed at any time.

Apportionment of Fund.

In the apportionment of the Register Fund for 1915, approximately \$9,000.00 will be contributed to state tournaments and approximately \$11,000.00 will be contributed to tournaments other than state tournaments.

Approximately \$8,000.00 of the total Registered Tournament Fund will be contributed in trophies. Purchasing trophies in such large quantities means additional value for the fortunate winners.

To each approved state tournament The Interstate Association will contribute \$225.00, part of which will be in trophies, irrespective of the population of the State in which the tournament is held.

The \$225.00 contributed to a Registered State Tournament will be made up as follows: \$100.00 in cash, which shall be awarded as the club holding the tournament wishes; \$75.00 in seven (7), trophies, which shall be awarded to the winners of the first seven places (high guns) in "The Interstate Association's State Amateur Championship" event, and \$50.00 in cash, which shall be awarded to the winner of the State championship (or to the runner-up, in case the winner cannot attend the Grand American Handicap Tournament), conditional on said winner, or runner-up, making entry and competing in the National Amateur Championship at the Grand American Handicap Tournament.

A club holding a registered State tournament to which a contribution is made shall schedule an event to be known as "The Interstate Association's State Amateur Championship," said event to be at 100 single targets, 16 yards rise, high guns win, open only to bona fide residents of the State in which the tournament is held, and any amateur contestant shooting for "Targets Only" shall be eligible to win said State championship and any of the trophies contributed by The Interstate Association.

The foregoing applies to register State tournaments to which contributions are made by The Interstate Association.

The following applies to registered tournaments other than tournaments given by leagues of gun clubs and special organizations:

To each approved tournament, irrespective as to whether it will be a one day, two days, three days or more tournament, The Interstate Association will contribute \$50.00, part of which, or all, will be in trophies.

It is optional with the club holding the tournament as to whether The Interstate Association's contribution shall be made one-half in cash and one-half in trophies, or whether it shall be made all in trophies, but it shall NOT be made all in cash.

Any amateur contestant shooting for "Targets Only" at a registered tournament shall be eligible to win any of the trophies contributed by The Interstate Association.

A club holding a registered tournament shall give, on the Information Sheet furnished by The Interstate Association, the names of the winners of the trophies contributed by The Interstate Association.

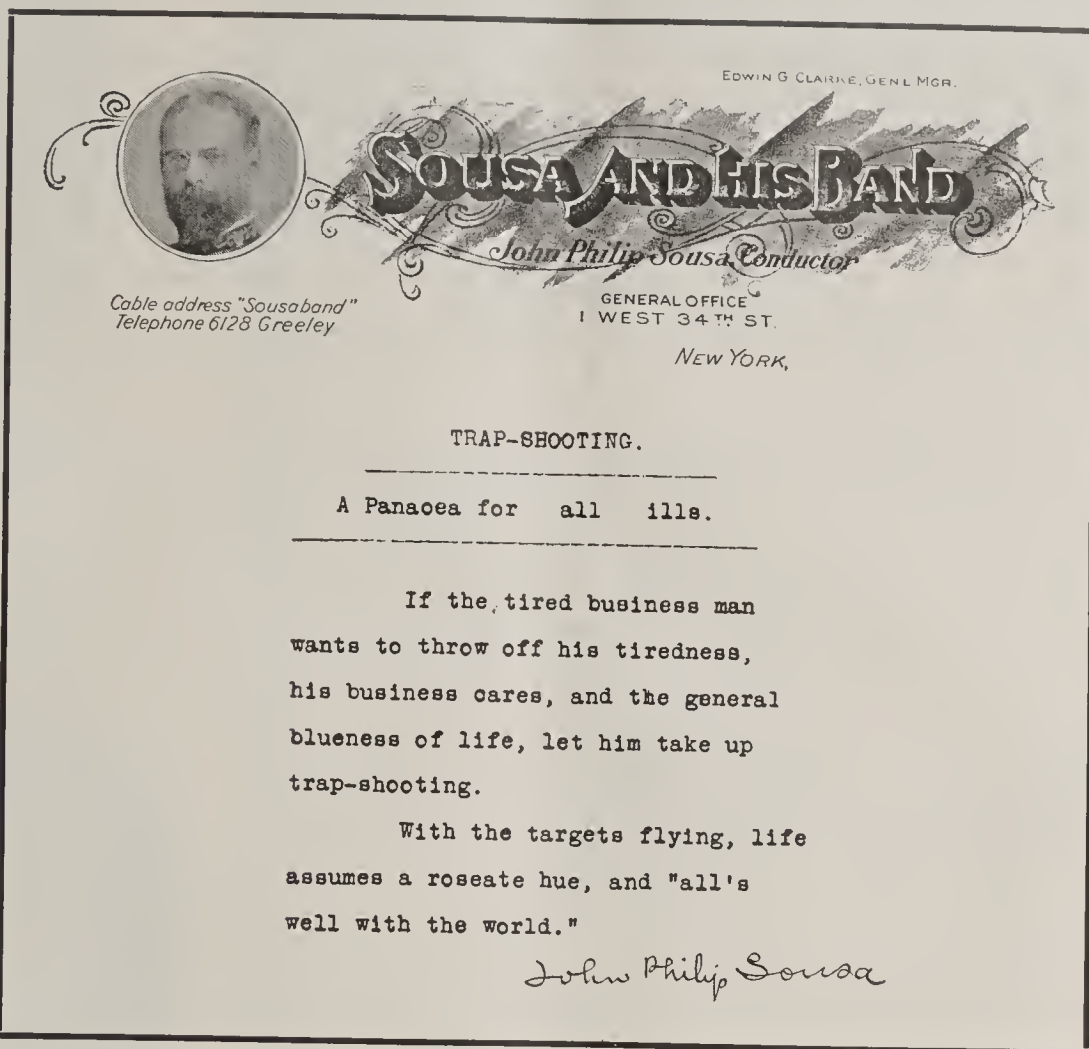

When the Registered Tournament Fund of approximately \$20,000.00 is exhausted tournaments will be registered, but without any contribution by The Interstate Association.

Information in General.

The Interstate Association's primary object in registering tournaments is to encourage State associations and leagues of gun clubs; therefore, it is the associa-

TRAP-SHOOTING.

A Panacea for all ills.

If the tired business man
wants to throw off his tiredness,
his business cares, and the general
blueness of life, let him take up
trap-shooting.

With the targets flying, life
assumes a roseate hue, and "all's
well with the world."

John Philip Sousa

EVERY MAN should have an active, muscle building, fat destroying, lung-developing hobby." Mr. Sousa chose trapshooting. He did so because this thrilling, fascinating, invigorating sport trains the brain and develops brawn, — it's a man's sport and gives him a chance for "hob-nobbing" with the best of sportsmen.

HAVE A HOBBY. Get out your gun and give the target smashing game "the once over." It's an every-day sport, and there are no game laws to obey. Go to it. Make trapshooting your hobby — join the fun at the shooting club.

Ithaca Trap Gun No. 4E

**GET NEW CATALOG
TELLS ABOUT
ITHACA ONE BARREL TRAP GUN**

No other gun has met with the enthusiastic reception, attracted the attention and favorable comment from the trapshooting fraternity that this gun has. It was announced in February Magazines and we are already flooded with orders. It is the gun the boys have been looking for. No other gun is bolted as this gun is bolted. It has two lugs at top and one at bottom and is bolted at each of these three points—giving a triangular form of fastening which will stand the severe strain of trap shooting. It is equipped with our lightning lock, automatic ejector and ventilated rib. Built in twelve gauge in our No. 4E and better grades. Ask for our Catalog, it shows the One Barrel Trap Gun and describes 18 grades double guns.

ITHACA GUN COMPANY, **Box 25, ITHACA, N. Y.**

tion's present intention to do all in its power to urge and foster the formation of State associations and leagues of gun clubs in those States where none now exist.

A State Association or a league of gun clubs, to secure recognition from The Interstate Association, must have a membership of five or more bona fide clubs located in five or more different cities or towns.

The Interstate Association, at its discretion, may exact proof of the proper organization of any State association, or league of gun clubs, which applies for a registered tournament.

Any club a member in good standing of a State association or of a league of gun clubs in a State that has no State association may apply for registration. Applications from clubs not members of a State association or of a league of gun clubs will not be considered.

When a club applies for a two or more days tournament, the granting of such application will depend on the attendance at and success of previous registered tournaments of said club, if any were held. The determination of whether it shall be a one day or two days' tournament is at the discretion of The Interstate Association.

Clubs located in States where there are no State associations or leagues of gun clubs may register their tournaments under The Interstate Association's old policy. The Interstate Association makes no contribution to tournaments registered under its old policy, but the scores made at such tournaments become a part of the official averages for the year.

Management.

The management of The Interstate Association concedes to the management of any registered tournament The Interstate Association powers as set forth in Rule 1, Section Nos. 1 and 2, of the Trap Shooting Rules, as revised in 1909, in respect to said registered tournament.

The management of The Interstate Association has the authority and power to inquire into and deal with any matter relating to fraud in connection with any registered tournament, and to bar any person or persons concerned in any fraudulent practices.

A club holding a registered tournament must pay all moneys and prizes as announced therewith. Failing therein, any club so offending will be barred till the default is cleared.

The Interstate Association's cash contribution will not be paid to any club until such time as such club, holding a registered tournament, shall have sent in the requisite report of the tournament to The Interstate Association.

The Interstate Association's cash contribution of \$50.00 to the winner, or to the runner-up, of "The Interstate Association's State Amateur Championship" at a State tournament, will not be paid until such time as the Grand American Handicap Tournament is held, and then only on the condition that said winner, or the runner-up, makes entry and competes in the "National Amateur Championship" event at the Grand American Handicap Tournament.

A club making application to hold a registered tournament shall not include "Practice Day" in the dates registered, as the scores made on said day shall not be counted in the yearly average.

A club holding a registered tournament shall send a printed program of the tournament to the secretary of The Interstate Association at least 15 days before the opening date of the tournament.

A club holding a registered tournament shall use The Interstate Association's Trap Shooting Rules, as revised in 1909, and shall conduct the tournament strictly in accordance therewith. It, therefore, must not change or modify the rule relating to shooting at a broken target.

A club which has been duly authorized to hold a registered tournament shall give one page of its program, of which the copy will be furnished by The Interstate Association, for purpose of announcing the amount of The Interstate Association's contribution and for purpose of publicity.

The Interstate Association respectfully suggests that the regular program for a registered tournament consists of not less than 150 targets nor more than 200 targets per day.

If a club holding a registered tournament defaults on its agreement in any particular, permission for further registered tournaments will not be granted.

Miscellaneous Rules.

Not more than two tournaments of any one club shall be registered in any one year. For the year 1915 a contribution will not be made to more than one tournament of any one club.

No tournament shall be registered for a Sunday only. A tournament which includes a Sunday may be registered, but the scores made on weekdays only shall count in the yearly averages.

A club holding a registered tournament shall allow any contestant, who so desires, to shoot for "Targets Only" in any or all events.

A club holding a registered tournament shall not charge more than 2 cents for each target shot at, except in the case of a club located in a section where freight rates are excessively high, thus making targets cost much more than they do in the East, in which case such club may charge 2½ cents or 3 cents per target, if it is customary to make such charge at tournaments.

A club which has been duly authorized to hold a registered tournament shall require contestants to give their names and addresses on blanks furnished by The Interstate Association, and said blanks, FILLED OUT BY THE CONTESTANTS, shall be sent to the secretary of The Interstate Association at the time the report of the tournament is mailed.

A club holding a registered tournament where shooting names (assumed names) are allowed must forward to the secretary of The Interstate Association, with the other records, the real names of those using assumed names.

With the exception of practice day, weather permitting, a tournament shall be started in the morning before 11 o'clock, and the time of starting shall be stated in the program. The hour shall be reasonably governed by the scheduled time of arrival of trains or trolleys at the place where the tournament is held.

All scores shall be shot in competition, and no scores shall be recorded which are shot prior to the advertised hour for starting the competition.

No contestant, whether amateur or professional, shall be allowed to "shoot up" any event or events other than events one, two and three scheduled for the first day of the tournament, on the first day, and this in no case unless the unanimous consent of the other contestants and the management are given.

No contestant, whether amateur or professional, shall be allowed to shoot any event or events in advance of the regular order of scheduled time for the competition as designated in the program.

No contestant, whether amateur or professional, shall be allowed to shoot any event or events other than those of the one day's program except in case the entry list is so large, or unavoidable conditions such, that it is necessary to carry over a tournament from day to day. The scores of any event or events thus carried over shall be recorded as being made on the day for which said event or events were originally scheduled.

Registration as herein set forth applies to United States clubs only. The old policy is still in force as to Canadian clubs.

DU PONT GUN CLUB TROPHY SPOON IDEA FOR 1915 POPULAR.

Innovation in the Way of a Trapshooting Trophy Meets With Instant Favor.

An innovation in the way of a trapshooting trophy for gun clubs is provided in the DuPont

1915 Gun Club trophy spoon. Several weeks ago, the DuPont Co. announced that this year's gun club trophy would be an especially and appropriately designed sterling silver teaspoon manufactured by Tiffany & Co., of New York. Instantly the idea seemed to meet with general favor on the part of trapshooters, and many clubs have made application for a DuPont spoon for their clubs.

One feature of the DuPont 1915 trophy proposition which is particularly pleasing is that an opportunity is offered any club to secure any number of these spoons that it desires. Every active and deserving club will be awarded one spoon, and they may purchase additional ones at \$1.50 each, postpaid. Under this arrangement a club may, at nominal cost, secure an attractive and useful supply of trophies sufficient to last through the season, and which will, beyond any question of doubt make their club shoots more and more interesting to their members.

A cut of the DuPont, 1915 Gun Club trophy is illustrated herewith and it surely comes up to the high DuPont standard of other years, and will, no doubt be immensely popular with the shooting fraternity. Gun Clubs desiring to secure these handsome trophies should write to T. E. Doremus, Manager, Sporting Powder Division, DuPont Co., Wilmington, Delaware.

An Ideal Hunting Lodge

One Thousand Acre Hunting Preserve Abounding in Partridge, Wild Turkey, Deer, Squirrel, Rabbit, Fox, Opossum and Raccoon. Adjacent to Quebec - Miami Automobile Highway and Southern Railway—in Southern Virginia.

Owing to the growing scarcity of game, and danger to life, the time is fast approaching when sportsmen will have to own their own preserves. This is an unusual opportunity to secure, at a low price, a very valuable piece of property, especially suited to the uses of a hunting lodge.

Address HUNTING LODGE

ITHACA GUN COMPANY JOINS INTERSTATE ASSOCIATION.

Pittsburgh, Pa., Jan. 30, 1915.

Editor *Forest and Stream*:

Please be kind enough to announce in the trap department of *Forest and Stream* that the Ithaca Gun Company, of Ithaca, New York, has been elected a member of The Interstate Association, and oblige.

The Interstate Association, E. Reed Shaner, Secretary.

UTICA FIELD AND GUN CLUB.

Utica, N. Y., Feb. 7.—The new gun club has "arrived." It has formed, elected its officers, appointed its committees to look up suitable shooting lodge sites and will incorporate right away as the "Utica Sportsmen's Association, Inc." As a result of the latest entrant, there will be three clubs shooting full blast within a month. E. J. Loughlin of the Genessee Gun Club announces a shoot at his place for next Sunday, and the Utica Field & Gun Club is breaking clay right along.

The new organization is made up of business and professional men almost exclusively, and represents quite a bit of coin. It is understood that the members are going to it on broad and ambitious lines with the idea of putting up a club house that will be quite an affair, and running the club so that it will be quite an agreeable place for the lady shooters to go if they care to do so. For some time the lack of a gun club grounds has been deplored by the amateur Dianas of the city who would like to mix tea biscuits and sliced lemon with light loads and softly booted trap guns. Both of the older clubs have good grounds but unfortunately there are no shady, wide verandahs on the shooting shacks or suitable rooms for changing into shooting frocks. Those of the ladies who like to shoot are expecting that the new club will provide both.

Dope has it that the new club house may be located in the vicinity of Utica Park, thus insuring crowds for every shoot, inasmuch as it would be the most easily reached of all the clubs. The committee on grounds is hustling around for a place and is to report at the next meeting.

When the club was organized the other night it was with the following officers: President, George L. Brayton; vice-president, Dr. F. T. Simmons; secretary, Jerome DeBee, who also belongs to the Utica Field & Gun Club, and treasurer, John J. Tritten, who thought of the idea first. These are the other men in the new organization: R. S. Green, Charles A. Nelson, George F. Murray, J. H. Horrocks, Tom L. Davidson, W. R. Owens, George E. Fuller, E. C. Richards, Dr. F. S. DeLong, J. J. O'Neil, F. D. Curtis of Oriskany Falls, W. T. Cantwell, F. J. Sisson, A. B. Maynard, Dr. A. S. Mahady, E. V. Dibble, Henry G. Siem, F. M. Black, F. R. Latta, F. G. Morrison, W. C. Harris, F. B. Lee, Theodore Steinhorst, P. J. Blake, J. Phil Bannigan, C. H. Ballou, George W. Weaver, Jr., Tom W. Johnson, Delos M. Johnson, William Ainsworth, W. E. Corfield, and A. J. Ackert.

Most of these men are well known in the local field as rabbit or bird hunters. A number of them are dog breeders of repute. Tom Johnson is the owner of Malwyd Rhoda, the clever little English setter bitch who is to be exhibited in the bench show of the Philadelphia Kennel Club this week.

John McCormack

Favorite of Three Continents

The most popular Concert Singer who has ever toured America, says:

"I smoke Tuxedo because it is the mildest tobacco I have yet found; yet Tuxedo, with its mildness, is distinguished by a rich flavor and fragrance that is unique."

John McCormack

"The Mildest Tobacco I Have Yet Found"

You know John McCormack, the greatest lyric tenor of three continents; you have sat under the spell of his sweet, luscious Irish voice; you have admired his robust, magnetic personality. This wonderful singer gives more concerts in one season than any other great artist. He makes the most strenuous tours, from coast to coast, giving recitals night after night, rendering almost the entire programme himself.

Under such exacting conditions, McCormack must be extremely careful of the tobacco he uses. Yet he smokes Tuxedo as freely as he wishes. Tuxedo refreshes his mind and body and does not the slightest harm to his voice.

Tuxedo
The Perfect Tobacco for Pipe and Cigarette

Think what it bespeaks for the mildness and soothing qualities of Tuxedo when the world's two greatest tenors—McCormack, lyric tenor, and Caruso, tenor robusto—endorse its use.

No matter how sensitive your throat and tongue may be you can safely smoke Tuxedo—and you'll always find it mellow and pleasant, rich in fragrance, soft as cream in your mouth.

Tuxedo absolutely cannot bite your tongue. The famous "Tuxedo Process" has taken the last particle of bite out of the fine ripe leaves of choice Kentucky Burley from which TUXEDO is made.

YOU CAN BUY TUXEDO EVERYWHERE

Ideal Hand Book.

The new Ideal Hand Book (No. 25) is now ready. The many thousands of shooters who know the book should write for a copy of the new edition at once.

For the benefit of those shooters who have not been so fortunate as to have a copy of the Ideal Hand Book in the past; we are pleased to state that "The Ideal Hand Book of Useful Information for Shooters" is a large 160 page book issued each year by The Marlin Firearms Co., and furnished without charge or obligation to any shooter sufficiently interested to send three stamps postage for the book. The principal purpose of the book is to show that the modern cartridge is a simple thing—that any intelligent shooter using proper tools and good judgment, can reload his rifle, pistol and shotgun ammunition understandingly. He can adapt his loads exactly to his particular gun and his special requirements—and enjoy a "hobby" that cuts down his shooting expenses considerably.

It contains a world of useful information for shooters, answering fully and clearly such questions as "What is a caliber—or gauge?" "What is the diameter of the bore in the various rifles?" "What is the twist of rifling in any standard rifle?" "What are the ballistics of the various cartridges?" etc. It illustrates,

"Citizenry, Trained and Accustomed to Arms"
— PRESIDENT WILSON

Get accustomed to gun powder. Learn to shoot straight. That's at least 50% of a soldier's equipment.

Perhaps the training will stand you in stead in some moment of personal danger. The lives of your wife and children may sometime depend on your steadiness and courage. The best weapon to practice with is the

IVER JOHNSON SAFETY AUTOMATIC REVOLVER

It is absolutely safe. It is accurate and reliable. It is simple in operation and will not fail you in a pinch. There are no levers to adjust or forget. Its safety is automatic—part of the action. All you have to remember is to pull the trigger.

Costs \$6 at Hardware and Sporting Goods Stores

Send for an 84-page book on Revolvers, Shot Guns, Bicycles and Motorcycles. It is free.

Iver Johnson's Arms & Cycle Works
356 River Street, Fitchburg, Mass.

99 Chambers Street, New York

717 Market Street, San Francisco

Western Walnut Grip, fitted to a 6-shot 32 calibre

tells how to cast, and gives the diameter and weight of the round balls for use in shotguns, explains how they are loaded and shows what results can be secured, explains how powder is bought and how measured for use in rifles and shotguns, telling how many cartridges one pound of powder will load with any given charge; gives tables reducing drams to grains, tables of primers, bullets and powders, showing clearly just what powder, primer, bullet, etc. to use for any rifle or pistol.

To answer the inquiry: "Does it pay to reload shells?" there are tables showing the actual cost of the factory cartridge compared with the cost of reloaded cartridges, showing in detail the cost of primed shells, cost of powder, cost of bullets ready made, cost of bullets

New .44 Revolver Bullet and .30 U. S. Spitzer point gas-check bullet shown in Ideal Book No. 25.

when you make them yourself, etc. The information in this book is essentially accurate and reliable and it will certainly make the average man sit up and take notice when he sees what a surprisingly big saving can be effected by reloading his shells. The books shows that the .22 Savage High Powder cartridges usually sold to the consumer at \$3.42 per hundred, can be reloaded with a charge that compares very favorably with the factory load, at an expense of 62c per 100. The .25-20 high velocity factory cartridges cost \$1.70 per 100; you can reload them with a mighty satisfactory load at an expense of only 59c. The .25-35 and .25-36 factory cart-

ridges sell at \$2.97 per 100; they can be reloaded for high power requirements at 79c per 100. The 30-30 and .303 factory cartridges sell for \$3.42 per 100; you can reload the empty shells and have 100 first class cartridges for 97c.

The book shows how by the use of modern reloading tools anyone can cast perfect bullets, exactly suited to his particular rifle or pistol; and after the bullet is made it is an extremely simple matter to prepare the cartridges as it is only necessary to expel the old primer, seat the new primer, insert powder charge, place bullet in end of shell and crimp the shell on to the bullet, all of these operations being performed in a single, simple and inexpensive set of tools. 100 cartridges like the .32-40 H. P. cartridge cost \$3.42 per 100; the shells can be reloaded with factory bullets and have the same identical powder charges and primers as in the new shells for \$1.35. You save \$2.07 while enjoying one of the most pleasant and interesting half-hours of your shooting experiences.

Send 3 stamps postage to-day to The Marlin Firearms Co., 27 Willow St., New Haven, Conn., and get your copy.

Why Do Speed Shell Shooters Win Oftenest At The Traps?

Would you like to know *why* shooters of Remington-UMC Arrow and Nitro Club Steel Lined Speed Shells have a better chance to break targets?

Would you like to know *why* the shot charges from Arrow and Nitro Club Shells get to the targets quicker? Why shooters of these shells do not have to hold so far ahead of birds? Why they can come nearer to point blank shooting?

A Post Card will bring to you a copy of "Inside Shot Shell Facts Laid Bare"
-- containing most interesting information that will suggest the way to better scores.

WILMINGTON, DEL.

HERCULES POWDER CO.

Meeting of executive committee was called to order at 11:30 a. m., by Commodore C. A. Spaulding, with a short address of welcome to visiting members.

On motion of Mr. Coppins; seconded by Mr. Wright: Reading of minutes of executive committee meeting of August, 1914, at Sugar Island were dispensed with. Carried.

On motion by Mr. Wright; seconded by Mr. Armstrong. The freedom of the floor was extended to board of governors and visiting members. Carried.

Mr. Quick read report of board of governors, and on motion of Mr. Wilkins; seconded by Mr. Saunders: Report was accepted as read and placed on file.

Motion made by Mr. Hogan and seconded by Mr. Coppins: That all expenses of clearing up disorderly camps, be charged to owners of said camps. Carried.

Mr. Wilkins moved that all questions contained in report of board of governors be referred to that board for discussion at their meeting to

The "PFLUEGER - REDIFOR" Anti-Back-Lash Casting Reel

NO WIRES TO FRAY THE LINE

makes casting a real pleasure for beginners as well as experts. It cannot break or get out of order, and requires no adjustment. Automatic Thumbers, attached to the flange of the spool enclosed within the reel, free from all dirt and possibility of damage, thumb the reel mechanically, retarding the spool as the bait slows down. This reel is made of best German Silver, satin finish, has genuine Scarlet Agate Jewels, balanced crank, fluted Pyralin Amber Handle, with Phosphor Bronze Bearing, and adjustable front sliding click and drag. This reel will hold from 60 to 100 yards according to size of line used. Price, **\$7.50** (Fully guaranteed against defects of all kinds for all time.)

If your dealer does not carry this reel, we will send it postage prepaid on receipt of price.

Trout Fly-Fishing in America

By CHARLES Z. SOUTHARD

Superbly illustrated in colors \$7.50 net

DR. JAMES A. HENSHALL calls it a "superb book, a splendid addition to angling literature, the last word on fly-fishing for trout."

A complete classification of trout found in America and full advice on the best methods of catching them.

E. P. DUTTON & CO. 681 Fifth Ave. NEW YORK

be held in the afternoon of same day. Seconded by Mr. Armstrong. Carried.

Mr. Hogan moved that secretary's report be referred to board of governors at their meeting. Seconded by Mr. Quick. Carried.

Mr. James moved treasurer's report be referred to board of governors at their meeting. Seconded by Mr. Wright. Carried.

Mr. Hogan moved the report of camp site committee be referred to board of governors at their meeting. Seconded by Mr. Coppins. Carried.

Report of the committee on ladies' camp was read by the secretary. Moved by Mr. Hogan and seconded by Mr. VomStegg that it be accepted and placed on file.

Regatta Committee's report was referred to the Racing Board.

On motion of Mr. Wilkins; seconded by Mr. Hogan: The reading of the division pursers' reports were dispensed with.

Report of Purser of Western Division received and filed.
 " " " " Northern " " "
 " " " " Eastern " " "
 " " " " Central " " "
 " " " " Atlantic " " "

Motion made by Mr. Wilkins; seconded by Mr. Hogan: That Article VII of the constitution and Chapter XII of the by-laws, be amended as follows; same having been published in the official organ two weeks previous to this meeting:

Article VII, duties of commodore: In the third

line after the word "camp," insert the words "having charge of same."

Chapter XII., Expulsion: In the second line after the word "conduct," insert the words "or disobeying the commodore when in charge of the camp, openly disobeying the rules or orders of the association, or any of its officers or committees." Carried.

Motion made by Mr. Armstrong; seconded by Mr. Hogan: That section IV, Article VI, of the constitution be amended as follows; same having been published in the official organ two weeks previous to this meeting:

Article VI, Section IV, board of governors: Strike out the words "its annual meeting" and substitute in place thereof, "The General Meet of the A. C. A."

At this point the commodore asked vice-commodore Saunders of the central division to take the chair and after a lengthy discussion the above motion was withdrawn.

Motion was then made by Mr. Spaulding and seconded by Mr. Coppins: That the commodore appoint a committee of three (3) to consider above proposed amendment and report to the noon session of the meeting. Carried.

The commodore then took the chair and appointed to serve on this committee, Messrs. Armstrong, Coppins and Quick.

A letter from Mr. Hand to Mr. Huntington

was read, asking that older members below the number 2,000, that limit being subject to change from year to year, who might merit it, be given honorary membership in the association. After some discussion the letter was accepted and placed on file.

Motion made by Mr. Wolters; seconded by Mr. Saunders; that Chapter I, Section V, of the by-laws be amended as follows: Same having been published in the official organ at least two weeks previous to this meeting:

Chapter I, Section V, Camp Dues: Strike out all that follows after the word "member" in the seventeenth line and insert the following "who is a minor when accompanied by parents. Minors, not accompanied by their parents who are members, must be cared for by a member or an associate member, and they shall pay Two (\$2.00) dollars each. A minor in the foregoing is understood to mean a person under the age of eighteen." Carried.

It was moved by Mr. Wilkins and seconded by Mr. Wright: That the next annual meeting of the association be held at Sugar Island from August 6 to 20, 1915. Carried.

On motion of Mr. Wright; seconded by Mr. Wolters: *Forest and Stream* was chosen as the official organ.

On motion of Mr. Wilkins; seconded by Mr. Wright: The following ladies were elected to associate membership:

Mrs. Wm. J. Hunter, 6003 Landsdown Ave., Phila., Pa.
Mrs. Edmund VomSteeg, Jr., 113 Chestnut St., Roselle Park, N. J.
Mrs. Guy L. Baker, 134 Highland Ave., Buffalo, N. Y.
Miss Ethel VanRiper, 227 E. Park Ave., Highland Park, Ill.
Miss Edna VanRiper, 227 E. Park Ave., Highland Park, Ill.

Resignation as historian of Mr. J. K. Hand was read and accepted.

Afternoon session resumed at 3:00 p. m.

Mr. Wilkins read report of the racing board; moved by Mr. Wolters; seconded by Mr. Hogan: That report be accepted and filed. Carried.

Mr. Quick read proposed amendment of Article VI, Section IV, of the constitution.

On motion of Mr. Armstrong; seconded by Mr. Wolters: Same was changed to read as follows: "Article VI, Section IV, board of governors: The executive committee at its annual meeting in October, shall elect one member of each division in its proper turn, to serve on the board of governors of the association for a term of three years, or until his successor is elected. The commodore shall be a member ex-officio, but in case of a tie, he shall not vote." Carried.

After a number of expressions from different members present, regarding a proper and fitting celebration to commemorate the 50th anniversary of modern canoeing, to be held at Sugar Island during the annual camp in August, a motion was made by Mr. Wilkins and seconded by Mr. Armstrong: That the commodore take full charge of the matter and anything he does regarding this question will meet with the approval of the executive committee. Carried.

Mr. Quick turned over to the secretary the reports of the board of governors, treasurer and secretary, and on motion by Mr. James and seconded by Mr. Wilkins: All were accepted and filed. Carried.

The commodore announced the following appointments:

Mr. C. F. Wolters, chairman, camp site committee.
Mr. L. T. Coppins, chairman, transportation committee.
Mr. Guy L. Baker, chairman, entertainment committee.
W. B. H. McCLELLAND, Secretary.

SIGNS OF SPRING IN MASSACHUSETTS.

Agawam Club, Haverhill, Mass., Feb. 24.

Editor *Forest and Stream*:

Your correspondent while in the field on the 20th inst., observed a pair of magnificent bald eagles perched upon a dead stub at the river bank opposite the local ball grounds. They were adult birds with snowy heads and tails; which makes their fearlessness the more remarkable as they were near the heart of the city and were watched with great interest by residents of the locality and passengers on the electric cars from the opposite shore. We have seen more of these birds hereabouts in the last three years than in all previous years put together and are led to believe they are undoubtedly increasing.

On Washington's Birthday, while exploring a piece of grouse cover to ascertain how the birds had wintered, I encountered a portly specimen of ground hog roving complaisantly about the sun warmed ledges. As the day was unusually spring-like he had wandered afar over the snow patches in the mellow air before returning to his domicile again, and we do not remember ever having seen one abroad in these parts at such an early date before. Last year at this time he would have had to tunnel up through several feet of snow. On this same date our first song sparrow put in an appearance and made his presence known by some brave snatches of song in a sheltered brush heap near the creek, and a golden winged woodpecker cackled away in the old apple tree as though it was already nesting time in May. This is quite the earliest date for any of the above that we have ever recorded. I must not forget to mention also that at about 8 a. m., on January 17th, a pair of robins were chirping in a maple tree in front of my city residence. We hope none of these early birds will prove to be victims of misplaced confidence in our New England climate though we are bound to admit they are running quite a big risk.

Late in the afternoon of the 22nd, after moving several singles, I was startled by a series of explosions in a giant hemlock before me much as if it had suddenly become the target of a German bombardment and six fine grouse tore out and away one after the other from the dark recesses of its matted limbs. Such bunches of old birds at this season are getting to be the exception nowadays in these parts rather than the rule, but taken all in all I am satisfied "Bonasa umbellus" has wintered well and a more than average sprinkling survived to stock the coverts against the coming of another hunters moon.

Our ring neck pheasants as could be expected pulled through to a bird for the season of white woodlands and esquimaux winds has no terrors for them. Now and then you hear the perky crow of a gay old cock tuning up under the energizing influence of a climbing sun and they are scattered all about individually in the odd nooks and corners while the hens have gotten together in little bunches of four, five and six as they always do on the approach of spring. It seems a peculiar trait, this segregation of the females just prior to the advent of the mating season, but they do it consistently and every year since they have come to us we have run across these hen colonies about the edges of the swamps and marshes at muskrat trapping time.

CHARLES B. MORSS.

Marlin
.22 PUMP ACTION REPEATING RIFLE

It's the hardest-hitting and most accurate rifle for rabbits, squirrels, hawks, crows — for all small game and target shooting.

Model 20
Octagon Barrel
\$11.50

Model 29
Round Barrel
Plain Finish
\$9.25

THE deep Ballard target rifling is the reason — it develops maximum power and adds years to the rifle's life. Ask us about Ballard rifling.

Other equally important advantages, too, make the *Marlin* the most desirable of all repeating rifles.

Equipped with splendid sights; shoots with guaranteed accuracy. 15 shots at one loading. Model 20 with Full Magazine, 25 shots.

There he goes!
Aim! Quick!
Fire!

Takes down easily. You can look through the barrel — it cleans from both ends.

Handles all .22 long, .22 short and .22 long rifle cartridges without adjustment.

Solid Steel Top protects your face and eyes against injury from defective cartridges, from shells, powder and gases.

Side ejection throws shells away to the side — never up across your line of sight.

FULTON, N. Y.

MICHIGAN SPORTSMEN FOR CONSERVATION.

Changes of the name from the Michigan Association to the "Michigan Wild Life Conservation Association," adoption of a new constitution and by-laws, adoption of a number of important resolutions including one which sets forth the aims and objects of the association, and election of officers concluded the business of the annual convention of this important state body in Lansing.

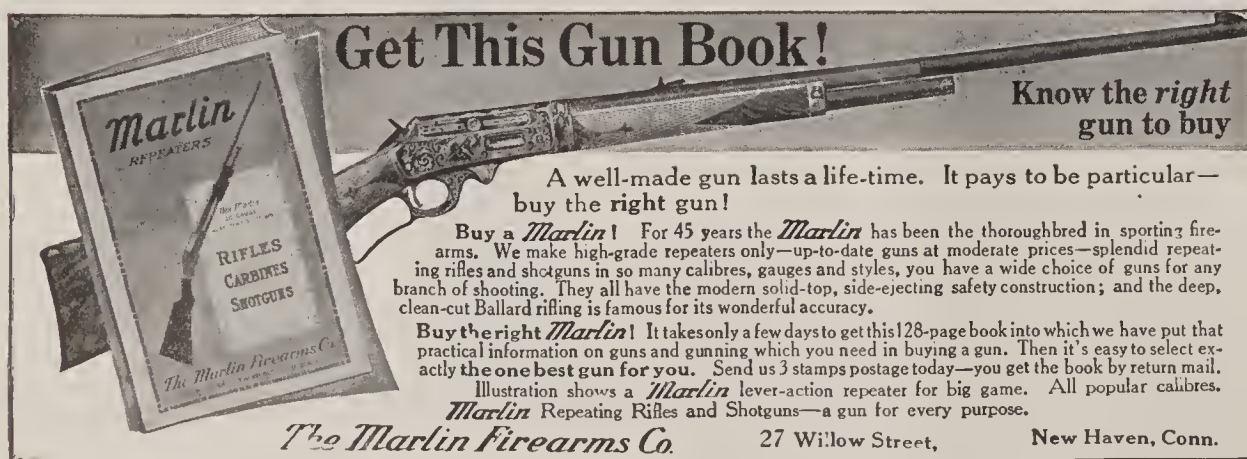

The most important resolution of all was the following:

Resolved: That the Michigan Wild Life Conservation Association is opposed to the killing of any wild animal, at any time, in any manner, except where it has been plainly determined that such killing is for the economic benefit of the people of the state of Michigan as a whole, from the standpoint of science, food value, or as an

adjunct to recreation. Further, that this association goes on record with the declaration that the most important consideration in our wild life is the protection of our insectivorous and seed eating song and other birds, inasmuch as it is the belief of this association, that all vegetable and all other animal life, including man, is dependent upon birds, as insect and seed destroyers, for the requirements of existence.

With one exception, the old officers were re-elected. The exception is vice-president, G. Pardee of Owosso being named to position of vice-president in place of F. H. Shearer of Bay City. President W. B. Mershon of Saginaw, Secretary H. B. Gilbert of Flint and Treasurer George M. Brown of Detroit all were re-elected.

President W. B. Mershon of the Michigan Association presided over the banquet and his introductory remarks were a few words in which he pleaded for "Conservation of Wild Life."

Get This Gun Book!

Know the right gun to buy

A well-made gun lasts a life-time. It pays to be particular—buy the right gun!

Buy a Marlin! For 45 years the *Marlin* has been the thoroughbred in sporting firearms. We make high-grade repeaters only—up-to-date, guns at moderate prices—splendid repeating rifles and shotguns in so many calibres, gauges and styles, you have a wide choice of guns for any branch of shooting. They all have the modern solid-top, side-ejecting safety construction; and the deep, clean-cut Ballard rifling is famous for its wonderful accuracy.

Then it's easy to select exactly the one best gun for you. Send us 3 stamps postage today—you get the book by return mail. Illustration shows a *Marlin* lever-action repeater for big game. All popular calibres.

Marlin Repeating Rifles and Shotguns—a gun for every purpose.

The Marlin Firearms Co. 27 Willow Street, New Haven, Conn.

Sportsmen and The Panama-Pacific Exposition

By Edward T. Martin.

GOING to San Francisco this year? Going to the Great Panama-Pacific Exposition? Of course! Why not? Every sportsman, every lover of the great out door world, devotees of shot gun, keen eyed rifle men, fisher folk, yacht men, all should be there. Their California brothers expect them and will extend a royal welcome, a hospitality which like that of the old South in antebellum days one reads of but seldom meets.

Many of the countries specialize on fish and game exhibits. Canada with its display of fur, fur farming, and fur bearers including a mother beaver and her family of kits, so strong and lusty that it is with difficulty they are kept in prison pens; Japan showing birds and fish, Australia with specimens from mountains, woods and streams, New Zealand whose chief commissioner the Hon. Edward Clifton and assistant, Maurice O'Brien, Esq., both are ardent sportsmen and whose exhibits fill many a packing case

and box covering every native fish and animal from a giant king fish, resembling our tarpon, to the graceful red deer whose ancestors came from the moors of Scotland.

Then there is California, queen of them all who has outdone herself. For many months she has kept parties in the Sierras and afield gathering varied specimens in great numbers, of deer and elk, valley quail and mountain quail with their desert kin. Beast, bird, fish and snake, everything from a tiny field mouse to a giant cinnamon bear, including some of the world-famed golden trout—such a display as has never before come from a single state—no, nor from many. This though, should be expected, for there is no part of these United States where game is so plentiful or fish so numerous and with hunting grounds or fishing waters so reachable by train or auto as in this same Golden State whose sons will never weary in entertaining their guests whether from east or west or foreign lands.

Sportsmen availing themselves of the low railroad rates and coming to the Pacific Coast will be well rewarded.

Visitors in search of sport, shooting or fishing—those coming for the opening—at first must content themselves with big game shooting or a little fishing, black striped bass and salmon being in season. There is open season only on the predatory animals, cougars, cats, bears and wolves. The first named are reasonably abundant. Despite a \$20 bounty and the killing of several hundred yearly it is barely a week since a band of four cougars or mountain lions, raided the coast slopes of San Mateo county not twenty miles from the Exposition gates, land which borders San Francisco Bay. The cowardly cats left a trail of dead deer and cattle where they had killed for the sake of killing. They made several forays, the latest being directed against the live stock of a ranch close to the town of Half Moon Bay, which is not over fifteen miles from the nearest section of San Francisco. Dogs owned locally refused to follow their trail. There were no hunters skilled enough to track them through the tangle on the lands of the Spring Valley Water Co. whence comes the drinking supply—water only—of the City. An expedition has been organized to run the robbers down, but it will probably result as such attempts nearly always do and the lions with many others of their kind, remain unharmed, so perhaps in after years some Nimrod of a visitor to the Exposition may point to a fine rug of cougar skin and say: "Here is a souvenir of California and her great Exposition," while his children, listening with bated breath to the oft told story of the killing, hope in after years such luck may befall them also.

As for fishing. Early it won't be much. Later very good. The State is a careful guardian of all game fish, and yearly saves many thousands of black bass for "during the annual freshets the swamp lands on the lower King's and San Joaquin rivers are inundated and vast numbers of black bass and other species of fish leave the main channel to take up their abode in the overflow waters. When the flow in the river becomes normal, millions of these fish are cut off from the main channels and unless rescued must eventually perish when the flooded area again become dry. It has been found practicable to take up the bulk of these stranded fish and return

The Livest of the "Live Ones"
— Try This New Floater,
Diver and Wiggler!

Brought out at the close of 1914's season, this new artificial minnow leaped into instant popularity. You will see all "the boys" with them this year—and they'll bring in more than their share of the big strings.

The result of thirty-four years of tackle-building experience, "The Pfluegers" present this

PFLUEGER "SURPRISE" MINNOW

to anglers in the belief that it is the highest development and refinement in artificial bait design and workmanship. Our reputation as "the largest fishing tackle builders in the world" stands behind this bait.

The "Surprise" is a floating bait which dives the instant reeling in is commenced, the depth being controlled by the speed of reeling. As it comes in its peculiar construction causes the bait to wiggle and dart about with the eccentric movements of a live minnow—the motions that arouse the combative instincts of the gamy bass. Upon stopping reeling, the bait rises to the surface.

Made in Seven Color Blends, as Follows:

- | | |
|--|---|
| No. 3914 Luminous Enamel all over—Red Throat | No. 3918 White Enamel Belly—Green and Red Spots, Red Throat |

them to living waters. This is accomplished by seining the potholes and small pounds and in cans or tank wagons returning the rescued fish to living waters. As many as 500,000 stranded black bass have by this means been saved in a single season." Striped bass are very plentiful and as early as the 15th of January of the present year, a bright warm sun shining and the water very clear, the writer saw three very large ones feeding near his duck blind on the flats of San Pablo Bay, where he is told, as the season advances there is no trouble in taking the limit, 25, on any favorable day. This location is very accessible to Exposition visitors, the round trip fare from San Francisco being only about a dollar, with boats at Giant or Pinole equally reasonable.

Closely following bass, trout fishing comes in season. This is the best anywhere as it should be when it is considered that in one year, 1912, later reports not quite ready, there were distributed and held for breeding in the State of California, 14,172,258 young trout, also 18,909,445 salmon. Some fish that. It is claimed the distribution for 1913-14 will exceed these numbers. How about it, Mr. Fisherman, in doubt where to go? Can you do better than to come to the Pacific Coast, see the one great show of history and take some of these many fish?

Deer shooting in the districts around San Francisco opens July 1st. In northern and western sections of the State it continues until November 1st. The Game Commission estimates the annual kill at about 12,000. All bucks, two

Joymotor

A Joy, Indeed, for All Sportsmen—

Takes all the drudgery out of fishing and shooting. Go as far as you like and back in real comfort. This wonderfully silent Joymotor runs your boat slow enough for trolling or up to 7 to 9 miles per hour. Weighs only 52 lbs. Easily carried; weight can be divided for long portages. Fits every type of boat—duck boat, fishing boat, canoe—square stern, pointed stern, or decked stern. With special bracket shaft may be run through bottom of duck boat or canoe. Attached and detached in a minute.

Sporting Goods Dealers Write for Agency

Reversing Propeller

makes Joymotor easiest controlled motor ever made. Just move steering tiller to right or left and Joymotor stops your boat within a few feet and backs it up without reversing the engine. No more danger of accidents. No drifting or paddling to shore or dock. Joymotor does all the work for you. Simple, efficient. Trouble-proof. A child can run it. You just move the tiller and Joymotor controls your boat at all times. A rudder would be useless. Study this picture.

High tension magneto, real carburetor, no pump hose to get tangled up, real bearings, complete oiling system. Built to enjoy—that's Joymotor.

If you are thirty years old

the small sum of \$2.19 (monthly) secures for you a policy for \$1000 in the Postal Life Insurance Company—a standard legal-reserve Whole-Life Policy, with guaranteed Cash, Loan, Paid-up and Endowment Options, and participation in the Company's surplus earnings; but the Policy will cost you only \$1.61 (monthly) during the first year, for you get the benefit of a saving from the agent's commission because you deal direct. In every subsequent year the earning is nine and one-half per cent. of the premium. That's an example of Postal service and Postal saving. All other companies in the United States employ large forces of agents, and the policyholder necessarily foots the bill. But the Postal Life has no agents at all. It does business direct with those who desire insurance-protection, and the benefit of the saving thereby effected is given to the person who takes out the insurance.

Strong Postal Points

First: Standard policy reserves, now more than \$9,000,000. Insurance in force more than \$45,000,000.

Second: Old-line legal reserve insurance—not fraternal or assessment.

Third: Standard policy-provisions, approved by the New York State Insurance Department.

Fourth: Operates under strict New York State requirements and subject to the United States postal authorities.

Fifth: High medical standards in the selection of risks.

Sixth: Policyholders' Health Bureau arranges one free medical examination each year if desired.

Of course, you are interested in insurance protection, and it is therefore worth while for you to

NEWFOUNDLAND

A Country of Fish and Game. A Paradise for the Camper and Angler. **Ideal Canoe Trips.** The country traversed by the Reid Newfoundland Company's system is exceedingly rich in all kinds of Fish and Game. All along the route of the Railway are streams famous for their Salmon and Trout fishing, also Caribou barrens. Americans who have been fishing and hunting in Newfoundland say there is no other country in the world in which so good fishing and hunting can be secured and with such ease as in Newfoundland. Information, together with illustrated Booklet and Folder, cheerfully forwarded upon application to J. W. N. JOHNSTONE, General Passenger Agent, Reid Newfoundland Company, St. John's, Newfoundland.

A Pipe With An Ash Pan — It's Great!

You pull out the patented aluminum pan to clean it. Prevents clogging, frying or stewing. A fine, cool, dry smoke always and as sweet as a nut. Nothing to get out of order. The Willis is an elegant pipe, handsomely finished and of genuine French Briar with best grade Hard Rubber, Horn or Celluloid bit. Send coin, money-order or stamps at our risk. We guarantee you the finest smoke you ever had and complete satisfaction or your money back. Address—

The Willis Company, 76F Pilling St., Brooklyn, N.Y.

50c. postpaid

to the gun limit, the non resident license \$10, covers also feathered game. Quail shooting laps over on the deer and extends until February 15th. During the present year there has been an unusual scarcity of these birds particularly around San Francisco possibly owing to heavy rains during nesting time.

As offset to this, duck shooting along the Bay has been good. Plenty of canvasbacks, bluebills and such. The puddle ducks in the marshes have also been reasonably abundant and the goose shooters were out with their circulars offering a shoot over live decoys at from \$6 to \$10 per gun. By a "shoot" they tell me is meant a kill of at least twenty birds or no charge. This is a decrease from the former figure of forty, and in a score of trips made by the writer under such conditions, once, only once—then in a pouring rain when the pits were flooded—was a hunt called "no shoot." There is neither close season nor limit under the State law on geese, which does not seem right as civilization is rapidly getting the best of them.

No doubt many visitors will receive invitation to shoot water fowl on the baited ponds. Those who do not, need have no uneasiness for around the Bay are many blinds, several hundred, a large number of which can be rented for a day or longer with use of boat and decoys at cost of only a few dollars. This year from the opening in October until Thanksgiving the shooting was fair. After that until Christmas as good as it has been for many years. Then there were cold rains and the ducks went South, only to return and bring their friends as soon as warm weather came again. Almost in sight of the Tower of Jewels at the Exposition grounds on the eighteenth of January the writer put out just before sunrise among at least 5,000 canvasbacks from around the Northern blinds at Pinole. Unfortunately a northwester made blind shooting uncomfortable and with tide running strong and wind blowing hard a dead duck would drift 500 yards before a boat could be put out to gather it, and let me tell you, a dozen or twenty trips of this kind against the combined strength of wind and tide were enough to try the stamina of a young man, let alone that of one whose years have been long. Rollers came in great high torrents. The boat pounded and jumped but took in no water and those wild rides were worth more than all the rest of the hunt. Furnished better sport than the ducks. Sport that was life-giving, exhilarating, glorious. A gamble with death? No, not exactly, but if it was, what then? Death lost and the game was worth the candle.

There will be just as good shooting this fall—bar wind and waves, which no sportsman need risk unless he chooses—shooting that will last through nearly two months of the Exposition, and if any visitor is in doubt, the writer will by himself will organize a duck shooter's aid society to tell both when and where to go. Yes, and besides act as guide and mentor when other duties will permit.

It seems useless to add that there will be much trap shooting, many fly casting contests, cups and coin for the best rifle shots. Prizes for disciples of Robin Hood at the sport of archery, yacht races, swimming races, for all these are to be had in the East.

**THE DEMON OF THE ALLEGHENIES
KILLED.**

Hagerstown, Md.—The "African Lion," which killed several sheep, two cows, a 400-pound hog, and several dogs, besides terrorizing the people all the way from Cumberland to Keyser, W. Va., is no more. The "lion" proved to be a huge "catamount," the largest ever seen in that part of the country. It weighed 100 pounds and was slain on Warrior Mountain.

Hunters got it, and the veracity of many people, including Rev. J. A. Shockey, is re-established. Here is the story of the battle to death from the Warrior Mountain correspondent:

"The animal came to this section and has been alarming the neighborhood with its horrible cries and bold actions. Saturday it had stood in the middle of the road and defied a team, and at the same time, with its head down as if to charge, giving vent to blood-curdling cries.

"Nine shots were necessary to dispatch the animal, William ("Bee") Miller fired the first followed by George Twigg, John Dolan and Moses Twigg.

"The animal was traced to its den, before the door of which it was dispatched. After the first shot, it pounced upon John Dolan, ripping him from shoulder to the abdomen.

"The animal measured 5 feet 9½ inches. It had crossed ears and a spotted hide.

"On Warrior Mountain the same men killed a bobtail wildcat that weighed 65 pounds."

BOOK REVIEW.

One of the most interesting and hazardous trips ever undertaken was that of the Kolb Brothers, who with an assistant in the way of an adventurous hired man, went through the Grand Cañon from Wyoming to Mexico. The hired man, by the way, left the party about half-way on the route, but the brothers got through in two flat-bottomed rowboats. More than that, they succeeded in taking a lot of magnificent photographs and a number of moving picture records. The book is published by the Macmillan Company, (\$2.00 net), and the 344 pages constitute a record of a trip which might be termed not only the grandest in the world, but one that affords more thrills than any other in America. The story is written in a quiet, modest way that carries conviction and removes any suspicion that exaggeration has been practiced in the least. On the contrary, one feels in reading the book that the authors have been almost too modest in their story. Owen Wister has written a very pleasing little foreword introducing the authors and telling something of their work. Any man with a drop of red blood in his veins will sit up all night reading the hair-raising adventures of the Kolb Brothers.

ANOTHER NATIONAL PARK.

The United States has another National park—the Rocky Mountain National Park in the State of Colorado. The law authorizing has passed both houses of Congress and has been signed by the President. The park contains something over a quarter of a million acres and includes the most rugged section of the continental divide of the Rocky Mountains.

There are more than 60 peaks that rise above 12,000 feet, and several between 12,000 and 13,000 feet, and one, Longs Peak, rises above 14,000 feet; between these peaks there are nearly 200 lakes, varying in size from a few acres to 50 or

COLUMBIA

FOR the youngsters' frolic, for the entertainment of your friends, for the dancing hour—no other *one* thing gives so much real pleasure and entertainment as the Columbia Grafonola.

From the thousands of Columbia Records—with scores of new ones every month—you choose from "all the music of all the world, and most of the fun of it, too."

Distinguished for superb *tone-quality* you can tell the genuine Columbia by its *tone-control* leaves which give the exclusively Columbia control of *tone-volume*.

More than 8500 Columbia dealers—every one waiting to demonstrate the Grafonola. If there is no Columbia dealer near you—just write and tell us, and let us send you a catalogue and tell you where you can buy Columbia Grafonolas and Columbia Double-Disc Records.

Over 1000 Columbia Double Disc Records at 65 cents—thousands of others up to \$7.50. And every one of them will fit any machine, Columbia or not. Grafonolas from \$17.50 to \$500—easy terms.

COLUMBIA GRAPHOPHONE COMPANY

60 acres; the timber line in the Alps is about 6,500 feet elevation, while in these mountains in the proposed park the timber line is 11,500 feet; there are 40 species of plants growing there; besides many kinds of wild life, including the mountain sheep (Big-horn), grizzly bear, black bear, deer, and beaver abound; there are no less than 1,000 varieties of wild flowers, and the Alps do not contain as many kinds of wild plants. The territory contains one extinct volcano, (which is probably the greatest mountain-sheep range in the world to-day); a half dozen glaciers; many snow fields, hundreds of cascades, and many passes in the Continental Divide above an altitude of 12,000 feet. No place in the world off of the railroads has been during the past few

years visited by so many people as this Rocky Mountain National Park. The new park is in the well known Estes Park country and is very easily accessible from Denver.

MUSKRATS ELECT SENATOR.

Salem, N. J.—To muskrats is given the credit for changing the political complexion of the upper house of the new State Legislature, through influencing the election of Collins B. Allen, Republican, of Manington township, Salem county, over Senator Isaac Smick, Democrat, of Canton. The Democrats were in control by just one vote, while this year the vote will be Republicans, 11; Democrats, 10. Muskrat trapping is one of the important in-

In order to supply the popular demand for a small Charcoal Cake we are now ready to place on the market

SPRATT'S Midget Charcoal Biscuits

This cake is the same size as our Midget Biscuits and is invaluable for dyspeptic dogs or those suffering from indigestion.

Please remember, that although dark in color, the charcoal in them is absolutely tasteless and the biscuit appeals to the dog's palate as much as the ordinary Meat Fibrine Cake.

Write for sample and send 2c. stamp for "Dog Culture" containing valuable information regarding kennel management, rearing, etc.

SOUTHERN HUNTING GROUND

I want boarders, preferably sportsmen, this winter. 25,000 acres of fine hunting land, with well stocked covers. Large, comfortable house, all modern improvements. 40 miles from Charleston, S. C., on A. C. L. R. Children and consumptives not taken. For further particulars write P. R. Porcher, Bonneau, Berkeley Co., S. C.

dustries in Salem county during the winter. Trappers and native hunters in the county found revisions in the game laws distasteful last year, and they took out their resentment against the administration upon Senator Smick. Senator Allen is a farmer, and is pledged to seek important changes in the trapping and hunting laws.

CELLULOSE USED FOR MANY PURPOSES.

It is doubtful if any material used by man adapts itself in more protean forms to the demands of civilization than the compound of cellulose and nitric acid discovered by Schonbein in 1845 and variously known as nitrocellulose, explosive cotton, gun cotton and soluble cotton.

Made by treating well purified cellulose, usually in the form of cotton, with a mixture of nitric and sulphuric acids, it varies materially in its properties according to the amount of nitrogen brought into the combination. The higher nitrates are extremely powerful explosives and constitute the basis of the many varieties of smokeless powder. Compressed gun cotton is the usual explosive charge of the torpedoes used in naval warfare. Combined with nitroglycerine it forms the British military explosive, cordite, and the Italian ballistite. The earliest French smokeless powder was a mixture of guncotton and picric acid. In all of these as in our own army and navy powders the nitrocellulose is converted by gelatinizing processes to a condition resembling horn. In sporting powders the degree of nitration is commonly lower and the finished product granular and less dense in the grain.

The multifarious usefulness of nitrocellulose, is, however, most apparent in the arts of peace. The lower nitrates made plastic under heat by the addition of camphor after the method invented by Hyatt in 1869 appears in every home as articles of celluloid. In the form of sheets and films it covers campaign buttons, shields us from the wind in automobiles, constitutes the base of photographic films and carries the moving pictures in ten thousand theatres. Dissolved in various solvents, of which amyl acetate is most generally used, it finds new fields of usefulness as lacquers for brass bedsteads, instruments, and highly finished metal articles generally, and forms the vehicle for the aluminum paint so widely used on exposed piping.

The dope prepared by blending nitrocellulose with castor oil finds a wide application in the manufacture of dress shields, waterproof sheets, artificial leather, and Pegamoid, and forms the basic coating of the best grades of patent leather.

PARTI-COLORED QUAIL.

Editor *Forest and Stream*:

The following picture of the white partridge I secured this fall while hunting in Brookfield, with W. A. Gregory of Danbury, has created a lot of comment among the hunters of this vicinity on account of its plumage. It might be that others have been killed but the oldest hunters who have seen it, say they never saw or heard of one as white as this one. It was all accidental in getting the freak as Mr. Gregory and I were chasing a partridge and ran across another hunter by the name of Geo. Corbin of Brookfield, and he showed us the freak and I told him I would have it mounted if he did not want it.

The breast was entirely white with the head, tail and wings a natural color. E. H. BAILEY.

ARCHERY

Forest and Stream is Official Organ of the National Archery Association

What A Good Bow Has Done And Will Do

By Will H. Thompson

THE press of duties has caused me to neglect for some days answering your recent favor, in which you request me to give my opinion as to the reasonableness of the four different tests you have contemplated applying to the Boy Scouts as measures of skill in archery, and I desire to answer as follows:

Number One.—Any boy with a pocket knife cutting a mere green sprout of any tree can make a *bow* that will shoot a distance of one hundred feet with fair precision; but no boy, unless he be a trained expert in the management of tools, can make an *arrow* that will shoot with fair precision at that distance, or practically at any distance. Any bow that is reasonably straight, will drive an arrow straight, but a good arrow is the most difficult thing to make in the world. So difficult, indeed, that the trained arrow makers of London and of Edinburgh, who have spent lifetimes in the making of arrows, have never yet been able to sell me a dozen out of which I could get six perfect arrows. Of course, the words "fair precision" will cover a multitude of sins. Almost any boy could make an arrow with which one could hit the side of a barn at one hundred feet. But a boy of fifteen, with a reasonably trained mind and handy with tools, should make an arrow that would fly sufficiently straight to keep on a four foot target at that distance.

Number Two.—With good arrows, a fifteen year old boy, with a year's training, should be able to make the score of three hundred and fifty with sixty shots.

Number Three.—A boy of fifteen with a year's practice and reasonably good arrows, should accomplish the feat of scoring three hundred with seventy-two arrows, using standard forty-eight inch target at fifty yards.

Number Four.—No boy of fifteen, nor man of any age, race, time, or with a record for previous condition of servitude, ever could perform or ever has performed the feat of shooting "so far and fast as to have six arrows in the air at once." Of course, the legend of Hiawatha furnishes such a supposed instance, but poets are not responsible, and we will let Longfellow off with only a slight reprimand. Seriously, after more than fifty years of the bow, and much experimentation, I have never been able to keep these arrows in the air at one time but have come so near it that I feel sure it might be done. I feel equally sure that no man ever has, ever will, or now can, keep four in the air at one time. The difficulty does not lie in the lack of power, in the bow, but the difficulty, amounting to an impossibility, of placing the arrows upon the string, drawing and loosing and replacing the second and third arrow upon the string. The

nocks of good arrows are made so narrow as to exactly fit upon the nocking place of the string, tight enough to bear the weight of the arrow without dropping off the string when pending perpendicularly, and the putting of an arrow upon the string, is a delicate and particular matter, which requires the archer to observe the nock and nocking point carefully. A very slight increase of speed might be secured by having large open

Mrs. Burton Payne Grey, Woman Champion of America.

nocks in the arrows, so that one could quickly *feel* the arrow on to the string, but the gain would not be sufficient to get an additional arrow (over three) into the air.

I feel like adding by way of postscript, that the bow is a much more powerful and reliable weapon than it is generally conceded to be, and, upon the other hand, has limitations that the poets and novelists reckon nothing of. The redoubtable Locksley (Robin Hood) never split the wand at one hundred paces, and never in-

tentionally split Hubert's shaft by aiming at the nock while the arrow was in the center of the target, nor did William Tell ever shoot the apple from his boy's head. Nor did Robin Hood ever shoot an arrow a quarter of a mile. Those legendary feats are pleasant to read of, especially in our boyhood days. They are like the story that the old lying by-stander always tells us archers when he wanders upon our shooting grounds about the wonderful shooting that he has seen done by the American Indians, nicking a penny out of a split stick every shot at one hundred yards. Yet no Indian ever lived who, with the weapons with which he was able to arm himself, could shoot one-half as well as the least skillful of our lady archers of the present day, not because he was an Indian, but because he had no two arrows that would shoot straight. I have tested their best many times, and never have found even a fair shot among them. On the other hand, the killing power of a good bow with a thoroughly well made arrow is far above the belief of the average person. An ordinary fifty pound yew or lancewood bow in the hands of a good archer, with a thoroughly well made arrow having a steel point an inch and a half in length by an inch in breadth, thin, needle pointed and razor edged, will drive such an arrow through an ox or a horse. Only last fall I paddled a canoe for Mr. Z. E. Jackson, of Atchison, Kansas, in northern British Columbia waters, and saw him with a fifty pound yew bow drive a much inferior arrow to the one I have described, though both shoulders of a deer, passing just in front of its heart, slicing into the aorta, and killing it almost instantly, the shot having been made from the delicate poise of a high seat across the gunnels of the canoe at the prow, diagonally upward to the mountain side at a distance of over sixty yards.

The historical stories of the polished steel mail of knights being cloven through and through by a cloth yard shaft, are no doubt true, and could be easily repeated by many strong archers of to-day.

ARCHERS, TAKE WARNING!

Though the season for real archery, and regular out door practice has not arrived, there are some things that we can do in order to be in good condition when we can get onto the range.

After a winter's rest, and in some cases real hibernation, our muscles are in no condition to do good shooting. About a month must pass before we can take up the sport where we left it in the fall. This is nothing new; nor is the advice which follows.

You have probably been resting all winter; but it is not too late to do yourself lots of good. Begin to-day; and every day do free, or light gymnastics. Keep a bow in your room and draw it once or twice daily, for ten or fifteen minutes. Rest as often as you wish to, use first one hand and then the other. You will not do this when

before the target, but some time it may be very convenient to be ambidextrous.

EDWARD B. WESTON.

TESTED ARROWS.

In the days of long ago our ancestors might have been able to take any old hand-made arrow and hit the mark at which they shot. They must have had an abnormal sense long since lost to mankind, which enabled them to forecast the individual eccentricities of each one of those crude shafts with which they were wont to bring down game or enemies at distances beyond the range of our modern target shooting. But nowadays, with fairly accurate arrows, machine turned and nicely balanced, it can't be done.

Confidence in his arrows is one of the chief assets of a skilled marksman. A rifleman would not keep a weapon that would not shoot regularly into a reasonably small target, when properly aimed. It would otherwise be discarded as worthless. If this system were applied to defective arrows, as they come to us from the maker or dealer, we should have to reject about two out of three.

When first made, it is possible that they are nearly alike in weight and point of balance; but careless handling in storage and transportation, together with the use of wood that is not sufficiently seasoned, leave them in such bad condition that an archer is very lucky if he can select eight arrows good enough for tournament use from an order of two dozen.

Many times I have heard archers say that, whatever the defects of their arrows might be, they would fly straighter than the archer could shoot them. In most cases I consider this to be very doubtful. It might be that an unknown defect in an arrow might offset an error in the shooter, and produce a good shot; but there are just as many chances that the opposite occurrence would result in a greater degree of inaccuracy. At the very best, the archer would be working under a very serious handicap if he knew the individual tendencies of each shaft and made due allowance for them.

It is a marvel to the writer that the archery supply manufacturers are able to produce arrows as good as they do, at the comparatively small price they receive.

There ought to be some extra grades of arrows made, that are specially built, inspected and tested. Most arrows could be improved both in the feathering and the fitting of the piles.

The test could be made by a competent archer or by a machine similar to the old time cross-bow. Some modification of this weapon could doubtless be made, which would give practically similar aim and loose at each shot. The makers could then guarantee any number of arrows which were sold in a set, from six up, to group on an average in a given sized circle at a certain range; the smaller the circle, the higher the price.

It would not only be cheaper in the end for the archer who is striving for accuracy; but it would encourage the manufacturer to put out a better grade of goods and give him proper return for the extra time spent in improving them.

If any firm could guarantee a full dozen arrows to group within the red at 60 yards, those arrows ought to be worth more than twice the price now obtained for un-tested goods.

Killed his deer with LEFEVER 20-Gauge Shot Gun

While hunting Pheasants
near Hansrote, W. Va.
Mr. W. M. Kefauver
killed a deer with his

LEFEVER 20-Gauge Loaded with No. 5 Shot

"The deer was running toward me at an angle," he writes, "and at the first shot I broke its shoulder, knocking it down. With the second shot, killed it dead with a charge back of the head at a distance of *about 25 yards*."

"Also killed two turkeys and I was absolutely astounded at the remarkable shooting strength of your 20-gauge gun."

WILLIAMSON, N. Y.

"HORNS vs. PEDICLES."

(Continued from page 144)

weighed the carcass for shipment at Clearfield, J. G. Lucas the baggagemaster and T. W. Weber the brakeman on the train which handled the deer out of Clearfield, all testified that the animal was a fawn, and that it had no horns, although they examined the head for them, but had what they called "bumps." Furthermore, although Mr. Harris and the accused guessed the weight as high as 100, the only person who really weighed the deer was the expressman at Clearfield, who testified that the scale weight was exactly 57 pounds, and his statement was not even questioned. The accused himself testified in part:

"I was appointed to be a watcher. I came to a place where in the snow I could see two deer had passed from the Game Preserve into the country which we intended to drive back toward the Game Preserve toward this road, and I concluded that it would be a good place for a watch, and I secluded myself behind a small oak tree on the side of the road."

Again he testifies:

"I was unable to see horns on this deer at the distance I was at, probably 75 yards away from this road coming directly toward me, and I could have killed this deer at that distance probably and I didn't shoot at it because I could see no horns on it, no antlers, but it came down closer to me and came out right opposite my stand, just across the Penfield Road, which is a narrow road, and stopped there a minute as all deer do before they cross an open place, and in that moment I saw on this deer's head horns, hard projecting organs on the head which it could use for defense or offense, and I thought this was a legal deer and I killed it."

Mr. Harris' claim that the Game Commission was prosecuting the accused to get square with some one, that if we did not convict him we would fail to convict any one and that all the other offenders under the law had gone free, is absurd. If Mr. Harris had taken the trouble to examine our books at Harrisburg he would have found that before, during and after this trial many penalties had been paid for killing just such deer as the one in dispute, some after conviction and others of their own accord, in accordance with law.

The Game Commissioners serve without salary or expenses, and neither they nor the officers who made the information in this case receive any share of the fines or costs so that there could be

no question of mercenary or vindictive motives, as Mr. Harris has implied.

It is the duty of the Game Commission to enforce the law for the protection of does and fawns, and its strict enforcement during the 8 years it has been on our statute books has been one of the great factors in bringing back our almost extinct deer, so that to-day in Pennsylvania we have more deer than we have ever had in the memory of the present generation, and this without the necessity of a single closed season, thus making history in game conservation.

THE SPORTSMAN TOURIST

Have Your Own Vacation Spot

Where you can take the family every year, a place to plan for and fix up, a place that will solve the vacation problem and prove a splendid investment besides.

NORTH COUNTRY PLACE
On Beautiful LAKE VERMILION

offers more real advantages than any other place in the Northwest.

Lake Vermilion in Northern Minnesota is the best hunting and fishing section in the United States.

It is 97 miles north of Duluth, 35 miles long, six miles wide, has 800 miles of wild, beautiful shore line and contains 355 islands—much of it covered with virgin timber.

Best of fishing, bird and duck hunting. Moose and deer plentiful.

North Country Place is a peninsula with nice bathing beach on both sides and sheltered by islands.

Ideal spot for cottage or camping, lays well, splendid location—launch passes daily with supplies. Fine bathing, boating, fishing.

Send for beautiful illustrated booklet.

NORTH COUNTRY OUTING CO.
DULUTH, MINN.

LONG VIEW

(in the Adirondacks) Long Lake, N. Y. Open May 1st to December 1st. A country abounding in game. In season the best deer hunting in the Adirondacks. When you write to W. F. Emerson, Prop., for reservation (rates are \$14.00 to \$20.00 per week), ask about bass fishing under Buttermilk Falls, and your chances of securing Forest and Stream's Silver Trophy, which is here. Boating, bathing, motor boating, tennis, mountain climbing and every other holiday enjoyment at Long View.

Excellent brook and lake trout fishing and the ice will be out on opening day of season, April third.

An Ideal Hunting Lodge

One Thousand Acre Hunting Preserve Abounding in Partridge, Wild Turkey, Deer, Squirrel, Rabbit, Fox, Opossum and Raccoon. Adjacent to Quebec-Miami Automobile Highway and Southern Railway—in Southern Virginia.

Owing to the growing scarcity of game, and danger to life, the time is fast approaching when sportsmen will have to own their own preserves. This is an unusual opportunity to secure, at a low price, a very valuable piece of property, especially suited to the uses of a hunting lodge.

Address HUNTING LODGE
Forest and Stream 22 Thames St., N. Y. C.

FISHING LAKE FOR SALE

In the Laurentian Mountains near Ste Agathe des Monts, 3 hours by rail from Montreal, Canada. Good log house, stove, cooking utensils, 4 cots and blankets and unexpired lease of fishing rights. Charming spot for a holiday, easy to reach.

Price \$1,000.00. Apply to

JOHN F. RAPHAEL,
43 St. Sacrament St., MONTREAL

VIRGINIA A BARGAIN FOR A QUICK BUYER

TAKE YOUR WIFE—Brook and lake trout in the dooryard. Well built bungalow at Raquette Lake, N. Y. Fireplace, separate kitchen, icehouse, etc. Completely furnished, cheap rent for May. Jud Landon, 740 Union Street, Schenectady, N. Y.

WANTED

A gentleman of excellent character (a good fisherman) whose life has been spent in refinement and leisure, will act as companion to select party, or person on trips for fishing. Is intimately acquainted with all the streams and lakes in the Maine woods and Southern waters. Will procure guides, accommodations, appropriate flies and give instructions, whenever desired. Is a good photographer. Will attend to all the details so necessary for comfort and enjoyment, in a trip to the woods. Exceptional references furnished and required. Would expect reasonable financial recognition, according to time and size of party. Address M, care of Forest and Stream.

WANTED—Position of training, handling and taking care of game preserve and high class shooting dogs. I have had fifteen years of experience training and handling high class shooting dogs. I can give best of reference as to me and my work. Address A. S. Ketchum, Cornersville, Tenn.

OLD COINS WANTED—FREE—Our standard illustrated book, sells at 15 cents, or if preferred, dozen West postcards, given for three months at 10 cents, collectors' hundred-page paper, devoted to stamps, coins, relics, weapons, old books and minerals. Established 1895. Philatelic West, "Collectors' World," Superior, Nebraska.

AMERICAN GAME BIRD SHOOTING.—Covering the whole subject of upland American game bird shooting. By Geo. Bird Grinnell. Illustrated, 550 pages. Price postpaid \$3.50. Forest and Stream Publishing Company, 22 Thames Street, New York.

TAXIDERMISTRY

TAXIDERMISTS

CROSBY FRISIAN FUR CO.—"Let us Tan Your Hide." Rochester, N. Y.

BE A TAXIDERMIST—Learn to mount birds and tan furs. Mounting instructions, 25 cents; tanning, 10 cents. Anybody can learn. Send for instructions. John A. Byram, Taxidermist, 45 Byram Avenue, Dover, N. J.

LIVE ANIMALS

FOX, RACCOONS, SKUNKS, MINK wanted for breeders. Must be healthy. State what you have and price. Robert Hyde, Deerlick Lodge, Fur and Poultry Farm, Clifton, Me.

BELGIAN HARES—Some Extra Good Breeding Does, \$2.50 each, 50 cents extra when bred to my famous buck Rex 2d. W. J. Gibson, Station D, Columbus, O.

RING-NECK PHEASANTS, per pair \$5, males \$2. Booking egg orders now. \$1.50 for 13. Chas. Hammond, Vanceburg, Ky.

GET WISE—RAISE PHEASANTS FOR PASTIME. Profitable and fascinating. Send for prices. Connecticut Farms Pheasantry, Union, Union County, N. J.

KENNELS

FOR SALE—Dogs, all breeds, for all purposes; cattle, sheep, hogs, ferrets, rabbits, pigeons; 15 cents for new handsome catalogue, with 90 illustrations, all breeds; price list poultry. Susquehanna Valley Kennels, Tunkhannock, Penna.

ENGLISH SETTERS, POINTERS, BEAGLES AND FOX HOUNDS, finest stock in the world, sold under positive guarantee. Our reputation is backed by Forest & Stream—a lifetime in the business, and hundreds of unsolicited testimonials from all parts of America. Trained dogs and puppies shipped on trial. Send 10 cents for catalogue, prices, photographs, etc. Hopewell Kennels, Stewartstown, Pa.

AIREDALE—The gentlemen's all-round dog. Collies of the best possible blood lines. We have puppies, grown dogs and brood matrons. Tell us just what you want and get our list. W. R. Watson, Box 202, Oakland, Iowa.

PEDIGREE STUD DOG—Chesapeake Kennels, John Sloan, Lee Hall, Warwick Co., Virginia. Buck London, welped 9-29-1912; enrolled Vol. 13, F. D. S. E. Tony T., 12541 F. D. S. B. Water Meg, 20919 F. D. S. B. Punch 3rd, Fannie, Water King, Brown Juda, Sampson Lady Dewey, Kent Princess, Neptune Nettie, Grover Juda.

CHESAPEAKE DUCK RETRIEVERS—Thoroughbred stock, natural retrievers from land and water; pups 6 months old for sale. John Sloan, Lee Hall, Va.

Beagle pup started on game, good type, grandly bred. Also shotgun and revolver. Jas. A. Whalen, Whitehall, New York.

PAIR OF BEAGLE PUPS—6 and 9 months. Started on game; also brood bitch. Jas. A. Whalen, Whitehall, New York.

RABBIT HOUND PUPPIES, fine hunting stock, \$3.00 each. F. Price, 26 Nowell Road, Melrose Highlands, Massachusetts.

MEN I HAVE FISHED WITH.—Incidents with rod and gun from the killing of birds and little fishes to buffalo hunting, by Fred Mather. Illustrated. 400 pages. Price postpaid \$1.50. Forest and Stream Publishing Company, 22 Thames Street, New York.

ANGLER'S WORKSHOP.—Practical hints for the amateur rodmaker, by one who knows how.—Perry D. Frazer. Price \$1.00 postpaid. Address orders to Forest and Stream Publishing Company, 22 Thames St., N. Y.

PHOTOGRAPHY

FILMS developed 10c., all sizes. Prints 2¼-3¼, 3c.; 2½-4¼, 3½-3½, 3¼-4¼, 4c.; Post Cards, 50c. doz. Work guaranteed and returned 24 hours after receiving. Postpaid. Send negatives for samples. Girard's Commercial Photo Shop, Holyoke, Mass.

SEND US TEN of your favorite Kodak negatives, any size; will print one picture from each negative for a total of 10c. (stamps). Or will develop any size roll of film and furnish one print from each negative for 10c. This is a trial offer, made to show our High Class Finishing. 8 x 10 mounted enlargements 25c. Roanoke Cycle Company, Roanoke, Va.

FILMS developed 10c.; prints 3c. to 5c. Take no chance on bathroom finishing; send to a reputable Incorporated Company conducting largest plant in existence. Price list and special offer. Enlarging our specialty. Chicago Photo Finishing Co., 54 W. Lake Street., Dept. C., Chicago.

"ALBION" WADERS

The only Perfect Waders

We have tried for many years to obtain a line of Waders that would give satisfactory service. We have now marketed these goods for three years and they have given UNIVERSAL SATISFACTION. The material of which they are made has proven to be the most DURABLE, DEPENDABLE and WATERPROOF on the market.

The medium weight are the most satisfactory all around Wader made. They are lighter than the domestic goods and more flexible.

The light weight are very light (a pair of stockings weighing only 22 ounces) yet they are quite durable and can be safely used for a long time by a careful angler.

The Leaping, Fighting, Impetuous Ouananiche

Much Misinformation Prevails About him and the Beautiful Environment in Which he Lives—The Angler's Blue Ribbon Prize

By E. T. D. Chambers, Author of "The Ouananiche and its Canadian Environment," etc.

FROM far above the Grand Falls of the Hamilton River and from the waters of its Ashuanipi branch in the interior of Labrador, came the skin of a fish, now in my possession, that unfolds a novel and interesting story to anglers and ichthyologists alike.

Mr. A. P. Low the late head of the Geological Survey of Canada brought it back with him to civilization, upon his return from his overland trip of 1894-95 to Ungava Bay. In its adipose fin, the fish whose skin it was, bore the badge of royalty among fishes—the evidence of kinship to the kingly family of the salmon. In its shapely beauty and brilliancy of coloring, from the deep bluish green of its back, through the various shades of its silvery sides, to the pure white of its under surface, and in the number and disposition of its fin rays, it scarcely differed from a grilse of equal size. But its habitat was above a cataract having a sheer fall of 300 feet, so that this fish could not possibly have been a salmon from the sea. The large number and the distinctness of the double X marks upon its sides, the large size of the eye and of the dark spots upon the gill covers, and the strength and thickness of that portion of the body adjoining the caudal fin, all stamp it a ouananiche or non-anadromous salmon.

Prior to Mr. Low's discovery of the ouananiche in many of the large rivers flowing into Ungava Bay, Hamilton Inlet and the Atlantic Ocean, its geographical distribution was popularly supposed to be confined to Lake St. John and its tributary waters. Now, its Canadian environment is known

to include the whole Labrador peninsula, excepting perhaps that part of its westerly slope drained into Hudson Bay; and the angler who would find it and fight it under the varying conditions in which it may be found, must traverse a vast region of mountain and lake and forest and stream, as practically unknown as the interior of Africa, save to the Montagnais and Nascapee Indians, whose hunting ground it is.

For countless ages, no doubt, the aboriginal Red Man, with his bone or stone-pointed spear, snatched from the rapid water in which the fish is found, the biggest specimens that came to the surface in the quest of insect food. "Wan-nan!" as we pronounce it—"There!" or "Look there!" or "There he is!"—they ejaculated, as the fish came to the top of the water, and "Wan-nan" thus came to signify the name of the fish. Its discovery by white men was first announced to the civilized world in 1647 by the Jesuit Father DeQuen, the first European to set foot upon the shores of Lake St. John. In its clear waters he found the fish and correctly classed it as a salmon, reporting his discovery to his Superior in Paris, in his "Relation" of that year.

The original French settlers in the land of the ouananiche did not confine themselves to the largest specimens when capturing the fish for food, for not having mainly to depend, like the Indian, upon the spear as a means of taking fish, they captured all sizes in their nets, and the Red Men used their diminutive terminology when describing the catch, calling it "wannan-iche" or little "wannan." But there is no "w" in the French language, its sound being represented by the letters "ou". Thus "Ouananiche" and not

"wannaniche" is the original written form of the fish's name as employed by those who first produced it on paper, and according to the inflexible law of priority in nomenclature, "ouananiche" it has remained, and is likely to remain, for it has now found a place in the new mammoth lexicon of the English language known as the Oxford Dictionary, at present in course of publication.

The ouananiche has been frequently treated, within the last quarter of a century, as a new fish, and some of the claims to its discovery are provocative of mirth. Science classes it—though not universally, it must be admitted—as the pure and original type of the ordinary *Salmo salar*—the well-known salmon of the North Atlantic Ocean and of the coastal streams of northeast America. The surmises of some anglers, on the other hand, in regard to its origin, are no less amusing than was Walton's respecting "the great trout that is near an ell long;" namely—"whether this were a salmon when he came into the fresh water, and his not returning into the sea hath altered him to another color or kind, I am not able to say."

To quite a number of ardent anglers the ouananiche has undoubtedly proved a new variety, and this fact, coupled, perhaps, with carelessness or meagre powers of observation and resultant haste in jumping to conclusions have led to the publication from time to time of a mass of erroneous information, not only in regard to the identity, the origin and the name of the fish, but also as respects its habits and geographical distribution, the alleged difficulty of its capture, and in fact upon almost every point of the subject upon which it is possible to err. Thus

On the Peribonca River, one of the feeders of Lake St. John, in the Ouananiche Country.

we are persistently told that the ouananiche is peculiar to Lake St. John and its tributary waters—that it is a landlocked salmon and a distinct variety from *Salmo salar*. On the other hand it has been perfectly well established for a score of years past that its habitat is co-extensive with the great Labrador peninsula, excepting only the latter's western slope. In 1804 and 1895, Mr. A. P. Low, already mentioned, found the ouananiche in the Koksoak river for a distance of nearly 200 miles below Lake Caniapsow and in the lake and river stretches of the upper part of the George river, which also empties into Ungava Bay. On the eastern watershed, the party frequently caught the same fish on both branches of the Hamilton river above the Grand Falls, and also in great Lake Michikamow at the head of the North West River. That it is not a landlocked salmon is patent to the most ordinary observer. In the Lake St. John waters, where it is best known to the majority of writers upon the subject, it has unobstructed access to the sea by way of the Saguenay river and the Lower St. Lawrence. The familiar story of the Lake St. John ouananiche shut out from the sea by some extraordinary upheaval of nature in the bed of the Saguenay is of course entirely apocryphal, for as I wrote in one of my books twenty years ago, "waters never yet flowed that smolt could not descend,

and it has still to be established that the Saguenay was ever dry."

But a few years ago, the angling for ouananiche was written of as a conflict between man and a dragonlike adversary which fought its captor more in air than in water, and with so much vigor and success that the strongest tackle manufactured was essential to its capture and that a good proportion of the rods brought to bear upon the fight were smashed by the angler's valiant combatant as if they were so many match splints. Sportsmen who set out a couple of decades ago to fish for ouananiche armed themselves for the fray as though they were bound for an attack upon the *Salmo salar* of coastal streams, and were frequently to be met, as occasional English or Canadian fishermen have been in later days, on the Grande Decharge or in the pools of the Metabetchouan River, casting with sixteen-foot, two-handed salmon or grilse rods, just as they do when fishing for thirty-pound salmon in the Moisie or the Ristigouche. Like that Hadendowah Arab the Fuzzy-Wuzzy of the Soudan, the Canadian ouananiche has been described somewhere by Col. Andrew Haggard as "An India-rubber idiot on the spree."

Much nonsense has been published from time to time about this really splendid game fish of the north, and anglers who have successfully

held the vaulting tarpon and the leaping salmon with rod and line, have more than once been disgusted beyond measure at the evident misrepresentation of those who have pictured the little salmon of Lake St. John as an inveterate smasher of fishing tackle. It is true that very little was known of the ouananiche until quite modern times, but recent investigation has brought to light many facts concerning the fish that were formerly veiled in obscurity.

The most accessible ouananiche waters are in the Grand Decharge of Lake St. John, but they do not contain the biggest fish. Many visit them annually to experience the sensation of shooting the rapids in the Indian canoes of birch bark. The sensation as the frail craft glides down a steep incline of smooth water, or dips into the hollow of a great sea, is thrilling in the extreme. Now it seems that the crest of a huge wave is about to break over the side of the canoe; the next instant the birch-bark is lifted sideways out of the hollow. Then again the bow is apparently upon the point of being submerged when the canoeman in front cuts off the head of the approaching breaker with his paddle. These experiences, amid the resistless impetuosity of the stream, are of a nature to quicken the pulsation of the heart and to hasten the coursing of the blood through the veins. Here and there are oily looking pools where the waters

are at rest, save for the heaving of their bosom after the storm of yonder passionate waterfall, and for the eddyings in circular motion of the larger patches of scum or foam over the surface of the pool.

Amid such surroundings we frequently cast our flies during a long-remembered visit, the Colonel and myself. The Colonel is an Englishman, and we had many American fishing neighbors, including a clever woman angler from New York who could give many of us points in raising the fish to our gay deceits of color and feather. Do what we would we could not approach the number of her rises. We cast all around her and changed our flies frequently, finally trying duplicates of those upon her own line, with which she supplied us from her own fly-book. Still she beat us all. Once she struck and hooked two fish at the same time. Then it was excitement, indeed! One up, one down, or perchance it might be both of them out of the water together, their shimmering sides glistening in the sun like flashes of silver. We all stopped fishing to see the outcome of the fight. The little three and a half ounce silver mounted, split-cane rod responded bravely to the demands made upon it, and never did its fair owner deign to lower the tip to relieve the strain, as one or other of the fish, or both of them together, dropped into the water from their many somersaults. Acting upon the theory that the rod could stand the same strain immediately after the leap of a fish that it stood before it, the dainty little fisherwoman yielded nothing but line to her pair of captive ouananiche, and after allowing them a pretty free rein for about twelve minutes, she suddenly turned the tables upon them and led them where she listed. The line was reeled up until the end of the leader almost touched the upper ring of the rod, and then not another inch was given them. When they still attempted to dive, with the same amount of fight that yet remained to them, they sometimes arched the rod until the whole tip was under water. Soon they were on their sides apparently exhausted.

The man in the bow of the canoe slipped the landing net under the lower fish, securing it safely, but missed the other. Quick as thought the angler had reached over her arm, and with the scissors which she held in her hand had snapped the leader just below the upper fish. The latter was a four-pound ouananiche, and aroused to new life and exertion by the sight of the net, gave another three minutes of exciting sport before it was again brought upon its side to the surface of the water. Then something happened for which we were totally unprepared. When one of the guides again took up the landing net to secure the prize, a sign from the angler made him lay it down again. Another minute was spent in thoroughly drowning the fish, and then as it was brought close up to the side of the canoe a dainty hand with a number of richly jewelled fingers quickly grasped the ouananiche in a tight hold around the tail, immediately in front of the caudal fin, and with a rapid movement of the arm the fish was lifted, or rather jerked from the water and safely landed in the bottom of the canoe. It was a capital act, and its execution was so sudden, so wholly unexpected that some seconds elapsed before the spectators could recover their astonishment sufficiently to applaud the tact and the success of the

On the route to Lac a-Jim, north of Lake St. John.

artistic fisherwoman. It was learned subsequently, that the young lady is a successful salmon angler, who has so great an abhorrence of the ordinary practice of gaffing large fish, that she has practised the killing of her own fish by first drowning them and then securing them by hand. She has thus succeeded in landing, by these simple means, a salmon nearly half as heavy as herself.

In the large patches of white foam, into which we cast our flies, there were thousands of natural insects which the ouananiche, hidden below were picking out of the scum, much as children might select the large, ripe berries out of a strawberry patch. Often they swam slowly around with their dorsal fins protruding from the water. One of our guides hooked one foul, the point and barb of the hook passing through the upper part of the back, a little in front of the tail. Then we had fun. First there came a series of leaps and dives and splashes upon the sur-

gave way. Presently, a high leap from the fish at the end of the line brought its run to an end. It was still several minutes, however, before it could be brought to the net, and once, in the course of its final leaps, it very narrowly escaped from landing in one of the other canoes.

One must be prepared for all sorts of adventures when trolling for ouananiche, and well do I recall, amid the islands of the Grand Descharge, hooking upon a small spoon, with a light cane rod, a huge pike, or American pickerel, of seventeen pounds.

But large and plentiful as are the ouananiche in the Metabetchouan river, and wild and beautiful beyond description as is the scenery of the Grand Descharge, the angler after sport and adventure of the most attractive kind will prefer to scale some of the mighty wild ouananiche rivers of the interior of Labrador. Take the Peribonca for instance, nearly three hundred miles from its mouth is Lake Manouan, containing ouananiche from five to eight pounds in weight. Several years ago I ascended the Peribonca for fifty miles, as far as Lake Tschotagama, and the trip occupied a week, nearly four days being required to ascend the stream. In that distance ten large waterfalls had to be portaged around; it was necessary to pole the canoe up furious rapids and to camp in bear-infested woods, more than a score of miles away from any human habitation. But the scenery was of the grandest and most magnificent description and the fishing in the pools below some of the falls was marvelously good. In Tschotagama it was wonderful. There it is no unusual experience to have a brace of ouananiche at the same time upon the rod, each five or six pounds in weight. There is a record of a 49 pound pike having been taken here on a troll. E. J. Myers of New York killed one that measured 52 inches in length and weighed 47 pounds, and the same angler has to his credit a pair of

Fifth Falls of the Mistassini, immediately below which is a famous Ouananiche pool.

face of the water as vivacious and brilliant as a display of fireworks. Finding that its skyward somersaults and aerial gymnastics were unable to shake it clear of the hook, the fish started off with as near the velocity of a torpedo as it could command, to leave trouble behind. The guide had handed me the rod before the ouananiche had started on its journey in the direction of the sea, and was now actively plying his paddle to enable us to overtake the fleeing fish, whose run was already depriving me of so much of my line that the reel was screeching as it

eight-pound ouananiche and a ten pound speckled trout from the waters of the same lake.

But it is quite unnecessary to go so far away from civilization to enjoy some ouananiche fishing in the early part of the season. In the end of May and the beginning of June, Indian or half-breed guides can be found at Roberval ready to convey the angler to fair fishing grounds in Lake St. John itself, where this much-discussed fish is usually to be found a short distance off the mouths of the Ouatichouaniche, the Ouatichouan or the Metabetchouan rivers.

A Problem That Bothers All of Us

What Are the Best Kind and Size of Flies to Use For Early Spring Fishing Under Varying Conditions?

By Charles Zibeon Southard, Author of "Trout Fly Fishing in America."

APRIL is here and the Trout Fly Fisherman's hour has arrived in many states and will shortly arrive in others! As anglers are now overhauling old flies and considering new ones, probably more so than any other article of their equipment, a few words in relation to them may prove of interest.

What are the best kind and size of flies to use? There is hardly a day at this time of the year that tackle dealers are not asked this question over and over again and in most cases their an-

swer is in the form of another question: What waters do you fish?

well qualified to suggest and advise the ordinary angler in the selection of flies for most waters. And this selection, as a rule, is a very fair one because it is nearly always based upon the flies that have proved successful in past seasons.

Almost every angler (save the novice or beginner) be he young or old, has some "favorite flies" which he will declare will catch trout when all others fail and this is based upon the fact that at some time or other an extraordinary catch has been made with them; and it is not always confined to a single instance by any means. With all due respect for the "favorite flies," their users

any water, unless he selected almost all of the well known and so called successful ones. The reason for this is that the anglers seldom agree upon the same flies even for use upon the same waters.

When the open season begins in the spring, the trout are just beginning to move about actively and seek the shallow water as the days grow warmer. It is at such times that the eyesight of these trout is the poorest and least keen, owing to the fact that they have been for a considerable length of time in deep, dark water and, in most cases, under ice. This condition has had its ef-

The Trout are Beginning to Move About Actively.

fect upon the sight of the trout, as the eyes have become accustomed to a subdued light, which has made them slow to resume their normal vision. As the trout are in the water, they always see any fly presented to them on the surface of the water, or a few inches under the surface, through the medium of the water. The distinctness with which they see any fly must necessarily depend

and the delightful sentiment for and memories of past angling days which the flies call to mind, I am nevertheless heretic enough to place but little real confidence in the theory of angler's "favorite flies."

On the "favorite fly" theory the novice or beginner at fly-fishing would be hard pushed indeed to make any reasonably good selection of flies for

upon both the water and weather conditions existing at the time the fly is displayed and, in addition, the coloration of the fly and its size.

Therefore, there are four factors that the angler must consider whenever fly-fishing for trout; namely, the condition of the water, the condition of the weather, the color of the fly and its size, in order that he may select one or more flies which can quickly be seen by the trout. In the early spring it will be found that on most waters larger rather than smaller flies will prove successful in the long run and, in fact, in the great majority of cases.

When the water is roily or discolored and the weather is rainy, cloudy or hazy, bright and light colored flies can best be seen by the trout. On the other hand, when the water is clear and the weather is clear and sunshiny, dark and medium colored flies will prove more attractive.

If white and black are classed as colors in fly coloration, then the White Miller is the typical light fly, the Black Gnat is the typical dark fly and the medium colored or neutral fly is best represented by the Hare's Ear or Wickham's Fancy.

Light-Colored Flies are those that have a decided lightish shade, and where white, light blue, light gray and light yellow predominate. Such as the Coachman, the Royal Coachman, Lady of the Lake, Reuben Wood, Yellow May, Dorset, Gray Drake, Deer Fly, Jenny Lind, Fern, Beaverkill, Gosling, and Blue Dun.

Medium-Colored Flies are those which are more neutral in shade, having no very marked leaning to either dark or light colors. Such as the Professor, Queen of the Water, Alder, Gray Hackle, Grizzly King, Light Cow Dung, August Dun, Hamlin, Lake Green, Brown Coughlan, Royal Governor, Aliee, Cinnamon and Marston's Fancy.

Dark-Colored Flies are those that have largely black, dark brown, dark green, red and indigo in their makeup and their general aspect is of a dark shade. Such as the Montreal, Cahill, Great Dun, Hawthorn, Furnace, Wasp, Carmen, Silver Gnat, Silver Doctor, Silver Spot, Governor, Dark Stone, Blue Bottle, Black June and Silver Horns.

For the wet-fly angler in the early spring flies tied on number 8 hooks are the best for "all round trout fishing" but on some few waters flies tied on number 10 hooks are a better size: and for use on most lakes and still water more success is often obtained with flies tied on number 6 hooks. I would not advise, on any waters, the use of flies smaller than number 10 or larger than number 6 and seldom will a number 10 fly prove as successful as the two larger sizes mentioned.

For dry-fly fishing flies tied on number 9, 10, 11, 12 and 13 hooks are the best, preferably the three larger sizes, although some dry-fly anglers prefer flies tied on number 14 and 16 hooks; but in the early spring the greater success will be had by the use of the larger sizes.

The wet-fly anglers should feel deeply indebted to their brothers, the dry-fly men, for developing the art of artificial fly making to such an extent that to-day many of the flies are real imitations of the natural flies found upon our trout waters.

While there are many trout waters (notably those of Maine, Canada and the West) where trout will not rise to a dry-fly if it is presented to them strictly according to the dry-fly man's code, yet they will accept that same fly if fished by a wet-fly angler upon and just under the sur-

face of the water and played as a wet-fly; and oftentimes the dry-fly will prove more successful under those conditions than many of the old patterns generally used by the wet-fly fisherman in those waters.

At no time during the open season for trout is it so difficult to make a proper selection of flies to meet the ever changing conditions governing fly-fishing as in the early spring or for the first three weeks of the season.

It is during this period that the "flood stage" of the streams greatly affects trout, creating in them a "state of unrest" which makes them shy and but "transient dwellers" in any place, because the swollen waters and changed conditions have driven them away from their customary habitat. Trout dislike unusual conditions; they, like people, seek to dwell in places that are to their liking and when such places are greatly disturbed or changed, from any cause whatsoever, they "roam" and are then poor risers to flies, either real or artificial.

This is one of the reason why the early spring fishing on streams is so uncertain and the right selection of flies so difficult to make with much likelihood of success, even when every little detail of the existing conditions are carefully observed. But it is just this uncertainty which makes the sport of angling so attractive and the pleasure is the greater, when good judgment, patience and perseverance in the application of the art of fly-fishing brings success to reward the angler's efforts.

"No living man can say," writes a well-known angler, "when upon unfamiliar waters, what fly will prove most alluring. The greater his experience the more tentative does he consider his first efforts.

"Every stream has its own peculiarities not only as to the most successful fly, but as to the habits of its trout as well."

Having given some reasons for using a certain kind and size of flies for early spring fishing, I will now give the names of some of the flies that find a resting place in my own fly-books when not in use and which have proved to be good flies for use on the streams, ponds and lakes of the New England and Middle States.

These flies are all to be had either snelled or eyed, just as the fancy dictates; but from an economical standpoint, if no other, it is preferable to use eyed flies for they will last longer and remain in better condition than snelled ones.

*If the angler is limited to but a few different patterns those flies marked with a star make a very good and serviceable lot.

Remember that the greatest skill is shown by the angler who persuades the trout to rise to his

fly when they are not feeding or they are in a "state of unrest;" and it is then he experiences the greatest pleasure and satisfaction if success rewards him for he then knows his selection of flies, both as to kind and size, has been wisely made.

The saying, "Oh! He is a lucky fisherman!" is one that beginners as well as old-timers at fly-fishing would do well to discount as having no meaning nor significance for, after all, success in fly-fishing is not a question of luck. It is rather the result of judgment and knowledge in knowing how to select the proper fly for the particular occasion and then knowing how to place and play the fly so as to make it prove most attractive as well as acceptable to the trout.

It matters not at all what trout waters the angler fishes if he has the true and kindly spirit of Izaak Walton, the Master Angler of years ago; for then every stream and lake has its own peculiar and delightful charms in which the angler revels while angling, with either the wet or the dry-fly, to fathom their piscatorial secrets.

Of all sport, I know of none that seems to develop in the individual such a kindly spirit, such a full appreciation of all living things, and such an absorbing love for the many and varied charms of "the open" as fly-fishing.

May the season of 1915 prove a joy and pleasure alike to all anglers from the youngster, who fishes the small brooks with his "Alder Pole" and angle worm to "The Expert," who casts his all but perfect fly with the finest of split bamboo rods on the larger waters.

"So help me, he was——"

Fly Tackle Angling For The Commoner Fish

A Distinguished Authority Tells How to Enjoy the Best of Sport Near at Home—Sport at a Minimum of Time and Expense

By Dr. James A. Henshall, Author of "The Black Bass," "My Favorite Fishes," etc., etc.

IN the spring months the thoughts of anglers naturally turn to fishing, and as game-fishes in all public waters east of the Missouri River are becoming few and far between, more especially black bass and trout, it is well to consider the merits of other game fishes that are still available. And while these fishes are smaller and not so gamey as those mentioned, they are nevertheless worthy of the angler's attention.

More than thirty years ago I penned the following: "It is among the possibilities in this world of transitory things, that fly-fishing for the salmonids in the United States will in the near future be known only by tradition. It should, therefore, be a source of great consolation to the fly-fisher to know that there are now, and probably ever will be, in the streams and lakes of this broad land, percid game-fishes equally worth of his skill, which require only to be known to be properly appreciated."

The quality of gameness in a fish is best determined by the character of the tackle used. A brook trout on a striped bass rod, or a black bass on a tarpon rod, could not, in either case, exhibit its characteristic gameness, or afford any sport to the angler.

Excellent sport with these smaller fishes, however, is now rendered possible owing to the advent of the very light trout rod. It should not be considered beneath the dignity of an angler to cast the fly for a rock bass, a blue-gill or a croppie, with a three-ounce rod. Certainly it is just as sportsmanlike as to fish for six-inch brook trout in a meadow brook or a mountain rill.

The urban angler is now compelled to travel long distances, and at considerable expense, to find good salmon, black bass or sizable trout. It should, then, be some gratification to know that with very light tackle he can enjoy very good fly—or bait-fishing with the several species to be described.

As these fishes are of wide distribution, their local or vernacular names are numerous and differ considerably, often interchangeably. To identify them correctly it is necessary to give, in addition to the common names, the scientific names as well.

The rock bass (*Ambloplites rupestris*), is well-known in the Great Lake region and in the upper Mississippi valley, where it is called "rock bass," for as its Latin name implies, it is fond of rocky situations. But it also thrives in rather weedy ponds. In the middle west it is known as "red-eye" and "Goggle-eye."

It is a handsome fish, growing to a pound in streams and ponds and to two pounds in lakes. Although not as much esteemed in the Great Lake region as its merits demand, it is well thought of in the middle west as a pan fish. And it is not to be despised as a game-fish on a three or four-ounce rod. Its habit of curving its body to resist the strain of the rod is characteristic. Brown, red or gray hackles, on hooks 5 to 7, can be used successfully, allowing the fly to sink at each cast. For bait-fishing very small minnows are the best, but grub worms, crickets, and earth worms are all useful. On lakes the trolling spoon of very small size will prove attractive.

The Blue Gill (*Lepomis Pallidus*), is universally distributed in most waters east of the Rocky Mountains, except in the eastern states. In different sections it is known as blue-gill, blue bream, copper-nose bream, or just "brim." But wherever found and under whatever name, from Canada to Florida, it is much sought after as a game—or food-fish, and deservedly so.

It is the largest of the so-called "sunfishes," averaging a half-pound, but sometime growing to a pound, as in Florida. The angler in search of rare sport, where the usually-called game-fish are scarce, will make no mistake if he uses a three-ounce rod for the blue-gill. It will rise to most of the hackle flies, the coachman, the drakes and stone fly.

The Calico Bass (*Pomoxis sparoides*), ranges along the Great Lake basin and in the upper Mississippi valley, where it is abundant. It is variously known as northern croppie, strawberry bass, grass bass, etc. It is gregarious, and like all gregarious animals is rather shy, loving the covert of tall-growing aquatic weeds in rather deep water in ponds. In lakes it also frequents open water. While not very game, it will not disappoint the logical angler with a three-ounce rod. Its lack of gameness is compensated by its eagerness to take his fly or bait, as sometimes almost the entire school can be taken by careful work.

Almost any grayish fly, as gray coffin, gray drake, Henshall or coachman are usually successful, especially late in the afternoon. For bait-fishing use very small minnows, grubs, grasshoppers or cut bait, and on open water the smallest trolling spoon is called for.

The Croppie (*Pomoxis annularis*) is the southern form of this genus, and abounds in nearly all southern states. In Kentucky it is known as "newlight," and further south, along the Mississippi River it is "white perch" or "speckled perch," and in Louisiana is "sac-a-lac," meaning "bag of milk." It grows in southern lakes to

three pounds, and while an excellent panfish is not very gamey, easily sliding out of the water when hooked. It will furnish good sport, however, to the fly-fisher, using small grayish flies. The Henshall fly on number 6 to 8 hooks is a favorite fly in Kentucky. Other flies as recommended for the calico bass and also used for its southern congener.

The White Bass (*Roccus chrysops*), is a favorite gamefish, in the upper Mississippi Valley and along the Great Lakes, where it sometimes reaches three or four pounds. It also inhabits some of the tributaries of the lower Mississippi, especially St. Francis and White rivers in Arkansas.

It rises well to the fly, and is easily taken with bait. A fly-rod of three or four ounces is quite well adapted for this fine fish, and such flies as march brown, the drakes, the duns, and also the flies mentioned for the croppies, will answer as well for the white bass.

Small minnows and the trolling-spoon are successful on lakes and large ponds. In the southern states it is better known as "striped bass," where it does not grow so large as in northern waters.

The Yellow Bass (*Morone interrupta*), resembles very much, in general appearance, the white bass, except that the black horizontal stripes along its sides are not continuous, but broken or interrupted, as its Latin names implies. It might be considered the southern form of the two species, though belonging to a different genus. While it does not grow so large as the white bass it is fair game on a three-ounce rod, responding to sober-hued flies, as brown coffin, march brown, alder, and the various hackles. For bait-fishing, small minnows, catalpa worm, grubs and earth worms will all prove successful at times.

The Yellow Perch (*Perca flavescens*), is so well known in northern waters that it is only necessary to give it a brief notice. It is very abundant in the Great Lakes region, and is also found along the eastern coastwise streams as far south as North Carolina. It is gregarious, especially in the spring, near the breeding season and is easily captured with fly or bait.

In lakes and large ponds it reaches two pounds in weight, and gives fair sport with very light tackle. It rises freely to almost any brightly-colored fly, as red ibis, silver doctor, professor, polka, yellow Sally, etc. It will take any kind of bait that is used for other small fishes. In the winter it is taken through the ice in large quantities and finds a ready sale in the markets, as it is a pretty good panfish.

The Grandest Game Bird in America

Mysteries of Wild Turkey Hunting Told by an Expert for the Benefit of a Younger Generation

By Dick Swiveller.

It may be of no interest to the old-timer, but it will attract the attention of the younger generation of sportsmen if I speak briefly of the habits of the wild turkey and how to find and bag him. The wild turkey is the largest of all our

gallinaceous game. In years past it could be found in most all the states east of the Rocky Mountains. Now it is found in the southern parts of the country. They are plentiful in Texas and to be found in fair numbers in all the southern states. The abundance in any locality, however, depends on the supply of their favorite food, such as mast, small nuts, acorns and seeds. They are very fond of all kinds of grain; and in searching for it will at times approach very near houses and outbuildings, and can be seen at rare times running and feeding near fences in fields containing grain crops. They are decidedly the shyest and sharpest of game birds and most difficult to approach, and yet they are accredited with doing fool things. Two hunters were sleeping under a tall pine tree. One awoke and lay there musing. Presently he noticed a bunch on a limb; he reached for his gun and shot at the bunch and brought down a good sized gobbler. A man on horseback, riding within thirty feet of a rail fence near the woods, counted fourteen turkeys coming through a break in the fence. Possibly they mistook the man as part of the horse. It is needless to say that the man did not have a gun, and that if he went to the hole in the fence with a gun and watched, he could do so for years and never have another such chance to bag a turkey. The writer, one morning when quail shooting, in South Carolina, had his pointer dog point a turkey in the heavy broomsedge grass near a fence. The bird flushed as I stepped forward expecting a quail to flush. I was so surprised I almost forgot to shoot. The report of the gun sent half a dozen or more turkeys into the air, all out of range. Now those birds must have heard the dog and myself approach, as they lay covered with the thick dry grass; one of the "fool things" a turkey will do. The wild turkey pairs off in the Spring. This is a time they are successfully hunted, the gobblers only being killed, though many of the young birds are shot in early Fall. The weight of a full grown wild gobbler is from sixteen to twenty-five pounds; the weight of a hen turkey, full grown, runs from ten to fourteen pounds. Instances are on record of the capture of thirty to thirty-five-pound gobblers. The writer once saw a gobbler alleged to have weighed thirty-seven pounds undressed. The writer shot one that weighed twenty-two and a half pounds, undressed.

In October, in states as far north as Pennsyl-

vania, and in November in southern latitudes, the turkey is in fair condition, and the youngsters able to care for themselves. At this time the gobblers may be "called" within range of the gun. Experienced turkey hunters can imitate the call of the turkey that brings the birds together. The little instrument, the "caller" is made of wood or metal. Some call with the mouth alone. An old turkey hunter I used to hunt with could make a gobbler believe to the depths of his tender gizzard that some fair inamorata of a hen turkey was languishing to have him call around. He would bring that gobbler right out of his concealment and fairly up to the blind, all by a peculiar puckering of the lips, assisted by the tongue. It is very difficult to learn to call correctly either with a caller or with the mouth alone. One false note, no matter how slight, will send the birds in the air or run them to cover. It is very exciting sport to lay concealed in the thick woods and get an answer from a gobbler who thinks a hen turkey is calling for him. The call is repeated and answered, and after an interval of fifteen or twenty minutes the wooing, soothing call. Again the answer from the wooer; and this is repeated by the hunter if all has worked well, until the gobbler makes his appearance. His position may be too far away. In this event the caller must have the skill to make the call of the supposed hen turkey appear still far away and thus draw the gobbler up to the distance required to bag him. Sometimes two or more gobblers will answer. The chances then are that two or more will be bagged. They are very keen, always on the alert. The slightest alarming sound can be detected. I have thought they can see the wink of a human eye at fifty yards. It is a splendid sight to see a full grown gobbler step into view after being called up. To see his wary look, his stately and noiseless tread, head erect, his black and greenish plumage spreading into bronze, the whole giving a metallic luster. When alarmed these birds, though so large, can get on wing about as quick as a quail, and shooting them under such circumstances requires speedy handling of the gun. They are very tenacious of life and require large shot, No. 4 or even No. 2, propelled by 28 grains of bulk smokeless powder and a hard-hitting 12-gauge gun.

There are several ways of hunting and capturing the wild turkey, being governed by locality and surroundings. They are called as mentioned above, while another way is in the use of trained dogs to follow the scent, discover and scatter the flock. The hunter, then guided by the barking of the dog, goes to the spot where the birds scattered, builds a blind and calling is begun to bring the flock together, for it is their habit to want to go to the place where they scattered.

By this means two or three birds are secured to two guns. Again a spot is found in the woods, usually near a swampy place with tall trees and heavy brush in proximity. The turkeys roost in the trees, on the upper branches generally. The hunter builds a good blind and goes to it just before sunset and waits for the big birds to come in to roost, then shoots them from the trees. Another plan is to discover where a gang of turkeys "uses." This is found where the feed is good. Corn should be scattered around in various places, and those places visited every day to see if the bait has been taken. Having become assured that the gang is coming every morning (they begin feeding at day-break) for the bait, then construct a blind, which is made simply of brush and limbs, but bear in mind it must not have a new or made-up appearance; no bright green wood or butts should show. Use dead brush, brown and old branches and sticks, and so constructed as to be closed on all sides, and roomy enough to accommodate one or more shooters in a sitting position. It should be open at the top, and open places enough on all sides to push the gun through. As soon as the blind is built, scatter the corn in front of it fifteen or twenty yards away. The turkeys will soon take **this trail**. Bait again in the afternoon and be in the blind long before daylight next morning, still as an owl, and await the coming of the grand turkeys. Just as the mantle of night is lifting and the rosy hue in the east is more pronounced, you will probably see them coming, two, three, four, seven, ten or you may count a dozen or more. An exciting moment. On they come, feeding, and at last reaching the place where the corn is thickest, which brings them within range. Now if you have not an attack of "buck-ague," select a bird, kill him and instantly put your second barrel to a bird on the wing without waiting to see if the first shot was effective. This method of taking the wild turkey is probably as fair and satisfactory as any.

I must confess, that in my experience in shooting most all varieties of our game birds, the question of "meat" has little to do with the sport, but when turkey shooting, the thought of this fine game bird on the table is a prominent factor in the desire to bring him to bag. I don't know but we may as well take him in any way we can get him which includes a slice from his tender bosom that has been browned by proper cooking—or a second joint if you please. The individual who has yet to taste for the first time wild turkey will experience a sensation of rapture beside which his first canvasback duck celery fed is a mere everyday affair at table, provided always that the turkey is properly treated in the kitchen and served with all the honors to which he is entitled.

Color Photography for the Sportsman

How you can Keep the Glories of Woodland Tints and Shades Before you Always—A Fascinating Recreation

By R. A. Worstall.

THE camera has become a necessary adjunct to every sportsman's equipment. Whether he be a trout fisherman, wading the shallow streams, or a big game hunter, trailing the moose and caribou along the ridges; whether his sport leads him far afield, or whether his ramblings be near home, nine times out of ten he will have a camera slung over his shoulder, or stuck in his pocket. And often during the long winter evenings that mark the interim for most outdoor recreations, he will turn to the pictures taken on his sporting pilgrimages. "This picture" he will say, as you pore over his album with him, "doesn't begin to do the subject justice. You should have seen the blaze of color in those October woods, with the green of the spruces for a background, and the blue sky and fleecy clouds reflected in the water. I'd give a lot for a picture of it just as it looked then."

What would you give, to-day, for a picture true in color of that great trout you caught last summer, with its blue and crimson spots, and the iridescent golden armor over all? Or for that hardwood ridge, a blaze of reds and yellows and oranges, where you downed your moose last fall? Or for that gorgeous sunset the last night in camp? Lost opportunities these, but there is no reason why, if you are willing to take half the trouble and devote a fraction of the effort you put into your fishing and shooting, you should allow such pictures to escape you again. For all these subjects can be taken in their true colors, and the results will repay you a hundred fold for the trouble.

This is not the place for a discussion of the theory and development of color photography. Those interested can obtain, through their photographic dealer, books treating on these subjects. We are concerned here only with a consideration of the necessary equipment and manipulations involved in making color transparencies. For successful color prints on paper are still a thing of the future. But if you will make your color transparencies in lantern slide size, and throw them, enlarged, upon a screen, or if you make and view them as stereoscopes, you will, I am sure, be so satisfied with the results that you will not ask for paper prints.

In taking color pictures, any ordinary plate camera, or any film camera which can be fitted with a ground glass focusing back and plate holders, will serve. It is of course true, in this as in all branches of photography, that the better the lens the better results you are apt to get, but an expensive anastigmat is not absolutely necessary. A special ray filter to fit over your lens, and a meter for judging the exposure, are necessary.

The whole cost of adapting an ordinary roll film camera to color plate work need not exceed five dollars.

The Autochrome process is probably the most widely used in this country, for making color

transparencies. The Lumiere Autochromes are made in France and their process of manufacture is briefly as follows: Wheat starch is sifted until circular grains of uniform, microscopic size result. Batches of these are dyed, with transpar-

What Would You Give for a Picture Like this in Colors?

ent dyes, the three primary colors: red, green, and blue-violet—and mixed in correct proportions. A glass plate with an adhesive coating is sprinkled with this mixture, and the surplus shaken off. The interstices which remain are filled with fine carbon black. The coating is then rolled, and covered with a waterproof varnish. Upon this is spread a very thin film of an orthochromatic collodion emulsion. Autochromes come packed four in a box, box of four in lantern slide size costing \$1.20. The film is very delicate and great care must be exercised in handling the plates. The box must be opened either in an absolutely dark room, or in one faintly lighted by a low candle power light fully screened by the "Virida" papers sold for the purpose. In any case, as the emulsion is sensitive to all colors, the less light of any sort one has, the better. Each plate is packed with the film side in contact with a black cardboard, and the two are loaded into the plate holders together. The glass side of the plate, which, contrary to the practice with ordinary plates, faces the lens, must be wiped gently with a soft cloth to remove dust.

Having your plate holders loaded, slip over the lens the special ray filter sold for Autochrome work. No other filter will answer. The object of this filter is to cut off the too actinic blue-violet rays, and to equalize the light, and the necessary shade of filter for this plate has been accurately determined by the makers. The ground glass in the focusing back must be reversed, that is the ground side faced out to compensate for the reversal of the plate in the holder.

Before making an exposure it is absolutely necessary to test the light. Color plates, for reasons which it is not necessary to go into here, have very narrow latitude in exposure, and unless the exposure is right the colors will not be true. The Watkins Bee Meter for Color Plates is cheap and efficient. With each meter comes a booklet giving full instructions, plate speeds, etc. Having tested the light in accordance with these instructions, and having ascertained the correct exposure, follow this absolutely, regardless of what your opinions may be as to its accuracy. The meter is far more accurate than the judgment any photographer, however skilled, can form from the image on the ground glass. The Watkins plate speed for Autochromes is 3, about eighty times slower than an ordinary plate.

Having made the exposure the next step is development, and the Lumiere booklets give full and complete directions for this. It is best, at any rate until you have become proficient to follow these directions closely. The plate is developed in the dark, or with a very feeble Virida light, for about two minutes, rinsed a few seconds, then put into a "reversing bath" and brought out to full light. Reversing requires three or four minutes, after which the plate is rinsed again, re-developed, rinsed half a minute, and set aside to dry. When dry, it may be varnished, and a protecting cover of clear glass is bound over it. The whole process of making a complete Autochrome does not require more than thirty minutes, and is simplicity itself.

"What," some will say, "lug around a lot of heavy fragile glass plates on a hard trip in the woods?" Well, why not? When you go out after big game, do you depend on a light target pistol, rather than be bothered by the weight of an effective gun? Color pictures are the big game of

Your Guides Would Like to Have this as a Remembrance of Their Race.

photography. If you are content with the small game, stick to the roll film camera. But it is safe to assert that the great majority of us, when we go to the woods, lug along, cheerfully enough, many times the weight of two dozen color plates, in the shape of tackle boxes, repair kits, etc., seldom if ever to use them. You will not stick at a few pounds extra weight in your outfit when once you have learned what beautiful effects you can secure only by color plates. For nearly every time it is the color in the landscape, not the composition, that inspires the picture, and the color blind plate or film yields prints that are disappointing. By all means take a dozen or two color plates with you, but before you go practice with them enough so that you can use them properly.

A color plate process which is rapidly gaining converts is the Paget. The Paget color plates are made in England, and, unlike the Autochromes, the taking screen is on a separate plate from the sensitive emulsion. The latter is a panchromatic one, sensitive to all colors. The taking screen consists of the same primary colors as that of the Autochrome, but in a microscopic, geometrical design, and this taking screen may be used over and over again. The film side of the taking screen is placed in contact with the film of the negative, and the plate holders for Paget color plates must be fitted with good springs, to maintain close contact of the screen and plate. A special ray filter is required. The ground glass of the focusing back is reversed, just as for Autochromes. In calculating the exposure, the Paget booklet gives twelve as the Watkins speed. It has been my experience, and that of several others, that eight is nearer right. From this it is evident that the Paget color plate is more than twice as fast as the Autochrome. After making the exposure, the taking screen is placed to one side for further use, and the negative developed according to the printed instructions enclosed with the plates. This negative is fixed and washed in the usual way, and from it is made a lantern slide transparency on a Paget Transparency plate. The completed slide is brought in contact with a viewing screen, having the same geometrical design, and in the same colors, as the taking screen.

When the two are registered exactly, the colors are true, and the two are then firmly bound together.

Each process has its advantages. A color picture by the Autochrome process can be completed much more rapidly than by the Paget. The Autochrome, having the same taking and viewing screen, shows no parallax effect by indirect light, while the Paget must be viewed by direct light. And the Autochrome costs a little less than a completed Paget. But in my estimation, the advantages of the Paget process far outweigh the disadvantages. In the first place, the Paget plates being faster, permit of shorter exposures. True, the Autochromes may be supersensitized, but not every amateur would care to attempt this. The Paget plates have far better keeping qualities, and more latitude in exposure. The final color transparencies are much more brilliant and stand the heat of the projection lantern much better than the Autochrome. The cost of failure in exposure is much less in the case of the Paget, as it is confined to the cost of the negative. The Paget process is duplicating, that is as many color transparencies as one likes may be made from the same negative, while but one Autochrome results from each exposure. And finally, the Paget color negative makes contact prints and enlargements in any medium one chooses. The quality of the prints made from these negatives will be a revelation to one who has not used panchromatic plates and ray filters.

Whatever color plates you take on your next outing, I strongly advise that before starting each box be sealed in a moisture proof tin box, fastened with adhesive tape. Do not leave Autochromes long in plate holders. Paget plates will stand more of this sort of abuse. When the plates have been exposed, unload the plate holders at night, under blankets, with no light of any sort, and reload at the same time. Carefully pack the exposed plates in the same wrappings, and boxes they came in, and seal again in the tins. And develop them at the very first opportunity.

When one takes up this delightful recreation of color photography, he finds it, as he becomes more skilled, a most interesting sport in itself.

Who Owns The Game?

By Ernest Schaeffle, Executive Secretary, California Fish and Game Commission.

DISSATISFACTION over the control and use of wild game is probably as widespread in the United States as it ever was in Europe, where we point whenever we want to show a horrible example of selfishness and injustice to the masses.

And, misunderstanding, as to the real trouble, is apparently as widespread as the dissatisfaction. No two people seem able to agree as to the cause of the universal complaint, the blame being usually placed upon the "game laws." Was ever an institution or program so generally misunderstood as those compromise statutes, usually ineffective, intended to preserve the country's wild life!

The writer of this article makes no claim to wisdom; but a peculiarly intimate acquaintance of many years with game and fish, "game laws," so-called "poachers" and the general public has given him some knowledge of natural conditions and those unnatural conditions brought about by advancing civilization, and he feels capable of explaining and clearing up some of the existing dissatisfaction and misunderstanding.

We must recognize the fact that in the United States, and in most foreign countries, land is subject to private ownership. Of course in every country large areas are collectively owned, or owned by the "government," the "crown" or by free cities and by states; but, with the possible exception of Russia, the private holding system obtains and is pretty generally regarded as being just and wise. We have the system in this country as an inheritance from our British predecessors in occupancy, who, in turn, had it from the Romans.

Along with the private land ownership system, however, has gone a somewhat conflicting system of public ownership in wild game and fish. That conflict should arise as a result of the dual system was inevitable; but that much of the present day discontent comes from it may not have occurred even to careful students. Let us state the case concretely, and see if it does not immediately become clearer and more convincing.

About ten per cent. (more or less) of the population owns the land that is not publicly owned. The remaining ninety per cent. owns no land and has no rights to or upon any "land" except public waters and highways, public parks, reservations, etc.

The wild life belongs to the "people," by which we always mean the hundred per cent. whether they own land or not.

Now, the ninety per cent., being people—the same as the ten per cent.—like to ramble about on holidays and Sundays and to hunt and fish. But—and right here the trouble begins—the minority own the farms and the streams and lake beds and borders, and quite naturally object to trespassing and keep or put invaders out.

All the while, mind you, the game and fish belong to the general public, and the general public knows it and curses a system of laws that keeps it away from them and in the practical possession of the landholder.

The fact that a tract of land is used by a "gun club" or "preserve," whether by virtue of

ownership or mere lease, is invariably sufficient to irritate the local public. For some reason the prejudice against a farmer who closes his place against public hunting is nothing compared to the ill feeling entertained for a club (or even individual) who keeps a place as a "preserve." It seems also that, mingled with resentment at being denied a privilege, is to be found a rapidly growing belief that the public has a right to go on private land so long as the purpose is the pursuit and taking of "community property," and so long as no actual damage is done to the landholder's own possessions.

It is, of course, outside the purpose of this article to discuss the question of land ownership and trespass; but no argument over the ownership of game and the public rights in it can be engaged in without going smash against those questions. And, what is more disquieting, it seems certain that the present trouble between the hunters and fishermen and those who control the game and fish will continue and increase. What the outcome will be no one can foresee; but it is hard to even imagine that a people wedded to the idea of private ownership in land and in the unrestricted use of it, as well as to the idea of a divine right to protection in such ownership and use, would stand for the general "trespass" that would be needed to bring about the end desired by the public.

That private ownership means careful and often complete protection to wild species is not always accepted by the public as sufficient excuse for the system. Too often sentiment seems to favor utter extinction of what can not be freely and universally enjoyed. This sentiment is, possibly, weak and hysterical, besides being a menace to animals that have the same right to existence and comfort that man himself claims.

The future may prove the viciousness of such feeling by developing some different scheme of holding land, under which every one will have real ownership in such wild life as may be spared by the present ruthless generation. I say present generation advisedly, for it is evident that another twenty-five years will see the practical extermination of every desirable wild species in North America, unless the present slaughter is checked. Some doubting Thomas may say, "That can't be true, for in Great Britain, with her forty-five millions of people, they have been slaughtering for centuries, and still there's plenty of game." Another doubter will say, "Why, just establish public game preserves, like those they have in Oklahoma, and everybody can have game." And even another will say, "All they (note the they) need to do is to start farms everywhere and raise pheasants and wild ducks and deer, etc." Just for fun I am going to show the fallacy of all three arguments—partly because they're all fallacious and dangerous, but largely because they have been given wide circulation by irresponsible and dishonest agencies and are accepted, more or less, by the public.

The first argument is advanced by superficial thinkers. It is true that there is still wild game in Great Britain; but it exists because millions

and millions of pounds are spent freely by sportsmen and landholders in fencing and draining building of roads, trails and telephone lines; in the wholesale poisoning and trapping of predatory birds and animals; in the rearing, liberating and "training" of millions of birds; in the feeding, watering, sheltering and even doctoring of wild deer, grouse and partridges, and in the continuous patrol against "poachers" by a body of "keepers" nearly as large as the regular army of the United States.

Further than this, the kill of game in Great Britain is not to be gauged by either area or population, for out of forty-five millions of people, less than sixty-eight thousand do all the hunting, and the number is decreasing. There are now over one hundred and sixty thousand hunters in California and the number is increasing by leaps and bounds.

As to argument number two—that about public preserves. We have them—have had them for years—and will have more and larger ones. But if the entire state were one preserve it would not raise the game that the public wants. Furthermore, not all varieties would breed in the state; most species of wildfowl breed only in more northern latitudes. What we must realize is that game must be treated like any other crop, saving each year enough seed for the next season's planting, with something over as a safeguard against bad weather, epidemics, etc.

And now we come to the last argument, which, of the three, sounds the best to many enthusiasts. The answer is that the game farms and preserves cost money, even in England, where families have owned the same tract of land until its value has been forgotten or is no longer appreciated, and where labor is dirt cheap. I have been told (by one of them) that capable gamekeepers work in England for \$6.00 a month "and found." The same man would demand from \$40.00 to \$60.00 a month here and would refuse to work as hard or as long. But the great trouble is that successful game preserves and farms are almost an impossibility because of the public's determination to pursue and kill "wild" game, even on private holdings. It is true that every hunter does not "poach" and it is also true that some preserve owners are able to protect their property; but a great many hunters will hunt wherever the shooting is good, and the average farmer or preserve owner gets laughed out of court whenever he attempts the prosecution of a trespasser. Some preserve owners have given up the courts and rely upon the shotgun, which is a favorite plan in Europe. Obviously the plan fails here, and what is worse, carries the whole scheme of things into increasing disrepute.

And now, lest the reader quit with the feeling that the situation is utterly hopeless, I will venture—a prophecy, shall we call it? It is my strong belief, based upon the knowledge gained through experience and investigation, that the American public at last realizes the value of wild life and the terrible necessity of protecting the pitiful remnant left. I believe also, that we will, if we find that the tinkering of the past and of the present has resulted in nothing but a sense of false security, and if compromise measures are not soon found, close down on all killing, whether for commerce or for sport.

Report California Game Commission.

Pacific Salmon in New England Lakes

Successful Transplanting of the Lordly Chinook Means an Era of Real Salmon Fishing to Anglers of Limited Time or Moderate Means

By George H. Graham, Massachusetts State Game Commission.

No more interesting experiment has ever been carried on in the line of fish culture than what has been done in the past ten years with the Pacific salmon known as "Chinook" in some of our New England lakes.

The splendid record that has come from Lake Sunapee, N. H., and more recently what has been the result of planting these fish in Lake Quinsigamond in the city of Worcester, Mass., attracts the attention of fish culturists and anglers all over the country. Knowing what had been the results of planting these salmon in Lake Sunapee and believing that equally good results could be obtained in the old Bay State the Commissioners on Fisheries and Game began to look around to see where to try the experiment. They found in Lake Quinsigamond what they considered an ideal lake; it has a large area of deep water and is very cold in places. It has a large amount of food for the salmon to feed upon in the shape of landlocked smelts which seemed to be increasing at an enormous rate.

The lake was screened at the outlet so as to prevent the young fish from going down stream and when the fish were planted they were good sized fish from four to six inches long. Ten thousand of these fish were planted during the fall of 1912 and during July of 1914

or within about twenty months from the time they were hatched, over 600 salmon were caught by the anglers ranging from one and one-half to five pounds each.

These fish were caught both trolling and still fishing with live bait, and as there has been no limit on salmon in Massachusetts one man caught over twenty fish in one day.

These eggs were furnished by the U. S. Bureau of Fisheries and were secured from the Columbia River in Oregon. They are larger than the eastern salmon eggs, being about the size and color of our half ripe currants. They are eyed out in one of the Government hatcheries before they are shipped east. The eggs are carefully spread out on a tray that is covered with cotton cloth and then covered over with thick wet moss; these trays are fastened together and then placed in the center of a large box and packed in firm with shavings and ice. They are shipped by express with directions for having new ice put in at certain stations in order to have the eggs remain at a certain temperature until they reach their destination.

The salmon that were planted in Lake Quinsigamond were kept in the hatchery until they were from four to six inches long, and when they were planted they were well able to care for themselves. This lake, like so many others in our New England states, was well stocked with pickerel and perch and there were so many

of these fish that doubt was freely expressed that the salmon would all be eaten up before they had a chance to grow.

But such was not the case, as the results have shown. The Massachusetts Commissioners

Samples of Transplanted Chinooks.

were so well pleased with the experiment that they stocked five other lakes during November, 1914 and at the present time they have 100,000 Chinook salmon eggs hatching to be planted during 1915.

When it becomes known that certain lakes and ponds that are now alive with pickerel and perch can be transformed into salmon waters and that good salmon fishing can thereby be placed in reach of the man who has a limited amount of time and money to spend, the demand from the sportsmen to stock our waters with these salmon will be quite large in every state.

The acme of all fishing is salmon fishing and it is a sport that has been enjoyed by only a very few people during the past fifty years. In recent years, one in order to secure any sport of this kind had to have a fat pocketbook and lots of leisure time. In the early history of New

A Real Catch of Pacific Salmon in a Massachusetts Lake.

England, most of the large rivers were noted as salmon rivers and the salmon ascended the rivers every year to lay their spawn in fresh water but since the rivers have been dammed to make power, the fish have been unable to ascend and it was only a few years after the dams were built when our salmon were all gone.

Since the salmon stopped running up the rivers very few people have had a chance to get them and there are but a few lakes and streams in all New England where salmon can be taken to-day. So scarce have these fish become that many men spend large sums of money each year to go to lakes in Maine, New Brunswick, Nova Scotia and Newfoundland. It is no wonder then that much interest has been displayed by sportsmen all over the country in the experiments that have been carried on with the Pacific salmon known as Chinook salmon, in our lakes of New England.

Since 1873 the Government has been experimenting with these fish but not until they were introduced into Lake Sunapee was the work successful. Millions of them have been planted with very little success.

It is possible that the many years of failure by the Government were due principally to two causes: First, the fish were planted in lakes and ponds that were not properly screened and, second, most of these were planted when small.

Year after year the results were the same and instead of going to the bottom of the trouble the same plan was carried out by the Government. Small fish were planted in lakes without screens and the fish allowed to run down stream, never to return. After these salmon were well established in Lake Sunapee the Government made a faint attempt to study their habits when raised in fresh water but their efforts were never finished and they know very little to-day as to the habits of these beautiful fish when confined to

Two Massachusetts Products.

fresh water. They do not know whether or not these fish will spawn, or whether they spawn in the fall or spring. It is known that in France they have been kept in confinement for many generations and that they do reproduce. After going to the expense of introducing them and getting them well established in Lake Sunapee it would seem that those in charge of the Govern-

ment work should use some endeavor to get all the information possible.

It is the plan of the Massachusetts Commissioners to study these salmon as much as possible and try to learn more as to their habits when they are confined to fresh water. It is believed by many fish culturists that these fish will reproduce under certain conditions in fresh water and by careful observation it may be possible to determine this question and to learn much more in regard to their habits.

There has never been a fish introduced into our eastern waters that has appealed to our sportsmen as much as has this species of salmon and when it is known that the Government is in a position to furnish millions of these eggs from the fall run of Chinook salmon without injury to the commercial interests and by taking eggs that will not be otherwise used it is no wonder that our people are interested in having the eggs sent to New England. No activity of the Bureau of Fisheries has been more successful from the angler's point of view than has the work done with these salmon.

Thousands of anglers have been going from Massachusetts to the other states north of us to secure salmon fishing but with our own lakes and ponds stocked with these fish it will make a large amount of money kept here at home each year. It will also mean that the fishermen will build camps and bungalows around our lakes and will increase our taxable property.

If these salmon are to be introduced we must first have a body of clear cold water with a screen at the outlet to keep the fish from going out. Smelt should be planted to serve as food for the salmon as it will be readily seen that a fish that grows four to five pounds in less than two years consumes an immense amount of food. The fish should not be liberated until late in the fall when they are four to five inches long.

Bill and The "Red Bird"

Gorgeous of Plumage and Awesome of Decoration it Yet Proved That the Mind of Man is Weightier Than a Ten Pound Bass

By Tenderfoot.

I was toward the end of an extremely dry August when I was invited to join my old friend Bill who had been camping for several days on the Chickahominy River, in the tide water section of Virginia.

He was out after the large-mouthed black bass which make these waters well worth the angler's time. Bill had been fishing for four days, when I joined him, and had got but one rise during this time. I suppose I must concede that he is a fair bait caster and knows the habits and feeding grounds of these bass as well as any man in the country, but, with all the tricks he could conjure to entice the wily moss backs from their cool loafing places under the lily pads and old "laps," nothing had proved successful. Only one rise in four days—think of that! And Bill was not a loafer either; he always put both head and hand into his work, no matter what it might be.

So, when I reached his big tent, pitched near Captain Tom's vegetable garden, I found him in anything but exuberant spirits. He was, however, hard at work on something, and after settling my duffle in the tent and changing to soft shirt and "sneakers," I went over to him, where he had established his workshop, under a big red oak, and inquired as to "what kind of hicky-doddle he might be making?" He informed me that he was manufacturing "a bait that 'cordin' to my dope ought to git 'em." It seemed that Bill had lost the day previous the only red surface lure he possessed—the only lure which had brought a rise—and although he didn't "hang much faith on reds," yet he was going to "take the tip and make me a reddish floater." He had found an old, dry, well seasoned, fence post of red cedar, and split from its heart a rectangular block, about 4½ inches long. He had about finished the rough torpedo-shaping of the block with a jack knife, when I arrived on the scene and must volunteer as first assistant and consulting engineer. We had no tools except our jack knives, a pair of small pliers and a key-hole saw, but substitutes were found quickly. I located a discarded "bait" bottle up the shore and broke this into convenient size pieces for scraping down the block to proper symmetry and smoothness. While I was engaged in this, Bill had found a piece of old wire and "diamond pointed" a short straight piece to be used as a drill.

After much sweating and strong language we finally finished boring the hole through the center of the block lengthwise, for the wire axis on which the head turns.

The aluminum wings for the head seemed to stump him at first, but soon the top of a tomato can was fashioned into the standard wing pattern and the burred edges smoothed off on a stone.

Next, we sawed the torpedo through at the big end, and there was the head and body separate and ready for assembling. The tin wings were tacked on to the head with cigar-box brads; the axis passed through the hole, and the eyes turned up at the head and tail ends for the swivel and gang hooks respectively.

The hooks and screw eyes for the side gangs were taken from an old white bait, which I happened to have in my box, and quickly attached to the new work of art. The lure was now finished and we must hasten to try it out. Bill attached it to his line and, after casting a few times from shore, we both decided that the head worked beautifully on the retrieve and that nothing more could be asked of it. "This is a bird," says Bill, "a regular red bird" and we christened it "Red Bird" on the spot.

As the heat of the day was now about over, we decided to go up the river to an old sunken wharf where the big ones usually lay. So we hurried to embark in Bill's skiff with all our angling paraphernalia.

On the way up the river to the "good place," we must pass much apparently good feeding ground near the lily pads; so I agreed to do the paddling after we reached the old wharf, if Bill would paddle for me to cast on the way up. He agreed to this arrangement and we started.

I used my favorites; the Blue Nose floater, Yellow Kid, and a white floater, but nary a rise did your humble author get. The old Blue Nose would rise gracefully and land within a foot of some cluster of pads, with no cuss-producing back-lash to mar the cast, but to no avail. Then the Yellow Kid would go scouting into the very center of some little piece of open water far back among the lilies and be retrieved—sometimes steadily and again with intermittent jerks only to end with the same result each time. When I occasionally glanced at Bill I found a set grin on his ugly countenance and this finally grew monotonous. I asked him if he had any suggestions to make. Did he desire to criticise either my method of casting or my selection of spots in which to cast? He only grinned a bit wider and kept silent. Finally I laid my rod aside and asked him to change places with me, if he "wanted me to paddle the — boat."

"A'right," says Bill. "Guess you aint goin' to make much time with Mr. Bass up among them pads. I fished all this water over 'bout ten times durin' the last few days and come to the conclusion that bass just must be around them lily pads, 'ceptin' they aint. No, sir!" said he, "bass is just like people; when the weather gits hot they want to leave home and go somewhere it's cooler and more comfortable."

We changed places in the boat and I began to paddle.

"Hit 'er up till we get about castin' distance

and a half from the wharf, and then work all the way around slowly like," Bill remarked, as he started in to fasten the "Red Bird" on more securely and make a few preliminary casts.

We soon arrived at the spot selected and I began paddling slowly around the long sunken wharf.

After a while I remarked as how "you could cast your head off and never get a rise this hot weather."

"Don't know but what you're right," he replied, "but I am goin' to give this here Red Bird a fly or two more any how."

I was paddling along slowly, alternating the paddle strokes with slaps at mosquitoes which were holding high carnival on the back of my neck.

Bill was gracefully soaring the Red Bird first over hand and then under hand, with his flat trajectory, as he called it, and we were arguing as to whether too much "splash" of the lure attracted or frightened a bass, when—splush! "Strike," yells Bill, "got him comin'; he'll weigh 'bout three pounds!" Then later, "by golly, watch him go, will yer; aint he a devil though! Say, I got some fish here, boy, you know that?" and many other remarks of a like nature which were accompanied by a great deal of chuckling and child-like exclamations—all of this much to my disgust, for I hold that the strict silence of an angler, while playing his fish, is a true hall mark of the genuine article.

Well, after much manipulation and conversation, the bass was finally netted very skillfully by your humble servant, and found to weigh just 2½ pounds—but nothing to go crazy over, as I remarked to Bill. I have never been able to understand why a grown man should lose his mind about one small fool bass, but they do; and one might suppose the "wealth of the Indies" lay at their feet, from the ecstasy exhibited by some.

I sort of figured that this was an idiot bass which had escaped from the bass asylum, and never once thought that the performance would soon be repeated; but strange things happen in this life. About ten minutes later, while I was paddling along sub-consciously, watching a muskrat swim across the bow of the boat, and ruminating over the perversity of bass in general, there came an explosion which sounded like a mixture of the tongues of Babel, with pure English expletives thrown in not too sparsely.

"A whale," gurgles Bill, "a great big man-eater, Boy!"

"Great Guns From Halifax, the biggest bass in the world, and I missed. Did you see him rise?"

I replied, in a dignified way, that I had seen nothing, but if he didn't quit trying to upset the boat and scaring all the fish for miles around,

I'd put the boat ashore and get out. I asked him also "what'd yer miss 'im fer?"

He only glared—opened his mouth—and glared again; and I thought if looks could kill I'd sure be a dead one.

I had stopped paddling and we were sitting there scowling at each other like two loving tom-cats.

"Well," I said, and drawled it out very long and in my most sarcastic intonation, "are you going to fish any more, or just sit there an' feast on my beauty?"

A snort was the only reply, as he stood up again and braced his feet in the bottom of the boat. (I forgot to say that at the climax of his outburst he suddenly sat down and nearly capsized the boat.) "You'll oblige me," said he, "by not paddling another lick till I can cover this water carefully, and, maybe, in spite of a green sour-balled boatman, I can make that bass rise again."

I laid the paddle across the gunwales, with a nonchalant air, and filled my pipe, or rather started to fill it, for ere I could tamp the cut-plug home to my own particular satisfaction, the Red Bird had sailed forth on its mission, and a swirl! a splash! was the answer, as it struck the water near the spot where the bass had previously risen.

"Hold him," I yelled, "don't give him any slack; don't blame me if he gets off!"

"Shut up," he replied, as, with set lips, he began to reel in; but reel in he couldn't. The line went out with a rush and the handle of the reel hit Bill's off thumb, I am sure, from what he said.

Finally, by thumbing the reel, and some very tight line work, he managed to check the run and started to retrieve, only to have to repeat the performance time after time.

At this point please allow me to digress, for a moment or two, in order to express my great irritation at this extreme tight line angling. It affords me, as it must afford all true anglers, exquisite pleasure to see just the proper tautness of line on a played fish; it being, to my mind, the essence of short-rod-angling, for, in this type of angling, one has but little help from the spring of the rod to aid him in the playing. But, for that matter, I am free to confess, confidentially, that I approved of but few moves made by my friend in handling his fish and I am sure I could have improved on most of them. This, however, I have never suggested to Bill; for why dampen the ardor of a good sort of fisherman, by disclosing to him the fine differences between fishing and angling? I really believe that he thinks, to this day, that he handled that bass in a masterly way. Perhaps he even allows himself to hold the opinion that I could have done no better. Mortals are certainly queer creatures, aren't they?

Well, to resume. The only remark thrown out by Bill, during all this time, was to the effect that I "would please keep the boat in open water and not turn it round and round like a confounded top." This to me! who was aiding him materially by my dexterous handling of the boat.

Each time the fish jumped clear of the water, Bill would groan. Each time the bass took a fresh lease on life and sprinted for deep water, Bill would mutter, and I could hear such words as "old line; pretty rotten I guess; got to be mighty kerful." It seemed to me that Bill was

paving the way to an excellent set of excuses, in case the fish got away.

After what seemed an hour, the bass was brought alongside, an apparently dying fish, and I proceeded to net him after the most approved style. Suddenly, however, the brute woke up just as I was raising the net under him and hit the frame so hard with his tail that I thought he'd smash it. Then, quick as a flash, away went Mr. Bass and the ziz-z-z-z-z-z of the reel could not be drowned even by the broadside of wrath which Bill turned loose over that peaceful stream.

Interspersed among the bursts of sulphur, I could catch occasionally such words as "Greenhorn," "Dub," "Old Woman," but I have never known precisely to whom he referred. I'll ask any man this question: How in the name of Jehosaphat could I know that the blamed bass was going to try and break my landing net? I am no reader of overgrown bass' minds. I don't get paid to do that kind of work.

Well, as I was saying, away went the bass and away went the line, but this time the work of retrieving the Big 'Un was less arduous and soon he was alongside again—the crucial moment had again arrived for both the bass and me.

"Don't be uneasy Bill," says I, "he's as good as in the boat this time;" and I looked up with a bright and confident smile on my face. This quickly vanished, however, when I saw his countenance—I actually feared for his life. The sweat stood out in deep rivulets; the lips were compressed in a deadly line; the face was furrowed with wrinkles; and the eyes were positively glassy in their horrible stare.

"Bill," I exclaimed, "Bill, old boy, are you ill?"

A violent struggle seemed to be taking place within him; he appeared to be on the verge of apoplexy, as he strove to speak. Finally the words began to come forth.

"I swear," said he in a thick voice, "by the great guns of Halifax, that if this fish gets away, I'll thump the living lights out o' yer and dump yer overboard."

That was all he said—no more—and, as Bill is six two and I am but little better than five two, I eased the net under that bass with all the science and care I could muster; and, as he was led over it slowly, towed along on his side like a shingle, I brought the net up skillfully and stiff-heeled the brute into the boat at Bill's feet.

That fisherman got a strangle hold on the poor bass' gills and throttled out the little life remaining in the poor old fellow; all the while talking and gibbing away like his ancestors, the long tailed apes. As the fish gave a last expiring flutter and lay still, Bill let out a yell that scared the captain of a sloop, half mile away, nearly to death; and caused old Captain Tom to wonder if the Pamumkey Indians had risen against the whites. This war whoop seemed to act as a safety valve, for, then, as the bright sun comes out through the clouds after a long bad spell, came the most beautiful smile o'er my companion's countenance—a smile the angels would envy.

"Boy," says he, "boy, I have killed the old he-one of 'em all and the Red Bird did it! I am going to patent that bait in all the civilized countries of the world; yes sir! I'll be rich."

"Here, weigh him quick before he shrinks!" The bass weighed a fraction over ten pounds

—some bass for Bill and the Red Bird to take, I claim, but then of course I helped them considerably, as you must allow—but for the love of Mike never intimate this to Bill if you ever meet him; at any rate not unless you are a block away and near some convenient corner.

I spent two days making Red Birds, and Bill ordered a special lot of red cedar from Santo Domingo and stayed away from his office nearly all the following winter, making Red Birds of every conceivable size and shape; but never from that day to this have we got a single rise to Red Bird.

I have come to the conclusion that bass are very much like "the ladies" and I agree with Mr. R. Kipling:

"You never can tell till you've tried 'em and then you 're like to be wrong."

I remember another time, when Bill and I were down at Captain Tom's, a bass jumped up and—but that's too long to start now; maybe some time I'll tell you about it.

DOES THE BACK CAST STRAIGHTEN?

Yonkers, N. Y., Feb. 10th, 1915.

Editor *Forest and Stream*:

Months ago I ventured to address an inquiry to one of our prominent sportsman's magazines, concerning the "straightening out" of the line on the back cast. The communication was prompted by just then having read once more in the pages of the author of one of the new dry-fly books, this same reference as of yore, regarding waiting for the line to "straighten out behind" before beginning the forward cast.

I offered the suggestion that perhaps instantaneous photographs would show that mayhap that line did not straighten out till after the forward cast was begun, basing this upon what I had seen of actual use of the line by experts, while fishing, and in such a light that made every inch of the line clear to the observer. Further, I inquired if any such photos had ever been made.

For one reason or another my letter was ignored; whether or not the inquiry was considered too absurd for serious consideration I cannot say.

The whole matter was brought back to my mind last evening while reading Samuel G. Camp's excellent little book on "The Fine Art of Fishing." If I knew nothing about Mr. Camp's book save this reference, I would say that he wrote as a man who knew whereof he spoke. Here is the passage:

"I have suggested waiting for the line to straighten out behind the caster on the back cast that is, before beginning the forward cast. Instantaneous photographs of expert casters, however, show that in actual practice the line does not entirely straighten out in the rear before the forward cast is started; that, in fact, there is a considerable loop at the end of the line which straightens out just after the caster begins the forward cast. The theory of this is quite plain. If, when casting a rather long line, you wait until the line becomes quite straight behind you, you wait just long enough for the line to lose its life. The forward cast then, should be started when the line, having passed to the rear of the caster, just begins to pull appreciably on the rod. On the other hand, do not start the forward cast too quickly, because this is liable to snap off the end fly."

Sincere congratulations to Mr. Camp.

Some Weedless Hooks and Others

Tried and Tested Contrivances That Have Helped The Bait Fishermen

By Robert Page Lincoln.

DURING my fishing in the autumn of 1914 I had some very pleasant experiences in all lines of the sport, and then again I had some experiences that certainly were not for the best. I remember one time in special—a warm, fine day when the bass were in the shallows and around the channel of the lake, where it connects with another member, and I had rise after rise to my artificials, and yet they did not stick on the hooks, though time and time again I set the barbs, firm and seemingly perfect, but

the point I wish to bring out in regard to weedless hooks, used as they are with live bait, frogs or minnows. I once met a disgusted fisherman; he rowed by, and asking him what luck he had had he said that it had been very poor; that he had any number on but that they would shake off. I asked to see the contrivance he was using. The reason was plain enough. His hook was so blunt that I could not, by pressure upon it with my finger tip, make any impression whatever. He was surprised at his thoughtlessness,

also a reason why you did not get those fish last summer.

If one is a live bait enthusiast, the selection of just the right sort of a weedless hook for the insertion of a frog upon same, is a mighty interesting proposition. For years I have tried out various kinds; some have been found wanting, and others have been eminently just right. A weedless hook should be just what it signifies. It should be so protected that it can be trolled through the thickest of weeds without adhering to same. But there are weedless hooks that do not do this. They will, though provided with an apparent safeguard, catch on the weeds. One of the first weedless hooks that I used was one having a single wire that ran up to the point of the hook, something as you will see in Figure 3. It had a very bright little silver knob on the end of it. It looked very cunning, and dangerous. But the fact of the matter was that the wire was too firm in place. If struck it would not press down; and the fish would get away. After losing many fish I took that weedless hook, and like the knight in King Arthur legend, I flung it, like another gyrating Excalibur, into the watery distance. I used a hook without a weed guard during the rest of that trip.

Figure 1 is a very good exemplification of a good weedless hook. The wire is not high-tensioned; it will readily press down at touch of the clamping black-bass mouth. Figure 2 is the same variety of hook, weighed with a bit of lead. Now there is a point about hooks that may have good points, then again not—this matter of leaded hooks. Ordinarily, for average bass casting in more or less shallow water I have found a leaded hook to be an abomination. I do not believe in certain hallucinations surrounding the word "luck," but, nevertheless, I have always had poor luck with a leaded hook. But of course they have their good points in this: When fishing in deep water, when, naturally, the hook and bait must be sunken to an appreciable depth, then the weighted hook comes in for especial mention. Figure 5, a Jamison spoon, is a very good production. I am very enthusiastic about these weedless hooks, with spoon attachment. In the first place one wants to lure his fish to it. In this manner, by the use of such a spoon he employs two irresistible systems; first, the live frog in itself; second, the twirling spoon with its penetrating glitter. One should always have a variety of spoons, weedless hooks, and common weedless hooks on hand. One always likes a change now and then. A brass, or copper spoon, and a silver, or nickled spoon are things to conjure with. Note on Figure 5 the swivel attachment. This is a good thing. Mark this well!

A swivel attachment has this advantage. It

they would come off. Inspection of my hooks revealed that they were very blunt; in fact, so blunt that hitting an ordinarily hard spot they would not drive through. Instantly picking up the tackle box file I filed them to suit and making my next cast, caught an old monster that I had had on three separate times, and who yet determined to put an end to my bait. The filing of the hooks did the deed. Now there is just

and fishing later, after having filed his hooks, he got his bass every time. Before, setting the hook, he had made no hold at all. Now this is not just exactly thoughtlessness either. I only learned of it a few years ago. I never go out now without having all my hooks sharpened to razor edge keenness and if an old lunger hits that bait anywhere near firm, up he comes. Pursuing the above intimation perhaps for you there is

does not twist and kink the line; second, it keeps the frog up, natural, in the water. It is therefore, at all times, desirable that you should employ the swivel, unless your hooks, in the very nature of their makeup, get around this inconvenience.

Figure 6 is the now famous weedless porker, and if you have not tried this hook with your pork rind you have missed a great deal of sport for the Porker is undeniably a winner. You may cast this bait into the thick weeds and the pads and it will come out without a weed adhering. Point number one scored. Its weed guard is ingenious to say the least. This guard is made of rubber, and underneath a wire spring holds it up. The fish hits it, and the easy give of the guard assures of the fish getting a good hold. Instantly the rubber and spring fly into place and double protection is given. Figures 7 and 8 are the well-known U-B production. Their guards are exceptionally good, and they have an easy give; never high tensioned. Figure 8 is weighted to use for deeper fishing. You will note on these the well known swivel attachment—a good thing, as I have already noted. Figure 9 portrays the harness hook, a very good hook in that, first, it keeps the frog consistently alive; second, by the very nature of its makeup it protects the hooks from the weeds. It is a very good hook and may be cast up into the northern moss and the lily-pads without its becoming annexed to same. Figure 11 shows double hook combination, for use when fishing with minnows and it a very good hook indeed, and with two hooks to its credit the chances of making a capture is greatly increased. Figures 12 and 13 are Jamison hooks; both of them are well protected against the weeds. Figure 12 shows the slide system; very good, in that if your bait is small the back hook may be shoved down to its right length. Both these hooks are weighted and may be used well enough for deep fishing.

The value of pork rind as a bass attraction has long since been advocated. This pork rind may be purchased ready cut; or the angler may cut it himself. Part of the rind is left on, and it is cut in the shape of a frog, more or less. Simply speaking this is hooked on at the head and cast like a live frog. Strips, or bits of red flannel make an added attraction, used with the rind. The weedless porker is one of the best hooks for the purpose.

BEAR COMES DOWN SUSQUEHANNA ON LOG.

Hagerstown, Md.—A large black bear came down the Susquehanna River last week riding a log about three hundred yards from shore. He was seen by two employes of the Mantz's planing mills, near Selisgrove, Pa. They thought at first it was a man but they distinguished the features of bruin, when they got out their field glasses.

The bear had some difficulty staying on the log. When a big cake of ice shoved up from the water and threatened to dislodge him, the men on the bank could see him strike viciously with his paw. Tossed by the churning waters, the bear was thrown from his foothold, but clung to the log with his front claws.

It was rumored that the brute was stranded on Hoover's or Byers' Island.

J. G. HAGER.

Rules For Dry Fly Fishing

A Few Directions Not Absolutely Guaranteed, But Which May Be of Assistance

DRY fly fishing in America will never reach the popularity it has achieved in England, for the reason particularly that "wet fly" fishing on this side of the ocean is satisfactory enough to suit the ordinary man, and also because the conditions here otherwise are not those prevailing abroad. But dry fly fishing is more than a fad, and since it represents the acme of angling skill, it will have many devotees.

Reduced to a few words, dry fly fishing is not a mystery, nor is it difficult to achieve as an art if one will follow a few elementary rules. The rules are legion, but a few are all that will be found necessary. Here are a few hints, compiled mostly from English sources, but they will answer American purposes, except that the upstream and downstream fishing theory will not hold good as much in the United States and Canada, because there are no rapid dry fly streams in England. However, the first English rule is as follows:

1—Never start to practice dry fly fishing down stream—you have all the ground to go over again when you start to fish up stream, and fish up stream you must if you wish to become a successful manipulator of the "floaters." 2—With the heavier line you will be surprised at first the extra amount of casting power you have—do not overdo it; let the rod do its work, and be it your business to direct and control the line. After a while you will find that your arm, the rod and line, and your eye work in unison; next you will discover that you have no thought for rod or line and only eyes for the fly and the fish—now you are getting on! but you are not an expert until you can, as it were feel the fly at the end of your cast and put it in front of a fish in such a manner that even an epicurean trout cannot refuse it. 3—Always pick the line very carefully off the water, or you will scare the fish equally as much as though you had made a splash when casting. 4—To dry the fly (and always dry it well) whisk it through the air a few times, i. e., make a few false casts; in this pro-

cess be as careful as though you were really making a cast, it is grand practice. 5—Never let the fly alight upon the water until you are sure that it will settle down where intended! rather make another cast. 6—After a cast the line should extend itself straight out in front of you, but in the event of the reel line coiling or being drawn beneath the surface study it not; so long as the fly floats in the right direction let well alone. 7—Let the fly float well over and behind the fish before picking it off the water for a fresh cast; very frequently a fish will let the fly pass him, and then ultimately turn around and ravenously rush at it. 8—Beyond all, when you go a dry fishing "study to be quiet."

Always watch the current; and cast in such a manner that the reel line causes as little drag upon the fly as possible, really it ought not to cause any drag; rest assured that if the artificial does not float down with the current in a like manner to the natural fly you have a poor chance of creeling a wary trout.

Briefly, then, the art of dry fly fishing is to present a fly that floats—and floats perfectly—to the notice of a rising fish in such a manner that it is mistaken for the natural *ephemera* which is hatching out, and in the result is accepted as such by the fish. To lure *Fontinalis* successfully after this manner it is necessary that the angler should have skill; be very observant; have the patience of Job, and, beyond all, be properly equipped for the task.

As to equipment our British brethren would be scandalized if an angler attempted to use his ordinary wet fly outfit for dry fly angling. Still we in the United States are not so prone to go to the matter of certain dress for certain sporting occasions, and with a little change in tackle or lines, anybody can apply the ordinary fly outfit to dry fly angling. Go to some good exclusive tackle house advertising in *Forest and Stream* tell them what you want, and they will fix you up in a new and interesting sport without asking you much for all that you require.

In the Land of Little Sticks

Three Level Headed Young Men Spent a Year in the Barren Land Country Without a Single Discomfort—It's All in Knowing How

HAT the ordinary level-headed man can visit the far-off places of earth and come back safely after having enjoyed himself, and suffered few if any privations is not a new theory, although one which in practice

too often breaks down because of lack of knowledge or preparedness, or even unexpected bad luck. So seldom is it that men undergo experiences in the real wilds without attendant privation and danger that we have almost gotten to the point of expecting or insisting on the tales of harrowing 'scapes by flood and field, when the explorers, amateur or otherwise, get back to civilization and tell us all about it. But that it is not impossible to take long trips, to stay away from civilization a year or more, and come back safely, is shown in one of the pleasantest stories of adventures written during the past year or more, describing the journey of three young men through the Barren Land of Canada, and to the Arctic Ocean and back. (Lands Forlorn; A Story of an Expedition to Hearne's Coppermine River, by Geo. M. Douglas; G. P. Putnam's Sons, 300 pp. Price \$4.00.)

George Douglas, a young Canadian engineer, who writes of the journey, was accompanied by Lieut. Lionel Douglas, another Canadian and by August Sandberg, a Swedish chemist and metallurgist. The object of the expedition was to investigate rumors of great copper deposits among the mountains in the far north, which rumors have been current for much more than a century and stories of which are given in every account by earlier explorers through that country. Mr. Douglas says little or nothing of this feature of the expedition, but tells rather of the interesting parts of the trip from the

sportsman's and naturalist's standpoint. The party went into the Barren Land country by the usual route from Edmonton, freighting their outfit to Athabasca Lake, taking the long and thrilling trip down the Athabasca to Fort McMurray, thence by Hudson Bay steamer up the Slave River, across Great Slave Lake and up the

magnificent Mackenzie River for hundreds of miles until they reached Fort Norman, a Hudson Bay post almost within the Arctic circle and which lies at the junction of the Great Bear River and the Mackenzie about one hundred miles west of Great Bear Lake.

This journey has been described a number of times before, but it is one that few people have yet taken, but one which opens up a prospect of magnificent lakes and rivers that some day will be better known. The Douglas party went fully outfitted, staying in the Great Bear country through the winter season and it is set forth in the story that their supplies weighed three and a half tons. They were very fortunate at Fort Norman in negotiating for a big boat or scow which had been towed to that far-off place loaded down with experimental farming machinery for government purposes and in this boat they started out on July 8, accompanied by eight or ten Indians hired for the purpose and towed the boat and two additional canoes up Great Bear River until Great Bear Lake was reached.

Here they dismissed the Indians, with the exception of one man and his family, who accompanied them, and by the use of sails made the rest of the hundred or two hundred mile journey along one side of Great Bear Lake, until they landed at the mouth of the Dease River, which empties into one of the north bays of Great Bear Lake.

At this point they erected for themselves a comfortable log cabin which they used as a winter base, making several preliminary trips before they had thoroughly settled down to the long sub-Arctic winter season. Even in this far-off place, they were not altogether out of touch with civilization, for they were joined by a rather interesting English character, one Hornby, who was doing some trade with the far-north Indians and Esquim-

THE "ATHABASCA BRIGADE."

Tons of Freight are Taken Far Into the North Country by This Method of Hudson Bay Transport.

Messrs. George and Lionel Douglas, August Sandberg and Father Rouvier.

eaux, and by Father Rouvier, an Oblat mission priest who was in charge of that far-off territory for the church.

The experiences of the party, their daily life and hunts and the more serious expeditions which took them all over the sub-Arctic country form a fascinating tale. They did not suffer; on the contrary, they with their fellow-companions, Hornby and Father Rouvier, led the life of refined white men during the long dreary winter, and it is not beside the mark to say that they had, as Colonel Roosevelt would put it, "a bully time."

The hunting was good; fish could be had at all times even through the ice and though the temperature dropped as low as 59 degrees below zero as a minimum, and was down below thirty many times, Mr. Douglas expresses himself that the climate in winter is rather a placid one.

He writes interestingly of the coming and going of occasional Indian bands—they were small bands and it is only repeating what many other explorers have told us about the Indians starving while the white man lives in comfort, because he looks after himself. They met on the Coppermine River and at different points,

"Main Street" Fort Norman.

While the expedition was not primarily for hunting purposes, the party was never without an abundant supply of caribou meat and large fish were always obtainable.

Speaking of his return to Fort Norman, the author says:

"How woefully disappointed we were in our welcome we have seen; the first inhabitants we met at this post had greeted us by turning their backs. Worse, far worse, was to follow. Instead of being hospitably entertained at the factor's house, it was the factor who came to our camp and was hospitably entertained by us; we could even produce a bottle of cognac to celebrate the occasion!

"It is true that we had failed to conform to the convention requiring that the explorer should come to the first post ragged and half starved, eating his moccasins and mits. So it was really our fault in both cases, and we only got the proper punishment that in some shape or other is inevitably meted out to all offenders against convention. And our good friend, Mr. Leon Gaudet,

Ruins of Fort Confidence—Barren Lands.

Eskimo Shooting Ptarmigan With Bow and Arrow.

was as heartily welcome to us as doubtless we would have been to him had our condition been properly miserable.

"Our stay at Fort Norman proved much longer than we had anticipated. The first fortnight after our arrival passed pleasantly enough; the weather was invariably fine and warm, our camp was comfortably situated and commanded a lovely view; the last four months had been fairly strenuous work and the rest was welcome enough. Then we had a chance to observe the life at a fur trading post under its usual conditions instead of at the times of abnormal activity attending the arrival of the steamer, the only occasions on which we had seen them hitherto.

"Little enough indeed went on; our own life at Hodgson Point in winter time was scarcely less devoid of incident. We became better acquainted with Father Ducot of the Mission, and with Mr. Hodgson, two men of great experience in the North who had many interesting things to tell us.

"The Fathers showed us around their church with justifiable pride; it was profusely decorated inside with paintings on the wood of the structure, the result of incredible care and pains.

"Once in a while a party of Indians would come in and pitch their tepee on the beach, and after getting a few things in trade, would go off to hunt again.

"The trading store was like a small, rather badly stocked country store. The quality of the goods carried was generally excellent, a feature of the Hudson Bay Co.'s fur trading stores that deserves the highest praise. Everything was very expensive but not unduly so, considering the difficulties and distance of transport, and the high quality of the goods; in this respect Fort Norman would probably compare very favorably with the towns on the Yukon.

"When trading they allowed only one Indian in the store at a time; if more than one was allowed to enter the others would give so much advice that the negotiations would never come to a conclusion. Their behavior in the store was exactly like that of uncertain children. I watched an Indian select six 'skins' worth of stuff

START OF THE RADFORD EXPEDITION FROM FORT NORMAN.

This Picture is Interesting as Showing the Ill-fated Radford Party Leaving—Radford is in Bow and Street in Stern—The Big York Boat Contains Government Experimental Farm Property.

one day. He was fairly dazzled and confused with such wealth to choose from. He took a little tea and little tobacco, then came a long mental struggle between a black ostrich feather and a blue leather peaked cap. The ostrich feather finally carried the day and he took it away in triumph. Truly 'the first spiritual want of a barbarous man is decoration, as indeed we still see among the barbarous classes in civilized countries.'

"A party of Montagnais Indians turned up at the post one day from some far eastern tributary of the Mackenzie. They had killed a number of moose and with the skins for cover and saplings for a frame they had built a large boat and journeyed down the river bringing in the meat. Some of it was dry, and some fresh, or green would be a better term, unless for choice and

truth one, said simply rotten. The boat showed great ingenuity in design and construction, and was really a thoroughly serviceable craft.

"As soon as they had disposed of their meat, they crossed the river and struck by some overland trail back to their hunting grounds on the eastern slope of the Rockies. They sold their boat to the factor of the northern trading company, who broke it up for the skins."

The observations on natural history are not extensive, but then the expedition was not for that purpose. The author talks interestingly of the different animals and other wild life. The party did not meet the annual caribou migration, which has been told about in *Forest and Stream* several times. He speaks very highly of Hanbury, the notes of whose earlier trip have also been published in these columns. All through the book it can be noted clearly that the charm of the Barren Land was getting more and more into the blood of the party. Every individual, every expedition passing into this far northern land, has written in the same strain.

The Barren Land is barren only in name, for during the summer season it is really a paradise of wild flowers and resembles more the prairie land of the south.

A mighty interesting trip this little Canadian party had and one which, as the facilities for getting into the country increase, and as its charm is better known, will be duplicated by many outdoor men in the future. It is to be hoped that those whose time and means permit such excursions will not participate in nor sanction the game slaughter which once marked the crossing by white men of the western sections of our own country. Already the trade in musk-ox skins is becoming too heavy, polar bears are being wiped off the face of the earth and in supplying the extreme northern bands of Indians and Eskimos with modern firearms, more harm than good will come to these people, for they will kill as long as trade offers, and trade, be it said with reluctant truth, has opened doors that reach to the extreme limit of human habitation.

The Crankiness of the Bark Canoe

It Isn't Half as Dangerous as Imagined, Providing You Follow a Few Directions—Keep Your Head Level and the Canoe Will Also Stay Straight

By "Tippecanoe."

YOU probably have often admired the skill with which your guide handled a canoe, and marveled how easy it seemed to be for him to keep the shaky boat upright while performing apparently difficult stunts with it. But your guide was not performing stunts to show off for your benefit, nor was he doing anything dangerous. He had grown so accustomed to his work that instinctively he had learned the secret of balance, just as a man learns to ride a bicycle; his body responded to every impulse of gravitation—the gravitation process being nothing more or less than the law which sends you into the water if you are not careful.

It may take the occasional canoe user and the ordinary woods tourist years to acquire what is second nature to the guide, but the novice can learn the secret easily if he will only keep in mind the few almost intuitive rules about canoe handling.

It may take the occasional canoe user and the noticed that when the guide shifts his position in the canoe, or when he prepares to stand up or step out, he always begins by laying the paddle across the gunwales on either side and exerts an even pressure on both sides of the canoe with his hands, while he pulls himself to his feet. This is about the only secret in the whole operation, for he maintains an equal disposition of weight on both sides. Once on his feet, the matter is different, but you also have noted probably that he either keeps his paddle in the water or if he is poling he is always ready to support himself by holding the ironshod end of the pole on the bottom.

Never stand up in a canoe unless you are thoroughly familiar with the act of balancing. It is better to sit on the bottom, and even then it is safer to keep your hands inside and not outside the canoe. This applies more particularly to the average bark canoe. Most of the canvas canoes are built to stay straight with the paddler or the idler at either end sitting on the cane seats which are built on a level with the gunwales. But if everybody followed the usual pictured summer resort style, as shown in illustrations of a white-flanneled young man directing a canoe from one end, while his best girl, sitting high up at the other end, plays the mandolin to cheer him on his way, or mayhap is leaning far over one side pulling water lilies, we would have more canoe accidents than are recorded every season, and heaven knows we have too many now, arising through ignorance and carelessness.

A canoe is as safe as a scow if you know how to handle it and it is so easy to learn that accidents ninety-nine times out of a hundred are inexcusable. There ought to be some sort of law

to hold the ignorant canoe paddler responsible for the accidents he causes, just as there is or should be, a law against pointing firearms or attempting to run automobiles without training.

In fishing from a canoe, unless the latter be a large one, it is always best to sit on the bottom and safer, of course, to remember that in handling a fish, you are not standing on dry land. The whole secret is to keep the balance as near a center line from the bow to the stern as possible. How simple it sounds to say this, but how few people remember it.

Another thing that seems startling until one grows rather accustomed to the novelty of the fact, is that many of the best canoemen in the world cannot swim. Hundreds of men in the lumber country who do stunts in running logs through rapids and down rivers and lakes, are unable to swim a stroke, and it is these same men as a rule who are experts in canoeing. It is well before trusting your life or that of members of your family to guides to ascertain whether they are at home in the water as well as out of it. The chances are nine hundred and ninety-nine in one thousand that they will not upset the canoe for they do know their business, but it does not harm at least to learn in advance whether in case an upset does occur, the guide will be of assistance or only an added danger.

I remember a few years since, going over rather suddenly in a canoe while fishing with a guide, a huge musky having made a most unexpected and disconcerting move at the end of the line. The accident was not serious, or at least I did not think so, but when I came to the top of the water I found the guide with the whitest face that could be shown under his coat of tan and smoke, hanging to the side of the canoe, his eyes having the look of one facing eternity. I swam around and threw a few floating things into the submerged canoe and we kicked it ashore. The guide was trembling so much when he struck terra firma that he could scarcely stand. I thought for a moment that he was afraid that his long record of good service might have been marred by the fact that he had drowned a "sport," and remarked to him that he need not exhibit so much concern, for I was able to swim. "Yes, I know you can," he said, "but I can't."

The poor fellow was really in great danger and added to this he was also afraid that I was in the same boat, or rather out of the same boat, and that we both were doomed to go to the bottom. Why these north country men in so many cases cannot swim I do not know. Probably the weather conditions are against them, and the opportunity is not always present, but of one thing I am certain—no man ought to take any party into the woods or rather on the water in anything like the craft used in hunting and fish-

ing expeditions, unless he can swim. Perhaps if people refused to hire guides who cannot swim, more of them would learn how.

Another thing that the novice wants to learn as early as possible and which knowledge it is more pleasant to acquire without a wetting, is how to step out of a canoe. Do not lift one foot from the canoe until the other foot is planted solidly on terra firma. Otherwise you are apt to give an imitation of a "Colossus bestriding" act that may be perfect in its way, but anything but pleasant to you. Do not imagine that you can spring like a bounding gazelle from a tottering canoe to dry land and get away with it, unless you have practiced the feat a long time. So far from being admired for your gazelle-like agility you are apt to furnish an illustration of a gazelle being changed miraculously into one of the hippopotamus family coming ashore. Also, this is not only not nice so far as you are concerned—it is dangerous for the guides, for many an honest guide has sustained serious injury from the strain of trying to keep from laughing while he hauls his too confident and impetuous passenger and boss out of the water.

In stepping into a canoe the same rule applies as in getting out of it. You are safe as long as you keep the hands gripping either side, kneeling or stooping as low as possible, but the guide usually steadies the craft by holding one end of it while you dispose yourself and your belongings comfortably.

You will often see guides making running jumps into canoes and out of them, but this is simply to excite admiration. I have seen them myself stand on their heads in a floating canoe but there is nothing practical in such navigation nor is there any reason why you should learn it unless you are training for the circus.

If your canoe does upset, what then? It usually goes over like lightning and bobs up about as quickly. Also as a rule it stays in the spot where it goes over, merely drifting with the wind. Keep your wits about you. If you can swim, the danger is not overly great, but do not try to crawl into the canoe by grabbing the sides. You will simply roll it over again and push it away from you. Work your way in the water to either end of the canoe. If you are somewhat expert you can, by a sudden flip, throw most of the water out of it and then can spring in over the end. But assuming that you are not expert enough to do this, and assuming also that you cannot swim, the only thing is to hang on to the canoe near one end, keeping as much of your body submerged as possible—for as is well known, the weight of the body under water is almost negligible—and kick for the nearest shore. As long as you hold to the canoe and keep your body under water you will not drown. If you have a companion with you the same rule

applies. The ordinary canoe will support three or four people hanging to it, but an upset accident, particularly when it concerns people who cannot swim, is a mighty unpleasant thing and there is no getting away from the fact that it is also a mighty dangerous experience.

Perhaps the advice is not worth much, for canoes usually upset before the occupant knows what is going to happen, but if you can remember in going over to hold on to the craft by one of the thwarts or the side, so much the better. You will not have to swim to the boat after the spill is over.

Canoe accidents are many times made more serious from the fact that novices are inclined to wear the fancy footwear sold to people going into the woods. Heavy, high-laced knee-boots, either for men or women, may be all right in tramping through the woods, although to tell the truth the writer could never see the advantage of carrying around from six to ten pounds of excess leather on the feet at any time, but it is a certainty that such footwear is not for the canoe. The heavy soles damage the canoe to begin with, and once afloat in the water, these boots are a decided drawback and even a danger. If you do happen to be wearing them and have been lucky enough to grab an upset canoe, try to kick them off or get them off in any way, for they are a great drag in swimming.

The ideal canoe shoe is the moccasin or canvas rubber-soled sneakers worn over a thick stocking or sock. Your feet may get a little wet once in a while, but if you have a portage to make after a long canoe paddle, you can slip off your heavy boots when you get in the canoe and resume them when you land again. As it is, many an old timer excites a smile occasionally from those who do not know the reason why, for doing most of his canoe work in his stocking feet. Such a man may be laughed at, but he has the satisfaction of realizing that he is stripped for the fray, so to speak.

What I have written above with reference to

upsets, etc., applies to lake canoeing. What to do when the canoe goes over in roaring white water river rapid cannot be presented in the form of written advice, except to say that should such an accident befall you, above all things else,

canoe is to peel off and upset the thing while trying out experiments. This is all right if you will benefit from what you learn, but the usual result is to make the ordinary man careless and the victim of many an otherwise avoidable acci-

Stripped for White Water.

hang to your canoe like grim death to one of our colored brethren, and do not let go unless you happen to strike bottom where you can stand up, or can gain the shore with certainty. The canoe usually comes through the rapids still floating and if your breath has not been knocked out of your body or if the rocks have not battered you, you will be better off than to let go and endeavor to shift for yourself. An accident or two will teach you the value of tying as many loose things to the canoe as possible, and if you have ever crawled out on shore shivering and soaked, you will perceive without further reminder the advantage of having a waterproof match-box with you.

Some people advise that the way to master a

dent in the future. I have always gone on the theory that the canoe is to be watched like a skittish horse and then if the darned thing does get away with me, I can console myself thinking that it was because of no neglect, carelessness or inattention.

Only foolish parents send children out in a canoe when the kids cannot swim, or will let them have anything to do with such a boat until they have had preliminary training. This applies to adults as well as juveniles. The person who can swim has little to fear on inland waters—and as a matter of fact such people are the only kind who should trust themselves in small craft on the water.

The Imported Pheasant and Native Birds

Editor *Forest and Stream*:

Does the introduced pheasant drive out our native game birds? I have talked with many gunners in eastern Massachusetts, and I find that most of them think the pheasant does drive out our native birds, but there seems to be very little direct evidence to prove whether this is so or not.

I have been much afield at all seasons for the last twenty years, collecting specimens in natural history, and my own observations seem to point to the fact that our native game birds were very slightly, or not at all, affected by the introduction of the pheasant.

The ruffed grouse and bob-white were diminishing very rapidly before the pheasant was liberated in this state and I do not think the rate of their decrease has been any greater since the pheasant came. Gunners seem to think that the ruffed grouse has suffered the most from the presence of the pheasant. The males of both these species are well known to be very pugnacious, and undoubtedly they will fight more or less when they meet. But that does not neces-

sarily prove that the grouse are driven out of the territory as the result of these battles, even though they are the smaller of the two.

If the grouse were plentiful in a locality when the pheasants were put out, and in a short time it was found that the grouse had almost entirely disappeared, while the pheasants had taken their places, it might seem probable that there were some good reasons for the hunters' arguments.

But although I personally know of plenty of localities where the grouse have decreased or disappeared within a comparatively few years, these localities are not now and never have been much frequented by the pheasants, although the latter are very common in cultivated districts nearby. I do not think they have invaded the grouse covers in numbers worthy of notice.

Although on general principles I am opposed to the importation and liberation of wild birds from foreign countries, as it has a strong tendency to upset the balance of nature, I feel that the pheasants are an unqualified success in Massachusetts. In the open season of 1914 about nine thousand were killed in this State.

This meant recreation for the people, desirable food for the table, and a good increase in business for the sporting goods dealers, dog breeders and trainers, transportation companies, and for many other people who profited either directly or indirectly from the additional number of shooters who were attracted to the woods and fields when the State game commissioners declared the first open season we have had since the pheasants became numerous enough to arouse much enthusiasm among the hunters. Some of our newspapers published many very foolish remarks about slaughtering the pheasants, but the birds proved to be well able to take care of themselves, and enough are left to restock our covers.

If any of the *Forest and Stream* readers have direct proof that the pheasants drive out the grouse, let us hear from them, for conditions in other parts of the country may be much different from what they are here.

Perhaps it will not be out of place to call attention to the fact that the pheasants we have in New England are frequently erroneously called "Mongolian Pheasants." No true Mongolian Pheasants are found running at large in this country. The bird which we have is really the Chinese Pheasant, (*Phasianus torquatus*).

HORACE O. GREEN, Stoneham, Mass.

An Angler's Contemplations

Just a Quiet Isaak Walton Like Little Sermon on Things You Ought to Know, Remember and Practice

By Ladd Plumley.

ASIDE from the use of the "dry fly," and used with dry fly or wet, there are sure methods for catching trout not understood by our sloshy and far-bug-chucking friends. He who really desires fried trout for supper should enter upon his pleasant task as if he were sneaking a Big Horn in the Rockies. If necessary, he should make his approach to the pools upon his knees; and there are smaller streams near our cities where that devotional attitude will bring its sure reward. When near the margin of the water the kneeling angler should take advantage of every cover; a clump of dock is fine and so is a baby spruce. The long cast over a smooth pool has its place but never when a pool is approached from the bank, and some pools have to be fished from the bank. The fly should be dropped, not smashed upon the surface, and a big fish may make a rush of thirty feet to see what is the food that has fluttered downward.

Of course, stooping and sneaking when actually wading a stream is not practicable. But it is profitably practicable to move here and there over the rocks with the very minimum of disturbance and crunching of hobnailed waders.

In these days of educated trout no fly fisherman should fish down the water, even on the riffles. And it is in the riffles that the up-stream, silent, short-line mode will take the largest trout. There is a tremendous advantage in this for the "cub" angler. To cast a long line may take many years of training, but almost any one can see to it that his feet move silently and that his fly drops softly.

There are many reasons why fishing up the water, against the current, is far more creelful than the more easy mode of traveling with the stream. Trout are not supposed to have eyes in their tails, although they sometimes act as if they did. And as they lie with their heads up stream it seems certain that they are less disturbed if the angler stalks them from their rear. Then, too, any sand or dirt dislodged by the fisherman's feet drift over the water that has already been fished. But as most of our trout river have rocky bottoms there can be slight advantage in this particular. What really counts in the upstream approach is that the angler is less conspicuous and makes less commotion when approaching from below than above.

Except for the pools, most American trout streams make constant and abrupt drops. And with some of our smaller streams there are a succession of little cataracts at the tail of each pool. Here the upstream angler has everything in his favor. He clammers up the watercourse, sometimes not lifting the half of his body above the next casting water. It is as if he were con-

stantly on his knees along a more level waterway. And in fishing riffles, on our larger streams, the same holds true, if not in so marked a degree as in streams of more abrupt descent.

But there is a far more important advantage in upstream fishing that, so far as I am aware, has not before been put in printer's ink. This is that sound travels with the current of a stream more easily than against. We know that trout are very sensitive to any shock within the water, as well as sensitive in a less degree, perhaps, to disturbances on the banks. It is as if they really did have ears under every portion of their skins. It is evident, therefore, that they do hear and are frightened by shocks given to the bottom near them. And as shocks are conveyed with the cur-

Home Practice is a Good Thing.

rent more easily than against it, the upstream fisherman has this great advantage in his approach added to the others that have been mentioned.

A quiet and inconspicuous approach is what we of the craft of the wand are always attempting. In some cases this is difficult, but whether difficult or not this care will add immensely to our chances. To say that it is difficult is only another way of saying that our craft is a difficult craft. If it were not, it would not possess for us its magical enchantment. For myself I can say that a world without fly fishing would be a far less interesting world than it is and that if fly fishing were as easy as it is difficult I should seek another sport.

A small spring run slips into the Beaverkill River near the village of Craigie Claire. Obstructed by a natural dam, the brook expands into a long and rather deepish pool, the banks dense with undergrowth and the willows making arches overhead. The really convenient way to fish the

place would be to let down a fly from a balloon. However, without a balloon the thing can be achieved.

You cannot fish the water from its tail, because the tail is a very weedy and encumbered tail; so you do the sneak act from above. You slip into a narrow path, where the rod must be poked ahead of you with some nicety of precision. When you gain the waterside it hardly seems possible to drop bait. As to a fly? Well, if you descend into the pool without sending ahead of you those horrible wavelets of water we all know, you may be surprised. Before you take to the water, however, keep on your knees and try an experiment. But wait without a motion for at least five minutes, and five minutes is a long time to keep in one position. The pay, however, may be large.

When the five minutes are over, gently swing your rod under the branches so that the fly will flutter to the surface within ten feet of you. Almost surely there will come a curl on the water, as from a miniature submarine, as something surges out from under the opposite bank and rushes toward you. And you will have him on—a heavy brown trout. Whether you ever gloat over him before the admiring tennis girls at your boarding-house depends on several hundred things. But you will have proved that the sneak act will bring results—if it be only a snapped leader and a heart-breaking departed giant.

You need not trouble yourself to wait another five minutes, or a century, and try again. Whether you made the first submarine surger your very own or not, that dodge will not work twice. So you slip into the water as gently as would a muskrat. And you will find that the over-hanging trees and the fringing brush give you a narrow casting avenue in the middle of the placid waterway. Of course you will be "hung up" pretty frequently and you must use every kind of gymnastic dexterity, but if you have any kind of luck and never make even one careless slosh, you will pull yourself out of the upper end of the leaf-reflecting trail with three or four heavy-weights to your credit and perhaps a dozen or so smaller sleeksides. And you'll admit that the fellow who has traveled from the amateur to taking fish under these conditions has traveled a good long ways.

Our craft is a craft where silent feet are the feet of the fishy smelling, and a lowly demeanor at the waterside meets with many a finny reward. Those who after a quiet approach drop a snowflake fly, be the line ever so short, will eat trout for breakfast and invite their friends to share. Upstream fishing whether with wet or dry fly, if the angler covers his hobnails with caps of mufflement and stoops humbly low at the pools of difficulty, brings a heavy creel at nightfall, with, it maybe, from the sloshers of carelessness: "Well, old boy, you surely did rake 'em. Now somehow I didn't hit the right fly all day!"

The Rainbow of the Ocean

By E. A. Donnelly.

THE Rainbow of the Ocean, or the sea trout, either of these names sound better to the ear than the common name of Weakfish. A game fish that is followed closer by anglers than any other of the so-called salt water game variety—a fish of many whims, fanciful as a bride-to-be, and a fish that you can always depend on not to be where you think it is. So when you have your mind set on a good day's fishing—wind, tide and weather conditions made to order, plenty of bait, good tackle, fine boat and a guide that knows the ground conditions as well as you know the carpet or rugs in your own home—that's the day, not a fish, not a strike. "Don't it beat the cars," the old guide will say. "Now only yesterday three of us had as nice a catch as you ever saw."

The trout in his pool under the dark shelter of some overhanging branch, letting past all kinds of delicate morsels, has nothing on his salt water brother for doing the same thing when he so desires.

This may seem strange to many, but it is a fact nevertheless. It is possible that just the moment you lay down your rod for a bite or to light a pipe, zizz goes the reel, and he is gone. Pull in, bait all over and try again. Now, look! there is one, and another over here—zizz, goes someone's reel. Be quick, make as little noise as possible; let excitement lend you speed. That's it!—take him easy! Don't lean over the boat so far; now, in with him; fine! Look at him now. All the color combinations of a summer's setting sun mixed on nature's palette, follow one another in quick succession. He sure befits the name of rainbow.

In angling for these game and tender mouthed fish a certain amount of skill is required that you can acquire only by experience. In the end, experience is a very wise but costly teacher.

The first and most essential point—drive this home—the very best tackle that you can possibly afford. The next is good bait and plenty of it; better to have to throw it away, after catching your fish than to go short when everyone else is catching fish.

Baits that bring good results are shrimp, plenty of them; blood worm, and crab. Fishing from shore or pier, crab or blood worm is best; as shrimp fly off the hook in casting. From a boat try blood worm; tip off with shrimp, or crab tipped off, the same way. If either do not take, try chum. A handful of shrimp thrown from the bow of your boat so as to drift by you often brings good results. Fish quietly, letting your anchor down easily and pulling it up in the same manner; make as little noise as possible. It may

not affect your fishing, but you don't know; so be on the safe side.

If two or more are fishing from a boat one can try bottom and one top, and if more in the boat one can try a few turns of the reel off bottom to find out how the fish are feeding. The minute they bite, use chum to hold them and then make hay while the sun shines.

The word "weakfish" does not mean what it says, for the only thing weak about this game fish is his mouth and that cannot truly be called weak, judging from the strike you get, even in the smallest of these fish. There is a great difference between the words tender and weak. The first expresses to a nicety the condition of the thin skin on each side of the jaw bones of a weakfish. This tears very easily and a heavy return from a strike often tears the hook clear of the jaws. Of course if your fish gullets the bait you have him as secure as if he were tied with a two inch hawser.

When he strikes be quick and take your line away from him fast, till he straightens out the kinks. Play him then, and you will soon acquire the much sought skill and be able to fish with the best of the weakfish anglers.

WHAT IS "BLOW-LINE" FISHING?

Editor *Forest and Stream*:

Can you describe for me what is meant by "blow-line" fishing which seems to be popular abroad?

CURIOUS.

Blow-line fishing for trout is an adaptation of dry fly fishing with the use of natural flies. It is used for the most part on Irish lakes. The method is about as follows: When you have reached the lake or "loch" where you are to fish, you secure as many natural "drakes," "daddy long legs," "stone flies" or "blue bottles" as some bare-legged future New York alderman can be induced to chase down and catch for you; then you hire someone to take you out in a boat to the spot where trout are supposed to hide. You rig up your trout rod, draw some yards of line from it, hold the rod in an upright position and let the wind blow the line out straight as far as it will go—six yards or more if possible. As soon as the light line is fairly extended, the top of the rod is lowered, and the "drake" alights on the surface of the "lough" as lightly as thistle-down. Not long is it allowed to dance upon the wavelets. There is the unmistakable rise of a trout, and the fly disappears; very gently is the line tightened—it is suicidal and quite unnecessary to strike a trout when fishing with extremely delicate tackle; the angler need merely tighten on the fish—there is a rush, a plunge,

and soon you are busy playing a grand specimen of the Irish lake trout. The tackle used is extremely light, but the rod as a rule is a long one in order to give the wind a chance at the line. The angler is supposed to fish as "fine" as he dares, and a long leader is essential. The blow-line angler is sometimes very successful, and heavy catches are often reported.

SPRING IN NORTH CAROLINA.

Henderson, N. C., Feb. 23, 1915.

Editor *Forest and Stream*:

I have read Theodore Gordon's interesting letters and have had the pleasure of hearing from him direct, also Louis Rhead and Ladd Plumley, etc., and have pretty well digested what they say. I have talked with others and have thoroughly mixed all together with fairly good results. I have learned to tie my own flies, and they kill trout!

I fish up stream (and I think this best) and down stream and across stream—according to wind and time and weather, etc., and the sun. I have found I can get the larger fish in upstream fishing; but there are pools one can't get the flies to—the likely place—from below, nor yet from either side. When I come to such a pool I get above and cover it well by casting across stream from me—the sun being opposite—and let my flies float down, drawing them the while across current with a twitching motion, as an insect struggling to swim across. It is a deadly method if well done and gets the big ones too.

I hold the line of course in my left hand, and as I gently raise the rod with my right, I take in line with my left, thus at all times having full control and ready for a strike.

Soon all nature will be aflame on Green River—azalias, white and orange and yellow in color, and each with an odor all its own—and the kalmias, then the rhododendron. Ferns from the coarsest to the delicate maiden hair, pinks and many other flowers, and evergreens, all nearby the beautiful little river and down to the water's edge—and big timber too, deciduous and conifer.

The call to go down there and try out some of my newly tied flies will soon come. Usually my first trip I try to keep out of the water, only casting in such places that I can get room for the back cast—but I can't keep to this. I usually wind up with a wetting, sometimes only knee deep or it may be "all over." Many a ducking I have had, and this reminds me of a couple of anglers fishing a stream in the Sapphire country. There was a stream with little pockets and at the bottom of all a fine large pool. One of the anglers stopped to fish the pockets while the other, unobserved by his friend, passed on down to the pool. After covering the pockets thoroughly he turned round and saw his friend quietly casting over the pool—but how did he get there so quickly? Evidently, he could as easily reach the spot his friend was casting from, as he had, so he began and very quickly did he slide to its bottom, rod, basket and all. On getting out, and

to his friend, he found him completely convulsed with laughter and moreover, just as wet as he. He had arrived by the same route and with like results. Both were alike and each had a hearty laugh at the expense of his friend—and a good ducking.

What would fly fishing be if it were all "plain sailing?" If we knew before hand the luck that would attend us, much would be lost.

ERNEST L. EWBANK.

P. S. By the way—The monthly is great.

MORE FISHING AND HUNTING FOR SPORTSMEN IN PROVINCES OF QUEBEC.

The Government of Quebec has arranged to concede and throw open to all sportsmen and tourists the territory formerly leased to the Philemore, Sagamo, and Camp Fire of America Fish and Game Clubs. This will enable many who heretofore could not fish and hunt on these limits to do so and build camps for their own use if so desired. On the line of the Q. & L. St. John Ry., the Batiscan River from Pearl Lake or the Bakery "Flag Station" offers an ideal canoe and fishing trip. This river is open for fishing, also a large tract of the Jacques Cartier reserve nearby Beaudet is open for hunting only. North of the Summit most all the land west of the railway track is now open for hunting, and a little further, nearby Quaquamaxis, Commissioners Lake, Saint Andre and Lake Bouchette, there are hundreds of miles of open country adjoining the railway line where good fishing and hunting can be had in season.

RULES FOR SURF CASTING TOURNAMENT.

Jersey City, N. J., March 17, 1915.

Editor *Forest and Stream*:

At a recent meeting of the Asbury Park Fishing Club, the following motion was carried:

"That a committee of three be appointed to work up with the different fishing clubs, a uniform set of rules covering surf casting tournaments held by the various clubs."

In line therewith the following surf fishing clubs have signified their willingness to join in the movement by naming committees to cooperate: Midland Beach Fishing Club, Belmar Fishing Club and Ocean City Fishing Club.

The hearty response above leads the committee to invite, through the columns of your valuable paper, other surf fishing clubs to join in the movement by opening correspondence with their chairman, Mr. Elvin C. Burtis, Hotel Marlborough, Asbury Park, N. J.

The purpose of the movement is to make an official place for 3 and 4 ounce casting weights in American tournaments and to broaden surf casting rules as laid down by the National Association of Scientific Angling Clubs, which at present prescribe the "V" shaped court and the 2½ oz. weight to the exclusion of all others.

The 2½ oz. lead of the Association dates back to the days when surf anglers used no lead at all in their casts. To-day the majority of surf fishermen pursue the sport where sinkers are necessary, the most popular being the 3 and 4 oz.

The "V" shaped court is good but not sufficient. There are other good courts.

An invitation has been extended to the National Association to enter the conference, to listen to the presentation of the case, (which is a movement from the outside) and to consider

the question of so modifying their rules as to bring them into line with the developments of surf fishing which have taken place within the last twenty years.

While there may be some disposition to act independently of the Association it is to be hoped that wise counsels will prevail and the matter presented so strongly that the 3 and 4 ounce leads of to-day's angler may take their rightful place by the side of the 2½ oz. casting weight of the pioneer; and that the straight lane representing the conditions which the angler meets when several are casting for a "cut," and the open field representing the broad ocean, shall come to their own.

R. H. CORSON.

HIGH HONOR FOR WM. MILLS & SON.

Uncle Sam always knows what he is about in making selection of the best things for his own use. This statement is strikingly confirmed in the announcement that the United States Government has selected the firm of William Mills & Son, 21 Park Place, New York, to furnish the Bureau of Fisheries Exhibit of Angling Apparatus at the Panama-Pacific Exposition. This is the "blue ribbon" order of the year, and was awarded only after careful investigation and tests. If you visit the "Fair" do not fail to drop around to the Bureau of Fisheries exhibit, and look at the most complete collection of angling tools, kits and appliances ever shown in the world.

The exhibit comprises over eighty outfits, for every kind of game fish angling. It consists of four large show cases, each with 132 sq. ft. of display space. It occupies practically one entire wing of one section of the United States Fisheries Bureau space in the Food Products Building.

Different outfits for the same general type of angling are shown together and are divided into the following general headings:

Outfits for Trout Fly Angling—for Dry Fly.

Outfits for Trout Fly Angling—for small fish.

Outfits for Fly Angling—for large Trout, Bass and Ouananiche.

Outfits for Salmon Angling—both Fly and Trolling.

Outfits for Bait Casting and general Bait Angling.

Outfits for Salt Water Angling.

The outfits for Fly Angling include rods ranging from 6 ft. long—31-32 ounce in weight (the lightest weight rod ever made) for small trout, to 11 ft. long 10½ ounces in weight, for Pacific Coast Steelhead and Rainbows, Black Bass and Ouananiche.

The outfits for Bait Casting and general Angling show rods from a 5¼ ft. 4 ounce "Single Stick" to a 9 ft. 14 ounce Muscallonge Trolling Rod.

The outfits for Salmon Angling include rods 13 to 18 ft. in length for Fly, and from 6½ to 9 ft. in length for trolling.

The outfits for Salt water work show rods ranging from a 6 ft. 6 ounce "3-6 Catalina Single piece" to the extra heavy 7 1-16 ft. 37 ounce Tarpon Rod.

Besides the rods, there are shown reels, lines, leaders, hooks, flies, casting and trolling baits, fly tackle and leader books and boxes, net rings, waders and a general line of accessories—the equal of which is not to be found in many

Tackle stores anywhere in the world (this exhibit being the largest and most complete ever shown anywhere).

The collection of outfits for Dry Fly Angling is particularly complete. It shows not only rods of the latest American Dry Fly type, but rods such as are used in England for this type of Angling. The reels, lines and leaders shown are the latest approved English types and American adaptations of same, while the flies shown comprise not only a general line of regular American and English patterns but also include a line of the celebrated F. M. Halford "Nature Series" patterns and Skues' patterns together with the American "Nature Series" patterns worked out by Louis Rhead, and the patterns recommended by G. M. L. La Branche in his "Dry Fly and Fast Water."

Practically every article shown in this exhibit was taken right out of stock—there being only two items in the entire Exhibit that had to be made for it.

Naturally most of the rods shown are the celebrated H. L. Leonard make, but there are numerous specimens of the medium and low priced rods made by William Mills & Son—such as their "Mills Standard Hand Made," "Manco," "Peerless" and "Tuscarora" grades.

ICE FISHING FOR TROUT.

Albany, March 18, 1915.

Editor *Forest and Stream*:

Some time ago, as your excellent index will show, I advocated further protection for fish in inland waters by dividing the state into temperature zones so that the various species would be safeguarded while spawning. This suggestion was the result of considerable study and was in direct opposition to the so-called "uniform" law idea which the conservation commission has accepted as gospel. My plan already is recognized as embodying the correct principle by the manner in which Long Island is set apart in the law, which is solely on account of the difference in temperature of the water there. The same principle would give us a temperate zone running through the middle of the state and a cold zone taking in the mountain streams and the great spring lakes like Lake George, and would protect fish in a scientific manner.

The latest argument in favor of the temperature zone plan is given now by the unwilling conservation commission indirectly. For the first time in the history of the state fishing for trout through the ice has been legalized. By an official order the commission says: "It is hereby ordered that all persons may take trout and lake trout through the ice by angling in any of the lakes or ponds of the state during the open season of 1915 for said species as established by the conservation law." The beautiful "uniform" law as it now stands opens the season for trout on the first Saturday in April and for lakers on April 1, on which early dates most of the waters of Northern New York, at least, are covered with ice. Moreover the law says specifically and has for many years that there shall be no fishing through the ice in waters inhabited by trout, except in very few specific instances where politics have enabled legislators to aid in depleting the inland waters of their home counties by out-of-season fishing.

What anglers will think of the new "conservation" plan for their favorite fish remains to be seen.

JOHN D. WHISH.

Legislation by Commission

ARE legislatures to be relied upon for proper game legislation? Those who have fought the fight for the laws we now have and have taken their places in the most advanced trenches of the firing line to protect laws won in previous skirmishes, are coming to the conclusion that the average state legislature will never be able to give us game legislation of the right kind. An interesting experiment in the direction of reform is to be attempted when the New York State Constitutional Convention meets this month. Hon. Edward G. Whitaker, Justice of the Supreme Court of New York, a friend of conservation and a man who has thoroughly at heart the better principles of outdoor sportsmanship, has drawn an amendment to the constitution which he will submit for adoption and which calls for the creation of a fish and game commission of three members with full authority to enact game and fish laws.

Averaging the situation, it is probably true that while the same number of fool proposals and good ones would be suggested to the commission as to the legislature a lesser number of dangerous or useless regulations would slip through, and on the other hand, the opportunities of getting good legislation would be increased.

One prerogative which the average member of a legislature can never permit himself to ignore is the introduction of game or fish bills. He may not know the difference between a wild deer and a calf, and the natural history of our fauna may be a closed book to him, but this is no deterrent. If he does not possess the originality to think up some scheme for monkeying with the game laws, he can of a surety count on the assistance of constituents not better posted, and the result is to be read in the hodge-podge of to-day. Mr. Whitaker's plan as published on another page possesses the advantage of directness; it is also designed to concentrate authority and with a proper series of appointments, enhances the probability of intelligent results.

A Natural Game Preserve

IT seems incredible that an area of the earth's surface comprising nearly four thousand miles should have disappeared from the charts of geographers for nearly three centuries, but if the explorations of the Sir William Mackenzie expedition to Hudson Bay are correct in detail, that amount of land will have to be placed on the charts again. The old cartographers, shortly after the discovery of Hudson Bay by Hendrick Hudson, mapped a number of large islands in the Bay, but as these islands were never seen in later years, they were removed from charts. Robert J. Flaherty, F. R. G. S., in charge of the Mackenzie expedition, now reports that he has rediscovered these islands and that they are of considerable extent.

The one on which his party landed was upward of one hundred miles in length and the next one

about sixty miles long. The whole area he estimates at more than four thousand square miles in extent, with a complete length north and south of nearly four hundred miles. Looking from the hill-tops of the main island, over sweeps of valley and hills, the impression was of highly cultivated areas, due to the luxuriant moss and grass that covered the surface. Should it turn out that these new islands are as large as reported, what a fine natural preserve for the caribou and perhaps also for the musk-ox they would prove! The Mackenzie expedition speak of seeing many superficial lakes scattered over the islands, around which swans and other wild fowl were breeding. The Dominion of Canada could not do better than to set aside this newly discovered area for the purpose mentioned—if indeed it is of the extent now estimated.

A Wilderness Canoe Test

ASO called Novelty Cruising Contest formed one of the Regatta events at the Sugar Island meet of the A. C. A. last August, this contest met with great favor and proved to be a feature not only interesting to the spectators but of real value to the canoeist. It has since been suggested that this event be made a regular part of future A. C. A. Regattas.

A cruising contest is not a test of speed or strength—in fact it is not a race at all, but rather a practical demonstration of the cruising canoeist's ability to care for himself and his outfit in the open. Such a contest is won on points which are determined by the way contestants do things on a real cruise.

Duffle to be packed in pack basket, pack sack or made up into any form of practical and neat pack, suitable for woods travel.

We hope that a large number of the cruising canoeists who attend the A. C. A. meet next August will enter this contest. There is nothing particularly hard about it, as the details of cruising, such as making camp and carry are the very pleasure of a cruise to the real cruiser.

Another "Dont" For The Angler

MANY anglers with an honest desire not only to keep within the limits of the law, but within the limits of their immediate necessities, make a practice of unhooking and putting back into the water all the surplus fish they are lucky enough to capture. But how few anglers realize that even though their intentions may be of the best and certainly most sportsmanlike, the fish they put back into the water are doomed to disease and death unless handled with thoroughly wet hands?

Never touch a fish with your hand, unless the latter be wet. The fish maintains its healthfulness by a protective covering of moist slime or mucous and once this is removed and the fish returned to water, the exposed portions are attacked by parasites, the result being usually that within a week or ten days and often sooner, a "bloom" disease is started that kills the unhappy victim.

As a rule anglers are too careless anyway in handling fish that they intend returning to the water. It is not necessary to grab the fish by the sides or the gills, squeezing him while he struggles, as the hook can be removed nine times out of ten without lifting the fish from the angler's net and without touching him at all. If

a fish swallows the hook there is not much use putting him back into the water as by the time the hook is taken from the throat or stomach, too much damage has been done.

In this connection it is to be said that anglers are often too free in the midst of their good luck in taking even surplus fish from the water. The sport may be fine, the opportunity one seldom meets with frequently, but even so it is best to be moderate. If you have enough fish for your needs or if you have caught all the law says you ought to have, stop and give someone else a chance in the future.

Game Fishing Near Home

WE of the angling fraternity are learning things these days. Think of being able, in a thickly settled state like Massachusetts, at the small expense of a nickel for a trolley ride, and the largest expense one can afford in the way of tackle, to have the opportunity of battling with the lordly salmon—a sport heretofore reserved for the brother angler, opulent of means and leisure, who himself has been forced to travel on long and expensive journeys to gain his heart's desire. Yet State Commissioner Graham of Massachusetts tells the angling world in this issue of *Forest and Stream* how it is possible for any state or any community to make the salmon a common habitat of local waters. There is no miracle about it; the only essential is the application of a little good common sense, science and energy.

Still another distinguished authority, Dr. James Henshall, points out in this same issue how all the thrills, anxieties and triumphs of the trout angler may be duplicated by the man who will go after the common fishes of streams and lakes with proper fly tackle. It is admitted that most men who go into the woods are actuated by the call of the wilderness rather than by any desire to take life. The latter is an incidental necessity; the other spirit is higher and better. But not every man can answer the call that leads him far from home; the majority of us are slaves to commerce or professions. Still it should be the privilege and within the province even of those tied closest to the daily grind to enjoy an occasional little fishing excursion and return with something in the way of results worth while. If the "stay-at-home" or "kept-at-home" angler will but exercise his citizenship in seeing that good laws are made and enforced, he can have real fishing for game fish at his door. The wonder is that he has not long ago realized this and insisted upon it.

"The Ice Is Out"

WHAT a thrill the information contained in these magic words will bring to many men this month and next. The message will be flashed over long forest reaches by means of telephone and telegraph; it will be carried to outposts of civilization through faintly defined trails or across regions where no trails exist; it will be received by wearied city dwellers who will at once forget the cares of office and hasten their departure for scenes of fishing delights. The message will mean that spring is here, that the long grip of winter is broken and that on far northern lakes blue waters are sparkling again in the sun, waiting for the return of the angler.

A Page of Personals From Forest and Stream's Friends

FROM THE FOUNDER OF FOREST AND STREAM.

Washington, D. C., March 13, 1915.

Editor *Forest and Stream*:

This is my eighty-first anniversary. It seems to me that *Forest and Stream's* change of dress at the beginning of the New Year was apropos. "Times are not as they used to be." When *Forest and Stream* was started it was introduced to its readers as the opener of a new country (represented as a terra incognita on Mitchell's School Atlas) and handed out in piecemeal and not in volume, bulk and book. West of the Mississippi River, plains and prairies were dotted with army posts, buffaloes, trappers, and breech clout Indians, and no civilization. Nowadays we have it offered to society and tourists by rail and autos; peopled from longitude to latitude with a remarkable growing population, crowded with sky scrapers, traversed by water courses, subways, tunnels and canals, and presented by photos, camera and periscope, in a panorama of landscape and birdseye views.

All this, as seen by younger generations can only be repeated and printed over and over again. Daily newspapers are just an everlasting treadmill and a continuous sensation. Monthly issues are frequent enough, outside of war news and death dealing.

CHAS. HALLOCK.

A SUBSCRIBER FROM VOL. 1, NO. 1.

1 Pierrepont Pl., Brooklyn, N. Y.

March 15, 1915.

Editor *Forest and Stream*:

I have been a subscriber ever since the paper started. How many other original subscribers have you?

JOHN J. PIERREPONT.

[The "Old Guard" of *Forest and Stream* is still a numerous as well as a goodly company and we hope soon to be able to publish the list of original subscribers still on the books. Probably no other paper in the country can boast of so many readers of so many continuous years' standing, and certainly none can show a more distinguished, intelligent or happier lot of men—and women too—than comprised in the "Old Guard" of *Forest and Stream*.—Ed.]

A READER FOR 35 YEARS.

Durhamville, Oneida Co., N. Y., Feb. 27, '15.

Editor *Forest and Stream*:

Enclosed find money order for one dollar—you know what it is for. When I read your notice of change of *Forest and Stream* from weekly to monthly, I felt some despondent as I did not fancy the idea of losing my most welcome week end visitor.

When I received the January number and saw the many good things you had in store for us I was glad of the change—as it was the best sporting monthly I ever saw or read at that time and thought it was impossible to improve it.

When the February number arrived I was more than pleased and greatly surprised at the good things you had in it for your readers. It was an improvement on January number. Every article very interesting and "gilt edge."

You certainly have them all stopped and I know if the sportsmen of the country at large knew the good things in store for them the dollars would come in to you thick and fast.

I have read *Forest and Stream* for the past 35 years—it has followed me through many states and I have always found it both interesting and instructive to all classes that love outdoor life. I have always found its advertisements reliable and honest in fact. I got the best strain of fox hound that ever followed sly Reynard, from an adv. in *Forest and Stream*.

You are at the top and always have been and before any other can pass you they will have to build a much longer ladder than they have at present.

Let the good work go on.

M. K. STRATTON.

BEGINNING THE NEXT 40 YEARS.

E. Wareham, Mass., March 8, 1915.

Editor *Forest and Stream*:

Having completed 40 years commencing with Vol. 2, I am sending you my dollar to begin on the next forty.

WALTER B. SAVARY.

ITS RECORD IS SOUND.

Indianapolis, Ind., March 16, 1915.

Editor *Forest and Stream*:

Along with many other of your older subscribers I want to congratulate you on the change to a monthly. I like the idea, and believe it will bring you a greatly increased circulation, due to the reduced price. Your labors in behalf of the conservation of fish and game in this country date back many years, something you have reason to be proud of, for undoubtedly you have changed the opinion of many sportsmen who are inclined to be selfish. What I like about *Forest and Stream* is the stand it takes when it comes to vital questions affecting the preservation of fish and game as is proposed in the enforcement of the migratory bird law by the Federal Government. Your stand on that question stamps you as a friend of the wild life of this country. I hope you will get a large increase in your circulation in Indiana. It is a State that needs education. With your help and that of other magazines in the same field we hope some day to put Indiana in the class where it rightfully belongs.

GEO. N. MANSFIELD, President Indiana Fish, Game and Forest League.

A WORD FROM KANSAS.

Editor *Forest and Stream*:

I enclose \$1.00 for subscription to *Forest and Stream*.

The Kansas sportsmen are compelled now by Uncle Sam to take care of their hunting wants through theory, not by practice.

Some day your Uncle Samuel may be glad to have some of the red blooded people who have been raised on the smell of gunpowder to help him fight his battles for him, while the milksop will cling to the radiator and the theory that it is not proper to shoot in National defense.

THOS. G. O'DONNELL.

IT IS SECOND TO NONE.

Wyomissing, Pa., March 11, 1915.

Editor *Forest and Stream*:

Yesterday while waiting on a train in Norristown, Pa., I happened to see your magazine at the news stand. I purchased it, looked it over, and I must say it appealed to me very much, and if this March edition is a sample of what you are going to send out each and every month you can count on selling at least one more copy.

I read practically all of the magazines pertaining to out-door life, and I am frank in telling you that *Forest and Stream* is second to none.

B. L. LORD.

A SOURCE OF ENJOYMENT.

Saginaw, Mich., March 12, 1915.

Editor *Forest and Stream*:

I congratulate you on the first copy of the *Forest and Stream* received from you since my new subscription. I am delighted with it and know it will be a source of enjoyment during the year.

GEO. GRANT, JR.

MONTHLY WILL GET MORE ATTENTION.

Baltimore, Md., March 14, 1915.

Editor *Forest and Stream*:

Let me say that the changing of *Forest and Stream* from a weekly to a monthly magazine is the best thing possible, the way I look at it. As a weekly paper it really came too often; one had hardly time to read one number before another was out. So that one got behind and lost the reading of many good things. I feel sure that as a monthly your circulation will greatly increase, besides it will be seen more on the newsstands. I hope you will keep up the same standard and that you will enjoy success in the change to a monthly.

CARROLL HAINES.

FROM THE OFFICE WINDOW.

Up from the litter on his desk

His wearied eyes a moment turn

To stark steel cubes and buttressed piles,

And asphalt that the sun's rays burn;

But in his gaze there dwells a dream

Far from the steel girt thundering pile.

And he is back, a boy again.

In realms where boyhood's fancies smile.

The azure sea that was the sky;

The floating islands, fleecy white;

The purling stream where fishes lurked;

The drowsing woods, the emerald height;

The moments freighted with such joy

As only untried youth may know,

And all his world his own to hold

Fresh in the fleeting morning glow.

Within the watching eyes there fades

Dream of the vanished heart's desire,

As bleak gray ashes, comfortless,

Cloak the warm glow of dying fire;

The city's pulses tireless beat;

The city roars and thrums and teems;

His world again has gripped his throat,

His world that has no time for dreams.

—OLIN L. LYMAN, in *N. Y. Sun*.

Some Old-Time Rifles and Rifle Shooting

By Will H. Thompson.

IN *Forest and Stream* of March 28, 1914, under the above title, "Back Number," gave us a very interesting account of some old-time Southern match shooting with the small-bore, muzzle loading flint-lock rifle. Born, as I was, in North Georgia, in 1848, and having grown to manhood there, it may be that "Back Number's" appreciation of the fine old weapon appealed more strongly to me than to most of your readers.

I knew the old flint-lock rifle well. No more accurate weapon was ever bored. The last one I owned, which my brother Maurice named "Hornet," was as nearly a perfect rifle as skill could at that time create. The octagon barrel was forty-four inches long, deeply rifled, slightly "drawn" or choked for an inch at the muzzle, so that a "starting-stick" of about six inches in length was necessary to be used to force the closely patched bullet down for a few inches until the slender hickory ramrod could bear the strain of pushing the bullet home.

This rifle, in old Southern parlance, "ran one hundred and eighty-six to the pound," which means that out of a pound of bar lead could be moulded one hundred and eighty-six bullets. The fine "birdseye maple" stock ran full to the muzzle; the "drop" was three and one-half inches, the grip very slender and delicately hand carved. The deeply concave butt that rested against the shoulder was plated with silver, and an engraved silver "grease-box" was set into the right cheek of the stock. The bore of this gun was so small that it was necessary to wipe it out at every second shot.

The weapon was so heavy and the charge so light that there was absolutely no perceptible recoil.

The "hair-trigger" was a combination of two triggers, a straight one in front and a curved one an inch to the rear. Before shooting the rifleman "set" the triggers by pulling the rear one until a slight "click" announced that the "dog" had caught in the shallow notch. Then the slender hammer, clasping in its jaws the keen-edged flint, was drawn back until another "click" betrayed that all was ready. The slightest, softest touch upon the front trigger discharged the piece. Much of the extreme accuracy of these rifles was due to the delicacy of the trigger mechanism. The clumsy parts of the "pan" of the old flint-lock musket give no idea of the graceful mechanism of the same parts of a fine old rifle.

The pan proper, which held the ignition powder,

was small, and, when the cover was shut down, the steel surface facing the flint sloped slightly backward, so that in striking it the flint chafed the front of the steel "facing," and, by the force of the blow, threw it back exposing the pan, into which a shower of sparks was dashed, and the discharge followed.

"Back Number" speaks of the use of "round" balls in these rifles, probably in contradiction to the long, sharp-pointed balls used in modern rifle cartridges. The old-time rifle bullets were neither

Will H. Thompson.

"round" nor of the "pencil" shape of the modern ball.

Each rifle had its own "bullet-moulds" into which enough melted lead was poured to fill the mould. The lead cooled almost instantly, when the mould was opened, the bullet dropped out, the "neck" of surplus lead that had filled the entrance to the mould, was cut off close to the bullet, which was then slightly oblong, a trifle longer than wide, with a small flat spot at the base where the neck had been cut off. This "neck" was always turned down in loading.

The process in loading "Hornet" was invariably as follows: The butt of the gun was set against the ground to the left at such distance as to bring the muzzle to about the level of the top of the rifleman's breast bone; a charge of very fine grained rifle-powder was poured from the powder

horn into a small buck-horn "charger," attached by a slender leather thong to the point of the horn, and from the charger poured into the muzzle of the rifle. A small square of unbleached cotton cloth, or "Osnaburg," was spread across the muzzle and a bullet was set upon this, neck down, and pressed into the bore of the gun until the top of the bullet sank below the level of the muzzle. Then the left hand gathered up the outside cloth and the right hand drew a sharp knife blade across the muzzle severing the cloth and leaving the bullet beautifully "patched." The starting stick was then held against the bullet with the left hand while the right, holding the gun at about the balancing point, drove the outer end of the stick against a tree, stone or other firm object, with just force enough at two or three efforts to sink the bullet four or five inches. The stick was then withdrawn, put in the bullet-pouch, and the long, slender ramrod drawn from the thimbles beneath the barrel. With this the bullet was slowly, by short impulses, pushed firmly home upon the powder. The ramrod was returned to the thimbles, and "Hornet" was ready for the final touch. This was, to be thrown across the left arm, the pan opened, filled with powder from the horn, and the pan closed.

All match shooting was done "off-hand," usually at one hundred yards, but sometimes at sixty yards. Most of the small-bore rifles were "sighted" for sixty yards, and an allowance of about one and one-half inches in elevation had to be made at one hundred yards.

One accustomed to using a percussion gun found difficulty with the slower action of the flint-lock. The distinct "chick-floo-bank"—marking the blow of the flint on the steel—the flash of the powder in the pan—and the report of the gun, unsettled the aim of the novice and spoiled the shot. Curiously enough, many fine shots attributed to this delayed fire, the extreme effectiveness of the flint-lock. Mr. Silas Wells, the greatest off-hand rifleman I ever knew, explained the theory in this way: "With the cap-lock gun you know that the touch upon the trigger and the report of the gun are simultaneous, and you are apt to quit your aim as the trigger is pressed, but in the case of the flint-lock you know that a period of waiting on the aim is necessary while the slower discharge proceeds. Consequently the affirmative action of keeping on the aim is maintained until after the bullet has gone." Years of experience with both styles of rifle have stiffened my faith in Wells' contention.

In shooting with the long-bow there is a maxim that admits of no dispute that "after the string is loosed the bow must be held in the same position until the arrow strikes the mark." Not that the flight of the arrow can possibly be aided or marred after it has passed the bow, but because there is always a tendency at the loose of the string to feel that the shot is made, and to unsteady the bow-hand before the arrow has wholly passed the bow. This dwelling upon the aim—the calm, prolonged fixidity of attention enforced

by the slow action of the flint-lock, had much to do with building the fadeless fame of the old-time rifleman.

In "Back Number's" interesting article, before referred to, the matches appear to have been shot at circular marks. It may be, however, that a three inch circle was drawn upon a three inch square paper or pasteboard target, as was the case in all the matches I ever witnessed. In every instance the square paper was tacked upon a blackened board; a round hole a half inch in diameter was cut in the center of the paper, and from the bottom of this hole to the bottom of the paper an acute-angle-triangle was cut out of the paper leaving the target to look like the diagram "A."

The habit of the rifleman was to begin the aim at the bottom of the black triangle, slowly lift the gun until the sights were trained upon the round hole in the center of the mark, softly press the front trigger, and steadily dwell upon the aim until the bullet was through the board.

I have attended many such matches in Northern Georgia and witnessed the triumphs of Wells, Taliferro, DuBose, and "Bud" Ellis, and other less famous riflemen, and have seen even better targets made than the excellent ones described by "Back Number," but, of course, I have never had the pleasure of meeting the rifleman who "could put five consecutive shots into a cap-box lid, off-hand at one hundred yards" as the average liar has dinned into my ears for half a century; nor have I ever seen the fellow who "could put three balls into the same bullet-hole, off-hand at forty yards," which the same unmitigated liar has seen done a hundred times." Every rifleman has met him. He is the same old fraud who haunts the archery field and tells of the wonderful shooting he has seen the Indians do with the bow, knocking a penny out of a split stick at sixty yards, and keeping six arrows in the air at a time! The wonder is that no one has broken his neck.

A GAME LAW WITH TEETH.

Editor *Forest and Stream*:

We have got a game law at last and a law with teeth. I don't mean that we have not had one of a kind for several years but it had no teeth for it was nobody's business to enforce it.

The new law provides for a game commission, shortens the season on everything, limits the quail bag to 15 per day, and ducks to 25, prohibits the use of nets between March 1 and June 15 and after that requires a \$25 license to use a net. And it gives the Game Commission control over the whole thing, so it will not depend upon a country justice and constable to prosecute their neighbors. I wrote you about one man slaughtering 800 robins on the roost in one night. There was a state law against killing song birds but it was as dead as Pharaoh's laws because the local officials would not enforce it.

But E. V. Visart, the U. S. Game Inspector, under the Migratory Bird Act, went down there and made 500 arrests in that section under the state law. Just how many will be convicted under the charges by the country justices cannot be told, but it has thrown a scare into the souls of the bird hunters. Now we will have game wardens independent of the local people and there is likely to be something doing in the line of game preservation. The law is not perfect but it is so far ahead of anything ever passed before that we feel we have gained a great victory.

J. M. ROSE.

RECORD GOAT HEADS.

Editor *Forest and Stream*:

I am sending you a photograph of two goat heads with measurements of their horns. I am of the opinion taking all measurements in consideration they are the record heads of this specie, Rocky Mountain Goat.

"Billy" goat; length of horn, left $10\frac{3}{4}$ in.; right $10\frac{1}{2}$ in., with small piece broke on tip; base 6 in., spread 6 in. "Nanny" goat, length 10 in.; base $4\frac{1}{2}$ in.; spread, $7\frac{1}{2}$ in.

In Rowland Ward's book the world's rec-

Two Record Goat Heads.

ord head is given—Goat, length $11\frac{1}{2}$ in.; base, $4\frac{3}{4}$ in.

It seems to me $10\frac{3}{4}$ in. with a base of 6 in. ought to be the record head as for a "Nanny" goat. I don't know of any as large as the photo of one I am sending you.

W. P. BASCOM, Box 128, Mackay, Idaho.

FIRST NATIONAL CONFERENCE ON GAME BREEDING AND PRESERVING.

Game conservation received enthusiastic impetus at the first meeting of the National conference held at the Waldorf-Astoria, New York City, on March 1. A representative gathering of game experts presented papers and led discussions on the most practical way to bring to perfection the gentle art of conservation and protection of the sportsman's future bag, the nation's feathered decorations and insect destroyers. The meeting began at nine on Monday morning, continued throughout the day and wound up with a feast for the inner man at seven in the evening. As usual the ultra protectionist was in evidence but many valuable suggestions were made that will take care of the covers and give the sportsman a chance for a fair kill. As a direct result of the meeting, which was fathered by the American Game Protective and Propagation Association, as usual in front

in such matters, the following resolution was reported:

The Resolutions Committee, after recommending that the Board of Directors of the American Game Protective Association be requested to organize the conference into a permanent department of that organization, urging that an annual meeting be held, outlined a set of ten principles as the underlying basis for the proposed department. These hold in part that all insectivorous birds should be protected at all times, except those clearly recognized as of the game species and those condemned by the Biological Survey; that protective laws should be so framed as to effect a reasonable annual increase in game birds; that sanctuaries for wild life should be established and that forests, fish and game should be regulated by state and Federal commissions; that game breeding should be encouraged by permitting the sale of such hand-reared and semi-domestic game at any season of the year as has been properly killed and tagged; that the sale of all but hand-reared game should be prohibited; that widespread information should be given both by state and private associations, designed to increase the protection and propagation of the most adaptable game birds and meat-giving animals; that license money paid by hunters should be strictly segregated; that Congress should give adequate support to the United States Bureau of Biological Survey.

ANIMALS IN YELLOWSTONE PARK.

Butte, Mont., Mar. 15.—Visitors to the Yellowstone National Park next season will enjoy the privilege of bathing in a natural hot water plunge 100 feet long and 50 feet wide, which is under construction at the Upper Geyser Basin, together with five private plunges, 5 by 10 feet each. In the report of Col. Lloyd M. Brett, acting superintendent of the park, which has just been issued, the number of elk in the herd in Wonderland is given as 35,209 head. Last year permits were granted to ship 782 elk from the park, but owing to the unusually open weather only 99 animals were captured and shipped. The elk found natural food in abundance and were not tempted by the hay displayed by their would-be captors.

The report goes on to state that shipping wild elk considerable distances under winter conditions is no longer an experiment, but that the fact is well established that the animals can be shipped with but little greater percentage of loss than ordinary range cattle. The expense of capturing and loading elk on the trains is estimated at \$5 per head, or \$15 apiece when the animals are crated for shipment by express.

No Accurate Census.

Of the other animals in the park the report says:

"No accurate census has been taken of the wild buffalo which roam the confines of the park. They are believed to be slowly increasing. In the tame herd of buffalo there are 96 males and 97 females.

"Gray wolves have been seen in considerable numbers, traveling in packs of 10 or less. Efforts have been made to kill them, but thus far none have been taken inside the park. "Moose are frequently seen."

Travel in the park last year was lighter than for some seasons past. The total number of visitors was 20,250. Of this number 9,875 came in via the Yellowstone gateway and 8,929 via the Gardiner entrance.

In the Land of Little Rain

Where the Mountain Sheep are, With Protection, Holding Their Own

By F. H. Ober, Assistant Commissioner, Fish and Game Commission of California.

INYO County, Cal., has an area of 10,204 square miles; its surface is largely mountainous, interspersed with large valleys, of which the Owens Valley is the largest, being over one hundred miles long and about seventeen miles wide at Bishop City, and varying in width as one goes south from four to ten miles. The Sierras here being impassable by wagon, the valley is reached from the north or south only, from California points, with the exception of four fair packtrails which lead across the Sierras.

The altitude of Owens Valley ranges from 3,620 feet at Keeler, the southern point, to 4,148 feet at Bishop, in the north; Mount Whitney, the highest peak in the United States, is within Inyo's borders, and many slightly less high neighboring summits afford scenic views scarcely less grand. We also have Death Valley, one of the lowest depressions in the world, at one point 430 feet below sea level. On each side of this wonderful Death Valley mountains rise to an altitude of from 8,000 to 10,000 feet, and within its bleak wastes desolation reigns supreme; a temperature of 120 degrees, and even higher, is not rare here. Naturally, in view of the foregoing facts, there is a tremendous amount of misunderstanding concerning this region, people generally accepting the sole functions of the valley as that of Creation's morgue; but it may be truthfully said that almost in its very heart springs of pure cold water are to be found, small tracts of land are now under cultivation, and more are sure to become so in the years to come. Similar conditions exist in the desolate valleys of Pannamint, Saline, Cow Horn and Eureka, these being continuations of Death Valley, lying to the north and west, and all being located in Inyo County.

Writers of note have frequently referred to Inyo County as a "sportsman's paradise," and that the Sierra Nevadas, particularly their frontage west of the Owens Valley, are, from a scenic standpoint, unsurpassed by any portion of the globe.

Mountain sheep are very plentiful in Inyo County, especially in the southeastern portion where the Nelson or desert sheep makes his home; their increase within the past five years has been truly wonderful, due to the fact that each year has brought forth an abundance of rain, with its consequence of plenteous feed in the particular habitat where these sheep abound, and to the further fact that very little if any mineral prospecting has been done, which certainly acts as a disturbance and cause of much loss of life to the sheep.

That which is, perhaps, the largest herd of

mountain sheep in Inyo County, may be found around and near Homestake Canyon, on the eastern slope of the White Mountains about twenty miles east of Independence. This herd numbers upward of one hundred and fifty head, but they have been observed, however, in separate bunches, eventually reuniting. Homestake Canyon is their watering place during the summer months.

East of Homestake Canyon, and across Saline Valley twenty miles to Hot Springs, and around Sand Springs and Last Chance Mountain, mountain sheep may be found everywhere; also on Ubehebe Mountain, lying east of Saline Valley, mountain sheep are very abundant, and south of Ubehebe Mountain for one hundred miles; all through the Funeral, Argus, Pannamint and Slate ranges of mountains, they abound. They are most numerous, however, in Inyo County, in the above named mountains, and in and around "Windgate Pass" and the Sheep Mountain country, and on the western slope of Tin Mountain northeast of Ubehebe Mountain.

Directly east of Big Pine, about thirty miles, there is a very beautiful herd, the writer, on

several occasions having seen as many as sixty at one time, and thirty-eight and forty at others; very reliable reports reach me concerning their splendid increase each year.

The Nelson or desert sheep vary in color at different seasons, ranging from a pale gray in summer to a pale blue in winter. Desert sheep frequent the most remote and precipitous and barren mountains imaginable, using for their shade and resting place the faces of perpendicular cliffs. Their food consists chiefly of the tender shoots of growing brush and their favorite dessert is the most delicate ferns and flowers.

In the Sierras running through Inyo County there are three herds of mountain sheep, and these are a distinct and much larger variety than the desert sheep. People generally are not aware of the existence of these sheep from the fact that tourists seldom see them, as they are found high up in cloudland and above the localities frequented by man. The largest herd known in the Sierras can be found northeast of Independence and about ten miles away; the writer has observed this herd upon many occasions, and their number is in the near neighborhood of eighty-five to ninety, sixty-five having been counted at one time this last winter at the base of the mountains touching the valley, and within a stone's throw of an automobile road, thus refuting the popular notion that mountain sheep do not change their altitude regardless of weather conditions.

The herd next in size may be found about twenty-five miles west of Bishop City, on Mount Tom, and numbers about forty or fifty head; they

A Sign of Spring—Young Bear Cubs are Tractable Pets—for awhile.

follow the snow line in winter, and, as a matter of fact come very close to the little farming community of Round Valley.

The next largest herd make their home in the neighborhood of the South Fork of Big Pine Creek, and from there on over to the rough Birch Creek and Mount Credo country; this herd consisted of about thirty head when last seen by the writer.

Of all the game animals in California the mountain sheep stand in a class by themselves; nature has provided for their welfare in many ways, having provided them with a telescopic vision and a telephonic hearing. While bold and seemingly reckless in their rock and cliff climbing, they are quick to calculate, always on the alert, and their judgment is free from error; they are very robust and strong limbed, yet very active withal, and are capable of feats of great endurance and in many ways most astonishing. Notwithstanding what many people have written and said, a mountain sheep can not and never did leap from any great height and alight upon its horns. The fact that the desert sheep are rarely found with unbroken horns is due to their using them in seasons of drouth, for prying amid the rocks and boulders in search of a certain succulent and watery bulb, called by the Indians "Sequaya," and which serves the sheep as a thirst-quencher until the springs are replenished and flow again; while in the Sierras, on the other hand, where water is plentiful, the horns are nearly always perfect to the very tips. When sheep are once pursued or fired upon, however, they can dash down an appalling declivity, touching a crevice here and there, and land in perfect safety and condition, where to the observer it would seem certain to be killed. For one to fully and really appreciate mountain sheep, they should be seen in their native home amid the grandeur of the treeless slopes, far above timber line, in the Inyo section of the grand old Sierra Nevadas.

The people of this county are duly grateful and appreciative of the splendid results achieved for them through the efforts of the State Fish and Game Commission. There is not a living stream within its borders to-day that does not teem with either rainbow, Eastern brook, cutthroat, Loch Leven or golden trout; at least fifty mountain lakes, previously barren of life, now hold millions of large Loch Leven and Eastern brook trout, and the bagging of a five-pounder of either of these high class table varieties has long since ceased to be rare enough to cause a comment, and is commonplace. The commission has well stocked seven streams in this county with trout, streams to which the fin of a fish was previously unknown, and has added to this section an asset in the way of an attraction to outside people, and in actual food value, beyond the possibility of computation or of estimation. The Chinese or ringneck pheasant, introduced into this section by the commission, has also adapted himself to his new environment and is thriving and multiplying rapidly.

Beaver in the James River

Editor *Forest and Stream*:

I have read with much pleasure a number of articles published in the last two or three numbers of *Forest and Stream* on the beaver.

I had an occasion to be fishing in the James River about fourteen years ago for genuine small mouth black bass, and had as my companion Mr. Richard Clarke, a very good fisherman and huntsman as well. As we generally fished in the eddies behind rocks, in the swiftest of streams and as paddling or pulling oars up these streams is impossible, we used a square head and stern boat, and propelled it with a sixteen foot pole to get to the best fishing places. On pushing up a very difficult stream we came to a small island with a sand bank and willow trees. As the water eddied behind this

known to be in James River for fifty years and nobody had ever caught one yet, and that I was throwing my time and labor away.

I found a track and a partly barked small sycamore and at once set one of my traps as per directions, and set the other five on sand bars, and small islands in the neighborhood. The next morning I was up the river bright and early and on going the rounds found three rats for my trouble and pains but not disheartened I set the rat traps, smeared a little more bait on the same sticks over the beaver traps and proceeded home.

The next day I induced a friend to accompany me and after poling the boat up the stream we came in sight of the first beaver trap set and could tell from the bank and sand that had been dug up that I had something large. In pulling

Work of the Beaver.

island and was about eight feet deep we concluded to try for bass, and on running the boat on the sand I got out to cast. As I did so I noticed a track in the sand which looked as if made by a bear or some other large animal; on calling Dick's attention to it he told me it must be a beaver track although he as well as myself had to confess we had never seen one before, but had often heard there was a family or colony of beaver in this river, they having made a dam between two islands about one-half mile below where we were. I told him that I was going to get some traps and catch one of these beaver and he remarked to me that this colony had been

up the chain, I had the first beaver I had ever laid my eyes on. He weighed 67 pounds. That winter I caught 89 rats, one otter, three mink, and seven beavers, one of the last named weighing 27 pounds, alive. I kept him in a barrel for two months, feeding him with sweet potatoes, peach limbs, sycamore, willow and sweet gum. He became so tame I could fondle him like a dog and often would put him out in the yard. I afterward sold him to Robert D. Carson, superintendent of the Philadelphia Zoo for \$40 and no doubt he is there now.

T. PETER HOWLE.

Live Notes From The Field

Being Reports From Our Local Correspondents

PRAIRIE CHICKENS IN COLORADO.

Sterling, Colo., March 9, 1915.

Editor *Forest and Stream*:

Find enclosed subscription to my favorite magazine, also price of five of your books.

At one time I contributed to your magazine but as years roll on my time is now taken and I can hardly get time to read. I am getting the books for my two boys whom I want to bring up to love outdoor things as I have always loved them. I want to tell you of the following, which I call very encouraging news to a sportsman. Three years ago there were scarcely one dozen prairie chicken along this, the Platte river—that is along the stream within this country. But there were a number, perhaps 300 over at Haxton which is thirty miles from here. Two years ago I noticed in the month of April ten pairs of chickens in the sand hills along the river while making a trip of eighteen miles.

Last season in September, there were, I would judge, 2,000 chickens in the sand hills and about 200 were killed, while this winter I have seen along the river several flocks of from one to two hundred each and from now on we will have splendid chicken shooting here. The reason for this is the ideal cover for hatching that the sand hills afford and the protection given by our game laws and the migration of the birds from the Haxton Country. It is simply an ideal country for them and they are multiplying rapidly. The Haxton country is also more plentifully stocked with them than formerly. I regard this as very encouraging when we hear of so many counties being shot out. Also, I might mention that our two new irrigation reservoirs have stocked themselves with ring perch and last summer I caught them there weighing as much as two pounds each. The reservoirs have been built four years and the fish have come from a reservoir sixty miles up the river. We planted 7,000 young bass in one of them two years ago which are doing well also.

J. H. KELLOGG, M.D.

MOOSE IN NOVA SCOTIA.

Editor *Forest and Stream*:

Permit me through the medium of *Forest and Stream* to make a few brief remarks in reference to the moose hunting grounds of the eastern counties of this Province; especially Pictou and Guysborough counties. My object in doing so is simply to offer a little advice to some of

the sportsmen who visit this Province in pursuit of moose or caribou.

Of late years the non-resident hunter seems to have given the preference to the western grounds and abandoned the denser and more promising areas of the eastern forests. I believe this to be a delusion, and that they have been lured away by men of local or mercenary interest.

Allow me to inform you that there are no better moose hunting grounds to be found in this Province than in Pictou or Guysborough. Take as a sample the splendid areas of forests all about the Liscombe River to the sea. Pictou County is also not behind its neighboring county for game, but from its proximity to the populated commercial and mining areas is greatly disturbed during the open season for moose, and consequently the big game are driven into Guysborough County.

Last season two fine heads were brought into this town. Any experienced guide will tell you that unusually large bull tracks are occasionally seen which prove that the monarch of the forests still holds his own here in spite of the axe, the mine and the rifle.

With regard to the topography of these counties there are towns and villages within reasonable distance of the grounds, probably twenty-five or thirty miles. Good guides are found here by making application previous to the opening of the season. There are white and Indian guides; some of them excellent "callers."

Licenses may be obtained by application to J. A. Knight, Esq., Chief Game Commissioner, Halifax, N. S.

A. PRITCHARD, Game Commissioner, New Glasgow, N. S.

COMMISSION TO MAKE GAME LAWS.

Supreme Court, Chambers St., New York.

February 27, 1915.

Editor *Forest and Stream*:

As you may perhaps know, I tried for some years to get from the Legislature a comprehensive, conservative, sensible and enforceable system of game laws. From actual experience I became convinced years ago that to procure such a system directly from the Legislature is hopeless. I have therefore prepared the enclosed tentative amendment to the constitution to be submitted to the constitutional convention in April next. Will you kindly publish it in your paper and invite discussion and suggestions—so far it has met approval.

E. G. WHITAKER.

Mr. Whitaker's proposed amendment follows:

Fish and Game Commission.

There is hereby created a Fish and Game Commission: It shall consist of three members who shall be appointed by the Governor by and with the advice and consent of the Senate. The term of each commissioner shall be five years and the salary of each commissioner shall be fixed by the legislature. Not more than two of the commissioners shall be appointed from the same political party.

The Commission shall be charged with the protection and propagation of wild animals, fish, shell-fish and birds.

The Commission shall have full and exclusive power to enact, repeal and amend laws prohibiting or regulating the killing of wild animals, wild birds, the taking and catching of fish and shell-fish and prescribe penalties and punishment for violations thereof and the periods of time within which wild animals, wild birds and fish may be had in possession, sold or transported. All such laws shall require the approval of the Governor.

The Commission shall also possess the incidental powers requisite to the exercise of the powers hereby granted.

Every law passed by the Commission shall be numbered and have an appropriate title expressing succinctly the purposes of the law. All laws passed by the Commission shall be duly certified and filed with the Secretary of State between the first day of January and the first day of March in each year and shall take effect on the first day of April following. Such laws shall be printed and published by the Secretary of State in the same manner that laws passed by the legislature are printed and published.

The Commission shall have power to appoint and at pleasure remove a secretary and such number of clerks, wardens, fish culturists and assistants as the legislature may authorize, whose salaries shall be fixed by the legislature.

All fees for licenses and all fines and penalties collected for violation of the laws passed by the Commission shall be paid to the State Treasurer.

As soon as the Commission shall have been appointed and qualified, it shall make a complete set of laws and certify and file the same with the Secretary of State, and such laws when approved by the Governor shall be filed before February 1, and take effect the first day of April succeeding and on said first day of April all laws then in force relating to the propagation of fish and game or the protection of wild animals, birds, game, fish and shell-fish, or the killing of such wild animals, birds, game and fish, the transportation or possession thereof shall be repealed.

The legislature shall pass such laws as may be necessary to carry the provisions of this section into effect.

Any member of the Commission may be removed from office by the Governor for cause, an opportunity having been given him to be heard in his defense.

NEW NEPIGON REGION OPEN.

Fishermen, hunters and outdoor lovers who like to get into virgin territory, but who still desire the comparative comforts of civilization, will be glad to know that a great new country extending north of Lake Superior to James Bay will be opened for travel this spring, summer and fall. Messrs. King and Armstrong of Jack Fish, Ontario, write *Forest and Stream* that this country is especially adapted to speckled trout fishing and has numerous rivers that teem with trout, and which have not yet been fished by outside sportsmen.

There are two transcontinental railroads running by the heads of these rivers, and excellent canoe trips can be made from one to the other with the best fishing en route, and with very little portaging to make; the speckled trout average in weight in these rivers from four to seven pounds, and the sportsman will be fishing virgin waters in any of these places.

Everything except personal equipment is furnished for a certain rate per day, and either Mr. Armstrong or Mr. King accompanies each party to see that satisfaction is given them in everything. There are camps on Lake Nepigon and a motor boat service which enables sportsmen with their families to take a two weeks' trip around this lake, fishing the many big rivers and streams that flow into it. Sportsmen who bring their families will be provided with a low rate per week or per day, everything furnished.

These places can be reached direct by through trains on either the Canadian Northern, Grand Trunk or Canadian Pacific Ry., thus enabling sportsmen to reach the fishing rivers by one railroad, fishing the river down to the other railroad, returning home by a different route, and not covering the same country twice.

For big game hunting, the Lac Seul regions have been opened. This lake is 100 miles long. Sportsmen can leave the train and step into a motor boat and take from ten to thirty days' trip around this lake, with a guaranteed chance at moose, caribou, deer, geese, ducks, grouse, and as for fishing, there are muskalonge, pickerel, pike and lake trout. There are no portages to be made on this route. It affords an ideal trip for ladies, although it is in new country.

F. C. Armstrong has operated a chain of hunting camps near this region for the last five years and there never has been a sportsman at his hunting camps who returned home dissatisfied or without a chance to get game.

HE CATCHES 'EM ALIVE.

In all the annals of huntsmen nothing so remarkable has ever been recorded as the hitherto unheralded feat of Emil Friesz of East St. Louis. Mr. Friesz went out the other day and brought back eighteen rabbits without firing a shot—without so much as carrying a gun. He did it with his hands, his bare hands, caught them in the

deep snow, that abounds in the vicinity of East St. Louis. It is reported that M. Friesz did not even wear gloves when he turned this trick. Fleet of foot and nimble is the rabbit, but not so fleet as to escape the wily Frenchman, who, unarmed, captured the white-tailed host. Mr. Friesz is now called "catch-'em-alive Emil."

AUTOMATIC PISTOL SHOOTING.

The baby gun, otherwise known as the automatic has been put into book form by Walter Winans, who a few years ago brought out a treatise, the best yet done, entitled *Hints on Revolver Shooting*. This work had a wide sale and seems to have called forth the present volume. An usual Mr. Winans holds a brief for the Smith and Wesson revolver and agrees with all revolver men that the automatic is too "uncertain" for handling by any one but an expert in gun matters. The only excuse for this sneak weapon is the fact that it easily may be concealed, thus making it a handy killer for the gun toter and illicit gun handlers. The author recommends the Colt automatic as adopted by the United States Government, which is the man's size variety. The book contains much general information on revolver and pistol handling, with a chapter on stage tricks in shooting, dueling and some other things of interest but not importance. G. P. Putnam's Sons are the publishers and the price one dollar.

On the North Shore of Superior.

The Outboard Motor in the Wilderness

Its Handiness is Making it Popular in Far Away Places—A Few Hints From One Who Has Tested it Out

By "Old Camper."

LIKE all old timers, wedded through years of association to the canoe and paddle, I once regarded the outboard motor as a fad for schoolboys and romantic young people who idle about lake resorts, and more than once around the camp-fire, we were wont to refer contemptuously to such contraptions as "tea kettles" and laughed at the idea that they would ever prove practical, to say nothing of being labor-saving. In those days it was felt that the man who did not half kill himself every twenty-four hours, packing a canoe over a portage or bucking it against a head wind, did not deserve the title of outdoor experience.

But times have changed. The outboard motor is still used by the schoolboy and the romantic young summer couples at fashionable resorts. It is also being used more and more in the wilderness, far from civilization and far from the center of John D's distillate known popularly as "gas," or "juice."

Olive Logan once wrote a book entitled "Ten Miles from a Lemon" meaning by this a distance far from civilized conveniences. A book now might be written "One Hundred Miles from Gasoline," for that would typify real wilderness. I do not know how far the outboard motor has penetrated the wilds. I have taken one myself pretty much up to the headwaters of the Ottawa, and I know of one or more that are doing service around Hudson Bay Posts in that country. Frequently I have seen them hanging over the side of the double-nosed bateaux of the lumbermen, snorting away and propelling considerable cargo, and I have even watched them towing a goodly bunch of logs across a lake.

In a word, the outboard motor can be used as far in the wilderness as you can keep it supplied with gasoline, and if through convenient arrangements you can have a quantity of the necessary fuel shipped in on the snow in the winter, you can have a lot of fun the next summer, pottering around big lakes and running the nose of your boat to the very end of long deep bays that nobody else has penetrated before you.

So far as the question of an outboard motor and a canoe built to accommodate it is concerned, the whole problem centers around the length of the portages and the character of the water which you meet on the way. Of course an outboard motor is not made to run in shallow white water rapids, although it can do it, but where a succession of long or big lakes without rapids is to be encountered, the carrying of a 60 pound motor is not an obstacle, for you can split it into two pieces for this purpose. The transportation of gasoline in cans is a matter which everybody must decide for himself. One advantage is that if you intend returning by the same route you can

lug quite a lot of gasoline part of the way and cache some of it along the route to be picked up coming back.

What if someone stumbles across the "gas" and steals it? Well, they do not do such things in the North County and even if a stray Indian, under the impression that he had found an Eden of unlimited high wines, as represented in the cans, did take a drink of it, he certainly would not repeat the dose. At any rate, if you do get stuck the canoe will bring you through and paddling is not a lost art, even though it is becoming unpopular and unnecessary.

But, the reader may ask: What if your engine busts? Well if she does, she does, and that is the only answer, but I have noticed that the breaking down of these little motors, or their refusal to work, usually begins with the "monkeying" curiosity that stirs the amateur to look inside at the works, just as the small boy breaks his watch by trying to see the wheels go round. The manufacturers of the motors usually send them out in perfect order and if one will keep his hands off the carburetor and does not start to screwing valves or doing anything else of that sort, the motor will give him good service.

If you have any curiosity as to the "innards" of these machines, satisfy it before you go into the woods, or better yet, get some good mechanic to show you the whys and wherefores and the secret of operation. The best mechanic I ever knew—he was a celebrated inventor at that—told me once that the secret of running machinery successfully was to let it alone as long as it worked right, and this applies to the outboard motor. A little study and instruction before taking the motor into the woods and the carrying of a few simple parts are generally all that is needed to venture far from civilization with one and get back successfully. Some people may bring up the point that storage batteries play out. They do, but in these days of built-in magnetos that fear need no longer be entertained.

As to fishing possibilities, the outboard motor is ideal. It can be held down to slow trolling speed and more water can be covered in one day through its use than in half a week under ordinary conditions. In common with many people I once entertained the conviction that the purring of the motor and the whirl of the propeller would frighten fish. I have caught half a dozen big lake trout in the late fall going around a rocky little island in a Canadian lake, from a light boat equipped with an outboard motor, passing over the same spot repeatedly and taking some of the big fellows less than twenty feet from the propeller, which seems to show that the fish were not afraid to snap at the lure as it passed over them.

In a club to which I belong, in upper Canada, we have five or six of the motors attached to

boats. The best fishing spot on our main lake is just at a place where the shores narrow to something over one hundred feet and this spot is passed over more frequently by the members going and returning on trips up and down the lake than any other. There is just as good fishing in these narrows as ever. The bass may have been educated to the sight and sound of a propeller, but I do not recall that they ever stopped striking, motor or no motor.

Again it has been argued that the noise of the outboard motor will frighten game. So it will; so will the passing of any boat if the game is in sight. But with the motor properly muffled, the sound does not amount to much and I have never had evidence that game had been scared away from the shores of any lake because boats going up and down were self-propelled instead of rowed or paddled.

The satisfaction of being able to cover twenty, thirty or forty miles on an average day's fishing or exploring trip and then having lots of time on your hands, and the luxury of sitting idle and having a chance to enjoy the scenery, instead of looking up once in a while to wipe sweat out of your straining eyes, or relieving a half-broken back and aching arms by stopping occasionally, while the cussed headwind blows your canoe out of its course, or on a rocky shore, must be experienced to be appreciated. I know that in our club we used to count it a pretty good day's journey to paddle ten miles up the lake, fish a while or visit another lake and return. Now we run that far in a motor canoe and get back at lunch time if we desire. It costs something to keep a supply of gasoline many miles from civilization, but the expense is nothing compared to the saving in labor and the saving in extra guides.

I have often wondered why some of the venturesome spirits who are contemplating long trips—into the Barren Land country of Canada, for instance—do not take the outboard motor as a means of getting over a lot of territory at little expense and less trouble than contained in the proposition now. One can have all the gasoline necessary sent by usual boat and river transportation through to Great Slave Lake or even Hudson Bay River steamer to Great Bear Lake, and once that was done, the rest would be easy. The man who does this will have the satisfaction of knowing that he is in a position to travel around and over big lakes that as yet have been only partly and imperfectly explored and he can do it in comfort and peace.

The thing works out almost mathematically. Two 150 pound Indians with still another 150 pounds or so of grub and outfit for a month's trip means nearly 500 pounds in all. Against this we can put a 60 pound outboard motor and not over 150 pounds of gasoline and get more

effective results, and travel twice as far. Some will say that you will miss the sociability and novelty of traveling with two untutored and unspoiled specimens of Lo, but, gentle reader, has it ever been your experience—I will not say pleasure—to have for companions two or more Hudson Bay country Crees, Dog Ribs, or Yellow Knives? They require more fuel to keep their "bilers" going than the little humming "teapot" at the end of your boat and there are other inconveniences not to be mentioned here.

As yet the question of fixing this new style motor into canoes has not been altogether satisfactorily settled, and I believe myself that a frail bark canoe is not best suited to the purpose. The stronger canvas covered boat is all right when properly equipped with a well through which to stick the propeller shaft, and one Canadian company—the Chestnut Canoe people of Fredericton, New Brunswick—have very nearly solved the problem by building a canoe with a square stern over which the motor can be adjusted.

In conclusion, if you can arrange to keep a supply of gasoline as far as you want to go, either by sending it ahead or taking it with you, the motor will carry you as long as the gasoline lasts. Otherwise, to start on a trip without a sufficient supply to get you in and back is about as sensible as starting on a horseback trip over the desert without taking food or water with you or knowing where you are to get either or both on the journey.

One convenience of the fuel supply problem of the outboard motor is that you mix your gasoline with a little lubricating oil before shipping it to your supply point. There is no oiling necessary other than supplied by the mixture running through the machine, and a little common sense in being careful in straining the gasoline through a chamois cloth when loading up the tank means perfect combustion and operation. How much gasoline the ordinary motor consumes depends somewhat on the skill and knowledge of the operator. Certainly anyone ought always to be able to get twenty miles out of a gallon, and frequently this record is very much surpassed.

NEWARK FLY AND BAIT CASTING DATES.

Newark, N. J., March 16, 1915.

Editor *Forest and Stream*:

Following are the dates and events of the 1915 bait and fly casting contests, Newark Bait and Fly Casting Club, to be held at the club platform Wequahic Lake, Newark, N. J. Visitors always welcome.

April 24 and July 17—Distance ½ oz. bait, accuracy ½ oz. bait, distance fly unlimited rod, accuracy, wet fly.

May 22 and Aug. 14—Fishermans distance bait, fishermans accuracy bait, distance fly, 5 oz. rods, dry fly accuracy, 5 oz. rods.

June 19 and Oct. 2—Distance ¼ oz. bait, accuracy ¼ oz. bait, roll fly, accuracy and delicacy fly, 5 oz. rods.

Inter-State Tournament on Sept. 11th. Event 1. Distance bait, ½ oz. 2. Distance fly, unlimited rod. 3. Distance fly, 5 oz. rods. 4. Accuracy bait, ½ oz. 5. Delicacy and accuracy fly, 6. Distance bait ¼ oz. First event called at 9 a. m.

All contests under rules and regulations of the National Association of Scientific Angling clubs.

First event in all club contests to be called promptly at 2:30 p. m. First event Inter-State Tournament called at 9 a. m.

A. JAY MARSH.

The Caille Provides an Ideal Trolling Speed Without Slowing Down the Motor

The Caille Five Speed Motor gives you five positive speed adjustments. You have a high speed forward, a trolling speed, slow reverse, fast reverse or you can bring your boat to a stand-still without stopping the motor. Suppose you were trolling with a

Push-Button Controlled

and your line became entangled in the weeds or stones. You would simply press the button at the end of the steering handle and drop the handle to the neutral position in the ratchet. This stops the boat but the motor remains running. Press the button again and drop the handle to the next notch, and you hack slowly to where the line is caught. Then you stop the boat without stopping the motor, while you disentangle your line. When free, press the button, raise the handle one notch and you travel again at trolling speed. Bring the lever to the highest position and off you go at 7 to 10 miles an hour. And all the time the motor revolves in one direction, at normal speed.

Has Magneto Enclosed in Flywheel

This is of the high tension, waterproof type—fully guaranteed—and gives a good, hot spark down to practically the last revolution. We can furnish this motor with dual ignition (batteries and magneto) if desired, at small extra cost.

Other Caille Features

Silencer on exhaust. Water-tight gear housing. Double seamed tank. Reinforced bracket. Non-kinking water tube. Long, heavy rubber steering handle. Details in free catalog No. 10. Get a copy. Dealers wanted.

For Larger Boats

we build motors from 2 to 30 H. P. These are fully described in catalog No. 24. Sent free.

The Caille Perfection Motor Co., 1549 Caille St., Detroit, Mich.

LITERARY.

A very handy, complete and valuable work "Field Book of American Trees and Shrubs," has just been issued by G. P. Putman's Sons, New York. The author is F. Schuyler Mathews, well known for his other works, among them being "The Field Book of American Wild Flowers," "Field Book of Wild Birds and Their Music," "Familiar Life of Field and Forest," "Familiar Features of the Roadside," etc. The book consist of about 475 pages, giving a concise description of the character and color of species common throughout the United States., together with maps showing their general distribution. There are numerous reproductions of water-color, crayon, and pen-and-ink studies from nature

by the author. Altogether the book is one which ought to command a wide sale, for it fills a real need. The price is \$2.50.

THIRTEEN YEAR OLD BOY GETS FOREST AND STREAM CUP.

Tuxedo Park, N. Y., Feb. 8, 1915.

Editor *Forest and Stream*:

The *Forest and Stream* cup consigned to the Tuxedo Club, has been awarded to Willis R. Betts, Jr., a thirteen year old enthusiastic angler of Tuxedo for recording in the contest the largest small-mouth black bass of the season taken in Tuxedo waters. Its weight was 4 lbs., 3 ozs.

Death of General Anderson

His Work Largely Responsible for the Yellowstone Park of To-day

By G. B. G.

Brigadier General George S. Anderson, U. S. A., retired, died on Sunday, March 7, at the University Club, New York, where he had lived since his retirement in 1912.

Gen. Anderson was born in Bernardsville, New Jersey, September 30, 1849. He received his appointment to the Military Academy from New Jersey in 1867 and graduated in 1871. He was assigned as Second Lieutenant, to the Sixth Cavalry, and was sent on frontier duty to Ft. Hays, Kansas, and during the next twenty years

The late Gen. Geo. S. Anderson.

saw service on the plains and did much Indian fighting.

In 1877 he was detailed as Assistant Professor of Natural and Experimental Philosophy at West Point, but in 1881 was ordered back to

Arizona, and from there to Colorado. He received his promotion to a captaincy in 1885.

In 1891 he became superintendent of the Yellowstone National Park, and accomplished much for its protection. Under his superintendency poaching in the Park became a hardship and numbers of violators of the regulations were captured, among them the famous Howell—taken in a blinding snow storm as he was skinning one of half a dozen buffalo that lay about him.

At the opening of the Spanish War, Gen. Anderson was offered an appointment as Inspector-General of Volunteers, with the rank of Major, but declined it, preferring to remain with his old regiment, which, however, did not reach the front. He became Major in 1899, and a little later was sent to the Philippines as Colonel of the Thirtieth United States Volunteers. His men were enlisted largely from Missouri, Kentucky, and Tennessee, and were giants in stature and marvels of endurance, and their appearance and work in the field struck terror to the hearts of the Filipinos, whom they so untiringly pursued.

Gen. Anderson was made Lieutenant-Colonel in 1901, and Colonel in 1903. In 1906 he had command of the First Cavalry and in 1908 went to the Ninth Cavalry. In 1906 he became a member of the General Staff, and served at Governor's Island, New York, as Chief of Staff of the Eastern Division until 1911, when in March he was appointed Brigadier-General. He was in command of the Department of Visayas in the Philippines when his application for retirement was granted in 1912, after 45 years of service.

Gen. Anderson was a splendid soldier and a delightful man. He did not know fear, was quick to adapt himself to any situation that arose, and possessed enormous strength and tremendous vitality. He had a great enthusiasm for the Yellowstone Park, worked untiringly for its protection and improvement, and made what is probably the best collection of Yellowstone Park literature that is in existence.

Besides the work that he did in administering

the Park—in keeping out evildoers and making protection popular among the neighboring inhabitants—Gen. Anderson kept the friends of the Park in the east advised of the dangers that threatened it, and thus enabled them to secure in Washington sympathy that was helpful to the reservation. He was one of that very small group—now grown still smaller—who during several strenuous years carried on a determined fight to protect the Yellowstone Park from being exploited by people whose only wish was to make money out of it.

An unusual incident that happened to him during his command in the Park suggests one phase of the man's character.

He was being driven from the Falls Hotel toward the Hayden Valley when unexpectedly the ambulance came upon an old black bear with two cubs, close to the road. The cubs hastily scrambled up a small tree, and the mother disappeared in the bushes. Gen. Anderson stopped the ambulance, and, while the driver tied up the mules, felt about in the bottom of the vehicle

Club or Estate Manager

If you have been having trouble in propagating game or game fish you need expert advice.

I have had fifteen years in theory and practice of hatching, planting and raising trout, bass and other game fish. Have studied, experimented with, and become proficient in quail, ruffed grouse and pheasant raising. Tree planting, diseases and plant culture have come within my experience. If your estate, preserve or club would be improved by intense methods I should be glad to have an interview.

and brought forth an empty sack which had held grain for the animals. He told the driver to climb the tree and throw down the bear cubs. As they came down one after another, Gen. Anderson seized each cub and thrust it into the sack, which he tied up. Meantime the mother bear had made her appearance, and was advancing threateningly with fierce growlings and gnashings of teeth. As she drew nearer she made a charge on Captain Anderson, who, picking up from the ground a small dead branch, rushed to meet her. The bear—her hair erect—snapped her teeth together and chattered in fury, as she came on, but long before the two came together, her heart failed her and she turned tail in hurried flight. She watched the wagon for some time, but did not again approach it. These cubs Gen. Anderson reared, and long had in a small enclosure near his quarters at what is now Ft. Yellowstone.

One of the best articles ever written on the preservation of the Yellowstone Park is found in the volume "Hunting in Many Lands," one of the earlier books of the Boone and Crockett Club.

Gen. Anderson never married. Few men had so wide a circle of acquaintances as he; few men are so generally beloved by their associates. With the stature of a giant and the bearing of a soldier, he had the simplicity, the directness and the heart of a little child. His death leaves a vacancy that cannot be filled.

THE HUNGARIAN PARTRIDGE IN CONNECTICUT.

Meriden, Conn., Mar. 18, 1915.

Editor *Forest and Stream*:

It may be of interest to the sportsmen of other sections to know the result of the importation of the gray partridge of Europe into Connecticut.

During the years 1909 and 1910 several thousands of these Hungarian partridges, as they are commonly called, were liberated by the Game Commission in various parts of the State. Many sportsmen looked upon the venture with dissatisfaction, because of the belief that the birds would not stand a severe winter, or ever become acclimatized; and for several years it did look doubtful.

Now the Hungarian partridge is breeding well in this section of the State, the largest setting

brought to my attention being of twenty-three eggs. This nest was singularly placed, being hidden in tall grass at the base of a telegraph pole within ten feet of the public highway. Of this setting, twenty-one eggs hatched, and a farmer living near by states that both old birds made a savage attack upon a dog that happened to come too close to the little travelers in the grass.

When first released these partridge kept within brush-covered country, probably for protection, but now they seem to prefer a life in the open meadows and cornfields, and differ little, if any, in general habits from the Bob White.

When distributing grain, after a heavy snow storm in late February, 1914, I found one cover of eight and another of three birds assembled on wind-swept knolls from which the snow was beginning to vanish under the warm rays of the sun. This winter a local farmer reports a flock of seventeen coming up close to the farm house

to secure food. As long as weed seed may be gathered from the ground, or the sumach and similar food supplies be not covered with ice and snow, the Hungarian partridge will not die of starvation, and it is proving a useful bird on the farm, both winter and summer.

As a game bird, what more does the sportsman want? In October, when the leaves are yet too thick for good ruffed grouse hunting, and the quail too small, it is a great satisfaction to have a try at the Hungarian partridge in the open meadows. The birds rise with a speed almost equaling that of the grouse, and spread out well; but they make a long flight and generally manage to alight together in patches of deep grass, clusters of alder or in a cornfield. After the hunt there is the satisfaction of good sized birds of delicious flavor, which is far preferable to larger game that requires an onion to control its strength.

CANOE RACES ON THE HARLEM.

A meeting of the New York Rowing Association was held at the New York Athletic Club on the evening of Tuesday, March 9, in which delegation the American Canoe Association was invited to state their views on a regatta to be held on Decoration Day on the Harlem River. The proposition was favorably received and a committee was appointed to take up the details of the arrangements.

As this is the first time that canoe races have been held in conjunction with rowing events under the auspices of the Associated Rowing Clubs of the Atlantic Division, this innovation promises to arouse considerable interest and will be effective toward increasing the popularity of canoeing in and around New York.

Canoeing as a racing sport has been unknown on the Harlem River as no races have even taken place there. The events contemplated include one man single, one man double, tandem single, tandem double, and club fours both single and double—and it is the intention to alternate the rowing events with canoe races, thereby keeping a continued interesting program which is expected to please the large concourse expected on that occasion. The results of this feature are looked forward to with considerable interest by the canoeing fraternity of the Atlantic Division.

ANNUAL DINNER OF ATLANTIC DIVISION.

The annual dinner of the Atlantic Division of the A. C. A. was held at Healey's, corner 66th St., and Columbus Ave., New York, on February 20. One hundred and thirty-five members and guests sat down and enjoyed the banquet which was served in the Jungle Room, and was voted one of the most successful social affairs ever offered by the Atlantic Division.

The addresses of the speakers were therefore in perfect accord with the occasion, and when the first speaker, W. P. Stephens, A. C. A., No. 32, of the New York Canoe Club, addressed the members on "Early Days of Canoeing," he held the respectful and appreciative attention of his audience, who showed by their applause that his words had struck the right key.

H. Lansing Quick of the Yonkers Canoe Club, one of the successful defenders of the International Sailing Trophy in the years gone by, spoke on "The Joys of Canoeing" and outlined the plans for the season 1915. In the course of his address he spoke feelingly on the loss through sudden death of former Commodore of the A. C. A., Irving V. Dorland, A. C. A., 1256, and paid a high tribute to our deceased friend and guide of former days. Geo. P. Douglas spoke on racing, and changes for sails and sailing races contemplated for the coming season.

The principal speaker of the evening was then introduced by Percy F. Hogan, who acted as toastmaster and whose clever remarks were highly enjoyed by the audience, and for an hour and thirty minutes Capt. Anthony Frala the explorer entertained the assembly with an intensely in-

teresting description of his trip of exploration through Brazil as a member of Col. Roosevelt's expedition to the "River of Doubt," and his subsequent experiences when he headed a division of this expedition and explored the Papagaios River and continued down the Rio Madeira and Amazon River to Manaus. His lecture was profusely illustrated by stereopticon and moving picture views and the tribute he paid to the American Canoe as against the cumbersome native dugout elicited the keenest appreciative applause.

The dinner was excellent and arrangements perfect. Vice-Commodore F. Edward Ahrens can point with pride to this most successful of all recent dinners. The dinner committee consisted of Edmund Vom Steeg, Jr., chairman, Frank S. Burnett, Harry W. Fleischmann, A. Roger Hart, Thomas B. Latham, Harold V. MacIntyre, Wm. P. Schoonmaker.

CLEMENS SCHROEDER, Purser.

A WILDERNESS CONTEST.

One of the features which will attract much more interest than the ordinary canoe race is what might be called a "Wilderness canoe contest" which will form part of the program of the next meet of the American Canoe Association at Sugar Island in August. Particulars of the contest are given in this department and are also referred to in another portion of *Forest and Stream*. Briefly, the contest is designed to make the canoeist show how much at home he is in the woods, how neat he is and with what dexterity he can take care not only of himself, but his entire outfit. Some people imagine that the modern day canoeist is simply a fancy paddler in or near city waters. The wilderness

canoe contest will bring home the fact that he really is one of *Forest and Stream's* "brethren of the woods."

There will be a handsome prize offered for this event, probably a silver shield—a prize, however, well worth an effort.

To begin with, each man's outfit must consist of the essentials necessary for cruising in the wilderness and we are to assume that the contestants are making an extended cruise. The conditions at Sugar Island are ideal for such a contest.

The contest starts off with the loading of canoes, and the points are given by the judges on the following things:

The way packs are made up; way canoe is loaded; paddle around the Island to designated carrying place; unloading of canoes; selection of camp site; making camp; building fire enough to boil pot of water; neat and trim appearance of camp; breaking camp; making portage; again loading canoe and paddle home.

The outfit of each contestant should consist of canoe, three paddles, tent, blanket, poncho, axe, cook pot, frying pan, coffee pot, plate, cup, knife, fork and spoon.

Now all you cruisers, old and young, come up to old Sugar Island next August, enter this contest and show the racing men that the quiet, shy canoe cruiser can pull some interesting stunts as well as they.

A. F. SAUNDERS, Chairman Regatta Committee, A. C. A.

[*Forest and Stream* will be pleased to add a trophy of its own to the winner of the above contest.—Ed.]

MULLINS STEEL BOATS

SAFETY AND SERVICE

SPRING is here! More than 40,000 owners are launching their Mullins Steel Rowboats, ready for another delightful summer.

They will have no "boat" troubles, because, while Mullins Boats are light, speedy and graceful—they are built of strong smooth steel—no seams to calk, —always dry—guaranteed against leaks or punctures. Designed by America's foremost Naval Architects. You can get a Mullins Boat for any purpose—from a small duck boat or rowboat to a big launch.

Mullins celebrated canvas-covered, cedar canoes are now made with a "well" for use with detachable motors. No other canoe is quite so efficient for this purpose.

Your Detachable Rowboat Motor will give a lot better service when used with a Mullins Outboard Special Steel Boat, built especially for such use—therefore 100 per cent efficient.

Don't buy a boat (steel or wood) for any purpose, until you have seen Mullins big Boat Book—a post card will bring it to you. Wherever boats are sold you'll find a Mullins.

The American Indian Language

By R. J. Fraser.

THE Indian language is a perfect one—it cannot be altered to be improved upon." Thus spoke Pere Richard, Jesuit missionary to the Ojibways of Lake Superior. We were seated in the cabin of the "Missionary," the little auxiliary sailboat in which the Father patrolled the shores of the lake, visiting and ministering to the scattered members of his dark-skinned flock. "But one would suppose, Father, that during the many years and generations in which the two races, Indian and white, have intermingled and intermarried, the native tongue would have been greatly affected by the other, and have suffered many changes. We presume the Indian to have been an illiterate person until he came under the influence of the white race, and that the teaching of your predecessors and yourself would have introduced a new and improved method—a more scientific and modern one—of construction of their language."

"You are wrong there, very wrong," replied the missionary. "In spite of the intimate knowledge which we have gained through several centuries of intercourse between our northern Indians and the white man, our people still have many false ideas about the former. Canadians in general are very ignorant regarding the noble language of the American Red Man.

"The American Indian, notwithstanding his long connection and intimacy with the whites has been generally considered as coming under the head of a class of untutored savages. A study of his language dispels such illusions and leads one to raise him from this degrading desig-

nation to his rank among our species. His mental powers are of a far higher order than is commonly supposed.

"Of all the Indian tribes perhaps the Algonquins and the Iroquois have been to us the most interesting—certainly so from a historical viewpoint. The former race stood out in relief as one of the most conspicuous among the many nations of northern America. From their great numbers and subdivisions as well as the large extent of territory which they at one time ruled and inhabited, they derived a paramount distinction. Because of their long intercourse with our race, commercially and otherwise, they ought to have a strong hold on our affections. Theirs, the 'Algic' tongue, is the mother tongue of a great many of the northern tribes. The Montagnais of Quebec, the Ottawas, Pottawatomies, Ojibways and Chippewas, the great Cree family, the Chippewyans, and others, all speak dialects which are derived from the Algonquin language.

"No Indian dialects present more similitude than the Santeux, or Otchipwe dialect, which is the correct name of the language of the Canadian Ojibways and Chippewas, and the Cree language. This latter dialect is the one spoken by the Indians and half breeds of Manitoba and Keewatin. The Otchipwe, which is nothing else (with but few variations) than the Algonquin tongue, forms one of the daughters of the great Algic family. Otchipwe harangues were heard, in olden times, on the borders of the St. Lawrence and Mississippi rivers, on the shores of Lake Superior and Hudson Bay, and even as far west as the immense plains of the Red River and the Saskatchewan. The names of rivers, lakes and of

divers places are still in use to attest, in future times, to the existence of these languages, and reclaim their rights of just possession."

Henry R. Schoolcraft, a prominent student of Indianology, said: "The true history of the Indian tribes and their international relations, must rest, as a basis, upon the light obtained from their languages."

Bishop Baraga, an Oblate missionary to the Chippewas, published in 1885, a grammar and dictionary of that (or more correctly, the Otchipwe) language. He claimed that fifteen thousand natives, scattered about the shores of Lake Superior, and the surrounding inland tracts, spoke this tongue. Several other tribes spoke the same tongue with very little alterations.

"He who can understand Otchipwe," he wrote, "can readily converse with Indians of these other tribes, and besides, quickly gain a speaking knowledge of the dialects of several others."

"It is a perfect language," repeated Father Richard. "That is why it has not been altered. It is a natural one; as Hebrew, Greek, and Latin are natural languages, differing from French and English which are artificial ones.

"Why," he continued, "I have manuscripts written in the Otchipwe tongue three hundred years ago, and the language is that of to-day. The Indian learns to read and write it quite readily, in the native characters, of course. Unfortunately the Indians are dying off so rapidly that the language is fast disappearing. There are not now so many true bloods left, and the half-breeds, though speaking their own tongue fluently, prefer the French or English.

"The Indian's language again is a natural one because he has never been taught it. He has really acquired it. It is, in its largest sense, a matter of progressive and systematic learning from childhood up to the age of maturity. He arrives at this latter age without any artificial helps, but instead, by a natural, necessary progressive development. Here, now, he has his stock of materials, his nouns and descriptive ad-

THE "MASCOT" WEEDLESS BAITS

Wobble, Dive, Float, Surface or Underwater

THE WEEDLESS "MASCOT" NEAR SURFACE OR SURFACE BAIT

We guarantee that you can cast this bait among thick lilies, rushes, underwater weeds, logs, stumps, snags, etc. Also that it is a sure killer. It runs at varying depths from the surface to two feet deep and will either Wobble or swim straight as desired. Is also reversible. Made with Red Head and White Body or all Red, White or Yellow.

PRICE EACH, 75 CENTS, Postage 3 Cents

These Baites have been tested and are endorsed and recommended by the leading authorities on bass and pickerel fishing.

WEEDLESS No. 1 WINGED "MASCOT" DEEP WATER OR SURFACE BAIT

This bait is also very weedless and a deadly killer. It can be used as a strict surface bait, throwing a spray of water, or as a deep water bait, running five feet deep or more. It "Wobbles," dives and floats when at rest. Fully guaranteed in every respect. Made with Red Head and White Body or all Red, White or Yellow.

PRICE EACH, 75 CENTS, Postage 2 Cents

Find the best load for your gun—How?

From November *Recreation*—

"To find out what your gun, be it shotgun or rifle, will do with different loads and which is the load best suited to it, for each particular need, there is no way to get at the facts except to experiment, and none so good as to load your own ammunition and try it out."

From December *Field and Stream*—

"Every gun shoots better with some loads than with others. The man who loads his shells can easily make up a few shells in various ways, and when he strikes the one that is best for his particular gun, he may perfect it at his leisure."

Why don't you experiment? It's a mighty interesting pastime—you get better results—and save considerable money. You can get empty shells at the gun club—an assorted lot of all makes—after a trap shoot. (Every gun club should reload shells for practice, and cut down ammunition expense).

Free—the Ideal Hand Book—160 pages—tells all about the powders, bullets, primers, tools and methods for loading and reloading rifle, shotgun and pistol ammunition. Full information to reload your shells understandingly. Free to any shooter who will send three stamps for postage. Send for your copy today.

jectives, with which to form his figurative expressions. These are to the native personal and peculiar. Not every Indian is an orator, and it has been no uncommon thing to see a distinguished chief employ some more gifted tribesman to deliver his flowery harangues."

"Why, then, does a white man find it so difficult to master the Indian tongue?"

"Well, as I've already stated several times, this, the Indian language, is perfect in its own way, and has many beauties not to be found in our modern languages. But it is a language of verbs. In a word, the whole structure of the Algonquian language, and the Huron and Iroquois dialects as well, depends upon the verb. It is the supreme chief of the language and draws into its magical circle all the other parts of speech, and makes them act, move, suffer and even exist in the manner, and in such situations as are pleasing to it. This is the great characteristic that distinguishes the Indian language from our own and other European ones—the peculiar structure and powers of their verb.

"In fact, the whole fabric of the language is of a peculiar form, as compared with European ones. The Indian groups and arranges his ideas to suit himself; we, who speak the modern languages, are confined within the rules of syntax. In the native tongue long expressions in French and English are often shortened; short ones are lengthened. Still, it is a system complete in its mechanism, and has proven quite adequate to the natives' needs. The Indian may often be in want of a name, yet he is never left in a quandary—he simply defines or describes the object. Thus his language has become a descriptive one. It is also, most abundant in specific or

concrete terms, but lacking in abstract or general words. Thus, for instance, for the varieties, sexes, and ages of a single animal there are a multitude of terms, but no general word for the animal."

The abundance of lengthy, flowery descriptives is peculiar and common to all the dialects of the American Indians, while barren of terms for the particular designation of natural objects. Until one has acquired the art of embellishing the substance of his speech with a multitude of natural descriptives he is far from being a master of the language. A council was being held by one of the Crees for the purpose of discussing the relative merits of Government treaty money and of land script, which was soon for the first time, to be distributed to the members of the tribe. A script buyer and a missionary were both present and each in turn addressed the assembled Indians. The former advocated the acceptance of the script by all who were entitled to receive it; the latter exhorted all to become treaty Indians. Although the missionary had a little Cree blood in his veins, and for over twenty years had been a diligent student of the language, his opponent had still the advantage. He was half-breed and since childhood had spent most of his life among the Crees of Keewatin and the west. He spoke to the Indians in their native idioms with all the forceful eloquence of the deliberate Cree. Time after time he repeated his arguments, yet never in the same words, calling into use an apparently inexhaustible fund of flowery descriptive phrases. The result of the contest was, that the majority of his hearers, heretofore staunchly loyal to the missionary fell to the other's unsound ideas—

swept away by the speaker's fluent interpretation of the beautiful natural metaphors of the Cree tongue.

The Iroquois tongue, as spoken by the Six Nations and some of the neighboring tribes, presents more difficulties to the student than any of the Algonquian dialects.

It is a branch of the Huron language and Europeans have ever found it hard to learn. Grammarians tell us that it is not so much because of the mental processes which the language expresses, as the inherent difficulties of inflection and articulation. A remarkable peculiarity that separates the language of the Iroquois stock from their Algonquian neighbors and the western tribes, is the absence of labial consonants from their dialects. A writer once said that it is this feature of the Iroquois tongue that permits the native to talk perfectly with his pipe between his teeth.

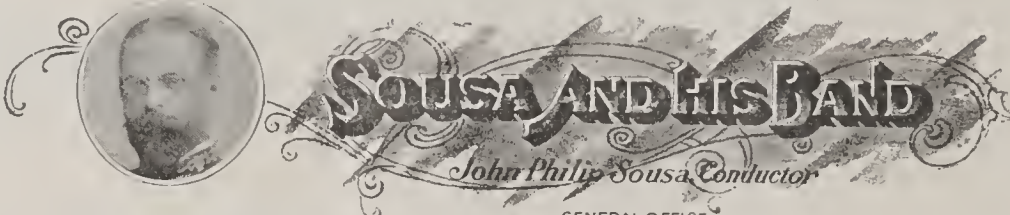

"Some have absurdly stated," said Father Richard, "that the Indian is often obliged to gesticulate in order to make himself understood by his fellows. That is untrue—absurdly so. Why, the Red Man, even in his most uncivilized state, could always give expression to his thoughts with precision and fluency. This he could do, too, in the dark, or otherwise, when gesticulation would be useless.

"No, the Indian language is a faithful interpreter of the understanding and of the heart. Gesticulation is quite foreign to their speech. Most of the dialect, like the Otchipwe, gave a languid manner of expression, quite in harmony with the cautious Indian character.

"The Eskimo tongue agrees somewhat in form, (Continued on page 256)

My Hobby — TRAPSHOOTING

JOHN PHILIP SOUSA

TRAP-SHOOTING.

A Panacea for all ills.

If the tired business man
wants to throw off his tiredness,
his business cares, and the general
blueness of life, let him take up
trap-shooting.

With the targets flying, life
assumes a roseate hue, and "all's
well with the world."

John Philip Sousa

"EVERY MAN should have an active, muscle building, fat destroying, lung-developing hobby." Mr. Sousa chose trapshooting. He did so because this thrilling, fascinating, invigorating sport trains the brain and develops brawn, — it's a man's sport and gives him a chance for "hob-nobbing" with the best of sportsmen.

HAVE A HOBBY. Get out your gun and give the target smashing game "the once over." It's an every-day sport, and there are no game laws to obey. Go to it. Make trapshooting your hobby — join the fun at the shooting club.

Our Booklets Tell an Interesting and Instructive Story of Trapshooting's Pleasures.

They Are Free. Write for Them Today. Dept. 3 S.

DU PONT POWDER CO., Wilmington, Del.

ESTABLISHED 1802

TRAP SHOOTING

Forest and Stream is an Honorary Member of the Interstate Association for the Promotion of Trapshooting.

DRIVERS AND TWISTERS.

I sympathize with those trap shooters who were stung at the roof shoot at the recent "Sportsmen's Show." The consensus of opinion among those who took part was that "they'll never go there any more." I hope the unfortunates realize that *Forest and Stream* had nothing whatever to do with the shoot, other than to offer a silver cup—and we haven't found out yet, who won it.

J. H. Hendrickson won the "Long Island Residents Shoot" at Neponsit. He smeared the ambient atmosphere with the dust of 85 rocks.

The National Amateur championship to be pulled at Travers Island on April 30 and May 1, shows indications of being the biggest yet held. This shoot is open to any amateur. Application should be made to G. J. Corbett, New York Athletic Club, Pelham Manor, N. Y.

Because of the tremendous increase in advertising in this issue we are obliged to be stingy in the amount of trap news. Our advertisers insist on increasing their copy and a lot of new ones have found it almost impossible to do without us. It looks like we would have to add another form to the paper to keep in all the news and accept all the advertising that is coming along. You trapshooters interested in motors, fishing tackle and the like can help me a lot by patronizing advertisers in *Forest and Stream*—it will help us to keep on making the paper better.

Officer! He's out again, is B. Elssesser, who made Atlantic City famous. Here's a note he wafts in about the Westy Hogans:

Since their 1915 tournament has just been registered by The Interstate Association, the Westy Hogans are planning an extensive publicity campaign into every part of the country. A meeting of the Tournament Committee will be called in the near future and the program for the big event in Atlantic City, during the week beginning September 13, will be discussed. The dates of the shoot are September 15, 16 and 17. True to Westy Hogan tradition, the members of this famous organization, will have many surprises for their numerous friends and it is confidently predicted that all Westy Hogan attendance records will be smashed at the 1915 tournament. A better shoot than the one last year was never held anywhere. It will be a hard matter to excel it this year, but the Westy Hogans intend to attempt it.

Sentiment still exists in Missouri. Gus Ichtenberg, secretary, Daniel Boone Gun Club writes: Success to Fred Gilbert, Du Pont Co. and *Forest and Stream*. For our share—thanks.

The big shoot of the middle west will be pulled when the Iowa State shoot will be held under the auspices of the Cerro Gordo Gun Club, at Mason City, June 15 and 17. Last year 127 crackers bought tickets to this shoot—this year, 50 more will be there. Date up.

Speaking of Fred Gilbert. He has been shooting a Parker Gun since 1899. He now has four from which he has shot 400,000 shots and the guns are as good as new. No wonder Fred likes his Parker.

The Utica Sportsmen's Association, Inc., was organized Saturday, leading business and professional men being members. The club will obtain a site to carry on its activities. The officers elected were: George L. Brayton, president; Dr. F. T. Simmons, vice-president; Jerome DeBee, secretary; W. E. Corfield, assistant secretary; John G. Tritton, treasurer, and John J. O'Neil, field captain. The club will affiliate with the New York State Sportsmen's Association.

The men at the meeting were: George L. Brayton, R. S. Green, Charles A. Nelson, George F. Murray, J. H. Horrocks, Tom L. Davidson, W. R. Owens, Dr. F. T. Simmons, George E. Fuller, E. C. Richards, Dr. F. DeLong, J. J. O'Neil, F. D. Curtis of Oriskany Falls, W. T. Cantwell,

(An advertisement by E. F. Slear)

REMINGTON UMC

There were 40 different kinds of guns and shells used in State Trap Shooting Championship Events in 1914—

Remington UMC

Won 24 out of 39 State Championships

If you entered a fast horse in 39 events against 40 other possible winners and you won 24 out of the 39 events, you'd have just cause to be proud.

That's What Remington-UMC Did in 1914

Shooters, we congratulate you. We wish to assist you through another successful season.

Fred J. Sisson, A. B. Maynard, Dr. A. S. Mahady, E. V. Dibble, Henry G. Siem, F. M. Black, F. R. Latta, F. G. Morrison, W. C. Harris, J. G. Tritton, F. B. Lee, Theodore Steinhorst, P. J. Blake, J. Phil Bannigan, Jerome DeBee, C. H. Ballou, George W. Weaver, Jr., Tom W. Johnson, D. M. Johnson, William Ainsworth, W. E.

Corfield, A. J. Ackert. Ossining Gun Club has been awarded a registered shoot May 19th. In addition to the regular events, a handsome cup will be offered for the championship of West Chester County. Particulars from C. G. Blandford, Captain. W. G. BEECROFT.

Don't use expensive ammunition where a cheap cartridge is just as good. Buy a

Marlin

Rim Fire Repeater

for squirrels, rabbits, hawks, woodchucks, skunks, muskrats, foxes, etc.—and save price of your rifle in the reduced cost of cartridges.

.25 Rim Fire—cheap, powerful and reliable—will kill foxes, skunks, woodchucks, muskrats, etc. as quickly and surely as more expensive ammunition.

Model 27 Marlin is the only repeater made for this splendid cartridge—so powerful it is used successfully for deer, so cheap you can shoot it freely at slight expense. Take-down; splendid sights; 8 shots; with 24-inch Round Barrel, \$13.15; Octagon, \$15.00.

.22 Rim Fire
All Marlin .22 Repeaters shoot all .22 short, .22 long and .22 long-rifle cartridges—for rabbits, squirrels, hawks, crows and all small game up to 200 yards.

.22 Lever Action
Model 1897—the best made .22 rifle in the world. Take-down; convenient to carry and clean; tool steel working parts; Ivory Bead sight; as steady and reliable as a big game rifle. With 24-inch Round barrel, \$14.50; Octagon, \$16.00. **Model 1892** is similar, but not take-down; with 24-inch Round barrel, \$12.15; Octagon, \$13.15.

.22 Pump Action
Model 29 has 23-inch Round barrel; take-down; a first-class repeating rifle; 15 shots; \$9.25.
Model 20 has 24-inch Octagon, heavier barrel; take-down; Ivory Bead sight; 15 shots; \$11.50.
Model 20 Full Magazine Rifle—the only pump action repeater giving 25 shots at one loading; \$11.50.

.32 Rim Fire—Model 1892, with lever action—uses .32 short, long and long-rifle rim fire cartridges; also .32 short, long and long-rifle center fire; 17 shots. A splendid all-around rifle for settled districts. With 24-inch Round Barrel, \$12.15; Octagon, \$13.15.

Send 3 stamps postage for new catalog, showing complete line of Marlin repeaters, rifles and shotguns. **Ideal Hand Book** tells all about reloading cartridges. Mailed for 6c in stamps.

A New Kind of Advertisement

(We receive so many letters from men who have been shooting LEFEVER GUNS during the past thirty years, that we believe brother sportsmen should read some of them.)

Gentlemen:—

"I do not feel just like closing this without a word of well deserved praise of your guns. This little gun—6½ lb. 16-gauge F with Ejector—I bought, I think, in '98. In all those years it has been my one shot gun. I am fond of hunting and have used it for everything from jack snipe to Canada geese, with all kinds of loads and under all conditions. It was specially ordered of you to shoot close and hard, and does.

"Before buying it I had used most of the best made American and some foreign guns and bought it because of the system of boring and moderate cost and have never seen a gun of any gauge that would do cleaner work when held right, and that with any size of shot from eights to double B's.

"But what I really had in mind when I began this was this: I have not had this gun fully dismantled until to-day for some years, and yet I find that the wearing parts show hardly any wear, practically none, after over fifteen years of use, much more than is usually required of a gun, firing thousands of shells and being on hunting trips galore. I really was surprised to find it apparently 'as good as new' in every way. It has been a good missionary for you and made several converts who bought. I expect this is an old story to you, but just the same you are entitled to the thanks of such as I, who enjoy and value a good gun."

W. H. RODDLE,
Port Angeles, Wash.

January 25, 1915.

\$25 Up

This is the gun Mr. Roddle shoots, and it has the Lefever System of Taper Boring to give it that penetration power.

NEW SMALL BORE STEVENS.

Following on the heels of the popularity of the 20 and 28 gauge shotguns there has been a marked increase in demand for even smaller gauges, particularly since the introduction of the .410 gauge loaded shell. Heretofore lack of suitable ammunition has prevented the general use of these guns, but at present at least two American ammunition makers are manufacturing .410 gauge paper shells of excellent quality and cheaper than ammunition in this gauge was to be had in the past. There are now some 20,000 of these extra small bore shotguns sold annually in this country.

Two new arms in the market are the Stevens .410 and 44 gauge single barrel shotguns, the .410 gauge being furnished with 26 or 30-inch barrel, and the 44 with 26-inch barrel only. These guns are extra light, weighing only about 4½ lbs. each, the light weight being secured by skillful design and by making all parts of a size proportionate to the small bore. They have case-hardened frame, walnut stock and rubber-butt plate; the barrel and lug are in one piece forged from a solid bar of steel. Price with plain extractor is \$5.50, with automatic ejector, \$6.00.

These guns have aroused much lively interest and are being called for from all parts of the country. The ammunition is now well distributed, so that the prospective purchaser need have no fear that he may not be able to get all the shells he needs.

1. Reflector focuses light at any angle.
2. Exclusive patent device in base permits instant attachment anywhere—to chair, door, piano, desk, table, gun locker, writing machine, score sheet.
3. Universal joint permits turning light in any direction.
4. Also, silk cord on reel in base allows lamp to be used anywhere within ten-foot radius of electric socket.

This Portable, \$2.00 Electric Lamp

Puts the Light Where You Need It

The adjustable reflector focuses a clear, strong, mellow light exactly where needed. Keeps eyes in the shade, avoiding all strain. You can hang it above a writing-desk, clamp it to a bed rod, place it flat on a table, and direct the light at any angle. Try it; make clear thinking and hard reading easier. Carry it with you in your grip: It is compact; takes little room.

This is a Sportsman's Opportunity Presented by Sportsmen—No Risk.

If your retailer does not carry it send us his name and we will send you the lamp through him. Or send us \$2.00 direct, and we will send you the lamp beautifully finished in satin brass, for ten days' trial, parcel post prepaid.

If for any reason you wish to return it at the end of that period, we will refund your money without question.

You can use this lamp wherever there is an electric light current—in your home, or in your office. And is it not worth many times \$2.00 to save your eyes from strain caused by poor or ill-directed light? The price of the Leindorf light puts it within reach of every Forest and Stream reader. Write now to the

him as well as to the camper, will appear in the May issue. This article was announced for April but unavoidably was delayed.

HANDICAP COMMITTEE G. A. H.

Pittsburgh, Pa., February 13, 1915.

Editor *Forest and Stream*:

We will thank you to announce in the trap department of *Forest and Stream* that the committee which will allot handicaps to entrants in the coming Grand American Handicap is made up as follows:

O. P. Goode, chairman, Chicago, Illinois; Harrison Kennicott, Evanston, Illinois; C. D. Coburn, Mechanicsburg; Ohio; J. F. Wulf, Milwaukee, Wisconsin; J. K. Warren, Birmingham, Alabama.

We feel confident that our expectations of this committee will be realized.

The Interstate Association
E. REED SHANER, Secretary.

GILBERTIAN MATINEES.

Words by Sir Ballistic—Staged by Du Pont.

April will practically end the trap season among yacht and country clubs but will open the season among strictly trap shooting clubs, excepting the few larger clubs that shoot all season. March was filled with important shoots, notably those given in honor of Fred Gilbert, who celebrated his twentieth year as a professional shooter. In that time this popular scatter gun man has done wonderful cracking, further along in this department are shown his records. The big event for Fred was an all day shoot pulled at Dupont Trap Shooting Club, followed by a dinner, some feed, at Dupont Hotel in Wilmington. Not content with the popping of the day, a merry fusillade of corks and pulling of innumerable jokes, reminiscences—and some Joe Millers, wound up the day and began another. The whole affair was given in true Dupontian style. Right here, having told something about an old trap shooter, it will interest thousands of aerosaucer destroyers to hear of the youngest to join the ranks, this is Charles G. Blandford, Jr., of Ossining, N. Y. This lad was born January 28 at the husky heft of 8¾ pounds, to "POP" Blandford, one of the most popular men that toes the score. Health and success to the lad. C. G.'s other two sons, aged 18 and 20, are 80 per cent. shooters. Some of the winners among 500 clubs holding Gilbert shoots were: West End Gun Club, C. D. Coleman, 96; Independent Gun Club, Howard Wilson, 98; Chester Blue Rock Gun Club, H. E. Thyng, 98; Bloomfield Gun Club, F. Baldwin,

91; Springfield Gun Club, Harry Fisher, J. Tracey and Powell tied on 95; Oxford Gun Club, Dr. Ewing, 97; Analostan Gun Club, Miles Taylor, 87; Lehigh Outing Club, 84 per cent; La Crosse Gun Club, A. J. Roberge, 100; Cerro Gordo Gun Club, Monplasure and McGowan tied at 86; Riverside Gun Club A. F. MacLachlan, 90; Daniel Boone Gun Club, 93; Beloit Gun Club, Geo. Vosberg, 93; Herron Hill Gun Club, B. Conrad, with 94, after a shoot off with J. E. Penrod; Independent Gun Club, J. Maurer, after a shoot off with J. Heil, 80—23x25; Thornburg Gun Club, R. T. Donaldson, 95; Youghioghny Gun Club, F. D. Smith, 94. Mr. Gilbert's records, as far as obtainable, are:

Year.	Shot at.	Broke.	Per Cent.
1895	Averages not compiled.		
1896	Averages not compiled.		
1897	3,290	3,056	92.90

*Indicates high average winner for year. Mr. Gilbert won this honor six consecutive years, eliminating 1906 when he did not shoot, a feat never before or since accomplished by any shooter, amateur or professional.

**The averages those years were figured only on targets shot at in Interstate Association tournaments.

KANSAS DECISION IS NOT FINAL.

In view of the fact that there is evidence that not only the public, but, in many instances the press of the country also, is under the impression that the decision just rendered by Judge John C. Pollock of the Federal District Court at Topeka, Kansas, in which he holds the federal law for the protection of migratory birds to be unconstitutional, is the final adjudication on that statute, the following statement correcting this erroneous impression has been issued by President John B. Burnham of the American Game Protective Association:

"Conservationists need feel no alarm over the Kansas decision. The Supreme Court of the United States now has before it on appeal a case

from Arkansas in which the constitutionality of the law will be finally passed upon. That case lacks certain important elements, favorable to the sustaining of the law, which the Kansas case, which will be incorporated with it, will provide. In a sense, then, Judge Pollock's decision is a welcome one to those who are working to avert the destruction of the wild life of the country.

"The Kansas decision is the third that has been rendered by federal judges on the law. In Arkansas, Judge Jacob C. Trieber on May 23, 1914 held the measure unconstitutional, while in South Dakota, Judge J. D. Elliot on April 18, 1914 held it constitutional. It is to be remembered that the law is in full force and effect and will doubtless be vigorously enforced by the United States Bureau of Biological Survey every where in the United States, with the exception of the jurisdictions of Judges Trieber and Pollock.

"The solicitor general of the United States has asked the Supreme Court for an early consideration for the test case as is possible but it may be that it will not be reached before next fall. We are hoping to have it passed upon this spring."

NEARLY HALF A MILLION TRAP SHOOTERS IN THE UNITED STATES.

A revised Gun Club map of the United States just issued by the Du Pont Powder Company, showing the location of towns containing organized clubs, gives the total number of clubs up to November 15, 1914, as 3,221. It is estimated that the average membership of these clubs is fifty, making a total of 161,950 trapshooters belonging to clubs that shoot regularly.

There are probably still more trapshooters not members of organized clubs, mostly in farming sections.

The increased popularity of the hand trap tends to swell the number of unorganized trapshooters.

The total of all classes is estimated at 400,000, probably more actual participants than can be found in any other American sport.

Trapshooting is undoubtedly growing rapidly and enthusiasts predict that the next annual map will show more than 4,000 clubs and that in 1915 the total number of trapshooters will grow to 500,000.

PRAIRIE CHICKENS INCREASING IN NORTH DAKOTA.

Galesburg, N. D., March 22, 1915.

Editor *Forest and Stream*:

Herewith is my check, renewing my sub. to the grand old paper, which in its monthly form is far better than ever.

We have had a very fine winter here; there has not been a single heavy storm all winter. Prairie chickens have wintered finely, and there are a great many of them about here at least. It is no uncommon sight to see 75 to 100 in any cornfield, and in one barn-yard a couple of miles from this town, one can see as many as that right in the yard among the tame fowl and the cattle, and it is certainly a pleasant sight, far pleasanter than to see that many dead birds. If we have a good hatching season it is probable that the shooting in North Dakota next fall will be beyond compare. All indications are for an early spring. The snow is about all gone and the weather is mild and sunshiny. I hope you will prosper in the new form as much and more than you did in the old.

J. P. WHITTEMORE.

RAINBOW TROUT SEASON IN NORTH CAROLINA.

Linville Falls, N. C., March 23, 1915.

Editor *Forest and Stream*:

The rainbow trout season in Linville River will open as usual May 1. The river is in the best condition it has been for several years. Several high "tides" last fall washed the mud out of it that had been deposited by erosion of fields and roads from rains during the summer and it is now once more the crystal mountain stream, the natural home of the rainbow trout. The river has been well stocked from a nurse stream, a small tributary, and, the fishing this season should be of the best, especially during May and early June. The stream is well protected, both naturally from its roughness in its deep and picturesque canyon, and from being patrolled for fifteen miles, all owned by one man. There is no speculation in it, no profit derived from the fishing and no hotel proposition connected with it. The small fees collected from visitors go to pay for protection and stocking. Visiting anglers may be taken care of here in several boarding houses, but this is not a fashionable resort. Attractive as any mountain region in America from May till November, it yet enjoys all the beauty of the wild. In other words, it is not "developed" in the sense of being a commercial resort. Linville Falls station, on the C. C. & O. Ry., six miles down the mountain, 1,800 feet below, is the nearest railway station.

F. W. BICKNELL.

Interstate Association Trophies.

"Warning No. 2"

Warning No. 1 is for the nimrod who goes home with the farmers' geese in his hunting coat.

Warning No. 2 is for the benefit of you, Mr. "Trapshooter," who goes home with the goose eggs in your scores, which you should eliminate by using one of "Bill Miller's" ventilated sighting ribs on your single barrel gun, for the following good reasons, viz.:

It positively prevents blurring of front sight, caused by radiation from a hot barrel, and enables a clear view of object aimed at.

The top being concaved and finely matted its full length, gives a distinct alignment of your barrel, or in other words a similar effect to a telescopic sight.

Prevents undershooting on rising targets (which is about 98% of all targets thrown) by providing for proper muzzle elevation without completely covering the target from view, or raising your eye at breech (a good cause for cross firing).

It does not mar the appearance of your gun in any manner, and can be removed at a moment's notice, which however you will not do or permit after giving it a fair trial.

Being machined out of a solid bar of steel, is very light (about 3 oz.) and strong, and made throughout in a first class manner, and finished in a dead black.

And most important of all, it has been thoroughly tried out and successfully used by a large number of shooters (one a state champion,) who have so greatly increased their scores that they would not be without it. "ASK THEM."—I'll tell you who they are.

And the price is such that you are losing money by not using it, which one day's trial at a tournament will prove.

If You Want to Shoot at a 98% Clip

HAVE A REAL VACATION with a BLUE BIRD MOTOR BOAT

Start right now to plan a "motor boat summer" for yourself and the family. In a few short weeks every lake and river in the country will be calling the man who has a tiny spark of the sportsman in him.

There will be endless opportunities for camping expeditions, picnics, fishing parties and daily expeditions up that shady cove where nature always seems at her best.

Of course, your blood tingles when you think of it. But—make no mistake—you must have a boat of your own—and a good one.

"Blue Bird" MOTOR BOATS

have solved the summer problem for thousands of healthy, "out-door" families.

These boats—exquisite in line and appointment—are made over moulds of highest grade Louisiana Cypress.

The wood work in decks and coaming are of best selected oak, the boats are very handsomely varnished and trimmed with the best "sun and water-proof varnish," and the hulls are finished in either blue or white paint. The engine is the Detroit two-cycle reversible—can be run slow or fast—has only three moving parts, STARTS WITHOUT CRANKING, uses very little fuel and is so simple that a child can handle it.

All models are now in stock—16, 18 or 20-footers. Send your order at once. Every boat and engine is fully guaranteed and subject to thorough test and inspection before shipment.

Agents Wanted Everywhere

Ask for Demonstrator Agent's Offer. Big reduction for first Blue Bird sold in any locality—World renowned Belle Isle and Hudson River canoes can also be handled in connection with the Blue Bird motor boats. If interested in canoes please specify in your inquiry and we will send you our New 1915 Dream Book of Canoes. Write to-day for 1915 Book of Blue Birds. A postal will bring it. All boating problems solved by us. None too small, none too big.

Canoes, \$20 Up

OUR ARCHERY CHAMPIONSHIPS.

Some two years ago, in writing of what should constitute the national archery championship, a noted archer said that the man who was the winner of the American round "was champion of his specialty only" and at once tacitly concluded that the winner of the York round was the logical archery champion for the year.

Is long distance shooting not also a specialty? Have our records proven that proficiency in the York round is a guarantee of accuracy at the shorter distances!

An examination of the records of our archers leads us to a most decided negative conclusion. In fact the reverse conclusion that efficiency at the shorter distances is a guarantee of accuracy in long distance shooting is quite as justifiable. Neither conclusion is upheld by our records.

Experience points to the fact that long and short distance shooting require separate and independent training and that proficiency at one distance does not presuppose the same degree of accomplishment at the other. We have analogous examples in every similar form of athletics. A wonderful 100 yard sprinter is generally a poor miler, and conversely. If the winner of the American round is champion of "his specialty only," so also is the winner of the York round. When then was the logic in proclaiming the winner of the York round as the National Champion?

This method of procedure was even more ridiculous than our point system of scoring to decide the winner of a round, the idiocy of which was so well illustrated in our recent Eastern Tournament.

The ancient history of the point system of scoring has never been explained to me. I doubt whether any American archer can cast much light on the subject. It was adopted by England and we failed to revolutionize the method. In England only the double York is shot to determine the championship. Therefore we concluded to do the same. The summation of the American and the York rounds, as adopted last summer, is a far more equitable arrangement for American conditions.

Archery has always had a hard row to hoe. Shortly after the Civil War the sport was quite popular. The spirit of the war was still in evidence and archery was a harmless and beneficial antidote. Now our primeval instincts are more dormant. A remedy for this sad apathy was suggested in my previous article. Let us continue.

Local June and October tournaments would add the missing incentive necessary to increase our membership in the various clubs and urge the present members to a greater activity.

How can we make the National Tournament more popular? What additional incentive can be offered to increase the attendance! The answer is by increasing the number of prizes to three for each event. It is perhaps a sad state of affairs when archers must be tempted by additional prizes, but such is human nature and our archers follow the general rule of humanity.

Many of our beginners learn to shoot fairly well at the shorter distances, but develop slowly

at the York round. Their chances for the National Championship is utterly nil. Naturally they say: "Oh, what's the use," and remain at home.

We have boxing and wrestling championships for every conceivable weight, and running championships for every distance from 100 yards to 26 miles. Why not follow this general custom, found wise from experience, and have a short distance, a middle distance and a long distance archery championship? The National Champion would be that person the sum of whose scores in these three events would be the highest. He might not hold any of the three championships but would be the best balanced archer of the lot. He would not be "champion of his specialty only."

Three prizes in each of these three events and the four championships would add a great incentive to the average archer and increase the popularity and attendance at the National Tournament. These prizes would be of a higher ethical type, make a more definite appeal and be more beneficial for the good of the sport than the handicap prizes now offered. In giving prizes positive attainment only should be considered and pure unadulterated luck eliminated.

Interstate Association Trophies

The winning of the handicap medals is purely a matter of chance. When it comes right down to brass tacks there is no more sense in giving an archer a medal for the greatest improvement in his second round than there would be in imposing a fine for shooting like a miserable dub, far below his ability, in the first round, save that the handicap medal would add an incentive to better work and prevent an archer from giving up hope.

We now have a definite promise of two pages in our revised *Forest and Stream*, provided we are able to furnish the necessary literature. Let us therefore thresh out these matters in print with the hope that some definite and beneficial conclusions and subsequent action will result.

"TOX."

ARCHERY IN WARFARE.

We think of the bow and arrow as medieval weapons of war abandoned by the nations of Europe four or five centuries ago; the bowmen of Crey are the last of any prominence in English history. Yet it is only one hundred years since soldiers fought with the bow and arrow in European wars, and that too, on the fields of southern Belgium where the present war began.

It was in 1813 when all Europe was armed against Napoleon. Every one of the allied nations brought every possible resource of men and means to further this end. Among them was Russia. To the war she sent soldiers from the newly conquered tribes that dwelt upon the steppes of Asia; Bokharans and Turkomans and Tartars and other half savage peoples. Many of these regiments were armed with bows and arrows.

Jomini, the military historian, speaks of a great number of these who fought side by side with the Prussians in eastern Germany and in Belgium, and he says that these bowmen held their own against the French infantry. Their aim he says, was surprisingly good, and they could shoot an arrow with effect almost as far as a musket ball was effective—but in those days that was not much more than a hundred yards.

To-day we are reading of a mild revival of archery in connection with the present war, isolated cases, it is true, but archery just the same,

MEEK REELS

earned their reputation for superiority by giving years of satisfactory service proving that a good article is worth its price. Our aim is not cheapness but Perfection. In ten years Meek reels have won four times as many International Trophies as any other reel and twice as many as all other reels combined. For sale by all first-class dealers. If your dealer will not supply you write us. Catalog E free.

B. F. MEEK & SONS, Inc., Manufacturers of Meek and Blue Grass Reels
1450 S. 18th St. LOUISVILLE, KY.

The "PFLUEGER - REDIFOR"
Anti-Back-Lash Casting Reel
NO WIRES TO FRAY THE LINE

makes casting a real pleasure for beginners as well as experts. It cannot break or get out of order, and requires no adjustment. Automatic Thumblers, attached to the flange of the spool enclosed within the reel, free from all dirt and possibility of damage, thumb the reel mechanically, retarding the spool as the bait slows down.

This reel is made of best German Silver, satin finish, has genuine Scarlet Agate Jewels, balanced crank, fluted Pyralin Amber Handle, with Phosphor Bronze Bearing, and adjustable front sliding click and drag.

This reel will hold from 60 to 100 yards according to size of line used. Price, **\$7.50** (Fully guaranteed against defects of all kinds for all time.)

If your dealer does not carry this reel, we will send it postage prepaid on receipt of price.

The Enterprise Mfg., Dept. No. 21 **Akron, Ohio**

THE ROD OF QUALITY

This phrase is a trade-mark based on sound facts, and is substantiated by all anglers who have put the rod to actual hard test.

and a careful study of the question almost con-
vinces one that if opportunities can be had for
the introduction of this most ancient weapon in
this, the greatest war the world has ever known,
that the last of archery has not been heard of.

Arrows by the thousands have been dropped
from the clouds with terrible effect, and the
common everyday arrow so well known to arch-
ers has been used repeatedly within the last
month or two, as silent messengers carrying in-
formation across the border, and if report speaks
truly even death in one instance, one man being
pierced through the throat.

JAMES DUFF.

FISHING IN A FOG.

By O. W. Smith.

As a rule I am not a lover of either rainy
or cloudy days for trout fishing, not so much
because I find the fish less willing to rise under
such conditions—for every angler knows that
trout are simply voracious when a gentle rain
roughens the surface of much-fished pools—but
because I somehow feel that the speckled
beauties should be lured only in perfect weather.
The poetry of angling rather than mere angling
makes me a devotee of Father Izaak's gentle art.
In spring, when the air is lambent, the mating
birds fair crazed with the joy of life, the early
flowers—violets and hepaticas—peep shyly up at
one, and the insects hover just above the water,
tempting the speckled fish to gymnastic stunts,
then trout fishing is at its best. No, I prefer to
fish when Nature smiles, yet I am not above
casting a fly in all sorts of weather, just for the
sake of the experience and knowledge gained.

We were camping on Thunder River, that
Wisconsin stream so often fished by me in years
gone by, still loved and fished occasionally. The
time of the year was August, a hot and rainless
month it was too. The stream was low and the
trout exceedingly shy. One morning, waking just
as the first light began to filter through the can-
vas roof, I was conscious of a dampness, an un-
wonted chill in the air. My first thought was of
rain, but upon looking through the open door of
the tent I discovered that all the world was
wrapped in a thick, impenetrable fog. My first
impulse was to snuggle down under the blankets
for another nap, but the second, and the one I
acted upon, was to investigate the angling possi-
bilities of the stream when concealed by Nature's
clinging cerements. So I sallied forth clad as for
rain, hip boots breviated, rubber slicker, and cap
provided with protecting cape, for I knew that
the water-soaked grass and trees would drench
me more thoroughly than would actual rain. It
was a strange, new world in which I found my-
self, all but the very nearest objects being shut
out by the clinging white vapor, those trees and
stumps ghostly surroundings. Descending from
the highland upon which our camp was situated,
I found the fog more dense and impenetrable in
the narrow valley through which the little stream
meandered. Though mid-August, I found the
moisture-laden atmosphere quite chilling, and
had it not been for my desire to know whether or
not trout were feeding I would have even then
returned to the warm blankets. Suddenly the
stream yawned before me: so unexpected was its

Orcas, Washington

appearance that I found myself grasping at a bunch of golden rod to prevent a header into the water which I could not see but could hear chuckling away below me.

I selected a large fly, I have forgotten just what particular one but I remember it was brightly colored and flamboyant, and sent it fluttering out into the fog and mystery. Where or how it hit the water of course I had no means of knowing,

but the feel of the rod told me that it was dancing away somewhere below me. I waited for what seemed an unreasonable period of time but there was no response, neither did I hear sound of leaping fish anywhere. So I cast again and again, up and down, where I imagined the current might set in toward either bank. At last satisfied that I would have to seek another location I felt my way along the bank, the shoulder-high grass now and then slapping me in the face with clammy fingers. All at once I came to a sharp bend in the stream and I recognized the place. Instantly there flashed before my mind a vision of the pool as I had seen it smiling beneath the rays of the sun some eighteen hours earlier. Yonder was a great log lodged against a redish-green stone about which the water curled and snarled. I could hear it growling away, its voice sounding strange and eerie coming from beneath the fog. Back yonder, where the current dashed against the far bank, was a deep pool mined out by years of constant activity. I knew that there were fish and good ones lying about the snag and in the pool. That the pool under the bank sheltered one good fish I knew full well, for I had caught a glimpse of him once or twice, a seldom fish, while lesser members of the tribe hung about the outskirts. You know what I mean. When a big trout pre-empts a pool, the smaller fish forsake the deep water but still linger in the locality. I knew if the big trout lay under the bank, the smaller fish would be found in the neighborhood of the snag, and vice versa. So I sent my fly out where I thought the current sucked down under the out-reaching bank, then in the direction of the log. Once for a fraction of a second I thought I had hooked a fish, but instead I had struck the log and my fly remained hard and fast. Then I tried other flies, but all to no purpose. The fish were not rising.

I set down stream on a journey of discovery, casting here and there, trusting to memory somewhat but to luck more. Once or twice I thought I heard an indistinct splash of rising fish but could not be sure. Then I noticed that the fog was thinning, becoming less dense and clinging, so I turned my footsteps back up stream, in due time reaching the pool where I had left my fly clinging to the snag. Still I could not see the water, but looking straight up above me there was a golden glow which indicated that the sun was fighting a winning battle with the mist. As my flies had all proven unattractive I searched my pockets for a bait. Not a worm did I have, but my tin "hopper coop" contained the dried remains of a grasshopper. It I worked upon a hook and cast out into the fog. Instantly it was seized, and instinctively I knew that I was fast to the big trout. How that fish struggled! No two trout fight exactly alike but that fish used every tactic that any member of the family ever resorted to in an hour of great need. Slowly and more slowly did he rush and I knew that he was tiring, so I unlimbered my landing net preparatory to the last act. The fog was beginning to drift, to sway back and forth with a ghostly motion inspired by a rising wind. For a brief fraction of a second I caught a glimpse of the water and my ripping line. Then I saw the line strike the side of the brown log and the fog settled again. I was fast. Talk about tragedy! I knew just what had happened. The fish had darted under the log and crossed the line. I also knew that ex-

THE CANADIAN ROCKIES, B. C.—Hunting, fishing and camping parties (all saddle and pack horse trips).

Bear hunting in Spring, fishing and mountain climbing in Summer. Big game hunting in Fall, everything furnished. Rates \$15.00 per day each.

H. G. LOW, Guide, Galena, via Golden, B. C.

RANDALL BEAGLES—The hunting beagles of the Adirondacks where the big white hare makes merry the chase. We have some beauties—all ages, sizes, sex or color. Twenty puppies, by field-trial parents. Sent on approval—YOU are the judge. Big new free catalog tells all. Come to the kennels and we'll have a hunt together. I'll use you right if you will let me. Randall Beagles, North Creek, N. Y.

BROOK TROUT—"A good trout stream without any trout is like the play of Hamlet, with Hamlet left out."

Why not stock your streams? Get together with your friends and do it. We have the trout—a world of them—fingerlings of all sizes, for sale. No care is necessary on your part. Put them in a running brook or spring pond, and they will do the rest. Our latest advanced methods, in conjunction with our pure water supply, gives us strong, vigorous trout, in the best possible physical condition. For particulars and prices address

PARADISE BROOK TROUT CO. Henryville, Pa.

NORTHERN BRITISH COLUMBIA AND ALASKA—Moose, caribou, sheep, goat and bear. I am willing to accompany one or two sportsmen, or arrange trips for the above animals for this fall; fifteen years experience, full particulars and references. Clifford Little, Box 409, Victoria, B. C.

Two hundred dollars buys 3-roomed, brick chimney camp, automobile barn, 1½ acres cleared land, on shore of trout brook in Maine. Details, Ulysses Hunt, Strong, Me.

Joymotor

A Joy, Indeed, for All Sportsmen—

Sporting Goods Dealers Write for Agency

Takes all the drudgery out of fishing and shooting.

Go as far as you like and back in real comfort. This wonderfully silent Joymotor runs your boat slow enough for trolling, or up to 7 to 9 miles per hour. Weighs only 52 lbs. Easily carried; weight can be divided for long portages. Fits every type of boat—duck boat, fishing boat, canoe—square stern, pointed stern, or decked stern. With special bracket shaft may be run through bottom of duck boat or canoe. Attached and detached in a minute.

Reversing Propeller

makes Joymotor easiest controlled motor ever made. Just move steering tiller to right or left and Joymotor stops your boat within a few feet and backs it up without reversing the engine. No more danger of accidents. No drifting or paddling to shore or dock. Joymotor does all the work for you. Simple, efficient. Trouble-proof. A child can run it. You just move the tiller and Joymotor controls your boat at all times. A rudder would be useless. Study this picture.

High tension magneto, real carburetor, no pump hose to get tangled up, real bearings, complete oiling system. Built to enjoy—that's Joymotor.

Write now for catalog giving full details and life size picture of Joymotor—"built to enjoy."

Write a postal now.

Joy Engineering Company, 416 Tribune Building, Chicago, Ill.

This picture shows position of steering tiller and propeller when slowing down or backing. Compare position of propeller with the large picture.

INTERSTATE TOURNAMENTS.

Editor *Forest and Stream*:

Please announce to the readers of *Forest and Stream* that the sixteenth Grand American Handi-

SIR ROGER de COVERLY AND PEG O' MY HEART.

Winners at the Westminster Kennel Club Show, 1915. Owned by Dr. H. M. Beck, Wilkes-Barre, Pa.

the fish, lay impotent and helpless. I paused, struck dumb with anger and astonishment. There have been a few times in my life when I have found words inadequate and that was one of them. Anger and exhaustion shocked me, but finally I managed to gurgle, "Hey, you!" For a single instant I saw my fish in the hands of that red-sweatered thief, then the fog shut down once more. Through the thick gloom came the echo of mocking laughter, and the thud of pounding feet. What I said I do not remember and it is just as well that I do not, for it would hardly bear repetition. I plunged about in the fog but to no purpose. When next the mist lifted I was alone in the little valley, and Thunder Mountain smiled ironically. When next I fish in a fog I am going to carry a gun, and—

ALWAYS CLEAN AND GOOD.

Editor *Forest and Stream*:

I have been a subscriber for *Forest and Stream* since. I don't know when, before 1890 I think—in '85 or thereabouts—and I figure that I shall be as long as I can read it or get some one to read it to me. I think I miss it once a week, but it is a better paper once a month. I don't see how you can get so much in it. I read it all.

I have got all of the "Uncle Lisha" series of books in my library and the story in the March number is good, for I can remember some of the old "Whippin' the Cat" men who used to live or work in Tuftonboro, N. H. where I was born. Most of my life has been spent in Boston, but I am New Hampshire born anyhow.

The paper is always clean, always good and

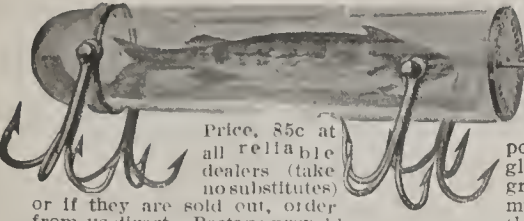

cap Tournament will be held in Grand Park, Chicago, Illinois, on August 16, 17, 18, 19 and 20, 1915, under the auspices of the Chicago Association of Trap Shooters. There will be \$3,500 added money and the winner of first place in the Grand American Handicap will be guaranteed \$500 and a trophy; the winner of second place will be guaranteed \$400 and a trophy; the winner of third place will be guaranteed \$300 and a trophy; the winner of fourth place will be guaranteed \$200 and a trophy, and the winner of fifth place will be guaranteed \$100 and a trophy. Numerous other trophies will also be awarded.

Also announce that the tenth Southern Handicap Tournament will be held at Memphis, Tennessee, on May 11, 12 and 13, 1915, under the auspices of the Memphis Gun Club. There will be \$1,000 added money and the winner of first place will be guaranteed \$100 and a trophy; the winner of second place will be guaranteed \$75 and a trophy, and the winner of third place will be guaranteed \$50 and a trophy. Several other trophies will also be awarded.

The tenth Western Handicap Tournament will be held at St. Louis, Missouri, on June 15, 16 and 17, 1915, under the auspices of the Missouri Athletic Association Gun Club. There will be \$1,000 added money and the winner of first place in the Western Handicap will be guaranteed \$100 and a trophy; the winner of second place will be guaranteed \$75 and a trophy, and the winner of third place will be guaranteed \$50 and a trophy. Several other trophies will also be awarded.

Elmer E. Shaner, Treasurer and Manager.

FISHERMEN! A Wonderful New Fish Catching Bait
—Use One Live Minnow All Day

This is the new, live minnow bait that is making such a great record for itself—that is the talk of the country. Excels all other artificial bait. Strong, clear, magnifying glass tube, housing a live minnow. Wonderful power of attracting fish lies in fact that, when in water, the glass apparently disappears, leaving minnow clearly visible and greatly magnified. Minnow has fresh water; stays alive; never mutilated; can be used all day. Experienced fishermen tell us that it is the most wonderful bait they have ever used.

Price, 85c at all reliable dealers (take no substitutes) or if they are sold out, order from us direct. Postage prepaid

DETROIT GLASS MINNOW TUBE CO.
56 West Lafayette Blvd. DETROIT, MICHIGAN

EXCELSIOR BELT SAFE--Absolutely Water-proof
Indispensable to the BATHER to put your Eyeglasses, Jewelry, Bathhouse Key in before going into the water.

Heddon's Genuine **Dowagiac Crab Wiggler**
Scurries Backward Like a Live Crab

The first Casting Imitation of the Natural Food of the Black Bass

No. 1809

BASS can't resist it—because it looks and acts just like their favorite food, the crab or crawfish. Accurately colored in the wonderful Heddon Porcelain Enamel, guaranteed not to crack, peel or flake. Just the right weight and balance for casting. Floats when at rest, but dives and zigzags backward when reeled in. Hooks held in the patented "Dowagiac" sockets, so they can't foul each other or mar enamel—and they get the fish. Variable line fastening governs depth and action. You need this "Crab Wiggler" in your tackle box. It's a winner. Also in other Heddon colorings at same price

85c

IT'S A YEAR OF WIGGLERS

More wiggling, diving baits will be used this year than any other style—chiefly Dowagiac "Wigglers," of course, because of their reputation and many advantages—non-cracking enamel, variable line fastening, "Dowagiac" hook sockets, and superior workmanship. Dowagiac Minnow "Wigglers," deep water style (No. 1600) and shallow water style (No. 1700) sell at 75c in various colorings.

ART CATALOG. A book you'll prize. Shows all Heddon tackle in colors, including the famous Jim Heddon's Casting Rods. Full of practical advice on expert casting and more successful fishing. A postal brings this book FREE.

THE AMERICAN INDIAN LANGUAGE.

(Continued from page 239.)

in leading peculiarities of grammar, with the Algonquin languages. These two, often called Mother tongues, may be inferred to belong to the same high generic family. Again, fundamental analogies with European tongues which pervade and form the basis of the Algic system show clearly an affinity between the languages of the two continents."

Many authorities agree on the theory that the ancestors of the American Indians are of Asiatic origin having crossed over to this continent by way of the Behring Straits. As evidence of a former intimate connection between the two lands by way of this northern passage, Father Richard told an interesting story. A good many years ago, a Jesuit missionary, who had been stationed among the western Indian tribes, was ordered to Tartary. There he met a squaw whose language he understood almost perfectly. She told him that some years previous to the time of his visit, she had been carried away captive from America by a band of Tartars, and that these people used to periodically raid the coasts of northern Alaska.

To-day, the Jesuit missionaries in Alaska minister to the Indians on both sides of the Straits, crossing and recrossing, in winter time, with dog teams on the ice. They have found that the two divisions speak the same tongues.

"Thus, you see, the study of the Indian language leads us deep enough into the history of nations to establish an intimate relationship between the primitive inhabitants of the Old and New Worlds. This alone should be incentive and reward to the student of Indianology."

Gradually the old priest, as he delved deeper into the beauties of this, his pet study, became more and more imbued with the spirit of his subject.

"But," he continued, "we have an interest in these Indian dialects that rises above mere literary curiosity. The Indian names now permanently attached to our cities, lakes, and rivers should have a peculiar interest to us all. Throughout all generations their language will continue to be spoken in our geographical terms. No one can turn to the lake, or river, or stream, to which the original lords of the land have bequeathed a name, without confessing that the Indian has perpetuated himself by a monument more eloquent and more imperishable than could be erected by mere human hands.

"Although obliged to disappear before the white man, the former savage has compelled his invader to adopt and preserve these denominations. The descendants of the Indians have kept, with great fidelity the names of their ancient localities, and have bestowed them upon our villages and cities, as they have successively appeared. It is but a fit tribute to our Indian predecessors to record the baptismal names of our rivers, lakes and streams, and also of their ancient sites."

In a list of the lakes of the United States, published in 1885 for the Fisheries Commission, two hundred and eighty-five bear Indian names. A larger proportion is shown in our rivers and streams. In a list of the principal rivers, flowing into the Atlantic and the Gulf of Mexico, but excluding those of the St. Lawrence basin, seven hundred and twenty-four have Indian names. If we added to these the Indian names of the St. Lawrence Valley, those attached to the waters of the Great Lakes, the Saskatchewan, the numer-

ous other great northern and northwestern watersheds, and the lakes and streams of the Pacific coast, the list might easily be doubled.

One must bear in mind that these have all not the true pronunciation, but have been disfigured by the early voyagers and trappers, who by mispronunciation destroyed and rendered them incomprehensible, in spite of the reclamation work of Indianologists who were anxious to preserve the true pronunciation.

KEEP YOUR RAZOR SHARP

Don't blame the razor if it dulls quickly. Maybe it's your fault. Rub a few drops of 3-in-One oil on your razor atrop. When leather is pliable atrop as usual. Any razor will cut easier, better and stay sharp longer. After using, draw blade between thumb and finger moistened with 3-in-One. This prevents rust, keeps edge smooth and keen, always sharp and ready for immediate use. Don't scrape your face. Use 3-in-One on your razor and shave right. **FREE** Write for liberal free sample and special scientific circular. Try it yourself. 3-IN-ONE OIL COMPANY. 112 New St., New York.

MEN!

Here is just what you have been looking for, the swell-est vest on the market, made of deerskin with fancy fringed pockets. A vest that will attract attention and admiration everywhere. Order one to-day, price only \$4.00. Also dandy deerskin shirts for sportsmen. Send for price list of Indian Bead Goods.

"ALBION" WADERS

The only Perfect Waders

We have tried for many years to obtain a line of Waders that would give satisfactory service. We have now marketed these goods for three years and they have given UNIVERSAL SATISFACTION. The material of which they are made has proven to be the most DURABLE, DEPENDABLE and WATERPROOF on the market.

The medium weight are the most satisfactory all around Wader made. They are lighter than the domestic goods and more flexible.

The light weight are very light (a pair of stockings weighing only 22 ounces) yet they are quite durable and can be safely used for a long time by a careful angler.

Across The Heart of Newfoundland

Story of A Journey Through a Fish and Game Region at the Front Door of Civilization But Hitherto Unexplored

Narrative of a Trip by Raynal C. Bolling and Livingston E. Jones From the Journal of the Former.

FOREST AND STREAM regards this story as one of the most interesting and important of the year. How few people realize that portions of Newfoundland, the "Ancient Colony" are still unexplored and unmapped! The young men who made the trip described herewith, were for twenty-six days as much out of civilization as though they had been in Central Africa. They were the first to cross Newfoundland along the route described, and they discovered quite a number of new lakes and found much new hunting ground. The story of their adventures will run through several issues of this paper.

TRIP into the bush never really begins until hard-soled shoes and white collars have been laid away in the trunk. It was a bright August morning when the S. S. Bruce of the Reid-Newfoundland Co. brought us to Port aux Basques, which is named from the Basque fishermen who used to put in for water and harbor. The steamer that we had expected would take us to the mouth of Little River on the south coast was reported two days late, and as our time was limited, we spent the morning trying to find a power-boat large enough to take us and our two men, John Gillett and Will Allen, together with equipment, along the ninety odd miles of rocky coast. There were but three boats we could find, and after a regular Spanish-American negotiation with each of the owners from whom it was impossible to get a definite answer, we were much discouraged until Bolling proposed that we take the railroad to Badger, and from there, work south across the island, instead of following our previous plan of working north from the mouth of Little River.

The men were pleased because we were at least to start in a country that they knew, Gillett having driven the lower Exploits River.

A freight train was about to start, and with the kind assistance of Mr. Mosdell, the agent of the railway company, we were able to stow our duffle in a box car, lash two 18-ft. canoes on top, get aboard the caboose and we were off.

Leaving Port aux Basques, the road runs along the top of cliffs seventy-five feet above the ocean, the surf breaking on a narrow sand beach directly under the train. Soon the rails leave the shore, and the freight jumps and jerks over the sprucewooded hills. When the engine needs water, we stop on a trestle over a small stream and pump through a hose into the tender. At one of the stations, a bag of crackers and a bottle of pickles were purchased, which, with some tea boiled on the stove in the car, made our supper, as all the provisions were locked in the freight car ahead. Wrapped in our blankets, we spent the first night on the floor of the car. The constant motion of the train made the floor seem less hard than if it were motionless. The following night, about 6 o'clock, we reached Badger, 300 miles from Port aux Basques, and unloaded our outfit in the rain on the railway embankment, arranged its several hundred odd pounds in canoes and pushed up stream a short distance from the little village, looking for a place to camp.

The tents, to assert their independence, leaked

in half a dozen places all night and kept us shifting about for the dry spots. Breakfast was cooked in a heavy drizzle, and, after getting all of our stuff aboard, we started up the Exploits, which is a big smooth river sweeping down hill, about 300 yards wide, with fast current, but the boulders had all been blasted out for log driving. We soon found that the paddles were of no avail, and that only the pole would drive the canoes. For lunch, we stopped in an old lumber camp to keep out of the wet, and while there, saw a caribou doe swim and wade across the river to our landing, from where she bounded off into the woods. After lunch, we worked up stream about eleven miles, and pitched the tents at an old river driver's camp above some falls that were about thirty feet high where the river comes over a sharp, slaty ledge.

So far as we could learn, no one had ever made a trip through the center of the Island from north to south just east of Victoria River. Those to whom we talked said that we could not do it and would be lost, but we replied that as long as we had food, we were not lost. Some years before, two men had attempted the trip in winter with dog teams on the snow. They were finally rescued, but not until they had eaten their dogs and were barely gotten out alive. Sir John Millais had been well up into the country

eastward of Meelpaeg Lake, which we came into from the west, but we knew of no one who had crossed the more than 200 miles in the center of the Island where we planned to go through. Our men were keen to tackle the country, and we felt it would make a better vacation than the usual autumn hunt. We also had dreams of some big heads in the undisturbed country.

The next morning, the air fairly sparkled, the blue sky broken by drifting clouds. It was nine o'clock before we got into the canoes as all hands were not yet accustomed to the many chores that are necessary in breaking camp. The half a gale of head wind from the west and heavy current made progress slow and together with a number of bad rips, it was 12:30 before we reached the mouth of Noel Paul's Brook, coming in from the south, where we had lunch. This is a fine broad stream, but so shallow that the boats had to be waded. Bolling and I took our rifles and walked along the top of the high bank while the men worked the boats up stream, part of the time wading and part of the time under the pole. We saw lots of open country and red fox. About 4:30, the stream or river became very rough, and we came down into it to help with the canoes. The current was strong rather than heavy, the water from six inches to waist deep, the bottom full of holes and covered with large, round and very slippery stones.

Canvas sneakers or moccasins, having soft soles, are not satisfactory for this work. The feet are pinched and stubbed among the large rocks. A stiff sole with holes in the uppers to

let the water out is the best rig. Camped at the first falls, which was a small one over broken ledges and about three miles above the mouth of the brook where we had lunch. Waiting for us at the falls, was old John Paul, a Micmac Indian, and his sixteen-year old son, who had been sent to this place by the Lumber Company to accompany us as fire warden until we got off their land. He was said to know more about the country than anyone, and was therefore a welcome addition.

At sunset, Bolling and I had a fine bath in the smooth rain-filled rock pools on the ledges where the water had been warmed by the sun. The pools were about the size of bath tubs, and there being half a dozen of them, we enjoyed a rare luxury of soaping in one tub and rinsing in another.

The following morning gorgeous. To lighten the canoes, which had to be poled up rather stiff rapids, Bolling and I traveled ashore, first across a smooth barren, but soon the timber beginning, we found the best going along the edge of the stream. Part of the way there was a good game trail, and we saw a doe that was not at all afraid until we were within a few yards of her, when she trotted off, and just as we stopped for the night, saw a stag of 24 or 25 points.

Rain began before daylight, and we had breakfast in a downpour. Were off at nine, and in an hour, reached the falls. "Carried around." Some heavy water for next three-quarters of a mile to a second falls. Here we were able to drag the canoes up a turbulent sort of sluiceway among the boulders. Once above this bad water, we struck Noel Paul's Steady, a beautiful waterway like a long and narrow lake, with scarcely any current, but flowing strong and smooth where it narrowed.

The rain had ceased, and we had lunch on a pretty point looking up the Steady. Seeing a large stag on a point opposite, Bolling tried to get a look at him through the glasses to see just how big a head he had, but before he could do this, the stag went into the alders. After the down-pour of rain all morning, it was a gorgeous afternoon, paddling up the nine or ten miles of Steady, the western sky like pearl against gray clouds. A strong current developed at the upper end of the Steady and a bit of bad water. Rounding a bend, we came upon a high falls with very heavy water that the old Indian, John Paul, did not know was there. In this series of falls there was a drop of more than one hundred feet in a quarter of a mile.

The next morning, we were hard at work cutting out a short half-mile portage on the southerly side of the falls. Packed the outfit over and had a short stretch of stillwater, when we came to another small falls over which the boats had to be dragged. Short stretches of smooth water and several rips, but nothing bad. Just as we were stopping for lunch, Bolling saw a stag of 24 points on the opposite shore a hundred yards or so ahead, and as I had never shot a caribou, he insisted that I should go over and get him. He was feeding in and out of the edge of the alders, and allowed John and me to get within fifty yards. It was like shooting a cow in a barn-yard. The liver we ate at lunch as it was less tough than the rest of the meat, from being so fresh. At this stage of the journey, we had such entire faith in our food supply

that the addition of fresh meat was merely an incident and not an event of much importance as it would have been later. We put most of the meat, including the horns, in the canoes.

After lunch, a continuation of rather hard work with pole and paddle until 4:30, when we came through some pretty bad rapids, rounded a bend and found another big falls above which was a gorge half a mile long, filled with very heavy rapids. As our Indian, who was said to know more about the country than anyone else, had never heard of these falls and we were no doubt beyond the land claimed by the Lumber Company, we were well into the country and only a few days' journey from the watershed, on the other side of which we hoped to find streams running south through which to work our way to the coast. Working up to the head of the gorge, one of the men climbed a tree and reported the country ahead as fairly flat, which was interpreted as a good sign.

The following morning was cloudy, but no rain. Crossing just below these falls, we unloaded the canoes, carried the stuff about one hundred yards and lifted the canoes up over the edge of the falls. Tow lines, sixty feet long, were attached to the bow of each canoe, the loads securely stowed and all hands set to work to drag them up through the gorge, down which the water was rushing in a stream 200 feet wide and mostly white. The sides of the gorge in many places were perpendicular rock twenty-five feet high; sometimes a ledge of a few inches in width would enable us, with the aid of

setting pole, to crawl along the face of the rock, or if this was not possible, to climb through or over the thick evergreen brush on the top of the cliff. The tow lines of the canoes had to be kept on the face of the cliffs with often two men working the line and the other two with poles on shore opposite the boat. It was pretty risky work as we were in and out of the hard rushing water, nearly waist deep, all the way. Lots of chance to lose a canoe and outfit.

At the head of the gorge where the stillwater began, the Indian and his boy turned back, having left their canoe at the foot of the falls, and I think they were sorry to leave us as they would have enjoyed the new country. The Indian's canoe was only fifteen or sixteen feet long, and it was a perfect delight to watch the old man and his young son climb up through white water, the youngster standing up in the bow with a short pole, driving first on one side of the boat and then on the other, his whole body in every shove. Then, when the going was a little stiffer, the old Indian, crouched in the stern, would jab down his pole, and hand over hand, reach up to the end of it until he was erect, and then with the weight of man and boy on the poles, the canoe would raise a bit and shoot forward over the rushing water.

Going through half a mile of stillwater, we came into a small lake three-quarters of a mile long. Here a brook coming in from the south looked as if it might head into the country where we wished to go. We now believe it was about opposite Maelpaeg Lake to which we afterward came. But the brook was a small one

and came rattling down over the stones and was too near to the falls to seem right from the map, which we subsequently found was wrong. We therefore continued on through the stillwater to a second lake about a mile long. After this lake, more bad water. Going about a mile further, we became doubtful as to the proper course, as both maps were clearly wrong. We did not, however, feel justified in leaving such a large stream of water and packing south across country, not knowing how far we would have to go to find streams running south. It was puzzling to have our river and its lakes, many of them of considerable size, not shown on the maps, and bearing much further west than we wanted to go as it was taking us too far west of Maelpaeg waters which drained into Little River. However, we had food, and though it was hard traveling, we were seeing some beautiful country.

After lunch, we kept on up river for about three miles through bad water, using paddle, pole and tow-line. It was hard work all the way, and we made camp for the night in a clump of swamp spruce. John again climbed a tree and saw a large lake about one-quarter of a mile ahead. We were by this time pretty doubtful as to our course, but felt sure from the volume of water in the river that there must be some lakes ahead and that we should have a better chance of finding water going south by keeping on until we reached the watershed, wherever that might be.

The air-beds were not only great time savers in making camp but enabled us to pitch the tent on wet or comparatively stony ground. To save weight, they had been made to reach only from the shoulders to the knee, which is all that is necessary, boughs being put under the head and feet. When running the canoes in bad water, the beds were inflated and lashed under the thwarts.

Sunday, August 31st. Dark day, but no rain. Breaking camp and getting away as early as possible, we worked through a quarter mile of rough water where most of the way the loaded boats had to be brought up under a tow rope along the shore, as a paddle was out of the question and the river was so pockmarked with deep holes that it was too risky trusting to a pole. One of the party would go ahead on the boulder-strewn shore with a rope while another of us opposite the boat, with a pole, wading or jumping from rock to rock, many of which were submerged, kept the boat clear by pushing the bow or stern. It was a matter of nice calculation for the man with the rope to know just how hard to pull or how much to ease up when the heavy cross current took hold of the canoe. Much too large a part of the whole upper river had to be handled this way and progress was slow. The lake that we now came to was about three miles long by half a mile wide, with a high, bare-topped hill on the southern side near the outlet and two more hills later appearing west of it as part of the same ridge, one of which we climbed in three-quarters of an hour, to see a small lake on the southerly side. The river we could see went up through a mile of fast water to a long large lake.

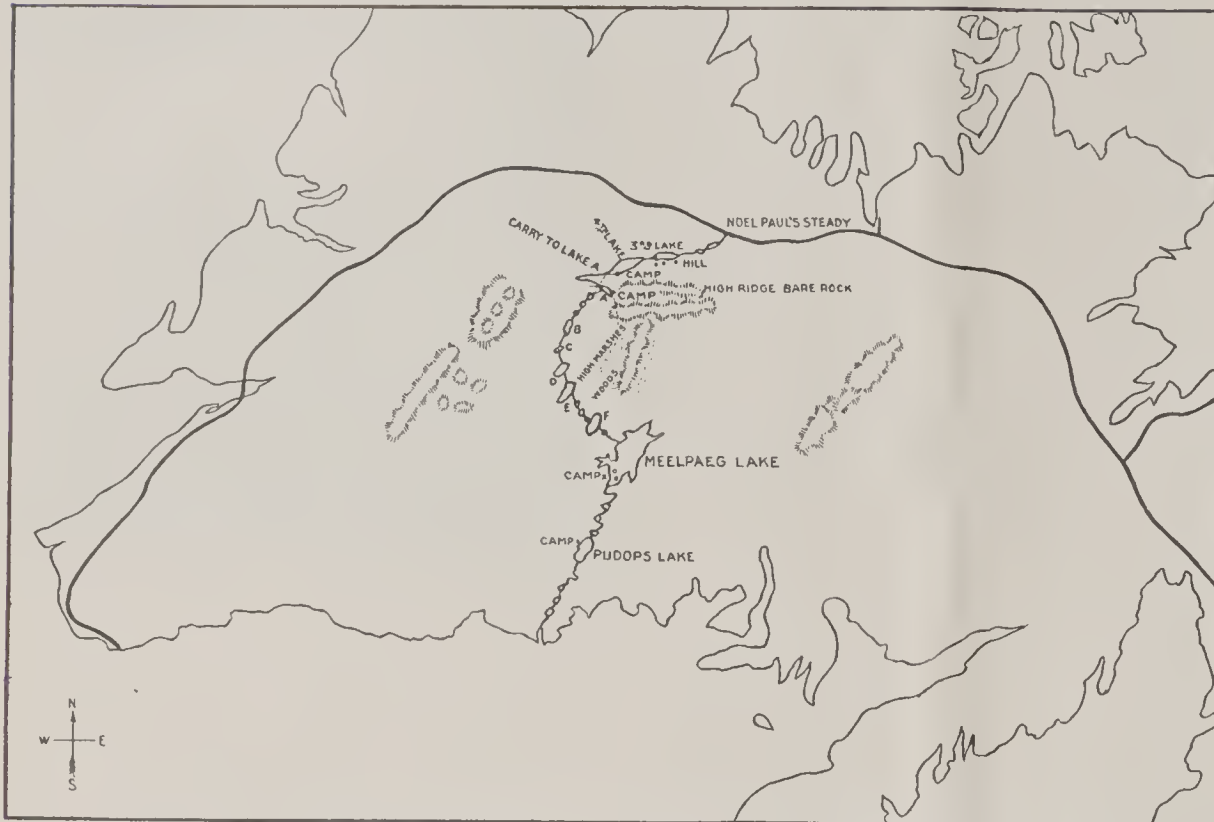

Maps were useless and we were more than doubtful as to our course, but decided to go on. Reaching the head of the lake, after coming down from the hill, Bolling and I splashed

along with the tow ropes again, and just before we came in the large or Fourth Lake, found a bit of very heavy water. Bolling and John were dragging their canoe with a rope along the shore where the rapid was heaviest, when the stern hung on a submerged rock and a heavy sea came over the side; a quick slacking of the line to let the canoe fall off with the current was all that saved her. The water in the river was so strong that if the canoe once got across the current on a rock and swamped, it would crumble like paper as later in the trip happened.

The Fourth Lake was five or six miles long and a mile wide, very beautiful among the blue hills. A strong head wind blowing from the west made all the chop the heavily laden canoes, dodging up along the south shore, could stand. Large rocks just under the surface a couple of hundred feet out where the bottom was eight or ten feet down, forced us to keep off and take the seas. Not being experts at running in the trough with canoes heavily laden, we had to slide them side-ways, quartering the sea in rounding the rougher points. The lake bears east and west, but about two miles from the upper end, bends away west southwest. Landed on the southerly side near the inlet, and as we had passed no other stream coming in from the south, the men were now sure we were on the wrong course, being too far west. Bolling insisted that we climb the heavily wooded hill just south of us until we could see to the south. So off we scrambled through some very thick and tangled growth and up over a high precipitous moss-covered ridge; no trees high enough

Map Showing Route Followed by the Explorers

above the others to make climbing one worth while. The outlook was certainly not favorable, but Bolling felt sure from what we had seen from the peak further south that the barrens made round southwest of us and pushed on ahead.

Sure enough, after coming out of the woods and crossing a long narrow bog, there was a rocky ridge. The sun had now come out and we pushed up over the ridge to a magnificent lookout dominating the whole country. We could see twenty miles in every direction and forty miles in some. Blue hazy ranges of high hills appeared on the horizon from the northeast around on the north to the southwest. Twelve or fifteen lakes and rivers were in sight; Red Indian Lake and Victoria waters were clearly seen, but not Meelpaeg, the goal of our desires, because it would take us south. But we felt sure that from a high barren ridge two miles south we could see it. Caribou leads like cow-paths were found in every direction, with a stag and five does not too far away. We traveled the two miles back down to the canoes in high spirits and made camp on the shore of a lake, knowing that we were finally at the height of land but not sure if we could find water running south within five or twenty-five miles.

September 1st. The next morning was one of those sparkling, clear days that only the northern country knows. We decided to go to the ridge to the south seen on the previous afternoon, Bolling and I taking outfit enough to camp on the high barrens. The men kept talking of the brook away back twelve or fifteen miles down the river we had worked so hard to get up. They were mesmerized by the map, in which they showed a child-like confidence, although the use of dotted lines on it showed its makers were in doubt as to this country. To satisfy them, they were to be allowed to go back through the bad waters with the lighter of the two canoes and to explore the brook should the lookout today not give us a satisfactory lead.

It was a hard pack up the hillside, covered thick with blow-downs, and so steep that it was

easier to go on all fours, big gobs of moss coming away from the rock and letting one slip back every other step. The small pack of thirty-five pounds with rifle and glasses was heavy enough. Passing over the high ridge we reached the day before, Bolling and I established a camp about a mile beyond in a droke of thick spruce and twisted juniper at the head of a little lake which we called Lake A. While having lunch here, saw a stag standing on the highest point of the next ridge to the south about a mile away and could make out with the glasses what appeared to be a good head. As he was in our line of travel, we set out to look him over, and after a fairly hard, fast climb, dodging a doe meanwhile, got within seventy-five yards of him, but he had no brow pans and only two dozen points, not worth shooting. We had, however, the fun of the stalk. This stag had stood almost motionless on the ridge in the strong wind and sunshine for two hours. In caribou hunting, unless the shot is a difficult one, the sport is over when the gun reaches the shoulder, for modern rifles have given the hunter all the odds.

When he stepped off in a long reaching trot, we went up to his lookout, and at last, saw our long sought Meelpaeg Lake, ten miles due south and twelve or thirteen miles due south of the head or Fourth Lake, where were our canoes. Six or seven miles away, south southeast was another ridge giving a better view of Meelpaeg and we set out for that, but it was now 2 o'clock, and after traveling some miles over all sorts of a broken country with rocky barrens and high wet marshes, we found we could not reach the next lookout and get back before dark, so we turned around, and soon saw another stag with a head very similar to the one we had seen earlier in the afternoon, but still having meat enough, he was only interesting from the standpoint of nature study. It was here decided that the men should leave Bolling and me and circle west and northwest to see which way the water ran in the chain of small lakes below us,

and to the north and west, while Bolling and I would return to the lookout where we had seen the first stag in the hope of seeing a larger head and after that return to our camp on Lake A, while the men would return to the other camp on Fourth Lake, where the canoes were and come up to our side camp on the high barrens the next morning, when we planned to explore the country toward Meelpaeg. Bolling and I stayed at the lookout until towards sunset, seeing a small stag and several does and fawns, and then went to our camp on Lake A.

After traveling hard for so many days up the roughest kind of a river and in doubt as to our way, there was cheer and stimulation in at last being on the top of Newfoundland, with wonderful views stretching in every direction. This high central plateau is devoid of timber, except wind-blown twisted growth in the little valleys. The rolling barrens and marshes are strewn with every conceivable size and shape of boulders, many of them as large as a three-story house.

We had done a hard day's work before reaching our camp in the dusk, but Bolling, always ready with the axe, went busily to work cutting firewood, while I cooked the supper. Food was welcome and then the pipe, while wet stockings were pulled off and dry ones put on. No place so cheerful as the tent with the soft air bed and warm blankets, for frost was in the air. A last look at the fire in front, and pulling the blankets over our heads, we were soon asleep.

(To be continued.)

MOSQUITO-PROOF TENT.

The top is formed with a light hoop, about 2 feet in diameter, covered with muslin like the head of a drum. Two strong pieces of tape are sewn from side to side of the hoop, crossing each other at right angles, and at the center where they meet is attached a thin rope about 10 feet long. To the muslin at the rim of the hoop is sewn a quantity of coarse cheese-cloth or "tarleton," descending so as to form a bell 6 feet in height and 8 feet in diameter at the ground. Around the lower edge, at intervals of 2 feet, are small tape loops for pegging out wide when two or three people wish to sit inside. The whole article weighs only about 2

pounds, and can be folded flat so as to go inside a bag when traveling. When required for use the rope at the top is thrown across the branch of a tree and drawn up just enough to let the lower edge of the cheese-cloth or "tarleton" rest on the ground. Danger from fire can be avoided by soaking the screen in a solution of tungstate of sodium.--J. J. M.

An Interrupted Excursion to Confluence

A Little Earthly Paradise That Exists Somewhere Among the Mountains of Southwestern Pennsylvania

By Benjamin Pullrod.

CONFLUENCE is a little village in the mountains of southwestern Pennsylvania, some twenty miles east of Uniontown, where three streams come together. These are fed by small runs, tumbling clear and cold down the neighboring ravines, or winding quietly through the valleys. For the most part these runs contain a very fair sprinkling of speckled trout. At Confluence the stranger may pick up any desired number of unoccupied villagers to escort him over the country, especially if he should happen to carry a bit of the stuff that cheers in his creel.

I had been there two Junes ago, and now it was another June, which meant another violent attack of spring fever, only to be allayed by a few days in the open. By chance lunching with my friend Dick, ordinarily a business man of considerable energy and application, to my astonishment I discovered in him a latent and somewhat timid germ of my own malady. By glowing descriptions of bosky wood and mountain brook, by hair-raising tales of huge, imaginary trout that broke rods and lines and even endangered lives, I nursed and fed this embryonic germ, until it became a vigorous, permeating thing that took hold of his whole system and overpowered him. Snatching the auspicious moment, I bound him then and there to join me the next Thursday morning, ready at seven o'clock to crank the machine and start away.

I got everything ready. There was the tent, for we were going to camp. The real outdoor life in the woods for us. None of your tender-foot ideas of hotel or farm house. We would sleep in our own blankets and cook our own meals, wherever the spirit moved us. There were the provisions, the cooking utensils, the blankets, the fishing tackle, the extra clothing.

It was eleven at night when we finally arrived at Uniontown, abandoned the car at the first garage, and sought the arms of Morpheus at the nearest hotel.

We awoke refreshed, looked out of the window into a sunshiny spring morning, noted Uniontown's one lonely skyscraper towering out of the miscellany of two and three story buildings, and went down to breakfast.

We embarked once more under a cloudless sky, over a more or less asphalted street. In the outskirts this asphalt changed to macadam, and presently we were climbing the four miles of spiral road up the Laurel Ridge. At the very top there squats the rambling, wide-verandahed building known as the Summit House, and there we stopped to let our engine cool.

The pleasant macadam shortly gave way to a stony jolting, worn-out rock road that loosened our back teeth and caused the car to buck like

a bronco. Dick tried to keep up a scattering conversation, but the fourth time that he bit his tongue he gave it up in disgust and maintained thereafter a sullen silence. However, this rough stretch did not last long, and presently we made out the good old macadam again away ahead on a hillside, and before long we were coasting easily down into Somerfield, where Carl Springer's tavern occupies the bottom of the V formed by the precipitous descent into the village and the steep climb out. You come in with both brakes set and a sickening dread that you are about to drop over the windshield. You go out leaning far forward to keep your center of gravity where it belongs, while you wonder how much of your baggage has rolled over the rear seat and gone avalanching back down to Carl's place.

But before we went out, we stopped at Springer's to let our brakes cool and to eat our lunch. For the latter we went into the cafe, a step below the ground, which consisted of a long narrow room divided lengthwise in the middle by an unpainted wooden bar, and with a stand-up lunch counter at one end. Behind the bar stood the dispenser of liquid refreshments in flannel shirt and overalls. I turned to a seamed and weatherbeaten old mountaineer at my elbow and remarked:

"I hear Bill has taken out a license, and is making his white whiskey under the law."

He looked me over with a gleam of interest in his hard blue eyes.

"I reckon that's right, stranger. Know Bill?"

"I was up at his still two years ago with Jimmy Pence and Colonel Holburke," I vouchsafed.

"You don't tell! Shake, pard! Why me and the Colonel has been visitin' old Bill together for forty years. Yes sir, Bill has been makin' his moonshine up in the mountin' for more'n forty years, and now he's took out a license."

So then we were friends, of course, and after a number of Bill's narrow escapes from revenue officers had been recounted we told him we were bound for Confluence, and were going trout fishing up above Draketown, near Newton Tannenbaum's farm. He nodded as each of these names was mentioned, and after studying a moment:

"Why don't you-all go over to Karl Miller's for trout?" he suggested.

"Who is Karl Miller, and where does he hang out?"

"Why, Karl Miller, the King of Unamis? Ain't you-all never heard o' him?"

We confessed our ignorance. So he told us about King Karl of Unamis, and the natives in the room gathered close around to listen eagerly, and occasionally to contribute additional data. When he had finished and had traced the route to Unamis on a large scale county map that was the only decoration of the plastered walls, we

left the tavern converted, and pointed the car for Unamis.

Thus far we have taken the reader along with open frankness, describing our route so that a child could follow it; that is, if it were a very bright child, and had an experienced guide along. But now the time has come for caution. Unamis is not for the many. The way must not be made too easy. Emerson says of him who can do any one thing better than his neighbor that "the world will make a beaten path to his door." Unamis can furnish better fishing, pleasanter surroundings than any of its neighbors that we know of. Above all it can furnish a host without a peer. Let the world make the beaten path. We do not propose to do it. However, perhaps it is safe to say that we left the pike at the small village of Addison, passed through a mining hamlet, and feeling our way over a road so rough and narrow, so walled in by the forest that to have met another vehicle would have been a calamity, we came out into the open, and there we looked down upon a charming valley, where a broad torrent of water curved between two thickly wooded thousand-foot hills, like a ribbon of silver chased with ripples and splashes of spray that flashed in the sun streaming down from the edge of a cloud.

In the immediate foreground, a stone's throw back from the road, there stood in a clearing to the left, a frame building, a story and a half high, fronted with a porch a step from the ground. Directly across the road two small cottages were perched on the first rise toward the right hand mountain. We descended into the valley and stopped the car opposite the first mentioned building, which proved to be a country store. We got out and sauntered up the path. A cloud of smoke drifted out from the porch, and we made out a black cigar protruding between a heavy mustache and a square cut beard. A pair of shaggy eyebrows thatched two twinkling blue eyes that regarded us intently from under the shadow of a brown slouch hat. The figure stretched in the arm chair was thickset, with perhaps a leaning to corpulence. The feet were on the railing. We hailed it with:

"Can you direct us to Karl Miller's?"

He bit the end off the cigar, rolled it a moment in his mouth, then spat it out.

"They call me Karl Miller," came the answer, and he took his cigar from his mouth. His lips parted, his mouth widened, his eyes narrowed to slits bracketed at the corners with little wrinkles—he smiled.

Since leaving Springer's tavern rain clouds had been gathering, and the sky was overcast, but when that smile played over his features, the clouds opened up, the sun came out, an oriole began to warble from an apple tree in the yard, a rooster on the path flapped his wings and

crowded, and a large yellow tom cat that had been sleeping at the other end of the porch, got up, yawned, stretched his four paws till his belly touched the floor, and came softly to rub his arched sides against Karl Miller's legs. It was an irresistible smile. A jumping toothache could not have kept us from answering it with another.

"Are you Karl Miller?" we smiled. "Then this is Unamis and you are King Karl?"

"This is Unamis," he returned, "and I have reason to believe that they do call me King Karl."

"Can we fish here?"

"You can do anything you like here that is becoming to gentlemen."

The smile lingered. So did the conversation. We learned that for three miles up stream the valley and the mountain sides were his. He had come out there some five years ago, having picked up his thousand acres for a song. He was practically alone in his little kingdom, with only a farm house or two within a four mile radius, and a dozen, perhaps, if you took in four miles more.

He took us over to see his house, next door to the store, where his two men and their families lived, as well as himself. It was a well built country house, not a bit pretentious, but substantial and comfortable, and suggesting an acquaintance with the luxuries of the city. The linen was of good quality, there was a library of well selected books, there was a rug here and there of excellent pattern. He conducted us across the road to inspect the cottages, which were four room bungalows with each a little bath room, with running water from a reservoir on the mountain side above. He informed us that he intended to make this a summer resort, and mentioned the price of the cottages, which was so insignificant that we looked at him in doubt. He only smiled.

Across the road again he led us to see his trout pond, where we watched as many as fifty

big fellows lazying in the pool, while he explained that this was intended for ladies only. No man might despoil this treasury with rod and line, save only if he were so unskillful as to spend two entire days along the stream without reward. Then three casts over the pond were allowed him. He showed us his cows and horses and chickens, and at last we followed him down into a dank shady glen, in whose heart lay a black pool, with a thick snow-white foam covering half the surface. This, he told us, was a spring of lithia water of great medicinal virtue, and would some day become famous throughout the country, for its curative properties were established. He would later show us the government analysis and reports from eminent physicians to prove it. We drank copiously and courteously, and the taste fully warranted his assertions. All the while he carried on a breezy conversation, touching on this subject and that with animation, sometimes fixing a point with a quotation, again with an anecdote, showing now and then a speaking acquaintance with politics, with history, with literature, and ever and anon breaking out into that infectious smile, that ended in rollicking, spontaneous laughter.

At length we strolled back to the store, and he invited us to his sanctum, or throne room. We followed him through the long store with its amazing assortment of merchandise, back to a small office in the rear, partitioned off by unpainted pine and dingy ground-glass and he ushered us in. A roll-top desk occupied the prominent position, groaning with papers, loose and in piles, letters in their envelopes scattered about and tied in packages, books on farming and chicken raising, government reports, photographs and photo films, pipes and broken cigars, and a general disarray of miscellaneous articles. Two chairs, besides his revolving desk chair, and an old egg stove completed the furniture, if a worn, colorless rug on the floor be excepted. He got out a large bottle of lithia water and set out

glasses, and we lit our pipes to smoke things over.

Meanwhile our minds were furtively busy, trying to find out the solution of the puzzle. Why had this man of evident breeding and education, this delightful companion, who entertained a couple of strangers with cheerful urbanity, buried himself in this lonely wilderness, with only two hired men for company, and the nearest farmer, even four miles away? A little girl came shyly into the store. He excused himself to wait on her, and we saw him open the back of the candy case and get out an "all-day sucker," which he handed to her with a smile as she held up her penny.

"Don't know what I'll do, if business keeps up this way," he chuckled, as he returned, "guess I'll have to get help. My wife was here one time when that little girl came in with her penny and she saw me make the sale of one lolly-pop. 'The idea of a man who once sold bonds in hundred thousand dollar lots, retailing candy over a counter,' she scolded: 'You ought to be ashamed of yourself,' " and he laughed aloud at the memory.

I seized the opening: "You're married then?" I questioned. "Oh, yes, my wife lives in the city. She likes it there. I like it here. I drop in on her occasionally and she reciprocates. She likes society and I don't. I like the country and she don't. So there you are."

"What do you do to keep busy?" Dick ventured.

"Oh, I look over the place and boss the men," he replied, "and tend store. And when my friends come out I entertain them."

"Don't you get lonesome when none of your friends are around? How do you keep cheerful all by yourself?"

"I think over the good times I've had," he answered. Then he changed the subject by suggesting a good camp site, inasmuch as we were determined to camp out, though he renewed his former invitation to stay at his house; at a price, he explained, for Unamis was strictly a business proposition, but again the price he mentioned was ridiculously inadequate.

Evening was approaching when we left him. We should have been fishing all afternoon, but he had held us like the Old Man-of-the-Sea. We followed the road about a mile up the valley, found the site he had described, made our camp, and considered the business of getting our supper. I suggested that we alternately take charge of the meals, and that Dick start by cooking the supper and washing the dishes, and I would get breakfast. He said the idea was all right, but it would be better for me to take the first meal, because I was experienced, and he could watch the process and be ready for the next one. I said there was a flaw in that argument somewhere, and he demanded to know where. After considerable study, I suggested that we take this one meal at Miller's, but after that arrange a satisfactory plan, and cook all our own meals as every true sportsman should. He agreed, and we jumped into the car and hurried to the store. We found the King just locking up. "I thought you might be along," he chuckled, "and told the cook to be prepared. Glad to see you. Come right on over."

The dinner? There is no use trying. The dictionary is a wonderful book. I believe it is supposed to contain every word in the English language. But it does not contain any that are adequate to describe that dinner. I hunted all

It Was the Big Trout.

through it and I know. The chicken alone would strain it, and when it comes to the buckwheat cakes, and the steaming coffee, and the apple pie, the poor book would burst its covers in shame. It was a dinner fit to set before a king. And the king was worthy of the feast. He regaled us with stories of the natives in the neighboring country, stories of his experiences in politics, and in the bond business, stories that had nothing to do with any of these things, and more than one cacophonous peal of laughter went around the table.

When the dinner was over, we repaired again to the store. He got out a device that he called Zig Zig, which consisted of a board with a narrow alley along each side, and a number of wire wickets and cages between the alleys. You shot a marble up one of the alleys, and it rolled down among the wickets, knocking against them all the way, until finally it came to rest in one of the cages. There were numbers giving different values to each cage, and you counted each one in which the marble delayed or stopped. We hung over this breathlessly, the gambling running high with pennies and nickels, till nine o'clock came and we left for our tent.

The next morning we got up early enough to make preparations for a day's fishing. Neither of us mentioned breakfast. We merely got into the car and drove over to the King's without a word. After breakfast, he handed us each a can of worms, which at first we refused, as we had brought plenty of flies, but he urged them on us in case of emergency, so we put them in our baskets, together with a lunch that he had ready. We ran the car three miles up the road, walked another mile across a meadow, cut through a deep fringe of woods, tied on our flies, and began to fish.

We fished along down stream, trying this fly and that until we had sacrificed an hour or so for art's sake, but had no concrete evidence in the way of anything piscatorial. True, Dick had caught his trousers, and his hat, and I had twice broken my line trying to pull down several trees whose branches overhung the stream. But we could not coax the trout out of their apathy. It may have been that the stream was too swollen, or the sun too bright, or the season too early, for flies. I patiently explained all this to Dick, when he reminded me of the tales I had told him at that first luncheon of ours, and asked me to tell him again what a trout looked like, so he could describe one to his wife when he got home.

Then we tried worms. At once the trout awoke from their lethargy, forgot the poetic side of life, and began to take an interest in practical matters. Soon we had taken three or four fingerlings, and after Dick had enjoyed a strike of more than usual vigor, and I had landed a nice ten-inch trout from the same spot while he was putting on another worm, we decided it was best to separate. The situation was rather too strained.

So I went ahead down the stream until I had put a sufficient number of bends between us for safety, leaving in sadness several likely looking pools to him, and began to fish on my own account. Something was wrong, and after I had tried it an hour or so without success, I gave it up and sat down to eat lunch. Then I lit my pipe and stretched out on the grass at full length, wondering how Dick was coming along.

Bass Fishing on the Delaware River.

Photo by C. L. Pedder

Gradually a sense of complete contentment stole over me, and I began to philosophize dreamily. This was surely an ideal way to live. There were no trains to catch here; no bills to worry about; no book agents with the latest history of the world to beguile out of the office; no street cars to dodge; no mad rush for money to keep a man on edge with tense nervousness. After all, I mused, perhaps Karl Miller had the right idea, living this kind of life from year's end to year's end. Just then a deer-fly struck my cheek with the velocity of a bullet, ripped out a piece of flesh, and carried it off in his jaws, buzzing derisively. I leaped to my feet with a snort, and decided to keep moving. I would fish down to the car and wait there for Dick. Presently I came to a swift riffle leading into a deep, quiet pool of considerable size.

If I had not determined to make this relation strictly truthful; if I had not resolved to leave nothing out, but tell all the facts without reservation, I would eliminate the ensuing adventure, if only for the sake of novelty. For who ever heard of a fishing tale without its story of the big one? But I must not allow the mere desire for originality to interfere with the truth. I must adhere rigidly to the facts. So the incident will have to be admitted.

I cast my hook, baited with a worm, into the white water that swirled between two boulders. As it bobbed along into the whirlpool below, it was suddenly deflected by some side current into the quiet pool beyond, and came to rest under the shadow of a ledge of rock overhanging the edge, just beside a dimly outlined form that looked like a sunken rock or waterlogged piece of tree trunk. This vague form moved aside.

You have guessed it. It was the Big Trout.

Lying down there in the bottom he looked to be nearly as long as my arm and a good deal thicker. My eyes bulged out. My knees trembled. My rod shook and fluttered in my excited hands. I choked off the shout that was about to leap from my open mouth, took myself in hand, and sat down to arrange my disturbed senses in their proper places. Should I call Dick? Perish the thought! I would land this trout by myself and punish Dick for his remarks of the morning. I detoured stealthily through the brush until I

came out into the open just behind the ledge of rock that projected over the pool, and peered cautiously over the edge. The trout was still there.

I selected the fattest, juiciest worm in the can and impaled him squirming on the hook. I worked my way flat on my stomach until my head and one arm were over the ledge, and gently lowered the line, slowly, very cautiously, till the worm dangled exactly in front of those lazy eyes. The big mouth quivered, half opened—then the trout pivoted on his tail, turned his back on the feast, and went on calmly balancing himself on his fins. The insulted worm writhed in humiliation. I tried again.

It is unnecessary to relate the various means I used in the attempt to land that fish. And finally—

He fought like the game creature he was, but the line held strong. When I landed him at last I threw my arms around him and hugged his flapping body to my breast. I laid him on the grass to admire him gloatingly. What a beautiful creature a trout is! Take him just out of the water with his wet, rainbow tinted sides flashing in the sun. Give him a background of green grass to set off his colors. See how garishly the various hues spots decorate his velvety skin. Note the lithe grace of his body, tapering and then spreading into the tail. Observe the delicacy and yet the strength of his frame. Can you think of any wild creature that can equal him for beauty?

With the trout slung over my shoulders, I followed the stream to the car, and waited there for Dick, who soon returned with a nice basket of sixteen very fair trout. I shall not attempt to describe his astonishment when he saw my prize, and I will not even mention his unworthy jealousy. We took them all to Miller's and weighed and measured the big one. The length from nose to tip of tail was twenty-eight inches and it weighed a little over four and a half pounds.

We had it for supper at Miller's, baked and stuffed, and laid out in a long platter, its sides dripping with juice. Its flesh was firm as it went into one's mouth, but broke away into nothing but flavor as soon as it got there. The

Sea Trout of the Eastern Provinces

Little Known Nooks of Nova Scotia and New Brunswick Where Primeval Conditions Prevail and Lots of Fish are Found

By Ellwood Colahan.

CERTAINLY the most popular vacation time and often the only available one is the mid-summer season from the middle of June to the end of August. While this is unfortunate for our ordinary brook-trout fisherman it is ideal for the man who goes after the great silver-clad, sea-going *Fontinalis* that sweep into and up the picturesque rivers of the Maritime Provinces during these beautiful months.

As a game fish volumes could be and ought to be written about the Canadian sea-trout. His temporary sojourn in the salt water seems to serve as a remarkably invigorating stimulant which applied to the natural vigor of the *Salvelinus* (for such he undoubtedly is) renders him a perfect paragon of activity. With this increase of vitality comes also a corresponding increase in size and in many of the New Brunswick streams great salmon-like trout of five or six pounds are by no means unusual. In the writer's opinion the sea-trout is not only without a peer but without an equal as a sporting fish, given a fair comparison of weight and tackle, though perhaps some allowance should be made for the wholesome prejudice that exists in the heart of every honest angler.

The methods of fishing for sea-trout vary greatly with the nature, size and location of the stream to be fished. New Brunswick and Nova Scotia, for instance, present such contrasting problems for the angler's consideration that it is convenient to speak of each separately. First, then, for Nova Scotia.

This charming, rock-bound, little peninsula is only from forty to sixty miles in width with a highish backbone in the middle which renders the streams both short and rapid. The water is the deep, clear amber color so familiar to the hearts of many of our anglers, with frequent pools, innumerable ponds and lakes and invariable long, meandering "still waters" between rapids where the stream drifts lazily through one of the numerous marshes of wet, inoffensive arctic moss and caribou grass, so typical of the Nova Scotia woods. Here the water deepens and blackens and here and here only the sea-trout are to be found. In the more remote and inaccessible streams the number of trout in these places is well nigh unbelievable, although they do not rival their New Brunswick brethren in size. It is absolutely a waste of time, however, to fish the rough water or the rocky pools between rapids, no matter how likely the places may seem—although each angler usually prefers to convince himself of the truth of this assertion the first day out, returning to face the quiet smile of his guide with perhaps more experience than fish.

Of all the Nova Scotia sea-trout rivers, those of the barren, God-forsaken northeast shore, between Halifax and Sydney, are the best. Many of these streams flow through impenetrable wildernesses and are extremely difficult to fish. They are practically unknown to sportsmen and offer, perhaps, the nearest approach to aboriginal conditions to be found in the Maritime Provinces. The banks of the still-waters are often densely overgrown with bushes and alders so that one can scarcely force one's way through them, but the wetter places usually afford good stands. Boats and canoes are very rarely to be had. There are usually trails along the lower reaches of the rivers, but in August and September when the fish have gone up one must literally fight one's way. A tent is useful, and, although one is always wet, either rubber boots or waders are utterly impossible. The writer prefers ordinary tennis-shoes with corrugated soles or light moccasins which stick to the rocks and don't become water logged, but this is a personal whim.

Although licensed guides are rare on the east shore they may be found on some of the larger rivers, and in a few of the better known places such as Muscadoboit, Quoddy Ecum Secum and St. Mary's, small camps and boats are provided. One may always, however, find a native who will know the stream thoroughly and who will usually be diligent and obliging. The rates are cheaper here than any other place in Canada, guides receiving from one dollar to two dollars per day, and board (if one attain to such a luxury) being even less. Among the best sea-trout streams on the east shore may be mentioned the following: Muscadoboit, Cole Harbor, Petpeswick, Tangier, Quoddy, Sheet Harbor, Half-way Brook, Moser's River, Smith Brook, Ecum Secum, Saint Mary's, Isaac's Harbor and vicinity, and the neighborhood of Guysboro'. The first mentioned place is some sixteen miles from Halifax and may be reached by stage from there. In June large sea-trout are caught in the salt water about the mouth of the river on both minnow and fly.

In most of the more remote rivers where the sport is usually confined to the much more delightful art of bank fishing in fresh water the best months are July and August. At Quoddy, eighty miles from Halifax, one can enjoy fine fresh water sea-trout fishing with guides, boats and camp. The trout average from one-half to two pounds with an occasional one on the better side of those limits as well as a stray salmon now and then. This is one of the few places on the east shore where one can combine sea-trout fishing with comfort, for it is usually safe to say that one sacrifices in either what one gains in the other. This principle is well illustrated by the glorious fishing to be had around Moser's

River, Isaac's Harbor and eastward where one must be a veritable Indian in order to keep in the game. The best way to reach these different points on the east shore is by boat from Halifax. Two or three little boats (all different owners) ply along the two hundred odd miles of barren, deserted coast and afford an accessible if somewhat rough and ready means of transportation. Fortunately, for the angler, there are no railroads in this part of the Province, the population being limited to a few tiny fishing and lumbering villages directly on the shore.

Southwest of Halifax along the line of Halifax and Southwestern Railway, most of the good rivers are either preserved or arranged with regular camps and canoes furnished by guides. The fishing here is slightly earlier than in most other places in Nova Scotia, the best time being middle and late June and early July. The fish go up the rivers in runs and the sport is intermittent depending entirely upon the state of the water and the arrival of the fish. In many places in this section by far the best fishing is to be had at the mouths of the rivers in the salt water, and one has not the evenly good, all summer, fresh water fishing of the eastern rivers above described.

At such places as Nine Mile River, Hubley's, Indian River, Ingram River, and the neighborhoods of Chester, Liverpool and the Medway Salmon country, large sea-trout are taken spasmodically and sometimes in great numbers. The latter districts approximate more to the conventional Maine woods than anything in Nova Scotia, and in consequence are not nearly so good or so certain as the less sophisticated region east of Halifax—though the fish average fully as large. Another charm of the west shore is the wonderful brook-trout fishing of the interior and the exceptionally fine canoe trips that go with it. Two dollars a day is the average charge of guides in this section.

The Bay of Fundy shore of Nova Scotia does not afford any sea-trout fishing worth mentioning, but very excellent sport may be enjoyed to the north in Cape Breton Island and Prince Edward Island, some of whose picturesque little streams fairly teem with lusty though rather small sea-trout.

Information as to the sea-trout and other fishing throughout the entire province may be had by mail or otherwise from the Chief Game Commissioner at Halifax who will willingly supply details as to localities and guides not easily obtainable elsewhere. The railroads such as the Intercolonial, Canadian Pacific and Halifax and Southwestern will also provide folders and other information as to the fishing along their respective lines to any person applying therefor. All these railroads have offices in Halifax. It should, of course, be remembered that the game

laws of Nova Scotia impose a license fee of five dollars on non-resident anglers, and that the open season for sea-trout is the same as that for brook trout, namely from April 1st to September 30th inclusive. This brings us to the somewhat simpler and more familiar conditions and methods of sea-trout fishing in the sister Province of New Brunswick and the adjacent portions of Quebec.

Nothing can be imagined more totally different than the sea-trout rivers of Nova Scotia and New Brunswick. Instead of the deep, dark still waters that we have described above, New Brunswick presents clear, glacial colored streams flowing over rocky beds with frequent pools and swift rapids between them. There are few still waters and not many lakes on the sea-trout rivers though an excursion into the interior after brook trout would show both to be of frequent occurrence there. The streams are all beautifully clear and this is peculiarly so of the lovely Gaspé Peninsula in Quebec on the North Shore of the Baie de Chaleur on such streams as the Nouvelle and the Escuminac. Here the pebbles may be counted at a depth of fifteen feet, the fish in the pools being as visible as though on exhibition in an aquarium. The New Brunswick streams approximate much more than those of Nova Scotia to our own semi-mountain trout streams. One fishes the pools with the wet fly in the same manner, with an occasional shot at the rapids in high water.

New Brunswick like Nova Scotia may be divided into a northern and southern district with Moncton as the divisor. With the southern district we shall not concern ourselves as little particularly good sea-trout fishing is to be enjoyed there. It is the famous and beautiful north shore and its environs along Northumberland Strait and the Baie de Chaleur that affords perhaps the most wonderful fishing for both sea-trout and salmon in the world. Probably, in mere numbers these streams do not equal the extraordinary productivity of some of the remote Nova Scotia waters, but in size they average far ahead. In many of the larger rivers such as the Restigouche and Mirimichi, and in many of the smaller ones such as the Tabusintac and Escuminac four and five pound sea-trout occasion no comment whatever while six and seven pounders are by no means unknown. It is safe to look forward to an average of from two to three pounds in any of these streams. The railroads render the entire shore easily accessible and one may often put up with excellent accommodations in neighboring farms. But, as is only consistent with this condition of things, most of the best rivers in New Brunswick for both salmon and sea-trout are privately owned although in many places the trout fishing rights may be secured for a more or less nominal sum. Guides in New Brunswick usually charge between two and a half and three dollars per day with board in proportion. The expenses are, therefore, much higher than those in Nova Scotia.

As to a choice of grounds, the streams are so numerous that I shall only mention a few of the better known ones and leave the angler to investigate further for himself. There are four towns in New Brunswick which will do admirably for starting points, each being located in the heart of a perfect sea-trout country. These are New Castle, where one may fish the Mira-

michi and its many branches in May and June; Chatham where one has not only the great Miramichi but the wonderful little Tabusintac and many others such as the Bartibog and Eskeldoc; Bathurst where by applying to Mr. H. Bishop one may let the rights on the Nipisiquit, whence the Tetagouche, Caraquet and Pockmouche are all available; and, lastly, Campbellton at the head of the Baie de Chaleur and the mouth of the Restigouche where one may choose not only that greatest of salmon rivers equally wonderful for its sea-trout, but the Cascapedia Matapeia, Upsalquitch, Nouvelle and Escuminac, as well. Campbellton is the starting point for the Gaspé Penninsular, above mentioned which contains in the writer's opinion perhaps the most marvellous sea-trout fishing in the world. July and August are the gala months for most of these streams, though the Restigouche and its

given will best accomplish this somewhat difficult task. The rod should be fairly solid and heavy for its length with plenty of "come back" and that sort of supple rigidity which always identifies the really good split bamboo rod. No reasonable expense should be spared on this part of one's outfit. As in all fly fishing the rod is the very gist of the angler's success and the size of one's pocketbook should be the only limitation put upon the purchase of the best rod obtainable. The reel is relatively of little importance. It should hold fifty yards of medium soft enameled silk line. A tapered line is convenient but by no means essential. Fairly heavy trout leaders are usually in order though the writer, personally, leans toward a lighter weight. There is a prevalent notion that sea-trout prefer bright flies but I have never taken much stock in any notion on this much maligned subject.

One Big Enough to Need the Gaff.

tributaries are not at their best for sea-trout until September.

In New Brunswick as in Nova Scotia information as to guides, rates and other details may be easily obtained from the Intercolonial Railway, the Tourists Association in St. John or the Chief Game Commissioner in Frederickton. New Brunswick imposes no license on foreign anglers but if one crosses the Restigouche into Quebec and the Gaspé Country there is a theoretical license of \$10 for trout and \$25 for salmon, although the former is rarely enforced. As in Nova Scotia the trout season remains open through September, the salmon season universally closing on the 15th of August. A few final remarks of general application as to outfit and equipment might not now be out of place.

First of all comes a good split-bamboo rod ten or ten and a half feet in length. I choose the heavier trout rods because in a majority of sea-trout rivers one must deal not only with large trout, but often with grilse and salmon, and it is therefore necessary, if possible, to use a weapon which, affording plenty of play to the half-pounders, will nevertheless cope with a ten or fifteen pound salmon. The lengths above

I have frequently used with success such flies as the Montreal, Cowdung, Brown Hackle (red body) Grouse and Claret, Cinnamon (the last two English) and varieties of the Silver Doctor, Parmachenee Belle and Jenny Lind. Whether the success of these flies was due to any inherent qualities of their own or merely to the fact that they happened to come first in the fly-book is a subject which it is not profitable to discuss. It is possibly true that sea-trout prefer the brighter flies in the salt water, but after they once get fairly into the stream I believe, if anything, the reverse to be the case. As a matter of fact, when sea-trout are rising they will take almost anything and when they are not they will take almost nothing. It is well to bear in mind that the size of the fly is just as important as its pattern, and experimentation is the only way to determine just what size is best. Between Nos. 7 and 12 Limerick are perhaps the usual sizes, although there is a popular hallucination in parts of New Brunswick and the Gaspé Peninsula that sea-trout will take nothing but salmon flies. The sea-trout will also take the dry fly readily in many of the streams of the Maritime Provinces.

New Books for the Sportsman

"THE BIRD BOOK."

Students of natural history, no matter how advanced, will find particular pleasure and value in "The Bird Book" by Chester A. Reed, issued recently by Doubleday, Page & Co., New York (\$3.00 net). This volume is magnificently illustrated with more than one thousand illustrations of birds and their eggs and more than five hundred drawings in four colors, showing birds in their natural tints. The completeness of the work may be judged from the fact that the index contains 2,388 subjects with descriptions of 768 birds from all parts of the country, giving size, range, description of eggs, habits and Latin names, etc. Within the limits of five hundred pages it is of course manifestly impossible to treat of any individual specimen at great length, but the beautiful and accurate coloring of the birds described, make more than brief recapitulation of characteristics unnecessary. There have been issued within the past decade dozens of works on ornithology, but none equal this in scope, completeness nor in accuracy.

THE WILD TURKEY.

A name that stands prominently in American conservation circles is that of Edward A. McIlhenny, with whose efforts toward the conservation of our bird life, notably the migratory birds, everybody is familiar. Mr. McIlhenny is also an authority on hunting and in his book "The Wild Turkey and Its Hunting" he has given us a volume which is apt to find a permanent place on the book shelves of American sportsmen. He tells his own experiences while hunting—how for days he has pursued a fine old gobbler through swamp and bush or waited in a dense thicket to hear his welcome "gobble-gobble-gobble," and his joy at his successful shot. His story, fascinatingly told, is a complete guide to turkey hunting. It is illustrated with some magnificent photographic representations of the wild turkey. Published by Doubleday, Page & Co., price \$2.50 net.

INDIANS OF GREATER NEW YORK.

"The Indians of Greater New York," a volume of some 150 pages, by Alanson Skinner, assistant curator of Anthropology, American Museum of Natural History, New York, is one of those scientific works which really deserve wide popular reading. When Hendrik Hudson sailed the Half Moon into the channel of the river destined to bear his name, he found that the region now known as Greater New York and its environments was owned by a number of loosely confederated Indian bands belonging to three tribes: the Delawares, the Mahikanms and the Mohicans. These tribes were of Algonic stock—at least they spoke the dialect of the widespread Algonquin tongue—and it is with the habits, history and tradition and actual contact with the tribes that were found settled around New York that the author treats. He has evidently done a wonderful amount of research work before setting down the facts given in his book and no doubt he has come near the truth in strip-

ping the veil of legend and dealing with real conditions.

In these days we use names such as Esopus, Manhattan, Canarsie, Rockaway and Hackensack and innumerable other designations of locality as though they were of the English or Dutch origin. As a matter of fact, they designate and illustrate Indian descriptions or appellations.

We must nevertheless take exception to the author's explanation of the meaning of the original word Manhattan. Mr. Skinner with some vividness describes the landing of Hudson, and the timid gathering around him of the native tribes, and goes on to tell how Hudson offered to the wondering wild men a glass of strange liquor which passed around the circle until one brave warrior sprang to his feet and harangued the multitude on their rudeness. Then with a magnificent gesture the warrior said that he believed it was for the injury of his people that that draught had been offered them and that whatever developed it was better for one man to die than for the whole tribe to perish. With these words the Indian bade his people farewell and quaffed the drink. The effect was eagerly watched by the Indians and his subsequent drunken stupor alarmed them, but when he recovered and expressed his sensations as being the most remarkable he had ever had, the entire company wished to drink and soon became intoxicated. For this reason the Delawares know the spot where this strange event took place as Mannahachtanink, the island or place of general intoxication. The general explanation of the word Manhattan is that it was a common term meaning something entirely different and in use by all the tribes in northeast America. It is mentioned by Champlain and other early writers. However, this is splitting hairs and does not in the least detract from the interest or the value of Mr. Skinner's book.

THE REDISCOVERED COUNTRY.

Stewart Edward White is the author of twenty books, most of them dealing with outdoor life, true and simple, and all of them of absorbing interest. In "The Rediscovered Country," giving an account of his last trip to Africa and his surprising discovery of an immense game territory never before invaded by the white man, his fame as an author—certainly as a traveler and a contributor to the best in outdoor literature—will rest. Probably all readers of *Forest and Stream* know in a general way of what Mr. White and his companion Mr. Cuninghame found on this trip, but every man with a drop of red blood in his veins will be thrilled by the description of the great herds of game and the daily experiences of the intrepid travelers who were first to find them. To quote Mr. White: "We found that after all there still exists a land where the sound of a rifle is unknown, as great in extent as the big game fields of British East Africa, swarming with untouched game, and now that the route and the methods have been worked out, easily accessible to a man who is willing to go light and work. Furthermore, I must repeat this is the last new game field of real existence.

All the rest of the continent is well enough known. However, we have the real pleasure of not only opening a new and rich country to the knowledge of sportsmen, but the added satisfaction of knowing that we are the last who will ever behold such country for the first time."

Space will not permit even the briefest reference to the experiences covering game hunting which Mr. White enjoyed, but this review must be extended to say that while he puts the case very modestly, Mr. White is probably the first man who has ever fought four lions single-handed and lived to get away with it. That story alone will remain an epic in sporting history.

IN THE OREGON COUNTRY.

The "See America First" movement is apt to prove popular this year, but not less important is the necessity of "Reading America First" which we regret to say will be equally necessary to many who will this year have the opportunity of traveling over their own country. "In the Oregon Country," a volume of some 175 pages, by George Palmer Putnam, issued by G. P. Putnam's Sons of New York and London, is one of the pleasantest books which has been received this season. It treats of outdoor life in Oregon, Washington and California, and is written in charming style. As the title indicates, the author in his pilgrimages was concerned chiefly with the attractions of the Open, which he chronicles with the enthusiasm of a devotee. There are descriptions of trips along the forest and mountain trails, on foot and horseback; and with gun, rod, and camera; of the ascent of peaks and of long canoe excursions, all replete with incidents of interest and rich in word-pictures of the glorious country traversed. Picturesque Indian legends are retold, while the developments of today and features of modern pioneering are sketched in, so that the reader gains acquaintance with many phases of the West, its peoples, and its natural attractions.

CAMP-FIRE.

We first felled a thrifty butternut tree 10 inches in diameter, cut off three lengths of 5 feet each, and carried them to camp. These were the back logs. Two stout stakes were driven at the back of the fire, and the logs, on top of each other, were laid firmly against the stakes. The latter were slanted a little back, and the largest log placed at bottom, the smallest on top, to prevent tipping forward. A couple of short, thick sticks were laid with the ends against the bottom logs by way of fire dogs; a fore stick, 5 feet long and 5 inches in diameter; a well-built pyramid of bark, knots and small logs completed the camp-fire, which sent a pleasant glow of warmth and heat to the furthest corner of the shanty. For nightwood we cut a dozen birch and ash poles from 4 to 6 inches across, trimmed them to the tips, and dragged them to camp.—NESSMUK.

You are reading "Forest and Stream" and enjoying it. Why not furnish some of your friends who may not be acquainted with the good things in this issue, an hour or two of similar enjoyment? If you will take the trouble to send us the names of any of your circle of acquaintances, we will see that they are supplied with a sample copy with your compliments.

His Surliness, The Brownie

The Alaska Bear is not a Beast to Trifle with, as Experiences Set Forth in this Story go to Show

By Chet Tolman

FROM the viewpoint of natural history the *Uras Gyas* of Alaska are very important, inasmuch as they represent the fast disappearing species of the great American brown bear, whose intelligence and cunning are paramount. And it is prob-

ably for this reason that a partially closed season was declared on them, in order that they will not become extinct.

But there is another side of the question, which, for the sake of humanity, should be considered before the scientific side. I am referring to the number of people more or less severely mauled during the course of each year.

From the number of cases known to the authorities it is evident that a conservative estimate could be placed at, at least, two per annum. Of course, however, very few fatalities result, which no doubt explains the Government's attitude toward the appeals from the people for a continuous open season on these animals.

I shall cite a few of the more recent cases which I can recall off-hand, and which, in the majority of cases, prove that the attacks were unwarranted, and one might almost say, pre-meditated.

Two unarmed prospectors who were following a bear trail down the side of a mountain were suddenly confronted by three bears whose belligerent attitude could not be misinterpreted. The leading gentleman, who was in perfect concord with the old adage that discretion is the better part of valor, departed with great rapidity of reciprocating parts, leaving his companion to his own devices. Whether or not this man was frightened into motionlessness, or whether he was laboring under the delusion that if he remained perfectly still the bear would not molest him, I do not know. But the fact remains that he did remain inert with the result that he was severely mauled by the male of the trio. His partner, hearing his shouts for assistance, came running up the trail beating a gold pan with a prospecting pick, thereby saving the life of the mauled one, who was on the verge of receiving a second attack. It appears that the bear, after having knocked the prospector down and chewing him about the legs and back, started to follow his affinities, only to return again when he heard his victim's vociferous calls for assistance. Although badly injured, the railroad track was finally reached and medical assistance obtained. According to the story as told by the man after his recovery, the two female bears paid not the slightest attention to him, while the male did not hesitate a moment in dealing out a right hook which, had it landed on a vital spot, would have spelled eternity to the recipient.

About the Only Time Mr. Brownie is Harmless

Still another case where the attack was more unwarranted and vicious than the preceding one is the instance of a man who was returning one evening to his homestead, about three miles distant from Seward. It was just growing dusk when he turned off the railroad track to traverse the short distance to his house, and as he neared a small creek a bear reared up but a few feet from him. Before he could recover from his surprise the animal was upon him, and he had only time to throw a sack of provisions at it before he went down before its onslaught. The unfortunate man was spared no mercy until he became quiet through insensibility. But when he became conscious again he managed to walk to the cabin of a neighbor, although he was forced to hold his head upright between his hands because of the severed cords in the back of his neck. His injuries, which totaled among others a severed ear, necessitated his remaining in the hospital for several weeks; but at the expiration of that time he emerged apparently none the worse for his encounter. So far no sufficient reason has been given for this outrage, although it is admitted as having been the work of "Old Resurrection," a bear of mammoth physique and unusual cunning.

Chief among the tragedies which have recently come to light is that of a trapper who was found dead in a lonely cabin on the Chickaloon Flats. What agonies this man suffered from his wounds before he came to death by his own hand no one

will ever know. It was apparent that he was taken unawares while after water, and not having any means of defense he was forced to undergo the frightful tortures of his wounds without hope of salvation nor alleviation from his pain. A short note, painfully written, tells graphically the cause of his horrible death. It read: "Been tore up by a brown bear."

The above is only a sample of what has been done on the Kenai Peninsula alone. I shall now shift the scene to the Alaska Peninsula where the bears are reputed to be still more vicious.

Here is the case of a foolhardy young man who followed a perfectly healthy brown bear into the alders and almost paid the penalty of his folly with his life. As it happened, he sighted the animal just at dusk as it disappeared into a clump of alders, and instead of trying to locate its whereabouts he chose to follow it into the denseness of its retreat, without a thought of the personal risk that he was taking nor the odds which he was up against in case of a sudden charge.

Slowly working his way along, he finally attained a position within thirty feet of the prey, but the increasing darkness and the intervention of a small bush made the position of the animal's body uncertain. So he decided to wait until a movement would betray the location of a vital spot. But he waited just a second too long; for without warning, without an action that would herald its attitude, the bear came straight for

him. But the two shots that he did manage to get in served to divert the bear's course slightly, so instead of being bowled over, only his gun was knocked from his hands. It exploded with the muzzle against the hairy side of his antagonist. That was all. The bear, careening madly through the alders, finally came to rest; and the youth, well—figure it out for yourself.

This is what the 35-automatic did to the Brownie: The first shot entered the shoulder well forward, breaking that member, and emerging on the same side. The second and last were within an inch of each other. They entered pretty well back of the shoulder, tore the lungs to shreds, and came out on the opposite side, one about eighteen inches astern of the other. Yet the bear, wounded as he was, traveled a distance of one hundred yards before he fell!

There was an incident which came to my notice a couple of years ago which illustrated more vividly the great tenacity of life exhibited by these brutes, and at the same time portrays a scene of heroism seldom equaled in the annals of Alaska. It was told to me by a trader and, knowing the man as I do, I have every reason to believe that it is scrupulously true.

Port Mollar Bay, an indentation of the Bering Sea coast, is justly famed for the number of bears that it supports, and it was at the head of this bay that an Eskimo, who was hunting with a party of his tribesmen, had the misfortune to be attacked by a female bear which erroneously thought that she was in defense of her cubs. It seems that the gun jammed after the second shot, and although the mother was hard hit, she kept coming on. The Eskimo, working furiously with the faulty action of his rifle, did not notice the close proximity of the bear until it was too late. So they tangled. The bear was too weak to inflict serious damage, but she had the man down and was doing her best to disfigure him when another of the party caught sight of the mix-up. Without hesitation, this man, knowing that it was out of the question to shoot, drew a knife from his belt and waded

Half Inside the Bear—But Safe

in. After he had hacked the bear with his bowie until the animal looked like a moth-eaten rug, he succeeded in distracting attention long enough for the first man to make good his escape,—and then the fight was on in earnest.

I don't remember how long it was that this man sawed away on the bear's anatomy, but the trader told me that when they called it off both of the participants looked as if they had been

playing with a mischievous cyclone. I do remember this though: that someone slipped the old girl a whole gun full of lead before she decided that she had had enough. Now, honestly, what chance has a man with a six-gun against such a lead-absorbing creature as a full-grown brown bear?

Here is an experiment that was made just to see what effect a "hand-iron" would have when used under the most favorable conditions. The arm employed was a 45-automatic of a popular make, and the bear was broken down in the hind-quarters to insure success. At a distance of three feet five shots were carefully placed in Bruin's skull and the result was that a 10-bore shotgun had to be used to save the lives of the experimenters.

But it isn't to be gleaned from this article that all of the *Uras Gyas* family have an ingrowing disposition that pains them. It is quite the contrary. Let any of them have a good look at you on the open beach and the chances are ten to one that you won't be able to see them for flying sand. Men who have made a study of their habits and idiosyncracies claim that only during rutting season, or when they are suddenly surprised, are they dangerous. In the latter case it is the old, old primitive instinct of self-preservation that governs their actions, although it must be admitted that a bear has just as much right to own a "cussed" disposition as a man. And they have. Speaking from personal experience, I'll wager that the old fellow who took all of the bark off my shins as I shied up a cottonwood tree must have had a lot of domestic trouble or something of that sort to get him in such a bad humor. If he had shown me the slightest consideration—such as allowing me to get my gun off my pack-board—I wouldn't have taken it so much to heart.

But that's not all he did. When corpulent Coe came clambering carelessly along in my wake his cheeks puffed out with the strains of a martial air, why—but that's a different story.

Fly Fishing For Shad

Editor *Forest and Stream*:

Can you give me any information about the habits of shad running into the rivers of Connecticut? Do they take the fly, and if so, at what season of the year? Would like to know kind of fly most suitable if caught in this way. Any information on this subject will be appreciated.—J. H. H.

As to whether shad will be numerous in the Connecticut River this season it is impossible to say. None have appeared as this article is written, and we are afraid that the number will continue to show reduction by reason of too much seining, too many dams, pollution of water, etc.

Shad do take the fly while running up rivers. That much is certain. The best account of fly fishing for shad that we recall was contributed to *Forest and Stream* some years ago by S. T. Hammond, whose work as an author of a number of interesting books is well known to older

readers of this paper. He wrote of several experiences in this sport, and his conclusion was that May is the best month in the year for such fishing. Mr. Hammond preferred the use of the ordinary trout fly tackle, with a small light brown hackle for a leader, and a white miller for first dropper and a scarlet ibis for a hand fly. Some anglers use a hand line even when fishing with flies, but this method is not nearly so killing, nor does it afford a tithe of the sport that is vouchsafed to those who wield a light, springy rod. Of his fishing in the Connecticut River, near Holyoke, he said—although of course what was reported then does not hold good today:

"Many times since then have I cast my flies upon these pleasant waters, and many beautiful captives have graced my creel. While fishing with Mr. Chalmers one day he hooked three fish at one cast, and by great good fortune I succeeded in landing them all—a grand trio of thir-

teen and one-half pounds. Two years ago I also caught three at once, but they were not more than half so heavy. For the past few years so many have joined in the sport that there is scarcely an afternoon that you cannot see from a dozen to fifty, and on favorable days even a larger number of fishermen, eagerly engaged in the pleasant pastime. One evening I counted upward of a hundred of fish that I saw captured, and presume that there were many more that escaped my notice."

The method which was preferred in the Connecticut River was to secure the services of a boatman and to get out where the shad were lying. The Editor certainly will be glad to record the experiences of other readers who have tried a sport that calls for all the skill of trout fishing, with the added dexterity that must be exercised in handling a fish with a soft mouth like that of the shad.

An Economical Vacation For The Family

It Doesn't Cost a Fortune—On the Contrary it is Cheaper Than Staying at Home—Hints From One Who Been There

By Amos Burhans

OUR annual expenditure for an outing had been limited to fifty dollars. This may seem small, but we are close to the woods and waters and are content to put up with some of the inconveniences. This year we wanted to buy a canoe, but did not know at first how we were going to manage it and get an outing out of fifty dollars. So we began to figure! A sale of canoes in St. Paul gave us the first chance. We found a guide's style, Charles River model, eighteen-foot canoe at thirty-four dollars. We bought it and dropped it into the river, Father of Waters, and had, after paying our fare to the city, thirteen dollars and fifty cents left. But we were not discouraged. We had carried our silk tent, duffle of casting and fly-rods, cook kit and blankets and other necessities to the city with us and thus obviated expressage. With three dollars and fifty cents' worth of supplies we were ready to go ahead with the vacation.

In this narrative "we" means the wife and I. If anyone could finance a vacation for two on the sum of thirteen dollars and a half she could, thought I, hence I gave her the purse and settled myself in the stern of the canoe to ply the main paddle. Though the route we took is not a new one by any means, still it is attractive enough for many to even do it each year. We dropped down to Prescott, Wis., where the small-mouth bass fishing is better than on any point on the upper river. Here we spent a week. The wife and I fished in Lake St. Croix and along the wing-dams below Prescott three days and had great luck. The fish were taking the fly splendidly. We had located the best fishing points and had the maximum of sport. On the morning of the fourth day the wife decided not to go out and at the landing there was a fisherman who wanted to go in her place. He had just come. He had heard of our success and wanted me to take him out for the day.

The weather was perfect and we went up the lake to try for bass along the rocky shores and about the mouth of several little creeks. I had as much good sport that day as previously, though I was guiding the stranger. We used Fischer flies made by Stapf and took to camp a fine bag of small-mouths. Three following days the stranger and myself worked along the wing-dams below the junction of the St. Croix and the Mississippi and were fairly successful. My four days of guiding brought me ten dollars, though I said nothing to the wife about it and hid it away for an emergency. Then we journeyed on in the canoe up Lake St. Croix. The fishing was not as good anywhere we tried in the lake as it was at the mouth.

It took four days more time to go to the head of Lake St. Croix and return on the opposite side of the lake. We pitched camp early every night and plied the flies along shore, and never tired of the great skillet of fried small-mouth. At the farms the wife bought the few necessities we needed from day to day. One beauty of this trip was that it was so primitive along the lake, yet so close at hand were all the necessities we must have.

At the junction of the rivers again we took a steamer for St. Paul at a total cost of a dollar and then headed up the Minnesota river for Mankato, where we planned to ship home, twenty-five miles east. There is no river in the north more replete with historical associations than the Minnesota and we enjoyed it to the full. At picturesque Fort Snelling we stopped and spent the night nearby. The following day we went on to Shakopee and wanted to get up into the pike pools and sand-bars for the fishing. Every night we set a bull-head line with some meat bait on about a dozen hooks, this to fill the biggest item of the food problem. It was astonishing what a variety of fish we would secure on this trot-line. Once we got a ten-pound sturgeon, once a twelve-pound catfish, both of which we traded for butter and eggs and potatoes, the exchange being craftily made by the good wife with some kindly farmer along the river bottoms. I have often wondered at the demand for fish among a class of people who have accessible waters well filled with them.

At all the little creek-mouths we found fair fishing for pike of the sand species. In the bigger pools of the clear streams that entered the river were a few big-mouth bass that took the surface lures with a deal of spirit. We found a few little lakes where the big-mouths were biting well, and by obtaining permission we had access to them. Not once were we ordered off for trespassing, for we first sought permission. It was always gladly granted. There cannot be a great number of vacationists or canoeists who travel up the Minnesota river, we decided, for we were looked upon almost as curiosities. Local sportsmen in the smaller towns always gave us a nice lift with their little launches, towing us from place to place and pointing out the best fishing. This was appreciated, for the constant drag against the current was tiresome, though we did not try to overdo the task.

St. Peter was one of the most interesting stops we made. There is lots of good bass fishing about this little city, and a fine lot of sportsmen, accommodating and courteous. Through the broad valley of the Minnesota to Mankato we gradually made our way. If we had worked too hard we would have reached the destination tired and weary, but we took our time, rested perfectly at night and did not need a couple of weeks to get rested from our vacation trip. One of the

reasons so few women who have tried canoeing ever make the second trip is that they are given too much hard work, more than they can stand, at the paddle. By going slow, making every camp a comfortable one and being satisfied with simple food, one can always come home fresh and full of vigor, the correct ending of a vacation.

The wife gained in weight, strength, was always eager to do more than her share, and her general health improved wonderfully in the few weeks we were outing. Out tent was screened and she slept well, gained animation and a refreshing lot of lung exercise she could have had in no other way. She was wiser in experience, had a fund of humor picked up on the way and is still giving it vent. She is a better canoeist, knows more about water and its likelihood for good fishing, can plan and build a camp, and is far wiser in woodcraft than when she started. She has seen a portion of the state she wanted to learn something about. In general, I may say that I gained the same things out of the trip.

In experience in fishing, boating and camping, it is the continual following of it that makes one proficient. Being cooped inside steadily I strive to make as many short trips as possible and one long one every year. After this trip my muscles were again hard as nails and ready for the grind. The main thing is not to overdo.

In dollars and cents we were in debt to the vacation fund just five dollars. In other words, we spent fifty-five dollars for the trip, and this included a first-class canoe, an asset that offsets the debt. I used but five dollars of the ten I'd earned guiding. We had as much sport on the water and better fishing than we had ever enjoyed in Minnesota. The trip could be duplicated by anyone. For economy, sport, fun, physical fitness, experience, making acquaintances, fishing, seeing new country (to us), we vote this the best vacation we ever had.

DO PARENT ANIMALS PROTECT YOUNG IN WATER?

Editor *Forest and Stream*:

On a number of different occasions I have had the pleasure of watching animals crossing lakes and other wide stretches of water. I began to observe after different experiences of this nature that there seemed to be order in the method of various species—that is, the mother deer always swam about a yard behind her fawns, while the black bear mother preceded the cubs by that distance. Was this by accident or design? If the latter, I presume the deduction is that the bear mother goes ahead of the cubs to face possible danger first, while the doe swims behind, the better to observe ahead or to protect the rear. Have any of the veteran woodsmen readers of *Forest and Stream* any theories to offer on the subject?

AMATEUR NATURALIST.

Camps, Camping and Cooking

A Practical Article Written for the Ordinary Man who Loves the Woods, but Can't get too far from Home

By Robert Page Lincoln

IN the first place, in considering a camping trip the means of transportation must be considered. The easier the means of conveyance the more readily is one moved into camp and more conveniently things can be brought along. Near to civilization camping is one thing; camping in the wilderness regions is quite another, as all will admit, and understand. Camping to the man who owns a motor boat is a matter of great convenience, to say the least. He can easily pack up and move from place to place, if he desires, along the innumerable waterways of the country. The motorboat camper has by far the easier means and method of transportation. Different indeed a horse and wagon proposition, and wholly different yet the more primitive means. Where transportation is a matter of comparative ease, many things can be brought along as a rule, though one should not overstock. Be simple, yet thorough; and thoughtfulness counts for a great deal indeed in this world.

For a couple the ordinary twelve by fourteen tent is quite big enough and will certainly amply suffice. I am considering now the family problem. It is all well and good to talk from the "go light," single-man point of view, but rarely is the larger tent problem considered. I shall speak in this chapter for the man who wishes to take his wife along with him, also his child, if he is so fortunate. The twelve by fourteen tent is commodious enough for a couple. Now in consideration of the weight to go into the tent, as a matter of ounces, we have eight, ten and twelve ounces to logically choose from. It all depends on the make and quality of the tent. In good material a certain ounce is good, in another a poor make, it is practically worthless. One tent I know of would not go twelve ounces (the army regulation weight, to to square yard) and good ten ounce will weigh more to the square yard. Personally I had a twelve ounce tent for years, but I do not really know if the weight of twelve ounces to the square yard could be attached to it. I do not believe, however, in a tent too lightly woven for summer use. Heavy woven tents may be all right in the winter, but for summer use, give me a tent in rather light weight material. But I have always wanted one thing to go with this twelve-ounce tent and that is a heavier canvas fly, for the tent should be protected, and the heavier fly will satisfactorily do this. And I will tell you how the tent can be best protected. In the ordinary tent the fly rests right on the ridge of the tent, and directly on the canvas. The fly and the tent ridge get wet and there is always dampness along that vulnerable point. To remedy this run a second ridge pole some

six inches over the real tent ridge pole and put the fly on this. This is beneficial in two respects, namely: the tent is safeguarded and protected along the ridge from wear, and fraying, and the bringing of the fly up higher throws off the penetrating heat of the sun, making for more coolness in the tent itself.

Ordinarily, in roping out the tent by means of the guy-ropes, one would do well to drive down four stakes a distance of three feet from the tent corner on each end, and on these fasten a pole, one on each side on which to tighten the guy-ropes. This will properly lift the canvas off of the ground along the bottom and will serve to assure of its long and healthy life. The tent should be guyed up till the edges do not lie on the ground. The small ropes at the bottom along the tent edges can then easily be fastened to suit one's taste. In rainy weather one should loosen up the guy-ropes, for a tent will shrink; if not loosened the tent will tear at the rings. These little things should be amply investigated, for they sometimes mean a great deal in the long run.

As a rule, the average camp, away from civilization, must do without a comfortable board floor. If you do not have the board floor I certainly suggest that you have a sod cloth, or a floor canvas. This is really, at times, a blessing, as I can amply relate. The ground is first leveled of all protruding stubs, rocks, etc., and then the cloth is laid down and fastened all around at the edges. A very good job can be done, by taking a little care with your work.

It is generally accepted by all campers that there should be ditches dug along the sides and back of the tent to admit the rainwater flowing down, or dripping from the edges. This is one of the first things you should look out for; it will save your floor, keeping it more dry.

It should always be remembered to locate the camp on more or less high ground so as to escape water flowing in. Never place a camp in a low spot, among bushes and trees. Rather locate where there is an open space with good drainage and you will find that it is better all around. And never place a camp near large trees; this is to protect you from the lightning, something that must be wisely taken into consideration.

The good points about takedown cots on which to sleep is that they can be folded up and rolled up during the day and set up at night, which takes little or no time. They are far from inconvenient, and are very good. Ordinarily two cots for a couple is a better all-around system, and make very handy additions to the camping paraphernalia. The camp cots accommodating two persons are not recommendable for the reason that they will not comfortably hold two,—that's the unconfined joke of it. It is an easy way of inviting misery. Therefore I would suggest camp cots, one to each

person; and the cost is quite inferior when all things are taken into consideration. As far as lying on the ground is concerned I certainly deem it as far from commendable. This may be the true, and tried, and hardened woodsman manner of doing it, but I am not especially considering that viewpoint in this article.

In line with the tent I would like here to call attention to what is known as an extension canvas that can be sewed onto the tent fly to make a sort of porch in front of the tent. This extension has any number of good points to its credit. Let me number them. *First*: Mosquito netting may be sewn onto the front and sides to this extension, making it a comfortable place to sleep warm nights and as a place to eat. *Second*: If means of transportation are anywhere near conveniently reasonable, and one can include a light portable Baxter stove, this stove can be used under this shelter with every degree of efficiency and success. It will then be of a service to cook under in rainy weather. If this is not a desirable addition to a permanent camp I would like to be shown one conclusively better. In adding this canvas to the other tentfly, simply make the top tent fly ridge pole long enough to include the extension fly, and all will be well and right enough.

I wish here to speak of those tents made in a light material and treated to a waterproofing preparation which makes them happily impervious to the entrance of water. These tents are very good, the prime satisfaction in them being that they are considerably lighter than canvas tents, therefore they are more readily movable. Some of these tents are made in very light material, resembling that of silk, in point of question the balloon silk that is so commonly used in some of the well-known shelter tents. These tents, by nature of their elaborate construction, cost more than ordinary tents.

Just what are going to be your means for cooking must be decided upon, your method of transportation—and your purse. If you are going to cook outside, in the good old-fashioned camping way, I certainly would suggest that you include in your outfit one of those triangular folding grates. Planked down over a fire this mighty handy thing will hold the coffee pot, frying pan, and the kettle. One of these is procurable for the sum of two dollars. I have known times in the woods when I have lived under all the "hideous" rules and regulations of the "go-light" crank, when I have welcomed such a handy thing as the triangular grate. No matter what sort of a grate you get, get one with iron rod legs that you can insert over the fire,—it gives successful results all around.

Now for cooking and roasting, et cetera, you have open to your purchase either a so-called Dutch oven, or a baker. Both of these are well

known now, and highly appreciated. But were my word to be taken for any worth I would suggest the aluminum baker.

In the matter of utensils I certainly would have for dishes and cups only one sort of material, that being the white enamel-ware. They are a triumph in camping utensils; and are light, unbreakable, easily washed. Let the cups and plates be of this material. For a couple two or three cups, knives, forks, plates, et cetera, would be a good idea, and being light, they need not become an inconvenience. A kettle and frying pan, or skillet, are necessary things. Personally, I would include both a small and a large lightweight material frying pan. There are times when a large frying pan has eminent points of value to its credit as all will allow. But remember, in planning out your cooking and eating utensils, there is no need of taking along a great number of things, handy but inconvenient. Select the most valuable of these and draw the curtain on the rest.

Cooking over a fire directly, minus the oven or baker, is a thing that seems to me rather of a blundering method, considering that these modern things can be inserted at not such a great cost. The ordinary camping method is to build a fire, poke down two crotched sticks, across from each other over the fire; to place a cross piece on the crotches, and thereon to hang the kettle, or boiling apparatus. The frying is done over the coals which are scratched to one side. If the baker and the oven are done without, then I would suggest that a sort of fireplace be built up of rocks having a back and two sides. The front is open. A piece of galvanized iron is placed over the top of this and the fire is built inside. Often great success can be had with this method, though the grate spoken of before this, coming at a most moderate expenditure, answers all the purposes assigned to this affair. Also if this is not made right it will prove a smoky affair. I have used some however that have been as efficient as one would think of or expect.

In the above I have taken into consideration the most needy things, which to include in your outfit. Remember that I am looking at it from the viewpoint of curtailing expense. Did I not do that I could name you any number of costly things that would improve your camp and make it doubly comfortable, but that is not my object. I am here considering the people rarely thought of by outdoor writers—the man and wife part of it; those of moderate means, to be exact. Many shy at making a camping trip for fear that they will have to go through all, and every black-art degree of misery and bothersome inconvenience; and that it will cost a great deal. There is just the good point in it. A great deal of money can be saved by camping out.

The food question is to the camper an interesting one indeed, one worthy of much attention. And just what you are going to select depends vastly upon how far you are located from civilization, and what are your means of bringing provisions into camp. In camping it is generally the rule that one live off of the natural resources of the land as far as possible, and the fish question is a very bright one indeed, in this respect. If one is within reasonable reach of a farm, milk and eggs can no

Where Landlords Cease From Troubling.

doubt be readily procured, and potatoes and various fresh vegetables may also be purchased from this source. But if further away from civilization the problem is not hard to get around. Right here it should be remarked that many unnecessary things should never be campers that it has been hard for them to leave brought along.

I am going to set down here some of the things that will do a man and woman for two weeks. By the way, it is always most satisfactory if two couples arrange a camping trip together. For a couple, for two weeks, as follows:

- Oatmeal 3 pounds
- Flour 14 pounds
- Baking Powder..... 1 can
- Coffee 3 pounds
- Sugar 5 pounds
- Lard 2 pounds
- Rice 3 pounds
- Corn Meal..... 10 pounds
- Beans 3 pounds
- Salt Pork..... 4 pounds
- Bacon 1 strip
- Butter 4 pounds
- Salt 1 small sack
- Pepper 1 can

The above entries are some of the most valuable additions. Now in the question of milk, if transportation is anywhere near reasonable, the canned condensed milk is excellent, otherwise powdered milk can be had. In the line of compressed foods, do not fail to bring along the famous *erbswurst* soup rolls, a compound of various delectable vegetables and select meats. The one-half pound rolls cost twenty cents each, or a trifle under, if I remember rightly. However, all of these compressed foods, and powdered foods, are of far greater

benefit and convenience to the man who goes on light trips.

I might here remark that it is a good idea to have the so-called food bags in which to store your food if you are on a long trip away from civilization.

Necessary and absolutely useful things about the camp should not be forgotten. There comes a time in camp when you stand scratching your head, the truth having dawned upon your consciousness that you have forgotten a most demanded article. Such a thing is the camp axe, and the useful camp lantern. These two affairs are absolutely necessary. And the wee, small, seemingly inconspicuous things are often worth their weight in gold, which you find out when you desire them most and have them not. As for instance small ropes, cords, wires and various sizes of nails. Now, personally, after some little experience, I know two thousand and one things around a camp in which I can use nails to the most desirable and accommodating advantage.

Previously, in this article, I did not mention the inclusion of a folding camp table, and chairs. These are procurable at a reasonable expenditure. A table is really a most necessary thing. To eat, seated on the ground, becomes the most monotonous and miserable thing one can think of in time. In a permanent camp the table has its place, without a doubt. Rustic chairs and tables are easily made, therefore the ready-made tables and camp-stools can be done without.

Lastly, let me remark that the trip should be carefully planned in the beginning. All the desirable, and absolutely necessary items should be listed on paper and checked as they are packed and put away. In this way you will know for sure if you have the outfit complete, without guessing at it.

The Pleasures of a Canoe Trip Vacation

American and Canadian Rivers and Lakes Offer an Endless Opportunity for the Amateur

By "Old Camper"

THE one great interesting thing about canoeing is that you need not go far away for your vacation. Far from it. As a matter of fact, right close to your home grounds and territory you will find scenes of natural perfection such as to satisfy anyone. My purpose is to deal impartially with both near to home camping and canoeing as well as the wilderness feature and its so-called more brilliant invitation. I shall address myself also to those therefore who cannot find the time or the money whereby long trips into wild places may be taken. To these our civilized waterways and lakes will give a measure of appeal that can only be indulged in to be thoroughly appreciated. As a matter of fact, the man who enters the wilderness leaves behind him places where he might get his supplies. The canoeist and camper within the borders of civilization can always have access to places where provisions may be laid in, before entering upon another stretch of water. He

may take his time. Our rivers, our waterways, afford limitless proportions for study and contemplation. The trouble is that we are deceived by thinking they are uninteresting. And yet along many of these one may travel for days and only occasionally be bothered by the advances of man. Lightness and compactness are prime requisites, both in the matter of a canoe and the tent outfit. If you outfit poorly—and think by so doing that you are going to save yourself some money, you may have to pay double in experience for your lack of thoughtfulness. The lighter every individual particular of the outfit is, the more things you can bring along to make up for it. A little attention to this feature in the beginning will save you a lot of needless exasperation and give you relatively more pleasure as a consequence.

I shall first bear mention upon the purchase of your canoe. If in the past you have been the owner of a canoe that turned out in the middle of your vacation to be as heavy as lead you will know now why the desire for lightness should be given heed to. Lightness is essential. Many

men who undertake the matter of a trip into the wilds strike out for the nearest point of civilization on their route, and there procure their canoe from some outfitter, whose business is to supply the needs of the pleasure-seeker. The one big obstacle in waiting to buy your canoe at one of these posts, or edge of the wilderness settlements is that you may not be able, through some unforeseen circumstance or another, to get just the right sort of craft you desire. As evidence of the truth of this many of these wilderness outfitters will tell you that you had best select your own canoe before you start and ship it.

There is something about the canvas-covered canoes that just exactly seems to hit the right spot. They are wholly efficient and, as a rule, under careful hands, they are dependable. The fact that they are taken in a serious light is proven by the fact that any number of thorough woodsmen of the north are owners of such. Such canoes, of the right sort, have a perfectly elevated bow and a stern relatively notable, and they are sufficiently proportioned of beam to as-

sure and inspire confidence. On rough rivers the canvas proves its worth. It resists well and is not easily damaged. One thing about it of especial note, of course, is the fact that it has the demanded and incomparable lightness. Taken all in all, it is a commendable craft and well worth your discriminating consideration. The average length for a canoe should be sixteen or seventeen feet.

The canoeist's tent should be light and durable; also it should be waterproof, for reasons that need not be dwelt upon. The small waterproof tents, most common in the Hudson Bay region, are prominent for mention in that they contain all these points, and at the same time they are comparatively cheap. A small balloon silk tent, of the shelter type, will cost you from eight to twelve dollars, it all depending upon what grade you acquire. I have one in view that we used which was four by seven feet, as the extreme size on the ground, and the height was at five feet; the weight was no more than four pounds, the price for same being eight dollars and fifty cents. Common canvas, unwaterproof, should never be brought along on an extended trip. It can only prove a dismal failure.

Incidentally it may be said that many go without a tent, and sleep under their upright canoes. This is more or less foolish, inconvenient and detrimental to solid comfort. In the first place one always has the mosquitoes, sand flies, deer flies, gnats and a hundred other winged things to contend with. With a good shelter tent, fixed over with some netting this is almost done away with. Sleep under your canoe, unprotected, and your nights will not be dreamless, even though you may build immeasurable smudges, and though you may have the one and only divine and "kill on sight" mosquito dope. A waterproof sleeping bag is a thing that should be closely considered. It may here be said that if your tent is waterproof, then your sleeping bag need not be so attended to, and yet, for all that, remembering the availability of unforeseen circumstances, the waterproof sleeping bag has its proper place in the outfit. With the waterproof bag over your feet (pre-

suming that you are to use no tent), the rain can beat down on the lower part of your body all night, and you will be dry, but your head is unprotected. Aside from the sleeping bag there should be included in the outfit some extra covers, and a waterproof canvas is therefore not out of place. A pair of woolen army blankets, and a canvas make a pleasing substitute for a sleeping bag. Some commend that the blankets be sewn together to form a sleeping bag and it is a good idea, for every inch of bedding must be made to do duty and none shall lay idle, but there is a better system than that, in my opinion. If the individual be supplied with large safety pins, he can readily, and temporarily, turn his blankets into a sleeping bag; that will well do. If you are using the blanket and canvas combination, a pocket in between called a browse bag may be used. This browse bag is filled at night with leaves and other likely material to form and act in the place of a mattress. Otherwise boughs and leaves are spread out on the floor of the tent, first making the ground even, and free of stubs, after which the canvas is spread over it and your temporary sleeping bag follows suit. The rubber floor cloth, or sod cloth, as it is sometimes called, often proves a distinct blessing. All the above when rolled into a bundle, or in separate bundles, takes up comparatively little room in your outfit.

The question of clothes for the canoeist is one that should not be considered as such a simple and easily covered subject. In the first place supply yourself with roomy trousers of some durable material, soft rather than stiff, to give you all freedom possible. A heavy pair of woolen trousers should be included, as well as a light pair. In the matter of underwear include woollens. The nights are often very cold in the north, especially in the latter part of the season, in the fall. When paddling in the daytime become used to getting along with as little on as possible and at night bring forth the available heavier garments; among which should be found a sweater of respectable proportions and warmth. Many have underwear without

arms to them and this gives ample freedom for the play of the arms, but it does not increase the matter of warmth. Flannel shirts, coming in good material, I always give preference. Two should be had along. Either gray, gray-green, or dark blue makes a fine shirt, coming in price from two, three or four dollars, or five for a highly excellent army shirt. But always remember to include a heavy garment, to protect yourself with against the cold, dewy mornings and the sometimes brisk northern summer nights. Incidentally it may be said that the best footwear is shoepacs, or moccasins, as they are sometimes called. They should be large enough to admit of the use of at least two pairs of socks, and should come quite high up on the leg. With good-soled, durable pacs one can tackle almost any stretch of rough portage with assurance. They do not slip and skid. They are firm, yet pliant, and in the canoe allow the feet rest and easeful comfort.

Those canoeists gain the most out of a trip where the most care is taken in the assembling of everything, when on the portage. Where everything is thrown together hap-hazard, the best and most reasonable ease of transportation cannot be expected. But where things are separately considered, and properly adjusted, everything goes along well, and the expenditure of energy, both mental and physical, is more rational. The usual method in use in the north for carrying the outfit, tents, sleeping bags, etc., is by the use of the tump, and the broad forehead strap, and when one gets used to this system he will be able to carry greater and greater loads, but the weak, and physically questionable man from civilization must content himself with small loads. The various paraphernalia, as for instance the clothing, are stowed away in various small bags, made for the purpose, and all assembled in one whole and inserted in a greater bag.

At all times care and consideration should be used. Simplicity should dominate your selection; and remember the absolute need of lightness as a prime requisite, first, last and all of the time.

The Habits of the Salmon

THE habits of the salmon have been almost a lifelong study for me, as I live by the side of one of the best streams in an eastern province of Canada.

You cannot get any fish in February. I have tried faithfully for years but never succeeded in hooking one during that month, but in March I have killed many salmon, and there are also others who have landed many a silvery beauty in that month.

I believe the fish come in early from the sea, but for some reason will not rise to the fly; when the salmon comes from the sea on his courting expedition he is a lordly fish, and takes his own lordly time about it; he tarries for days at a time in a shady pool, then on some moonlight night makes a break for another pool farther up the river, but there is no telling where he may be found on any given date; they may be present

in any pool in goodly numbers but will not deign to look at a fly. But some hours later, or it may be next day or next week, he will rush open mouthed at any fly that is cast over him; so you see it is pretty hard to tell when you have got him coming.

We get no salmon in February, but take them in early March, with Durham Ranger or an all-pheasant feather fly. April is a good month; best flies Durham Ranger and Silver Doctor. May I consider the best month on this river for salmon fishing; flies Blue Doctor and Jock Scott. In June and July grilse are here in great abundance every year; for grilse we use ordinarily trout flies; among the best killers are Grizzly King, Brown Hackle, Montreal Coachman, Yellow Sally, Professor, Cowdung and Jock Scott. Ours is a "yellow river"—that is, we use a good lot of yellow in the make-up of flies.

The question is sometimes asked: Are enough fish taken to furnish sport sufficient to offset the discomforts naturally incident to what is ordinarily a most inclement season, *i. e.*, February and March? It is a difficult question to answer; it depends upon how long the sportsman stops and if he happens to strike lucky days. I once killed two in thirty-five minutes; at other times one might fish a week and never see a scale.

The facts will illustrate one of the vagaries of a most capricious fish; that the salmon should come freely to the fly in a neighboring river in February and refuse to accept it in another, although many fish are present, is strange indeed; probably if very large flies were used, three or four inches in length, such as are used in the winter fishing on the rivers of Scotland and Norway better success might be had.

Single Tracking Into the Great Outdoors

A Silent Steed that Takes You Where No Other Vehicle Can Go, and Enlarges Your Travel Boundaries by Many Miles

By Raymond S. Spears

TWO years of motorcycling have given me some new ideas about what the single trackers are doing to bring people into the Big Outdoors. It has given me a new viewpoint with regard to some of my old notions about going somewhere and seeing things. I bought a motorcycle primarily because it looked like easy going. Also, it looked like passing uninteresting places in a hurry. So it proved.

The best I have ever done on foot was nearly fifty miles in one day. The day began at dawn and ended near mid-night, and in the meanwhile I scoured a considerable section of Adirondack territory, seeking a friend who had very inconsiderately missed his way in the deep woods. Happily, I found him on the road at last by telephone.

Floating down stream in a skiff, shantyboat and scow I have made as many as fifty miles, if there was no wind. Along the waters of the Great Lakes, with no current and casual breezes, I've made forty miles, pulling a skiff.

The best I ever did with a bicycle was 93 miles by cyclometer. That was while on a run from New York city via Fort Lee, northern New Jersey and southern New York to Westfield, near the Pennsylvania. I remember thinking how exhilarating it was to think of going so far by my own exertions, being able to start, stop, turn and run as I pleased. But my average rate was only nine or ten miles an hour—not bad for the hills and roads!

It was the memory of the bicycle that gave me a thrill when I saw youths slipping by on motorcycles, so I bought me one. I wanted to get forth into the country and follow the roads. I think that but for one little memory I should have purchased a bicycle instead of the motorcycle. When I was pulling around the east end of Lake Ontario one blistering hot July day the previous summer, one of the St. Lawrence skiffs of this modern day came ploughing by. It was about 20 feet long, perhaps 50 inch beam, and it was driven by a 25-horse power motor. The sportsman sat in the stern at his ease, and the \$8.00 a day guide knelt in the bow, and steered.

As they passed by the guide turned and saw me sweltering as I pulled the oars, looking like a relic of the previous century, no doubt. He opened wide his mouth and yelled, a jeering, pestering yelp.

As I considered the automobiles and the motorcycles driving along the roads, I knew that if I bought a bicycle I should always have that feeling of belonging to the previous century—but one.

So I bought me a motorcycle, two speed, twin cylinders and standard 27 gear. Having learned

to ride it, I began to reach out into the country, and view neighboring towns and communities. When the slight nervousness at the wonderfulness of the speed and unexpectedness of the power had worn away, I began to take note of the strange quality of the single tracker.

In an hour I would go further than I could walk in ten hours. In a day I would make three

something so delightfully soaring-like in the sensation of sailing along good roads on a motorcycle. I know that friends who own automobiles after a time begin to feel that they have no more places to go, when they have traveled over all the good roads in a vicinity. That feeling came to me after a few thousand miles.

My Goods Roads district reaches from west

I Live in the Heart of One Hundred Miles of Scenery

or four rowboat journeys. I had thought I did pretty well in walking with a sixty pound pack the thousand miles from Utica, N. Y., to Holston, Old Virginia, taking about three months to do that stunt—lingering along the way, a bit, of course. On the motorcycle I rode a thousand miles in a month and hardly knew it!

Good roads are a great temptation. There is

of Utica, N. Y., to east of Amsterdam. There are some good roads that lead north, making a round trip of sixty or seventy miles. Southward, there is a dry-weather circuit of a hundred miles, and by various extensions, the roads that become old and over-familiar amount to about four hundred miles.

That is to say, running around on a motor-

cycle in beaten paths, one wears out about eight hundred miles of scenery. Can there be anything more preposterous? Why, the State pays thousands of dollars to preserve a quarter of mile of scenery in Watkins Glen, and there are whole books written about a mile of Trenton Falls, let alone a few hundred feet of Niagara.

The difficulty developed was familiarity. I live in the heart of about 100 miles of scenery which has long been regarded as among the great attractions of the country. When the Erie Canal was dug through, the tourists used to stand on the decks of the boats and wipe their eyes because of the tears of exhilaration at such sights as filled them.

Not only did I follow the canal, but I followed the parallel roads, and then, having used up fifty miles of scenery, I would go up on the valley ridges, first one side and then the other. It was when I began to leave the good roads, which are marked on automobile maps, that I began to find the better service of the motorcycle.

I think I must have traversed about 3,000 miles of roads in making 8,000 miles. I rode away across country eighty miles or so, taking the roads as they came. I went into the woods fishing. I went hunting. I went, many times, picnicking.

Off the macadam the going varies from hard clay, which is as good as stone or brick, to soft sand and slick mud, than which I know of no worse going for motorcycling. Hills seem not to matter much for the motorcycle, when one has learned the arts of slipping the clutch, getting headway, manipulating the two speeds. The latest models, the three speed, will go up anything where the driving tire can get purchase.

I have said that my wheel had a 27 gear on originally. I reduced this, with excellent results, to 33 gear. This gives a slightly larger oil and gas consumption, but it gives a great deal more pulling power—speed is reduced so that I suppose I can hardly make more than 60 miles an hour, but at ten miles an hour, I go up anything I try to climb, and I have carried 375 pounds of humanity up and down and across country where the grass grows in the roads because horses cannot haul wagons over them.

The great charm of the motorcycle is the diversity that it gives one. Starting from a city, one arrives in a morning's run, at as good trout fly fishing as one can find nowadays in the Adirondacks. If one starts early, he can get to deer hunting by nine or ten o'clock. As for squirrel and bird shooting, if one knows the country, the motorcycle is simply astonishing.

With a friend of mine, I went out after gray squirrels. The idea of hunting in the open country, in woodlots, in an off year for squirrels, seemed rather like exercise, more than like real hunting. We rode out eight miles, dragged a woodlot, went on a few miles, dragged another lot; then we rode two miles to the top of a ridge where we could get a bird's eye view of the country. From this height we picked some woods about five miles away, and went through them.

Here was a kind of hunting of which I had no previous knowledge. It is common enough, of course. Lots of men go out in a buggy, or in these days, in an automobile, and hunt over

more woods acres in a day than they could possibly hunt over in a week walking.

One night coming down out of the country with my big headlight shooting a fog of illumination for fifty rods ahead, I discovered a family of skunks, eight young ones. It was such a pretty sight, that I ran down town, and got a couple of the boys to come back up with me and look at them—ten miles round trip.

Again:

"How far is it?"

"Just over the hill."

"That all? All right—Come on!"

The hill is two thousand feet high and over it is ten miles, and ten back.

"I got lost up there."

"That so—Go far?"

"No, not very. Twenty miles—I came out by that old cheese factory on the Van Hornellsville road. Then I knew where I was."

The See America First spirit has moved thousands of motorcycle boys to take trips that they never dreamed of taking before. Thus two

twenty miles before putting down his traps.

Motorcycles and automobiles are equalizing the hunting of the country. They are making the trout as shy, the deer as wild twenty-five miles back as they are in the city reservoirs, and in the edge of the timber.

The lust of going somewhere generally stifles and grows stunted in the breast of most men. It is first school, then work, and then the paucity of vacation days. When one thinks how many tens of thousand of people dare not break away from their work for more than a week or two weeks annually, the thralldom in which humanity exists is dimly seen. Some men know how to make a break for the timber. Sometimes it takes an attack of lung trouble to give them nerve to make the break, however.

The motorcycle has freed tens of thousands of people. A little city has a hundred of the machines, a small county has six hundred, and the country has hundreds of thousands of these little machines. Men who could not get away from town without taking the train get away

They Get into the Woods and Mountains

youths whom I met last summer were going to Denver. Every day, all summer long, tourists on motorcycles drive down the Mohawk Valley. They come in from Chicago, Cleveland, St. Louis, Omaha, Cincinnati, Louisville, and other towns. They began to go through westward bound last fall on their way to the Panama Canal Exposition. A good many hundred motorcyclers will go through this summer. In Canada, the motorcycle boys are enlisting in the armies as message bearers.

The outdoor business men are using the motorcycles a great deal in going and coming. One man of my acquaintance has been riding all this winter, with a sled-runner outrigger carrying a side car. He drives a hundred miles without difficulty. I know that trappers were covering their lines with motorcycles, and the number is increasing for the reason that if there are any kind of roads, particularly sandy, in wet autumns, hundreds of miles of lines can be covered in the semi-open country. Where a man on foot could not cover a circle reaching more than ten miles from home, a man on a motorcycle can go

on a Saturday afternoon, ride on a motorcycle a hundred miles to supper, and then the following day, drive 150 or 200 miles further. Two hundred miles in a day is a long pull for a soft rider, but a hundred miles is as easily ridden as ten or fifteen miles in a buggy. And what is more, it is as easy to take one's wife or sweetheart out twenty miles to a picnic creek-side as it is to walk down town to a hotel dinner.

I know that the motorcycle is making outdoor men of indoor men. It is taking young men away from town resorts of questionable propriety onto the wilderness road. Boys who would ordinarily never have seen the green timber, now run out into the Big Woods as a matter of course, and they are learning to shoot, to fish, to camp out as they would never have learned to do without the single tracker and its exceedingly seductive capacity for making miles at a low expense. Thus they get into the woods at the rate of two cents a mile, or thereabouts. They come and go at their own hours. Neither night nor day deters them.

The big thing about motorcycles is the fact

that they instantly extend their possessors' horizon. The city limit, formerly the impassable wall, becomes merely the beginning of a new life abroad. The stream which comes from some unknown mountain country to turn the mill wheels, is traced to its fabulous source, and the joy of fishing in the lakes and ponds and rifts is like a breath of a fairy land.

Even outdoor men, used as they are to finding a way out into the open from locked-in conditions, discover in these machines, which take up such a little room, a vehicle that bears them swiftly into their favorite haunts—takes them there literally as though the seeker were winged and blessed.

I do not pretend to compare the motorcycle with automobiles. The saddle horse and the

carry-all, the cowman's pony and the grub wagon, the race horse and trotter, the carriage and the gypsy wagon—what is the use of trying to find comparisons? The motorcycles are more like saddle horses than anything else.

They carry a hundred pound camping outfit, if one cares to burden himself with that much. One should get his outfit for a camping trip inside of fifty pounds, including tent, blankets, and similar duffle. A hammock with a waterproof "A" to swing over it is better than a tent for some kinds of trips—and I've run my machine into the brush, and left it there while I went on beyond the end of the trail into the timber. You can't leave a horse that way.

Motorcycles are making tens of thousands of outdoor men who would be mere townsmen, if it were not for the single trackers.

of Americans would flock to see them, but it is safe to say that out of our one hundred million population, not five hundred people have ever stood under one of these vast monuments or on their tops.

Trips like these may not be for the ordinary man, but this does not mean that they cannot be taken by anyone of ordinary outdoor experience and health and some leisure time and means. Do not conclude because of the multitude of books of exploration that the world has been covered. There are spots in it—on our own continent—that are today as unknown as when Columbus landed on San Salvador.

Newfoundland, so old in the history of America that it is termed the "Ancient Colony," is supposed to have been known as thoroughly as Nova Scotia or New Brunswick. Yet numerous portions of the interior are waiting the pressure of the foot of the white man. In this issue of *Forest and Stream* is begun the story of two young men who were the first to penetrate the island from the center of the southern shore. They found many things that were new geographically, and in addition had a splendid outing trip. If Newfoundland, at our very doors, offers such possibilities, what of the thousands of miles of greater territory that lie all over the Northern Continent, equally unknown and equally fascinating from the standpoint of the geographer, the hunter, the fisherman and the naturalist?

HUNGARIAN PARTRIDGE IN OHIO.

Columbus, Ohio, April 10, 1915.

Editor *Forest and Stream*:

The communication of Horace O. Green of Stoneham, Mass., relative to the question: "Does the introduced pheasant drive out our native game birds?" aroused considerable interest among sportsmen here as General John C. Speaks, chief game warden of Ohio, has been introducing the Hungarian partridge by the thousands in this state, apparently with marked success. General Speaks recently sent out 1,000 inquiries to farmers and others throughout Ohio asking answers to the question, among others: "Is the Mongolian pheasant a menace to the native game birds of the state, especially the quail?"

"I have had replies to that question from nearly all these inquiries," said General Speaks, "and 95 per cent. of them state that the Mongolian pheasant is not a menace to the quail. I therefore judge that the Hungarian partridge is also not a menace to the quail. In the spring of the year, all game birds are great fighters, especially the male birds. The pheasant is especially pugnacious at this time. We have found that the Hungarian partridge very frequently takes up with the quail and so I would not be surprised to find that they inter-breed but I cannot cite definite cases of this kind at this time. Many of our reports show that the partridge released last spring, were running with quail and made common lot with them during the time that they were in covies and before the mating season, when they pair off."

General Speaks released 6,000 of these birds throughout the state last spring and reports this spring show that they passed the winter splendidly and the farmers are calling for more and they will be sent into every county as soon as possible.

C. B. GRIFFITH.

The Spirit of Adventure—Is It Dead?

ARE the young men of today averse to exploration trips into the unknown or partly unknown territories of this continent? There seems to be a dearth of spirit of adventure, perhaps because an impression prevails that the last unknown has been exploited, but more probably because the present generation finds its satisfaction in commercial pursuits or the lighter forms of social diversion. Where can we pick up recent books of trips into the lesser known regions of America, or where can we find accounts dealing with such experiences? Poor Hubbard lost his life trying to penetrate unknown Labrador, but Dillon Wallace, his companion, completed that trip later, and what is more remarkable, Hubbard's widow, spurred on by the spirit to complete the work her husband had attempted, made the journey he had originally planned, and wrote a most interesting report of her experiences. Little is heard of Mrs. Hubbard's trip, but it stands forth as one of the most striking of recent times. That wonderful officer of the Canadian Geological Survey, Mr. A. P. Low of Ottawa, has gone over Labrador in all directions and has made known to us thousands of miles of Hudson Bay country which was, until he penetrated it, an absolute *terra incognita*. So also the Tyrells of the same Canadian Geological staff, have mapped out the Barren Grounds of Canada and the western Hudson Bay country. Hanbury, Warburton Pike, and others have traveled the sub-Arctic regions and written of them.

These men found the way, but why is it that so few have followed them? What a wonderful opportunity exists for the man of means and leisure, and not an over-amount of either at that, to put in a summer season traversing new country and seeing wild life! It is not the purpose of this article to serve as a guide book for such trips but a few expeditions may be mentioned that possess all the fascination of real discovery and delightful experience. For instance, a trip up the Hamilton River of Labrador to the Grand Falls is not beyond the capability of any man with two months' time and a moderate amount of means. The Grand Falls of Labrador have been visited by several college expeditions and notably by Mr. Low, and offer a spectacle of grandeur worth all the trouble it requires to gain access to them. Within a distance of about twelve miles there is a fall of

eight hundred feet of water, some of it in the form of cataracts that are comparable in a sense with Niagara. Once the plateau region above these falls is gained, a magnificent country abounding in virgin fishing, with trout of six or eight pounds and ouananiche equally large, is found. In this land of lakes and rivers the wanderer may travel for weeks. He must carry his provisions with him and he must not get too far into the interior of Labrador to get out again before these fail him, but it is a trip worthy of one's ambition.

Lake St. John in Quebec has been the mecca of hundreds of ouananiche fishermen, but how few have traveled any considerable distance up the magnificent rivers that flow from the north into this great basin of water? One or two Americans have made these journeys, but not in recent years. Lake Mistassini, a magnificent expanse of water of some 125 miles in length, stands on the top of this Labrador watershed. It teems with fish and the Hudson Bay Company maintains, or did maintain at last account, a post on the shores of the lake. Living is reduced at this point to bare necessity, for the bringing in of supplies to Mistassini up the Rupert River from Hudson Bay, represents about the utmost expenditure of human endeavor and effort. William Cabot of Boston has written much of this district.

It is possible to go down the Rupert River from Lake Mistassini to Hudson Bay and thence circling the shores to reach Moose Factory and by direct route to return up half a dozen rivers until steel is reached again, either on the new Transcontinental or at Missanabie where the Canadian-Pacific crosses.

Trips from Edmonton north, after the manner of the one described in the April number of *Forest and Stream*, open a world of outdoor life, within a reasonable limit of time. Even the country north of Lake Superior heretofore beyond attainment except by trappers, is now accessible by means of the new Transcontinental, and following this line on, one may find a wilderness of vast mountain scenery which will be the delight of the coming generation.

How many have ever seen the wonderful natural bridges of northern Utah in the New Mexico and Arizona country? These were told of recently in *Forest and Stream*. Were these bridges located on a foreign continent, thousands

What the Keokuk Dam Has Done

Fair Vistas Ruined by the Overflow, but the New Marshes May Make Refuges for Migratory Fowl

By Orin Crooker.

ANY will feel keenly the desolation which is beginning to be manifest along some two score miles of the Mississippi river above the great hydro-electric plant at Keokuk, Iowa. The gigantic dam which now obstructs the Father of Waters at this point has caused a change in the river level for a distance of some fifty miles up stream. At Fort Madison, fully twenty-five miles away, the rise in the river has been not far from eight feet. Thousands upon thousands of acres of heavily wooded river bottoms have been flooded. The water has backed up on either side of the main channel for great distances.

The reservoir thus formed had been slowly filling for some time before the plant was put in operation. The effect, of course, was not un-

There has been an abundance of romantic boating on this part of the Mississippi the past season. Areas which hitherto had offered inviting tenting spots to the camper and fisherman have been easily navigated in boats. The tree-draped flowing aisles afforded wonderful vistas

scale. Trees and shrubs made a valiant fight for life—and are doing so yet. But the odds are too heavy against them. The region is doomed to become a desolate waste. Gaunt lifeless spars will soon take the place of arbors of waving green. The higher points of land will

Gaunt, Lifeless Spars Soon Take the Place of Green

like an extraordinary spring freshet. There were those who predicted that the trees would not send forth their leaves in the spring of 1914, but they were disappointed. Trees and shrubs flung out their green banners as usual, although the former stood waist deep in the blackish waters and the latter waved frantic salutes to passing boatmen from half submerged positions in the swirling tide.

of green arched waterways. In the branches overhead birds sang unconcernedly and lent a choral accompaniment to many a chugging motorboat which nosed its way into places which hitherto had been regions of the deepest woody seclusions.

By mid-summer of last season, however, withering green began to show here and there—a prelude of what is to come on so extensive a

Wonderful Vistas of Green Arched Waterways

become small green islands in the midst of a wilderness of lifeless trees—all in order that hungry industries may have power upon which to feed and that men may clip coupons from beautifully engraved bonds. It may be that some of the timber will be cut while it is yet serviceable, but the desolation of half submerged stumps will be no less a heartache for the lover of outdoors.

It is not unlikely that this vast labyrinth of winding, tree-lined river channels will afford congenial shelter for migratory water fowl. In this case some compensation will ensue. But Nature enthusiasts along this section of the mighty river wear doleful faces these days. They confess that with their favorite haunts already a thing of the past and the entire region becoming so changed from what they can long remember, they have a fellow feeling for the Indian as he faced the encroachments of the white man upon his territory. It is the same story, written of course in different symbols, of the aftermath of progress.

The Aristocrats of the Sea

Smell of the Brine and the Swish of the Waves Run Through this Story of Summer Delights

By Switch Reel.

BELIEVING that the popular opinion which fresh water anglers hold against salt water angling is based largely upon a lamentable lack of acquaintance with the gamier of the denizens of the mighty deep, and knowing full well that the sea contains warriors worthy the attention of highest exemplars of sport with rod and reel the writer will attempt to present a brief for a branch of sea fishing now growing in favor along the eastern seaboard.

It would be a waste of time to speak for the tarpon of the South or the tuna and swordfish of the Catalina Islands. These aristocrats of the sea have won their well-deserved place in the affections of the unprejudiced and are seldom included in the thoughts of the fresh water devotee when he lets loose his slings and arrows at salt water fishing.

But it is as unfair for him to look down upon salt water fishing because some members of the craft disembark from the Fishing Banks craft with tow bags full of ling and cunners as it would be for the salt water angler to sneer at fresh water fishing because the cane pole or slim hickory will "snake" a mess of catfish or crappie from some shady pool in a quiet stream.

How long, my brother of the fly rod, would you be worthy to sit in the company of the clect at Rangeley Dam for instance, did your rod weigh more than half an ounce to the possible pound of fish, or did your leader stand a strain of more than five or six pounds dead weight? Is it not then a fact that the proportions you maintain between tackle and quarry are the main basis of your claims to sportsmanship? You have found that the fly rod of fifty years ago was heavier than necessary. You have reduced its calibre, length and weight, and, in truth, have found the lighter tackle the more pleasurable. You set a standard of light tackle as the *sine qua non* of sportsmanship—with certain other frills which we all observe.

Now let us look at the tackle of the surf angler. His rod will weigh from 24 to 30 ounces, and he battles with fish of 30, 40 and even 60 pounds in weight. So that the proportions of half an ounce to the pound are maintained. His line, nine-thread, twelve or fifteen-thread, is made to conform to the Catalina standard of two pounds breaking strain to the thread so that the heaviest of the three lines is of the same ratio to fish that your leader bears—and it is the whole line—not simply a six-foot leader. So why are not these proportions the equals of yours?

To be sure you take the admirable position that if the fish will not take the fly you do not want them. So the surf angler, standing by so often empty-handed, sees the striped bass troller

land from his boat with three or four fish without budging from his stand that if the fish will not come to the beach they may go elsewhere.

Why, then, is not the second stiff-necked code as admirable as the first? Is it because the strippers do not take the fly? Ah, my brother of the fly rod, would you quit fishing if the trout never took a fly? I think not. You'd descend to bait.

Yes, there are aristocrats in the sea as well as there are common fishes in the streams and lakes. What can be more game than the striped bass? It is the common experience of surf anglers after standing against the frantic rushes

"Anglers Who are Content With One Fish"

of a big striper, rushes reaching anywhere from two hundred to five hundred feet, and battling for half an hour on the heavy tackle that is justified, to bring through the breakers a dead fish—a fish that has fought until his heart has actually broken in his efforts to rid himself of the restraint of the line! You kill your trout before you drop him on his mossy bed in your creel. But the average striped bass of any size has died before the angler can beach him. Isn't he game?

Take the channel bass—that beautiful great copper and silver warrior who comes breasting the breakers from Florida to Barnegat each season, as another example of gameness. He is hardly so high strung as the striped bass, but

he is game to the core. His fight is long and strong. He may move more slowly than his striped partner of the surf, but when he is beached there is never a flop left in him. Mr. Cawthorne spent one hour and fourteen minutes by the watch in beaching his record 63-pounder, and it was a savage fight from the instant the lead leaped to life and started for the other side of the Atlantic. Oh, yes! there are aristocrats in the sea, and the standards of the sport and the tackle are well worthy the consideration of the highest sticklers for nicety.

So often we hear you say our tackle is crude. It is heavy as compared with yours, but it is not crude. In comparison with the fish we take, however, it is as light as yours. The lightest tackle judged by such comparisons is not the two or three-ounce rod of the fly fisher, but that of the Aransas Pass tarpon angler who, with a 6-ounce tip and a 9-thread linen line, tries conclusions and wins against fish of from one to two hundred pounds.

The fly is a feathered fraud. If your fish breaks off he has nothing to show for his adventure. If our fish escapes he often wins a juicy mouthful of bait.

There are some great rod makers in the country. Leonard, Vom Hofe, Divine, Orvis, Conroy, John Seger—why tire you?

The lines are linen of necessity. Silk has no place in sea water.

How many days, my fly fisher friend, can you stand it without a rise? My own experience on Hunter black bass has been that after a couple of hours' steady casting without reward I have been ready to take a rest by using bait, and after three or four days without a fish, to pack off for some other locality. But come with me to the surf and I will show you anglers who are content and happy over one fish in a season.

It's a joy to swing a Leonard rod and waft a couple of flies forty feet or more and to see them stop a few inches above the water ere they safely flutter down to the surface. It's a gentle joy.

So, too, it's a joy, and a wild joy, to grasp a surf rod by its 30-inch butt, with hands and feet well apart, starting the swing from the ankles, putting every ounce of power into it from legs, hips, waist, back, shoulders, arms and wrists as the rod goes overhead, and finishing with a filling of the tip which shoots the cast 40, 50, 60, 80 yards out into wild curling breakers where there is a chance for a fish that will bring one's back muscles into play in the fight. And there is fierce pleasure which no fly fisher knows to dig one's heels in the sand and lean back on a rod which will stand the strain while one of these fish makes a 200-yard dash. All must go well with the cast or disaster is

imminent. The lead weighs four ounces, the line breaks at say 18 pounds strain. It is a delicate art to start this weight from its resting point three feet or so below the tip of one of these really powerful rods, and to so evenly and rapidly apply the last pound of power in one's muscles, accelerating the lead throughout each inch of the swing until, at just the right time, a wave is sent along the rod which reaches the tip at precisely the instant the thumb releases the reel and puts the "wallop," so to express it, into the cast.

"Wallop" is just the word—and to get it there without breaking the line where it is knotted to the swivel is beyond anything done with a fly rod.

But we have only started the cast. The reel is revolving at a high rate of speed. Its bearings are as smooth as those of a watch and are lubricated with a fairly thin oil. If the line be dry as in tournament casting, its friction will burn the skin from the caster's thumb unless protection in the shape of a thumb stall be worn. And yet thumbing must control the reel down to a point where it delivers line at the speed the lead is traveling forward. Trained instinct will tell when, and a little faith will encourage one, to remove the thumb entirely from the reel and the cast goes on gathering distance in its graceful parabola until after three or four anxious seconds the lead strikes when the thumb abruptly stops the reel. The anxiety of these seconds is born of a fear that the line may not have been properly spooled in reeling up the last cast, or that a speck of sea-weed or a stickiness of the line may cause it to falter in its delivery from the barrel of the reel, or that some foible of the wind may corkscrew the line in its journey from reel to first guide, or any one of a dozen other causes may bring the dreaded back lash and the almost inevitable breakdown resulting therefrom when the line is as light as a 9-thread. Escaping this fate, what a satisfying picture it is to see the line hanging high for an instant apparently in the gracefully curved air-hole the lead has made and then crumpling and sinking to the sea! It is a sight the angler in fresh water never enjoys, for there is nothing like it elsewhere than under the magic spell of the surf rod.

I repeat, there is no cast so long, no anxiety so intense, no satisfaction so great when success attends, in the whole field of casting as the surf angler enjoys when all goes well. The American tournament record in surf casting may be mentioned right here to point the statement as to length of cast. It is 349 feet $\frac{1}{2}$ inch, made by Dr. Carleton Simon at the Midland Beach Club's tournament last summer, and my information is that it was made with a linen line. [Dr. Simon wrote very modestly of this event in the February number of *Forest and Stream*.—Ed.]

As to the poetry of the sport there is the ever-changing sea, whose moods run the widest gamut of variations that man can know, from the gentle playfulness of a child to the wild fury of—itself. Now bright and sparkling in the dazzling sunlight, sending its white foam flickering up the clear sands, now dull and oily under an overcast sky. To-day as gentle as a kitten, to-morrow lashing the beach with a frenzy all its own.

Woe unto the too venturesome if he follow a few low waves down too far in an effort to get his lead and bait beyond the combers, for his loved friend of yesterday may roll up a sea which will first fill his boots and ruthlessly sweep the water-logged one into the channel where a fight for life would be against great odds. One may love the dear old ocean, but one must also respect. Reflecting old ocean's moods are the skies. Of the clear white beach one sees but comparatively little at a time. Between the vastness of sea and sky one realizes to the fullest possible extent one's insignificance amongst the infinities and so comes truth which is poetry.

In the pursuit of sport here the angler is more free than his inland brother, for no law governs him but the unwritten code which it

When I tell you that I have taken *Forest and Stream* for almost thirty years, that should assure you that the paper suits me. When you announced that you proposed to change the paper from a weekly to a monthly, I was not sure I would like it; and in fact the first two or three numbers were not just what I wanted. Then you got busy, possibly anticipating what I wanted, and the last few numbers are good enough, at least for an old-timer.

For something over fifty years I have loved the forests and the streams, and I have had much to do with both in old Pennsylvania and in other states and countries. That kind of life has kept me on my feet and has deprived my family physician of many a bill. I will soon reach my seventieth milestone. For many years

"To Dig Ones Heels in the Sand and Lean Back on the Rod."

is an honor to observe. There is no six-inch law to protect his quarry. His hook is his self-imposed handicap in that direction, for if it were straightened out the wire thereof would measure within an inch of the length of the trout limit! There is no six-inch mark on the butt of your surfman's rod—instead there is a spring balance scaled to 50 or 60 pounds in his duffle bag. Here is a sport which the law need not restrict, for surf fishing will never threaten the extinction of any species which comes to the beach except the fish hog! He cannot endure in the surf.

There is no class of fishing less decimating to the stock of fish than this.

The code is simple. Be considerate and kind to your neighbor. Leave your tackle bag open. Help the beginner with good advice and teach him to beach his fish unassisted or lose him manfully. Do likewise yourself. If it is impracticable to send a big fish to a cook, send him back into the breakers; don't leave him on the beach to rot. And let your good right forefinger be your gaff—no cruel steel is necessary.

HAIL TO THE OLD GUARD.

Clearfield, Pa., April 14th, 1915.

Editor *Forest and Stream*:

I do not know what kind of a magazine other sportsmen desire, I can only speak for myself.

I have killed my limit of big game here in my own mountains, and hope to do so for some years to come. Strange to say, that for the last few years I have done better shooting at big game than I could do when I was much younger. I prize the big game heads that hang in my home more than I can tell you. Five moose, three caribou, several bears, and as fine a lot of deer heads as ever graced a "Den" will furnish an inspiration for my dreams long after I have hung up my old Winchester and my faithful old Parker.

But I didn't intend to prolong this letter. I only wanted to say that *Forest and Stream* in its new dress suits my fancy as well and better than if I were putting it together. But don't give us too much fiction; I like the real and true stories of the old-timers. Oh, how we miss them! There should be enough good stories wrought out in the hard school of experience, on the streams and lakes and along the trail; stories that come from the host of enthusiastic and successful sportsmen to fill your columns, without resort to reveries and stories of things that never happened. I am not complaining, I am only suggesting.

I owe many happy and mighty interesting hours to *Forest and Stream*. With my best wishes for your future success.

FRANK G. HARRIS.

Elastic Game Laws

THE notable advances already made in giving protection to wild life leave us still far from having met the swiftly-changing conditions which time brings about. Many of our laws are good enough, but through inadequate appropriations or political influences they are often not enforced, so that we might almost as well have no laws at all.

In the last issue of *Forest and Stream*, Hon. E. G. Whitaker suggests for New York State—in view of the approaching constitutional convention—a tentative amendment to the constitution, providing for the establishment of a Fish and Game Commission. To this Commission, Judge Whitaker suggests, should be given powers "to enact, repeal and amend laws prohibiting or regulating the killing of wild animals, wild birds, the taking and catching of fish and shell-fish" and to prescribe the times within which game and fish may be had in possession. In other words, this Commission should be authorized to put in operation game laws which shall be elastic—and may readily be adapted to changing conditions.

Judge Whitaker's recommendations and the draft of his amendment deserve most thoughtful consideration. The subject has already been discussed by some of our best sportsmen. In its report for 1912 the Game Preservation Committee of the Boone and Cockett Club declared that just such Commissions for the preservation of game should be created and should be invested with elastic powers and full responsibilities. "These Commissions should have full authority to make or unmake, lengthen or shorten, close seasons, to increase or decrease bag-limits; to set aside and entirely prohibit shooting on areas of land or water necessary for feeding grounds of wild fowl, shore birds, game birds or animals; to establish rest days on which neither game nor waterfowl can be disturbed; in fact, full and complete powers to establish such constitutional regulations or restrictions at any time or in any section independently, as varying and changing conditions may require, adequately to conserve the game." The recommendation then made was endorsed by the Club. The Committee repeated these suggestions in its report for 1915, emphasizing especially "its recommendation that game laws should be made flexible and entrusted to responsible Commissions with powers to adapt them immediately to changing conditions."

This is essentially the practice, if we are not mistaken, in Canada, where by an order in council the game laws may be changed without waiting for legislative delays.

The principle was recognized by Congress, when it passed a territorial game law giving the Secretary of Agriculture the power to prescribe close seasons for large game, and again when it enacted the Migratory Bird Law, which had a similar provision.

It is gratifying to read independent suggestions on the point from the Supreme Court bench of

New York. Their author has long been a sportsman and the earnest and continued work done for many years by his father before him in behalf of wild life on Long Island is still remembered by the older generation of sportsmen.

Judge Whitaker's suggestion deserves full consideration and prompt support by the sportsmen of New York State. In this matter New York has now an opportunity to lead the way, soon to be followed, it may be hoped, by all her sister States.

Nature Close to Town

THE fishing and camping season is at hand. The spirit that leads people to live near to nature may be the survival of primitive instinct, but it is a spirit to be encouraged and kept alive, for its cultivation means better health, clearer brain and cleaner living. Do not allow yourself to think—or rather do not allow your friend and neighbor to harbor the delusion, for every reader of *Forest and Stream* has already learned differently—that a long purse, ample means and abundant time are prerequisites of summer camping trips. By setting up your modest tent and rustic lares and penates in a grove or on a stream almost around the corner from any community, you can camp just as truly and enjoy the same experience that the wildest hiker into the extreme wilderness gains.

Of course it is something to be able to locate yourself in a region where fish are plentiful; where you have no neighbor, and where the wilderness looms large. If you cannot do all this, there is no earthly reason why you should deprive yourself of the joys of outdoor life. If the fish are scarce, then so much greater is the glory and the excitement of catching them. If you cannot get far enough away to hear the owls hoot, the loons wail or the wolves howl—and they howl but little in summer—you can at least be happy near town.

The bright glint of the rising sun over the dewy landscape is just as beautiful, the song of the white throat or the thrush is as melodious, and the soft murmur of the wind on the tent just as soothing. So also, pursuing your lessons as amateur camp cook, you can get just as much smoke into your eyes and burn your fingers as distressingly as in the real wilderness. The only disadvantage here is that you have not got the whole wilderness to swear in, safe beyond hearing, but at that the observance of the decent requirements of civilization will not spoil the summer outing.

Forest Fires

THE daily papers in widely scattered parts of the country will soon begin to report forest fires. It may be that with a comparatively humid or wet spring the fire season will be delayed, but that it will occur some time before fall is certain. Nine out of ten of the fires which destroy valuable property and natural resources are the result of carelessness and entirely avoidable. It is regrettable that the reports of the state fire wardens and rangers too often contain the line "started by campers."

The camper may not be to blame as often as the public is given to believe, but the way for the camper to get rid of his bad reputation in

this particular is to prove himself a woodsman by putting out all the fires he starts, and being careful not to toss matches or half-burned cigars or cigarettes along trails through the woods. The man who by his own acts of omission or commission lets a fire get beyond his control is only a little better than the individual who points firearms at people or shoots at some moving object in the woods without knowing at what he is aiming. Perhaps both in some future state will get more fire than they need. At least they will if the expressed wishes of those who suffer by reason of their misdeeds mean anything.

Is the Spirit of Adventure Dead?

IN another column a valued correspondent has something to say about the seeming indifference that exists nowadays toward trips into the comparatively unknown regions of this continent. His view is that the present generation of young men is missing great opportunities both of pleasure and knowledge by sticking to the beaten trails rather than striking out into the paths that have been opened for them by hardier explorers and sportsmen.

Perhaps there is something in this, although when it comes to scientific exploration and investigation, the unknown places of the world are being thoroughly ransacked. The American Museum of Natural History in New York alone has a staff of young scientists who are scattered all over the world collecting material and prying into the mysterious, and this holds true also with other institutions of note. But whatever the reason for the stay-at-home spirit, it is true that there are marvelous places to visit on this continent—regions where the foot of man has trod seldom, if at all, and vast sections where the game and other wild life is as abundant as in the days before the white man touched these shores.

Time to Protect the Moose

A MATTER which is coming nearer the stage where it must be considered seriously is the better protection of the largest game animal on the North American continent—the moose. Maine even now is face to face with the problem of a closed season. The legislature of that state so far has refused to enact laws suggested by the fish and game authorities favoring a closed period, but it is stating only the truth to say that if Maine does not do something of this kind, her reputation as a state for moose hunting will soon be nothing more than tradition.

Strangely enough, the big province of New Brunswick, adjoining Maine, reports moose and caribou more plentiful than ever, although the number of moose killed in that province in 1914 is stated officially to have been 1,737—which, of course is very much under the mark—while 231 caribou were brought in by licensed hunters. The new northern Quebec game regions mentioned in these columns several times contain an abundance of moose. Possibly some of the largest heads left in Canada are to be found there. It is evident that the moose needs more protection in the way of governmental or state refuges. The season also might be shortened to advantage.

Fiction Becomes Fact in Wolf Biography

MANY readers of this paper will recall the "nature-faking" controversy of a few years ago. It came to a head when the Rev. Dr. W. J. Long asserted, in a syndicated newspaper article, that a timber wolf could, and frequently did, kill a big bull caribou "by biting it through the heart with a single snap." Colonel Roosevelt, called upon to chastise the leader of the nature-fakers, declared that a timber wolf could perform the feat of getting into the chest cavity of a caribou with a single snap about as easily as a bulldog could bite in two a grape-fruit placed in the middle of a barrel of flour. With the issue joined, the leading naturalists and sportsmen supported the Colonel, while the reverend gentleman, with great heat, said he could get the affidavit of a man who knew of another man who had seen an ordinary wolf instantly kill a big horse by biting into the heart "with a single snap." While this latter performance would have required an axe and well handled, too, it led to the examination of other wolf stories of the reverend doctor, one of which will now be repeated. In "Northern Trails" he begins the first page with the account of a trip to Newfoundland in a schooner, and on arriving at midnight the anchor was dropped in a quiet harbor of a small village. As the full moon arose "a great white wolf," with its form outlined against the lunar background, sent "an unearthly howl rolling down the mountain," while the native dogs, "sitting on their tails in a solemn circle," their eyes glowing like "fox-fire," answered back the call of their wild ancestor. In this particular wolf the author seemed to take a great interest, for he says (page 12): "All over the Long Range of the northern peninsula I followed him, guided sometimes by a rumor—a hunter's story or a postman's fright." This method of hearsay tracking, and of a particular animal for weeks, while new to the world, was somewhat affected by the fact that wolves were extinct on the island at the time of the doctor's visit. But this did not prevent a series of wonderful daylight adventures with a nocturnal and absent animal. His description of his first night in the far north was as follows:

"All about us stretched the desolate wastes of sea and mountains over which silence and darkness brooded * * * not a light shone, not a sound or sign of life came from the little houses * * * when the moon arose I noticed the dogs flitting about like witches on the lonely shore; now sitting on their tails in a solemn circle, now howling all together as if demented. I paddled ashore * * * one dog ran swiftly past * * * his eyes gleamed as fox-fire in the moonlight. A long interval of profound silence had passed and I could just make out the circle of dogs sitting on

their tails * * * when an unearthly howl came rolling down the mountain *Ooooooo-Ow-Wow-Wow!* * * * From far away an answer, an echo, perhaps of their wailing * * * came ululating over the deep. Then, silence again, vast and unnatural, settling over the gloomy land like a winding-sheet. Suddenly my eye caught something moving swiftly on the crest of the mountain. A shadow with a slinking trot of a wolf gliding along the ridge between us and the moon * * * it stopped, leaped upon a big rock, turned a pointed nose up to the sky, sharp and clear, *Ooooooo-Ow-Wow-Wow!* the terrible howl of a great white wolf tumbled down on the husky dogs.

"The wild wolf had called and the tame wolves awakened to answer."

On the page opposite the text is a drawing showing this wolf outlined against a full moon.

This easy and very prompt method of beginning the study of wolves at the edge of a hamlet, swarming with dogs and human beings, like the rest of the story, was rudely declared by the natives and all visiting sportsmen to be pure fiction, notwithstanding the expressed declaration of the author, in the preface of his book, that everything narrated therein "is minutely true to fact and is based squarely upon my own observation and that of my Indians." But truth is stranger than fiction and imagination sometimes evolves into reality.

Jules Verne's "Twenty Thousand Leagues Under the Sea," finds a verification in the submarine craft of the present day, while the imaginary wolf of the Newfoundland peak finds a flesh and blood counterpart directly across the continent. For there on a British Columbia peak, adjoining the village of Telegraph Creek, a big wolf outlined against the moon sends an "unearthly" howl "ululating" and "rolling down the mountain" to the dismay of its tame descendants, who, flitting about like "witches" or "sitting on their tails in a circle," with eyes of "fox-fire," re-enact, action by action, the Eastern story of the big white wolf. This is fully described in a book recently published, entitled "Big Game Fields of America, North and South," wherein the second and later author graphically tells of the eventful opening of his first trip to the far north as follows, (pages 282-4):

"It was close to midnight. For an hour the little hamlet had been slumbering; no sounds were falling, the hush of the night was complete. A thin, silvery light grew behind the shattered spurs until a young crescent moon sailed up. Several huskies lay in restless slumber, every now and then they would raise their heads and peer at me * * * while their eyes shone like fox-fire * * * and great silence reigned over all. Out of the

blue throbbing night there ebbed a faint sound that came ululating over the distant hills like a voice of the wind * * * Three or four huskies trotted swiftly by as soundless as a darting shadow * * * I saw several of them flitting about like witches in the moonlight, now sitting on their tails in a solemn circle * * * A long interval of profound silence passed. Then suddenly * * * an unearthly howl came rolling down the mountain. It was a long wail of a great lone wolf. Then the huskies, which are but wolves of yesterday, raised their muzzles to the sky and howled as if demented * * * Across the river came a long *Woo-Ooo-Wow-Wow*, and then a great black wolf leaped to the very top of a spur and stood motionless * * * against the crisp stars and young moon. Sitting back on his haunches and pointing his jaws to the moon, he rolled out a long appealing wail.

"It was the strong and the free, calling to his degenerate captive kindred to be wild."

The pretended vision of the reverend fictionist in determining the color, size and the precise attitude and actions of a wolf at midnight, a mile or so away, is quite equaled by that of his voracious chronicler, while the very rare detection of the moon's reflection ("fox-fire") in the dogs' eyes is, also, an interesting conversion of Eastern fancy into Western actuality.

But, after all, the most striking feature in a wolf outlining itself against the moon, lies in the fact that the conjunction of the moon with a terrestrial sky-line varies each night in time and location, the impingement lasting but a few minutes, so that the "great black wolf" had to arrive at a precise moment, on the highest portion of the ridge and at the exact point on the sky-line between the sportsman and the moon. Were the moon, wolf and spectator not in a direct and unobscured line and at the right moment, the Lupine lunar eclipse could not be noticed.

Aside from one wolf being white and the other black, the coincidence of fact with fiction is most striking. True, there is a slightly greater proportion of *H's* in the ululating *oo's* of the Western animal, but this is merely a geographic variation. The phases of the moon were different, too, but that the *new moon rises at midnight*, as stated in the British Columbia story, is no more novel than that of a *full moon rising at midnight*, in the Eastern version, for each performs an unparalleled feat at a time unnoted, or perhaps overlooked, in any lunar calendar.

In concluding, it may be stated that the performance of the great black wolf, extraordinary as it may seem, was followed several weeks later by a wholesale duplication, for the owl-eyed author of "Big Game Fields," while sitting at his camp-fire witnesses a midnight parade of eight or more wolves passing successively in front of the moon, where "the leader, with his sensitive muzzle raised towards the sky, sounded the hunt call of his fellow kinsmen," and the latter re-

(Continued on page 295.)

Here is a Picture of Bird Life Undisturbed

THE scientific and exploration trip to the Antarctic under the leadership of Sir Douglas Mawson, 1911-1914, has beyond question given the world more in the way of results of real value than any other expedition of the kind of which we have record. Of course, the trips of this character recorded as popularly important are those which resulted in the achievement of discovery of the poles of the earth. In one way this is correct. But a trip which included nearly thirty scientists of note, which had its work and program divided and subdivided as completely and accurately as the system which characterizes the operation of the German army, was bound to reveal important truths. We have to go back to expeditions conducted under the authority of the late Charles Darwin to find something worthy of comparison.

In this short space it is absolutely impossible to touch upon the various features of the Mawson expedition, even of the heroic fight of the leader of that expedition to get back to his base of supplies after having lost his two companions—a struggle which revealed the true character of this young Australian. It is also impossible to more than touch upon any one single feature of the trip thoroughly, but to those who delight in natural history the descriptions of the bird life and of the wild fauna of the Antarctic, must prove fascinating.

We have been led to believe, for instance, that the sea elephant is almost an extinct mammal. It is, on the North American continent, and the few specimens which linger on the lower California coast and on islands lying off South America, are dwindling rapidly. But in the Antarctic the sea elephant apparently is as common as the walrus in the Arctic regions. It is, as a matter of fact, the victim of commercial greed and is slaughtered by the thousands on islands one thousand miles south of New Zealand. The scientists of the Mawson party lead us to believe that this slaughter does not exceed the reproductive powers of the herds that still remain. That may be true now, but we all know what occurs when civilization finds a profitable commodity in any form of prevailing wild life.

The Antarctic, be it understood, differs from the Arctic in that human habitation is entirely lacking. The region is one of such repelling climatic conditions that permanent habitation is physically impossible. It differs from the Arctic in that the southern cap of the globe consists of high plateau elevations of from six to ten thousand feet, over which winds sweep constantly with a fierceness not known elsewhere in the world.

During the stay of the Mawson party in the Antarctic for a period embracing nearly three years, the average velocity of the wind for months was fifty miles an hour and gales where this velocity was trebled were not at all uncommon. In such bleakness it seems incredible

that life for any warm-blooded creature is possible. Nevertheless, under such forbidding conditions the greatest remaining masses of bird life on the globe are to be encountered. We do not mean that where climatic conditions are the worst this bird life is the greatest, but within its zones are to be found literally millions of those great aquatic birds, the Penguin, which live and breed and multiply amazingly.

Through the courtesy of Sir Douglas Mawson

tending for hundreds of miles around the Antarctic circle.

The Penguins are of several species or subspecies, the heaviest weighing upward of sixty pounds. They formed a goodly portion of the dietary stores of the Mawson party and *Forest and Stream* has the word of some of the scientists in the party that the Penguin is food worthy of commendation.

Much that is new as to its breeding and other

Forest and Stream is able to present an illustration of one of the big breeding grounds of the Great Penguin. No estimate can be placed on the number of birds in this picture. They must be measured in mass and calculated, for counting is out of the question. And almost infinite though the separate specimens shown in this picture are, they represent only a limited fraction of the whole territory that might be pictured.

habits was discovered and set forth by the Mawson scientists. Better than that, thanks to modern inventions, the moving picture machine was brought into play on this expedition and all who have had the opportunity of seeing these pictures have enjoyed a treat that heretofore of necessity has been reserved to those who have journeyed to the ends of the earth to see things new and strange.

Fascinating Study of the Antarctic's Surplus Fauna

As stated already the expedition was divided into sections, some of which did not endeavor to penetrate the extremes of latitude, but established stations on the outskirts of the Antarctic. One of these was on Macquarie Island, a bleak rock outpost nearly one thousand miles south of New Zealand, and which is accessible to sealers, egg hunters, etc.

G. F. Ainsworth, the scientist and naturalist who had charge of this section, resided with his

modesty when refined has a market value of from £20 to £25 per tun, it will be seen that the industry is a profitable one. The cows being small never have a very thick coating of blubber, but I have seen bulls with blubber to a depth of eight inches, and some of them yield nearly two thousand pounds, though I should estimate the average yield at about one thousand one hundred pounds. The sealers in the early days used to obtain the oil by cutting the blub-

The 'elephant season' lasts only about three months, and within about four weeks of its conclusion, the 'penguin season' begins; the same gang of men being employed as a rule. The most difficult operation in connection with both of these industries is undoubtedly the loading and unloading of the vessel.

"About the middle of the month the Royal penguins commenced to lay, and on the 17th Sandell and I went to their rookeries.

"From careful observation I should say that the number of birds killed during the season would total one hundred and fifty thousand. The method of killing—by blows from a heavy club—is about as humane as any that could be adopted, and the yearly increase in numbers in the only rookeries that are being worked is certainly greater than the decrease due to the depredations of the sealers. Apart from this, there are acres of rookeries on the island from which not a single bird is taken, and they go on year after year adding thousands upon thousands to their already vast numbers.

"At the end of June, Blake and I surveyed all the penguin rookeries round about 'The Nuggets' and, allowing a bird to the square foot, found that there must have been about half a million birds in the area. The sealers kill birds from these rookeries to the number of about one hundred and thirty thousand yearly, so that it would seem reasonable to suppose that, despite this fact, there must be an annual increase of about one hundred thousand birds."

Will the Penguin become extinct as have the Great Auk and so many other species of our bird life? It seems impossible that such a calamity will befall, but it is to be remembered that not over two hundred years ago the Great Auk was almost as numerous in the Northern Hemisphere as the Penguin now is in the Antarctic. Anthony Parkhurst, in 1518, wrote: "These birds (the Great Auk) are also called Penguin and cannot fly; there is more meate in one of these than in a goose. The Frenchmen that fish neere the grand baie bring a small store of flesh with them but victuall themselves always with these birdes."

Richard Whitbourne, writing a few years later, says: "These Penguin (the Great Auk) are as big as geese and fly not for they have but a little short wing and they multiply so infinitely upon a certain flat island that men drive them from thence into their boats by hundreds at a time."

The work of extermination was so thorough that the museums of the Northern Hemisphere are without specimens. The last bird was shot in 1844, and is in the museum at Copenhagen. That was the end of the Great Auk. Let us hope that the Penguin will not suffer a similar fate. It possesses a value commercially and no matter how unlimited may be its number at present, it will go the way of the Auk unless a more enlightened sentiment expressed through governmental action is enforced to preserve it.

(The Home of the Blizzard; by Sir Douglas Mawson, J. B. Lippincott Co., 2 vols., \$9.00.)

party for nearly three years on the island, and his chapter of the expedition is one that contributes in nearly every page something new to natural history. Speaking of the herds of sea elephants encountered, Professor Ainsworth says:

"The sealers always gave the animals time to form their rookeries and then killed the bulls for oil. A well-conditioned full-grown animal yields about half a tun of oil, and as the com-

ber up into very small pieces and melting it down in 'try' pots. These pots, many of which may be still seen about the island, were made of very thick iron and the fuel used was the refuse taken from the pot itself. In the present method steam digestors are used, and the oil from the melted blubber is drawn off, after steam has been passing for twelve hours. Coal is brought down by the sealing-vessel to be used as fuel.

Things We Don't Know About Salmon

By E. A. S.

IN A RECENT communication to *Forest and Stream* I stated that although the season for fly fishing for salmon on the rivers of the Maritime Provinces opened February 1, it apparently does not have much significance so far as the streams of Quebec and New Brunswick are concerned, for the reason that the fish do not, probably, enter them so early in the season.

The language I used was such that the inference might naturally be drawn that we have information which shows that the early run of the fish is confined to the rivers of southwestern Nova Scotia, but such information is not, so far as I am aware, possessed by anyone, although I have been unable to discover any record of such movement it very possibly may occur; no

one can assert whether or not fish run into all the rivers of the lower provinces as early as they do those of Nova Scotia; who can say they do not enter the Penobscot in February and even in January? Why shouldn't they? Surely Canadian rivers and that glorious one of Maine have no greater frigidities than those of Norway and Scotland, and we know that the salmon are running up those rivers in January almost as freely as they do later in the season.

Someone has stated, I cannot now say whom, that salmon are probably running up or down Canadian rivers in every month of the year; while this is no doubt purely conjecture, I should not like to say it is not true. In fact, there is very much yet to be learned about the movements of our noble game fish, and I pen

these lines for *Forest and Stream* in the hope that they will draw out new facts from observers which should permanently be put on record.

I was once informed that the salmon which frequented one of the Quebec rivers abandoned its early summer ascent in consequence of the persistent netting which encompassed it and relinquished the ascent of the stream until late in the season after the nets had been removed. Now, to attribute to the salmon an intelligence great enough to change its habits in order to evade the nets and traps is going too far, for no one can imagine that any degree of reasoning that it might possibly possess would enable it to overcome the great natural instinct to ascend the river at its regular period.

I had my doubts in relation to this matter and in consequence wrote an expert friend, asking his opinion concerning it, believing him to be possessed of information if anyone was. His reply was:

"I think you were misinformed about the Quebec river into which the fish did not enter until the nets were lifted on the coast; I never heard of it before, and do not now believe it. In all our rivers (N. B.) there is a late run of salmon, and no doubt it is the same with the Que-

bec rivers; but the coast nets have nothing to do with this so far as I have ever heard."

Now it seems to me there is something here worth examining and something which tends to substantiate the statement that the fish move up or down the rivers "in every month of the year." We know of the early summer ascent and of the "late run" and have no reason to doubt that many fish come into the rivers very early in the spring in the same manner as do their congeners on the other side of the Atlantic; and this leads us to inquire why there should be such a diversity of habit, why they do not enter and leave the streams nearly simultaneously; the explanation I will endeavor to give is the result of considerable thought, and possibly it will stand until a better one is offered.

In the opinion of many good observers the salmon does not carry out the work of reproduction every year; that is to say, in many cases the fish do not always mature and deposit their ova every year, and some pass or go by occasional seasons.

I do not suppose anyone would undertake to say that all salmon cast their spawn every year or every alternate year, because so far as I have been able to ascertain, nobody has any tangible proof in the premises, but there seems to be very strong leanings to the belief that a certain proportion of the fish spawn only on alternate years.

Now the salmon, having performed their great work, have no excuse or reason for longer tarrying in the rivers in which most of them have spent many months, generally without food, and so they begin to move down the streams on their return to the ocean, where, by reason of the abundant food that is afforded, they are enabled to recuperate and again become the well-conditioned, vigorous fish they formerly were.

But the spent salmon, or kelts, do not always hurry in descending the rivers, some even procrastinating their return to the sea until April and May.

Now my theory is this: those kelts which do not return to the salt water until late in the winter or even in the spring cannot possibly recuperate to a degree that would enable them to mature spawn ripe for reproduction in the following autumn, and that they, instead of returning to the rivers, remain in the salt water during the early winter months.

But having acquired their full condition, their health, strength and vigor, the natural process of elaborating and ripening the ova begins and they are then prompted to return to the rivers in which those ova must be deposited, and a certain proportion of them attain that condition very early in the season, even as early as January or February according to the length of time during which they have remained in the ocean; those are the fish which constitute the early run.

The late run, so-called, most probably consists of those fish which deposited their spawn early in the previous autumn and descended at once to the sea, in which they have from ten months to a year to recuperate.

Between the early and late runs come those fish which ascend the rivers during the summer months, most of which bear eggs which will mature in the coming autumn, but some of which ascend the river only in pursuance of that instinct which teaches them to pass up into the fresh water even if no ova are to be deposited.

A Rival of His Majesty the Salmon

It may be urged that most of the foregoing is nothing but conjecture; of course it is, but it is conjecture that has been based on no little study and the getting together of no inconsiderable number of facts; whether it may be proved correct or not time will show; much valuable information, in fact possibly the key to the whole situation, may be obtained by the careful and general tagging of all salmon that are handled at the hatcheries, and by keeping records of their subsequent coming into the rivers from which they are released.

In the meantime it must be apparent to all observers that there is yet a "whole lot" we don't know about the salmon.

STRIPED BASS AND SHAD

Editor *Forest and Stream*:

Writing of the disappearance of shad and striped bass, Mr. E. A. Donnelly in the March number of *Forest and Stream*, seems to assume that both are migratory fish. The shad is migratory but not the striped bass. On our Northern coast the habit of the striped bass is to winter in fresh water, and summer in the salt. Thus the Hudson River bass spend the winter in deep holes up the river, emerging in spring to descend to the ocean and bays, where they remain until hard cold begins in the fall. So far from their being migratory, it is doubtful if the Hudson River bass ever stray as far as Montauk Point on the one hand or Barnegat on the other.

The striped bass is one of the most widely distributed fish on the Atlantic Coast, being

found from Massachusetts to Georgia. Below the Chesapeake it is locally known as the "rock-fish," and farther south than North Carolina it does not appear to migrate even from fresh to salt water. For example, all of the fresh water streams of South Carolina are full of them, yet they are never taken at any season of the year below the brackish water line. So much for the migratory theory.

That the striped bass is fond of shad roe is no doubt true, but it is rather straining the limit to speak of shad roe as its "natural food supply." A natural food supply must be constant, but shad roe is nowhere more than occasional. The natural food supply of the striped bass is small fish, crustacea, and worms. Shad roe is to it merely a spring luxury, just as the strawberry is to the human.

Thus the disappearance of the striped bass cannot be attributed to a diminution of the supply of shad roe. But is the bass disappearing? Numbers were taken last summer in the bays and along the beaches, which is proof the fish is still here. It is less frequently taken in the Hudson than formerly, probably because the surface water is so foul, it follows the deep and cleaner water to the sea. The shad is undoubtedly disappearing from the Hudson, and apparently from rivers further South. Whatever the cause elsewhere, in the Hudson it is the amount of sewage in the water, and probably also, the oil distributed by motor boats.

W. E. SIMMONS.

A DAY WITH THE JEW FISH

"HURRY up folks! breakfast is ready, and the motorboat is waiting; conditions are right for Little Pass, and you should have good luck." Such was our greeting on the morning of December the 8th last, by our genial host, Captain Lewis Roberts.

We soon finished a good Southern breakfast, and piled in the boat, waved good-bye to the Siesta and headed for the narrow of Sarasota key. Our party consisted of Dr. Doerner (Old Doc), his two attractive daughters, Lillian and Frances, my good wife and myself. Henry and Jim manned the boat and kept her moving at good speed, while we busied ourselves getting the tackle in order, renewing the water for our live minnows and viewing the scenery.

A matter of several miles around the Key brought us to Little Pass, an inlet so narrow that one can cast across, yet such a large volume of water from the Gulf rushes through this pass that at its mouth the current has hollowed out a remarkably deep hole with very abrupt banks. We anchored our boat a hundred yards or so inside, and made our way over the broken shells to the hole, where we were cautioned not to venture too close to the edge.

We lost no time getting our lines overboard, while Jim baited the shark hook with a one pound mullet, and twirling it around over his head, he sent it flying some 40 feet into the deepest part of the pass, and securely lashed the end of the rope to a stake on the beach. Old Doc was the first to get fast to a fish. After baiting his hook with half a crab, he made a beautiful cast, and the bait had hardly touched water when it was struck so violently that the revolving reel handle trimmed the skin from his

knuckles. He held on however, and after a tussle, beached a big channel bass, which came as a surprise for it is rare that this fish will take the bait at a jump. Not another bass was caught that day, but we soon had our hands full with better game. The tide had turned, and the clear water of the Gulf came pouring through the pass bringing in an immense school of shiners, and slashing right and left through the school were the biggest mangrove snappers we ever saw. Throwing away our crabs, we baited with live minnows and in a few minutes all were busy with the snappers, so that it was not long before we had a nice bunch of the big gamy fellows ranging from 3 to 7 pounds each, the biggest one which was a perfect beauty, being caught by my wife. Suddenly she cried out: "Theres goes the shark line!" Jim got there first, and giving the line a vicious jerk, called out: "All hands lay to!" We reeled in quickly, threw our rods on the beach and ran to his assistance. All pulled together, hand over hand, and over the bank came a jewfish which must have weighed 200 pounds or more. It was the first jewfish we had ever seen, and we spent some time marvelling at its great proportions. Jim soon rebaited the big look and swung it out as far as he could, and we resumed our rod and reel fishing.

I had just landed a fine snapper when there was another alarm, to which we responded pell mell, and after much excitement and yelling, we pulled out our second jewfish which was quite as large as the first one. We now felt entirely satisfied with our luck, but there was more to follow.

It was time for lunch, and the way the good things disappeared showed that fishing is the best tonic for an appetite. We were seated in a circle on the shell beach finishing up on oranges, when the coiled rope straightened out, and we made a grand rush for the shark line upsetting everything in our way. We soon landed our third jewfish, this time a small one of some 60 or 70 pounds. A little later Miss Frances hooked a big fish, and refusing all assistance, triumphantly landed her catch, which proved to be a fine grouper.

By this time the snappers had stopped biting and we had about decided that we would get no more strikes, when Henry suddenly called out: "Help! Help! Everybody!", and there he was at the shark line vainly trying to hold it in check. We ran to the rope, and realized at once that we had something extraordinary on the other end. All hands, seven in all, pulled with might and main, meanwhile screaming like school-children and slipping and falling in our excitement, until inch by inch, foot by foot, we recovered the line, and with a last mighty effort dragged our prize jewfish out of the water. It was a veritable monster, and we estimated its weight at from 400 to 500 pounds. The four great jewfish and the big bunch of smaller ones made a wonderful sight, and we would have given anything if our Northern friends could have seen them spread out on the beach.

Our day's fishing was over, for the wind had changed, and we felt the first chilly puffs of a coming norther. Henry bade us hurry and told us we would have to leave our one biggest fish behind, as we would have heavy seas to fight and he was afraid to overload the boat. With great reluctance three of us rolled our prize fish overboard, and as it was not long out of its

element, it swam away unhurt. The other jewfish were lashed on the bow and stern of the boat, and placing the other fish inside, we made off at full speed.

Henry was right, for the wind increased in force, and we had a very rough trip before we finally reached the Siesta. We were met at the dock by the Captain whose eyes fairly popped when he saw our catch. "Well, folks," he said,

"I have had many guests to fish at Little Pass and occasionally get one or two jewfish, but you are the first to catch four in one day's fishing."

A few days later we waved good-bye to Sarasota, and our train pulled out for home. We spent a most enjoyable vacation, but all agreed that there is one day we will never forget, the day with the jewfish.

Passing of A Pioneer Rod Maker

Charles Orvis, Famous for Early Development of the Split Bamboo, Dies at Advanced Age

On Wednesday, March 24th, 1915, there passed away, in a little village nestling in the valley of the Battenkill, at the foot of Mount Equinox in Vermont, a man well known and highly respected by a wide circle of acquaintances, and much beloved by those whose privilege it was to know him intimately; on Friday a few of those who knew him best and loved him most, laid away the body of the veteran rod-maker in the beauti-

with a few other well known men, with its early history, and a number of improvements, radical at the time, but now practically universal, were conceived and first used by him.

Mr. Orvis was a man of strong character and personality, who possessed in a remarkable degree, the faculty of attracting to himself those who made his acquaintance, and of forming deep and lasting friendships. He had been president and postmaster of the village in which he was born, and had held other positions of trust and responsibility in the gift of his fellow citizens, who knew his worth and trusted him accordingly. He lacked the advantage of early education, yet his strong and vigorous mind was stored, through his own efforts, with much of practical knowledge and scientific learning, and he was genuinely interested in everything that concerned the welfare of humanity. Especially was he deeply versed in the political history of his country, and few men could trace so accurately as he its development from the earliest Colonial days to the present, and at all times, and upon all subjects, he was a delightful companion and a most interesting talker.

A man of sterling integrity, scrupulous honesty, and indefatigable industry, he will be greatly missed in his home, in his native place, and by the wider circle of friends the country over, who knew him personally, or by correspondence.

Two sons—Robert J., at present postmaster of Manchester, and the Hon. Albert C., formerly member of the legislature—survive him, as also do two grandchildren, to all of whom he has left the priceless legacy of an upright and honored life. An only daughter, Mrs. Mary Orvis Marbury died only a few months ago.

H. W. VAN WAGENEN.

The Late Charles F. Orvis

ful cemetery of his native place, beside the noble wife he had loved so long and well, and mourned so deeply, and the gifted daughter who had preceded him by but a few months.

Charles Frederick Orvis was born June 19th, 1831, in Manchester, Vermont, where, with the exception of a few years, he spent his entire life, and with the history of which he was identified for more than three quarters of a century. He was an ardent sportsman, and early became interested in the making of fly rods, his first rod for sale having been made in 1856, and with some intervals, during which he engaged in other pursuits, he continued their manufacture until his last illness, in the Summer of 1913, laid him aside, since which time he had been a great sufferer until relieved by death. Although he was not the first, by some years, to make the split-bamboo rod, he was identified,

THE MOST INTERESTING AND RELIABLE
Pittsburgh, Pa., March 30, 1915.

Editor *Forest and Stream*:

I take this occasion of extending to you my congratulations on the splendid appearance of your publication under the new form, and the only criticism that I have to record is that I enjoyed the receipt and reading of the *Forest and Stream* under the weekly issue, as I assure you I would not receive it too often, and it is somewhat of a disappointment to have to wait a full month now before I can get a copy of the issue.

I consider your publication one of the most interesting and reliable in the field which you cover.

C. E. CORRIGAN.

GAME BAG AND GUN

Game Bird Conditions in Middle West

Guernsey, Iowa, March 14, 1917.

Editor *Forest and Stream*:

If you have any idea that you would permit a farmer to express his ideas through the columns of *Forest and Stream*, I would like to make a few remarks relative to the new migratory game law, and why game birds are becoming more scarce. Having had several years' experience as a market hunter, commencing thirty-three years ago, in Indiana and continuing during the hunting seasons for ten to twelve years, I have some conception of what a quarter section of land covered with game birds looks like. I lived in Indiana on a farm upon what we called the prairie country in White County, my father being a farmer and a good game marksman, naturally did considerable shooting for the market. Just four miles north of our home was where we would leave the prairie country and enter the timber and marsh country, and for some thirty to fifty miles north continued this unbroken marsh land and timber, including what is or was known as the Kankakee marshes and river. The geese and ducks would go from the marshes to the prairie to feed, commencing just at day break and continue until about 10 A. M. and again at about 3 P. M. and continue until dark. The flocks which went to the fields in the early day returned in the afternoon.

These birds were so plentiful that at times I have seen as much as ten or twenty acres of ground covered so thickly that it would appear that there was no room for any more. When I was about nine years old (1880) my father bought one of the first breech loaders that came to that community. He bought it of the famous Bogardus at one of his glass ball shoots at Logansport, Indiana. It was a Parker I well remember, and the wonder of the shooting fraternity in the neighborhood. I have stood at the house and have seen father kill ten, fifteen or twenty geese flying across the fields coming from the marshes early in the morning in the course of one to two hours before breakfast.

I used this gun later and for several years averaged two hundred, three hundred and some time four hundred geese and five hundred to twelve hundred ducks during the spring shooting each year, and after duck shooting was over, we would shoot Golden Plover, and Jack, or English snipe for a period of thirty days. I generally averaged one thousand plover and snipe every April. All the neighborhood was shooting for the market during all these years and we did not notice any perceptible diminishing in number or plentifulness of any kind of game of this kind until we commenced to drain the land.

Drain tile commenced to come in use and in later years the steam dredge ditcher was put in

service and the marshes to the north ditched. The one marsh where we had been killing wagon loads of ducks, geese and snipe was drained, and I might mention too, that many times this old marsh, commonly known as the Blue Sea, has seen many a tired and worn out business and professional man from Chicago, Cincinnati, Cleveland, Pittsburgh, New York, Philadelphia and other cities spending a week or two with Phil Dobbins in his scat getting some rest and at the same time fighting the geese and ducks off, but as these marshes were slowly drained, so too was the shooting drained, and later when these former bird haunts were dry, there was very little game, but we would have a wet spring now and then and every marsh would be flooded.

Then the ducks, geese and snipe were just as plentiful as before, and to this day when there is plenty of water there is very good duck shooting as long as the water lasts. I have noticed that drainage all over the country has had a tendency to drive out our water fowl. I believe, notwithstanding the thousands we used to kill, drainage has been the most potent factor in driving the birds away.

This part of Indiana which I mention was a great place for prairie chickens. There is no doubt that the gun has diminished the number of chickens, but when I attended the Grand American Handicap at Dayton, Ohio two years ago, I stopped to visit father a few days, who still lives in White County and he told me that there are still plenty of prairie chickens; he said the winter before he saw what he estimated at five hundred chickens sitting in the timber just north of the house at different times. Of course the cold weather causes them to bunch up.

We often hear the question: Why are prairie chickens so scarce here in Iowa compared with years ago? And the usual answer is, they have all been killed, which in part only is true, but the principal reason I think is this: I have lived in this community for five years and practically no chickens hatch here, (fifty-five miles southwest of Cedar Rapids) but every fall we see hundreds of chickens coming from the north and stay here all winter and in the spring they go back north, probably to northern Iowa and Minnesota and probably part of them as far as North Dakota.

Why is it? The facts are that Iowa is so closely farmed and grazed that a prairie chicken has no place to make a nest. In this whole community I have not seen even a fence row where there is enough grass for a chicken to make a nest. The stock clean out all the grasses right under the fences and the cross fences are farmed so close that there is no grass. Consequently the chickens have to go north to a wilder country

to breed. The quail also are getting in the habit of migrating to a limited extent. During the spring and summer the quail sit on the garden fence near the barn and in fact we can at times count eight to twelve at one time saying: "Bob White" and a little later there are many flocks of little quail which we generally take great pride in protecting, but we have to hustle in the fall to have a little fun before they go a little south. I presume they go to Missouri and other warmer places during the winter. Last winter there were six quail wintered on this farm; during the fall we had four flocks of quail, but they all went south in December and this winter we have six quail again, presumably the same six of last winter. During the cold weather these six quail came to our hog lot to get fed, but within the next sixty days there will be pairs of quail everywhere.

Now the difference between the migratory birds and the native birds as viewed by the farmer. The average farmer takes pride in protecting the native birds, including migratory song birds. When we run the mowing machine into a quail's nest, not knowing it be there, we stop long enough to replace the nest, and fit it up in good shape and leave a pile of hay at the nest so that whoever of the family does the raking, after having been told about it, knows where that quail's nest is and goes around it, and nine times out of ten the old mother quail will hatch the flock just the same as if it had not been disturbed, but as to geese, ducks and the various snipe family we take a different view. We are told by people who know and by writers who have studied the geese and duck family that their home is the whole earth, wherever they can get fed. We are protecting game birds that live the greater part of the year on the South American and other continents.

I read a lady writer not long ago. (I have forgotten the author's name) who claimed to have followed the Golden Plover which abounds in this country during the spring, passing through here up the Mississippi River valley, lingering about 30 days. She says these plover and snipe after leaving Indiana, Illinois, and Iowa go to the extreme northern part of Canada to breed. When the young are ready to fly they start about September first or earlier and go to the eastern coast of Canada for a two weeks' rest, then they start south along the coast of North America, flying in flocks sometimes miles long. They make another two weeks' stop somewhere on the Central American coast, thence they go to Argentine Republic where they remain all winter. After some reflection upon the question of protecting migratory birds we arrive at the conclusion that we are protecting the birds for foreign countries, the birds having no personal home.

I have also noticed considerable comment by city writers on the "Pot Hunter." If I understand just what the term means, I would suggest to those that think the "Pot Hunter," is still a

factor, just to get out into the middle west or north or most anywhere in the United States excepting a very few states, shoot a bunch of any kind of game birds and try to sell it. After they do this they won't wear out any more blue pencils preparing articles on "Pot Hunting and Market Hunting."

I have been asked by several farmers in this community about the new migratory game law. Very few farmers as yet know about this law, but I am of the opinion that when the majority of the farmers learn that they are prohibited from going duck shooting on their own farm, they will not endorse this law. We have closed seasons on our native birds and the average farmer takes pride in protecting our native birds. Each state should protect its migratory birds in nesting time, and I believe there are very few farmers who would knowingly shoot a duck that was nesting—in fact the average farmer generally kills a few ducks in late February and March in this community, but as soon as the ground is ready to work he generally gets busy farming, and if the ducks light right in the same field he very seldom stops to go and get a gun to kill them. Mrs. Dobbins and I would much prefer to shoot at clay targets than to shoot game, but we certainly like two or three nice duck roasts during the spring. However, this spring, Uncle Sam says we can't eat wild duck; therefore we will have to wait until next fall for that duck roast, and shoot a few targets in the meantime.

J. W. DOBBINS.

WILD DUCKS DYING IN KANSAS.

Ellinwood, Kansas, March 31, 1915.

Editor *Forest and Stream*:

I have read your March copy with pleasure and enjoyed the "Confessions of a Market Hunter," and I sincerely believe this country again could be made a land of plenty of ducks and geese with long open seasons and plenty of birds for the market. But under our present system of game laws our game is protected off the face of the earth. As to my theory, most of our legislators are incompetent as to the real care our waterfowl should have. I will venture to say if Kansas had game laws which it should have, it could produce thousands upon thousands of birds every year within its boundaries. Thousands of dollars are spent to make laws but not one dollar is spent to produce birds.

The wild ducks here, the last few weeks, are mostly pintails, and they are dying by the hundreds and hundreds. They seem to get weak and hungry. I found some twenty live birds on a patch of four acres that could barely fly, and the dead lay in numbers on the field. Now what is done to care for such birds? From all indications the money from the game department is spent to make laws, to convict good citizens, but none is spent for the welfare of the birds. These birds that are dying by the thousands could have been saved with little money.

Rights of Farmers to Control Game

By Sandy Griswold

I noticed in a recent number of the *Forest and Stream* where some correspondent desired to know about the rights of farmers to control all the game that harbored on their lands, and as this question has been frequently put to me, I will say that the principle that property rights in the *ferae naturae* repose in the state and not in the individual until reduced to actual possession, has long been established. It probably had its origin in the arbitrary exercises of power by the early Norman kings of England, who asserted ownership over all the wild creatures in the kingdom. We hear nothing about "the king's deer" before that time. But color is given to the rule that *ferae naturae* are not the property of individuals until reduced to possession by the fact that the wild creatures do not inhere in the land of any individual, having no permanent abiding place, and not being subject to human control; but are on this man's land today and that man's land tomorrow; so that no individual landowner can claim any other than a transitory interest in these wandering denizens of nature's wide domain. And it is no great strain on the fundamental principle of property rights for the state to assume a restrictive control over these creatures that cannot in the nature of things be considered one man's property more than another's when in a wild condition, the state's intervening being for the purpose of best securing the rights of all in the game and fish that are common to all who can properly gain access to it.

But if the state should appoint agents to go on the man's land to reduce to possession the game that it has theoretic title to, the landowner could challenge the right of the state to invade his premises for such a purpose and would be sustained by the courts.

A Sioux City reader takes me to task about my assertion in a recent issue of the *Forest and Stream* that the sportsmen are the class that are chiefly interested in the propagation and preservation of our game birds and animals. He says: "If, as you have so many times asserted, it is the sportsmen who shoot game who are the most interested and the most earnest in their efforts to protect and provide for it, will you inform me whether their good work is instigated by the desire to do something useful, or only that they may later kill them. According to my way of thinking, it is the naturalist who is the most deeply interested and the one who does the real work of protection and preservation."

In reply, I would say that for one, I claim that it is for the useful purpose the sportsmen seek to preserve our game, and it is also for a useful purpose they hunt and kill. They are just as much interested in the protection of game in parts of the country where they never expect to kill any, as they are in localities where they expect to derive direct benefit from its protection, and if their hunting days were over, would still be interested in its protection from a sportsman's standpoint.

There are certainly naturalists who are sports-

men and sportsmen who are naturalists. I think a good percentage of the sportsmen are naturalists to some extent or other. Has not the sportsman the opportunity to study and the soul to admire game in its wild state? A true sportsman has no desire to kill all of the game he sees. Science is indebted in many ways to sportsmen and hunters for much of the knowledge acquired about game.

The young sportsman of the present day accepts the established order of things as a matter of course. But what has been accepted as right for a few years may easily imply existence from time immemorial. It is not many years since improvement began. The perfection of the practical sportsmanship of today had its origin in very crude beginnings about twenty-five years ago. In this country—and it is of this country of which I write—so great is the difference between ideas, implements, and methods of today and those of twenty-five years ago, that they mark widely different eras of development.

Twenty years ago every sportsman used Nos. 1, 2 and 3 for ducks, 0's or 00's and No. 1, for geese. Ten years ago they used Nos. 3, 4, and 5 for ducks and Nos. 1 to 3 for geese. Five years ago 4s to 6s for ducks, and 2s and 3s for geese. What do you find today? Nos. 6s to 7s for ducks and almost exclusively 4s for geese. It hasn't been a sudden change or it might be less trustworthy. But a general deduction in the size of the shot has been going on. For the past ten years I have used 6s exclusively for ducks, and in fact, almost everywhere else. When I came here, twenty-five years ago, a man wouldn't think of doing duck hunting with anything but a No. 10 gun. Now thousands use 16s, and many of them 20 bores.

SHELTER FOR THE NIGHT.

He is a poor woodsman who in a forest of any kind cannot very quickly provide himself with shelter from rain or snow. It may be of palmetto leaves, of branches of trees or of bark from the trunk of a tree. The favoring trunk of a tree may keep off the storm, or in a rocky country a shelter can often be found under a projecting ledge or in a shallow cave. A good thing always to carry along is a rubber poncho for each person. It is good to roll around the bedding when *en route* to protect it from wet and dirt; or to put over one's shoulders when traveling in rain or wet snow. When night comes, if the ground is wet and the heavens dry, spread it under your bed. If the reverse, reverse it. With two small stakes at opposite sides of a bed for two, to support two corners of a poncho, the other two corners being stretched backward and held to the ground by a couple of stones or chunks of wood, a very good shelter is provided for your heads and shoulders. Then another poncho spread over the blankets to your feet, and you two can sleep blissfully through any ordinary rainy night.—

W. N. B.

The Buck Law

(With apologies to Mr. Dooley.)

By W. H. Bentley

"PHALEN," I says, "I've been raydin' in th' *Fa-arest an' Sthream* paper a pile iv late 'bout th' book la-aw iv th' sthate iv Noo Yorruck; an' f'r th' loife iv me I can't git th' roights iv ut."

"Pwhat's th' thruble," he says.

"Ut's this way," I says. "Thar's thim ut wants t' shoot th' dhoes iv the deer ala-ang wid th' books, so as t' persoorve th' game fr'm extinckshun; an' on th' ither hand iz thim ut says 't'iz enuff t' shoot on'y th' books f'r th' same poorpus."

"An phwat's th' p'int iv th' argymint ut bothers ye," he says. "Ain't ut plain az th' nose on yer face, kapin' th' prime objek iv consoorvashun in moind, av ye shoots th' moothers az will az th' fa-athers iv th' famby, y'r makin' twi'ist th' progress yu'd be makin' av ye shot but th' wan? Ut luks t' me, Donovan, az iv thim ut wants t' shoot both, haz got th' ithers nailed t th' floor."

"So it wud same, Phalen," I says; "but not bein' a hunther, they's things ye don't ondersthan 'bout th' matther. Ye see, whin ye'r hunthin' th' deer, ut's diffycult says th' pa-arties iv th' foorst pa-art, t' till th' dhoes fr'm th' books; an' noinety-noine times out iv a hunderd whin they blazes away at a book, they knocks down a dhoe; an' ut bein' at prisint onla-awful to shoot th' same, they laves the karkiss on th' sphot an' legs ut out iv thim pa-arts, f'r fear th' game wardin wud lug 'em to coort t' pay a fine. Av coorse, bein' considtherate aven though near-sighted, 'twud be natcherul av they waz t' instruoct th' guide t' put a ma-ark be th' sphot, so av inny loyers waz t' coom meandtherin' al'ang that way in th' doosk, they wudn't fa-all over th' karkiss an' git hooorted; an' ut's loikely they duz that same. Besoides, th' indivige ut shot th' dhoe might himsilf be sthrollin' al-ang there arther da-ark; an' silf-persoorvashun iv th' shins iz th' foorst la-aw of naycher. There's lots iv mate wasted that way, ye see, on account iv th' near-sightedness iv most hunthers; whereas, av 'twuz la-awful t' shoot th' dhoes, th'r wud be nawthin' prejooidishul to afflikted eyes amoong thim ut takes th' consoorvashun iv game so mooch t' ha-art, an' incidinshully they wud be a divvle iv a lot of good mate saved."

"Both pa-arties t' th' argymint iz contindin' f'r th' same princypal, ye see, Phalen. Both iz consarned t' persoorve th' game fr'm extinckshun, an' th' on'y p'int iv diffrunce bechune 'em iz which iz th' betther way t' do ut. Th' mere gittin' iv a deer karkiss to take back an' show thim that ain't got th' price iv th' travelin' ixpenses, an' boord ut a sphortin' camp, an' t' hoire guides that can shoot sthstraight an' ain't near-sighted, don't figger in th' case ut a-all. Av coorse," I says, "ut's soome sthrain on human naycher, whin a near-sighted hunther wa-alks up t' th' deer him an' th' guide fired at, an' finds ut's a dhoe, espeshully whin th' day befure yis-tiddy a frind iv his'n coom wa-alkin' into camp behind a book wid la-ang hoorns that th' guide waz loogin. Logickly, th' foorst wan continds that iv th' game iz to be persoorved fr'm ex-

tinckshun, ut shud be la-awful to shoot th' dhoes; while th' sicond wan continds ut's bein' persoorved fast enuff be shootin', on'y books; an' so bechune th' two th' argymint breaks out."

"Why th' divvle," says Phalen, "don't they git th' la-aw changed, so on'y th' dhoes can be shot? Thin, instid iv shootin' th' wrong deer noinety-noine times out iv a hooorder, ut wud on'y be wanst out iv th' same."

"Good Lord! Phalen," I says. "Phwat makes ye so thick? Changin' th' la-aw wud on'y defate ut's own poorpus. That wudn't impvroove th' eyesight iv a hunther. Don't ye see that thin, insthead iv shootin' noinety-noine dhoes, thim near-sighted hunthers wud shoot noinety-noine books be misthake? Thin th' diffyrunt pa-arties wud have to change sides in th' argymint. Whin ye a-are supphortin' a princypul, Phalen," I says, "ye can't be changin' sides a-all th' toime."

"I dinnaw 'bout that, Donovan," he says. "I have an oidee on th' p'int, an' we'll coom t' u' later. How is ut," he says, "thim hunthers can't till a book fr'm a dhoe. Ain't th' books got hoorns?"

"Yis," I says, "they have whin they're grown up; but whin they's yoong," I says, "thim that continds f'r th' priv-lige iv shootin' th' moothers az will az th' fa-athers iv th' deer famblies in urdher t' persoorve th' game fr'm extinckshun, insists ut no wan can till 'em fr'm dhoes. I ain't noticed," I says, "that anny iv 'em whote t' th' *Fa-arest an' Sthream* ut he made th' misthake himsilf an' kilt a dhoe; but they're a-all trimblin', they says, f'r fear ut th' supphorters iv th' book la-aw will shoot a-aff a-all th' dhoes be misthake, an' git ahead iv 'em in persoorvin' th' game."

"I see; I see," says Phalen. "'Tis ra-ally a problem afther a-all. I ain't had no experyunce wid game," he says; "but I notis th' princypul iv th' perptchiashun iv speshies is gin'rully the same ivrywhere. They waz kittens in me cellar a-all th' toime I kep' a tabby cat; but afther Pat Mulligan's dawg shuk her backbone apa-art, they wasn't no mure kittens. They waz niver anny dhoes round me primises f'r me observashun; but I'd loike dom will to have soom wan till me how th' divvle ye can raise deer whin th' dhoes iz a-all kilt a-aff, or a tabby cat have a famby whin her backbone is bruk in two. Ye can remimber, Donovan," he says, "whin they waz millyuns iv thim booffyloes rootin' round ut Wist. They wasn't anny book la-aw thin; an' ivry moog wid a goon waz bizzy persoorvin' 'em. Whin they got t'roo, ivry wan iv thim waz persoorved."

"Soom hunthers, Donovan," he says, "whin they sees annythin to shoot, gits so near-sighted they can't till a hoomin' bur'rd fr'm a roosther, or a jack-rabbit fr'm an illyfunt. Aven a book la-aw ain't iffictive ag'inst that koind; but, Donovan, av ye waz to jail a few iv 'em ivery toime they got near-sighted, ut wudden't be la-ang befure they cud till a moskeeter fr'm a black fly, siven miles a-aff. Waz ye iver hunthin' yersilf, Donovan?"

"I waz," I says, "a good many toimes."

"Did ye shoot annythin?" he says.

"I did," I says.

"Phwat did ye shoot?" he says.

"A good many dhoes, an' wanst in a while a book," I says.

"The divvle," he says. "Was ye attackted wid near-sightedness yuresilf?" he says.

"I was not," I says. "They waz no book la-aw where I wint, an' therefore no occayshun t' git near-sighted," I says.

"An' cud ye till a book fr'm a dhoe?" he says. "I had no diffyculty t' speak iv," I says. "I niver wanst shot a dhoe be misthake."

"Will, th're ye a-are," he says. "'Tis just az I tilled ye befure. Th' pa-arty iv th' sicond pa-art that continds f'r th' persoorvashun iv game be shootin' on'y th' books, ain't got no mure show 'n a fince poster wid a billy-go-at. But sphakin' akydimikally, nayther iv 'em iz toochin' th' mate iv th' sitchiashun, whativer th' divvle becoomes iv th' acktul mate that's sphotted out so ut no meandtherin' loyers can bruk their shins on ut. 'Tis th' sycology iv th' matther ut nayther iv 'em rayconizes," he says. "Don't ye see, Donovan, ut whin they's no book la-aw, they's no thruble wid th' eyesight, an' a hunther can till a book fr'm a dhoe t' wanst. Be a sillyjism," he says, "whin th' hunther can till a book fr'm a dhoe, he ain't goin' t' shoot inny iv th' latther, an' the' princypul f'r which both pa-arties iz contindin', is safe. Wid th' book la-aw in foorce, dhoes now gits kilt on'y be misthake; but av ye trun out th' la-aw, noone iv 'em will be kilt at a-all, at a-all, an' th' hull argymint blows oop be its own weight."

"Be th' pipes, Phalen, y're roight," I says.

"I know I am," he says.

"Phalen," I says, az we wint in be th' side dure, "will ye have a horn yerself?"

March 10, 1915.

WOLF BIOGRAPHY

(Continued from page 287.)

sponded "from the top of every jutting rock" (page 336).

As hundreds of American and English sportsmen have hunted in the Stikine River region and have never seen a wolf or even heard one, it may suggest that the future method in hunting this skulking animal should be on the sky-line at midnight, when "the wolf in the moon" would present an encircled target, much like that seen through a Lyman sight. The fact that the precise color, size, attitude, leadership and distinctive notes of these animals can be detected from a camp-fire would give accurate shooters a chance to kill without leaving their comfortable surroundings, while those of less accuracy in aim could sit just below the lunar trails and pot them as they went by. —G. S.

HOW TO TELL A BOILED EGG

An egg is an egg—on the outside at least—but sometimes it is difficult to tell whether it is raw or boiled, unless its antecedents are familiar.

One day last summer in Maine our guide put a plate on the ground and began whirling an egg on it. One after the other he spun on the plate and finally put two of them aside. These he broke and put in the coffee. I asked what the whirling was for. He told me that that was how he could tell a boiled egg from a raw one. A boiled egg will keep spinning while a raw one will stop dead. And it is so.

Live Notes From The Field

Being Reports From Our Local Correspondents

The Eastern Pinnated Grouse

By Dr. George W. Field

THE eastern pinnated grouse or heath hen, locally called "heth'en" on Martha's Vineyard, is one of the most interesting birds in the world from the fact that it is the contemporary of the Great Auk, the Labrador duck, passenger pigeon, Eskimo curlew, Carolina parakeet, and, like them, appeared to have been marked for extirpation at the hands of man. Now, however, it gives promises of perpetuation. Formerly abundant from Cape Ann to Virginia, especially so in Massachusetts, Rhode Island, Connecticut and New York, particularly so on Long Island, and in New Jersey, and probably Maryland and Delaware, the last record in the Connecticut Valley in Massachusetts was in 1813. In 1824 it was no longer common around Boston; in 1844 it was believed to be extinct on Long Island; about 1848 it disappeared from Cape Cod, and the last bird on the mainland was shot near Barnegat, New Jersey, in 1869.

In 1906 the experiment was conceived of attempting to save from extirpation the last few individuals of this species which had persisted for some years in the interior of Martha's Vineyard. As is well known, these birds resort in the spring to special places for their courtship. Those on Martha's Vineyard were ascertained and on May 1, 1906, a careful, simultaneous observation, conducted at these places, three in number, disclosed but twenty-one birds, so near at that time was the species to extirpation. In May, 1907, actual count of the flocks definitely located in various sections of the range showed seventy-seven individuals.

The eastern bird was first distinguished from the western type by William Brewster and described by him under the name of *Cupidonia cupido*. In 1890 Mr. Brewster estimated that from 120 to 200 birds, inhabiting about forty square miles, were left from the previous winter. This number slowly but surely diminished.

This bird is of further interest from the fact that the original description of Linnaeus was doubtless of this eastern species. On Martha's Vineyard the bird was well known and characteristic of the fauna as far back as memory or local tradition extends.

Various attempts were made at restrictive

legislation; New York was the first to recognize the danger of extinction and in 1785 made a close season from April 1 to October 1. New Jersey, Massachusetts and Long Island followed, but in Massachusetts the state law of 1843 provided that the law for the preservation of this grouse or heath hen might be suspended by the towns, and such action was usually taken. From 1890 a completely close season was in force, but until 1905 there were

A Typical Specimen

no systematic attempts to enforce the law, and the money secured by sale of the birds was sufficiently attractive to encourage violations. In 1906 the penalty for violation was raised from \$20 to \$100. By an act of 1907 the Massachusetts Fish and Game Commission was authorized to acquire land by right of eminent domain as a refuge for the heath hen; to provide mounted game warden service to patrol against violation of the game laws; to guard against forest fires; to construct and maintain fire stops; to furnish food in inclement weather; to kill feral cats and other vermin which prey upon birds.

Through the co-operation of the towns of Tisbury and West Tisbury, the National and the Massachusetts Audubon Societies, the Middlesex Sportsmen's Association and about twenty-five private individuals, about \$2,000 was pledged to purchase land and to assist in this work. Since 1907 the number of

birds has varied from time to time, but in general there is a decidedly upward tendency, so that at present there are at least 600 birds and possibly as many as 1,000 on the island inside and outside the reservation. It was possible last spring to see 150 birds in sight at one time, and flocks of from 30 to 50 are frequently seen in various parts of the island. Forest fires have been the principal cause of destruction, chiefly associated with the fact that the hen sets so closely with the eggs or young as to permit herself to be destroyed. On the reservation where they have not been shot for seven years, the birds even now rise up out of gunshot when they know that they are seen; though if they believe they are unseen they will lie very close.

So far as recorded, only four nests have ever been found, chiefly due to the fact that the birds apparently cover the eggs with leaves when leaving the nest. The period of incubation is twenty-four days; the young when hatched are remarkably well concealed by their protective coloration. At ten days they are able to fly considerable distances as a result of the very rapid development of the primary feathers. At seventy days old they are practically mature. The winter feed is largely made up of dried berries, acorns, grain, clover, the tips and needles of the pitch pine. It is a very hardy bird and easily withstands the rigors of the northern winter.

The chief enemy of the heath hen on Martha's Vineyard has been the marsh hawk, possibly associated with the fact that the island is closely covered with a dense growth of scrub oak and other brush, making mice difficult to capture. The marsh hawks have thus been compelled to turn to more available prey. The destruction of birds by marsh hawks is therefore merely a local condition of perverted appetite. Investigation of forty-three stomachs by the United States Bureau of Biological Survey disclosed the important fact that all but four contained remains of heath hens or song birds. The nest of a marsh hawk contained remains of one flicker and eleven chickens and heath hens.

Telephone wires have been responsible for the destruction of many heath hens, as indicated by the fact that three birds thus killed or injured have been found in the past year. But without question the worst enemy is the domestic cat which wanders out into the interior of the island after having been abandoned by the summer cottagers.

The future of this bird is somewhat problematical. That it can be saved from extinction, barring an epidemic or unusual disaster appears to have been demonstrated. The most interesting result of the work, which has consisted largely in the development of a typical farm in the center of the reservation where the birds can find abundant food in variety and relative freedom from enemies, has been the fact that even from a small number of birds rather rapid increase may be secured. It appears to have been a very fortunate circumstance that the number of males was much in excess of the females, possibly as many as ten males to one female in 1907. This reduced the chance of any possible deterioration from inbreeding. Our observations indicate that this preponderance in number of males over females is slowly disappearing, and, as my observations indicate, is probably now about four or five to one, 1913.

As to the efficiency of these birds as insect destroyers, testimony was given by our state ornithologist who said that last summer when the grass and corn on the rest of the island were practically destroyed by an incursion of army worms, our reservation presented a green oasis in the desert. Of most importance possibly is the application of the methods adopted here as promising success on similar reservations for saving the remnants of the various species of grouse and allied birds in the middle and western states, notably the sage cock, the sharp-tail, pinnated and other grouse.

The problem for the people to determine is whether saving the remnant of these birds with the possibility of restoring them to suitable localities where they can be again naturalized and maintained is worth while.

BIRD PROTECTION LAW STILL EFFECTIVE.

Many of the press comments on the decision of the United States District Court, rendered March 20 at Topeka, Kansas, holding that the Federal Migratory Bird Law is unconstitutional, according to the United States Department of Agriculture, are erroneous and are apt to mislead the public concerning the real situation in this matter.

The Kansas decision, like a former decision to the same effect in the Eastern District of Arkansas, is limited in its operation solely to the district in which it was rendered. Neither decision settles or nullifies the law, and the exact contrary has been held by the United States District Court for South Dakota. The Arkansas case has been appealed to, and is now pending in the United States Supreme Court. The Act of Congress protecting migratory birds stands effective until the Supreme Court finally decides the question of its constitutionality. In the meantime it is incumbent on every law-abiding citizen to observe its provisions and the regulations. It is the duty of the Department of Agriculture to enforce this law and the officials in charge will endeavor to do so as long as it is in force. Reports of violations will be carefully investigated and when sufficient evidence is secured they will be reported for prosecution. In this connection it should not be forgotten that an offender against this, as in the case of other United States

Seven Promising Anglers—Young Kingfishers.

laws, is subject to prosecution any time within three years from the date the offense is committed.

PARTI-COLORED PARTRIDGES.

Editor *Forest and Stream*:

I note in your March number an article by Mr. E. H. Bailey in regard to a parti-white partridge secured by him while hunting in Brookfield, and think such freaks worthy of publication.

A friend of mine here in town while out hunting last fall killed a white (cock) partridge, that was perfectly white with the exception of one black feather in crest. I also shot one several years ago that had white wings, the rest of the body having the natural colorations, and a friend hunting with me a few years later shot one with white and dark feathers alternating all over. Both my friends had their birds mounted, the white one attracting a good deal of attention in one of the local sporting goods stores.

W. K. SMITH.

Manchester, N. H., April 3, 1915.

GAME IN WISCONSIN.

643-72nd Ave., West Allis, Wis.

Editor *Forest and Stream*:

Our native game wintered well. I took the little beagle out for some exercise about two weeks ago and was much surprised to see him start two rabbits in a little thicket where I didn't think there was any game at all. The herd of elk given the State by the Federal government was received early this spring, but very unfortunately did not stand the trip well. All but five had died of a lung trouble, and they were not expected to live the last time I heard of them.

More ducks were seen on Green Bay this spring than for many years, due to the Federal law, we hope.

When the announcement of the change to a monthly was made I decided to drop out, but the monthly is so good I feel that I cannot give it up.

C. T. WINSTON.

A STRANGE CALLER.

This was the first morning warm enough to have the outside door of our new farmhouse left open, and a strange caller, known as Mr. Yellow-bellied Sapsucker (sometimes called *Sphyrapicus varius* (Linn.)), came to call on about half a thousand of the bird family that had moved in (within the past two months) and announced "at home" after April 1st.

The visitor came unannounced—by the front door, through the vestibule into the hall, and turning to the right into the living room, where he was found inspecting the pictures and windows until my daughter took him in hand and turned him over to me. I introduced him to my granddaughter as the bird that makes so many little round holes on the apple trees. He was a fighter from the start, continually pecking my fingers.

We took him out to a large maple tree near the house, on which was a can of sap, into which I put his bill; after getting a taste of it he took three or four more swallows.

I then put him on the rough bark of the tree, but he did not tarry there, immediately flying to a Norway pine, taking refuge in its heavy green foliage.

I have often had woodpeckers brought to me that had been killed by flying against the trolley cars, but never before have I known of their going into a house.

J. L. DAVISON.

Pine Knob Farm, Lockport, N. Y.

P. S.—This Sunday morning the whole family saw a sapsucker (probably the same one) pecking on the same Norway pine and then fly to the same maple tree, although there are fifty evergreen and maple trees around the house; perhaps he was looking for that can of sap, which had been removed.

NEWTON 25 HIGH POWER.

"What is the Newton 25 calibre high power? Is it a harder hitting rifle than the Springfield?"

The Newton is a made-to-order Mauser of .256 calibre, taking the 123 grain expanding bullet with a velocity of 3100 feet a second. Its trajectory is 8½ feet at 1000 yards and its muzzle velocity 2633 foot pounds. This figures a trifle over 200 foot pounds muzzle velocity more than the 1906 Springfield and much less recoil. Incidentally, Remington U. M. C., Peters and Winchester all make Spitzer expanding point bullets.

You are reading "Forest and Stream" and enjoying it. Why not furnish some of your friends who may not be acquainted with the good things in this issue, an hour or two of similar enjoyment? If you will take the trouble to send us the names of any of your circle of acquaintances, we will see that they are supplied with a sample copy with your compliments.

Deep in the Okefinokee Swamp

The Stirring Adventure of Two Young Men, Armed Only with Bow and Arrows, into One of the Wildest Regions of the Old South

By Will H. Thompson

IN their interesting and valuable "Biological Reconnaissance of Okefinokee Swamp," (1) Messrs. Wright and Harper refer in the most kindly manner to certain notes upon the Okefinokee region made by my brother, Maurice Thompson, in "A Red-Headed Family," (2), and in "An Archer's Sojourn in the Okefinokee," (3) and say:

"In 'My Winter Garden,' (4) Thompson speaks casually of having been 'deep in the Okefinokee.' And yet it is almost inconceivable that he could have seen for himself the marvels of the swamp's interior without treating them extensively with his gifted pen."

This suggested doubt may have been born of the fact that the *scene locus* of "A Red-Headed Family" was laid in "one of those shallow cypress lakes of which the larger part of the Okefinokee region is formed," and further based upon some expressions in "An Archer's Sojourn in the Okefinokee," which refer to the great swamp as a *region* rather than to the more contracted area now accepted as Okefinokee Swamp. Indeed, the real Okefinokee is so largely typical of the surrounding region that the "American Military Atlas of 1776" covered the whole more or less inundated territory of southeastern Georgia and northeastern Florida with the map of the "Great Swamp, Owaquaphenoga."

In the year 1866, when my brother and I visited that part of southeastern Georgia for the first time, the whole country from the Satilla and St. Mary's Rivers to the Suwannoochee was commonly called "Okefinokee Swamp." Yet, when Maurice spoke of being "deep in the Okefinokee," he, without doubt, referred to the hard and never-to-be-forgotten trip into the very heart of the great swamp, of which I now write. It was his first acquaintance with the region, and the cause of his later visits. Why he did not write of his experiences one cannot now know, but only surmise. He was at the time only twenty-one years of age, and had hardly yet begun his nature studies, and his literary work had been limited to occasional poetic contributions to southern magazines. His health had been wrecked by more than four years' severe service in the Confederate armies, and a wound in the right lung, still unhealed, caused him so much distress that his hope of life was clouded. And I think he did not then contemplate a future literary use of the pictures and statuary found in the green galleries of Okefinokee.

His courage was devoted to the struggle for life, and mine to selfishly helping the soft air,

sunlight and balsam of the pines to give him back to me.

He was even then a bird lover, and the woodpecker family interested him even more than the singers. The great Pileated woodpecker (*Phlocotomus Pilcatus*) and the greater, shyer and far more beautiful Ivory-Billed woodpecker (*Campephilus Principialis*) were his favorites among the feathered folk, and he was never happier than when watching them.

Early in the month of July, 1866, we found ourselves at the little town of Magnolia, in Clinch County, Georgia, about fifteen miles from the western border of the great swamp. We had not come with any thought of entering it, but its presence was constantly felt as a gloomy mystery. The stories, true and fabulous, told by the people of the bordering barrens, especially those told by the negroes, appealed to the romantic spirit of my brother, and were not without their influence upon me.

How the "Daughters of the Sun," the most beautiful of all the children of men, had glorified it with their presence in ages gone, tradition had already told us. How the indomitable Seminoles had retired to its shrouded depths and held them against the power of the United States through years of desperate battle, was history. How the deserters from the Confederate armies had crept into its twilight to be seen no more, and how the runaway negro slaves during the last two years of the Civil War had sought its sanctuary to wait for liberty, was fresh in the memory of the inhabitants of the borders.

All these, with many romantic legends, stirred us to raise the dense curtain of green foliage and gray moss, and for a month to share with the wild things this domain of gloom and silence.

At that time, there was no permanent inhabitant of the swamp. The Civil War had ended a year before, and the deserters were free to issue from their hiding places, and had gladly abandoned the life of skulking with its privations. The runaway negroes had heard the news of their emancipation and surrendered their black fortress without a sigh. The timber-hunger had not then gnawed its way into the cypress ranks, and under these, and through the lily-strangled leagues of marsh slept nearly seven hundred square miles of shallow water, set with pine-clad islands and teeming with wild life.

For years, the white men of the vicinity had been away from their homes in the ranks of the Southern armies. The negroes had not been permitted to hunt with firearms, and, since the collapse of the Confederacy, the white people had been, by order of the occupying Federal forces, likewise forbidden to have firearms in their possession, and the game had multiplied in the swamp and had become as tame as it was plentiful.

We were poorly equipped for such an inva-

sion of the Okefinokee as we essayed. We had only lately begun the use of bows and arrows as weapons, and were far from that proficiency in archery that we afterward acquired, and had it not been for the abundance and comparative tameness of certain varieties of game, our life in the swamp would have been far less pleasant in retrospect.

We found only two white men who had penetrated the swamp at all, and these had seen only a few miles of the interior, but we were directed to a negro by the name of Jordan Wilson, who, we were told, knew the swamp better than any other man in Clinch County. "Jord," as he was familiarly called, had, as a slave, belonged to Mr. Joseph Wilson of northern Georgia, who, with his slaves had "refugeed" before the armies of Sherman in 1864 to the vicinity of Troupville, Georgia, where Jordan bartered the fetters of slavery for those of the Okefinokee. There he had lived for more than a year in this self exile, without once venturing out. His description of his year of privation, if given in his own words, would be a masterpiece.

The poverty of the Southern people at that time is well exemplified by the fact that we hired Jordan to go with us as a guide and man of all work for the price of 50 cents per day, and his food, the latter being the important part of his compensation.

He secured for us very cheaply at east fork of the Suwannoochee Creek two dugout canoes, the smaller of which proved to be a constant source of doubt and anxiety. It was about ten feet long, not more than twelve inches wide, made of tulip wood, dressed to almost the thinness of pasteboard, and was perfectly round and smooth on the bottom. It sat beautifully on the water, but was so "tipsy" that it was almost impossible to get into it or out of it without being thrown into the water. We named it "Fate," on account of the lugubrious prophecies of Maurice, and I was consigned to it. The larger canoe was about sixteen foot long, quite twenty inches wide, deep, flat-bottomed, and very steady. One could stand erect in it when shooting with the bow, or while fishing, without danger of capsizing. Jordan sat in the stern of this craft, and guided it with a cypress paddle or a strong cane pole, while Maurice sat forward of the middle and cleared brush and vines from the narrow waterways.

Before loading these boats upon the "running gear" of an ox wagon, Jordan and I had given nearly two days to the improvement of the large canoe by building fires in it and then dressing out the charred wood until we had reduced its weight more than one-half. Then we hauled the boats and our outfit to the Suwannee Creek at the northwesterly margin of the swamp, and carried and dragged them into the creek.

Our arrows, about three hundred in number,

1. "The Auk," Volume XXX, Oct., 1913.
2. By Ways and Bird Notes, New York, 1885.
3. Atlantic Monthly, Volume LXXVII, April, 1896.
4. Century Magazine, Volume LXI, Nov., 1900.

our cooking vessels, consisting of two long-handled frying-pans, a coffee pot, a sheet iron water boiler, a dishpan, a small Dutch oven, a large and a small bucket, six tin cups, a small box of knives, forks and spoons, an axe, a heavy hatchet, and a dozen tin plates, together with our bedding, we packed in the large boat. This bedding consisted of one heavy blanket for each of us, and three hammocks of our own devising. These were made by taking two strips of heavy bed-ticking, four feet wide and six and one-half feet long, sewing them together along the sides, and at one end, binding a bunch of cotton into each corner, and behind these bunches tying strong cotton clothes-line cords. These cords, when tied to trees or stakes, held the hammocks above water or damp ground. When we camped for more than a single night in one place, we filled these bags with dry leaves, pine needles, or dry Spanish moss. When sleeping on them, we spread the large blanket over them, lay down upon the middle of the blanket, and drew the overhanging sides across our bodies.

Our store of provisions consisted of bacon sides, one ham, fifty pounds of flour, an equal amount of corn meal, four pounds of ground coffee, one-half pound of tea, a gallon bucket full of lard, a few pounds of butter, plenty of sugar, salt, soda and pepper, a large bottle of horse radish and vinegar, twenty ears of pop corn, a few eggs, ten loaves of white bread, a good supply of half-grown onions, five pounds of rice, and a few young potatoes. Each of us carried a four-ounce bottle filled with matches, securely stoppered against possible wet.

We took along two canvas "flies," each nine feet by twelve, which, when stretched over a pole or taut cord became an "A" tent nine feet square. A hundred feet of strong cotton cord about the same diameter as that of a lead pencil, was an important item. A peck of wheat and an equal amount of shelled corn taken along at the suggestion of Jordan, proved the wisdom of the black man.

We camped that night at the edge of the great swamp, because we had exhausted most of the day in preparation, and because of our wish to try out our hammocks. When stretched by the four corners to young trees, they proved so perfectly adapted to our purposes that I have often since used them when camping in the wild.

The crackle of Jordan's fire aroused us before daylight the next morning, and the three of us joined in cooking what we called the "departure breakfast." Maurice and I were so anxious for the plunge into the unknown that we could not do the meal justice, but Jordan betrayed neither hurry nor anxiety. He knew the toil that impended.

The spring and early summer of the year 1866 had been backward, with a very unusual amount of rain, and, as Jordan said, the swamp was "high." The streams flowing into it ran bank full or overflowing, and as we slowly glided down the Suwannee Creek, the first two miles were uneventful. Obstructions multiplied every mile thereafter. At many points we had to cut our way through tangled logs. At others, make sloppy portages, and when at the end of less than five miles, we camped upon the north end of a long island called by Jordan "Parmetter" (Palmetto) Island, it was nearly sunset. Upon a map contained in Wright and Harper's Biological Reconnaissance of Okefinokee Swamp, this

MULLINS STEEL BOATS

DOUBLE YOUR PLEASURES IN THE BIG OUTDOORS

On many a fair day while breakfast is in the making or just before bed time—or at fish-biting time—you'll get a lot of enjoyment out of your Mullins boat. You'll like it better than the ordinary boat because Mullins boats are built of strong, smooth steel. Light, graceful, easily handled—always dry. Guaranteed against leaks or punctures, non-sinkable and practically everlasting. You can get a Mullins boat for any purpose from a small duck boat or rowboat to a big launch.

More than 40,000 now in use.

"Outboard Special" designed for use with detachable Rowboat Motors. Construction prevents harm to hull or stern from motor vibration. Does not "bury" at the stern—speedy—100% efficient.

Mullins open gunwale, canvas covered cedar canoes are now made with a "well" for use with Detachable Motors. The motor can be attached or detached in a jiffy.

Don't buy a boat (steel or wood) for any purpose until you have seen Mullins big Boat Book—a post card will bring it to you.

island is no doubt correctly called "Craven's Island." We had with us a copy of a map made for the state of Georgia nine years before, which proved to be useless, because nothing within the swamp was found in place. Our pocket compass was almost as inefficient, for our bearings taken along the thousand sinuosities of our route meant nothing. The stream widened near the upper end of this island, and the level of the water being high, we got upon the dry land with little difficulty. The island was not in the creek, but in the cypress swamp westward from the creek, and seemed to rise but a little above the level of the water. Much of it was sandy pine

barren, underset with the saw-palmetto and huckleberry brush. Here we wasted about a dozen good arrows in the vain pursuit of some wood ducks that would not fly but swam in and out of the short brush and logs along the west margin of the pond or wider part of the creek.

That night the Okefinokee proved its power. Oppressively silent during the day, it relaxed now, and the night gave up its voices. There was no wind, the air was very warm and, outside the glare of our campfire, the blackness seemed dense. The frogs' serenade began early but ceased by nine o'clock. The great barred owls sent their deep, far-reaching cries through the

"FRAMERS OF THE CONSTITUTION OF THE U.S.A." NO 1

George Washington — "Father of His Country"

EVERY AMERICAN knows that without "Immortal Washington" our National Independence would have been impossible. Few, however, know that the greatest battle of Washington's life was fought to secure for his countrymen the Constitution of the United States. Almost immediately after the Revolution it seemed that all the great sacrifice of blood and treasure had been in vain. The original thirteen states refused to work in harmony, either in spirit or in law. The new Republic was tottering to its foundations. At this critical period in American history the most brilliant men of each state met in convention and unanimously elected Washington as President—undoubtedly the most momentous gathering of the kind the world has ever known. Here he displayed as great ability as law-maker as he had as a warrior. For months the Fathers of the Republic labored, and finally adopted our present National Law, which forever guarantees Religious, Commercial and Personal Liberty. This was in 1787. Seventy years later Anheuser-Busch established their great institution upon the tenets of the Federal Law which Washington did so much to create. Like all of the great men of his time he was a moderate user of good old barley brews. For three generations Anheuser-Busch have brewed honest malt and hop beers. To-day 7500 people are daily employed to keep pace with the ever-increasing public demand. The great popularity of their brand—BUDWEISER—due to quality, purity, mildness and exquisite flavor, has made its sales exceed those of any other beer by millions of bottles.

cypress wilderness, and the uncanny little screech owls dropped their maniac whimpers from the darkness above us. Amid the cypresses we heard the snarl and squeak of fighting things that splashed the water, and the rasping of claws upon the bark of trees. Otters slid into the stream, making only a faint "sough" as the water parted along their velvet sides.

Far down the stream, two whip-poor-wills lifted melancholy voices, and a sound like the gritting of teeth issued from the palmetto shrubbery. No cheerful sound came out of the gloom. One small screech owl on silent wings flitted about our heads, once so close to mine that I smelled the musk of its body. On no other night did the great swamp more impress me with its savagery.

We broke camp early next morning and that day of battle with the armies of the Okefinokee was the most strenuous of the entire trip. Tearing aside the thick pendulous veils of Spanish moss, we were met with interlocked branches of trees, some above water, while others were half submerged. These gave way to our attacks, only to let us upon snags and slippery logs, and tree-tops set *en chevaux-de-frise*. At two places old jams of sunken logs were overgrown with vegetation, and matted with moss and mold, under and through which the unseen river wound its way.

Here difficult portages were made, through tangled brush and in water sometimes waist-deep. I had had a score of opportunities to upset my boat, but accepted only one of them. While

trying to pull a half rotten pole out of the mud bank, it broke, and "Fate" deserted me. I poured the water out of my quiver, surrendered my wet bow and Maurice, who rubbed them dry, and I continued on foot for more than an hour, waist-deep in water, removing obstructions.

Late in the afternoon we encamped on an island east of the stream, six or seven miles south of our last camp. Jordan built a great fire, and I dried my clothing without taking off anything except my coat and boots. Our stay upon this island was too brief to gain much knowledge of its extent or of its animal life, but here I made the best shot of the many hundreds upon the trip. A gray squirrel was seen crawling out upon one of the topmost boughs of a large sweet-gum tree, evidently about to leap to an out-reaching branch of a neighboring cypress. It was probably seventy feet from the ground and at least sixty yards away. An arrow which should miss him would be hopelessly lost in an almost impenetrable thicket beyond. I chanced to have my bow in hand and a fine broadhead arrow nocked upon the string. The shaft was too good to lose and I hesitated; but urged on by Maurice's derisive "Shoot! Shoot! You cannot miss him!" I drew the arrow to the head and the strong black-locust bow drove the broad steel arrow-head through both shoulders, and the squirrel came down with only the feathered end of the shaft clinging in the wound. Jordan wagged his head slowly and said: "Mos' like a rifle." Afterward, however, he had much opportunity to challenge the accuracy of this comparison.

The night spent here was much like the one before. The screech owls were not in evidence, nor were the frogs, but the big Florida owl shook the night with his *basso profundo* note, and twice from far down the creek came a hideous "Ha! ha! ha--a!" that no stage villain ever had power to match or mock. Jordan grinned as I jumped to my feet and stared into the dark. "What's that?" I asked. "Jackass," he answered. "No," I said, "not a bit like a jackass' hehaw; that must have been some kind of an owl." "Jes' what I said; jackass owl," he said. Then was the first time I ever heard the voice or the provincial name of the great laughing owl. It is a rare bird, and no giant maniac could inform his yell with a title of the horror borne through the gloom by this night bird's brainless laugh. The little wood ducks called and whimpered in the river below, and then for a time all was still. But soon the things that walk in darkness and are not afraid, made themselves known, and I went to sleep, feeling that many eyes were fixed upon us, and that live bodies slid like shuttles through the web of weeds and shrubbery that carpeted the ground about us.

Jordan lighted his morning fire early, and announced that "We gwine to eat dinner on Billy's Island today." The cheery tone of his voice chimed with his earlier declaration that "Billy's Island is the bes' place in the whole swamp," and we lost no time in preparing for departure to the promised land.

Thus far our course had been nearly due south, in so far as we could judge, and we so continued for an hour or two, until we came to where a sluggish stream entered from the northeast. Jordan had a name for this creek, but I have forgotten it. Its current was scarcely per-

ceptible. It was of no regular width, and had no definite banks. It was choked with lily pads and alive with wood ducks, herons, egrets and water-turkeys, and almost every log was covered with sunning turtles. Hawks were in the air, and the twitter of small birds came from the enclosing cypress trees. This was the outlet and gateway to Billy's Lake. We found this long lake or pond to be a mere widening of the creek. Its greatest width was only two hundred or three hundred feet, while its length exceeded two miles. The yellow water lilies occupied half of the lake's surface with their armies, and beautiful odorous white water lilies were in many places massed in the shallow water. It was a beautiful place. Here the friendly sun looked upon the water and it was glad. The slow summer wind barely crinkled its surface. This was Okefinokee's "Field of the Cloth of Gold." Here the level lists of the wild were set and the dragon-fly could "tilt against the field." From the spire of a blasted tree, *Phlocotomus Pileatus* sent forth his clarion challenge, and clear and high, from the dark cypress tops, the defiant voice of *Campephilus* answered him. The look in Maurice's eyes repaid me for all of the hardships of the last two days.

That was before the days of the kodak. We could not preserve for alien eyes this slender, lily-flowered ribbon. The silver green and gold of water and leaf and bloom, the blue of the stainless sky and the sombre gray of the cypress colonnades were finer than any colors that Titian mixed or Raphael saw in dreams. One can only wonder whether this picture, spread on the hot bosom of Okefinokee, rose in the memory of Maurice when long afterward he wrote:

"Though I am poor, and cannot buy
The rare time-mellowed things of art,
God keeps an open gallery
Of glories for the poor in heart,

"Whose walls are hung with grander show
Of color than old Titian knew;
With outlines Michael Angelo
Wronged in the best cartoon he drew."

Our slow movement up the lake was preceded by a skirmish line of herons, water turkeys and curlews. And more than once the matted and corrugated snout of an alligator parted the water ahead of us.

Near the upper end of the lake, at the border of a lily field, we caught two big-mouthed black bass, one of which would have weighed at least eight pounds. These were taken with sawyers, a species of grub found under the bark of decaying logs.

Jordan made good his prophecy by landing us late in the afternoon upon the northern end of Billy's Island, at a point about a mile and a half south of the lake, and his declaration that this island was the best place in the swamp proved to be true.

Though typical of the larger islands of the Okefinokee, this old demesne of Billy Bow-Legs, the indomitable Seminole chief, we found to be of all the islands in the swamp, the most attractive and best fitted for a sylvan home. Here we established our permanent camp and for eighteen days used it as a base from which all our forays started, to which we always returned ere night-fall, and which, toward the last, became almost a home.

We found many evidences of late occupation.

Troll With This Motor Without Altering Its Speed

It has five mechanical speed adjustments—a high speed, **ideal trolling speed**, neutral, slow and fast reverse. Speed adjustments are secured by simply pressing a button without stopping or altering the speed of the motor. When the

Dilapidated huts, made from thin rived shakes of pine or cypress, yet remained, and one very good one, near the north end of the island, was taken possession of by Jordan, and here he slept, and here our outfit was stored. My brother and I preferred the open air, and having cleaned away the saw palmetto from beneath a group of young pine trees, we filled our hammocks with dry Spanish moss, swung them side by side, three feet above the ground, attached the flies over them, and Maurice, with outspread hands, said softly: "Alabama." (Here we rest.)

This beautiful island, not quite five miles long, by nearly two miles in width, nowhere appeared to rise fifteen feet above the level of the water in the surrounding cypress woods. The almost perfectly level surface was covered with scattered pines, mostly of the long-leaved variety. Below was a thick undergrowth of saw palmetto, sedges, and a wiry grass. In many places, huckleberry and blueberry bushes formed large thickets, and tons of the finest ripe berries might have been gathered on the island.

bears were devoting much time and energy to berry harvesting. The borders of the island sunk slowly to the level of the water and were clothed with a thick growth of cypress and choked with vine-matted underbrush. Opossums, raccoons and wildcats in great numbers dwelt there, and, at night, came into the pine barrens in search of the sleeping quails.

A REAL "WILD CATTLE"

Surrenden Park, Pluckley, Kent, Eng.
Editor *Forest and Stream*:

Some time ago there was an amusing discussion between one of your correspondents and myself as to whether the Russian "Aurochs" (called "Zubr" in Russian) or the Chillingham, so-called wild cattle, were the original wild cattle.

I enclose a photograph of myself with a two-

Chillingham "Wild" (?) Bull Calf

weeks-old pure-bred Chillingham "wild" (?) bull calf.

I leave it to your readers to decide if it looks like a wild animal, or if, as I think, exactly like a domestic calf such as one meets in Sweden at all farms.

WALTER WINANS.

NORWAY SALMON AND THE WAR

The present European war will have a pronounced effect on the Norway salmon revenue, for the reason that very few, if any, English anglers will be going to Norway for this year's fishing. This offers a rare opportunity to American sportsmen, who can, if they desire, have some of the finest salmon fishing in Norway at small cost.

MARBLE'S

Woodcraft Hunting Knife

The biggest value ever offered in a hunting knife. Costs you only \$1.50, yet has the shape, weight, quality and desirable features of \$2.50 and \$3.00 knives. Adapted for sticking, cleaning, skinning, slicing, chopping bone, etc. High-grade steel—bevel blade thick at back, tapering to a fine point. Handle of laminated leather. Absolutely guaranteed. Price \$1.50 at your dealer's or direct by mail postpaid upon receipt of price.

Marble's Camp Axe No. 10

A handy, reliable axe for hunters, campers, prospectors, guides and forest rangers. Carried in sheath, easily attached to belt. The blade is forged from solid tool steel. The tempered head, designed for driving stakes, spikes, etc., will not become battered even under continuous service. The nail puller has tempered jaws. These are features that are exclusive in Marble's tool steel axes.

Blade, 3 1/4 x 5 1/4 in.; weight 28 oz.; Handles 16 or 20 inches. Mention length of handle desired.

Heddon's Dowagiac Crab Wiggler

Scurries Backward Like a Live Crab

BASS can't resist it—because it looks and acts just like their favorite food, the crab or crawfish. Accurately colored in the wonderful Heddon Porcelain Enamel, guaranteed not to crack, peel or flake. Just the right weight and balance for casting. Floats when at rest, but dives and zigzags backward when reeled in. Hooks held in the patented "Dowagiac" sockets, so they can't foul each other or mar enamel—and they get the fish. Variable line fastening governs depth and action. You need this "Crab Wiggler" in your tackle box. It's a winner. Also in other Heddon colorings at same price

IT'S A YEAR OF WIGGLERS

More wiggling, diving baits will be used this year than any other style—chiefly Dowagiac "Wigglers," of course, because of their reputation and many advantages—non-cracking enamel, variable line fastening, "Dowagiac" hook sockets, and superior workmanship. Dowagiac Minnow "Wigglers," deep water style (No. 1600) and shallow water style (No. 1700) sell at 75c in various colorings.

ART CATALOG. A book you'll prize. Shows all Heddon tackle in colors, including the famous Jim Heddon's Casting Rods. Full of practical advice on expert casting and more successful fishing. A postal brings this book FREE.

James Heddon's Sons, Box 17, Dowagiac, Mich. (Pronounce it "Doe-wah'-ji-ae")

SUMMER HOME AT LITTLE COST

The Province of Quebec, through its Department of Colonization, Mines and Fisheries, uses some space in this issue to inform American readers how easy it is for them to obtain location for summer homes, among the delightful surroundings of wood and water in that province, without cost, and also speaks of the record moose heads which have been taken by American and local hunters in the great game lands of Quebec. When Adirondack and other like property is beginning to have a value running into thousands of dollars per acre of lake-front, it will surprise not a few people to know that equally good locations are awaiting them in Quebec at little or no cost. In these days of railway penetration into the wilderness, almost any man, no matter how moderate his circumstances, can acquire a summer home, and if he be at all skillful, he can build himself a permanent camp without straining either his back or his purse. Write the Department of Colonization, Quebec, Canada, for further particulars.

DEVASTATING THE FISHERIES OF SOUTHERN CALIFORNIA

Editor *Forest and Stream*:

The Southern California Fish Dealers' Association is demanding the throwing open of the Santa Catalina Fish Reservation to the market fishermen, which, according to Dr. David Starr Jordan and other experts means the ruin of the fisheries.

This is what I saw at Santa Catalina, when I went to the Island, two years ago:

A beautiful island, with high green hills, many colored cliffs and canyons, and clean pebbly beaches, surrounded by the deep, pure, sapphire waters of the Pacific; a natural breeding place for the little fishes and the big fishes of the prolific sea.

A lovely crescent harbor, named Avalon, nestled among the hills, with a fair vale opening behind it, and trails zig-zagging up the slopes in every direction, among the oaks and laurels and wild lilacs; a natural play-ground for the people of Southern California and Arizona and New Mexico, who want salt breezes and a simple life, and a little healthful sport on sea and shore.

A few hotels and a multitude of camps and bungalows and cottages and tenting-grounds arranged for the accommodation of the thousands of families who will flock hither in the summertime to have a great deal of fun for a very little money.

A tribe of boatmen, with launches and row-boats, well equipped with fishing tackle of the true sporting kind, light rods and slender lines, which teach the angler to match his skill against the strength of the fish and cultivate the spirit of sport in the men, women and children who visit this favored isle.

This is what I saw when I arrived at Catalina April 14th, too early in the season for the best fishing, but at a good time to look over the layout and study the value of the island as a natural spawning ground of fish, and a natural outing-resort of folks.

This is what I saw two days later when a touch of early summer had made the opal sea smooth and still around the south end of the island and the air was warm and soft and filled with fragrance from the blossoming hills.

There were fifteen or twenty little launches

The Biggest Moose Heads

come from the Province of Quebec. Several were secured in September and October, 1914, with antlers having a spread of five to six feet.

Mrs. H. G. Campbell, Jr., of New York has a record of a black bear and a large bull moose at Lake Kiskisink.

The big bull moose of Mayor Carter Harrison of Chicago was killed in Northern Quebec.

Caribou and Deer

are abundant in parts of Quebec Province.

The Best Trout Fishing

in the world is in the Province of Quebec, and so are the best Guides both for fishing and hunting. Read Henry van Dyke's description of some of them in "Little Rivers."

Mining Rights

are obtainable on most liberal conditions. Write for details.

Would You Like To Own A Summer Camp

for your family, by a forest-clad stream or mountain-surrounded lake?

You can build one of your own, by leasing a fishing and hunting territory from the Government of the Province, whether a resident of it or not, or by joining one of the many fish and game clubs.

Write for an illustrated booklet on "The Fish and Game Clubs of Quebec," which tells you all about them, and address all enquiries concerning fishing and hunting rights, fish and game laws, guides, etc., to

Hon. HONORÉ MERCIER

Minister of Colonization,
Mines and Fisheries,
QUEBEC, QUE.

floating along by Pebbly Beach and Seal Rock. In each launch there was an honest boatman earning a good day's living, and two or three people from the mainland—not millionaires, but just plain human people—out for a day's sport.

The water was full of little fishes, schools of sardines, and anchovies, and smelts, and tiny mackerel, millions of them, milling around and running up close to the shore. After them came the big fishes; silvery sea-bass; golden yellow-tail; gleaming, lance-like barracuda; the noble tribes of the deep. Each one of these fish was food for a family of folk; and the catching of one with light tackle was a sport calculated to develop the qualities of fair-play, patience and skill.

Into the midst of this goodly scene about the

TUXEDO—The Great American Smoke

Get busy! Get happy!

Those two great qualities—vigor and cheerfulness—stand out in American life. In less than a hundred years this American energy and optimism have populated hostile plains, reared skyscrapers, founded fortunes and made America the hope of the whole world.

Anything that inspires these qualities in American men—anything that encourages wholesome cheer and generates useful energy is sure to be hailed with delight.

Tuxedo

The Perfect Tobacco for Pipe and Cigarette

Tuxedo fills a man full of snap and good humor. Bound to, because it smokes so mild and easy, full of mellowness without bite or irritation.

Thousands and thousands of up-and-doing, successful Americans in every walk of life gladly endorse this temperate, helpful tobacco—made from the rich, mild leaves of Kentucky's choicest Burley—treated by the famous "Tuxedo Process" so it absolutely cannot bite your tongue.

A tip to those Americans who want to put vim and gusto into their lives: Get busy—Get happy—Get Tuxedo.

YOU CAN BUY TUXEDO EVERYWHERE

Convenient, glassine-wrapped, moisture-proof pouch **5c** Famous green tin, with gold lettering, curved to fit pocket **10c**

THE AMERICAN TOBACCO CO. Room 0000 111 Fifth Ave., New York

middle of the afternoon came the Spoilers of the Sea. Three snub-nosed, thick-set vessels, piled high with nets, owned by firms of fish dealers, manned by foreigners, came butting down the coast. They set their nets close to the shore and ran a quarter of a mile out to sea, sweeping in everything that came in their way. One of the boats must have scooped out a couple of tons of yellow-tail and white sea-bass, to be sold to the dealers at perhaps five or ten cents a pound, and to the people at twenty cents, thirty cents, whatever the dealers choose to ask for them.

Those were the fish that would have spawned around the kelp-beds and gravel-banks of Catalina this spring and summer, providing a new
