## LEADING HOTELS

New York, N. Y.

### HOTEL EMPIRE

Brooklyn and 434 Street, New York City  
 THE ONLY IN THIS ROOM  
 A Family and Transient Hotel  
 Rooms \$1.50 per day and upwards  
 CANTONMENT, B. & O. G. I.  
 Table d'Hôte Dinner, \$1.00  
 Restaurant open for breakfast, lunch, and supper, and suitable  
 prices. See menu in gallery and lobby.  
 W. JOHNSON, M. M., Prop.

Chicago, Ill.

### GRAND PACIFIC HOTEL

Jackson Boulevard and Clark Street, Chicago.  
 EUROPEAN PLAN  
 Special Facilities for Banquets, Dinners, and After  
 Theatre Parties.  
 Gentlemen's Cafe on main floor. Ladies' and Children's  
 Restaurant and Private Dining-Rooms on second floor.  
 Two hundred guest rooms, three bathing of which have  
 private bath in connection.  
 Rates from \$2 Upwards.

Boston, Mass.

### BERKELEY HOTEL

Berkley and Scituate Streets, Boston, Mass.  
 EUROPEAN and AMERICAN PLANS  
 Masters in every detail.  
 Convenient to Large Stores, Theatres, and all  
 places of interest.  
 NEAR STATE BAY STATION  
 JOHN A. SHERLOCK.

## COMMENT

MISTAKEN and short-sighted are those Republicans who imagine that the interests of their party and of their party's candidate in 1904 will be damaged by the disclosure of frauds in the Washington city post-office, and who, consequently, seem inclined to limit the scope of the investigation, lest equally shocking exposures should be made in the post-offices of New York and Chicago and in many branches of the postal service. It is not the resolute unmasking and punishing of official evil-doers that will injure the Republican Administration, but the growth of a belief that an opposite course is favored in high or influential quarters. If Mr. Roosevelt follows his own upright instincts, the inquiry prosecuted by Fourth Assistant Postmaster-General Bristol will be so wide-reaching and drastic that there will be nothing left for Congress to investigate when it meets in extra session on November 9. We are by no means inclined to hold the President responsible for the cowardly plea put forward by Postmaster-General Payne's comment on Mr. Bristol's report,—a report, by the way, which proves ex-cæteris Tullio's accusations to have been well founded. Mr. Payne intimates that the purpose of those who impute corruption to his department is to assail the character of President McKinley and of ex-Postmaster-General Smith. He will take no part in such an assault, he says, and for that reason no attempt will be made to expose and punish improper acts committed under the previous Administration.

Can it be that Mr. Payne does not perceive that if, on such a ground, he suffers wrong-doers to remain in office, he makes himself an accessory after the fact? The plea is both a cowardly and a meddlesome one. It is cowardly because it seeks to shield persons guilty of malfeasance in office behind the honored name of a dead man. It is meddlesome because many of the offenses charged have been committed since Mr. Roosevelt became President, and it is obviously immaterial whether the guilty persons were appointed by the actual Chief Magistrate, or by Mr. McKinley, or by Mr. Cleveland. Neither the fact that former Assistant Postmaster-General Heath is now out of office nor the fact that he is at present secretary of the Republican National Committee should save him from pun-

ishment if complicity in fraud can be brought home to him. We do not believe that Mr. Roosevelt will spare Heath because he is a legacy from a former Administration, or that he will permit a man who is the object of so much suspicion to remain secretary of the Republican National Committee. Mr. Roosevelt might also realize that more confidence would be felt in the sincerity of his determination to purge the Post-office Department if he declined any longer to allow Postmaster-General Payne to exercise any control or supervision over the pending investigation. Honest men of all parties would prefer to see Mr. Payne relieved from a duty which he has shown himself reluctant to perform, and to see Mr. Roosevelt himself assume the direction of the inquiry.

Since the last number of this journal was published, two new candidates for the Republican nomination for the Vice-Presidency have been put forward by their friends. They are both residents of States west of the Mississippi, one being Ulysses S. Grant, of California, and the other, Fourth Assistant Postmaster-General Bristol, of Kansas. Grant has in his favor his father's name, which may still be conjured with. Mr. Bristol, who was born in Kentucky, but who has spent most of his adult life in Kansas, seems likely to repay the experience of his distinguished kinsman, and to leave behind him a name memorable for honesty and high-mindedness in official life. There is, however, a fatal objection to both of these selections, namely, that, if the election took place next month, Mr. Roosevelt would not need Grant's help to carry California, nor Bristol's help to carry Kansas. Nor is it likely that Bristol's name would avail to regain for the Republicans Kentucky, where, it will be remembered, McKinley in 1880 secured twelve of the thirteen electoral votes by a plurality of only 281, while in 1900 Bryan carried the State by a plurality of nearly eight thousand.

If Mr. Roosevelt is politically wise, he will not desire to see the Republican nominee for the Vice-Presidency chosen from a State which he has no reasonable chance of carrying, nor from a State which he is already sure of. He now seems sure of all the Northwestern States, with the exception of Colorado and Montana, and possibly of Idaho. The one Northern State west of the Alleghenies which the Democrats will spare no effort to recover is Indiana, and that, consequently, is the State to which Mr. Roosevelt's political sagacity will naturally turn when in quest of a nominee for the Vice-Presidency. Two Indiana names have been mentioned, those of Senator Fairbanks and Senator Beveridge. The former, as we have said before, is the more eligible candidate; he would add weight to the Republican ticket. It has been alleged that Senator Fairbanks would refuse a nomination for the sub-ultimate office, but we do not believe the assertion to be well founded. No American statesman, no matter how experienced and eminent, can in these days afford to look down on the Vice-Presidency. Nor can we being ourselves to believe that a national convention will ever again put forward for that office a man not generally regarded as of full Presidential calibre. So much can undoubtedly be said of Mr. Fairbanks, but not of Mr. Beveridge. Under all the circumstances, we deem it probable that the nomination will be offered to the former Senator, and all patriotic citizens, no matter what may be their party predilections, must hope that he will accept it. It is of vital moment in the country that the tremendous possibilities of the Vice-Presidential office should nevermore be overlooked.

On June 17, Mr. George M. Fuller, Washington correspondent of the *Gibsonian News*, had an interview with ex-President Cleveland at Princeton, and forthwith published a

report thereof. The report loses much of the interest and value that would otherwise attach to it, because Mr. Cleveland has since denounced it as untruthful and inaccurate, though he does not specify in what particulars the report is incorrect. One or two of the statements, however, ascribed to Mr. Cleveland have the ring of genuineness. For instance, he is represented as saying that no political leader of any prominence has as yet endeavored to promote any movement to nominate the ex-President in any State, and that, in the absence of any proof of such a movement, it is unreasonable to expect him to occupy the ridiculous attitude of refusing to accept something which he has no reason to suppose will be offered. We have no doubt, either, that Mr. Cleveland declared in so many words that he neither desires nor expects the Democratic nomination next year. We believe him to be entirely sincere in this declaration, but the fact does not affect his eligibility an iota. If the Democratic national convention should nominate Mr. Cleveland for the Presidency, it would not be because the delegates imagined him to want the office, but because they believed the party to need his help in a grave exigency, and because they held that, having twice received the highest honor in the party's gift, he would have no moral right to withhold his assistance. They would be entirely justified in taking such a view of the matter. Mr. Cleveland has no moral right to refuse to help his party, if the party deems his help to be indispensable.

With regard to the assertion that no conspicuous Democratic politician controlling the party machinery in any State has announced himself in favor of nominating the ex-President, this may be true, but it lacks significance. No veteran politician would be likely to commit himself until he felt the ground-swell of an irresistible popular demand. It is as yet too early for any such ground-swell to make itself felt, even were it believed to be impending, for only during the last few weeks has Mr. Cleveland's eligibility been the subject of active discussion in the Democratic press. Long before next spring we shall learn how the suggestion is regarded by the masses of the people, and to what extent, if at all, their desire to see a thoroughly trusted man in the White House is offset by an unwillingness to give any one a third term of the Presidency. We ourselves hold that the objection to a third term is reasonable and logical only when the three terms would be consecutive. They would have been consecutive had Washington accepted a nomination in 1795, or Jefferson in 1808. There is a good deal of doubt, moreover, whether the anti-third-term tradition will stand searching investigation. One of the reasons, if not the main reason, for Washington's refusal to accept a renomination in 1795 was the knowledge that Virginia was in the hands of his political opponents, the Jeffersonian Republicans, and that, if he ran, he might be subjected to the humiliation of failing to carry his native State. As for Jefferson in 1808, he was virtually bankrupt, and could not have afforded to spend a third term in the White House. Besides, he knew that his political principles were assailed of ascendancy in Washington, and that, if he lived, his successors would seek and accept from him advice.

It is already evident that Mr. Murphy, the leader of Tammany Hall, believes himself able to carry the Greater New York this year for his candidate for the Mayoralty, for he is coming the Board of Aldermen, which he now controls, to withhold appropriations for public works. Owing to the increased valuation of real estate, the borrowing capacity of New York city has been materially augmented, and Mr. Murphy desires to postpone the large additional expenditures thus rendered practicable until his friends are in office. The principal ground for the confidence expressed by him is the fact that last year Mr. Coler, when running for the Governorship, carried the Greater New York by a plurality of about 120,000. Now it should be easy to show, by a comparison of statistics, that in 1862 a great many Gold Democrats, and not a few Republicans also, who voted for McKinley in 1860, refused to vote for Odell two years later. Let us glance at the returns in the two years named from the counties of New York, Kings, Queens, and Richmond, which are included in New York city. In 1860, the vote of New York County was for Bryan, 181,799; for McKinley, 153,933. Last year, in New York County, Coler received 192,735 and Odell only 106,131 votes. In Kings County, three years ago, the vote

was, for Bryan, 106,221, and for McKinley, 108,805. Last year, on the other hand, in Kings County, Coler surpassed Bryan, receiving 110,634, while Odell fell far short of McKinley's strength, securing only 84,120.

So it was in Queens, where Coler got 10,532 votes, though Bryan had obtained only 14,740, while Odell could muster but 6372 votes instead of the 12,341 cast for McKinley. In Richmond, Coler got 7251 votes, instead of the 6131 given to Bryan; and Odell, only 4874, out of the 6047 votes which Mr. McKinley polled. Now there seems to be no doubt that Mr. Low, McKinley's ally, has no reason to doubt that Mr. Low, McKinley's ally, should be renominated by the Fusionists for the Mayoralty, since not the Republican voters that went to Mr. McKinley three years ago, and also most of the non-Tammany Democratic voters that went to Mr. Coler in 1862. Kings County has been repeatedly carried by Mr. Low, when recent experience seemed to have proved it firmly Democratic. There is, indeed, no reason why Mr. Low should not be able to beat the Tammany Hall candidate for the Mayoralty this year as decisively as he beat Mr. Shepard in 1901, provided he can get nearly as large a proportion of the German vote as he did then. Some time ago, it looked as if he had lost favor with the German voters, and the editor of the *Staat-Zeitung* still seems inclined to oppose his renomination. There are now fewer signs, however, of an organized German movement against Mr. Low than there was at the beginning of the twelvemonth, and we opine that Mr. Bidder himself will be found ultimately in the Low camp. We can hardly conceive of his accepting any part of the responsibility for the reinstatement of Tammany Hall in power. In 1897 many independent Democrats voted for Mr. Van Wyck in the belief that Tammany Hall, if restored to office, would be on its good behavior. They no longer cherish any such illusion.

We regret that our State Department did not more promptly give public expression to its abhorrence of the crime against civilization perpetrated at Belgrade, by directing Mr. Jackson, our minister to Greece, Rumania, and Servia, to refrain from taking any step that might be construed as a recognition of the newly elected sovereign of the last-named country, until the latter shall have purged himself of complicity in the atrocities. It has done the next best thing, however, by following England's lead. On Friday, June 19, Lord Lansdowne, the Secretary of State for Foreign Affairs, announced in the House of Lords that the British minister at Belgrade had been ordered to withdraw from that city, the British government having no intention of maintaining ordinary relations with the persons concerned in the massacre. It appears that for the moment France, Germany, and Italy are maintaining a like attitude, but we apprehend that the former two powers will ultimately feel constrained by their respective alliances to follow the example of Russia and Austria; while the King of Italy, who is a brother-in-law of the late wife of the now Servian ruler, may ere long be persuaded to pursue a similar course. All the more firmly and sternly should Great Britain and the United States adhere to their present position, until King Karageorgevitch shall have made an earnest effort to punish the assassins who turned his palace into a shambles. This is probably equivalent to saying that Great Britain and the United States ought to remain unrepresented at Belgrade for an indefinite period.

We do not expect the assassins of the late King and Queen to be punished, because public opinion in Servia does not demand their punishment, and because the army, which regards them as its representatives, would not permit them to suffer for deeds which it admires. Indeed, according to the latest news from Belgrade, the principal agents in the crime have been promoted. That Servia has scarcely emerged from barbarism is evident from the close approach to unanimity with which the massacre has been approved, even the Metropolitan, or head of the national church, having referred to it in eulogistic terms. There is no doubt that King Karageorgevitch is confronted by a dilemma, on one or the other horn of which he will be impaled. Unless he makes a determined effort to subject the authors of the massacre to the penalties of the law, he will justly be regarded as an accessory after the fact, even if he is not suspected of instigating the murders. If, on the other hand, he insists on the arrest and trial of the assassins, he can scarcely hope to escape the fate of his predecessor.

It pushes an American citizen to understand how an educated and reasonable man can bring himself to accept a throne under such circumstances. It is well known that both the Sultan and the Czar are haunted by the dread of assassination, yet, of all the heads that wear a crown, that of Peter Karageorgievitch must be the most unmy.

Count Cassini, the Russian ambassador at Washington, is reported to have expressed much gratification that the cordial relations long maintained between Russia and the United States have not been disturbed by an official expression of the indignation with which our citizens regard the massacre of the Jews in Kishinef. We are by no means certain that his gratification is not premature. The next few months, and possibly the next few weeks, will show whether the Kishinef atrocity, and the fear of its repetition in other Russian cities, have not caused a deplorable increase in the outflow of undesirable emigrants to this country. In the communication which Count Cassini was instructed to read to our Secretary of State, the St. Petersburg Foreign Office intimated that it should not complain of any precautions we might deem it expedient to take against the admission of Jewish fugitives from southwestern Russia. Our Federal Executive has no power to take any other precautions than those which have been sanctioned by Congress, and these notoriously have proved inadequate to prevent the inflow of uneducated and destitute Russian Jews, who constitute a vast majority of the 600,000 or 700,000 of their coreligionists believed by well-informed statisticians to exist in the Greater New York. No doubt those immigrants are industrious and thrifty, and there is ground for the hope that most of their descendants will become useful and worthy citizens. Meanwhile, however, the process of assimilation will be an arduous one, and the New York community has a right to complain of the unparalleled magnitude of the task imposed upon it.

Russia has no more moral right than has Rumania to drive Jews by persecution into the United States. If we had a reasonable basis of remonstrance in the one case, we certainly have in the other. Should the record of the next few months demonstrate that the Kishinef atrocities have had the same regrettable effect that was produced by the attack of a dozen years ago confining Russian Hebrews to the so-called Jewish Pale, it seems to us that Mr. Hay would be bound to conform to the precedent set by Mr. Blaine, who argued in 1891 that the Czar ought not to make of the United States a dumping-ground for a class of his subjects by barring them out of large sections of his own dominions. That courteous but earnest protest may have had no practical effect on Russian legislation, but it reflected credit on the dignity and vigilance of our diplomacy, and it in no wise disturbed the friendly relations of St. Petersburg and Washington. Moreover, it is pertinent to ask whether in the form of morals the massacre of poor Jews at Kishinef is less reprehensible than the massacre of moral personages at Belgrade. From the viewpoint of American citizens, the former enormity calls for rebuke no less loudly than the latter,—except herein, that the Russian government has at least made a pretence of punishing the criminals, whereas there is as yet very little prospect of any such tribute being paid to humanity and decency in Serbia.

The outcome of the German general elections was as might have been expected. To sum it up in a few words: enormous gains by the Socialists, and losses by both the Agrarians and the Liberals. At the preceding general elections, in 1898, the followers of Marx and Lassalle cast 2,120,000 votes, sending forty-eight delegates into the Reichstag. At by-elections in the interval they secured eight additional seats. They have demonstrated a voting strength of close on three millions at this present election. This means that about 33 per cent. of all the electors in the empire pronounced in favor of Socialist candidates. As there are 397 seats in the Reichstag, the Socialists would seem to be entitled to about 130 seats in that body. This is, however, not the case, as the election districts in Germany are of very unequal size in the matter of population, no redistricting having taken place since the empire was founded in 1871, and the Socialist strength being chiefly in the populous cities, which have grown enormously since, while there has been a positive decline in population in the

rural districts. Therefore it is that the Socialist delegation in the coming Reichstag will not be at all commensurate in size with the vote cast by the adherents of that party. However, a material increase there is, giving the Socialists a solid phalanx large enough to seriously embarrass the government on a number of measures. The gain in the Socialist vote must be attributed to two main causes. The new tariff policy of the government and of the controlling majority in the Reichstag is one, and the widespread dissatisfaction of the broad masses with the Kaiser's and his government's reactionary and illiberal political tactics is the other. The most effective slogan of the Socialists during the campaign was "bread money," a phrase coined to designate the ruling power's recent increase in the duties on breadstuffs, meat, and nearly all other agricultural products.

The most conspicuous leaders on the Agrarian side, Hahn, Bismarck, and Lucke, were defeated outright, a clear indication that their extreme doctrines, favoring a purely prohibitive tariff on agricultural products, have not found approval even in those rural districts where they run. While the Agrarian (or Conservative) party has issued from the elections not much weaker numerically than it has been during the past five years, their "ultra" wing, the Husbandry Federation, has been snowed under, and their losses have been large enough to teach them the needed lesson of moderation in their demands. This fact is of special significance for this country, for it has been the Agrarian party and particularly their most noted spokesman, the defeated gentleman aforesaid, who, during the quinquennial period of the defunct Reichstag, intruded and wheedled, urged and threatened by turns, driving the imperial Chancellor, Count Bilow, finally into that tariff policy upon which the country has now set its seal of disapproval—that tariff policy which was largely aimed at the United States, and which, if it had been persisted in, would have ended by plunging Germany into a tariff war with some of her best customers. The German government has no longer its hand tied by the erroneous fear of offending a supposed majority of her ruling classes, and can lay its plans for the near future so as to remain at peace and in economic good-fellowship with neighbors. For the further dwindling away of the four factions composing together the Liberal element in the empire, the growing tendency on the part of the electors to do away with the "middle parties," those standing for the old German ideals in political and economic life, is responsible. The process of entirely eliminating this element from practical politics will not go on at an accelerated pace. The great mass of the voters, leaving aside that abnormal exuberance on the German body politic, the Centre (or Ultramontane) party, have ranged themselves on two sides: the Conservative (or Agrarian) and the Socialist. The Centre has remained a "tower of strength," as its chief leader called it at a recent debate. Though its adherents number barely half those of the Socialist creed, the Centre's constituency is far more localized and compact, and hence its delegation will again exceed 100. It will necessarily be the government's parliamentary strategy to secure, for the great bulk of legislative measures it desires to see passed, the support of the Centre and of the Conservative party. These two combined, with small fragments from the remaining dozen or so factions, will give the government its majority, as it did in the last Reichstag. Practically, therefore, the situation has not much changed in this respect.

The death of Cardinal Vaughan removes the last of a great historical group of English Catholics, three of whom received the cardinalate, the highest reward but one in the Catholic Church. If Cardinal Newman was the man of letters of the trio, giving to Christendom a hymn which is by far the best piece of verse in the hymnals, Cardinal Manning was the diplomatist and statesman, and Cardinal Vaughan was the builder and reconciler. Born of one of the old aristocratic families of England, an ancestor of which, Count Herbert de Vermandois, came over with William the Conqueror, Cardinal Vaughan represented that older tradition in England which never accepted the doctrines and changes of the Reformation. His whole family shared the same devotional fervor which made him so eminent a prince of the Church. Of the fourteen children of his father, Colonel Vaughan of Courtfield, six brothers and six sisters embraced the religious

life. Cardinal Vaughan's brother, Roger Bede Vaughan, became Archbishop of Sydney; another brother, Father Jerome Vaughan, founded several Benedictine communities; Father Bernard Vaughan became a celebrated preacher in the Society of Jesus; Father Kenneth Vaughan was a missionary in South America; Father John Vaughan was attached to the House of Expiation, in Chelsea. Cardinal Vaughan himself, who, even in his seventieth year, was described as the handsomest man in England, will perhaps be best remembered as the builder of the Catholic cathedral at Westminster. He will be remembered also as a reconciler, who recognized all denominations of the Reformed churches as his fellow Christians, and worked hard to secure religious teaching in all English schools, whatever division of the church they belonged to.

Pending the decision of the Alaskan Boundary Commission, the capitalists of this country have decided to go ahead and build the first Alaskan railway. The new hyperborean line, with the commonplace title of the Alaskan Central, will run something over four hundred miles, from the southern coast at Resurrection Bay northward through the Cook Inlet country and up the Snettina Valley to the Tanana River, a hundred and fifty miles above its junction with the Yukon. The harbor at Resurrection Bay is, like Port Arthur and Dalay, an ice-free port, open all the year round, and the route of the railroad, which was surveyed during the summer months of last year, is through a heavily wooded valley and a country rich in coal, gold, and copper. As far as gold goes, the projectors of the new line declare that it will be the means of increasing the gold yield of Alaska fivefold, from forty millions a year, as at present, to something like two hundred millions of gold annually. The railroad will reach the new Tanana gold-fields, which will, in time, become as famous as the Klondike. The railroad will save three weeks of the journey from the Pacific ports of the United States to the interior of Alaska, and there is no sufficient reason why a considerable body of emigration should not find its way to southern and central Alaska, which has a climate not much severer than that of Scotland, and where, according to the view of the Agricultural Department, based on careful experiment, practically anything can be grown that will grow in our Northern States. It is probable that apples may soon become as important an industry in Alaska as they are in Vermont, and if it is found that fax and wheat do as well as is expected, the regions newly opened up have abundant sources of prosperity, even leaving the precious metals out of the account. The company which will build the Alaskan Central Railroad is formed of Ohio, Michigan, and Illinois capitalists, and matters have gone so far that the orders for the rails and rolling-stock have already been placed, and work will be begun on the new line almost immediately.

The great and constantly increasing volume of Jewish immigration to New York city is one of the grounds on which the Board of Education has modified the provisions for instruction in German in the public schools of our commercial metropolis. The modification of the curriculum, which has provoked remonstrance on the part of some German newspapers, is, after all, but slight, and there are many patriotic citizens who think that it should be carried farther. Hitherto pupils in the elementary schools of New York city were permitted to study German as an extra for two hours a week for two and a half years. Under the new rule the study is optional in all the schools for one year, for five hours a week, as an alternative to French, Latin, or stenography. We, ourselves, German, French, or any other foreign language. The capital function of our primary schools is to equip children to become American citizens. All other functions are secondary, and it is doubtful if, by comparison, they deserve any consideration. The whole of the time at the disposal of such institutions is needed for the fulfillment of their prime purpose. That German-American newspapers should take a different view of the existence if immigration from Germany should come to an end, and the children or grandchildren of German immigrants should cease to speak German. Obviously, they are actuated by pecuniary self-interest when they demand that a considerable place shall be allotted to German in the curriculum of

elementary schools. Hitherto they have been able to secure some attention to their demands through their possession of considerable political influence. The influence is due to the fact that the residents in Greater New York who are foreign-born, or the children of foreign-born parents, rather more than 786,000 were, according to the last census, of German stock.

The Board of Education is quite right, however, in declining to be swayed by such influence, lest a precedent established in the case of German should have to be followed in the case of other foreign languages. As we have pointed out in another paragraph, the number of Jews in New York city is now computed at from 100,000 to 200,000, and it is increasing rapidly. Some of these, no doubt, speak German, but the proportion of them who speak only Yiddish is already large, and continually augmented. One or two decades hence, if the persecution of Jews in Russia shall go on, the demand for the teaching of Yiddish in New York elementary schools will be every whit as reasonable as is that now made on behalf of German. Then, again, the number of Italians in the Greater New York is even now estimated at more than 300,000, and the immigration from Italy exceeds that from any other country. If the claim made for German to-day be reexamined, the claim that would be made for Italian to-morrow could not be rejected with any show of consistency. Finally, it might be plausibly contended, in view of the fact that Spanish is spoken by a large fraction of the inhabitants of our new colonial possessions, that if any non-English tongue is to be taught in our elementary schools, it should be Spanish. There would be, in truth, no end to the regrettable consequences that would follow departure from the rule that only English should be taught in the schools, whose cardinal aim is to produce American citizens.

John Paul Boscok, who died in Wayne, Pennsylvania, on the seventeenth of last month, in a cottage in which, he wrote a friend three months ago, he had expected "to spend some happy days," was a man of singularly fine taste and of unusual attainments. Born and educated in the capital of the Old Dominion, where his family had long been prominent in political and social circles, he brought with him to his work in the North the best elements of Southern culture. For many years he labored successfully in journalism, having been connected editorially with several of the leading papers of Philadelphia and New York. His talents were of the most versatile nature, his contributions to the periodicals, which were numerous, comprising stories, essays, and articles on a great variety of subjects, and poetry of an excellent quality. His writings even on commonplace topics bore the marks of literary purpose and effort. All through his career, he was deeply influenced by a love for the classics, and there were not many men in the country who outranked him as a Horatian scholar. He has left behind him one of the largest collections in the world of editions of his favorite Latin poet, which he gathered from all quarters. Personally, he was of the most lovable character, and possessed of a happy faculty of humor which enabled him to make light even of the dire pain and distress of the long and severe illness which brought his bright and useful life prematurely to an end.

There is a tale that Fair-President Francis, of St. Louis, purchased a court-dress suit in which to appear before King Edward in London, and did appear therein; but fearing to bring home the monarchical vestments with him to Missouri, left them hanging in his closet in Cluridge's Hotel in London. But he could not help telling about the abandoned clothes, and the St. Louis *Post-Dispatch* gathered up the tale and printed a page of it with illustrations in a Sunday edition. Thereby it came to the knowledge of the London *Illustrated News*, which twits Mr. Francis on his timidity, and holds up to him the example of M. Rostand wearing a green uniform, cocked hat, and small sword in his initiation into the French Academy, and of Victor Hugo, that impassioned republican, who wore a like dress on a like occasion without asking himself whether it was consistent with republican simplicity. But, after all, France is not Missouri. It was not his own feelings that Mr. Francis regarded when he left his court clothes behind, but those of his countrymen. If he had brought the clothes to St. Louis, could even he have kept them out of the list of exhibits at the great fair, and once they were

on exhibition would the necessary explanations have left him any time for other duties? For a man facing great labors his course in leaving the clothes behind seems justified as a measure of reasonable prudence.

Writing in the *Creatory* about "Unavailing Wealth," Mr. Eliot Gregory holds up as a horrible example a St. Louis young man who inherited \$50,000 a year. In college he had shown symptoms of more than usual intelligence. When he got out of college and came into his fortune, what did he do? Mr. Gregory says he got a job in a trust company at \$2000 a year (which seems big pay for a beginner), and applied himself to learn the science of money-making. This, as Mr. Gregory sees it, was a deplorable turn, due to the youth's being raised in a dollar-worshipping atmosphere. Under better influences he "would have developed into a desirable member of society, and served his country to some good purpose either in diplomatic posts abroad or by helping to purify administration at home," whereas he is "grinding away the priceless spring-time of life in quarters and under conditions that he would hesitate to impose on one of his grooms."

This young man's case may really be a sad one, and he may be merely learning to make money instead of doing something more desirable, but the state of facts which Mr. Gregory presents does not necessarily compel that conclusion. His problem, apparently, was to qualify himself to do something that was worth doing. What amounts to the same thing, he had to become expert in some form of usefulness. If there is any way of doing that without devoting a large slice of the "priceless spring-time of life" to some form of drudgery, Mr. Gregory will confer a valuable favor on many aspiring youths, who have just been graduated from various colleges, by divulging it. Every year, nowadays, a good many American young men step out of college into the possession of ample incomes. What they are to do with themselves is a very interesting question. They may travel, they may devote themselves to sport, they may see life and enjoy it with all the zest of youth, they may get married, and even get unmarried again. We see our rich young men trying all these expedients with more or less success. But the more earnest of them are not satisfied unless they think that they are qualifying themselves to be in due time of some personal account in the world of achievement and of effort. They know that they have got to learn something thoroughly if they are ever to amount to anything, and they cast about to see what it shall be.

Now it doesn't vitally matter what it is, so long as it is something. It is not a necessary assumption that Mr. Gregory's rich young man of St. Louis who went into the trust company is primarily bent on making more money. It is a fair assumption that what he is after is to take an active part in the life that is going on about him, and to be a man among men. What better can he do to begin with than learn banking? He is a capitalist already, and the business of a trust company suits his condition in life. Does he want to be a diplomat? An intimate knowledge of finance and American business is thought to come nothing amiss to an ambassador. Would he be a reformer of domestic administration? It was a business man who wrested Minneapolis from the thieves who controlled it, a laborious lawyer who prosecuted the civic criminals in St. Louis. The men who do the work in our American world are the working men—the professional workers. They are the men on the inside of things. To be of them, to be in touch with them, is worth while for any aspiring youth, and the way to do it is to work at something long enough, at least, to learn the rules of the game. We have in mind at this moment a man born to a large inheritance, who was educated as Mr. Gregory would have had him, to be a diplomatist. He never got a start in diplomacy, but he learned subsequently to be a man of business, a banker, and a capitalist, and to find in those callings money, satisfaction, and opportunities of public and private usefulness, which he has abundantly improved. Making more money is only an incident of "business" as a rich young man should view it. The main attraction of it for him should be that it will teach him to know the world as it is, and qualify him to act a manly part in it.

The most audacious of all the many huculaurate disclosures of June 21, which the newspapers have reported, was

that of President Buckingham of the University of Vermont. He actually praised the engineers of our great material machine; our men who make the wheels go round—captains of industry, great manufacturers, mechanics, and financiers. A sentiment that more or less prevalent holds that these chiefs find the cash rewards of their leadership so ample that there is no need to add prize to their substantial gains. But Dr. Buckingham did praise them, as men who "by a process which Socialism calls 'exploiting,' and of which a fairer name is management of organization, create industry, thrift, comfort, and luxuries in which the whole community shares." He said they were among the finest products of our Christian civilization, and he thought that both the press and the pulpit were overmuch inclined to run them down. This almost amounts to praising success, but it is the truth that a large proportion of even commercial and fiscal success is praiseworthy. The other day a visitor to a thriving New York State city asked two resident friends: "Who are the big men in this town now? Who takes the place in the community that such men as Judge Green and Governor Brown used to fill?" The two residents discussed the question. Finally they said, "Our leading men are John Gray and Tom Sullivan." Gray was an inventor who had started an industry which had grown to world-wide fame and enormous proportions. Sullivan was a contractor, who had come to be a very able and successful organizer of manufacturing enterprises. They were men of an entirely different sort from the Judge and the Governor, but they were the men who were doing the most to build up the town's industries and promote its prosperity, the men most talked about and regarded as of most importance to the town. These two the two arbiters—a lawyer and a capitalist—felt constrained to name as the big men of the place; as being the men whose work had been the most conspicuous and beneficial.

In spite of all the talk of the coming extinction of the American race, there is interest enough in babies in this country to win a hearing for the London *Lancet* when it protests against a prevailing persuasion that the fattest babies are the best. Judges at British baby shows, the *Lancet* says, don't know fine babies when they see them. They can weigh a baby, and that is about all, for the fattest baby gets the prize, irrespective of quality. In the *Lancet's* opinion Baskard, and other great masters, promoted a mistaken idea of physical perfection in a baby by perpetuating "hypertrophic pathological types" as pleasing and admirable. The baby-show judges incline to the same error, and award prizes to carbohydrate, or sugar-fed, infants that are "cold, gelatinous and flabby, with none of the elasticity and tone characteristic of a vigorous, healthy, breast-fed baby." American authorities support the *Lancet* in this position, averring, as quoted in the *Sun*, that there are patent baby foods which fatten American babies to the detriment of their health, and that there are plenty of fat babies in a bad way in the hospitals. Parents with fat babies that seem to be doing well are not advised to dispose of them, but parents are cautioned that all is not fit food that fattens, and that fat babies that are otherwise ill-disposed are not in good health. One would think our practice of fattening infant industries and pointing to them with pride as enormous for their age had had misleading effects on American parents, if it were not that the English are in just as bad a case.

Everybody knew, or felt as if he knew, Major Pond. For nearly twenty years he had been associated in the American mind with native and foreign celebrities, until by constant contact with famous men he had become a celebrity himself. Fame is thrust upon some men, and it rubs off on to others. It rubbed off on to Major Pond from Beecher, Mark Twain, Bill Nye, Stanley, Sir Edwin Arnold, and a long list of eminent and well-advertised lecturers. But a fair proportion of his fame the Major won by his own efforts, for he was the world's best man at his business. No one managed a lecture more successfully than he did. His military title he came honestly by, by service in the civil war. He was born in New York State in 1818, was an editor in Wisconsin at twenty-two, then a editor, then a man of business until 1874, when he bought a lecture bureau and began to manage platform speakers. In that employment he found his true vocation, and he stuck to it and prospered in it, until his death on June 21.

## Three National Anniversaries

During the last fortnight we have witnessed the commemoration of the one hundred and twenty-eighth anniversary of the battle of Bunker Hill, and the one hundred and twenty-fifth anniversary of the evacuation of Philadelphia by the British forces, while on July 1, 2, and 3 which, as it happens, fall on the same days of the week as they did forty years ago, will be commemorated with peculiarly impressive ceremonies the decisive battle of Gettysburg. There are few events in American history that are more worthy to be held in honor than those that we have named. It may be, indeed, as has been alleged, that the battle of Bunker Hill was of little, rather than of national, significance, and that, in any event, its importance has been heavily exaggerated. We cannot concur in that opinion. When the Revolution began, it was taken for granted in Great Britain that raw colonial levies would be unwilling, or unable, to face British regular troops. The assumption was believed to be well founded by most of the American loyalists, and not a few of the patriots were inclined to agree with them. That George Washington himself had some misgivings on this score is evident from the anxious and unremitting attention which, on his arrival at Cambridge, he gave to the disciplining and drilling of the volunteers under his command. It was true that Colonials had taken Louisbourg, and had borne a conspicuous part in the capture of Havana, but on the former occasion, they had been assisted by a British fleet, and, on the latter, had co-operated with British regiments. It was true, also, that already on May 9, 1775, Ethan Allen, at the head of a handful of Green Mountain Boys, had surprised Fort Ticonderoga, but that had been a bloodless victory. It is true, moreover, that the so-called battle of Bunker Hill, which really was fought on Breed's Hill, was ostensibly a reverse for the patriot cause, since the strategic position occupied had to be abandoned to the British. That the Americans, nevertheless, achieved a moral victory which had a tremendous effect upon their national fortunes is undeniable. The number of the killed and wounded in the British army in this action was at least 1,054, including 83 commissioned officers. For nearly half an hour the British had encountered a continued shot of fire from the Provincials, and the action was hot for double that period. The steadiness of the Colonials astonished old British soldiers, who confessed in bewilderment that they had never seen the like. An American has pointed out, the battle of Quebec, which was half a continent far England, did not cost the lives of so many of her officers as did the battle of Bunker Hill, which gained nothing but a place of embarrassment. The events of the day convinced Washington that the liberties of America were safe, and Franklin wrote to his English friends: "The Americans will fight; England has lost her colonies forever. A like profound impression was produced on the British commander, General Gage. He went to Land's End, Dartmouth in England: "The success, which was very necessary in our present position, cost no dear. The number of killed and wounded is greater than our forces can afford. The trials we have had show that the rebels are not the despicable rabble too many have supposed them to be." He added that, "The conquest of this country will not be easy. In all their wars against the French the Provincials never showed so much conduct, attention, and perseverance as they do now. I think it my duty to let Your Lordship know the true situation of affairs." There is no doubt that the gallantry and fortitude evinced by the Provincials at Bunker Hill started the wave of admiration and sympathy by which the French people was to be swept into an alliance with the thirteen colonies.

The evacuation of Philadelphia on June 18, 1778, by the British forces under Sir Henry Clinton marks the date when British generals and statesmen recognized, though they would not yet acknowledge, that a triumph of the colonies was impossible. From their point of view, Burgoyne's surrender in the preceding October had been much more than counterbalanced by the two defeats which Washington had suffered at the hands of Sir William Howe, and by the occupation of Philadelphia, which, at that time, was by far the most populous and opulent of American cities. Could the British have kept Philadelphia, it is probable that the colonies would eventually have succumbed, owing to the exhaustion of their resources. They would have kept it in spite of the news that France had formed an alliance with the Americans, and was about to despatch a fleet and army to their assistance, but for the memorable fact that Washington had managed to keep his forces together amid the dreadful privations of the winter at Valley Forge, and by the month of June had brought them to such a pitch of efficiency that Clinton had no wish to meet them in the field. From what took place a few days later at the battle of Monmouth, it is plain that Clinton was well advised in evacuating Philadelphia, for, had he waited till Washington had been reinforced by a few French regiments, and until a French fleet had gained control of the Delaware, he could scarcely have avoided the fate which, some three years afterward, was to overtake Cornwallis. New York the British could hold, and did hold, until after peace was declared, but, from the moment that their grasp on Philadelphia

had to be relaxed, it was manifest to suspicious onlookers that their cause was lost. Not only Pennsylvanians, therefore, but all Americans, do well to recall with exultation the departure of Sir Henry Clinton from Philadelphia.

The turning point in the civil war should indisputably be identified with the early days of July, 1863, when the capture of Vicksburg and the defeat of Lee at Gettysburg came together. As it turned out, the war being protracted almost two years longer, the capture of Vicksburg was of great importance, as insuring to the Union forces the command of the outcome of the struggle had Lee triumphed at Gettysburg. It will be remembered that the Confederate advance had almost reached Harrisburg, and had thrown the cities of Washington, Baltimore, and Philadelphia into great alarm. The alarm would have proved well grounded had Meade's army met with defeat, for it is now generally admitted that in that event, nothing could have prevented Lee from moving successfully on those great centres of population, and it is probable that he could have dictated terms of peace in the Federal capital. The fact that the fighting continued for three days hours witness to the poignant distinctness with which the commanders on both sides recognized how much was staked upon the battle, and it must have been with a foreboding that the Confederate cause was doomed that Lee at last gave the order to retreat. Never again, save when Early essayed his reckless and abortive raid, were the standards of the Confederacy to be seen north of the Potomac. How it came to pass that the victor of Fredericksburg and Chancellerville was to be vanquished in Pennsylvania has long been, and is still, a subject of eager but friendly discussion among Federal and Confederate survivors of the three years' struggle. The Federal failure has been variously attributed to the absence of Stonewall Jackson, who had been killed at Chancellerville, to the fact that Stuart's cavalry was too far distant when the action began, and to some shortcoming on the part of Longstreet. As it is, it is generally admitted that Lee was measurably successful on the first of the three July days, and that, at the close of the second, the advantages were still with him in respect of the positions gained and of the losses experienced, and through the acquisition of a larger number of fresh troops. On the other hand, an eminent military critic, General Sir Edward B. Hamley, formerly Commandant of the British Staff College, holds that Lee's defeat at Gettysburg was due to a grave initiatory mistake of his own. He has pointed out that the lines of operation followed by Meade and Lee respectively from the Potomac, met at an acute angle in Gettysburg, and that Lee, being at the point of the angle, attacked, forming front oblique to his line of retreat, with his left thrown forward considerably off that line; whereas, by withdrawing a short distance from Gettysburg toward Fairfield, and manoeuvring by his right, he could have forced Meade to retreat and fight in a flank position. Whether or no this fundamental weakness is rightly imputed to Lee's tactics, it is certain that, after Gettysburg, the war was prosecuted by the Confederates in despair rather than in hope. Other battles were to be fought, in which the forces under Grant and Meade were to suffer tremendous slaughter, but there was to be none so gigantic, none in which victory was to be so indispensable and so decisive, as it was in the battle which took place at Gettysburg.

## What are the Bars to Sympathy between England and the United States?

MR. WEBSTER, Chief Secretary to the Lord-Lieutenant of Ireland, speaking the other day at a dinner at the 'Pilgrims Club' in London, said that one of the motives impelling him to introduce the Irish Land Purchase Bill had been the hope of gaining the approval and good-will of the American people. His desire was, he said, to make of Ireland a link binding together Great Britain and the United States, instead of what she has long been, a chasm dividing the two countries. That is a generous aspiration, and we should like to see it fulfilled, though we are not sure that even the complete reconciliation of Irishmen to British rule would remove all of the barriers to a cordial understanding between Englishmen and Americans. There is no doubt that the immigration of Irishmen, driven from their native soil by destitution or by wrongs, introduced into our population an element of bitterness and persistent hostility to Great Britain. Such was the outcome of the exodus of Scotch-Irish Presbyterians from Ulster during the latter of the years preceding the Revolutionary war; it is, in truth, a matter of record that more than 100,000 of these emigrants constituted a considerable fraction of the Continental army. The proportions of this anti-British element were immensely magnified when, after 1846, famine and despair forced hundreds of thousands of Catholic Irishmen to seek refuge on our shores. The aggregate number of Irish emigrants who came hither during the five ensuing decades has been computed at many millions, and as they were very prolific, their descendants now undoubtedly form

an important factor of the nation. So far as we know, there are no Catholic Irishmen in the United States, and very few Scotch-Irish, who are not convinced that the land of their forefathers has been for centuries the victim of mismanagement at English hands. The influence of so large a body of citizens on American public opinion could not fail to be deep and wide, and that influence was furthered by the belief, natural to uneducated native-Americans,—by which terms we designate, for the sake of convenience, the descendants of Englishmen and Scotchmen,—that nothing could be more reasonable and righteous than Ireland's demand for such a measure of home rule as is enjoyed by every one of our States within the Union. From our point of view, the Irish people might safely be entrusted with as large powers of self-government as are exercised under our Constitution by any State which seceded in 1861. That the concession of such powers to Irishmen might require a readjustment of the unwritten British Constitution seems to us no valid bar to the satisfaction of their wish.

Such being the position taken with reference to the Irish demand for home rule by a vast majority of native-Americans, as well as by their fellow citizens of Irish birth or descent, it is not to be supposed that the passage of the proposed Land Purchase Bill, even should that measure receive several desirable amendments, will at once transform Ireland from an obstruction to international friendship into a promoter and evener thereof. Not for a moment would we seem to fail to appreciate the admirable sense of Mr. Weyland's speech-making recipient. The offer is made to the Irish peasantry five hundred million dollars, and to supplement the loan with a free gift of sixty million dollars, must be recognized as an act of unparalleled magnificence, when we call to mind the enormous burdens which the South African war has imposed upon the British treasury. If the bill embodying that splendid offer shall become a law, it will undoubtedly go far toward solving, though it will not altogether solve, the agrarian problem which for hundreds of years has lain at the root of Ireland's misery. To convert Irish tenants into landowners, however, will not suffice to make them contented and loyal subjects of the British crown, so long as all the legislation affecting their local interests is enacted in a distant place, and usually indifferent Parliament, wherein less than a sixth of the elective members are Irishmen. Irishmen will never be satisfied, and not only Irish-Americans, but a great majority of native-Americans, hold that Irishmen ought not to be satisfied until the management of their local affairs be committed to a Dublin legislature. Very much has been gained, however, when a representative of the Unionist party proves in a most impressive way his willingness to aid Irishmen to recover the control of their native soil. That such a step should be taken under a Unionist government may be accepted as an injury of the eventual triumph of home rule. Let Irishmen once acquire a legislature of their own in Dublin for the superintendence of their local affairs, and Irish-American will gradually grow in regard. Englishmen with confidence and amity, and any attempt of theirs to maintain a contrary attitude would meet with but little countenance on the part of native-Americans.

Even should, however, a self-governing Ireland become as tranquil and as loyal as is Yorkshire, and even should the former hostility of Irishmen to England disappear, there would still remain one obstacle to a entire community of interest and the development of a lively sympathy between Great Britain and the United States. That last obstacle must be removed if the British government would heal the Anglo-Naxon schism on this continent by urging the provinces of the Canadian Dominion to become States in the American Union. So long as we are compelled to look upon British North America as a politically foreign and industrially competitive, just so long will it prove difficult to bring about a league of hearts between the British monarchy and the great American republic. Not in the fantastic dream of a consolidated British Empire, but in the reasonable hope of the indissoluble friendship of the United States, lies the key of England's safety and prosperity. That hope will never be fulfilled so long as a Canada remains an alien and a rival country, but nothing could stop its fulfillment were Canada a part of the United States. Were all that part of North America wherein the English tongue is spoken to be compacted in a single commonwealth, it would be bound to England by indivisible ties, for it would see in her an indispensable customer, and, in return, would be recognized as an independent and free power. Under such circumstances no formal alliance would be needed, for the law of self-preservation would constrain us to side with our principal customer against any hostile combination of the Continental powers. Her sea-ships and ours would jointly patrol the North Atlantic, and across the regular transit of food products, and thus would England be forever safeguarded against the dread of being forced by famine into an unseasonable fatal to her dignity and power.

It may be said that England cannot, with any show of decency, urge the Canadians to enter the American Union. If they prefer a preference for allegiance to the British crown. We reply that it is not only the right, but the duty, of a parent to commend to a child a course of conduct which must undoubtedly conduce to

its present and its future welfare. No thoughtful Englishman will deny that free trade with the United States would be of an estimable benefit to Canada. There is good reason to believe that, were the Canadian provinces admitted as States into the American Union, their growth in population and wealth would be one of the most astonishing phenomena of the twentieth century. Instead of having cause to reproach their mother-country for admitting them to seek political incorporation with their American neighbors, the Canadians would quickly have cause to bless her. Assuredly, they could not love her less because her maternal foresight had discovered that their well-being and their progress are inseparable from a reunion of the Anglo-Naxon race in North America. They would inevitably come where Canadian gratitude and American sympathy would enjoy a thousandfold their debt to her wisdom and her magnanimity. It is, in a word, not difficult for England to gain the ardent and imperishable friendship of the United States. She has only to deal justly with Ireland and wisely with British North America. That way lies peace, and security, and honor.

## The Iowa Convention

The eyes of politicians in both parties are now fixed upon Iowa, in which a State convention will assemble on July 1, because in that State a large, if not a dominant section of the Republican party has professed to wish such a revision of the Dingley tariff as shall adjust it to existing commercial and industrial conditions. The friends of Governor Cummins, the principal advocate of the so-called "Iowa law," will probably control the convention, but it is believed that the platform will be fearless. Senator Allison, who has long been credited with preëminent tact and adroitness in the rôle of "harmonizer," and "fencing both ways," is to frame the platform, we are told, on the managerial principle of "keeping in the middle of the road." That is to say, he will recommend a revision of the tariff, "when necessary," but he will add that the necessity has not as yet arisen. He will further declare that to increase tariff legislation at this time would be inopportune, because it would unprofitably business conditions, and would interrupt the commercial and industrial prosperity that the country is enjoying. We have heard this argument before, but another one attributed to Senator Allison is comparatively new, namely, that a political party cannot be expected to commit itself on a vital question when it is on the eve of a Presidential campaign. That is to say, tariff revisionists are to be invited to maintain in power a party that will not even promise to make any concession in their views. If Iowa can be carried on such a platform as that, it is evident that revisionist sentiment has made but very little progress among Republicans in that State. Only those who shut their eyes to the lessons of recent political history can, for a moment, entertain the notion that no pledge need be exacted, but that the Republican party, if allowed to continue in power for another quadrennial term, will voluntarily make substantial reductions in important schedules of the Dingley tariff. What kind of reduction may be expected from the Republicans was inadvertently exemplified by Representative Hepburn of Iowa, when he pointed out the other day that in 1862 the duty on steel rails was something like \$28 a ton, whereas now it was only \$8.56. He said, how thoroughly the Republican party deserves the confidence of reasonable revisionists! In twenty years it has spontaneously cut down the duty on an important product by something like 70 per cent. He forgot to add that, when the duty on steel rails was \$28 per ton, the price of rails was about \$100, or, in other words, the duty was less than 20 per cent. of the price. At present the price of steel rails is only some \$30 per ton, and the duty, although but \$8.56, is equivalent to nearly 30 per cent. of the price, or, in other words, bears a much higher proportion thereto than it did twenty years ago. Mr. Hepburn knows very well that no genuine revision of the Dingley tariff, nor any application of its reciprocity clauses, except in the case of Cuba, can be looked for from the Republican party.

## The Wilmington Lynching

Negroes has been witnessed in any of the Southern States a more heinous punishment of a hideous crime than was inflicted in Wilmington, Delaware, on the morning of June 21, on the negro assault and murderer of a young white woman, the daughter of the Rev. Dr. K. A. Bishop. Having been pronounced guilty of the crime by a coroner's jury, the negro was taken by a mob from the workhouse where he was imprisoned, conveyed to the scene of the crime, and there executed at the stake. This deplorable outbreak of savagery might probably have been averted had the Delaware judges granted the request of the Attorney-General of the State that a court might be convened and a grand jury empanelled, so that the accused person might be speedily indicted and tried. The judges rejected the request on the ground that the suggested proceeding would constitute an undesirable

precedent. One incident of this horrible affair has never been, so far as we know, paralleled in any of the Southern States. On the evening of Sunday, June 21, a Presbyterian minister, in Wilmington, addressing his congregation from the pulpit, declared the cavalier and murderer ought to be lynched, unless the judges would reconsider their decision, and provide for the prompt trial of the criminal. This exhibition of a violent and vindictive spirit on the part of a minister of the Gospel, preaching in a city that stands midway between Philadelphia and Washington, shows that the feeling with which white men regard the new negro crime is the quite as intense and uncontrollable at the North as it is at the South. Hereafter, when Southerners are reproached for outbreaks of mob violence in their section under like provocation, they will be able to point to the scene enacted in Wilmington, Delaware, as a proof that the passions of white men are not changed by geographical lines. What really has changed in both sections is the attitude of the negro toward white women. As we pointed out not long ago, there is not a recorded example of an assault having been committed on a white woman by a negro in the Southern States before the civil war, nor, so far as we know, was there a single instance of such an offense in the Northern States either, during the ante-bellum epoch, although some of them contained a good many negro inhabitants. That is why we are justified in speaking of the "new" negro crime, and may well ask ourselves to what deep-seated and far-reaching causes the phenomenon should be attributed. We, ourselves, as we have formerly said, are inclined to think it directly inseparable to the notions of equality implanted in ignorant but brutal negroes by the Fourteenth and Fifteenth Amendments of the Federal Constitution, and by the practical applications thereof in the corrupt-governments of the Reconstruction period, and in the deference paid in many Northern States to the negro vote. A telling piece of evidence in favor of this theory is the fact, if it be one,—it is reported on good authority,—that in Mississippi since the blacks were practically disfranchised in that State, there has not been a single instance of the crime against white women. Before the new State Constitution of Mississippi became operative, the crime was by no means infrequent in that commonwealth, and it provoked just such summary vengeance as was visited upon it in Wilmington. The truth seems to be that in such cases the laws, so commonly administered, are felt to be too slow and inefficient to satisfy an outraged sense of justice, and the instinct of racial self-protection from loathsome contamination.

### Ambassador White's Advice to Millionaires

In a speech delivered in New Haven, on June 22, at a meeting of his class—the class of '53 of Yale University—Mr. Andrew D. White, lately ambassador in Germany, described what he maintained would prove "a paying investment," and commended it to Mr. Carnegie, Mr. John D. Rockefeller, and other American possessors of enormous capital. What he would like them to do is to pick out some twenty-five universities in the United States, and to endow therein professorships for the purpose of teaching young men to become legislators, administrators of public affairs, and diplomats. We think that in this country such endowments would be a waste of money. They might be useful in England, where the sons of aristocrats, or plutocrats, may look forward to permanent careers in Parliament, in diplomacy, or in the civil administration of India, or of the crown colonies. Under our political and social conditions, no such careers can be counted upon with any approach to certainty by young Americans of any class. So far as all young Americans, except an infinitesimal fraction, are concerned, they have their living to make, and they are too well informed to expect to make it in politics. Yet, if rare exceptions be neglected, politics is the sole gate through which admission to legislative, administrative, and diplomatic functions is attainable. After a man has achieved success in business or professional life, or in the sciences, enter the political arena, and, as experience has shown, the same qualities that served him in the former vocation are likely to advance him in the field of public affairs. Senator Hanna is only one of a thousand memorable examples of the ease and efficiency with which a successful business man can apply his faculties to administration and legislation. As for a lawyer, it has been assumed in all countries and ages that he will be qualified to legislate. To allot any considerable part of the limited time at the disposal of a young man to diplomacy would be, it seems to us, unexpedient, unless you could, at the same time, guarantee him immediate and continued employment in those vocations, together with a remunerated, or continually ascending, salary, commensurate with his reasonable desires. That is precisely what Parliament, the India civil service, the crown-colony service, and the diplomatic service of Great Britain offer young Englishmen of the aristocracy and higher middle class. We have no such class in this country, and, even if we should

ultimately evolve one, it could never, under our political system, find permanent employment for its sons in legislative administration or diplomacy. The truth is that Mr. Andrew D. White has made the mistake of assuming that his personal experience, which is almost unique, is at all likely to be, or could be, that of the average university graduate, who, as we have said, has got to earn his living and amass a competence before he can afford to enter public life. Mr. White, by a rare accident, has led the life of an exemplary English aristocrat. He has not had to earn his living, but, instead of squandering his fortune and his energies, he has, from the outset, been actuated by a laudable desire to distinguish himself in the administration of academic and public affairs. A poor young man could not be reasonably expected to emulate his career.

### Women and Boredom

A RECENT French weekly treats the subject of the boredom of women with much solemnity and not a little vituperation—"Woman," it says, "is bored by reason of the indigence of her nature and the inferiority of her social condition. Her boredom is innate and organic, and is due to the essential poverty of her sensations and the lack of continuity of her impulses. Few roads are open to her; she has access to few crafts or professions. By birth she is relegated to mediocre occupations and posts without appeal; she lives under the surveillance of opinion; she can never act herself free; she cannot go where she chooses, nor appear alone where she pleases; she is condemned to the management of a house and the guardianship of a home. It is a hard fate. To bear it without impatience one must be endowed with a talent for mechanical activities and habitual sleepiness. The domestic affair to be recognized daily is a veritable web of Peulopoe, wearisome to an insupportable degree."

The article gives itself to the most dependent statement of the case, and offers no remedy. America, the soil upon which most problems are solving, is again the place where this question of the scope of woman's freedom is being tried. It is fair to say that in thickly populated districts more women suffer from nervous prostration than from ennui. Certainly here, almost all the crafts and many of the professions are open to woman—not begrudgingly open, but freely and fairly open. Medicine and literature have thrown the gates wide; only the more conservative arts debate the right of public preaching, and even in that restrictive list in the legal profession, she would be the first to admit that logic and legality are not of the native bias of the feminine mind.

As to Peulopoe's web, the years are lessening the burden by mechanical devices for lightening work, by domestic conveniences innumerable, and ultimately, doubtless, the great servant question will be solved. Servants, unfortunately, are not trained to their craft. They take a place, trusting to luck that they will know what to do, and manage somehow to do it. Some of them resent their position and do their work grudgingly without a standard. If domestic schools inspired the need for domestic service that normal colleges and kindergarten training-schools do for the work they teach, the millennium would be leaving over the horizon line. And if there were training-schools for mistresses where they were taught patience, system, consideration, respect for inferiors and care for detail—who knows but the millennium would come sailing over our sea to us. Domestic servants can only be supposed to feel a real interest in their work where they feel a real interest in their mistress, therefore, the first rule laid down in the mistress's training-school should be: "Be charming to your servants." To be charming to husband and children is an old error, but to be loved by the rest of one's household is almost a new discovery to prevail and order. Many of the wheels of the domestic machinery would be oiled if the mistresses were schooled in having an eye to the comfort and the diversion of their servants. Harriet Martineau used to call in her domestic evening meeting, and spend a half-hour reading and discussing with them the foreign news in the daily papers. But if this is carrying theory far afield, at least it ought to be as such a part of domestic economy for servants to have a tidy place to rest in, with cards and games and a few books and a plitorial paper or two as it is for the mistress to have a sitting-room. And this is not extravagant; it can be done as easily in a flat at \$400 a year as in a mansion house.

These details, the care to diffuse cheer and harmony over a given space in the universe—who cares how big or how little the plot provided it is exquisite as far as it goes—these create an interest as vital in the domestic routine as the passion for idleness did, in the web of Peulopoe. Mrs. Wiggs never knew ennui in the cabbage-patch; we have seen the very funny little Higher Journalist depicted with no such feeling, of twelve children, where they keep one girl, and the washing is done at home, and found them ignorant of the meaning of the word boredom.

Wherever a life is lived with real, wherever there is a standard strive for and gradually approached, there—the conditions which they may—boredom is strangled.

### A NEWLY DISCOVERED PORTRAIT OF WASHINGTON

*This portrait is reproduced from a hitherto unpublished miniature of George Washington painted by John Trumbull, the famous Colonial painter, whose "Signing of the Declaration of Independence" and "Surrender of Cornwallis" hang in the Capitol at Washington. The picture was left as a legacy to an old family in Kansas. It has passed through various hands during the last eighty years, and the original is now in the possession of a family in New Orleans.*

# Diversions of the Higher Journalist

## The Apotheosis of M. Rostand

THE Office Boy looked in and said, with rather more ceremony than he ordinarily used with the visitors of the Higher Journalist, "The Shade of M. Emile Zola."

The Shade entered, grave, simple, serious, and the journalist made as if taking his hat, which he really went to nothing in his grasp, and pursued himself, "I was just thinking of you!"

"Approas of M. Edmund Rostand's welcome at the French Academy?" the Shade suggested, as he sat dazedly down in the chair politely indicated by a wave of the higher journalist's hand.

"Precisely?"

"And you were wondering what I thought of it? There seemed to me some question at that point in the Elysian Fields. Several of the side-walkers spoke to me about it, as if I must be especially interested. Voltaire got a good deal of fun out of it, and I wish he would get some out of me. We are very good friends, you know. It does me the honor to fancy that I once behaved in the case of a poor Jew to be once belated in the case of a poor Protestant. But he likes his joke, and he pretended to taste a delightful irony in a nervous that put a signal stamp on my repeated failures. But there were others who could not enjoy the incident as much: Fautrest, the Goncourts, Dandel, Massaponnet. Voltaire insisted that they ought not to take such a thing seriously."

"Most people seem to have done so," the higher journalist said. "The accounts of the affair excited across to us very impressive."

"I hadn't seen them," the Shade replied. "What were the chief incidents?"

"There never was such an excitement about the admission of any member of the Academy. Thousands of people applied for the six hundred places open to the public, and they would have been willing to pay anything for seats. But the great distinction of the affair was the presence of women famous in the world of art and almost of fashion. Mlle. Bernhardt, with her son, was there in a fur hat, and a green straw hat with changing shades. La divine Henriette was dressed with supreme refinement in a beige toilet lightly dashed with black, and wore a straw hat, lampion shape, trimmed with pink feathers. Mme. de Harlay wore a large tulip hat, Louis XIV. style, with a striking white mantle, embroidered with black and silver. Then, the higher journalist read from a newspaper he had taken up, "There were the Comtesse Girardin, very beautiful in her black toilet, with a large Gainsborough hat; Mme. Emile Deschanel, with a Watteau hat, trimmed with violet, and a beige costume; Mme. de Saint-Victor, in black, with tulip hat; the Baronne de Reinburg (Mlle. Reichenberg), in a hat trimmed with Maréchal Niel roses, and a dress in emerald blue. There were also Mme. Jules Claretie, in black; Mme. de Pierrefeu, very stylish, in a yellow straw hat trimmed with a large bill of paradise."

The Shade of M. Zola smiled, and he asked, "Is that all" in a tone which the journalist could not take as referring to the ladies.

"No, M. Rostand made a speech, chiefly in favor of sincerity and emotion, as opposed to the sterility of intellect; and received, with a personal allusion to Mlle. Bernhardt, which the audience loudly applauded."

"It was apparently the easiest way of dealing with a writer acquainted with those mighty Russian realists, the absolute opposites of M. Rostand, in every theory and practice of art. Fancy the same man praising their work and then praising his!" the Shade explained.

"It should be difficult," the higher journalist owned, "but perhaps not impossible. We must tolerate every species in the world of art."

"Every species, yes, except the artificial, the unnatural. That species we ought never to tolerate."

The higher journalist made his reflection that M. Zola seemed to have been conscious, in Elysium, of the example of the Bourbons on earth, where they seemed nothing and forgot nothing. But he did not think it well to go beyond saying, "It is what people like."

"Oh, yes, it is what people like! That is what myself, and what might well make me, if shades could see their minds. You know," he pursued critically, "what my literary wife—a being battle, by precedent and example, for the true, the real, and how I so far outlived myself as to know that I had lost it?"

"Yes, it was pathetic enough."

"Philistic! It was tragic. Think of my having done such things as Victor Hugo, to be myself down, in fact, by such pyramids as Lott and Rostand! They might have left me out of their Academy, which I tried to force my way into chiefly because it stood historically for literature, too to let in the like of that 'L'Anglais' juggler, that 'Cyrano de Bergerac' conjurer! He talked, did he, of sincere passion and emotion? He never, so far as his work shows, let a touch of either! He is fortunate from the crown of his head to the sole of his foot, and is incapable of even imagining life, let alone portraying it!"

"You are severe, cher ami," the higher journalist deprecated. "Ah, severe! What would you say if the Shade spread his transparent heels and shrugged his translucent shoulders. I never knew how to spare. *Mex Hauser* is not a pretty book. I had to tell the truth as I knew it, and I had to show life as I saw it. Why should I now concern myself with missing matters?"

"Oh, merely, I thought in the other world we learned a little patience, perhaps. Why, in fact, should you be impatient with the invisible? It is not all unscrupulous food of life's flesh. Somewhere in the courses, the unwholesome things must come in: the hors-d'œuvre, the made dishes, the entrées, the summary. This is the account of Hammy, all over the world. We have had full of fish, flesh, and fowl, and now we want a little salad with whipped cream or beaten egg on it. You belonged to a great time, but that time is passed or passing. You were one of those great Era-houses of olden days, whom you have mentioned, and of the great Russians, the great Spaniards, the great Italians, the great Newyorkians, but you could not expect your age to last but always. Now, the age of materiality, of the theatre in literature, has come, and you must take your outings after having had your satiries. You don't suppose Victor Hugo particularly liked being toppled over by you, with all the cosmetic tradition?"

"No, I don't suppose that he did."

"Then you must not object to his being set on his legs again. The romanticist tradition is not here to stay, I dare say. After seawind with whipped cream or beaten egg on it, we shall want some honest victual again, and then we shall come back to you and to the other chefs of your school."

"Oh, no!" the Shade responded, with a shake of the head that made the journalist trouble a little for it. "You will not come back to us. You will never see us, unless, but you will never see us. You will not read those writers of your own generation who will have learned the truth from us."

"Well, do you want the earth always," the higher journalist asked, "when you have all benefits for you, or do you? Why bore that an Illinois court has pronounced him guilty of plagiarizing the leading ideas of his 'Cyrano de Bergerac'?"

"How could that be?" the Shade eagerly inquired.

"How could it not be, when the inventions of romanticism are invariable, and the romanticists must always be standing firm as always new, and full of original situations and motifs. It is no Academy when an Illinois court has condemned him for having been perfectly honest, whose hands in turn may not dent? Though at that time you were preoccupied with the Dreyfus affair!"

The Shade's mind seemed to waver momentarily from himself.

"Ah," he sighed, "it is my letter with the *Leva* now?"

"Well, they are killing them off in Russia, without the legal oscillation of the pendulum in that direction. It has to swing both ways, or else stop, and if it stopped, there would be no end of time. The Shade shivered, and said, as he rose, "There are some old needs't call your boy to show me out. I will just vanish."

# Through American England

By Sydney Brooks

LONDON, THURSDAY, APR. 27, 1921

**G**OOD Americans may go to Paris when they die, but they certainly come to England while they are alive. The country is swarming with them—whether more or less in this year than in other years I do not know. At any rate, their ubiquity is palpable enough. No where you will not find them, in Bloomsbury, Piccadilly, or the residential West End, you will find in a twenty minutes' walk representatives of

Drawn by M. Robinson

You will find . . . representatives of every State in the Union

every State in the Union. They seem almost to monopolize the buses, they overrun all the best hotels, they are crowding all the show places with a fervor of solemnity that is the annual surprise of the stolid, imperturbable Englishman. And London, you may be sure, lays itself out for them. It is an English custom that the road to an American's pocket lies through his or her patriotism. The Nazis and Stripes accordingly float temptingly from all the largest stores, summer suits are advertised "especially for the convenience of American visitors," and the most unmitigated English store blossoms out into the quietest devices for entrapping the dollar—now that they sell "American candy," and will even experiment with some fantastic machine that calls itself an "American soda fountain." The bait seems to be pretty cheerfully taken, but not, I think, to anything like the extent that rumors speak out. The enormous sums that Americans are said to spend annually in England are for the most part imaginative merely. By far the greater proportion of the invaders are people of moderate means, who have had to economize for the trip, and, when in London, mingle the pleasures of sight-seeing with the horrors of a Bloomsbury boarding house. They throng Westminster Abbey, and visit the Tower and the Chelsea Chase and the Wallace collection—and all the other places that Londoners know nothing of; they haunt the British Museum and Taylor's house, and fill the coaches that start from Northumberland Avenue for Windsor and Barking and Hampton Court; they are the keenest patrons of the show, and stand at Hyde Park Corner for hours, eastern in hand, waiting to "see" the King and "do" everything, and so doubt have a thundering good time. They do nothing in support of the English cause—except, nevertheless, in innumerable—but to a millionaire.

But it is in the provinces, and not in London, that Americans really rule the roost, and it is in the provinces and especially the Midlands, the Stratford-on-Avon and Warwick part, that I mean to be the leading of this letter, American England. That district may without any exaggeration be called American England. On the streets, at the hotels, along the blossoming, unforgettable, Warwickshire lanes, square's house, Ann Hathaway's cottage, Warwick Castle, the Leycester Hospital, and so on, you hear the same answer to the inevitable question, "Rightly met, one of our visitors are Americans." I have just returned from a few days' trip in that neighborhood, and can testify to the correctness of the estimate. If anything it is under the mark. I looked at the register of the "Red Horse Hotel" at Stratford-on-Avon, the famous old hostelry where up in memorials of him, and turned over twenty pages without finding a single English name and address. The "Red Horse" is in London are usually placed. Each spring-time come letters from one's American friends asking one in various towns for them "at some dear old English hostelry, where the boys are sent, you know, and the sheets kept in lavender, and there is a jolly-

looking landlord with a lot of old brass candlesticks on his coffee-room mantel-piece, and where a Sam Weller will clean our shoes for us, and where we can live for a dollar a day." One simply has to reply that such places don't exist any more, at any rate not in London, and that for the rest the notion that England is a cheap place to live or travel in is just a fairy tale and nothing more.

From Stratford one goes inevitably to Warwick, another English town with a population of American visitors, a pleasant ten miles' drive through the heart of the country, between hedges topped with May and chestnut blossom, past stately old houses standing in the depths of smooth parks—Charlecote Hill among them, where Shakespeare stole his deer—over as typical a stretch of the plump, smiling English landscape as one could wish for. I never take such a drive without a growing conviction that Matthew Arnold was widely and wisely wrong if he meant to include the peasantry among his "brutalized lower classes." No far from being brutified, the English farm laborer shows more of the aesthetic sense than any peasantry in Europe, the French not even excepted. Enter any cottage you please and you will find it an object-lesson in tidiness, the walls spotlessly whitewashed inside and out, the floors scrubbed and polished, the table linen as clean as it is simple. But it is more particularly outside the house that the English laborer's good taste shows itself. No farm-hand is so poor as not to be rich enough to have his little garden; and however small, it is always well kept, the walks are rolled and gravelled and bordered with stocks and evergreens, every inch is utilized and the charming English flower always to be seen. A cottage without a flower-jar in every window, without ivy or some flowering vine or a rose-tree covering its walls, is no cottage at all to the English laborer. You pass by many a little hamlet made up of exquisite items like this on your way to Warwick, the castle walls of which beckon greedily from the distance. A fine old English town, echoing to American feet, American voices, American enthusiasm, and quite worthy of it. The castle and its grounds and squawking peacocks, the old Hospital—most perfect of Elizabethan relics, the "Warwick Arms" with its wine-cellar, where the cobwebs and fungus hide bottles and walls in a matting half a foot thick; Mill Street, beloved of artists, where every house less than three hundred years old is an outpost; Mrs. Gierne's cottage at the bottom of it, where you have tea served in you under the garden trees, with the broken arches of a Roman bridge almost within hand's reach, the Avon flowing musically at your feet and over the weir where the castle rises its storied front—all this, and a good deal more besides, deservedly makes Warwick an American Mecca.

Stratford Church

## LOOPING THE LOOP IN AN AUTOMOBILE

A new method of looping the loop, which will soon become popular at our American pleasure resorts, is illustrated in the above picture. The feat of entering the wheel in an automobile has been accomplished for the first time by an English woman, and is now one of the staples of the Hippodrome in London.

# Books and Bookmen

By James MacArthur

THE Carlyle-Froude controversy, which has been disagreeably revived through the publication of the *New Letters and Memorials of Isaac Watts Farquhar*, is unpleasant in itself, but it may tend to turn our minds again, not without profit, to one of the greatest intellectual forces of the nineteenth century. One cannot but regret the personal enmity that trails through so much of the recent disclosures which were best forgotten and buried, with that part of a man's life which is sacred and private. It is wiser to reflect the thoughts and feelings of the mind in its states of exaltation and to recall those passages of reminiscence in a life which elevate and inspire and refresh us. It is a most deplorable and regrettable feature of journalism—for it cannot be said to belong to the sphere of literary criticism—this making up of the rage and remnants of private correspondence and washing of dirty linen before the vulgar eye. Had kings or no seldom catch the divine rapture and are so often tempted of the devil, we cannot sufficiently cherish the sanctity of personal rights or lightly ignore the faith and hope that make us men and breathe a soul into the actual.

Reading in the *Letters of the Brownings* lately, we came upon two passages which were in the nature of a question and an answer concerning Carlyle's well-known mottoes of poetry: "And does Mr. Carlyle tell you that he has forbidden all 'singing' to this perverse and broad generation, which should work and not sing?" writes Miss Barrett. "And have you told Mr. Carlyle that song is work, and also the condition of work? I am a devout sister at his left—and it is an effort to me to think him wrong in anything—and even when he told me to write prose and not verse, I fancied that his opinion was I had mistaken my calling,—a fancy which in infinite kindness and gentleness he straightened immediately to correct. I never shall forget the grace and that kindness—but then! For him to have thought ill of me, would not have been strange—I seldom think ill of myself, an old woman. But for Carlyle to think of putting away, even for a season, the poetry of the world, was wonderful, and has left me ruffled in my thoughts ever since.

—Popping the Question—The Puritan Style

as his disciple I ventured, I do not know him personally at all. But in my poems, and I heard from him as a consequence. 'Dear and some of music. You find it so—do you not?' Browning's answer is characteristically humorous and throws a reminiscent side-light which I would have told you he had shaken that grand head of I lost our him, a fortnight ago, he turned, from I don't know what a thing? 'Of all things in the world, that I did you never try to write do.' Then came his definition of a song—'then, with an appealing and my stars, I shall burst into a song' (he is not mechanically should wrap the thought as Donne says 'An amber-drop encraps a bee'), and then he began to recite an old Scotch song, stopping

at the first ruse completed. 'The beginning words are merely to set the case, they tell me'—and then again at the couplet about—'or to the effect that—'give me' (that in broad Scotch), 'give me but my leg, I care not for my right.' He says 'quote the magic naturally, 'that if you allow him the love of his lass, you may take away all else, even his eye, his lip or ear, and he cares not,' just as a professor expounds Lycophron. And just before I left England, six months ago, did not I hear him cross, if not certainly sing, 'Charlie is my darling, ' my darling, ' with an adoring emphasis, and then he stood back, as it were, from the song, to look at it better, and said, 'How must that notion of ideal woman perfection have impressed itself in this old Jacobite's ' young Cavalier'—' They go to save their land, and the young Cavalier?'—where I, who care nothing about such a rag of a man, cannot but feel as he felt, in speaking his words after him! After saying which, he would be sure to counsel everybody to get their heads clear of all singing!"

If Carlyle and Browning were still alive, one could imagine the former turning from a discussion of the Post Laureate's tragedy *Flodda's Field*, and then with heroic pathos the last lines, address in all old Scotch songs,—"The Flowers of the Forest?"

I've heard the living sit and rave with you,  
How a singing below the dew of day;  
But now they are mouthing in like  
—The Flowers of the Forest are a wode song."

Mr. Alfred Austin's tragedy was presented at the Haymarket Theatre in London on the evening of June 8, and was not only a happy occasion for the charity it was designed to benefit, but one of the memorable events of the season. An additional interest was given to the evening's entertainment by the presentation of a clever one-act play adapted by Mr. Kipling from Kipling's remarkable short story "The Man who Wins." The combination inspired Mr. M. M. Postelton, one of his happy caricatures.

A few weeks ago the writer happened to be a number of bright young persons engaged in a discussion of the quality and tendency of the whole matter of the whole matter. I was not only a participant in the discussion, but also a witness of the final result. In fact, the writer of the article went so far as to plead, "in the otherwise crowded field, for a magazine devoted primarily to the terrible and tragic," why such stories are not being written to-day is that there is no time to read them." We noticed that the editor in a footnote noted the thrilling ghost-stories of Miss Wilkins and Mr. Howells—and in mention one by Mr. Crawford! So much for the irony of literary criticism!

# IDEALS OF AMERICAN WOMANHOOD

## THE SCHOOL TEACHER BY MISS KATHERINE DEVEREUX BLAKE

PRESIDENT OF THE ASSOCIATION OF  
WOMEN PRINCIPALS OF NEW YORK

**T**EACHING is in many ways the most noble of all the professions. The clergyman ministers to sick souls, the physician to sick bodies, the judge metes out justice to offenders, but to the true teacher is given the beautiful duty of so shaping the plastic heart and brain of the children under her care that neither soul nor body need fall ill. This is a work which calls for the highest and best to which a human being can attain. The noblest ideals of the soul should be enshrined in the heart of her who strives to awaken high thoughts in the minds of the children who hold the future of our country in their tiny hands. There are now over ten thousand teachers in the public schools of this city, most of them imbued with the high spirit of their sacred calling.

Nearly nine-tenths of these teachers are women, as they should be, for women are the natural teachers of the race. In all branches of the animal kingdom it is the female who trains the young, and it is wise to place the education of the young of the human family in the hands of the woman. Just consider for a moment the splendid task that is given to the teacher here.

New York city has been called the "gateway of the nation." To its shores come immigrants in hundreds, nay, in thousands, every day, and many of them never go beyond the city limits. As a result our metropolis is the most foreign city in America; but sixteen per cent. of its children are born of American parentage. Into the hands of the public-school teacher is given the magnificent work of transforming these unlettered and uncultured peasants of Europe into educated, self-respecting English-speaking American citizens proud of the institutions of the land of their adoption. Is not the woman who does her share in this labor living an ideal life?

Our great city does all this not only for the children, but for the grown people. In our evening schools it is not unusual to see gratified men and women struggling with the intricacies of our beautiful language. The public-school system goes a step farther this year, and has established a series of lectures on American government in Yiddish and Italian. These lectures track the precious bloodlines of the freedom which is now theirs to these poor foreigners, who are often bitter with the centuries of oppression under which they and their fathers have groined. Only those who are conversant with our public-school system can appreciate the stupendous ideals which the character of the new immigrants. Think of the individual workers in this service field, the brave soldiers who now for the harvest of a lifetime—for the reaping of a nation! Fifty years ago a man became a teacher after he had failed in everything else; a woman, because no other profession was open to her. To-day this is all changed. Those who desire to become teachers must have not only an excellent education, but a pro-

fessional training in the art of teaching as well. Surely such a training encourages high ideals!

It is to be regretted that women have not been permitted, to any extent, to take their proper place among those who guide the policy of our schools. As yet, our superintendents are almost exclusively men. We women look forward to the time when the value of our counsel will be recognized, and merit rather than sex will be considered in the appointment of superintendents and other school officials. We feel that the home spirit which we bring to our schools, and only a woman can carry this home spirit with her, and this attribute should find its place in the highest councils of the school world. As no home can be perfect without the guidance of both father and mother, so does the perfect school need the The huge institutions that are like enormous educational mills give place to smaller and more homelike school communities where principal and children can know and love each other. Love should be the keynote of thought and feeling alike in home and school, the touchstone that will awaken all the dormant faculties, the lamp that will light all the dark places. There are no ideals too holy for the teacher to aspire to, but love alone will help her to their attainment, for "the greatest of these is Love."

## THE POWER OF THE PRESIDENT

REAR COVER 100 NEW YORK, THURSDAY 1897.

To the Editor of Harper's Weekly:

Sir,—I was much interested in your editorial on the subject of "Mr. Roosevelt's Conception of the Presidency," partly because it was in line with questions that had occurred to myself, and, again, because it seems to me that you have only touched one side of the case—the appointing power, which certainly is not the most important.

The popular idea of the President's power in making appointments does not seem to include the Senate as a factor of any importance, and is frequently resentful of any interference with the President's plans by that honorable body. Most people take to an appointment "advised," and only gradually concede to the Senate the power of withholding its "consent," and any failure of confirmation usually brings a storm of vituperation upon the Senate.

Press and people do not consider that in nearly every case of the rejection of a nomination the President himself has invited the degradation of his nominee by either neglecting or refusing to recognize the rule of "the courtesy of the Senate," and in a larger percentage of cases than the people imagine, perhaps, the Senate has consented, even though it has been ignored until the nomination has been sent to them. This feeling of resentment toward the Senate may be inspired by the reason that the press and the people are naturally more in sympathy with the man who is more especially their own deliberate choice than with the body that was elected by an indirect vote and do not, therefore, directly represent them. However that may be, it certainly is a wise provision of the Constitution that these appointments must be made by and with the advice and consent of the Senate, and the President and people should be cheerfully governed in action and opinion by a constitutional requirement which has proven itself to be a valuable safeguard of the interests of the republic.

No President should be so egotistic, and no people should be so arbitrary of any man as to think that he is himself, and his judgment so excellent that his nominations should not be questioned. That consideration is so part of the case, because the Constitution makes clearly intended to confer upon the Senate advisory powers in the matter of the appointment of public officers, and at the event that the President should refuse to accept their advice, the Senate has the undoubted right and power to reject the nomination. It is, therefore, clearly a matter of the rights of the Senate, and, instead of "the courtesy of the Senate" it should be termed the "consent of the Senate," and it is, therefore, a very grave infraction of the Constitution for the President to refuse to accept the reasonable advice of the Senate that is extended in a manner that conforms to the regular custom that has been observed by both Presidents and Senates of the past.

However, Mr. Editor, that, when President Roosevelt said that he "would rather be a whole President for three years than half a President for seven years" he had his mind fixed on higher things than the mere appointment of political workers to their respective. The appointing, or nominating power of the President is not by any means the highest prerogative of his office, and it may be that he has chafed under other restraints than these, or that he is looking ahead to a battle that must be fought within the ranks of his own party in order to clear away some of the traditions that gather upon leaders and increase leaders.

The idea, indeed, I might say for the government of the nation by the party has become so firmly rooted and grounded into our political system that even so strenuous a man as Mr. Roosevelt should hesitate and turn back before he begins any serious assault against this time-honored custom. It is neither sanctioned nor prohibited by the Constitution, and Mr. Roosevelt could not be accused of any infraction of that bill of rights merely because he might reject or ignore the conclusions of party councils in governmental policies and affairs. It may be that he is giving notice in advance that government by party must yield to the supremacy of Roosevelt. His well-known disposition to at times cut loose from the restraints of party councils and policies is thoroughly consistent with this view, and it would not hardly seem that even he would be so rash as to reject the co-operation and advice of the Senate in those cases where the Constitution is mandatory; but infractions of this nature are charged to him, and the Crum case, as an example, would seem to indicate that the charge has some foundation in fact.

The men who by their work and sacrifices have brought Mr. Roosevelt's party to almost unqualified power, and who have been honored by invitations to the higher councils of shaping governmental policy, naturally do not like the prospect of being ignored, except as subjects and recipients, for the men who must depend largely upon their past work and present influence for their continuance in office. And then, Mr. Editor, there are those among the party, as well as men in the compasser walks of life, who honestly prefer government by party to that of the individual.

No bag as the people must have the party responsible for the mistakes of the President, the Congress, or the Legislature, it cannot be held to be unreasonable that the leaders of the Johnson's opinion use their influence in guiding the administration, and the Republican party are still suffering from the lack of man which his vindictive tyranny engendered in the solid South, and the Republican party are still suffering from the excitement you related correctly one of the ebulliences which the Senate interposed to curtail his power; but it is hardly fair to mention John-

son in this connection, for the reason that Mr. Roosevelt is in any way superior to him and with no trace of vindictiveness. Nevertheless, there is a warning in this dark page of history.

When President Cleveland took the bit in his teeth, his party sought to deny responsibility for his blunders, but the people never released them from the bond. Mr. Cleveland may not be so quick of perception as Mr. Roosevelt, but he is more reflective and less energetic, two qualities which tend to a large degree to save men from errors, unless it might be the mistake of inactivity.

Therefore, when Mr. Roosevelt declared that he "would rather be a whole President for three years than half a President for seven years," was it not a notice in advance that he does not intend to divide the responsibility of his own administration with his party leaders or any one else, and does not think that government by party is at an end so far as he is concerned? Would it be surprising, after the many recent unequivocal statements of his desires, almost denials, of his party leaders, if he should yet insist upon dictating the platform of the next national convention? What a Rooseveltian affair the next administration will be, if he does make the platform. The privilege of making it is his for the asking, for no one will dare to say him nay.

I am, sir,

C. B. STODDARD.

## THE WOMAN IN BUSINESS

NEW YORK, THURSDAY 1897

To the Editor of Harper's Weekly:

Sir,—As a woman, fortunately engaged in business, I was greatly interested in Mrs. Wadsworth Baker's fluently conceived article in your issue of the 20th on "The Business Woman." But, first, a confession. It has always seemed to me that the proponderant effort of business life on a woman was an unfavorable one. As the constant dropping of water wears away, even so, the continual sacrifice of a woman's native tenderness for social aims makes inroads upon that certain dignity of womanhood which one likes to regard as inviolate. Her numbers are unconsciously affected by this general mingling with men under democratic conditions. Her almost invariably subordinate position conflicts with her already settled and conventional ideas of her social relations with men, and the result is a confusion of ideas which for a time at least upsets her whole outlook upon life. She is made to understand at once that she must not expect the manners of the drawing-room in business offices, and her immediate conclusion is "Are men's manners then only for an occasion?" This is perhaps the first blench on her ideal of men; a trivial one from the stand-point of maturity, but influential with the unsophisticated girlhood mind.

Mrs. Wadsworth Baker has done business women a genuine service in pointing the way to a practical ideal for their life to follow; but only the exceptional women will be able to live on so high a plane. The general effort of business life upon men is to cultivate the notion of self-interest; the same influence must also be felt by women. Family life, on the other hand, makes for unselfishness, and women are happier and better when they are giving than when they are engaged in getting. But if they can fulfill the ideal set forth by Mrs. Wadsworth Baker, if they can do what men have failed to do—that is to say, reconcile a Christian ideal with business success—they will not have entered in vain.

I am, sir,

GRACE BOWWELL BROWN.

## LANGUAGE AND MIND TRAINING

NEW YORK, THURSDAY 1897

To the Editor of Harper's Weekly:

Sir,—With regard to the question of abandoning Greek and clinging to Latin as preparatory schools and colleges, it seems to me that it might be desirable to cleave to both or comp both; but if one must go it should be Latin for the following reasons: A great deal of Latin has come down to us filtered through the New French; and what we are most indebted to the Romans are their systems of law and government, in which particulars but we have a confessedly superior article in English and American law and government; but when we come to Greek culture we find something which is unequalled in certain respects, and cannot quite be replaced by modern culture because the latter is of a very different nature from the former. Latin literature, being a faded copy or faint reflection of Greek literature, is comparatively worthless. On the other hand, Greek literature, philosophy, and art, are of incalculable value, and modern culture is unintelligible, almost impossible without a knowledge of those subjects.

Many scientific men have said that the study of the Greek language trains the mind better than the study of the Latin. (I will both, if you will; and substitute English and American law and government for Roman, and replace Greek culture by Latin the inferior instrument for training the mind, and forsake the base provider,—such a unprofitable proposition in the Latin literature compared to the Greek.

I am, sir,

GEORGE B. BRYANT.

**Concerning School Children**

In a recently published report on certain aspects of educational progress issued by the University of Colorado, several suggestive conclusions are set forth concerning the mental and physical capacity of school children.

In general, it appears, "there is a distinct relationship in children between physical condition and intellectual capacity, the latter varying directly as the former. The endurance of boys is greater than that of girls at all ages, and the difference seems to increase after the age of nine. There are certain parts of the school day when pupils, on the average, have a higher storage of energy than at any other period. The morning school does not produce notable mental fatigue. The noon rest is very careful to the pupil, since it renders him capable of better work than he is able to give after a prolonged rest, as observed when entering school."

**The Americans of the Future**

WOLF VON SCHERERENBERG, who has recently collected and edited the Kaiser's speeches, tells of an interesting prophecy which was made recently in his hearing concerning the future of the American people.

"At a social gathering in the house of Baron von Rheinbaben, the Prussian Minister of the Interior," relates Mr. von Schierer, "he insisted to me that, with the moving emigration from every land under the sun pouring into the United States, it was only a question of time when the population as a whole would become a mixed race, of swarthy or yellow skin, and their language and religion, too, would have undergone a radical change."

**ADVICE TO HUSBANDS.**—Mrs. WILSON'S SWEETHEART should always be used for children's medicine. It soothes the child, soothes the gums, stops all pain, cures all colic, and is the best remedy for diarrhoea.—(447.)

**THE OLD CAMPER**

See for forty five years had one article in his supply—Bain's Hair & Beard Conditioner. It gives to children, soldiers, hangers, campers, and sailors a daily routine, "like the old times." Delicious to taste, rich, and chocolate.—(448.)

Your business card will vanish if you always call for **COLE'S PERMANENT REDDING DYES** that you drink Chamberlain's.—(449.)

To cure a cold on the lungs, and to prevent pneumonia, take **PAIN'S CURE FOR CONSUMPTION**.—(450.)

**DRY'S ANKER.** It breathes new when **ADAMS'S** the Original Anker's Bitters, are used.—(451.)

# THE SLEEP WALKER

BY MORGAN ROBERTSON

A Story in Two Parts.—Part I.

of going to business, he cleared the kitchen table and began cleaning the neckwear. A full hour he spent at the task, much in his way and to the neglect of his business, when she broke her moody silence with:

"What are you doing? Why do you not go down town?"  
"I will meet my dear," he answered, amiably. "Just as soon as I get the syrup and butter out of this tie you made. I don't mind washing my face twice instead of once, but I hate to see this tie soiled."

She was upon him instantly, her arms about his neck and tears in her eyes, while she begged, humbly, for forgiveness. It was granted, of course, and for a long time griddle-cakes were omitted from their discussions.

Again, inspired by a natural and wildly desire to "jog some spirit into him," she had carefully prepared a slippery place on the front yard walk which a slight snow concealed from his view when he arrived in the evening. He came down hard, and though he was not hurt, he pretended to be; for he saw through her trick at once, and to punish her looked for assistance and blamed his own carelessness, but uttered no word of suspicion or reproach. Neighbors assisted him in, and all that evening, prone upon the couch, he enjoyed the ministrations of a contrite and tearful wife, who tried to atone for her sins of commission (and omission, for she did not confess), by softly spoken sympathy and frequent service of water, heavily to relieve the pain—a remedy which Beverton liked, but which was denied him as a beverage.

And so, as their young married life went on, he shamed and tamed her, not by breaking her spirit, but by compelling her to break it herself; and though she remained a tigress against these who were her enemies—for the more she hated—the displayed toward him an attitude of meekness, adoration, and almost slavish obedience which made him at times regret the transformation; for her tantrums were the charm which had first attracted him.

But at this period it seemed to him that the tantrums had struck in. They slept in separate rooms, and one night he awoke to find her leaning over him with a pail of water poised above his head. Before he could catch the tilting pail, she had dumped him, but even this did not disturb his equanimity; he merely sprang out of bed, caught her by the arm, and asked what he had done to deserve a dunking. She answered with a scream, and, dropping the pail, clung to him in the darkness. She did not know where she was—she could not explain, but at last he understood.

"Do you walk in your sleep, Grace?" he asked, gently.  
"Oh, no—yes," she stammered; "but not since our marriage. I thought it had left me. Oh, I'm so sorry. Did I wake you?"  
"With a bucket of water," he answered, dryly, as was possible in his moist condition. "I had the habit when very young, but they cured me by radical treatment. You're too old to be punished, Grace, but we must find some way. You may set fire to me next time."

But he knew of no way, and when she had repeated the feat with the pail of water, and a little later made a midnight assault upon him with the carving-knife, he could only nail her bedroom window tightly open for ventilation, and put a bolt on his side of her door. Her grief and horror were pathetic, and it surely tried Beverton to look up his wife like a wild beast; but she had become a menace to his health, and perhaps his life; for, though on such occasions he had wakened in time to realize her intent, he had not wakened in time to save himself completely. He had not quite avoided the downing knife; and, at the top of his heart, it had grazed his arm as he wrenched himself under.

It was a very fine piece of polished hardware, this knife—and he heaped to a carving set given to them at their wedding. On the day following her demonstration with it, and before he had announced her sentence of nightly imprisonment, she had bound the knife, fork, and steel together with a rosette of ribbons, and with the aid of a step-ladder hung them high on the dining-room wall; then she burned the fender, and when Beverton arrived in the evening showed him the exhibit.

"There," she said, with a determined little frown, "is the only deadly weapon in the house, and it is out of my reach. Let it stay there; I hate the sight of it, and could never bear to have it on the table again; but if it be up there—out of the way—where I can't help reach it, perhaps—perhaps—it will—" The rest was convulsive sobbing.

(Continued on page 1120.)

THERE was nothing abnormal in the character of Beverton except a tendency, while very young, to walk in his sleep, and nothing in his twenty-five years of life of which he was really ashamed except a deed of his infancy, born of the short-tempered tendency for which he had been severely punished at the time. The punishment, no doubt, impressed the incident on his mind, and he recalled it occasionally, always with a flush of shame, while he lived his years of boyhood, youth, and early manhood. He remembered being rudely awakened from sleep, not in the crib where his mother had placed him, nor beside her, where she sometimes slept, but flat on his back on the carpeted floor of a long hall, dimly illumined by distant gas jets, the soft glow from which showed him a woman in a night-robe looking down upon him with angry eyes, and a purple-faced child a little younger than himself, gasping and choking in her arms. His cheek burned from the slap she had given him, and his head hurt from the impact with the floor, so he joined the other baby in protest, and the uproar brought several uniformed hall-boys and a night clerk, who led him to the room occupied by his parents. After punishment, and when able to understand, he learned what he had done in his sleep—left his crib, sought the hall, buried his small fingers in the throat of this other sleep-walking infant—when he had woken over before—and might possibly have murdered it had not his mother wakened and arrived in time to interfere. He was well spanked for the feat.

His mother believed in both punishment and prayer as factors in reform. For a long time he received nightly spankings in bed, with injunctions to stay where he was put until morning, and supplicated his "Now I lay me down to sleep" with a plea to be cured of his infirmity.

The treatment was successful; the unconscious cerebration left him, but the spankings continued until he had outgrown the conscious cruelty common to all children then, having ceased viciousness of insects and angle-worms, and overcome his antagonism to the aged, the helpless, and the infirm of his own species, he began his development into a cheery, generous, and humane character, which, assisted by good health, good home training, and a good education, found, at manhood, outward expression in six feet of good looks.

These good points brought him a wife—a creature as well favored as himself, but his very antithesis in disposition and physique, the man of the blond type, calm, masterful, and impetuous in temperament; she of the brunette, warm-hearted, and impulsive, yielding him neither obedience nor spoken approval, and meeting him half-way only upon the common ground of love, which Mother Nature provides for the agreement of her opposites.

Beverton was content with her, and managed her in a way peculiar to himself. Whether it was the best way or not, is hard to decide; for it is possible that with more antagonism from him there would have been less from her. But it was successful. As instance—she had thrown a plate of sizzling buttered griddle-cakes across the breakfast table; her aim being good, they had struck him fairly in the face, and the melted butter smeared not only his face and shirt-front, but a gorgeous puff cravat which her his valet had made for him. He indignantly left the table, changed his reinment, and they finished breakfast in silence; then, instead

**A Perilous Feat**

The "Flatiron" Building at the junction of Broadway, Fifth Avenue, and Twenty-third Street—of which a remarkable picture was published in the WEEKLY about a year ago—is one of New York's most famous skyscrapers. It is topped by a flagpole which

"Steeple Paul" painting the Sky-scraper's Flagpole

is occasionally in need of a fresh coat of paint. But the job of applying it is a perilous one, attempted only by professional steeple-climbers. This work was accomplished recently by "Steeple Paul" Kuhlhoff, who has painted, in the course of his career, 2003 steeples and flagpoles. The accompanying photograph was taken during the hour and ten minutes that he hung suspended some 300 feet above the pavement.

**The Chances for Shamrock III.**

By George C. Pease

WHAT lover of yachting, at least in this country, does not regret that development of speed in yachts has been at the sacrifice of graceful lines? A comparison in respect of form between Shamrock III. and Reliance certainly favors the Yale boat in no small degree, and some of our best yachtsmen even prefer Shamrock III. to our beautiful Columbia. With a finer entrance than Reliance, an under bilge, fuller at the gunboards, and altogether a more graceful curve to her midship section; with well-turned quarters and a clean run; with graceful sheer and a suggestion of rive in every curve, Shamrock III. is certainly an inspiring craft.

But "handsome" is somewhat in yachting as in other things, and so for the object in view we come down from the consideration of beauty of form to what that form is likely to do in actual speed through the water. Combined with form of hull are also the questions of sails and construction. An set of sails and quality of canvas, and in lightness, rigidity, and strength of spars and rigging there is not much to choose between Shamrock III. and Reliance.

(Continued from page 1155.)

Beverton comforted her, and meaning to lock her up at bedtime, suggested putting the harrowing remainder out of sight in some safe place; but she would not consent, even though she approved of the bolt on her door.

"I might find that knife in my sleep, no matter where you hid it," she said. "Lock me up, instead, and then, if I pick the lock, I cannot reach the knife."

So there it remained, and as they used their dining-room for a sitting-room, and as she had resolutely placed the bevilboard and glittering display squarely opposite her favorite seat, she had full opportunity of benefiting by any deterrent influence it possessed.

As to its possessing such an influence, she could only surmise and hope; however, she confessed that it fascinated her.

"I can't keep my eyes off it," she explained one evening, while they sat reading in the dining-room. "For the seventh time to-night I've found my gaze creep up to that knife. Why is it? And the hateful thing makes me sleepy—just looking at it."

"Well," responded Beverton, grimly, "if it could only keep you asleep, it would be all right, wouldn't it?" Then, observing that the speech had pained her, he arose, kissed the flushed cheek, and a d d o gently. "Don't look at it, girl; fear the other way and get interested in your book. What are you reading?"

"It's so hard to get interested," she said, wearily. "In what you don't understand. It's a sea novel." She held up the book and turned the leaves. "What does top-sail mean? Tom?—fore-and-aft, slew-up and clew-down? And here's a word, 'mizzen.' And clew—garnet—what does that mean? It's a strange language." "First if I know Pick the story out. Never mind the descriptions."

They resumed their reading, and it was ten minutes later when Beverton, aroused by the unusual quiet, looked again at his wife. The book lay on her lap, held open by her hands, but she was not reading—she was staring up at the hardware glistening in the lamp-light, with eyes wide-open, but almost as listless as the eyes of a corpse. And as Beverton looked at them, the eyelids fluttered together and closed in sleep. Beverton watched, and never saw before—so strange, hard, and murderous, it seemed.

"Grace," said the startled man, rising to his feet, "are you awake?"

"Awake," she screamed—screed, better describes the hard, raspy tones with which she answered him. "Aye, awake and ready—for down the mizzen hatch, and all hands drunk but the cook. What's

"Wake up, Grace," he commanded.

A convulsive shiver passed through her, she uttered a little gasp, then closed her eyes, and opened them with her natural smile.

"Why, I did go to sleep, after all, didn't I?" she asked, softly. "Yes, and talked and looked like the very devil. Let's see what you are reading." He took the book from her hands, but rather on the opened page nor upon any preceding could he find words similar to those she had spoken.

"What were you dreaming of when I spoke to you?" he inquired. "I didn't dream—at least, I don't remember. Did you speak?" She yawned and arose. "I'll go to bed, Tom," she said. "Lock me up."

Beverton read the book, after she had retired, from the beginning to the opening page; then sat down and pondered for into the night.

Next evening, on his way home, he visited a physician—a personal friend, who had once met Mrs. Beverton—and to him he stated the trouble.

"So if hypnotized," said the doctor, "by the usual method—staring at a bright object. Practically in the same condition as when sleep-walking. You can cure her by suggestion."

"How—what do you mean?"

"Don't you know that a somnambulist will always obey orders—will believe anything that is spoken in a firm, commanding tone, the same as though hypnotized?"

"She didn't look and act like it. And where did she get that sailor talk? It wasn't in the book she was reading."

"The book suggested the train of thought, nevertheless. The subconscious memory is absolute. She read those words at some time in her life, or heard them spoken—possibly in infancy."

"Well, it's too much for me. Can you take charge of her case?"

"No—although there is not, perhaps, a man in town more studied in this subject than myself. But there is no one more useful to operate. I am too subjective, as the phrase is—too good a subject, really hypnotized, and thus unable to control even a self-hypnotized person. As there is no professional hypnotist in town it devolves upon you."

"But I know nothing about it."

"Learn. Your natural mastery over her renders you the one above all others to treat her successfully. Let her stare at the knife again—my bright object. Lead back into her past, and sleep; then tell her that her fears or anxiety were groundless, and that she must never get up in her sleep again."

He gave Beverton as much of practical instruction as was safe for a novice to possess, and with some misgivings the half-erudite tempt to do so, he found unexpected developments in the situation that seemed to remove the solution farther yet from his grasp.

END OF PART I.

"Grace," said the startled man, arising to his feet, "are you awake?"

(Continued from page 1129.)

At least nobody will say that one is superior to the other in any appreciable degree. In construction of hull, both yachts are as light as their builders dare make them.

In form of hull, however, there is a distinct difference. While the *Reflexion* suggests the barrel-shaped hull with lines drawn out to ugly ends and the enormous lead-line hung underneath, *Almarock III*, still preserves some of the characteristics of a yacht, and draws her lines out fine only to give the water an easy flow and gain speed.

In the smaller classes, so far as it has been possible to judge, the *Reflexion* type has proved faster than any other, and it is because of this fact that yachsmen on this side of the Atlantic believe that *Reflexion* will supercede all other yachts. The hold-over of her design, compared with *Almarock III*, is certainly striking.

Sir Thomas Lipton now has all three of his cup yachts in this country, besides his big steam-yacht *Erin*, an ocean tug that is towed over *Almarock I*, and several other steam-craft under charter. Messrs. Morgan, Belmont, and Smith have quite large steamers for each of the three American ninety-footers, together with launches and all sorts of small craft, so that one can imagine what a business it is to race for the coveted America's cup. Sir Thomas Lipton's outlay in his efforts to win it must now be nearly a million dollars, and it costs more to defend the cup than it does to challenge for it. To prepare for race during a year, about all the time of those most interested, and the sport has become a game for millionaires and men of leisure.

**The Shoes We Wear**

Exports of boots and shoes for the fiscal year closed to end seem likely, according to official reports, to exceed those of any preceding year, both in quantity and value. In 1900 the number of pairs of boots and shoes exported was 378,574; in 1900 the number expected was 387,000, and in 1901 it had increased to 387,000, and in 1902 to 3,036,720 pairs, and in 1902 to 3,560,760 pairs; and in the present fiscal year the total will exceed four million. The value of boots and shoes exported in gross from a little over half a million dollars in 1902 to more than six millions in 1903. Of the six million dollars' worth of footwear exported in 1902, two million dollars' worth went to the United Kingdom, practically a million dollars' worth to British Australasia, over a half-million dollars' worth to Mexico, a half-million dollars' worth to Cuba, and about an equal sum to Canada. The increase in shipments from the United States to the United Kingdom has been very rapid during the decade, the total value in 1902 being but \$2100, and in 1902 \$2,032,800. The number of pairs sent to the United Kingdom from the United States was, in 1902, 1907, and in 1902, 1,925,396; while to British Australasia the number of pairs sent in 1902 was 8298, and in 1902 250,400; to Germany, in 1902, 412, and in 1902, 122,029. The total number of pairs of boots and shoes sent abroad was 3,000,760, two-thirds of which went to British territory, distributed as follows: United Kingdom, 1,035,206 pairs; Quebec, Ontario, etc., 280,164 pairs; British West Indies, 282,443 pairs; British Australasia, 550,469 pairs; British Africa, 164,997 pairs; Nova Scotia, New Brunswick, etc., 32,980 pairs; British Columbia, 25,020 pairs; Newfoundland and Labrador, 13,194 pairs; and 14,677 pairs; British Honduras, 49,221 pairs; British Guiana, 31,631 pairs; and British East Indies, 12,019 pairs, making a total of 2,330,982 pairs sent to British territory.

**Mascagni's New Venture**

That most strenuous of geniuses, Pietro Mascagni, is said to be planning a venture in a new field of artistic endeavor. He has stopped writing operas for the present, and is devoting his time to the composing of the comedy in three acts, with which one of the Roman theatres is to open in the fall. Nothing is said as to the subject of the play—in it possible that Mascagni has dramatized his recent American experiences?

### A New Field for Young Women

A CONSIDERABLE number of young women, according to a rural observer, are engaging accountants, to be making a success of it. A correspondent tells of being in a Chicago dry-goods store on a Saturday afternoon, not long ago, when she saw one of the sales-girls receive her wages for the week. She was paid \$2, having been in her place from eight o'clock in the morning until six o'clock in the evening every day; it was necessary for her to be well and more so less extensively dressed, to be constantly on her feet, and to keep her temper and her self-possession, frequently under trying circumstances. On the other hand, says our observer, take the case of the farmer girl. None makes less than \$2 per week, and many make \$5. They work only two or three hours a day; their surroundings are conducive to good health and cheerfulness, and they can dress as they feel inclined. The writer mentions the case of two young girls who sold last year an average of \$5 worth of eggs every week during the spring and summer. Nor did they sell all they might have disposed of, for they raised over 400 young chickens besides.

### Uncle Cyrus Celebrates the Fourth

Drawn by E. W. Kemble

"Used to call 'em 'chairs' when I was a boy. As I remember 'em, they was a heap o' fun to 'em."

The fun begins.

And starts down the back, following the usual custom.

These following a course, and 'by no' means, ...

Comes out the pants' leg. Ma. in the scene.

Ma. "Well, Cyrus, if ye think ye've got all the fun ye want make it, ye might show it away."

### Love-making in Various Lands

A curious inquiry into amorous customs and traditions has lately met with some interesting observations on "the way of a man with a maid" in different parts of the world. In Japan, it appears, the affair is carried on with characteristic delicacy. There, the lover who wishes to declare his love throws a bunch of plum-blossoms back into the lady's conveyance as she enters it on her way to the wedding of a friend. Should she fasten them to her gown, it signifies that the suitor is accepted; should she throw them away, however, the lady is rejected him. In the arctic regions a less amiable habit prevails. The Eskimo lover cares little for the usual amenities of civilization; he walks boldly into the fair one's abode, seizes her by the hair, or by her garments of fur, and drags her away to his home.

The Hungarian gypsies use cakes as love-letters. A cake is baked into the sweetest, which is then thrown at the favored lady as she passes by. If she eats the cake and retains the core, all is well; but if she should fling back the silver, it would be fatal to the lover's hopes. Among the savages of the Arabian desert the girl is approached without ceremony while pasturing her flock. She resists strenuously, attacking her suitor with sticks and stones. If he succeeds in driving her into her father's tent she is his, but if she should resist him, lifelong disgrace would be his portion.

# Schlitz

## A Doctor's Reasons

Patient: "Why do you say Schlitz beer? Isn't any other beer as good?"

Doctor: "Perhaps; but I don't know it. I do know that Schlitz beer is pure."

Patient: "What do you mean by pure?"

Doctor: "I mean free from germs. Impurity means bacilli; and in a saccharine product like beer bacilli multiply rapidly. I do not recommend a beer that may contain them."

Patient: "How do you know that Schlitz beer is pure?"

Doctor: "I have seen it brewed. Cleanliness is carried to extremes in that brewery. The beer is cooled in plate glass rooms, is filtered air. The beer is then filtered. Yes, after all these precautions, every bottle is sterilized—by Pasteur's process—after

it is sealed. I know that beer treated in that way is pure."

Patient: "And is pure beer good for me?"

Doctor: "It is good for anybody. The hops form a tonic; the barley a food. The trifle of alcohol is an aid to digestion. And the custom of drinking beer supplies the body with fluid to wash out the waste. People who don't drink beer seldom drink enough fluid of any kind. A great deal of ill-health is caused by the lack of it."

Patient: "But doesn't beer cause biliousness?"

Doctor: "Not Schlitz Beer. Biliousness is caused by 'green' beer—beer that is insufficiently aged. But Schlitz beer is always aged for months before it is marketed."

*Ask for the brewery bottling.*

*Love is not here the sentimental emotion of the ordinary novel or play, but the power that purges the weaknesses and vivifies the dormant nobilities of men and women.*—The Academy, London.

*Julie Le Breton has the mysterious gift of the emotions; her stormy, impulsive nature sets the nerves of others vibrating.*—The Milwaukee Free Press.

## The Redfields Succession

By HENRY B. BOONE  
& KENNETH BROWN

*Authors of "Rastover Court House"*

The scenes of this story are laid principally in Virginia, and give an accurate and entertaining account of Virginia country life. The principal characters are a Southern girl and an impecunious newspaper reporter, who, however, is a fine fellow at bottom, and a descendant of an old Virginia family. The love story is cleverly managed and piques the reader's interest from first to last. Scenes of fox hunting and other country sports are described with much dash and color.

Post 8vo, Ornamented Cloth, \$1.50

(Imprint of R. H. RUSSELL)

## The Black Lion Inn

By ALFRED HENRY LEWIS

*Author of the "Wolfville" Stories*

Mr. Lewis is the legitimate successor of Bret Harte. His stories of life in the West are classics. In his new book the cow-punchers, miners, half-breeds, and adventurers meet at the Black Lion Inn and tell their stories. The tales are all full of life, vigor, and that racy American humor which has already made the author's work so popular.

## COMMENT

Or recent political incidents none is more important than the position taken by the Democrats of Iowa in their State convention held on June 24 at Des Moines. To appreciate the significance of the incident, we should bear in mind that Iowa adjoins Nebraska on the east, that Greenbackers and Populists successively exhibited a good deal of strength in the State, and that on the eve of the convention Mr. Bryan announced in the *Commonwealth* that all self-styled Democrats who would not uphold the Kansas City platform would be traitors to their party. Nevertheless, the Democratic State convention of Iowa, by a vote of 463 to 354, refused to accept a minority report, signed by four members of the committee on resolutions, adding to the platform reported by the seven members constituting the majority of the committee a plank reaffirming the Democratic national platform of 1900. It will be observed that not merely the Free Silver plank, but the whole of the Kansas City platform was repudiated, and when the Bryanites attempted to save at least that part of it which demanded government ownership of railways, they were defeated by 628 to 190. This action of the Iowa State convention must be recognized by Mr. Bryan as conclusive proof that west of the Mississippi, and even in his own neighborhood, his influence has been seriously weakened,—although it is not yet extinct.

It may be that he and his friends will be able to frame the State platforms of the Democracy in Nebraska and Colorado, but it is predicted that, if they are, even the last-named State, which is their stronghold, may be lost. So far as the next national convention of the Democracy is concerned, we now feel assured that the conservative element will be predominant therein, and it has even become improbable that Mr. Bryan's friends will muster a third of the delegates. He will, therefore, be unable to forbid a nomination, however offensive it may be to him personally. We adhere, nevertheless, to our opinion that, so long as his leading ideas are discarded, a conciliatory policy should be adopted toward Mr. Bryan. No prudent Democrat can wish to drive any voters out of the party, so long as no sacrifice of principles is needed in order to retain them. We recognize, as Mr. Bryan must recognize, that he is the victim of events, which have brought about a

revolution of opinion within the Democratic party. He has also maintained that it is the duty of professed Democrats to support the candidate of their party, even if they do not entirely approve of its platform. He cannot reasonably refuse in 1904 to be bound by his own rule, and we do not believe him capable of such a refusal, provided, of course, he is not driven out of the Democratic camp by contumacy, but treated with the personal deference due to a man who has twice been the standard-bearer of a great party in a Presidential campaign. Holding that the ranks should be closed up, and that the whole Democracy should now march forward under new leadership, we are glad that Mr. Bryan has accepted an invitation to visit ex-Mayor Taggart of Indianapolis, who is a friend of conspicuous Eastern Democrats, and their candidate for the chairmanship of the Democratic National Committee.

The platform adopted by the Democratic State convention of Iowa deserves attention for its positive as well as its negative features. In its attitude toward the tariff the convention was naturally averse, not only by tradition, but by its belief that its Republican opponents would fail to advocate the "Iowa Idea." In its platform, accordingly, it calls for the removal of the tariff from all trust-made goods, and demands that all tariff schedules be adjusted with a view to a tariff for revenue only. We know of no commodities that would be described by anybody as "exclusively trust-made," except petroleum and anthracite coal, and the term is not fairly applicable to the latter product, because there are many individual owners of anthracite mines. In the demand that all tariff schedules be adjusted with a view to a tariff for revenue only, the Democratic convention went much farther than the Republican advocates of the Iowa Idea desired to go, or than Mr. Gorman would permit the United States Senate to go, when the Wilson tariff bill came up for consideration in that body. It might have been wiser for the convention to ask only for that which there is some chance of getting, to wit, a readjustment of the Dingley tariff to the changed conditions of industry and trade. The present includes the loss, however, and those who desire a tariff for revenue would, of course, assent to a readjustment of certain schedules. The Iowa Democratic platform, therefore, may attract some Republican voters that will be alienated by the expected inwilligness of their own party to favor any change in the tariff at the present time.

As for the Imperialist plank in the Iowa platform, it strikes us as a perfunctory, for the vitality of the issue has been practically extinguished by Governor Taft's exemplary administration of the Philippines, and by the remarkable advance of Porto Rico in prosperity. Nobody doubts that a large measure of self-government will in due time be conceded to Porto Rico and to the more civilized portions of the Philippine archipelago, and it is scarcely reasonable for the Iowa Democratic convention to demand that such a step shall be taken without delay. Another proponent of the convention will excite some surprise among those who recall the order with which, in the past, many Iowa Democrats have urged an expansion of the circulating medium. Now, on the other hand, the Democracy of the State condemns the proposal to permit national banks to issue circulating notes based on securities other than government bonds. It is hard to reconcile the opposition to this proposal with the vehement assertion that the volume of the currency must be made adequate to the needs of the business interests of the country. Well timed and laudable, on the other hand, is the demand for a thorough investigation of the Post-office Department, and of other executive depart-

ments, by a committee of Congress. Such an inquiry will undoubtedly be ordered; provided, of course, Mr. Roosevelt leaves anything to investigate.

The mischievous effect of the plank inserted last year by Mr. Hill in the Democratic platform of New York—we refer to the demand that the Federal government should take possession of the anthracite-coal mines of Pennsylvania by the right of eminent domain—may be distinctly recognized in the programme formulated by the Democrats of Iowa. The Iowa platform asserts that, when the sources of supply of any product are in the ownership of those who combine to extort from the people unreasonable prices for such product, it is the duty of the Federal government to take such steps as may be needed to secure an equitable distribution of such product, with fair compensation to the owners of the same, so that nature's design in making provision for the wants of man may not be perverted into means for his oppression. We do not for a moment deny that the expediency of empowering the Federal government to exercise a right of eminent domain in the case of fuel, or of any other necessity of life, might be urged with a good deal of force in a campaign aimed at the sanctification of such power by an amendment of the Federal Constitution. We have often pointed out, however, that no such power at present exists, and we do not believe that it will ever be conferred on the Federal government by two-thirds of each House of Congress and by three-fourths of the States. To us, therefore, the question seems a purely academic one, whose function in a party platform is merely decorative.

The same thing may be said of the other Socialistic feature in the Iowa programme. The convention has asked for such changes in our law, statutory or constitutional, as will limit the charges by railroads to such an amount as will yield only a reasonable return on the capital actually invested. The word which we have italicized indicates that the framers of the resolution are aware that, under the Constitution as it stands, the Federal government cannot pretend to exercise any control over the dividends paid by railways. It follows that this demand must also be regarded as simply a rhetorical flourish. It is, however, a matter of serious significance that the Iowa Democrats should have felt it necessary to put forward such a demand. Such extravagant and hollow appeals to believers in State Socialism attest a consciousness that an anti-trust campaign can no longer be conducted on the lines followed in 1900 and 1896, because, so far as the powers given by the existing Federal Constitution and by the anti-trust act are concerned, Mr. Roosevelt has already turned them to account. In other words, he has captured the whole of the Democratic artillery and ammunition hitherto employed against the "trusts," and thus some of the Democrats who desire to touch the issue at all think themselves driven to take a new and untenable position. We call the position untenable, because, first, it cannot be reconciled with the Constitution as it stands; and, secondly, no amendment of the Constitution which would render it tenable is attainable.

We are glad that President Roosevelt has turned a deaf ear to those advisers who would have dismissed him from taking official note of the Kishinef incident by presenting, with his official sanction, the petition addressed to the Czar by the United Hebrew Congregations on behalf of their persecuted co-religionists in Russia. It is perfectly true that the punishment of the officials responsible for the failure to avert the massacre of Jews in Kishinef and the prevention of similar atrocities in other Russian cities may be described by the St. Petersburg government as matters that lie within the sphere of its internal affairs. It is also true that the condign punishment of the authors of the hideous tragedy enacted in the palace at Belgrade is primarily the business of the new Serbian government. Nevertheless, all civilized powers, with the exception of Russia and Austria, have refrained from recognizing the new sovereign, who owes his throne to wholesale slaughter, and it is to be hoped, will continue to refrain, intends to pursue with reference to the assassins. Moreover, the Russian Czar and the Hapsburg Emperor have both named themselves bound by the dictates of humanity to demand that the murderers of King Alexander and Queen Draga shall suffer the penalties which their crimes deserve.

Why should such respectful and earnest representations, which, when made to the King of Serbia, are regarded as eminently proper, be looked upon as unseemly and inadmissible when addressed by President Roosevelt to the Czar? Was the Belgrade massacre more appalling than that which took place on a much larger scale at Kishinef? Is the former one-tenth part as likely to be repeated as the latter? If both these questions must be answered in the negative, what becomes of the assertion that the Czar's dignity will not permit him to receive at Mr. Roosevelt's hands the pathetic prayer addressed to him by the United Hebrew Congregations? As a matter of fact, it was not only the President's duty, as Mr. Roosevelt promptly recognized, to forward the petition, but had he refrained from doing so, he would have disregarded some of the most honorable examples set by his predecessors. As we have previously pointed out, when, in 1882, a massacre of Russian Jews similar to that at Kishinef, but on a smaller scale, took place, our State Department was directed by President Arthur to express to the Czar's government our earnest hope that the Russian Jews would be shielded from outbreaks of race hatred. Again, in 1891, when a massacre had restricted Russian Israelites to certain provinces collectively known as the Jewish Pale, and had imposed severe disabilities even upon the Jewish residents in those provinces, Mr. Blaine, then Secretary of State, was authorized by President Harrison to say, through our minister at St. Petersburg, that our government viewed with serious concern the harshness with which Hebrews were treated in Russia. There is no reason to think that those remonstrances chilled in the slightest degree the friendliness with which the United States had been regarded by Russia, and we do not believe that Mr. Roosevelt's respectful expression of a hope that precautions will be taken against a repetition of the Kishinef massacre will provoke resentment on the part of the Czar Nicholas II.

As we took for granted, Mr. Roosevelt has never seriously considered the selection of Senator Quay for the chairmanship of the Republican National Committee in the campaign of 1901. The foolish suggestion seems to have emanated from friends of the Senator, who mistakenly assume that Republicans in the country at large are as indifferent to character-affecting personal reputations as the Republicans of Pennsylvania have shown themselves to be. Another candidate put forward for the chairmanship was Senator Lodge, who is not only a personal friend of Mr. Roosevelt's, but has evinced considerable skill in the management of political campaigns in Massachusetts. Mr. Lodge, however, is comparatively unknown to the financiers of New York, and to the manufacturers of Philadelphia and Pittsburg. Moreover, the selection of an Eastern man might cause disaffection in the West, and undo part of the work which Mr. Roosevelt accomplished for himself in his recent tour. The ideal man for the post is, of course, Senator Hanna, and we entirely credit the report that the President has asked him to retain it. Whether the Senator will consent to remain chairman seems uncertain, however, for he is exceptionally loyal to his friends, and he may stipulate that Mr. Payne shall be allowed to remain Postmaster-General, and that another lieutenant of his, Perry S. Heath, shall continue to be the secretary of the Republican National Committee.

Yet, nothing is more certain than that the Republican party cannot afford to carry Heath any longer, and every week seems to emphasize the fact that Mr. Payne's usefulness to the Administration has ended. If Mr. Roosevelt can manage to secure Senator Hanna's services without seeming to abate his determination to purge the Post-office Department, and bring to justice all the evil-doers that are now, or have been, connected with the postal service, we may take for granted that he will do so. No one else can even pretend to vie with Senator Hanna as a collector and distributor of campaign funds. He enjoys to an unparalleled extent the confidence of Wall Street magnates and of the manufacturing interests. Nothing is more foolish than the notion that the good-will of Wall Street, by which we mean the conservators and administrators of vast capital, is a detriment to a candidate. That good-will was one of the great forces behind Mr. Cleveland in 1892, and behind Mr. McKinley in 1896 and 1900. In the first-named case, it proved strong enough to more than counterbalance the organized and vehement opposition of American manu-

facturers, whom Mr. Cleveland had challenged by his declaration in favor of a tariff for revenue. It should also be borne in mind that Mr. Hanna is more popular with the plain people of the United States, and even with the labor element, than is any other man who is equally trusted by the wielders of great capital. The change in this respect which has taken place in the last three or four years is phenomenal. Mr. Hanna has outlived cartoons.

The rogues in the Post-office Department who have expected to be shielded from detection or conviction by means of their political "pull" must have shivered as they read the published letter from President Roosevelt to Attorney-General Knox. Everybody knows that Mr. Roosevelt did not appoint the scoundrels who have been indicted, or are threatened with indictment, for malfeasance in office. There is no possible way in which he can be held responsible for their misdeeds, provided he does not connive at their escape from punishment. He is not the kind of man to allow himself to drift under the influence of dishonest politicians into the position of an accessory after the fact. He is neither short-sighted enough nor weak enough; nor is he under any obligation to be "loyal" to rascals, never having accepted any favors at their hands. We repeat what we said some time ago, that by character and situation Mr. Roosevelt is just the man to thoroughly cleanse the postal service. In the letter to Attorney-General Knox, the President points out that there can be no greater offense against the Federal government than a breach of trust on the part of a public official, or the dishonest management of his office. Mr. Roosevelt adds that, of course, every effort must be made to bring such offenders to punishment by the utmost rigor of the law.

Aware that the delays experienced in the office of the district attorney of the District of Columbia have excited suspicion, Mr. Roosevelt directs the Attorney-General to accelerate the prosecution of the postal delinquents, by detailing some of his present staff, or by appointing special assistants, not only to take up the cases in which indictments have been or may be found, but to investigate all charges that have been made against officials in the postal service, with a view not only to the removal and prosecution of all guilty men now in the service, but also to the prosecution of guilty men, whether now in the service or not, where the cases are not barred by the statute of limitations. The words italicized show that Mr. Roosevelt does not agree with Postmaster-General Payne in thinking that an offender can escape punishment by resignation. It is plain that it matters not an iota to the President by whom a guilty person was appointed. This means that we shall here know more about ex-Cashier Tallich's charges being a covert attack upon Mr. McKinley. No true friend of the late President's will hold that, in order that his memory may be honored, it is necessary to let rascals appointed by him go scot-free. We observe with peculiar satisfaction that, in pursuance of Mr. Roosevelt's order, Attorney-General Knox has appointed, not professional politicians open to partisan influence, but Mr. Charles J. Bonagante, of Baltimore, and Mr. Holmes Coarad, former Solicitor-General, as special attorneys to assist in the prosecution of dishonest employees in the Post-office Department. These are dark days for the "new crowd," which, according to Heath, took possession of the public offices after March 4, 1897.

We are not surprised to hear that the first skirmish in the Bogota Congress over the canal agreement with the United States—a skirmish provoked by a preliminary and incidental question—has resulted in the disavowal of the opponents of the treaty. Before they got to the Colombian capital, a majority of the delegates seem to have thought that the document provisionally signed by Dr. Herran, on the part of President Marroquin, was unsatisfactory on two grounds, namely, that adequate guarantees had not been secured for the maintenance of Colombian sovereignty on the isthmus, and that the pecuniary consideration for the canal franchise was too small. By this time some of the delegates have probably been convinced, first, that the loans of ten million dollars in gold and the annual rental to be ultimately paid represent the utmost *provis* that can be wrung from the United States; and, secondly, that the United States will not go a hair's breadth farther in the way of recognizing Colombia's sovereignty on

the isthmus. Not a few international lawyers think that we have already gone too far, because the judicial and police arrangements agreed upon seem likely to lead to a conflict of authorities, while, on the other hand, by guaranteeing the sovereignty of the Bogota government we bind ourselves to assist any future attempt of the province of Panama to secede from Colombia, and erect itself into an independent republic. Especially is the latter covenant of questionable expediency.

That Colombia is likely to fare worse if she does not ratify the present treaty was brought home to the members of her Congress by a pithy communication from the manager of the Panama Canal Company. Cabling to his agent at Bogota, he pointed out that, unless the offer of the United States should be accepted, Colombia would lose an opportunity of advancement in prosperity that would never recur. It would never recur, because the United States would hangle no longer with Colombia, but would forthwith adopt the Nicaragua route, while no other foreign country, and no foreign corporation, would venture to complete the Panama Canal against the wishes of the Washington government. He also pointed out that, if the present treaty should be ratified, Colombia would never lose her control of the isthmus, her sovereignty being guaranteed by the great American republic, whereas, if the treaty should be rejected, she might lose control to-morrow, for a movement in favor of independence would almost certainly be started in the province of Panama. This hint may have tremendous weight. It means that the large stockholders in the Panama Company would be interested in fomenting and sustaining an insurrection in Panama against the Colombian government. Nor is it likely that, under such circumstances, the revolutionists would lack friends in the United States, although, of course, our Federal government would observe a strict neutrality, and, in pursuance of the treaty of 1846, would maintain order on the Panama Railway.

We have no desire to dispute the sincerity of the friendship for the United States expressed by the Emperor William II. in the speech delivered by him at a banquet in Kiel. He felt sure, he said, that no serious citizen of America or Germany believes that harmony and the continuance of mutual interests could be disturbed. The two countries, he thought, were knit too closely together by the permanent factors in their relationship to become inimical to one another. Their reciprocal good-will was too strong to allow of a development of antagonism. He seemed to consider that the fact that so many hundreds of thousands of Germans live and thrive in the United States would render easier the task of smoothing the path of peaceful and progressive relations. Admitting that these are the present sentiments of the German Emperor, how long can we expect him to retain them against the drift of public opinion in his own country? Even if he were as autocratic as is the Czar—which he is far from being—he would still be amenable to the pressure of public opinion: it is well known that Alexander II. was forced into the Russian-Turkish war of 1878 against his will. In the past the Hohenzollern rulers have shown themselves peculiarly sensitive to the views and feelings of their subjects.

Now there is no doubt that, among well-informed and far-seeing Germans, there is a deep-rooted conviction that a collision between the United States and the German Empire is inevitable, not only because of commercial rivalry, but because, through our Monroe Doctrine, we forbid the fruition of Germany's expansionist aspirations, which can only be satisfied in South America. Kaiser William II. says he trusts that no serious citizen of Germany believes that harmonious relations with the United States can be disturbed, yet he cannot be unacquainted with the immense mass of literature published during the last few years, and produced by university professors, by political economists, who proclaim a precisely opposite opinion. Extracts from scores of these publications have been translated and forwarded to the *London Spectator* by a correspondent. The authors quoted express regret that Germany did not take advantage of our war with Spain to secure by purchase the Danish West Indies, and they make it plain that the most southerly province of Brazil, in which there are already about 150,000 German colonists, is earmarked for future acquisition by the German

Empire, though it is admitted that nothing can be done in this direction until the question whether Germany means to obey the United States' order of "Hands off!" in South America has been answered in the negative. An influential writer, whose treatise was published in 1906, suggests that, pending some definite conclusion with regard to southern Brazil, a beginning might be made in Venezuela, by picking up a harbor. Dr. Winter insists that equality of treatment with the United States in South America is the theory which Germany, both on principle and as occasion serves, must oppose to the Monroe Doctrine and defend by force. Yet Dr. Winter is pre-eminently one of the "serious citizens" of Germany who cannot, the Kaiser says, believe that the harmony and mutual interests of the United States and Germany can be disturbed.

The mine owners and operators having accepted the representatives of the miners appointed by the district labor-unions after these had been endorsed at a miners' convention, the Board of Conciliation is now sitting in the anthracite region. If the six members of the board fail to reach a decision regarding any of the questions in dispute, recourse will be made to an umpire, who, there is reason to believe, will be Judge Gray of Delaware. It now appears that, even if every question in dispute should be decided in favor of the miners, they will be worse off than they would have been had no award been made, and had they accepted the terms voluntarily offered by Mr. Baer, the President of the Reading Coal Company. It may be remembered that, when the award was announced by the Anthracite-Coal Strike Commission, a local labor leader, William Wilhelm, disputed the assertion made by Mr. John Mitchell that the award was a victory for the United Mine Workers. He said that, on the contrary, he himself, when acting as an intermediary, had received a proffer of better terms of settlement while the strike was in progress; and that, moreover, the offer publicly made by President Baer before the commission, of a general increase of five per cent. in wages, would have been of greater benefit to the employees viewed collectively than was the award made by the commission. This statement, it appears, is borne out by a tabulation of the wages received by miners and laborers of all kinds employed by the Philadelphia and Reading Company, for this tabulation shows that sixty per cent. of the men at work in the mines do not benefit, even ostensibly, by the award of the commission.

It is true that the miners themselves receive a higher rate of wages, but they work less and earn less money than they did before the strike. As for the general laborers, drivers, breaker employees, etc., they receive no advance at all in wages, and the companies, resenting the arbitrary attitude of the miners' union, have withdrawn many of the privileges formerly voluntarily granted. It is computed that the general advance of five per cent. proposed by President Baer would have made a difference in wages throughout the anthracite region of \$250,000 monthly. That is to say, the employees in and about the anthracite mines of Pennsylvania would, in the course of a year, have been three million dollars better off had they accepted Mr. Baer's voluntary offer, instead of waiting for the commission's award. When these facts have been brought home to the United Mine Workers, it is probable that they will desire to see Mr. Roosevelt's experiment repeated. There will be, at all events, no doubt as to the direction which the sympathies of the coal-consuming community will take. For many weeks consumers were compelled to pay extortionate prices for fuel, on the plea that the vital interests of the miners were at stake, whereas the net outcome of the strike and of its settlement by an unconstitutional commission is that the miners will have lost, by the end of a year, the sum of three million dollars which they might have received. The result would be ridiculous, if the hardships suffered by the poor through a worse than fruitless strike had not been pitiable.

The one item of recent news which is calculated to bring any comfort to the editor of the *Commoner* is the announcement that Mr. Tom L. Johnson, Mayor of Cleveland, has consented to run this autumn for the Governorship of Ohio, against Mr. Myron T. Herrick, the Republican nominee. Nobody expects to see Mr. Johnson elected, but his motive for

entering the contest is twofold. In the first place, he will thus acquire absolute control of the party machinery in the State during the coming Presidential year, and will be in a position to name the Ohio delegates to the next Democratic national convention. This means, of course, that Mr. Bryan will have one sturdy and powerful supporter from the Central West. If Mayor Carter Harrison, of Chicago, also succeeds in controlling the whole, or even a considerable part, of the Illinois delegation, Mr. Bryan's following in the convention will be larger than of late has been expected, though we still think that it will fall somewhat short of a third. He must long since have renounced the hope of dictating the platform, but he has evidently clung to the belief that he might secure delegates enough to veto an objectionable nomination. The other motive which must have prompted Mayor Johnson to assume the onerous and expensive role of standard-bearer in Ohio this year, is the most unreasonable hope that he may manage to return a majority of the members of the next Legislature, and thus defeat Senator Hanna's aspiration for another term in the United States Senate.

It so happens that in Ohio it is much easier for the Democracy to capture the Legislature than it is to elect a Governor. If Mayor Johnson could secure the United States Senatorship for himself, he would forthwith become a person of national importance, and might be heralded in certain quarters as a candidate for the Democratic nomination for the Presidency. His situation would, in fact, be analogous to that occupied by James A. Garfield in 1880, for it will be remembered that the latter, when nominated at Chicago for the Presidency, had just been elected a United States Senator from Ohio, but had not taken his seat. There is no doubt that, from many points of view, Mayor Johnson would seem an ideal candidate in the eyes of the Bryanites, and the fact that he has never looked with favor on the free-silver heresy would, taken by itself, commend him to the Gold Democrats. His advocacy, however, of Henry George's "single tax" and of divers features of State socialism would be almost certain to repel the conservative element of the Democratic party, which, after two defeats, is indisposed to lend any further countenance to Populistic ideas. In the minds of the men likely to control the next Democratic national convention, Mayor Johnson may be discredited by the fact that in his canvass for the Governorship of Ohio he will command the zealous support of the wild agitator, Mayor Jones of Toledo, and of the labor element which the latter may be able to attract.

It will be a serious setback for Senator Gorman and a slight also upon the prospects of the Democratic candidate for the Presidency, who cannot afford to lose Maryland, if the Democratic candidate for the Governorship of that State should be defeated this year. Mr. Edwin Warfield, president of the Fidelity Trust and Deposit Company of Baltimore, who is the leading candidate for the Democratic nomination, has announced that he will not spend a dollar above the legitimate expenses of the campaign, but will render an itemized statement of every cent disbursed, with the names of the parties to whom he pays it, and a declaration of the purpose for which it was paid. Experienced politicians say that, should he adhere to his determination, he would inevitably lose the State, which could not be carried by the Democracy for less than fifty thousand dollars. It seems that at recent elections in the lower counties, the votes of white men have commanded fifty dollars apiece, and that as much as seventy or eighty dollars was paid at the recent primaries in Queen Anne County. The Democratic politicians who insist that Mr. Warfield will be defeated if he refuses to connive at corrupt practices seem oblivious of the fact that their assertion is tantamount to an admission that Maryland would go Republican if there were so improper use of money. For it is well known that Mr. S. A. Williams, who is slated by the leaders of his party for the Republican nomination, has hitherto been one of the most outspoken opponents of ballot corruption in the State.

It turns out, after all, that Massachusetts has one bit of coal legislation to show for the ten-thousand-dollar investigation with which a committee of the Legislature began several weeks in the early part of the year. Succeeding the failure of three radical propositions as recently described in the WEEKLY, the coal committee brought out its last hope—

a bill for the licensing of coal dealers. Of all the remarkable pieces of law-making which this Legislature has made its own, this, passed on the last day of the session, is close to being the chief. It provides that, each municipality enacting such terms and conditions as it chooses, all dealers in coal or coke must take out from the office of the secretary of the commonwealth a license for a fee not to exceed five dollars. On the secretary is placed the duty of hearing complaints, and he may, subject to the review of the courts on appeal, revoke the license for the use of false weights and measures, for charging exorbitant prices, for counting or weighing unskillfully with other persons, for unlawfully discriminating in the conduct of the business, or "for any other reason"—the last being a provision which might excite alarm were not the secretary a man of sense superior to that of the Legislature. Fines of not more than fifty dollars, and imprisonment of not more than six months may be imposed for violation of the law—though they will not be, for nobody, not even the legislators themselves, has the slightest idea that the statute is good for anything. Except for the five-dollar license fee, some of it is probably unconstitutional, and all of it is certainly impracticable. A member of the Governor's council is credited with the saying that the Legislature of 1893 was "the greatest aggregation of incompetents that ever sat in the State-house"—a judgment which the study of this shrewd enactment goes far toward confirming. To the people of the commonwealth there is the consolation that the general court might have done far worse in coal legislation, as is evidenced by the measures which it killed. These were mischievous; this is only stupid. It is a ridiculous ending to an agitation that started out to uproot and overturn everything in the Massachusetts coal trade.

The result of this year's college boat-races was a triumph for education. Yale, on June 24, beat Harvard in three races on the Thames; Cornell the next day beat all her antagonists in three races on the Hudson. Cornell's university crew was a wonder both in material and in training, and romped away from the others without any trouble, finishing far in the lead. A good many farmers' boys and other mature youth who are well served by manual work go to Cornell, and help her to keep first place among the colleges in rowing, but what has more than even that to do with her continuing succession of victories is that she has in Courtney the most skillful professional coach in the rowing business. Her crews are the best taught college crews that row. And Yale this year was better taught than Harvard. Yale has an excellent professional coach in Kennedy, and in at least two races of the three rowed on June 24, superior coaching won. Rowing is an exceedingly fine art. The professional teachers of it seem to beat the amateur teachers about as regularly as professionals beat amateurs in other pursuits. There are objections to professional coaches and trainers, but among the strong points in their favor is this, that their labors make for the turning out of crews that are physically fit, and for the economical use of the oarsmen's strength. Boat-races, especially the four-mile races, are dangerous affairs for men not in perfect physical condition, and thoroughly expert in their business. One does not like to see the strength of likely young fellows misapplied, nor to see them too much used up by their exertions. Perfect rowing in a perfectly trained crew is comparatively easy for the men. The pace that kills in boating is the pace of a beaten crew, gone stale in training, and not rowing together. On the whole a college which has the right sort of a professional coach for its oarsmen seems lucky, not so much because it will win the races it ought to win, as because its young oarsmen are the safer by being in the hands of a trained expert who can give all his time to looking after them.

One of this year's great June floods was regular and according to the annual programme. It was the flood of Commencement discourse from the colleges. It covered all subjects, and most points of view, and a great deal of it was edifying. But its volume was, as usual, so great, that much of it got less notice than it deserved. There were at least two Harvard deliverances the echoes of which have not quite died away. One was a piece about Harvard and the Individual contributed by Professor Briggs—"ex Deum" Briggs—to the Boston Transcript. Dr. Briggs has just been chosen president of Radcliffe, but still will belong to Harvard, and none knows the modern Harvard better than he does. When

he writes of undergraduate life there he writes as an expert, whose finger for eleven years never missed a beat of the undergraduate pulse. He defends his college against the charge of exclusiveness, combating the idea that a strange lad is very much a stranger there, and that—now the university is so big—he may go through his whole college course and be a stranger still. If he does it in his own fault, says Dr. Briggs, and goes on to tell of the means and appliances that Harvard has of assimilating the lads who come to her without ties or friends in Cambridge. There are so many of them, that it has become necessary to systematize the business of helping them to find themselves. A committee of trustees and undergraduates receives the freshman and offers him the freedom of the university; an adviser is assigned him from the faculty, possibly a junior or senior invites him to his room to meet some men, and he is entertained—not housed, but really entertained. Ladies give teas for him in Brooks House; if he is sick the medical adviser goes to see him, and sends him a doctor if he needs one, or to the college hospital if the case is serious. And Dr. Briggs avers that the way that some students look after other students with whom they have slight acquaintance, or none at all, is more interesting than some things in the story-books.

This all sounds as though there was kindness left in the world in spite of all the trusts and all the competition, and as though the processes of civilization were still unfolding in some sheltered places, and would in due time produce a crop. It does not greatly matter how lads get together, if only they do get together. When they are few they may begin by pulling hair if necessary, but when they are very many, acquaintance cannot start so intimately as that, and more formal processes of approachment are necessary. At the luring investigation at West Point two or three years ago a cadet testified that he put a plebe through certain courses of sprouts out of sheer kindness, and so that the plebe would not feel neglected. That was really possible. It was better to have a freshman than to neglect him altogether, but here at Harvard, as doubtless in the other big colleges, hazing, long outgrown, is succeeded by a pacific seeking out of green men, and offering them social opportunities. The sun really "do" more, and the world also.

Harvard made Professor William James, the psychologist, an LL.D. at this year's Commencement, and Dr. James—who is not a Harvard graduate—stood up at the Commencement Dinner, returned his thanks, and complimented the university on being still the best place in the country for a lonely thinker. Speaking after the ball games, but before the boat-races, and speaking as an outsider, he gave Harvard credit for her "persistently atomistic constitution," for her tolerance of exceptional and eccentricity, and for individual quality which "made it impossible to 'make single, one-sided regiments of her classes.'" Her great special attraction, he declared to be that "she cherishes so many vital ideals, yet makes a scale of value among them; so that even her apparently insensible second-enthusiasm (or only occasional first-enthusiasm) in intercollegiate athletics comes from her seeing so well that sport is but sport, that victory over Yale is not the whole of the law and the prophets, and that a pugna is not the crack of doom." It is evident from Dr. James's use of language that he was a James—and the brother of his brother Henry—before he became a Harvard doctor, and after. He certainly made the finest extenuation of Harvard athletics that was ever made. It was a clothing of her with defeat as with a shining garment, and inviting her to ride ahead of the band. And it was only an aside, too; something thrown in with the elucidation of his main point that "the only rational ground for pre-eminent admiration of any single college would be its pre-eminent spiritual tone." The chief token by which he inferred that Harvard had a pre-eminent spiritual tone was that she attracted thoughtful persons in large numbers and from afar, and cherished them. "The colleges," said he, "in their more club-house quality, cannot differ widely. All must be worthy of the loyalties and affections they arouse. But as a nursery for independent and lonely thinkers, I do believe that Harvard still is in the van." Maybe so! At any rate it is an interesting opinion, based on grounds that all critics of colleges may find it profitable to remember.

## Recent Discussion of the Fifteenth Amendment

We are not among those who hold that a repeal of the Fifteenth Amendment of the Federal Constitution would be practicable at the present time. Until the change of public opinion with reference to that amendment—change which has already made considerable progress, shall have become much more widely prevalent in the Northern section of our country, it is improbable that the necessary assent of two-thirds of each House of Congress and of three-fourths of the States could be secured. Not on that account would we deprecate the discussion of the subject as premature or fruitless. Only through discussion it is possible that Northern citizens should arrive at a sober second thought concerning the matter. It is useful, therefore, to consider all suggestions relating to the Fifteenth Amendment that emanate from men of extensive observation and trained intellect. Professor Goldwin Smith, whose knowledge of our political and social evolution has been attested by a remarkable history of the United States, has lately published some interesting remarks upon the topic. He seems inclined to regard with a good deal of misgiving the total repeal of the Fifteenth Amendment, on the ground that such a repeal would probably lead to the permanent exclusion of the negro from political rights and from any hope of ever acquiring the status of a citizen. It would tend, in other words, to the establishment of a race of political helots.

Not many Americans will share Mr. Smith's apprehensions on this score. A repeal of the Fifteenth Amendment would simply leave the suffrage where the Constitution originally placed it, to wit, in the hands of the States. Such States as chose might give the suffrage to the negro, just as they may, if they choose, give the suffrage to women. In those States which should withhold the suffrage from the negro he would be no worse off than women are in all except four of the States. He could with no more justice be described as a helot than a woman can; because in Læonia, where the law originated, a helot did not possess the same rights before the law which were enjoyed by a Spartan, or even by a free Læonian inhabiting a rural district. The withholding of the suffrage would not deprive the negro of equal civic rights which are enjoyed by women in most of the States. His position would be precisely analogous to that occupied by many white men who lacked the property qualification which was prescribed for the franchise in most of the Northern States for many years after the formation of the Union. It seems at present improbable that in any of the Northern States white men would by State Constitutions or by statutes exclude the negro from the suffrage on account of his race or color, and no remedy might provide for the exclusion of ignorant blacks by prescribing an educational qualification, such as exists in Massachusetts, or by making the consent of the local authorities essential to the exercise of the franchise, which curious application of the local-option principle is exemplified in Vermont. Nothing but the growing frequency in the Northern States of the new negro crime, by which is meant the crime against white women, and the conviction that this crime is due to the notion of political and social equality implanted by the gift of the suffrage, is likely to cause such a revulsion of Northern sentiment as to lead to the wholesale disfranchisement of the blacks on the ground of their race or color.

While Mr. Goldwin Smith would dissuade the American people from a repeal of the Fifteenth Amendment, he recognizes that, at the present time, it cannot be enforced in many of the Southern States without provoking vehement resistance on the part of the white community. He admits, in other words, that a state of things exists in many of the Southern States for which a remedy is needed. The remedy that he proposes is the suspension of the operation of the Fifteenth Amendment for a certain term of years. The years of suspension would be a period of tutelage and probation, at the end of which it might be seen whether Booker Washington's patience, the development of habits of industry and thrift, had proved sufficient. In the mean time, he would require for the Northern States to give satisfactory pledges of respect for the negro's personal rights, and against a revival of slavery under any form. In a word, he holds that word-big, either than political enfranchisement, should be the principle provisionally applied.

We are constrained to say that this remedy would be impotent. An amendment of the Federal Constitution could only be suspended by a new amendment, to secure which, as we have recalled, the assent of two-thirds of each House of Congress and of three-fourths of the States would be requisite. It would be well-nigh as hard to obtain such a close approach to unanimity for suspension as for repeal. Indeed, it would be more difficult than political citizens, who remember the deplorable incidents of the Reconstruction period, would foresee that to make negroes wards of the Federal government would inevitably lead to friction between Federal and State authorities. An outright repeal, on the other hand, would cause no friction, because, as we have said, the whole question of suffrage would then be referred to the States.

It would seem, moreover, superfluous in order to suggest the necessity of constitutional amendment to respect to the cumbersome Fifteenth Amendment, inasmuch as that amendment is already sus-

pending in fact by a number of State Constitutions in the Southern section of our country, and inasmuch as the United States Supreme Court in a recent decision has declined to give any relief to alleged sufferers from the suffrage clause of such Constitutions. Had the United States Supreme Court taken an opposite position, agitation for a repeal of the Fifteenth Amendment might, indeed, be deemed indispensable and urged by a large and increasing part of the white community at the North as well as at the South. Even as it is, we must regard it as of the utmost importance that public opinion should support the highest Federal tribunal in the wise attitude that it has taken. The question of the validity of the suffrage clause of the Constitution of Alabama will again be brought before it at an early date in a case technically different from that which was formerly presented. Nor is this the only reason why a conviction that the Fifteenth Amendment was a piece of immature and imprudent, if not vindictive, legislation, should be driven home by enlightening and earnest discussion to the public mind. It will be remembered that, in the opinion which accompanied the decision of the United States Supreme Court in the Alabama case, the majority of the judges held that the enforcement of the Fifteenth Amendment was not their business, but the business of the political department of the Federal government. There is no doubt that the political department can enforce it if it chooses, for the Fifteenth Amendment itself provides that "the Congress shall have power to enforce the provisions of this article by appropriate legislation." As long ago, however, as 1892 public opinion in the Northern States pronounced decisively against a "Force bill," and it is certain that the feeling adverse to such legislation is stronger now than it was then. Only by persistency in public discussion, however, can that feeling be maintained, extended, and intensified.

With regard to Professor Goldwin Smith's suggestion that the Southern States might be called upon to give satisfactory pledges of respect for the negro's personal rights, and against a revival of slavery under any form, this, also, seems to us unnecessary. There is not a white man at the North, and there are few white men in the South, who do not believe in the rigorous enforcement of the Thirteenth Amendment, which provides that "neither slavery nor involuntary servitude, except as a punishment for crime, whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction. There is not a white man at the North, and there are very few, if any, in the South, who would not applaud the exercise by Congress of the power given to it by the Thirteenth Amendment to enforce this particular article by appropriate legislation should such enforcement be required. Again, we must recognize, however, that such legislation is needless. Public opinion at the North sternly condemns the evasions of this amendment which have been recently committed in certain counties of Alabama, where county magistrates have sentenced negro delinquents to labor during a specified term for white men who have paid their fines. Such sentences are at this moment the subjects of judicial inquiry in a Federal court presided over by a judge who is an Alabamian by birth, and there is no doubt that any evasion of the Fifteenth Amendment will be by him exposed and nullified.

## Democratic Prospects and Candidates

Mr. EDMUND W. PETTUS, lately a United States Senator from Alabama, is reported to have said that he can see no prospect of success for the Democracy in 1904, owing to the factional discussion within the party. He is also alleged to have declared that, if he had a favorite candidate, he would not name him in this hour, lest the candidate should draw the fire of one faction or another. At the same time, Mr. Pettus inadvertently disclosed his own predilection by the statement that the Democracy has never gained anything through coalition with other parties—he must have had the Liberal Republicans, the Greenbackers, and the Populists in mind—but would do wisely to become once more, what it was formerly, namely, the most conservative of political organizations. That is to say, he does not approve of Mr. Bryan, who personifies the alliance with Populism, but desires the re-assertion of those principles which are incarnate in Mr. Cleveland. We also learn from close observers of the situation in West Virginia we refer to lawyers whose professions often compel them to traverse the State—that Mr. Cleveland is the only Democrat who can carry that commonwealth. As we have previously pointed out, West Virginia—in addition to the otherwise Solid South, and to New York, New Jersey, Connecticut, and Indiana—is indispensable to the success of the Democratic candidate, unless, indeed, he can carry Colorado and Montana, which, if free silver is repudiated, might be difficult. Meanwhile, with an election that looks like a reaction from trepidation, some Republican journalists, since the return of President Roosevelt from his Western tour, have discovered the existence of so-called Roosevelt Democrats west of the Rocky Mountains and have announced the entire collapse of what they term the Cleveland boom. With a suspicious anxiety to shield

the Democracy from the consequences of an alleged field error, they assert, on authority for the most part anonymous, that, if Mr. Cleveland by chance were nominated, the Democracy, early would practically cease to exist in the Trans-Mississippi States north of Missouri and west of Arkansas, Louisiana, and Texas.

We have recently directed attention to the fact that the Democrats would be caucus-chasers if they attempted to carry any of those States, with the possible exceptions of Colorado and Montana. Their efforts must be concentrated on the old pivotal States of New York, New Jersey, Connecticut, and Indiana, to which, under the new apportionment, West Virginia must be added. The single question for ex-Senator Pettus and other far-sighted Southern leaders to consider is who in the Democrat host qualified to carry these five indispensable States? We repeat that, if any Democrat now living can carry West Virginia, it is Mr. Cleveland, and the same thing may be said of New Jersey. There is not a well-informed Republican in New Jersey who would not privately give up the State on the morrow of Mr. Cleveland's nomination. That in Indiana every Gold Democrat would rally to Mr. Cleveland's standard goes without saying, the only question in that State being whether all the Baywitsers could be retained.

Of New York and Connecticut, which usually follows in the wake of its colossal neighbor, we often hear it said that much depends on the outcome of the municipal election in the Greater New York this autumn. If the Tammany Hall candidate for Mayor is elected, we are told that the Democracy of the Southern States may flack up heart, and enter the Presidential campaign with some hope of victory, and if Mayor Lusk is re-elected the Democracy must despair. We take a different view of the matter. If Tammany Hall is beaten it will continue to be on its good behavior. Moreover, if Mayor Lusk should be successful, it could only be through the aid of tens of thousands of Democratic votes, every one of which in 1884 would go to Mr. Cleveland, or to any other conservative candidate put forward by the Democracy. The outcome of the Mayoralty election will probably be determined by the result of the pending investigation of the charges brought against the Dock Commissioners appointed by Mayor Van Wyck, in which investigation Mr. Murphy, the present leader of Tammany Hall, is implicated. In the light, however, of the two hot elections for Governor, it would be absurd to say that the result of New York city by Tammany Hall is indispensable to the success of a Democratic candidate for the Presidency in the State. In 1884, Mr. Roosevelt, running for Governor, with Tammany Hall mistress of New York city, obtained a plurality more than twice as large as was secured last year by Mr. Ulster, although then all the power and patronage of New York city was in the hands of a Republican Mayor.

Under all circumstances, we find it difficult to understand why ex-Governor Robert E. Pattison, of Pennsylvania, in an interview published on June 28, should have dismissed as impossible the candidacy of ex-President Cleveland for the Democratic nomination for the Presidency. Mr. Pattison was convinced, he said, that there was hardly any conceivable set of conditions under which Mr. Cleveland could be elected, even should he receive the nomination, which was pronounced out of the question. The ex-Governor's words would carry more weight if he had proceeded to analyze the situation in the five pivotal States, and to show why Mr. Cleveland could not carry any one of them, as, for instance, New Jersey. He gave no reason for his opinion, except this, that the people of this country will not give any man a third term at this time, and he added that he hoped they never will. We are surprised that a veteran lawyer should disregard the legal maxim, *Contra ventum remanet de jure*, and refuse to recognize that, where the three terms are not consecutive, there is no ground for the objection to a third term. Under such circumstances, a principle would dissolve into a prejudice. Not that we are disposed to moderate the not-repelling effect of mere prejudice, provided the prejudicial should seem likely to prevail in the north of argument and common sense. We are very skeptical as to such persistency. We have never doubted, for instance, that if General Grant had received the Republican nomination in 1880 he would not only have been elected, but would have run much better than did Mr. Garfield. Yet Grant was a military man, and to those who did not know him personally, the imputation of intended favoritism might not seem utterly ridiculous. The wildest Republican spellbinder, however, would be too slow to exhibit a guffin in charging Grover Cleveland with aspiring to become a Czar. There are extravagances of hyperbole which even a torchlight procession cannot stand. Outside of an insane asylum, nobody can picture the image of Prince as a law-giving dictator, bent upon strangling the commonwealth. We fear that ex-Governor Robert E. Pattison is devoid of any sense of humor.

It must, at the same time, be admitted that, although Mr. Cleveland has repudiated the interview published in a Texas newspaper, one of the statements ascribed to him therein is entirely well founded. It is true that as yet no Democratic leader controlling the party machinery in any one of the law-giving States, has up-  
strung the commonwealth. We fear that ex-Governor Robert E. Pattison is devoid of any sense of humor.

occur before next spring that will point irrevocably to some other candidate, but not until the Democratic national convention of 1884 has met and has deliberately given the nomination to another, will it be safe for ex-Governor Pattison, or for anybody else, to describe Mr. Cleveland as an impossibility.

## Use of the Streets

It is not generally known that New York city is without any well defined, clearly construed laws by its government. The presumed basis of its regulation rests upon ordinances, but what they are or mean is not easily comprehended. There is a confused mass of numerous paragraphs which are so described, but their relevancy or applicability, in most cases, has not been determined. To fence this mass into meaning has been undertaken several times, but generally with an ignorance that has failed to provide a remedy for most grievances. These futile efforts induced the Board of Aldermen to appropriate the sum of \$25000 a year for effect this result, but the expenditure was limited to a period of four years by a change of administration, and no benefit derived. Of all grievances, the nuisance of the streets affects the people more directly. There is no doubt that the right to their free use for passage is vested in the people of the entire State, and they have conferred upon the Board of Aldermen, with certain limitations, the power to govern this use by ordinance. Yet its exercise has been so confounded by ignorance, that satisfactory government is difficult, and this would be further increased by a question as to the extent of territory under their control. Above Bleeker Street, the city owns the fee to the centre of the roadway, but below, the fee is in the owner of the adjoining land, though the people have an undoubted easement in its use for passage. But whether subject to an undivided use in the owner, is a question. If the latter is government to a public use, then any restriction imposed by ordinance is without effect, and the walks may be encumbered for any length of time if there is no unreasonable impairment of the easement. Without considering this aspect of the case, the courts have decided that a reasonable use may be made of the walks and streets in conducting business, and have clearly defined what they meant. But indifference to the rights of the public, has extended this use to the non-appropriation of the thoroughfares. What the people demand and the law requires is, that merchandise shall not be permitted to interfere with a public use beyond the immediate requirements of receipt and delivery without using the walks as a storehouse.

The exposure of merchandise for sale within three feet of the house line, is a direct violation of the law, it may be exposed, but not sold. However, there is little wisdom in this distinction, and the ordinance could be repealed without operating any hardship, and it should be done as far as it relates to vegetables and things edible. There is one exception, however, and this gives the right to builders to use one-third of a street for the deposit of building materials, but they seldom recognize any limit. Many, with a thought to the public convenience, prepare and store their materials in the cellars, thus showing that there is no necessity for a general privilege. The law gives no right to sink masonry in the street, yet it is done. Nor is there any for the erection of frame buildings for workmen to sleep in, nor for engines on the walks. It is therefore clear, that, with the exception referred to, the only lawful right of the public is to pass along the public thoroughfares, together with such a reasonable use of them that will not interfere with the safety, comfort, and health of others. This would prevent the hauling of wares through the streets, suppress the discordant hum of the *sciow-winders*, and eliminate the offensive push-cart. An ordinance created the latter, and grants permission for them to be kept in one place for ten minutes. But it is absolutely useless, for if it could under the right for ten minutes, it could for ten hours. Head-ergers are permitted to be played during the day, between the hours of nine and seven, yet, without interference, they destroy the quiet of earlier and later hours.

There has also been a complaint of a general inclination to avoid the obligations of citizenship. We have not the civic pride which makes for the good of a city. We cannot depend upon the people for aid in securing a better observance of law. There is an assumed right to follow a selfish purpose, and any lawful objection is resented. This feeling naturally follows a prolonged lack of subordination until it becomes indifference.

In the prosecution of all violations the great difficulty has been in the lack of importance attached to them generally by the courts, notwithstanding that in many cases causing injury, the city is liable in damages. Complaints have been numerous enough, but through political favor the defendants have rarely been seldom required to appear in court, and whether they did or not, it was generally only some anonymous person who was made known to the most respectable and dispassionate before disposal. Such action was seldom taken willingly, but was under the stress of political conduct. However, in most cases, violations were due to ignorance,

though many were persisted in by the protection of political favor.

The immediate necessity is for an intelligent revision of the ordinances, repealing those that have become obsolete, and framing others in the light of judicial decisions that will remove ambiguity, when enforcement may be procured by instructions to the police force, enabling them to understand them.

### The Neal Case in Delaware

It seems to be the opinion of some of the best citizens of Delaware—Judge Gray and General James H. Wilson, for instance—that the lynching by which their State has been disgraced might have been averted had it not for the unfortunate refusal of the Wilmington judges to call at once a term of the Court of Oyer and Terminer for the trial of the negro White. They were unwilling, they said, to establish a mischievous precedent, but what precedent could be more mischievous than the lynching which their decision provoked. They also said that, while the crime was fresh, it might be difficult to secure a jury before which the accused person could have a fair trial. We cannot conceive of a petit jury before which the negro White would not have had a better chance for his life than he had at the hands of the Wilmington mob. The judges further alleged that the people of Wilmington could have waited till the autumn in the absolute assurance that the crime would be adequately punished. They seem to have forgotten the case of the negro Neal, which, it is probable, was in the minds of every member of the mob.

It is but twenty-three years since an atrocious assault was made by the negro Neal on the wife of a farmer named Langdon, who lived near Clayton, Delaware. As in the White case, the woman was not only outraged but murdered. Neal was arrested soon after the crime, and, after being confined in jail for a few months, was tried, and sentenced to be hanged. His counsel, however, Athony Higgins, at one time a United States Senator from Delaware, took the case to another court. On the second trial the negro was again condemned to be hanged. The convict's lawyer appealed, with the result that a third trial took place, and a third sentence to the death penalty was imposed. Once more the case was carried to the Supreme Court, and, after an interval, Neal was acquitted upon a technicality. He is still living in freedom, his crime having gone unpunished of the law. With such a notorious proof that in Delaware, as far as the courts were concerned, a negro ravisher and murderer might go free. It is not surprising that many Wilmington people regarded with indignation the refusal of the judges to order a speedy trial for the negro White.

We may here point out that some of the attempts to make political capital out of the crime by attributing it to a predatory negro attracted from the Southern States by the premium offered by the Adickes Republicans for negro votes will not bear close scrutiny. The negro White turns out to have been a native of Pennsylvania, and to have served a term in the penitentiary of that State for an assault on a white woman. Had he been adequately punished for that offense he might have been deterred from repeating it. As for courting the negro vote in Delaware, the Adickes and the anti-Adickes factions are equally guilty. We have just seen how ex-Senator Higgins enticed himself to the colored race. We do not hesitate to say that the lynching of White is directly traceable to the shameful mismanagement of justice in the Neal case.

### Clauses Struck Out of the Declaration

AMID the innumerable questions that were delivered on the Fourth of July, how many pointed out the remarkable difference between the text of the Declaration of Independence as signed, and the original draught, or recalled the circumstances under which the change was made, and drew attention to the momentous consequences thereof. The verbal alterations made in the Declaration, as penned by Jefferson, were unimportant, and of the two passages omitted, one, which outraged the British people for upholding the King and Parliament in acts of usurpation, was omitted, but such sweeping reprobation should give offense to the English friends of the colonies, who, though greatly outnumbered, were outspoken and unflinching. The omission of this passage was, also, for within seven years, the friends of the colonies were to become a majority of the House of Commons.

The other clause which was stricken out of Jefferson's draught was of tremendous prospective moment, and had it been suffered to stand, could not have been reconciled with the perpetuation of slavery under the Federal Constitution which was framed in 1787.

In that rejected clause, Jefferson had arraigned King George III. for waging cruel war against human nature itself, violating its most sacred rights of life and liberty in the persons of distant people who never offended him, capturing and carrying them into slavery in another hemisphere, or to incur miserable deaths in their

transportation thither. This piratical warfare, the opprobrium of infidel powers, was, said Jefferson, the warfare of the Christian King of Great Britain. Determined to keep open a market where men might be bought and sold, he had prostituted his own power by suppressing every legislative attempt on the part of the colonies to prohibit or restrain this execrable commerce. And, finally, that this assemblage of horrors might want no fact of infamous dye, the King, George III., was now inciting those very people to rise in arms against the colonists, and to purchase the liberty of which he had deprived them by murdering the people on whom he had obtruded them, thus paying off former crimes committed against the liberties of one people with crimes which he urges them to commit against the lives of another.

Jefferson himself has revealed how the clause reprobating the enslavement of the inhabitants of Africa came to be elided from the Declaration. It was omitted, he says, in compliance with the wishes of South Carolina, and Georgia, which, unlike some other colonies, had never attempted to restrain the importation of slaves, but which, on the contrary, desired to continue it. Jefferson goes on to say that "our Northern brethren also, I believe, felt a little tender under these remarks, for, although their people had very few slaves themselves, yet they had been pretty considerable carriers of them to others."

It will be remembered that it was a like co-operation of the New England States with South Carolina and Georgia in the Philadelphia convention which caused slavery to be perpetuated in the Federal Constitution, and even the slave-trade to be tolerated up to 1808. What a Pandora's box of woes was opened when the anti-slavery clause of the Declaration penned by Jefferson was blotted out.

### Anglo-American Trade War

Two remarkable incidents in the trade war between the United States and England gain lamenessly in interest from the light they shed on the new fiscal policy advocated by Secretary Chamberlain. For two years the United States and England have been fighting for the tobacco trade of all countries in which the weed is not a government monopoly. The Americans, chiefly represented by the Tobacco Trust, found that their only hope of success lay in a bold invasion of England, and an attack on the home market, which would compel the English manufacturers to concentrate their resources at home, and thus make their foreign outposts more vulnerable. The English tobacco men immediately saw that they must unite, and their newly formed Imperial Tobacco Company began business by offering to distribute \$200,000 among English dealers who boycotted American wares. The American Trust saw this, and raised it, offering to distribute a yearly sum of about six million dollars, among its faithful retailers. Swarms of English tobaccoists immediately made contracts with the invaders, a cut rate war began, and tobacco was peacefully given away by the thousand tons. But this secret ruin for both English and American traders. They therefore made peace, the Americans evacuating England, while the Englishmen withdrew from America and Cuba. Thus the Englishmen fought their battle and won it, without any preferential tariff, while the American company, by buying factories in Belfast, India, and Australia, showed how easy it is to skip across a tariff wall, such as Secretary Chamberlain proposes. The said factories have since been resold to the Englishmen. There is still that magnificent bluff of six million dollars a year in bonuses, and Lord Chief-Justice Alverston has just decided that it must be paid, the American company being liable for two-thirds, while the Englishmen must pay a third.

A far more serious incident is the cotton situation in Lancashire generally, and Manchester in particular. For generations Manchester has passed into a groove for greedy, complacent commercialism; and India owes much of her starvation economics to the pressure which the Manchester men have brought to bear on successive English administrations, compelling them to keep the Indian markets open to Lancashire cotton, regardless of India's own interests and nascent trade. The hand of Nemesis has now fallen, it would seem, on the Manchester man. The cause is the sudden rise of American cotton, which, after selling for years at six or seven cents a pound, has suddenly soared to fourteen cents, partly as the result of hull operations in New Orleans and elsewhere, and partly through the efforts of the "hole weevil," who is steadily extending his operations southward from their original base in southern Texas. At the moment of writing, every cotton-mill in Lancashire, which practically means every cotton-mill in cotton is prohibitive. A universal alarm is expressed, and it is openly stated that, should those high prices continue, the cotton trade of England will die a sudden and violent death. Englishmen have to some degree foreseen this possibility, and recent projects to begin cotton planting on an immense scale in West Africa show one direction from which help may ultimately come. But, while the cotton grows, the mills will starve. Here again it should be noted that Secretary Chamberlain's policy would be unavailing.

### FIRST TRIAL OF "SHAMROCK III." IN AMERICAN WATERS

Sir Thomas Lipton's new challenger recently showed her speed in a trial spin with her professor, "Shamrock I," over a twenty-four-mile course of Sandy Hook. The new racer finished more than half a mile ahead of the older boat and it is claimed that she can do better than that. The above snap shot was taken at the finish-line before "Shamrock I" had come in sight.

# Diversions of the Higher Journalist

## Two Contrasting and Fascinating Books

THE Thoughtful Reader, who is not always to be distinguished from the Unstable Reader by vs., but as apt to be a woman at a man, said that he had just been lying down late and rising up early in the interest of two new books, which had perturbed his nights and days like the sense of a strong personal experience. What affected him first in regard to them was their absolute contrast; what bore in a manner fairy-tales, the one of science, the other of faith.

"Of course," the Higher Journalist said, "you can be talking only of 'New Conceptions in Science' and 'Repealed Men.'"  
"Yes," the thoughtful reader allowed, "and I have been reading them in the order you have given them. I suppose Mr. Carl Snyder would not quite like being called a poet, and I am not sure that Mr. Howard Pyle would, and yet both of them take the imaginative, the poetic view of their subjects, and both with such varying method, present the results with a like effect of captivating the fancy and, paradoxically enough, convincing the reason."  
This declaration gave the higher journalist a pause of which he availed himself to look wise. "I don't know that I follow you," he said.

"Why, I mean that you can no more praise Mr. Pyle's dramatized thesis that if Christ came to our day and generation on the terms of his first advent,—truly and truly come so,—he could suffer the same fate from the highest and best representatives of our civilization as he suffered from those of the Jewish civilization nineteen hundred years ago, than you can refuse Mr. Snyder's facts of physics."

"Both are like measure ascertained in the reason, with an added force in the consciousness with regard to Mr. Pyle's thesis that makes it still more convincing. I don't think it would be going too far to say that he is a more dispassionate witness of the truth presented than Mr. Snyder, though I do not suppose Mr. Snyder, at the highest and best representatives of our civilization. On the other hand, his truth is not quite so novel. The case has been treated before, though Mr. Pyle treats it with entire originality. I hope you are one of the few but fit people who remember Mrs. Lynn Linton's 'Joshua Davidson.'"

The higher journalist tried to look as if he were, and said, "Oh, yes."

"But the difference between her treatment of it and Mr. Pyle's is that upon the whole she makes you feel that the scribbles and phantasies of 1870 were culprits wrong in their dealings with the Saviour of mankind when he came a second time, while Mr. Pyle, now when Christ comes in our own day, has no wish to convict the scribbles and phantasies of wilful error. They receive Christ as they do, coming as he does, with his tremendous pretensions so entirely unappreciated by his noted critics, his shabby following, his timid, ignorant, and wicked men, but precisely because they are the most enlightened, respectable, and orderly people of their time. They form not only the most refined and cultivated class, but they are allied socially with the plutocracy, and are equally interested with that ruling caste in the maintenance of the status. They conclude that better Element which you and I are so proud to belong to."

"It has carried through the municipal reforms which have swept the country like a tidal wave," the higher journalist said, thoughtfully.

"Well, that is as it may be," the other only partially assented, "Mr. Pyle does not condemn them; he almost justifies them in showing them what they inevitably are, and in predicting what they do from what they are. He would possibly allow that they are a growth from the original stock of error, an effect of that fatally mischievous direction of civilization which Tolstoy holds has brought 'Christianity' upon the same page with Paganism, but he would not, could not apparently, allow that they were personally culpable or personally responsible. They are wrong only so far as we are all wrong; and if we have any duty in the matter it is to find out where the common blunder began."

The higher journalist had nothing to say on this point, and the thoughtful reader went on.

"A very curious aspect of the allegory he presents is that it has to do almost wholly with the miraculous Christ. It is in doing this that his pictorial power makes itself felt. I think he alone among them, in the effort of being original, he is almost thought and felt his subject and in the story part of this strange work of his, he is as greatly an artist as in anything he has done poor. He convinces you not only that the person supposed are instances, the raising of Lazarus, as the omniscient young plasterer have read it, you have been there, down on Long Island, and seen the dead man come, out of the receiving-vault in the ugly con-

try, in his underclothes' dress-suit, and look about him with his dead eyes.

"It is something tremendous, and the verity is built up out of the facts, which are never sought and never assumed because they are shabby and commonplace. What the author evidently wants you to do is to realize that if the historical Christ came again on the historical terms, he would meet the historical fate which seems to us so terrible and impossible, but which would be perfectly inevitable. In our lifings and agings associations, we attribute this fate to the pictorial Christ who is familiar to us in sacred and legendary art, and to the subjective Christ whom we learned to know at our mother's knees, and who is for each of us the only Christ, whether we vitally obey him, or whether we merely worship him as drame scenery. Between this Christ and the historical Christ there is a gulf which no man has ever passed, save some poet or artist. For the most part even poets and artists fall of passing it. A few years ago I saw that awful Russian picture of Pilate visiting Christ in prison the morning after he had been scourged. I suffered from the sight as much as if it had come with Pilate, not because that poor, half-rained, tattered, and beaten man was the Son of God, but because he was a poor, half-crazed, tattered, beaten man. He did not relate himself at all to the Christ, at once pathetic and majestic, who had always been in my consciousness."

"Then you mean to say that the subjective, and not the historical Christ is the real Christ," the higher journalist demanded.

"My dear friend, I say no more than that Mr. Pyle leaves us that consolation or he leaves us none. You might as well bring me to look in regard to the universe as I have been learning to know it from Mr. Snyder's fascinating essays on the world beyond our senses. The first question, what this world is made of, the next idea as to what is mind, how the brain thinks, and the rest."

"He propounds no theories of his own, he only sums up and presents the conclusions of the great scientific investigators as to the facts in the case; it offers no new theories, and for those who are not willing, and for whose sake you cannot refuse them. Their primary source is in hypotheses from which they are logically obligatory, but are not very thinkable. A molecule divisible into millions of atoms does not mean any more to me, now that I am told there is an infinitesimal atom that is no longer divisible, than it did before; but I am charmed to know it. From time to time I have felt rather lost in a universe lost in infinite space; but now that I find the sum of the universe may be safely estimated as something between sixty and sixty thousand millions, and that there are 'no nature boundaries beyond which there is nothing,' I find myself much more at home in the material frame of things."

"To my profane perception the lawfulness are imaginably of the same quality with those which might be drawn from the small boy's hypothesis that darkness is nothing but little fine black fuzz, but as no experiments have yet been founded on this hypothesis, and as a vast number of experiments, all tending to establish them have been founded on the other hypothesis, I am bound to accept the new scientific conceptions. In fact, I do not wish to repeat the same error in accepting them of the nature of that which Charles Lamb experienced in letting his mind behold in a vacuum." I have a personal modesty in knowing to them which is naturally enhanced in me by the humiliating fact that we ourselves very few of us are exceptions in science to the studies of our American investigators; we are behind almost every other people in these."

"But I don't see," the higher journalist protested, "just where your notion of a subjective universe comes in."

"I don't know that I've greatly insisted on that notion, I merely say that the investigators, who are not so much as you realize it. They carry themselves to a point where appreciable matter seems to disappear, to rush into something far thinner than smoke, to disperse themselves into ultrasonic spaces he-jayvee, what am I to do with it? I am making bold to say, a little hypothesis of my own, which if I could duly experiment with it, through mathematics and chemistry, might prove of the great most conduct to the true."

"What if it is the basis where matter ceases to be, say all a few miles beyond the farthest of those sixty or sixty thousand million suns, spirit should begin? Spirit would not find that difficult, for spirit knows neither time nor space, and would be as active as it is in the midst of men and day."

"I think," the higher journalist said, "you might find Asserius enough to draw the balance of scientific investigation, which is now against us, by excursions on the line of your hypothesis. You may offer it to the Christian Scientists, or the 'Dimitrics.'"

"Now," the thoughtful reader protested, "you are beginning to be trivial, which is always a danger of yours. You have reached the limit where beyond which there is nothing in you."

*At the Corner of South and Berksman Streets during the Storm  
The boys of the neighborhood are navigating the flooded streets in empty soap-boxes*

## **NEW YORK CITY A FLOOD CENTRE**

# About Berlin

By Sydney Brooks

London, June 27, 1901.

IT is the rut of the hedge, or else the dropping of the "K's," that first really convinces one that this is England. In America I think one's introduction to the virtues of the country is to hear oneself called an "Aussie." On the Continent there can be no question of what it is that strikes the same assured note of individuality and welcome. It is the sight of a blue blouse. So that the railway porter who took my baggage the other day from the steamer to the train at the Hook of Holland stood for more than he knew. He was thinking of his tip, and I of his blue blouse. Possibly, too, he was wondering what outlandish tongue, if any, I spoke. He had tried Dutch and English and German and French, and was desperately addressing himself to Italian without getting a single response. But it was his own fault. The blouse was so very, so continually blue, and the pleurings of twenty years came rushing back at the sight of it—three Paris expatriates, and I know not how many week ends in the same city, some in Brittany, walking trips through the French provinces with a cicerone, a glimpse of an Englishman or an American for weeks at a stretch, Switzerland and its rambles, his inevitable journey down the Rhine, botchings in Holland, and so on.

A Union Transporter  
Expressed by Remon after the attack by Dussak.

and so on. I could not explain all this to the Dutchman, but I hope the tip I gave him, but his blouse, satisfied its owner. He stowed my baggage at a nod in the Berlin car, and went off to provide for a less salacious victim.

Holland at six o'clock on a brilliant May morning! I chose a seat by the window to look out on it. From the Hook to Berlin was a new route to me, but Holland is always and everywhere Holland. There is not a square mile in the country that could be mistaken for anywhere else. You may have to glance twice and even thrice at certain bits of France to be sure you are not in England, and longer still at parts of Switzerland to convince yourself it is not Italy. But Holland never looks anything but Holland, like it white and when and how you please. It has the unobscured stamp of an absolute individuality.

Holland once past, the run to Berlin confirmed one's worst fears of German dullness. It was a rich, fertile strip of the country, but happily not. One could have got out and had a game of billiards on it almost anywhere. I was reminded alternately of England and America—of England by the wide-plastered, oak-banned cottages and the plentiful cultivation of America by the shelter of hedges and country houses and estates and gardens, and by the open, unobscured, unshaded aspect of things. There was little or nothing distinctly German about it, barring the inevitable peaked semi-military caps on the laborer's heads, the trumper of women working in the fields, and the old men in charge of the local showings who stood at attention as we passed. It was not until we drew up at Hannover that I caught sight of anything that could only have happened in Germany. There was a youth on the platform, of a nervous, washed-out, insignificant appearance, the son, I should judge, of some small tradesman. He waited bodily to find out something or other about his train, and his way of finding out was to make little rushes at every official and to come across, lift his hat, and then put it to him. I do not think it would have occurred to any one but a German to take off Hohenzollern trappings in that little act. But as even I, a stranger, could have told him, you do not in Germany get things done for beneath it; and if beneath it, then very much beneath it. The poor fellow was made patent, and the conductor's eyes followed him as he lurched on. As we steamed out of the station he simply turned him at it, the same dejected sweep of the hat meeting with no still failure. I really pitied him. It was so obvious he would have to lower his standards or emigrate.

Berlin is the Chicago of Germany. In the equality of its growth it is nothing else. To one who has not visited it for ten or twelve years the place seems to have trembled and quaked itself. Very

likely it has; but what most impresses one is not the extent, but the quality, of its growth. It is the only modern city I know of that has managed to escape looking artificial. Most foreigners complain that New York looks as though it had been hit off at a stroke and dumped down on Manhattan Island by contract. Their inroad against its deadly uniformity, its English lines, its prosaic precision. They say that it has been far too obviously mapped out by architects and surveyors instead of by nature. None of these charges could be brought against Berlin. The city, or most of it, at any rate, is as modern as New York, but the labor of building it has been most dexterously hidden. The Germans took hold of the problem of a Greater Berlin with the same intelligent foresight that they threw into their preparations for Sedan; and they have made it something considerably better than a mere show board of brick and stone and mortar. The streets have a curved and rattling spaciousness; they are shaded with avenues of trees, faultlessly asphalted, and clean with a cleanliness surpassing that of Paris. You would not call it a beautiful city, but handsome and imposing it certainly is. Electric cars, running with an American smoothness and comfort, traverse it in all directions, and along with the white buildings and the crystalline air, give one at first an impression of an improved New York. The architecture is either too formal for English or American taste, but, for all that, decidedly effective, and a drive from the Unter den Linden to Charlottenburg will take one past a succession of finer houses than either London or New York can show. And even the official architecture, in spite of the Kaiser's directing patronage, has its points. There are its statues in the Siegesallee quite as unobjectionable as those in Central Park and the streets of London.

If Berlin may be taken as typical of the new Germany, the old days of plain living and high thinking seem well-nigh over. There may be plenty of high thinking done in the capital, but it certainly is no longer a city of comparatively plain living. The rents are such as to upset even a New Yorker's eye, household expenses are proportionately severe, and the clubs, the theatres, the stores, and, above all, the hotels and restaurants, point in a direction that does not lead by any means to economy. There are hotels to-day in Berlin that rival and in some points even exceed the Waldorf, the Unter den Linden, and the Carlton. True, they are not built for, and possibly are not greatly patronized by, the Berliners themselves, to whom the open-air café is still the choicest and most popular resort; but their mere presence suggests an emphatic change from the old ways. Berlin, in short, has been swept into the cosmopolitan whirlpool, and though its social standards seem hardly quite fixed—for instance, it has no dinner hour—yet the advance all along the line in luxury and pleasure-seeking is palpable enough. An old Berliner who knows the world pretty well remarked to me: "I suppose there is no city in which so many people are living beyond their means as in the Berlin of to-day." Twenty years ago such a statement would have been incredible, and fifty years ago impossible.

# Books and Bookmen

By James MacArthur

IN a paper written on the occasion of Gladstone's interment at Westminster Abbey, in July, 1903, Canon Scott Holland thus recalled the first meeting of Gladstone and Ruskin. "It was, curiously, far on in each life; but somewhere about the year 1881." Canon Holland seems to have trusted to his memory, hence the discrepancy, for the meeting actually took place three

years earlier. "Mr. Ruskin had written an article in the *Nineteenth Century*, which had profoundly stirred Mr. Gladstone, and it was suggested that it would be a happy opportunity for Mr. Ruskin to be invited to Hawarden." (Later, we find that Gladstone had returned in the same magazine, and Ruskin writes to Mary Gladstone: "I wonder if your father will forgive my sending him a snappy message by his daughter, that I don't think he need have set himself in the *Nineteenth Century* to prove to this Nineteenth Century that 'all the treasures of wisdom and knowledge were contained.'") Ruskin accepted the invitation to visit Hawarden, and he and Canon Holland arrived on the same train. "As we drove up I discovered he had the darkest view possible of his host, including, from his 'Master' Carlyle, his whose imagination he figured apparently as the symbol of all with which he was at war. Ruskin was therefore extremely timid and suspicious, and had occurred in view of a possible retreat, a telegram which might at any moment summon him home: this telegram loomed largely the first day, and we were constantly under its menace. But as hour by hour he got happier, the reference to his possible arrival came more and more rarely, and finally it became purely mythical. The announcement of the meeting of the two lay in the absolute contrast between them at every point on which conversations could conceivably turn. The brilliant optimism of Mr. Ruskin, his things, believing everybody, came clashing up at every turn with the invertebrate pessimism of Mr. Ruskin, who saw nothing on every side but a world rushing headlong down into the pit." This first meeting took place in January, 1878, and a second visit was made by Ruskin to Hawarden in October of the same year. Ruskin was born in February, 1819, so that he was then nearing his three-score years, Gladstone's diary contains three brief allusions to the two visits of his great contemporary:

"Jan. 12, 1878.—Mr. Ruskin came; we had much conversation, interesting of course, as it must always be with him.  
"Jan. 13.—Mr. Ruskin went at 10<sup>15</sup>. In some respects an unrivalled guest, and those important respects too.  
"Jan. 12, 1878.—Mr. Ruskin came; health better, and no diminution of cheer.

"Oct. 12.—Walk with the Duke (of Argyll), Mr. Ruskin and party.  
"Oct. 14.—Walk with Mr. Ruskin. Mr. Ruskin at dinner developed his political opinions. They aim at the restoration of the feudal system, and exhibit a mixture of virtuous abolitionism and Christian socialism. All in his charming and characteristic manner.  
"Oct. 15.—Good-bye to Mr. Ruskin, and off for London at 9.5 A.M."

The record of those two visits to Hawarden, and what passed between the eminent statesman and his "unrivalled guest" is chronicled in a little volume just published, entitled *Letters to H. G. and M. G.*, by John Ruskin. The

contents consist of extracts from an old journal concerning Ruskin's visit, the *Letters*, and two supplementary papers by Canon Scott Holland. But the finest fruit of that Hawarden visit was the friendship which sprang up between Ruskin and Mary Gladstone ("M. G."), and the letters written by Ruskin to her, now published for the first time—a rare memorial to her and her

women and little children, or as he puts it for "aibys and children and vintals and so on." The Hon. George Wyndham's preface and Scott Holland's papers rapidly the glimpses of Ruskin a deeper insight and occasional references to the philosophy and politics tinged by his view of the general maywardness of the world, but for the most part, the reader will prefer to dwell on the playfulness and affection in these letters evoked by his admiration and love for the daughter of Hawarden. Noteworthy as the letters are in their added revelation or iteration of Ruskin's teaching and views, they are more valuable in showing that a great man has his gentle, playful, and affectionate side. As Mr. Wyndham observes, the sun and feeling in the letters are so delicately fragile that any appreciation of the prophet's message, also to be found in them here and there, would be not so much out of place as in the sky." There is not one reference to the letters of "M. G." are not given also.

*Ruskin versus Rossetti*  
"Has one been heard, master?"  
"Yes, but I've had my cheek bitten by a dog"

and which it now stung him with shame to remember. It was the thoroughly characteristic and consistent art of a frank, simple, direct, childlike nature. Three days after his departure, in his first letter to Mary Gladstone, he confirms his conviction and announces that the affectionate passage has already been ordered expunged.

HAWARDEN, CROFTON, LANCASHIRE, 26th January, 1878

DEAR MARY G.—You say I was not at Hawarden? It has been only my doubt of your story that has prevented my letter of thanks from definitely acknowledging this lovely one of yours after which I feel myself very happy and good. I have not written words, as in ways of showing the present billing-phase of the web of all things one doesn't tell like to say: one's beloved little probes being all so broad in nature, still and more close and beautiful—equally unaccountable—and with little additions which one is greatly ashamed of for having grown so fast, and which one shares not with it! I will consequently say this letter of yours makes me very happy.

I think I am and your sweet dates very warmly for having let me see your father, and understood him in his profession. How is it possible for the men who have known him long to allow the thought of his course of conduct to be at any time fine, having been warped by addition, to diminish the better and the power of his mind? I have long grievously decried concerning his myself, and have ever written words about him which I trust you at least may care to see. They shall be erased hereafter if I have written to cancel the page on which they are if ever you see them, forgive me, and I will know what it is to forgive.  
I am ever grateful and loving,  
JOHN RUSKIN.

It was Ruskin's humor to call M. G. "St. Cecilia," and the butler's bewilderment may be imagined where he received a letter addressed as in the accompanying facsimile.

The Letter that puzzled the Butler

### THE NEW HENDRIK HUDSON MEMORIAL BRIDGE

Plans have just been completed for the construction of a new bridge at Spuyten Duyvil, New York. It is to be built as a memorial to Hendrik Hudson, the first white man to sail up the river which bears his name. The bridge will be pushed and opened to the public in September, 1899, the three-hundredth anniversary of Hudson's discovery.

## Lighting a Metropolis

**I**T takes eight thousand men to light New York city for twenty-four hours. In order that we who have a penchant for saving may fit from the Battery to The Bronx, and still command the convenience of turning on and off a flood of light at will by the twist of a screw and the scratching of a

knifer, there are gas-mains extending over covering, it is estimated, about two thousand five hundred miles—two-thirds of the way across the broadest part of the United States. During the cold days of last December the amount of coal used for manufacturing gas amounted in one day to thirty-five hundred tons. These figures represent, in a small way, the progress of a typical American city during the last seventy years. Incredible as it may seem, no longer ago than 1825, Manhattan was illuminated by candle-light and whale-oil. All the wealth in the world could command no better. One hundred years ago the use of gas and electricity as it is employed to-day, was regarded very much as we of this age regard the possibility of rapid transit to the moon. Thinking men and scientists alike scoffed at the idea of producing light without a wick. The London press also failed to foresee the future, for when the question of a new method of lighting was agitated, long columns of ridicule greeted the morning editions, and, to illustrate how the discovery of gas was to be generally regarded, it may be recalled that our waggish editor expressed his views on the question in verse, as follows:

We thought now that gas and moon  
 Are placed on very high  
 That no impostor's name might reach  
 And soar them from the sky;  
 We're it not so, we soon should find  
 That some referring gas  
 Would start, perhaps, to snuff them out  
 And light the world with gas.

In spite of opposition, however, gas soon came into common use, and now, after having served its purpose for a century, there is every indication that it, too, will go the way of the candle, and its mission be performed by electricity.

It is a wonderful day and age in which we live. The ideas that were scouted yesterday are consummated to-day, and tomorrow may be relegated to the scrap-heap of an intellectual past. When we are told that in fifty years from now the wonders of this age will suffer in comparison with the wonders of that, we need a lightning car and a believing mind. In the light of the marvelous progress founded upon scientific discoveries and their application for the benefit of man, the thoughtful pessimist is a logical impossibility.

Few things in the range of human advancement present a more interesting study to the student of political and social economy than the evolution of a modern city in its adaptation of public utilities for the benefit of its population. To-day the question of illuminating New York city is an all important one. The problem of furnishing light and power provides labor for many hands. In order that current be transmitted to the business portion and to the outlying resident mile of pavement in the city an average of seven miles of structure, electric. In the resident portion of the city, gas at the present

time holds undisputed sway, but many who still count themselves young can remember when coal-oil furnished a large percentage of the domestic lighting, and even now on the lower East Side, among the densely settled tenement districts, lamps and candles are much in evidence. This, however, is largely a matter of economy, for the oldest houses are fitted with fixtures for gas. The upper West End and Harlem, with The Bronx, and the remaining resident portion of the city, use gas almost exclusively, both as an illuminant and as a fuel. Over seventy-five thousand preparation meters are in use in the greater city, and almost every apartment of ordinary accommodation is fitted with a gas-range. The preparation meter is a contrivance arranged on the principle of a telephone bell. Twenty-five cents dropped into a slot opens a valve, which measures out twenty-five cents worth of gas into a small reservoir. When this is exhausted, another quarter may be dropped in, and in this way the housewife may keep tab on her gas bill as she goes.

Since the introduction of electric lights some twenty years ago, that method of illumination has become exceedingly popular. The partisans of electricity assert that such rapid progress is made in the field of electrical invention, that in the course of the next ten years electricity will have largely taken the place of gas. Its superiority as a light is unquestioned, its only handicap being its greater expense. To remedy this, the genius of the world's great inventors is striving to produce mechanical results that will make electric light and power so cheap as to bring them within reach of the masses. That electric lighting will entirely eliminate gas in the business districts within the next five years is conceded without a question. A canvass of the leading architects and real-estate firms in New York city resulted in a unanimous statement that 100 per cent. of the business buildings, and 96 per cent. of the resident buildings erected within the last two years in New York city, have been equipped exclusively with electrical fixtures. Seven-eighths of the sky-scrapers erected within that period maintain their own plant, the voltage ranging from 110 to 115, which furnishes both illumination and motor-power for the elevators.

The underground railway, now in course of construction, will also be lighted entirely with electric lights. From ten to sixteen thousand electric lamps of from sixteen to thirty-two candle-power will be necessary. The stations, placed at distances of 1700 feet apart, will also be brilliantly lighted, as will the cars themselves.

The subway plant will be located on the extreme West Side, between Fifty-seventh and Fifty-eighth streets.

While gas has made great inroads on coal as a fuel, electricity is as yet almost entirely confined to the lighting field, for no invention has been perfected that will save of the larger hotels and clubs, however, electricity is employed for cooking specialties where merely a uniform heat is required, and for the same purpose electric heat is satisfactory in the laundry.

A New York Sky-scraper as it looks at Night, lighted entirely by Electricity

### THE BUSIEST SPOT IN NEW YORK AFTER DARK

At midnight in New York Row street around here are at work collecting and printing the news of the night for the early editions of the great metropolitan dailies. The lighting of these buildings in the neighborhood of City Hall Park is an important part of the show seen when it takes to light New York only for twenty-four hours

## "LOVE'S LABOUR'S LOST" GIVEN BY COLLEGE GIRLS

A performance of Shakespeare's comedy was given recently by the Senior Dramatic Society of Smith College, in which all the parts were taken by members of the graduating class.

**MISS MABEL TALIAFERRO**

*Miss Taliaferro is one of the youngest actresses now on the stage. She made her first success as "Mother" in Zangwill's "Children of the Ghetto" when she was twelve years old, and some years later created the rôle of the "Fairy Child" in the first American production of W. B. Yeats's drama "The Land of Heart's Desire." In the recent revival of Mr. Yeats's play by the Irish Literary Society, Miss Taliaferro again took the part of the Child*

*A Train on the Electric Suspension Road passing along a Street*

*Another View of the System in Operation—the Line here crosses the Street at Right Angles*

### **THE FIRST SUSPENDED ELECTRICAL SYSTEM IN THE WORLD**

*The only suspended electric railway system in existence is soon to be opened in Germany. It has been built by Messrs. P. Bruck, F. v. M. and H. Anzelm and runs for most of the way over the river Wupper. It was found impossible to make a surface railway, and the line, as there was no available land to span the river and an underground road would have been too costly, as the plan of suspending the system above the river was devised upon as a way out of the difficulty. It is believed that the successful railway system will solve the problem of high-speed passenger traffic abroad, and already there are projects on foot for a hundred mile-an-hour suspension line between London and Stroud.*

# MISSING = A WIFE

An Idyll Of The Glad Vacation Time  
By Albert Levering

1. "Goodbye, enjoy yourself, and let Bobby have lots of sunshine. Oh, I'll be all right." (Linda.) "Love for the first good time since I've been tied up."

2. "Great, the living part — Gee! I wish I knew some one down here!"

3. "You think it's odd — hey? Ain't she de beach? What're ye doin' so far away from home an' out yer wife, mate?"

4. "A beach party. Hair's lots of fun, an. Ha-ha-ha! It was at one of these I first met my wife."

5. "I'm sorry, com. It is. No, how dare you?"

6. "At home? I wonder if she'll believe I am any one in it?"

AN ECHO FROM THE FOURTH

BOSTON, NEW YORK, TWO A. 1903

To the Editor of Harper's Weekly:

Sir.—The "Gleesome Fourth" is here again. We celebrate with laurels, fireworks, and other demonstrations our joy at the triumph of Democracy over a century ago.

In nothing else is the difficulty of solving the theories of government so practical as in the history of the people to retain their sovereignty. In theory they still have it, in fact, it has slipped away from them.

The individual delegates to others his atomic share of this sovereignty. He has yet to learn that to delegate sovereignty to another is not to abdicate it, in fact the people do not govern, not nominate, not choose those who govern in their name. The boss nominates, commercializes, rigs, and the people acquiesce, having lost capacity for both indignation and resistance. The Fourth of July is a good date for us to determine whether explosions are or are not effective as a corrective of bad government. It seems tolerably obvious that organized continuity is a necessity if we would oppose the organized continuity of political machines; the organized continuity of a press largely under the sway of those machines; the continuity of the slavery of officials who owe their nominations to those machines; the continuity of apathy, timidity, moral cowardice, and a timidity which says "don't touch American institutions," even when these words cover the selfish and growth that is eating the heart of the Republic.

The representatives of the people whom have been delegated the offer of agent to do their will, are the officers of the party who dominates, by the power over nomination, which he has usurped. And yet we celebrate the Fourth with readings of the Declaration and orators and speeches because Democracy is not a failure—yet, it is still an ideal of achievement. What is lacking is a fresh start. We have travelled from time to time because we have allowed the boss to do what the people ought themselves to do, that is, guide, and direct legislation, veto, and perhaps initiate legislation, and amend as well as elect the members of the houses.

I am, sir,  
LEWIS STOCKTON.

## AMERICAN SHIPPING

To the Editor of Harper's Weekly:

BOSTON, NEW YORK, TWO A. 1903.

Sir.—I want to mention a slight error in the admirable editorial on American shipping in your issue of the 13th inst., where you say that the United States "at this hour has sailing under the American flag only two American-built transatlantic steamers, to wit, the *Prof* and *St. Louis*." You have overlooked the existence of the steamships *Massachusetts* and *Mississippi*, of the Star line, and of the steamships *Academy* and *Flanagan*, of the Red of the Atlantic Transport line, both of which lines are owned by the International Mercantile Marine Company. The two first-named began their first voyages in June and October, respectively, of 1902, the other two in February and April, respectively, of this American built ships, two to be of 13,000 tons gross register, for six two to be of 10,425 tons gross each, and two to be of 9,800 tons each. The first two they have since sold to the Pacific Mail Steamship Company. To give an idea of the comparative cost of building ships in the United States and in Great Britain, in a letter of 17, 1901, stated that two ships under contract with British builders each cost \$1,410,120. "The same identical ship built at the works of the New York Shipbuilding Company will cost us a little over \$1,000,000," he said. The same company is building two of the smaller ships of 7,200 tons each, and another company is building both the other two of the same size, and another company is building both the same year for this line in Great Britain. The same ships were cost \$334,000, the other costing \$490,000. The cost of operation, on which you say, is much higher under the American than under a foreign flag. And this explains, of course, why American-built ships, operating under the American flag, cannot profitably compete with those built by foreign governments to their ships, amounting in 1900, of Navigation, \$26,132,041, unsaid American ships, it must be obvious, cannot compete.

It is of some significance that, previous to the construction of the new American-built steamships above-named, all of the ships American capital controlled there. It has been publicly announced by the chief officials of the lines that the reason they placed their operations in America instead of British shippers was the expense of subsidy bill. The three of them that the reason they placed their operations in America instead of British shippers was the expense of subsidy bill. The three of them that the reason they placed their operations in America instead of British shippers was the expense of subsidy bill. Had it been enacted, quite likely more, if not all, of the ships of those lines would hereafter have been built in this country, and thus American ships would have gradually superseded foreign ships where the competition is most keen. The suggestion is even foreign flag to reduce the expense of their operation.

I am, sir,  
ALEX. R. SMITH.

"PARSIFAL" AND MR. COHBEH

NEW YORK, TWO A. 1903

To the Editor of Harper's Weekly:

Sir.—Having come to rely upon the WEEKLY'S judgment on musical affairs as expressed in your critical editorials, I venture to make an appeal through your columns for a saner and more sensible view of the question of an American production of Wagner's "Parsifal," which is just now agitating the musical public of two continents. The question seems to hinge upon a point of artistic honor. Has Mr. Heinrich Conried, the new director of the Metropolitan Opera House, a moral right to produce Wagner's "Parsifal" in defiance of the wishes of Wagner's widow and executrix, and those of the composer himself? It is admitted that Wagner was strongly opposed to the production of "Parsifal" elsewhere than at Bayreuth, for reasons of artistic fitness. He doubted, quite properly, if his "sacred stage-festival play," as he called it, could be adequately given except under the conditions obtaining at the Bayreuth Festival Theatre; and Frau Wagner's vigorous objection to Mr. Conried's plan is based, ostensibly, upon a regard for her husband's wishes,—despite her notorious indifference to his desires and ideas in other matters pertaining to the conduct of the Bayreuth performances. There is no question at all, however, that any opposition to say plain looking to the destruction of her monopoly of "Parsifal" is unnecessary by wholly commercial considerations. The special copyright restrictions upon the stage performance of "Parsifal" anywhere in Germany but at Bayreuth have made the opera for her an immensely profitable possession. Those who wanted to hear "Parsifal" in its entirety were compelled to go to the little Bavarian city and to pay whatever Wagner's widow chose to exact from them for the privilege of hearing the master's own song. They could hear "Parsifal" in the inevitably unsatisfactory concert version, if they chose, but there was nothing for it but to go to Bayreuth; and Frau Wagner reaped the profits. For it is "Parsifal" that has kept the Bayreuth enterprise alive during the last twenty years; no one goes nowadays to hear the "Ring" or "Tristan" or "Meister-singer" for one can hear them much better given elsewhere,—notably in America.

No such regard for the objections of Wagner's widow. The question of a regard for Wagner's wishes is a grave one. Would it be possible to give at the Metropolitan Opera House, under merciful or less conventional operative conditions, a performance of "Parsifal" which should be adequate representative? That is the essential point. I should say yes, unhesitatingly. No doubt those who have had Wagner's master-work at Bayreuth would miss the unique Festival Theatre atmosphere which surrounds the performances at the work as "Parsifal" would received in anything but the most respectful and appropriate spirit, even at the Metropolitan Opera House? And is it conceivable, again, that Mr. Conried, excellent and acting manager that he is, would put before the mood of production of Wagner's great work? Granted that Wagner would be alive to-day, but "Parsifal" belongs to the world, and any supprece masterpieces should be held as the exclusive property of a fifth-rate German municipality.

I am, sir,

GEORGE WARRINGTON TOWNSEND.

## THE TEACHING OF ENGLISH

To the Editor of Harper's Weekly:

NEW YORK, TWO A. 1903.

Sir.—In these days of scrap-books and tabloid literature it becomes necessary for the man of varied mental interests to take care systematically record each new development of critical skill that his eye encounters, if he be at all literary in his pursuits.

The page of "Books and Book-men" in your issue of June 20th, filled by the charm of a stunner most grand. With a page fit honor become a page of artistic finish and suggestiveness.

With respect to the quoted and condemning reference to the Mrs. Ella W. Peattie, and I would further endorse the sentiment of up these positions to men and women of decided ability and worth vogue is somewhat faulty. Even among our colleges the system in have successfully passed their examinations very often show a poor understanding and appreciation of good literature.

A teacher of English and literature to do effective work, must be in line with his calling, be possessed of tact and erudition, have ways endeavor to cultivate simple methods. Through which he may impart to beginners a few of his manifold.

If one were to ask a certain number of graduates fresh from the grip of these daily tasks, to separately sit down and write a word bring forth a general admission of incapability in that direction.

I am, sir,  
JOHN F. FARLEY.

**A Question of Titles**

The City Treasurer of Edinburgh, Colonel Sir Robert Cranstoun, who has lately been knighted by King Edward, was called upon recently by a commercial traveller, who wished to see the Colonel on business. As Sir Robert, like most of his countrymen, is of the volunteer corps, not of the regular army, the traveller's inquiry was for Mr. Cranstoun. Colonel Cranstoun, he was informed, was out.

"Oh, very well; can I see Mr. — then?" (mentioning another member of the firm.)

"Major — is out, too."  
"And is Mr. — out, also?"

"I am sorry to say that Captain — has just left to attend a society chess."

The expectorated traveller turned to go, when he was recalled and asked if he wished to leave any message.

"Well," he replied, "it's of no consequence, but you might just say, if you think of it, that Lord Walsley looked in."

**Max Beerbohm's Logic**

When George Bernard Shaw, the brilliant playwright and essayist, realized his position as dramatic critic of the London Saturday Review, he was asked by the manager of the paper to suggest a successor. It did not take Mr. Shaw long to decide upon the man best fitted to succeed him, and he recommended Max Beerbohm, the well-known writer and caricaturist, who had contributed some notable articles to the Saturday. Mr. Beerbohm was sent for and offered the position. He accepted readily; but when it came to the question of salary there was a hitch. Mr. Shaw, said the manager, was getting such and such pay, but he promised that Mr. Beerbohm, being comparatively inexperienced, would scarcely expect so much.

"Oh yes, I shall," rejoined Mr. Beerbohm, deviously; "indeed, I shall expect more. You see," he explained, "as Shaw knows the drama thoroughly, it was preferable for him to write about it. Whereas I know nothing about it, and it will be shockingly hard work."

**Diseases of Metals**

Certain metallurgists in Germany have come to the conclusion that metals are capable of being infected with diseases. A leading scientist, Professor Heyn, has found that, in the injury done to copper from heating, the metal is poisoned with what he calls copper protoxide, a disorder which causes sickness and structural weakness. Steel that has been poisoned by hydrogen is deteriorated until it becomes almost as brittle as glass. Another scientist has discovered a certain kind of the pest which inhabits roofs. He found also that when the diseased metal was brought into contact with healthy tin the latter soon became infected and was finally destroyed.

**What We Pay for Our Lives**

An authority on life-insurance matters has been gathering some striking statistics on the subject of insurance policies and payments. In 1923 cities and towns in the United States during the year 1902 the total distribution to policy holders and their beneficiaries exceeded \$520,000,000. In the distribution of this sum among the larger cities New York holds third place, \$22,940,475 of the total sum having been distributed here in 1902. Philadelphia follows the metropolis with a record of receipts aggregating \$8,750,000. Chicago holds third place with a record of \$6,252,447. In each case these figures show an advance over those of the preceding year, which fact has led our authority into making some inter-

esting prophesies. At the rate of distribution recorded for the past year, it is estimated that the life-insurance companies of New York (exclusive of Brooklyn) are pledged to pay something like \$100,000,000 to the citizens of Manhattan within the next twenty years; while Philadelphia will receive \$100,000,000, Chicago \$100,000,000, Brooklyn \$100,000,000, and Boston \$120,000,000. As more than ten thousand million dollars in policies are carried in this country at the present time, the rate of increase suggests astounding possibilities for the future.

**Education in Italy**

The system in Italy seems to be in a bad way, and, according to the second census, they are improving but slowly. Two years ago, it appears, 61.9 per cent. of the Italians were unable either to read or write; while to-day the number of illiterates has been diminished only to 48.5 per cent. This, however, is the figure for the entire population. In the northern portion of the country progress has been made, and the illiteracy rate has largely decreased. The illiteracy, the percentage of persons unable to read or write now being in the neighborhood of 14 per cent. But the southern section shows no such improvement. Here the percentage of ignorance is between 80 and 90, with no indications of immediate improvement.

**AYER'S PILLS.**—Mrs. W. DODD'S SON, NEW YORK, says: "I always use Ayer's Pills for children's ailments. It makes the child happy, opens the bowels, gives good color, and is the best remedy for diarrhoea." (Ayer's.)

**IF YOUR PHYSICIAN** prescribes a cathartic, for its easy administration, it will be best to use **WATERBURY'S CATHARTIC TABLETS**, a mild, delicately flavored salt that perfectly conditions the bowels by modern methods. For general household use. Prepared by Dr. J. C. Waterbury, New York. (Ayer's.)

**BRACED** with mind and strength of body come only from perfect digestion. Make the stomach strong with **Ayer's**, the Original English Dietetic. (Ayer's.)

**LOVE** thy neighbor and love the most delicious, sparkling Champagne on this Coast, **Charles Heidsieck & Co.** (Ayer's.)

**USE BROWN'S** Compound Sassafras Dentifrice for the TEETH. 25 cents a jar. (Ayer's.)

**PROVE YOUR** Coughs cured always, give relief in cases of Croup and Croup. 15 cents. (Ayer's.)

**ADVERTISEMENTS.**

**Pears'**

Whoever wants soft hands, smooth hands, white hands, or a clear complexion, he and she can have both; that is, if the skin is naturally transparent—unless occupation prevents.

The color you want to avoid comes probably neither of nature or work, but of habit.

Use Pears' Soap, no matter how much; but a little is enough if you use it often.

Established over 100 years.

# THE SLEEP WALKER

BY MORGAN ROBERTSON

A Story in Two Parts.—Part II.

"Now," she said, "did I make any mistakes in this?"

"No," he answered, "and for good it is correct."

"Very well. You know I stopped you at this point, and when I had written it out in long hand, I said 'I'm ready, sit on, and turned to a new page; but you, instead of reading more, dropped the book, got down on your knees, and—just listen—you uttered this in tones of the utmost distress:

"'Sir, my life is in your hands; but as to my body, in relation to that which you would persuade me to, my soul shall never be separated from it, through the violence of your arms, than I shall consent to your request.'"

"And I said that in my sleep?" inquired the amazed Beverton.

"You did," laughed his wife, "in the most plaintive, piping feminine accents imaginable. You were a perfect picture of virtue in distress. What were you dreaming of?"

"I don't remember. Isn't this the page?"—he glanced at the book—"that you were reading when you fell asleep the other evening?"

"Yes, I think so; but I was looking at the knife when I dropped off."

NOT daring to take her into his confidence, he waited, evening after evening, for her to place herself under favoring conditions—to take up the wearying tale of the sea, and to rest her eyes and brain by staring at the glowering array of styes on the wall. She expensively and viciously declared that she would have nothing more to do with either, that she would divert her mind by polishing up her neglected accomplishment of stenography (from practice of which he had rescued her by marriage), and while he fidgeted and made occasional more or less adroit references to the story, which he pretended to admire, she translated into hieroglyphics the random thoughts of her brain.

"For if I make a widow of myself some eight," she said, "and as angel of you, Thomas, and escape execution, I will need to earn my living, don't you see? But if you like that horrid story, suppose you read to me from where I left off, and I'll take it down for practice."

He had committed himself, and was bound to the task. He began at the top of the page and read, but she mercifully stopped him part way to the bottom, so that she might transcribe his notes and verify. This measured her interest in the story, and as he had now himself be gladly ceased, and she began her transcription. While waiting for her to glance at the ornament on the wall. It attracted his gaze, and having secured it, held it; for the longer he looked the less inclined he felt to look elsewhere, and at last, with the knife falling his vision to the conclusion of the fork and steel, his eyelids drooped and his senses left him.

When he awoke he was in his knees, with hands clasped in supplication before his wife, who, with tears in her eyes, but with laughter quivering on her lips—in fact, nearly hysterical, had arisen from her chair with her pencil and note-book.

"Why, Tom," she said, "what is the matter with you? You were not yourself, it was as absurd and ridiculous. Did you go to sleep, and do you talk in your sleep, as I walk in mine?"

"No," he answered, rising and blinking sleepily. "Did I? Yes, perhaps I did doze off—in the chair. Did I get up?"

"Yes, and got down—on your knees to me, with your eyes passionately fixed on mine—oh, it was so funny, but it frightened me; you were so intense—and you delivered yourself up—well, I took it down in shorthand, and I'll transcribe it first, and then read."

He sat down in his chair, and she worked busily for a few moments, and then said: "Now, I'll read first what I took down from that horrid senescent, and you take the book and follow me to see if I've made mistakes."

He picked up the book from the floor, found the page, and scanned it while she read from her copy as follows:

"—which had blown, at dinner, with a force that nearly though aged by the more violent power that was gathering about the borders of the sea, in the direction of the neighboring continent. Each moment the eastern puffs of air lost their strength and became more and more feeble, until, in an incredibly short period, the heavy sails were heaved flapping against the mast—a frightful and ominous calm succeeding."

"So was I," he responded. "Now, this is one of Cooper's tales, written, I think, about the middle of this century; and, though page, that resembles the prophetic speech of mine, or your typographical language the other evening, which you uttered, by the way, in a hoarse, masculine tone."

"Did I?" she asked. "What did I say?"

"Something about 'eight bells' and 'all hands drunk.' I've forgotten it all, but did you ever listen to any sailor yarra? Have you ever read any sea-stories besides this?"

"I never saw a sailor in my life, that I know of. I never read a sea-story, either, and never shall. I don't like them."

"Then it isn't a bright object which, if looked at steadily, will put a person into a hypnotic sleep. At least, that is what I have heard."

"And then we talk," she said. "But why should you talk like a virtuous maiden and I like a bad man?"

"I don't know," he said. "I know very little of hypnotism."

"Thomas Beverton," she said, with much severity, "did you ever listen to a prayer for a helpless female in your power?"

"No," he answered, laughing. "No, I swear it. I've always done the praying myself."

"I suppose so," she rejoined, with a pout. Then, rising, she listened; and if you are going to talk in your sleep, I'm going to listen, and I'll know all about your love affairs, remember that."

And with this truly feminine disposition of the question, she went to bed.

Beverton secured a broom from the kitchen and, reaching up, unhooked the curtain and examined each piece carefully. The sign was a fork, the steel a steel, the knife a knife—simple in store; but the knife possessed one slight peculiarity that his question-knife shape, yet the blade as in the conventional but this, in carving-knives, while the long concave in the back of the blade, near the point, was very short and deep. A further look of a Moorish semitar; but even so, would have carried an unconsciousness to Beverton's mind, and he, who was going to bed before him, he decided to remove it. Putting on his hat and overcoat, he took the three pieces out to the back yard and hurried returned and, as was his custom, read until sleep.

It was two hours later before the desired condition arrived, and lying down a his book, he discovered that he had not bolted his that his bed was empty. He called, but, and, so it certainly did not thoroughly awake now, he ran through the doors of the house, to see his hat and coat. As he reached the dining room, however, was in her night-dress, he saw her enter from the kitchen. Her eyes was the lightless state of unconsciousness, and in her hand the knife. In spite of his trepidation, Beverton shrieked as he

# THE FOUR-TRACK NEWS

AN ILLUSTRATED MONTHLY MAGAZINE  
OF TRAVEL AND EDUCATION

Every issue of the magazine is beautifully illustrated and contains one hundred and twenty or more pages, each one of which is of human interest.

The scope and character of the magazine is indicated by each month's Table of Contents, which approximates:

A dozen articles upon the Places, Peoples, and Objects of all countries, with Nature-Studies, and other articles upon topics of general value and interest.

Four or five readable "Little Histories."

A number of poems that contain something more than a rhyme.

An editorial department devoted to "The World's Progress."

A couple of pages of "Vest Pocket Confidences"—in a minor key.

A department of especial interest to the traveling millions.

Two or three pages of miscellaneous items "From the Field of Fact."

A "table" of book reviews.

Two pages devoted to current New York theatrical doings, treated in a brief "what and where" way.

And enough crisp and humorous briefs, edited by the scissors, to create many a laugh.

In short, each issue of the **FOUR-TRACK NEWS** contains a fifty-cent assortment of good things for five cents, every article being fully illustrated by the finest half-tones that can be made.

Subscription price, 50 cents a year to any address in North America; foreign countries, \$1.00; single copies, 5 cents. Sold at all news stands, or address

GEORGE H. DANIELS, Publisher,  
7 East 43d St., New York.

Room 155.

watched her expressionless stare, then remembering his friend's instructions, pulled himself together, and said:

"Drop that knife. Drop it at once."

The lady glittered on the floor; he advanced, picked it up, and placed it on the sideboard. Then he faced her, calm and determined, resolved to solve the problem.

"Why do you walk in your sleep?" he demanded. She stood quiescent before him; and though her features moved with inward emotion, she did not reply.

"Why do you walk in your sleep?" he again demanded. "Answer me."

"To save myself," she said, slowly, and in plaintive, aggrieved tones.

"From whom?" asked Beverton.

"From my enemy—who would kill me."

"Who is your enemy? Why would he kill you?"

"I do not know. I know I must kill him, or he will kill me."

"This is nonsense," said Beverton, sternly, warning in the problem.

"Nonsense?" Her face seemed troubled, as though the mind behind was not so sure.

"Rank nonsense. No one would harm you. Every one loves you. What makes you think he would kill you?"

"He tried." The face of the young wife took on an expression of fright and horror.

"He met me when I was looking for him, trying to explain. He clashed me by the throat. He would have killed me if he could. He will kill me yet if I cannot explain."

"When did he choke you?" asked Beverton.

"Where was it?" he asked, with perspiration starting from his forehead, and an incident of his childhood in his mind.

"In the hall, a long hall."

"He was a baby," ventured Beverton.

"How could he harm you?"

She waited a moment, as though the question puzzled her, then said:

"A baby, yes. I was a baby, too."

"Where was this long hall?"

"Against the play of emotion on her features, but no answer."

"Was it in a hotel?"

"A hotel, yes."

"What hotel? Where was it?"

"The Mansion House, Main Street, Buffalo."

Beverton shook to the knees. She had named the hotel where his parents had stopped while travelling—where he had last walked in his sleep.

"Grave," he said, as firmly and gently as he could with his tongue trembling against the roof of his mouth. "It did not mean to hurt you; he did not know you at the time. He will never hurt you. You must never seek him again, either to kill or explain to him. He is satisfied."

"How he forgives! Does he realize that—that—that—"

Her face became troubled again, and she moved forth her hands, clanking at the air, as though trying to grasp the elusive mystery.

"Yes, he has forgiven," said Beverton, stouter of voice now at the apparent success of the experiment. "And you will never seek him again, will you? It is all settled now."

"All settled," she repeated, while her countenance softened.

"You will not worry any more, will you?"

"No more. It is all settled. He has forgiven me."

"You will never walk in your sleep again, will you, Grace?"

"No, it is all settled. He has forgiven me."

Then Beverton sent her to bed now he might have spared himself a life-long puzzle which ever baffled solution; but with fairly good command of himself, he yielded to curiosity, and asked:

"What had you done to him? What had he to forgive?"

Her face became convulsed; the query seemed a blow that gave her agony. With arms extended and fingers clucking again, she tottered, but did not fall, and he nervously repeated the question. She did not answer, and by a hasty decision of prompting her, reached for the knife on the sideboard.

"Had it anything to do with that?" he asked.

"The scimitar," she exclaimed, hoarsely.

**Elements of Navigation**  
By W. J. HENDERSON

It is a very clear and concise statement of essential facts concerning the handling of a ship at sea, and contains information indispensable to every one concerned with the navigation of a vessel.—*Army and Navy Journal*, New York.

With Diagrams. \$1.00  
HARPER & BROTHERS, PUBLISHERS, N. Y.

"I killed her with it." Then she pressed her hands to her brow, hid them tight, and her eyes closed, while her frame stiffened visibly under the pressure. When she removed her hands and looked at him, she seemed another person; for in her eyes was the strange, hard expression they had worn when she had dived off in her chair. They lighted on the carving-knife, and before he could move she pressed upon him and wrenched it from his hand.

"Ha," she exclaimed, in the same harsh, raspy voice as before; "and would the senecita harm herself—or me? This is a pretty play-thing"—she ran her finger along the edge—"but too sharp for the Lady Isabel. Spanish make, I took—no took it from the Spanish plate-shop off Tortuga—but better fit to slay than to prod. And had ye thought, my obstinate charmer, that when my patience is given out, it may be this that shall slit your smooth, white throat?" With a meaning and somewhat quizzical smile at him, she laid the knife on the side-board.

Beverton kept his nerve, remembering her reveal amenability to his suggestions.

"Who are you?" he asked, tentatively, seeking an opening for further inquiry.

"Be-lin," she laughed. "An idle question to ask of Hal Morgan. Are ye so little informed of a man known to your countrymen from Madrid to Panama?"

"And where are you?"

"Where am I? Where indeed, but in the stateroom of my Lady Isabel, who, if I mistake not, is still intractable. We will try the water-cure for ourselves." She lifted her face to the ceiling and rulled; "On deck there. A bucket of water. Send it below by the steward."

As though the order were obeyed, she stepped to the kitchen-door, just beyond which was the sink; and from this she lifted at arm's length—a foot of strength, possible in her when awake—the pail of water which always stood there. Turning toward him she swung it backward, one hand supporting it, the other gripping the bottom edge, and would have deluged him, had he not averted.

"Wait," he said, sternly. "The water-cure will not avail."  
Her eyes wavered before his steady gaze, and she slowly lowered the pail to the floor. For a moment it seemed that she would waken, or at least lapse into seditious mood; for her features grew composed, and her eyes lost their glitter; but they rested on the knife, and immediately hardened.

"Then, here's to the end of it," she said, impatiently, and she sprang forward she seized it, then with another bound she leaped, and she reached Beverton and thrust the knife in his shoulder.

It was done so swiftly that he had not time to dodge, and he her hand and remaining in the wound. Looking up with falling brows he beheld her standing with arms listless by her side, the tension gone from her face, and her gaze wandering mildly about the room.

"Grace," he gasped, "you've killed me. Wake up!"

The last was a whisper, but she heard it, and Beverton's last remembrance before he fainted was of her piercing scream as she wakened and looked down upon him.

She had not killed him; on the contrary, though he had espiously nath their armed servant had wounded the doctor, he recovered from the wound and loss of blood long before his wife recovered from the brain-fever that followed her awakening; and it was while she was delirious, and he cavalierly enough to talk that the doctor, after listening for an hour to her ravings one day, entered the room of his other patient, and said:

"She is past the crisis—preparing and sound asleep, and will recover rapidly."

"But," Beverton, though while delirious she was most certainly an as subjective condition as when self-hydrated, yet she has not uttered one word of a qualified or pitiful nature."

"And what of that?" replied Beverton, weakly, but doggedly. "According to those books of yours"—he pointed to a pile of them at the foot of his bed—"and I've studied them well while lying here—there are one, two, or more sub-normal personalities within us, say one of which can become dominant."

"Admitted; but is that a proof of reincarnation?—that the soul of your wife entered in the body of a pirate named Hal Morgan, and that your soul animated the form of a beautiful maiden captured by him?"

"I can accept no other explanation. As infants we were sub-scientific enemies. I drove her back farther, seeking the cause; I saw the convulsive transition. I heard her use language she could not have learned in this life."

The doctor smiled, and drawing a look from his pocket, said:

"Then here is something to further strengthen your belief—for a time—I took for

copy of your maidenly speech to a librarian in the city, told him what was necessary to interest him, and he found this book for Estremada's account of the divorce of Captain Henry Morgan, is this—"

He opened the book, searched the pages, and read aloud, showing it would like to remain for a constant, he presently changed phrases and head notes. To all of which she gave only this terse and positive answer: "I don't know," and the doctor said, "which you could present me to my bed, in relation to that from it, through the studies of your arms, than I shall conclude to your request."

"And what more do you want?" asked Beverton, excitedly.

"The rest needs I speak and I never see that book."

"Wait," said the doctor, smiling. "This follows:"

"Drop that knife! Drop it at once!"

"Captain Morgna, understanding this her heroic resolution, recommended her to be stripped of the best of her apparel, and imprisoned in a darksome, stinking cellar; here she was allowed a small quantity of meat and drink, wherewith she had much ado to sustain life."

"No need of reading the whole account," said the doctor, closing the book. "This occurred in the city of Panama, which Morgna had just captured, and the lady was seen at sea with him. His men took her from Taguay or Taguilla, and he released her on the march from Panama to the coast. He did not kill her."

"Then why should I hate her as a lady?"

"I do not know. Children have strange antipathies, and while very young, are much in the subjective state."

"But the sailor talk: where did she get it? Where did I get that question you just read?"

"Telepathy," said the doctor. "It is the subconscious mind which projects and reads thoughts. You were both subjective from an inherent tendency and the influence of that shiny knife on the wall. Your fear of punishment and bedtime prayers were a strong auto-suggestion against somnambulism; but the half-overdose it is your case, and your wife never met with any deterred influence whatever. Now, Bererton, one of you—it makes no difference which—has read the mind of the other, and this one has read the mind of some stranger, projective personality—some man or woman thoroughly imbued and interested in the history of the seventeenth-century pirates—some man who has lately read this book, and other accounts of Morgna's adventures."

"And the sinister-like shape of the knife—the sea-story by Cooper?"

"Coincidences, both of them—and suggestions."

Bererton was silent a few moments, then said with a wry sigh: "I cannot conceive myself. I wish I could. It is strong evidence, as you say, toward telepathy, but does not disprove reincarnation. How did she find that knife in the moon? It was dark. I did not know where it fell."

"Your subconscious mind knew. So did hers. It was merely clairvoyance."

The doctor rose. "It does not disprove, I admit, Bererton," he said; "and if you must know, you can only learn by experimenting farther. The knife, fork, and steel are at the bottom of the river, as you directed. But you can hypnotize her by other means."

"Not for the world," said Bererton. "I give up. I'll wait until she wakes in her sleep again, if I experiment any more."

But Mrs. Bererton never accommodated him; neither would she have a pointed knife in the house, nor permit her eyes to move thus merely rest upon anything bright for the rest of her life.

### The Life of a Seed

The United States Department of Agriculture is making experiments for the purpose of determining the extreme vitality of seeds. Over a hundred species of plants have been packed in a well consisting of dry clay enclosed in pots, and buried at varying depths underground—eight sets at a depth of six inches, twelve at a depth of twenty, and a third set of twelve at a depth of three and a half feet. At the end of one, two, three, five, seven, ten, fifteen, twenty, twenty-five, thirty, forty, and fifty years, a set from each depth will be sown and treated. The results of the experiment are likely to be of extraordinary value to agriculturists, both commercially and scientifically. Incidentally, it may be recalled that seed-beds in arid regions are so covered which prove that certain seeds have the power of sprouting after having been buried for long periods of time, reliable tests having shown that twelve out of twenty-one species but the power of germinating after twenty years.

### A Home for English Girls in Paris

Mrs. Mackay and Mrs. T. P. O'Connor warmly recommend Madame de Pompadour's Home for English Girls wishing to spend their holidays in France. Point de la Vierge, Madrid, overviews the Bay of Biscay, has beautiful views, every house furnished, bath room, perfect ventilation, and every house electrically lighted. In connection with Madame de Pompadour, who has been recently gifted as a member of the Order of the Legion of Honour, will be immediately answered. For further information, or for a prospectus, apply to Mrs. T. P. O'CONNOR, Oakley Lodge, Chelmsford, London, England.

## We Go to Bohemia for Hops

We send our own buyers there every year to get the best that are grown, and we pay for them twice what common hops cost.

A partner in our business buys our barley, and selects the best from all.

We get our water from six wells, bored to rock.

Our yeast is all developed from the original mother cells which helped make Schlitz Beer famous.

## We even filter air

All the air that touches Schlitz Beer comes to it through air filters.

And the beer itself is filtered through white wood pulp.

Then we age it for months, until it can't cause biliousness.

We sterilize every bottle.

**Yet Schlitz Beer costs only common beer prices**

## The Twentieth-Century Farmer

For many years it has been a source of considerable levity that the candidate for office bowed subserviently to the farmer; he has been pictured as helping load the farmer's hay and eating with the "hired man" - for votes. Likewise have the law-maker and executive been held up as subservient to the demands of the agriculturist, and in prose and verse the dictum that "the farmer feeds us all" has been reiterated. This is particularly noticeable in the West, where the farming communities constitute the larger portion of the territory. Demands are there made and enforced which result in the adoption of measures favoring the agricultural communities at the expense of other interests.

### Favoring the Farmer

There are, for instance, scores of school districts in the thinly settled portions of the plains where the entire tax is paid by railroads and Eastern corporations, and farmers' children attend the schools so supported. The new irrigation law is a farmer's measure. It begins with the expenditure of \$6,000,000, and may in the end expend \$100,000,000, all in making fit for tillage semi-arid land demanded by would-be settlers. Investors with bonds and mortgages in ditch properties look upon the movement helplessly, though the workings of the commission may be to deprive some properties of their value by decreasing the amount of water obtainable in order to assist other sections.

Nearly every Western election contest is fought on a basis of promises to change the laws to favor the farmer. Once in a while there is a political insurrection, and a Farmer's Alliance sweeps the boards, sending former legislatures to frame super-partial laws, which later are blighted by the Indian's courts. The settler demands the Indian's land, and he gets it; he asks for the rancher's grazing territory, and he obtains it. Yet it is fair to consider that the average farmer thinks his class much abused, and believes that the followers of other callings are favored greatly at his expense.

### His Increasing Prosperity

The farmer seems to have fared very well during the past few years. With the feeding yards, the farmer serenely contemplates record-breaking prices for meats, and seems to have the best of it. For what of the laboring man or the tailor in office and shop? He has no beef to sell; his dinner costs him more than before, and his salary is not increased. The farmer has seen the value of land throughout the entire Mississippi Valley increase in value from twenty to seventy five per cent. in the past three or four years. It is the farmer's land, nearly every acre of it, and he is benefited. No comparative increase has been made in the price of realty in the towns. Even the vast reaches of plain, fit in their present state only for grazing, are becoming valuable as the amount of range diminishes - the farmers and ranchmen own it, or what they do not already own will soon pass into their hands through the movement of settlement and homesteading.

### The Farmer, and Others

Unquestionably, one great basis of our development as a nation is agriculture; no class deserves more or earns more of respect and consideration than that one which produces the things of the soil and range. But, in current phrase, "there are others." The complex forces of modern civilization have brought other elements into the nation's development, and while in no wise diminishing the farmer's value has brought to task with him the artisan, the trans-

prefer, the dealer, and other notable figures in the advancement of the world's work.

The designer devises a great deal of attention to the wheat-grower or for feeding up the price of corn are evolved; co-operative plans to make unnecessary the "middle-men" are exploited—and usually with a provision for a salary or commission to some shrewd city promoter who would not know a self-blender from a corn-harvester. Every little while the telegraph tells of the probable formation of a mighty union of farmers to reduce or limit the ravages of some crop. It ends in smoke—it was the dream of a schemer who hoped to profit by its success.

**Broader and Happier**

There are indications that the farmer does not take these things as seriously as he once did. He reads the daily papers (delivered to him before dawn by rural carriers); he takes the magazines; he understands something of the other side of life. He travels more than in the days of high railway rates—the roving back East for "old home work" brings him in touch with the people of other States. He is made broader and happier.

Most important of all, he is learning to make of his occupation a business, and when that is done he ceases to consider himself the favorite of fortune. The government long ago made the gathering of agricultural statistics a part of its duties, and many Western States secure, with great exactness, reports showing the cost of producing every kind of grain. The farmer, instructed by the bulletins, learns, if he has not already studied the mathematics of his farm, whether he is losing or making money by his methods. He learns also how to provide against the vicissitudes of the seasons. As a result, he becomes a business man, and takes rank among the captains of industry—not the commander, for none is in the prime in rank, but an equal sharer in the advancement and prosperity of the nation. And this place is the highest honor that can be paid him.

**More about Radium**

Radium does not get its energy from the air, as some scientists seem to suppose, but very probably from changes within the atoms of which it is composed. It is believed that these atoms are the heaviest in the universe. It is possible that, after hundreds of thousands of years, radium may devolve into simpler elements, and so pass right through the series to hydrogen. Scientists do not now believe that the "elements" are really elemental. There is really only one element. But radium is its most remarkable form. Great quantities have been manufactured in the specimens now being publicly exhibited at the London Natural History Museum—three tiny grains in a watch-glass, shining as they have done since before man appeared on the earth. The constant exhibit seems to give the most authentication. In it some sulphide of zinc has been painted with radium, and in the dark it glows with a soft green light. This part of the exhibit will not require renewal for 30,000 years. Other interesting metals in the exhibit are thorium and bismuth. Thorium is the main ingredient of the incandescent mantle. Helium is so light that the world's revolution has whirled nearly all of it off into space. What remains is probably now re-formed by the breaking down of the atoms of radium—if the world atom can be applied to what has at least 150,000 parts.

## COMMENT

THE "Iowa Idea" has been strangled in the State where it was born. For this act of political infanticide Governor Cummins, the author of the idea, must be held mainly responsible, inasmuch as his friends were preponderant in the Republican State convention held at Des Moines on July 1, and defeated all but one of the nominations. It is admitted that the tariff plank was originally drafted by Governor Cummins himself, but afterwards altered, after conferences with Senator Allison, J. W. Blythe, chief counsel for the Burlington and Quincy Railway, and ex-Congressman George D. Perkins, editor of the *Sionix City Journal*. We say that the Iowa Idea was strangled, because the tariff plank does not demand, as Governor Cummins formerly did, that the redemption of certain schedules shall be made as quickly as possible—that is to say, by the Fifty-eighth Congress. To say vaguely that a readjustment of the tariff to changed industrial conditions is a desirable thing, but, at the same time, to postpone the attainment of it to an indefinite future, is, of course, equivalent to a withdrawal of the project from the field of practical politics. Governor Cummins, in his speech of acceptance of the nomination for Governor, declared that he still believed the tariff should be revised from time to time to meet modified conditions and to check the development of monopolies. If the Governor had not really retreated from the ground he occupied a year ago, he would have caused the convention to declare that certain clauses of the Dingley tariff must be altered without delay, and that the reciprocity treaties now pending in the Senate should be ratified at the earliest possible moment.

Certain spokesmen of the minority, not satisfied with the substance of victory, expressed indignation that the convention should endorse tariff readjustment, even in the most perfunctory and evasive way. One Congressman denounced tariff-reformers and tariff-fighters as little better than Democrats, and Congressman Lacey declared that, while he would accept the platform as a whole, he would never consent to any change in the tariff so long as he remained in the Federal legislature. These men are exponents of the new Dingleyism, which Mr. Dingley himself would have disavowed. Nothing is more certain than that Mr. Dingley heartily approved of the reciprocity clauses in his bill, and that it was with an eye to the execution of these clauses that he made the duties on

certain imported products very high, so as to leave a margin for reduction in favor of such countries as should be willing to make equivalent concessions in reciprocity treaties. That the abnormally high duties would be retained, while, at the same time, all but one of the proposed reciprocity treaties would be rejected, was an outcome of his tariff that Mr. Dingley never contemplated. His position was thoroughly understood and publicly sanctioned by President McKinley in the latter's last speech at Buffalo.

The reference to the so-called "trusts" in the platform framed by the Republican State convention of Iowa also strikes us as hollow and insincere. The convention expressed the belief that the large corporations commonly called "trusts" should be so regulated and supervised, both in their organization and operation, that their evil tendencies may be checked and their evil practices prevented. What these tendencies and practices are was not defined. The convention went on to acknowledge that in many instances the trusts are efficient industrial instruments, and represent the natural outcome of a national process of economic evolution. It did not desire their destruction, it said, but insisted that they should be so regulated and controlled as to prevent monopoly and promote competition. It will be interesting to learn how a combination of railways or of industrial corporations could promote competition. One of the principal aims of combination is to avert the waste inseparable from needless rivalry. It seems incredible that the rank and file of the Iowa Republicans can be satisfied with such a double-faced and meaningless declaration. A creditable plank in the platform expressed earnest approval of the reciprocity with Cuba lately ratified by the Senate, and demanded that the House of Representatives should promptly take the requisite steps to make the treaty effective.

The only other features worth notice were the recommendation that self-government be conceded to the Philippines, so far as this should be found practicable; an indirect rebuke of mob violence, such as has been lately witnessed in Wilmington, Delaware; the advocacy of good roads and of irrigation; and a denunciation of the disfranchisement of the negro in Southern States. The last-named pronouncement seems to have been perfunctory, for, according to the telegraphed summary of the platform, it was not accompanied by the demand for a Free Bill—that is to say, for the enactment by Congress of legislation calculated to compel obedience to the Fifteenth Amendment of the Federal Constitution. We scarcely need say that the Iowa Republicans urged that Mr. Roosevelt should be nominated in 1904 to succeed himself. Had the endorsement been made before a similar step was taken by the Ohio Republican convention, it would have had considerable significance, because Senator Allison of Iowa has long been talked of as a candidate for the Presidency. As things are now, those politicians that wish to commend themselves to Mr. Roosevelt by exceptional zeal must intend that he be nominated not only next year, but also in 1908. This extraordinary proposal has actually been made in Virginia. We hope that it will be reiterated, and that it will meet with general approval on the part of the Republicans. In that event, their principal objection to a conspicuous candidate of the Democracy would have to be withdrawn. If a third consecutive term would be desirable in the case of Mr. Roosevelt, a third term not consecutive would be unobjectionable in the case of Mr. Cleveland.

We took for granted that the sound position taken by the Democratic State convention of Iowa, the position, namely,

that certain schedules of the Dingley tariff must be readjusted now, and that this issue is more vital than any of the demands inserted at Mr. Bryan's behest in the Kansas City platform, would command itself to Democrats all over the country, or, at all events, in the States east of the Mississippi. It is with regret, therefore, that we note the comparative indifference to truly national issues exhibited by ex-Governor Pattison and Colonel Guffey, who, between them, are likely to shape a platform for the State convention of their party in Pennsylvania. Colonel Guffey wants his party to demand the immediate repeal of the Sales-Grady Libel Act, and to make the next campaign in the State turn upon that issue. Such a demand would figure properly enough in a State platform, but it could not be made a cardinal issue, for the reason that the rank and file of the Pennsylvania Republicans are as much opposed to the new libel act as are the Democrats. The law has no friends, outside of a few Republican leaders whose withers have been wrung by the publication of unpleasant truths. It has been incessantly and notoriously defied ever since it was placed upon the statute-book, yet nobody has dared to call for its enforcement. Nothing more absurd could be imagined than to make a still-born statute the pivotal issue in a campaign preceding by only about six months the meeting of national conventions in a Presidential year.

Mr. Pattison sees the impudence of Colonel Guffey's plan, and would have the Democracy appeal to the voters of Pennsylvania with the old Times war-cry, "Turn the rascals out!" It may be that events will so change themselves as to render such a war-cry effective. To adopt it at present, however, would be premature. As regards the corruption with which the Washington post-office, if not the whole postal department, seems to be honeycombed, Mr. Roosevelt has thus far displayed an inflexible determination to detect and punish the evil-doers. If there are any signs of wavering on his part, there are to be recognized in the confidence with which Senator Hanna, after an interview with the President, announced that Postmaster-General Payne would not resign, and in the reluctant admission made by First Assistant Postmaster-General Wynne and Fourth Assistant Postmaster-General Bristol that they had been forbidden to give the press any further information concerning the discovery of postal frauds. Postmaster-General Payne would hardly have issued such a prohibition unless it had been sanctioned by the President. It is hard to understand why publicity, which, according to Mr. Roosevelt, will prove an efficient deterrent of wrongdoing on the part of corporations, should suddenly seem objectionable in the case of guilty post-office officials. It is pretty clear that if the gag had been applied some months ago the post-office scandal would never have been heard of.

We shall hear no more of the complaint that in some of the Gulf States an attempt was making to revive negro slavery under the guise of peonage. As we have formerly pointed out, a law was placed upon the Alabama statute-book by virtue of which, if a negro was fined for a misdemeanor by a county magistrate and was unable to pay the fine, he could be sentenced to forced labor for months or even years in the service of the white man by whom the fine should be paid. Although the law was eventually pronounced unconstitutional by the Alabama Supreme Court, some county magistrates persisted in exercising the powers which the statute purported to confer on them. Under the circumstances, it was deemed expedient to invoke the interposition of a Federal court. As it happened, Judge Thomas G. Jones, of the Northern and Middle districts of Alabama, the United States District Attorney, and the United States Marshal were all three of the negroes. The quickness and the rigor with which the infringements of the Thirteenth Amendment were punished bear impressive witness to the heartfulness of public opinion in the State. Neither in Alabama nor in any other part of influential citizens or newspapers to evade the Thirteenth Amendment. If any apprehension on this score has Alabama Federal Court, and by the virtual unanimity with which the action has been applauded.

No anxious Southerner needs to be told that the inclination now observable in the Northern States not to insist upon

the enforcement of the Fourteenth and Fifteenth Amendments would be instantly arrested by the discovery that the practical nullification of the Thirteenth Amendment was contemplated in some Southern States. That amendment, it will be remembered, prescribes that neither slavery nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist in the United States or in any place subject to their jurisdiction. To fine a negro, and, in default of the payment thereof, to sentence him to hard labor, not for the State or in a county workhouse, but in the service of an individual who may see fit to pay the fine, obviously throws the door wide open to collusion on the part of a magistrate, and constitutes a flagrant violation of the Thirteenth Amendment. The true friends of the South have taken for granted that an erosion of that amendment on any pretext would be loathly condemned, and we note with satisfaction, but without surprise, the cordial approval which the course purged by Judge Jones has commanded in his native State. From the view-point of the highest interests of the Southern whites, it was of the utmost importance to stamp out peonage in the germ.

The hideous incident at Wilmington, Delaware, has naturally provoked discussion of the negro's position in the American commonwealth, the opinion having gained ground that the elevation of the blacks to political equality is largely responsible for the new negro crime. A remarkable declaration was made on July 3 by the African-American Conference, held at Louisville, Kentucky. In an address on the new question issued to the public by the conference, it says that it offers no objection to the disfranchisement of the ignorant negro, provided ignorant persons of the white race are similarly dealt with. We presume that a property qualification would also meet with approval, provided it were applicable to both races. It is probable that the practical effect of educational and property qualifications would be to disfranchise those negroes from whom crimes may be apprehended. Mr. Booker T. Washington, speaking at Louisville on the preceding day, pointed out that the outbreak of mob violence at Wilmington had conveyed a lesson to the colored race. The lesson was that, so far as the influence of parents, schools, and pulpits was concerned, no effort should be spared to impress on the colored people the imperative necessity of putting an end to idleness and crime. His fellow blacks should let the world know on all proper occasion, he said, that they consider no legal punishment too severe for the wretch of any race who attempts to outrage a woman. Meanwhile, there are men who seem to see that equal justice shall be meted out to black and white. Such a man, he said, was Judge Jones of Alabama.

Another interesting contribution to the discussion of the negro problem was made on June 29 by Regent Charles A. Gardiner, of New York, at the annual convention of the educational body known as the "University" of the State of New York. He opened, although no explicit decision of the question has yet been put forth by the United States Supreme Court, that the property and educational qualifications for voters, lately introduced in the Constitutions of certain Southern States, would be declared valid, although the "grandfather clause" would be pronounced void. The repeal of the Fifteenth Amendment he regarded as not only visionary, but also in superfluous, because the illiterate and thriftless negro would be practically eliminated, in spite of the constitutional amendment. Mr. Gardiner was convinced, he said, that any attempt to enforce the Fourteenth Amendment by substituting for apportioning Representatives would be absolutely unconstitutional and void. He held that the power of Congress to amend the Fifteenth Amendment was adopted. But if the Fifteenth Amendment, considered as a nation, can neither repeal the Fourteenth, nor enforce negro suffrage under the Fourteenth, what solution of the negro problem remains? Mr. Gardiner would find the solution in education, and he maintains that Congress is constitutionally empowered to educate the negro.

No other recent comments, however, on the negro question quite equal in respect of weight and insight those embodied in a Fourth-of-July address delivered by Dr. Lyman Abbott, editor of the *Outlook*, at Montclair, New Jersey. He started with the admission that the problem cannot be solved by subjugation, by expatriation, or by amalgamation. Humanity, religion, and economic self-interest combined to make extermination or expatriation impossible. Segregation has been tried and renounced, and no renewal of the experiment, however disguised, will be permitted. As for amalgamation, this is forbidden by the instincts of both races, and, so far as it has been surreptitiously attempted, has tended, apparently, toward race deterioration. Precisely how the problem should be solved Mr. Abbott did not presume to say, but he is convinced that, in seeking a solution, we must never depart from the principles of liberty, equality, and fraternity. He hastened to explain precisely what he meant by these terms. By liberty he meant that the negro must possess the same freedom of family, of labor, and of contract which white men claim for themselves. By equality he meant that the negro must be the equal of the white man under the law and before the courts. He was far from asserting, nevertheless, that equality before the law implies equality in character, or involves identity in function. Equality does not mean that all men, black and white, are to govern as State Executives, as sheriffs, as members of a legislature, or as voters. We are reminded that a boy of sixteen years of age is equal before the law with a man of sixty; but the boy cannot vote and the man can.

We may add that women and men are equal before the law, yet women are debarred from voting in all but four States of the Union. It will scarcely be alleged that in any of our States men have violated the principles of liberty, equality, and fraternity with reference to women. To prescribe, as six Southern States have recently prescribed in their State Constitutions, property and educational qualifications for the suffrage is neither unconstitutional nor inconsistent with liberty, equality, and fraternity. It may be true that these prescriptions are not justly and equally enforced in some sections of the South. What is the remedy? Dr. Abbott answers that we and the negro must appeal to the honest and intelligent sentiment of the South for the just and equal enforcement of laws which the South itself has fashioned. He recognizes that there is no lack of truth and courage in the South, and that while Southerners do not believe in negro domination or in amalgamation, they do believe in giving the negro equal justice before the courts, and a helping hand in his endeavor to help himself. This brings us to the definition of fraternity, as the term is used to indicate one aspect of the relation between the white man and the black. By fraternity Dr. Abbott does not mean that the negro is to intermarry with the white, or to govern the white, or to imitate the white, but that the white man is to help the black to develop in himself as an individual, and in his race as a race, the highest and best and largest manhood. Help can best be rendered by education; but of nine dollars devoted to the purpose, Dr. Abbott is convinced that eight dollars should be spent on industrial and pecuniary education—i. e., on the kind of instruction that enables the instructed to support themselves.

We have discussed elsewhere the notable address delivered by Chief-Judge Alton B. Parker, of the New York Court of Appeals, at the annual meeting of the Georgia Bar Association at Tallahassee. The impression made by Judge Parker on the members of the Georgia Legislature, to whom he had previously been introduced, seems to have been most favorable. It does not appear, however, that he said a word that might be construed as an allusion to the use that has been made of his name in connection with the Democratic nomination for the Presidency. He went no farther than to admit that he concurred in the opinion when somebody shouted that "we need a Democratic President." Not an incident occurred to justify the most cautious observer in describing the perfectly proper acceptance of an invitation to address a bar association as an eulogizing term. Nobody desires that the occupant of a high judicial position should not seek political office. On the other hand, no reasonable person will assert that a judge should repel a nomination for such an office, if

it be tendered. It has been repeatedly alleged, but is not strictly true, that no jurist was ever elected President of the United States. As a matter of fact, Andrew Jackson was for six years judge of the Supreme Court of Tennessee, though, of course, it was his military rather than his judicial achievements that made him President.

Few students of affairs in the Northern States in 1856 now doubt that the Republican national convention of that year would have done well to nominate Judge McLean of the United States Supreme Court for President instead of John C. Fremont. They would then have had a fair chance of carrying Pennsylvania. Neither would anybody now dispute that the Democrats would have done wisely in 1868 had they nominated Chief-Justice Chase of the United States Supreme Court instead of Horatio Seymour. The former would have received the support of the New York Tribune and of many veteran Republicans who regarded General Grant with suspicion. There is a man now on the bench of the United States Supreme Court who would make an admirable candidate for the Democracy in 1904, because he has espoused the Democratic side on all the live issues of the hour. He was audaciously opposed to the free coinage of silver at the ratio of 16 to 1—but that is a dead issue. He is an anti-imperialist, believing that the Constitution follows the flag; and he holds that great combinations of capital can and should be subjected to restraint by the Federal government. We refer, of course, to John Marshall Harlan; and the question may well be asked why, if the Democracy is to take a candidate from the judiciary, it should not seek the highest bench and pick out the best man on it? The only objection to Justice Harlan's availability is that he was born in and appointed from Kentucky, which the Republicans have renounced the hope of carrying. The truth is, however, that Justice Harlan has sat so long upon the bench that he may be said to hail from the Capitol at Washington; and, as for local availability, there is reason to believe that State pride would cause Kentucky, which never yet had a President, to give him her electoral votes.

It is satisfactory to learn that the announcement informally made by Count Cassini through American newspapers, that the Kishinef petition addressed by the United Hebrew Congregations to the Czar would not be received by the Russian Foreign Office, had failed to deter President Roosevelt from forwarding the petition, with a note of commendation. If the Russian government desires the communication to be withheld, it must communicate its wishes in an official way. We can quite understand why Mr. de Plehve, the Russian Minister of the Interior, on whom the responsibility for the massacre largely rests, would like to stop the forwarding of the petition. If our ambassador to Russia were now at St. Petersburg he could demand a personal audience of the Czar, and thus make sure that the petition reached the hands of the autocrat. Transmitted through any other channel, it might fail to meet the eyes of Nicholas II. There has been so much talk about the matter, however, that the Czar is likely to insist upon an inspection of the document. If he does, some material concessions to the Russian Jews may be secured, for, as we have pointed out, the petition is admirably worked, and calculated to touch the heart of a generous and sympathetic ruler.

We are sorry to see a disposition to impute Mr. Roosevelt's persistency in forwarding the petition to arrogance on his part at the alleged sequestration of Russia to the concessions requested of China by our minister at Peking. We have demanded that the treaty of commerce now in course of negotiation shall contain a provision that the number of treaty ports in Manchuria shall be increased by two, so that our exporters of American products to that province may have free access not only to New-chiang, but also to Mukden and Taku-shan. We do not for a moment believe that Mr. Roosevelt could have been persuaded to refuse the request of the United Hebrew Congregations by a cessation of Russia's resistance to the opening of new treaty ports in Manchuria. We have no doubt that Russia would gladly see American admitted in Mukden and Taku-shan, but for the fact that other foreigners, including particularly the British and the Japanese, could not be debarred from the enjoyment of the

same privilege because the "most-favored-nation" clause is, or will be, contained in all the treaties concluded between China and foreign powers. No man conversant with the irreconcilability of Russian and Japanese interests in the Far East can fail to appreciate Russia's unwillingness to see the Mikado's subjects admitted to Manchuria; and, of course, since the conclusion of the British-Japanese alliance, Englishmen are also eyed with suspicion. Some of our American newspapers seem to forget that Russia has expended a vast amount of money on the Trans-Manchurian branch of the Siberian railway, and that to expect her to renounce the protection of the line is unreasonable. How long could the railway be kept in running order if the Russian garrisons were withdrawn, and Japanese emissaries were suffered to enter Mukden and there foment Chinese hostility against the Russian invader? We ought to ask ourselves how we should be likely to act if we were in Russia's position.

Certain letters of his which have been published in *franglais*, indicate the possibility that Lucius N. Littauer, a representative of a New York district in the Lower House of Congress, has been guilty of an act which is made a crime by the Federal statutes, a participation, namely, in the profits derived from government contracts. A Federal law makes it a misdemeanor, punishable by a fine of three thousand dollars, for a member of Congress to undertake, execute, or enjoy, directly or indirectly, in whole or in part, any contract entered into on behalf of the United States, and the same penalty attaches to a government official who shall have entered into any such contract. From the published documents in the case it seems to be possible that the man Lyon, with whom a contract for furnishing gloves was made by the Quartermaster-General's Department after the outbreak of the war with Spain, shared profits with the firm to which Littauer belongs. As early as Thursday, July 2, Secretary Root, doubtless acting on instructions from Mr. Roosevelt, called Judge-Advocate-General Davis into consultation, and directed him to look into the legal aspects of the disclosures concerning Representative Littauer. Nor is this the only case of the kind with Spain which Secretary Root has determined to subject to a rigorous investigation. It appears, for instance, that the contracts for supplying headstones to the army have for several years been given to the Vermont Marble Works, of Proctor, Vermont, in which Senator Redfield Proctor of that State is largely interested. It is also alleged that Representative Sibley of Pennsylvania is interested in a concern that has furnished supplies to the Post-office Department.

It has long been a matter of current rumour in Washington that, if the methods followed by the War Department in the purchase of supplies for the army between the 4th of March, 1897, and the date when Mr. Root became Secretary of War, should be subjected to investigation, a mass of corruption would be disclosed that would shock the country. The amount of money involved in the Littauer glove case and the Proctor headstone case is believed to be insignificant compared with the criminal waste incurred in other transactions. We have heard it asserted by men who spoke from information and with authority, that during the period preceding the appointment of Secretary Root the government was defrauded of many millions of dollars in army contracts, and that implication in the frauds can be brought home to men who still President Roosevelt and Secretary Root, at a crisis which conceivably may involve their party's fortunes, will heed the injunction, *Senite, and spare not!* One thing is tolerably certain, namely, that if, for any cause, they should be disposed to shirk their duty, they will be sternly reminded of it by the Democratic minority in the House of Representatives.

We discuss elsewhere the conditions under which the next Pope will be chosen, and we have lately directed attention Leo XIII. in the course of his statesmanship given by When he assumed the triple crown in 1878, the condition of the Papacy was, of course, less abject than it had been when Pius VII. was chosen Pope at Venice. It was sufficiently depressing, however, the total loss of temporal authority by Pius IX. having been accompanied by a threatened eclipse

of spiritual influence. The promulgation of the dogma of Papal infallibility by the Vatican Ecumenical Council had given rise to the Old Catholic movement which, for a time, seemed likely to acquire large dimensions. In Prussia, Bisumrek had announced that he would never go to Canosa, by which he was understood to mean that the Falk laws against the Catholics would never be repealed. There was ground for fear that the anti-Catholic policy followed at Berlin would be adopted at St. Petersburg against the Polish Catholics. In Spain an anti-Catholic republic had been but recently supplanted by a monarchy, which looked precarious, and in the third French Republic, Gambetta, still all-powerful, had hidden French republicans to see in clericalism their chief enemy.

On the recent twenty-fifth anniversary of his enthronement Leo XIII. could gaze around him and recognize that the clouds had been dispelled by his foresight and sagacity in every quarter but one. A satisfactory *modus vivendi* had been established with Russia in regard to the Catholic hierarchy in Poland. The Falk laws had been repealed in Prussia, with the exception of a fragment by which Jesuit establishments were barred out from the Prussian dominions. The influence of the Papacy in the Iberian Peninsula had been completely renewed. Unprecedented progress had been made by the Roman Catholic religion in the United Kingdom and in the United States. In Belgium, the Clericals had superseded the Liberals as masters of the Parliament, notwithstanding the immense extension that had been given to the suffrage. With reference to the Italian monarchy, the Papacy is no worse off politically, and is much better off morally, than it was twenty-five years ago, because it has become a matter of grave moment to the Quirinal that the Catholic voters, who, in obedience to the orders of Pius IX. and Leo XIII., have abstained from taking part in Parliamentary elections, should rally to the support of conservative principles. That is to say, in Italy the state now needs the Church. Only in France has the conciliatory policy of Leo XIII. proved fruitless, and the Pontiff's last moments must have been embittered by the knowledge that the concordat between that country and the Papacy seems on the verge of abolition. Yet the thought must have consoled him that, with the limited means at his command, he gained many a moral victory, and immensely enhanced the prestige of the Vatican.

That the baby should swallow a pin and come to no harm, and that the passion for gambling should vanish,—these are among the commonplacees of Christian Science testimony, but the annual excursion to Concord, New Hampshire, the home of Mary Baker G. Eddy, is no commonplace, and never will be, so long as it is like that which happened on the last Monday in June. Ten thousand or so of her disciples went on that trip. Nobody knew that they were going until the middle of the day before, Mrs. Eddy having withheld her invitation to the last possible minute. For an evening disengagement, tickets could not be prepared, the day being Sunday. To this, as they did, drawing from their own ranks a supply of anti-Christian Science publishing-house all the tickets needed. They also furnished a corps of able ticket-sellers, who sold 40,000 wouder is tickets on Sunday afternoon. But what excited most of the crowd of pilgrims, the general passenger agent of the railroad testified that a letter-natured lot of people never travelled together. The accompanying reporters marvelled at the quiet courtesy of the devotees when they reached Concord. Says one: "Nobody ventured to encroach upon his neighbor, none struggled for a better view," and some ventured on any forbidden ground. They even kept off the grass. The most motley crowd simply concluded itself with courtesy and consideration—to the bewilderment of observers who had seen big excursions before. Of the demeanor of Mrs. Eddy's followers toward that woman when she appeared on the balcony of her dwelling, and as she rode through the muck in a closed carriage, it is needless to say no more than that as an exhibition of adoration the churches rarely see anything to compare with it.

## Chief-Judge Parker on the Reconstruction Amendment

It is perfectly true that, in the remarkable address delivered by Chief-Judge Alton R. Parker, of the New York Court of Appeals, at Tallulah Falls, before the Georgia Bar Association, there is not a line or a word which can be construed as a bid for political favor. It is, at the same time, undesirable that an subject should be depicted, more certain to rivet the attention of lawyers in a Southern State than the hearing of the phrase "Due process of law" on the constitutional relation of the Federal government to the constituent States of the Union. The phrase recurs, it will be remembered, in the Fifth Amendment of the Federal Constitution, which provides, among other things, that no person shall be deprived of life, liberty, or property, without due process of law. It occurs, also, in the Fourteenth Amendment, which sets forth that no State shall deprive any person of life, liberty, or property, without due process of law. The Fifth Amendment was added to the Constitution on the demand of the States, and was intended to restrain the Federal government; while the Fourteenth, in the clause to which we have referred, was meant to restrain the States. With regard to the latter amendment, Chief-Judge Parker pointed out that at no time in the history of the United States could it have been adopted previous to the so-called Reconstruction period; and he did not hesitate to add that, if it were not now incorporated in the Constitution, it is impossible that such an amendment could ever be made a part of that instrument. He even pronounced it doubtful whether the Fourteenth Amendment would have been adopted in the Reconstruction period itself, had it been then understood to confer upon Congress the power to enforce the restrictions on State powers which are contained in the amendment, and to confer upon the United States Supreme Court the power to set aside provisions of a State Constitution or statute which, in the judgment of that court, might abridge the privileges or immunities of citizens of the United States, deprive any person of life, liberty, or property, without due process of law, or deny to any person within the jurisdiction of the State the equal protection of the laws. In a word, the great majority of the framers and adopters of the Fourteenth Amendment did not understand that they were thereby placing the essential rights of life, liberty, and property under the ultimate protection of the Federal government.

Judge Parker, of course, did not deny that several of the Senators who contributed to the formulation of the Fourteenth Amendment have asserted that it was intended to operate in the broadest sense. The Hon. Charles Sumner, in a speech on one occasion pronounced the journal of the committee which framed the amendment, to show how the various provisions came to be inserted, and he maintained that the committee intended to give them the widest possible scope and operation, for the benefit of all persons, white or black. Whatever may have been in the minds, however, of some of those who framed the amendment, Judge Parker is undoubtedly right in assuming that most of those who adopted it did so on the hypothesis that its sole purpose was to benefit and protect the colored race. He adduces expert proof of this assumption in the opinion of Mr. Justice Miller in the slaughter-house cases, and in the opinion of Mr. Justice Strong, in which all the other justices of the United States Supreme Court concurred, in the case of *Bronder v. West Virginia*, in which Mr. Justice Strong said that the true spirit and meaning of both the Fourteenth and Fifteenth Amendments cannot be understood without keeping in view the history of the times when they were adopted, and the general objects they plainly sought to accomplish. The Fourteenth Amendment, he said, was designed to assure to the colored race the enjoyment of all the civil rights which under the law are enjoyed by white persons, and to give to that race the protection of the general government in that enjoyment, whenever it should be denied by the States. Mr. Justice Strong added: "We doubt very much whether any action of a State, not directed by way of discrimination against the negroes as a class, will ever be held to come within the purview of this provision."

What are the privileges and immunities of the citizen of the United States which by the Fourteenth Amendment the States are forbidden to abridge? They are those which are within the sphere of the United States government, and which are enumerated in the decision of the United States Supreme Court in the slaughter-house cases. These are as follows: Free access to the great functions of the Federal government, free access to the ports, sub-treasuries, land offices, and courts of the United States; protection to life, liberty, and property on the high seas and in foreign countries through diplomatic agencies. The right to assemble peaceably and to petition for redress of grievances. The right to habeas corpus. The right to take the navigable waters of the United States and to become a citizen of any one of the States by a local *quo* residence therein. A person, however, may be a citizen of the United States without being a citizen of one of the States,

or he may have his residence in Washington city or in the Territories. In spite of the enumerated privileges which the States are forbidden to abridge, the State remains the guardian of the fundamental civil rights of the citizen, as well as the determinant of the citizen's political privileges.

Dealing with these fundamental civil rights in detail, under the four heads of police power, the power of eminent domain, the power of taxation, and the power of civil and criminal procedure, Chief-Judge Parker quoted the United States Supreme Court in a decision that under the Fourteenth Amendment, broad and comprehensive as it is, on any other amendment, broad and comprehensive with the power of the State, sometimes termed its police power, to prescribe regulations to promote the health, peace, morals, education, and good order of the people, and to legislate so as to increase the industries of the State, develop its resources, and add to its wealth and prosperity. As regards the hearing of the amendment on the State's right of eminent domain, Chief-Judge Parker pointed out that the power of a State to take private property for public use is inherent in sovereignty, and necessary to it; and that the Fourteenth Amendment merely prohibits the State from taking without due process of law, meaning, of course, that there must be compensation, as well as orderly procedure. With reference to the matter of taxation, Chief-Judge Parker advised decisions of the highest Federal tribunal to prove that the tendency to assume that the judicial department of the Federal government can and should review and correct errors of a State's Legislature or a State Executive, has received little support from the United States Supreme Court, when that tribunal has considered the axioms upon taxing statistics of States and the procedure thereunder.

Concluding his address in the Georgia Bar Association, Chief-Judge Parker felt warranted in saying that, incomparably valuable as has been the service of the United States Supreme Court to the American people, that tribunal has never been charged with a greater responsibility than that placed upon it by the adoption of the Fourteenth Amendment. He recognized that to the recognition and discharge of that responsibility the individual members of the court have devoted their highest energies, great abilities, and broad learning, ever keeping in mind—as appears from many written opinions—the danger of which Mr. Justice Miller gave warning in the slaughter-house cases, the danger, namely, of so far exceeding the Fourteenth Amendment as to fetter and degrade the State governments. It is true that, since that opinion was expressed, the Fourteenth Amendment has received a wider application than the majority of the justices contemplated at that time. Nevertheless, as Chief-Judge Parker reminded his auditors in his opinion in the United States *Keppell* case, and in a similar declaration in the case of *Belden v. Hardy*—not could any declaration give more hope and comfort to the Southern States—that, while the cardinal principles of justice are immutable, the methods by which justice is administered are subject to constant fluctuation; and the Constitution of the United States, which is necessary, and to a large extent, inflexible, and exceedingly difficult of amendment, should not be so construed as to deprive the States of the power as in several their laws as to make them conform to the wishes of the citizens, as they may deem best for the public welfare, without bringing them into conflict with the supreme law of the land. There was not a lawyer present at Tallulah Falls who did not instantly recognize the bearing of this declaration on the recent decision of the United States Supreme Court by which a majority of the justices declined to pronounce against the validity of the suffrage clause of the Alabama Constitution.

## The Next Pope

Scarcely in the history of the Papacy has the outcome of a conclave been awaited with more anxiety by anxious Catholics, or with more interest by European statesmen. As the present assembly of the *WASANT* will reach the apex of its activity before the choice of a Pope is made, it may be well to note the conditions under which an election will take place, before proceeding to review the candidates and to indicate the problems by which the next occupant of Peter's Chair will be confronted. It was as long ago as 1274 that Gregory X, in a conclave held at Lyons, promulgated a code of law, complete, in all respects, for the conducting of the Papal election. These rules have since been modified and supplemented in many particulars, but the substance of the provisions now enforced may be set forth in a few sentences. The cardinals go into conclave on the tenth day after the Pope's death, each attended by one person only, though, in the case of a great festival, more than one attendant is allowed. Each resident finds in the Vatican a bed-room, constructed for his occupation, and assigned to him by lot. Every morning and every evening the cardinals present proceed to a "Scrutiny," by which is meant a voting by specially prepared ballots, which conceal the name of the voter, and are opened only in the event of an election being made at that scrutiny. After each scrutiny an

opportunity for an "accedere" is afforded, that is to say, after the number of the votes for each candidate is declared, it is open to every voter to show by a similar secret ballot that he "accedere" to such or such a candidate. If no election be thus arrived at, the same process is repeated every morning and evening, till some cardinal is found to have the requisite majority of two-thirds of those who are present. Very rare, the candidate's own vote being subtracted. Develops the "adoration" of the new Pope by the cardinals takes place, and the announcement *Habemus Pontificem* (We have a Pope) is made from a balcony, by the Dean of the Sacred College, *Ubi et ubi*—to the Eternal City and to the world at large. We should here mention that a scrutiny is of course superfluous when an election takes place by "inspiration," or, in other words, when all the cardinals, as if by the inspiration of the Holy Ghost, proclaim one and the same candidate. We add that the question whether cardinals who have been named secretly (or in fiction), but have not been publicly proclaimed, may enter the conclave, has not been settled by precedent. A conclave has sometimes permitted, and sometimes refused to permit, such persons to take part in a Papal election. We observe, finally, that, during the interregnum between the death of a Pope and the proclamation of his successor, the supreme governing powers of the Papacy are vested in the Camerlengo, or Grand Chamberlain, who, at this time, is Cardinal Orsini di Santo Stefano.

The existing number of cardinals falls somewhat short of seventy, the maximum number fixed by Sixtus V., and never since exceeded. A majority of the cardinals are Italian. For this reason, and because it is easier for foreign cardinals to agree upon an Italian than upon one of their own number, it is almost certain that the next Pope will be a native of Italy. Inasmuch, moreover, as a large majority of the Italian cardinals are uncompromising in their hostility to the Quirinal, it is probable that the choice of the conclave will fall upon a candidate who can be relied upon to adhere indifferently to the irreconcilable policy maintained by Pius IX. and Leo XIII. All the influence of the Italian government will, of course, be thrown against such a selection, and it would be a mistake to moderate this influence, though it has to be exerted in indirect and secret ways. Much depends upon the answer to the question whether the veto power which is possessed by Austria, France, Spain, and Portugal, but which was waived at the last conclave in 1878, will now be exercised. This veto power, as the term implies, gives the government of each of the four the right to prohibit the election of any particular candidate whom it may deem objectionable. Quite recently, it was reported that the Vatican intended to open negotiations with a view to the abolition of the veto power, on the ground that, the Papacy having lost its temporal authority, there is no longer any reason for its existence. As things are now, the veto power survives, and might conceivably be exercised by Austria or France against a candidate offensive to the Quirinal. It is also possible that a combination might be effected among the foreign cardinals in favor of an Italian member of the Sacred College, whose opinions with reference to an accommodation with Italy are not definitely known; but, as we have said, it is more likely that a man of uncompromising views will be preferred, and it may be well to bear this presumption in mind as we name the various candidates for the Papacy. As it happens, there are all cardinals; but any man, lay or ecclesiastic, not a heretic and not essentially unpopulated, may be elected Pope.

The belief has long been current at Rome that the successor desired by Leo XIII. is Cardinal Gotti, now Prefect of the Congregation of the Propaganda Fide. He is a man sixty-eight years of age, the son of a Roman laborer. He belongs to the Carmelite Order of barefoot monks. He is a man of learning, but possesses no literary talent, unlike Leo XIII., who wrote correct and pleasing Latin verses, and was a master of Latin prose. On the other hand, Cardinal Gotti is a mathematician and a physicist; he would, therefore, be an ideal candidate in the eyes of St. George Mivart and those Catholic scientists who desire to reconcile religion and science. The precise position of Cardinal Gotti with reference to politics in general, and to Italian politics in particular, is not generally known, as he talks but little and keeps his opinions to himself. For that very reason, should the sittings of the conclave be prolonged, he may be agreed upon as a candidate by the rival provision of extreme opinions, and whose prospects seemed at one Parliamentary, who heard the last confession of Leo XIII., the Grand supervisor of the administration of the extreme union, to him, Vienna, and is likely to receive support from German and Austrian members of the Sacred College, among his Italian fellow at present Librarian of the Vatican, and the most distinguished Catholic ecclesiastical writer living. If the Quirinal could see election, for Cardinal Capelatro is one of the most ardent partisans in Italy, and has made no secret of his desire to promote a reconciliation between Church and State. On that very ground, the

Jesuits, who have tremendous influence in the Sacred College, are infinitely opposed to him, and will, doubtless, be able to defeat him. Among other cardinals who have been mentioned as possible recipients of the Papal crown are to name them in the order of prominence—Serafini, Martinelli, Riboldi, Rosignoli, and Sestini.

The two cardinals hitherto most favored, however, by the uncompromising party, which consists on being dominant in the conclave, are Rattolli and Svampa. The former was made a cardinal when he was forty-four years old, and he is now fifty-seven. He was at one time Papal Nuncio at Madrid, and afterwards served as arbitrator between Spain and Germany in the controversy over the Canarian Islands. For the last fifteen years he has been Papal Secretary of State, and is credited with having dictated the policy of the Vatican toward Germany and France. He is the favorite candidate of the Jesuits, but his irreconcilable attitude toward Italy has made him so intensely distasteful to the Quirinal, that an effort may be made to induce Austria or France to veto his election. Such an intemperance is not inconceivable, seeing that Austria is Italy's ally, and that the diplomatic relations between the French and Italian governments are now extremely cordial. Another candidate who, it is believed, would be acceptable to the Jesuits, is Cardinal Svampa, Archbishop of Bologna. There is no more outspoken and better reactionist in the Sacred College.

Most of the cardinals who demand a restoration of the temporal power of the Papacy would be content with the territory which Pius IX. possessed in 1870, before the occupation by the King of Italy. Some would even accept, it is reported, cession of the so-called Leonine City, and of a strip of land on the southern bank of the Tiber connecting the Vatican with the sea. Cardinal Svampa, on the other hand, insists on the restitution of all the dominions that belonged to the Papacy in 1859, a restitution that has never been made even a subject of discussion by practical politicians. No member of the Sacred College is personally so obnoxious to the Quirinal, for he did not scruple to avoid positive hatred of Victor Emmanuel II., and he has studiously stowed the latter's son and grandson. If cardinals were now to vote for Cardinal Svampa by a prophecy, dating from the twelfth century, that Rome would one day see a line of Popes designated by the word "stump," which means "flames." There is no doubt that Cardinal Svampa would gladly set Europe in a blaze if thereby he might recover the temporal possessions of the Papacy.

Whoever may be the choice of the conclave, he can scarcely hope to rival the remarkable achievements of Leo XIII. The situation in which he will find himself is even more difficult than that which his predecessor encountered. The Italian monarchy is more firmly rooted in the peninsula, and more strongly buttressed by foreign alliances and understandings than it was in 1878. The concordat with France may be abolished at any hour; and the Socialists in Germany are swiftly moving toward numerical preponderance at the ballot-box, though, owing to an unfair apportionment of seats, their ascendancy in the Reichstag seems still distant. A strong and skillful pilot will be needed to steer the bark of St. Peter through tempestuous seas.

## Does Woman Know Too Much?

In the *North American Review* for July, Miss Margaret Roland discusses the falling off of the birth-rate among native Americans, and attributes it "to nothing more or less than the overeducation and abnormal public activities so ardently encouraged among our women since the close of the civil war." In the Bible story of the fall and the curse of Eve, she finds an allegorical record of a primal experience of mankind which resulted in the conclusion that in women too much knowledge of good and evil—too much mental cultivation and active participation in general affairs—was inevitably prejudicial to child-bearing, and that unless women's energies were restricted to the domestic side of life, the race would run out. To the tremendous force with which this lesson was at some time impressed upon prehistoric Asiatic peoples, Miss Roland attributes the strength of the oriental tradition which finds extension in the variable exclusion of women in all Oriental countries from reflected in the early laws and customs of the Europeans, themselves of Asiatic derivation. It was modified to advantage in the West as civilization advanced. In the early days of the Roman Republic, the Roman woman as mistress of her household held a place very like that occupied by the wives of our pioneers. She found complete occupation at home and was highly successful in the mother of strong men. In Rome's later days with the emancipation of the Roman ladies from domestic labors and their participation in politics, arose idleness, childlessness, divorce, the destruction of the Roman race, the domination of the old Latin latians. When the empire fell there came a bright sun of civilization "not unlike that which ages before drove the man and woman

out of Eden. Evolve the woman of Europe toward her task of bringing forth children; her duties are to her husband, and be rated next her." Christianity, involving motherhood with a holy dignity, helped to check the disease that the Roman civilization had bequeathed, and with the rise of a new ideal, and "the re-establishment of woman upon her true throne of god in her sphere of maternal power, she labored again Adamlike, to maintain the organization of the family and afford privacy and protection to the wife and mother in her own home."

Through the conservation of the women, Miss Holland thinks, Europe has achieved her true destiny: "for lack of that very precaution we of the United States bid him to dare the fate that overtook the equally ambitious Roman." Fewer energies, it seems, and shorter hours, combined, saved the Americanized woman. But it isn't her fault. As long as she found honorable, independent, profitable employment at home she stayed there content, and her ambitions were realized in her children. But when "the greedy current of commercialism tore out her hands all home employment, she followed her task to the mills and factories." Forced to get her living outside her home, she reached naturally for whatever laws, privileges, training and education would help her. Men, doing feminine jobs cheap and efficient, have been glad to train it. But it has all hurt family life. Fewer children are born to a marriage, and divorcee have increased until now in the Western Reserve of Ohio there is one to every eleven marriages. Moreover, Miss Holland holds that the expectation that highly educated mothers would bear superior children has not been realized. She says the highly educated woman is either in a hurry, or in a hurry, to make money, or to enjoy life, attracts her more than marriage, and if she does marry she has few children or none. And so the families of our best educated native-American classes keep getting smaller, and if Europe did not send us population we should be in a bad way. What we most need, she thinks, is not new incentives to education, or new spheres of public activity for our women, but re-education of the motherhood ideal. Otherwise out of this Western Eden we shall go, because Eve, as before, has eaten too freely of the tree of knowledge.

It is easy to say that the North America's contribution has not held the whole story; it is easy to point out exceptions to the general rules she offers, and her view that assimilation is a chief cause of race decline is denied by more excellent authorities. But there is plenty of acknowledged truth in what she says, and she has put it impressively. What are we going to do about it? Close the colleges for girls? Put obstacles on the higher education of women? Separate the typewriter from its mistress? Prohibit the employment of girls and women in factories? No, some of these expedients are possible. If all the people who want children and cannot have them could be suddenly supplied, much of our reproach would for the time being be taken away, but that is not practicable either. Legislation, fines, rewards, taxation of relatives—all these expedients would be of trifling effect. The strongest direct artificial force that works in this country for the multiplication of offspring seems to be the Roman Catholic Church. No other artificial force, not even President Roosevelt, makes more than a temporary showing. The conditions of living have checked the increase of population among our native-born citizens, and if anything ever starts the birth-rate upward again some change in the conditions of living is likely to be at the bottom of it. Meanwhile the treatment by education and persuasion is the only one practicable. That may help individual cases, even though the multitude of night-to-be mothers still flock to mills, offices, shops, and summer hotels, and armies of night-to-be fathers live in bachelor-apartment houses, and constitute woful, but indifferent, warnings to mankind.

The most encouraging suggestion offered is that the progression of the decline in birth-rate among the native Americans have been derived too much from statistics of the North Atlantic States. Professor T. L. Smith of Clark University, Worcester, has been studying the reports of the Twelfth Census, and learns that in 1900 there were 41,053,417 native American whites in the country who had 1,128,285 children less than a year old. That means twenty-eight surviving children per year to every thousand native Americans. The rate for American families of foreign parentage was thirty-two surviving children to every thousand. The discrepancy is not so great as to be startling. An estimate made for Massachusetts has given seventeen births per thousand for native whites and fifty-two per thousand for foreign whites. That does indeed look as if the native American was out of the competition, but the rate for the whole country as taken from the census report tells another story.

### A Victory of Peace

THAT peace hath her victories no less renowned than war was once more demonstrated on July 4, when a message was flashed under the Pacific, and by means of a cable laid by an American company, from President Roosevelt at Oyster Bay to Governor Taft at Manila. To measure what this achievement would mean in time of war, when quick and uninterrupted communication

might be indispensable, we should recall the fact that in the spring of 1901 the first heavy, then all-steel, was ordered to attack the Spanish squadron in Manila Bay. The message had to be sent by a most circuitous route, and by foreign cables, first under the Atlantic from New York to Lisbon by way of the Azores, and then from Lisbon to Gibraltar, to Malta, to Alexandria, to Nuez, to Aden at the mouth of the Red Sea; thence to Bombay, to Madras, to Fering, to Singapore, and so to Hong-kong. The new Pacific cable, however, which has been laid by the Pacific-Commercial Company, of which Mr. Clarence Mackay is the President, comprises only four sections, and three stations between San Francisco and Manila—those, namely, at Hawaii, Midway Island and Guam—although it is some eight thousand three hundred miles long, or about twice the length of the next longest cable in the world.

To comprehend the magnitude of the work, it is needful to bear in mind not only the longitudinal distance covered, but the average depth beneath the surface of the ocean at which the cable had to be laid. The section, for instance, between San Francisco and Hawaii has a mean depth of 2500 fathoms, and a maximum depth of 3025; the section between Hawaii and Midway Island, a mean depth of 2800 fathoms, and again a maximum of 3025; the section from Midway Island to Guam has a mean depth of 3600 fathoms, and a maximum of 4900, while the fourth and most westerly section, from Guam to Luzon, has a mean depth of 2200 fathoms, and a maximum of 3400. To make clear the bearing of such facts on the magnitude of the work, we should point out that where there is a depth of 2000 fathoms and a cable is sailing eight knots an hour, no fewer than twenty-five miles of cable are in suspension at a given time, and a single point in the cable will take two hours and a half to reach the bottom. Naturally, a cable qualified to withstand the enormous strain of its own weight under such conditions must be of exceptional toughness, though it need not be of exceptional size. The cable laid between San Francisco and Luzon is only seven-eighths of an inch in diameter. In the center, however, is a twelve-wire-strand copper core, covered with heavy gutta-percha insulation, wrapped about which are eight plies of Manila hemp and asphalt, which, in turn, are covered by an armor of 23-1/2-gauge galvanized steel wires, while over all are six more wrappings of Manila hemp and a covering of asphalt.

As to the speed with which the new Pacific cable may be operated, we may note that President Roosevelt's message to Governor Taft at Manila left Oyster Bay at exactly 10:15 p. m., and Governor Taft's reply was received at the same place exactly half an hour later.

### Americanization of Jews

DR. MARCUS FISHBERG, of New York, a well-known anthropologist, contends that in the United States the Jewish race is disappearing, and that, within a few generations, the American Hebrew will be indistinguishable in physiognomy from his Gentile neighbors.

As the medical examiner of the United Hebrew Charities, Dr. Fishberg has had exceptional opportunities for conducting a physiognomical investigation. Some of his conclusions are certainly remarkable. For instance, his examination of over 3000 Jews in New York city has convinced him that there is no foundation for the notion that every Jew possesses a long, hooked nose. As a matter of fact, he has found only 6 per cent. of hooked noses among Hebrews. Straight noses constitute 66 per cent., broad noses 12 per cent., and what is even more remarkable, retreating noses 14 per cent. He does not deny that Jewish immigrants are easily pointed out, but he insists that they cannot be identified through any peculiarity of facial structure. A foreign look is popularly mistaken for a Jewish look.

Then, again, the Jewish immigrants have what may be appropriately described as the Ghetto face. The Ghetto face, or rather the Ghetto eye, expresses a careless fear and anxiety, or at least suspicion, of everything around it. The same eye is observed among other peoples that have been subjected to agelong persecution, as, for example, the Christian Armenians in Turkey, and the Kurds, or native Christians, in Egypt. The Jews who have lived for several generations outside of the Ghetto do not exhibit this facial phenomenon. There is no reason why the Ghetto eye should not tend quickly to disappear among the descendants of Jewish immigrants in the United States. It is true, as Dr. Fishberg says, that there is as much physiognomical difference between the Russian immigrant in the East Side of Manhattan borough and the American Hebrew who is conspicuous in commercial, professional, and public life as there is between the Irishman and the German. Yet, beyond a doubt, the ancestors of the advanced Hebrew of to-day bore a striking physical resemblance to the Russian Jews who are new-comers in this country.

As regards intermarriages between Jews and Gentiles, there is no doubt that they must have frequently taken place in the past, so far at least as the marriages of Jewish men to Christian women is concerned. This is evident when we compare Spanish Jews with German Jews in respect to the color of the eyes and hair.

## Co-operation in Ireland

In a speech delivered recently in the west of Ireland, the Hon. Bourke Corcoran, ex-member of Congress for New York city, made two points of considerable interest. He spoke of Ireland, with her remarkable natural resources, as "the coming maritime centre for the distribution of all products between Europe and America." He also offered his congratulations on the many evidences apparent of awakening prosperity in the "disfranchised country."

To these remarks he might have added a mention of the Irish Industrial League of America, a league which concerns itself not at all with "paternalism," but which is being formed among wealthy Irishmen in the United States, to help their countrymen at home to help themselves. The ideas which are helping so mightily in the making of a new Ireland are the ideas of co-operation. Their apostle in Ireland is the Hon. Horace Plunkett, and it was during ten years of exiling west of the Mississippi that he thought out the problem how to teach Ireland to help herself. There, too, it is said, he "diluted his hereditary instincts with democratic ideals." For he is one of two families of noble Plunketts, who for seven centuries have slung to their old homes under the shadow of the hill of Tara. An old chronicler declares that whoever escapes being robbed of their long-haired cattle by one Lind Plunkett, will not fail to be dogged by the other, and Horace Plunkett, in relating this, adds that he "never pits a new remedy without a sense of resolution for these little irregularities." Aristocrat and conservative and Protestant by birth, his allies in his great work are drawn from all shades of politics, positions, and religion. Every year he makes a trip to the United States, thus helping himself in touch with the progressive thoughts and methods of the New World.

Co-operation to the man in the street generally suggests a big store, where you buy at wholesale prices for cash down. But that is only a small part of the science—for science it is. Productive co-operation, which teaches its disciples how best and therefore most profitably to supply the needs of humanity, is a much wider subject. Its basic principle is that individual effort and combination for the common good must go hand in hand.

Twelve years ago, when Mr. Plunkett began his crusade, he was as the voice of one crying in the wilderness, so steeped were the Irish farmers to whom he was addressing himself in the apathy born of ignorance, debt, and poverty. Single-headed he worked at first, and with so little apparent success that he had held over fifty meetings, spread over two years, before the first co-operative society was started. Now, there are seven hundred, with a membership of seventy thousand, and every day the movement extends. This rapid growth of quite new ideas in Ireland is attributed particularly to the fact that the old establishment has never disintegrated. A good deal more is due to the personality of Mr. Plunkett. Sincerity, gentleness, tenacity of purpose, and small interests—these are mighty factors in life. When they supplement rare intellectual gifts, they can move mountains. They are doing so in Ireland to-day. Mr. Plunkett has inspired his band of co-workers with a rare and disinterested enthusiasm, already fruitful, and the movement is believed to have only begun; already there have been striking results. The Irish butter-trade has been practically lost to Denmark. Now, under co-operation, whereby the farmers of a district combine to equip a creamery for themselves, Irish butter goes steadily ahead in output and quality. The same principle, and with similar success, are being applied to the egg and poultry trade, to bee-keeping, and to various handicraft home industries. In each case the whole "couth" belongs to the workers. All the profits are apportioned among them. There are no middle men.

A deeply interesting development of co-operation is the formation of small rural banks on the Raiffeisen system. The money-lender, that curse of the poor farmer the world over, exists in rural Ireland in a peculiarly aggravated form. The "toy banks," as they have been laughingly called, are killing out these vampires. Small they are, to be sure, but how else could money-lending be managed, where the borrower is personal character, so more and so less. The borrower, therefore, and his sureties, must be known to the lenders, who, consequently, must be local men. Usually they are farmers themselves, with a priest or person among them. They may be anything from tea shillings up; but the object remains stated. Merciful have been the results, and not monetary alone. For effect not easy to estimate. For a loan granted on such security is the cause of responsibility for the lenders. They know they had best of this kind has yet to be made in Ireland.

All these, and many other aspects of co-operation now visible in Ireland, owe their existence to the working of the Irish Agricultural Organization Society, founded by Mr. Plunkett in 1884, to promote co-operation among Irish farmers. History repeats itself. Long ago, Ireland was a centre of learning, and a Christian

missionary to other nations. Now, English farmers are coming to her, to study the co-operative methods of which she is becoming a remarkable object-lesson.

## A Fascinating Theory of the Sun

Some twenty years ago that genial Irishman and very distinguished physicist, the late Dr. John Tyndall, wrote an admirable essay on the scientific use of the imaginative faculty, pointing out how many great truths, which strict scientific method had failed to discover, had been divined by the imagination. Mr. George W. Warder, a man of many activities, seems to have had to heart the lesson of this essay. Not satisfied with the theory of the solar system which has been commonly accepted for many generations, he has let loose his imagination in search of something newer and more romantic. And this is what he has found: that the sun is not a molten or even a hot body, not "a fluid base of light," but a cool and pleasant world—perhaps a heaven—which generates enough electricity to supply heat and light to the whole solar system; that this electricity is sent to the planets by a sort of ethereal transmission; that it is not converted into heat and light till it comes into contact with the opposite electric forces of the planets; and that it draws back from the latter to itself such planetary electricity as it needs to perpetuate its status and functions. With the exercise of great industry and considerable scientific knowledge, Mr. Warder proceeds, in a book he has had the enterprise to publish privately and in a periodical article, to apply his theory and to measure it against facts. And it must be confessed that it stands the test very well. Indeed, it seems to afford explanations of many phenomena which the accepted theories explain but unconvincingly or only envelop in deeper mystery.

True, Mr. Warder's discovery is only a theory; but the astute hypothesis and its corollaries are nothing new, and, theory against theory, Mr. Warder's seems capable of holding its own. True, too, the author of the new idea is not a strict scientist—despite his considerable scientific knowledge; he is not likely to gain the entire confidence of the thinking world, for he has a habit of making dogmatic assertions without feeling called upon to adduce even theoretical proofs of their truth, and of letting his imagination carry him into idealistic regions where the scientific and philosophic mind cannot bear him company. But when this is said, it must be admitted that he has furnished the astronomical scientist with a very interesting theorem to work on, to prove or disprove.

If they should succeed in demonstrating the truth of the general idea, the importance of the result attained by Mr. Warder's scientific use of his imagination would be very great. It cannot really matter, the man in the street may think, whether we believe the sun to be a molten body, glowing heat and light—as we have hitherto supposed—or a cool body transmitting to the solar world continual currents of electricity, which are convertible into heat and light by contact with the electric fluids of planetary atmospheres. But it really does matter a great deal, at any rate, to thinking people, for our whole psychological attitude toward life is modified by our scientific conceptions. The old theory that the sun is a burning star, an incandescent, gaseous sphere, has long furnished the premises with one of their strongest, most irrefutable arguments. Everything is fiery and futile, they say; in a few hundreds or a few thousands of years the sun will have burnt itself out, the planets will be frozen up, all life will be extinct; vanity of vanities, all is vanity. Not so, now replies the electric theory; the solar body renews and will renew itself perpetually, and the poet's words acquire a new significance:

Yet, I doubt not, thro' the ages see increasing purpose runs,  
And the thoughts of men are widen'd with the process of the suns.

If Mr. Warder's idea is correct, there is going on a ceaseless interchange of solar and terrestrial fluids. Perhaps, even, every atom of the earth, including our own personal substance and essence, has been in the sun and will return to it. Mr. Warder says this is so; we prefer to say—perhaps,

But if science, after due investigation, should approve our adoption of this benign theory, those of us who are not strict scientists yet insist on making our creeds accord with scientific fact, those of us who, like Mr. Warder, have spiritual needs, and faith, sometimes, let our imaginations soar into the vague and high places, those of us who have lost our old heaven, may let our fancy and our faith build again for our spirits—which result at the thought of extinction—no everlasting refuge on the other side of death, and may peacefully hold once more something of the old comforting belief which, since our minds unstrayed and we looked upon the evil things of the earth, we have often found hard to justify, that

God's in His Heaven,  
All's right with the world.

**PRESIDENT ROOSEVELT WRITING THE MESSAGE WHICH  
OPENED THE NEW PACIFIC CABLE**

*On July 4 the President wrote the cable message to Governor Taft with which the new Mackay cable to the Philippines was opened. The reply was received in thirty minutes. Then the President sent a message from Oyster Bay around the world to Mr. Charles Mackay at Koolen, Long Island. This message traveled more than twenty-two thousand miles to connect two points only eight miles apart. Mr. Mackay's reply was received in sixty-one minutes.*

# Diversions of the Higher Journalist

Litera Scripta Manet

**T**HE staying powers of the written letter have seldom been more helpfully manifested than in three recent instances involving not, perhaps as you might think, that one would rather not have said in one's life, as things that one would rather not have had read after one's death."

This seemed, to the Higher Journalist, a piquant beginning in contemplating some paragraphs on the recent publication of some intimate letters of Margaret Fuller, some private letters of John Ruskin, and an open letter of James Anthony Froude. But when he had got his position well before himself on paper, he began to have his misgivings. After all, had so much harm been done by any or all of these publications as his position implied? There was a good deal to be said on the other side, and it began to say itself with the volubility of a woman whose emotions embody her ideas, but it was really on the higher journalist's own intellectual conscience having a little talk with him.

Mrs. Thomas Carlyle

mental culpability and unkindness, and offensive enough, but were they so very dismayingly singular or significant? There was nothing surely, so inconclusive, so shocking in the fact that a couple very much in love with each other should have fought their married life through like cat and dog. It was a pity, but was it a crime of intellectual turpitude? The like has happened often enough in the history of humanity, if not the humanities, to have had its novelties toward the cat. The cat has often the best of it; but the dog, if he lives to tell the tale, may well accuse himself of brutality without proving the fault altogether his own. It happened that Carlyle survived, but if Mrs. Carlyle had lived to be his widow, perhaps she would have bewailed him and blamed herself in terms quite as snoring and hysterical as his own in considering his conduct toward her. "Come," the intellectual conscience urged, "let us use a little common sense! The only thing that Froude has the glamour of his literary bias, who, having only of heroic size when it was really of the ordinary dimensions. The only other thing that he has proved is for the Carlyles quarrels, as to be without an equal sure in the medical review with the theory that the cause, if related, was matter? Can any one be deeply concerned in it? Why should there are reasons as plenty as Mark Twain in an obscure reason, when the higher journalist had not found, severally, very important as cast a pleasing light on this-dog, to whose daughters they were magnanimity and dignity. They did not, it contended, show Ruskin in the reader's sense as of an affectionate postleness not always English fastness, poured round and over all, was illumined with flashes of inspiration, and there was something charming in it of another great man that a great one could owe to the daughters, but thought him, politically a wretched, and then could accept far givenness as frankly as he had given offense. The little ordinary was present for its intimations of that personalism which is mainly pressed in English politics, a kind of privacy absent from dinner. Therefore, the intellectual conscience maintained, more good than harm could come from the publication of little notes

and misdeeds, sometimes only a few lines long, which would not add to the splendor of Ruskin's just remembrance, or revive what certainly appeared to be his fading influence.

As for the love-letters of Margaret Fuller, written more than half a century ago to a young (German) Jew, the bad taste, had almost to the verge of bad faith, would not lead to abate a general question of national and racial taste involved. But was not the taste, such as it was, German, rather than Jewish? Was not the publication of these impudently rhetorical letters, so long after they had failed to suffer spontaneous combustion, and had not otherwise been burned, an effect of firmness, sentimentality rather than of Jewish conscience? The first Christian impulse to make a scrapbook of the Jew-life who kept the letters, and falling him, through the course of nature, to hand up his descendant with his sin, and drive him into the wilderness there to repent of his treason of good manners in opening these pages to the general eye. But perhaps we ought to blame his nation, and perhaps there is no great blame anyway. Who is to be blamed now by these love-letters? Margaret Fuller is no longer a fame; she is hardly a name. Her was in her time a most strenuous, a most earnest person, but she was always a superstitious rather than a religion, and she is now quite an obsolete superstition. Her survivors in an anecdote or two; as a literary force she was spent long ago; but her tragical fate, in returning home to be shipwrecked with her young husband and child on her sailing shores, has given a lasting pathos to her memory, and this is what appeals to the student of literature rather than anything she said; and she said a great many things. Most people will probably find as hard a reading as they would find her essays and criticisms; but they are not out of tune with the transcendental ecstasies of her time, and upon the whole, they brighten the sole remaining interest of her past. She outlived her earlier passion-lived to marry a young German noble of high revolutionary ideals, and to die with him in one of the most affecting disasters.

"The lesson," the intellectual conscience finally contended, after perusing these reasons, or, if they are not reasons, these arguments, upon the higher journalist, "is one that we cannot take too much to heart. A few years ago we were deluged with a wash of sentiment in the form of spurious love-letters, of which the public was at once and forever made so sick that fiction will not even repeat that done. But we had still to learn, what we that all love-letters are powerfully dull reading. It is almost as bad as listening to the raptures of the lovers in real life, and

John Ruskin

quite as bad as seeing their transcripts on the stage. When one sees a love-letter has got cold, it is of a heartiness of which it is the unique imperfections of personality to lighten its lump, it had better carry it, and left there. The error of the heirs of Mr. James the more good morals, as a mistaken attempt to contravene a law of nature."

With these observations his intellectual conscience let the higher journalist alone.

### A FINISH AT CLOSE QUARTERS

*The above snap shot was taken recently on the track at Sheephead Bay, Long Island, as the racers were crossing the line at the finish. The photographer stood directly in the path of the horses, at great risk to himself and secured what is probably the most extraordinary picture of a horse-race ever taken.*

# The Chamberlain Programme

By Sydney Brooks

**T**O prophesy in politics is proverbially foolish. But there are times when not to prophesy asks a degree of restraint such as, luckily for the interest of life, it is given to few to reach. Such a time is the present in England.

Humane nature has got the better of superhuman prudence, and every Englishman for the moment is a whole meteorological office of political forecasts in himself. Needless to say, it is the interest of Mr. Chamberlain's "unauthorised programmes" that serves as the starting-point for all these speculations. Since Gladstone announced his conversion to Home Rule, no bombshell of such unexpectedness and prodigious scattering power, has fallen into the camp of English politics. I believe that even Mr. Chamberlain is surprised at the confusion and hubbub he has raised. He had not meant to bring matters to a head quite so quickly. But politicians are like actors in their ignorance of what will occur and what will fail to secure a popular hit. The Birmingham speech of a few weeks ago was no more than the repetition, an amplifier and rather more detailed repetition, of a speech which Mr. Chamberlain delivered over a year ago. The earlier effort attracted some notice, led to a certain amount of discussion and even to a debate in the House of Commons; but in less than a month it had been forgotten, and the nation had turned to other things. Mr. Chamberlain had not the least idea when he took up the subject again, that he would be invited to consult not only England but the Empire, and indeed the world. Had he foreseen it, he would either have chosen some other topic for his speech, or have handled it differently. The way in which the nation poured upon his words and insisted on treating them as a new declaration of policy, really caught him unprepared. I do not mean that he was merely blind. What he said at Birmingham he sincerely and indeed passionately believed. But he intended it to have only an educational value, to prepare the way, not to be a statement of policy, and he was ready to carry out straightaway. The country, however, asked at once for facts and figures. It caught him up. It demanded the translation of his abstract principles into concrete details; it clamoured to have his point of view formulated in a cut and dried scheme. And, to tell the truth, Mr. Chamberlain had no cut and dried scheme to produce. Except in a general way he had not thought the matter out, and he would very much have preferred a less embarrassing minute inquiry into his suggestion. He would have liked to hear it, at any rate for a year or two longer. In the ideal and more or less rhetorical stage, quite outside the range of "practical politics." He wanted time to prepare his case. But no time was to take it up and so emerge from the safe shelter of generalities, statesmanship. He chose—as he always has chosen—the bolder off at half-cock. The sentimentalist who confides in public that he had gone Mr. Chamberlain would think of putting on the last garment of decency, he quickly made up his mind to face it, and there it was week by week he faced it with an exceedingly bold front. Within a week he had pitched up a rough and ready scheme of sorts, and to be used, and colonial food-stuffs admitted free in return for preferential treatment of British exports; and the working-class prospect of higher wages and a plebeian to an old-age-pension fund. It is not clear, but he called for an exhaustive inquiry into the whole subject, into the workings of free trade, into the methods and probable effects of establishing preferential tariffs

with the colonies. It was undoubtedly a fine parliamentary performance. His hand had really been forced, but from the perfect assurance with which he played the card, you would never have guessed it.

I lay stress on the extreme suddenness with which the whole proposal had leapt spring on the country because, unless one bears it constantly in mind, the present political chaos becomes inexplicable. It is as certain as anything can be that Mr. Chamberlain did not consult his colleagues in the cabinet before issuing his Birmingham manifesto. It came just as much a surprise to them as to the country at large. I may add that to some of them, perhaps even to a majority of them, it appears a blunder not only in politics but in policy. That has been made significantly clear already. There are members of the cabinet, Mr. Ritchie, the Chancellor of the Exchequer, is one of them, and I fancy the Duke of Devonshire is another, who would sooner resign office than vote for any such policy as Mr. Chamberlain has proposed. There are other members of the party, like Sir Michael Hicks-Beach and Lord Lochee, who will fight it even though by so doing they split the Unionist as Gladstone split the Liberal party; and they will be followed, it is certain, by a not inconsiderable section of the rank and file. The rupture has not come yet, but sooner or later, if Mr. Chamberlain persists, it is inevitable. The trouble at present is to get to the bottom of the matter, to get to something definite, nothing irreconcilable. So manifold are the complexities of the situation that caution is the safe and indeed the only game. Americans may readily exercise the topsyturviness of all things here if they will carry their minds back to 1896, and picture to themselves what would have happened if free silver had been made the issue of that great campaign at a week's notice instead of six months' or six years'. A month ago the last thing any one in England was expecting was to find himself hotly arguing for free trade or protection. The "man in the street" found politics interesting, but by no means exciting. He was concerned with Southland; he had an eye on the London Education bill; he was pondering the Irish Land bill. The political waters ran placidly enough to the outward eye, though with a strong undercurrent that the government found difficulty in gauging. The Opposition were no divided as ever. In all its essential the situation was pretty much as it had been for five years and more, and in an instant, without a moment's warning, it was not merely changed, but turned completely inside out. An article on English politics written for an American review on May 9, was out of date before it reached to the last century.

Mr. Chamberlain delivering an address at Southampton

and accurate enough at the time, was out of date before it reached to the last century. Mr. Chamberlain's programme has utterly swamped everything else, and the hotness with which the budget and even that immensely important measure, the Irish Land bill, are being discussed is a sign of the impatience of the country to have the matter settled. But the country will have to wait.

Immediate decision, I think one may even say that Mr. Chamberlain's impromptu policy, or at any rate the old age-pension was enough to show its futility. A moment's clear thinking would have shown the futility of the general scheme of which it was a part, and the prospect of it.

Mr. Chamberlain will have to find something else with which to gild the preferential bill. No doubt he will see in the main cause is unworkable. Men like the Opposition are chock by a "Government inquiry."

## A NEW UP-TOWN SKY-SCRAPER FOR NEW YORK

*The New York "Times" is following the lead of the "Herald" and is soon to move up town from Newspaper Row. Its new home, which is being built at the junction of Broadway, Forsyth Street, and South Street, is to be the tallest building in the city. Its summit will be 675 feet above the pavement, only 100 feet less than the height of the Park Row building, which holds the city-wrapping record for New York.*

# Books and Bookmen

By James MacArthur

"WEE MACGREGGOR," I see, has attained to the enviable honor of appearing this month in the *Bookman's* list of six best-selling books. The wee Scotch laddie has just managed to squeeze in at the tail end of the list, while *Lady Rose's Daughter* maintains the dignity she won last month at the top. But *Wee Macgreggor* has good Scotch doggedness in him, and will climb higher before the summer is gone. Mentioning Mr. Bell's second book, *Etiket*, which was published a few weeks ago, is fast making friends, and is selling rapidly. Unlike its predecessor, this book is not in Scotch dialect. The story is told for the most part in a series of dialogues in the most natural and entertaining fashion. It is the story of a courtship developed by means of conversations between Etiket and her lover. It is all so natural, so like the thing, that readers will smile reminiscently at the likeness in similar scenes in which they have figured. But the success of the story lies in its art, its deft execution, the turn of wit, the touch of human nature, the suggestion of such that is fine and true and appealing that is yet unspoken. For it is in his restraint that Mr. Bell shows himself to be a true artist. Other gifts come to him instinctively, his never-failing humor, for example; this is studied and promises well for his future. A certain humorist as an artist who playfully gives us his intuition of the world and human life. The sportive element in Mr. Bell's writing is contagious. Whether it be *Wee Macgreggor*, his "jaw" and "maw," "Aunt Perdiss, or Etiket" or Hugh or Mrs. Goble, his humor plays about his characters, with such kindly catching snift that you are compelled to laugh with him; yet his humor is in his humor, his sympathetic relation to his creatures so close and intimate that you dare not laugh at them. It is the direct, sweetest, sanest humor in the world; the quality of nature that enriches and kindles the heart; the laughter that makes friends of all and enemies of none.

Mr. John A. Stewart, to whom I am always grateful for *The Minister of State* and the pleasant memories it awakens, has just brought out a new novel entitled *The Samaritan*, which is less agreeable if more powerful. It is not a pleasant story. Mr. Stewart did not intend it to be. The title because of the satire which impregnates it, is in his aim to bring and to tell the truth about them, and he does this with a directness and a grim humor that appeal and shake the by. In *The Hebrew*, the owner of the innkeeper described being Israelite. But as it is not fair to suggest that Mr. Stewart's approval by calling the Hebrew in this particular slum, among them and several American visitors, and by a stroke of light but the climax of Israelite. The plot of the book lies in its terrible and the powerful interest of the poor in the slums, the criminal and lawless drugging treats the scum and sediment of civilization in his pictures of slum-land and Hyde Park, the uttermost poles of destitution and

luxury. The delineation of character in the slums is portrayed with a vivid realistic touch; Mr. Stewart is more successful with his low life than with his high life. He has vividly lived into the London of Fagin and the Artful Dodger, and studied the life at first hand. One can scarcely credit the revelation of the "Popping hole," though there is precedent for it in *Oliver Twist*. Surely the writer who wrote the plot for the terrible and tragic incident in the *Jane Eyre* ought to be pleased with *The Samaritan*. And if so, *John Street*—a book that none who read it can readily forget, and with which *The Samaritan* has much in common—could recommend a wide reading, it does not seem improbable that Mr. Stewart's gruesome novel should also attain a wide circulation. The savor of both books is their humor, of which there is an abundance.

The reported success of *A Rose of Normandy*, by Dr. W. R.

A. Wilson, would seem to set at naught the argument that the historical novel is defunct so far as public interest in it is concerned. The hero of the book is Henri de Tont, who is an historical character and who figures as the faithful lieutenant of La Salle. The great historian Parkman has immortalized the famous French pioneer and explorer in one of his most vivid and graphic volumes, and not a little of Dr. Wilson's inspiration is due to those picture-page pages and their portraiture of La Salle. The story opens in the streets of Paris and among the intrigues of the French court when Louis XIV. was reigning, and crosses the seas to follow the fortunes of La Salle and Tont. There is a reminiscence of King Vercueil in the love which the two prominent characters in the novel bear for the heroine, which holds the scene in suspense until the end is reached. Hence, the *Rose of Normandy* shares in many of the adventures with which the action of the tale is kept alive, and merits for dearly bought happiness in the stirring climax which caps an interesting and exciting book. *A Rose of Normandy* has evidently been studied with such careful historical accuracy that it may be read as a piece of history as well as a story.

"Since summer had had a gift" — Skirmisher.

accuracy that it may be read as a piece of history as well as a story.

The June number of *Chambers' Journal* has an interesting paper on Robert Burns, containing some annotations written by the *Keros*. Some of these notes are characteristic of Irish literature. The simple after this anecdote in the book, "A servant maid had once returned home crying one day because a criminal whom she had Burns makes the ironic observation, "Honest nature." In the origin alongside the words of St. James, "Count it all joy when ye see in desire temptations." Burns exclaims, "Ah!" as if this inquiry, "Is love like a present of ribbons that you cannot should revive?" The following sentence, "Man was originally made of the dead earth, but woman of the living sun—therefore of a very excellent sort," recalls the poet's own lines:

Her prettier hair she try'd on man,  
As then she made the lanes, O!

### THE DAILY SHOW AT ASBURY PARK

*The famous front on the Jersey coast is one of the most popular resorts for New York's pleasure-seekers during its summer months. The annual show on the board walk at the bathing hour is one of the interesting sights, especially for out-of-town visitors to New York, during the summer months.*

## A LETTER FROM HOME

One of the Positions for Expert Sharpshooting

A Second Position for Valley-jump

## The American Soldier

The Finest Shot in the World

By R. Everett

THESE are few more interesting sights than to watch sharpshooters at practice. Take, for instance, the last afternoon at Sea Girt, preliminary to the selection of the team that went to England to bring back the Palma trophy. The marksmen who are now to shoot are prone on the ground. On the right stands a man at a telephone that connects with rifle-pit in which the men who are to mark the shots are stationed. At the end of the rifle-pit, well in view of all, is an instrument known as a wind-dial clock, which does exactly what its name implies—shows the direction of the wind. With the same intent, red flags flutter here and there. The clock may be out of order, but the flags will tell the truth to those versed in their language. Although each marksman keeps his own score—in me that he gets all that is coming to him—there is one official score-marker to every two sharpshooters, and a range officer.

United States War Department.

Upon the frames for the targets coarse cloth, like gunny-bag cloth, is first tacked; over that, cotton cloth; and over the cotton cloth, tough white, or light-brown paper is pasted. Upon this paper the "bull's-eye, inner and outer," have been indicated by heavy black lining. Although a great many materials have been tried for targets, nothing perfectly satisfactory has been found. The man who invents a preparation through which the bullets having passed, will leave an unchangeable hole will deserve the thanks of all "distinguished experts," to whom a fraction of an inch often means so much. The targets work in frames like the shades of windows. One is raised out of the pit, exposing its face to the marksman who fires. The marker in the pit bears the spot on his target; he takes a disk, fastened to a long pole, and raising it out of the pit, he covers the hole made by the shot. The position of the disk indicates the exact spot on the target hit by the marksman, while the color of the disk shows the value of the shot. A white disk indicates a bull's-eye, counting five; a red disk a centre, counting four; a black and white disk a magpie, counting three; a black disk an outer, counting two. The target is then pulled down into the pit, the hole made by the shot is covered by pasting a piece of paper over it, and the target is raised to be shot at again. Sometimes, to facilitate quicker firing, a double target is used. It is hard work; eye-straining work; but to time.

To the layman it looks impossible to make bull's-eyes at 1000 yard. But the "experts" do it. As the shooting begins, you run the wind in an "gully" and invariable as the summer gill. You have noted ten shots fired by Lieutenant Jenkins, of the Seventy-first Regiment, N.O.N.Y., the Seventy-first that last year and this year carried off the honors for the largest number

of "crack" shots among its members. The lieutenant, who has brought science to his aid in learning how to shoot, saw counts surely upon making a bull's-eye at his third shot at 1000 yards. But alas, alas, just when the trigger-finger has too much pressure on to stop, a dandy mosquito—he must have been the dress-suit of his regiment—settled on the tip of the "distinguished expert's" nose. The mosquito jimmied his proboscis down into those minute, torturing nerves that lie just beneath the skin, where he wigged it around until he found something that suited his fastidious tastes; then he settled back on his haunches and began to pump up the lifeblood of the nose. *Bling! alerkeley!* They had the bull's-eye between them; Lieutenant Jenkins three, the mosquito two. But the score-marker did not register the mosquito's shot; probably because he had neglected to "qualify."

Convinced that you will have heart failure if you watch Lieutenant Jenkins any longer, you draw near Sergeant Doyle—also of the Seventy-first. Talk about "a mind alone makes"; that isn't in it at all when it comes to rifle-shooting at 1000 yards at Sea Girt. To be psychically in a high state; and Sergeant Doyle is equal to the emergency. As he lies prone on the ground, the waxy little gnat—whose only claim to fame is that we strain at them when thinking of the frailties of our friends. Well, those scriptural insects settled on Sergeant Doyle's hands, his nostrils, neck, face; mercifully they left him his "shooting eye." But the man has no time to bother with gnats now, *Bling!* and—*it's a "crackjack!"* Good enough Sergeant Doyle.

And there was young Goodcombe, who does not look to be more than twenty-one or twenty-two, yet he is a lieutenant in the United States Marine Corps. He shoots well, and was "high man" last year. But he has not gone into the scientific study of rifle-shooting as have Dr. Henderson, Lieutenants Jenkins, Cawson, and others, from whose experiments in loading their own cartridges—carefully, patiently weighing out the powder for each shot, and afterwards recording the results, the manufacturers have so greatly benefited.

Watch Captain Evans of the Sixty-ninth, N.O.N.Y.—the "fighting Sixty-ninth," of which his lone head, but what's the use in him, or he to the sun? It's bull's-eye he's after—not accidents.

Under some of the tents—awaiting their turn—are more of those "distinguished experts." You may have heard an "oh! oh! oh! oh!" as a certain Guardsman is passing. He turns around and this way his comrades are poking him on the pool, and you learn that it is those—the poor shots—are the "gnats." And so they go! As they journey through life they play a little by the way; these "distinguished experts."

Members of the Seventy-first Regiment at Rifle Practice Showing the three positions for sharpshooting

**PAINING THE INTERIOR OF THE CAPITOL DOME AT WASHINGTON**

*This is an unusual photograph, taken from the gallery of the Capitol dome while the new series of work renovating the interior. The work requires more than ordinary skill, and the decorators, both inside and outside the dome, are retained only once in several years.*

*It will be remembered that several years ago the Ancient and Honourable Artillery Company of Boston paid a visit to the Honourable London Company in England, and had a royal reception. Early this autumn the London Company will return the visit, and be entertained by its Boston friends.*

# Uncle Sam and his Colonies

## An Optimistic View of the Philippine Question

By Albert Levering

Uncle Sam: "Well, I'll be durned! Someone has gone and hit you there, and I'll be jinxed if I know what to do with you."

Congress: "The President, Uncle Sam, gentleness and persuasion do more than all else in bringing up a child."

"Turn him loose, and let him answer himself as best he can. It will make him independent."

"Trust him! Put him on his honor. He won't goof!"

Philippines: "I've it to him, Uncle Sam! Spare the rod and spoil the child, you know!"

Uncle Sam: "Well, Philippi, I don't know which was right, but you seem to be coming along nice a very good sort of boy."

# Correspondence

THE NEW NEGRO CRIME—A SOUTHERN VIEW

NEW ORLEANS, July 1, 1903.

To the Editor of *Harper's Weekly*:

Since I am a constant reader of your WEEKLY, and when my eyes have fastened on its spirited and spirited illustrations, I turn to the Editorial Section, and uniformly find its treatment of current topics comprehensive and able. As a Southerner by birth and long residence, and contrast with the negro at least range both before and since the war which emancipated him, I thank you for the candid and incisive of your articles on "The New Negro Problem," etc. In your Nevada number, June 20, candor and fairness, believe me, are more grateful to your Southern readers than partisan advocacy. These agreeable traits mark both title and article. You are right in describing the numerous crime as "new." I wish you might be describing the equally exceptional opportunities for information. Living half my childhood and boyhood on a cotton-plantation in closest contact with the negro, and also while pursuing my education both in law and my country of Georgia and middle South Carolina, a pastor of congregations of whites and blacks, in intimate association with Rev. Dr. Charles Cookbook Jones, the Apostle of the Negro, a stern student of the race, a philanthropist, pious, and not in vain, for better clothing, housing, and feeding, as well as for religious instruction, and by his wise correspondence in touch with the whole negro problem when it was one of servitude, myself a diligent reader of newspapers, secular and religious, I solemnly affirm that up to the close of the war between the States I never read or heard of a single instance of the crime now so common, and which North and South have visited with such common and sometimes savage severity.

You name two theories as to the cause of this dreadful development—reconstruction and reversion to original type; and, with some qualifications, adopt the former as the more probable, and because, in your judgment, the second does not harmonize with the alleged fact (which was a surprise to me) that reconstruction to population more crimes of this sort are committed by the negro at the North than at the South, notwithstanding the constraining influence of an overwhelming white civilization. You will pardon me if, confining the view to the Southern negro, I express the opinion that the two theories are not mutually exclusive, but harmonious. I am convinced that both reconstruction and reversion have much to do with the problem. I was deeply interested in Senator Bankhead's statement that since the practical disfranchisement of the negro in Mississippi, there has been a marked decrease in the crime against white women, which has been driven so many Southern families to the protection of community life. You estimate the inference at its full value when you ask for that which is lacking in other States more recently adopting similar constitutional changes—on based deduction can not rest securely on so narrow though promising a base. An argument that rests on other foundation besides statistics may be so justified as to be not only correct, but effective.

First of reconstruction as one cause of what will deplore and are working to cure.

In the Confederate Memorial Hall in New Orleans there is a picture of a reconstructed legislature—the Lower House. If I remember, every face is black, and these lawmakers were many of them fresh from the cotton, cane, and rice fields, and absolutely illiterate. Now, even under the restrictions of slavery, news spread among them with marvellous speed and extent, by what the world calls a "wireless telegraph"; what wonder, then, when marvellous stories were told of negro education and elevation by the helping hand of a powerful government, should have incited the race not only equal, but superior, to that of their true, between the white man and the negro woman, but between heaven and hell, had been closed by Federal authority and tolerance and virtue of the South in the schools of private charity at once found for the freedmen institutions for general education, took the ambitious title of "universities," but, amidst with no black element, and finally in line with freedom teaching by and example the completed social equality. I myself have handled a little school paper issued in Louisiana, in black pupils as "our dear Natchez" and from an eye-witness the disgust of outsiders, parted with their scholars, whether of both sexes or not, that is to say, whether of either sex, in which lips covered belief in social equality, if not worse negro opinions by constant legislation and had teaching in the other factor, reversion to original savagery, cannot be safely to that any race freed from restraint should be, asserted by this, degeneracy. If now begins to be admitted by general moral era, that slavery was not "the sum of villainies" it was honestly institute, well-believed to a rare of certain extent it was a training ground the motives governing Southern masters and wild impulses, and self-protection in the violent politics were self-interest of a beneficent control remains unaltered. But more than this

not be said. The masses of our negro population in slavery were to a large extent under the controlling influence of the Christian religion. More of them, it has been said, were communicants than any now, and in the main led as creditable lives as the average working class of any race—indeed, shared discipline administered by white overseers, ministers, or churches exercised a wholesome restraint over their passions. Many a black church member has been read out as excommunicated for immorality, or restored upon proof of repentance. As another real fruit of reconstruction, the race's own spirit, and while, as I happen to know, the freedman trusted his old master to keep his earnings, he went elsewhere for his political faith; the black man distrusted the white man, even in religion, and the white man resented his own freed political subject and violated his resentment on the new suffrages. Thus it happened that instead of the educated gentry white minority who formerly guided him, he was relegated to the supervision of black shepherds, too often immoral, then and now, who naturally became his political leaders, and believed and preached a political millennium. Considering all these circumstances, it is not astounding that so many of these crimes have been perpetrated, but so few. The Southern church, it is to be hoped, is awakening to its duty to the heathen in black, the Northern church to more sympathetic and rational study of the problem, and the negro himself is becoming disillusioned. Neither this generation nor the next may see the conditions permanently settled; but the discovery of the causes, if removable, is a long step toward the cure of any evil.

I AM, SIR,

R. Q. MALLARD, D.D.

## FOREIGN MISSIONS IN CHINA

New York, June 30, 1903

To the Editor of *Harper's Weekly*:

Sir,—Since your issue in a review in one of your paper two paragraphs presenting the views of Mr. Francis H. Nichols upon mission work in China, with which views you appear to concur, the following statements have come under my eye:

As you have been in touch with our American missionaries in China for years, knowing many of them personally, and well acquainted with the results of their labors, do not think for them perfect either of judgment or performance in their peculiarly delicate and difficult work, nor do we, on the other hand, need of it; but the general public, to whom, ought, by all rules of fairness, to be shown the point of view of others who may be charged to be authorities on the subject of the relations existing between the natives and the missionaries, and the effect of the latter upon the former. It is true that Mr. Nichols credited to the missionaries a good character for general conduct, and ability, and "considers that China needs Christianity far more than she needs anything else." This is a great advance upon the position occupied by a large part of the secular press, and many an exhibition of ignorance of the two prior ages, when there was such as was only equalled by the bad animus with which it was pronounced. But Mr. Nichols, or the writer of your "Comment," pro the Chinese hate Christianity, and with good reason. They regard the Chinese hate Christianity, and with good reason. They regard Chinese sentiments and customs, whether necessarily incompatible with Christian beliefs or not. They track their converts to disprove doctrinalism. They hate the Christians because the Christians make themselves hateful. On the other hand, they are hated, and don't mind it," etc. Per contra, I quote the following: In a who served in China many years as consul-general to China, and from 1876 to 1880 as United States minister there, says:

"During my twenty years' stay in China I always congratulated myself on the fact that the missionaries were the best citizens of our own and able men among the merchants and officials, but it was the missionary who exhibited the foreigner in benevolent work, or in having other aims than those which may be justly called selfish. The good done by missionaries in the way of education, of medical relief, and of other charities cannot be overestimated. On his return to his home in Minneapolis, the Hon. John Goodness, consul-general of the United States at Shanghai, who the connection in China in 1860, was very busy with affairs during who listened to an account of his experiences with interest, and he paid this tribute to their work:

"The thing that makes us most popular in China is the work of our missionaries. The fact that the American nation and the time and people is due almost wholly to these facts: First, the the missionaries; prayer by preaching the Word; second, service, where thousands and thousands of poor natives had and cared for; and, thirdly, to the fact commonly recognized by the Chinese of intelligence that the American people do not want Chinese territory."

Relying upon your sense of justice to present this side of the subject also.

I AM, SIR,

A. C. P.

Life After Death

A GERMAN biologist has been investigating the question of the activity of animal bodies after death, and has published some suggestive conclusions. It appears that death is not instantaneous throughout the physical organism, for it has been observed that many of the different tissues continue active for a considerable period after the time when the animal is assumed to be dead, particularly in the case of the lower animals. Cells from the brain of a frog, for example, have been kept alive for over a week when held in certain solutions, and the heart of a frog has been known to beat for many hours after being removed from the dead body. The hearts of turtles and snakes will beat for days, or even a week, after death.

"The Best-laid Plans—"

A STORY is being told in London about a man prominent in public life, whose name may not be mentioned, which illustrates the insecurity of human preparations. He was planning an entertainment, on an elaborate scale, to be given to various friends in the neighborhood of his country-seat. Unfortunately, his nearest neighbor, a close relative is highly unscrupulous in himself and his intimates, and he wracked his brains to devise a scheme by which he might avoid the necessity of leaving the undesirable cousin in to being the unwilling "host."

"I have it!" he announced to his wife at breakfast on the morning of the event. "I'll send him some tickets for the play tonight in town. Of course he'll be delighted, as he seldom has an opportunity of going to the theatre."

The tickets were accordingly sent, and the host, with an easy conscience, proceeded to enjoy the company of his friends. But his misfortune was of short duration. At the height of the festivities he walked the objectionable neighbor.

"Such a stupid mistake you made," he announced, as he approached his cousin; "as soon as I heard about your party I knew that you must have sent me the tickets for the wrong night, so I got them changed for to-morrow evening and came right over here as soon as I could."

A New Way to Europe

A ROUTE across the Atlantic which would greatly shorten the ocean voyage is being discussed in England. It is proposed to utilize the harbor of Galway, situated on the western coast of Ireland, and run a line of express steamers between there and St. John's, on the coast of Newfoundland, a distance of 1816 miles, while the rest of the journey to New York could be made for most of the way by fast trains. It is believed that the trip from London to the American metropolis could thus be shortened by at least a day. From New York to Southampton is almost twice as far as from Galway to St. John's—3116 miles; while the distance from New York to Liverpool is 2095 miles.

The Ten Greatest Men

A GERMAN newspaper has recently propounded to its readers the question, Who are the ten greatest men alive to-day? An examination of the replies revealed many interesting readings. Five hundred and two readers voted for Yaldai; the German historian Meumann was a close second with 420; Marconi followed with 445; Bowen received 425; Edison, 368; Nassau, 370; Roentgen, 264; Menzel, the German painter, 248; Koch, the bacteriologist, 230; while the Kaiser indignantly brought up the rear with only 202. Five hundred will vote that of these ten candidates six are German; such insignificant personages as Herbert Spencer, George Meredith, and Thomas Hardy were not even mentioned. Among those who received over 100 votes were Chamberlain, the Russian novelist Gorky, Hauptmann, the dramatist, and Max Klinger, the German artist.

A British Innovation

The first motor-railway line in England has lately been opened near Southsea, and is now being successfully operated. The

The Motor-Railway in Operation

train consists of a motor and one passenger-car, which is said to be crowded on all its trips.

AVOIDED MATHS.—Miss Wiseman's SCORCHING WRAP should always be used for children reading. It softens the skin, soothes the eyes, opens the ears, turns what ails, and is the best remedy for dizziness. (Advt.)

All symptoms. A tonic, an expectorant, and a diaphoretic in actual drinks.

# The Three Opal Buttons

By

van Tassel Sutphen

"D E QUINCEY was right, and murder should be a fine art, that the Borgias—only amateurs! The far-famed *Jeux Feyous*—pooh! any chemist will put it up for you easily. Only be careful how you use it. Chemical analysis has advanced somewhat since the day of the divine Lucretia, and a jury would convict without hearing their souls."

"Father rough on your business I should think," said Estes, speaking scores but thickly, for the port had stopped with him overfrequently of late. "Is poisoning really out of date?" he continued.

"As absolutely a criminal and the novelty of G. P. R. James," answered our host, lightly. "But I who was watching him closely saw his eyes harden. Estes had said more than one imprudent thing that evening, and this time he had gone too far. I would have to get the boy away somehow."

There were three of us dining with Balencourt that evening at his chambers in the Argyle—Estes, Crawford and myself, and as usual we had had an excellent dinner, for Balencourt knew how to live. An odd sort of fellow, but his letters of introduction had been unexceptionable and his checks were always honored at the Jockey Club in Paris, and there was his name on White's books for any one to read. A man of forty-fifs perhaps, clean shaven, well set up, an inveterate glass-totterer, a prince among racemasters, and the most astounding polyglot I have ever met, and once he had collated some of his researches into *Iranic-Turanian root-fores* for the Philological Society. But let us go back to our waltzes.

Crawford picked up the thread. "Then the science of assassination is a lost art," he said, tentatively.

"Oh, I did not say that," replied Balencourt, carelessly. "There are other ways—better ones."

"You mean beyond the risk of detection,"

"Perfectly."

"Eliminating the toxic-poisons of all kinds."

"If you like."

"I doubt it," said Crawford, with a little hesitation.

"And I deny it," interrupted Estes, rudely, and stared straight at Balencourt. A quick glance answered his challenge: it was like the engaging of rapier in scabbard; I half started from my seat. But Balencourt kept perfectly cool.

"Perhaps Mr. Estes desires proof," he said, slowly.

"I do."

"Let us say between—"

"Tonight and the thirty-first of May."

"That will suit me perfectly. My passage is booked on the *Cicurrit* for June first."

"It is also the day set for my wedding to Miss Catherwood," said Estes, quietly.

Balencourt took it admirably. "So you have obtained the decision at last," he said, smiling lightly.

"Crawford rose to his feet. "My felicitations."

"The stakes" put in Crawford, feebly, for shaken as he was, he could still grasp at the deft idea included in the last named word of his host's, and his jaw hung loose and pendulous. "For God's sake, fellows!" he began, but Balencourt stopped him with a gesture.

"This is a private matter between Mr. Estes and myself, as he knows full well. So far as you and Mr. Thorp are concerned, call it what you like—a duel or, better yet, a sporting proposition."

"The stakes" put in Crawford, feebly, for shaken as he was, he could still grasp at the deft idea included in the last named word of his host's, and his jaw hung loose and pendulous. "For God's sake, fellows!" he began, but Balencourt stopped him with a gesture.

"The stakes," repeated Balencourt. "Well, they are hardly of a nature that either Mr. Estes or myself can intrude them to the party; it is a debt of honor."

Up to this moment I had kept silent, but now I must make my own try. "He is but a boy," said, leaning my elbows on the table and seeking to plumb the uttermost soul depths in the cold, gray eyes of the man who sat opposite to me. But Balencourt only laughed, somewhat.

"Then he should not assume a man's name."

"Will you come now, Thorp," interrupted Estes. He pushed his chair unlitely back and we all rose.

"You won't wait for coffee?"

"Please." He touched the call-button and Jarman entered to help us on with our topcoats. *Par parenthese*, how absurd for help suddenly of this accident of a Balencourt possessing the most

perfect of serrig-men. There never was anybody who could roll an umbrella like Jarman, and I have been aroused a lot in my time.

The door closed behind us, and we three stood in the street.

"A cab!" I queried, and a passing hearse swung in towards the curb.

"I'd rather walk along with you, Thorp," said Estes. "Jump in, Crawford, and we'll perch you up later at the club."

Crawford smiled and was forthwith driven away. I turned to Estes.

"What is it, George?" I asked. "Remember there's Elizabeth to be considered in this."

"None of Betty's. Catherwood is my niece, and I considered that I had the right to speak. But I wasn't prepared for the depth of trouble that I encountered in the glance George Estes turned on me. "So bad as that!" I finished, lamely.

"It won't take long in the telling," began the boy, desperately.

"You remember that after I left Princeton I went to Germany for a two years' course in international law under Langbein; it was a pet idea of the Pater's."

I nodded.

"Well, we all make fools of ourselves at one time or another, and here is where I dished the cap and bells. You have heard—"

"The revolutionary society?"

"Yes; it's the active branch of the 'Suarlie League'—the practical work you know. I joined it."

"Had nothing to say. George laughed a little dimly and went on:

"About wasn't it! I, a citizen of the best and freest country on earth to be making common cause with a lot of crack-brained theorists who would replace constitutional government by the secret terror. And the 'Council of Ten'—a world ruled by a life or any one man's life to the progress of civilization. It was only when I came to look at the means apart from the end that I realized the horrible fallacy of it all."

"You withdrew of course."

"You don't quite understand. One doesn't withdraw from the 'Down.' He may cease to be identified actively with the propaganda, but he is still subject to be called upon for a term of this was left at my rooms."

"He took a post-bound bag from his pocket and handed it to me. It contained a small, red button, fashioned out of some semi-precious stone, resembling Mexican opal."

"It was the first summons," continued Estes, "and within three days I should have been on my way to Berlin—to receive my instructions."

"You refused then?"

"There was Betty," said the boy, simply.

"You must understand," he went on, "that this 'service' can only be demanded once of a member. He may refuse compliance, if he chooses, but in that case there is a forfeit to be paid, and it becomes due after the third warning."

"Well?"

"Must be paid, you understand. If not by the recalcitrant himself, then by the agent of the 'Fory' through whom the summons comes. That makes it clear, doesn't it,—Balencourt and his debt of honor?"

"When did you know—about him I mean?"

"Here is the second button. Balencourt slipped it into my hand just before we went out to dinner to-night."

"It is incredible, incredible! Balencourt is a man and you are but a boy. An act of youthful folly—no one short of a fend—"

"You forget that it is his life or mine," interrupted Estes, quietly.

"But, George, it is unthinkable; there must be a way out and he knows it; he sure of that."

"And if there was?"

"No matter what the man is he can't be destitute of every human feeling. When he knows; but you did tell him—about Betty—"

"That's just it, old chap. Balencourt asked her to marry him ten days ago, just before I received the first red button."

"I was speechless; the non-naturalness of the thing had struck me all of a heap. "The police," I said, vaguely, but Estes shook his head.

"It is but postponing the bad quarter of an hour," he said,

gently, "and I don't think that I could put up with this sort of thing indefinitely. Moreover, it wouldn't be fair to—to Betty."

"No, old chap," he went on, "it's better to have a little set, just as it is now; for at least I should be able to keep his word. Once past the thirty-first of May, I can do as I please. Then by the thirtieth you shall put it off. If you three—Crawford, you and I—can't I match with one playmate on the "Downs" we shall do so well; but the bottom drop out of the Monroe doctrine and be done with it."

"We had arrived at the club. For an instant our hands met. "Not a word to Betty," he whispered.

"Of course." Then we went upstairs to the pipe-room, where we found Crawford sitting gloomily over a game of dominoes and soda. The clocks were striking three when we took Kates back to his apartments, and we both spent the night with him. The issue had been fairly joined, and it was exactly two months to the thirty-first of May.

The month of April passed absolutely without incident, and sometimes it was difficult to believe in the reality of the contest in which we were engaged. Yet we omitted no precaution, and during the whole thirty days Kates was never out of our sight, or the sight of either Crawford or myself. But so; I'll correct myself there, for we had to allow him an hour and a half every evening with Betty, and I was not to be seen in the street, shivering confoundingly in the variable April zephyrs. No thanks for it either, indeed. Betty's manner was distinctly topographical whenever we chanced to meet, she being a young person of discernment, and perfectly well aware that we were keeping her in the dark about something. But it helped George to forget, and as I pointed it in with the rest of the day's work and held my peace.

As for the rest, there was nothing to be done except to keep a couple of chambers on Balconnet, and we had a full account of his movements by eight o'clock every night, a regular ship's chart worked out with time-stamps and not entries in red ink, after the accustomed fashion of Central Office men. It was a great relief that we were not obliged to bother about the boy's sailing, unless he had been ordered under the terms of the agreement, and whatever Balconnet might be we was first of all a gentleman. No April dragged monotonously along; the period of stress was over, and he had ailer. There came May-day, and with it a little shock. Our man—I mean Balconnet—seemingly to disappear, and he did it so effectively as though there were no such thing as a "shadow" in existence. When the head-ache came shamefacedly that night to report his disappearance I cut him short in his theorizing—now what has happened? I fear—and asked for the facts. That there was only the one—Balconnet was certainly not out, and that was all there was to say. Whereupon we banished the "shadow" to the outer darkness where they "shut one" and returned our original course of war.

One thing was plain—the danger of remaining longer in the city. There are so many things that may happen in a second, and especially if our friend Balconnet formed part of that unknown quantity. There is always a chance of a robbery, not tumbling about one's ears or of being run down by some reckless chauffeur. And who is to know the truth? Avicenna will happen; they are wifful things and insist upon keeping themselves in evidence. Impatience then, to get out of town; but where?

"Hoodman's Ledger," began Crawford a little doubtfully, but I could him up with joyful diversion.

"The very thing," I said. "I'll send a wire to the caretaker to-night, and we'll be off by Thursday. I invite you all—for a month. Why, of course, George, that includes Betty and her mother; they were to come to me no anyway in June."

Now Hoodman's Ledger is one of the innumerable small talents that dot the Maine coast above Portland. A few years ago the fancy had taken me to buy the island—it was only three acres in area—and later on I had put up a house, nothing very elegant,

"And I deny it," interrupted Ester, raptly

but everything for comfort, a model bachelor's establishment. It pleased me to have thus obtained an undivided share of the universal heritage; in this little piece of ground I was at liberty to put down metaphorical roots and percolate myself at home. Here I could have my friends, my books—it was a paradise whose shy was only clouded by an occasional remembrance of the late autumn cold and storms that would eventually drive me back to my chambers in town.

For our present need no better asylum could have offered. The island was small and occupied only by my own domestic establishment. It lay in the light of Oliver's Bay, quite a mile from the nearest shore, and there was but one other bit of land anywhere around—an uninhabited islet known as the "Thimble," that lay a quarter of a mile due East. Surely this isolation promised marvellous security; here if anywhere we might map our fingers at the would be rather cold off the Maine coast so early in the season, but there were five places in plenty and stacks of driftwood. The only real difficulty lay in procuring my estimable sister that Hoodman's Ledger was a more desirable place of residence in early spring than was Gramercy Park.

Finally, I left it to Betty to manage. "I can't expiate myself any clearer, my dear," I ended up rather lamely, "but it will be better for George. Will you do it?"

"So you won't trust me with the secret? No; you needn't protest—there is a secret and I ought to know it. But you here just George?" indeed! Very good, Leicester; I'll obey orders. But can show good and sufficient reason for this ridiculous mystery. For, dear mamma; how she will hate to be plucked up—like an early radish." And thereupon Miss Betty sailed away with her small head tilted skyward.

But she did manage it, and by Saturday night the party was actually assembled at the "Brookers." There was a semi-circular pier, with new and then a cheerful sputter as a few stray drops sought to immoderate themselves in the wide chimney-pipe plume behind Mrs. Caterwood's back and landed her the last spilled out of me—the witch!

Again, I pass over many unsuccessful days. "Nothing doing," as

Crawford put it, and I was only too glad to be able to agree with him. *Leisner's* review was a good enough motto for us, and the children were, oh! so blissfully lappy.

Three, four weeks, and so even or sound from Meisen Bahen-court. Not so surprising after all, seeing that we were living on an island surrounded on all sides by deep water, and no land within a mile, except that little dot called the "Thimble." And I kept watch and water, both day and night. The gardener kept their mouths shut, and finally, there were the four dogs—two Great Danes, a collie, and "Spap," the fox-terrier. It would have been a that particular month of merry May.

It was the morning of the thirty-first, and I was lounging on the piazza, Crawford being on duty at the time. The warm scientific review I had been reading slipped from my hand and that were trading about the lawn, between the boat-house and a rustic pavilion overlooking the tennis-court. One bird I marked he circled about, possessed, as it were, with the pure joy of motion, as a bolt from the blue—then I rubbed my eyes in amazement. It was free; it was a moulting non-script that now fluttered feebly once or twice and then lay still on the gravelled path, close to the stone sun-dial. I ran down the steps and bent over the pitiful thing—dead flesh; there was a disagreeable odor of burnt feathers in the air. Mechanically, my eye fell on the sun-dial—there was a spot the size of a silver dollar on the side of the pedestal where the steam had crumpled and disintegrated, so though it had been placed behind the sun-dial and looked out to sea. And there in line with the pedestal of the dial and the dead bird on the path lay the "Thimble."

Now, as I have said, the "Thimble" was a rocky islet only a few rods in extent, but densely wooded with spruce and blue gum. The name, rather, a picturesque object in the sea-scape, but, of course, utterly valueless, except for occasional picnic teas—a bit of no

man's head whose purpose in the robbery of Nature had hitherto remained unfulfilled. But now?

I went back to the piazza and caught up a powerful pair of micro-spectacles that were lying on the table. There, shining like a star through the close curtain of green that veiled the "Thinker" was the projecting end of a highly polished tube of steel. And, even as I gazed, a man's face peered out so though in the act of sighting—*Arum Halocourt!*

That I understood. The tube was the means of projecting some enormously powerful heat beam, whose nature must be akin to that of the familiar X-ray. The article I had been reading; what was the title?

"Radium, the Wireless Metal." That incomprehensible substance forever sending forth its invisible and terrible emanations, yet never diminished by even the ton thousandth part of a grain; a natural force whose properties and functions were but imperfectly understood, even by the learned men who had succeeded in isolating it. Even now from a steel tube billions of ions might be rushing, invisible to the eye, but certain death to whatever of animal existence they chanced to encounter. There was the pigeon lying dead on the walk.

"Do hurry, George," called out Betty's thin, sweet treble; she stood at the entrance to the pavilion and waved a tennis racket impatiently.

"Coming," was the ebullient response, and Ettes turned the corner of the house; he took the gravelled path at full speed, in an instant or two at the foot of the would be passing between the sun-dial and the dead pigeon, in line with those deadly radiations.

We had been playing a little single wicket earlier in the day, and a cricket-ball lay on the wicket-table at my hand. I could not have uttered a word or a cry to save my life—to save his—but the old instinct held true. With a full sweep the ball left my hand, ruckling the bag squarely on the forehead; he fell within his stride.

Betty was with us on the instant, but I seized and held her, despite her struggles; naturally she thought I had gone mad. There I looked over again at the "Thinker"—just in time to see it disappear behind a cloud of grayish vapor; an instant later a dull sound of an explosion filled our ears, and the ground under our feet trembled. When I looked again the "Thinker" was gone; there was nothing to be seen, even with the glass, but a light smog covering the water, and some fragments of tree branches. But the air about us was full of fine dust that powdered Betty's hair as though for a costume-ball, and made me choke and cough consequently.

Well, I had quite a number of explanations to make to Miss Betty after George had been reconstituted—a slightly disfigured hero, but still in the ring.

"One thing I don't understand," said Crawford. "There were to be three warnings, and Ettes only received two of the red buttons." Whereupon Betty blushed, and drew a little package from her pocket.

"It came last night directed to George," she said, "but I forgot to give it to him. It looks open in my pocket and it contained this." She held out to me the third red button. That was decent of Halocourt; to have given the last warning.

There is only one possible hypothesis in account for the catastrophe. Halocourt was dealing with a terrific force, whose nature was but partially understood, even by science. He had intended to use it to fulfill the vengeance of the "Dawn," but something had happened, and in an instant the monster had turned and roared its master. That is all that we can know.

Two days ago George and Betty were married—they didn't stick to the date of June first, for George, with a leap on his forehead as big as the cricket-ball itself, would not have made a presentable bridegroom. I carried on umbrellas at the function, whose incomparable rolling was resuscitated upon by silk. Next I say that it was the same umbrella that Halocourt's man, Jarroon, had manipulated for me that fateful evening when we dined at the Argyle. I shall never forget that umbrella, even at the cost of a wetting. To me, it is a memento.

Colorado has 900 lakes and more than 60 rivers. From the Subarctic's view-point, they range from pure to good and from "mildling" to hot. In Colorado, as everywhere else, the best fishing is not to be found within a mile or two of the big cities. You want to go where the fish are. But if you do go and you know how, you will find that, in Colorado, the trout are bigger, fiercer and more numerous than anywhere else in America. There is good—most good—fishing round about Fort Collins, Windsor, Greeley, Sappers, Alamosa, Wagon Wheel Gap, Selter, Norris and Platt Canon.

These places are quickly and comfortably reached via the Rock Island System from Chicago, Omaha, Kansas City, Ft. Worth, Memphis and hundreds of other places in the Middle West.

Send six cents in stamps for "Under the Turquoise Sky," interesting, practical, beautifully printed and illustrated. Contains a list of Colorado lakes and boating houses, together with information as to rates, capacity, etc.

JOHN SEBASTIAN,

## The Problem of the Prairies

The story of this year's "round crop" on the prairie serves to point afresh and to emphasize the economic distinction of that part of the nation. News of the important industrial achievements of the Middle West relates almost entirely to the farms; to the view of an outsider, at least, it must appear that the chief functions of that region are performed in the fields, the towns seemingly playing a small part, in sharp contrast to the industrial life of the Eastern States. This may naturally prompt the question, What of the prairie towns? And this question goes to the root of the most serious economic problems which the West has had presented for its solution.

### Evils of Over-population

The reason for this difficulty is not at once apparent. Logically, in a purely agricultural region the true functions of a town are very simple, and the conditions which are to determine its health and growth are perfectly easy of discovery. So long as agriculture is the one and only really productive industry of the people, the need for towns is merely the need for market places for the products of the fields, and for centers of distribution of those commodities which must be imported. Nowhere else is there so little of complexity in their relations. The populations of such towns, if they are to retain health and strength, must be kept down to the minimum that is consistent with an efficient discharge of their duties; to inflate population beyond that point is but to decrease the relative utility of its inhabitants, causing idleness and the manifold evils which follow in its train. The over-populated country town must necessarily be an incubus upon the community that is called upon to sustain it. Its surplus populace must be fed from the farms; this cannot be effected by legitimate means will result in illegitimate means will result in the loss of the town becomes correspondingly artificial and tenuous.

Had the prairie-taken account of these very obvious truths when their work was beginning all would have been well; but for a long time they were practically lost sight of, and the region is now engaged in the tedious business of caring and eradicating ills which might better have been prevented.

### Towns before Farm

It is well to note that it is most peculiar districts town-making preceded the actual settlement and development of the outlying lands. There was some reason for this. Immigration was very rapid, induced by larger opportunities for, and the promise of quicker returns upon, the occupation and cultivation of the soil. There were no forests to be cleared away, no tons of strew stone to be gathered up, no long delays of any sort imposed by nature. The lands lay free and ready. Once this was understood, the influx of intending settlers was phenomenal. But several years were necessary for establishing the farms. In the mean time the necessities of life must be supplied this end, from outside sources; and as a means to this end, there were only railroads and trading-posts, dotted at intervals along the trails, where passing emigrants, trains, or herds, were served. As a rule, these trading-posts had an political organization, no existence as bodies corporate, no laws but those of convenience, and no scheme for commercial permanence or growth. Gradually, however, as civilization progressed, there grew up amongst them a spirit of trade rivalry; and then followed a rude sort of idea that took hold upon them: they were bred to beat, one against the other,—not of

## Get Strong and How to Stay So

BLAIKIE  
 To be had in any one of our NEW YORK CITY

81 00 net, postage extra

their superior wealth alone, but also of the important details of size and wealth. They all wanted to be regarded as cities. All manner of frontier adventures swarmed to these centres, and were welcomed because they swelled population and gave a fancied justification for pride.

#### The Boom-Town

Later, in the eighties, came the era of the "boom" and his mad adventures in town-building. The boom-towns was a re-incarnation in larger form of the departed spirit of earlier undertakings. Railroads had appeared in the moments past, and there were many other new elements in the prairie life which the ingenious promoter could call to his aid. It is always easy to lapse a rationally with belief in its own present or potential importance. Every little hamlet was suddenly encouraged by its particular exploit to nurse a booping ambition: there was almost no county in the Middle Western States without its vain candidate for metropolitan honors. It was exciting enough and fairly praiseworthy while it lasted; but, like the movement which preceded it, it did not reckon with the fundamental question of neediness, else the inevitable penalty—collapse—might have been clearly foreseen. Reaction came in due course, and left scores of boom-towns straggled high and dry over the whole-width of the prairies, glinted with superfluous people.

#### The Reaction

The towns, swollen with excess of people, who had assembled with every intention for the future, and even close inspection of the present, were left, when the reaction set in, with twice as many inhabitants as could find employment in carrying on the soberest real work. Realization was acute; but for a time pride was stronger than understanding; surpluses were swarming—a last resort. There were many who, not clearly grasping the fact that the industrial activities of the prairies were and must remain essentially rural, felt that any daunting in the towns would be a retrograde movement, a sign of economic insubordination. They argued that other States with no greater aggregate wealth or population were able to maintain large cities: so why not they? The spirit of jealous emulation, first cause of the trouble, persisted under such unintelligent emulation, until the towns, slowly consuming their own substance, were left lean, listless—a positive deterrent to progress.

#### A Lesson to the Towns

The change that has come over the cities of the prairies within the last decade is nothing short of marvellous. Their dilemmas, like every other, had two horns. When it was clearly seen that dozing would not avail, some towns seized one horn and some the other, and out of the chaos they have brought order. It was imperative that the excessive population should be drained away and food employment upon the farms, or else that the towns should establish industries of their own which would employ the people in increasing the utility of the community. In the census of 1900 very many Western towns and cities showed a marked decline in population, as compared with the returns of 1890. False pride aside, this was no cause for chagrin; it marked the beginning of a wiser life, a restoration of equilibrium between town and country. Other cities showed substantial growth for the same period, due to the building of mills and factories for the utilization of the raw materials of the prairie, and the multiplication of other means of self-support. Opportunities were abundant, and the market for manufactured products was at hand.

The lesson was sharp but invaluable. It is safe to say that there will be no more ill-considered trials to force economic progress in disregard of reason and experience.

### TOUR TO THE PACIFIC COAST.

Via Pennsylvania Railroad, Account G. A. B. National Excursion Agent.

On account of the National Excursion of the Grand Army of the Republic at San Francisco, Cal., August 17 to 22, the Pennsylvania Railroad Company offers a personally conducted tour in the Pacific Coast at remarkably low rates.

Tour will leave New York, Philadelphia, Baltimore, Washington, and other points on the Pennsylvania Railroad east of Portland, Thursday, August 6, by special train of the highest grade Pullman equipment. An entire day will be spent at the Grand Canyon of Arizona, two days at Los Angeles, and visits of a half day or more at Pasadena, Santa Barbara, Del Monte, and San Jose. Three days will be spent in San Francisco during the Excursion period. A day will be spent in Portland on the return trip, and a complete tour of the Tribulation Park, covering six days, extending directly in destination via Billings and Chicago, arriving Washington, Baltimore, Philadelphia, and New York September 1.

Round trip rate, covering all expenses for twenty-seven days, except three days spent in San Francisco, \$215; two in one berth, \$230 each.

Round trip rate, covering all expenses to Los Angeles, including transportation, meals in dining-car, includes only through California, and returning to the East by Delaware D., via any direct route, including no third stop over, \$115; two in one berth, \$140 each. Returning via Portland, \$11 additional will be charged. Rates from Pittsburg will be five dollars less in each case.

For full information apply to Ticket Agents, or Geo. W. Boyd, General Passenger Agent, Broad Street Station, Philadelphia, Pa.

## Cool Off in Colorado

It's hot about you and you want a change of air, then don't you know how to get it. Go to Colorado. In the one perfect summer resort, the only place where you can find the best of everything in the West, the best fishing, the best hunting, the best scenery, the best climate, the best hotels and boarding houses, all go to make Colorado the ideal country for western sports, health and pleasure.

### Send for our "Handbook of Colorado"

A trip to Colorado costs but little. Our handbooks of all the best resorts, and the attractions of different places. Send for a copy. The best of all is that some cost \$1 and you can find it at any bookstore. Send the 10c. Chicago Book Store, 100 N. LaSalle St., Chicago, Ill. before the date it takes to see right on the spot and then return to us at 10c. to be returned to you.

## COMMENT

THAT there has been any grave disagreement between President Roosevelt and Secretary Hay is improbable. It is true that a sharp departure seemed to be made from Mr. Hay's circumspect and cautious management of our relations with Russia, when, during his absence, an official statement, believed to have been dictated by Mr. Roosevelt at Oyster Bay, was given to the press by an official of the State Department—a statement to the effect that, owing to the obstruction offered by Russia to the procurement of the trade privileges in Manchuria desired by the United States, our government had no intention of withholding the protest against the Kishinef massacre prepared by the United Hebrew Congregations. It is obvious that the moral effect of the protest would be neutralized if the presentation of it could be attributed to irritation provoked by the misarrangement of commercial plans. The expediency of keeping the two matters entirely distinct must, in the end, have recommended itself spontaneously to the President, or may have been suggested to him by Mr. Hay during their subsequent interview at Oyster Bay. At all events, the State Department has since declared that the petition, or notice thereof, will be forwarded as soon as it is ready, and that meanwhile the demand for the opening of additional treaty ports in Manchuria will be suspended. It also seems to be settled that due deference will be paid to Russian susceptibilities as regards the method of presentation. That is to say, upon the arrival of the petition, our *chargé d'affaires* at St. Petersburg will give the Russian Minister for Foreign Affairs notice of its purport, and inquire whether he will receive it. It is taken for granted that the answer will be in the negative, and that the incident will then be closed.

There is reason to believe, however, that the demonstration will not be fruitless. The discussion of our government's intention cannot have been concealed from the Czar, and we may doubtless attribute to his personal fact the vigorous action now being taken by the Russian government against the persons responsible for the Kishinef massacre. According to the latest news from that city, it appears that no fewer than eight hundred arrests have been made, that 350 persons have been remanded for trial in the lower courts, and that 450 indictments, of which fifty-three are for manslaughter, have been sent to the Court of Appeals. We are told that a number of persons, previously discharged from arrest, have been re-arrested, and that a ring-leader in the atrocities has committed suicide, being executed by the arrival of the Director of the Russian Minister of Justice that punishment was

inevitable. No attention has been paid by the Russian ambassador at London to the suggestion of a Catholic newspaper that the St. Petersburg government should retaliate for the attempt to interfere in its internal affairs by sending to Washington a protest against the lynching of negroes in the United States. The Czar's advisers desire to conciliate and not to oppose the American people. There is manifestly no analogy between sporadic outbreaks of popular violence against negroes believed to be guilty of infamous crimes and the systematic massacre of unoffending citizens at Kishinef.

Postmaster-General Payne is said to have declared that the end of the Post-office Department investigation "is in sight." How much has lately been accomplished it is impossible to say, because President Roosevelt, while precluding a determination to "turn the rascals out," has permitted Mr. Payne to give First Assistant Postmaster-General Whym and Fourth Assistant Postmaster-General Bristow, from whom information could formerly be secured. The final report of the last-named official, however, when submitted, will have to be made public, and we shall then learn not only what has been discovered, but also whether the scope of the inquiry has suddenly been circumscribed. It is reported that Mr. Bristow's report will include some drastic comments on the conditions found by him to have existed in certain divisions of the department, and that it will be accompanied by the recommendation that several officials be removed. If it be true that George W. Beavers intends to give evidence for the prosecution against A. W. Machen, we should be able to get at the true inwardness of at least one of the conspirators to rob the government.

Turning to the Litterer case, we observe that the War Department has followed the example set by the Post-office Department, and has issued positive orders that the investigation of the alleged connection of Representative Litterer with glove contracts shall not be disclosed, and that no information secured by the investigating officials shall be divulged. That the War Department has no intention of shielding Litterer or of narrowing the inquiry seems to be a fair inference from the fact that Colonel Garlington, Inspector-General of the Department of the East, is forthwith to begin an examination of documents and witnesses connected with the glove case, and that General Burton, Inspector-General of the Army, has been ordered to make a drastic investigation of certain army contracts entered into by the Quartermaster's Department on the Pacific coast. We are not sure that the Roosevelt Administration is wise in deciding to withhold information from the public pending the completion of inquiries. As experience has shown, the effect of publicity is to cause witnesses to come forward. Few persons believe that the exposure of wide-reaching fraud in the Post-office Department would ever have been made had the inquiry been a secret one.

There have been of late but few political incidents of much significance. Colonel Gaffey, the leader of the Pennsylvania Democracy, and the representative of that State on the Democratic National Committee, has indicated an intention of pledging to ex-Governor Robert E. Pattison the Pennsylvania delegates to the next national convention of the party. This proceeding does not mean, of course, that Mr. Pattison is supposed to have any chance of gaining the nomination for the Presidency; it simply signifies that Colonel Gaffey desires to keep the delegates well in hand, so that he may be able to exert considerable influence in the convention. Had Mr.

Pattison been successful at the ballot-box last year, and had he been for the third time chosen Governor of Pennsylvania, he might have been put forward as a candidate with some prospect of success, though nobody believes that Pennsylvania would give its electoral votes to a Democrat in a Presidential year—unless, perhaps, that candidate should be Judge Gray of Delaware. One would like to know what Colonel Guffey thinks of Mr. Cleveland and of Chief-Judge Parker. He is not known to have said a word upon the subject, but his friend, ex-Governor Pattison, has declared himself against the ex-President, and has shown himself inclined to regard Judge Parker with favor. It is by no means impossible that Colonel Guffey may make up his mind to give the Pennsylvania delegation to Judge Gray of Delaware, to whose remarkable discussion of urgent national problems we have elsewhere directed attention. It is believed that Senator Gorman had Judge Gray in view when he said that he knew of a man who could beat Mr. Roosevelt at the ballot-box, so far as the labor vote was concerned.

The only two Eastern Democrats whose names have been mentioned in connection with the Presidency, and who, at the same time, are supposed to command the confidence of the labor-unions, are Mr. W. R. Hearst and Judge Gray. It is needless to point out the latter's superior availability. Mr. Hearst, like Mr. Tom L. Johnson, of Cleveland, and Mayor Carter Harrison, of Chicago, is commonly looked upon as a representative of the Bryan element, which is most unlikely to dominate the next Democratic national convention. Whether Mayor Johnson, by the way, will accept the Democratic nomination for the Governorship of Ohio this year remains uncertain; but, in any event, he will make a strenuous effort to control the next Legislature of that State, and it is barely possible that, with the aid of Mayor Jones of Toledo, he may manage to do so, in which event he would secure the seat now occupied by Mr. Hanna in the United States Senate. The only other incident worth mentioning is the effort making in the city of New York to implicate Mr. Charles F. Murphy, the leader of Tammany Hall, in the violations of law wherewith the former dock commissioners have been accused. If he is indicted we presume that Tammany Hall will consider it expedient to choose another leader. It is not impossible that, in that event, Mr. Lewis Nixon might be again selected for the post.

Representative Cannon of Illinois, who will undoubtedly be the Speaker of the House of Representatives in the Fifty-eighth Congress, has made a qualified denial of the purpose imputed to him of exercising the power that he will possess as Speaker to prevent any legislation in regard to the currency. He denies that any man would have the power to prevent the majority of the next House from working its will, and he declares that any one attempting to exercise such a power would write himself down as "worse than an ass and a knave." This is a disingenuous statement, and by no means reflects the prospective Speaker from the imputation of intending to thwart the wishes, not only of President Roosevelt and of the Secretary of the Treasury, but also of the Republican leaders in the Senate, some of whom are known to be engaged in framing a measure calculated to relieve the stringency recently experienced in respect of the circulating medium. Nobody knows better than Mr. Cannon that a Speaker does have the power to prevent a majority of the House of Representatives for the time being from working its will, and that this power was repeatedly exercised by Speaker Reed and by Speaker Henderson, neither of whom has been described as an ass or a knave. The majority of the House of Representatives is controlled by rules administered by a Committee on Rules, of which the Speaker is the head, the other two members being appointed by him.

It is true that the rules are originally made, and may theoretically be altered, by the majority of the House, but that majority is governed by a caucus, and the caucus, in turn, is controlled by a few leaders, of whom the Speaker is by far the most influential. As a matter of fact, not a single bill or resolution has been passed for years in the House of Representatives against the wishes of the Speaker and his two appointees on the Committee on Rules. That Mr. Cannon, then, will have the power to block currency legislation in the next Congress

may be pronounced certain. It remains to be seen whether he will exercise the power. He has expressed the opinion that no currency legislation will be needed next winter, because the country is in a prosperous condition, and because there has been an increase of the national-bank circulation during the last twelve months. He entirely overlooks the fact, brought out in the last annual report of the Secretary of the Treasury, that but for the extraordinary inducements offered by the Treasury Department the national-bank circulation would have been contracted during the year, notwithstanding the organization of new banks. Mr. Cannon also fails to perceive that not only do we need a clearly defined method of meeting the requirements of business by a timely increase of the circulating medium, but we also require a safe and convenient method of decreasing the volume of currency when there is more in circulation than the business of the country calls for. We suspect that Mr. Cannon is piqued by the announcement that Senators Aldrich, Allison, Spooner, and Platt of Connecticut are engaged in devising a currency measure, and is inclined to remind them that the Speaker of the next House must be reckoned with.

At the hour when we write, the Colombian government is not known to have taken any definite action concerning the canal treaty, although the document was presented to that body on July 4, and has since been under discussion. It is alleged that Mr. Roosevelt concurs with Mr. W. N. Cromwell, general counsel of the French canal company, in thinking that the Colombian government is morally bound to ratify the treaty, and the President is credited with an intention to hold that government to a strict accountability for the observance of the moral obligation. The grounds for this view are, first, that the Bogota Executive initiated the negotiations for the purchase of the canal on the part of the United States by proffering the treaty to our government; secondly, that it gave a consent to the sale of the Panama Canal Company's concession to the United States; and, thirdly, that it assented to the purchase of the canal by the United States on the terms accepted by Dr. Herrera. Admitting those facts to be correctly stated, we do not see that they prove the Bogota Executive to be any more bound morally to compel the Colombian Congress to ratify the canal treaty than the McKinley administration was bound morally to compel the United States Senate to sanction the first Hay-Pauncefote treaty, which, it will be remembered, was repudiated by an overwhelming vote. All that we can ask of President Marroquin is the exhibition of good faith. So long as his personal *bona fides* is undisputed, he cannot be fairly blamed because the Colombian Congress proves recalcitrant.

Should the canal treaty be rejected, our course is plain. We must immediately resume negotiations with Nicaragua and Costa Rica; meanwhile, it is probable that public-spirited citizens of the province of Panama, aided by the principal stockholders in the French canal company, who will see themselves threatened with ruin by the action of the Bogota Congress, will organize an insurrection on the isthmus for the purpose of establishing an independent republic. As we have formerly pointed out, there would be nothing new in such a move. In 1841 the province of Panama and the adjoining province of Veraguas seceded from New Granada, and declared themselves independent under the title of the State of the Isthmus of Panama. Their reincorporation, however, with New Granada was soon effected; but in 1853 an alteration of the New Granada constitution was made, whereby the right was granted to every province to declare itself independent, and to enter into merely federal connection with the central republic. In 1856 and in 1857 Antioquia and Panama took advantage of the permission. It is obvious that the province of Panama would have everything to gain by secession. Not only would it, as an independent republic, receive the whole of the bonus to be paid in cash by our government, but also the whole of the rental to be eventually forthcoming, together with all of the fiscal benefits resulting from the increase of population that would be sure to follow a resumption of work on the canal.

We referred the other day to the cases of secession in Alabama which have been dealt with by Judge Jones, himself an Alabamian, of the United States Circuit Court. It appears

that very few intelligent Alabamians were aware that poonang existed in their State. The counties in which negroes were sentenced to hard labor for specified terms and turned over to white farmers to work out their sentences are barely touched by railroads, and practically beyond the reach of newspaper reporters. The Governor of the State, however, must be regarded as an accessory after the fact, for it appears that last year he sent the chief of the Convict Inspection Board to Tallapoosa County, but refrained from taking any action for the suppression of poonang when he found that the sheriffs and magistrates, as well as rich landowners and politicians, were involved in the practice. According to United States District Attorney Reese, who is prosecuting the offenders before Judge Jones, a simple and effective method of extinguishing poonang would be to pass a State law requiring justices of the peace to report to the State Convict Board whenever they sentence a negro to hard labor. Now that the oversight of publicity has been turned upon the facts, we have no doubt that such a statute will be passed. Another thing that Alabamians should do, if they desire to retain the respect and sympathy of Northern Democrats, is to repeal their old law permitting a man who borrows money to contract to pay the debt in labor.

Another law that should be expunged from the Alabama statute-book provides that if a borrower should commit a breach of his contract to pay a debt in labor, he must confess the breach to the next employer of whom he seeks work, which prospective employer must secure permission from the creditor to employ the debtor. That is to say, a debtor cannot work at his accustomed vocation for any one but his creditor without the creditor's leave. Judge Jones of Alabama lately held that this law operated to deprive citizens of liberty and of the pursuit of happiness. Even this last-mentioned law, though it violates the Constitution of the United States and the Constitution of Alabama, did not purport to confer a right to lock up a debtor, to beat him, and to prevent his escape by means of armed guards and stockades. That the Southern whites, considered as a whole, do not desire the depression of the negro, but, on the contrary, are willing to elevate him in the social scale, so far as this can be done by education, is evident from an incident that took place at Atlanta, on July 6. After a heated debate, the House of Representatives of the Georgia Legislature killed by an overwhelming vote a resolution providing that in the distribution of money to common schools the county authorities should apportion the money among schools for white and negro youths according to the taxable property of the two races. It is perfectly true that in Georgia the school tax is collected almost exclusively from whites. Nevertheless, the colored children will share the proceeds of the tax in proportion to their numbers.

Long-distance discussion of the negro problem by Northern writers has pretty much passed. The problem has been brought to our doors. Take up any newspaper nowadays, and you find the negro-problem items dated from all the points of the compass. The first paper we pick up, as we write, tells how a negro who walked with a white girl at a street carnival at Marinette, Wisconsin, and talked back to a disapproving crowd, had to be rescued by a militia company; also, how a negro at Schenectady, New York, threw himself in front of an approaching trolley-car under the mistaken impression that he was pursued by a mob; also, that the report that a gorilla-negro had been skinned by a mob at Bluefield, West Virginia, had no foundation. The next paper examined reveals that Evansville, Indiana, is orderly once more; but that in consequence of the shooting of a brassman by a negro in Houston, Texas, a mob of five hundred men had driven nearly all the negroes out of the Four Lake oil-fields. A third paper records a small race-riot in Philadelphia, and a call for a meeting of a presbytery in Delaware to discuss the recent "lynching scene" of Mr. Ewood of Wilmington. The ratio of race-problem incidents to the total negro population would seem to be considerably smaller just now in the Southern States than in the rest of the country.

What seemed most to be desired for Robert Lee, the colored murderer, whose crime brought on the Evansville riot, was a speedy trial. Judge Rauch proposed to give it to him, and

ordered him to be brought to Evansville from the State Reformatory at Jeffersonville by the sheriff with a military escort. But Governor Durbin says No. He learns that Lee has serious gunshot wounds, and is not fit to stand a trial yet; he does not propose to have him "railroaded to the gallows to satisfy public sentiment"; nor is he willing to admit that in the second city in Indiana the law cannot be enforced in an orderly manner without the presence of troops. "I do not desire," says the Governor, "to compromise for a moment with the mob spirit. Let this man be tried as speedily as his condition will admit, under the safeguards prescribed by our laws." The Governor is right. In this case, and after what has happened in Evansville, speed in trying Lee is not so vitally useful as justice. The cases to be rapidly and vigorously pressed just now are those against the rioters. If the score or more of indictments returned against them are handled with due energy the probability is that by the time Lee is fit to try he can be tried safely, and duly hanged—if found guilty—in an orderly manner. The peace and good name of our country are in more peril just now from mob violence than from the crimes of negroes. The Evansville case is not like the Wilmington case. There a prompt trial would have accorded perfectly with justice, and might have averted mischief besides. But here the mischief has been done, and the law will be better vindicated by a fair trial for Lee than one that is too speedy.

President Roosevelt has rendered a service to the country by his plea for the concerted preserving and replanting of the national forests, which is included in a pamphlet lately published by the Department of Agriculture. There is no doubt that the prosperity of great sections of the republic depends on the forests, and it is equally certain that we are exhausting our forest supplies far more rapidly than they are reproduced. There is but one remedy, to wit, the introduction of practical forestry on a large scale, which, of course, would be impracticable, even if the requisite Federal and State legislation were forthcoming, without the employment of men not only equipped with scientific knowledge, but also trained in actual field work. The needed legislation can neither be procured nor enforced without the active co-operation of the lumber trade. Hitherto such co-operation has been unattainable, but there are now some indications that the lumbermen are awakening to a perception of their interests. The papers included in the pamphlet published by the Department of Agriculture is contributed by Mr. McCrackin, who is president of the Mississippi Valley Lumbermen's Association. He directs the attention of business men to the rapid rate at which lumber is being cut in all great timber sections, and demonstrates that the lumber trade itself will be the first to feel the disastrous effects of a policy of wasteful cutting, which does not recognize the necessity of replanting and rearing trees to take the place of those destroyed.

After pointing out that the lumber industry now ranks fourth among the industries of the United States, he declares that it has reached a point when it is no longer able to supply the enormous demand for lumber which has been fostered. In the old days it was customary to despoil one forest and then turn to another. To-day there are no new fields to turn to. Henceforth lumbermen must either look to the production of a second crop upon lands already depleted, or prepare to stop lumbering when the first crop is gone. They must make the best of what is left, and wherever such a process will pay they must cut timber conservatively. Whether conservative lumbering will pay depends on whether the value of the second crop upon lumbered lands is likely to prove sufficient to make it worth while to foster and protect such a crop. In a third paper, Mr. Gilford Pinchot, the government forester, shows that under certain conditions—it is the business of the Bureau of Forestry to ascertain and make known what those conditions are—a second crop of a same amount can be secured from a given tract in forty years. Taking the stumpage at its present value, with taxes as they now stand,—he is speaking of timber-land in Arkansas,—and estimating the expense of protection against fire and theft, Mr. Pinchot finds that the returns on the capital invested for those forty years would be six per cent. net. As a matter of fact, the returns would be greater, because the value of stumpage will increase largely in the interval. Such calculations

should have practical results. Once convince lumbermen that conservative lumbering will pay, and the preservation of what is left of our national forests would be insured.

There now seems to be no doubt that the melody by which Pope Leo XIII. was attacked was pleurisy, and that it was wrongly diagnosed as pneumonia by Dr. Lazzoni, the physician-ordinary to the Vatican. Dr. Manzoni, who was subsequently called in, is a distinguished surgeon, but has never made any particular study of pulmonary diseases. The greatest Italian specialists on the heart and chest are Dr. Baccelli and Dr. Carbolli, but the former is a member of the existing Italian ministry, and the latter is a Senator. As office-holders under the Italian monarchy, which is looked upon as a usurper of the states of the Church, they are supposed to be disqualified for employment in the Vatican. The extraordinary resistance made by Leo XIII. to the malady, notwithstanding the fact that the treatment was for some time based on a wrong diagnosis, indicates that his life might have been preserved for perhaps some years longer had one of the great specialists in pulmonary disorders been summoned when the Pope was first attacked. The apparent willingness to sacrifice a Pontiff's life rather than invoke the services of a man of science connected with the Quirinal seems absurd enough; yet it is not more ridiculous than the etiquette which forbids a cardinal to start from his home before a Pope's death, no matter how distant may be his place of residence from Rome.

We are told, for instance, that unfavorable comment has been elicited by the departure of Cardinal Gibbons from Baltimore, *en route* to the conclave; and it is to be inferred that Cardinal Moran of Australia will also be criticised for starting earlier from Sydney, New South Wales. As the sessions of the conclave will certainly begin ten days after the Pope's death, it was doubted, when Cardinal Moran started, whether he could arrive in time to take part in the election of a new Pope. It is, of course, only the Italian members of the Sacred College who insist that the foreign cardinals ought not to leave their homes until the breath is actually out of the Pope's body. The fewer foreign cardinals take part in a conclave, the better their Italian colleagues are pleased. In 1878 the American Cardinal McCloskey reached Rome too late to take part in the election of Leo XIII. Neither Leo XIII, by-the-way, nor Pius IX. would have become Pope had the Austrian cardinals arrived in time to exercise Austria's right of vote in the conclave. If the Spanish cardinals could have been prevented from entering the conclave in 1831, and thus exercising Spain's right of exclusion, Cardinal Giustiniani would have been chosen Pope; for, when the vote was announced, he had already received 21 out of the 29 votes needed to complete the two-thirds requisite for election. These historical incidents explain why Italian cardinals are by no means eager to facilitate the participation of their foreign colleagues in a conclave.

There are good things in *Punch*, not always, of course, but sometimes, and a recent instance was some answers to the inquiry: "Should there be music at meals?" Of six replies, that attributed to Mr. J. P. Sousa was: "There is no doubt that the nearer the trombone the sweeter the meat," which was frivolous; but this answer, attributed to Mr. Henry Bird, really goes into the merits of the question; "You say, 'Should there be music during meals?' But what of the converse?—should there be meals during music? It seems to me that to offer music at a restaurant is a confession of failure on the part of the chef. Our music at the St. James's Hall concerts would have to be had indeed before we provided the extra involvement of food to go with it." There is decided point to that. Music at meals fairly implies a failure somewhere, and if it is not in the cook, it must be in the diners. Music costs something, and certainly the restaurant keepers would not provide it unless they believed their patrons liked it. The natural accompaniment of dinner is talk, but music is a hindrance to conversation. It makes it hard to hear what is said, and keeps voices strained. It must be that people who want to converse over their food don't like it, and if there are so very many people who do like it they must be folks who

are glad of any din by which their conversational defects may be concealed.

But do so very many people like it, or is it only a fad which most people are tired of, and from the bondage of which they would be glad to be released. In New York, as in London, all the best restaurants have orchestras now, and it is hard to get a good dinner outside of a club or a private house without having music forced in. Whatever restaurant started the practice in a past already dim must have found it profitable, but it is quite possible that the public taste no longer craves this indulgence. All fads tend to live on awhile after the taste for them has been satiated. The force of habit preserves them for a time, but their doom eventually arrives. It is no longer compulsory on persons of all ages to play golf. The game survives, and will survive, for it is a good game and useful. But it is played this year by people who like it, and not so much as it was by people who think they ought to like it. It takes a good deal of time, and people who would rather do something else feel freer than they did to devote their leisure to other things. Bridge-whist is a younger fad than golf, and is still very prevalent; but it is as certain as the taxes that, presently, a great many people who have made it the chief of the secondary objects of their existence will yawn in its face, and inquire if there are not other pastimes which it would be expedient to test. Bridge-whist, attentively played, takes a fairly large slice out of the waking moments of its patrons, and most of them are bound to come in time to a point when they wonder whether it pays. Only a few diversions are permanently attractive. Money never goes entirely out of fashion, and its pursuit comes near being a permanent fad. Feeding, if judiciously cultivated, shows a wonderful permanence of attraction. Drinking seems to wear well as a form of enjoyment, in spite of all the blots upon its record, and all that may be truthfully said in disparagement of it. And good talk, too, adds steadily to human happiness. But all these are old and tried employments. The new diversions change from year to year, have their turn, and give place to something newer, to be resurrected again, if they happen to be good, after every one has forgotten them.

William Ernest Henley, who died in England on July 12, at the age of fifty-four, was always himself interested in life and its incidents, and contributed very considerably in his day to make life interesting to his fellows. He was a writer of talent and vigor, who had something to say on many topics, and was seldom deterred from saying it either by considerations of sentiment or prudence. He had a good deal of learning, irregularly acquired outside of the universities, and was less conservative in his use of it, and in his opinions—whether based on knowledge or whims—than his brethren, whose training had been less irregular. He showed power as an editor, a critic, and a poet. Much of his life he was an invalid, and doubtless the condition of his health affected his temper. His post-mortem dissection of his old friend Stevenson's literary reputation was felt to have been needlessly unkind, but that, like many other of his deliverances, was taken with allowance for an invalid's spleenic temper. But he could write, and he paid the writer's trade to education, and, after all, it is easier to excuse the faults of a writer who can write than the merits of a writer who can't.

Dr. Stiles, of the Marine Hospital service, who discovered the hook worm, is credited now with having picked up the trail of the parasite, which, in the economy of nature, was designed to abridge the activities of the mosquito. The published description of this parasite—named by his finder "anatomermis entis"—represents it as a horse-hair worm, that lives in the mosquito's abdominal cavity and saps its energies and shortens its life. Female mosquitoes who have these lodgers do not breed. Infection by the destroyer takes place in the larval stage. The problem is—the destroyer being now identified—to propagate it for the market. That has been done with the grass-hopper parasite, with important beneficial results to Western districts, where the grass-hopper plague has prevailed. If it can be done with this destroyer, Dr. Stiles's discovery may become of greater practical importance than to be a text for paragraphs. At any rate, it is a sign that the war of science against the mosquito keeps steadily on.

## Judge Gray on Some National Problems

It is not surprising that, not only in Pennsylvania, but in other sections of the country, a great deal of attention has been given to the address delivered at Wilkes-Barre, on July 4, by Judge George Gray, of Delaware. Few, if any, citizens of the United States have made more rapid progress in public esteem and public confidence than has Judge Gray since he was chosen to succeed the late Thomas F. Bayard, one of the Paris Peace Commissioners, and more recently as president of the Anthracite Strike Commission, have commended him to the nation. He is, perhaps, the only man in the country of whom it may be truthfully said that he is regarded with equal respect and with equal trust by employers as the anthracite miners think of him as the other. What the anthracite miners think of him was shown the other day by a canvass of the officers of the mine-workers' local union in the Wilkes-Barre district, where a great majority of those who are Democrats by predilection advocated Judge Gray's nomination for the Presidency. At the approaching Schuylkill County Democratic convention it is expected that Cleveland men and Bryan men will combine to urge the nomination of Judge Gray. When we bear in mind that the miners in the bituminous regions may be relied upon to follow the course adopted by their fellow workers in the anthracite district, we can readily forecast the effect of the demonstration on public sentiment in Pennsylvania. Now will it be for a moment be disputed that, if Judge Gray should be backed by the Pennsylvania delegation in the Democratic national convention, he would prove a formidable competitor for the nomination.

There was not a trace, however, of self-seeking in the nomination delivered at Wilkes-Barre, by Judge Gray, on the Fourth of July. Although he knew that he was speaking in a community wherein labor-unions held the balance of power, and although he knew that labor-unions deny the right of non-unionists to work, he did not flinch from pointing out that in the anthracite region there has existed hazy and indefinite notions of the civil liberty which, so far as this country is concerned, had its birth on July 4, 1776. He told his auditors that the liberty guaranteed by the Federal and State constitutions is not class liberty, nor corporation liberty, nor guild or association liberty, but individual liberty. Individual liberty, he said, means the right to man's home, the right to go and come, the right to worship God according to the dictates of one's conscience, the right to work or not to work, and the right to be exempt from interference by others in the enjoyment of those rights; the right to be exempt from the tyranny of one man, or of a few men or of many men; the right as to live that no man or association of men shall work his or their will upon us against our consent. This he pronounced a liberty worth living for and worth dying for. So long as this shall be maintained, all things are possible that lead to the expansion, the development, prosperity, and glory of our common country.

Judge Gray proceeded to remind his fellow citizens that individual liberty cannot endure unless it lives and breathes in the lives, characters, and actions of those who to-day enjoy it. Unless your hearts and minds, he said, are full of the love of that same liberty, regulated by law, which has made us free in the past, our national institutions and all that our flag symbolizes will decay and fall, and our individual prosperity, and happiness, and hopes will be involved in the common ruin. It is not foreign foes, he continued, that the American people have to fear, but the invidious enemies who seek to poison our minds and divert our affections from our ancient faith in individual liberty, who would undermine the foundations of a liberty regulated by law with the vain hope that the tyranny of a class or corporation, or of an association to which individual liberty and individual conscience are to be subordinated, can achieve the lasting happiness of those whose method and character it will have weakened and destroyed. Appealing directly to the mine-workers, he said: "Your personal and individual liberty, my friends, can only be safeguarded by a willing and generous recognition of the like liberty of your neighbors or fellow citizens. The homage you pay to his is the title-deed and assurance of your own." Let that homage, he added, be no mere lip service, but a hearty, thorough, and manly acknowledgment of the great principles that were established by the blood and sacrifices of brave men in the past, and which are worthy of equal devotion and equal sacrifices at the present hour. Mr. Roosevelt has never brought out so distinctly, because he does not possess an equal power of clear thinking and exact expression, the capital truth that national institutions are based on national character. Judge Gray built upon this fact that national institutions, and especially free institutions, are not, and cannot be, abstractions. They are, on the contrary, the outgrowth of the character, method, and virtues of the people among whom they exist.

Will it be inferred, from the emphasis with which Judge Gray dwells on the necessity of preserving individual liberty, that he overlooks no rightful and servicable role to labor associations? On the contrary, he insists that the individual liberty guaranteed by the Declaration of Independence means no selfish and narrow

individualism that ignores social duty and fails to recognize the interdependence of men, considered as social beings. Individual liberty, as Judge Gray conceives it, comprehends the development of man's social side, and co-operative efforts for the advancement of civilization. He reminded his hearers that in the anthracite region wherein they dwell they had lately had an opportunity of making what social progress might be subserved by labor associations. He thought that both employers and employed had learned something by the experience of the year behind them. "Unless my judgment is at fault," he said, "my faith in the fact, founded, labor-unions will soon have passed through their period of trial and tribulation, and will emerge upon a sound plain, where their American character, the fruit of American individual liberty, will illustrate the worth of our institutions, and make perpetual the blessings of civil and religious freedom." For labor-unions he foresew expanding opportunities and a beautiful future.

Judge Gray was strengthened in this faith, he said, by his observation of the manner in which those engaged in the anthracite industry, whether capitalists or laborers, had, in the main, agreed to stand. The mine-workers, as well as the employers, who had differences had been submitted to arbitration, have maintained their self-respect, and challenged the respect of others, by manly adherence to their pledged faith. No disappointment as to results has served to shake the determination of the mine-workers to make good their word and deserve the encouragement received from a sober public opinion. Employers on the one hand, and employed upon the other, had answered the scriptural definition of a manly man: "He that sweareth to his own hurt, and obudgeth not."

Judge Gray had been the more deeply impressed, he said, by the reception of the Anthracite Commission's award, because that award depended for success not at all upon legal authority, for it had none; nor on much on the influence and character of the President who appointed the commissioners, as upon the integrity and patriotic spirit in which the award had been received at once by operators and by mine-workers. Either side to the contrary might have insured the failure of the award by a sullen and half-hearted acceptance of its provisions, by dwelling in the letter, and not in the spirit, of the deliverance made by the commission, and by forgetting the amiable which accompanied the award, the mention, manly, that of firmness, forbearance, and will are the prerequisites of peace and harmonious co-operation in all the social and economic relations of men.

## The Competition for the Papal Chair

ATTENTION at the hour when we write Leo XIII. is still alive, and has evinced powers of resistance to disease that render his recovery not inconceivable, an early meeting of the conclave is still regarded as probable, and public interest in the selection of the next occupant of the papal chair, far from showing any signs of abatement, is intensified. There are, indeed, many reasons why this interest should be acute, and should be shared not only by Catholic ecclesiastics and by zealous Catholic laymen, but also by statesmen in European countries and even in the United States. Shall, for instance, the next Pope maintain the same irreconcilable attitude toward the Italian monarchy which has been adopted by Pius IX. and Leo XIII.? The doubt whether he could be trusted to persist unswervingly in such an attitude is at the bottom of the unwillingness to elect a non-Italian cardinal, especially one of German, or Austrian, or of French birth. Such a man would be likely to be influenced by the drift of public opinion in his native country, and we need not point out that Germany and Austria are political allies of Italy, and that the French people now regard the last-named kingdom with cordial good will.

An English cardinal (if there were one; there is none save the archbishop of Canterbury), an Irish, an Australian, or an American cardinal, would scarcely be seriously considered, because in their respective countries Catholics do not as yet "tabulate" religion, as it is in Austria, Spain, Portugal, and even in France. For this, besides the other reason just mentioned, a German cardinal would be out of the question. To be known, indeed, to be regarded with favor by Emperor William II. would be a grave detriment even to an Italian cardinal, and it is largely on this score that opposition is offered to Cardinal Huet, although he is universally acknowledged to be a man of party and learning. On the other hand, if the papacy seemed likely to go to one of the cardinals who are known to have endorsed the principles of Christian socialism, and who, therefore, might encourage the cooperation of the Christian party of the Centre with the Socialists in Germany, it might even be the decisive and the most vital moment to defeat his election, and to that end he might prevail upon his Austrian ally to introduce a veto.

About the validity of Austria's claim to exclude a particular candidate there is no doubt whatever, provided it be exercised in the manner by one of her cardinals while a "scrutiny," or announcement of the votes cast, is taking place, and before any

cardinals has received the number of votes needed to elect, namely, two-thirds. It is well-known that Austria, her cardinals reached Rome in time, would have used the veto power to prevent the election of Cardinal Ferretti in 1848, and that of Cardinal Pecci in 1878. It is improbable that her intentions will ever again be frustrated by delay. Equally unopposed is the veto power of Spain, which was used in 1831, and would be used again if a cardinal believed to be friendly to the Carlist cause should be put forward. Political also, as we have formerly said, defines the right of exclusion, and the claim seems to be sound enough from a technical view-point, but it is contested by Italian cardinals. On the other hand, the veto power of the kingdom of the Two Sicilies was suspended not repeatedly exercised, but most Roman canonists deny that this right passed by conquest to the present Italian monarchy. That France, by the establishment of the Concordat, regained the veto power which she had possessed under the ancien régime is, as a matter of theory, generally acknowledged, but it appears that the government of the present French Republic has no intention of exerting it. Yet it is certain that the party now dominant in the French Chambers would resent the election of Cardinal Gotti, or of any cardinal likely to reverse, or even modify, the position taken by Leo XIII. with reference to the French republican régime.

The United States have but a single representative in the Sacred College, Cardinal Gibbons, although there are more than twice as many Catholics in this country as there are in Portugal, and, according to some computations, almost as many as there are in the German Empire. If representation in the Sacred College were proportioned to the number of the faithful, American Catholics would possess great weight. That they are profoundly interested in the outcome of the conclave is obvious, for there are certain cardinals who would sorely tolerate the oscillatory attitude maintained by many Catholic prelates, and conspicuously by Archbishop Ireland, toward the civil power and American institutions in general. Thus, again, since our acquisition of the Philippines, it has become a matter of importance to our Federal government that the papal chair shall be occupied by a Pontiff capable of taking a broad and recommending view of the question of the friars, which still constitutes the most difficult problem in the archipelago.

A Pope can exercise considerable influence on the choice of his successor, as Leo XIII. is well aware, although in his case the provocations taken by Pius IX. prevent the success of his candidacy for the papacy proved fruitless. Every prospect of Cardinal Pecci to secure a post at Rome which would promote his reasonable aspirations was defeated. This, not only was his refusal to be appointed Prefect of the Propaganda refused, but Pius IX. insisted upon naming his Canevari, a post which for centuries—owing to the power exercised by its occupant during an interregnum—has been deemed unacceptable with a candidate for the papacy. The role, it is true, was broken in favor of Cardinal Pecci, but it is unlikely to be vinked again, and it is generally held that Leo XIII. barred the path of Cardinal Gregori in the papal throne when he appointed him Canevari. On the other hand, he plainly showed his preference for Cardinal Gotti when he made him Prefect of the Propaganda, and proved that he was not ill disposed to Cardinal Serafini Vannutelli, when the latter was made Grand Penitentiary of the Holy Catholic Church.

There seems to be a widespread belief in quarters that should be well informed that, at the opening of the conclave, Cardinal Gotti will have more votes than any other candidate, and he may be eventually successful, promised measures are taken by his friends to associate Cardinal Rampolla, who for years has discharged the functions of Papal Secretary of State. Cardinal Rampolla has no hope of mounting the papal throne at the present time, but he has a large enough following to turn the scale in certain contingencies, and it is reasonable that his support might be secured for Cardinal Gotti by a promise to make him Prefect of the Propaganda, and thus place him in the line of succession. The approach is certainly, however, that Gotti's election would be followed by the abolition of the Concordat in France may prove fatal to his candidacy, in which event Serafini Vannutelli papal chair. France would willingly accept him, inasmuch as she knows that Rampolla's election is at this time impossible. There is an objection to him, however, that may have a good deal of influence upon his colleagues in the conclave, the fact, namely, that Vannutelli has a brother in the Sacred College, and a host of relatives in the Roman nobility that would clamor for his election. It can hardly be expected that every Pope will present the same inflexible front to aspirations that have been exhibited by Leo XIII.

It is probably true of conclaves that the unexpected happens, and should the voting be protracted, it may well be that the papacy will fall to a cardinal who never had the best, namely, the seriously considered. The younger candidates, like Gotti, Vannutelli, and Rampolla, who, between them, could doubtless, command two-thirds of the conclave, finding that none of them can be elected at this juncture, may agree to postpone their contest for

a time, by combining to place an aged cardinal in the papal chair. To that end they might fix upon Cardinal Cape Ciatras, who is eighty years old, a man believed to be without an enemy. There is, however, this objection to him, that the Quirinal would view his triumph with delight, for, of all the cardinals, he is the most ardent patriot, and the most likely to bring about a *modus vivendi* with the Italian monarchy. Another compromise candidate who would be recommended by great age is Cardinal Gregori, who is eighty-two. We repeat, however, that it is improbable that the rule against the election of a Vannutelli will be twice consecutively broken.

## The Spanish War and the Pension List

ALTHOUGH the precise statistics for the last fiscal year have not yet been tabulated, the data at hand go to show that the payroll of pensioners on account of the war with Spain now approximates \$2,700,000. Compared with the grand total of \$137,500,000 that roughly represents the annual disbursements of pensions on account of all wars, this seems an insignificant sum. But when it is remembered that the civil war alone engaged the military services of more than 2,213,000 men, and that of those only 1,727,000 survived the rise of hostilities, whereas the war with Spain engaged fewer than 275,000 and the losses by death fell short of 2000, the proportion of pensioners for the less bloody contest at arms assumes a larger importance. The war with Spain is not yet five years past. At a corresponding distance from the close of the civil war the disbursements for pensions were a little more than \$29,351,000, and this included the pensioners of the Revolution and all the other wars through which the country had passed.

The total number of individual pensioners created by all our wars down to the month of 1898, and still on the roll, may be stated in round numbers at 600,000. The total created by the Spanish war to date will be found, when the full figures are in, to exceed 14,250. The civil war ended thirty-eight years ago, and the pension roll in 1866, representing all wars to that date, contained 129,722 names. Assuming the list chargeable solely to the Spanish war to grow in like proportion—and such things, in a country where the citizen soldier plays so considerable a part in politics, never move backward—we may look for a pension list in 1897, due to the Spanish war alone, of 111,007, or, roughly, four pensioners to every ten men engaged, in very large percentage, in view of the non-hearshness character of much of the campaigning.

A comparison which will throw a still stronger light upon these figures may be made with the pension list of 1861, which, after the United States had passed through all its martial adventures down to the outbreak of the civil war, contained only 8636 names, nearly equally divided between the laralid veterans and the widows. It is but fair to say that the disparity between the statistics of that remote day and ours is due not wholly to the fallibility of the individual veterans who were to become beneficiaries of the system, but in very large measure to the trend of politics and legislation. The civil war differed from its predecessors in the fact that it offered practically the first crucial test of the loyalty of the American citizen to his government. The party that adulterated the government during the war has shaped legislation for most of the time since; and by way of emphasizing its own attitude and forcing the opposition into a false one, has presciently written into the statute-book more and more liberal pension laws, embracing in their scope not merely the veterans of 1861-5, but those of 1812, 1846-7, and the Indian hostilities from 1832 to 1842. This is the sign of least hopefulness on the horizon to day, as far as economy is concerned.

At what a pace the pensions of the war with Spain have swelled may be seen at a glance in the following table:

Fiscal Year.	Applications received.
1899	363
1900	1514
1901	4212
1902	4530
1903	5000 (incomplete.)

There are now on hand about 45,000 applications; 10,000 have come in within the last twelve months. How earnestly these have to be sifted is evident from the rejection of nearly 8000 claims in a single year.

Wonders is sometimes expressed that, since the weakness of old age begins its work in carrying off veterans of the earlier wars, the pension list has kept on increasing. This is due to three causes: first, a majority of the volunteers were widows, many of them young women when they married late in life; second, a law of 1890, which in effect enables any needy veteran of good character to get a little help on an indifferent proof, has added largely to the roll; and the Spanish-war pensioners, joining with the widows and the new indigent stipendiaries, more than make good the annual reduction due to deaths in the older rolls.

## The Educators' Convention

Boston is a hospitable town. The conscientiousness of being profitable does not always develop the disposition to confer profit on one's neighbors, but in Boston's case it does seem to have that effect. She likes to have the multitude of earnest seekers come to her and join with her in the search for truth, and she likes to have the seekers have a good time while they are searching. In the week beginning July 5, she entertained the National Educational Association, which she opened for her on July 6, more than ten thousand strong, and stayed four days. College presidents and professors, and school-teachers came from all parts of the land—from Texas and California, from Minnesota and Maine—and talked over everything that had to do with modern education, and listened to addresses on its general and particular.

President Eliot, who has come to be a sort of primate in our educational hierarchy, welcomed the delegates at a great evening meeting on July 6, and told them what he thought we were wanting nowadays in expecting from a "cultivated man." The haunts of knowledge have widened. There is far more to know than there used to be. Our cultivated man, Dr. Eliot considers, should have, to start with, a body fitted by training for habitual contact with the external world, and a mind trained from childhood to intensive, sympathetic acquaintance with the natural objects of earth and sky. We should expect to find in him further, a character formed, not in isolation, but "in the quick running tides of the busy world." He should be able to express himself by tongue or pen with some accuracy and elegance. Knowledge of everything we may not longer expect of him, and even a little knowledge of everything, but modern culture should include "a general knowledge of some things, and a real mastery of some small portion of the human store." The imagination being the greatest of human powers, the training of it, Dr. Eliot considers for the most important part of education. Constructive imagination—that which gives power to the sculptor and the poet, and also in the engineer and the electrician—should be trained in the cultivated man.

At this same opening meeting, Mr. William T. Harris, United States Commissioner of Education, discussed on "The Reparation of the Church from the School Supported by Public Taxes," an address which was vigorously discussed.

Most of the meetings of the convention were department meetings, of which many were held every day. There was much interest in a meeting of the Department of Higher Education, the topic of which was "The Length of the Baccalaureate Course, and the Preparation for the Professional Schools." President Eliot set forth the Harvard idea of a three-year course, including four years' work, for those who want it. President Butler, of Columbia, argued strongly for a college course, "carefully constructed as a thing by itself" as a preliminary for the professional schools. Whether this proposed course was to lead to an A.B. degree or not he did not care, but he insisted that such a course was needed and must come. The four-year course he found suitable and useful for a boy who looks forward to a career as a scholar, teacher, or man of affairs, but he held that the boy, who, entering college at seventeen, proposes to take up later the study of a profession in a university, ought not to be compelled to spend four years upon liberal studies just at that time in his life. It is a fallacy, Dr. Butler thought, to suppose that the more time a boy spends to study the more he knows and the more he grows. Whether he grows by study depends on whether he studies suitable things, for a boy can develop spicily in college, as well as knowledge. Dr. Butler thinks that the earlier parts of professional courses in law, medicine, engineering and the like, are most excellent material for the boy of nineteen or twenty. But he is opposed both to the compromise plan which shortens the college course by a year or two, while professing to be a four-year course, and also to the admission of students to professional schools directly from the secondary schools, and without a preliminary course of liberal study. His conviction of the need of a three-year's course as a preliminary for professional studies has probably grown out of observation of his own university, of which the situation is a great city is a help to his professional schools and a drawback to its academic department. His proposition did not get much encouragement from his brother educators.

The dominant note of the discussion of the convention as depicted by the correspondent of the *Evening Post*, was that our schools and colleges have developed intellectually to the neglect of morals; that they produce capable men, but not the type of men who are willing to assume civic responsibilities, and bring about the moral uplifting that the country needs. President Eliot set the fashion some months ago of rehearsing our defects as a nation, putting the blame for them on the schools, and offering more and better schools as the remedy. We certainly need more good, honest, strong citizens, who will make, administer, and obey wise laws, and constrain their neighbors to do the like. If our educators, holding an apparent death of such citizens are disposed to say, "It is our fault," they are in a self-denyng attitude, and to be applauded. The plan to make character first in the home, next

in school, next in the college. The parent has the best chance; the school-teacher the next best. When the college imparts its morals it is apt to be largely, because the schools send these better boys. Our carefully secularized public schools are still in an experimental stage so far as character-building goes.

## Woman's Place in Education

The closing day of the session of the National Educational Association at Boston was rendered memorable by the attack made by Dr. G. Stanley Hall, president of Clark University, on the education of boys and girls in high schools, if not also in universities. As Dr. Hall is an estimator of great distinction, and is known to be thoroughly conversant with the practical outcome of the system which he deprecates, his views made a profound impression upon many of his auditors, though they naturally provoked resentment in certain quarters. Dr. Hall did not deny that the principle of coeducation seemed to be firmly rooted in certain institutions. All that he aimed at was to check, he said, the further application of the principle. Prolonged experience of education, and earnest personal study of its results, had convinced him, he said, that the old arguments arrayed against its introduction were sound, and could not be refuted.

The considerations, which he has come to regard as controlling, are deduced from the very foundations of the question of the function of the sexes. He has found, he says, that coeducation during "the middle years"—that is to say, the high-school age—tends to sexual precocity, the effect of which is all the worse, because it is subtle and insidious. In the case of young women, sexual precocity tends to overwork of the brain, an exaggeration of the importance of the intellect, and a diminution of the importance attached to motherhood, the natural and highest function of womanhood. In the case of young men, he has observed that coeducation, by bringing about dissipation through familiarity between the sexes, weakens the motive for marriage. In the weakening of this motive he discerns a very grave danger to civilization. He points out that, according to statistics, marriage is now undertaken in the United States at a later age than it was formerly, and he pronounces it inevitable that late marriage is one of the things that leads to a decay of civilization.

It is largely on this ground that Dr. Hall has been led to take what for him is a new attitude with respect to the education of the sexes. He cannot uphold a system which he thinks encourages ordinary or late marriages. He believes that, with a view to the preservation of the race, all the national institutions, and especially the schools, should push sex distinction to the utmost. He regards it as a profound mistake for girls to acquire the ideals of men, and to contemplate competition with men in virile vocations. He has come, on the contrary, to the conclusion that nothing could be worse for the race than the evolution of a female sex that should lack a feminine character. Hence he would have education planned and conducted with a view to making women more womanly, and men more manly. Observation has taught him that, when women frequent the same schools as men, they lose much of womanly grace and delicacy, tend to adopt masculine aims, and carry brainwork to an excess that nullifies them for the function of maternity.

This is the old argument against coeducation, which was advanced many years ago by Dr. Clark of Boston, but it gains force as the mouth of Dr. Hall, because the latter used to be a zealous advocate of the system which he now condemns.

## Ominous Climatic Effects

AN officer of the navy, Assistant Paymaster DeLano, court-martialed for retarding irregular accounts, and other failures in his duties, offered in his defense that he had served three years in Guam and the Philippines, and at the end of that time when his services were offered, was unfit for duty. He submitted in support of this claim the report of Surgeon Hoeler on the physical condition of officers of the navy who had served in the East.

An army officer, Lieutenant McCue, on his return from Manila, married a wife in San Francisco in addition to one that he had lately married in Cincinnati, submitted in excuse, that he was not mentally responsible because of hard-laps undergone in the Sumatran campaign. He has been sent to the Government Asylum for Insane Soldiers.

Discussions differed in McCue's case as to whether the Philippine climate or excessive stimulant had upset his balance, but the climate may have been to blame for his over-indulgence.

The result of these cases seems to be that an approval of the mental condition of officers who serve in the East should be made at proper intervals, so that divergence from the normal may be detected before it leads to serious results.

# Leo XIII

LORD before the nineteenth century closed, Leo XIII, 25th Pope of Rome, had come to be recognized as the foremost "Grand Old Man" of the world. Stripped of all temporal power, forced to live on the contractions of the faithful, his kingdom was world-wide, his influence and sway were felt wherever the spirit of Christian religion moved men to be just, kind, truthful, virtuous, and humble, and to worship God. Two things that he longed for, that he prayed for earnestly and without ceasing—the restoration of the temporal power of the Papacy, and the union of all the followers of Christ under the Church of Rome—did not come to pass.

And yet it is a question with many if the Church is not stronger and the power of the Papacy is not more of a living force because their enemies are given chiefly to the extension of a strictly spiritual kingdom. Leo longed to be Pastor of the World. No Pope, no religious teacher in all the world's history, ever came so near being pastor of the world as he. A prisoner in a palace, living an austere and austere life, his voice was more potent, his power more deep, subtle, and lasting in presenting all these influences which induce men to do and die—those influences which we call civilization—than any of the rulers of the earth.

This vicegerent of God was a veritable prince among men. He was an old man, as the world reckons age, when, in 1878, at sixty-eight, he was chosen Pope. One of the sixty-two members of the College of Cardinals who participated in the conclave that selected him, only one, Cardinal Luigi Orsini, survived at the twenty-fifth anniversary of that election in 1903. Only one Pope, his immediate predecessor, Pius IX, occupied the Papal chair longer than Leo XIII. Pius IX, ruled thirty-two years; Leo ruled twenty-five years; St. Peter ruled twenty-five years; nine other Popes ruled more than twenty years.

Leo came into office when the power and influence of the Church were at a low ebb, when great temporal kingdoms of the world, who hitherto had acknowledged the established place of the Papacy in the world's affairs, were openly hostile; when only in free England and in free America, of all the great nations, and in Spain, of all the minor nations of influence, was not the Church of Rome hated with bitter enemies. He found the Church weak; he left it strong.

He lived to see the day when Germany, Austria, and Russia acknowledged his right to a spiritual sway in those countries; when the Church was stronger in Italy than at any time since it was shorn of temporal power when France was hostile only in outward spirit. He had the distinction of being the great-deservable Pope. He urged his followers in France and Brazil to accept republican forms of government, and to try to unite the Catholics of the United States under the greatest growth in the history of the Catholic Church under the republican institutions of the United States. His rule showed the elasticity and ductility of the Catholic Church as the rule of no other Pope had revealed them—since the rule of Pope Hildebrand. A scholar and a poet, an humble follower of Christ, he died a majestic figure in the world's history.

Leo was of noble birth. He was born Joachim Pecci, the son of Count Luigi Pecci and Countess Prospera, near Siena, Italy, on March 2, 1810. As soon as he had taken orders Dr. Pecci attracted attention by his fearless work in the cholera epidemic in Rome. Here this he had chosen service with the Holy See in preference to a parish, and, soon becoming a domestic prelate of the Pope, Gregory showed his confidence in him by making him Civil Governor of the Province of Benevento, a post calculated to try the mettle of any man, in their opposition of the people, were little better than robbers. Governor Pecci fought them bravely. Soon brigandage was practically stamped out, but the nobles fretted under his unyielding rule. They resented him in the Pope as a revolutionary leader, but Gregory did not heed them.

Four years later Pope Gregory made Father Pecci Civil Governor of the turbulent Province of Perugia, where, up to the time of his elevation to the Papacy, he spent nearly his entire life. The province was in a sore way. Brigandage and oppression prevailed, the poor were in distress, and the prisons were crowded. Governor Pecci soon emptied the prisons, and put down disorder and public robbery. Again he won, in spite of the bitterest opposition, in two years peace and order. At the age of thirty-eight, in 1848, he was made titular Archbishop of Anagnino, and appointed Papal Nuncio to the court of Leopold I, of Brussels. It was a case known as a man of profound learning, a champion not only of the Catholic religion, but of letters and science, a man of wonderful tact and great fearlessness. It was at the court of Leopold that he declared that the culture of letters was "next to religion, the greatest of God's gifts."

Archbishop Pecci was recalled by Pope Gregory, but not until he had spent three months in London, studying English institutions and affairs and laying up for himself a broad basis for his role as a cardinal, but six officers of men. The Pope had promised to make him a cardinal, but in 1855, the new Pope Gregory XVI, had died. Signor Pecci Archbishop of Perugia, and sent him back to the same office, although he was thought, in an obscure place for thirty years. Archbishop Pecci's merits were of the kind that could not be hidden. He came into notice by his vigorous protests in letters to King Victor Emmanuel against the law legalizing civil marriage

in Umbria, and against the expulsion and spoliation of Catholic orders. No more vigorous deliverance was ever made to an Italian ruler in behalf of the Church than these letters. Archbishop Pecci, champion of the Church, was again foremost in the public eye.

Then he settled down to the routine of a more or less obscure archbishop's office. He was a simple, sincere, unaffected, tolerant, kind, and devout. In 1853 Pius IX, made him a cardinal, but he continued his work in Perugia. He never ceased to improve his mind with a wide range of studies, and he became openly the advocate of science when it was thought that science was the greatest enemy of religion. This scholarly man had a different belief. He issued a pastoral letter advocating the study of science, and in those days said that science unaccompanied a belief in God, he replied, "led in all his work reveals Himself with all the attributes of His power."

After a sojourn of twenty-four years as Archbishop of Perugia, Pius IX, called Cardinal Pecci to Rome, and made him Cardinal Chamberlain to the Vatican. He was the Chamberlain of the Palace, an office which included the Presidency of the Apostolic Chamber. Cardinal Pecci assumed this post in July, 1877, and the next February Pius IX, died. On February 22 the College of Cardinals, after three ballots and by more than the required two-thirds vote, elected him Pope, and he chose the name of Leo XIII. It was thought that by reason of his advanced age a new Pope would be elected in a few years.

Leo firm in his conviction that the temporal power of the Papacy should be restored, and disinclined to be treated by the royal house of Savoy as an existing writing, preferred to make his coronation a simple altar than an ostentatious ceremony. He was crowned in the Sistine Chapel, the second Pope to be so crowned in the history of the Church since 1533, the other Pope being Pius VII. The simple life of the cardinal and archbishop of Perugia showed Cardinal Pecci at once. He abolished all unnecessary expenses at the Vatican, cut down useless expenditures, and lived as plainly himself as any ordinary priest. His first thought was not to acknowledge in any way, direct or indirect, the sovereignty of the Italian government in Rome. In that he persisted to the end. Never did he set foot outside the sacred precincts guaranteed to the Papacy when Pius IX, was forced to yield to the Italian government. Not even when his brother was dying in Rome would he violate this rule and go to him. The first encyclical, of all those encyclical papers that he wrote and issued to the faithful and to the world, was written to "assert the rights and liberty of the Holy See." He showed his firm purpose of ignoring the Italian government by refusing to accept the annual donation by that government of 3,225,000 lire for his support, and he relied upon Never did he touch one lira of the money Italy desired him to accept.

Repeatedly, Leo gave assurance of his special interest in the welfare of Catholics of the United States and in the country itself. Marching has been the growth of the Church under the free institutions of America. Bitterness by the narrow-minded and suspicion by the mischief-makers subsided. Unofficial relations, without violence to American traditions, were established with the government. This was done largely to the tact and liberal views of such men as Cardinal Gibbons and Archbishop Ireland, and through them and their collaborators the feeling gained strength throughout the land that the Church was in no degree a menace to the country, but rather a bulwark, especially in its support of law and order.

Our illustrations bring out the typical events connected with Leo XIII, and his death. The first picture is a portrait of McCarty, representing allegorically the demise of the Pope, and the cardinals laying his honor before his shrine. Then follows as the best portrait of the Pope himself, which stands to-day as the best portrait of him in existence. The drawing entitled "The Pope is Dead," represents with careful fidelity the strange custom which has obtained for a thousand years or more of the formal announcement of the death of a Pope. Dating back beyond the Middle Ages, the custom—then probably with a utilitarian purpose—has prevailed of intruding the Pope three times upon the funeral with a hammer as the cardinal knells his death. Had it there is no movement, the officiating cardinal then upon someone that the Pope is dead, and send good news to the world. The double page is an impressive drawing by Mr. Sydney Adamson which depicts in the chapel of St. Peter's, which is the daily custom which Leo observed of walking and sitting in the piazza, the Vatican gardens, and looking over the Roman Cam with one or more of his cardinals. St. M. Ave has also represented the great ceremonies by Mr. Sydney Adamson which took place on the occasion of the Pope's jubilee, celebrating the fifty-fifth anniversary of his pontifical accession. Last comes an interesting picture representing the election of the new Pope. Each cardinal writes the name of the man whom he would choose to be Pope, and when all of these have been reduced they are counted, and the cardinal receiving ten-thirds or more of the votes is declared Pope. This solemn ceremony of the people mark the little ceremony of the furnace especially made for this purpose, wherein the votes once counted are burned. And when the smoke arises all know that another Pope is chosen.

Drawn by George Gotheis

### THE STRENUOUS SUMMER LIFE AT OYSTER BAY

The energy of the President, even during the hot days of midsummer, at Oyster Bay is always a source of wonder. Apart from carrying on his official business at the special executive offices in the village, the President always finds time for a morning horseback ride, usually a game of tennis, and only a few days ago, when the thermometer was above the two-mark, he completed his day's exercise by chopping down trees in a little grove near Sagamore Hill.

# Diversions of the Higher Journalist

## A Scientific City

"NOW, here," the Casual Visitor said, drawing a folded newspaper on the Higher Journalist, as if it had been some sort of weapon, "is something that ought to suggest a good topic to you. In fact it is a topic, already, and I should like to have your mind upon it."

"Mind" is very handsome," the higher journalist said, with a frank confession of relief. "What is your topic?"

"The fact, on the report, that one of the most enlightened of our millionaires is about to build in the South a model manufacturing city which will be completed upon the most modern terms, with water-works, electric lights, public heat, and common power for all purposes, and then, and not till then, given up to its future inhabitants."

"Rather iridescent?" the higher journalist commented.

"Yes, undoubtedly iridescent, but entirely business-like. In fact, a city built nowadays on the old, accidental plan is an idiotic anachronism, which ought to be forbidden by law. Imagine what a different New York this would be if the ancestors of the enlightened projector of that iridescent, but practical, metropolis in the South, had conceived of constructing it upon scientific principles!"

"I refuse to imagine that," the higher journalist retorted, "for the simple reason that in their day there were no scientific principles. The devices one then laid out the streets on her way to and from the pasture; the water-works consisted of wells with picturesque but ineffectual sweeps; the lighting was performed by lamps and lanterns burning kitchen-grease with rag-wicks;

the heating was from logs on the kitchen and parlor hearths; the street-cleaning was done by the family pigs and hens; the sanitation was non-existence."  
 "Precisely!" the casual visitor exclaimed, "and therefore the descendants of those benighted ancestors go on in emulation of the cow, the pig, the hen, the log, and the rag-wick, and you are disposed to sneer at one of those who promises to depart from their tradition."

"Never! Did I sneer?" the higher journalist deprecated.

"You intimated a conditional skepticism."

"That was my misfortune, I meant to express a contingent faith. In fact, I am very much interested in this experiment. Some years ago, in one of those protean forms in which it has been my habit to—"

"Change, and pass and come again."

I myself suggested that the scientific city was the only city that new had any right to be built. I remember that I described an ideal commonwealth, somewhere "in dark purple spheres of air," in which no one dreamed of building any other sort of city. The horror and surprise he felt in seeing the constant pulling down and building up in our cities, the perpetual excavations in and lighting, with all the dirt, disease, and waste incident to such community to construct its dwelling-places in the series of loaders and ventures which underlay the cities of the past. I think there was something about their keeping a section of an old competitor cities could come and were the sort of thing from which science that this new city in the South was projected. Except for the fact that he would hardly borrow an idea from an imaginary commonwealth, I might have fancied that a leaf had been taken from my book."

"There it is an unshodden grudge that prevents you from recognizing the subtlety of the conviction?"

"No, I own that even at second-hand the conception is subtle, and it might well be that this son of capital knew nothing but in battalions. For all I know, the ideas come not as single spies, but in battalions. For all I know, the Patent office at Washington upon my model would make it another's, and I should have no right to complain; I do not say that mine was a working model.

The projector of the new city, the one truly modern city that I have heard of outside of fiction is reputed to be an enlightened spirit rare even among American millionaires. If he is said to be a lover of literature, he is known to be a lover of art. As such his dream is worthy of his, and so far from grudging him it, because I had dreamt something like it before, I would fain hail him fellow-philanthropist across the gulf fixed between the higher journalist and the lowliest capitalist. My own philanthropy cost me nothing; in fact I was liberally paid for it by the editors and publishers; but I shall not think the loss of his if it cost him a great deal. I shall watch with the eagerest interest for the verification of his vision, and I shall not lose faith in him or it if it is not all that was expected of its verification. Many attempts of that sort meet unreasonably fail, but only in their direction does success lie. People who defraud and applaud the state always take as if it were the most radiant triumph, but the truth is that it is a sudden mass and snarl of most dismal defeats. It is quite probable, though it is so preposterous, that many inhabitants of the unscientific city, the chaos city, the fool city, which we now have, think it the final city, and will look askance at this generous proposition in the direction of a scientific city. But that is the only sort of city that can now be rationally, economically, and hopefully built. I myself might prefer to have the community build such a city for itself, but if some gracious dreamer will imagine it and realize it for a community, I have no prejudice that will forbid the scheme."

"You seem," the casual visitor remarked in bewilderment, "to be taking the position of my mouth. I don't know whether to offer or demand an apology."

"I never," my dear friend," the higher journalist magnanimously responded.

"At first, I was a little reluctant, as you rightly say, but as soon as I recognized my own invention in the scientific city proposed, I was gladly acquiescent."

"Then you don't think it quite so iridescent as you did?"

"In the contrary, I think more so. The iridescence of today is the crystallized glory of to-morrow; the diamond solidified from the dew drop. First the fact; first the impalpable ideal; then the period of reality. Three hundred years ago a book was written which the au-

.1 View of the new Utopia in South Carolina

ther, with a smiling irony, called "Utopia," because it was too good to be anywhere true. Ever since then anything too good to be anywhere true has been called Utopia; but every fruitful and hopeful scheme of modern civilization is based upon what we once Utopia ideas. There ever was a dream that was so perennially dear to the heart of humanity as the dream of Utopia. If this new model city in Utopia, it is destined to realization. Whatever is Utopian goes, it occurs. As soon as that city is thrown open to habitation, I am going there to live."

The casual visitor, whom the higher journalist had pushed from his stool, had become more and more restless at this preposterous harangue. He thought it high time to put a stake into the wheel of that flying chariot, even at the expense to himself of an apparent inconsistency. "What about the model city of Pullman?" he asked.

"Ah, well!" the higher journalist sighed, "that seems not to have been Utopian enough. You must go all lengths in Utopia, or you that it presupposed a population who would make it pay a good income to the investor. I should say that if this new model city was meant to make money for the projector it would fail; it is not in the Utopian ideal that any one shall make money. The only conception of our day was Andrew Carnegie's offering than here they make war upon her for it. Why should not other such magnanimous millionaires be imitating the construction of a model city on which, for humanity's sake, he should steadily fail to draw a cent of profit,—should be willing to sink a few millions?"

The casual visitor, hopefully unheeded, cast a hurried look upon the higher journalist in departing. "I think," he said, "be constructed by great mass of people will continue to build and to dwell in what you call the fool city."

### W. E. HENLEY

*William Ernest Henley, poet, editor, and critic died on July 12 at his home in Walsley, England. He was for many years a close personal friend of Robert Louis Stevenson, with whom he collaborated in a number of plays. To most Americans, however, he is best known as an essayist and poet. The picture here reproduced is from the recent painting by William Nicholson.*

# France and England

By Sydney Brooks

LONDON, July 4, 1915.

FRANCE is more merciful to her President than America. She allows them, at any rate, the relaxation, if it be a relaxation, of paying visits abroad. Whether the President thereof or not, there can be no question that France's neighbors would enter a unanimous protest against its repeal. Europe is often grumbling because the American Constitution shuts up the American President in the White House whenever he wants a holiday, instead of sending him on a tour of the European continent. It would be altogether too much, if France were to become similarly selfish. Happily there is no chance of that. To pay visits and to receive visits, and to do both rather better than any other nation would do either, is a part of the national reputation. The social position of France is a something dear to the heart of every Frenchman. They are all terribly sensitive to the suspicion that the republic may be thought a trifle "dowdy"; they like, above all things, to feel that their country is holding her own among her brilliant neighbors; the pomp and glitter of those ceremonial courtesies immensely please that artistic, that historic sense which is one of the most delightful as well as one of the most stable traits in the French character. And if France is well pleased to send M. Loubet over to England, England is equally glad to welcome him. The real and hearty satisfaction which the prospect of his visit has aroused among all classes of Englishmen, I believe, the beginning of a new era in Anglo-French relations. I cannot recall anything to which the people of this country have looked forward with so much eagerness as to this visit. Nor is there any man, except President Roosevelt, whom Englishmen feel so much drawn to, so much in sympathy with, as M. Loubet. The welcome he will receive will be absolutely national and popular. There are at least three sets of reasons for this—personal reasons, national reasons, and international reasons. To begin with, England admires and trusts M. Loubet. The people have the same sort of regard for him that they had for President Garfield. They have read of his humble birth and beginnings, of the struggles which his sturdy peasant spirit has faced and overcome. They have watched him in his high office—always simple, prudent, firm, and dignified without the airs of a Czarist or the stiltedness of a Cretol. His boldness of the imagination of the English people in the democratic hold. They think of him as fundamentally one of themselves, a unit in the average laboring mass of mankind, one who, like them, has worked for his daily bread, has mounted high from a lowly station, and owes his success not to birth or influence, but solely to his own character and abilities. Such a career has always been a great attraction for Englishmen, possibly because in England it is extremely rare. Again, M. Loubet is the President of the French Republic, and at this moment one of the most popular of men in France. His visit will not only increase this, but, unless I am grossly mistaken, will set a reunion to give the third, the international, reason for England's particular delight in honoring the French President. It is that M. Loubet is not a German. That may seem an indirect and not particularly flattering reason, but it is, nevertheless, a potent one, because he is the representative of a nation that cannot be suspected of over-friendly dispositions towards Germany. Recent events here, in England, have shown, wherever he likes, parade her in Germany that it should exist at all is a humiliation which all Englishmen feel, be such as to make it unacceptable that their sympathies are not in the direction of German co-operation.

Are they, then, in the direction of Anglo-French co-operation? I believe very strongly that they are. Not of course that there is any chance of England's embarking herself as a formal member of the Dual Alliance. No one thinks of that. But there is a

powerful flow of opinion towards a policy that would make it clear that as between the Dual and the Triple Alliance, England favors the former, and that she could not express her preference more effectively than by entering on an entire cordiale with France. The real pivot of European politics, though one is apt sometimes to forget it, is still as it has been for the last thirty years, Alsace-Lorraine—the French desire to win it back, the German determination to retain it. It is a question which may never, probably will never, lead to war, but, for all that, it remains the dominating condition of Continental Europe, and which, eventually, is ultimately referable. No country, for example, can become friendly to Germany without arousing a good deal of suspicious anxiety in France, which may, and in Italy's case did, develop into downright hostility. No country, again, can draw near to France without reminding Germany that her Continental position is one of extreme precariousness and without unsettling her policy overseas. What, then, is England's policy under these circumstances? She has no policy; her desire is to remain neutral. But it happens that of late appearances have been against her, and she has seemed to be definitely throwing in her weight on the German side of the balance. This has roused more than a little perturbation in France. If French suspicions are now quelled it is due to the explosion of anger with which the English greeted the Anglo-German agreement in Venezuela. That was the first clear proof that the French had recognized that whatever this government or that government might do, the British people were resolutely set against any sort of compact with Germany.

From that moment Anglo-French relations have substantially improved. At the same time England has clearly made up her mind that a complete independence of Germany is essential to her interests, and that watchfulness rather than friendship is the attitude that ought to be taken up towards the Wilhelmstrasse. The reaction from Lord Lansdowne's Phosphorus Statement has given a distinct impulse towards an Anglo-French understanding. If England has to be either for Germany or against her, she will choose the latter alternative. One may take that to be from now onwards an axiom of British policy, and the realization of it is of immense moment both to England and France. It furnishes them at once with a platform on which they can meet with entire freedom. Again, this is a time of political and journalistic calm. There is no question on which England and France are at loggerheads. They have ceased scolding one another, and after the furious excitement of Fashoda, the Dreyfus case, and the war, the return to an atmosphere of peace and sanity is doubly tranquillizing. It disposes men to the calm, to the sympathetic, and to see neither, on both sides of the Channel there has been a good deal of this quietly made for an exchange of juster estimates.

It is, at any rate, a fact that the old "traditional" hatred which the English have always been supposed to cherish against France has now wholly died out. It could of course be re-time being it is now extinct. The truth is that the English have got to know the French too well to harbor them any longer. The hardships of travel and the hundreds of thousands who make acquaintance with a week-end in Paris or for a few days in British English people are at length adjusted the focus. There is no country with and literature and history they are better acquainted, some with whose language really like better. The old antipathies—and it is popular enough to keep nations apart—has now, on the English side, entirely, and on the French, too, very largely, withered away.

When the people of two countries feel friendly, it does not take nearly so long to discover that political differences are France look round the world and find themselves with but one (foundland), and that is only really serious when the negotiators on each side distrust and suspect one another.

KING EDWARD VII AND PRESIDENT LOUBET  
THE first visit of a French President to England

**PLAN FOR MUNICIPAL AND TERMINAL BUILDINGS AT CITY HALL PARK, NEW YORK**

At the suggestion of Mayor Lane an important city improvement is being considered under consideration. The entire plan, which will cost in the neighborhood of \$3,000,000, includes the building of a large terminal building at the bridge terminal, in which there will be room for the city offices. The entire area of the present City Hall Park will be cleared, with the exception of City Hall itself, which the Mayor will see done as an office. It is estimated that, with the new station planned for the terminal, three hundred million people a year can be accommodated.

# Books and Bookmen

By James MacArthur

**I** SUPPOSE if a light comedian were called upon to express his views," wrote Mr. Howard Pyle in a friend recently, "it would hardly be expected of him to give a dissertation upon the single aspects of life." When Mark Twain desired a serious hearing for his study of Jeanne d'Arc, he was impelled to seek it for the same reason anonymously. And so with Mr. Pyle: apart from his work as an artist and illustrator, he has been so long identified in literature as a writer of children's books that it takes an effort to adjust him to the new view he presents as the serious and earnest student and religious thinker in his modern story of the Christ, *Revised of Men*. However this novel may be regarded as a Thesis of Christiana, thought and conviction today, it must be admitted that, as a believer, Mr. Pyle has handled his theme reverently and with a devout spirit. In his Proem, he states that his story "is intended as a phase of that divine history already told to the world, but now told from another standpoint, and translated from the ancient Hebrew habits of life into America, so that the reader may more readily understand the circumstances that directed our actions. If he has been told aright, he may see why it was that we crucified the Truth."

The book is startling in its conception of the New Testament story in a twentieth-century environment. The leading characters of the Jewish drama are fitted to modern parts that bear a singular resemblance to the originals, yet they impress by their familiarity to the type, while they shock our imagination in their historical divergence. It is with difficulty that even the most imaginative mind can wrest itself from the hold of tradition and reach out to see radical a dramatic perspective, but so far as it can be done Mr. Pyle has succeeded in approximating a modern reproduction of the coming of the Messiah.

It is interesting to know that a book like *Revised of Men* has a history; that it was not merely an imaginative experiment, but the outgrowth of life and experience. The intellectual and spiritual processes by which the work was evolved are set forth in a letter which Mr. Pyle wrote in answer to an inquiring friend.

"The great problems of life and death have always largely occupied my thoughts," he says, "from my youngest childhood. Even in my infancy, the fear of death and annihilation hung above me like a cloud, and that cloud was not dissipated, but became rather more dark and dense as I advanced into youth and adolescence. I was a sceptic in spite of myself, for I found an one who could enlighten my doubts. My questions seemed only to entangle me in perplexities, so that, instead of affording me a new rational ground of belief, I saw only the absurdity of his arguments. Accordingly, whatever change of views I may since have effected at all, I had to reach by myself, by my own reason, and without such outside assistance—excepting such as I could obtain from the writings of Noetherberg."

"Such a self-education in reasoning makes one rather radical in one's opinions, and I suppose that my opinions are very radical indeed. And radical opinions impel a man to express himself almost against his own volition. I begin it a number of years ago, after a conversation with Mr. Alden—the editor of HARPER'S MAGAZINE—and it was my first intention to tell only the story of the Birth of Men. As I proceeded with the work, however, it grew under my limitations with which it was begun."

*Revised of Men* was begun about eight years ago. The author's idea may be clearly seen in his original title, which was *Menap* written in, and retouched it, and corrected it, and amended it, and revised it has hardly any trace of its original form. It seems to be a very short story," concludes Mr. Pyle, "for eight years of intermittent work, but I can say that it was written very earnestly

and with great sincerity of conviction, and however the world may take it I have yet the satisfaction of knowing that I have said my say with every sentiment of reverence and very strong belief in that which I was trying to say."

The editor of a newspaper in Pocolontas, Arkansas, has a sense of humor. Evidently he has been stirring up things by opening his columns to a discussion on the proposed building of a school-house in this bright region where he waxes the torch of civilization. Under the flamboyant headline "Save the Country!" this bright editor prints the following amusing letter from an illiterate, irate correspondent, violently opposed to the erection of the above-said schoolhouse:

Ma. Karma—I have been reading some articles in your paper over the name of J. R. Alexander. I want to take issue with the gentleman on a few things. First he wants Pocolontas to go in debt to build a school house. I don't think this is right, because if she goes in debt there will be a debt hanging over the town

for our children to pay. I think the way to do would be to wait 'till we get the money then we can build the house.

I think we have a good enough house and a good enough school for the present. Pocolontas is not such a large place any more.

There are not more than two thousand people living in the town and not over four hundred children at most, and it seems to me like we have school enough.

Why does he want to make the taxes any higher. They are so high now that a poor man can't hardly live and keep up a large family. I haven't got very much but a big family and if the taxes get any higher,

I think I will have to leave the town. Besides I don't like a public school any way very much. I don't believe they are moral enough. I believe that it would be better to leave all the education to the churches

then we would have more religious people and more people would be members of the church. Why not let the ministers do all the teaching? We have to have them to instruct us in religion any how. Public school teachers are not moral men besides they get more wages for their work than they are worthy of. A man working on a farm or at anything else has to work longer and don't get as much for his work.

Now I had rather sit in the house for six or seven hours a day for a dollar than to have to work out doors all day for it. Besides I think the gentleman is putting over stress on public schools and education

and not on moral education and I have made up my mind to have a school where every body thinks it will be worth a fortune.

Great goodness, the country is going to ruin, ever body thinks I might need some education. But I never respect to be one, therefore living by honest work.

If we get that new school where every body thinks it will be no time till some poor boy not more than two years old will have a better education than I have got. Such a thing will be will soon be full of educated fools. My boy has been wanting to go to school some more but I squarled him and said myty quick when he got as much education as I have and don't need no more. This the country and I have made up my mind to raise a wat's ruinin' it and shoot my pen through it.

Mr. Ed I've been reading your paper all the time and think you get up one of the best papers in northeast Arkansas but for the sake of the country shut that fellow Alexander off

RIP VAN WINKLE.

Author of "Revised of Men"

living all right. People who work at mills and on the farms don't need much if any education. What good will an education do a fellow when he has to work all the time? My education never done me any good. I could have gotten on just as well with no education at all. It don't help me saw a loaded, burst a rock or plow a furrow.

Of course if I were a merchant, banker, lawyer or minister I might need some education. But I never respect to be one, therefore living by honest work.

If we get that new school where every body thinks it will be no time till some poor boy not more than two years old will have a better education than I have got. Such a thing will be will soon be full of educated fools. My boy has been wanting to go to school some more but I squarled him and said myty quick when he got as much education as I have and don't need no more. THE PRESIDENT AND MR. JEFFERSON

NEW YORK, June 20, 1903.

To the Editor of *Berger's Weekly*:

Sir.—Although opposed to having Republican State conventions in 1903 pledge themselves for Mr. Roosevelt for 1904, I am unable to concur in your comments on his St. Louis address. He could not truthfully have said more than he did about Jefferson's part in the purchase of Louisiana.

Jefferson authorized negotiations to buy the Isle of Orleans and a small adjacent territory including the mouth of the Mississippi. Langston and Monroe themselves made a treaty for the whole Louisiana as voted. Jefferson's silly construction of the Constitution caused him to (at first) make his approval conditional on the prior adoption by Congress of a constitutional amendment. His cabinet "sat down" upon this idea, and not being a strong man Thomas yielded.

You will find it difficult to name any important measure adopted between March, 1801, and March, 1809, of Jefferson's instance, of which an intelligent American can be proud. Some of his cabinet were able men—but better statesmen than the then President. If Jefferson be classed as a statesman at all his grade would leave him about the fifth or sixth class.

I am, sir,

"X"

ROOSEVELT IN OHIO

CLEVELAND, OHIO, June 20, 1903.

To the Editor of *Berger's Weekly*:

Sir.—Your article in the current WEEKLY on the report that President Roosevelt contemplated asking Senator Hanna to give place to the gentleman from Pennsylvania in the chairmanship of the Republican committee hurts not a little. In the first place, if ever any public man gave abundant evidence of a purpose to do right surely his name is Roosevelt. First assuredly, he will make no childish mistakes. However, his reputation will take care of itself, for he is almost worshipped out here in the interior—by all classes.

Now in the Pennsylvania gentleman standing at all to me, but it is the marked unfitness of the comparison (as directed against the judgment of the President) that I object to. If the Pennsylvania gentleman came now "doing time" for embezzlement—be it not the only embezzler one. There has been a well-planned and diabolical well-paid plot, carried on out here against the President, and in favor of Senator Hanna, that is just as crooked as any sin can be. Hundreds of little slurs in the daily papers, all over Ohio, Indiana, western New York, Michigan, etc.

It is a man whose office he stands out and fights like a man, but I hate the sneak who hides and sneaks from the bush. The man who will keep up for months little unfair attacks, that the President can't see nor answer, in the hope of breaking his good name by "suggestion," and while doing it in secret give the appearance of loyalty and good-will in public is just as wicked as the Pennsylvania man, for God Almighty hates a lie worse than He does murder.

Much comment was made in the local papers on the evident feeling of ill at ease the President manifested while here at the Hanna wedding. It must have been wormwood and gall to his open straightforward soul to have to suffer the double-dealing. And the repeated cheap attacks in the papers out here came from just one source: a school child could have seen some man's wording it all.

President Roosevelt knows, as some of his friends out here do, that Senator Hanna hates him as he does the devil. Put your knife in his place. Would it embarrass you to have a man you had put his arm around you? He could give no better proof of his ability to steer a safe course through the reefs than his handling of Senator Hanna. Is it fair to the President to ask him to accept the leadership and good-will in public is just as wicked as the Pennsylvania man, for God Almighty hates a lie worse than He does murder.

It is almost impossible for Mr. Roosevelt to uncover the Hanna battery, and yet the Hanna crowd are the worst enemies (true Republicanism here) you do. Show the people out here in selfishness, how he is trying to undermine the President in every possible way; how relentlessly it is the President's enemy, and how you under Hanna's challenge. You can do it, and ask another to do the same, disinterested things you have done.

Where is there a man who can touch our splendid President for all the traits that go to make up a typical American? Put him down in an equal fight—day by day—with Senator Hanna, and he would crush the ground with him, as he has with men and systems far the thing that hurts. Point out this evident unfairness, the impossibility of Hanna's challenge, and his selfish desire to take his revenge of his hatred of Roosevelt's campaign, before, and that will indeed give you the right to make the man. You have said several times that it is a young man's administration

tion; make it so farther still by selecting one of the younger leaders to manage the campaign.

Let me assure you of one thing. You can count on the absolute love and loyalty of the enthusiastic support and faith in Roosevelt, of eight out of every ten men in these central West States. I trust all over there is a part of what I have put out the "ays" all about you. The American citizen will endure a lot of rogues in office, but drop down in their hearts they love a man. And our splendid Roosevelt, with his magnificent moral and physical courage, his clear vision to all, his lack of fear of the "bosses" wins their hearts to the core.

I never this hidden battery of the Hanna crowd, who to day would sacrifice the party and all its interests to down Roosevelt, and you will win the gratitude of millions of people.

I am, sir,

W. R. L.

THE FELLING IN CANADA

CANADIAN, CHICAGO, June 20, 1903.

To the Editor of *Berger's Weekly*:

Sir.—In an article in your issue of June 27, entitled "Will Canadian Liberalism turn to the United States?" you use the following language: "The Liberals, on the other hand, said that they were actuated by magnanimous motives alone, but said that they had given the tariff preference to the mother country in the first place, but, ultimately, their generosity would be appreciated, and would be rewarded with an equivalent concession."

"... They have finally expressed a hope that if they were very, very good, and gratuitously gave to British manufactures a preference in the Dominion markets, they would eventually gain a corresponding preference for their food products in the market of the mother country."

I am surprised that a journal of the standing of yours, should so far misrepresent the Liberal policy on the question of the preference. It is exactly the opposite of what has been the case all along. The leaders of the Liberal party, both in the House and out of it, have always maintained that the preference was a complete free gift to the mother-land, without any expectation of a preference in return, and Sir Charles Tupper, while a member of the House, and his followers ever since, have secured the Liberals out and out of it, have always maintained that the preference was a complete free gift to the mother-land, without any expectation of a preference in return. During the session of 1902, Sir Wilfrid Laurier, replying to a member of the Opposition, said:

"The honorable gentleman has attacked us for the British preference, and has called upon us to ensure no exchange, forsooth, we have given a British preference without exacting any compensation."

"Mr. Fielding, in the course of the same debate, said: "The point on which we differ from honorable gentlemen opposite on the question of preferential trade is this: They have, from the beginning, insisted on our demanding of John Bull a preference, and giving him nothing until he would grant it; whereas, the position we took was that we would give John Bull the preference, believing it was good for ourselves, and that ultimately it would lead him to take a more favorable view."

The point has always been emphasized by the Liberals, that no matter what course Great Britain would take, she would enjoy an equivalent preference in Canadian markets. Irrespective altogether of other hand, took the view that an equivalent should be given in suits of the preference, but pointing out your mistake in laying certain matters to the charge of the Liberal party.

As a believer in reciprocity and one who has advocated it, I but if you confess that I think it would be mutually advantageous, a platform in the near future, I think you will take it up as taken. There never was a stronger feeling of independence in spite of trade matters. When Canadians were anxious for reciprocity and higher, and at a time when they were doing their best to help Canada than there is today. I simply mean independence as applied to trade matters. When Canadians were anxious for reciprocity and higher, and at a time when they were doing their best to help Canada than there is today. I simply mean independence as applied to trade matters.

It has been possible any time—to have secured trade concessions—vent such a state of affairs being brought about. To-day Canadians realize that they can trade elsewhere, even though they prefer no preference in the mother-land. They are not afraid of them. They have tried to be friendly with the United States, but the States "gave it to us in the new every line they got a chance. And while some of them still admit the advance have been mutual, reciprocity, they do not care two straws whether they get it or the enjoy today; enjoyed greater peace and prosperity than more prosperous; her foreign trade has greatly increased much higher in all these things, the overtures for reciprocity must come from them, for Canadians are too contented to bother about it, and presenting it. There is even, in some quarters, a strong feeling in favor of "retaliation" against the States, and it would not take very much agitation to make it a factor in public affairs.

I am, sir,

ROBERT HOLMES,  
M.P., West Haron.

An Anecdote of Lincoln

How Abraham Lincoln saved the life of the defendant in a murder trial is related in an anecdote told by Walter Logan, a son of citizens of Beardstown in Illinois, who was a witness of the jury which rendered the verdict of acquittal.

In August, 1857, one William or "Duff" Armstrong, living near Petersburg, Illinois, joined a crowd of ruffians who had gathered near a camp-meeting in Mason County, Illinois. Armstrong, who had been drinking, engaged in a fight with a comrade named Mettler. Later in the day Mettler was hit with an ox yoke by another drunken companion, Morris by name. Three days later Mettler died, and Morris and Armstrong were promptly arrested, charged with his murder. Marks of two blows were found on the victim; either of which might have caused death. That Morris struck one blow was proven beyond a doubt; but did Armstrong deal the other? He claimed to have fought with nothing but his fists, but both the marks on Mettler's body showed them to have been made with some blunt instrument. Public sentiment was very strong against both of the accused men, and they were thrown into prison. Separate trials were served for the prisoners. Morris was tried first, convicted, and sentenced to eight years in the penitentiary for manslaughter.

At the time that Armstrong's trial came due at Beardstown in May, 1858, it happened that Lincoln was attending court in the town. Although he had not been retained as Armstrong's counsel, he readily consented to assume the management of the case when approached by the prisoner's mother. The case for the defense looked almost hopeless, but Lincoln was confident. Going to the attorneys already selected for the delivery, Lincoln asked if he might be permitted to assist them with the case. They gladly accepted his offer, and he at once took the case in hand.

The strongest evidence against the accused was that of a man named Allen, who was examined by the State. Mr. Logan remembers it as follows:

Q. Did you see Armstrong strike Mettler?

A. Yes.

Q. About how far were you from where the affair took place?

A. About forty feet. I was standing on a knoll or hill looking down at them.

Q. Was it a light night?

A. Yes, it was.

Q. Any moon that night?

A. Yes, the moon was shining almost as bright as day.

Q. About how high was the moon?

A. About where the sun would be at 10 o'clock in the day.

Q. Are you certain there was a moon that night?

A. Yes, sir; I am certain.

Q. You are sure you are not mistaken about the moon shining as brightly as you represent?

A. Sir, sir; I am not mistaken.

Q. Did you see Armstrong strike Mettler by the light of the moon, and did you see Mettler fall?

A. I did.

Q. What did Armstrong strike him with?

A. With a sling shot.

Q. Where did he strike Mettler?

A. On the side of the head.

Q. About what time did you say this happened?

A. About 10 o'clock at night.

With this testimony the searched conviction for Armstrong seemed certain. The prosecuting attorney, in a fervid address, asked for a conviction from the jury on the strength of the evidence given. Mr. Lincoln made the closing argument. After a careful review of the testimony, he asked permission to introduce an almanac of current issue in the trial. The almanac was read conclusively by that at the hour when, according to Allen's testimony, he saw the prisoner strike the fatal blow by the light of the moon. The moon was shining. The almanac was submitted as evidence, and was plainly confusing to the prosecution. Mr. Lincoln concluded with one of the

most eloquent, pathetic, and forceful appeals in behalf of the prisoner ever heard in a court-room. After being out some five or six hours the jury brought in a verdict of acquittal, and Armstrong was discharged.

"The story has been current," says Mr. Logan, "that the almanac which threw the prosecution into confusion and secured the acquittal of the prisoner, was a piece of trickery on the part of Mr. Lincoln; that it was not of the year 1857, when the murder was committed, but of the year 1853, and that the 3 and had been changed to a 7. I wish to say that this charge is not true; I know positively that the almanac used at the trial was published in 1857, and could not have been changed, for I examined it very closely. As a further proof that no trickery was used or forgery committed in the trial, I would say the same would have been entirely unnecessary. The sheriff, however, has but to refer to any almanac for August, 1857, and he will see that the moon was exactly in the position as shown by Mr. Lincoln in the trial."

A Story in Two Parts.—Part I

**T**HIS Candidate, in his great swing through the West, made a loop far down into the country which is called semi-arid by its inhabitants and by boomers, but which seems to anybody else only a sea of hot sand under a better sky. At least Harley of the New York Gazette could find in it neither beauty nor use, as he stared through the car window at the low, ceasing expanse of brown dotted here and there with clumps of the thorny cactus. It was monotonous, ugly, and, above all, awful in its loneliness.

In the car the heat quivered like a mist, and the passengers drew deep panting breaths. They could not open the windows, because the moment they lifted the glass, even for an inch, the burning sand, borne on the breath of the desert wind, drove in like hail, powdering the face, filling the eyes, creeping under the collar, and harrising like one of the seven plagues of Egypt. So they abode in the still, thick heat, lying limply against the backs of the seats, and enduring as best they could.

"My God! what a country!" said Harley to himself as he stared at the sandy coast, rippling away in its ugly brown billows. Three or four of the correspondents, worn out by the great campaign of the Candidate—monotonous work night and day—had taken an earlier train for Deepdene, in order that they might get a little rest, leaving the others to handle the news for them in their absence from Jimmy Grayson's side; by and by they would return the favor, and the understanding was complete, good faith being a matter of course.

In three more hours they would be in Deepdene, and Harley repeated the name to himself more than once. There was a sort of grim satisfaction in calling it under the tongue; its smooth poetic sound and its significance were in such striking contrast with the country in which it lay; he had noticed before this frequent peculiarity of the desert people, their fondness for names resounding of green grass, clear running water, and trees in bloom. He would not be surprised to pass, one after the other, such stations as *Lovers' Lane*, *Silver Water*, *Green Grove*, and *Meadow Grass*, all in the brown desert.

"You can talk of the glories of freedom and unlimited space," said his friend Barton, "but there isn't money enough to hire in to live here. Better a year of a Harlem flat and an 'L' strap than fifty years of this."

Harley did not reply, and Barton, exhausted by this small display of energy, was silent until they reached Deepdene, a few hours later.

Deepdene was all that Harley had expected, merely a dozen houses, the majority of corrugated tin or adobe on the bare plain, but sheltered somewhat from the sunstorms by a curving brown ridge to the south and to the west. It was all brick and drabware, without a drop of water anywhere save that which was brought in tanks by the railroad. Hundreds of empty tin cans, of all the red, blue, yellow, and green, glittered in the sun. This was the worst, the cruelest, and the ugliest. "Barton was right," he murmured.

The correspondents, valises in hand, stepped from the train, faces, clothing, and grips alike powdered a white-brown by the alkali dust.

The train whistled, started with a rattle, and quickly disappeared in a brown cloud of dust under the southwestern horizon, exclaimed the volatile Barton, looking at the fretting brown cloud as the abandoned looks after the departing ship.

Harley felt the force of his words. Although three of his correspondents were with him, he had never before known such a sense of on to the rear platform of the ugly ordinary day train which had just disappeared in the brown cloud. "I'd go crazy if I had to live here," was his thought.

"I wonder if the place is alive," said Barton. "It may be an abandoned town. The fact that Jimmy Grayson is to speak here is no proof that it isn't, because when he speaks all the cowboys good as another."

As he spoke a cowboy, in southern, hickory shirt, and leggings,

came out of a low adobe hut, wiping his mouth with the back of his hand.

"It is inhabited!" exclaimed Barton, triumphantly, "and that but, as I infer from the suggestive action of our friend the cowboy, is the milson. At least we shall not perish in the desert of this."

The cowboy went behind the adobe hut, and when he reappeared he was mounted upon a pony.

"I am willing to wager that our unknown friend is about to desert this God-forsaken place and leave it to us alone!" exclaimed Harley.

He was right; the cowboy rode into the desert, and he, too, disappeared in a brown cloud. Barton uttered words of imprecation. "We'll never see him," he said with pathos.

But when they went further into the village he became more cheerful, even joyous.

"Behold!" he exclaimed, pointing a long forefinger. "See the splendor! and the remainder of home, too!"

They came to a two-story wooden building, from which all the paint had been blown long since by the desert winds, but over the low veranda was written in glaring letters, "New York Hotel."

Harley shared Barton's joy. The question of food and lodging in the desert, even where the railroad ran, was not always easy to solve, and this building, despite its wind-blown air of neglect, gave promise.

They entered the house, and the landlord, a bedragged man in carpet slippers, shuffled forward to meet them.

"When the sun's so 'tarnal hot," he said, "I don't go out to meet the train; I reckon if anybody stops they kin find the hotel themselves, an' they won't find any but mine, 'cause there ain't any other."

"The grasping band of monopoly is felt even here," whispered Harley.

Yes, he had rooms, plenty of them, and he could give them something to eat, ranged goods from Chicago and beef. If the guests would be seated, Bill would take the valises up to their rooms, and he'd have dinner ready in half an hour.

They gladly resigned their valises to "Bill," a large, stoop-shouldered, sun-browned man even more ragged and unkempt than his employer, and then, after washing their faces with luted water in a little basin to behind the house, felt much refreshed.

"It isn't what you have, but what you haven't had, makes a thing good," said Barton, with a contented sigh, "that makes hot train this old ramshackle is a regular Waldorf-Astoria in the desert to me."

"All the same, it's the jumping-off place," said Harley, looking out at the dusty plain.

The landlord, who was making some effort at a hospitable welcome, joined them, and said that dinner would be ready in a few minutes.

"I reckon you gent's belong to Jimmy Grayson's outfit that's due here to-morrow," he said, tentatively. "I reckon there ain't any other 'tude that would bring so many stiff dollars to Deepdene."

"You are right," replied Harley; "we are newspaper correspondents traveling with Mr. Grayson, but in order to enjoy your town part of us have come on ahead, as you see."

"That's right," replied he of the hotel, affably. "Deepdene ain't no such town, I'm willin' to allow, but if a fellow knows how to are bunk, and you kin go right in. Bill's ready with the dinner."

All set on one table covered with a cloth not too clean, but long fasting made the beef and the roasted goods sweet in their taste, and they ate with sharpened appetites. The big man, Bill, could not get him a glass of water he replied. "Yes, sir; it will mellow, and so perfect in accent that Harley, who so well modulated, so polite.

He saw only a face covered with unkempt brown beard, and the waiter suddenly turned his eyes away when they met Harley's, and None of the others had noticed the quality of the waiter's voice, and Harley said nothing, but he watched Bill as he moved about the room serving the dinner.

There was nothing attractive in the waiter's appearance; his

# BUFFALO LITHIA WATER

**Is Successfully Employed by the Profession in the Treatment of Inflammation of the Bladder, Albuminuria, Bright's Disease and Uric Acid Conditions. The Long Experience and Many Carefully Conducted Experiments of these Eminent Medical Men Entitle their Opinions to Consideration.**

Cyrus Edison, A. M., M. D., Health Commissioner, New York City and State, President Board of Pharmacy, New York City, *Evansbury Physician Corporation Council, New York City, etc.*

"I have prescribed **BUFFALO LITHIA WATER** with great benefit in Bright's Disease. In a case of Uric Acid Gravel to which I recently prescribed it, beneficial effects were apparent after the third dose."

Hunter McGuire, M. D., L.L.D., *Ex-President American Medical Association, late President and Professor Clinical Surgery, University College of Medicine, Richmond, Va.* "In Uric Acid Gravel, and, indeed, in diseases generally dependent upon Uric Acid Diathesis, it is a remedy of extraordinary potency. Many years experience in its use only confirms the good opinion I have so often expressed in regard to it."

Dr. J. T. Le Blanchard, *Professor of Montreal Clinic, S.M., S.N., P.U.* "I have used **BUFFALO LITHIA WATER** in most obstinate cases of Chronic Inflammation of the Bladder, in Stone in the Bladder and in Uric Acid Gravel with most efficacious results." Additional medical testimony mailed. For sale by the general drug and mineral water trade.

Hotel at Springs now open.

PROPRIETOR BUFFALO LITHIA SPRINGS, VIRGINIA.

clothing was without a touch of acuteness; his hair had not been combed for a week, but noticeable above all was his manner, which inspired mingled repulsion and pity; it was impossible for him to stand the gaze of any one; his mother's look by chance met his, his eyes drooped as usual. The whole effect that he created was spiritless and abject. It seemed to Harley that if sleep-drops were the jumping-off place here was the fit habitation of it.

Barton was talking as only he could talk—that is, all the time, and his flow of spirits occupied all except Harley, who, out of the corner of his eye, was watching the dejected waiter. At last he said to the most of the "How far is it ahead to the next town?"

"Sixty miles, sir," replied Hill, using only three words, but they were rapid, flowing, and amusing.

Harley started; some old memory in him stirred, but when he sought to trace it and make some connection it was gone in a moment like a breath. He spoke again, and more than once to the waiter before the dinner was over, but Hill no longer replied to words, merely with a nod or a shake of the head, and the correspondence turned his attention back to his comrades.

The landlord, John Keyes he gave his name, was pleased with his guests; in some dim, remote day, when he was a farm boy in Indiana, he had gone with a cart-load of cattle to New York, and he felt that the fact established a strong connection with the correspondents, all of whom were from the metropolis. When Barton gave him a chance he talked glowingly about the country and its prospects.

"Glazed for gold," he said, "an' the gossens' full of gold an' silver. We doo' need nothin' but capital from the East, an' we'll have that as soon as Jimmy Grayson is roun' in the gov'ment to sell us."

They were sitting at the veranda now, and with the approach of evening the air was growing cooler and much more pleasant. Harley was in a tilted chair near the door, where he could command a view of the dining-room. Hill was still shuffling about the tables, and it seemed that other guests were expected. In fact, the town disclosed movements of life, as the sun began to set, and people appeared from mysterious regions. Two or three men went into the dining-room, and Hill served them with the same obsequious, abject manner. The last of these was a Mexican, a violent, yellow little man who first found fault with the food, and then did a thing that no one but Harley saw.

The Mexican suddenly raised his open palm and struck the big waiter in the face. Hill murmured some apologetic words and went on with his work. Harley was so astonished that he could not speak; he had expected to see the waiter, abject and cringing though he was, fall the Mexican in the face. Then his blood boiled up in furious wrath. That an American should take such a blow from a miserable yellow half-breed was just belief. Yet he had seen it with his own eyes. He brought his teeth together with such a sharp click that it drew the attention of Burton.

"Why, Harley, old man," he exclaimed, "what on earth are you looking so savage about?"

"I've just seen something that I do not like," replied Harley.

"He was staring out over the vast, ugly sweep of the brown plain.

"Oh, the desert," said Barton. "But there's nothing new in the scenery to be seen every day. Besides, why growl about it? We're in Des Moines now, and there's a bed and twelve hours of sleep just ahead. It's to be glad, not to be angry."

Harley maintained a discreet silence, and Barton's attention soon wandered back to the talkative group, of which he and the landlord of the New York Hotel were the centre. But Harley, while seeming to listen, kept an eye on the dining-room, where the big, bearded waiter shuffled listlessly among the tables. Once the man saw Harley looking; but his eyes fell instantly before the correspondent's glance, and he hurried into a corner of the room where the troubling man could not follow him; but before he disappeared Harley saw the whole figure shivering as if in nervous alarm.

The man was sinking in the desert.

## The Rise and Progress of the Standard Oil Company

By GILBERT HOLLAND MONTAGUE

This is a scholarly and accurate study of the Standard Oil Company, from its beginning in 1865 till its control in 1891 of twenty-five per cent. of the entire oil business of the United States, and thence down to the present time. The story of this gigantic trust reads like a tale of magic, and is of profound interest even to the casual reader.

AGENTS IN ALL PRINCIPAL CITIES

Brilliant terraces of purple and red and gold, heaped on the hills, heralded its going. Then it suddenly shot through them and was like a stone in water. Darkness, borne on the edge of a chill wind, swept over the plain, and the desert night had come. The men shivered and went inside.

"What a curious contrast the night is to the day here!" said Harley.

"Yes," said the phlegmatic Keyes, "you can cool off now."

All the correspondents except Harley drifted off to their rooms. He said that he did not care for bed just yet, chinking to have slept in the train. He put on a light overcoat, and announced a desire to wander about the town and see the sights.

"Don't you go out here," said Keyes, "if you were to get a hull-miss out in the desert you might never find the town again, and that 'ud be the best of you."

Harley promised, and went out into the so-called street, merely a strip of the broad desert, between the squalls and houses, and stood there for a few moments. If the place was desolate in the day, it was a wail in its loneliness at night, because then it had a peculiar wind and chilling quality, that on the desert the wind was meaning like a lost soul, and Harley could readily imagine that he was the only human being within in a sweep of five hundred miles, with nothing around him but sand and mud and cactus. Indeed, it was more like feet than fancy.

But it was no part of Harley's intention to explore the desert. He had noticed the waiter throwing the debris from the tables on a heap behind the house, and he walked silently to the rear of the New York Hotel. Presently he saw the man coming; he knew the figure by the star, and the stoop. Like a cringe, Hill carried a bucket half filled with scraps and bones, and throwing them upon the heap turned to go back to the house. In the darkness he did not notice the correspondent standing at his elbow. Harley touched him on the arm.

"Harley," he said, in a voice low but insistent, "what does this mean?"

Hill stood so if paralyzed. The bucket did from his hand, and fell with a slight clang to the ground. But Harley's grasp was on his arm. Hill looked up, and Harley, faint though the moonlight was, could see that his eyes were full of terror.

"Harley," repeated Harley, his voice growing more insistent, "tell me, what do you mean by this?"

Suddenly the waiter, a man six feet high and with a head like those in his life, and the sound of a man's sob drawn deep from his chest unheeded him.

"Harley," he exclaimed, "stop! For God's sake, stop!"

The man made an effort to restrain himself, and Harley saw his great shoulders quivering. By and by both were silent again, but out on the desert the wind was yet moaning like a lost soul.

Harley spoke a third time, still calling the man "Harley"; nor was there contempt in his voice, only pity. "Harley," he said, "whatever you may tell me is sacred. You know me well enough to know that it will never go farther if you wish it."

The big man suddenly fell forward, not on his knees, but in a limp heap, and groveled against the earth.

"Charlie," he exclaimed, "you have found me, and how I love you! whoever you may tell to me is sacred. You know me well enough to know that it will never go farther if you wish it. I thought that I was hidden forever! Why should any one when I ever knew want to come to such a spot as this in such a desert—this devil's hide! Desperate, they call it! You don't know what a monkey that name is!"

"I can guess,"

said Harley,

graciously.

"Yes, you can

guess; anybody

can. An hour of

it is enough, but

I belong here.

I'm like it, I'm

as God forsaken

as it is. You

see that yellow

half-bred Mexi-

can strike me in

the face, and I

didn't have the

courage to strike

back. And it

isn't the first

time I've been

struck, either.

But you never

knew me. I'm

not the man, I'm

just a bill, the

waiter, kicked

about because I

deserve to be."

He put his face

in his hands and

groaned. Harley

walked up and

down, taking

short steps. He

did not know

what to do or to

say. The wind

still moaned

across the desert.

Behind them only

two or three

lights shivered

in the little

town. They were

alone with the

universe.

"Harley," he

asked at last,

"what on earth

made you come

here?"

"To be away

from everybody.

And it's the best

place for that.

You know what I

was once, and

you know, too,

what I am now;

but you remem-

ber, too, what

I've been through.

You might hunt all this Southwest, and you wouldn't find nobody like me, Charlie. I'm crushed! I tell you, I'm crushed!"

He repeated mechanically the word "crushed; crushed!" and his hand across his brow. When he took it away it was red and swollen, and he had a look of agony. "I tell you I'm crushed, all smashed up!" the man went on, melted gold, "and it all done from that awful night. You remember it, but as for me, it is like yesterday. I know I have been drinking, drinking for days, and doing other things as bad or worse; but, my God! Charlie, you know what the city has of it, and the crowd was one of the biggest that I ever

Hill carried a bucket half filled with scraps and bones.

found—curiously brought 'em; and then when I got up to speak, I could utter nothing but a miserable little squeak. "Thank law, suppose ridiculous, how idiotic it was! I could have stood everything if I had kept my voice, the one thing that made me famous; but it's gone, and gone forever."

Harley stopped in his short walk up and down, and looked curiously at the man whose voice in his agony expressed every range of human passion and woe.

"Harry," he said, "you've heard that Jimmy Grayson is to speak here to-morrow night."

"What's that to me?"

"Listen to what I say. Jimmy Grayson is a great orator. God gave him the gift of language. We call him the Golden-Mouthed."

"Yes," said the correspondent as if talking to himself. "I knew but one man who was his equal, but he isn't before the public now. Perhaps he was Jimmy Grayson's superior, but, for all his wonderful powers, for all this great gift that God had sent him he was a fool, the biggest fool that I have ever known."

"Oh, don't, Charlie!" grieved the man. "I speak what I think," said Harley, in firm, accusing tones.

"I don't defend myself; you can call me anything you please; no name will be too hard for me, but think of all that I've gone through, what came before that night, and all that has happened since—since I came to this hotel. You don't suppose I've forgotten, do you, those old days when I was happy and famous? You remember that first great speech of mine, the one that set everybody to talking? You reported it yourself, Charlie—that was when I first met you—and they gave it four full columns on the front page of the *Gazette*, and even the staid old *Herald*, which was never known to approve wholly of anybody, said that I was not without promise; don't you remember it, Charlie?"

"I remember it very well," said Harley, glancing out of the dark desert, and shuddering at the loneliness and desolation around him.

The man, who had risen with the old memories, threw himself upon the sand again.

"Oh, God, Charlie!" he cried, "I can't stand it! I was called the jock of them all. There was none who could speak as I, there was none who could sway the crowd as I could! Charlie, I always felt the power in me; I could think best when I got on my feet, and then I had the voice. I don't take any credit for that; it was a gift which might as well have gone to some one else."

Harley had been thinking intently. "Harry," he said, "I want you to hear Jimmy Grayson to-morrow night. If for nothing else, to hear yourself as you used to be. I want you to shove off that hideous beard, put on good clothes, hold your head up, and sit next Jimmy Grayson with me, where you can hear every word that he says."

The waiter shook in sudden terror.

"I can't do it; I can't do it!" he cried. "There's blazes coming, and if I sit up he'll know me, and there may be more. I can take a blow now, but I can't take that."

"They need not know you, though it would be all right if they should," Jimmy Grayson, I suppose, will speak on the little square platform that I saw just beyond the hotel, and all except where he stands will be in the dark. You shall be there with me."

"Charlie, I don't dare! I don't dare," said the waiter.

"You shall be there with me," said Harley, decisively. "I'll attend to everything. You see, Harry, you can't escape me. This spot in the desert isn't more than three hundred yards across, and I've got you cornered. Good night!"

He held out his hand and the waiter looked wonderingly at it.

"Nobly has shaken hands with me in years," he said.

"Harry, are you going to refuse my hand? Do you wish to insult me?"

The waiter seized the outstretched hand, shook it convulsively two or three times, and then, without a word, ran into the house.

To be Continued.

## The Nation's Meat

Of the many industries which in the evolution of events have become identified with certain regions, and which are known to the public at large only through hearsay, none has been subjected to so thorough a misunderstanding as that of meat production. Especially is this true of beef growing, an industry now conducted almost entirely upon the prairies and plains lying between the Mississippi and the Rocky Mountains. The ideas now generally current upon the subject gained circulation in the time when cattle-grazing was in a primitive and rudely picturesque stage, and have not changed to keep pace with radical changes in conditions and methods. The present-day popular conception of the range fits the haphazard conditions of twenty years ago, when the plains lay open from Mexico to Canada, surrendered to wild herds in the keeping of men no less wild than their charges; whereas the business of breeding and grazing beef-cattle is to-day as scientifically conducted as any other department of rural activity.

### The West takes a Hand

Grazing is only a part of the beef industry in its modern aspect. In earlier days, when almost every farm of the East had its pasture, its meadow, and its herd, and contributed its share of beef, pork, and mutton to the markets, the successive steps in production were not so sharply distinguished as now, all being conducted together. Gradually, however, as the West took to itself the culture of corn, changing the processes and so diminishing the corn acreage in the East, it was found unprofitable to produce live-stock, and particularly cattle, in the older regions. In the course of a few years the cattle business was practically monopolized by the West; dairy herds remained, of course, but beef herds as such are all but unknown east of the Mississippi.

### Branches of Cattle-raising

Cattle-growing was never more than a collateral branch of farming in the Eastern States, the herds being small, like the farms—just large enough to utilize waste-lands as pasturage and to consume the surplus products of the fields. In the West, however, the secret of success in all departments of agriculture lay in conducting them upon a large scale; and this led to specialization. The cow-grazer, with his several thousand acres under cultivation, commonly exacts nothing besides the ranchman, with his team or hundreds of thousands or even millions of acres of grazing-land, contests himself with breeding cattle. The two branches cannot be conducted together economically; corn-land is too valuable to be used as pasturage, and the lands most desirable for grazing will not produce corn. This was not all known from the first; its discovery was evolutionary and then revolutionary. Every phase of meat-production is to-day sharply separated from every other.

### The Grazing Industry

The grazing industry had its beginning in the West on the semi-arid plains of Texas. The first herds were the inferior, long-horned, long-tailed animals of the west still grown in Mexico—half-wild beasts, that wandered almost as free as the bison. There was no fencing of land in those days, nor any thought of private ownership; the plains were open to all alike. Scientific breeding was unknown, and there was no systematic care of the herds, save that they were driven from place to place occasionally in search of new feeding grounds. As the cattle increased in number, and the Southern States were despoiled, the practice obtained of driving the large herds northward during the summer months into western Kansas and Nebraska, and later

into Wyoming, Montana, and Dakota, returning there southward as winter approached, for cattle of that wild strain could not survive the rigors of the Northern winter. This procedure was followed without hindrance so long as the lands were unoccupied by settlers.

#### Benefits of Homesteading

But after a few years homesteading began along the lines of the cattle-trade, and barriers were interposed in rapidly increasing number, leading to hostility between the two classes, lines of opposing interests. It was that period which brought the cattle-men into a desperate which continued long after they had ceased to desire it. Owners as well as breeders, long accustomed to exclusive possession of the lands, regarded the settlers as intruders, and resented to lawless methods for their expulsion. But homesteading continued, and recognizing the inevitable, the cattlemen began to acquire title to the lands, and the wandering herds were gathered upon big ranches, in the manner of the present day. The owners benefited by the change; they were led to improve the blood of their stock, in order to fit them for the Northern climate, and intelligent breeding became a part of their industry. Other improvements in methods followed, and within a few years the herds of wild Texas cattle were changed into the modern herds of Herefords, each held within its own enclosure, receiving intelligent care, and returning a larger profit than was possible under the old practice. It is this change in the character of the herds, through breeding, that has led the cattlemen to oppose a reduction of present tariff duties, which would smother the unimproved herds of Mexico and Canada and disorganize the industry.

#### The Permanent Ranch

Not the least of the benefits resulting from the establishment of the permanent ranch has been a greater economy in the use of land. Formerly, when there was no stimulus of self-interest through ownership, methods were very wasteful and pasturage was being rapidly exhausted. An effort is now being made to conserve the natural range and to supplement it wherever possible by bringing tracts of land under cultivation and raising fescue crops by means of irrigation. The local natural ranges are those lying upon the plains whose altitude exceeds 3000 feet, where there is little or no rainfall in the late summer and fall; for the wild grasses are not often cut as hay, but are allowed to cure on the ground, there to remain in winter pasturage, and raise which fall after the natural curing is completed destroy their nutritive qualities. But with the irrigation ditch better crops of alfalfa, millet, and tame grasses can be produced, to be used in the time of "drouth feeding," when the ranges are snow-covered and the productive capacity of these irritable tracts is greatly increased. Already the effects of this change in methods are apparent. From twenty-five to thirty acres of wild grass-land were once considered necessary to furnish a year's sustenance to each head of the grazing herd; whereas a single acre of irrigated fescue crops will now thus suffice for the same length of time. Although the number of small farms is continually increasing in the West and Southwest, in what was once exclusively "cattle country," containing by many millions of acres the lands available for range, there is no decrease in the number of cattle grown from year to year, save under exceptional circumstances. The appearance of small, highly cultivated farms scattered over the plains has been a powerful agency in bringing about social and political stability in many ways; for as civilization industry is strengthened by social order,

#### TOUR TO THE PACIFIC COAST.

Via Pennsylvania Railroad, Around G. A. R. National Encampment.

On account of the National Encampment of the Grand Army of the Republic at San Francisco, Cal., August 17 to 25, the Pennsylvania Railroad Company will operate a special tour to the Pacific Coast at unusually low rates.

Tour will leave New York, Philadelphia, Baltimore, Washington, and other points on the Pennsylvania Railroad east of Pittsburg, Thursday, August 6, by special train of the highest grade Pullman equipment. An entire day will be spent at the Grand Canyon of the Arizona, two days of Los Angeles, and half a day or more at Pasadena, Santa Barbara, Del Monte, and San Jose. Three days will be spent in San Francisco during the encampment. A day will be spent also during the encampment, and a complete tour of the Yellowstone Park, entering six days, returning directly to destination via Billings and Chicago, and New York September 1.

Round trip rate, covering all expenses for twenty-seven days, except three days spent in San Francisco, \$125, two in one berth, \$200 each.

Round trip rate, covering all expenses to Los Angeles, including transportation, meals in dining-car, and bills for food & amusements, Pasadena, and Fresno, taken only through California, and returning to the East by October 25, via any direct route, including one-third stop-over, \$115; two in one berth, \$198 each. Itinerary via Portland, \$115 additional will be charged.

Rates from Pittsburg will be free unless here in each case.

For full information apply to Ticket Agents, or Gen. W. Boyd, General Passenger Agent, Grand Street Station, Philadelphia, Pa.

**Stories of  
Travel and Adventure  
in Many Lands**

*Eight Volumes of Absorbing Interest*

No more delightful stories of travel and adventure have ever been written than these charming pictures from the graceful pen of Mr. Richard Harding Davis. His genius for close observation, the personal charm of a natural style, and an ever-ready sense of humor bring to him an audience wide as the English-speaking world.

*Eight Volumes Handsomely Bound*

THE EXILES      OUR ENGLISH COUSINS      ABOUT PARIS  
VAN BIBBER. AND OTHERS      THE WEST FROM A CAR-WINDOW  
THE RULERS OF THE MEDITERRANEAN  
THREE GRINGOS IN VENEZUELA AND CENTRAL AMERICA  
A YEAR FROM A REPORTER'S NOTE-BOOK

*Eight Volumes Beautifully Illustrated*

300 Full-Page Illustrations by Charles Dana Gibson,  
Frederic Remington, T. de Thulstrup,  
and a great many others.

**OUR OFFER** We will send you the entire set of eight volumes, charges prepaid, on receipt of \$1.00. If you do not like the books when they reach you, send them back at our expense, and we will return the \$1.00. If you do like them, send us \$1.00 every month for eleven months. In order to keep you in touch with us during these months, on receipt of your request for these books we will enter you as a subscriber to either *Harper's Magazine*, *Harper's Weekly*, *Harper's Bazar*, or *The North American Review* for one year without additional cost to you. In writing, state which periodical you want.

"Easily the Best Built Car in America"

THE 4-CYLINDER GASOLENE LOCOMOBILE

OWING to our unexcelled manufacturing facilities, and to the fact that we have all kinds of bodies on hand ready for the finishing color, we can make unusually prompt deliveries on the 16-H.P. Car shown above.

In riding in one of these cars, one is impressed with the quiet and smooth running, and the delicate throttle control from the steering wheel. The sense of ample power, available at all times, is most satisfying.

All mechanical features are in accordance with the latest and best practice. A strong feature of the car is the facility with which all important parts can be removed and replaced. *No experiment.*

Write to our factory or to any branch office for further information, or to arrange for a thorough demonstration. Visitors to our factory need only notify us in advance and an automobile will be at the train to meet them.

## COMMENT

The Chicago Journal, a reputable newspaper, whose editor, we hear, recently had a talk with President Roosevelt, prints the following paragraph:

Two influential newspaper publications have incurred President Roosevelt's keen displeasure; they are the New York Sun and HANNA'S WEEKLY. The President believes that he is at all times malicious and unfair. They are the only organs in the country with which he has any quarrel. He says they are not content with criticizing him and his public acts, but they strike at him through his friends and seek by ingenious means to annoy him. At no time, he says, are they more vicious than when they pretend to be acting as friendly organs, voicing his views. Both these publications have lately been exploiting Senators Fairbanks and Hanna as Vice-Presidential possibilities. To President Roosevelt the purpose is manifest.

As to this journal, despite the assumed authority of the editor referred to, we frankly do not believe that the President either feels that it is "at all times malicious and unfair," or that he avers that it "strikes at him through his friends" and "seeks by ingenious untruth to annoy him" and is never "more vicious than when pretending to act as a friendly organ, voicing his views."

The reasons why we do not credit these statements are obvious enough. No argument ought to be needed to convince our readers that of all the qualities represented in these columns, "malice and unfairness" are the most conspicuous by their absence. Who are the friends of the President whom we are accused of attacking or do not know? If Mr. Payne, Mr. Quay, Mr. Platt, and their ilk are meant, we plead guilty—and shall do it again and yet again. If Secretary Hay, Secretary Root, or even General Wood is hinted at, we are innocent itself, despite the fact that we consider the recent advancement of the officer mentioned both unwarranted and unfortunate. The charge of "pretending to act as a friendly organ" has no foundation in fact. This journal is friendly to Mr. Roosevelt and to every other servant of the people who is trying to do his duty, but it is not and does not "pretend" to be "an organ" of him or of anybody else. Neither does it "voice" or "pretend" to voice any views but its own, which, however mistaken, are at least honest and at times held.

We did suggest the consideration of Senator Fairbanks as a possibly desirable candidate for Vice-President, and even now fail to perceive the impropriety of the proposal. The

suggestion of Senator Hanna for that candidacy we laughed at and still laugh at as being on a par with Senator Platt's Satanic nomination of Senator Alrich. Indeed, our readers will know that, from the day he became President, we have consistently and persistently urged upon Mr. Roosevelt the duty and necessity of sending these Bourbons and all like them to the rear. That he has done so in his most drastic and effective manner in a matter of genuine congratulation to all lovers of good government not dissociated from progress. More power, we say, to his elbow in a cause so righteous! No, good though mistaken friend in Chicago, President Roosevelt has no "quarrel" with HARPER'S WEEKLY. It takes two to make a quarrel, and we have none with a man who always tries to do what is right, even though at times through error he does that which we think and say we think and shall continue to say we think is wrong.

A political incident of interest, if not of importance, was the meeting of certain Democratic leaders of the Middle West, convened on July 18 by the Chicago Democratic Club. With one exception, Mr. D. R. Lawler, of Minnesota, the speakers seemed to be unfriendly to Mr. Cleveland, and to favor the nomination of Mr. Carter H. Harrison for the Presidency, although Chicago's four-times-elected Mayor was not actually named. Confidence was expressed in the possibility of carrying Illinois for the Democracy in 1904, provided a young, vigorous, and progressive Democrat should be the standard-bearer. As a matter of fact, Mr. Cleveland is the only Democratic candidate for the Presidency who has carried Illinois since the civil war. The speech which attracted most attention was naturally that delivered by Mr. William Jennings Bryan. He asserted that never before in the history of the country has there been greater need for a Democratic party animated by a truly Democratic purpose. He alluded that the aristocracy which Hamilton led against the Democracy of Jefferson's day, and the plutocracy which Nicholas Biddle led against the Democracy of Jackson's day have combined to assault the Democracy of the present hour, and these assaults, he said, are supported by a metropolitan press more subservient to capital and more widely read than were the papers of 1800 or 1832. He challenged genuine Democrats to say whether they would abandon their championship of the people's interests in the hope of conciliating forces essentially anti-Democratic, and of thereby securing a few offices by means of campaign contributions,—contributions that would have to be made good out of the pockets of the people.

Mr. Bryan insisted that the Democratic party must appeal to the democratic sentiment of the republic, which sentiment is far wider than any party. He added that the odium which Mr. Cleveland's second administration had brought upon the Democracy had done more to defeat the party in 1896 and 1900 than any one plank in the Chicago platform, or even than all the planks that were most severely criticized. Had not the party repudiated Mr. Cleveland's policies in 1896, it would have been impossible, Mr. Bryan said, to make any campaign at all, and even the repudiation, complete as it was, could not entirely disinfect the party. He had faith, he said, that if the Democratic party would take no step backward, but would continue to defend the rights of the people and to protect their interests wherever these should be attacked, whether the attack should come from financiers, monopolists, tariff barons, or imperialists, it might look forward to an ultimate revolution of sentiment that would give a victory worth having. A victory, on the other hand, gained by a repudiation of the Chicago platform, and under the banner of Mr. Cleveland, or of any leader known to share Mr. Cleveland's opinions,

star has set. The utmost that he can hope for, in the event of Democratic success, is to become Secretary of State. There is no doubt that Chief-Judge Parker, were he President, would urge Mr. Hill to accept that office.

Speaking, a fortnight ago, of a *propos* of the Littauer and Proctor army contracts, of the probability of these being no more than instances of widespread practices of like nature, we strongly urged the President to order a searching investigation into the purchase of all supplies "between the 4th of March, 1907, and the date when Mr. Root became Secretary of War." We added: "We have heard it asserted, by men who speak from information and with authority, that during the period preceding the appointment of Secretary Root the government was defrauded of many millions of dollars in army contracts, and that implication in the frauds can be brought home to men who still hold high official positions." To this General Alger, who was Secretary of War during the period mentioned, takes exception. "If," he says in an interview, "there was any corruption in the War Department during the time when I was Secretary, or if there was any reason for thinking there might be such corruption, I knew nothing of it, and I do not believe there was any such corruption. I did not even know that any glove contract had been made. Matters of detail of that kind were left to subordinate officers, and I suppose that many minor contracts were made without being submitted to the head of the department during the time when the army was being mobilized, and when there was a great mass of business to be attended to." This is as we supposed. Nobody, in time of war, could with reason expect the overburdened Secretary of War to be personally familiar with the great number of contracts necessary to be made in haste and more or less confusion. General Alger's assertion that he did not even know there was a glove contract, therefore, is neither surprising nor properly commendable. We made no reflection upon General Alger, for the simple reason that, so far as our information goes, there has never been the slightest suspicion of his perfect integrity and good faith. It is the "man who still hold high official positions" that we see after, as General Alger will perceive very quickly upon reading our words more closely. Indeed, when the former Secretary says, "I hope that the matter will be investigated to the very bottom, in order that the facts may be fully demonstrated," he expresses our position to a dot. It is fitting, however, to add our expression of regret that there should have arisen any misapprehension of our purpose in the mind of a man whom we regard so highly and whose chief burden has been to suffer for the sins of others.

Senator Lodge, before his departure for London to perform the duties of Alaska boundary commissioner, is said to have expressed the opinion that the investigation of the Post-office Department and War Department scandals will help the Republican party in 1904. The opinion is well founded, provided the investigation is vigorously prosecuted, but not otherwise. If, next November, the results attained shall seem so grossly inadequate as to excite suspicion of the prosecution's good faith, an investigation by a committee of the Fifty-eighth Congress cannot be averted, and, as experience has shown, the Republican majority of such a committee could not prevent their Democratic colleagues from uncovering the truth. It is satisfactory to recollect that on July 16 a number of indictments were found in the post-office cases by the Federal Grand Jury in Brooklyn. United States District-Attorney Oyster had spent the previous evening with the President at Oyster Bay, and had had imposed upon him Mr. Roosevelt's wish that the post-office scandals should be probed to the very bottom. "I want you to see," the President is reported to have said, "this investigation go as far as possible, no matter where it reaches or whom it hits." No such injunction would Hanna's friend Heath is still secretary of the Republican National Committee.

Of the indictments presented in Brooklyn, two were against George W. Brewster, former Chief of the Division of Salaries and Allowances in the Post-office Department at Washington. In one of these he is accused of receiving a bribe of eight thou-

and forty dollars. The crime is technically a misdemeanor, punishable by two years imprisonment or ten thousand dollars fine. It is alleged that the bribe was given by Congressman Briggs, now under indictment for his connection with the Brandt-Dent Company, which manufactures so-called "automatic cashiers," and which supplied over five hundred of its machines to the Post-office Department. The price paid for these was \$150 a piece, at a time when the machines were selling for \$125 in the open market in small lots. The investigation has shown that Mr. Briggs received a commission of fifty dollars on each machine; that the regular agents of the company who made the deal with the department also received fifty dollars per machine, and that the company only got a third of the sum paid. Mr. Briggs avers that he is not liable under the statute, because in May, 1898, sworn in as a Representative in Congress. The records prove, however, that he drew pay from March 4, 1898. If he was enough of a Representative to draw pay, we do not see how he can escape the penalty of the law. He is certainly liable for any commission received after he took his seat.

Although an eminent financier is reported to have said that the present year is not a "convenient season" for currency legislation, and although Mr. Cannon, who will be the next Speaker of the House of Representatives, has described Roosevelt's existing currency system as "good enough," President Roosevelt does not agree with them, and it is certain that the whole power of the administration will be exerted in favor of passing a currency bill of one kind or another. Moreover, an attempt will be made to launch on November 9, the extra session of Congress, which will begin on November 9. We have not, as yet, any authoritative account of the measure which Senator Aldrich and some of his Republican colleagues are alleged to have been engaged in framing. Even if their bill were before us, we could not derive from it any definite conception of the law, if any, that will be ultimately enacted. There is no ground for assuming that the measure drawn up by Mr. Aldrich and a few of his Republican fellow-Senators will pass the Senate in its original form, and, even if it did, it would be likely to undergo material alteration in the House of Representatives. The principal pretext for tinkering the currency at the present time is the fact that the Federal government is continually depleting the circulating medium, by exacting customs duties and internal-revenue dues greatly in excess of the money needed for its current expenditures. The result is the accumulation of a surplus of revenue in the Treasury, already amounting to about one hundred and fifty-five million dollars, and likely to reach two hundred million dollars at no distant day. The problem which the Republican Senators have been pondering is, how to get that surplus back into the hands of the people.

Democrats would say that the common-sense method of dealing with the problem would be to extinguish the surplus as expeditiously as possible, by reducing the customs duties or the internal-revenue dues, or both, to a point where income would balance outgo. This simple and effective method does not commend itself to the extreme protectionists who now dominate the Republican party, and who are resolved that the Fifty-eighth Congress shall not lay a finger on the Dingley Tariff. So the surplus will go on accumulating so long as the country enjoys prosperity, and so long as the Republicans control the executive and two legislative branches of the Federal government, or any one of them. Starting with the assumption that the surplus must be kept saved from embezzlement through changes in the revenue laws, but, at the same time, admitting that it should be put somewhere where the people can borrow it for use in their business, some Republican leaders propose that it shall be deposited in the national banks, the latter to pay interest on it at the rate of two per cent, and to furnish government bonds as security for the returns of the deposits. Others have suggested that the security need not be confined to government bonds, but might comprehend the bonds of certain cities and States, or even of certain railroads. We need not point out that either of these proposals is certain to encounter vehement opposi-

tion, and our own belief is that the prospect of any currency legislation during the coming twelve-month is by no means bright.

Secretary Hay merits credit for a successful termination of the negotiations with Russia regarding the opening of two new ports to foreign commerce in Manchuria. It will be remembered that hitherto the whole of that vast region, which comprises three provinces, has been accessible to foreign trade through the port of New-chang only. The United States treaty commissioners at Peking have long been trying to embody in the projected treaty of commerce with China an agreement that two other treaty ports shall be opened, at Mukden and Ta-tung-kau,—the latter place, which lies on the Yalu River, close to the Korean line, being ultimately selected as likely to further trade between Korea and Manchuria. It was no secret to our commissioners that their efforts were continually blocked by Russian influence at Peking, but this obstacle now seems to have been removed; for Secretary Hay, after months of negotiation, has secured from the Russian *chargé d'affaires* at Washington an agreement in writing that Russia will no longer oppose the opening of two additional ports in Manchuria.

It is, of course, well known that Russia would long ago have granted to the United States the privilege of access to Manchuria if she could at the same time have withheld the privilege from Great Britain and Japan. Our State Department has declined, however, to accept any such discrimination in our favor, and has insisted that the privilege must be embodied in a treaty of commerce made directly with China, under which circumstances it would, of course, be shared by all nations whose treaties with China contain the "most favored nation" clause. Heroin Mr. Hay indubitably has pursued an upright, a high-minded, and an equitable course. He deserves the more credit because neither Great Britain nor Japan has evinced any zeal in his support, although both of those powers would benefit by the success of his endeavors. There is reason, indeed, to believe that the Mikado's subjects would like to see the relations between the United States and Russia embittered, for what they most dread is isolation in the contest with Russia which they regard as inevitable. They know that if we are assured of free access for our commerce to Manchuria, we shall remain impartial spectators of a war between Russia and Japan. They also know that if France refrain from siding with the Czar, England would remain neutral, for her treaty with Japan only binds her to co-operation provided the last-named country be attacked by at least two maritime powers. The Japanese have viewed with some annoyance the cordial welcome given to President Loubet during his recent visit to England, because, in the event of a friendly understanding between Great Britain and France, the last-named country would be loath to join Russia in hostilities against Japan.

Whistler, dead at sixty-nine, is a loss to sport as well as to art. And the loss to art is great enough to keep the other loss long in the world's mind. He had many talents, and put out at every corner that might better, perhaps, have been hid, but it was not in him to hide anything from motives of prudence, and his gift of sarcasm reached its full development with the rest. The saving grace of his impudence and bluntness hit-backativeness was the fun he seemed to get out of it. As a fighter he justified the soldier blood in him and his own West Point education, but he seemed to fight more because he liked it than out of any very deep animosity. It is pleasant to see almost any one truly enjoy almost anything, and Whistler's apparent enjoyment of his quarrels made them amusing to his fellows. In art he won his place by merit against even more than the usual odds. His art was scoffed at by the wise. He was pose for two-thirds of his life, and could not get much for his pictures. His famous portrait of Carlyle, painted in 1872, was once pawned with others. The story is that later he offered it for four hundred guineas to a Scotch gallery, and finding that the subscription paper disclaimed approval of himself or his art, promptly raised the price to a thousand guineas. It was bought, in 1891, for the Glasgow gallery. His portrait of his

mother is in the Luxembourg gallery. He was a chevalier of the Legion of Honor, and a member of more art associations in Europe than there is space to set down. Considered as an American artist, he ranks beside Sargent, and he was really more of an American than Sargent, for he was born here (in Lowell), and lived here in his youth. His achievements in art are recorded with due appreciation in another page of this paper.

A lady of high fashion has offered her Newport house for sale; another is said to have serious thoughts of doing the like, and observers are invited to infer that the attractions of contemporary life at Newport are waning. It is a good island for persons who like it, and doubtless plenty of people always will like it, but there are other ways than the Newport way for rich people to live, which, with the growth of intelligence, and with practice in the disbursement of large incomes, have grown in favor, perhaps, at Newport's cost. So long as Newport is the very pinnacle of fashion, it will attract not only such people of fashion as like to be fashionable in summer, but also a considerable company of aspirers, emulators, philosophical observers, parasites, and hangers-on. High fashion, doing its proscribed stunts is rather a delicious spectacle, and worth looking at from many points of view, but any lessening of its prestige impairs its spectacular value, and diminishes its following. Once the spectators get about that high fashion has flitted from its pinnacle, straightway the aspirers and emulators, noting the direction it has taken, wag their pinions in pursuit, and the philosophical observer turns his attention to other types. However, it will take more than two, or twenty, departures to impair the ascendancy of Newport. The vested interests of various opulent families there are highly important, and doubtless many of the cottagers have sentimental associations with their summer homes which are strong enough to defy whim. It won't cease to be fashionable, nor see its scandals set forth in less than the biggest headline type, for many a long day yet, if ever. But if it should go out of style,—with all the gallery empty, and a little grass in the streets, and meats and groceries cheap, and rents low, and society God-fearing again, what a charming summer place it would be!

A pitiful record is the annual list of children dead of lockjaw, as a result of using toy pistols on the Fourth of July. The injury is always the same. The infernal pistols shoot fragments of paper into the children's hands. The wounds are trifling as wounds, but their tendency to produce lockjaw is very terrible. Five haphazard despatches in a newspaper, all dated July 15, tell of three deaths thus caused near Watertown, New York; three in central Massachusetts; eight in Cleveland, and add fourteen names to the death list by lockjaw in Michigan. The ages of the children—all of them boys—range from nine to fifteen. What the death list is for the whole country from this cause does not appear, but it is evident that there is a wanton and cruel waste of young life from a contemptible cause. That manufacturers should make these deadly toys, legislators allow their manufacture, and parents permit their use, is astonishing.

In an editorial article in the WEEKLY of July 11, in which the Neal case in Delaware was mentioned as bearing on the recent lynching of the negro White, some statements were made which require correction. Neal, a negro, was accused of atrocious assault on the wife of a farmer. We were mistaken in saying that the woman was murdered. Neal's counsel, assigned to that duty by the Court of Oyer and Terminer, was Mr. Anthony Higgins, of Wilmington, at one time United States Senator from Delaware. On his first trial the negro was found guilty. The case was carried to the Supreme Court of the United States on a point of law, and the judgment was annulled. On the second trial Neal was acquitted on evidence furnished by the woman he was said to have assaulted. The acquittal of the prisoner made a great stir in Delaware at the time (twenty-three years ago), and was violently criticized. We regret that in recalling the occurrence we have fallen into several mistakes of fact, and done ex-Senator Higgins an injustice.

## Why all Eyes are Fixed upon the Vatican

Those who recall the death of Pius IX. in 1878 will remember how comparatively languid was the interest evinced in the outcome of the conclave, so far as the secular world was concerned. It seemed to matter but little on what particular cardinal the choice of the Sacred College should fall, for, in the minds of Protestant outsiders, at all events, the papacy was doomed, and not a few devout Catholics also viewed the future with profound misgiving. Not for centuries had the prospects of the pontifical system seemed so dark. The conquest of the States of the Church, the occupation of Rome by French troops, and even the imprisonment of Pius VII. in the earlier part of the nineteenth century had been looked upon as only temporary reverses, for, in the teeth of the hostile conditions incessantly renewed, the Napoleonic Empire could not be considered permanent. On the other hand, the incorporation of Peter's Patrimony, including the Eternal City, in the Italian monarchy, was justly regarded as a far more serious blow. The German and Austrian governments, far from being inimical to the new monarch installed in the Quirinal, were notoriously friendly, and the Triple Alliance could scarcely be foreseen. What likelihood was there that a ruler of Italy, now firmly planted in the peninsula that had been any of his predecessors since the days of Theodosius, would long tolerate the refractory attitude that had been maintained by Pius IX., who not only refused the substitution offered by the Italian Parliament, but persisted in describing himself as a prisoner in the Vatican, and forbade faithful Catholics to recognize the new Italian régime by taking part in Parliamentary elections. A position so defiant and so inconsistent would scarcely be brooked by a self-respecting monarchy, unless the conditions incessantly renewed by the irresistible moral pressure of the civilized world.

But no such pressure was exerted or expected in 1878 when the conclave assembled for the election of a new Pope. On the contrary, Catholicism seemed threatened in many quarters with disintegration and collapse. In Italy itself it seemed improbable that the Roman Church could long make head against the victorious Free Masons, slated by the extinction of the Pope's temporal power, and resolved to wield the formidable weapon of secular education against the papacy. In Russian Poland, the St. Petersburg government, seizing the advantage given to it by the helpless submission of the Vatican, had determined to uproot Catholicism, which had come to be the last refuge of Polish patriotism. In Prussia, and in Alsace-Lorraine, a systematic effort was making to crush the Catholics by oppressive legislation. In southern Germany and in the German-speaking provinces of Austria, the promulgation of the dogma of papal infallibility by the Vatican Council had excited the indignation of the so-called Old Catholics headed by Dr. Dollinger, one of the most learned and distinguished theologians in the Church. In October of the previous year, in France, the political party friendly to Catholicism had been defeated by the Radicals led by Gambetta, who had his followers ably cheered on as their worst enemy. In England the recent attempt to re-establish a Roman Catholic hierarchy was still watched with disapproval and distrust by the Protestant majority, and it seemed probable that at any moment the "No Popery" cry might be revived. Even in Spain, the Anti-Catholics had shown themselves strong enough to place upon the throne a member of the deposed House of Savoy, and in 1878 it still seemed possible that the restored Bourbon monarchy would prove as short-lived as the preceding republic. Only in the United States was Catholicism making notable progress, yet it could not be forgotten that even there only some twenty years had elapsed since the Know-Nothing movement, avowedly aimed at Roman Catholics, had swept a part of the country like a whirlwind. With so many elements of danger visible, where were the moral forces to be found by whose generation and consolidation the papacy could hope to recover at least its spiritual influence and to maintain its preeminent position within the Christian world?

It does not appear that all or most of the cardinals who met in conclave in 1878 were alive to the magnitude of their responsibilities. They bumbled better than they knew when their hastily accepted Cardinal Pevet as a compromise candidate, and broke in his way a precedent which for centuries had debarred a cardinal discharging the functions of *Camerlengo* from election to the papacy. There is no doubt that the two principal factions in the Sacred College, neither of which was for the moment strong enough to secure the requisite two-thirds vote, agreed upon Cardinal Pevet in the belief that they would thus postpone for a short time the decisive contest. From this point of view Leo XIII. seemed an ideal horse forerunner, for he was not only an old man (sixty-eight), but had long been regarded as the principal favorite to succeed to the conclave to a fellow cardinal who had just retired for him. "You desire, then, to make a second Adrian V.," referring to a Pope who had occupied the papal throne only thirty-six days. Whatever may have been the motives, however, that impelled many members of the Sacred College in their self-inflicted error, the result was so unexpected and extraor-

dinary that devout Catholics may be excused for regarding them as involuntary agents of the Holy Ghost. It is certain that a marvelous transformation took place in the physical resources of Leo XIII. Every one of his fellow members in the conclave, with the exception of Cardinal Gregalia, was to precede him to the grave, and he was to occupy the papal chair longer than any of his predecessors, except the venerable Pope whom he succeeded. Up to almost the last day, moreover, of that memorable quarter of a century his intellect remained unimpaired. How singularly adapted were his intellectual gifts to the difficult task imposed upon him was to be proved by the event. Judgment, foresight, sagacity, knowledge, address, and tact were all at his command. Like a veteran, wary and accomplished pilot, he seized the helm of the papacy, saved it from the shipwreck that seemed impending, and steered it through stormy seas into an unshored-for haven.

We must look back and mark the amazing change in the prospects of the papacy which twenty-five years have witnessed, in order to measure the work accomplished by this extraordinary man, who, when he set his hand to it, was already close to the scriptural limit of threescore years and ten. The moral strength of the Pope has now become so great in Italy that it has been at times an open question whether he or the Piedmontese ruler were the more firmly rooted in the peninsula. In Germany, Bismarck long ago understood that pilgrimage to Canossa which had haunted would never be made, and at the present hour the Catholic Church, through the Christal party of the Centre, holds in its own power in the Reichstag, and can dictate terms to a Protestant Emperor. In Bavaria and Austria the Old Catholic schism, once menacing, is virtually defunct. In Russian Poland the attempt to substitute the official Orthodox Church for Catholicism was long ago abandoned, and the Russian Catholic hierarchy is unshakably established. In Spain Catholicism has no longer anything to fear from revolutionists, and, thanks mainly to its support, the Bourbon dynasty has retained possession of the throne. In France the Combes ministry, by its attitude against the teaching religious orders, and by its present encouragement of the agitation against the renegade, betrays a conviction that there is not room in France for both Catholicism and Republicanism of the radical type, and, in the judgment of some shrewd outsiders, there is but little doubt as to which of the two must ultimately go. In England, the growth of Catholicism has been so pronounced, and has been accompanied by such increase of tolerance on the part of public opinion, that the expediency of suppressing the anti-Catholic declaration in the King's oath has been seriously mooted. In the United States the number of Roman Catholics has been tremendously augmented, and their expansion is so far from exciting misgiving in the Protestant population that an attempt made to increase the number of bishops of the west would be treated with derision. The outcome of the extraordinary changes which have taken place during the long pontificate of Leo XIII., and which, in large measure, must be credited to his personality, is a revival of spiritual influence throughout the Western World, for which we can only find a parallel by referring to a period preceding the Reformation, in the period, indeed, when Wycliffe was so justly honored in England or those in Bohemia.

In the spiritual fabric of which the Pope who has just died must be recognized as the chief architect, likely long to survive him? Unquestionably it possesses many elements of durability. The Church of Rome has ever to be regarded by conservative statesmen and political economists as a barrier against socialism, and by Christians of all sects as a bulwark against apostasy. Among those not born within its pale there are many wise men who acknowledge that if it did not already exist, it would be necessary to invent it. That during the pontificate of Leo XIII. the papacy has been a heartening agent, that its vast and rapidly increasing powers have seldom been misused, but have, upon the whole, been exercised for social amelioration and the commonweal, is unlikely to be disputed by the impartial reviewer of the nineteenth century. That the personal qualities of the next Pope may have a certain effect on the policy of the Vatican, and may promote or temporarily check the progress of Catholicism, no reasonable person will deny. We, nevertheless, incline to the opinion that, whoever may succeed him in the papal chair, the work performed by Leo XIII. will remain substantially intact.

## Mr. John Bigelow on the United States Supreme Court

Transvaal. Americans will be glad that the address on the United States Supreme Court delivered in London by Mr. Joseph Hodges Choate was reproduced in the *North American Review* not only for its own sake, but because it has elicited a remarkable article from the veteran journalist and diplomatist, Mr. John Bigelow—an article which appeared on July 10 more than four months of the Standard. Mr. Vinton, who is now eighty-six years old, the article in question proves that his mind has

lost one of its former locality and penetration, but that both his reasoning power and his gifts of expression remain unimpaired. Mr. Bigelow takes Mr. Choate's assertion that the Federal judiciary has steadily refrained from exercising any political power which belongs exclusively to Congress and the President, and so it has been brought into no collision with the other departments. Mr. Choate added that the Federal judiciary would not even indulge in discussions, or express opinions upon purely political questions, and he quoted with approval the refusal of the United States Supreme Court to comply with a request by President Washington for the opinions of the judges on the construction of the Treaty with France of 1778, and a similar refusal to consider and pass upon certain pension claims, on the ground that the power proposed to be exercised was "not a judicial power within the meaning of the Constitution."

How can Mr. Choate's assertion be reconciled with the part played by five judges of the United States Supreme Court in the Electoral Commission of 1877, when they showed themselves to be divided so strictly on partisan lines as were their fellow members of the commission, who had been chosen by the Senate and by the House of Representatives? That is the question which Mr. Bigelow presses home, and concerning which he urges Mr. Choate, as a jurist of eminent authority, to give a categorical answer. Mr. Choate is invited to explain where, and how the United States Supreme Court, or any of its members, ever acquired the right to participate in the deliberations of that commission, organized to discharge a duty expressly imposed by the Constitution exclusively upon the House of Representatives; and by what authority, sacred or profane, it usurped with its members of Congress, not only in the deliberate neglect, but in the deliberate violation, of their constitutional duties. Mr. Choate correctly declared in his address that the Supreme Court has original jurisdiction only in cases affecting ambassadors, public ministers, and consuls, and in those in which a State shall be a party; in all other matters the jurisdiction of the Supreme Court is only appellate. He would scarcely pretend that the right of the Supreme Court to meddle with the counting of electoral votes for the Presidency comes under either of these categories. Mr. Choate went on to say in his address that the courts of the United States exercise no supervision over, or interference with, the President, or Congress, or the legislatures of the States. They have, he pointed out, no jurisdiction to pronounce any statute, either of a State or of the United States, void, because irreconcilable with the Constitution, except as they are called upon to adjudge the legal rights of parties as they come before them. In a word, "the Supreme Court will perform no duties except judicial duties." Was counting the electoral votes for President, asks Mr. Bigelow, any more than the counting of the votes received by a Member of Congress or an alderman, a judicial duty coming before the judges of the highest Federal tribunal? Were the members of the Supreme Court exercising no interference with the President or Congress "when they cooperated with members of the Senate and House of Representatives, and finally gave the casting vote which invested with the dignity and responsibilities of the Presidency a candidate whose few persons at this day believe to have been elected by the people?"

Considering, further, whether the power whereby the right of seven tribunals was created, and which it was intended to exercise, was a judicial power, Mr. Bigelow inquires by whom and by what was it conferred? Certainly not by the Constitution, and it is patent that no such judicial power could exist outside of the Constitution. As a matter of fact, were not the members of the right by seven tribunals appointed for no other purpose than to exercise political powers, to express opinions upon purely political questions? Were they selected for any other purpose than to help count the electoral votes of each of the several States to be united and to designate the candidate who, in their judgment, had the requisite majority or plurality? Why was each of the members of the tribunal, even the five from the Supreme Court, selected, and fear of them at least officially branded by Congress as partisans, if they were not expected to exert political power? If, as Mr. Choate says, it was the duty and boast of the Federal judiciary steadily to refrain from exercising any political power which belongs exclusively to the President or Congress, then how would he explain its usurpation of a power conferred explicitly and exclusively to Congress?

Mr. Bigelow points out that Mr. Justice Bradley, of New Jersey, the former chief justice, and the two Republican and two Democratic judges to constitute the fifth of the judicial quota of members of the electoral tribunal, admitted the assumption of political power by himself and his fellow justices in the opinion which he delivered in support of the Republican count of the Presidential electors in the contested States on the 9th of February, 1877. Justice Bradley said: "I assume that the powers of the commission are precisely those, and no other, which the two Houses of Congress possess in the matters submitted to our consideration." But what does the Constitution say shall be done when the power which it vests in Congress concerning the counting and declaring of electoral votes cannot, or, for any reason, are

not exercised? Mr. Bigelow reminds us that, according to the Constitution, from the moment it transpires that the two Houses cannot agree upon a candidate as a candidate for the majority of the electoral votes, the two joint Houses of Congress have the power to meet to have any question on an electoral commission, or any other tribunal, to decide by the selection of a President. Considered as a constitutional corporation for the selection of a President, Congress was absolutely *factus* *officio*. "If," says the Constitution, "no person have such majority, then from the persons having the next number, the House of Representatives shall choose immediately by ballot the President." Such being the plain injunction of our Federal organic law, Mr. Bigelow submits that, when Justice Bradley's tribunal met, the two Houses of Congress had no more to do in joint ballot with the election of the President of the United States than they have to do with the election of a successor to Leo XIII. Nay, the Lower House of Congress was allowed to meet with a power much larger than was ever enjoyed by the joint bodies. It might, under possible circumstances, have set aside both the candidates whose majority they had been quarrelling about, and thus have exercised a power which the Constitution had never given to the two Houses jointly. The Electoral Commission, by assuming to exercise the power improperly conferred upon it, was depriving the popular branch of the government of a privilege expressly guaranteed to that branch by the Constitution, and of a power in the exercise of which, while it was possible that the wishes of the people might have been grievously disappointed, the people would not have been humiliated by a flagrant violation of the Constitution.

Mr. Bigelow concedes that some friends of Mr. Choate's, not so good a lawyer as himself, may say on his behalf that the five good gentlemen taken from the bench of the Supreme Court for the Electoral Commission, did not constitute or represent the Supreme Court, but were only as many individuals chosen for their learning and judicial experience. Unfortunately for this theory, those five gentlemen constituted a majority of the Supreme Court, and enough, when seated and sitting in *habe*, to decide any question that could come before it; and it was precisely this judicial contingent that did deprive the nation of his choice for the Presidency in 1877. It is not, however, the choice of the great fraud whereof the American people were the victims in the year named, whereof Mr. Bigelow desires to raise, but the far more urgent and momentous question whether the United States Supreme Court was an innocent participant in that fraud as Mr. Choate's silence upon this question might lead his English audience and some of his American readers to suppose. If the court was innocent, Mr. Choate's address seems to require some explanation on that point, and if the court were not innocent, a serious modification. If Mr. Choate believes that the five justices of the Supreme Court were justified in performing the part they played in the Electoral Commission, it is surely incumbent on him to give the reasons for the faith that is in him. If, on the other hand, no such belief is entertained by him, can it be possible that he is willing that the crime of 1877 shall be stereotyped as a precedent into the history of the Republican party, the history of the American bar, and the history of the highest Federal tribunal? and that no record shall be made of Mr. Choate's having washed his hands and the hands of those for whom he is at liberty to speak, of any responsibility for a callous usurpation?

## The Cloud in the East

The question in Manchuria is one of high international politics and ought to be considered from the broadest possible point of view. It is easy to rush to war with figures and to print conclusions the very publication of which will instantly excite a warlike feeling. The statesman and least thoughtful solution for a difference of opinion is a fight with the other side, and it is naturally, therefore, the first to occur to certain classes of minds. The first suggestion of the Russian attitude toward Manchuria in such minds is that the United States and England must inevitably oppose the permanent occupation by Russia of Manchuria, and must insist on the maintenance of the open door. Indeed, a very cautious and official statement has been made from this country in support of the Kibinov petition. In this statement it is made to appear that the United States government will be very angry if the Tsar exercises his unappreciated right to refuse to receive the petition of certain private citizens of this country touching the character of Russian police administration. It is also suggested in this annual document, which does not bear the impress of Secretary Hay, that Russia has not been perfectly ingenuous and, in her seizure of Manchuria, has betrayed evidence of willingness to break her promise to aid in maintaining the open door. In a word, it is declared, and this is the well-known universal belief, that if Russia dominates any part of China, trade with that part of the

fashioned beside some of the more recent "impressionists," for which he long ago first opened the exhibition doors. It is hard for us to believe that "A Portrait of the Artist's Mother" (now in the Luxembourg) was "put in the cellar" at Burlington House when it was sent in for exhibition, and saved only by Bonall (R.A., and then popular portrait-painter) insisting upon its being hung. Bonall gave the committee their choice between hanging the picture and accepting his own resignation as one of their number—"for," said he, "it shall never be told of me that I served on a committee which refused such a work as that." The picture was eventually placed among the "black-and-white" exhibit, drawings, engravings, etc.

"The Girl in a White Dress" was rejected at the "Salon"—and so on. These pictures seem so little peculiar, so reasonable, to the men of to-day that it is hard for them to understand why there should have been such almost universal condemnation of them.

As to Whistler's achievement,—what he accomplished—it was, first, the reassertion of "true" in painting. "Values," which in the early effluve had been long forgotten, became his chief care; values and "arrangement." He cleared away a mass of tawdry illustrations which were passing current as pictures, but in which all the decorative qualities were lacking. It is impossible to speak of what Mr. Whistler represented without using technical terms. His work was not intended for the public's admiration. All painters will understand, however, the above sentences and realize how much the master has done for them.

Then, Whistler has undoubtedly taught us the use of monochromatic schemes of decoration; and more than any other person he was responsible for rousing our Western attention to the lovely art of China and Japan, which was always considered as more or less "grotesque" before his time.

In writing, Whistler takes his place in the very first rank. Indeed, he and Rembrandt stand shoulder to shoulder in front of all the rest. It is too early to predict what posterity will do for him in the way of appreciating his painting. So far he is distinctly what Sir John called him twenty years ago, "a painter for painters," and the public neither comprehends nor greatly likes his work.

Although he was in no way a spendthrift, he would make every sort of sacrifice to his art. Had he been given more opportunity, there seems no reason to doubt that he would have made other rooms even more beautiful than the famous "Peacock" dining-room of the Leyland mansion in London. But, frankly, the public did not care for his work enough to buy much of it from him at anything like a fair price, so that he was obliged to limit himself to comparatively small surfaces, oval pictures, over which collectors will soon begin to wrangle, we dare say, now that the clever hand which created them can work no more, and the big, kind heart which gave this man the courage to fight through fifty years against "la belle humaine" is cold and still.

Is Whistler perhaps the greatest of our modern masters has just left us. We did not treat him very gently while he was here—more than in art!

Pearse to his ash! The world is better for his having lived in it, the richer by his noble work.

## Tobacco

DR. WILEY of the Agricultural Department in Washington, who has been experimenting for some months past to ascertain the effects of various foods and food-preservatives upon the human system, is credited with purposing, when he finishes his present series of experiments, to ascertain the effects of tobacco, to determine the effect of various sorts and forms of tobacco upon users. His plan, as the papers report it, is to take men who are regular smokers or chewers, ascertain their physical condition as to digestion, heart action, and the like, while consuming their customary rations; then cut off their supply, and observe how it affects them; then perhaps start them again in the tobacco habit, giving them a little at a time, and gradually increasing the allowance until they reach the limit of their capacities.

Foosibly Dr. Wiley's experiments will extend into an attempt to compare the effects of different grades or species of tobacco, foreign and domestic; but as to that positive information is not yet furnished. The experiments will be interesting of course, especially in the immediate subjects of them, whose craving, it appears, are to be appeased, glutted, restricted, and dispersed by turns without regard to their feelings.

That conclusions of practical importance will be reached seems doubtful because personal idiosyncrasy has so much to do with regulating the habits of every tobacco user, and is so difficult an element to measure. A great many thoughtful and intelligent men who smoke don't know whether it does them good or harm. They notice bad effects when they smoke too much. They know that having once acquired the habit of smoking, it betrays them when in good health to have their allowance of tobacco cut off. But whether they would be able and better men and do better

work without tobacco than with it is matter of doubt with them. To some more tobacco is so much fuel which stimulates their wits and senses to enable them to run their mental machinery at a better speed than they can get without it. Others, by devoting a large part of their strength to the consumption of tobacco, are able to get along with very little other outlet for their energies. It is the busy man's stimulant, and the lazy man's helper.

It is matter of common observation that when grown up, and intelligent smokers find that their capacity for tobacco has been overtaxed or become impaired they smoke less, or stop entirely. The habit is easier to regulate than the Irish habit, since we constantly see persons prevail to carry their liquor has been abundantly demonstrated. Young boys who get the cigarette habit often show extremely bad effects of it, and the same cause probably does very bad results in some adults, who have delicate nerves or other weak spots. But, as a rule, the users of tobacco succeed or profit well in regulating their consumption of it according to the limits of their capacity.

It does not make smokers wretched and vain fellows as rum often does. Indeed, is so far so it soothes irritation and induces contentment, it makes for domestic happiness. Some great men, workers of supremely active minds—as Gladstone, Charles A. Dana, and Roosevelt—have not been smokers. Others have. Bonall was a constant smoker, General Grant smoked all the time when his mind was most keenly occupied. De Witte, the famous Russian Minister of Finance, has been described as smoking cigarettes incessantly over his work. Most artists smoke; tobacco seems to stimulate the imagination. Most writers smoke, though Mr. Howells doesn't, and Dr. Holmes finally abjured tobacco and denounced it as a thief of time. Tennyson's clay pipes and Rip Stevenson's liag's bear tell of the tie between tobacco and poetry. Stevenson's liag's bear tell of the tie between tobacco and poetry. Stevenson's liag's bear tell of the tie between tobacco and poetry. Stevenson's liag's bear tell of the tie between tobacco and poetry.

Among the smokers there is that prodigious worker Mr. Morgan, an earnest consumer of long black cigars much vaunted in the newspapers. How about Mr. Harriman, Mr. George Gould, Mr. Cassatt, Mr. Belmont? We guess they all smoke a good deal—and they dare—and somehow we guess Mr. Rockefeller doesn't and never did. He doesn't have to, and probably nowadays tobacco is a world disagree with him. In the Wall Street district there is a pretty large and solid steady consumption of pretty good cigars. The tension is high there. Nerves need steady, and there is no part of the country, not even Park Row, where imaginations are more active.

Maybe the world would be happier if beverages did not intoxicate, though we are not so conclusively certain of that as many good people are. But would it be happier without tobacco? Perhaps we shall know better when Dr. Wiley has finished his experiments. Meanwhile we don't think it would. Charles Lindbergh once said that he would think tobacco was the root of all evil if it were not for what he knew of the Romans, who didn't have it. It is a new thing, comparatively, and is spite of its abuse, and of the men who bring lighted cigars into public conveyances, and of persons who know no better than to smoke when they are driving or walking with ladies, and of all other persons who smoke at the wrong time or in the wrong place, and of the high price of good cigars, and the badness of all cigarettes, for our part we like the world better since it added wooden Indians to its population.

## A Massachusetts Labor Commission

As announced by the Massachusetts Legislature, Governor Bates has lately appointed a commission to investigate labor problems. Beyond limiting the commission to five persons, and providing that one should be an employer of labor and one a representative of labor, the Legislature imposed no restrictions on the Governor. He has selected Carroll B. Wright, president of the legislative department of Clark University, who is to be chairman; Royal B. Adams, treasurer of the American Waltham Watch Company; Davis Rich Dewey, economist and statistician, and a professor at the Massachusetts Institute of Technology; William M. Osgood, a Boston lawyer, and a leading Democrat; and Henry Bierling, a printer employed in the office of one of the Boston newspapers, who is prominently engaged in the work of the typographical unions.

The commission will take up the existing law bearing on the relations of capital and labor, with a view to perfecting it; and will also consider the questions of employers' liability for injury to employees, the conduct of strikes and lockouts, the treatment of labor troubles by injunction, blacklisting, disability and pension funds, industrial partnerships for the purpose of regulating wages, and schemes of industrial courts. All these matters were before the Legislature in the form of bills and petitions at the recent session, and all go in this commission for investigation and recommendation. The creation of this commission is the first official attempt in Massachusetts at a broader scientific treatment of the whole subject of labor.

## THE EXPERT HORSEMANSHIP OF THE AMERICAN WOMAN

*Mrs. Thomas Hitchcock, Jr., who is one of the best horsewomen in this country, always rides astride, on the theory that she is not only safer in the hunting field, but more comfortable and better able to stand long distances. Her costume consists of high riding-boots, a low-trimmed, and a long coat that falls below the knees and is practically a divided skirt.*

### THE ACTING POPE DURING THE INTERREGNUM

*Cardinal Gregorio, the Dean of the Sacred College of Cardinals, acts as the temporary representative of the papal power until a successor to Leo XIII. is elected. At the death of the Pope, the supreme power of the Church of Rome passes immediately under the control of the College of Cardinals until a new Pope shall have been decided upon. Cardinal Gregorio has been mentioned in Rome as a possible successor to Leo XIII.*

# The Pope as a Politician

By Sydney Brooks

London, July 26, 1923.

THOSE who know Europe best have the most respect for the realities of the papal power. Those, conversely, who affect to regard that power as resting on "superstition" or who look upon it as a mere "interesting relic" know neither Europe nor the world. To leave the Vatican out of account is to miss the greatest and most pervasive influence that plays upon the politics of the world. Supreme and inflexible in all matters of faith and morals for the devout Catholic, the Pope exercises over the tangible affairs of kings and statesmen a dominion hardly less supreme and considerably more extensive. He teaches the consciences, not only of those who believe in him—a large section of mankind, no doubt, but still far from being the whole of it; he touches the politics of the entire world. His spiritual empire is absolute and unquestioned, but it is confined to professing Catholics; his temporal empire, while no less absolute nor unquestioned, has no limits. It embraces the entire earth and every nook

and cranny of it. In a sense, it seems almost to transcend the bounds of space and time. Emperors and presidents, kings and dictators, monarchies and republics, civilization and heathendom, all come within its scope. Wherever there is a Roman Catholic, there is the Pope. The smallest atom of the mighty organization that looks to him as its head exercises, whether it chooses, the privilege and, if need be, the support of the entire organization. Nothing can happen anywhere that in the least affects Roman Catholics without directly concerning the papacy. Its diplomacy, therefore, is of our world-wide and microscopic. Temporal interests, German "interests," Russian "interests," even the "interests" of the British Empire, are as nothing. No chancellor or foreign office in the world has anything like the range of the Pope's authority.

The network of the papal power has a mesh wherever men are living. The Vatican is, in this sense, the centre of the earth." So, I believe, wrote Mr. Justin McCarthy some years ago, and his words are literally true. Napoleon is at the height of his splendor and his power never waned a tittle of the constant and asserted authority of Leo XIII.

Along what lines did the late Pope administer his jurisdiction? What was his policy? To answer that fully would require an examination into the political history of every civilized country and almost every uncivilized one for the last century of a century. At one time or another, during the long pontificate of Pope Leo the Thirteenth had negotiations to conduct and questions to settle with every European nation, with China, with Japan, with the United States, with Canada, with pretty nearly all the South American Republics, and with large sections of Africa. Most of these questions arose on the eternal difficulty of the schools and the political status of the Church; others were of a purely secular nature; others again took rather the form of a general policy. The first and most of all were of course the expansion development wherever development was possible. The second object of a better and more secure name may be spoken of generally as a labor and varied appeal to him. It appealed to his humanitarian; to his keen and reflective interest in social economy; about to his religious ideas. He watched with an unrelenting vigilance the growth of popular infidelity, the final triumph of the hands of faith; and he was inclined to find in modern life, "It is a sad and gloomy picture," he said, "a society has had sight of, and mistaking religious principles, that it sees itself now shaken to the foundations. To restore these principles and to

give them back their strength of influence over the human race, is the only means of re-establishing society on a sound basis, and of guaranteeing peace, order, and prosperity. It is the mission of the Church to preach and spread these principles and these doctrines throughout the whole world." Christ-like, serious, unambitious, and most other "isms" he brushed aside. The Church appeared to him the only adequate agent of regeneration, the only one whose final results, if slow, would be permanent. He did, indeed, in his famous encyclical of 1891, pronounce solemnly not only as a politician, but as a deeply religious man and as a Pope whose policy was as bold and broad, though in another and better way, as Gregory VII's or Innocent III's, it was to the Church he looked as the ultimate savior of society. From first to last he was the working man's Pope.

I think a third object of Leo's diplomacy may be found in his persistent acknowledgment of facts, and in the way he encouraged others to acknowledge them also. In other words, though a reformer by instinct, and a practical one, his policy was in the best sense conservative. Two remarkable instances of this may be given. It is not too much to say that but for Leo's sagacity and forbearance there would today be no republic in France, and an Alphonse would not wriggle the throne of Spain. His recognition of the Third Republic was an act of peculiar courage. An immense majority of French Catholics identified monarchy with religion. The Comte de Mun organized a great Catholic party, the policy of which was to be frankly anti-Republican. The republic itself was and still is bitterly anti-clerical and anti-papal. The Church was immediately attacked and discredited. Gauchat picked out evolutionism as the enemy of all others for the republic to be on its guard against. The change to a constitutional Pope to create a turmoil that could only have ended in a violent civil war and in the overthrow of the republic—which, one must always remember, only came into existence by default, stepping in through the gap of royalist feuds—was not promising. But Leo the Thirteenth held his hand. In spite of immense pressure he declined to take up the Bonapartist challenge. Instead, he formally and frankly recognized the new régime. By special letters to the French clergy, by a public encyclical, and by a still more public interview in the *Petit Journal*, he made it clear that the policy he recommended in French Catholicism was not subversion, but acquiescence. "Accept the republic," he wrote, "that is to say, the power constituted and existing among you; respect it and be submitted to it, as representing the power that comes from God." To the revolution then taken he adhered without wavering. Even the Panama scandals failed to shake him. Only a statesman of singular prudence, moderation and humanity could have acted as he did. The condition of France today, of hope, contentment and prosperity we are now witnessing, are tribute enough to the soundness of his judgment.

In Spain, too, the papal influence has been an inestimable weapon of purification. But for the love of peace that dictated every move of Leo's diplomacy, the Spanish clergy to-day would be Catholics to a man.

He had but to lift his hand and Carlism would have risen from a sentimental cult to a fighting cause. Here, again, the temptation must have been strong. Man for man, or, rather, system for system, the Pope would naturally prefer a Catholicism to an Alphonse. Nevertheless, the Pope not only turned his back on Carlism, but pointedly recalled the Spanish clergy to the support of the existing régime. He took it publicly under his protection, with the result that Alphonse XIII. to-day seated on the throne not indeed secure, but infinitely more secure than it would be had Leo XIII. refrained from checking the Pretender.

Pope Leo in his Pontifical Robes

## THE LAUNCHING OF THE "ERSATZ KAISER" AT KIEL

The recent launching of the German cruiser "Ersatz Kaiser" at Kiel, was one of the most spectacular events of the gathering of the German fleet in Kiel harbor. The German Emperor was present in person, and with his suite and invited guests, gave added social importance to the event. The picture was sent by our special correspondent at Kiel. It was taken at the moment when the officers of the German fleet were saluting the Emperor, just before the ship was sent into the water.

# Books and Bookmen

By James MacArthur

WHI that has read *Eleanor* can ever forget Mrs. Ward's impressive and moving picture of the Pope in St. Peter's. Rome? In all contemporary writing there is no more memorable or touching portrait of Leo XIII. in his highest Pontifical moment. The description is instinct with noble feeling, religious fervor, and reverential awe. One is caught by her mood and vision and made to see and feel what she saw and felt—the roar that came up the vast church, passionate, undecipherable, as the "white-robed, triple-crowned Pope" enters. "There—there he is—the old man! Caught in a great shaft of sunlight striking from the south to north, across the church, and just touching the chapel of the holy sacrament—the Pope emerges. The white figure, high above the crowd, swings from side to side. The hand upraised gives the benediction. Fragile, spiritual as is the apparatus, the shadow, reflexes, substitutes, spiritualize it still more. It hovers like a dream above the vast multitude—surely no living man"—but thought, history, faith, inkling shape; the passion of many hearts revealed. I'll rudder the rear towards the Tribunes. . .

"The Pope and his cortège disappeared behind the Confession, behind the High Altar, and presently, could be seen dimly in the farthest distance, against the apex, and under the chair of St. Peter, the chair of Leo XIII. and the white shadow, motionless, erect, within it, amid a court of cardinals and diplomats. . .

"One more movement, however, there was,—very different from the great movement of the entry yet beautiful. The mass is over, and a temporary platform has been erected between the confession and the nave. The Pope has been placed upon it, and is about to chant the Apostolic Benediction. The quivering voices rise into the ceiling above the silence of St. Peter's. Fifty thousand people hold every moment, strain their eyes to listen. Ah! how weak it is! Surely the effect is but a pretence, for fear so pathetic, so agonizing, the Pope shows a long sigh—the sigh of weakness. . .

"Ah! precious! sets a woman, in a transport of pity—then more attempts the chant, sinks again—and sings. Nothing more to be said. Fragile, motionless, low beneath the Papal crown, a child, because he is weak and old, and the burden of his office is great, but in singing, keeps a perfect poise, dignity, courage. He sings in the end and so Peter's white is a terrible thing straight lips close as though with a great thought. The singing, the words drop like suspended rain, and open doors. . .

"That he guards from the choir, the Pope's eyes close away. He opens his eyes, the choir, the Pope's eyes close away. Whether that the singer's eyes, and the choir's eyes close away. . .

himself, clinging to the chair; he lifts the skeleton fingers of his partly gloved hand; his look searches the crowd."

A few weeks ago I noted the success of Mr. Kinsley Pyle's one-act play, adapted from Kipling's "The Man Who Was," which was presented on the occasion of the poet laureate's dramatic production, "Flooded Field." Mr. Beerbohm Tree and Mr. Max Beerbohm have equally distinguished themselves, Mr. Tree in the impersonation of Amelia Linnsson, and the irrepressible Max in his caricature of the dramatist as the Man of the Moment and the author as the Man who Was. There has been a growing tendency

to speak of Kipling in the past tense, and nothing stops the truth or starts a lie in the public mind faster than the caricature of a trenchant wit. But there is never kindness in Mr. Beerbohm's art; it is pure fun, born of the moment's fancy, and I have never known any of his victims refuse to join the jest. He knows that he laughs best who laughs last, and that "what is excellent, as God lives, is permanent."

The vulgar see the tower, then invest the scene.

Mr. Kipling seems to be in the way of getting dramatized at last. One of London's successes during the past season has been "The Light that Failed," which after several legislative efforts on the part of aspiring and ambitious dramatists, was finally adapted to the stage successfully by Constance Fleming. It is this same capable dramatist, by the way, who is now at work on Mrs. Ward's *Lady Row's Daughter*. We are promised a New York production of both these plays next autumn. Miss Fleming is, by all accounts, exceptionally clever at play building, but, undoubtedly, great part of "The Light that Failed" is due to the acting of Mr. Forbes Robertson and his charming young wife, and the problem of fitting the part of Julie Herbin to an actress who will hold the soul into it will not be easily solved.

A statement made in all seriousness recently by an eminent writer on a young woman's paper that "As compensation for plainness it has been noticed that plain women nearly always talk well," has driven a poet to devising this:

He sat low, and her voice was June,  
A live wit, a very plain.  
"But what of that?" "No doubt," said he,  
"She'll be true the most brilliantly."

And he married her. But oh!  
Alas! he did her but of use.  
His wit all such poor fellow: That  
He had no more to trouble at.

A woman's plainness, as to talk well, or ill—as she sees fit, but that the plainness of the "new" thought which has been going to make a woman's plainness in the women's clubs, plainness is evidently a thing which cannot be compensated for—even in verse.

## Housekeeping on an Ocean Liner

THE PART OF THE SHIP THAT PASSENGERS ARE NOT ALLOWED TO VISIT.—WHERE THE "BETWEEN-DECKS" WORK IS DONE.—SOME OF THE CURIOUS AND INTERESTING PLANS FOR OCEAN HOUSEKEEPING.—FURNISHING THE SUPPLIES FOR A WEEK'S HOME LIVING ON THE TRIP TO EUROPE.

By Franklin Matthews

**J**'UST as the battleship, in the broadest sense, is a floating steel fort with engines under it to move it from place to place in the shortest possible time, so is the average liner a floating hotel with machinery in it to move it from one side of the ocean to the other with the greatest possible speed consistent with safety. Every great ocean steamship leaving New York for Europe carries from \$10,000 to \$15,000 worth of food and drink supplies. The leader of the ship is usually loaded for the return voyage as well, for two-thirds of the perishable food is purchased on the American side. This is especially true of meats, flour, and sugar. Liquors are bought on the European side, because they are cheaper there. The lines give bonds not to sell any liquors when in port on the American side, and thus the duty is saved on this class of goods. Inasmuch as the drink-stores are not perishable, the profit to the company on their sale is large and certain.

A day or two before a great steamship sails the general passenger agent sends an estimate of the probable number of passengers that the vessel will carry to the port steward. The port steward has already received, usually from three houses, an estimate of prices. He then makes his requisitions, and early on the morning on which the vessel sails the trucks come lumbering down to the pier, and in a few hours the goods are stored on board. The ship has taken on by this time from 3000 to 3500 tons of coal, about 500 tons of water, 20 tons of live, several thousands tons of cargo, and, at the last minute, the passengers and their baggage are stowed away.

the whistle blows, and the vessel backs out slowly, with the aid of spurring tugs, puces a moment in midstream, and then starts for Europe.

Most of the port stewards of the great lines spend from \$1,000,000 to \$1,500,000 a year for supplies in New York alone. Here are some of the items of what the supplies include: Fully 50,000 pounds of fresh meat, two thirds of which consists of beef. There are generally 10,000 pounds of poultry—chickens, ducks, squabs, geese, and other fowls on board. The meat supplies include calves' heads, kidneys of various kinds, sweetbreads, ox tails, sucking pigs, and, indeed, every kind of delicacy that the butcher can furnish. Not overlooked are kosher meats for Jewish passengers, and large supplies of salt and canned meats of all descriptions. In fresh vegetables there are 200 bunches of asparagus, 500 heads of cauliflower, 400 bunches of beets, 15 barrels of onions, 600 barrels of potatoes, besides radishes, tomatoes, leeks, cabbages, beans, and egg plants and other supplies in season.

The items of fruits is large. Fully 25 barrels of cooking apples and 20 barrels of eating apples are supplied. About 50 bunches of bananas are stored away. When in season, 500 pounds of grapes, 40 boxes of oranges, 250 pineapples, and 500 quarts of strawberries are used. Then comes a great variety of canned and dried fruits, with all sorts of jams and jellies and marmalade. Fully 10,000 pounds of butter are consumed on a voyage. There are different grades of butter, according to the classification of passengers. At least 350 barrels of flour are carried and about 2000 pounds of

The First-Class Galley on an Atlantic Steamship, where the Food for nearly Four Hundred Passengers is prepared. There are separate kitchens for the intermediate passengers, for the steerage, and for the crew.

crackers. About 2000 pounds of cherries are used, and 500 gallons of condensed milk and 600 gallons of fresh milk, with about 200 quarts of cream. In fish about 6000 pounds of various kinds, fresh and dried, are eaten. Fully 10,000 pounds of sugar, 2000 pounds of coffee, 1200 pounds of tea, are consumed. No less than 200 bottles of olives and 1500 bottles of various kinds of sauces—tomato, mushroom, walnut, anchovy paste, and the like—are needed to fill up the larder. Something like 150 gallons of vinegar and 1500 bottles of various kinds of spices go down on the list, with 2500 pounds of salt.

All the ice-cream used on board is made in the United States, and carried to Europe for the incoming as well as the outgoing voyage. Ice-cream, American fashion, is not made in Europe for general sale, and every large steamer takes about seven quarts of it when the vessel starts out from New York. The liquor supplies for a liner include about 2500 bottles of champagne, 2000 bottles of claret, burgundies, and American wines, 1500 bottles of white wine, hock, and sherry, 2000 bottles of whiskies, 2000 bottles of ale and porter, 4000 bottles of beer, 5000 bottles of mineral waters. About 8000 cigars of various kinds and the same number of packages of cigarettes are included in the bar outfit.

All this amount of supplies is based, of course, upon a full passenger list, say from 400 to 500 first-class passengers, 200 second-class passengers, and from 800 to 1200 stowage passengers, with a crew of say 400 persons. In addition to the ordinary supplies, the government requires emergency supplies to be carried, so as to provide food for fully a month in case of accident. These supplies are chiefly canned or dried goods, and consist of peas, beans, barley, flour, canned meats, coffee, tea, and sugar. They are rarely used, and, after being carried for a few months, it is often necessary to condemn them and get new ones in.

The element of waste on an ocean liner is enormous. It is safe to say that there is not a port steward who does not wish that food, like the liquors, could be sold by the cask. At present the first-class passengers are fed in the style of the most expensive of American hotels, and far beyond the needs or desires of the ordinary passenger. If such one should pay for what he eats, according to a scale of prices, the line would conserve what is now largely wasted. However, it is altogether unlikely, in the present stage of competition, that any such change will be brought about. The liners will go on supplying food on an extravagant basis, and there will be no limit in the luxury of the table.

The domestic economy of a great liner includes other important items than food. The great supply of liners of all kinds requires a system of laundry work that involves a heavy cost each year. In the plan of the ship room for jackets and linens, as well as for the kitchen and adjacent storage places, must be supplied. The ice-manufacturing plant, the cold-storage and dynamo rooms, all occupy spaces convenient of access, and almost as next to the passengers as the culinary arrangements and linen repositories.

Far back in the ship, usually behind the stowage, is the post-office. This is a busy little caddy-hole. The clerk has his time occupied nearly all the while. In some of the boats there is a well-equipped gymnasium, where active and athletically inclined passengers may, if they choose, keep themselves in good physical condition during the voyage. This department is furnished with the usual apparatus, and is well patrolled on all of the liner's trips. There is also a hospital—or sick-bay, as it is called. Quarters for the crew take up a noticeable amount of space. With all these housekeeping requirements it is easy to see why the spaces of the hold are often encroached upon to supply the needs of the passengers.

The Gymnasium

Where athletic passengers may keep in training during the trip.

The waiters are cleaning the silver table service used in the first-class.

### A SUMMER SPECTACLE AT MANHATTAN BEACH

The photograph shows a panoramic view of the ballet which precedes the mimic destruction of the old city of Pompeii in the spectacle "Last Days of Pompeii" at Manhattan Beach. The ballet is followed by choruses and arabesque feats. The buildings shown in the picture are connected by a passageway with a device, under the stage, so that at a given signal, the eruption of Vesuvius, they are automatically destroyed.

### IN "PEGGY FROM PARIS"

*The latest portrait of Miss Helen Hall, who will take a principal part in George Ade's "Peggy from Paris," to be produced by Henry W. Savage at Wallack's Theatre early next season.*

An Experimental Electric Car travelling at 100 Miles an Hour  
The car was propelled along the top rail, the axle rests upon horizontal wheels preventing the car from derailing.

Inside a Mono-rail Car  
The passengers are to sit on either side of the central propulsion, which covers the propelling wheels running on the top rail.

## One Hundred and Ten Miles an Hour by Rail

THE FIRST MONO-RAILROAD TO BE BUILT FOR PRACTICAL USE WHICH WILL CARRY PASSENGERS AT OVER ONE HUNDRED MILES AN HOUR WITH GREATER SAFETY AND COMFORT THAN THE EXPRESS TRAINS OF TO-DAY.

**T**HERE is at last in sight a railway that will carry passengers 110 miles an hour regularly, and the credit for making it practicable belongs to Great Britain. There have been models of high-velocity railway-trains made in different countries, and a mile or two of track have been constructed for experimental uses, but Mr. F. H. Bahr, an English engineer, deserves the credit for putting the thing into practical use.

The railway is to be built at once between Manchester and Liverpool, a distance of 34½ miles. Only through trains will be used, and the running time will be less than twenty minutes.

The system is of the so-called mono-rail type, that is, the engine and cars rest upon one rail which is about half-way from the floor to the top of the car. By arranging the seats back to back like a jangling-car, the construction is such that each of the carriages straddles the rail, and extends to trucks on either side below the floor. On these trucks are set wheels which lie horizontally and run on the outside of two other rails. They thus act as steadiers, and admit of very high velocity with safety, and make abrupt curves possible. The plan is to run an engine and one car every ten minutes, and the probability is that in time for a radius of 100 miles around a large city people can get in and out each day to their business within an hour. Mr. Bahr has the support of expert engineers all over England. Many of them appeared before the House of Commons committee at the time when the sanction of the government was secured for the building of this little road, and they testified to the safety and practicability of the whole scheme.

Engineers are agreed that average speeds of over seventy miles an hour are impossible on the curves found an existing railways.

The construction of a special mono-rail track would enable very high speeds to be reached with perfect safety and would do away with that "mixture of speeds" which renders the problem of dealing with express, slow, and goods traffic one of ever-increasing difficulty to the railway companies. The mono-rail tracks would be laid alongside the existing two-rail ground tracks or the cars could be run overhead if so desired. A view is given above of a mono-rail electric car moving at the rate of one hundred miles an hour. It has been practically established that the limit of size and power in locomotives and in rail-construction has been reached according to the present railway methods. Electricity has helped materially in grades, not only making a great saving in the construction of road beds, but in opening country of certain topographical eccentricity which will never be available for steam-power generated in a locomotive hauling a train. The combination of electricity and the mono-rail system makes these much steeper grades and sharper curves possible, but at the same time it practically eliminates the danger of derailment. It looks, therefore, as if there were a chance that passengers might be able to travel with at least the same safety as to-day, at double the rate of the present fastest express train by the mono-rail system.

If this is so, another step has been made in the great work of preventing congestion in the life of modern cities. Many men in this country travel an hour by rail each way each day to and from their offices. Fifty miles is about the limit now. Extend this limit to 110 miles, and the opportunity for life practically in the country with daily business work in the centre of a city becomes possible.

A Steam Train of Mono-rail Type now in Operation at Ballinacorney in Ireland  
The railway, which is about three miles long is situated by steam with rail the last century track between Manchester and Liverpool will be by steam. The engine and carriages are along in passenger tracks across the steel rail which is raised above other feet from the ground. The steel rail is used

# The WHEELS of PROGRESS

How Hiram Duckworthy Stopped Them  
By Albert Levering

Agent: "For land sake? He, what is trouble do you think'd the like to?"  
Hiram: "I'll bet, Hiram, I'm glad to get up to this here reason, but business is good and all!"

Hiram: "Yes, it's about what I want for— Well, I've heard so much about motor-cars, I'd like to see it go."  
Agent: "It's a go on, I'll give that machine a try that will surely give satisfaction. Jump on."

Agent: "Now what's your opinion of that little fellow?"  
Hiram: "I should call it surely impossible to be reversed."

Agent: "All right—we'll go."  
Hiram: "Well, of all the ways!"

Hiram: "They've done it, by hooky."

Agent (dead): "Ah! You are satisfied? Hiram! That's correct. Thank you."

## A CHRISTIAN SCIENTIST'S VIEW

July 25, 1905.

To the Editor of Harper's Weekly:

Sir,—Since the WEEKLY is likely to comment on the visit of some ten thousand Christian Scientists to Mrs. Eddy at Concord, New Hampshire, I venture to hope that the personal note of that great gathering will not escape the recorder. That note was one of gratitude and love, there were men and women who had definite blessings to record, as the result of applying Mrs. Eddy's teachings to every-day affairs. There was a noble restraint over their demeanor, which was very generally noticed by the townspeople of Concord and others, but nothing could stifle their gratitude and no one would have wished to do so.

There was no fulsome flattery, but it is more than probable that in the minds of many of the visitors there was a recollection of the unkindly criticisms and denunciations which their personal headmaster had undergone in these past. This recollection was one of the many factors in drawing out their love.

I am, sir,  
W. D. McCrackan.

## DR. MILBURN'S BOOKS

JACKSONVILLE, FLORIDA, June 22, 1905.

To the Editor of Harper's Weekly:

Sir,—It was the request of the late William H. Milburn (popularly known as the "Bill of the Evening," and for many years chaplain of the House of Representatives at Washington, D. C.) that his private library be sent to Professor John H. Woods, of this city, his lifelong friend, and through him, after he had made a personal selection, the balance of the books were to be given to the public library recently presented to the city by Andrew Carnegie.

The number of volumes in the collection is between 1200 and 1500. The list includes biographies, reference books, books of travel, and many other volumes, but Dr. Milburn collected in his extensive travels. The gift is greatly appreciated by the library board, and indeed by the citizens generally, and it is certainly most fitting that here where Dr. Milburn lived and received his education, and where he spent so many of his vacations, these books should be preserved as a perpetual memorial of his career. The unpublished manuscripts and private papers of the deceased were given into the keeping of Oliver Milburn, a nephew.

I am, sir,  
WALLACE ROCKMAN.

## SHALL THE PRESIDENT COME FIRST?

PHILADELPHIA, July 20, 1905.

To the Editor of Harper's Weekly:

Sir,—Among the many news to which your pen is put, can you not find the time to give for some criticism of the custom among our people, both official and non-official, of always playing second fiddle in the other fellow. In spite of our wonderful growth in power, wealth, and population, and our recognition among the nations of the world as of the mightiest, the will of which I write, increases and does not abate. I complain particularly of the abased and humiliating habit at all banquets in which toasts are drunk whether given here or abroad, while the principal guests use of some other country, to always toast the monarch of the other country before our own Chief Magistrate. The reason for this I cannot understand. The people of no other nation do this. To them their own is always number one and never number two, whether it be at home or abroad, and why we should not do likewise, passes my understanding. I have been paying particular attention to the different banquets given abroad by our ambassadors, ministers, admirals, and those who are not in official life, as reported from time to time in the daily newspapers, and, without exception, the other fellow gives the preference, while our President was made to follow immediately after him. Note in the reports of the reception in the Prince of Wales by Admiral Cotton on the *Reverence*, an American ship, and hence American territory, where the toast was the "King and the President." Our band played "God Save the King" as the Prince departed, while the band on the English vessel tried to play the "Star-Spangled Banner," but could not do with any satisfaction, to the listeners. This was the case at the dinner given to the officers while in Germany and in England, where, in each instance, the guests always toasted the "Emperor and the President," or the "King and the President," according to the country in which it was being given, the next toast was our country to their guests, the "President and the Emperor," or the "President and the King," but the other fellow first and ourselves second. I can recall but two instances in this country at banquets given by our first, and they were given in New York in which our own figured being the "President and Emperor William." If you will take the time to look over the reports of the several banquets given yearly by the different foreign societies whose members have their habitates in this country, you will see the difference between their conduct in this regard and that of our own people. It is the ruler country in their mother-country who leads, and not that of their adopted country. This may seem a trifling matter, and possibly not worth your consideration, but it seems to me that there is now too much lack-splitting and toadyism abroad. Our evidence of our de-

generacy officially is to be seen in the conduct of our ambassadors and ministers in court dresses rivaling Solomon in all his glory. Shade of Franklin what does it all mean?

I am, sir,  
GEORGE H. FRANCIS.

## THE AMERICAN SOLDIER AND HIS FOOD

Fort Thomas, Kentucky, July 21, 1905.

To the Editor of Harper's Weekly:

Sir,—Having just read an article in your magazine of June 20, 1905, headed "An American Soldier and His Food," by J. E. Jenks, and having the advantage of years of the most practical service that the lines have afforded, my surprise at the differences between the author's account and the reality of experience prompts me to submit these few remarks: not to criticize or deny, which my position would warrant, but to outline this difference so as to give a more correct impression.

A general statement is made that the soldier of to-day, unlike his predecessor of the civil war, need no longer depend upon the uncertainties of the forage. If the author is confining this remark to the United States proper, then I see it as he does; but if he means to say that in a strange country away from railroad lines the case is then I must say that I have not found it so late as 1868-9, and can even see that it might yet be necessary to depend on forage on occasion.

It would probably prove uninteresting to cite instances where men have lived on nothing but what they could scrape, until soundly from lack of proper food and others were ruined in health. It would also be tiresome to dwell on the fact that from three to fifteen days' rations having been issued to each man, he was expected to cook his own food, and divide his ration-supply as he saw fit, but him through the entire period, and have nearly all being hungry and tired and feeling that they needed something to sustain them, and this three days' allowance in no many meals and this fifteen days' allowance in six days, and what did they live on during the balance of the ration period? Why, on whatever they could forage, of course.

I do not wish to reflect on the ration system of our country, and agree with Mr. Jenks that we have the finest in the world; but from the necessities of an unimpaired world, and the masses of produce were trudging in the rear of an advancing column, ready to distribute whenever the demand might be made. This is not so, for even in the garrisons at home food is issued at regular intervals during the month, and if properly managed, sufficient of its kind to satisfy the demand, but with very little ammunition ten days' rations are often disposed of in eight, seven, and even six days, and then who is to pay? The commissary department will certainly not issue again until the next regular day he issues more. So you see the soldier would not have had doughn't at home under the most favorable conditions, how much more liable is it to happen in the field where the odds are against the management in all things, such as abnormal appetites, demands for more food, poor fuel and cooking outfit, unfavorable surroundings, and increased wear-tire.

It is true that the soldier of to-day has many advantages over the soldier of years ago, yet the nature of the remark that the soldier of the civil war period soundly had a hard time of it, seems to imply that the soldier of to-day would have an easy time in the field. From what I have seen, and judging from the opinions expressed by veterans of the civil war and Indian campaigns, I believe that though at some the difference is great, yet in the field it would be modified.

It is true that railroads cover nearly every country, but will not the enemy destroy these roads as soon as it cannot take advantage of them, and would we in the enemy's country not be compelled to revert to the wayside for our rations, and "eat raw," just as they had to in '61? or perhaps in this advanced age to the "auto-wagon."

An officer offering ten dollars for a "pitiful cracker" does not seem very bad. I have seen privates in 1860 drawing sixteen dollars per month for it all, one pound of chewing tobacco, and were not able to buy it then.

Yes, except as used in the "emergency ration," molasses, and sugar as mentioned are not articles of the ration, and while it seems when the will to speak of new inventions of men, but the yet it is quite a different thing to diet on the article, put up especially for army use.

Mr. Jenks also speaks of satisfying the craving and ensuing demand for sweets in the Philippines, as though the government made it a point to give each man boxes of candy and sugar, and seems to classify candy and boxes as "extras" belonging to the ration. This is a mistake. True, the commissary had good candy for sale, and when the men could not buy enough, a certain amount was at times of pressing need distributed among them, but each man's name was noted and opposite, the value of tobacco so received, which he paid for from the first pay money that he received thereafter, to his company commander, who had purchased these goods to relieve the men.

Candy and tobacco are no more parts of a soldier's ration than champagne or ginger ale. If a soldier is willing and has the money to pay for them he can get them; but if not, he does without.

I am, sir,  
OTTO F. GRONKE.

Co. "D," Third Infantry, Fort Thomas, Ky.

An Artist's Work-Tower

The finished work shop of M. André Coudanier at Amsterdam, near of France, which he built up in a few weeks and afterwards he lived in it and made in his work during the summer months.

Midsummer Fiction

THE August number of HARPER'S MAGAZINE is a beautifully illustrated volume devoted chiefly to fiction. There are also complete short stories and sixteen pages of illustration in color and tint. Among the short-story writers represented are Margaret Deland, Robert W. Chambers, Mary E. Wilkins, Marie von Vorst, James Branch Cabell, Christopher S. John, Ellsworth Kelly, and Marie Vanvald Day.

Perhaps the most notable of the many exquisitely colored illustrations in the number are Rex paintings by Howard Pyle and four pictures of child life by Sarah Millwell. Two striking pictures in color are by T. Smalley, Henry Hunt, Elizabeth Shippen Green, and H. Reinisch.

There is only one serial feature in the August number. This is the first installment of a three-part novelette by Alton Brown, which promises to be the author's greatest work.

Among the interesting special articles are: "How Remarkable Distilled," a hitherto secret bit of diplomatic history by the late M. de Bismarck, former Paris correspondent of the London Times; an important and interesting paper on the use of "Foreign Words in the English Speech" by Brander Matthews; a valuable scientific paper on "Photographing the Moon," by Professor G. W. Ellsby, and an historical sketch of the new almost forgotten "Republic of Vermont," by Mayo W. Herrick.

The number is bound in special cover of white, blue, and gold, and is altogether one of the most attractive and readable issues ever published.

A Millionaire's Ferry-boat

A boat which serves virtually as a private yacht for the millionaires of Wall Street who have summer homes above the Jersey coast, runs daily between New York and Atlantic Highlands. The boats are elaborately equipped, and one may hire a private afternoon for the season, with a special piazza of his own. The competition for these private afternoons has been so keen that many of the rich men who patronize the line have had to enter their applications for years in advance. The boat which leaves the Metropolis in the early afternoon is especially popular with the great men of the financial district, who leave

their offices in the middle of the afternoon for these ferries along the Atlantic coast, and one may see on her decks, almost any afternoon, such magnates as the Hon. Cornelius M. Bliss, Jacob H. Schiff, George F. Baker, W. F. Havemeyer, Isaac Seligman, and John A. McCall.

A Matter of Taste

AUGUSTUS THOMAS, the playwright, tells an amusing anecdote of a certain well-known Western editor, who was very exacting in his literary standards. A member of his staff handed him some "copy" on one occasion, which was handed back in a few moments with the bulk of it cut out by the editor's ruthless blue pencil. The reporter eyed his mutilated manuscript with a discontented countenance.

"There's no doubt about it," he observed contently to the editor, "I don't write as well as I used to."

"That isn't it," rejoined his chief; "you write just the same, but your taste's improved."

ALFRED T. MITCHELL—MR. W. H. BROWN'S SUCCESSOR AS EDITOR of HARPER'S WEEKLY for children's reading. It makes the right, better the good, gives all sets, pure, well edited, and is the best ready for children.—[Ed.]

# A DAWN IN THE DESERT

By Joseph A. Altsheiler  
Drawings by George Gibbs

A Story in Two Parts.—Part II

**H**ARLEY remained there a long time, gazing into the illustrious desert, which seemed to him so truly a grave. At last he went in, but as he passed through the lower hall of the hotel he heard the strident voice of the landlord rebuking Hill, the waiter, for laziness and neglect.

"Half them dishes ain't washed up yet," he said.  
Bill made no reply, but Harley saw him lean over a pile of dirty dishes. The correspondent sighed and went up to his room. When he awoke the next day the sun was high in the sky, hanging like a ball of copper over the burning desert. After breakfast he sought the landlord.

"Mr. Keyes," he said, "I want to hire your man, Bill, for this afternoon and evening. He's taken a foolish notion that he'd like to fix up like a gentleman and wear Jimmy Grayson, and I've taken an equally foolish notion that I'd like to have him do it."

Keyes stared at the correspondent.  
"Wa'n't you Eastern people are pow'ful cur'us," he said. "You kain't fix up Bill like a gentleman; you might put gentleman's clothes on him, but he'd be the same dirty, cringing fellow without the spirit of a curio in him."  
"It's my notion," said Harley, briefly, "and I'm willing to pay for it."

"A man like a crank any time he pleases if he's got the price to pay for it."  
Harley named a sum for a half day of Hill's services that Keyes promptly accepted, and the bargain was closed.

There's a Mexican fellow around here that I fix ring in in Hill's place," he said.  
Barton came to Harley an hour later, when he was sitting comfortably on the veranda, his eyes shaded from the sun, and plumped himself down in the next chair.

"See here, Harley!" he exclaimed, "what is this I hear about you and you all fellows, the one whom I never knew to do a cranky thing before? They tell me you are going to dress that smoking dirty waiter, Bill, in good clothes, and take him up on the platform to-night with Jimmy Grayson."  
"They tell you the exact truth," said Harley, his eye on a bare red hill in the desert.

"Why?"  
"Just a freak idea of mine; I wish to break the monotony."

Barton snapped his fingers incredulously.  
"Do you see any hayseed about me?" he asked. "I know you don't do things that way. There's something queer in this,—you, queer."

"Harley did not take his eyes off the distant red hill, but he replied, gravely:  
"Yes, there is something queer, one of the queerest things I ever met in my life. How long have you been working on the New York papers?"

"Eight years."  
"Then you remember the Great Davonport Mystery?"

"Of course; that was too big a sensation to forget, even in this day of sensation—the brilliant fellow who went all to pieces and then dropped off the face of the earth, so to speak. Wasn't there a nasty scandal, bedevilled?"

"Yes, his wife, you know—another man—Davonport got a drink to drink at a terrible rate—the same imaginative quality that made him a great orator, pushed him to the very depths of dissipation, I suppose."  
"I remember," exclaimed Barton, with increasing interest.

"Then he was to speak in the Madison Square Garden—enormous crowd there, all his political enemies, too, looking for at least a part of what came—I was present at the reporter's table—what a scene! He broke down, not an idea, and what was worse of all, his enemies howled! I was present at the reporter's table, and I struck by lightning—and he so young, too—he couldn't have been much more than thirty."  
"It was all just as you say," said Harley.

"But, what has all this to do with this fool thing you are planning?"

"A bit."  
Barton wheeled in his chair and stared at Harley. But Harley was still looking at the bare red hill out in the desert, and his hat brim was bow down over his eyes.

"You don't mean—"  
"Yes, I do mean. Now, Barton, old man, don't say a word, but just do as I tell you, and make the other fellows do the same. You promise?"

"Yes, I promise," replied Barton, and said no more, but he was the victim of a drowsing curiosity.  
After the twilight Harley took the waiter up to his room, the man weakly protesting, but obeying the stronger will of the correspondent as a dog obeys his master. Harley loved him to shave off the hideous beard, and when it was gone he was surprised to observe how little the features had changed, how the old, bald elastic outlines reappeared. Then he produced from his valise what he called his "Sunday suit," a bag black frock-coat, vest, and light trousers that he wore sometimes when he came to the larger towns in the West.

"Harry," he said, "I'm a big man, too, and this will fit you well enough for to-night. Not a word now! Throw off those old things of yours and get into this suit at once."

The man glanced timidly at Harley, but he seemed afraid to speak, and after a moment's hesitation put on the clothes. Apparently the good garments, of a cut that belonged to the present, exercised an effect upon him as he straightened up and looked at himself in the dusty glass on the wall. A faint gleam of a spirit long gone appeared in his eyes, and he threw back his shoulders. Harley, looking at him, was surprised. The man, now that he did not stoop, stood more than six feet high. His smoothly shaven face was broad and open, and the hair beginning to thin at the temples, retreated slightly from the brow. Harley was more than surprised, he was startled.

"Strange that two men with the same gift should look so much alike," he murmured.

The waiter did not notice him, but was still staring at himself in the glass, as if all the old memories were busy. Harley looked again at the man, the tall, erect figure, the smooth, massive features, the hair rather long, slightly tinged with gray and brushed back from the forehead, the black string tie and the long black coat, buttoned tightly about the broad chest.

"How like!" he murmured.  
The waiter turned away and glanced at the window.  
"Come, Harry," said Harley, briskly, "the crowd has gathered, and it's time to go. Don't you be nervous; it's pitch-dark everywhere except at the very edge of the speaker's platform, and nobody will see you."

He put his hand firmly upon the man's arm, and together the two went out of the house and toward the improvised stage in the open from which Jimmy Grayson was to speak.

Black night enfolded the desert, as the moon was not yet risen. The crowd had gathered already, although the candidate's train was not due until 8:30, and that was fifteen minutes away. It was a typical Southwestern crowd, drawn from a circle of a hundred miles,—prosperous cattlemen, cowboys, mining prospectors and wanderers, all quiet, orderly and waiting, ready to applaud every sentence that their hero, Jimmy Grayson, might utter. Closely packed, they formed a wide black ring around the speaker's stand.

Harley, with his hand still on the waiter's arm, pushed his way through the crowd toward the platform, which was almost wholly in the dark, except at the table beside which Jimmy Grayson would stand, where two lanterns flickered. He and the waiter climbed upon the platform where Barton and his comrades were already seated at the table placed for the correspondents.

"Pretty dusky for writing, eh, Barton?" said Harley.  
"Oh, it's all right," replied Barton, coolly. "Long practice is a good thing, and there ain't a fellow here who couldn't write in the dark."

He looked up and by the flickering light he caught a glimpse of

the waiter. He started and was about to utter an exclamation, but he remembered his promise and was silent.

"But here, Harry, and you can hear well," whispered Harley, "take a chair in the farthest and darkest corner of the stage. The big man sat down obediently and Harley sat near him. These passed and the crowd standing there in the darkness thrilled with expectation. In a few minutes Jimmy Grayson, their idol, would be there, and they would hear the golden notes of his voice.

The multitude now began to give forth all the familiar sounds of a great political gathering. There was a noise of moving feet, of long breaths, of men making comparisons and recalling other speeches. In the distance horns stamped and rattled their bits.

Harley, despite the dark, was watching Bill, the waiter, and he was so close that he could see. When the multitude first began to talk and show expectation the man suddenly raised his head, and a fire that had long seemed dead began to kindle in his eyes. Harley, watching him, said nothing, but despite his habitual calm a strange excitement rose in his breast at what he saw.

The old familiar sights and sounds, this block of life projected from the past, went on, and the soul of Bill, the waiter, continued to expand. The fire in his eyes grew brighter, his figure grew more and more his head higher and higher. Harley had seen wild animals in their cages suddenly lift their heads and send the air as if forgotten wisps of the wild, free jungle, had suddenly come back to them. He thought again of this, as he looked now at Bill, the waiter.

The expectation of the crowd mounted higher, and the shuffling noises, the hum, and the occasional cheers increased. "Now is the favorable moment; he ought to appear," murmured Bill, the waiter. Harley heard him, but said nothing.

A whistle came from the desert, then a race, and the train pulled into the station. Harley heard the noise of men leaving it, and then dark figures for which the crowd made way rushed upon the stage beside him. One that stumbled over him was Blaisdell of the *Exile*.

"Where's Mr. Grayson?" asked Harley. "Why, there's the 'dewy to pay'?" exclaimed Blaisdell. "Mr. Grayson has been gagged out on the bench like for a little speech he thought he'd make the connection all right and get back in time, but he didn't. Two of the fellows are with him, and the rest of us are here. Where's the chairman of this meeting? I've got a telegram for him, explaining and apologizing, but Mr. Grayson, I'm sure, is all broken up over it. You know how honest he is in these matters. He knows that least of these men have come a hundred miles to hear him!"

Harley snatched the telegram out of the astonished man's hand.

"I'm the chairman," he cried, "as at least I'm going to be. Listen how the people are yelling and cheering and calling for Grayson! They think he's here on the stage with us, and he isn't! I never be last! Jimmy Grayson himself or double! Just when you wait half a minute and you'll hear him at his best. Now, Billy, do exactly what I say and don't ask a question; you don't know just how much depends on it. Get right in the crowd this instant and raise that famous old hat, carry the war-whoop the boys used to raise when Harry Davenport 'Bare-throated,' the greatest, the only heaven-born orator New York ever knew!"

He pushed Blaisdell directly at the platform and disappeared among the figures. The long drawn, high pitched cry that rose in him came on wave and burst in a final reality, it tated it. Led by Blaisdell of the *Exile*, the hat-throwers poured now from hundreds of throats, rose and swelled in volume again and again until it echoed far out on the desert.

But Harley scarcely heard it. At the first note of the old familiar cheer he turned his eyes upon Bill, the waiter. The man had

FALL TERM OPENS OCTOBER 1

been sitting in a sort of daze, but the correspondent saw him leap to his feet at the sound, his eyes flashing and his chest heaving. He ran to him and seized him by both shoulders.

"Come!" he cried in compelling tones. "It's you they want! They've found you out at last! They know that you are Harry Davenport, the great orator! Don't you hear the old cry never raised for anybody but you?"

"I believe you're right," the man said under his breath, but not so low that Harley did not hear.

In a moment the strong arms of Harley pushed him down to the edge of the stage, and then the applause doubled. Harley raised his hand, and instantly there was silence.

"Gentlemen," cried Harley, at the top of his voice, "I desire to introduce to you the speaker of the evening!"

And then he addressed under his breath, but sharply:

"Now give it to 'em, Harry! You know how to do it! You've lived here and you know how they feel. You feel the same way yourself! Flick into the corporations and the trusts and the monopolies, and you can sprinkle free silver almost, but I'm against it, but it doesn't matter!"

Again the cheers swelled, roared, and then died, to be followed by the strange breathless silence that only a crowd can create.

The tall figure, standing there in the more than twilight dusk, wavered for a few moments, but Harley had no doubts. He knew that the hour had come at last. He saw Davenport's figure straighten and stiffen, and his broad chest heave again. Then the man began to speak in liquid golden notes, in a voice that penetrated, persuaded, and compelled.

The people had never seen Jimmy Grayson. They had worshipped him from afar, mad, in their minds, but built for him lofty ideals, but now he fulfilled, and received their highest hopes. No one could resist the beauty of his voice or the strength of his logic. Metaphors, tropes, similes, allegories, flowed from his tongue. He used phrases and illustrations familiar in their daily life, drawn from their own desert, from their own South-west. He seemed to have upon him the stamp of the way in which he shared their hopes, fears and joys, and cheered when he seemed to will it, and they were silent when he wished silence.

Now and then a man would whisper to another: "I knew that Jimmy Grayson was great, but I did not know that he was so great as this," and then he would look up again in awe there in the dusk at the edge of the stage, and swaying the people as he would.

Harley, sitting scarcely a yard away, watching every movement of Davenport, and every facial phase of his face, under full stream, he saw the dead and crushed soul spring into new life all the fresher and stronger because of its long rest, at

the touch of the old life, at the sound of the old familiar notes, the inspiration and stimulus of a great political thought that looked up to him for strength and leading. Harry Davenport's new daze had come in the desert after a long sleep, but he had taken for death, the golden voice that had failed him once was there again, stronger and deeper than ever, returning in a rushing flood. As he sat on the stage he had been in a sort of daze, — he was yet in some respects, — he thought that all these people had called for him and not for Jimmy Grayson, and the old audacity that roused him from the dead ashes was still ringing in his head. He expanded, body and mind alike with the sense of power and triumph. He was Harry Davenport, Harry Davenport, the great orator, who, at thirty, was without a peer, and could hold ten thousand in his spell, as the hypnotist holds his subject.

Harley, watching intently, saw every wrinkle, the last semblance of Bill, the waiter, slip from the man. Bill, the waiter, merely formed the ashes from which, phoenix-like, came the triumphant resurrection of Harry Davenport. Never again would that tall figure be bowed, and as once would Harry Davenport cringe before any man. If a man struck him he would do it at the risk of his own life.

The wind still moaned on the desert, and the night air grew chill, but no one noticed. There was but a single mind in all that vast assemblage of hard-riding, an-bearing men, the mind of Harry Davenport, and he absorbed the others into the image of his. He made them see what he saw, and he made them follow where he led. Hour after hour he spoke; all the silent thoughts of years came pouring forth, clothed in beautiful language, adorned with familiar and striking images, and spoken in tones like the swell of organ music. Now and then, when he paused for a moment, the volume of cheer would rise, and always blended with the old thrilling battle cry.

It was past midnight when Harry Davenport, tanned, sank exhausted in his chair. Then the cheering broke forth in a volume greater than ever, and above it rose the storm of men shouting "Hurrah! Hurrah! for Jimmy Grayson!" Davenport heard it and turned a startled look on Harley.

"Oh, Charles!" he exclaimed in an agonized voice, "what have I done?"

"Nothing except the work for which you were born. Come, Harry, your long purgatory is over; you go with us to-morrow."

The next day the Eastern train on the main line picked up Jimmy Grayson at the junction, and went on. But in the same coach with The Candidate sat a man wonderfully like him, pale and smoothly shaven, who was dressed in a suit of riches and his own. And always this man's mind, like his face, was turned toward the Northwest, and in his eyes was the distant roar of the world's greatest city.

Again the cheers swelled, roared, and then died.

**The Outlook for Catholicism**

By Rev. John Wynne, S. J.

The appointment of men, who were born and educated in this country, to some of the vacant bishoprics in the Philippines emphasizes a condition of the Catholic Church in the United States, which imports great progress, if not serious changes also, in the near future.

Until a comparatively recent date not only the members, but the clergy also, bishops and priests, of this Church, were recruited largely from other countries, who came as if into a vacuum country, so far, at least, as concerned the condition of Catholics and the relations at their hierarchy with the Holy See. Now, however, bishops will begin to go out to countries which were really foreign, even though they form part of our possessions. With American bishops of our possessions, our young clergy will soon follow, and in a short time will appear the power of the Church as a factor in the pacification of the islands, and in the gradual assimilation of the people to American ways and ideals.

Never before was the Catholic Church in this country capable of doing what it can now do for the spiritual, intellectual, and social benefit of its own members and of the country at large. As a spiritual power it is able to predict that this vast and well-organized force will exert a salutary influence against all that is sham or merely materialistic in religion, and inculcate a robust faith, proved by deeds more than by professions, in a personal God, the immortality of the soul, the moralness of human life, final reward or punishment, Christ's divinity and redemption, the visible communion of His followers, the authority of His head. Without any aggression or fanatical proscription, it will act as a safeguard against the delusion of spiritualism, the extravagance of Zionism and Christian Science, the spiritual paralysis of skepticism, the blight of atheism or agnosticism, personal or racial suicide, the materialism or commercialism that would make this world the sum of human destiny, and the gradual disintegration of the Christian Church. As a religious body Catholics will not have to deplore empty churches, a Continental Sunday, or a dearth of vocations to the ministry.

**The Church and Divorce**

The moral influence of the Church ought to be most apparent in the attitude of its members towards divorce. It has been suggested lately that all good citizens should ostracize remarried divorced persons. It will never be necessary for Catholics to do that. If they are consistent, their sentiments on lawful wedlock are so well known that those who have transgressed the Church's canon will not be likely to object to their company where they know it cannot be acceptable. No one questions the appalling evils of divorce in our land. While other churches are vainly seeking remedies in legislation and in public sentiment, the Catholic Church stands for the divine ordination of matrimony, and holds it round with all the solemnity of a sacrament. No divorced person attempting remarriage can be in good standing in this Church, which means that it is an respecter of persons, but stands for the integrity of the family and for the inviolability of the most sacred of human contracts.

**A Far-reaching Influence**

It is chiefly in social matters that the Catholic Church will show its influence. Under its fostering care come nearly one-half of the vast number of immigrants daily arriving in our ports; under the same care are the great majority of working-men who worship in any church; for so matter how prosperous some of its members may be, this

**JOYOUS VACATION DAYS**

Vacation time is here again. Where are you going this summer, and how?

There are many delightful places: Lake Champlain, the Lawrence River, Adirondack and White Mountains, Adirondack Park, Catskills, etc.

are Falls, South Shore of Lake Erie Country, including its beautiful islands; Isles of the North-west, Yellowstone Country and Colorado places.

The service of the Lake Shore & Michigan Southern Railway—unparalleled for completeness and comfort—may be used with greatest advantage for reaching all of these places.

**Privileges**—A number of enjoyable privileges are extended to ticket holders on the Lake Shore—airpower of Lake Champlain, Niagara Falls, Lake Erie Islands, fine option of boat or rail, either way, between Cleveland and Buffalo, etc.

**Summer Bureaus**—Set up for cents in postage by under-signed "Lake Shore Tour," "Lake Champlain," "Quiet Summer Retreats," "Privileges for Lake Shore Patrons," "Boats of Trips."

Any information for perfecting your vacation plans gladly furnished.

**A. J. SMITH, G. P. & T. A., Cleveland, O.**

Church never desists from seeing the laborer and the poor. These two facts speak volumes for the solution of the problems raised by socialism, anarchy, and the irritable relations of capital and labor. Respect for authority, regard for personal and proprietary rights, close union of pastor with people, and habitual submission to law inculcated in the Church, home, and school among so many employers and employed, must necessarily make for social tranquility and industrial peace. Catholic working men are numerous enough to influence the sentiment of all the labor unions in the United States. Catholic citizens are numerous enough, and they would readily find millions to supplement their number, to stop some source of social distress which makes employers more exacting and employees more and more impoverished—namely, the excessive taxation imposed to meet extravagant expenditures for official and public service. The private schools and charitable institutions which Catholics support, with results as favorable as those of the State, and often superior, for one-half and even one-third of the expense incurred by the State, are an object-lesson in civic economy which must ultimately assert itself in our sociology.

**The Decay of Prejudice**

There is one gratifying sign of the times which fortifies the assurance with which we make the foregoing predictions. Much of the old prejudice, intolerance, and apprehension which used to mark the attitude of too many of our fellow citizens towards the Catholic Church has given way to a proper appreciation of its position, confidence in its loyalty, and a sincere desire on the part of every intelligent American that all its forces should contribute to the public welfare. What statesmanlike officials and public-spirited citizens, may even representative churchmen of every denomination, fear, is not that the Catholic body should exert due influence on the fortunes of the country, but rather that Catholics should fail to recognize their power for good in the community, and through indifference or timidity desist from exercising their conservative, progressive, and beneficent activities.

**Some Anecdotes of Whistler**

It is told of Whistler that, upon a certain occasion, he appeared at a dinner party with no tie on. A friend of his remonstrated.

"For Heaven's sake, Whistler, you've forgotten your tie!"

"Not at all," he returned, "not at all! Why wear a tie? My shirt is cut from a grey white cloth, which is fastened by a gold stud. Everything simple, excellent. Why put another white on top of that! I'm much better dressed than you!"

**A Question of Ownership**

A certain Lady So-and-o, who admired Whistler's graces to the extent of purchasing one of his pictures, never was able to obtain possession of her property. One day she drove to the studio in her victoria. Mr. Whistler went out to the sidewalk to greet her.

"Mr. Whistler," she said, "two years ago I bought one of your pictures, a beautiful thing, and I have never been able to hang it on my walls. It has been loaned to one exhibition of another. Now to-day I have my carriage with me, and I would like to take it home with me. I am told it is in your possession."

"Dear lady," returned Whistler, "you ask the impossible. I will send it to you when I have it again, but it is not here. You have been misinformed." And so forth and so forth, to the same effect, and the lady drove off without her picture.

After she had departed, Whistler commenced to poke around the studio, and to

HARPER & BROTHERS, PUBLISHERS, N. Y.

**MORPHINE** THE GREAT ENGLISH REMEDY FOR PAIN  
 THE DR. J. L. HEPBURN, Vm. Dept. 27, Lebanon, Ohio

the great astonishment of a friend who had been an involuntary listener to the above conversation, he brought forth a mirror.

"Here it is," he said. "She was right about one thing, it is beautiful! And it was beautiful."

"But the impudence of these people," he continued, "who think that, because they pay a few paltry hundred pounds, they own my pictures. Why, it merely secures them the privilege of having them in their houses now and then! The pictures are mine!"

#### Dinner versus Inspiration

Whistler's fondly in the matter of engagements was notorious. No one ever knew if he were coming or not to a dinner. But his point of view is explained in his answer to a friend of his, who knew that he had an engagement to dine with some artists in a distant part of London, and who felt that it was most impossible for Whistler to offend them. It was growing late, and yet Whistler was putting away, madly, intently.

"My dear fellow," he said to him at last, "it is frightfully late, and you have to dine with Lady Natch-Ome. Don't you think you'd better stop?"

"Stop?" fairly shrieked Whistler. "Stop, when everything is going so beautifully! Go and stuff myself with disgusting food when I can paint like this! Never! Never! Besides, they won't do anything until I get there—they never do!" And the entire speech is most characteristic of the man.

#### The Sneeze and His Ear

Whistler was unprepared to sit still when annoyed him—in fact, a sitting being was an ordeal that it required courage to face. It is said that one man annoyed him horribly by sneezing at the end of each sitting.

"How about that ear, Mr. Whistler? Don't forget to finish that!"

"At the last sitting, everything being done except this ear, Whistler said:

"Well, I think I am through. Now I'll sign it," which he did in a very solemn, important manner, as was his way.

"But my ear, Mr. Whistler! You aren't going to leave it that way?"

"Oh, you can put it in after you get home!"

#### The Incident of the Grocer's Shop

The morning he had an engagement at a banker's, where he was to receive a large sum of money for a set of stockings, a sum that he happened to need very much at that time. He was busy chatting and showing some of his things to an appreciative visitor, who happened to know the circumstances, and considerably reminded him that he had far to go and that the American would probably be in a hurry and would not wait.

"Yes," said Whistler, "but just look at this now," pulling forward another mirror. And so it went on, until his friend said:

"Whistler, you really must go! That man will never wait for you."

"What a nuisance you are!" he exclaimed, but he got ready and they started.

They were hurrying down the street at a great rate, when Whistler suddenly stopped the cab and made the driver go back to a certain spot—and they had to go backwards and forwards for quite a while before they found the exact place—in order to get a view of a certain little grocer's shop with his fruit and vegetables outside, striped awnings, etc.

Whistler put up his hands for a frame, squinted and twisted. "Beautiful!" he exclaimed. "Lovely! I'm going to do that, but I think I'll have him save the oranges over to the right corner, and that green, now."

"Let me see—"

"Whistler?" cried his friend, "do come along! That man will be here in New York before we get there!"

"What a nuisance you are!" declared Whistler, and was out of the rick at the way.

It was not a pose; the painter was so embarrassed by what he saw that banker and money were nothing to him at that moment. He eventually realized that very picture, and a most beautiful thing it was.

Dear Sirs:

So well pleased have I been with the several small policies carried in your Company for a number of years, and believing fully in the Strength and Stability of The Prudential, I have taken an additional policy of \$50,000 with your Company. This, I take it, is the best evidence of my appreciation of The Prudential.

Yours very truly,

*Fredric Colver*

# Lady Rose's Daughter

By  
Mrs. Humphry Ward

The Chicago Evening Post says:  
"Julie Le Breton is a very glorious human creature, tingling with vitality, actuality, and individuality."

The Washington Post says:  
"Mrs. Ward has eclipsed all her previous successes. She has given us a flesh and blood heroine—her charm is wonderful and bewildering."

The St. Louis Republic says:  
"In the character of her heroine we meet the most subtle, perplexing, baffling, and fascinating woman whom Mrs. Ward has yet depicted."

The Brooklyn Eagle says:  
"Neither religious problems, nor politics, nor social contests occupied Julie Le Breton's mind. She is wrapped in an overmastering passion of love."

## New Conceptions in Science

By CARL SNYDER

THIS is not a dry and arid treatise, unintelligible to the general reader, but a clear, comprehensive exposition of the results of latter-day scientific research and discovery. The underlying romance of science and scientific method has never been more convincingly set forth than by Mr. Snyder. The book will be nothing short of a revelation to the average layman, while of abiding value to the scientific student.

## THE FAMILY BEER

Visitor: "Does your whole family drink beer?"

Host: "Just Schlitz beer—no other. Our physician says that Schlitz beer is good for them."

Visitor: "Why Schlitz beer and no other?"

Host: "Because Schlitz beer is pure. There are no germs in it. Schlitz beer is brewed in absolute cleanliness, and cooled in filtered air. The makers go down 1,400 feet for the water they use in it. They filter the beer, then sterilize every bottle—by Pasteur's process—after it is sealed."

Visitor: "But beer makes me bilious."

Host: "Schlitz beer will not, that's another advantage. Biliousness is caused by 'green' beer—beer hurried into the market before it is sufficiently aged. Schlitz beer is aged for months in refrigerating rooms before it is bottled."

Visitor: "And what do you pay for it?"

Host: "Just what you pay for other beer. I secure the most careful brewing in the world for what you pay without it. I get a beer that costs twice as much as common beer in the brewing, by simply demanding Schlitz."

Visitor: "I'll do that next time."

Host: "Yes, and ever afterward. People are learning these facts, and Schlitz sales now exceed a million barrels annually. Ask for the brewery bottling."

COOK'S MALTO-RICE IS A PERFECT BLENDING OF MALT AND RICE

# HARPERS BOOK NEWS

## THE SUBSTITUTE

The reader of "The Substitute," the new novel by the author of "Abner Daniel," meets on every page curiously set forth humorous observation and common-sense philosophy.

The plot of the story is a new one, the love story a strong one, and the anecdotes which Mr. Harben introduces through his characters are even more amusing than those in his earlier books.

## MARJORIE

In "Marjorie," the new romance by the author of "If I Were King," there is a dainty little love story enacted in picturesque environment. The scenes of the story are laid for the most part on a ship bound for the West Indies to establish a colony. The crew mutiny and seize the ship. After many exciting adventures Marjorie and her lover are rescued by an English ship. There is dash and vim in the story, and its interest is admirably sustained.

## THE PRIDE OF TELLFAIR

Few young writers are content to deal with the things of everyday life, and few have the skill to make these things interesting. Mr. Elmore Elliott Peake is an exception to this rule. In "The Pride of Tellfair" he writes of life in a little Middle-Western town. He knows the life so thoroughly that he is able to make us feel it is not uninteresting. He tells his story with much skill and with such a thorough knowledge of his people that these ordinary American citizens appeal to us more strongly than the swashbuckling gentilefolk of romance. His story is meeting with the success which it deserves.

## COMMENT

A "slump" in Wall Street may be either helpful or harmful to the public weal. Same reaction from unwarranted apprehensiveness is always a good thing, but when that reaction becomes a mania in the case itself, it is a bad thing—a very bad thing, doing injury to thousands of innocent persons, checking prosperity, and impairing in the minds of millions of American citizens the faith they should ever have in the durability of their country's institutions and methods. Such a slump we have just experienced upon a greater scale and with less real reason than ever before. That a marked depression must follow in time the wild inflation of values which began five years ago was inevitable and expected, but that it should reach such extremity in a time of good crops, active business, few mercantile failures, and of employment for all who want to work is little short of amazing. Whether it can be attributed justly in large part to the gigantic operations of our richest citizens in furtherance of an insatiable desire to pile yet more millions upon the uncounted and scarcely comprehensible number already within his grasp, probably only himself could tell. If such should prove to be the case, however, the game, while legitimate enough, judging from Wall Street standards, will sorely develop hazard to large accumulations of wealth within the control of avarice. Despite the recent exhibition of what seems to be almost limitless power on the part of one or a few, this is going to continue to be a free country, and, in one way or another, in their own good time, the people will surely relieve any oligarchy in existence or in process of formation, political, financial, or both, of the management, however indirect, of their affairs.

If, on the other hand, the recent happenings have been due to the stern determination of the less wicked to force the more wicked to the wall, the crusade may prove to have been as righteous as such a one could be expected to be. That many believe this to have been the case is evident from the total lack of sympathy manifested in connection with the failure of a firm of brokers closely associated with our most notorious and daring speculator. This firm and this gambler have certainly been very active in interfering with the management of large properties and in harnessing those responsible to the corners for the conduct of their affairs. Inasmuch as those interfering were in no sense producers, but only traders eager to scramble for profit upon the results of the labor of others at whoever's expense, their declared

motive of safeguarding the interests of those who obviously did not want their interests safeguarded, at least by them, did not insure the average citizen as genuine. In any event, they "saw a copper," and no tears were shed. As for the unfortunate who got caught in the tangle and suffered in consequence, the only solace seems to be in contemplation of the salutary lesson taught to those who have not yet learned that the time has passed when unscrupulous men can successfully break down what others have built up or "break in" to prosperous businesses to the detriment of the community. If, incidentally, the unfortunate aforesaid should also deduce from their present misery the conclusion that, after all, in the long run, it may be better not to buy what one cannot pay for and not to sell what one has not, much good may come from what seems to have been very bad.

We are told by some observers of the depression of securities that the phenomenon is merely the outcome of a "rich man's panic," and must not be regarded as an omen of an industrial crisis. We are invited to note that the earnings of railroads are as large as ever, and seem destined to increase, since the huge crops of grain which the Western farmers are now harvesting must be brought to market, and it is to be expected that the farmers will demand in exchange correspondingly large quantities of manufactured goods. There, too, is this year's cotton crop, from which also immense returns should be forthcoming. We are reminded that last year we exported nearly seven million bales, valued at \$290,000,000, and it is pointed out that the amount of cotton in sight this season—10,750,000 bales—is greater than was visible at the corresponding period last year. All this is perfectly true, and yet it is a mistake to suppose that the extraordinary scenes witnessed on the New York Stock Exchange have no bearing upon the relation of demand to supply in our great native industries. A drop of more than sixty points in New York Central, of upwards of fifty points in Pennsylvania Central, and corresponding shrinkages in the market value of other standard railway securities, cannot take place without affecting materially the power of corporations to obtain money for improvements by new issues of bonds or stock. Being, under such circumstances, restricted to loans procured for only a short term, and at high rates of interest, railway companies must needs minimize their output of money for improvements, and are not likely to transcend the programmes to which they are irreparably committed. This means, of course, that the demands for the products of iron and steel used by railways cannot be expected to go on increasing for the next twelve months at the rate observed during the last two years. The demand being thus threatened with curtailment, the supply must also be curtailed, if the risk of overproduction is to be avoided. It is to be hoped that a timely adjustment of supply to demand may be effected through the approach to concentration of the iron and steel industry exhibited in the United States Steel Corporation.

Mr. William Jennings Bryan no longer denies that in November, 1892, he and his friends in Nebraska voted, not for Mr. Cleveland, the Democratic nominee, but for the Populist candidate, Mr. Weaver, with the result that Mr. Harrison carried the State by a small plurality. That is to say, if Nebraska had happened to turn the scale, Mr. Bryan's defection would have deprived the Democracy of the Presidency. Mr. Bryan defends in the *Commoner* the course which he then pursued, by asserting that it was devised for strategic purposes. A strategy that gave the State to the Democracy's opponent seems to have been ill-conceived, or, at all events, ill-executed. We are perfectly willing to concede, however, that for the vote which Mr. Bryan cast in 1892 he had an em-

play, an edifying, and even a patriotic motive. We concede that of the moral and intellectual quality of the motive be must be the exclusive judge. Neither would we for a moment assert that he was disqualified for being the nominee of a Democratic national convention in 1896 because he had chosen to vote for a non-Democratic candidate in 1892. However "irregular" may have been the course pursued by Mr. Bryan in 1892, we hold that his credentials of regularity were perfected from the moment that he was permitted to take a seat as a delegate from Nebraska in the Democratic national convention which met at Chicago four years later. Not only do we concur with Mr. Bryan in holding that strayed sheep should be welcomed back to the fold, but we know of no reason why the warmest career in the fold and the best part of the fodder should not be allotted to a sheep that went astray. That is precisely what the Chicago convention of 1896 did in the case of Mr. Bryan. His fellow delegates did not invite him to take a back seat, but summoned him with effusion to "go up head." It was in the same spirit that the Democracy in the State of New York welcomed back with burrachs in 1852 the Barnburners who had bolted the nomination of Lewis Cass in 1848. Mr. Bryan has sometimes been credited with saying that he has no objection to the readmission of Democrats who voted against him in 1896 and 1900, but that he does not think they ought to presume to nominate a national convention. If Mr. Bryan really said this, which we doubt, he must, for the moment, have forgotten that he, the bolter of 1892, was allowed, only four years later, not only to re-enter a Democratic national convention, but to carry off the prize of the Presidential nomination. We hold that the precedent then established was a proper one, and we do not see how Mr. Bryan can object if it should next year be followed in the case of Mr. Cleveland or some other Gold Democrat who, for strategic or other reasons, declined to accept the candidate or the platform put forth at Chicago in 1896.

The Bookbinders' Union No. 4, which had announced the intention of ordering a strike in the Federal Printing Office, in the event of the reinstatement of Mr. Miller, the assistant foreman, has discovered that the government at Washington still lives, and that President Roosevelt, although friendly to organized labor, is not its slave. The leaders of the union now say that they will let the law take its course. How they could have prevented the law from taking its course is not clear to us. Whether Mr. Miller has or has not been guilty of any violation of Federal statutes remains to be determined by an official inquiry. All we know as yet is that no such violations have been brought home to him; that, nevertheless, the Washington Bookbinders' Union No. 4 ordered the Public Printer to discharge him, and that, in the teeth of the civil service act, the order was obeyed. The facts being brought to Mr. Roosevelt's attention by the civil service commissioners, the reinstatement of Miller was immediately commanded. We shall soon learn whether the Public Printer is to be disciplined for an indispensible breach of the civil service law. We take for granted that the official inquiry now proceeding will take cognizance not only of the charges brought by the Bookbinders' Union against Mr. Miller, but also the latter's charges against the union. Mr. Miller says that he gave offence by insisting that workmen in government employ should do a reasonable amount of work for fair wages. He asserts that hitherto it has cost the Federal government forty cents a volume to bind books which could have been bound by private firms for eight cents. In other words, the workmen in the Government Printing Office have been in the habit of regarding public employment as a private snip. Whatever may be the outcome of the official inquiry as regards the verification of the imputation made by either side to the controversy, one wholesome truth has either side to the controversy, namely, that, so long as Mr. Roosevelt is President, the Federal government will transact its own business, and will submit to no dictation at the hands of organized labor.

It was high time that the labor leaders should be made to understand that there are limits beyond which Mr. Roosevelt will not go. There is no doubt that he transcended his constitutional functions when he appointed the Anthracite Strike Commission, but in that matter he could plead that the public interest seemed to call for his interposition. The public interest does not require the violation of the civil service act

at the option of the Public Printer; neither should the taxpayers be forced to pay five times as much for binding as is paid by private employers. There seems to have been an impression current of late in labor circles that, owing to the proximity of a Presidential campaign, Mr. Roosevelt would not venture to resist the assumption by labor-unionists of a right to control the Federal government. Had the experiment tried in the printing-office proved successful, a like assertion of supremacy in other departments would have been quickly made, and we should have witnessed the construction of an *imperium in imperio*.

If before November the investigation of the Post-office Department should have been recognized as resolute and drastic, public opinion will credit the achievement to Mr. Roosevelt, and will not call upon Congress to institute an inquiry. That is why the President's well-wishers were sorry to see the *stag* applied to First Assistant Postmaster-General Wynne and to Fourth Assistant Postmaster-General Bristow. Experience has shown that a policy of silence is not apt to be followed by a ruthless punishment of offenders. Fortunately for the Postal Service, it has not escaped Mr. Roosevelt's notice that the investigation has dragged during the last few weeks, and that a number of persons who are allowed to deserve dismissal for misconduct are permitted to remain in office. Neither is it likely to have escaped the President's attention that Hedges was removed by Postmaster-General Payne on minor charges affecting his *per diem* account, nothing being said of the grave accusation that he used his influence in Congress in favor of a war claim which was allowed at the last session. Now Mr. Rand, the confidential secretary of Postmaster-General Payne, is accused of being improperly interested in the same claim. From the curious reticence prestained on this subject in the case of Hedges, the inference is drawn that Rand will go scot-free. On Saturday, July 25, however, Fourth Assistant Postmaster-General Bristow went to Ogyster Bay, in pursuance of a summons from the President, and it is hoped that on his return to Washington the department will apply itself with more energy to the operation of turning the rascals out.

If it be true, as Hedges asserts, that the mode of cheating the government exemplified in his *per diem* account is generally adopted by postal employees, it would follow that the department is honeycombed with fraud. It may be remembered that another charge brought against Hedges was that, when Superintendent of City Delivery, he induced a number of postal employees in Philadelphia to buy stock in a mining company of which he was president. It now appears that Thomas L. Hicks, who, at the time, was Postmaster of Philadelphia, co-operated with Hedges in obtaining the subscriptions, the pamphlet issued on the subject setting forth an endorsement of the company by Hicks. Hicks now pretends that he did nothing to induce employees to purchase stock, but he can scarcely mean to assert that his printed endorsement was utterly valueless in the eyes of his subordinates. Both Hicks and Hedges seem to imagine that the law forbidding such performances is a dead letter. It is true that the law slumbered on the statute-book during the McKinley administration; but it is by no means defunct, as some transgressors of it may discover to their cost.

The uncovering of fraud in the Post-office Department was followed by the exposure of a glove contract which had been entered into by the War Department, and in which Representative Littauer is accused of being interested; this, again, was followed by another glove contract, concluded by the Indian Bureau of the Department of the Interior, with which also Littauer's firm appears to have been connected. Now the Department of the Treasury is accused of gross and unlawful favoritism in the award of contracts. It seems that for some time special agents have been investigating a series of charges filed with the Secretary of the Treasury by the Charles McCaul Company of Philadelphia in support of a protest against the proposed award of a contract for the new post-office at Cleveland, Ohio, which will involve a total outlay of \$1,550,000, with a prospect of \$500,000 more. It is asserted upon high authority that Mr. Roosevelt, to whom

these charges have been made known, has decided to order a searching inquiry into the past and present management of the office of the Supervising Architect of the Treasury. We learn that when the bids were opened for the four-story granite building to be erected at Cleveland, it turned out that William Bradley & Sons had offered to erect the proposed granite structure for \$1,359,777. On precisely the same specifications the Charles McCaul Company bid \$1,357,292, being thus the lowest bidder by \$2485. Nevertheless, Secretary Shaw did not award the contract to the lowest bidder, as he was required to do by law, but, acting upon the information and advice furnished him by Supervising Architect Taylor, announced his determination to award a contract to William Bradley & Sons for a sandstone building at \$1,049,232, reserving the right to substitute granite at any time within eighteen months, upon an agreement to pay \$308,000 additional, the extra sum making up the exact amount of the original bid filed by the Charles McCaul Company for a granite building.

It is alleged in the charges that have been brought to the President's notice that Supervising Architect Taylor has never had any intention of erecting a sandstone building, but that the reference to sandstone in the contract given to Bradley & Sons was merely a device to avoid awarding the contract for a granite building to the lowest bidder. It is further charged that "Bradley & Sons" were not bona fide bidders, but mere shammas for John Pierce, who is known throughout the country as "Platt's man," and who is building the new general post-office in New York, the government building in Chicago, and the Federal building in Indianapolis. The Chicago contract provoked a good deal of unpleasant comment in Congress, and it was with the utmost difficulty that an investigation was averted. At that time Senator Platt of New York had the support of Senator Hanna, Senator Quay, and Senator Furness, but there is now some reason to hope that when spoilers fall out honest men will get their dues. Pierce's shammas, "Bradley & Sons," will naturally be backed by Senator Platt, but Senator Quay and Senator Furness are behind the Charles McCaul Company, and Senator Hanna, with an eye to his re-election, may deem it expedient to insist that the Cleveland structure shall be built of Ohio sandstone, in which event there would be but little profit in the transaction for Bradley & Sons. Fortunately for the taxpayers the President has decided to take a hand to the game.

By the time this number of the WEEKLY falls under the reader's eye, the Mayoralty campaign in New York city will have begun. The first gun will be fired by the Citizens' Union, in the shape of a campaign book intended to convince intelligent citizens that by Mayor Low the municipal administration has been conducted on business principles. It will be pointed out that, although \$145,000,000 have been added to the debt limit of the city, not more than \$43,000,000 thereof will have been applied by the present administration to projected improvements, which, by the way, include \$10,000,000 for the extension of the city's source of water-supply; \$10,000,000 for the new Brooklyn Bridge terminal and city building, the erection of which in City Hall Park is contemplated; \$5,000,000 for a branch of the subway, and \$5,000,000 for a new court-house. Attention will also be directed to the enormous loss to the immense value of the city's property. To say nothing of such assets as school furniture, books, horses, carriages, boats and other implements or materials, we may mention that Central Park alone is valued at \$300,000,000; the real estate belonging to the Croton Aqueduct system outside the city at \$100,000,000, and that of the Brooklyn water-system at \$25,000,000. The total value of the city's holdings is put at \$815,000,000. These figures invite comparison with those of the largest railway companies, and indicate the importance of the municipality, considered merely as a really-owning corporation. In view of the fact that the next administration will have the power to add \$100,000,000 to the city's debt, it seems incredible that the taxpayers will deliberately sanction a return to Tammany methods, that Tammany Hall looks forward to the outcome of the election with much less confidence than it evinced some months ago in evident from its exhibition of a willingness to take advice from Brooklyn and from the revival of the suggestion that Mr. E. M. Shepard will be re-nominated.

It is well known that Tammany Hall would not have nominated Mr. Shepard in 1901 unless it had believed itself to be in a desperate position. The Tammany leaders were well aware two years ago that Mr. Shepard would no more had himself to an improper use of official opportunities than would Mr. Low, but they hoped that, with the former's name at the head of their ticket, they might be able to fill the minor offices with their candidates. Nothing could be better for the metropolitan community than to have Mr. Shepard and Mr. Low again pitted against one another, for then, no matter which should win, the municipal treasury would be safeguarded against robbery. It now looks as if Mr. Shepard would prove to be the only nominee with whom Tammany Hall would have some prospect of success. Nobody believes that Mr. Coker could now poll for Mayor anything like the vote that he polled in the city last year for Governor. Mr. Shepard, it will be remembered, was beaten by Mr. Low in 1901 by less than 6000 in the boroughs of Manhattan and the Bronx; by less than 28,000 in the borough of Brooklyn, and less than 770 in the borough of Richmond, while he beat Mr. Low in the borough of Queens by about 550. The question, obviously, is this. Is Mr. Low, as against Mr. Shepard, weaker by 32,000 votes to-day than he was two years ago? In other words, would 16,000 voters, who supported Mr. Low in 1901, now cast their ballots for Mr. Shepard? We are inclined to think that this question must be answered in the affirmative. Although we are by no means disposed to exaggerate the extent of the defection from the fusion movement imputed to German-Americans, we imagine that it considerably exceeds 16,000 votes. We doubt, however, whether Tammany Hall could win with any candidate except Mr. Shepard. Why, it may be asked, should a man of high character and great abilities accept a Tammany nomination for the Mayoralty, even if it carried with it a promise of success? We answer that if Mr. Shepard should be elected Mayor this year, he would be certain of securing the Democratic nomination for Governor in 1904 or 1908, and, if elected, he could count upon securing the Democratic nomination for the Presidency in 1908. That is a prize which might well dazzle the eyes of one who, even at the date last-mentioned, would still be in the prime of life. We add that, on good authority, it is alleged that two years ago Mr. Shepard received the promise of the Tammany nomination for Mayor in 1903 should he fail to be elected on the first trial.

Mr. Titus Sheard, of Little Falls, New York, who beat Mr. Roosevelt for the Speakership of the Albany Assembly nineteen years ago, and who recently made a visit to Oyster Bay, says in an interview that this President is much concerned about the political situation in his own State. This is not surprising when we recall the fact that Mr. Odell was elected Governor last year by less than 3000 plurality, or less than half as large a plurality as Mr. Roosevelt received when running for the same office in 1898. It should, at the same time, be noted that Mr. Odell polled more votes in 1902 than Mr. Roosevelt did in 1898, the figures being 665,150 against 664,707. Curious too, the Socialist-Labor party polled a larger vote by about 8000 against Roosevelt than it did against Odell. Next year, we presume, that Roosevelt will get nearly all of the Socialist-Labor vote in the State of New York, provided he is opposed by a conservative Democrat. A Socialist would be successful if he did not support the appointer of the anthracite-strike commission. Nevertheless, there is something ominous in the returns for 1900 and 1902. In 1896, Mr. McKinley obtained in the State of New York 819,238 votes, and four years later, 821,992. As in 1900, Mr. Bryan received 678,386 votes, it is tolerably clear that at least two-thirds of the McKinley plurality of 143,000 was cast by Gold Democrats. Mr. Roosevelt knows that he will not have a single supporter among the Gold Democrats of his native State, provided Mr. Bryan's friends shall prove unable to frame the platform, or dictate the candidate in the next Democratic national convention. Under the circumstances, it is not surprising that Mr. Roosevelt should have permitted Mr. Sheard to see that he felt uneasy about the outcome in New York of the 1904 election.

Mr. Sheard thinks that the Democrats will never again be able to roll up a vote in New York city equal to that given to Mr. Coker in 1902. We hold, on the contrary, that not only

some Democrats, but many Republicans, who refrained from voting last year are likely to cast their ballots for the Democratic nominee for the Presidency in 1894, provided he is not a Bryanite. There is no doubt that Mr. Roosevelt is popular in the Far West, but he is even less popular in his native State to-day than he was in 1893, when the islands of San Juan Hill and Las Gansinas were fresh. Mr. Sheard admitted that Judge Parker, who, it may be remembered, carried the State in 1897 by a plurality of 60,889—this, too, only twelve months after McKinley had swept the State with a plurality of 293,460—would make a stronger run in the up-State districts against Mr. Roosevelt than any other man the Democrats could put up. He thought, however, that Judge Parker's gain in those districts would be more than offset by Mr. Roosevelt's gain in New York city. We repeat that we can see no reason for assuming that Mr. Roosevelt is any stronger in the city of New York to-day than he was five years ago. On the contrary, we believe him to be materially weaker, notwithstanding the effect of the anthracite-strike commission on the labor vote.

Americans have taken so lively an interest during the last quarter of a century in Ireland's struggle for home rule that they have viewed with not a little satisfaction the passage of the Land Purchase bill by the House of Commons, and the prospect of its acceptance without further amendments by the House of Lords. It will be remembered that in June, 1886, Mr. Gladstone coupled his first Home Rule bill with a Land Purchase bill, thus recognizing that in Ireland the political question was inseparably associated with an agrarian problem. It will also be remembered that all of Mr. Gladstone's attempts to deal with the political question failed, and that the only political concession obtained by Ireland in a quarter of a century came from a Unionist government. We refer, of course, to the delegation of considerable powers of local self-government to county and district councils. The agrarian problem, on the other hand, Mr. Gladstone was permitted to try to solve—first, tentatively in 1870, and then more trenchantly in 1881. The establishment in the year last named of the principle of the three F's and the creation of land courts for the purpose of rent-revision, formed undoubtedly a landmark against rack-renting; but such measures did not go to the root of the matter, for while, on the one hand, they embittered the landlords by lowering rents, they still left the peasants in the status of tenants, liable to eviction under certain circumstances. On the contrary, the bill introduced by Mr. Wyndham, and, after some amendments, accepted by the Irish Parliamentary party, contemplates nothing less than the abolition of all Irish landlords, and the transformation of Irish tenants into peasant proprietors.

It is a mistake to imagine that anything of the kind was effected by the French Revolution. It is now well known that peasant proprietorship had become widespread in France under the *ancien régime*, and that the sole agrarian effect of the revolution was to place the lands of the clergy and of the outlawed nobles on sale to the highest bidder. Those peasants who had saved money could invest it in the lands thus put upon the market, if they chose; but otherwise their status was unchanged. The only true parallel to the agrarian revolution planned by Mr. Wyndham was effected by the ukase of Alexander II., which not only freed the Russian serfs, but made them collectively owners of the lands previously tilled by the commune. That is to say, the land previously owned by an individual proprietor, but cultivated by a given commune, became thenceforth the property of the peasants constituting that commune. The landowner was to be indemnified partly by a free gift from the Czar, and partly by payments to be made in instalments by the communal authorities. This, it will be observed, is practically the course to be pursued in Ireland. The Imperial government makes a free gift of sixty million dollars, and lends in addition \$500,000,000 to be used repaid by the peasants, converted, it is to be noted, into absolute owners of the fee, but into tenants of the government. It is obvious that this precaution is taken to prevent subdivision, which would result in the quick creation of a new and worse race of landlords.

When Cassius Marcellus Clay died the other day at his country-seat, Whitehall, there were but few living who could recall the admiration with which even slaveholders beheld the stand which he maintained for more than twenty years in the heart of the proslavery section of Kentucky. Clay, like John C. Calhoun, went to Yale College; but went home a convert to antislavery opinions, having been brought to abjure the sentiments of his family and fellow citizens by a speech which he heard delivered by Garrison. Of all the latter's disciples, Clay was the most illustrious, for he alone took his life in his hand when he presented the opinions of his master. Clay said, when he returned from New Haven to Kentucky, that he meant to give slavery a fight for its life, and there is no doubt that he kept his word. We do not remember how many duels he fought, how many assassins he killed or maimed, how many wounds he received, and how many scars he bore up to the day of his death. But this we do know, that nothing approaching the gallantry exhibited by Cassius Marcellus Clay for upwards of twenty years has ever been equalled or even approached in American history. It should be borne in mind that there was nobody to cheer him on. It redounds greatly to the credit of Kentucky slaveholders that eventually their admiration for unparalleled courage got the better of their detestation for antislavery principles, so that they permitted Cassius M. Clay to do and say what he would. For more than twenty years he was the only man south of the Ohio River who enjoyed absolute freedom of speech.

The Male Beauty Show at Vienna was an inglorious fiasco. Nobody but admiring relatives and friends would go to inspect the collection. It is painful to see our patriarchal brethren of the press draw a false moral from that spurned beauty. For the consolation of the ugly, the "deprived," as the Italians say, these undubitably handsome modelists tell us that beauty is only skin-deep, and that divers great men have been humely enough to stop the Strasburg clock:

What is the blooming tincture of the skin  
To peace of soul and harmony within?

What a sweet satisfaction and compensation it is to feel that those of us who are not handsome are full of other goodness or brains! But the real reason why the Vienna exhibition of Prince Charmings did not draw is that handsome men are so common, that a Congress of Handsome Men stirs no more interest than a Congress of Jerseymen would, whereas a Congress of Homely Men would "positively turn money from the door." The sobriety of men's dress marks their sense of their sufficient beauty. They know they need to adornment. The enthusiasts who introduced this summer a radiant coat, a sort of Japanese kimono, all fringe and picture, have found no welcome. Men are too splendid to wear splendid clothes.

What is the most virtuous place in the world? Ashbury Park fell from grace long ago. It was not worthy of Founder Bradley. Vineland, another Jersey isle of bliss amidst the beating of the sinful sea, is perfect no more. Chelsea is dead no longer. Manhattan was truly good only in the citizenship of Captain O'Reilly and Captain Chapman. But that earthly paradise can be found. It has been found. John Alexander Dowie, alias "Elijah the Restorer," has found it. In a discourse at Zion City, the other Sunday, he told this affecting anecdote: "A man said the other day that he was not swearing at a person, but at a piece of pipe. I said, 'You cannot swear at a water-pipe in Zion City. You cannot swear at anything.'" You cannot swear at all in Zion City. You cannot fire off crackers in Zion City on the Fourth of July. If there is any noise to be made there, Mr. Dowie will make it himself. Zion City is not only the Dowie capital, but it is the Capital of Virtue. It seems a pity that "reporters from the Devil's papers in Chicago" are not allowed to linger in that happy spot. Mr. Dowie says that if any of them dare to show themselves there, they will "be invited to leave very quickly; for they are impudent liars and spiritually lined descendants of the impudent thief." At least they might learn in Zion City not to swear. Besides, in "conversing" and accepting a famous epigram of Daniel O'Connell on Di-reck, Mr. Dowie shows himself to be an impudent borrower.

## The Omens of War in the Far East

AMERICANS will be keenly interested in the outcome of the war between Japan and Russia, concerning the imminence of which there is now but very little doubt among well-informed observers. We shall be interested, primarily, as purveyor of a large and constantly increasing quantity of commodities to Manchuria, which will be one of the scenes and one of the prizes of the contest; secondarily, as members of the white race, which, for the second time in seven centuries, will be pitted against the yellow race under imposing and pregnant circumstances. Which direction American sympathies will take depends upon the question whether commercial interests or ethnic interests are likely in the end to predominate. But considering the possible interplay of interests and affinities, we may pose to match the conditions under which the contest will take place.

We begin with the assumption that the war will be a duel between Japan and Russia. The assumption is favorable to the last-named power, because the cooperation of England would be far more beneficial to Japan than would that of France to Russia. That at the outset, at all events, the conflict will be a duel may be taken for granted, first, because the alliance between Japan and England binds the latter country to cooperation only in case the former should be attacked by two European powers at once; and, secondly, because France, owing to her present cordial relations with England, would not willingly enter upon a course which would necessarily convert England into an antagonist. Moreover, even if Russia should be beaten in the initial stages of a campaign, it is improbable that she would call upon France for support, inasmuch as she would thereby expose to Japan the assistance of England, and might thus bring France in the Far East. We are, therefore, quite justified in assuming that what we are likely to witness is a duel between the Mikado and the Czar. The latter's dominions stretch from the Baltic and the Vistula to Bering Straits, and the number of his subjects considerably exceeds a hundred millions. The Mikado's subjects are not half so numerous, and his possessions are, not only limited, but relatively so small that the population is seriously pressing on the means of subsistence. The fundamental cause of the approaching war is, in truth, the earth-hunger that compels the Japanese to attack Russia, which detour them from an outlet on the Asiatic mainland. As a result they must hence on look forward to prostrate starvation and ultimate extermination.

If we were to imagine that the outcome of wars is always determined by extent of territory and volume of population, we should be obliged to take the defeat of the Japanese for granted. But how, if we must accept such premises, could we explain the successful emergence of the Green Yeast War, or the repeated triumphs of the French Republic against European coalitions? The truth, of course, is that success in war—given equal bravery, equal training, and equal military skill on both sides—depends on the ability of a combatant to concentrate a larger force at an important strategic point, and at the right moment. To this end geographical propinquity, or command of the sea, or both, are useful, if not indispensable. From both points of view Japan will enter upon the contest with a marked advantage over her antagonist. Truly the narrow Strait of Shimozuki separates one of her most densely peopled islands from the Korean peninsula. Even if Russia should acquire a nominal command of the sea, it would be impracticable for her—with naval stations so remote from one another as are Vladivostok and Port Arthur, to prevent the landing or the reinforcing of a Japanese army in Korea. Nobody believes, however, that Russia will acquire control of the sea. That the Japanese navy is stronger than the Russian in Far Eastern waters is acknowledged by the Russians themselves. The latter, we are told, have no intention of provoking a naval conflict on a large scale, but will confine themselves to a use of their war-ships for defensive purposes. It follows that Japan can throw whatever force she likes into Korea, or, for that matter, into the Liaotung peninsula, on the flank of Dalny and Port Arthur; destroy the Manchurian branch of the Trans-Siberian Railway, and thus cut off the Russian troops from communication with their far-flung base, whereas the maritime communication with Japan will remain uninterrupted. It is needless to say that the Russian commanders are counting upon such a move on the part of the Mikado's generals, and admit that, owing to their weakness in sea power, they could not prevent it. Consequently, they have collected in Manchuria, and especially in the Liaotung peninsula, a large force of the best Russian soldiers, numbering, it is said, considerably more than one hundred thousand men, besides food supplies and material of war sufficient for at least a two years' struggle. The Russian generals assume, moreover, that they could win a brief war, if they believe themselves capable of beating their Japanese opponents with the greatest facility on land. They are probably wrong, however, in supposing that the Japanese will be discouraged by two or three initial defeats. The Mikado's subjects are so thoroughly alive to the knowledge that their national life or death will hinge upon the struggle—that they may be relied upon to fight with desper-

ation. They consider, moreover, it must be remembered, that the Liaotung peninsula is their rightful property, fairly gained in war, and that they were robbed of it by Russia when that power, acting in conjunction with France and Germany, compelled them to retrocede it to China in return for an additional money indemnity. The retrocession was, of course, a trick, for, secretly had it been made, when China was forced to leave Port Arthur and the adjacent territory in the Czar's hands.

If Russia succeed in retaining Manchuria at the cost of a long and exhausting war with Japan, she will undoubtedly prove to be a formal incorporation of that region with her empire. Once incorporated, it will become subject to the general customs laws of Russia, unless a special tariff regime shall be applied to the new acquisition. The right of importation will be managed by the St. Petersburg government to the United States. It is improbable that Manchuria would be exempt from the operation of a tariff applicable to the rest of Russia, or that such exemption, if granted for a moment, would be permanent. On the other hand, if Russia should be beaten by Japan, and expelled from Manchuria, that region would undoubtedly become a part of the Mikado's dominions, and, thereafter, American exporters would enjoy therein precisely the same facilities of access which they now have in the Japanese islands. There is no doubt that, at present, it is easier for the products of American factories to enter Japan than to enter Russia. This facility will last no longer, however, than the inability of Japanese manufacturers to compete with Western rivals. So far, then, as our commercial interests are concerned, they might be temporarily furthered by the triumph of Japan, but it is doubtful whether they would be promoted for any considerable period.

We now turn to the grave question of ethnical affinities, the question whether it is wise to connive by passivity at a victory of the yellow over the white race. The English people are already prepared to acquiesce in such connivance; indeed, Great Britain, as we have pointed out, has even to take, not merely a passive, but an active, part on the side of Japan, should the last-named country be assailed by more than a single power. It is obvious that by this agreement the English have entirely abandoned every semblance of sympathy on the score of race. Are Americans ready to follow their example? We do not mean, of course, to inquire whether, under any probable circumstances, we could be induced to render any assistance in the way of arms to the Japanese against the Russians. That question would be promptly answered in the negative. Are we even sure that we ought to wish the Japanese success? Have we weighed the consequences of a demonstration that Japan is stronger than Russia both on land and sea, so far as the Far East is concerned? Would not the probable effect of such a demonstration be the outmodation of the yellow race under the leadership of the Mikado? Should we not be likely to witness an expulsion of the discredited Manchus and the installation of a Japanese dynasty at Peking, amid the enthusiastic acclamations of the active Chinese? Would not Japanese officers be able to prevent and example quickly to develop the vast latent resources of the Middle Kingdom, and to utilize them for military purposes? Is it not conceivable that, under such circumstances, the yellow race might be encouraged to attempt once more that conquest of Europe which was but half-performed by Attila in the fifth, and by the descendants of Genghis Khan in the thirteenth century? Would not the experiment be this time made under conditions far more auspicious? And is it not probable that the Moslem armies, drilled and offered by the Japanese, would find efficient white comrades just as the host of Attila included the Ostrogoths? If Englishmen are now disposed to side with the Japanese against their Aryan brethren, the subjects of the white Czar, is it likely that heretofore Germans or Frenchmen or Italians would prove less willing to sacrifice racial affinities to commercial interests? These are questions that we ought to ponder and decide before we too hastily determine to give even our sympathies to Japan in her impending war with Russia.

## The Future of the Catholic Church

When these lines meet the reader's eye it is possible that the successor of Leo XIII. will have been chosen, for some days will have elapsed since the doors of the Vatican were locked upon the cardinals. Many well-informed persons believe that the cardinal Mealy will be short one,—perhaps as short as that of 1878, when Cardinal Pecci was elected on the third ballot. At this distance it is idle to speculate on the outcome of the papal election. It may, of course, be expected that the decision of the Sacred College will be swayed by the wishes which have been exhibited on similar occasions during the last hundred years. Experience has shown, however, that even should a mistake be made it will have no permanent effect upon the fortunes of the Catholic Church.

If we except the odious record of Pharaonic rule in Egypt, which itself was repeatedly interrupted by the intrusion of foreign dynasties, the papacy has proved the most inflexible of human

institutions. It survived the transfer of the capital of the Roman Empire to Constantinople. It survived the Arian heresy which at one time infected all of the barbarian conquerors of the West except the Franks. It survived the kingdom of the heretic Ostrogoth Theodoric, the reconquest of Italy by the Byzantines, and the long dominations of the Lombards in the peninsula. The revival of the Roman Empire in the West under Charlemagne the Great strengthened, instead of extinguished, the papacy. It survived the collapse of the Carolingian Empire, the invasion of Italy by the Saracens, and the successive onslaughts of Magyars and Mongols upon Central Europe. With might but spiritual weapons at their disposal, the bishops of Rome withstood for centuries the tremendous military power of the emperors, and they brought to their knees such material representatives of imperial power as Henry IV, Barbarossa, and Frederick II. In the fourteenth century the papacy was threatened with the disruptive and disintegrating effect of transplantation and seclusion, yet it survived the Italian captivity of seventy years at Avignon and the subsequent rivalry of two popes, and, for a time, of three popes, for the affliction of Christendom. It succeeded in paying the homage aimed at it by Luther, by Zwingle, and by Calvin, for, although England and Scotland, Sweden and Denmark, the northern provinces of the Netherlands and a large part of Germany were imperially lost, Catholicism succeeded, by means of the Counter-Reformation, in regaining a firm hold on all the rest of Central and Western Europe. It was to witkinds triumphantly an even severer test of its vitality; for, although the French Revolution sought to destroy the Catholic Church property wherever French arms or influence could reach, by an occupation of the Eternal City, and by the imprisonment of Pope Pius VII, that pontiff lived to witness the downfall of the Napoleonic Empire, and the re-establishment of the States of the Church. In 1847 Pius IX. was compelled to flee from Rome to Gaeta, but he was presently restored, and continued to exercise the temporal powers for upwards of twenty years. To one familiar with the extraordinary history of the papacy, as every cardinal must be, there is nothing appalling or even formidable in the existing ascendancy of the civil power in Italy. The Bishop of Rome has less to fear from Victor Emmanuel III. than he had from Theodoric, from the Lombards, from the German Emperors, or from Napoleon I. There is, in the nature of things, no reason to suppose that the head of the House of Savoy, who has throughout a large part of Christendom public opinion sees in the Catholic Church a beneficent agency, and accepts the plea that for an effective exercise of his functions the Pope needs political independence. It may be said that seldom, if ever, have the spiritual functions of the papacy been more efficiently discharged than they were by Leo XIII., although he, like his predecessor, called himself a prisoner in the Vatican. The truth, of course, is that he never was a prisoner in any odious sense of the word, but his freedom from physical and moral restraint was due to no lack of power on the part of the Quirinal, but in the sagacious self-control exhibited by its three successive occupants, and to the excessive vigilance and deference with which the currents of opinion in Catholic Europe were watched and headed by Victor Emmanuel II., by Humbert I., and by the present ruler. What guarantee does the ignominy of the Vatican possess that the successor of Victor Emmanuel III. will not be an infidel or a degenerate? What assurance has he that an outbreak of spite or violence on the part of the civil power in Italy might not be coincident with such a state of disturbance in Europe as would preclude the hope of success from any Catholic or friendly power? To say that the exercise of the papal functions does not require political independence seems, from the view point of pious Catholics, to be unreasonable, because it neglects the experience of fifteen hundred years, to which no real exception is presented by the wisdom and self-restraint temporarily evinced by the House of Savoy, which itself is in a precarious condition.

Even to Protestant and secular onlookers, who contrast the increase of papal prestige during the last quarter of a century with the simultaneous decline of the Italian monarchy in popular esteem, the recovery of a portion at least of the temporal power has ceased to seem chimerical. Meanwhile, it is becoming more and more patent with every year that the retention of power by the Savoyard dynasty hinges on the maintenance of a respectful attitude toward the Catholic Church. Public opinion not only England, would not now permit Victor Emmanuel III. to do what his grandfather might have done with impunity. The slightest attempt at the present time to exert coercion upon the Vatican would provoke a widespread resentment that might be fatal to the stability of the Italian monarchy. It would then be said that

the House of Savoy had been tried in the balance and found wanting, that the coexistence of a King and a Pope in the same city had proved impracticable, and that the peace of Christendom demanded a renunciation of temporal sovereignty to the papacy. That is one of the events to which some Catholics look forward, and it is likely to take place, unless the prudence and discretion thus far shown by the Quirinal shall be continued for many generations.

In the mean time, there is ground for thinking that the disposition of civilized mankind to desire the upholding of Catholicism as a force coexistent with the commonwealth is likely to wax rather than to wane. From both a religious and an economic point of view the Catholic Church is coming to be regarded as the keel-ancher of society. Where else is there to be found a rare part against scepticism on the one hand and against socialism on the other? We are not among those who expect that the twentieth century will witness a reabsorption by Catholicism of many, if any, of the Protestant sects that seceded from it some four hundred years ago. It is quite possible that individual members of the High Church wing of the Anglican communion may be increasing in number so over to the Church of Rome. It is also possible that like apostolic conventions may take place in those Continental countries in which Episcopal hierarchies were established by the Lutherans. The Anglican and Lutheran bodies, however, will no doubt retain for a long period their separate organizations, and this may be predicted with an even closer approach to certainty of the Presbyterians, the Congregationalists, the Baptists, and other minor Protestant sects. But while an reunion on a considerable scale is probable, there will be evolved a tolerance, and even a sympathy, for Catholicism of which in Protestant countries there was not trace a hundred years ago.

Of the growth of such tolerance and sympathy we see everywhere impressive evidences. They are as visible in England, and even in Scotland, as they are in Prussia, Denmark, and Holland, and they are nowhere more conspicuous than they are in the United States. As we have formerly pointed out, an attempt at this time to raise the "No Popery" cry in England would simply provoke derision, and only a lunatic would try to revive to-day the anti-Catholic "Know Nothing" party that was for an hour so powerful half a century ago. The Catholic Church is now regarded by statesmen and political economists in Protestant countries as a useful if not indispensable conductor in the work of upholding the existing order. The intractableness of such an alliance was so clearly recognized by Karl Marx that he made the repudiation of Catholicism a cardinal tenet of the Socialist creed. His injunction has been heeded in both Germany and France; and, by a natural counter-movement, all the conservative forces of society are beginning to occupy a friendly position toward the Catholic Church. In view of this new alignment of forces, the papacy is justified in looking forward with equanimity, if not with confidence, to the possible vicissitudes of the twentieth century.

## General Wood's Promotion

THESE were reasons why President Roosevelt would have chosen Leonard Wood to be a major-general. We all recall how, when the Spanish war came on, Wood, an assistant surgeon in the army, and family physician to President McKinley, became colonel of Theodore Roosevelt's Rough Riders. The two men were already intimate friends, and worked together in extra harmony. When Wood was promoted to be brigadier-general of volunteers, Roosevelt succeeded him as colonel of the Rough Riders. Out of the army with which he developed the possibilities of that position, adding an astonishing military indorsement to a civil reputation already widely known, came his nomination to be Governor of New York. On that followed the Vice-Presidency. Naturally, therefore, President Roosevelt may feel that Wood, in his course and coworker in the Rough Rider enterprise, helped more than any other one man to bring him to the place he now holds and the powers he now administers. It is natural enough, then, that he should feel that he owes in General Wood any good turn he can do him.

But it so happens that General Wood was a great favorite of President McKinley, who saw him promoted to be successively brigadier-general and major-general of volunteers, appointed him brigadier-general in the regular army, and chose him to be the military ruler of Cuba. Assuming General Wood's services as an administrator to have been quite as valuable as his friends think, they were so amply rewarded by promotion, that until now President Roosevelt has had no opportunity to give him a substantial lift. With the retirement of General Miles and Duff and the change came, and the President has made his friend a major-general.

It is true that Generals Sumner and Wood, who have been promoted, were at the top of the list of the brigadier-generals. That Wood, but it does not make his appointment a good one. There are but six major-generals on the active list. Five of them, and

the present lieutenant-general also, will be retired before or during the year 1909, so that in six years General Wood, if he lives, will be senior major-general, and first in line of promotion to be lieutenant-general. He will not himself reach the retiring age until 1924, so that if his appointment is confirmed by the Senate, he may hope to serve for twenty-one years either as major-general or as a still higher grade.

Now we do not doubt that General Wood is an able man, with charm of manner and other ingratiating traits, but what has he done to deserve this high military rank, or to qualify himself for the duties which it involves? His service as an army surgeon made him so far familiar with military life and methods that when he was appointed colonel of volunteers he was doubtless much better qualified for the place than were most militia officers or civil appointees. But in the colored of volunteers is one thing, and to be a major-general in the regular army with twenty years to serve is very much another. A major-general is not alone a lieutenant-general—should be of proved abilities as a fighting man; but not for any considerable service as a fighting man has General Wood's successive promotions come. He certainly has not fought his way up; it is disputed whether he has even worked his way up. Men well qualified to form an opinion insist that by the favor of the late President he was passed rapidly over the heads of many officers whose qualifications were superior to his and their services much more distinguished. "Well, then," say the protestants, "turn about is fair play. General Wood was jumped over the heads of more deserving men. Why not now have a comparison of recent records? Why should not such officers as Franklin Bell, Tucker H. Sims, Joseph P. Sanger, Thomas H. Barry, E. J. McFarland, James S. Petrus, E. Nelson Hazard, Dr. L. La Garde, O. H. Ernst, W. M. Hark, O. W. Goethals, John Biddle, Crozier, Bereng, Eber, and Grebe, all of whom are in the staff corps, be considered now for promotion on their merits over the head of General Wood? Every one of them is a better soldier than he, and their careers do not begin to exhaust the list. Bell was better administrator than he, and did far more important administrative work in Cuba. Bell is incomparably his superior as a soldier. If it was fair to jump him over the heads of such men two or three years ago, why not jump some of them over his head now?"

In our opinion, the point so stated is well taken. General Wood was amply rewarded for his services by the late President. If President Roosevelt's relations with him are so peculiarly close that he could not bring himself to deny him this present promotion, the Senate ought to concern itself vigilantly in the matter, and devise to confirm the appointment unless it shall appear that there were better reasons for making it than the personal testimony of the appointing two successive Presidents.

There are highly important offices which the President might give to such a man as General Wood without exciting criticism of importance, but a major-generalship in the army is not one of them. That ought to go to an officer of thorough military training and distinguished record. That it should go to an officer whose career as a fighting man began no more than five years ago, and whose military record, though creditable, is brilliant only in its rewards, cannot but be exceedingly discouraging and demoralizing to the faithful officers of the army. It is a shock to discipline, and it comes, seriously enough, from a President whose interest in the army has been active and intelligent beyond what is common, and under whose administration and with his help great progress has been made in making the army an efficient machine. It was not characteristic of President Roosevelt to give a major-generalship to a man who had not earned it. We must conclude that in General Wood's case either the personal motives for making the appointment were so peculiarly strong as to overcome some sense of fitness, or that his opinion of the value of General Wood's services and of his military abilities is exceedingly high. The readily lies with the Senate, which should not fail, and, we think, will not fail, to examine carefully into General Wood's qualifications and military record, and decline to confirm the appointment if it shall prove to be impudent and undeserved.

### Women and Music

As cradles and industries German has recently compiled a list of almost 1000 women composers who have from time to time published music of their own composition. We have gone over Herr Ebel's list with scrupulous care and the keenest interest, and out of the 1000 names, garnered from several centuries and many nationalities, we have abstracted those of a dozen women composers who have achieved a certain measure of recognition in the practice of their art: of those other 988—and Herr Ebel has listed the names only of those whose work is definitely known and recorded—fame and the living world know nothing. Here is an extraordinary, a fascinating problem: How comes it that during four centuries—from the time, roughly speaking, of

Palestrina, in the present day,—only twelve women have made their mark upon the history of creative music, and that not one even of these twelve has accomplished anything approaching first-rate excellence? The fact is, of course, indisputable: musical history has known no feminine Bach, or Wagner, or Schubert, nor even a feminine Dvořák or Purcell. Women have wrought admirably, at times incomparably, in letters, and in painting they have worked to honorable ends; but what woman has written music that is to be mentioned in the same breath with the work of George Eliot, of Christina Rossetti, of the Brontës, of Rosa Bonheur, of Alice Meynell, and Flora MacLeod? Surely not Clara Schumann, nor Ingelborg von Bismarck, nor Angèle Holmb, nor the inimitably superior Chopinette, nor Liza Lehmann, nor those accomplished and earnest Americans, Mrs. H. H. A. Beach and Miss Margaret Ruthven Lang—to name those among the most eminent who came first to mind.

It has been urged, and doubtless will be urged again, that the woman composer has had, as yet, scarcely a fair chance to prove her mettle: but it must be conceded that she has had at least equal opportunities with her sisters in literature and art. Certainly there are no insurmountable obstacles in her path; for only the other day Miss Kibby Smyth composed the amazing feat of achieving the production of her music-drama, "Der Wald," on the urgent and ineluctable advice of the Metropolitan Opera House, New York—work to mention her previous creative work in Great Garden, London, and, before that, of an operatic stronghold in Berlin. One is, finally, then, confronted with the question: Is woman incapable of great creative achievement in this most sensitive, plastic, and emotional of the arts—the art of all others in which she would suppose, she might most bravely try to excel? Surely, there is everything to warrant the conviction that she is. Mr. Havivsek Ellis, a thoughtful and acute psychologist, endorses the view that Mr. G. P. Upton takes of the matter in his *Woman and Music*. Conceding, says Mr. Upton, that music is the most intense and potent medium for the expression of the emotions, and that women is emotional by nature, "is it not an exhibition of the problem that woman does not suddenly repudiate them, because she herself is emotional by temperament and nature, and cannot project herself outwardly? . . . The emotion is a part of herself, and is as natural to her as breathing. She lives in emotion, and acts from emotion; . . . but to treat emotions as if they were mathematics, to bind and measure and limit them within the rigid laws of harmony and counterpoint, and to express them with arbitrary signs, is a cold-blooded operation possible only to the sternest and most odorous nature of man."—All of which, to our mind, is exceedingly convincing and explanatory. Mr. W. B. Frazer, who is as subtle in criticism as he is accomplished in poetry, has written somewhere what seems to us a truly felicitous defect in woman's practice of the art:—"A sitting incoherence," he calls it,—"a stifling drying out of the sense, as most needs be when life is the master and not the slave of the singer." There is, we believe, the fatal disaffection; so long as woman's emotional relation to life is that of the slave rather than the master, so long will her creative work in that art which is pre-occupied, above all things, with emotional utterance, be inferior and ineffectual.

### Dublin University and the Irish Land Bill

UNTIL the very end of the committee stage it was all plain sailing for the Irish Land Purchase Bill, with a fair wind and a clear sky. Towards the close of the long debate, a storm suddenly arose; turmoil and strife took the place of peace and unity, and threats were bandied back and forward between the Tory promoters of the bill and their Irish allies. The cause of this sudden outbreak of bitterness was that venerable institution Trinity College, which has stood as a rock through more than three centuries of fierce turmoil in Ireland, and during all that period has consistently stood for a single principle, a single ideal. Founded by Queen Elizabeth on lands confiscated by her from the Irish "rebels" who resisted the Tudor policy of spoliation, Trinity College was further greatly enriched by the Stuarts, who pursued the same policy of confiscation; subsequent rights extended the same principle, until at the present day Trinity College is the owner and landlord of more than two hundred thousand acres of land, from which she draws a yearly revenue of about two hundred thousand dollars, the most considerable element of her wealth. It is perfectly evident that a holding like this forms an extremely important factor in the general redemption of Irish land, and the matter is complicated by many vexatious factors, such as political, legal, and religious.

For generations, Trinity College has been the stronghold of the English garrison, the Protestant ascendancy party of the Tory landlords, and at Trinity College their sons have received an education colored altogether by the narrowest parish spirit, and fitting them to carry out the policy of English and Protestant domination over the Irish Catholics, who for more than a century

had no civil rights at all, and whose form of worship was rigorously persecuted, the same price being set on a wolf and a Catholic priest. Trinity College has always been a hotbed of that class spirit and religious intolerance which have been responsible for so many of the evils of Ireland's history.

It is easily intelligible, therefore, that the Irish Nationalists cannot easily accept a proposition to levy further contributions on the resources of Ireland in the interests of Trinity College, especially when these proposals are open to the gravest objection on quite different grounds. The question arose in the following way: Trinity College does not deal directly with the cultivators of her lands, just as (twice a year) the landowners do not deal directly with the taxpayer. Each creates a class of middlemen, who pay a certain fixed amount, in return for the right to squeeze what they can from the wretched peasant who actually tills the soil. The Trinity College middlemen made an excellent thing of it for centuries; they found their business so profitable that they finally entered into a bargain in perpetuity, promising to pay a fixed sum to Trinity College until the crack of doom, and extracting as much more from the wretched peasant as the peasant could pay without dying of starvation. The middlemen thought they had done a shrewd thing and made an excellent bargain. And so they had, until the days of the land agitation came, bringing in their wake the land courts, which not only fixed the amount the middlemen could extract from the tenant, but further, on two subsequent occasions, when that amount, well the need of starvation began to have a new and illuminating meaning to the hitherto happy middleman, and took on a personal application which was dire and menacing to a degree. For he was held in the vice of the perpetual lease, and had to go on paying a fixed amount to Trinity College, while his own receipts, already greatly diminished, were threatened with further luminous diminutions.

The land-purchaser bill now enables the cultivators to redeem the land they have been tilling, and they will presently become full owners of the soil. But the middleman is still in the grip of Trinity College, and will have to buy his liberty at a pretty stiff price, amounting to practically every penny of the peasant's redemption. No one, however, seeks to compensate the wretched middleman, but the feelings of Trinity College are to be carefully safeguarded. To accomplish this, Mr. Wyndham has set aside twenty-five thousand dollars yearly to safeguard Trinity College against any possible loss which may be involved by the removal of the middleman, so that whoever suffers, Trinity College stands to win.

The twenty-five thousand dollars a year was secured in a way which added fuel to the flames. There is a general fund "for the development of Ireland," which is raised from Irish taxes. On this fund the Government has set aside twenty-five thousand dollars has been laid out, not for the development of Ireland at all, but for the promotion of sectarian education amid the narrowest and most bigoted traditions, in an institution which has always been anti-national in an exaggerated degree. It is, therefore, easy to see why the Irish members resisted both the matter and the manner of this grant, with a vehemence which threatened to break the Tory alliance in two.

## The Novelist in Politics

Ten MacMasters and McCarthys of the mid-twentieth century will record this as the age of novelists. The rising of the Third Estate has been chronicled so often enough. The Fourth Estate has celebrated itself more than once through the Fifth Estate now advances proudly in tally-ho and ten-thousand-dollar automobiles, to the sound of trumpets and typewriters. Nobody writes anything but novels. Nobody reads anything but novels. The world is the novelist. The schoolgirl and the sage, the captain of pantaloons and the strong man, are rejoicing in his strength and his gift secure—all ages, sexes, and sorts—pay willing homage and royalties to King Novel, and Grab Street is paved with gold.

Inevitably the novelist becomes the instructor and director of the public mind. He is literature, history, morals, the universal professor. He is the successor of our old friend the Moulter of Public Opinion. Since the summer of the intellectual throne, he is the real ruler of his age's consciousness.

This unofficial power of his might be dangerous and irresponsible. It is his duty to go into politics; to accept the office which stretches out supplicating hands to him; to be the actual, as well as the nominal, ruler. Fortunately, some American novelists have heard their political calling well. Mr. Booth Tarkington heard and obeyed. The Indiana Legislature was his trying-ground. He was "an

say. He was a good fellow. He was shrewd. He studied parliamentary law as diligently as if it were an Epithet out of which an historical novel were to be milked. His experience in disfigure fitted him for debate. In short, he took naturally the leadership which belonged, to a leading novelist, and his legislative bureau

are causing inconstancy among his brethren of the novel in Indiana. They yearn to follow where he has bravely led. Meanwhile he looks toward Washington, the House of Representatives, the Senate-Chamber, the White House. The world is all before him where to choose, and the Illinois long to choose him.

The good example soon bore fruit. Mr. Winston Churchill was elected a member of the New Hampshire House of Representatives, a body already consecrated to literature, dramatic literature, by the late Mr. Charles H. Hoyt. Only the other day Mr. Richard Harding Davis was "mentioned" as the fittest candidate for member of the General Court of Massachusetts from the town of Milton. Mr. Davis has waived away the promised honor in a modest letter. He has not left us, at all heart, is still true to New York. He will not give up his citizenship here. New York is a "pivotal" State. A novelist ambitious to be a pivotal politician will naturally settle in New York.

So Mr. Davis may yet take opportunity to study close at hand the Soldiers of Fortune in the Legislature. One after another, the novelists will take the position that belongs to them. The scholar in politics has not amounted to much. The novelist in politics has almost a closer frid and general favor. And novelists are never wearisome—in politics.

Mr. Roosevelt must be watching with eager sympathy this political progress of the novelists. While only a sporting writer and historian himself—and history is the maiden aunt of fiction—he may be said to be a character out of a novel, "Ivets and Spurs," perhaps, or "The Romance of a Rich Young Cowboy."

## The Artistic Temperament in Medicine

SOMEONE has recently raised the question as to whether the elderly doctor, with his queer, curt, stern manner, has really disappeared, or is merely superseded by a spirit of the new type who has learned to be polite among those of his patients from whom he may expect a good consideration for his services. Without going too deeply into particularities, it seems to me that the ethics of the profession have not merely improved, but have been actually regenerated. The artistic temperament can belong to a man of genius, but this is exceptionally the case, and nowhere more so than in the medical profession.

Of true geniuses in medicine there have been not a few, and by no means have all of these attained the distinction and received the honor of a Harvey or a Jenner, however worthy; but, like great men everywhere, they were characterized by that unconcern, that altruism, that lack of pretense, which demands no praise and has need of none. Such, by their modesty and sympathy for the weaknesses of mankind, have made the world a more habitable place and have set noble ideals for future generations.

False geniuses, like false prophets in general, have ever been plentiful among doctors, but it is needless to say that the profession, as a whole, has decried them and refused them recognition. Of such are the obstreperous and pretentious quacks who demand for themselves undeserved economies, and in matters involving standards of taste are absolutely incompetent. "Art for art's sake" forms no part of their creed, while selfishness and avarice produce the inevitable result—viz., a perfect lack of sympathy for the foibles of humanity and that disinterested to every mandate of conscience which only the absolutely bigoted and unscrupulous can obey.

The eccentric may be defined as an individual of average ability who derives his chief inspiration from his own self-glory. Consequently, he is entirely a self-centered person whose love of the conspicuous is manifest in long shaggy hair and English trousers of the greatest possible width and most impossible pattern. Whether known, but in any case the distinction, to his greatness is harmless enough, and so easily diagnosed as to be unworthy of serious attention.

The Old School seldom produced the scholar, and almost never produced the refined gentleman, and in this lies its chief distinctive mark and often abrupt in the point of insult, yet beneath it all lay the kindly spirit and the generosity beget by a life spent in the service of mankind. Some of us can remember the country doctor of long ago who, summoned at midnight to a severe case of pneumonia, let us say, would ride a dozen miles through mud and slush, upbraid his patient most unceremoniously, and then proceed to give the minutest directions to the attendants, with a have changed. The New School demands the best—now liberally understood in our universities, who can combine absolute firmness with unrequited politeness. The polished gentleman is coming into the ranks, and there is less occasion for the artistic temperament in medicine to-day than ever before. The entire question is one of encouragement in idiosyncrasy and of ignorance in matter of taste.

*W. A. Larned, the National Champion, making a Fore-hand Stroke*

*H. S. Mahony, a Member of the English Team, who will compete in the International Matches*

*Edgewood F. and H. L. Doherty, the visiting English Champions, playing a Match Game*

### **THIS WEEK'S INTERNATIONAL TENNIS MATCHES**

*The Doherty brothers, tennis champions of England, have come to America with H. S. Mahony, the first member of the team, to take part in the international tournament for the Duxbury Cup this week at Longwood, Massachusetts. They will play against the Wrenn brothers and W. A. Larned, who constitute the American team*

# Money to Burn

Snap Shots by our Artist, W. A. Rogers, of the Gordon Bennett Steam-Yacht Race off Newport

"Amoska" (H. H. Rogers) and "News" (W. D. Lunt) start, both confident. "Amoska" pulls ahead, and Lunt's yacht below with an idea of ...

Firing up with Rock Island stock, and ...

Forwards "News" gains, much to Rogers's dismay. Then ...

The Salt Stores buy and sell. Rogers tries Amalgamated Copper, common, but Lunt gains ahead with Rock Island, preferred.

Whereupon Rogers has a brilliant idea, and joins in Keweenaw, winning easily, "Amoska" still down.

*The "Kanawha" at the Finish Line*

*Mr. H. H. Rogers' "Kanawha," winner of the Lyellstrata Cup*

*The "Nema" crossing the Line at the Finish a mile and a half astern*

## THE "KANAWHA" WINS THE INTERNATIONAL CUP FOR STEAM-YACHTS

*The recent contest for the International Challenge Trophy, the Lyellstrata Cup, won by Mr. H. H. Rogers' "Kanawha," was the first race between steam-yachts that has been held in years. The race was over a triangular course of sixty miles off Newport. There were only two contestants—Mr. Rogers' "Kanawha" and Mr. W. B. Leeds' "Nema," two of the largest and fastest steam-yachts afloat. The "Kanawha" covered the course in 3 h. 3 m. 9 s., beating her rival by 4 m. 36 s.*

# England and Education

By Sydney Brooks

London, July 21, 1914.

"ENGLAND has a contempt for knowledge." That was the opinion which the late Bishop of London formed and expressed shortly before his death; and Dr. Pugh's law of "shoveled in" says that no man's experience could be thought wide enough to justify so grave and comprehensive an indictment, then his could. Like most English bishops, he began life as a schoolmaster; he was for many years a great teaching professor; he was also a historian who held his own with Froese, Lecky, Green, Freeman, and Gardiner; he had come into contact, more or less intimate, with thousands of young men; and from the high position to which he eventually climbed he looked abroad with keen, wide-seeing eyes. And that was the conclusion to which his busy and varied life had forced him—that the English despise knowledge, are intellectually lazy, trust for too completely to their "practical qualities," and betake themselves to scientific study "in a spirit of condescension."

There cannot be much question that the bishop was substantially right. Englishmen cannot, seemingly, be induced to regard education seriously. In Birmingham, they have made an earnest effort to build and run a thoroughly up-to-date technical university after the best American and German models. The proposal was put forward four or five years ago, just when the pressure of foreign competition was rousing the country to the necessity of scientific education. It was put forward in Birmingham, which in its godliness and public spirit is the Chicago of England. It was put forward also in the back-rooms of the most forceful personality in English public life, Mr. Chamberlain, in private and public letters, on the platform, and in personal interviews, expended the whole of his immense energy to get the project launched. Everything, therefore, was in his favor from the start. And yet, in spite of all this, the scheme might have fallen through altogether and it has not been for Mr. Carnegie, and even with Mr. Carnegie's help, the university is still considerably short of funds for building as well as teaching purposes. Could anything show more clearly that the English are not really in earnest about education, that it is still a cause to which they will pay life service, but for which they will not take off their coats?

The days seem to be gone forever when Englishmen honored themselves by endowing seats of learning. Many, perhaps most, of the great names of American industry are connected with the schools, colleges, and universities which their wise liberality has founded. But in England it is the rarest possible thing for a millionaire to redden education among the objects of his benevolence. To appeals from charitable and religious bodies his purse is always open, but the claims of education do not interest him. Even to Oxford and Cambridge, which are the pride of every Englishman, bequests and show his originality more freely than in remembering his Alma Mater in his will. It seems difficult to realize that Oxford can be in need of money; yet the fact is so. Money is wanted at Oxford for all the newer branches of study and for most of the old ones. The university knows as well as we that it is still superseded by a sufficient lecture course for a professor of physics was appointed by New College in 1900; he has to borrow rooms from his colleagues, a mineralogical reports that there is not at present any equipment for the study of the subject at Oxford. The department of mechanics is equally backward and it is a matter of recent official confession that "the scientific study of modern history cannot be presented in Oxford."

Nor does the State step into the gap left open by private indifference. It spends an enormous amount of money, but spends it unwisely. Education in England is free and compulsory, but the best English school school hardly reaches the standard of the average American or German public school. The whole system indeed is confused almost to the point of chaos—the universities based in an out-of-date curriculum, the middle schools on the basis-ground of theologians, secondary education starred or misapplied, and only such seminaries as Eton and Rugby to be pointed to as reflecting real credit on the country; and even they do far more to mould the characters than the needs of their pupils. Consider the Education Bill which has declined so passionately all through last year, and indeed right up to the moment of Mr. Chamberlain's "new departure." Hardly a man, in or out of the House, discussed it from the educational point of view. The debates raged round its alleged injustice to Dissenters, its alleged favoritism to the Church of England, and ended finally in what was neither more nor less than a sectarian brawl. Even now in many parts of the country there are Dissenters who are refusing to pay the new education rate, and prefer to sing hymns and chant psalms while the law-officers detain upon their goods. There will never be an educational system worthy of the name in England until Englishmen bring themselves to leave God out of the discussion.

Add to this sectarian narrowness the strong social conviction that education is something dangerous and confusing. If Englishmen are not in earnest about education, English women are even less so. It complicates the great servant problem; in fact it has already done so; the cook "has ideas above her station"; the housemaid no longer "knows her place"; the waiter is a great deal too "independent"; the "lower classes" are becoming "smooched." I do not say that this spirit counts for very much, but it certainly counts for something. It helps in thwart, if not to discourage, the energies of those who are honestly and ardently trying to better things. It creates an atmosphere that tells against the educational reformer. But in the long run it does not make very much difference whether the working class society "approves or disapproves of education. What is really serious is that the work of business should be equally sceptical. Manufacturing and commercial England is at least a generation behind both Germany and America in its recognition of the value of scientific instruction. Perhaps it would not be overstating the case to say that in no country is the educational system so divorced from, and of so little use to, the nation's business. After persistent and careful inquiry I have failed to discover a single instance in a single industry in which the application of science has first been made by Englishmen or in which Englishmen, after adopting a foreign invention or a foreign process, have afterwards improved on it. I am speaking of a period of our own times, and I think my statement will hold good for a period that covers the last thirty years.

On the other hand, instances abound where industries have been wrested from the English because their rivals have adopted really scientific methods. Take brewing for example. Thirty years ago our country exported no beer at all; to-day she sends abroad nearly as much as Great Britain, and of a far better quality. In electrical engineering, in the manufacture of chemicals, in the production of glass, or iron and steel, of pottery, of explosives, and of many other articles for which Britain used to be the industrial centre, this country is being rapidly left behind. The history of the oil and colors industry is but too instructive. The scientific production and manufacture from coal-tar was first discovered in England, and for a long while the industry was overwhelmingly in laboratory, the late Professor Baeyer. He developed the theory of oil and colors so enormously that the industry has now almost wholly shifted to Germany, although the English dyers are the No. 1 consumers. In all such things Germany is the ideal State. Nowhere else, not even in America, is academic life so closely and helpfully in touch with commerce.

Discussing the Education Bill in the English House of Commons

## TRANSFORMING THE METROPOLITAN OPERA HOUSE, NEW YORK

Alterations which will cost not less than \$1,200,000, and which will revolutionize the scenic production here of Wagner's music-dramas, are now being made on the stage of the Metropolitan Opera House, New York. By a series of large stages set in the floor an entire scene may be lowered, and its place taken by a scene already set below the stage. A new and adequate system of electric lighting will be installed, and the orchestra space will be enlarged by cutting away part of the stage, in order to accommodate the 120 men required for the proper performance of Wagner's works. This illustration shows the new stage as it will look when arranged for the first American production of Wagner's "Tristan." The stage is set for the last scene of the first act, showing the Sanctuary of the Holy Grail, while the space beneath it occupied by the opening scene of the second act, completely set on disappearing carriages, and ready to be raised into place without a moment's delay.

# Books and Bookmen

By James MacArthur

**A** TELLING cartoon on Mr. Chamberlain's scheme of preferential tariffs which appeared in a recent issue of the *Puff Blow Graphic* borrowed its illustration from Wec Macgregor's boyish passion for "tablet"—a confection dear to Scottish children. "C.B." may not, for the benefit of those who do not follow British politics closely, be Sir Henry Campbell-Bannerman, a Scottish member of Parliament, and leader of the Liberals in the House of Commons. It argues a very wide acquaintance for a book, an acquaintance that goes beyond the usual reading circle, when a newspaper uses its salient humorous feature to point the moral of a political problem. Mr. Bell is a fortunate young man to have attained such distinguished recognition for his first book, but everybody agrees in admitting that he has merited it. His second book, as I have already noted, is in a different vein, but it is merely another medium for his individual and delightful humor to work in. Of *Etzel* a New York critic writes: "There is only one other story with which it could be compared—*The Dolly Dialogues*. Yet we should rather know Etzel than the flirtatious Dolly."

The publication of the late M. de Bliovita's autobiography, which was announced a long time ago, seems for some reason or other to have been deferred. Musing the curtail number of HARPER'S Magazine publishes a remarkable chapter in the diplomatic career of the late world-famous Paris correspondent of the *London Times*, in which he has left recorded the true facts concerning Bismarck's retirement. It illustrates admirably the adventurous and romantic side of a special correspondent's life, and affords necessary readers an insight into the extraordinary incidents and daring exercise of them which are essential to the knowledge of home and foreign affairs, accepted by readers as unthinkingly, so far as the methods in procure the product goes, as they partake of the breakfast served with the paper they read. In relating the Bismarck incident, M. de Bliovita confesses that he wrote it not only for the sake of retracing an episode with which he was not connected, but also to show the strange obstacles, the unexpected contradictions, and the involved difficulties that a journalist must confront.

In a recent number of *Le Renard*, a French magazine, we sense characteristic reminiscences of M. de Bliovita, many of which have already become the common property of the press, but which he recapitulates to demonstrate the fact that celebrity is the supreme emotion of great journalism, and that de Bliovita possessed this faculty in the highest degree. The rapidity with which he could grasp the whole significance of any given episode and dispatch the very soul of it, as it were, to the *Times*, recalls to the French writer a skill which appeared under the Second Empire at the Palais Royal. Two people were on the stage. Suddenly one of them begins to rush off.

"Where are you going to?" calls out his companion.

"I haven't the vaguest notion," replies the other. "But I've got to be there by a certain time."

The second stood for a moment dumfounded. Then he exclaimed, "I must be there before him, and disappeared as quickly."

In addition to his flair for the exact value of any political incident, and the aptness with which he could turn it over in his mind and review it from all sides, de Bliovita was gifted with an extraordinary memory. One example which M. Frédéric Lotie cites in his interesting article is new to me and as it may be to my readers. Mr. John Deane, then editor of the *Times*, having crossed to Paris in 1872, accompanied de Bliovita to Versailles, on the occasion when Thiers, in a wonderful speech, divulged the political programme. That very night Deane was returning to London.

"What a pity things are to the station, the former exclaimed; if we could only give it verbatim in to-morrow's paper, would be the biggest thing we have ever done." He spoke without the smallest thought of Bliovita's ever possible. But suddenly an idea flashed through de Bliovita's mind. He asked himself whether by a suppliant entreaty, the illusion of being permitted to hear Thiers speaking, and as a result that he could reconstruct the speech almost in its entirety. Instantly he rushed to the telegraph office, and having obtained permission to write in a room by himself, he alternately closed his eyes in order to see the words rising before him, and

opened them to commit what he recalled to paper. The next morning Mr. Deane, turning over the leaves of the *Times*, saw in its statement, two-and-a-half columns faithfully reproducing the salient features of yesterday's proceedings. The exactness of this performance of de Bliovita was equally great both in London and Paris.

I suppose that to the minds of those who were familiar with the close friendship of Stevenson and Henley, there came the remembrance of Henley's distasteful attack on his dead friend two years ago, when news of Henley's death reached on the other day. But it is the friendship of the two men that is now best to be remembered. In spite of the misunderstanding that estranged them, say one who has read Stevenson's letters and Henley's poems know that they loved each other in the end, and Henley's savage criticism, read aright, only betrays and accentuates the bitterness of his irreparably wounded affection. Henley's intellectual influence on Stevenson, it must not be forgotten, was certainly great, and of the two his personality was the more dominant and masterful. Although but a year Stevenson's senior, he had already found himself when Stevenson discovered him in the Edinburgh Infirmary, and we know that the man's gallant spirit in suffering had its bearing effect on Stevenson, who had not yet outlived his somewhat morbid and uncertain youth. The little devotion to *Forster* with a *Healey* tells the tale. And for the other side one has only to read Henley's words on his strange meeting with Stevenson to realize the fascination the young Scotsman had for him, the deep interest he took in his literary career, and the tokens of a strong affection. Henley and Stevenson may be said to belong to the same cult among the moderns. The naturalism which oracles proclaimed by Browning and still more clearly by Meredith had its most vigorous exponent in Henley. As a friend of sound critical judgment, speaking of Stevenson and Henley, wrote me lately: "His poetry is one of the most imaginative exhibitions of the religion of sex. He was a stout lover of the earth, a born fighter against odds, an ardent romantic. Little wonder that Stevenson felt that he and Henley could not help being friends. But Henley's masculinity ever dwelt on sentimentality and his stoical faith, while it met the want of a generous generation, represented, after all, a passing and transitional mood. Stevenson and Henley started out with the same ideals; but Stevenson's was the deeper and far more comprehensive character. In spiritual ways he outgrew Henley, and there was the break. But the point of it was ever alive in the life of the other. In Henley's own words:

"What is it ends  
With friends?"

man's heart; each had written himself unobtrusively into the life of the other. In Henley's own words:

Mr. Leonard Merrick, an English author who has written several clever novels, includes his latest piece of fiction *Conrad in Quest of his Youth*. As Mr. Joseph Conrad is a remarkable man, his book called *Youth*, we may shortly expect, says Merrick. If this autobiographical play on titles becomes popular, to see authors chasing their own tails in some such form as this: *Joseph in Search of his Cargo*; *Fame on the Road to the Eternal City*; *James on the Wings of the Dove*; *When Parier came to Paris*.

A rhymester in our English contemporary, *The Tatler*, has had his gorge aroused by observing that the practice of "foreshaking" in spelling seems to be coming into favor among certain English firms. He resorts in this wise to the design of satire which is certainly more effective than rage:

Forsooth spelling I abhor,  
And read not my old Bible  
Or stuff up my trowsers now  
That look stout at a sight.

The Yankee "thesaur" and seek  
At folk in its issue  
And my pencil will so much  
That I become profane.

A traveler with day wain - "I"  
Will make me slant my frame,  
His load less than mine in speed  
Hud look stout at a sight.

Now needs to be no pedagogue  
To teach this world how  
Could he but teach "thesaur" "thesaur"  
Be other than a rascal.

Wec Macgregor at Westminster  
writes on his Magazine "Am about to see what's good for  
books" as it was

### A HUNDRED-FOOT DIVE IN ARMY PRACTICE

*The soldier bicyclists of the Italian army are experts in the performance of exciting feats, one of their common diversions being to dive into the Tiber River on wheels from high points along the shore. The accompanying illustration shows one of the soldiers making a dive on his machine from a cliff 114 feet above the river.*

# The Roof-Dwellers of New York

THE PEOPLE WHO MAKE THEIR HOMES ON THE ROOFTOPS OF NEW YORK.—A ROOF DWELLING THAT TOPS TENNYSON'S SPire.—THE WARM-WEATHER REFUGEES.—AIRY PLAYGROUNDS FOR SCHOOL CHILDREN.—NEW-YORKERS' GENERAL ESCAPE TO THE ROOF IN SUMMER

By Theodore Waters

**T**HE roof-dwellers of New York? It has come to that in some quarters of this many-sided town. The congestion which but years ago to the construction of sky-scrapers is now so intensified that people have been forced out of the tops of high buildings and compelled to live on the roofs. Just as there is a large colony of unfortunates who spend

most of their lives in the tenements and subways of the Metropolis, so there is a still larger colony of more fortunate beings who spend the greater part of their lives on the housetops. There is enough of them to populate a city of the third class, and the circumstances of their lives are as varied as all view-points considered, as they possibly could be in such a city. There are the high and the lowly, the well-to-do and the poverty-stricken, those who live thus from choice and those who do so from compulsion; all manners and sorts of men, women, and children. They enjoy on the housetops and enjoy the pleasures of life: eat, drink, work, and play, and are happy in much that would be denied to them in the more prosaic life of the streets. Probably such a phase of human endeavor does not exist in any other city in the world.

People are compelled to live on the tops of houses for two reasons: One, the excessive value of the interior floor space, which makes it necessary for the superintendents and janitors of sky-scrapers to live above the rent-paying line; the other, unsanitary conditions, which drive the inmates of tenements up through the sculleries. People choose to live on the tops of houses for one reason: the intrinsic contrast between the light, the pure air, and the sunshine of the roof and the noxious conditions that too often exist in the noisome which in places are misnamed streets. But whether from necessity or choice, the movement upward is growing more and more pronounced.

Among one class of roof-dwellers the choice and the compulsion have gone hand in hand. That is among the superintendents of the highest buildings in town. Formerly these fortunate individuals and their families were compelled to live below the street-line. But the sky-scrapers monopolize in such a formidable engineering problem that every foot of available space below ground is required for machinery, so the owners have been compelled to build little houses for their superintendents on the roofs of the structures. Some of these domiciles are quite sumptuous in style. For instance, the family living on the roof of the Empire Building overlooking

the financial district have quite the most eerie dwelling in town. They live as far above the spire of Trinity as that spire is above the street-line. They might live on the foothills of some mountain chain and not have a more healthy abode. Their little house cannot be seen from the street, but it is far more commodious than the most simple apartment in town. Indeed, the apartment idea has been followed more or less closely in the construction of the little house. But, unlike other apartments, there are windows on every side. The immense roof of the office building constitutes the house area of this happy family, and like other home areas, it has the traditional garden, the vine, and the more or less life-like substitute for the fig-tree. The high parapet that runs completely around the coping of the roof prevents all possibility of accident to the younger inmates of the household, and the magnificent view is supplemented by the fact that objectionable neighbors are more rigorously excluded than if the great moat surrounding the building were filled with water.

*A City Roof-Garden*  
The home of the janitor of one of New York's high office buildings is situated on the roof. It has a well-arranged vegetable and flower garden.

ing the needle and gaspings to their hearts' content. In some cases he is favored as their fellows. Those shop-workers who bring their parapets are nearly always high enough to keep the children from falling off.

Even the municipal authorities have begun to recognize the value of the rooftops. A number of the East Side schools now have recreation areas on the roof.

In short, a regular roodas on the roof takes place all over New York city every year. The theatres long ago recognized the advantage of having performances on the roof. Several hotels annually prunamently located on the roof of a skyscraper.

*"Hurling the Hoops" on the Roof of an East-Side School-house*  
Many of the East-Side schools in New York now have playgrounds on their roofs, which the children use for their games and sports. An East-Side baseball nine plays its road team on one of these rooftop playgrounds.

### SKETCHES OF SIR THOMAS LIPTON

Since the arrival of Sir Thomas on his third attempt to lift the International Cup, he has made his headquarters on board the steam-yacht "Erin," which was purchased "Shamrock III," on her trip across to America. Sir Thomas uses the "Erin" not only for many of the social functions he has given while over here, but for following the trial races of his two "Shamrocks." At all times the "Erin" is in touch with events on shore by wireless telegraphy. Our special artist on board the "Erin" has sketched Sir Thomas in a number of characteristic poses during a sail just outside the harbor of New York to watch a trial of the two yachts.

This representation of the remarkable old woman who controls the Chinese Empire was made a short time ago by the artist Frederick McCann, when the Empress, after a trip on the Lunan Railway, received M. Roulland, the manager, to thank him for his care in conducting the Imperial party

### MOTOR-CYCLING IN FOOTBALL COSTUME

The player in high-speed motor costume are beginning to adopt the protective head-dress advocated by football players, for enough work on the field. Prominent motor-cyclist say that with the head-dress on they can withstand the severest head-fernt tackle without injury, as there is a space in the top of the helmet which offers a pneumatic resistance to the jar

# Correspondence

MR. CLEVELAND'S CANDIDACY

TORONTO, CANADA, July 13, 1903

To the Editor of *Harper's Weekly*:

SIR.—I will, with your permission, state a few of the reasons that have led me to the conclusion that Grover Cleveland is the only man for the candidacy of the Democratic party.

1. The Democratic party has long been divided into two irreconcilable factions on economic questions—just as the Republican party was over the greenbacks in the '70s, and silver in the '90s. Both times its controlling faction set down an hard on its weaker element as to eliminate it, and got up apparently stronger than before. A house divided against itself cannot stand. Until the Democratic party plants itself squarely and permanently on one or the other side of the rapidly crystallizing economic problems, it will be unable to secure the needed confidence and support of a majority of the voters—and the nomination of Mr. Cleveland at this time would fix its future status as that of no one else would.

2. Even if its factions could be induced to unite temporarily against their common enemy the party could not win without securing outside help. From whom can it be obtained? Not from Populists, for the most of these are disgusted with the results of the past abortive efforts of these two parties to swallow each other; nor from the Socialists, who are still in the impractical partisan stage. But Mr. Cleveland has been twice elected by the help of Republicans that preferred him to his Republican opponent—and it is an old saying that what has occurred may occur again. That the leading Republican financial magnates greatly fear him, Mr. Roosevelt is well known, but they will not support a Democrat unless that party commit itself unreservedly against the socialistic trend of the age and nominate a man they feel sure they will elect. Mr. Cleveland is probably the only Democrat in whom they have sufficient confidence to risk polling him into power.

3. It can be safely assumed that Mr. Cleveland would not accept the Democratic nomination unless secured of the support of the leading members in other parties of the corporate interests, the bank and big city class—which would insure an almost unlimited campaign fund, the spending of which would begin as soon as the decision to fight was reached—i.e., before the actual nomination.

4. The strictly legitimate purposes to which money can be put in a political campaign are very numerous, and the knowledge that the supporters of any candidate will put up the needed funds has a powerful influence on nominating conventions. Who are the leaders of the numbers of public speakers, writers, personal canvassers, workers required in practice, singers, harpists, challengers, and other is seen that tens of thousands would be beneficiaries of this fund, no matter how the election might turn.

5. Even those that dislike Mr. Cleveland personally admit that he has a host of admirers outside of his own party; and he is certainly the most dominant personality in it. Mr. Bryan is strong numbers of good people believe him to be as honest and courageous as Roosevelt, and regard him as "a pre-eminently safe man" for life into the new future, and, under such circumstances, an expediency to turn to and insist upon a "safe" man is very probably has more friends to-day than ever before, and it is almost certain that there is much less authority in the present opposition to him than there was at this stage of each of his previous campaigns.

For these and other reasons, it seems to me, that the conviction is likely to spread and deepen among Democrats that the best thing for them to do is to nominate Grover Cleveland on a platform of anti-socialistic tendencies in the old Democratic corner-stone and best which governs least. With any other candidate defeat and a crushing conservative platform, a national victory is within the range of possibilities. Such a campaign would be made certain, and a new lease of life given to the party.

I AM, SIR,  
ALBERT GRIFFIN.

LESLIE CHAMBERLAIN, July 17, 1903.

To the Editor of *Harper's Weekly*:

SIR.—It is manifest that you desire Mr. Cleveland to again be President, and are indirectly urging the Democrats to nominate him with leadership. It would be the only way you can accomplish your object, of making Mr. Cleveland President, is to urge his nomination by the Republican party.

Mr. Cleveland is popular with Republicans; they are grateful to him for past services; and if you turn your gaze on that party greater effect on the rank and file of the Republican party than it is producing among Democrats.

I AM, SIR,  
WILSON JACKSON.

To the Editor of *Harper's Weekly*:

CHICAGO, July 2, 1903.

SIR.—I note the persistence with which you bring forward the name of Grover Cleveland as a possible nominee by the Democrats for President. Permit me to say that I have had some experience in politics, and having served a ten years' apprenticeship in the newspaper field, think I know how to find out things. I have traveled during the past year through all of the South and much of the West. I am frank, in plain language, and newspaper offices I have tried to learn the Democratic sentiment.

Result: Grover Cleveland has no following anywhere. A few men who held office under him would like to see him nominated if they thought he could be elected, but they concede there is no Shepard Gorman cannot be nominated. Cleveland is not satisfactory to the politicians of his party, to say nothing of the rank and file generally. If you would guide the party rightly, drop Grover and Gorman. New York is too small to dictate candidates, and any one favored by Wall Street will be defeated, if it is known.

I AM, SIR,  
FRANK M. SMITH.

To the Editor of *Harper's Weekly*:

CANTON, Mass., July 12, 1903.

SIR.—In connection with the thousands of others who regard the "Journal of Civilization" as an oracle in political matters, I have read with interest your recent editorial discussion of the wisdom and probability of the renomination of Mr. Cleveland at the Democratic national convention of 1904. There are certain historical facts, which, in my mind, are pertinent to the issue of which you make no mention.

It will, of course, be readily admitted that the Democratic party was in high favor with the people in November, 1892. Must it not also be admitted that from then on its tide ebbed away? Not even Mr. Cleveland's incumbency of the Presidency prevented the majorities of tremendous size against the administration, and that honest currency, and before the Gorman tariff bill fiasco had called down upon his party associates the scornful denunciation of the President.

Stripped of its fine language, was the appeal of Mr. Bryan in 1896 anything more than this? "The tide is against us on the tariff issue; we must change our battle-cry to one with which all the people are not an assailer."

Nor should it be forgotten that in 1892 over a million votes went to Governor Weaver, and that those votes were cast for Mr. Bryan.

Now if the Democratic convention should name Mr. Bryan, it is certainly reasonable to suppose that Mr. Bryan would win their support. Neither Mr. Cleveland nor his friends could complain if he did, for he would be doing just as they did in 1896. We are Democrats, and before the astonishing and interesting spectacle of three parties, each with a singularly popular leader, one ultra-conservative, one fairly so, and one frankly radical.

With that combination Mr. Cleveland would unquestionably have Jersey in, to my mind, not so certain as you seem to think. As a popularity, together with the certain defection of those who believe as Mr. Bryan does, and the further fact that these States have been uniformly Republican since '92, their support of Mr. Cleveland is, to my mind, a very remote possibility.

Mr. Bryan would not probably make as good a showing in the electoral college as Weaver did in '92, but it is idle to suppose that seven million of his countrymen will not receive an immense vote, which, as in the previous case, would draw far more from Mr. Cleveland than from Mr. Roosevelt. I believe that the Democracy, candidate and adopt a platform at the next election, must choose a wings on both support, that any other course makes Mr. Roosevelt's election certain, or, at least, might throw the contest into the end, amount to the same thing.

In view of the probabilities it is quite fair to Mr. Cleveland to ask him to make the race. He will be sixty-seven years of age, in a peculiar degree, the respect and regard of his party's opposition as judged by himself has already attained to a place in the nation's heart usually accorded only to those who have passed away.

To drag him back into the arena, to subject him to the attacks, certain to be made, even by those now loud in his praise, instead of the peaceful arena of a long period of political torpor is better prospect of success than exist, is, to my mind, a species of cruelty.

Grover Cleveland deserves better of the American people than to be dragged from an enjoyable retirement to what is likely to be an ignominious defeat. The Democratic party has no right to demand such a sacrifice.

I AM, SIR,  
WILLIAM G. NARR.

A Whipping-post in Delaware

The whipping post is an attraction to-day in the State of Delaware, and especially so, because of the number of slaves who were sold by the State to the post. The whipping post is used by the State to punish runaway slaves who take the oath as an ally on they would a free fight or a living man's life.

Our Increasing Trade

RECENT developments with reference to additional facilities for trade with China lead interest to some figures showing the growth of our commerce with that country, presented by the Department of Commerce and Labor through its Bureau of Statistics. Exports to China in the fiscal year 1903 aggregate about six hundred million dollars, against less than four billions in 1902. The total value of our exports to China in 1903 exceed those of any earlier year except 1902, when they were above the normal by reason of the light exports to that country in 1901, in which year importations were grossly interfered with by existing hostilities in the East.

Comparing this growth with that of our commerce with other parts of the world, it may be said that our total exports to Europe in 1903 aggregate a little over a billion dollars, against six hundred and sixty-two millions in 1902, having therefore increased less than sixty per cent. during that period. Those to Asia in 1903 aggregate about sixty million dollars, against sixteen millions in 1902, an increase of two hundred and seventy-five per cent. In Germany the total for the year is about thirty-one million dollars, against eleven millions in 1902; but this does not account for the commerce with the Hawaiian Islands, which is considered as a part of the domestic commerce of the United States and separately stated.

It is apparent from these figures that the growth in our exports to Asia has been more rapid than in any other section of the world except Africa, and the growth in the exports to China has been a very important factor in the growth of shipments to Asia.

The Clothes Angels Wear

THE following story is going the rounds among of a party recently given by a former Secretary of the Navy at the New York World's exhibition, "Last Days of Pompeii," at Manhattan Beach. In the party was a little girl who appeared to be enjoying the show immensely, and as an especially brilliant burst of rockets lighted the scene the little girl turned to her mother and inquired:

"Mamma, do you suppose the Lord is watching the fireworks?"  
"I guess He is, dearie," replied the fond parent. "Why do you ask?"

"And are the angels with Him?" continued the child.

"Yes, the angels are with Him."  
"Well, I hope the Lord's all right—but, Mamma, how do they keep their clothes from burning?"

Columbus and the Englishman

An Englishman while crossing the plains for the first time fell in with some Americans who were continually boasting of the greatness of their country, and proclaiming Columbus to be the greatest man the world had produced because he discovered it. The Englishman having looked out for days upon what seemed to be an endless prairie, exclaimed, "The blessed country is so big, I don't see how he could have missed it."

# THE SHERIFF SWEETSTAKES

BY ETHEL WATTS MUMFORD

"If I lay my hands on the progeny of a marine chef who did that—" The words drifted through the open door of "The Blue Pup Hotel," and simultaneously Bill Silters took his feet from the counter, and Ginsling Charlie came from behind the bar.

"Sarkin' wrong with Hotshot!" said Bill, as he made for the door.

"When Buckle Talfer gets to waller's in college words it's his," added the bartender, following close.

Before the hospitable entrance of the "Pup" stood a tall, keen-eyed boy in his early twenties. In one hand he held a plumed cavalry bridle, while the other slapped wistfully at his right hip-pocket. Facing him, his four white feet spread well apart, tail twitching, neck extended, and curled digested lip down back, exposing yellow gums and strong young teeth, stood as handsome a pinto as ever three feet.

"What's the matter with Hotshot?" demanded Bill.

"Matter?" Buckle's fingers continued to twitch about his revolver butt. "Matter! Why, that aged-child there hadn't more than human sense in his stabled head, there'd be no entry of mine in the Sheriff's Sweetstakes." See that?—he tossed the bridle into Bill's large red hands—"small the lot. I left the conformation with Injun Pete to mend the throat-latch neck."

Bill saluted obediently. "Huh!" he said, his eyes narrowing wickedly.

Charlie projected a long, lightly-colored nose over the shining steel bar,—the atmosphere became cordless.

"His owner nodded proudly, as he administered a falling whack of encouragement upon the cheek-shoulder of his pet. "Oh, I guess you turned up his nose, and no bit for years truly—then I guess you."

Bill Silters hitched his chaps. "Injun Pete has lived to a ripe and a rotten old age."

Buckle shot out a long, detaining arm to the sleek of his friend's belt. "Isn't Pete. He's got his crazy red in the world on Hotshot. He loves a horse, and is the only Indian that ever did let him alone."

"Who, then?"

"Buckle did not answer directly. "Didn't expect to get it till tomorrow—but just happened to see it was finished—just happened to put it on instead of the one I was using—and by the merest luck."

"Who do you think did it?" asked Bill, exasperated.

"Why is this end of town like a bloomin' cemetery, and why is there a hurling metropolis here Egberts?"

"That," said Ginsling Charlie, disgust occupying his countenance, "is what you call swell-er-better than I do. It's that messy-bastards-jeweled-by-blows-and-cracked travelling outfit of Zeke's."

"Yep," said Buckle, slowly, "and you'll notice that Mr. Crude and Selinger Knemilgrade and Ten-strike Galloway and Three-gun Prince are hunched, and that means, if there's a howling, under-stand me, that they're all dead—sixty-three million, the Sheriff ought to know where to look, or he's a mole. Now, he or who, they got to medicine that bit, I don't know yet, but that's the crowd, and it wasn't Pete. They went finished out, because the boys would be game for Teepee, and I bet they have an entry that can do him."

Bill slipped his nose. "Eight you me, Pardner, sure's preachin'! Mr. Crude is a riding of a wire-legged cayuse he calls Teepee, that nobody ever seen before—a yellow buckskin that twists his off hind feet when he walks. Gime all over, and get sein' blind. He'll enter that boss ind minute, and with Hotshot grizzly,—he'll tell the boys, an' run 'em out." Once again he stunted forward belligerently, but was again restrained, while Ginsling Charlie, who knew more of Buckle's elaborate methods, grinned with interest. "What-eh-ye-do!"

"Lead me a bit! All right, Bill, you sit here and keep your lungs screwed on that horse; anybody comes near, call me, I'm throwing! Then I'll ride down and show off. Guess they'll think their scheme took all right—that'll halt 'em. Let 'em sit in deep as they'll go."

He stripped into the house, quickly made the exchange, conducted his feelings with a long, strong dose of "Pina" set up by Charlie in honor of the superhuman perspicacity of Hotshot, and returned to his horse.

"All right, old man," he said, encouragingly, as the pony sidled away. "There's no dope about this. You just open that trap of yours and trust me." The Suspicious One thrust forward a tentative, quivering lip, lapped a pink tongue at his master's hand, bowed, shivered his tail, pushed Buckle's snout cheek affectionately with a velvet nose, and submitted to his badge of servitude. The boy swung himself into the saddle, dropping easily and loosely in his seat. The pony spun about on one hoof with the quickness of a cat. "You can back us to your last copper," he called back. "Hook your ponies and the 'Blue Pup' layout. It's as good as the bank."

Hotshot bucked cheerfully by way of showing no hard feeling, threw his head up to hear the curb rattle and feel the slap of leather on his neck, then settled to the quick, regular lisp of his lead, decouring the half-mile of straggling street that lay between the "Pup" and "Zeke's." The town was very much alive. The tiny, board houses, with their imposing "up-and-down" painted fronts, fairly shook with animation. Innumerable patient ponies stood about, occasionally squealing or administering a sidelong kick at a distant neighbor. Cowboys, ranchmen, Indians in German-town blankets, Mexicans in bobtailed jackets. Here and there a graysville, local-mounted, Mexicanite, a soft-footed Indian woman, or the cheerful, froxy Irish proprietress of "Eric's Best" or "Los Amigos." That Lynchville was only thirty miles from the Santa Fé railroad was made obvious by a man in store clothes, who held court with a nickel-in-the-slot machine, while another drove a thriving trade with an automatic poker-hand contrivance. The centre of attraction, however, lay below the town proper, where the shrieking whine of a hardy-guy caulked the air, and a pandemonium of voices raised a popular tune.

Buckle pulled up on the edge of the crowd—stood in one stirrup, letting the other leg hang across the saddle. In spite of his hot anger he burst into uncontrollable laughter. A battered and worn merry-go-round whirled slowly, propelled by a cog arrangement, operated in turn by a bedraggled, spotted mare, circling discontinuously at a distance. Seated on the dented and scolding wooden horses under the tattered tinsel canopy, a dozen or more cowboys were giving a dazzling exhibition of plain and fancy riding, each new effort being greeted by yells of joy from the dense throng of onlookers. "Go it, Jimmy!" "See Bill pick up the dice!" "Gooshy's gruggy!" "Will you see the side on Jimmy Peters' get!" "Hi, Crude, hang onto Mary—that's the only gal Injun Pete's got!" The wooden steeds showed down, the occupants of the tinsel saddles were dragged off by a volley of roaring citizens, determined to outdo their predecessors in deeds of valor.

Buckle watched Crude as he assisted Mary, only daughter of Pete, the harness-maker, to night, and no doubt was left in his mind as to the hand that had attempted to cheat Hotshot of his race. The girl glowered at Mr. Buckle's eyes, and turned hastily to her companion, who did not turn his head nor change his direction. A moment later the two picturesque figures disappeared in the crowd.

Selinger Knemilgrade swaggered indolently up, rolling a cigarette in one hand and as he came. "Hi," he said, softly, "the race has brought together everybody—is it not so. And how is the winner?"

"Oh, Hotshot's all right," said Buckle, endeavoring to hold his rising temper. "He's a sure thing for tomorrow. Better get your money on him. What are the odds now?"

"For the 'Sheriff'—he is the favorite, as you know. There are a few who back Teepee—also my friend Crude talks of letting Teepee run; but I tell him he can fool. For the two-year-old it is Roger's Irishman, to Cool, even money. Do you back the Jack Sweeney or The Only such-boy for the runs (throwing)? As between the two I will be glad to bet with you."

"All I've got," said Buckle, patting Hotshot's neck, "is on this

trump. If that show-footed bickskin wins, Loughville won't see me for six months."  
 "You have seen her, then?" The Spaniard raised an irritating eyebrow. "Good pony. Well, good luck to ye and the piece. Say this ye'd like to sell, I give ye—hundred freely."  
 "Thousands!" growled Buckie, scornfully.  
 Seigneur Krommgarde shrugged his shoulders. "Pretty horses thirty—forty dollars. Want to make 'em hot at all—no—four? I take six hundred on your horse at four to one—not yet? Odds will be higher to-morrow—no!—seven good. You find me here till—say meet o'clocks. Bye is risto."  
 Krommgarde ascended off puffing contentfully as he went.

The crowd, weary of the exploits of the courteser, became suddenly aware of the favorite, and promptly stampered to his side. "Fine shape," said O'Neill, running his hand freely down a trim foreleg.

"Going to win, bloomin' sure!" remarked Australian Jimmy, biting the strap of his quirt, meditatively. "That'll be his third, which'll put 'im what they calls in the Paris Baboon." "Horse o' Connoisseur"—which means 'ee the sort of 'ness you can't course any more, as 'ee always takes the stakes."  
 Buckie turned seriously in the area about him. "See here, Jim, and you, Duffy, and the rest of you—you know me, and you know Hotshot; and all I've got to say is, you trust an—" "College and thoroughbred"—you've called an—"we'll be w'is out. Don't be afraid to back us if you can find takers—no!—well, if you're letting with Crude, Krommgarde, and Company—just you have 'em put up the red with Billie Taylor. Wait for to-morrow—just wait developments."

Buckie checked softly and whirled Hotshot in a semi-circle, making him lift his feet to quickstep as if the ground were too hot. In so doing, his eye caught a flash of scarlet and black, as Injan Mary, astride of a red and white pinto, disappeared around the corner.

Buckie pulled up short. "Where did Mary come that course?" he demanded.

"Dunno," "Search me," came the unobscuring replies, till Cady, on the outside of the circle, called, "I saw that pony with 'Zake's' outfit last night. Guess 'Crude's' got his lumps on Mary—and a bad day for her." A crowd of "You bet" expressed the general sentiment. "Marked bloomin' like Hotshot," observed Australian Jim, jerking his thumb in the direction taken by the girl and her variegated mount. "Looks like the bloody markings of the countries is no bloody geography book."

Buckie whistled softly and whirled again. "Well, boys, I'll not be in the game to-night. I'll have to stick to the horse. Doesn't do to let the favorite snore around alone day before the race. No-king—we meet again at Philippi!"

"Isn't he aw the long talk, though?" remarked Jim admiringly. "Some of them days he'll swallow a bunch of those as he'll shake," said Duffy, judicially.

Hotshot made one more for the "Pop," which was now rapidly filling up, and drew up before the door. Buckie dismounted, threw the bridle over his arm, and called for Bill Silthiers. That worthy appeared with alacrity.

"Bill, are you with me?" was Buckie's sudden question.

"Sure," said Bill, extending a grizzly paw.

"Shake," They shook. "How about Hotshot?"

"Good un."

"Shake." They shook once more.

"Are you gear?" said Buckie, "for a little surprise party that'll make that red-tinted horse-finders all up and beg?"

"Shake," said Bill, "and not me winc."

"Your shake fears right by finish, and there's a lean-to shed business 'log side!"

"Yeh."

"Well, comes truly and his buckle here will stop with you—see, I'm going to have a talk with Injan Pete about the conduct of his only daughter. Pete is a friend of mine, and he's ailed her. I've got to see 'em necessary. May be going to have a bad fall that'll keep her from going out to-morrow. It's too bad she'll have to miss the race—but accidents will happen."

The view before the door of Bill Silthiers' shack was one of beauty and animation,

We Could brew beer for half our cost

We could cut down half on materials.

We could save what we spend on cleanliness.

We could cease filtering our air.

We could send out the beer without aging it for months—but the brewer would then cause biliousness.

We could save what it costs to sterilize every bottle—an expensive process.

Yet You would pay the same

Common beer—brewed without all our precautions—costs you no less than Schlitz Beer.

When you can get a pure beer—a healthful beer—at just the price of a poor beer, isn't it wise to ask for Schlitz?

Ask for the brewery bottling

The owner and Bill Slithers worked, rubbed, strove, and sent out bulletins of his condition

The whole of Lyachawa, reinforced as it was by the entire hunting population of a hundred miles in every direction, was gathered by the judge's stand, with its squatty bell-tower. Horses squaled, whinies, and the buzz of talk filled the air. The ropes that barred the crowd from the track sagged helplessly forward, while a half dozen pumehs severely backed their posture into the press hunker to inspire law and order in the minds of too enthusiastic on-lookers. The judge sat back and smoked meditatively on an elevated perch, while Ringhouse Latham took occasion to address the crowd on the commotion and color of the occasion, gloom being obviously *ster mney*. For not a hundred feet away stood the favorite for feet disposed in a pall of hot water, his horse, indeed; such blanket, compresses on his neck and throat, his lower wrapped in a white the frantic owner and Bill Slithers worked, rubbed, swore, and sent out bulletins of his condition. The odds on the favorite crested slowly down in spite of Buckle's assurance that he intended to ride to victory if Hotshot could so much as stand on one leg.

Correspondingly, Pease, the dark horse, and Teepee, the second favorite, came forward. At first it was said to be a slick game, to lower the odds, but it was noticed that there was plenty of money to take up the long shot on Pease. There were rumors exactly what the trouble was, or whom to hold responsible.

Through it all Buckle could not withdraw his entry, but persisted in his hopeful assertions of victory. Crude, Emmilgard, and Company, stalked about with blasé self-satisfaction. The rain throwing contest went unexpectedly to little Payton, who roared and threw his cattle with a dexterity that put the champions to blush.

The two-year-olds came in a nose and nose finish, while Green's Doloroso bolted into the crowd and threw himself in the ropes, breaking his forelegs.

Bill Slithers and Buckle, with anxious faces, continued to hunch where betting was highest. Teepee, a lean little bay, entered the post. Carby followed kicking viciously. The three came into line, Spot Cash at his shoulder, up, leaped into position. The cloth and blankets were stripped from the pony in Bill Slithers's hands, his white feet emerged.

"Even money on Hotshot—400 of Buckle's, and 400 of mine—*who wants it?*"

Crude held up a thin, flexible hand. "Take you."

There was a sudden outbreak of enthusiasm. Buckle's friends called Emmilgard, Crude, & Company plunged heavily.

The Sheriff Swoopstake was called. Teepee, a lean little bay, entered the post. Carby followed kicking viciously. There was a pause, and Crude's Pease, with little Galloway from the pony in Bill Slithers's hands, his white feet emerged.

"That ain't Hotshot!"

"Course not," said Bill, with a roar. "That's Zoko's screw-bald that Crude gave Injun Mary for doperin' Hotshot's bit—that's unerringly, sent his head from side to side, and with a sort of satisfaction, trotted toward a bunch of ponies by the judge's stand. "And here, ladies and gentlemen," Bill continued, "is Hotshot himself and his bunkie who wasn't taking no chumps!"

The door of the shack opened and Buckle stepped out, leading the highly maned Hotshot, his quarters hunched together, his tail flattened tight, in evident dislike of horses built for man. The sheer that went up was deafening. The pony laid back his side Teepee, prancing with impatience.

"I protest!" cried the voice of Emmilgard from the crowd. "A trick!"

"Yes," cried Gilding Charlie, "a trick—and a blamed good one. Better than medicine a bit, Seigmer. You better not say another word, you had. And you had Crude and Galloway and Prince can just take the medicine that's comin' to you—and it won't be a little bit, either! You needn't go to the horse win."

A roar of approval greeted the speech, which was cut short by a clung of the starting-bell. The horses shot forward, a platooning, scattered the dust in a headlong spurt; the others crowding up, gaining slowly.

Suddenly Pease strove, broke forth his stride for a moment, and leaped forward a full length, as if thrown by a catapult. He was neck and neck with Teepee, Spot Cash thundering close behind.

"Now for it, Hotshot! Show 'em!" Buckle's face was white with excitement. Never was the Derby run with greater tension gathered himself, and with steady, piston-rod legs, leaped his way the dull yellow flank of Pease—on, steady and unswerving, strain, no hint of weariness up,—by the yellow neck, grown brown and the laboring, tan muzzle flecked with foam, the bright eye a clear length, with the open track and the wide sweep of the plain before the rush of wind. Then growing closer, suddenly, leaped, quivering human body—a roar of frantic voices, that tore the air and echoed from the ground, that tore the air and echoed from the ground, that tore the air and echoed from the ground.

"Hold up, Hotshot!—hey—let up—hey—*you don't have to go round again!*" Buckle peated. Hotshot rose on his hind feet and sprang straight into the air, lighted on telfet, and bounded forward

again, shaking his dripping head by way of grotesque dash to his performance. Then he whirled obediently and offered himself to be revivified by the cheering men and made a dash, where for the moment order was not even in his head.

The Judges leaped from their frail chairs, and "Sheriff Swoopstak" in Rickie Tailor's "Hobnob," in the faintest time ever made on this planet.

That night a sickening band of despirited and utterly clotted-out gamblers laid down, "Zebra's" outfit removed itself with dispatch, but not without a great deal of loss. He had gained a certain in lajus Mary, who disappeared when he ran father finally out her hands and returned her from the chair where she had sat for twenty-four hours. But Pete, though he lost a dough, was not even lastly on the "Sheriff," which was considered by the boys as ample compensation for an injury.

Gathered in the long room of the "Blue Pop," the night wore away in joyous respect. Rickie astride of Hobsnot, who was becoming accustomed to the inside of man-houses, held forth with such eloquence and so many "college words," that Hobs was moved almost to tears.

The disappointed but persistent crowd had long been ringing early morning numbers, when Rickie, in a last throes of enthusiasm, dragged from his belt a folded paper.

"Didn't know I wrote some, boys, did you? Well, I do sometimes, and this is one, and it's for 'Hobsnot'—may be never see him?—long life and sound beds to him! And you ever there, Duffy, you tases, and we'll give the entire to sleep with it in the restless nights—and—here goes—and it's all of college words and some of ours."

Ring of your Cornish points,  
From the flowers and here;  
Ring of your Irish banners,  
From the Kilties and 'Flow;  
And praise, you men of the desert,  
Slow your feet back to college rooms.  
But I shall sing of the Western Home,  
The best of the barns at home.

It is by love, love, love,  
Willard, And praise and love,  
Love, love, love,  
Then, longer than that endure,  
Never a screw or better!  
To the love of the West, strong  
The sweeping love of the West, these  
Three lines keep the train aloft.

You may keep your trim high-steppers,  
Equilibrium, we'll see—

"I God Save the King!" roared Anstallian Jim.  
A fit for the horns of Flanders,  
And his brother, the Verbruce.

"What was he a percher on?" asked Duffy, sleepily.  
"I 'stead up!" growled Charlie, and pulled up by the collar.

There's just one horse in this grey old world  
That's steady and true and sane—  
The lean little, chest-bird Western Horse  
That's bred on the Western plain.

Then it's love, love, love,  
From the hills that we're born to;  
Love, love, love,  
The life of the west moon.

Through a valley of my own, through  
The three bright hills,  
The swinging love of the Western Home,  
Come steady and clear and strong.

Then boys, in love, you, my dear, and brother!  
You put me in love, my dear!  
Through love and cold and road and ill  
Through the winter snow and the death,  
The love of the West, strong  
The swinging love of the West, these  
Three lines keep the train aloft.

And love's love, you and I,  
The love of the West, strong  
The swinging love of the West, these  
Three lines keep the train aloft.

That's the way that followed was deafening.  
Belcher stamped, Mew, and in one last  
madest protest against publicity, planted a  
pair of firm heels against the boys with an  
exhaustive and directionless worthy of his  
master.

"There!" said Rickie, above the tumult  
of applause,—"Hobsnot," says the writer-  
water in his tin."

Men who Work Overtime

By John Z. Rogers

RECENTLY I have talked with a number of men who work hard in their various professions. The committee of a stock company I begin with, as he says a new play every week, I am always at the theatre every afternoon at about two o'clock, and am often unable to till half past six or even later, the new play has not begun to run smoothly. Similar long hours prevail, of course, even on Saturdays. On mornings are taken up with rehearsal for the play that is to be put on the next week. This, with the time I have to devote in studying my lines, takes about three hours a day. It is pretty hard, but after a talk, the other day, with a friend who had just come in from playing a night's stands, I congratulated myself on having a comparatively easy lot in life.

The Routine of a Clergyman

The ordinary weekly routine of a prominent out-of-town clergyman with whom I talked is as follows: All day Monday I take up with the regular routine of church work. Every night is the week there is a service. On Saturday prepare my sermon. During the month or quarter comes the conference and other meetings at which I am expected to be present. The church conducts an employment bureau, a free dispensary, a kindergarten, and other enterprises, all of which I visit once or twice a week. This, by the way, does not include meetings of educational, fraternal, and other organizations for which I often have to prepare addresses; nor the calls on the clergyman's hundreds of my congregation. Last year month or more was employed in marrying eighty-two couples, attending nearly one hundred funerals, and making about one thousand calls.

What Schoolteachers Say

I have a friend who is a schoolteacher, and he says that he earns every cent of his salary. "I average about twelve hours' work a day," said he, "and during my vacation I devote about half my time to special reading in connection with future school work. The introduction of supplementary work in the schools, the shifting up of special subjects one or two hours a week, require extra reading and studying."

To many the newspaper reporter appears to lead a life of pleasure. But the reporter we see on the stage—the "journalist" with the not-book—is never seen in real life. Here is what one of the reporters on a big morning paper told me, and so I have been through the same experience. I know it is substantially true, in order to save time at half past eleven. I get to the office papers half an hour before the noon assignments are given out. Soon after twelve I am sent out on a story. If it is not very important or is not far away, I may have two or three to look after. Under ordinary circumstances I return to the office before six and write my report. As soon as it is finished and I have my dinner, I start out on report assignments, returning as soon as possible, for the earlier one writes his copy in the news "space" he is paid for in the paper. No one can tell in advance when a news story will break out, and I always keep a pencil grip at the office.

Men of Wealth

Even the wealthier work overtime, and most of them pay the penalty, sooner or later, in one way or another. It is said that George Gould is at his desk at eight o'clock every morning when he is in the city. The prominent Russell Sage has it when he strolls an hour for a drive. John D. Rockefeller has already bartered his stomach for his wealth by working long hours.

A prominent physician recently said to me: "I'm in a generation ago the world was said, 'Look out for your stomach!' Now it is, 'Look out for your nervous system.' An eight-hour session for professional men and men who work with their brains ought certainly to be seriously considered."

opera, particularly in "Furial" and "Siegfried".

The entire electrical system of the stage has also been altered, and a new switch-board costing over \$10,000 is to be installed. The operator will stand beside the prompter, with his chin just over the stage, so that he can keep constantly in touch with the action. With a moving backward and forward of three little wheels, somewhat in the manner of a ship-pilot steering his boat, he will control all the electrical effects on the stage. The interior of the house will also be redecorated and the proscenium rebuilt. The architects who are carrying on the work, Messrs. Stein, Cohen, and Roth, have had the assistance of Herr Lautenbacher, Director of the Regener's Opera House in Munich, so that New York will benefit by the experience of one of the foremost of European opera-houses.

### Reminiscences of General Clay

It was the peculiarity of the late Cassius M. Clay's career that he was a fire-acting anti-slavery man and a Southerner. He need no haughty and threatening manner in attacking slavery and slaveholders as the most violent had employed in his defence. In one of his earliest outbursts he made it plain to his opponents that an odd and foreign-sounding accent had appeared among them. "This is not the first time I have heard the cry of abolition. It has no terrors to my ear. Bowie-knives, and bolted pistols, and the imprecations of sudden death have not driven me from my country's cause. My blood, and the blood of all whom I hold most dear, is ready when she calls for the sacrifice." Clay suited his actions to his words. He constantly wore a Bowie-knife in his belt, and when he made a political speech there was always a brace of pistols in the mouth of his carpet bag, which he ostentatiously placed at his feet. He went prepared to die, his opponents make their choice of argument. He was adopted the Northern view of slavery, he strictly adhered to the Kentucky view of a home and good breeding. He made it of his daily life to argue with the reasonable, to refer his differences with "gentleness" to the great unknown god of death, and to crush every outburst and kick every coward that crossed his path.

### Remaking an Opera-House

ALTERATIONS which will probably give New York city, within a few months, the finest and most completely equipped opera-house in America, are now being carried on in the Metropolitan Opera House. We print on another page of this issue of the WEEKLY an illustration showing the changes that are being made in the structure of the stage, with a view, especially, to the more elaborate production of Wagner's music-dramas.

The space under the stage has been excavated to a depth equal to the height of the stage itself, so that entire scenes can be built up underneath it on disappearing carriages, and raised into place with the least possible delay. This will effectively do away with all noise on the stage between the acts. In the case of the drop-scenes, which have hitherto required a very complicated rigging-left with innumerable ropes and pulleys and the services of two or three men, the arrangement has been so simplified that the drop-scenes are now contributed by weights, and slide up and down with the minimum of effort.

For the first production in America of Wagner's "Parsifal" right huge scene-rollers are being put up, which will be used to represent moving while the landscape changes as they move the scenes sideways on the rollers, the first one containing large foreground objects, such as trees, bushes, rocks, etc. attached to a transparent net and moving at a very rapid rate. The second two sets contain the objects in the middle ground, attached to less transparent nets, each moving at a slower rate, while the last set of rollers carries the background of sky, mountains, or other distant objects, moving at an extremely slow rate, so that the total effect is that the landscape seen from a moving train. These moving landscapes play a very important part in several of the Wagner

### Editing under Fire

Clay derived an audience larger than any that could come within the hearing of his deep voice, and therefore he established, at Lexington, in 1843, an anti-slavery weekly journal which he called *The True American*. It was very violent and personal; but it was doubtless pleasing to his anti-slavery readers in Kentucky. He continued his attacks upon slavery and its champions in Kentucky as if the power were all on his side. His physical and moral courage were marvellous. As in every case where an anti-slavery agitator raised his head in the South, "a number of the respectable citizens" assembled; it was resolved that *The True American* was "a dangerous and pernicious" organ to our community, and the safety of our homes and families. The usual committee was sent to demand the discontinuance of his paper. "The list of the 'respectable citizens' in 'assessing, pinning, and highway-robbers.' To their demands he replied: 'I treat them with the burning contempt of a brave heart and a loyal will.' Your advice with regard to my personal safety is worthy of the source whence it emanated, and meets with the same contempt from me which the purposes of your mission excite. The best way to conclude an cowardly association that I, M. Clay know his rights and how to defend them." Although he had previously made elaborate preparations in general, his office against violence, he had not sufficiently recovered from a serious illness to defend his rights. His press was seized and sent away to Cincinnati. This was a serious check to Clay's growing power. Nevertheless, he continued the publication of his paper in Cincinnati, and even edited it in Lexington, as before. Clay's fearless independence of party shows that he was never a party-sucker. History will not go wrong in honoring him as the Fighting Garrison of the South.

## The Discovery of a Stock Exchange

It is well understood that the average Indian is addicted to the playing of games of chance, but to find these primitive people carrying on a financial market—a stock exchange—similar in all respects to Wall Street or to London's famous Lombard Street institution—was left to Professor Harlan J. Smith, of the American Museum of Natural History, New York city, a prominent authority on the life and habits of the Indians of the northwest coast of America.

One day while Professor Smith and several companions were dining for publication remains on the northern shore of Vancouver Island they noticed an unusually large number of canoes passing the beach on the way to a nearby village. A friendly native informed the party that the canoe carried Indians from distant villages on the way to a "potlatch" about to be given by a wealthy Indian who lived a mile or two distant.

"We had heard of the 'potlatch,'" says Professor Smith, "and we knew that it was one of the most interesting ceremonies practiced on the northwest coast, so we immediately resolved to be present when it took place. Before we had been long on the scene we found that we were, as one of us remarked, 'looking upon the pit of an Indian stock-exchange.' There, grating upon the beach, were the canoes of the interested; there, standing with lofty pride before his dwelling, was the richest man in town—the Mogun or Rockefeller of his tribe; there, in the rich man's house, was piled, as in a vault, the specie in which he dealt—blankets, hooped against the wall in thousands, and each representing a value of almost one dollar.

### The "Potlatch"

"When an Indian wishes to hold a 'potlatch' the fact is heralded far and wide, and immediately his house becomes a focus-point for the chiefs and their families for miles about. Not only do those Indians come who desire to make investments, but the general public, and even invited. Those non-investors are necessary witnesses, as there are no ledger accounts kept in the India Northwest. The 'pit' sometimes consists of four great logs on the sand in the form of a square; sometimes of a platform composed of long poles laid on the tops of two great tree-trunks standing upright in the sand. In the latter instance blankets by the hundreds are piled upon these poles in view of every one, and are counted out aloud and thrown down to the horsemen.

"The money-lender, as the rich man might be termed, does not himself do the talking. That would be beneath his dignity, or possibly beyond his power. He hires a public orator, who stands upon the platform and beranges the multitude in approved native style. The orator we heard stood high above us, among the blankets, and told of the vast wealth of his employer, and of his generosity and goodness.

### Blankets as Investments

"When he was through with his speech he began to toss down the blankets to those who wished to borrow, enumerating each one in a loud voice, so that each bidder saw and the extent of his obligation might be inflexibly impressed on the minds of all with in hearing.

"After all the blankets had been thrown down in piles, those who borrow all gathered them up, folded them neatly, and took them away in canoes to manipulate them just as any broker in Wall Street might manipulate his securities, against the time one year hence when their most needs return them with interest added. Of course the expression 'return them' is figurative. The Indian looks upon the blankets as mere currency—money. He would not think of wearing one as an article of clothing, and then putting it back again as part of his securities. Therefore he does not, in the time one year hence, expect to deliver the identical blankets he borrowed. He may afford a dozen different 'potlatches', and manipulate the market until his holdings run into hundreds of blankets."

### TOUR TO THE PACIFIC COAST.

**Via Pennsylvania Railroad, Across G. A. N. National Connections.**

On account of the National Encampment of the Grand Army of the Republic at San Francisco, Cal., August 17 to 27, the Pennsylvania Railroad Company offers a personally conducted tour to the Pacific Coast at remarkably low rates.

Tour will leave New York, Philadelphia, Baltimore, Washington, and other points on the Pennsylvania Railroad east of Pittsburg, Thursday, August 6, by Atlantic, two days at Los Angeles, and visits of a full day or more at Pasadena, Santa Barbara, Del Monte, and San Jose.

Three days will be spent in San Francisco during the Encampment. A day will be spent in Portland on the return trip, and a complete tour of the Yellowstone Park, covering six days, returning directly to destination via Billings and Chicago, and arriving Washington, Baltimore, Philadelphia, and New York August 21.

Round trip rates covering all expenses for twenty-six days, except three days spent in San Francisco, \$215; two in one berth, \$200 each.

Round-trip rates covering all expenses in Los Angeles, including transportation, meals in dining-car, and visits to Grand Canyon and Pasadena, and through East by October 15, via any direct route, including un-illustrated stop-overs, \$115; two in one berth, \$105 each. Returning via Portland, \$12 additional will be charged.

Rates from Pittsburg will be five dollars less in each case.

For full information apply to Ticket Agents, or Geo. W. Boyd, General Passenger Agent, Broad Street Station, Philadelphia, Pa.

## COMMENT

THE successor of Pope Leo XIII, Cardinal Giuseppe Sarto, was chosen on the seventh ballot by the Conclave, on Tuesday, the 4th inst., and announced at once that he would assume the name of Pius X. The new Pope is a Venetian by birth, having been born at Rioni in the province of Venice, on June 2, 1835. He is therefore sixty-eight years old. For the greater part of his life he has been a parish priest in or near his birthplace. Finally becoming Bishop, his character, education, and ability soon made him conspicuous, and in 1893, at the age of fifty-eight, he was made a Cardinal and also Patriarch of Venice. His declaration in favor of the union of church and state in Italy, made in 1894, will now become an important factor in the new regime of the occupant of St. Peter's chair. For those who can remember back to 1878, the difference of the attitude of the civilized world, both Catholic and Protestant, to-day and at the time of Leo XIII's election is a remarkable illustration of the change of feeling that has spread throughout Europe and America, and we wish all others cannot fail to add our satisfaction that such a change has taken place.

There seems to be no doubt that the improper connection of Representative I. N. Littauer with the Lyon glove contract, secured from the War Department, has been confirmed by the official inquiry, and that he will have a chance of defending his conduct in a court of justice. Although such influential members of the bar as Justice Millburn and Mr. Lasterbosch appeared for him before the War Department, their services seem to have been unavailing. It is alleged on authority usually trustworthy that Judge Advocate-General Davis has reported that the evidence submitted establishes a *prima facie* case against Littauer, and that consequently it will be the duty of the Secretary of War to demand repayment of the money from the contractor and his bondsmen, and in the event of a refusal on their part to return the money voluntarily received, to send the papers to the Department of Justice. It should be kept in mind that in the present proceeding it is not Littauer, but the contractor, that is primarily concerned. Should it be admitted, however, or, in default of such admission, be proved in a court of justice, that Littauer was improperly connected with the glove contract, he can be dealt with later for a violation of the Federal statute. We are told

that Littauer's counsel informed the Secretary of War that the glove-contract scandal had worried their client so much that he had lost some flesh, and desired to go to Europe for his health. It looks as if his presence would be needed in this country, where the taxpayers are a good deal worried to find a Federal lawbreaker accused of deliberate and systematic violation of a Federal statute.

An examination of the seven indictments returned on Thursday, July 30, by the Washington Federal Grand Jury, involving nine postal officials and others, reveals the details of the scheme for botching the Federal Treasury device and carried out by Machen, formerly Superintendent of the Free Delivery Department. It seems that Machen gave Major Cupper, of Lock Haven, Pennsylvania, a contract for painting, at the rate of twenty-five cents for posts, fifty-nine cents for letter-boxes, and one dollar for parcel-boxes. The prices paid by Cupper for the work were five cents, fifteen cents, and twenty-five cents respectively. It is true he furnished the paint, which, however, could not have cost over a few cents for any of the boxes. It is evident that the government was made to pay about four times what it cost to do the work. It appears that Machen evaded the law which prohibits advertising for bids, on the pretext that aluminum paint was to be used, which could not be procured by painters generally. The "rake-off" in this instance went to a go-between named Long, who promptly transferred a part of his receipts to Machen.

In another case of a similar type Machen is charged with entering into a conspiracy with one Maurice Runkel, of New York, in connection with a contract for furnishing leather book-covers for delivery carriers—covers that the carriers did not need and will not use. According to Fourth Assistant Postmaster-General Bristol, no fewer than 40,000 of these leather book-covers were ordered for some 18,000 letter-carriers, most of which covers remain to this day in bins in one of the buildings of the Post-office Department. On January 30, 1903, Runkel delivered to Machen a sum of \$12,521.75, which was accepted by that official. In the Crawford case Machen approved a bill of \$15,500 for 5000 satchels at \$3.10 each. Crawford, having received a warrant for the amount, sent soon afterwards a check for \$5411.35 to a go-between named Lauren at Toledo, Ohio, who subsequently forwarded a draft for part of the money "payable to the order of A. W. Machen." Crawford and Machen seem to have found the satchel business quite lucrative. It will have been observed that among the indictments found on Thursday, July 30, one against Heath was not included. It is said that Heath will now be able to escape punishment, being able to plead the statute of limitations. All the more is it the duty of the government to expose his delinquencies, if malfeasance in office can be brought home to him. Let him be forced to plead the statute of limitations, which will be construed as tantamount to an admission of guilt. We assume that had an indictment been found against him on July 30, he would have been forced to resign the post of secretary to the Republican National Committee, which he still retains. We are glad to learn from Fourth Assistant Postmaster-General Bristol that the investigation of the Post-office scandal is by no means ended. He at least is doing everything in his power to relieve the present administration from responsibility for the bribery and corruption which have disgraced the Post-office Department and disgusted the country.

Secretary Shaw, in an open letter, finds it easy to discontinue with regard to the contract for the new post-office at Cleveland, Ohio, that the award to William Bradley & Sons for a sandstone building is above criticism. The Bradleys' make the lowest bid for a sandstone building, and, of course,

not the contract. This is an evasion of the point, however. The protest filed by the McCaul Company rested exclusively on the assertion that there is no intention on the part of the supervising architect of the Treasury, or on the part of Contractor Pierce, who used the Bradley firm as a dummy, to erect a sandstone building at Cleveland; but that, on the contrary, the Treasury Department has definitely decided to put up a granite structure. In one of his letters to the McCaul Company the Secretary of the Treasury practically admits that a sandstone building will not be erected at Cleveland, but says that the additional appropriation of five hundred thousand dollars required for the substitution of granite will have to be secured from Congress without his aid. His aid may not be necessary, it being understood that Senator Hanna has undertaken to secure the appropriation. It is evident from the papers in the case that Pierce, or rather his dummy, Bradley & Sons, will have acquired the contract by a trick, provided the material used is granite. The contract could not have been fairly awarded to the Bradleys on the granite specifications, and they did not even attempt to conform to the requirements imposed on all bidders on the sandstone specifications. One of those requirements was that all sandstone bidders should own a quarry that has been open for at least three years, and from the stone of which at least three important public buildings shall have been erected.

A similar evasion has been practiced in Chicago in favor of the same contractor, who is widely known as "Platt's man." In that city bids were requested for the new Federal building on two sets of specifications, one set calling for good materials, and the other for the very cheapest and most unsuitable materials. It turned out that Pierce's bid on the good materials was too high, but that on the cheap materials it was much the lowest. Accordingly, the contract was awarded to him on his bid for the cheap materials, but subsequently the Treasury Department decided that the good materials should be used at a cost approaching one million dollars over Pierce's original bid. This extra expenditure of one million dollars was authorized by a secret contract, and was never made the subject of competition. In San Francisco also, within the last few months, according to reports submitted to Secretary Shaw by special agents of the Treasury, concessions have unlawfully been made to contractors involving the saving by them of many thousands of dollars, and a corresponding loss to the government in work and materials. In a work, not only the Post-office Department, but the Department of the Treasury, requires investigation. The turn of the Department of the Interior, with its Indian Bureau above contracts, will come next.

Senator Arthur P. Gorman, of Maryland, having been chosen leader of the Democratic minority in the United States Senate, naturally possesses a great deal of influence in his party. Under the circumstances, it was to be expected that on his return from Europe he should be requested to indicate his views regarding the political situation and the various candidates proposed for the Democratic nomination to the Presidency. Interviews with the Senator are always pleasurable, but unprofitable. His manner is friendly, and even confidential, but his utterances are vague and unsubstantial. In a long interview which he gave to a newspaper correspondent on August 1 he said a great deal, but nothing to the point, with the exception of a remark touching the paramount issues of next year. These, he thought, should be a reformation of the tariff, economy in Federal expenditures, and honesty in public places. Whether, however, the post-office scandals would seriously injure the Republican party in 1904 he would not pretend to say. Much would depend upon the time that might elapse between the conclusion of the investigation and the Presidential campaign. Much also would depend on the extent to which the people should be convinced of the sincerity and thoroughness of the government inquiry. To the question whether, in his opinion, the Democratic party was in "good shape" for the struggle of next year, he replied with some hesitation that it seemed to be getting away from a number of false ideas that the party has been "chasing around after for some time."

All this was characteristic of the Senator's known caution and natural desire not to commit himself. So, too, was his

reference to candidates. It was too early to talk about them, he said. The national convention is almost a year away. For the present it is the party that must be considered, not the men. Interrogated respecting the course which the Democrats were likely to pursue in the first session of the Fifty-eighth Congress, he said, after a long pause, that in his judgment it would be the business of the Republicans, commanding as they will majorities in both Houses, to frame legislation; that is to say, the function of Democratic legislators will be an obsequent and a critical one. Asked what he thought about the regulating of trusts, he said that some of them seemed to be recultivating themselves out of existence, and recalled a remark made by Mr. Bryce, the author of the *American Commonwealth*, that "they all have incorporated within them the seed of death." As to the management of the next Presidential campaign, he declared that under no circumstances would he accept the chairmanship of the Democratic National Committee, but should confine himself to heading the Democratic forces in Maryland. To the question whether his position would be affected by his old quarrel with Mr. Cleveland should the latter be nominated for the Presidency, the Senator answered that Mr. Cleveland and he had never quarreled, but only differed. About Chief-Judge Parker he would say nothing, and, as to his own candidacy, declared that he was only a soldier in the ranks. On the whole, it was a typical Gorman interview—conciliatory and cryptic.

Chief-Judge Parker himself replied the other day to an indiscreet inquiry whether he expected to be the Democratic nominee for the Presidency that he should remain upon the Bench. What other answer could be made? Did the interviewer expect him to announce that "Barkis is willin'?" It would be obviously unworthy of a man in his high judicial position to thrust himself forward as a candidate for any political office, and it rebounded greatly to his credit that during his recent visit to Georgia, for the purpose of delivering an address on an interesting legal subject, he should have studiously eschewed the use of electioneering arts. There was a time when Southern statesmen would have respected such an exhibition of professional dignity and self-restraint, and would have seen in such qualities so many guarantees of fitness for the great office of Chief Magistrate. Since, however, it is our business to chronicle facts as we find them, we must recognize that of late many leading Democrats in Georgia have seemed inclined to favor Mr. Gorman rather than Chief-Judge Parker, and Representative Bankhead of Alabama has said that the Senator can have the delegation from his State. We do not doubt that the Southern States would like to see a distinguished Southerner installed in the White House. Before the civil war they would have been even more glad to witness that phenomenon, but in these days the Democratic organizers of victory in the South were not rainbow-chasers, but aimed at the attainable. We doubt whether the time has come when it would be expedient for the Democracy to nominate a native of one of the former slave States.

For that reason we do not consider Senator Gorman's nomination probable; neither do we believe that Senator Cockrell of Missouri has ever sanctioned the use of his name. The senior Senator from Missouri is too experienced and too wise to sacrifice the substance to the shadow. He knows that his candidacy for the Presidency would eliminate him from the canvass for reelection to the Senate in 1904. He is now the head of the Democratic minority in the Committee on Appropriations, which means that if his party should ever again control of the Senate, he would be almost certain to become the chairman of the committee. That position, now held by Senator Allison, is one of tremendous power. There are those, indeed, who consider the occupant of it more influential in legislation than the President of the United States. Another Missourian who has been mentioned for the Presidential nomination is Mr. Joseph Wingeat Folk, the Circuit Attorney of St. Louis, who has waged such a memorable battle against legislative corruption and has done so much to redress the fair name of his State. We earnestly hope that his fellow Democrats will nominate him for Governor this year, in which event he may be considered certain of an election. Even then, however, it would be injudicious to make him the Democratic candidate for the Presidency, for the reason that

Missouri would under any circumstances be carried by the Democracy in a Presidential year.

It may be remembered that the Northern Securities Company is the defendant in three suits. One of these, brought by the State of Washington, is now pending before the Supreme Court of the United States, which has original jurisdiction, because the State of Washington alleges that the company, chartered in New Jersey, is performing in the State of Washington actions illegal under the law of that State. No decision has been rendered in this case. The second case is a suit of the United States against the company, under the Sherman act, in the United States Circuit Court at St. Paul, Minnesota, the three judges of which recently concurred in a decision adverse to the company; an appeal from this decision will be heard by the United States Supreme Court in December next. The third case was a suit by the State of Minnesota against the company in the United States District Court at St. Paul. Here the charge was that the merger of railroads, alleged to have been practically effected by the Northern Securities Company, violated acts of the Minnesota Legislature forbidding the consolidation of parallel and competing lines of railway.

With these facts in mind it becomes interesting to study the present situation. In the decision which was rendered on August 1, Judge Lochren dismissed the State's bill of complaint, declaring that the Northern Securities Company is not a railroad corporation, nor a lessee, purchaser, or manager of railroads, and that it has not effected a consolidation of the Great Northern and Northern Pacific lines, but merely holds stock therein. To the plaintiff's contention that it will be for the interest of the Northern Securities Company to restrain trade by suppressing competition between the two railroad companies, wherein it holds a majority of the stock, and by coercing or persuading the two boards of directors, whom it has the power to elect, it will cause them to commit penal offenses, Judge Lochren answers that he rejects the doctrine that any person can lawfully be held to have committed, or to be purchasing or about to commit, a highly penal offense merely because it can be shown that his pecuniary interests will be thereby advanced, and that he has the power, either directly by himself or indirectly through persuasion or coercion of his agents, to compass the commission of the offense. Now it will be observed that although Judge Lochren simply decided that the company did not violate a Minnesota statute, yet the reasons given for the decision controvert the position taken by the three judges composing the United States Circuit Court when they declared that the company had violated the Sherman Anti-Trust law. For the Circuit Court held that the Northern Securities Company is in effect a railroad company and an illegal combination in restraint of trade, whereas Judge Lochren sees that it is neither a railroad company nor a combination in restraint of trade. In his opinion Judge Lochren reviews the Supreme Court decisions on the Sherman Anti-Trust law, which were made by the judges of the Circuit Court the basis of their decision, yet he arrives at a precisely contrary conclusion. The discovery that Federal judges can take opposite views of the legal significance of the same state of facts will encourage those who hope to see the decision of the United States Circuit Court reversed by the higher Federal tribunal.

It is said that Judge George Gray, of Delaware, was influenced by a letter of President Roosevelt to accept the invitation to become the fifth member of the Board of Arbitration selected by mine-owners and mine-workers to end the Alabama coal strike. It is expected that he will be chosen chairman of the Board, and that the striking miners will return to work forthwith, their representatives having given a promise to that effect in case the judge should consent to act as a member of the Board. The only condition attached by Judge Gray to his acceptance of the invitation was that the Board should conclude its work by September 1, soon after which the United States Circuit Court, over which he presides, will convene. It is a pity that the Conciliation Board now sitting in the anthracite region of Pennsylvania could not agree upon Judge Gray for umpire. Had they done so, we should not have witnessed the prolonged delay in the settlement of the questions at issue,—a delay which is causing

many of the miners to express dissatisfaction with the award of the Anthracite Coal Strike Commission. It must be said in justice to the workers that they would only have been too glad to accept Judge Gray for umpire. It will be interesting to note the impression made by the distinguished Delaware jurist in Alabama. He will be as careful not to swerve from the path of judicial duty and dignity as was Chief-Judge Parker, but it may be that in his capacity of private citizen Northern Democrats may find him a more congenial man. It may be well, too, for Democratic leaders at the South to bear in mind that Judge Gray has acquired a hold upon the labor vote probably stronger than Mr. Roosevelt's, and that he has gained it by the faithful performance of the duty which he undertook.

Moreover, Judge Gray is, perhaps, the only native of a former slave-State who would have a reasonable chance of carrying the doubtful States at the North, by reason of the trust reposed in him by working-men, who have it in their power to turn the scale, not only in New York, Connecticut, New Jersey, and Indiana, but even in Ohio, Illinois, and, possibly, in Pennsylvania. Perhaps Representative Baskin, when he sees Judge Gray, will reconsider his inclination to give the Alabama delegation to Mr. Gorham. Who knows, however, that Alabama may not have a candidate of her own? The San Antonio (Texas) Express advocates the nomination of Senator John T. Morgan, of Alabama, as the next Democratic candidate for the Presidency. It may be remembered that in 1900 he was supported by the Democrats, Republicans, and Populists in the Legislature of his State, and was unanimously elected Senator. He is now serving his fifth term in the Upper House of the Federal legislature. Although he has just passed his seventy-ninth birthday, he is not too old to be an efficient and influential Senator, and therefore not too old to be a President. We have his own authority for saying, however, that he would decline the nomination should it be offered to him; for in an interesting interview he pointed out that on grounds of political expediency the nominee of the Democracy ought to come from a Northern State.

The question has been asked whether American or foreign capitalists, before making the loan of thirty-five million dollars authorized by the Cuban Congress, will not inquire of our government whether the proposed loan conforms to the conditions laid down in the so-called Platt Amendment, which was incorporated in the Insular Constitution. The amendment prescribes, it will be remembered, that no money shall be borrowed by Cuba from foreigners unless an adequate provision for interest and sinking-fund can be made without encroaching upon the revenues needed to meet the current expenses of the insular government. It is true that this covenant has not yet been embodied in a treaty, but our State Department would undoubtedly regard it as binding, because its insertion in the Cuban Constitution was made a condition precedent to our cession of the island. Our deduction from these premises is that capitalists who are invited to make the loan will undoubtedly, in either a formal or informal way, request our State Department to say whether in its opinion the Cuban government has properly provided for repayment. If the reply be in the negative, the loan, of course, will not be made. But how if it be in the affirmative? Will such a reply be construed as a moral guarantee of the loan? We certainly should not be placed in the position of endorsers of Cuban securities. Congress has never authorized the Executive to give any such endorsement. Suppose, however, the opinion expressed by our State Department that the loan was adequately provided for should ultimately prove ill-founded; would we permit foreign credence to do in the case of Cuba what we allowed them to do in the case of Venezuela, namely, seize the debtor's principal custom-houses, and apply the revenues thereof, or part of them, to the payment of the debt? That would be a state of things which the American people would never tolerate, and that is why, from the outset, we have expressed regret at the acquiescence of our State Department in the blockade of Venezuela, and the proposed sequestration on a part of her customs revenues.

The question whether the Platt Amendment is not already made obligatory by insertion in the Cuban Constitution, and

whether a rearmament of it in a treaty would not be superfluous, would have been pressed upon us had the reports of an insurrection in the province of Santiago been confirmed. It now turns out that the acts of a few brigades, who were quickly suppressed by the rural guards, were magnified into a rebellion said to have been organized by ex-soldiers of the "army of liberation." It may as well be understood that no serious insurrection will be suffered to get under way in Cuba, because the armed forces of the United States would be employed betimes to quell the disturbers of the peace. It is easy to show that such an intervention would promote the best interests of the independent insular government. A railroad traversing a mining district in the province of Santiago is controlled by British capitalists. This railroad would almost certainly be damaged if the ex-Cuban soldiers were permitted to start a rebellion. Thereupon Great Britain would have in the case of Cuba exactly the same right to protect the interests of her subjects and to demand reparation for injuries which we have allowed her to assert in the case of Venezuela. To avert such an unwelcome situation, we must nip rebellion in the bud, and we are fortunately authorized to do so by the terms of the Platt Amendment.

It seems to be settled that the owners of cotton-factories will request the Fifty-eighth Congress to investigate the recent corner in raw cotton, and to enact laws for the purpose of averting a similar condition of affairs in the future. It appears that in order to produce cotton fabrics at a fair profit, the manufacturer must secure his cotton at a price approximating forty dollars a bale. At the hour when we write, the price is not far from sixty dollars, which is prohibitive. Organized labor in New England has forced wages up to the maximum; and even in the South, where operatives are organized imperfectly, if at all, wages have been kept up by the demand for skilled workers. When to labor thus rendered costly is added the present high price of raw cotton, the manufacture of certain cotton fabrics has to be abandoned, for the reason that the finished product will not sell for more than the net cost of production. Of the ten million spindles in the United States only four million are now running, and the number is continually decreasing. Of course, cotton will be cheaper after September 15, when the new crop will be on the market. Texas alone expects to produce 3,500,000 bales this year, and, according to government reports, the cotton crop of the whole South is likely to reach 12,000,000 bales. The mills now closed will undoubtedly, no doubt, be reopened; but meanwhile an immense amount of money will have been lost by operatives through the enforced suspension of work.

The notion, however, that a remedy can be found for this state of things by trammelling the cotton exchanges with laws intended to prevent speculation in cotton is fallacious. The remedy would prove worse than the disease. Congress has no power to forbid a man to buy an article that he thinks will advance in price, and, of course, his purchase helps to advance the price. It may be asserted that trading in "futures" could be prohibited on the ground that they tend to check interstate commerce. Cotton-buyers might profit by the abolition of traffic in futures, but cotton-growers would lose by it. This is the lesson of experience. The German government prohibited the trading in futures, and the result was that farmers had to carry over their crops when they needed money, or sell in the autumn, when every one else would be selling and prices would be low. Capitalists would like nothing better than to buy the whole crop under such circumstances and hold it until the spring, when they would advance the prices disproportionately. The attempt to meddle with the cotton exchanges by restrictive legislation would almost certainly be followed by corresponding interference with the produce exchanges and the stock exchanges, and then the whole community would suffer by the repudiation of the principle that the law should leave prices to be settled by the interplay of supply and demand.

A political incident that has excited more comment than it really deserves was the so-called annihilation of Populists which took place on July 28 at Denver. The so-called Middle-of-the-Road Populists, who nominated Barker for President in 1900, and the Fusion Populists who gave Mr. Bryan their support that year, as they had given it to him

in 1896, decided to reunite and to put forth a common platform. They have agreed upon four demands. In the first place, they want government-made fiat money. In the second place, they insist that railroads and telegraphs shall be owned by the government, and operated at the cost of service. In the third place, they lean toward Henry George by holding that private ownership in land shall be confined to those who use it, and that land should not be made the subject of speculation. Fourthly and lastly, they announce that American foreign commerce must be transacted in American ships; but, as they are firmly opposed to a subsidy, they must mean to accomplish their aim by such discrimination against foreign ships as would practically debar them from our seaports. This reunion of Populists might have some significance if their numbers were still formidable. In 1900, however, the Middle-of-the-Road Populists cost less than 51,000 votes, and all the rest of the party, which in 1892 gave Weaver twenty-two electoral votes, had become indistinguishably merged in the Democracy. It is not impossible that Mr. Bryan, who, it is remembered, voted for Weaver delegates in Colorado in 1892, might revive the old strength of the party to a considerable extent if he would accept a Populist nomination for the Presidency in 1904. But Mr. Bryan has a future before him within the Democratic ranks, and it is most unlikely that he would again become a bolter.

In almost every instance of recent labor agitation the hazy discernment of right as against wrong seems to be fostered by hazy thinking. There is the recent Murphy case, in which the defendant tried to get clear of a charge of stealing by claiming that as the money was in the hands of the union by the processes of extortion, it couldn't be stolen,—and that therefore the alleged stealing was in reality no stealing at all. Then there is the Chicago labor agitator who calls for the establishment of a "neutral police" to serve in case of labor riots. And there are only two cases of muddled thought out of scores. They do to go with the conclusion of certain politicians that as various irregularities in the Post-office Department cannot be punished because the statute of limitations intervenes, therefore the moral obliquity is condoned. All this is clearly enough doubtful ethics, and indicates the necessity of the rebuilding of moral standards. But it also shows how men can reason crookedly and make themselves believe that they are logical.

Some statistics with reference to the absences of Presidents were recently compiled for the Philadelphia Press. It appears that George Washington during the eight years of his Presidency was absent from the Federal capital, which was first New York and afterwards Philadelphia, only 181 days in all. It must be remembered, however, that the journey to and from Mount Vernon was then a long and fatiguing one. John Adams, during whose four years' term the capital was moved from Philadelphia to Washington, was absent 355 days, most of which he spent on his farm at Quincy, Massachusetts. Thomas Jefferson was away from Washington no fewer than 796 days during his eight years of office. Madison's record was 637 days, which is surprising when we call to mind that the war of 1812 occurred during his administration. Monroe took advantage of the "era of good feeling" to be away 708 days out of his two terms. Andrew Jackson had troubles enough to detain him in Washington—it will be remembered that he was censured by the Senate,—nevertheless, he was absent 502 days. During the last half of the nineteenth century the Chief Magistrates deemed it expedient to spend a larger part of their time at the seat of Federal government. Thus, President Polk was absent but 137 days, Fillmore but 60, Pierce but 67, and Buchanan only 57 days. Grant seldom left Washington, except for a sojourn at Long Branch in the hot weather. Hayes and Arthur, if they travelled at all, endeavored to avoid public notice. Mr. Cleveland, during his first term, it may be remembered, spent even his summers in a suburb of Washington. It was President Harrison who first—if we except Andrew Johnson—"swinging round the circle"—undertook a systematic tour of the country for political purposes, which President McKinley and President Roosevelt have followed. It is obvious that whatever ground there may have been for objecting to a President's absence from the Federal capital is minimized in these days of railroads, telegraphs, and telephones.

## The Outcome of the New Mississippi Constitution

It is well known that in Mississippi the colored population considerably outnumbers the white. It is a well known fact that Mississippi was the first of the Southern States to venture to qualify the suffrage by means of a new State Constitution. As that Constitution was adopted thirteen years ago, time enough has elapsed to permit of definite conclusions regarding its practical results. The importance of learning what those results are will be recognized by all intelligent and fair-minded citizens at the North as well as at the South. We therefore desire to lay out and give a authoritative discussion of the subject by Hon. Frank Johnston, which has been reprinted from publications of the Mississippi Historical Society. We avail ourselves of the notes collected by Mr. Johnston, first, to recall precisely what the Mississippi State Constitution of 1890 provided, and then to set forth the working of the qualifications of the franchise.

The State Constitution adopted by the convention which met at Jackson on August 12, 1890, provided that hereafter an elector must have resided in Mississippi for two years, and in the election precinct where he should desire to vote for one year; that all taxes, including a poll-tax of two dollars, for the year preceding the election at which an elector offers to vote, must have been paid on or before the first day of September of that year; and that an elector must have been registered at least four months previously to the election at which he offers to vote. Another and much-debated qualification of the suffrage was that a voter must "be able to read any section of the Constitution of the State; or he shall be able to understand the same when read to him, or give a reasonable interpretation thereof." The condition of residence in the election precinct for one year manifestly excludes a large class of voters who are thriftings, have no steady employment, and are constantly moving from place to place. The exacting of registration four months previously to the election excludes voters who take little or no interest in public affairs. The provision with reference to the poll-tax, as construed by the Supreme Court of Mississippi, makes the payment of that tax entirely voluntary when the larger class of voters who own no property subject to taxation. Their property cannot be taken for the poll-tax, and no criminal proceedings are allowed for the collection thereof, the only consequence of the failure to pay this tax being the loss of the franchise, so long as the delinquent continues. We add that an voter can be arbitrarily excluded from registration when it is read to him, or give a reasonable interpretation of it. The question of a voter's right to the franchise is not finally decided by the registrar, for a voter may appeal from that decision to the courts.

In the course of the memorable debate on the Mississippi Constitution of 1890, which took place in the United States Senate during the Fifty-first Congress, few criticisms on the new organic law of the State were made by Republican Senators. It was alleged by them that the whole scheme was devised for the purpose of disfranchising the negroes; that the "understanding" clause was a subterfuge, and was intended to enable the registrar, who was to decide upon the qualification of the voters, to discriminate against the negro; that there was an appeal from the decision of the registrar, and that his decision, however arbitrary and unjust, were final; that the basis of the legislative apportionment was unfair, and discriminated against the counties with large negro populations; and, lastly, that the Constitution had not been submitted to the people of the State for ratification. Senator George, who defended the work of the Mississippi convention of 1890, had no difficulty in showing that, as we have said, the State Constitution itself gave citizens an appeal against a registrar's disfranchising decision; that the legislative apportionment was not unfair, because it was based upon the voting, and not upon the total population, of counties and districts, and exhibited few glaring inequalities than those which marked legislative apportionments in Connecticut, Massachusetts, New York, and other Northern States; and, finally, that, with one exception, it had been the uniform practice of Mississippi that a constitutional convention could adopt and enact a Constitution without submitting it to the people for ratification. The State Constitution of 1817, that of 1832, and that of 1865, as well as that of 1890, had been thus adopted. Moreover, this question had been raised before the legal tribunals of the State, and the present Constitution had been held to be valid by the Supreme Court of Mississippi. It was, of course, to the main accusation leveled at the effect of the educational qualification of the suffrage on the negro voters of the State and the purpose of the constitutional convention is limiting the franchise that Senator George mainly addressed himself.

Every provision in the Mississippi Constitution applies equally and without any discrimination whatever, to both the white and the negro races. Any assumption, therefore, that the purpose of the framers of that Constitution was ulterior and dishonest, is gratuitous, and cannot be sustained. For this assertion we have the authority of the highest Federal tribunal. The question of

the validity of the franchise provisions of the Mississippi Constitution was presented to the Supreme Court of the United States for decision in the case of *Williams vs. Mississippi*, a case which had been decided by the Supreme Court of the State in 1890, and had been carried on the part of *Williams* by writ of error to the United States Supreme Court. The last-named tribunal held, all of the judges concurring, that the provisions of the Constitution did not violate the terms of the Fifteenth Amendment to the Federal Constitution, and that their enactment was clearly within the constitutional powers of the State. The United States Supreme Court expressly declared that the provisions of the Mississippi Constitution relating to the suffrage did not discriminate between the black and the white races, but applied to both races impartially and alike. Thus was the work of the Mississippi constitutional convention irreversibly upheld.

Now let us look at the results. Mr. Johnston, who writes with admirable moderation, disabuses any expectation on the part of those who framed the franchise article of the Mississippi Constitution that the political phase of the racial problem had found its final solution in the adoption of the limitations which were placed upon the suffrage. It was believed, however, that such measures as were adopted would alleviate the situation then existing in Mississippi, by improving the electoral body; that they would tend to give the administration of public affairs to the white race by constitutional and honest methods; and that they would prove effective in securing these objects for many years to come. It was then the opinion of the leading men of the State, and there is to-day an agreement of opinion in Mississippi, to the effect that the number of negroes who are being qualified to meet the educational conditions of the suffrage through the school facilities afforded by the State, will continue to increase, and that it may be only a question of time when there will again be a majority of qualified negro voters in the State. It is impossible at this time to speculate intelligently with reference to the course that it may hereafter be needful to pursue. No one can forecast the final outcome of the sociological, economical, and political conditions that flow or may flow from the unprecedented situation in which the two races find themselves in Mississippi and generally in the Southern States. It is already coming to be recognized, however, at the North, that, while negro suffrage concerns the South more deeply and directly than any other section of the Union, yet its comprehensive and far-reaching effects extend to the entire nation. There are several Northern States in which the negroes hold the balance of political power. We repeat that here the negro problem may be sitting quietly at the North as well as at the South, it is impossible to predict; meanwhile, we would direct attention to the fact that in Mississippi the requirements of the existing situation have been met with wisdom and that the blessings of good government have been secured in the people of that State for the present and for many years to come. In Mississippi the two races now dwell together in harmonious relations. Every vocation, trade, and calling in life is open to the negroes. The honest and industrious among them are prosperous. Their children are being educated at the public expense, their indigent and insane, their blind, deaf, and dumb are cared for by the State. In a word, the white race in Mississippi has conceded, and is willing to continue to concede, to the black man every civil right that the white man enjoys, but it is not willing that the black man should assume political supremacy in the State. That would be, not figuratively, but literally, to surrender the territory of the State to the colored race.

Mr. Johnston expresses not only the hope, but the belief, that, happily for the Republic, the Northern people have reached a stage of public opinion where they recognize the fact that the negro problem concerns the South pre-eminently, and that it is the wiser course to leave Northern statesmen undisturbed in a task more difficult than ever before was imposed upon a people. The future is obscure, but Southern statesmen can be relied upon with confidence to meet with courage and justice whatever destiny may await them. They will preserve their civilization and maintain social order for themselves and their descendants.

## Diverse Views of Mr. Chamberlain's Proposal

It is a timely and a vital subject to which the August number of the *Northern Review* allots its first three articles, by Mr. Chamberlain's proposal to impose duties on foreign products in order to give a preference to similar commodities from the colonies is certain to rivet the attention of the British nation for many months to come, and has an obvious bearing on the interests of the United States. The suggested imperial Zollverein is discussed from three points of view. The Rt. Hon. Sir John E. M. P., who is a Conservative and who, it may be remembered, has been Solicitor-General, Under-Secretary for India, Financial Secretary to the Treasury, Deputy Chairman of Committees in the House of Commons, and Vice-President of the Committee of Council on Education, sets forth his reasons for believing that

the adoption of Mr. Chamberlain's scheme would place a crushing burden on the people of the United Kingdom. Mr. A. R. Colquhoun, formerly an Indian Administrator, a globe-trotter, and an interesting writer on Asiatic subjects, has undertaken to prove that Mr. Chamberlain's project would conserve the British Empire, evidently assuming that this is the capital, not to say unique, object of the British people, the desire to keep the breath in their nostrils being thrust aside as immaterial. The probable effect of Mr. Chamberlain's policy, should it ever be carried out, on the trade of the United States, is examined by Mr. H. Loomis Nelson, Professor of Political Science in Williams College, well known to intelligent Americans by his books on "Our Unjust Tariff Law" and "The Money We Need." We purpose here very briefly to indicate what he said on this momentous topic from the various standpoint assumed, and, incidentally, to express our own opinion.

In a singularly cogent article, Sir John E. Gorst points out that the United Kingdom can expect no adequate compensation for the loss which she will incur by imposing a duty on food products in order to give a preference to like colonial commodities. Her export of manufactures will not be increased in commensurate proportions. The market for manufactures in which the Colonies could handicap foreign countries in favor of Great Britain by discriminating tariffs is not large. The market is limited to those imports from foreign countries which British trade could supply, and has been estimated at no more than twenty millions sterling. The experiment made in Canada by the concession of a preference of 33 1/3 per cent. to British manufactures does not warrant the belief that Britain could monopolize the whole of the Canadian market; but, whatever its value, the portion which she secures will be all she is to get in return for the tax on food. Compared with the total British export trade of 220 millions sterling, it is insignificant. But, in these matters on the other side to be lost or jeopardized? As a matter of fact, the exports of Great Britain to foreign countries are twice as great as those to her own possessions. It is obvious that the former trade may be injured. Countries which already have hostile tariffs, may, by increasing those tariffs cause a further diminution in the demand for British manufactures. Whether such retaliation would or would not be encountered, it is certain that, if wages are raised in any British industries as a consequence of colonial preference, the cost of production will be thereby increased, and the commodities will, in consequence, be handicapped in their competition in the general markets of the world. Should the gain in exports to the colonies be more than balanced by the loss in exports to foreign countries, it is plain that the British industries which manufacture for external trade would suffer; workmen would have to be discharged; their resultant competition in the general labor market would tend still further to lower wages; and the ultimate result of Great Britain's experiment in commercial policy might be discrimination of wages, as well as an increase in the price of food. That a preferential treatment of the colonies will be inevitably followed by an increase in the price of bread Mr. Chamberlain himself admits. With this admission in his mind, Sir John E. Gorst is determined to make the British voter understand that, if Mr. Chamberlain's proposal were adopted, Great Britain would be embarking on a contest in which her very life would be at stake. It would be an attempt to place upon the back of the British people a burden which they cannot, in their present condition bear. It is Sir John E. Gorst's conviction that, if they are deluded by the oracles of false prophets, in attempting to undertake it, they will be crushed to the ground.

In a lucid exposition of the bearing of Mr. Chamberlain's imperial tariff plan on the United States, Professor H. L. Nelson demonstrates that the hope of founding imperial patriotism on reciprocal commercial advantages rests upon an unsubstantial economic basis. He would not deny that, if a considerable preference should be given to the colonies, British mother country might eventually supply a very large part of the mother country's demand for food products. Whether, however, the British manufacturer would get any equivalent return for the concession depends entirely upon the course which the United States on their part might elect to pursue. It has been estimated that their twenty per cent. preference in 1902 furnished of the total amount of food supplies imported by Great Britain could, in the course of time, and under favorable conditions, be increased to eighty per cent. Professor Nelson considers the estimate quite within the range of probability when the fact is borne in mind that Canada now has more uncultivated agricultural lands than we possess. Whether, however, the British manufacturer shall get any adequate return for the proposed concession depends entirely upon the question whether the United States shall decide to leave their tariff as it is, so far as Canada is concerned. Canada's prosperity strongly inclines her to become our customer, and, as experience has shown, notwithstanding the preference of 33 1/3 per cent. granted to British manufactures, we are still her principal purveyors. Nor is there any doubt that, if we should enter into reciprocal tariff relations with her, Canada would quickly come to depend upon the United States for most of her imports of manu-

factured articles. In other words, we can at any moment outbid Mr. Chamberlain for Canada's trade. What the British Colonial Secretary proposes is to take advantage for political purposes of an artificial trade condition which we ourselves have created, by withholding reciprocity from Canada. The advantage contemplated by Mr. Chamberlain would be compassed at the expense of the English consumer, and of the United States farmer and manufacturer. Professor Nelson's conclusion is that the power rests with us to protect the American farmer from artificial and injurious competition in England; to enlarge the market for American manufactures, and, at the same time, to promote such friendly international relations as would do more for the welfare of mankind than possibly could be accomplished by Mr. Chamberlain's proposed employment of a tariff war against the outside world for the purpose of fighting loyalty to the British Empire.

Mr. A. H. Colquhoun seems to think that he will prove his case if he succeeds in convincing the reader that the stability of the British Empire, by which he means the permanent adherence of the self-governing colonies, can be assured only by the species of heism embodied in the preferential tariff proposed by Mr. Chamberlain. He avouches Mr. Chamberlain's plan because he is convinced that a new policy is needed to revivify the British Empire, a new bond to bind it closer together. He admits, indeed, that, even if England should lose all her self-governing colonies, she would still have an Empire, because she would retain India, the Crown Colonies, her world-wide trade and her maritine navy. Why, then, is he willing to risk as much, in order to connect Canada, Australia, and South Africa a little more tightly with the mother country? The only reason that he can assign is that he looks to the self-governing colonies as nurseries of the English-speaking race, as the heritage of England's children, who will, he thinks, be immeasurably the losers if the falls which drives them from the overcrowded island of Great Britain should forbid them to live in white man's countries under the British flag. Does Mr. Colquhoun regard the Australian Commonwealth, the Dominion of Canada, and the South-African Colonies as better entitled to be described as nurseries of the English-speaking race than are the United States? Does he deem those British emigrants immeasurably the losers who have chosen to live under the Stars and Stripes rather than under the British flag? Does he not perceive the inherent fallacy of the sole argument by which he seeks to persuade the British proletariat to pay an extra cent or two for a loaf of bread, the argument, namely, that otherwise, the self-governing colonies may, like the United States, become independent republics? If that is all that is meant by a dismemberment of the British Empire, what terrors can the prospect have for the British artisan? Is he likely to face starvation or even extreme privation for himself and his family in order to prevent the sentimental difference between the practically autonomous Australian Commonwealth and the avowed independence of the United States? The question answers itself.

## Mr. Washington and the Negro Problem

In Boston, on July 30, an attempt was made by a number of negroes to break up a meeting of colored citizens, which Booker T. Washington had been invited to address. He himself protested on the following day that the colored citizens of Boston, considered as a whole, should not be held responsible for the unwise acts of a few rioters. Nine-tenths of the colored people in that city, he said, stand by him and support him in his work, and they were never more hearty in their approval than they are to-day. At Tuskegee, Alabama, where the Normal and Industrial Institute, presided over by Mr. Washington, is situated, a resolution was unanimously adopted on July 31 by the Alabama Colored Baptist Convention severely condemning the hostile demonstration made by negroes in Boston on the preceding night, and endorsing Principal Washington as a worthy, conscientious, and safe leader, deserving the confidence and respect of his race. The question will naturally arise, What has Booker Washington done that any men of his color should try to interrupt meetings at which he is expected to appear? The answer is obvious enough. He has not advised his colored friends in fight for their political rights. On the contrary, he has counseled them to leave politics alone, and to cultivate the virtues of industry and thrift.

In other words, he would have them prove themselves deserving of the franchise, before they insist upon exercising it. This is what constitutes his affair in the eyes of professional negro agitators, who make a living by fomenting antagonism between the black and the white races. The negroes who seek to become delegates to Republican national conventions have heretofore posed as the official champions of their race, and have found it profitable to do so. Their recapture would be gone if Booker T. Washington could have his way. The negroes who manipulate the colored vote in those Northern States, where it sometimes suffices to elect the whole, are disposed to repudiate the teacher who tells young colored men to go to technical schools and learn how to

man a living, instead of clamoring for the enforcement of the Fifteenth Amendment. From their point of view Booker T. Washington is a betrayer of the black man's cause.

That the free negro will never be self-supporting until, in pursuance of Mr. Washington's idea, he has been trained in habits of industry and thrift, is tolerably clear from the experience of a colony of colored people founded in Canada more than half a century ago. This colony was started in 1849 by the Rev. William King, an English evangelist, in Boston, Kent County, Province of Ontario. Here a tract of some nine thousand acres of fertile land was set aside by the Canadian government for the use of fugitive slaves who had been assisted to escape from the Southern States by the "underground railroad." The land was sold in farms of from forty to one hundred acres at the price of \$1 50 per acre, and the colonists, who, at one date numbered 1200, had unlimited time in which to pay for their holdings. As money could be made from the start by cutting the fine timber that stood on the land, the colony began under auspicious conditions. How has it prospered? Very few of the negro colonists or their descendants now remain on the farms, and, with one exception, those who are still there are renters. The rest mortgaged their lands, and even the standing crops, and squandered the proceeds of the transaction, and in many cases abandoned their farms rather than take the trouble to till them. They proved incapable of steady work, and were destitute of foresight, their power of provision being limited, apparently, to a day or a week. When oil was discovered on the tract occupied by the colony, the negroes sold their rights at once for trivial sums rather than wait for a development of the subterranean wealth. The one exception proves the rule. This man came to the colony from British Guiana in 1872. He is a school-teacher, and during his vacations worked on his farm. He concurs with Booker Washington in thinking that the negroes in the Southern States of the Union should be trained in the habits of industry and economy, in order to acquire the foundation on which close fellowship may properly be reared.

One of the most interesting contributions to a study of the negro question was made the other day by a Southern white citizen in a letter to the New York Sun. Referring to the prediction uttered by Justice Brewer in his Milwaukee address that there would be a popular uprising against lynchings and a remedy applied to them, the writer prayed Heaven to speed the day when such a remedy might be found. He suggested, however, that Justice Brewer had missed the crux of the question, so far as the South was concerned; for, however deplorable lynchings are, the conditions which cause them in the South are so serious that punishment by lynching is insignificant in comparison. What are those conditions? They are these: no white woman in the negro belt dare traverse the public highway alone; while, on the other hand, any negro woman can go from the Potomac to Texas alone, on foot, unmolested, in absolute safety. The white farmer's wife sits at home in fear and trembling, even though her husband may be working in a neighboring field. This insecurity has had a disastrous effect on agricultural prosperity; because of it thousands and thousands of farmers have left the rural districts for the towns and cities. The writer in the Sun declares that if Justice Brewer and his "popular uprising" will find a remedy to stop the assaults upon white women, so that they can have the freedom of the highway, or enjoy peace and safety in their homes, thousands upon thousands of families will go back into the old farms, and the waste places of the black belt will once more blossom as the rose. It is offering no remedy to say that, if the negro assaultant of a white woman is caught, he can be punished by law.

As General Fitzhugh Lee pointed out the other day, it is asking too much of the poor victims to require her to go in a court-house, and there, before a curious crowd, go into details of her sufferings and humiliation. To a modest woman suicide were preferable. In the judgment of white women at the South, the vital question is not how shall lynching be stopped, but how shall white women be protected? It is a question, moreover, which the North is bound to help the South in solving. As the North took the negroes from their white owners after the civil war, and organized them into so-called "loyal negroes," and started them along lines adverse primarily to the Southern whites, and indirectly to the blacks themselves, destroying the influence of the former masters and teaching the negroes to look to the North for teaching and guidance, it now believes the North to undo its work, if it can, and to make the negroes understand that white women shall not be assaulted, and that, if negro teachers, and preachers, and negro colleges fail to stop the atrocious crime, the North will withdraw its countenance from them, or co-operate in a movement to coerce negroes into a repression of their brutal instincts.

## The Evolution of Racial Type in America

There is hardly a more fatuous individual anywhere than the man with a brand-new theory of his own conceiving. Wonderful is

the ingenuity he will practice in finding plausible evidence to confirm his fixed idea, and marvellous the power his eyes acquire of seeing right through a very mountain of facts which refute it. Eminent men are not exempt from subjection to this faculty. Theologians, politicians, scientists, philosophers, and the teachers of men generally are prone to fall into it. Professor Starr of the University of Chicago is the latest notable example. According to newspaper reports of a lecture which he recently delivered there, he believes that the American people are fast developing an Indian. He has held the theory for some time, and announces that he has now confirmed it by personal observation. He examined the descendants of a small colony of Germans who came to the United States years ago, settling in Pennsylvania, and found that the fourth and fifth generations had developed marked Indian characteristics, such as black eyes and darker colored skin.

"The change must take place inevitably," said Professor Starr, "through the influence of the potent American climate and environment."

In this case, the mountain of refuting fact which the theoretician sees is represented by the whole American race outside of the present-day colony of Teutonic Pennsylvanians, and, possibly, a few other seeming instances. Nor, apparently, does the worthy scholar care to observe that during the last four centuries there has been a certain admixture of Indian blood into that of the white invaders of the American continent, and that this may account, in a measure, for the traits he has observed. No, dear professor, your theory that the American people are fast developing the Indian type, and will go on approaching it more and more, cannot be taken seriously. It is too obvious that, even if there were an undoubted tendency of this kind, it could only develop in the wilderness and in the primitive conditions which produced the Indian savage; and the difference between our civilization and these conditions need not be insisted upon.

A distinct racial type, as marked, almost, as that of any European people, has certainly been evolved in the United States; but it does not bear any particular resemblance to the Indian type. It is not difficult to designate an American man or woman in Europe; and Americans abroad are recognized not only on account of their clothes and speech and external manner, but by that something distinctive in face and form and temperament which we call race. It is true that there are certain superficial differences between Eastern and Western Americans, between Northerners and Southerners; but it is a curious thing that, in a country of such length and breadth and of such diverse climatic conditions, in a country peopled by descendants of so many branches of the Caucasian family, no national racial type that is fairly uniform and predominant should have been produced in a few generations, and should be able to assimilate to itself the vast horde of foreign elements which is continually being absorbed into it.

## Money in Fact and Fiction

There are strange times in the accumulation of fortunes—stranger than any fiction could ever have made them. Think of it for a moment! Andrew Carnegie, a canny little Scotch boy, came to this unknown land a few decades ago barefooted, and last year offered to settle the Venezuelan indebtedness to Germany, England, France, and Italy and the South-American republic by loaning Venezuela the entire sum of these international debts. And yet a fortune so huge as to permit of such offers is as nothing to the power of another man. Mr. Rockefeller, personally a quiet American citizen from Cleveland, a simple liar with few habits of luxury, could easily buy half a dozen of the independent kingdoms of Europe; could without feeling it in any great extent in his pocketbook take up the debts of all the empires of Central and South America.

Again, in 1844, Alexander Dumas published a book called *The Count of Monte Cristo*, the basis of which is the fabulous wealth of an individual. The count finds a rare full of almost priceless jewels. He says, "I must live; he spends money everywhere; he comes to Paris with a satchel from his Italian bankers giving him unlimited credit on a Paris bank. There is no limit on what he can draw from M. Danglers. It is entirely unprecedented. Nothing like it was ever known before. He draws five millions of francs, and ruins the banker, and still no complaint from his Roman house. His rights wrongs; he sues more lives; he punishes the guilty by the use of aniline dye on their heads. And then he is by the name Maximilian on the island of Monte Cristo with his bride and sons away. As Maximilian sees his ship disappear on the horizon, he feels Monte Cristo's will leaving him his whole fortune. This fortune, Dumas suggests is two or three places, was one hundred million francs—\$20,000,000. It is the greatest private fortune the Frenchman could receive of in 1844 and is considerably less than the fortune of John D. Rockefeller in 1863.

So you might run on, if it did not tire the reader to conceive more. But, most remarkable of all, this one individual made his unprecedented wealth with his own brain.

## The American City

SOME recent statistics have emphasized the fact that, among our centres of urban population, Philadelphia is pre-eminently the American city. This is not so surprising when we call to mind that it had more native Americans to start with. Not only in 1790, when the first census was taken, but for at least two decades afterwards, Philadelphia contained more inhabitants than any other American town. As early as 1810, the population of Philadelphia was 111,210. According to the census of 1900, Philadelphia contained 1,293,697, of whom 908,257 were native and 285,240 foreign-born. In not a single ward of the city are there more foreigners than natives. Of the 710,200 persons of foreign parentage living in Philadelphia, some have both parents foreign; others, either father or mother foreign. Of these individuals both of whose parents were born in the same foreign country, 231,500 claim Ireland as the birthplace of their parents; 150,250, Germany; 53,020, England; 44,320, Russia; and 27,690, Italy.

It will be observed that Philadelphia receives a far smaller fraction of the immigration from Italy and Russian Poland than does New York city. It is further to be noted that, of the native-born population of Philadelphia (908,257), 844,548 were born in Pennsylvania; 20,978 in New Jersey; 23,184 in Maryland; 21,683 in New York; 20,698 in Virginia; and 16,255 in Delaware. Comparatively few residents of Philadelphia were born in England or the Western States. That is to say, Philadelphia does not exercise upon those sections of our country the magnetic attraction exerted by New York. On the other hand, it is significant that of the foreign-born males, twenty-one years and over, less than ten per cent. are unable to speak English. This shows that the assimilation is performed in Philadelphia with exceptional energy and rapidity. In New York, an immediate acquirement of the English language is by no means necessary, if an immigrant confines himself to the quarters occupied by the Italians or by the Polish Jews.

Of foreign-born residents in Philadelphia, only 65,384 are naturalized. It follows that the political influence of the so-called "foreign vote" is insignificant. Of the population of voting age, not more than 18 per cent. is of foreign birth, and even of those voters, four-fifths have been in the United States more than ten years, and nearly one-half more than twenty years. All the more shame to Philadelphia that corruption and fraud should be deeply rooted in the government. The American city ought to exhibit a far better municipal record than New York, though, as a matter of fact, the latter city has elected two reform Mayors in the last decade. This, although New York contained, according to the last census, 1,270,080 inhabitants of foreign birth. We cannot avoid the inference that Philadelphians are relatively lacking in civic virtues.

## The Army Officer's Wife

ONE of the most delicate problems with which the military authorities have to deal is the army officer's wife. In the navy, where the duty separates the officer from his family, there are none of the trying considerations induced by garrison life in the army. One of the features of this social factor is the appointment to commissions of men who have served in the callous border, and there is always the terror that an army officer, no matter whence he comes, shall bring with him a wife who is not up to the service standard. The mere suggestion of anything which will add to this problem is calculated to throw the military establishment into ethical hysteria; yet one officer, Captain T. Bentley Mott, of the Artillery corps, in a certain plan he has proposed, has approached this subject with fearlessness and defiance and met the issue with candor.

He has suggested that army commissions be opened to the older non-commissioned officers, partly as a reward to that class and an inducement to have good soldiers remain in the service, and partly in order to obtain junior army officers of experience and ability. Among other things he anticipates the objection which may be raised on the ground that these old soldiers are likely to be "impossibly" married. But he says there are no social deficiencies of men promoted after fifteen years of service in the ranks which are not offset every day in the problems presented by men who have been coming into army commissions by way of West Point and the ranks. He says that four years spent at the military academy, or a less time at a military post as an enlisted man, do not alter the origin, tastes, or social peculiarities of people who come from all classes of our democratic life, and he believes that a short time as a commissioned officer will harmonize "those affinities natural to all aggregations of individuals." He adds: "The same would happen to the soldier commissioned after fifteen or twenty years of service, whether married or single; his official-social position would be shortly fixed by exactly those

forces which to-day determine the place of all officers, whether they come from West Point or the ranks. As for his wife, if in a matter vitally affecting the efficiency of our army we must consider that question, there is no reason to suppose that she would greatly differ from the women whom many officers now marry, or that her troubles or other people's concerning her would be a matter of real importance to the service."

It is a long time since any officer has been so straightforward and emphatic in treating of a subject which most army people have spoken of in nothing above a bated breath.

## On Book Criticisms

BOOK criticism has become a very prevalent vice. Every one does it—even the football-game reporter. Naturally, even as for all things universally manufactured, many methods have been invented. The very easiest is to write the review without reading the book. Doubtless this method has been in vogue longer than we realize, but certainly some two years ago an established critic as Mr. Andrew Lang dealt with his book by saying: "I have not read ——. Being repelled by the exceedingly ugly design on the covers, I did not open them." The covers in this instance chance to have been designed by Mr. Aubrey Beardsley, and one can fancy the amazed disgust which those drawings at first excited. It must have equalled the popular feeling about Blake. In England, where the fault of the average man is that of taking himself and his business too seriously, Mr. Lang's airy repudiation of anything verging upon a sense of responsibility must have amounted almost to a witicism. In this country it would be found to have a less potent charm, because so actively in the manner of the young girl just out of school, who feels that nothing matters now, so long as she has amusement enough. Here this method lacks novelty.

An equally interesting way of dealing with an author in that adopted recently by a reviewer in one of our own best reviews, in dealing with a book of serious art criticism. The reviewer says simply: "We are obliged to confess, that lacking the required knowledge . . . and sympathy, it may be . . . much of . . . book is incomprehensible to us." This way is rapid and straightforward, and might even be serviceable as a self-protection if only the author's name were signed, but, alas! it is not. Otherwise we might set down on the tablets of memory "Mr. ——" of the staff of ———, knows nothing of art and admits it; skip his art criticisms henceforth." But only to know that an unknown reviewer knows nothing of art and says so is waste knowledge.

A third method of book criticism is to rely entirely upon the interest of one's personality. This is a method readily learned and made in vogue. A well-known contributor who makes it his business to know all English books deals thus with Miss Keat's last volume: "It must be my fault, but I can't read the book with any pleasure. Her stories are to me tiresome and unattractive. I mention this not because it is of the slightest consequence whether I like Miss Keat's stories or whether I do not, but simply because of the fact that while to many they seem exceptionally good, I cannot read them." The value of this sort of book reviewing must rest entirely upon our reverence for the reviewer. Robert Louis Stevenson, by a chance sentence, has taught many a mortal in delight in the chapters of *Mansons Agonistes*. How many of us would have really loved Coleridge, outside *The Ancient Mariner* and *Kubla Khan*, but for Peter, or known one Gray without Arnold's help! Symonds, Peter, Arnold, Swinburne, Salustiana, have, by criticism, opened many fields for exploration; their book criticisms are still books of criticism.

## The Rhodes Scholarship

THE trustees of the will of Cecil Rhodes have announced that the first election of Rhodes scholars in this country will be held between February and May next year, and the appointees will commence their residence in October, 1904.

In each State and Territory a committee of college officers will make one appointment from the candidates between sixteen and twenty-five years old, who qualify by passing the prescribed examinations. These examinations—which are not competitive—are based on requirements for "preparations"—the entrance examinations for Oxford—and are tests in arithmetic, algebra and geometry, Greek and Latin grammar, Latin prose composition, and Greek and Latin authors. Scholars must also have reached the end of their second year in some recognized degree-granting university or college.

This last requirement does not fit in particularly well with the other, as Sophomores in good standing in our colleges have usually forgotten enough of what they knew when they entered college to meet the reposing of an entrance examination a matter of some difficulty.

### AT FULL GALLOP ON THE ROAD TO ARDSLEY

On the last trip of the public coach "Pioneer" to Ardsley, a record was set made, with Alfred G. Vanderbilt on the box. During the race the coach starts every morning from the "Waldorf" and the route are loaded with the advice of President Roosevelt's wife and their guests. One photographer caught a snap shot of the coach near Ardsley on the last trip, with the coachmen and team at full gallop.

### THE NEW POPE, PIUS X

*The Papal Conclave last week elected Cardinal Giuseppe Sarto to the throne of St. Peter on the seventh ballot, the new Pontiff taking the name of Pius X. Giuseppe Sarto was born in 1835, in the province of Venice, and is said to have been Pope Leo's choice for his successor. He was for many years a parish priest in the province of Venice, and afterwards a bishop. In 1893 he was made a cardinal, and given the title of Patriarch of Venice.*

# The London Season

By Sydney Brooks

London, July 20, 1923.

"I HAVE the judicial temperament," said Mr. Dooley. "I hate sunbaths, I have the London temperament. I enjoy boating. The capacity to do nothing and to get real pleasure out of the pasture is one of the qualifications of the London-lover. Without it a man will find himself, scarcely knowing how or why, in a perpetual inward conflict with the atmosphere of this easy-going metropolis. Business here is business simply. It is not the whole of life nor even a creditable fraction of it. In fact, there are moods in which one is tempted to dismiss it as a mere side issue, an impediment and unpleasant interruption of the real pursuits of life. It becomes almost a form of asceticism. Offered the choice between the usual "bustle" and sitting under the trees in Hyde Park on a bright July morning and watching the daily promenade and the riders in the flow, it takes an effort never felt in New York to conclude that "bustle" is the

straight and narrow path. There is always something picturesque and delightful going on that one can easily convince one's self ought not to be missed. Perhaps no city offers so many temptations to just loaf about or give in the practice so much the air of an educational tonic. It knocks ten per cent. off one's income simply to live within reach of the inexhaustible variety of the London streets. Numbers no one person's eye's self so satisfactorily as here that a day spent in rummaging among old book-stores or in print-shops or old furniture and silver-ware-shops is a day profitably spent. No one ever knows London. There is always something left for the stranger to discover on his own account, and a plunge out of the main thoroughfares into a labyrinth of winding alleys and narrow, silent, seamy-looking streets is bound to yield something to the investigator, be it an old inn with a wondrous cellar of poet, or some unexpected church of historic memories smothered away in a corner, or an old curiosity-shop with all the riches of Siberia and Chippendale behind its depressing frontage, or a Georgian mansion tucked almost out of sight by upstairs encroachments, or even, with luck, some relic of Roman London.

But the Park is the real playground of the million or so Londoners who live to kill time. Every morning between 10 and 12:30, every afternoon between 4 and 7, and every Sunday morning in the breathing space between church and lunch, you may see in Hyde Park between Manship Gate and the French Embassy something, though not very much, of the wealth and beauty of London: something, too, though here again not very much, of its society. A fine summer morning brings out very early two or three hundred riders in the flow and two or three thousand people to promenade up and down, to sit on the chairs a select gathering any more than the New York Horse Show, if you will, it is still fairly correct to say that "everybody" goes there, real world, and within a yard of him or her somebody who looks like an escaped inmate from a Bloomsbury boarding-house—and who probably is. But this great concourse, idling up and down or talking and laughing under the trees—a brilliant splash of color with worth seeing, and an amusement very well worth taking if an immense suggestion of leisure, easy elegance, natural enjoyment. I wish I could say as much for the riding. You will, of

course, see in the Row some superb seats, but the average is not a particularly high one, least of all among the women. The English seat is more effective than graceful, and so far as mere form goes Central Park could give a handsome lead to Boston Row. What is really remarkable about the Row is the enormous number of riders who reach a high standard of horsemanship without quite reaching the top notch of excellence. The turnout in New York, and I think, too, in Vienna, is better in quality, but in comparison almost infinitesimal in bulk. In the matter of quantity London scores overwhelmingly, and most of the riders in the Row have this extra attraction that they are well known. Quite a percentage of social and political London horses itself up for the day's labor by a preliminary canter in the Row.

The same general criticisms may be passed on the afternoon show. I have never more perfectly appointed settings in Central Park, but never so many good ones; a few finer teams, but never so vast a gathering of sound horseflesh. Where

New York has its first-class tens, London has its second-class hundreds, with the result that the sight, if less satisfying in one way, is infinitely more impressive in another. But the Park after the show is a little too public to be really representative of the best. The place to see the pick of social London is Harlington or Ranelagh. The Ranelagh Club is the direct descendant of the famous Kit-Cat Club founded precisely two hundred years ago. The clubhouse is a fine old eighteenth-century mansion, once the home of Thomson, the poet, and stands in a park of some 200 acres at Putney, on the banks of the Thames, some forty minutes' drive from Piccadilly Circus. There is provision for pretty well every form of sport, but it is on its polo and horse shows that Ranelagh depends for its chief attraction. It would be hard to beat the setting anywhere. You turn out of the heat and dust and dreariness of a main thoroughfare into a long, winding, shady drive, the river on one side, a stretch of exquisite English park on the other. It is the perfection of all a country club should be—highly laid-out grounds, "mist sauce" lawns, an infinity of flower-beds, gignets, spreading chess tables, and a superbly equipped club, and a

staff of stewards such as one can only find in England.—Add to all this the fact that during the season London is the world's center for opera, for concerts, for pictures, for nearly every form of art. Add, again, that it is the capital of the kingdoms and the empire, the home of royalty, and the scene of the thousand and one festivities, ceremonies, and fetes that always go with a court. Add once more that every phase of amusement, theatres, music-halls, and all that is going full blast during these three months. Add, finally, so that of all the people on earth the English are the greatest entertainers, publicly and privately. A Londoner need not have a very big circle of acquaintances to find himself two or three deep women who is fairly in the swim will walk through a dinner and four or five at-loses night after night, week after week, with a provision that is quite startling. All this on the top of lunch-ess, garden parties, teas, and the bazars and other semi-public functions that claim the time and presence and activity of all prominent English women, makes up a round which it almost brings on vertigo even to think of. It is a strenuous life. If you like, in fact, there is so much to do and so little time to do it in that afternoon calls have dropped from the fractional twenty minutes to an actual ten, and even threaten a future five.

## THE PLAN OF THE NEW AND PROPOSED BUILDINGS AT YALE

With the recent gift of Frederick Vanderbilt to Yale University, the students of the Sheffield Scientific School will have for the first time a building of their own which are owned by the college. Heretofore the college dormitories have not been open to them. Of the buildings shown in the drawing, St. Anthony Hall and the Historical Society building have been standing some years. River House and the Hall is nearly finished, and one of the large dormitories given by Mr. Vanderbilt is under way. The others will be built on soon as the necessary funds can be secured.

# Books and Bookmen

By James MacArthur

**T**HE choice of Miss Fay Davis to cast the role of Julie Le Breton in the dramatic version of *Lady Rose's Daughter* is a happy one, and has evidently been made with deliberate purpose and fine discrimination. I have already said in these columns that to fit the part of Julie would be a problem not easy to solve. Other actresses might be found who could better fit the part in physical appearance, but the charm of Julie is the charm of mind, of "soul," as the French would say, and it is this charm that is pre-eminent in Miss Davis's work in the theatre. She is an actress of fine intelligence, and though American by birth and education, her reputation on the stage has been won in London, where, until a year ago, she was closely identified with Mr. George Alexander's triumphs at the St. James's Theatre since 1863. So that her stay in the English metropolis has doubtless enabled her to imbibe that mental attitude and atmosphere which characterize the milieu of *Lady Rose's Daughter*. The dramatization was wisely assigned to the capable pen of a practised dramatist, and is now, I understand, in the hands of Mr. Charles Frohman, who promises to present the play in New York this autumn. The dramatist is Miss Constance Fletcher, better known as George Fleming, the author of several novels and plays, notably her latest success, "The Light that Failed," which Mr. Forbes Robertson is bringing to New York in November.

So much has been made of the resemblance between the career of Julie Le Breton and that of her confessed prototype, Mademoiselle de Lespinasse, that no excuse is necessary for the lengthy extract which I give below from a weighty review of Miss Wormeley's recent translation of the *Letters of Julie, de Lespinasse*, of the French original, and of a later work in French by Eugène Assolant, entitled *Madame de Lespinasse et la Marquise du Defand, suivi de documents inédits sur Mademoiselle de Lespinasse* (1877). The article appears in the latest issue of the *Edinburgh Review*, and for the first time presents a critical and comparative study of the subject which argues that the charge of plagiarism is one which cannot be seriously maintained from any sensible point of view for a moment. In the imaginative exercise of history and the application of biographical facts to fiction, the writer even goes so far as to express admiration for Mrs. Ward's daring innovation. "To take historical characters—figures in the society of a particular age and country—and place them in another land and another time and under other names—in other words, to dress them in modern fiction—is a new and ingenious device, but one which has aroused some criticism." Naturally, for there never was a departure from accepted literary forms or conventional devices of art which did not stir up a hornet's nest among the family connections of the gods. To be sure, Mrs. Ward's device has its dangers, and only in the hands of so dextrous and delicate an artist as the author of *Lady Rose's Daughter* could these dangers be successfully avoided, and "it is, however, little more than a literary pastime," says this writer in the *Edinburgh Review*, "to trace the resemblances between the actual events in the life of Mademoiselle de Lespinasse kept so closely, as has generally been stated, to her historical precedents. Mademoiselle de Lespinasse was a family connection of Madame du Defand, and while Julie Le Breton could claim near kinship with Lady Henry, and Mademoiselle de Lespinasse and Julie Le Breton entered upon their adventures with their respective misadventures under quite different auspices, while Madame du Defand usually discovered the young man's defection. In many respects, therefore, it is little more than a fiction. Lady Henry is a clever and haughty tempered old lady, of whom plenty were to be found in London in

the eighteenth as they are in the twentieth century. But she bears but a faint resemblance to Madame du Defand. Where is the faithful Wriart and Horace Waldpe with his curious devotion to his blind friend? Nor is the company which assembled at Madame du Defand's little salon in the convent of Saint Joseph and in Mademoiselle de Lespinasse's modest apartments in Rue Saint-Benoislike at all like the people with whom Mrs. Humphry Ward fills Lady Henry's drawing-room in the West End of London. Points of character have unquestionably been gathered from real traits in Mademoiselle de Lespinasse; her tact, her talent for intrigue are reproduced in the ways of Julie Le Breton, and the unassuming love of Mrs. Humphry Ward's heroine du Wriartlike is obviously founded on the passion of Mademoiselle de Lespinasse for de Gumbert; while in the respectful affection of Dr. Meredith, the eminent editor, for Julie Le Breton we see a faint resemblance to the steady and helpful regard of M. d'Alenfort for Mademoiselle de Lespinasse. The novelty and ingenuity of Mrs. Humphry Ward's plan necessarily gives to *Lady Rose's Daughter* a freshness of treatment which has added much to its popularity as a story, but historically her thoughtful work is of slight importance. Julie Le Breton neither explains nor alters our view of the Mademoiselle de Lespinasse.

This, it seems to me, settles the question.

For some time Mr. John Lane has received a good deal of clever advertisement gratis from the literary gossip columns of the press through the exploitation of what seems to be another of those admit "fake" stories about a forthcoming publication. We have all heard of the manuscript in a red box which was left on Mr. Lane's doorstep, and which was fostered by him when the author apparently refused to come forth and claim his own. The author was given to certain date to reveal himself. Failing to do so, Mr. Lane announced that he would publish the book at his own risk and on his own responsibility, as he was convinced of the merits of the work. Indeed, he has succeeded to some extent in working up the imagination of his readers in expectation of something wonderful—the end which he has most sedulously aimed at. Now we have it on a show of authority that the author is a West of England clergyman who has been seeking an introduction into literary life through a brother of the cloth not far from the banks of the Tay in bonnie Scotland. The same red box has been the inside of more than one newspaper office in London, but his comments were more than sufficient for certain publication. More than one publisher's reader, while declining it, recognized its literary merit, and advised its publication. It is understood, moreover, that the editorial agent of the author had an interview with Mr. John Lane concerning the founding some time before the first day of July, but so far the secret has been well kept.

The New Journalism or Stronach Youth  
 First Gentleman "I think I shall subscribe. If the next is another one it shall be mine."  
 Second Gentleman "Oh yes, quite all right. But I hope it won't be too early for you and the girls to drop down."

*The Man Chase*, by Mr. Meredith Nicholson, is well deserving of the recognition it is gaining. It is not only one of the very best American novels we have had from a new writer in recent years. It approaches more nearly that artistic blending of the romantic and the real in our everyday life which is achieved by a very few writers of modern fiction. One notes, also, with pride and pleasure in the growing movement of our fiction toward a national literature, that *The Man Chase* relates the particular life it portrays to the national life at large, and makes itself felt as an important part of the whole country. Mr. Nicholson is evidently conscious of this significant fact. "It seems to me," he wrote the other day, "that our fiction, where it expresses honestly some phase of our life and really catches and holds an atmosphere, serves to knit us together to make a real national unit of us." Though a first novel, *The Man Chase* gives its author a place at a bound among our foremost young novelists.

**MR. ALEXANDER WINTON AND HIS NEW RACING-CAR**

Winton, who was captain of the American team in the international contest for the Gordon Bennett Cup, has recently purchased a seven-cylinder racing-car, which was designed and constructed in a workshop of his own in the town of Winton, Ontario. The car is a development of the American type, and the superior quality of the gasoline which he used, Winton was unable to justify. His new automobile that he will abandon racing, and drive himself in the future to manufacturing.

## LIFE-LINES

Farnis's January Caricature of Gladstone

# The Pen- Humorists of England

By  
Arthur William à Beckett

John Burns  
By Harry Farnis

THE change of the centuries has ushered in a change in English caricature. Tristram, the finest of draughtsmen, in what he himself termed once (in a speech at the Royal Academy "Comic Art," from 1851 to 1901, laid down his pencil, or rather his pen, two years ago. Since his day much has happened. The paper which monopolized the best of his work has left his loss. Even now he is remembered by the world that dines away from the table immortalized by Thackeray as "the Mahogany Tree" in Bourgeois Street. By the way, that festive board was (and possibly still is) of plain deal, and owes its value to the letters carved in the wood by the admitted wits of yesterday and the probable humorists of tomorrow. John Tenniel's colleagues, at any rate of the present generation, will declare his loss irreparable and continue to regret his loss in spite of his eighty years—too early resignation. And as yet the public are in sympathy with them. The admirable artist who has succeeded him was his fellow worker in the same field of labor for more than a quarter of a century, and has not changed his methods; and the "second in command" has a style full of beauty, but he is not John Tenniel. John Tenniel was peerless in the last century—he is peerless in this. If world fame that the box of caricature is dying out in England. Twenty or thirty years ago there were scores of so-called comic papers. Today the number has dwindled to literally ten or three. One of the brightest periodicals of modern times, *Punch*—a paper that in its day numbered such humorists as Byron, Prouser, Harry Leigh, Arthur Skelton, and Tom Hood—has gone the way of the majority, and this after it had passed into the hands of Sir George Newnes, one of the richest and most successful of our publishers of periodicals. The same late label *Goodman*—a very clever if not a very witty weekly. And what remains? A journal that relies as much upon its past prestige as its present ability, a weekly that has even far, better days, and *John Bull*. I give the name of the editor and staff of *John Bull*, the national representative is a gentleman of infinite jest, and has nothing in common with the early brute in top-boots who usually appears either as a fool or a bully.

Alfred Harcourt  
Max Beerholm's caricature of the English journalist

Where can one find British caricature nowadays? Very rarely represented in the pages of the "comic papers." No doubt there are plenty of pretty girls, smart-looking fellows, elegant apartments, but the legends give the point to the pictures. The only seldom humorous in the sense that Lewis's *Illustrations of England and Rome*, and there is scarcely a sketch that will not cause a hearty laugh. Every detail is worked out by an artist who was not only a draughtsman, but a keen humorist.

Du Maurier and Charles Keene belonged to the same school, but, at the moment, the blocks in the lighter periodicals with the legends changed might serve as illustrations in a serial novel running through the pages of a ladies' paper. Perhaps the greatest caricaturist of the day is as well known, on the Western side of the Atlantic as on the Eastern, and, strange to say, has the style of another Anglo-American cartoonist—I refer, of course, to Mr. Harry Farnis, whose work often conjures up memories of poor Matt Morgan. Of the last named I would like to write a few lines of valediction: During the last few months have appeared a series of articles in a leading London magazine, by the editor of a representative English comic paper, accusing Morgan of plagiarism. As the dead artist was a friend of mine—he worked with me on a paper six and thirty years ago—I declare that he was far too rapid with his pencil ever to waste his time in taking tracings.

Another admirable caricaturist in the true sense of the word is Mr. F. Carruthers Gould, whose drawings in the *Westminster Gazette* are always full of humor. Another evening paper—one published by a gentleman whose name and fame is as familiar in New York as in London—possesses an artist of great promise in Mr. Halkett. This gentleman occasionally contributes to what may be termed by sneerers and others "professional" comic papers. Mr. Leslie Ward of *Vanity Fair*, although he cannot make us forget poor Charles Pelegrin, is perfect in serio-comic portraiture, in quite a different school, but with equally excellent effect. Mr. Max Beerholm (half brother of Mr. Beerholm Tree, of His Majesty's Theatre) contributes impressions of personalities to *John Bull*. Of an earlier generation are Meares, E. T. Reed and Phil May—so the first legitimate in likeness, the last familiar in technique. I have already spoken of the veteran Sambourne and Mr. Bernard Partridge—both artists of well-merited celebrity and high repute. And where are the rest? No doubt if I were put to it I could give scores of names, every one of which would meet with popular approval. But are they caricaturists? I venture to think not. As I have already said, I have pretty pictures, full of charming objects, both minute and inanimate, but they lack the comedy of Du Maurier and Charles Keene and the broad farce of John Lewis. Unquestionably, Mr. Raven Hill is very frequently happy in suggesting comic incidents, and his method is above reproach, but to me there is something lacking in nearly all the creations of our modern comic artists. No doubt the demand will some day create the necessary supply. For the moment the English seem to take their caricatures—like their other pleasures—sandy.

"The Old Leader"  
George R. Halkett's caricature of  
Sir Vernon Harcourt, M.P.

*In a First-class Hotel*  
 Chambermaid "What do you want the kitchen for?"  
 Mr. Briggs "I want to wash myself."

"I'm glad she's got a few days for their possession, but I don't take much interest in it myself."

Victor "Some of your answers, I suppose?"  
 Florence "None just! No. My answer is all dead."

"Then for Brown, who I've seen in a hall at Robinson's." "Many women there?"  
 Brown "No, only their mothers."

Distinguished amateur talks has been cast for the part of Sir Toby Belch.  
 "I suppose I shall want a little padding?"  
 Cassamere "Certainly. (Showing effort, bring down a full-size stomach."

**SOME CHARACTERISTIC SKETCHES BY PHIL MAY**

Phil May, the well-known illustrator who died last week in London, made a specialty of types. In describing his method of work, he used to tell of his search for individuals who embodied striking and characteristic varieties of human nature. "A quaint old Sydney clergyman whom I knew," he said, "figured very usefully, not so long ago, in an allegorical and up-to-date presentation of 'The Temptation of St. Anthony.'" Herewith are reproduced some of the artist's best and most representative sketches

**George V. Hobart's Burlesque, "Lifting the Cup," at the Crystal Gardens**

*In Mr. Hobart's show Sir Thomas Lipson's third attempt to hit the "America's" Cup is made the subject of a lively medley of songs, dances, and topical hits. The crews of "Kiliana" and "Shamrock III," are welcoming Sir Thomas on board his steam-race "Gran," the girls representing the crew.*

*There is no more common error than the belief that the actress just drifts into success.*

*His great ambition is to be taken seriously. A comedienne is—to laugh, and sometimes that hurts.*

**A Musical Comedy Star at Home**

*Miss Fawn Tompkins, who is playing the leading role in "The Showmen" at the Casino Theatre, is to be starred in it soon in the first musical comedy to come from the pen of Clyde Fitch—"The Infant Prodigy." Miss Tompkins has been on the stage since her Eleventh year, when she made her first conspicuous success as "Gabriel" in "Aurora." Within seven years she has made a notable record for herself in the Weber & Fields parodies as a mimic of unassuming folk and humor.*

### **"LADY ROSE'S DAUGHTER" ON THE STAGE**

*Miss Fay Davis, who was leading woman with William Faversham last season in "Imprudent," has been engaged to play the part of Julie Le Breton in George Fleming's dramatization of "Lady Rose's Daughter," which Charles Frohman will produce during the coming season. George Fleming is the pen name of Miss Constance Fitcher, the daughter of an English clergyman, whose stage version of "The Light that Failed" is soon to be brought to America.*

### GERMAN TORPEDO-BOATS IN PRACTICE

Six torpedo-boats of the smallest class are apprehended in each of the practice-maneuvers of the German navy for the purpose of training officers and men for actual service. The maneuver illustrated in the photograph is designed to test the skill of the navigators in managing their vessels at close quarters. The trial is a difficult and dangerous one, as the torpedo-boats are never more than 100 feet apart.

# The Retirement of a General

Or How the Horse whiled away the weary Miles

By Albert Levering

General Miles: "Well, well! So I'm old enough to quit, eh? I'll show you there's still something in the old man yet. What do you think of that?"

Gen. M.: "Seems to be a good outfit. Guess I'll go in and break a few records."

Gen. M.: "I declare! I failed to notice that he has five toes on his hind feet."

Gen. M.: "And as I live, he has them on his fore feet! Seems, if anything, to rather outdo me in movement. Good thing."

Gen. M.: "Huh, Huh! Well, in spite of your automorphic, we're broken old horses."

Gen. M.: "Who would have thought it! Well, I rather fancy his general appearance."

# Correspondence

## TAMMANY AND THE DEMOCRATIC PARTY

CHICAGO, ILL., July 10, 1912.

To the Editor of Harper's Weekly:

Sir.—Must it be inferred from your comic cartoon of this week's issue that the Democratic party of the nation is as unwary because certain ward-heads in the city of New York are charged with leasing dock privileges to themselves? Is it not a common error of the provincial New York papers to confound the Tammany organization with the Democratic party? Is there not deliberate design in the persistence in this error, or rather misrepresentation?

I am, sir,

WARREN DEMOCRAT.

[It is not a common error to confound the Tammany organization with the Democratic party, but it is a common occurrence for the Tammany organization to exert a powerful influence in the choice of a Democratic candidate for President. That being the case, Tammany must be reckoned with, for we should always bear in mind that as a political organization it has no equal in this country.—EDITOR.]

WARM!

ATLANTA, Ga., July 4, 1912.

To the Editor of Harper's Weekly:

Sir.—In a letter this day written to a gentleman in New York who is very much interested in the negro question I used the following language:

"If you will read two articles in HARPER'S WEEKLY, one in the issue of June 26, the other July 4, about what they call the 'New Negro Crisis' you will see a curious case of how close a conscientious seeker after truth can get to it and yet utterly miss it. The reason they fail to hit on the truth is because they are not in touch with the problem they are studying. They are blundering in the dark. Children play a game of hiding the switch. When a searcher gets close to the hidden switch he is told that he is getting 'warm.' I have often watched a 'warm' seeker, and felt strongly moved to add a hint when I see him come within an ace of uttering the hidden subject of his search and yet miss it utterly for want of just a little help. I feel that way about HARPER'S. The writer was evidently sympathetic and wants to see the truth. If he understood the negro he would see it. As it is, he has missed it entirely, although he had his hands almost on it."

I send you this hint in order that you may feel encouraged to keep up your search. You have almost found what you were looking for, but your "miss" is as good as a mile.

I am, sir,

HOOPER ALEXANDER.

## AS TO LYNCHINGS BEFORE THE WAR

BIRMINGHAM, July 14, 1912.

To the Editor of Harper's Weekly:

Sir.—You say that negroes never committed the lynching crime in the South before the war. "Old Harry," a negro, was hanged at Romney, Virginia (now West Virginia), nearly a hundred years ago for outrage upon a little girl. He intended to kill the child, and threw stones and brim on her mail so she could not be seen. She was found, though, and she did not die.

At Abingdon, Virginia, in slavery days, one of Colonel Preston's blacks was hanged for attempting the same offense. He hid in a lady's room at night, but some car happened to look through the door and saw his eyes shining from behind the bed. Nature does not change, and it is not true that lust did not use to tempt the black men of the South.

W. W. STRICKLEY.

[Yes, here are two examples in a hundred years.—EDITOR.]

## THE EVILS OF COEDUCATION

July 25, 1912.

To the Editor of Harper's Weekly:

Sir.—I have read the recent article in your paper upon the evils of coeducation. I have also read many articles in many papers written by learned men and by some women upon the evils of the higher education for women, one and all declaring that the modern educated woman did not marry so readily as her ancestors as readily as her great-grandmother. I do not deny this. I wish to ask of these writers, through the medium of your paper, ten questions. Have they any daughters? Do they wish them to marry, at sixteen or eighteen, the average young man prospects of that age, and in the next twenty years rear a family of ten children? American fathers are so proud and fond of their for the intellectual life which the daughters of studious educated men inherit equally with the sons? Would they like to see all the staid physical discomfort—to state it mildly—to many plain and little recreation, with no time or place for mental culture. The American man may like the Chinaman, reverence his mother for such a life of self-sacrifice, he may also, like the Chinaman, expect his wife to follow in the same line as a matter of

course; but can he, like the Chinaman, contemplate with untroubled serenity the same fate for his talented young daughter?

No? He will hold to the historic masculine point of view that women were created for the purpose of assisting in populating the earth and for nothing else; but he will except his own daughter. He will prefer her to become first a cultivated interesting woman and a wife and mother afterward—if her life can be as untroubled and more happy and interesting to her individual self.

American girls owe to the pride and indulgent love of their hard-working fathers, as well as to their own and their mother's ambition, their happy student days and their intellectual resources in the trials and disillusion of later life. These things are among the best—the very best—things in the life of a woman which the husbands of this world can neither give nor take away.

I am, sir,

W. Y. R.

[THE WEEKLY does not disapprove the higher education for girls. If it is a question of coeducation or an education, give the girls coeducation. If it is a question of coeducation or separate education, the preference for separate education seems to be gaining.—EDITOR.]

## THE BIRTH-RATE AND THE USEFUL LIFE

New York, July 15, 1912.

To the Editor of Harper's Weekly:

Sir.—In HARPER'S WEEKLY of the 15th inst. the question of an apparent decrease in the birth-rate is discussed in its general aspects, attention being called to Mrs. Margaret Hildland's article in the *New York American Review* for July.

One would imagine, from the prevalent sentiment of the article, that on this subject, that a doubtful child is not as great a desideratum of married couples, the end and evidence of the greatest conjugal bliss. The conditions of living, as you say, determine to a very large extent the number of offspring in families of native (American) stock, and where the girl's growth up as competent wage-earner there is induced a feeling of independence that modifies the natural inclination to seek for the fulfillment of life's mission in marriage.

One phase of the question that is too often overlooked is the element of quality rather than quantity in the production of offspring. It needs but a stroll through any highly congested neighborhood in this city to find that children are multiplied fast enough to suit the needs of the country at large, and too fast to obtain from their parents adequate maintenance and support.

Is it not better for a young married couple to so direct their mental and physical energies and resources that the three or four children that will ultimately make their cost and contribution to the world's betterment shall have distinctive qualities of mind and heart,—an appetite for culture, an irrevocable attachment to the pure and noble in life and thought, an active imagination, and a sound physical body? It would seem to me that such a quality of life is thus wisely obtained and secretly developed oestrogen to be fruitless as far as the common welfare of man is concerned.

I am, sir,

JOHN F. FARLEY.

[Three or four children seem to be all the average couple can rear to advantage nowadays. Practically the race-aside problem is how to induce competent parents to raise three or four children instead of one or two.—EDITOR.]

## FOR MORE POPULAR MUSIC

New York, June 15, 1912.

To the Editor of Harper's Weekly:

Sir.—Is it not time that musical conductors, concert-managers, and others who compose musical programs for public audiences depart a bit from old-time methods?

Would not a really popular musical program be interesting and valuable? It would be especially so now. The popular musical taste seems to me to be changing. People who a decade ago would scorn to recognize any "popular" air of the day now appreciate the light and catchy music that song writers and composers contribute to musical literature. Most unlearned people who either all heavy or all light. If like both kinds from Mr. Dooley to "The Star-spangled Banner" and "My Old Kentucky Home," and the Jewel Song from "Faust."

It would like to hear suggestions from the readers of HARPER'S WEEKLY regarding a popular musical program that will be all that the music implies.

I am, sir,

C. STEWART VALE.

[We should welcome any suggestions from our readers concerning the question which interests our correspondent. We doubt if the audiences of the Boston Symphony Orchestra or the Philharmonic Society would take kindly to performances by those organizations of "Mr. Dooley" or "My Old Kentucky Home," or that Mr. Dooley's public would welcome a Brahms symphony on one of his programs. But we should be glad to leave the question open for a discussion by those of our readers who have views on the subject.—EDITOR.]

"Tell the driver to put the horses in the barn."

He waved his hand toward a low building in the rear of his residence, and then he invited the Candidate and the correspondents to enter. He looked cautiously, but with reverence, at the Candidate.

"You are really Jimmy Grayson," he said. "I'd know you offhand by your gait, which I guess has been printed in every newspaper in the United States. I bow it's a powerful honor to me to see you here."

"And it's a tremendous honor for me to see you in take us," said Jimmy Grayson, with his usual easy grace.

But Harley was looking at Simpson with a gaze so full of interest that the old man had laid upon Grayson. The accent and inflection of their host were of a region far distant from Nebraska, but Harley, who was born near that wild country, knew the long, low, narrow type of face, with the high cheek bones and the watchful black eyes. Moreover, there was something directly and personally familiar in the figure before him.

Under any circumstances, the manner of the old man would have drawn the attention of Harley, whose naturally keen observation had been sharpened by the training of his profession. The old man seemed abstracted. His fingers moved absently on the stock of his rifle, and Harley inferred at once that he had something of unusual weight on his mind.

"Ma an' the ol' woman has been settin' late," said Simpson. "When you get of you don't sleep much. But I'll be a long time. Mr. Grayson, before that fits you."

He led the way into a room, better furnished than Harley had expected to see. A real fire crackled on the hearth, and the arrangement of the room showed some evidences of lightness and taste. An old woman was bent over the fire, but she rose when the men entered, and turned upon them a face which Harley knew at once to be that of one who had been frightened by something. Her eyes were red, as if she had been weeping. Harley looked from courtly, and apologized so gravely for the intrusion that an ordinary person would have been glad to be intruded upon in such a manner. The woman said nothing, but stared stargazed at her guests. The old man came to her relief.

"This is Marthy, my wife, her folks," said Simpson. "Mr. Marthy, this is Mr. Grayson, the greatest man in this here United States, and the other is one of the newspaper fellows that travels with him."

Jimmy Grayson bowed to the woman courtly, and apologized so gravely for the intrusion that an ordinary person would have been glad to be intruded upon in such a manner. The woman said nothing, but stared stargazed at her guests. The old man came to her relief.

"Marthy ain't used to visitors, least of all a man like you, Mr. Grayson, and in kind of spots here he said, 'You see Marthy as we lives here all by ourselves.'"

"The woman started and looked at him."

"All by ourselves," repeated the man firmly; "but we'll do the best we kin."

"Daniel," suddenly exclaimed the old woman in high, shrill tones, "why don't you put down your gun? Mr. Grayson'll think you've a-gone to shoot him, or something."

The old man laughed, but the ever-watchful Harley saw that the laugh was not spontaneous.

"I 'lar to gracious!" he said; "I s'ems forgot I had old Doolyere. You see, Mr. Grayson, when I heard the dogs barkin', set I to myself 'It's robbers, afore'; and before I k'ize the window open, I seeers old Doolyere off the books, and then if it had a few robbers, it wouldn't a-been healthy for you."

"I'm sure of that, Mr. Simpson," said Jimmy Grayson; "you don't look like a man who would allow himself to be run over."

"As I wouldn't!" said the old man, with sudden, fierce emphasis. But he put the rifle on the books over the fireplace. Such books as there were not usual in Nebraska; but Jimmy Grayson was too polite to say anything, and Harley was still watching every movement of the old man. The driver returned at this moment from the stable, and, reporting that he had led the horses, took his place with the others at the fire.

"I 'see you-uns would like to eat a little," said the old man, laughing in the same

as usual you kin." "Merthy, tote in uthis' from the kitchen as quick as you kin."

The old woman raised her startled, frightened eyes, and for a moment her glance met Harley's. It seemed to him to be full of ecstasy; the whole atmosphere of the place was to him tense, strained, and tragic; why, he did not know, but he shook himself and decided that it was only the result of weariness, the long ride, and the night in the storm. Nevertheless, the feeling did not depart, because he stilled that it should go.

"No, we thank you," Jimmy Grayson was saying; "we are not hungry; but we should like very much to go to bed."

"It's just with you," said Simpson. "Merthy, I'll show the gentlemen to their room, and you kin stay here till I come back."

The old woman did not speak, but stood in a crouched attitude looking at Grayson and then at Harley and then at the driver; it seemed to the correspondent that she did not dare trust her voice, and he saw fear still lurking in her eyes.

"Come along, gentlemen," said Simpson, taking from the table a small lamp, that had been lighted at their entrance, and leading the way.

Harley looked back once at the door, and the woman's eyes met his in a look that was like one last despairing appeal. But there was nothing tangible, nothing that he could not say was the result of an overwrought fancy.

It was a small and bare room, with only a single bed, in which the old man took them. "It's the best I've got," he said, apologetically. "Mr. Grayson, you an' the newspaper man kin sleep in the bed, an' tather feller, I reckon, kin curl up on the floor."

"It is good enough for anybody," said Jimmy Grayson, reluctantly. As a matter of fact, both he and Harley had known what it was to fare worse.

"Good night," the man said, and left them rather hastily. Harley thought; but the others took no notice, and were soon in sound slumber, because the Candidate, because he had the rare power of going to sleep wherever there was a chance, and the driver, because he was indifferent and tired.

But Harley lay awake. An hour ago his dream of heaven was a bed, and now, the bed attained, sleep would not come near. Out of the stillness, after a while, he heard the gentle moving of feet below, and he sat up on the bed, all his suspicions confirmed. Something unusual was going on in this lone house! And it had been going on even before he and the Candidate came!

He listened to the moving feet for a few moments. Then the noise ceased, but Harley knew that there was no further chance of sleep for him, with his nerves on edge, and likely to remain there. He lay back on the edge of the bed, trying to accustom his eyes to the darkness, and presently he heard a sound, the most chilling that a man can hear. It was the sound of a woman,

alone and in the dark, between midnight and morning, crying gently, but crying deeply, uncontrolably, and from her chest.

Harley's resolve was taken at once. He slipped on his clothes and went to the door. His eyes were used now to the dark, and there was a window that shed a half-light.

He stopped with his hand on the bolt, because he heard the low, wailing note more plainly, and he was sure that it came from another room across the narrow hall. He turned the bolt, but the door refused to open. There was an key on the inside! They had been locked in, and for a purpose!

Harley was fully aroused—on edge with excitement, but able to restrain it, and to think clearly. There was an old grate in the room, apparently used but seldom, and leaning against the wall beside it an iron poker. Tiptoeing, he obtained the poker, and returned to the door. The lock was a flimsy affair, and, inserting the point of the poker under the latch, he easily pried it off, and put it gently on the floor.

Then he stepped out into the dusky hall and listened. The woman was yet crying, monotonously, but with such a note of woe that Harley was shaken. He had thought in his own room that it was the old woman who wept thus; but now in the hall he knew it to be a younger and fresher voice.

He saw farther down another door, and he knew that it led to the room from which came the sounds of grief. He approached it cautiously, still holding the poker in his hands, and noticed that there was no key in the lock. The woman, wherever she might be, was locked in, as he and his comrades had been; but the empty keyhole gave him an idea. He blew through it, making a sort of whistling sound with his puckered lips. The crying ceased, all save an occasional low, half-mothered sob, as if the woman were making a supreme effort to control her feelings.

Then Harley put his lips to the keyhole again, and whispered: "What is the matter? It is a friend who asks." There was no reply, only a tense silence, even the occasional sobs ceasing. Then, after a few moments of waiting, Harley whispered, "Don't be alarmed; I am about to force the door."

The door was of flimsy pine, and it gave quickly to the poker's leverage. Then, his useful weapon still in hand, Harley stepped into the room, where he heard a deep-drawn sigh that expressed mingled emotions.

There was a window at the end of the room, and the moonlight shone clearly through, clothing with its full radiance a tall slim girl, who had risen from a chair, and who stood trembling before Harley, fully dressed, although her long hair hung down her back and her eyes were red with weeping.

She was handsome, but not with the broad face of the West. Here was another type, a type that Harley knew well. The cheek bones were a little high, the features delicate, the figure slender,

and there was on her cheeks a rosy bloom that never grew under the cutting winds of the Great Plains.

Harley knew at once that she was the daughter of the old couple below stairs.

"Do not be afraid of me," he said, gently. "I know that you are in great trouble, but I will help you. I, too, am from Kentucky. I was born there, and I used to live there, though not in the mountains, as you did."

The appeal and terror in her eyes changed to momentary surprise. "What do you know of me?" she exclaimed.

"Very little of you, but much of your father. Years ago I was at his house in the Kentucky Mountains. He was the leader in the Simpson-Eversley feud. I know him to-night, but I have said nothing. Now, tell me, what is the matter?"

His voice was soothing—that of a strong man who would protect, and the girl yielded to its influence. Briefly she told the story. Many men had been killed in the feud, and the few Eversleys who were left had been scattered far in the mountains. Then old Daniel Simpson said that he would come out on the Great Plains, more than a thousand miles, and they had come.

"There was one of the Eversleys—Hesley Eversley—he was young and handsome. People said he was not bad. He, too, came to Nebraska. He found out where we lived; he—has been here."

"Ah!" said Harley. He felt that they were coming to the gist of the matter.

The girl, with a sudden passionate cry, threw herself upon her knees. "He is here now! He is here now!" she cried. "He is in the cellar, bound and gagged, and my father is going to kill him! But I love him! He came here to-night, and my father caught us together, and struck him down. But we meant nothing wrong. I declare before God that we did not! We were getting ready to run away together and to be married at Speedwell!"

Harley shuddered. The impending tragedy was more terrible than he had feared.

"You can do nothing!" exclaimed the girl. "My father is armed. He will have no interference! He cares nothing for what may come after! He thinks—"

She could not say it all; but Harley knew well that what she would say was, "He thinks that he has been robbed of his honor by a mortal enemy."

"Can you stay quietly in this room until morning?" he asked. "I know it is hard to wait under such circumstances, but you must do it for the sake of Hesley Eversley."

"And will you save him?"

"He shall be saved."

"I will wait," she said.

Harley slipped noiselessly out, and closing the door behind him, went to his room, where he at once awakened the candidate.

Jimmy Grayson listened with intense attention to Harley's story. When the tale was over, he and Harley whispered together long and earnestly, and Jimmy Grayson frequently nodded his head in assent. Then they awoke the driver, a heavy man, but with a keen Western mind that at once became alert at the news of danger.

"Yes, I got my bearings now," he said in reply to a question of Harley's. "I asked the old fellow about it when I came up from the stable, and Speedwell is straight north from here. I can take one of the horses and hit the town before daylight. I know everybody there."

"But how about the dogs?" asked Jimmy Grayson. "Can you get past them?"

"No trouble there at all. After we came, the old fellow locked 'em up in a stall in the stable and left 'em there. I guess he didn't want to look to us as if he was too suspicious."

"Then go, and God go with you!" said Jimmy Grayson, with deep feeling.

"He will do his part," he said; "now for ours."

He did not sleep a wink, and Harley could not think of it. The flush of dawn appeared in the East at last, and then they heard a faint step in the hall outside, and the gentle turning of a key in a lock. A half hour later there was a loud knock on their door, and old Daniel Simpson had them rise and get ready for the road.

"It is chiefly in your hands now," said Harley, in a low tone to Jimmy Grayson.

They entered the dining-room where the

breakfast snatched on the table, and Simpson and his wife were waiting.

"What's your driver?" asked Simpson.  
"He has gone down to the stable to feed and care for his horses," replied the Candidate, easily.

"Then he waited," said the old man, hospitably. "We've got corn-bread and ham and eggs and coffee, and I guess you kin make good."

The three sat at the table, while Mrs. Simpson served them. Jimmy Grayson did most of the talking, and it was addressed in a very confidential manner to old Daniel Simpson. He fairly radiated with the quiet called personal magnetism, and soon the old man ate mechanically, while his attention was riveted on Jimmy Grayson.

The old man sank into his chair, but his look wandered to the door. It seemed to him that light sounds came from the other part of the house, and the old man, too, appeared for a moment to be listening; but Jimmy Grayson at once began a story, and Simpson's attention came back.

"This is a story of the mountains of eastern Kentucky," began the Candidate, "and it is a love story, a very pretty one, I think."

Simpson moved in his chair, and a sudden wondering look appeared in his eyes at the words "eastern Kentucky," but Jimmy Grayson took no notice, and continued:

"This," he said, "is the love story of two people who were young then, but who are old now. The youth and the girl belonged to families that were at war with each other, and a marriage between them would have been considered by all their relations a mortal sin. They were compelled to meet in secret, but the girl was frightened for him, because she loved him. She told him that he must go away—that if her father and brothers heard of his meetings, they would kill him. He listened to her gently and tenderly. He would not go away; he was not afraid."

"No, I was not afraid," breathed the old man, softly. The old woman straightened herself up, until she stood erect. There was a delicate flush on her face, and her eyes were luminous.

"The youth did what I would have done, and what you would have done, Mr. Simpson," continued Jimmy Grayson, "he overbore all resistance on the part of the girl, who in her heart was willing to be overborne. One dark night he stole her from her father's house and carried her away on his horse."

"How well I remember it!" exclaimed the old man, with eyes a-gleam. "I had Marty on the horse behind me, and my rifle on the pommel of the saddle before me."

"Before morning they were married," continued Jimmy Grayson. "Then he took her to a house of his own that he had built, and he sent word that if any man came to do him harm, he would meet a rifle-bullet. And that youth and that girl are still living, though both are old now; but neither has ever, for a moment, regretted that night."

"You speak the truth!" exclaimed the old man, striking his fist upon the table while his eyes flashed with exultant fire. "We've never been sorry for a moment for what we did, Mr. Simpson."

"Marty had risen to his feet, and a signal look passed between him and the Candidate."

"And then," said Jimmy Grayson, "why do you deny to Henry Forester the right to do what you did, and what you still glory in after all these years? Mr. Simpson, shake hands with your son-in-law. He and his bride are waiting in the doorway."

The old man sprang up, his daughter and a youth, a handsome couple, stood at the entrance. Behind them were three or four men, one the driver, and another in clerical garb, evidently a minister.

"They were married in my study parlor, while we sat at breakfast," said Jimmy Grayson. "Mr. Simpson, your son-in-law is still offering you his hand."

The bewildered look left the old man's eyes, and he took the outstretched hand in a hearty grasp.

"Henry," he said, "you've won."

## A Revolution in Nature

By Louis Bell

THE structure of matter has been a favorite subject of speculation ever since the days of Lucretius, and it is little wonder that any idea, however small, to his economic supremacy is eagerly clutched at. Thus it happens that there has recently been built up about the really remarkable phenomena of radium and its allies a new hypothesis, sufficiently startling in itself, and resisted in terms so striking, to arouse even the most attention of the newspaper-reading public. It is somewhat difficult to formulate the doctrines which Sir William Crookes and Sir Oliver Lodge are promulgating, for they are, so far, rather nebulous, partly from lack of data, partly from their intricate speculative character.

## Atoms within Atoms

In a general way, the new hypothesis implies the breaking up of what has previously been regarded as the ultimate particles of matter into electrons, so-called, and also further suggests that this breaking up is continuous, and that the electrons, when combined into other forms as a natural sequence. We are thus confronted by the idea of what we know as matter being in perpetual change, dissolving into electrons and re-forming into matter constantly, and in cycles long as geological time in some instances, shorter than human history in others. Until the rise of this interesting speculation the generally received unit of matter was the electron atom, the smallest, uniform subdivision of an element which is capable of preserving its identity in spite of all chemical and physical changes. Now this atom, Lodge and his followers hold, can be crumbled into electrically charged dust, as you would crumble a bit of dry earth between your fingers, and, indeed, is continually sifting away, perhaps to gather elsewhere into another kind of atom-bump.

Each so-called atom, then, is made up of some hundreds, or thousands, of electrons, always the same average number, for the average atom of any given kind, but with perpetual tendency of electrons to drift away from the atoms somewhat, as the particles we snuff evaporate from a piece of camphor. In the case of radium, the electrons are supposed to stream away so fast that the oldest radium must have been spontaneously formed within a few thousand years. As to the relation of the electrons in the atom, opinion seems to favor a definite structure of some kind, with appearance in favor of orbital movements, so that the atom may be looked upon as a microcosm of the solar system, or perhaps of Nature's rings, described by Maxwell as a "flight of circles." And, finally, there is a strong disposition to regard the electrons as themselves simply particles of electricity, whatever that may mean.

## Radium as Fuel

Such are the principal tenets of the new faith of which Crookes and Lodge are high priests. It is, to put it mildly, somewhat sensational to think of atoms built up of whirling particles of electricity, and perpetually undergoing destruction and re-organization, the old elements dissolving and forming new ones, unstable to the end of time. Some recent additions to the creed are even more startling. For instance, since radium keeps its temperature above its surroundings, it can be computed on the electron hypothesis that enormous energy must be stored in the radium atom and spontaneously given off. The intensity of the emanation of one hundred horse-power hours per gram. At this rate a last line could cross the Atlantic on the energy stored in four pounds of radium, could its output be controlled, one pound of radium being capable of doing 1,322,000 times the work of one pound of coal.

The present status of these doctrines is, however, very far from general acceptance, and most conservative physicists regard them as not yet constituting even a well-defined working hypothesis, but rather as a brilliant and daring speculation which may lead to important discoveries, but is based not on a very slender foundation of ascertained fact.

Honors for a Musician

HAROLD BAUER, the pianist, who will make a concert tour of America during the coming season, has recently had conferred upon him the decoration of Officer of the

Harold Bauer

French Academy, and the Institute of Isabelle's Cathedral of Aptin and St.-Quentin of Portugal. Mr. Bauer has been playing in England and on the Continent, and is now making a concert tour in Brazil.

Is the Englishman Deteriorating?

A RECENT investigator has compiled some statistics which would seem to indicate a rather alarming physical deterioration in the British people. The figures, based upon the recruiting and medical reports of the army, show, for example, that while in 1863 the proportion of men in the army under the feet five inches in height was 100 in a thousand, the following year it had risen to 115 in a thousand; in 1871 to 117; in 1878 to 132. The proportion of men measuring less than thirty-three inches around the chest was, in 1869, seventeen in 1000; in 1878 it was twenty-three. In 1871, 450-4 per 1000 recruits were under 120 pounds in weight; in 1888 the proportion had increased to 301 per 1000. In addition to this, there has been a general decrease in the birth-rate from 52.5 per 1000, in 1876, to 39.4 in 1891.

Passenger Traffic Manager,  
Chicago, Ill.

## A History of the Inquisition of the Middle Ages

By HENRY CHARLES LEA

A history not less distinguished by amplitude of preparation and exhaustive research than by philosophical treatment and breadth of view, which is impartial, candid, scrupulously equitable, above all the bitterness of controversy. Spacious in survey, and profound in analysis, a history, finally, written with such graphic power that it exercises a fascination upon the reader, and leaves him impressed alike by the tragic horror of the facts and the dignified ease and felicity with which they are set forth. . . . The style is lucid, dignified, temperate, and graphic.

# A HISTORY OF THE AMERICAN PEOPLE

In Five Volumes

By WOODROW WILSON, Ph.D., Litt.D., LL.D.

*President of Princeton University*

PRESIDENT WOODROW WILSON has devoted the best years of his life to the preparation of his great work, "A History of the American People," from the earliest times to the accession of President Theodore Roosevelt. The work, which is just completed, is monumental in character and scope, represents the genius of the greatest historical writer of the present time, and is written in that delightfully flowing style which translates historical facts into the romance of a nation. It is printed from new type specially cast in 1902. In the matter of illustration, every field of human activity has been searched, and hundreds upon

hundreds of new portraits, prints, maps (in colors), plans, and pictures make the pictorial features alone tell their wonderful story of the finding of the continent and the birth and growth of what is the United States of America. There is a photogravure frontispiece to each volume, and portraits in India tint and black. It is a curious fact that there was not a single complete narrative history of the United States in existence until now. Dr. Woodrow Wilson's is the first. It is bound in dark-blue vellum cloth, leather-stamped, lettered with gold, untrimmed edges, gilt tops, etc. The edition is in five volumes, and the price is \$25.00.

**OUR OFFER** *We will send you the entire set of five volumes, charges prepaid, on receipt of \$1.00. If you do not like the books when they reach you, send them back at our expense, and we will return the \$1.00. If you do like them, send us \$2.00 every month for twelve months. On receipt of this dollar, we will send you, without cost, beginning at once, a year's subscription to either Harper's Magazine, Harper's Weekly, Harper's Bazar, or the North American Review. In writing, state which periodical you want. Address*

## COMMENT

We refer elsewhere to the mortifying episode connected with the retirement of Lieutenant-General Miles from the command of the army. What effect, if any, it will have upon Presidential aspirations is not now apparent. That it may induce the egotistical general to think he has a chance is wholly probable; indeed, we dare say that, in the bottom of his heart, he regards the circumstance equally as most fortuitous and helpful to his political ambition. But so sleep need be lost over this phase of the situation. The Admiral Dewey fiasco has settled the hero-President idea for some time to come. President Roosevelt is the man concerned. From the viewpoint of his ambition it is the worst blunder yet—on short-sighted, unnecessary, and inexcusable as it is almost past comprehension. In the issue of this journal of July 5, 1902, we used these words:

The fact is that the President lacks what he needs most—the daily advice of a sagacious politician. No member of the cabinet satisfies these requirements. The Secretary of State is not sufficiently practical, the Secretary of War is far too aggressive by temperament, and each lacks the experience essential to wise counsel.

There seems to be no urgent reason for revising this judgment of more than a year ago.

Sorely had Representative Lucius N. Littauer announced that he regarded as a complete exoneration of himself Secretary Root's comment on Colonel Garlington's report concerning the glove and gannet contracts, when a new order was issued by the Secretary directing Colonel Garlington to continue the investigation. It is to be hoped that Colonel Garlington, in the course of his renewed inquiry, will examine Edmund R. Lyon, of New York, with reference to the dealings which he (Lyon) had with Littauer during the years when that Representative's firm was furnishing gloves and gannets to the Federal government. Lyon's testimony should be relevant and interesting, in view of the fact that, in proceedings before a referee in bankruptcy in New York, he declared under oath that Littauer's firm had a share in the con-

tracts secured by Lyon from the War Department. Timothy Keck has also sworn that, after meeting Representative Littauer in New York City, he (Keck) refrained from bidding for certain government glove contracts, and was paid so much a pair to keep out of the competition. A facsimile letter has been published in which Lyon acknowledges the payment of \$1500 to Brothers Keck in consideration of their withholding bids. It would be worth while to learn whether this money was furnished by Lyon himself, who has never been a rich man, or by his bondsmen on the government glove contracts, who were Littauer's brother and brother-in-law. If there are in existence any other documents that would throw light on the true inwardness of Representative Littauer's connection with government glove contracts, it is to be wished that they will now be exhibited to Colonel Garlington. The President has declared, we are informed, that Littauer need expect no mercy if that Federal lawmaker has violated the Federal law forbidding a Representative to be interested in government contracts.

The week ending August 8 witnessed another serious depression of "gilt-edged" securities on the New York Stock Exchange. Not only industrialists that have never failed to pay dividends, but the most prosperous railways touched a level lower than they reached in the panic of May, 1901. In the foreign or internal commerce of the country there is nothing to justify such a phenomenal shrinkage of prices. We have previously shown that our aggregate foreign trade is greater than it ever has been before, and that even the volume of our exports has been exceeded but once, namely, in 1901. If we turn to our internal traffic, we find that during the first half of the current year the trade on the Great Lakes has exceeded that of the corresponding period in 1901 and 1902. The river and canal traffic also has increased, and the shortage of cars at certain points shows that railway equipment is already inadequate to the demands upon it, although at the hour when we write, the movement of this year's principal crops can scarcely be said to have begun. It appears that wheat receipts at eight interior markets for the crop year ending June 30, 1903, were 236,675,668 bushels, against 221,786,287 bushels in 1902, and 217,658,745 bushels in 1901. The shipments of grain from Buffalo by rail in the first twenty-six weeks of 1903 were 44,452,990 bushels, against 37,259,404 bushels, and 39,098,624 bushels in the corresponding periods of 1902 and 1901, respectively. The freight tonnage via the Sault Ste. Marie Canal was 11,944,504 tons in 1903, against 11,484,591 tons in 1902, and 6,767,120 tons in 1901. New Orleans shipped 21,914,545 bushels of grain, including flour reduced to bushels, in the first six months of 1903, and only 5,954,109 bushels in the corresponding part of 1902. Galveston's figures were 9,713,131 bushels and 1,178,786 bushels, respectively, for the two half-years named.

It is evident, therefore, there is no evidence of a general recession in commercial activities corresponding to the extraordinary decline in speculative values. We add that in July railway earnings, usually regarded as the most authentic indexes of prosperity, showed a gain of fourteen per cent. over those of July a year ago; indeed, the figures are the best ever reported for that month. Moreover, although there have been a few failures on the New York Stock Exchange during the last fortnight, the number of business failures is actually less than it was a year or two years ago. Bradstreet's Commercial Agency reports that the number of business failures throughout the country in the week ending August 6 was 161, against 169 in the like week of 1902, and 185 in 1901. Dun & Company, in their weekly review of trade, announce that, with the ex-

ception of cotton-mills, manufacturing plants are well employed. Industrial conditions generally are as favorable as they were a year ago, and in many lines there has been an increase in transactions. In view of such facts the continuance of national prosperity seems assured for at least another twelvemonth, and unless the state of things on the Stock Exchange continues to be abnormal, there will be a revival of speculative activity in the autumn.

A question of much more importance just now than any other issue to the inhabitants of the Borough of Manhattan is whether the subterranean electric railway under Broadway between Forty-second Street and Union Square is to be a shallow subway or a deep-bore tunnel. That is to say, shall the Broadway branch retain the level of the main underground road constructed by Contractor McDonald, or shall it follow a much lower course, conforming to the examples of London, Chicago, and Boston? In the British metropolis tunnels have been driven without tearing up streets, digging ditches, or interfering with business in any way. Huge elevators are used to take a trainload to the surface quickly. In Chicago a tunnel fourteen miles in length and from twenty-seven to sixty-five feet below the surface has been in process of excavation under the business district for several years. Not only has the work caused no public annoyance, but it has gone on without the knowledge even of the newspaper reporters. In Boston, tunnelling was carried on along Tremont Street and the whole line of the subway without seriously incommoding traffic or in any way restricting the use of the streets.

To turn a crowded section of Broadway, nearly a mile and a half in length, into an open ditch, and to keep it in that condition for a considerable period, is a prospect that naturally provokes outcry on the part of the shopkeepers, hotel-keepers, and theatre-owners whose interests will be affected. They have had an opportunity of witnessing in Fourth Avenue and a part of Forty-second Street the ruinous effect of an open ditch on traffic, and they are justified in thinking that the losses thereby incurred may never be made good. The driftings, eddyings, and veerings of trade are not always easy to account for, but any one can understand why retail traffic during the last year has deserted Forty-second Street between Fourth Avenue and Broadway. It is also a matter of observation that traffic, once diverted from a particular locality, is seldom regained. On the whole, the owners and occupiers of the buildings fronting that part of Broadway which is threatened with excavation have ample ground for the protest which they are about to address to the Rapid Transit Commission. It should be borne in mind that the Interborough Company and the contractors employed by it have no authority in the premises. It is for the Rapid Transit Commission to say whether a shallow or a deep tunnel shall be run under Broadway from Forty-second Street to Union Square. The reason why an open ditch is favored by the Interborough Company is plain enough; it would cost less, and would enable the builders to make more money. The pretense assigned for its adherence to the system followed on Fourth Avenue are two, and they are equally ridiculous. According to the Interborough Company, there are questions connected with gas and sewer pipes which would make the work extremely hazardous in a deep tunnel. The truth, of course, is that one of the principal grounds for preferring a deep tunnel over an open cut is that the former saves the labor and expense of taking care of the water and gas mains, the wire conduits, and the underground trolley system. The other pretended objection is that no rapid-transit system can be served properly with a deep tunnel, because people would be averse to climbing down long flights of stairs. In London, as we have said, people are not expected to go down or up stairs, but are lowered or lifted in large and quick elevators.

From time to time we have directed attention to attempts of local labor-unions to punish members for serving in the State militia. Should labor-unions generally proclaim the principle that membership in their associations is incompatible with the defence of the commonwealth, they will be rightly regarded as public enemies. There is no doubt that the national government may call for the service under arms of every

able-bodied man on the soil of the United States. It is equally patent that a conscript will for a time prove relatively useless if, owing to his previous refusal to serve in the militia of his State, he is entirely untrained. The maintenance of militia is, in truth, an essential element of the system of national defence. He who eliminates that element paralyzes the whole system to a considerable extent. No lover of his country would subject a fellow citizen to industrial and social disabilities for having made himself familiar with military duties. The pretext that militiamen are sometimes used to put down strikes, when strikers are violent, might be with equal propriety invoked for the abolition of the regular army.

It will be a bad day for labor-unions when the question, Can a labor-unionist be a patriotic American citizen? has to be answered in the negative. It seems that in the United States socialism and militia service are already looked upon in some localities as irreconcilable. One Charles Sternens, a member of the Massachusetts militia, and also a member of the Socialist Town Committee of Clinton in that State, was called upon by his colleagues to resign his membership of the committee, on the ground that his action in joining the militia was in violation of the aim of the Socialist movement, which stands for the emancipation of the human race from capitalist exploitation, and opposes the spirit of militarism "now fostered by the capitalist class for the purpose of enslaving the workers." The militia being part of the equipment of capitalist society, no Socialist should join it. Mr. Sternens, finding himself compelled to choose between Socialism and what he believed to be his duty to his country, decided to relinquish his position on a Socialist committee, and to remain a member of the State militia. It must not be inferred that all Socialists consider their doctrines incompatible with the duty of bearing arms in defence of the State. Neither in France nor in Germany has any such position been taken, nor has it received any countenance in the platform adopted by either of the large Socialist organizations in this country. What the Socialists in Clinton did was to follow the example set by labor-unionists in a New York community and elsewhere. By whomsoever committed, the attempt to punish men for joining the militia is a reasonable act, which ought to be dealt with in courts of justice.

Mr. Jacob H. Schiff has published over his signature some interesting comments on Mr. Arnold White's suggestion that Hebrew capitalists in the United States and England should subscribe money for the purpose of creating within the boundaries of Russia a new and larger "pale" for the benefit of the Jewish population, which is now leading a miserable existence in the existing pale. This was the only solution of the Jewish problem in Russia which Mr. White could propound after a series of confidential conversations with Mr. De Plehve, Count Lamsdorf, and other important officials at St. Petersburg. According to Mr. Schiff, this is not the first of Mr. Arnold White's suggestions to Hebrew capitalists. He made another some years ago, which was adopted, but the results were unsatisfactory. It seems that, when the late Baron Hirsch became interested in the Russian Jewish problem, he sent Mr. Arnold White to St. Petersburg, for the purpose of seeing what could be done to raise the status of the Russian Jews, through technical and agricultural education, to be provided by funds which the Baron would undertake to furnish.

Mr. White, who is said to have received a handsome honorarium for his services, reported on his return to England that, in order to carry out the Baron's designs, it would be well if a considerable sum of money were deposited with the Russian government for the prosecution of the Baron's educational plan, simultaneously with the presentation of a petition to the government for permission to carry the plan into effect. Baron Hirsch made the suggested deposit, but the permission sought for was refused, and the money deposited was cashly appropriated, not to the Jews at all, but to the building of Christian churches. Under the circumstances, Mr. Schiff does not look with unqualified approval on Mr. White's renewed suggestion that Hebrew money should be given to Russia. Mr. Schiff is obviously right in asserting that it is not the business of Americans or of Englishmen, whether they go to churches or to synagogues, to solve the Jewish question in Russia. It is

Russia's business to solve it for herself. There will always be a Jewish question in Russia just so long as the Czar's government, instead of endeavoring to raise the status of its Jewish subjects, assists in breaking them down morally and physically through the application of exceptional laws, thus creating the conditions which have brought about the horrors of Kishinef. Mr. Schiff holds that no additional pales, formed with the aid of Anglo-Saxon funds, are needed. What is wanted is the uplifting of Russian Jews through equal protection under the laws of the land they live in. If the Czar would abolish all exceptional laws, and permit his Jewish subjects to dwell within his vast territories wherever an opportunity of earning a livelihood offers itself to honest effort, instead of compelling them to drag out a miserable existence within a narrow district, there would no longer remain any Jewish question in Russia.

We believe Mr. Joseph Rogers Choate to have been entirely serious when, speaking in London on the 4th of July, he expressed the hope that one day there would be a statue of Washington in the city of London and a statue of Queen Victoria in Washington. The *Saturday Review*, however, has deemed it needful to explain that the American ambassador was merely perpetrating a joke, and that there is no occasion for the Loyalists of the Province of Ontario to work themselves into a fury of indignation and sign a petition to the authorities of Westminster Abbey protesting against what they describe as a proposal to "erect a monument to George Washington in Great Britain's historic edifice." The Ontario Loyalists declare that the erection of a statue to Washington in the British metropolis would be regarded in Canada as a condemnation of the sentiment of loyalty to Great Britain. They opine that a statue to Sir John Macdonald would be more appropriate. The *Saturday Review* would be no furious as are the Ontario Loyalists if the project to which the latter take exception were really on foot. "We might just as well," says the *Review*, "put up a statue to one of the Cape rebels whom we have just disfranchised, or to one of the Irish boys '98,"—Wolfe Tone, for instance. The *Review* thinks, indeed, that statues to the Irishmen of '98 would be more justifiable, because "the Irish certainly had infinitely more just grounds for rebellion than had the Yankees." It goes on to say that the Dutch in South Africa were a different race, and owned the country before the Britishers, "whereas the Americans, people of our own blood, owed their country solely to us." We do not understand in what sense our Revolutionary forefathers can be said to have owed their country to the Britishers, of whom they chose to assert their independence. What help did the settlers in New England and in Virginia, or, for that matter, in any of the American colonies, receive from the mother country?

American manufactures were stifled, and American commerce was paralyzed, by acts of Parliament and by regulations of the British Board of Trade. The colonies had the slave trade forced upon them against their will. As for the alleged help given by England to the colonies against the French, by far the most efficient work in the way of self-defense was performed by the colonists. The colonists took Louisburg and helped to take Havana, both of which places were ultimately retroceded to promote the interests of the mother country or of the Hanoverian dynasty. Yet, even at this late day, the *Saturday Review* has the assurance to assert that our Revolutionary forefathers owed their country solely to the Britishers. It may be, after all, as the *Saturday Review* maintains, that Mr. Choate merely intended to perpetrate a joke; but, if so, it was a sly one, well calculated to puncture shams, and to uncover the real sentiment with which Americans are regarded by a good many Englishmen. We imagine that a good many years are likely to elapse before the statues mentioned are interchanged.

American citizens will remember that under Mr. Cleveland's second administration they only escaped a Federal income tax by a decision of the United States Supreme Court that the tax was unconstitutional; that the decision was rendered by five judges against four; and, moreover, that one of the majority changed his mind while the case was pending.

We are not in this country any more averse to an income tax than Frenchmen have long shown themselves to be, and particularly under the Third Republic. The cabinet headed by M. Léon Bourgeois was practically asept because it proposed to introduce an income tax, although ostensibly it resigned on another ground. No other ministry under the existing régime has ventured to make such a proposal until now; but M. Rouvier, the present Minister of Finance, and a man of undisputed eminence as a financier and an economist, has found it impracticable to make both ends meet except by imposing an income tax in a modified form. His plan is to convert a large proportion of the indirect taxation which already exists into direct taxes upon revenues. He designs, in other words, to abolish the tax on the value of furniture and the tax on doors and windows, which imposts, taken together, bring in an annual revenue of \$32,000,000, and to substitute a direct graduated income tax. Under his scheme, incomes of 500 francs or less a year are exempt, and incomes between 500 francs and 1000 francs would pay at a rate 85 per cent. smaller than that which is applied to incomes of 20,000 francs. Taxpayers who have several children would pay at a lower rate than that normally applicable to their incomes.

In the case also of the tax on rents, which is to be at the rate of 4 per cent., reductions are to be made in proportion to the size of the taxpayer's family. Whether this bill can be passed by the present Chamber of Deputies is uncertain. The Socialists welcome it, but many of the Radical supporters of the Combes cabinet persist in opposing it, and the anti-Ministerialists, notwithstanding the respect in which they are inclined to regard any proposal coming from M. Rouvier, will be strongly tempted to seize the opportunity of overthrowing a government whose antilegal policy has made it an object of detestation. Even if the income tax should run the gauntlet of the Chamber of Deputies, it is doubtful whether such a measure would be sanctioned by the Senate, where the Socialists are few, and where the old-fashioned Republicans preponderate. The hatred of an income tax is traditional with French Republicans, and there is no doubt that the imperialist pretenses require, for the collection of such an impost levied themselves to the gratification of party spite and the exercise of petty tyranny.

The *Norik American Review* has published recently an interesting article on the Panama Canal question from a Colombian view-point by Mr. Raúl Pérez, the son of a distinguished Colombian Liberal, and the grandson of a former President of Colombia. The article, we repeat, is interesting, but it is by no means convincing. Thus the writer points out that an article of the Salazar-Wise contract, which became a law of Colombia in 1878, and is still in force, forbids the French concessionaires to transfer or mortgage their rights for any consideration to any foreign nation or government.

This article he pronounces enough to invalidate the Herrán-Hay treaty. It should scarcely be necessary to reply that the power which enacts a law can repeal it, and that the Colombian Congress, by sanctioning the sale of the French company's rights to the United States, will have done *facto* what the law just quoted. We add that the article by Mr. Pérez is full of inconsistencies. For example, when he is contending that ten million dollars is too small a compensation for the right to complete the Panama Canal, he says that Panama is bone of the bone and blood of the blood of Colombia, and has always been her cherished hope. On the other hand, when he wants to refute the assertion that Colombia would be foolish to reject the Herrán-Hay treaty, because the completion of the waterway would be for her a great economical boon, he insists that every country in the world would be a gainer rather than Colombia. It must be borne in mind, he says, that the isthmus is a strip of land utterly detached from the remainder of Colombia, and separated by an immense tract of low, marshy land, which is covered with virgin forests, where not a single road exists, and into which but few explorers have penetrated. The only section of Colombian territory that could possibly derive

advantage from the canal would be, Señor Pérez asserts, a strip of land some three hundred miles long and fifty miles wide on the Pacific coast of the republic. If all this be true, it is obvious that the Bogota government will be overpaid by a bonus of ten million dollars, to say nothing of the rentals to be ultimately forthcoming, for its ratification of a transfer of franchises already granted to the French company.

After a careful reading of his article, we incline to think that Señor Pérez would waive his objections to the amount of the bonus provided he felt sure that the sum would go to the right persons. If the money is paid now, it will be distributed among the partisans of the dictator Marroquin, and among the religious orders by whom he is supported. It is naturally galling to a Liberal and the descendant of Liberals to see the price of the only salable asset which Colombia possesses pass into the hands of his political enemies, by whom he has been deposed, imprisoned, and exiled. He can scarcely expect the United States, however, to defer the acquisition of a right to complete the Panama Canal until the Liberals shall have recovered power at Bogota and put themselves in a position to receive the purchase-money.

One of the silliest stories circulated at a season proverbially silly is the report that Judge Parker's visit to Georgia was politically a failure, because an alleged lack of personal magnetism chilled the Southern leaders, who were prepared to acclaim his candidacy with enthusiasm. Those who circulated the story failed to perceive that they are imputing to representative Southern Democrats a fundamental unfitness for leadership. The Southern Democrats had their fill of personal magnetism in 1896 and 1900. If they considered personal magnetism the chief desideratum in a President, they would vote for Mr. Roosevelt, who keeps the comradery on tradition and dispenses it without regard to sex, color, or previous condition of servitude. The Democratic leaders at the South believe now, as they believed in 1856 and 1876, that it is of vital moment to their section to install a Democratic administration at Washington. If they had considered personal magnetism indispensable, they would never have given their support to James Buchanan, who was an iceberg, nor to Samuel J. Tilden, who was a mummy. Unless the South, as its enemies pretend, has lost the breed of statesmen, its action in the next Democratic convention will be shaped with an eye single to the triumph of great policies and to the right settlement of momentous issues. It will leave those who are capable of being hypnotized by personal magnetism to flock with Mr. Bryan in a hopeless minority of the convention, or to bolt the Democratic party altogether and whomp it up for Mr. Roosevelt.

Politics means business at the South, to an extent which Northern men, happily for themselves, can hardly realize. In that section, the civil war, the reconstruction amendments, and the infamous carpet-bag régime have driven home to every white man the dreadful consequences that may follow political defeat. Always, in truth, as we have elsewhere said, Southerners have shown themselves keenly alive to the seriousness of the questions mooted in political campaigns. When they have fixed upon a candidate, it is because they have had faith that he could win, or had, at least, a fair chance of winning; not because he was a half-fellow-well-met, who had a talking trick of grinning and extending a glad hand. If they nominated James Buchanan in 1856, it was because they rightly believed that he could carry Pennsylvania, which State was deemed indispensable to their success. If they nominated Samuel J. Tilden in 1876, it was because they had confidence that he could carry New York, New Jersey, Connecticut, and Indiana, and their confidence was not misplaced. For whenever the Southern Democrats shall vote in the next Democratic national convention—whether it be Mr. Cleveland, Judge Parker, Judge Gray, or some other candidate not yet conspicuous—it will be on a ground identical with that on which their course has always been based, except in 1868 and 1900, namely, the conviction that he has a prospect of regaining those pivotal States at the North which are essential to the triumph of their party. They insult the South who imagine

that its leaders in 1904 can be influenced by any motive less reasonable and less sober.

Coincident with the closing of the National Teachers' Convention in Boston came the just-ended Emerson centennial (from July 13 to 31) in both Concord and Boston. There were thirty lectures in all, besides certain afternoon extemporaneous reminiscences and a few Sunday sermons. Among the latter was Charles Malley's eloquent and subtle exposition of Emerson's poem titled "Bacchus," which he made of purely spiritual import, and which was given in the Concord Unitarian Church. The morning lectures were given in Concord in the Town Hall, where Emerson had himself lectured a hundred times, trying his literary wares upon his townsmen before offering them to Boston, New York, and London audiences; and the evening lectures in Huntington Hall, Boston. No phase of Emerson's quality was left untouched. His Puritanism, his treatment of nature, his message, his personality, his poetry, his Orientalism, his wit and humor, his relation to Germany and to Carlyle—all, and much besides—were presented in a body of papers notable for careful study and acquaintance with those themes. Among the speakers were Rev. Edward Everett Hale, Mrs. Julia Ward Howe, Professor Kuno Franke, Dr. Edward W. Emerson, Professor Nathaniel Schmidt, President Jacob Gould Schurman, Frank B. Sanborn, Rev. H. Heber Newton, and Joel Weston. The audiences were eminently select, if not very large, and their attention and well-regulated applause evinced a keen critical understanding. The whole series of exercises was good to the very end, and anything just like it will hardly be seen again in this generation.

Phil May is dead at thirty-nine—a serious loss to a world so lately bereaved of Henley and Whistler. Whistler had lived his life fairly out, and Henley at fifty-four had expressed himself reasonably fully, but from May twenty or thirty years more of work seemed fairly due, and it was work of a sort and quality that the world never sees enough of. Most people know good drawing when they get it,—know, that is, that it is good; some people know how good it is, and a few know why it is good. Most people know Phil May's drawings were good; everybody that liked fun liked the fun in them; a few care less in them than what Whistler saw when he said, "Black and white art is summed up in two words—Phil May." He put his lines in the right place to express what he had in mind. That is about all there is in drawing, but it is difficult. Some men can place their lines pretty well, but have nothing very interesting in their minds, and others—like Thackeray—have such interesting minds that their pictures succeed in spite of defects in technique. Phil May had highly interesting and amusing things to communicate, and a surpassing gift of pictorial discourse. What du Maurier did for English polite life, May did for English low life. He was a great economist of lines, wasted none, and got his effects with the least possible ink shed. His style of drawing he perfected during a three years' engagement to draw for the Sydney (Australia) *Bulletin*, the presses of which could successfully print only the simplest and clearest pictures. As will be recalled, he succeeded du Maurier on the staff of *Punch*, and was also a contributor to the *Graphic*. The Pope died, and now there is a new Pope in Rome, but there will be no new Phil May to take the vacant place at *Punch's* table.

Radium, discovered in 1898, was valued at five million dollars a pound. Its estimated value has since been reduced to \$2,721,555 90 a pound, which is a very material reduction, but the price is still high. We read with interest that a Buffalo man, Mr. Stephen T. Loekwood, expects to engage in the manufacture, or extraction, of this interesting substance, and hopes to lower the price still further. His hopes, as recorded in the papers, are based on the possession of certain deposits of carnotite in Utah, from which he has been able to extract radium, and which he believes can be induced to give its radium up somewhat easier than the pitchblende from which the radium so far obtained has been extracted. We hope he will succeed. Radium is the most interesting substance out, and, dear though it is, a very little of it goes a great way, and lasts, apparently, forever. We want more of it, for, unlike liquid air, it seems really to be of use for something besides amusement and speculation.

## President Roosevelt and General Miles

Was President Roosevelt justified in withholding from Lieutenant-General Miles the recognition to which his long and gallant service fairly entitled him because during the past few years General Miles has disagreed with and sought to harass the administration, particularly in its peace-worthy endeavors to reduce chaos to order in the Philippines?

That the President did deliberately administer a snub of the odious sort to the old soldier does not admit of doubt. The announcement of his retirement was supplemented by this curt phrase:

Lieutenant-General Miles will proceed to his home. The travel enjoined is necessary for the public service.

That is to say, an allowance for mileage on the journey homeward from the seat of government seems up the whole recognition that, in Mr. Roosevelt's opinion, General Miles's career deserves. The record itself need not be told at length; it is familiar to all as one of the most notable in our military history. Nelson A. Miles fought through the most stupendous civil war known to history, entering the service as a captain and leaving it as a major-general; was wounded and commended at the battle of Fair Oaks; commended in the Seven Days' battles; wounded and commended at Fredericksburg; again wounded and commended at Chancellorsville; actively engaged at Gettysburg; then in the Shenandoah campaign; in the terrible campaign of the Wilderness; in the Richmond campaign, and in the decisive campaign that closed at Appomattox. Of his services against the Indians, which began in 1870, and did not end until there ceased to be an Indian question, it is superfluous to speak, because they are fresh in the memory.

When General Schofield was retired eight years ago the announcement of the War Department contained very handsome expressions of praise and appreciation. Similar tokens of recognition have later fallen to General Otis, General Merritt, and, as might perhaps have been expected as inevitable, "The War Department, by direction of the President, thanks General Wood and the officials, civil and military, serving under him upon the completion of a work so difficult, so important, and so well done."

It is silly, therefore, to plead that a suitable expression would have been contrary to custom. Just the reverse is true, as, of course, the President was well aware. The snub, as we have said, is proven to have been deliberate. Why was it administered?

Because General Miles has been a thorn in the flesh of the administration. He has interfered seriously with the good work of the War Department; he has made accusations over and over again that may or may not have been susceptible of proof, but were certainly unbecoming one in his position; he injected himself into the Sampson-Sheley controversy in a manner so unbecoming for one to bring forth a stinging and well-deserved rebuke from Secretary Root; he has been consistently belligerent and non-cooperating and generally a nuisance, apparently paying to the galleries with some ulterior—probably political—purpose in his mind.

It is not to be wondered at that this course of action has been as irritating to the President and Secretary Root as it has been harmful to the service. But was the offense sufficiently aggravated to justify the President in wholly ignoring General Miles's really splendid past, and merely pointing to the door? Would Lincoln have done it? Would Cleveland or McKinley? Would any President grown to that degree of personal resentment which his great effort demands?

Obviously the country thinks not. Obviously also the whole people—if the unanimous voice of the press means anything—feel hurt, mortified, and ashamed, not so much on account of the old soldier who has been rebuffed, or cheated himself maybe, out of his just dues as an account of their President, who has disappointed and humiliated himself.

## The Outlook for Presidential Candidates

The launching of the Gorman boom for the Presidency has promptly followed the Senator's return from Europe. There is a report that several Democrats of national reputation have flocked upon Mr. Gorman as the standard-bearer of their party in 1904. We are told that among those who are quietly advocating the nomination of the distinguished Marylander are Mr. J. K. Jones of Arkansas, Chairman of the Democratic National Committee, Senator W. J. Stone of Missouri, and, what is even more interesting, Mr. J. K. F. Hall, Chairman of the State Democratic Committee in Pennsylvania. No next step is to be taken, we understand, at the Democratic convention to be held at Harrisburg in September; but, unless the present plan is changed, Pennsylvania's delegation to the Democratic national convention will endeavor to make Mr. Gorman the nominee of the party for the Presidency.

Senator John T. Morgan, of Alabama, allowed himself to be interviewed the other day, and expressed the opinion that

Mr. Gorman, would be the "logical" nominee of the Democracy, because he stands forth as the representative of the belief that nothing is of more vital importance to the South and to the country at large than the limitation of negro suffrage. He pointed out that Mr. Gorman lost his seat in the Senate through the negro vote; and recovered it, owing to legislation in Maryland by which negro suffrage was restricted. Mr. Thomas's book, however, has encountered obstruction even in Alabama, where the *Montgomery Advertiser*, a well-edited paper, contends that the nomination of the Maryland Senator would be a source of weakness rather than of strength. It asserts that Mr. Gorman and Gormanism turned Maryland into a Republican State, although it used to be an unprejudiced a Democratic stronghold as Alabama. It is not denied that national issues had something to do with the result, but the charge is made that Mr. Gorman and his political methods split the Democratic party in his State, and brought it to defeat. The *Montgomery Advertiser* thinks that Maryland would be more likely to go Democratic this autumn, if the Senate had remained in Europe. It is pronounced absurd, however, to say that, if Maryland had gone Democratic this year, Mr. Gorman would be indicated as the next nominee of the Democracy for President. We are reminded that Maryland is normally Democratic, as party leaders all over the country know. It never has been, and is not now, the keystone to the arch of Democratic victory. It stands in no such relation to the success of the Democracy as does New York, New Jersey, Connecticut, or even New Hampshire, or even Kentucky or Tennessee, or every Maryland. It is, indeed, the belief of the *Montgomery Advertiser* that any other Democrat, likely to be put forward by the national convention of his party, would get more votes in Maryland itself than would Mr. Gorman.

We believe it to be true that the Democracy, in selecting a candidate for the Presidency, would do well to keep its eyes fixed upon the States which proved pivotal in 1876, 1884 and 1892, when it was victorious. At the same time, while disposed to question Mr. Gorman's availability, we cheerfully concede that no one is better qualified to point out the measures and policies upon which the Democratic party can be most effectively defeated. While the Democratic party should put forward in 1904 a candidate capable, or believed to be capable, of drawing votes from the Republicans and of carrying the States of New York, New Jersey, Connecticut and Indiana, it might do wisely to heed Senator Gorman's counsel with reference to a programme, and to make, first, tariff revision, and, secondly, honesty and economy in public administration, the chief planks in its platform. As leader of the Democratic minority in the Senate, Mr. Gorman will, we ought to play, a great part in shaping the course of the national Democratic campaign throughout. It will be observed that Senator Gorman has not said a word about the limitation of negro suffrage, which, according to Senator Morgan of Alabama, and Representative Livingston of Georgia, will be, or ought to be, the principal issue in the next campaign. Mr. Livingston, it will be remembered, is the senior Democratic member of the committee on Appropriations, and one of the leaders of the Democratic minority in the House.

He has learned a platform for the party which is received with a good deal of commendation by his colleagues from the South. He holds that, during the next session of Congress, the Democrats should begin the Presidential campaign by pressing on the Republicans the three following demands: first, the enactment of an elastic currency law; secondly, the abolishment or reduction of rates in tariff schedules protecting trust-made goods; thirdly, that the Republicans shall either uphold or repudiate the President's "negro policy." We are not sure that the time has come to lay great stress upon the third demand. In Mr. Livingston quite sure that he is able to define Mr. Roosevelt's "negro policy." So far as the President has yet gone, it is possible for his friends to say that he has appointed fewer negroes to Federal office than have his recent predecessors; that he is not the first President to receive a negro as a guest in the White House, and that his own kind has him to respect the Constitution and the laws, including the Fifteenth Amendment, so long as they stand unamended. In view of the position lately taken by the United States Supreme Court with reference to the enforcement of the Fifteenth Amendment, we do not see that such practical good could be at this time accomplished by an agitation for the repeal of that amendment, and we are inclined to think that the agitation would be harmful. At present, the negro question is not of politics, and to force it back again might prove a serious mistake; it might stop the growing tendency among sober-minded Republicans to regard the Reconstruction legislation with misgiving and regret, and to countenance the attempt to certain Southern States to minimize its harmful effects by their new State Constitutions.

We are sorry to see that Mr. Bryan has again given public expression to the ill-trodden view which he seems to regard the revival of Mr. Cleveland's popularity. Speaking the other day in Ohio, where the campaign for the governorship has begun, he so far forgot himself as to describe the man three nominated and twice elected by the Democracy to the Presidency, as a "boon-steerer." The application of such an epithet to his predecessor by

one who himself has been twice honored by the Democracy, has offended not only the sense of justice but the sense of decency in many Democrats, who hitherto have been conspicuous in the Bryan wing of the party. It has driven out of the Bryan camp, for instance, Mr. E. V. Brewster, who has been a leader of the Bryan forces in Brooklyn in two Presidential campaigns. Mr. Brewster now declares that the next nominee of the Democracy ought to be, and will be, Grover Cleveland. Johnson, he thinks, is not to be considered, and neither is Gorman nor Parker. He insists that, if the party hopes to win, it must get back to the solid Cleveland principles—those of Jefferson. The epithet applied by Mr. Bryan to Mr. Cleveland would scarcely have been uttered under any circumstances by a dignified and self-respecting man, and, even in the mouth of the most reckless of stump-speakers, it could only be justified if Mr. Cleveland during his second administration, had grossly and defiantly broken promises made by him during the preceding campaign. As we have previously shown, not one of the political intentions declared by Mr. Cleveland in 1892 was discovered by him during his second term of office. It was no fault of his that the Wilson tariff bill was transformed almost beyond recognition after it reached the Senate, nor was it his fault that the income tax was pronounced unconstitutional by the United States Supreme Court. To try to make Mr. Cleveland responsible for the panic of 1893 is ridiculous. Mr. Cleveland had been in the White House only a few months when that panic occurred.

When he went into office, the condition of the Federal finances was such that the Treasury officials were obliged to rake up the subsidiary silver in their vaults in order to show a favorable balance. In the last days of Harrison's term, Secretary Foster had recognized the necessity for a governmental loan, and had proposed to issue one; but Republican politicians thought it would be a shrewd trick to throw, if they could, the discredit for the disordered finances on the shoulders of the Cleveland administration. No doubt, the panic of 1893, while due largely to overproduction, may in part also be imputed to vicious financial legislation. The silver dilution of the currency caused by the legislation of 1878 and 1890 helped to bring on the crisis. But, what had Mr. Cleveland to do with legislation in either of those years? The silver law of 1890 will always be known by the name of its author, John Sherman; and the silver law of 1878 was forced through a Democratic House by Mr. Blaine, and through a Republican Senate by Mr. Allison. The truth is, that Mr. Cleveland has never swerved from his principles, or broken faith with the people, who twice raised him to exalted office, and the eyes of the Democracy are now wide open to the fact.

Senator John T. Morgan of Alabama, to whom we have already referred, is always interesting, and sometimes startling. In his latest interview, he made the surprising assertion that his opinion, Mr. Roosevelt would not be nominated for the Presidency in 1904, but that the Republican nominee would be Senator Foraker, who acted as the President's next friend in the more or less avowed contest with Senator Hanna, which preceded the recent Republican convention in Ohio. This is a prediction which will be heard with interest at Oyster Bay. There are, as yet, so distinct indications of opposition to Mr. Roosevelt in any part of the country, except among the White Republicans in certain Southern States. Steps have already been taken to secure an anti-Roosevelt delegation from Texas to the next national Republican convention. No doubt, the movement will extend to other Southern States, but, as a counter-movement will be made by the colored Republicans, the outcome will be simply the despatch of contending delegations to the convention. There will be nothing new or important in such a phenomenon. Mr. Roosevelt will be nominated. If he is supported by the great States of New York, Pennsylvania, Ohio, and Illinois.

Whether he secure the support is likely to depend at the last moment on the delegation from the Empire Commonwealth. It is now generally recognized that Governor Gillet has renounced the hope, if he ever entertained it, of competing with Mr. Platt for the leadership of the Republican party in the State, and it follows that the Senator will again control the New York delegation to the Republican national convention. Should he make up his mind to throw Mr. Roosevelt over, it is probable that Senator Quay would again co-operate with the outside of Senator Foraker, and it is extremely improbable that, outside of Senator Foraker and Senator Beveridge, they would encounter much opposition from Ohio, Illinois, Indiana, Iowa, or any State of the Central West. This we see that Senator Platt, controlling, as he seems certain to control, the New York delegation, will have his hand upon the friendly to the President with his colleague from the latter's visit to Wall Street, and that, if the President had friends in "go into liquidation." This means, if it means anything, that Mr. Roosevelt not only has friends in Wall Street, but a number of them as to constitute a preponderant element. If there were consistently, could not save the President from "going into liquidation." Nobody knows better than Mr. Platt whether it helps a candidate for the Presidency, not only in the country at

large, but in the city of New York itself, to be regarded as a favorite of Wall Street. He knows that in 1884 Mr. Blaine's largest attendance at a banquet offered by some New York capitalists, including the late Jay Gould, cost him more votes than the Burehard speech about "rum, bonapartism and rebellion." Would Senator Platt talk about Mr. Roosevelt's friends in Wall Street, if he sincerely desired the President to be nominated and elected in 1904?

## Pope Pius X. and the Civil Power

It is universally acknowledged that, from a religious point of view, a felicitous choice was made by the conclave, when Cardinal Joseph Sarto was elected Pope. We are reminded of the traditions of the primitive Church when we read of the exemplary piety and the single-hearted devotion with which he, who will henceforth be known as Pius X., discharged the duties of parish priest, of Bishop of Mantua, and of Patriarch of Venice. He is spiritually qualified to be the shepherd of his flock. But how will he deal with the difficult and delicate problems involved in the relations of the papacy to the civil power in many countries, and what position will he take with reference to the intellectual and social movements of the time? The question could be more easily answered if Cardinal Sarto had held any of the great offices at the Pontifical Court, or in the diplomatic service, and thus been associated with the formulation or the enforcement of the papal policies. As a matter of fact, he has never held any of the great posts in the Curia; he has never lived in Rome; he has never acted as Nuncio, as Legate or as Ablegate. He is not a member of any of the great religious orders. From the day of his ordination up to the present hour, he has been a member of the secular clergy, and, what is no less noteworthy, his functions of priest and bishop have been performed in a province lying outside of the former States of the Church. As regards acquaintance with the men who for many years have helped to shape the treatment of the questions affecting the interests of the Church, which have arisen in Germany, in France, in Spain, in England, Ireland, and the United States, and, above all, in Italy, the new Pontiff is almost a stranger in the Vatican. Such shortcomings from the papal court has been accused to no grave a disability that, according to a current saying, the Roman cardinals—a term applied to those members of the Sacred College, who have the management of Papal politics—would rather give the tiara to a foreigner than to a provincial. They broke the rule, however, in this instance, as they broke it in 1878, when they raised a Cambrige to the papacy. The latest departure from custom took place under interesting circumstances, for the report is confirmed that at one time during the conclave, when Cardinal Rampolla had received upwards of thirty votes, and it seemed probable that he would be quickly chosen Pope by the process of "accession," a veto was interposed by one of the Austrian Cardinals, in obedience to an order of the Viennese government. Should the subsequent election of Cardinal Sarto be looked upon as a defeat of the Rampolla party, or was he their second or third choice? If this question could be answered we should have some light upon the course which Pius X. is likely to pursue, and we shall have even a clearer indication when the appointment of Papal Secretary of State is definitely made. At the hour when we write, that post is said to have been successively offered to Cardinal Agliardi and to Cardinal Sottili, and to have been declined by both, and the belief prevails that it will be tendered to Cardinal Vincenzo Vannutelli, a brother of the leading opponent of Cardinal Rampolla.

Although surprising transformations have been wrought at times in cardinals by their elevation to the papal throne, they, like other men, are moulded to a large extent by environment and habits, and it is from a knowledge of their past that we can best forecast their future. Pius X. was born, and has spent all his life, in what was once Venetian territory. It is scarcely conceivable, therefore, that he should regard the Hapsburg power with sympathy, or that he should fail to look with some kindness on the House of Savoy, in which Venetians see their liberator. He has learned, moreover, by long experience to accommodate himself to the disturbed relations of church and state in Italy, for since 1866 he has been a stipendiary of the Italian government. He knows that he could not have become Patriarch of Venice against the will of King Humbert I., and as the occupant of that post, he recognized that he owed a duty to the secular sovereign as well as to the head of the Church. It was in violation of an order of Leo XIII. that he welcomed King Humbert on the latter's visit to Venice. His intercourse with the ex-Queen Margherita is known to have been extremely cordial, and his relations with her son, the present ruler of Italy, have been amicable. For these positive reasons, and on the negative ground that he has had no personal connection with Viennese politics, his election to the papal chair is not so satisfactory to the Italian monarchy as would have been that of any of his colleagues, with the exception of Cardinal Capovetro. His past, in a word, seen in a word, seems to offer guarantees that the new Pope will show himself a Liberal rather than a Reaction-

ary in his dealings with the civil power in Italy. But there is, as we have said, no certainty that such calculations will not be upset, for the Pope may prove unable to resist the pressure of his new environment, and his predispositions may be effaced by a sense of tremendous responsibility. There is less reason to attribute Liberalism to Cardinal Natta than there was to ascribe it to Cardinal Mastai-Ferretti in 1846 or to Cardinal Fieschi in 1878; yet in both of the former cases expectation was ultimately disappointed.

Having been himself a member of the secular clergy, the new Pope, it might be presumed, would not react with special bitterness against the educational religious orders from France. Nevertheless, if Cardinal Vincenzo Vannucelli is appointed Secretary of State, there will be some ground for apprehending a change in the papal policy toward the French Republic. It will be observed that Premier Combes, speaking at Marseilles, on Sunday, August 9, uttered a species of warning when he criticized the attitude of the higher ranks of the clergy, which, he said, had made common cause with the congregations expelled from France, and had sought to stir up a religious civil war. He added that, if the situation continued, the French government would be obliged to consider the advisability of modifying the existing relations between the Church and the state. This means, of course, that whether the Combes cabinet will renounce or carry out the projected abolition of the concordat depends upon the course that will be taken by the new pope. The Vatican is, therefore, one of the gravest questions by which Fiza X. is confronted. There is only one question more momentous in its bearing on the relations of the papacy to the civil power, and that is whether the new Pope will rescind the order issued by Pius IX., and reaffirmed by Leo XIII., the order whereby all faithful Catholics in Italy were prohibited from taking part in Parliamentary elections. That order has had a serious effect upon the fortunes of the Italian monarchy. The result of it has been that the number of persons actually voting at a Parliamentary election has usually constituted only about fifty per cent. of the number registered. As the abstentions have taken place almost wholly in the rural districts, there has been a growing tendency to give a preponderance of political power to the urban proletariat, and to the Socialist representatives in the Chamber of Deputies. The consequence has been that, whereas under Minghetti, the ministers used to be chosen from the Right, power passed, first to the Moderate Liberals under Depretis, then to the Radicals under Crispi, while it has now gravitated to the extreme left. It will never again be possible for a Conservative, or even for a Moderate, party to obtain Parliamentary ascendancy until faithful Catholics are permitted by the Pope to vote. We deem it very doubtful, however, whether an injunction upon which so much stress was laid by his predecessors will be recalled by Pius X. Even if he were personally inclined to such a step, the pressure to which he will be subjected by almost all the cardinals is likely to prove irresistible. If the injunction had never been issued, the fact that individual Catholics took part in Parliamentary elections might have been construed as simply an admission of what nobody denies, to wit, the existence of the Italian monarchy as a government *de facto*. But Pius IX. and Leo XIII., having held that voting would be tantamount to a recognition of the Italian monarchy as a government *de jure*, it is hard to see how their successors could recede from that position without seeking to rescind the papacy to acquiescence in the scheme of the states of the Church.

A government which has cause to regret the elevation of Cardinal Natta with anxiety is that of Alfonso XIII. Ever since the Bourbon monarchy was restored at Madrid in the person of the present ruler's father, it has been upheld by the Vatican against Carlistism on the one hand and Republicanism on the other, both of which have adherents in the army. In considerable sections of Spain the parish priests are Carlists to a man, and nothing but the rigorous discipline maintained by the bishops in obedience to orders from Rome has kept them ostensibly faithful to the Alfonso dynasty. For the ex-Royal, Queen Christine, the late Pionit had the highest regard, and he was the godfather of her son. The new Pope not only has no ties of the kind, but he has long been on the most friendly terms with Don Carlos, who is a resident of Veazir. It remains to be seen, however, whether the occupant of the papal throne will remember the friendships of Cardinal Natta. Here again much significance will be attributed to the selection of a Secretary of State. Everybody knows what Cardinal Rampulla's policy toward Italy, France, Germany, and Spain, has ably and earnestly forestalled his successor's with any approach to confidence.

So far as the United States are concerned, we are mainly interested in learning what the attitude of the Vatican under its new master will be toward the Liberal element in American Catholicism, pronounced by Archbishop Ireland, and toward the theory question of the Irish in the Philippines. Had Pius X. been a Franciscan, or a member of any of the orders which possess large estates in the Philippine Archipelago, we might have experienced much difficulty in reaching a solution of the problem. With one who, throughout his adult life, has belonged to the secular clergy,

It should prove easier to arrive at an accommodation. What our government has resolved upon is this, that the friars, who, rightly or wrongly, are odious to the natives, shall leave the Philippines—possibly if they will, finally if they must. We are perfectly willing to pay at a fair valuation for any property the title in which they can make good. Under the circumstances, it might have been supposed that the problem could be quietly dealt with, but it still remains for Pius X. to solve. As regards the position that is likely to be taken by the new Pope with reference to the views of Archbishop Ireland, only those who are familiar with the writings of Cardinal Natta can foretell how he will act.

## Curiosities of Our Political History

At the first glance it might be supposed that nothing more interesting and drastic could be found than the voluminous collected Executive Rescripts of the United States. This is a list of the Presidents and their cabinets compiled and published by Mr. Robert Brent Mosher, chief of the Bureau of Appointments in the Department of State, Washington. An inspection of the book will disclose answers to many questions that might puzzle persons repelled to be conversant with our political history. For example, did a Vice-President ever fail to be chosen by the electors? Did the same man ever serve as Vice-President under two successive Presidents? Was the office of Vice-President ever resigned? Did the same man ever hold simultaneously two or more cabinet offices? Did the same man ever hold simultaneously a seat in the cabinet and a place on the bench? These are but a few of the inquiries to which replies could not easily be given offhand, but concerning which information is obtainable in the work before us.

It is well known that at the first election of a President under the Constitution all the Presidential electors voted for George Washington, but less than half of them for John Adams. If all the non-Adams electors had concentrated their suffrages upon a single candidate, the latter would have been Vice-President. As a matter of fact, their votes were scattered among ten candidates, including two from Massachusetts (John Hancock and Benjamin Lincoln); two from New York (John Jay and George Clinton); one from Connecticut, one from Maryland, one from North Carolina, and three from Georgia. Only one of these, George Clinton, was to be elected again subsequently in the electoral college. As a matter of fact, his votes were scattered among five candidates, including two from Massachusetts (John Hancock and Benjamin Lincoln); one from New York (John Jay and George Clinton); one from Connecticut, one from Maryland, one from North Carolina, and three from Georgia. Only one of these, George Clinton, was to be elected again subsequently in the electoral college. As a matter of fact, his votes were scattered among five candidates, including two from Massachusetts (John Hancock and Benjamin Lincoln); one from New York (John Jay and George Clinton); one from Connecticut, one from Maryland, one from North Carolina, and three from Georgia. Only one of these, George Clinton, was to be elected again subsequently in the electoral college. As a matter of fact, his votes were scattered among five candidates, including two from Massachusetts (John Hancock and Benjamin Lincoln); one from New York (John Jay and George Clinton); one from Connecticut, one from Maryland, one from North Carolina, and three from Georgia. Only one of these, George Clinton, was to be elected again subsequently in the electoral college.

Few persons recall the fact that, notwithstanding Washington's refusal to accept a third term, he received two electoral votes, one from North Carolina and one from Virginia, in 1793. At the same election, when John Adams beat Jefferson by three electoral votes, and consequently, became President, fifteen votes were cast by Virginia for Samuel Adams, of Massachusetts, and thirty for Aaron Burr, not one of them, seriously enough, being from New York. Neither John Jay nor George Clinton got a vote this time from his native State, but the former had five, and the latter seven, supporters in the electoral college. The first dismissal of a cabinet officer occurred under the administration of John Adams. Timothy Pickens, of Pennsylvania, was a hold-over from Washington's administration in the office of Secretary of State. His resignation was requested on May 12, 1800, but he declined to resign, and was dismissed on May 12 of the same year. Charles Lee, of Virginia, was both Attorney-General and Secretary of State from May 12 to June 8, 1800. Benjamin Stoddert, of Maryland, was both Secretary of War and Secretary of the Navy from June 1 to June 12, 1800. Samuel Dexter, of Massachusetts, was not only Secretary of the Treasury, but also Secretary of War, from January 1, 1801, to the close of John Adams's administration; moreover, on January 31, 1801, while holding the two offices just named, he was "authorized and requested" by the President "to exercise the office of Secretary of State so far as to fill the seal of the United States in the enclosed commission to the present Secretary of State, John Marshall, of Virginia, to be Chief Justice of the United States, and to certify in your own name as executing the office of Secretary of State *pro hoc vice*." John Marshall was both Chief Justice of the United States and Secretary of State from February 4 to March 2, 1801. It is well known that, at the fourth election for the Presidency, Jefferson and Burr received an equal number of electoral votes, and there being, consequently, no choice, the House of Representatives proceeded on February 11, 1801, to choose a President, voting by States, and each State casting but one vote. It is a remark-

able fact that Chief-Justice Marshall remained Secretary of State for one day after Jefferson's inauguration, for the special purpose of counterbalancing some "sea letters" which were to be used immediately. Samuel Dexter, of Massachusetts, another Federalist, was permitted by Jefferson to serve as Secretary of the Treasury from March 4 to May 6, 1801. Willard another Federalist, Benjamin Stoddert, was allowed to retain the post of Secretary of the Navy until March 31, 1801, and Joseph Halloway, of Georgia, another of Adams's appointees, was suffered to exercise the functions of Postmaster-General until November 2, 1801, when he resigned. Even Jefferson, who might have been expected to set his face against general offices, authorized Henry Dearborn, of Massachusetts, to be both Secretary of War and Secretary of the Navy from April 1 to July 17, 1801.

It will be remembered that, before the enactment of the Twelfth Amendment, rendered necessary by the tie between Jefferson and Burr in the electoral college, the Constitution provided that the electors should vote by ballot for two persons, without specifying which was desired for President and which for Vice-President. The person having the greatest number of votes should be President; if such number should be a majority of the whole number of electors. The person having the next greatest number of votes was to be Vice-President, whether such number constituted a majority or not. The Twelfth Amendment, on the other hand, provided that a majority of the electors should be required to choose a Vice-President as well as a President, and if no person should have a majority of the votes for Vice-President, then the Senate should choose the Vice-President from the two highest numbers on the list, but a majority of the whole number of Senators should be necessary to a choice. The Twelfth Amendment further provided that no person constitutionally ineligible to the office of President should be eligible to that of Vice-President of the United States. It follows that if Chester A. Arthur had been born in Canada instead of in Vermont, he would have been ineligible to the Vice-Presidency, and his election to that office in 1880 would have been constitutionally null and void. Was the power of the Senate to elect a President in the emergency named ever exercised? Yes, in the winter of 1850-51, when Martin Van Buren was elected President, but R. M. Johnson, of Kentucky, received but 147 votes for Vice-President, while 148 were needed to elect. The Senate proceeded to choose Mr. Johnson Vice-President.

George Clinton was Vice-President under two successive Presidents, to wit, Jefferson and Madison. The only other man who attained this distinction was John C. Calhoun, who was Vice-President not only under John Quincy Adams, but under Andrew Jackson. Calhoun is the only man who ever resigned the Vice-Presidency. His resignation of the office was forwarded to the Secretary of State on December 28, 1832, the reason assigned being his acceptance of a seat in the Federal Senate to which he had been elected by the Legislature of South Carolina.

## The Profit of Longevity

"FINALLY, he had the great advantage of living long." Thus does Mr. Bryce, in his recent volume of biographical studies, conclude his analysis of the career of one of the leading British statesmen of the nineteenth century.

To enumerate longevity among the causes of success in public life is scarcely in harmony with the prevailing sentiment. The doors of opportunity are popularly supposed to be closed to every man who cannot show a certificate of being less than fifty years of age, and there are even those who seem to believe that the fortieth birthday is the high-water mark of influence. It is admitted, of course, that there are certain compensations for gray hairs, but these are mainly of a private and social nature. The mighty men of this commonwealth—of any commonwealth—must be sought, it is declared, among those who have not yet passed their meridian. Such is the theory. How far it corresponds with facts may be estimated by any one who will take a list of United States Senators—certainly the most powerful group of public men in America—and count the number of septuagenarians.

What, then, are the actual advantages which the older man possesses over the younger, given equal ability? In the first place, the mere possession of the years brings a certain automatic increase of reputation to a strong man. Take, for instance, the case of Grover Cleveland. It is now nearly twenty years since he was first elected President. That is to say, when our present-day men of thirty-five were at school Mr. Cleveland held the highest office in the nation. Whatever opinions may be held respecting that his statesmanship it seems a great deal, as affecting his influence, that he has occupied a foremost place in the public eye during that time. To a voter of forty a politician of forty may be acceptable on account of his platform or his speeches or what not, but

the crowd can never carry quite the same weight of authority as the man who started in the competition with a prestige already accumulated. It is natural for us to imagine the older man as of better stature, for he has been so presented to us from the first; whereas it is hard to realize that any one can be really great who was a boy when we were.

In some instances the authority of an old statesman is heightened by the fulfillment of his predictions and the confirmation of his policies. This accession of credit is especially deserving of notice when it involves the reversal of a popular misjudgment. There is no man who gains such a firm hold upon public confidence as he who has had strength of character to withstand a wave of excited feeling, and whose wisdom has been vindicated by the course of later events. It is not often—for on a large scale the relation of cause and effect takes a long while to work itself out—that such a justification comes within the limits of a single lifetime, but when the courageous and independent politician is fortunate enough to survive not only the taunts of his opponents, but the popularity of their schemes, he receives an admiration proportionate to the former denunciation. One of the most conspicuous instances of this advantage of longevity was seen in the career of John Bright, who, for opposing the Crimean war, not only lost his seat in Parliament, but was reviled in the newspapers and spat upon in the streets, but who lived to hear that war generally condemned and to receive in consequence such esteem and trust as would never have been his if he had let himself be carried along with the stream.

It must be understood, in all this, that the statements of experience whose force we are considering is no fool's. To the old man who has lost his vigor or who is out of touch with young life—its ideals, its point of view, its manner of speech—there is no salvation in the mere lengthening out of years. A collection of diaries is not in itself equivalent to a treasury of wisdom, and a changing world familiarity with precedents may sometimes be dangerous lore. But in every country there is, and always will be, a career for the man to whom the years have brought maturity and knowledge without taking from him freshness of spirit and quickness of adaptation.

## Automobiles and Exercise

On the whole the automobile is the most amusing toy now in the market. Almost persons who have got tired of navigating Long Island Sound and sailing up and down the Atlantic coast in yachts, find novelty and pleasure in yachting on wheels. Most of them seem to go through the same experience. Beginning with a modest little motor-wagon, run by electricity perhaps, they duly aspire and acquire, advancing from car to car, each time a bigger one with more horse-power and greater speed capacity, until they have to send horses to pasture and carriages to be stored to make room in their stables for the collection of dirt waggons.

There is no doubt that the machines are interesting, and that the testing of their capacities to cover distance has great fascination. But with many owners they are still a lark, and in so far as they are a fad they will in time lose part of their attractiveness. And as a fad automobilizing has some drawbacks. It is told, with diagrams and pictures to help, that a good many automobilists are getting uncomfortably fat, and it is a matter of observation that the livers of others are not working so smoothly as their owners and their owner's associates could wish. Can it be that automobilizing is defective as a sport in that it fails to give its votaries due physical exercise? It looks that way. Golf, though it may come to be tiresome, is an exceedingly salutary exercise. Horseshoe riding and polo-playing jolt the liver in a fashion that is highly advantageous to that organ. Walking and tennis keep down fat, and are plainly wholesome for persons who still, but automobilizing, though it is a true recreation is that it engages and entertains the mind, seems to be a bit too easy on the body. That is a serious defect in a sport, for our older men especially cultivate sports, not so much as a hill-time, as to keep the body in such condition as will best sustain the urgent activities of the mind. If the automobile can't keep its owner "in condition," it won't have all the stable interest, nor leave the golf-course bare of players. It will not perish, of course, but persons who just now find in it their sole recreation will have to supplement it with exercises that exercise.

Man is intended to work both with his mind and his body. When human ingenuity succeeds in making any difficult thing—like transportation or maintenance—so easy that it is no trouble, that perplexing difficulty ceases to be some measure to perform its office in helping people healthy, and some other difficulty has to be substituted for it. If we could live without trouble we should have to invent suitable forms of trouble to keep us from degenerating, and that is precisely what folks do whose lives have been made too easy, and who are wise enough to realize it.

### A RACE BETWEEN AN AUTO AND A BALLOON

An experiment has shown a hot balloon and a hot automobile was lately run in Austria for the purpose of determining the relative advantages of the two means of communication. The race proved satisfactorily until the auto came to grief in fording an arm of the Danube River. The water proved to be deeper than it was supposed to be, and the machine was wrecked, the balloon, meanwhile, continuing on its way. Our illustration shows the auto being hauled across the river by a team of men.

*As the Surf-boat approaches the drowning Person a Buoy is thrown as a temporary Help until the Guard can get to him*

*One of the Life guards sweeps the board and swims to the drowning Man, while two Assistants follow and help get him into the Boat*

### **SNAP SHOTS OF THE ATLANTIC COAST LIFE-SAVERS**

*At each of the important summer resorts along the Atlantic coast there is a trained corps of Lifesavers who patrol the beach in squads. At Atlantic City, the corps consists of fifty-eight men, and from two to three lives have been saved daily so far this season. An important branch of the coast-guard service is the Volunteer Lifesaving Corps of the State of New York, which has 465 stations and 7300 members. It has a record of 4729 lives saved in nine years.*

*At first sight of the Auto, the poor Impaler was to leave the Road*

*As it came nearer, there was a Howl of Uncertainty*

*On second Thought, he decided to have a good look at the Machine*

*With the good American that, upon your account a change. Alas! there was no real Danger*

## **SNAP SHOTS BY CINEMATOGRAF—TRAINING A THOROUGHBRED TO MEET AN AUTOMOBILE**

Last week our special photographer took several trips in an automobile around New York and in New Jersey, to get a pictorial record by cinematograph of horses from an auto going at high speed. In most cases, the horse paid little or no attention to the passing auto. The photographs here reproduced show how a thoroughbred, accustomed to automobiles, started by with no more than a show of nervousness. Other pictures in this material series will be published in forthcoming issues of *The Weekly*.

# Women in English Politics

By Sydney Brooks

LONDON, August 13, 1915.

POLITICS and society in England are inseparable. You may see the truth of this almost any afternoon on the terraces of the House of Commons. The terraces is a fine embankment, some hundreds of yards in length, washed by the Thames; it is on the terrace, at the invitation of an M.P. is one of the choicest diversions of fashionable London. Hundreds of tables are scattered about it, and each is a centre of brightness and gaiety. Brilliant women in brilliant gowns, attended by an immaculately groomed M.P.—the House of Commons is the best-dressed assembly in the world—the gliding Thames in front of one, with its ceaseless flow of life, and behind one the gray walls of Parliament, waiters who look like legislators sitting in and out, the afternoon sun lending its golden touch, strawberries and cream, cigars and cigarettes, talk and laughter—who wouldn't be an M.P.? In its way it is almost as picturesque and elegant a scene as any in London. Everybody who in anybody finds his or her way to the terrace sooner or later. It looks like a garden-party, and so it is, a garden-party of picked men and women. I remember when Mr. Chamberlain had finally got clear of his early Radicalism and was beginning to be taken up by society, it used to be thrown in his face that he never appeared on the terrace without a cohort of adoring duchesses. He is still one of its most prominent patrons, as well as one of its most popular. But, indeed, no member of either House can long resist the terrace.

After the stuffy, mephitic atmosphere of the interior it is a wholesome change to the freshness of the river's brink; after hours of wrangling in committee, what can be pleasanter than a twenty-minute chat with a clever, witty woman? You wouldn't think to look at the flush and easy animation of the scene that Westminster—simply existed to form a background for it. But you would be wrong. There comes the midday tinkle of innumerable electric bells; it is the sign that a division is being taken in the House. Instantly the terrace lounge is turned into the politician. Cigars and cigarettes are thrown away, and with hasty grumble and apology, honorable members make a rush for the lobbies. The terrace is left without, manless, and a stranger, the days and hours of its meetings, it carefully arranged things proof of its intimacy with the "week-end." That was another riot. There were at the time some democratic protests, and so-called an unjust, and had no effect beyond, perhaps, giving an agitation saw their country houses guests. Society would as House meet on Saturday. The week-end is one of the most lively, and nothing but a revolution because the government, in this case, affected or really felt indignation because overthrow it. Those who its other proposals, did not suggest a Saturday sitting, and most opposition of society—its protest against what they called "the domination got its way, a social cataclysm would have been the re-

sult. The week-end is society's and human nature's answer to the intolerance of the London Sunday. One might defend it on hygienic grounds, but it is altogether so charming a custom and English country houses are so spacious and restful in their hospitality that no defence is needed. There have, I know, been hostile pictures conjured up of the catastrophes that a mail the nation through these week-end migrations. Some Sunday, it is said, when the queen is at her lowest and the telegraph office closed, France or tyranny may declare war, fall upon the English coast, and sink the empire at its heart by a descent upon London. And beyond a few clerks and doorknopers and spasmogogers they will find no one in the government office to receive their threats, the ministers and responsible officials will be idling in the country, playing golf or inspecting antiquities or chatting under the garden trees. It is a terrifying prospect, no doubt, but England seems ready to run the risk. In other countries society adapts itself to political exigencies. Here the business of legislation is arranged to suit the convenience of society.

English women are not only keen, but intelligent politicians. They read the debates, they study questions, they follow the by-elections, and wade through columns of campaign literature. And being in constant and intimate contact with the makers of English politics, their information is always of the best. Readers of *Lady Rose's Daughter* will remember how naturally Mrs. Humphrey Ward made her heroine move through the world of statesmen and diplomats, and how cleverly she gave the impression of a salon that was behind the scenes of all that was worth knowing. There are many women and many salons like that in London—women who have learned the inside of politics as a part of their social education, and salons where they turn their knowledge to admirable use. They are still an unquestionable power in politics. They make and unmake men, they make the last great art of politics, they pull strings with a frankness and audacity that a mere man can but marvel at from afar.

The English woman who is also a politician . . . does the work of political canvassing to perfection

beyond Westminster, and much of the easy-goingness and moderation of English politics is due to the fact that the leaders on both sides are continually moving outside the House and dining at the same table. I do not suppose it has ever occurred to an American Democrat that unity in his party might be promoted if the wives of the more prominent leaders would ask the wives and women-kind of the rank and file to occasional at-home in Washington. Yet this is precisely the experiment that is now being tried in London by the wives of leading Liberals. That again proves the closeness of the relationship between politics and society.

But the English woman who is also a politician does not by any means confine her activities to the drawing-room. She sits on political committees, forms political leagues, makes political speeches, and does the work of political canvassing during election-time to perfection. Already Mr. Chamberlain's scheme has brought into being three large and vigorous associations, composed entirely into being three large and vigorous associations, composed is known all over the world as one of the best organized and most influential electioneering agencies in existence. It is, at any rate, a singular token of the political capacity and enthusiasm of English women. Perhaps it may be objected that their activity, after all, does not amount to much. That may be so. But there is still left over an ample sphere in which they may ply their arts.

### THE NEW MANHATTAN EYE-BAR BRIDGE

*The new bridge over the East River, between the foot of Pike Street, Manhattan, and Brooklyn, is planned on unconventional lines. According to the plans of the Bridge Commissioner, the superstructure of the main spans is to be suspended from link, or eye-bar, cables, having fixed connections at the tops of the towers and at the anchorages. This will do away with the trusses that are used on most bridges for stiffening, and at the same time will give ample strength to the structure. The Elevated trains will run on tracks above the trolleys. The promenade will be on the outside of the roadway, while the driveway will occupy the centre of the bridge. An unusual feature will be a large hall built inside of each anchorage, to be devoted to public use under the direction of the city officials.*

# Books and Bookmen

By James MacArthur

"I LOVED a love one," wrote Charles Lamb in the most pathetic of all his poems, "The Old Familiar Façe."

I loved a love one, fallen among women:  
Thou, ere her death on me, I must not see—  
All are, ere they die, the old familiar façe.

These haunting lines of Elia gain fresh significance from an article in the September number of STARKER'S MAGAZINE entitled "Charles Lamb's One Romance." For the first time the brief correspondence which passed between Lamb and the famous Drury Lane actress and singer, Miss Frances Maria Kelly, when the gentle Elia entertained the hope of a household over which she should preside, is given and also a facsimile of Lamb's letter (now in the collection of John Hollingshead, Esq.) in which he made Miss Kelly an offer of marriage. "It is truly a sweet assumed character I have learned to love you," we find him writing to the lady of his dream, "but simply as F. M. Kelly I love you better than them all. Can you quit these absurdities of existence, and come and be a reality to me? can you leave off harassing yourself to please a thankless multitude, who know nothing of you, and begin at last to live to yourself and your friends?" The same day a letter came in reply informing him that "an early and deeply rooted attachment has fixed my heart on one from whom no worldly prospect can well induce me to withdraw it."

With instant courtesy and even the dignity Lamb hastened to assure her that "Your injunctious shall be obeyed to a title," and then with wonderful delicacy sought to regain the old footing and put her at ease by a return to his customary good-natured banter. Altogether this romantic disclosure and contribution to Elia's life is an interesting and valuable a literary human document as has been made in some time.

"I loved a love one," Who was the lady of Charles Lamb's one romance? the reader may ask upon reading Mr. Hollingshead's story of the correspondence of marital consideration between Lamb and the lady of Drury Lane. This correspondence occurred in the July of 1818. In February of the same year Lamb wrote a letter to the editor of the *Examiner* on "Miss Kelly at Bath," in which he says: "This lady has long ranked among the most considerable of our London performers. . . . She has been winning her patient way from the humblest degradation to the eminence which she has now attained, on the self-same boards which supported her first in the desecrated professions of chorist-singer." Comparing her acting with that of Mrs. Jordan, he goes on to say of Miss Kelly: "This latter lady's is the joy of a freed spirit, resembling in its career, as a bird that has been fettered, her swiftness, if I may use the expression, seemed avowed out of the fire, relics which a good spirit had stretched up as a sign post; her documents are visitors and not intruders; she is not in them by allegorist, and when she does ordinary traveilian." In another letter later in the same year he speaks of her as framed "not to loose or turn out even in just, noble sliverity." In another letter he writes of her as "a lovely Ys or Vu; to yield or refuse assent with a private life. We have heard too, of some virtuous which she is in the practice of; but they are of a description which repay themselves, and with them neither we nor the public have anything to do."

For the rest, the following bibliographical note, which I quote from the latest edition of *The Marlow Portrait Gallery* will suffice: "Of all these loving friends of Charles Lamb and friend—only one may remain, 'cher' [sic], *Posthume, Posthume, Posthume*, the memory of the best of reason and flow of soul of long-past years. This is Frances Maria Kelly, 'the most unprobable of actresses and unexampled of women,' now in the ninety-third year of her age (1882). It was in December, 1790, that she made her first appearance on the boards of Drury Lane, in the operatic spectacle 'Bluebird,' by her uncle, Michael Kelly. It is worthy of note that, on the very same evening, the great Edmund Kean,

then a mere lad, the senior of Miss Kelly by three years only, first braved a London audience. It is, of course, not within my province to trace, however cursorily, the dramatic career of this eminent actress, who, in her day, was the worthy associate of Sarah Siddons, Joha Kemble, Liston, Farrow, Edmund Kean, Misses, Dandridge, and Marcandry; but she claims a remembrance as one of the most intimate and beloved friends of Lamb—the subject of one—"To Miss Kelly"—and, as I suspect, another—"To a Celebrated Female Performer in the 'Hindoo Boy'"—of his sonnets—and the "Barbara S." of the *Essays of Elia*. It is pleasing to learn that in November, 1802, this venerable and respected actress became the recipient, through the Prime Minister, Mr. Gladstone, of a grant from the crown of £100 per annum." Miss Kelly, I may add, died a month after this note was printed, on December 9, 1862. She was born at Brighton, December 15, 1790.

"We are in the midst of an immense interest in Charles Lamb," writes Clement Shorter in a recent "Literary Letter" in the *Observer*, and his evidence he adduces half a dozen late Lamb publications. From one of these—an India paper edition of some 500 pages of the best of Lamb's work, published by the firm of George Newman—and reproduce the accompanying portrait of Elia by Mr. Edmund J. Sullivan, as being an interesting study of the gentle humorist and essayist. It will strongly recall Maellor's etching signed, "Yours ratherish unwell, Chas Lamb," and his own quaint characterization of his friend, "Brahm the singer"—a compound of the Jew, the Gentleman, and the Angel."

There is a reference to the poet Keats in Mrs. Nancy Huston Keats's romance of southern Kentucky, *Road and Road*, which helps to bridge the literary chasm between the England and America of a hundred years ago, and touches our fancy pleasantly. One of the characters has copied a poem to please me, and with whom he is in love. I saw the poem for the first time an hour or so ago at Mr. Audubon's. It is new, and has never been printed. It was written by the young English poet, John Keats, to his brother, George Keats, who is a partner of Mr. Audubon in the mill on the river. The poem came in a letter which has just been received. I have copied a part of it, and a few words from the letter also. "A Prophecy" are given, and the following extract from the letter: "If I had a prayer to make for any great good . . . it should be that one of your children should be the first American poet." But the Muse is not thus easily propitiated. This recalls the fact that a number of letters written by Keats to his brother George in America appeared in the *New York World* in 1877; I think it was. Their authenticity was questioned by some, but they bear the stamp of Keats's mind. Keats wrote from the fine old country town of Winchester. Here is one delightful passage:

"Monday.—This is a grand day for Winchester; they elect the mayor. It was, indeed, high time the place had some sort of excitement. There was nothing going on—all asleep. Not an old maid's sedan returning from a card party, and if any old women have got tipsy they have not exposed themselves in the dice streets where they are excessively maiden-lady like—the dice streets always fresh from the flames; the knockers have a very staid, serious air, almost awful, quietness about them. There is some of your lady Brillstone tapping and ringing here; so thou dosting dapper footmen; no opera-trotter tattlers; but a modest lifting up of the knocker by a set of little, well-fingered that keep through the gray mittens, and a ding-dong thereto."

"The great beauty of poetry is that it makes everything, every place, interesting. The polistine Venice and the abbotine Winchester are equally interesting. Some time since I began a poem called 'The Eye of St. Mark,' quite in the spirit of town quietude, called 'The Eye of St. Mark,' quite in the spirit of walking about a country town in a coolish evening. I have not yet whether I shall ever finish it. I will give it as far as I have got—at the present."

# This Week's Yacht-Races

## Is Jockeying at the Start in the International Races Unfair and Against the Best Interests of Yachting?

A DISCUSSION BY EXPERTS OF AN IMPORTANT PHASE OF THE SPORT.—MR THOMAS LIPTON'S VIEW.—THE FEELING OF "DEFENDER" BY "VALKYRIE III." IN THE "AMERICA'S" CUP CONTENT OF 1885.—THE DIFFERENCE IN OTHER BRANCHES OF SPORT.—UNFAIR ADVANTAGES.

By Sir Thomas Lipton

I HAVE to thank you for giving me the opportunity of penning the article herewith, and of offering an opinion thereon. In Great Britain there is no trouble respecting the starting of yacht-races with the on-gun start, and provided the sailing-masters adhere strictly to the racing rules, there should be no danger of a foul at the start. The "jockeying" at the start of the races is quite legitimate if carried out fairly, and the start often

shows the best seamanship, which in itself is as much to be desired as the possession of the fastest boat. To secure the windward berth at the start of a race requires skill and judgment, and an advantage gained by these qualities must not be looked upon as an unfair advantage.

To arrange the position of the boats in a start by lottery would, in my opinion, be detrimental to good sport and fine seamanship.

By William Everett Hicks

WHILE the rules governing all other races have received substantial revision in recent years, the method of starting the international races for the America's Cup is as antiquated as ever, and the permitting and encouraging of jockeying before the start continues to menace the cordial sporting relations between the two great Anglo-Saxon nations. The most distressing scandal that has ever been connected with international sporting contests grew out of the jockeying before the start in 1853 by the *Yolgairie* and the *Defender*. There is not a Cup race in which the series and indeed the whole future of the contests are not impelled by the present method of starting, which violates the basic principle of all sporting contests—equality in the start.

As conducted to-day the Cup contests are the only races that encourage jockeying before the start. In all other lines of sport every effort is made to prevent one competitor from gaining an advantage over another before the start; in other words, to make the start as nearly equal as possible. It remains for the yachtmen managing the Cup races to lay down the principle that what is discouraged, repudiated as un-sportsmanlike, in every other branch of competition should be encouraged and lauded in these great yacht-races. One would think in contests so momentous as these, upon whose result two continents hang with feverish expectancy, everything would be done to remove all grounds for possible friction and misunderstanding. On the contrary, just the opposite is the case. The skipper who can "outmaneuver"—that is, outjockey—his rival and gain the greatest advantage at the start is hailed as a "clever seaman," and, no matter though his tactics meet with the hearty disgust of the committee and the onlookers, so long as he avoids an actual collision he is permitted to profit by the advantage he has gained by methods that would promptly subject him to a fine if employed in any degree in other kinds of races.

However, we have become accustomed to this trickery in manœuvring before the start in the Cup contests. We are told it is "part of the race," and that the greatest of all races would not be a real race if it were sought to make the start as nearly fair as human fallibility would permit.

So, on the dictum of leading yachtmen, we have come to believe that it is the most skillful skipper who gains for himself the most advantage at the start—

that is, who obtains the most unequal start. One has but to think of the Cup-race rules applied to "arbitrary heat competitions to test the absurdity of them. What a roar of disapproval would go up if, instead of positions being allotted to the crews, each boat should be privileged to "maneuver" for position before the final signal-gun, crowding competitors out of the way, threatening collisions, and performing similar tricks to demonstrate their "watermanship." Or, in a trotting race, how long would public approval give its sanction to races between valuable horses if the drivers were permitted to jockey before the start, impelling their own lives and those of the competing animals?

The argument that yachts are in an open sea where there is plenty of room does not touch the point at all, for the reason that the weight of the boats, the uncertainty of the wind, the buffeting of the waves, the immense spread of rigging, the impossibility of changing direction as close as possible into the wind reduce the margin of safety to a point where it loses all force as an argument

for the continuance of the present system. The fact is, so keen is the desire to get the windward jockeying, and it remains now to ascertain what is gained by this manœuvring. The yachts are matched to see how fast they will sail a certain distance after the starting-line has been crossed. What they do before the start has nothing to do with the race. It is simply preliminary, and its purpose is merely to enable the boats to get the most equal start, as far as possible, should they be out of an advantage. That duty is vital, is primary.

I think I have shown that the principles of true sport are violated in this before-the-start jockeying, and it remains now to ascertain what is gained by this manœuvring. The yachts are matched to see how fast they will sail a certain distance after the starting-line has been crossed. What they do before the start has nothing to do with the race. It is simply preliminary, and its purpose is merely to enable the boats to get the most equal start, as far as possible, should they be out of an advantage. That duty is vital, is primary.

The remedy for the evils that attend the present method of starting the Cup races lies in the allotment of positions before the start, either by the committee or by lot. The choice of position could be given to the yachts alternately, and in the odd race the choice could be determined by lot. The committee, for instance, would announce on the first day that the *Shamrock* had the choice of position. On that day Captain Barr of the *Reliance* would be compelled to bear that in mind, and instead of trying to crowd the *Shamrock* out of her position would be forced to give way. If the *Shamrock* won that day the committee might decide she had won the right to retain the choice of position the following day, or it might be decided to give the *Reliance* the choice on the second day. Then if the *Reliance* had the choice the *Shamrock* would have to give way. This plan would absolutely do away

with the crowding, the pinching, the blanketing, and all other mischievous features which now mar the beginning of every race. It would not mean that the yacht to which the choice had not been given could not cross the line ahead of her rival; it would simply mean that if she did so she should not in any way interfere with the other boat's starting. Nor would this allotment of position deprive the contestants from taking the position of advantage after the start, any more than the outside horse is debarred from taking the "poke" after the race is on. No time sportsman will object to the blanketing of one yacht by another after the race is on, but there is something contemptible in the blanketing of an opponent before crossing the starting-line, for then it looks like and is an attempt to steal an advantage from an adversary and get a better start.

That is the difference between jockeying before and after the start. After the start it is simply one of the elements of the contest; before the start it is the obtaining of an advantage before the contest is on. It is like shooting in a duel before the word "fire" has been given.

Sir Thomas Lipton  
A map shot on board the steam-yacht "Erie."

### A FOUL DUE TO JOCKEYING AT THE START OF AN INTERNATIONAL RACE

*In the international races of 1895, between the "Defender" and Lord Dunraven's "Vallure III," the jockeying before the start by the two boats, in the race of September 20, was the cause of the fouling of "Defender" by the challenger in crossing the line. The reader is referred to opinions on this phase of yachting on the opposite page.*

*"Yes, I have a good deal of work to do at home in preparing my specialties"*

*"I get my ideas in shape, and my wife takes down my dictation in shorthand"*

*"She is an expert at the typewriter, too"*

*"Then we often go over the musical accompaniments together"*

*"Of course you know we've just been married"*

### **A POPULAR FUN-MAKER AT HOME**

*Marshall P. Wilder, the well-known entertainer and monologist, is shown in the photographs at work in his study preparing his specialties for the coming season, with the aid of his wife, who assists him as stenographer and typewriter*

**MISS HENRIETTA CROSMAN**

*Miss Crosman will be seen early next September in a revival of "As You Like It," at the Manhattan Theatre, New York, and in several of the large cities for a brief tour, before entering upon an important engagement in a new play which has been especially written for her*

### PRAYING FOR THE NEW POPE IN AN ITALIAN HARVEST FIELD

*It is the custom in Italy during the harvest-time for the peasants to offer prayers in the fields for the prosperity of the crops. This year the peasants all over Italy united their supplications for a plentiful harvest with prayers for Pope Leo XIII. and for the new Pope. One drove into the field a cart on which it erected an altar. A priest, assisted by one of the peasant children, celebrates a mass, during which the peasants, ranged in a double row behind the cart, kneel and pray.*

**THE LATEST PAINTING AT THE  
WHITE HOUSE**

*The illustration is from a new portrait of Quentin Roosevelt, the President's youngest son, painted by Mr. Walter Knapp. The picture is one of a series of portraits of the Roosevelt children which Mr. Knapp has been commissioned to paint.*

## CONCERNING MUSICAL PROGRAMMES

New York, August 12, 1903

To the Editor of Harper's Weekly:

SIR,—I have been interested in reading in the WEEKLY the remarks of a correspondent and your own comment concerning the "popular" nature of our concert programmes. In this connection I wish to offer a few remarks against so-called popular programmes as they are compiled in New York City. As to what does or does not constitute popular music, there might be some difference of opinion. So far as I can see popular music seems to be the kind which the banisterer thinks the public likes. I have attended a great many concerts in New York City, both indoors and out-of-doors, and it seems to me that the programmes, in many instances, are pretty nearly as incongruous and mistaken as they can well be. Coon songs are admittedly popular, but let us leave them to the organ-grinders, whose capacity for expression is limited. Don't let us gather together a fairly good orchestra, containing, in many instances, some excellent soloists, and force them to produce such songs when there are shelves full of the music of the masters, which the public invariably appreciates, according to my observation, whenever it is their privilege to listen to it.

I have seen audiences at the Battery Park free concerts show the greatest enthusiasm over the Tchaikovsky overture or a magnificent march of Meyerbeer's. Of course, in the case of private concerts, if the manager believes that the people will not pay for anything but coon songs, it is his privilege to treat just that sort of music; but in the case of the concerts in the public parks, which are paid for by the taxpayers of New York, I earnestly protest against programmes which sell the music that is worth hearing, and include compositions, by the banisterer, which, without doubt, are most banal, colorless, stupid and so-called musical compositions that have ever been produced in the history of music.

If we cannot have music of the best kind, which, in my observation, people do enjoy and do appreciate when they are given enough of it to make an impression upon them, let us at least omit the banisterer's fatuous blatherings.

I am, sir,

PAUL HALIFAX.

New York, August 11, 1903.

To the Editor of Harper's Weekly:

SIR,—I have just been reading the letter from Mr. C. Stewart Yale, published in your current issue, under the heading "For More Popular Music." As far as I can make out from Mr. Yale's communication, he would have concert-givers make up their programmes with a view to capturing the interest both of the Mozart, Beethoven, and Brahms, and those who find great joy in "Mr. Dooley" and "My Old Kentucky Home." It seems to me that the suggestion contained in your editorial comment on Mr. Yale's letter points the way for a possible rejoinder. Surely this is a case of every man to his taste. And has Mr. Yale neglected on the probable disastrous consequences that would follow the placing upon one programme of, say, "Mr. Dooley" and "Bernard Shtrauss"? For Strauss would assuredly frighten away the lovers of "Mr. Dooley" and "Mr. Dooley," in his turn, would effectively repel the admirers of the composer of "Tim Hattenbarren pocketbook." For Strauss would assuredly frighten away the lovers of "Mr. Dooley" and "Mr. Dooley," in his turn, would effectively repel the admirers of the composer of "Tim Hattenbarren pocketbook." for Strauss would assuredly frighten away the lovers of "Mr. Dooley" and "Mr. Dooley," in his turn, would effectively repel the admirers of the composer of "Tim Hattenbarren pocketbook." Clearly, it is not better for Mr. Yale to go for his popular music to places where it is ridiculous, and let the Stravauses and the Brahmsians browse undisturbed among the masterpieces?

I am, sir,  
JAMES HALE OGDEN.

BROOKLYN, August 12, 1903.

To the Editor of Harper's Weekly:

SIR,—A correspondent of yours who advocated the introduction of more "popular" music in our various concerts observed to me in a trade song, "to me made especially sensitive by a recent shock. Feeling very strongly the want of some good music the other evening, I sought out the best concert of hand-picked De Koven between (Liszt and Wagner, and Mendelssohn with "Hiawatha" and some melodies resulted in what was to me a most successful evening.

I believe that your correspondent will find no one to agree with him. The haughty critics will not, the trained music-lovers will not; the latter wants nothing but rag-time. Away with music from the Mill! The former, among whom I proudly stand, do not get on with "Nancy Brown" and "My Old Kentucky Home," but we go to some café to hear them, and we delight in them all; while we listen. And when we tired up and go forth to hear music of real worth in the things of the café have no place—neither the food nor the drink nor the so-called popular music.

The two things are incompatible. One would not introduce a hardly-gurly into the cathedral.

I am, sir,  
JOHN RUTLAND.

## TEACHING RELIGIOUS ORDERS

PHILADELPHIA, Pa., August 3, 1903.

To the Editor of Harper's Weekly:

SIR,—At the present time there seems to be active competition among periodicals as to which can do the most to conciliate that class of our citizens which professes the Roman Catholic faith. This may have its advantages as a business procedure, but there is a limit to the length to which periodicals should go, certain ones taking liberties with the truth on suppressing corrections when made. It is hardly necessary to say that a leading journal like yours has no sympathy with such as these.

In an editorial of your July 15 issue you say, "On the other hand, Cardinal Gotti is a mathematician and a physicist; he would, therefore, be an ideal candidate in the eyes of St. George Mivart and those Catholic scientists who desire to reconcile religion and science."

St. George Mivart has been dead several years. Before his decease he was expelled from the Roman Church on account of his scientific belief. He took a paring shop at his former church in *The North American Review* for April, 1900.

In an editorial of your issue of August 1 you say, "In France the Combes ministry, by its crusade against the teaching religious orders, and by its present encouragement of the agitation against the concordat, betrays a conviction that there is not room in France for both Catholicism and Republicanism of the radical type, and in the judgment of some shrewd onlookers, there is but little doubt as to in which of the two must ultimately go."

That the Combes party may succeed in overturning the present form of government in France is not impossible, and the efforts of the religious congregations in France have long been directed toward that end, but that the sympathy of Americans should not be with that the French Republic would seem inconceivable, even though that the French Republic should follow our example and separate Church from State.

What the feelings of the people of France are is clearly shown by the fact that Brittany, which has been represented by a certain class of newspapers in this country as on the verge of revolt on behalf of the religious orders, has just elected an anti-clerical deputy!

By speaking of the "teaching religious orders" you unwittingly convey a very erroneous impression.

Some of these orders taught and very many did not. Some of them engaged exclusively in the manufacture and sale of liquor. Others were employed in manufacture of various commodities, and as wages and taxes were not paid by the orders, the products of these manufacturers came into unfair competition with those of the largely of aliens, certain vantage-points in which the French Republic was violently attacked. The situation became impossible in France, so it would here or anywhere else. That the French Republic might, to a certain extent, control the congregations living within its borders, a law was passed to compel all religious congregations in France to declare their public their constitutions and regulations. Such congregations as objected this has remained as in France; such as refused to obey the law were told to go. These are the facts of the case.

It would be a hardship if free America should free discussion be barred from public prints to an extent that any class of religion should be supplied with misinformation only, as to important happenings, and thus be deprived of means to form an intelligent opinion. Great journals like yours feel it their duty to see that such a consummation is avoided.

I am, sir,  
ARTHUR ALDRAM PATTEN.

## TOBACCO

PHILADELPHIA, Pa., August 3, 1903.

To the Editor of Harper's Weekly:

SIR,—Your half-playful editorial on tobacco on page 1254 leaves me of your readers wishing you had dealt with the economic side also of the question. There is much light yet to be thrown—let us hope Dr. Wiley will throw it—on the physiological effects of tobacco which may correct assumptions on both sides of the question. I can hardly think any one will maintain that the utmost benefits claimed for the habit as practised by adults and in moderation can equal the grave injury done by it to those of immature development, not to speak of the general relation of that as a people which is not so something to give us pause, every year we spend probably 700 to 1000 millions of dollars enormous amount of cash! The habit is becoming well-nigh universal. Almost all boys—some of them hardly more than infants—smoke, and it is seen to be, in popular estimate, the sign of manhood, and some there will be practically no one free from the liberally riveting upon themselves chains which will weigh so hard to break! We think it is a great thing that we spend a few hundred millions yearly on our schools; yet how pitifully we pay the quired taste two or three times over.

Tell us what you think of the economic side of the tobacco question.

I am, sir,  
H. D. C.

**A Mix-up of Remedies**

Mr. JOHN W. RAMSONE, the comedian, is, physically, of quite ample proportions, a fact which has caused him considerable anxiety. Not long ago he came across an especially persuasive advertisement describing the virtues of a certain remedy for corpulence. Mr. Ramsone went for a bottle, and was amazed to find, in three weeks' time, that he had lost eleven pounds. Overjoyed, he wrote a letter to the firm testifying to the efficacy of their treatment, and authorized them to publish it. A few days later he received a reply thanking him for his kindness, but adding: "We have concluded that we will not publish your letter, however, upon reference to our books, we find that by a stupid error on the part of one of our clerks you were sent the 'Royal Remedy for Epileptic Fits.' We are delighted and surprised to learn that it reduced your weight."

**ADVICE TO MARRIAGES.**—Mrs. W. RAMSONE'S SARCASMIC SCRYER should always be used for children's ailments. It soothes the nerves, restores the system, gives the child a good night's rest, and is the best remedy for diarrhoea. —(Adv.)

**NO SUBSTITUTES.**  
Not even the best tea, coffee, cocoa, or chocolate can be substituted for the original. The only genuine and healthful smoking. It is the only one of its kind, and is the only one that is not harmful to the system. It is the only one that is not harmful to the system. It is the only one that is not harmful to the system. —(Adv.)

**TELEPHONE SERVICE.**—Your home will save space and money. Low rates. Reliable service. New York Telephone Company, 15 Broadway, 111 West 53rd Street. —(Adv.)

**YOUR LIPS BETTER, BUT BETTER, ARE BETTER, WHEN YOUR SKIN IS BETTER.**—Use the best. —(Adv.)

**PEE HAD A HEAVY DREAM, AND WAS DISTURBED WITH A BATH OF COOL WATER.**—Use the best. —(Adv.)

**THE BROWN'S COMBINATION STRENGTHENING DENTAL FILLER FOR THE TEETH.**—Use the best. —(Adv.)

**FOR RESULTS AND SAVING MONEY, USE PEAR'S EYE AND CONJUNCTIVITIS WITHOUT OPERATION.**—(Adv.)

**SKIN DISEASES.**  
That are so annoying and humiliating can be safely relieved and generally cured by the use of Hydrozone. This scientific remedy, being non-poisonous, is safe for the most delicate skin. It is the only one of its kind, and is the only one that is not harmful to the system. It is the only one that is not harmful to the system. —(Adv.)

**ADVERTISEMENTS.**

**Pears'**

Why is Pears' Soap—the best in the world, the soap with no free alkali in it—sold for 15 cents a cake?

It was made for a hospital soap in the first place, made by request, the doctors wanted a soap that would wash as sharp as any and do no harm to the skin. That means a soap all soap, with no free alkali in it, nothing but soap; there is nothing mysterious in it. Cost depends on quantity; quantity comes of quality.

Sold all over the world.

**We Could brew beer for half our cost**

We could cut down half on materials.

We could save what we spend on cleanliness.

We could cease filtering our air.

We could send out the beer without aging it for months—hur the beer would then cause biliousness.

We could save what it costs to sterilize every bottle—an expensive process.

**Yet You would pay the same**

Common beer—brewed without all our precautions—costs you no less than Schlitz Beer.

When you can get a pure beer—a healthful beer—'t is just the price of a poor beer, isn't it wise to ask for Schlitz?

Ask for the brewery bottling.

**MENNEN'S BORATED TALCUM TOILET POWDER**

PREVENTS HEAT, CHAFING, AND SUNBURN, STRENGTHENS SKIN.

**Elements of Navigation**  
By W. J. HENDERSON

It is a very clear and concise statement of essential facts concerning the handling of a ship at sea, and contains information that is indispensable to every one connected with the navigation of a vessel.—Army and Navy Journal, New York.

# THE THIRD DEGREE

By Joseph A. Altsheler

THE Candidates and his company were due that night at Grayville, a bleak Colorado town, dwelling snugly in the shadow of high mountains, and hopeful of a great future, based upon the mass within its limits, and the great potential country beyond, as any of its inhabitants, asked or unasked, would readily have told you. Hence there was joy in the train, from Jimmy Grayson down, because the next day was to be Sunday, a period of rest, an epoch to be made, nothing to write, but just rest, sleeping, eating, idling, loathing, talking—whatever one chose to do. Only those who have been on arduous campaigns can appreciate the luxury of such a day now and then, cutting like a sweep of green grass, across the long and dusty road.

"They tell me that Grayville has one of the best hotels in the mountains," said Burton to Harley, his leather correspondent. "That you can get a dinner in a dozen courses, if you want it, and every course good; that it has real porcelain-lined bathtub, and beds sure to cure the worst case of insomnia on earth. Do you think this improbable, this extravagant, but most fascinating tale can be true, Harley?"

"I live in hope," replied Harley.

"Jimmy Grayson has been here before," interrupted Hobart, of the New York Leader, "and he says it's true, every word of it; that you can get a dinner for a thing, that settles it; and here is a copy of the Grayville dinner; it has to be a pretty good town that can publish as smart a daily as this."

He handed a sheet to Burton, who laughed.

"There speaks the great detective," he said. "You know, Harley, how Hobart is always arguing from the effect back to the cause."

Hobart, in fact, was not a political writer, but a "murder mystery" man, and the best of his kind in New York, but the regular staff correspondent of his paper, the Leader, being ill, he had been sent in his place. Hobart was a Harvard graduate and a poet, with a taste for poetry, but he had a peculiar mind, and upon which a murder mystery acted as an irritant—he could not rest unless he had solved it—and his paper always put him on the boards. Now, he was restless and discontented, the tour seemed to him the mere reporting of speeches and obvious incidents called for the very edge of a fine intellect.

"Grayville, with all its advantages as a place of rest, is sure to be like the other mountain towns," he said, somewhat solemnly, "the same houses, the same streets, the same people, I might add, nothing out of the way."

Harley had taken the paper from Burton's hands and was reading it.

"At any rate, if Grayville is not unusual, it is to have an unusual time," he interrupted.

"How so?"

"It is to hear Jimmy Grayson speak Monday, and it is going to hang a man Tuesday. See, the two events get equal advance space. Two columns each, on the front page."

He handed the paper to Hobart, who looked at it a little while, and then dropped it with an air of increasing discontent.

"That may mean something to the natives," he said. "It may be an indication to them that their place is becoming important—a metropolis in which things happen—but it is nothing to me. This hanging case is stale and commonplace; it is perfectly clear; another witness; no doubt about his guilt, plenty of witnesses (witness; just out only five minutes; whole thing as bald and flat as this plain through which we are running.)"

He tapped with his finger on the door's ear-window, and his whole expression was so gloomy that the others could not restrain a laugh.

"Cheer up, old man," said Burton. "Four more bones and we are in Grayville; just think of that wonderful load, with its new wonderful beds and its new wonderful kitchen."

The hotel was all that they ridley expected, but the town down brought a beautiful Sunday, disclosing a pretty little frontier city with its green, dignified valley on one side and the fringing mountains, like a protecting wall, on the other. Harley

stepped into, and after breakfast came out upon the veranda to enjoy the luxury of a rocking-chair, with the soft October air around him, and the majesty of the mountains before him. But there was a persistent inquiring spirit abroad which would not let him rest, and this spirit belonged to Hobart, the "mystery" man.

Harley had not been enjoying the swinging case of the rocking chair five minutes before Hobart, the light of interest in his eyes, pruned upon him.

"Harley, old man," he exclaimed, "this is the first place we've struck in which Jimmy Grayson is not the overwhelming attraction."

"The hanging, I suppose?" said Harley, carelessly.

"Of course. What else could there be? It occurred to me last night, when I was reading the paper, that I might seize up a fracture or two in the case, and I was out of my bed early this morning to try. It was a fool's hope, I'll admit, but anything was better than nothing, and I've had my reward. I've had my reward, old man!"

He chuckled outright in his glee. Harley smiled. Hobart always interested and amused him. The instinctive way in which he unobtrusively rose to a "case" showed his natural genius for that sort of thing.

"I haven't seen Boyd yet," continued Hobart, excitedly, "but I've found out this much already: There are people in Grayville who believe Boyd innocent. It is true the people in Grayville murdered man—had been quarrelling in Grayville, and Boyd was at it with the slaty with the blood-stained knife in his hand, but that doesn't settle it."

Harley could not restrain an incredulous laugh. "It seems to me these two circumstances, without the other proof, are pretty convincing," he said.

Hobart flushed. "You just wait until I finish," he said, somewhat defiantly. "Now, I have learned, was a good-hearted, generous young fellow. The quarrel amounted to very little, and probably had been patched up before they reached their shack."

"That is a view which the jury evidently could not take."

"Of course; in the eyes of superior people."

"Now don't you try to be satirical—it's not your specialty. I mean to finish the tale. If you read the paper, you will recall that on the night when the murder occurred, was only a short distance from the mountain road, and there were three witnesses, Bill Metzger, a disolute cowboy who was pooling, and who, although Woodford's death, ran to the cabin and found Boyd, whose stained knife in hand, bending over the murdered man; Ed

Thorp, a tramp miner, who heard the same cry and who came up two or three minutes later, and finally Tim Williams, a town idler, who was on the mountain-side, hunting. The other two heard him he arrived, Boyd was still dazed and muttering to himself, as if overpowered by the horror of his crime."

"If that isn't conclusive then nothing is," said Harley, derisively.

"It is not conclusive; there was no real motive for Boyd to do such a thing."

"To whom? Did the knife belong?"

"It was a long-handled knife that the two used at the cabin."

"There you are! Proof no proof!"

"Now, you keep silent, Harley, and come with me, like a good fellow, and see Boyd in the jail. If you don't, I swear I'll poster the life out of you for a week."

Harley rose reluctantly, as he knew that Hobart would keep his word. He believed it the idlest of errands, but the jail was only a short distance away, and the business would not take long. On the way, Hobart talked to him about the three witnesses, Metzger, who reached the valley on the day of the murder, had been riding in from a town until a short time before the departure of Boyd and Woodford for their cabin.

They reached the jail, a conspicuous stone building in the center of the town, and were shown into the condemned man's cell. The jailer announced them with the statement:

"Tim, here's two newspaper fellows from the East wants to see you."

The prisoner was lying on a pallet in the corner of his cell,

and he raised himself on his elbow when Harley and Robert entered.

"You are writers for the papers?" he said.

"Yes, clean from New York; they are with Jimmy Grayson," the latter answered for them.

"I don't know as I've got anything to say to you," continued the man. "I ain't got no picture to give you, an' I had one I wouldn't give it. I don't want any language to be written up in the paper, with pictures an' things too, but I please the people in the East. If I've got to die, I'd rather do it quiet and peaceful, among the boys I know. I ain't no free circus."

"We did not come to visit you or to be for another purpose," Harley hastened to say.

He was surprised at the youth of the prisoner, who obviously was not over twenty-one, a spare boy, with good features, and a look half defiant, half appealing.

"Well, what did you come for, then?" asked the boy.

Harley was unable to answer this question, and he looked at Robert as if to indicate the one who would reply. The mystery man did not seek to evade his responsibility in the least, and promptly said:—

"Mr. Boyd, I think you will acquit us of any intention to intrude upon you. It was the best of motives that brought us to you, I have always had an interest in cases of this sort, and when I heard of yours in the train, coming here, I received an impression that there has been strengthening on my arrival in Grayville. I believe you are innocent."

The boy looked up. A sudden flash of gratitude, almost of hope, appeared in his eyes.

"I am!" he cried. "God knows I didn't kill Bill Wofford. He was my partner and we were like brothers. We did quarrel that morning—I don't deny it—and we both had been liquorish; but I'd never lay attack him a blow of any kind, least of all a foul one."

"Was it not true that you were found with the bloody knife in your hand, standing over his yet warm body?" asked Robert.

"It's so, but it was somebody else that used the knife. Bill went on ahead, and when I came into place I saw him on the floor an' the knife in 'im. I was struck all a heap, but I did what anybody else would a-done—I pulled the knife out. And then the fellows come in on me. I was rushed into a trial right away. Of course I couldn't tell a straight tale; the horror of it was still in my brain, and the effect of the liquor too. I got all mixed up—but before God, gentlemen, I didn't do it!"

His tone was strong with sincerity, and his expression was rather that of grief than remorse. Harley, who had had a long experience with all kinds of men in all kinds of situations, did not believe that he was either led or guilty. Robert spoke his thoughts aloud.

"I don't think you are guilty," he said.

"Everybody believes I am," said Boyd, with pathetic resignation; "and I am to be hanged for it. So what does it matter now?"

"I am going to look for the guilty man," said Robert, decidedly.

Boyd shook his head and lay back on his pallet. The others, with a few words of hope, withdrew, and when they were outside Harley said:

"Robert, were you not wrong to sow the seed of hope in that man's mind when there is no hope?"

"There is hope," replied Robert. "I have a plan. Don't ask me anything about it—it's vague yet—but I may work it."

Harley glanced at him, and seeing that he was intense and eager, he had his mind concentrated upon this single problem, resolved to leave him to his own course; so he spent most of the day, a wonderful October Sunday, in furious illness, in a rocking-chair on the piazza of the hotel, but gravely being a small price, he knew everything that was going on within it, for means of a sort of signal telegraph that the two corresponded squires. He was, for instance, that Robert was all the time with one or the other of the three witnesses, Metzger, Thorpe, and Williams, for the

In such chapters as "The Town Meeting," "The Federal Union," and "National Teaching" the author traces the growth of our national institutions and points their significance.

50¢ Tin, Uncut Edges, \$1.50  
HARPER & BROTHERS, NEW YORK

moment the most important persons in Grayville by reason of their conspicuous connection with the great case.

When Hobart returned, the edge of the sea was behind the high mountains, but he took no notice of Harley, walking past him without a word, and leaving himself somewhere in the interior of the hotel. Harley learned subsequently that he went directly to Jimmy Grayson's room, and remained there at least half an hour, in close conference with the Candidate himself.

The next day was a beach in the great campaign. Owing to train connections, which are not tridies in the Far West, it was necessary, in order to complete the schedule, to spend an idle day at some place, and Grayville had been selected as the most comfortable and therefore the most suitable. And so the luxurious rest of the group was continued for twenty-four hours for all—save Hobart.

Harley had never before seen the "mystery" man so eager and so full of suppressed excitement. He frequently passed his comrades, but he rarely spoke to them, or even noticed them; his mind was concentrated now upon a great affair in which they would be of no avail. Harley learned, however, that he was still much in the company of the three witnesses, although he asked him no questions. Late in the afternoon he saw him alone and walking rapidly towards the hotel, it seemed to Harley that Hobart's head was borne somewhat high and in a manner exultantly, as if he were overcoming obstacles, and he was about to ask him again in regard to his progress, but Hobart came more speedily without a word and went into the hotel. Harley learned later that he held a second secret conference with Jimmy Grayson.

In the evening everybody went to the Opera-house to hear the Candidate, but on the way Hobart said casually to Harley: "Old man, I don't think I'll sit in front tonight. I wish you would let me have your seats afterwards." "Of course," replied Harley, as he passed down the aisle and found his chair at the correspondent's table on the stage.

There Harley watched the fine Western audience come into the theatre and find seats, with some noise, but no disorder, a noise arising as what Jimmy Grayson would say, the other correspondents entered one by one—all except Hobart, and took their times he saw him near the main entrance of the building. Once by casual inquiry, learned that it was Metzger the cowboy. A man, naturally, was Thorpe, the tramp miner, and yet another, a tall third witness.

Kidnapping the three witnesses would attend Jimmy Grayson's meeting, which was natural, however, as everybody in Grayville took upon himself the task of instructing them as to the methods,

the manner, and the greatness of the Candidate. He had done such a thing himself, upon occasion, the Western interest in Jimmy Grayson being so great that often appeals were made to the correspondents for information about him more detailed than the newspapers gave.

Harley studied the faces of the three witnesses as attentively as the distance and the light would admit, but they remained near the door, evidently intending to stand there back to the wall, a plan sometimes adopted by those who any wish to slip out quietly before a speech is finished. Harley, the trained observer, saw that Hobart, without their knowledge, was abdicating them as the shepherd greatly makes his sheep converge upon a common spot.

The correspondent could draw an inference from the faces of the three men, which were all of usual Western type, without anything special to distinguish them, and his attention turned to the audience. He had received an intimation that Jimmy Grayson would deliver that evening a speech of unusual edge and weight. He would indict the other party in the most direct and forcible manner, pointing out that his aims were moral as well as political, but that a day of reckoning would come, when those who profited by such evil courses must pay the forfeit; it was a part of the law of nature which was also the law of retribution.

The Candidate was a little late, and the Opera-house was filled in the last seat, with many people standing in the aisles and about the doors. Harley, standing again at the rear and rows of seats, saw the three witnesses almost together, and just to the right of the main entrance, where they leaned against the wall facing the stage. Hobart flattered about them, holding them in occasional talk, and Harley was just about to look again, and with increasing attention, but at that instant the great audience, with a common impulse and a kind of rushing sound like the slide of an avalanche, rose to its feet. The Candidate, coming from the wings, had just appeared upon the stage, and the welcome was spontaneous and overwhelming, that evening, when he first appeared before the footlights, that his face looked tense and eager, as if he felt that a great task which he must assume lay just before him.

He wasted no time, but went at once to the heart of his subject, the crime of a great party, the wicked ways by which it had attained its wicked ends, and from the opening sentence he had his great audience with him, heart and soul.

The indictment was terrible; it was a masterly way he summed up the charges and the proof, as a general miracle his forceful statements, could see them all marching in unison like the battalions and brigades, toward the common point, the exposed centre of the enemy.

Again and again, at the pauses between sentences, the cheers of the audience rose and ceased, and then Harley would glance over

"I don't want my honcin' to be all wrote up in the papers," he said

door toward the door; there, always, he saw Hobart with the three witnesses, gathered under his wing, as it were, all looking reply and intently at Jimmy Grayson.

The Candidate by and by seemed to concentrate his attention upon the four men at the door, and spoke directly to them. Harley saw one of the group move as if about to leave, but the hand of Hobart fell upon his arm and he stayed. Harley, too, was conscious presently of an unusual effect having the quality of serendipity. The lights seemed to go down in the whole Opera House, except near the door. Jimmy Grayson and the correspondents were in a semi-darkness; but Hobart and his three new friends beside the door stood in a light that was almost dazzling through contrast. The three witnesses now seemed to be fixed in that spot, and their eyes never wandered from Jimmy Grayson's face.

Familiar as he was with the Candidate's oratorical powers Harley was surprised at his strength of invective that evening. He had proved the guilt, the awe-befitting guilt of the opposition party, and by his describing the punishment, a punishment sure to come, although many might deem it impossible.

But there would be a day of judgment; justice might sleep for a while, but she must awake at last, and the longer vengeance was delayed, the more terrible it became. Then was the guilty.

The audience was deeply impressed by the eloquence of Jimmy Grayson, receiving so well with their own views. Harley saw a look of awe appear upon the faces of many, and the house, save for the voice of Jimmy Grayson, was as still as death. Harley felt the effect himself, and the weird, unreal quality that he observed about the scene.

Once when he went over to make some notes he noticed that the words written a half hour before were scarcely visible, but when he glanced at the opposite end of the theatre there stood Hobart and the three witnesses, gathered about him in the very heart of a dazzling light that showed every changing look on the faces of the four. Harley's gaze lingered upon them, and again he tried to find something peculiar, something distinctive in at least one of the three witnesses, but as before he failed; they were to him just ordinary Westerners following with rapid attention every word and gesture of Jimmy Grayson.

The Candidate went on with his story of the consequences; the crime had been committed; the profits had been reaped and enjoyed, but sinning against justice, awake at last, was at hand; it was time for the wicked to tremble, the price must be repaid, doubly, trebly, fivefold. Now he pronounced the guilty party, the opposition, which he treated as an individual; he compared it to a man of his kind hidden his crime from the world; others might be suspected of it, others might be punished for it, but he could never forget that he himself was guilty; though he walked before the world innocent, the sense of it would always be there, it would not leave him night or day; every moment even before the full exposure it would be inflicting its punishment upon him; it would be useless to seek escape to think of it, because the longer the guilty victim struggled the more crushing his punishment would be. The correspondents forgot to write, and like the audience, hung upon every word and gesture of Jimmy Grayson, as he made his great denunciatory speech; they felt that he was stirred by something unusual, that some great and extraordinary motive was impelling him, and they followed eagerly when he led them.

Harley now the look of awe on the faces of the audience grew and deepened. With their overwhelming admiration of Jimmy Grayson they seemed to have conceived too a sudden fear of him. His long, accusing finger was shaken in their faces, he was not alone denouncing a guilty man, but he was seeking out their own hidden sins, and presently he would point at them his revealing finger.

Hobart stood with the three witnesses beside the door, still in the dazzling light. Harley was sure that not one of the four had moved in the last half hour, and Jimmy Grayson still held them all with his gaze.

Saves a Day

"20th Century Limited"

An urgent situation requiring your immediate presence in New York or Chicago can best be met by use of the "20th Century Limited." A little superior to any train in America, and particularly ahead in point of speed. Pre-eminently a train for busy people, but may be used with equal advantage by any one wishing perfection of last service with comfort. Runs daily, in each direction, between

## New Conceptions in Science

By CARL SNYDER

THIS is not a dry and arid treatise, unintelligible to the general reader, but a clear, comprehensive exposition of the results of latter-day scientific research and discovery. The underlying romance of science and scientific method has never been more convincingly set forth than by Mr. Snyder. The book will be nothing short of a revelation to the average layman, while of abiding value to the scientific student.

Illustrated. Cloth, \$2.00 net (postage extra)

HARPER & BROTHERS, PUBLISHERS  
FRANKLIN SQUARE, NEW YORK

FOR MEN OF BRAINS  
**Cortez CIGARS**  
-MADE AT KEY WEST-

Harley suddenly saw something like a flash of light, a signal glances, as it were, pass between him and Hobart, and the next instant the voice of the Candidate awoke into greater and more accusing volume.

"Now you behold the guilty man," said Jimmy Grayson. "I have shown him to you. He stands in the world full of pride and power, but he knows that justice is passing him, and that it will overtake him; he trembles, he cowers, he fies, but the avenging footsteps are behind him, and the sound of those rings in his frightened ears like a death-knell to his soul. A wall runs across his way. He can flee no farther, he turns back to the wall, raises his leader's averted eyes, and there before him looms a and a terrible voice proclaims, 'thou art the guilty man!'"

The form of Jimmy Grayson swelled and towered, his hand was raised, the long forefinger pointed directly at the four who stood in the dazzling light, and the hall resounded with the tremendous echoes of his cry: "Thou art the guilty man!"

As if lifted by a common impulse, the great audience rose with an indistinguishable sound, and faced about, following Jimmy Grayson's long, accusing finger. The man Williams threw his arm before his face, as if to protect himself, and, with a frantic cry, "Yes, I did it!" fell in a faint on the floor.

They were all on a train in Wyoming, four days later, and Harley was reading from a copy of the Grayville *Avant* an account of Boyd's release and the avowal that the people had given him.

"How did you trace the crime to Williams, Hobart asked Harley.

"I didn't trace it," it was Jimmy Grayson who brought it out by giving him 'the third degree,'" replied Hobart, though there was a quiet tone of satisfied pride in his voice. "You know that in New York when they expose a man at Police Headquarters to some such supreme test they call it giving him 'the third degree,' and that's what we did here.

It seems that Williams was in the saloon when Boyd and his partner quarrelled, and he knew they had a lot of gold from the claim in their eskin. His object was robbery. When he saw Wilford go on ahead he followed him quickly to the cabin, and killed him with the knife which lay on a table. He expected to have time to get the gold before Boyd came, but Boyd arrived then Williams, cunning and bold enough, came back as he were a chance passer-by and had been killed by Metzger and Thorpe. The other two were as innocent as you or I.

"I could not make up my mind which of the three was guilty, and I induced Jimmy Grayson to help me. It was right in line with his speech—no harm done even if the test had failed—and then the man who snatched the lights at the Opera-House, a friend of Boyd's, helped me with the stage effects. Jimmy Grayson, of course, knew nothing about that. I borrowed the idea. I have read somewhere that Aaron Burr let just such a device once convicted a guilty man who was present in court as a witness when another was being tried for the crime."

"Well, you have saved his life to an innocent man," said Harley.

"And I have set a guilty one free." And then, after a moment's pause, Hobart added, with a little shiver:

"But I wouldn't go through such an ordeal again at any price. When Jimmy Grayson thundered out 'Thou art the guilty man' it was all I could do to keep from crying, 'Yes, I am, I am!'"

### Musical Vandalism

Erwan MacDowell, the American composer, was talking not long ago with a friend who had just come from a concert given by the students of a conservatory of music—affairs which are usually avoided by the musically indolent.

"I have just heard," remarked the friend, "one of the girls, a little girl of eight, play your 'To A Wild Rose' beautifully."

The composer sighed dejectedly.

"I suppose," he said, "she pulled it up by the roots!"

Roller-Skating on a Tight-Rope

A master feat of skill that is being performed at one of New York's pleasure resorts consists in what the posters call "an aerial skate for life." The performer, with a pair of roller-skates attached to his feet, is carried to a platform raised fifty feet above the ground, from which two parallel cables extend downward at a sharp incline, terminating two sturdy handles attached to the platform he mounts the cables, placing

The Performer about to begin his Aerial Skate

the wheels of his skates firmly on the wires. At a given signal he releases his hold on the handles and slides down the inclined cables at terrific speed. As he nears the bottom he throws a somersault and lands in a net placed at the end of the structure. A false move at the start of his downward flight would mean a serious mishap, and the exhibition is watched with keen suspense by interested crowds.

Interesting Facts about Our Exports

The fact that the exports of the United States in the fiscal year just ended are greater than those in any preceding year except 1903 lends special interest to a statement presented by the Department of Commerce and Labor, which shows the relative growth of the export trade of the principal countries of the world for a term of years, and compares that of the United States with other countries. The table in question shows some facts of especial interest to Americans, one of these important facts is that the United States, which occupied fourth place in the list of exporting countries in 1870, now shows a larger total in the fiscal year which represents the latest available year than does any other country of the world.

The United Kingdom, France, and Germany showed in 1870 a larger total of domestic exports than did the United States, the figures being for that year: United Kingdom, 371 millions; Germany, 552 millions; France, 541 millions; and from the United States, 377 million dollars. By 1900 the domestic exports of the United States exceeded those of France in Germany, but were still below those of the United Kingdom, the figures for that year being: United Kingdom, 1045 millions; Germany, 867 millions; France, 689 millions, and the United States, 824 millions. In 1900 the United States occupied a similar relation, the figures for that year being: United Kingdom, 1292 millions; Germany, 762 millions; France, 724 millions; and the United States, 845 million less. In 1902, the latest available year for which the figures of the United Kingdom, Germany, and France are available, the figures of domestic exports stood: United Kingdom, 1379 millions; Germany, 1113 millions; France, 818 millions; while those of the United States for the twelve months ending June 30, 1903, are 1392 millions, stated in round terms, the precise figures as announced by the Bureau of Statistics being \$1,392,087,872.

## Charles Lamb's Love Letters

A notable article embodying some hitherto unpublished letters of Charles Lamb and of the lady whom he wished to marry. The letters are printed in full and tell for the first time the story of the great essayist's one romance.

## Travel

Mr. Zangwill contributes a delightfully poetic paper telling of a wandering trip through Italy. His paper is illustrated by Louis Loeb, who accompanied Mr. Zangwill on his journey.

## Alice Brown's Serial

The second part of Miss Brown's remarkable story appears in the September Magazine—a dramatic and moving instalment of this most unusual novel. Illustrated by W. T. Smedley.

## An Indian Composer

Miss Natalie Curtis, a niece of the late George William Curtis, tells of a remarkable Indian in the far Southwest, who both composes the music and writes the words for songs, one of which is reproduced in part.

## Short Stories

There are eight short stories in the September Magazine. Among the authors represented, in addition to Mrs. Deland, are Robert W. Chambers, Alfred Ollivant, Norman Duncan, Roy Rolfe Gilson, Sewell Ford, and May Harris.

## A Paris School Colony

Stoddard Dewey tells of a "fresh air" colony conducted by the municipal government of the Tenth Arrondissement of Paris. His article is accompanied by six charming drawings by the famous French artist M. Boutet de Monvel.

## English

Professor Thomas R. Lounsbury, of Yale, has written an intensely interesting and important paper dealing with "The Standard of Pronunciation in English"—a paper that comes to some radical conclusions.

## An Old Chester Tale

Margaret Deland's "Old Chester" story in the September Magazine is entitled "The Note." It is a story involving a question of honor—another story in which Dr. Lavendar proves himself the master of a difficult situation.

## Science

Professor Allan Macfadyen, of London, contributes an important scientific article on "The Effects of Low Temperature." He takes up the question of the effects of low temperature on animal life.

## Pictures in Color

The pictures in color and tint in the September Magazine include paintings by W. T. Smedley, Louis Loeb, and M. Boutet de Monvel. All are dainty and effective.

## COMMENT

A report that an extraordinary session of the Fifty-eighth Congress would be convened in October became current after a conference had been held at Oyster Bay between President Roosevelt and the Republican members of the subcommittee of the Senate Committee on Finance. The reason given for the alleged intention to make the date earlier than Monday, November 9, was that while the session is to be called primarily for the enactment of the legislation needed to render operative the Cuban Reciprocity Treaty, the administration also desires to bring forward as speedily as possible a bill providing for a more elastic currency system than at present exists. Still another motive for the change of date was said to be the wish to bring about an adjournment of the regular session of Congress before the meeting of the national conventions of the two principal parties. According to Senator Aldrich, a currency bill has not yet been drafted, nor will be until influential Democrats, as well as Republicans, in both the Senate and House of Representatives have been consulted, the hope being that a non-partisan measure may be evolved. Should the bill be confined to a simple provision that the money received by the Federal government in payment of customs duties shall, instead of being stored up in the Federal Treasury, be deposited in the national banks, government bonds being given as security therefor, it could probably be passed, though not without a prolonged debate in both Houses.

An attempt to make any bonds except those of the United States government receivable as security for deposits of government money would be almost certain to fail. That such an attempt will be made, either by the framers of the bill or in the form of amendments, is probable enough, and the resultant discussion is likely to occupy Congress for an indefinite period. Whether an adjournment can be compassed before the meeting of the national conventions is extremely doubtful. Senator Gorman, the leader of the Democratic minority in the Senate, can prevent such an adjournment if he chooses, and from a strategic point of view it may be expedient for him to do so. The announcement of a purpose to convene Congress in October has provoked widespread resentment on the part of Representatives, who point out that their political interests require them to be present in their

respective districts in the month preceding election day, and it now seems probable that Mr. Roosevelt will heed the protests and revert to his original intention of calling the extra session on November 9. Whether Congress, beginning to sit on November 9, will have time to finish urgent business and adjourn before the meeting of the national conventions depends partly, of course, upon the dates at which the last-named bodies shall convene. That is a question for the Republican national committee to settle. The Democrats in 1904 will invite their opponents to fire first. They will not hold their own national convention until after they know definitely when the Republicans will nominate and what platform they will put forward.

There are those who think that the later the national conventions are called, and the shorter the ensuing campaign, the better. Chief-Judge Parker, of the New York Court of Appeals, has recently expressed an opinion to this effect. He pointed out, what is perfectly true, that much less time is now needed for the exposition of campaign issues than was the case in the days before steam and electricity were applied to transportation and intercommunication. It certainly is no longer necessary or expedient, as at one time it was supposed to be, to nominate candidates two years, or even a year, ahead. Of late years an interval of from four to five months between nominations and elections has usually been deemed sufficient. Whether the campaign period should be still further abbreviated is by no means as clear to all political observers as it is to Judge Parker. If the purpose of an election were merely to take a census of public sentiment with reference to particular candidates and programmes, national conventions might not need to be called more than two or three weeks before election day. Each political party, however, has a twofold aim: it desires, first, to produce a change in public sentiment by making converts from the ranks of its opponent, and, in the second place, so to intensify the loyalty of its own adherents as to bring all of them to the ballot-box.

Some expert politicians held that every Presidential election is carried by the floating vote,—by which we do not mean the purchasable votes, the proportions of which are much exaggerated in the popular belief. What we have in mind is the suffrages of those who do not belong, by conviction or habit, to any one political party, but who vote in each Presidential year for the party or the candidate most likely, in their opinion, to promote the welfare of the country. Other politicians, equally experienced, have asserted that the party destined to win in a Presidential contest is the party which succeeds in bringing to the ballot-box the largest percentage of its own vote. The truth is that both factors are important, and in order to make them operative a good deal of time is obviously needed. It is by long and patient argument that clear-headed and high-minded men are converted; and it is only through the creation of enthusiasm that a party's own vote can be brought out. Five months will scarcely be regarded as an excessive amount of time to spend in enlightening voters and in arousing a fervent interest in political questions, when we bear in mind that only once in four years have the American people an opportunity of taking part in the executive government of their country; that, although nominally sovereign, they are sovereign but for a day, and that their sovereignty is restricted to the single act of depositing a ballot. Here we may point out that one reason why Senator Gorman may desire to keep Congress in session until after the national conventions have been held is that campaign speeches may then be made for or against candidates and platforms in the Sen-

ate and House of Representatives, and circulated gratuitously in the *Congressional Record*.

It is but a straw, yet it is worth marking, as showing how the political wind is blowing in the Southern States. We refer to the poll of some five hundred prominent Democrats of Tennessee, just made by Mr. Frank M. Thompson, Chairman of the State Democratic Committee. The poll was made for the purpose of ascertaining their choice of candidates for the Democratic nomination for the Presidency in 1904. The result was that out of 502 representative Democrats in Tennessee, no fewer than 384 expressed a preference for Chief-Judge Parker of New York. Ex-Senator David R. Hill received two votes, ex-President Cleveland nine, Senator Gorman twelve, and William J. Bryan 155. The weakness of Senator Gorman is not more surprising than the persistent strength exhibited by Mr. Bryan. We have repeatedly expressed the opinion that it is a mistake to assume, as some Eastern newspapers have done, that Mr. Bryan has been eliminated as a political factor even in the Southern States. That he holds his own in the West, Senator Newlands of Nevada testifies. In a recent interview the Senator says that although Bryan will not be a candidate for the Presidential nomination this year, he is still the strongest man in the West,—the only Democrat, indeed, who can hold Mr. Roosevelt in check in that section. In the trans-Mississippi States his leadership is undisputed, and his influence would be of material help to a Democratic candidate.

We have warned some of our Democratic friends in the East that they have undertaken too large a contract in proposing to read Mr. Bryan out of the party, and we have expressed the opinion that nobody can eliminate Mr. Bryan except Mr. Bryan himself. He injures himself, as well as his party, when he picks out for special vilification a man so universally respected as is ex-President Cleveland. We regret to see also that he seems inclined to oppose Judge Parker, although it is certain that the latter voted for the Democratic nominee in 1896 and 1900. Does Mr. Bryan really desire the Democratic party to be beaten unless it can win under his own leadership? Does he not see that if hereafter he can be justly accused of opposing or even of only giving lukewarm support to the nominee of his party in 1904, he will forfeit the chance of securing the nomination at some future time? Had Henry Clay walked in his tent in 1840, would he have obtained a third nomination for the Presidency in 1844? Nothing is more probable than that Mr. Bryan's claim would one day be recognized, should he now evince a conciliatory and self-sacrificing spirit, and by his energy and devotion contribute powerfully to the triumph of the Democratic nominee next year. Mr. Bryan is still a young man. He has, in the natural course of things, many years of activity and usefulness before him; and no man in American history has had a more splendid opportunity of benefiting his party and his country since Henry Clay, though passed over in 1840 in favor of William Henry Harrison, forgot his griefs, seized the Whig standard, and bore it to victory.

Judge George Gray, who himself is discharging the function of umpire in a labor dispute in Alabama, has complied with the request to appoint a seventh member of the Anthracite Conciliation Board, which is considering the controversies between operators and miners in Pennsylvania. He has designated Mr. Carroll D. Wright for the purpose. Mr. Wright, who is now sixty-three years old, has long taken an active part in the discussion of labor questions. For some fifteen years he was Chief of the Massachusetts Bureau of Labor Statistics. In 1885 he was appointed by President Cleveland the first Commissioner of Labor, and he was reappointed to that office by President McKinley in 1900. In 1903 he was one of the commissioners who investigated the railroad strike in the West. When the Anthracite Coal Strike Commission was nominated last year, Mr. Wright was made the recorder of that body, and subsequently was appointed a member. So far as the miners are concerned, the selection of Mr. Wright as umpire seems to give satisfaction. The officials of the miners' union in the Wyoming region say that while the umpire may not decide in their favor on many of the questions in dispute, they will be glad to see the questions settled one way or another. One of the individual operators has

expressed the opinion that the miners will be disappointed in Mr. Wright, as in fairness he will be bound to decide in favor of the operators on many points. Whatever his decision may be, the prevailing, though not universal, belief is that it will be accepted by the mine-workers.

One of the grievances of the miners is the computation by some companies of the ten-per-cent. increase on the net, instead of the gross, earnings of the men; another and more serious grievance is the alleged discrimination against former strikers. The firm of Cox & Co. agreed to take back all the striking miners except those who were under indictment for crime at the time when the strike was settled. A majority of the men who were accused of misdemeanors during the strike have been acquitted, or have had their cases ignored by the Grand Jury. It is computed, however, that three-fourths of them are still idle. This enforced idleness, the mine-workers contend, is a violation of the findings of the Anthracite Strike Commission. The Lehigh Coal and Navigation Company, when the strike ended, announced a willingness to abide by the decision of the commission. It is alleged, however, that in collieries controlled by them about 150 miners, many of whom took an active part in the strike, are still unemployed. The most vital question, however, in dispute between the miners and their employers relates to the right asserted by the companies to discharge men for any cause except membership in a labor-union. Should the umpire rule against the miners on this point, it is possible that the settlement effected by the strike commission may be imperilled. Mr. William Dettrey, president of the Hazleton mining district, has announced that if a verdict adverse to the miners is rendered by the conciliation board on the "right to discharge" question, he will resign his place on the board of conciliation. It is to be hoped that hereafter the conciliation board will be able to sit as often as three days a week, so that the business before it may be expedited.

A very important order was issued on August 10 by Postmaster-General Payne, the effect of which will be to make practically every railroad train in the United States a mail-train, and thus to place all railroads throughout their length under the protection of the United States government. It will be remembered that during Mr. Cleveland's second administration strikers were prevented by United States troops from interfering with a railway on the ground that they were obstructing the carriage of the United States mails. At that time, however, only certain passenger-trains were employed for the purpose, and there might be considerable intervals during the day or night when no mails would be transported over a given section of a road. Under the new order issued by the Postmaster-General, any train, passenger or freight, will be empowered to carry the mails, and the United States will hold itself responsible for their delivery. When the contemplated arrangements have been made, and the plans of the Post-office Department have been carried fully into effect, there will be very few trains on any railroad which will not be either regular or "special" mail-trains. In the event of interference on the part of strikers with any one of these "specials," the United States will accord it the same protection by Federal troops that has in times past been given to regular mail-trains. The *modus operandi* will be the following: the trainmen on all trains will be commissioned as employees of the postal service, and the Federal government will pay them a stipend for their services. It is expected that at the coming session of Congress the Postmaster-General will ask for a special appropriation to meet the cost of this innovation. Nobody doubts that the railway companies will gladly avail themselves of the opportunity of securing almost absolute immunity from mob violence. Some labor leaders, on the other hand, regard the Postmaster-General's plan with marked disapprobation. They speak with disgust of the "underground methods employed to battle with an improbable contingency." The contingency is not regarded as improbable by railway companies or by employees of the postal service in Washington.

The attempt to carry out the recent decision of the American Federation of Labor to organize the unskilled negro laborers of the South into labor-unions is encountering a great deal of resistance on the part of the white race in Mississippi and

Louisiana. Organizer Leonard has been driven out of Vicksburg, and it is reported that the Federation will appeal to President Roosevelt to interpose and secure to him protection in that town. The New Orleans States, which has been a strong sympathizer with union labor, declares that the organization of negroes into labor-unions ought not to be tolerated by the whites. It predicts that consistency on the part of white unions in encouraging such organizations will bring about the ruin of labor-unionism in the Southern States. It expresses the conviction that the most insidious and dangerous movement made toward the amalgamation of the white and black races in this country is the disposition of the Federation of Labor to organize negro unions. There is, in the judgment of the New Orleans States, but a step between industrial fraternity and social equality, and a very short step at that. It denounces the experiment undertaken by the Federation as not only a foolish, but a perilous one.

Although the beginning of the Mayoralty campaign in the city of New York is now close at hand, it is still impossible to give positive answers to the questions, Will Mayor Low be the fusion candidate? and, Whom will Tammany Hall nominate? Mr. Hermann Ridder, of the German-American Reform Association, persists in saying that under no circumstances will that organization again support Mr. Low. Mr. Jacob A. Cantor, who was elected President of the Borough of Manhattan on the fusion ticket, seems disposed to return to Tammany Hall, but Mr. John C. Sheehan and Mr. William Hepburn Russell assert that the Greater New York Democracy will continue to support Mr. Low, should he be renominated, though both declare that it would be expedient this year for the friends of good government to unite upon a Democrat. They point out that anti-Tammany Democrats are naturally averse to placing the control of the municipal administration in Republican hands in a Presidential year, thus helping to give the electoral vote of the State to a Republican candidate for the Presidency. The only Democratic names suggested on the fusionist side are those of District-Attorney Jerome and ex-Secretary John G. Carlisle. It is no objection to the latter that last year he attended the Democratic State convention as a Tammany delegate. It will be remembered that a number of distinguished gentlemen who have never been connected with Tammany Hall were invited to attend that convention for the good of the party.

Mr. Jerome's chances of securing the nomination would be better if it were certain that he retained the popularity which he possessed two years ago. He was undoubtedly a tower of strength to the fusionists in the last campaign. Now, however, he is alleged to have offended the labor-unionists by the vigorous part which he has taken in the prosecution of walking delegates accused of blackmailing employers and embezzling the funds of their unions. We do not think so much of the great majority of labor-unionists as to believe that Mr. Jerome has lost ground in their esteem by the energetic discharge of his official duty. A rumor is still current that Mr. Murphy, the present head of Tammany Hall, will, during the Mayoralty campaign, be indicted for complicity in a violation of law alleged to have been committed by the Dock Board appointed by Mayor Van Wyck. Another incident, which has had a sobering effect upon the Tammany plant, is Mr. Hermann Ridder's announcement that it must not be imagined, because he is opposed to Mayor Low, that he will support a "yaller-dog" ticket put forward by Tammany Hall. He has explained that by "yaller dog" he means anybody who, however reputable personally, has at any time been known as one of Mr. Croker's particular friends or favorites. He has added that this definition bars out Representative George B. McClellan. There are indications that Mr. Hugh McLaughlin means to demand the nomination of Mr. Bird S. Coles, on the ground that the vote cast for him, when he ran for the Governorship in 1902, shows conclusively that he could be elected Mayor. There is absolutely nothing to be said for Mr. Coles that cannot be urged with ten times greater emphasis on behalf of Mr. Edward M. Shepard, who, moreover, deserves a nomination, because he consented to lead a forlorn hope in 1901.

Before the Cuban Senate adjourned, it ratified a treaty by which the United States ceded to Cuba whatever title to the

Isla de Pines may have acquired from Spain by the Treaty of Paris; and also the treaty by which Cuba leases permanently to the United States sites for naval stations at Bahia Honda on the north coast and at Guantanamo on the south coast of the island. We covenant, it should be noted, to pay the Cuban government a yearly rent of two thousand dollars for the naval stations, and also to repay it for the sums advanced in expropriating private landowners on the sites leased. The general treaty explicitly embodying the terms agreed upon in the Platt Amendment which had to be made a part of the Cuban Constitution before we would consent to the evacuation of the island was not acted upon by the Cuban Congress. The failure to ratify the general treaty may prove to have been a mistake from a financial point of view, for it would probably have tended to give a fixity to Cuban values highly desirable at the present time, when the Havana government desires to effect a loan of thirty-five million dollars in the United States or Europe.

The latest news received from Bogota is more favorable to the ratification of the canal treaty. In the first place, it turns out that the extra session of the Colombian Congress, called for the specific purpose of discussing the treaty, does not, as has been mistakenly assumed, on July 30, but may be prolonged until the regular session begins next year on the day fixed by statute. In the second place, President Marroquin on July 16 sent to the Congress a message advocating a ratification of the treaty, and throwing the responsibility for the consequences of its rejection exclusively upon the Congress. What those consequences might be he intimated by pointing out that an acceptance of the treaty would gratify the State of Panama. It is an obvious inference that a rejection of the document would be resented by that State. Recent intelligence from the isthmus confirms the belief that a failure to ratify the treaty would be quickly followed by a revolt of the States of Panama and Cuzco (which, between them, comprehend the whole Pacific coast of Colombia) and the establishment of an independent republic. According to one report, the engineers of the movement have so far matured their plans as to select peripatetic officers for the proposed new commonwealth. That the Colombian government would be able to avert the uprising is improbable, for it seems that, with the exception of fewer than 100 men, the Colombian troops were long since transferred from the isthmus to the vicinity of Bogota, and their transportation back to the isthmus would take several weeks.

Labor legislation in Australia is held responsible—by some persons, at least—for a surprisingly declining birth-rate. In newly settled communities we do not look for small families. But the Sydney correspondent of a London newspaper asserts that the Australian birth-rate is only a trifle larger than that of France, and that it exhibits an alarming tendency to become smaller still. And he has evolved the theory that the phenomenon is due to the increasing reticence of Australian women to accept the burdens of maternity, induced by the growing love of pleasure which is fostered by the numerous holidays and lessened hours of labor insisted upon by the unions. The sequences of his logic are clear, if not convincing. Unions, short hours, holidays, entertainments of pleasure, resentment with obstacles to enjoyment, disinclination to maternity, declining birth-rate, race suicide, extinction,—they fit together like the blocks in a mosaic and make a striking picture. They also make a fine puzzle for the sociologists.

The friends of the South at the North have watched with interest the primary election that has just taken place in Mississippi, just as they watched with anxiety the effort to stamp out poisons in Alabama. At the Mississippi primary, Major Varderman received the highest number of votes, but not enough to make him the official candidate of the Democratic party for the Governorship. A second primary, therefore, will be needed, to decide between him and Mr. F. A. Critt, who received the next highest number of votes. The State Constitution of Mississippi, as we have lately pointed out, prescribes an educational qualification for the suffrage. The enemies of the South at the North have maintained that this educational qualification was devised in order to disfranchise the blacks, a charge hitherto disproved by the willingness of the State to expend large sums of money for the

purpose of lifting the negroes to the required educational level. Major Vardaman has done his best to furnish ammunition to the enemies of the South at the North by opposing the further expenditure of money on the negro for educational purposes. Mr. Critt, on the other hand, insists that the State must continue to afford the negro an opportunity to improve his condition through education. Mr. Critt will undoubtedly be successful in the second primary, as he will be earnestly supported by Senator McLaurin, who is the most influential man in Mississippi, and who the other day was re-nominated unanimously for the United States Senate. No one knows better than Senator McLaurin the vital importance of attesting the good faith of his State in prescribing an educational qualification. Should that qualification be twisted into discrimination against the black race in Mississippi, and, if Judge Jones's resolute purpose to exterminate peonage in Alabama had been thwarted, the drift of public opinion at the North toward a toleration of the non-enforcement of the Fourteenth and Fifteenth Amendments of the Federal Constitution might be seriously checked. The true friends of the South are not those who applaud everything that hothouse in that section are inclined to do in their exasperation of President Roosevelt's negro policy.

Attorney Folk is recognized as a candidate for Governor of Missouri, not by his own motion, but because he has commended himself to the people, who rejoice to have found one man who is not afraid. He is not without rivals, however. There is one Reed, who has announced himself, seeing that nobody seemed moved to announce him, and whose candidacy promises rare fun, judging from its introduction. Mr. Reed made a speech the other day in exhibition of himself, and the Missouri newspapers report him as saying little or nothing of the political condition of the State, but as gleefully asserting of Missouri that "countless rivulets whisper the music of content in woody dells, and all her valleys shake with the liquid laughter of myriad springs." Mr. Folk at about the same time made a speech from which the rivulets and the dells were conspicuously absent, but he made up for that omission with the remark that "the honor of the State has been peddled around to seekers of bribes for official influence." There is not so much of poetry in this as in Mr. Reed's "blue-grass that lifts the borders of winter's smoky shroud and prophesies that vernal suns again will shine," but it impresses one as being more appropriate, when we recall the story of the baking-powder trust and of the weeping Lieutenant-Governor's consequent confession. Then again, Mr. Folk rings out with, "Every citizen must march under either the flag of decency or the banner of iniquity," while Mr. Reed is soothing with the assurance that "over all are skies painted by magic's matchless brush, with wondrous changing shades of softest blue, through which the flood of yellow sunlight falls like drifting waves of powdered gold." We read in a St. Louis newspaper that although there have been nineteen boodle convictions during the last twenty months, not a boodler has as yet reached prison. Mr. Reed's allusion to "the drifting waves of powdered gold" may be interpreted as a delicate and recondit allusion to that lamentable fact, as it is seen from the point of view of the dominant political machine, but plain people better like the plain words of Attorney Folk that the corruptionists are "intrenched behind millions of dirty money." The nor too long—if he goes on as he has begun with his roseate skin and his verdant suns; but it will pin its faith to the man who pounds the public plunderers.

President Roosevelt's latest prescription for improving humanity includes courage, patriotism, and common sense as indispensable ingredients in the make-up of a valuable citizen. Count Tolstoi is not with him. The Count is strongly opposed to patriotism, and declares, as lately reported, that it is an evil thing which creates armies, produces wars, divides the human race, and is in its very essence anti-Christian. There is little use of arguing with or about Tolstoi, whose views are highly individual and are not intended to fit in with the prevailing policies, but his denunciation of patriotism seems too sweeping to tally even with his own opinions. We do not doubt that he is a sincere patriot himself, and loves his country and is earnestly solicitous for the welfare of his Russian fellow creatures. That is the essence of patriotism, and he

has given signal expression to it in *War and Peace*. The sort of patriotism that constantly schemes for the aggrandizement and enrichment of one's own country at any cost to any or all other countries, and at any cost of truth and fair dealing, is not a virtue, is not sound politics, is not good morals. To be sure, it exists; aye, abounds; but sometimes it is the last refuge of a scoundrel, sometimes the chosen standpoint of promoter, sensation-monger or contractor. It cloaks an evil purpose with an honored name. Tolstoi justly accuses Lincoln of patriotism, and therefore holds Garrison to have been the greater man. Lincoln can stand his censor, but his praise is pretty hard on Garrison. Practically in sixty-nine cases out of a hundred the alternative to loving one's own country is loving no country. It is not loving all mankind, as Tolstoi would have. The best lover of his kind and country at home is apt to be the best lover of mankind at large.

As the day of the reopening of the schools approaches, schoolboys will read with warm commendation the remarks of Dr. Goldwin Smith, communicated to the *World* on his eightieth birthday. "Having set out with a very weak constitution," he said, "I believe I owe my attainment of old age to my not being overworked at school as a child. At the two schools at which I was, one of which was Eton, work was light." No right-minded schoolboy wants to prejudice his chances of longevity by working too hard at school. And he seldom does it. School-teachers say that it is necessary to keep watch of some girls and see that they don't work too hard, but that almost every boy has a saving grace of laziness about him, which enables him to keep his health in the face of the most attractive opportunities of gathering in book-learning. Dr. Smith is not a very confident optimist about the future of the United States. He apprehends serious disturbances as a consequence of the war between labor and capital. He thinks our collection of multimillionaires is getting too big, and does not see any effectual means of stopping it, except, perhaps, by a social revolution if the evil becomes great enough to warrant it. He complains that log-rolling monopolies control our government; that divorce has made our marriages precarious and imperilled the purity of our social life, and that our universities are suffering from athletic mania. But these, after all, are only the passing observations of a looker-on. He would not risk a prediction as to where we are coming out.

The famous Yale class of '63 celebrated its fiftieth anniversary last June, and one of its members, Mr. Charlton T. Lewis, of New York, made a speech, which has lately been published in the *Yale Alumni Weekly*. Mr. Lewis is well known and honored hereabout. He talked about old times and the changes in work in colleges and out. Discussing whether colleges ought to develop the strong points of a one-sided man, or aim rather to strengthen him where he was deficient, he argued for the latter. He asked for men; for reasonably complete men. "If I could sum up in one word," he said, "the lesson of the hour, it would be a call to the generations of Yale never to subordinate manhood to work. It remains no less true to-day than of old and forever that 'in this universe there is nothing great but man, and that in man there is nothing great but mind.'" Mr. Lewis hit the right experts enough, money enough, enough organization and enough opportunity. If we don't subordinate manhood to work, we shall get along. What is to settle the labor problem, against that mob, the lynching problem? Manhood. Up lists, and the mobs. There is no other effectual barrier against tyranny.

As the *WEEKLY* goes to press this week the country is getting ready to be excited over the races for the *America's Cup*. At this writing, on the eve of the first race, there is lively interest, but not yet excitement. We all expect our boat to win an usual, and we can't be excited about it until Sir Thomas accidents, is going to win in spite of time allowance, no American observer admits doubt. The general sentiment is that Mr. Iselin's boat is a prodigy, and that the new *Shamrock*, though good, is not good enough.

## Are the Republicans Sure to Elect the Next President?

We have yet to read a Republican newspaper or meet a Republican politician that fails to express absolute confidence as to the success of the Republican nominee for the Presidency in 1904. The unanimity with which the confidence exhibited is, so far as the party is concerned, *affords*, of course, no guarantee of its justification. The Republicans do not feel to-day a whit more certain of electing the next President than the Democrats did in 1880; than the Whigs did in 1843; or than the Democrats in 1847. In 1875 the Democrats could point to the fact that Martin Van Buren three years before had secured 176 electoral votes against 754; and that the minority had been divided among the candidates of four factions, a union of which seemed impossible. Such a union was arranged at the last moment, however, and in 1840 William Henry Harrison obtained 234 electoral votes against 60 cast for Van Buren. This was a victory even more overwhelming than that which Andrew Jackson had gained in 1828, and, naturally, therefore, the Whigs in 1843 contented upon electing Henry Clay in the following year. Nevertheless, Clay was beaten, receiving only 145 electoral votes against 770 cast for James K. Polk. Under the circumstances mentioned as these were, their having carried to a victorious conclusion the war with Mexico, the Democrats felt warranted in the belief that nobody could beat their candidate, Lewis Cass, in 1848. Nevertheless, their candidate was defeated through the loss of the State of New York. The conviction that the Republicans will be more fortunate in 1904 than were the Democrats and Whigs at the three elections named, is based upon several assumptions: first, that the existing prosperity, the credit for which is claimed by the Republican party, will continue until November of next year; secondly, that a reunion of the Democratic party, as it existed in 1884-92, cannot be effected; thirdly, that Mr. Roosevelt, should be the candidate of the Republican party, will prove as strong as was Mr. McKinley in the pivotal States. Let us see whether these assumptions are well founded.

It is certain that in the States of New York, New Jersey, and Connecticut, scores of thousands of voters have lost money through the extraordinary drop in the value of high-class securities which has taken place on the Stock Exchange. It is perfectly true that this extraordinary shrinkage of value cannot be imputed to an industrial crisis, and that the scores of thousands of voters who have suffered by the shrinkage must ascribe their losses to some other cause. Rightly or wrongly, most of the sufferers attribute the shrinkage of values on the Stock Exchange to Mr. Roosevelt's programme of warfare against the trusts, a programme the concrete results of which are visible in the suit brought by the Attorney-General of the United States against the Northern Securities Company, and in the executive legislation enacted by Congress, which may be turned to account by the Bureau of Corporations in the new Department of Commerce. There is probably not a voter in the three pivotal States just named who, if during the last year and a half he has lost money through the shrinkage of values on the Stock Exchange, does not hold Mr. Roosevelt responsible, directly or indirectly, for his misfortune. From one point of view, this is unreasonable, for Mr. Roosevelt, of course, did not foresee the financial effect of his aggressive denunciations against concentrated capital. We are not here concerned, however, with the question whether, as a matter of right, Mr. Roosevelt ought to be more or less popular in New York, New Jersey, and Connecticut than Mr. McKinley was in 1900. We simply assert that, as a matter of fact, he is very much less popular in those particular States, and, so far as we can observe, is growing less popular every day.

Mr. McKinley himself was materially weaker in New York, New Jersey, and Connecticut in 1900 than he had been in 1896. This is a fact often overlooked, although of political significance in elections. In 1896 Mr. McKinley's plurality in New York was 268,669; in New Jersey it was 87,402; in Connecticut it was 52,545. In 1900, although, meanwhile, he had carried the war with Spain to a triumphant close, his plurality dwindled in New York to 143,696; in New Jersey to 56,999; and in Connecticut to 28,576. That is to say, within four years his plurality was cut down by about 45 per cent. in New York, by upwards of 50 per cent. in New Jersey, and by nearly 50 per cent. in Connecticut. With the tide of opinion ebbing at such a rate, Mr. McKinley himself might have found it difficult to carry New York, New Jersey, and Connecticut in 1904, even if no prejudice existed against a third term. Nor are these the only doubtful States in which Mr. McKinley's plurality fell off materially between 1896 and 1900. In the former year he carried Maryland by 32,224; in the latter year by only 12,141. In 1896 he actually carried Kentucky by 282 plurality; he lost that State four years later by 7975. Not only in Connecticut, but in all the other New England States, Mr. McKinley's strength declined rapidly in the four years following his first election. The figures are startling on this point. In 1896 his plurality in Massachusetts was 175,285; in Maine, 45,777; in Vermont, 46,490; in

New Hampshire, 36,794; and in Rhode Island, 22,978. In 1900 Mr. McKinley's plurality had shrivelled to 81,860 in Massachusetts; 28,415 in Maine; 28,719 in Vermont; 19,314 in New Hampshire; and 13,777 in Rhode Island. Last year the Democrats actually carried Rhode Island, and they are not without hope of electing their State electors in Massachusetts and New Hampshire, if not also in Maine.

Now what reason have we to suppose that Mr. Roosevelt would run as well in November, 1904, as did Mr. McKinley in 1900? It may be admitted that he is as strong as was his predecessor in most of the States west of the Mississippi, and in some, perhaps, a little stronger. He may sweep them all, and yet be defeated if he is beaten in all the former slave-holding States and in the Northern States of New York, New Jersey, Connecticut, and Indiana. It is undeniable that Mr. Roosevelt has irremediably offended the white race in all the former slave-holding States, and, moreover, he has a far smaller chance than had Mr. McKinley of carrying Delaware, Maryland, West Virginia, and Kentucky. His Democratic opponent should be able to count on large accessions of white Republican votes in every one of these border commonwealths. As for the relative popularity of Mr. Roosevelt in New Jersey and Connecticut, we have as yet no means of judging, except as far as these States must be held likely to be influenced by the sectional passions which affect their electoral colleges in the State of New York. Mr. Roosevelt has had an opportunity of showing how popular he is in New York, which is his native State. In November, 1898, with all the laurels of San Juan fresh upon his brow, he cut down McKinley's stupendous plurality of two years before from 208,409 votes to less than 18,000. In other words, a change of 1900 votes from one side to the other that year would have nipped Mr. Roosevelt's political prospects in the bud, and it is notorious that more than that number of votes were abstracted from the Democratic candidate by Mr. Croker's refusal to renominate Judge Daly. It seems to be certain that Mr. Roosevelt is to-day much weaker in his native State than he was in 1898. He still appears to have Mr. Platt behind him, as he certainly had seven years ago, but has made little or no gains of veteran politicians, who control many Republican votes in certain agricultural districts. As for his popularity in the city of New York, we know that, when he was nominated for Mayor, he ran far behind the normal Republican vote, and was beaten not only by Abram S. Hewitt, but by Henry George. Should Mayor Low be re-elected this year, he might undoubtedly render considerable assistance to Mr. Roosevelt in 1904; but should a Democratic Mayor be chosen, Mr. Roosevelt can hardly expect to escape defeat in his native commonwealth. If he is beaten in his native State, he is almost certain to lose New Jersey and Connecticut also, provided his opponent is a man calculated to heal the dissensions in the Democratic party. The Democrat who could effect such a unifying work in the East might as well give up success in Indiana, especially if the Democratic candidate for the Vice-Presidency should be selected from the last-named State.

Thus far we have taken for granted that there will be no industrial crisis, but that the prices of our agricultural and manufactured products will undergo no sensible decline before November, 1904. We have also taken for granted that Mr. Roosevelt will be enthusiastically supported by the Grand Army of the Republic, and loyally upheld by the engineers of the Republic's machines in such indispensable States as Ohio, Illinois, and Wisconsin. It remains to be seen whether the veterans and sons of veterans composing the Grand Army of the Republic will completely condone and quickly forget the treatment of their illustrious comrade, Lieutenant-General Miller; and whether the expert wire-pullers who opposed with the utmost vehemence the selection of Mr. Roosevelt for the Vice-Presidency will work themselves to the bone in order to keep him four years longer in the White House.

## Recent Comments on Lynching and the New Negro Crime

WHEREAS lynching, as a matter of fact, tends to repress the new negro crime, by which, of course, we mean the assault of a white woman by a negro, and whether the deterrent effect being admitted, it should on that account be tolerated by public opinion, are questions that have been recently discussed in an illuminating way by three eminent jurists and by Mr. John Temple Graves, of Atlanta, Georgia, who speaks from a thorough knowledge of the Southern country, which he suffered most from the new crime. Chief-Justice Love of Delaware, speaking at Charleston, New York, defended the course pursued in the White case by the courts of his State, which, it will be remembered, refused the request of white citizens that the negro reviser and murderer should be speedily tried. Any court, he said, that would listen to a mob and suffer it to prescribe judicial methods or even to determine, or procedure should be abolished as a mockery of justice

Justice. Chief-Justice Love added that the more brutal the crime, the more degraded the criminal, the more widespread and intense the public sense of outrage, the more imperative it is that courts of justice should give a calm, just, and fair hearing, and that the guilt be established, otherwise men may be punished for a crime they did not commit. This sounds plausible, and may even seem conclusive to those who fail to ask themselves how it happens that in New Jersey and in England, where the judicial punishment of criminals is exceptionally expeditious and certain, lynching is seldom or never heard of. As regards the notorious fact that in many of the United States negro murderers have through legal technicalities escaped the death penalty, Judge Woodward of the Appellate Division of the Supreme Court of New York, also speaking at Chautauque, asserted that the technical rules made use of by the guilty to delay the day of execution are the very rules which guarantee in the instant, the preservation of their rights, even in the face of popular clamor. This assertion also has a specious appearance till we puncture it with the question, Are innocent persons any more likely to suffer unjust punishments in England and New Jersey than they are in New York? Judge Woodward goes on to denounce as "foolish" the attempt to determine the efficiency of the criminal law by a reference to the time which elapses between the commission of the crime and the final action of the jury. If this be folly, it is a folly of which Englishmen and Jerseymen are proud.

The Hon. David J. Brewer, a justice of the Supreme Court of the United States, takes a different view of the matter. Judge Brewer begins by admitting that men would disgrace their manhood if they were not wrought to terrible excitement by the rape of white women by negroes, and he is willing to concede that a few lynchings had put a stop to the atrocious outrage, society might have condoned such breaches of its law. On the strength, however, of reports which he accepts, he assumes that lynching does not act as a deterrent. We shall see presently that, according to Mr. John Temple Graves, lynching does have a deterrent though inadequate effect, in the Southern States at all events. Proceeding to consider the method by which the epidemic of lynching may be stayed, Justice Brewer disagrees with Chief-Justice Love of Delaware, and with Judge Woodward of New York. He insists that the way to stop lynching is to establish a greater amount of public confidence in the summary and inevitable punishment of the criminal by courts of law. He recognizes that in many of our States men are afraid of the law's delay and the uncertainty of its results. If, on the other hand, all men felt sure that criminals would be promptly tried and punished, the inducement to lynch would be to a large extent removed. Justice Brewer went on to demonstrate that the establishment of public confidence is entirely practicable. Some years ago, addressing the American Bar Association, he advocated going away with appeals in criminal cases, and he still believes in the wisdom of that expedient. He recalls the fact that for nearly a hundred years there was no appeal from a conviction in criminal cases in our Federal courts; and no review, except in a few instances, wherein by two judges sitting together, a question of law was certified to the United States Supreme Court. Judge Brewer further reminded his auditors that in England it has long been the rule that there shall be no appeal in criminal cases, although a question of law is so reserved, and he is sure that, while he was minister to England during Mr. Cleveland's first administration, only two cases were so reserved. How are one doubt, however, he asks, that justice is fully administered by the English courts?

We pass to the subject addressed on "The Mob Spirit of the South," delivered at Chautauque by Mr. John Temple Graves, of Atlanta, Georgia. Mr. Graves, of course, did not deny that lynching is a violation, or rather repudiation, of the law, but he maintained it to be justified by the crime that provoked it. He said, "The problem of preventing lynching, but the larger and deeper question, how shall we root out the crime which always has provoked and always will provoke lynching?" The answer which the mob returns to this vital question is well known, and, according to Mr. Graves, the knowledge of the state of things at the South, he insists that in repression of rape. He asserts, not that the lyncher exterminates a sheer, cold, patent fact," he says, "the mob stands forth to-day South and such a criminal of crime as the white women of the land precipitate the annihilation of the negro race."

Mr. Graves considered at some length the various remedies that have been proposed for the new negro crime, and then suggested not, he holds, be adequate to eliminate lynching, because adequate as an efficient deterrent of the new negro crime. Ne-

grees, he said, are not afraid of death coming in a foreseeable, regular, and ceremonious way. They passionately love display, and the spectacular elements of a trial and execution, wherein the criminal plays the star part, appeals to their imaginations. On the other hand, the negro is awed by strange dangers and is intimidated by startling penalties. The negro is a thing of the senses, and for the black race and all similar races the desire of the senses must be restrained by the terror of the senses. Mr. Graves further argued that religion would not solve the problem, because we cannot expect the Christ spirit to become all-pervasive until the millennium dawns. Education, he contended, complicates the problem. The census showed, he said, that the criminal record of the negro was worse in the South since efforts have been made to educate him than it had been before. Every year of enlightenment appears to increase the negro's aggressive bitterness against the iron walls of a prejudice that has never yielded, and will never yield. Time aggravates the problem by giving increasing numbers to the negro, and politics complicates it, because at epochs of fierce civic conflict the passions and prejudices of faction may be moved to partisan alignment with the deep and lurking dangers of the race question. Mr. Graves thinks that even the repeal of the constitutional amendments and the firm establishment of the negro's inferiority in law and society, though desirable, would no longer suffice, so long as survivors of the present generation of blacks shall exist. For the negro would continue to remain in juxtaposition with the white woman, and he has been taught to dream with which amalgamation is regarded by the white race.

What remedies or palliatives would Mr. Graves himself suggest? (Observation has convinced him that a far more efficient deterrent of the new negro crime than is to be found in the death penalty would be a statute imposing amputation for the offense. There is no doubt that castration might be described as "cruel and unusual"—so is the crime for which it would be inflicted. Mr. Graves is convinced that such a penalty, if invariably enforced by statute, would fulfill the purpose of intimidating crime, as well as that of rendering impossible a repetition thereof by the criminal. He madly has adopted this lesson in the Southern States the mob in its restraining influence upon the brutal appetites of the mob. He offers as evidence two counties of Georgia, where this method of punishment has been employed by mobs, and where no subsequent assault of a white woman by a negro has ever occurred. Mr. Graves seems, indeed, to doubt whether the time is ripe for first propounded by the late Dr. William A. Hammond, the courts might, without a relapse into barbarity, adopt the lesson taught in Georgia, and enforce the law in new and startling terror for the suppression of the blackest and foulest of human crimes.

In Mr. Graves' judgment, however, there is only one logical, inevitable, and drastic solution of the race problem which confronts white men at the South. That solution is geographical separation. How the blacks shall be induced to emigrate, and whether they shall go, Mr. Graves does not pretend to say. He evidently believes, however, that success will be found, when white men throughout the nation are once agreed as to the imperative importance of the end in view. It is indisputably true that we are morally bound to provide the blacks with homes elsewhere, if we are resolved to tolerate them no longer in proximity to ourselves. Millions some of the vast and thinly populated tracts in her north-western settlements. It would, he doubts, be far more difficult and far more costly to transplant a large fraction of the negroes than it was to move the Indians from the Gulf States in the Indian Territory. To dislodge such a project, however, as entirely impracticable is equivalent to an admission that the race problem is insoluble, or to a denial that any such problem exists.

## Durbin of Indiana

THE public interest shown in Governor Durbin of Indiana excites surprise in some quarters. He has done nothing, say some astounded observers, except to get out the State troops to quell riot, and express himself in favor of a fair trial for criminals. Any Governor might do as much as that.

To be sure, every Governor ought to do as much as Governor have not done, and do it just as promptly. But all Governors forgotten the terrorism of the coal-strike days under the next supervision of Governor Shreve. They have read daily in the papers about lynchings and the violent acts of strikers, and about the hostility of the labor-unions to the National Guard, and about the sight of a State official doing his duty promptly and with vigor in

a crisis of public disorder has come to be a spectacle of the liveliest interest.

Joseph Folk, of St. Louis, promoter of hoodlums, and Governor Durbin of Indiana, suppresser of mob violence, both represent the vigorous enforcement of the laws. They have both become conspicuous because they have shown a vigorous disposition to do their duty, and because such duties as they have performed have been far too commonly shirked.

Outside of Indiana the people of the country don't know much about Governor Durbin. Most of them merely know him as an upholder of the law against mobs. That is enough for them. There is no way in which a level-headed Governor can make himself a national reputation so quickly as by showing himself the enemy of unauthoritative persons who, in hot blood or cold, attempt to defy the law, or take it into their own hands and administer it to suit themselves.

### The Pursuit of Happiness

The London Telegraph reports that one Dr. Paul Valentin is starting a school of happiness in that metropolis. The scheme sounds promising. The particulars of it include a course of lectures and the publication of a periodical to be called *The Normal Life*. The reputation of Dr. Valentin as a promoter of happiness has not penetrated as far as this, but the special educational work to which he seems to have set himself is worth doing, and if he is up to his job there would seem to be possibilities of a considerable success in his enterprise. For one sees a great many persons here, alone, and there are probably still more of them in London, who want very much and try very hard to be happy, but don't seem to know how to go about it. And what makes their case the more interesting is that many of them are persons who seem to have the means of happiness in abundant measure.

We are used to feel—to put it crudely—that folks who have health and money ought to be happy. And so they should. A sufficient income promotes comfort, and that contributes to cheerfulness of spirit; and to have health, of course, seems to feel well, and that is a long step towards feeling good. But how far do we have to look to find persons with health to squander and more money than they know how to spend, making strenuous efforts to attain happiness, and merely achieving impaired health? If you have health and money you can usually buy pleasure, but enjoyment is a different article; and even when you have got enjoyment, happiness may still elude you. Pleasure pulls, and sometimes demoralizes; enjoyment easily yields to weariness; but you don't get tired of being happy, and you may be ever so tired and be happy still.

Happiness is a state of satisfaction. One reason why it is so elusive may be because we human creatures are a complication of body, mind, and spirit, and require for our complete satisfaction a particularly nice adjustment of blessings and of conduct. If we indulge the body too much, the other two partners become suspicious; if we overmaterialize the mind, the body may break down; and if we bestow all our attention on mind and body, the spirit, ignored, takes a sure vengeance on us for our neglect. It is so difficult as to measure and direct our efforts as to appease all the demands of our triplicate natures, that the simpler way is to regard happiness as a by-product, give over all direct attempts to acquire a constant supply of it, and simply accept however much of it may come while we go about our business with such intelligence as we can. We can usually keep our bodies in fair repair if we are too lazy or too self-indulgent; if we have to exert our brains our minds, and bodies too, find occupation that is usually wholesome; and the discipline of work, done as it usually is, for others as well as for ourselves, helps to satisfy the exactions of the spirit.

It is another of common observation that people who are fully occupied at reasonably congenial tasks are usually happier than idler people, and work is very commonly prescribed as a panacea for discontent. But the remedy must fit the individual case. Work undertaken simply to make the worker happier may not yield that result. An idle millionaire may not find relief in stoneware-making, or even in a business the natural object of which is to make more money. The business may be more draining to him, and he may not care for mere money. The work must not only engage and exercise the mind, but in some way it must satisfy the spirit. To treat something and to work for it is a very likely basis for happiness. Folks who have all the material things that they want, and can think of nothing that seems reasonably attainable that they care to work for, are in a way to lead dull lives and run short of entertainments. We are in the habit of insisting upon them the high expediency of tending to and making fit their business to work for others. That is a good plan, if they can accept it; but the acceptance of it seems to involve some realization of human brotherhood, and that in turn seems to involve some acceptance of religion, which again in turn can hardly flourish without some belief in the immortality of the soul. One man believes vividly that his soul is immortal, or can achieve immortality,

and that his immediate future condition is closely related to his conduct in this life, he has a motive for effort irrespective of worldly ambition or the satisfaction of his material wants. For his soul's sake, if for nothing else, he may struggle, and fit his string, the gradual certainties, at least, will hardly fall off.

That an intelligent, civilized man should find a permanent measure of positive happiness without some basis of religion to support him does not accord with expectation. If the London professor tries to conduct a school of happiness without including a certain amount of religious instruction, his work will necessarily be superficial, and fall of the best results. He may teach manners. He may teach the greedy the folly of overeating, and the bibulous the folly of overdrinking. He may teach husbands to be civil to their wives, and vice versa. He may lay stress on the importance of keeping expenditures well within incomes, on the need of work for the able, and of alms for the selfish. All that is important, and may be helpful. But the spirits of thinking people have got to be satisfied in some way if they are to be happy. Nature gives us cravings,—hunger and thirst to insure due care for the body, mental aspirations to insure activity of the mind, spiritual aspirations to insure something else. If the mind rages we grow dull, and can't have much fun. Neither can we be happy if the cravings of the spirit find no response.

### Lord Curzon and India

Lord Curzon is to remain in India as viceroy for five years more, and this although a second term for a governor-general of India is even more of a novelty than for a President of the United States. India is to be reconstituted on his decision to accept the offer of Mr. Balfour's cabinet; yet one cannot overlook the fact that his own career may be somewhat adversely affected. We are accustomed to think of Lord Curzon in connection with India, owing in part to the fact that Lady Curzon has been very conspicuous at the viceregal festivities, and in part to the great estimation durbar, that we are tempted to forget that, as Lord George Curzon, the present viceroy really won his spurs as a rising Conservative M.P., and had already gone so far as to be an evident candidate for the reversion of the Tory premiership.

Now that Mr. Chamberlain is practically out of the running, the two most probable Tory promoters of the future are Mr. Wyndham and Lord Curzon; and while both were in Parliament together, there is no doubt that the latter was the more considerable figure. It is true, of course, that the governor-general of India is in many ways a much more considerable personage than the chief secretary for Ireland; the one governs a territory of nearly three million square miles, with a truly oriental splendor, while the other has only some thirty thousand square miles to look after, with a large parliamentary party to help him; the one is responsible for a population of three hundred millions, while the other has in his charge less than four and a half millions. Yet the importance of India is inversely as the square of its distance from England, and India sends no members to the Parliament at Westminster. There can be no question that Mr. Wyndham, by his Irish policy of conciliation, has not only added an element of stability to the United Kingdom, but has further palpably kept his party in power since the beginning of the year, in spite of Mr. Balfour's Education Bill and Mr. Chamberlain's fiscal policy. This is a claim which his party cannot but recognize when the time comes to appoint a successor to Mr. Balfour. Further, another five years in the trying climate of India may make further inroads on the viceroy's already delicate health, making political life an impossibility for him on his return. It is doubtful whether his stay will do very much for India, not because he lacks will or ability, but because the ratio of population to sustenance makes very great amelioration well-nigh hopeless.

### Secretary Root's Retirement

There seems to be no doubt that Secretary Root is determined to resign the headship of the War Department. It is well known that during his tenure of that office he has discharged not merely the functions of a Secretary of War, but also that of a Minister of the Colonies. He has undertaken not only to reorganize the regular army, now adjustable to a scale of one hundred thousand men, but also to formulate and administer laws for some ten millions of human beings, the inhabitants of the Philippines. Either one of these tasks would tax the resources of a first-rate intellect. The fact that Mr. Root has performed them both with an efficiency that, on the whole, must be recognized as admirable, has placed him in the front rank of American statesmen. Time will show whether the new staff system will act, in practice, give too much power to the Adjutant-General. But certainly, in that respect, it may be said that it constitutes a great improvement on the preceding state of things.

**The President Reviewing the Fleet from the Bridge of the "Mayflower"**

*As the "Mayflower" passed through the line of war vessels to receive the salutes of the fleet, President Roosevelt and his party of honor stood on the bridge of the yacht, and acknowledged the welcome of each ship in turn.*

Dressing Ship on the "Kearsarge"

The "Texas" Firing Her Salute

**THE GREAT NAVAL PARADE OFF OYSTER BAY**

*On August 17 President Roosevelt reviewed the most powerful fleet of American war-ships ever assembled before a President. There were four battleships, six cruisers, and ten torpedo-boat destroyers, ranged in four lines. The government yacht "Mayflower," carrying the President, ran down through the fleet and received the Presidential salute of twenty-one guns from each warship.*

### The Torpedo-Boat Collision

One of the features of the maneuvers incidental to the parade was a quick formation in straight-ahead line of five boats of the torpedo division. Just as they came under the "Barry's" steering gear was sprung, causing her to ram the "Decatur." The prompt action of the officers and men of the first averted a serious disaster.

Sir Thomas Linton    Admiral Dewey

Mrs. Roosevelt

### The President's Party on Board the "Mayflower"

## THE GREAT NAVAL PARADE OFF OYSTER BAY

After the review was over, the President received aboard his official yacht the "Mayflower," Rear-Admiral's Barber Smith, Coghlan, and Wile, together with the officers of the fleet and its naval attaches to several of the foreign legations. Later in the day, in the course of a visit which he made to the "Keatinge," Mr. Roosevelt took occasion in a speech to pay high tribute to Admiral Dewey and the officers and men of the "Olympia" in recognition of the Manila Bay victory.

*Mr. T. M. Hunter, one of the English Players*

*Mr. N. F. Hunter, of the Oxford-Cambridge Team*

*Mr. J. L. Low, Captain of the Visiting Team*

*Mr. L. H. Conklin, of Princeton*

*Mr. P. H. Jennings, another of the Yale Players*

## THE INTERCOLLEGIATE GOLF MATCHES

A team of golfers from Oxford and Cambridge has come to this country to play a series of matches with representative American players. In the first of their matches, held at Myopia, Massachusetts, with the Intercollegiate Golf Association, the visitors won by a score of 0 to 7. The English team is made up of picked players from the two universities; the American collegiate team is represented by three men from Princeton, five from Yale, and three from Harvard. The photographs are snap shots of the captains and some of the best players on the teams taken in one of their matches.

### CHAMPIONSHIP DIVING AT HIGHGATE, ENGLAND

*At an international aquatic contest which was recently held at Highgate, England, a display of daring feats of diving was given in connection with swimming and life-saving exhibitions. The photograph shows the competitors in the championship high-diving contest performing a perilous feat from the top of the exhibition stand, twenty-eight feet above the water.*

## RIVER-DRIVING IN MAINE—DOWN STREAM ON THE TRUNK OF A TREE

The life of the river-drivers in the lumber regions of Maine is an exciting and picturesque one. For logs which are floated down the streams from the timber regions to a sawmill, they are driven by a current of water which has a greater commercial value than the logs themselves. The river-drivers, however, are not content with floating the logs down the stream, but they are constantly watching the logs and the river-drivers consist in guiding the log down the stream, about as every one knows, by means of a pole, which is stuck in the log, and the driver sits on a log, using it as a seat, while his spiked shoes give him a firm grip on the log.

# Books and Bookmen

By James MacArthur

IN the issue of the WEEKLY following upon the death of Phil May there appeared a brief appreciation of the gifted and lamented young artist, and a page of his characteristic sketches. On this page appears one of the last of his full-page humorous character studies—a brilliant example of his art—drawn just a few days before he died. Phil May had achieved a world-wide reputation, and his taking off will be deeply regretted, and his premature death in especially a serious loss to Punch. When Mr. Mauser died, nearly seven years ago, Phil May took his place as chief among Punch's artists. It was in February, 1910, and Phil May was invited to occupy a seat at Punch's table, an honor reserved for very few. To draw for Punch is a very different and far less notable thing than to share the privilege of sitting at Punch's famous weekly dinners. Very few artists indeed had penetrated into this charmed circle. It was the London sketch which first gave Phil May the scope and canvas necessary for the exhibition of his original work in humorous character, if I mistake not, under the able editorship of Mr. Clement Shorter. His knowledge of London types was remarkable, one of his most characteristic books being *Gutter-Jargon*, humorous studies of the street-by life of the metropolis. He had Dickens' passion for exploring the East End—indeed, there was much in common between the two minds. "I am never tired of reading Dickens," he has often said, "I never find a dull page in his books. I think my favorite is *Oliver Twist*, and after that *David Copperfield*." And then he went on to speak of Dickens' "wonderful genius for characterization," and added, "he had the observant faculty as few men ever have. He spoke as truly of himself. He studied and made sketches in London, but he worked best out of the city. He was an indefatigable worker when the fit was on him, but he was Bohemian in his mode of life, and was seldom caught at it. He had ideas and plans, but work which never saw the light."

The late Mr. R. L. Farjeon was one of those prolific writers of popular novels, but the international copyright act, who, in common with several other English novelists, notably Mr. David Christie Murray, saw their work enjoy a wide circulation in cheap paper covers without any reward for their labors. Mr. Farjeon was a first-rate sensationalist in fiction; he was strong in plot which he cared for more than for character. As in the case of Mr. Murray, his later books showed a falling off, although *Pride of Ruze*, published not long ago, was a striking study of the dignified pertinacity and adaptability of the Jew in England. Mr. Benjamin Leopold Farjeon was, I believe, of Jewish extraction. He was fortunate in obtaining the praise and friendship of Dickens, whose memory he revered. It was with difficulty Mr. Farjeon could be induced in his later years to leave his home, but I recall the name of Dickens acting like a magnet on the occasion of a Dickens dinner some years ago at the Whitefriars Club in London, when Mr. Farjeon presided. Mrs. Farjeon, who survives her husband, is the daughter of our famous actor, Mr. Joseph Jefferson. Mr. Farjeon had a great fondness for the theatre, and was himself something of a playwright.

I have not read the *Love Letters of Margaret Fuller*, recently published, but I have read the observation which she made when Goethe, a Jew, had crossed. It is to be found in her characteristic effect: "I understand more and more of the character of the court in a literary way, since the affections and ideal hopes are so unproductive." And now Time has had a strange revenge on the writer of these sentences, by taking out these love letters and "turning the whole to account in a literary way."

A few weeks ago I quoted some passages in these columns from a correspondence between the Brownings in the days of their early acquaintance, on Carlyle's strong dislike of poetry. I have just

heard of a new story on the same theme which is told by Professor Goldwin Smith. It appears that Professor Smith was once a visitor with Carlyle at Lady Ashburton's house when Teagson was one of the circle at "The Grange." Teagson was asked to read one of his own poems aloud, but, to the surprise and disappointment of his gentle hostess and the public good, and, we may add, in courteous consideration of his hostess, crossed the room, and invited Carlyle to take a stroll in the grounds. The Sage accepted the invitation, and, during the stroll, the poet brought off his reading.

Years ago Mr. Hall Caine wrote one of his strongest pieces of fiction in *The Roadside*. The scene was laid principally in Iceland, and although it is many years since I read the story the permanent effect of its background stays in my memory. Yet the novelist had not been to Iceland for his "local color." Now we read in a morning paper that Mr. Hall Caine has confessed that his next novel will deal with life and customs in Iceland, and he is going there for six months to study the region and the local color. This is how a sarcastic poet views it:

From that far land he is to  
draw,  
The chill wind of the North  
Comes freshening with the Sun,  
and so:

The Summer forth forth  
To Iceland's firth, left behind,  
sits not his present plan;  
The proper study of mankind  
Is now no longer "Man"

He sees the Northern Lights flash  
and

About the midnight sky:  
For him the golden gyron mist:  
Their boiling springs on high:  
O'er modern things he is ac-  
cused of being old.

His artistic course he takes,  
In quest of local color and  
The fund of Icelandic makes.

Though other things he will not  
see,

Those mentioned are enough  
To suit the purposes of his  
Fictionist's art:  
Others will follow, for we know  
A chapter of the book  
To save the Saga of the Snow  
From turning out a "fool."

Here is a link to the biography. It occurs in an introduction which Mr. Andrew Lang has written for a new cheap English edition of Dumas's *Three Musketeers*, just published: "There is no real biography of Dumas. Nobody has collected and sifted all his correspondence, tracked his every movement, and pursued him through newspapers and legal documents. Letters and other papers, if they had been preserved, should be as abundant in the case of Dumas as they are scanty in the case of Molière. But they are left to the dust of unsearched offices, and it is curious that in France so little has been systematically written about her most popular, if not her greatest, novelist."

There is a lively account of the return of the Chinese court to Peking in the *Fortnightly Review*, by Mrs. Archibald Little, which makes entertaining reading. For example: of the Emperor we learn that she is of "the type so well known in every land where society exists. Were she an English mother she would, one feels at once, marry all her daughters to eldest sons, irrespective of how many of them were lianatics or confirmed dipsomaniacs." But this about the Emperor is especially amusing. It appears that at a party his Imperial Highness earnestly kissed a little American girl of five years. "How had the very ideas of such a thing ever been suggested to him?" asks Mrs. Little, who is an authority on Chinese life and manners. "No Chinese man thought of the whole length and breadth of the vast Chinese Empire over his wife or child, unless he has been taught to do so by a foreigner. No child-lifting mother ever kissed her child. The nearest she gets to it is when she says to her child, 'Come up to bed,' and, as it were, smothering it in her arms. The Emperor's conduct was evidently against the practice, so that directly he saw this foreign little girl he took her up and kissed her, as if it were the most natural thing in the world, and indeed repulsive process."

Phil May's last Cartoon, illustrating the line from Shakespeare, "A Twice-told Tale"

**SCULPTURE AT THE WORLD'S FAIR—MR. BELA L. PRATT'S  
"LIGHT AND DARKNESS"**

*Mr. Bela L. Pratt, the Boston sculptor, is preparing some notable statuary groups for the St. Louis Exposition. The groups are to surmount three of the towers of the Electrical Building, the principal design of each to be three allegorical figures representing "Light and Darkness." "Light," the central figure, will hold a star which is to be lighted at night with electricity, and which will be the largest single electric light ever used in an architectural decoration. Mr. Pratt first became known through the sculptural groups which he designed for the Chicago Exposition. His afterwards executed important commissions for the Congressional Library in Washington and the Pan-American Exposition at Buffalo.*

## THE WAR GAME C

A series of attacks upon the defences of Portland, Maine, are being made this week to simulate a possible German submarine force's entrance into the harbor at Portland. The squadron is commanded by Rear-Admiral J. S. ... Department of the East. It is expected that the games will yield valuable information.

## Saratoga in Full Swing

A SUMMER CAPITAL OF CHANCE—SARATOGA'S REMARKABLE EVOLUTION—ITS TEMPORARY DECLINE AS A FASHIONABLE SUMMER RESORT—WHAT MR. WHITNEY AND OTHERS HAVE DONE TO REHABILITATE IT—"THE NEWMARKET OF AMERICA"—SARATOGA AS IT IS TO-DAY.

NATURE intended Saratoga for a great sanitarium. Man has made it the world's summer capital of chance. Nature placed here fifty-two mineral springs, each different from the other, for the healing of the ills of the nation.

Man built great hotels, broad boulevards, a race-course, and half a dozen temples for the gambling votaries of the Goodson of Fortune, and Saratoga became the Mecca of the fashionable, frivolous, and fortune-wishing cosmopolites of the world.

If one could imagine a composite picture of Carlsbad in the early morning; of Brighton, as it was a quarter of a century ago, from 10 o'clock in the morning until noon; of Newmarket in the early afternoon; of Hyde Park during the hours when fashionable London goes on parade; of the boulevards of Paris and the casino at Monte Carlo in the evening, he would get a fairly accurate picture of the Saratoga of to-day.

This garden spot of the great North Country, nestling in the fertile valley between the Kayaderosawas and the Hudson, has passed through various stages of an evolution more wonderful, in some respects, than that of which Darwin dreamed. Fifty years ago Saratoga was the most fashionable summer resort in the United States, and the world's greatest spa. Everybody who made any pretense to social distinction made it his business to celebrate the Fourth of July in Saratoga, and remain there until the first of September.

But the descendants of Longfellow's Skeleton in Armor, or somebody else, rediscovered Newport and the thousand and one other summer resorts that are now scattered over the United States. The great army of the soldiers of fortune, with their camp-followers, straggled down on Saratoga, and the fashionable folk fled before the invaders. Palaces were built above the cliffs at Newport, cottages were erected by the sea at Narragansett and Bar Harbor, men and women of fashion peopled them, and Saratoga became the summer home of the demi-monde and the knights of the roulette wheel and the deal box. The race-course fell into the hands of the Guttenberg confederacy and, from a dividend-paying enterprise, it became an earner of deficits. Saratoga was in

the winter of her discontent, in the throes of unprofitable speculations.

Then, after the village had purged itself, of its own volition, of that which contaminated it, the Hon. William C. Whitney, August Belmont, the brothers Hitchcock, H. K. Knapp, and a few others gave to Saratoga its renaissance. They acquired control of the race-track and made it the "Newmarket of America." They put racing on a higher plane than it was even when the Lorillards and the Jeromes and John Hunter and William E. Travis were in the saddle. The old stables and pits were enriched, new stables, each worth a fortune, were hung up, and the racing at the Saratoga course to-day is better than it ever was, even in the halcyon days of the long ago.

With the new birth of the town came new people, and in these August days of the new century, Saratoga shares with Newport the distinction of being the most fashionable resort in the United States. An August day in Saratoga is worth living. For the invalid there is health in every breeze, and there is nature's medicine in the waters of every spring. No matter how late Saratoga may go to bed, she is up and doing by nine in the morning. There is the spring-water cocktail before breakfast, and after breakfast the music of superb orchestras until noon. Then luncheon and away to the track for an afternoon of racing. The races over, there is the drive to the Lake just before sunset, with a fish dinner by the lakeside or a dinner at the club on the return.

When the night shadows have settled over the town, the ball-rooms of the great hotels are lighted, the music of the orchestras flows out into the night, and the dance is on. After the dance the supper, and the day in Saratoga is done. It has been a day of elbow-touching, as they used to sing in "Pinafore," of "Rus-sian, French, and Prussian and, perhaps, an Englishman." The diamond king of South Africa will find himself sitting in the club-stand beside an Indian Maharajah, who will have a lord-sardier of Paris on his right, a German noble in front, and a Russian aristocrat behind him, while all will be looking at fashionable New York in the boxes that border the stand.

## **RACING DURING THE SEASON AT SARATOGA**

*Through the activities of Mr W. C. Whitney and his associates, Saratoga has again taken first place in the United States as a centre of horseracing, and is now, during the season, the Mecca for horsemen from all over the country. If its development continues as it has begun, Saratoga promises to become within the next few years the centre of turf interests in the world. The reader is referred to the article on the opposite page for an interesting description of Saratoga as it is to-day.*

**"A Son of Rest," at the Fourteenth Street Theatre**

*In Broadway and Curtis' new musical farce, "A Son of Rest," Mr. Nat M. Wells appears in the leading role of "Having Grabb," an outrageous wonderer with a talent for singing and dancing, who becomes involved in a series of adventures becoming to his reputation as the Harpe Thief of New York.*

**"Vivian's Pappas," at the Garrick Theatre**

*Mrs. Rice and Warr, who had the chief parts last season in "Are You a Mason," opened the season at the Garrick Theatre last week with Mr. Leo Thielmeier's new farce. The central figure in the plot is a New York show girl, who mistakes the affections of a family by mistakingly sending a telephone message to a certain place instead of to the house of the same name. Warr, Thielmeier, Johnson as love, chorus girls, and a salacious party are matched in delightful roles to provide the material for the plot.*

**THE FIRST NEW PLAYS OF THE SEASON**

### MISS CLARA BLANDICK

*Miss Blandick played the part of "Glory Quayle" in Lihler & Co's recent revival of "The Christian" at the Academy of Music, New York, and afterwards during its brief run in Boston. Later in the season she is to be leading woman for Kyle Belton, and will appear with him in a dramatisation of Mr. E. W. Hornung's "The Amateur Crackman"*

## THE NEGRO CRIMINAL.

MANASSAS, VIRGINIA, August 4, 1901.

To the Editor of *Harper's Weekly*:

Sir.—The recent discussion of the negro question averted to have precipitated two or three clear conclusions out of what has long been a mist of generalities. Your designation of the outrage and murder of white people as "the new negro crime" was itself no slight contribution to definite thinking on this subject. For are so few as to be negligible. This narrowing down of the class who are to be held responsible for the unhappy events which follow the commission of this unspeakable crime is an instance of the sharper analysis which promises to result from the present discussion. It is indisputably classed together. Any reasoning which seeks to explain either the crimes or the progress of the race without taking into the account racial stratification and lines of cleavage is sure to prove unconvincing.

It scarcely admits of doubt, for example, that the restlessness and sense of oppression which so appeal to sentimental reformers are characteristic not of the black but of the colored people propitiously called—that is, of those who have in their veins an admixture of white blood. For many of them have inherited not only the physical traits of their white parentage, but mental and moral peculiarities as well. Booker Washington is not a traitor, such as humor and sympathy. Not that the negro mind lacks these. But there is a well-marked difference in the quality.

Professor Du Bois in his rather hysterical book is raising the cry not of black people, as he says, but of white people. He is classed as negro-hater, whose aim is to bring into fierce the gallery of education in the South. Among an assembly of some two hundred negroes there was scarcely a single black face. The thought never to have been a suggestive and helpful phenomenon. His Providence—with a potent stubbornness—shall we not rather say in the world, is willing to bring good out of this evil. The criminal negro belongs to a class as definitely marked, classified not merely by blood. Not yet will I take any franchise on the other account for his condoning the franchise well to discuss the bearing of these things on the question. But I am surprised that what is manifestly the principal influence in been definitely mentioned. Let a few words on that point be my ready reply.

It may be that in some quarters there are signs and not the vigorous denial. My own observation is limited, but it leads to three doubt upon the affirmation. Groups of negroes in isolated neighborhoods have now a little more liberal behavior than they had before freedom came to them. But the influence in the most unfavorable locations is probably sufficient even to secure their final extinction. As for the growth of new negroes and negroes, that has without doubt made fast of a real, typical negro it is a matter of such complete indifference to me as to seem laughable were it not so serious.

We are the criminal negro to a more subtle and far-reaching influence than either of them. It is the fruit of a lack of discipline under a discipline that was made habit effective. In slavery the African race is such that they profit by a rather rough mass-standard of discipline in slavery days. That it was effective and was largely withdrawn, when the actual power of over-looked their leisure, was the unimpeachable conduct of mill-churning not merely the law of force, but the law of love as well. There is hardly a more significant fact in history than that these slaves did not rise up to fight for their own freedom.

Emancipation broke the link that bound white and black to freedom. The black was anxious to test the quality of his new goods, were also relieved at having no longer the responsibility

of caring for a dependent race. Both, as is now painfully evident, were lost for the white people neglected what before they had been careful about, the training of the negroes. There was now nothing to bring the two races together. The children no longer played with each other and had formed life-long attack-motives.

The negroes of a younger generation made matters worse, and constantly widened the breach, by the impudent assertion of "rights" for which they only cared as a means of annoying the white neighbors, and the worst of them soon began to make lives of their liberty. They no longer learned to obey. No white man had the right to make them do as their parents, ex-slaves, they considered beneath them, and so would not obey them, but not only go to school enough to make them conceited, but not enough to impress upon them the mental and moral discipline that might with negroes, this growing up of ignorant an entire generation who were never taught to "aim," as the black "nannies" used to say, is a more than adequate explanation of the criminality which from time to time horrifies the world.

This in outline is the history of the rapist. His naturally strong passions have been pampered by idleness and the absolute absence of restraint. He has been a drunkard and gambler all his life.

He is probably addicted to cocaine or some other vice drug, ex-slave. He is not of the same class with the grocer, the politician, and colleges, or with the steady, working people which are a majority of his own generation. To visit hatred and persecution on them on his account is rank injustice. Sometimes he is a vulgar social climber offered the vicious tendencies of both white and black and adds Caucasian kenosis to African brutality. Superfluous political privileges and mistaken encouragement regarding race only increase his boldness and confirm him in his set resolution to try nobody and to gratify his vicious instincts, cost what it may. One of these instincts is a thirst for publicity. An insatiable desire to draw public attention and to figure in the newspapers than would ever be helped by one not familiar with modern operations of the African mind.

In view of such considerations as those above set out, it is not surprising that the proportion of criminal negroes to the whole negro population is decidedly larger at the North than in the South.

Now, I might add, does it surprise us in this quarter that the more disciplined of all crimes unaverted and distract white men in the North as well as in the South. It is to be feared that the crime. Every encouragement should be given to the creation of B. Council and Booker Washington, who are striving to furnish discipline. The ennobling quality of work, the necessity of self-control and obedience to law, the cultivation of a friendly spirit are preaching with might and main. Industrial training is not in itself to be the salvation of the negro. It has its value, which willingness to work at all. That means the subduing of his vicious and idle nature. Slavery in its day supplied a superb discipline for that. For it required both work and obedience. But did note a substitute may be found. For of all the negro's discipline, I am, sir,

GEORGE B. WINTON.

[As the editor of the *Christian Advocate*, Mr. Winton speaks in this interesting letter not only with serious purpose and in the spirit of an upright man, but also with a Southerner's mind and the point of view that an intelligent Southerner takes. We publish the letter willingly as a valuable contribution to the perhaps the most important question in America to-day.—EDITOR.]

## THE SITUATION IN THE PHILIPPINES

MANASSAS, VIRGINIA, July 15, 1901.

To the Editor of *Harper's Weekly*:

Sir.—My January 10 edition of *HARPER'S WEEKLY* has just come to my notice. After a two years' residence in the Philip-  
pine Islands, what Mr. Sydney says about dumping  
junk and institutions upon the Filipinos agrees in my quite  
entirely with the present condition of affairs in the islands.

Having been in close relations with America and native officials, both in the cities and the country, I am of the firm conviction that a greater consciousness of laws and centralization of management is needed.

While it is a good omen for a still better understanding that the American people are, at least, satisfied that the Filipinos are prepared for self-government, it cannot expect he will be prepared to enforce and obeyed.

I am, sir,

W. J. K.

The Mare

NEW-STRAND from our mothers, up hill and  
down valley.

We rained and we ran,  
The length of the pulchre to one wild rally.  
Then round the fence-leader in rambling  
rally.

Filly and colt upon,—  
Till at length to the gate we came.

Even, free-finned, superb,  
Who hared me forth with a oar wing of herb.

Who piped me afar with a cooing name,  
And when I resisted

Laughingly wrestled  
My strength and my pride and my will away,

Vaulting my shoulder in Titan play;  
Then with pat and pall

Petted me, harnessed me,  
With dress and love

Fretted me, charmed me,  
An even power, bebind, above,

Insuper, masterful,  
Till he took me from my own

And leashed me unto his heart's desire, his  
will my law alone.

Harsh-bearer, privilege proud,  
I arch my neck and lord the crowd;

Or, one will his voice's rise and fall,  
Spung at my taper's ringing call.

Soon from the smothering seas we pass,  
The white road margins torn of grass,

And I guess his wish, foreknowing it will,  
Fetlock-deep in the meadow swell

To plunge and race together away  
Where the hills shall treble my bugled  
neigh.

Galloping, galloping, bridle-free,  
Oh, to throw my forelimbs higher each mi-  
nute.

To bite the earth with my hoofs, to spin it,  
A ball, behind me, lugging, smiting.

Battling the rhythmic, pulse-delighting  
Song of the Four Hoofs out in glee.

Enough! cries the rider. Enough the rein.  
But my old wild passion is loose again.

This looms on my lips in swirls of wine,  
Lightning forks through these veins of mine.

And my head shall toss and my mouth shall  
chafe.

Eye the drawn rein checks me, steady and  
soft.

Yet must I needs obey  
My governor, my God,

Onimpotent in his nod,  
He hath taken me from mine own and made  
me walk his wiser way.

So rounds our path to the mansion gate,  
Where I see my gentle lady wait.

She will know what game we played,  
By my shining harness, my pointed ear.

My breast of knotted power,  
And will measure the leagues we made;

And when she comes at my head so near,  
Calling me softly, "O Cloee, Star White,"

And offers me delicate morsels, fower  
of golden grain or leaf to bite,

On her spreading palm for tokens,—  
Let the house dog plead with appealing paws,  
Let the goldfinch trill through his cage's  
grate.

I only stand and look  
And quiver with love unspoken.

Now I have gulliped him to her,  
The parting they defer.

It's a sloping path at wax of day  
He leads me away.

To the pasture brook,  
Wherein I mark through the light that dim  
My long drooped head, my rush-brown limbs.

Livens with spore contained,  
And never a spore fringed.

Saddle and harness and bit that slung  
To the brepet string.

Naked I fall to my foot of green.  
Am ye at your tables so meth-ild and  
supple and grave and clean?

WILLIAM A. LEAHY.

Figures About Steel

IMPORTATIONS of iron and steel into the United States in the fiscal year 1903 are larger than in any preceding year since 1891, and with that single exception are larger than at any time within the past twenty years.

Only seven earlier years in the history of the country have the importations of iron and steel been as large as those of the fiscal year just ended. The total value of iron and steel imported in the fiscal year ended June 30, 1903, is \$51,617,231, against \$27,140,247 in 1902, \$17,874,793 in 1901, and \$12,100,440 in 1900. Running back through the import records from 1860 down to 1902, the only years in which the value of iron and steel imports exceeded those of 1903 are 1872, when the total was \$35,500,109; 1873, \$39,308,421; 1880, \$32,714,008; 1881, \$30,003,477; 1882, \$27,070,607; 1883, \$28,435,048; and 1901, \$25,544,373. These large importations of iron and steel have occurred, it will be seen, in periods of exceptional business activity, but as no former occasion have such large importations been made in the face of so great home productions of iron and steel, it 1903, when the importations were two million dollars greater than in the year just ended, the total home production of pig iron was one and a half million tons, while that of 1902 was over seventeen million tons, or double that of 1901. In the period from 1880 to 1903, when the importations of iron and steel were larger than those of 1903, pig-iron production averaged only about four million tons per annum, or less than one-fourth the annual production of the present times; and in 1872 and 1873, when the importations slightly exceeded those of 1903, the pig-iron production averaged only two and a half million tons annually, against seventeen millions at the present time.

# THE IRON KHIVA

HAMLIN-GARLAND

**F**OR countless generations a gruff brown people had dwelt high on the top of a mesa—far in the desert. Their houses rose like native forms of sandstone ledges on the crest of the rocky hills—seemed indeed a part of the cliffs themselves.

To join the old women climbing the steep path laden with water-bottles of goatskin, to mingle with the girls chattering on the roofs was to forget modern America. A sensitive nature facing such scenes abhorred of Egypt before the Anglo-Saxon glider-trotter had vulgarized it, plantation. Therefore, while the great Mississippi Valley was being exterminated these simple folk lived apart.

They were on the maps of Arizona, but of this they had no knowledge and no care. Some of them were not even curious to know the white man who coveted the mysterious land beyond the mesas, deeply resenting the prying curiosity and the noisy intrusion of the occasional cowboy who rode across the desert to see some of their solemn rites with amulets and crabs.

The white men grew in power just beyond the horizon line, but they asked no favors of him. They planted their corn in the sand where the floods ran; they guarded their hardy melons, and gathered my people—chanting devout prayers and year as contentedly on to the dories that preside over the clouds and the fruitful north, which an officious government built for them, nor for the little white man.

They were a gentle folk,—small and round nosed brown of flesh, right habitually took their babies to their arms—and it was curious for copper—their curving infants on their knees, waiting turned all preoccupied notions of desert durezza.

They had their own governors, their sages, their physicians, joy and sorrow that visit other human beings in greater lands, down they looked down upon the sapphire mist which covered it tall, curling like herks.

Troc, pretensions except over them from time to time—and for some devotional remission on their part and rebuked their superior to that of their neighbors, the Time; and their tradition pleased—they put a ward of fervent thoughts into their songs that "the men of iron" name no more.

But this new white man—this horseman who wore a wide hat—of song, and the worship of a new kind of deity—this restless head, declares American came in larger numbers year by year, right.

Ultimately he built an Iron Khiva near the foot of the trail, and view this house—and bring their children, and leave them to learn the white man's ways.

"We do not care to learn the white man's way," replied the

head men of the village. "We have our own ways, which are suited to us and to our desert, ways we have come to love. We are afraid to change. Always we have lived in this manner on this same rock, in the midst of this sand. Always we have worn this fashion of garments—we did not ask you to come—we do not ask you to stay nor to teach our children. We are glad to welcome you as visitors—we do not want you as our masters."

"We have come to teach you a new religion," said the missionary.

"We do not need a new religion. Why should we change? Our religion is good. We understand it. Our fathers gave it to us. Yours is well for you—we do not ask you to change to ours. We are willing you should go your way—why do you insist on our accepting yours?"

Then the houses of the men in black coats grew very stern, and they said:

"If you do not do as we say and send your children to our Iron House to learn our religion, we will bring bluecoated warriors here and make you do so!"

Then the little house people retreated to their rock and said: "The Iron men of the olden time have come again in a new guise—the rocks, they prayed and sang that this curse might pass by and leave them in peace once more."

Nevertheless, there were stout hearts among them, men who said: "Let us die in defence of our homes! If we depart from the ways we despise us."

These bold ones pushed deep into the inner rooms of their khivas, and uncovered broken spears, and war-clubs long unused—the old men sang songs mourning their arrows, while the ground—and children raising their laughter creep about in coveys like sword grass—drinking, they knew not what.

Then the white men withdrew, and for a time the Pueblos rejoiced. The peaceful life of their forefathers came back upon them. The men again rode singing to the purple plain at midday, the old women grumbling and muttering together went down to the spring for water. The dirt potters resumed their art—the girls, the sound of the grinding of corn was heard in every dwelling. But there were those who had been away across the plain and still did know when these disturbing invaders came—they were again! They are like the snows of winter, better and out to be turned aside with words."

## II

One day they came again—these fierce, impossible white men—preceded by warriors in line, who rode big horses—horses ten times as large as a burro, and they were all a grin like wildcats, and they camped near the Iron Khiva, and the war-chief sat word then.

All right it was agreed that six old men should go down—old men and old women will never fight. They were to be for long. They carry on into the East to torture our time," they said. "If our old women will never fight, they will not be for long."

So while all the villagers sat on their homesteads to watch in silence and dread, the aged ones wrinkled, gray, and half-blind, they went and way down toward the peace grove in which the

white lodges of the warriors gathered, with mauling axes led by the chief priest of the Antelope Clan. The high priest stood in silence before the war-chief of the lodges who came to meet them. Speaking through a Tinia interpreter, he said:

"The Great Father, our chief, has come to tell you this. You must do as this man says," and he pointed to the man in black. "He is now your chief. He has come to gather your children into that Iron House and teach them the white man's ways. If you don't—if you make war—then I will go against you with my warriors and my guns that go boom, boom, boom a hundred times, and I will destroy you. These are the commands of my chief."

When the old man opened with this direful message, despair seized upon the people. "Evil times are again upon us," they cried. "Surely these are the iron men more terrible than before."

They debated voluminously all night long, and at last decided to fight—but in the early morning a terrible noise was heard below on the plain, and when they ran to behold the warriors in blue were rushing to and fro on their horses, shouting, firing off their appalling weapons. It was plain they were doing a war-dance out of weakness and strength, and so terrible did they seem that the hearts of the small people became as wax. "We can do nothing against such men, they are demons, they hold the thunder in the palms of their hands. Let us submit, perhaps they will grow weary of the hunt and send and go home again, and they will lead for their wives and children and leave us. We will wait."

Others said: "Let us send our children—what will it matter? We can watch over them, they will be near us, and we can see that they do not forget our teachings. Our religion will not vanish out of their minds."

So the old man went again to the war-chief, and, with bowed head and trembling voice, said: "We yield. You are mighty in war, and we are poor and weak. Our children shall go to the Iron House."

Thus the war-chief gave them his hand and smiled, and said: "I do not make war with pleasure. I am glad you have submitted to the commands of my great chief. Live in peace!"

III

For two years the children went almost daily to the Iron House, and they came to love some of those who taught them—a white woman with a gentle smile, and the man in the black coat who told the children that the religion of their fathers was wicked and foolish—him they hated and bitterly despised. He was unmerciful and fearful of noise. He shouted so loud the children were aghast—they had no breath to make reply when he addressed them.

But to even this creature they became accustomed, and the life of the village was not greatly disturbed. True, the children began to speak in a strange tongue and fell into foolish ways which did little harm—they were, in fact, amusing, and, besides, when the outbreaks came by and wished to buy beads and blankets, these skilled children could speak their barbarous tongue—and once young Kigeli took his son who had mastered this hissing language, and went afar to trade, and brought back many things of value. He had been to the house of the Little Father, and the fort.

In short, the Pawlitan were getting reconciled to the Iron House and the white people, and several years went by so peacefully, with so little change in their life and thought, that not the most far-seeing eye might the children cease to have in a passionate and storming with excitement.

A stranger had arrived at the Iron House, accompanied by a tall old man who claimed authority over them—the man who lived in the big white man's house—and they had said to the teacher we want six children to take away with us into the East.

This was incredible to the people of the chief, and they murmured. "You were mistaken, you did not understand. They would not come to tear our children from our arms."

But the little ones were whispering with fear and would not go back to the plain.

HARPER & BROTHERS, PUBLISHERS, FRANKLIN SQUARE, NEW YORK CITY

They moaned and wept all night—and at sunrise the old men went down to the Iron House, and said:

"Our little ones came home last night, crying. They said you had threatened to carry them away into the East; what does this mean?"

Then the strange men said:—This is true. We want six of your children to take away to school. We will not hurt them. They will live in a big house, they will have warm clothing, they will want for nothing. We are your friends. We want to teach your children the ways of the white man.

Passionately the grandmothers responded:—We do not want to hear of these things. Our children are happy here, their hearts will break if you take them away. We will not submit to this. We will fight and die together.

Then the old white man who had been speaking became furious. His voice was sharp and fierce.

"If you don't give up the children I will take them. You are all fools—your religion is wicked, and you are not fit to teach your children. My religion, my God, is the only God that is true and righteous, and I will take your children in order that you may be taught the true path and become as white men."

Then the old men withdrew hurriedly, their lips set in a grim line. Their return, their report, from every heart. It was true therefore these merciless men of the East were planning to carry their children into captivity. Briefly the word passed, the goats were driven into their corrals, the water bags were filled, the storehouses were replenished. "We will not go down to the plain; our children shall go no more to the Iron House. If they take them, we will be when all our warriors are dead."

So it was that when the agent and the mission aries climbed the mesa, path they came upon a barricade of rocks, and men with bows and war arrows—standing guard. They made little talk—they merely said, "Go your ways, white men, and leave us alone. Go look to your own sons and daughters, and we will take care of ours, the world is wide to the East, go back to it."

The agent said: "If you do not send your children down to school I will call my warriors, and I will kill every man with a war-club in his hand."

To this young Koy-eh, the war-chief, said: "We will die in defence of our home and our children. We were willing that our children should go down to the Iron House—till now—now when you threaten to steal them and carry them afar into captivity where we can never see them again, we resist. We will fight! Of what value is life without our children? Your great war-club will not ask this hard thing of us. If he does then he has our answer."

Then with dark faces the white men went away and sent a messenger across the desert, and three days later the sentinel of the highest rock saw the bluecoat warriors coming again. Raising

a wild song the war-song of the clan, the cliff people hastily renewed their defenses. They piled great rocks from the ledges, and set them where they could be toppled on the heads of the invaders. They built the barricades higher. They burnished their arrows and ground their specks. Every man and boy stood ready to fight and die in defence of their right to life, and liberty, and their rocky home.

IV

But now, again, the timid prevailed, they said: "See this tall, white man, his weapons are most marvelous. He can strike where he is, in safety, and send his missiles against our unprotected babies. He is too great. Let us make our peace with him."

No at last, for a third time, the elders went down to talk with the conquerors, and said: "What can we do to make our peace with you?"

Then the tall, old man said: "If you will give us two of your brightest sons to go away into the East we will ask no more, but your other children must return to the Iron House each day as before."

The elders with drew, and the news flew about the pueblo, and every mother looked at her handsome son in angry terror, and the men assembled in furious debate. The party ended out with great bitterness of clamor.

"Let us fight and die! We are tired of being chased like wolves." But at last up rose old Horro, and said: "I have a son— you know him. He is a good son, and he has quick feet and a ready tongue. He is not a lawyer. He is beloved of his teachers. Now, in order that we may be left in peace, I will give my son."

His short and passionate speech was received with expressions of astonishment as well as approval, for the old youth— and Horro a proud father— "What will the mother say?" thought all the men who sat in the council.

The gray old Apache chief priest and sage, rose slowly, and said: "I have no son— I have no son— I have no son!"

But him I will dedicate, though he is a part of my heart. Because if the white man rages against us he will slaughter everybody."

White yet they were in discussion some listening but kept away and scattered the word among the women and children. "Lelo and Sakoni are to be found and sent among the white men." There was weeping in the houses as though a plague had smitten them again—and the mothers of the boys made passionate protestations against the sacrifice of their sons—all in no purpose. The war-chief came to tell them to make ready. "In the morning we must take the boys to their captors."

But when the morning came they could not be found in their accustomed places, they had fled upon the desert to the west. Then, while the best trackers searched for their footprints, the fathers of the tribe went down and told the white chief. He said: "I do not believe it, it is your deceiving me."

"Come and see," said Horro, and led the way round the mesa

"Go back to the white natives who sent you"

to the point where the trailers were slowly tracing the course of the fugitives.

"They are running," said young Klee. "They are badly scared."

"Perhaps they go to Oriskany," said one of the priests.

"We have sent runners to all the villages. No, they are heading for the great desert."

They followed them out beyond all hope of water—out into the desolate sand—where the sun flamed like a flood of fire and only the sparse shrubs and grasses—and at last, sharp eyes detected two dark flecks on the side of a dome of yellow sand.

"There they are!" cried Klee, the trailer. The stern, old white man spurred his horse—the soldier chief did the same—but Klee outran them all. He tripped the sand dune at a swift trot, but there halted and stood immovably gazing seaward.

At last he came slowly down the slope and, meeting the white man, the agent, and the soldier, he said, with a smile, accusing face, and with bitter scorn:

"There they are; go get them; my work is done!"

With wonder in their looks the pursuers rode to the top of the hill and stood for a moment looking; then the lean hand of old Horro lifted and pointed to a little hollow.

"There they lie—exhausted!"

But Klee turned and said, "They are not sleeping—they are dead! I feel it."

With a sudden hoarse cry the father plunged down the hill, and fell above the body of his son.

When the white man came to him they perceived that the bodies of the boys lay in the dark stains of their own blood as in a basket. They were dead, slain by their own hands.

The old Horro rose and said, "White man, this is your work. Go back to your home. Is not your throat slaked? Delish up the blood of my son and go back to the white soldiers who sent you. Leave us with our dead!"

In silence, with faces ashen and heads hanging, the war-chief and stern, old white man rode back to their camp, leaving the heroic father and grandeur alone in the desert.

That night the great mesa was a hill of woe, a place of lamentation. Horro and Supla were like men stricken by a sudden blow. The old grandeur wept till his cry became a wail, but Horro, as the greatness of his loss came to him, grew violent.

Mounting his horse he rode fiercely up and down the steeps. "Now, will you fight, coward, praise dogs? Send word to all the villages—annihilate our warriors—no more talk now, let us battle!"

But when the morning came, behind the tents of the white soldiers were taken down, and when the elders went forth to parley, the soldier-chief said:

"You need not send your children away. If they come down here to the Iron House that is enough. I am a just man; I will not fight you to take your children away. I go to see the Great Father, and to plead against this man and his ways."

"And so our sons died not in vain," said Supla to Horro, as they met on the mesa top.

"Aye, but they are dead!" said Horro, fiercely. "The going of the white man will not bring them back."

And the stricken mothers sat with haggard faces and unseeing eyes, they lack no comfort in the knowledge that the hapless white man had fled with the bluecoated warriors.

## The Sugar We Use

More than five billion pounds of sugar, valued at over 100 million dollars, were brought into the United States in the fiscal year just ended. This is a larger importation of sugar than in any preceding year in the history of the country. The total number of pounds of sugar brought into America during the year was, as shown by the records of the Department of Commerce and Labor, 5,287,077,004, while in no earlier year in the history of the country has the importation of sugar ever reached five billion pounds.

The largest importation in any earlier

## Questionable Shapes

by WILLIAM DEAN HOWELLS

Author of "The Knicker" "A Hand of New Fortunes," etc.

IT sounds odd to speak of Mr. Howells as a writer of ghost stories, but in his recent volume, *Questionable Shapes*, there is fiction of a very ghostly character. Yet these stories do not seem untrue, as ghost stories usually do. They are told with such perfect art, such photographic reality, that the reader feels he is living with the characters through their queer adventures, and shares, with them, the mystery, the awe of the thing.

Illustrated by W. T. Swinberg and Louis Mitchell. Edition with Harper & Brothers' edition of Mr. Howells's Works, Cloth, \$1.50.

HARPER & BROTHERS, PUBLISHERS, NEW YORK

Exclusive design, luxurious appointments and the most perfect mechanical equipment ever installed in an automobile characterize the Columbia 14 Horse-power Gasoline Touring Car, Mark XLI. All working parts are instantly accessible; noise and vibration are practically eliminated, while ease and certainty of control are secured at all speeds up to forty-five miles per hour. Catalogue of all Columbia Automobiles will be sent on request.

## MUDLAVIA

This great event opens the year 1902. Mudlavia, the first and greatest of the world's great events, is held in London, England, from August 1st to August 15th. It is the only event of its kind in the world. It is a great and wonderful event, and one that should not be missed. It is a great and wonderful event, and one that should not be missed. It is a great and wonderful event, and one that should not be missed.

year was that of 1907, when the total was 4,919,906,733 pounds. Adding to the existing importation of 1903, 600 million pounds as the domestic production, would give a total sugar supply of 5,517 million pounds for the year, or sufficient to furnish an average of seventy-two pounds for each individual in the United States, estimating the present population at eighty million.

The record of sugar importations for the year differs materially in certain respects from that of earlier years. The total importation of beet sugar during the year was only 87 million pounds, against 255 million in the fiscal year 1902, and 203 million in the fiscal year 1901. Cane sugar, of course, composed the remainder, and the cane-sugar importations of the fiscal year, exclusive of that brought from Porto Rico and the Hawaiian Islands, amounted to 497 million pounds, against 205 million in the fiscal year 1902, and 290 million in 1901. From Porto Rico the total sugar brought into the United States amounted to 226,142,500 pounds, valued at \$7,406,579, and from the Hawaiian Islands 774,823,420 pounds, valued at \$25,310,654. Thus the total quantity of sugar supplied by Porto Rico and the Hawaiian Islands amounted to one billion pounds, or about one-fifth of the total brought into the country, its value being nearly thirty-three million dollars.—It would seem that, as a nation, we are fast of sweetmeats.

## Experiments with a War Balloon

A new type of war balloon has lately been experimented with by the military branch of the Spanish army. The photograph reproduced above shows the balloon at the beginning of its ascent on its first trial.

## About our Foreign Commerce

Our foreign commerce of the United States in the fiscal year just ended is, according to official reports, larger than in any preceding year in its history. The total of imports and exports, as shown by the Department of Commerce through its Bureau of Statistics, is, for the year 1903, \$2,445,810,417, against \$2,319,937,156 in the year prior to 1903. The total of imports is larger than in any preceding year, and the total of exports exceeds that of any preceding year save 1901. The imports here for the first time crossed the million-dollar line, the record being \$1,023,819,127; while the exports for the second time crossed the 1400-million line, with a total of \$1,419,591,290, or practically 1429 millions. The single year in which the value of exports exceeded those of 1903 was the fiscal year 1901, when the total was \$1,457,704,901. The imports of 1903 exceeded those of 1903 by about 109 million dollars; the exports, therefore, have increased 18.4 per cent. during the decade, and the exports by 67.5 per cent. during the same period. Comparing the figures of 1903 with those of several periods of earlier dates, it may be said that the imports of 1903 were 203 millions; those for 1893, 213 millions; for

1873, 522 millions; for 1883, 325 millions; for 1893, 306 millions, and for 1903, 182½ millions. The exports of 1893 were 203 millions; those for 1903, 204 millions; for 1873, 522 millions; for 1883, 825 millions; for 1893, 847 millions; those for 1903 were within a fraction of 1420 millions.

The imports of 1903, therefore, are less than four times those of 1853, while the exports for 1903 are practically seven times those of 1853.

**Mr. Edison's Ideas on Radium**

THOMAS A. EDISON has evolved and announced a theory which he believes solves the problem that has been puzzling scientists ever since the discovery made by Madame Curie of the peculiar properties of radium and the kindred substances uranium and thorium. The phenomenon presented by these substances, as is generally known, is their apparent property of giving off actinic rays of peculiar chemical properties, somewhat similar to the Roentgen rays, without any apparent loss of energy or bulk, based on these observed phenomena several new theories of matter have been put forward, all of which accept as a fact the apparent origin of the energy within the substances themselves.

Mr. Edison's theory eliminates this contradiction of accepted natural laws, and indicates the possibility that the energy radiated by radium is merely reflected, as it were, from some unknown source.

**Undiscovered Light**

"I have made extensive experiments with the Roentgen ray and with radium," said Mr. Edison in a representative issue of HARPER'S WEEKLY, "and have come to the conclusion that these new substances are not the sources of energy, but are rendered fluorescent by the action of some hitherto undetected ether vibration or ray. Just as the Roentgen ray and the Hertzian wave remain undiminished for centuries after the phenomena of sound, light, and heat were well understood, so it is not only possible but extremely probable that there are other rays in the immense gamut from sound to ultra-violet which we have not yet discovered. In my own experiments I have found that the ordinary electric arc when raised to an extremely high temperature gives off a ray which renders opaque of lithium highly fluorescent. In the same way the Roentgen ray renders platinum barium-cyanide, tungstate of calcium, and cupropotassium of potassium highly fluorescent—that is, the X ray sets up in these substances a condition of activity which results in the emission from them of actinic rays and a small amount of heat.

**A New Kind of Vibration**

"My theory of radio-activity is that the rays which the new elements emit are set up in the same way, the substances being rendered fluorescent by some form of ether vibration which is undoubtedly all-pervading but has not yet been isolated or measured, and which may have some extra-planetary origin. To accept any other theory is to declare one's self in perpetual motion, in seeking something for nothing.

"It is not at all strange that only two or three substances have yet been found which exhibit this phenomenon, as there are only three substances known which are rendered fluorescent by the Roentgen ray. It is a peculiar coincidence, moreover, that the only one of the known fluorescent substances that is ever found in its natural state, tungstate of calcium, is always more or less closely associated with pitchblende, which all the radium as far made has been extracted.

"I believe this theory is capable of proof, but I shall be content to let some other prove it. I am through for all time with experiments in radio-activity. Two of my assistants have been named for life by their close association with the Roentgen rays, and I myself have one eye badly out of focus and am suffering from severe stomach disturbances from the same cause. The new dark room laboratory which I have just completed for such experiments will remain unused or be converted to some other use."

## THREE NEW PUBLICATIONS

# THE MAIDS OF PARADISE

By Robert W. Chambers

Author of "The Maid-at-Arms"

Mr. Chambers's romances are probably the most satisfying of their kind now appearing in America. His adventure carries one along with a sweep and a whirl that are irresistible; his love scenes have a charm, a tenderness, and convincing reality that raise them far above the meetings of lovers in contemporary fiction. Paradise is an idyllic French village, and the maids thereof live in the stirring days of the Franco-Prussian War. Fighting is rife through many of these pages, but the dominant note is love, and the romance is the happiest that the author has done.

Illustrated by Andre Castaigne and others. Ornamented Cloth, \$1.50

# THE CHANGE OF HEART

By Margaret Sutton Briscoe

Author of "Jimmy, and Others," "The Sixth Sense," etc.

These are six captivating love stories by one of our best-known short-story writers, whose cheerful optimism and genuine belief in the highest ideals make her romances at once inspiring

and satisfying. The stories deal with gentlefolk, and in each one of them some tangled love affair or similar situation is unfolded with delicate ingenuity.

Ornamented Cloth, \$1.25

# INNOCENT INDUSTRIES

(Duplication of E. H. Brown's)

Drawings and Verses by O. Von Gottschalck

Forty-eight full-page pictures, humorously illustrating the different processes of our "innocent" industries, with simple verse in large print under each. A charming book of amusement and instruction for a child.

Board Covers, in Full Color, with Linen Back, \$1.25

## COMMENT

THE Nebraska Republicans, who met in State convention at Lincoln on August 18, not only endorsed the candidacy of Mr. Roosevelt for the Republican nomination for the Presidency in 1904, but also put forward Mr. John L. Webster as their candidate for the Vice-Presidency. Mr. Webster is one of the leading citizens of Omaha, and for years has had a large practice at the Nebraska bar, but outside of the State he is only known as an unsuccessful candidate for the United States Senate. No doubt the example of Nebraska will be followed in other States, and we shall witness the competition of many "favorite sons" for the Vice-Presidential nomination on the Republican ticket. The platform adopted at Lincoln deserves notice for several reasons. In the first place, it reveals no trace of the Iowa idea, but proclaims adherence to the protective policy of the Republican party. Moreover, although Nebraska, being an inland State, would not be presumed to take much interest in the subject, it demands Federal legislation for the purpose of securing American-built, American-owned, and American-manned ships in which to carry American products to all the world. Especially emphatic was the reason given for endorsing Mr. Roosevelt. He deserves endorsement, we are told, because he has "carried into full and complete execution in a masterly way" Mr. McKinley's "magnificent policy."

Has this generous phrase any meaning, and if so, what? The principal features of Mr. McKinley's policy are well known, or should be. As the last speech that he delivered shows, he was firmly resolved to carry out the policy of reciprocity contemplated by certain clauses of the Dingley Act, and commercial treaties to that end had been negotiated during his administration, but had not been confirmed by the Senate. They remain unconfirmed in this day; nor is Mr. Roosevelt known to have made the slightest effort to bring about reciprocity with any foreign country except Cuba. Another characteristic feature of Mr. McKinley's policy was his determination to avoid war if possible. It is well known that for nearly a year after he entered the White House the prospect of intervention on our part between Spain and Cuba was less promising than it had been toward the close of the Cleveland administration. No close observer of the events that took place between March 4, 1897, and April 18, 1898, can doubt that Mr. McKinley was driven into hostilities much against his will by the destruction of the

Maine, and, even after that catastrophe, his closest friend, Senator Hanna, declared in Wall Street that there would be no war. Neither was Mr. McKinley one of those statesmen who regard the maxim "in time of peace prepare for war" as applicable to the United States. He, on the contrary, like Thomas Jefferson, was inclined to think that active and incessant preparation for war is apt to beget a bellicose temper. How can anybody pretend that in this respect Mr. Roosevelt has carried out his predecessor's "magnificent policy"? Concerning the expediency of putting the country in a condition to fight, and of going about with a chip on the shoulder, Mr. Roosevelt may be right or he may be wrong, but he certainly is not following in McKinley's footsteps.

That in another particular Mr. Roosevelt has departed widely from the policy of his predecessor is the almost unanimous opinion of white citizens in the Southern States. From the day when he entered the White House until the hour of his death, Mr. McKinley strove earnestly and skillfully to allay race enmity and sectional discord. He was successful to a remarkable extent. No Republican President or Republican statesman had ever come so near to gaining the confidence and good-will of the Southern whites. It is needless to point out the difference in the situation to-day. It is doubtful whether any Republican, with the possible exception of Theodore Roosevelt, has ever been more disliked in the Southern States than is Theodore Roosevelt. We do not for a moment suppose that the President deliberately set himself to revive race hatred and sectional dissension; we believe him to have stumbled into the nets which have caused this unfortunate result, through inadvertence, or a certain "freshness," or inability to read correctly the signs of the times. He failed, at all events, to recognize with sufficient promptitude what his Secretary of War at once detected,—the fact, namely, that of recent years public opinion in the Northern States themselves has been undergoing a profound change touching the wisdom and expediency of the Fourteenth and Fifteenth amendments and of the whole policy built thereon. Thus we see that Mr. McKinley's "magnificent policy" there was not a single prominent feature that is conspicuously distinguishable in the Roosevelt administration. One thing, indeed, he has been careful to do, and we suspect that it is in this which has aroused Nebraska Republicans to enthusiastic admiration,—he has kept just as many of his predecessor's appointees in office as possible. Only when crime has been brought home to them has he withdrawn from them his support.

Whether Mr. Roosevelt has or has not carried out his predecessor's "magnificent policy," we repeat, what we have often said during the last year, that he has no formidable rival for the Republican nomination. If the national convention were to be held next month he would unquestionably be made the Republican nominee. Whether his prospect of a nomination will be materially clouded during the next nine months depends mainly upon himself. His enemies inside or outside the party are relatively powerless to injure him. Assuredly this may be said of Mr. Louis F. Parn, whom Mr. Roosevelt, when Governor of New York, declined to reappoint Insurance Commissioner. Evidently the wish is father to the thought when Mr. Parn says of the President that he is now one of the most unpopular men in the State of New York, and that if he had to go before the people to-morrow, he would be defeated in the State by at least one hundred thousand. Mr. Parn, who has lately been on his travels, alleges also that if Mr. Roosevelt has any strength in the Middle West, he (Parn) failed to find it. Our belief that Mr. Roosevelt

will prove far from strong in his native State is not based on Mr. Payne's prediction, but on the indisputable fact that in November, 1898, he was chosen Governor by less than 18,000 plurality, although Mr. McKinley, two years before, had carried the State by upwards of 268,000.

Neither do we think that Mr. Roosevelt will be irremediably discredited because, at Lockport, New York, on August 19, ex-Governor David B. Hill chose to describe him as a victim of megalomania. It is true that the ex-Governor coined a new word—*egomania*—for the malady imputed to Mr. Roosevelt, but his description of it is indistinguishable from the symptoms of megalomania, which are well known and unmistakable. Nobody will believe Mr. Roosevelt to be suffering from that exalted and incurable disease on the strength of a slur uttered by a political opponent. We must have proofs more relevant than this, and only Mr. Roosevelt himself can furnish them. It will be for him to show by his own acts and words, or by a sagacious abstention from utterance or action, that he is calumniated when he is assailed among those whom Mr. Hill denigrates as "spectacularists." According to the coinage of this epithet, those who deserve it assert the staid kind of self-evident propositions, which have become moss-covered from age, with all the emphasis pertaining to oracles. Mr. Hill went on to say of "spectacularists" that, with superficial acquirements, they snatch at every opportunity to air their shallow learning, and resemble the man described in Proverbs as "wiser in his own conceit than seven men who can render a reason." We seem to detect a sting at the Anthracite Coal Strike Commission in the assertion that "spectacularists" "meddle with everything, whether within or without their official jurisdiction." This must seem to Mr. Roosevelt the most unkindest out of all, coming as it does from the man who caused a New York State convention to demand that the Federal government should take possession of the anthracite-coal regions of Pennsylvania by virtue of a so-called right of eminent domain. Mr. Hill seems to have seen a great light on this subject recently, for he now says that the fixing of the prices of products, the number of hours which a man shall labor, and the compensation which he shall receive are "largely matters to be regulated by private contract rather than by law."

Before leaving for England, where he is to serve as one of the commissioners who will determine the Alaska boundary, Mr. Elihu Root confirmed the report that he would resign the post of Secretary of War during the coming winter. His approaching departure from the cabinet has naturally caused some gossip regarding his political plans. It is reported that President Roosevelt would like Mr. Root to accept the Republican nomination for the Governorship of New York next year. Nobody knows better than Mr. Root that Mr. Roosevelt does not have it in his power to tender the nomination for that office. Nobody can secure it against the will of Mr. Thomas C. Platt, and it is well known that the Senator, who had long encountered Mr. Root's opposition in local politics, viewed with disapproval the latter's appointment to the War Department. We do not believe that Mr. Root would accept a nomination for the Governorship of New York if Mr. Platt would concede it to him. He would scarcely look upon it as promotion, if it be true that he could have had the nomination for the Vice-Presidency in 1900. At a banquet given the other day in Washington by the new general staff of the army in honor of the Secretary of War, it was asserted by Postmaster-General Payne that the Vice-Presidency was offered in 1900 to Secretary Root by President McKinley. Mr. Payne proceeded to read a letter, written at the time by Mr. Root to the chairman of the Republican national convention, setting forth his reasons for declining the honor. We find it hard to believe that a man so sagacious as was President McKinley would have gone out of his way to offend by forcing upon them as unwelcome friends in the convention, as the course pursued with reference to Mr. Roosevelt showed, no man could have been nominated for the Vice-Presidency against the will of Mr. Platt and of the formidable combination which he had organized.

A curious blunder, on the part of an eminent lawyer, was made by Mr. Root on the eve of his departure for Europe.

Asked what he had to say about the suggestion that he should be nominated in 1904 for Vice-President on the Roosevelt ticket, he replied that the Federal Constitution forbids the taking of both President and Vice-President from the same State. The Constitution does nothing of the kind; nor did it before the third section of the second article was superseded by the Twelfth Amendment. The third section of the second article, by which the election of a President and a Vice-President was originally governed, provided that "the electors shall meet in their respective States, and vote by ballot for two persons, of which one, at least, shall not be an inhabitant of the same State with themselves." That provision would, of course, have prevented each of the Presidential electors of New York in 1800 from voting for both George Clinton and Aaron Burr. But one New York elector might have voted for Burr and Jefferson, and another for Clinton and Jefferson; and every one of the Presidential electors in all the other States might have voted for Clinton and Burr, in which event both the President and Vice-President would have been New-Yorkers, the choice between them being determined by the question whether a larger number of the New York electors gave each one vote to Clinton or to Burr. Of course, if Burr and Clinton had received the same number of votes, the election would have gone to the House of Representatives. After the failure of the electoral college to choose a President in 1800, the Twelfth Amendment of the Federal Constitution was adopted, whereby the third section of the second article was superseded, and it was provided that "the electors shall meet in their respective States, and vote by ballot for President and Vice-President, one of whom, at least, shall not be an inhabitant of the same State with themselves." It is obvious that this provision would simply prevent the Presidential electors of New York from voting for both Roosevelt and Root. It would not stop the Presidential electors in any other State from doing so. Of course, however, constitutional law is one thing, and expediency another. It is most improbable that any political party would wantonly provoke widespread sectional hostility by taking its candidates for both the Presidency and the Vice-Presidency from the same State. Mr. Root was, therefore, quite right in opining that he and Mr. Roosevelt would never be nominated on the same ticket, but it is odd that a lawyer who had more than any other man to do with framing the existing State Constitution of New York should make a mistake with reference to the Federal organic law.

There has been of late a good deal of talk about the Democratic nomination for the Presidency. It is now believed that National Democratic Committeeman James S. Onffey has made up his mind to give the Pennsylvania delegation in the Democratic national convention to Senator Gorman. The belief is founded on the fact that in Potterville on August 18 he persuaded the Schuylkill County convention to reconsider its intention of putting forward Judge George Gray of Delaware, although the delegates were unanimously in favor of that course. Colonel Henry Watterson, who has been spending his summer vacation in the city of New York, has expressed the opinion that the contest for the nomination will be among Gorman, Parker, and Gray. He does not like Mr. Cleveland, and believes that the ex-President is not seriously advocated. He says that talk of a fourth nomination and a third election is too wild to be considered by sensible people, and will not be considered by any nominating convention. That remains to be seen. Mr. Cleveland has made a good many new precedents in his time. For one thing, he has taken possession of the White House—a thing no other Democrat has been able to do since the civil war. Ex-Senator James Smith, Jr., the Democratic leader of New Jersey, is commonly looked upon as a pretty shrewd man, and, when he was in the Senate, used to be a warm friend of Senator Gorman's. He now says in a published letter to Hon. Henry Staff Little, of Trenton, that Mr. Cleveland "is the only man they [the Democrats] can elect at this time." No well-informed man has ever doubted that Mr. Cleveland can have the New Jersey delegation to the next Democratic national convention, if he desires or will accept it.

In the same letter Senator Smith mentioned that he had conferred with Mr. Charles F. Murphy, and a number of other New York Democrats, all of whom agreed with him that the

only thing for the Democracy to do was to nominate Mr. Cleveland. The Senator added that he was sure New York State would be in line for the ex-President at the convention, and so would all the Eastern and Middle States. Whether Mr. Bryan and his friends could or could not beat Mr. Cleveland through the application of the two-thirds rule, the Senator did not venture to predict. Mr. Charles F. Murphy has since explained that he did not say in so many words that he favored Mr. Cleveland, or that Tammany Hall was committed to the ex-President. This was a prudent disclaimer. The avowed support of Tammany Hall would do Mr. Cleveland no good. It was against its vehement opposition that he secured the nomination for the Presidency in 1894 and 1892. There are wisecracks who insinuate a doubt of Senator Smith's sincerity, and who suspect the real purpose of those who are pushing Mr. Cleveland to the front is to shield from the fire of factional antagonisms the candidacy of Gorman, Parker, and Olney. It is barely possible that some of Mr. Cleveland's boozers may have such an end in view. We would not advise them, however, to put much reliance on such tactics. The plan was tried in 1891; but, when the false friends of Mr. Cleveland thought the time had come to push him aside and disclose their real candidate, the people would not let him go. The ex-President is set of the stuff whereof a stalking-horse is made. If he goes to the front, he is likely to stay there, as some of the over-statured politicians found out in 1892. In that year Mr. David B. Hill had the New York delegation—he had taken the precaution to secure it at an exceptionally early date—but Mr. Cleveland had the national convention. We advise those who do not seriously want Mr. Cleveland not to loom him. As for the supposed opposition to a third term, we do not believe that there exists in the popular mind the faintest objection to three terms, provided they are not consecutive. We have always thought that, if General Grant had been nominated in 1880, he would have been elected over any man that the Democrats could have put up that year except Samuel J. Tilden. We add that, between the hour at which we write and the assembling of their national convention, avowed Democrats are likely to bethink themselves of the old adage: Find out what your opponents don't want you to do, and do it. Nobody who keeps his eyes and ears open can fail to have observed that the one Democrat whom Republican politicians, including President Roosevelt himself, are afraid of is Grover Cleveland.

It is certain that Mr. Roosevelt can command the labor-unionist vote in 1904. If not, it is obvious that he will be a much less available candidate for the Republicans than hitherto he has been assumed to be. Until very recently the question would have been answered unhesitatingly in the affirmative. But there has been a change in the situation. It is reported, indeed, that even now Mr. Mitchell will say in his forthcoming book on "Unionism in the United States," that Mr. Roosevelt placed labor-unions under profound obligations by his appointment of the Anthracite Coal-Striker Commission, because he thereby established a precedent of which organized labor may one day have urgent need. Mr. Mitchell, however, has more capacity for gratitude and foresight than have most of the walking delegates. Other unionist leaders are apt to forget favors received if a subsequent demand, however unreasonable, is rejected. In Chicago, on August 10, members of the Engineers' Union announced upon learning the President's intention to see that non-unionists should not be discriminated against in government departments, that a national movement would be started to defeat him for re-nomination and for election should the fight in the nominating convention prove unsuccessful. Mr. Neil C. McCallum, business agent of the local engineers' organization, proposes to start the movement in Illinois, and predicts that the rule laid down by Mr. Roosevelt will defeat him in the next Presidential campaign. We should see the irony of destiny exemplified if one of the President's most creditable acts should undo all that he has striven to accomplish by his unconstitutional intervention in the anthracite coal strike, and by his headlong warfare against corporations.

Not only was Mr. Roosevelt justified in reinstating the assistant foreman in the bookbinding of the Government Printing Office, who had been dismissed in compliance with the demand of a trades-union, but it is hard to see how he could

have escaped impeachment if he had failed to perform his sworn duty in the premises. Under the Constitution of the United States, every citizen possesses equal rights, and the United States Supreme Court has held that among these rights is that of eligibility to public office or to government employment. If a government employe must be dismissed at the behest of a labor-union, it is obvious that the Constitution has been supplanted by the resolution of bodies unknown to the Federal organic law, or to the statutes enacted under it, and that an *imperium in imperio* has been already installed. Not only has Mr. Roosevelt done his duty in the matter of the government employe, Miller, but he has directed other departments of the Federal government to ascertain whether attempts have been made by labor-unions to exercise any control over government employes. The responsive reports made by the Secretary of War and the acting Secretary of the Navy show that in several instances labor organizations have endeavored to dictate to government officials. It is high time that labor-unionists who were unduly cleft by Mr. Roosevelt's intervention in the anthracite coal strike should be made to understand that there are limits beyond which a President cannot and dare not go. He is bound to enforce the Constitution and the laws, among which is a statute making it a punishable offence to entice workmen from any arsenal or armory. Another Federal statute provides for the punishment of any workman who obstinately refuses to perform the work allotted to him. This law is obviously applicable to any labor-unionist who refuses to work side by side with a non-unionist. There are some of the statutes that Mr. Roosevelt has sworn to enforce.

The announcement of Mr. Roosevelt's resolve to perform his duty by declining to discriminate against non-unionists in government employment is not the only violent blow which labor-unionists have recently experienced. An opinion which, from their point of view, is highly offensive, was handed down on August 17 in the United States Circuit Court by Judge Rogers of Arkansas in the labor-injunction case of *Royer et al. vs. the Western Union Telegraph Company*. The plaintiffs in this case allege that they had been discharged from the service of the Western Union Company solely because they were members in a St. Louis lodge of the Commercial Telegraphers' Union of America; that a conspiracy existed between the St. Louis officials of the Western Union Company to discharge all members of the aforesaid union and to break it up; that, finally, the Western Union maintained a so-called blacklist on which have been placed the names of the members discharged, and that this list has been furnished to other employes, with the result that the black-listed persons have been prevented from obtaining other employment. The United States Circuit Court, sitting as a court of equity, was requested to prevent the Western Union Company from discharging any employe because of his being a member of a labor-union; to prevent the St. Louis officers of the Western Union from conspiring to that end; to forbid interference of any kind with the Telegraphers' Union; and to prohibit the Western Union Company from maintaining a blacklist, and from placing therein the names of men who might be discharged because of being members of a union.

The court rejected every request of the plaintiffs, and sustained the defendant company on every point. Judge Rogers held that the Western Union Company had a perfect right to discharge employes, not under contractual relations with the company, for any cause, or without assigning any cause whatever. He held, further, that there could be no such thing as a conspiracy to commit a lawful act such as he had ordered the discharge of the company's employes because of being members of a union to be. He decided, finally, that the Western Union Company had a perfect right to maintain a list upon which might be placed the name of a discharged employe, and the cause of discharge, and that this list might be given to others, provided, of course, its contents were truthful. He added that, as the bill of the plaintiffs alleged that the Commercial Telegraphers' Union was formed for moral and proper purposes, there should exist no objection upon the part of an employe to have his discharge based upon the mere fact that he was a member of such a union. If there was nothing discreditable about such a union how could it discredit a man to be known to belong to it? Evidently

Judge Rogers is not seeking unionists' votes; in other words, he is not thinking of quitting the bench in order to run for a political office.

In Mr. Roosevelt as certain to command in 1904 the enthusiastic support of the Grand Army of the Republic as he seemed to be a few months ago! This question can no longer be answered promptly in the affirmative. The determination to promote General Wood to a Major-Generalship over the heads of distinguished soldiers of the civil war, and to compel the Senate to confirm the unwelcome nomination by holding back the promotion of thirty or forty veteran colonels to the rank of brigadier-generals is viewed with indignation, not only by the great majority of officers in the regular army, but by representative men in the Grand Army of the Republic, who dread the effect of such a gross exhibition of favoritism. The fact that General Wood's brief term of service under the colors in Cuba, supplemented by Mr. Roosevelt's personal friendship, was to outweigh the wounds gained by thirty or forty veteran colonels in the war of the rebellion, would have sufficed to provoke sharp criticism, but the rankling sense of injustice has been immeasurably deepened and broadened by the treatment of Lieutenant-General Miles. In San Francisco, however, at the national encampment of the Grand Army veterans, General Miles was greeted with homage and affection that no doubt consoled him for the humiliation to which he had been subjected by the War Lord of Sagamore Hill. We have repeatedly expressed the opinion that General Miles is a much better soldier than politician, but we are willing to admit that he may be quite as adept in politics as was General Zachary Taylor, who, we believe, had never voted in his life, but who, nevertheless, was elected President in 1848. Nobody ever dreamed of putting forward Taylor for the Whig nomination, except Thurlow Weed, and he did not suggest it until just before the national convention. In view of that precedent, anything is possible, and we certainly shall not deny that, if General Miles, who is a native of Massachusetts, should be nominated and elected Governor by the Democracy in that State, he would stand a fair chance of securing the Democratic nomination for the Presidency.

It begins to look doubtful whether a serious attempt to carry a currency bill through the Fifty-eighth Congress will be made, either in the special session or in the first regular session. It is said that even the subcommittee of the Senate Committee on Finance is itself far from agreeing as to a measure for the relief of the existing stringency in the New York money-market, and other leading Republicans in the Senate and in the House are still more widely apart. Mr. Roosevelt's notion that a non-partisan measure might be framed for which the support of Democratic as well as Republican leaders could be secured beforehand, as well as of things, impenetrable. On the eve of a Presidential contest, it would be absurd for Mr. Gorman, the leader of the Democratic minority in the Senate, to assume toward the Republican administration the attitude of an ally rather than that of a critic. Such unanimity could scarcely be looked for from a politician, even if the urgent need of more currency were acknowledged all over the country. As a matter of fact, the demand for additions to the circulating medium comes almost exclusively from New York and two or three other commercial centres in the East. As ex-Senator Carter of Montana has lately told Mr. Roosevelt, the West is not clamoring for money, but, on the contrary, is able to lend to New York. There will be but little if any basis this year for the old story that the New York banks are drained of their currency in order to move the Western crops.

Nor is it only the difficulty of reaching an agreement on the part of Republicans themselves that renders the expert managers of the party doubtful about the expediency of enacting a new currency law before the opening of the Presidential campaign. In the first place, they do not want to be accused of legislating in the interest of Wall Street; in the second place, they fear that their admission that the surplus customs revenue ought to be put out of the Treasury vaults and put back into the pockets of the people would give their opponents a compelling argument for the reduction of the tariff. Touching this point, ex-Governor Hill, in his speech

at Lockport, unmasked one of the Democratic batteries. After reminding his auditors that the principal feature of all the currency bills proposed by Republicans was the lending of the Treasury surplus to national banks on "approved" securities, he proceeded to point out what opportunities for favoritism and what facilities for the accumulation of riches would necessarily be afforded by such a measure. He added that since the Republicans acknowledged the surplus customs revenue to be an evil, it is obvious that what the country needs is not a palliative, but a remedy that would go to the root of the disease. If millions upon millions of unneeded dollars have been accumulated in the Federal Treasury as the outcome of superfluous taxation, it would seem to be the part of wisdom, instead of continuing such taxation and thus creating from year to year a still larger fund to loan exclusively to national banks—to abolish forthwith all unnecessary taxes, and henceforth to leave the money of the people in their own pockets.

Mr. Pulitzer's generous donation of \$2,000,000 to Columbia University for the establishment of a School of Journalism has attracted much attention, and seems to have met with the approval of everybody but the *Evening Post*, which never approves anything. That the spirit actuating the gift is wholly commendable, goes without saying. Mr. Pulitzer is to-day the most vivid personality in American journalism, and he owes his fame and fortune to the quick response of the public to the manifestation of his tireless energy and undoubted genius. It is fitting that he should show personal recognition of this fact by turning back into the channel of his own success some portion of that which he has received for the benefit of the people through the uplifting of his profession. That, as we understand it, is the purpose underlying the experiment and why the making of it, the striving at least to render a genuine service, should encounter objection from anybody, except of course the *Evening Post*, is hardly comprehensible.

Of the practicality of the plan much has been said and more will be. People who delight in the usual naturalized question the possibility of doing what never has been done, but such may be dismissed with a nod of compassion in these good days of original development. Some think that the application to the regular course of a university will do for a young man all the knowledge he needs for success in his chosen calling. Others, mainly members of the cult, revert to the familiar fallacy that journalists are "born not made." All of this and like comment upon the project, which the *World* prints daily in many columns with the exclusiveness characteristic of its recognized enterprise, makes very interesting reading. When the returns are all in from the many millions who have always known how a newspaper should be made, and just the man to make it, if he had the chance, we shall have an abundance of material from which to deduce conclusions for the enlightenment of our own more modest readers. Meanwhile, it is interesting to note that the man who seems to have most adequately grasped the spirit of the effort is Samuel Bowles, and he who has made the most sensible suggestion, that of actually running a daily paper in the city of New York, is William Dean Howells. One fact is certain: if, in the imparting of instruction, the whole genus of successful journalists is to be run from, say, Horace White to Arthur Brisbane, we shall not miss a single teacher. We shall also advise the present workers on the daily press to do the same, meanwhile continuing to grind out copy and accept the traditional curses of their superiors with equally traditional equanimity, having in mind all the time that, while journalists are not born, they are self-made, not taught—a fact which, if disputed, may easily be demonstrated by pointing the finger of pride at Joseph Pulitzer.

The annual report of the British Lunacy Commissioners shows a very serious increase of insanity in England and Wales. In 1850, 1 in 536 of the population was reported as insane. Last year the proportion was 1 in 293. The increase is almost all among pauper lunatics, and part of it may be accounted for by the belief that a more accurate census of the insane is taken now than was had fifty years ago. But that does not dispose of the present annual increase.

The number of English people who went crazy in 1902 was 22,581, which was 3251 more than in 1901. That is an enormous increase, with which the Boer war may have had something to do. Heredity accounts for twenty-five per cent. of the insanity in women, and nineteen per cent. of the insane men. Other attributed causes of the increase are the strain of modern education, and early marriages among the poor, and late marriages among the upper classes; but the most important cause of all is alcohol. The same story comes from England as from France and Belgium. There has been a gradual increase in spirit-drinking, with very bad results. New and stringent methods have lately been devised to check it. How effective they will prove, and what effect, if any, they will have on lunacy statistics, it is not yet possible to judge, but the fact is recognised that the overconsumption of stimulants in England is far too serious an evil to be left to mend itself.

There are occasional signs of anxiety for fear that Mr. John D. Rockefeller will get all the money there is. Mr. Rockefeller has not lately seen fit to publish his estimate of the value of his possessions, but sanguine guessers rate him nowadays as pretty nearly a billionaire, and the most conservative computers believe he has more than half a billion. It would be impossible to say what is the total wealth of the United States, but the assessed valuation of the several States for 1902 amounted to about thirty-five billions. Even if Mr. Rockefeller has a whole billion, there is something left for the rest of us. But his fortune, they tell us, is probably increasing by as much as fifty millions a year, and is not likely to double within ten years. Already his financial power is enormous, so that he could influence stock values very materially if he chose, and, at times, make or unmake ordinary millionaires by mere whispers at the telephone. Malice is not attributed to him, nor is he felt to be a mischief-maker, but the feeling is that his business abilities are so surpassing, and his business judgment so unapproachably sound, that he can't help seeing and improving chances to make millions more. To discuss him is as little of an impertinence as to discuss the comet. He is a force, sixty-four years old, moving through the earth's atmosphere, and believed to be rapidly increasing in weight and velocity. Persons who fear they are in his orbit and may be pinched may find some relief in considering that even though his fortune increases very rapidly, its growth may be fed by the increase of wealth in the country. If wealth in general stops increasing, and Mr. Rockefeller's wealth keeps on increasing, then the pinch may be felt.

Not that he is our only rich citizen. Mr. Carnegie, too, is prepotently solvent, and some money that came down from the last generation not only stays in the families that inherited it, but has lately increased in volume. We used to say, only twenty years ago, that it was three generations from shirt sleeves to shirt sleeves. No one says that now. A youth with a taste for wheat, or other such speculative disposition, may make family riches seem unstable, but, as a rule, the fortunes that have been made long enough to cool seem to be, as Wall Street would say, very firmly held, and vastly more likely to grow than to dwindle. There are no shirt sleeves in sight for Mr. Rockefeller's descendants, or Mr. Astor's, or Commodore Vanderbilt's, or Mr. Gould's, except such as are displayed incident to sport. But so man's wealth, not even Mr. Carnegie's, excites so much consideration as Mr. Rockefeller's. No other capitalist is credited with so much business sagacity as he, no other millionaire is thought to have so limitless a capacity for accumulation. We do not think of him as a man with ordinary human desires, but rather as the incarnation of the money-making instinct. And so far as can be judged from report, he has begotten a remarkable son who has inherited his points of view, as well as much of his ability, and has learned his method. The younger John Rockefeller takes life seriously, and labors hard to do some good and make some money. When in the course of nature the father's career terminates, the son seems likely to go on where the parent left off, and keep the great snowball rolling up. A very important part of the son's education pursued under the father's eye has been directed to qualify him to give away

money. He gives well—they both do—but with great care, for they are conscientious men and hate waste, but the general belief is that they give at the spirit while their store increases through the long-bole; and because much less care is necessary in acquiring money than in dispensing it, they are very far from making headway against accumulation. It is a very interesting case,—the most interesting of the kind in history. How it will work out no prophet predicts with confidence. Perhaps the Messrs. Rockefeller will announce, some time or other, that the financial game has come to be so easy for them that they can't lose money adequately, or even avoid making more without loss of self-respect, and that they have not time to give enough away. And then, perhaps, they may suggest an income tax.

An American yachtsman who spent a season abroad with his boat makes some interesting criticisms upon two British institutions, the parcel post, and the postal telegraph. He says the parcel post has so weakened the British express companies, that they are less comprehensive in the details of their usefulness than ours. The weight limit of a parcel that the post-office will carry is twelve pounds. When a heavier package is to be sent, it often takes strategy and forethought to get it carried. Our voyager had been visiting at a small place not far from London, and wanted to send a trunk to Southampton. It weighed fifty pounds and couldn't go by mail, and there was no express company to take it. He had to send a man to take it to London, buy a ticket to Southampton, and check it to that place. Aboard his boat at Southampton he expected a telegram, and asked to have it sent out to him. It didn't come. He went ashore finally and found it. Why had it not been sent? The telegraph itself said the government made no provision for delivering telegrams aboard yachts, and that if she had sent it out at her own cost, and it had not been accepted and paid for, she would have been personally out of pocket. Another telegram, slightly misdirected but intended for our man, had been forwarded to a man of similar name who had gone to Genoa. The American asked to see a copy of it. No; it was against the rules to show copies. So he had to telegraph to Genoa to have the message returned, which was done, though it took time. He does not like the red-tape system in telegraphy and expressage. It works fairly well in cases of plain sailing, but in anything like an emergency it is impersonal and therefore ineffective.

Dowie still proclaims that he is coming to New York this fall with three thousand of his adherents to bring Gotham, and especially Wall Street, to a sense of its sinfulness. Why should the respectable doctor come so far, when Chicago, at his door, offers so inviting a field for his energies? Some one to preach the gospel of live and let live seems a need of the most urgent exigency in Chicago. The restaurant waiters and cooks are trying again, at this writing, to starve out the consumers of restaurant food. Everybody who works in Chicago seems bent on doing everybody who pays. Our Mr. Sam Parks, the extorter, who seems now to be happily started on his way to jail, is a Chicago product. In that city he learned the arts that have brought him renown, and tribulation to us. The greatest good Dr. Dowie can do New York is to convert Chicago to reasonableness and industry, that her example may be helpful instead of harmful, and her exported organizers may be leaders in work instead of manufacturers of illness.

A great victory has been won; a land victory; greater even, in many eyes, than the maritime triumphs of *Reliance*. A quadruped won it; the great and memorable mare, Lou Dillon, on the Resville track on August 24. She beat the record by two seconds and a quarter, and trotted a mile in two minutes. Great is Lou Dillon! Sound the bugle; let the tocsin be heard! In 1829, Flora Troup trotted in 2:19 $\frac{1}{2}$ . It has taken forty-four years to gain the two seconds. However, men have wondered and disputed whether it could be done. Mr. Besmer is said to have figured out mathematically that the two-minute trotting horse was impossible. She is here; she is young, and she seems to have it in her to put the record lower still. But two minutes is low enough. It was for that that we here all have been waiting. Let us hope that the spirits of departed horsemen have got wind of what has been done.

## The Relation of New York State and Municipal Politics to the Presidential Contest

MR. DANIEL M. CAMPAN, of Detroit, the Michigan member of the Democratic National Committee, said the other day in an interview that almost all Democrats the country over are looking to the Mayorality campaign in New York city with intense interest. There has seldom been a time since the organization of our Federal Government under the present Constitution when far-sighted politicians failed to watch with attention, if not anxiety, municipal elections in the city of New York, on account of the important, if not decisive, bearing of those contests on the State elections, and even on the competition of parties for the Presidency of the United States. In the third Presidential election, which was the first to be contested, John Adams would have been defeated had he not managed to secure the electoral votes of New York. As it was, he beat Thomas Jefferson by three electoral votes, and no more. In the fourth Presidential election, which was the second to be contested, Jefferson and Burr would have been beaten by Adams and C. C. Pinckney had not the former pair of candidates managed to carry New York. As it was, they only outstripped their Federalist competitors by from eight to nine electoral votes. The fifth Presidential election was practically uncontested, Jefferson and George Clinton obtaining 102 electoral votes against 14 cast for C. C. Pinckney and Rufus King. Almost the same thing may be said of the sixth Presidential election, when Madison secured 142 electoral votes against 47 thrown for C. C. Pinckney. In the seventh electoral contest, De Witt Clinton, who carried New York, would have beaten Madison had he also gained Pennsylvania, which he might reasonably expect to win, having on his ticket Jared Ingersoll of that State for Vice-President. It is well known that in 1816 James Monroe got all the electoral votes but thirty-four, and four years later, all of them but one. Of course no State could play a pivotal part on either of these occasions. In 1824, on the other hand, if the whole electoral vote of New York had gone to William H. Crawford, as he had ground for hoping it would go, he and not Adams would have been Andrew Jackson's principal competitor in the House of Representatives. There was practically no contest in 1828 or 1832, Jackson having a walkover in both years. Neither would the loss of New York by Van Buren in 1836 have deprived him of the Presidency. William Henry Harrison, also, would have been successful in 1840, no matter what course New York might have taken. There were land-slides on both of these occasions. There is no doubt, on the other hand, that in 1844 James K. Polk would have been defeated had he lost the thirty-six electoral votes of New York. So, too, in 1848, it was New York that gave the Presidency to Zachary Taylor. In 1852 there was another walk-over, Franklin Pierce obtaining more than six times as many electoral votes as did James Buchanan. In 1856 the opposition of New York did not beat James Buchanan, who would have been elected without even the electoral votes of his native State, Pennsylvania. The returns for 1860 show that if the electoral votes divided between Breckinridge, Bell, and Douglas had been concerned, Douglas had carried New York, he would have beaten Abraham Lincoln. In 1864 McClellan's opposition to Lincoln was insignificant, as he obtained less than a tenth of the electoral votes. Grant, New York. It is well known that in 1872 Grant's opposition of Horace Greeley, died before the electoral colleges met, but New York could have played no important part in that one-sided contest. Everybody knows that R. B. Hayes would have entered the White House without being obliged to resort to an electoral commission could he have carried New York in 1876. Again, in 1880, the success of James A. Garfield was brought about by the State of New York. It is well known that in 1884 Grover Cleveland would have been defeated by James G. Blaine, had he not the former carried New York by less than 1200 plurality. In 1888 Benjamin Harrison was chosen President because he had managed to win the State of New York. In 1892, on the other hand, Grover Cleveland could have fulfilled the prediction of the prophecy that he would be elected nevertheless, have gained the Presidency by a considerable majority had he played so preponderant a role that even New York's support would not have made Mr. Bryan President.

Thus it appears that at nine Presidential elections the result was determined, or almost had been determined, by the electoral votes of the State of New York in one State in the Union run this occasion, when the electoral vote of that almost all of those nine proved decisive, the course pursued by the Empire Commonwealth to a very large extent by the City of New York. It was determined there of the Freed men in the city which secured to Tilden the Governorship of the State of New York in 1874, and the electoral votes of the State for the Presidency in 1876. In 1884 there is no need to defeat Mr. Cleveland by his presence at the Jay Gould banquet, and by the outbreak about "Hum, Romanism, and Re-

bellion," of which Burchard, one of his professed adherents, was guilty. In 1888 it was largely the votes cast in what is now the City of Greater New York that enabled Harrison to carry the State.

Perhaps, however, there has never been a stronger proof of the influence exercised by the State on the City of New York than the contrast presented by the majorities obtained by Mr. McKinley in 1896 and 1900 respectively. In 1896 Mr. McKinley's popular vote all over the country was 7,106,770. His plurality over Mr. Bryan was 603,854. In 1900, Mr. McKinley's total popular vote was 7,207,923, and his plurality over Mr. Bryan was 840,790. We would, naturally, therefore, expect Mr. McKinley to have beaten Mr. Bryan in New York much more decisively in 1900 than he had beaten him in 1896. What are the facts? In 1896 Mr. McKinley's plurality over Mr. Bryan in the State of New York was 268,489; in 1900, it had dwindled to 143,698. How are we to account for such an astonishing reduction? In 1896, a Republican, William L. Strong, was Mayor of New York, and all the influence of the municipal administration was employed on behalf of the Republican candidate for the Presidency. In 1900, on the other hand, a Democrat, Robert A. Van Wyck, was Mayor of the City of New York, and we cannot believe it to have been a mere coincidence that 125,000. That the whole power of the municipal administration, however, was not exerted by Mayor Van Wyck on behalf of Mr. Bryan is evident from the fact that in 1896 his brother had come within less than 18,000 votes of beating Mr. Roosevelt for the Governorship. It may be asked how we account for the fact that although Mr. Seth Low, a Republican, was Mayor of the City of New York in 1902, Mr. O'Leary carried the State that year by less than 8000 plurality. We answer that the influence of the fusion municipal government was that year not exerted vigorously, if at all, on behalf of the Republican candidate for Governor.

In view of Mr. Roosevelt's notorious weakness in his native State—a weakness indubitably demonstrated in 1898—there is not an atom of doubt in the mind of well-informed persons that if a Democrat should be installed in the Mayorality of the City of New York on January 1, 1904, and if the Democrats should put forward such a candidate as ex-President Cleveland, or Chief-Judge Parker, or Judge George Gray, they would be almost certain to carry the Empire Commonwealth in November of next year. Moreover, the same tidal wave of opinion which would sweep over the State of New York would be likely to involve its neighbors, Connecticut and New Jersey. This would inevitably be the result in New Jersey if ex-President Cleveland were the nominee.

When, therefore, we consider the actual conditions in the City and State of New York, and recall the historical relations of that municipality and that Commonwealth to political battles in the country at large, we can easily account for the intense interest evinced by Mr. Daniel M. Campan, Democratic National Committeeman for Michigan, and by other watchers on the Democratic Zion, in the outcome of the New York Mayorality election. Before these words reach the reader's eye the municipal situation will have been clarified to a certain extent, for the conferees of the fusion forces,—the Republicans, the Greater New York Democracy, the Citizens' Union, and other allied bodies,—are to meet in September 1.

## The Marquis of Salisbury

THAT a descendant of Elizabeth's Cecil should have been three times Prime Minister of England was no republic in all but name. If proof were needed, of the resilience of Anglo-Saxon institutions, Lord Salisbury was Mr. Gladstone's utmost and most dangerous opponent. In him was personified and perhaps exaggerated the cautious deliberation characteristic of the English race. He helped largely to teach his countrymen to pause before discarding the results of tested experience for the most attractive theories which have never proved their promises by their fruits. On such domestic questions as primogeniture, land legislation, and the erection of an Irish parliament, the strength of his character was most conspicuous. Even in 1830, he breathed the air of stateroom from his earliest youth. It was in his blood. His father was twice a cabinet minister. A second son, Lord Robert Cecil, was trained for public life at Eton and Oxford. He took his degree in 1849. As a lad at college he took an active part in the debates of the Oxford Union Society. Unlike Mr. Gladstone, who conscientiously honed the political compass from Turin to home-ward, Lord Salisbury remained in the last day of his life the consistent opponent of government by counting noses. From the records of the Oxford Union Society it is known that he supported a motion to provide England with a stronger government than the Liberals were able to give her. He moved also a resolution deprecating, and in another debate he gave expression to a strong condemnation of the dissolution of the monasteries by Henry VIII, and made an emphatic protest against the disestablishment of the English Church. These speeches were vigorously controverted, veh-

ment in tone, enactive in attack, didactic in statement—qualities which remained with him to the last.

After leaving Oxford the young Lord Robert Cecil started on his travels, which extended to so distant a portion of the empire as New Zealand, where he stayed for some months, came late close touch with a form of democracy that was strenuous, if not triumphant, and bore at the expense of the personal freedom of the peremptory condition of life which are generally obscured from the heir of a great English name, and from the mastery of great possessions.

In 1853 he entered the House of Commons as a Member for Stamford, and watched the country drift into the Crimean war, as on the Eastern front the little crowd shogled like the head of the Tsar Nicholas stretched in the direction of Constantinople. His marriage in 1857 to Georgina Caroline, eldest daughter of Sir Edmund Hall Alderson, Baron of the Exchequer, was displeasing to his father, and as a consequence he at this time acquired further experience of the conditions of other men's lives by the narrowness of his income. He attended his late by sharpening his pen. In the *Saturday Review* he contributed many of the bitter criticisms which gave to that journal influence and character, now entirely lost. No man can regret that Lord Salisbury should have passed through a period of struggle. Under a cold and cynical public manner he covered the public mind with a veil of mystery and felt the latest interest in all that related to what Carlyle called "The condition of the people question," but he would not allow his sympathies and real interest on their behalf to be utilized for his own political advantage.

One feature—perhaps the most conspicuous—in Lord Salisbury's character was his aloofness. To him the political world was a laboratory. He had no a priori hostility or sympathy for any measure that commended itself to his judgment as practically adapted to accomplish the end in view. The measure that did commend themselves to his judgment, however, attained that position from causes beyond the ordinary ken. In foreign affairs he was long associated in the public mind with Lord Beaconsfield, although the belief prevailed in many minds that as early as 1876 the two men were pulling opposite ways. Disraeli, in obedience to his Senile instincts, was bent upon dragging England into a war for the maintenance of the integrity and independence of the Ottoman Empire. Twenty years later the public learned from Lord Salisbury's own lips that they had been "getting their money on the wrong horse," a confirmation of the popular conviction that Lord Salisbury and his leader were antipathetic from the first. Lord Salisbury was never a Turcophile Tory. His experience, however, abroad was first gained when he was selected to represent her Majesty's government at the conference of Constantinople in 1876. Lord Salisbury's appointment was publicly announced by Disraeli at the Guildhall banquet. The speech in which the announcement was made contained the famous reference to the resources of England as a country which would have no need to inquire whether she could enter into a second or third campaign. The English plenipotentiary's policy at the conference was that of trying, by all possible means in his power, to induce Turkey to open her eyes to the danger which surrounded her, to awake from her infatuation, and to give to the populations who had suffered so much from Turkish misgovernment some measure of liberty and safety for life and honor. Lord Salisbury's mission was abortive because he was a good man handicapped by principle, and a minister who did not really represent the nation.

The Russo-Turkish war then took place, and after Russia had succeeded in getting to the gates of Constantinople, Lord Beaconsfield and Lord Salisbury, in June, 1879, left for Berlin, where the congress, under the presidency of Bismarck, snatched the fruits of victory from the Russian army. At this conference Bismarck took the measure of the English Foreign Secretary, and uttered his celebrated epigram about the "lath painted to look like iron." Mr. Balfour accompanied his uncle to the Berlin conference, and first obtained his initiation into European politics.

Here Lord Salisbury and his chief returned to England, and how "Peace with Honor" became the watchword of the Tory party, is now a tale that is told. The cool judgment of the impartial historian is unable to record a favorable verdict on the Tory policy of that period. Russia was exasperated for generations. England was not strengthened, and her reputation as a belligerent, a rhetorician, and a gadfly was established in the archives of the Russian Foreign Office. Russia, however, was rescued by Mr. Gladstone in the passionate pilgrimage of the Melchior campaign. In one long denunciation of Mr. Disraeli's policy in Europe, in Asia, in Africa, among the Christian populations of the East, the tribes of the northwest Indian frontier, and the Boers of the Transvaal, Mr. Gladstone found no good thing. He pledged himself that if returned to power he would undo all that was done by his predecessors. He was returned to power, and he kept his word. Lord Salisbury had his revenge. After Beaconsfield's death he succeeded by seniority to the command of the Tory party, and to him, more than to any man in Parliament, belongs the credit of victory in the intellectual struggle with Mr. Gladstone on the home-rule question. It is scarcely too much to say that the master of "Glean, and

forms, and jaws" was the only man in the front rank who was intellectually capable of coming to close quarters with Mr. Gladstone on the subject of Irish autonomy. There were many others who believed themselves to be the redoubtable antagonists of the "Grand Old Man," but none of them carried weight with the country.

His last term of office, from Lord Rosebery's resignation in 1895 to his own retirement in July, 1905, included the Boer-Italian boundary incident, the Boer war, and the troubles in China. His course in all these matters is fresh in the memory of readers. That the Venezuela incident came to a harmless, though important, solution has been credited largely to his prudent self-restraint. At that time and until 1901 he was his own Foreign Secretary. Whether another man in his place could have avoided the calamities which came upon the Boers or carried it through at a low price is matter for future historians to discuss. He warned off all interference and saw the task through.

With all his abilities he neither understood nor was understood by the main body of his countrymen. He distrusted democracy, openly derided the House of Commons, remained aloof from his supporters, and even in the Foreign Office was unknown to the majority of his subordinates. During the latter years of his life the profound melancholy and dejection of his public utterances irritated his adherents and offended the pride of the English people. The chatty statesman that is the mark of aristocratic government was almost entirely absent from Lord Salisbury's character. He winced under attack, and allowed his suffering to be known. Still, his faults were those of a great man. He was exempt from the follies of the demagogue or the wiles of the self-seeker, and belonged to a type that is vanishing.

The English people were proud of a man they scarcely understood, and did not wholly like. He belonged to the old order of things. The personal habits of prominent men no longer excite the attention of the world. Lord Salisbury's habitual pessimism, which increased during the closing years of his life, may undoubtedly be attributed to ill health, partially produced by want of exercise. Those who have been guests at Hatfield, especially when no house-party engaged the attention and occupied the time of their host, can tell how the complete absorption of Lord Salisbury in his work precluded the conditions of healthier existence. His great bulk incapacitated him for personal exercise. He weighed 280 pounds. He was endowed, moreover, with an appetite on a large scale that was voraciously healthy, and he would pass from his desk to the table and from the table to the desk after a full meal without a minute's intermission. Dyspepsia, low spirits, and pessimism are first cousins. Lord Salisbury's pessimism may be regarded as partly the product of his ill health, and partly the result of his life. When in office he devoted the whole of his time to his public work; even the resources of the laboratory, which he more than dabbled in electrical and chemical experiments, were disregarded. He never could see that he owed it to himself no less than to his country to take proper exercise, for exercise was the one thing he could not endure. He used his strength to cross the street, and although in former years he might be seen walking across the park on his way from Arlington Street to the House of Lords, even this short walk was discontinued in later years. His natural pessimism was latterly increased by solitude for Lady Salisbury's health. He owed to her much of his success. They were married while he was still a struggling man, and the felicity of their domestic life, though less in the public eye than that of Mr. and Mrs. Gladstone, was no less conspicuous as one of the elements combining to form Lord Salisbury's attractive personality.

## King Edward in Austria

KING EDWARD'S visit to Maribor means a good deal more than a course of waters and a well-earned holiday for an overworked monarch. It is already bringing about the happiest results in the political world, and the influence of the English statesman-king will presently be seen in the storm-center of Europe, the Balkan peninsula. All the prearrangements and tergiversations of the Sultan are based on the hope that, at the last hour, he may be able to stir up strife among the European powers which seek to coerce him into conceding decent government to his Christian subjects; and most of all he counts on England, his ally in 1878 and his dynasty's ally in the Crimean war, to obstruct and neutralize every effort made by Russia and Austria in the path of reform. Abdul Hamid is sire of Germany, and with the Kaiser's friendship and the good-will of England could continue in the path of anarchy for years.

But here he counts without his host. The great English statesman who has just passed away used to say that, in backing Turkey against Russia, England had put her money on the wrong horse. Not only is King Edward VII. of the same mind, but he is drawn towards Russia by the strongest ties of blood and kinship. His visit to Austria, therefore, and his extremely cordial meeting with the veteran King Emperor Franz Josef, taken in conjunction with his coming visit to his nephew, Nicholas II. of Russia, will

demonstrate to all the world, and not least to the hermit-dog at the Yikhi Kiok, that England leads her hearty good-will to the reform programme of the Landsort-Göteborgsköns understanding, and is anxious to atone, to the full extent of her power, for the part played by the English jingoes in 1878, in thrusting already free Macedonia back once more under the iron heel of the Turkish tyrant.

It is impossible not to notice that the visits of King Edward, first to Portugal and Italy, then to France and Austria, and later to Russia, have a tendency to mark the isolation of Germany from the general trend and the more humane purposes of European politics. Yet we cannot but admit that Germany has invited the isolation by the willfulness and rashness of her action, against in the maladjusted policy in the Far East or the expedition against Venezuela, or, even more markedly, by the Kaiser's fraternizations with Abdal Hamid, the assassin of the Armenians, the Bulgarians, the Macedonians. All Germany yearns for the better ideals that provided the iron despotism of Bismarck, her practical isolation will make for the well-being of the human race; and it is as a step towards this isolation that King Edward's visit to Austria is most significant.

### What a Journalist Should Know

If your journalist knows everything, so much the better, but there is no such to know nowadays, that it is admitted that no one may say longer aspire, as Bacon did, to make all knowledge his own. Mr. Pulitzer is not to spend money in the hope of giving young men such special training as may best fit them to become journalists. What is especially desirable that they should know?

There are two chief branches of the newspaper business: making the paper, and selling it. We take it for granted that the new school of Journalism will concern itself with the editorial side. Its graduates must have learned how to write. First, they must be able to tell their stories and express their opinions; secondly, they must learn to have stories to tell and opinions to express.

It is hard to imagine a better school of story-telling than every good newspaper keeps for its young reporters. It sends them out to observe and inquire; they write down what they see or learn, their reports are read and revised by editors of experience, and for so much of them as is printed the reporter is paid. Opportunity, instruction, and reward come close on one another's heels. Talent, energy, and ability are quickly recognized, and promptly rewarded. The rudiments of good writing are taught in a school, and most good schools will call for special pains nowadays to teach them. But that rote writing and calligraphic penmanship of mind which are not common, nor likely to be so, it is the result of practice and instruction, but natural talent has to turn out more than a reasonable proportion of excellent writers.

But a very important help to good writing is to have something to say and to know what it is. There the schools may help. Opinions are not of much use unless they are based on knowledge. The more accurate knowledge any observer has, the more opinions he is likely to have, and the better worth printing his opinions will be. The able reporters who get the best assignments are those who are qualified by knowledge, talent, and experience to handle them. The successful interviewer must himself know at least enough about the subject on which he wants his man to talk, to ask intelligent questions and to take in what is told him. The able correspondent gathers the information within his reach, adds to it what he knew before, sifts it through his own mind, and his paper gets the product. As for the editorial writer, he should know a little about a great many subjects and a good deal about a few subjects. He should be able, with the help of his books of reference, to deal with any item of news that comes in, and with some special line, or lines, which he should deal with authority.

The modern method of teaching law is to set students to dig their law out of the reported cases. Medical students in like manner are sent to the dissecting-rooms to see for themselves. Text-books are used in the schools of both these professions, but the aim is to teach method even more than facts, and to supplement text-books by practical work. Whether the School of Journalism will attempt to publish a newspaper remains to be seen, but at least it may teach its young men how to study their profession. A good journalist must be a continuing student. He must study every day; study to get his facts, study to state them—clearly and concisely; study—if he comes to be an editorial writer—to make sound deductions from them. He must from the habit speak the truth, and he must take very particular pains not to print anything that he is not sure of. Next important to having knowledge that is constructive with the demands on it, is to keep one's statements within such knowledge as one has, or can acquire for the occasion. If the students of Mr. Pulitzer's school learn by taking a considerable step towards proficiency in their profession,

For the rest, we suppose that besides instruction and practice in the writing of English, they will be able to do as full as possible of modern American and European history, and will be taught the rudiments of law and of finance. Religious instruction is not likely to be given them, and yet as religion is a subject of constant and lively interest to a large proportion of the newspaper-reading public, a newspaper man can hardly afford not to know it. Sport it will not be worth while to teach, as plenty of good beginning journalists will study it out of hours. Nor is it likely that the school will try to impart the important qualification called the nose for news. That must pre-exist, or must grow naturally, as noses do.

The amount of technical knowledge which a beginner in journalism requires is so small, and the amount of general knowledge that he can use is so limitless, that it is not surprising that some critics have said that the proposed school is not worth founding, because all that is important in its work may be done elsewhere. Against their opinion is to be weighed the complaint of some newspaper editors that too much educational work is forced upon them. Moreover, Mr. Pulitzer's opinion that there is a place for his school goes for a good deal. He ought to know. He has made newspapers, and has dealt with a great variety of newspaper men, and nobody denies that he knows his business.

### The Operatic Prospect

ACCESSORS to Mr. Heinrich Corried's announcements, New York is to have this winter a most exceptional and brilliant opera season. If nothing were promised us by Mr. Corried but the production of "Parafal" we should still have a unique and memorable experience to anticipate. But there is still more in store for us. New scenery and costumes are promised for a number of the operas on Mr. Corried's list—and it will be noted with especial gratification that the shabby and inadequate accounting which "Der fliegende Holländer" has had to suffer in the past is to be bettered at large expense. Nor is this all. We are to have an orchestra increased in size and efficiency, and two of the best conductors in Europe to direct it—Felix Mottl and the admirable Hertz, together with Vigna, who comes with an excellent reputation earned at La Scala and in Monte Carlo and Berlin. Calvé is to return, and Sembrich, and Termini, and Placido Domingo are to be well rewarded. Van Rosy, Scotti, and Campanelli are to be well rewarded. An experienced and authoritative stage-manager has been secured, and there is no doubt that the mechanical management of the performances will be accomplished with intelligence and skill.

But there are, to our mind, some curious deficiencies in Mr. Corried's scheme, despite its general and notable excellence. We need scarcely repeat what we said last winter at the time of Mr. Corried's election to the directorship of the Metropolitan; that he is very nearly the ideal man for the post; and we believe that he is making every effort to provide the most justly balanced and intelligently organized performances that the Metropolitan has ever seen. It is precisely because we feel so confident of his integrity and the sincerity of his aims, that we are impelled quite frankly to remark upon the several unacceptable features which seem to us to mar his programme. How, for example, are we to explain the absence from Mr. Corried's company of Mont Nordica, who is to-day an unequalled representative of certain rôles? True, we are to have Mikka Termini—an exquisite *Jodit*, an unapproachable *Elizabeth*. But she is not the *Briandine* that Nordica is,—in either "Walküre," "Siegfried," or "Götterdämmerung"; nor is she the equal of the American singer in certain lesser parts. Why, too, is that other accomplished American, Emma Kraus, omitted from the roster? But even more serious is the defective constitution of the French department. With the exception of Caruso—who is incompetent in interpretation, but the conventional rôles of the French and Italian repertoires—and one of the men engaged by Mr. Corried is of the first rank; we shall have it seems to content ourselves with such singers as Kraus, Burgstaller, Dippel, Solera (a possibility), and a newcomer, Naville, who may or may not justify his reputation. Why was not Jean de Reszke engaged? Diverse views, it is explained, could not be reconciled. But surely we are entitled, in view of the success upon which Mr. Corried is planning his operations, to the best that the market holds, despite its costliness. And what of the novelties announced—such eminently unimportant works (always, of course, excepting "Parafal") as "Les Dragons de Villars," "La Dame Blanche," "La Gioconda,"—which is neither novel nor consequential. Why are we not to hear a few, or even one, of the works which all Europe has been discussing—such things as Richard Strauss's "Fruensøth," Debussy's "Pelleas et Melisande," Chabrier's "Lohé?"

In entire friendliness we recommend these points to Mr. Corried's consideration. They are, we think he will admit, reasonably taken; for we cannot but feel that in an enterprise so generously and so heedfully planned, there should be less serious defects of preparation.

# Books and Bookmen

By James MacArthur

IN an interview with *Toddy* published in the London *Daily Chronicle* recently the Russian novelist asked his visitor if he had read *Franklin et in Biblia*. Upon receiving a reply to the negative, *Toddy* urged him to get it. "There was a man who read his Bible for some purpose," *Franklin* himself has told us of the great advantage he derived in after-years from the close study of the Bible enforced upon him in his boyhood. It is a fact to be deplored that the Bible is not read and studied nowadays as in bygone days. The tenacity of the educational programme both in Great Britain and America is to neglect the study of the Bible and to relegate it to the theological seminary. A reader of Miss Lafayette Melan's recent novel, *Zerkel*—a Biblical romance of the times of Ahab and Elijah—wrote to the author the other day in admiration of her portrait of the notorious queen, and added that it had interested her so much she intended reading the original history again in the Bible—she was quite sure where, but she hesitated it was in the Book of Ruth! I am afraid that this is by no means an isolated or exceptional example of the increasing general ignorance of the Bible. Even in the press Scriptural allusions are rarely made, although some journalists compared the brutal treatment of the late Queen Drags to that meted out to Zerkel of old—to the confusion of certain of their readers, as I happen to know. In England the practice is kept up with more frequency. And yet one wonders if a reference like the following, relating to the Persian massacres (Italics are mine) which appears in the issue of the *Spectator* that has just come into my hands is intelligible to most of its readers.

The Government tried at first to smother the potpourri section, but finding this dangerous, we sentenced one to be thrown away from a cannon and another to turn his head into a bomb. It is not stated that he smothered his bomb.

The neglect of Shakespeare, especially on the stage, in this country, is often emphasized with a dagger of reproach pointed at the way they honor the Bard of Avon in England. Yet even there they are not easy in their consciences, for only yesterday I read in a prominent London journal: "We preserve Shakespeare's house as a place of pilgrimage—chiefly for the use of American pilgrims—and buy sets of his works for our bookshelves and leave them there. We seldom go to see his plays presented, and when we do honor a Shakespeare play we regard the visit as a penalty we are paying in culture, and most of us hope that the mounting, extravagant dresses, and pretty incidental music will make our burden bearable." And yet in the English papers which make with the same mast I find some items of news which indicate a lively evidence of interest in the great dramatist. I learn that Mr. Sidney Lee in addition to his pretty quarrel with Miss Marie Corelli over the *Healey Street* episode in *Stratford* has written a preface to an anthology *In Praise of Shakespeare*, compiled by Mrs. E. Hughes, which aims at showing that the poet's reputation has never, since his own time, been seriously affected by the changes of fashion in literature. Then there is an announcement that one of the largest publishing firms in London is about to issue a certain quarto Shakespeare, for which these publishers, who evidently have short introductions and footnotes. In the correspondence column of the same paper my eye lights on an interesting letter from the eminent of a number of Shakespeares in the parish registers of Epsom, Bedfordshire, between 1523 and 1634. "The register," says the writer, "was astonished as I was at the finding of these five, and has no name of one on any tombstone in his parish churchyard. But the great William S would have approved of the *London* four—mother, and who had not of his next day with a bag of it, and sought a two-penny roach, the biggest that has been taken

near Hampton for a long while." Again, I read the statement in another paper that the British Empire Shakespeare Society has come into flourishing existence and claims attention. Sir Henry Irving, who has done so much for Shakespeare, is president of the Society; the Lord Bishop of Ripon is vice-president, Alexander Forbes-Robertson, and Lewis Waller are vice-presidents. The aim of the Society is to encourage the rising generation "not only to study Shakespeare's works, but to live them." Lectures, readings, and presentations of the plays are part of the Society's programme. The Society already numbers one thousand members. I could see on this side show a like boast in one day's casual reading of the newspapers?

Weimar, the home of Goethe and Schiller, had recently unveiled a statue of Shakespeare. The statue is the work of Ulm Lenzing, the sculptor of the famous Lenzing monument at Berlin. A German correspondent thus describes the statue: "The roll is one hand of the poet, the fresh blooming rose in the other, are symbolical, as are also the laurel-crowned sword at his feet and the fool's rap on the skull—allegories alike of his earnestness and of his humor, of his deep sense of comedy and of tragedy."

The new Statue of Shakespeare at Weimar

The *Memoirs of George Eliza*, edited by Lord Monson and George Leveson Gower (William Heinemann: London), affords a glimpse of army and society life in the England and India of a hundred years ago. Captain Eliza was in the Twelfth Regiment of Foot, and though he saw no actual service of any account, his career was as typical of the army officer in India that the historic worth of these memoirs is as valuable as their human interest is rich and entertaining. "The first of these memoirs," Lord Monson tells us "was found in the library of Hurton Hall by my relative, Mr. George Leveson Gower, to whom I am also indebted for his assistance in preparing this volume for publication; and as they seemed by me to present a faithful and interesting picture of life in society and in the army at the end of the eighteenth and at the beginning of the nineteenth century, I decided on publishing them." Eliza was very intimate with the Duke of Wellington in his early days when he was Colonel Arthur Wellesley, Maria Edgeworth, the novelist, was a cousin of the captain; and the Prince of Wales, afterward George IV, was a long acquaintance in those days of military dandies. Miss Edgeworth. It appears, read the autograph of these memoirs. "Your affectionate letter and entertaining history," she writes in one of her letters, "pleased and interested all this family very much, my dear Cousin; and I thank you for the trouble you took in writing it to me." The letters of Miss Edgeworth are taken up for the most part with matters of family genealogy, but this passage, written in 1811, is of literary interest:

"As you are so good to take an interest about my works, let me beg that you will take the trouble to deny my being the author of the 'Shalsh Girl' or of 'Tales of Real Life,' which I hear somebody has published in the name of Mrs. or Miss Edgeworth. There is also a person who takes the name of Theodosia Edgeworth, and published the 'Shipwreck.' I know nothing of it or of him. All our works are published by Johnson.

"I read you an Epigram of my father's upon recent fashionable Scotch marriages and divorces. It was the day of *Green's Green*." The lines have been attributed in England to Sheridan, and have been sent as Sheridan's by different people back from England to Ireland. My father thinks it a high honor to have anything of his writing attributed to so accomplished and witty a writer:

"To raise Scotland boys and girls are carried  
From their fair hills, and to be married  
Soon when green the valleys round them ran  
To rattle bells to get the best of them.  
The folks of Scotland, with their blue and  
Black, are not far from their own."

### THE MARQUIS OF SALISBURY

*Lord Salisbury, who died at Hatfield House, England, on August 23, was the head of the famous House of Cecil, which has been so closely identified with the high politics of Great Britain for more than three centuries. He first came into international prominence in 1878, when he and Disraeli represented Great Britain at the Congress of Berlin. In 1895 he became Prime Minister of England, and held the post at various times until his retirement from public life a year ago.*

# Sport in England

By Sydney Brooks

Shooting Grouse driven to a "blind" on an English Moor

LONDON, August 21, 1921.

THERE are some dates that you simply must know to hold your own in England. August 12 is one of them—the "Glorious Twelfth" when grouse-shooting begins. September 1 is the second; it marks the opening of the partridge-shooting season. October 1 is more important in later intelligently in the dominating conversational topic of the next six or seven months. Without them you will be socially lost.

The "Twelfth" has this further significance. It marks the official close of the London season. Actually the season winds up two or three weeks before. This year, owing to the King's visit to Ireland, it came to an unusually early end. For nearly a month the Park, which is the best and about the only public gauge of London's "emptiness,"—which can alone tell you whether the fifty thousand who count have fed, and only the five millions who do not count remain,—has been practically deserted. And yet while Parliament is still sitting and the light burns from the great tower at Westminster, the season is still officially in being. You see how the advantage of being governed by rich men. I suppose half the grouse moors in the kingdom belong to members of either the Upper or the Lower House. There is, in consequence, an immense pressure put upon legislators to get through their work and wind up the session before the "Twelfth." Bills are rushed through or ruthlessly dropped, private members are gagged and crumpled into silence, and the government grooves every wheel to bring the parliamentary machine up to its topmost speed. When Englishmen finally settle down to work they work quickly, and the machine somehow never fails to respond to the call. With the smell of the leather already in their nostrils, and the pop of the guns clicking in their ears, honorable members display the most unaccounted activity. A foreigner who did not know the motive power at work might really mistake the British House of Commons, during these momentous days that precede the "Twelfth" for a business-like assembly. There is such earnestness, such speed, such relentless refusal to be led away from the straight and narrow path. It always merits with its reward. No crisis is imaginable that would persuade the House to all beyond the "Twelfth." It never fails to get itself prosecuted in time to pick up and catch the night express for Scotland and the moors. And with its prerogative the London season that for weeks has been spluttering is finally stamped out.

And about this, too. The piquancy of Mr. Henry James has discovered and sung the praises of London in August, and there is at least one ambassador who prefers it to all other months. London in August, he declares, is the only season of the year when he can be really quiet and feel himself the master of his time. But ministers with a lesser gift for abstraction or fewer demands on their leisure, as they wander through an empty Belgrave or a swing a few they know, find it something less than Paradise. Like everything else, your club is given over to the decorator, and though it is the good rule of London for clubs to stand together

and help one another over these distasteful August cleanings by opening their doors to the horseless cars, somehow you do not care to accept the invitation more than once. It is not your club but someone else's; you are waited on by unfamiliar stewards; you have no local habitation, and the chair you instinctively gravitate to you always find to be the favorite seat of an original member. The only people who can and do enjoy London in August are home-painters and Americans and the London County Council. Social London is in the hands of the first, picturesque London the prey of the third. The sidewalks are littered with holders and pulls and brushes, and pleasantly tinted with splashes of paint; the roads are "up" and raking of tar; and every other person you meet is poring over a Bauedeker. No that, in spite of Mr. Henry James and the Ambassador, I think a pretty good case could be made and why we should not spend August in London.

At any rate a good many people seem to feel this way about it. Go any morning or evening just before the "Twelfth" to one of the great London stations and watch the crowds starting for the north. It is a sight which will show you a new side of the grouse—its economic value. Vast armies—vast, that is, as Englishmen reckon vastness in land—have been made prosperous by the grouse; the grouse employs thousands; the grouse has led to the building of railroads and steamship lines; the grouse for the time being is the alpha and omega of the social programme. At the London termini you will discover that sport and politics, sport and society, are in England pretty well synonymous. Nearly every one you see crowding into the trains that are bound for the Scotch and Yorkshire moors is a man or woman of mark—lawyers, legislators, and society leaders, the pick of English life. It knocks on the head one's notions of English stolidity and reserve. Every one in tweeds and every one is laughing and excited; troops of footmen, with gun-cases and of lady's maids with the usual impudently hostile round; the great holiday has begun. They do not precisely look the sort of people who are inclined to rough it; but if you accompany them to the moors, you will find them all, men and women alike, to be possessed of a wonderful staying power.

Almost all shooting in England has been rechristened within the last forty years. The development along really scientific lines of "driving" and the immense amount of attention that has been devoted to the rearing of partridges and pheasants are the cause of the revolution. Games of course are wild, and no attempt, so far as I know, has been made to head rear them on any large scale. But the introduction of driving has altogether changed the methods of shooting them. In Scotland alone, where the birds will sink to the nature of the ground, are they now walked up to with dogs. In England, on the Yorkshire, Durham and Lancashire moors, the man who is content to patter about behind a pointer or setter and kick up a few birds at a time, is already a rarity and threatens in time to disappear altogether. The same may be said, too, of partridges and pheasants. Formerly all through England they are now driven to the guns, with great slaughter. At a famous shoot in Suffolk, a few years ago, eight guns in four days killed 5387½ brace of grouse; but that of course was altogether exceptional. Two hundred brace is a fair average day's sport. The moors are rented in accordance with the number of brace they usually afford and the house accommodation they provide. Bargains are rare though. I know one compact five-acre moor in Yorkshire which rents regularly for £125 a very moderate price. The larger and better stocked ones average about \$4 or \$5 rental per brace.

# THE NEW NATIONAL GUARD

THE NATIONAL GUARD AS IT WAS IN THE OLD DAYS—HOW A SENIORITY GUARD DUTY IN THE SEVENTIES—THE REGULARS AND THE GUARDMEN—HOW TIMES HAVE CHANGED IN THE NATIONAL GUARD—THE DISCIPLINE AND EQUIPMENT OF TO-DAY—THE FASHION OF THE "TEN SOLDIER"—THE NATIONAL GUARD OF NEW YORK THE EQUAL TO-DAY OF ANY MILITARY ORGANIZATION OF ITS KIND IN THE WORLD

## By Franklin Matthews

**T**HE National Guard colonel of twenty-five years' experience sat on a camp-stool outside his tent and smiled as he watched a sentry patrolling his beat.

"Remember when you used to do that?" asked a friend.

"That's just what I was thinking of," was the reply. "How times have changed! 'Way back in '77 I was put on guard duty in front of the armory in Fourteenth Street. Riot duty we were out on. An orderly came to our quarters and said in the captain's, 'Bill, the colonel wants you to put a guard out in front of the armory.' 'You tell him to go to Hullyhoon,' was the answer. The orderly went back and then one of the lieutenants said to the captain, 'Bill, guess we had better let him have a man.' 'All right,' said the captain. 'Here, Jim, you go on guard duty.' 'I can't do that,' said Jim; 'don't you know you and I are going out to breakfast together?' 'That's so,' said the captain, and then they selected me.

"I wasn't even a member of the company, but I was doing duty with them, expecting to get in. If I had shot a man it would have been marvellous. Well, I walked up and down for an hour or two, and then I went into the armory and asked when I would get my breakfast. They told me not to mind about a little thing like that, and I got mad and said I'd buy it myself. So I went around the corner, got my mackerel in a corner in a restaurant, had a good feed, and when I got ready went back again.

"I walked up and down there for three days, off and on. When I got tired I'd go inside and rest. When any of the shop-girls came along I would walk a block or two with them. I'd go off post at any time to get my meals. On the third day I got tired and sang out to the company quarters that I wanted to be relieved. They sent another man down, and I went across town to a relative's, had a bath and a shave, and came back when I got ready. That was guard duty in time of riot twenty-five years ago. Now when I punish a man for the slightest infraction of duty, I often wonder what he would say if he knew."

"Fancy a regular doing that?" was the friend's comment.

"That's all right," said the colonel, "but you and most people have an idea that regulars are so vastly superior to National Guardsmen that it is ridiculous to compare them. I tell you it isn't so. We're up against an entirely different game from the

regulars, and, what's more, we do our work as well as if not better than they would do it. What is the watchword with the National Guard? 'I'll tell you. It's battle. A summons comes in the night. The bugler doesn't stand outside his tent and lool, lool, and then there you have your men. No, it's a grand hustle all over town, and in four hours you've got your men at a railroad station and off you go.

"What's the watchword with the regulars? It's deliberation. Don't be in a hurry, don't get excited, in the morning of every move they make. Why, I remember we got word in the Spanish war to move to a certain camp preparatory to going to the front. In ten minutes I had the officers before me. 'How soon can you move?' I asked. 'Half an hour,' was the answer. I went and reported to the regular army officer in command. I said, 'We could go this afternoon, but we'll be ready early to-morrow morning.' 'Let's see,' said the colonel. 'This is Monday. Don't upset the commissary. You send word back that you will be ready to start a week from Wednesday.' There you are.

"I tell you our game is different. A regular in service has a definite enemy. In war that enemy wears a uniform. You know where he is, what he looks like, and you know what to do when you see him. In our work the man that walks along the street in a parade may use a stick of dynamite on you the next minute, and you never know when to shoot. However, shooting is a good thing sometimes. If a man had his legs shot on a freighter in Buffalo in 1902 I almost believe we'd be there yet. The guardsman was smart enough to get a clean gas and a full cartridge-clip, and no one ever found out who did that shooting, although there are hundreds of men to-day who could tell it. In these days, however, a guardsman doesn't need to hide it if he shoots a man when obeying orders. Yes, times have changed in the National Guard, and the highest ambition nowadays is not to have an armory as a club-house and have a big ball once a year, but to do your work so that a regular couldn't do it any better.

"Curious how that ambition in beat the regulars affects a man. Why, I knew a guardsman so affected with desire to emulate the regulars that he went over to Governors Island and had his clothes made up with as many little knicks in them that the regulars used as he could have. Even had red stitching put in some

A Cavalry Brigade of National Guardsmen Surprising a Relief Train

Infantry Drill—Skirmish Line Advancing in Open Order

of the serum. He was an artilleryman. He never chewed tobacco, but when he went on duty he wanted to be so like a regular that he put a tremendous chew in his mouth. 'What battery of the regulars did you need to serve in?' asked his commanding officer, and when he came off duty he disappeared for three days. I don't say he was—well, anyhow, let us say he was indisposed from joy.

"Yes, we'll stick up against the regulars in any way you want us to. It's been a long, hard fight, but the National Guard of the State of New York is in such a state of discipline, is so thoroughly equipped, has such excellent sanitary regulations, that no man in the world is in better shape. Take the matter of food. I remember when the best "one-day's ration" was a \$5 bill in your pocket. When we got to Buffalo in 1932 we had been eighteen hours without food. They said we were going to camp on a farm. A great cheer went up when we heard the news. We could see the fresh eggs, the butter, and chickens and nice capitaines all being cooked for us. Solddiering wasn't so bad, after all. We were going into a land of milk and honey. Well, that farm was a swamp, filled with railroad cinders, and there was nothing but grain elevators and mosquitoes in sight. We had no food for nearly forty-eight hours more.

"One of the officers went into Buffalo, got an order on a wholesale grocery house, had to hire a furniture van to haul the supplies out to camp. The boys pulled the van into camp with a great shout. Well, there were no cooking utensils. I remember my company got a big wash-bowls and we made a stew. Every one took a head in the cooking. We noticed a peculiar steam on top of the stew, but the steam from that stew was so grand that we didn't care about the looks, and we just skimmed the steam off and let her simmer. And how we did eat it! When we got through some one looked in the boiler, and there were the remains of a bar of soap that we had neglected to remove. But there never was a better stew in the world than that, soup and all.

"Well, what happens nowadays? Every company has its portable stove, its cooks, and every man has his little knife and fork and spoon and plate attached. And then there are meat-knives and big knives and everything needed to go along, and it's all packed up snug and fine, and no guardsman ever goes hungry. He even carries condensed rations, good for one day's supply. He doesn't need the \$5 bill in his pocket any more. He's as well equipped as any regular could be, and his commissary is in just as good a condition. We are sending out the men from their camps on marches of one or two days, making them take care of themselves as they go along. Regulars couldn't do my better.

"As to the health of men in the field, well, nothing is neglected. I remember, just to show the difference, a 'lung mill' in the camp at Peekskill ten years ago in the night. We all tumbled out—of course, in those days the tip had been sent around word to expect— I was coming back to camp one of the general officers, and was trying to get out of the way of a battery that was making a short cut, stumbled in the dark over the ropes of a tent, fell badly, cut himself terribly on the tent-poles, and was one of the worst-looking objects in the world. We got the doctor as soon as possible. He had crude appliances and no helpers. I left my command to assist the doctor, and I'm a captain! I had a nasty brownish lump to give us light; an acetone gas as in those days. It was a disagreeable job getting the man up, and it was a marvelous piece of work, considering our meagre equipment.

"What is the situation now? We have men enlisted in every company as a hospital outfit. Why, sometimes you can't keep

out of their clutches. Let a man have a headache. They will actually seize him, bundle him off to a hospital, and not let him go. Let a man suggest that he has a pain. These Red Cross fellows pounce on him, even want him to make him think he really is sick; then they cuddle him and turn him out with great pride the next day a well man. Let a man fall in the ranks or get hurt. Does a captain leave his men and go to assist the soldier doctor or captain doctor? Not much. Nobody pays any attention to the stricken man. The hospital gang is there on the jump, and we go right along. Why, we need to have to borrow an ambulance whenever we went out. Do we do it nowadays? I guess not. We even have the harness for the horses all ready. And the medicine chest is a marvelous thing. Let a man complain of a brown taste in the mouth. He goes to the doctor—he wouldn't think of such a thing at home. 'Give him Number 31,' or whatever it is, says the doctor, and the pills or the powder—or liquids—are doled out.

"And the camp inspections? Twice a day they are made. Every officer knows how to pitch a camp nowadays. 'Wood and water' is the trick to learn. Get your water from the highest point up stream, and let the camp drainage go into the stream the farthest point possible below.

"Talk about discipline! The enlisted man to-day uses the third person in addressing his officers. He comes up to the captain and says, 'I have the first sergeant's permission to speak to the captain.' If you're the captain, you would have said in the old days: 'Why, I'm the captain. You lunkhead, don't you know that?' Not you say, 'Well, what is it?' This custom of using the third person runs through all the ranks. There's no familiarity with officers. You don't hear a captain called 'Bill' by his men any more. Every man in the guard is able to repeat, just as he would in secret society's ritual, the duties of a sentry. I remember asking a lot of officers once to repeat that formula. They couldn't do it. Two weeks later every man had it. Then they made every one of their subordinates learn the same thing, and so it spread until to-day an enlisted man of a few months who cannot recite that thing off isn't fit to be in the guard. The great point is that the elementary things are now thoroughly understood by the private as well as by the officer.

"One of the greatest helps in the advancement of the National Guard of the State has been the banishment of the ornamental officer, the man who had to wear a uniform on show occasions and who knew nothing of military duty, but even enough to wear a sword properly. Ready-made uniforms and all that are gone. Why, when I joined the National Guard of New York there were no less than 13 major generals and eighteen brigadier generals, to my sorrow, of a lot of superfluous small fry. The Governor's staff was filled with men who strolled around at official receptions in a gorgeous uniform, and couldn't have done a right-about-face if they had tried. Our Governor's staff, it is true, was never over-loaded with those men like the staffs of so many Governors of States. We never had from 150 to 200 civilians on the Governor's staff, like the Governor of Illinois has. Why, not at St. Louis in April last the staff of the Illinois Governor resembled a regiment of cavalry made up of war recruits.

"What is the situation in New York State now? There is just one major general and only four brigadiers, but the Governor's staff there are only two civilians, although the Governor is entitled to appoint four. The rest of the staff is made up of men detailed from the various military organizations of the State, and they are trained men. They know how to wear military clothes on social occasions, and they also know how to perform real military

duties when it is required. Governor Hisek is entitled to the credit of shooting off these useless officers. He signed the bill making the change, and Governor Roosevelt put the law into effect. Governor O'Neil has carried out the purpose of it with the utmost strictness, leaving vacant two places which he might fill with civilians.

"Now all this has had a tremendous effect in the matter of discipline and of preserving the military esprit de corps with the guard. Not doing it on a strict business basis with us, and, as I said before, the guardsman is striving not so much to do his work as well as a regular, but better than a regular. Let me illustrate. If there is anything that a regular likes to get out of it is dress parade. He sees so much of it that when he is excused from it he is like a boy who gets let out of school early, and inwardly he feels like giving a whoop. How is it with a guardsman? 'What? Not parade?' he says. 'What do we come here for?' He wants to parade. He doesn't hear the toot and bling-bong of the band every night in the year. He likes to feel the vanity that comes from wearing a uniform on a show occasion.

"To hark back to discipline, let me give you another striking instance of the great improvement that has gone on. The old National Guardsman used to regard it as a misfortune to have to saluting his officers all the time. Why should he salute Bill or Jim or any of his friends who just happened to be an officer and was no better than he? He didn't do it, that's all. Now he understands that saluting is a military privilege of the highest kind.

"It is harder on the officer than on himself. The officer must re-

ply to a hundred salutes where he has to give one. I never bother with a man who doesn't salute me. I just say to him, 'What are you under arrest for?' You know a man under arrest is never allowed to salute. 'Me under arrest?' he says. 'I'm not under arrest.' 'Why don't you salute?' I ask. Invariably the hand goes up, and that man never forgets. He begins to understand that it is a privilege to salute, and he shows his officers every time they pass him that he knows what his duty is, and that he expects to have his superiors respond and recognize it.

"The National Guard of New York, as a result of all this improvement, is to-day in a state of efficiency that makes it able to bear comparison with any military organization of its size in the world. The people of the State do not realize it. The day of the 'tin soldier' has gone. With the new York bill in operation the regular-army officers will find the State soldiers ready for any kind of work at any time, and that they will stand the closest comparison with the regulars."

Landing Naval Reserves under Fire

The chorus of autograph girls who have come to "Peggy's" hotel to beg for her signature

"Captain Alonso Plummer" (Mr. George Richard), the father of "Peggy," and his daughter "Lutie" (Miss Guelma Baker) have come to the Paragon Theatre, in Chicago, to call on "Mlle. Fleurette Caravelle." "Captain Plummer" is figuring up his various expenses since leaving Hickory Creek

### "PEGGY FROM PARIS"

Mr. George Ad's musical comedy, "Peggy from Paris," opens in New York next week at Wallack's Theatre. "It is intended to be," says Mr. Ad, "a satire dealing more or less lightly with the strictly American habit of paying homage to the foreign artist." "Peggy Plummer," the daughter of "Captain Alonso Plummer," of Hickory Creek, goes to Paris to study for the operatic stage. She returns to America as "Mlle. Fleurette Caravelle," a successful prima donna, without informing her friends at home of her real identity, and a series of amusing adventures and complications results

**MISS CORINNE PARKER**

*Miss Parker played leading roles in Richard Mansfield's company for several seasons until a serious illness interrupted her work. She has now recovered, and will be seen in an important part during the coming season. A novel of New York stage life which has just come from her pen will probably be published in book form this autumn.*

# Correspondence

THE "WEEKLY" IN THE SOUTH

THE NEW ARMY RIFLE

RECORDED: MAR., AUGUST 18, 1902

NEW ORLEANS PROGRESSIVE COLOON, NEW ORLEANS, JULY 18, 1902.  
To the Editor of Harper's Weekly:

Sir—Editorials which have appeared recently in HARPER'S WEEKLY with reference to the race question in the South and in the country at large have attracted a great deal of favorable comment here, and I want to congratulate you upon them.

It occurs to me that in the week of the great Southern edition of your publication to be issued in September next, that it is almost a duty not to show in your editorial columns an appreciation of the reception this special number has received editorially at the hands of many of the most conservative and able papers of the South—just as ably edited as HARPER'S WEEKLY and just as particular about the matter that goes upon the editorial page to express their views.

This publication has been given an extraordinary and unusual support by the people of Louisiana, Texas, and other Southern States, and the editorial recognition that it has received seems to demand recognition in the editorial columns of HARPER'S WEEKLY. However, as you are the director of what should go into those columns, you will please accept what I have to say merely in the light of a suggestion.

I am, sir,  
TOM RICHARDSON,  
Manager.

[That the editorials on the negro problem which have appeared in the WEEKLY have met with general approval in the South is in itself a subject for congratulation on our part, for in our ardent object of helping to advance the civilization, the morals, and the life of America, we cannot avoid taking up this important subject. And where the South feels that Northern opinion is apt to be biased, no better note could be struck than the one in this letter. We have noted with increasing satisfaction the general interest throughout the South in our number on the New South which is in issue in September. It shows not only the standing of the WEEKLY there, but it shows how the two sections of the country are coming closer and closer together.—EDITOR.]

## WHAT THE KAISER THINKS OF THE "WEEKLY"

BREITEN, AUGUST 10, 1902.

To the Editor of Harper's Weekly:

Sir—Perhaps no American abroad has enjoyed fame and fortune longer than Dr. Sylvester, who, as court dentist to Kaiser Wilhelm, occupies a coveted post in Berlin.

His home, near the Brandenburger Thor, is rich in objects as in associations, together with his genial personality, has enrolled a long list of friends for him, from the number of the famous and powerful. His cordial welcome to Americans is ever-ready; his hospitality is proverbial.

A party of his countrymen had gathered at his invitation to an informal dinner last winter, just as the first snow upon the horizon threatened a warlike outbreak over Venezuela. Conversation turned thereon, and as if to stifle conviction some facetious remarks were made. This suggested a joke, and the host gave the order, "Bring the last HARPER'S WEEKLY." He pointed to its last page, on which was a funny account from a wag's standpoint in partnership with a clever artist, of the chief actors and their parts in the international drama—the Kaiser, John Bull, Castro, and Teddy Roosevelt. Shots of laughter greeted the page till some guest said, "Only don't let the Kaiser see it."

"Oh, I showed it to him the other day, and no one laughed more over it than he!" exclaimed the host. "Whenever such fun is brought to his notice he seems to appreciate the joke and heartily enjoys it."

I am, sir,  
R. C. V.

## EMPHATICALLY ACKNOWLEDGED

VICTORIA, BRITISH COLUMBIA, JULY 20, 1902

To the Editor of Harper's Weekly:

Sir—Having read the article entitled "Leo XIII," which appeared in the July 25 issue of HARPER'S WEEKLY, I am constrained my inclination of expressing to you my satisfaction and pleasure—in fact, I may say the unbounded delight—with which I perused that article. It is a source of edification that cannot fail to appeal to the hearts of all who may chance to read it. Whether or not you are the author of the essay I do not know, but say, as the editor is responsible for what appears in his paper, I must assert that I am impressed with the thought that the editor of HARPER'S WEEKLY is endowed with a mind capable of un-biased reasoning and an unbiased expression of ideas—even those treating of the much-despised and scoffed-at Pope of Rome—thus indicating that he is possessed of that broad-minded freedom of thought which we lay Roman Catholics who may chance to read when we have the task of commenting upon the weekly's events.

Having heard and read so much against the Pope—as we Catholics do—I must say, having read the above-mentioned article (of which it signifies little, indeed, coming from me) that I hold the paper's WEEKLY in very high esteem, and think of the editor with respect and admiration.

I am, sir,  
FRANK C. DAVIS.

To the Editor of Harper's Weekly:

Sir—Army men are deeply interested in the new Springfield magazine rifle which is now being manufactured in the United States armory in Springfield, Massachusetts, to fill a special order for a small number. A great deal is claimed for the new weapon, and it is believed that it will be the most notable feature in its range, which is five miles. It is expected that after a trial of the new arm by the troops first equipped, a general order will be received to continue the manufacture and equip the entire army. The weapon has been recently tested, with remarkable results. The target used consisted of about twenty squares of white pine, one inch thick, which were mounted vertically one inch apart. Bullets shot from the improved cartridges of the new rifle at a distance of fifty-three feet from the nearest square showed a penetration of 6.3. According to a law deduced by ordnance experts, the fleshy part of a man's body, from front to back, offers the same resistance to a bullet as does a plank of white pine one inch thick. On this theory it is claimed that the new rifle will shoot a bullet through the bodies of fifty-five men formed in a straight column, all facing its muzzle, the nearest man being fifty-three feet away; at a distance of 500 yards it will now down twenty-three men; at 1000 yards, thirteen men; and at 1500 yards, at least, three men. The Krag-Jorgensen rifle now in use will now down forty-six men, as against the fifty-five of the new arm.

Although the new rifle has a carrying capacity of five miles, soldiers will not attempt to use it at that distance, 2000 yards being considered the greatest distance at which a soldier with sharp eyes, even when aided by a telescope, can see a human target with sufficient accuracy to aim.

The new bullet will have 43 grains of powder, as against 37.4 in the bullet now in use, the muzzle velocity of the weapon is 2500 feet per second, or 300 feet faster than the muzzle velocity of the Krag. The bullet of the new arm is equal to the old in diameter as well as in weight, but its greater charge of powder increases the weight of the entire cartridge grains. Nevertheless, the total weight of the new rifle with bayonet, scabbard, and 100 cartridges is one pound less than that of the old. This is the result of a clever arrangement of the new arm. It is six inches shorter over all than the old. With its new substitute for a bayonet and scabbard it weighs 9.47 pounds, while the Krag-Jorgensen with its present bayonet and scabbard in use weighs 10.64 pounds.

On the new arm the old-style bayonet is entirely discarded. Instead, the bayonet and cleaning rod are one and the same. By pressing a button under the muzzle the cleaning rod may be pulled out ten inches, where the button catch holds it in place as a pick or bayonet. The bayonet and its scabbard are then dispensed with as separate articles, such as a single down the older arm. The bayonet has a highly polished blade, and since the methods of warfare have become humane, and the demand for an intrenching tool with which the soldier may throw up breastworks has been growing more and more insistent. On account of this demand an intrenching tool is now being designed which will probably take the place of a bayonet in the soldier's belt.

A "mob cartridge" which is now being designed for the new weapon is a decided military novelty. It is designed to be effective up to 250 yards only, and instead of carrying one elongated bullet, it contains two pieces of round shot of the same diameter. It is intended for use in case of a mob or riot, when the elongated bullet would be too deadly, causing massacre of innocents as well as shooting down combatants.

Although the Krag was thought to be a superior weapon, the new arm is regarded as an arm much better than the Krag, as the Krag is better than the old Springfield rifle, and the officials in the United States armory predict its use in the entire army.

I am, sir,  
L. MARSH MELLIS.

## MUSICAL PROGRAMMES AGAIN

PERSEUS, PENNSYLVANIA, AUGUST 15, 1902

To the Editor of Harper's Weekly:

Sir—I have heard the same question concerning musical programmes in the past, and I propose by your correspondence in the issue of August 18, and I should like to give what seems to me the true answer to it.

In the first place, there are numerous concerts given of just the nature desired by our correspondents. Any of the "pop" type ought to fill his bill to a nicety. In all probability he will find better selections than the "Jewel Song" and worse harmony than "My Old Kentucky Home." "Mr. Dooley" will probably be inducted in a melody or given as an encore; and he will be treated to the "Star-spangled Banner" as a signature, with the crowd cheering vociferously all around, and go home imagining he has been enjoying music.

The great musical organizations, such as the Boston Symphony Orchestra, do frequently perform the "pop" type of music, but do not expect such an organization—whose work is to render the best music in the broadest sense and to educate the musical taste of a nation—to play the daily crop of ragtime as an incompensable as to expect the latest Dutch comedian monologues from the pulpit.

I am, sir,  
W. W. M.

**Lord Kelvin and the Teapot**

DOMESTIC science has of recent years adopted the phraseology of the laboratory and become the favorite field of chemists and economists. Twenty years ago, however, it was still a novelty to be treated so flippantly, perhaps, but with less seriousness than it receives to-day. It was something like joy, therefore, that a few students admitted to the scientific meetings of the Royal Scientific Society of Edinburgh heard the present Lord Kelvin announce Tea-Cosies as the subject of his paper for the evening.

In that black land where the afternoon cup of tea is the universal habit, the peddler of heat to slip over the teapot and arrest the dissipation of its heat in everywhere in use, Lord Kelvin had made an exhaustive study of radiation in proportion to the surface of the teapot, and wished to show that the surface of the teapot might be reduced to a size where the cozy would no longer keep it warm, but make it actually colder. The boy on the back seat listened eagerly. Here at last was a practical use for science. By manufacturing teapots of scientifically exact proportions, the cumbersome tea-cozy might be dispensed with and one's fortune made. Through endless formulae the lad tried to follow the course of the argument. At last Lord Kelvin reached his conclusion. "The proper size, in short, for the ideal teapot," he announced, "is approximately that of an ordinary garden pea."

**APPEAL TO MOTHERS.**—Mrs. Wilmot's Sovereign Remedy should always be used for children's teething. It soothes, it kills, and is the best remedy for diarrhoea. —(Adv.)

# LETTERS OF MARQUE

ISSUED UNDER SEAL OF THE KINGDOM  
OF BOHEMIA TO ESPER INDIAN, ESQ.

BY VAN TASSEL SUTPHEN

## The Adventure of the Gentleman's Visiting Card

**T**HIS card that had been thrust into my hand had pencilled upon it, "Call at 4020 Madison Avenue at a quarter before eight this evening." Below in, copper-plate, was engraved the name, Mr. Esper Indian.

It was one of those abominably springlike days that New York sometimes experiences at the latter end of March, days when negligee skirts and last summer's straw hats make a sporadic appearance, and beneficent weather prophets write letters to the afternoon papers about the sun-spots. Really, it was hot, and I was anxious to get out of the dust and glare; it would be cool at the club, and I intended dining there. The time was half past six, the height of the housewreck rush hours, and, as usual, there was a jam of vehicles and pedestrians at the Fourth Avenue and Twenty-third Street crossing. The subway contractors were still at work here, and the available street space was choked with their stagnant and temporary footwalks. The inevitable consequent was congestion; here were two of the principal thoroughfares of the city crossing each other at right angles, and with hardly enough room, at the point of intersection, for the traffic of men. The confusion grew worse as the policemen and signposts stationed at the crossing occasionally had their heads, every now and then, a new lock would form, and several minutes would elapse before the crowd could be broken. In all directions long lines of yellow electric cars stood stalled, the impatient passengers looking ahead to discover the cause of the trouble. A familiar enough experience in the modern New Yorker, yet it never fails to exasperate him afresh.

The impasse looked hopeless when I reached the scene. A truck loaded with bales of huperia was on the point of breaking down at the crossing, and it was a question of how to get it out of the way in the shortest possible time, consistent with the avoidance of the threatened catastrophe. Meanwhile, the jam of cars and trucks kept piling up until there was hardly space for a newboy to worm his way from one curb to another, and the crowd on the street corners began to grow restive.

Now, I detest being in the mob, and I was about to back my way out of the crowd and seek another route, even if a roundabout one. But just then the blockade was partially raised, an opening presented itself immediately in front of me, and I was forced forward willfully. Arrived at the other side of the street, I drew out of the press as quickly as possible, and it was then that I discovered Mr. Indian's card—dark rattle tightly clenched in my left hand. Impossible to conjecture how it had come there, but premeditation is at least conceivable. My own part in the transaction had been purely involuntary; the muscles of the palm had closed unconsciously upon the object presented to it, just as does a baby's. "Mr. Esper Indian—and who the deuce may he be?"

The club dining-room was full, but Jockley bid me and offered me a seat at his table. I thought Jockley, and as I explained politely that I was waiting for a friend, and should not dine until later.

"Well, then, have a cocktail while I am finishing my coffee," persisted the host, and I was obliged to comply.

"I had to leave rather earlier than usual," explained Jockley.

"Yes," I said, not caring in the least about Mr. Jockley's hours for meals.

"You see I'm doing the opening at the Globe to-night, and I must get my act early in the office before the theatre. And what do you think of that by way of an extra assignment?" He took a card from his pocket-book and tossed it over. It was another one of Mr. Esper Indian's calling cards, and pencilled in pencil, "Call at 4020 Madison Avenue at eight o'clock this evening."

Jockley was lighting his cigar and so did not observe my start of surprise. Have I said that Jockley was a newspaper man? One of the new school of sportsmen, a creature who would stick at nothing in the manufacture of a sensation. The Bear-Head is his pet, and he holds nothing else sacred in heaven and earth. He would sacrifice—but perhaps I'm unjust to Jockley; maybe it's

only his house and flourish that I detest. Furthermore, I'm a little afraid of him; I don't want to be written up.

"Esper Indian," I read aloud. "Don't know him."

"Ever heard the name?" asked Jockley.

I hesitated. "It's unfamiliar, certainly."

Jockley looked gloomy. "Nobody seems to know him," he said.

"And the name isn't to be found in the directory, telephone book, or social register?"

"Wonderful fellows, these newspaper men; I never should have thought of going for Mr. Indian like that."

"But why and wherefore?" I asked, cautiously.

"A mystery, my son. The card was shoved into my hand half an hour ago."

"Where?"

"At Twenty-third and Fourth. There were a lot of people around, and I haven't the most distant notion of who it was."

"What does it mean?"

Jockley shook his head.

"What will you do about it?"

"I will make the call, of course."

"Of course?"

"Yes, maybe he's a story thief, who knows. Besides, it's directly on my way to the Globe, and the curtain is not until eight-thirty. Tell you what, old man; come along with me and see the thing in a flash. Fate leads a card—Mr. Esper Indian's—and will give the second hand, what do you say?"

I declined firmly. God forbid that I should be featured, along with the other exhibits in the case, on the first page of to-morrow's *Planet*.

"See," he assented indifferently and pushed his chair back

at the crossing, and in fact, the room was entirely deserted. I looked at my watch; it was ten minutes after seven, and that gave me a quarter of an hour in which to think it over. Should I accept Mr. Indian's invitation to call?

So there were three of us—if not more. Rather absurd this

off at polo and thrashing a single-sticker to windward in a Cape-

Cod squall. But I she'd not say a word against the governor, God bless him! He gave me what I thought I wanted, and it wasn't his fault that an insignificant blood clot should beat him out on that one day of days—the corner is "R.P." It was never the Chicago crowd that could have done him in—I'm glad to remember that.

Well, there being only the two of us, it didn't matter so much:

it wasn't as though there were a lot of helpless women folk to consider. After the funeral and the settlement with the creditors there was left— I'm ashamed to say how little, and, anyway,

Its design, luxurious appointments and the most perfect mechanical equipment ever fitted in an automobile characterize the Columbia 14 Home-power Gasoline Touring Car, XLI. All working parts are unusually accessible; noise and vibration are practically eliminated, while ease and certainty of control are secured. Its top speed is up to forty-five miles per hour. Catalogue of all Columbia Automobiles will be sent on request.

distinctly; he seemed to be put out about something; he spoke impatiently, even angrily.

"But this is 4020 Madison Avenue, isn't it? Mr. Indiman—I was asked to call—Mr. Jerckley of the Planet."

"Must be some mistake, sir," came the answer. "This is No. 4028, but there's no Mr. Inkerman—"

"Indiman, not Inkerman—Mr. Epper Indiman. Look at the card."

"Never heard the name, sir."

"What? Well, then, who does live here?"

"Mr. Neell, sir. Mr. Ambrose Johnson Neell. But he's at a dinner and I couldn't disturb him."

"Humph!" I busy that Jerckley swore under his breath as he turned to go. Then the outer door was closed upon him.

It was a relief, of course, to be spared the infliction of Mr. Jerckley's society, but I could not but admit that the situation was developing some peculiarities. Elucidating the doubtful personality of Mr. Ambrose Johnson Neell, who was this Mr. Epper Indiman, whose identity had been so freely admitted to me, and so explicitly denied to Jerckley? The inference was obvious that Jerckley had failed to pass the first inspection test, and so had been turned down without further ceremony. This reflection rather annoyed me; I forgot about the invisibility to which I was being subjected in the long wait, and began to be curious about the game itself. What next?

At a quarter after eight, and then, again, at half after, there were inquiries at the door for Mr. Indiman. To each caller the answer was returned that Mr. Indiman was known at No. 4020 Madison Avenue and that Mr. Ambrose Johnson Neell could not be disturbed at his dinner.

There was no caller at the next quarter, and none again at nine o'clock. The series had, therefore, come to an end, and I remained the sole survivor—of what for what?

I knew just my nerves had been somewhat weakened by two days' fast, or else it was the effect of Jerckley's cocktail on an otherwise empty stomach. What ever the cause, I and slowly became conscious that I was passing into a state of high mental tension; I wanted to scream but impatiently upon the air, Jerckley would have put it that I was within an ace of flying off the handle.

A sudden click of ringing metal startled my ears. It should have been the bustling knock, and it was, but not after the fashion that might have been expected. As though by magic, the bell-ringing, I felt as if I were upon a boat outboard of the situation, in my life.

In the center of the room stood a heavy table of some East-Indian wood—oak, I think, they call it. I could have sworn that there was nothing whatever upon this table when I entered the dining room; now I saw three objects lying there. I walked up and examined them. As they lay towards me, the first was a tin-bound volume of heavy white paper directed to me, Winston Thorp.

The letter was brief and brutal; it read:

Mr. Indiman presents his compliments to

Mr. Thorp and requests the honour of his company at dinner, Tuesday, June the thirtieth, at nine o'clock.

4020 Madison Avenue.

Dishonor, death and disaster—a curious trio to choose between. Yet to a man in my present position each of them appeared in its own way, and I'm not ashamed to confess it. Perhaps the choice I made may seem inevitable, but what if you had seen Hughman's face as I did, with the one light full upon it? It was the remembrance of that that made me hesitate; twice I drew my hand away and looked at the asseny and the pistol.

Through the open door came a ravish- ing odor, that of a fillet à la Chateaubriand; the purely animal instincts reasserted themselves, and I picked up the garden-hose and stuck it into the buttonhole of my dinner-jacket. I looked down at the table, and it seemed to me that the ten-thousand-dollar note and the pistol had disappeared. But what of that, what did anything matter now; I was going to dine!

I walked up stairs guided by that delicious, that heavenly odor and entered the dining room, in the rear, without the smallest hesitation. At one end of the table sat a man of distinguished appearance, and that entrancing fillet, displayed in an asseny silver center, shined before him; I could not take my eyes from it.

My host, for such he evidently was, rose and bowed with great politeness.

"You must pardon me," he said, "for sitting down, but, as my note said, I dine at nine. I will have the shell-fish and soup brought on."

"I should prefer to begin with the fillet," I said decidedly.

A servant brought me a plate; my hand trembled, but I succeeded in helping myself without spilling the precious sauce; I ate.

"There are three conditions of men who might be expected to accept the kind of invitation which has brought me the honor of your company," remarked my host as he lit our cigarettes near the Boston punch. "To particularize, the merely foolish prison, and the forced labor, as Homer would put it, and neither do I suffer business. At least one of the latter is not likely to bother me again."

"I found my desperate man in you, my dear Mr. Thorp; shall we drink to our better acquaintance?" I bowed, and we drank.

The precise nature of your substance does not concern me," he continued, airily. "It is sufficient that we are of the same mind in our attitude towards the world—to shake 'twixt Destiny and beer." Is it not?

"One may meet with many things on the highway of life—poverty, disease, sorrow, treachery. These are disagreeable, I admit, but they are positive; one may overcome or at least forget them. But supposing you stand confronting a blank wall, the nega-

I discovered Mr. Indiman's card deliberately tucked in my left hand.

tive of existence; the highway is clear indeed, but how interminable its vista, its straight, smooth, and intolerably level stretch. That road is mine.

"Yes; I have tried the by-path. Once I was shanghaied; twice I have been marooned and by my own men. That last amused me a little. I was the second man to arrive at Bordeaux in the Paris-Madrid race of 1903; during the Spanish-American war I acted as a spy for the United States government in Barcelona.

"I made the common mistake of confounding the unusual with the interesting. Roussier is a shy bird and not to be hunted with a brass band. Where is the brass of life, if not at one's elbow? At the furthest, she has only to turn the corner of the street. It is easier to look for prodigals in the abyss, but every straggler has its straws that float; I have determined to watch and follow them.

"I want a companion, and so I advertised after my own fashion. I selected you, tentatively, from the mob; later on I made the list more complete. But you have no business; either me."

He took a spray of orchid from the silver bowl in the centre of the table and handed it to me.

"I protested: 'I have my garden.'—'I looked at my buttonhole and it was gone. Mr. Indian smiled. 'Let me confound,' he said:

"You recall the abnormal tension of your nerves as you sat waiting in my room, merely the effect produced by a mixture of certain gases (traced on from a tag under my knee). Then the crash of a brass gong; it is what the scientists call 'massive stimulation,' resolving super-sensitization into partial hypnosis.

"Once I had you in the hypnotic condition, the rest was simple enough. I had only to suggest to your mind the three objects on the table and you saw them. The book-note, the revolver—they were as immaterial as the gauds that no longer adorn your buttonhole.

"I did not attempt to influence your choice among the three, as that would have destroyed the value of the test. I had only to hint, you accepted my invitation to dinner. Frankly now, I am curious—why?"

"That is very simple," I answered. "I had not eaten anything for two days, and I detested the odor of that exquisite diet. Not the slightest ethical significance in the choice, as you see."

Exper Indiana laughed. "I should have kept my pantry door closed. But it does not matter; I am satisfied. Shall we go into the library for coffee?"

Directly opposite the door of the latter apartment stood as usual holding an unfinished canvas. A remarkable portrait—how little I know about pictures, I could see that clearly enough. A three-quarter length of a woman wearing a dorsal corset and dressed in a magnificent costume of red velvet.

"Lily's 'Red Duchess,'" remarks my host, seriously. "You may have seen it in the *Herald* at Petersburg."

I looked at the picture again. Why should this masterpiece not have been properly mounted and glazed. The edges of the canvas were jagged and uneven as though it had been cut from its frame with a not very sharp knife. We set down our coffee and liquors.

As I awoke in the narrow quarters of my hall-bedroom I am inclined to believe that the occurrences of the preceding night were only the paroxysms of a disordered digestion, where had I eaten that Welsh rabbit? The morning paper had been thrown over the transom and, following my usual custom, I reached for it and began reading. Among the foreign dispatches I note this paragraph dated St. Petersburg:

"The famous portrait of the Duchess of Leinster, by Sir Peter Lely, better known as the 'Red Duchess,' has disappeared from the gallery of the *Herald*. It is now admitted that it must have been stolen, cut from its frame and carried away. The theft took place several months ago, but the secret has just become public property. The absence of the picture from the gallery framed picture had, of course, been noted, but it was understood that it had been removed

It is a very clear and concise statement of essential facts concerning the handling of a ship at sea, and forms the volume from which every navigator, sea or coastwise, in this far-spread system of a world-wide and 'New Journal,' New York.

\$1.00 Postpaid, \$1.10

HARPER & BROTHERS, PUBLISHERS, N. Y.

school-bank and a long bamboo pencil at one end of which is a fire-pointed brush for writing; then think of some tiny children, — a half dozen probably—the boys' heads shaven, except for a circular bunch of hair neatly at the crown, the girls with long tassels of straight black hair hanging in front of each ear, all dressed in little flowing garments with sleeves like the wings of birds,—then children sitting behind other little tables, their brushes in hand, and writing, from the teacher's dictation, strange-shaped characters on coarse copy-books,—imagine this, and you have an ancient Japanese school in session, both teacher and pupils sitting upon the floor.

They never went beyond reading and counting upon the seven-line (abacus).

Things have changed now. The old has utterly passed away. A most efficient educational system, Western in theory and practice, is now in full operation throughout Japan. Commodious common school-houses, and imposing college and university buildings are dotted all over the country. A thoroughly graded system operates from the primary school to the Imperial University, which ranks with the highest American institutions. The official or government schools are worked out to cover the whole field of education except the religious feature, and this they are endeavoring to supply by an eclectic system of morality, both Oriental and Occidental.

Besides the regular course, which extends from the common school through the high school, to the university, there are government technical schools for every branch of trade and the professions,—commercial, army, navy, agriculture, textile, mechanics, law, medicine, normal, language, etc.

The government maintains a special school for the teaching of every modern language of importance,—English, French, German, Russian, Spanish, Italian, Chinese, and Korean. But the English language prevails all other languages, and it is making such rapid progress that it is destined to become the spoken language of the nation.

One serious criticism against Japan's educational system is that it discourages private schools. Pupils of private schools of equal grade and efficiency with the government schools cannot pass to the upper official schools with the same facility as pupils of the government schools. When we remember that the government schools are not free schools, and that many excellent private schools supported by foreign capital give students an education practically free, this discrimination of the government would seem to be unwise, and it is likely to be corrected in the near future.

The American nation should be especially proud of Japan's educational record, since it is from America that Japan has taken her lessons in Western learning.

**Some Parliamentary Anecdotes**

CERTAIN Parliamentarians were cooling themselves on the terrace of the House of Commons after a long day's work on the Land Purchase bill, when the talk drifted to the principle of arbitration. "I remember," said one M.P., "that Joe Bigger was once asked what he thought of arbitration. 'I only believe in arbitration,' said the former member for Limerick, in his daily humorous way, 'when you have squared the arbitrator.'" Said another M.P.: "That reminds me of a discussion we had about E. Mitchell, one of 'T. W. Russell's Salvation Army'; somebody said he was a Prefecture and another said he was a Catechism. Then Sir Wilfrid Lawson turned to Joe Bigger, and said, 'Well, Bigger, what do you think about the religious question?' 'If there is anything in it,' said Bigger, 'with his head on one side, 'if there's anything in it, I think the Papists have it.'" Said a third M.P.: "When Tim Healy first came here he went into the hall as a Catechism, but Joe Bigger, after a while he mustered up courage to say to the man from Limerick: 'I recognize what a hard fight we have to fight for Ireland, and you are those great men arrayed against us.' He stood at the government benches. 'Great men?' said Bigger; 'these are not great men.' They are only a set of jealous individuals!"

His genius for close observation, the personal charm of a natural style, and an ever-ready sense of humor bring to him an audience wide as the English-speaking world.

# THE HEART of HYACINTH

By

**Onoto Watanna**

*Author of "A Japanese Nightingale"*

An exquisite love story of Japan told with the delicacy of touch, the tender sentiment, and the dainty comedy that charmed so many in "A Japanese Nightingale." The story is the romance of an American girl born in Japan, reared by a Japanese woman, whose half-English son is her companion, and, finally, her lover. The book is uniform with "A Japanese Nightingale," beautifully bound in lavender cloth, with gold and colored decorations; Japanese artists have illustrated it with full-page pictures in color and marginal drawings in tint on every page.

*Deckel Edges and Gilt Top. In a Box. \$2.00 net (postage extra)*

## TWO PRISONERS

**By Thomas Nelson Page**

*Author of "Marse Chan," "Red Rock," etc.*

Thomas Nelson Page has achieved an enviable rank in American literature, and "Two Prisoners" is written in that early manner of simple and touching eloquence which made him famous. The story concerns a little girl imprisoned by lameness in her room, and a mocking-bird whom she longed to set free. Through the unconscious agency of this bird the little heroine came into a great happiness.

*Five Pictures in Color by Virginia Keep. Ornamented Cloth, \$1.00*

**MONNA  
VANNA**

**By Maurice Maeterlinck**

An exquisitely written play in three acts. The scenes are laid at Fisa, at the end of the fifteenth century, and centre around heroic Vanna, the beautiful wife of the city's ruler. Love, passion, heroism are sublimely depicted in passages in which Maeterlinck's genius is at its height.

*Decorated Bevelled Boards, Untrimmed Edges, Gilt Top, Silk Headband, \$1.20 net (postage extra)*

**THE  
FAIRIES' CIRCUS**

**By Neville Cain**

*Author of "The Fairies' Menagerie"*

The wonderful feats of the fairies are described in pictures in various tints, and in bright verses such as the children enjoy. Fifteen full-page illustrations and many small ones, by the author, show the marvellous things the fairies can do.

*Quarto, Ornamented Paper Boards, Linen Back, \$1.25*

## COMMENT

The Democratic party has survived worse misfortunes than the outcome of the Democratic State convention of Ohio, held at Columbus on August 28. Not only was Mr. Tom L. Johnson, Mayor of Cleveland, nominated for Governor by acclamation, but the Kansas City platform was reaffirmed, and Mr. William J. Bryan was invited to speak on behalf of the Democratic ticket in the campaign now begun. We said that the Democratic State Committee having been placed in the hands of Mr. Johnson and his friends, they will handle the party machinery next year, and may be expected to control the delegation from Ohio to the Democratic national convention. Is it, then, impossible to find any ground for comfort or reassurance in the Ohio situation? On the contrary, there is reason to believe that the reaffirmation of the Kansas City platform was perfunctory, for, when the paragraph nominally reaffirming it proceeds to specify the principles and purposes to which the Ohio Democracy adheres, it utters not a word about the free coinage of silver at the ratio of 16 to 1. That the convention went on to nominate for United States Senator Mr. John H. Clarke, an eminent lawyer of Cleveland, who presided over the convention held by the Gold Democrats of Ohio in 1896, and stamped the State in opposition to Mr. Bryan.

Nevertheless, Mr. Bryan is expected to accept the invitation to speak in favor of Mr. Clarke. If he does so he will have thereby given conclusive proof that he is much less vindictive than he has been thought to be. If Mr. Bryan is willing to support a Gold Democrat for the post of United States Senator, why should he oppose the nomination of Judge George Gray for the Presidency? With how much less propriety could he refuse to support Chief Justice Parker of New York, who voted for the Democratic nominee in 1896 and 1901? We shall not be surprised to see Mr. Bryan assume a tolerant and non-vindictive attitude, since the Democratic State conventions in Ohio and Nebraska have demonstrated that he still retains a great deal of influence and must be reckoned with. We do not credit the report from Grand Island, Nebraska, where the State Populist convention was held,—a report attributed to Mr. M. F.

Harrington,—that if Mr. Bryan's friends should find themselves outnumbered in the Democratic national convention, they will bolt and nominate a third ticket, to be headed by Mr. Charles A. Towne, formerly of Minnesota, but now of New York city. That Mr. Bryan's friends will be outnumbered in the convention may be taken for granted, but we do not for a moment believe that they would bolt the nomination of such a man as Chief-Justice Parker, or Judge Gray, or Grover Cleveland. A delegate who declares beforehand that he will not submit to the will of the majority ought not to be permitted to vote in a national convention.

The Citizens' Union has taken a step calculated to increase the chance of electing a fusionist Mayor in the city of New York this year. That organization has announced that neither Mr. Low nor any other candidate for a city, county, or borough office shall go on its ticket unless he shall have declared in a public speech or in a signed letter that he will not, directly or indirectly, further the interests of any political party in the State and national elections of 1904. It was high time that such a promise of non-partisanship should be exacted. Democrats have not failed to note the eagerness evinced by President Roosevelt, Governor Odell, and Senator Platt to secure the re-election of Mr. Low, and they have recalled the fact that the letter presided at a Republican meeting held in the city of New York during the autumn of 1902. No greater mistake could be made, from the viewpoint of those who desire to secure good municipal government, than to suffer an impression to gain currency that their candidate for the Mayorship is so closely identified with a particular political party that he would be likely to use his official influence to promote its interests. Mr. M. Linn Bruce, the new president of the Republican County Committee, showed his sense by rejecting the proposal that his organization should send a committee to ask permission of Mr. Low to present his name at the fusion conference to be held on Tuesday, September 1. In a city like New York, which is normally Democratic by a large majority, the expediency of nominating a Republican for Mayor is at least disputable, and there is no doubt whatever that pledges of non-partisanship should be demanded and kept.

The Citizens' Union declares that it does not intend to allow the success which it may have achieved, or the influence which it may have gained, to be used by any political party to further partisan aims in the State or in the nation. It points out that if any political organization shows a willingness to promote the emancipation of a municipality from corrupt rule by adopting the principles of the Citizens' Union, such organization will deserve the thanks of all good citizens, and doubtless will receive at State and national elections the support of some who have not previously acted with it. To such gains an organization is pronounced fairly entitled. Such recognition is an indirect and inevitable result of public opinion. No party, however, should be suffered to secure nominations for municipal offices with a view directly to influence State or national elections. It will be remembered that in 1901 the Republican organization in the city of New York publicly advocated the non-partisan platform of the Citizens' Union, and the promise ought to have been made good. It was made good in the sense that official patronage was not used by Mayor Low to further the election of Mr. Odell to the Governorship in 1902, but it cannot be denied that the head of the fusionist municipal government estranged

some of his Democratic supporters by presiding over the meeting held by the friends of the Republican candidate. This exhibition of sympathy on Mr. Low's part was as fruitless as it was injudicious, for Mr. Cole, the Democratic nominee for the Governorship, swept the city of New York by an immense majority.

Had Mr. William C. Magelssen, the vice-consul of the United States at Beirut, been killed, as Mr. Leishman, our minister at Constantinople, reported him to have been, the despatch of Rear-Admiral Cotton's squadron to that Syrian seaport would have been justifiable. Even then, however, it might have been wise to have awaited a detailed account of the incident. It turns out that Mr. Magelssen was shot at, but not hit, and that a similar attack was made upon him some time ago, of which, however, no official notice was taken. On both occasions the assailant is alleged to have been actuated by jealousy. There seems to be no reason to assume that the Turkish authorities at Beirut are disposed to shield the offender, or that in that place or anywhere else in Syria Americans are in fear of their lives. Everybody knows that Americans, like all other foreigners, are exposed to danger in Macedonia, but that province of the Ottoman Empire is a thousand miles distant from Beirut. What possible assistance could a squadron on the Syrian seacoast render to Americans threatened with massacre in Salonica? According to the Rev. Louis Gaston Leary, of Elizabeth, New Jersey, who returned two weeks ago from Beirut, where he was a professor in a Protestant college, Americans are rarely molested in that town, and go out freely at night without finding it needful to carry any other weapon than a stick. Mr. Leary seems to think that Mr. Magelssen, who at one time was a cowboy in Dakota, is quite able to take care of himself, without the help of two or three broadsides. The more we read about this Magelssen affair, the more we are inclined to think that both Minister Leishman at Constantinople and President Roosevelt at Oyster Bay went off at half-cock. If Secretary Hay had been in Washington when the unfounded report cabled by Mr. Leishman reached the State Department, we doubt very much whether Rear-Admiral Cotton's squadron would have been ordered to Beirut before the news was confirmed. Senator Depew, for his part, thinks that a fleet ought to be sent to Beirut, because, some years ago, he (Depew) narrowly escaped capture by brigands in Macedonia. We are afraid that Senator Depew would not make a good Secretary of State.

The retirement from the War Department of Mr. Elihu Root directs attention to the extent to which Mr. McKinley's cabinet remains intact in the hands of his successor. There is no doubt that when Mr. Roosevelt became President he earnestly requested every member of his predecessor's cabinet to retain his portfolio. The act reflected credit on his sense of propriety. It was no doubt prompted by right feeling, but it was also expedient in a high degree. President Arthur tried for a time to pursue the same sagacious course, but he soon quarrelled with Mr. Blaine, and virtually compelled the latter to give way to Mr. Frothingham in the State Department. There is no reason to suppose that Mr. Roosevelt's relations have been other than friendly with every one of the gentlemen whom he found installed in cabinet office. Nevertheless, four of them have departed. Mr. Gage has left the Treasury; Mr. Long has ceased to superintend the Navy; Mr. Charles Emory Smith is no longer Postmaster-General; and now Mr. Root has made room for John Taft in the War Office. Mr. Hay, Mr. Knox, Mr. Hitchcock, and Mr. Wilson remain, and, so far as we can judge, are likely to keep their offices until March 4, 1905. It will be observed that neither Mr. Gage, Mr. Long, nor Mr. Smith was an important political factor.

The really influential men in Mr. McKinley's last cabinet were Mr. Hay and Mr. Root. With their assistance Mr. Roosevelt has been able to avoid Presidential Arthur's fate, by which we mean that if the national convention of the Republican party were held next week, the present Chief Magistrate would unquestionably be nominated to succeed himself. Whether he will be nominated next June is, of course, a different question. He may do things in the interval that will render him highly undesirable or obviously unavailable. By

that time, moreover, the Democratic party may come to be regarded as so irremediably disorganized that any decent Republican would be certain to be elected, in which event Mr. Roosevelt's reputed popularity would be superfluous. From the view-point of his own fortunes, the most sensible thing that Mr. Roosevelt could do during the next nine months would be to preserve a discreet reticence, and practically leave the conduct of affairs, so far as this should be practicable, in the hands of Mr. Hay and of Judge Taft. The sooner the last-named gentleman returns to this country the better. An Assistant Secretary should not long be suffered to exercise control of a great office which, since our acquisition of the Philippines, combines the functions of a Minister of the Colonies with those of a Secretary of War.

The Democratic primary election for Governor held in Mississippi on August 27 resulted in the choice of Major Vandam, the radical and reactionary candidate, over Judge Critz, the favorite of conservative Democrats. It may be remembered that in the first primary, which was inconclusive, Major Vandam received about 39,000 votes; Judge Critz, some 34,000; and Senator Noel, upwards of 34,000. It was taken for granted that at the second primary almost all of Senator Noel's friends would support Judge Critz, and, accordingly, the betting in favor of the latter was two or three to one on the day preceding the second primary. Nevertheless, Major Vandam secured the nomination by a majority of about 2000, carrying even such large "white" counties as Amite, Lincoln, and Marshall, which in the first primary were carried by Critz. Especially was the change of feeling noticeable in those sections of the State which have received considerable numbers of immigrants from the North. It seems that, near the close of the campaign, a rumor became current in Mississippi that the hope had been expressed by Mr. Roosevelt that Major Vandam would be beaten. This rumor is said to have caused a decisive reaction against Judge Critz.

There is no doubt that the contest turned on the race issue. Major Vandam holds that the negro schools of the State ought to have no more of the school fund than would be proportionate to the share of the taxes paid by negroes. Judge Critz, on the other hand, maintains that it is the duty of Mississippi to promote the education of her negro citizens with all the means in her power, in order to qualify them for exercising the suffrage, thus proving that the educational qualification prescribed by the new State Constitution was not intended to disfranchise colored men. As a matter of fact, there is scarcely a chance that Major Vandam's school policy will ever be adopted. The State Constitution itself makes adequate provision for the support of the negro schools, and is clear to change the Constitution it would be necessary first for Major Vandam's friends to carry the Legislature, which they have at present no hope of doing. The first primary showed that the next Legislature will be almost solidly conservative, and can be trusted to thwart any movement looking to the degradation of the colored race. All that Major Vandam's victory means is that a majority of the people of Mississippi desired to express their disapproval of the programme of political and social equality for the negro which Mr. Roosevelt is supposed to favor.

It is certain that the Fifty-eighth Congress will be earnestly requested to restore the "post-exchange," commonly known as the canteen, in the United States army. The proposal will be vehemently denounced by many excellent persons, on the ground that a principle is at stake, and that it is unseemly for the United States government to sanction the sale of intoxicating beverages. There is reason to think, however, that some of the religious denominations which formerly demanded the abolition of the canteen have become enlightened as to the mischievous results of the proposed reform. Rev. S. H. Dexter, secretary of the Interdenominational Ministerial Alliance, has made a personal investigation of the state of things at Fort Sheridan since the canteen was abolished. He reports that pay-day means gloom from the post of almost half the command; that the soldiers are robbed by dive-burgers on all sides, and are imprisoned in the guard-house by the score for drunkenness. Another plea for the restoration of the canteen is made by General Fred. D. Grant, who himself is a total abstainer. In the annual report made by

him as Commander of the Department of Texas, he says that to close the doors of the soldiers' garrison-club, and send him out into the haunts of iniquity run by moral vultures is a wrong, not only to the soldier, but to the community in which a garrison is placed. It is well known that Secretary Root, in his last annual report, strongly recommended the re-establishment of the "post-exchange"; that the Association of Military Surgeons of the United States and the American Medical Association have declared that, in the interests of sanitation, morality, and discipline, the "post-exchange" should be re-established at the earliest possible date. The surgeon in charge of the Marine hospital has testified that, of 387 insane soldiers sent home during a certain period, twenty-five per cent. were made insane by drink. Nobody denies, of course, that even before the canteen was abolished some soldiers were made insane by alcohol, but the Adjutant-General's records show that, during the seven years when the "post-exchange" existed, the reduction of insanity in the regular army amounted to nearly thirty-two per cent. It is also a matter of record that desertions, which previously had averaged eleven per cent., fell to two per cent. after the "post-exchange" was established.

It is an interesting offer which was made by the British government to the Zionist Congress that has been sitting at Basel in Switzerland. Lord Lansdowne proposed to set apart a section of British East Africa for colonization by the Jews. The territory suggested for the purpose is a tract by the equatorial highlands which stretches for a distance of 200 miles along the Uganda Railway between Man and Nairobi. Sir Harry Johnston, formerly Special Commissioner for the Uganda protectorate, has described in an official report this region as admirably watered, fertile, and covered with forests. It is, we are told, relatively cool, and as healthful for Europeans as Great Britain. Lord Lansdowne said that if a Jewish colony should be established in this part of Uganda, complete control of its local affairs would be conceded to it, under a Jewish chief official, the British government retaining only general jurisdiction, and the right to reoccupy the land should the settlement prove unsuccessful. After a long debate, the Congress, by 225 votes to 177, adopted a resolution to appoint a committee of nine who should proceed to East Africa to examine the site proposed for a Jewish colony. The Russian delegates were among those who had opposed the project, and they left the hall by way of protest, but they were subsequently reconciled to the plan, after being convinced that the British offer had no political significance. The British Foreign Office has announced the intention of instructing the British Commissioner in the East-African protectorate to facilitate in every way the work of the committee. It remains to be seen whether the Jews can find a prosperous agricultural colony. The fact that in Russian Poland they are exclusively addicted to handicrafts and trade proves nothing on the point, for they are prohibited by law from engaging in farming. There is no doubt that agriculture was pursued by the Jews settled in the Crimea before the arrival of the Tartars in that peninsula. Those who take a pessimistic view of Lord Lansdowne's project assert that, while you may convert Jews to East Africa, you cannot make them stay there, and that they are likely to gravitate to the towns in Natal and the Cape Colony. However this may be, the experiment ought to be tried. Mr. Simon Wolf, who took an active part in persuading President Roosevelt to send a protest against the Kishinef massacre, has published a letter in which he intimates that Zionism will prove no remedy for Jewish suffering. Emigration to this side of the Atlantic he believes to be the only cure. He holds that only in the United States will the Jew ultimately find his Zion.

The American Bar Association, which has been sitting at Hot Springs, Virginia, will severely commend itself to sensible men by its adoption of the antitrust report of the committee on commercial law. The committee's report asserts that we cannot rely on natural forces, on the law of supply and demand, or on economic considerations to limit the growth of modern combinations of capital. The remedies proposed by the report are three: first, corporations may be taxed to death, or taxed, at all events, until their growth and extension are impeded. It is pointed out that in almost all of the States the franchise tax is so graded as to tax a small

corporation at a higher rate than a large one. The first one million dollars of subscribed capital is taxed at a higher rate than are subsequent millions. The committee of the American Bar Association would recommend a contrary course. It would levy no tax at all on the first one hundred thousand dollars of capital, and only a small tax on the first million, but it would raise the rate with each succeeding million. It is suggested, for instance, that a tax of ten per cent. should be imposed on the last hundred millions represented in the securities of the United States Steel Corporation.

The second of the remedies proposed is that any corporation engaged in inter-State commerce should be compelled by a United States statute to reduce its rates fifty per cent. to and from every point where competition has been prevented by combination, merger, common control, or agreement. The committee is quite right in saying that such a law would have a more prohibitive effect on combinations of capital like the Northern Securities Company than a hundred Sherman antitrust acts. But would not the remedy prove worse than the disease? Can a railroad be forced to do business at a loss? The third remedy advocated is a resort to State socialism on a great scale. The State itself, says the report, can enter the industrial field as a producer, and restore vitality to competition by becoming itself a competitor of the great trusts. The report was adopted, although it is evidently based on an unfounded assumption. It is not true that we cannot rely on natural forces or the law of supply and demand to limit the growth of modern combinations. Natural forces have never had free play in the United States since the civil war; and, under the Dingley tariff, they operate less freely than ever. If the tariff on trust products were removed, and the law against discrimination in transportation rates were strictly carried out, we should then see natural forces and the law of supply and demand in full and effective activity. The trusts may eliminate domestic competition to a certain extent, but in the absence of a high protective tariff they could not avert foreign competition. That is true, at all events, of almost all American products, though it has been maintained that petroleum and anthracite constitute exceptions.

On Thursday, August 27, the employees of the Government Printing Office in Washington were compelled to take an oath to support the Constitution and the government. If, hereafter, those who have taken this oath shall attempt to interfere with the conduct of the Government Printing Office, by demanding the discharge of a non-unionist employee, they will be themselves instantly dismissed for violating their oath of office. The necessity of the course pursued by the government will be obvious when we point out the purpose of the oath taken by the union printers. Every union printer and bookbinder solemnly swears that his fidelity to the union and his duty to the members thereof shall in no sense be limited by any allegiance that he may now or hereafter owe to "any other organization, social, political, or religious."

Colonel E. A. Garlington, Inspector-General of the Department of the East, has been ordered to make a more drastic investigation of the glove contracts, into which the War Department entered, and in which, it is alleged, the firm of Littauer Brothers was interested. He is directed to obtain the testimony of an important witness, which he has hitherto failed to secure. When this testimony is forthcoming, the Attorney-General will be requested to indicate the method to be followed in proceeding against the glove contractors and Representative Littauer to recover money due the government under the act of Congress requiring a repayment of all sums advanced, should it appear that a Member of Congress was interested in the same. Whether Secretary Hitchcock is prosecuting an inquiry into the connection of Representative Littauer with a glove contract entered into by the Department of the Interior, we do not know. For the present, we are willing to take for granted the Secretary's good intentions in the matter, because of the evident determination craved by him to expose the land frauds perpetrated upon Indians in the Indian Territory. Members of the Dawes Commission have been accused of complicity in these frauds, and, when they had the

assurance to write to Secretary Hitchcock and demand an investigation of the charges, they were quietly informed that an inquiry was already in progress.

It seems that members of the Dawes Commission, who, by virtue of their office, are supposed to be the guardians and protectors of the Indians, are stockholders and officers in the so-called Canadian Valley Land and Trust Company, the purpose of which is to buy Indian lands cheap and sell them dear. It seems that a few months ago the Trust Company rented the rooms previously occupied by the Dawes Commission, which, on its part, nominally moved its offices up-stairs in the same building. The members of the Dawes Commission kept their desks in the lower rooms, and stayed there themselves as officers of the Trust Company. The result of this trick is that the Indians are still going to the lower rooms, supposing them to be the offices of the Commission. They find the same desks and faces there, and proceed to sell and lease their lands to the very same men who are presumed to be running the Dawes Commission up-stairs. It seems that the inquiry into the rascality practiced by government officials in the Indian Territory has been going on for many months, and has been carried forward so secretly that so lately as four weeks ago Mr. Ryan, Assistant Secretary of the Interior, knew nothing about it. We note with satisfaction that, as a result of the investigation still in progress, a number of minor government officers have already been dismissed. There is reason to believe that the Indian Bureau of the Department of the Interior is an even worse sink of corruption than was the Post-office Department under Assistant Postmaster-General Heath. Almost every Federal official in the Indian Territory seems to have taken a hand in the game. The United States District Attorney, his assistant, and the United States Marshal, who ought to have been prosecuting the frauds, see themselves under charges. The very inspector sent by the Interior Department to investigate the scandals is himself accused by the Indian Rights Association of connivance with a company formed for the purpose of despoiling the Indians.

Since the last number of the WEEKLY went to press, we have heard a good deal about the prospects of the canal treaty at Bogota. It is reported that one of the strongest influences at work in that city to defeat the ratification of the treaty by Colombia emanates from British owners of the Suez Canal securities. It seems to be taken for granted in London that the traffic and revenue of the Suez Canal, which for years have been continuously increasing, will be materially cut down on the completion of the rival waterway. We deem it incredible that an interposition so detrimental to the interests of the United States can be countenanced by the British government, which, it will be remembered, during the Beaconsfield administration, bought the Khedive's shares in the Suez Canal. Another unpleasant report is to the effect that the Colombian Congress, by its proposal of amendments to the treaty, is trying to gain time. The Bogota politicians are credited with the astute design of prolonging negotiations for about fourteen months from the present date, when, according to one theory, the franchise of the French company will expire. The \$40,000,000 which we have agreed to pay the French company for its franchise and plant would then become payable to Colombia. This theory is based upon the fact that the only concession to the French company about which there is no dispute will lapse on October 31, 1904. This concession was duly ratified by the Colombian Congress. In April, 1900, however, the executive power of Colombia, by which is meant President Marroquin and his cabinet, undertook, in consideration of \$200,000 in gold, to grant to the New Panama Canal Company an extension of the franchise for six years from October, 1904. As this extension was not ratified by the Colombian Congress, its validity is denied by the Colombian Liberals.

We have yet to learn what amendments of the treaty will be recommended by the Committee of Three appointed by the Colombian Congress to devise a plan which might avert the rejection of the treaty. Whether the Congress can lawfully ratify in advance the treaty, provided certain designated amendments shall be accepted by the United States Senate, is a constitutional question about which opinions differ. The

most interesting telegram bearing on the treaty comes from Panama. We are told that the spirit of revolution is gaining force on the isthmus, as the result of the repudiation of the canal treaty in its present form by the Congress at Bogota. Only vigorous action on the part of the Colombian government can prevent an outbreak, and it is doubtful whether such action is practicable. Such naval force as Colombia possesses in the Pacific is stationed at Panama, and is virtually controlled by the Americans, or pro-American Englishmen, who act as engineers, navigators, and gunners. They would be only too glad to aid in giving the isthmus an independent government. As we have previously pointed out, the permanent interests of the State of Panama have been repeatedly sacrificed to the greed of Bogota politicians, with the result that the inhabitants of the isthmus have twice asserted their independence.

We have formerly directed attention to the tremendous increase in the industrial and commercial resources of Hawaii and of Porto Rico since the products of those transmarine dependencies were admitted to the ports of the United States duty free. We have also pointed out how signally that section of our mercantile marine which is engaged in the coasting trade has profited by the increment in the exports and imports of those islands. How enormous is likely to be the development of the trade of the Philippines, when we treat them with the same equity that we show to our other insular possessions, may be inferred from the statistics published by the insular bureau of the War Department for the ten months ending April 30, 1903. It should be borne in mind that, during the period covered by these figures, the most adverse agricultural conditions have prevailed, and the insular economy has been in a chaotic condition. Nevertheless, we find that in the month of April, 1903, the total value of imports to and exports from the Philippines was \$6,733,778, as against \$3,845,673 in 1902, and \$3,867,262 in 1901. For the ten months ending April 30, 1903, the whole trade (export and import) of the Philippines amounted to \$33,703,235, while for the corresponding part of 1902 the amount was \$16,145,981, and in 1901 it was \$14,120,572. It should be noted that most of the gain credited to the ten months was due to the increase of exports for the month of April, the increase being particularly observable in hemp.

The value of the hemp exported in the ten months under review was \$17,506,500, against \$11,404,361 two years ago. The export of copra, also, has risen from \$2,382,900 in the ten months ending April 13, 1901, to \$5,686,186 in the corresponding period of the present year. The export of sugar, also, has increased by about a million dollars. On the other hand, the export of tobacco has declined. On the other side, the immediate change in this respect if the products of the Philippines were admitted free of duty; for there are several tracts in the islands where it is known that a leaf equal to the best Sumatra leaf for wrapping purposes can be grown. The imports of rice during the ten months ending April 30, 1903, reached the large valuation of seven million dollars. These figures, it is to be hoped, will be materially cut down hereafter through the home production of the staple, which is being vigorously stimulated by the Manila government. Aside from rice, the United States already supply over one-sixth of the commodities imported by the Filipinos. Almost all the wheat flour imported, for example, comes from the United States. We send to the Philippines, also, canned salmon, meat products, illuminating oils, machinery of different kinds, paper, cotton goods, and leather manufactures, principally boots and shoes. It is expected that the new currency will be substituted for the old Mexican silver on the 1st of September. There is no doubt that its introduction, by assuring stability of values, will impart a notable stimulus to the development of industry and commerce. It is not generally known that the Washington Bureau of Engraving and Printing is preparing for the Philippines a shipment of silver certificates amounting in the aggregate to five million silver pesos, equivalent to \$2,500,000 in gold. Under the law, these certificates may not be of a lower denomination than two pesos (silver dollars), but may be for any amount up to ten pesos. They are receivable for taxes and all public dues, and, when so received, may be reissued. It is satisfactory to learn

that the Filipinos take quickly to our money, and have confidence in it.

The business community has learned with relief that Secretary Shaw has forty million dollars deposited in the national banks for use in averting a money stringency during the crop-moving season. It seems not to be generally understood, however, where the Secretary got this money, and by what authority he is able to make it available to borrowers. Any public funds, except customs duties, may be deposited by collectors in the banks named as national depositories, but it has long been assumed that until those deposits have been transferred to the United States Treasury they cannot be removed therefrom except by authority of Congress. It has been supposed that the Secretary, with the help of the Attorney-General, had come to believe himself lawfully empowered to transfer back to the banks internal revenue money paid from them into the Treasury. We are informed, however, that this has not been done, but that the forty millions which the Secretary has in the banks has never been in the Treasury at all, but has been kept in the banks where it now is since the internal-revenue collectors put it there. The Secretary, it seems, foreseeing the need of this money, directed, some months ago, that one-half of the internal revenue collections should be retained in the banks in which the collectors deposited them.

It is held by defenders of the promotion of General Wood that he should have been promoted because he was at the top of the list of brigadier-generals. When General Young was made a major-general in January, 1891, he was promoted over the heads of Generals Wade and Merriam. General Chaffee, a month later, was promoted over Wade, Merriam, McArthur, and Ludlow. Next General McArthur, and, after him, General R. P. Hughes, were made major-generals over the heads of officers higher on the list. It is proper that the appointing power should have the privilege of making generals by selection and not by seniority, and Congress has passed a law permitting it. General Wood could have been passed over, and should have been, for he had had promotion enough.

It is evident that the Balkan insurrection has now passed into a new and more dangerous phase. There are not less than twelve thousand insurgents under arms in Macedonia, and some thousands more in the vilayet of Adrianople. Hundreds of volunteers are daily or nightly crossing the frontier of Bulgaria to join the combatants, and these bands are largely led by officers of the Bulgarian army. Servia is at last being drawn into the contest, and there is a popular clamor for war amongst King Peter's adherents. Finally, the Turkish armies are said to be on the verge of desperation, and ready to mutiny, as they have received no pay for months, and see no prospect of receiving any. The atrocities committed by both parties to the combat grow in fierceness and savagery; the Turks are said to give no quarter, killing the wounded, and, as of old, wreaking their vengeance on women and children. The neutrals, on their part, are using dynamite more extensively, and not only on railroads, but in the midst of crowded cities, where hundreds of innocent persons are certain to lose their lives. The whole country is in a state of war, and recalls with irresistible force the condition of affairs in the spring of 1877, just before Russia's declaration of war, a war which gave national existence to Servia and Bulgaria.

Japan and Russia have settled their differences in the Far East, and Russians and Japanese are equally confident of peace. The probable basis of agreement will be a delimitation of spheres of influence, Japan agreeing to Russia's practical occupation of Manchuria, while Russia acquiesces in the more extensive development and colonization of Korea by Japan, and the Korean sovereignty remaining theoretically intact, just as Chinese sovereignty does in Manchuria. Baron Hayashi recently declared that Japan placed full faith in the Tsar's pledge to complete the evacuation of Manchuria in October, though of course this evacuation will in no case apply to the line of the railroad or the ceded areas which protect it. He also affirms that any small causes of friction between Japan and Russia will soon be settled, and that

Japan seeks nothing fresh in Korea, beyond a recognition of the protectorate which she has exercised over the Hermit Kingdom since the China-Japanese war of 1895. The virtue of this understanding is, that it rests on the solid ground of utility on both sides. Russia absolutely requires an ice-free port for the six million square miles of her Siberian territory, already rapidly increasing in population; while Japan, a small country with an enormous population, about equal to that of the German Empire, will be forced at no distant date to choose between colonizing and starvation. Korea is the most natural field for Japanese colonies, and there is no valid reason why the dewets of the Korean Empire should not be made to blossom by thrifty and energetic settlers from Japan.

The Tsar's appointment of M. de Witté to be president of the Committee of Ministers in Russia is not, as has been asserted, the creation of a Premier, and no a departure from the traditions of autocracy and an approach to the constitutional forms of the Western world, nor is it a practical shelving of M. de Witté, and therefore a victory for M. de Plehve, the energetic, not to say drastic, Minister of the Interior. The Committee of Ministers is a purely executive body, as distinguished from the legislative Council of the Empire; and has always had, and always will have, a president, or chairman; so that no new office whatever has been created. M. de Witté succeeds M. Dourova, former Minister of the Interior, who, until his death a few weeks ago, was president of the Committee of Ministers. He is not shied from his old post at the Finance Ministry, for the decree appointing him chairman of the Committee of Ministers expressly declares that he shall continue to supervise the Department of Finance. Nor is the new appointment a victory for M. de Plehve. It gives a decided preponderance to M. de Witté, who, as chairman of the Committee, can make his influence felt in many ways, besides showing that he possesses the confidence of the Emperor in a high degree. M. de Witté has not been made Chancellor of the Empire, an office at present not in existence.

The *Journal of the American Medical Association* has been investigating the disease known as "Fourth of July tetanus," which newspaper readers recognize as top pistol lockjaw. It records four hundred and fifteen cases this year, of which ninety per cent. were caused by top pistols and most of the rest by cannon-crackers. The pistols that do the mischief are those that explode blank cartridges. Nearly all the victims were children, and in spite of antioxin and all the new lockjaw cures, ninety-eight per cent. of them died. The *Journal* attempted to discover whether there were tetanus microbes in the cartridges, and in some of them it found many, and in others none. It doesn't signify, however, whether there are microbes in the cartridges or not. The fact that the use of the top pistol is fatal to four hundred American children a year seems quite enough to support a demand for the infernal toy's suppression. The *Journal* suggests forming an association to secure general legislation, and also that municipalities take measures to stop the sale of blank cartridges and the apparatus for exploding them. It has done a public service in providing reliable statistics on which legislation can be based.

We all know now that *Rubiac* is a better boat than *Shamrock III*. (though at this writing they are still trying to sail a third race), and the feeling is that we shall keep the cup until a new yacht-designer is born to the British people. So far as appears Sir Thomas has done all that could be done with such means as were available to a British yachtsman. He has had money, energy, and zeal, all in sufficient volume, and has spent all freely. He has given his order to the likest of British designers, brought over a good boat, and seen her sailed so well as to make real races, but we keep the cup because we have a lighthouse. That is a good reason, and Sir Thomas seems disposed to regard it as conclusive. He has not indicated that he will make further attempts to upset it, and it may be a good while before another challenger sights Sandy Hook.

## British Comments on Mr. Chamberlain's Fiscal Policy

We indicated the other day the three different points of view from which the proposed British Zollverein was discussed in the *York Associates Review* for August. We now desire to direct attention to some important British and foreign comments which have appeared in the *Nineteenth Century*, the *Contemporary*, and the *Fortnightly Review*. Among the persons eminently qualified to examine Mr. Chamberlain's project from a politico-economic and international or a sociological point of view may be mentioned Sir Robert Giffen, M. Yves Guyot, Professor Long, Hamilton, Dr. John Beattie Craiger, Mr. Benjamin Kidd, Lord Welby, the Rt. Hon. L. B. Courtney, and Mr. Edward Diney. The suggested return to protection is also considered by M. Mallman Barrie from the workman's point of view, and it is made the object of a searching investigation by the two able writers who contribute to the *Fortnightly* under the pen-names of "Caliban" and "Egiphtionians," and who, in this instance, arrive at opposite conclusions.

Sir Robert Giffen, the well-known statistician, described a year ago the hope of a British Zollverein as a dream, and argued that free trade within the empire was the ideal at which British and colonial statesmen should aim. Even then, however, he admitted that the ideal was very far from attainability, and careful readers of his former article will not therefore be surprised that he is inclined to support Mr. Chamberlain's proposal—not, indeed, on economic but on political grounds. The conclusion at which he arrives after a prolonged discussion of the projected preferential tariff is that while a system of reciprocal preferences holds out no promise of economic advantage to the weaker country, or even to the colonies, and results in a foolish thing to establish and maintain, bringing with it inevitable deceptions and misunderstandings, which might tend to disintegrate the empire rather than bind it together, yet there are good political reasons at this juncture for taking counsel with the colonies as to the practical issues of imperial union, and for arranging with them a good understanding on this topic. He adds that as the political question is much more important than the economic one, the former must be decisive of England's action. What he has in mind when he speaks of the political question is the obviously reasonable wish—called into activity by Germany's disposition to retaliate upon Canada for the latter's extension of a preference to British imports—that the commercial relations between the British Empire and foreign countries may be adjusted on the basis of imperial unity, giving foreign countries no opening for the attempts that have been made to distinguish between different parts of the empire, and to penalize any part for its delinquencies in matter of inter-imperial trade. In short, Sir Robert Giffen can see no really plausible objection to Great Britain's entering into a project for purely political reasons on common action with the colonies.

M. Yves Guyot, ex-Minister of the French Republic, who looks at Mr. Chamberlain's programme through the spectacles of a French free-trader, maintains that if England adopts a protectionist system she will encourage other nations to continue it in an aggravated form, and she will lose all the benefit which she gained from her policy of free exchange. There is a great deal to be said for that proposition, and it is a pity that M. Guyot should have undertaken to uphold it by an assertion that will not bear examination. He says that for more than half a century England has been bringing its economic system into harmony with the discoveries of science and the progress of industry, whereas the legislatures of other nations have followed a policy which runs counter to every effort made by inventors to lower the cost price of goods. M. Guyot ought to know that nowhere have the labors of inventors to lower the cost price of goods been so vigorously and successfully stimulated as in Great Britain and the United States. It is precisely in free-trading Great Britain that labor-saving devices meet with reluctant and tardy acceptance.

By Professor Lajo Bretonau the matter is considered from the viewpoint of a theoretical politico-economist. What, he asks, would be the result of the realization of Mr. Chamberlain's commercial programme? We are reminded that the majority of the goods which enter as the equivalent of the claims of British capitalists come from foreign countries. Now if these goods are subjected to an import tax it is obvious that, in proportion as this takes place, the profit upon British investments abroad will suffer a corresponding diminution. Does Chamberlain, asks Professor Bretonau, intend thereby to enrich English capital out of such foreign investments in investments in the British colonies? Up to the present time the British colonies have not been considered at all capable of employing the British capital which England has invested in non-British countries, and they are as yet lacking in products which could offer as an equivalent for the claims of British capitalists upon the foreigner. The execution of Chamberlain's project would mean a colossal reduction of the income drawn by English capitalists from abroad—an income amounting to a hundred millions sterling. With this diminution of the capitalist's income, his demand for home products would also lessen,

and those who have hitherto supplied these products would come to want. In view of these facts and deductions, Professor Bretonau is not surprised that the British middle classes should view with profound mistrust Mr. Chamberlain's patriotic pretensions.

Unexpectedly enough, the two rival experts in the philosophy of history, Dr. John Beattie Craiger and Mr. Benjamin Kidd, are thus taken both on the same side, and that Mr. Chamberlain's, Dr. Craiger, for his part, is no outright protectionist. He would have preferred protection for England's sake, primarily and mainly. He would have preferred protection for the United Kingdom specifically and independently, leaving preferential treatment, as between the mother country and the colonies, to be accorded on either side spontaneously and gratuitously, in pursuance of the example set by Canada, rather than with the slightest tinge of bargain or sale between the parties. He thinks, however, that if Mr. Chamberlain and colonial statesmen can see their way to construct a business scheme which shall draw the bonds of imperial unity tighter, and work without friction, the endeavor can be fraught with nothing but good. Mr. Benjamin Kidd describes as "hollow" the cry as to the danger to which the food of the British people would be exposed by Mr. Chamberlain's policy. He insists that no scheme of preferential tariffs would put the food of the British people in such jeopardy as that with which it is confronted now, when the United States and Germany are threatening to take work out of their hands, and, consequently, bread out of their mouths. The retaliation and tariff wars which would ensue if the United Kingdom is threatened should Mr. Chamberlain's programme be adopted, Mr. Kidd regards as "largely dressed-up logic." On the whole, he considers the project of a British Zollverein worthy of England's great traditions. He holds that to transform a world-wide empire of fragments and segments into a commonwealth with a common system of endeavor to uphold therein the standard of civilization for which Englishmen have fought and endured, and the standards of life for which British labor has struggled and suffered; to endeavor thereby to introduce some order and moral sense into "the gigantic anarchy of those tendencies in modern trade, production, and finance, of which the Charagnes and Foreign and Morogon of the future have become the emblematic figures." Mr. Kidd's opinion is a cause worth living for, worth fighting for, and worth enduring for.

In a loud and repeat article, Lord Welby, who is firmly opposed to a preferential tariff, recalls that in 1884 Mr. Chamberlain said: "I am sure that the price of food would not decline in consequence of a reduction in their purchasing value. The purchasing power of money would have a smaller purchasing power." Mr. Chamberlain went on in 1881 to say that a tax on food would mean more than this, for it would raise the price of every article produced in the United Kingdom, and would indubitably bring about "the most gigantic speculative trade which the United Kingdom is capable of." The British people, working under conditions of absolute freedom, have been able to secure. Lord Welby points out that the conditions have not changed in the interval. On the contrary, Great Britain's export trade, working under conditions of absolute freedom, has become more gigantic. If attacks on food mean a decline in wages in 1881, it would mean a decline now. Mr. Chamberlain was the president of the Board of Trade, with all the information before him which a British Minister of Commerce can command. He has now changed his mind; but, if his judgment in 1881 pronounced under all the advantages of the position then occupied by him, was hasty and insufficiently considered, what guarantee is there, asks Lord Welby, that it is sound now? Thoughtful men do not change their convictions easily, and, in the presence of such a change of front, prudent persons must have some doubts as to the capacity of the proponent of a preferential tariff. Mr. Chamberlain himself admits that he would tax the food of the British people. Lord Welby reminds us of what Burke said concerning the expediency of such a course: "Of all things," said Burke, "an indirect tampering with the trade in provisions is the most dangerous. My opinion is against the overruling of any sort of administration, and more especially against that sort of meddling on all meddling on the part of authority, the meddling with the substance of the people."

The Hon. L. B. Courtney, who, it may be remembered, was one of the Liberals who seceded when Mr. Gladstone introduced his first home-rule bill, and who has since been Vice-Speaker of the House of Commons, would describe the proposal of a preferential tariff as "Mr. Chamberlain's illusion." It is conceived that England's leadership in the world's industries is passing away, and that she has already ceased to be first in more than one commanding department. He holds, however, that there could be no greater madness than for a nation in such a position to abandon free trade. He deems it absolutely certain that any return to protection would only make England's position worse. He finds an analogy to the policy which he would prosecute. The British Premier likened the conduct of an international commerce in the management of a business, and suggested that, by abolishing every protective duty, England had thrown out every sand bag. What, asks Mr. Courtney, should we think of the accountants who, finding

### LAUNCHING THE LARGEST VESSEL IN THE UNITED STATES NAVY

The armored cruiser "Pennsylvania," which was recently launched at Camp's shipyard in Philadelphia, is not only the largest ship in the United States Navy, but one of the most formidable war vessels afloat. She is 325 feet long, and is designed to have a speed of 22 knots an hour. A notable feature of her equipment is a water-tight armor belt over seven feet wide extending the entire length of the ship on both sides, and having a maximum thickness of six inches. By this means it is expected that the engines and machinery will be made absolutely secure from injury in an attack. The vessel's armament includes four 6-inch breech-loading rifles and fourteen 4-inch rapid-fire guns.

# Diversions of the Higher Journalist

## Reversible Proverbs

**I**N a world which seems not to be so full of ideas as once, the Higher Journalist sat waiting for the topics which refused to come forward for treatment, when an Unexpected Optimist, radiating inspiration from his joyous face, brightened the doorway. "I have got an idea for you," he said, and with these cheering words he sat down and referred to a memorandum in his hand, while the higher journalist went round his razor consciousness and plucked up his dejected spirits by their collars.

"And what is it?" he inquired, very gently, lest they should between them frighten the way.

"It might be called, New Teeth for Old Saws, or Rules that work Both Ways, or built a dozen other names; but it is simply this: tarring proverbs inside out, or t'other end, or upside down. There is any amount of amusement and instruction in this; and it is wonderful how it takes the cynicism and brutality and conceit of the proverbs, and renders them humane and modest and generous. For instance, the first one that came to me, quite by accident, was the saying, 'You cannot breed Zeas without having Quarrels.' In its old form, you cannot have Quarrels without breeding Eggs; it had struck me as mean, sneering, and hard. It denied the hopes of youth, the ideals of progress, the attributes of genius. But turn it round, and how full of promise and consolation is it! You at once get something for nothing; you have the gold brick in your hand. In the original form,

now worn bars of anything like originality, you had only the smacking wisdom of a man who bought experience; the cruel taunt of the disappointment which lures to see itself mirrored in the eyes of expectation; the denial of the impossible, which we must accomplish, unless the world is to stand still. But take it the other way, and there is the prophecy of all prosperity in it. You are going to market, suppose, with your basket of eggs, and an ever active, when an unavoidable accident dashes it to the ground. On the old terms, nothing but loss and ruin would have awaited you; at the best you would have had to return home, and poorly wail days and weeks till the industry which you have had toiled for nothing, you have had toiled for nothing. But now, the instant your eggs are broken, you have comfort. Your misery is lessened with a fairy wand, and the diabolical spilt unites into a breakfast-bowl of the first quality. Didn't you see how vast the scope of such a proverb is, how it overflows with suggestion? It is exactly in the line of the 'New Conceptions in Science,' which you were just praising, the other week. From the broken egg of hypothesis the omelette of fact eventuates. Under the old order of things you would have had to have the omelette first, and then find the eggs which produced it. You see—

"Yes," the higher journalist answered, with a cheerfulness which he had not known for many a week. "Have you any others?"

"I wouldn't mind you with one alone. Take this: *Poverty comes in at the Door when Love flies out of the Window.* How much more delightful and how much truer this is than what you cannot any longer call the right side of the saying! It did not do the door, or else all that the poets and romancers have told us of that smothering passion is the veriest taradiddle. If anything like that happened we may now be sure that it was not love, but self-interest—merely the blind blindness of the naked boy. In the light of the reverse statement we see the promise of endless twelvemonths composed entirely of honey for every married pair. His of youth; happiness for all the terms, and desire is a negligible quantity in the social process. Not until love flies out of the window does poverty come in at the door; until then, the such other's eyes, long after they are a bare cupboard through their need spectacles. Until love flies out of the window, poverty, according to my version, cannot come in at the door, poverty, impossibility: the only sort of impossibility that really exists."

The higher journalist nodded his head over his forehead as if to assure himself that this was not a dream of the land of all possible worlds, rather than a fact concerning a certain class of misery and woe in which he was accustomed. He thought that

he ought to put the unexpected optimist to the severest test, and he asked, "But how about such a proverb as 'Love laugh at Locksmiths?' Turn that about, and what do you have?"

"The vital truth of the saying! Locksmiths laugh at Love is the form expressing the delight which even the grimace of mankind experiences in the happiness of lovers. We are told that all the world loves a lover, and at sight of the pranks of the frolic spirit which makes nothing of bolts and bars, even the locksmith himself cannot restrain his smiles. Let us get away from an aspect of this invention of mine which seems to reduce it to a single phase of life. Let us take the saying, 'Spoil the red and spare the child.' However it may have been in Solomon's time, it is certainly the amended axiom which guides us in the nurture of youth in our own day and generation. Especially as in this country the red has been spoiling for the child, to the child's increasing advantage, for the last fifty years at least. Some of us know it, by experience and observation, before it began to spay the child, and we were none the better for our knowledge. In fact, the mischief it did in those old days is almost incalculable, and until the saying which justified its wrongdoing was practically reversed, the child remained a little less, to be accented forward on the path of righteousness and science."

The optimist continued, "It is not merely the sport of an idle fancy to turn these proverbs t'other end, and it is not merely a new meaning that the process creates; it is a new principle of conduct also which it discovers, and which may animate the discoverer to actions hitherto unattempted. Take, for instance, the proverb saying, 'They break if you break Owners, and reverse it so as to read, *Obey Owners if you break Orders, and you have it once an axiom appealing to an intelligence far above that of the mere eye-servant.* You suppose, and by your supposition you scientifically create, a kind of obedience which contradicts the real advantage of the master, and does not merely obey his lusty or decremented mandate. You remember how in the 'Rak Ballad'—"

Young Hogries, Sub-Lieutenant of Chancellors,

reversed concerning the instructions of his superior, Lieutenant-Colonel Justice Dubois, who had ordered him to land a furlough home in a night attack on the English coast:

If Charles my king said, "Go, my son, and die,"  
I'd go, of course—my duty would be done.  
As for Lieutenant-Colonel Justice Dubois,  
How know I that our ancestor would approve  
The order he has given me to-night?

Here you have the enlightened spirit applying itself to the literature of the day, and its own originality were always made to command what I have suggested, but it is the incultation of a noble altruism that the reversed proverb can be most useful to civilization. Suppose that instead of declaring "A Bird in the Bush is worth ten in the Hand," we held that *A Bird in the Bush is worth ten in the Hand!* We should then have a rule of conduct of the finest and highest morality. We should regard not only the equal right to another's caprice of the bird, as ourselves, but an inalienable right to life, liberty, and the pursuit of happiness. But I don't insist upon this point. All these things are secondary considerations. It is the subjectiveness of the reversible proverb that I would make attractive. If you have a long railroad journey before you, and you do not smoke, how agreeable it has the same thin instructive, to pass the time in your parlor-car chair quietly reversing all the proverbs you can think of! Or if you cannot get to sleep at night, and you do not know any poetry to recite, let me invite the *reversed* to life, liberty, and the pursuit of happiness, when no suggestive topic offers itself, and still, something inspiring and edifying is expected of you as a higher journalist—" "Oh, come now!" the higher journalist interposed. "Don't be person!"

"We should also regard the interest of the bird"

of the instruction, just as it would be if it were a bird. It is the incultation of a noble altruism that the reversed proverb can be most useful to civilization. Suppose that instead of declaring "A Bird in the Bush is worth ten in the Hand," we held that *A Bird in the Bush is worth ten in the Hand!* We should then have a rule of conduct of the finest and highest morality. We should regard not only the equal right to another's caprice of the bird, as ourselves, but an inalienable right to life, liberty, and the pursuit of happiness. But I don't insist upon this point. All these things are secondary considerations. It is the subjectiveness of the reversible proverb that I would make attractive. If you have a long railroad journey before you, and you do not smoke, how agreeable it has the same thin instructive, to pass the time in your parlor-car chair quietly reversing all the proverbs you can think of! Or if you cannot get to sleep at night, and you do not know any poetry to recite, let me invite the *reversed* to life, liberty, and the pursuit of happiness, when no suggestive topic offers itself, and still, something inspiring and edifying is expected of you as a higher journalist—" "Oh, come now!" the higher journalist interposed. "Don't be person!"

*Crossing the Rockies—Hard Going for the Auto*

*Worse than no road at all*

*A rough climb in the Sierras*

*Getting the Packard out of a Mudhole*

## **FROM THE ATLANTIC TO THE PACIFIC IN AN AUTOMOBILE**

*The feat of crossing the continent from San Francisco to New York in an automobile has been successfully accomplished by Mr. E. T. Feltz and Mr. M. K. Krump, of Warren, Ohio. The trip was made in a Packard touring-car of about eight horse-power, and included the passage of the Sierras and the Rocky Mountains. Many portions of the route were found to be almost impassable, and at several points the machine was required to take grades never before attempted by automobilists. The entire journey from San Francisco to New York was made in a little over two months' time.*

# The Silly Season

By Sydney Brooks

London, August 26, 1925.

**I** EXPECTED as much. It has become one of the topics of the "silly season." For weeks the signs have been accumulating that this would inevitably be one that the floodgates would have to be opened, and the "great British public" invited to roar and trample through them. No editor could be counted on for long to resist so tempting a bait; it was dangled too enticingly before him. And now one of them, as he was bound to do, has succumbed, and if you pick up his paper and turn to its correspondence columns—four or five in number, day after day—you will find that what really interests England just now is not the new Chamberlain programme, or the Anglo-French rapprochement, or even the secrets of the Motor Car Act, but this absorbing and altogether vital question, "Is Cricket Declining?" It has immensely "caught on." Nothing within my memory has caught on quite so obviously since the same paper, years ago, propounded the problem, "Is Marriage a Failure?" That undoubtedly was a "star" topic; it will be long before even the silliest of silly seasons can hope to rival that.

You see, there is this horrible gap between the middle of August and the end of September to be filled up somehow. As a social machine, a social organization, London during this appalling period simply does not exist. There is no news. Society is dispersed all over the kingdom, all over the Continent—indeed all over the world. It is yachting, shooting, fishing, staking, and generally enjoying itself. It takes up the daily paper with an effort and throws it aside with a yawn. Politics too are moribund. A speculation or two about the new Pope, a blind guess as to what may really be the matter in the Balkans, a telegram from China—and there the whole thing drops. A great veil of impossibility is drawn over the nation. Nobody does anything worth doing, nobody does anything

even worth chronicling. The national life flows entirely in private channels where only ladies' papers have the courage and inclination to follow it. All cities, all countries, have, of course, during this six weeks' break, this periodic rest; but no where is it so complete as in London; nowhere is the hiatus so vivid, or so "latinate" as truthfully suggestive of a "phantasma or hideous dream." And of all the editors of the daily papers, they have to be writing and polishing something. There is no reason why they should, but the thing is so.

The paper must appear; even those who in the early years of a century house billiard-room resemble the lordship of its dominions would complain loudly still if it failed to come at all. And then of course, British conservatism, which is at least as strong an influence in British journalism as in the British House of Lords, demands that even during the dead season there shall be no alteration in the size or make-up or appearance of the leading papers. The editorials must be as lengthy and wearisome as usual, the news telegrams must appear in their prescribed place, the season must be made to fit the paper, it really brings undertakings fulfilled in various ways, but always fulfilled. Some journalists seize the chance to start a new scheme for army reform; others take up the Persian Gulf question; each in its own style is doubtless profound and certainly voluminous. But there is one dodge that all, with the exception of the *Times*, resort to. They start a silly-season topic.

If you don't know what a silly-season topic is you don't know England. That is no exaggeration. To an inquirer for a preview of the English character and the English intelligence I would confidently recommend the *Daily Telegraph* during its immersion in the topic of its choice. I mention the *Daily Telegraph* because it is still pre-eminently the paper of the average English Londoner, but almost any London daily will do. Any of the papers, of August the editor of each London morning journal writes about for a subject that will "fetch" the British public, all the correspondence columns, are so help him over the silly season. Such and such are not really done, but they must be of popular interest and able to provoke the average man or woman into discussion. They must, therefore, deal with matters of the simplest and most so-called scientific matters, if possible, of the heart as well as the head. It is not by any means everything that will fill the bill.

A hundred suggestions are put forward and talked over in the editor's room before the right one is adopted, but we will suppose the subject found—"The Decay of Honesty,"—Eng-

lish versus American Women," "Why Don't Young Men Marry?" "Should Women Work?" "Are We Impoverished?" "Are Women or Men the Happier?"—or something of that kind. A member of the paper's staff will write a letter to the editor on the subject. Another member will reply to him. Instantly from Clapham and Ilford and throbbing provincial bow-bolders there sets in a steady stream of letters—all genuine and argumentative and for the most part quite appealingly earnest. It is a curious phenomenon, such, I suppose, as no other country can show. For thousands of men and women these annual discussions would seem to be their one chance of really opening their hearts and minds to the world; and in very strange spots they make their appeal—England could ignore these debates. They are conducted too furiously and naturally to be other than intensely self-revealing, and the light they throw on the average collective temperament and intelligence and instinctive ways of looking at things is really of first-rate significance. You get the otherwise inarticulate masses, the ordinary expressionless man and woman, unfolding themselves to the best of their ability on the social problems that are the common property of civilization. That is always entertaining and always pathetic. It is done so sincerely, too, with so many signs of thought and care, that a "human document" of undeniably value is the result. Its value, of course, is rather reflex and unobscured than inherent and literary. I doubtably there is better reading than the *Daily Telegraph* while the silly season screams through its columns, but there is nothing that shows up certain aspects of the English characteristics and attitude toward life more clearly.

As for the question which promises to dominate all others this year—whether cricket is declining—my mind is as open as is Mr.

Balfour's on the merits of the Chamberlain policy. No one but an Englishman or his half-brother in Philadelphia can appreciate or really understand cricket. Any one who plays it, not from a sense of duty, but with positive enjoyment, may as well know the meaning of a snipe-jack at once; it is so unmitigatedly English. Where else but in this sleepy, time-ignoring island could a game in which it takes three whole days to decide a single match—which even then is no

question about cricket holding its own in England. It is played on a far bigger scale and with infinitely more zest than baseball in America. In every bit of waste-land in town or country, in the parks, on ten thousand specially dedicated cricket-grounds, you will find this inconspicuous pastime in full swing from May to October. There are hundreds upon hundreds of men over fifty who keep at it with the keenness of schoolboys, and no one born between Land's End and John o' Groats's ocean can young or old hold a bat. In the summer time all the schools, the colleges, for anything have three half holidays a week when cricket is compulsory, besides several hours of obligatory practice at the nets; and for any one who thinks of going in for schoolmastering there is no "Blue." Even persons find cricket a help to promotion. Indeed, a good many eccleziastics seem to think far more of the bowling career in Mr. Barrow's pews than of their souls. The young are asked about the new living to which he has just been presented, besides everybody's curiosity by replying, "Oh, well, they are rather weak in bowling, but it's a first-rate pitch." But what is most surprising is the quantity of people who profess to attend all their time watching cricket matches. To one it is of all games the most watchable. You sit at the best some two or three hundred yards from the scene of action; it is absolutely impossible to detect the smallest error of either the bowler's or the batter's performance, and hours may pass without a single incident that can arouse the faintest spark of interest. True, you occasionally see a big hit, a smart piece of fielding or an exciting finish, but taking it as a whole, it would sooner assist at a Chinese tea than an English cricket match. The capacity to enjoy it, like the capacity to enjoy Dickens, is some sixth sense which I most probably have been denied; and when I see the thousands who will crowd to see two trials of a "dovey" knocking a ball about for three days on end, it is with a feeling of helplessness and bewilderment. No, cricket is not declining. It should be, but it isn't.

A Cricket Match at Lords, London

## A \$3,100,000 DEPARTMENT STORE

The largest department store in the world is now being built for the Westmanaker establishment at Broadway, Fourth Avenue, Eighth and Ninth Streets. It is to be an all-Milnes store; eight-story store to be below ground, and the floor space will exceed that of any other retail store in existence. Almost other special features there will be a main-entrance for the first six of stories, for which extensive elevations are being prepared. It will take two years to complete the building, and the cost will be \$3,100,000.

# Books and Bookmen

By James MacArthur

MRS. HUMPHRY WARD is known to the world chiefly as a novelist, yet one of the most active aspects of her life is her philanthropic work among the Settlements of London. Especially is she interested in the raw material of young life that populates the congested slums of the East End, and the institution which lies nearest her heart and of which she is most proud is the Vocation School founded by her in Blossomway in conjunction with the Passmore Edwards Settlement in Tavistock Place. While the readers of England and America have been following with unobscured interest the fortunes of *Julia La Plante* in Lady How's *Daughters* during the summer months, the author has been quietly and unostentatiously preparing her schemes for the amelioration and gladdening of the joyless lives of the children in the neighbourhood of Blossomway. Most of the children in the Vocation School are drawn from the mean streets of the adjoining St. Pancras district. A visitor recently dropped in on Mrs. Ward and several interested friends who were gathered in a pleasant garden of the Settlement where the story-telling class was in session. Alice in Wonderland was being read to the children, and the visitor was just in time to hear the words, "I was a aslep," grumbled the Dormouse. "I heard every word you fellows were saying."

"It all arose out of an article I read in *HARPER'S MAGAZINE* a little more than a year ago," Mrs. Ward explained to the visitor when asked for the history of the school. "The article described the vocation schools of New York in an attractive way that made up our minds to try the experiment here. We succeeded in making arrangements before the summer vacation of last year, and the result was so entirely successful that, at the opening of our school here for the present vacation, it was quite inevitable."

"The children appreciated it?"

"So much so that we had fourteen hundred applications from children who wished to attend during this vacation, and, unfortunately, we can only accommodate one-half that number. Some of the bigger lads, who are able to earn a little as errand boys, and girls who ran about in the house, have some trouble in making arrangements to attend, but that does not keep them away. And now we will visit the class-rooms."

Room after room was visited, disclosing the various occupations of the children. Here a group of girls were busy making dolls' dresses, while near by was reading a story aloud to them. In another room was gathered the painting class, every child being furnished with a paint box and brushes. In the kitchen boys and girls were learning to cook. Not far from the kitchen was the class-room for manual training, where each boy spends one morning a week at a carpenter's bench well equipped with tools. Mrs. Ward said it was most gratifying the way in which every boy looked forward with the keenest pleasure to his turn at the bench. Equally popular are the swimming classes held at the Holborn green library, its tables beset with books that fascinate the youngsters; picture-books for the little ones, books of adventure for the boys, all Mr. Streat's "books for boys," and fairy-tale wood, its pictures, and its tiled fireplace has been designed to make an impression that will surely linger in the memory of the children who browse there.

As Mrs. Ward passed from one room to another with her visitor slighted ward was followed to with fond admiration, and her genuineness, from which issued the sound of a piano, and coming out into the garden again. Mrs. Ward spoke with enthusiasm of her plans for the future of the Vocation School, for as yet she only

views the institution as a promise of greater things to come. "What we hope to see sometime," she said, "is the organization of a London 'League of Play' for the capturing of the children's play-time. I should like to see evening play-centres established in every district of London, with superintendents of playgrounds in all the parks and many open spaces during the summer holidays. I regard this as the natural complement of the moral education the children are already receiving, and as of equal importance. There is reason to hope that one result of the success of our school here will be some action on the part of the new education authorities towards further experiments in vacation schools in other parts of London before very long."

Mr. Edwin A. Rawle, in an interesting brochure on *The Dooms of Exmoor*, has investigated the traditions upon which *Lorna Doone* is founded, and notwithstanding the fact that certain persons were recognized as descendants of the Doones down to comparatively recent years, he comes to the conclusion that the stories still locally current have no historical foundation. He traces the origin of the legends to the invasions of the Doones during the reign of Alfred the Great. "All that has been said by recent writers on the subject of the outlawed Doone family goes to prove that they were imaginary beings; whereas the history of our own country records beyond all doubt that the Doones were terrible realists. The sanguinary doings of those days doubtless left indelible impressions upon the contemporary inhabitants of West Somerset. Impressions which have been transmitted from generation to generation in tales of gigantic robbers who committed savage and murderous outrages upon the inoffensive and peaceable inhabitants of Exmoor."

Mr. Rawle adds an interesting fact which seems corroborated by the evidence he adduces, namely, that Mr. Blackmore got his clue for the conception of his great romance of the Doone Valley from a story entitled "The Dooms of Exmoor," which appeared in the *Litton Hour*. He is in error when he says that Mr. Blackmore wrote a tragic story called "Blain by the Doones," which has never been published on this side of the Mend. & Company some years ago under that title, and in England it was, if I mistake not, the initial story in a volume called *Tales from the Telling House*, which appeared about the same time.

Since mentioning Miss Edgeworth's name in these columns is our last issue, I learn that her little-known but delightful volume of stories, *The Parrot's Assistant*—a most unfortunally titled—has been issued in a good edition, from the charming pen of Mrs. E. B. Popham. The following pleasant reminiscence of Thackeray is worth recording from this introduction:

"Once when the present writer was a very little girl she suffered for a short time from some inflammation of the eyes, which prevented her from reading, or amusing herself in any way. Her father, who had just then returned from the East, in order to help her to pass the weary hours began telling her the story of the Parrot's Assistant, and when he had finished, and had boiled down the wicked thriver in oil, and when she asked him to tell it all over he said that he would try and find something else to amuse her, and looking about the room he took up a volume of *The Parrot's Assistant* which was lying on the table, and began to read aloud the story of 'The Little Merchants.' The story lasted two hours, and an odd, confused impression still remains in the writer's mind to this day of Naples, Vesuvius, pink and white sugar and a darkened room, of a lonely country house in Belgium, of a sleeping garden full of flowers outside the shutters, of the look of a big sofa covered with yellow velvet, and of her father's voice reading on and on. When she visited Naples in after-days she found herself looking about unconsciously for her early playfellows."

*A Snap Shot taken near the Harbor, Port Antonio*

*What was left of a Jamaica Village after the Storm had passed*

### **SNAP SHOTS OF A HURRICANE'S HAVOC**

*The recent disastrous hurricane in the West Indies was felt with particular severity on the island of Jamaica. The storm caused a heavy loss of life and property damage to the amount of about \$10,000,000. In many parts of the island there was a total destruction of valuable crops, the rivers were flooded, and shipping along the coast was seriously affected. The photographs, taken just after the hurricane, give a graphic idea of the destructive effect of the storm.*

## A DANGEROUS GAME

# The End of the Season at Coney

By Henry Harrison Lewis

IT was a little after the noon hour on a Saturday, and Surf Avenue and the Boardwalk were sprinkled with the ad- vanced guard of the great army, even then moving in force on the "Island." With the stroke of twelve the real business of the day had begun. As if by magic, the unusual quiet had disappeared before an avalanche of discordant notes from the half

dozen and making the discordant entry. The sidewalk filled with curious spectators and a number followed the elephant. Some one in the crowd, in front of the Egyptian dance exhibition, exclaimed: "Well, would you believe it, fellows! That's a baby-elfant Barker. It's gittin' those people to see the show. That's great, ain't it! Come on, let's go over."

"Ladies a-a-and gentlemen! Step up! Step in! We are giving to-day a fac-simile of that ancient and most gorgeous of Egyptian dances. Need I whop'er its name? Na! period, the thought. Your intelligence will inform you. Suffice it to say, that we show the real thing, and —here his voice sank to a stage whisper— "It is hot stuff, hot!"

Several men in the small crowd that had halted to listen to the Barker paid their ten cents admission and passed in- side. The Barker smiled his chest, gave an extra twitch to his cuffs and smiled, confidentially. He was about to resume his speech when the proprietor hurried around the corner.

"Git a move on yer," he muttered, huskily. "There's a big excursion just landed at the pier an' they'll be put here in a minute. Now's yer chance to hustle. If yous let 'em slip I'll have yer scalp, savvy?"

The Barker understood. His experience on the Island had covered eleven seasons, and until the present engagement he had been successful. Now the old order of things was changing. The "wide open" features with which he was so familiar were disappearing one by one, and the show he represented that day was the last of its kind. Small wonder that he glanced anxiously down the street and leered himself for a supreme effort.

There was a scurrying of feet, a peal of laughter, and round the corner came a mob of rollicking excursionists. The Barker's sibilant voice rang out as he enlarged on the fascinations of his entertainment. The crowd wavered in its passage. The proprietor eagerly beset them with both hands and hooks. Ten or three bought tickets, and the rest were about to follow, sheep-like, when an uncertain sound came from across the street where a trained-animal show had quartered itself.

Out upon the sidewalk in front of the gory-behaved building a baby-elfant stood waving its trunk and trumpeting furiously. Presently it began to back inside the long corridor, still waving its

trunk and making the discordant entry. The sidewalk filled with curious spectators and a number followed the elephant. Some one in the crowd, in front of the Egyptian dance exhibition, exclaimed: "Well, would you believe it, fellows! That's a baby-elfant Barker. It's gittin' those people to see the show. That's great, ain't it! Come on, let's go over."

The Barker pounded the air with his cane and launched forth into the effort of his life. The proprietor added his voice to the din for a moment, then rushed in- side and brought into view a couple of the alleged Egyptian dancers, but the curio-mania broke and scattered toward the other side of the street, leaving the dance exhibition without a spectator. The Barker looked at the furtive face of his "boss" and only left the little plat- form.

"I pass," he said. "I am going back to the woods. An elephant Barker is too much for me."

The Coney Island of 1903 is not the Coney Island of last year or the year be- fore. The same old beach is there, and the same indiscriminate collection of wooden buildings, and the same merry-go-rounds and cheap amusement enterprises, but the moral atmosphere is different. To-day there is just as much fun to the square inch of sand, but it is of a different kind. The immoral shows are gone, the tone of the variety halls is a little higher, and new features have come to lend a greater variety to the sport of the place.

It is in the latter change that the Coney Island of 1903 is unique. At just the time when it was needed, when the attrac- tions had grown a trifle monotonous, two young men came out of the West and, without any blowing of horns, erected as if in a night an amusement park which has not its counterpart anywhere else on earth. The thinking visitor, after he has seen the many features, after he has laughed at the better-skier, and watch- ed the Cinghese dancers, and made a trip to the moon, and another via the sub- marine route to the North Pole, will glance back after leaving the really picturesque entrance and marvel at the

inventive genius that has made all this possible.

Where you would not think of throwing a ball at a wooden doll in the city, you elbow your way through the crowd to be the first to try the game at Coney Island. You do this and more, too, be- cause you are at Coney Island, and the sole passport of your visit is to squeeze as much fun out of five hours as your temperament and your purse will permit.

The "Shall-a-Lasp" Man at Coney, who Advertises the Toys of Shooting the Chute

The "Helter-Skelter"

One of the most popular features at the new Coney. The "Helter-Skelter" is a kind of winding toboggan slide with a bamboo surface, down which you slide at high speed without danger.

## AN ARTIST'S IMPRESSIONS OF THE NEW CONEY

Coney Island has taken a new lease of life. It has a new amusement park, including such attractions as a "liver-shiller," a submarine trip to the north pole, a trip to the moon, and a baby elephant who acts as a "barber" for one of the shows. The merry-go-rounds and amusement places of the old Coney Island are still there, but the tone of the variety halls is higher, and the musical shows are gone.

**"The Princess of Kensington"—Act II.**

The new comic opera by Captain Eust Hood and Edward German came to the Broadway Theatre last week from the Savoy, London, where it has just concluded a successful run. Captain Hood has heard the story of his libretto on "A Midsummer-Night's Dream," interweaving with it an element of modern burlesque.

**"My Wife's Husbands"—Act I.**

At the Madison Square Theatre Edna Milton Kelly and her wife Alma Fritz Kelly, are starred in Mr. Kelly's new farce, "My Wife's Husbands." Mrs. Kelly plays the part of "Gwendoline Weston," a dashing young widow with three divorced husbands all of whom she encounters successively at a dinner given in honor of her next husband to "Robert Kelly." Mr. Kelly, who is trying to locate a bill for the absence of dinner—out of the complications which result from the meeting of "Gwendoline," her husbands, and her former Mr. Kelly has made an hilarious but amusing comedy.

**EARLY AUTUMN THEATRICALS IN NEW YORK**

**MISS ISABEL IRVING**

*Miss Irving, who starred last season as "Virginia Carol" in Winston Churchill's dramatization of his novel, "The Crisis," will begin, late in September, a transcontinental tour in the same play under the management of James K. Hackett.*

# Russia's Black Sea Fleet

By Charles Johnston

**T**HE Russian fleet has returned to the harbor of Sevastopol, but the expedition in Inada is likely to remain with painful vividness in the mind of Abolil Hamid as a lively reminder of penalties to come. When we realize the power and quality of Russia's Black Sea force we shall understand how formidable a menace lay in its appearance off the Turkish coast, and what irresistible pressure was thus brought to bear against the Sultan. That part of the imperial Russian Navy which operates in the Black Sea is, as its backbone, eight formidable battle-ships, six of which are of the largest size, and which, as a class, are not only the most heavily armed, but also the most heavily armored ships in the world.

To begin with, we have the two battle-ships *Pravir* and *Potemkin*, and the *Tri Sestretina*, each of twelve thousand five hundred tons displacement, and easily able to do seventeen knots an hour. The former was launched within the last two years, and embodies the best results of modern knowledge. Of the latter, one of the first experts in England says, "*Tri Sestretina* is the heaviest ironclad in the Russian navy, and the most strongly protected ship in the world." The first half of this sentence is no longer true, as, since it was written, Russia has launched no less than five new first-class battle-ships, each with over a thousand tons greater displacement than the *Tri Sestretina*; they do not, however, belong to the Black Sea fleet. Each of the two battle-ships named has a primary battery of four twelve-inch guns; *Pravir* and *Potemkin* has a secondary battery of no less than sixteen six-inch quick-firing guns and twenty three-inch quick-firers, besides a number of smaller guns, each of course, torpedoes. *Tri Sestretina*, besides her primary battery of four twelve-inch guns, has a secondary battery of eight six-inch quick-firing guns, four four and seven-inch quick-firers, and fifty-two smaller quick-firers.

Then, after these two 12,500 ton ships, we have a group of four—*Georgi Pobedonostsev*, *Troisman*, *Elizaveta II.*, and *Sissop*, from ten thousand two hundred to ten thousand three hundred tons displacement each. The three last are sister ships, and have an armor belt of no less than eighteen inches in thickness. All four carry the astonishing number of six twelve-inch guns each, so their primary battery, arranged in pairs in disappearing carriages within a triangular turret, which is peculiarly Russian in design. The mechanism of these disappearing guns is interesting; the recoil of the shot drives home a hydraulic ram, which is then used to raise the gun again, after reloading. Besides these tremendous primary batteries of six twelve-inch guns each, these four ten-thousand-ton battle-ships have secondary batteries of seven six-inch guns and from fourteen to twenty-four smaller quick-firing guns.

Then we have two nine-thousand-ton battle-ships, the *Rostislav* and the *Dimitriy Sostolov*, the latter with four twelve-inch and four six-inch guns and twenty-two small-calibre quick-firers; the former with a primary battery of four ten-inch guns, the only guns of this caliber in the eight battle-ships of the Black Sea fleet, and also a secondary battery of eight six-inch quick-firing guns and twenty-six smaller quick-firers.

To these eight battle-ships must be added two recently completed protected cruisers, *Krugol* and *Ischokol*, each able to do twenty-four knots, or something better than the fastest six-day Atlantic liners, and carrying twelve six-inch and twelve three-inch quick-firing guns, besides smaller quick-firers. Also, of course, a full complement of torpedo boats, torpedo-boat destroyers, and small craft in general.

What work are these ships of the Black Sea fleet intended to accomplish? Evidently they were not called into existence to protect Russia against the navy of Turkey, for, generally speaking, Turkey has no navy. It seems equally evident that Russia's Black Sea fleet is not designed to meet the fleet of any other power. Its peculiar character: the proportion of eight battle-ships in two cruisers, the great number of twelve-inch guns, no less than thirty-six for the eight ships, and, finally, the immense thickness of the armor-belts, going up to eighteen inches, all point in the same direction; these ships are evidently designed to make an overwhelming attack on land forts, and the only forts within their range of activity are the Turkish forts on the Bosphorus, which guard the northern gateway to Constantinople.

Two of these forts stand at the mouth of the Bosphorus, overlooking the Black Sea, and they are connected, in pairs, along the banks of the Bosphorus, on the average about two miles apart, throughout the sixteen miles of the strait stretching to Constantinople. The construction of these forts was carried out under the supervision of German officers, whose services were kindly lent to Abolil Hamid by his friend Kaiser Wilhelm II., and they will probably be fought by German gunners, or at least by gunners trained in German methods. There, in a sentence, is the real barrier to a solution of the Italian problem, the answer to the oft-repeated question, "Why does not Russia intervene?"

The heavily armored and heavily armed battle-ships of the Russian Black Sea fleet are evidently designed to overcome this barrier when the time comes. Whether they will be able to overcome it, is only to be solved by actual trial. It is certain that every officer on board these battle-ships, every gunner, and every seaman is willing to make the attempt. But before facing such a tremendous hazard, Russia is determined to try every other expedient.

The North Gateway of Constantinople, guarded by Turkish Forts, against which Russia's Fleet is designed to Operate

The Problem for Russia's Black Sea Fleet, showing the Method of Naval Attack which Russia would have to follow in case of a War with Turkey

# The VERY OBJECTIONABLE CANAL

A Number Of Excellent Reasons Why It Yet Remains Above Ground  
By Albert Levering

1. *Y. Bull* "I say, old chap, not are you doing 'em? Dipping a double? I say, now, you can't do that, you know; it's not allowed—for diplomatic reasons."

2. *La Dame France* "Ah, Monsieur Sam wishes to build a ditch? I had I say, now, you can't do that, you know; it's not allowed—for diplomatic reasons. You call it thirty cent de chance—s'v'v'z pas?"

3. *Senor Columbus* "Barro! And not to in Senor Captain Le Dutch Sam prepare for to pay me—in a small price—let for to dig? Ha! Yes!"

4. *Senor Columbus* "I find not to not of a preference, Senor Sam. Besides, I think you have yet more."

## MORE RACE INCIDENTS

BIRMINGHAM, Ala., July 4, 1925.

To the Editor of Harper's Weekly:

SIR.—The negro criminal who outrages a white woman or child does so generally because negroes of that class think they have white neighbors in the South. White women are not attractive to negro men, still less are white children of the female sex. They are poor, washed-out creatures; the badly dressed and loudly performed leech of his own race is his ideal. The town in which I live, the county-seat of the largest slave-holding county in the State formerly, now has one-third negro population. The white people were nearly evenly divided between Union and Secesh. When the war was over a negro, to a crowd of his own color, shaking his fist and cursing, declared his intention to outrage every white woman he could. Within a short time a fireman girl of twelve, going to a spring for a bucket of water, in the suburbs, was a victim. The criminal was taken quietly from jail at night by a party made up of about equal numbers of ex-Federal and ex-Confederate soldiers, who had just quit fighting each other, and hanged on a rope stretched from trees on opposite sides of the street, so he was in the middle and in plain view. To their astonishment the negroes of the criminal class found they had as white hangers, and never has there been a second race crime there.

It is an important coal plant of the local system, and many negroes work in the mines. A white union once ordered a strike, to which the negroes paid no attention. White miners from another town, not even members of the United States, came in, patrolled the roads, and some of the negroes going to work. The negroes, born and raised in the county, some living on their own property, appealed to the men who had held their fathers as slaves. "You will not let us work, and if we need you put us in the penitentiary." The white business men got impatient against the white assailants of the negroes, and saw that the latter were allowed to work in peace.

A man a few years older than myself, my mother's wedding present from my father (but not a slave for life, but to be bought a trade and freed at twenty-one), who raised for me as a child, appealed to me for help to pay a lawyer to defend his son in a serious race of fighting another negro. Telling me of his happy issue out of all his troubles, he said, "I told my lawyer to get all the old slave-holders he could on the jury, and when they failed get their laws."

No people in the world will do as well by the negroes as those of the whites; but they will not allow negro governments, for they have Haiti and San Domingo under their own eyes as proofs of what it would end. And never while the world stands will the white men of the South consent that a white woman survive such an outrage, but will strive to rehearse the particulars of her misdeeds before the multitude in court.

If the whites of the North wish to do their best for the women and children who are the innocent sufferers let every one who writes or speaks confine himself or herself to the one remark, "When the crimes cease, the lynching and burnings will cease."

I am, sir,

GEORGE WILSON.

## APPRECIATED

LITTLETON, ENGLAND, July 21, 1925.

To the Editor of Harper's Weekly:

SIR.—I want you to know how much pleasure the regular arrival of HARPER'S WEEKLY occasions in this household. I think you are to be congratulated. The paper again has the right to use its secondary title.

The editorial comments are particularly strong and healthy. They strike one as independent and discriminating, while fair and free from the scolding, raving spirit which has so weakened the influence of some of our journals otherwise powerful for good. The verdicts that go with the stronger merit help to make both the more palatable.

I am, sir,

ALEX. C. HURFARAY.

## THE KIPLING BACILLUS

CHARLESTONVILLE, VIRGINIA, August 11, 1925.

To the Editor of Harper's Weekly:

SIR.—I have unshipped my wagon from my stall, wound up the traces, unfastened the harness- straps, unshookled the throat-latch, if I have turned him loose. Kipling is free.

Since Kipling began to write, or rather since, in a pirated newspaper story, I discovered him—and plumed myself mightily on it—comes of a cheap and yellow newspaper, were genuine in mind—I have been striving with might and main to discover the brand of ink that Kipling uses, in order that I might homily take a dip pre-emptively; and my fall was made plain to me, one day when man's poison, and asserted that books were most and poison too. "You," he added, "are doing what would tempt you possibly by your blind adoration of Kipling. Kipling reduces a thought to its bare weight in words. And many men enjoy him—and he has results; for neither they, nor you, are Kipling. Stevenson is what

you need, or Hemlett; they have not thought to the skinny cranium; they give some of the mostative significance, instead of braving it all to the reader. Kipling says, 'Fat Man,' Stevenson introduces you to the tailor's despair at the quantity of cloth required for his breeches."

Huismaster came to me with his words, and I saw myself the pitiful initiator—on chrome—without thickens. Now Kipling has thickens. He may be naked, but he is no derelict—a picture. He proceeds interludes: he is bluggy inside. Cut us trailers open and we bleed only pitious sad. A few of us catch the trick of expressing our hurried language—like the Emperor William's musk; but though we may have the manner, there is no meat behind the manner. It is a trick with us, and nothing else. We say, "Go to! let us be Kiplings!" But Kipling is not yet away by himself. He was not ordained to be triplets, nor even twins. He shares no height, we smooth fellows rarely help to his brilliancy a little. And how pleased we are with the reflection, till the evening dew falls and dims our shine, and we see it in no light of ours.

The words of my friend had sunk deep into that part of me which rodes within my skull; and sorrowfully, yet with determination, I went to my room to delubrate my idol. There are book-shelves at the head of my bed. Much thoughts are as vouchsafed in my mind, most notably between sleeping and waking; hence I have never been able to rest other than my bedroom as a study. And on the bookshelves rest shoes, on the lower rungs; riding posties; a reader, handy to reach at night; last-trunks and books; two bags for carrying notes on paper ribbons—like the Emperor William's musk; but though we may have the manner, there is no meat behind the manner. It is a trick with us, and nothing else. We say, "Go to! let us be Kiplings!" But Kipling is not yet away by himself. He was not ordained to be triplets, nor even twins. He shares no height, we smooth fellows rarely help to his brilliancy a little. And how pleased we are with the reflection, till the evening dew falls and dims our shine, and we see it in no light of ours.

The words of my friend had sunk deep into that part of me which rodes within my skull; and sorrowfully, yet with determination, I went to my room to delubrate my idol. There are bookshelves at the head of my bed. Much thoughts are as vouchsafed in my mind, most notably between sleeping and waking; hence I have never been able to rest other than my bedroom as a study. And on the bookshelves rest shoes, on the lower rungs; riding posties; a reader, handy to reach at night; last-trunks and books; two bags for carrying notes on paper ribbons—like the Emperor William's musk; but though we may have the manner, there is no meat behind the manner. It is a trick with us, and nothing else. We say, "Go to! let us be Kiplings!" But Kipling is not yet away by himself. He was not ordained to be triplets, nor even twins. He shares no height, we smooth fellows rarely help to his brilliancy a little. And how pleased we are with the reflection, till the evening dew falls and dims our shine, and we see it in no light of ours.

I am, sir,

KENNETH BROWN.

## MORE ABOUT MUSICAL PROGRAMMES

WEST POINT, New York, August 17, 1925.

To the Editor of Harper's Weekly:

SIR.—Referring to the statement that the concert bands render selections of too weighty a character, as expressed by Mr. Yale, I would say that the bands and orchestras of the country are so numerous, and of so diversified a character, that all inferences may be omitted. He who desires the program minutely should attend a concert of high-grade players and expect to have his prejudices gratified. He would naturally seek music to his liking, and could be easily gratified by attending any of the operatic concerts on the East Side, where music of this character predominates.

It might be just as reasonable to say that the shelves of our libraries are filled with works of too deep a character to be acceptable to the average reader.

Music is refining and elevating. If Mr. Yale would study the works of the masters to the extent of paying careful attention to their rendition, he would find beauties that would gladden his innermost soul, and he would be able to discriminate between "Udeh Fantasies" and the sublime recitations of the Boston Symphony Orchestra.

Most of the prejudice against classical music is of a superficial nature. Some people not only do not, but will not, endeavor to understand or appreciate the truly beautiful in music or art.

Good books and good music have a mission to perform, and the lover of good literature can easily learn to appreciate the refinements of the grand orchestra and the classical traditions of the Kipling Orchestra.

The ten-time and the melody overture are on a par with the dime novel; one may read and one may listen—and forget, but the symphonies of Beethoven, the songs of Schubert and Mendelssohn, together with the outstanding works of Wagner and Meyerbeer, will continue to gladden the hearts of future generations when the "Patrol" and kindred productions are buried in the dust of oblivion.

I am, sir,

SAM FINKELSTEIN,  
U. S. M. A. Band.

The Cash Value of Ready Wit

A Bloodless Story of the Civil War

By A. J. Wright

READY WIT, much as it is admired, is not capitalized even by the modern promoter, and the instance wherein it has proven to be a quick asset are few and far between.

There was one instance, however, that deserves telling, in the long and arduous life of General Joseph H. Geiger, familiarly known as General Joe Geiger, who died recently at Columbus, Ohio, at an age so ripe in years that, like many that deserve it in their day, he had lived to see himself both famous and forgotten.

The incident which established the cash value of his quick wit occurred in New Orleans, at the time when General B. F. Butler had possession of pretty much everything there, Spanish and cotton included. If it had not been for General Geiger's timely presence there, the accumulated war claims, vast as they are, would probably be larger by some hundreds of thousands of dollars than they are to-day.

One evening away back in the seventies I was making a friendly call on the General, together with some newspaper men, when some one asked:

"How about that yarn they tell on you sed the cotton planter, General?"

The General tells his Story

He tried to pose the matter off as a joke, but, being pressed for an explanation, he finally proceeded in an inimitable way to tell the story which, odd as it is, I have never seen in print. So far as my facts are concerned, and without any attempt to repeat the wit and pathos with which he embellished it, the story is about as follows:

"I had been sent to New Orleans on a confidential errand and was detained there several days. General Butler not only had possession of the city, but had seized all the cotton, and all the planters and owners were scrambling to get it released. In the confusion, the innocent suffered with the guilty. In some manner the planter before mentioned, who was a former sympathizer, had learned of my presence in the city, and in their desperation came to me for help.

The Northern army had overrun his plantation with its usual disastrous results, and his cotton, already beyond reach, was the only thing between him and actual want. His proceeds were in the hands of General Butler, where, as I afterward learned, they had long been, with a mass of other similar claims, unexamined. As I was going to spend the following day with Butler I told my utterly dispirited friend to call the morning following when I would take the matter up with the General and do what I could for him.

The Appeal to General Butler

"When General Butler and I had completed our other business, I repeated the planter's tale of woe, very much as he had given it to me.

"We were surprised at the completeness and conclusiveness of the proofs, which, owing to the extraordinary circumstances, had received less attention than they deserved. General Butler saw at once that an injustice had been done in this case. He accordingly wrote out an order releasing the cotton and handing it to me, directing me to express his regrets to the owner in the expenses of my car, so serious an injustice had been done.

How the Planter took the News

"I was just out of bed next morning when there came a rap on my door. Opening it I let in our unfortunate friend. I did not wait to be asked, but walking across the room to my coat, I took the order from my pocket and handed it to him without comment. You should have seen the effect! He was not prepared for the surprise. Reading the order half aloud, and, as if not believing his own eyes, drawing it closer, he read it again, and gasping something like 'Great heaven!' whirled and went through the door without saying good-by or even thank you.

"I had been very much occupied dur-

ing the day, and the question of fee did not so much as enter my mind. You see, I had really done no work at all, either mental, physical, legal, or spiritual. I didn't even have to prey with the General.

"Next morning while making my toilet, I thought the matter over a little. I had decided finally to charge him \$25, when there came a rap on the door, in case the planter, no longer sad and dejected, but content beyond control.

The Fee that was a Windfall

"Walking straight to the center table, he pulled out of his pocket the largest roll of bills I had ever seen, and began peeling off five-hundred-dollar bills. He counted out four, and asked:

"How's that, General Geiger?"

"I looked at those four \$500 bills, and said, 'Well, I don't you think you had better make it twenty-five.'

"The fifth five-hundred-dollar bill was instantly laid on the pile, accompanied by the most profuse expressions of gratitude it was ever my pleasure to hear from a client."

The  
Substitute

By WILL N. HARBEN

Author of "Abur Daniel," etc.

A new story of Northern Georgia. A young man of humble birth but astutely shrewd character is befriended by an old man who desires to atone for a past sin by so educating and training him that he may become his nearest substitute in the eyes of Providence. Hence the novel. From the first chapter in the last there is a continuous flow of anecdotes and humorous reminiscence.

# LETTERS OF MARQUE

ISSUED UNDER SEAL OF THE KINGDOM  
OF BOHEMIA TO ESPER INDIMAN, ESQ.

BY VAN TASSEL SUTPHEN

## The Adventure of the "Red Duchess"

AT half after eight we sat down to dinner. Indiman, of course, took the head of the table, and opposite him propped up on the arms of an enormous "bishop's chair" of Finnish oak, was Lely's portrait of the "Red Duchess." What a glorious picture it was, in the masterly sweep of its lines, in the splendor of its incalculable coloring! The jagged edges of the canvas showed plainly where the vandal knife had passed, separating the painting from its frame. But the really big thing is always independent of its *odors*; one hardly noticed the mutilation and then immediately forgot about it.

I had been honored with a seat at the lady's right hand, and opposite me a fourth cover had been laid. Indiman noticed my look of inquiry.

"Only one of my fancies," he explained, smiling. "I always make provision for the unexpected guest. Who knows what surprising guests may be hovering around."

"We were hardly at the soup before a servant brought in a card. "Roger W. Blake" read Indiman aloud. "An honest enough sounding name. Is the gentleman in evening dress, Bolder?"

"No sir, I don't think so, sir."

"Hunt that is unfortunate. Still, if Madame la Duchesse will permit and you, Thorp, have no objection—good! ask Mr. Blake to do me the favor of joining us at dinner."

A few minutes later Mr. Roger Blake appeared at the door of the dining-room; he was a young man with a profusion of fair hair and a good deal of color, the latter brightened considerably by the somewhat embarrassing circumstances attending his introduction. But Indiman relieved the situation immediately, going forward and greeting the new guest with unaffected cordiality.

"Mr. Blake is it? You are very hearty, welcome I assure you. Let Bolder take your hat and stick; indeed I insist upon it. Allow me now to present you: Her Grace the Duchess of Laskshire, more generally known as Lely's 'Red Duchess'—Mr. Roger W. Blake, My friend, Mr. Thorp—Mr. Blake."

Evidently the young man was not overclear in his own mind as to how it had all happened, but there he was, sitting bolt upright in the vacant chair and drinking two glasses of wine in rapid succession to cover his confusion. A comedy, apparently, but to what purpose? Mr. Blake blushed painfully and made no reply to the polite compliments that I ventured; Indiman smiled benevolently upon both of us, and in the most natural possible manner, led the conversation to the subject of portrait painting. There was his best bet before him—the famous "Red Duchess"—and he talked well; I found myself listening with absorbed attention and even the shy Mr. Blake became oblivious of the lesser agencies of self-consciousness. So we went on until the polite course had been removed.

Our host rose to his feet, champagne glass in hand. "Gentlemen," he said, and we followed, example, Blake managing to upset a dejeuner of cherry in the process.

"In life and in art—the finest of her sex. I give you, gentlemen, 'La Duchesse Rouge.'"

The toast was drunk with becoming decorum; I was about to resume my seat when I saw that Mr. Blake had screwed himself up to a desperate decision, and that the climax of the comedy was at hand. He was quite pale and he stammered a little as he spoke.

"Very sorry I—I'm gone," he blurted out, "but you are Mr. Blake—Indiman?"

"I am, and not in the least sorry for it. Go on."

"It is my duty, sir, to place you under arrest for complicity in the theft of that picture," Mr. Blake threw back his coat and displayed a detective's shield attached to an aggressively red suspender brace.

Esper Indiman bowed ironically. "I presume that my presence at Police Headquarters is unnecessary," he inquired.

"Yes, sir, I have a copy in waiting outside, and we will start at once, if you please." Mr. Blake, under the stimulus of his pro-

fessional functions, but his embarrassed air and become scarcely businesslike and official. "This gentleman will have to accompany us," he continued, looking at me.

"The coffee, Bolder," called our host, "and never mind the sweets." I drank a demitasse and lit a cigarette. "Ready," assuring Indiman, and we descended to the coach, Mr. Blake bringing up the rear and carrying the precious picture enveloped in a silver table cover.

"What reward is offered, officer?" asked Indiman, as the carriage drove off.

"One hundred thousand dollars, sir. It will be a big thing for me if—"

"He stopped a trifle embarrassed."

"Ah, those italics!" quoted Indiman, musingly.

The chief of the detective bureau received us in his private room. He listened attentively to Blake's report, but seemed rather puzzled than gratified by its triumphant peroration. Now the young man felt that he had done a big thing, and this non-committal attitude of his superior chagrined him. He unrolled the covering in which the picture had been wrapped.

"There!" he said, half-resentfully.

The chief looked carefully at the picture and turned to Indiman. "The you desire to make any explanation, Mr. Indiman, as to how this picture happens to be in your possession?"

"Certainly," was the prompt reply. "I bought it for a small sum a month ago on the lower Bowery. The dealer's name was Grepsire or Grepsky."

Young Mr. Blake sniffed laconically. A messenger handed a couple of telegrams to the chief. He read them with knitted brows and then touched a bell.

"Send in Oliver Stone," he ordered.

Mr. Stone immediately made his appearance. In his hand he carried a fat, square parcel which, in obedience to a further order, he proceeded to unwrap. I uttered an involuntary cry, for it was nothing less than a replica of the famous portrait of the "Red Duchess." A replica indeed! It would take an expert to decide which of the two was the copy; they were absolutely alike, even to the detail of the rough edges, the marks of the blunted knife.

This picture was discovered in an art-dealer's window on Fourth Avenue near Twenty-sixth Street," explained the chief of the detective bureau. "And now kindly listen to these despatches. The first from the Chief of Police of New Orleans:

"Lely portrait discovered in pawn-shop. Officer Smith goes North to-night to return property and claim reward."

"J. G. Bowers."

"The other from Pittsburg, is substantially the same language, reports the finding of the portrait of the 'Red Duchess' in a private gallery. This fourth picture is also on its way to New York for identification."

We all looked at each other. Blake the picture of puzzled anger and disappointment. "Which is the true picture?" asked the chief. "Mr. Indiman, I should be glad of your opinion."

Indiman, who had been examining the canvases held by Stone, answered quietly. "Neither of these and it is more than probable that the other two are also copies by the same hand. Wonderfully well done, too, but the study of portraiture is a hobby of mine, and I have even contemplated a monograph on the subject on more particularly, a handbook to the smaller galleries and private collections. I've had my share, too, of good finds—glorious sport the running of them down."

"But the 'Red Duchess'?" persisted the chief.

"Of course I know it perfectly. I won't bore you with technical explanations, but on the back of the stretcher is the address of the American art dealer from whom the original canvas was purchased. That should be enough."

It was as Indiman said; each of the canvas stretchers carried a

small gummed label, the address of a Fulton Street art supply shop.

"That settles the question," remarked the chief of detection. "I may say finally that I have this ruble from the Minister of Police at St. Petersburg, confiscated to me through the Russian Consul-General:

"Lily portrait recovered and replaced in the gallery at the Hermitage. Withdue published reward.

"(Signed)

SOMMERKA.

"A queer piece of business, but this appears to be the end of it," commented the chief. "Needless to say, gentlemen, that you are at liberty to depart. My apologies for the annoyance to which you have been subjected." We all bowed and withdrew to the anteroom. Blake, blushing red, came up to Indiana; he began to apologize, stammering pitifully, but Indiana cut him short.

"Call up the coach and offer the driver extra fare for the best time his horses can make to this address," he scribbled the house and street number on a leaf torn from his note-book and handed it to Blake. "Yes, you can come along if you like; it may be the leg thing yet."

As the carriage rolled along Indiana volunteered certain explanations.

"As I have already told you," he began, "I bought the picture from a small dealer in the Bowery. I happened to notice it in his window, and the 'Red Durban' being one of the half-dozen comparative peritons of the world, I was naturally interested. It was retained a fine copy, and I was pleased to get it so cheaply.

"Now there were two or three circumstances connected with my find that afterwards struck me as peculiar. In the first place it is well known that permission to copy any of the pictures at the Hermitage Gallery is very rarely given, and the authorities are particularly averse to having reproductions made of the Lily portrait. Secondly, why were the edges of the canvas so noticeably serrated, giving the picture the look of having been hastily cut away from its frame? And finally, where and when had this copy been made? For the label of the Fulton Street art dealer on the back bore the date 1903, and this was the second of February in the same year, (obviously impossible that the artist could have gone to Russia, painted the picture, and returned with it to New York in a little over a month.

"Two days later I was walking up Fourth Avenue, through the district affected by the curio and old-heralds dealers, and I discovered a replica of my 'Red Durban' hanging in a shop-window. In every respect identical, you understand; the two pictures were unquestionably the work of the same hand. Whose hand?

"In your encounter, Thorp, the name of Clive Richmond? Well, for a year or two he was the favorite painter of women's portraits here in New York, hailed as genius and all that. Then suddenly his work began to fall off in quality; his failures became egregious, and his clients left him. Shortly after, he disappeared; it was the common report that his misdoings had stirred his enemies, there were even hints at suicide. That was some four or five years ago, and whatever the secret may be it has been kept faithfully.

"At last I had ordered a portion of the problem: it was Clive Richmond! and no other who had painted my copy of the 'Red Durban.' How do I know? Well, with the expert, it is a matter purely technical, but more largely intuitive. How do you recognize a friend's face? How does the bank clerk detect the counterfeit bill?

"Now this second copy bore the same marks as the one in my possession. It was one of the canvas matted and jagged, the Fulton Street label on the back. What was this mystery?

"Mystery, yes, and I had it the shadow of a crime, of a human tragedy; who was to lift the veil? There was but one man, Clive Richmond, who could answer my question, and where was Clive Richmond? A week later I found still a third copy of my 'Durban' over on Sixth Avenue. I had left my purse at home that morning, and when I went back the next day to buy the picture it was gone—sold to a stranger. But I say that I had missed getting possession

Exclusive design, luxurious appointments and the most perfect mechanical equipment ever installed in an automobile characterize the Columbia 24 Horse-power Gasoline Touring Car, Mark XXI. All working parts are instantly accessible; noise and vibration are practically eliminated, while ease and certainty of control are secured at all speeds up to forty-five miles per hour. Catalogue of all Columbia Automobiles will be sent on request.

of the second picture through the same sort of contrivance? I never saw either of them again.

"I had written to a friend in Petersburg to make certain inquiries for me; his answer confirmed some of my suspicions. The 'Red Duchess' was not hanging in its accustomed place at the Hermitage; it was in process of renovation according to a statement made by the director of the gallery.

"That was enough for me. The portrait had been stolen and was probably in New York at this very moment. Where? Let me first find Olive Richmond, and I must be quick about it, for once the secret was out the detective would not be long in rounding up the various purchasers of these wonderfully accurate copies. This morning the cable brought the news, and at dinner-time Mr. Blake's card was presented to me. Quick work, Mr. Blake. I congratulate you.

"Here in the letter that I received just before we left my house, you remember that it had come in the evening mail and been overlooked. I will read it.

"Dear Indiana," it began. "There's more in art than can be squeezed out of a color tube, isn't there? But I have the secret now; it was given me by Lely himself—in his box. What a pity it is that I shan't have the chance to use it, but you and the cognoscant can fight it out together. You might busy me decently if you like; you ought to be willing to do that much, seeing that your critical pronouncements have been so amply vindicated. C. R.

"P. S.—My secret? But on second thought I will take it with me."

St. John's Park and the streets fronting upon it was once a fashionable quarter of the town. Now a hideous railway freight-station occupies the former park area, and the old-time residences, with their ornately wrought-iron stoop-railings and graceful fanlights, have been degraded by the bare bones of a tenement population. Only the quiet chapel of St. John has survived the slow process of contamination, a single nook rising above the sordid tide.

The cumb stopped before one of the most pretentious of the old-time houses, now almost one of the dirtiest and most dilapidated. We were directed to the upper story, Indiana leading the way.

A single attic chamber bearing the marks of the cruelest poverty, a store, an artist's easel, a tin pallet spread directly on the grimy floor, and upon it a man in the last stage of emaciation. He glanced up, and Indiana and waved his hand helplessly. He tried to speak, but his words died away in his throat; Indiana hurried by his side to catch the words.

"It is cold—shut store door—there's enough now to last me out."

Indiana went to the store where a little fire was smoldering; he shut the door, and the pallet spread directly on the grimy floor, and upon it a man in the last stage of emaciation. He glanced up, and Indiana and waved his hand helplessly. He tried to speak, but his words died away in his throat; Indiana hurried by his side to catch the words.

"You know well enough why I have come," he said, slowly. "I tell me the truth."

There was no audible response from the bloodless lips, but the dark eyes were full of ironic laughter. Then they closed again.

"Richmond?" said Indiana, sharply. "Richmond?"

I had been standing by the door, but now I came forward and joined Indiana. "Come," he said, briefly. "Come and taken his secret with him. Only that was the secret?"

We tried to argue it out on the way up-town, but with only indifferent success. Granted the promise that Richmond had actually stolen the "Red Duchess," what were his motives in multiply-

ing copies of the picture, a proceeding that must infallibly end in the detection of his crime? And the supreme question—what had finally become of the original?

My theory was simple enough. The man was mentally unbalanced, the result of knocking over his own father in art. He had stolen the picture, possessed with the idea that by study of it he should discover the secret of its power. He had made copies of the picture and sold them in order to supply himself with the necessities of life. At the end, knowing himself to be dying he had caused the original to be returned in the gallery at Petersburg, a contribution to the convalescent fund.

Indiana's argument was more subtle. "Granted," he said, "that the poor chap was mentally irresponsible, and that he actually did steal the picture. But you must take into account his colossal vanity, his monumental egotism. Richmond never admitted for a moment that he was a failure as an artist; there was a cabal against him, and that accounted for everything. This affair was simply his revenge upon his critics and detractors; he would turn out these reproductions of a masterpiece so perfect in their technique as not to be distinguished from their original, nor indeed from each other. So having set the artistic world by the ears he would enjoy his triumph, at first in secret, and afterwards openly."

"But what was the picture returned to the Hermitage?"

"One of these same copies—that was the supreme anticlimax."

"The original, then,—the 'Red Duchess'?"

"The fuel in the stove consisted of some strips of painted canvas," said Indiana, gravely. "I don't know, I can't be sure—they were almost recognized when I saw the door."

"An imperfect copy?" I hazarded.

"Some day we will take a trip to the Hermitage to make sure," answered Indiana. "Where garance is bliss, etc. What do you think, Blake?" he continued, turning to our companion.

"Is all the same to me, sir," answered Blake, a little ruefully. "It was a big thing right enough, but somehow I seem to have missed it all round."

"Well, good night, sir; if you'll kindly set me down at this corner."

Indiana and I enjoyed a small supper under Oscar's watchful eye; the night was fine and we started to walk home. Have I said that Indiana had proposed

that I should move my traps over to his house and take up my quarters there for an indefinite period? In exchange for services rendered as he put it, and somehow he made it possible for me to accept the invitation. It had been twenty-four hours now since I had first enjoyed the honor of Mr. Roger Indiana's acquaintance; the novelty of having enough to eat—seriously enough—was already beginning to wear off. Man is a wonderful creature; give him time and he will adjust himself to anything.

At the corner of Fifth Avenue and Twenty-seventh Street Indiana stopped suddenly and picked up a small object. It was a latch-key of the familiar Yale-lock pattern. I looked at it rather indifferently.

"Man, man!" said Indiana, with simulated despair. "Surely you are an incorrigibly prosaic person. A key—does it suggest to you no possibilities of mystery, of romance?"

"Oh, is that all? To-morrow we will go out and find a door upon which this little key will no longer be probably employed. You promise to enter that door with me?"

"I promise."

Here the "Adventure of the 'Red Duchess,'" ends, and that of the "House in the Woods of the Black" begins.

There was no audible response from the bloodless lips

# GET RICH GROWING GINSENG

There are a few people in the United States now making fortunes for themselves by growing Ginseng.

There will be a great many people of enough shrewdness and enterprise to acquire riches from Ginseng gardens in the next few years. Whether you will be one of them or not depends upon you alone. It is the most profitable business known.

Ginseng root brings from \$6 to \$10 per pound in American market. Seeds and young plants bring splendid profits from American growers. A Missouri man sold \$25,000 worth from one-half acre one year, being the accumulation of marketable roots, seeds and young plants for several years.

If you sell your harvest of seeds and young plants each year instead of replanting and enlarging your own patch, a \$10 or \$25 garden will pay you a handsome profit annually, beginning with the first year. Requires little more care than a turnip patch.

We sell stratified seeds and cultivated plants. Our copyrighted directions, fully covering every point of cultivation, sent free with each order. We guarantee safe delivery and prepay express.

If you will send two two-cent stamps to help pay postage, we will mail you immediately our 55-page book telling all about the enormous, easily-earned profit in this wonderful plant, Ginseng, which has been marketed from its wild state for 175 years; cultivation in the United States just beginning; also copy of the current issue of our magazine, "The Ginseng Garden."

As *The Saturday Evening Post* states, the roots of an acre of five-year old Ginseng are worth \$24,000. In addition to this the same plants will have yielded 500 pounds of seed; at \$50 per pound, one-half the present market price, the seed would bring an additional \$24,000.

Read this Editorial from "The Saturday Evening Post," the conservative Philadelphia publication, issue of Aug. 22, 1903, telling of the enormous profits of Ginseng

## GINSENG FARMING

Little Gardens That Pay Big Dividends

UNDER scientific cultivation some rare discoveries have been made in regard to ginseng, root, struggling in hard soil or against rocks, and other impeding elements variously known, many of them closely resembling the human form. In fact the Chinese word *Jen-shen*, man-man-wort, as it has been translated by many people, even including some of the ginseng cultivators and dealers in America, that the Chinese demand for the root was based on the fancy that the development of the roots in the altitude of man was nature's indication that they are intended in minister to ailing humanity.

Recent discovery that the plant under cultivation frequently produces straight roots, bearing no likeness to the human body, and that these samples of ginseng, being richer in quality than the native kind, are bringing higher prices in China, have awakened a new inquiry into the secret of the Chinese people's eagerness to possess the plant.

Washington, "I have recently discovered in ginseng some remarkable element which has hitherto been unknown to occidental science. It does not seem reasonable that the Chinese and Japanese are so wise men, and in many ways deeply learned in the mysteries of nature, would for unnumbered centuries continue to use as one of their most highly prized therapeutic agents a vegetable which is a plant totally without medicinal value. From the humblest citizen up through all the grades of society, including many of the profoundest and eastern scholarship, big officials and even emperors, the inhabitants of China for ages have had an implicit faith in the power of ginseng to prevent and cure many of the ills of the body."

Thus far, scientific inquiry into the secret of ginseng has been a baffling study in chemistry. European chemists have been attempted to discover what it was in the plant that had made it for ages so highly prized at that their reactions failed to show that ginseng held the alchemical medicinal value. More recently official chemists in America have analyzed ginseng roots and found that they contain about 30 per cent of nitrogen, 40 per cent of lime, .50 per cent of phosphoric acid, .70 per cent of potash, the remainder being nothing but water. These chemists, therefore, confirmed their inability to understand why the Chinese should place such value upon it, eagerly buying it at ten dollars the pound, and giving for some of its distillations far more than their weight in gold.

As a result of these scientific decisions against ginseng as a medicine, new support was given the theory that the popularity of the roots in China was due to the superstition that their resemblance to the human form was an accent of their supposed power to cure. In the legends of the Chinese, the founder of the Celestial Empire traced reference in regard to ginseng was found. It was learned that the founder of the Chinese race, the son of a man living at Shanghai during the reign of Wen Ti, Emperor of the Six dynasty, who said to bear a voice as slight calling to him from the forest. For years, across the forest, he heard, came mysterious callings were repeated, but no explanation of their origin could be found until one day there was dug up a hundred feet from the man's home, a huge ginseng plant that closely resembled a human being. After that the voice ceased, and the man died of a tea brewed from the roots of that ginseng plant lived without pain to a patriarchal age. In further explanation of the ready Chinese market for ginseng, plants that had been found in the contemporaneous thought of China is the conviction that nothing save starvation can overcome a man acclimated with ginseng essence. It was also learned that the roots of these roots assumed human-like forms, the better price they commanded.

But all ingenious explanations of the value of ginseng in China are of no avail if the plant, for so stated, the discovery has been made this year that cultivated roots, many of

these bearing no resemblance to human forms, are selling at a higher rate in China than has ever before been obtained for the wild roots. In the present year, the Chinese market, according to the reports of the American consulates here, has brought to light the discovery that among the chemists who analyzed ginseng there was one who discovered in the root an alkaloid, the nature and value of which he was unable to determine. The name *jen-shenol* was proposed for this alkaloid.

At present, in medical dictionaries in the United States, ginseng is defined as "little more than a demulcent." Now that recent experiments show that the Chinese are buying the roots irrespective of their shape, more serious inquiry is to be made into possible medicinal qualities which have escaped previous analysis.

So alluring have been the promises of profit in ginseng farming that the subject has been taken up by official agriculturists in various parts of the United States. Many of the government seeds will be very valuable to farmers who contemplate embarking in the growing business.

As a result of the tests it is officially announced that, if all preparatory conditions be faithfully complied with, the gross returns from an acre of ginseng, after five years of growth may exceed \$10,000. Deductions of \$2000—which includes the original payment made for the plants, the amount expended on materials for constructing artificial shade and the cost of labor in planting, cultivating and harvesting—the net profit is five years from one acre planted at not over \$25,000, or \$2000 per annum. On this basis a farm of the ordinary size, 200 acres, would, if planted to ginseng, yield a net annual income of \$40,000, provided the market price of the roots should remain as at present. It is pointed out that though extensive cultivation would be profitable, the demand for ginseng in China is increasing. Sixty \$30,000 worth of the plant has been exported thus far from the United States and the market price is being rapidly advanced. Moreover, the plant in China has been fully exterminated, and the few districts in which it is still found have been set apart as the Emperor's private reserves.

The indications, therefore, to embark in ginseng cultivation, the best roots of which now readily bring from six to eight dollars the pound in America, are very great. Emphasis should be laid on the importance of first gaining a thorough knowledge of the plant's needs, for some of its habits of growth are anomalous.

In the East, the strange and important fact has been demonstrated that ginseng seed, although fully, normally matured, will not germinate until eighteen months has elapsed from the time of harvest, and that it will not germinate at all, even after eighteen months, if it is sowed in a dry time of the year. During all this period it must be preserved by stratification with wood shavings, moist and staidly altered. Moreover, the soil selected for planting must be perfectly adapted to the plant, a proper amount of shade must be provided, and other essential preliminaries looked into with painstaking care. It has been discovered through official channels that some individual experimenters throughout the country have failed to realize the prodigious gains possible in ginseng cultivation, simply because they were not equipped with proper knowledge of the plant's peculiarities. Scientific tests at experimental stations in several States have been satisfactory, and the officials have an opportunity in saying that, under proper care, the returns from ginseng farming may equal if not exceed the best that has been known.

Experiments showed that in cultivated plants there was a loss of only 2 per cent, while in the wild the ginseng roots transplanted was all per cent.

The roots were planted eight inches apart each way. With a gardener's dibble, holes were made to enable the roots to expand. This was an important factor in multiplying the yield of the crop.

A \$10 to \$25 garden will pay you a dividend the first year; in five years' time its annual yield will have aggregated thousands of dollars.

You can start a Ginseng garden for from \$5 up. Our assortments include plants two and three years old that are already seed bearers.

**Remember that Ginseng must be planted in the fall. Now is the time to buy seeds and young plants.**

We have cultivated Ginseng ourselves for years and give full instructions with all orders.

It is a very certain crop. It is an absolute staple, like cotton, wheat, and iron, and, like them, is regularly quoted in the world's markets. It has an unlimited market already established; the price is advancing steadily, and the supply is rapidly falling—it will take years to even check the annual deficit. It is not perishable and may be held in store for an indefinite time. The land needed for its cultivation is so restricted that it is a very little city lot will hold a bed yielding hundreds of dollars annually.

All plants and seeds purchased of us will be delivered to any address free of charge. Every order is personally inspected by our botanist. Our copyrighted directions, fully covering every point, are sent free with each order. Autumn is the time to set out plants and sow the seed, and as our stock for sale is limited and the demand strong it is advisable to place orders at once. We reserve the right to decline all orders after the stock for sale has been engaged.

Remember our offer to mail you immediately our 55-page book telling all about the enormous, easily-earned profit in this wonderful plant, Ginseng, also copy of the current issue of our magazine, "The Ginseng Garden," for two two-cent stamps to help pay postage.

**CHINESE - AMERICAN GINSENG COMPANY, Dept. 77, SCRANTON, PA.**

gin their apprenticeship has been found great enough to induce the managers of great dailies to give it space, and it is not only tolerated but is found necessary to financial success. Few, while regarding such chronicles as banal, realize the worth of them. Few understand that the mounting of women's doings, even in trivial things, is hourly making for a development of mental and political status that will bring about a juster estimate of the value of women's work, and create a demand for a higher grade of it intellectually as well as materially.

Women journalists have had to wait their opportunity to do that which they may do when they know how, and to be content to do small things while waiting to do larger. The point that may be gained finally is as lofty as aim can make it, but the women who fill the more responsible posts must have served in varied capacities before they can achieve the end.

**The Rewards of Journalism**

Out of the five million self-supporting women in the United States (those in domestic service not counted), few comparatively have become journalists. Of those the majority give their training in the "preliminary" fashion of an older day. Many fall out of the ranks early, some never go beyond the "preparatory" stage, some advance and attain all the honors in the gift of the profession. That newspaper work claims the greater number is due to the fact that newspapers pay better than any other journal. An illustrious scientific magazine with which it would be an honor to be associated for literary reasons offers to an assistant (woman) editor but \$10 a week, and a daily paper pays \$30 for less responsible services; it is comprehensible that less fame and more money should be accepted.

But whether in the stress and excitement of work on a morning paper, or following the quieter routine of a weekly, or the more literary duties of a monthly, is no other calling are there such possibilities: not so much for fortune or for ambitious advancement, as for gaining an ever-deeper knowledge of humanity; for giving and winning sympathy; for keeping in touch with growing and widening movements in which the worker may share.

**Infant Marriages**

According to a recent census report, 143 boys and 187 girls under one year of age were married in India during a single year. The record during the same year for marriages of children under five years was 2297 for boys, and 3254 for girls. As a consequence of this state of affairs there were, at the time the census was taken, twenty-two widowers and twenty-seven widows less than a year old, and some 300 less than five years old. The evil results of this system have been so extreme and alarming among certain of the Hindu castes that a bill has lately been drafted in the province of Baroda which limits the marriageable age at eighteen years for boys and fourteen for girls.

# A HISTORY OF THE AMERICAN PEOPLE

In Five Volumes

By **WOODROW WILSON**, Ph.D., Litt.D., LL.D.

*President of Princeton University*

**P**RESIDENT WOODROW WILSON has devoted the best years of his life to the preparation of his great work, "A History of the American People," from the earliest times to the accession of President Theodore Roosevelt. The work, which is just completed, is monumental in character and scope, represents the genius of the greatest historical writer of the present time, and is written in that delightfully flowing style which translates historical facts into the romance of a nation. It is printed from new type specially cast in 1902. In the matter of illustration, every field of human activity has been searched, and hundreds upon

hundreds of new portraits, prints, maps (in colors), plans, and pictures make the pictorial features alone tell their wonderful story of the finding of the continent and the birth and growth of what is the United States of America. There is a photogravure frontispiece to each volume, and portraits in India tint and black. It is a curious fact that there was not a single complete narrative history of the United States in existence until now. Dr. Woodrow Wilson's is the first. It is bound in dark-blue vellum cloth, leather-stamped, lettered with gold, untrimmed edges, gilt tops, etc. The edition is in five volumes, and the price is \$25.00.

**OUR OFFER** We will send you the entire set of five volumes, charges prepaid, on receipt of \$1.00. If you do not like the books when they reach you, send them back at our expense, and we will return the \$1.00. If you do like them, send us \$2.00 every month for twelve months. On receipt of this dollar, we will send you, without cost, beginning at once, a year's subscription to either Harper's Magazine, Harper's Weekly, Harper's Bazar, or the North American Review. In writing, state which periodical you want. Address

## COMMENT

SOME of the friends of Judge George Gray, of Delaware, were disappointed because of the omission to put forward his name as a candidate for the Democratic nomination for the Presidency in the Democratic State Convention of Pennsylvania. The delegates from the anthracite-coal region would have applauded such a move. The managers of the convention, however, deemed it judicious to avoid any reference to national issues at this time. For two reasons. First, Pennsylvania—unlike Ohio, which Mr. Cleveland in 1892 came within a hair-breadth of carrying—has long been a Republican stronghold in Presidential elections. It was deemed expedient, therefore, that suggestions as to the construction of a platform and the designation of nominees for 1904 should be left to the States which Democrats are believed to have a chance of carrying. Then, again, Pennsylvania, unlike Ohio, is confronted with State issues of vital moment. It cannot justly be said that Ohio is misgoverned, whereas the assertion may be made with more truth of Pennsylvania than of any other State in the Union. We add that only minor State officials are to be chosen this year in Pennsylvania, whereas in Ohio not only is a Governor to be elected, but also a Legislature which will have the naming of a United States Senator to succeed Mr. Hanna.

Under the circumstances, Pennsylvania Democrats cannot be blamed for preferring to restrict their platform this year to demands for a free press, for ballot reform, and for decent home-rule in municipalities. Our incident, however, may be accepted as affording conclusive proof that the Democrats of Pennsylvania can be trusted to co-operate with the great majority of their brethren in the States on this side of the Mississippi in recognizing the national Democracy next

year on the traditional conservative lines. A proposal made in the platform committee to reaffirm the Kansas City platform was supported by only ten out of the fifty members. There is no doubt that the feeling in favor of Judge Gray is gaining strength in eastern Pennsylvania, as well as in his native State, notwithstanding his own declaration that he is not a candidate and that the movement in his behalf should not be renewed seriously. We learn from Dover that young Democrats all over Delaware are preparing to organize Gray clubs, with a view of assuring to him the Delaware delegation and of commending his nomination to the next national convention. In refusing to countenance such demonstrations on the part of his friends Judge Gray is taking exactly the position which a self-respecting and profoundly respected member of the Federal judiciary ought to take. From this point of view there is nothing to choose between him and Chief-Judge Parker of New York.

Mr. John H. Clarke, of Cleveland, Ohio, who was nominated for United States Senator by the Democratic State convention of Ohio, not only opposed Mr. Bryan in 1896 and 1900, but he is still defiantly unrepentant. Addressing a Senatorial convention at Napoleon, Ohio, on September 1, he said that he had no apologies to make for having denounced in the past the free coinage of silver at the ratio of 16 to 1. He was just as inflexibly determined, he said, to uphold the single gold standard as he ever was. The State Senatorial convention to which we have referred comprised delegates from five counties which hitherto have been controlled by Bryanites. Mr. Clarke told them frankly that if they desired a representative in the United States Senate who is without opinions of his own, and without sufficient independence to stand on his conclusions when he had reached them, they ought not to support him, for he was not that kind of a man. That a man who could make such a declaration would be cut off from any hope of receiving Mr. Bryan's support might have been inferred from some of the latter's former utterances. During the national campaigns of 1896 and 1900 Mr. Bryan denounced as traitors all the Democrats who refused to rally under the free-silver banner. Only a few weeks ago he announced that men who had deserted the Democratic party in the critical years named could only get back by an unconditional disavowal of their anti-free-silver opinions. We have always believed, however, that Mr. Bryan was much less of a fanatic and much more of a politician than he has seemed to some of his opponents. It is perfectly clear, of course, to Mr. Bryan, that for the present, at all events, the silver issue is dead, and that as regards many other questions of capital, and even urgent moment, he has very much more in common with a Gold Democrat than he has with a Republican.

This he now has the candor to admit. He said in an interview at Columbus, Ohio, on September 2, that while Clarke was grievously wrong in 1896, and while he (Bryan) would have preferred a man for United States Senator who had been with him on all the planks of the Kansas City platform, he nevertheless thought it better to support one who differed with him only on one point than by opposing him to encourage those who would elect a Republican. He went on to say that since 1896 the quantity of gold in the country had been immensely increased, and the arguments

advanced seven years ago in favor of a larger volume of metallic money had been vindicated. The fact that Mr. Bryan has decided to stump Ohio in favor of Mr. Clarke's election to a seat in the United States Senate must be accepted as a decisive proof that there is no longer any irreconcilable difference between Free Silver Democrats and Gold Democrats. By this act, which we do not hesitate to describe as far-seeing and politic, Mr. Bryan has done more than any other man could do at this juncture to help the Democratic party. Whether Mr. Bryan's support will enable Mayor Johnson to secure the Governorship is a different question. It is true, as is pointed out by the *Cleveland Plaindealer*, the principal Democratic newspaper in northern Ohio, that a good many Republicans in that State are suspected of a secret desire to see Senator Hanna defeated. On the other hand, it is not improbable that some Democrats who have long been and still are influential in Ohio would like to see Mr. Johnson beaten. Under the circumstances, the *Cleveland Plaindealer* thinks that both anti-Hanna Republicans and anti-Johnson Democrats will take to the woods, and that consequently a very tight aggregate vote will be polled. Another course is recommended by the *Philadelphia Record* to anti-Hanna Republicans and anti-Johnson Democrats. As the Democratic State convention has named a sound-money man for United States Senator, the election of an anti-Hanna Legislature and the simultaneous defeat of Johnson for Governor would be an ideal distribution of rewards and punishments.

Among the States which elect Governors this year, there are three in which the contest will be watched with interest because of their possible bearing on the next Presidential campaign. In Maryland not only is a Governor to be chosen, but also a Legislature which will name a successor to Senator McComas. The recent primaries have placed Senator McComas in control of the Republican machinery, notwithstanding the opposition of Congressman Mudd, ex-Senator Wellington, and ex-Governor Louwides. On the other hand, the Democratic party in the State has been reconstituted, and is skillfully directed by Senator Gorman. It will be remembered that Mr. McKinley swept Maryland in 1896, and also carried it in 1900, although his plurality in the latter year was less than half as large. The political change witnessed in Maryland on the former of these occasions was due partly, of course, to the split in the Democratic party on the free-silver issue, but partly also to the fact that recently the western section of the State has received many immigrants from the North, who have been attracted thither by its stores of iron, petroleum, and lumber. A like cause has produced a similar result in West Virginia. If Senator Gorman can succeed in stemming the tide that has been setting for some years against the Democracy in Maryland, he will not only return a Democrat to the United States Senate, but will be able to promise the electoral votes of Maryland to the Democratic nominee for the Presidency in 1904.

Turning from Maryland to Missouri, we observe that it is still uncertain whether the Democratic nomination for the Governorship will go to State's Attorney Folk, who is honored all over the country for his determination to release the good name of his State by sending the St. Louis bootleggers to the penitentiary. There are at least half a dozen other Democratic candidates for the Governorship, and it is possible, if not probable, that one of them will secure the nomination, for the managers of the State machine are avowedly or secretly hostile to Mr. Folk. The pressure of public opinion, nevertheless, may prove irresistible. There is a widespread impression that if Mr. Folk, having been rejected by the Democratic machine, should run on an independent ticket, he would be endorsed by the Republicans, and might carry the State. In Delaware the so-called "Regular" Republicans, who constitute, it is well known, a minority of the party, have announced that under no circumstances will they again support Governor Hunn, who vetoed the bill passed by the last Legislature repealing the Voters' Assistant law, which enables the purchaser of a voter to vote that the latter "stays home." As Governor Hunn has placed the election machinery in the hands of the Fusion or Adickes Republicans, who form a majority of the party, there is but little doubt that he can obtain a renomina-

tion if he wants it. In pursuance of a bargain made by the two United States Senators from Delaware, and sanctioned by Postmaster-General Payne, the Adickes Republicans are to control the Federal patronage in two out of the three counties. The Republicans bring thus divided, the Democrats of the State will make a strenuous effort to elect their candidate for Governor.

It appears that Secretary Shaw has deposited \$2,500,000 in national banks of St. Louis, and that smaller sums have been deposited in some smaller Western banks. We are not surprised to hear that the announcement that the Secretary was contemplating an increase of the deposits in national banks by nearly \$40,000,000 brought a deluge of applications to the Treasury Department. We are told that the only applications granted were those which had been on file for several months, and which, for the most part, were confined to agricultural districts. In a speech made by him at Chicago, on September 2, Mr. Shaw outlined a measure that, in his opinion, would impart the desired elasticity to our present currency system. He would by a new law permit national banks, with the consent of the Controller of the Currency, to issue a volume of circulating notes equal to fifty per cent. of their bond-secured circulation. The said additional notes would pay a tax of six per cent. and be retired, either by the banks at will or by direction of the Controller, on the deposit of an equal amount of lawful money with any subtreasury. The practical effect of the measure would be as follows: When money was worth more than six per cent., the additional notes would be issued; when money was worth less, the notes would be withdrawn. But what security would the public have for the redemption of the notes? According to Mr. Shaw, the Federal government could afford to underwrite them, because the proceeds of the six-per-cent. tax would provide an adequate insurance fund. But suppose a large number of banks which had issued an amount of additional notes equivalent to fifty per cent. of their bond-secured circulation should simultaneously become insolvent before the six-per-cent. tax had been collected for a single year. Would not the guarantee assumed by the Federal government impose in such a case a serious burden on the Federal Treasury? We do not believe that the Secretary's project has the slightest chance of becoming a law.

It begins to look as if the Federal courts would be quickly invited to pronounce on the constitutionality of the act of Congress by which the President, acting through the Bureau of Corporations in the new Department of Commerce and Labor, is empowered to exact from any industrial company the most minute information regarding its private affairs. We deem it extremely doubtful whether Mr. Roosevelt would have used the power mentioned during the coming twelve-month, but the question of constitutionality is likely to come up in another way. Mr. Beer, president of the Reading Company, and the presidents of other leading anthracite-coal companies, have neglected or refused to furnish the Census Office with the statistics demanded regarding the operation of the anthracite-coal mines since 1900 and at the present time. A law passed in 1898 provided a penalty of ten thousand dollars fine and one year's imprisonment for any officer of any corporation who should fail to produce the statistics required by the Census Office. The law has since been amended so as to postpone the date when the desired statistics must be "obtained" to July 1, 1904. The word "obtained" is believed to have been a clerical error for "published," but the presidents of the anthracite-coal companies may take advantage of the error, though it is more probable that they will plead unconstitutionality, if an attempt is made to arrest and punish them under the law of 1898.

The list of questions prepared by the special agents of the Census Office was delivered to the proper officers of the coal companies in January last. The interrogatories have been answered by the bituminous-coal companies, but replies have been withheld, as we have said, by leading companies in the anthracite region. When we look at the list of questions, we are not surprised that it should be regarded as what the lawyers call a "fishing excursion," upon the result of which prosecutions might be based by the Bureau of Corporations.

The Intersectories call for detailed information regarding the operating expenses of the various companies, the cost of the production of coal per ton, the freight charges of the several affiliated roads, the pay of the miners in the anthracite fields, their number and average daily wage, and, finally, the gross and net earnings and profits of the anthracite companies. The data collected by the Census Office would at once, no doubt, be accessible to the Bureau of Corporations, and, ultimately, would be published to the world. It is, in truth, an interesting question whether the Federal Constitution gives Congress the power to compel corporations to disclose their private business in the absence of any charge which would justify a court in making an order to that effect.

The London Times has published an editorial article on our post-office scandals, and deduces from the facts the conclusion that an administrative system wherein the civil service is made a part of the political machine, and is thus founded on political corruption, cannot be purged of personal dishonesty. The truth, of course, is that our Federal civil service has been to a very large extent divorced from the political machine, and that even those officers who are still bestowed for political services can easily be purged of dishonesty if the heads of the government for the time being desire to do so. If before November our Post-office Department is not thoroughly cleansed by Postmaster-General Payne, public opinion will require Congress to institute an investigation. We regret to say that we have seen no disposition evinced of late by the Post-office Department to press the prosecution of Machen; and though Beavers, a ringleader in the conspiracy to defraud, has been arrested and released on bail, nothing more has been heard of the minor offenders, who, we were informed two months ago, were to be dismissed, if not tried. The Postmaster-General's private secretary and other cronies of Perry S. Heath still embellish the public service, and the assistant in the law office of the department, who was suspended more than four months ago, has been neither discharged nor reinstated. He is drawing his pay regularly, however.

Meanwhile, the hour is rapidly approaching when many of the reputed criminals will go scot-free through the operation of the statute of limitations. Those who desire to screen the guilty persons are reckoning without their host if they assume that public attention has been diverted by the disclosure of malfeasance in other quarters. The unlawful connection of Lucius N. Littauer, a member of the Lower House of Congress, with a glove contract entered into by the War Department has been proved to the satisfaction of many observers, and, if no notice of the violation of a Federal statute is taken by the Attorney-General, the House of Representatives may be invited to say what it thinks about the matter. It is also believed that the Secretary of the Interior has in his possession conclusive proof that Federal officials have attempted to rob the Indians in Indian Territory of their lands, and we are confident that in this instance no attempt will be made to cover up iniquity. It by no means follows, however, that, because the American people have found out that fraud and corruption are not confined to any one executive department, they are likely to overlook the flagrant evidences of evil-doing in the Post-office. It is now a great many weeks since Postmaster-General Payne announced that the end of his investigation was "in sight." To us the end is by no means visible, although we have watched for it steadily and anxiously. But perhaps Postmaster-General Payne's notion of the proper way to "end" an investigation differs materially from ours. We ourselves had a court of justice and the penitentiary in view.

Although the time during which the Colombian Congress can set upon the Panama canal treaty does not expire until September 22, it is understood that no hope of securing a ratification of the agreement is entertained any longer by our State Department. Dr. Herran, the Colombian charge d'affaires at Washington, has been invited to explain his published criticisms on the activity of United States Minister Rumpé at Bogotá. Not only does our government assume entire responsibility for Minister Rumpé's assertion that no alteration of the canal treaty would be accepted on our part, but he has been instructed by telegraph to reiterate the statement. No concessions whatever will be made by President Roosevelt, nor will he indicate what, in his opinion,

would be the "reasonable time" prescribed by the Spooner act, after the lapse of which it will be his duty to begin negotiations with a view to the construction of an interoceanic waterway by the Nicaragua route. To this end it is reported that Secretary Hay has invited certain Senators and Representatives to a conference to be held in Washington after September 25. Those likely to be present at the conference are Senators Cullom, Spooner, and Morgan, and Representatives Hepburn and Hitt. Messrs. Cullom, Spooner, and Morgan are members of the Senate Committee on Foreign Relations, and Mr. Hitt is the chairman of the House Committee on Foreign Affairs. Messrs. Morgan and Hepburn will represent the Isthmian Canal committee of their respective Houses.

It may be remembered that the Spooner act provides that the President must obtain for the United States by treaty, from Costa Rica and Nicaragua, perpetual control of the territory needed for the canal before beginning the work of construction. In general terms, the concession has already been granted by the two countries named in protocols signed to between them and the United States in December, 1900. The details of the agreements, however, including the amounts of the purchase money, will have to be settled in treaties, and the negotiations for that purpose may occupy a good deal of time. Meanwhile, it is probable that a revolution will break out in the states of Panama and Canal, having for its object the secession of those provinces from Colombia and the establishment of an independent republic. Our government, of course, will refrain most scrupulously from taking sides in such a quarrel; but, if the revolutionists should prove successful, and should offer to make the desired concession for a canal, our State Department could scarcely be expected to repel the overture. According to the latest news from the isthmus, the delegates of Panama to the Colombian Congress have abandoned their efforts to secure a ratification of the canal treaty, and are returning to Panama. On reaching their homes, they are expected to urge upon their state government the expediency of seceding from Colombia, and of taking up on its own account the negotiations with the United States for the construction of an interoceanic waterway.

Mr. Andrew Carnegie spoke of matters as to which he is an acknowledged expert in the address which he delivered on taking the chair at the conference of the Iron and Steel Institute held at Barron-in-Furness. Comparing the condition of the iron and steel trade thirty years ago with the present state of things, he pointed out that the work which used to require a week to do is now done in a day. Still more extraordinary is the contrast in respect of the cheapness of the product. Just before the present boom in the iron and steel industry, hundreds of thousands of tons of 4-inch steel billets were made and sold at the rate of three pounds for a penny. Mr. Carnegie expressed the conviction that the minimum of price had then been reached. In his opinion, there is every indication that, as our seasonal period shall follow another, the price of steel will become higher, owing to the growing dearth of raw materials. The cost of several of the raw materials used in the manufacture of steel is several dollars per ton higher to-day than it was a few years ago. The demand of the United States for iron and steel products is certain to go on increasing from year to year, and the demand of other countries will correspondingly increase. Mr. Carnegie is inclined to answer the question in the negative. Where is the iron ore to come from? No doubt the United States Steel Corporation is supplied with ore for sixty years ahead at its present rate of consumption; but, as Mr. Carnegie reminds us, sixty years is but a brief term in the life of a nation. The assertion will scarcely be disputed that upon new discoveries of iron ore depends the future of cheap steel-manufacturing, even on this side of the Atlantic. Large deposits of iron ore have been found in Utah and southern California, and it is believed that very large deposits exist in Mexico. But most of these sources of supply are at present inaccessible, and the cost of rendering them available will tend to increase the price of steel. So far as we can now judge, however, the world will always need steel, so substitute for it being in sight, and, therefore, the augmented price will be willingly paid. We have

said that the United States Steel Corporation has ore for sixty years ahead at the present rate of consumption. Mr. Carnegie, of course, does not assume that the present rate will not be exceeded. He believes, on the contrary, that, during the next half-century, the output of iron and steel products in the United States will go on increasing at a tremendous pace. The output in Great Britain, however, he expects to remain stationary, though it may be somewhat expanded if the search for new deposits of iron ore in Norway and Sweden should be successful.

The President laid down good doctrine in his Labor-day speech at the New York State Fair at Syracuse. He had an audience of ten thousand, and made them an excellent discourse devoted mainly to the relations that ought to obtain between the farmers and wage-workers on the one hand, and business men on the other, in their conduct as citizens. He declared that prosperity came to both from the same sources and under the same conditions, and that their interests, generally speaking, were identical, and he declared it to be "all essential to the continuance of our healthy national life that we should recognize this community of interest among our people." A healthy republican government, he held, must rest upon individuals, not upon classes or sections, and he found it to be a lesson of history many times repeated that the death knell of republicanism had rung as soon as the active power became lodged in the hands of those who sought not to do justice to all citizens alike, but to stand for one special class and its interests, as opposed to the interests of others. The line of cleavage between good and bad citizenship runs, declared the President in effect, not between employer and employed, not between class and class, but between the just and the unjust, the square and the crooked, the dutiful and the irresponsible, the law-abiding and the law-evading. On each side of that line are rich men and poor men, capitalists and wage-earners. On the same side of it are the unscrupulous wealthy man who exploits others in his own interest and the demagogue who wishes to attack all men of property. Men sincerely interested in the due protection of property and men sincerely interested in seeing that the just rights of labor are guaranteed should alike remember, said the speaker, not only that in the long run neither the wage-earner nor the capitalist can be helped in healthy fashion save by helping the other, but also that to require either side to obey the law and do its full duty toward the community is emphatically to that side's real interest.

The address, as will be seen from these brief extracts, ran very much to generals and very little to particulars. Legislation, said the President, to be permanently good for any class must also be good for the nation as a whole, and legislation that does injustice to any class is sure to work harm to the nation. So, "whatever is advisable in the way of remedial or corrective currency legislation—and nothing revolutionary is advisable under present conditions—must be undertaken from the standpoint of the business community as a whole; that is, of the American body politic as a whole. Whatever is done, we cannot afford to take any step backward, or cast any doubt upon the certain redemption in standard coin of every circulating note." This was as near to a particular as he came. But the speech was an excellent speech, sound, well put together and expressed, and perfectly suited to the occasion.

According to a Turkish official report, no attempt was made on the life of Vice-Consul Macabean in Beirut, but the noise heard was made by a rifle or fowling-piece discharged by a party of Turks who were celebrating a wedding. Turkish official reports are not to be received with blind confidence, but there is slight reason to suppose that American citizens are in any more danger in Smyrna, Salonica, or in any other Turkish port, than they are in Beirut. The one exception is Constantinople, where the Mohammedan population has been wrought to intense excitation by the outrages committed by Macedonian insurgents on railway trains and passenger-trains. It is conceivable that Moslem fanatics in the Ottoman capital might vent their rage upon all foreigners, and we would not underrate the gravity of the warning addressed by the Porte in the foreign embassies and legations. It is well known, however, that war-vessels would not be permitted

to traverse the Dardanelles, and, if a guard of marines should be needed by Mr. Leishman, our minister at Constantinople, they would have to be brought by land, or, possibly, a small steam-launch would be permitted to convey them.

It can hardly be doubted that a general conflagration in the Balkans has already begun; nor will it cease until the power of the Turk is finally broken, and the Asian hordes that have for four and a half centuries obsessed and tortured southeastern Europe are driven once more across the Bosphorus. It seems certain that Turkish troops have already crossed the frontier of Bulgaria; it is altogether certain that, both from Bulgaria and from Servia, armed bands have repeatedly invaded Turkish territory with the full knowledge and connivance of their governments. The atmosphere is electric, as it was in the early months of 1877, just before the Russian Emperor and the Russian nation declared for war. The difference is that, where there were only revolting provinces of the Moslem Empire then, there are now no less than four independent nations, all built up by Russia's victory, and all of whom will almost certainly be drawn into the struggle. Beginning at the west, unconquerable Montenegro can put into the field some thirty or forty thousand admirable soldiers, to whom Russia not long ago presented a million cartridges, and who are well supplied with field-artillery. To this Servia can add a hundred and fifty thousand well-trained troops, with a hundred and fifty thousand more as a first reserve, all efficient men who have passed through several years of training. Nor can it be doubted that a successful war would set the new King firmly on his throne as nothing else could, as it is certain that Servia would claim the north-western part of Macedonia and part of Albania as her share of the spoils. The total war strength of Bulgaria is about two hundred thousand, armed with Mänlicher repeating rifles, and with good field-artillery, and the strong fortress of Sofia to fall back upon, with its formidable defence of Nordenföldt quick-firing guns. Finally, there is Rumania, with an army of one hundred and seventy-five thousand men, brought by its Hohenzollern sovereign up to the Prussian standard of efficiency. All these are old enemies of the Turk, whose freedom was first formally affirmed in the San Stefano treaty of March, 1878. Add some fifty thousand insurgents in the three vilayets of Macedonia and in Adrianople, and we have a total of over seven hundred thousand men to oppose the four hundred thousand which is probably the utmost that Turkey can put into the field. And this without going beyond the recent confines of the Turkish Empire or calling on any European power to intervene.

The Marquis of Lansdowne is being made the British national scapegoat, the sacrificial victim in the outcry for army reform. Arnold White calls for the impeachment of the Foreign Secretary, as a punishment for his former sins at the War Office, a measure that takes us back to the times of the Stuarts, a bygone epoch of English history. Other critics go so far as to suggest that, should Lord Lansdowne elect to ignore the cry for his resignation, a monster petition should be presented to the King, praying for his removal, as a menace to the national safety, the more so that troublous times are palpably ahead for the Foreign Office, in view of the Balkan upheaval. One daily paper declares that Lord Lansdowne's presence at the Foreign Office is a grave source of danger to the country, and asserts that his failure in duty, which cost the nation so many lives and such an outlay of treasure, is the result of indolence and the sacrifice of the nation's safety to his own personal convenience, as has been avowed by the culprit, with a cynical disregard for the feelings of those who have suffered so cruelly. "The indictment against Lord Lansdowne," concludes this modern Junius, "has been proved to the hilt by his own evidence. He refuses to resign. The nation must extort his resignation, under circumstances that will inflict upon him indelible disgrace." This suggests two criticisms; first, that exactly the same outcry was raised against the War Office, and with infinitely better justification, during and after the Crimean war, and that the Prince Consort, of all people, was then chosen as the nation's scapegoat, with an entire absence of justice, as was afterwards admitted on all hands. The responsibility for War Office conditions lies, then, not only with Lord Lansdowne, but with every Secretary for War during the last half-century. Again, it is noticeable

that all the soldiers are unanimous in seeking to shift the blame from their own to the War Secretary's shoulders. But one has only to read General De Wet's history to see what countless blunders the soldiers made.

A new step is being taken in the tranquillization of the Far East. M. Lassar, the Russian Minister at Peking, has just announced to the Chinese Foreign Office that his government will complete the evacuation of the provinces of Nin-Chuang and Mukden in the first week of October; the departure of the Russian troops from the third and most northerly division of Manchuria to take place six months later. With the better understanding with Japan, now being reached at the St. Petersburg conferences, and the opening of two new Manchurian markets at Mukden, and Tso-Tung-Kao, on the Yalu River, this further stage in the evacuation marks the close of an acute and menacing stage of the Far Eastern question, and the opening of a period of peace and business activity. As was pointed out in the WEEKLY, when the question was first raised, the opening of Mukden to the world's commerce in its complete harmony with the interests and policy of Russia; the costly Manchurian railway must be made to pay, and the more freight it carries, to whatever nation it may belong, the better contented will the government authorities be. It is reported in Russia that Admiral Alexieff, the new Viceroy of the Far East, will make his headquarters either at Kharbin or at Mukden; but this in no wise conflicts with the Russian promise of evacuation, which does not, of course, apply to the ceded or leased areas. It will be well to keep this distinction in mind, as it was lost sight of last spring, and much confusion of thought and statement resulted.

The Alaska Boundary Commission duly convened on September 3, and printed volumes, embracing the case and the argument of the United States, on the one hand, and the Canadian Dominion, on the other, were submitted to the tribunal. The oral arguments will begin on September 15, and it has been tentatively decided to close the hearings a month later. After the oral arguments have been listened to, the members of the Joint Commission will confer with one another, and proceed to vote on the boundary question. If one commissioner on either side shall vote in favor of the position taken by the other side, the boundary dispute will be settled permanently under the terms of the treaty. If every member on each side refuses to yield, a deadlock will result, and the appointment of a commission will have been fruitless. The British argument maintains that there is no foundation for the American assertion that the negotiations which preceded the treaty of 1825 between Russia and Great Britain contemplated the erection of a land barrier ten marine leagues in breadth from tidewater between the British and Russian possessions. The British argument repudiates our contention that England is entitled to none of the inlets, but, on the contrary, insists that the heads of all important inlets belong to her. We, on our part, hold, it is well known, that the eastern or inland boundary of the Alaskan territory acquired by us in 1867 is a line distant ten marine leagues, not from the coast of the ocean strictly so called, but from tidewater, and that the British government is not entitled to any port on tidal waters.

The arctic-exploration propensity seems again to have got the better of Lieutenant Peary. Before he came home the last time it was given out that that was his farewell quest for the pole, but when he arrived and had to report that the pole had not been lifted, it seemed not unlikely that he would go back for it if he could. It was announced on September 5 that the Navy Department had given him three years' leave of absence, beginning April 1, 1904, and that he hoped to start for the north about two months later. His plan is to get a strong wooden steamer with powerful engines, go to Cape Sabine, and having established a sub-base there, to take aboard a lot of Whale Sound Esquimaux, and then force his ship as far north as the north shore of Grant Land, and there winter. This may take two seasons, though he hopes to do it in one. From his winter quarters in Grant Land his purpose is to start north in due season over the ice-pack with a small pioneer party, followed by a much larger one. He will have about five hundred miles to go to reach the pole, and allows himself one

hundred days to go and return. Four ships have heretofore reached the north shore of Grant Land and returned, so that that feat is not impossible. Mr. Peary himself has made four journeys over the ice-pack in those regions as long as or longer than the distance from his proposed winter quarters to the pole, so that that part of his plan does not seem at all impracticable to him. The Whale Sound Esquimaux whom he counts on to help him he knows personally and individually. There are about two hundred in the tribe, he says, and he has entire confidence in their disposition and ability to help him. Twelve years of life and effort in the polar regions have given Lieutenant Peary a fuller experience of arctic exploration than any other explorer possesses. Provided his physical condition is still equal to the work, he seems to be better qualified to reach the pole than any other man. The feature of his plan which is the special point of his experience is the placing of his winter quarters just as far north as possible, thus reducing the length of the sledge journey. The money for his new expedition is to be furnished by the Peary Arctic Club.

The outlook for the lifting of the America's Cup is discouraging, and it looks at first sight as though there might be no more Cup races for some time to come. But there is no certainty of that. "There are gains for all our losses," the late Mr. Stoddard said, and consideration of the experiences of Sir Thomas Lipton tends to confirm in that opinion. There are certainly gains for challengers of the right sort even when they lose. A challenger becomes at one step a public character, the representative, self-appointed, of one great nation to another. An enormous publicity is bestowed upon him, which ripens speedily into fame if he gives it a fair chance. Now, to a man of aspiring spirit that is worth something. To be known of men is a condition which, though not desired by all persons, is so highly valued by very many as to be recognized as worth very great sacrifices of ease and, if necessary, of money. There never was a time when in politics, in society, and in trade advertising was so much appreciated as now, and the business of getting and conferring it was so big and so skillfully conducted. To win the America's Cup means fame for any Briton, to try for it means celebrity at least, and a good story for the trier, if he loses the sort of a good time that a well-mannered and right-spirited challenger is sure to command. Sir Thomas has had lots of fun, and made for himself a far-reaching reputation. There is nothing in his experience of large expenditure and successive defeats that seems likely to discourage future aspirants. The game seems worth the candle however it turns out.

Indeed, as between challenger and defender it is a question whether the challenger does not get rather the best of it. The defender keeps the Cup for us; but we had it before, so we are not very much ahead; and we expected him to win for us, so he is not very much ahead. We are apt to spend more of our strength in sympathy for the loser than in exulting with the victor. It would not be strange if it were true, as reported, that Mr. Iselin is disposed to let the defence of the Cup pass into other hands. The sport needs some kind of fillip to recommend it to defenders at least. It is suggested that the next race should be between real yachts instead of between racing-machines, and if any change in the conditions of the contest can bring that about it will be welcome.

By order of the Secretary of War, in accordance with a recommendation of Superintendent Mills, the West Point cadets have been permitted, since September 4, to use tobacco during relief from quarters within the barracks. That is to say, the restriction on smoking has been removed. It was a very irksome restriction, which brought many penalties on the cadets, and which could not be enforced. The average age of the cadets at West Point must be about twenty. They are old enough to smoke if they want to. Many schools forbid the use of tobacco, and some of them are actually able to prevent it, but no college that we know of now meddles with the tobacco question. The idea seems to be that boys ought not to be allowed to smoke until they are old enough to know better, which time should have come by the time they enter college. The West Point cadets are of college-boy age, and no good reason appears why in this matter of smoking they should not enjoy college-boy privileges.

## Will there be a new Know-Nothing Movement?

THE Native-American or "Know-Nothing" party, which was started in the early '40's as the outcome of a species of panic caused by the tremendous inflow of emigration to the United States which set in from Ireland after the famine of 1845, and from Germany after the revolution of 1848. In the State elections of 1855 that party swept most of New England, besides New York, Kentucky, and California, and gained some successes in other States. In 1856 they nominated Mr. Fillmore for the Presidency, and polled nearly 575,000 votes; but they secured the electoral vote of Maryland only, and this defeat was the deathblow of the Native-American organization. Nobody now denies that the Irish and Germans constituted valuable additions to our population, or that they were quickly assimilated, owing partly to racial affinity, partly to identity or kinship of language, and partly to the eagerness with which they sought the privileges of citizenship. The immigration with which we are now flooded from southern and eastern Europe is unquestionably less assimilable. The inhabitants of southern Italy and Sicily, of certain provinces of Austria-Hungary and of Russian Poland have nothing in common with ourselves, as regards race, language, institutions, customs, or habits of thought. That, under such circumstances, a much longer time will be needed for the assimilation of emigrants to our surroundings is indisputable. In the process of assimilation likely to prove so protracted, if not altogether impracticable, that immigration from southern and eastern Europe ought to be stopped altogether, or should it be checked and minimized as to political effects by an extension of the period required for naturalization and enfranchisement to fifteen and twenty years?

This is a question which is variously answered, but there is no doubt at all about the interest which it excites. In almost every Northern State from Maine to California working-men are evincing a desire, which may easily become a determination, to erect barriers against any further immigration from the sections of Europe to which we have referred, or, at all events, to withhold from immigrants political equality. As the naturalization law has left the definition of the qualifications for the suffrage to the several States, the new American party, should one be organized, will have to proceed upon the lines followed by the old "Know-Nothings," and aim primarily at a drastic reform of the Constitutions or statutes of the several States with reference to naturalization. It is by no means certain, however, that the withholding of the franchise would have an appreciable effect in checking immigration of an undesirable kind. It is a notorious fact that the great majority of Englishmen, Scotchmen, Canadians, and Frenchmen who come to this country for a money-getting purpose do not even wish to exercise the franchise in the United States, but pride themselves upon retaining allegiance to their native land. It is probable that the natives of southern and eastern Europe care even less about political privileges, and would be even more likely to content themselves with the opportunity of making a few dollars, which the United States afford, and with the perfect equality before the law of which they are here assured. Absolutely to stop or seriously to cripple immigration might require the direct intervention of Congress. Two measures to that end have been suggested. First, power might be lodged in our diplomatic and consular representatives to examine all prospective emigrants as to their physical, mental, and moral conditions, with a view to ascertaining whether they are anarchists or belong to anarchistic families; are possessed of sufficient education in their native tongue to become intelligent citizens; and have sufficient means to render them independent of State help. To such emigrants as should seem upon inquiry to be duly qualified, a consular general or diplomatic agent might be authorized to issue a certificate, to be inspected and taken up on the immigrant's arrival in this country. Secondly, in order to insure compliance with the condition just named, a Federal statute might provide that any steamship company bringing over an emigrant unprovided with the prescribed certificate should be subjected to a fine of not less than ten thousand dollars, and required to return the emigrant forthwith to his native country at its own expense.

Were a new Native-American party to be formed, however, for the purpose of securing such State and Federal legislation as shall bar out emigrants from southern and eastern Europe, it may be well for the American people to pause and seriously consider whether it is quite certain that the newcomers are an unprovoked evil, or whether, as a matter of fact, they do not promise more benefit than detriment. No greater mistake could be made than to assume that absolutely nothing can be said in their favor. It should, in the first place, be noted that at present in our Northern States Italians and Hungarians perform the hard manual labor, which fifty or forty or even thirty years ago used, for the most part, to be done by Irishmen, but which the latter have long ceased to do. It is perfectly true, as a champion of the vilified emigrants from southern and eastern Europe has lately pointed out, that these "balders" have become indispensable to the mill, the factory, and the railway, that they are indefatigable producers, and that, viewed collectively, they are adding immensely to the aggregate

of the national wealth. It is true of them, as it is true of the manual laborers in every country, that however lowly and looked down upon they form the foundation of the State. It is they who are lifting on their shoulders to a higher position of material well-being all the other immigrants who have preceded them from Colonial times. As this is an indubitable fact, it is for those who deny the value of the inflow of emigration from southern and eastern Europe to tell us where else we are to look for the indispensable supply of manual labor.

It is true that in mines and factories, and in railway construction or repair, the influx of emigrants from southern and eastern Europe is tending to lower the standard of wages? As a matter of fact, these emigrants demand and receive considerably higher wages than were paid for manual labor to native Americans before the tide of emigration from Europe set in during the fifth decade of the nineteenth century. This assertion will not be contradicted by anybody who recalls the pay that used to be given to day laborers for twelve hours' work fifty years ago, and who compares it with the two dollars per day of eight hours now exacted by the Italians employed on the New York Subway. Shall we be told that the purchasing power of money has been reduced in the interval? We answer that a dollar will buy more of all the necessities of life to-day, except rent, than it would ten of the decade preceding the civil war. Will it be alleged that the home life and social habits of the immigrants from southern and eastern Europe are introducing a defiling influence in the social and moral life of the American community? Statistics do not justify the accusation. It is not among the newcomers that the most defective and illegitimate children in the country are to be met; them that divorce are frequent. It is precisely the native-American element that, if statistics prove anything, stands in urgent need of moral regeneration. The United States census would indicate that the Anglo-Saxon factor in our population is decadent, for the average of six children per family exhibited a century ago has shrunk to two, say, to one, and, in a deplorable fraction of instances, to none at all. If it be true that race-antipathy is due to depending and demoralizing practices, it is not the newcomers from southern and eastern Europe who have most cause to dread reprobation. Will it be said that the emigrants from the sections of Europe to which we have referred are habitual lawbreakers, exceptionally prone to crimes of violence against the person? It would probably be easy to prove that ninety per cent. of the lawless participants in lynchings and burnings at the North or at the South are native Americans of Anglo-Saxon or Celtic lineage. As to the natives of the sections referred to for the suffrage, by reason of their impudently willingness to sell their votes, every observant person who has inhabited the rural sections of our Northern States will acknowledge that a large fraction of native Americans deserve to be disqualified on that score. Moreover, vote-selling is a transaction for which two parties are required—a briber as well as a bribee. The statistics have been reviewed that an aim cannot be set at all, and an ignorant Italian or Hungarian has been persuaded to sell his vote, the purchaser was a native American.

Such are some of the objections made to any attempt to discriminate by Federal or State legislation against the inflow of emigrants from southern and eastern Europe. Some of them may be granted or minimized, but we think that, viewed collectively, they warrant us in opining that the American people will long hesitate, and anxiously deliberate, before sanctioning a revival of the old Know-Nothing party.

## Judge George Gray on the Labor Question

In an interview which bears all the marks of authenticity, Judge George Gray, of Delaware, has discussed the actual and virtual relations of capital and labor in this country. It is well known that in some of our larger cities the position taken by the building trades has caused plans which contemplated the investment of large sums of money to be suspended or renounced, while even the anthracite region, where a settlement of the disputes between operators and miners was pronounced to have been effected by the Strike Commission, has seemed of late to be threatened with disturbances. In the existing friction between capital and labor it continues and even become aggravated, or may we hope to see it gradually diminished, and ultimately replaced by a friendly understanding? That is obviously a question of vast moment to the American people, and an man is better qualified to answer it than he who presided over the anthracite commission, and who has since put an end to the Bituminous-coal strike in Alabama. In the latter interview it is said that we have referred, Judge Gray not only sets forth reasons for believing that there is a promising outlook for industrial peace in the United States, but he also undertook the task of defending Mr. Roosevelt from the charge that, by an unconstitutional intervention in the anthracite strike, he committed a trespass on the rights of private property. We may say at once that the convictions expressed here on some grounds commended themselves strongly to the employers of labor, and that on other grounds they have received an enthusiastic welcome from President Gompers

of the American Federation of Labor. It must, at the same time, be admitted that neither on the one side nor on the other have his views met with unqualified approval; which is precisely what must have been expected by one who was determined to maintain in the discussion of heated questions the spirit and temper of an impartial judge.

The conclusion to which Judge Gray has been led by observation and reflection is that on this side of the Atlantic, at all events, a solution of the problem involved in the struggle between capital and labor will eventually be found. The solution will be reached by effort along the lines of common sense and of humanity. A long time, however, may be needed for the purpose. A change that is to be permanent will be slow. In the end, some system of arbitration will be derived and accepted as an alternative to the method of settling economical controversies by violence and the strong hand. In compulsory arbitration, such as exists in New Zealand, Judge Gray does not believe. He holds that compulsion tends to intensify rather than to mitigate bitterness, and that, as the paramount aim should be to promote a friendly feeling between employer and employed, compulsory arbitration is really a contradiction in terms. On the other hand, a distinct advocate has been made toward the generation of the right kind of reciprocal sentiment, when employer and employed have voluntarily agreed to arbitration. Thus, again, the personal contact that results from the settlement of labor questions by a voluntary appeal to arbitrators proves educational to both employer and employee.

Judge Gray's experience has taught him that both sides have something to learn. He points out that if this is true to-day, it will be more emphatically true to-morrow. As products or distributors of articles that are sold on an increasingly larger basis, the distance that separates the workman from his employer will tend to widen. Even as things are now, the two classes of men do not and cannot see each other as intimately as they did under former conditions. The human element in their relations approaches the vanishing-point. How is the reintroduction of this element to be compassed? Judge Gray has found that voluntary arbitration tends to bring employer and employed together, to bridge the chasm, broadening between them, by reviving the sense of human solidarity. The conciliating and healing effect of arbitration has been brought home to him by his discharge of an arbitrator's functions in two labor disputes. He recalls the fact that the arbitration in the anthracite region was conducted openly. The whole interested public looked on and listened, and the parties on each side, however embittered, being advised and advised by the presiding arbitrator, quickly recovered self-control and abandoned the prejudice by the knowledge that they were facing the tribunal on an equal opinion. The result was an orderly and intelligent, though strenuous, discussion, conducted with all the amenities that obtain in a high court of justice. It was Judge Gray's belief at the time, and he has seen no reason to retract it, that employer and employed parted each from the other with mutual respect and good-will, renewed, moreover, by the proceedings before an impartial tribunal, that there are two sides to every controversy, and that something can generally be said on both sides. Similar, said Judge Gray, had been the outcome of the arbitration in the Alabama bituminous strike. There, too, the hearings were public, and were conducted decorously and courteously, with the mutual understanding that, after each side should have defined and defended its position, both sides would cheerfully accept the decision reached by their chosen arbitrators. Here, again, Judge Gray was convinced that the opportunity afforded each side of hearing the other's case set forth clearly and effectively amid the clarifying atmosphere of a quasi-judicial tribunal, had a salutary educational effect on both miners and operators.

Judge Gray, for his part, is unshakably convinced that laborism, no matter how far it goes, is not the answer. He thinks that laborism, so far as his observation goes, they have a marked tendency to bring good men to the front. He was impressed, he tells us, by the fact that the men who represented the strikers in Alabama brought to the discussion which resulted in the strikes a remarkable spirit and a remarkable intelligence. The highly favorable impression made upon him by labor-minionists has led him to take a somewhat unexpected view concerning the expediency of employing non-union labor. It would be quite superfluous on our part to insist, question a capitalist's right in employ non-union labor; the question raised by Judge Gray is one of right, but of a far-distant right. He points out that when an attempt is made to solve a controversy between capital and labor by the displacement of labor-minionists and the substitution of non-union men, the inevitable result is bitterness and restlessness, the sanctifications of which may require to be suppressed by force. He maintains that, if aid in the police, the question for employers to consider is whether they will not have purchased peace at too great a price. His own advantage from a peaceful settlement with the old labor to which they are accustomed than by resorting to the rough and provocative

method of bringing in new labor at lower wages or under altered conditions. So long as human nature remains what it is, a hasty and defiant resort to force on the part of employers is apt to lead to retaliatory violence and devastation on the part of the employed. Troverson that view long-term experience taught both parties to labor occurred to the extremely wide measure has become acute and has been carried to the extreme where work was suspended, the wisest, cheap-est, and most edifying course is to refer the matters in dispute to impartial citizens who will reflect the common sense of the community.

From Judge Gray's comments on Mr. Roosevelt's intervention in the anthracite coal strike we infer that, if he were President, he would, under similar conditions, pursue exactly the same course. He unambiguously asserts that in October, 1902, the people of our Eastern States were confronted with a crisis more grave and more threatening than any that has occurred since the civil war. He means that the closing of the mines in the anthracite region, caused not only a cessation of the mines and the controllers of the great fraction of the American community a prolonged deprivation of one of the necessities of life, the continuance of which threatened not only the comfort and health, but the safety and good order of the nation.

Not for a moment would Judge Gray assert that Mr. Roosevelt had any constitutional power to interfere. It is pointed out, however, that his position as President of the United States and first citizen of the Republic gave him an influence and a capacity of leadership that enabled him to appeal, as no other man could, to the patriotism and good sense of the parties to the controversy, and so to subject them to the moral coercion of public opinion as to elicit from them an agreement to stop by arbitration a strife that had led directly consequences to a large section of the country. Judge Gray holds that, in setting an opportunity of public usefulness, Mr. Roosevelt did not perform the duty of a citizen, and that he ought to be not rebuked but applauded for doing properly rights. Mr. Roosevelt's intervention in the coal strike tended to conserve them. What rendered the situation in the anthracite region unique was that the operators controlled a natural monopoly of a product necessary to the comfort, and to the very existence, of a large portion of the people. A much farther precipitate an attack upon property rights in general. It is, indeed, pronounced idle to deny that economic and property, being an *in rem* right that it may properly be spoken of as a natural monopoly, is affected with a public interest, and therefore must be differentiated from ordinary kinds of private property. Such are the reasons that have moved Judge Gray to think and to declare that no American citizen has ever acted more wisely, courageously, and promptly in a national crisis than did Mr. Roosevelt in the anthracite-coal strike.

## Lancashire Ruined by Rise in Cotton

The cotton-spinning districts of England, with Lancashire at their head, are passing through a crisis ever more acute than that which is afflicting New England, and especially the great factories of Fall River, with their three-quarters of a million spindles and their armies of mill-hands. But while Fall River is grimly holding on, and doing its best to face conditions never almost than those of the civil war times, Lancashire sees a certain danger ahead, which she has dreaded for years, and which has now and again colored the fiscal policy of English ministries. Fall River, Lowell, New Bedford, and the other great mill cities of New England, are justified in believing that the arrival of the new cotton crop in October will see the collapse of the corner, and the termination of their work, even though they are at a loss to account for the great falling off in the demand for their products; but Lancashire and Old England are being harder hit, and look into the future with misgivings as grave as they are well-founded.

This danger is the rivalry of cotton-mills in India, and especially of the great capitalist interests concentrated in the hands of a group of Parsi millionaires, with the family of Sir Dinkar Mankaj Peti at their head. It must be remembered that England annually exports to India manufactured cottons to the value of over a hundred million dollars, about two-thirds of the entire exports of the United Kingdom to its greatest dependency. Against this tremendous import of cotton, Indian manufactures have valiantly struggled, though they have at present nearly two hundred cotton-mills in India, employing about a thousand hands each on the average, and totalling five million spindles. It is to be remembered, however, that the cotton-workers represent the entire population, numbering three hundred millions. On this vast demand, the prosperity of Lancashire has been built up, and the policy of success of British ministers, in preventing India from defending herself by a protective tariff has enriched England, while keeping India poor.

But certain causes may have the same effect as a protective tariff; for instance, the American civil war, by cutting off Mas-

cheater's supply of raw cotton from the plantations of the South, gave a tremendous impetus to the cotton mills of Bombay, and is having the same effect. For India has unlimited resources of her own, having ten million acres in cotton already, and ten million more ready for cotton, the moment the alienation of Lancashire's output makes it possible for the Bombay mills to pay. And this loss to Lancashire, affording an export trade of a hundred million dollars yearly, is likely to be permanent and irrevocable.

### The Austrian Emperor as Arbiter in the Balkans

THE recent visit of King Edward VII. to Vienna, the coming meeting between Tsar Nicholas and the Emperor Franz Josef, and the growing tension in the Balkans, all increase the probability that it will fall to the lot of Austria to decide the fate of Macedonia and restore peace and prosperity to that much-suffering land. To begin with, Austria has an open land approach to Turkey, through Croatia and Slavonia, on the one side of the frontier, and Bosnia and Herzegovina on the other; then Austria has had unequalled experience in dealing with many races and many languages; and, finally, Germany, the ally of Austria, undertaking the work of reclamation, is certainly wiser and does object to its being assumed by her rival, Russia. The willingness of Russia to give up this traditional task to Austria, for so long her rival in the East, makes an immense sacrifice, but a sacrifice which the Lamsb. and Goltchowski agreement proves that Russia is willing to make, in the interests of peace and the security of the oppressed Slavs in Macedonia. England, also, no longer openly hostile to Russia, the ally of the powers for restoring peace to eastern Europe; and France, the ally of Russia and the friend of England, will acquiesce in their decision.

When we consider the record of the Emperor Franz Josef, his status for this great task at once becomes evident. Throughout his reign, amid dangers from without and troubles and trials within his borders, and in the face of national shrinkage and decline, he has again and again exercised his personal initiative, always showing wisdom, force, and penetration. After the disaster of Magenta and Solferino, Franz Josef himself arranged with Napoleon III. the terms of the peace of Villafranca; and when dissolution threatened the empire in 1863 he convoked the German princes to a *Fürstentag* at Frankfurt, presiding at its sessions with splendid skill and tact, and, on the falling of his object through the hostility of the King of Prussia, who refused to have anything to do with the conference. He played a prominent part in the negotiations which followed Prussia's victory at Königgratz; and, immediately after, facing imminent danger at home, he arranged with Deák, the Hungarian statesman, the terms of agreement under which the Dual Monarchy has been governed ever since. Again, though born amid the traditions of absolutism, he has introduced, instead, and legally established, a constitutional system which made immense inroads on his prerogatives; and it cannot be doubted that he would long ago have made peace with his Slav subjects and been crowned King of Bohemia at Prague, as he had already been crowned apostolic king of Hungary at Budapest, but for the sulky opposition of the German element in his dominions, and their hardly veiled threat of secession to Prussia.

Finally, it is acknowledged, on all hands, that in Bosnia and Herzegovina, still Turkish territory in name, though intrusted to Austria twenty-five years ago by the Berlin Treaty, the deputies of Franz Josef have met with singular and admirable success. A like fate for Macedonia, though not the best, is yet the most practicable solution for the oppressed Christians of Macedonia.

### Loan Associations

THE United States League of Loan Building and Loan Associations has recently held its eleventh annual convention in Boston. One of the speakers, a Kentuckian, remarked that "there is a million in prospect for every man who knows how to save his earnings." Very true; but the men who haven't, and never will have, a million the other men who have a million or more, the relative amount of "know how" in the country is manifestly microscopic. Still, the growth of building and loan associations, most of which are individually modest in size, is proof of the increase of education along the line of building the earnings.

Eleven years ago, when this league was formed, most of the associations were just getting fairly established. Now they number 3,590, with a total membership of 1,530,767, and with assets of \$577,228,014, of which \$11,849,048 is an increase over last year. For the most part the membership is of working-men and working-women and of persons who receive small and moderate salaries. Nearly all the assets are in mortgages on real estate occupied as the homes of the members. By far the majority of these homes are modest and unpretentious. And they all represent small savings,

slowly accumulated, a few dollars a month, gradually wiping out the debt, and leaving the men finally the owners of his home.

We fancy that the Kentuckian who holds out the prospect of accumulating a million to each one of these home-buyers who is learning how to save his money through the association's training rather overstates the truth, if the truth is to be confined to mathematics. But many a man has got more than a million dollars' worth of good out of his membership, in the habit of economy he has formed, in the strengthening of his character, and in the home he has acquired. If any of the financial institutions of this country are patriotic, these building and loan associations are distinctly so.

### Another American Duchess

IT is announced that another American lady is to become a British duchess. The prospectively happy lady is John James Ker, Duke of Roxburgh, who is described as young, amiable, and in good order, a Scotch duke, who sits in House of Lords as Earl of Ross. The lady is the daughter of the late Ogden Gordon, of New York, and one of the two heirs of his abundant estate.

It is a growing fashion for American women in superfluously easy circumstances to marry dukes, and there is some lamented public curiosity as to the average pretentiousness of such ventures. No statistics are available to apprise this curiosity, but no doubt it is pleasant to be a duchess if you get a good duke, and so far as the average of the dukes recently Americanized has been high. There are now living in England two American Duchesses of Manchester and one Duchess of Marlborough, and all in good spirits, so far as known.

These alliances no longer excite much criticism in this country. England is not so far from home as it used to be, that makes a difference. No American lady has ever been suspected of marrying a duke against her will or to oblige any one but herself, and when the lady is willing how will or to oblige any one but herself, and when the lady is willing how will or to oblige any one but herself, and when the lady is willing how will or to oblige any one but herself, the opinion that it is a misuse of good Yankee money to maintain British dukedoms and peerages is not quite so confidently held as it used to be. The ruling class in England rules a good deal, and is an important squad of folk. When Henry Ward Beecher went to England, in civil-war times, he did not reach it, though the common people heard him gladly. But money never stops talking, and the language it uses is the one that all the upper classes everywhere understand and love, because it is the one they use also. It need not shout. It is quite enough if it trickles down through the generations whispering modestly of its source as the break of its spring.

### Mr. Pulitzer's Gifts to Education

MR. JOSEPH PULITZER'S interest in the higher education of aspiring young men was recently attested by his gift of \$2,000,000 for founding and endowing a School of Journalism in Columbia University. But it is not generally known that this interesting new departure in special training for a vocation of the highest importance in a free country is only an extension of Mr. Pulitzer's educational plans.

Fourteen years ago he notified the City Superintendent of Schools that he had arranged to "give assistance to poor boys of the public schools of this city in their desire and effort to obtain a collegiate education." His plan met with this obstacle at the start: The grammar-schools of New York did not prepare boys for college, and the city had then no high schools. But the College of the City of New York had a sub-Freshman or preparatory year, and the first winners of the scholarships had no other way to take it. It was then found that the curriculum of the preparatory year was not adapted to meet the entrance requirements of the higher colleges and universities. In 1893, therefore, Mr. Pulitzer gave \$100,000 to the building fund of Columbia University, in consideration of which the trustees agreed to provide free instruction for the holders of the Pulitzer scholarships during a three years' preparatory course in the Horace Mann School, ten being chosen and admitted each year, and also free tuition for the four years' course in Columbia in any of the schools except that of the Physicians and Surgeons.

The assistance given (\$250 a year to twelve boys) was not thought sufficient to destroy the impulse and the ambition for self-help which are at the bottom of the most worthy successes in this field, but was intended and thought to be enough to make a college course possible to many boys who could not take it without the aid. This judgment has been sustained by results. All of the winners of the scholarships have worked during their vacations, and as they became sufficiently advanced in their studies many have helped themselves by tutoring and other avocations. Up to the present time the total number of candidates for the scholarships has been 1501. The number awarded has been 147. The number graduated has been 35—34 from the College of the City of New York, 24 from Columbia, and one from the University of Wisconsin.

## THE FIRST PHOTOGRAPH AT CLOSE RANGE TAKEN OF PROFESSOR LANGLEY'S AIRSHIP

At Wids Water, Virginia, where Professor Samuel P. Langley is experimenting with his new flying-machine, our photographer was enabled to take the first snap shot of the airship at close quarters. The picture shows the division of the machine, so far long, as it is being hoisted to the launching track on top of the house-tower from which the experiments are made. A is the "developed" collapsible camera under; B, the fusible engine; C, the control car in which the operator stands. The post and back wings, which are attached in pairs, measure, respectively, 100.20 feet and 87.12 feet.

*College Girls exercising in a new Physical-culture Invention, the "Rocking-horse"—used for Developing the Arm and Leg Muscles*

### **PHYSICAL TRAINING FOR COLLEGE GIRLS**

*Women college students throughout the country are becoming more and more alive to the benefits of physical training, and in many of the colleges a course in physical development, under the direction of a professional trainer, is a regular part of the curriculum. The photographs show some of the novel gymnastic exercises in use in the Hemenway Gymnasium at Harvard*

### A NEW PORTRAIT BY WILLIAM M. CHASE

*One of Mr. Chase's most recent portraits is his painting of Henry Morton, Ph.D., Sc.D., LL.D., late President of the Stevens Institute of Technology. Dr. Morton, who had held the presidency of the Institute for over thirty years, was a scientist of wide and varied attainments. His illustrated lectures on astronomy, physics, and chemistry, given in Philadelphia during the seventies, were among the first to succeed in arousing intelligent public interest in scientific subjects. He was also a poet of no mean abilities, and as a student was one of the first to translate the famous Rosetta Stone in the British Museum.*

# Books and Bookmen

By James MacArthur

**M**R. JAMES LANE ALLEN'S position in England, where his name is linked with Hawthorne and Howells and Mary E. Wilkins, has evidently been strengthened by the recent publication of *The Mettle of the Pasture*. On this side, interest in Mr. Allen's work has been strong since the beginning.

Who that read *Vinte* and *Edna* upon its appearance can forget the freshness and vigor and fragrance that come up out of Kentucky to declare a new force and presence in our literature? What deep delight there was in the revelations of quiet beauty and gentle humanity in the unfolding of *A Kentucky Cavalier* in the pages of *HARPER'S MAGAZINE*! I take an unshod joy in recalling over that unfortunate portion of my fellow readers who missed the leisurely grace and tranquil aim of the author's art in the surprised delight of its serial form, even as I sometimes hug the remembrance of the first sight of most of the chapters in *A Window in Thruway* before they were gathered in book form. (By the way, I have never seen it stated that *A Kentucky Cavalier* was the forerunner of that class of novel, since grown so prevalent and popular, known as *Nature Fiction*.) But in England, Mr. Allen's work came into critical and popular esteem with *The Choir Invisible* and *The Increasing Purpose* (as *The Reign of Love* is known there), which with *The Mettle of the Pasture* are considered by English critics as "epoch-making novels, which raise a perennial problem." As one of these critics puts it,

representatively for England: "The publication of a new novel by Mr. James Lane Allen is now a real event in the literary world. Of all the American novelists his work stands out most prominently for its style, its thought, its sincerity. That *The Mettle of the Pasture* has occasioned controversy, as did the two previous novels, was to be expected; like them, but in a more daring if not more vital way, it searches the spirit of man, it goes deeper than conversation and expediency, it probes the mettle of a man to the quick, and measures human conduct by the highest ideals of manhood. It is a censor to low ideals and a spur to excellence. And however we may be in agreement or disagreement with the story, we cannot deny the compelling power, the moving human interest, the lofty idealism and profound scientific truth, which lift it on a high and serious plane, and make it a book, as one has said, that 'leaves us thinking.' And only the novels that have greatness in their selves die out. As for the theme—'Does a woman care what a man may have done, if he be not found out? Is her ideal for him a profitable repression, not a spurious character'—the argument falls in line with some lines of Browning's which might have been writ against Mr. Allen's pages:

Love bids teach truth, reduce truth, and embrace  
Truth, though embracing truth, less crusheth truth.  
'Worship not love, but God!' the angels urge:  
That is love's grandeur.

I notice an interesting comparison in one of the English reviews of *The Mettle of the Pasture* between Mr. Barrie and Mr. Allen. "Mr. Allen's activity," says this critic, "places him side by side with Mr. J. M. Barrie among the supreme literary craftsmen of the age. But Mr. Allen has some qualities in which Mr. Barrie is deficient, and some deficiencies of which Mr. Barrie cannot be accused. Mr. Allen thinks deeper than Mr. Barrie—thinks out the problems of life with more courage, handles perplexities more freely." No one that has read *Tommy and Gertrude* will question this, with its bizarre, almost grotesque catastrophe made to serve as Nemesis demanded upon Tommy the sentimentalist, as strikingly in contrast with the grave, convincing tragedy of *Howan* in *The Mettle of the Pasture*. But it is difficult to perceive how the writer reached the following conclusion: "On the other hand, Mr. Barrie has humor, of which Mr. Allen has practically none—or, if he has any humor, it is of the sort that raises a gentle smile instead of compelling a hearty laugh." Not to speak of *A Kentucky Cavalier* and *Afternoon*, which live and move and have their being in humor, had the writer not been forced his comparison to this untenable conclusion read (to cite only one instance) the chapter

in *The Mettle of the Pasture* describing the meeting of Pansy and Mrs. Meredith—one of the most humorous situations that could well be conceived! The fact is that Mr. Barrie is, first of all, a humorist—a humorist of the most delicate and whimsical kind, whereas Mr. Allen is primarily and always concerned with the fundamental truth of life as it unfolds itself in the crises of character. The emphasis is misplaced: Mr. Barrie and Mr. Allen possess an individual gift of humor. But Mr. Barrie is a humorist; Mr. Allen is not; that makes the difference.

A strong Dickens revival seems to have set in on the English stage, and doubtless it will be felt on these shores. The greatest dramatic version of "Em'ly," taken from *David Copperfield*, is not the first to win success on the boards. As far back as 1869 a play called "Little Em'ly" was brought out at the Olympic Theatre in London. The London Lyceum Theatre, now in process of demolition, holds a record for first performances of Dickens plays. "Barstley Judge" was first given at that theatre in 1841, and later "Martin Chuzzlewit," "The Chimes," and "The Cricket on the Hearth." "The Battle of Life" featured a special bill at the same theatre on Christmas, 1848. These and other adaptations in their strong and immediate appeal to the public imagination. For Dickens on the stage is not so much a literary or dramatic question as it is an illustration of that which goes to make so many poor book-plays successful, namely, the viewing of characters in the light of old friends and acquaintances, meeting them with a prediction of familiar affection. This is pre-eminently the case with Dickens, whose characters have probably met with more lifelike fidelity on the stage and with better acting and setting than any other author. Mr. E. N. Willard, I notice, is now to present "Em'ly" as a new adaptation from *Martin Chuzzlewit*, at the St. James in London. The strongest Dickens drama we have seen here in years was "The Only Way,"—perhaps because of all Dickens' novels *A Tale of Two Cities* is essentially the most dramatic in construction.

"David Copperfield" on the Stage

A scene from the dramatization of Dickens' novel as produced at the Adelphi Theatre, London

A friend in Paris to whom I had sent a copy of the August HARPER'S writes thanking me especially for the pleasure she derived from a story in it by Mr. Robert W. Chambers. "He has spirit," quoth my appreciative friend, "a sense of the unseen things that are the real things, and for such let us be duly thankful. They are as rare as sunny days in Paris this summer. They are certainly rare qualities, by which the tale of love and adventure is raised to the excellence of the kind of fiction he has succeeded so far. Take *The Mists of Paradise*, for instance, his new novel. The scene is France during the disastrous days of the Franco-Franconian war—Paris, the provinces, and *Paradise*, a village that remains loyal in its heart, like an idyll in landscape. The ingredients are secret service and political intrigue, love, war, and adventure. There is no dullness in starting the game. The story opens with the brisk announcement: "On the third day of August, 1870, I left Paris in search of John Bushkoff," and in the case of a clicking military telegraph instrument which keys curtly up to the straining-point, and records a scene in rapid dialogue to which only that superb master of word efficiency on the stage, William Gillette, could do dramatic justice. The third act introduces us to the brave, charming heroine, the Countess de Yassart, and already we are in the thick of the plot. Mr. Chambers certainly knows his business as a story-teller. Prodigious resources, he throws the reader into scene after scene rich in surprises and rapid in action, yet he knows the value of repose and can call a halt to the carnage and carnage of war to indulge the reader in those quieter scenes for the meeting and parting of lovers in which the old, old story of eros purposes and pining at native plays so humane if common, a part of the romance of romance. But underlying all this there is a sense of the unseen things that are the real things which imbues the story with reality—that vision of life which takes account of the soul of things and reckons with the dream as well as with the actual.

## THE NATIONAL SHOOTING MATCH AT SEA GIRT

In the recent regional shooting match for the Interstate Championship, held at Sea Girt, New Jersey, twenty-eight teams competed—the largest number ever before engaged in a Sea Girt meet. Teams from the west, the north, and the National Guard have entered in the contest, the men, including individuals and team matches with both rifles and small-arms of ranges varying from 200 to 700 yards.

## New York City

**The Cheapest City in America to Live in on a Moderate Income**

By Spencer Thorne

**I**T is the general opinion in various sections of the country that the cost of living in New York city is much higher than anywhere else in America. This is erroneous, and is probably due to the fact that many people in New York spend large sums either in keeping homes or living in hotels. Many New Yorkers pay \$10,000 and \$15,000 a year, and even more, for rent of an apartment, and at that "live over a stove," as a rural visitor to the metropolis put it; and their annual expenditures for game, fruit and vegetables out of season would comfortably support an ordinary family. There are people who live in boarding-houses at a weekly expense of \$50 a week cash and more, and thousands of New Yorkers think nothing of paying a restaurant check of \$10 for a dinner for two without wine. It is these extravagances, if so they can be called, that are probably responsible for the fallacy that the cost of living here is high.

There is probably no place in the country where a family of moderate means can live well and have such a variety to enjoy at so small a cost as in New York. Codfish are cheaper along the Maine coast, and chickens cost less in the South; but as a rule in localities where the home product is cheap there is little variety in the market, and foreign products cost much more than they do in New York. I have kept house in New York, in a suburb of Boston, doing most of my marketing in the "Buh," and in a Maine village, and I have found that a family of moderate means, say with an income of from \$1500 to \$3000 a year, can live

better and cheaper in New York than in either of the other above-mentioned places.

Last fall, while in a Massachusetts city of nearly 100,000 people, I compared the prices of meat and poultry which a thrifty housewife paid with those which I paid in New York, and found a difference of fifty per cent, and even more. I never paid more than twelve and a half cents for fowl, while she paid eighteen cents. I have bought roasting chickens, so-called, for the same price, while the Massachusetts housewife paid twenty-two cents. She paid eighteen cents for a leg of mutton, and I never paid over twelve and a half cents, usually ten cents, often nine, and on one occasion seven. Rump steak cost her twenty-eight cents; there is no such cut here, but sirloin and porter-house are eighteen and twenty cents, respectively. She also paid more for eggs, butter, and milk, and much more for oranges, lemons, luscious, and similar fruit. And this was a city within an hour's ride from Boston.

There are thousands of street hucksters in New York who sell all kinds of berries, fruits, and vegetables. They buy when the supply exceeds the regular demand, and their wares are as good as those purchased at stores or "glimy stands," and are much lower in price. In season I have bought excellent strawberries and blackberries from hucksters at six cents a box, though this was an unusually low price. The past summer they sold watermelons as low as fifteen cents each, and cantaloupes, when they were plenty, for two cents.

### BUILDING NEW YORK'S GREAT CATHEDRAL

The Cathedral of St. John the Divine, which is in course of construction on Morningside Heights, New York city, is making gradual progress toward completion. One of the most difficult problems the contractors have to deal with has been the moving of the immense pillars for the interior of the cathedral up the hill on which the building stands. The pillars are in four sections, weighing from forty to ninety tons each. As it was found that at least thirty horses would be required to move them, it was decided to use steam. With the aid of a steel cable and a traction-engine a huge track bearing the columns was hauled to the top of the hill. Several days were required to move each section.

**Edward Harrigan in "Under Cover"**

*Mr. Harrigan returns to his familiar field of musical farce in his new comedy, "Under Cover," in which he appeared this week at the Murray Hill Theatre. Mr. Harrigan plays the part of "Chevy Colmarin," a post-room operator and ward politician. With him in the cast are Mrs. Anne Yeomans and Dan Colyer.*

**"Three Little Maids"**

*The new musical comedy by Paul Ruben, which Charles Frohman and George Edwards have brought to Daly's Theatre from England, has made a decided success as it met with three or four nights. The story is of the adventures which befall the three young daughters of a country curate, who go to London to earn their living as waitresses in a hotel street-academy.*

**TWO NEW PLAYS OF THE EARLY SEASON**

**MRS. FISKE AS "MARY OF MAGDALA"**

*Mrs. Fiske appears this week at the Manhattan Theatre, New York, in a brief revival of "Mary of Magdala," which ran for so many weeks last season at the same theatre. During her present anti-opium engagement she will be seen for the first time in New York in a few special performances of Ibsen's "Hedda Gabler."*

**How Russia keeps her Hold on Manchuria.**

*The group shown in the photograph is a body of Russian soldiers from the garrison which Russia keeps constantly on duty in the port of Newchwang.*

**Men-of-War in Port at Newchwang, China.**

*The two war-ships at the right are the United States gun-boat "Wilmington" and H. M. S. "Vandal". The two at the left are Russian men-of-war.*

**THE PRESENT SITUATION IN THE FAR EAST**

*The Chinese port of Newchwang, the principal commercial centre of Manchuria, is virtually a Russian town. It is administered by the Russian government, policed by Russian troops, and has a Russian commissioner of customs; although the United States and England still have a nominal share in the control of the port, and American and British men-of-war may be seen in the harbor at almost any time.*

### CARVING FROM LIFE BY MACHINERY

*It has been made possible by a new English invention to carve a marble bust directly from life, producing a likeness photographically exact. The head of the subject is fixed in a wooden frame. The operator sits in front of him, and moves over the surface of the head a wooden pointer, which controls the action of two steel drills having a block of marble, and operated by machinery. These drills, moving in accordance with the wooden pointer, carve the marble block into an exact facsimile of the model. Fig. 1 shows the sculptor reproducing a bust of Homer in duplicate; 2 and 3 illustrate an experiment in carving from life; 4 shows the results of half-an-hour's work on the head of Augustus*

NEGRO WORKERS IN ARKANSAS

MEMPHIS, ARKANSAS, August 22, 1903.

To the Editor of *Harper's Weekly*:

Sir,—As we do justice to the negro. He is with us and will stay with us, and it is proposed to quarrel with this condition and to make enemies of the quiet reliance of the cotton States. My close experience with the colored population as employer of slave and of freed labor for more than sixty years convinces me that at least ninety per cent. of these people are quiet, really managed, unambitious farm workers. My reading satisfies me that they are the most reliable proletarian on the globe. This vast majority of them are entirely misled with their condition—homeless, with little or less education, indifferently moral, content with living, more or less indolent, and with the result of their current wages when, with a fair share, would be the honest testimony of the Southern landholder.

The remaining tenth is mainly composed of loafers and duces who gather in the back streets of cities, living by petty thieving or on the earnings of their wives or coachmen, who are cooks, laundresses, etc. There is also a percentage of worthless day laborers whose farmers are compelled to employ for lack of better material. These so-called farm-hands drift from place to place, without local attachment, or any special purpose than that of "beating" their employers. This unorganized friction of very bad negroes are those who commit dreadful crimes and are so often hunted and destroyed like wild beasts. It is pitiful, but they are relatively fewer in reputation of the entire race. One of this wretched class obtains employment from a planter, but before he has a tool in his hand must be supplied with food and lodging, often with shoes and clothing. If he purchases a pair of shoes, at the end of it the negro is in debt several dollars, and then finds it to his interest "to light out"—that is, abscond. It is not an infrequent event that one year's harvest is completed a month or two before the work on the next begins, sometimes on bottom lands work is delayed for many weeks by overflow of the river. In either case, when ready to begin work, the chances are that the planter will be short of hands, if he has permitted his lands to seek work on higher ground, but few of them may return; if he has not, he may find the workers in debt, and unwilling to work the debt out. Some few planters protect themselves by a species of terrorism, but the majority of them submit, as they do to the failure of a crop from natural causes. There is no remedy for this method of robbery; the debt is a simple one, calculated on an ordinary scale from necessities. Owing to the scarcity of labor, blacklisting is of no avail. A negro commits a crime; the magistrate desires to be lenient and fixes the fine as low as possible; the criminal may already be in debt to his employer, but, anyway, the latter needs the labor and pays the fine and costs, with a possibility of being repaid in work. After working and repaying a small part of this debt the man gets sullen and is ready to quit. I am sorry to say that this kind of ingratitude is to be seen confined to the negro. It was perhaps so early in this condition that caused the so-called peonage cases in Alabama.

One would think, from reading some Northern newspapers, that there is a perpetual war between employers and laborers in the South. It is true that the Southern laborer is far less than that between employer and white labor in the North and West. The idea of Southern landholders and their laborers being kept from each other's throat by State troops is utterly absurd—at least up to this period.

I repeat emphatically that a great majority of Southern negroes are quiet and inoffensive, easily satisfied and controlled, and the Southern man who wishes they were back in Africa is one who quarrels with his bread and butter. It is a mere cordiality to the above that nine-tenths of the colored people of the South are as free and happy as it is in the nature of human beings to be, and he who attempts to widen the breach between the races is not only an enemy to both races, but also to civilization.

I am, sir,

JAMES B. CRAIGHEAD.

## IMMIGRATION AND RACE-SUICIDE

JANUARY, NEW YORK, August 27, 1903.

To the Editor of *Harper's Weekly*:

Sir,—In issue of July 15 of the WEEKLY, under heading "Does Woman Know too Much," reference is made to Miss Bidland's essay in *North American Review* a few months back on the much-discussed subject of race-suicide.

The two leading causes of decline in birth-rate of native Americans in the Northern States are immigration and false or wrong education. In the Southern States, where there are very few people of foreign birth, the birth-rate is still high even among the educated classes.

By the census of 1900, 54 per cent. of people of foreign birth resided in Northern States, and only 6 per cent. in the Southern States, exclusive of Missouri, more than half of these being in Texas. As a rule, the higher the per cent. of foreigners the lower the native American birth-rate, and as immigration increases so will the native birth rate decrease until large sections of the country become demoralized.

The presence of immigrants makes head land distasteful in some of native Americans, and drives them into the professions and lighter occupations, the home and sinews of the country being more and more composed of foreigners and their descendants, and it is this class which has the highest birth-rate in all countries.

The descendants of the pioneers who settled and developed this country have the right to say that come to dwell among them.

I am, sir,

W. H. LOVELL.

FROM A ROMAN CATHOLIC READER

SOUTH BOSTON, August 21, 1903.

To the Editor of *Harper's Weekly*:

Sir,—For the spirit of courtesy and fair play shown by your publication toward the Catholic Church and people, especially during the past few weeks, you deserve the thanks and praise of all fair-minded men. To those of us Catholics who remember the cruel bitterness of Eugene Lawrence and the frenzied cartoons of *Yank* the change in its pleasing as it is creditable to you. There may be some who think that the only way to "hear the other side" is to return to those old and angry days, but if there are any left they are few and old, their number decreases daily, and they leave no successors. No Catholic who more than justice and fair treatment, moreover. No Catholic who more than justice and fair treatment, moreover. We are to rejoice that is assisted by the course of your great and deservedly influential journal, as well as by the course of the American press generally, all of which speaks for peace, good order, and Christian charity.

I am, sir,

MATTHEW HALL.

## CLEVELAND'S CANDIDACY

LA CROIX, WISCONSIN, August 21, 1903.

To the Editor of *Harper's Weekly*:

Sir,—The talk of Mr. Cleveland as a possible Democratic candidate for the Presidency in the late manifestation of the fact that the Gold Democrats of 1900, who still think themselves Democrats, cannot realize that the procession has gone by, and that they are nothing but political orphans. I speak as one of them, who realized, early, that the Democracy of the sixties had gone, never to return.

Mr. Cleveland's record is a splendid one. He will go into history as one of our greatest Presidents. But he had no party, even while he filled the office, and the capture of the Democratic organization by men of social tendencies in 1890 was merely the culmination of certain activities of political thought that had been named throughout Mr. Cleveland's term in office.

No man in the Democratic party of that day were more potent in furthering this transformation than the three then Democratic Senators—Gorman, Hill, and Brist. Their intrigues with free silver, that side-tracked free trade, by the defeat of Roger Q. Mills for the Speakership with Mr. Crisp was the first formidable accomplishment of Populism, and was logically followed by Bryanism.

It was the beginning of the end of conservatism in the Democratic party. Issues have since so changed that there is practically nothing in the live politics of this country to-day that fits the designations "Democrat" and "Republican," as applicable to particular issues ten years ago. This is the fact that cannot be realized by men in either party, who learned their lessons in politics during the days of Mr. Cleveland.

Mr. Roosevelt today represents more of the issues and more of the true-spirit of the tendencies that were Democratic in 1892 than Mr. Cleveland himself, and, strong as is the admiration of Western men for Mr. Cleveland, he could not, at this time, take those votes away from Mr. Roosevelt, even if he could be nominated, which is utterly impossible.

I am, sir,

ELLEN B. UNKLER.

## SOCIALISTS AND THE MILITIA

SOCIALIST PARTY HEADQUARTERS, 125 PARKSIDE AVENUE,  
BROOKLYN, CONNECTICUT, August 21, 1903.

To the Editor of *Harper's Weekly*:

Sir,—In your editorial comment in *HARPER'S WEEKLY* for August 22 you disapprove of the action of the Socialist party at Clinton in expelling a member who joined the militia. As a member of the Socialist party allow me to say that while the Socialists approve, verbally, and support law and order, they do not think a member to join the militia, because in the militia a man is, under oath, subject to the arbitrary orders and laws of a few representatives of the people, absolutely beyond the control of the people who elected them, appointed in a manner contrary to the principles of Socialism, the demands of which is the initiative, the referendum, and imperative mandate, in addition to public ownership of the means of production and distribution.

In other words, we demand a government of, by, and for the people; not of, by, and for the capitalist class, as their masters; but in the capitalist class which pays their campaign expenses or buys their services.

Therefore we cannot approve of our members putting themselves under oath to do as their their life a form of government opposed to and renouncing our principles and our liberty.

As you have taken the liberty to criticize our actions, allow me to request you to do us the justice to publish my explanation thereof.

I am, sir,

YAROSLAV BACCH.

[Our correspondent seems to want government by town-meeting. That would do for villages, but not for States. To condemn the militia is as our friend says, to condemn the government that maintains the militia and uses it at times to maintain its authority. Does he also, we wonder, condemn the police force of Bridgeport, and would he expel Socialists who join it? He and his colleagues seem to be in a state of malapropos to military, and ought to move out of Connecticut and seek somewhere where government is more to their taste.—EASTON.]

## New York at the World's Fair

The pavilion which New York is to have at the St. Louis World's Fair is peculiarly appropriate from the fact that it will commemorate the event on which the holding of the Exposition is based. The building is patterned after the University of Virginia, which was designed by Thomas Jefferson, during whose administration an President of the United States the territory comprising the Louisiana Purchase was acquired from France. The building is Colonial in design and detail, and is surmounted with a low dome. One enters a large hall sixty feet square, raising the full height, arched and domed in the Roman manner, with galleries around the second story. To the right is a large assembly hall, to be used on State occasions. The second floor contains suitable rooms for the commission, the secretary, and general offices. In the large hall it is proposed to place four large paintings in the lunettes, symbolizing the four original settlements—the Indians in one, Spanish, French, and Americans in the others. The four paintings will be filled with pictures emblematic of the four original States included in the purchase.

**APPLICABLE TO MARRIAGE.**—Mrs. W. W. WOOD'S SWEETENED SOAP should always be used for domestic purposes. It softens the skin, softens the hands, kills all germs, cures wind colic, and is the best remedy for diarrhoea. —[Adv.]

## IF YOU WANT

A perfect cream, preserved without sugar, under England's FAMOUS BRAND'S PATENT PROCESS. It has a delicious natural flavor, and is superior to the richest cream you can buy, with the added advantage of being sterilized. Prepared by Borden's Condensed Milk Co. —[Adv.]

THE EXPRESS Service at your home will save every small expense. Low rates. Efficient service. New York Telephone Company, 10 Bay Street, 111 West 9th Street. —[Adv.]

INACTIVE Ever depressed spirits—make both night and Abbott's, the (Official) Standard Remedy. It restores Abbott's will revolutionize the system. —[Adv.]

WHEN you go out fishing, a few bottles of CHICK'S IMPROVED "WATER BURY" CHAMPAGNE will refresh the memory. —[Adv.]

MANY mothers administer PEAR'S CREAM when their children have spasmodic croup. It is effective. —[Adv.]

THE BROWN'S Compound Supersaturating DENTIFRICE for the TEETH. 35 cents a box. —[Adv.]

## ADVERTISEMENTS.

## Pears'

Agreeable soap for the hands is one that dissolves quickly, washes quickly, rinses quickly, and leaves the skin soft and comfortable. It is Pears'.

Wholesome soap is one that attacks the dirt but not the living skin. It is Pears'.

Economical soap is one that is a touch of cleanses. And this is Pears'.

Established over 100 years.

## The yeast in Schlitz Beer never changes

Beside purity, there's nothing more important in beer than the yeast.

We experimented for years to get a yeast that was right—a yeast that would give a better flavor than any other beer had.

When we got it we saved the mother cells. And all the yeast used in Schlitz beer from that time, and forever, is developed from those original cells.

## But its best goodness is purity

Drinking Schlitz Beer means drinking good health.

Not another beverage which you drink is so carefully made. We even filter all the air that touches it, and sterilize every bottle after it is sealed.

Yet the price of common beer buys it.

Ask for the brewery bottling.

## TWO BOOKS BY GEORGE ADE

(Imprint of R. H. RUSSELL)

## THE GIRL PROPOSITION

*A Bunch of He-and-She Fables*

George Ade's fables are read the world over. The present volume is, as its title indicates, a series of extraordinarily clever sketches on a theme that is very dear to the author's heart, and which is vastly interesting to most people.

*The Girl Proposition* is packed with sense and wit and entertainment, all in the inimitable Ade vein. Profusely illustrated by Holme and McCutcheon. \$1.00.

## PEOPLE YOU KNOW

GEORGE ADE'S LATEST

No living writer could duplicate the work done here by this keen and humorous observer of American life. Among the twenty-six "people you know" are The Patient Toiler, The True Friend, the Self-Made Heskiah, The Married Couple, The Samaritan, The Work Horse, and The Two Young People.

Over fifty quaint illustrations by McCutcheon and others. \$1.00.

## The Adventure of the "House in the Middle of the Block"

"All things come to him who waits," quoted Indiman. "Do you believe that?"  
"It's a comfortable theory," I answered.  
"But an untenable one. And Fortune is equally elusive to those who seek her over-persistently. The truth, as usual, lies between the extremes."  
"Well?"

"The secret is simple enough. Be who is ready to receive, receive. Love, fame, the shower of gold—they are in the air, and only waiting to be precipitated. I stand ready to be struck, and that same afternoon the Evening Post strikes a blow at the Tammany 'Tiger' over the shoulder of Mr. Edward M. Shepard; I am in the mood adventurous, and instantly the shadow of a prodigious fall across my threshold, you, though I live on upper West End Avenue. Do you remember this?" and he held out a small Yale latch-key.

"It is the one you picked up at Twenty-seventh Street and Fifth Avenue last night."  
"Precisely. Now a key, you observe, is intended to open something—in this case a door. What door? As though that mattered! Put on your rain-coat, my dear Thorp, and let us begin a little journey into the unknown. Fate will lead us surely, O unbelieving one; you have but to place your hand unhesitatingly in hers."  
We left the house, and Indiman tossed a penny into the air. "Broadway, hence; Fourth Avenue, thence," he said.

Arrived at Fourth Avenue we stood waiting for a car. The first that came along was on its way up town and we boarded it.

"Was it you who asked for a cross-town transfer at Twenty-ninth?" inquired the conductor of Indiman a few minutes later, and Indiman nodded assent and took the transfer slip.  
At Eighth Avenue the cross-town car was blocked by a stalled coal-car. We alighted and passively awaited further directions from our esoteric guide. Quite an amusing game for a dull, rainy afternoon, and I felt grateful to Indiman for his invention.

The policeman on the corner was endeavoring to direct a very small boy with a very large bundle. "Up one block and turn east," he said, impressively. "I've told you that now three times."

I had a flash of inspiration. "Copper it," I cried.  
"Right," said Indiman, cheerily. "We walked down one block to Twenty-eighth Street and then turned westward."  
New York is a big city, and therefore entitled to present an occasional anomaly to the observant eye. And this particular section of Twenty-eighth Street is one of these departures from the normal, a block or two of respectable, even handsome houses set on an oasis in a dull and arid neighborhood. How and why this should be does not matter; it is to be presumed that the people who live there are satisfied, and it is nobody else's business.

We walked on slowly; then, half-way down the block Indiman stopped me. "What did I tell you?" he whispered.  
"The house was of the English-banquet type and occupied two of the ordinary city stories; nothing particularly remarkable about that, and I said as much."

"Not look again," insisted Indiman. I did so and saw a man standing at the door, evidently desirous of entering. Twice, while we stood watching him, he rang without result and the delay annoyed him. He shook the door-knob impatiently and then left to re-examine his pockets, an elaborate operation that consumed several minutes.

"Lost his latch-key," commented Indiman. He walked up the steps of the entrance porch. "You might try mine," he said politely, and held out the key picked up the night before at Fifth Avenue and Twenty-seventh Street.

"Huh!" greeted the man suspiciously, but he took the little piece of metal and inserted it into the slot of the lock. The door swung open. Amazing, but what followed was even more incredible. The man stepped into the hall, but continued to hold the door wide open.

"You're coming in, I suppose," he said, stultily.  
"Certainly," answered Indiman. "This way, Thorp," he called at me and most ungraciously I obeyed. We passed into the house and the door closed behind us. Our intruder turned up the gas to the old-fashioned hall chandelier, and looked us up with a perfunctory stare. "New members, eh?" he greeted, and turned away as though it were a matter of entire indifference to him who we were. But Indiman spoke up quickly.

"Pardon me," he began, with the sweetest civility. "I was afraid for the moment that we had got into the wrong place. This is the—"  
"A delicately suggestive pause."  
"The Utiman Club," supplied the other.

"Exactly," said Indiman in a most relieved tone. "It is the Utiman, Thorp," he continued, turning to me. Now I had not the smallest notion of what the Utiman Club might be; consequently, I preferred a discreet silence. Indiman addressed himself again to our ungracious entrance.

"A very nice box you have here, Mr. er—"  
"Hoyt, sir; Colman Hoyt."  
"Ah, you—of North Pole fame. You are the man—"  
"We have had four expeditions to reach it, and failed as often. That is my title to fame. And also my qualification for membership in the Utiman Club," he added, grandly.

"Ah, you—the discoverer of the Pole. A unique and delightful idea in childhood, eh, Thorp. To succeed—"  
"No sir; to fail," interrupted Mr. Hoyt, rudely. "What the devil do you suppose I am doing in this gallery? You must be a very new member of the Utiman Club."

"To tell the truth, Mr. Hoyt," said Indiman, with an air of engaging frankness, "I have never, until this moment, even heard of the Utiman Club. But for all that I am convinced that I am about to become a member of it, and I may say the same for my friend Mr. Thorp. Now possibly you may be inclined to assist us."

"Mr. Hoyt stared. "It's a pity, isn't it," he remarked, reflectively, "that our standard of eligibility doesn't conform to that of your impudence. Still I won't say that it can't be done: this is a proprietary club, you know. You had better see Dr. Magnus."  
"Dr. Magnus?"

"The proprietor of the Utiman Club. Here he comes now."  
A slight dark-haired man of forty or thereabouts had entered the hall from the rear and immediately came forward to meet us. His eyes were the extraordinary feature of his face, piercingly brilliant and enormously magnified by the spectacles that he wore. The lenses of the latter were nearly an eighth of an inch thick, and evidently of the highest power. Even with their aid his powers of vision seemed imperfect; on hearing the few words of explanation vouchsafed by the unamiable Mr. Hoyt, he drew from his pocket a second and third pair of glasses and deliberately added both to his original optical equipment. I know that I felt like a fly under a microscope as heing that formidable battery of lenses. But the scrutiny seemed to satisfy him; he spoke courteously enough:

"Step into my office, gentlemen, and we will talk the matter over."

Mr. Colman Hoyt had departed without further formality and we followed our host into the room adjoining the hall on the right. It looked like the study of a man of science; charts and globes and plaster-of-Paris casts were everywhere, while the far end of the apartment was occupied by a huge flat-topped table, covered with papers, test-tubes and glass dishes. But even more remarkable than its contents was the room itself and its singular architectural proportions at once engaged my attention.

As I have said, the house occupied two twenty-five-foot city lots, but the entrance and hall were at the extreme right, facing outward towards the street, instead of being in the center, as it usually the case. Consequently, the room in which we were

for a social organization—the lone ducks, the noble army of the leopards, the gentlemen & *maie pachee*? Pray go on; you interest me exceedingly.

"We have them all here," answered Dr. Magnus, smiling. "The unsuccessful author, the business bankrupt, the artist whose pictures have never reached the line, the touchstone of failure you see; the stability (odious word!) of our membership is an impeachable.

"A superb conception. My dear Dr. Magnus, I must beg of you to enroll Mr. Thorp and myself at once. Believe me that we are not unworthy of a place in your galaxy of dark stars."

Dr. Magnus walked to the table and took up his pen. "This gentleman," he began, inquiringly, and looked at me.

"An unimportant affair of the heart," answered Indiman—an exquisite piece of audacity at which I browned, and then perforce had to smile. "It comes within your rule, I trust?"

"For limited membership only," answered Dr. Magnus. "In fact, we rather discourage victims of sentimental reverses, it being invariably impossible to determine whether the transaction is finally to show a profit or a loss. Then, too, the quick recoveries—but we'll let it stand at that. Now, with yourself?"

"I," said Indiman, gravely, "am a sentimentalist by instinctive preference and early training. But I have never been able to cross the Ave's Bridge," the forty-seventh problem of Kneid. Incidentally, I may mention that I am a golf-player with a handicap of eighteen.

"A double first," commented the proprietor of the Utiman Club. "I perceive, Mr. Indiman, that you are head upon amusing yourself, and since circumstances have undeniably favored you, you may continue to do so. But not at my expense," and thereupon he mentioned a figure for initiation and dues that made me sit up. But Indiman settled without flinching; he happened to have his check-book with him, and the remaining formalities were quickly complied with.

"And now, gentlemen, let me show you about the club," said Dr. Magnus, affably. "Will you be good enough to follow me?"

He led the way into the hall, and thence into the cloisterlike passage communicating with the

"House in the Middle of the Block." I glanced out at the courtyard as we passed a window in which was most ingeniously

planned to take the utmost advantage of its limited area. An oblique Italian fountain occupied a niche in the opposite wall, and on either side were sofas flanked by bay-trees in tubs, and two or three specimens of the Japanese desert oak. A bas-relief in plaster of the Elgin marbles ran frieze-like the full length of the party wall, and eyed immediately above the fountain niche the terrible mask of the Medusa face looked down upon us. The ground, and I could see that the ground of the courtyard was divided into four garden-beds, separated from each other by narrow paths of broad red tile bordered by box. All in all it was a charming little bit of formal gardening; I could imagine how pretty it would be on a spring morning when the beds should be gay with crocuses and tulips.

We were admitted into the club proper by a liveried servant, and from the handsome oak-paneled vestibule we passed into a lofty apartment hung with pictures and filled with miscellaneous objects of art. All, without exception, were execrable—miserable and a collection of stationary that could be adequately matched only by the horrors in Central Park. "Our art gallery, gentlemen," explained Dr. Magnus.

"Art gallery indeed? To me it was the most melancholy of exhibitions, but Indiman was enraptured.

"What a glorious spectacle of inequality!" he exclaimed. "What miracles of ineptitude!" and Dr. Magnus smiled, well pleased.

We ascended to the next floor. Here was the library, lined with bookshelves with books that had fallen still-born from the press. Gigantic cabinet presses occupied the centre of the room, the final depositary of countless "unavailable" MSS. In an adjoining room were glass cases crowded with mechanical models of musical and engineering inventions. Naturally, I expected to see a large section devoted to the resolution of the perpetual-motion problem, but in this I was disappointed; not a single specimen of the kind could I discover.

"We do not attempt the impossible," explained Dr. Magnus, dryly. "Our failures must be inherent in the man, not in his subject."

There were other rooms, a long succession of them, filled with melancholy evidences of ineptitude and defeat in almost every department of human activity. Plans of abortive military campaigns, prospectuses of moribund business enterprises, architectural and engineering drawings of structures never to be reared, charts, models, unfinished musical scores; finally a huge picture-machine glide on which were traced the routes of Mr. Colman Hoyt's four unsuccessful dashes for the North Pole. It depressed me, the sight of this vast lumber-room, this collection of useless fustian and jargon, cast up and rejected by the sea of strenuous life.

Most moving of all, a broken golf-club standing in a dusty corner, and beside it a wretchedly constructed and battered ball. I pointed them out to Indiman.

"A fellow sufferer," he said, and sighed deeply.

Last of all we were conducted to the common room, a spacious apartment immediately under the dome. At one end a huge stone fireplace, in which a fire crackled cheerfully.

"Non possumus," read Indiman, deciphering the motto chiseled upon the chimney breast.

"An admirable sentiment indeed," said Dr. Magnus. "I venture to infer that the Utiman Club is the child of your own brain, Permit me, to congratulate you; a glorious inception and carried out to perfection."

Dr. Magnus smiled frostily. "I thank you, Mr. Indiman," he said, staring hard at him. "In a civilization so complex as ours the Utiman undoubtedly fills a want. And now, gentlemen, if you will excuse me, I have some affairs of moment. The club is yours; make use of it as you will. You are already acquainted with Mr. Hoyt, I believe, and he will doubtless serve."

He bowed and withdrew.

Indiman dropped into an easy chair and lit a cigar. "Lee Maudslayi," he said to me in an undertone. "Look at them."

In truth, it was a strange company with whom we had fortuned. There were perhaps a dozen men in the room, and each seemed wholly absorbed in the listless contemplation of his own draped personality. The large table in the centre of the room was laden with newspapers and periodicals, but no one had taken the trouble to displace the nest files in which they had been arranged. The card-room adjoining was unattended, the green baize tables, with their complement of shiny, new packs of cards and rubber counters, bore no evidence of use; in the billiard-room at the back a marker slept peacefully in his high-legged chair. Assuredly, the members of the Utiman Club were not advocates of the strenuous life.

It was after six o'clock now and the big room was beginning to fill up with later arrivals. Yet there was none of the cheerful hum and bustle ordinarily characteristic of such a gathering. A man would enter and pass by his place unalarmed by even the courtesy of a friendly glance; at least a score of men had made their first appearance within the last quarter of an hour, and not a single word of greeting or recognition had I heard exchanged. Among them, Mr. Colman Hoyt, the unsuccessful Arctic explorer. He passed close to where Indiman and I sat, yet never looked at us. An odd set, these our fellow members of the Utiman, and

one naturally wondered why they came to the  
slab at all. But so we were now to learn.

As I have said, the building was entirely  
windowless, ventilation being secured by  
forced draught from an engine-room in the  
basement. Consequently, artificial light was  
necessary at all times, and a very reasonable  
quality of it was furnished by electrolites  
concealed behind ground-glass slides in the  
ceiling and fittings of the various apart-  
ments. The light thus obtained was dimmed  
rather than direct, and being colorless it  
closely approximated natural conditions, the  
illumination being heightened by the construc-  
tion of the wall panels as in the case of  
windows. To add again to the effect, these  
lights had been gradually lowered so the  
day wore on; now it must be almost dark  
in the outside world, and it was twilight in  
the common room of the Utinan Club. I  
could no longer distinguish between the mo-  
tionless figures of the men around me and  
the shadows that enveloped them. Even the  
fire was dying out; in a few moments the  
darkness would become profound, and I felt  
my pulse slow down with the chill of the  
thought.

One single ember remained in the fire-  
place; I watched it glancing like a great  
red eye in its bed of ashes, then it winked  
and went out. And at the same instant the  
last ray from the false windows disappeared,  
strain my eyes as I would, the sensitive  
retina remained insidiously unaffected; the  
darkness had finally come, and from corner  
to another that desolate company ran a  
little tremulous sigh; then the silence of  
complete seclusion.

From the apex of the domed ceiling a  
sudden and wonderful effulgence of rose-  
colored light streamed forth, flooding the  
great room with glorious color and life.  
Magical were its effects. Men straightened  
up in their chairs and looked about them,  
the flush of retaining animation in their  
cheeks, and their eyes bright with question-  
ing interest. A prosaic chap leaned over  
and spoke earnestly to his neighbor, then  
some one laughed aloud. Instantly, the  
floor-panels were opened; the air was vi-  
brant with the hum of conversation, the  
ringing of rail-bells, and the spattering of  
fuses. A blue haze of cigarette smoke fur-  
nished about the heads of the assemblage;  
the Utinan Club had come to its own  
again.

The large folding-doors at the rear end  
were now opened, disclosing the supper-room  
beyond—a spacious apartment, and decorated  
with a heretofore splendor of gilding and  
intricate plastic work. I remarked par-  
ticularly the preponderance of the red tints;  
indeed an other shade of color could I dis-  
cover,—but of this more particularly here-  
after, Indiana looked at me, and we  
trocoped out with the rest—our coats-coats?

We found a small table; the tapers and  
glass were exquisite, the cuisine and service  
perfect. We surrendered ourselves to the  
filibuster of the hour; I was conscious of  
an unusual lightness and exhilaration of  
spirit; Indiana's eyes were sparkling with  
unwonted brilliancy. I raised my cham-  
pagne-glass. "To the Utinan Club," I  
said with enthusiasm, and rather more  
loudly than I had intended. The toast was  
at once re-echoed from every mouth, and a  
burst of laughter followed.

A late comer entered and looked about  
the room somewhat uncertainly, for all the  
tables had been taken. It was Mr. Coleman  
Hoyt. He saw me and smiled graciously. "We  
have room here," called out Indiana, and  
he joined us. "I am fortunate as ever," he  
said, as he took his seat. "New friends,  
old, and our chief attraction is incom-  
parable to-night. What more can the  
heart of man desire?"

"Not even the North Pole!" said Indiana.  
"Ah, the Pole! Hark! I can put my hand  
on it when I want it. Did I tell you that  
I start to-morrow on my fifth expedition?"  
Success is certain; will you honor me by  
drinking to it?" He drank, solemnly.

"I thought you were wearing a dark-  
green scarf," I interrupted, somewhat ir-  
relevantly, speaking to Indiana.

"I am," he replied.  
"It is red," I insisted. "Not green at all."  
"Nonsense!" said Indiana, and there-  
upon Mr. Coleman Hoyt burst into laughter.  
"Complimentary colors," he said. "All

**THE LOCOMOBILE CO.**  
 Bridgeport, Conn.

the blue, green, and yellow rays are excluded from this kindly light invented by our friend Magnus; consequently there can be no sensation of those colors within our vision."

"A curious fact," said Indiana.

"Say rather the most glorious and beneficent of discoveries," retorted Mr. Hoyt. "All life and vigor and power of achievement are dependent upon the color and out of our participation. Inactivity, failure, disease, death—they are generated by the violet rays alone; eliminate them, and the problem of existence is solved. All hail to the color of our existence! All hail to the color of our vision! Light of light! All hail!"

A score of voices took up the cry, and I know that I shouted with the rest. Then I felt Indiana's hand upon my arm; my other senses partially returned. "Keep hold of yourself," he whispered, and the warning came in time; I pushed away my sunglasses, and thereafter saw only enough of the exquisitely scented viands to satisfy my hunger. And all the while Mr. Coleman Hoyt bubbled foolishly about the white glories of the queen of the North; to-morrow he should be again on the way to see dear England. "The blue! gentlemen; behold I arrive; c'est moi!"

We passed out into the general room. The card-tables were now full, the billiard-ball rattled incessantly across the green cloth; from an inner room came the unmistakable click of a roulette-ball. Men talked loudly of their projects and auditions shortly to be accomplished. An epic poet was about to publish his poem upon the birth of a new star in the poetical firmament; a speculator had made his great coup—to-morrow he would have the wheat-market controlled.

"My novel!" cried one. "My symphony!" retorted another. A third said no word, but looked at the miniature of a woman's face that he held in the hollow of his hand—looked and smiled and smiled and smiled.

The night wore away; nay, speeded were the better word, for no one felt any suggestion even of weariness or satiety. Then suddenly the glow grew dimmer; little by little the laughter died away and the voices were hushed. A few of the bolder spirits set themselves to stem the receding tide, but their blaspemies quickly trailed away into weak indolence and again silence conquered all. And darkness fell.

A servant crossed the room and drew aside the heavy velvet curtains draping the false windows; the more colorless light streamed in, but it disclosed a world in tinge all blue and green and indigo. Our eyes, so long deprived of the rays emanating from the violet end of the spectrum, were now affected by them alone; every object was horribly transformed by the bluish-green bands surrounding and outlining it. A man brushed curiously past me; it was Coleman Hoyt, and his face was of a man already dead; his lips moved, but no sound issued from them. He passed into the model-room connecting on the west with the central hall; there was the sound of a fall, and Indiana and I followed quickly. Yet not quickly enough, for across the great globe upon which were traced the records of his four unsuccessful expeditions lay the body of Coleman Hoyt. He was a heavy man, and he had evidently flung himself at his full weight upon the sharp arrow-pointed rest that served as the axis of this miniature world; it had pleased to his very heart. The North Pole—at last he had reached it.

"Let us go," said Indiana to me, and we stole quickly away.

Now, in the vestibule below, a young man who had entered in haste pushed quietly past us and made for the row of private letter-boxes fixed opposite the coat-room. He passed at box No. 82 and gazed eagerly into it. The front was of glass, and I could see readily that the box was empty. The young man had his pass-key in his hand, but it was clearly useless to insert it, and he finally turned away, his countenance displaying the bitterest sense of disappointment. His widely roving eye encountered that of Roger Indiana, "Sir," he began, impetuously, then checked himself, bowed ceremoniously, and was gone.

Here the "Adventure of the House in the Middle of the Wood" ends, and that of the "Private Letter-box" begins.

### Four Billion Feet of Lumber

THE lumber markets of the United States are likely to have in supplying them, is the subject that now of some attention by the United States Department of Commerce and Labor. Recent reports from American consuls in the Orient announced the arrival of the first cargo of lumber in the Chinese market, by a Russian vessel from Vladivostok. This fact opens the question of future competition for the Oriental market between the American lumber interests on the Pacific coast, on the one hand, and that of the Russians in Siberia and on the Yalu River, on the other. In both cases enormous resources are awaiting development. The American industry on the Pacific coast has the advantage of organization on a large scale, and of mechanical equipment unequalled by that of any other field in the world. This is evidenced by the rate of annual production. Unofficial estimates put the annual cut of lumber and shavings of the three Pacific States at 4,500,000,000 feet, which California supplies 300,000,000 feet, Oregon 740,000,000 feet, and Washington 2,500,000,000 feet. At this rate it is calculated that the forest of the Pacific coast will be exhausted in forty years. The rate of increase, as will be seen by comparison of these figures, is enormous.

### A Remarkable Exhibit for the St. Louis Fair

When Columbus discovered America there stood in a remote mountain gorge in Cherokee County, North Carolina, a tulip poplar tree that was then 400 years old. For four more centuries it grew and flourished, and was recently felled for exhibition at the St. Louis World's Fair. The tree was thirteen feet in diameter at the base when it was cut, and in which it grew was so inaccessible, being forty miles from a railroad, that it was impracticable to obtain a section near the base. Forty feet up, where the tree was a little more than six feet in diameter, a disk was cut. This has been polished, and will occupy a place in front of the hunter's lodge. On the polished disk have been engraved the important historical events of the Old North State from the time that Sir Walter Raleigh took possession of the land in his sovereign's name on July 4, 1585, through the Colonial days, during the Revolution, and up to the present time. Another section of the tree will stand like a monument in the forestry exhibit. It is ten feet high. A portion has been dressed, polished and varnished, while the lower portion is covered with the bark.

### The World's Railroads

Some one has estimated that the aggregate length of the world's railroad, was, in 1901, more than half a million miles. The approximate of mileage to the different countries was as follows: Europe, 146,708; Asia, 41,814; Africa, 44,887; North America, 226,303; South America, 29,854; Australia, 15,849—North America leading. The two continents of the western hemisphere, it will be noted, have more miles of railroad than all the rest of the world together; North America alone more than Europe and Asia together. The additions per year to the world's railroad mileage were, during the six years between 1896 and 1901: 87,700 in 1896; 66,747 in 1897; 106,864 in 1898; 63,539 in 1899; 102,707 in 1900; 125,477 in 1901—1901 having been a record year, a phenomenally active year in railroad building.

Special Autumn  
Fashion Number

112 PAGES

FRONTISPIECE IN COLORS

More Than Fifty Pages  
of Fashions

Written by A. T. ASHMORE, and illustrated by ETHEL and GUY ROSE, of Paris, the best fashion artists of to-day.

This brilliant showing of EXCLUSIVE FASHION MATERIAL from the great fashion centers of the world includes the following features:

FASHION'S OUTLOOK FOR 1904  
STREET DOWNS and WRAPS  
FASHIONS FOR OLDER WOMEN  
TEA DOWNS and REGLISSES  
FRENCH EVENING DOWNS  
CHILDREN'S FASHIONS  
DOWNS FOR SCHOOL GIRLS  
BABIES' SUITES  
AUTUMN HATS  
LINGERIE  
SEPARATE WAISTS  
SIMPLE FABRICS

The October BAZAR will also contain the first PARIS LETTER from the BAZAR'S new Paris correspondent, FLORA McDONALD THOMPSON, who will contribute three letters during the continued illness of Miss de Forest.

## The Memoirs of a Baby

The current instalment of JOSEPHINE DASKANT'S immensely funny serial is even more entertaining than the chapters that have appeared.

MARGARET DELAND writes a paper, strong in its appeal, on "ACQUAINTANCE WITH GRIEF."

IDA JACKSON, a well known Wisconsin factory inspector, contributes an exceedingly interesting paper on "THE FACTORY GIRL AND DOMESTIC SERVICE."

The distinguished artist ORSON LOWELL contributes a fairy tale, "THE STORY OF THE ENSMALLING GLASS," with illustrations by himself. This will delight both children and grown-ups.

## If Seeking a Home and Profitable Business

Investigate the Land of Manatee, discovered by the Seaboard in 1902, the most expensively beautiful portion of the South, heretofore without rail facilities. The climate is delightful the year round, the atmosphere soft and perfumed by thousands of blooming orange, lemon, and grape-fruit trees. Fruit growing and trucking there pays handsomely, and enormous fortunes are being rapidly built up by the growers. Consumption and all forms of rheumatic complaints quickly cured. Special low rates to Home-seekers.

Write for six Months booklet. It is illustrated in the Seaboard's most up-to-date prospectus ask for the Book Book.

J. W. WHITE

General Industrial Agent, Portsmouth, Va.  
SEABOARD AIR LINE RAILWAY

GETTYSBURG HATTLEFIELD AND WASHINGTON.

Personally-Conducted Tour via Pennsylvania Railroad.

The tour will leave New York 7:55 A. M., and Philadelphia 12:30 P. M., Saturday, September 26, in charge of a Pennsylvania Railroad Tourist Agent, and will cover a period of six days. An experienced stenographer, whose special charge will be unexcused ladies, will accompany the party throughout. Round-trip tickets, covering transportation, carriage hire, and hotel accommodations, will be sold at the extremely low rate of \$22 from New York, \$24 from Trenton, \$29 from Philadelphia, and proportionate rates from other points.

For illustrations and full information apply to ticket agents; Tourist Agent, 265 Fifth Avenue, New York; 4 Court Street, Brooklyn; 790 Broad Street, Newark, N. J.; or address Gen. W. Bond, General Passenger Agent, Broad Street Station, Philadelphia.

## Letters Home

By **WILLIAM DEAN HOWELLS**

Author of "Questionable Shapes," "The Kentons," etc.

An exceedingly interesting story told in letters written to their homes by various people in New York. They not only describe New York life from novel and entertaining view-points, but unfold to the reader a fascinating story of the American metropolis.

Uniform with Mr. Howells's Other Works. \$1.50

## Judgment

By **ALICE BROWN**

Author of "Meadow Grass," "The Mannerings"

This is the story of a wife who, by the unconscious influence of her noble character, finally brought her husband to alter his stern conception of justice, and to see the true meaning of human charity, and by so doing nearly sacrificed her own life to achieve her aim.

Illustrated by W. T. Smedley. Ornamented Cloth, \$1.25

## A Candle of Understanding

By **ELIZABETH BISLAND**

Author of "A Flying Trip Around the World"

A love story of Mississippi and New York, beginning just after the war, when the hero and heroine are children, and concluding, very happily, in the present. It has humor and great charm, especially in the picture of the heroine's childhood.

Ornamented Cloth, \$1.50

## The Stories of Peter and Ellen

By **GERTRUDE SMITH**

Author of "The Lovable Tales of Janey and Josee and Joe," "The Raggle and Raggle Stories"

A companion volume to "The Lovable Tales of Janey and Josee and Joe." The story tells of where Peter and Ellen go on the fat, white pony, and of what they see, of the pet monkey, of the visits to "Wyville Pieville," and so on.

Stance Full-page Pictures in Color. Square Covers, Ornamented Cloth, \$1.35 and George cover

# Harper's Magazine

for OCTOBER

### INDUSTRY

Miss Mary Applewhite Bacon, the well-known writer, and herself a teacher in the South, writes of the industrial schools recently established in Southern cities. In these schools the children of the mill laborers are not only taught to work intelligently, but to care for themselves and their homes.

### TRAVEL

Arthur Symons gives a vivid picture of life in Belgrade and Sofia, two of the least-known and most picturesque European cities.

### NATURE

Dr. H. C. McCook, who has given years to the study of ants and their ways, tells about the slave-making ants that he has observed—of their strategy and almost human behavior.

### SERIAL

Miss Alice Brown's novel, "Judgment," is concluded in the October number. It is beyond question the author's best novel, and one of the most striking recent stories by an American author.

### SHORT STORIES

There are eight short stories in the October Magazine. Among the authors are **Margaret Deland**, **Florence Wilkinson**, **Mary Tappan Wright**, **J. A. Altschuler**, **Jennette Lee**, **van Tassel Sutphen**, and **J. J. Bell**, who wrote "Wee Macgregor."

### DISCOVERY

Professor Uhl, of the University of California, tells of the remnants of an ancient civilization recently unearthed in Peru. These antiquities prove that Peru was inhabited in Biblical times by a comparatively civilized people.

### ADVENTURE

J. B. Connolly contributes an article on a picturesque fishing trip which he made in company with the rough fishermen of Lapland—an interesting account of the life of a little-known people.

### REMINISCENCE

Justin McCarthy, the veteran English historian, tells of many of the statesmen and literary men whom he has known. His article includes his personal reminiscences of Dickens, Thackeray, and many others equally famous.

### LITERATURE

Professor George F. Woodberry, of Columbia University, has written an important paper on the writers of the South, in which he gives a new estimate of Poe and many other much-discussed poets and authors of the Southern States.

### NOTABLE PICTURES

Among the striking pictures in the October Magazine are paintings in color by **Albert Sterner**, **W. T. Smedley**, and **F. C. Clarke**. Other striking drawings by **Lucius Hitchcock**, **Charlotte Harding**, **W. D. Stevens**, and **S. Ivanowski**.

## COMMENT

There are increasing indications that the men who control the Democratic machinery in many States purpose to put forward Senator Gorman for the Democratic nomination for the Presidency. Attempts are also beginning to be made to influence public opinion in his favor. Mr. Clark Howell, the editor of the *Atlantic Constitution*, which vigorously supported Mr. Bryan in 1896 and 1900, and denounced both the Chicago and the Kansas City platforms, has announced an intention of pushing the candidacy of Mr. Gorman. There is no doubt that Mr. Howell's voice is potential in the South. We observe also that the *Philadelphia Public Ledger*, which may be described as politically independent with leanings towards Democratic principles of the old-fashioned type, looks upon the Gorman movement with approval. It thinks that if the Democrats are to have any solid issue in the approaching contest for the Presidency, they are most likely to find it in tariff revision. On that issue Senator Gorman would be qualified to serve as the protagonist, because he is a moderate protectionist of the Samuel J. Randall school. It points out that Maryland, although not strictly a Southern State from the view-point of ex-Confederates, is so nearly one as to render a candidate from it more acceptable to the South than would be a citizen of any other Northern or Middle State. On the whole, the *Public Ledger* believes that Mr. Gorman's chances of receiving the nomination of his party have been from the first apparently better than those of any other aspirant, and that they are now improved by Mr. Howell's outspoken advocacy of the Maryland Senator.

It is with regret that we differ from the *Public Ledger*. For our own part, we have never doubted that Mr. Gorman's candidacy would please most of the Southern States in which the Bryanite element does not retain ascendancy. We assume, however, that every State south of Mason and Dixon's line, with the exception of West Virginia, and with the exception also of Delaware should Judge Gray not be nominated, can be relied upon to give its electoral votes in 1904 to the nominee of the Democratic national convention, whoever he may be. The vital question for the convention to answer is whether a given candidate would be likely to strengthen or weaken his

party in those States at the North which may be fairly looked upon as doubtful. Now, even if Mr. Bryan should tacitly acquiesce in Mr. Gorman's nomination, there is no reason to believe that in New York, New Jersey, Connecticut, and Indiana the latter would run as well as ex-President Cleveland or Chief-Judge Parker or as Judge Gray. He would, perhaps, run as well in those States as would Mr. Olney; that is, most that could be said for him. There is no reason to suppose that he would attract a single voter who hitherto has been Republican, and there is some ground for the apprehension that he would lose many Democratic votes. This apprehension, if it is justified, should be fatal to Mr. Gorman's candidacy.

There is but little doubt, according to a correspondent of the *Baltimore Sun*, that Mr. Bryan's opposition to the Maryland Senator goes much further than mere disapproval of Mr. Gorman's nomination for the Presidency. Men who have communicated with him on the subject do not hesitate to declare that Mr. Bryan will refuse to be controlled by the action of the national convention should Mr. Gorman be nominated. In other words, he would bolt, and call upon his followers to pursue a similar course. How can such a position be defended, it may be asked, in view of the fact that Mr. Gorman, whatever it may have been his private opinion of free silver, voted for Mr. Bryan in 1896 and 1900, and in view of the further fact that Mr. Bryan is now advocating the election to the United States Senate from Ohio of Mr. John H. Clarke, who openly opposed him in both of the last two Presidential contests? Mr. Bryan's intimate friends assert that in the different attitudes assumed by him toward Mr. Clarke and Mr. Gorman there is no real inconsistency. Mr. Bryan, they say, looks beneath acts to the motives that inspired them. The fact that a man may have voted for him in 1896 and 1900 for the avowed purpose of maintaining a "record for regularity" is not accepted by Mr. Bryan as a conclusive proof of fitness for the Presidency. According to his friends the paramount question in his mind is whether a candidate's sympathies are with the masses, or whether he has hitherto exhibited a willingness to serve corporations and concentrated capital. He justifies his support of Mr. John H. Clarke by the plea that while the latter was grievously wrong on the free-silver issue, he has shown himself heartily in favor of the other and now more conspicuous planks of the Kansas City platform.

What Mr. Bryan means will be evident to those who have noticed that Mr. Clarke, in his opening speech at Akron, Ohio, proposed to give the Philippines immediate independence. In this demand he showed himself a man after Mr. Bryan's own heart, though it is doubtful whether one per cent. of the voters in the United States would sanction the impracticable proposal. Mr. Clarke went on to advocate not only the abolition of customs duties on all articles the manufacture or sale of which is controlled by a monopoly or an approach to a monopoly, but also the limiting by Federal statute of the capitalization of all corporations engaged in interstate commerce to the exact value of the property invested. Both of these projects are impracticable in view of the large majority which the Republicans now have and are likely long to retain in the Federal Senate. Moreover, could they be carried out, they would do more harm than good, and it is doubtful whether the United States Supreme Court would regard as constitutional an attempt of the Federal government to regulate the capitalization of an interstate corporation. Such propositions, however, are beside our present purpose, which is simply to recognize

that Mr. Bryan is supporting Mr. Clarke because on all of the issues put forward at Kansas City, except one, the Ohio lawyer is a Bryanite. On the other hand, he is inflexibly opposed to Mr. Gorman, because he believes the latter at heart to be unfriendly to all the Bryanite ideas.

Should any attention be paid by a Democratic national convention to Mr. Bryan's opinions? We have never been counted among those who make light of his political importance, and who profess to think that the Democracy would be benefited by his voluntary withdrawal from the party. There is only one man in the United States who, if nominated by the Democracy, would find his prospects materially improved should Mr. Bryan bolt his nomination in favor of Mr. Roosevelt. For every Democratic vote that Mr. Cleveland might lose under such conditions he would attract two votes from the Republicans, and might have a possible chance of election. This is probably as clear to Mr. Bryan as it is to ourselves, and for that reason we do not believe that he would wreck his own political future by letting Mr. Cleveland's nomination. It is, on the other hand, conceivable that he might refuse to support Mr. Gorman, because he would foresee that his opposition to the Maryland Senator would be fatal at the ballot-box, and would thus offer a conclusive proof of his own political influence. We repeat, what we have often pointed out, that, as against any nominee except ex-President Cleveland, Mr. Bryan's influence is a factor that a Democratic national convention cannot afford to overlook.

What we have in mind is not, of course, the obvious fact that if Mr. Bryan's friends in the convention shall muster a third of its members they will be able to veto the nomination of any man objectionable to themselves. We assume, on the contrary, that the Bryanites will fall short of controlling a third of the delegates. Not on that account, however, should we regard Mr. Bryan's influence as, under all circumstances, a negligible quantity. His followers are by no means confined to those States wherein they constitute the dominant element in the local Democracy, which States, however, are almost certain to be swept by the Republicans in 1904. His adherents are numerous enough in each of the four doubtful States—New York, New Jersey, Connecticut, and Indiana—to turn the scale against any Democratic nominee, except Mr. Cleveland, against whom Mr. Bryan should openly and inflexibly protest. Democrats should look facts in the face, and Senator Gorman nor ex-Secretary Olney could carry the four doubtful States which we have named should a bolt be organized by Mr. Bryan. Cleveland could survive the concerted defection of a million votes were cast by the Populists, yet the figures show that for every vote drawn from the Democrats by Weaver, the Populist candidate, Mr. Cleveland attracted two votes from the Republicans. In spite of the Weaver movement, which it was supposed would certainly defeat him, Mr. Cleveland beat Mr. Harrison not only in the latter's own State, Indiana, and in New York, Connecticut, and New Jersey, but even in Illinois and Wisconsin, while he actually got five electoral votes from Michigan, and one even from Ohio.

Apparently the Panama Canal treaty must now be looked upon as dead, and there is no reason to suppose that negotiations looking to the arrangement of a new convention will be undertaken by our State Department. That the Bogots politicians have not been led to oppose the existing treaty by high-minded constitutional considerations, but have simply been trying to extract more money from our government, is evident from the preposterous provisions of the bill reported to the Colombian Congress by the committee recently appointed to study the conditions upon which the construction of the Panama Canal could be authorized in advance. These provisions are that the canal zone leased to the United States shall not include the cities of Panama and Colon, and that, even within the zone, the police and sanitary provisions shall be exclusively Colombian. The annual rental demanded for the zone and for the Panama Railway is \$400,000 up to 1867, when the railway must be surrendered to Colombia. In the third place, the French Canal Company is only to be permitted to transfer

its franchises and plant to the United States on payment by it of \$10,000,000 to the Bogots government. In the fourth place, Colombia requires the payment of \$20,000,000 from the United States on the exchange of ratifications of the treaty. As these proposals will be treated at Washington with the decision they deserve, and as there is now no likelihood of the Colombian Congress's recalling its rejection of the treaty and ratifying it before September 22, by which date ratifications must have been exchanged, we seem justified in regarding the Panama Canal project as dead, so far as the Republic of Colombia is concerned.

Precisely what course President Roosevelt will deem himself constrained to take under the terms of the Spooner Act will not be announced until after September 22. We shall not be surprised by a declaration that, in his judgment, the "reasonable time" contemplated by the law just mentioned has elapsed, and that, consequently, it is his duty to enter upon negotiations with Costa Rica and Nicaragua for the purpose of securing the concessions needed for the construction of an interoceanic waterway by the Nicaragua route. In the nature of things, such negotiations will occupy a good deal of time, even if the greed evinced by the Central-American politicians should prove less ravenous and insatiable than that exhibited at Bogots. Meanwhile, it remains to be seen whether the inhabitants of the Panama isthmus will acquiesce passively in the sacrifice of their fundamental interests on the part of the Colombian Congress. Ever since the liberation of Spanish America, the provinces of the dominant inland regions of Colombia, has been treated as a milk-cow by the central government. On two previous occasions the natives of Panama have been so exasperated by official neglect or positive oppression that they have gone to the length of declaring their independence. Never before have they received, however, such intolerable protraction as that to which they are now subjected by the rejection of the canal treaty.

It is satisfactory to learn that Mr. Charles J. Bonaparte and Mr. Holmes Conrad, the special attorneys appointed by the President to make an independent investigation of the frauds in the Post-office Department, have completed their work, and have sent their report to the Department of Justice, to be forwarded to Mr. Roosevelt. We await with interest a publication of the outcome of this inquiry. Meanwhile Postmaster-General Payne seems to have realized the necessity of exhibiting some signs of activity, if he desires to avert a Congressional investigation of his department. On Tuesday, September 8, indictments were returned by the grand jury of the District of Columbia against A. W. Machen, the former Superintendent of Free Delivery, and George W. Beavers, Chief of the Division of Salaries and Allowances; also against I. S. McGiehan and J. H. Huntington, of New York, alleged representatives of the Columbia Supply Company, against E. D. Sheld, of Toledo, Ohio, accused of giving Machen a "rake-off" for purchasing letter-boxes for the rural free-delivery service; and against I. W. Erwin, of San Francisco, a former Post-office inspector, who, being interested in a letter-box device, is said to have placed among certain Post-office officials some of the stock of the company which manufactured the article. We are told that thus far the inquiry has failed to show that Perry L. Heath, formerly First Assistant Postmaster-General, had any improper connection with the frauds. It has been brought out, however, that Beavers used the name of Heath very freely, intimating, it is said, that Heath ought to be "taken care of" in the various illicit transactions wherein Beavers figured.

We are glad to learn that the grand jury will presently resume the work of exploring the transactions of the Post-office Department during the last six years, and that more indictments may be looked for. McGiehan, principal stockholder in the Columbia Supply Company of New York,—who was lost, but has been found,—is charged with agreeing to allow Machen fifty cents for each \$1.25 paid on the package-box contract by the Federal government. In the case of Sheld, who was interested in the firm that furnished letter-boxes to the government, the indictment cites a large number of specific payments by him to Machen. It is the more indispensable for Postmaster-General Payne to bestir himself in the matter of

the scandals exposed in his department, because he is in danger of being made a scapegoat for the dismissal of Miss Todd from a fourth-grade post-office in Delaware, on the avowed ground that she was obnoxious to Mr. Albee, the Adkins United States Senator from that State. Mr. Payne alleges that Miss Todd was dismissed in pursuance of an agreement for a division of patronage entered into between the two Senators from Delaware; and he says further that Mr. Roosevelt was aware of the agreement, and tacitly, if not explicitly, sanctioned it. We do not believe that any such sanction was deliberately given. It is true that the occupants of fourth-grade post-offices are not entitled to demand the protection of the civil service law, but, according to an official declaration made by the Post-Office Department, known to the President, and never yet disavowed, such employees were to be exempted from dismissal on political grounds. The position which will be taken in such a matter by Theodore Roosevelt, the civil service reformer, can scarcely admit of doubt. At the same time, we can quite understand that Mr. Payne will feel that he has some reason to complain if he is overruled in the Todd matter. He was selected for his present office on the acknowledged ground that Mr. Roosevelt's cabinet was too academic, and needed the introduction of a "practical" politician. Mr. Payne had the reputation of being a particularly "aleik" specimen of the species of man desired.

We have twice expressed the opinion that Secretary Hitchcock of the Interior Department can be trusted to make a drastic and ruthless exposure of the land swindles, to which many Indians, wards of the nation, have been subjected in the Indian Territory at the hands of Federal officials. These officials seem for some time to have acted on the assumption that absolute impunity was assured to them. The sooner some of them are brought to book, and put on the road to the penitentiary, the better for our national reputation. There is a United States District Attorney in the Territory who seems to be in special need of overhauling. The political "pull" which some of the alleged criminals supposed themselves to possess has thus far proved unavailing. Thus one Streett, who has what was once considered the incomparable advantage of hailing from Ohio, and who was appointed by President McKinley, has been summarily removed from the post of Town-Site Commissioner in the Choctaw nation. A month ago charges were filed against Streett, and Mr. Hitchcock started an investigation. An opportunity to offer an explanation of his conduct was given to the accused man, but he failed to avail himself of it to the satisfaction of the Secretary, and was asked to resign. This he refused to do, apparently supposing that his former "pull" would hold good. Finding himself discharged, in spite of his political influence, he will doubtless go back to Ohio, convinced that the country is going to the dogs.

His successor, Mr. Dwight Tuttle, who made an excellent record when he was formerly chairman of the Town-Site Commission for the Creek nation, has been appointed by President Roosevelt on the recommendation of Secretary Hitchcock and of Senator Platt of Connecticut, who is a member of the Senate Committee on Indian Affairs. It may be remembered that some time ago certain Federal office-holders in the Indian Territory, who had been accused of malfeasance, had the assurance to request the Interior Department to institute an investigation. They were considerably chilled by the reply that an inquiry had been for some time in progress. It was announced in Washington, on September 11, that Mr. Hitchcock would presently announce the appointment of a special agent selected to take charge of a further inquiry with regard to the frauds committed in the Territory named. The Secretary said that he had found a man who had the confidence of President Roosevelt, and who was thoroughly equipped for the work required. This incident has its humorous aspects: first, because the friends of the accused persons had previously striven to secure the appointment of an agent acceptable to themselves; and, secondly, because, although the name of the agent has been thus far kept back, there is reason to believe that he has been for some time secretly engaged in getting at the true inwardness of the Indian land scandals.

It will be remembered that the three members representing the United Mine-Workers on the conciliation board appointed

in the anthracite region in pursuance of the award of the Coal-Strike Commission, were unable to agree with the three members representing the mine owners and operators, and that, in conformity with the request of the board, Judge George Gray, of Delaware, appointed Mr. Carroll D. Wright an umpire. The latter's first decision was rendered on September 8, and it turned out that he had sustained the operators on four of the five questions submitted to him. Mr. Wright decided in favor of the miners in the case of one Harry Brains, against whom, it was alleged, Cox Brothers & Co., of Hazelton, had discriminated on the avowed ground that he had taken part in last year's strike. Mr. Wright held that, if the award of the Coal-Strike Commission was to be accepted, no discrimination should be made against a former employee on the avowed ground that he had participated in the strike, unless he had been found guilty of a crime or was still under arrest. But how if no such ground for discrimination were avowed, and employment were withheld from a former employee, or an existing employee discharged, without any reason for the act being assigned? Then, according to Mr. Wright, the withholding of employment or dismissal would be entirely valid. In the case of alleged discrimination on the part of the Lehigh Coal and Navigation Company, Mr. Wright held that it had not been proved that the men were discriminated against because they were members of a labor-union.

In the absence of such proof the discharges must stand. In the case of William Morry, of the Philadelphia & Reading Company, the question was distinctly raised as to whether the mine-operators have the right to discharge at will. Mr. Wright pointed out that nobody denies that a workman has a right to quit his employment without assigning any reason whatever. It follows, conversely, that the right of the employer to discharge for any cause other than the explicit charge of belonging to a labor-union must be sustained. What is sauce for the grinder must be sauce for the goose. As might have been expected, the decision announced by Mr. Wright was a great disappointment to the union miners. They appeared to have taken for granted that every decision would be in their favor. It looks as if the only kind of arbitration entirely satisfactory to them would be conducted on the principle of "heads, I win; tails, you lose." There is much loose talk of refusal to abide by the umpire's judgment, and there are rumors that the mine-workers' presidents may retire from the conciliation board. It is significantly hinted that the tide of disfavor, which is setting in from the miners toward Mr. Wright, may be stemmed by a "judicious handling" of the short-Saturday question. By judicious handling is meant, we presume, a decision in favor of the mine-workers, whether they deserve it or not.

Another incident having an obvious bearing on the labor question occurred at Bridgeport, Connecticut, on September 12, when two suits were instituted by the American Antitrust Association against the national officers of the American Federation of Labor, the officers of the Hatters' union in Danbury, Connecticut, and 250 of their individual members. One suit is brought through the United States District Court for damages assessed at \$240,000, under the provision of the Sherman anti-trust law, which provides that injured persons may recover threefold the amount of loss actually sustained. In this case, an injunction is asked restraining the defendants from continuing an alleged boycott against D. E. Lowe & Co., hat manufacturers of Danbury, in whose name both actions are brought. The second suit is directed against those defendants who reside in Connecticut, and requests the Superior Court of Fairfield County to give the plaintiffs damages amounting to \$100,000, and an injunction preventing a continuation of the boycott. Property of 250 residents of Connecticut has been attached to satisfy the claim of \$100,000. It seems that in April, 1901, the labor men made a demand on the plaintiffs to unionize their hat factory. The plaintiffs declined to do so. Thereupon, the complainant alleges, the defendants conspired to violate the Sherman anti-trust law, by causing union men to leave the factory, by instituting a boycott against the hats of the firm, and by the employment of agents who visited the wholesalers and threatened them with loss of business unless they refused to handle the Lowe hats, thereby crippling the production of the factory, and causing

the owners great loss. Among those cited as defendants in the suit brought in the United States Court are Samuel Gompers (president), six vice-presidents, the treasurer, and the secretary of the American Federation of Labor. This fact of itself demonstrates that the suit will be sharply contested, and that the constitutional questions involved are likely to be carried to the United States Supreme Court for final adjudication.

There seems to be but little doubt that the position taken by the plaintiffs in this action will be sustained by the highest Federal tribunal. A person's business is his property, and he is entitled to protection from unlawful interference therewith. There is no doubt that such interference took place when wholesale hatters were visited by representatives of union labor, and threatened with a withdrawal of custom unless they refused to handle hats made by the plaintiffs. It also seems to be obvious that a person injured by a boycott must have a legal remedy for the damage inflicted on him, and that he can exact the remedy from the individual members of the combination formed to injure him. The Sherman antitrust act expressly provides that every combination or conspiracy in restraint of trade between the States is unlawful and criminal; and it gives to any person whose business or property is injured thereby an action against all the persons entering into such a conspiracy for the recovery of threefold the damages suffered.

We took for granted the other day, when Mr. John Temple Graves, of Atlanta, proposed at Chicago the wholesale deportation of negroes in order to remedy what he termed the "halted development" of the South, that he was merely uttering a counsel of perfection, and was quite as keenly alive as we are to the practical difficulties that would attend an attempt to execute the project. Of course, it would bankrupt the United States to deport nine or ten million negroes and provide them with homes, even if they were willing to go, which would not be the case. Senator Hoar of Massachusetts, therefore, did not hit the slain when he described Mr. Graves' purely academic suggestion as "totally impracticable." The Louisville Courier-Journal says that in his deportation fantasy Mr. Graves represents nobody but himself. The truth is that he did not even represent himself, for nobody knows better than he that we can't rid ourselves of the negroes against their will, and that, by indicating a purely ideal solution of the negro problem, he was virtually expressing the opinion that the problem was insoluble. If, instead of talking Mr. Graves too seriously, the Courier-Journal had confined itself to saying that the wholesale deportation of negroes would encounter more opposition from white men at the South than at the North, it would have made an assertion which, for the present, at all events, and in the absence of extensive white emigration to the former section of our country, is undoubtedly well founded.

In the rice-fields the labor of the negro is no longer indispensable, as it used to be considered a hundred years ago, but in the cotton-fields, although the work could be done there as well by white men if they were obtainable, the negro still must mainly be relied upon. Moreover, throughout the Southern States he is employed in other pursuits to an extent not paralleled at the North. Only the other day a despatch came from Memphis, Tennessee, to the effect that negro labor was in urgent demand for the purpose of harvesting the cotton crop, and the scarcity of negro laborers in the rural districts was attributed to the demand for them in manufactures. As to the alleged "halted development" of the South, Mr. R. H. Edmunds, editor of the *Manufacturers' Record* in Baltimore, has undertaken to demonstrate that the present productivity in the Southern States is such that their development cannot reasonably be described as "halted." It points out that the South will this year have poured into it from other sections and other countries for raw cotton and for cotton products about nine hundred million dollars, and that its other agricultural products will be worth as much more. Undoubtedly these figures are impressive when they stand by themselves, but they will scarcely bear comparison with the statistics for the same period relating to a section of the North or Western States equal in area and population. It is

perfectly true that the population of the South has more than doubled since the civil war, and that the value of its agricultural products has increased in a much greater ratio. Yet we think that few candid persons will deny that the productivity of the Southern States has been retarded by the negro problem, and that with white labor it would have attained to far more remarkable proportions. That, however, as we have said, is a purely academic conjecture. The negroes are in the South to stay, and we must try to make the best of them.

We hear very little of the feelings of the army about the promotion of General Wood, but that is because open criticism of the appointment would be contrary to military discipline. The army cannot speak, except privately, and what is said in private the public does not hear. But there is no doubt of the intensity of the army's feelings on the subject. As a major-general General Wood will have to review the proceedings of courts martial and perform like duties of great importance to discipline, commonly intrusted to veterans of military education and long experience. Nothing is more demoralizing to a self-respecting and competent man who has thoroughly learned his business than to have an untried newcomer put over him. An old soldier is quoted as saying: "Our whole present army is no more than a school, in which the older officers are the teachers. We need generals who can teach, not generals who come to learn." As an officer in command of men General Wood's experience is extremely limited. His courage has been proved, but of his military capacity nothing is known. There are no facts on which to form a judgment. His ability is generally conceded, but is it military ability? No one knows. No one has ever had any means of finding out. That a man so destitute of all military record should be made a major-general in our regular army, with the prospect of being the senior officer in that army and possibly its commander in six years, is truly an astonishing, a monstrous thing.

If M. Irvolaki is to take Count Lamoroff's place at the St. Petersburg Foreign Office we may look for more energetic measures for the relief of the Macedonians. M. Irvolaki was identified with the Liberation party in Rumelia in 1877-8, and first made his mark in the reconstruction of eastern Russia, now a part of the Bulgarian principality, where he served as First Secretary of the Russian Consulate-General at Philippopolis. He is a strong, resolute man, thoroughly versed in Turkish diplomacy.

The hand of the Emperor Franz Josef is weakened, at a very unfortunate time, by the intestine strife in Hungary, and his Majesty is likely before long to be recalled to Budapest to resume the endless discussions with Magyar statesmen which have been interrupted by a series of royal visits, beginning with that of King Edward. The bone of contention, as so often before in the Dual Monarchy, is the question of language. When it is remembered that the language spoken by large numbers of the Emperor's subjects include German, Hungarian, Polish, Bohemian, Rumanian, Italian, the Russian, Slovak, and Slavonian, it is easy to see that the question of commands and drill in the extremely composite army is one of no small difficulty. At present the Hungarians demand that, while the orders of generals may be conveyed in German, all regimental orders, all orders by colonels and officers of lower grade, as well as the drill instructions and barrack orders of non-commissioned officers should be in Hungarian. The Emperor's refusal has caused very great discontent, and certain patriotic Magyars have proposed that the Hungarian throne should forthwith be offered to Kaiser Wilhelm's second son, Prince Eitel Friedrich. Needless to say, this proposal will not improve relations between Vienna and Berlin.

That Serbia will aid Bulgaria against the Turkish armies is now fairly certain. Mass-meetings have been held at Belgrade to protest against the horrible barbarities of the Turkish regulars and bashi-bazouks, or head-buffers, as they are called with ghastly fitness. Attacks on churches and monasteries held sacred by the Serbian people in that part of the Kosovo vilayet which was once a part of the Serbian Empire, and is still always spoken of as Old Serbia, have inflamed the nar-

tional imagination, so that all old jealousies against Bulgaria are being forgotten, in detestation of the common enemy and the inhuman cruelties of the Albanian and Asiatic hordes. The unconquered Montenegrins will also, we may be certain, lend their heroic aid; and it is almost impossible the combat will not invade the narrow strip of Austrian-protected territory running south from Bosnia, between Servia and Montenegro. This would mean, of course, the intervention of the Austrian army, a consummation devoutly to be wished. All omens seem to show that before this year ends the Balkan question will be finally closed, and a red chapter of crime and atrocity at last ended.

The release of Sam Parks from Sing Sing on a certificate of reasonable doubt was a disappointment to many observers who thought he was where he belonged and that it was a pity to move him. As things are turning out there seems no reason to regret the course events have taken. Parks has had all the rope he wanted, and the issue seems likely to be such as is traditionally looked for in the case of persons of his characteristics. He has proved to be a heavier load than even his late adherents could afford to stagger under. His "vindiction" on Labor day did not vindicate him, and by a rapid sequence of events he is being stripped of the authority he abused, and deprived of the power to do serious mischief. The charter of the Home-Smiths and Bridgemen's Union, of which he was the head, has been annulled by the International Association that granted it, and within the union itself there is a lively revolt against his authority. Several more indictments besides the one under which he was convicted are hanging over him, and it seems likely that if he presently returns to prison it will be as a rogue whom his victims recognize to be a rogue, and not as a convict whose pals regard him as a martyr.

A new influence favorable to rural delivery appears in the assembling in Chicago, on September 12, of representatives of seventeen thousand rural letter-carriers to form a national association. Their lot, they assert, is not all that the fancy might paint, and they are organizing as a preliminary to effectual self-help. Mr. Henry H. Windsor, who has been welding them into an association, says that the rural carriers have so lately come into existence that the public does not realize how much they do for fifty dollars a month, which is their present pay. At first it was twenty-five dollars a month, but that wasn't enough. Out of his pay the rural carrier maintains a horse and wagon, and clothes himself in a uniform. Mr. Windsor suggests that his work is harder, and his official expenses much greater than those of the city carrier, who gets a thousand dollars a year. That may be true enough, but six hundred a year is more money in Fillmore, New York, or Morrisville, Vermont, than a thousand a year is in New York. The pay of the rural carriers will finally develop a good deal on what the traffic will bear. If the service is extended the number of carriers may come to be very great, and we presume it is not the intention of Congress to maintain and extend the system at a very serious loss to the department.

Considering how much you have to pay for a decent cigar, your property rights in the cigar that you buy seem singularly restricted. If you get the thing lighted and between your teeth, you may smoke it, provided you are in a place where smoking is not prohibited; for once the cigar is alight, the government ceases to be concerned about it. How closely it watches it up to that time appears in the notice served this month on stewards and superintendents of clubs, that they must not serve cigars in trays, but always in the boxes in which they come. If club members do not go to the cigar-stand and pick out their cigars, the boxes must be carried to them. It will be recalled that certain rascally cigar-dealers in New York lately got into trouble because they refilled boxes, in which expensive cigars had come, with cheaper ones. This new restriction in clubs is a precaution against this practice and others like it, though it has been taken for granted heretofore that a club would not cheat its own members. An individual buyer who has purchased a box of cigars may still lawfully fill his pocket or his cigar-case from the box. He is not compelled to carry the box about with him.

It is supposed that the President, on his recent extended journey through the West, was the guest of the railroads even which he travelled, and paid nothing for the special train which they furnished. He has been a good deal criticised in consequence. What are the rights in this matter? When the President travels, should he travel as the guest of the railroads, or should he pay his own expenses? In many States legislators and State officers are prohibited from receiving passes from railroads. Is it not equally improper that the President should travel free? Perhaps it is, but if it is, the matter should be regulated by something more definite than mere custom, and a provision for travelling expenses should be made for Presidents, just as provision is made for the maintenance of the White House and its grounds. Extended Presidential journeys are commonly made more for political than administrative ends, but, on the whole, it seems a good thing for the country that the President, from time to time, should visit the States remote from the capital, Washington is close to the Atlantic seaboard. The disadvantages of its one-sided situation are modified when the head of the government goes on his travels and visits citizens too far away to come to him. But, practically, the President cannot travel as a private citizen may. It is neither safe nor convenient for him to do so. Not on his own account, but on ours he must be guarded and looked after, and special care must be taken to keep him from harm. He has to travel by special train, and take many persons with him. It is not proper that his salary should be charged with the heavy expenses of such journeys, nor should considerations of their utility keep him at home. The railroads seem to be more than willing to put their facilities at his disposal. If it is improper that he should travel at their cost, then by all means let the government provide a fund out of which such expenses should be defrayed. It is not expedient that the President should stay at home merely to save money.

The degenerate son of a well-known and respected citizen of New York died the other day, a suicide and a murderer, after embezzling church funds to a considerable amount. It was told that he had demonstrated his worthlessness years before by a discreditable business failure; but his relatives had found a place for him as clerk of a church corporation and caretaker of its funds. He took advantage of his position to forge notes, which he cashed without difficulty, and spent or speculated with the proceeds. When he was found out he shot himself, first shooting a woman who had the misfortune to have been his friend. Here was a man who apparently had given his friends reasonable warning of his quality. The mistake they made was in getting him a new job and trying to save his reputation. That is a common and a very bad mistake. Many families have the misfortune to include one member who, perhaps from some congenital defect, is not trustworthy. Yet they hate to give him up, and hoping, as he goes from one disaster to another, that he will yet learn his lesson, they keep on finding chances for him to throw away. To raise up such a person is simply to add to the weight from which he must fall. To protect his reputation is simply to furnish him with means to deceive whoever trusts him. The sooner he gets down to the level he belongs in the better for himself, his friends, and society. Help him on, but not up. Pay his board, but don't find him a job where he can betray confidence. Keep him out of the poorhouse and out of jail, if possible, but most of all keep him out of mischief by making serious mischief inaccessible to him. To put a defective, irresponsible, man who is used to ease and the comforts of life, into social and commercial competition with persons of his own social grade is to invite disaster. Let him be known, if he is known at all, for what he is, and thereby minimize the risk involved in his existence.

The news of the death of Mrs. John Sherwood in New York on September 12 will give to many of the older readers of the WEEKLY the sensation of having passed a mile-stone on the journey through the world. She was a notable woman in New York in a generation that was in its prime thirty years ago. For half a century or more she had been a writer of books and a constant contributor to the American periodicals. Few American women have been so widely known, and perhaps none has maintained equally long an equal degree of mental and literary activity.

## President Roosevelt's Latest Speech

UNQUALIFIED commendation has been received, and was deserved, by the address which the President of the United States delivered on Labor day at Syracuse, New York. It is true, of course, that Mr. Roosevelt is not the first man to discover the dangers of class Mr. Roosevelt has not been more clearly and forcibly brought out, and it is to be added that the exposition could hardly have been more timely. Where a laborer expels a member on the ground that he has recognized a fundamental duty to the State by joining the State militia, and when the public printing-office at Washington is called upon by another laborer to discharge a trusted employee, it is evident that the generation of a class fever is well known, but it would be a mistake to infer that, in his speech at Syracuse, he uttered a word at which either an employer of labor or a labor-unionist can fairly rail. If he were disposed, as he is not, to play the demagogue, there is no doubt that he had a trumping opportunity. It is true that he was speaking, not to a (limited) body of operatives engaged in manufacturing or mining, but to a meeting of the New York State Agricultural Association, and that, as yet, American farmers and agricultural laborers stand aloof from unionist organizations. Nevertheless, it could not be forgotten by any of his auditors that Mr. Roosevelt had transcended a President's constitutional functions when he appointed the anthracite-coal strike commission, and that he is generally supposed to have given thereby a conclusive proof of his sympathy with union labor. It would, therefore, have surprised no one who hears if he had spoken in the spirit which characterized many of the speeches delivered by him a year ago, when he dwelt upon the actual or prospective harm with which our institutions were threatened by the consolidation of capital in colossal corporations. If any of those who gathered at Syracuse to listen to the President expected an utterance of similar tenor, they must have been disappointed. Not only were Mr. Roosevelt's words unqualifiedly in alliance or sympathy, rather than hostile, class enmity, but he entirely passed over, or very lightly touched upon, certain topics upon which he has seemed at times disposed to dwell with superstitious effusion. At Syracuse very little was said about the supreme importance of doing, daring, and dying, the virtues supposed to be characteristics of rough riders, and almost as little about the paramount duty and beauty of begetting and rearing a large family. With assent, Mr. Roosevelt confined himself to the subject in hand, to wit, the imperative necessity of checking letian class jealousy and class antagonism, if the republic is to endure, and not to share the dismal fate of the Roman commonwealth.

It is an undisputed historical fact which was put forward by Mr. Roosevelt at the outset of his address, the fact, namely, that on this side of the Atlantic the trend in the last few years has been to go down together. If at any juncture the average well-being of the American community is high, the average wage-worker, the average farmer, and the average business man will all find themselves well off. If the general average shrinks, on the other hand, there is not one of these classes that will not feel the shrinkage. Of course, there are always some men who are not affected by good times, just as there are some men who will not be affected by bad times. It is, nevertheless, unquestionably true, as Mr. Roosevelt, speaking broadly, avowed, that when national prosperity comes, all of us tend more or less to share in it, whereas if adversity fall upon the nation each individual citizen, to a greater or less extent, is likely to feel the tension. Is this a platitudinal? We hope it is; for, in that event, it would be truth universally recognized, and we might reasonably expect that the consequences of it would be as inevitable as the consequences of interest in generally realized. It should be as widely acknowledged that our government can only be maintained on a sound and healthy basis—our social system not only be made and kept what it should be—on condition that each individual shall be judged not as a member of a class, but on his intrinsic worth as a man. Mr. Roosevelt does not speak too strongly when he describes it as an inflexible principle of our American life, an not fundamentally treacherous to the spirit of our institutions, to apply to any man any test save that of his personal worth, or to draw between two sets of men any distinction save that of conduct; the distinction that marks off those who do well and wisely from those who do foolishly and ill. Good citizens and bad citizens there will inevitably be in every class and every locality; but the attitude of respect toward the good public and social questions will be determined not by considerations of employment or locality, but by the deep-set principles which represent the inmost souls of men.

Mr. Roosevelt is right, ten times over, when he declares that a failure in public or in private life to treat each man on his own merits—a disposition to regard the Federal government as existing either for the poor or for the rich or for such-and-such a large part of our people, as such a failure and such a disposition have always proved fatal in the past to other republican experiments. A healthy republican government must rest upon ind-

viduals, and not upon classes or sections. As soon as it becomes government by a class or by a section, it departs from the American ideal. It may be a tyranny, but it is one that cannot be too often driven home, that people show themselves equally unfit for liberty whether they submit to anarchy or to tyranny. In no way is the loss of self-governing power on the part of a community so distinctly and usefully forewarned as in the tendency to turn the government into one primarily conducted for the benefit of a single class, instead of a government conducted for the benefit of the people as a whole. Mr. Roosevelt recalls that, in the city-states of ancient Greece, in those of medieval Italy and those of the modern Phœnix, this tendency was shown and wherever the tendency unchecked it invariably and inevitably proved fatal to a commonwealth. As regards the final result, it mattered not a whit whether the movement was in favor of one class or another. The outcome was equally fatal, whether the country fell into the hands of an opulent oligarchy which exploited the poor, or whether it fell under the domination of a turbulent mob which plundered the rich. In both cases there resulted violent alternations between anarchy and disorder, and, ultimately, a total loss of liberty to all citizens—destruction in the end overtaking the class which had for the moment been victorious, as well as that which had been defeated. The death knell of a republic was rung as soon as political power became lodged in the hands of those who sought not to do justice to all citizens, rich and poor alike, but to stand for one special class and for its interests, as opposed to the interests of all citizens.

If Mr. Roosevelt is to be elected President in 1904, he will need the votes of wage-workers, and he may also need the good-will of the employers of labor. He made it perfectly clear at Syracuse that neither the one class of citizens nor the other need look upon him as devoted specifically to its interests. He did not hesitate to warn wage-workers that they have no worse enemy than the man who condones mob violence in any shape, or who preaches class animosity. He did not warn workers that the slightest acquaintance with our industrial history should teach even the most shortsighted among them that the times of most suffering for the American people as a whole, the times when business is stagnant and capital suffers from shrinkage and gets no return from its investments, are exactly the times of hardship and want and grim disaster among the poor. Mr. Roosevelt exhorted those toilers who are inclined to look with favor on the Socialist Utopia that, if all the existing laws and institutions for the protection of labor could be abolished, the first and severest suffering would come among those of us who are best well off at present. In a word, the wage-worker is well off only when the rest of the country is well off; and he can best contribute to the general well-being by showing unity and a firm purpose to do justice to others.

When he turned to the employer class, the President was equally sympathetic and equally convincing. He said that the capitalist who is really conservative, the rich man who has forethought as well as patriotism, should heartily welcome every effort, legislative or other, which has for its object to secure fair dealing on the part of capital, corporate or individual, with the public and with the employee. He insisted that certain legislation, which has been eyed askance by some representatives of capital, had really been enacted in the interest not merely of the people as a whole, but of the propertyed classes themselves. He had in mind such a law as the Franchise Tax Act in the State of New York, which the Court of Appeals recently pronounced constitutional by a unanimous decision; such a law as that passed by Congress last year for the purpose of establishing a Department of Commerce and Labor, under which there should be a bureau to oversee and secure publicity from the great corporations which do an inter-State business, and a law, in fact, as far as it is concerned, for the regulation of the great highways of commerce, so as to keep their roads open on fair terms to all producers who desire to get their goods to market. Mr. Roosevelt had organized capital in mind when he dwelt with emphasis on the fact that in no way is the stability of property better assured than by making it patent to the American people that property bears its proper share of the burdens of the State, and that property is handled not only in the interests of the owner, but in the interests of the whole republic and community. In other words, legislation, to be of permanent utility to any one class, must also be good for the nation as a whole, and legislation which does injustice to any particular class is certain to work harm to the nation.

In his peroration the President told the farmers, wage-workers, and business men of New York that if to-day they are proud of their State and still prouder of their nation, it is because their predecessors and forefathers lived up to the creed which he had outlined. There must continue to be ever present in their minds, he said, the fundamental truth that in a republic such as ours the only safe course to pursue is to stand neither for nor against any man because he is rich or because he is poor, or because he is engaged in one occupation or in another, or because he works with his hands or works with his hands. We must treat each man on his merits as a man. We must see that no man is given a square deal, because he is entitled to no more, and should

receive no less. Finally, we must always keep in mind that a republic such as ours can endure only by virtue of the orderly liberty which comes through the equal domination of the law over all men alike, and through its administration in such resolute and fearless fashion as shall teach all that no man is above the law and no man below it.

### Does England Lack Brain-Power?

HEINZIG has a more remarkable confession been made in public by a representative man than was attested by Sir Norman Lockyer, President of the British Association for the Advancement of Science, which met on September 9, at Southport, England. Recalling Captain Mahan's demonstration of the influence of seapower on history, Sir Norman pointed out that Englishmen were keenly alive to the importance of their navy, and that they had but little to fear from a hostile consideration of maritime states. The danger that confronted them, he said, lay in a different quarter, and arose from a grave though corrigible deficiency. Englishmen were, he believed, with eventual omen from the markets of the world, because of the superior energy displayed by their commercial rivals in the application of intellect to industry. What England stood in increasing need of, by comparison with Germany and the United States, was not sea-power, but brain-power. There was of course no lack of native ability in Great Britain, but it was not applied with the requisite urgency and vigor through scientific channels to the development of manufactures and trade. The educational system of Great Britain is relatively antiquated and inadequate, because the facilities provided for scientific research are not commensurate with the nation's necessities. This Sir Norman proceeded to prove by a citation of significant statistics. He reminded his countrymen that in Great Britain there were but eleven universities which had to compete with twenty-two universities in Germany, and with no fewer than one hundred and thirty-four state-supported or privately-endowed universities in the United States. Attention was directed to the fact that the Prussian government gives to a single instrument of the higher education, the University of Berlin, more money than the British government allows to all the universities and university colleges in England, Ireland, Scotland and Wales put together.

No unequal are the conditions which regulate the production and the direction of brain-power in Germany and the United States, on the one hand, and in Great Britain on the other. The excuse offered on behalf of the British government for its reticence in stimulating scientific investigation and the applications of science to the arts is that such encouragement is properly a matter for private effort. That is not the assumption on which governments proceed in Germany and the United States. For example, the buildings erected with state aid for the new University of Strasbourg have already cost nearly five million dollars, or about as much as has been provided by private effort for university and college buildings in Manchester, Liverpool, Birmingham, Bristol, Newcastle, and Sheffield. We add that the annual government endorsement of the German university just named is more than \$245,000. The experiment of relying upon private contributions for the adaptation of universities to modern needs has been tried in the United Kingdom, and has notoriously failed. Sir Norman Lockyer shows that, in the case of twelve English university-colleges which are the federates of universities, less than \$50,000,000 has been furnished by private endowment during the last sixty years. In the United States, on the other hand, during a comparatively short and recent period, universities and colleges have received from private endowment more than \$200,000,000, of which almost \$15,000,000 was supplied in the years 1893-1900. Upwards of \$20,000,000 have been devoted by Mr. Carnegie alone to the evolution of brain-power through scientific research in two well-known institutions, the one located in Pittsburgh, and the other in Washington. Scarcely less remarkable have been the contributions made by Mr. John D. Rockefeller to the Chicago University for the fulfillment of similar purposes.

Sir Norman Lockyer is convinced that England must definitely renounce the hope of securing from private persons the pecuniary resources indispensable for the reconstruction of her universities from a scientific point of view. The medieval scheme of education, the original aim of which was to fit students for the ecclesiastical profession, an aim in which by far the greater part of the existing endowment is restricted, must be quickly superseded or supplemented by a different educational system which will qualify the British intellect to grapple with the arduous conditions of the struggle for existence in the twentieth century. The means to that end must be furnished by the state, inasmuch as the response to the appeal for private contributions has proved lamentably faint. In Sir Norman's judgment, his country may as quickly abandon the thought of competing with her great industrial rivals. If she is to continue relying on private endowment for the development of brain-power in useful directions through the prosecution of scientific inquiry, and through the discovery of new and valuable relations of science to practical mechanics and manufactures.

What practical step was urged by Sir Norman Lockyer on the British government? He pointed out the vast amounts of money annually spent on "State Power," through the enormous appropriations for the army and navy, and with these contrasted the insignificant sums applied to the creation of "brain-power" by the Imperial Exchequer. He advocated the drastic course of duplicating the navy budget, and of devoting a fund equivalent to that yearly allotted to the navy, to the increase of brain-power in Great Britain. A part of the great sum should be set aside, he thought, for new buildings to be erected in the next five or ten years, and the interest of the remainder should be applied to the stimulation of scientific research. Money used in such a way, he said, should not be looked upon as practically gone when spent, whereas the cost of a short-lived ironclad cannot be otherwise regarded. An adequate grant for the development of an efficient scientific education should properly be considered as a loan that would bear a high rate of interest. To assure the proper application of a large educational grant, Sir Norman Lockyer proposed the establishment of a scientific national council, which should act as an advisory committee to the government.

It remains to be seen whether Sir Norman Lockyer's exposition of Great Britain's imperative need of brain-power of a specially trained and directed kind, will bear satisfactory fruit in legislation. It would not be necessary to create an entirely new set of institutions for the provision of scientific education and the stimulation of scientific research. The newly reorganized London University might be devoted chiefly to that end. The time-honored universities of Oxford and Cambridge and the Dublin University, better known as Trinity College, might have their present incomes doubled by the state on the express condition that half of their revenues should be allotted to scientific purposes. All of the best-minded and progressive men connected with these institutions would cordially welcome state assistance thus conditioned. They are as conscious of their existing deficiencies from a scientific viewpoint as were the authorities of the four Scottish universities—Edinburgh, Glasgow, Aberdeen, and St. Andrews—who gladly accepted Mr. Carnegie's gift of ten million dollars, though it was coupled with a stipulation that one-half of the income should be applied to the improvement of facilities for scientific research. The British government, which has just awarded \$50,000,000 to a tentative settlement of the land question in Ireland, may now reasonably be asked so to enlarge the resources of the English universities as to make them more active and useful agents in promoting the national prosperity.

### Chicago's Centennial

We all consider that Chicago is a very remarkable city. Even Chicago herself admits it, and thinks it well worth while to celebrate the hundredth anniversary of her birth. She dates her existence from the building of Fort Dearborn, by Major Whistler, at the mouth of the Chicago River, in 1803, and has set apart six days, from September 26 to October 1, for a proper celebration of her centennial. This spare of time she has planned to fill with spectacles and entertainments. She expects to include among her guests the President and his cabinet, and many foreign ministers, Governors, Senators, Congressmen, Mayors, and other illustrious persons. She will have a great military and a great industrial parade. By burning many hundred pounds of red fire on her tall buildings she will try to give an intimation of what the great Chicago City is. She will reproduce old Fort Dearborn in the likeness which appears in connection with the article by Professor Sparks on another page of this issue of the WEEKLY, and will furnish forth generously such a celebration as Chicago might be expected to provide.

All the country is proud of Chicago. Some observers admire her awfully, and with a tinge of reverence as a prodigy that has some of the characteristics of a monster. But all admire her. She is big, she is handsome, she is ugly, she is brilliant, she is dirty, she is all sorts of stunning and contradictory things. But her greatest quality is that she is so much alive. Almost every effort has been going at her, but it is not known that any one ever called her a monster.

Yes, she is alive, vibrantly strenuously alive. She is indeed the great municipal experiment station for our country, especially for social and industrial experiments. Every new kind of strike, every new kind of organization of labor, or rupture, or coalition, between workman and employer, seems to be tried first on Chicago. The mixture which she calls her population includes a larger proportion of restlessness, aggressiveness, explosive humanity than the proportion of any other American city. Business life is more or less of a conflict everywhere, but in Chicago, as we see it through the newspapers from the outside, it seems a rough-and-tumble street fight, conducted under suspension of most of the rules.

Be that as it may—and doubtless it is not quite as we seem to see it—the great city plunges on towards the fulfillment of a

gigantic destiny. Her engines seem to be of the new sort that get their power from explosions, but her speed is indisputable.

A plan of the city, pictured on another page, discloses the new and extraordinary scheme for a rapid-transit system which is now under consideration. The plans provide for radial and comprehensive changes in the elevated, surface, and subway systems of the city, with a total cost of nearly nine million dollars. The details include four new elevated railway loops, high and low level subway systems with transfer stations where the loops intersect, and the completion of the Boulevard system by a tunnel connecting Michigan Boulevard and the Lake Shore Drive.

Some such plans are sure to be perfected and carried out in due time.

Chicago enterprise, which has concerned itself so industriously in providing interurban transportation for London, may be trusted to make provision for Chicago too. It may seem over-ambitious to say so, but the country expects some day to see in Chicago an illustrious type and example of what a great, modern, inland American metropolis ought to be. She has the site, she has the energy, she has the money and the brains. She even has the reagents of the necessary ideals, and she will realize them.

## Election of United States Senators

IMPORTANT action was taken by the Democratic State Committee of Ohio, in session at Albany, on September 5, in the adoption of a resolution providing that heretofore Democratic candidates for United States Senators shall be nominated by the State convention of the party, and that Democratic members of the Legislature shall be pledged to support the candidates so nominated. The reason for this resolution, as recited in the text thereof, is that thus for all efforts to amend the Federal Constitution so as to provide for electing Senators by direct popular vote are proved abortive, so that in no other way than this one it is ascertained that Senators shall be chosen to represent the will of the people.

This is an experiment novel and unprecedented as far as New York State is concerned, but it is in line with action already taken by the Ohio Democrats, whose recent State convention nominated John H. Clarke as its party candidate for the United States Senate, to succeed Mark Hanna.

An analogous plan prevails in several of the sure Democratic States of the South, where United States Senators (as well as State officers) are named by the Democratic primaries. In this manner United States Senator Bernardo de Soto Moray was lately nominated as his own successor, in Mississippi.

As long ago as 1860, the Democrats of Illinois in State convention nominated General John M. Palmer for United States Senator, carried the Legislature, and elected him to the Senate. It will be interesting to hear the plan works out in New York, where, a decade ago, it was no uncommon thing for the Democrats to elect their State officers, but at the same time fail to carry the Legislature, on account of the plan of apportionment, which greatly favors the thinly populated rural counties, as compared with the cities, which were normally Democratic in their tendency. Advocates of this direct election of United States Senators believe that a failure of this sort, by reason of a legislative gerrymander, deadlock, bribery, or other like cause, to elect a candidate practically endorsed by the people at the polls, would greatly hasten the adoption of an amendment to the Constitution.

## Jonathan Edwards
