

-1903-

1

Cambridge, Mass.

1902-3

Dec. - Feb.

Since my last entry, the three winter months have come and gone. I have been in Cambridge all the time and we have been pushing the work on the Birds of the Cambridge Region incessantly. Will is making a long introduction which will add much to the List. I have been looking up early & late dates of arrival & departure, type-writing all manuscript sheets &c &c

I attend the meetings of the various Clubs and enjoy them all. The "Be Dine" met "Be Dine" here on February 25. Eleven members from the club and ten were present, C. F. Batchelder, W. Brewster, A. P. Chadbourn, W. Deane, J. H. Eddle, W. A. Jeffries, H. M. Spelman, R. Thaxter & C. W. Townsend & R. T. Jackson. E. H. Rand was absent. We had a Washington's Birthday dinner, center piece of the Lad. axe or shoulder, baking at a cherry tree ladder with cherries & covered with leaves. Flags on stands stood around the center. At each plate were a bunch of cherries tied with red, white & blue ribbon, a red candy hatched and a photograph of either George or Washington. The cake had cherries on a hatched or it and flags floated from the moulds of ice cream that were brought in. The bonbon dishes were in the pattern of the American Flag. I read verses on the members,

1903

A Trip to Longwood, Mass.

Mar. 1

Clear, sunny with broken clouds, windy, max. tem-
perature 47° .

I called on Arthur P. Chadbournes this morning at 225 Marlborough St., Boston and went with him to his old home in Longwood to see some bird skins. The estate of two acres is on the corner of Pleasant & Freeman Streets. The country is still quite open in that section. Behind ^{An old} The old barn stands a Sassafras Tree ^{Sassafras} that has been growing ~~the~~ naturally there for ^{Tree} many years. Clinton Chadbournes remembers it well, when he was a boy. - It is on a slope and stands by itself. I took its dimensions with a measuring tape as follows: -

Circumference above the swell, 2 ft. above ground	} 7 ft. 9 in.
on upper side, 3 ft. on lower side	

Longest diam. at same height	2 " 9 "
------------------------------	---------

Shortest " " "	2 "
----------------	-----

Height (estimated)	30 "
--------------------	------

5 to 6 feet above ground the trunk splits into 4 limbs, two of which rise quite perpendicularly, while the other two veer off at an angle of about 45° . One of the upright limbs has been sawed off 5 or 6 feet from the fork. to preserve what is left. All together it is an old relic.

On the same place is a fine symmetrical ex- A fine ample of a Norway Spruce with even taper. Norway At 4 feet from the ground, it measures Spruce. 6 feet, 9 inches in circumference.

I dined at Chadbournes and returned home in the PM.
- I weigh today 165.4 lbs -

1903

Mar. 12

Cambridge, Mass.

Clear and maximum temperature 57° .

Spring seems really to be upon us. Well it last? Snowdrops, Squills & Crocuses have been up at the Brewster garden for a few days past.

Fresh Pond is entirely open. This morning my first I took a walk toward Fresh Pond and heard Bluebirds, a Song Sparrow & Meadow-Lark. The Song Sparrow was sitting on a branch of a Spruce singing at the top of his little lungs. At 6.40 this morning I heard a Bluebird in the garden opposite. Chicksadees are singing their Please note continually now -

This evening we went in to the Boston Nat. Hist. Soc. and heard Mr. Henry C. Gloyd on Bird Music in connection with the human scale. Tuesday evening (the 10th) we heard him on Bird Notes. He has a most delicate whistle by means of which he interprets the songs and the occasions have been fascinating to me. I met Mr. Gloyd in Washington last November, I had an interesting talk with him after the lectures, and to-morrow I am going to show him about Cambridge -

1903

Mar. 13

Cambridge, Mass.

Clear, calm, warm, a day ideal in every respect, like a warm day in the middle of April - Max. temp. 65° , min. last night 35° .

This morning I met Mr. Celys at 9.30 Mr. Celys by the Harvard Union and showed him first over Cambridge over the Harvard College grounds visiting the Library, Gymnasium, Fogg Art Museum, Architectural Bldg., Memorial Hall, and then over to the Mus. Comp. Zool. where we met Dr. Thaxter near the entrance and had a talk. Then we went to Mr. Sam Henshall's room and he kept with us for an hour. He has a collection of live Bermuda Toads (Bufo aqua) lately arrived. This Bufo aqua species has been introduced into the Bermudas from the islands farther south. It is very large, specimens being 9 in. long, not including the legs. There specimens, six, I believe, in number, are under size, but some are as large as larger than one Bullfrog. They are brown, without the warty character of our toad which they resemble in habits.

After going over the Museum and examining especially the Scott collection of nat'd birds and the Glass Models we took a carriage and visited points of interest, including Fresh Pond from Hemlock St., returning to Harvard Union by 12.30 where we dined with Mr. Brewster. Then Mr. Celys & I went to Concord and I returned to the Museum.

I saw my first Vanessa antifa this morning on Brattle St. 1st inst. Also my first Grackles on Brattle St. 1st March.

1903

Mar. 14

Trip to Wayside Inn, Sudbury, Mass.

5

Clear, calm, warm, meagry (max.) 70° .

Mary, George, M. & I took the train at North Cambridge Junction at about 12 M., reaching Wayside Inn Station at 12.40. It was positively warm, vegetation is still in abeyance except in favored spots by brooks and meadows, where the grass is green and *Symplocarpus* is well in flower. We walked along the dry, sandy, country road to the Inn, one mile and a quarter, enjoying every bit of it. Bluebirds were singing, and one pair were inspecting the hole in an old stump by the road. Juncos were abundant flitting along by the fence rows and singing the jingling melody in a clear voice. Fox Sparrows were scurrying in their characteristic eagerness among the dead leaves for food and Robins were fairly abundant -

We dined at the Inn and enjoyed wandering through the various rooms. On former visits I have had the rooms and objects fully described. After dinner we actually lay out on the grass. It was so very warm - Shortly after three, George & I walked to the train, the ladies driving.

As we were on a noisy road I heard a sort of barking, somewhat resembling the cry of a Scrub Owl, and immediately a flock of? some twenty in number fly with lightning speed over our heads in a perfect V keeping in sight but a few seconds. I could make out no markings. They seemed smaller than Jays and uttered this ho-ho-ho-ho, ho-ho-ho-ho, continuously, a slight pause following each set. They were about twice the height of the trees. We reached home shortly after 5 P.M.

1908

Mar. 14

A Trip to the Bay-side Inn, Sudbury, Mass.

I observed the following birds in Sudbury between the Station and the Inn:—

Corvus americanus. About a dozen

Trochocercus hyperythrus. In full song. Abundant by the roadside and in the trees near by, feeding busily, and flying about as we advanced.

Passerella iliaca. I saw about eight in all.

A flock of three were scratching together in one place. One sang a little.

Melospiza melodia. Saw & heard a few.

Parus atricapillus. Heard a few.

Merula migratoria. Quite abundant, in the fields.

Ficedula scalaris. Five or six. A pair were inspecting a hole in an old stump by the road.

I saw ^{in Sudbury} a Balloon Spider sailing overhead attached to his long streamer and a Vanessa antiope was flying about at the North Cambridge Junction Station.

1903

Mar. 15th

Waverley, Mass.

Cool, clear and cloudy, light east wind.
maximum temperature 54°.

This morning (Sunday) I went to Waverley in the electric with Edith Congdon and we spent the morning in the Reservation - Beaver Brook runs full, its water clear as crystal. The wet ground bordering it in the Lower Reservation is covered with the flowers of Symplo-
carpus foetidus, a harbinger of spring. The grass in wet places is green, but all else is still locked up in buds, awaiting longer and warmer days before risking exposure. In the swamp just outside the Lower Reservation, Grackles were flying about, singing, and I saw a single male Redwing. He visited the Waterfall in the Upper Reserve. It was very full and the water was foaming over the rock. A good flock of Ducks were swimming above in the Port. We returned home to dinner.

This afternoon I showed the Museum to Mr. Sam Henshaw and the two Carey boys.

Birds observed this morning at Beaver Brook Reserv.
Colaptes auratus leucurus. one shouting.
Corvus americanus. several.
Aegleis phoeniceus. one ♂ - my first.
Trochocercus aeneus. a flock of about 15 in swamp.
Melospiza melodia. Full song. About six.
Picus atricapillus. one singing, pluvie note.
Ficedula lealii. one singing -
- - - -

Merulaxis migratorius. Three near the house this AM.

1903

Mar. 20

Belmont, Mass

8

This morning Will Brewster & I went up to School St., Belmont on the electric reaching there about 8.30. Mr. Hoffmann had told Will of a Carolina Wren established on a farm on School St. We walked down the street to the farm at the foot of the slope on the left. There was the Wren singing lustily in a willow near the barn. I had a most excellent view of him and listened to his cheery song for some time. His whole energies were thrown into every strain. His head was thrown up, mandibles opened to their widest extent and the song pronounced as if his very soul was in each note.

1903

Bedford, Mass.

Mar. 29

Clear, cool day. Mercury reached 28° last night but has not leave the advanced growth of the past two weeks.

I took the electric this morning to Bedford receiving C. W. Jenks' at 10.20. I passed a most delightful day with him. We took a walk from 10.30 to 1.30 with his friend,

through the meadows, and over a hill opposite the house, through the Slade Hill Nursery, back to the house.

There was a light fall of snow last night with rain and a little sun was still on the ground in sheltered spots. Vegetation is very forward in Bedford as elsewhere. In the garden, Bloodroot, Hepatica (Acetosa & acutiloba) Dicentra, Claytonia, Daphne Mezereum were in flower. Meadow Larks & Song Sparrows were singing freely. The woods were running full and nature was most attractive.

After lunch we strolled about again over the place inspecting the farm buildings and visiting the vegetable garden where work must soon begin.

We dined at 4.30 with Jenks' two sisters & a friend. I returned home at 6.30.

Birds Observed:-

<u>Buteo lineatus</u>	1* soaring	<u>Corvus americanus</u> hd.
<u>Bonasa umbellus</u>	1 flushed	<u>Melospiza melodia</u> abundant *
<u>Dryobates p. medianus</u>	2 ⁽²⁾ 1	<u>Fringilla coelebs</u> 3*
<u>Sayornis phoebe</u>	1*	<u>Passer domesticus</u> frequent
<u>Turnella magna</u>	6* one saw two near west followed by a trill. I watched him sing with my glass.	<u>Parus atricapillus</u> 1
<u>Quiscalus q. acerinus</u>	1 ⁽²⁾	<u>Merula mycerotis</u> abundant
<u>Otocoris alpestris</u>	1 ⁽²⁾	<u>Trochocercus constantii</u> - one heard of at least 20-
<u>Gelatinis phoeniceus</u>	1 ⁽²⁾ in wood among pines -	<u>Falco tinnius</u> numerous x
		saw 1hd 8 or 10 14 sps.

1903
April 5

Concord, Mass.

10

Minimum temp. on previous night 26° . Max^{imum} temp. during day 39° . Blustering wind through the day. Sunny. very cold, a great change from the warmth of the past few weeks when vegetation has taken wonderful strides.

This morning R T. Jackson & I took the 9:11 train at Peters Sta. for Concord. The brooks were running full and the blades of grass projecting the water were beaded with glistening drops of ice. Hansen met us at the station and drove us to the Barrett Farm where we met Will Brewster and Sam Henshaw who had gone up the day before (Saturday). We passed a very delightful day together, wandering over the whole estate here & there. Birds were very scarce, the cold wind driving them to shelter. We observed Partridge¹, Phoebe², Fox Sparrow^(Sax) in scrub at foot of Ball's Hill by river. Sing Sparrow³, Bluebird⁴.

The river is high, and the scene from the top of Ball's Hill resembled a lake, the meadows all being under water. It was a beautiful sight. We dined at the Barrett House in front of a big open fire. Jackson & Henshaw were much pleased with everything. They had never seen the place before.

At 5 P.M. Jackson & I crossed the Concord to W. Bedford in W.B.'s boat, Will holding the oars, and returned home by electric. I reached the house by 7 o'clock.

The holes of the Ground Bees were very abundant in sandy places & open fields -

Concord, Mass

1903

May 3

Cloudy, chilly, windy. a few short glances
of the sun during the day. Min. temp last night
37°. Max. during the day 53°.

William Brewster, Samuel Henshaw, George V.
Levett, Roland Hayward & I took the 9.11 A.M.
train for Concord, from there the electric to West
Salem and across the river to Ball's Hill.

Here we spent the day, dining in the cabin
and strolling through the woods and fields
morning & afternoon. We returned the same
way in the late P.M. leaving Bill behind.

Gilbert cooked us a most excellent dinner -

It was most delightful in the woods, where all
was so peaceful and quiet, and the leaves
and pine needles were soft under foot. We saw
or heard most of the birds behind Ball's Hill
in the morning. About noon as we were
standing in a small clearing among some
white pines, a fine Espey sailed over our
heads quite low down. It is late to see
a Fish Hawk. We saw all the Swallows
except the Bank (Riparia riparia) and the
Swifts were abundant in the late afternoon
over a bit of water at the edge of Ball's Hill.

A pair of Coopers Hawks are nesting
in the woods toward the Barrett House
but though we visited the spot and saw
the nest we did not see the birds -
I heard for the first time this season
the Pine Warbler, Purple Finch and num-
bers of others.

Concord, Mass.

1903

May 3

Birds observed at Concord on May 3:-

- (2) *Buteo swainsoni*, 1 pumping in meadow by river, R.m.
Zenaidura umbellata, flushed 2.
Pandion haliaetus carolinensis, 1st near Ball's Hill, 12 M.
Dryobates villosus, 1 tapping on tree & calling. Seen
 " *p. medianus* 1st
Coccyzus americanus, several *
Chactura pelapica, 25 over pond by Ball's Hill R.m. Later in
 the town I saw numbers flying about.
Sayornis phoebe, 2 occupying nest in shed near cabin.
Cyanocitta cristata, several *
Corvus americanus, "
Aegialitis phoeniceus, numerous along the river.
Lanius calus g. *aeneus*, 1 near W. Bedford Station.
Corporacera purpurea, 1 * in A.m.
Spizella socialis, 2
 " *pusilla*, 1 *
Melospiza melodia, 2 *
 " *georgiana*, 1 *
Passer domesticus, few W. Bedford
Progne subis, a few r
Petrochelidon leucippe, 1st
Hirundo erythrogaster, several
Tachycineta bicolor, 6

May 5

13

A walk by Rock Meadow, Batham, Mass.

Cloudy & cool, max. temp. 61.

George & I went to Waverley this morning and walked to the Lower Pond in the Reservation and through the fields and old desert orchards along the edge of Rock Meadow for a good distance coming out finally to the Repelo Road, a mile or more from the Beverly electric. We got home to Lunenburg. We walked at least four miles. The land lies in a hollow and but little is under cultivation. I saw some very fine White Oaks. Saxifraga virginiana was in flower. S. pumila (var.) was in bud. Amenone nemorosa, Ranunculus abortivus and Amelanchier were in flower.

We observed the following birds:

Anas obscurus, 1 flushed in a swamp back of the Lower Pond. It flew straight away after describing a short curve. We searched the spot carefully, but found nothing.

Buteo lineatus 1*

Coturnix alector several *

Chautauca pelasgia several

Cyanocitta cristata saw one, hd. a few

Corvus americanus several

Cypselurus phoeniceus 12

Sturnella magna 1*

Zenaidura macroura few

Spizella socialis "

" pasilla 1*

Melospiza melodia 2*

Pepele erythrorynchus 1 calling

Hirundo erythrogaster several 1*

Trochocercus varia 2*

Dendroica virens 1* Waverley

" virgata

Parus atricapillus few

Thryomanes migratorius common

Ficedula leucopygia a few,

one pair were on an old

apple tree, the ♂ sitting in a hole, the ♀ close by -

20 species -

1903
May 7

Turkey Hill, Arlington, Mass.

Fernald, M. L. & I went to Turkey Hill this afternoon and visited some interesting Vacciniums. In a large pasture there were two forms covering the ground, fine bushes, the ground kept clear between them. One form V. corymbosum has now the flowers first appearing long, creamy white, the leaves well out and smooth. The other form var. atrocecum has the flowers well out, short, unexpanded, and the leaves not yet out. I took a picture of a bush of each with my new camera, but I doubt if I get much. It was quite cloudy. I used the smallest stop and give it 6 seconds.

As a thunder storm seemed approaching I left Fernald to collect some violets and came back. It did not rain -

Beaver Brook Reserv., Waterley, Mass.

1703

May 10

Clear, warm, max. temp. 75° . Sunday.

George & I went to Beaver Brook Reservoir this morning, and spent a couple of hours in the Lower Reserv. studying the birds. I took my camera and exposed four plates (Leeds 26 X, 4 X 5). It was my first attempt. We observed the following birds: —

Cotopaxia luteola had several times

Cyanocitta cristata " " "

Tyrannus tyrannus saw one

Fayornis phoebe had "

Corvus americanus a few

Cicelans phoeniceus several

Lanius s. aeneus one

Carpodacus purpureus imm. ♂ (X)

Spizella socialis several

Melospiza melodia a few

Hirundo erythrogaster " "

Tachycineta bicolor " "

Vireo flavifrons one *

" olivaceus" " "

Minutilla varia " "

Dendroica aestiva several

Galeoscoptes carolinensis one *

Merula migratoria several

Sialia sialis a few.

All these in the Reservation

The Chipping (Reed) was in full song this morning as I passed Will's Garden.

May 26

Cambridge Mass. to Shelburne, Vt.

17

Clear, cool day. M. & I took the 9.01 A.M. train for Shelburne and had a pleasant ride to Portland, reaching there shortly after noon. An hour's wait, including dinner followed, then a little train, consisting of an engine and single car took us up to the Junction where we caught the train on the Grand Trunk Railroad at 1.35^o and reached Shelburne at 5.06 where F. was waiting for us with a carriage and pair. It was good to land in old Shelburne once more. A smart breeze was blowing and as we rambled over the Androscoggin River we saw the booms built up the stream to guide the logs, and the logs floating down streams and large numbers. The great mass of logs is still above Berlin and they will not come down for some little time yet but I shall see it some time in June. The cheery song of the Bluebird greeted us as we stepped from the train & heard him a three singing at once. We had a warm welcome when we reached the house. Miss Fanny and Aria, Margaret & Lawrence are at home. There are several boarders. Vegetation was early here as at home, but a late frost did serious damage to the young crops which had in many cases to be started again.

Shelburne N.H.

1903

May 27

Min. previous night 52 - Max. during day 72 -

It has been a glorious day cool, with fresh breezes. This morning I walked through the intervals to the river with Miss Candler of New York who is here. The Barn Swallows are abundant nesting in the barn and shed and skimming over the meadows twittering constantly. Bank Swallows are also numerous flying over the meadows, feeding and picking up little fine twigs for their nests. They utter constantly their hoarse little notes.

I exposed two films at the lion claws by the creek. We then went through the pasture behind the Scudder cottage and some way into the woods. We saw an Overbird utter his energetic song from very close at hand. A Pine Warbler sang constantly in one place.

This afternoon M. & I walked a little near the house and I photographed the Knobble from across the road in front of the house and I also took a picture of the new cottage by the Cassins. I saw a number of species of birds to-day. I shall list them together those recorded during my visit at the end of my Journal. The Bobolinks are abundant in the intervals, singing merrily and filling the air with melody. Phoebe's are abundant, five pairs nesting within 5 min. of the house.

Corallorhiza imata, R. Brum.

Woods on the path to Mt. Cabot.

Shelburne, N.H.

1903

May 28

Min. 57 - Max 74. Cool, cloudy, dry. Thunder in late P.M., a little rain. Rain in evening.

This morning Mr. & I wandered over the meadow listening to the Bobolinks, and watching the Bank & Barn Swallows. Near the river we heard a Savanna Sparrow and saw a Black Duck fly down stream. A pair of Kingbirds were feeding busily and by the Knobble a Chestnut-sided Warbler was singing. I followed him up and got very near him. On the Knobble I was interested to find two plants of the Habenaria Hookeri which species was growing there in the early 80s. A (male) of Old Fly catcher was on the large dead White Birch on the road side just below the house and once he uttered his note - ^{an acre of vegetation was visible} by the Knobble -

This afternoon I photographed the house and barn and sent off the roll of films to Robey French Co. Later I walked to Wheeler's Bog and saw a Redwing. A Hermit-tit brush was singing at the foot of Cagger's nest.

As I was near the Schoolhouse, a Pileated Woodpecker uttered his loud call and I saw him flying over the trees and alighting on the top of a tall one where he sat for a minute, his long crest erect. Then he started off and flew over the river. He was a big fellow. It was quite exciting.

Cophthorus
pileatus

Sheburne, N.Y.

1903

May 29

Min. 57° - Max. 66°. Clear, cool, windy -

It has been a glorious day.

This morning I took a walk with Mrs. Converse who is here with her daughter. We went down the road to Minot's art in the orchard by the house. I got some Hedgehog grills from the remains of one that had long lain there. I want to show the points through a microscope. Then we skirted along the base of the ridge and listened to an Indigo Bird and a Magnolia Warbler that seemed to be vying for the musical prize. In the distance a Veery sang softly, and as we returned to the road a Westerville Warbler uttered the pretty notes. Macromelurus canadensis, M. nestalis, americanus and Cornus canadensis carpet the woods with white, and Cypripedium acaule is in full flower, both the purple and the pure white forms that I found here in the early 80s. We continued on to Wheeler's bog where I saw two pairs of Redwings. It is a pretty spot for their nesting, quiet and undisturbed. Immense numbers of various kinds were darting about. They were beautifully colored. I captured one large one for Mr. Herstle. It was very abundant near the water. Returning we saw an Osprey soaring over our heads and down to the river, quite low down. A Bluebird was feeding its young in the little bird house by the Minot house.

Shelburne, N.H.

1903

May 29

(2) After dinner I went over to the Knibble to collect a few plants. I found in the grass near the foot several specimens of which I took. A berry was singing on the Knibble, as on the 28th, I found a number of plants of Habenaria Hookeri growing at intervals over the top and I took two.

The Crows were screaming overhead a good deal and Captain of as I was going down to the meadow I saw in a young tree a tree some half way down the slope a young Crow well grown. It was about 15 feet up. By shaking the tree, I started the bird and, after flying clumsily to another tree, it sailed down to the ground just outside the Knibble where I picked it up. It made no resistance. In less than a minute there were twenty-five Crows yelling over my head. Such a racket! I walked home with my prize showed it to the family, and then returning to the center of the field threw it up into the air. It flew about half way to the Knibble and then walked for the remaining distance and disappeared among the bushes. Twelve Crows screamed overhead during this performance -

There is a patch of Hierochloe brevis in the field by the Knibble in full flower now. It is very attractive. Carex leucomelas sativa. Clarity. In grass by Knibble Antennaria nevadica. Meane. "open field by" Habenaria Hookeri. R. Brown. On the " Hierochloe brevis, R & S. In open field by "

Shelburne, N.H.

1903

May 30

Min. 44° , Max. 65° - Clear, very cool & windy.

This morning M. & I walked down to Wheeler's pond. A Blackburnian Warbler was singing his little song in the pines and on our return I saw him and watched him sing. At the pond I captured with my net a number of dragon flies of various species for Mr. Henshaw. Some were a rich blue, with wings folded along the back. One species that frequented the borders of the pond in great numbers was quite large and had white spots on the back.

We walked on to the foot of Crows Nest and found a sunny spot below the towering cliffs where we noted Pine Warblers, Myrtle Warblers, Titmoss, Redbird Birds. Even birds were singing or flying about us while in the woods closely a Hermit Thrush poured forth his rich music. We returned in time for dinner.

This afternoon I walked through the woods alone some distance on the way to Bowls & Pitchers. The woods were beautiful but very quiet. Lawrence's little Fox Terrier, Raleigh went with me.

Right after breakfast this morning I exposed a plate giving the view from the house, and another at the Button Bushes in the yard from the back door of the barn -

Shelburne, N.H.

1903
May 31

Min. 40° - Max. 68°. Clear, cool, tracing,
light breezes - An ideal day

This morning Gus Philbrook & I took a walk
to Bowls & Pitholes. It is through a very beauti-
ful wood where Mitchella, Trichotis and
Cornus canadensis carpet the ground with pure
white, among the fallen leaves and pine needles.
I heard the lazy drone of the Black-throated
Green Warbler, the sharp notes of the Scarlet
Tanager and the Yank, yank of the Red-
bellied Nuthatch. At the falls on Burbanks
Brook I took three pictures, one of them
being just above the falls, the other two
of the falls. This afternoon I rested
and towards 4 o'clock, we walked down to
the river where we watched the logs
drifting down stream. I captured on the Aymonis
bank a Mountain Silver Spot (Arynnis atlantis)
atlantis) very much smaller than either
cybele or aphrodite. On our return we
stopped for some time watching and lis-
tening to the Bobolinks, Bank & Bank
Swallows. It is a treat to see so much
of these birds. I saw among them
a Tree Swallow, the first we'd here
observed here.

Viola cucullata, L. - Growing on the rocky
at Bowls & Pitholes on Burbanks Brook,

Shelburne, N. H.

1903

June 1

Min. 38° - Max. 73° . Sunker from frost firs,
rather warm, light clouds -

This morning M. & I walked over to the Post Office at the bridge we watched the logs floating down the river and I took a picture looking up stream to Bald Cap. While trying to get a picture across the river of the bridge, a gust of wind unfortunately blew over my camera, with lens drawn out, and on the tripod. It fell lens forward, and was badly broken. It was most dismaying and I only hope that it can be mended properly. I have expressed it down to Robey-Freud Co and I await with deep interest their reply.

camera
broken!

Savanna Sparrows were singing in the meadow across the river and a large flock of Cave Swallows are building under the eaves of Morse's barn.

This afternoon we went over Mrs. Emerson's cottage - Mrs. Emerson & her sister Miss Clark left here this P.M. I finished reading Dorothy Vernon of Haddon Hall this afternoon - Mrs. Sheffield arrived on the afternoon train.

Shelburne, Vt.

1903

June 2 Min. 38 ~ Max. 72. A bright pleasant day
light winds, rather warm in the afternoon.
except for the smoke from forest fires over
the mountains. In the afternoon the wind drove smoke from
the smoke down the valley till nearly the ghostly forest fire
outlines of the mountains were visible and the
sun was a lurid red. The evening moon shone
dim and red and finally disappeared from sight.

This morning Gus drove me to Gorham in an
open buggy with a pair. We went by way of Dead
Mine Bridge with its beautiful view. I saw very
few birds on the way. The effects of the recent frost
of May 23 were very visible along the way, where
we saw Butternut trees absolutely withered in every leaf,
and on the slopes of Mt. Hayes where large brown
patches scattered over the mountain side told of frost-
bitten trees, leafless for this summer. In Gorham Brook trout
by the blacksmith's shop, in the center of a small lawn in pond.
~~adjacent~~ to a small white house is an artificial
pond some 15 feet across and four feet deep
with clear fresh water from a mountain brook
continually running in and out. In this pond
are two large magnificent trout. The larger
must have been 15 inches long. They had been
there for at least three years.

I called at the cobbler's, Wesley Wright, to get
some shoes mended. He is Gus's cousin, 60 years old,
having lost a leg in his youth. He is a very in-
teresting man and I had a long talk with him. Phillips
Brooks stayed at his house once and he has his photograph
on the walls of his little shop -

Shelburne, N.H.

1903

June 2

(2)

Returning from Gorham we were approaching Lanius migrans home about half way between Lary's and the house when I saw a Migrant Shrike scaling over the interval a short way ahead of us. It alighted in the willows on the road side and I had an excellent view of it. This is the first time that I have ever seen this species. It soon left the willows and flew on to the plateau above where I last sighted it.

Shelburne, Vt.

1903

June 2

(3)

In the afternoon we limited ourselves to a stroll over the intervals to the river. The air was murky with smoke and the hills were dim, but the river with the floating logs and the wide stretches of flat meadows were very attractive. Two Spotted Sandpipers alighted on the top rail of a fence by the stream and I approached to within a very short distance and enjoyed their delicate plumage and dainty movements.

This evening we called on Mrs. & Miss Fudder & Miss Smith at their college and saw many of Miss Fudder's foreign photographs which she took abroad. As we were talking, suddenly the clear note of a Whippoorwill came ringing in from without. The bird had appeared right and we were expecting it to keep to the door leading to the back piazza and carefully opening it, I saw the bird sitting on the mid-side of the piazza, some ten feet from me. As I *Catherpes* ^{rostratus} looked at him he rose and flew straight up ^{catching an insect} in a perpendicular line, head up and tail down, some eight or ten feet, seized an insect from the air and returned to his former resting place. He soon flew off, but returned, alighting for a few seconds on the corner of the piazza. A little later we stood by an open door and heard him sing a long time from close at hand. He uttered a faint cluck like a rap of the bill on wood, at the beginning of each please chuck-whippoorwill, chuck-whippoorwill, etc. The sound could not have been heard a sheet way off.

Stellburne, N.H.

1903

June 3 Min. 52° Max. 76° - Very strong north-west wind

It has been a most remarkable day. The forest fires are raging about seven miles north west of here on Pine Mt. beyond Mt. Hayes. The smoke is up near Berlin and at Alpine Cascade and the strong gale from these fires is carrying the smoke down the valley. It has grown thicker & thicker to-day. Till this afternoon at 5 o'clock you could not see over the river, and the sun, which had been hanging in the leaves, like an eclipsed moon, with dull red light, vanished from sight. Though there was not a cloud in the sky. I never knew such an experience. Gus & I drove over to the village about 4.30 P.M. and learned that the Pejile House & the Pleasant House were burned up. This however is doubtless false. This afternoon the smoke hurt our eyes.

In the morning I walked to the Minot house and through the intervals with some of the ladies, a-birding, but the smoke & wind was bad. Still we heard ^{a few} Blackburnian, Nashville, Myrtle, warblers, very Spotted Sand-piper, Bobolinks, Bank & Barn Swallows. etc. I added a Field Sparrow to my list. We strolled over the intervals again in the afternoon ~~again~~ Salix lucida. Mule. By the creek in front of the house -

A trip to Bethel, Maine.

1903

June 4

Min. 41° - Max. 70° . No wind, sun like heavy
but no as bad as yesterday -

The wind went down last night and we learn
that the fires are being fought in Berlin & Gorham
by 500 men. The air has been a little clearer
to-day and the cinders have ceased flying. I picked
up a good many of these floating black remnants
of the flames, yesterday, and in every case they
were either entire or fragmnetary beach leaves.

This morning Gus, his two daughters Anna & May ^{Gould}
(Ethel is in Boston) & I took the morning train to Bethel to attend the graduating exercises of Howard at the Gould Academy. Gus & I kept together during the day, going over the chair factory, driving out of town some distance to see about getting some fence boards covered with bittersweet that Gus wanted to make picture frames of, driving at the Bethel House, sitting 2½ hours at Gould Academy during the exercises Dr. Howard spoke his piece very well, in fact all the declaimers spoke with ease and a good deal of dignity. We returned on the afternoon train.

My films that I sent down to Robert French Co. have come back, developed, and with one print. They are pretty good on the whole. I have not used one and yet about my camera. I must bear to-day.

E. K. Rand writes regrets that I cannot be present at the Bot. Club meeting to-night.

This morning as we drove to the bridge, a Blue Jay screamed. This adds a new bird.

Shelburne, N.H.

1903

June 5 Min. 37° - Max. 72° . No wind, smoke everywhere, sun a lurid ball, no clouds. Faint outline of Baldcap ~~the~~ only, visible.

This morning a party consisting of Miss Fenster, Miss Smith, Mrs. Sheffield, Mr. Cander, Gus & I started over the ridge back of the house for Cabot. It was a pleasant ascent through the woods. Reaching the top of Cabot, Miss Smith & I remained in an open spot among the trees, while the rest went on leaving us alone for two hours. It was a good place for birds and we heard several. Cotopax a. culicinus, Dryobates villosus, Centropus viridis, Eupidonax minimus, Bonasa umbellus subsp. (this farther down the path a little earlier), Zonotrichia albicollis, Dendroica caeruleiceps, Anorthura inornata, Turdus m. swainsoni, T. g. pallidus. We got Saw an very close to the Olive-backed Thrush and saw him olive-backed setting on a small branch very near by. I saw his Thrushing olive back and his light eye-ring. He was perched on one leg, and he raised his head slightly as he opened his mandibles and puffed out his sag. It was quite an experience. The party returned bus at 1 P.M. and we reached home to a late dinner.

This afternoon I drove over to the village with Gus, and examined the Barn Swallows under the eaves of Morse's Barn. There are 38 nests, a few of them completed, but most still building. The birds were bringing mud from a creek over the flood meadow. I watched them going to and fro. I heard a Savanna Sparrow in the meadow.

Catramine pennsylvanica, hubb., Big, foot of Mt. Cabot.

Shelburne, N.H.

1903

June 6

Min. 46° ~ Max. 77° . No wind. When I have said no wind for the past week I have meant that no wind was perceptible, but the direction of the slight current of air in such cases has been always west or north-west.

During part of the day you could see little from the house beyond the creek, and never could you see more than the ghostly outline of the fort hills of Moriala. Gus learned in Gorham this afternoon the fire on this side of the river which we feared the most was under control, and part of the gang there had been sent to Berlin.

This morning Mr. Candler, Gus & I went over the ridge back of the house and found my trowel which I had left behind yesterday. It was a delightful walk through the woods of beech, red maple, birch & pine - I was fortunate in getting my trowel & Mr. Candler found it, & added a Black and White Warbler to my list of Shelburne birds. Miss Davenport heard to-day a Purple Finch in the woods leading to Hill Brook.

This afternoon after reading I walked with tall dead birch a short way down the road. Twenty Cedar Birds were perched on top. They were engaged in catching insects, sailing off at intervals and returning to their perches - sometimes a dozen would be soaring over the meadow during up and down like Swallows. I saw two, sitting close together, pass an Cedar Bird insect to and fro six times. Then it dropped. Pretty sight. passing a Chestnut-sided Warbler joined the group & sang. went to each other.

Shelburne, N.H.

1903

June 7

Min. 45° - Max. 77° - Light east wind at last. Thick as usual this morning, but during the afternoon the smoke has cleared enough to show the outlines of the mountains, excepting the two peaks, Madison & Adams. At 4 P.M. I could not look into the sun with naked eye, as I have been able to do the past few days - No cloud -

This morning Miss Laighton & I took a walk along the path to Bowls & Pitches road by Mill Brook. We saw about 33 species of birds. An Alder Flycatcher was singing in the Alders near Greene's and we saw an Olive-sided Flycatcher for at least a quarter of an hour. ^{Contopus borealis} He was on the top of a dead tree close by us, and we watched him catching insects. He kept uttering his pip-pip, pip-pip-pip, almost incessantly. We saw a Solitary Vireo and listened to his song for about fifteen minutes. We heard another later. Three Blackburnian Warblers were singing together and a fourth was close by. We heard their song twice. I saw my first Rose-breasted Grosbeak and heard a Purple Finch. We heard the Veery, Hermit & Olive-backed Thrushes continually. Cedar birds Two cedar birds sat on a Pine branch six inches apart, feeding in one helped to the other, gave it an insect, hopped back, etc., then returning, took it back and this pretty show was kept up about 12 times.

This afternoon I strolled over the intervals, catching insects. An Alder Flycatcher was singing by the Knobble, Lops we floating by in large numbers.

Shelburne, N.H.

1903

June 8

Min. 65° - Max. 67° - Light east wind.

Rain at last!! Light rain this morning early - From 9 to 1 o'clock cloudy but no rain. Intermittent rain during the afternoon.

What a relief that rain has come at last. May it continue long -

This morning Mrs. Sheffield, Miss Langdon & I went to walk on the path to Bowls & Pitches. We spent nearly 3 hours in the woods and saw a good many birds among them, the Olive-sided Flycatcher again. He showed this time the white-flank feathers conspicuously. We saw and heard a Solitary Vireo and Broad-winged Hawk, Blackburnian, Nashville, Black-throated Green, Myrtle Warbler, adult male Purple Finch. We heard a Partridge drum about six times. Olive-sided backed & Wilson's Thrushes were singing constantly. In the Alder thickets, Eun-
pidonax t. alascensis was jerking out his quavir note -

This afternoon Mr. & I walked down into the intervals and down the road to the school house. It was quite wet -

Will Brewster writes me from Bethel, asking me to come down on the 10th. He says "I have a nest to show you very near the station - nothing less than that of the Migrant Shrike with ^{the} pair of old birds, an off, & a young bird. All these I have just seen. I have been watching the old birds ever since I came but only found their nest this morning" -

1903

Thelburne, Vt.

June 9

Min. 62° - Max. 70° - Light east wind, good rain for a portion of last night. Cloudy all day, no rain in morning, heavy rain in first half of afternoon. Frost fiers are out or checked.

Caught Wood Turtles by Clement's Brook.

This morning Mrs. Sheffield & I had a very pleasant walk between 8.30 & 1 o'clock. We crossed the bridge and watched the logs floating down. In the intervals Savanna Sparrows were very abundant, their little wee note sounding from the grass. We saw a great many of the birds. They were very tame and we got close to them. For nearly half an hour we watched the Barn Swallows at Moses barn. Then we crossed over to Clement's Brook and followed it to the River. It is a good place for birds, as it is bordered by bushes. We saw a pair of Red-wings, the female with food in bill. I was much pleased ^{desire to action} to see a Yellow Warbler that I first heard at ^{Clement's Brook}. Then followed up at the mouth of the brook. I heard the song at least half a dozen times along the brook. I located three Catbirds across the river. That makes five places in all, three by the river, two in doors by the road. Returning by the railroad track we saw, seated in the telegraph wires close together six Swallows, three of them Bank, one Tree, one Eave a Cliff, & one Barn. It was a fine opportunity to study them from very close at hand.

This afternoon when the rain stopped M. & I walked down the road and tramped the Minot field. I collected two sp. of beetles (one a lady bug) that were on the blades of grass. A Beeper Sparrow was singing, also four Veerys. Savanna Sparrows were singing in numbers this evening in front of the house.

Visit to Bethel, Maine

1903

June 10

Min. 64° - Max. 70° . Calm, cloudy, slight rain at intervals.

M. & I took the 8:30 train this morning to Bethel and spent the day at Dr. Schimpf's and with Will Brewster. Arriving at 9 o'clock, M. drove up to the house while Will took me to see the family of the Migrant Shrike that he had discovered. It was a rare treat. The nest is in a very small elm about 10 or 15 feet up, built of sticks and close by the road. It is but a minute's walk from the station and I could actually see the nest as I stood on the platform at the station. Will said there was a young bird out, and one egg toward a second set in the nest on Monday. He has made many interesting observations on the feeding of the young bird. As we approached the tree we saw the female bird sitting on the nest. He watched her for a moment and then walked down the road where we soon found the male bird feeding a clumsy, fat young one in a small maple. He watched them for nearly an hour. The old bird would rest on the fence or telegraph wire, and from there swoop gracefully down, catching an insect either on the wing, or after alighting. Then he returned and feed the young one. We saw but one young Shrike. The male bird was very handsome, the contrast of black, white and slate-colored being very striking. His movements were very graceful, especially when he scaled a set

Visit to Bethel, Maine.

1903

June 10 wing. The little bird I got to within 4 or 5 feet of (2) and could see him perfectly. His markings were much like the old birds, but unsoofed - The vermiculations on the breast were beautiful. The bill was rather short and stout, with a slight hook. It was a funny little fellow as it hopped along the top rail of the fence. Could fly quite well, though it allowed us to approach very close to it. It fluttered its wings and cried as a young bird will when fed - Once we heard the male utter its song, a series of peculiar notes - Bill found a Bluebird, Swallow and Pickeral Toad impaled near by - These were all taken away or eaten. Once the Shrike flew up into a tall elm in the open field and as it entered it, a Robin hastily fled out, but we could not tell whether the Shrike was after it or not. Bill showed me where the various creatures had been impaled or fastened into forks of branches. The whole performance was a rare sight.

Leaving this interesting adventure we walked up to the house where I met Dr. H. S. Gehring and other numerous guests - They were very cordial. We spent the time about the house and grounds as the wood were very wet. Birds in Bethel, not observed here are Vireo philadelphicus, Progne subis, Quiscalus quiscula. Purple Finches were singing freely, while here I have heard but one - We visited a Martin House, opposite the Academy in a neighboring garden. It was made of

Visit to Bethel, Maine.

1903

June 10 sugar barrel. There were four stories with seven Martin (3) holes in each story. The pole ran through the house. barrel in a wooden core fitted into the barrel. It made a very attractive house. The holes were well filled with Martins that seemed to be feeding their young. English Sparrows occupied two holes and seemed at peace with their neighbors. Tree Swallows were in one or two holes. The house had been up 4 or 5 years. A platform surrounded the house at each story.

The tin cap covers the top. The owner told us that he first put the wooden cylinder, through which the pole was to run, into the barrel. Then he fitted the partition which ran from the side of the barrel to the cylinder and cut the holes. The idea is a novel one.

We had a very pleasant lunch at the Greetings and at 4 o'clock we walked back to the station, Will accompanying us part way.

This morning, as we were waiting at the Shelburne station for the train I saw two *Buteo swainsoni* rise from over the intervals at Clement's Brook and fly along some distance down the stream before they disappeared. I have not seen them since before -

Shelburne, Vt. A.

1903

June 11 - Min. 64° - Max. 70° cloudy, calm, no rain.
 This morning was rather tired after
 yesterday and I did not go more than wander
 near the house. I found a Reed-swing
 in the creek in front of the house - I just
 heard him from my room. It is the first
 time that I have seen one there. I
 heard four Alder Flycatchers by the river
 and I had a nice chance to see the one
 in the alders by the dead birch just below
 us. I watched him for 10 or 15 minutes as
 he snapped out, with a toss of the head, his
 little song - Two Veerys were singing of among
 one in the Knubble and one in the woods
 between the Knubble and the road. A new bird
 to my list was Loxia c. minor, the Red Cross-Loxia minor
 bill of which I saw a flock of about six
 that alighted in an elm near the Goodall
 Cottage where we happened to be sitting.

Viburnum cassinoides is now in full flower
 by the Knubble - Two Field Sparrows were singing
 a broken song and in front of the Emerson Cottage
 a vesper Sparrow was filling the air with song.

This afternoon W.D. & I took a walk a little
 way along the path to Ford's Patches.

Yesterday a riverman found in the field between the Wood Turtle marked "A.E.P."
 Knubble and road a large Wood Turtle marked underneath "92" found.
 "A.E.P. '92" I was remember distinctly doing this in
 front of the house at that time. He marked on it
 "W.D. '03" and let it go again. I wonder if it will
 be found some years hence -

Shelburne, Vt.

1903

June 12 Min. 60° - Max. 62° . Heavy rains at intervals during the night and morning. Soaking rain all the afternoon and evening.

The heavy rains have kept us at home. This morning M. & I walked as far as the excellent Scudders and made a call. Miss Vida Scudder ^{photio with} showed me her beautiful photographs taken in Italy ^{and 10 cameras} Switzerland with a \$10 camera, one stop, snap shot. She also lent me the Outlook for June 6 with an article by her, illustrated by her own photographs taken as above, some of them enlarged - It is a delightfully written article and the illustrations most excellent -

In the middle of the morning as I was sitting ^{*Loxia curvirostra*} by the window a flock of about 25 Red Crossbills flew chattering up from over the intervals to the house and alighted in the elms directly in front of the front door. They were well hidden among the leaves, but I saw a very male very well. They did not stay long. Returning from our call at the Scudders, I saw two more.

I have read and written letters during the day -

Shelburne, N.H.

1903

June 13 Min. 56° - Max. 59°. Wind still east. Rain all the morning, misty with slight rains in the afternoon clouds hanging low.

Floods and washed the road of the day - Also the big jams of logs at the bridge. We have had quite an exciting day - Last night by ten o'clock the interval between the house and river was largely covered with water. The saw is from our windows. This morning a number of large logs were seen deposited over the interval, the water having gone down some what. The creeks are all very full and Cabot Brook near the house was a torrent. It was a remarkable sight. After breakfast Gus took a party of us in the big wagon to see the sights. We drove first to the bridge and there we saw two enormous jams of logs, against two of the piers. The "walking boys" said there were from five to six hundred feet and feet. They were piled upon each other in grand confusion. In one the logs projected five or ten feet above the level of the bridge which is at least ten feet above the water. It was tremendous. The river men were beginning to work on one jam, but we drove on, as we should see it later. We took the road to Gorham and after going over terribly washed out roads came to Rattle River. Here the bridge was washed away and the brook which in the night swept over the road was still a raging torrent. Returning we watched the river men a while breaking up the jam.

Shelburne, N.H.

1903

June 13 but we had to get home to dinner so we did not stay long. After dinner I went to the bridge again and staid from quarter of three to quarter past six, watching the movements of the men and it was most exciting - Ten men with pavers or cant logs were at work on the jam near this side and two men were in the long pointed boat with long pointed poles ready to give assistance. The men were working with a will hauling, prying, rolling the logs, and running about on them as they were even floating free with perfect ease. Sometimes a whole section of the jam would slowly settle. Then it was exciting. The men were shouting and running to get out of the way, and then springing upon the logs and guiding them on either side of the iron piece of the bridge. The jam rests on the bottom of the river, for often it gets started against the pier or any other obstruction, the logs get jammed more and more by those coming after, and pressed up & down. Once two or three of the men slipped in between the logs up to their waist, but it didn't take long for them to recover, for the logs have great cushion power although moving slowly - At last it was near supper time and I returned home.

Shelburne, N.H.

1903

June 14 Min. 54° - Max. 61° - Clear brilliant day! first since June 1 A.M. Changing clouds in P.M.

It has been a rare treat to get at last to beautiful a day, mild, almost calm, with air clear and bright. We have spent the entire day on the bridge watching the rivermen at work on the second pier. I don't know when I have passed a more interesting time. This pier was piled against the pier several feet higher than the bridge itself and extended under the bridge and out the other side. It ran back a long distance back. Mrs. Grandgent who is here insisted upon my using one of her cameras which holds a 4x5 plate, and during the day I took twelve pictures of the pier and the men in various positions. It is astonishing to see the speed with which the men work with axe and cant dog in that mountain of logs piled up and lying in every conceivable direction.

They will probably start the whole pile off to-morrow - The "walking boss", a Mr Hickey, told me that the men work from 5 A.M. to 7 P.M. They rise at 4.30 and breakfast hastily, have a lunch at 9, dinner at 2 and supper after work. Lunch & dinner are turned through. The men get \$2.25 per day and board & lodging. They have plenty of first class food - Sunday with the rivermen is a working day -

Crossbills (Loxia c. minor) passed over the bridge three times to-day - 9 bearded and Oriole by the house this morning.

Shelburne, N.H.

1903

June 15 Min. 54° - Max. 58° . Cloudy, chilly and rainy at intervals through the day. Calm.

Good weather has not yet come. This A.M. I walked down to the bridge. We found there the Boss, Mr. Hickey, and Larry Howard. Work on the jam has stopped for the present as work farther up the river was more important. About two hours work was done this morning and a portion of the jam was blown up with dynamite. I had a long talk with Hickey and Howard. This drive started at Lake Umbagog and consists mainly of Spruce and Poplar or Pipelle as it is called here. The rest is made up of Pine (*P. strobus*), Fir and Hemlock. The Pine is classified as Pine & Pasture Pine, the latter being the scrubby pasture form, branching low down and much inferior in quality. It is these kinds of trees that are piled up in the jam. The poplar is all peeled. Gus says that the men this year are getting \$2 per day with board and lodging. He has shown me some contracts made between him and various Lumber Companies for the delivery of lumber either either at Berlin or into the Androscoggin River. The afternoon was too stormy to be out with any comfort. I have read and written letters.

Yesterday a Headlog was shot very near the bridge on the road in the intervals on this side.

Stelburne, N.H.

1903

June 16 Min. 52° - Max. 60° . Bright clear, sunny sun,
cloudy P.M., almost calm, wind west - A good day.

This morning the Misses Davenport, Mr. & I walked down (or up) to the bridge. Larry (Lawrence) Howard was the only one there. The logs had caught on the gravel bar just below the bridge in the center current and had backed up above the bridge Howard was building a wing out, as the logs came down, so as the force the logs down the easterly current as they jammed in the center current. He had arranged with Howard to come to the bridge when the sun shone to get some pictures of him on a log. Three times he walked up the bank to the end of the jam, pushed a big log out into the stream, jumped on it and came down in the current towards us, one standing, one sitting, and once lying flat on his back, while we from the bridge took snap shots of him. Howard landed either on the drift of logs or on the bank. Then he let me photograph him in the battue ^(technically pick pots), holding a cent dog in one hand, and the fronted pot in the other. I took another picture of Howard, who is a very nice fellow, by a pile of logs. All these pictures have been taken with Mrs. Granger's camera and I have no idea what the results will be.

This afternoon I went down to the bridge again and descended over the bridge down the ladder, into the battue and from there on to the logs. Howard was there and with him I walked not on the floating logs in

Stellburne, N.H.

1903

June 16

every direction. I went under the bridge and down to the island and saw how a few began. Then I spent some time studying the logs with Howard and I finally got pretty well acquainted with them in the forms they showed. They were as follows:-

White Pine. - The bark was always on, though often much scoured and scraped.

Red Spruce. - Easily recognized with bark on. The bark was often gone, and the log superficially resembled Spruce, but the knots are very different and the log is straight.

Fir. - There was always some bark on the logs, making identification easy, many were much scoured and peeled.

Hemlock. - We saw but two logs, both peeled.

Poplar. - Always peeled, otherwise it would get waterlogged and would sink. Rarely straight. The knots render identification easy.

These species compose the drive. The bulk consists of Spruce & Poplar or Poplar.

Howard took me in the batteau to the main river and we climbed to the top of it, examining the log of the logs. The general direction of the logs is across the river. They ^{were} found in every direction from horizontal to perpendicular.

I found and collected quite a number of beetles that were crawling on the floating logs.

I captured today the Tiger Swallowtail and Mountain Fiber Spot, and heard this morning Vireo gilvus singing close by the base a Warbling Vireo.

St. Albans, N.H.

1903

June 17

Min. 48° - Max. 58° - cloudy with intermittent showers all day -

It has been a chill disagreeable day and I have not been out very much. This morning M. & I walked up the road as far as Katie Burgess's cottage where we called. Katie used to work for Mr. Greenleaf. I collected quite a number of insects, beetles mainly. Near Mr. Lightfoot's house just above here I heard a Pine Warbler, Nashville Warbler and Solitary Vireo. The Alder Flycatcher was singing in the Alders by Greenleaf's and farther on a Veery was singing on either side of the road and a Vesper Sparrow made beautiful music. This afternoon a Hermit Thrush was singing in the woods behind the house. I hear more Veerys & Olive-backs than Hermits -

My camera at last arrived to-day, but so ~~camera~~ poorly packed that the ground glass is in bits. The turned wooden frame will be sent back to-morrow. It was outrageous. A bit of thin corrugated paper was wrapped about it and a bit of brown paper about that. No mark Glass was on the label. I cannot imagine greater stupidity on the part of the packers. When shall I have the camera in perfect order? I am afraid now that the inner lens that was in contact with the broken glass may have been scratched but I hope not -

I collected to-day -

<i>Gutierrezia virginica</i> Greene.	dry places, open -
<i>Geococcyx richardsoni</i> Gmelin.	Buffy ground -
<i>Fragaria virginiana</i> Nutt.	meadow -

Shelburne, N.H.

1903

June 18 Min. 53° - Max 58°, Light east wind, heavy clouds, rain in P.m. at intervals.

It has been another cold disagreeable morning it did not rain, and Mr. & I walked down the road about half a mile beyond Wheeler's.

Lesser Sparrows were singing almost during the whole of our walk. At Wheeler's Pond a Bittern flew over us and alighted in the Leather Leaf (*Cassander calyculata*) that surrounds the pond. I saw him, after he had alighted, with extended neck. In a stump in a field near the road, a short distance beyond Wheeler's we found a pair of Tree Swallows feeding their young in a Woodpecker's hole some 20 ft. up. It was a pretty sight. A little farther down the road I heard *Trochilus erithacus* the call of a Crested Flycatcher and I soon saw him in some Pines. He called a number of times and as he flew off he displayed his sulphur yellow throat. Veery's & Hermit were singing and we heard a Blackburnian & Nashville Warbler and a number of other species.

This afternoon Mrs & I drove up to Stevens' farm and on the return drove down into the meadow just below Lead Mine Bridge to the edge of the big jam. The men were working farther on but it was too wet to get there. We shall take a dry day for it. The number of logs piled up there is enormous -

I have at last secured Amer. Nat. for May, Amer. Nat. 1888, from Mr. Wm. Witter Stone. I have been trying for May, 1888 & completed Bill Brewster's set for about 4 years now!

Shelburne, N.H.

1903

June 19 Min. 48° - Max. 65° . Cloudy light showers in Am., clouds breaking in P.M. with more or less sun -

This morning M. & I walked over to the village. We spent some time at the bridge, both going and returning, talking with Larry Howard and watching him handle the logs. He has built out a boom of logs so that all those now floating down go through the channel nearer this shore. The end of the drive is only barely this side of Gorham and there is so much to be done above here, that doubtless we shall miss the big work done here later when the whole gang of men & horses are here, and the wagon is pitched close by.

This afternoon I walked down the road with Miss Laighton. At Minot we saw a Great Blue Heron sailing over our heads and descending to the river. As long as we saw it, it sailed on set wings without a motion. The distance was some 600 yards. It was a graceful performance.

Miss Laighton played the violin very beautifully this evening. Miss Davenport accompanied her.

I learned from C. W. this evening as we sat around the fire that the drive of logs stops at Berlin where some are removed, as there it passes on to Rumford Falls its final destination. They, the logs, are sorted into three boats representing the three companies who own them.

Then they go right into the mills and are ground ~~to pulp~~ for paper. What are left over when winter comes are stacked in piles to be cut during the winter. Sir says that this drive as it lies today is worth over \$700,000.

Shelburne, N.H.

1903

June 20 Min. 58° ~ Max. 68° - Wind east, cloudy. Sun breaking out a few times toward noon for a few moments. Heavy clouds and mist in Ptn.

This morning Miss Haughton, Mr. Caudle, Gus & I drove up to Lead Mine to the big jam, a little below the bridge and spent a couple of hours there. The jam was a tremendous one at least 1000 ft. long Log jam below
a few days ago. Even now it is enormous "plugging" two channels of the river, resting on the bottom and rising some 10 feet above the water, extending several hundred feet in length. We walked out on it to the front and watched first the men working with horses. The horses stood in the water up to their middle and a man sat on the back of one. A chain with "dog" on the end was used, two chains being attached to the horses. The "dog" was hammered into the log to be drawn out, and sometimes two logs were hauled away at once. Lead mine Bridge.

The "dog" is released by a single blow of a "cat-dog"; "Dog" ~~at 1.~~ at 1. It is a very clever arrangement.

The "dog" is laid flat on the log thus:  Then, as it is driven in by a few strokes of a big mallet, the straight end rises thus:  rendering the releasing of it easy.

We also watched the sawing in another part of the jam. It was fascinating and I could hardly get away. They will be about three weeks up there. We returned over Lead Mine Bridge. The Rattle River bridge is finished -

This Ptn. M & I went over to an bridge and had a talk with Larry Howard who is an guard there.

Celastrus scandens, L. River bank, foot of the jam.

1903

Shelburne, N.H.

June 21 Min. 51° ~ Max. 56° - Easterly storm, continuous rain all day, excepting for a short intermission in the P.m.

Sunday - Never was there such weather - We have kept the house to-day, excepting for a walk in the P.m. when Mr. & I went down the road to just this side of Wheeler's. The rain fell all the time. A Hermit Thrush and two Veerys sang in spite of the storm.

When I was talking with Harry Howard at Black Duck the bridge yesterday, he said that at about noon and young, of that day he saw a Black Duck with a brood June 20. of about ten young ones appeared on the river near the bank below the bridge on the north side were the trees overhanging and touching the water. They went swiftly down stream on seeing him.

Shelburne, N.H.

1903

June 22 Min. 49° ~ Max. 67° . Pleasant day, no rain ^{and wind}
east, slight, sun & cloud alternating in the ~~cloud~~ ^{sun} P.M.

This morning at 7 o'clock, the report came through the house that there was a deer in the intervals. Rushing to our windows which command an extensive view over the broad expanse stretching from the house to the river, we saw a fine full grown buck feeding in the short grass directly in front of us about two hundred yards off. Glasses gave us a perfect view of him. His antlers were about a foot long and in the velvet, and his hair was very red. He looked to me nearly as large as a cow. Howard & Ralph were working in front of the house but he paid no attention to them beyond raising his head and looking up toward the road at intervals. He grazed a moment and then walked on, shaking his beautiful tail. We saw him for full ten minutes before he passed out of sight behind the old brick wall that skirt the end of the Knobble. All his actions were slow and graceful.

After breakfast a party of us drove with Mrs. ^{to} ^{below} ^{Leed Mine} ^{Brick} down to the big gap below Leed Mine Bridge and spent the morning there. It is always exciting. About thirty men were working like beavers. One fellow got left on a log that was stuck some way from the main. They sent him a log and springing upon it he rode some distance down stream through some rapids and landed on a pile of logs below. It was good work. I took a leap of him and a few other views also.

Took a walk with Mr. Hins P.M. catching a few insects. Finished Cainsworth's Rockwood this P.M.

1903

Shelburne, N.H.

June 23 Min. 51° ~ Max 59°. No rain until east, chilly.

(1) Sun & cloud alternated during the day. Glory B.M.

This morning M. & I walked down the road, collecting insects for Mr. Henshaw. I took several specimens of Celastrus. I found that by swinging the net to & fro over the grass & shrubbery I got many insects that I could not get otherwise.

This afternoon I found an old Migrant Shrike Lanius L. feeding three young on the plateau west of the house migrans among the apple trees that are scattered over it. ad + 3 99.

The young birds could fly very well and did not allow an approach nearer than about forty or fifty feet. They were continually calling and the sound was audible across the plateau, about one hundred yards. Sometimes they alighted on the ground and seemed trying to find food for themselves. I watched them for some time. The old bird remained near by perching either on the big elm near the Goodale Cottage to the east or on the fence rail or on a small pile of grass that had been recently cut. Finally the birds flew down near the road, but later returned. Mrs. Chas. H. Grandjean who is in the cottage, called "The Little House" tells me that she saw the two old birds on the 21st and three young on the 22^d. Miss Helena S. Dudley who is visiting the Seabards tells me that she heard the young birds on the 21st and saw all three sitting on a branch together on the 22^d. In both cases the locality was alone I saw them.

Shelburne, N.H.

1903

June 23

- (2) In the latter part of the afternoon I strolled by myself through the pasture behind the Scudder Cottage and a short distance into the woods on the old path that we used to take when we were ascending Mt. Cabot. I saw my first Parula Warbler in these woods - Brown, Pine Warbler by a cool small pool were a few plants of which I took
Corynallis cinnamomea, R. Br. } Rich woods by
Carex intumescens, R. Br. } cool pool.

I then visited the Residential platform which Gus built some few years ago just within the woods. By the judicious pruning of a few trees, a splendid view is afforded of the big mountains from Madison to Washington.

Shelburne, N.H.

1903

June 24 Min. 52° - Max. 57° - Wind east. Sun came out for a short time this A.M. but heavy cloud soon covered the sky and descended over the mts. Rain during the P.M.

I vainly thought we should have a sunny day early this morning but the record above shows the result. I took a walk from Linscott Hill after breakfast and then visited the young Shrikes who were calling *Lanius L.* loudly among the trees on the plateau. The old bird *migrans* was there too. I have seen but one adult bird. Though the clouds were beginning to cover the sun, I took three shots at two young Shrikes, two of them at the same bird in the same position. I only want to show ~~that~~ I saw the bird. We hunted all about for the nest but did not find it.

We took a walk down the road this P.M. but the rain drove us home. I watched a brood of young Barn Swallows being fed by the old birds. There were five young birds and they were perched above a window of the shed, four being on the sill above the window, and the fifth on the blind. They were fed in this order. No. 1. on the left of the row, first,

" 2 next bird, second,

" 3 " " Third, and no. 1 was fed immediately after by old bird before leaving.

" 4 " " fourth, and no. 1 was again fed immediately after by old bird before leaving.

Then the young birds began to change places and the count was lost.

St. Helburne, Vt.

1903

June 25 Min. 49° ~ Max. 58°. Wind still east, clouds heavy all day, rain in the morning - Chilly.

We spent most of the morning in the house & later Mr. & I walked down the road past the Minard (not hunting) place - I saw a female Downy Woodpecker feeding a young female. Cedar Sparrows were singing and a Vireo was making good music.

This afternoon I visited the young Shrikes. I found all three in the old place but didn't see the migrans old bird. I watched the young for some time.

They are learning to feed themselves, by flying down into the grass and picking out insects.

I then walked down to the river which is now very low, and large numbers of logs are stranded high and dry. They will all be hauled off later but we must go home on the 26th June.

Shelburne, N.H.

1903

June 26 Min. 52° ~ Max. 68°. Wind west at last. Rather cloudy in A.M. clearing in P.M. with much sun.

This has been a beautiful day - This morning I took a walk with a small party (Miss Leighton, Miss Emerton, Miss Ripley & Jack Wright) over the river, through the village and over the meadows to Clement's Brook. We followed up the brook some way and rested in a beautiful spot by a clear pool. It all reminded me of the times when we used to frequent the brook as boys in the 60's. I hadn't been there since.

I saw Cirtheurus in the meadow and a number of Attaeius.

This afternoon a party of us drove to the wagons by "Banffan" ^{before} the river on the further side a little above Charles Leeds Miss Philbrook's. It is in the intervals very picturesquely situated close to the water. There are four sleeping tents a tent for storing and keeping the food and a table with a fly over it where the food is served. The cook was very polite to us, as also the cookstove. He inspected everything, saw large dishes of custard, etc., piles of cakes, dryplums, etc. The cook put a big pot of beans into a hole where a fire had been burning and covered it with hot ashes. I took 6 pictures, snoozed with my new camera. In the sleeping tents a long thick blanket runs the length on either side and folds over the men.

24 men slept in one of the tents. The end of the drive is a short way above the wagons.

I saw Hieracium canadense in two places in Shelburne to-day.

Steeburne, N.H.

1903

June 27 Min. 50° ~ Max. 70° - Wind nort. Clear with scattered clouds. An ideal day ~

This morning a party of us with Gus drove off for the day. We first visited the camp or wagon ^{Chayman} _{below} where we went yesterday and took a few pictures. ^{Lead mine} The lead cork was there and I found he was Tiddwell who had worked for Long Jr. & Bill Brewster. I had a nice talk with him. We then drove farther up the road and down over the interval, fording a bit of the river to an island ^{Lead mine} _{below} where there burst upon us the whole scene of the ^{Long farm} _{below} ^{Lead mine} _{Bridge} race or fair, logs, men & horses hard at work. To get a good view we found that we had to cross the main river, and two rivermen took us over in the batteau. Then we were close against the big fair and we walked out over it to where the men and horses were working. There were fifty five strong, stalwart men and eight pair of horses and the fair was rapidly eaten into. The whole scene was wonderfully picturesque. I took a few pictures, all snapshots. I had a good talk with four rivermen. Not all the time as they are, they seem to suffer no harm (one fellow has worked for sixty five ^{days} consecutively including Sundays, standing in the water ^{so much} of the time, and has ^{been} perfectly well all the time. He had a very pleasant picnic dinner under the trees at the end of Stevens Farm, Gus having driven round and got home a little after 5 P.M.

59

Shelburne, N.H.

1903

June 28 Min. 45° ~ Max. 75° . Clear with scattered clouds.

warm, a glorious day. Sunday -

This has been our last day here in this beautiful spot. It has been an ideal day. We have staid about the house most of the time, taking a walk down the road in the afternoon. The sun was quite warm.

This morning we arrived against the barn a pick pole, cant dog, axe and pair of caulked shoes, making the outfit of a riverman. I took two time exposures with plates and before for good results.

Some of my pictures have come back from Boston and they are rather satisfactory. They are at least suggestive of the gains and the work that was going on there. They are rather dark and I hope it is in the printing -

The work tea with Mrs. Suddes, Miss Peabody, Miss Dudley & Miss Smith and had a very pleasant evening. As we were walking through the pasture after tea, Rolly, the dog, who followed us, came out of the woods with his mouth full of hedgehog quills. I took him home and they were all extracted by pulling with the fingers and with pincers. I have never seen this before. Rolly bore it well.

Mr. Post showed me to-night through his telescope, "the red moon," Venus a crescent, & Cynos a beautiful double star one orange, one blue.

1903

June 29

Shelburne N.H. to Cambridge Mass.

We left Shelburne this ^{after} by the 8.30 train. The mists were rising from the mountains and the sun was out, and we longed to stay. Everybody bade us a cordial good bye. We had a very comfortable ride in a parlor car straight through to Boston. Miss Laighton accompanied us as far as Portsmouth where she left us on her way to the Isles of Shoals. She is a cousin of Roland Thaxter. Her father was Cedric Laighton - I well remember her grandfather when he appeared on the hotel piazza and blew a long horn to summon his guests to meals - I was a boy then, Oscar & Cedric was boys then then I remember them.

We reached home by 4.42 P.M.

Shelburne, N.H.

Cambridge Mass

1903

Aug 17

The days have slipped by since we returned from Shelburne on June 29, just six weeks ago. With the exception of a few days, the weather has been remarkably cool, over now so dear last year.

I have been regular at the Museum. Will get on to the Cambridge list early this month and except for the introduction, the work is very nearly done.

On July 10 and 27 I saw Borelli's Comet Borelli. It was visible with the naked eye though it did not glow for much. With my field glasses I could make out the nucleus and tail, but could not see the double tail. It looked thus: 

I call on Mr. Sam Henshaw about once a week and always enjoy this almost new dear acquaintance, else I can possibly do. Yesterday, Aug. 16, Sunday, he & I went up to the Dealer Brook Reserv. and spent a hour or so wandering about, discussing insects & plants. Caddis Flies were abundant, a small species.

Polygonum virginianum is very abundant along the brook side in the lower Reserv., fine vigorous plants.

In the P.M. (Aug 16) Mary. W. & I drove through Belmont and along the Trapelo Road. We left M. at the junction of the Trapelo & Lexington Road, where she took the electric home. We continued to Hollis Brook Reservoir, a beautiful sheet of water -

Polygonum virginianum B.B. Reserv. very abundant by the brook in lower Reserv.

Polygonum Lower Reserv. in brook -

Concord, Mass.

1903

Aug. 23

Clear, rather warm in the sun. Beautiful day.
Will Brewster, Sam Henshaw & I took the
electrics to West Bedford this morning (Sunday)
reaching there about 10. Gilbert was with us - We
walked to the boat landing, and just after crossing
the track, Gilbert & I see a Tawny-tail flying
swiftly over our heads - We crossed the river in the
boat. Blushing-bugs () were numerous and
I captured some in my butterfly net and got one alive
& Cambridge and put him into Bill's pond. He is
a true beetle and has eyes above and eyes below, so that
it sees under water & above water. Has one pair of eyes
divided. After landing we strolled about before dinner.
We saw Pickrel, Leopard, Green, & Blood Frogs and
captured a Salamander (Plethodon erythromelas) which
we examined and released. We found under a log
a lot of Bombadier Beetles (Brachinus sp.). Won-
derful creatures. On being disturbed they speedily ran
in all directions shooting off, with a squeaking sound,
their fluid from a sac behind. This immediately
cleaves into a gas, and looks like a puff of
smoke as it shoots out with a report. This is
a protection against an enemy - We captured several.

We dined in the old Cabin and were joined by
Mr. Fobush who is taking charge of the place this
summer. Then we walked to the Barrett
Farm through the wood & fields. We heard and
saw a Green Heron in the Aler. & heard a Red-headed Hawk.
This AM a Marsh Hawk flew by. We examined the Ritchie
Farm recently bought and drove to the Fitchburg Station taking
the 5:24 Train home (train, W.S. below). Successful day.

Bombadier
Beetles)

1903

Aug. 29

Cambridge to Ipswich Mass.

166

Heavy clouds - little rain, cool.

M. & I took the 3.30 P.M. train for Ipswich to Spend Sunday with Dr. & Mrs. Townsend. Townsend met us on the train. Reached Ipswich about 4.30 where we met Mrs. Townsend at the station. We all drove to the house, three and a half miles toward the sea. The clouds were very heavy, but it didn't rain. Townsend owns twelve acres. His house stands on the top of an elevation facing north. East & south stretch the extensive marshes of Castle Neck River beyond while on the east extend the famous dunes, the banks of white sand visible from the house with glimpses of the sea, while to the west over the marshes rises a fine drumlin, Hog Island by which Conestock & Essex Rivers empty into the sea. It is a glorious view. Townsend has planted out a good many trees that are doing very well. He has a small barn and hen yard with vegetable garden. There are four children Gertrude, the oldest about nine, Margaret, Francis & Charles the youngest. All were at home but Margaret. Gertrude takes care of the pony, Stella and of the birds. Dr. T. H. Towle lives opposite and Mrs. Richardson & Taylor have houses on the hill near by. A broad piazza runs round two sides of the house. The living room runs the length of the house. In the center is a large brick chimney with fireplace on each side. A narrow way on either side of the chimney joins the two parts. It rained in the evening. We sat about the open fire, popped corn, examined the map and talked. Dr. & Mrs. Taylor sent Dr. & Mrs. Towle called.

We planned for a tramp with Dunes tomorrow. At dusk we heard Summer Yellow-bells calling in the marsh.

1903

Aug. 30

Ipswich, Mass.

Sunday - North-easterly storm with high wind.
rain held up during the middle of the day.

After breakfast Tom and I took me over the place
and showed me his barn, farm; his garden, and
the trees he had been planting. The land slopes
down to the salt-marsh and a boat-house stands
on the edge of the stream whence they sail &
bathe. The rain continuing I was clad in
an oil-skin suit, heavy rubber shoes with woollen
stockings, and broad brimmed sun-hat. Tom
had put on his oil-skins and off we tramped
for the beach and the dunes. It was great
sport. We walked down the road nearly two
miles before turning in to the dunes and over
the white sand to the lighthouse. As we walked
along by the low scrub, we started a fine large
female Ring-necked Pheasant. She first startled
and dropped quickly into the bushes before I saw her.
Then we both ran toward the place and at about
ten yard she rose and sailed off straight
away from us some distance. We went straight
to the beach past the lighthouse. The tide was low
and an immense expanse of sand was uncovered
stretching an interminable distance in either
direction. Though the rain beat in our faces
we could see across the water to the shores of
Cape Ann with the waves breaking wildly
off shore and over the bar at the mouth of
Ipswich River. On the bar we could see
and make out a mass of seals grouped
near the water. It was a wild sight.

1903

Uxbridge, Mass.

Aug. 30

(2) As we walked along the beach, the rain stopped and held up till we reached the ^{the house} through the heavy clouds hung low and it rained hard later. Though we did not see very many birds in number, still I was much gratified to add some birds that I had not observed before. There were a Bonaparte's Sandpiper, a Black Tern and a flock of 5 Caspian Terns. The Sandpiper Bonaparte's flew close by us and I wanted who has often Sandpiper seen them readily recognized it as he did also the Black Tern, its small size and peculiar black ^{green} markings rendering it easily identified.

I paused here before me to walk farther along the beach, where I stopped to rest. As I was standing alone there flew over my head very low down a flock of five terns. They were very large, apparently twice the size of a Wilson's and I saw the roseate bills distinctly - they were calling ca-ca, ca-ca, ca-ca continually. A little later when I wanted joined me we saw a single Caspian. He has shot up here - so we recorded six Caspian Terns - We saw also Herring Gulls, Sanderlings, Semipalmaried Sandpiper and Ring-necked Plover, a Black-bellied Plover, while large numbers of Tree Swallows were continually flying about low over the beach and the woods.

Turning away from the water finally we struck straight into the Dunes and entered a remarkable region - The country is very rolling the white sand having dried into every conceivable shape, elevations alternating with

Ipswich, Mass.

1903

Aug. 30 depressions. These depressions are of various sizes
 (3) called "Amphitheatres", some of them circular in shape, the sand sweeping in beautiful curves, the sides sometimes forty or fifty feet high. Vegetation clothes a large part of the dunes and here and there the sand is burying up the trees. We saw a pine of pitch pine about half buried, the cone-bearing branches close to the sand. In another place, a long buried pitch pine forest is emerging again, the sand drifting away to another locality. The principal vegetation seems to be Little White Pine, Red Cedar, Gray Birch, Aspen, Bayberry, Sweet Gale, Sweet Fern, Alder with small shrubs and herbaceous plants. Cranberries cover an immense area and were fruiting profusely. In towns and farms there are two Cider Trees, one Red Bush, one Hemlock. In the lower portion of depressions where sphagnum occurs there is a fine growth of small plants.

Hudsonia tomentosa is very abundant. In one place we saw a cloud of Tree Swallows hovering over the Bayberry bushes. They feed on the berries. At times the flock would rise and we estimated that there must have been at least two thousand birds. They looked like a swarm of bees. It was a pretty long tramp covering at least six miles. We reached home at 2.30 ate a late dinner and I was glad to lie down for an hour and enjoy a good rest.

*See note

Aug. 31 / 1903

1903

Ipswich, Mass.

Aug. 30 In the evening Goodale & wife came to tea to celebrate their wedding and later neighbors dropped in and brought articles in tea, and we had a very merry time.

List of birds observed in Ipswich to-day between the house and the beach: —

Larus argentatus 100 to 200 at the beach

Sterna caspia 5 or 6 overhead & 18 alone. It joins some Wilson's terns among which its large size was apparent.

Sterna hirundo about 100 flying off shore

Hydrochelidon nigra surinamensis 18 on the beach.

Ereunetes pusillus 25 or 30 on the beach

Tringa fuscicollis 18 very conspicuous.

Calidris arenaria 25 on beach

Ciegelalitis semipalmata 5 or 6 on beach

Squatarola squatarola 1 on beach. shown; black bust

Pharomachrus longatus 1 ♀ flushed in the dunes.

Circus hudsonius 1 ♀ ad. soaring over marshes.

Colaptes auratus lateralis 2 or 3

Corvus americanus 5 or 6 on beach.

Dolichonyx oryzivorus calling in field

Passer domesticus 20 or so roosting

Cistugulus cristatus numerous

Pooecetes gramineus 5 or 6

Anthonothus 3. Savanna 2 or 3

" candiaculus 3 or 4. marsh

Spizella Socialis, several

Melospiza melodia 2 or 3

Chlidonias erythropus 5 or 6

Tachycineta bicolor abundant flying over the beach & marsh low down.

a flock of at least 2000 hovering over Barber, in Dunes.

Riparia riparia 2 or 3

Merula migratoria few

Ducks a flock 4

about a dozen flew

over the water.

They were probably

Coot of some sp.

25 species

1903

Ipswich & Cambridge, Mass.

Aug. 31

The storm raged all last night. We were up at six o'clock and down to breakfast at seven. Dr. Townsend drove with us to the station where we took the 8.10 train for Boston. He had a most delightful visit and one said last and Boston could not have given as a more delightful time. We reached home by quarter of ten - Ruthven is here - I called on him this evening at the other house. He returns to Chicago to-morrow morning -

"Amphitheaters" - "By amphitheaters I mean the large spaces between curving ridges seen only further south in the Ipswich dunes. What I called your attention to Sunday were the pits which work down wind by scouring out on one side & filling in on the other."

C.W. Townsend in Citt. Sept. 22, 1911.

We visited Dr. Townsend on Sept 16-18, 1911 (see Journ.) and, owing to the bad weather, went but a short way in the dunes from the northern extremity. We did not go even as far as the light -

Cambridge Mass. to Wells, Maine

1903
Sept. 14

Monday very warm -

- Mr. & I took the 4.15 P.M. train for Wells to make a week's visit to our cousins at the Elms. We had a good run down reaching the end of our journey exactly on time, 6.52, but it was awfully hot all the way especially after the cool weather preceding. Mr. Goodwin met us at the station and drove us up to the house. The air was so cool that I put on my overcoat. A hearty welcome awaited us - there are now at the house Robert & Ella Lad, Mrs. George C. Lad & Dr. Palmer, a lady physician. After tea we enjoyed the evening talking in the sitting room and retired early. But one of our trunks was left off at the Elms -

1903

Sept 15th

The Elms, Maine

73

Clear, warm, with fresh sea breeze -

I have been rather quiet, resting to-day.

R. R. took us this morning over the new barn and showed us every detail. It is a fine structure, admirably adapted to the uses intended for it. The horses and the Guernsey cattle are well housed and the mows are filled with hay. In the old duck pond are a flock of Brazil ducks, with white plumage and red bases of the bills. Later in the morning we drove over Colis Hill for an hour or so -

This P.M. I strolled over the meadow by the house. Rapae and philodice were very abundant. I took one very small butterfly that is probably a clouded Sulphur. Shall know later. At 4 o'clock Ella, Dr. Palmer & I drove with Mr. Goodwin to Kennebunk. A cool and pleasant day. We drove through the town, returning home by six o'clock -

Birds very few. I observed to-day:-

Coccothraustes a. aleyron 1st.

Cotopaxus c. luteus 3rd.

Cornus americana 12.

Cryptotomus tristis abundant, heard constantly. Saw some.

Passer domesticus about a dozen by the barn,

Proct器es grammurus one seen.

Spirochela socialis abundant on the lawn and elsewhere.

Littorina evanescens one.

Sialia Sialis abundant, saw a dozen or more.

The Elms, Maine

1903

Sept 16

Clear cool day. Fog drifting in from the sea in the PM.

Not having been very well last night I stayed in bed this morning, getting up and going down to dinner at half past one -

We spent some time after dinner in the study looking over photos illustrating Rob's & Ella's Foreign trips last year -

I rested in my room afterwards -

Birds observed to-day

Corvus americanus heard

Cisticolus tristis "

Passer domesticus 3 or 4

Spizella monticola Saw 1 by the bare

Malospiza georgiana

The Elms, Miami

1903

Sept. 17

Mild, very windy from the south-east, sun alternating with cloud and rain.

This morning I staid near the house, reading, the weather being threatening - Dr. Palmer left about 10 o'clock. Later I walked about the summer house where I enjoyed the vast stretch of ocean and marsh with the Gulls clustered in a snow white mass on the sand at the mouth of Little River - I returned to dinner. The truth is I have not felt quite right since I have been here and I must be careful - At half past three this afternoon Ella & I with Mr. Woodman drove down to the beach and went over the whole length of it twice - we got pretty near the Gulls - I counted about 30 Blackbacks Sandeelings were the only sandpipers on the beach. An occasional ^{seal} thrust his head and often half his body above the breakers close in shore. It began to rain soon after our return. Bird to-day: Larus argentatus about 200 mouth of Little River " marmurus " 30 " " " " Sterna sp. probably himantopus 10 along beach. Calidris arenaria about 75 in small flocks on beach - Tringa macularia 3 ^{and} ^{and} flocks by salt-marsh. Ardea herodias 2 ^{or} salt marsh. Colaptes caeruleus 2 Cornus americana ① on beach Astragalus tricoccum wd. constantly Passer domesticus a few Melospiza fasciata about 6. Proct器 grammianus marmurus said 7 or 8 -

1903

Sept. 18

The Elms, Maine

76

Clear with light clouds, quite high wind - mild.

This morning I walked down to the mouth of Little River and enjoyed the view over the marshes. I saw a fine Barn Hawk, a Sharp-shinned Hawk and a large Cooper's Hawk and heard a Red-shouldered Screaming. The sumpture is bright red now and the marsh grasses and rushes are a beautiful russet. Returning to the house I got my camera and exposed a plate from the little summer house back of the house. Ella then walked with me to the marsh again and I took three connecting views of the big marsh & Little River. We saw a Sharp-shinned alight on a post and hear to pieces some creature that he had caught. We also saw three Kingfishers at one time.

This afternoon I took half a dozen pictures near the house and on the point by the summer house - M. 09 went to the barn at 4.20 to see the Turnseys come in. Each cow knows her own place and goes to it.

For some days past the men find in the early morning strands in the gutter back of the cows and on the floor nearly intact a number of crawling caterpillars with long tails, some (Exstatio) times two hundred at once. They are brushed back into the hole underneath but return each morning. The numbers are lessening now. I have some in a cloth to study.

This noon the dogs caught a mink on the marsh, light belly, upper parts and feet black. feet black. body 2.7, tail 1.2 in. Said to dry: Larus argentatus, Anas, Circus hudsonius 1^d; Buteo lineatus 1^d; Accipiter velox 3; A. cooperii 1; Cleptes aletus 1; Corvus americanus, 30 in flocks of 12 at a time; Astragalinus tristis 1^d; Passer domesticus 4 or 5; Proocetes grammivorus 5; Querula pectoralis 1^d; Sialia sialis 1^d. Galeosphenus carolinensis 1^d; Cyanocitta cyanomelas 1^d.

Sept. 24/03

1903

Sept. 19

The Elms, Maine

77

Clear, calm, very cool, an ideal day -

This morning Rob and I spent some time photographing "Safety", the Guernsey bull. He was led out into the yard and I exposed two plates. Then we took some snaps at him. Later we walked over the fields in front of the house and I took a picture of Dorothy, granddaughter of old "Quartz" and niece of Quartz 4th. I photographed the breed of the latter as she was lying in the grass. Then I snapped at some sheep.

This afternoon I went a little "The Pic", and then walked over the golf links with Rob & E. The air was wonderfully clear and the ocean was a deep blue -

Birds to-day

Gull Herring like a snow bank at mouth of river.

Moth-bird ^{with others} Great Blue Heron one over marsh & alighting in river

Flicker - saw one, heard two.

Crow - several.

Goldfinch - heard several -

Horn Sparrow - a few.

Gray Finch - one or two.

White breasted Nuthatch - one flying about the bare trees calling

Cuckoo - one

Say Sparrow - heard

King Fisher "

1903

Sept. 20

The Elms, Maine

cool, clear and cloudy, a fine day, glorious sunrise.
This morning Rob and I walked over to the
boathouse and Rob rowed me up the river
nearly to the mill. The tide was up and
the views were very attractive, as the eye
ranged over the salt marshes. Twice we
started up a Great Blue Heron and once I saw
a Kingfisher drop with a big splash into the
water and fly up with a fish in its big bill.
One of the Brazilian ducks that Rob has been
fledgling over to the river in the Spring and has
lived ever since at a certain bend in the
river, allowing no one to approach. We found
her to-day and followed her for some time,
and could have caught her if we had had
a net with a handle. Rob will try again.
The foliage is turning rapidly now and the
fall is upon us. Returning home we
took a drive (Curt, Ella, Rob + I) to the beach,
Tide about $\frac{1}{2}$. Gulls were flying up & down and
we saw the immense flock off Little Pine
rise and soar. A flock of at least seventy
five Sandpipers flew by and I saw three
Loons, one an adult in fine plumage, on the
water. We drove along the beach and
took the road from Drakes Island. I
visited the Sassafras trees that I have seen
before. They are in a small wood a few
rods from the road. There are two stately
trees, about three or four feet apart and each
about thirty five feet high. The trunks measure

The Elms, Maine

1903

Sept 20 respectively, 5 feet up, 1 ft. 3 $\frac{1}{4}$ + 1 ft. 7 $\frac{1}{4}$ in. round.
(2) Close by are three young seedlings, one to three
feet high. I took some specimens from these
small plants. After reaching home, I took
a few snaps about the place.

This afternoon we put our things together for
our departure and then I went out into the
barn and visited the cows and Safety, the
bull. I called on Mrs. Taylor and saw her
daughter Toy, who teaches the little school here.

We saw a Gray Squirrel in the woods near
the boat house this morning. Rob says that it
is the first one he has ever seen here, though
Mr. Taylor has seen the species here.

Birds observed to-day:-

Tarzia imber 3 off the beach, one an adult in full plumage

Larus argentatus immense flock off the river

" mazrim numerous with above.

Botaurus lentiginosus one road to Deakes Island.

Calidris acuminata about 75 in flock on beach.

Ceryle alcyon, 3 or 4 by river. Saw one catch a fish. one
Ardea herodias started two

at the Dike

Sayornis phoebe one

Colaptes s. cafer "

Corvus americanus a few

Agelaius phoeniceus two by river

Spizella breweri twenty or more

Dorecatus grammacus one

Melospiza fasciata "

Passer domesticus few

Dendroica coronata one

Parus atricapillus 1*

Merula migratoria 5

Sialia sialis 4 or 5

Cyanerpes cyaneus 2*

1903

The Elm, Maine & Cambridge Mass

Sept 21

Cloudy, cold, air clear.

We were up by time this morning and breakfasted early. Mr. Gordon drove up to the station and I accompanied us. I heard Crows cawing, Goldfinches singing and Jays screaming. We boarded the train at York minutes of eight and had a quick pleasant run to Boston reaching there at just 10.15 A.M. We reached home shortly after eleven o'clock.

I weighed this morning on two separate scales exactly one hundred and sixty-eight pounds (168 lbs). Ordinary dress.

Eristalis sp. doubtless *tenuis*.

1903

Sept 24 Through Mr. Sam Henshaw I have learned the name of the larvae collected in the cow barn at The Elms Farm, The Elms, Maine on September 18 and 20, 1903. The genus is *Eristalis* and the species doubtless *tenuis*. For absolute specific determination the imago is necessary. The insect is one of the Diptera. The larva is brown, has no legs and the long tail is the breathing apparatus, being hollow and open at the end which is furnished with a tuft of hairs. The larva is hatched in manure and the little one feeds upon it, burying itself in it and leaving the end of the tube open to the air to breathe through. When the larva is ready to pupate, it draws in its tail and the outside of the insect hardens and it becomes a pupa. From this it emerges a Fly as large as a big Honey Bee and somewhat resembling a bee. It is black and yellow and harmless, being seen about *Chrysanthemums* where it feeds on plants like. Although the Fly is commonly seen, the larvae are not generally observed, probably because the eggs are laid in out-of-the-way places. Chickens eat the larva greedily. Probably the larvae were seeking a place to pupate when they were found every morning on the floor in the cow barn. They crawled up from below. The larva is called the Rat-tailed Larva and the Fly, the Common Drone Fly or Syphus Fly (Family Syphidae). There are eight or ten species of *Eristalis* in New England. See Our Insect Friends and Foes, Belle S. Cragin, New York & London, 1899, 286-287.

The Elms, Wells, Maine

1908

- Sept. 15-21 List of birds observed at The Elms, Maine between September 15th and 21. They were very scarce and I could not observe as much as usual:-
- Gavia immer* 20' off beach, one an adult in fine plumage.
- Larus marinus* 17' ^{about 30, mouth} Little River 18' idem 19' idem 20' idem

Cambridge to Andover, Mass.

1903

Oct. 14

Clear, cool, brilliant day after the long storm.
 Since our visit to The Elms, Me. we have been
 in Cambridge. Part of the time I worked in the
 Museum - To-day we came here for a little
 rest. We took the 10.45 A.M. train at the
 North Station and reached Andover by 11.26.
 The Station is in the valley of the Shawsheen
 River. From there we drove up to the town
 up a steep road and then on till we reached
 an elevation of 250ft above the river when
 we found ourselves in front of the spacious
 grounds of Phillips Academy and the famous
 Theological Seminary - We drew up at
 The Phillips Inn where I had previously
 engaged a room. It is a very attractive
 building, the original part being of stone -
 In this part is one room on the second
 floor, up one flight in the south-east cor-
 ner. The base faces nearly south, we
 overlook the Academy grounds and also an
 expanse of field and wood with a small
 lake near by. The Inn consists of the old
 stone part and a large wooden addition. In
 the parlor is posted the following notice:-
 "The "Stone House" built in 1828 was first used as a
 carpenter's shop by the Theological Students, then as
 the residence of Prof. and Mrs. Stowe [Harriet Beecher Stowe]
 from 1853 to 1864.

Called the "Mansion House" from 1887 to September, 1902.
 Renamed "The Phillips Inn" in memory of the
 founders of the Institution upon the Hill!"

1903

Oct. 14

Cambridge to Concord, Mass.

84

I strolled about a little near the house before lunch. There is a fine view to the north and north-west including the city of Lawrence. The small cemetery nearby contains the graves of a number of distinguished men connected with the Academy. The Theological buildings are close by. They consist of three plain old buildings of red brick. They have a corps of fine instructors and about ~~twenty~~ students."

After lunch we walked over to the Academy's football foot-ball field and saw a good game between Phillips Academy the boys and the Tufts College team. They ^{Tufts} ₁₅₋₅ have a fine field. The boys seemed to turn out in large force and there were a good many ladies present. I was surprised at the strong playing of the home team against the big college boys. Andover won by a score of 15 to 5. This is two touch-downs, with no goal kicked, and a very pretty goal from the field, against one touch-down. Good leaders kept the boys cheering various songs all through the game.

We got home in time to rest a little before dinner which we had at 6.30.

We have spent the evening quietly in one room. We have hot air radiators and electric lights.

English Sparrows in small numbers I saw to-day about the place and I also saw a flock of five Crows flying east.

Andover, Mass.

1903

Oct. 15

Clear, cool, calm, an ideal day -

This morning we spent walking about on the hill through the Theological grounds and by the various buildings belonging to the Academy.

I exposed a number of plates. The buildings of Phillips Academy are ranged along the west side of the main road and also to the south of the Theological grounds. The boys room in dormitories and also in private houses. We went into the Archaeological Building and saw a fine Archaeological collection of relics of Indian mounds and the like. Below there we went over to the burial ground behind the Theological Blogs where we found the monument erected to Harriet Beecher Stowe. It is of polished, brownish granite and bears the inscription, "A tribute of loving remembrance erected by her children - 1811 Harriet Beecher Stowe 1896. Her children rise up and call her blessed". In front on the left is a small granite monument inscribed, "Calvin Ellis Stowe. Born April 26, 1802. Died August 22, 1887. The common people heard him gladly - Mark. XII, 37". In front on the right is a small white marble cross, inscribed "TA TTANTA XPIΣΤΟΣ". Henry E. B. Stowe, drowned in the Connecticut River while a member of Dartmouth College, July 9, 1857, aged 19".

After dinner we walked down to the town center through some pretty streets and did a little shopping. Everything seemed neat and attractive. We visited Memorial Hall and

Audover, Mass.

1903

Oct. 15

were well repaid - A large gift was made to the town and this in connection with money raised by the town caused the erection of the red brick building. It takes the place of a soldiers monument. The public library is established. There and there is a large collection of pictures and relics relating to our wars. The building also contains the John Cornell Legacy Art Collection, a series of very fine photographs of famous works. From here we walked home up the main road.

This evening, we had a call from Mrs. Theodore C. Pease, mother of Arthur Stanley Pease, my botanical friend. She was exceedingly pleasant and told us a good deal about her son and also about the Academy. Her husband, when living, was connected with the Theological School and she and her son Academy boys in her house which is on the main road opposite the Theological Library. The house next to hers one of the Seminary buildings (there are some buildings of the Theological School on Academy grounds) was the home of Elizabeth Stuart Phelps. Mrs. Pease invited us to dinner next Sunday when her son will be here. I accompanied her home later.

Birds today:-

Chickadee Heard two or three.

Robin Saw - one

Horn Sparrow. A few -

Andover, Mass.

1903

Oct. 16

Cloudy, cool, calm, with occasional glimpses
of the sun.

M. & I walked down to the railroad station
this morning - M. took the 9.33 train for Boston.
I then walked over the Shawsheen River and
followed the road down stream crossing the
river again and keeping on the main road
to Tyre Village along the stream. The country
is very pretty. I took the electric back to
the top of the hill and walked around the new
ball field and back home. M. arrived at 1.30.

On R.R. we took the electrics to Lawrence -
Trolley to Merrimac River where there is a pretty view
of the falls made by the dam. The
car ran through Essex St. and skirted the
city, stopping on the east side. We
walked about for half an hour and saw
that we were on the edge of the Open coun-
try not far from Methuen. We re-
turned in the same way and rested before
dinner. We have made the acquaintance
of Mr. Thos. Adams of the Kensington
Boston. E. J. Williams' brother married
Mr. Adams' sister. We have had many
very pleasant talks. Birds today in
Blue Jays, 2 or 3 screaming near the river. ^{* in the} House Sparrows. A number in different places.
Tiny " 1/4 river
White-breasted Nuthatch * a number of times by the Inn.
Chickadee. heard once or twice
Bluebird, several times - Saw two,

Andover, Mass.

1903

Oct. 17

Cloudy morning, thunderstorm and heavy rain all the afternoon -

We kept quietly at home to-day, mostly in our room. I felt rather tired and used a good deal of the time. We made a call in the late afternoon on Mrs. Pease and found Arthur Stanley Pease at home. We had a most pleasant time. This evening we sat in the parlor and talked with Mr. & Mrs. Adams for some time.

Birds to-day,

Blue bird h.

Crow h.

Andover, Mass.,

1903

Oct. 18

Cloudy, breakin', with bright sun in sun, clear
very windy and cold, brilliant blue, Sunday.
After breakfast I walked across the campus
to the Reases. Mr. Rease and I took a walk
down Phillips St. where he showed me the old bed
of the Boston & Maine R.R. where the tracks ran
straight to North Andover before Lawrence was.
This is a very beautiful walk with a row of
white pines on either side. This road bed can
be followed a long distance. Then we all went
to church in the chapel opposite the Inn. It
was interesting to see the Academy boys and
hear them sing. Prof. Day, President of the
Theological School officiated. After church
Mr. Rease & I took another walk through the
cemetery and round by Missionary Lane,
through a pretty country. Saw Cypripedium
thyrsoides. We returned to Mr. Rease's and
inspected his grounds. Mr. joined us and we dined
there. After dinner Mr. P. & I went to his room
in the third story where we examined plants.
We all went to sleep again in the afternoon.
Mr. Rease gave us a mentioned volume to be his
husband, who was appointed Professor at the Theol. School
here in 1893, but died two months after his inauguration.
From the Cemetery this A.M. I was shown the Southern
Keartage, the two Pack Monarchs, etc.

Birds to-day:-

Blue Jay one.

Downy Woodpecker one.

Concord, Mass.

1903

Oct. 19

Cloudy morning cold, mercury 44° at 8 o'clock.

Sunny afternoon with clouds, air clear, calm,

This morning we walked over to the Brechin Library of the Seminary and were given very kind attention first by Miss Pease and then by Mr. Wm L. Ropes, the Librarian. They both of them knew of father. The literary treasures are boundless and priceless. We were shown many:- two copies of Eliot's Indian Bible, some of the great Polyglots, reproductions of famous MSS., scrolls of soft leather containing the books of Genesis and Exodus in Hebrew. We saw an immense stone slab brought from Nineveh. It contains the figure of one of the early Kings engraved on it and a history of his reign and dates back between eight and nine hundred centuries before Christ. One room contains objects of Natural History all from the Holy Land, metal altars of unknown antiquity, mounted birds, and mammals etc. There were many portraits of the early founders, donors, &c. We enjoyed it all very much.

From the Library we walked down Phillips St. and repeated the stroll that Mr. Pease & I took yesterday morning through the pines on the old & M. roadbed. Then home to dinner.

This afternoon we took the electric & trolley to Reading taking the car at the corner of Chapel Reading Ave. & Main St. - It was a very pleasant trip throughout. The road runs almost due south through a very pretty street

Andover, Mass.

1908

Oct. 19 of country rather heavily wooded and interspersed

(2) at intervals with houses. The brilliancy of the foliage, especially of the maples, has gone, but the country is all deeply colored with rich russet brown from the oaks and beeches, deep yellow from the poplars, maples and ashes, and beeches, while the low shrubs scattered over the fields yield a variety rich color. The elms are dropping their leaves very fast, the west through North Reading and crossed the Ipswich River, a very small stream at this point. The car goes at a break-neck speed along this cause - We were just a half-an-hour reaching Reading, a distance of nine miles. We stayed in the car and in another half hour were back again.

We called on Mrs. Pease and invited her to drive to-morrow morning. Returning over the campus we went into Bartlet Chapel, designed by Balfinch and completed in 1818 and visited the "Chapel" in it, and also Lecture Room A both on the ground floor. A good deal of history clusters about all these buildings and rooms -

I must not omit one other that we saw in the Library, Copy of a framed copy (autograph signed) of the tune "America". "America" This copy was written by Rev. Smith, the author, in 1895 in his 87th year and just before his death. He composed the tune in Concord in the "America House" in 1832 when he was a student here at the Seminary. Young Woodpecker - one. Flicker - one. House Sparrow - several Chickadee - one.

Audovera, Mass.

1903

Oct 20

Cloudy and sunny, very windy, air balmy.

This morning I took a carriage and driver and took Mrs. Pease and a lady whom she asked, to drive. We had a very pleasant time indeed. First we drove about the town and then went to North Andover, observing many places of interest on the way. The country in North Andover is very rolling and hilly, affording most delightful outlooks. The large pond or lake in the northern part of the town is an important addition to the natural beauties. We drove to the top of Mills Hill and had a very superb view in every direction, including the sea to the east; Danvers Asylum, Mt. Bachusett, Monadnock (not visible to-day) the two Park Monadnocks, &c., &c. We returned a little after twelve.

After dinner I called on Prof. E. Longfellow and enjoyed a conversation with him extremely. Then Mr. & I called on Mr. & Mrs. Edwin Reed and I found Mr. Reed entirely wrapped up in his Bacon vs. Shakespeare work. He has published three different works on the subject and is now getting ready for press the eighth edition of one of them. We called on Mr. & Mrs. John L. Brewster, but they were not in. A call on Mrs. Frederick Palmer resulted in the same way.

We decided this morning to return home to-day and after dinner we took the 7.15 train, reaching Boston at 8.06 and home about 9 -

1903

No. 8

Arlington Heights, Mass.

93

Bright sunny, cool day, sun in the fields.

Mr. Sam Heathcaw & I took the car to Robbins Spring Hotel this morning and walked over the Heights in the fields and roads, through Marsh St and on to Waverley where we took the car back to dinner. We went to see the Pine Grosbeaks that are abundant now but we were unfortunate in not finding a single one, though they have been on the Heights and about Marsh St. for some time. However we had a very pleasant walk and saw a number of birds - Robins were very abundant as well as Fox Sparrows and a large flock of Pine Siskins flew over our head. We listed the following birds: -

Colaptes auratus lateralis two

Corvus americanus heard a few

Passer domesticus abundant by houses & in fields

Trochilus minimus very abundant, flocks of 10, 15 or 20 constantly seen - They were continually flying overhead chipping.

Chrysonotus tristis one -

Sturnus vulgaris, a flock of about thirty flew over singing
Zonotrichia albicollis one, probably more.

Trochilus hypoleucus abundant on the Heights.

Thlaspius c. melodia a few by roadside

Pasterella iliaca, abundant constantly seen, singing some.

Sitta carolinensis, heard one, in Lower Reservation

Parus atricapillus seen a few.

Therula migratoria, extremely abundant, one flock feeding in a field consisted of at least one hundred birds. Everywhere.

Cyanocitta cristata, five to ten.

Cambridge, Mass.

1903

Nov. 22

Cloudy, chilly, a little sun at noon, melting
soon. Mercury at 8 A.M. 24°.

George & I walked round Fresh Pond this morning. The mist over the pond made a very pretty effect as we circled round on the ordinary. A flock of about 410 Herring Gulls by actual count was sitting on the pond, and were busily engaged in preening their feathers and splashing about in the water. A flock of nine Black Ducks sailed over the pond in set wings and after circling round over the Gulls alighted with a splash near them.

Particularly interesting to me were a flock of Tulicier or seven Mud-hens (Tulicier americana) on the west Fresh Pond side of the Pond. They have been there a number of days, I am told. They feed by "tipping up" close in to shore and at one's approach swim out, approaching the shore farther away. Their white bills are very conspicuous a great distance. We watched them for half an hour. With them were three Ducks. I was able to diagnose one of them, for I saw him clearly. Head and neck rufous red, top of head dark, body very light, under parts not seen, culmen & head in straight line. This suits exactly Aythya valisineria. The bird sat low in the water and was a large bird. I know well the shape of the Red-headed A. americana. On our return I looked up there specimen at the Museum and the bird certainly seems to be A. valisineria.

Cambridge, Mass.

Dear Deane,

I pass the enclosed effusions on to you for your edification. I know you always enjoy the wise and witty writings of our friend.

I am looking forward to seeing you at the head of the table on the 25th. I suppose we shall have a regular Cat dinner!

Sincerely
E.L.R.

If all your lady friends who write
You letters should this day unite
And each declare that she was thine
And claim to be your valentine,

I pity you,-
What would you do?

Feb 14

[Notice of Club meeting - By E.L. Rand.]

Come Walter Deane the well beloved
And join us rough & ready men
Although if we were ladies nice
You'd like us better than.

Sept 10th

I am of my Club one, Club to attend a Council
Meeting at E. F. Weston's where we always
take a supper. WD.

I am glad you can attend.

Great William conscientious Deane doth leave,
But greater William will our friend receive.
If play is lost for work it will be sweet
At close of work to have far more to eat.

Edd.

March 17 [1903]

E. L. Rand couldn't come to my dinner

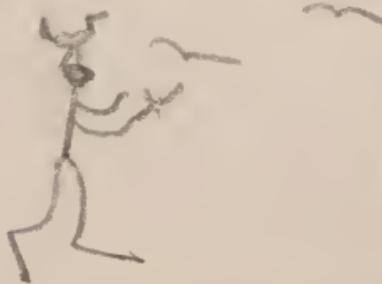

Lo, I must fast while others feast
Because we changed our day.
Oh, think of me, your last and least,
Who sadly stays away.

E. L. R.
