The American people have a way of coming around sooner or later to a just appreciation of the place and service of men who have been prominent in national history. European students of philosophy and theology and appraisers of intellectual greatness long since came to the conclusion that the outstanding figure among American theologians of the eighteenth century was Jonathan Edwards, of Northampton and Stockbridge, and there have not been lacking like-minded American critics through all the years that have intervened since he died prematurely at Princeton in 1758. During the nineteenth century, however, his popular fame waned, the type of theology he stood for ceased to dominate, and for lack of any adequate popular biography of him dwelling upon his life as a *sermon*, as a *champion*, as a *chastising* English prose stylist, and as an admirable human being, his name ceased to have attractions for the laity. But the poll of names for the Hall of Fame in New York city, taken in 1900, picked men from all the leading professions and callings being the electees, showed that his name led all the rest among the preachers and theologians voted for, he receiving eighty-two out of the sixty-seven ballots cast, Henry Ward Beecher coming next with thirty-four.

Two hundred years have passed since Edwards was born, and it is planned to celebrate the bicentennial of his birth with adequate ceremonies at several of the academic centres on October 9,

and also in the towns identified most prominently with his name. There will be no such general recognition of the day as admirers of Emerson and Wesley have seen with gratification. Edwards, partly through his own fault and partly because of his biographers', has never gripped the imagination or the heart of the people as a very human or winsome being, in this so different from Emerson. Nor did he, like Wesley, give his name to a great religious movement notable for its administrative and practical religious victories. But for sheer intellectual power and spiritual depth neither Emerson nor Wesley approached him. He was a great rationalist and a great mystic; English has been put on his defeat as the former; the time has come to tell of his victory as the latter.

## The Summer Hotel

THE season is nearing an end, and the glories of the summer hotel have begun to wane. There is a gap for calm and reflection now. There are many varieties of summer hotels, but those tempered by an adjacent school of philosophy or a summer school for teachers offer advantages not to be attained elsewhere. Here one meets the greatest variety of the human species. In those hotels that harbor only the very rich, the themes for conversation are apt to be limited. One one has learned—and this can be quickly forgotten—just how much every one is worth, there remains only such subjects as to spend it, and who is in love with another man's wife.

On the other hand, the places where gratification is modified by necessity, offer a broader field, and where those are connected with an establishment of learning the field is broadest and most fertile. One may linger where bent and unkempt philosophers are wrangling over what Kant, Hegel, and Schopenhauer said to the universe as pitted against a mere rationalistic calculation of what brings the greatest good to the greatest number. One can move on to the next table and hear what the Brooklyn girl has to say to the other girls on the block. It would seem that from eighteen to twenty-five is the most loquacious and confidential period of life, and so by dint of a little patience one may stay away for lutesc moral reflections the whole life of "the block," its mental activities and physical accommodations. The girls on the block, one would derive, have more of the up-to-date摩登 ideas. They evidently do not like to be "old maids"; on the contrary, they like "gen'lemen friends,—piqué dresses,—and buggies." They prefer the piqué dresses to those of lighter materials on the ground that the "gen'lemen friends" may at any instant dash round the corner of destiny, and one must be prepared to jump in, and sustain dresses are so easily crumpled. Indeed, life on the block seems to be largely a matter of gear—and the girls on the block, one would surmise, are well equipped with the various cogs and wheels, and being ready for the buggy that may leave over the horizon any time and bear one away. It reminds one vaguely—this living ever-ready for some imminent future—of a passage in Maeterlinck where he says, even if some day supreme happiness were to fall upon us from the planet Mars we could receive it only in so far as our hearts were prepared for it—in so far as we have held them open to a help in a high and noble destiny. Ah, well! the girls on the block are wise virgins, with their hearts trimmed and filled, and when fate comes—though it be but in the form of a buggy and its driver—it will find them prepared in white, starched piqué dresses.

Nearly every hotel nowadays has a millionaire. One has one and she is a widow. In the evenings she often brings down her written proposals of marriage from adventurers of various nations, for the delirium of all general money. All summer hotels are blessed by mothers with theories of education. These theories are not always so powerful as the theories of the philosophers, for say what you will, the pursuit of philosophy makes for gentleness in its devotees. But an instinctive passion for our own—a sort of extended and enlarged egotism such as mother-love—is apt to result in a dogmatic conviction—usually a conviction that gentle moral persuasion is useful for one's own and a hindrance for others' efforts. Then there are the children themselves—with their shouts and squabbles and games and endless noise—all this gives one the sense of the push and press of the busiest life, of living in a miniature world, active as an ant-hill.

After the noise and glare of August there comes a moment of pause in September when the guests slowly scatter; as the air grows fresher a certain hush comes in the big sitting-rooms, and one hears the murmur occasionally to oneself. The light is the sun and gold and sunset with sunsets at leaves; in the almost afternoon lights and in the morning the leaves are spread with white glitter in the early sunlight. The moonlight, however bitter the air, becomes one's private property once more, and only vague echoes of the strange unalarming of unshaken heart the place. Then one realizes that the virtue of adjusting oneself to so cosmopolitan a little world as a summer hotel is the power to adjust oneself to the larger protuberant world of which one may be the reward of virtue in this world is but the power of adjustment in the next form of existence offered.

*Ten Cavalry Members of the Class of 1902, which included 104 Cadets  
A prominent member of this class was a son of General Nibolov, Commander-in-Chief of the Bulgarian army*

## HOW NEW YORK CITY GUARDS ITS SHIPPING INTERESTS

The New York Fire Department maintains a number of powerful fireboats, equipped with a complete fire-fighting apparatus, whose business it is to protect the city's waters from any fire that may break out on the river. These boats are manned by men who are well trained in the art of fire-fighting. The photograph to the right shows one of these boats in the East River, and proceeding to the scene of a fire on the river. The photograph to the left shows a view of the river from the fireboat's deck, with a view of the city skyline in the background.

# In Dorsetshire

By Sydney Brooks

SEASIDE, DORSET, September 24, 1904

ONE of the charms of London is the number and pleasantness of its nooks, its oases, its little pools of quiet. They tend to grow fewer under the pressure of the London County Council, with its "improvements" and the crane for mansions; but they are still gratefully abundant. The most of thing I mean you will find by walking up Ligate Hill into St. Paul's Churchyard. Its the right a little street, just wide enough to hold one wagon at a time, rather you. Wander down it and a variety of nooks will bring you to an old eighteenth-century mansion lying back some twenty yards from the foot-path. It is a palpable relic of the best Georgian period, spacious and yellow with age and wood, rarely finished, with a red-wooded flume, to give by contrast an extra touch of pretentiousness to this stately old home. It is the dearest of St. Paul's, and as peaceful and unobtrusive inside as any country vicarage in the land. From the windows you catch a glimpse of the surging traffic roaring on its way to and from the City, but no sound of it reaches you. Open the windows, and even then "London's central roar" comes to you only as a soothing whisper, so cunningly has modern art or design tucked the dearest away from the turmoil of the world outside. In its way it sums up and typifies the round-the-world leisure of London. There are places like it in the labyrinthine city by the score—places where a happy dive off a main thoroughfare will carry you from the twentieth century to the eighteenth and from all the hustle of the streets to a little haven of almost unnamable quietude. Every one who has been over here has revelled in such transformations secure, has passed under the gateway in Fleet Street, and found himself suddenly accosted through the Temple by Johnson and tobacco-smith and Lamb, or has taken a step up the hillside into the cloistered seclusion of Staple Inn.

Contrasts and juxtapositions such as these are truly the "note" of London alone, but of all England. Here in this country there are some thirty-two million people living in an area not much larger than the State of New York. You would think it impossible to get away from them. You would imagine, in the holiday season especially, that solitude or even a doubtful allowance of privacy must be quite out of the question. You would picture the whole country a prey to the festive middle classes, its choicest spots swarming with excursionists, its "resorts" riddled by "Army and Navy" and German bands, trippers, "alger non-sensibles," and padding red-faced millionaires meandering even in its least accessible nooks. And from this you would go on to wonder how such loneliness as a dialect, queer old customs, and so on could possibly hold their own. You would conclude that they could not, because, as it were, all at a kind, must have its possibilities and active soldiers rolled out of it, must pass to the conqueror an extreme of characterless uniformity. You would, in fact, expect to find that London and the big towns had leached the lung, that

the differences between the town and the country mind had disappeared, that Yorkshire was as Cornwell, Lancashire as Suffolk, and all of them like a metropolitan suburb. But you would be utterly wrong. There is far less uniformity of mind and instinctive ways of looking at things in England than in America. Local habits, local idioms, local characteristics stand out against the railways and the public schools far more successfully than one would have hoped even in the most optimistic mood. To enter a new neighborhood in England is as often as not like going into a new world. And somehow, in spite of all the millions of holiday-makers, there are places, plenty of them, where the many-headed crowd does not, where you can be as quiet and comfortable as you wish, and where you will find the most splendid of the wilderness, but the peacefulness of trim and cultivated antiquity, unimpaired by, impregnable to, the modern road. Within a day's walk from Hyde Park Corner

I know of a little village, perched beautifully on a Sussex ridge, which Cromwell might visit to-day and find nothing changed in any one who really knows England could give you off-hand a dozen such places, most of them inland, but not a few on the coast.

Swanage, where I write from, is hardly so primitive as all this. It is in the chrysalis stage, with hopes of eventually becoming one of the best known of south coast watering-places. At present it is agreeably overhauled by Bourne-mouth and Weymouth. These have already arrived, while Swanage is only emerging and may happily fall to win much favor. It has grown out of its old state as a fishing and smuggling village, and is halting now on the verge of a "boom." The staggard, narrow village street still remains untouched, with its tumble-down ruck and a succession of cottages sunk six feet or so below the level of the road, but new houses are being built out from it, apartment and

View by Alfred Parsons

Places where you will find the Peacefulness of a cultivated Antiquity

boarding-houses are multiplying, private residences are springing up on the outskirts, and already there are three hotels. It is, in short, a "resort" in the making, not yet popularized by the rabble, and still pleasantly bleeding the old with the new. For instance, in spite of its hotels, it has its town-crier, with a cocker hat and a red coat, just as you see him in the advertisements. I always go to the window when I hear his bell. For official impertinence I have never seen his equal outside of the leaden in the Madeline. He is everything a town-crier should be, red-tailed and white-haired, and with a voice that gives you the edge of his sixty years. Sometimes you can even make out what he is saying, but that is a mere side issue. Our announcements are sailing in Swanage bay, where King Alfred beat the Danes, and fishing for whiting, bass, and mackerel, and driving round the country-side to the various places of interest—there are plenty of ruins and historic buildings roundabout, besides the pleasure of "spotting" the waves and sometimes the original houses of Hardy's novels—and bathing in perfect water, high tide or low tide. Alas, of course, there are the inevitable gulls and lesser sea birds, and half a mile of tents stretched along the beach for bathing and bathing.

### THE PASSING OF A CURIOUS INDIAN CUSTOM

When the rich grand-sons of the Vancouver Indian chief Squaw, of the Nootka tribe, hid two years ago, his people held his memory in such veneration that they used his property for the erection of a great monument overlooking the sea near the Indian village on the island of Vancouver. The memorial presents a huge Alaskan totem of the carvers of the Indian mythology—and a statue. Now by one too young-machinist, combined as a token of sorrow by the late chief's name. The Indian custom of erecting such memorials to one that is disappearing with the passing of the wild fishes of the Northwest, and the Vancouver monument to preserve one of the last that will ever be seen.

**EVERY ONE HIS OWN SAMSON—A PEASANT CUSTOM IN HOLLAND**

One of the traditional pastimes of a Dutch mauldredery is a competitor feat of strength designed to test the prowess of the peasants. The game is to regulate the highest number of pounds by setting a weight, the winner having the chance of the postpaid and as his partner in the dance which follows.

- - - - - Proposed High-level Subway.

.....

## CHICAGO'S CENTENNIAL—A NINETY-MILLION

In connection with the celebration of its one-hundredth anniversary this week, Chicago will consider complete transformation of the elevated, surface, and subway systems, and will cost, in all, \$59,800,000 the drawing, which will provide immensely improved means of transportation not only in the business new plan for elevated loops, the plan provides for both a high and low level subway system, with the rem will be completed by an underground tunnel connecting Michigan Boulevard with the Lake Shore

Proposed Low-Javal Subway.

A-New Lake Front.

B-Entrance to new Underground Boulevard.

## ONE-DOLLAR PLAN FOR TRANSPORTATION

Extensive plans for the improvement of the city's transportation facilities. The plans provide for a new Boulevard system, a new Underground Boulevard, and a new Lake Front. It is proposed to substitute for the present elevated railway loop four new loops, as shown in the plan, and to provide for the Boulevard system at all points where the loops from each side of the city intersect. The Boulevard system, altogether, the plan is one of the most comprehensive yet proposed for any American city.

# This Week's Centennial in Chicago

THE BUILDINGS OF CHICAGO—OLD FORT DEARBORN—THE EXPLORATION OF THE JENKINS—THE EVOLUTION OF LAKE MICHIGAN—THE INDIAN TRADE—THE MASSACRE OF 1812—THE GROWTH OF TRANSPORTATION FACILITIES.—IMPORTANT HARBOR IMPROVEMENTS.

By Professor Edwin Eric Sparks

THE planting of Fort Dearborn at the mouth of the Chicago River in 1803, the real beginning of the city of Chicago, furnishes the occasion for the centennial celebration now being held in that city. The history of Chicago is not far different from that of other inland cities. Advantageous points in the great system of inland waterways—perhaps the head or mouth of a river, a carrying-place, a harbor—become halting-places for the Indians, camping stations for traders, sites for protecting government forts, and nuclei for villages and, later, cities. At such obstructions in the pathways of commerce were collected the products from adjacent regions to be forwarded in manufactures sent in return. The Chicago River and portage proved to be a collecting and distributing point for the commercial world, but their written history commenced far back of this stage, antedating even the English-speaking occupancy which began with the fort.

Like other places along the St. Lawrence, the Great Lakes, and the Mississippi, Chicago cannot be dissociated from the missionary wanderings of the French Jesuits. From the plain stone building constituting the church, "college" hospital, and cloisters upon the lofty cliff at Quebec, this order sent more than three hundred priests, scholars, and assistants during a period of nearly two hundred years to tend the savages to Christianity. This period, measured by our history, began eight years before the landing of the Mayflower, and ended during the administration of Washington as President of the young republic.

Waterways were the ready highways for these Jesuits, as well as for the official explorers who often accompanied them to forestall the advance of the English from the Atlantic coast and of the Spanish from the Gulf of Mexico. From the Indians these adventurers stole strange lands toward the relative position of the water-courses and the shortest paths between them, generally near the head-waters. Perhaps the buffalo in migrating from one feeding-ground to another first made the traces which the Indians used as carrying paths and the French as portages.

The most ideal route to the westward was that from the head of the south branch of the St. Lawrence or Garlie River, at the head of Lake Michigan, to the present Desplains River, and thence into the Illinois and the Mississippi. Here the temporary body of water, which accumulating retreat of the ice age and is known to geologists as "Lake Chicago," had deposited a flat plain of sand and clay, fifteen miles wide at its greatest breadth and half fifty miles long in a crescent sweep about Lake Michigan. When the water retired to its present position and became Lake Michigan, the rainfall upon the northern portion of this sandy plain was drained by two arms of a stream, forming the present Chicago River. Flowing between low-lying, sedge banks, the stream cut deep into the sand, and accumulated the washings near level in the plain that the south branch of the river finds a head less than fourteen miles from the mouth and only fifteen feet above the lake level. If Lake Michigan had been sixteen feet higher it would have drained into the Mississippi instead of into the St. Lawrence. This slight elevation of the watershed suggested the present Chicago drainage canal.

To reach the Illinois country from the Great Lakes, the French first used the portage between the St. Joseph River at the southeastern head of Lake Michigan and the Kankakee; but they soon learned to use the easier and shorter one between the Chicago River and portage. So much frequented was this easy portage that a French fort of rude construction was built upon one of the hills called St. Louis, across the summit of an isolated rock which rose above out of the prairie one hundred and twenty-five feet from the Illinois River flowing at its base. No place was associated with the French in Illinois is so picturesque marked by nature as the site of the long-vanished Fort St. Louis.

Although the French explorers,

Jenkins, and traders approached the Illinois country by way of the Great Lakes, permanent French settlement reached it by coming up the Mississippi after the founding of New Orleans. The province of Louisiana embraced the Mississippi Valley as far north as the portage de Chicago. It was as transitional to the settlements formed within its jurisdiction. Every building in Kaskaskia, the largest of the Illinois villages—supposed to have contained at one time seven thousand people—has disappeared. Even the alluvial soil on which it stood has been washed away by the ravages of the Mississippi. A few bits of peculiar log-and-pole construction mark the site of old Cahokia. Fort Chartres, whose walls once enclosed four acres of ground, established for the protection of these French villages, is now reduced to a ruined powder magazine. The English-speaking conquerors and invaders wrought this destruction to secure building material for their houses, also entered the territory by the south instead of using the Chicago portage.

President Washington fully inaugurated the policy of planting forts on the frontier for the protection of settlers in order to sell the public lands. Three forts were located on the natural highways leading into the interior of the continent, and were built as rapidly as the Indians could be persuaded to yield possession of the land. By the treaty of Greenville in 1785, made after the usual drubbing, the savages drew another line beyond which the whites agreed not to settle. At the same time, the tribes confirmed certain tracts of land made in former treaties and consented to others upon which trading-posts or forts could be located. Among the sixteen grants of this kind was one reading: "One piece of land six miles square at the mouth of the Chicago River, extending into the southwest end of Lake Michigan, where a fort formerly stood." Thus was the traditional French fort of 1685 handed down after the lapse of a century. The Chicago portage was again assuming importance.

Military posts had already been established at several of these reservations, that at Detroit in the Indian territory being the most prominent. The old Fort Leveillé, with its "star" or "circular" stockade the centre of the village, the whole surrounded by a crenelated wall. The streets are narrow, straight, regular, and intersect each other at right angles," reported a United States Indian agent to his government in 1803. "The houses are the commonest, low and irregular, and a majority of them require very considerable repair." Several companies of United States troops had been stationed at this fort since its surrender by the British seven years previously. The entire army of the fort consisted of 100 men in 1854. From this number several existing posts had to be garrisoned and new ones established.

When Secretary of War Dearborn decided in 1803 to build a fort on the Chicago reservation, he ordered a company of the First Infantry from Detroit for that purpose.

Captain John Whistler, commanding the company, set out in a sailing vessel with some of his officers and the women, whilst Lieutenant Swearingen marched the men by land. There is a strong current along the west shore of Lake Michigan, probably due to the prevailing winds, which causes the sand to accumulate on the north side of an obstruction. The troops found such a bar at the mouth of the Chicago River, pushing the entrance as far south as the present Madison River, which has cut a deep furrow in the river (made by its present deflection the fort was located, and was soon constructed from the small oaks growing along the river. The war records contain scarcely a mention of this fort except to give its longitude and latitude, and to locate it "within a few yards of Lake Michigan." The name of the Secretary of War became associated with the fort, although never formally bestowed. The small two-story log-house was built near the stockade to accommodate the government "factor" or trader. In 1810 this factory contained 877 shins and 84732 worth of merchandise to exchange for furs.

Between 1803 and 1812 there was always at least one company of troops stationed at Fort Dearborn to protect the government factory and the few private traders dwelling in huts along the river. The latter year found the Northwest alarmed by the news of the execution of Tecumseh. The authorities at Washington decided to

In Commemoration of the Fort Dearborn Massacre of 1812

Fort Dearborn in 1863, from the North Side of the River

call in the outpost at Chicago. Attempting to retreat to Fort Wayne, the troops and fleeing settlers were attacked by the Indians, August 15, 1812, about one mile and a half from the fort and near the foot of the present Eighteenth Street. Of the fifty-four regulars nearly one-half were killed in this "Chicago massacre," together with twelve settlers acting as militiamen, two women, twelve children, the post surgeon, the interpreter, and an ensign. The remainder of the troops, with the women and a few surviving children, were made captive and distributed among the tribes for labor. A spirited group in bronze erected on the scene represents the rescue of Mrs. Helm by the Black Partridge, a friendly Indian. News of this attack was carried to Detroit a fortnight afterward by a Pottawatomie Indian. Seven days later it had reached Fort Erie by boat, and thence was taken to Buffalo, where it appeared under the headline "Fall of Fort Dearborn." In October it was copied in Niles's Weekly Register at Baltimore under the general head of "Events of the War." Such was the news service of that day.

The pacification of the Indians at the close of the war of 1812 allowed the traders to return to the Chicago River, a company of troops following in 1816 to protect them. The fort and many adjacent buildings had been burned by the Indians on the day following the massacre. The fort was rebuilt on the former site, but on different lines. It was now garrisoned from the western division of the army, whose headquarters were at St. Louis. The Indian trade at Chicago speedily revived. During 1817 and 1818 the government factor purchased the skins of 161 deer, 71 beavers, 1172 raccoons, 25,627 muskrats, and 16 foxes. But as yet there was no promise of the future city. When the fort was temporarily evacuated in 1825, in accord with the policy of garrisoning posts farther

West, there were probably not a half-dozen houses within a radius of a mile of the mouth of the Chicago River.

In 1831 the Black Hawk war brought General Scott with a large body of troops by water to rendezvous at Fort Dearborn. The vigorous report which the general sent to the authorities at Washington when he found it impossible to bring his vessels into the river no doubt aided in securing from Congress in 1833 the first appropriation for converting the river into a safe harbor.

This first gift from the national government, although only \$25,000, inaugurated the third stage of Chicago's history, the commercial era. Further appropriations were added from time to time to complete the work. Over four millions of dollars have thus far been given to widen, deepen, and straighten the river and to convert it into a magnificent harbor. Where formerly wreckage of adventurous vessels strewed the lake shore at certain seasons, commerce now finds a hospitable entrance, safeguarded in every possible manner, and a channel which leads to immense docks and elevators where the soldiers from old Fort Dearborn once mingled with traders, half-breeds, and squaws.

Vast buildings devoted to the wholesale trade tower in air, and freight-cars are shunted over terminal tracks where once stood the stockade and the garden of old Fort Dearborn.

During the present week Chicago will celebrate the centennial anniversary of the building of the fort. A band of Indians has been imported to give the desirable aboriginal aspect to the affair, and a company of regulars from Fort Sheridan represents the military feature. Tablets at various places inform the public of the historic past, and illustrated lectures in the school buildings will instruct both youth and adult in the early history of the city of Chicago.

The Site of Fort Dearborn as it looks To-day—an important Section of Chicago's Commercial District

**"The Rogers Brothers in London"**

Mr. Max and Mr. Gus Rogers, who are playing at the Knickerbocker Theatre in J. F. McVail's new musical farce, are pictured in scene with a brief melody of song and movement, such are picturesque plots, the scenes of which are laid on an ocean liner, in London, and finally in New York.

**Miss Annie Irish in "Ben-Hur"**

This Irish plays the important part of "Jes," the Egyptian eunuch, in the elaborate revival of "Ben-Hur" which Messrs. Klaw and Erlanger are giving at the New York Theatre. The cast in an important one, including Frank M. Irish, Messrs. Harry Woodell, Charles Mackay, and J. F. Dodson.

**Mrs. Langtry and Mr. Paul Arthur in "Mrs. Deering's Divorce"**

Mrs. Langtry returns to the New York stage this season in a comedy of merriment by Peter Frohly, an English playwright. The action of the piece turns on "Mrs. Deering's" love for her divorced husband. The latter has engaged himself to a rich and widely-spread, with no regard for former wife, she serves a beautiful youth who has become enamored with her. Neither at the divorce, however, is satisfied with the new matrimonial prospect. They discover that they are very well suited to one another, after all, and followed a scene of reconciliation, which takes place accidentally at a fashionable dressmaking establishment, the end of the play finds them reunited.

## THE DRAMA IN NEW YORK

**MISS JULIA DEAN**

*Miss Dean, who is to have an important part in "Aleg," the new play in which Yveta Tolley is to star this season, was leading woman with Nat Goodwin and Maxine Elliott last winter. Previous to that she played leading roles in the permanent stock company at Honolulu, H. I.*

### A SIGNIFICANT GERMAN STATUE

*The German sculptor Gustave Eberlein has recently finished an important statuary group, giving expression to a new and enlightened attitude toward France on the part of Germany. The statue is entitled "Ein Kulturideal," and symbolizes the invitation of the Fatherland to the French republic to advance with it in the interests of humanity. The heroic male figure representing Germany is crushing under foot the evil spirit of prejudice and animosity.*

### NEWS ITEMS INTERPRETED BY OUR SPECIAL ARTIST

1. "A New York philanthropist endows a hospital for homeless cats." 2. "The Dentists' Trust—No patient treated before looking up his record." 3. "Society adopts a new fashion in 'cross-country hunting.'" 4. "New use for X-rays—Gold coins swallowed by Japanese mist employer found by the new process." 5. "Manicurean outdoors—A Jersey sportsman kills twenty-five at a shot." 6. "Suggestion for photographing football celebrities on the field."

CONCERNING MUSICAL PROGRAMMES

FOR ROOSEVELT

CHARLESTON, S. C., August 24, 1903.

To the Editor of Harper's Weekly:

Sir.—As an admirer of "The Journal of Civilization," I beg to thank you for your superb review on the retirement of General Nelson Appleton Miles. I am satisfied the best Americans of both parties heartily agree with your views on the retiring general: but at the same time disapprove and condemn your attacks on Executive Roosevelt. Roosevelt is alone and ahead of his party. His record as a soldier and statesman is so gloriously immortal, regardless of his party's next convention, also of the result in November, 1904. It is the belief of many good Democrats here that President Roosevelt will be returned to the highest position on earth by a larger, not a smaller vote than was ever given by a larger body. And it is more conceded by all business men that the greatest menace to all business is national elections every four years, instead of once in eight years. Why not advocate this for the good of all Americans. These sentiments are those of a life-long Democrat, one who puts his country's interests above his party's success.

I am, sir,

JESSE CLEVELAND.

## NO RACE PROBLEM

ANNAPOLIS, MD., August 23, 1903.

To the Editor of Harper's Weekly:

Sir.—During the past year or two it has been very interesting to note how the North and South have joined together in an effort to solve the race problem. With this object in view, HARPER'S has been more diligent than any other magazine. It is a mistake to assume that the South should settle this question altogether without aid. The two sections see the danger from the standpoint of aid and suggestions are made by extreme ignorance of the conditions or by partisanship will not be rejected by the South without due consideration.

It is also a mistake to assume that we young men of the South show indifference as to whether the negro obtains his rights or not. In all Southern colleges and universities this is a favorite study in both classroom and debating society. It is true that young Southern men are just as firm and steady in their faiths and beliefs as their fathers ever were, but no one can arouse these same young men, or their fathers either, not being broad-minded and democratic enough to assist a struggling helpless race, so long as that race keeps within the limits an all-wise Providence provided for it.

HARPER'S WEEKLY has dealt with the matter with broad American spirit, and should all the papers follow your lead something might be accomplished. No doubt agitators in Boston picture all Southern white men as frenzied looters with a horsewhip in one hand and a revolver in the other, at the same time resting one foot on the neck of the black man. Yet this is an unkind cartoon, and the artist who drew it never saw the South.

But the South has never relinquished the views she always held with regard to the negro. In those old days, when the races began to mingle, the forefathers of the white man began to build up a higher civilization, along with his mechanical devices, and he cultivated higher conceptions of life. The black man lacking the resourcefulness and mental ability of either Greek or Roman went to the jungles and began to deteriorate. He was finally taken out of this savage state for commercial purposes, and was later placed on an equal footing in plane with his white brother. In the first place he lacked the white man's resourcefulness and higher social and psychical conceptions, and in the second place, he had been made helpless by centuries of stagnation. After a long period in the dark medium transition to the light lands, now it is to be expected, then, that the negro can take an equal plane with the white man?

Now that the devastating result of sudden total emancipation has passed, even the most radical portion in the South acknowledges that slavery in its worst form was a different thing, and it will never be recognized in the North. Dr. Crum has said that the negro will become so populous that in time they will rule in the South. When such a state of affairs exists no firing line exists between the Southern men who fought at Kings Mountain and at Gettysburg will be alive.

Since the atrocious errors that have recently been committed in the North and the invariable results, Northern editors have come to realize that there are two sides to this question. It is worthy of remark, too, how the North has come to consider the problem in a more impartial manner and how she has silenced the Boston agitators who would not let even Booker Washington speak quietly and peacefully.

The ignorant and the partisan are certainly incompetent arbitrators, whether they live in Boston or South Carolina. The question must be settled by fair-minded men—men who have pride of race, but who are broad-minded and democratic enough to see the right thing by a simple right people. And since no action of this great united union can be believed or brought to accept any distasteful condition, the question must be settled to the satisfaction of all sections and races concerned.

In a country which has produced at various intervals a Washington, a Lincoln, a Lee, a Grady, and a McKinley is the settlement of the problem beyond the ability of its statesmen?

I am, sir,

FLETCHER CHESAULCE.

CHARLOTTE, N. C., August 20, 1903.

To the Editor of Harper's Weekly:

Sir.—Your correspondent, with the volubence so common and so unconvincing in musical criticism, object to degrading a good programme by admitting popular pieces. But will they not admit that we have a little superior music admitted into popular programmes? Why not set people who do not care for the best learn to care for it by learning what it is? Didn't we all have to do so? When we were children how barbarous a taste we had as to what we listened to and sound. I wonder what kind of us, possessed of a piano, look in his school-books with the flaring colors that he liked best. Or who of us, for all our classical taste as grown-ups, didn't we stand in front of a street organ as long as it would staid, or follow any brass band that ran back to Theodore Thomas's popular concert in Central Park garden, or all around through the land? And have they forgotten how he beguiled the untutored into taste for good music by giving them bits from symphonies and operas by the great composers? Goodness, your taste of music is respected in any company, if it doesn't seek to elbow off the platform less pretentious songs and dances. It is thus that the public taste in worship-music has been extensively improved.

I am, sir,

A HYMNAL EDITOR.

## THADDEUS STEVENS

LANCASTER, Pa., August 21, 1903.

To the Editor of Harper's Weekly:

Sir.—In the August HARPER'S WEEKLY you comment upon Mr. Bryer's expression in his volume of biographical studies, "Finally, he had the great advantage of living long." He evidently refers to Gladstone. In your very learned critical comment upon the thought-ladenness in the generation, give John ment upon the thought-ladenness which great profit resulted from longevity. Bright as an instance where great profit resulted from longevity. That is perfectly in accordance with the facts in his case. But the strongest case of the kind history ever produced was our fellow citizen Thaddeus Stevens, the emancipator. He was an abolitionist and abhorred for his advocacy of anti-slavery doctrines. The fulfillment of his policy and his honors came in the last ten years of his life. His vindication came with overwhelming final results. It was greatest of all, because the subject-matter that he produced it was the greatest that ever transpired in the world's history. There never existed any man, in ancient or modern times, whose ambition and labors had so magnificent a vindication as those of the "Old Comrade." He lived here and we were his honor, and we revere his memory and we are ever cherishing his name and distinction for him. The Christian war and our civil war and results hardly bear comparison.

I am, sir,

AND M. FRANTZ.

## MARRIAGE AND TOBACCO

RADON, N. C., August 20, 1903.

To the Editor of Harper's Weekly:

Sir.—It is possible to resist an impulse again and again, only to have it "bop up severely" later so big and so strong that it "wangles us." Your columns are generously open for the discussion of interesting topics, and certain of us have long been hoping to hear from a woman who retains her sisters, well equipped by nature and art for the success of a tobacco habit, and children should fit themselves for independence, and, seemingly happy therein, refuse seriously to consider matrimony.

Here one reason. Twenty-five years ago the most fastidious women married men already wedded to the tobacco habit and tried to believe, as a few still declare, that they "liked the odor of a good cigar." Of recent years women have taken up physical culture, with all that it means of building the temple of the indolent God well and keeping it pure. This has by imperceptible degrees made them fastidious to a new fastidiousness. A man seldom with a taste tobacco can escape inconvenience and disgust to a number of his feminine (and some masculine) neighbors in church or hall, and it is no wonder that now who would not dream of defiling herself with such an odious habit should decline the reality by proxy.

We have all heard smokers say that intricate business programmes become readily soluble during the smoking of several cigars, and the temptation is almost irresistible to ask if they would like their wives and daughters to solve their problems by the same means. Who knows—perhaps if the women smoked freely some solution of the severest problem might come to 'em? Will not the wives of smokers try what seems to be the only untrodden path? Permit me in closing to thank you for the enlightenment and pleasure your columns give us, with the horrors of crime, with which the dailies teem, left out. They contain all of politics that a busy woman needs, so well stated that every line is interesting. Your writers are all experts. I have read the HARPER'S WEEKLY for several years, and have contracted the HARPER habit, and cannot be quite happily without all three.

I am, sir,

G. E. S.

# LETTERS OF MARQUE

ISSUED UNDER SEAL OF THE KINGDOM  
OF BOHEMIA TO ESPER INDIMAN, ESQ.

BY VAN TASSEL SUTPHEN

## The Adventure of the "Private Letter-Box"

I HAD agreed to meet Esper Indiman at the Ullman and dine there. The weather had turned cold again, for it was the middle of our chargeable March, and the draperies in the common room of the club was leaped high with hickory logs, a cheerful sight, were it not for that odious motto, "Non Possumus," graven over the mantel-shelf where it most inevitably met every eye. Never could I read it without a tightening of my heartstrings; a very potency of blighting evil seems to speak in the mournful words.

There were but two or three club members in the room, one of them the young Mr. Sydenham, who had attracted my attention once or twice before by the insidious slyness of his face. A more boy, too, hardly five and twenty at the most. He sat in a big chair, a magazine with its leaves rustling in his lap. For an hour or more he had not stirred; then he rang for a servant, directing him to inquire for any mail that might have come in the afternoon delivery. Nothing for Mr. Sydenham was the report, and again the young man relaxed into his melancholy musing. An hour later, and just after Indiman had joined me, Mr. Sydenham repeated his inquiry about his letters, receiving the same negative answer—Nothing for Mr. Sydenham. Evidently the disappointment was not unexpected, but it was none the less a bitter one. With a sigh which he hardly attempted to stifle, the young man took up his secret magazine and made a pretense at examining its contents; I watched him with a lively but silent pity; any active sympathy might have seemed obtrusive.

A servant stood at the young man's elbow holding a salver on which lay a mixture of some sort, a telegraphic message, to judge by the flimsy, buff envelope.

"Telegram, sir," said the man at length. "For Mr. Sydenham; yes, sir, will you sign for it?"

The boy turned slowly, and there was a sick horror in his eyes that made me feel cold. He signed the book and took the message from the salver, apparently acting against a sense of the most intense repulsion, and for all that unable to help himself. The message open in his hand he did not seem to concern himself overmuch with its possible import; presently the envelope fell from his inert fingers and fluttered down at Indiman's feet. The latter picked it up and handed it to the young man, who thanked him in a voice barely audible.

"The man is waiting to see if there is any answer," suggested Indiman, quietly.

Mr. Sydenham started, colored deeply, and tore open the envelope. He read the message through carefully, then pressed it for a second and a third time, and sat motionless, staring into vacancy.

Indiman leaned forward. "Well?" he said, sharply.

The young man looked up; the cold confidence of Indiman's gaze seemed suddenly to inspire in him a feeling of trust; he took the risk; he handed the message to Indiman. "What answer would you advise me to give?" he said.

The message contained these words:

"The Empire State Express passes the Fifth-third Street bridge at 8:35 o'clock to-morrow morning. Is life more than honor?"

Indiman looked at me, then he rose and took Mr. Sydenham by the arm. "Let us go into the card-room," he said, quietly. "Thorpe, will you come?"

The young man's story was very simple. He had held until lately the position of cashier in the firm of Sandford & Sande, stock-brokers. On January 12 a shortage of fifty thousand dollars had been discovered in his books. Mr. Sandford being an intimate friend of the elder Sydenham had declined to prosecute. That was all.

"Let us proceed frankly, Mr. Sydenham," said Indiman.

"Did you take the money?"

"I am beginning to think so," answered the young man dully.

"Come," said Indiman, encouragingly, "that does not sound like a confession of guilt. Don't you know?"

Mr. Sydenham shook his head. "I can't tell you," he answered, hopefully. "My accounts were in perfect order up to January 16, when I discovered that our bank balance showed a discrepancy of \$30,000. I covered it over for the time, hoping to find the source of the error. Five days later I told Mr. Sandford. The money was gone, and that was all that I could say."

"Let us recall the events of January 5. Did you make your regular deposit that day and where?"

"We keep our account at the Bank of Commerce. But that afternoon I overlooked a package of bills in two denominations. I sent another messenger over to the bank, but it was after three o'clock and the deposit was refused. The boy brought the money back to me—the package contained \$30,000."

"And then?"

"I don't know. I might have locked it up in our own safe or carried it home with me or pitched it out of the window. It is all a blank."

"Did you stay at the office later than usual that day?"

"Yes; I was busy with some of Mr. Sandford's private affairs, and that delayed me until all the others had gone. I left about five o'clock."

"And now who is V. S. I. Pardon me, but the question is necessary."

"Miss Valentine Sandford—Mr. Sandford's daughter. I was engaged to be married to her."

"I had asked and been refused. Then that very day she sent me a telegram. It contained the stilet word 'yes,' and was signed by her initials. It came at the same moment that the messenger brought back the money from the bank."

"And it is the same V. K. who sends this message?" asked Indiman, something out the telegraphic blank which he held in his hand.

The young man took a bundle of papers from his breast pocket. They were all telegraphic messages, and each was a suggestion towards self-destruction in one form or another. "Suicide's corner" at Niagara, poison, the rope—all couched in language of Satanic ingenuity fit immundo, and ending in every instance with the expression, "Is life more than honor?" Answer, V. S. I.

"I have had at least one every day," said the young man. "Sometimes two or three. Generally in the morning, but they also come at any hour."

"And Miss Sandford?"

"I write and tell her of my terrible misfortune, released her from the unannounced engagement, and begged her to believe in me until I could clear myself. I have not seen her since the fatal day of the 15th of January."

"And you have received from her only these—these messages?"

"That is all."

"And you think they come from her?"

"No; or I should have killed myself long ago. But there are days when I do take a tight hold on myself; to-day is one of them," he said, very simply.

"Mr. Sydenham," said Indiman, solemnly. "I now know you to be an innocent man. Had it been otherwise you would long since have stumbled under this mysterious and terrible pressure."

"I am innocent," repeated the young man. "But to prove it?"

"It shall be proved."

"The money?"

"It shall be found."

"Through whom?"

"Yourself. A simple lapse of memory is the undoubted explanation. The gap must be bridged, that is all. Will you put yourself in my hands?"

"I am ready."

"Good! I desire then that you should return to your home

dashed away. Sydenham looked again at the sprig of hellebore; he pressed it passionately in his lips. Then carefully placing it in his pocket-book, he began an examination of the papers left by Mr. Sandford. The clock struck three.

The clerk Alden re-entered. "They wouldn't take it," he said, and handed the package of bills to Sydenham. "Oh, very well," said the cashier, absently, "I'll take care of it. That's all, Alden; you can go."

For an hour or more Sydenham worked steadily. Then, gathering the papers together, he rose, took off his office-coat, and began making preparations to depart. There he came into Mr. Sandford's private office, where he was sitting, but apparently he did not notice our presence. Indiana gripped my hand hard. "Going splendidly," he whispered.

The cashier put on his hat and top-coat. The legal papers were carefully stowed in an inside pocket, and he was about to close down his roll-top desk when the package of bankbills met his eye. He frowned perceptibly; then picking up the bundle he dropped it into the same pocket with the papers belonging to Mr. Sandford. He went out, closing the door behind him.

We followed as quickly as we could, but this time luck was against us—Sydenham had disappeared.

"To the safe deposit company," said Indiana, and we jumped into a hansom. Mr. Sandford was there, and we waited impatiently for Sydenham's appearance; it was the only chance of again picking up the lost trail.

There he came, walking slowly up Nassau Street, in a manner a trifle preoccupied and his eyes bent on the pavement. Opposite the safe deposit company he stopped and thrust one hand into an inner pocket. He took it away empty, and a terrible change came over his face. With a quick movement he drew out the bundle of banknotes and regarded it anxiously. A cry burst from his lips; he reeled and fell, the money still clutched in his hand.

Instantly we were at his side. A coach was at hand, and we got him into it, and directed the driver to proceed to Indiana's lodgings. The attack had been but a momentary one, and Sydenham revived as we turned out of Park Row. He looked at us, then at the money in his hand.

"It has failed," he said, brokenly, and none of us could say a word. "I came to myself," continued Sydenham, with forced calmness; "there in Nassau Street; it was as though I had awoken from a dream. The money—it was in my hand. I stood before the world, a self-convicted thief. I think you; you have done your best, but it is useless." He passed the money to Mr. Sandford; mechanically his hand went to the inside breast-pocket of his overcoat; he drew out the package of legal papers bearing Mr. Sandford's name. "But—but," he stammered, "I don't understand—I left these in your box at the safe deposit company."

"To be sure you did," answered Indiana, coolly. He pulled the clerk-card. "Drive back to the safe deposit," he called to the hackman.

"Now, then," said Indiana, in a quiet matter-of-fact tone, "will you tell me the conditions under which you had access to Mr. Sandford's vault. Of course your name as an authorized agent of Mr. Sandford was on the company's books. You had your pass-key, of course?"

"No," said Mr. Sandford. "There was but one pass-key, and

that I kept myself. When Mr. Sydenham had any business to do for me at the safe-deposit vaults I would let him have the key temporarily."

"You gave it to him on that particular day, the 9th of January?" continued Indiana.

"Yes."

"Where is it now?" almost shouted Indiana.

"Here," said Mr. Sandford, in surprise. "On my key-ring." "Exactly. There is the broken link in our psychological chain. When Mr. Sydenham felt for the pass-key, which should have been in his pocket, he discovered that it was missing. Instantly, the continuity of events was broken, the solid link necessarily was again submerged, and Mr. Sydenham's normal consciousness was re-established. Mr. Sandford, you are perfectly aware of the fact that these legal papers were properly deposited in your vault, and that the pass-key was returned to you by Mr. Sydenham on the morning of January 10. Gentlemen, it is evident that we shall find the original fifty thousand dollars lying in Mr. Sandford's strong-box, where it was left by Mr. Sydenham on the afternoon of January 9."

I noticed that I was mightily excited when the moment came to test the correctness of Indiana's deductions. We were shown into a private room, and, under Mr. Sandford's eye, the treasure-box belonging to him was carried in and opened. Almost at the bottom lay a long brown mailing envelope fastened with three red rubber bands. It contained fifty one-thousand-dollar bills.

"I noticed that envelope several times," explained Mr. Sandford, "but supposed it contained some mixing stock. You see here is another envelope identical in appearance and lying directly beneath it. Mr. Sydenham never suggested even that he might have left the missing money in my safe-deposit vault."

"It never occurred to me that I could have done so," said Sydenham. "I remembered making a deposit of the papers—but the money, no, I had no recollection of having seen or touched it from the moment that Alden brought it back from the bank and laid it on my desk."

"Gentlemen," said Mr. Sandford, "I am indebted to you for speak of that again. Where can I put you down?"

But Indiana declined to re-enter the coach, pleading some further business downtown, and of course I remained with him. The carriage was about to drive off when Indiana put up his hand.

"How stupid of me!" he exclaimed. "I had almost forgotten." He took from the pocket of his overcoat a rather bulky package and handed it to young Mr. Sydenham. "They'll explain themselves," he said, smiling. The coach rolled away.

"The missing letters from V. R.," said Indiana, in answer to my look of inquiry. "As average of two a day, and all addressed to him at the Utinam. Well, what was the poor girl to do? The young fool had changed his lodgings and put up his hand, every possible trace of his whereabouts. All Miss Sandford had to go on was the bare intimation that he could be addressed at the Utinam Club. She might as well have posted her communications in the North River."

"I don't follow you."

"Two days ago I put a dummy letter addressed in Sydenham in his private lock-box at the Utinam. I had promised, you know,

He reeled and fell, the money still clutched in his hand

BOOKS BY THE LATE

Mrs. M. E. W.

**SHERWOOD**

**An Epistle to Posterity**

Being rambling recollections of many years in the author's life

Mrs. Sherwood's reminiscences extend over a period of more than half a century of American social, political, and literary life, and their range comes very close to the limits of Dr. Johnson's famous survey of mankind—from China to Peru. Literally, Mrs. Sherwood must have known every one and gone everywhere, for there is hardly a shining name on our honor roll of art, letters, and affairs that is not included within the wide circle of her acquaintance.

With portrait, \$2.50

**Manners & Social Usages**

"The last word on social etiquette"

This has been long recognized as the standard book on etiquette in America. There is nothing of pretense in it, nothing that weak worship of conventionality which gives the stamp of vulgarity to the greater part of what is written on this subject.

New edition, attractively bound and illustrated, \$1.25

**A Transplanted Rose**

A story of New York society

The story is cleverly told, and gives a picture of metropolitan society which is realistic in the extreme. There is a great deal about social forms in New York which will make the book interesting to the feminine mind, details about sending cards, introducing people, etc.

75 cents

**HARPER & BROTHERS PUBLISHERS - NEW YORK**

to send him on his mail if he would keep away from the club, and accordingly I laid the key of the letter box in my possession. Ten minutes later I went again to the box and it was empty—that is, you could see distinctly from one end of the box to the other, and it was absolutely bare."  
"A duplicate key, of course."  
"Not at all. It is only a stupid person who descends to crime—except as a last resort."  
"Well, then?"  
"Did you ever attend any of the exhibitions at the old Egyptian Hall? One of the favorite illusions was the trick cabinet in which the performer seated himself in full view of the spectators. The doors would be closed for an instant, and then, when reopened, the man had disappeared. The full interior of the cabinet was plainly visible: it stood on legs, which precluded the idea of a trap-door, and it was inconceivably shown that grooves from the back, top, or sides was impossible."  
"Yet the performer was gone?"  
"I said that the cabinet appeared to be empty—quite another thing."  
"Go on."  
"It was a simple arrangement of photographic mirrors fitting closely at the sides and backed by the disintegrating paper of mill paper with which the rest of the cabinet was covered. Immediately that the doors were closed, the performer drew these false sides outward, so that they met and crossed at the doors of an acute angle. The false-side walls were thereby exposed, and, of course, they were papered to correspond with the rest of the interior. Their reflection was doubled in the mirrors, making it appear to the observer that the whole cabinet was open to his vision. The truth was that he saw only half of it, the performer being concealed behind the mirrors. The only possible point at which the illusion could be detected was the angle where the mirrors joined, and this was masked by the centre post at which the double doors met. To conclude the trick, the doors were again closed, the performer swung the mirrors back into place, and presto! he was back in the cabinet, smiling graciously at the gaping crowd."  
"Then you think—"  
"I know. Look box No. 82 was constructed on the same principle in miniature, the letter still being placed in such a position that anything deposited in the box fell behind the mirrors, the whole interior remaining visible through the glass front and apparently empty. The owner of the box would naturally glance into it before actually using his passkey. Obviously, it was a waste of time to go through the form of opening an empty box, and so poor Sidenham never got any of the letters that were daily deposited there, for the box is a large one and the secret place behind the mirrors was almost full. The artifice of unhooking the box operated upon an interior mechanism that swung back the mirrors at the same instant that the door was pulled open. After seeing my dummy disappear, I tried the experiment, and was amply rewarded."  
"You still reach more to tell. When I saw the letters lying there I knew that it was all right so far as the girl was concerned, but only to acquiesce Miss Sandford with the circumstances in the case to secure her further co-operation, for, of course, she had never ceased to believe in her honor. She prepared and sent the message which you saw delivered to Sidenham in Sandford's office this afternoon."  
"But it was not the same as the one received for him on the actual January 3. That contained a word, 'yes,' and was signed by her initials; this second one consisted simply of a speck of holotropic."  
"Do you understand the language of flowers?" The holotropic means, 'Je t'aime,' and Sidenham understood it instantly, as you saw."  
"Yes, but why?"  
"To repeat the original message would not have impressed him as I wished; it would simply have seemed part of the illusion which he knew perfectly well we were endeavoring to create. The problem was to suddenly startle him by a real communication from V. N. and, above all, to have it of such a nature as to convince him that the cloud between them had finally lifted. Now

## IN THE GARDEN OF CHARITY

By BASIL KING

Author of "Let Not Man Put Asunder"

This is a tale of the strange love of two women and a man—of the great love of both women and the great sacrifice of one of them. Charity Pennland and her soldier-husband and his mock-marriage wife—a charming half-Greek—are the leading figures in the story, which, in its idyllic beauty and intensity, recalls George Eliot's "Silas Marner." \$1.50.

HARPER & BROTHERS, N. Y.

without trust and confidence, true love is impossible. The message of the angel of hellfire told him all that he had been hungering and longing to hear throughout these terrible two months; the shock was sufficient to drive the normal consciousness from its seat and permit the subliminal self to take control. In other words, it practically put him back in the identical mental mood of the afternoon of January 6, and that was the crucial point of the whole experiment. Anything more?"

"Who sent the false telegrams?"  
"Of course you would ask that; I don't know."  
"Such a monstrous wickedness! It is inconceivable."

"Yes, unless we admit the existence of a spirit of pure malice—of an intelligence working out a plot so inhuman as to drive an innocent man to self-destruction for no other motive than that of doing evil for evil's sake. That such an intelligence has been active in this case is certain, or how explain the content of the letter-box, a necessary factor in the problem, as you will admit."

"But you don't know."  
"Not yet," answered my friend Indiman.

We dined down-town that evening, and it was about nine o'clock when we called a hack—coach as it started home-ward. As we drove on up the Bowery an illuminated transparency caught our eyes.

"Fair and Razor," read Indiman. "Benefactor of the United Housewives' Benevolent Association. What is a housewife, Therp? Evidently we will have to go and find out for ourselves." He pulled the check-book and gave the driver the new direction. Pure foolishness, of course, but Indiman was not to be put out of his humor.

Up one flight of stairs to a large, low-ceilinged hall that was jammed to suffocation. A score of gaily trimmed booths wherein were displayed various articles of feminine fallals and cheap bric-a-brac, each presided over by a lady housewife. "Or should it be housewife-hunt?" asked Indiman. "Hullo! What's this?"

Behind a long counter covered with red paper muslin sat a dozen young women of more or less pronounced personal charms, and a huge placard announced that houses were on sale at the uniform price of fifty cents, "take your own choice." Smaller cards bore the various cognomens assumed for the occasion by the fair vendors of pecuniary delights. "Cleanpairs." "The Fair One with Golden Locks," "Kathleen Mac-vornmen." "Punchboats," or more simply, albino and less mysteriously, "Miss A. B.," or "Mademoiselle N." Of course, each and dressed the part as neatly as might be, and the exhibition was certainly attractive to the masculine eye. In questionable taste, no doubt, but one does not stand upon trifles when it is all for sweet charity's sake.

"My dear Therp," said Indiman, with the utmost gravity, "have you half a dollar in your pocket? Therp, come with me, and harketh will be lamed and returned to me very through the crowd until we reached the long counter covered with red paper muslin.

Here the "Adventure of the Private Letter-Box" ends and that of the "Twenty-and-Nine Kisses" begins.

### How Bulgaria Trains Leaders for the Macedonian Cause

See page 1843

During the middle centuries Bulgaria was one of the strong and prosperous kingdoms of the Balkan Peninsula, ruling over an extensive area, and inhabited by a large population. Her borders touched the Black Sea, the Aegean, and the Adriatic. The remembrance of the glory of her emperors—Kroem, Asen, and Simeon—still thrills the Bulgarian heart with pride. It was Czar Simeon who led his victorious armies to the very walls of Constantinople, and it was of his line that Gildan says, "Bulgaria assumed a rank among the civilized powers of the earth." But Turkey divided to have possession of the Balkan Peninsula. After

## Nature

never covered an animal's body with cotton or linen. Wool is the only substance possessing all the properties essential to the ideal covering for the human body.

## WRIGHT'S HEALTH Underwear

is made with an inside fleece composed of tiny loops of wool woven into the lamination fabric. This makes the most natural, hygienic and healthful underwear ever devised. It keeps in the warmth, takes up the perspiration, ventilates the skin and prevents chills.

Wright's Health Underwear comes in all styles, for men, women and children. It is made of the finest quality of wool, and is guaranteed to last.

HARPER & BROTHERS, NEW YORK

conquering other nations, she succeeded in capturing the hornie Bulgarians, whom she kept under her despotic rule for five hundred years. When the intolerable sufferings of this Christian nation under its Moslem oppressors finally attracted the sympathy of the world, Russia came to its help in 1877 and secured its autonomy by the Treaty of Berlin, the next year.

Bulgaria is now only a small principality of 48,500 square miles, and a population of 2,310,000; yet she is free enough again to be free, and to enjoy her own national rights.

**What the Academy is**

The National Military Academy was founded in 1878 at Sophia, the capital, with Major Bolekine, a Russian, as its director. The number of cadets in attendance formerly averaged four hundred, but in latter years has increased to five hundred. The course of the school covers four years, and the cadets, after graduating and serving for several years in the army, are free to go and continue their military education in any of the several other European academies selected for this purpose by the Bulgarian government.

The school has thirty-four teachers, of whom twenty-three are military men and eleven civilians. Some of the best-educated and most talented Bulgarians are among the teachers. In the beginning of the fourth year of the course the graduating class is divided into two sections. Those with the highest marks in mathematics are taken for the artillery, and the remainder prepare to enter other branches of the army—infantry, cavalry, or pioneer corps.

**Two Thousand Graduates**

Officers graduated from this school can attain any rank in the Bulgarian army for which their audacity and efficiency fit them. Some of the most capable officers of high rank at the present time have had only the military education which they received in the Academy. In the twenty-five years since it was established, the Academy has sent out upwards of two thousand graduates. Its present director is General Ieff, who succeeded Colonel Soreff when the latter was chosen Minister of War, early in the present year. He was himself a graduate of the institution of which he now becomes chief.

**Leaders for the Revolution**

Of the more than two thousand officers who have graduated from the Academy, six hundred are from Macedonia; many of these are at present bearing hardships and fearful dangers as leaders of the revolt in their native land against Turkey. General Tschouff, vice-president of the Macedonia Revolutionary Committee, and Colonel Tschouff, who in September of last year proclaimed the revolution, both of whom are taking a prominent part in the terrible struggle for liberty now being waged in Macedonia, received their military training entirely in the Academy at Sophia.

**A Case of Defective Memory**

An anecdote which has lately been going the rounds in British official circles concerns the memorable experience of a certain member of Parliament during the last year of Queen Victoria's reign. The distressing incident in question is not one of those which are most firmly convinced of the benefits of total abstinence, and the evading of a certain public function at which royalty was to be present found him in a condition which would not have been edifying to the supporters of that movement. The late Queen was receiving the guests of honor, and it was necessary that the member in question should be presented with the toast. As he approached his sovereign, Victoria extended her hand for him to kiss. But he did not kiss it; instead, he grasped and shook it with vigorous enthusiasm, while he scrutinized her face with grave perplexity. "Very face, madam," he observed, "is perfectly familiar to me, and I'm blessed if I can remember your name!"

# William Makepeace Thackeray Complete Writings

IN TWENTY-FIVE VOLUMES

*A Set of Thackeray is not a Luxury—it is a Necessity*

THACKERAY'S creations place him at the head, perhaps, of the English novelists of the nineteenth century. His characters are always human. There are no immaculate heroes, no perfect heroines, no utterly unredeemed persons of either sex to be met with in the pages of his books. He conceived it a duty to describe the world as he saw it, and he drew his characters with admirable realism, and with a marvellous insight into the natures of men and women. We take pleasure in announcing a new edition of Thackeray's complete works, and we feel confident that this edition will meet with the approval of all lovers of good library books.

## The Heart of Hyacinth

by

ONOTO WATANNA

Author of "A Japanese Nightingale," etc.

"The Heart of Hyacinth" tells the love story of a daughter of American parents, born and reared in "the land of flowers," and of a half-caste youth whose father was an English nobleman. The fairy-like charm of Japan is felt in every page of the story. It is incomparably dainty, and it is filled with the indefinable spirit of the East.

The book is bound in a delicate lavender cloth, with gold and colored cover decorations. There are full-page illustrations in color and marginal drawings in tint by Japanese artists on every page.

Gift Top, Uncut Edges, in a box, \$2.00 net (postage extra)

## COMMENT

As in the autumn of 1896, so at this time, the eyes of politicians are fixed upon Ohio. Should the Democrats carry the Legislature, or even make great gains over the vote cast by them in recent years, they would be encouraged to make a concerted and energetic campaign in all the doubtful States next year. Nor would such an incident tend, as might at first sight be supposed, to strengthen the influence of the Bryan-Johnson element in the party. Such an inference would be refuted by the fact that Mr. John H. Clarke, an avowed Gold Democrat, was nominated for United States Senator by the Democratic State convention, and was unanimously accepted by Mr. Bryan. Any marked gains, therefore, at the ballot-box would be attributed to a thorough reconciliation of Gold and Silver Democrats. It would follow that if such a reconciliation could be effected in Ohio, where the Silver Democrats have been rampant and resentful, it could be more easily effected in Indiana, as well as in New York, New Jersey, and Connecticut.

Mr. Clarke has shown sagacity in selecting the issues on which his campaign is based. About the free coinage of silver at the rate of sixteen to one he naturally says nothing; and Mayor Johnson, the candidate for Governor, maintains an equally judicious reticence. That issue they justly regard as dead. Neither are we surprised to see that Mr. Clarke, who is an eminent lawyer, refrains from an attempt to narrow the equity powers of our judiciary by vague declamation against "Government by Injunction." He would far rather, on the platform, and we may be quite sure, therefore, that his Republican competitor for a seat in the United States Senate will decline the invitation to meet him in joint debate. The only Ohio Republican who could cope with Mr. Clark upon the platform would be Senator Foraker. In his speech at Chillicothe on September 19 he did his best to shield his colleague by declaring that the only joint debate of interest would be one between John H. Clarke of 1903 and John H. Clarke of 1896. He thinks that it will keep the former busy until election day is gone to answer the latter. He adroitly admits that the John H. Clarke of 1896 was a very

able and vigorous man, who said in a vigorous and forcible way a great many things that nobody has ever yet answered. That is true.

In Kentucky some of the Gold Democrats are disposed this year to support Colonel Morris Bellman, the Republican candidate for Governor, and there is no doubt that the Republicans will make a desperate effort to carry the State. It will be remembered that Mr. McKinley carried Kentucky in 1896, though by a plurality of less than three hundred, and that Mr. Bryan obtained in 1900 a plurality of less than eight thousand. In view of these facts it would be idle to deny that the State is a battleground, but we do not believe that it will go Republican this year or next. In Colorado the Democrats at their State convention followed the example set by Nebraska and Ohio and reaffirmed the Kansas City platform, free silver and all. This performance is no more significant than would be the news that the Dutch had taken Holland. Colorado, it will be recalled, gave Mr. Bryan a plurality of nearly 135,000 in 1896, and almost 30,000 four years later. It is true that in 1902 the Republicans regained control of some State offices, but not of the Legislature, and therefore failed to prevent the re-election of United States Senator Teller. The offices to be filled this year are of no great importance, and the Republicans possibly may secure them, for only a small aggregate vote is likely to be polled. It is improbable that, under any circumstances, the five electoral votes of Colorado will go in 1904 to the Republican nominee for the Presidency. What is true of Colorado is true also of Montana. Mr. Bryan carried that State in 1896 by upwards of 32,000 plurality, and in 1900 by nearly 12,000. It still looks as if its three electoral votes would be counted for the Democratic nominee next year.

In Maryland Mr. Edwin Warfield has been nominated for Governor by the Democratic State convention. He is a man of high character, and has set his face inflexibly against the corrupt use of money at elections. He has not been in public life since 1896, when he retired from the post of Surveyor of the Port of Baltimore, to which he had been appointed by President Cleveland. The nomination of such a man bears witness to Senator Gorman's wisdom, as also does his refusal to permit the Maryland Democratic convention to put forward his name as a candidate for the Democratic nomination for the Presidency next year. He knows that he has some personal enemies among the Democrats of his State, and that it is of the utmost importance to his own prospects that their support of the State ticket this year should not be lukewarm. He is also aware that, as he controls the machinery of his party in his State, he can command Maryland's endorsement of his candidacy for the Presidency whenever he wants it. In the Democratic national convention the delegates from Maryland will support any candidate whom the Senator prefers. We add that, outside of his own delegation, Senator Gorman is likely to wield a weighty, though scarcely decisive, influence on the choice of the national convention.

Does Senator Gorman want the nomination for the Presidency, and could he get it if he did? The latter question is answered unhesitatingly in the affirmative by Mr. Clark Howell, the editor of the *Atlanta Constitution*, who should be in a position to know the feeling of his party leaders in the Southern and Eastern States with reference to the head of the Democratic minority in the United States Senate. Mr. Howell is mistaken in assuming that the Cleveland and Bryan wings of the party could be united better on Mr. Gorman than on any one else. Mr. Bryan has distinctly in-

limited that under no circumstances would he and his friends except the Maryland Senator. In view of their probable defection, Mr. Gorman had not hope to carry any one of the four doubtful States north of Mason and Dixon's line. Mr. Gorman would rather be a king-maker than an abortive pretender to the crown. Like a large majority of the Southern delegates to the convention, he is likely to leave the designation of the nominee to the doubtful States of the North.

Mr. Howell, indeed, concedes that the voice of New York will be more potential with the Southern Democrats than will that of any other State. He adds that if New York should put forward Chief Judge Parker, the South would support him. But what if New York and New Jersey should present the name of ex-President Cleveland—a contingency at least conceivable? Mr. Howell answers that the nomination of Mr. Cleveland, if such a thing were possible, would totally disrupt the Democratic organization in two-thirds of other Southern States, not to speak of the Western and other States. "Disrupt" is an alarming word, but what does it amount to when closely scrutinized? It is no doubt possible that the nomination of Mr. Cleveland might split the Democratic organization in the trans-Mississippi States, but there are only two of them, Colorado and Montana, with eight electoral votes between them, that any Democratic candidate would have much chance of carrying. As for the former slave States, Mr. Howell knows, as well as we know, that though there might be some talk of disaffection before election day, Mr. Cleveland would sweep every one of them, with the possible exception of West Virginia and Delaware. Neither have we any doubt that he could come nearer to carrying the two States just named than could any other nominee of the Democracy. We come, then, to the crucial question concerning our information is, perhaps, as trustworthy as Mr. Howell's—the question, namely, could Mr. Cleveland carry the States of New York, New Jersey, Connecticut, and Indiana? We answer that if he is unable to carry those four States, there is no living Democrat who can. In any one of those four States any possible disaffection on the part of the Bryanite element would be far more than counterbalanced by votes gained from those Republicans who look with distrust upon Mr. Roosevelt.

It is many years since so able a speech was made by a Republican statesman as that which was delivered on September 19 by Senator Foraker at Chillicothe, Ohio. We do not believe that any other Republican now living could equal it. Senator Foraker, by the way, stood in the foreground of politics when Mr. McKinley was unheard of, and we venture the prediction that he will still be conspicuous when Mr. Roosevelt shall have retired to private life. In the speech to which we refer, Senator Foraker rendered a service to his country, for there were passages in which he spoke not as a partisan, but as a patriot. No doubt he carefully kept in view his primary purpose, which was to promote the election of a Republican Governor in Ohio, and of a Republican successor to Mr. Hanna in one of the seats belonging to that State in the Senate. To that end, wherever the Republican programme is strong he made the utmost of its strength, and where it is notoriously weak he did his best to disguise the weakness. In what he said, however, about the imperative necessity of upholding the equity jurisdiction of the United States courts, he soared far above the ordinary level of the politician, and in his remarks upon the labor question he administered a lesson which ex-Senator Hill might do wisely heed. He pointed out how dangerous and how dangerous is the Bryanite protest against "government by injunction," which was proclaimed at Chicago in 1896, and echoed at Kansas City four years later.

We suppose that not one Bryanite in a thousand knows what the protest signifies. That protest means, if it means anything, that the courts of the United States ought to be deprived of their equity powers, one of the most useful if not indispensable of which is the power to avert by injunction an injury for which no adequate remedy can be provided after the harm is done. A little reflection should demonstrate that not only are such equity powers essential to the welfare and the safety of individuals and of the commonwealth, but the expression of a doubt concerning the fit-

ness of the Federal tribunals to exercise such powers is obviously an impeachment of their impartiality and wisdom that would be detrimental, if not fatal, to their usefulness through the whole sphere of their judicial functions. As Senator Foraker pointed out at Chillicothe, no greater calamity could befall our people than the serious impairment of the reputation of our Federal courts. Such an impairment might be even the beginning of the end of the republic, for men will not long tolerate a government that does not uphold a judiciary believed to be free and untrammelled. The true friend of labor-unions, he said, is the man who will tell them the truth, and not the demagogue, who, prating of friendship, holds out false promises and illusive hopes of something that is unattainable. Recent events have proved that when Mr. Roosevelt interposed between operators and miners in the anthracite-coal strike, labor-unions were encouraged to believe that he could and would go much further on their behalf; that he would, for example, at their behest, shut non-unionist labor out of Federal employment. This, of course, Mr. Roosevelt is unable to do without violating the spirit, if not the letter, of our laws, and the result is that the labor-unions look upon him as a deceiver. They can never make any such mistake again as Senator Foraker. They will always know exactly where he stands.

It is alleged that labor-unions can control in a Presidential election nearly 2,500,000 votes. Will these votes be cast for Mr. Roosevelt in 1904 if he shall receive the Republican nomination for the Presidency? Until very recently it was assumed that the question should be answered unhesitatingly in the affirmative, and the assumption furnished the strongest ground for believing that the Republican nomination would go to Mr. Roosevelt. If he can only get a fraction of those votes, and if a majority of them are likely to be cast against him, what reason is there for preferring him to some other candidate—an older, if not an abler, soldier in the public ranks? The supposition that he was likely to get all the votes controlled by the labor-unions was founded on the fact that, as President, he had transcended his constitutional functions, by interposing between the miners and the operators in the anthracite region, and thereby rendered the former an invaluable service. The hypothesis was open to contradiction on two grounds. First: Many miners are disposed to regard the alleged service rendered them by Mr. Roosevelt in appointing the Coal-Strike Commission as insignificant, if not ad. They point out that the award of the commission did not recognize their labor-unions as corporate entities, entitled to speak for the enrolled miners, though such recognition was the principal aim of the strikers. They point out, further, that such concessions favorable to them as were made by the award had been offered months before by the operators themselves. They point out, finally, that while the advantages alleged to have been derived by them from the commission are superfluous or illusory, the disadvantage is serious, because the commission pronounced the principle that no discrimination should be made by employers, public or private, between laborers, on the ground that some of them do or do not belong to labor-unions.

The fact that this principle is logically and inevitably deduced from the spirit of our political institutions does not in the least commend it to labor-unions, who are indignant and disgusted to find that Mr. Roosevelt intends to abide by this righteous principle in his dealing with the employees of the Federal government. They evidently took for granted that the President of the United States, when he transcended his functions by appointing the Coal-Strike Commission, did so for the exclusive purpose of capturing the labor-unions' vote, and that, therefore, he could be treated to accept for his personal rule of conduct only so much of the commission's award as would seem likely to promote the interests of labor-unions. Under the circumstances, it is not surprising that they were shocked to learn that Mr. Roosevelt would not permit Foreman W. A. Miller to be dismissed from the Government Printing-Office in Washington for no better reason than that he was objectionable to a labor-union. The shock instantly converted them from friends into critics of the President, and they now seem determined to impose upon him the unpleasant choice between losing their votes at the next Presidential election, or submitting unconditionally to the fact of

the labor-unions. The Washington Central Labor-Union is sending to all labor-unions in the United States a copy of the resolutions which it has just adopted, declaring that the President's order reinstating Miller is an unfriendly act, and urging labor-unions throughout the United States to petition Mr. Roosevelt to modify his order of "no discrimination," and to dismiss Miller from the Federal service. If it be true that the step taken by the Washington labor-union was known to the officers of the American Federation of Labor, and has had their approval, it is obvious that Mr. Roosevelt must either knuckle to the labor-unionists or defy them.

As the extra session of Congress approaches—there seems to be no doubt that the Fifty-eighth Congress, although not yet officially convened, will assemble on November 9—there are signs of increased activity in the purgation of the postal service and of the Interior Department. There is nothing so much dreaded by official wrong-doers as investigations by committees of Congress on which both political parties are represented. There is no known way of escaping exposure at the hands of a minority report, especially in a two-months' proceeding an election for the Presidency. So the cabinet officers whose subordinates have enjoyed impunity for some six years, are justifying themselves with an energy, which, in the case of Secretary Hitchcock, we believe to be genuine, and which, even on the part of the Postmaster-General Payne, presents a lively semblance of sincerity. A New York politician, State Senator George E. Green, Chairman of the Republican Committee in his county, was on September 19 arrested and arraigned in Binghamton on two indictments recently found against him and George K. Beavers, by the Federal Grand Jury in Washington. Green is the president of the International Time Recording Company. He and Beavers are charged with conspiring to defraud the Federal government in the purchase of time recorders for the Post-Office Department. The accusation is, in other words, that on November 1, 1901, State Senator Green entered into a conspiracy with Beavers whereby the latter was to receive a commission of ten per cent. for every time recorder purchased by the Post-Office Department. Specific allegations are made in the indictment as to the dates on which Green had checks for divers sums made out to him by the Time Recording Company, and on which he in turn gave his personal checks for the same amount to Beavers. We observe that Green has had the decency to withdraw completely from the Republican organization, so long as he rests under any imputation of dishonest acts. Turning to the frauds alleged to have been committed by Federal officials upon Indians in the Indian Territory, we observe with satisfaction that a ruthless investigation awaits them at the hands of Mr. Charles J. Bonaparte, who has been designated by Secretary Hitchcock for the purpose.

It appears that Postmaster-General Payne violated not only decency but also the civil service law when he dismissed Miss Haldah D. Todd from a fourth-class post-office in Delaware, on the ground that she was personally and politically obnoxious to Mr. Alee, the Addicks United States Senator from that State. Civil Service Commissioner Greene maintains that by the civil service rules, as amended by President Roosevelt in March, 1903, all fourth-class postmasters are brought within the classified service, and cannot be removed from office on the ground alleged by Mr. Payne. It is, as Commissioner Greene points out, a common misapprehension that the civil service law and the rules promulgated thereunder are confined in their operation to those officeholders who have been subjected to competitive examination. This assertion seems to be warranted by the language of the civil service rules, promulgated by Mr. Roosevelt on April 15, 1903. Rule II. says that the classified service shall include all officers and employees in the executive civil service of the United States now existing, or hereafter appointed or employed, in positions now existing, or hereafter to be created, whether compensated by a fixed salary or otherwise, except persons employed merely as laborers, and persons whose appointments are subject to confirmation by the Senate. As fourth-class postmasters are officers or employees in the executive civil service of the United States, and are not employed merely as laborers, and are not subject to confirmation by the Senate, it seems indisputable that they are in the classified service.

If they are in the classified service, it is clear that fourth-class postmasters are subject to the provisions of Civil Service Rule I, promulgated by Mr. Roosevelt, one of whose provisions is that no discrimination shall be exercised, threatened, or promised by any person in the executive civil service, against or in favor of an applicant or employee in the classified service, because of his political or religious opinions or affiliations. Another provision of Rule I, also applicable to all persons in the classified service, is that no person in the executive civil service shall use his official authority or influence for the purpose of interfering with an election, or affecting the result thereof. It follows that if a fourth-class postmaster be removed because he refused to render political service to any party or politician, or because he refused to be coerced in his political action, or to contribute money for political purposes, it would be in violation of law. It is now for Theodore Roosevelt, the civil service reformer, to say whether Postmaster-General Payne or Civil Service Commissioner Greene has taken the correct view of the law governing the removal of Miss Todd from a fourth-class post-office. We await his decision with some interest.

Apparently Mr. Roosevelt has no present expectation, and, indeed, no desire, of attracting Democratic votes. Had he privately cherished such a desire, as his predecessor unquestionably did, he would have left undone some things that he has chosen to do, and would have done some others that he has omitted to perform. He would, for instance, have avoided certain acts, which, though they may gain for him the colored vote in the doubtful States, have exercised a repelling influence upon many non-partisan Northern whites, who appreciate the gravity of the race problem by which their brethren in the South are confronted. On the other hand, Mr. Roosevelt went out of his way to offend every Democratic member of the Grand Army of the Republic, and every Democrat in New Jersey, when he suppressed all mention of General McClellan's name in the speech which he delivered at the unveiling of a monument to New Jersey troops on the battlefield of Antietam. Had he forgotten that General McClellan was a Governor of New Jersey, and a resident of that State when he died, and, above all, that he commanded in the memorable action which only caesars will refuse to call a victory, inasmuch as it was followed by Lee's retreat across the Potomac, and by the abandonment of his project of invasion? Did he not foresee that, when he delivered a speech at Antietam, and avoided any allusion to the commander by whom the victory was won, he would recall to many an auditor Byron's impressive argument that "Cæsar's peasant, more of Brutus's bust, did hit of Rome's great son remind her shore?"

At the hour when we write, the term fixed for the exchange of ratification of the Panama canal treaty is about to expire, and there is no trustworthy indication that the enemies of the treaty in the Colombian Senate will, at the last moment, withdraw their opposition. There is, indeed, a report that, if the French Canal Company would pay five million dollars, or one-eighth of the forty million dollars it is to receive from the United States, for Colombia's assent to the sale of its franchise and plant to the United States, the treaty would be quickly taken up and ratified by both Houses of Congress at Bogota. If such a proposal has been made, it is at once shameless and impracticable. It would be shameless, for it would be tantamount to an avowal that the opposition to the treaty based on constitutional and patriotic pleas had been a mere trick to secure delay, during which plans for the extortion of more money could be carried out. We have never credited Bogota politicians with much self-respect, or with much regard for the opinion of the world, but we did not suppose that a city, ostensibly civilized, existed where so brazen a confession of contemptible motives could be made.

The exposure of the character of Central-American "statesmen" may, from one point of view, be welcomed as timely, for it shows that such men should not be permitted to take any administrative or judicial part in the management of the canal zone, and that the concession made by the treaty of joint authority to Colombian officials under certain circumstances would have led to endless trouble. The lesson should be turned to account when we come to negotiate a treaty with Nicaragua and Costa Rica, a step which we may be compelled

to take, unless the provinces of Panama and Veraguas, possibly assisted by the province of Cauca, shall declare and establish their independence of Colombia. The attempt to extort five million dollars from the French Canal Company for assent to the sale of its franchise—an assent already supposed to be paid for by the lump sum of ten million dollars promised by the United States to Colombia—bears witness to an incredible amount of ignorance regarding the difference between a régime of law and order, such as prevails in France, and the anarchistic state of things which exists at Bogota. How could the officers of the Panama Canal Company pay Colombia five million dollars! They do not possess the money, and nobody would lend it to them for the purpose, until the promise to repay such a sum had been sanctioned at a meeting of the company's stockholders. The convocation and assembling of such a meeting would take time, and it is by no means certain that French investors, who are both thrifty and high-spirited, would submit to such a harebrained attempt at robbery.

We have discussed elsewhere the curious and seemingly hopeless condition in which the British Unionist party, so powerful but yesterday, has been placed by the resignation from the cabinet of Mr. Chamberlain on the one hand, and of the most uncompromising free-traders on the other, and by the double-faced position assumed by Premier Balfour himself. What we would here point out is the lamentable failure on the part of Mr. Balfour and of Mr. Chamberlain, both of whom protest an earnest desire to secure American good-will, to consider even momentarily the question whether England has not less to gain from tightening the bonds of the British Empire than from securing the cordial and unshakable friendship of the United States. It should be, one would think, quite evident that, if England could obtain a formal alliance with the United States, or what, practically, would be equivalent, such intimate relations of international amity as would render a formal alliance superfluous, she would be far better safeguarded against any possible outbreak of Continental anarchy than she could be by any conceivable consolidation of the British Empire. So long as she retained the friendship of her colonial daughter States, England need never dread starvation or the loss of her ascendancy at sea, although nearly all the rest of Europe should be arrayed once more against her, as it was at one juncture during the Napoleonic wars.

Even if the time should ever come when the surplus food products of the Canadian Northwest would suffice to feed the British population, it is certain that Canada would contribute next to nothing to the British navy, which might be exposed to attack on the part of all the Continental powers, while, on the other hand, it is obvious that the very breadstuffs upon which England would depend could never reach the seaboard on this side of the Atlantic if the United States were hostile. It would be a fool's bargain for England to follow Mr. Chamberlain's suggestion, and, for the purpose of averting the possible secession of Canada, to make such concessions to the Dominion as would inevitably alienate the vast American republic. It is especially amusing that such an act of folly should be countenanced by Mr. Balfour, who has been supposed to approve heartily of the course pursued five years ago by his elder kinsman, the late Lord Salisbury, when the latter strove so wisely to undo the evil work of a hundred years, and to regain for England the lost affection of her thirteen colonies, transferred by time into a mighty commonwealth. There is no doubt that, by the patience and forbearance with which Lord Salisbury received Mr. Cleveland's Venezuela Message, and that by the magnanimity with which he returned good for evil when he forbade certain Continental powers to interpose between us and Spain, he did much to wipe out the ranking memories of our civil war, of the war of 1812, and of the war of the Revolution, and to erase from our school-books the details of an ancient tale of wrong. Is it worth while for Mr. Balfour to frustrate his great kinsman's aim?

John Morley's *Life of Gladstone*, so long and patiently awaited, will come, after all, at a most opportune time. Never since the introduction of the second Home Rule bill have Gladstonian principles been so in the ascendant, and it is impossible to touch any living issue that is not reminiscent of the great statesman's name. The great Tory measure of

Irish land purchase is nothing but a Gladstonian principle, carried further than the House of Lords would have allowed Gladstone to carry it. He laid the foundation of land purchase in his Irish Church Act of 1869, and raised the first story in the Land Act of 1881. The other great world-issues of the hour is not less Gladstonian; it was the great Liberal leader who first awakened England and all western Europe to the horrors of Turkish rule which brought about the "Bulgarian atrocities" of 1876; and if Gladstone could have made his policy prevail, frankly supporting Russia and the San Stefano Treaty, we should have none of the Macedonian abominations which to-day shock the sense of the civilized world. They are the direct result of the handiwork of Gladstone's great rival, Disraeli, who, with Bismarck, succeeded in perpetrating Turkish anarchy, plunder, and dishonor. Again, the present day marks the eclipse and imminent extinction of the Chauvinist spirit of the jingoes, against which Gladstone fought so long and so well; and, finally, it is more than probable that John Morley will once more be a cabinet minister, fighting for the Gladstonian tradition of humanity, before his life of the great statesman reaches a second edition.

General Petroff, chief of Prince Ferdinand's cabinet, has made important statements in reply to the charge that Bulgaria has permitted the Macedonian insurgents to pass freely across the frontier into and from Turkey, a charge which has brought Turkey and Bulgaria to the brink of war. General Petroff declares that the fault lies wholly with Turkey. Bulgarian posts along the frontier are few and far between, while Turkey, though making constant complaints, will not allow Bulgaria to increase their number. Turkey, on the other hand, has a complete cordón of posts; nevertheless the Macedonian insurgents come and go, precisely as they please. For this extraordinary laxity, the Bulgarian Premier gives the following reason: the Turkish troops along the frontier are, for the most part, raw levies from Asia Minor, cultivators dragged from their fields to a foreign land. They are ill-equipped, they have no fancy for dying in battle. They let the insurgents pass on into the interior of Macedonia, because to oppose them would mean to face dynamite, bombs, and Mämlücher rifle fire; while their future doljaks in Macedonia are no concern of these Asiatic outposts, whether men or officers.

General Petroff further tells us that, once across the frontier, the insurgents are greatly favored by the nature of the country; they are even more favored, he adds, by the temper of the Turkish army. The Turkish troops are not seeking for battles, they are seeking for loot. They burn and plunder villages, burning them, indeed, to conceal their marauding, and the violence that accompanies it; but, wherever possible, they leave the armed bands severely alone. On the contrary, it is the insurgents who seek to come to blows with the Turks, not only in furtherance of their cause, but also to avenge the plundering of their villages. The Turks yearn for spoils but not for death. The Bulgarian government, adds General Petroff, becomes daily more helpless in the face of popular enthusiasm for the Macedonian revolutionists. The government may honestly enough wish to check the Macedonian committees and their inroads, but what can they do when the people, the army, and the police are all in league to let them pass and speed them on their way? He believes that the moment is rapidly approaching when the Bulgarian nation and army will demand a war, and the government will be compelled to carry out the will of the people, or to face a general revolt.

At the hour when we write it is still uncertain whether Representative George R. McClellan will be nominated by Tammany Hall for Mayor of New York city. There is no doubt that Mr. Charles F. Murphy, the leader of Tammany Hall, desires to nominate Mr. McClellan, and he may decide to gratify his wish, in spite of his knowledge that the boroughs of Brooklyn, of Queens, and of Richmond are opposed to the nomination. A report is current that Mr. McLaughlin, the leader of the regular Democracy in Brooklyn, may be conciliated by an agreement to nominate Mr. Coler for Comptroller. It is still possible, however, that Mr. Murphy may agree to put forward some other candidate, in view of the somewhat improved prospects of Mayor Low. District Attorney Jerome's letter, objecting to the renomination of

Mr. Low on the sole ground that the Mayor is not a safe-getting candidate, and that, in order to win this year, the fusionists should nominate a Democrat, has not produced the effect that seems to have been expected, not only by the writer, but also by some non-partisan onlookers. It has not prevented Mr. Grout or Mr. Forney, both Democrats, from announcing a willingness to accept a renomination at the hands of the fusionists for the posts of Comptroller and President of the Board of Aldermen. Mr. R. Fulton Cutting, who, previously, had declined to run for any municipal office, has now consented to allow his name to be used as the fusion candidate for Alderman in the eighteenth district, where Mr. C. F. Murphy resides. Following his lead, Mr. George Haven Putnam has agreed to run for Alderman in the nineteenth district, provided he can get the endorsement of the regular Republicans, and there is basis for expectation that Dr. Nicholas Murray Butler, Captain Mahan, and Mr. Jacob A. Riis will also be candidates for Aldermen in their respective districts.

These forthcomings show the spirit in which the Citizens' Union leaders have gone into the campaign since Mr. Jerome put gringer into it by his disparagement of Mayor Low. Mr. Jerome himself will support Mr. Low if he is nominated. Mr. Herman Bidder has admitted in the *Staatsformen* Union that it will be the duty of the German-American Republics to back the fusion ticket, even though Low leads it, at least as against McClellan. The executive committee of John C. Shadash's Greater New York Democracy has endorsed Low, Grout, and Forney by a vote of fifty to one, the sole dissenter being the chairman, Mr. William Hepburn Russell, who has resigned his office of Commissioner of Accounts, and seems to purpose affiliation with Tammany Hall. There seems no longer room for doubt that Mr. Low will be the fusion candidate, and apparently he will be helped, rather than hindered, in the race by Mr. Jerome's letter. Popularity comes oftener by favor than by desert, and while Mr. Jerome's assertion that the Mayor cannot bring much personal popularity to the help of his ticket is probably based on accurate observation, the great mass of the voters in New York have no personal relations with Mr. Low and care little whether he excels in personal charm or not. They will vote, administration that they can get by electing him. If they prefer that New York should continue to be governed as it has been governed for two years past, they will vote for Low. If not, they will vote for Tammany. Choosing a Mayor is a business proposition, which considerations neither of personal sentiment nor of national politics ought to confuse.

Report comes from Albany that Typographical Union No. 4 of that city has requested the Board of Public Instruction to buy only such school-books as bear the union label. The school board of three, two Republicans and a Democrat, gave a hearing to the request, and unanimously agreed that it was impossible to grant it. But on September 21, the Common Council, by a vote of 11 to 8, requested the school board to do as the union requested. All but two of the eleven affirmative votes in the Common Council appear to have been Democratic. It was very small politics of the Albany Council to try to coerce the school board in such a matter. The public schools are non-partisan, unsectarian institutions, which should not be used to promote the special interests of any political, religious, or social organization. If the union printers in Albany want their children to study out of union-labeled school-books they can accomplish that end by providing proper instruction for them, but to try to compel all children who go to the Albany public schools to use union-labeled books is highly ill-advised and impertinent. As well demand that all the schoolboys should wear union-labeled hats and trousers.

Bishop Brown of the Episcopal Church in Arkansas, an Ohio man, has been quoted and freely criticised for having lately said: "While I do not justify lynching, I can find no other remedy adequate to suppress the crime for which this has been made a punishment by the people of the South." Lynching has not proved adequate to suppress any crime that we know of. That is one of the great objections to it. It is not effective as a restraint upon the propensities of criminals, except those actually lynched. It is argued, and believed at least in the North, that a prompt administration of legal

justice would restrain crime better. And besides, what is the crime for which, as the Bishop says, lynching has been made a punishment? Of course he means criminal assault. But statistics will be printed next New-Year's, as they have been printed annually for years past, which will show that only about one-third of the negroes who have been lynched in the current year have been guilty of, or suspected of, crimes against women. A large majority of the victims of the lynchings are lynched for murder, arson, or other violent crimes. The *Chicago Tribune* has long made a point of collecting the statistics which support this conclusion. We have never seen their accuracy disproved, yet nine-tenths of the Brown has dealt with it, as a punishment for rape or criminal assault, and nothing else.

The first principle of learning about the progress of medicine and surgery is to accept with distrust all the information that the newspapers give. It is almost impossible to tell the tale of a surgeon's hopes or a physician's expectations so that it will convey to the lay mind the precise degree of information that is ready to be transmitted. When the surrogations, his facts are understood and his conjectures are sifted in the light of the experience of his fellows, but we laymen are apt to swallow whole the tales we read of medical discovery, and to be disappointed when the expectations we form are disappointed. The papers have begun to disclose, for example, that experiments are going on that look to the cure of Bright's disease by a surgical operation on the kidneys. Surgeons no longer stand on much ceremony with the kidneys, but deal with them as they would with eyes, or any of the duplex organs, taking one out when it is hopelessly disordered, and making repairs on such as are repairable. They say one of the new operations for Bright's disease is to peel off the outer coats of the kidneys, and leave them to work, as you may say, in their shirt-sleeves. At any rate, some of the surgeons do some kind of operation which is said to cure the patient, though the whole proceeding is still in the experimental stage, and there has not been time yet to determine whether the cure is permanent.

A special line of investigation about which the medical profession is just now concerned is directed to the measurement of the pressure of the blood. The pulse has heretofore been the indicator of the strength of the blood currents, but now a long series of experiments on animals and humans has resulted in a mechanical device which does the work more accurately and supplies a record of the absolute pressure which can be measured by the rise of mercury in a graduated tube. The precise nature of the contrivance used is too long a story to tell here, but an inflated rubber bandage around the arm is the basis of it. By means of it the doctors think they can measure the precise effect of remedies long used to stimulate the flow of the blood currents, and determine how far and how long they serve the end intended. One of the results believed to have been reached is the conclusion that alcohol is of less value than has been supposed in keeping life in fever patients and surgical patients who are suffering from shock. In these latter cases, where the patient's life is ebbing because the blood runs too feebly, outside pressure on the surface of the body has been found to help. It is best administered by clothing the patient in a double suit of rubber so contrived that it can be inflated and subject the wearer's whole body to gentle and uniform pressure. These discoveries are thought to promise valuable additions to the stock in trade of therapeutic knowledge, though of course no medical discovery gets a standing as a really useful find until it has stood the insensible test of time.

The papers report that a physician in Wisconsin who has been used to experiment with rabbits generally found that chloroform killed them before he had a chance to operate. Disgusted at the wastefulness of this method, he tried hypnosis on one rabbit that he had left, and found, to his surprise, that with a few passes of the hands he could easily hypnotize the little creature so perfectly that it lost all capacity for movement or sensation. If rabbits can be hypnotized, it will seem perhaps a little less incredible that some diseases of horses may yield to mental treatment.

## Disruption of the Unionist Party in Great Britain

The Unionist party, which at the last general election secured a majority of 150 in the House of Commons, and seemed certain to retain control of the British government during the statutory term of the present Parliament, has suddenly been split into three factions. On the one hand, those Unionists who believe that the United Kingdom ought forthwith to tax imported food products in order to give a preference to like commodities coming from the colonies, have ceased ostensibly to be represented in the cabinet. Mr. Joseph Chamberlain having resigned the post of Colonial Secretary. Those, on the other hand, who believe that their country ought not to swerve in the slightest degree from a free-trade policy approve of the course pursued by Mr. C. T. Ritchie, Chancellor of the Exchequer, by Lord George Francis Hamilton, Secretary for India, by Lord Balfour of Burleigh, Secretary for Scotland, and by Mr. Arthur Elliott, Financial Secretary to the Treasury, who have declared to hold aloof under Mr. Balfour, because of the Premier's abandonment of the free-trade creed. That abandonment is complete, for in his published letter Mr. Balfour declares that he considers Mr. Chamberlain's scheme of a preferential tariff right in principle, though he does not think that the time is ripe for the enactment of it in legislation. Pending the arrival of such a time, the Premier advocates such measures as will enable Great Britain to retaliate respectively against protectionist countries, or, as if reciprocity were obtainable, to retaliate for the exclusion of British manufacturers. It will be observed that there is no essential difference between Mr. Balfour's position and Mr. Chamberlain's. They differ only as regards the opportuneness of a step they would both like to take. Mr. Chamberlain has the courage of his opinions, while Mr. Balfour is unwilling to make a sacrifice for them, and clings to office, although after his public confession of faith, he ought to follow Mr. Chamberlain's example and resign.

Which of the three factions into which the Unionist party is now divided is the strongest in the present House of Commons, and which is likely to prove the strongest at the next general election? We doubt if Mr. Chamberlain could master to-day fifty members of Parliament who would deride themselves as if of immediate adoption of a preferential tariff. However that may be, it is certain that Mr. Chamberlain and his friends will support Mr. Balfour so long as the latter desires to remain in office, because they will thus gain time for their propaganda. The stability of the Balfour government depends on the number of votes which the Unionist free-traders could muster in the House of Commons in favor of a nation renouncing the Premier's policy. We doubt if they could muster more than seventy. That would hardly suffice, even if the Irish Nationalists were certain to co-operate with the Unionist free-traders and the Liberals. Such co-operation may not be forthcoming should Mr. Wyndham remain in the cabinet, for Mr. Wyndham has rendered the Irish Nationalists a memorable service by passing the Land Purchase bill, and he has promised to render them another during the next session of Parliament should he continue in office, by introducing a bill for the relief of agricultural laborers. Such a measure, if backed by Premier Balfour, could be carried through the House of Lords, whereas a home-rule bill, which the Liberals will doubtless promise, would be rejected by that body. It is, consequently, quite on the cards that the Irish Nationalists will prefer a bird in the hand to an uncatchable bird in the bush. We do not, therefore, share the confidence of those who believe that Mr. Balfour, if he does not voluntarily resign, will be defeated on the re-assembling of Parliament. We opine that he can retain his post for a while, if he deems it dignified to do so. This opinion is based on the assumption, however, that the resignations from the cabinet will not go much further. If the Duke of Devonshire, President of the Council, and Mr. Broderick Lord of the War Office, also quit the cabinet, the loss of prestige would be so great that Mr. Balfour might deem it inexpedient to cling to office, even if he thought himself capable of patching up a working majority in the House of Commons. As regards the offices already under vacant by resignations, it is reported that Mr. Anson Chamberlain will be transferred from the Postmaster-Generalship in the Chancery Office to the Exchequer, and Mr. Broderick from the War Office to the India Office. If Lord Milner, who has been a zealous representative of the imperialist policy in South Africa, should become Secretary of the Colonies, Mr. Chamberlain would have two agents in the cabinet, and the latitudes of the alliance between him and Mr. Balfour would be unmeasurable. At the hour when we write, it is unknown who will replace Mr. Broderick in the War Office, but we may be sure that it will not be Lord Kitchener, for the reforms that he would institute would be too drastic for the London drawing-rooms, in which so many army appointments have been made.

Although, for the reasons we have given, we do not look upon an early appeal to the constituencies as inevitable, such an appeal may be precipitated at any moment, and, in any event, is unlikely

to be deferred more than a year, because Mr. Chamberlain is no longer a young man, and can scarcely afford to devote more than a twelvemonth to his propaganda. So in 1903, at the farthest, we expect to witness the first battle at the ballot box between free-traders and protectionists in the United Kingdom. That the protectionists, whether they profess to favor simply a retaliatory tariff or boldly advocate a preferential tariff, can win the first battle seems incredible. They may not find it easy to agree upon candidates in all the constituencies, as Mr. Chamberlain, for his part, will naturally prefer a thorough-going to a half-way supporter; and, even if they should agree, they could not hope for the votes of those Unionists who remain uncompromising upholders of free trade. That has already been made plain by the by-elections in Ayrshire and St. Andrew's, and the shrinkage of Unionist votes is certain to be still more marked, now that three members of the cabinet have resigned to emphasize their disapproval of even Mr. Balfour's half-way policy. Assuming, however, that the Liberals will win, we are confronted by the question whether the victory will be overwhelming, such as was Mr. Gladstone's in 1880, when he secured a majority of about a hundred over Conservatives and Irish Home-Rulers combined; or whether the Liberals will need the support of the Irish Nationalists to make up a working majority, as was the case in 1886 and again in 1892. If the British Liberals were now united, and had such a leader as was Mr. Gladstone, they might reasonably look forward to repeating the triumph of twenty-three years ago. As it is, the schism between Imperialist and pro-Bour Liberal is scarcely healed, and, what is worse, the trade-unions of their recent congress determined to put forward candidates of their own at the next Parliamentary elections, instead of supporting Liberal nominees. Then, again, neither minority in the House of Commons nor Lord Rosebery, whom Mr. Asquith and other Liberal Imperialists would like to see re-elected with the leadership of the Liberal party, is qualified to excite enthusiasm in the Liberal rank and file. Under the circumstances, we fall to see how the Liberals, even if they are aided by all the Unionist free-traders, can count on gaining a majority large enough to make them independent of Nationalist support. That support will have to be bought by a promise of home rule, and, whenever that attempt is made to fulfill the promise, the Liberal government will alienate its Unionist supporters in both Houses of Parliament. That is why we deem it probable that, while the next general election may result in a victory for the Liberals, the government that they will form is likely to prove short-lived. Mr. Chamberlain hopes that by the time a second appeal to the electorate is needed he will have been able to induce a majority of the voters up to the point of accepting a preferential tariff.

There seems to be no doubt that Mr. Chamberlain, by making a convert of Mr. Balfour, and by inducing the Premier to say that, while thinking a preferential tariff premature, he is ready for the immediate adoption of a tariff for retaliation, has secured for his propaganda the use of the Conservative machinery. Whether he will be able to employ for the same purpose the machinery of the Liberal-Unionist organization will depend probably upon the position taken by the Duke of Devonshire. We need not say that the control of both machines would prove a formidable political factor, the importance of which, however, might not be accurately measurable at the first general election, which Mr. Chamberlain expects to lose.

## The True Inwardness of the Situation in Macedonia

History shows that the Ottoman Turks, comparatively late converts to Islam, are not fanatical, and do not habitually persecute their Christian subjects for religion's sake. When they persecute, it is for political and not for religious reasons. In almost all Orientals, to whom human life is cheap, they are ruthless. That is one fact. Another is that there is no such official appellation as Macedonia, the name being loosely applied in Western countries to a region which in classical times comprised a part of Thrace, the original kingdom of Macedon, and Epirus; but which now comprehends the four vilayets, or provinces, which, outside of Constantinople, compose European Turkey. The third fact is that in the region loosely called Macedonia, the element which is Bulgarian by blood, religion, and language is not the dominant factor in the population, being numerically exceeded in three provinces not only by Modera, but also by Greek Christians, and in the fourth province by Servians. It is true, moreover, that the Bulgarian element of the Macedonian population has entered upon the present insurrection from mixed motives, one of which is that their brethren in autonomous Bulgaria desire to annex their territory, by the annexation of at least the central and eastern sections of the area vaguely termed Macedonia, although, as we have seen, their claim to predominate is not supported by statistics.

All this is true; yet it does not follow that the Christian pow-

ers of Europe ought to remain impassive spectators of the conversion of Macedonia into a shambles at the hands of the revengeful Turk. Whatever other motives may have prompted the uprising of Edigerlis in Macedonia, there is no doubt that one ground for it was atrocious, adequate, and righteous. We refer to the failure of Sultan Abdul-Hamid to introduce the reforms to which he pledged himself by the Treaty of Berlin a quarter of a century ago. Had the reforms been carried out, there would have been no pretext for an insurrection in Macedonia, had Greek, Bulgarian, and Servian Christians would have dwelt side by side in peace and amity with the Moslems, and the Sultan's autocracy would have stood on an unshakable basis. Whose fault is it that not even a pretense of fulfilling the promise has been made? It is the fault of the same Christian powers, co-signatories of the Berlin Treaty, which refrained from exacting the fulfillment of a similar pledge in the case of Turkish Armenia, and which, when Armenian Christians struck a blow on their own behalf, instead of coming to their aid, looked on and did nothing, while the insurrection was put down by appalling massacres. Does anybody doubt that if Mr. Gladstone had been Prime Minister in Great Britain England's duty as one of the guarantors of the Berlin Treaty would have been performed? Does any one doubt that he would have forced the Sultan to keep his word, both in Armenia and in Macedonia?

The truth is that the public conscience, throughout central and western Europe, is now, and has been for some time, torpid; that it needs to be awakened, shocked into recognition of its duty to compel the enforcement of international compacts and to alleviate human misery. Because Greek Christians have been foolish enough to be so seized by racial or political jealousy as to profess a preference for Ottoman over Belgian ascendancy in Macedonia, it does not follow that the same foolishness should permit Bulgarian, Greek, and Servian Christians alike to be subjected to senseless outrages, and decimated or assimilated at the hands of the Turkish soldiers. This is the twentieth century—an epoch at which barbarism is supposed to be far behind us—and it would evidently be the duty of Christian powers to obey the plainest dictates of humanity, even if they were not bound by treaty to exact from the Sultan the immediate concession of reforms promised long ago.

### The New Negro Crime again Considered

Since we suggested that the perpetration of assaults by colored men upon white women might be described as "the new negro crime," and that the cause of the phenomenon seemed to require investigation, the question has received a good deal of discussion in all sections of the country. That the premise is sound there seems to be an agreement of opinion. The only person disposed to dispute its soundness has asserted that he has found two examples of the crime under the slavery regime during the two most restorative that preceded the civil war. Even if conclusive proofs of the authenticity of the two instances alleged had been produced, which is not the case, it is plain enough that they would not have sufficed to impugn our assertion that the crime was practically unknown in slavery times, either at the South or at the North. We now propose to make another attempt, so to speak, also, we challenge contradiction. Not only was the particular crime, of which we are speaking, practically unknown in the South under the slavery regime, but it continued to be unknown there until about twenty years after the negroes were emancipated, or until a generation had grown up which lacked the respect for white women which had been ingrained in the bosoms of the preceding generation. We desire to submit a third assertion, namely, that the crime which we call new did not exist in the Northern States either, until very recently, although for many generations the negro there had borne something like the same ancestral proportion to the whites that he bears now. We would make still further additions to our original premise. What we have termed the new negro crime seems to be confined to the United States. In all events, we seldom, if ever, hear of it in the British West Indies—except, of course, during the frightful uprising of the blacks against the whites in Haiti—or in the Spanish or Portuguese speaking countries of Central or South America. If it be true, as we allege, that the crime is practically unknown in the other American countries just named, the inquiry will at once suggest itself, Does the crime thus fall to rest, because in those countries intermarriage between whites and negroes, or, in a word, amalgamation, is allowed by law?

So much for our premises. If the truth of all of them be conceded; if it be acknowledged that the crime which we are discussing is, not only modern, but also local, in the sense of being confined to the United States, it obviously follows that it must be the outcome of conditions peculiar to our own country, and to conditions, moreover, affording the present, but no previous generation of negroes in the United States. What are those peculiar conditions? We have been able to discover only a single cause for the phenomenon. That cause may be thus stated: The whole system of reconstruction devised by Thaddeus Stevens (who carried out his principles in private life) and by other leaders of the Radicals, who dominated Congress under the Johnson administration—the system

embodied in the Fourteenth and Fifteenth Amendments of the Federal Constitution, and in the Congressional and State legislation growing out of them—was based on the fundamental idea of absolute equality, social as well as political, between the white and the black races. Following the lines of the Fourteenth and Fifteenth Amendments of the Federal Constitution, and, in some cases, perhaps, preceding the definite adoption of the last-named amendment, a number of so-called "civil rights" laws were passed by Congress. The reconstruction, or "carpet-bag" Supreme Court of Alabama decided that one of those "civil rights" laws, the validity of which was disputed, dominated and abrogated a State law forbidding the intermarriage of whites and blacks. These reconstruction judges assumed, and they were undoubtedly correct in the assumption, that the theory on which their Radical masters at Washington had proceeded was favorable to amalgamation. Upon no other theory can some of the civil rights acts be explained, for their tendency to bring about absolute social equality between the black and the white races is obvious and indisputable.

There is, in a word, no doubt that the idea of absolute social equality between the black and the white races, to which amalgamation was the logical and inevitable corollary, pervaded the atmosphere of Washington during the reconstruction period, and that of all like Southern States under the carpet-bag regime, so far as the blacks and the white negroes from the North were concerned. That idea was inhaled with the air when the presence of negro was growing up to puberty and entering on adult life. They became infected with the belief, and the belief was justified, that if the Fourteenth and Fifteenth Constitutional Amendments, and the civil rights acts founded thereon, had any theoretical basis and pointed forward to any ultimate consummation, that basis and that consummation must be looked for in the intermarriage and eventual fusion of the two races. Amalgamation, therefore, instead of being regarded with loathing and abhorrence, as it had been by the Southern whites, was held up to the post-bellum generation of negroes by their radical teachers at the North and by their own common sense interpretation of constitutional and statute laws, as at once lawful, proper, and desirable.

Not many years elapsed, however, after the emigration of negroes from the South to the North began, before the opinions and the feelings of Northern whites regarding the expediency, or even the possibility, of intermarriage between the races underwent a profound and startling change. Startling in the sense that Northern radicals themselves were shocked at the logical consequences of the theory that had inspired their reconstruction legislation. As far as the Southern whites, we need not say that they had never ceased to view amalgamation with disgust and horror. What we would here indicate, however, is that, in the new negro crime, we behold the justification of the idea that the minds of white teachers and men during the reconstruction period, an idea which we cannot expect to see instantaneously apostrophized, merely because the Northern radicals who planted it have begun sincerely to repent of having done so. Finding, to his surprise and bewilderment, that the fundamental theory on which the constitutional and statute legislation of the reconstruction period was founded is in process of extinction, if not utterly extinct, and that the faces of white men at the North, as at the South, are set like flint against the intermarriage of the races, a negro is now and then provoked to assert by violence the right to a cohabitation that is either forbidden by law or prohibited by public sentiment.

In this way only are we able to explain the phenomenon presented by the crime that we are discussing, a phenomenon which is at once modern and local. It is modern because, before the reconstruction period, the black man never looked upon marriage or cohabitation with a white woman as conceivable, such less as warranted by the theory of law. It is local, because in the Spanish and Portuguese speaking countries on this side of the Atlantic, it is unnecessary for a negro to resort to force, for the reason that the intermarriage, or voluntary cohabitation of whites and blacks is neither prohibited by law nor condemned by public sentiment.

If we are right in our diagnosis of the conditions under which the new negro crime arose, we may reasonably expect to see it vanish when those conditions shall have disappeared. As we have formerly pointed out, it has vanished already in Mississippi, where inspired reconstruction legislation, the black man in that State is not the political, much less the social, equal of the white. The crime is likely to vanish elsewhere when the same hard, but indispensable, lesson is driven home.

### Exports versus Imports

That fiscal inquiry has brought one lasting benefit to England: it has cleared up, once for all, the cloud of mystery which for years has hung over that most mysterious matter, the balance of trade. We have all read a hundred times that England was going to the dogs, because her imports every year enormously exceeded her exports, which showed that she must be living on her capital,

and drifting fast towards bankruptcy. The famous *Salvator* pamphlet, the royalties on which are already a party issue, and the big *Blue Book* which accompanies it, have finally set that matter at rest, and brushed all doubts and fears forever. Lord Avebury, better known to the world as Sir John Lubbock, has furnished the necessary commentary, and the mystery is a mystery no more.

Far from taking a pessimistic view of Britain's trade, Lord Avebury is fairly enthusiastic over the whole matter, in gross and in detail. He tells us at the outset that the total of England's exports and imports last year was "the largest volume of commerce ever transacted either by England or by any other country in the history of the world."

Yes, says the objector, as, for instance, Mr. Balfour in his pamphlet; but, since the imports greatly outstrip the exports, this only shows that England is every year getting more hopelessly into debt. Nonsense, replies the great patron of bank holidays; it shows nothing of the sort. Our imports indicate our purchasing power; and it is surely a good sign to have that as large as possible. The truth is, we pay for these imports not only by our exports, but in at least four other ways of the utmost importance.

First comes *sevice*, and especially the service rendered to the whole world by British shipping: a service valued at not less than half a billion dollars yearly. Then come the immense sums of English money invested in foreign government stocks, in bank stocks, railways, and the like, abroad. Then come the immense interest amounts which also have to pay for a part of Britain's imports. Next we have the further immense sums invested in foreign lands, in mines, mills, factories, plantations, and so forth, also earning money abroad, which is available to pay for Britain's purchases. Then there is the not inconsiderable sum spent in England by foreign tourists and visitors from America, probably fifty million dollars a year, which must also be credited on England's balance-sheet. These three sources exceed total less than the earnings of English shipping, making, on the whole, about a billion dollars yearly, available, and lawfully and rightly available, for the purchase of imports, and a good deal more than covering the great excess of imports which has been the cause of so much wailing. The old mystery of the "unfavorable balance of trade" has died hard, but it is dead, this time without a doubt.

When we look at the figures for British shipping, the result is indeed startling. Taking the average tonnage during the five years from 1862 to 1867, we find that the United Kingdom totalled less than eight hundred thousand tons. Twenty years later, the figures were about four million tons. At present they are more than eight millions. Here is, in truth, an industry in which Great Britain has an overwhelming ascendancy; as a recent writer says,

Still, there are three other ways in which we give Mr. Balfour. Quite without error, returns the sound student of economics. Here is a little table, from the *Fortnightly Review*, which puts the matter clearly. It shows the value of the exports per head of the four great trading countries of the world:

Average for the Period.	United Kingdom		France		Germany		United States		
	£	s.	£	s.	£	s.	£	s.	
1875-1879	0	0	0	14	3	3	0	10	3
1880-1884	0	13	2	15	5	3	8	3	11
1885-1889	0	2	6	3	9	3	5	6	11
1890-1894	0	2	11	3	11	4	3	2	12
1895-1899	2	10	5	3	14	8	3	7	2

Therefore we see that, year by year, for quarter of a century, the exports per head of the United Kingdom are nearly double the exports per head of all the other great commercial countries in the world, and have for long periods, namely, from 1880 to 1894, been more than double the exports per head of the United States.

British exports are, therefore, in a highly flourishing condition; while her imports are far exceeding those in value that good think Englishmen like the Premier feel that there is something unwarlike about it all, something which must be stopped. We see now that the excess of imports is paid for, and more than paid for, by the enormous sums earned by Britain's mercantile marine, which does the bulk of the carrying-trade of the world, added to the immense earnings of British investments and industrial enterprises in foreign lands. It was worth all the fuss over the fiscal inquiry to get this great point made clear.

### "Parsifal" and Mr. Corried

The very interesting interview with Frau Cosima Wagner which we publish on another page of this issue of the WEEKLY, presents for the first time a definite statement of the personal attitude of the Wagner family toward Mr. Corried's much-discussed project of an American production of "Parsifal." Frau Wagner, it will be noted, expressly declines any concern over the possibility that Mr. Corried's New York production of her illustrious hus-

band's swan song may injure the drawing power of the work at Bayreuth. The question, she says, "is merely whether we shall obey the direct commands of the master." It certainly is indisputable that Wagner intended to reserve "Parsifal" exclusively for Bayreuth, and it is well that Frau Wagner has so far simplified matters as to make that the sole ground of her objection to Mr. Corried's scheme. We are to hear no more talk, it may be anticipated, of the "sacrilege" of Mr. Corried's proposal, and of "Parsifal" as an inviolable religious property; we are to consider, by Frau Wagner's own confession, simply the moral objection; i. e., Mr. Corried justified in disregarding Wagner's known wishes in the matter, and are we justified in supporting him in his disregard? That, then, is the ultimate question; and, for our part, we feel no hesitation in deciding upon an affirmative answer.

Mr. H. T. Finch has put the case, so far as its essential point is concerned, with admirable succinctness. He has admitted that Wagner's intention was, undoubtedly, that "Parsifal" should be reserved for Bayreuth—but only until the rest of the world should be ready to listen to it in the proper spirit. That time, he believes, will now come. The claim is perfectly sound. It would, of course, be idle to deny that there are conditions attending the Bayreuth performances that Mr. Corried cannot hope to duplicate at the Metropolitan Opera House. But is the Bayreuth atmosphere essential to a properly receptive attitude on the part of an audience toward a representation of Wagner's music-drama? The belief that it is assumes that "Parsifal" is virtually a religious work—in substance, if not in purpose; whereas the candid truth is that it is nothing of the sort. It has, indeed, a fundamental spiritual significance—but so has "Tristan und Isolde," so has "Lebendige," so has "Der Ring des Nibelungen." Wagner, an incorrigible—though unconscious—mystic, wrought into the texture of his musical plays a profound and subtle spiritual philosophy, and "Parsifal," no less than "Tristan" and the "Ring," is essentially a spiritual symbol. But its spirituality need give no concern to those who talk solemnly of the "sacredness" of "Parsifal," its sacredness, being a deeper thing than can be embodied histrionically, is perfectly secure against profanation on the stage of the Metropolitan. It is true, as Mr. Finch says, that Wagner incorporated in "Parsifal" some details from his early drama, "Jesus of Nazareth," but "everything is modified and adapted to the spirit of medieval legend, and the drama, as a whole, is purely operatic in the best sense of the word."

No: Mr. Corried is not planning a sacrilege, and he is abundantly justified in ignoring Wagner's intention looking to the reservation of the work to Bayreuth. It is almost incredible that a masterpiece of creative art should have been held, for nearly a quarter of a century, as the exclusive property of a fifth-rate German municipality, and Mr. Corried has put us all very deeply in his debt through his enterprise and determination in the destruction of so preposterous a monopoly.

### Lyman Abbott on Woman Suffrage

The most obvious sign that there is still life in the woman-suffrage movement nowadays are the occasional attempts to check it. No discriminating person wastes ammunition on what is already done for, and that Dr. Lyman Abbott should have set forth in the *September Atlantic Monthly* the reasons why, in his opinion, women do not wish the suffrage, indicates that he thinks the suffragists are still active enough to be worth attention.

He says that when the Massachusetts women were asked in 1865 whether they wished the suffrage, only 23,200 out of a possible 575,000 voted yes. That is, about four per cent. of those wanted to vote. The rest didn't care. Dr. Abbott thinks this result expressed fairly well the average sentiment throughout the country. At any rate, he is confident that an overwhelming majority of American women have silently determined that they do not wish to vote, and he undertakes to set forth the reasons for their indifference. These reasons, he feels, then, are neither new nor unfamiliar. Of course, he does not argue that women are inferior to men. Of men and women he says that because their functions are different all talk of equality or non-equality is but idle words without a meaning. His argument is that the family is the basis of society, that the basis of the family is the difference of the sexes, that the military function in all its forms and phases belongs to men, and that the office of government being the protection of persons, property, and reputation from forces that assault them, it rests finally on the power to compel obedience. But to furnish that power is indispensibly the function of men, and not of women. Behind a vote must be the strong arm that supports authority. Women do not care to vote because they recognize that voting involves a fitness and willingness to fight, and because they recognize that fighting is not included in the duties that fall to them.

Such is Dr. Abbott's position, crudely and briefly stated. The root of the matter seems to be in it.

*The Boat and Decoys in Position—Getting ready for the Day's Sport*

*Shooting Ducks by the Decoy Method—The Hunter lies partly concealed in the wooden Boat, surrounded by the wooden Decoys*

### **DUCK-SHOOTING ON THE CHESAPEAKE**

With the approach of the duck-shooting season in Maryland, sportsmen from all parts of the country are starting for the famous shooting-grounds in the region of Chesapeake Bay. The birds are shot either from "blinds"—a box made of wooden slats and concealed along the shore—from wooden enclosures in the open known as "bars," or with the aid of decoys—wooden ducks which attract the game to the neighborhood of a specially constructed boat in which the gunner is concealed, as shown in the photographs. Dogs trained especially for retrieving the game are kept at the gunning clubs along the shore of the bay for the use of members

# The First Interview with Frau Wagner

The First Authentic Statement from the Widow of the Composer, made to the Special Representative of "Harper's Weekly" at Bayreuth, regarding Mr. Conried's proposed American Production of Wagner's "Parsifal"

By Thomas Stockham Baker

**M**Y appointment for an interview was fixed for an hour which not only gave an opportunity of meeting Frau Wagner, but also permitted a view of the interesting family which is now assembled in the Villa Wahnfried.

Several of the Wagner children were playing in the park in which the villa is located as I came up the driveway—very lusty, normal children, and quite free from the oppression of their great name. On the doorstep was an immense Russian wolfhound, who looked a very formidable sentinel, but was indeed subdued by the quiet and peace of the place. In a moment I was introduced into the immense music room which forms the centre of the house, and found myself standing before Frau Cosima Wagner.

She is tall and remarkably thin. Her features are delicate, and the whole physiognomy has something distinguished and expressive. From under a large cap peeps a quantity of white hair. It is a face such as one might find in the pictures of some of the eighteenth-century French masters. In appearance and bearing Madame Wagner is decidedly French, but her profile is strongly reminiscent of her father, Franz List—the same prominent nose and somewhat the same shaped head.

The appearance of Frau Wagner was so interesting that I did not notice that there were two other ladies in the room until I was introduced to her two daughters—Fran Gieseler and Frieda and Fräulein Eva Wagner. After this ceremony we moved into the next room to tea.

Frau Wagner now became the fascinating hostess, the brilliant and experienced woman of the world. She talked on a variety of subjects with the greatest cleverness and apparently with equal freedom, whether the idiom happened to be German, French, or English.

"You are certainly a very busy woman, Frau Wagner," I said. "Do you not find your labors too severe?"

"It is not the work that exhausts me. Work rests me; but there are other things," she said.

"'Parsifal' in New York?" I ventured to ask.

"Yes, we must oppose the performance of 'Parsifal' in any other place than in the Bayreuth Festival Theatre. The creator of the work expressed very clearly his desire that 'Parsifal' should be given solely here. It is not at all a question whether the per-

formance in America can please Bayreuth, but merely whether we shall obey the direct commands of the master. Of course I expected that the Bayreuth artists would take no part in the Mr. Conried's performance, and that German singers in general would have too much professional honor and artistic pride to help in the production of a work in direct opposition to the wishes of Richard Wagner."

"What is the true state of the case in regard to the singers who have appeared here?" I asked.

"As soon as I had heard that Von Roey had accepted Mr. Conried's offer, I inquired of him whether this was true. He replied that he had pledged himself to learn two new Wagner roles, and he hoped that 'Parsifal' would not be one of them, but he could not break his contract. He said he wanted to visit me to get my advice. I wrote to him that he must not break his contract, but that he should have made it a condition, as did Felix Mottl, that he would not have to appear in 'Parsifal.' I was very glad to go over the matter with him, and wrote him that there was such a thing as an artist's honor, and one could not do everything merely for money. He did not come to see me, and I wrote again to him, stating what disgust his agreement with Mr. Conried had provoked in the whole artistic world, and that a spot would always rest upon his name. I asked Professor Kniese to write to the tenor Burgstaller and inquire whether he had agreed to sing 'Parsifal.' We received no reply. I had the right to ask three questions of these two singers, because they had both been trained in Bayreuth, and both of them began their dramatic career here.

"In regard to Fräulein Termini, the case is somewhat different. She came to us as a recognized artist, and although we studied with her very carefully the part of Astarte, she could have worked out the task alone, though in a different way. To be sure, I thought that an artist of her reputation would not so far forget herself as to commit a sacrilege against a sacred work merely for money."

Frau Wagner has had bitter experiences, but nothing has affected her more deeply than the proposed performance of 'Parsifal' in New York, and more especially the desertion of her leading singers. Those who are best informed on this subject believe that if Von Roey and Termini and Burgstaller do sing in 'Parsifal,' they will never be heard again in Bayreuth.

A Scene from "Parsifal," as given at Bayreuth. The present "Kundry" assumes "Parsifal's" lot after his return to Monsalvo.

# A Sample of British Administration

By Sydney Brooks

London, September 22, 1922.

THE Boer war is ancient history. True; but the moral of it, its frightfully typical significance, endures. And just how significant and how typical it was we are at last learning, in detail. The report of the Committee of Enquiry into the conduct of the war up to the occupation of Pretoria has just been published in three fat volumes. They rank, on the whole, about the painfulest reading I have ever come across. They set forth in a cold and pitiless light a state of things which is a disgrace not only to Englishmen but to all who speak English. It is a record of such fabulous stupidity and incapacity that not England alone, but the whole English-speaking race, is incriminated by it. The shock and the smart of it are felt first and most keenly, of course, by King Edward's subjects, but one need not be an Eng-

lishman to see in which Lord Lansdowne "absolutely refused even to discuss." Every other suggestion which the military put forward was similarly snubbed; and the war when it actually came found such a deficiency of material, and such disorganization on its side, as was unparalleled in the whole history of the world. Before hostilities had been on for two months there was only one reserve battery of artillery left in the country; the whole of the stock of field-gun ammunition had been exhausted, and England was borrowing guns from the navy and India; the reserve sets of cavalry and mounted infantry, harness, and saddle had all disappeared, and America had to supply extra ones; the store of small-arm ammunition had been reduced by two-thirds, and the country was dispatching weekly 400,000 more rounds than all its manufacturers, working overtime, could produce; infantry necessaries were

at once and wholly exhausted, and the War Office had to borrow large guns from the navy, machine-guns from fortresses, boots and helmets from India, and to buy 25,000 sets of rifle harness, 17,000 tents, and 900 mazzettes; there was no reserve hospital equipment in the country and but one-fifth of the picketing-gear required at the seat of war, and a reserve of only eighty swords. All this, remember, before the war was two months old! But what is the use of going on with the sickening details? It is in the same old story of men and middle. "Despite not this energy had been the moral gathered from every British war that history tells of, and conveniently forgotten before the next. Never was it more completely out of mind than in 1900. But that is always the course of events when England is war—first, the picnic period, then the defeat, then a quiet and terrible determination to "see this thing through." The everlasting luck of the British Empire, a handful of really capable officers working on material that needed only the shock of war to bring out its excellence, and the blunder of General Joubert in besieging Ladysmith instead of overrunning Natal, saved South Africa to the British crown.

You would think that, after such a warning, there would at least be a resolute and sweeping reform. But no; nothing of the sort is in sight. England to-day is even less prepared for war than she was in 1900. The disorganization at the War Office is greater and not less; and, so one of them in his opinion, "a wish and not an expectation." I believe it is really impossible for the English ever to possess an efficient army, because the standard of administrative capacity is too low to produce one. The curst spirit which permeates England largely handicaps the possibility of the right man filling the right post. There is a small and exclusive coterie of peers and large landowners and county gentlemen who regard public office as a sort of birthright. Their chief qualifications for the posts they occupy are their heredity, their social position, their other qualifications they have usually none. The consequence is you get men of quite ordinary ability and quite ordinary intelligence filling the most momentous offices of state—a Lansdowne at the War Office and succeeded by a Broadrick. There may be efficiency under such a system. If so it will be by accident only.

Their chief qualifications are their social position, their harmony with the court atmosphere, and their charming manners.

Americans can look into it without an explosion of exasperation at the thought that the man who recommended such appalling blunders and were guilty of such criminal stupidity were men of the same race as himself, speaking the same language, governed largely by the same traditions and the same forms, and his inseparable allies in supporting the credit of Anglo-Saxondom. There are many allowances which every dispassionate critic must make for the opening mistake of the civil war. There are several allowances, too, which may fairly be made for the military chaos which the Spanish war revealed. But here no allowances are possible. For four years the British government must have known that war was inevitable. They were, at any rate, repeatedly warned that it was bound to come. They had the fullest, and as it now turns out, the most accurate information of the preparations the Boers were making. They had the experience of former Boer wars to guide them. They were aware that the field of operations must, to begin with, lie in British territory. They were able to send and supply reinforcements by intelligence officers on the spot. Yet with all this to aid them they were caught not merely unprepared, but in a state of the blindest panic and confusion. They clung to the hope of peace long after every Anglo-African realized and proclaimed its futility. They allowed President Kruger to choose his own time for taking the field. They let their diplomacy run hopelessly ahead of their military preparations. They believed even to the death hour that the Orange Free State knew South Africa and predicted with absolute accuracy the course his representations and more before it broke out, found her, who was in command of Cape Colony, and warned the government that if it came to war 100,000 troops would be sent to meet it. "Pretextless" written across his dispatch by the War Secretary, and promptly recalled. Lord Roberts, the ablest of British soldiers, was not once consulted as to the military preparations. No plan of campaign was drawn up; no maps first duty was to be obtained Henderson compile a map for him. The government departments were all at largeheads. The Treasury would not grant supplies; the Ministry, with a majority of 120 in the House of Commons, was afraid to come to Parliament and ask for them. General Buller's proposal to advance on the Transvaal via the Orange

## A NEW WAY OF MAKING EXPOSITION STATUARY

At Hoboken, New Jersey, a new method, which has revolutionized the work of enlarging statuary models, is being used. The model is connected by a "pointing-machine" with a mass of plaster and staff on a wooden frame, and by following the outline of the model with the "pointer," an exact reproduction and enlargement of the required size are made. Both the models and enlargements were formerly done by the original designer. The reader is referred to the interesting article on another page for a full description of the new method.

# Books and Bookmen

By James MacArthur

**I**AN MACLAREN tells a good story of the late Major Pond, which he generously styles "The Major's One Mistake." It was during the famous clergyman's delivery of a series of Yale lectures on preaching, on his first visit to this country. The Major recognized that there was a difference between lecturing in the university and to a popular audience, and he judged it expedient that the "stars" should make a trial trip with him for a lecture in a neighboring town, and it was on the return from that lecture that the Major made the solitary mistake of going to the smoking-car when enjoying on the glory of the spirit, and in the smoking-car was enjoying on the glory of the spirit. When the train began to stop, the Major sprang to his feet.

"Gues," he said, "we'd better hurry, or else we'll be carried to New York"; so the "stars" and his wife and the Major left the cars in haste, and the train, the last train of that day, went on its way.

"Where is our carriage?" demanded the Major, standing outside the station with the "stars" behind him. "What carriage?" The carriage seemed to be here for Major Pond and his "stars." That cabman is a dark number. He's not a time, and the contract's broke. Get me another carriage," he said to the railway man.

"Can't get one now. Major. Too late. All off for the night."

"Do you give me to understand, young man," and the Major spoke with awful impressiveness in the darkness lit by a single lamp, "that the university city of New Haven cannot supply a covered conveyance with two horses for an American gentleman in public life and a distinguished visitor? You are not worthy of your privileges as a citizen of this cultured community."

"New Haven, Major— was that what you said? Why, sir, this ain't New Haven."

"Not New Haven?" and the words fell syllable by syllable from the Major's lips. "May I inquire the name of this settlement?"

"Call it Maryville, Major," and it was plain the railway man would have boasted had he not been afraid. "Can't get to New Haven to-night."

"Maryville?" and the Major fixed the presumptuous porter with a gaze so haughty that the man slunk into the darkness with a muttered apology for the existence of the place, and the Major looked at the spot when the man had been dismissed.

"After a full minute of the most profound silence I ever heard," says Ian MacLaren, during which the "stars" were silent and motionless, the Major whirled round and led the procession through the booking-office and along the platform to the extremity. When he could go no farther, he stood again for a space consuming with himself, and then he turned, and this is what he said:

"Maryville! No! It never happened before, and if it happened twice the public raver of J. B. Pond would be closed. Maryville!"

It was hardly becoming for his guests to intrude, but they murmured words of consolation—that a night here or there didn't matter, that no engagement would be broken, that they would get on next morning, that there would surely be a hotel in the place, and such like facilities, which did not touch the heart of things.

"Maryville," repeated the Major; "the first night of a three months' tour, and I look the 'stars' out of the cars at Maryville, and the Major took his 'stars' with such pathetic self-pity that they looked on with consternation.

An English visitor recently in America has been contributing his impressions of American journalism to the home periodicals. This visitor, Mr. David Williamson, a writer of editorial and journalistic experience and ability, while here on a lecturing tour, bears witness to the ubiquitous interviewer and the live reporter. "A newspaper which is not 'alive' from its first paragraph to its last has no chance in an American newspaper," says Williamson with due humility records that England's New Journalism is simply Old Americanism. This is characteristic, and though fainter beyond remark to us, it borrows a certain pungency from familiar point of view. "Let me give one of many instances," says Mr. Williamson, "of how the American journalist insists on his matter being read. 'I saw in one great daily paper an incoherent paragraph headed 'Red Lemonsade.' What do you think it recorded? The funeral of a well-known woman! It began with a conventional account of the service at the home of the deceased, went on to report a list of friends who were present, and the items of the service. Finally, when I was wondering where the real lemonade came in, I reached the final sentence, 'Red Lemonsade was served to the mourners in the rear parlor.' The writer of that paragraph had learned the secret of arousing curiosity. If he had merely titled the matter 'Funeral of Mrs. So-and-So,' only the immediate circle of friends of Mrs. So-and-So would have troubled to read it. As it was, he probably compelled 150,000 people to read it.

"That is a sample of the way in which American journalists deal with news. They take infinite trouble to dash it up in an original style, never few 'fill-up para's' in the papers. Everything that was worth printing was written up brightly, of course, there is a lack of proportion about the space accorded to news which surprises a British journalist. A little girl was lost in one of the great cities I visited. The papers were immediately busy with columns of description of the child, her home life, and the incidents of her mysterious disappearance. Pictures of her favorite dolls, portraits of her father and mother, and even of the Catholic priest whose church the parents attended were given. In a few days the child was found, and ordinary conditions, but by this time the name was common talk among hundreds of thousands of people."

The latest Portrait of Mrs. Humphry Ward

The London *Standard* for September is a Mrs. Humphry Ward number, and devotes most of its space to an interesting collection of portraits of Mrs. Ward and pictures illustrating the scenes of her novels. In a critical paper by Mr. A. H. Jones on the subject of Mrs. Ward's work, the writer concludes that among living women novelists of to-day the author of *Lady Ross's Daughter* occupies a unique eminence. "Probably none of them has done more to revivify and humanize the Christian ideal, or to stimulate thought and the enthusiasm for social reform; no other has exercised a more fruitful influence on the intellects and consciences of the religious, the sceptical, the agnostic, and the Jew. It is not alone that *David Grieve* has been almost so extensively translated as *Robert Elmer*, and that few books of their time have been so written and lectured about in half the languages of Europe. *Lady Ross's Daughter* has been translated into French by *Nancy and Alfred*, and will appear this autumn in the *Revue des Deux Mondes*.

Tom L. Johnson

Myron T. Herrick

### **TOM JOHNSON AND MYRON T. HERRICK, THE RIVAL CANDIDATES FOR GOVERNOR OF OHIO, PLAYING GOLF**

*The photograph shows an interesting situation—the Hon. Tom L. Johnson and the Hon. Myron T. Herrick, rival candidates for Governor of Ohio, playing golf on the links at Cleveland. Mr. Johnson, now Mayor of Cleveland, is the Democratic candidate for Governor, and Mr. Herrick, who is a member of the Republican National Committee, is his party's nominee for the same office. The photograph gives an interesting sidelight on the Ohio situation, where political feeling runs high.*

# The New West Point—And what it Signifies

THE INADEQUACY OF THE PRESENT ARRANGEMENTS.—THE NEED FOR INCREASED ACCOMMODATIONS.—WHAT CONGRESS HAS DONE.—OUR FUTURE STANDING ARMY.—NEW BUILDINGS PLANNED FOR.—THE NEW ACADEMIC BUILDING, MORGAN HALL, CHAPEL, AND HOTEL.—INCREASED FACILITIES FOR ATHLETICS.—OTHER IMPROVEMENTS AND ADDITIONS.—THE WEST POINT OF THE FUTURE AND WHAT IT WILL COST.

By H. Irving Hancock

**S**TATED on the porch of the hotel at West Point, General Wesley Merritt listened patiently to the tale of the mother of a new cadet. She eagerly recounted the athletic triumphs of her son during his preliminary two years at college.

"He must be a very capable young man," remarked General Merritt. "But how does he stand in mathematics?"

"Mathematics!" repeated the mother.

"If he fails in anything connected with mathematics," continued General Merritt, "your boy will never succeed at West Point."

Just now West Point is involved in a turmoil of figures that covers many varied points in the future history of the United States. In the first place, Congress not long ago appropriated \$5,500,000 for the remodeling of the Military Academy. When this amount of money has been used, or when it has been nearly all spent, it is expected that Congress will be asked to appropriate at least \$8,000,000 more, although, of course, not all of this latter amount is looked for in one appropriation.

At present there are a few more than five hundred cadets at West Point. There is not room enough for them. While the rooms in cadet barracks are constructed for the use of two men per room, not a few of the rooms shelter three cadets each. Under the new appropriations, barracks will be so enlarged as to provide for 1200 cadets, two to each sleeping-room. In the ultimate West Point—the one that is planned for by the administration and the War Department—there will be every possible accommodation for the housing, training, and recreation of 1200 cadets. That day is still far off. It will not come until some time after the \$8,000,000 more that is required have been granted by Congress.

But we are to have as soon as possible the most perfectly equipped training-school for army officers that is possible, and one that will be large enough for the effective handling of 1200 cadets. When the citizen recruits that not long ago we had only some 400 cadets at the Academy and that even to-day there are but few in excess of 500, he is likely to wonder what need there is of 1200. One of the reasons is that this country is growing so fast, and it is taking such an active part in foreign affairs, that a much larger army is considered by the guiding minds at Washington to be one of the urgent needs of the near future. The continuance of our commercial supremacy must be protected from jealous rivals by a strong showing of military strength.

Just now the architects are busy with the completion of their plans. It will be probably a year before the actual work of the reconstruction of the Academy buildings is begun, and it is expected that those provided for in the present appropriation will not be completed before the end of three years. Colonel Mills, the superintendent of the Academy, emphatically gives his opinion that it will be a piece of good luck if the building work is finished within six years.

The new plans look to a concentration of the working portion of the Academy. Economy of time is aimed at. Cadets are not to be obliged to waste valuable study and recreation time in over-long marches between barracks quarters and section rooms. In order to make this object the more easy of attainment buildings and groups of buildings that are not intimately connected with academic work are to be comparatively isolated.

West Point has its traditions and its distinctive landscape features. In order to preserve these the architectural spirit of the present buildings that are to be retained will be the keynote. The picturesque surroundings of forests, mountains, hills, cliffs, and rocks are to be emphasized. The Middle Gothic type of the present buildings will be preserved. One general aim of the designers is to retain all the rugged grandeur of West Point.

A new railroad-station and steamboat landing will be erected, and look will give greatly increased facilities. The general approach will be retained, but considerable grading will be done to render less steep the road that leads from station and landing to

the public square. Large freight and passenger elevators will also lead to the level of the square, and just above the elevators will be located the new hotel and the carriage-stand. These improvements will greatly increase the convenience of the visiting public. Every American citizen has a standing and cordial invitation to visit the Point and to see the working of his Academy. The present hotel is notoriously inadequate to the public demand, but the new hotel will be large and a thing of beauty. Its construction will cost \$140,000.

The new academic building is to be placed directly opposite the old building, and the two will be connected by an arch and a bridge. This connecting link will be one of the richest of the architectural features. There will be room for statues and for memorial inscriptions. Colonel Larned's original suggestions will be followed at this point in all essential respects.

One of the dignified buildings now at West Point, yet one of the most important, is the riding hall. Its design is entirely out of keeping with the landscape and with the larger buildings. The new structure will be so large that, at first, there will be more room than is needed, especially in the towers. The design of the new riding hall will be extremely simple and severe, but this will be in order that the building may appear to grow out of the top of the cliff where the lower plateau begins. If possible, stone from local quarries will be used.

In the construction of the additions to cadet barracks considerable thought was needed. The new wings will provide for the best possible escape of air through the rooms. The gymnasium to be moved in order to provide for a quadrangle inside the academic buildings that will be 350 feet long, with an average width of 100 feet.

For the sake of encouraging the greatest interest in athletic work it has been found necessary to provide for much better field-athletic possibilities. The open space in the rear of "Professors' Row" has been chosen. Here there is an abundance of room for baseball, football, and track-work. On the slope of the hill beyond it is proposed to place seats for 6000 spectators, all of whom will have a clear view of the field. When situation, amount of field area, and advantages of view are considered, this will be one of the grandest theaters of athletics in the world.

In its present location the chapel is regarded as an incongruous feature on a military post. The new chapel is to be located on a spur of hill just west of cadet barracks. Here it will be more readily accessible in winters, cadets, and visitors. Its tower will rise impressively over the nearby buildings. The superintendent's residence, too, is to occupy a new site. It will stand where the old hotel now does.

While there would be no interest in reading a tabulated statement of the cost of each of the improvements, a few of importance may be given. The new cadet barracks will cost \$300,500, and the new academic building \$204,800. Alterations of the old building called for \$30,000, and special fittings for \$50,000. The chapel, which is not to be one of the plainest of buildings, will cost \$384,000, with furnishings estimated at \$21,000. For the riding hall \$186,000 will be needed, with \$258,500 for post headquarters. Furniture and fittings for the latter will consume \$50,000. The handsome memorial bridge that is to connect the old and the new academic buildings will cost \$50,000, while the cadet administration building, occupied by the tactical officers, will require, with furnishings, \$110,400. The new hospital ward, with its fittings, will take \$37,500 more.

When the new West Point is completed it will be a thing of beauty that even its famous traditions cannot enhance. It will be a thoroughly equipped school for the training of the finest military body in the world—for the men whose work we cheer as we stand in front of the bulletin-boards in war-time.

## THE WEST POINT OF THE FUTURE

For such an extensive plan

Congress has appropriated \$5,000,000 to be used in remodeling the United States Military Academy. And later it will be asked to make an additional appropriation of \$5,000,000 for the same purpose. The West Point of the future will provide accommodations for the training and maintenance of 7,000 cadets and will be the perfection of equipment, the grand of any military training school in the world. Among the most important improvements, the plans for which have not yet been approved, will be the new academic building, new riding-hall, and new cadet barracks. The cost of the buildings will be reduced by the fact that the stone necessary for their construction can be quarried on the premises.

**Miss Blanche King in "The Jersey Lily"**

Miss King is appearing at the Victoria Theatre in the play written for her by George V. Herbert and Reginald De Koven. She plays the part of "Lilliana," an actress who returns to her native Isle of Jersey where she has made a name for herself on the stage. During her visit the local mayor, a home-doctor, falls in love with her, and thereby comes into conflict with the Jersey Lilies' Society, a South American diplomat. The political secretary, finally, however, gives up his suit, and the lady marries the man of her choice.

**John Drew in "Captain Dieppe"**

Mr. Drew begins his present season in a dramatization, by Harrison Rhodes and Anthony Hope, of one of the nation's romances. The comedian has the role of "Captain Dieppe," a Frenchman and a political schemer, who becomes a guest in the home of an Italian count who is living at random's point with his wife because of an unfortunate love-affair on her part. During the absence of the wife on a brief journey for the purpose of obtaining money with which to purchase incriminating letters from her blackmailing lover, she is impersonated by her countess, in whom "Captain Dieppe" makes love, on the belief that she is the real countess. He succeeds in buying of the blackmailer, in saving the count's letters in order, and finally in winning the countess's countess for his wife.

**TWO NEW PLAYS IN NEW YORK**

### MISS VIOLA ALLEN

Miss Allen will be seen this season as "Vada" in an ambitious production of Shakespeare's "Twelfth Night," opening in Washington on October 26. It is promised that the play will be given with as little departure from its original form as modern requirements will permit, and practically the entire text is to be used. The cast will include, besides Miss Allen, John Blair, Frank Carter, Scott Craven, James Young, and Zeffe Tibbory.

### MEDALS FOR THE SOLDIERS WHO FOUGHT THE BOXERS

The photograph shows Sir Ernest Satow, the British Ambassador to China, presenting medals to the Shanghai volunteers who fought during the Boxer insurrection in China. The presentation ceremony took place in Sir Ernest's field, a park which extends along the entire river-front of Shanghai.

**MEDALS FOR THE SOLDIERS WHO FOUGHT THE BOXERS**

The photograph shows the general situation in the city of Peking, the scene of the recent Boxer rebellion. ## THE NEGRO COLONY IN ONTARIO

ALBANY, Ga., August 29, 1902.

To the Editor of Harper's Weekly:

See.—The information in your issue of August 15 as to the present status of the negro colony in Kent County, Ontario, is quite interesting. I set forth here some evidence as to the temporary opinion in Essex, Kent, and Elgin as to about the time the colony was founded. Most of this information was collected about 1856 by David Christy, of Cincinnati, agent for the Ohio branch of the American Colonization Society, who in turn derived his information in large measure from official reports and communications to the Canadian government from Major Robert Loeblich, chairman of the Quarter Sessions for the Western District.

As far back as 1841, Major Loeblich, who was a vigorous opponent of slavery and had been a warm champion of the negro race, had written an official report of some length warning the government that the continual influx of negroes into that section of Canada was proving very demoralizing to the community, and urging some measure to prevent it. Among the peculiarities he had at that time ascribed to them were an insufferable manner, indifference to employment, and atrocious and rapidly increasing criminality. Major Loeblich had even repeatedly called attention of the grand jury in his charges to the "appalling circumstances that among a population of near 20,000 souls . . . the greater portion of the crime . . . should be committed by less than 2,000 refugees from a land of liberty, protection, and comfort, etc." The crimes enumerated by him as committed by these refugees were "murder, rape, arson, burglary, and larceny, besides every other description of minor offences." The resultant official inquiries as to the matter continued in 1852, down to which date, it appears from the reports, the relations between the whites and blacks had continued to grow more and more strained.

In 1849 the Elgin Association undertook to remedy these conditions in some manner by purchasing a large tract of land in Raleigh township, County Kent, and offering inducements to the scattered negro population of Essex, Kent, and Elgin to concentrate upon it. (On August 18, 1849, a public meeting was held in the town of Chatham to protest. This meeting disclosed any animosity toward negroes, but declared it contrary to nature and Christianity to inflict this thing upon themselves. "It is also," they declared, "with a feeling of deep resentment that we look upon the selection of this township of Raleigh, in this district, as the first portion of our country, which is to be cursed with a systematic organization for settling the laws of nature at defiance.

The language of this address is intensely bitter, ascribing immensurable criminality to the negro race, but stopping at intervals to declare that they had no hostility for negroes. If the whole of it could be here reproduced it would be quite curious and interesting, but space forbids.

On September 30, 1852, the negroes at Toronto met and answered this address with denunciatory resolutions, declaring it exhibited "the workings of a corrupt and depraved heart, etc."

In October 9 following, the municipal council of the district memorialized the government in protest, declaring that the white population regarded the movement with a feeling of "disgust and hatred," and declaring that the presence of negroes had occasioned a number of specified public evils and inconveniences. St. Catherine's Journal for June, 1852, under the title "The Facts of having Colored Companies and Colored Settlements," recorded a race riot growing out of a militia muster in which negro troops had sought to participate. Many were injured, some fatally. The paper adds, "The colored village is a ruin, and much more like a place having been besieged by an enemy than anything else."

In 1857 Colonel Prince of the Western District declared in the Canadian Parliament that "the black people who infested the land were the greatest curse to the province." The laws of the people of the west (meaning Kent and Essex) were made void by the foundation of these animals, and many of the largest farmers in the county of Kent have been compelled to leave their beautiful farms because of the pestiferous swarms. What were these wretches fit for?" etc. There was even more bitter language in this speech, which was upon a measure to lay a capitation tax on all negroes coming into the province. The curious part of it is that this Colonel Prince had the originally felt great sympathy for the negroes. He said further that "he found these men without fire and food and lodging when they were in need; and he would be bound to say that the black men of Essex would speak well of him in this respect. They would not admit those as being equal to white men; and after a long and close observation of human nature, he had come to the conclusion that the black race was born to be and intended for slavery and that he was fit for nothing else. . . . He had told black men that the lazy rascals had shirked their shoulders and wished they had never run away from their good 'old Massa' in Kentucky."

The negroes of Toronto thereupon held another meeting, and denounced Colonel Prince as a swine language, to which he responded in the Windsor Herald for July 3, 1857, engaging in a personal dispute with his assailants, in which he lowered his dignity somewhat and upon ascribing to the negroes of Kent some very bad qualities and derogatory remarks, as their agents in our service, have fed States, and in return I have generally found them rascals and thieves, and a graceless, worthless, thieving, lying set of vagabonds.

The grand jury at the Essex Assizes in November, 1850, in their pronouncements published a petition from the people of Andover, in which it was desired that the negroes there were living by stealing from the white people, and that they committed nine-tenths of the crime in Essex "according to the population," but that they willingly without the emancipated slave, etc. Nevertheless, if the government does not afford protection, "persons of Capital will be driven from the County." To these pronouncements the court replied that he was not surprised at the feeling, that the negroes were unworthy of sympathy, and would not work, "but proffering subsisting his information from respectable farmers, and begging from those benevolently inclined."

In September, 1853, an agent from Jamaica endeavored to persuade the negroes of Kent to emigrate to that island, but they refused, and in a public meeting at Chatham, on October 3, among other deliberations.

Resolved, "That in view of the fact that a crisis will soon occur in the United States to affect our friends and countrymen there," etc.

Mr. Christy understands this resolution to refer to the John Brown raid, which occurred thirteen days later.

The bitter feeling exhibited by the Canadians was never known in the South. There has always been a sentiment here of genuine kindness and sympathy for the negro, and while maintaining an unshaken purpose not to allow him an equal status, the white people have never used such insulting language toward him as some slave states, nor manifested such hostility. They seem to differ entirely from the Northerners and Canadian people in their sentiments. I think they deal with the question more practically, but I doubt if either of the sections quite understands the attitude of the other. As time passes and the number of the old negro diminishes, the tenderness and affection of the past grows closer and more engaging between them and their old feudal lords and their families. But the relations between the newer generations of the two races are, to my mind, most portentous. I am afraid the philanthropy of the North will never realize what is coming until the cataclysm is here.

I am, sir,  
HOOPER ALEXANDER.

## PROGRESS IN CANADA

KERRISTOWN, Pa., August 6, 1902.

To the Editor of Harper's Weekly:

See.—The following figures and facts concerning the trade of Canada may possibly be of interest to your readers.

It has been for years the custom of many to speak of the Dominion of Canada in a somewhat flippant manner, without much faith in its present or future importance as a factor in the world solely with this country. The trade of Canada for the year 1902 may come as a surprise to many. During the fiscal year 1902, her trade was considerably over \$467,437,000, showing an enormous increase in the trade and commerce of the Dominion. It certainly bears out favorable testimony to the wisdom of the present government's fiscal policy. The figures for this year show an increase of \$13,590,000 over the fiscal year of 1901. On the basis of imports which actually entered into consumption, and Canadian produce only, exported, the trade of the year totaled \$448,188,989 as compared with \$398,811,258 for last year, being an increase of \$49,377,640.

The trade of the Dominion in the years 1900 and 1903 was as follows:

1900	\$220,502,817
1903	\$448,188,989

This shows that within the past seven years the trade of the Dominion has more than doubled.

During the period of national policy which existed for nearly eighteen years prior to 1896 the increase was only 80,000,000, or less than three per cent. annually, whilst during the past seven years the increase has been fifteen per cent. annually, and for the same period the exports alone have increased about 120 per cent. Last year the exports of Canadian products were \$37 per capita, whilst the exports from the United States were but \$19 per capita.

The total trade of Canada, estimating the population at five and three-quarter millions, was \$81 per capita, whilst this country for last year was \$31 per capita. In 1850 the United States, with a population of twenty-three millions, had a total foreign trade of \$28,000,000, while the Dominion to-day, with a population of less than six millions, has a total foreign trade of about \$470,000,000.

From these figures and facts it would seem that Canada has not been lagging behind in the commercial race amongst the countries of the globe. It would also appear that, with affairs in this condition, annexation is not a doctrine that should find many supporters across the border. Canadians, generally, realize that a future as great as the present position of the United States is desirable for this country, and they prefer to work out their destiny apart from the United States. It is not a matter of desist that they are bound by ties of blood and advantage which bind together, not only this continent, but the whole Anglo-Saxon peoples.

I am, sir,  
CHARLES E. T. STUART-LINTON.

**\$2,000,000 for Turkish Rugs**

TURKEY is one of the countries with which our commerce consists principally of imports. While the total commerce with Turkey in Europe last year was over six million dollars, only \$408,745 of that sum was exports, and \$5,672,578 was imports.

Of the exports to Turkey in Europe in 1902 (the detailed figures of 1903 are not available), \$165,000 was cotton manufactures, \$111,735 provisions, \$67,257 agricultural implements, and \$68,298 manufactures of iron and steel. Of the exports to Turkey in Asia in 1902, manufactures of iron and steel amounted to \$64,189; cotton manufactures, \$45,145, and agricultural implements, \$13,469. To Turkey in Africa, manufactures amounted to \$971,657; iron and steel manufactures, \$69,807; mineral oil, \$25,345, and cotton manufactures, \$24,227. Of the imports from Turkish territory, the principal from Turkey in Europe were rugs and carpets, \$2,553,283; tobacco, \$649,874; hides and skins (chiefly goat-skins), \$812,218; oils, \$206,592, and wool, \$187,795. From Turkey in Asia, licorice root was the largest item, \$867,287; wool, \$672,273; opium, \$401,113; tea, \$363,873; dates, \$213,608, and raisins, \$136,227. From Turkey in Africa—Egypt—cotton amounted to \$9,323,431; sugar, \$1,361,938; and gum-arabic, \$266,138.

**APPLIC TO MOTHERS.**—MRS. W. COLEMAN'S **SCOTT'S EMERALD** should always be used for children's medicine. It soothes the child, soothes the fever, silences all pain, cures wind colic, and is the best remedy for diarrhoea. —[Adv.]

**ADVERTISEMENTS.**

**Pears'**

People have no idea how crude and cruel soap can be.

It takes off dirt. So far, so good; but what else does it do?

It cuts the skin and frets the under-skin; makes redness and roughness and leads to worse.

Not soap, but the alkali in it.

Pears' Soap has no free alkali in it. It neither reddens nor roughens the skin. It responds to water instantly; washes and rinses off in a twinkling; is as gentle as strong; and the after-effect is every way good.

Established over 100 years.

**Schlitz**

THE BEER THAT MADE MILWAUKEE FAMOUS

**There is no biliousness in old beer**

The beer that makes you bilious is what we call a "green beer." It is beer that is marketed too soon—that is insufficiently aged.

We store Schlitz Beer for months in refrigerating rooms, and this fact requires a storage capacity for 425,000 barrels.

We keep it there until it is well fermented. That adds to the cost, of course. That is why some beers are shipped green.

**We are that careful all through**

Careful about materials—about cleanliness.

So careful that we filter all the air that touches Schlitz Beer.

And when it is bottled and sealed, we sterilize every bottle.

Your doctor will tell you to drink Schlitz Beer, rather than common beer; and it costs you no more than the common.

Ask for the brewery bottling.

**Eczema**

Salt Rheum, Ringworm, Itch, Acne or other skin troubles, promptly relieved and cured by

**Hydrozone**

This scientific germicide, which is harmless, cures by killing disease germs. Used and endorsed by the medical profession everywhere. Sold by leading druggists. If not at yours, send 25 cents for a trial bottle. The genuine bears my signature. Accept no substitutes. Address

*Prof. Charles H. ...*

**MORPHINE** and **LIQUOR** **HABITUATED** **THROAT**, being sold elsewhere, has been found to be. Write **The Dr. J. L. Stephens Co., Dept. 87, Lebanon, Ohio**

**TOUR TO THE PACIFIC COAST.**

**Vis Pennsylvania Railroad, Around Meeting National Bankers' Association.**

On account of the meeting of the National Bankers' Association, to be held at San Francisco, Cal., October 20 to 25, the Pennsylvania Railroad Company offers a previously conducted tour to the Pacific Coast at remarkably low rates.

This tour will leave New York, Philadelphia, Baltimore, Washington, and other points on the Pennsylvania Railroad east of Pittsburg, Wednesday, October 14, by special train of the highest grade Pullman equipment. A quick run westward to San Francisco will be made, via Chicago, Omaha, Cheyenne, and Ogden.

Five days will be devoted to San Francisco, allowing ample opportunity to visit the bay by most recent motor, returning stops will be made at Salt Lake City, Colorado Springs, Denver, and St. Louis. The party will reach New York on the evening of October 21.

Round-trip rate, covering all expenses for railroad fares, except the extra added in San Francisco, \$150. Rates from Pittsburg will be \$200 less.

For full information apply to Travel Agents or Gen. W. Reed, General Passenger Agent, Broad Street Station, Philadelphia, Pa.

# LETTERS OF MARQUE

ISSUED UNDER SEAL OF THE KINGDOM  
OF BOHEMIA TO ESPER INDIMAN, ESQ.

BY VAN TASSEL SUTPHEN

## The Adventure of the "Ninety and Nine Kisses"

THE fair and bazar of the United Housewifery Benevolent Association was assuredly a tremendous success, and not the least of its attractions was the open market where kisses might be purchased at the ridiculously small price of fifty cents each. But "cash before delivery" was the motto, and on the counter in front of each young woman stood a brass bowl in which the purchaser deposited his money—free hat entirely suspended. One could see that "The Fair One with Golden Locks," a large, full-bodied blonde with extraordinarily vivid red cheeks, had been doing a rushing business; her bowl was overflowing with notes and coins. And the others also had done well, all except "Mademoiselle D.," the girl at the far end; she had not made a single sale. A slight little thing, pale and somewhat anxious-looking, no wonder that customers had passed her by. Then she looked up, and we both caught our breath. What eyes! Eyes of the palest, scintillating gray—gray of that rare quality that holds no tint of either green or blue. Her eyes were her one beauty indeed, but the superlative measure of loveliness is best seen when it stands alone. And these dots of hazel-steel had passed on to sample the pink and white confectionery at the other end of the counter.

"One hundred, if you please," and Indiman laid a fifty-dollar bill in the bowl of the girl with the gray eyes. The crowd stopped and gaped, and "Mademoiselle D." turned from white to red and then to white again.

"Bought up the whole stock, boss!" asked a foolish-looking youth whose collar was slowly but surely choking him to death.

"Better take a couple on account," said the pert dandy attached to the young fellow's arm. "They might turn sour on you, Mister Man."

"Give 'em away with a pound of tea," put in a third joker. "Eh, Josie?"

"Let's get away from here," whispered Indiman to me. "The girl looks as though she might faint."

We pushed on through the crowd that continued to chaff us good-naturedly—joking they called it. Then we managed to struggle into a sort of backwater at the side of the dais upon which an alleged string band was trying to make good, as the scornful Miss Josie remarked.

"There's something wrong in this, Thorpe," said Indiman to me in an undertone. "Did you notice the stout man who stood immediately behind her?"

"The chap with one ear a full size larger than the other? Yes, I did."

"He never takes his eyes from her, and I believe that the girl is here against her will."

"Indiman!" I began, but he cut me short.

"I know it, I tell you, and I'm going to take her away. Do you see that electric-light switch on the wall behind you?"

"Back of the musicians' platform was a small wall cupboard holding the usual apparatus for controlling the incandescents lights with which the hall was illuminated."

"Pull down both handles when I give the signal," he went on, imperceptibly.

"What signal?"

"Inference considered. 'I'll take one of my kisses,' he said, smiling."

"I'll do nothing of the kind."

"Oh, yes you will. Remember now—the instant that I bend down to kiss her?"

He was gone, leaving me to curse his folly; I tried to overtake him, but the foolish youth and his Josie blocked my way. Intentionally, it seemed, that was part of their joshing of the stranger looked for Indiman. He had just reached the counter covered with red paper mastic, he pushed his way up to the girl with the gray eyes, and said something to her. She seemed to shrink away.

Indiman turned for an instant, and looked back at me, then he bent down and kissed her.

Without having had the slightest intention of so doing I pulled down both handles; the hall was in instant and utter darkness. For a moment the following silence persisted, menacing and deadly; it was as though Fate had suddenly reared her frightful head, a wild beast ready to spring.

A girl's light laugh turned the scale. "Trying to raid the fruit-stand, are you, huh," went on Miss Josie, in her thin, cool voice. "Thought you could pinch a couple in the dark of the moon, but my, my, Thorpe! those two assets'll just cost you supper for four. I'm not sitting behind the bargain counter to-day, thank you."

A babel of cat-calls, oaths, and laughter broke out, but the tension had been relaxed, and the danger was over. I pushed and jammed through the crowd to the stairs. No one was attempting to leave; in the hall they had just got the lights turned on again. I started down.

"Here, you!"

I looked back; the stout man with the disproportionate ears stood at the head of the stairs, hunched in by the crowd. He pointed and shook his clenched fist at me. "You! You!" he shouted, impotently. I ran on.

In the street before Indiman was helping the girl into the coach. He turned as I ran up.

"Good," he said, and offered me his cigarette case.

"The big fellow is coming down," I urged.

"Have a light," said Indiman. "And now, my son, adieu!"

I stepped into the coach and Indiman after me. There was a sound of angry voices from the hall above; two or three men dashed down the stairway, others following.

"Drive on," shouted Indiman, and the carriage started. Then we both turned and looked blankly at that empty back seat.

Indiman bit his lip. "It is an old trick—leaving by the other door," he said, quietly. "It was while we were fighting our cigarettes, and that reminds me that I had decided to give up the habit." He tossed his cigarette out of the window; the coach rolled away.

Private business called me to Washington the next day, and I had to take the night train back, arriving in New York at the uncomfortably early hour of seven. But it was some small satisfaction to tap vigorously upon Indiman's door as I passed to my own room. One always experiences a sense of virtue in being up at unreasonable hours, and blessings should be shared with one's friends. Later on we met at breakfast, and he did not thank me.

The following paragraph in the "Personal" column of the *Herald* caught my eye. "Ladies to this," I said, and read it aloud to my sulky host:

"To Mademoiselle D: There are ninety-and-nine kisses still due me, and I propose to collect. Box 90, *Herald* office (up town), or telephone 18,901 Madison Square. (Private wire.)"

Esper Indiman smiled and touched an electric button. "The letters, Boldier," he said, but the man had anticipated his request, and was carrying in a salvo heaped high with mislives and papers. "I had the personal telegraphed to the *Herald* the same night of our adventure at the Housewifery's bazar," said Indiman. "Also repeated in to-day's issue."

"It seems to be bearing a fine crop of replies."

"There's a lovely basket of 'em already—mostly from the alleged bachelors. Or else it's this sort of thing," and he tossed over an extraordinary piece of stationery—white cream—laid with string, like a mourning band, only pink instead of black; thick of that."

Of course the contents of the letter did not baffle its exterior. "Mr. Housewifery" was informed that not only ninety-nine, but

**CADILLAC**  
Automobile

The Cadillac 750 is the greatest value ever offered in the history of motor cars. No other machine is so strongly built, so low center of gravity, so unobstructed area of steering mechanism. Working of every part simple, like one wheel, about twice as much. Great speed on the level, wonderful hill climbing—the automobile that solves the problem of safe, rapid and economical travel. Heavy top at \$2 extra. License—\$200 extra. Discount booklet is sent free.

ridiculous, and the voice sounded cold and inconceivably distant. "I have the honor to wish you a very good morning!" The telephone rang off sharply.

"I fancy that for some thought in both our minds—could this be the same woman whom we had seen selling her kisses at an East Side bazaar? The very thought was incredible. And, remember, that we had not heard her voice before. Yet neither of us doubted, even for a moment.

"After all, it was only the one kiss that was actually sold and delivered," said Indiman, half defiantly. But he need not have defended her to me.

It was getting to be a very pretty problem as it stood, the one obvious probability being that it was the girl herself who stood in danger. What could we do? To discover the nature of the impending peril and, above all, the personnel of the conspirators. And then what? How were we to communicate with or warn the girl, for, of course, she had called up Indiman from a public pay-station, leaving no clue to her identity or address? Well, there was still the personal column in the *Review*; it had reached her once and might again.

"I am going downtown to the main office of the Western Union," said Indiman, "and may be away all day. If I should return by dinner-time you will carry out the instructions in the message. Exactly, remember—our No. 6, and the best butter—each detail may be important. About nine o'clock should be a good hour.

"I understand," I said, and we parted.

At exactly half after nine that evening I stepped off our No. 6 at the crossing of West Fourth and Eleventh streets. The grocery was on the northwest corner, and I entered without hesitation.

Like many other big cities, New York (even excluding the transpennine suburbs) is a collection of towns and villages rather than a homogeneous municipality. Chelsea and Harlem and the upper West Side—all these are distinct and separate centres of community life. Greenwick village knows nothing of Yorkville, and the East Side Ghetto has no dealings with the inhabitants of the French quarter.

Now the small area bounded by Waterley Place, Christopher Street, West Fourth, and West Eleventh streets is also a *l'espace* itself. The neighborhood is respectable and severely old-fashioned, the houses large and comfortable, and the resident population almost entirely native New-Yorkers in moderate circumstances. A village, then, with its shops and schoolhouses and churches; it is as provincial in its way as the Lanesville of the comic week-part of the male population, the men who would not be seen in a shop, seated on benches and chairs around the stove, for it was a raw and chilly day. They looked up as I entered, but no one moved or spoke. Undoubtedly my man was in the group, but how to pick him out. I walked to the counter and addressed the young fellow who lounged behind it.

"Two pounds of the best butter, please."  
"All out," was the unexpected reply.  
"None of the best—that's what I said."  
"I wanted a green trading stamp." I went on, helplessly.  
"Anything over five cents' worth; jar of pickles, if you like."  
"No; not that. Here, give me—how much are those cigars?"  
"Five and ten."  
"Ten cents, then."

The young man handed out the box with a nonchalant air. "Help yourself," he said.

I selected a cigar. "You're sure you haven't any better—the best butter?"

"Ah, now whether giving us? This ain't no Tiffany & Co. Best butter, huh? Fraps you'd like to take a peck of it, woulda, house wid jer—the best d'romon, mind, all ready shelled and fried in gold dust. And jist throw in a bunch of them German-silver longsticks for the salad. Y'sair; charge 'em to Mr. Astor, Astorville, N. Y."

The loungers about the stove sniggered audibly, but something in the fellow's voice made me forget his insolence; I looked up and into the eyes of Esop Indiman.

I think I did it pretty well—the cool, ignoring stare with which one is accustomed to put a boor out of countenance.

"Let me have a light," I went on, and the pretended grocer's boy was anxious to oblige, scratching the match himself and leaning across the counter to hold the flame to the cigar end.

"Coach waiting for you in front of the church," he whispered. "Drive straight home and slowly—to give him a chance."

I left the shop without troubling to glance at the loungers about the fire; Indiman would attend to that part of the business. The coach was in waiting at the Baptist Church, and the driver touched his hat when I mentioned my name. I gave him the address, and told him to drive slowly. As we turned into Seventh Avenue I looked back and saw a cab following.

An hour later Indiman came in and joined me in the library. "Now, then?" I said, impatiently, after waiting to see him mix a high ball and light a tresser-dough black Brevé. Indiman is a little provoking at times with his infinite deliberation.

"Where were we?" he began. "Ah, yes, I had my theory about finding the chap who wrote out that message. It was correct, absolutely so," and Indiman pulled away in dreamy content, staring up at the ceiling.

"I know Mason of the main Western Union office quite well, and he was most obliging. Recognized the peculiarity of the telegraphic ending at once; there actually was a fellow who had a habit of intersecting the superfluous a in his dispatches. Name of Ewell, and he was the operator in a sub-station near Jefferson Market.

"Well, I posted up there and sounded him. He didn't know anything about it at first, so I had to scare him a bit; he weakened then, and told me what I wanted to know."

"Of course it wasn't a real message; he had run it off on his machine at the request of a queer-looking gentleman who had given him a couple of dollars for his trouble. According to his description, the man was stout and dark, with one ear, the left, decidedly larger than the other."

"Aha! the fellow we saw at the bazaar. But he wasn't in the group about the grocery store."

"Of course not, but he had his copper there."

"Go on."

"Well, I thanked Mr. Ewell for his information, and left him with a solemn admission to be more careful in the future about doing business on the side. Then I sat down to consider, the two pounds of the best butter, and the green trading stamp had nothing to do with the real business of the evening. The game was simply to identify the 'Mr. Housewirth' who had advertised for his stinky and nice kisses, and the green trading stamp had nothing in telegraphic characters, and all the rest of it were simply the kind of bait at which so eccentric a person might be expected to bite. The gentleman with one ear larger than the other desired to find the elusive Mademoiselle D, erstwhile

Indiman was helping the girl in the coach as I ran up

dispenser of kisses at an East Side charity bazaar, and, consequently, he was following up every possible clue. He wanted "Mr. Housewirth," and I wanted "him."

"Fight shadows with shadows, remember, and so I took service with my honest friend, David Brown, dealer in groceries at West Fourth and Eleventh streets. He was rather offish at first, but Mattson at Police Headquarters had provided me with a special detective badge, and Mr. Brown was led to believe that I was working up a case of graft. He lent me a jumper, and I was forthwith installed behind the counter.

"Everything went off according to schedule. The "shadow" had his cash in readiness and I had mine. He trailed me to No. 4022 Madison Avenue, and I followed Mr. Shadow to the Central Detective Office. It seems to have been a case of sleuth against sleuth, with the match all square.

"Anything else?"  
 "Well, yes. As I came into the house just now, two men were waiting for me in the vestibule. They went through me, but I still retain possession of my watch and purse."

"No," I said, somewhat helplessly.

"What's the next move to be made?"  
 "It is the last night of the supplementary opera season," answered Indiman, "and we are going to dress and see what we can do. Tschikowsky's 'Queen of Spades' is a novelty—first and only performance outside of Russia, and Terzini heads the cast."

"There is Mademoiselle D.," remarked Indiman as his glass swept the semicircle of the grand tier. "The fourth box from the end."

There were but three people in the party—the girl with the gray eyes, an elderly man with a ribbon in his buttonhole, and Jack Crawford, whom everybody knows.

The curtain fell on the third act, and immediately Crawford made his appearance in the ornate box where we were sitting.

"Come with me, mes enfants," he said, gravely. "It seems that you and the adorable Countess Gilda are old friends; she compensates your instant attentions. What, men, do you hesitate! I shall lose my head as our sovereign lady is not instantly obeyed."

The girl with the gray eyes greeted me with smiling unconcern. "Do you know my uncle?" she asked, and we were forthwith presented to his excellency Baron Cassilda, the Russian ambassador to the United States. Then the Countess Gilda addressed herself squarely to Indiman.

"I am in your debt, Mr. Indiman, and you must permit me to discharge the obligation. My dear uncle, your purse."

Indiman bowed and accepted the fifty-dollar bill tendered him.

"Now we are quits," she said, smiling. "Not quite," he answered, hardly. He drew a half-dollar from his waistcoat pocket and offered it to her. A flood of color mantled her brow, but she took the coin and slipped it into her gloves. "Well," she asked, her small chin defiantly up-lifted.

"I have only one question," said Indiman, earnestly. "Is there danger for you?"

"None in the world."

"Then I am quite satisfied."

She softened at that. "Only a rather aggravating disappointment; it does not matter now. But why will you now interfere in an unoffending woman's affairs?"

"I had no idea—"

"Of course not. However, we need not enter further into particulars. Your friend in the orchestra stall yonder will doubt-

# CRYSTAL Domino SUGAR

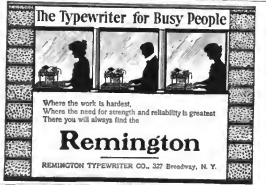

**A Triumph in Sugar Making!**

**Sold only in 5 lb. sealed boxes!**

"CRYSTAL DOMINO SUGAR" is packed in neat, sealed boxes, and is NEVER used in bulk. It is packed at the refinery and opened in the household—there is no intermediate handling. Hence, no dirt, no waste, no possible adulteration. Every place alike—and every piece granules like a cluster of dominoes, the result of the perfect crystallization. Considerable. When broken, this sugar resembles thick, melted putty, and can spread it in any form, perfect in quality, brilliant in appearance, no sugar made can equal it in its "Domino" Mark. "Domino" brand, the name of "Crystal Domino," as well as the names of the manufacturers. You will be pleased to discover you own a box. You will be better pleased when you have tried it in your tea, coffee, etc. It is sold to all first-class grocers, and is manufactured only by HAVEMAYER & BROS. SUGAR REFINERY, NEW YORK.

THE T. & J. CO. LEASE  
 73 and 75 West Street, New York

less enlighten you later on." A stout man with one eye distinctly larger than the other deliberately faced about in his seat and directed his glances at our box. Immediately after the curtain went up on the last act, and his excellency held up his hand to command silence.

"Madam," said Indimian, as he headed the Countess Glida to her carriage, "I swear to you that the blunder I have unintentionally committed shall be atoned for. I ask but a hint—the slightest of clues."

"With pleasure, monsieur. I give you, therefore, the third appearance of the Queen of Spades. As a reward? We will to-morrow by the Comander."

The man with the disproportionate ear touched Indimian's elbow. "I beg pardon, sir," he said, deferentially, "but I shall have to have a word or two with you."

We drove to the Utman Club, and found a secluded corner. "Now what is it, officer?" said Indimian.

The detective looked rather sheepish. "I'm afraid we've made a mess of it between us. Case of political blackmail, you see, and the young lady thought she could handle it herself. And so she could have done if we hadn't butted in, begging your pardon for so saying."

"Get to the point."

"Well, then, at a question of a letter belonging to a Great Person in Moscow—Written to or by her doesn't matter. The letter is here in New York, and it isn't a question of money with the holder, but power. There's only one thing to be done in that case—steal it, and the Countess thought she could then turn the trick. So she went over to the Broadway East Side and laid her pipe to the head of the old party who holds the precious document. At the Bureau's request I was detailed from the Central office and instructed to keep my eyes on the young woman and my hands off the money. So, then, I couldn't do anything. I lost the girl when you walked off with her at the House-smith's bazaar, and then I had to stick in my head and answer your personal in the Herald. I laid what I thought was a pretty smart trap. You fell into it right enough."

"So you were the fellow who had me searched and held up at my own front door," said Indimian, a Commission. "What did you expect to get?"

"Why, the letter, sir; I had figured it out that way was the blackmailer."

"Oh, the donor! And at the same time the real article had been put on his or her guard by all this hullabaloo, and the Countess Glida's game was blocked."

"That's it, sir. A mistake all round."

"I should think so. Well, there's nothing more to be done. That's all you know about the case?"

"Never heard of the Queen of Spades in this connection?"

"Never, sir."

"Well, good night, officer. Brownson's your name, eh? It ain't forget it."

"Good night, sir."

The night was fine, and we walked home. Over an Eighth Avenue masquerade ball we were in progress, and the brightly lit windows of the hall in which it was being held. A mackerel stood at the door, a woman dressed to impersonate the Queen of Spades. She moved her hand to Indimian, who had changed to look up; she then plucked a rose from her bodice and tossed it over to him. He caught the flower, as he expected a gullant man, but immediately walked on.

"That was your cue—the Queen of Spades," I said.

"Not at all. It is only the third time that comes. First at the masquerade and now here; the final and only important appearance is still to come."

At the next corner a wretchedly clad woman was giving a small barrel of water. "For the love of Mary!" she whispered, and Indimian thrust something into her waiting hand. He tried to hide the action, but I caught a sight of the money, a yellow-backed bill bearing the magic figure 50.

"Did you notice the tune," said Indimian as we walked on. "The Ninety and Nine?"

Here the "Adventure of the Ninety-and-Nine Kiowa" ends and that of the "Queen of Spades" begins.

### INTER-STATE FAIR AT TRENTON.

September 25, 26, and 27, October 1 and 2.

The great Inter-State Fair will be held on Sep-  
tember 25, 26, and 27, October 1 and 2, at the Fair  
grounds, near the city east of Trenton, N. J., on the  
New York Division of the Pennsylvania Railroad.

The Pennsylvania Railroad Company will sell ex-  
pansion tickets for the Fair grounds, including coupon  
admission, at 50 cents reduced rates from stations  
within a wide radius, and special trains over the  
New York, Hudson, and Andes Division will be  
run through to the grounds, thus avoiding street-car  
trains.

As in previous years, every department will be  
adequately well equipped and interesting displays. The  
National stock exhibit will be particularly fine, and  
the daily program of races contains the splendid  
classical attractions. The management of the Fair has  
put forth extraordinary efforts to make this year's  
exhibition even grander than last year's record-break-  
ing display.

# ABSOLUTELY FREE! \$10,000

To be distributed among subscribers to the  
 Cincinnati Daily Enquirer in November, 1903.

On Tuesday, the 3d day of November, 1903, there will be a state  
 election at which a Governor of Ohio will be voted for. To stimulate  
 interest in this election, the Cincinnati Daily Enquirer has set aside  
 \$10,000. This will be distributed, according to the schedule annexed,  
 among the subscribers, on and after this date until the close of the con-  
 test, who estimate nearest the vote which will be cast for the office of  
 Governor of Ohio. The number of the total votes cast for the office  
 of Governor will be determined as final and conclusive by the official  
 certificate of the Secretary of State.

## THE PRIZES TO BE DISTRIBUTED ARE AS FOLLOWS:

To the one making the nearest correct estimate of the exact total of the vote for the office of Governor of Ohio.....	\$5,000.00
To the Second Nearest.....	2,500.00
To the Third Nearest.....	1,000.00
To the Fourth Nearest.....	500.00
To the Fifth Nearest.....	250.00
To the Sixth Nearest.....	200.00
To the Seventh Nearest.....	150.00
To the Eighth Nearest.....	125.00
To the Ninth Nearest.....	100.00
To the Eleventh Nearest.....	75.00
To the Twelfth Nearest.....	50.00
To the Thirteenth Nearest.....	25.00
To the Fourteenth Nearest.....	16.00
	10.00

In all fourteen premiums amounting to \$10,000.00

If there is a tie in the estimate of two or more persons for any one of the prizes, the amount thereof will be equally divided.

### THE VOTE OF OTHER YEARS.

## COMMENT

ACCORDING to ex-Senator Butler of North Carolina, chairman of the Populist National Committee, the Populist party will put forward a nominee of its own for the Presidency next year. That would not be an incident of importance if the nominee were unlikely to receive more votes than were cast for Barker in 1900—only 50,000. Dela, the nominee of the Socialist-Democratic party, got almost twice as many, and Woodley, the nominee of the Prohibitionists, more than four times as many. Ex-Senator Butler thinks, however, that the political situation in 1904 will resemble that which was witnessed in 1892, when Weaver, the Populist nominee, it will be remembered, obtained not far from a million votes at the ballot-box, and no fewer than twenty-two electoral votes. During the campaign which preceded the election in the year last named, the Republican politicians viewed the Populist movement with complacency, taking for granted that Weaver's supporters would be recruited mainly from the Democratic ranks. If this was indeed the case, there must have been a far larger class of Republicans into the Democratic camp. For Mr. Cleveland obtained a plurality of 122 electoral votes over Harrison.

Ex-Senator Butler is doubtless right in assuming that what he terms Clevelandism, by which he means the conservative element in the party, will preponderate in the next Democratic national convention. It will be sufficiently powerful to frame the platform, though whether it will command the two-thirds vote needed to designate the nominee for the Presidency is still uncertain. The Bryanites expect to send delegates to the Democratic national convention from the States of Kansas, Nebraska, North Dakota, South Dakota, Colorado, Montana, Idaho, Wyoming, Nevada, Oregon, and Washington. These States, collectively, cast only forty-nine electoral votes in 1900. The Bryanites hope, however, to control, through Mayor Johnson, the Ohio delegation, and through Mayor Carter Harrison the Illinois delegation. They would have to do considerably better than this, however, in order to muster a third of all the delegates in the convention. If the Southern States should combine with the Middle and Eastern States they would probably be able to attract enough dele-

gates from the transmississippi region to make up the two-thirds vote which a Democratic candidate requires in order to secure the endorsement of his party. The figures that we have here suggested will not be regarded with approval by the *Commoner*, but we do not think that we have much underrated the strength of Mr. Bryan's following in the next Democratic national convention. If our computation is correct, the conservative Democrats will be able to nominate any one they choose, and the paramount question for them to consider is whether they can elect him.

We have several times had occasion to point out that, in our opinion, Mr. Bryan's influence was waning, even in the transmississippi States, but not on that account have we approved of the disposition evinced in certain quarters to treat him with contumely, or at least indifference, as if he were a wholly negligible factor in American politics. In our judgment that is not the temper in which the reconsolidation of the Democratic party should be undertaken. It is, therefore, without any sympathy that we record the vindictive utterance of Mr. O. K. Wright, a well-known lawyer of Denver, and a Democrat of influence in Colorado. Mr. Wright holds that the Democrats have a chance to win next year, but he adds that if the twice-defeated Nebraska candidate is to be consulted on any of the issues, or invited to take any part in the conduct of the campaign, the Republicans will be justified in beginning the shouting before the polls open in November, 1904. As regards the issues on which next year's contest will be fought, the defaming of them, so far as a control of the matter can be exercised by the Democratic national convention, will be intrusted to the Committee on Platform, in which we may take for granted the Bryanite element will constitute only a weak minority. Mr. Wright may be thoroughly assured that there will be no Bryanism in any of the planks, if by Bryanism he means a demand for the free coinage of silver at the ratio of 16 to 1, nor a demand for the immediate evacuation of the Philippines, nor a demand for the withdrawal of the power to issue injunctions from Federal courts of equity.

A proposal has been made to invest the Vice-President with more important functions than those allotted to him by the Constitution, which are confined, it will be recalled, to succeeding to the Presidency when that office becomes vacant, and, meanwhile, to presiding over the Senate, and to voting in that body on a bill or resolution when the Senators are evenly divided. It is suggested that, by an amendment to the Constitution, the Vice-President should be made an irresponsible member of the cabinet. Such an innovation would be irreconcilable with the theory on which the Executive Department of our Federal government is based. According to that theory, the members of the cabinet are merely agents of the President, and, as such, are appointed by him, with the consent of the Senate. Very seldom has the Senate declined to confirm a cabinet appointment. Logically, members of the cabinet should also be removable at the President's option, and the soundness of this view of their relation to the Chief Magistrate commended itself to Congress when the Tenure of Office Act was repealed.

It is obvious that a President and Vice-President might differ materially concerning an important question. Not only was there antagonism between President John Adams and Vice-President Jefferson in 1797-1801, and between President John Q. Adams and Vice-President John C. Calhoun

in 1825-29, but if President William Henry Harrison had lived, he and Vice-President Tyler would have taken opposite sides with reference to the expediency of chartering the United States Bank. It is clear that such a difference of opinion might be productive of inconvenience, if not mischief, were a Vice-President to be made, by a constitutional amendment, an irremovable member of the cabinet. To make him a removable member no amendment of the Constitution would be needed. President McKinley, for instance, would have had the legal right to nominate Vice-President Hobart for a seat in the cabinet, but it is very doubtful whether the Senate would have confirmed such an appointment. Many Senators would probably hold that the impartial discharge of the duty of presiding over their deliberations could not easily be reconciled with the assumption of active participation in the work of the Executive Department by the Vice-President. As things are now, a great deal of influence on the conduct of executive business may be exercised by a Vice-President. There is reason to think that Vice-President Hobart's opinion had quite as much weight with President McKinley as had that of any member of the latter's cabinet. On the whole, it seems wise to leave the functions of a Vice-President where the Constitution has placed them. This is not to say that heretofore greater care ought not to be taken in the selection of nominees for the office.

The attention of professional politicians continues to be fastened upon Ohio, although not even the most optimistic Democrat imagines that Mayor Johnson can secure the Governorship at the approaching election. On the other hand, Senator Hanna, for some reason best known to himself, seems to think that the Republicans are much less certain of obtaining a majority in the Legislature than they have hitherto been supposed to be and that, consequently, his re-election to a seat in the United States Senate is in doubt. Only on this hypothesis can we explain his earnest appeals for assistance and the responsive co-operation of Republicans of national reputation in a State campaign. As we have formerly pointed out, it would not be easy to exaggerate the effect that would be produced on several pivotal States if in Ohio the Democrats should manage to acquire a majority of the Legislature, and should utilize their victory by sending Mr. John H. Clarke, a Gold Democrat, to the United States Senate. This they are bound to do by a resolution of their State convention, and since Mr. Bryan has sanctioned Mr. Clarke's nomination, it is improbable that any Bryanite member of the Legislature would refuse to vote for the latter. In Iowa, Governor Cummins has been, it is well known, renominated, and can look forward to what is known as a "walk-over." His election will have no significance, inasmuch as he has accented to a compromise with the "stand-patters."

In Maryland both the Republican and Democratic candidates for the Governorship have set their faces against a corrupt use of money, but it remains to be seen whether a similar stand will be taken by the competitors for a seat in the United States Senate. Should the Republicans manage to elect their candidate for the Governorship—an event which, at the hour when we write, seems improbable—the debatement would not unreasonably be drawn that Maryland in 1904 will give her electoral votes to Mr. Roosevelt, as she gave them to Mr. McKinley in 1896 and 1900. It should be borne in mind, however, that the majority for the Republican electors shrank three years ago from upwards of 22,000 in 1896 to less than 14,000. In Kentucky the contest for the Governorship is conducted on both sides with an exhibition of energy and confidence calculated to surprise those persons who cannot bring themselves to realize that Kentucky has ceased to be one of the strongholds of the Democracy. It is true that from 1876 to 1892, inclusive, its electoral votes were always given to the Democratic candidate for the Presidency. In 1892, however, Mr. McKinley carried the State by a small plurality, and obtained twelve of the thirteen electoral votes; in 1900 he lost the State by less than 8,000 votes. But for the assassination of Goebel, which is still unforgettable, the Republicans might this year have a fair chance of carrying the State.

At the hour when we write, it seems probable that the proposed amendments of the State Constitution of New

Jersey have been rejected, only a small percentage of the normal vote having been polled at the special election. The rejection of Article VI is a matter of grave importance to scores of thousands of persons, not inhabitants of the State, who are stockholders and bondholders in corporations that have been organized under the New Jersey laws. Hitherto in New Jersey not only have all judges, whether of common law or equity courts, been appointed by the Governor, but the highest judicial tribunal, the Court of Errors and Appeals, has consisted of the Chancellor, the Justices of the Supreme Court, and six lay judges. The purpose of the amendment to the State Constitution embodied in Article VI, was the exclusion of laymen from the highest tribunal, which was to be entirely composed of judges learned in the law. That non-lawyers should be permitted to take part in the decision of nice legal questions seems, on the face of it, absurd, yet it is just such an absurdity that the citizens of New Jersey, by their apathy, have consented to perpetuate. If it be true that the amendment mentioned has been defeated, there is a report that the defeat is the outcome of an organized but secret movement on the part of the labor-unions, which professed to believe that if the Court of Appeals were divested of its lay element, and composed entirely of lawyers, it might be more easily swayed by great corporations against the interests of labor. The labor-unions would no doubt consent to the substitution of lawyers for laymen in the highest judicial tribunal if in New Jersey, as in New York, all the members of the judiciary were elective, instead of being appointive. We believe the day to be yet distant, however, when the people of New Jersey will accept an elective judiciary.

That negro labor is indispensable to the Southern States has long been a current assumption, based on two assertions, —first, that, owing to climatic conditions, white men are unable to compete with blacks as cultivators of the South's staple products; and secondly, that even if such physical disability did not exist, white immigrants could not be attracted to the South from foreign countries or from other parts of the United States, owing to their unwillingness to compete with negroes in the labor market. It appears that neither of these assertions is well founded. If there is any Southern staple which white men have been supposed to be unfit to cultivate, it is rice, yet it turns out that almost the whole of this cereal that is raised in Louisiana is produced by white men. A large proportion of these rice-growers have come from the Northern States. According to the *Farm Magazine* of Baltimore, upwards of 70,000 immigrants from the Northern and Western sections of the Union have settled during the last decade between New Orleans and the town of Corpus Christi in Texas. The same periodical brings forward other interesting data relating to the migration of white agriculturists from the North to the South. We read, for instance, of twelve hundred white farmers, not Southerners by birth, that have during the last twelvemonth been cultivating lands on the lines of a single railroad south of the Potomac and east of the Mississippi. We are further informed that a nearly straight line a hundred miles in length may be drawn through the so-called black belt of Virginia without crossing an acre of land owned by a negro, and that a large percentage of the farms thus crossed are tilled by white men who have come from the North and West. Around Petersburg, in Farmville, and in the Norfolk trucking section are to be found many white men of foreign birth or descent. There is no doubt that agricultural land is relatively cheap in the Southern States, and it is probable that if an organized effort were made by Southern railways, a considerable fraction of the immigrants from Europe might be attracted to their section. We learn from the *Farm Magazine* that within a twelvemonth an old and abandoned tract in Georgia has, through the application of up-to-date agricultural methods, been transformed into a flourishing settlement of four hundred whites.

There seems to be no foundation for the assertion made by Mr. Henry Watterson in the *Courier-Journal* that of the forty million dollars to be paid by the United States to the French Panama Canal Company for its property on the Isthmus of Panama, one-half was to be distributed among the American citizens who are credited with procuring the pas-

usage of the Spooner Act in pursuance of which the purchase was to be made. It is well known that the property of the French canal company was valued by the experts composing the Isthmian Canal Commission, including eminent civil and military engineers, at forty million dollars, an estimate regarded by French engineers as much too low. Colonel Waterson fails to explain how, under the rigorous laws which in France govern the management of corporations, one-half of the purchase money receivable from the United States was to be diverted from the stockholders and expended on this side of the Atlantic in the form of bribes. It is quite possible that the Bogota politicians may have tried to extract some money from the French company in consideration of Colombia's assent to the sale of its franchise, but, as we have formerly pointed out, no money could be legally appropriated for the purpose by the officers of the company, and, if furnished, would have to be advanced by some of the large stockholders in their individual capacities.

Some misconception seems to exist regarding Mr. Roosevelt's duty, in view of Colombia's failure to ratify the canal treaty within the time fixed for an exchange of ratifications. Even a man usually so well informed as Senator Morgan of Alabama assumes that, under the terms of the Spooner Act, the President is bound immediately to enter upon negotiations with Nicaragua and Costa Rica for the procurement of the right to construct a canal by the so-called Nicaragua route. There is nothing in the Spooner Act to prevent Mr. Roosevelt from again entering upon negotiations with Colombia, or from agreeing to pay for the right of completing the Panama Canal a sum somewhat larger than that previously fixed, or even from accepting conditions relating to jurisdiction somewhat different from those designated in the former treaty. The President may deem it inexpedient to take any of these steps, but he is at liberty to take them under the Spooner Act, which authorizes him to purchase the Panama Canal at such a time and under such conditions as to him shall seem reasonable. Of what constitutes "reasonable" he is made the sole judge. We shall not be surprised if Colombia herself takes the initiative and proposes the conclusion of a new treaty diverging in some particulars from that which her Congress has just refused to ratify. Of course, a new treaty would have to be submitted to our United States Senate for ratification, and it would undoubtedly be opposed by those Senators who from the outset have favored the Nicaragua route.

It looks as if Mr. John Mitchell had succeeded in frustrating the plan impudently to President Gompers, the plan, namely, of arraying the American Federation of Labor on the side of those labor-unions which have been disposed to exeat from Mr. Roosevelt a promise that only labor-nominals should be employed on government work. If the plan had been carried out, it is certain that the President would have adhered to the position already taken by him, that neither membership nor non-membership in a labor-union shall constitute a bar to employment by the Federal government. It is also probable that, in consequence of his refusal to accede to the wishes of the Federation of Labor, he would have been held up to labor-unions as an enemy. If Mr. Gompers had proceeded to declare that, as between President Roosevelt and Senator Hanna, the latter should be looked upon as the better friend of labor, an attempt might have been made in the Republican national convention, to convince the delegates that the nomination of Mr. Roosevelt for the Presidency was no longer expedient. There are those who think that the question raised by the discharge and reinstatement of Foreman Miller of the Government Printing-office in Washington may be settled by a dismissal of Miller, who is accused of bigamy, on the score of immorality. How would the vacancy created by Miller's dismissal be filled? Should his successor be a labor-unionist, the objection might be drawn that the charge of bigamy had been trumped up to revile the Roosevelt administration from an ill-timed and unwelcome contest with labor-unionists. If, on the other hand, Miller's successor should be a man not connected with any labor-union, it might prove exceedingly difficult for Mr. John Mitchell to prevent the American Federation of Labor from pursuing the course which Mr. Gompers is believed to advocate. This is a matter of more political importance than it may seem at the first

glance to be. Admitting, what few well-informed persons are likely to deny, that in the Northern States the labor-unionists control about ten per cent. of the total vote cast, we must acknowledge that, in such pivotal commonwealths as New York, New Jersey, Connecticut, and Indiana the Republican party could not afford to provoke the hostility of labor-unions.

Before these words meet the reader's eye, the arguments for the United States, on the one hand, and for Great Britain, on the other, will have been completed before the Alaska Boundary Commission, and the announcement of a decision will not be long deferred thereafter. As we have repeatedly pointed out, the sole chance of an agreement being reached by four out of the six commissioners depends upon the ability of the counsel for the United States to convince Lord Alverstone of the justice of the American claim. As yet, of course, it is quite impossible to forecast the position that will be taken by the British commissioner, but he has seemed to be much impressed by several of the points presented in the American case. Should he continue, nevertheless, to side with his two Canadian colleagues, the commission will be evenly divided, and all the labor and money expended on the effort to reach a settlement of the boundary question will have gone for naught. Much stress has been laid by Mr. D. P. Watson, of Pittsburg, one of the counsel for the United States, on the indispensible fact that the aim of both the British and Russian parties to the treaty of 1825 was to prevent collisions between traders of the Hudson Bay Company, on the one hand, and agents of the Russian-American Company, on the other. This aim would have been frustrated by a construction of the treaty which allowed the British traders to retain the heads of inlet, and thereby to enjoy free access to the Pacific Ocean. It is this intention of the treaty-makers upon which the United States largely rely, and which is expected to have due weight in the judicial mind of the British commissioner.

It will be remembered that Secretary Root, before departing for London to discharge the functions of an Alaska Boundary Commissioner, expressed the opinion, in a review of the facts brought out by an investigation, that a prima facie case of improper connection with an army contract for gloves had been established against Representative Littauer. Mr. Root explained at the time that it was for the Department of Justice to determine what steps, if any, should be taken against the contractor and Littauer. It appears that an opinion of the facts was prepared in the Department of Justice about September 20, and submitted to Attorney-General Knox, who is expected shortly to decide what action should be taken against the accused persons by the government. Should Attorney-General Knox omit or delay to take the proceedings requisite for a judicial examination of the question whether the law has been violated by Littauer, the House of Representatives will be invited, soon after the assembling of the Fifty-eighth Congress, to say, in its capacity of lawmaker, whether one of the statutes which it helped to frame has been violated by one of its members.

Senator Penrose of Pennsylvania has brought back some interesting news from British Columbia, in which province of the Canadian Northwest he has been spending a part of his vacation. It may be remembered that the area of this province, which did not become a part of the Dominion of Canada until 1871, comprises more than 283,000 square miles, and stretches from the northern boundary of Oregon to the southern border of Alaska. It also is, or should be, well known that we formerly claimed the whole of the territory between California and Alaska, and that President Polk, in his message of December 2, 1845, asserted that our title up to the parallel of 54° and 40' was upheld by irrefragable facts and arguments. For a time it seemed probable that our government would adhere to the programme "fifty-four forty, or fight," but ultimately we accepted the forty-ninth parallel of latitude as the northern boundary of Oregon, conceding the section lying between that parallel and Alaska to Great Britain. Senator Penrose is undoubtedly right in opining that our assent would never have been given to the compromise had we been conversant with the value of the section ceded. Events have justified the declaration made by William H. Seward that our renouncement of the tract now known as

British Columbia was the most ignominious surrender of national territory ever agreed to by a self-respecting nation. Mr. Penrose tells us that, even in that part of British Columbia which adjoins Alaska, the mildness of the climate is amazing to those persons who have imagined it to be arctic in character. Not only is the timber fine and the hay crop bountiful, but cereals are grown successfully. What surprises us is Mr. Penrose's assertion that at this day a majority of the residents of British Columbia share Secretary Seward's regret at the divorce of their country from the great American Republic. We knew that a considerable section of the population consists of emigrants from the United States, but we have taken for granted that the sentiment of the majority was pro-British, and our impression has seemed to be confirmed by the fact that a delegation from British Columbia is supporting the view of the Alaska boundary which is advocated by the Canadians before the Commission now sitting in London. We have no desire, however, to question the accuracy of the statement made by Senator Penrose with the authority of an eye and ear witness.

Through the efforts of circuit-attorney Folk, of St. Louis, nineteen hoodlums have been convicted of bribery, some of them of perjury also, but none of them is in prison. The verdict, says the *Globe-Democrat*, is stayed in every case, in a State Supreme Court, composed of six Democrats and one Republican. The Democratic managers in Missouri do not approve Mr. Folk; their sympathies seem to be with the convicts. The idea that he may be the Democratic candidate for Governor appears to be exceedingly distasteful to them. He has support, and support from Democrats, but not from the party managers. The inference is inevitable that a large proportion of the influential Democrats in Missouri are not in favor of honest legislation. That is what Mr. Folk stands for—honest legislation, honest government. His reputation, by far the most distinguished that has been recently made in Missouri, is based solely on his efforts to defend the property rights of the people and bring rascals to justice. He is abundantly admired abroad and abundantly disparaged at home. This is a safe condition for Mr. Folk. Though not altogether satisfactory, it cannot hurt him. But is it a safe condition for the Democratic managers in Missouri?

The deadlock in Austria-Hungary may be fruitful in results for the future policy of the Dual Monarchy, and also in the greater question, the rivalry between Teuton and Slav, which is the mainpring in all eastern European politics. Austria was absolutely dominant until 1866 and Sadowa. Then came Hungary's turn, and one of the greatest achievements of the Emperor Franz Josef was to know how to yield and what to yield to the Magyars. For the last decade Hungary has been ever more and more the predominant partner, presenting a solid front to the divided Austrian states. At the present juncture, Austria, hard pressed, will be forced to enlist the support and sympathy of the Czechs and southern Slavs by considerable concessions, in order to use them as a counterpoise to Hungary. In this way the Czechs are likely to gain privileges they have long been fighting for, with a more definite recognition of their political importance and value. The result will be to place the balance of power in the hands of Bohemia, just as Ireland now holds the balance between the two great English parties. After Bohemia will come the turn of the southern Slavs, of Croatia, Slavonia, Dalmatia, Carinthia, and Carinola, who, for a generation, have been growing stronger in national feeling and linguistic unity. Austria will thus become practically a Slavonic power, as it is, including Hungary, preponderantly Slavonic already in population. The fitness of Austria to protect and develop the Slavonic populations in Macedonia, as she has already developed the Slavs of Bosnia and Herzegovina, will thereby be enhanced; so that Hungary, in holding out at the present juncture against the Austrian Kaiser, is playing directly into the hands of the Slavs, whom of all people she most cordially dislikes and despises.

The Macedonian situation continues obscure and perplexing. The one thing certain is that both sides are deliberately misrepresenting the facts, the insurgents exaggerating the numbers of those massacred beyond all probability or even possibility, while the Turks deny the very existence of a

secrecy even in villages where consuls of the powers have seen the heaped-up bodies of slaughtered women and children. Again, all experience shows that, as the winter approaches in the Balkans, and the higher peaks are covered with snow, the activities of the insurgents always slacken, and gradually die out; yet, in face of this, we find the Sultan continuing to mobilize new battalions of Asiatic troops, although those already in the field are almost mutinous from hardship and the impossibility of obtaining their pay. Bulgaria is keenly on the alert, and, with two hostile armies mobilized and facing each other across the southern frontier of the principality, there may at any moment be an outbreak which will mean the certainty of war. As to the attitude of the great powers, we have, on the one hand, Count Lamsdorff's defence of his policy, in which he holds the insurgents wholly to blame for the present inflamed condition of Macedonia, accusing them of provoking outrages to bring about intervention, and thus of making the introduction of reforms impossible. On the other hand, we have the wise and considerate declaration of Mr. Balfour that, with present conditions, two powers are stronger than three, and that England, therefore, will confine herself to heartily supporting the policy of Russia and Austria, and will not herself intervene. While the attitude of Germany is not in reality altered, the desire to "inherit" from Abdul Hamid prevailing error, pity and justice, yet Germany has been compelled by the force of international opinion to at least seem to support the other powers; with the result that the pressure on Turkey is notably increased, and the probability that a real and earnest attempt at reform will be inaugurated with the approach of winter. At the same time it is abundantly clear that no half-way measures will suffice, nor will Macedonia settle down before the three vilayets, following the example of Rumelia in 1885, have declared their independence, and united themselves with Bulgaria, thus practically restoring the San Stefano status, and undoing the work of the Berlin Congress.

Lord Milner's hesitation about joining Mr. Balfour's cabinet, as Mr. Chamberlain's successor, sprung from very intelligible causes. In the first case, to do so was to declare against Chamberlain, and thus to bar the way for possible future favors from the Man of Birmingham, should he some day come into his kingdom. Then again, Lord Milner conceived that his own prestige would be somewhat dimmed by boarding the ship, as it were, on the eve of almost certain shipwreck. For, with the meeting of Parliament in the first week of November, Mr. Balfour will have to take a decisive step of some kind. He must either introduce a measure embodying the principles of his famous pamphlet of insular free-trade, or confess himself a humbug and an opportunist. And it is abundantly certain that he cannot carry any such measure, unless he gets the fullest aid from the Irish party, which means a Catholic university and home rule, as Mr. John Redmond has most bravely declared. Further, it may suit Mr. Chamberlain's purpose to throw himself with his following into the opposite scale, and thus bring about Mr. Balfour's fall. Therefore Mr. Balfour's path during the next few months will not be strewn with roses, and Lord Milner is only human in his unwillingness to link himself with such a chequered fate. Yet to refuse point-blank would have meant avowed disloyalty to the Conservative leader at a time of dire emergency, and this would have barred Lord Milner's path to future promotion, and, perhaps he himself thinks, to the reversion of the Premiership.

M. Urbain Gohier, the energetic editor of the *Paris Aurora*, who took such an active part in exposing the delinquencies of the military chiefs in the Dreyfus affair, and who has for some years led a continuous attack on militarism in France, lately spent five months in this country, seeing things for himself and writing an account of what he saw for the benefit of his countrymen. His book, too, makes good reading for Americans, though it is primarily addressed to the French. He says you can observe and get to understand a larger number of things in the United States than anywhere else in the same space of time, because life is more open there—private life as well as public life. Family affairs, like political and money affairs, are carried on in broad daylight; marriages, betrothals, divorces, quarrels between man and wife, business failures, wills, honest dealings and shady transactions are

announced, explained, commented upon openly and publicly. When the papers do not give enough details, those who are interested take upon themselves to supply the deficiency. Nothing is secret. There is no false shame; and sometimes, indeed, there is a lack of modesty and delicate restraint. But all this is very convenient for the foreign observer.

In this chaos of humanity, wherein men of black skin, yellow skin, and red skin are mingled with men of every tribe of white skin, good and evil carry on their eternal battle. Humanitarian societies swarm all over the country; warm-hearted, self-sacrificing people spend an enormous amount of good-will and energy; works of charity and popular education are innumerable. Crime is more audacious and more ingenious than anywhere else. There is as much virtue as in any place in the world, and nearly as much hypocrisy as in England. Scandalous adultery is rarer than in France, because divorce is excessively easy; but the revolver plays an equally important rôle in the tragedies of love. Vice is less bold, but much more brutal. Blackguardism is little known, but a party bent on having a good time very soon begin to look like a band of roving sailors. In America, a man marries a wife and her only. In France, where the family is a sort of entity, he marries the whole lot of them—the crabbed mother-in-law, the sour-tempered aunt, the worthless big brother, the silly little sister, the ill-famed uncle. In America, the bridegroom can ignore the existence of all these accessories. The young people do what they will and harm life in living it.

He finds the feverish chase after money not so repugnant in America as it is in certain other countries. The American is not barely grasping; he is a gambler; he wants to win the game, so as to be able to play another; a larger capital represents to him a better chance of success. Energy, energy! is the great American word. All the politicians and writers of America boast of American energy; the educators preach it; the young people brutalize themselves in sportive exercises, and the men drag themselves to acquire it. But he thinks that in reality American energy is a legend. Or rather, it would probably be more exact to say that the American people possesses large reserves of energy—because they spend very little of it. This is not a paradox. Assuredly, in the business centres of New York, Chicago, and other cities, the dollar-hunters are very much agitated at certain hours of the day. The fever is ardent, more so perhaps than in London or in Paris. But this feverish agitation of a few thousands of business people is not energy. Americans do not know whether they have energy, because they have never really been put to the proof since their great civil war. Europeans know the difficulties of life; are steeped in strife, because they have to struggle continuously against accumulated obstacles, against enemies without number; they cannot perform an act, a gesture, without bumping against something or somebody; family tyranny, tyranny of social prejudices, tyranny of secular and Byzantine legislations, state tyranny, tyranny of privileged castes, tyranny of the bureaucracy. In America there are no enemies, no obstacles. There is liberty in the family, liberty in social life, liberty in the State. There are no prejudices, no traditions, no irksome laws, no bureaucracy. Before you, a country infinite in extension, infinite in wealth. Go in peace, live no your understanding prompts you, work as you will, just take the trouble to pick up riches. That is the programme.

He holds that the genius of the American people consists precisely in sparing the expense of energy. There is nothing more marvellous than the ability with which they have rendered effort useless in this country. Everything is made to work as in a fairy palace. Mechanism and electricity perform prodigious things that man may take his ease. The industrial and agricultural machinery is admirable, and every day brings a new improvement. The business man in his office, the farmer on his reaper and binder, the engineer on his engine, have only, so to speak, to run their fingers over a keyboard or two and the work is accomplished. It is the triumph of human genius; it is not energy.

The politicians play a game of politics as they would play a game of poker, using the same processes, with the same

object, and their heart is no more engaged in the one than in the other. The ornament of American cities would be their parks, if the municipalities could only restrain themselves from spoiling their magnificent scenery by ridiculous statues and monuments. Throughout the whole country real artistic sentiment would be shown in not destroying the marvels of nature. Nothing is perfect, not the American nation itself. He finds it has still something to acquire, and hopes very ardently that its development may be accomplished in the best way, under the best auspices, to lead it to the realization of the human ideal. He hopes so, first of all, because the American people is at present the most vigorous, the sanest, the most alive people on earth, and its splendid confidence in the future appeals to general sympathy. He hopes so, also, because the prosperity of the United States is a great lesson for the other nations. The United States are prosperous, on the one hand, because prodigal nature has piled up on and implanted in their soil the possible elements of wealth. But they are prosperous, on the other hand, because their political institutions, the vivacity of their republican instinct, their bold practice of extreme liberty have permitted the full free exercise of human activity.

At the session of the Unitarian National Conference at Atlantic City, on September 23, there was much talk from experienced speakers about the training of ministers, the kind of minister needed, and what the theological seminaries could do to supply them. One layman, from Amherst College, said the minister needed must first of all be a man, and he enlarged handsomely on the qualities of manliness, and also of godliness, with which he ought to be endowed. Another layman, from St. Paul, called stoutly, and not without some humor, for ministers who had, not merely ethics, but religion; who had a sense of reverence, and a true call; who were unselfish, who had, above all things, a real gospel to proclaim, and could send it home. The addresses of the laymen were edifying, but the most interesting observation to be found in the report that includes them, was made by Mr. F. C. Southworth, who as head of Meadville Seminary has much to do with the education of men for the Unitarian pulpit. He said his seminary aimed in the first place to send out theologians, who could define their belief clearly and intelligibly. More than that it sought to send out men of power, but it could not itself produce such men; the theological schools are not the soil in which they grow; the schools can only train them. Then he said: "Among the twenty-five students who have entered the Meadville Theological School during the last two years, not one has come from a Unitarian home. And I am led to believe the condition is similar at Harvard."

The natural inference from this interesting statement is that the Unitarians must be getting a large proportion of their ministers, nowadays, from outside their own enclosure, and that supposition is borne out by the remark of one of the laymen above quoted, who said there was another important source of supply to Unitarian pulpits besides the liberal divinity schools, and that was the orthodox ministry. This speaker supposed that a definite call to the ministry, which he thought it important that every minister should have, was most likely to occur "in connection with evangelical ideas and supernaturalist theology." "And perhaps," said he, "this will account for the superior religious fervor and power of many of the Unitarian ministers who come to us from orthodoxy." On the whole, one would gather from all this a not very hopeful impression of the prospects of the Unitarian pulpit, if it were not that the laity of that denomination includes an unusual proportion of men qualified and disposed to speak in meeting. The Unitarians failing to breed ministers, may finally conclude to get abroad without any.

One feature of the rapid growth of the Southern States is especially noteworthy. In Georgia, whose remarkable progress is noted in this issue of the WEEKLY, an association for developing the State along business and industrial lines has been in existence for some time. The president is Mr. J. K. Orr, and it is largely through his influence and energy that the Greater Georgia Association has come to be recognized as an important factor in the State's affairs.

## Premier Balfour's Tariff Ideas

Tan pamphlet in which the Right Hon. Arthur James Balfour, M.P., the present head of the British government, has set forth what he terms "Economic Notes on Insular Free Trade," is of interest to Americans on two grounds: first, in respect of the ideas themselves, and, secondly, in respect of the effect which their adoption in the United Kingdom would have on the export of food products from the United States. We may say at once that we had addressed this pamphlet to the people of this country would have been superfluous. It would have been preaching to the converted. It is quite possible that a majority of our voters do not concur with the "standard pattern" in respect of the Dingley tariff should remain intact for an indefinite period, although the reciprocity clauses devised by Dingley himself for the purpose of mitigating, under certain circumstances, his highest of high tariffs, continue to be maintained, except in the case of Cuba. It is certain, on the other hand, that a large majority of our people are opposed to thoroughgoing free trade, and favor such moderate protection as shall safeguard American workmen against competition with the underpaid labor of Europe. We have long since learned by experience in this country, what Mr. Balfour has just discovered, that there are three things which it is peculiarly difficult, and, at the same time, peculiarly desirable, for a manufacturer, or combination of manufacturers, to do. The first is to run their factories or foundries evenly—that is to say, without undue pressure at one period, and without overworked workmen and leaving plants unworked at another period. The second and difficult thing is to plan their work on a scale which shall secure the greatest economy of production, or which, in the language of political economy, shall take the utmost advantage of the "law of increasing returns." The third desirable and difficult thing is to secure a footing in foreign markets which are already occupied, in the judgment of a large majority of Americans, the British Prime Minister is right when he asserts that, for the attainment of these three objects, any manufacturer or combination of manufacturers who have, with the help of protection, obtained a command of their home market, are at an immense advantage, compared with their rivals in a free-trade country. The unprotected manufacturer is compelled either to restrict his plant to a point well within what may sometimes be required of him, or, in ordinary times, to leave it partially idle. Even a small excess of supply may lower the price of his goods out of all proportion; and if it does he not only loses heavily in respect to this small margin of overproduction, but in respect of his whole output. There is no reason to expect that the plant erected to meet an average demand would reach the exact size most conducive to economy of manufacture. Should it prove to do so, it could only be by accident, either in the way of arranging the plant, or the plant itself, or the best working of all time. If it is there most critically be recurrent periods, during which overproduction, with the consequent cuts, must inevitably take place.

There is no doubt that Mr. Balfour is right in asserting that such is the ordinary position of the manufacturer under free trade. He proceeds to compare with it the position of a protected plant which controls its home market. The latter is not haunted to anything like the same extent, if at all, by the fear of overproduction. If the home demand should slacken, compelling him, if he desires to maintain prices, to limit home supply, he is not driven, like his unprotected competitor, to attain this result by limiting output. Ordinarily he is not obliged to close part of his works or to discontinue some of his hands or to run his machinery on half time. On the contrary, so long as other countries offer his open or at least penetrable markets he can dispose of his surplus abroad, at prices no doubt lower, and often very much lower, than the prices which his quasi-monopoly enables him to obtain at home; but at prices which, nevertheless, make the double transaction, domestic and foreign, remunerative as a whole. Why, Mr. Balfour goes on to inquire, is no similar policy open to the manufacturer in a free-trade country? Because such countries make it difficult for him to obtain, and to keep control of his home market; and because, unless he has this control, it is difficult, if not impracticable, for him to fix two prices, a low foreign and a high domestic one. If he attempts it, he will be understood in the home market by his rivals, or even, if the divergence of price exceed the cost of freight out and back, by himself. His own goods will be uncompetitive. He will become his own most dangerous competitor. In the case, on the other hand, of a quasi-monopoly in a protectionist country, it is entirely practicable not only that the prices exacted by him from foreign countries should be less than the home prices, but even that the former should be less than the cost of production. It is a matter of experience that German steel has been sold in Great Britain at a price which no British manufacturer could produce it—*or* German manufacturer either, without the double aid of combination and protection.

Mr. Balfour completes his argument for a reversion to a protective tariff by pointing out that the unprotected manufacturer is attacked not only at home, but abroad. He has, perhaps, acquired what may be described as the "good-will" of some neutral

market. He has, in other words, a clientele whom he has served well, and who, under ordinary conditions of trade, would never have deserted him. Suddenly, under the trust system, through no fault of his own, nor through any shortcoming of his staff or plant, he finds himself undersold. It is true that the power of underselling will last no longer than the rig or combination, whose approach to monopoly has made it possible. It is also true that in some industries, though only in some, there is nothing so advantageous as are these commercial conspiracies. Yet, however short-lived as they may be, they will probably have lasted long enough to destroy a valuable asset, painfully acquired in a free-trade market by an individual exporter, and if the unprotected manufacturer's business survives at all it will be only by slow and laborious stages that it can reconquer neutral territory left from it in a day by a tariff-protected combination.

If Mr. Balfour's pamphlet were to be regarded solely as an argument for the imposition by the United Kingdom of such duties on imported manufactures as would assure the home market to the British manufacturers of similar articles, there is no doubt that, to a large majority of Americans, the argument would seem unanswerable. We do not understand that Mr. Balfour, or even Mr. Chamberlain, would impose, under any circumstances, duties upon the raw materials which are indispensable to British manufacturers, although this is done in the United States. There is no doubt, however, that Mr. Balfour accepts as right in principle, although he does not in fact, the application of that principle, Mr. Chamberlain's proposal to tax food products imported into the United Kingdom from foreign countries for the avowed purpose of giving a preference to similar commodities coming from the British colonies. Here the moderate protectionist of the United States must part company from Mr. Balfour. If the United States, like the United Kingdom, were to tax the consumption of the population, our Congress never would sanction a tariff, the inevitable outcome of which would be to increase the price of a workman's loaf of bread. If at present we tax food products, it is only because our soil yields more than enough of them to feed our people, and even gives us a large surplus for export.

## Canada and the Empire

CANADA is the real motive power of Mr. Chamberlain's policy. It is true, of course, that the preferential tariff which is to bind the empire together, is not original with Chamberlain, but was borrowed by him from South Africa and other empire states, in the late 'twenties. It is no less true that Sir Edmund Barton and Mr. Seddon have pronounced themselves very strongly in favor of the Birmingham idea. Yet the real pressure comes from Canada. The reason is that Canada has among her arguments for the mother country not merely a bundle of promises of future tariff preferences, but also a threat; the threat of a customs treaty. This is Canada's advantage. South Africa has no such threat to make. Australia has no such threat in reserve. There is practically no competing power to which they could make overtures, and with which they could enter into relations closer and more profitable than with England. The Australians have borrowed enormously from England, being, indeed, the most heavily indebted group of states on earth; therefore they cannot separate their destiny from that of England, if they would. South Africa knows, rather the English of Cape and Natal know, that only the British connection checks the supremacy of the Dutch Afrikaanders. Therefore any defection of either is not to be thought of. But with Canada it is different; therefore Canada puts on the screw.

Here are certain facts which should be kept in mind. In the first place, Canada prices immensely by her connection with England in having for her territory and commerce the guarantee of imperial defense, for which she pays no adequate consideration. In the second place, she has a free market in England, while she herself heavily taxes English goods. And, thirdly, her much vaunted preferences to British imports are almost wholly illusory. This is shown by two facts: First, we should remember that Canada taxes various imports very steeply, and, designedly of course, in her tariff schedule. Because she has already the most heavily taxed, very much more heavily, for instance, than those which she imports from the United States. The truth is that Canada, while professing to give a substantial concession to the mother country, has in reality done exactly the opposite. She has, indeed, taxed the imports from the mother country at a rate which is practically prohibitive, and it is small consolation to the English importer that the weight which already lies upon him in the scale, is raised even higher, as a mere exercise of decoration, against his rivals. All are shut out, only England is a little more politely shut out than her neighbors. Canada means, of course, to protect her own manufacturers, and we cannot blame her for so doing. And she also means to import from the States

certain things which she herself needs and does not produce. Hence, while nominally favoring England, her tariff really favors, and most effectively favors, the United States. The proof is evident, and this is the second noteworthy fact: that though England's commerce with Canada increases somewhat, yet the commerce of the United States increases much more rapidly, and is likely so to continue. The advantage enjoyed by England, therefore, and in return for which the British workmen are asked to tax his food, is purely imaginary.

Finally, to favor in any marked way the great Canadian wheat-field is wholly needless. As our Western farmers are rapidly finding out, it is already favored beyond all the wheat-growing areas of the world. We think of it as being too far North. We should remember that this means two hours more sunlight daily, during the ripening of the crop, as compared, say, with Ohio; almost an immense advantage. Again, the soil is of exactly the right quality and disposition, as regards character, subsoil, and the like, and the cost of tilling is a minimum. As has been suggested, the wheat lands of the Canadian Northwest are increasingly coming into the hands of American farmers, and it is not easy to see how they are to be aroused to a fervor of British loyalty in the sense hoped for by Mr. Chamberlain. They are much more likely to Americanize Canada than to Anglicize themselves.

### The Offshoots of Concord

THE summer schools are closed now. Each year new ones are started, and it is safe to say that there are no specialties now that cannot be procured in vacation-time by busy people.

It is many years since Emerson, Alcott, Thoreau, Hawthorne, Dr. Harris, Thomas Davidson, and numbers of other distinguished men founded the first summer school of philosophy. It was a little, plain, single-roomed board building, looking like a primitive school-house, in Hanson Alcott's "back yard." Here the long-haired, silver-tongued Alcott posed Socratic questions; here Emerson, the long-faced, keen-eyed Yankee, uttered his epigrammatic, disconnected other-world wisdom, touched by the sly flavor of the canny farmers about; and here the tranquil, red-headed Davidson, with his phenomenal verbal acrobacy, dealt with philosophy as though it were a kind of mental prize-fight. Half the distinguished men of letters of that generation in America took their turn to talk in the little Concord school-house.

That generation has passed away, and only a few men remain who recall its palmy days, but in two places, at least, offshoots of the Concord school still flourish. So early as 1888, Thomas Davidson started a school of philosophy on his own account in Farmington, and the following year moved it to Glen Moore in the Adirondacks. Here throughout July and August of each year many of the best men gather and talk, and many further-reaching philosophical books are outlined and discussed here. In the past month Dr. William James spoke here on "Radical Empiricism," Dr. John Dewey, of Chicago University, gave a week to the "Logic of Experience," Dr. Murray of Montreal gave a course on the "Evolution of Philosophical Ideas among the Early Greeks," Dr. Harris of Washington talked on Hegel, Dr. Felix Adler on "Social Ethics," and Dr. Feala on the "Psychology of the Mystic." The sermons are given to the formal courses, but every Wednesday evening is given to informal discussion of the subjects of the week. And all this takes place in one of the most wonderful climates, eighteen hundred feet above the sea-level, and near one of the most extended rivers in the Adirondacks.

But what different offshoots spring from the same parent tree! On the coast of the four or five miles, and upon the tidal river Piscataqua, is another child of the Concord school—a daughter this time, for the "eternal womanly" reigns supreme in the method and arrangement of Greenacre. Greenacre is a sort of conference of religions. Philosophy is not barred out, but it is not a main feature. Here Buddhist Jews in flowing robes, Persian prophets in gold-embroidered vestments, Jewish rabbis, and Catholic priests proceed to discuss their various religions.

Many men are diffident upon mooted points in science and philosophy. It is only when the nature of God and the exact geography and the climatic effects of the hereafter are in question that the men in the street feels sure he knows all about it. Upon these themes he bravely vaunts dogmatic, and contradiction, however vehement, is difficult to set upon a sure basis. We Western peoples have much to learn from the philosophical temper and the open-minded, unobscure spirit of the Eastern nations. Strange to say, an unlooked-for power does reign over Greenacre. It would almost make one believe that ultimately the average man will come to see how many seeming contradictions may be contained in a large enough whole.

One of the most picturesque features of the year in Greenacre is the Buddhist flower festival, given in August, under the full moon: the day of the year when, it is said, the spirits are nearest the earth. At this time prayers are most readily heard and answered. But the spirits are exacting. It is only to the pure in

heart and body that they come. The day must be one of strict fast and of pure and kindly thoughts; of solitude and quiet, and one's path must be entirely of white. At night under an enormous pine-tree an altar is raised covered with white flowers and decorated with thirty-seven lighted candles. It was a strange sight this year to see the white-robed pilgrims, about one hundred in number, each bearing a lighted candle, sitting motionless for an hour or more in a circle around the stambulus gipsy. Slowly the August full moon rose, at first twinkling gaudy shadows from the giant pine-branches over the ground, and then sending a bluish light under its tangles. Merely as a spectacle scene, with white flowers and decorated

A slight protest these schools of philosophy and religion may seem against the cozily commercial spirit of the age, and yet, however ill-intended the protest, it is still in the spirit of the Concord protest fifty years before.

### Aristocracies Wanted

WHEN leaders speak it is worth while to listen. What they say, be it wise or foolish, helps us better to understand them and the situations in which they are an element. Two noted Eastern leaders happen just now to be in the West, and both have spoken. One of them is Mr. Samuel Parks, of New York and Hong Kong, the noted and influential captain of the Bridge and Structural Iron Workers, and lately a factor of extreme importance in industrial concerns in this city. Mr. Parks has been to the national convention of Bridge and Structural Iron workers in Kansas City, whence, having re-established his authority as a leader, he has sent back word that when he gets home he will order clothes apiece every one that opposes him. The other leader is Mrs. Fish, of New York and Newport, wife of Stuyvesant Fish, president of the Illinois Central Railroad. She is a leader, or boss, of society, and as well known in her line as Parks is in his. She has been in St. Louis, and the newspapers report that while there she talked to a reporter, who has quoted her as saying that she would not care to be a President's wife, nor to sit with congress, because she did not believe in negro equality, nor, indeed, in equality at all. She thought that there would always be classes in this country, and that we were coming more and more to have an aristocracy and a common people. She approved of that. "I do not believe," she said, "in being too democratic." She denied that Newport was declining in prestige, but thought it paid too much attention to foreign travel. She considered that American girls were laying themselves open to the ridicule of the world by marrying European noblemen, and in a specified case, in which she said two million dollars had been paid as a consideration preliminary to the alliance of an American lady to a British duke, she thought the venture a piece of folly.

Sam Parks is an impossible case. His leadership means inevitable mass for the organization he controls. He believes in an aristocracy of labor leaders who shall rule despotically over the common people, saying to this man, "Work!" and to that man, "Starve!" and to a third, "Pay me tribute!" His threats are interesting, but the seeds of defeat are in them. He has aspired too high. He has wanted, and has had, real power—real power. But he cannot keep it. The common people will not ask him. But Mrs. Fish is much more moderate. The sort of aristocracy she approves and would promote is not hostile to anybody's liberties, nor does it interfere with the peace or comfort of any wise person. It seems to be based not on greed, but on renunciation. It does not seek to exalt the common people, but simply to live separate from them, to exult their pleasures and their acquiescence. And, incidentally, since in our time the common people are the fountain of political honor and the disturbers of fame, Mrs. Fish's aristocracy must calculate to get along without political honors or tasks, and without higher distinctions than such as one can be bought for money.

But, after all, when you have bought all the houses and clothes and food and vehicles and pictures and yachts and such things that you want, there is nothing as bad as being a pauper. The sort of aristocracy of the sort Mrs. Fish contemplates is op a tree. He has no duties, and he cannot buy life that he likes. There are only two or three ways of making life tolerable. Religion makes it so, but religion implies both love and service. Work, and especially public service, makes it so. So, apparently, does acquisition, but it must be acquisition of something you want, and our aristocracy as it appears at Newport has got everything it has imagination enough to want, and has had too much dinner. For that reason Mrs. Fish's criticism of the disbursement of two millions to promote the union of an American girl with a high-grade poor seems ill founded. The alliance was well worth the money if it suited the lady, and will result in transplanting her from an aristocracy which has no duties into one which has a few duties left.

"We don't want Sam Parks's kind of aristocracy. It is too real, its bowl is too heavy on our necks. But Mrs. Fish's kind of aristocracy has no terrors for any one but its own members. If they carry across the seas to get out of it, who can blame them!"

### ON HORSEBACK OVER A TWENTY-FOOT CLIFF

*The pictures are remarkable snap shots of an Italian cavalry officer in regular practice. The training of an Italian cavalryman includes, besides these unusual feats, skill in steeplechasing and cross-country riding over rough country. In the western part of America our own cavalrymen have to perform similar feats, but it is not a regular part of the routine of their drill*

# The Opening of the Sublime Porte

A Rhapsody in A(sia) Minor

Drawn by Albert Levering

Wilhelm. "Yes, Eddy, do's der rich man of Europe. He makes me rich, too; but we must honor him. Do's't ask me why; I know."  
Eddy. "I got an ear?"

Wilhelm. "Hand me up dem glasses—do's de way to jolly him up. No, do's barrel of powder."  
Eddy. "Please let me see this ear?"

Wilhelm. "Ap, ee's a few minutes anyway! We must keep him in a good humor, no? Get me dem glasses."  
King Eddy. "I'd like to see my ear?"

Wilhelm. "Pass up dem books on modern military tactics not I want myself. I prefer de education of der savage."  
King Eddy. "Ah—er . . . ear?"

King Eddy. "I wish I had used my ear?"

Diele Sam. "Wah?"  
King Eddy. "Oh, sir, could you see my ear?"

### A GALLERY VIEW OF THE PENSION OFFICE AT LUNCH-TIME

*The city of Washington has few popular-price restaurants. The United States government, recognizing this fact, provides a lunch-room in the Pension Office for the use of the employees and others who cannot afford to pay much for their meals. Coffee, milk, and vegetables cost five cents, while meat costs ten*

**MAXINE ELLIOTT IN CLYDE FITCH'S NEW PLAY**

*Max Elliott makes her debut this season as a star in a new play by Mr. Clyde Fitch, "Her Own Way." She plays the part of "Georgiana Carley," a strong-minded American girl who is wooed by two lovers—a soldier and a Western millionaire. The soldier goes to the Philippines, not knowing that "Georgiana" loves him. Meanwhile the millionaire dishonorably pretzes his suit, but without success. The soldier returns at the end, and the situation is solved.*

# GEORGIA

The State Capitol, Atlanta

## EARLY DAYS IN THE STATE

BY W. G. COOPER

Secretary of the Greater Georgia Association

**G**EORGIA was settled in 1732 by General James Oglethorpe, who was accused by philanthropic natives. He had been moved by the sufferings of people in prison for debt in England, and secured the passage of an act of Parliament, allowing honest but unfortunate debtors to emigrate to Georgia.

This circumstance has given rise to a misapprehension concerning the antecedents of the population. Some misinformed writers have gone so far as to say that the colony was populated by jailbirds, indicating that Georgia was the Botany Bay of that time. Nothing could be further from the truth. The number of debtors brought over by General Oglethorpe was comparatively small, and their descendants are few and far between.

The infant colony was reinforced by settlers from South Carolina, including some French Huguenots, and some New England Puritans, whose lineage is easily traceable in the family names of this day. It was further strengthened by the arrival of Salzburghers from Germany and Highlanders from Scotland. Settlers poured into Georgia after the Revolution from the Carolinas and Virginia. Most of them were Scotch-Irishmen or Englishmen. The population of Georgia is almost entirely Anglo-Saxon, and ninety-nine per cent. native-born.

The trustees who, with General Oglethorpe controlled the colony, intended to make it a highly moral community, and the importation of rum and slaves was forbidden so long as the founder remained in the colony.

In 1734 John Wesley, who afterward became the founder of the Methodist Church, came over with his brother Charles for the purpose of preaching the gospel to the Indians and the settlers. In 1738 Rev. George Whitefield, one of the most noted preachers of his day, came to Georgia and remained several years. During that time he founded the Bethesda Orphan Home, which is still in existence near Savannah.

General Oglethorpe had many difficulties to overcome. The infant colony was an outpost or buffer between the flourishing colony of South Carolina and the Spanish possessions of Florida. He was anxious enough to establish friendly relations with the Indians and they became his allies in the contest with the Spaniards.

In 1732 the trustees of the colony surrendered their rights to the English crown, and the first royal Governor, John Reynolds, was appointed in 1734.

Georgia was one of the original thirteen colonies which united in the Declaration of Independence, and suffered severely during the war of the Revolution. Savannah and Augusta were captured by the British, and their raiders overran the best portions of the State. The Georgians, however, joined the South Carolina colonists, and shared with them the victories of Kings Mountain and the Cowpens.

An event which had a far-reaching influence on the industrial life of the State, and, indeed, on all the Southern States, was the invasion of the cotton-gin by Eli Whitney in 1794. At that time the exportation of cotton from the United States was only 975 bales. At the end of 104 years the crop of the South exceeded 11,000,000 bales.

Another event of far-reaching importance was the launching of the first trans-Atlantic steamship. It was owned in Savannah, and took the name of that city. Its first voyage was made in 1819.

It was not without a struggle that the secessionist carried the Georgia Convention in 1861, for many of the leading men were reluctant to leave the Union. It is also true that a large majority

of the white population were not slave-owners. It was really a question of State's rights, rather than slavery, which cost the life in fever of secession. Once a decision had been reached, the whole population, almost without exception, rallied to the flag of the Confederacy.

After the withdrawal of troops from the South in 1876, indu-

Hon. Joseph M. Terrell  
Governor of Georgia

trial conditions rapidly improved, and by 1881 a new era of progress had begun.

In 1881 enterprising citizens of Atlanta projected the Cotton Exposition, which was a rallying-point for the rising industrial spirit. By 1885 Georgia had regained the point in taxable wealth from which she began to recede in 1861. Since that time the progress of the State has been rapid.

## THE PROGRESS OF EDUCATION

THE public schools of Georgia are provided for by the State fund, and all the towns and cities are supplemented by a local tax. The general fund of \$1,520,000 gives a five-months' term in the rural districts. In many counties it is supplemented by contributions or tuition sufficient to extend the term to seven or eight months. In all the towns and cities and in four of the counties there are local school systems, supported by a local tax, which, added to the per cent of the State fund, yields enough revenue to support public schools for nine or ten months. Naturally the schools with the local tax, longer term, and larger fund are better than those of short term which stop with the State fund and make no effort at local taxation. Steady progress in the direction of a local tax is being made all over the State.

Of 8414 teachers in the State, 2225 had normal training. For ten years or more the State Normal School at Athens has been at work increasing the efficiency of the teaching corps, and its effect is apparent in the improved methods. This year the University Summer School for Teachers at Athens had an attendance of five hundred. All over the State the teachers meet in institutes arranged for the convenience of several counties.

The improvement in country school-houses is steady. During 1902 the cost of new school-houses of the common school system was \$100,401. In some counties remarkable results have been achieved by supplementing the State fund. In Hancock County the school commissioner, Mr. M. L. Duggan, has by determined effort secured enough money to extend the country schools to eight months. One of the extra months was put on by the General Education Board in recognition of the work done by the citizens.

Mr. Duggan also secured enough money to establish a system of circulating libraries, which has been a blessing to the boys and girls of the country districts. The same thing has been done by the school commissioner of Newton County. In Washington County pupils live at remote distances from the school-houses are conveyed to school. By this means schools have been consolidated and improved. Children are brought to the Sand Hill school in Carroll County, and the mules used in the vehicle are utilized in the cultivation of a thirty-acre farm. The school rents the whole farm, including a dwelling, and the sublet of a part of the farm, together with the work of the mules on thirty acres, is sufficient to pay the hire and the keep of the animals, thus making the rest of the concern practically nothing. Several model schools, established in different parts of the State, furnish valuable object-lessons. Nature study and manual-training have been established in many of the counties, and are being introduced in others.

There are some excellent schools conducted by private philanthropy. One of the most notable is that of Miss Martha Berry in Floyd County, near Rome. Miss Berry began with three country boys as scholars and a cabin in her yard as a school-house, and she enlarged the work until it has become a rural industrial school of such importance as to have attracted the attention of educators in other States. She takes the raw country boys, mostly from poor families, in many of which ignorance and poverty are the twin evils, and trains the orphans in industry, cleanliness, good manners, and good morals, as well as by study. Incident to the teaching they get valuable industrial training.

The public school systems of the towns and cities, with nine or ten months' terms, compare favorably with those of other States. In the city schools teachers attend normal classes every Saturday, and in many counties teachers from the outlying districts attend normal classes at the county-seat one week. In addition to this, it is the rule for the teachers of the towns and cities to spend their vacations at the great universities or in great summer schools, in courses of study which improve the equipment for work. Teach-

ing in Georgia is passing from the stepping-stone stage, and rapidly becoming a profession, with specially equipped men and women filling the important places. A vigorous generation of competent and devoted young teachers is pushing its way to the front.

Between the public schools and the colleges there is in most of the towns a high school system. Private schools supplement these. Supplementing the work of the colleges and the State university are the technical schools of law, medicine, dentistry, business, etc. In Atlanta alone the technical schools and the institutions of higher education have an attendance of more than four thousand.

The Wesleyan Female College at Macon is the oldest in the world. Georgia was a pioneer in the education of women, and the number of women's colleges far exceed the number of male institutions for higher education.

The Georgia Normal and Industrial College for Girls, at Milledgeville, is supported by the State. This institution adds to a thorough academic course special training in drawing, music, bookkeeping, shorthand, typewriting, household economy, and sanitation, cooking, sewing, gardening, and horticulture. A dozen or more women's colleges, some of them conducted under the auspices of religious denominations and others by private enterprise, are largely attended. In addition to the colleges already mentioned, there are a number of religious institutions for boys, several supported by the Catholic Church, Episcopal Church, and other denominations. Atlanta has recently raised \$250,000 to secure a Presbyterian university, the total endowment of which will be \$1,000,000.

## THE STATE UNIVERSITY

BY CHANCELLOR WALTER B. HILL

HIGHER education in this State began with the charter of the University of Georgia, in 1785. This is the oldest State university in the Union. Its charter is remarkable in that it co-ordinates primary and secondary education with the university in a scheme of education by the State. The author of the charter was Abraham Baldwin, a graduate of Yale, who came South with Eli Whitney, another graduate of Yale and the inventor of the cotton-gin. In 1826 Wesleyan Female College was incorporated at Macon. Mercer University (Baptist) was founded in 1852. Emory College in 1838.

The phrase, "University of Georgia" is used in two senses. In the narrower sense it refers to the parent institution at Athens, consisting of (1) Franklin College, the College of Liberal Arts, leading to the degree of Bachelor of Arts; (2) The State College of Agriculture and the Mechanic Arts, on the Morrill foundation, leading to the degree of Bachelor of Science; (3) Law School; (4) Graduate School. In the wider sense, the phrase includes the following institutions, which by law are "parts" of the university: North Georgia Agricultural and Mechanical College, at Dalton; Medical College, at Augusta; Technological School, at Atlanta; Normal and Industrial College, for women, at Milledgeville; State Normal School, for men and women, at Athens; Industrial College for Negroes, at Savannah. The total attendance in these institutions is 2527. Each of these institutions is managed for the most part by local boards or commissions, but the title and ultimate control of all of them is vested in the single board of trustees of the university. This constitutes the unique feature in the educational system of the State, and differentiates the organization from all other States in the Union.

The institution at Athens has 329 students. Tuition is free to residents of Georgia. A small tuition of \$50 in charge of non-residents. The dormitories are free, and board is furnished in Tenmuck Dining Hall on the co-operative plan at \$8 per month. The sum of \$125 to \$150 cover all the necessary expenses of students.

Children learning Gardening, Primary Industrial School, Columbus

Georgia Institute of Technology, Atlanta

## SCHOOL OF TECHNOLOGY AT ATLANTA

BY PRESIDENT LYMAN HALL

**T**HE State of Georgia has been the pioneer among Southern States in providing technical education for her sons. As early as in 1808 the doors of the Georgia School of Technology were thrown open to young men who desired to become experts in shop-work, and to take degrees in mechanical engineering. The State gave an annual maintenance fund of \$22,500, which enabled young men to enter the school at a nominal cost. The State has increased its annual appropriation to \$45,000, and the authorities have been able to offer degrees in electrical engineering, civil engineering, textile engineering, engineering chemistry, and mechanical engineering.

The enrollment has steadily increased from about 150 students in 1828, the present number. The standard of the school has steadily advanced, and the education now offered is on a par with that given by the largest technical schools in the country. The Georgia School of Technology is purely technical, there being no purely literary course offered; students who attend understand that they have undertaken a life-work, and those of them who are in earnest invariably adopt the profession for which the school has prepared them. They have taken positions as managers, foremen, superintendents, engineers, manufacturers, and proprietors in almost every State in the South, and in many States in the North. Over 90 per cent. of the graduates pursue the work on technical lines.

University Hall, Mercer University, Macon

It would be impossible to enumerate, in a limited article, the splendid equipment which has been prepared for all of the departments named. The most striking, however, is the institution in, possibly, its department of textiles. This was established in 1808, and gives a splendid course of four years in the various branches of manufacture of cotton goods.

The school has been a great influence in the State in convincing the people that technical education serves for a young man a responsible position, almost on the day of his graduation, and there is an institution supported by the State which has warmer advocates in a State legislature.

## MERCER UNIVERSITY

BY PROFESSOR J. H. KILPATRICK

**M**ERCER UNIVERSITY is an educational institution for men, situated in Macon, Georgia. It is the outgrowth of Mercer Institute, a manual-labor school, founded in 1823 by the Georgia Baptist Convention at Penfield, Georgia. The school received its name from Jesse Mercer, the leading man of his denomination in the State at that time. In 1838 the institution was raised to collegiate rank, and received the name of Mercer University, with Rev. R. M. Saunders as its first president and Rev. Jesse Mercer the first president of the board of trustees. In the retired village of Penfield it grew steadily in influence and material resources until the civil war. After the war the changed condition of affairs demanded the removal of the college to a more accessible site, and it was accordingly brought in 1871 to Macon, the fourth city of Georgia in size and almost the exact geographical center of the State. Since then the growth of the institution has been steady and assured. In 1875 was added a school of law which has come to be the largest in the State and one of the strongest in the South. Under Judge Emory Speer, of the United States Circuit Court, as dean, it has attained a national reputation, drawing students from all parts of the United States. In the present year a Department of Pharmacy has been added under Professor J. E. Sellers, as dean, which promises to satisfy the local desire for a strong and dignified technical school in this branch.

## EMORY COLLEGE

BY PRESIDENT JAMES R. DICKEY

**E**MORY COLLEGE (named in honor of the Methodist Bishop John Emory, of Maryland) was chartered in 1826 by trustees appointed by the Georgia Conference of the Methodist Episcopal Church. A site was chosen near Covington, and the prospective village was named Oxford, inasmuch as John Wesley was long connected with Oxford University, England. In 1838 the college was opened for the reception of students, under the presidency of Dr. J. A. Few. He was succeeded by Dr. A. R. Langstreet. Bishops Pierce, Haygood, and Chandler served as presidents before called to the office of bishop. The first class was graduated in 1841.

More than thirteen hundred young men have received diplomas from Emory College and gone forth to serve in Church and state. Besides numerous congressional officers, Emory has furnished to the Methodist Church Bishops Key, Haygood, and Chandler. Numerous lawyers are on the alumni list. Justice W. A. Kerney, of the New York Supreme Bench, is an Emory graduate. In addition to many of the professors of her own chairs, Emory has sent forth workers in other colleges. This list includes twenty-seven college presidents. This year one hundred and thirty-three of her men are at work in the public schools of Georgia.

On the campus there are an administration building (Soley Hall), Language Hall, Science Hall, Library (Chandler Hall), chapel, gymnasium, two literary society halls, and a new \$200,000 science building (Pierce Science Hall) just erected.

# EVENTS IN MIDDLE GEORGIA

BY JOEL CHANDLER HARRIS

**P**UTNAM COUNTY has the singular good fortune to be the geographical centre of a section that has been made famous by more than one writer. There was Major Jones to begin with—he is supposed to have been a Morgan County man; there was Simon Suggs, whose original was a Jasper County farmer; and there are the characters made famous by Colonel Richard Malcolm Johnston of happy memory—all of whom belonged either to Hancock County or to Putnam.

In fact, the most characteristic literature that has been produced in the South since the war belongs to one or the other of the seven counties of which Putnam is the geographical centre. Those who are interested in this literature will be inclined to believe—if they have a superficial turn of mind—that the characters with which it deals are merely provincial, and that the humor, which is their distinguishing characteristic, depends for its effect partly on ignorance and partly on account of the narrowness of their surroundings.

But those who care to read between the lines will perceive that behind this play of humor, and beyond their apparent provinciality, there is a philosophy based on deeper knowledge than can be found among men of the average sort. In short, the type of men who have been selected to stand for the Middle Georgian in literature are not mere primitive provincials, but far-seeing philosophers, who are able to apply the doctrine of cheerfulness to the hard problems that sometimes confront the sons of men when they are least expecting them.

Now, in Middle Georgia, and therefore in Putnam, this philosophical humor is a chronic epidemic. One generation after another is seized by the contagion, and it is joyously transmitted down the line. Without especially intending to do so, Colonel Johnston's characters speak for Putnam as well as Hancock, for Eatonton as well as Painesville; for the humorous philosopher who resides in one county of the seven is common to all. It was a very happy thing for Putnam that it had its humor to fall back on in the dark days of reconstruction, for it sustained the people through many hard trials, and prevented some of those dark tragedies that accompanied and marked that period in other sections.

Four years from now Putnam will be in a position to celebrate her centennial, should her people have a mind to do so. This would be something out of the ordinary, for, so far as this writer knows, no county has ever undertaken to celebrate its hundredth year. But for that very reason it is likely that Putnam will, if it is so easy in that climate to organize a barbecue that I venture to say that some such function will mark the county's hundredth birthday. The boundary lines of Putnam were fixed in 1807, and it is to be supposed that even before that time there was a small settlement—a house or two, at the very least—marking the site that would presently become the town of Eatonton.

What may be termed the miracle of progress has existed in the town and county from the first. There was not much reason why it should make itself manifest in the early years of the nineteenth century, for the commercial spirit, as we know it to-day, had not even begun to show itself; and yet the people of Putnam had a cotton-mill in successful operation in the late thirties. It was profitable, in spite of the fact that its product had to be hauled to the distant market of Augusta by wagon. This mill was capitalized at \$70,000, and was owned by the planters of Putnam.

As far back as 1853 it employed thirty-six looms and 1836 spindles. It produced 100 bales or bundles of yarn, 1000 yards of oamburg, 100 yards of bogging, and a quantity of rope sack working day of the year. It employed ninety-seven operatives, whose wages were from \$14 to \$26 a month, and there was a free school for the children of the operatives.

The lands of Putnam are rolling, the original growth being oak, hickory, chestnut, and pine. The soil has a foundation of clay, and the land answers promptly and profitably to intelligent tillage. It was thought, fifty years ago, that the best lands were worn out by the cultivation of cotton, but the Bermuda hills and bottom continue to produce large crops of everything that can be grown in the temperate zone. Bermuda grass came into the county as a blessing in disguise. For years the farmers fought it, but since they have learned how to co-operate with it, there has been a great improvement in their profits.

Among the interests that have prospered as the result of the invasion of Bermuda are stock-raising and dairying. This last has become quite a feature in the county, and the butter produced finds a ready market; indeed, some of the special brands of Putnam's butter is much sought after by those who are fastidious.

The average yield of cotton is 15,000 bales annually, and, as a rule, the farmers produce their own supplies. One reason why the farming interests of Putnam have been developed with such unusual intelligence is the fact that the young men go from the farm to college, and when they have received their degrees, they return to take charge of the agriculture, and instead of going into the professions return to the farms with minds broadened and with ideas that enable them to apply special economy to agriculture. As a result, all their methods are modern.

One of the results is to be seen in the interest they take in good roads. During the last fifteen years the roads of the county have been practically remade, and they are kept in repair by means of the latest improved machinery. No county in any part of the country has better roads. Another result is to be found in the system of public schools. While many sections of the South are suffering from, and complaining of, the lack of school facilities, Putnam has a system in which there is tuition nine months in the year, absolutely free.

Putnam has never been troubled with what is known as the negro problem, and the relations between the races in that county would constitute, if properly set forth and explained, an object-lesson of considerable interest to the rest of the country. The negroes are for the most part thrifty and industrious. The great majority of them are the descendants of those who came to the county as slaves, and they are well disposed. For instance, there has never been in Putnam a case of the crime that seems to call for the illegal administration of justice, and there has never been a lynching. Eatonton, the county site, now has three cotton-mills with about 9000 spindles, an oil-mill, and other industries, which shows that she is keeping step with the most progressive communities in the country. In addition, the little city is lighted with electricity, and has a complete system of water-works.

I imagine that Putnam would be an ideal place of residence for those farmers in the West and Northwest who now have to wage a continual war with the elements—with the fierce heat in summer and the fiercer cold in winter. The summer temperature is about 85 degrees, and the mercury rarely goes below the freezing-point, and there is an abundance of pure free-stone water.

Threshing Wheat near Eatonton, the Boyhood Home of Joel Chandler Harris

# INSTITUTIONS AND SOCIAL LIFE

BY W. G. COOPER

Secretary of the Greater Georgia Association

**T**HE population of Georgia is an English-speaking people, ninety-nine per cent. of whom were born in America. Their institutions are those of English-speaking people, democratic and conservative. The social climate, which has its effect upon life every month in the year,

has its effect upon the habits and customs of the people. They are open and hospitable in their disposition, vigorous, active, and free of artificial restraint. Out-door sports are popular, and outside of the cities large groups are accustomed to boating, fishing, and swimming. It is a fact worthy of note that Georgia furnished to the Spanish war a larger proportion of soldiers, according to population, than any other State in the Union. Her vigorous young men make hardy soldiers, and stand campaign life well. In this connection, it is noteworthy that the Georgia Rifle Team has frequently won the contest for marksmanship at Sea Girt.

It is a fact generally known that the Southerners are religious people, more conservative with respect to changes of creed than those in other parts of the country. The inhabitants of Georgia are church-going people, and their cities and towns are orderly. Sabbath observance is general, and the State law prohibits the running of trains on that day. Sunday baseball and Sunday theatres are prohibited. Even barber shops are not allowed to open on the Sabbath. In a large majority of the counties there is practical prohibition of the sale of intoxicating liquors, either by a prohibition law established by a vote of the people or by special enactments against the traffic. Nothing more than 100 counties of 137 in this category. Liquor is sold in the principal cities, usually under high license and strict regulations. In Atlanta the saloons close at ten o'clock and open at six.

In all municipal government there is more or less of the social-

istic feature. Southern cities, particularly those of Georgia, have been slow to adopt this idea. As a rule, cities and towns own their water-works, but few of them own electric-light plants, and none of them street-railways or gas-plants. The facilities are excellent, but furnished by private enterprise. The system of taxation on corporations is liberal, and even in the city assessments, manufacturing plants are assessed at a low figure, with the approval of the public.

Atlanta is composed of people from every county in Georgia, who constitute two-thirds of its population, and people from the adjoining States, who constitute nearly all of the other third. In a total population of 100,000, 3500 constitute the contribution of the Northern and Western States to the population of Atlanta. Among the 3500 are many good citizens who have been thoroughly acclimated, and are as much Georgians as if they had been born in the State.

In this article appears a picture of the Queen's Boat in the Floral Festival at Columbus, an important characteristic of the region. It is a beautiful truth that people reared in the presence of nature have in a high degree the esthetic sense. Even the little negro, trudging by the wayside with a dinner bucket, is seen to carry a bunch of wild flowers. The love of nature is a strong characteristic of people raised in the open air.

In the cities of Georgia the democratic spirit is strong, and the absence of hereditary and good-fellowship among the masses prevail. There is comparatively little class distinction, and the rich and cultured mingle in public assemblies, in the churches, in schools, and in political gatherings with the hazy son of toil, frequently calling each other by their first names and may be friendly familiarity. The fraternal spirit, natural to the people, has been highly developed through social and fraternal organizations.

The "Queen's Boat" in a Floral Parade at Columbus

## FACILITIES FOR TRANSPORTATION

**T**HE State of Georgia was the first government to own a railroad, and in the early part of the last century was one of the first to encourage railroad building by liberal charters. The civil war made it necessary to reconstruct a large portion of the railroad system of the State, and railroad building was very rapid between 1865 and 1890. Then came a reaction in 1894, and three-fourths of the railroad mileage of the State was in receivers' hands. This was followed by a reorganization, which resulted in placing the railroads on a sound financial basis. To-day scarcely one per cent. of mileage is in the receivers' hands, and almost all the companies are prosperous.

In 1905 the main-line mileage in Georgia was 5249.35; in 1902 it was 6053.32, an increase of 794.97 miles. The gross earnings during the same period grew from \$18,030,146 96 to \$24,952,768 87, an increase of \$6,922,621 91. The operating expenses, which were \$12,997,730 20 in 1905, grew to \$17,629,914 32 in 1902, an increase of \$4,632,184 12, which was \$2,742,239 28 less increase in expenses than the increase in gross receipts. The net earnings increased from \$4,332,416 36 in 1905 to \$7,334,754 64 in 1902.

In 1905 the percentage of gross receipts expended in operation was 73.20 per cent.; in 1902 it was 70.48 per cent., or a decrease of 2.72 per cent., in spite of the greatly increased cost of materials and the higher wage of labor.

In addition to this, it must be remembered that many of the principal railroads have been practically rebuilt. Time was when the poor physical condition of railroads in the South was proverbial, in respect both of track and equipment. To-day they will compare favorably in all respects with the best lines in the country.

No finer track or better rolling-stock can be found in the United States than that of the Georgia trunk lines, and each year shows improvement, keeping pace with the progress in rail-roading.

A significant feature of the present situation is the better understanding and better feeling between the public and the railroads. The railroad millennium has not dawned, nor will it dawn, so long as there are two sides to the transaction and a dollar between them, but, fortunately for both, this antagonism is passing away, and animosities have to a large extent died out, and there now exists between the public and the railroads a better feeling than ever before. This was brought about by the realization on the part of each that the other had rights which should be respected, and that to a great extent their interests are identical. The progress of railroad consolidation in Georgia during the past ten years has been rapid, and most of the mileage is now owned by a few great companies with large facilities and broad policies. They have been important factors in developing the material resources of the State, and this fact has much to do with the better feeling of the public toward the roads.

Although the railroad mileage of Georgia is large in proportion to the population and area, the number of new railroads is under construction and old lines being extended is greater than at any time during the past twenty years, and the prospect is for continued extension of transportation facilities and increased prosperity to the communities engaged in the business. The amount of traffic is rapidly increasing with the growth of population, trade, and industry.

Georgia was the first American State to establish a railroad commission, and its work in fixing local rates and arranging

classifications has been used in a precedent in other parts of the country.

Water transportation is one of the most important factors in the system of Georgia, Savannah and Brunswick have two of the finest harbors on the Atlantic coast, and regular lines of steamers ply between them and Eastern cities. The Ocean Steamship Company, controlled by the Central of Georgia Railway system, has a superb line of steamers plying between Savannah, New York,

and Boston. The Mallory line runs between New York and Brunswick. Both cities have a large traffic carried on by tramp steamers and sailing craft.

The Savannah, Ocmulgee, Chattahoochee, Coosa, and several smaller rivers have steamship lines which have some effect in modifying railway rates. The water rates from the East and Savannah and Brunswick materially reduce the rates of freight throughout a considerable portion of the State.

Steamboat Landing at Bainbridge, Georgia

## HORTICULTURE AND PHYSICAL OUTLINE FRUIT-GROWING INDUSTRY

BY W. M. SCOTT

**I**N 1867 the Georgia State Horticultural Society was organized for "The promotion and encouragement of the science of horticulture in all branches by the most feasible means." Under the leadership of Hon. P. J. Berckmans, its own and only president, this society has been the chief factor in the development of Georgia horticulture. It has been active in the collection and dissemination of knowledge concerning the most approved horticultural methods and in the protection of this industry from adverse influences. Mainly through its efforts it may be said that today Georgia leads in the horticulture of the South.

Commercial peach-growing in Georgia dates back to the early seventies, when such men as P. J. Berckmans, of Augusta, and S. H. Rumph, of Marshallville, began to make export shipments to the New York market. Mr. S. H. Rumph is considered the pioneer, and his origination of the famous Elberta peach from a seed planted in the fall of 1870 marked an epoch in the history of the peach industry the world over. His success enticed others to venture, and in 1890 peach orchards became quite extensive around Marshallville and Fort Valley, which soon became known as the peach belt of Georgia. From this nucleus the industry has rapidly grown until there are now commercial peach orchards in more than half the counties of the State.

In 1918 there were at least 6,000,000 peach-trees in commercial orchards, and the increase since is unparalleled, as shown by the number of trees planted each season as follows: 1898-99, about 1,000,000; 1900-1901, about 1,500,000; 1902-03, about 2,000,000; 1904-05, about 2,500,000; 1906-07, about 3,000,000; making a total of about 9,000,000 young trees planted since 1898. A small proportion of these new plantings is necessary to replace old, exhausted orchards, and the figures given do not, therefore, represent an actual increase of 8,000,000 trees; but it seems safe to say that when these young orchards reach bearing age, three years hence, fruit will be harvested from at least 13,000,000 peach-trees.

Under favorable conditions a well-cared orchard will produce an average of one bushel of fruit to each tree, from which we might conclude that the production for the State would be 13,000,000 bushels, or about 20,000 cases; but such a yield cannot be expected, owing to poor management of many orchards and adverse local conditions. An average production of one-half bushel to each tree, making 6,500,000 bushels for the State in one season, would be a fair estimate. This would represent about 46,500,000 pounds in circulation during midsummer.

The climate and soil of Georgia are such as to admit of a great diversity of crops, although the peach holds the first place among the horticultural products of the State, many other classes of fruit are extensively grown. The coast belt and the section bordering Florida produce several subtropical fruits, while in the

mountain region many of the best Northern varieties of apples are successfully grown. Peas, plums, grapes, and strawberries succeed well throughout the State, and hundreds of varieties of these fruits are annually placed on the market. It has been thoroughly demonstrated that these and several other kinds of fruit can be profitably grown here, and there is a tendency toward their more rapid development.

During the past decade the State established a Board of Entomology as a part of the Department of Agriculture, and the work of the State entomologist has added immensely to the value of the orchard interests through the extermination of insect pests.

## PHYSICAL CHARACTERISTICS

**G**ORGIA is the largest State east of the Mississippi River. The census credits it with 58,900 square miles, and the State survey gives it a slightly larger number. The land surface falls into three natural divisions—the Appalachian Highlands, the Piedmont Plateau, and the Coastal Plain. The Appalachian Highlands are in the north, where the Blue Ridge, in breaking up, makes an American Switzerland. In Towns County, near the North Carolina line, there are several mountains which reach a height of about 5000 feet.

The Piedmont Plateau is a granite region which extends across the State from the foot of the mountains southward to an irregular base from the Savannah River at Augusta to the Chattahoochee a Columbus, passing through Milledgeville and Macon. Below the plateau is the coastal plain extending to the Atlantic coast and to Florida, and covered largely with forests of long-leaf pine, which are carpeted with wire-grass. This grass, which furnishes winter pasturage for sheep and cattle, gives rise to the designation of that section of the State as the "Wire-grass Region." This is one of the most productive parts of Georgia. A great variety of soil and climate results in a corresponding variety of products. Georgia produces almost anything that will grow in the United States, except the tropical fruits of southern Florida.

Investigation shows the State to be divided into three distinct climatic zones, due to its varied topography and proximity to the sea. Elevations varying from almost sea-level in the extreme south to several thousand feet in the extreme northern counties give a variation in temperature usually covering at least ten degrees of latitude. The annual mean temperature for the State is 63.5 degrees. The lowest annual mean, 53.5 degrees, is in Rabun County, at an elevation of 2920 feet. The highest annual mean, 67.5 degrees, occurs at Savannah, very near sea level. The warmest month is July, average temperature 80 degrees, and the coldest, January, with 43 degrees. The summers are not hot, but pleasant, the temperature rarely rising to 100 degrees. The winters are short and comparatively mild, temperature seldom falling below zero.

Electric-power Dam on the Cheslate River, near Gainesville

## WATER-POWER

BY B. M. HALL

San Hydrographer

**T**HE topography of the State of Georgia is such that nearly all of its streams rise within its borders and flow outward in different directions. There is one point in the northeastern part of the State where there are three springs within a stone's-throw of each other sending out their waters, one to Savannah, another to Apalachicola, and the third to New Orleans; while within a short distance of this point are the heads of two other basins, one draining to Mobile and the other into the Atlantic through the Altamaha River. The State owns both of its border rivers, as its lines are on the east bank of the Savannah for its entire length, and on the west bank of the Chattahoochee from West Point southward, thus including within its borders the great water-powers on these streams. The most important water-power streams in the State are the Savannah, Broad, Ocmulgee, Flint, Chattahoochee, Etowah, Coosawattie, and Trece rivers and their tributaries. These streams rise at elevations of 800 to 2000 feet above sea-level, and flow along the high Piedmont plateau in a succession of cascades until they come to the fall lines where they take their last great leap from granite bedrock to navigable water in the younger geological formation. The Southern fall line passes through Augusta, Mill-edgesville, Macon, and Columbus, and the country south of it has no large water-powers on the rivers, although there are many smaller ones of considerable importance on the tributaries. The Western fall line, from granitic rocks to limestone, is at Cartersville on the Etowah and at Carters in Murray County on the Coosawattie. The latter point is at the head of navigation, but the hard lime limestone forming the bed of the Etowah below Cartersville makes many good shoals between that point and Rome. The streams north of the Blue Ridge Mountains, tributary to the

Geese, Nottely, and Hiwassee rivers, are all mountain streams with a steep slope and good water-supply. It will be seen from the above that the important power streams are in a crystalline formation, having no previous geological strata that would cause seepage or watershed leakage. The rainfall at Atlanta represents a fair average for the State. Here the average for a record of thirty-two years is 51 inches annually, distributed as follows: Spring, 13.76; summer, 13.34; autumn, 6.63; and winter, 14.87. This remarkably equal distribution gives a large and constant flow to the streams, and makes them reliable for water-power.

The streams are never frozen over, and no mill wheel is ever troubled by arctic ice. In October, 1895, the Hydrographic Division of the United States Geological Survey began systematic measurements of the Georgia rivers, and have kept them up from that time to the present. The published records show the amount of water flowing in these streams every day in the year during a period of nearly eight years, which period fortunately covers the years 1896 and 1897, when the streams were at a minimum stage that is estimated to be the lowest since 1848.

## MINERALS

BY W. S. YEATES

San Geologist

**T**HE mineral resources of Georgia are rich and varied, and for nearly a century there has been activity in gold and iron mines.

The Dahlonega mint is evidence of the important part which Georgia mines played in the production of gold during the first half of the nineteenth century. This State led in the production of the precious metal until the California gold discoveries in 1848, when the excitement carried away many of the Georgia miners. Within recent years new importance has been attached to the gold deposits of this State, and large investments of capital have been made in them. A modern plant which contains a 120-stamp mill was recently erected, and much capital has been expended in developing water-power, which is used in hydraulic mining.

With the exception of a few isolated areas, the gold deposits of Georgia extend across the State from northeast to southwest, in belts from one to five miles wide. The principal of these is the Dahlonega belt, which attains its greatest width in Lumpkin County around Dahlonega. The Dahlonega belt enters the State from North Carolina, and passes through Rabun, White, Lumpkin, Dawson, Forsyth, Cherokee, Bartow, Cobb, Paulding, Polk, and Harlson counties, and extends into Alabama. Lumpkin, White, and Cherokee counties are the most prominent, because of the large number of deposits in these counties, which have been worked with greater or less success.

The deepest gold mine in the State is the old Franklin, discovered long before the civil war, and mined and successfully worked for the first ten years by the Freighton Mining and Milling Company of Pittsburg, Pennsylvania. This mine is something over

Constructing a Power Dam on Bull Sluice Shoals, Alabama

3000 feet deep. The ore from it is of a highly sulphide nature, consisting of auriferous pyrite in quartz. In the early history of the mine much free gold was recovered from it; but, on deep mining, it became necessary to put on an extraction plant which would recover the gold from the sulphides. Since the Craghton Company has operated it, this mine has been the largest gold producer in Georgia.

Among the gold mines in the vicinity of Dahlonega the most noted for past production are the Harlow, the Hand, the Finley, the Lockhart, the Clifton, the Fry, the Battle Branch, the Calhoun, and the Whim Hill.

The Dahlonega Consolidated Gold Mining Company, with a capital stock of \$1,000,000, has one of the most extensive, up-to-date gold mining and milling plants in America. Air-drills are used, and ore is conveyed in steel trolley-cars. The 120-stamp mill is supplied with fine screens for concentrating the sulphides. Cars on an elevated railway transfer the sulphides from the mill to the 50-ton chlorination plant.

The Crown Mountain Gold Mining & Milling Company organized three years ago, with a capital stock of \$2,000,000, and purchased mining property on Finley Ridge near Dahlonega. With a powerful pump on the Toccoa River, two or three miles distant, water is forced to the top of Crown Mountain, and from a reservoir at that point hydraulic mining is extensively done in the adjacent mines. A first-class 60-stamp mill and four Huntington mills have been erected.

In the lower part of the Dahlonega belt, near the Alabama line, the Royal Gold Mine, in Haralson County, has had an enviable reputation as a gold producer for several years. It is supplied with a good modern mining and milling plant, the chlorination process being used for saving the sulphide values. At Villa Rica, in Carroll County, a number of good mines have been worked occasionally with large production.

Mining along Duke's Creek, White County, has been carried on almost continuously since 1828, and at times with great success. That county has yielded a great many gold nuggets, ranging from ten pennyweights in size over 500. The largest of these, weighing 504 pennyweights and four grains, was found on the property owned by John Martin of Niseconee.

For several years mining has not been extensively prosecuted in White County, most of it being done by trilateral and others mining in a small way. The Reynolds Mine, the Humby Mountain placer, owned by Mr. Martin; the Lead Mine, owned by Mr. E. K. Brown, of Athens, Georgia; and the Glen Mine, owned by A. W. Farlinger, of Atlanta, are the most important.

The Lead Mine, in its production of gold nuggets, is one of the most noted in the State, and active operations in the placer have been going on uninterruptedly for several years. Recently, it is said, a rich vein has been opened there.

In McPhay and Lincoln Counties, are a number of the best known mines. Of these the old Columbia is said to have produced as much as two million dollars, having been operated extensively before the war and since. It is now in the hands of an enterprising Atlanta company who have for three years been doing systematic development work. With the possible exception of the Franklin, no gold mine in Georgia is in a better condition of development. A large modern mining plant and mill are in course of erection, which, when completed, will put this mine in excellent shape for production. Within a mile of this property is the Smith or Parks Mine, which has become noted in the past few years, on account of successful operation by its owner, Mrs. J. Bellamy Smith.

The iron ore deposits of Georgia consist, with rare exception, of the three mineral species, magnetite, limonite, and hematite. The first named has been found in Lumpkin, Rabun, Fulton, and some other counties; but as yet it is problematical whether or not it is in such quantities as would pay for mining.

Limonite, or brown iron ore, occurs in large quantities in Polk, Barrow, Floyd, Cherokee, Wilkes, and other counties, and is successfully mined. It is used in all the Georgia furnaces, and makes

The largest Gold Mill in the Southern States

excellent iron bar cut-wheels. Most of the Alabama iron-ore making cast-iron wheels from ore Georgia brown ore. This ore occurs in gravel, ranging from one-fourth of an inch, and even smaller, to four or five inches in diameter, and its nodules from five inches to two feet or more in diameter. Occasionally the brown ore occurs in veins.

Hematite occurs extensively in Dale, Walker, and Chattooga counties as fossiliferous iron ore, closely associated with limestone. It is used at Rome and Rising Fawn furnaces.

Beginning in Fannin County, the marble outcrops in belts for about sixty miles, running through Gilmer and Pickens into Cherokee. All the commercial marble of Georgia has so far been taken from Pickens County. Two companies have been continuously operating there twelve years. At Marble Hill, the Southern Marble Company has opened five or six quarries of white marble, and large quantities have been shipped and used in nearly all parts of the United States. From these quarries, came the marble used in the erection of the Corcoran Art Gallery in Washington city, the Rhode Island State Capitol, the large office building of the State Life Assurance Company of Worcester, Massachusetts, the new Stock Exchange Building in New York city, the State Savings-Bank Building at Detroit, Michigan, the government buildings at Savannah and Jacksonville, the Carnegie Library in Atlanta, and a number of other smaller buildings. This company has at the foot of Marble Hill a large mill well equipped for the cutting and dressing of marble for building purposes.

The Georgia Marble Company operates a number of quarries, one in the white marble of Marble Hill, and another in the pink and the black-and-white spotted marbles three miles distant. This company has a \$1,500,000 plant for the cutting and dressing of marbles for building and monumental purposes. Georgia marbles are renowned for durability and low absorption.

From the quarry of the Atlanta Marble Company, in the valley south of Marble Hill, was taken the white marble of which the Minnesota State Capitol was built.

Besides these, there is in the extreme northeastern part of the State, in Whitfield County, a large deposit of brown and gray marbles, approximating closely those of East Tennessee, of which they are an extension. Strange to say, practically no development of these deposits of superior stone has ever been undertaken, though the quantity is large and the quality and beauty superior.

## AGRICULTURE

BY R. F. WRIGHT

Assistant Commissioner of Agriculture

WE cannot form a proper conception of what Georgia soil will produce from the census reports of the average of our crops, because those averages embrace everything, from the work of the most unskillful farmers to that of the most scientific, and the former constitute the large majority. But if we take the work of the best farmers, who have aimed to bring their lands up to the highest state of cultivation, we get a fair idea of the fertility of the State. The farm of Mr. James M. Smith, in Cherokee County, affords a good illustration of what can be accomplished on the average lands of Georgia. By studying the nature of the soil, supplying it with the necessary plant food, diversifying his crops, using his brains as well as his hands, and superintending everything himself, he has year by year added to his possessions, until his one-hundred-acre farm has become one of the largest in Georgia, covering thirty-square miles of land and giving employment to 1250 men, women, and children. For years he has averaged twenty-five bushels of corn to the acre, fifteen bushels of wheat, and 1000 pounds of seed cotton. But on some of his land he has made from thirty to thirty-five bushels of wheat, on other portions two bushels of cotton, and on some thirty-five bushels of corn to the acre. All this land, which at first was not worth more than \$10 an acre, he considers cheap at \$50. His best land, including several hundred acres, he has made rich in the following manner: For a number of years he has kept 500 head of cattle, which he pastures in summer, and feeds in winter on cottonseed-hulls and meal, together with forage. His milch-cows, numbering from 75 to 100, are Jerseys, Devons, and Holsteins, some of pure blood and some mixed. They have produced each year about 20,000 pounds of butter, bringing from eighteen to twenty-five cents per pound wholesale. He has been able to sell about one hundred head of cattle a year without diminishing his herd. These cattle are kept in an enclosure of fifteen acres, and occasionally moved to another lot. Every month or two the ground is ploughed, turning under the manure.

With agriculture Mr. Smith combines manufacturing, and the raw material produced by the soil is turned into a valuable manufactured article by means of the steam-ginney, silk-mill, and fertilizer-factory.

Mr. Smith hires negro laborers, whose exertion and loyalty he has won by his kind but firm management. On his large estate a sawmill cuts the lumber for his various houses, a brick-yard turns out the brick, and his negroes are made in his own shop. The carpenter work is done by men who learned their trade on the estate. His own railroad, seventeen miles long, hauls material to his factories, and takes his marketable products to the outside world.

The average annual product of this farm is 2500 bales of cotton 120,000 gallons of cottonseed-oil, 3000 tons of fertilizer, 20,000 bushels of corn, 10,000 bushels of wheat, 1000 of rye, 3000 of oats, 6000 of peas, 20,000 pounds of butter, 100,000 pounds of fat cattle, 5000 pounds of bacon and lard, besides such crops as sweet and Irish potatoes, watermelons, ground peas, sorghum, etc.

Intensive farming, which applies the lessons

Georgia Corn grows high

Sugar-holing in North

of science and experience to the results. They are not by any means done by exceptional efforts. The average production of lin acres on good, but, and indiffer common for a farmer to raise and abundant fertilizing. That Georgia.

Some extraordinary yields the Department show the great possibilities of agriculture in this State.

One acre of land has produced 6017 pounds of seed cotton, equivalent to 2365 pounds of lint cotton, or about 4½ bales. The lint at ten cents would be worth \$250 50, and the seed at 5½ per ton would be worth \$30, making a total return of \$280 50 for the acre.

Other yields touched for by the Agricultural Department range from 2500 to 4500 pounds of seed cotton per acre in the counties of Troup, Burke, Carroll, Crawford, Elbert, Jefferson, Brooks, Clay, Conroe, and De Kalb.

The Department reports yields of corn from 104 to 127 bushels per acre; oats from 46½ to 117 bushels; wheat from 28 to 65 bushels; sweet potatoes from 400 to 800 bushels; Irish potatoes from 100 to 200 bushels; cane syrup from 450 to 605 gallons; hay from 6575 to 16,000 pounds; sugar 24 barrels.

Georgia land will bear heavy fertilizing, because of the few subsoils. The farmers of this State put over plant food in the soil than any other farmers in America, and the returns of product, measured by dollars, is twice as great a percentage on the investment in land as the farmers of the rich prairie States produce. In Illinois, the annual value of farm products, not fed to live stock, is thirteen per cent. of the value of the farm.

# GEORGIA'S MANUFACTURES

BY W. G. COOPER

**G**EOORGIA has made great strides in manufacturing during the last half-century. In that period, while the population increased by 144 per cent., the increase in the number of wage-earners was 502 per cent., that of the product 1400 per cent., and the capital 1545 per cent. In a word, industry grew six to ten times as fast as population.

There was a large percentage increase during each decade, but the greatest growth was in the period between 1860 and 1900. The number of wage-earners increased during these two decades from 24,875 to 83,842; the capital from \$23,872,000 to \$80,790,000, and the product from \$30,410,000 to \$100,654,000. Since the census of 1850 the increase has been twenty-five to thirty-three per cent., and the total product is about \$125,000,000.

Naturally the public mind has been directed to cotton manufactures, which constitute the largest item in the census schedule, but if we put together all the products of the pine-tree they about equal the manufactures from the cotton-plant.

The product of cotton-mills is valued by the census at \$18,544,000, and that of the sawmills and planing-mills together at \$18,907,000. If we add the value of turpentine and resin, amounting to \$8,110,000 we have a total of \$35,561,000 for the products of the forest. Since the census of 1900 the cotton-mill product has increased to about \$24,000,000.

The seed of the cotton-plant contributes to the value of its prod-

and equally so in its manufacture. Progress in cotton culture dates from the invention of the cotton-gin at Savannah, which made the crop possible, and Georgia took the lead in developing it. The manufacture of cotton goods in the Southern States began with the erection in Georgia of the first cotton-factory south of the Potomac.

Where Georgia blazed the path of progress her neighbors profited. Texas has taken first place in cotton-growing, and the Carolina, within the past decade, have taken the lead in the production of cotton goods.

Georgia has again blazed a new path for her sister States. Since the last census was taken a mill has been erected at Columbus, and supplied with machinery to spin finer yarn than any other factory in the South. It is equipped to manufacture thread up to No. 125, which approximates the finest yarn in New England.

In diversification of product this State has several mills with few equals in this section of the country. Among their products are cotton blankets, towels, cottonades, gingham, plaids, carpet wares, rope, twine, skirts, hose, and underwear.

Mills at Atlanta, Augusta, and West Point own bleacheries, and within the past few years a considerable proportion of new machinery has been put in to spin No. 30 yarn for shorthings which are sent to the bleacheries.

One of the most significant facts in connection with the cotton-mill industry is the duplication and reduplication of investments made in this State by capitalists interested in New England and Middle States mills. The Massachusetts Mill Company in 1864 invested \$600,000 in a cotton-mill at Lindale, near Rome, in 1864.

Since that time the plant has been increased twice, and now the total investment is \$2,250,000, with 100,000 spindles and 1500 operatives, who support a town of 5000 people.

The New York Mills have built a cotton-factory at Aragon, and Pennsylvania capitalists have erected mills at Okeetown, both within fifteen miles of the Lindale plant.

The confidence shown by capitalists of three great manufacturing States—New York, Pennsylvania, and Massachusetts—in Georgia cotton-mills is encouraging, but it is even more so to observe the confidence of home capital, which built most of the Georgia cotton-factories, and continues to increase the investment. South Carolina capitalists have invaded Georgia, and the Piedmont Manufacturing Company has a model-mill of 50,000 spindles at New Holland. The great

urts nearly half as much as the fiber. The value of oil and oak, given by the census at \$4,084,000, should be added to the value of cotton-mill products, in order to make a fair comparison between the long-leaf pine and the cotton-plant. With this addition we have a total forest product of \$26,117,000 and total manufactured products of cotton amounting to \$25,010,000.

The pine-trees and the cotton-plant furnish the material for about half the manufactures of Georgia. In fact their products make fifty-two millions of the total one hundred and six millions.

This State was a pioneer in the cultivation of cotton

Where the finest Yarn in the World is Spun, Columbus

Swift Fertilizer Works, Atlanta

A Cotton-oil Mill, Fort Gaines

water-powers at Columbus and Augusta made these cities pioneers in cotton manufacturing.

Within four miles of Columbus the falls of the Chatahoochee furnish power which a State bulletin estimates at 80,000 gross horse-power. One of the first mills in the State was erected at Columbus, and for half a century labor has been trained in the manufacture of cotton. Within one year this labor, which had never spun yarn finer than 40's, was trained to spin up to 100, and, in the opinion of the mill president, will without difficulty operate the machinery up to its capacity, which is 120 yarn, and even to No. 130.

The Chattahoochee River falls 302 feet in the thirty-four miles from West Point to Columbus, and the discharge at low water in this territory is 4033 cubic feet at West Point and 3216 at Columbus. If the power of all these falls and shoals were utilized, it would approximate 190,000-horse on the basis of mean low water. The district from West Point to Columbus is destined to be the seat of an immense cotton industry, furnishing as it does nearly half the available water-power of the State.

Augusta became an important seat of the cotton industry more than half a century ago. The construction of the Augusta Canal made the power of the Savannah River available at moderate expense, to the extent of 14,000 horse-power. The city leases the water right on the canal at 45 cent per horse-power per annum, and the mills erect their own plants. The expense of developing power along the canal is moderate, and the total cost to the mills is no less so to stimulate the industry, which includes 329,740 spindles and 5300 looms in thirteen establishments. Some of the largest and best-equipped mills of the State are in the Augusta district, and they make a variety of products.

Without water-power an important cotton industry has been built up at Griffin, where diversification of the product has been a strong factor in the success of the mills.

Other large cotton-factories are located on the streams of North Georgia, but the abundance of cheap bituminous coal has extended

Cotton Mill, Greenville, started by the recent Cyclone

the industry far beyond the region of water-power. In the southern part of the State there is hardly a county of any importance without a cotton-factory.

A study of the cotton-spinning industry of the United States by Edward Stanswood, Special Agent of the Census Bureau, shows that, while the tendency in New England is toward coarser yarns, that of mills in the South is toward a finer product. The average number of spindles in New England from 28.20 to 25.86 in the past decade, while in Southern mills it rose from 14.76 to 17.04. In Massachusetts, the leading New England mill State, the average went down from 26.75 to 25.97, while in South Carolina, the leading Southern mill State, it rose from 15.13 to 18.40. During that decade the rise in the average number of spindles in Georgia was very slight, but within the past two years machinery has been set in motion which spins the finest yarn in the South, and the average grade of product is rapidly rising.

The significance of these changes cannot well be overestimated, for the diversification of the product and the improvement of the quality have a vital effect upon the prosperity of the industry. Southern mills already consume more cotton than New England, but the value of the New England product in 1900 was about double that of the Southern mills. It took the cotton crop of Georgia to supply the mills of the Carolinas, Georgia, and Alabama, and what manufactured, this cotton, which costs the mills forty-seven millions, was sold for sixty-five millions, or about double the value of raw material.

The same year the New England mills worked up fifty-eight

A Charcoal-furnace Stack in use before the War

millions' worth of cotton, and sold it in manufactured form for 101 millions, or three and a third times the cost of raw material.

As the advancement in the value of the crop by the process of manufacture is in even greater ratio than the improvement in the quality of goods, the tendency toward finer product is the most encouraging fact in the Southern cotton industry, especially since it has been demonstrated, within the past two years that native Georgia labor, with a year's training, can operate successfully machinery spinning yarn as fine as 120. The authority for this statement is Mr. G. Guahy Jordan, president of the Eagle and Phoenix mills of Columbus, who thinks the same labor can spin up to 160 without difficulty. He says, in a letter on this subject:

"The spinning in these mills will make 120 yarn, and today they are spinning 100's on orders right along. In reference to the 160's, however, there would be no difficulty whatever in spinning that number. The only difficulty is, in this instance, that the machinery (spinning only) is not adapted for finer numbers than 120's."

"We did not have to bring any of the labor from New England. The houses were brought here, as this was a new venture in making fine yarn; but most of the operatives themselves were imported. In other words, it is all local help, and I think all the Northern superintendents concur in the belief that the help at Columbus, Georgia, is as good as any in the world. There is no more trouble teaching them than at any other point. In fact, it is far better than the average help in New England, which is now mostly foreign immigrants. It takes generally about one year to take an absolutely green hand and educate him up to the standard of fine work. Or, in other words, it takes no longer here than anywhere else. In localities like Columbus, where a generation or two preceded the present help, in this particular line of business, whose adults have been directed to this work, whose thoughts have been about manufacturing, whose

nerve and muscles have been adapted, by selection and use, to this work, and where people are native-born and understand the climate, the surroundings, and associations, it is no exaggeration of facts to say that the help is as good as the best. The only thing it needs is to be taught what is required."

The steady improvement in the machinery used by Georgia mills is made clear in the statement of the census expert that the number of spindles to the wage-earner in Georgia cotton-mills has risen from 32 to 44 in twenty years. This is a 38-per-cent. improvement in the economy of operation, as against a 77-per-cent.

Steamships loading Cotton at Savannah

improvement in the same item in the New England States during the same period, their progress having been from 68.6 to 79.2 spindles per wage-earner.

The manufacture of iron in Georgia began with the erection of a charcoal-furnace on Stung Creek, Bartow County, in 1840, by Moses Sitrop. Mark A. Cooper bought this furnace, and erected a masher on the Etowah River five miles below. In the same vicinity he built the first rolling-mill and nail-factory in the State, using water-power from the Etowah River to run the machinery. During the civil war these works were used for the manufacture of cannon, and in 1864 the plant was destroyed by Sherman's army.

The Wharf of the Naval Stores, Savannah

The ore of that locality is of high quality, and iron manufactured from it was shipped to Colt's Armory about 1830, and made into razors, revolvers, and knives. Twelve old-fashioned stone-furnace stacks in Bartow County tell the story of the early iron industry, but none of them are in operation, though a heavy tonnage of Bartow County ore is shipped out of the State.

There are five modern charcoal-furnaces and one coke-furnace in Georgia, all but two in operation. The Cherokee furnace at Cedar-iron, owned by the Georgia and Alabama Iron Company, makes sixty tons per day of charcoal iron from brown ore mined at the Gladys bank near the plant. It is low in phosphorus and high in manganese, and an exceptionally fine cast-iron.

The Rome furnace, with a daily capacity of sixty tons, makes a fine quality of charcoal iron from a mixture of brown and red fossil ores. The product is used in car wheels.

The Tallapoosa furnace, with a thirty-ton capacity, also makes charcoal iron of good quality, mainly from brown ore. The Elma furnace was built in the early seventies to make charcoal iron. It is smaller than the others, and a larger furnace will probably be built there.

Ridge Valley furnace, in Floyd County, nine miles north of Rome, is a charcoal-furnace at present out of blast.

A large coke-furnace of 300 tons capacity is in operation at Rising Fawn. It is owned by Atlanta capitalists, headed by Joel Hurt, and the ore used is mined in Bartow County. Most of the car-wheel iron manufactured in Alabama is made from brown ore mined in Georgia, because there is very little ore in Alabama that will make so fine a quality of charcoal iron. The mining and shipping of iron ore in Bartow, Polk, and Floyd counties is an important industry, apart from the manufacture of iron. A great deal of manganese is shipped from Bartow County to Pittsburg.

The larger deposits of coal in Alabama have made that State the scene of an immense iron industry, limited almost entirely to coke iron, but the finer quality of ore in Georgia fits in this State a prominent side of the manufacture of high-grade iron. The Atlanta Car Wheel Works make a superior wheel from charcoal iron produced at Cedar-iron and Rome, and the product is sold all over the Eastern part of the United States.

The manufacture of stoves, grates, furnaces, agricultural implements, engines, boilers, gins, cotton-oil mills, grist-mills, saws, iron beds, machinery, tools, and various kinds of hardware are flourishing branches of the iron industry in Georgia.

The products of the forest are surprisingly numerous. The forests of long-leaf pine originally covered about twenty million acres of Georgia land. Much of this has been cut away, and within the past six years the price of lumber has more than doubled. Georgia pine is sold all over the United States east of the Rockies, and much of it has been shipped to Europe and South America. At present the sawmill companies own about a million acres of pine land, and are cutting 800,000,000 feet annually.

# THE CITIES OF GEORGIA

## ATLANTA

**A**TLANTA is one of the cities started by railroads before the middle of the last century. Its commanding site on the ridge which divides the watershed of the Atlantic from that of the Gulf made it a natural centre. Railroads were built through Atlanta to accommodate the Western traffic seeking an outlet on the Atlantic coast. Another stream of traffic, which flowed down the Appalachian Mountain chain, crossed that from the west at this point, and the two streams, meeting at Atlanta, spread through the Southeastern States. Thus the city became a gateway and a distributing-point.

Whitehall Street, Atlanta—Looking South

From an elevation of 1050 feet above the sea, the land slopes away in every direction, giving perfect natural drainage, delightful climate, and healthy atmosphere.

Yes, railroad lines, radiating through the Southeast, reach the South Atlantic and Gulf coasts in twelve to eighteen hours. General Sherman said Atlanta was the most important strategic point in the Southeastern States because it was the most convenient base of operations from which to reach the ports. That commanding position gives a like advantage in business. There are seventy-nine towns of 4000 population and upward in Georgia, the Carolinas, Alabama, and Mississippi. The average distance of these towns from Atlanta is 281 miles, which is 80 to 170 miles less than the distance from the next nearest important centres.

The progressive spirit of Atlanta is shown by a story going the rounds to the effect that a man from this city was sounding the praises in the Metropolis, when the New Yorker said: "Yes, I know all about it. I was down there not long ago."

"Yes," said the Atlantan, "but that was last week. You ought to see us now."

Atlanta's business is growing four times as fast as the population, and that in growing twice as fast as the population of the United States. Population, now over 100,000, increases 4 per cent, per annum, bank clearings 18 per cent, and post-office receipts 16 per cent. This city is the business centre of the Southeastern States, and in several important lines it is headquarters for the entire South. Railway, telephone, and telegraph companies direct the business of five to twelve States from here. This is the site of many manufacturing corporations which cover this whole country. Atlanta is the third insurance centre of the United States, and one of the largest in the world. The Southeastern Tariff Association has its headquarters here.

This city has always had the advantage of an abundant supply of printer's ink. In proportion to population, this is the greatest publishing centre in the United States. Atlanta pays Uncle Sam more for second-class mail matter than either Brooklyn, Baltimore, Buffalo, Omaha, Louisville, or New Orleans. The people believe in mixing brains with their ink. They gladly set the

pace for Atlanta journalism, and it has led the South ever since. The fact that Atlanta is Southern headquarters for almost everything, made office-buildings a necessity, and there are none modern, fireproof structures for business purposes that say other Southern city can boast. The heart of Atlanta looks like the lower part of Manhattan Island.

Though Atlanta does a big business with Uncle Sam, it is not altogether a postage-stamp town. The census credits the city with 265 manufacturing establishments, 9368 wage-earners, and a product valued at \$16,721,890. That was in June, 1900. Some investigations made by the Chamber of Commerce last December indicated that since the census was taken the number of wage-earners had increased to 11,000 and the product to \$26,400,000. Wholesale and retail trade are estimated at \$30,000,000, and the horse and mule trade at \$7,000,000. These items, with the fuel trade and the manufactured product, make a total of eighty millions which may be counted. That this is not all the business of Atlanta is evident from the bank clearings, which were \$121,000,000 in 1902. The clearings tell a remarkable story. In 1894 they were \$36,000,000, and in 1902 \$121,000,000. Within that period twelve millions were put in buildings, as shown by the building inspector's books. Within the same period bank deposits grew from less than four millions to twelve and three-quarter millions.

The factories of Atlanta and suburbs use 45,000 horse-power of steam and electricity. A company is erecting, at an expense of about two millions, an extensive water-power and electric plant on the Chattahoochee River, at Bull Nullee Shoals, sixteen miles from Atlanta. By the middle of 1904 they will deliver in the city 11,000 horse-power of electric current, which will give a great stimulus to industry. Much of it is already spoken for.

A unique feature of Atlanta's business is the live-stock trade. Sixty-two thousand five hundred horses and mules passed through the city and were sold here during the season of 1902-3. Their value is estimated at \$7,000,000. The rapid growth of this business created the Brasby Union Stock Yards.

Atlanta has an excellent street-railway system, with 140 miles of track, 100 miles in the city and forty miles in the suburbs. Another line has been projected to Marietta, a distance of twenty miles, and another about the same distance to Roswell.

The building record gives a concrete illustration of Atlanta's growth. After the fire in 1864 only 300 houses were left; now there are 20,000, including many costly structures. In the seven years which followed the re-erection of 1863 the number of dwellings erected was 3637, an average of 519 per annum. During the last six months permits were issued for 565 buildings, showing that the rate of improvement this year is nearly double the average rate during the preceding seven years. Extractions are in progress for a fifteen-story office-building to cost about a half-million dollars. Hundreds of minor buildings are under construction.

Just ahead, Atlanta has several enterprises of unusual importance. First is the Union Passenger Depot, estimated to cost nearly a million dollars. The Seaboard Air Line has several thousand

Looking down Marietta Street, Atlanta

heads at work to complete the link between Atlanta and Birmingham. A bill has been introduced in Congress providing for a national park on the battle-ground of Peachtree Creek, just beyond the northern limits of Atlanta. As the finishing stroke of the war, the Atlanta campaign has great historic interest, and it is believed that this measure will pass at an early date. The site is a fine one, and if properly treated would make one of the most attractive national parks in America.

The street improvements of Atlanta are on a comprehensive scale. Most of the streets are paved with granite blocks and the important drives with asphalt. Recently many miles of sidewalks have been laid. Where railroads cross important streets substantial steel viaducts have been constructed, or are in process of erection. The most important of these are on Whitehall, Broad, Forsyth, Mitchell, and Peters streets, where the traffic is very heavy.

The city government is administered by a Mayor and General Council, and appropriations have to be voted on separately by the Council and Aldermen. The Mayor has a veto power, and sits on important executive boards. The fire, police, water-works and schools are and other departments are well conducted. The schools are in the hands of a progressive Board of Education, which has introduced manual training, instruction in vocal music, and physical culture. Taxation is on a basis of one cent-fourth per cent, and assessments average sixty per cent of the real value of property. The charter requires the annual setting aside of a sinking-fund to retire all bonds within thirty years from date of issue, and a Sinking-Fund Committee has been created to handle the investment. Floating debt is prohibited by the charter, and such United States to turn over to its successor \$175,000 in cash. The United States Controller of the Currency designated Atlanta as one of ten cities whose bonds were accepted as security for deposits of Federal funds. Within the past few months Atlanta three-and-a-half-per-cent bonds have sold above par. Insurance rates are low because of the fine record of the fire department and the excellence of the water works system. Water is furnished for domestic consumption at ten cents per thousand gallons and to manufacturers at a still lower rate. Even at these rates the water department pays a profit.

The educational advantages include a fine school system, an excellent public library, several fine theatres, a number of technical schools, and 132 churches. There are 14,000 pupils in the public schools and 4360 students in the higher educational institutions. The medical, dental and business colleges, school systems for boys and girls, and the Georgia Institute of Technology furnish a wide range of instruction. The Technological School is the leading institution of its kind in the Southern States, with 480 students, and schools of mechanical and electrical engineering, textile engineering and civil engineering, chemistry, physics, mathematics, and such others as usually accompany a technical education. Machine-shop practice gives a practical turn. Graduates of this institution are prominent in manufacturing and mechanical enterprises in all parts of the United States.

Institutions for the education of the negro are important, and include Atlanta University, Clark University, Gammon Theological Seminary, Spellman Seminary, Atlanta Baptist College, and Morris Brown College. These institutions have more than 3000 students. Spellman Seminary has one of the best-equipped hospitals in the Southern States, and conducts an excellent training-school for nurses.

Within the last few months the people of Atlanta subscribed \$250,000 to secure a Presbyterian University with an endowment of \$1,000,000. This matter is to come before the Presbyterian General Assembly this fall, and the subscription has already been offered. If the general assembly should not accept the tender, it is believed that there are other friends of education who will be glad to take its place, and add enough to Atlanta's \$250,000 to establish here a great university.

## SAVANNAH

SAVANNAH is now the largest and most important city on the South Atlantic coast; it is the largest naval stores port in the world; the third largest cotton-shipping port in the United States, and its foreign and coastwise exports of timber, lumber, cottonseed, and oil and their products, rice, fruits, vegetables, and phosphate rock run into the millions. It is the most advantageous distributing-point in the South, the terminus of four of the largest railroad systems and two of the principal steamship lines of the United States. Its commerce is the largest of all the Atlantic ports south of Baltimore.

Savannah has a population of 60,000, and the city covers 6000 acres, and has a property valuation of nearly \$60,000,000. Its commerce reaches \$75,000,000. It has one hundred and sixty miles of streets, seventy acres of public parks, sixty miles of street-railways, and eight miles of wharves. Geographically, it is at the head of ship navigation on the Savannah River, eighteen miles from the ocean, on a plateau ten miles above the level of the sea.

On account of its accessibility as a place of gathering it has earned the title of "The Convention City by the Sea." In the last six weeks over seven thousand visitors have attended conventions held here from all parts of the United States and Europe.

West Broad Street, Savannah

The city is nearly square, and most of the streets are broad and run at right angles with each other. It is the most beautiful city in the South, and is delightfully situated as a residence town. No other American city has such wealth of foliage; its parks and squares are adorned with oaks, fountain, and mounds, gigantic oaks, magnolias and palm-trees, with here and there catalpas and banana-trees.

Its architecture is varied and striking, much of it in the quiet fashion of bygone days, but with those characteristics that the art of the present day is eager to counterfeit. It is rich in historic memories; its society is cultured; art is patronized, and all the intonances exist which make the city attractive. All classes of society are found as in other States, and the question of nativity, antecedents, and political views create as few distinctions as can probably be found in any community in the world. The stranger is welcomed, and the newcomer finds plenty of friendly neighbors around him.

Savannah is one of the healthiest cities in the South. The death-rate in the city is less than three per cent, per annum.

The health record for Savannah for the last fifteen years is a part of its history. The authorities have from year to year made liberal appropriations for the benefit of the city's health, and Savannah to-day is in the front rank of the cities of the South from a sanitary standpoint. Its supply of water is entirely from artesian wells.

Every man who has the proper regard for the welfare of his posterity in selecting a home for himself and family will be influenced by a large measure by the facilities which it offers for the education of his children. In this respect Savannah and the surrounding country present peculiar advantages superior in all respects to those of other localities in the South. As an educational center Savannah has long held a high rank.

Savannah, whose tolerance in religious opinion is proverbial, is rich in edifices of Protestant, Catholic, and Hebrew worship. Here was the field of the two Wesley's and Whitefield. Savannah's churches in architecture and beauty rank with any in the South.

Savannah has reason to point with pride to its banking institu-

Cotton Exchange, Savannah

Post-office, Savannah

tion. Through national panics these institutions have by a careful and conservative course progressed steadily, and established themselves on an enviable basis. Savannah has ten banks; their total capitalization is \$3,375,000, not taking into consideration the capital represented by private banking firms and building and loan associations and companies which would largely increase this amount.

The bank clearings for Savannah in 1902 were \$181,690, 677 89. They have doubled in ten years, and are greater by \$50,000,000 than those of any other city in Georgia. Savannah has never had a bank failure.

One of the best evidences by which to note the growth and progress made by Savannah in recent years is in the prosperous condition of the real-estate market. Two large banking and office buildings have lately been erected, another is in progress of construction, and plans are being prepared for a third. A new magnificent City Hall is to replace the old Colonial Exchange. A fifteen-story hotel is also to be built in the heart of the city. Eight and ten story structures are replacing old buildings.

Savannah offers extraordinary advantages for manufacturing. Directly tributary to the city are all of the elements necessary for a manufacturing center; large tracts of unoccupied lands to be secured by rental or purchase on easy terms. Georgia is rich in ores and coal, fuel is cheap and abundant, labor is cheap and plentiful, living is economical. Freight rates by rail to interior points and by water to the North and foreign ports are low. Desirable locations near deep water, with rail connections, are numerous, with plenty of yard space and side-track room. The facilities for handling freight are unequalled.

Court-house, Augusta

Showing example in foreground, erected in memory of Georgia's signing of Declaration of Independence

## AUGUSTA

**A**UGUSTA, the "Lowell of the South" is the county-seat of Richmond, located in the beautiful and fertile Savannah Valley, and is the second oldest city in the State. It stands at the head of steamboat navigation on the Savannah River, and has long been a trade centre and supply depot for much of Georgia and South Carolina. The city was settled in 1733 by General Oglethorpe, and named for a royal princess. It has an area of seven square miles and a population of 50,000. The city has eighty-six miles of streets, some of which have become famous. Broad, the principal business street, is 160 feet wide and three miles long. It is paved with asphalt, and has a double-track electric railway and electric lights in the centre. Greene is one of the most beautiful residence streets in the world. The large and elegant winter hotels in this vicinity and the number of tourists visiting the city attest the healthfulness of its climate. The mean annual temperature is 64 degrees: spring, 63.7; summer, 79.6; autumn, 64.1; winter, 48.8. Average rainfall, 48.10 inches; last killing frost on March 17. Mean relative humidity, 75 per cent.

A range of sand hills encircles the city on the west and southwest, reached by electric railway lines. These hills have long been famous for their sanitary advantages, and health-seekers from every quarter go there to recuperate and breathe the balmy air that comes from the neighboring pines. The national government established in 1861 among these hills an arsenal which it still maintains. It is said that the atmosphere there is so dry that a piece of highly polished steel stored indefinitely in the arsenal buildings will show not a particle of rust.

Augusta's superb position on the Savannah River gives her a marked advantage over other inland centres. At the head of steamboat navigation, she will ever have an opening to the water

Georgia Railroad Bank, Augusta

which cannot be controlled or merged. Consequently, Augusta merchants have a freight rate from Northern and Eastern cities which is much lower than that of many other inland cities.

This city is pre-eminently the home of cotton manufacturing in the South, for it was here that Eli Whitney conceived the idea and invented the cotton-gin, which machine has revolutionized the manufacturing business of the world.

Following the invention of the cotton-gin came the digging of the canal. It was opened in 1842, but has since been enlarged, and is now 120 feet wide and yields 14,000 horse-power. The canal brings water from the river at a point seven miles above the city,

where massive and permanent locks have been constructed from native granite. In and out of season the power from the canal is always available, and last winter, when many manufacturing plants were compelled to shut down, owing to the scarcity and high price of coal, those located at Augusta were all running full and double time, and making handsome dividends. The canal is owned by the city, and power is furnished to manufacturing plants at \$3.50 per horse-power per year. The electric plant of the city, which furnishes power and lights, and the trolley system, a line more than thirty miles long, are both operated by power from this canal.

Eight separate lines of railway enter Augusta, operating quick and accommodating schedules to every section of the country. The competition between the railway companies and river traffic causes the Augusta merchants to receive a remarkably low freight rate by rail as well as by water.

Mr. B. M. Holl, the Georgia hydrographer for the United States government, makes the total water-power on the Savannah River above Augusta 28,900-horse continuously, or 10,300-horse on a ten-hour basis.

A progressive community has an factor more important to its financial or business success and prosperity than its banking institutions. It can be truly said that to a large extent, just so far as these institutions are safe and enterprising, and perform their duty to the community, to that extent is the community prosperous. Augusta has every reason to be proud of her banking institutions. Through peace and times of stress the banks of Augusta have, by their careful and conservative course, established themselves on a reliable and substantial basis. Augusta is the banking center of a large section of country, rich in natural resources, abounding in fertile lands, and conducting large and varied interests, and the influence of her institutions is broad and far-reaching.

The cheap freight rates, solid financial institutions, and fortunate geographical situation have been great factors in Augusta's growth and development, as the reports of clearings for four years evidence. Clearings in 1908 were \$38,368,242.52. In 1907 they were \$74,569,321.98, an increase of nearly one hundred per cent. in four years.

There are in the city twenty-three churches, representing the Baptist, Methodist, Presbyterian, Lutheran, Episcopal, Catholic, Christian, and Hebrew faith.

The schools of the city and county are under the jurisdiction of one Board of Education. The same length of term, same qualifications of teachers, and same rate of salary are prescribed for the rural districts and those of the city. This has resulted in building up a remarkably fine system of schools, and makes Richmond County an exceptionally good place to live in. The revenue of the Board of Education is about \$100,000 a year, of which \$55,000 is raised by local taxation, and the remainder comes from State school fund.

## COLUMBUS

COLUMBUS, the beautiful and progressive Georgia city, with 20,000 inhabitants, is a gem in the Greater Georgia galaxy of municipalities. So much could be written of her history, her cultured people, the national fame of many of her gifted sons and daughters, her achievements in matters artistic, educational, and religious that it seems quite prosaic to descend to a description of her natural resources, her commercial triumphs of the past, and her great business possibilities of the future.

The city is situated in the pine forest district, with a sandy soil. Its sewerage is carried away by a fast-flowing river. There are no

Street in the Residence District, Columbus

swamps nearby, and malaria is not known. The hills of the river here being the termination of the granite formation of the State. The suburbs are upon an elevated range of hills, all reached by quick transit by electric lines of railway. The Chattahoochee, a fast-flowing river, makes the western and a portion of the southern boundary of the city, and a good system of sewerage perfects a system of drainage which has been found ample and satisfactory. The river has never overflowed in Columbus; the bluffs preclude this.

The combined State and county tax is 90 cents per \$100. The county of Muscogee has no debt, and carries money to its credit in bank at all times. The tax-rate of the city of Columbus is 1.2 per cent. Strikes and labor troubles are practically unknown in this section. The manufacturers of Columbus are liberal and humane in the treatment of their employees. Seven railroads center at Columbus, controlled by the following three trunk lines, viz.: Southern Railway, Central of Georgia Railway, and Seaboard Air Line Railway, thus giving competitive, quick, and reliable transportation in every direction.

Columbus is at the head of navigation of the Chattahoochee River, which river, joining the Apalachicola River, empties into the Gulf of Mexico, at the port of Apalachicola, Florida. This gives Columbus not only the command of about four hundred miles of interior navigation and traffic, but makes her a port in direct connection with sea-going vessels, and she is thus the only large interior cotton-manufacturing point in the South with direct water connection with South America and West India ports and (and the proposed Isthmian canal) with the Orient.

Columbus, being at the head of the Chattahoochee Valley, with its rich, fertile land, producing large quantities of cotton of the very best staple, makes this city very attractive to manufacturers who want their cotton in large quantities and at the lowest possible price. The total receipts of cotton at the warehouse and compresses of this city are about 100,000 bales per annum, the six cotton-mills of Columbus consuming only about 50,000 bales. Columbus has been a cotton and woolen manufacturing point for over fifty years, and there is an abundance of educated white labor at command here. This advantage is manifest. The help is all native and to the manner born, and work is easy and with their employees. There are now six cotton-mills in Columbus, four making colored goods, one on brown sherings, and one making fine yarns.

Some of Columbus's big Mills

Bringing Cotton to Market, Rome

The total number of spindles is 137,636; total number of looms, 3767. Total number of cotton-mill operatives employed is 3773. Number of bales of cotton consumed annually is 50,000.

In addition to being a large cotton-mill centre, Columbus has many other important industrial plants, as follows: Two large clothing manufacturing establishments; barrel, trunk, and box factories; three cotton compresses; cottonseed-oil mills; two large foundries; four ice factories; plough-factories; fertilizer manufacturing; one hosiery plant; an exclusive cotton-gin factory; two shoe-making factories; two wagon and buggy factories; two saw, door, and blind factories; and numerous other minor industries incident to a manufacturing centre. The total weekly payroll of the city amounts to \$30,146; total number of employees in all industries is 5636.

## ROME

**R**OME, the county seat of Floyd, is the largest city in northwest Georgia, with a population of 16,924 in 1900, counting the suburbs of North Rome, East Rome, and Lisdale. The population of the county in 1900 was 33,113. Since that time the city and county have considerably increased their population. Rome is pleasantly situated at the head of navigation on the Oconee River, where the confluence of the Oostanaula and Etowah forms the Oconee. The altitude varies from 600 to 1000 feet, and the climate shows a mean temperature of 61.87-night degrees, with 256 days of sunshine during the year. Fresh air from the mountains, with a abundance

of ozone, gives vigor to the population, and malarial diseases are rare.

The county is fifth in the State in population and wealth, and commercially Rome ranks sixth among Georgia cities. The wholesale trade extends far into Alabama, and the merchants compete with Atlanta, Chattanooga, and Birmingham. The surrounding country is fertile, producing large crops of cotton of superior fibre, which brings a higher price than the average upland cotton. Orchard interests in the surrounding country are large, and yield considerable revenue in the autumn. It is estimated that 5000 wage-workers are employed in the shops and factories of Rome and suburbs. There are three banks, electric railways, electric lights, and seven radiating lines of railroad, controlled by the Southern, the Central of Georgia, and the Nashville, Chattanooga, and St. Louis systems, all of which have a fine track service. The Seaboard Air Line passes within twelve miles, and it is expected to throw out a branch to Rome. The Oconee River is navigable 180 miles, going through a rich agricultural and mineral section of Alabama. With the construction of locks this river, in connection with the Alabama, would furnish water transportation as far as Mobile. Steamboats ascend the Oostanaula River 100 miles, to bring down timber and farm products from the vicinity of Cohutta Mountains. The neighboring valleys, which lie between spurs of the Blue Ridge, are exceptionally fertile. Cotton, corn, wheat, and grasses all do well, and dairying is profitable. A nursery at Rome has been the means of planting about four millions of peach-trees in Northwest Georgia. In the adjoining counties north of Rome several hundred car-loads of strawberries are produced and marketed every season. Live stock and poultry are paying industries.

Rome is surrounded by a country of great mineral wealth in unusual variety. Bauxite and red iron ores, kaolin, manganese, coal, and marble are found within a short distance. The Etowah River within fifteen miles has a water-power estimated at 1200-horse, and smaller streams of the county furnish a number of fine powers. At Lisdale, one of the suburbs, the Massachusetts Mill Company has a cotton-factory investment of \$2,350,000 and 103,000 spindles, consuming 50,000 bales of cotton per annum, with 1800 operatives, supporting a factory town of 3000 people. Geologists have indicated the possibility of oil in the flat woods near Rome, and boring has reached a depth of 1800 feet, with good indications.

Residence of Professor C. L. Martin  
President Chamber of Commerce Macon

## MACON

**T**he capitalist who seeks a field for profitable investment, the manufacturer who seeks a change of location, the immigrant who is in quest of a genial, healthy climate, and to the laborer who seeks employment, none great State of Georgia has no city more attractive, more fair, or more swelling than Macon. Located in the center of the State, with a population of 43,000, and a property valuation of \$15,000,000, with eleven railroads leading in as many directions, a navigable river at its doors, and flourishing factories of many kinds with an annual output exceeding \$25,000,000; with literacy and business colleges of wide renown, denominational and non-denominational schools, several beauty spas, and a reputation as the second healthiest city in America; with water-powers at hand, fertile soil all around; with special adaptability to fruit culture; with innumerable mines of kiesel, and a wide variety of hardwoods in close proximity, the advantages of Macon have only to be known

Vessels loading Cross-ties, Brunswick

to become a magnet of irresistible power to those seeking a location for business or residence.

Within a radius of fifty miles from Macon live half a million people—the hundred thousand more than are found within a like distance of any other large city in Georgia. The census of 1900 shows Macon to be the centre of population of Georgia. The inhabitants of thirty-six counties, representing one-third the population of the State, reach it more quickly than any other city. It has therefore virtual command over this thickly populated area, and is a distributing-point par excellence. Macon enjoys an elevation of several hundred feet above sea-level, with fine systems of sewerage, gas, electric lighting, trolley service, public schools, free libraries, churches, colleges, pure water, pretty parks, and well-paved streets, which justly give it the distinction of being one of the most modern and attractive cities in the South.

The United States government by the recent expenditure of a large sum of money on the Thruway River, has made its navigation feasible, and has assured the city a freight rate second to that of no inland city, and enjoyed by only two cities of Georgia. The recent Congressional appropriation of \$200,000 for a new Federal building shows that the United States government recognizes the rapid growing importance of Macon.

A company of local capitalists is developing falls of the Ocmulgee, which will bring to the city between twenty and twenty-five thousand horse-power of electric current. This will work a revolution in the industrial situation, and rapidly multiply the numerous factories of various kinds, which have been erected by local capital and are all in a flourishing condition. Companies among these are factories producing yarn, hosiery, underwear, cotton duck, cutlery products, iron and cabinet work, ice, soap, paints, beer, brick, pottery, fertilizers, chemicals, such, shoes, bindis, and plating mill work, harness, saddles, cigars, etc. One establishment has a product valued at nine million dollars, and exports its goods to nearly every civilized nation on the globe. The total output of Macon manufacturing establishments last year amounted to 15,000 car-loads, and the freight paid to railroads on this traffic amounted to \$2,500,000.

Raw material and labor are cheap and abundant. Labor conditions are excellent, and amicable relations exist between employer and employee. The railroad companies are liberal in their treatment of industrial enterprises, giving them ample facilities and freight rates, which assure profitable operation of the plants.

## BRUNSWICK

**B**RUNSWICK, situated on an arm of the ocean, on the coast of Georgia, is an old Colonial town, laid out in 1763. The harbor is landlocked and ample in extent for a vessel commerce. The city, located on a peninsula, is nearly surrounded by salt water, creating exceptionally healthy conditions, supplemented by the George S. Waring system of sewerage and an accompanying drainage system to lower the water level in the soil. The navigable depth of water in the channel entrance is twenty-five and a half feet, requiring no expenditure for maintenance, and the government has appropriated the necessary sum to increase this depth. The largest foreign and

export trade of the South Atlantic coast in lumber, cross-ties, timber, shingles, and kindred products is conducted at Brunswick. This trade is steadily increasing, and Brunswick ranks as the second naval-store port in the world. The commercial business of the port has increased since 1893 from \$3,000,000 to over \$28,000,000. The Southern and Atlantic Coast Line railways have ample terminal facilities, and a third railroad, the Brunswick and Birmingham, has been pushed 250 miles westward toward its destination, Birmingham, Alabama. The corner-stone of a steel plant to cost \$10,000,000, turn out daily not less than 1000 tons of finished product, and employ not less than 6000 hands was laid on April 26, and work is being pushed. The people are progressive, and invite foreign capital. This is illustrated by an ample site given for the Millionaires' Club, is at the entrance of the harbor. The clubhouse is but six miles from Brunswick, through which all visitors pass on their way to the club.

## MONROE

**M**ONROE is near the centre of Walton County, fifty miles west of Atlanta, and in the same latitude, on the Gainesville, Jefferson, and Southern Railroad, and has connections with the Georgia Railroad and the New-England Air Line. The town is on a high ridge, and is noted for its healthfulness. It has public schools, local and long distance telephones, two banks with \$125,000 capital, two weekly papers, twenty-five stores, and several factories. The population is about 3000. The city has churches of three denominations, and Walton County has had prohibition for ten years.

The value of taxable property in the county has steadily increased for eight or ten years, and is now estimated at \$1,500,000. Walton

Cotton Mills, Monroe

Courthouse, Moultrie

County has excellent pasture-lands. Fine farms, improved cattle and stock, and fine horses and mules. Cotton, corn, wheat, and hay are the principal crops, but all cereals, fruits, and vegetables indigenous to the soil of middle Georgia will thrive here. The Monroe Cotton Mills and the Walton Cotton Mills together have \$254,000 capital, 550 operatives, 16,000 spindles, and a combined monthly pay-roll of \$700. There are cotton-oil mills, a fertilizer-factory, iron-foundry, acid plant, knitting-mills, and machine-works in the county.

## HARMONY GROVE

**H**ARMONY GROVE, in Jackson County, northeast Georgia, is the Bermuda-grass belt, is famous for its prosperous dairies. The country is undulating, the atmosphere invigorating and the climate delightful.

There is an abundance of pure water and no intoxicating liquor, as the country is under local option. Naturally, people live to a good old age. The surrounding country is thickly settled and well cultivated. The farm-houses have a neat, prosperous look, and land brings from \$10 to \$25 per acre. The lands are fertile, and some of the best farms produce a bale of cotton or forty bushels of wheat per acre. The products embrace everything but tropical fruits. Peaches grow well, and this year, when the crop is short elsewhere, the trees of Jackson County are full. There are five or six prosperous dairies within ten miles of Harmony Grove, and the cattle industry is important. The railroad service is good, and there are four daily mails from Atlanta. The population is 2000, rapidly increasing, and cotton receipts 18,000 bales. There are forty-four brick stores, three iron-clad, and ten wooden buildings, only one vacant, and others going up. Five churches for white people and three for negroes show the moral tone of the community, which is emphasized by the absence of bar-rooms. Among the important institutions are two hotels, a \$50,000 bank, a cotton-mill with 10,000 spindles, 400 looms, and \$250,000 capital, all owned in the county, a roller-mill for wheat, two cottonseed-oil mills, a carriage-factory, foundry and machine-shop, newspaper, a public-school system with a \$12,000 building, and a Board of Trade. The tax-rate is three-fourths of one per cent., bonded debt \$12,000, and assessed value of property \$600,000—real value \$1,500,000. City government is clean, and there is a healthy public spirit.

## MOULTRIE

**M**OULTRIE, the county-seat of Colquitt County, is in the lumber and turpentine section of Georgia. It has three railroads, and is between Okefenokee and Ocala rivers. The town has an excellent system of water-works, electric lights, good graded schools, two large cotton-mills, saw-mills, five cotton gins, railroad shops, carriage-factory, and is surrounded by a number of plantations and sawmills. The sawmills of Colquitt County have an annual output of more than 100,000,000 superficial feet of lumber, averaging 85 per thousand. Moultrie is a growing town, having

about four thousand population. The climate is good, the thermometer rarely going above 100 degrees. The summers are long, but not severe, and there is a constant breeze blowing from the Gulf of Mexico. The healthfulness of the county is unquestioned. The county has public schools, and at Norman Park, ten miles from Moultrie, is Norman Institute, a co-educational college having ten hundred and fifty students. The population of Colquitt County has increased in the last eight years from 6000 to 15,000. This index is largely due to the fact that the soil and drainage of the county are so satisfactory. The sawmills and planing-mills led the way, and the farmers and manufacturers followed. The turpentine operators and the sawmill industries have cleared large tracts of land where the soil is almost virgin. The soil is pebbly soil with a red clay foundation. The other has a rich sandy soil with a mixed clay foundation. Farm lands sell at from \$2.50 to \$10 per acre. The land will produce from fifteen to twenty barrels of cane syrup, worth \$180 per acre, of such a quality as to bring the best prices. Sea Island cotton is grown here with great success, averaging from one-half to one bale per acre, worth at \$100 per bale. The short staple of ginned cotton here reaches perfection. With good culture a bale may be produced on an acre. Other crops grown here are corn, oats, potatoes, tobacco, and fruit. The land produces 1500 to 1600 pounds of hay to the acre, and tobacco is being successfully cultivated. Melons and grapes, cultivated largely throughout this and adjoining counties, are shipped from Moultrie. Peach culture is beginning to prove profitable. Strawberries and small fruits appear on the market very soon after the Florida fruits make their appearance. Pecan-trees bear abundantly, and the nut is of fine quality. The Alabama iron mines are so near at hand, lumber of the best grade is so plentiful and so cheap, the cotton-fields are so broad and so productive, labor so inexpensive, that cotton, wool, and steel goods could be manufactured at minimum cost. Pine wood is so plentiful that it might be utilized for steam purposes, but the coal-fields of Alabama are nearby if coal is desired, and the freight rates are low. Brick-making is largely engaged in, and last year a new industry was organized that is almost all profit. This is a process for extracting turpentine, creosote, oil of tar, and tar from pine stumps which have heretofore been considered worthless. Each cord of the wood yields products which sell in the market for \$25. There is raw material awaiting capital.

## TOCCOA

**I**N the heart of the "Hills of Habersham" is the famous Piedmont region, the little town of Toccoa, 1090 feet above sea level, is the home of thirty-three hundred souls. With the beautiful Toccoa Falls, a cascade of 166 feet, only two miles away, and nine miles distant the Tugalo River, with its vast water-power, Toccoa is the garden-spot of northeast Georgia. The town is at the intersection of the Dalton branch of the Southern Railway with the main line, and is thus easy of access. Toccoa has good churches and schools, with the prospect of a large industrial school at an early date. The county has had prohibition since 1885, though the nearby vineyards encourage the making of wine. The most important industries of the town are the cotton-mills, compress cotton, which handles 35,000 to 40,000 bales of cotton annually, machine-shops, light and power companies, and lumber industries. Almost every variety of trees indigenous to the Atlantic seaboard may be found in this county. The price of land is low, climate unsurpassed, country tree watered and abounding in native grasses, grain and root crops, favorable to dairying and stock-raising. Two thousand acres have been planted in peach-trees, which find here a congenial home.

## SPARTA

**S**PARTA, the principal town of Harcum County, with about two thousand inhabitants, is situated on the Georgia Railroad, less than seventy-five miles from Macon and Augusta and a hundred and fifty from Atlanta. Sparta is nearly six hundred feet above sea-level, and has uniform seasons and delightful climate. The town boasts of clean streets, handsome buildings, cultured citizens, and a progressive and conservative government, with low tax-rate and fine schools. Public high schools for both whites and negroes, and fifty-acre rural schools, with accommodations for both sexes, are well distributed over the county. Sparta has two banks, a fine telephone service, both local and long distance, and has good shipping facilities. The culture of cotton, hay, and fruit, the raising of cattle and horses, and the shipping of peaches keep the dwellers of this section busy.

The fine pastures of Bermuda, Logsdon, broom-sedge, and other native grasses make Hancock County a fine location for dairying, and this industry is profitably carried on. It is claimed that fine horses can be raised here as successfully as in the famous blue-grass region of Kentucky. Inexhaustible supplies of granite are found near Sparta, and two quarries are in successful operation. Among the enterprises of the town are an oil-mill, ransing-factory, creamery, sawmills, cotton-factories, and grist-mills, with abundant water-power to operate like machinery.

More than 250,000 peach-trees are in cultivation in the county, yielding handsome profits,—one orchard of fifty acres having afforded a net profit of two thousand dollars per year for the past three years. Decker and Brothers, the well-known nurserymen, own here a farm of 81,000 trees.

## VIENNA

VIENNA, the county seat of DeKalb, is located in the best part of southwestern Georgia. The county has 710 square miles of mostly level land, largely covered with forests of long-leaf pine. Timber brings about \$12 per acre, and when cut off leaves a productive soil which is a steady loan free from rocks and not baked by the sun after heavy rains. Cotton, corn, potatoes, cane, hay, rice, peas, and all kinds of fruits and vegetables grow well.

Vienna has 2000 people, forty brick buildings, forty-five stores, two hotels, a cottonseed oil mill which cost \$55,000, a third-class post-office, two fine rural delivery routes, an artesian well, water-works, electric lights, telephones, express and telegraph office, a good public-school system, and fine railroad facilities, with actively passenger-trains and eighty-one mails per week on two lines of rail, the Georgia Southern & Florida and the Atlantic & Birmingham, both of which have continuous depots. The population has almost doubled in three years.

## CORDELE

**T**HIS thriving city, situated in the central portion of Dooly County, has gained the title of "Mable City of the Pines," by reason of its rapid growth. In 1888 two roads crossed at the spot where today a busy city with more than five thousand inhabitants, excellent facilities in the way of railroads and banks, and with its own water works and levee plant, forms a trading center for a wide area of country. The four railroads meeting at Cordelle do more than a million-dollar freight business annually,—freight rates competitive and transportation prompt. The tea wholesale and one hundred and forty-eight retail stores of Cordelle, together with its two banks, do an aggregate business yearly of \$16,000,000. Here we find one of the best cotton-markets and the third largest lumber-market in the State. The water-supply is furnished by artesian wells, and the government mortality report shows only twenty deaths in the year 1906. Land sells at reasonable prices and on easy payments, and this, with good schools, four churches, and a free public library offers rare inducements to home-seekers.

## ALBANY

**A**LBANY, county-seat of Dougherty County, is at the head of navigation on Flint River, is southwest Georgia. Radiating from this commercial center are eight lines of railway, besides the water route on Flint River. Albany is in the basin of a large cotton-producing section, receiving 80,000 bales annually, and has a rapidly increasing wholesale and retail trade. The soil of the county is fertile, with level lands, easy cultivation. Some of Georgia's finest farms are within its limits, and so generous is nature in this locality that it has been called the "Door man's paradise and the ambitious man's opportunity." Peaches, watermelons, and all the small fruits and early vegetables are raised in quantities and shipped to the Northern markets.

Among Albany's leading industries are cotton compressors, brick yards, fertilizer factories, a cottonseed-oil mill, and a manning factory which employs many operatives. An electric plant, now in course of construction upon one of the nearby streams, will furnish cheap power for manufacturing enterprises. Albany has a population of nearly seven thousand, and the character of her citizens is attested by the fact that her schools rank among the best in the State, having taken the first place in a recent contest. Her streets are clean, beautiful, and picturesque, and her public officials zealous and conscientious. Albany was the first city east of the Mississippi to obtain a flowing artesian well and has now so many that it is often called the "Artesian City."

Albany demonstrates the advantage of municipal ownership of public utilities, since the electric light and water systems not only furnish street lights and water for sewerage and fire protection, but afford a handsome net profit above operating expenses, derived from the revenues from private consumers. The Georgia Chantanooga, which has had a successful career for fifteen years, has its home in Albany. This assembly is held annually from April 26 to May 3, and brings to Albany the best talent available in the country on the lecture platform and in a musical and educational way.

Bird's-eye View of Cordelle

Albany's tax-rate for several years has been as low as three-fourths of one per cent, and land in Dougherty County is wonderfully cheap, when we consider the immense possibilities. Dougherty County stands for rich lands, good roads, artesian water, fire transportation, low taxes, and cultured citizenship. The county commissioners are able and incorruptible. They are building a \$40,000 court-house. The abundant pasturage of Dougherty County make it a fine cattle section, and a parking-house with cold storage is one of the projected enterprises. During the civil war this section of Georgia became the source of supplies and its resources seemed inexhaustible, giving it the title "The Egypt of the Confederacy." Before the war Dougherty was the wealthiest county in the United States, with \$50,000 per capita.

## CEDARTOWN

**O**F all the favored towns of Georgia none surpasses Cedartown in excellence of location, present prosperity, and promising future. It is the county-seat of Polk, is the centre of the famous Cedar Valley, a rich mineral and agricultural section of northwest Georgia. Its salubrious climate, fertile soil, variety and wealth of minerals, abundance of pure water, fine water-power, ample timber-supply, and substantial, intelligent, and progressive citizens make the beautiful Cedar Valley a peculiarly attractive region. In this valley are mines of iron, manganese, and bauxite areas of unmeasured richness. There is enough slate in the district to roof the State, and limestone quarries are vast and numerous. This section has been fortunate in attracting many families of refinement, intelligence, and wealth, from widely separated parts of the country, as well as from foreign lands, and as a result the community is remarkably free from local prejudices. The political independence of its people may be inferred from the fact that three times they expressed a preference for Cleveland for President, and twice for McKinley, Polk being one of the few white counties in the South to go Republican at times in national politics, while remaining loyally Democratic in local and State elections.

The Seaboard Air Line, the Central of Georgia, and the Southern railway systems all penetrate Cedar Valley, and make of Cedartown a distributing-point for the surrounding country. The staple agricultural productions of Polk County are cotton, corn, wheat, oats, peas, potatoes, peaches, and small fruits. Many tons of iron ore are mined and shipped annually to the furnaces of Alabama and Tennessee. The county has one blast-furnace with an output of seventy-five tons daily of high-grade charcoal iron of such high quality that government experts have often specified it as the iron to be used in public works. There is a two-million-dollar (burial) cement plant, the largest quarries in the South, paper-hat factory, foundry, cottonseed-oil mill, lumber, sash, door, and blind factory and rice cutting-mills, carrying 60,000 spindles, besides tanneries and textile-machinery. With the three raw materials necessary for progress at hand, and the water-power needed for their development, Cedartown is in a position to become a power in manufacturing

Chantanooga Auditorium, Albany  
Cordelle monument in foreground

enterprise. The town has good public schools, water-works, electric lights, sewerage, all owned by the municipal government. It offers cheap fuel and labor, low freight rates, and good homes. The people are public-spirited and hospitable, and have organized a Chamber of Commerce to advance the public interest.

## DECATUR COUNTY

DECATUR COUNTY, in area nearly equal that of Rhode Island, offers rare opportunities to the investor or farmer. The land is cheap, and its productive power very high. It is even claimed that a net income of 200 to 1000 per cent. on the original price has been secured. This is the only county in Georgia with land adapted to the production of Sumatra tobacco for cigar wrappers. Sumatra tobacco raised in Decatur County took the prize for excellence over the entire world at the Paris Exposition of 1900. The price of Sumatra wrappers is \$2 per pound, with \$4 for selected stock. With a yield of 1000 pounds per acre and a cost of \$250 per acre of bringing the crop to market, there is a net income of \$1750 per acre. One large company owns 1000 acres, which is shaded by cloth supported by framework nine feet high. The shading on this tract cost \$240. The only other Sumatra lands in the United States are in the Connecticut Valley, where they bring \$500 per acre. In Decatur County the land is comparatively cheap. The soil is especially adapted to sugar-cane, and it is not uncommon for farmers to secure a profit of \$50 per acre on the cane crop, which has been a blessing to the county. Since its introduction, the condition of the farmers has greatly improved. The industry is still in its infancy, but two large sugar-mills are in process of erection. The soil is adapted to all the vegetables and cereals, except wheat. The rainfall is abundant, and grass grows well; winters are open, and this cheapens the cost of beef.

The county is traversed by two fine rivers and crossed by important railroads, in four directions. Headbridge, the county seat, located on a river, with railroad facilities, has freight rates as low as some large cities of the State.

## MADISON

Why the blue-grass region is in Kentucky, the Bermuda-grass section is in Georgia. Morgan County and the land adjacent to it occupy this favored belt, and Madison is in its center. Nearly two thousand people find their home in this county-seat, which is considered one of the most beautiful small cities of the State. Morgan County, with its rich Bermuda pastures, raises horses that compare favorably with the famous Kentucky thoroughbreds, and quite an interesting feature of the neighborhood is the Colt Show, which is occasionally held. Given horses of equally fine pedigree, with men who understand the business of raising them, and money to spend for modern improvements, and Morgan County would equal any county in the blue-grass region in the quality of her horses. Cattle thrive in these grass lands, and dairying is carried on with profit. One of the finest and most perfectly appointed Jersey and stock farms in the South is within a few miles of Madison. The beautiful Jersey cows found here, and the excellence of all the farm products, attest the quality of the locality for dairying. The county is well watered, and is noted for its large yield of fruits, wheat, corn, and cotton.

Madison has electric lights and water-works, fertilizer-factories, a cotton compress, cottonseed-oil mill, and many other industries. Madison is at the intersection of the Georgia Railroad and a branch of the Central. Tributaries of the Oconee flow through the county, furnishing water-power, while enriching the scenery.

## Georgia Stories by Will N. Harben

### THE SUBSTITUTE

A story of Northern Georgia—of George Buckley, who, though of humble birth, has a natively fine character. A strong interest centres in his love affair with Lydia Cranston, the lovely daughter of an aristocratic and proud old Virginia family. But this is only a background. Prominent characters in the book are seen in the homes and in the business houses of the place, and their life is humorously described. From the first chapter to the last there is a continuous flow of anecdote and reminiscence.

\$1.50

### ABNER DANIEL

A story of a shrewd, kindly old bachelor, a plucky Southern girl, and an unwelcome railroad which finally makes the fortunes of the people in whom the reader is interested. Abner Daniel himself has been described as "a David Harum of the South," and it was therefore assumed by some that he might be an imitation of the original. But this is a mistake. One reviewer says: "No, he is quite new, quite novel, an refreshingly quaint and queer, witty and droll as though David Harum had never been born." The humor is in a different vein from that of other Southern writers.

## VALDOSTA

**T**HE southern part of Georgia, near the Florida line, is known as the "Wiregrass" section. In this famous section is Lowndes County with Valdosta as county-seat. The city takes its name from the home of Governor Troup, whose plantation was called Vau d'osta, meaning beautiful valley. At the close of 1925 there were but eight or ten small frame dwellings on the place. In 1927 the spirit of progress took hold of the place; stores and factories were built, and railroads came to the town. Now there are four railroads entering the city, with others in process of construction. The city has four fertilizer factories, an iron-foundry and machine-shop, ice-factory, barrel-factory, buggy and carriage factory, and a modern cotton-mill with 11,000 spindles. There are three banks, two lines of telegraph, local and long distance telephones, five public schools, and churches representing eight religious denominations. The raising and marketing of Sea Island cotton is one of Valdosta's most important industries, the town having the greatest inland market in the world for this staple. Valdosta's municipal affairs are in excellent hands, and its finances are ably managed. With an elegant City Hall, a magnificent fire department, street-railways, and many artesian wells, Valdosta furnishes a delightful home for her 8000 people, with room for many more.

## ATHENS

**A**THENS is one of the most historic cities in Georgia. It was founded in 1803, when the State University was located there, and has always been an educational center. Besides the university, it has the State Normal School, Lucy Cobb Institute for girls, and a fine system of public schools. Athens is in the Piedmont section of the State, within forty miles of the Blue Ridge Mountains. The climate is equable and salubrious, the thermometer rarely reaching a lower temperature than twenty degrees or a higher one than sixty-four degrees. The health statistics show that it has never had an epidemic and the death-rate, with fourteen thousand inhabitants, is less than one per cent. The city has an ample water-supply from the Oconee River, and a fine sewerage system. Railway facilities are furnished by the Southern Railway, the Seaboard Air Line, and the Georgia Railroad, and Athens is the commercial center for southeast Georgia.

The city has gas and electric lights, electric street-railways, ice-plants, a cottonseed-oil mill, and the first cotton-mill established south of the Potomac. This industry has been continuously in operation since 1827, has never scaled a debt, and has always declared a dividend. There are seven other cotton-mills in the immediate vicinity. Athens leads all other cities in Georgia in wagon cotton receipts. The receipts per season at this point are from 75,000 to 90,000 bales, fully half of which are brought into the city on wagons. Cotton-seeds can be easily supplied with all the cotton they require.

Athens is situated in one of the best agricultural sections of the State. Cotton, corn, wheat, oats, rye, barley, peas, potatoes, southern-corn, grasses, etc., are raised in abundant yield, and the advance of this part of the State in wheat-growing sections during the past few years has been remarkable. The volume of business in Athens exceeds twenty million dollars per year. Several Southern States are covered by the jobbing business of the city, and this line of business is increasing rapidly on account of the many ad-

vantages of this distributing point. A \$50,000 City Hall and fifty new residences are going up, and the construction of a \$100,000 Federal building will be under way during the present year. A \$100,000 fertilizer-plant is being constructed, and will be ready for operation by fall.

Athens is rapidly becoming the educational centre of the South. The University of Georgia, since its establishment in 1801, has contributed to the South many of her greatest citizens. There are now in attendance more than three hundred and fifty young men. The curriculum is such that no young Georgian need leave his native State to complete his education. The faculty is composed of able educators, and every facility for first-class training is given. Among the new buildings going up on the university campus is the magnificent library building, the gift of Mr. George Foster Peabody, of New York. The chapter halls, dormitories, shops, etc., make an attractive settlement. The State Normal School is only eight years old, but in that time has leaped to the front rank. The average yearly attendance is six hundred. Teachers from all parts of the State take advantage of its exceptionally fine advantages. The departments of pedagogy and psychology, the model school, and the department of English are equipped in the most approved manner. A library of five thousand volumes has been secured, one hundred free scholarships have been founded by generous Georgians, and one hundred more have been given by the General Education Board.

The city of Athens has a progressive system of public schools. The departments of nature study, manual training, drawing, and English leave little to be desired. The county of Clarke, in which Athens is situated, has a nine-months' term in rural schools. The East Athens night school is in the factory district. This institution affords fine opportunities to the children of the operatives. The industrial department is one of the most successful features of the night school. The tax-rate of the county of Clarke is the sixth lowest among the counties of the State, and in the lowest among counties doing permanent road improvement.

## GREENE COUNTY

**G**REENE COUNTY is in middle Georgia, midway between Atlanta and Augusta, on the Georgia Railroad. It is 700 feet above sea-level, and the climate is such that people may work out-of-doors all the year without discomfort. The soil is diversified, being rich, loamy lands, with clay subsoil, and suited for every class of farming. Greene County is in the Bermuda-grass region, and yields also large crops of red clover, vetch, lucern, and many other native grasses. Upon these horses and cattle thrive, and there are several successful creameries in the county.

Greeneville is the county-seat, and is conveniently located on the Georgia Railroad. It has a bank, cotton-mill, glassing-mill, hatching-mills, and several large and successful creameries. The city is beautified by shaded streets, handsome homes, and a profusion of flowers. The citizens are wide-awake and progressive, and ready to extend a cordial welcome to newcomers.

Union Point and Woodville are other prosperous towns of Greene County. Union Point has a bank, brick-yard, cottonseed-oil mill and planing-mill, and a mineral spring which is destined to become famous. Woodville has a large grocery, grist-mill, creamery, and is a shipping point for several adjacent towns. Greene County is not only beautiful, being entirely free from malaria and epidemics. It abounds in running streams, and is known for its extensive and choice vegetable crops and for the excellence of its cattle and farm products.

## FORT VALLEY

FORT VALLEY, in Houston County, is the peach-porch grower of the Southern States. It is the home of the famous Elberta and Emma peaches, whose originator, Samuel H. Kumph, a Georgian, began the business here thirty years ago, and succeeded from the first. Last year 85 per cent of the entire peach crop of the State was shipped from this point, and 30 per cent. more from the immediate vicinity. This year promises even a greater percentage.

The location of Fort Valley, at the junction of several lines of railroads, its fine hotel accommodations, and its exceptionally pleasant and beautiful climate, attract buyers who congregate here and buy and pay for the peaches on the track.

Among Fort Valley's enterprises are a knitting-mill, cottonseed-oil mill, compresses, machine-shops, an iron-foundry, flour-mills, ice factories, and bottling works. Besides these are factories for making crates and fruit baskets and a fruit evaporator.

Many Northern capitalists have invested in this section, and land is held at a good figure. One farm of 1100 acres (without a peach-tree on it) sold in March at \$30 per acre. The value of the trees will continue to increase as people discover the wonderful possibilities of the soil and climate.

## WAYCROSS

WAYCROSS is in southeast Georgia, and its county seat. Waycross, is an important railroad centre.

With an electric plant for lighting, a street railway, gas, water, works, and good public schools, this town of nearly six thousand inhabitants is taking its place in the march of progress.

Because of the exceptional fertility of the soil in the surrounding county, Waycross offers fine inducements to manufacturers and farmers. With land that will yield four hundred bushels of sweet potatoes per acre, with a market value of fifty cents per bushel, two hundred bushels of Irish potatoes, worth seventy-five cents per bushel, seventy-five bushels of corn per acre, and other products in proportion, this is a veritable "land of plenty." Cassava, one of the finest of all stock foods, and velvet beans in profusion make this a paradise for stock. Twenty to twenty-five tons of cassava is the yield per acre.

Georgia sugarcane is conceded to be the best produced in the United States, and it reaches its perfection in Waycross.

There is a government syrup refinery in Waycross for experimental purposes, and it has been demonstrated that one acre will produce thirty to forty tons of cane, capable of yielding more than nine hundred gallons of fine syrup.

## MARIETTA

MARIETTA, the county-seat of Cobb County, is twenty miles north of Atlanta on the Western and Atlantic Railroad. This little city is at the foot of historic Kennesaw Mountain, and has itself an elevation of 1132 feet.

Marietta has an excellent climate, the average temperature from November till April being a fraction over 46 degrees, and averaging 57 degrees the rest of the year. The town is noted as a health resort the year round.

There are good systems of water-works and electric lights, fine public schools, churches of all denominations, a opera-house, and a public library. With a population of only five thousand, the amount of postal business done through the city office is phenomenal. In fact, the city mail delivery, the county being already covered by rural free delivery.

In Marietta are two of the largest chair-factories of the South, the largest paper-mill in the South, four marble-yards, and a large plant for finishing marble. Other industries, such as knitting-mills, machine-shops and foundries, make the total weekly pay-roll, approximately, \$7000. All the marble from the famous quarries of north Georgia, which goes to every State in the

# CRYSTAL Domino SUGAR

**A Triumph in Sugar Making!**

Sold only in 5 lb. sealed boxes!

"CRYSTAL DOMINO SUGAR" is packed in neat, sealed boxes, and is NEVER sold in bulk. It is packed at the refinery and placed in the household—there is no intermediate pure granules like a dealer of adulteration. Every piece alike—and every piece in form, perfect in quality, brilliant in appearance, no sugar made can equal it in solubility. When buying this sugar remember that the sealed package, as well as the name of the manufacturer, "Domino" brand, the name of "Crystal Domino," bears the design of a "Domino" Man, "Domino" brand, the name of "Crystal Domino," as well as the name of the manufacturer. You will be pleased to find the name of the manufacturer, placed where you have tried it in your tea, coffee, etc. It is sold by all Best-Grade Grocers, and is manufactured only by HAYMEYER & ELDER SUGAR REFINERY, NEW YORK.

# Columbia

Fashion is extraneous in the matter of town carriages for private service. Union, is shipped through Marietta by way of the Atlanta, Knoxville, and Northern Railway. A spur-track of the Seaboard Air Line will soon reach the town, and as two lines of the Southern Railroad already run through the country, the freight receipts are quite considerable.

Cotton is the staple crop, but much attention is given to truck-farming, dairying, raising poultry, and the cultivation of peaches.

## GAINESVILLE

GAINESVILLE is one of the smaller cities of Georgia, which has grown in three years from a town of five thousand to a busy manufacturing community of nearly ten thousand inhabitants. It has three cotton-mills, operating a total of 81,500 spindles, and employing about three thousand operatives. One of these mills manufactures 30,000 bales of cotton annually for the Chinese trade. Gainesville has a shoe-factory with an output of one thousand pairs per day, two carriage-factories, an oil-mill, furniture-factories, ice-factory, marble-works, and numerous smaller enterprises.

The city is in the center of a fine farming district, and is a market for a diversity of crops. Among the handsomest public buildings in Gainesville is Brown's College, one of the best-equipped female colleges in the South. Besides the college there are excellent public schools.

## MILLEDGEVILLE

The beautiful and historic little city of Milledgeville, the county-seat of Baldwin, was the capital of Georgia until shortly after the war between the States. Milledgeville is the geographical center of the State, and is built on a slight elevation on the banks of the Oconee River. Running streams on four sides furnish natural drainage and water-power. A company of Chinese and New York capitalists are putting in a dam on the Oconee which will furnish 14,000 horsepower.

The city has three railroads, water-works, electric lights, and is an educational center. The building which was the State capitol until 1865 is the home of the Georgia Military College—an institution which has an enrollment of five hundred students, and whose graduates have made their mark at West Point and in the United States army. The college now has nearly fifty commissioned officers in the United States army, who claim it as their alma mater. The Georgia Normal and Industrial College, a State institution for girls, is also here, and has four hundred students. The State Sanitarium for the insane and the State Prison farm are also located here.

Baldwin County has deposits of talc, kaolin, and clay, procured by experts to be among the finest in the world. Ornamental and building brick are extensively manufactured, and much clay is shipped to other points. The agricultural products of the county are numerous, but cotton, corn, wheat, pease, hay, and fruits are the crops upon which the farmers principally depend.

## THOMASVILLE

There are three grand divisions in Georgia—north, middle, and south Georgia. In the last divisions are vast pine forests, a highly productive soil, and a healthy climate, which is eagerly sought as a winter resort for invalids. In the very heart of this favored belt is Thomasville, the county-seat of Thomas County, and the home of more than six thousand enterprising citizens.

Thomasville has direct and rapid communication by rail with Atlanta and Savannah, both of which cities are in the neighborhood of 200 miles away, and it is in twenty-four-hours' ride from New York, and six-hours' ride from Jacksonville, Florida. With natural drainage and good crops, and a healthy soil, the city is entirely free from malaria and other diseases peculiar to low climates.

In fact, Thomasville is a health resort,

## Help Yourself

numbers of health-seekers coming every winter from the severest climates of the North and East to breathe the life-giving fragrance of the pine forests by which it is surrounded. President McKinley once honored the town with a visit, and Mark Hanna has a winter residence here. Many pretentious homes have been erected in and around the city by Northern capitalists, whose Country Club has a splendid clubhouse, fine golf-links, and all facilities for out-door sports. The Georgia game laws protect the quail, so that it is plentiful in season, and quail-shooting in the open woods is enjoyed by the residents of the country.

The air is dry, free from high winds in winter, and not having the humidity peculiar to climates farther south. Farm lands can be bought at from \$2 to \$15 per acre, according to location and improvements. The soil, for the most part, is sandy on top; but from six to twelve inches below the surface is found a firm, red clay subsoil. It produces cotton, corn, and other farm products in perfection, and is particularly adapted to the cultivation of vegetables and articles that admit of high fertilization. Sugar-cane is raised extensively in Thomas County, and twelve thousand barrels were shipped last year from the town of Cairo, twelve miles from Thomsville.

No better Turkish cigarette can be made. Look for the signature of S. ANAGYROS

## CALHOUN

CALHOUN, the seat of Gordon County, is located on the N. W. corner of L. R. R. in the hill country of northwest Georgia. It lies on the sea, in the beautiful Okefenokee Valley, near mountains which rise to a height of 3000 feet. The surrounding country has a fertile soil, producing freely grain and all the staple crops. The county has more than a million peach-trees, whose crops bring a large revenue, and Calhoun is a heavy shipping-point for fruit. The county is watered by numerous streams, including the Oostanaula River. There are several water-powers, one of 125-horse-power near Calhoun. This section of the State is famous for live-stock raising, and the Richard Peters stock farm, a few miles distant, is one of the most famous in the South. It was here that Henry Grady took his recreation and took inspiration for the articles which so stimulated Southern agriculture. About 10,000 bales of cotton constitute the leading crop, but wheat is almost as important.

Calhoun has water-works, telephones, public schools, sewerage, an excellent brick court-house of modern construction, and several blocks of brick business houses, a hotel, newspaper, bank, two literary clubs, flour-mill, and a brick-making plant flourish there. An abundance of pure water and heating air give the foundation of a beautiful, exhilarating climate.

## DANVILLE

DANVILLE, on the Macon and Dublin Railway, is in the heart of the tobacco-packer belt. It is in an undulating, well-watered region, covered originally by a sturdy growth of oak, hickory, and other hardwoods, with a soil of sand and a good clay subsoil. Berries grow in plenty, and the conditions favor stock-raising, dairying, fruit-growing, and general farming. The president of the Macon Agricultural Society, Hon. Dudley Hughes, resides here on a tract of land covering twelve thousand acres. He is one of the largest and most successful planters in Georgia, and his operations show the possibility of agriculture in this part of the State. He owns a fine peach orchard in the vicinity of Danville, and this year gathered a large crop from four-year-old trees. There are many other peach orchards in this section, and fruit shipments are heavy.

Twiggs County, of which this community is a part, is one of the most productive in the State. It is traversed by two railroads, the Macon and Dublin Road and the South-Railway runs along the northern border. Shipping facilities are good, and the people are enterprising.

### KEMBLE'S DRAWINGS

These books of character sketches by E. W. Kemble in picture the Southern negro in his every aspect.

# A HISTORY OF THE AMERICAN PEOPLE

In Five Volumes

By WOODROW WILSON, Ph.D., Litt.D., LL.D.

*President of Princeton University*

PRESIDENT WOODROW WILSON has devoted the best years of his life to the preparation of his great work, "A History of the American People," from the earliest times to the accession of President Theodore Roosevelt. The work, which is just completed, is monumental in character and scope, represents the genius of the greatest historical writer of the present time, and is written in that delightfully flowing style which translates historical facts into the romance of a nation. It is printed from new type specially cast in 1902. In the matter of illustration, every field of human activity has been searched, and hundreds upon

hundreds of new portraits, prints, maps (in colors), plans, and pictures make the pictorial features alone tell their wonderful story of the finding of the continent and the birth and growth of what is the United States of America. There is a photogravure frontispiece to each volume, and portraits in India tint and black. It is a curious fact that there was not a single complete narrative history of the United States in existence until now. Dr. Woodrow Wilson's is the first. It is bound in dark-blue velum cloth, leather-stamped, lettered with gold, untrimmed edges, gilt tops, etc. The edition is in five volumes, and the price is \$25.00.

**OUR OFFER** *We will send you the entire set of five volumes, charges prepaid, on receipt of \$1.00. If you do not like the books when they reach you, send them back at our expense, and we will return the \$1.00. If you do like them, send us \$2.00 every month for twelve months. On receipt of this dollar, we will send you, without cost, beginning at once, a year's subscription to either Harper's Magazine, Harper's Weekly, Harper's Bazar, or the North American Review. In writing, state which periodical you want. Address*

IN TWENTY-FIVE VOLUMES

*A Set of Thackeray is not a Luxury — it is a Necessity*

THACKERAY'S creations place him at the head, perhaps, of the English novelists of the nineteenth century. His characters are always human. There are no immaculate heroes, no perfect heroines, no utterly unredeemed persons of either sex to be met with in the pages of his books. He conceived it a duty to describe the world as he saw it, and he drew his characters with admirable realism, and with a marvellous insight into the natures of men and women. We take pleasure in announcing a new edition of Thackeray's complete works, and we feel confident that this edition will meet with the approval of all lovers of good library books.

## COMMENT

We have discussed elsewhere the complications brought about by certain recent incidents in the contest for the Mayorship in New York city. The complications, as we have pointed out, should not obscure, but rather emphasize, the duty of every citizen who desires honest municipal government to vote for the ticket headed by Mayor Lew. With regard to Messrs. Grout and Fomes, we wish to say particularly that they deserve to have administered to them at the ballot-box a rebuke so severe that their permanent retirement from public life may be assured. No clear-sighted man can mistake the motive which prompted their acceptance of the nominations tendered by Tammany Hall. They had an eye single to their personal advancement, and to that end were perfectly willing to sacrifice their comrades on the fusion ticket. They must have known that by leading to the Tammany organization whatever reputation for integrity they might have acquired they would contribute in just that measure to lessen the contrast between Mr. Murphy's ticket and that put forward by the fusionists. By consenting to figure on the Tammany ticket, they were estopped from denouncing it as unworthy of the support of honest men. If it is good enough for them to stand upon, it is evidently, in their opinion, good enough to be voted for. Mr. Grout himself seems to have recognized the logical outcome of his double-faced performance, for he has publicly admitted that while he should continue to endorse the Low administration, he would not feel called upon to attack Tammany Hall. Yet it is, or ought to be, obvious that a non-aggressive campaign against Tammany would be a contradiction in terms. Why should an independent Democrat vote against Tammany, except upon the ground that its record is odious, and that, in view of past experience, no material improvement can be looked for at its hands. We hope and expect to see Mr. Grout fall between two stools. The fusionists rightly regard him as a traitor; the avowed part of the regular Democrats of Brooklyn have outwitted a determination to oppose him; and there is reason to believe that even in the ranks of Tammany's adherents he will be widely cut. Should he and Fomes run far behind the Tammany candidate for Mayor, they will but reap the merited harvest of self-seeking and duplicity. They ought to be buried under an avalanche of hostile ballots.

On Thursday, October 1, the Democrats of Massachusetts met in State convention in Truett Temple, Boston, and on the following day the State convention of the Republicans was held in the same hall. The action of the latter body was foreseen. Governor John L. Bates was re-nominated, and the tariff plank of the platform was framed by the "Stand-Peters," a perfunctory admission being made that, conservatively, some changes might be availed at some future time. The platform included a declaration that to President Roosevelt, as "an able, honest, far-seeing Chief Executive, we pledge our loyal support for the campaign of 1904." Very much more noticeably were the proceedings of the Democratic State convention. Mr. Bryan's name was not mentioned; Mr. George

Fred. Williams, though a delegate, was not present. Not a word was said about the free coinage of silver at the ratio of 16 to 1. The Chicago and Kansas City platforms were not explicitly ratified. Nevertheless, certain concessions were made to the Bryanite element in the party, and to the socialists, who possess considerable strength in Boston. For example, the convention condemned "the abuse by some Federal courts of the high writ of injunction"; favored tribunals for voluntary arbitration in all labor disputes, with power to enforce their decrees; and demanded from Congress a national labor code which should limit the hours of continuous employment of railroad engineers, telegraph operators, and switchmen, and generally protect all workers employed in interstate commerce.

By a curious inconsistency, the convention condemned lynchings in the South, yet opposed the repeal of the Fourteenth or Fifteenth Amendment, although the experience of Mississippi shows that where those amendments are practically nullified the negro crime which originally provoked the practice of lynching (since extended, it is true, to other offenses) tends rapidly to disappear. It is well known that there are still a good many anti-imperialists in Massachusetts; their views are adopted in the plank which condemns the policy of conquest and subjugation and insists that the Philippines should be treated as was Cuba. The most conspicuous section of the platform, however—a section which is certain to figure also in the forefront of the national programme of the Democratic party—is the demand for the admission free of duty of articles controlled by the trusts, of the raw materials of manufacture, and of the necessities of life. It was almost in accents of despair that the convention recognized that reciprocity with Canada, long the hope of Massachusetts, must soon be achieved or forever abandoned. It is unquestionably true that even the Liberal party in the Canadian Dominion has ceased to express any desire for reciprocity with the United States. It prefers reciprocity with Great Britain, and American manufacturers will be lucky if they escape dishonor from Canada by a retaliatory tariff.

It will have been observed that no attempt was made in the Democratic State convention of Massachusetts to put forward Lieutenant-General Miles as a candidate either for the Governorship or for the Presidency. As was expected, Colonel William A. Guston, of Boston, was re-nominated for the leadership of the commonwealth. The name of Mr. Richard Olney, Secretary of State in the second Cleveland administration, was not mentioned in connection with the Presidency, but it is significant that his nephew, Richard Olney II, was nominated for Lieutenant-Governor. Mr. Olney's friends have shown sagacity by acting on the assumption that it is not their business at this time to anticipate the functions of the State convention which will be called next spring for the express purpose of naming delegates to the national convention of their party. It is possible, of course, that during the next six months events may change the intentions of party leaders in Massachusetts, but it is evident that if delegates to the national convention had been chosen on October 1, they would have been instructed for Mr. Olney. Thoughtful men will also attach considerable importance to the fact that while, as we have said, Mr. Bryan seems not to have been once referred to by name in the convention, yet the platform is one which he himself might have penned, so far as it goes, though it is probable that he would have added a perfunctory demand for the free coinage of silver at the ratio of 16 to 1.

Indeed, we should be not at all astonished to learn that a draft of the platform had been actually submitted to Mr. Bryan and approved by him. It will be remembered that in 1900 Mr. Olney publicly advocated the election of Mr. Bryan, being moved thereto largely by the conviction that the imperialistic policy of the Republican party, rendered possible by the decisions of the United States Supreme Court in the insular cases, was essentially irrevocable with the theory upon which our Federal government was founded and hitherto has been conducted. To those, indeed, who have noted carefully the expression of Mr. Bryan's opinions in the *Commoner*, it has long been evident that of all Mr. Cleveland's friends, and of all the men acceptable to Gold Doug-

erates from a monetary view-point, Mr. Olney is the man most likely to be supported by the element in the Democracy which still regards Mr. Bryan as an oracle. If, therefore, he should also be acceptable to those conservative Democrats who are likely to constitute a majority of the national convention, Mr. Olney might come nearer than any other man to securing a unanimous nomination—much nearer than would Senator Gorman, whom the Bryanites would resist to the end. The purpose, however, of a national convention is not merely to nominate, but to assure, so far as forethought can do it, the election of its nominee. What reason is there for supposing that Mr. Olney would prove a strong candidate? By no possibility could he carry his native State. There is no ground for believing that he could carry New Jersey or Indiana, and he would be much less likely to carry New York or Connecticut than would Chief-Judge Parker. In what sense, therefore, can Mr. Olney be described as "available"? The test of availability in 1904 will be the ability, not only to hold the votes cast for Mr. Bryan, or most of them, but also to win over a large fraction of the votes thrown for Mr. McKinley.

Former Governor Brown of Maryland has arrived at the conclusion that Mr. Cleveland, in spite of some opposition on the part of Mr. Bryan's followers—an opposition, however, likely to prove far weaker than that personified by Mr. Weaver in 1892—would poll more votes than any other American citizen, not excepting Mr. Roosevelt. The comments made by Southern Democrats on Governor Brown's declaration differ, a preference being avowed in many quarters for Senator Gorman on the score of his supposed superior availability. Our Southern brethren are quite right in wanting to win, and in regarding the next Presidential election as one that may have a momentous bearing on the interests of their section. Before they make up their minds, however, that Mr. Gorman is better qualified than any other Democrat to get a majority of the electoral votes, we advise them to consult the Senator himself, and get, if they can, his personal opinion on the subject. Mr. Gorman has an desire to be a defeated nominee for the Presidency. He is well aware that such a defeat would deprive him of much of the prestige which at present he possesses as chosen leader of the Democratic minority in the United States Senate. Nobly knows better than Mr. Gorman that, in order to be successful in 1904, the Democratic nominee must carry New York, New Jersey, and Connecticut, and also Indiana, or some other equivalent Western State. Mr. Gorman knows that he would not have the slightest chance of carrying New Jersey, and that in New York and Connecticut he would run far behind Mr. Cleveland.

One plank of the platform framed by the Massachusetts Democracy deserves to be considered separately. We refer to the demand for an amendment of the Federal Constitution providing that United States Senators shall be elected by the people in each State, and not by State Legislatures. We do not purpose here to discuss the expediency of the change proposed, for the people in a majority of the States have decided in favor of it. The change will not be brought about, however, by an amendment of the Constitution, but in a different way. The Federal Constitution, it will be remembered, can be amended only in two modes: The Congress, whenever two-thirds of both Houses shall be favorable thereto, may propose specific amendments, while, on the application of the Legislatures of two-thirds of the States, the Congress is bound to call a convention, whose power of proposing amendments would be *illimitable*. The second method of procedure will never be adopted until the people of the United States are ready to witness a drastic reconstruction of the Union. The experience of 1787 shows that a constitutional convention, once assembled, would not confine itself to one or two specific recommendations. As for the alternative method, that, namely, of submitting to State Legislatures or State conventions the single specific suggestion that United States Senators shall be chosen by the people, this will never be adopted, because a two-thirds vote in favor of it cannot be secured in the Senate.

Must, then, the will of the people be thwarted? Not at all. They can indirectly nullify the provision of the Constitution that United States Senators shall be chosen by State Legis-

latures, just as they have indirectly nullified the liberty of choice given by the Constitution to Presidential Electors. We have not thought it worth while to abolish Presidential Electors, yet not one of them would dare to vote otherwise than he was expected to vote by the State convention which named him. The members of a given party in a State Legislature may easily be made mere mechanical registers of the popular will, like Presidential Electors. All that it is needful to do is to nominate a party's candidate for United States Senator at a State convention; or, if it be feared that a State convention might prove too subservient to the manipulators of a political machine, then a party's nominee for United States Senator could be designated precisely as a party's nominee for Governor in some of the Southern States. That is to say, a law could be passed by a State Legislature providing that at primary meetings to be held on a day named, the registered voters belonging to a given party might indicate their preferences as to the nominee of their party for the United States Senate, and the person receiving a majority of the votes thus cast at the primaries should be the nominee of the party. There is no doubt that the popular will, thus proclaimed, would be ratified by the State Legislature, and thus it would come to pass that the provision of the Federal Constitution prescribing the mode of choosing United States Senators would practically be set at naught.

It is about three months since we were informed that the investigation of the postal frauds was nearly over, and now we are informed that it actually is concluded, so far as the Post-office Department is concerned, and that a report will presently be laid before the President. Some thirty persons will have been indicted, and there is reason to believe that most of them will be rigorously prosecuted. Does it follow that the Post-office Department is popularly regarded as completely purged? The question must be answered in the negative on several grounds. In the first place, no attempt is known to have been made to hold Mr. Hanna's friend, Perry S. Heath, responsible for the malfeasance in office, much of which began and was carried on while he was Assistant Postmaster-General. In the second place, although Rand, the personal friend and private secretary of Postmaster-General Payne, has been temporarily relieved from duties which he seems seldom or never to have performed, we do not learn of any intention to hold him to account for his connection with the gold-mining company in which government employees found it expedient to become stockholders. It is even reported that this man is still borne on the pay-roll of the department. Concerning these and some other points we shall be better qualified to speak when the report to be made by Fourth Assistant Postmaster-General Brinton shall have been published.

It is satisfactory to learn that, notwithstanding the pressure brought to bear upon him from certain quarters, President Roosevelt is determined to carry out his plan of cooking Congress in extra session on November 9. He is unquestionably right in holding it to be our duty to enact with all possible promptitude the legislation needed to render operative the reciprocity treaty with Cuba which the Senate has ratified. How much, if any, opposition will be offered to such legislation by the beet-sugar interest remains to be seen. The only new ground on which the requisite enabling act could be opposed would be the assertion that, owing to the Brussels sugar convention, which is now in force, the prospects of the cane-sugar growers of Cuba have been so much improved that they no longer need a reduction in the duties levied on raw sugars by the Dingley law. It is barely possible that, owing to a temporary increase in the market price of raw sugars, the Cuban planters might be able without our help to regain a measure of their former prosperity. Nobody can foresee, however, how long the Brussels sugar convention will remain in force, and it will surprise nobody if it is denounced by Great Britain at the earliest possible moment.

Meanwhile, our failure to give practical validity to the reciprocity treaty will cause us to lose a large part of the share of Cuba's import trade which we still retain. We ought by this time to have acquired almost the whole of that trade, and we probably should have done so, had we promptly and loyally carried out the agreement to which we were morally com-

mitted by the McKinley administration when it exacted the incorporation of the so-called Platt amendment in the insular Constitution—an amendment which has virtually placed Cuba under our protectorate. It is perfectly true, as is pointed out in the platform framed by the Democratic State convention of Massachusetts, that the best-sugar interest has put us in a false position with reference to Cuba. That is to say, we have obtained from the island valuable concessions, the promised consideration for which is not yet forthcoming. As for the objection to an extra session said to have been put forward by some Republican politicians—the objection, namely, that Democratic Representatives and Senators will seize the opportunity to raise the whole tariff issue—Mr. Roosevelt has shown himself politically sagacious by disregarding it. If the President wishes, as he is believed to wish, that the first regular session of the Fifty-eighth Congress should be concluded before the national conventions meet, it would be obviously conducive to that end that the tariff question should be extensively, if not exhaustively, discussed during the preliminary extra session. Although there is no likelihood of any tariff changes being sanctioned by the Republican party before the next Presidential election, the Democratic leaders in Congress are determined to place before the people their view of the necessity of such changes; and the sooner they are permitted to do it, the better for the timely accomplishment of the Republican legislative programme.

We earnestly hope that there is foundation for the report that President Roosevelt has decided to offer the next vacancy on the bench of the United States Supreme Court to a Democrat, and that this Democrat will be Judge George Gray of Delaware. Justice Harlan is now eligible for retirement, but there is no man on the bench of the highest Federal tribunal whose withdrawal would be witnessed with more regret. If he should determine to go, it would be fitting that his place should be filled by an appointee from the circuit which includes Pennsylvania, Delaware, and New Jersey. It may be remembered that Justice Shiras of Pennsylvania was succeeded by Judge Day of Ohio, a resident of the circuit to which Justice Harlan belongs—the circuit, namely, which comprises Kentucky, Ohio, and West Virginia. Under the circumstances, it would be but fair to select Justice Harlan's successor from among the jurists and lawyers of the circuit which Justice Shiras represented. There would be just ground for complaint if, after appointing Judge Day, the President should fill the next vacancy in the United States Supreme Court with another citizen of Ohio. No doubt Mr. Roosevelt would like to appoint Judge Taft of Ohio, and the latter has made no secret of his desire to exchange the Governor-Generalship of the Philippines for a place on the highest Federal tribunal. But, unless the President wishes to be taxed with bestowing undue favor on a particular State, Judge Taft will have to wait for another vacancy, which, it is expected, may be made within a year or two by the retirement of Chief-Justice Fuller. A strong man will be needed to receive from Justice Harlan, but we know of no one yet mentioned for the place who is more likely than Judge Gray to measure up to the high standard which Justice Harlan has established. Nor would the appointment of Judge Gray to the United States Supreme Court take him out of the list of candidates for the Democratic nomination for the Presidency. His friends would remain as convinced as ever of his fitness and availability for the higher office.

The pressure being brought to bear on Turkey is measurably increased by the mobilization of the Bulgarian army, in response to an outburst of national sentiment so strong that the Sofia government was no longer able to resist it. We learn that the Bulgarian armaments are now completed. Bulgaria has two hundred thousand Mannlicher rifles, and has just received ten million cartridges. Ninety-six thousand men have been mobilized already, sixty thousand in southern Bulgaria, practically along the Turkish frontier. Bulgaria can put a second hundred thousand into the field within twenty-four hours, and all these are thoroughly trained troops, and among the best shots in Europe—the best, perhaps, the Swiss alone excepted. Simultaneously with the news of Bulgaria's mobilization, we hear rumors of skirmishing along the frontier between Turkish and Bulgarian soldiers, and even of con-

siderable engagements. This is only to be expected when two armies confront each other across an open frontier, both full of enthusiasm or fanaticism, and both confident of victory. Bulgaria's determination to mobilize was the inevitable result of the concentration of troops in the Adrianople district and the recent calling out of new levies to the number of fifty thousand by the Sultan. It is in the highest degree interesting to watch the decision of the new Servian cabinet, which may very well elect to support Bulgaria against the Turks. The question of peace or war in the Balkans is now practically in the hands of Germany, as it was in the hands of England in 1877. If Germany, while openly siding with the powers, secretly supports Abdul-Hamid in resisting the reform programme, then war seems to be inevitable.

The world's storm centre seems to have passed from Macedonia to Manchuria. There are indications that the Japanese minister at Peking is by all means in his power endeavoring to prevent Prince Ching from signing the conditions under which Russia is willing to withdraw her troops from the districts of Mukden and Kirin. It seems to be Japan's deliberate intention to fight, and it is doubtless with a clear perception of this that Russia is greatly increasing her fleet in the Far East, bringing it to a point where it slightly exceeds that of Japan in fighting power, while the Russian troops within or near Manchuria amount to about two hundred and seventy thousand. In Port Arthur itself a number of new and very strong forts have just been built, making that promontory the Gibraltar of the China sea, and the combination of her fleet and army, with the Manchurian railroad as a basis of supplies, makes Russia's position almost impregnable. These new preparations on Russia's part—the despatch of three additional first-class battle-ships of the newest design and the heaviest armament, with two new armored cruisers now nearing Port Arthur, as well as the new fortifications—are planned to be ready about the date appointed for the Manchurian evacuation. It is as though Russia had been warned beforehand of the Japanese plan to force on a war. Russia's recent moves are not to be explained in any other way, since she has come to an understanding with every power except Japan.

Japan, on her part, has not confined herself to diplomatic activities at Peking. She has recently been working with feverish energy to get her fleet and army ready for instant action. Within the last few days, under cover of "an experiment in mobilization," she has landed additional troops in Korea, besides the strong garrisons she already has at the three Korean ports. The meaning of this is, from a strategic point, perfectly clear. Given the strength of the Russian fleet and forts, an attempt to attack Port Arthur, Taitien-wan, or New-Chwang by sea would be futile. Japan hopes to succeed in an attack by land, and is being neutral or tributary Korea as a landing-place. Her armies are familiar with all the roads from the Korean ports to the capital, and thence across the Yalu river to Manchuria, since they occupied this very territory, and fought their way along these very lines, in 1893 and 1894, actually succeeding in taking the Regent's Sword peninsula, with Port Arthur at its extremity. Japan has evidently determined to land as many troops in Korea as she can before any open breach is reached, and thus to open the way for the subsequent transfer of her army to the Asian mainland, whence the invasion of Manchuria can be undertaken. It is evident that, once war is declared, Japanese troops landing in Korea will be liable to interception by the Russian fleet. In spite of Japan's calculations, however, it seems practically certain that Prince Ching will agree to Russia's terms, that the evacuation of Mukden and Kirin will be completed, and that Japan's cause for war will disappear. It remains to be seen whether she will invent a new excuse or determine to accept the inevitable. For it must be understood that Russia's evacuation of the civil districts of Mukden and Kirin will in no wise affect the troops in the leased areas or the defence of the Manchurian Railroad.

Two men were discussing possible Democratic candidates for President. They had gone down the list, arguing the pros and cons in the case of each possible nominee. "Do you know," said one, "who should have been, and would have been

but for a lamentable mischance, the man to run against Roosevelt next year?" "I know," was the answer, "whom you mean. You mean William E. Russell, and I think you are right." Russell was born in 1857 and died in 1896—seven years ago. It is an extraordinary thing not only that his place in the Democratic ranks has not been filled, but that it is recognized and remembered as a place that is empty. That a man who died at the age of thirty-nine should still, after seven years, be acutely missed in national politics is a circumstance worth recording. Russell could have done nothing until the Bryan gale had blown out, but this year, if he had lived, we should have heard from him.

The editor of the *Japan Weekly Mail* is better informed concerning the affairs of the Mikado's subjects than he is about international marriages. Referring the other day to the American young women who have married members of the British peerage, he summed up his remarks in the announcement that four of them had become duchesses and two countesses. He very much underrated the extent of the American invasion of the privileges conceded to the wives of Britain's hereditary legislators. We do not pretend to carry about with us an exhaustive list of our countrywomen who have wedded peers of the realm, but, besides the two Duchesses of Marlborough and the two Duchesses of Manchester, to whom will soon be added a Duchess of Roxburghe, we can call to mind two marchionesses, Lady Dufferin and Lady Angelsey, while the young American who by courtesy is styled Lady Yarnmouth will be Marchioness of Hertford, should her husband outlive his father. There are at least seven American countesses, besides one viscountess, and, if her husband outlive his father, Lady Deverhurst will become Countess of Coventry. Of American baronesses, there are no less than ten, if we include the widow of the late Lord Fairfax, whose name was carried on the roll of the House of Lords, though he never claimed the privileges of the peerage.

There could be no greater mistake than the assertion that the marriages of American girls with foreigners of rank are mainly confined to England. Up to a quarter of a century ago there were at least three such international marriages in France for one in England. Daughters of American girls have married French nobles of the ancient régime, to say nothing of those who obtained their titles from Napoleon, like Prince Murat. Among these may be mentioned the Due de Rochefoucauld, the Due de Dino, and the Due de Dezares. Many an Italian noble, from Prince Colonna down, has married an American young woman. There are examples of such marriages in the Spanish peerage also; the Duchesse d'Arroux is an American. Many American girls have married German nobles, and one of them, Miss Lee of New York, at present the wife of Count von Walderssee, had for her first husband a reigning prince, the Duke of Augustenburg, who was eligible for intermarriage with any imperial family in Europe. There have been fewer examples of such marriages in Austria, Hungary. At this moment we recall but two, that of Miss Carroll, who married Count Esterhazy, and who now lives in Washington, and that of Miss Mabel Wright, who first became Mrs. Yasnaga, sister-in-law of the Dowager Duchess of Manchester, and subsequently married a member of the highest Hungarian aristocracy. Whether the rule about sixteen quaterines, which is so rigorously observed in the court circle at Vienna, has been relaxed in her favor we know not. The truth is that the number of American women who have married European nobles would be found, upon a complete enumeration, to have exceeded considerably a hundred. We said that, while there have been flagrant exceptions, these international marriages seem, as a rule, to have brought the average amount of happiness.

A Northern student of affairs in the South who lately spent several months there was impressed with the curious contrasts of sentiment in different localities on the subject of negro labor. In the same State he found townships which no negro is permitted to enter, and laws against the encouragement of negro emigration. He reports driving out one day with a negro driver. Without being aware of it he crossed the town—it may have been the county—boundary. As he went on a farmer called to him from a field: "Hello! Where's that nigger going? We don't allow niggers in this town."

He went on. A mile or two further on another farmer called to him to stop. He stopped. The man came to the wagon. "This town," he said, "is white. We don't allow niggers in here at all. No offence to you, but if that nigger goes on he'll be shot." That was enough for the negro driver. He was a prudent man and declined to proceed. On the other hand, our observer found that though the movements of individual negroes or single negro families were not restricted, there were laws in some States against inciting emigration, and in most communities, whether there was a State law about it or not, the stirring up of negroes to move away by wholesale was not tolerated. Persons who came seeking to carry off negroes by the score or the hundred were warned away, and if the warning was not effectual, other means that were effectual were used.

A good many persons have the impression that high scholars from the colleges do not do particularly well in the workaday world. This is a vulgar error. They do do particularly well. The valedictorian of a college class does not often lead his class all through life, but the chances are very much in favor of his doing much better than the average of his mates. In the current *Atlantic Monthly* Professor A. L. Lowell, of Harvard, has been at some pains to compute the chances of the high scholars to win distinction. He takes as a rough and ready, but available, measure of distinction the list of names in *Who's Who in America*. That measure he applies to graduates of Harvard College between 1861 and 1887. He finds that of these graduates, one in every thirteen and three-tenths is included in that book. But of the men who ranked in the first seventh of their class, one in seven is in *Who's Who*, as against one in sixteen for the rest of the class, and one in five for the first four scholars. This ought not to surprise any one. High scholars in college are not invariably able men than their fellows, but they are apt to be able as well as more diligent.

Mr. Lowell has gone farther and tried to discover how it fares in the matter of distinction with the college athletes. Still using *Who's Who*, he finds that of the members of the Harvard University crews between 1861 and 1887, one in thirteen and two-thirds is in the book. But of seventy-two members of Harvard crews between 1869 and 1887, only one, Mr. Lowell says, is in *Who's Who*, this sole representative of baseball being apparently Dr. H. C. Ernst, of Boston, pitcher and bacteriologist. Of ninety-three Harvard football men who were on the eleven between 1874 and 1887, three, or one in thirty-two, are in *Who's Who*. It would appear from these figures that the outlook for distinction in a life-time for college athletes is not good. But it should be remembered that *Who's Who* is a defective measure of distinction, still more so of success; and that it is especially defective in the case of athletes. The book—an excellent work of its kind—includes a great many writers, and the more noted professors, scientists, artists, and politicians. But lawyers, doctors, and men of business are not generally included unless they happen also to be writers or politicians. Among Professor Lowell's own mates of the Harvard class of '77, there are many notably successful men whose names are not in *Who's Who*, but that book includes. Athletes rarely make good poets, writers, painters, or professors, but they are believed to average pretty well in general business, so that the conclusions about them derived from questioning *Who's Who* must be taken with distrust. A Harvard athlete was until recently a partner in the best-known banking-house in New York, and has been regarded as one of the most conspicuously successful men in town, but his name is not in *Who's Who*.

College athletes get a great glut of distinction while they are still college athletes. What they usually want in real life is substantial success payable quarterly or oftener. Whether they get more or less than their share of it we do not know. It would be interesting to learn. The leading college athletes devote a vast deal of time to their specialties. Does it pay them? Do they do particularly well in the world? Are they strenuous in other things besides sport? Are they apt to be able, or apt to be dull? Are they good men to hire? The world would like to know, but it cannot find out from *Who's Who*.

## The New York Mayoralty Election

It is doubtful whether a more complicated political campaign was ever waged in the United States than that which is now going on in New York city. On the one hand, Mr. Charles F. Murphy, the leader of Tammany Hall, has gone into the camp of his opponents by inducing Messrs. Groot and Foran, who previously had accepted nominations on the fusion ticket. The fusionists, on their part, have repudiated Messrs. Groot and Foran, and substituted the names of men who are trusted to oppose earnestly the candidates of Tammany Hall before election day, and to give loyal support to Mayor Low should he and they be elected.

On the whole, the temper of the ticket headed by Mayor Low has been materially improved during the last few days. Recent incidents have clarified the public mind, and aroused it to a vivid perception of the fact that in the Mayoralty contest there is but a single issue, the issue, namely, of good government. To the issue of good government a death-blow would have been dealt had the fusionists permitted Messrs. Groot and Foran to remain upon their ticket after their acceptance of nominations from Tammany Hall. There seems to have been for a time some confusion of ideas in the fusionist camp concerning this matter, owing to the misinterpretation of some alleged precedents for the course pursued by Messrs. Groot and Foran. There is reason to believe that at first neither Mayor Low himself, nor Mr. Cutting of the Citizens' Union, foresaw that the simultaneous appearance of the names of Groot and Foran on the Tammany and the anti-Tammany tickets would materially improve the prospects of the fusionist nominee for the headship of the municipal government. It was pointed out that, respectively a judge of the State Supreme Court in one or other of the districts included within the city of New York, who has committed himself to the bar by his non-partisan conduct, has received and accepted a nomination for a second term on the bench from both the Democratic and Republican parties. The fact, also, was recalled that in 1888 Abraham S. Hewitt, then Mayor, secured the nomination of Tammany Hall for Mayor, as well as one from the rival organization, the County Democracy. It is true, moreover, that on one occasion, which, ostensibly, is even more to the point, and at which, consequently, Mr. Groot has made the most, Mr. Myers, who had been nominated for Comptroller by the Republicans, was permitted without protest on their part to accept a nomination for the same office from Tammany Hall. Not one of these precedents will bear the comparison which would be made by the friends of Messrs. Groot and Foran have tried to put on it. It should be obvious that when, for non-partisan conduct, a judge is renominated on both Republican and Democratic tickets, the relative strength of the two parties will not be affected an iota, because the judge, being a non-partisan, and accepted on that very ground, would feel himself bound to do absolutely nothing to help either party. The same would be true of a nominee for Mayor from Tammany Hall, as well as from the County Democracy, did strength in some extent the former at the expense of the latter organization, in probable enough; but Mr. Hewitt took the course he did not only with the consent but in compliance with the prayers of conservative Democrats on both factions, who feared that unless they coalesced Henry George would be chosen Mayor. The voters proved that their apprehensions were justified.

Had Mr. Hewitt declined the nomination offered by Tammany Hall, and had that organization put forward a nominee of its own, nothing could have averted the election of Henry George, who, as it was, polled 60,000 votes, against the 73,000 cast by Tammany Hall and the County Democracy, assisted by many Republicans. It is manifest that by his course Mr. Hewitt did not desert the cause of sound and safe government, but did his utmost to assure the triumph of it. We come now to the case of Mr. Myers, which at first sight looks like an exact parallel to Mr. Groot's. As a matter of fact, in 1899 Senator Platt and other leaders of the Republican party in New York city approved the acceptance of a Tammany Hall endorsement by Mr. Myers, their candidate for the Comptrolership, because they had very little hope of beating Tammany Hall that year, and desired at least to establish in the Comptrolership's office a bulwark against the wholesale plundering of the city. Their procedure at that time, in other words, was tantamount to a confession that they anticipated defeat. Nor can there be any doubt that had the fusionists pursued a similar course this year, and acquiesced in Mr. Groot's acceptance of a Tammany endorsement, their acquiescence would have been motivated on an admission of their inability to re-elect Mayor Low, and of a consequent desperate desire to rescue something from the wreck before them.

We repeat that the issue before the voters in this contest is the issue of good government. The issue of good government is far from desperate; on the contrary, it should be easier to re-elect Mayor Low this year than it was to elect him in 1901. That as regards his personal character and private life, Colonel George B. McClellan is an estimable man we do not doubt. His career in Congress, if not brilliant, has been open to no reproach. It is absolutely certain, however, that he could not have obtained a post of trust and emolument in connection with the Brooklyn Bridge, that

he would not have been sent to Congress for several consecutive terms, and that he would not have been nominated by Tammany Hall for Mayor unless he had been a personal favorite of Mr. Richard Croker and of Mr. Charles F. Murphy, the past and present leaders of the Tammany organization. He has not imposed himself upon those leaders; he has been thrust forward by them. They owe him nothing; he owes them everything. Under the circumstances it is idle to pretend that Colonel McClellan occupies the same position with reference to independent Democrats that was occupied by Mr. Edward M. Shepard two years ago. Mr. Croker appeared to Mr. Shepard to save the Democratic organization in New York city. Had Mr. Shepard been successful he would have been under no obligation to Mr. Croker. The obligation would have been upon the other side. No reasonable person will assert that Colonel McClellan is in a similar position.

Those citizens of New York who want good municipal government can get it. They have a better opportunity of securing it this year than they had in 1901, thanks to the breach, apparently irreparable, between Tammany Hall and the regular Democracy of Brooklyn. They cannot get it, however, if, like Messrs. Groot and Foran, they express by act or word the opinion that one ticket is as good as the other. There can be no such thing as neutrality at such a conjuncture. Mayor Low can truthfully declare that "he who is not for us is against us," and that "he who is not against my opponents cannot be at heart for me." It is plainly impossible for a clear-headed and honest man to remain in a ticket that cannot embody the wholesome and beneficent ideals of municipal government personified in Mayor Low, and at the same time remain upon a ticket which recalls the offensive record and aims to carry out the pernicious programme, of Tammany Hall.

## The President in Washington

PRESIDENT ROOSEVELT is now in his official residence in the White House, and all the members of his cabinet have returned to Washington, ready to perform, each his part, in the work of the Federal administration. Although there is no reason to suppose that the national interests have suffered through the prolonged absence of the Chief Magistrate from the Federal capital, it is indisputable that, in spite of the facilities for communication afforded by the telegraph and the telephone, the task he has to perform as Chief Executive can be most effectively discharged in the place where the administrative departments are seated.

During the President's absence any realness or delay in purging the Postal Service and the Indian Bureau of the Interior Department would naturally be imputed to the Postmaster-General and to the Secretary of the Interior. Henceforth on Mr. Roosevelt's shoulders will rest the responsibility for any neglect or hesitation to expose and punish malfeasance in office.

It is also at the seat of the Federal government that the President can best secure the information and the counsel needed for the preparation of the legislative programme that he will recommend to Congress, and for the determination of the attitude that he will take during the winter toward the great domestic questions of the day. We take for granted that, in the prosecution of the Fifty-eighth Congress in extra session, will be put forward as a reason for the continuance the necessity for legislation rendering operative as speedily as possible the reciprocity treaty with Cuba. It is less certain whether Mr. Roosevelt will also describe an urgent the need of a law imparting more elasticity to the currency, and remedying to some extent the accumulation of the circulating medium in the vaults of the Treasury under the issue of bonds. Of grave importance is the necessity for legislation which forbids the depositing of customs duties in the hands of small holders of railway and industrial stocks and bonds is the question whether Mr. Roosevelt means to push any farther at the present conjuncture his campaign against the so-called trusts, a campaign which, rightly or wrongly, is debited with the grievous shrinkage of values on the New York Stock Exchange, a shrinkage which has terrified a multitude of humble investors into selling at calamitously low prices the securities in which their savings were embarked. It is worthy to note that, in the promise of grain and cotton crops, and in the prospective earnings of railways for at least six months to come, there is nothing to warrant the fear that what has threatened to develop into a financial crisis in New York would be followed by an industrial crisis. There can be no industrial crisis without overproduction, and, in the pivotal iron and steel industry, there would be no reason to apprehend overproduction had not the expected demand from railways and iron contractors engaged in the erection of buildings been materially cut down. The demand has been cut down for two reasons: first, owing to the extraordinarily high cost of labor, a cost which nothing except a prolonged lockout is likely sensibly to reduce, and, secondly, because it has proved impracticable, or extremely difficult, to secure the funds required for railway extensions and building purposes. It is in the issue of stocks or bonds in the present state of the money-market. For

our own part, we deem it scarcely credible that, in view of the questionable aspect of the industrial, no less than of the financial situation, the President will proceed any farther in the direction of interference with the relations of capital and labor, or with the modern tendency of capital to conglomeration.

When Mr. Roosevelt shall next transfer his residence from Washington to Oyster Bay, the Republican national convention will have been held, and its nomination for the Presidency will have been made. He has at least eight months before him in which to improve, or to re-visit, or to finally to impair, his present excellent chance of winning the nomination. Were the national convention to be held next week he would indubitably be the nominee, and it is on the face of things altogether probable that the situation will have changed so materially before June, 1904, that the nomination will then be withheld from him. But, while we still expect to see Mr. Roosevelt the candidate of his party, we must recognize that the election of the Republican nominee is by no means so inevitable as it looked a year ago. The prosperity which, however transient, was unquestionably witnessed under the McKinley administration, has ceased to be a universal and conspicuous phenomenon. Not only must disappointment and despondency be predicated of the large class of small investors, to whom we have previously referred, but in most of the great urban centers there is certain to be acute and widespread suffering this winter, owing to the prolonged, and, for the present, seemingly irremediable dispute between capital and labor in the building trades. If it be true that the political party in power is instinctively averse, to a certain extent, with the generation or mistatement of the national well-being, it is equally true that national adversity, or ominous indications of a drift therein, are apt to be imputed to the party responsible for legislation. If things shall go on for the next twelve months as they have gone on this summer the Democracy will have at least a chance of electing its nominee for the Presidency; provided, of course, that someone shall be a man calculated to ally, instead of aggravate, popular uneasiness and apprehension.

### Our Chaotic Divorce Laws

CARDINAL GREENE lately declared that, in his opinion, the worst evil from which the American community is suffering is the legal toleration of divorce. It is also reported that President Roosevelt at no distant date will advise Congress to institute an exhaustive examination of the divorce laws of the several States, with a view to the devising of some remedy for their dissimilarity and for the fortification of the marriage tie. There is no objection to such an inquiry. It might, and probably would, help to create a current of opinion that might impel certain States, in which the divorce laws are particularly lax, to introduce reforms which, beyond a doubt, are imperatively called for. It should be distinctly understood, however, that an amendment of the Federal Constitution, which should empower Congress to pass a uniform divorce law for all of the States and Territories is out of the question. Even if such a constitutional amendment were not impracticable, its expediency is doubtful. Such a tremendous invasion of the rights reserved to the States, and such a transfer to the Federal government of the exclusive power to regulate marriage and divorce, would throw the door wide open to a rapid transformation of our present political system into a unified and highly centralized government like that of France.

The discussion of the expediency of such a constitutional amendment is, however, essentially academic, for never would it be adopted by the prescribed number—three-fourths—of the States. It never would be adopted, because the people of the several States would never agree as to the scope and character of a uniform divorce law. The Catholics would insist—by the tenets of their religion they are bound to insist—that divorce shall never be granted for any cause whatever. Marriages are sometimes, though very rarely, annulled by the Pope on canonical grounds; but a divorce is the legal sense of the word never has been, and never will be, sanctioned by the head of the Catholic Church. The only State in our Union which accepts the Catholic view of the indissolubility of marriage is South Carolina, which has no divorce laws. Members of the Protestant Episcopal Church adhere, for their part, to the principle that divorces should be granted for one cause only, to wit, adultery. New York, however, is the only State which has based its divorce law on this principle. In twenty States and Territories willful desertion for a certain term of one year is a sufficient cause for the dissolution of the marriage bond. Desertion for two years suffices in twelve States and Territories, and also in the District of Columbia. A desertion for three years constitutes an adequate cause in thirteen other States and Territories, including Massachusetts, Connecticut, Maine, and New Hampshire. A failure, during one year, on the part of the husband to support his wife is ground for a divorce in seven States. A lack of support is a sufficient cause, but no time is specified, in nine other States, including Massachusetts, Maine, Vermont, and Rhode Island. A divorce such talked about in the newspapers has recent-

ly been granted in Rhode Island for this cause. If the parties to a marriage voluntarily lie apart for five years without cohabitation a divorce will be granted, on the demand of either party, in Kentucky or Wisconsin. The joining of any religious sect is believed marriage unlawful, and a divorce would not be granted, in a legal sense for divorce in Kentucky and New Hampshire. A wife's refusal to cohabit for twelve months will enable her husband to procure a divorce in North Carolina. Habitual drunkenness is a ground for divorce in all the States and Territories except Texas. There is, in fact, no end to the grounds on which, in one State or another, the marriage tie may be sundered.

Now, it is obvious that such laws would not have been placed and retained upon the statute-books unless they had been upheld by public opinion in their respective States. It is, therefore, necessary to set upon public opinion in order to secure even a moderate approach to uniformity. Absolute uniformity cannot be looked for. Every one who is conversant with the history of divorce legislation in the United States knows that it would be impossible to secure the assent of half, or even a quarter, of the States—much less of the required three-fourths—to the law governing absolute divorce in the State of New York. It is much wiser, therefore, to aim at a practicable improvement, which could be brought about by the creation of a wholesome and earnest public opinion that would exercise a coercive influence upon legislatures in those States, the divorce laws of which are exceptionally and deplorably lax.

### The Next Liberal Premier

THE opening weeks of the November session will show whether Mr. Balfour can hold his party together more successfully than he has held his cabinet. He and his followers are pledged to introduce a measure of protection which, as it must of necessity leave food and raw materials untouched, can only be aimed at manufactured goods, and especially at exports from the United States. We are therefore interested in the framing of parties when Parliament meets. That a large body of Conservatives, and only one like Sir Michael Hicks-Beach, Mr. Ritchie, Sir John Gosset, Lord George Hamilton, Lord Hugh Cecil, Mr. Winston Churchill, Lord Gouchen, Lord Ashbury, and probably the Duke of Devonshire, but also many of their less conspicuous fellow members, will vote against, or at least not vote for Mr. Balfour's proposals, is certain. What is not certain is whether or not Mr. Balfour may still have a bare majority in the Lower House. It is not clear, in any instance, whether he could count on the support of Mr. Chamberlain, in spite of the latter's promises. He is thus wholly dependent on the Irish party, and their terms are stiff, to say the least of it; practically meaning a home-rule bill and a Catholic university. But Mr. Balfour may not be able to persuade his followers to make concessions on capital; and thus along this line also there are prospects of his defeat. That he could carry the country at a general election, if defeated in Parliament now, is something nobody believes possible.

His alternative is to temporize; to keep back his bill, on one pretext or another, until next spring, and meanwhile to pretend to govern, while merely floating with the stream. But during the intervening months Mr. Chamberlain will probably have modified his policy half a dozen times, to the further confusion of the Unionists, and the very most that Mr. Balfour can hope for, even by the adroitest temporizing, is to delay the evil hour of dissolution.

But dissolution will come, and all appearances show, a moderate victory for the Gladstonian Liberals and their principles will follow. And it is noteworthy that the whole outlook in the domain of world politics will favor the standard Gladstonians, who are sitting at a disadvantage such was never known as Lord Rosebery. Gladston's Italian policy is now being triumphantly vindicated, even Mr. Balfour having practically indorsed it. The conscience of humane England is once more waking up to Britain's direct responsibility for the Macedonian horror, and a reaction towards Gladston's ideas is inevitable as a result. In Ireland, also, the Gladstonian idea has triumphed. It was Gladstone who paved the way for both the principle and the practice of land purchase, later adopted by the Balfours and Mr. Wyndham. And it cannot be doubted that there is in England a strong and growing body of opinion which favors a better and more generous treatment of the Transvaal and Orange River Boers than Mr. Chamberlain has yet deigned to show.

The leader of a new Gladstonian Liberal party will certainly not be Lord Rosebery, whose unworldly though brilliant character has quite failed to gain the confidence of his former colleagues. Nor will the mantle of Hawarden fall on either Sir William Harcourt or Sir Henry Campbell-Bannerman, whose jealousies are largely responsible for the long-continued weakness of the Liberals. Mr. Asquith and Mr. Morley are both eminent statesmen, yet it is not to be disputed that the most authoritative and strongest, the most distinguished and eminent of the Liberals is Earl Spencer,

who for years has led the Liberal party in the House of Lords. Lord Spencer was Lord Lieutenant of Ireland from 1866 to 1874. Lord Spencer's first ministry, which disestablished the Irish Protestant Church, and which distributed certain church lands among the tenants struck the keynote of Irish land purchase. In the second Gladstone ministry, of 1880 to 1885, which came in on the strong reaction against Disraeli's pro-Turkish policy, Earl Spencer was Lord President of the Council, the position lately held by the Duke of Devonshire, and later, on Earl Cooper's resignation, Lord Lieutenant of Ireland. He came to Dublin first of hope and conciliation. Lord Frederick Cavendish as his chief secretary. The terrible Phoenix Park murders, on May 6, 1882, changed the whole spirit of the Liberal policy, and conciliation made way for repression and the Crimes Act. Yet during these years Lord Spencer was converted to home rule; and he was an avowed home-ruer in the third Gladstone ministry of 1886, which saw the memorable session of the Liberal Unionists, with which saw the memorable session of the Liberal Unionists, with which saw the new divergent Chamberlain and the Duke of Devonshire at their head. In this ministry Lord Spencer was once more Lord President of the Council. In Gladstone's fourth ministry, in 1892, and in that of Lord Rosebery, which followed it, Lord Spencer was First Lord of the Admiralty. Lord Spencer, therefore, as the most distinguished, eminent, and faithful of the followers of Mr. Gladstone, seems the natural and inevitable head of the next Liberal cabinet.

### Educational Methods

ALL the schools and all the colleges are started again in their year's work. The private schools heretofore open from two to four weeks later than the public schools, the boarding-schools in the country starting on a par with the day-schools, while the private schools in the towns, which had of necessity until a fair proportion of their pupils get back from the country to town. Most of the colleges start late, too, for the college professors long since found it to their advantage to have as much as possible of the year's vacation come in the summer months. Three months clear in the summer is a slice of time that can be put to important use, and nowadays most of the college professors get it.

What use the summer period, learning, and by what methods it is being taught in them? That is a hard question if one attempts to answer it in detail. Education seems to be still an experiment; new theories are constantly being put on trial; old methods are constantly being swapped for new, and almost constantly the new methods stir misgivings in the minds of some of the observers. Even the kindergarten is not yet beyond criticism. Able and commanding writers have poked a good deal of rather penetrating fun at it in the magazines, and though as an institution it is well founded and sure to act and to do good, the usefulness of kindergarten methods is felt to have bounds. The aspiration to make education so easy and so pleasant that it will be no trouble to any one is not universally applauded just now, and when critics and commentators declare that effort has great educational value, and that children ought to learn to overcome difficulties, the advocates of the primrose path have to do a good deal of explaining. We know in a general way that small children are being taught to read and write, that some of them are learning to spell, that they learn arithmetic, geography, and abhorrence of liquor on physiological grounds, and other useful branches. Whether they are taught this year to read a whole word at a time, or by syllables, we don't know. We hope it doesn't matter, for whatever method prevails just now seems likely to be found defective before the year after next. At a conference of teachers the master of a famous school for girls said that fashions in the education of girls change so fast that one method hardly endures long enough to educate a single pupil. "But we find," he added, "that this variability does not harm them." It may have been this same wise teacher, however, who said the limitations of his craft, who said that when he and his staff had brought the girls together and warmed and aired the rooms, about four-fifths of the work was possible had been done. He spoke, of course, with more humor than accuracy, but a great deal has been done when a good lot of pupils have been assembled in a suitable and healthy place and put to work, with good people to look after them. With that much of a start, they will do a great deal for themselves and for one another. We expect them to do a great deal to educate one another. Whether the pupils are girls or boys, their rivalries, their friendships—all their dealings with one another are educational, and help in that formation of character and ideals which is the most important aim of education.

So much is pointed out in mistaken methods and wrong teaching—the progressive teachers are so scandalized by the way things used to be done, and the conservatives are so distrustful of the efficiency of the way things are done, that the observing parent has excuse enough to despair of finding anywhere anything more than a second-best educational opportunity for his children. Like enough that is all he will find, but he must comfort himself by reasoning that a second-best chance is all a first-rate child needs, and

will a second-rate child can improve. There must be an analogy between the science of education and the science of cure. What saves all the quacks, and patent-medicine men, and empirical healers, and keeps their advertisements in the papers is that a very large proportion of the sick people get more or less well, whether they get professional assistance or not. No doubt a good many of the educational strategists that are tested owe such durability as they owe to the fact that an average child who goes to school will manage to get more or less education, whether the process in use is rather better or rather worse than the average. Moreover, people who want to school in times past, and managed to learn enough to keep ahead in the sea of life are apt to think that the kind of schooling they had was the right kind. If they don't think so, but in their objection show themselves instructed and capable, observers may reason that the kind of bad schooling that was compatible with such good mental fruits must have had good fruits.

It is rather a vague business, this directing of the young idea. The little ships have a pretty wide channel ahead, with deep water from shore to shore, and the folks who want to mark this course or that with buoys as the only safe one may be taking more pains than the facts warrant. There is a schoolmaster in New York who can talk on compulsion, about the education of girls, but some of his parent customers complain that he talks tediously, and that they know no more after hearing him than before. They pay him a compliment. The subject is large and vague, and he realizes it. Nobody talks other than vaguely about a large, vague subject, except persons who do not realize how large and vague the subject is.

### New American Music

EARLY in the present year we commented upon the unique and important work which Mr. Arthur Farwell and his associates are doing for the cause of American music through their *Wau-Wau Press* establishment at Newton Center, Massachusetts. The second year of the enterprise is coming to an end, and now we list what Mr. Farwell has issued a quantity of new music even more remarkable and significant than that which we discussed last spring. It will be remembered that the purpose of the enterprise is the promotion, through publication and performance, of the most progressive, characteristic, and serious work of American composers (especially the younger and less known ones), considering it as far from the standpoint of artistic excellence, and without regard for the question of a profitable popularity—there, of course, is the innovation. It is a most admirable enterprise—unquestionably, as we have before remarked, the most determined, courageous, and enlightened endeavor to advance the highest interests of American music that has yet been made. And how, one may reasonably ask, is the enterprise justifying itself? The answer is to be found in the best of the music which has so far been issued—music so untrammeled in its inspiration, so sincerely felt, so mature and completed in its artistry, that one would be venturesome who should assume to set bounds upon the possibilities of the creative power which, in the aggregate, achieved it.

Let any one who doubts the presence of an original and vital impulse in our native music consider some of Mr. Farwell's recent publications. Turn, for example, to Mr. Henry F. Gilbert's *Five Veronese Moods* in the *Wau-Wau* issue for September—a burst of poetic pathos for piano. Here, one notes immediately, is the authentic quality and color of Verisimo; but here, too, is a penetrating and beautiful musical art—an art distinguished and vivid, forceful and subtly articulated; moreover, it is encharged with personality, point and indubitability. Mr. Farwell's own *Domain of Harbors*—a study in elemental symbolism—is an equally remarkable piece of writing in a wholly different key. It is a fantasy evocation in the spirit of the old, with a hauntingly poetic impression for piano and piano, inspired by Mr. Arthur Davie's painting, "Morfydd"; a girl seated upon a bank of moss in a deep wood, dreamily gazing her hair, while a youth beside her plays upon a harp. A piano piece by Mr. Edward Burlingame Hill, *At the Grove of a Nero*, is profound and true in feeling and impressive in sternness.

No one who has at heart the legitimate and vital interests of our native musical art can afford to ignore the fruits of Mr. Farwell's efforts toward its advancement. And let there be no misconception in the matter; this music has for us no virtue merely for being of American origin; we are not of those who—in the rustic phrase of Mr. Philip Hale—would "cover mediocrity with a cloak of patriotism." The music which Mr. Farwell offers us is American, but, more, all, it is excellent art.

### SHIPPING A CIRCUS ACROSS THE PACIFIC

The photograph gives an idea of the difficulties involved in shipping a circus consisting of a host of performers and heavy animals, from Yokohama to Seattle. In order to get the elephants from the deck into the owners' hold it was necessary to fit a band of mill-like wheels over their bodies and hoist them on board with a derrick. The total expense of transporting the circus from Yagusa to America was \$25,000.

# Diversions of the Higher Journalist

## The Age of a Book

THE Constant Reader, who had been away all summer, de-vouring novels at the seashore, poems in the mountains, and travels on the trains going, and coming, appeared at the office of the Higher Journalist with a book caught to her knee, as usual. The higher journalist had not yet got back to town himself; however, he was there in spirit, and at sight of the other apparition he called out, with the purity of people just home from the country, "Ah, what have you got now?" "Something," she said, with all the frankness of her sex, "that I should think you would be a little ashamed to have overlooked among the books you've mentioned lately," and she put somewhat indignantly on the table before him, Mr. George Horton's "In Argolis."

"Why, that is an old book!" he said.

"It's a year old," she returned. "Do you call a year-old baby an old baby?"

"What has that got to do with it?"

She declined a direct reply. "If at the best a baby lives to be a hundred years old, and some books live to be two or three thousand years old, what is the comparative relation of a year to the youth of a book and the youth of a baby?"

The higher journalist laughed magnanimously. "There is something in that," he said. "But you know that people won't buy a book that's a year old, and they resent your talking about it."

"What has that got to do with it—as you say? People don't know what they are talking about. I was reading this summer a book that has lived to be a hundred years old, and I found it the newest thing out. It was pretty coarse in places, but it wasn't bad, and there isn't one of our wretched society novels that describes the fashionable life of Newport and New York half as well as "Hammy Clabber" does when Smollett is talking of Bath and London. You would think it was the very freshest scandal; there's nothing but antonishing looking to bring it up to date. And diversions, of course. The English of that day hadn't got to be so good as our English now. I don't expect you to notice that; but I am talking about "In Argolis," and I don't think it's at all too late for you to re-rect your fault in overlooking it."

The higher journalist asked warily, "What would you want me to say of it?"

"Everything! That is one of the most charming books that any American has written about the life of another people, and that in describing that little Greek island town where Mr. Horton went to spend his summer after he had been turned out of his consulate at Athens, he has done one of those instantaneous classics that you were talking about not so long ago. It's delightful, every word of it, with just that mixture of the epic and idyllic, and domestic and divine that is peculiarly American."

"Then! Who said all that of it?"

"Well, we were reading it aloud on the hotel piazza, and that is what a young literary man who was there for his wife's health said. You will hear from him some day. What are you thinking of?"

"That it happens to be all true, which is very uncommon for the sayings of young literary men. I should even go further. I should say that I had read very, very few books of foreign origin, which seemed to come nearer the heart of the fact than Mr. Horton's, and that he had the gift of sympathy, at once luminous and poetic, which can alone enable an observer to penetrate the life of an alien people." "Add that the people in his case are the race from which we draw our intellectual civilization, and you testify to the importance of his subject, as well as the fitness of his treatment. He has a most graceful and pleasing altitude, never patronizing nor oversteering, and his style, so simple and so frank, enables him to get very close to his subject without offense, so that you stroll the foul streets as well as the beacon overhills, and you see the little town, which all the sea remotest web class, in its squalor as well as its beauty. With his young American example, the sole stranger, set down in the midst of it, and obliged by the circumstances and conditions to live very much like the Greeks themselves, you have a warrant of intimate knowledge which does not suffer you to question what he tells of them. The great thing is that his knowledge is friendly. He does not condemn them—nothing could be friendlier than that—and he does not satirize them. Their customs and characters, their superstitions and ideals, reveal themselves in his page quite as they presented themselves to his kindly student. Would you mean that every man you've been going to far if I said that no American family with the average American experience, and some after-knowledge of European life, would be the most intelligent witnesses of such a delicate and delicate situation as Mr. Horton presents, which it could possibly have?"

"No, I don't think he would," the constant reader returned. "At any rate, I shouldn't, and I am very glad to have you say it. I don't think you've so kindly recognized our advantages and our superior qualifications as teachers."

"Well, we've come pretty near it. But I'm always willing to

have a fresh occasion for it, and I thank you for happening to review me of my neglected opportunities by bringing Mr. Horton's book to my guilty sense of dereliction. I thought, from my friendship with his parents, that he was a singularly fit man to send as counsel to Athens, and I felt when he was removed that that of your system lends itself so ungraciously. My conviction is that if he had remained, we should not have had just this book from him; a record tinged with the pathos of his hardship in being turned out, but gay with the vivacity it had given him, and full of the kindest, the most delicate feeling for the material of his misfortune provided him. It was not altogether his misfortune, as it certainly is not ours, for "In Argolis" is one of those very rare books which seem to make the reader even more at home with so alien fields than the author himself was. Besides, it is a charming piece of literature, with a graceful style of its own, an instinct for the right word, and a strain of poetry glowing into tender humor. There! Let your young literary man who thinks himself a discoverer put that in his pipe and smoke it."

The constant reader said, literally, dreamily: "He smokes cigarettes. But I am glad to know that you know Mr. Horton's work so well. Will you send me one of his poems?"

"Ah, there you have me! That is a very old book, very, very, or eight years old. How can I tell you where to find such a superannuated volume?"

"Well, sayway," the constant reader said, with an air of candor, "who is Mr. Horton?"

"One of those surprising Chingones, who are now giving us the East, by their refined and artistic literary work, the patronizing surprise which the English feel at that of some Americans, then young, a generation ago."

"And do you mean to say," the constant reader returned to her first position, "that you still consider "In Argolis" an old book?"

"Not now, that I have so freshened my remembrance of it. I merely consider it an old friend. But the common run of readers of their kind by what they commonly buy—would say, if they got so far as the title-page, and read 1002 on it, that it was the oldest kind of book, and would rather resent the bookseller's showing it, if he had had the temerity to do so. He might draw out by arguing that anything about the "Greeks" was of inauspicious omen, as a remnant of the actual troubles in Macedonia. If he had got beyond the title-page himself, he might even himself further by saying that it was a very old little book, and nicely written. But then if his customer came back at him with the question whether it had been, in its remote time, one of the largest-selling books in Kansas City, or Down Town in New York, he would have the ground cut from under his feet, and not a leg to stand on where the ground had been."

"No," the higher journalist continued, "a new book is a book just out of the press, and if it is one that has sold fifty thousand before it was published then is never still. But people who know what they want, want no other sort of novelty in a book. The fact that six or nine hundredths of the old books in the world are American has nothing to do with the case. What they want is literature raw, and they get it, one way or other. Can we say that they are altogether wrong? They are raw themselves, and what would they do with literature that was mellowed by time, even a year's time? You have brought me "In Argolis" too late, dear lady—as I should call you if I were a character in one of Mr. James's books. Neither what your young literary man said, nor what I say, will avail. It is an old book, though the only real reason to be urged against old books would hardly hit it."

"What is the real reason?" the constant reader inquired, with quick curiosity.

"That human nature, like nature in Bryant's poem, "speaks a variety of tongues, and the dialect of one speech is scarcely ever the dialect of another. Each generation has to be addressed not only in a dialect of its own, but from special feeling, and from a special point of view. You imagine that the situation in such and such a London, as it is described in "Hammy Clabber," is exactly that of Newport and New York; but submit the description to any of the many intellects which rule in our fashionable world, and what to answer will you get? No, I won't be unfair. If you try yourself to understand those cases you will find them very different."

"But you don't think," the constant reader pursued a little tremulously, "that a book only a year old, about the daily life of a little town on a Greek island, which couldn't have elapsed such in the same sense the book "Hammy Clabber" would be outshone by the statute of limitations ruling in the literary world?"

"Not so much as if it were a novel a year old. Still you can't say it isn't an old book."

The constant reader sighed deeply. "No, I suppose not," and she went thoughtfully away, leaving the higher journalist on an unassented triumph. His visitors commonly got the better of him.

**THE NEW COLUMBIA STATUE, BY DANIEL C. FRENCH**

*A new statue by Daniel Chester French was recently unveiled at Columbia University. It is called "Alma Mater," and stands on the steps of the University Library. The statue is the gift of the Goddard family.*

# Lord Lansdowne

By Sydney Brooks

LONDON, October 3, 1915.

**L**ORD LANSDOWNE today is far and away the most prominent, or perhaps I should say the most notorious, personality in English public life. Every one is abusing him; not a few are demanding his impeachment; all hope rather than believe that his resignation of the Foreign Secretaryship will shortly be enforced. For this outbreak of the press campaign of inquiry into the Boer war, of course, responsibility is placed on all hands that the almost incredible incompetence which that report revealed acted ultimately he laid at Lord Lansdowne's door. He was the head of the War Office for four years before Mr. Kruger launched his ultimatum. He had ample time to foresee and prepare. It is now proved by a deadly accumulation of evidence that he did, if possible, less than nothing; that he was as blind as a mole in the signs of the coming crisis; that warnings, the most earnest and most emphatic, filtered through him as through a sieve; that he thwarted the plans and disregarded the advice of his professional colleagues; that his policy, in short, was to let the narrow take care of itself, to slide as comfortably through the day's routine as might be, and leave everything to chance. The result of that policy is now a matter of history, written in terrible characters of blood and national shame and wasted millions. And the people who remember what agonies of apprehension and humiliation they endured, how near they came to losing South Africa, by what a miracle of good luck it was saved, and who find the author of their misadventures, actually rewarded for his inefficiency by promotion to a higher office, are beginning to wonder whether such a thing as official responsibility any longer exists. They are clamoring unanimously for Lord Lansdowne's head. But I have far too much faith in the British system and in Lord Lansdowne as the type of it, to believe that it will be thrown to them.

Do you remember how Lord Rosebery in his *Viceroydom* dismissed Lord Bathurst, the official responsible for the safety of the empire at St. Helena? "He was," says Lord Rosebery, "one of those strange children of our political system who fill the most dazzling offices with the most complete obscurity." A hundred years hence, such, our prospects, or something very like it, will be the verdict handed in on Lord Lansdowne. He has certainly filled the most dazzling offices. Few of his contemporaries have filled so many and for so long. It is precisely thirty-five years since he was appointed one of the Lords of the Treasury. He was at the time just turned then to twenty. Two years later he was Under-Secretary for War. In 1880, when the Liberals under Gladstone again returned to power, he became Under-Secretary for India. He split with his party over the Irish land question, and resigned office; but when the Liberals returned to power, he was appointed his Government's minister of Canada. He held the post for five years, and was transferred in 1888 to the Viceroyalty of India, returning home finally in 1893. Two years later, when War broke out, he was appointed Secretary for War, and half a year later Secretary of State for Foreign Affairs. In addition to all this, he is one of the largest landowners in the kingdom, owns about 150,000 acres and half a dozen estates, and is an indefatigable entertainer. That is a not inconsiderable record of activity and success, and a singular quality of some sort—a unique talent for versatility, an extraordinary power of application, or some quite uncommon capacity. But I do not imagine to Lord Lansdowne in saying that he is in no way out of the ordinary run of men. True, he has filled all those dazzling offices; true that, if there be such a thing as responsibility in politics nowadays, then he has been respon-

sible at one time or another for the military honor of the British Empire, and the good government of some 150,000,000 people. But, like Lord Bathurst, he has contrived to combine the occupancy of these positions and the wielding of this immense authority "with the most complete obscurity." There only has the veil been lifted—and that was to show the blistering tragedy of his failure at the War Office.

England is one of the most difficult of the Old-World countries for a man to rise in by his own exertions. It is overcrowded to an extent hardly to be realized by Americans who have not gained some corner of the curtain themselves and seen with their own eyes the really ghastly struggle that is being fought out behind the smiling, comfortably external of English life. Congestion and convention combine to make the young man without wealth or industrial friends work out the best part of his life in a barren apprenticeship that to an outsider looks little more attractive than mining in Siberia. On the other hand, and as a natural corollary, those who are born into an estate or a big business in England, who inherit a title and an estate or a big business from their father, lead what is perhaps the easiest and most delightful existence to be met with in Europe. The path is smoothed out for them; success is almost a birthright, and only by some glaring scandal can they be ousted from their heritage. Lord Lansdowne, then, started with the supreme initial advantage of "being the son of his father." It is an old and distinguished family. The Fitzmaurices trace their descent from the Irish Earls of Kerry, whose title runs back to 1181. Lord Lansdowne, having lost his father in boyhood, came into the title, estates, and a seat in the House of Lords on his twenty-first birthday. Three years later he added vastly to his wealth and the strength of his social influence by marrying the eldest daughter of the Duke of Devonshire, a handsome, dazzling, ambitious woman who has been the misstep of her husband's political fortunes.

India prefers a Viceroy . . . who will not attempt to learn anything of the people except at third or fourth hand

nothing or very little that was quite fitting for the occasion when in his thirty-eighth year he went to Canada as Governor-General. Little is expected from a Governor-General beyond the capacity to appear in govern. Lord Lansdowne had that capacity. Of capacity for serious work, of initiative, of anything in the nature of a policy, he gave no sign. And when he went to India it was just the same. He was an ideal Viceroy from the bureaucratic point of view. He never interfered, always did as he was told, and had none of the reforming interest that Lord Curzon, to the insupportable benefit of India and the equally incalculable blenny of officialdom, is so full of. Social and official India prefers a "manageable" Viceroy, without personality or initiative, one who will contentedly remain a gold-dust dummy and figurehead, hide himself in Simla right round the clock, and not attempt to learn anything of the people except at third or fourth hand. Lord Lansdowne answered to this description admirably. Of all the big problems that Lord Curzon is now tackling so brilliantly, Lord Lansdowne only curiously dealt with straight ones.

Was this the sort of career to entitle a man on his return to England to the Secretaryship of War? Lord Lansdowne apparently thought it was. No you get lifted mediocrity installed in the most sedulous and most vital of government posts, and failing disastrously to meet its requirements.

*Shooting over a Row by means of the Hyposcope—The Marksman is invisible to the Target*

*The Hyposcope attached to the Rifle. A is the Sight through which the Marksman gets his Bearings*

*Firing over a Fence which entirely conceals the Body of the Marksman*

### **ANOTHER DEADLY INVENTION FOR MODERN WARFARE**

*A newly invented rifle attachment, the hyposcope, has made it possible for the marksmen of a firing party to annihilate an enemy without offering any part of their bodies as a mark for the return fire. The hyposcope is an arrangement of reflecting lenses attached to the barrel of the gun. The marksman conceals himself behind a boulder or in a trench, and by looking into one of the lenses can see the target and get his sight, while presenting as a mark only the end of a gun-barrel*

# Books and Bookmen

By James MacArthur

I SHALL be curious to see what happens to *The Vagabond*, by Mr. Frederick Palmer, the author whose name is new to me, although the publisher's note says that he is "distinguished as a correspondent, and known to many readers by a series of strong short stories. The flags of the *Steeple*." One admission has time enough to go back to the time of its appearance, but after reading *The Vagabond* I intend to read those "strong" with quiet firm, all through the stress of the Vagabond's struggle to achieve his end—even in the grim scenes of the Civil War, which bear the impress of fresh treatment—the writer has a twinkle of sentiment in his eye, and a humorous delight in conflict. *The Vagabond* deserves, as it will surely enjoy, a very wide popularity.

Another book that has moved me deeply is a first novel by a new writer. At least the author of *The Law of Life* is new in the world of books. Miss Anna McClure Sholl has written many short stories for the magazines and contributed essays and verses here and there—so the publishers state—but they have not been of a kind to fasten her name in my memory. Her novel, therefore, comes as an agreeable surprise. It is a book to make a deep impression. Written with sincerity and deep feeling, it announces its problem story by using Cornell University, thinly disguised as Hallworth, as a background. Miss Sholl has drawn her inspiration from a battle-ground of educational ideals with which she is familiar. Dr. Hiram Corson, who has occupied the chair of English literature at Cornell for over thirty years, is her uncle, and she was herself a student in the university. *The Law of Life* as a novel of Cornell is important inasmuch as it reflects the faculty and post-graduate phases of university life as they have perhaps never been depicted in our fiction. The reference to the Hon. Andrew D. White, so closely identified with Cornell, and who in its early years was its president, is of interest, and the régime and ideals of those unsullied days are brought out in striking contrast with the alleged truckling to the masses of unrighteousness and utilitarian compromise of later days. Other members of the faculty may be discerned in the characters of *The Law of Life*, but this is of minor importance.

Somewhere between the Alleghenies and the Atlantic—the Vagabond spent a dreamy boyhood in the open, getting his grasp on the universe, in spite of the stirring incidents which crowd the latter half of the book, the maid returns with keenest pleasure to those early chapters in which Billy Williams passed a difficult boyhood with his stern, woman-hating father, unaided by a woman's care, and thrown upon Tim Hooker, a furnished, for the sake of companionship, and upon his dreams from which to distill strength of purpose for the future. And the romance of the story grows out of the stuff of his dreams. In an old geography, by way of being led by a woodcut of a famous peak. Thenceforth his greatest ambition was to climb a mountain. Some traveller's tale about the wealth of the Uralis enlarged his ambition. He must find a mine in his mountain. A chance meeting with a strange little girl, who came and went like a vision, made his dream complete—a mountain, a mine, and a girl! "Such imagines" in an evile boy bound to be happy though in a nook, would not be worth our mention had not his determination and the ardor of his idealism and his adherence to first impressions made him steadfast. His friendship for Tim was not for all these and all moods. His fancy for the girl was not a passing one. Hence the story. Not an impossible story, though a rare one, and all the better for that. If there are men made of such stuff as the Vagabond who can keep steadfast to the dreams of their youth, then this story done of the boy who ran off as an excursion into the world to make his dream come true, the Vagabond is built on heroic lines. In fact, what I like exceedingly about *The Vagabond* is its wholesome vigor and virility; the idealism is stubbornly held down to the trouble-fakability of human nature as well as keyed to the noble ends of the tale. To be sure, the Vagabond is built on heroic lines that don't tally with the requisition of those critics who say that what we want in fiction today is human nature as it is. We can sympathize with the poignant reality of Valérie—the "girl"—when she exclaims, "You don't know—that's the worst of you!" But I am not so sure that there are no Vagabonds in America today; and

If there were not, I am not so sure that the American people, lulled as they are with idealism, do not like to see the triumph of ideals in fiction. Especially when as in the Vagabond that strain of idealism is the flower in a sturdy stock born in the hardy soil of his native land which, East or West, North or South, has raised so many strong sons to be the flower of the nation. Another quality to be found in *The Vagabond*—and without it failure comes frequently in many excellent novels—is power. The power to bear the impress of fresh treatment—the writer has a twinkle of sentiment in his eye, and a humorous delight in conflict. *The Vagabond* deserves, as it will surely enjoy, a very wide popularity.

Another book that has moved me deeply is a first novel by a new writer. At least the author of *The Law of Life* is new in the world of books. Miss Anna McClure Sholl has written many short stories for the magazines and contributed essays and verses here and there—so the publishers state—but they have not been of a kind to fasten her name in my memory. Her novel, therefore, comes as an agreeable surprise. It is a book to make a deep impression. Written with sincerity and deep feeling, it announces its problem story by using Cornell University, thinly disguised as Hallworth, as a background. Miss Sholl has drawn her inspiration from a battle-ground of educational ideals with which she is familiar. Dr. Hiram Corson, who has occupied the chair of English literature at Cornell for over thirty years, is her uncle, and she was herself a student in the university. *The Law of Life* as a novel of Cornell is important inasmuch as it reflects the faculty and post-graduate phases of university life as they have perhaps never been depicted in our fiction. The reference to the Hon. Andrew D. White, so closely identified with Cornell, and who in its early years was its president, is of interest, and the régime and ideals of those unsullied days are brought out in striking contrast with the alleged truckling to the masses of unrighteousness and utilitarian compromise of later days. Other members of the faculty may be discerned in the characters of *The Law of Life*, but this is of minor importance.

Miss Anna McClure Sholl  
Author of *The Law of Life*

After all, the story, like the play, is the thing, and it is because of the tale and not the topography that *The Law of Life* will be read with deep interest by those to whom its theme is a subject of curiosity or sympathetic attraction. I have referred to it as a problem story. It is a variation on the eternal triangle of love frustrated by the marriage bond. Barbara Dale comes to Cornell to be the ward of Dr. Fredrick, a gentle, eccentric, austere mathematical professor. The death of her uncle, with whom she has lived the life of a rebebe, has left her alone in the world, and she enters Cornell, still dreaming in her unawakened dream of ideas and abstractions, and knowing little of the world of men and women. Very naturally she drifts into marriage with the professor of mathematics. The university wonders and shakes its head, but with a shrug accepts the situation. Not so Richard Waring, who has been attracted to Barbara from the first. He is thrown much into Barbara's company and friendship, and the triangle comes. The banner of white ideals floats over their friendship, but "lovin' almighty justification" clamors and threatens to pull down the flag. The cry of the heart drowns the call of the spirit, and accepts this very modern Fools and Franceses on the grounds of surrender which nearly ends in moral equivocation. Miss Sholl strikes the emotional note and sustains the pitch through the long tension of struggle and surrender and ultimate spiritual conquest with a graphic power that compels interest in the drama of these two souls. And if few speak of it, the ending of *The Choice* is fair, Miss Sholl's novel may find a wider acceptance and justification than appears. No novel of education has been written that can compare with *The Law of Life* since *A Student's Life* played on the heartstrings of the non-sympathetic reader some seven years ago.

### WHERE THE SEALSKINS COME FROM

The photograph shows a seal-killing expedition on one of the Pribilof Islands, off the coast of Alaska. The men are attacked with clubs and helped up until they can be thrown and the fish removed. The Alaskan Eskimos have afforded to the post the richest and most extensive fur-seal fishing in the world, but slight changes of the animals has almost destroyed the industry in Alaskan waters.

## THE NEW BRIDGE SYSTEM

The New York Department of Bridges is considering a comprehensive plan for extending the city's transportation bridges. The main feature of the plan is to connect the Brooklyn Bridge by loops with the new Manhattan, Williamsburg Bridge will be replaced by one consisting of upper and lower decks for trolleys and trains, and a moving platform.

Drawn by Vernon Howe Bailey

## EM IN NEW YORK CITY

facilities by a system of surface, subway, and elevated railroads connecting the present and proposed East River  
 Williamsburg, and Blackwells Island bridges, as shown in the drawing. The present railroad system of the Brooklyn  
 will cross over the Williamsburg Bridge through Delancey Street, the Bowery, and Park Row to Nassau Street

# Sam Parks: Graft and Blackmailer

THE EXTRAORDINARY LINK OF A LEADER WHO IS MORE DANGEROUS TO LABOR THAN TO THE EMPLOYERS HE OPPOSES.—THE SECRET OF HIS POWER.—THE SUPPORT OF A "STRONG-ARM" GANG TO CONTROL THE MEN OF HIS OWN UNION.—THE LABOR SITUATION INDICATED ABOUT BY HIS METHODS AND ITS SOLUTION.—STATEMENTS BY MEN PROMINENT IN CAPITAL AND LABOR REGARDING THE PRESENT SITUATION.

## Labor

### Sam Parks says:

*I am going back to New York, and will strike everything that opposes me. Wherever a holding engineer is employed under the employers' arbitration agreement I will strike that job. I will strike the East River Bridge, and will pull out every man of the American Bridge Company. I will show them that old Sam has not forgotten how to fight, and, I tell you, I am just beginning.*

### James J. Daily, of the Dock Builders' Union, says:

*The victory of Parks in Kansas City means a continuance of the fight against arbitration.*

### President Buchanan, of the Bridge and Structural Iron-workers' Union, says:

*I will make one mighty effort to save the International. I cannot believe that the honest mind of men of the construction will let a man like Parks rule them.*

## Capital

### Charles L. Eiditz, President of the Building Trades Employers' Association, says:

*If the expected change in the labor situation does not come about by the conclusion and implementation of Sam Parks, the loss to New York city employers will be not far from \$68,000,000.*

### William W. Kerly, Manager of the United States Mortar Supply Company, says:

*The present situation affords every reason for capital not to invest. I believe that almost no building will be done in this city for a year or more. But for Parks this present season would have been a great one. I believe that more than fifty per cent. of the workmen will be unemployed this winter.*

### Charles M. Schwab says:

*Labor's exorbitant demands have done more than any other one thing to bring about this setback. This is especially true of the bridge trade.*

## By District-Attorney Jerome

"Within six weeks Sam Parks and the most dangerous elements of his gang of grafters will again be doing time in Sing Sing."—First statement since Parks's release made by District-Attorney Jerome to a representative of HARPER'S WEEKLY.

## By Henry Harrison Lewis

WHEN District-Attorney Jerome said to me in his office on the first day of this month that within six weeks he would have Sam Parks again doing time in Sing Sing he offered the only available solution of a remarkable and extremely serious labor question. "I can safely say that within six weeks we will have the dangerous element in that gang of grafters up the river. We will send Foley up first. Then we will follow with McCarthy. That chap, you know, is about as dangerous as Parks himself. In fact, I really think he has more brains than Parks, and that he has originated the biggest schemes. He is at the head of the 'strong-arm' gang, and is more feared by the devout labor element than the leader, with McCarthy and Foley out of the way we will start Parks doing his bit, and then I think the good men on both sides will come to order."

Before seeing Mr. Jerome I spent some time with representative men of the Employers' Association, with Judge McConnell of the Fuller Construction Company, and with others representing both sides of the subject. The facts learned from these interviews are:

First, that the citizens of New York do not appreciate the extreme gravity of the labor situation in their city.

Second, that Sam Parks is a distinct menace to the peace and welfare and only of capital as represented by the building interests, but of the laboring classes.

Third, that sedata before in the history of this country has such a high-handed disregard of the law been shown as that exhibited by Sam Parks and his gang of thugs since his spectacular uprising last May.

Fourth, that the shameful truth must be confessed that relief can come only from the capture and impounding of Sam Parks as one would a mad dog.

The situation can be viewed from four standpoints, namely: that of the Employers' Association, that of the independent dealers, such as the Fuller Construction Company, that of the devout element in the labor organizations, and that of the vicious element represented by Parks.

From all indications the Employers' Association and the devout element are in sympathy. The status of the other two is not so

clear, although I have repeatedly been told that a certain lack exists or did exist between the Fuller Construction Company and Sam Parks. The charge that Parks was imported from Chicago by the Fuller Company has been denied by Judge McConnell, as representative of the company, which closes that particular incident. It has little bearing on the present situation.

The Employers' Association, through one of its officials, states that it is at present working a force equal to sixty per cent. of its former force, and that Samuel Parks can no longer be considered a factor, that, in fact, his power to cause the association trouble is gone. Notwithstanding this statement, I was also given to understand that Sam Parks out of jail meant a tie-up in the building trade this winter, and consequently a serious financial loss to the building industry. By the president of the association this loss was estimated at \$69,000,000; by the vice-president at \$35,000,000.

The fact that Parks did not succeed in having his candidate, Hugh F. Donnelly, elected to the presidency of the International Association of Bridge and Structural Iron-workers at the convention recently held at Kansas City does not mean that he has lost power to do evil. He retains his hold on Local Union No. 2, which has a membership of almost four thousand men, and through affiliations he is able to influence a great many more. I was told at the Employers' Association that Sam Parks controls thirty thousand men, and can dictate to these any policy of graft he chooses.

The cause of the present deplorable labor situation is simple. It is the result of an unprecedented condition of prosperity in the building business, and the appearance of a man unscrupulous enough and of sufficient power to turn the situation in his own account.

It is not necessary to recite the details of the differences between the old board of Walking Delegates and the employers. There was bad blood between them, and when Parks began his systematic campaign of grafting by buying blackmail on the builders, the latter were forced by the presence of a common enemy to organize. Up to the time of this organization there had been little in common between the builders of the city. Mr.

**Two Scenes from Stephen Phillips's "Ulysses," now playing at the Garden Theatre**

*The photograph on the right shows the meeting between "Ulysses" and his son "Telemachus," also the former's scene to Ithaca from "Calypso's" Isle. In the scene to the left "Ulysses" greets his wife "Penelope," also he has put her captors to flight with a shot from his great bow*

**Weber and Fields's new Piece**

*"Whoop-Dee-Do" is an re-enactment of the familiar Weber-Fields act. It has no plot, but much of diverting incident and humor. What action there is takes place in Paris, where Weber and Fields turn up as two would-be hotel partners, advertised for by Louis Maun, a highway innkeeper*

**"ULYSSES" AND "WHOO-P-DEE-DO"**

**MISS MAUD FEALY IN "HEARTS COURAGEOUS"**

*Miss Fealy is playing at the Broadway Theatre in a dramatization of Hattie Erskine Rice's novel "Hearts Courageous." Miss Fealy has the role of "Anne Tillson," an American girl of the Revolutionary period, with whom the "Marquis de la Romerie" (Mr. Orion Johnson) is in love. The "Marquis" has come to America charged with an offer of aid to the Colonists. He is thrown into prison by the Tories, but his purpose is finally effected through the help and love of "Anne."*

*The Artillery Corps in Action in the Field*

### **BULGARIAN REVOLUTIONISTS IN THE FIELD**

*In a recent number of the "Worker" two photographs were printed showing how the Bulgarian Military Academy trains revolutionists for the Macedonian cause. The Bulgarian army is now mobilized, and ready for the outbreak which may at any time precipitate a war with Turkey. The photographs show the infantry and artillery troops in action in the field.*

**A NEW NOTE In The EUROPEAN CONCERT**  
 Emperor William & King Edward Greatly Enamoured of Ragtime (The Press)  
 Drawn By Albert Levering

William "Vo's der madder een det et opvornal mask! Vagner, Gounod, Verdi! Niner anydigs but him, him, iddle, iddle, him! Go mit me det fiddle!"  
 Eddy: "I say, beauty old Vagner!"

William: "Ah, someone hat took a card to us. Ve will see dem. Des Americans as a gross, see it?"  
 Eddy: "I say, now, jolly old Americans!"

William: "Ragtime? Vach is ragtime—something to eat, no?"  
 Eddy: "I say, jolly old ragtime!"

William: "Umh! Eddy, dat's der worst finest music yet! I efer som pover myself, you."  
 Eddy: "O-o-o! But I say, ripping old ragtime!"

William: "Such a democret, such military walking!"  
 Eddy: "Good old walking!"

William: "Dat cumbaline—so make it so! How you say—no it do people?"  
 Eddy: "Jolly old—no, no!"

# Correspondence

AS TO FOLK

PUBLISHED MONDAY, July 15, 1901.

To the Editor of Harper's Weekly:

Sir,—Under the head of "Comment," those splendid state papers that appear weekly in HARPER'S, in discussing the admirability of Joseph W. Folk as Democratic Secretary of his State, you raise two objections, one was, that in all probability he could not get the endorsement of his State in the national convention. Considering the quality of statements (?) who now control the Democratic party of Missouri, this would be, in his favor. Another objection you urged, that his State was certain to go Democratic in any event; it would be better for the Democrats to take their candidate from a close or doubtful State; this argument might have been effective in the days of mail-coaches and Conestoga wagons, but, in the in the days of mail-coaches and proper feeling between the States, days of swift intercourse, whether the country do not care a whit where a man hails from so long as he is the man they want; it would not make a bit of difference whether it was Vermont, or a Republican in Texas. It's the man. The politicians, of course, want it to appear otherwise. So-called favorite sons find that is about their only chance for the lightning stroke, that they live in a close State and they are indispensable for the success of the ticket; that is why the impossible Beveridge is mentioned as a running-mate for Roosevelt. Not one voter in a thousand cares whether the Republican party takes a man from Indiana or New York, providing he could take President Roosevelt's place in case of a vacancy.

Mr. Folk has been mentioned in Mr. Bryan's *Commoner* as worthy of the Presidency. That in itself is a great point in Mr. Folk's favor. No one can be elected on the Democratic ticket who was hostile to Mr. Bryan in 1900 or 1900, that might as well be recognized first as last.

The more one learns about Mr. Folk the greater he grows, from positive obscurity of a couple of years ago his name is now known in every "nook and cranny" of this big country, because he has accomplished the seemingly impossible, he has pacified, single-handed and alone, an American municipality; his latest utterance breathes forth a spirit that is most refreshing than comes to you from the broad Atlantic. He says:

"The greatest enemies of the Republic to-day are the glvers and false prophets."  
"The official who would betray his trust would sell his country if he could."

"No State or nation can be injured by getting rid of physical or moral evil."

"No more serious question confronts the American people than the eradication of bribery. Other problems concern the factions of government, while this strikes at the foundation of the government itself. Other offenses violate the law, while bribery poisons the very foundation of law."

Mr. Folk is quite right, bribery is the greatest foe to American institutions that exists to-day. Without bribery, Ohio and Montana would have Senators bearing different names from what they bear now, not to mention a few about Pennsylvania.

Hurrah for Folk! I am, sir, RICHMOND W. JENNINGS.

## A SOUTHERN WOMAN'S VIEW

SAN ANTONIO, TEXAS, September 27, 1901.

To the Editor of Harper's Weekly:

Sir,—In the *Darkness* for August 5 is a letter from a Southern correspondent, with comments by the editor, from which I quote: "No white woman dares to travel the public highway alone; yet say negro woman can travel in absolute safety, on foot or otherwise, the highways from the Potomac to Texas. . . . If an uprising against lynching, it is also appropriate that there should be an uprising in favor of our white women. They are entitled to go unattended. Why should they be debarred from travel on the king's highway? Why should they not be accorded the liberty and privileges of a negro woman? Why should a farmer's wife sit in fear at her window, if her husband chanced to be in the field?" The editor adds: "It may be that this letter exaggerates the fears; it may be that the fears exaggerate the dangers. But our first duty is to remove these dangers and allay these fears."

I am a farmer's wife, and I wish to say that neither the dangers nor the fears are exaggerated. I literally "sit in fear" when my husband is in the field. My pistol is always loaded and lying in a convenient place, for, when alone in the house, I feel that I must rely on my rifle. I do not dare to stray alone to the neighboring town, nor do any of my women neighbors. It is hardly considered safe for ten women to drive together, though they are often obliged to do so. Not long ago two women were driving from town when a negro man cut off the brush by the road, and stopping their horse, demanded that they give him the groceries they had in the back of the carriage, adding a threat which so frightened them that they were glad to give him the groceries and escape without worse harm. I have known of five cases of assault of white women by negro men in this vicinity, and in no case has the negro been lynched or even pursued by a mob, in spite of dragging justice in delayed trial and conviction. I cannot visit my neighbors several miles away, because I do not dare go alone and my husband is too busy to accompany me. In building our dwelling-house we built it on the extreme edge of the farm, in order that it might be nearer the house of a neighbor upon whom I could call for protection in the absence of my husband. Earlier down the road I have a negro family—respectable, law-abiding citizens, and respected by their white neighbors. I notice that the negro woman drives

back and forth to town alone; she does not need a male protector. I notice that Northerners who come here to live quickly recognize the necessity for and accept the many cases of assault which we do not take; for, I take it, even the strongest partisan for the negro does not wish to expose his wife or daughter to the risk of rape.

Northern papers chronicle and comment upon the few cases of lynching, but make no mention of the many cases of assault when the negro is not lynched, and in some cases escapes punishment altogether. I am not advocating lynching—nothing could be more horrible. I am simply stating facts, hoping that in time a remedy may be found. I am, sir, FANNING WYKE.

## SEMITIC INSTINCTS

CLEVELAND, OHIO, September 4, 1901.

To the Editor of Harper's Weekly:

Sir,—In the article, "The Marquis of Salisbury," which appears in your issue of September 6, I find a statement to me unmistakable by reason of its absolute inconsistency with historical truth. "Disraeli, in obedience to his Semitic instincts, was being again dragging England into a war for the maintenance of the integrity and independence of the Ottoman Empire." Why "in obedience to his Semitic instincts?" The Semitic nations have never been antagonistic for their warlike qualities. There has never been an instinct of territorial aggrandizement among peoples of Semitic race. By their very environment they have been compelled to become defenders rather than aggressors. Semitic history, if such there be, cannot record a single instance of a forced war, waged with the motives and for the ends you charge. I am, sir, ALFRED A. BRESCHER.

[It was not intended to give the idea that Disraeli's "Semitic instincts" were warlike, but rather that he had qualities of a fighting man, but a dreamer who meant to make his dreams come true.—EDITOR.]

## THE HOUSE-TAX AGITATION IN JAPAN

TOYO, JAPAN, September 1, 1901.

To the Editor of Harper's Weekly:

Sir,—Seeing how utterly false the representations of the foreign house-tax question in Japan has become in England, it has occurred to me that the American public may likewise be imposed upon.

You, of course, know that this question has now become one of international debate and is in the hands of the Hague court of arbitration. A few days ago an English paper made the representation that foreigners and Japanese were living side by side in this country, and under like conditions; and yet the foreigners refused to pay their house tax, while the Japanese paid. This is a gross perversion of existing facts, from simple ignorance.

The plain condition of the case is as follows: Some forty years ago, by treaty with Western powers, Japan sold to foreigners in perpetual lease certain tracts of land, fixing an annual tax of ten dollars of American cents per every thirty-six square feet. These were the Concession districts. On this land the foreigners lived and carried on their business.

Three years ago, when the new treaties went into effect and the legal administration of the Concessions passed into the hands of the Japanese, the foreigners, for the first time in forty years, were called upon to pay a house tax in addition to the fourteen cents fixed by treaty, notwithstanding the new treaty declared that no new impositions shall be put upon this property.

The quibble is whether the word property in the treaty means the land only or the land and houses also; the Japanese contending for the former, the foreigners for the latter. It is contended by the foreigners that this house tax is unjust.

1. The fourteen cents per thirty-six square feet in the original treaty is more than three times what a Japanese pays on similar land. In fact, more than covers every tax a Japanese citizen pays. The Concession property-holder contends, therefore, that the tax is exorbitant.

2. This fourteen cents covers every expense to which the Japanese government has been put in caring for the foreign Concessions, except in some places where immense public works have been undertaken for the national good.

3. Forty years have passed by, and in all this time not a single intimation has been heard that the treaty did not cover the houses erected on the Concession lots. The Japanese government during this time has apparently acted on the supposition that the treaty covered the houses also, and never made any demand for the tax.

If it held by England, France, and Germany that the word property in the treaties includes the houses, and they have now laid the question before the Hague tribunal, America and the other powers interested have declined to take sides one way or another, though they claim exemption should the decision turn in the favor of the foreigners.

No foreigners living outside the Concession have declined to pay the house tax, since they hold their property under other conditions, and are treated just as Japanese subjects, while the Concession residents are in very different circumstances.

The question, therefore, concerns only foreign residents inside the Concessions; and the decision of the court of arbitration means much to them. If it goes against them, they will be subjected to most unusual, and, consequently, unjust taxation.

I am, sir,

E. SWANSON.

Editor *The Post*.

## How we Depend on the Tropics

The taste of the people of the United States for tropical products seems to be increasing at a very rapid rate. It is stated that the value of the tropical and subtropical products brought into this country in the past year was over 400 million dollars. In 1890 the value of this class of merchandise imported was only 200 million dollars; in 1875, 200 millions; and in 1870, 140 millions. Thus the value of the tropical products brought into the country in the year just ended was about three times as much as in 1870, twice as much as in 1875, and one-third more than in 1892.

EVEN these figures do not show the real increase, because of the great reduction in prices of many of the articles forming this huge total. The value of the sugar of tropical production brought into the country in the past year, for instance, was 104 million dollars, as against 79 million dollars in 1870; but the number of pounds brought in from the tropics last year was more than four times as great as in 1870. The total number of pounds of tropical sugar brought into the country last year was over five billions.

### ADVERTISEMENTS

# Pears'

We perspire a pint a day without knowing it; ought to; if not, there's trouble ahead. The obstructed skin becomes sallow or breaks out in pimples. The trouble goes deeper, but this is trouble enough.

If you use Pears' Soap, no matter how often, the skin is clear and soft and open and clear.

Sold all over the world.

## There is no biliousness in old beer

The beer that makes you bilious is what we call a "green beer." It is beer that is marketed too soon — that is insufficiently aged.

We store Schlitz Beer for months in refrigerating rooms, and this fact requires a storage capacity for 425,000 barrels.

We keep it there until it is well fermented. That adds to the cost, of course. That is why some beers are shipped green.

## We are that careful all through

Careful about materials — about cleanliness.

So careful that we filter all the air that touches Schlitz Beer.

And when it is bottled and sealed, we sterilize every bottle.

Your doctor will tell you to drink Schlitz Beer, rather than common beer; and it costs you no more than the common.

Ask for the brewery bottling.

## EXPERIENCED CANVASSERS WANTED

We can give remunerative, dignified employment to men and women in every city and village in this country—even to those who can spare but part of their time. We give four periodicals to work with, each distinctively the best of its class. Experienced canvassers, and all those who wish to increase their incomes, should write at once for what is perhaps the most attractive offer ever made.

HARPER & BROTHERS  
FRANKLIN SQUARE, NEW YORK

# LETTERS OF MARQUE

ISSUED UNDER SEAL OF THE KINGDOM  
OF BOHEMIA TO ESPER INDIAN, ESQ.

BY VAN TASSEL SUTPHEN

## The Adventure of the "Queen of Spades"

I AM very fond of Esper Indian, but there are times when he is positively odd for humana nature. Last week, for instance, when for three days on end we did not exchange a single word, not even at dinner, where the amenities should, always, come on with the walnuts. I grant you that hum-drum wears upon the spirit, that the fetters of the daily road may be a harder thing to get over than even Mr. Bunyan's mill itself, but for a man to surrender himself mind and body to solitary agnosia weakness. Moreover, it was a ridiculous combination of the cards that Indiana invariably set himself to resolve; the chances were at least a hundred to one against the solitaire coming out, and, indeed, I never saw him get it hit once. Under certain curious circumstances, too, but I won't anticipate; let us begin with the beginning of the Adventure of the Queen of Spades. You will remember that there was a midnight letter whose possession had become a matter of supreme importance to a certain Great Prince in Russia. The Countess Golda (sister of the Ninety and Nine Kisses) had been on the point of obtaining the treasure, but the overconfidence of my friend Indolence, coupled with the blunders of a stupid detective, had brought about a premature explosion of the train. To Indiana, apologetic and remorseful, the Countess Golda had confided a single pregnant utterance, "Wait for the third appearance of the Queen of Spades." This was his cue; let him make the most of it if he would repair the mischief that he had unwittingly done.

Now the opera, on the night preceding the Countess's departure for Europe, had been *Tschickowsky's* "Queen of Spades"; the inference was inevitable that here was the first materialization of our mysterious heroine. That same evening we had encountered, at an Eighth Avenue ball, a number whose costume had been designed upon the familiar model of the court-card in question; so much for number two. But Fortune had been almost too kind, and immediately upon this promising beginning she had with drawn her smiles; for upward of a month nothing whatever had happened. As I have said, Indolence played solitaire and I smoked as much as I could. Dull work for all that it was the end of April, the height of the Easter season, and New York was at its gayest. A brilliant show; you and the same old one. Did you ever get a quilt a day for thirty days? Why not for three hundred or three thousand days, supposing that one is really fond of quilts?

For the thirty-third consecutive time the solitaire failed to come out, Indolence gathered the cards, shuffled them with infinite precision, and handed them in to be cut. I did so, Indolence took the pack and fang it into the air; the cards fluttered in all directions and one came sailing straight for my nose. I put up my head and caught it; it was the Queen of Spades.

"Here is the lady for the fateful third time," I remarked, jestingly. But Indolence was serious if not serious. He took the card from me and studied it attentively.

"Rather an interesting face, don't you think?" he said, musingly. "Somewhat Semitic in physiognomy, you notice; that comes from the almond-shaped eyes and the abnormally high arch of the brows. Would you know her in the actual flesh—say on Broadway? Brunette, of course, jet black hair banded à la Merveille over the ears, a little droop at the corners of her mouth. Voilà! the Queen of Spades, let us go out and look for her."

"A proposition," I remarked, judicially, "that savors of the rankest lunacy. And yet, why not? The lady certainly made the advance; it is an equivalent to an irritation to call. Pity she doesn't put her address on her card."

"Hym!" coughed Indolence, deliberately, "that savors of the street-director, with minds open and unprejudiced, and our faith will be rewarded abundantly in due time."

"We will pass over the numbered streets and avenues," continued Indolence. "I am not in the mood for mathematical sol-

itudes, although there is much of virtue in the digit 8, as every adept knows. Names are our quest to-day, as listen to them as they run—Allen, Bleecker, Bayard, Day, Division—now why Division, do you suppose? What was divided and who got the lion's share?"

"A delicate allusion to some eighteenth-century graft," I suggested. "Consult the antiquaries."

"Oh, it's enough for our purpose that the division itself exists; it must lie below the 'barbed wire fence,' somewhere across the line. To speak precisely, Division Street appears to start at Chatham Square, and it runs eastward to Grand Street. We will take the Third Avenue Elevated to Chatham Square, and then ask a policeman. Nothing could be more simple."

Downward the Elevated stairs, Division Street lay right before our eyes and further inquiry was superfluous. Indolence's spirits had risen amazingly. "Why, it's only an elementary exercise," he said, smilingly. "Divide an East Side street by a pack of cards and the quotient is the Queen of Spades; you simply cannot escape from the conclusion. Forward, then."

Now Division Street is something out of the ordinary as downtown thoroughfares go. It is the principal highway to that remote Yiddish corner whose capital is William H. Seward Square, and the entire millinery and feminine tailoring business of the lower East Side is centered at this its upper end. In the one short block from Chatham Square to Market Street there are twenty-seven millinery establishments—count them for yourself!—and with one exception the other shops are devoted to the sale of cloaks and mantles and tailor-made goods. All on the eastward of the street, you notice; there is a dollar and a shilling side in Division Street, just as elsewhere.

Talk of Bond Street and Fifth Avenue! Where will you find twenty-seven millinery shops in an almost unbroken row? What a multiplied vista of delight for feminine eyes—hats, hats, hats as far as the eye can reach. Black hats and white hats; red, blue, and greenery-yellow hats; weird creations so loaded with gump and passementerie as to certainly weigh a pound or more; dainty confections in gauze and feathers; parterres of exotic blooms such as no earthly garden ever bore; hats with bows no 'em and hats with birds on 'em, and hats with beads on 'em; hats that twitter and hats that squeak; hats of holed velvet and hats of pleated corduroy; felt hats, straw hats, chip hats; wide brims and narrow brims; sk-sewed, beribboned, belowed; finally, again, just hats, hats, hats, a phantasmagoria of primary colors and grays and fal-lal-lal-lal pure and simple, before which the masculine brain fairly reels. But the womanly contingents come with a scarcely perceptible flutter; the hat she wants is somewhere here, and it is only a matter of time and patience to find it.

There is always a Mont Blanc to overtop the lesser Alpine summits, a Koblitzer in whose splendor all inferior radiance is extinguished.

Indolence touched my elbow. "Look at that one," he murmured. Now that was a hat. To describe it—but let me first bespeak the indulgence of my feminine readers. I am not an authority upon hats—most distinctly not—and I shall probably display my ignorance with the first word out of my mouth. But what matter; I am simply trying to tell of what these poor mortal eyes have seen.

In effect, then, the foundation of the hat appeared to be a black straw, with a wide straight brim, the trimming being a lim-crackery sort of material whose name for the moment has escaped me. We will cut it *à la mode*, if you don't mind. The principal ornament was a large red apple in wax, pierced by a German-silver arrow, but the really unique feature of the entire creation was the pearl-like fringe that depended from the edge of the brim, a continuous row of four-inch filaments upon which large black beads were closely strung. An overbold device, perhaps, but it certainly caught the eye; there was a lurid suggestion in

those strings of glittering beads that made one think of the Congo and of tontones beating brazenly in the moonlight. A hat that was a hat, as I have previously remarked, and Indiana and I gazed upon it with undivided interest. It is hardly necessary to add that this particular hat had the place of honor in the shop window, it being mounted upon the wicker model of a sleeping lady with flaxen curls and a complexion incomparable. Assuredly, then, the pearl of the collection.

"Le Hernandez," said Indiana, reading the sign over the door. "Spanish Jew. I should say—yes, and the Queen of Spades in persona," he added, in an undertone, for Le Hernandez was standing in the open doorway of the shop and regarding us with a curious haziness of glance.

Now through the summer-time it is the custom of the Division Street modistes to occupy seats placed on the sidewalk; in a business where competition is an strenuous one must be prepared to catch the customer on the spot. Even in winter the larger establishments will keep a seat on duty outside, and the lesser proprietor must, at least, cast an occasional eye to window, if the balance of trade is to be preserved. Undoubtedly Madam Hernandez was taking a purely business observation, and we had chanced to fall within its focus.

The resemblance was indeed striking. There was the luscious hair over the eyes, the slightly drooping mouth, the peculiar upturning of the eyebrow arch—the Queen of Spades in persona, as Indiana had said. And this was her third appearance.

Indiana removed his hat with a sweep. "Madam," he said, with elaborate civility, "it is a beautiful day."

"What of it?" retorted Le Hernandez, ungraciously enough. "Or perhaps the sun isn't shining above Madison Square," she added, sarcastically. A strange voice, this, unusual in quality and abnormally low in pitch.

"I have'n't noticed," said Indiana, with undisturbed good humor. "Alike upon the just and unjust, you know. Now if you will kindly allow me to pass—"

"What do you want in my shop?"

"I desire to purchase that hat," replied Indiana, and pointed to the atrocity in the window.

"It is not for sale."

"I am prepared to pay liberally for what strikes my fancy." He took out a roll of bills.

"The hat is not for sale."

"Madam," said Indiana, with the utmost civility, "are you in this business for your health?"

"I am."

"Oh, in that case—"

"You may come inside; it tires me to be on my feet for so long. To my sorrow I grow stout."

"It is an affliction," murmured Indiana, sympathetically. We followed her within.

The shop was crammed from floor to ceiling with luncheons arranged in three or four rows, and glazed presses, filled with feminine hats and bonnets, lined the walls. Near the window was a small counter, behind which Madam L. Hernandez immobily installed herself in a placid armchair. From this vantage-point she proceeded to inspect us with cool deliberation, fanning herself with the while with a huge palm-leaf. "You wish to buy a hat?" she said, tentatively.

"That one," answered Indiana, stubbornly. "That hat on the model's head."

"Bah! Nonsense. It is fatiguing to look, like children, with pillows in the dark. You want that Russian letter; why not say so?"

"For a full half-minute their eyes met in silent throat and purry; it was to be a duel then, and each was an antagonist to be respected.

"If it is a question of money," said Indiana, shortly.

"It is not."

"Then I must take it where I find it, and so it appears," answered L. Hernandez, placidly. "But you must first find it; eh, my bold young man?"

"Be tranquil, madam—"

"I am tranquil; you are but wasting your time."

"I have it to spend in unlimited quantity; I am a solitary player."

# CADILLAC

Automobile

The Cadillac Six-cylinder at \$750 is the greatest value ever offered in the history of motor cars. No other machine is so strongly built, or has better engine, transmission gear or steering mechanism worthy of comparison. Great speed on the level, wonderful hill climber—the automobile that solves the problem of safe, rapid and pleasant motor travel. Heavy top at \$50 extra, tonneau, practical seats for two motor-homes forward—\$100 extra. Illustrated booklet is sent free.

"Oh, you play *solitaire*; how many variations do you know?"  
 "One hundred and thirty-five."  
 "I can count one hundred and forty-two."  
 "Including the 'Bridge'?"  
 "The famous 'Bridge'? Do you know it, then?"  
 "I learned it from a Polish gentleman in Belgrade."  
 "It is difficult."  
 "Especially so; it may come out once in a hundred times."  
 Madam L. Hernandez produced a pack of cards from underneath the counter. "Will you oblige me, *señor*; I am anxious to see the play."  
 Indiman proceeded with the explanation. It was too intricate for me to follow; I could only understand that, with the *solitaire* properly resolved, the cards should finally divide themselves into four packs, *brides*, respectively, by the ace of clubs, king of diamonds, queen of spades, and leave of hearts. Indiman tried it twice, but the combination would not come out.  
 "We will try it again to-morrow," said Indiman, rising.  
 "With pleasure. Good day, gentlemen; mind the step."  
 As we walked towards Chatham Square a stout man joined us,

a man with one ear noticeably larger than the other. "Mr. Indiman," he began, deferentially.

"What, you, Brownson?"  
 "Yes, sir; I have an assignment on this job from the Central office. I saw you coming out of L. Hernandez's just now. Smooth old bird, ain't it?"

"You see this case!" said Indiman, stopped.

"Yes, sir. You see, the parties concerned finally determined to get it into our hands, and they'd have been enough sight better off if they'd done it in the beginning. Bless you! it's no great shakes of a layout. There's the letter, a slant shot of notes paper written in violet ink on one side only, and we know the party who has it up her sleeve. L. Hernandez—I don't mind saying it, seeing that you're also on it—I'll do the trick within three days, or you can hold my head for a cooked beef dinner."

"Well, good luck to you, Brownson," said Indiman, absently. There was a cob rack here in Chatham Square, and we drove up-town to the Ullmans Club for a late luncheon. While we were waiting for our diet to be prepared Indiman wrote a brief note and had it despatched by messenger; it was addressed, as he showed me, to Madam L. Hernandez. "Divine Stork," I'm not going to have that body upset the apple-cart for a second time," he said, savagely. "Now we will have to wait for at least three days."

This was on Monday; on Friday we presented ourselves again to Madam L. Hernandez. She received us politely, almost graciously; she sat in the great chair behind the counter, engaged in the truly feminine occupation of putting up her hair in curl papers. A pad of stiff white writing paper lay on the counter before her, and from it she tore the strips as she needed them.

"I am tired of these *bandeaux*," she explained, smilingly. "My friends tell me that curls will become me infinitely better."  
 "No doubt," acquiesced Indiman; "but tell me, madam, did you receive my note?"

"I did, *señor*, and I return you a thousand thanks. Ah, how these pigs of detectives have tortured me; you would never believe it. Twice my apartments at the back there, have been entered and ransacked from end to end; I even suffered the indignity of being personally searched by a dreadful newspaper woman who had answered my advertisement for 'Improvers Wanted.' Chloroformed in bed daylight in my own house!"

"But they didn't find the letter?"  
 "I was not here yesterday, *señor*."

"Good!" said Indiman, heartily. "What incredible police-men can be!"

"What, indeed! Behold, *señor*; I show you the ruin wrought by these swine. This way."

L. Hernandez rose, waddled stiffly to the back room, and there opened the door. "There!" she exclaimed, dramatically. Evidently these were the lady's living apartments, a bed-chamber and a smaller room at the left, in which were a gas-range and some other culinary apparatus. It was plain that the intruders had made thorough work in their search. The carpet had been removed and the flooring partially torn up; the walls had been scoured for secret receptacles, the pictures stripped of their backing, and the chairs and bedstead pulled half to pieces. "Not a square inch of anything here they left unprobed by their accursed needles," said L. Hernandez, furiously. "It will take me a month as I am, to get things to rights."

"An outrage," said Indiman, soothingly. "Shall we have a try at crossing the 'Bridge'?" and forthwith they set down to the great *solitaire* with the utmost anxiety. But again it did not come out; the combinations were insoluble.

The next day we paid another visit to L. Hernandez.

"The curl papers do not seem to be very effectual," remarked Indiman, glancing at the familiar smooth bands of hair drawn straight down from the forehead and over the ears.

"Ah, these wretched *bandeaux*!" sighed madam; "they are intricable. I shall have to wear my curl papers by day as well as by night. Excuse me, gentlemen, for a few minutes," and she disappeared into the back room, to shortly reappear with the rebellious *bandeaux* tightly swaddled in a dozen little rolls of twisted paper.

"Again the impossible 'Bridge,'" she said, pouting, and the pair waddled half a dozen times with the problem as of course, unsuccessfully.

On the following day the comedy was repeated.

"*Señor*, my memory is undoubtably failing; I go to repair the omission." Re-enter madam in curl papers and then the "Bridge" as before; do *rapé* for a week or so.

"It seems impossible to get that accursed combination," said Indiman, and he threw down the cards.

Madam L. Hernandez smiled, and there was a little silence.

"Madam," said Indiman.

"You are not treating me fairly. You have allowed those stupid detectives to search your apartments, and I demand as equal privileges."

"You shall have it, *señor*. I am going to make a complaint of the affair at Police Headquarters—perhaps *Señor Thorp* will kindly accompany me?"

"Excellent! I will remain here, and if the letter is within these four walls I shall find it."

"My best wishes, *señor*."

I called a coach; madam arrayed herself in a fur cloak and crowded herself, curl papers and all, with that atrocious fat from the window stick, a grotesque figure of a woman in all conscience. But I had avenged myself for the *solitaire*, and we drove away amid the jeers and laughter of the street crowd, for an hour we returned; Indiman was plaudibly smoking and working on his *solitaire*.

"You were successful, *señor*?"

"No; but I have hopes."

"Ah! Well, good day, gentlemen. Come again."

"Of course there was nothing," said Indiman to me as we drove home. "I even went through every halfpenny."

The squat, ungainly figure had fallen forward upon the counter

ingly. Then she stopped and went white. It was not the knife of her, but the green of space and over it he had pasted a small *carte-de-visite* photograph—that of a man dressed in the coarse uniform of one of the Russian penal settlements, white plainly visible on the right shoulder as the breast of the coat, a small red arrow. With lightning swiftness Indiman leaped forward and twitched the wig from L. Heratole's head; the man himself was there before our eyes. Brownson and his hangers stood at the door, resolvers in hand. But there was no need. The squat, ungainly figure had fallen forward upon the counter, crushing the horrible nightmare of a hat of which I have an extra spoken, and which, quite by chance, as it seemed, had been lying there. Brownson sprang forward and raised the limp body. The red woman apple had been broken into a dozen pieces. Among them lay the fragments of a fragile glass vial, and the smell of almonds was in the air.  
 "Prussic acid," said Brownson, sententiously. "He wasn't the kind to be taken alive."  
 Indiman mechanically turned over the last card; it was the knife of her, and the fastidious silhouette of the "bridge" had been made at last. He slipped the cards into his pocket and rose to go. "Brownson," he said, with a little catch in his voice, "I hadn't thought it would come to this, but it had to be. I suppose, have him put away decently, and send the account to me."  
 "Very good, sir. But ain't it a pity about the letter. However, we can take a good look now, and maybe we'll turn it up yet."  
 "Perhaps so," said Indiman.

"His real name was Grilbyoff, and he was implicated in the famous assassination of Prince Trapsky," said Indiman to me as we sat over our cigars that night. "A desperate fellow, one of the 'Blacks' you know. I picked his picture out in a moment at Police Headquarters, after seeing his reflection in the mirror. I knew it was necessary to surprise him, and so I borrowed the photograph and used it to impersonate the quack optician etc. Just for an instant he lost his nerve, but that was enough."  
 "But as Brownson said, how about the letter?"  
 Indiman drew from his pocket the wig to which the curl papers were still attached. He unrolled one and showed it to me. "I could see that the strip was written in French on one side of the paper and in violet ink. "It will be easy enough to piece it together again," he said. "Plain enough now, isn't it, why L. Heratole raved to all his life after Brownson's men rummaged table-drawers and chair-seats. The letter was safe until the time should come to use it, only it never came."  
 "I suppose you are going abroad?"  
 "I shall sail Thursday."  
 "And you will be gone how long?"  
 "That depends, doesn't it, upon the pleasure of that most gracious lady, the Countess Gile. I may be back by August, and in that case I will make an engagement with you. We will take a ride together on a trolley-car."  
 "Agreed," said I.

Here ends the "Adventure of the Queen of Spades."

**Franklin Pierce and the Orator**

FRANKLIN PIERCE, at the time of his nomination for the Presidency, in 1852, was scarcely known to the public at large. When a well-known orator was addressing a Democratic meeting, The chairman whispered the name of the candidate to him. "Ladies and gentlemen," said he, "I have the honor to announce to you the nomination for President of that great statesman, that illustrious citizen, that noble man whose name no one knows wherever the flag flies—whose name is a household word—whose motto is 'None other'—(turning to the chairman) "what does the dickens do you say his name was?"

## Twenty-five Millions for Goatskins

A new industry is offering itself to the farmers and manufacturers of the United States. The fact that twenty-five million dollars' worth of goatskins are now annually imported into the United States, and that our enterprising manufacturers are now obliged to send half-way around the world for a large share of them, suggests that the farmers of the country have a great opportunity to put a large share of this sum into their own pockets, and that the entire sum may be divided between our producers and manufacturers. Importations of goatskins into the United States now amount to about twenty-five million dollars per annum, and a large share of these are brought from India, China, Arabia, and southeastern Russia. The increasing popularity of certain classes of kid leather for footwear, as well as gloves, has greatly increased the demand for goatskins in the United States within recent years. In 1883 the value of goatskins imported was about four million dollars; by 1900 it had grown to nine millions, by 1906 it was fifteen millions, in 1909 it was twenty-two millions, and in 1905, in round numbers, twenty-five millions. The farmers of the United States are apparently making no effort to reap any part of this golden harvest for themselves. The census of 1909 showed the total number of goats in the United States to be less than two millions in number, and when it is understood that the skins of probably twenty million goats were required to make the twenty-five million dollars' worth imported last year, it would be seen that the supply from the United States could have furnished but a small share of the total consumption. Yet the fact that a large share of our supply of this important import comes from India, China, France, and Mexico suggests that there are large areas in the United States which might produce goats successfully and in sufficiently large numbers to supply the entire home demand.

Supplying Man with Wings

A new flying-machine, with which experiments have recently been made in France, works on the principle of a bird in flight, as shown in the photograph.

## Canine Politics

DURING the contest for the Presidency between Buchanan and Fremont in 1856, a country boy turned up at one of the Fremont meetings with a number of brindle pups, which he offered for sale as "Fremont pups." Some days later, a gentleman who had bought one saw the same boy at a Buchanan meeting selling the same pups, which were, he claimed, of the Buchanan persuasion. "But you told me," objected the purchaser, "that these were Fremont pups." "Yes," returned the boy, "that was before they got their eyes open."

## CRYSTAL Domino SUGAR

A Triumph in Sugar Making!

Sold only in 5 lb. sealed boxes!

"CRYSTAL DOMINO SUGAR" is packed in neat, sealed boxes, and is NEVER sold in bulk. It is packed at the refinery and opened in the household...there is no intermediate handling. Hence, no dirt, no waste, no possible adulteration. It is very pure alike—and every piece speaks like a steady diamond, the result of its perfect crystallization. Consumption is firm, perfect in quality, brilliant in appearance, no sugar made can equal it in preference. When buying this sugar remember that the sealed package bears the design of a "Domino" label, "Domino" brand, the name of "CRYSTAL DOMINO," as well as the name of the manufacturer. You will be pleased the moment you open a box. You will be better pleased when you have tried it in your tea, coffee, etc. It is sold by all Wholesale Grocers, and is manufactured only by HAVEMAYER & ELDER SUGAR REFINERY, NEW YORK.

# BOOKS BY MARY E. WILKINS

## Six Trees

In these etching-like stories of humble people of New England, Miss Mary E. Wilkins has written of the trees near which her people dwell, of the influences of the trees and people upon each other, and has interwoven many amusing or pathetic incidents of daily life with that minute and intelligent art of which she is completely mistress, and in which she has few rivals in any language.

*Illustrated by Broughton. \$1.25*

## The Portion of Labor

The scene of the novel is laid in New England in a manufacturing town, and, with all the peculiarities of Miss Wilkins's method of writing, is a novel which involves a discussion of the relation of labor to capital.

*Illustrated. \$1.50*

## Understudies

While these twelve animal and flower stories have a psychological interest, they are written in the author's clear, concise, and fascinating style.

*Illustrated. \$1.25*

## A New England Nun And Other Stories

"What can we say that will express our sense of the beauty of these stories? So true is their insight into human nature, so deep an feeling, so choice in expression."—*Critic*, New York. *\$1.25*

## The Love of Parson Lord And Other Stories

*Contents*—The Love of Parson Lord; The Tree of Knowledge; Catherine Carr; The Three Old Sisters and the Old Beau; One Good Turn. *Illustrated. \$1.25*

## Giles Corey, Yeoman

*Harper's Black and White Series. Illustrated. 2mo. 50 cts.*

## Pembroke

The *New York Sun* said of it, among other things: "As a picture of New England life and character, as a story of such surpassing interest that he who begins is compelled to finish it, as a work of art without a fault or a deficiency, we cannot see how 'Pembroke' could possibly be improved." *Illustrated. \$1.50*

## Silence, And Other Stories

*Illustrated. \$1.25*

## Jerome: A Poor Man

How are the strong New England types she loves to depict, the various people of a country neighborhood, alert, conventional, niggardly or generous, but vivid and true to our knowledge of such men and women. *Illustrated by A. L. Keller. \$1.50*

## A Humble Romance, And Other Stories

"The pathos of New England life, its intensities of repressed feeling, its homely tragedies, and its tender humors, have never been better told than by Mary E. Wilkins."—*Boston Courier*. *\$1.25*

## Madelon

"I know scarcely any other writer who gives so vivid a sense of life, whose vision is so microscopic and so true."—I. ZANOWILL. *\$1.25*

## Jane Field

A really admirable story of New England character. Full of most delicate and amusing sketches of village life. *Illustrated. \$1.25*

## Evelina's Garden

## COMMENT

The lively interest exhibited all over the United States in the Majority contest in the City of New York bears witness to the importance of the effort that will be produced by the example of the commercial metropolis on the cause of good municipal government. The interest is not due to the assumption that the outcome of the contest will have a material bearing on the question whether the electoral votes of the State of New York shall be given in 1904 to the Republican or to the Democratic candidate for the Presidency. The enormous popularity obtained last year in the City of New York by Mr. Coles, as a candidate for the Governorship, must be accepted as a conclusive proof that honest Democrats will have nothing to lose in 1904 by Mayor Low's re-election. On the contrary, the influence of reputable New York Democrats in the national convention of their party will be sensibly increased by a second defeat of Tammany Hall. The national Democracy has never had any reason to regret ignoring the wishes of that organization. On the contrary, on the only two occasions since the civil war when it has managed to acquire control of the Federal government, it has achieved success by putting forward a candidate who had been furiously assailed by spokesmen of Tammany Hall on the floor of the convention. Tammany Hall, in office or out of office, is as powerless to assure the election of a weak candidate for the Presidency as it is to defeat the election of a strong one.

Democrats of the South, of the West, and of the East will do well to recall the events of 1864 and of 1892 when any attempt is made to convince them that the triumph of their next nominee for the office of Chief Magistrate is in any wise bound up with Colonel McClellan's attainment of the Majority in New York city. The latter's sole hope of beating Mayor Low lies in the dishonest effort of his partisans to confuse the public mind concerning the pivotal issue in the canvass. At the hour when we write, the effort seems destined to be futile. There is not a single clear-sighted and upright Democrat in New York who does not repudiate the assertion made by Colonel McClellan in his speech of acceptance that the public acts of the members of the Low administration have been prompted by a desire to influence the Presidential election next year. Especially is it ridiculous to accuse them of having turned the police force into a weapon of political terrorism for use on election day in 1904. The patent truth is that, since General Greave became Police Commissioner, there has been a merciless extirpation from the Police Department of the infamous practices encouraged under the Tammany régime, the practices of conniving at gambling and of blackmailing vice. Already the police force is relatively clean, and good citizens may reasonably look forward to its complete rehabilitation if a second term of the Low administration is secured. It is almost incredible that Colonel McClellan should fail to recognize the vast improvement in this department of the Low administration; that he should single it out for dispr-

approval reflects no credit on his personal candor and trustworthiness.

Colonel McClellan, in his speech of acceptance, went on to denounce the repudiation of Messrs. Grout and Farnes by the fusionists as a crowning act of inconsistency, which has stamped their professions of non-partisanship with hypocrisy. If the fusionists, he said, had really wanted a non-partisan municipal government, they would have allowed Messrs. Grout and Farnes to remain upon their ticket. Unfortunately for the effect of Colonel McClellan's imputation of partisanship to his opponents, Mr. Grout a few minutes later not only accepted the Tammany nomination for Controller, but went on to pledge his support to McClellan and all the other Tammany nominees. This public confession of his real predilections and intentions has, of course, put an end to the ridiculous purpose at our time entertained by him, the purpose, namely, of appealing to the courts to compel the Citizens' Union and the Republicans to retain his name upon their ballots. Now that Mr. Grout has been constrained to reveal himself in his true colors, he will be distrusted on all sides, and it looks as if he, at least, were certain to be beaten, no matter what may be the result of the contest between Low and McClellan. At the hour when we write, a large majority of the Brooklyn Democrats belonging to the organization headed by Mr. McLaughlin are confirmed in their resolve not to vote for Messrs. Grout and Farnes, who, under the circumstances, should run behind their ticket by tens of thousands of votes.

No more wholesome and bracing incident in political life could be imagined than the contemptuous rebuke at the ballot-box of Grout's wily and double-faced attempt to secure a nomination from two parties irrevocably opposed to one another. It is now plain enough to every one that if Grout had been allowed to remain upon the fusionist ticket he would have been a traitor in the camp. Exposed as his character now is, he is a loss that Tammany Hall would find it hard to carry even if he had not been publicly repudiated by Mr. McLaughlin. We await with interest the announcement of the view which Mr. Edward M. Shepard will take of the situation. We do not see how any clear-headed and sound-hearted man can deny the truth of the avowal made by Mayor Low in his letter of acceptance that he who is not for the welfare of the city as above every other consideration whatever is against it. Mr. Lewis Nixon, in a letter to the Metropolitan Democratic Club, seems distinctly to intimate the opinion that all high-minded Democrats ought to vote against the candidate of Tammany Hall under its present management. What other inference can be drawn from his statement that those who are Democrats from conviction feel that they should stand together at this time, and spare no effort to bring about such a condition that they can say without fear of contradiction that the party machinery, on the Democratic side at least, is not employed for private gain? That he also approves of the repudiation of Grout by Mr. McLaughlin seems evident from his further assertion that it is essential that no one overpowering influence should dominate all the boroughs in the city of New York.

Mr. Grout said at the Hoffman House on Saturday, October 10, that, as between Mr. Low and the "clean and manly candidate" of a party which, "in the past two years, has steadily done so much to clear itself of the faults" which he and others formerly charged against it, he should support McClellan. Mr. Grout omitted to explain what Tammany Hall had done to rehabilitate itself during the last two years. There is no doubt that it has made professions of good intentions, as it made them in the canvass preceding the municipal election of 1901. But what has it done, or for that matter, had the opportunity of doing? Well, it has put on its ticket Messrs. Grout and Farnes, who, previously, had been nominated by the fusionists. Obviously, however, this was a trick in order to rescue from defeat its candidate for Mayor, who would have a vast appointing power. As to McClellan's "cleanness" and "manliness," these are qualifications which were attributed to Mr. Robert Van Wyck before he was elected Mayor, and which, at that time, were not disputed by his political opponents. The question of vital moment to citizens of New York is, not whether the next Mayor has hitherto been looked upon as "clean" and

"manly," or, in other words, as a decent man, but whether he will deem it his duty to make such municipal appointments as shall be dictated to him by his political creators. That is the sole point worth considering, and nobody could put it more sharply than it was put by Mr. Low in the speech made by him in Brooklyn on Saturday, October 10.

The question with which voters have to deal in the present campaign is not, he said, whether this or that candidate has hitherto been regarded as respectable, but whether Tammany Hall is to be suffered to regain control of the great municipality. He was sure that the question would be answered by all honest men according to their conception of the nature and animating motive of Tammany Hall. Several well-known definitions of that body were quoted. George William Curtis once defined Tammany Hall as an "organized appetit." Mr. Groot described it two years ago as "a stench in the nostrils" and a "financial syndicate." It was not, Mr. Groot said, a "political party" at all, but a "mere business investment"; a combine into which some people put money and put time, in order that they may get more money out of it. Mr. Croker avowed the animating motive of Tammany Hall when he defined his own object in politics to be "to work for his own pocket all the time." Mr. Low suggested that Tammany could scarcely be assumed to have changed its nature because Mr. Croker is living off its profits in England, or because Mr. Murphy has transferred his activities from the Dock Board to Fourteenth Street. Of course Tammany is the same self-seeking organization that it always has been, bent on getting rich at the public expense. Mr. Low was right, moreover, in asserting that at this juncture the Greater New York is confronted with a graver danger than it ever before encountered; for, if Mr. Murphy's avowed determination to Tammanize Brooklyn shall be carried out, one of the chief safeguards of municipal safety will have been demolished, and the disgraces of the past will pale before those that shall stain the future.

Mr. Low sees, and he made his auditors in Brooklyn recognize, that Colonel McClellan's personal character offers no guarantee of security. It is precisely Mr. McClellan's narrow conception of loyalty, his conception of obligation to the nominating power, that constitutes the most perilous element in the existing situation. It was just such a conception of loyalty to his political creator that proved ruinous to Mayor Van Wyck's reputation and calamitous to the city of New York. How far Mr. McClellan's sense of obligation would be likely to carry him hereafter may be measured by the extent to which it has carried him already. Mr. Low reminds us that two years ago, when the city was horror-struck at the infamies engendered or fostered under the Van Wyck administration, Mr. McClellan could find in his "clean and manly" heart to say: "We meet here to-night to endorse the Democratic administration that has been provided over so ably and so successfully by that unwavering and fearless Democrat, Robert A. Van Wyck. We have no apologies to offer. We have nothing for which to apologize. We have done well. Ours is the credit, and ours the honor." Is it not obvious that the nomination this year of the man who could make such a speech as that is a challenge flung in the face of decent Democrats by Tammany Hall? It amounts, as Mayor Low well says, to a demand that clean and upright citizens shall admit to the red-light district, with all its horrors, was something to be proud of; that the conversion of the police force from an instrument the object of which is to enforce the law, into an organization for the systematic sale of law, was a thing to be commended; and that, in general, the mercenary spirit which breeds dishonesty in the public service is a spirit to be nurtured and sustained by public approval, instead of being visited with the severest condemnation.

It is no time to be mealy-mouthed or to mince matters in speaking of the amazing presumption exhibited by Mr. McClellan in seeking the Mayoralty of New York after his defiant declaration that no apology was needed for the Van Wyck administration. Mr. Low is perfectly right in saying that no nomination within the range of possibility, unless it had been the re-nomination of Mayor Van Wyck himself, could have raised the issue between good and bad municipal govern-

ment so sharply and unmistakably as it is raised by the nomination of the young man who could bring himself to utter the words that we have quoted above. To those supporters of Mr. McClellan who talk about Tammany Hall's ability to regenerate itself, and who take Mr. Tilden's omeu to vain, Mr. Low concedes that Mr. Tilden threw himself with all his power into the effort to purge Tammany Hall of Tweed and his iniquities; but he adds that he never heard that, two years after the overthrow of Tweed, Mr. Tilden lent his support to the election of a Mayor who had brazenly said of the Tweed régime that the Democracy had nothing to apologize for, but that, on the contrary, all the credit of that infamous régime was theirs.

According to a telegram from Washington, Senator Foraker has told the President that the Republicans are certain of overwhelming success at the approaching election in Ohio. Colonel Herrick, the Republican candidate for Governor, will have, he said, anywhere from 60,000 to 100,000 majority, and the Legislature will be Republican on joint ballot by from thirty-one to forty-two votes, thus insuring the return of Mr. Hanna to the United States Senate. It is difficult to reconcile this profession of confidence with the Macedonian cry for help sent forth by Mr. Hanna's managers to leading Republicans all over the Union. Not only a number of United States Senators, but several members of the cabinet, have agreed to stump the State, and on Friday, October 9, Secretary-of-the-Treasury Shaw made the first speech of his Ohio tour. Mayor Johnson, the Democratic nominee for the Governorship, and Mr. John H. Clarke, the Democratic candidate for Mr. Hanna's seat in the United States Senate, will have an easy time of it if they have no more effective opposition to cope with than that presented in the free-trade bogie put forward by Mr. Shaw. As a matter of fact, the voters of Ohio are particularly well informed, and they are likely to resent the imputation that they are densely ignorant of recent political history, an imputation involved in the Secretary's assertion that the Democracy propose to throw our commercial doors wide open for the free importation of all the products of foreign labor.

Mr. Shaw says that the Democrats urge that if the American people will but allow Europe to clothe them and to furnish them with glass, earthenware, hardware, steel rails, structural iron, and everything else produced in the United States, they will thus secure a wonderful export trade. We shall be obliged to the Secretary of the Treasury if he will point us to any proof that the Democracy demand a tariff for revenue only. No such purpose was embodied in the Wilson bill, even as originally framed, and Mr. Cleveland, in the famous message which has been supposed to have impaired his prospects in 1888, expressly disclaimed any purpose of destroying such American industries as has been built up by protection and as still needed its fostering influence. We should have said that if anything is clear to American voters not willfully blind, it is the present attitude of the great majority of Democratic leaders toward the tariff. That attitude is limited to three demands:—first, that the tariff shall be lowered so as to prevent the harmful accumulation of surplus customs revenue in the vaults of the Federal Treasury; secondly, that the tariff shall be reduced as regards all trust products which can be and are sold abroad more cheaply than they are sold to American consumers; thirdly, that the reciprocity clauses of the McKinley act shall be promptly turned to full account, on the ground that otherwise the intention of their framers will be set at naught and American consumers defrauded. These fiscal reforms are practicable, and they constitute about all that the people have any chance of obtaining so long as the Republicans retain a great preponderance in the United States Senate. The notion that at this time of day the Democrats of the country are demanding unlimited free trade is preposterous, and Mr. Shaw must know it. The fact that he should think it needful to resort to such a scarecrow indicates that he is hard put to it for campaign ammunition and that he is uneasy about the outcome of the contest in Ohio. We infer that his apprehensions are shared by Senator Hanna; otherwise the latter would scarcely betray the bitterness which now for the first time he exhibits in speeches on the stump.

The Philadelphia *Public Ledger*, the editor of which is well known to be a personal friend of Mr. Cleveland's, undertakes

in a recent issue to allay the alarm evinced by the Washington *Star* lest the admirers of the ex-President should insist upon making him next year the Democratic candidate for the office of Chief Magistrate. The *Star* had begun by admitting that while no American citizen had for three terms occupied the White House, it was equally true that no American citizen who has become Chief Magistrate through the death of his predecessor has ever been elected President. The *Star* undertakes to draw a distinction between these two precedents, on the ground that no warning has ever been uttered by any statesman against electing to the Presidency a man who has succeeded to it through a death. For that matter it might be pointed out to the Washington *Star* that no American statesman, not personally interested, has ever uttered a warning against electing a citizen to the office of President for three terms, when the three terms would not be consecutive. The objections to Grant in 1869 were manifestly hollow, and put forward in the interest of Blaine. Should Mr. Cleveland be invited by the people to re-enter the White House on March 4, 1905, no fewer than eight years will have elapsed since he left it. It is absolutely absurd to suppose that any harm could be done to the spirit or working of our institutions by Mr. Cleveland's acceptance of the Presidency under such circumstances.

It is generally taken for granted that the President in his message to Congress will announce what he purposes to do with reference to the transisthmian waterway, in view of Colombia's refusal to ratify the canal treaty. Senator Morgan of Alabama holds, as we have said, that Mr. Roosevelt is bound to regard the "reasonable time" allowed him by the Spouter act as already lapsed, and to make known to Congress his purpose to proceed immediately to secure from Nicaragua and Costa Rica the franchises needed for the construction of a canal by the alternative route. It may be, however, that the Bogota Congress, before the close of its extra session, will pursue such a course as would justify the President in waiting somewhat longer before renouncing definitely the hope of constructing a canal by the route which expert engineers have pronounced incomparably the best. Suppose, for instance, the Bogota Congress should abandon the attempt to extort any more money from the United States or from the French Canal Company, and should confine itself to a request that the provisions of the treaty relating to jurisdiction might be modified so as not to violate the Colombian Constitution; our State Department might then deem it reasonable to consider at least the question whether such modifications would not be tolerable in themselves and acceptable to the United States Senate. That some overture will presently be made to us by the Marroquin government seems certain, in view of the fact that the Bogota politicians of all parties will face a very grave responsibility if they permit Congress to adjourn without taking any steps toward the conclusion of a canal treaty, and thus provoke the province of Panama to declare itself independent.

The strife between Japan and Russia in the Far East springs from economic causes, and is therefore inevitable. In the view of both parties, the actual outbreak of hostilities has been, from the first, only a question of time and preparation. The moving force in Japan's case is self-evident: an immense population, full of energy and enterprise, shut up within a narrow territory. With an area of less than a hundred and fifty thousand square miles, Japan has a population of over forty-five millions, a large part of which is crowded together with a density of from four to five hundred to the square mile. Japan compares advantageously with Germany, in both size and numbers, if Bavaria be left out. As in Germany, the question of a future outlet dominates all others. Korea, separated from Japan by a narrow strait, with a population of perhaps eight millions, spread over eighty thousand square miles, and with great untouched resources, is for Japan a Promised Land, the goal of centuries of ambition. Manchuria, with the immense area of three hundred and sixty thousand square miles, sparsely peopled by some eight millions, is a prospective paradise. The Japanese have, therefore, dreamed of a great empire, of nearly half a million square miles, which, with their energy and resources, would make them one of the greatest of nations. They actually effected a landing through the war of 1895 with China, and occupied the peninsula of the Respect's Sward, on which Port Arthur and Dalny stand.

By the Shimonoseki treaty of May, 1895, Japan, under the combined pressure of Russia, Germany, and France, reluctantly abandoned her foothold on the mainland, taking the island of Formosa in compensation. Thereupon China leased the Port Arthur territory to Russia, with a narrow strip connecting the port with the Siberian railroad, Germany at the same time getting a leased tract at Liao-chau, while England entered Wei-hai-wai on the same terms. There has at no time been any question of Russia's relinquishing the leased areas of Port Arthur and the railroad, and great verbal confusion has been caused by speaking of it as if she had pledged herself to evacuate them. The evacuation applies to the areas outside the leased tracts, which Russia occupied much later, during the Boxer uprisings, which threatened the destruction of her railroad and ports.

Russia's presence in Manchuria is also the result of economic causes. Already far the largest of white nations, with a population of one hundred and forty millions, she is also the most rapidly growing, the birth-rate among Russians of pure race being the largest in the world. As a result, Russia will probably have a population of some two hundred millions within twenty-five years, and five hundred millions within a century. European Russia is already feeling the pressure of these vast masses of people, and colonists are finding their way to Siberia in a great and increasing stream, which already amounts to more than a quarter of a million yearly. It is probable that, before the century closes, Asiatic Russia and Siberia will have a population of two hundred millions, with a territory of over six million square miles, much of which is, however, a wilderness. The best Siberian land closely resembles the western provinces of Canada, and has similar resources. We have, therefore, an area about equal to that of the whole North-American continent, with a prospective population of two hundred millions, yet without a single ice-free port—until Port Arthur was leased from China. It is as though the whole of North America, with twice its present population, were compelled to carry on its commerce by the St. Lawrence River and to suspend it during the winter months. This is the future problem that Russia has, for the last dozen years, been straining every nerve to meet, at a cost of much sacrifice and even impoverishment of the present agricultural population, who are called on to furnish an insurance for their children. She saw her only possible doorway to the sea threatened by a coalescence of the yellow races, and she has, perhaps, somewhat overtaxed her strength in trying to prevent this.

Great hopes were expressed in both London and Paris that the Anglo-French understanding, and the recent steps for the conclusion of an arbitration treaty between England and France, would do much to mitigate the Far-Eastern crisis. France, of course, as the ally of Russia, as well as the largest holder of Russian securities, has the strongest interest in preventing anything which might tend to the detriment of her friend, while England is very apprehensive of being dragged, against her will, into the military whirlpool—something which neither the condition of the War Office and the Balfour cabinet nor the present depression in financial circles is likely to incline her to. England is haunted by the fear that her first act of participation against Russia would be the signal for an invasion of India, which is, of course, no less than the truth; and an invasion of India, whether successful or not, could not be otherwise than a calamity. So much is this so that it is in the last degree doubtful whether, were the question of a treaty of alliance with Japan to come up again, any English party would consent to it; the feeling of England has so completely changed in many things since the Boer war, and even Mr. Balfour found nothing too good to say about Russia's work of peace in the Balkans. We may be quite certain, therefore, that England views the prospect of a war in the Far East with genuine alarm, and will do all in her power to mitigate and mollify the hostile spirit. And France, for equally sound reasons, is not less earnestly on the side of peace.

It seems that in Kansas, where the unexpected often happens, a breed of mule-footed hops is becoming prevalent enough to be noticed. A correspondent of the *Kansas City Star*, who lives in Labette, Kansas, protests against the incoherency of persons who doubt the existence of these hops.

and says he raises them himself, and has them on foot at his farm ready to be seen. The first, he says, were brought from the South Sea islands forty-six years ago and turned loose in certain mountains of Indian Territory. He says they are exemplary hogs, and since he tried them he has raised no other kind. It may be disputed, however, whether a mule foot, novel and interesting as it is, is really any help to a hog. The variation has taken the wrong turn. A large number of our Jewish fellow citizens are estopped by the Levitical prohibition from using pork as an article of diet. Clever-footed animals that chewed the cud were recommended to the Hebrews as fit for food, but the swine, says the Scripture, "though he divide the hoof, yet he cheweth not the cud; he is unclean to you." Evidently a mule-footed hog that does not even divide the hoof would be even more unclean than the common kind. But if some one will train up a breed of hogs that will chew the cud, that may be worth while, as making bacon, pork, ham, and sausage available for persons who now avoid them for conscience' sake.

To us Americans German justice often seems a curious thing, especially when it deals with the brutalities of military officers. There was no military complication about the offence of Dippold, the tutor who fogged to death the fourteen-year-old son of Director Koch of the Deutsche Bank. He was tried and convicted. The evidence showed that he was a dangerous and revolting degenerate. His sentence was—what do you think! Death! Life imprisonment! No; neither. A Berlin despatch says that he was sentenced to eight years' imprisonment. It says the people in the court-room were incensed at the prisoner, and cursed and threatened him, but it does not suggest that the sentence seemed insufficient. American justice is uncertain and too easily evaded. It is nothing to brag of. It might have fogged Dippold insane, and sent him to a mad-house, but it is hard to conceive of its giving him no more than eight years in prison, unless judge and jury were restrained by a statute.

Surgeon-General O'Reilly reports 1830 cases of alcoholism in the army last year, and 15,000 cases of disease due to personal licentiousness. He thinks the restoration of the post-exchange system of selling beer and light wines in barracks would result in an improved showing in both of these particulars. Whereupon the *New York Evening Post* comments derisively, calling the Surgeon-General's recommendation "remarkable," and asking why, if beer close at hand is really a cure for too much beer outside the barracks, we should not have a little gambling in the post to cure the passion for a great deal in civilian resorts. The *Post* affects more significance of comprehension in this matter than is consistent with its prosperity as a newspaper. The *Post* might take its usual stimulants in the back parlors of a red-light district instead of at its own dinner-table without perceptible prejudice to its morals, because the *Post* is a respectable citizen a hundred years old. But of course it makes a vast difference whether a lot of young soldiers drink their beer in decent places under reasonable supervision, or in dives where all manner of dangerous temptations invite them. A little gambling (penny-ante) in the post would be better than a great deal outside, but gambling is not so susceptible of restriction and control as drinking, and it has never been proposed to allow it in the post-exchanges. We regret to think that the *Post* is on the side of prejudice and bad morals in the post-exchange matter. It expects from the enlisted men of the army a degree of abstemiousness which it would not dream of attempting to exact from its own employees. Its attitude and its arguments on the canteen question are out of keeping with its position as a mature journal that has seen something of life.

In view of reports called from Berlin, that considerable bitterness had been aroused in Germany by the declaration of Professor Small of Chicago that Germany is determined to provoke war with the United States, Professor Small of Chicago has announced that a wrong inference was drawn from his words. There really is a Professor Small in Chicago. His name is Abner W. Small, and he is professor of sociology in the University of Chicago; an erudite person, who was born in Maine, has studied in Maine, Massachusetts, Germany, and Baltimore, and has been a minister and a

college president. Still it is not apparent why Germany is so rattled by his remarks, unless it is that his wife is a native of Berlin. They seem to take professors harder in Germany than they are taken here. But Mr. Small says there won't be any war, since we are going to have no many ships that it will not pay to fight us.

Pretty nearly a foot of water fell in New York and its neighborhood on October 8 and 9. Ten and four-hundredths inches fell in thirty-one and a half hours. Our average annual rainfall in New York is estimated at 44.8, so that we got nearly one-fourth of a year's supply in less than a day and a half. The storm beat all the Weather Bureau's records for these parts. It extended in great force up the Atlantic coast from Virginia, flooding the old "Middle States" and reaching the northern extremity of New York State. Comparatively few lives were lost, but a vast amount of damage was done by flood, especially in New Jersey, where Paterson and Passaic in particular, suffered very severely, and narrowly escaped much worse usage than they got.

Dowie professes that his special purpose in coming to New York is to convert Wall Street. He will find it particularly ripe for repentance. It has had severe discipline and heart-rending griefs, and was never more anxious to be so good and deserve the confidence of the country. There may not be Wall Street individuals who are not personally eager to be themselves brought to a sense of sin, but they all seem concerned that seats on the anxious bench should be reserved for their brethren. There never was a better time for a strong upward movement in righteousness, but how much Dowie can promote it is another question. He seems himself to be of a strongly speculative turn, and has risked a good deal of money and staked much of his prestige on what looks like a thoroughly crazy enterprise. Our local clergy by no means recognize him as a preacher of sound religion. He will get neither aid nor countenance from them, and though he and his hosts will undoubtedly stir the public curiosity and draw crowds, he will be a clever man if he can prevent his crusade from ending in a farce.

An electric car running on the Marionfelde-Zossen experimental line in Germany reached, on October 6, a speed of 125 4-5 miles an hour. Passengers are carried at that rate, and live to tell about it. The car used has four motors having between them about 1100 horse-power. Further experiments are likely to show speeds considerably higher, and the attainment of a velocity of 150 miles an hour is not unlikely. Whether this is to be the speed of fast trains on future railroads is open to discussion. The limit to possible speed no discerning observer is ready to define yet. The limit of speed at which passengers will ever consent to be hauled or railroad companies can ever afford to haul them will probably be considerably lower, but the facts are not yet forthcoming for the calculation of even that.

Thomas Kidd, vice-president of the American Federation of Labor, is quoted as making the interesting suggestion that if the anti-boycott associations and associations of employers keep on using unions for damages and thereby tying up their funds, three hundred million dollars may be withdrawn from the banks and savings institutions of the country. Mr. Kidd thinks that would make a lot of trouble. Savings-banks, he guesses, would go down by the score, ruin would be started on all the banks in the country, and there would be a panic. Well, well! And where is he going to get his hands on so much money? He says the trustees of the country have a hundred millions on deposit, and that the individual members of the unions have two hundred millions more. He does not expect to see all the vast sum ordered out, "but I do believe," he says, "that as a matter of self-preservation this step will become necessary." Go chase yourself, Mr. Kidd! You are over sanguine. Without discussing whether the unions and the union men have command of so much dough, or whether its withdrawal would produce the effect that you anticipate, is it conceivable that the union workers of the country could find their advantage in unhooking all the banks and bringing on a panic? Would work be more abundant or wages higher after it? Are they the sort of folk who will sit on a limb and saw it off, under orders, between them and the tree?

## The Expected War between Japan and Russia

The latest news from the Far East confirms the belief that the interests of Japan and Russia are essentially irreconcilable by negotiation, and that a reference of them to the arbitration of war cannot be long averted. Nor can it be denied that, owing to the course pursued, with regard, first, to Manchuria, and, secondly, to Korea, the Petersburg government on entering the contest would lack the sympathy of Western peoples, which, by reason of racial affinity, it naturally would receive. The series of provocations under which the Russians are smarting began about eight years ago, when Russia refused to permit them to reap the fruits of their triumph over China, and compelled them to retrocede the Liau-tung, or Regent's Sword, peninsula, which had been surrendered to them by the Treaty of Shimonoeki. It is true that, in lieu of this territory, China agreed to pay an additional pecuniary indemnity, and it is probable that the Tsar's government, which profited all the more by the Tsar's government, which profited all the more without much resentment had the peninsula remained under Chinese sovereignty. But it was inevitable that the Japanese should be wrought to exasperation when Russia extorted for herself from China the tract of which they had been deprived, a tract exceptionally valuable, not only on account of its commercial relation to Manchuria, but also containing the naval fortress of Port Arthur, which commands at once the Gulf of Pechili and the Yellow Sea. From that hour the Mikado's advisers have been under no illusions with respect to the ultimate designs of Russia upon the three great provinces comprising the region known to us as Chinese Manchuria; and, undoubtedly, they would have tried years ago, before the completion of the Trans-Manchurian Railway, to oust Russia from her claim of advantage could they have relied on the neutrality of the other maritime powers. But for a number of years Russia has been in a case of need, without the cooperation of France, if not of Germany, and that Japan, for her part, would have no counterbalancing support. The situation was materially changed by the treaty concluded between Japan and Great Britain, whereby the latter power agreed to assist the former should she be assailed by more than one antagonist. Meanwhile, it seemed possible that the pressure exerted by the United States on Russia in connection with the maintenance of an open door in Manchuria might qualify, if not mitigate, the effect of Russia's control of the Liau-tung peninsula and of the Manchurian branch of the Trans-Manchurian Railway. For a time events seemed to warrant an optimistic view of the immediate future, for on April 8, 1902, Russia and China signed a convention, in pursuance of which the evacuation of the three Manchurian provinces was to be carried out in three successive periods of six months each, the expiration of the first of which it is true that the convention was not ratified, but, subsequently, the Petersburg government pledged itself in writing to the United States that the evacuation should begin on October 8, 1903. Skeptical as to the fulfillment of this pledge, the Mikado's advisers are understood to have proposed to renounce opposition to the practical absorption of Manchuria by Russia, provided the latter power, in return, would recognize Korea as exclusively within Japan's sphere of influence. This proposal, we are told, has been cordially rejected by the Viceroy of the Russian possessions in the Far East on the extraordinary ground that Japan has nothing to do with the Manchurian question, and a counter offer has been made to divide Korea, Russia reserving the northern half, and conceding to Japan the southern half, of the Hermit Kingdom. In view of this imperious rejection of the compromise suggestion we heard without surprise that a body of Japanese troops had been despatched to Korea, and that a very much larger force was in readiness to follow. Russia, on her side, had already encroached on the territorial independence of Korea. On the pretence of turning to account the lease of a timber tract, she had placed soldiers on the southern bank of the Yalu River, which forms the boundary between Korea and Russian Manchuria.

Such is the state of things at this hour when we write. It is obvious that the truce is proposed, and that a spark may cause a conflagration. October 8 has come and gone, yet the Russians have made no pretence of keeping the promise given to the United States to begin on that day the evacuation of Manchuria. Moreover, we learn by a telegram from Yokohama, dated October 11, that M. Lamer, the Russian minister to China, has announced that the Manchurian evacuation has been deferred above, has lapsed. If, in addition to its repudiation of the pledge concerning Manchuria, the Russian government shall adhere to the position that only the southern half of Korea will be recognized as within Japan's sphere of influence, it will probably prove impossible for the Mikado to restrain the warlike ardor of his subjects. It is true that negotiations concerning the Korean question are still going on between Japan and the Russian Viceroy, and there is no doubt that a santer so vital will be referred to Peking. It is also true that both England and France are doing their utmost to avert a collision, because they do not want to be drawn into the conflict. The British Foreign Office, however, cannot reasonably expect the Japanese to submit to ex-

clusion, not only from Manchuria, but from the northern half of Korea, while, on the other hand, the French Foreign Office may find it extremely difficult to persuade Russia to concede the whole of the Korean peninsula to Japan. They may find it difficult, because, since the retirement of Mr. Witte from the Ministry of Finance, the war party is in the ascendant at Petersburg, and the war party believes that Russia is entirely competent to deal the single-handed with Japan, both on land and on the sea. The single-handedness is based partly on a mistaken estimate of the military and naval efficiency of the Japanese, and partly on the fact that nearly a quarter of a million of Russian soldiers have been collected in the region between the Amur River and Port Arthur, while almost all of the best vessels in the Russian war fleet have been assembled in Far Eastern waters.

There are good grounds for the opinion that the Russians underestimate the military and naval efficiency of the Japanese. It would probably be easy to show that, of all the contingents that took part in the recent expedition of the allied powers against Peking, the Japanese force was the most efficient, by applying to the several commanders the test which was applied to the Greek captains after Salamis, when each of them, it will be remembered, claimed the highest credit for himself, but gave the next highest credit to Themistocles. It is certain that, for courage and discipline, the Japanese soldiers proved second to none, and it is not likely that they would have captured the Empress-Regent, and thus have cut the knot of the Chinese entanglement, had they not been forbidden to do so by the representative of another contingent in the allied force. The Russian common soldier is brave and does not know when he is beaten, but this is the very characteristic of the Japanese, and with respect to technical training it is probable that the Japanese officers are, on the whole, superior to the Russians. It is, therefore, by no means impossible that the first collision between Japanese and Russian troops may result in a humiliating surprise to the commander of the latter. As regards numbers, there is no doubt that Japan—provided she retains control of the sea—can land considerably more than a quarter of a million soldiers on the Asiatic mainland. It should also be incomparably easier for her to keep them supplied with food and ammunition, for their opponents in Manchuria and Korea will fight at an immense distance from their base, which will be, of course, European Russia.

We have been assured that Japan will retain control of the sea, it being obvious that, should she be deprived of such ascendancy, she would not only lose Korea, but herself be exposed to invasion. A comparison of Russian and Japanese naval strength will be found in another column. The capabilities of Japanese seamen and naval engineers were tested in the great battle off the Yalu River, where, as will be remembered, with cruisers alone, they lost several armored battle-ships, some of which were commanded by Europeans. Notably, the Japanese torpedo-boats did not hesitate to attack and capture the Chinese fleet anchored in the harbor and under the forts of Wei-hai-Wei. For a long time the efficiency of the personnel of the Russian fleet has not been tested. Russian ships took part in the battle of Navarino, but that was three-quarters of a century ago. Since then they have done next to nothing, having made no attempt to face their British and French enemies during the Crimean war, and having had no adequate opportunity of testing their competence during the last war with Turkey. It remains to be seen whether the embarrassment, wastefulness, and regret, which crippled the Russian army a quarter of a century ago, will impair equally the fighting qualities of the Russian navy. Meanwhile, there is a widely current impression that the corruption which notoriously pervades Russia's military administration, provides her naval department also, in which event it may well happen that Russian war-ships, like the Spanish, when tried, will be found wanting.

## The War Forces in the Far East

The navies of Russia and Japan should first be considered. Japan can land troops only in Korea, to make an attack on Russia's position in Manchuria, if her transports are covered and guarded by powerful battle-ships and cruisers. At the same time she must guard her home ports against possible and even probable Russian attack. Therefore Japan, as she determined on her great anti-Russian campaign immediately after her war with China, saw that she absolutely needed, first of all, a powerful navy, and to gain a strong navy she set herself vigorously to work. In 1904 she launched two powerful battle-ships, the *Tashima* and *Fuji*, of over twelve thousand five hundred tons displacement, with armor belts of enormous thickness, not less than eighteen inches thick, almost all battle-ships, except those of Russia's Black Sea fleet, they have primary batteries of four twelve-inch guns each with secondary batteries of six ten-inch quick-firing guns, sixteen six-pounders, and five torpedo-tubes. They can steam about eighteen knots an hour, the average speed of Japan's first fighting line. In 1905 Japan followed these two battle-ships with six con-

and others who had suffered from the boycott inaugurated during the trolley strike of the spring would vote against any representative of that boycott. They believed that a conservative element in the unions themselves would take this time to rebuke a leadership whose aggressive methods during the trolley strike were popularly regarded as the exciting cause of riot, assault and murder. They did not fear the cry of "capitalist" against the sort of capitalist represented by Mr. Elton; nor the cry of "trust" in the case of a trust recognized as such. The Republicans, by continuing to keep labor, the Republicans were greatly helped in emphasizing the issue by the character of Mr. Lynde's two principal supporters, the men whose scheming and work secured him the nomination—the ex-president of the local trolley union and the president of the Central Labor Union. Both justly identified with the conduct of the trolley strike, and held jointly responsible for continuing it long after success was hopeless. Additionally the latter stood publicist committed to a similar aggressive policy to "bring the factories into their houses," having already made a beginning by securing a boycott of one large factory because of its manager's refusal to submit to the demand of the Buffers' Union and discharge a so-called "pacer." The issue then, as finally presented, was simply that of rebuking or endorsing unionism "pushed to the limit," with the menace of great loss for all, rich and poor alike, and possibly of the city's business.

The answer was the election of Mr. Elton by 577 majority, overcoming a normal Democratic majority of about 600, or a gain of some 1600 votes. The total vote, 6586, only 338 short of the largest ever cast (that at the Presidential election of 1900), was brought out almost without a campaign beyond newspaper discussion. The Waterbury papers contain graphic accounts of the strenuous early morning competition to vote which crowded the polling places beyond all precedent, so deeply was the city stirred. The membership of the Waterbury union is estimated at about 9000, with a voting strength of from 4000 to 5000. Mr. Elton's total vote having been 4782. These figures speak for themselves of the vote of unionism against unionism when "pushed to the limit." They carry cheer to every city and town which has shared Waterbury's experience in the assurance they give that courage will "win out" in the end; that the way to face the issue of unionism, as to face every other issue in American life, is to put the people squarely to the test.

## The American Business Man and His Vocation

In Pierre de Conleuvre's *Noblesse Américaine* a Frenchman's American wife, taken to visit Avidis, perplexes and scandalizes the venerable Marquis, her mother-in-law, by her slow appreciation of the glories of the saints whose devoted lives have immortalized that town. She even regrets, "in the stipulation of the Marquis," that St. Francis and St. Claire never married, and the discovery of the old adage about the saintliness of their own and naive leaves her still puzzled and still somewhat incredulous. Doubtless the author exaggerates her lack of imagination in spiritual concerns. Accepting her mother-in-law's discourse as true of the people it concerns, the still says:

"Ah! there will never be any saints in America."

"Who knows?" said the Marquis.

"No, no! I don't see an American divesting himself of his goods, preaching poverty, and talking to doves. Instead of St. Francis we shall maybe have men who will lessen poverty and make the world a more comfortable place."

We have had saints in America, though they may not have been canonized, and we have them now, and shall continue to have them, but there is a good deal of timely truth in this suggestion that the typical American who aspires nowadays to help his fellow-brains to conquer himself chiefly with the multiplication of material blessings. He does not withdraw from the world for the fuller development of his own spiritual nature, nor embrace poverty for his own soul's good, nor enjoy the patient endurance of it upon others as a source of spiritual advancement. Rather he looks upon it as an objectional condition, and seeks to abolish it altogether, for himself first of all, but incidentally for just as many other people as he can. The young American lady, with a pretty sound conception of the working of the contemporary American mind when she says, "We shall maybe have men who will lessen poverty and make the world a more comfortable place."

That truly seems the best of American energy in the most conspicuous of its current phases. If you ask the American business man why he works, he will tell you that it is to make a living. That is the chief compelling motive for labor in all lands, and it does not constitute an idiosyncrasy in the American that he should feel and acknowledge his love. But when he has made his living in simple measure and provided abundant sources of income for himself and his immediate descendants, does he stop? As a rule, he doesn't, and in that he is somewhat peculiar. He hoards driving ahead, as though, he said, still he should him, and though he loves to spend money, as well as to make it, and invites his soul and cultivates his taste and rests and enjoys himself as well as

he can, he is loath to give up work while his strength lasts, and usually he dies in the harness. To be sure, we have seen Mr. Carnegie and a number of his associates and rivals take advantage of an unusual opportunity to get out of the steel business, but that was an exceptional case, and most of the "retired" steel men are still proportionately active in affairs, and deep in all sorts of industrial enterprises.

It is matter of the commonest observation that the American business man's vocation takes a very strong hold on him. The reason why the saints stuck to self-abnegation, poverty, and good works was because they found that life empty remunerative. No other seemed to them so good, and for them discipline no other was so good, for the saints, all things considered, were happy people. The successful business man sticks to business for the same reason the saints stuck to saintliness—because it is his job and he likes it. When he has once become an important part of the great industrial machine, upon the working of which the progress of civilization so largely depends, the machine uses him even more than he uses the machine. For all that his profit may be great and his income unmanageable, he is still in a way a devoted man. Sometimes he talks on with conscious and willing self-sacrifice because he sees the immediate welfare of thousands of other people dependent upon his knowledge and discretion. Very often a sense of duty, which has stiffened into unconscious habit, binds him to the work which he can do best, and in which he is most useful. Often too he is loath to lay aside the power that he has won, and relinquish the advantages of a position which enables him to dispense benefits, offer opportunities, and directly influence the lives and fortunes of other men.

Very many American rich men who have made money in business give freely of their wealth to all sorts of good causes, but especially to institutions for education, which shall qualify young people to live more wisely, enjoy life better, and turn their natural abilities to better account. These benevolences are made possible by the profits of successful business enterprises, but lavish and frequent as they have come to be, and important as their results are to civilization, they are incomparably less important than the direct results of the business that has made them possible. Almost all the great fortunes are results of labor and enterprises which have created wealth by multiplying commodities, developing natural resources, or binding remote places together by railroads, canals, and telegraph and steamship lines. The man of business hopes to prosper by supplying his fellows with something that they want the most, competition by cheapening his processes or bettering his goods—often by doing both. His constant study is to be able to supply his customers with better commodities at less cost. His vocation is to distribute wealth not less than to produce it; to feed the hungry, to clothe the naked, to make two blades of grass grow in place of one, to make human life easier, pleasanter, more comfortable, and more profitable. To be sure, he changes something for his services, usually all he can, often a great deal too much. But that does not alter the fact that his exertions promote human comfort and human welfare, and that he is one of the most active and important agents for the spread of civilization and the advance of humanity.

A nation may be rich without being righteous, and if it pays its mind more on riches than on righteousness it is bound to have a self-lack. But all nations being more or less faulty, its rule in our day seems to be that the richest nations are the wisest, and that those wisest nations, which know best of poverty, are the ones, on the whole, in which righteousness most abounds.

## Faith Cure in New York State

J. LEVISON PIERSON and his wife, of White Plains, are Dentists, and have no faith in drugs or doctors of the regular schools. Their adopted daughter, sixteen months old, was taken in January, 1904, with whooping-cough, which developed into pneumonia. They called in no physician, and gave the child no medicine. The child died. Pierson was prosecuted, convicted of neglecting the child, and sentenced to pay a fine of five hundred dollars or spend a day in jail for each dollar not paid. The case was appealed. The Appellate Division reversed the judgment, and the State withdrew. The Court of Appeals has decided that the conviction and sentence were right, and Pierson must pay his fine or go to jail.

Judge Haight, who wrote the opinion, briefly reviewed the whole history of medicine, and the gradual substitution of trained medical men for religious practitioners in the treatment of disease. But without committing the court to any opinion for or against any kind of faith or mind cure, he found that the defendant's attendance "which our penal code contemplates to be furnished to miners is the attendance of a person legally qualified under the laws of the State to practice medicine. Only persons who have been licensed and registered, or have a diploma from a satisfactory medical college, are authorized to practice medicine in this State. So in New York, at least, it is not lawful to take faith-cure chances with sick children.

### A FOX-HUNTING EPISODE

*This striking photograph is a snap shot taken at the moment of a recent accident in the hunting-field near Rome. The horseman who has just been dismounted is Prince Ruffo, an Italian nobleman, and one of the best-known sportsmen in Italy. The accident very nearly cost him his life. Fox-hunting is a popular sport with the Italian nobility, who are expert huntsmen*

# Diversions of the Higher Journalist

## An Eye for an Eye

THE lady wore a sort of ornamental fillet over her eyes, and the Higher Journalist, fresh from the news of the late life of Laura Bridgman, was led by the natural association to suppose her a pupil from a blind asylum. But the fact that she had a curious power of mechanism in one hand, and a conversance in the other with which he was already supplied, suggested another conjecture, and he said, with attempted severity, "Agents and peddlers are not allowed here. Didn't you see the notice as you came up?"

"No," the lady gently replied, "my sight is rather imperfect, and besides I am not an agent or a peddler. Nothing is farther from me than buying and selling of any kind. My name is Justice, and these little objects which have misled you are my emblems."

The higher journalist jumped to his feet with an alacrity which did him honor. "Oh, I beg your pardon, a thousand times! Will you be seated?"

"No, I always prefer to stand. I can explain better, if I stand. I suppose that if I had appeared with the sword, which I used to wear, and the scales which I sometimes threw at him, you would have recognized me instantly."

"Of course!" the higher journalist responded, glad of this way out, and she went on.

"Instead of the sword I now bear the dynamo, for I think it a great deal wiser to inflict the supreme penalty, which the sword once symbolized, by a certain number of volts and amperes, than to make a bloody mess of it by decapitation. Electrocutation—a most unobscure word, I must confess—is wiser even than guillotining, or fustigation, or any of the old methods, except perhaps drinking hemlock, which had an Attic elegance. Hanging is not to be compared to it, though hanging, when I used to inflict it for the theft of anything above a walking-coght to have been improved far more than it ever was. It did not keep pace with modern civilization, and nothing really could be said for striking a criminal in the temple with a leaden mace except that it was the custom in the jurisprudence of the Holy Father. This other little thing, which you can see a great deal better than I can, is by adjusted that a hair will turn the scale. It is in a sort of telepathic sympathy with the electric force which excites my will, and is something like throwing the sword into it in obnoxious respectability."

The higher journalist was listening with profound veneration, "Urrning—hemlock—hemlock," he murmured respectfully.

"Yes," she returned, "I better myself that those appliances are signs, and in spite of her declared resolution of standing she dropped into the chair which he had set for her, and being her cushions fell together into her lap, she remained pensively silent."

"And yet," he ventured after a time to prompt her, "and yet?" "And yet they don't seem to work satisfactorily, as far as the moral effect is concerned. Would you have said," she appealed slaughter were devised, and an agency so swift, painless, and really successful as electricity was introduced, nothing more could be urged upon the death penalty? That the utmost demands of humanity, if carried out, had been fully satisfied?"

"That," he replied, "would have been my conclusion, at least on first thought. But what reason have you to believe that these mechanical customs, and the simply founded in our nature that assemblies of leading citizens in our most enlightened communities take, on mere suspicion of crime?"

"It was rather a long sentence," she went back to the question recent successful State homicide of those three wretched Van Uncle's boys, when I have just had killed for the murder of their uncle?"

"Yes," the higher journalist confessed, "How could anybody keep from reading them?"

"Nobody could," she grinned. "And what was their effect with you?"

The higher journalist rubbed his brow, and was glad that she could not see the trouble he had failed to erase from it. "Well," very frank with her, "I am afraid it was a mixed effect. May I be?"

"Do!" she extracted.

"He went on. "Then, I should say, that up to the infliction of your supreme penalty, I had no sort of sympathy with the three criminals for whose sentence could be said. But—"

"Go on!"

"But when it came to that point, I fell into a strange bewilderment—I lost my bearings—I come to feel a regret that was altogether a respect for them; a pity which I suppose you would say was de-

"I felt it myself!" she moaned. "I don't know what to make of it! The grounds for abhorring them remained the same as ever."

"Yes, quite. But somehow the grounds of emotion were shifted. We saw three miserable, blood-stained men, who have done the foulest and cruelest murder, advancing to meet their deaths with the dignity of martyrs. They were examples of serene courage; they were the converts of a church which feels itself authorized to bless and to bind, to absolve the sinner, and promise heaven. They bore themselves with tenderness toward each other, and with mildness towards all others. They contended which should go to the death-chair first, each in pity of the others' weakness. They had, in view of their approaching doom, won upon the compassion and the liking of their jailer and of all about them. Their sentence supported and sanctified these. Instead of leaving the sense of the monstrous crime first in the mind, they left the impression of a soul heroism which has never been surpassed. I suppose this is not what you intended?"

"As far from it as possible!" Justice lamented.

"I understood that when you introduced this great improvement in the means of official homicide, you had arranged for an entire privacy in the application, and had forbidden any publication of the facts concerning it."

"I had," she said, "but it wouldn't work. A free and independent press was too much for me. Its enterprise steadily and successfully defied me from the beginning."

"Yes. If you could have kept the scene a lasting secret, and had destroyed the dead bodies, as you proposed, with quinine in the prison-yard, instead of giving them over to the families of the felon—"

"I proposed that, yes, but it couldn't be done. It was regarded as an outrage on common humanity. I had to abandon it."

"So that all you achieved was a speedier and more workmanlike manner of killing. I believe that even the death-chair has had its moments of repugnance!"

"At first. But we don't treat them as we did at first. It is done much more scientifically now."

"That is, you have called a skilled electrician to the function of the headman?"

"Oh, you can give it an ugly name!"

"I should be sorry to do that. I do not see why the electrician should feel himself a more active agent than the judge who passes the sentence exacted by you, or merely happens to be the last link in the chain from cause to effect, and he is unhappily but necessarily present at the unpleasant moment when your will is carried out. The worst that can be said of the whole matter is that it seems to be a failure. That the benefit to the community has been said to lie in the deterrent consequence of the punishment, and it appears not to deter. There was Colquhoun; but even the great brothers from heaven; that he was going to give his uncle a Colquhoun shot in the stomach. His fate incited to crime, if anything. Are not you afraid that the ostensible martyrdom of the Van Wozzers may have some such effect with the millions who read of their heavy loss in meeting death?"

Justice did not answer; she seemed lost in a miserable reverie. The higher journalist had seldom had such an easy time with a visitor, and he went on volubly.

"In countries like Italy and Switzerland, and even that wicked Russia, where your extreme penalty is unknown, the life-imprisonment inflicted is not less deterrent, if it is not more. No one seems conscious of the fate of the assassins of the King of Italy except every purpose otherwise. I wish that a lady of your well-known good sense and admirable common-sense could look a little more at the facts of the case. Are there more murders in Maine, where there is no death penalty, than in New York, proportionately to their respective populations?"

"It is a nice question," Justice admitted with the candor of her sex.

"Well, in a certain sense. But it is a very nasty one in others. It involves the shade where a people which has not got beyond the old notion of your character, and misanthropic you as vengeance, is not still in rather a barbaric condition. You see I do not put hard utilitarian ground the ground of sentiment at all. I put it on the parade, your guillotine, your gallows, your block, your headman's axe, is a failure in the very point where its success could also serve the community."

"There is something in what you say." Justice acknowledged, "I—I will think it over. And would you mind letting your fellow-boy show me out? I got in easily enough, but I feel all shaken up, and I doubt if I could find my way."

"I will show you myself," the higher journalist politely said.

"Do let me carry your dynamo for you!"

*A Scene on West Street during the Storm—The Water up to the Platforms of the Horse-cars*

*One of the Contrivances which were used to carry Commuters from the Ferry-slips to dry Land*

## **INCIDENTS OF THE RECENT STORM IN NEW YORK**

*The recent deluge in New York city broke the local rainfall record, tied up traffic, and destroyed property valued at thousands of dollars. In thirty-one and a half hours 20.27 inches of rain fell. Trains from all directions entering New York were delayed from two to twenty-four hours. West Street was flooded to a depth of three feet, and commuters arriving on ferry-boats in the down-town sections of the city had to be carried across the street on tracks.*

# Parties in England

By Sydney Brooks

London, October 5, 1915.

ENGLAND has been rubbing along as best she might without a Colonial Secretary, a Chancellor of the Exchequer, a Secretary for Scotland, a Secretary for India, and a Financial Secretary to the Treasury. The delay in getting them filled was the really significant feature. In part that delay appears to have been due to accidental circumstances. Agis, London gossip declares that the King has been leniently roused by the report of the war commission, and insisted on the appointment of a man who will thoroughly reorganize the War Office. The difficulty, first, of finding such a man, and, secondly, of disposing of the former War Secretary, Mr. Hendrick, is said to have accounted for a good deal of the delay. But I can hardly believe this. It sounds so indifferently unlike all our knowledge of the King's temperament and of the accepted injunction of the British crown. To suppose a British monarch really putting his foot down and insisting on efficiency and reform is to suppose a personal and constitutional revolution. I suspect that Mr. Balfour's difficulties are susceptible to a much simpler and more general explanation. No man cares to join a sinking ship, and the conviction that Mr. Balfour is steering a doomed vessel is now all but universal. That explains why he found it so hard to enlist new recruits, and why whatever success he has met with is of little final consequence. The cabinet will face Parliament discredited in public opinion, and more or less secretly distrustful of itself. It will be torn, it is already torn, by enduring cleavages among the rank and file as well as among the leaders. It will be further divided by a jobless Opposition that fails itself, beyond all hope, save more a united party. It will be acted upon by the impotence of the country, and particularly of the business interests, to have this question of tariffs settled at the first possible moment. England has already entered a zone of acute trade depression; councils stand today at the lowest figure they have known for more than thirty years; Lancashire is suffering from the severest cotton famine since the civil war; the number of unemployed threatens this winter to be large beyond precedent. I do not see how Mr. Balfour's cabinet has definitely "plunged her" into three various factors. An early dissolution, possibly before Christmas, probably next spring, certainly before the autumn of 1916, is something to which the whole country seems to have made up its mind.

Besides this, the situation is one of the most complex and baffling that English politics have yet produced. What is the policy of the government? None can say. Up to a point it is clear enough. Mr. Balfour's cabinet has definitely "plunged her" into three various factors. An early dissolution, possibly before Christmas, probably next spring, certainly before the autumn of 1916, is something to which the whole country seems to have made up its mind. An early dissolution, possibly before Christmas, probably next spring, certainly before the autumn of 1916, is something to which the whole country seems to have made up its mind.

tax? It is here we part company with what is fixed and clear and find ourselves in confusion and speculation. Mr. Balfour's sympathies, as he has confessed, are with the Chamberlainian policy, but he does not think the country is yet ripe for it. He is, therefore, he has struck it off his programme. Mr. Chamberlain, on the other hand, sticks to his guns, and has pledged himself to a campaign on the preferential and food-tax issue. To this end he has organized a perfectly equipped, very wealthy, and actively intelligent propaganda. He will take the field himself, and he will take it with an extraordinary chain on the affections of a generous people. He has sacrificed office, position, and prospects for the sake of the empire. That is something unique in English politics, and it will tell on the electorate with immense effect. Agis, one has to remember that Mr. Chamberlain is the only British statesman of the moment for whose efficiency the average

Englishman has perfect confidence, that he is also a supremely effective platform-speaker, and a past master in all the arts of agitation. I do not question that when he has fairly launched his campaign there will be a tremendous revelation of feeling in his favor, and, as an inevitable consequence, in favor of his policy.

From now onwards to the general election and probably for long after that, we shall have, then, this amazing situation—official unionism proposing retaliation, and Mr. Chamberlain, whether he be in the cabinet or out of it, is still the mainstay of the Unionist party, advocating retaliation, too, but also going a step further and proposing for preferential treatment of the colonies on the basis of a food tax. The possibilities of such a situation are almost endless, but it may, I think, be taken for granted that a vote given for retaliation means a vote eventually given for preference, and that if the former view it will not be long before the latter triumphs also. And that, of course, will mean Mr. Chamberlain's return to official life with a power and prestige such as no British politician has possessed since Palmerston. I do not doubt for a moment that Mr. Balfour would applaud the whole of Mr. Chamberlain's programme to-morrow if

he thought it "politically advisable." Retaliation is surely the sticking-point, the easy approach to the final goal of preference and food taxes. Of disagreement between Mr. Balfour and Mr. Chamberlain there is absolutely none, fifth fervor preference as well as retaliation; both admit that the country, while ripe for the latter, has to be educated up in the former; both, therefore, are pursuing the same ends, and if their means appear to differ, that, too, is by agreement. I emphasize this because, to judge by the cable reports, some American papers seem to think that the resignation of the Colonial Secretary implied a rupture which, in fact, is not so. Each is playing most shrewdly into the other's hands, and their apparent divergences are but moves in an ingenious and boldly calculated campaign.

But, then, will retaliation win? It will appear before the electorate, remember, freed (for electioneering purposes) from the onerous burden of the food tax; it will rightly appeal to the British instinct of hitting back; it is undoubtedly regarded by many thousands of English manufacturers, whether rightly or not, do not attempt to decide, as their own road to salvation. One can but give one's personal impressions. My own, after many weeks of inquiry in all parts of the country, is that retaliation will win.

The new English Cabinet—Latest Portrait of King Edward VII. The intervention of King Edward in the reconstruction of the British Cabinet marks the first time in half a century that an English sovereign has taken an active part in the national politics.

### A SUCCESSFUL ENGLISH AIR-SHIP

*The recent failure of Professor Langley's air-ship experiment at Wash Water, Virginia, lends especial interest to this illustration of a flying-machine which has lately been put to a successful test in England. The machine made an air trip from one end of London to the other—the first on record—without mishap. The photograph shows the air-ship starting on its voyage*

# Books and Bookmen

By James MacArthur

IN a review of some recent novels in the October *Bookman*, Dr. Frederic Taylor took—some of our smart and most acute critics—advice himself, by way of introduction, of a neat, compact little essay on what may be termed "The Single Idea in Fiction." I quote it without comment—it gives some—and adorns our readers with it upon the tablets of their memory. Not only would-be novelists, but many who are now practicing the art, may profit by its observations of a fundamental principle in successful fiction. "The single-idea nature of the successful novel is a safe way that few stories have obtained a genuine and lasting success which did not contain some simple, clear-cut idea capable of being summed up in a single terse sentence. It is probable that no better advice could be given to the young writer of fiction than to warn him not to begin a book until he was quite sure that he had some definite, central motive, capable of being condensed within the brief space of a telegraphic hook. The best novels of the past, those that really deserve a permanent place on our shelves, can nearly all of them be summed up in a few words; and this includes not merely problem novels, a class which in its essence pre-made a definite clear-cut problem, but also the big stories of adventure, the romantic novels of the Scott and Dumas type; even a book such as *The Three Musketeers*, containing episode after episode and story within story, can, after all, in its simplest form be reduced to the terse word limit: "How four heroes saved the Queen's honor and outwitted Richelieu." Of modern novels the only one in this respect are distinctly superior to the English and American writers. They confine themselves much more closely to the point at issue. Having selected their problem they try to reduce it to its simplest terms, to eliminate extraneous events and characters, and make the case they are studying a typical rather than an exceptional case. The great trouble with a large proportion of our new novels is that in their search for novelty, in their desire to produce something original and startling and bizarre, they complicate and confuse the central theme until one is often left in doubt whether they themselves have a clear idea of just what they are trying to do."

No better example of what Dr. Cooper desiderates could be cited at the present moment than Miss Alice Brown's new novel, *Justice*. It is a model of perfection in the art of storytelling. From the title to the last word it is the logical and consistent development of a definite central idea. It is the artistic embodiment of the historical and practical idea of the Old and New Testaments translated into modern commonplace—the Hebrew idea of Justice tempered and interpreted by the Christian ideal of Mercy and Charity—

To turn not only by a woman's wish  
But a man's faith in the grandeur, God—  
But the comfort, Christ.

The story is not a long one, nor the characters many, yet it moves swiftly, truly, and with quiet irresistible force from one compelling turn of the wheel to another through a series of incidents happening within a few hours that seem to cover a life's experience. We can understand the author might have expanded the book to twice its length, but in nothing is her art so wonderful as the way in which the reader is made aware of what has gone before in that unwritten half of the story, so that her very silence is more eloquent of feeling than the audible word. It is the most direct and dramatic piece of fiction Miss Brown has yet written, and directness and dramatic power are qualities which we had almost come to believe were denied her in sustained fiction.

It is difficult to give an idea of the power and intensity of *Justice* in my review of the story, the manner of the telling being an essential in its success as the material used. It is the story of a wife who finds in the safety and happiness of several lives. The situation is not unlike that in *The Mistle* of the

Pastor, Kent Markham is on his way from the Cape to espouse Rosamond, who is in a flutter of happy expectancy. There was an ugly affair in his foolish youth, it transpires, which was repeated and stoned for—so far as such an act can be met by stonement. His father knew of it, but stonement and stoning also, for Kent was honest if headstrong, but Rosamond knows nothing of the blot on the scutcheon. The girl is dead, she was a ghastly, light-patched thing, avowed of much account, but her mother conceives a plan to get her "just dues" in order to satisfy her. She procures certain incriminating letters of Kent's to her daughter which she has preserved, and threatens to inform Rosamond unless she is paid ten thousand dollars for the evidence against Kent. Helen Markham's solicitude for Rosamond is as strong, stronger, in fact, than for Kent, her stepson, and she is thrown back on her own resources—she can't raise so large a sum—by her husband's telegram in answer to her written appeal in the young lover's behalf. John Markham is absent from his home at the time in the thick of a strike among his employees. His attitude

toward the strikers is skillfully used as a shadowy background to emphasize the man's character. His telegram read, "He must take the consequences of his own acts." "That's just like my father!" cries Elizabeth to Helen Markham. "It's his everlasting glorification of what he calls justice. Do you know what will happen to my father some day?"

My father believes in the old Hebrew law—an eye for an eye." There's something in it. But as sure as he's a living man and tries to administer it himself, some day it will turn on him." Helen loves her husband and he adores her. He is the sort of man who sets with rigorous justice, and when punishment comes to him, he does not regret it as such. She is the sort of woman who suffers in silence and takes to herself the larger portion of that pain which follows the crushing acts of justice. Elizabeth divines truly that life will strike him one day through his love for his wife. "He has left people alone to fight out what he presumes to think they have deserved. He will be left alone. That will be his judgment. He has stood here, leaning and beckoning to it. It will come." And it does come. The passage of tragedy is only averted by the blinding flash of judgment which strikes John Markham at the summit of his pride, and gives birth to that "poor impulse" which is having its way at last.

Seems the only work of a lifetime,  
Which away the rest had tried.

The situation between Kent and Rosamond, which I have likened to that between Isabel and Henry in *The Mistle* of the Pastor, is not a vital issue as it is in Mr. Allen's novel. Indeed, Kent does not appear in the story at all. And when Rosamond is told in the end, "she was an image of immortal grief," but her love and trust are unshaken, "It is that which troubles Helen," she asked, "Was she afraid I should find out?—afraid I should blame him, judge him? Why, I'll tell her!—Neither death nor life—that was what she said the other night—'see principles not powers.'" The moral of the story is in its creative art. The characters reveal themselves as in a drama, yet without artifice; the drama itself is solved through a comprehension and larger view of life than belongs to mere mechanics. "You can't fight off law," says Elizabeth when confronted with events. "That's what it is—this course of things. It's law."

"There is a law above the law," answered Helen, poetry meeting fact. "They are like the steps to an altar. I shall fight my way up over them, to that last appeal. . . . We decree love and we get it—for somebody."

That in the keynote of the book.

An English reviewer of Mr. Robert Barr's new book, *Three for a Dozen*, a romance of Cromwell's invasion of Scotland, says, "Mr. Barr was born in Scotland, and so has not had to go north for local color." Mr. Barr was taken to Canada when he was four years old. What an observing talent he must have been!

### AN OIL-WELL ON FIRE IN THE NEW TEXAS OIL-FIELDS

*The discovery of rich oil-fields in the neighborhood of Sour Lake, Texas, has created a city of boom people in what two years ago was an unpopulated prairie. The oil flows in such abundance that if all the wells were allowed to yield their maximum quantity 200,000 barrels daily could be produced. The oil is running to waste in the vicinity of Sour Lake. Where the oil catches fire, as shown in the photograph, such embankments are frequently built to keep it from spreading.*

tionist camp in the Balkan mountains, showing some of the principal leaders of the insurgents' army

# The Fight for Clean Government

SHALL TAMMANY HALL AGAIN CONTROL NEW YORK'S AFFAIRS?—WHAT THE RE-ESTABLISHMENT OF TAMMANY WOULD MEAN.—GRAFT, CORRUPTION, VICE, CRIME, NEGLIGENCE OF THE POOR AND INFIRM.—THE OTHER SIDE OF THE PICTURE.—AN HONEST AND EFFICIENT MAYOR, WHO WILL SAVE THE CITY FOR THE GOOD OF THE PEOPLE.—WHAT REFORM HAS DONE.—HOW ARE YOU GOING TO VOTE?

By Franklin Matthews

**R**EDUCED to its simplest terms, the present municipal campaign in New York city is a campaign for or against the Ten Commandments. The question is, Shall Tammany Hall again gain control of the city's affairs? This second Hall campaign shall be established again? Shall there be open sales of the violation of law? Shall the children of the city be exposed to daily contact with vice? Shall the gamblers and crooks be permitted literally to "own the town"? Shall the city treasury be looted by indirect methods for favored contractors? Shall the leaders of Tammany be allowed to become enormously rich through swindles and jobbery?

## What the Return of Tammany would Mean

Shall the paupers and criminals, the sick and infirm, and the insane and feeble-minded be half-starved, half-clothed, and subjected to the personal profit of some Tammany plunderer? Shall the streets of the city be only hell-scapes and cemeteries? Shall the public institutions be allowed to run down while the money for their maintenance goes into the pockets of a coterie of hivers? Shall exorbitant prices be paid for supplies, the real excess in go into the pocket of a Tammany leader? Shall the great public improvements now under way be utilized for loot?

Shall school fittings be denied to thousands upon thousands of children, so that the public money, expended in other channels, may find its way into some Tammany man's pocket? Shall the Board of Health again become a political machine and the death-rate go up again, or, in other words, shall 5000 poor persons be permitted to die each year, so that Tammany men may enrich themselves? Shall the tenement-house population, especially the children, be exposed to fifty per cent. shall the taxes be increased twenty-five per cent.? Shall the crooks of this and other cities be invited to again pursue their callings upon a basis of absolute, division, and silence with police officials?

Shall young girls be dumped in constant streams and be kept in prison—white slaves—in dens of vice for the personal profit of some ward heeler? Shall we have the Brass Checks that Jerome showed in the last campaign back again? Shall we have a dummy Mayor in the City Hall and a real Mayor in Tammany Hall, or shall we have a Mayor while is Mayor? Shall the city be sold for the benefit of the people, with better street pavements, better lights, better public health, better police protection, and fewer undetected homicides, fewer and fewer tenements, more parks and public buildings, clean air and more sanitary tenements, the lowest collection of public money, the cessation of extravagance, or shall the city be raked for the benefit of a coterie of Tammany Hall men who are out "for their pockets all the time"?

## The Choice—Tammany or Clean Government?

Appeals not to permit the return of Tammany need be made on two lines alone. One is to recall what Tammany Hall is, has been, and always will be, and the other is to show what the administration has done in the way of actual reform and in making what almost might be called a model city government. There may be some in whom statistics of good municipal work will not appeal. District-Attorney Jerome has said that you cannot win election in this way. Well, then, recall what Tammany was under Van Wyck, a tool of Croker, and try to figure out how it will be under McEllin, mere of a tool of Murphy then Van Wyck was of Croker? Shall Murphy be the fresh coat of paint on the inside of the question? Shall the methods of the New York Department be put in force in the other city departments? That is the important side of the question. Mayor McEllin may not permit grafting? Mayor McEllin? Why did Murphy select him as the man who is absolutely necessary for Tammany to have a man under his complete domination so as to insure his leadership of Tammany Hall at its very beginning? Because Murphy knew his aim, and knew he could be trusted to do exactly as he was told.

## Crime, Incompetency, Neglect

Extra if Murphy does not "improve" upon the methods of the Van Wyck administration, do we want that kind of a regime in power again? What was the result? Incompetency everywhere, graft supreme, jobs, like the Rambo water shod in the air, brookings on all sides in appointments, Alliance with crime of evils of prostitution, child labor, children exposed to the vice of the Brass Check system, swindling profits paid for supplies, Pay-roll padded, Public buildings neglected, The city's poor badly fed and clothed, Public health and public safety neglected. Why prolong the list? The main thing is the situation?

Who dares defend the Van Wyck administration? Not Murphy George B. McEllin only. He shows his said of the Van Wyck regime: "We have no apologies to offer. We have nothing to apologize for." Not the man who has sold the city for a chamberlain's league with vice, nothing but trafficking in fire and blood, nothing but looting the public treasury, nothing but the innocent and the few Trust, nothing but a high death-rate and hundreds of children of the poor lying in their graves instead

of being saved, nothing but an open alliance with gamblers, policy swindlers, probably being the worst—nothing but filthy streets and overcrowded schools. Nothing to apologize for? Not one thing? That is what making means. That is Tammany. The cry of the injured children none ought to make George B. McEllin throw his fingers into his ears. The "starch in the nostrils of men," of which Comptroller Great, the modern politician James, has spoken, ought to make him hold his nose. The closure of the ragged doorway during the Van Wyck administration ought to be his tongue. How can George B. McEllin say "I have nothing to apologize for" and look an honest citizen in the face?

## What the Low Administration Has Done

And what about the Low administration? Well, in the first place, Deveryism to go. For a year after Low went into office Devery practically ruled the police. He doesn't now. Police appointments are being made on a longer and longer basis. According to the Tammany method of making promotions, have been made without tribute. The "System" has been worked, and only a few wrigglers of its tail are left. General Grever, the Police Commissioner, practically destroyed it when he sent the infamous warden back to the streets. Crooks have been banished, policy playing is dead, open prostitution has been checked, the children, at any rate, being safe from it; gamblers have been made to seek the darkest of dark places, murder is less frequent, police tyranny is gone, the good name of the police has been almost completely restored, no less than thirty-four high police officers when Devery ruled have been dismissed or retired "for the good of the service." The police force has been made decent, and its very best man on it may now hold up his head.

## Reducing the Death-Rate

And the public health? Let the figures tell the story. In the year 1902 under Low it was 18.75, and in the year 1903 it will be about 18. The smallpox epidemic, inherited from the Sexton-Van Wyck administration, has been stamped out. Milk adulteration has almost entirely ceased. Special summer treatment for the poor has been established. Consumption has been fought, showing a great decrease in the number of deaths; North Brother Island has been made civilized. The city hospitals have been made pure and decent. As a touching tribute to the efficiency of Dr. Lester in this department, it may be said that there are about twenty-five men in New York who would have died had the Tammany methods of caring for the public health been continued.

And the public schools? Figures talk again. In four years under Van Wyck Tammany appropriated \$13,324,742 for new schools. In eighteen months the Low administration has appropriated \$14,980,000. By September 1, 1904, every child in New York that demands a school sitting should have one.

A recreation has been made in the charities department. It would take pages to tell how the poor suffered needlessly under Tammany. They have good food now and plenty of it, and yet the best charity is \$30,000 less than under Tammany, while their quarters are in an excellent sanitary condition. Destitute children are better cared for; there are no more delinquencies in the management of the department; graft has disappeared.

In street cleaning, the days of Waring have returned. Yet better than the Waring days have come. No longer is the city's refuse dumped in the streets, and the sweepings and the refuse piled up the steps of Bloor's Island, and when the place is filled up it is not only so now—a property worth more than \$500,000 will be ready for the city's use, having an area greater than Blackwell's Island. The public institutions on that island can be moved there, and Blackwell's Island will be available for park purposes. Refuse is now being buried in incinerators, and the city is actually making money out of it.

The new tenement-house department has done prodigious work. Vice has been driven from the tenements from the tenements. The people who live in these places know that the Low administration is a friend and not an enemy. No better work for the masses has been done in any department than under the new tenement-house regime.

## Honesty in the City Departments

And so the story might be prolonged indefinitely. Six parks and seven public playgrounds have been opened, against only one park in the Tammany regime. The parks have been cared for intelligently and faithfully, and lost has been diminished. The docks, the wharves, and the piers have been managed on business principles. The great fact in the administration made from the business management of the city's interests that it has given, is that graft and the sale of law and the league with vice have gone. Every East Side rascal, every "red-light" promoter, every profiteer of a house of prostitution, every gambling establishment, every crook, every swindling contractor of the old regime, is for the return of Tammany to power. How are you going to vote?

**TAMMANY WAITING FOR THE STORM TO "BLOW OVER"**

*This famous drawing by Thomas Nast is one of the series in which the great cartoonist exposed the iniquities of the Tweed Ring. It was published in "Harper's Weekly" of September 22, 1871.*

*Robert, who has been disguised as a Hunter, discloses himself to Perpetua as the King*

*King Robert, in the House of Lyrabetta, discovers that he has been transformed into the Fool Diogenes for his Misdeeds*

### **THE NEW YORK STAGE—MR. SOTHERN IN "THE PROUD PRINCE"**

*Mr. Sothern is appearing at the Herald Square Theatre in the dramatized version of Justin Huntly McCarthy's novel "The Proud Prince." The action of the play is founded on a romantic legend of which King Robert of Sicily is the central figure. As a penalty for certain misdeeds, the king is transformed into a beggar, and a new king enthroned in his place. After a series of stirring adventures, King Robert is restored to his throne through the good offices of the girl with whom he is in love*

**MISS ELEANOR ROBSON IN A NEW PLAY BY  
MRS. HUMPHRY WARD**

*Mrs. Humphry Ward will be well represented in the dramatic field during the present season. The stage version of "Lady Row's Daughter" was recently produced with Miss Fay Davis in the title role; and later in the winter Miss Eleanor Robson is to appear in a new play by Mrs. Ward and Louis N. Parker entitled "Agatha"—Mrs. Ward's first venture as a playwright.*

## ANOTHER CHANCE FOR MR. CARNEGIE

Merion, Kansas, September 30, 1923

To the Editor of *Harper's Weekly*:

Sir.—While the establishing of public libraries is something so much attention throughout the country, and while the pursestrings to Andrew Carnegie's millions remain slack, I desire to call attention to a few facts and make a suggestion—a suggestion which, if favorably heeded, may be the source of much benefit to many people and at the same time add materially in letting the great, and now liberal, steel magnate slip into a poor man's grave. This benefit, too, of which I speak would be in favor of many who now receive no such benefit.

The suggestion which I would make is that the passenger-trains of all railroads which exceed a hundred miles in length in the United States be supplied with books and magazines for the free use of passengers. In particular do I suggest that they be supplied to all through trains and trains carrying colonists or house-movers. While the establishing of public libraries, is a laudable work, this, in my opinion, would be fully its equal. Besides being a source of enjoyment to all travelers it would be such in particular to that class of people who make long migrations from one part of the country to another in quest of a suitable location for a home—country folk who have little or no opportunity to visit the public libraries located in the large and medium sized cities. The migration of house-movers is a wearisome journey, and to those who are unable—as many are—to buy reading matter, the trip in this way would be made a hundredfold more pleasant.

The carrying out of this suggestion would take little time; and no large sums of money would be required for the erection of buildings. In addition to the books and magazines to be supplied, only a depository would have to be established in each train and a person employed to take care of the same. In Sweden there is already a system of this kind in operation, and I am informed that it is doing a noble work.

It is true that on some of the Western trains few magazines are now found for the free use of passengers, but the system deserves to be known until the whole of the country is included. "Knowledge of books is a form of business," says the English proverb, "is a torch in the hands of one who is willing and able to show those who see bewildered the way which leads to prosperity and welfare." Let us put such torches in the hands of as many men as possible, and especially so since it is Mr. Carnegie's favorite hobby.

I am, sir,  
CHARLES ALMA ITERS.

## CONCERNING MUSICAL PROGRAMMES

MORRIS, PENNSYLVANIA, October 2, 1923.

To the Editor of *Harper's Weekly*:

Sir.—Musical education would be advanced and receipts increased if symphony concert programmes were modified and hearts given a fine hymn of praise, serenade, a snatch from an opera, some master-composer's melody. This would be a welcome relief to the better half of the audience; weary, sleepy, headachy, bored; and many, too, trying hard to appreciate! In a concert of classic music, who has not noticed the general outbreak of hearty applause that never fails to follow the rendering of a chœur number, the restrained can appreciate. Rag-time? No; Mendelssohn's funeral march, perhaps; Handel's Largo, the Austrian or other national hymn, waltzes from Tell, a Schubert serenade. How much more fascinating is the music we love when rendered by a large live orchestra. May not the autographed have one number of such programmes? It has had always one or two numbers that do not please, as distinguished from the successful in it, could appreciate, an individual or a single orchestra; the public itself would probably have held a dozen.

I am, sir,  
EVERETT STEWART.

## MUSIC AND THE PROGRAMME

PERVARDIA, FLORIDA, October 5, 1923

To the Editor of *Harper's Weekly*:

Sir.—Noting in the columns of your valuable publication the interesting discussion of music, and the popular programme given to me, I wish to contribute my mite to the general fund of opinion. Speaking from a personal standpoint, which may, perhaps, represent the tastes and preferences of many others, I would say that the programme of a music-lover, a classic programme would offer untold attractions on any occasion, music, wherever such predominates, is not to be despised in whatever form or shape it may be presented.

I am not, in this connection, alluding to the flashy productions of ambitious bandmasters' assistants, nor to the rag-time conga song. I am merely offering a protest against the arbitrary line which seems to be drawn between good music and bad, as defined in the suggestion herein offered. In my judgment, the emotional interpretation of a simple folk song, or ballad requires not only the art of the trained musician, but the soul of the natural one. Under such treatment, even the despised "My Old Kentucky Home" (which has been lauded in no represent the dividing line) might become "a thing of beauty and a joy forever."

The poetry of Chopin and the sublimity of Beethoven entrance on any programme. The lover of classic music finds in this form of expression, short of all redundancy, an intellectual stimulus beside which the mere tinkling of melody fades into insignificance. Yet, it seems to me, there should be no appreciable "let down" in this exaltation of feeling—rather a variation in degree—when, with exquisite fullness of harmonic tone, a simple, old-time folk song strolls out upon the ear, bearing on its electric wires messages which throng thick and fast, as though borne to the soul with the perfume of a flower.

As to rag-time, it in having its day, its crazy movement sometimes considered a retrogression, or rather outcome, of syncretism it has its lovers—as exemplified in the reply of a certain person who was asked if she liked Beethoven.

"Oh yes; very good, indeed, for An'—but then, you know, rag-time had and been invented."

As regards the mixed programme, I should suppose that to be a mere matter of taste, regulated by time, place, environment, taste, and good judgment. But from the local productions which ordinarily delude a musical programme in recognition of the supposed popular demand—the ornate rendering of merely "show pieces"; the variations; oh, the exorbitant variations, with their endless dragging on some broken-down theme (which bear the same relation to music that a hanging tongue does to a harassed soul!)—from all such we say, reverently, "Good Lord, deliver us"—at any time.

I am, sir,  
LARA PETERSON PRESTON.

## THE NEW WEST POINT—A CORRECTION

MISSOURI—UNITED STATES MILITARY ACADEMY,  
2307 POINT, NEW YORK, October 2, 1923.

To the Editor of *Harper's Weekly*:

Sir.—I am much disturbed by the statement made by the author of the "New West Point," in a recent issue of the WEEKLY, that eight million dollars more are to be asked for to carry out the proposed plans for the new West Point. The statement, I feel, is calculated to do much harm; it certainly misrepresents the expectations and intentions of the authorities. One of the chief factors considered in accepting the plans decided on was the belief in the economy of their construction and that the needed buildings could be built within the appropriation.

These buildings are to provide for the present maximum number of cadets—not for 1250. If, however, in the future Congress should decide to increase cadets to that number, there will be a place for the additional buildings necessary without disturbing any important ones then existing; but even the cost of such additional buildings, together with the amount already appropriated, would be much less than a total of eight million dollars.

I hope you will kindly correct the wrong impression in the above matters your article gives.

I am, sir,  
A. L. SMITH,  
Colonel, United States Army, Superintendent.

## STREET ADVERTISING

New York, September 30, 1923.

To the Editor of *Harper's Weekly*:

Sir.—"The art of advertising" is a phrase common enough, and yet too common when it approaches the meaning that one is compelled to give it in these degenerate days; for the allowance has become no other than a synonym for vulgarity. There is no reason why the cheap show-up of a manufacturer of flimsy, form corsets should not, if he deems his business honorable, advertise it in an honorable way.

The day is at hand when a censorship in this affair is not only desirable, but absolutely necessary, and the quicker we have it the better. We long for the time when an unbarred way safely be left in the street overnight without being decorated by the advance agents of "The greatest living wonder" or "The marvelous mystery of a coming musical performance. There is a deference due to public opinion, a deference due to public morals, and a deference due to public decency—all of which will be satisfied when the advertising matter shall be confined within his proper limits.

I am, sir,  
J. W. V.

## APPRECIATED

VERMONT, MONTPELIER, September 25, 1923

To the Editor of *Harper's Weekly*:

Sir.—To a recent article in your paper on "Booker Washington and the Negro Problem" I was moved and again amazed. That was the brightest ray of hope that has shined over us from the North in many a weary day. Send us more. I have been working with and for the Africans at home and in Central Africa for ten long years, and I endorse every word you say.

I am, sir,  
S. P. VERSTER.

# A DEAD CITY

By JOSEPH A. ALTSHELER

whereas in reality as well as seeming; nowhere did they see a miner's hat or a hater's cabin; only nature in her most savage form.

The little group of horsemen were silent. The Candidate's head was bowed and his brow bent. Clearly he was immersed in thought. Mr. Heathcote, amused to such a degree, turned forward in his saddle in a state of semi-astonishment. Harley said at last to the guide: "A wild country, one of the wildest, I think, that I ever saw."

"Yes, a wild country and a bad 'an' too," responded Jim. "See off there to the left."

He pointed to a mass of bare and rocky ridges, and when he saw that Harley's gaze was following his long forefinger he continued:

"I say it's a bad 'un because over there Red Perlin and his gang of horse thieves, outlaws, and outcasts used to have their hiding-places. It's a tangled up stretch o' mountain, so wild, so rocky, and so full of coves that they could have hid there till Judgment-day from all Montana. Yes, that's where they used to hang out."

"Lead to?"

"Yes, 'cause I ain't heard much of them for some time. They came down in the valley and tried to stampede them new blooded horses from Kentucky on Sifton's ranch, but Sifton and his men were waitin', and when the smoke cleared away most of the gang was wiped out. Red and two or three of his fellows got away, but I ain't heard of 'em since. Guess they're scattered."

"Wiseest thing they could do," said Harley.

The guide made no answer, and they plodded on in silence until about two o'clock in the afternoon, when they stopped in a little cove to eat lunch and refresh their horses.

It was the first grateful spot that they had seen in hours. A break led by the cove above formed a pool in the hollow, and then, overflowing it, dropped down the mountain wall. But in this sheltered nook and around the life-giving water green grass was growing, and there was a rim of goodly trees. The horses, when their riders dismounted, grazed eagerly, and the men themselves lay upon the grass and ate with deep content.

"Shall we retrace Crow's Wing by dark?" asked the Candidate of the guide.

Jim had risen, and, standing at the edge of the cove, was gazing east over the rolling sea of mountains. Harley noticed a troubled look on his face.

"If things go right we bin," he replied; "but I ain't akeer that things will go right."

"What do you mean?"

"Do you see that brown spot down there in the southwest just atop the hills? Wa'd it be a cloud, or it's comin' this way. Clouds, you know, always brin' somethin' in 'em."

"That is to say, we shall have rain," said the Candidate. "Let it come. We have been rubbed on too often to mind such a little thing, eh, Harley?"

The correspondent nodded.

"I don't think it'll be rain," said the guide. "We are so high up here that mornin' Hilly'll be snow. Ah! when there's a snow-storm in the mountain you can't go climbin' along the side o' cliffs."

The others too now looked grave. They had not foreseen such a difficulty, but the guide came to their relief with more cheering words; after all, the cloud might not continue to grow, "no! it ain't worth while to holler afore we're hit."

This seemed sound philosophy to the others, and dismissing their cares, they started again, much refreshed by their stop in the little cove. The road now grew rougher, the guide leading and the rest following in single file. By and by their cares returned. Harley glanced toward the southwest and saw there the same cloud, but now much bigger, darker, and more threatening. The sunshine was gone and the wrinkled surface of the mountains was gray and somber. The air had grown cold, and down among the cliffs there was a wild, moaning wind. Harley glanced at the guide and noticed that his face was now decidedly somber. But the correspondent noticed nothing. Part of his strength lay in his ability to wait, and he knew that the guide would speak in good time.

Another hour passed and the air grew darker and colder. Then Jim stopped.

"Gettin' on," he said, "there's a snowstorm comin' 'n' winter. I didn't expect one so early even on the mountains, but it's comin' anyhow, an' if we keep on for Crow's Wing they'll have to dig our bones out of the mornin' drifts next summer. We've got to make for Queen City."

"Queen City?" exclaimed Mr. Heathcote. "I didn't know there was another town anywhere near here."

"No! a-standin' all the same," replied the guide, brusquely, "an' I wouldn't never be startin' out on a trip to Crow's Wing if there hadn't been such a stoppin'-place betwixt an' between, in

WHEN the special train was at Blue Earth, in Montana, among the high mountains, three came to Jimmy Grayson on appeal, compounded of pathos and despair, that he could not resist. It was from the citizens of Crow's Wing, forty miles deeper into the yet higher and steeper mountains, and they recounted, in mournful words, how no candidate ever came to see them; all passed them by an either too low or too difficult, and they had never yet listened to the spell of oratory; of course they did not expect the nominee of the great party for the Presidency of the United States to make the hard trip and speak to them, when even the little fellows ignored them; nevertheless, they wished to inform him in writing that they were alive, and on the spot at least they made as big a dot as either Helena or Butte.

The Candidate smiled when he read the letter. The tone of it moved him. Moreover, he was not deficient in policy—no man who rises is—and while Crow's Wing had but few votes, Montana was close, and a single State might decide the Union.

"These people at Crow's Wing do not expect me, but I shall go in there," he said to his train.

"Why, it's a full day's journey and more, over the roughest and roughest road in Montana," said Mr. Curtis, the State Senator from Wyoming, who was still with them.

"I shall go," said Jimmy Grayson, decisively. "There is a break here in our schedule, and this trip will fit in very nicely." The others were against it, but they said nothing more in opposition, knowing that it would be of no avail. Obedient, generous, and soft-hearted, the Candidate nevertheless had a temper of steel, when his mind was made up, and the others had learned not to oppose it. But all shunned the journey with him to Crow's Wing except Harley and Mr. Herbert Heathcote, a National Committee-man from Eastern State.

The going of Harley with the Candidate was taken as a matter of course by everybody. Silent, useful, and strong he had been almost imperceptibly into a residential relationship with the nominee, and Jimmy Grayson himself did not realize how much he relied upon the quiet man who could not make a speech, but who knew the American people so well and who was so ready of resource. As for Mr. Heathcote, being an Eastern man, he wished to see the West in all its aspects.

They started at daybreak, guided by a taciturn mountain man, Jim Jones, called simply Jim for the sake of brevity, and, the hour being so early, but few were present to see them ride up the hanging slope and into the slightly wilderness.

But it was a glorious dawn. The young sun was gilding the sea of creeps and crevices with burnished gold, and the air had the sparkle of youth. Mr. Heathcote threw back his slightly narrow chest, and drawing three deep breaths of just the same length, he said, "I would not miss this trip for a thousand dollars!"

Harley said nothing, but he too looked out upon the morning world with a kindling eye. Far below them was a narrow valley, a faint green line down the center showing where the little river ran, with the irrigated farms on either side, like beads on a string. Above them towered the peaks, white with everlasting snow.

"A fine day for our ride," said the Candidate to Jim.

"Looks like it now, though I never gamble on mountain weather," replied the taciturn man.

But the promise held good for a long time, the sun still shining, and the winds coming fresh and brisk along the crevices and ridges. The trail wound about the slopes and steadily ascended. Vegetation ceased and before them stretched the bare rocks. Harley knew very well now that only the sunshine saved them from grimness and desolation. The loneliness became oppressive. It was the

now n' trouble with the weather. An' let me whisper to you, Queen City's quite a stinkin' place. We'll pass the night there. It's got a fine hotel, the finest an' biggest in the mountains.

He looked grimly at Mr. Heathcote, as much as to say, "Ask me as much more as you please, but I'll answer you nothing."

"Scouring cold and damp touched Harley's cheek. He looked up and saw the faintest of snow, descending softly, settled upon his face. The clouds rolled over them, heavy and dark, and shut out all the mountains save a little island where they stood. The snow, following the first few flakes, fell softly but rapidly.

"It's Queen City, or something in the drifts till next summer," cried Jim, and he turned his horse into a side path. The others followed without a word, willing to accept his guidance through the greatest danger they had yet faced in an arduous campaign. Despite the danger, which he knew to be heavy and pressing, Harley's curiosity was aroused, and he wished to ask more of Queen City, but the sinister face of the guide was not inviting. Nevertheless, he risked one question.

"How far is this place, Queen City?" he asked.

"Just two miles," replied Jim, with what seemed to Harley a desire to get on, and it's tared lucky for us that it's so near."

Harley said no more, but he was satisfied with nothing in the guide's reply save the fact that the town was only two miles away; any shelter would be welcome, because he saw now that a snowstorm on the wild mountains was a terrible thing.

The guide led on, Jimmy Grayson with best head followed; Mr. Heathcote strank in his saddle, came next, and Harley, who had dropped back, brought up the rear. Now and then the vast veil of snow parted before the wind, as it fell down the crevices by a sword-blade, and the correspondent looked upon a grand and awful sight. Below him were all the peaks and ridges rising in white cones and pillars against a cloudy sky, and the effect was of distance and sublimity. From the clouds and ravines came a desolate moaning. Harley felt that he was much nearer to the eternal here than he could ever be in the plains. Then the vast veil would close again, and he saw only his three comrades and the rocks twenty feet away.

They turned around the base of a cliff, rising hundreds of feet above them, and Harley caught the dull red glare of brick walls showing through the falling snow. He was ready to raise a shout of joy. This he knew was Queen City, lying snugly in its wide valley. There was the typical, single mountain street, with its row of buildings on either side; the big one nearby was certainly the hotel and the other big one farther on was as certainly the opera-house. But nobody was in the streets, and the whole town was dark; not a light appeared at a single window, although the night had now come.

Harley rode up by the side of the guide. "The place looks like snow," he said.

"Maybe they're all gone to bed, but they ain't nuthin' here to keep 'em awake," replied the guide, with the old puzzling and desirous smile.

Harley turned coldly away. He did not like to say so to make Jim of kin, and that he saw clearly was the guide's intention. Jimmy Grayson was still thinking of things far away, and Mr. Heathcote, chilled and shrank, seemed to have lost the power of speech.

The guide rode slowly toward the large brick building that Harley took to be the hotel, and at that moment the snow slackened for a little while; the last rays of the setting sun struck upon the brick walls and the gilded trim, and the red and brass panels of glass gave back the red glare, but mostly the windows were bare and empty, like cyclops' sockets. Harley looked further, and all the other buildings—the opera-house, the stores, and the residences—were the same, desolate and desecrating. About the place were snow-covered heaps, evidently the refuse of mining operations, but no other saw so human being.

The effect upon all save the guide was startling. Harley saw the look of chilled wonder grow on Jimmy Grayson's face. Mr.

# CRYSTAL Domino SUGAR

A Triumph in Sugar Making!

Sold only in 5 lb. sealed boxes!

"CRYSTAL DOMINO SUGAR" is packed in neat, sealed boxes, and is NEVER sold in bulk. It is packed at the refinery and opened in the household.—There is an intermediate pure granular like a cluster of diamonds, the result of its perfect crystallization. Consequently, it is firm, perfect in quality, brilliant in appearance, and never made one equal it in its "Dissolve" "Mash" "Dissolve" "Dissolve" the name of "Crystal Domino," as well as the name placed where you have told it in great tin, on the top. It is sold by all first-class Grocers, and is manufactured only by HAVEMORE & SUGAR SUGAR REFINERY, NEW YORK.

Leaders—because the Best.

Heathcote raised himself in his saddle and stared, incomprehending. Harley had been deep in the desert, but never before had he seen such desolation and ruin; because here was the body, but all was dead from fire. He felt as one alone with ghosts. The guide laughed dryly.

"You guessed it," he said, looking at Harley. "It's a dead city. Queen City has been as dead as Adam these half-dozen years. When the mines played out it died; there was no earthly use for Queen City any longer, and by and by everybody went away. But I've Queen City in my mind when it was alive! Five thousand people here, seen the old town when it was alive! Five thousand people here, Money a-blowin'; drinks a-passin' over the counter one way and the coin the other, the gamblers' houses at the theatre check-full, all women, any kind you please. But there ain't a soul left now."

The snow thinned still more, and the buildings rose before them, stout and grim.

"We'll stop to-night at the Grand Hotel—that is, if they ain't too much crowded," said the guide, who had had his little job, and who now wished to serve his employers as best he could, "but first we'll take the horses into the dinin'-room; nobody will object, I've done it afore."

He rode toward a side door, but over the main entrance Harley saw in illuminated letters the words "Grand Hotel," and he tried to shake off the feeling of weirdness that it gave him.

The door to the dining-room, which was almost level with the earth, was open, and with some driving the horses were persuaded to enter. They were tethered there, sheltered from the storm, and when they moved their feet rumbled hollowly on the wooden floor. The candidate and his two friends, driven by the same impulse, turned back into the snow and re-entered the house by the front door.

They passed into a white hall, and at the far end they saw the clerk's desk. Lying upon the desk were some fragments of paper fastened to a chain, and Harley knew that it was what was left of the hotel register. It speaks vividly of both life and death that the three stopped.

"Would you like to register, Mr. Grayson?" asked Harley, wishing to relieve the tension.

The candidate laughed mirthlessly.

"Not to-night, Harley," he said, "but gloom as the place is we ought to be thankful that we have found it. See how the storm is rising."

The snow drove in at the unsheltered windows, and a long white arched around the wind whirled around the old house. The guide came in with cheerful haste and stamp of feet.

"Don't linger here, gentlemen," he said. "The house is yours; come into the parlor. We've had a piece of luck. Now and then a lone tramp or a miner seeks shelter in this town, just as we have done; they come mostly to the hotel, and some feller who gathered up wood failed to burn it all. I'll have a fire in the parlor in five minutes, and then we can ring for hot drinks and a warm dinner. I'll take straight whiskey, an' after that I ain't particular whether I get putty-do-fay-graw or hummis'-bird tongues."

His good humor was infectious, and they were thankful too for the shelter, desolate though the place was. All the wood had been stripped away except the floors, and the brick walls were bare. In the great parlor they had nothing to sit on save their saddles, but it was a noble apartment, many feet square, built for a time when there was life in Queen City.

"I've heard the Governor of Montana speak to more than two hundred people in this very room," said Jim, reminiscingly. "He was to have spoke in the public square, but snow come up, an' Bill Fowler, who ran the hotel and run her wide open, invited 'em all right in here, an' they come."

Harley could well believe it, knowing, as he did, the miners and the mountaineers and by report early Montana.

At one end of the room was an immense grate, and in this Jim

heaped the wood so generously left by the unknown tramp or miner, lighting it with a ready match. The ruddy blaze leaped upward and threw generous shadows on the floor. The men, sitting close to it, felt the grateful warmth and were content.

"An old hand traveller" in the mountains always provides for a snowy day," said the guide, and he took from his saddle-bags much food and a large bottle.

They drank a little and ate heartily. The last touch of cold departed, and the fire still sparkled with good cheer, casting its comforting shadows across the stained floor.

"I've brought in the horse blankets," said the guide, "an' with them under us, our overcoats over us, an' the fire afore us we ought to sleep here as snug as a worm as a heaver in his house."

Harley walked to the window and looked out. The night was black, save for the driving snow, and when he looked back at the

room it seemed a very haven of delight. But the strangeness of their situation, the weird effect of the dead city, with the ghost-like shapes of its houses shewing through the snow, was upon his nerves, and he did not feel sleepy.

Mastering some excuse to the others he went into the hall. It was dark, and a gust of cold air from the open window at the end

struck him in the face. At the same moment Harley saw what he took to be a light further down the hall, but when he looked again it was gone.

It might be a delusion, but the matter troubled him: if a lone tramp or miner were in the building he wished to know. Any stranger would have a right in the hotel, but they were comradeship and welcome in Jimmy Grayson's party.

Harley's instinct said that all was not right, and taking off his boots he crept down the hall and among the cross halls with noiseless feet. He did not see the light again, but he heard in another room the hum of voices, softened so that they might not reach any one save those far whom they were intended. But they reached Harley, crashing just behind the

edge of the door, and hearing, he aubounded. A great danger threatened the frontier for the Presidency of the United States. Such a thing as the present had never before happened in the history of the country.

The door was still on its hinges, and it was still slightly ajar. Harley, peeping through the crack, saw the faint light from the window, saw the fire occupants of the room, and because the man who drew the curtains and who showed himself so evidently the leader had red hair he knew him instinctively. It was Red Levy and the rest.

Harley was in a chill as he listened, and then his professional instinct leaped up. What a tremendous piece of news the kidnapping and holding of Jimmy Grayson would be! But it was only a momentary thrill; above it and beyond it swelled his sense of comradeship and duty and of devotion to the man whom he had come to regard as his chief. The candidate must be saved, he thought.

But Harley, thinking his hardest, could not think how. There were five men well armed in the room before him: the guide probably had a pistol, but he had none, and he was sure that Jimmy Grayson and Mr. Heathcote were without them. He passed a long time, undecided, and at last he drew his gun to his waist and toward the great parlor. Then he put on his boots, re-entered the room, and spoke in a low voice to his comrades.

"The guide's fighting blood was on fire at once. 'I've a revolver,'

The guide led on; Jimmy Grayson, with bent head, followed

he said; "we his barricade the room and hold them off. There are but two windows here, opening out on the snow, but they are so high they can hardly reach 'em with their heads. We kin make a good fight of it."

"No," said Jimmy Grayson, "there's not a shot to be fired, because I've a better plan. How long do you think it will be before they come for me, Harley?"

"About fifteen minutes I should say, at least that is what I gathered from their talk."

"And they have not examined the building or the town?"

"No, they merely came down the trail behind us and slipped into that room, waiting their chance."

"Very good. Joo, you told me a while ago that the Governor of Montana once spoke to two hundred people in this room; it was a famous remark of yours, because I shall speak to an easy people to-night in this same room. Shut the door there, put the saddles before it, and then load the fire as high as possible."

**A Desperate Expedient**

The Candidate's voice was sharp, decisive, and full of command. The born leader of men was asserting himself, and the guide, without pausing in reason, hastened to obey. He opened the door, put the saddles before it, and draped upon the fire all the remaining wood, except a stump, reserved by Jimmy Grayson's express command. The fire leaped higher and the room was brilliantly lighted.

Jimmy Grayson stood by, erect, calm, and grave.

"Now, gentlemen," he said, "you are a crowd, come from Crow's Wing to meet me here and to hear what I have to say. I trust that you will like it, and indurate your liking by your applause."

The stump was placed in the middle of the floor, and Jimmy Grayson stepped upon it. His face at that height was visible through the window to any one outside, although the others would be hidden. Just as he took his place Harley thought he heard the soft crunch of a footprint on the snow beneath the window. He felt a burning curiosity to rise and look out, but he restrained it and did not move. The guide was staring at the Candidate in open-mouthed amazement, but he did not speak. A few big white flakes drove in at the open window, but they did not reach the room before the fire that blazed so brightly. Harley again thought he heard the soft shuffle of footsteps on the snow outside, but then the burning wood crackled merrily and Jimmy Grayson was about to speak.

**The Great Speech**

"Gentlemen of Crow's Wing," said the Candidate, in his full, penetrating voice that the empty old building gave back in many an echo, "it is indeed a pleasure to me to meet you here. The circumstances, the situation are such as to inspire any man who has been so honored, I would like to have seen your little town, the home of brave and honest men, dwelling as it does among these mighty mountains and far from the rest of the world, but I cannot do so, so reluctant. I appreciate too your kindness and your thought for me. Seeing the advance of the storm and knowing its dangers, you have come to meet me in this place, over so full of life. I sad something singularly appealing and pathetic is this. Once again, if only for a brief space, Queen City shall ring with human voices and the human tread."

The Candidate paused a moment, as if the end of a rounded period had come and he were gathering strength for another. Then suddenly arose a mighty chorus of applause. It was Harley, Henthobte, and Jim, and their act was spontaneous, the inspiration of the moment, drawn from Jimmy Grayson's own inspirations. The guide bent upon the floor with both hands and both feet, and the other two were not less active. Moreover, the guide opened his mouth and let forth a yell, rapid, continuous, and so full of volume that it sounded like the whoop of at least a half-dozen men. The room resounded with the applause, and it thundered down the halls of the great empty

building. When it died, Harley, listening again intently heard once more the crash of feet on the snow outside, but now it was a rapid movement, as if of surprise. But the second cause to him only a moment, because the Candidate was speaking once more and he was worth hearing.

As an orator Jimmy Grayson was always good, but sometimes he was better than at other times. The audience from Crow's Wing, the consideration they had shown in meeting him here in the dead city, and the wildness of the night outside seemed to inspire him. He showed the greatest familiarity with the life of the mountains and the needs of the miners; he was one of them, he sympathized with them, he entered their houses, and if he could he would make their lives brighter.

Never had the Candidate spoken to a more appreciative audience. With his foot and hand and voice it thundered its applause; the building echoed with it, and all the time the fire burned higher and higher, and the merry crackling of the wood was a minor note the chorus of applause. But Jimmy Grayson's own voice was like an organ, every key of which he played, it expressed every human emotion; full and swelling it rose above the applause, and Harley, watching his expressive face, saw that he felt these emotions. Once he believed that the Candidate, carried away by his own feelings, had become oblivious of time and place and thought now only of the troubles and needs of the mountain men.

### The Enemy Routed

Harley's attention turned once more to the wideness. He thought he was a lucky chance it was that no one standing on the ground outside was high enough to look through them into the room. He blessed the unknown builder, and then he tried to hear that familiar shuffle on the snow, but he did not hear it again.

Jimmy Grayson spoke on and on, and the applause kept pace, until at last the guide slipped quietly from the room. When he returned a quarter of an hour later the Candidate was still speaking, but Jim gave him a signal look and he stopped abruptly. "They are gone," said Jim. "They must have been gone a full hour. The snow has stopped, and I guess they are at least ten miles from here, ruzmia! for their lives. They know that if the men of Crow's Wing put hands on 'em they'll be hangin' from a limb ten minutes after."

Jimmy Grayson sank down on the stump, exhausted, and wiped his hot face.

"See, Mr. Harley," whispered the guide to the correspondent. "I've heard some good speeches in my time, but to-night's was the greatest."

The Candidate spoke the next day at Crow's Wing, and his audience was delighted. But Jim was right. The speech was set as great as the one he made at Queen City.

## What a Locomotive Engineer has to Remember

By Leon Edgar Reed

OFFICIALS who operate the fast trains recently put on between New York city and the West are just now facing a problem in philosophy which, on paper, looks something like this:

"How many iron-rod rules on the human mind keep within instant recall, if death is the penalty for forgetting?"

The answer is supposed to lie somewhere in the code of rules and signals which the officials have developed for the operation of these fast trains. These rules, of which there are about 700 for each 125 miles between New York city and Chicago, were made for the safety of the public, but the public may look askance when it learns that one man must remember 700 of them, and that a slip on any one rule may mean a shocking loss of human life.

### Six Thousand Rules

These 700 rules are the average for each division of the chief railroad lines running

## A Gentle Aperient

## Hunyadi Janos

Natural Laxative Water.

If you are CONSTIPATED (the beginning of many derangements of the system) get at once to your Craygitt and get a bottle of Hunyadi JANOS. The cost is small. Drink half a tumblerful morning and get prompt and pleasant relief. Many of the world's greatest female specialists have endorsed and now prescribe Hunyadi Janos for CONSTIPATION. Taint on HUNYADI JANOS and freely refuse substitutes. They are often harmful.

**MORPHINE** LIGHT ON HABITUALS  
The Dr. J. J. Stuppleson Co., Dept. 21, Baltimore, Md.

west from New York. Each set covers the work of one engineer, who drives his train until another engineer, with a fresh set of rules and, presumably, a fresh memory, releases him. In other words, eight men, the average number of locomotive engineers who drive a fast train between New York and Chicago, must keep constantly in mind nearly 6000 different rules in order that patrons of these trains may travel without risking their lives. What this means to the public, in twenty-four-hour's ride on one of these trains, can be judged from the following list of what an engineer on a certain 100-mile run has to watch, while his locomotive is going at a speed of sixty miles an hour:

**A Few Things to Look out For**

Five hundred "cross-over" switch-lights, to learn whether they are red or white. Fifteen "interlocking" switch-lights, to learn whether they are red, white or green. Seven "non-interlocking" switch-lights, to learn whether they are red or white. Three "non-interlocking" switch-lights, to know whether they are red or green. Nineteen arms at twenty-five way stations, for possible red lights. Four hundred highway crossings, to know whether they are "clear." Locomotives of a dozen trains approaching on parallel tracks, for red or green lights. Three graph operators at twenty-five way stations, who may be walking near the track with orders. For a red flag at any conceivable point in the 100 miles, displayed as a danger signal. Whether one or two explosions are exploded at any point in the 100 miles, signifying "caution" or "stop." Whether his clearance card is good for each of twenty-five way stations. Whether there is enough water in the engine boiler. Whether there is enough water in the engine tender. Whether there is enough coal in the engine tender. Whether the steam pressure is being kept up. Whether the fireman is chafing. Whether the other long set of rules. Whether the engine-bell rings at 400 highway crossings.

**Reading Signs at a Mile a Minute**

These rules apply to the terminal division of a certain great railroad, where 100 miles is covered frequently at an average speed of sixty miles an hour, and spurts of eighty miles an hour are occasionally made. If the color of one of these 500-and-odd lights is overlooked or misunderstood, a catastrophe is possible. But in addition to these duties the engineer must watch: The rattle of his locomotive, to detect a loose or broken part. The exact location of four water-troughs, filling the tender without stopping. The position of the track ahead of his engine. The approach to every small hill or incline in the track.

By day the switch and signal-lights are replaced by signal boards and "blocks," the color or direction of which must be read as literally as the lamps. The engineer who notes 600 of these signs from his cab-window, and mixes the 100th, has taken, in true-track language, a "700 to 1 shot" with a train-load of human lives.

**Has the Safety Limit been Reached?**

The engineers who drive the limited trains on the 100 miles of road cited above, which is shorter than the average division, but a fair example, either "double" the distance by taking a train each way in one day, and resting the next, or else are allowed to cover it in one direction daily. Why they are not made to work longer hours needs no explanation. A short time ago, the most expert engineer of this railroad, after being offered an apoplectic stroke while quitting his locomotive after a two-and-a-half hour run on a twenty-four-hour New York-Chicago "limited."

The public has good reason to ask whether the safety limit has not been reached by the good and bad rules. There must be a point where the locomotive is so large and its speed so great, that one human mind cannot safely control it, no matter how few the levers are. A 10-ton passenger locomotive going at seventy miles an hour, as operated by one man "inside" is so much a mechanical freak as a 200-pound human athlete would be, if turned loose with the brain of a three-year-old boy.

**BUFFALO LITHIA WATER**

Possesses "Peculiar Power as a Nerve Tonic and Exhilarant," and "Decided and Permanent Benefit" Results from Its Use in Acid Dyspepsia, Nervous Indigestion and Neurasthenia. "An Efficient Remedy in a Wide Range of Nervous Disorders."

Dr. J. Allison Hodges, Professor of Anatomy and Clinical Professor of Nervous and Mental Diseases, University College of Medicine, Richmond, Va.: "BUFFALO LITHIA WATER" (its properties, and is an efficient remedy in a wide range of Nervous Disorders. In all of the many cases of Nervous Indigestion and Neurasthenia in which I have prescribed it, it has proved highly beneficial. I would especially mention the case of a sufferer from Nervous Indigestion who, after visiting most of the noted health resorts, both in this country and Europe, without material benefit from any, received decided and permanent benefit from this Water."

Dr. Harvey L. Byrd, Baltimore, President and Professor of Obstetrics and Diseases of Women and Children in the Baltimore Medical College, formerly Prof. of Practical Medicine, etc.: "It is an admirable general tonic and restorative, increasing the appetite, promoting digestion, and invigorating the general health. It is powerfully anti-acid and especially efficacious in Acid Dyspepsia. It is strongly tonic and exhilarant, which makes it exceedingly valuable, where there is nothing to contra-indicate its use, in all cases where nervous depression is a symptom."

Hunter McGuire, M. D., LL. D., late President and Professor of Clinical Surgery, University College of Medicine, Richmond, Va., and Ex-President American Medical Association, says: "It has a very marked adaptation to diseases of the digestive organs. In that condition especially known as Nervous Dyspepsia, frequently caused by over-nutrition, and in those cases also where there is an excess of acid, in the process of nutrition, it will be found highly efficacious." The experience of the medical profession with this water in the treatment of Bright's Disease, Albuminuria, Gonorrhea, Rheumatism, Renal Calculi, Inflammation of the Bladder and All Uric Acid Troubles has been highly satisfactory. Voluminous medical testimony on request.

**BUFFALO LITHIA WATER** is for sale by the general drug and mineral water trade.  
**PROPRIETOR BUFFALO LITHIA SPRINGS, VIRGINIA.**

**The Heart of Hyacinth** By ONOTO WATANNA

Author of "A JAPANESE NIGHTINGALE," etc.

Japan—the land of flowers—in the scene of this new love story by the author of "A Japanese Nightingale." It is marked by all the delicacies and native charm of the earlier book. The story is even more original. Bound in a lavender cloth, with gold and colored decorations; delicately colored illustrations and quaint Japanese decorations on every page. A marvel of artistic book-making.

## Lady Rose's Daughter

By Mrs. Humphry Ward

*The Washington Post* says:

"Mrs. Ward has eclipsed all her previous successes. She has given us a flesh-and-blood heroine—her charm is wonderful and bewildering."

*The Brooklyn Eagle* says:

"Neither religious problems, nor politics, nor social questions occupy Julie Le Breton's mind. She is wrapped in an overwhelming passion of love."

*The Milwaukee Free Press* says:

"Julie Le Breton has the mysterious gift of the emotions; her strong, impulsive nature sets the nerves of others vibrating."

*The Boston Transcript* says:

"The story is the combat between two powers of a brilliant woman's nature. Sometimes you are sure the lawless, the vagabond, the intriguing side will win—but it doesn't."

## The Puritan in Holland, England, and America

By DOUGLAS CAMPBELL

"The author attacks the old-time theory that American institutions are chiefly traceable to English example, and gives much credit to Dutch influence.

"Our Northern States were settled by Puritans—Scottish, Irish, Dutch, Welsh, English—who in their political procedure departed widely from the precedents set them in the British monarchy. . . . While other scholars have said this in general terms, Mr. Campbell . . . has sought out facts and authorities in minute detail, and has massed them with convincing force."—Critic, New York.

## Are You Looking for a Location?

We want the names and addresses of 10,000 readers of **HARPER'S WEEKLY** who are dissatisfied with their present surroundings and are anxious to make a change for the better.

We cannot undertake to find employment for them, or to assist them in starting in business, but we can—and will—help them to the extent of giving them such information as will be of great benefit.

The condition is this: Arkansas, Oklahoma, Indian Territory, and Texas need more men. In these states and territories are vast areas of unimproved and unoccupied land—land which does not yield the crops Nature intended it should. The same thing, in a different way, prevails in the towns and cities. Few lines of business are adequately represented. There are openings of all sorts—for mills and manufacturing plants; for drug, grocery, and dry goods stores; for banks and lumber yards. Mechanics are needed. Professional men are in demand.

The other side of the story is this: The East is overcrowded. Competition is keen. Expenses are high. Opportunities are few.

The common-sense solution of the problem is to induce twenty or thirty thousand men and women who now live East to move West. And that is what we are trying to accomplish.

"Going West" is not half as big an undertaking as one would suppose. Oklahoma and Indian Territory are less than two days from Chicago, and have been settled long enough to enable residents to provide themselves with all the comforts and most of the luxuries of life. The towns are well built, the people are law-abiding, and the climate has no superior anywhere on the continent. The winters are mild, and while the summers are hot the heat is not exhausting and the nights are always cool.

Here is my suggestion: Write me a letter stating what line of business you wish to engage in, how much money you have, and where you prefer to locate. As soon as I can, I will place before you full and complete information as to desirable locations. You can then decide for yourself whether or not you wish to "try the Southwest."

The Rock Island System has no lands to sell, and its only object in encouraging immigration to the Southwest is to do its share in the up-building of that section.

## COMMENT

ALBUQUERQUE the Majority campaign this year in the city of New York is to be exceptionally short, it is being prosecuted with energy by the fusionists. The determination of District-Attorney Jerome to take a part in the contest has encouraged the friends of Mayor Low. Jerome is the one speaker on the fusionist side who has proved his ability to shake Tammany's control of the densely populated section of Manhattan Island that lies east of Broadway and Fourth Avenue. The election returns from that section in 1902 bore witness to the tremendous influence exercised by him on voters of German and Hebrew descent. Jerome's co-operation is the more needed this year, because there have been some indications of apathy in the districts where Republicans preponderate. His appearance in the field and Mr. McLaughlin's inflexible refusal to support Moers, Grant and Forman are the two circumstances that lead close observers of the situation to regard Mr. Low's chance of success as somewhat better than his opponents'. The attempt to convince honest Democrats that a victory for Tammany Hall this year is an indispensable condition, precedent to the triumph of their party in the nation a twelvemonth hence, seems likely to fail. A like effort was made in Indianapolis to convince decent Republicans that they must uphold their party candidate for Mayor if they wanted to carry Indiana for Mr. Roosevelt in 1904. The citizens, however, made up their minds that there was issue before them was good government, and that their Republican Mayor, who had given them a "wide-open" town, must not be re-elected. Accordingly, they gave his Democratic competitor a plurality of about one thousand, although the normal Republican plurality in the county in which Indianapolis is situated is some forty-five hundred. No person acquainted with the facts imagines that the outcome of this municipal election will have any sensible effect upon the position to be taken by Indiana next year.

Senator Gorman, when he was in New York recently, is said to have expressed resentment at what he termed the President's interference in a Maryland local contest. In our opinion, Mr. Roosevelt, as the official head of the Republican organization, is perfectly justified in attempting to allay factional dissensions within his party in any State, so long as he confines himself to advice and admonition, and makes no use of official patronage, as at one time he was accused of doing in Delaware. Maryland having given her electoral votes to Mr. McKinley in 1896 and 1900, it was not to be expected that the Republicans would renounce the hope of carrying the State next year. It is true that Mr. McKinley's majority dropped from upwards of 52,000 in 1896 to less than 14,000 four years later, and that since then Mr. Gorman has been

returned to the United States Senate. But, owing to the considerable volume of the recent emigration from Northern States into western Maryland, it is the opinion of close observers that the Republicans, were they united, would have an even chance of carrying the State this autumn. To unite them is Mr. Roosevelt's perfectly legitimate purpose, but whether he can carry it out is doubtful. United States Senator McComas, who is a candidate for re-election at the hands of the Legislature to be chosen next month, is bitterly opposed by Representative Wachter and by Representative Mudd. The two last-named gentlemen declare that in no event can Senator McComas be re-elected, inasmuch as a considerable fraction of the Republican legislators will vote against him. The feeling of hostility is so widespread and intense that it is expected to give to the Democrats a number of legislative districts in which friends of Mr. McComas have been nominated. Mr. Roosevelt has been told that the Republicans can elect their candidate for the Governorship and carry the Legislature if Mr. McComas can be prevailed upon to announce that he will not be a candidate for re-election to the United States Senate. Naturally, the President does not like to exact such a sacrifice from the Senator.

It begins to look as if the factional dissensions in the Republican party might be offset to a certain extent by a lack of unity in the Democratic camp. Senator Gorman is understood to have promised Senator McComas's seat to Governor Smith as a reward for calling an extra session of the Legislature at which a ballot act was passed, the practical effect of which, it was supposed, would be to disfranchise a good many negroes. Governor Smith, however, is certain to have at least two competitors for the Democratic nomination, namely, ex-Governor F. E. Jackson, who can probably rely on a good deal of support from the Eastern Shore, of which he is a resident, and Mr. Lidger Bayner, Attorney-General of the State, who, it will be remembered, defended Admiral Schley before the Court of Inquiry. One of Senator Gorman's friends, Mr. J. P. Poe, formerly Attorney-General of the State, has also entered the race, but his candidacy is regarded as a blind, and whatever votes he can secure in the Legislature will go ultimately to Smith.

Not only Republicans, but Democrats all over the country are interested in the State election of Maryland. If Senator Gorman cannot carry his own State this year, he is unlikely to be seriously considered as a candidate for the Presidency in the Democratic national convention. From this point of view, it might be auspicious for the Republicans to connive at his success next month, and thus improve his chance of obtaining the nomination for the Presidency, for nobody who has been suggested as the Democratic nominee could be more easily beaten. It is certain that Mr. Bryan's friends would refuse to support Senator Gorman, a defection that would be fatal in such doubtful States as Indiana and Connecticut, while, on the other hand, there is no reason to believe that Mr. Gorman is trusted by the high-minded and conservative Democrats who in 1896 voted for McKinley and Hobart or for Palmer and Buckner. We would not underestimate the firmness of the control which Mr. Gorman possesses on the Democratic machinery in many States, owing to the influence which he exerts as chosen leader of the Democratic minority in the United States Senate. Those States are far, however, from being able to give him the two-thirds vote which is necessary for a nomination in a Democratic national convention.

Mr. Bryan has declared, it will be remembered, that under no circumstances will he support Mr. Gorman as a candidate for the Presidency, while as to Mr. Olney he has merely denied that he has ever expressed approval of his candidacy. With regard to Chief-Judge Parher he has made no definite declaration of his intentions. To Mr. Cleveland he is openly opposed, yet we doubt if Mr. Bryan would ultimately set himself against a popular upheaval in favor of the ex-President. Of such an upheaval there are already not a few indications, and they are likely to multiply from this hour henceforward. We directed attention some time ago to a species of phibiscite taken in Tennessee, the outcome of which was an immense preponderance of opinion favorable to Mr. Cleveland. A similar result has attended the attempt of the Chicago *Farm* and

Homes to ascertain the preferences of its subscribers as regards a successor to Mr. Roosevelt. It appears that almost every Republican subscriber signified a wish that Mr. Roosevelt should succeed himself, but of the Democratic votes cast, which amounted, in the aggregate, to some 32,000, Mr. Cleveland received an immense plurality, the figures being—Cleveland, 12,833; Bryan, 4921; Parker, 4552; Johnson, 4335; Hill, 2135; Hearst, 1445; Gorman, only 179; and scattering, 2491. This may be only a straw, but it shows that a strong wind is blowing. There is no doubt that Mr. Cleveland's recent visit to Chicago evoked even more conclusive proofs from the rank and file of the Democracy than did his visit to St. Louis of a desire to see him once more occupy the White House. This, too, although Mayor Carter Harrison forms with Mayor Tom Johnson and Mr. W. R. Hearst a triumvirate which is aiming to persuade the Democratic national convention to put forward a nominee of the Bryanite stamp.

Will the Senate, at the extra session of Congress which will open on November 9, ratify the commercial treaty with China which has recently been signed at Peking, and which, among other things, gives to the United States the privilege of trading at two additional ports in Manchuria, to wit, Mukden and An-tung. This is a matter that may have an important bearing on the situation in the Far East. It is premature to talk of our using force to make good our treaty rights at Mukden and An-tung which at present are in Russia's possession; because, as yet, we have no treaty rights, nor shall we have any until the commercial treaty has been ratified and the ratifications shall have been exchanged. The intimation, however, distinctly made by our State Department, that, if and when the treaty becomes valid, we shall not submit to a frustration of it by Russia, is tantamount to a declaration that we mean to fight for our Manchurian trade, and that any attempt to bar us out of New-chwang, Mukden, or An-tung, on the plea that Russia has not evacuated Manchuria, will be regarded as a casus belli. In other words, the military and naval power of the United States will henceforth figure as a factor in the Far-Eastern situation.

There is no doubt that Senator Morgan of Alabama and his coadjutors in the House of Representatives will take advantage of the extra session of Congress, which will begin on November 9, to demand that the President enter forthwith on negotiations for a canal franchise with Nicaragua and Costa Rica. They will insist that the "reasonable time" given to the President by the Spooner act for the purpose of securing from Colombia the concessions necessary for an interoceanic waterway across the Panama isthmus has expired. They may even try to pass a joint resolution expressing that opinion. The President could veto such a resolution, however, if, in his judgment, the public interest requires delay. It is not quite clear what the President expects to gain by delay. What reason is there to imagine that a new Colombian Congress would ratify the canal treaty which the present Bogota Parliament has rejected, or any substitute for it which would be acceptable to us? The members of the present House of Representatives in the Colombian Congress were picked out for the express purpose of ratifying the treaty, and so were those Senators who have been newly elected. Nevertheless, every member of the Bogota Senate voted against ratification. A suggestion has been made to the effect that if the last extension of the French company's franchise—which was made, it should be remembered, not by law, but by executive fiat—were to be declared invalid, and the property of the company were to be confiscated, Colombia would become entitled to all of the purchase-money—forty million dollars—which we have contracted to pay the French corporation for its franchises and plant. Those who make this suggestion fail to foresee that public opinion in France would compel the government to protect the rights of the canal company, even if it had to proceed to the bombardment of Cartagena and other Colombian seaports. We should then find ourselves confronted with a question involving the interpretation of the Monroe Doctrine such as was raised when war-torments of Great Britain, Germany, and Italy blockaded La Guayra and Puerto Cabello. An even more delicate question would be presented if French squadrons should undertake to blockade the harbors of Colon

and Panama; for, under the treaty of 1846 with New Granada, we are bound to safeguard freedom of transport across the isthmus. We add that, having entered into a contract to buy the property of the French canal company, we could not, with any show of decency, connive at Colombia's attempt to rob that company of its assets.

At the conference of the National Civic Federation in Chicago, Senator Mark Hanna, the president of the association, made a speech of some length in which he managed to say nothing of importance. On the other hand, interesting speeches were made by Mr. John Mitchell, president of the United Mine-Workers, and by Mr. Samuel Gompers, president of the American Federation of Labor. Opposing the so-called "open" shop, Mr. Mitchell argued that the refusal of labor-unionists to work with non-union men is no more unreasonable or objectionable than it is for a life-insurance or fire-insurance company to decline certain risks, or for a church to withhold membership from certain classes of people, or for any association to prescribe conditions on which it will have dealings with certain persons. He thought that with the multiplication of trade-unions and their growth of strength there would probably be a lessening of the intensity of feeling against the non-unionists, but no abatement of the determination to exclude non-unionists from shops in which labor-unionists are employed. Mr. Gompers also compared the so-called "closed" shop to various organizations, societies, and professions which bar out persons unacceptable to them. Boycotting also was defended by Mr. Gompers. He expressed the belief that there were no gentlemen or ladies in the hall who had not engaged in boycotting at one time or another. It is an expedient, he said, to which everybody has recourse in a social, financial, or business way. Those who practise the boycott, he contended, are simply reducing to a minimum their dealings with dilapidated or distracted persons, while living up to the principle that we should stand by our friends.

A very different position was taken by Mr. T. F. Woodlock, of New York, who maintained that if the principle of the "open" shop be rejected by union labor, then union labor must deny the justice of its own demands, and, ultimately, dispute the natural rights upon which our democratic polity is founded. He revealed association for the purpose of fair competition as defensible morally and legally, but he denounced association for the purpose of establishing a monopoly of employment in any field of industry as a restraint of trade which in a democratic state or society is morally and legally wrong. Meanwhile, it has been settled that the Federal government under the Roosevelt administration will not tolerate the establishment of "closed" shops among its employees, but will permit no distinction to be drawn between unionist and non-union labor.

That the United States are deeply interested in the free-food campaign now proceeding in Great Britain is recognized by Mr. C. T. Ritchie, lately Chancellor of the Exchequer, who, in a speech to his constituents, has pointed out that Mr. Chamberlain, by his proposal to give a tariff preference to breadstuffs imported from the colonies, is risking the substance while grasping at the shadow. He is risking the loss of American good-will in order to cement a colonial loyalty which, according to the Cassandras, is already assured. Mr. Chamberlain commends his scheme to the British proletariat by telling them that in the course of a few years, provided a preference is given to grain imported from the colonies, the Northwest provinces of the Canadian Dominion will be able to supply all the breadstuffs that Great Britain is now compelled to import. In other words, the British Empire would be self-sufficing from the view-point of food. He forgets to explain what will become of the enormous existing export of British manufactures to the United States. The vast quantities of British manufactures which are now imported annually into the United States are paid for, not with cash, but with cotton, petroleum, and food products sent across the Atlantic to the United Kingdom. If food products should cease to be exported from the United States to Great Britain, the amount of British manufactures which could be purchased by the former country would be immensely diminished. It would be obviously impossible for five or six million Canadians to offer a

market equivalent to that which had been furnished by eighty million Americans.

What would become of British factories if, through a preferential tariff, they were to lose their American customers? It is certain that a very large proportion of them would be shut down. Such would be the inevitable outcome of Mr. Chamberlain's project in times of peace. What would happen in the event of war between Great Britain and a European coalition? It would be the primary purpose of such a coalition to subjugate Great Britain by starvation, to which end it would forthwith declare food contraband of war, unless it feared thereby to array the military and naval power of the United States on the British side. If we should be at the time, as we now are, the principal purveyors of food products to Great Britain, we should unquestionably fight to uphold the rights of neutrals, conspicuous among which is the right to furnish food to belligerents. But if, owing to England's enactment of a preferential tariff in the interests of her colonies, we had ceased to supply her with food, we should cease to have any interest in the matter, and could not reasonably be expected to lift a finger in order to rescue England from famine. That, in the event of a war with a European coalition, Canada's breadstuffs would punctually reach Great Britain must be pronounced extremely improbable. Needing all the warships she could assemble in her home waters to shield herself against invasion, England would not be able to spare war-vessels enough to convoy grain fleets across the Atlantic. Under the circumstances, England would be exposed to starvation, even should our government preserve a strict neutrality.

It begins to look as if Republican spoilsmen would give Mr. Roosevelt precisely what he wants, to wit, an opportunity of proving that he meant just what he said when he requested Messrs. Bonaparte and Conrad to investigate the frauds in the postal service, and announced a determination to turn the rascals out. It is hard for Republican politicians of the old-fashioned type to believe in Mr. Roosevelt's sincerity, and we should not be surprised if Secretary Shaw, like Postmaster-General Payne, should need one or two hard knocks before he is thoroughly enlightened. As we have formerly pointed out, the report of Messrs. Bonaparte and Conrad, who, at Mr. Roosevelt's request, investigated the scandals laid bare by the Tulloch charges, reflects severely upon Mr. Tracewell, Comptroller of the Treasury, and intimates that his retirement would be for the public good. It seems that Secretary Shaw resents the implication of the Treasury Department in the postal frauds, and has threatened to quit the cabinet if Tracewell is dismissed. Mr. Shaw asserts, so we are informed, that if the President prefers to follow the advice of "outsiders" like Messrs. Bonaparte and Conrad, rather than his own, on a matter affecting the administration of his department, there ought to be a new Secretary of the Treasury. If he imagines that the verdict of Messrs. Bonaparte and Conrad would not have more weight with the people of this country than his desire to protect an Indiana wire-puller, the term of his usefulness to the President has expired, and the sooner he returns to Iowa, the better.

Since we last mentioned him, Boris Sarafoff has been killed twice. He has in each case promptly come to life again, which, in so young a man, is the more astonishing. In this, the great Bulgarian leader is but the type of Slav insurrection against Turkish misrule. Slav resistance has been dying and coming to life at intervals since the fall of Constantinople. And we are, therefore, well prepared to learn that the Turks have once more stamped out the insurrection, and that peace once more reigns in Macedonia and Adrianople. We shall be just as well prepared to learn that the insurrection has broken out again next spring, whether or not Russia and Austria get their reforms accepted by the Porte. For as to these reforms, the truth is that they will never effect much; at least, never enough to satisfy the Bulgarian revolutionists. Nor is this wonderful. For the Porte will always find ways and means to make them nugatory. Thus there are already hundreds of Swedish and Norwegian gendarmes in Macedonia, introduced wholly in the interests of reform. Yet they are practically under guard all the time, and have no real power. So it would

be if these hundreds were turned into thousands. Until the powers are in a position to collect the taxes and pay the bills, their agents will never have any real power. Until they are backed by armed force, they will never be allowed to collect the taxes and pay the bills. Therefore, unless the powers agree to enforce a programme of Macedonia autonomy, with a Christian governor, on Turkey, and further insist on the withdrawal of Turkish troops from the Slavonic area, the condition of Macedonia will remain practically unameliorated, and the work of the insurgents will continue. The best hope, therefore, for the miserable Macedonians is a coalition of the more humane powers—England, France, Italy, Austria, and Russia—strong enough to ignore or override the opposition of Germany, and to dictate to the Porte the conditions of autonomy for Macedonia. In due time an autonomous Macedonia will, doubtless, give in its adherence to Bulgaria; just as did autonomous Eastern Rumania, by the peaceful revolution of 1855. In this way another step will be taken towards the settlement reached by the San Stefano Treaty, which was upset by the Berlin Congress, from motives of frank hostility to everything Slavonic.

In the present ministerial crisis, the most interesting thing in Mr. Morley's Life of Gladstone is the revelation of the fact that Mr. Gladstone declared that, had Queen Victoria asked him to advise her as to his successor, he would have named, not Lord Rosebery nor Sir William Harcourt, but Lord Spencer. This will doubtless help to determine King Edward. In the event, which cannot long be postponed, of the resignation or collapse of Mr. Balfour. We recently gave certain details of Lord Spencer's past achievements, showing his great administrative ability and high character and prestige, and in a speech delivered a few days ago, Lord Spencer showed great penetration in pointing out that the preferential tariff scheme of Mr. Balfour is a two-edged weapon; that the United States could very easily retaliate on England for favoring Canada at the expense of this country. Lord Spencer added that Sir Wilfrid Laurier's declaration that, rather than sacrifice one item of legislative independence, Canada would quit the empire, was sufficient of itself to damn the scheme of Mr. Chamberlain. A Liberal ministry formed by Lord Spencer would doubtless include Mr. Morley, Sir Edward Grey, Mr. Fowler, Mr. Asquith, Mr. Beyer, Mr. Richard Haldane, Mr. Lloyd-George, and Sir Henry Campbell-Bannerman, while it is improbable that Sir William Harcourt and Lord Rosebery would so far sink their own pretensions as to serve under any one whom they would consider a successful rival. Meanwhile, Mr. Balfour is determined to hold on to the last moment, and what Adam Smith called "the higgling of the market" is in full swing between the Premier and Mr. Balfour.

The visit of King Victor Emmanuel II. and Queen Helena to Paris is a good deal more than the mere merry-making of royalties. It is yet another of the symptoms of the new era in European politics, which was half unconsciously inaugurated by two such dissimilar personalities as Tsar Nicholas II. and King Edward VII. The first step towards this new order was taken when Russia joined forces with France, not merely in a formal alliance, but much more in a united protest against the Teutonic idea, as revealed in the politics of Bismarck, and the equally aggressive, equally opportunistic neo-Bismarckianism of Kaiser Wilhelm II. The older Bismarckian policy had accomplished the humiliation of Austria and the partial destruction of France; it had further committed Italy to a ruinous militarism, the results of which are found in the bread-riots, destitution, and emigration which are the chief features of modern Italian life. The new Bismarckian policy of Wilhelm II. expressed its spirit openly in Kiao-chau and Venezuela, and secretly in the Balkans, in Asia Minor, in Hungary. The visit of King Edward to Italy, France, and Austria stimulated these three powers to a mutual fricadelle, whose fruits we see in President Loubet's visit to London, in the new arbitration treaty between England and France, and, lastly, in the visit of the Italian royalties to Paris, which is thus once more asserting its claim to be the capital of the world, and eclipsing its rival, Berlin.

The acquittal of former Lieutenant-Governor James H. Tillman, of South Carolina, tried for the murder of editor

Gonzales, has surprised and shocked the country. Tillman was displeased with criticisms printed by Gonzales in his paper, and announced that he would shoot Gonzales at sight. Gonzales, relying on the protection of the law, went unarmed about his business, until Tillman shot and killed him. The defence was that Tillman acted in self-defence. To be sure, his victim was unarmed, but one of his counsel said, "We do not concede that Mr. Gonzales was unarmed, but he should have been armed if he was not." "I was forced to do what I did," explained the prisoner. James H. Tillman is a quarrelsome brute, profane in insults, and since it has been demonstrated that he can defy South Carolina law with impunity, his future course will be watched with special interest. There must be many decent people in South Carolina as well as out of it who are outraged by the verdict that set him free.

A "Platform of the Massachusetts State Democracy, 1903," is in print, which declares in its first paragraph that "the Democratic party, . . . the defender of Man against the Dollar, shall fight the trust oligarchy now as it fought the political oligarchy with Jefferson." Just at the present moment to fight the trust oligarchy seems rather like jabbing at a drowning dog with the butt end of an ear. Plenty of plain water seems likely to deal effectively with a large proportion of the trusts without violence from bystanders; but without dissenting that, does Man in Massachusetts want to be defended from the Dollar? Here in New York he doesn't. Here in New York when Man sees the Dollar coming for him he stands out in the open and clutches for it, and elapsé it to his bosom. He thinks no one who scores the Dollar off when it is coming his way. What he is after, and will think the Democratic party, or any other party, to promote, is the more perfect domestication of the Dollar, so that it will be less fugitive and timid, and will come and nestle in his pocket, and, if possible, breed freely in captivity. Present concern hereabout centres in the apparent disposition of the Dollar to run away and hide. There is no fear of it at all; on the contrary, the burden of current solicitude as it finds expression in this great Democratic stronghold concerns the ability of President Roosevelt to put salt on the Dollar's tail so as to make it easier to catch. A good many sober and anxious observers are afraid that the President is not so proficient as he might be in that use of salt, and are looking at all likely men and all likely parties to see if there is not some one in whom the Dollar would be sure to confide. For it is the Dollar that is scored, not Man.

A Paris correspondent of the *New York Evening Post* tells an interesting story about alcoholism in France. The average consumption of alcohol at 100 degrees in France in 1850 was 6½ litres to each inhabitant. It was then drunk chiefly in the form of wine. A litre is a little more than a quart. The average consumption in 1900 was 15 1-5 litres, half in wine, a fourth in beer or cider, and a fourth in spirits. As some districts in France are still reasonably abstemious, the consumption in other districts is much above the average, Normandy and Brittany being especially drunken, and showing very serious results from it. It is not that the people get violently drunk, but that they keep themselves constantly drugged with alcohol, with ominous results in the form of disease and degeneracy. The average consumption of alcohol is estimated to be 13½ litres in Switzerland, about 10 in Belgium, Italy, and Denmark, about 9 in Germany, England, and Austria, 6 in Holland, 5 in the United States, and 2 in Canada. The poorer classes are most affected in France. The middle and higher classes as a rule have intelligence enough to restrict their potations. Other countries have been as drunken as France and have reformed. In Sweden in 1825 the average annual allowance to each inhabitant was 25½ litres of pure alcohol. Now it is 5 litres. Finland between 1850 and 1900 came down from 20 litres to 2. England, where there is a special effort now to restrict the indulgence of the drinker, has in twenty-five years reduced her annual per capita allowance from 10 litres to 9. The great trouble at present in France seems to be that the government is not strong enough to restrict the manufacture and sale of liquors. Government in France needs votes. There are very nearly half a million wine-shops in France, and last year, in spite of repressive legislation, there were 1,137,328 private distillers who made alcohol as handy from their own produce for their own use. This enormous prevalence of private stills seems appalling.

Their number has increased sevenfold since 1879. Government not only needs the votes of distillers and wine-sellers, but the revenue from alcohol is indispensable. So the problem is a hard one, but it must be solved, because to neglect it means destruction.

There is to be a school of journalism in Columbia University, and possibly preparation for it has gone so far that one or two gentlemen are already sifting notes—books with thoughts and instances proper to be brought by lecturers to the notice of its students. Such persons, if there are any, will go far without finding a more delightful illustration of the value of familiar knowledge of good literature to a newspaper writer than in the comment of the Charleston (South Carolina) *News and Courier* on certain remarks of Senator Tillman. A newspaper compared President Roosevelt's omission of McClellan's name from his Antislavery speech to the failure of Tillman to mention Wade Hampton in his lecture on South Carolina's Redemption from Carpet-bag Rule. "We had not noticed it," observed the *News and Courier*. "No matter. Hampton's place in history is secure." But it mattered to Tillman, who cried, "A dirty attack!" "a falsehood!" "a manufactured lie!" and wrote a letter violently denying that he had ever delivered such a lecture. The *News*, declaring that the letter was characteristically vulgar, impertinent, and disingenuous, quoted from the *Enquirer*:

They say the Lion and the Lizard keep  
The Courts where Jambuhl gloried and drank deep;  
And Balaam, that great Hoaxer—the Wild Ass  
Stomps o'er his Head, but cannot break his sleep.

Without having any opinion as to the merits of the controversy, it is impossible not to rejoice in so admirable an exhibition of the skillful use of weapons. What Senator Tillman said next does not appear. There are occasional instances of a conclusiva retort which stops argument, and possibly this was one.

At this writing Dowie's campaign in New York has begun, but if we may trust the unanimous testimony of the newspapers, the Chicago prophet has not made at the start so deep a dent in the equanimity of New York as he expected. He is universally commended for the discipline he maintains among his followers, who are described as exceptionally orderly and peaceable people. The same characteristics were noticed by the Boston newspapers in the Christian Science hosts who made a pilgrimage last spring to the home of Mother Eddy in Concord. There never was a better-natured lot of people seen in those parts than the Scientists. But as for getting any real hold on New York, there is no sign yet that Dowie will do it. He is compared with Moody, much to his disadvantage. Both were remarkable men, but the message Moody brought was that which every Christian preacher preaches, or tries to preach, all the year round. He preached the religion of the country without any variations, except as his personal power and earnestness varied the method of its presentation. But Dowie is a bird of quite another feather. His assumption that he is the reincarnated Elijah appeals to the public sense of humor. New York is ready enough to be amused by him, but as for taking him seriously—the town seems not nearly ripe for that. In a population of three millions there are a good many individuals who are anxious to try a fresh start of some sort, and some of these Dowie may enlist, but the town as a whole is not in the least likely to get excited over him. It seems fitter to compare him with Brigham Young than with Mr. Moody. His whims are not noxious like Brigham's. He preaches sound morals, and his faith-healing beliefs are such as other sects have made use of. But the industrial side of his enterprise is not so Mormon-like, and we should be more sure that his bubble would burst disastrously if the Mormon bubble had not held its own so long. After all, his persuasion that he is Elijah is not a very pestilent heresy, and if the business end of his enterprise seems so recklessly developed as to excite the suspicion that his mind is unduly fixed on the main chance, at least he gives his followers government, discipline, morality, and so far contentment, which is more than any of the get-rich-quick concerns give to theirs. If one must be a duped, there may be worse chances than to be the dupe of Dowie.

## The Decision of the Alaska Boundary Commission

The decision rendered by the Alaska Boundary Commission through the concurrence of Lord Chief-Justice Alverstone, the British commissioner, with the three American commissioners, Secretary Root, Senator Lodge, and ex-Senator Turner, is, as regards not only its actual, but its prospective, consequences, one of the most momentous events in the history of the relations between Great Britain and the United States. After marking the effect of the decision on the boundary between our Territory of Alaska and the Dominion of Canada, we shall indicate the counterbalancing influence which the decision seems likely to exert, by postponing the establishment of an international tribunal, to which all future disputes between the United States and the United Kingdom may be generally referred, and thus accomplishing the purpose of the wise arbitration treaty which was negotiated under Mr. McKinley's first administration, but which our Senate failed to ratify. We should premise, however, what some of our contemporaries seem to overlook, the fact, namely, that the decision rendered by the Alaska Boundary Commission on the specific questions submitted to it is not of itself legally binding on both of the countries concerned, but, in order to become obligatory, will have to be embodied in a treaty, which, like other treaties, will need to be ratified. We assume, however, that the Ottawa government will not attempt to prevent the signing of such a treaty

by the British Foreign Office, and that the ratification of it by our Senate is assured, notwithstanding the fact that one of Canada's claims, a minor one, is allowed. If this relatively small concession had not been made by the three American commissioners no decision could have been reached, and the proceedings of the commission would have been abortive.

It will be remembered that the main question in dispute between the Dominion of Canada and the United States turned on the question whether the thirty miles which were to constitute the breadth of the strip of land conceded to Russia by the Anglo-Russian Treaty of 1825 were to be reckoned from the outer littoral of the outlying islands, or from the situations east-line of the mainland. Had the former of these two constructions of the treaty been adopted by the commission, the Klondike gold-fields, which lie in Canadian territory, would have gained access to the Pacific through a port on the inlet known as the Lynn Canal. As it is, Canada is entirely barred from communication with the Pacific, except at and near the southern terminus of the boundary, where the commission have given her Plover and Wales islands at the juncture of the Observatory Inlet and Portland Canal. The islands have only a strategic value, but this is considerable, with reference not only to Fort Simpson, which is expected to be the Pacific terminus of the new Transcandinavia Railway, but also to Nanoga Harbor, from which the British Columbia, Northern, and McKinnon Valley Railway has been projected to run through Canadian territory to Dawson City and beyond. While admitting that the decision is certain to be completed quickly, some British-Canadian are inclined to regard the decision of the Alaska Commission, however unacceptable to them in other respects, as a blessing in disguise. The Toronto Globe, which is the organ in Ontario of the Liberal government headed by Sir Wilfrid Laurier, also seems disposed to make the best of the situation. While admitting that the decision, so far as it affects the Lynn Canal, through which the ports of Dyea and Skagway, the gates of the Klondike region, are concerned, is very discouraging, it thinks that the practical consequences will be minimized, because the practice of landing imports consigned to Canadian territory has done away with the obstructions encountered at one time by Canadians who desired

to traffic with the Yukon district. The Globe also recognizes, what is unquestionably true, that if Lord Alverstone had not seen his way to arrive at an agreement with the three American commissioners, there would have been no decision at all, in which event, the Alaska boundary question would have remained an open one, likely at any time to cause serious trouble between the United States and Canada, in which Great Britain could not have avoided implication. Of course there are a good many Canadians who resent bitterly Lord Alverstone's conclusion that justice constrained him to side, as regards most of the points at issue, with the American instead of the Canadian commissioners. The Canadians to whom we refer denounce what they term the weakness of British statesmen to conciliate Americans, and the alleged failure on their part to appreciate the importance of Canada. They assert that the interests of British-Americans were sacrificed on previous occasions in the surrender of Detroit and of the territory which now forms the northeastern section of Maine. They forget that if we, on our part, had adhered to our professed determination to fight rather than concede 34° 46' as the northern boundary of Oregon, we would have been no such thing as British Columbia.

The ultimate significance of the high-minded act performed by Lord Chief-Justice Alverstone transcends infinitely its immediate bearing on the boundary interests of Canada. The so-called loyalty of the Dominion is of infinitesimal value to the United Kingdom, compared with the good-will and confidence of the United States. Lord Alverstone has fitted the keystone to the arch on which an indissoluble fabric of good-will and confidence may be erected. By the decision rendered in the case at hand, he has convinced the American people that a British jurist can be trusted to act on an international tribunal without any improper bias in favor of his native land, and with an eye single to the dictates of justice and of equity. He has gone far to convince us, for the first time not only that it might be at once safe and wise to refer to arbitration all future disputes between Great Britain and the United States, but that the arbitration might well be of a simple and imposing kind, reflecting equal honor upon both of the parties thereto. It now might be well to reconsider a proposal already submitted and discussed, the proposal, namely, that, instead of selecting a Swiss or a Russian for an umpire, and giving him the casting vote, we should agree upon a tribunal for the settlement of Anglo-American controversies, composed of six judges, half of whom should be members of the United States Supreme Court and half representative of the British judiciary. A year or even a month ago such a proposal would have had no chance of acceptance on this side of the Atlantic. Thanks to Lord Alverstone, the establishment of such an august and beneficent tribunal is now possible, if not even probable. To have rendered practicable such a change in the relations of the two halves of the English-speaking world—to have rendered unbroken peace attainable and war almost impossible to be waged between the two halves of the globe—fourth-century Americans will have cause to place Lord Alverstone's name in the list of Englishmen that have rendered us memorable service, the illustrious list that includes the names of Chatham, of Shelburne, and of Salisbury.

## The Gold Standard for China

WRITHIN a generation the chief countries of Europe and the United States have practically all adopted gold as the basis of their monetary systems. When Japan and the Russian Empire entered the circle of the gold countries about 1897, the list of silver countries was narrowed practically to Mexico and China. Mexico seemed to prosper for a time as an silver country, because of the increase in the face value of her exports. Examination of the facts has shown, however, that the increase in the trade of Mexico was largely fictitious, and that when reduced to gold values she was paying for a given quantity of foreign products a steadily growing proportion of the products of her own capital and labor. It appeared that the prosperity of Mexico, so much vaunted for a time by Mr. Bryan and his friends as due to free silver, was really due to the firm and wise administration of President Diaz, the restoration of order in every part of the republic, the abolition of custom-houses on State frontiers, and the security afforded for the extension of trade and the safe investment of capital.

The man who should have proposed, as recently as two or three years ago, that silver should in her turn adopt the gold standard would have been looked upon as one who saw visions. There are indications, however, that a new China is growing up who is soon to take her place in the circle of other advanced nations. Not less than four railways are in actual operation in China, five more are in process of construction, and another five are projected. As is pointed out in an article on this subject in the *North American Review* for November, with railways must come the commercial use of coined money and the adoption of the modern habits of the West. Railways cannot do passenger charges and freight tariffs in Chinese products; they cannot pay their fares, eight-

ness, and trackmen in yards of silk or chests of tea. On both sides of their operations—rail and river—stations—they must use coined money, and their use of it must inevitably introduce it into all the localities through which the road runs and throughout the district from which it draws its freight supplies. Moreover, every new railway opens new markets, increases commercial activity, and thereby increases the demand for the medium of exchange, even where work is medium already exists.

Late China, therefore, with the introduction of railways must go a national monetary system. It is a gratifying fact that the United States have taken the lead in a comprehensive scheme for planting China on the gold standard. Mexico and China joined in an appeal to the United States last winter to take up the question of restoring the unity of relationship between the moneys of the self-styled countries east of those countries which are now using silver. In compliance with this appeal, a commission was appointed by President Roosevelt, made up of Mr. Hugh H. Hanna, of Indianapolis, chairman of the committee which has been fighting since 1896 for improvement in our monetary laws; Mr. Charles A. Conant, of the National Trust Company of New York, who formulated the system for the Philippines; and Professor Jeremiah W. Jenks, of Cornell University, who made a study of currency conditions on a recent tour through the Orient.

This commission, known as the Commission on International Exchange, has just made public a report of its consultations with the European powers regarding the introduction of the gold standard into China. The report is, on the whole, most favorable, in view of the necessity of the proposition. At one leading capital was admitted that the introduction of the gold standard into China would bring great benefits in its train to the manufacturing and exporting nations and to the Chinese people. The commission of the United States has been able to report that the diplomatic obstacles have been cleared away which would have undoubtedly arisen if the American commission had gone directly to China without explaining its purposes to the European powers. So encouraging was its success in Europe that the President has designated Professor Jenks, upon the recommendation of his associates on the commission, to go to China to present the subject to the Chinese imperial government, and to endeavor to secure the adoption of a well-considered plan for a monetary system based on the gold standard.

Planting China on the gold standard means enormous economic benefits to the manufacturing nations, because it opens a wide outlet for the great output of machine-made goods which in every period of relaxed consumption weighs upon the markets with the menace of an economic crisis. More important in some respects is the opening which will be afforded for investing capital with the certainty that, so far as the currency system is concerned, it will retain its value and earning power in gold. Capital has held back from investment in both Mexico and China while it was uncertain whether a given sum turned from gold into silver to-day might not shrink to half its gold value to-morrow by the fluctuations in the value of silver bullion.

For China herself the advantages of the gold standard will be not only economic, but political. Coupled with the expansion of railways, which will knit together the different parts of an extended empire, the adoption of a national currency system will tend to a unification of national life which will make China no longer the inert, helpless mass which she appears to the Western world, but will tend to give her a distinctive national character. Such a character can only be attained in the near future under foreign leadership and suggestion, but with China now well started upon this road, and with the well-known intelligence and efficiency of the Chinese people, it is not improbable that her progress will be so rapid and striking as that of Japan, her sister empire of the Orient.

### Mr. Cleveland on a Citizen's Duty

EX-PRESIDENT CLEVELAND has never made a speech that deserved wider circulation or more serious consideration than that which he addressed on October 14 to the Commercial Club of Chicago. He was speaking to men who might have been expected to take the side of the rich against the poor, and to assume that national prosperity covers a multitude of sins. He was speaking, moreover, in a city which notoriously has suffered from misgovernment, an experience which it might have escaped had every citizen acted on the belief that it is not only his right, but his duty, to take an active part in political work. It was in this stern, unflinching spirit of the Hebrew prophet who said "Thou art the man" that Mr. Cleveland pressed home to the business men who permit private interests to divert them from public affairs the responsibility for corruption in municipal, State, and national politics. He reminded his auditors of the self-complacent assertion too often heard in business circles that "we are not politicians." The advice that business men do all that is required of them as patriots when they make profession of faith in the creed of good citizenship, and abstain from the commission of palpably unpa-

triotic acts, is, Mr. Cleveland showed, the parent of a self-righteous contentment which inevitably puts them under the thumb of those who make political activity a trade. To such ex-prophets of patriots, as to those church members who hold that they have discharged their whole duty to religion when they live honestly, at least worship regularly, and contribute to a clergyman's support, the ex-President applied the words of Scripture: "If any be a lover of the word and not a doer, he is like unto a man beholding his natural face in a glass: for he beheldeth himself and goeth his way, and straightway forgetteth what manner of man he was."

Mr. Cleveland proceeded to point out that there is in this country an habitual associate of civic indifference and listlessness, an associate who, professing immutable faith in the invulnerability of the national greatness, invites our admiring gaze to the flight of the American eagle, and assures us that no stroke of weather can ever tire his wing. Thus, as a few well-meaning men are led into a condition of mind that will not suffer them to harbor the uncomfortable thought that any neglect or omission on their part can check American progress or impede the country's continued development, such multitudes of patriotic aspiration lurk everywhere, but nowhere in the world can they cause such desolation as in the United States, for our whole scheme of government, Federal, State, and municipal, is based upon confidence in human nature, upon the assumption of a close interdependence of interest and purpose among those who make up the body of our people. It is true, as Mr. Cleveland told the Commercial Club at Chicago, that our government was made by patriotic, unselfish, and self-sacrificed men. It is not surprising that the fault-finders for those who see selfish, corrupt, and unpatriotic, it is the worst government on earth. It is so constructed that it needs, and must have, for its successful operation the constant care and guiding hand of the people's abiding faith and love. Such unremitting guidance is indispensable to keep our national mechanism true to its work.

Are such conditions present to-day? That is the question which Mr. Cleveland asked upon his auditors to answer. Is not our public life, he asked, saturated with the demands of selfishness? Is it possible to deny the existence of still more odious and detestable evils which, with steady, cumbering growth, are threatening the health and safety of the nation? The ex-President was, of course, referring to the open and notorious corruptions of our suffrage; to the buying and selling of political places for money; to the purchase of political favors and privileges; and to the traffic in official duty for personal gain. What is most distressing in the spectacle is not the huge proportions to which, from small beginnings, such evils have attained, but the calmness and imperiousness with which respectability by the thousands and hundreds of thousands serve the debasement of political life. Mr. Cleveland, for his part, maintained that a new and sinister meaning has been given to national prosperity. He is not disposed to accept the national splendor built on the shabby ventures of speculative wealth as a proof of genuine success. He declines to rejoice contentment upon the masses of our people, whose share is the alleged prosperity if insignificant or non-existent. How can they be expected, he asked, amid the bare subsistence of their scanty homes, to rejoice ecstatically over statistics exhibiting an immense expansion of the country's exports and imports? We can hardly wonder, he said, that the masses of the people are dissatisfied, and inclined to demand a better distribution of the fruits of our vaunted prosperity. Of such dissensions will be the outcome in the disposition of the proper relations between labor and capital, a disposition mischievous already, but darkly ominous of more harmful developments to come. We see growing up among the toilers a disregard for the restraints of law, and a disposition to evade its limitations, while strictures on the action of our courts lead to undermine popular faith in the administration of justice, and complaints of imaginary short-comings in our financial policies furnish an excuse for the propagation of all sorts of monetary nostrums.

Is Mr. Cleveland, then, a pessimist? Can he discern no remedy for the state of things which he decries? On the contrary, he does not believe that the saving grace of patriotism is dead among his countrymen. He believes that it can be reawakened by the revival and activity will bring about a realization of the forgotten hope of a free nation. The time has come to reorganize, however, that, as in municipal, so also in State and Federal politics, the general well-being depends exclusively on the disinterested participation of good men in public affairs. It is in time that there should be an end of self-satisfied gratification or pretense of virtue in the phrase "I am not a politician" to sinister ends. Every citizen should be politician enough to bring himself within the true meaning of the term, as one who concerns himself with the "regulation or government of an action or State for the preservation of its safety, peace, and prosperity." This is politics in its best sense, and this is good citizenship. By service in this field men not only do patriotic duty, but in so doing it is time to themselves the share of benefits due them from our free institutions.

**AMERICA WINS THE ALASKA BOUNDARY AWARD**

The claim of the United States to the disputed Alaska territory was confirmed, with the exception of one concession to Canada, by the Commission sitting in London. The photograph shows the final session of the Tribunal at the Foreign Office.

### WHERE A FALSE STEP MEANS DEATH

*One of the most difficult feats of mountaineering in England is the ascent of the peak known as the Great Gable, in the Lake District between Keweenaw and Scafell. The photograph shows a climbing party who have just succeeded in reaching the summit of the Napes Needle on the southwest face of Great Gable. The mountains in the background are the Scafell range, where four mountain-climbers recently lost their lives*

### "ELIJAH THE RESTORER" AT MADISON SQUARE GARDEN

*John Alexander Dowie, the self-styled prophet, who has come to New York with 4,000 followers to rededicate the city, holds his sublimation meetings in the amphitheatre of the Madison Square Gardens. He is listened to by audiences numbering from 4,000 to 11,000, many of whom leave the building before the end of the services. The proceedings consist of prayers, extemporaneous addresses, announcements by Dowie, spoken by a choir of men, music by a band, and practitioners and terrepreneurs according to the rate of Dowie's "Church of Zion."*

**THE QUEEN OF ENGLAND, DOWAGER EMPRESS OF RUSSIA,  
DUCHESS OF CUMBERLAND, AND KING OF DENMARK AT CARDS**

*This unusual photograph was taken recently at Fredensborg, near Copenhagen, the summer residence of the Court of Denmark, and shows King Christian and his three daughters playing a game of whist. The players around the table, from left to right, are Thron, Duchess of Cumberland, Queen Alexandra, King Christian, and Dowager Empress of Russia.*

## THE STORY OF THE STATE

BY FRANKLIN MATTHEWS

**T**HE ocean and rivers of Massachusetts made that commonwealth what she is and always has been. Typically American, settled originally as a place of religious asylum for those who craved and who secured freedom to worship God in their own way, the people, from colonial days down, have been foremost in American struggle and triumph. Her men of indomitable energy, have probably prospered more consistently than the people of any other of our States, have been devoted to high ideals, especially self-government and religious freedom, with a zeal that has seldom flagged and with a persistence that could not be checked.

Every one who knows anything of American history knows the story of Old Massachusetts. The Massachusetts of to-day is not so well known. Every one knows of the Pilgrims and the Puritans, the establishment of town-meeting rule, the development of religious freedom in the commonwealth, the important part the people played in the great American Revolution, its proud rise in commerce, its antislavery agitation, its share in the glories of the civil war. Mention Massachusetts and the names of some men eminent in American history are recalled than from any other part of the United States. Eadwitt, Bradford, Higginson, Mianish, the Adamses, Otis, Bevere—the list could be prolonged indefinitely—who does not recall them?

The Old Massachusetts still lives. Its influence is the most potent power in the commonwealth. Nowhere else in the United States are the old traditions and influences more active; nowhere else are the ideals of the past more respected. The same qualities that made Massachusetts a leader in colonial and revolutionary days make her to-day a leader in all that makes for real progress—devotion to civil and religious liberty, to local self-government, to both elementary and higher education, to rigorous and just business methods, to thrift, to respect for law, to culture, using that word in the broad sense of uplifting the masses.

And what is the Massachusetts of to-day? She had giants of old and she has them to-day. The perspective of history is needed to see them in their true light. Let there be a call for public services and her heroes will stand forth. Her statesmen are as able as of old, even if they are not so conspicuous; her merchants are as energetic and thrifty as in the former times; her thinkers are in the pulpit, at the bar, in educational fields, exercise their more pre-eminent influence that they did of old. She is American in spirit from end to end. She knows no other ideals. Anarchy has

never lifted its head and backed in Massachusetts sunshine. Patriotism has no letter exponent than the people of the State.

Only four States of the Union are smaller than Massachusetts—Rhode Island, Delaware, Connecticut, and New Jersey—and yet it ranks fourth in importance as the manufacturer of the country. The State has only 8670 square miles, and its population is now about 2,000,000. According to the census of 1900 the population was 2,805,348. Its chief city, Boston, has about 500,000 people within its narrow corporate limits, giving it fifth rank in the cities of the country, but in its metropolitan district fully 1,000,000 people live. Boston never had the ease for association of suburbs like New York and Chicago. The people of the small surrounding cities and towns have inherited a love for self-government that interferes with any desire of Boston merely to be big. Strictly speaking, Massachusetts has ceased to be an agricultural State, although 61 per cent. of its territory is included in farms.

Massachusetts wrang her prosperity from scant native resources. Developing these resources gave her rich character. In the early days she became a power in maritime commerce. She led all her sister commonwealths in this respect for decades. Her settlers upon the coast gradually moved inland along the streams. They cultivated the land chiefly for self-support, not for trade. They cut the trees for ocean trade. They built ships, and these ships carried the flag of the country all over the world.

Half-way in the first part of the nineteenth century American commerce on the sea began to decline. Massachusetts had to turn to other fields of mercantile effort. She became foremost in manufacturing, according to population, and she holds that rank to-day.

Here is a State almost bare of raw material. She leads all the rest of the country in cotton manufacture, and does not grow a pound of raw cotton. She makes more shoes than all the rest of the country and produces almost no hides. She leads in the wool and woollen trades, but really grows no wool. She produces no coal, iron, lumber, and yet most of her great industries have to do with these commodities. All the raw material is brought in, some from far across the sea, and when she has made up her goods she has to go outside the State for her chief markets. There is no parallel to this in the United States. Little commonwealth resembles the England that has her own coal and iron.

A glance at the topography of the State will reveal the part it has played in developing not only the industries but the char-

Hon. John L. Baker, Governor of Massachusetts

acter of the people. The western end is crossed by two low mountain ranges. The Berkshires are beautiful in scenery, but they are not productive agriculturally. In the valleys in the mountain region the land is fertile, but there is little of it. The hills are stern, rocky, and, aside from forest growth, forbidding to vegetation. A rugged lead extends eastward to the Connecticut River. East of this river the land is undulating, beautiful to look at, and for the most part arable. The lakes that are sprinkled all through the region make it unusually attractive to the eye, and the hills and knolls give it a rolling character that makes it desirable for home-building in almost every part. The land gradually slopes toward the Atlantic, terminating in flat sandy beaches in the south-east, and a more or less rugged and rocky coast on the northeast. The numerous rivers have rapid falls, giving superb water-power that was first used in manufactures and that gave the State a commanding lead in that form of industry.

The great harbors along the coast, especially that of Massachusetts Bay, made it a safe refuge for ships, and encouraged settlers to a degree that no other part of the Atlantic coast did. The famous Captain John Smith in his explorations paved the way for the Pilgrims and Puritans. Curiously enough, Captain Smith named the place where the Pilgrims landed Plymouth years before they actually got there under the patronage of the Plymouth Company. All along the coast and in the first inland lowland settled English names are found. Boston and Cambridge are familiar names. The first settlers grew prosperous in fishing and in dealing in furs and the like. Gradually they moved inland, settling houses along the rivers and on the hills, where they could be safe from Indians and the French.

Gradually their seaport towns became famous trading marts. They built their own ships, and they learned to sail them as well as the hardy mariners of Europe. They were essentially a seafaring people. They grew to be prosperous, and their chief town, Boston, became one of the great American ports.

## THE ADVANCE IN INDUSTRY

WHEN shipping declined the people turned to manufacturing. England had forbidden the exportation of textile machinery. The Yankees got men who could make machinery to come to Massachusetts; they smuggled plans in through France; they sent their men abroad to pick up all the ideas they could. What else was to be expected from a community which on December 31, 1767, at a meeting in famous Faneuil Hall voted that "no one should purchase from abroad any of certain articles, among them cordage, men and women's hats, ready-made wearing apparel, gloves, gold, silver, or thread lace of all sorts; broadcloth that cost above ten shillings a yard; silk or cotton velvet, or silk of all kinds for garments; or gauze, laces, or embroideries." All this here had been upon the wumodnik, but they stood by, and the pledge was kept. In 1780 an association was formed at Worcester to make cloth, and in April of that year the first piece of corduroy was made in that town. Other associations of like aims were soon formed throughout the commonwealth, and in that way manufacturing was begun. It was a stern school of self-reliance, but the Massachusetts people were just the kind to pass through the ordeal with profit to their characters and their purses.

After 1830 shipping began to wane. The great ocean front and easy methods of transportation by water in the State had caused that industry to become foremost. Railroads were coming on, navigation laws were being modified, and the outlook was serious. In twenty years the commercial decline set in with a speed that would have meant ruin had not the people long before this gone into manufacturing. In the absence of coal and machinery for steam-power they set to work developing the splendid water-power with which the rivers were equipped. The enterprise that made Lowell, Jackson, Lawrence, and Appleton famous was set in motion. Every place where there was a natural waterfall or where an artificial one could be secured was seized upon, and Yankee ingenuity soon made Massachusetts first in the line of American manufactures.

The people also seized upon all the newest ideas in machinery making, and what machinery they could not secure elsewhere they invented themselves. And what is the situation to-day? Water-power at Holyoke and Turner's Falls on the Connecticut, and on the Deerfield, Millers, Chisago, and Westfield rivers, tributaries of the Connecticut; on the Merrimack at Lowell and Lawrence, at Fall River from the Watappa pond, and from scores of small streams and natural reservoirs is still used, but coal has largely supplanted water-power, and the mills have grown by the hundreds of acres into square miles. Massachusetts leads all the rest of the country in the making of textiles, cotton-woolens, and woollens. The State is foremost in the making of boots and shoes. It is first in the manufacture of writing-papers, and it has the proud distinction of making all the paper at Pittsfield needed by the government for national bank-notes, bonds, and certificates of various kinds. Four-fifths of the left-dried paper made in the United States from 1865 to 1897, as the recent census bulletins pointed out, was made within fifteen miles of Springfield. The State has led in the manufacture of india-rubber goods. It has done much in the making of forge steel, and probably has worked scrap steel and iron over to a greater extent than any other of the States. It has third rank in the making of jewelry, and has practically gone into every field of manufacture where there was a profit and a market that could be cracked readily. But its great prosperity and its great strength as a manufacturing State lies in the making of cotton and woollen goods and in the making of shoes.

The census of 1900 showed that Massachusetts had 22,000 manufacturing establishments, employing an invested capital of \$840,000,000 and 509,000 wage-earners, who produced \$1,038,000,000 worth of goods. What this means may best be understood by the fact that New York, with a population of 7,208,804 and 49,170 square miles of territory, produced only \$2,178,000,000 in manufactures, against Massachusetts, with a population of 2,850,000 and a territory of 8000 square miles. Pennsylvania, with a population of 1,302,115 and 45,215 square miles of territory, made \$1,533,000,000 worth of goods. Illinois, with a population of 4,821,550 and 56,650 square miles of territory, made \$1,256,000,000 worth of goods, and then Massachusetts comes next. The census of 1900 showed that in the previous year the State made \$214,000,000 worth of textile goods, exceeding Pennsylvania, its nearest competitor, by \$56,000,000. It made \$117,000,000 worth of boots and shoes. It made \$58,000,000 worth of foundry and machine-shop materials. It made \$22,000,000 worth of paper. And here are some of the other leading items: confectionery, \$7,800,000; cordage and twine, \$9,000,000; electrical apparatus, \$10,000,000; jewelry, \$10,000,000; lumber, \$12,000,000; leather, \$28,000,000; printing and publishing, \$29,000,000; rubber and elastic goods, \$14,000,000; slaughtering products, \$32,000,000.

In the agricultural side Massachusetts shows a peculiar development of the East in a striking degree. It lies in the increase in dairying, market-gardening, and horticulture. Although the

A View of Boston from the Cambridge Bank of the Charles River

The Boston Public Library

average of fertile lands is less than in 1840 the profit is greater. The total value of farm property in the State is \$182,000,000. The number of farms is about 38,000, and their value has increased wonderfully, especially near Boston, where an increase, owing to trolley extensions and the demand for suburban property, is reported amounting to 319 per cent. in ten years.

With its superb harbor and excellent transportation facilities Boston has become the chief city of the State and of New England. It is the second city of the country in commerce, taking rank next to New York. It is the commercial capital of our Northeast. It is in and around Boston that the industry of the State centres. Rich in historical associations, its business history is also memorable. Its banks are conservative, and its civic institutions take rank with the highest.

Boston, like all other American cities, is undergoing a transformation in the erection of steel-framed buildings. In one respect, however, it seems to be different from most of our cities. It has more of a finished and less of a torn-up look than

Tremont Street and Lafayette Mall, Boston

The City Hall, Boston

any of our municipalities. There is a uniformity in its new building construction that is lacking elsewhere. The height of buildings is regulated by law according to the width of streets. The result is that tall building is not excessive, and there are few monstrosities in architecture jumping up into the sky. Moreover, the city that displays to the best advantage the architecture of a Richardson and his colleagues is producing to-day an architecture in office buildings that well supports the best traditions of a noble profession, and, consequently, Boston has taken on an aspect of pleasing compliance with the demands of good taste in building that is seen nowhere else in the United States. Even now the owners of a building are removing several stories from one built in defiance of the law limiting the height of buildings in the city. The case was fought out to the end in the courts, and enabling legislation was sought for in vain from the State. It has seemed a pity to mar a beautiful building by cutting it down

at the top, but law is law in Massachusetts, and the effect of its stern enforcement has been inspiring upon observance of building operations.

There is a public demand for the beautiful as well as the enduring in all things that pertain to municipal matters, and an instance of this probably the greatest glory of Boston and the public spirit that finds its best expression in the commonwealth is to be found in the unequalled public-park system that is being developed. Boston has its own superb city parks, but in addition to this there is the metropolitan park system under the supervision of a State commission, which has laid out the most elaborate, comprehensive, and beautiful system of parks probably in the world.

This metropolitan park system consists of 9245 acres of land, and already there are 24.6 miles of parkways in it. It lies in thirteen cities and no less than twenty-six towns. The entire cost of the park system of Boston and this surrounding country thus far has been \$28,000,000 in round numbers. Boston's city park is the southern part of the city, Franklin Park, is one of the most beautiful in the country, while the Back Bay Park, the little Marine Park on the water-front, are striking examples of what may be done in the densely settled parts of a city. But the great Boston Common and the Public Gardens adjoining cannot be deemed by any system of parks however elaborate. They are unique.

But to hark back to other cities than Boston in the State. It is interesting to note how the industries of the State are localized. Fall River, Lowell, New Bedford, and Lawrence are all textile cities. Brockton is almost wholly given over to the manufacture of shoes, as are Lynn and Haverhill. Hopedale is a city of paper-making. Worcester leads in the making of foundry and machine-shop products. Gloucester shares with Boston in being the great fish market of the coast. Springfield, Fitchburg, and Taunton are the homes of diversified industries. Boston itself has a wide range of diversified industries, and nearly every city and town and specified has some large manufacture as its leading means of support. More than 22 per cent. of the population of the State are active wage-earners in these industries which Massachusetts has established and has maintained, despite her lack of raw material and with few natural advantages, except her great water-supply power. The record of Massachusetts in manufacturing is a lowering tribute to the ingenuity and persistence of her people. It is typically American from first to last.

# AN IMMORTAL OF BOSTON

BY W. D. HOWELLS

WHEN the Higher Journalist was summoned by the Authorities to write something about the literary situation in Boston for their Massachusetts number, he was generally refused on the ground that if he wrote of anything so hypothetical he would have to say the things which were not, or the things which had better not be said. But an answer had he done this than his mind began to work in the direction he had turned his face from, and without assignable reason he recalled a story of Edwin Booth, of which the relevancy will act at once appear. The great actor, who was also a great and thoughtful man, rose one morning, after his arrival from New York, and stood at his hotel window looking down on the streets and chimney-pots of Boston, and in the reveries which there was no one to overhear he murmured, "A beautiful city, a beautiful city! But how lonely!"

This story happens to work found in the Higher Journalist's opinion for its true significance, very different, as he felt, from the disadvantageous meaning of its surface, and before he knew how, it had related itself to a Boston book about a Boston man by a pair of Boston authors, and so had related itself, however vaguely and remotely, to the literary situation which he had refused to consider. In this aspect the story ceased to be the merry jest which it appeared at first glance and became a praise of Boston almost equal to the dreams of Boston. That loneliness, which it seemed to ascribe to the beauty of our most beautiful city as a qualification of its beauty, put on the distinction of the spiritual solitude in which Boston is without a peer, and almost without a rival, among the cities of America, if not the whole earth. For, whatever the conditions that electrical air, whatever the perpetuity of that volcanic soil, it has produced souls of a fiery purity and aspiration unknown elsewhere; and though the glory seems now to have passed from it for a while, still the just endeavor, the strong thing that moves us, the right feeling is first of Boston. Still she stands lonely in the beauty of the deed that goes with the noble purpose.

The higher journalist who in his Bostonian avatars always knew himself alone and estranged in the city that adored him, was reminded of all this and more by the book which is ostensibly the life of Laura Bridgman, the famous deaf and blind mute who the patience and the courage of one of the greatest Bostonians rescued from the fate of being an object of pity, and delivered her to an enjoyment of liberty without the powers which are the birthright of all. But such more it is the story of that unlimply unselfish man, whose deed in her behalf it could not celebrate without tarnishing the light upon his whole figure, and incidentally and almost helplessly, for without the inclusion of

his larger life the lesser life of Laura Bridgman could not be understood. Fully to understand what was done for her, we must understand who did it; we must know that the ardent young American student, who founded the first American school for the blind had first heard the call of struggling Christianity in the Turkish night, and had left his books to take part in the Greek revolution of 1824, and to help constitute the Greek nationality which continues a menace to the powers of darkness in that unhappy region of Europe where the night of Islam still prevails through the memories of Christendom. He came home and took up the work to which he gave himself with grand abandon as well as profound intelligence and unflinching perseverance. But in the eagerness of this service, stretching over the period of nearly a half-century, there was no forgiveness of other duties and good causes. He remembered all those in

The old Corner Bookstore—One of the literary Landmarks of Boston

and the American slave had his heart and his help throughout the long agitation for freedom ending in Lincoln's proclamation. When John Brown offered himself in his hopeless sacrifice for the freeing of the slave, the teacher of the blind and dumb was his ally and adviser, and he shared the dangers which Brown's failure brought upon those who stood behind him or beside him. It was universal freedom that was sacred to him, and he worshipped her, whether her vision hovered over Missolonghi or Harper's Ferry.

But he did not suffer these activities of his heart and hand to interrupt him in the work to which his gifts had dedicated him. Constantly, quietly, strenuously he labored in upbuilding the institution at South Boston which can never be dissociated from his name, and which only in less degree is related to the fame of Laura Bridgman. The story of her liberation from the prison-house which he found her early swept over the world, and everywhere stirred the springs of humanity. It was indeed a triumph for humanity not less than for science, and in our own day it has renewed itself in the celebrity of the more gifted Helen Keller. The methods which Dr. Howe invented, and the means of their application to the case of Laura were those which an equal patience has brought to such splendid effect in the case of Helen; and the last is but a more splendid flower of the culture blossoming in the first. The day of Laura Bridgman was not the day of the visible speech which has been so wonderfully translated into palpable speech for the development of Helen Keller, but all the rest was done for Laura Bridgman.

Laura had not indeed the rare intellectual qualities of the wonderful Helen; nature had denied her that some of them to which we yield the name of genius. She had no more rhythmical poetry, constructive imagination, and graphic expression, than she had sight, hearing, or speech. But she had a great deal of the "charms, ripeness from the affection and attraction of childhood into a womanhood of the gentlest and sweetest amiability. This is what the authors of the present life of her make us feel, in a succession of wisely and skillfully managed details which are never allowed to become trivial or tiresome. Nothing here is without significance: all is telling and important.

But inevitably it is in the case of the teacher rather than the pupil which remains, and it is he who rises the position of that great spirit which like the city itself must improve in witness with the hardihood in its beauty. Till some other city stands alone who reason for self-devotion like hers she must needs stand alone. Who shall be her rival? Inevitably New York? Truly Chicago? The time is not yet when this can be confidently affirmed.

In the mean time there rises before the higher journalist, at an altitude considerably greater than his own, "the tall form of other years," to use the Socratic phrase, which the keen not more adored by an unexpectant people than by a poor blind child, used to present himself to the eyes of other men: a spare tall and gaunt and somewhat bent, taking in without tolerant wide eyes, albeit somewhat absent, whatever less commanding aspect it looked upon, and promising a sufficient consideration of humanity in every fellow man. In the later years of his life when the higher journalist knew him, and now and then saw him in Boston, on those social occasions to which he lent himself so little, he somehow felt himself judged by the nobler personality of the man. This was the man's involuntary, not his voluntary, effect with people who had led lives indifferently devoted or devoted, and perhaps this will be his effect, upon the same terms, with readers who acquiesce themselves in that admirable book with his most modest, most magnanimous personality. If so, it will be no less effect for the reader, and it will be a sufficient attestation of the nodding greatness of that which we must need call Boston when we mean the patriot, the poet, the philanthropist, her immortal sons.

# THE STATE'S MONEY-POWER

BY EDWARD S. BRADFORD

State Treasurer and Receiver-General

**T**HE Commonwealth of Massachusetts, one of the thirteen states joining in the Declaration of Independence and afterwards constituting the new nationality of the United States, was prominent in her part therein. In all this national life, from its birth to the present day, her prominence has been continuous and unchallenged, and always as a factor in advancement and leadership. The regular and constant demands for executive, legislative,

and for the issuing, under reasonable and creditable restrictions, of State bonds or certificates of indebtedness, maturing in terms ranging from twenty to forty years, and in each and every instance accompanied by the immediate establishment of sinking-funds to provide for the redemption or payment thereof at maturity. No Commonwealth in the Union enjoys better credit in the financial world to-day than does the Commonwealth of Massachusetts. No securities are better known or in better demand than are here; and as it is true that the purposes for which these bonds have been issued have been largely accomplished, the amount to be added thereto in the future must be comparatively small, so it would appear also to be true that their intrinsic value and attractiveness are sure to be maintained, if not enhanced. Below is appended a résumé of the financial status of the Commonwealth, as of January 1, 1903, according to the figures as published in my last annual report:

The population of the Commonwealth estimated by the Bureau of Statistics of Labor is..... 2,925,704

The wealth of the Commonwealth (as reported to me by the Tax Commissioner, for the purposes of this article) is:

Real Estate .....	\$2,474,898,282
Personal Property .....	1,673,462,218
Total .....	\$4,148,360,500

The direct bonded indebtedness of the Commonwealth contracted for purely State purposes, as follows:

Abolition of Grade-crossings Loans.....	\$9,300,000 00
Fitchburg Railroad Securities Loan.....	5,000,000 00
Harbor Improvement Loan.....	310,000 00
Massachusetts Hospital for Consumption Loan.....	300,500 00
Massachusetts Hospital for Epileptics Loan.....	821,800 00
Prisons and Hospitals Loan.....	345,000 00
Massachusetts War Loan.....	1,174,200 00
Bedford Housing Auction Loan.....	1,174,200 00
Metropolitan Parks Loan, Series Two (one half).....	1,377,500 00
State Highway Loan.....	2,825,000 00
State House Construction Loan.....	2,825,000 00
State House Loans.....	225,000 00
Boston, Hartford & New Bedford Loan (containing coupon).....	975 20

Amounts to.....\$27,415,325 20  
Which is reduced by sinking-funds amounting to..... (2,940,000 21)

Net Direct Debt.....\$24,475,325 00

The indirect bonded indebtedness of the Commonwealth (contracted for the benefit of certain municipalities and metropolitan districts, so called, the communities of which are annually assessed for the payment of interest and eventually the principal at maturity), as follows:

Armory Loan.....	\$1,805,000 00
Metropolitan Parks Loan.....	9,292,500 00
Metropolitan Sewerage Loan.....	11,140,812 50
Metropolitan Water Loan.....	24,568,000 00

Amounts to.....\$46,806,312 50  
Which is reduced by sinking-funds..... 4,381,034 25

Net Indirect Debt.....\$42,425,278 25

In this statement no account is taken of the unexpended balance of the proceeds of the sale of these securities,

Amounting to.....\$5,104,952 74

Total Net Indebtedness.....\$69,964,600 74

Chamber of Commerce, Boston

judicial, benevolent, and reformatory departments, as well as her large contribution to the educational interests of her people, are provided for annually, through taxation, direct and indirect. But the further demands of an advanced idea and higher ideal for the benefit of generations, such as the development of State highways; the abolition of grade crossings at the intersection of highways and railways; the establishment of hospitals and asylums for the insane, the epileptic, the dipsomaniac, and the consumptive; for State House construction and improvement; for harbor improvements—all these have been recognized and met. They have been

300, or a total of 150,000 members. The trade-unionists consider a "strike" their most potent means of securing the aid aimed at by their organization. During the year ending June 30, 1903, there were 211 strikes in the State of which 29 per cent. succeeded, 20 per cent. were unopposed, 40 per cent. failed, while at the close of the period the decisions in the case of 11 per cent. had not been arrived at.

The Legislature of 1903, as well as those sitting in previous years, voted liberal financial aid to the textile schools in New Bedford, Fall River, and Lowell. A special report will be made to the Legislature of 1904, as to the expediency of establishing free-employment offices. The Legislature of 1903 passed a resolution providing for the appointment of a committee to consider and report on the laws governing the legal relations between employers and employees.

### To Modify the Laws

The treasurer named as members of this committee the Hon. Carroll D. Wright, United States Commissioner of Labor; Henry Sterling, a trade-unionist; Davis R. Dewey, professor in the Institute of Technology; Royal Robbins, a manufacturer; and William N. Oggood, counsel-at-law. The committee has held a number of hearings, at which all interested were invited to be present. Among the subjects considered are the following:

Fixing its textile-works; a Saturday half-holiday on election day; employer's liability; disability or pension funds and the related subject of working-men's insurance; conduct of strikes and injunctions; picketing, boycotting, and black-listing; violence and intimidation; arbitration and conciliation, including the question as to whether investigations by the board should be compulsory; industrial courts; the attachment of wages; profit-sharing and industrial partnerships; the furnishing of work for the unemployed.

### The Sentiment against Arbitration

The sentiment of the trade-unionists is decidedly against compulsory arbitration or the incorporation of trade-unions. It is thought by some that the trade-unionists should register, but the plan is opposed by the working-men, who look upon it as the first step towards the end desired. The indications are that the next Legislature will amend many existing statutes and pass some new ones.

Generally speaking, the manufacturing industries of the commonwealth are in a most satisfactory condition. Mills, factories, and workshops, as a rule, are running on full time with a full complement of employees. Considering all industries, wages had advanced six per cent. in 1902, as compared with 1900, and the average annual product per employee had been greatly increased.

Notwithstanding the fears expressed by some that the Massachusetts cotton-mills would suffer materially from Southern competition, the New England cotton-mill owners at their recent convention expressed their opinion that the supremacy of the New England cotton industry could not be successfully assailed for the present at least.

### Natives and Foreigners

At the beginning of this article it was stated that but little more than a third of the industrial force of the commonwealth is of "native stock." The pessimists refer to this fact as an evident sign of industrial decadence. If they will examine the population statistics of the twelfth census of the United States, they will discover that the native stock has not died out, but has simply been transplanted to more fertile and productive fields in other States of the Union. Despite the great influx of immigrants into Massachusetts, the Americanizing of them has been a slow but steady and sure process. The native-born number 1,856,922, as compared with 446,324 foreign born. If the tide of immigration should cease entirely, in two generations they would be, theoretically, more of foreign birth, so of foreign descent, for all would be "native and by the mother born." In time, immigration keeps up to former proportions, it will be many years before the native born gain the ascendancy.

THE FINANCIAL CENTRE

THE financial interests of Massachusetts centre, as a matter of course, in Boston. The history and tendencies of the city's banks are marked by conservatism and extreme caution. Boston's banking reaches to a large extent the operations of the banking methods of Philadelphia. There is evident at all times a spirit of painstaking care in investment and in safeguarding investors' investments with the inherited business tenacity of the people of the State. In addition to this, those who have displayed in recent years a marked tendency toward consolidation of banks and retrenchment of capital not only to a similar extent in any other city.

Second only to New York

Within five years or less than twenty-five national banks have gone out of business by means of consolidation with other institutions. The banking capital has been reduced from \$50,000,000 to \$35,500,000, with a surplus of nearly \$14,000,000, and a divided profit of about \$7,000,000. This record of capitalization, surplus, and New York. It is especially noteworthy also in that the clearing-house records show a constantly increasing business. The figures for four years make this clear. Here they are: 1909, \$611,573,000; 1909, \$291,545,000; 1901, \$662,755,000; 1902, \$647,558,000. A striking tribute to Boston's conservatism in banking is also shown by the clearings thus far in 1903. The outpouring of the stock market in New York has affected Boston only slightly. In fact, the bank clearances, like those holding their own, revealing that the New York panic has been almost strictly local and due to over-speculation. It has been a stock-optimizer's panic.

Enormous Clearings

The official record of the bank clearings in Boston for January, 1903, was \$670,000,000, against \$647,000,000 in 1902. For February they were \$525,000,000, against \$532,000,000 in 1902. For March they were \$536,000,000, against \$556,000,000 in 1902. For April they were \$593,000,000, against \$618,000,000 in 1902. For May they were \$618,000,000 in 1902. For June they were \$777,000,000, against \$732,000,000 in 1902. For July they were \$704,000,000, against \$625,000,000 in 1902. For August they were \$407,000,000, against \$498,000,000 in 1902. The clearings for September and October were not available when the data for this article were secured. For the eight months of 1903 included in this summary the clearings were \$4,540,000,000, against \$4,060,000,000 in the same months of 1902, a falling off of only \$96,000,000 in eight months, or a little more than \$8,000,000 a month, less than one and one-half per cent. This makes a really startling showing for Boston's banks and Boston's business output. It shows that the city's financial interests are in a healthy, strong condition. It is a matter to be proud of.

Banking Interests

It was in 1782 that the famous Bank of North America, started by Congress, began business in Philadelphia. Two years later the first bank in Boston was started, the Bank of Massachusetts. It is still in existence.

Eight years later another bank was started with much opposition, because it was feared that there would not be sufficient business for both. By 1808 the bank had grown to sixty-one in number, and then the conservative spirit called a halt on the rapid expansion of the business. Twenty-five banks went out of business and five new ones were established. It is even now predicted that in time the number of banks in the city will be reduced to twenty-five and possibly fewer.

There are eighteen savings-banks in Boston, out of 186 in the State. Their deposits aggregate about \$100,000,000. The savings-bank laws of the State are stringent, and make these institutions eminently safe. These banks have assets in the entire State amounting to more than \$600,000,000. Some of these assets are investments in the stock of the prospective national banks of the city of Boston.

ADDED to the banking business is that of the stock-market. Boston has a Stock Exchange with a membership of 125, membership being valued as high as \$25,500. The board has been in existence for sixty-nine years. It has dealt in more than 10,000,000 shares of stock in a single year, and its sales of bonds have aggregated nearly \$25,000,000 in one year. Some of the foremost names of Boston have been associated with the banking history of the city. The Peabodys, Nickersons, Thayers, Humeswells, Coledges, have made their names memorable in banking and financial circles, and it is largely to the high character of the men who have engaged in the business that Boston's enviable financial standing is due. Boston is peculiar in Stock Exchange transactions in that it is the home, practically, of the great copper companies. It is the copper-emporium centre of the United

the Boston Exchange amounts to about 4½ cents, and the earnings on the stock have been, on the average, about 1½ per cent.

The relation between the shrinkage in value of the stocks and the earnings forms a basis of interest that may account for much of the activity in the sales of the investments. Mr. Walker summed up the situation regarding the values of the stocks of these companies as follows:—  
 "Their stocks have recently sold on the basis of about 37½ cents for each pound of copper produced annually, and as their output is made at an average cost of less than nine cents a pound, there is approximately an average profit of 4½ cents per pound on the entire production."

Early in January Mr. Walker published a table to show that, if copper should sell to 1905 at an average of 15 cents a pound

Bird's-eye View of one of Boston's Trade Districts

States. The great successes in the last fifty years in mining copper in this country have been due chiefly to Boston capital. The most active of the Stock Exchange transactions in the city are copper stocks. Some of the investments have brought fabulous returns. Many have resulted in failure. There has been much manipulation of the market from time to time, and fortunes have been won and lost, not so much in the actual mining of copper as in speculating in copper stocks.

There are more than twenty companies listed on the Exchange, and, to illustrate the fluctuations in value, one has had to refer to the weekly letter of a recognized expert in copper stocks and mine values, George L. Walker, who printed a table on December 5 last, giving a summary on this subject. Mr. Walker showed that the highest value of the 4,415,000 shares of the twenty-two listed companies was \$475,281,600, and the lowest value, according to the stock quotations, \$297,497,000, a shrinkage of \$278,684,600. On the other hand, according to figures compiled by Mr. Walker and published on August 15 last, the approximate profit a pound of the companies listed on

for the year, the earnings of the corporation listed on the Exchange would be between \$0,500,000 and \$7,000,000 greater this year than last, when the average price of copper was 11½ cents a pound. The price is now above 15 cents a pound, so that the outlook for the earning capacity of the copper stocks held so largely in Boston is much brighter than a year ago.

Boston's interest in copper-mining began as far back as 1844, when the Cliff Mine in the Lake Superior region was developed. It was worked out at a profit of more than \$2,500,000, and the shareholders received \$22 for each dollar they invested. In the ten years following, some of the fabulous mine-paying investments in copper were developed, the most famous of which was the Calumet and Hecla, which, on an investment of \$1,500,000, has already paid more than \$80,000,000, and is now paying on the basis of 24,000,000 a year.

It was these early successes in copper that made Boston pre-eminent in this field. Early successes made Boston capitalists eager to go into this field, and the result was that the city came into possession of a large part of the world's best mining properties.

PROGRESS IN BUSINESS

IN the amount of capital invested and the amount of business done, the cotton-manufacturing industry of Massachusetts really leads all the rest. In the value of the product, boots and shoes in ahead of it slightly, but considering what the Bureau of Statistics of Labor, under the able management of Horace G. Wadlin, calls the "mitter of industry product, the amount paid to wages and the profit and minor expenses fund," cotton-goods manufacture stands foremost among the nine lead-

ing industries of the State. Here are the figures as presented in the last census report: number of establishments, 171; less than in 1890; capital employed, \$190,000,000, \$29,000,000 more than in 1890; average number of wage-earners, 92,000, an increase of 17,000 in ten years; total wages, \$32,000,000, an increase of \$7,000,000 over the record of ten years before; value of product, \$111,000,000, an increase of \$11,000,000 for ten years.

The cotton-making figures for the present

year are not entirely fair as a basis of comparison, for the reason that, owing to the high price of raw cotton and strikes of operatives, many of the mills were closed for weeks. The year 1901 may be taken as the banner year. In that year the mills of this industry did a business up to their bell girth. The business of the other leading industries of the State aggregated only about 91 per cent. of their capacity. The average earnings of the cotton mills were about five per cent. and the total amount of wages paid to operatives was almost twelve per cent. larger than the year before. Nearly one-half of these operatives are women and girls.

The first cotton-mill in the United States was started in Beverly, Massachusetts, in 1785. The various inquiries into the trade show that between 1800 and 1814 about fifty companies were organized to make cotton goods, and in 1815 there were fifty-seven mills engaged in the industry, operating about 60,000 spindles. In 1815 a large mill was erected in Waltham, with 1700 spindles, and for the first time in this country all the processes of cotton manufacture were carried on under one roof.

The power loom, however, revolutionized the industry in this country. It was first erected by Francis C. Lowell, of Boston, and Paul Moody, of Amherst, illustrative manner. England would not allow the exportation of this kind of machinery. Mr. Lowell went to Edinburgh and Manchester in 1811, and got sufficient information wherewith to start a power loom here. It was put into operation at Waltham in 1814. England had such machinery in operation for ten years. The cotton-cloth making business, as it exists to-day, however, did not come into successful operation until 1842, when it was established thoroughly at Lowell. It has grown steadily, and although the number of establishments has decreased, owing to consolidation, it remains the foremost industry of New England, and Massachusetts leads all other States of the Union in its production.

**SOUTHERN COMPETITION**

It has been feared that the South would take the industry away from New England. Wonderful as has been the progress of the South in this field, New England still holds her own. In 1900 Massachusetts had 41 per cent. of all the spindles and 39.3 per cent. of all the looms in the United States. The value of its products in cotton goods was 33.2 per cent. of all the goods of this kind made in the United States, South Carolina, the second State in rank in the industry, made only 8.9 per cent. of the goods. When it is considered that the neighboring States of Connecticut, Rhode Island, and New Hampshire make a large amount of cotton goods, the danger of being overwhelmed by the South does not seem imminent, although in the last two or three

years the Southern States have made marvelous progress.

Four reasons are given why New England continues to retain supremacy in this field, despite the fact that all the raw material has to be brought to its mills, while the mills of the South have the raw materials at their very doors. One is that a superior line of goods is made in New England. Another is that the circumstances and surroundings in which the goods are made are superior to those of the South. Still another is that peculiar advantages in the transportation of finished goods are enjoyed in New England, and yet another that the business character of those managing the industry of New England is the most acute in the world. The opening of China to the cotton trade after the recent disturbances there brought a great impetus to the industry in this country, and the New England men were prompt to take advantage of it. The industry is pre-eminently chief among all those of New England. In this respect it is worth while to note that no less than 671,000 bales of cotton were received in the port of Boston in 1897, and that of this sum only 115,000 bales were exported.

**WOOLLEN GOODS**

In the manufacture of woollen goods this country has come to surpass all others of the globe, and in this work Massachusetts leads all the other States. The State in 1899 made 26.1 per cent. of all this kind of goods, a loss of seven-tenths of one per cent. over the record of 1898. The capital involved showed the same relative position as in 1890, but the wages paid showed an increase of seven-tenths of one per cent. over that of the rest of the country. The Bureau of Statistics of the State in 1901 showed there were 180 establishments engaged in the business, employing a capital of about \$35,000,000. They used stock worth \$21,000,000, and the product was valued at not less than \$50,000,000, an increase of \$6,000,000 over the previous year.

Back in 1791, Alexander Hamilton, as Secretary of the Treasury, rebuked in the woollen industry of the country as entirely confined to families. It was all of the home-spun kind. The first woollen factory was established at Ryefield in 1784. There the first spinning machine was set up, but there was little further progress until the Embargo Act of 1807 and the Non-Intercourse Act of 1809 threw the people of this country on their own resources. The start of 1812 soon came on, and in that year the government issued no less than 237 patents on textile machines. The people of New England pledged themselves to produce all the woollen goods that the army needed. They fulfilled their pledge. Asso. Whittemore, by the introduction of his wool-carding machinery, had transformed the trade. Spinning jennies under water-power had been put in operation in Uxbridge and Pittsfield

A Massachusetts Cotton-Mill

made in England. The first real shoe-factory was started in Danvers, about twenty miles from Boston, and as early as 1740 cutting, cutting, and shoemaking were begun in this establishment in Danvers. There was great prejudice against machine-made shoes, and not until recent years did it die out wholly. The entire shoe was formerly made by one person, and it was common in the early days for farmers and women generally to engage in the work in the winter time. In 1814 Joseph Walker invented shoe-pegs to take the place of sewing and in 1831 a pegging machine was introduced. It was in 1861 that the sole-sewing machine was put into use, and since then ingenious inventions have been applied, one after another, until the industry has been transformed, and the hand-made shoes have been driven practically out of general use. In the matter of value of output, the boot and shoe industry of Massachusetts leads all the rest.

In iron and steel manufacture Massachusetts has an enviable record. It does not compare in output with Pennsylvania, but it has done some noteworthy things. At the last census the State had eight establishments engaged in this industry, with 6125 wage-earners, whose produce reached a value of \$12,500,000. There was an increase of nearly \$3,000,000 in the value of the product in ten years, or 24.2 per cent. The first iron forge in America is asserted to have been set up at Haverhill, Massachusetts, by James and Henry Leonard, who "were the first adventurers from England to this country who were skilled in the forge-iron manufacture." The first rolling-mill established in the State was at Middleboro. The iron deposits in the Berkshire region were drawn upon for raw material, but the use of this was found impracticable after a time, and the raw material was brought from outside the State. Massachusetts has a somewhat special line of iron and steel manufacture. This lies in the fittings for steamships and marine engines. Ship iron-work has progressed there to an extent probably that it has in no other place in the country, but in recent years a new process of making steel has commanded the use of a large amount of capi-

tal. It is for the making of steel from scrap steel. All kinds of waste steel and junk are transformed by this process into new steel, especially in the form of tools, and with a remarkable tensile strength, and the government ship-building firms have adopted it in general use.

Foundry products play a large part in the nine leading products of the State. It is the third industry of the State. It centers in and about Worcester largely. The 825 establishments engaged in the business in 1900 employed no less than 32,000 wage-earners, and the product of their industry was \$26,500,000, an increase of \$7,000,000 in a decade, or more than 44 per cent.

In the seventeenth century the work of making iron castings was begun in Bristol and Plymouth counties. It may be seen that it is one of the oldest established in the industry. In 1642 the Colony Court granted a monopoly to Joseph Javala for fourteen years to make engines for water-mills and to make saws and other edged tools. Lewis, the historian of Lynn, says, "Joseph deserves to be held in perpetual remembrance in American history as being the first founder who worked in brass and iron on the Western continent." Hugh Orr made in Massachusetts the first market ever made in America, a fact that stood the colonists in good stead in later years when serious trouble began requiring the use of markets.

Nail-making machinery was put into use in Plymouth County as early as 1730, and then, in Worcester County, there was developed the extensive industry, that still holds a very large, of working hardware, tools, and machinery. The extension of the textile and leather and shoe and other important industries stimulated the still greater development of the foundry industry, and this led to one of the most important branches of iron and steel workings in the State.

TEXTILE-MAKING

THE people of Massachusetts were really under great obligations to England for prohibiting the exportation to any for-

own country of "utensils made use of in the cotton, linen, woollen, and silk manufactures." The Yankees had to make the machinery themselves. If Massachusetts's manufacturers have had any one superior quality it has been to invent or adapt upon all the latest ideas in new machinery. They have always been seeking labor-saving devices, and chief among them has been machinery used in textile manufacture. England even went so far in her prohibition as to try to stop the sending of plans and patterns of textile machines to the New World. The first shops for the building of this kind of machinery were erected in 1746 in Bridgewater, Massachusetts. In response to a demand from the legislature to encourage the industry, a committee was appointed "to view any newly-invented machines that are making within this commonwealth for the purpose of manufacturing sheep's and cotton wool, and report what measures are proper for the Legislature to take to encourage the same." As a result of this committee's report a sum equal to \$1000 was appropriated to finish certain machines for carding and spinning cotton. These machines were not put into use, but were shown about the State as models, and this led to the introduction and manufacture of textile machinery on an extended scale, an industry in which Massachusetts still excels. The first American spinning machinery was used in a cotton-factory in Beverly in 1789. Twenty years later the introduction of carding-machines in the woollen industry was made in Hopedale, near Newburyport.

Then came the introduction of the power

loom, already referred to, and the making of textile machinery received still another impetus. At first the machine-shops were run as parts of the textile-mills, but about 1845 most of them became independent concerns, and finally, breaking away entirely from the textile-making of goods, established their own centres of trade. The market for this machinery is not confined to Massachusetts. Millions of dollars worth is sent abroad every year. The American lightness and strength cause the machinery to be in demand in foreign lands. Interchangeable parts are also another feature that leads to its success. Every part of a machine made in America comes from one shop, while in Europe the reverse is the case. It has been said that American machinery leads the "American invasion" of Europe. If this is the case American textile machinery is peculiarly at the head of the invasion.

## PUBLISHING

THE first printing-press in America was set up in Cambridge, and in January, 1639, a printer named Day printed on it what is known as the Freeman's Oath. The press had been brought to this country in 1638 from England by the Rev. Mr. Glover. Day in 1640 issued the Bay Psalm Book, the first book printed in the American colonies. He continued to do the printing-work for the colonies until 1645, when Samuel Green succeeded him. In 1655 a new press was sent over from England, and on it Eliot's famous Indian Bible was printed. For forty years all the printing that was

from abroad used in the manufacture have been obtained. The best workmen that can be procured are engaged in the industry, and the result is that the product of their skill and the progressive business methods of the manufacturers have produced a trade that is unsurpassed in this industry, viz. anywhere in the country and you find the chocolates made in Massachusetts in general use on the table and in the countless forms of confections. Indeed, Boston early took the lead in making novelties in confections, and heavy shipments of these are sent consistently to every part of the country and even abroad. The secret of preserving this class of goods has been studied out and mastered, and a steady increase in the making of goods for consumption in far-off places has followed.

There are fully 250 large confectionery establishments in the State, employing more than 3000 workers, whose wages probably amount to not less than \$1,200,000 a year. More women than men are employed in the industry, the ratio being about 1200 men to 1800 women. More than \$4,000,000 worth of raw material is used each year in the factories, and the output is valued at more than \$7,000,000 each year. The quality of the goods produced has made a high reputation for the manufacturers, and has placed the trade in a commanding position among the industries of the State.

### CARRIAGE-MAKING

**A** FORM of manufacture in Massachusetts that has attracted attention outside the limits of the State is the making of carriages and other vehicles. The industry is not a large one compared with that of other States, but the superior kind of work turned out has caused it to be established thoroughly and to grow constantly. There are more than 600 of these establishments in the State, and their output is valued at fully \$6,200,000 a year. More than 2500 men are employed in the industry, and their wages amount to \$1,700,000 a year. In the making of cars, another branch of what might be called the transportation industry, more than 3000 men are employed, and the value of their output is nearly \$8,000,000 a year.

### SPORTING GOODS

**I**N the manufacture of firearms and other sporting goods Massachusetts has a reputation that is enviable. The State is well known for its hunting and fishing grounds of the great north, and many devotees of sport reach the woods from Massachusetts. Probably there is no city in the country which has so large a proportion of men who hunt and fish from the true sport of it. There are

ten concerns in the State that produce firearms, and they employ a capital of \$2,000,000. They employ about 1000 men, who produce fully \$2,000,000 worth of goods each year. The guns and revolvers made in Massachusetts command high prices because of the excellence of their workmanship, and it is conceded that they are among the finest made.

### MUSICAL INSTRUMENTS

**A**S a centre devoted to music, it is to be expected that the manufacture of musical instruments follows as a matter of course. Some of the best-known piano firms of the United States have their factories in Massachusetts, and Holyoke Street in Boston furnishes what may be called Music Row. There are scores of salerooms and offices of piano-makers, especially along that busy and attractive street, and the business they do is extremely large. There are more than sixty factories in the State engaged in the manufacture of various kinds of musical instruments, and they employ about 2500 men, with wages amounting to fully \$2,000,000 a year. The value of their output is close to \$7,000,000 annually.

### FLORICULTURE

**A**LTHOUGH it is in no way related to manufacture, no review of the industries of Massachusetts would be complete without mention of the cultivation of floriculture. Widespread attention was called to this industry several years ago when the celebrated Lawson pink was originated by Thomas F. Galvin, 600,000 plants of which were sold before the crane subsided. This sale alone gave great impetus to the propagation of pinks in this country, and that was accentuated by the habit of the late President McKinley of always wearing one. When Prince Henry visited Boston he was met at the Floral Display in his honor, and pronounced it the most elaborate and beautiful he had ever seen.

There is no doubt that Boston has what might be called the flower belt developed to a greater degree than any other city. One reason for this is that it is so far north that in the summer those who can afford to buy flowers do not leave town to the extent that the people of New York and Philadelphia, for example, do, and therefore there is a constant demand for flowers even in the so-called dull months of the year. The extent of this industry, as shown by the census returns, amounts to about \$1,800,000 a year. Massachusetts is acknowledged to be one of the leading States in this branch of agriculture. There is a capital of nearly

**T**HE first mill driven by power for the production of woolen cloth in this country was started in 1788 and after a little more than a century the American Woolen Company was formed, which produces goods equal to any in the world. Many changes have taken place during that century but there still remains a little of the old Tory prejudice in favor of English customs and foreign goods. To satisfy this prejudice many people ask for imported fabrics and do not know whether the cloth they are given comes from abroad or is made in this country. If the latter, they are getting the most for their money. A foreign cloth, while not superior to an American Woolen Company fabric in corresponding grades, is the more expensive when made up in this country. The whole question is largely a matter of knowledge. A person who is familiar with the quality of the American Woolen Company goods will ask for them and not pay a premium for a prejudice.

\$5,000,000 invested in the business, and the valuation of the land alone on which some of the greenhouses are situated runs as high as \$450 an acre. There are nearly 700 greenhouses in the State.

**INSURANCE**

**A** MATTER of pride to Massachusetts business men is the fact that no regularly incorporated life insurance company of the State has ever failed. Probably there is no State in the Union where

such close supervision of life insurance companies is made as in Massachusetts. The present rigorous system of watching investigation made by the authorities of the State is due chiefly to Kilmer Wright, who was Insurance Commissioner more than thirty years ago. He perfected a system of examination that has revealed the weakness of many a company and that has stood policyholders in all companies in good stead. One of the requirements of the State's laws is that a duplicate policy written in the State must be filed with the Commissioner of Insurance.

In fire insurance there is the same careful method of protection to policyholders. These companies do an enormous business in the State, with Boston as their headquarters, and their financial standing takes similar rank to those of the best and truest companies. In supervision of its great financial institutions Massachusetts does not take second rank to any State, and the result is a splendid testimonial to its sound and conservative business methods.

**TRANSPORTATION**

**I**N every large American system the problem of local transportation is still an unsolved condition. Boston, however, is an exception. There is probably no city in the world where this municipal system has been perfected to such an extent as in the capital of Massachusetts. All the serious questions have been settled, and what changes are to be made in the future are to be along well-established lines already laid. The system might be called a model one.

There are two great steam railroad terminals in the city, one in the south and the other in the north. Boston resembles London, owing to its circular shape, in the matter of steam railroad terminals. The roads enter either on the south or on the north. In London, however, there are half a dozen northern terminals, as there are in the south. Here in Boston, now, however, all the roads entering Boston from the south and north-west enter one massive terminal, one of the largest in the world, and all entering the city from the north and northwest also enter one on the north. These two terminals are connected directly by an elevated railroad and numerous street-car lines. It is also possible to shut cars from one terminal to the other by using freight tracks in the heart

MANUFACTURERS OF

*Bigelow-Lowell Wiltons*      *Bigelow Axminster*  
*Bigelow-Lowell Brussels*      *Lowell Ingrains*  
*Bagdad Lowell and Brussels Rugs*

The carpets made by the Bigelow Carpet Co. have been always of the highest standard, and have received the highest awards when exhibited, including Gold Medals at the Paris Exposition, 1878, and at the Centennial, 1876.

They have a deserved reputation for excellence of fabric, richness and durability of color, and beauty of design.

For the protection of the public, the Company has adopted as a trade-mark the words "BIGELOW-LOWELL," which is woven in white capitals into the back of the fabric. See it on all the leading brands.

Rear of the South Union Terminal, Boston, showing the twenty-eight Tracks entering the Station

of the city and also by going out into the suburbs in a roundabout way.

The elevated and street-car lines are all under the management of one company, the Boston Elevated Railroad, and the result has been the simplifying of the transit problem to a marvelous degree, and the satisfaction of the traveling public's interests in such a way that no city in the United States enjoys better transit facilities. The suburban trolley system, owing to the large number of surrounding towns in close proximity to Boston, is probably more elaborate than elsewhere in the United States. This system covers no less than thirteen cities and towns and reaches for a score of miles out into the surrounding country.

The consolidation of local transit facilities has been of tremendous advantage to the city. It has brought about a singular circumstance, namely, an elevated railroad operating its trains in a subway for that part of its lines where the city travel is most congested. This Boston subway was the first to be constructed in this country. It is only about a mile long, and runs from north to south. It was intended to take the street cars off Tremont Street, one of the most crowded thoroughfares in the city. It runs along the edge of Boston Common. The use of it for elevated trains came after the consolidation of the various transit companies.

Briefly, the way Boston takes care of its street-cars and elevated railroad is this: An elevated railroad five miles long runs from Charlestown on the north to Dudley Street, far below the business centre of the town, on the south. There is a great terminal at each end of this elevated railroad. From each of these terminals the trolley roads spread out all over the surrounding country like a fan. The trolley-cars are brought up to the elevated's terminals on

raised tracks, so that the passenger simply alights from the car in which he has been travelling through the crowded part of the city and takes his place in the street-car which is awaiting him. He needs no transfer check. There is no delay, and the large terminals are cleared of passengers almost as quickly as they arrive.

There are also two great clearing stations in the subway itself for trolley-passengers. These lines from the southwest, which enter the city pass into the subway in the southern end on tracks of their own, go nearly half-way of its length, and then loop around a station where the elevated stops, and pass out the way they came. Similarly trolley-cars enter at the northern end, go a short distance, and then loop back, having deposited their passengers at elevated railroad stations in the subway. One of these great exchange stations in the subway, that at Park Street, at the top of the Common, is probably the largest clearing house station of travel in the world. It is estimated that it is used by no less than 80,000,000 people a year. That is to say, 30,000,000 enter it, 30,000,000 leave it, and 20,000,000 transfer there from elevated to trolley or from trolley to elevated. In the subway, as in the case at the terminals of the elevated, no transfers are required, the passenger simply stepping from one car to another.

It is possible for a traveller on the Boston elevated line to get on the cars without going up one step. He has only to go downstairs at a subway station, and soon his train emerges from the tunnel, climbs an elevated structure, and goes to its terminal. There the passenger gets into a trolley, glides down to the street level, and gets off on the surface at his destination. There is no such co-operation in transit facilities anywhere in the world. The present system will undoubtedly remain. The elevated

The  
**FRENCH CARRIAGE COMPANY**  
DESIGNERS, BUILDERS, RESTORERS, SELECT CARRIAGES  
BOSTON, MASS.

structure may be extended further north and south, but this system of transfers to trolleys at great terminal stations, keeping the suburban trolley-cars from entering the city, will remain. A spur of the elevated runs along the harbor front, out of the great congested part of the city, and connects the two great railroad terminals. It is the only place in the business part of the city where an elevated structure runs, and it does not mar the symmetry of the city at all. Taking the tracks of Tremont Street has made that thoroughfare one of the most beautiful in the country. Except for the neat station entrances along the Cosmos's edge one would not know there was a structure underground. The subway is well lighted and ventilated, and travel in it is exceedingly comfortable and rapid.

The subway cost about \$4,500,000. It was built by a transit commission and leased to the company operating it. The allied local transit companies of the city carry nearly 1,000,000 passengers a day. Up to September 1 of this year the traffic had amounted to 222,500,000 passengers. Of those who travel on the lines, fully one-half get free transfers. It is possible to ride more than twenty miles in Boston and its suburbs for five cents.

The great South Station in Boston has been described so often that it is well known to all well-informed persons, but it will not be amiss in an article of this kind to recall some facts concerning it. It covers an area of about thirty-five acres, and the main station is 850 feet long by 725 broad. About 800 trains a day enter and leave the place. There are four miles of track under one roof, and 344 sixty-five-foot cars can stand beside the platforms under the train-shed. It is used by about 28,000,000 passengers annually. Architecturally, the station is not imposing. It is of a severe, low-structure type of building, but it is more adapted to the uses of a terminal station probably than any in this country.

The great Union Station is the north is almost as large as that on the south. It has a frontage of 967 feet and is 605 feet deep. About 600 trains a day enter and leave it. There are more than two miles of track under its roof, and its standing car capacity is 161. It contains twenty-five tracks. The trains that use it in one day would, if put together, reach a distance of thirty-five miles. The station is ornamented in front with a beautiful arch, giving the building an imposing effect which the other great station of the city lacks. The elevated railroad does not come so near the building as to hide its architecture, a circumstance from which the South Station suffers materially.

Railroading in Massachusetts is so safeguarded that accidents rarely happen. In the year 1901, for example, not one passenger out of the 87,000,000 carried on the steam railroads was killed, and only three railroad employees met their death. These railroads employ fully 45,000 persons. The freight-carrying system is as well regulated

A Station on Boston's Rapid-transit System

as that for carrying passengers. The average rate for passenger travel in the State is now only 1½ cents a mile, and for freight it is only 1.25 cents a ton mile. These are among the lowest figures for railroading in the country, and of themselves they reveal one reason for the prosperity and great amount of business done in the State.

## AGRICULTURE

BY J. LEWIS ELLSWORTH

Secretary of State Board of Agriculture

IT is one of the commonest of statements that Massachusetts is not an agricultural State. Nor can it be gained when the comparison is made between the output of our farms and that of our factories and workrooms, or, again, when the value of our agricultural property and products is compared with that of those of the great farming States of the Middle West. It must not be thought, however, that our agriculture is a little thing, or one of no importance in the economy of the Commonwealth. Our 27,715 farms, of an average value of \$4180 each, producing in 1900 farm products to the value of \$42,358,274, considered by themselves, form an industry of prime importance and deserving of consideration and support.

With our immense urban population, the farmer of Massachusetts finds his most profitable field in the supplying of the home market with the farm necessities and luxuries of the table. The production of the cereals is limited practically to the raising

The North Union Station, Boston

of eggs and oats for consumption by the grower's live-stock, to appear upon the tables of our city houses in the form of fancy dairy or creamery butter, or as milk and cream.

Our dairy interests are of constantly increasing importance, 37.0 per cent. of our gross farm income being derived from this source, and the consumption of milk, cream, and butter is increasing in our cities in more rapid ratio than in their production on our farms. The poultry industry is also a rapidly increasing one, the percentage of increase in the production of eggs alone being 44.8 per cent. in the decade from 1889 to 1898. On the other hand, the number of sheep and the clipping of wool have steadily decreased for many years.

The production of fruits and vegetables for the home market is an important feature of our agriculture, and one constantly increasing in the area devoted to it and the money value of its products. In 1898 the value of all vegetables produced in the State

Agriculture in Massachusetts  
Loading cranberries for transportation

was \$3,546,298, or about one-eighth of the total value of all farm products. The value of orchard and small fruits combined was in the same year, in round numbers, two million and a half dollars. In the same year our florists and market gardeners had almost nine million square feet of land under glass, yielding a product for the year of \$1,638,700.

It is among these lines—the production of fancy dairy products, fine fruits, and fresh eggs, with fresh and well-ripened fruits and vegetables, for the home market—that the future of our Massachusetts agriculture lies, and our farmers are awake to the opportunity presented. Intensive cultivation and fine quality is their watchword and the key to success. That the lesson has been well learned is shown by a simple comparison with the great agricultural States of Iowa, Minnesota, Kansas, Nebraska, Illinois, and Missouri. In the production of flowers and plants, nursery products, onions, potatoes, miscellaneous vegetables, tobacco, hay and forage crops, and dried fruits and small fruits, Massachusetts excels all these States in the average value of products per acre as well as these classes, the margin being substantial in each case and more than twofold in many instances.

Our official agricultural machinery is in the hands of a Board of Agriculture elected from the agricultural societies of the State, with three members appointed by the Governor, and has in the past been well and efficiently administered. The appropriations made for the improvement of agriculture, while not as large as in some of the purely agricultural States, have been generous, and we confidently expect that the commonwealth will meet the future needs in the same liberal spirit that it has those of the past.

The Cranberry Industry in Massachusetts

## THE NEW BOSTON

BY JOHN LIVINGSTON WRIGHT

**D**URING the past ten years there has arisen within the city of Boston the most remarkable municipal revolution this country has witnessed. Here in this town, famous for its conservatism, have been inaugurated municipal works that are not only stupendous in themselves, but are especially imposing because of the place of their origin.

Boston is a city in which the general public sentiment clings with seemingly iron-bound tenacity to bearing constantly in mind the epigram some traveller made of Rome, "There are many feet here, and every foot historic." A proposition to raise a building or to open a new street is measurably certain to bring out the protest that historic landmarks are being destroyed. Every inch of the ground on which Boston stands is sacred, to some part of her population at least. It is not a matter of vague imagination, this disposition to memorialize the past. It is profound, absorbing, consuming—a part of the nature of Bostonians. Any yet, since 1860, groups of towering buildings of the radical "skyscraper" pattern have been set down in the midst of the sparsely relics of ancient Boston. A magnificent transit tunnel of over a mile and a half in length has been opened through the heart of the graveyards, famous statues, narrow streets,

and alleys of the business district. The railway terminal have been brought in center in two great stations, one on the north side of the business district, the other on the south, this latter being the largest railway station in the world. Its construction involved, in order to provide new and adequate railway approaches, the opening of an avenue of a mile in length through the southern boundary of the business center.

In these thirteen years calm, slow-going Boston has brought under construction the most comprehensive park system in the world, the most effectively and scientifically equipped water system in the world, the most extensive sewerage system in this country, the finest electric street-railway system; has developed the most beautiful suburban district; and, as incidental superlatives, has the finest public library in America, the largest grain-elevator in the world, and the only municipal music commission and printing-plant in this country.

That is to say, thirteen years have seen the birth of a New Boston. The physical appearance of Boston has been revolutionized. The presence of three towering office, hotel, and theatre buildings creates in a bird's-eye view of Boston a spectacle of contrasts the like of which can be seen nowhere else in the country. Nor is the sight which greets the eye more interesting and curious

The Factory of the Harrington &amp; Richardson Arms Company, Worcester

than the unique municipal system which has come to prevail in Boston, the gradual outcome of this mighty effort at "metropolization."

In the face of the overwhelming obstacles, the narrow streets packed with venerable business blocks and revered memorials, the fact that traffic must, somehow, go on while engineering works in progress, and, most discouraging of all, that avowed conservatism of the city—is it wonder, in view of the marvellous material achievements that have lately been accomplished of one being accomplished, that Boston should be the Mecca for students of engineering, of sociology, of municipal problems?

The construction of the avenues—strong sky-scraper, the Ames Building, in 1890, was the enterprise which really aroused this gigantic building and engineering upheaval. The engineers and sociologists, the publicists, men who realized that the city was at the stage where absolute necessity must create new systems of transportation, water, and sewerage, and other civic functions, were helpless. It was utterly impossible to get measures of conservative magnitude voted through the Common Council or the Legislature. It remained for a private business undertaking unwittingly to breach the barrier of conservatism. The trustees of the Ames estate set out to erect a building that

million-dollar Bapstet church. An indication of the value of real estate in prominent sections of the down-town district, it may be noted that \$850,000 was paid by the promoters for the site of a new theatre. Going still westward, out in Copley Square—the finest square in the city, and in which stands Trinity Church, the noblest example in America of the pure Gothic type of architecture—are found the noble Public Library and the well-known apartment building which was the undertaking of a Chicago man, who meant to go up twenty stories, but had his aspirations somewhat curtailed by the passage of a law limiting the height of buildings for the future to twelve stories, or sixty feet. Even the sacredly aristocratic premises of Commonwealth Avenue have been assailed by the materialistic skyscraper.

In what is now called "The Fens," or "Fenway," are a series of attractive greenhouses, paths, and della, constructed out of what was but a few years ago, a great, useless, unightly area of marshes. On the Huntington Avenue side of the Fens is located Mrs. John L. Gardner's famous "palace," one of the most remarkable buildings in America in that it is the finest private temple of art.

But it is not in her private commercial enterprises, but along municipal lines, that

Copley Square, Boston

should amaze the city and prove an enduring advertisement. The great structure appeared in a definite stage essay of the big building plans that had been talked of for years, yet always fell a little short of actually being under way. The first evidence of the new impetus was the Chamber of Commerce Building in India Square. The big sky-scraper hurried in the new North End Union Station project, so that by 1893 the third largest railway headquarters in the country stood at the northern edge of the city. This became the terminal house of the Boston and Maine and Fitchburg railroads. About this time was erected the four-million-dollar Nickel Exchange on Kilby Street, not far from the Ames Building, a magnificent structure covering a whole block. Taken the inspiration for building went on. In this vicinity were constructed between 1895 and 1898 a number of ten or twelve story buildings of the sky-scraper style. One of them is noteworthy in being the work of Chicago contractors, marking the entrance of the Western builder into Boston. It is built of steel girted in Jeddite Illinois.

To-day, go to the top of the Ames Building and you behold its steel-skeleton offering scattered like garish ornaments among the low, dingy gray structures of other generations. Near by, in Fenborough Square, is the new Court House, a stately edifice completed in 1903 at a cost of \$2,250,000, and by its side, the new newspapers, the Pemberton and Barristers' Hall. Just beyond is the three-million-dollar addition to the State House. Looking southeast down Tremont and Washington streets, we see on Tremont, Tremont Temple, the unique

Boston has made the most astonishing advance. In 1877, the Boston Park Commission began constructing a system of parkways designed ultimately to form a continuous link from the Charles River on the north clear around the city to South Boston. A mammoth enlargement of the foregoing project was authorized when the Metropolitan Parks Commission was established in 1892. This was assuredly one of the most comprehensive undertakings ever attempted by any city, and was one of three great features in a far-reaching plan to provide for a "Greater" or "Metropolitan" Boston, these other features being the "Metropolitan Water District" and the "Metropolitan Sewerage District." In this grand process of "metropolization," Boston proper and surrounding cities and towns were included, the conviction being that, eventually, Boston and her neighbors would enjoy public benefits absolutely impossible without such unity of interests. The Metropolitan Parks District, under direction of a gubernatorial commission, comprises what will soon be a vast range of parks, boulevards, and pleasure grounds covering a radius of thirty miles about Boston. This area includes twelve cities and twenty-five towns. Up to the present time over ten millions of dollars have been placed at the disposal of the commission. Under special laws providing that the State must pay suitable damages, the commission has acquired one million of dollars in buildings nearly 5,000 acres of park and woodland reservations and over twenty-three miles of parkways.

The population included in the district grew from 524,742 in 1870 to 1,918,515

Anna Held at the Simplex

Mr. THEODORE P. BROWN, 52 May St., Worcester, Mass.  
 Dear Sir:—I believe that in the Simplex you have achieved a great advance in piano players. From a musical standpoint, it appears to me more strongly than any other device of its kind.  
 Yours sincerely,  
 Anna Held

# SIMPLEX

PIANO PLAYER

"It Makes Musicians of Us All"

The SIMPLEX is said by the famous musical artists of the world, as well as by its purchasers, to possess the greatest number of points of superiority. The basic principle is right—construction proper. Each component part is selected with a view to its perfection. Artisans of acknowledged skill only are employed in its manufacture.

Teachers mention the use of the SIMPLEX by their pupils. It affords an example of correct piano playing that is of great assistance to the student.

EVERY SIMPLEX IS YEAR GUARANTEED AND WILL LAST A LIFETIME.

Price, \$250

THEODORE P. BROWN, Manufacturer  
 52 May Street, WORCESTER, MASS.

The new Court House, Boston

In 1888, and will far exceed 2,000,000 before many years. To gain an adequate realization of the public blessings to be bestowed by this vast system of parks, boulevards, and playgrounds, one must drive over the territory. Every resource of the woodman, road-maker, and landscape-gardener has been put forth, and thousands of acres of wastefully and useless land have been turned into resorts of surprising picturesqueness and beauty. Roads have been built through filled-in swamps. Shrubbery has been adapted to denuded localities. Flower-beds have taken the place of weeds, and the rose blooms in the desert. On the reservation at River Beach a seventy-thousand-dollar bath-house has been erected, and has been used on hot days by over 100,000 persons. A splendid driveway has been laid out along the seashore. And recently the famous Nantasket Beach came under control of the commission. The commission has created a line of delightful parks and pleasure grounds along the Charles River, as well as a dam boulevard and "spadway." These extend clear from Cragie Bridge at the "West End" in Boston, to Waverston, a distance of twelve miles. Westward, the works extend clear through the aristocratic Newton to a point beyond Wellesley, sixteen miles!

In the work of the Metropolitan Sewerage District, established in 1890, an extensive sewerage system is intended for Boston and twenty-two cities and towns. The area of this district is 187 square miles, divided into

three sections—the north, Charles River (west of the city), and Neponset, southeast. The entire length of the three systems is sixty-nine miles.

Within recent years Boston has been making strides in the construction of school buildings. Public bathing facilities have also become a prominent feature of municipal Boston, and in this innovation she is ahead of any city in the country. Out in Brookline is the first all-the-year-round bathing-concrea operated under municipal management east of the Mississippi.

Of course it was inevitable that in the midst of Boston's renaissance "municipalizing" there should arise the humorous and the delectable. The comic paragraphers scented a feat when the first report about Boston's Music Commission and Art Commission filtered forth, but when the music arbiters went over to the North End and undertook to gauge the tone and the timbre of the hard-gurdy the paragraphers grew busy indeed.

The Municipal Printing Plant has been the basis of many a squabble among the city officials, and the wisdom or wisdom of its establishment has been argued. A dispassionate statement of the Municipal Printing Plant situation would seem to be that, while the greatest care was not exercised in stocking the institution, there are many reasons why it might become a thoroughly satisfactory branch of Boston's activities.

Along with the recent land works is and

about Boston have been prosecuted important improvements on her harbor, the second in the United States in commercial standing. The harbor of Boston consists essentially of an inner and outer harbor, the former twenty square miles in area, and the latter twenty-six, and is noted by a deep and narrow water-way known as the "Main Ship Channel." The State Board of Harbor Commissioners has prosecuted works that have changed almost the entire water-front of the city. Since 1896 it has been allowed over a million dollars for use in pier-building, a notable evidence of its labors being the Commonwealth Pier in South Boston, costing \$200,000.

Other examples of its enterprise exist at the Hoosac Tunnel docks in the vicinity of the Northern Union Station, the work on the New England Railroad docks, and the Commonwealth Piers in South Boston and the neighborhood of the new Southern Terminal Station. The water-face of the city—below bridges, that is, as distinguished from the water-face inland—is about eight miles. Among the ventures of the Harbor Commissioners has been the improvement of this area of land in South Boston, known as the "Flats," and owing to this step developed the project of opening a new avenue to be known as "Northern," running on a bridge over Fort Point Channel and to those lands, the latter, it may be remarked, being valued at \$3,000,000. Further illustrations of the new era in harbor and maritime affairs are the huge grain-elevator of the Fitchburg

Now, in regard to this momentous physical regeneration of Boston, what is the first thing to be said? In viewing this uprising of a modern city within the old, what is the one fact that is really the truest tribute? The answer lies in two words: no waste! Among all these mighty engineering undertakings, this surmounting the labyrinthine problems of digging huge tunnels and rearing steel-skeleton buildings without "elbow room," in financing the legal messes incident to the construction work, the greatest honor to Boston is that these demonstra-

tions have taken place without the public being wrought upon with stories of jobbery, bribery, and political corruption. If there is magic in this Titanic evolution that entitles the event to admiration, it is that busy professional and commercial men of Boston have been found who were willing to give of their time and brains, without salary in numerous instances, to the rehabilitation of their home. It is the simple truth that, in view of the peculiar material obstructions that stood in the way of construction, what these men have achieved constitutes a marvel of the present age.

Curiosities of English

By Herbert W. Herwill

THE other day a firm of Edinburgh publishers received from an Italian newspaper editor, in the following terms, an application for a book that had recently appeared:

"Sir,—You will make a thing glorious to us and at the same time useful to diffusion of knowledge, if you will send to us as a gift your recent publication signed in the address. That might be useful, in the limits of our power, to the diffusion of the book. We will send to you the fascicles, in which the book will be announced and examined, and if the exchange of gifts will be pursued, our Review might be sent to you regularly."

A Pæthetic Appeal

Where the style of composition is dictated by "Cupid's productive hand" and "the intellectual creation has been entangled in thoughtful attitude," as in one compilation, it is not surprising that the writer should become dithyrambic. This same tone may be observed in the following application for a clerkship:

"I beg to say that philosophic saying of days of yore and of modern theologian based on best truths to the effect that the sunshine and storm of life go hand in hand, are but theoretical and negative to me alone, since my introduction to the sphere up to the present stage. I am journeying through the vale of life with none to help and none to free me from the cruel jaws of chill penury though possessed of minions of splendor. Nevertheless I am, which keep up my feelings of patience, and to stand on firm feet amidst the heart-rending difficulties by the phantoms of melancholy."

A Calcutta editor once received an offer of assistance which, if accepted, would undoubtedly have placed his paper high on

the list of comic journals. "I would be appearing in your columns," wrote a literary aspirant, "as 'A Political Bohadur.' The tone of my style would be mostly high-class refined humorism and narrative style. *Acrostichon Paradoxe, The Makarim, The Hindu, The Chaudhri*—these four blither fops of the Government would be made the target of my sound criticism. Force of arguments, skill of reasonableness, and logic of facts would mark my style. Vituperating remarks, ribald writing and scurrilous logic will be avoided. Strengthening of assertions and theories will be based on conclusive evidences. Native reptile proverbs, which constitute the reproach of Indian societies, will be cured of their Babophobia malodior by the reasonable strictures of my remarks. Below I hand you over a specimen of my writing which I give in as brief words as possible. I request the favour of a reply. In case I may not be approved of as said Correspondent, I shall feel obliged of hearing a negative reply."

The desired obligation, doubtless, were not lacking.

An Equestrian Feat

The opening of Karna to outside influences has produced a certain infusion of the English language into the studies of the more progressive members of the native community. The following extract from a local publication is a specimen of the result:

"Latey the Police Headquarters ordered to forbid the servants, etc. to run the horses freely on the big streets as they sometimes pounced the children down and hurted them on the ground, and the police stopped a maoop running a horse hardly on its bark, but a number of soldiers came along quickly and captured the police away."

This equestrian feat was certainly unique, and it seems a great pity that Messrs. Barman and Bailey were not present to take advantage of it.

**Our Business with China**

THE recent completion of a new treaty of commerce between the United States and China leads interest to some figures presented by the Department of Commerce and Labor, through its Bureau of Statistics, regarding the trade of the United States with that country. These figures show a very rapid growth in the exports from the United States to China.

In 1873 merchandise imported into China from the United States amounted to 1,018,000 Haiswan taels in value, out of a total importation of 89,948,000 Haiswan taels. In 1885 the value of imports from the United States was 3,317,000 Haiswan taels, out of a total importation of 89,407,000 Haiswan taels. In 1898 merchandise from the United States amounted to 5,093,000 Haiswan taels, out of a total importation of 179,947,000 Haiswan taels in value. In 1900 the merchandise from the United States to China amounted to 16,724,000 Haiswan taels, out of a total of 211,670,000 Haiswan taels in value, and in 1902, 30,138,713 Haiswan taels in value from the United States out of a total importation of 315,263,982 Haiswan taels. Thus, in 1875, the share from the United States was less than 2 per cent. of the total imports into China, and in 1902 grows by 10 per cent. of the total imports. These figures are from the official reports of the Chinese government. Taking our own figures of commerce with China, the growth in exports to that country has been from \$1,501,383 in 1880 to \$2,946,200 in 1890, \$15,259,167 in 1900, and \$18,063,369 in 1902.

MAGEE FURNACE COMPANY, BOSTON, MASS.

WHERE MAGEE RANGES AND HEATERS ARE MADE.

THE MAGEE FURNACE COMPANY was founded in 1856, with headquarters at Boston, Mass. The foundry is located at Chelsea, Mass., and has an output of fifty tons of castings per day, and comprises 300,000 square feet of floor space. It has branch houses in New York, Chicago, and San Francisco. The officers of this progressive company are F. A. Magee, President; Albert N. Parlin, Treasurer.

**MAGEE RANGES**—large and small—for families, hotels, and restaurants, are known the world over, and are built in "Portable" form or for "Brick Setting," using coal, wood, coke, or gas for fuel.

**MAGEE HEATERS**, from the smallest tank heater to the largest sectional boiler, are manufactured by this company.

**MAGEE FURNACES**, for warm air only, or for combination of warm air and water, are favorites with all architects. The best sanitary conditions are found in the construction of these furnaces.

**MAGEE GAS RANGES** are well and favorably known wherever gas can be used as a fuel. Their construction is such as to suit the most fastidious.

Story-telling as a Business

By Henry Harrison Lewis

Mr. Dewey sat in his office reading a letter that had arrived in the morning mail. There were two enclosures in the envelope, one an invitation to dinner, the other a brief note. The latter said:

"MY DEAR DEWEY,—I have put you down for a response to the toast 'Niagara.' I expect your few remarks to prove the hit of the evening. Don't disappoint us."

Mr. Dewey smiled as he touched a button on his desk.

"William," he said to the attendant, "are what we have on Niagara. Something about harnessing the water-power and the electrical developments. Bring the clippings to me. I want a couple of stories, too."

The secretary ran over the letters of a filing cabinet in an adjoining room, and glanced through a row of neatly indexed cards until he came to one labelled "Niagara." This card referred him to another cabinet, from which he brought forth a number of clippings. Selecting several, he placed them upon his chief's desk and retired.

In the course of the day Mr. Dewey examined the clippings, made notes, and finally

DICKSON SCHOOL OF MEMORY, 241 Auditorium, Chicago

dictated a résumé of his prospective speech. That night at Sherry's, after the formality of eating was over, Mr. Depew spoke for ten minutes, reviewing the great work accomplished at Niagara, and concluding with the following story:

## Unwilling Heroism

"I seldom hear Niagara mentioned," he said, "without recalling a little episode that occurred several years ago. I happened to be one of a small party of Wall Street men who went to view, with awe and envy, the mighty volume of water which was then going to waste. An interesting feature of the programme was a trip on the *Head of the Mist*, which, as you know, carries venturesome sightseers to the foot of the Falls.

"Shortly after we started, the captain of the boat, whom I had seen in earnest conversation with my friends on board, came up to me. He asked if my name was Depew. I acknowledged the truth with the usual reticence.

"I did not know you were on board, sir, until I was told just now," he said. "I am very pleased to meet you, sir, and I want to do something to celebrate the honor of your being on board my craft. I understand that you are a very daring man, and that you are never happier than when you are risking your life."

"I looked at the man in amazement. "Senator, your wishes shall be gratified," he continued. "To commemorate your visit I intend to take this boat nearer the Falls than she has ever been before!"

"I expostulated in vain. I assured the captain on my word of honor that it would not please me, that it wasn't my risk-taking day, and that I had an important engagement in Buffalo, but he evidently thought I was modest and did not wish to cause him trouble. Leaving me while I was still pouring objections into his ear, he went to the wheel, and may I never make another speech if he didn't take that frail steamboat so close to the cataract that the spray ruined my new silk hat. I thought my time had come. I solemnly assure you."

The speech and this story, it was reported at the time, were the results of a most happy impromptu effort on the part of Senator Depew. The truth is, however, that both were the result of most careful preparation. In discussing the question of after-dinner speaking, Mr. Depew said:

## Mr. Depew's Method

"Speech-making is a trade to me. My theory is that a man can work only a certain number of hours at business, and then must get his recreation. This speech-making habit of mine, which is a tonic and not an occupation of wear and tear, answers the same purpose as the Greek or Latin translation of Mr. Gladstone, or an horse-driving habit of mine, which is a tonic and not an occupation of wear and tear, answers the same purpose as the Greek or Latin translation of Mr. Gladstone, and as regards did to Commodore Vanderbilt, and as regards to nine-tenths of the business men of this country. The difference between my recreation and that of other business men is that mine is all in public.

"The pleasure to me in after-dinner speaking is not only in the actual speaking, but also in the preparation of speeches. It has been said that I speak on the spur of the moment. That is not true. I have never made more than one or two after-dinner speeches without careful preparation. I have a regular system. If the subject is historical, I seldom fail to read over several of Macaulay's incomparable essays. And if it is political, I glance through the writings of such past masters as Lincoln and Douglas. The stories I tell?

## Stories in Stock

"Oh, I have a supply on hand suited to all purposes. I never am asked that question without thinking of the odd circuit-riding who was a great favorite among the young people of his section. Returning one evening from a long and fatiguing journey, he found half a dozen couples waiting to be married. He was no more out with travelling than he decided to make a wholesale job of it, so he told them to stand up together and join hands. While they stood he repeated a part of the marriage rites, concluding with the announcement: 'Now, dearly beloved, you are all married. Go your ways

The CADILLAC  
the  
Automobile  
of All Seasons

This car will give the same excellent service in the cold of Winter that it will the hottest day of Summer. Any day a wheeled vehicle will go in a good day to get out in a Cadillac.

The Cadillac is graceful in design, handsome in finish and appointments, simple in construction, strong and rigid in frame work, flexible in gear, wonderful in durability. Speed range four to thirty miles an hour; control absolute. The Cadillac has all the desirable features of the best motor cars, but is only \$1000 with tonneau for four, facing forward. Without tonneau, \$750—the smartest runabout ever built.

Send for illustrated booklet. It gives address of nearest dealer in your city, where the Cadillac may be seen and tested.

and be happy.' This was satisfactory to all but two couples who, in the excitement, had joined hands with the wrong persons. When they expostulated with the old circuit-riding, he thought a moment, then, with a smile of calm content, said: 'That's all right, brethren and sisters. I've married the wads and hatches, haven't I? Now you can assort yourselves!'

'That's the way with my stories,' continued Mr. Depon. 'I put out a batch and let them assort themselves. Whenever I hear the accusation that my speeches are too long, he reminds me of the story told by Horace Porter. It was about an Irishman who went into an East Side barber shop to get his hair cut. He had been imbibing pretty freely, and fell asleep as soon as he got fairly settled in the chair. The barber, a son of Italy, began his work, but presently a fight in the street caused him to look around, and in the act he slipped off the lower part of one of the Irishman's ears. Seeing what he had done, he set up a terrible howling and awoke his customer.

'"Pshaw! the matter!" demanded Pat. "'Matter! Suppise! I cut a off part of your ear," wailed the barber.

'"An' pshaw if ye did!" he growled. 'It was too long, anyway. U'wan wid yer job!"

#### The "Dead-Beat" and the Pass

Among after-dinner speakers Joseph Jefferson ranks as one who can tell a good story in a dry, delightful way. His stories deal principally with theatrical subjects. Here is one of his best:

"While strolling through Indiana several years ago," he said at a dinner the other night, "my manager was approached by a man who had the local reputation of being a *pass* worker, or dead-beat. He told the usual yarn about being an actor and ended by asking for professional assistance.

"I would be glad to oblige you," said the manager, "but, unfortunately, I haven't a card with me." Just then a happy thought struck him, and he added, "I'll tell you what I'll do. I will write the pass where it will be easy for you to show it."

"Lending over with a pencil he wrote 'Pass the bearer' on the fellow's white shirt-front, and signed his name. The best thanked him and hastened to the gate. The ticket-taker gravely examined the writing and let him take a few steps inside, then he called him back and said, in a loud voice, "'Hold on, my friend; I forgot. It will be necessary for you to leave that pass with me!"

#### Nat Goodwin and the Lunatic

It seems to be a part of an actor's attributes to tell a good story. Sol Smith Russell was famous for his anecdotes, and Nat Goodwin cannot be excelled in the telling of humorous experiences. To see the latter relate one—really to "see," because his acting of the characters in the best part of it—is worth travelling miles. His story of the lunatic he encountered on a country road, though an old one, is still good.

"I was playing in Austin, Texas, at the time," he said, "and one day strolling on a country road which skirted the river, I had walked probably half a mile when, suddenly, a man scrambled from the bushes near the water and advanced toward me. I saw at a glance that he was crazy. His clothes were torn, his face flushed, and his eyes glittered with the fire of insanity. In one hand he grasped a huge knife.

"I confess I was dismayed. The lunatic meant mischief, and there I was without a weapon of any kind to defend myself. There was not a house or human being within from thing to do, and I did it without loss of time. I took to my heels and sprinted down the road. The lunatic, shrieking with fury, hurled yells I knew that I was no match for him in a race. Just as I made this discovery I tripped over a stone and sprawled could feel the lunatic's hot breath upon my face. Something touched my shoulder. I thought it was that horrible knife. It tingled his feet, he darted away and called out shrilly:

'"Tag! You're it!"'

There are few after-dinner speakers more

# Dr. Lapponi

Physician to the Late POPE LEO Strongly  
Recommends the Use of

## BUFFALO LITHIA WATER

In all Forms of Uric Acid Diathesis and Many  
Other Affections.

Dr. LAPPONI, who was Physician in Ordinary to POPE LEO XIII. has been  
Appointed to Act in the Same Capacity to POPE PIUS X.  
His Endorsement Carries the Weight of an Eminent  
and Widely Recognized Authority.

Following is Exact Translation of Dr. Lapponi's Testimonial  
as Written by Himself:

ROME, August 24, 1903.—In the Hospital of San Giovanni Calibrita (del Fatebene Fratelli) in Rome, directed by myself, I have largely experimented with the natural mineral water, placed in commerce under the name of **BUFFALO LITHIA WATER** and am glad to be able to attest that, by its richness in composition of lithia, it is of marvelous efficacy in cases of Gout, of Chronic, Articular, and Muscular Rheumatism, of Hepatic Congestions and Functional Disorders, of Gastro-intestinal Dyspepsia, of Gravel and Renal Insufficiency, of light Nephritic Affections and of all the various forms of Uric Acid Diathesis.

The same water is also to be recommended highly in the initial processes of Arteriosclerosis and in obstinate forms of Bronchial Asthma.

May also be used as a good table water. So much I declare for the truth.

(Signed) PROF. GIUSEPPE LAPPONI.

Principal Physician of the Hospital of San Giovanni Calibrita (del Fatebene Fratelli)  
in Rome, Member of the Academy of Medicine of Rome, etc., etc.

**BUFFALO LITHIA WATER** is for sale by Grocers and Druggists, generally,

## MORPHINE

THE DR. J. L. STEPHENS CO. CHICAGO, ILL.

## DRUG USING

The use of Morphine is a habit that is becoming more and more common. It is a habit that is dangerous to the health and life of the user. It is a habit that is easily formed and difficult to break. It is a habit that is often the result of a single use. It is a habit that is often the result of a single use. It is a habit that is often the result of a single use.

welcome at a banquet than Bishop Potter. He has a fund of humor that makes his stories extremely entertaining. Not long ago he told the following:

"When one has lived for years in America without any special title in ordinary conversation, it is not easy to become accustomed to being hailed as 'my lord' whenever any service is rendered. During my season-trip to Europe, I found it impossible to go anywhere or do anything without being 'lorded' right and left. At last I was in a fair way of becoming spoiled when a little occurrence mercifully delivered me. I had reached London after a run abroad, and while descending the gangplank met a friend, an old vestryman of mine. He was hurrying on board to receive his wife and daughters. Passing midway up the plank, he grasped my hand and shouted:

"Why, hello, His! How are you!"

### A Leading Question

In what might be called the spirit of good American after-dinner speculation, he included Joseph H. Choate, or "Joe" Choate, as he is familiarly termed by his friends despite his august diplomatic position. Mr. Choate's appreciation of a humorous story is as keen as his knowledge of law. He tells with gusto this story of a brother lawyer:

"A certain judge living in the upper part of New York who, during a case, listened with pain and displeasure to the testimony of a colored woman who was describing how she had whipped one of her offspring. She enlarged on the harrowing details until the judge stopped her.

"Do you mean to tell me that you were cruel enough to punish your own boy that?" he demanded.

"Oh no, I did, you know," she replied.

"How dare you be so brutal!"

"The colored woman looked at him in the contempt for a moment, then asked aloud:

"Look a-beeh, judge, was yob ever de father ob a white-messenger boy?"

"My friend almost fell from the bench.

"'Ri yob ain't," continued the negro, "then yob don't know nuffin' about de race!"

### He Had the Bait

Another story attributed to Mr. Choate is equally good. The incident occurred while he was travelling through Georgia. He was driving across a bridge spanning a river and had just noticed two darkies, one a boy and the other considerably slier, who were fishing from a string-pier, when the boy fell into the stream. The colored man leaped to his feet with a shout, and immediately sprang to the rescue. Before Mr. Choate could reach the spot the slier darky had succeeded in dragging the boy to a place of safety on the bank.

"My good man," exclaimed the lawyer, "that was a noble act of yours. Isn't it fortunate you were able to save your son?"

"Tain't mah son," granted the negro. "But you risked your life to save him. What impulse caused you to act so promptly?"

"He had de bait in his pocket!"

A new set, comparatively speaking, in the ranks of after-dinner speakers is Simon Ford.

### Trials of a Speechmaker

"There are three species of guest," he said at a recent dinner. "One, the letter man, being who is invited solely to eat, drink, and be merry at some other fellow's expense. Another, the gifted being who travels on his shape and who by reason of his greatness is invited to throw a bomb of respectability over the occasion. And last, the distinguished yet unhappy guest, who the host is to work his passage. To the latter I present my felicitations; to the first, my heartfelt sympathy.

Some few orators really enjoy speaking, but they are men without any way of escape. Chassey Depew was one of these. As fairly tired after after-dinner speaking. As for me, I would rather be the humblest bar-tender serving you, and sit down and drink with you, than be up here in the red-hot light which has been upon the head since, and get my dinner for nothing."

The Progress of Science

The Science of Food

Some months ago elaborate experiments were conducted in this country with the object of discovering whether or not certain food preservatives in common use were seriously detrimental to the human organism. Another investigation in connection with human nutrition—to determine the minimum amount of protein or albuminous food requisite for the maintenance of health and strength under ordinary conditions, and whether economy in food usage be practiced with distinct advantage—is being carried out, the War Department co-operating with the Sheffield Scientific School in the work. These experiments deserve close attention and all encouragement. It is a marvellous thing that science, which has weighed the moon and measured the orbits of the planets and split the atom into electrons, has not yet been able convincingly to tell man what is and what is not his proper food. And yet it is evident to every intelligent observer that a very large proportion of men and women are poisoning themselves every day, ruining their bodies and their minds, shortening their lives, and bringing upon themselves pain and misery, through eating and drinking unwholesome quantities that are not fitted for human assimilation. And who shall say how much of the vice and perversion of the world is directly due to this evil? Reformers are at work everywhere, but the reformer who could, with authority, show humanity what it should eat and drink, would surely do more good than a whole army of well-meaning tinkering at the effects of the evil. Every community has its contingent of quacks and cranks urging their fellows to eat this and avoid that, and most physicians have some fad or other to prescribe for their dyspeptic patients; but what the world needs is an authoritative science of food. Of course, people would not always obey it, and at first, at any rate, that gradually many would conform, and in a generation or two the effect would surely be striking, and the example of the healthy would spread rapidly. Every important nation, and especially the United States, ought to have an endowed institution for the scientific investigation of questions relating to human nutrition, for the conduct of experiments on a large scale, and for the constitution and development of a real and definite science of food. Meantime, the efforts that are being made by the Sheffield Laboratory and other institutions are a step in the right direction.

**Radium to be available at \$6000 per Gram**

Radium continues to occupy the interest of scientific men. The extraordinary phenomena it presents of a tremendous evolution of radiant energy, going on perpetually without combustion, without chemical change of any kind, without alteration of atomic structure, and without appreciable loss of weight—for the loss of weight is estimated at only one gram for every square inch of surface in ten million years—in an apparent violation of the law of conservation of energy, and bids fair to revolutionize some long-accepted ideas of matter and force. A vast amount of experimentation has already been conducted with radium and others of the radioactive group of metals—polonium, actinium, uranium, and thorium—and much speculation and some interesting hypotheses have been evolved. From these, it is believed, a great deal will be learned about the constitution of matter and the correlation of the vital and physical forces, more, in all probability, than from any substances which have ever been discovered before.

Radium bromide is the strongest radium salt yet produced, and there is little of it in existence, the amount having been estimated at four grams. All radium of higher activity than 7000 has until recently been retained for the experiments of Professor and Madame Curie and their associates, but information has now been received from Director Doolley of the Société Centrale that they expect shortly to put upon the market a preparation of radium, chemically pure, or nearly so, at a cost of \$6000 per gram.

262 NORTH MADISON BUILDING, PHILADELPHIA

## Riches of South Dakota

More than 60,000,000 bushels of corn, more than 50,000,000 bushels of wheat, live stock to the value of \$32,000,000, hay to the value of \$12,000,000, and products of the mines above \$12,000,000 are some of the returns from South Dakota for 1903. With a population of 450,000 and the production of new wealth for 1903 above \$146,000,000, it can be readily understood why South Dakota people are prosperous and happy. For them the horn of plenty has been turned upside down. This year, for the sixth consecutive time, South Dakota leads all other states in the production of per capita wealth. Why not go there? From Chicago, Milwaukee, St. Paul, Minneapolis, and from many other points in Illinois, Minnesota, Iowa and Missouri, direct service to South Dakota is offered via the

## Chicago, Milwaukee & St. Paul Railway

Its main lines and branch lines fairly gridiron the rich agricultural and stock country that lies east of the Missouri River. The mileage of the Chicago, Milwaukee & St. Paul Railway in South Dakota is more than 1,200 miles, and by the building of extensions is being rapidly increased. Some of the best opportunities for success are along these new lines, but the railway company has no lands for sale. If you are interested, it is worth while to write to-day for a new book on South Dakota. F. A. Miller, General Passenger Agent, Chicago, Milwaukee & St. Paul Ry., Chicago.

## I. W. Harper Rye.

"On Every Tongue"

It reaches the spot and covers the case as no other whiskey can. Pure, delicate, rich, and invigorating. Sold by leading dealers everywhere.

BERNHHEIM DISTILLING CO., Louisville, Ky.

# The YOUTH'S COMPANION

The Family Paper of National Circulation.

The Companion  
Comes  
Every Week.

The Youth's Companion fully meets the demand for the best reading suited to ALL the members of the American household. The life it pictures and the characters it helps to mold are typical of our own time and country. The Companion comes every week. It is the best investment for \$1.75.

## NEW SUBSCRIPTION OFFER.

Every New Subscriber who will mention this publication or cut out this slip and send it at once with name, address and \$1.75 will receive:  
**Free** All the issues of The Companion for the remaining weeks of 1903. The Thanksgiving, Christmas and New Year's Double Numbers. The Companion's "Springtime" Calendar for 1904, lithographed in twelve colors and gold. V 122  
And The Companion for the fifty-two weeks of 1904—a library of the best reading for every member of the family.

# ARPER WEEKLY

Edited by George Harvey

NOV  
7  
1903

WILEY & BROTHERS NEW YORK  
Price 10 Cents

COLLEGE LIBRARY  
THE PENNSYLVANIA STATE COLLEGE

BY THE LATE  
M. E. W.  
**SHERWOOD**

**An Epistle to Posterity**  
Being rambling recollections of many years  
in the author's life

Mrs. Sherwood's reminiscences extend over a period of more than half a century of American social, political, and literary life, and their range comes very close to the limits of Dr. Johnson's famous survey of mankind—from China to Peru. Literally, Mrs. Sherwood must have known every one and gone everywhere, for there is hardly a shining name on our honor roll of set, letters, and affairs that is not included within the wide circle of her acquaintance.

With portrait, \$2.50

**Manners & Social Usages**

"The last word on social etiquette"

This has been long recognized as the standard book on etiquette in America. There is nothing of pretence in it, nothing of that weak vulgarity of conventionality which gives the stamp of vulgarity to the greater part of what is written on this subject.

New edition, attractively bound and illustrated, \$1.25

**A Transplanted Rose**

A story of New York society

The story is cleverly told, and gives a picture of metropolitan society which is realistic in the extreme. There is a great deal about social forms in New York which will make the book interesting to the feminine mind, details about sewing, cards, introducing people, etc.

75 cents

**HARPER & BROTHERS**  
PUBLISHERS - NEW YORK

This beautiful reproduction of the famous painting by the artist's own hand is the best of its kind in the United States.

The four famous paintings illustrating the calendar plaques for 1904 are the work of the artist's own hand.

**The Anheuser-Busch Art Plaques**  
With Calendar Plaque for 1904

AT GREAT expense, Anheuser-Busch Brewing Ass'n has secured from the Art Branch of the celebrated Ecole des Beaux-Arts, a series of magnificent paintings, representing the artist's conception of the four seasons. These are reproduced with splendid fidelity as to detail and coloring in the form of four plaques, each containing in the form of four plaques, "Autumn Fruits," "Summer Flowers," "Spring Rivers," "Winter Woods," and an additional plaque containing the twelve months—illustrations for 1904. The four plaques are each 12 inches in diameter, illustrated on the highest art in color, finished with an enamel-like finish, and mounted with silver embossing, giving the effect of lacquer and enamel.

The calendar for 1904 is bound in any style or material, and is available in any quantity. The price of the calendar for 1904 is \$1.00. The price of the calendar for 1904 is \$1.00. The price of the calendar for 1904 is \$1.00.

**FOUR GOOD NOVELS**

**Cherry**

By **BOOTH TARKINGTON**, author of "The Gentleman from Indiana," "Montair Beaumercer," etc.

A sparkling romance, in which Mr. Sudgeberry, a conceited and hopeless prig, tells of his love for charming Sylvia Gray, whose beauty, wit, cherry ribbons dazzle and ensnare him. Sprightly, clever comedy.

Illustrated in color by A. I. Keller. Ornamented cloth, gilt top, etc., \$1.25.

**The Relentless City**

By **E. F. BENSON**, author of "Dodo," "The Book of Months," etc.

A novel of English and American society, the scenes laid in London and in New York—"the relentless city"—and in charming country resorts. The plot concerns the wedding of an English nobleman to an American heiress and the exciting complications which follow.

Ornamented cloth, \$1.50.

**Hesper**

By **MAMLIN GARLAND**, author of "The Captain of the Grey-Horse Troop."

A love story of the West, strong and virile, in which Mr. Garland is at home amongst his wild mountains, plains, mining camps, and cattle ranches. The life is described in all of its primitive vigor and disregard of convention. The work is one of remarkable realism and dramatic intensity—a worthy successor to "The Captain of the Grey-Horse Troop."

Ornamented cloth, \$1.50.

**Judith of the Plains**

By **MARIE MANNING**, author of "Lord Alington, Bankrupt"

A romance of the plains at the end of the big cattle days in Wyoming. Judith stands out against the background of cattle stealing, cattle stampeding, and lynching, a noble figure of a girl, throbbing with passion and life, dominating the action of the tale and carrying it to a thrilling climax.

Ornamented cloth, \$1.50.

## COMMENT

The elections are still to come as the WEEKLY goes to press, and comment on their results must be deferred until next week. In the City of New York, the large registration process that the voters are thoroughly alive to the importance of the municipal election, and experience has shown that, under such circumstances, Tammany Hall is likely to be beaten unless its opponents are divided, as they were in 1897. In 1901 Mr. Edward M. Shepard, the last man ever nominated for Mayor in our time by Tammany Hall, with the exception of Abram S. Hewitt, obtained in round numbers only 265,000 votes, yet he had the enthusiastic support of the regular Democrats of Brooklyn, and there was no secession from the Tammany Hall forces, such as Devery has attempted this year to organize. Devery was expected to secure at least five thousand votes, which, under normal conditions, would go to the Tammany Hall candidate, and the latter should lose more than twice as many of those that Mr. Shepard obtained in Brooklyn, owing to the indignation and resentment caused by the deposition of Mr. McClellan from the leadership of the regular Democracy. On the other hand, there is no doubt that what is known as the "liquor vote" will be cast with a close approach to unanimity for Mr. McClellan. Although this vote has ceased to have the weight it formerly possessed, it is still a factor of considerable importance, and may possibly turn the scale against Mayor Low. Whichever candidate is elected, his plurality is not likely to be large.

As a rule, but little attention is paid to the attempts of newspapers to forecast the outcome of an election by means of canvassings, whether these take the form of personal interviews or are conducted by postal-cards. It has been observed that a newspaper prosecuting such an inquiry is very apt to arrive at the result which it desires. Two years ago several forecasts of the kind which professed to have been undertaken in an impartial spirit, and to have covered a wide field of investigation, were favorable to the election of Mr. Edward M. Shepard in the New York Mayorality election. Nevertheless, Mr. Low was elected by a plurality of about 32,000. This year the New York Herald has sent out a multitude of postal-cards requesting the persons addressed to indicate their preferences for Mayor. On the other hand, the *American* and the *World* have employed large bodies of canvassers, for the purpose of securing oral statements of the intentions of voters. Curiously enough, the *Herald* and the Brooklyn *Espe* reach different conclusions from precisely the same data. From the returns thus far received by it, the *Herald* induces Mr. Low's election by over 37,000 plurality. The *Espe* concludes from the same returns that Mr. McClellan will win by 25,000. What makes the divergence of opinion odd is not only the fact that both of the newspapers use the same poll, but the circumstance that both of them are opposed to Tammany Hall. The *American*, formerly known as the *Journal*, maintains that

its canvass justifies the belief that Mr. McClellan will be elected by a plurality of 35,000. The outcome of the *World's* investigation has not been definitely announced at the hour when we write, but the newspaper is inclined to think that, while Mr. McClellan is slightly in the lead, Mr. Low will, nevertheless, be successful by a small plurality. For our own part, we put but little more faith in such canvassings than we do in the odds given by letters. But by the time these lines meet the reader's eye the contest will have been decided, and all that we need to say at present is that if Mr. Low is not elected, he ought to be.

The Ohio Republicans profess to expect an overwhelming victory on November 3, but, curiously enough, the Democrats seem not in the least despondent. Before 1896 the election of a Democratic Governor in Ohio was by no means unprecedented, but, in order to win, Mayor Johnson would need the votes of every Gold Democrat, as well as of every Bryanite. Can he count upon loyal and strenuous support from the faction which is headed by Mr. John R. McLean? After a review of Ohio's election statistics for the last ten years, and after a perusal of representative newspapers on both sides, we incline to think that the Republicans will not only elect their Governor, but also carry the Legislature, though we should not be surprised to see their majority in that body cut down. That the Democratic vote will be larger than it usually is in non-Presidential years is probable, not because Mayor Johnson is particularly qualified to reconsecrate the Democratic party in his State, but because there is a growing feeling of uneasiness touching the duration of the prosperity which has been popularly attributed to the Dingley tariff and to Republican administration. The feeling of uneasiness, however, seems to be playing no part in the Maryland canvass, for, if it did, the Democrats would be sure of victory, owing to the signal reduction of the colored vote caused by the new ballot act. It is noteworthy that in 1901, when the new election law became operative, almost 50,000 fewer votes were cast than in 1897, when precisely the same fewer votes were to be filled. It seems to be generally conceded that, in spite of the shrinkage of the negro vote, the Republicans will come to Baltimore city with a small majority, which, however, is likely to be overcome, unless nearly all the Independents in Baltimore should support the Republican ticket.

That Iowa will go Republican is almost as certain as that the sun will rise on the morning of November 4. Neither does the most optimistic Democrat expect to see Colonel Gannon elected Governor of Massachusetts, although an earnest effort will be made by Mr. Olney's friends to cut down Governor Bates's majority, which, last year, was only 57,000, in order that, in the next Democratic national convention, Massachusetts may be depicted in rainbow colors as a doubtful State. In Rhode Island it looks as if the Democrats, assisted by anti-machine Republicans, would re-elect Governor Garvin. We doubt whether the check experienced by manufacturing prosperity has as yet made itself felt in New England with sufficient distinctness to influence political elections. Most of the cotton-mills, which were closed during the summer, have been reopened. A year hence, if a large proportion of the operatives engaged in every branch of manufacture should be thrown out of employment—an event that now seems not improbable—we may witness some startling political changes in Connecticut and New Hampshire, and possibly in Maine and Massachusetts.

On Saturday, October 24, Senator Gorman, in the early speech which, up to that time, he had made during the political campaign in Maryland, denounced President Roosevelt for interfering in the contest for Governor and for control of the Legislature in that State, and for having forced the race issue to the front by inviting Booker T. Washington to dine with him in the White House, and thus asserting the social, as well as political, equality of the blacks. Mr. Gorman would see nothing surprising in an exhibition of lively interest by members of the Republican National Committee in a State election, the outcome of which may be the loss of a seat in the United States Senate. How, then, can he regard as improper a similar exhibition of interest by Mr. Roosevelt, who is the official head of the Republican party, and at least as deeply concerned in its fortunes as any member of the Republican

National Committee? There is more ground for Mr. Gorman's charge that the President's act of courtesy to Booker T. Washington—an act which we prefer to think impulsive rather than calculated—has had the effect of aggravating the race issue in the Southern States. About the fact there seems to be no doubt, though we cannot believe that Mr. Roosevelt had any such result in mind.

Whether the race issue, which Senator Gorman, by the speech above mentioned, has tried to inject into the Maryland canvass, will prove a considerable factor on election day remains to be seen. If it does, we shall hear much more of it next year, not only in Maryland, Delaware, West Virginia, and Kentucky, but even in Indiana. When we call to mind the position taken by the United States Supreme Court with regard to the alleged infringement of the Reconstruction amendments of the Federal Constitution by the restrictions of the suffrage in Alabama, and when we also keep in view the doubt expressed by Secretary Root of the wisdom of the sweeping enfranchisement of the negro by the Fourteenth and Fifteenth Amendments, we must recognize that Republican politicians cannot wish to see the race issue brought forward prominently in 1904. If that issue should become pivotal, it would be difficult for Mr. Roosevelt to carry any of the doubtful States, and he might even lose Ohio and Illinois. We are inclined to think, however, that the time is not ripe for testing the opinions of white men at the North touching the expediency of allowing the Fourteenth and Fifteenth Amendments to remain unexecuted. For the present, at all events, it might be judicious to heed the maxim *quis non movetur*—let sleeping dogs lie. There are other issues on which the Democracy should be able next year to recover control of the Federal government, provided it is sensible enough to put forward a conservative candidate who commands public confidence. It begins to look as if, by November, 1904, the Republican brand of "Progress" will have become an unsalable commodity.

Congressman Littauer will not be prosecuted by the War Department under the statute which prohibits members of Congress from making, or sharing in, contracts with the government. The Secretary of War having asked the Attorney-General whether the government should take action on one of the glove contracts in which Mr. Littauer seemed to be implicated, the Attorney-General has replied, that because the statute orders prosecution for money "advanced," and the contract in question has been fully executed, the goods delivered, and all payments finished, the government may not hope to sue successfully for money paid on it. That is to say, it is too late to take action. So as to prosecuting Mr. Littauer for misdemeanor in violating the statute, and collecting a fine of \$3000 from him, the Attorney-General says it is too late for that also, "since the statutory period of limitation within which such a prosecution would be brought elapsed more than a year ago." This decision relieves Mr. Littauer of the danger of government prosecution, but leaves untouched the question whether or not he violated the law. It may be said for him that so far as has appeared the government has lost nothing by the contracts with which he was suspected of being concerned. The gloves made in his factory were good, so far as appears, and the price not excessive. But Mr. Littauer can hardly exult in the position in which the Attorney-General leaves him. In an open-air sermon that the President preached in Washington on Sunday, October 25, he called earnestly for honesty—"not only the honesty that keeps its skirts technically clear, but the honesty that is such according to the spirit as well as the letter of the law." Doubtless a man may violate a statute and still be an honest man, but in no far as Mr. Littauer's honesty was affected by the charge that he violated Section 3739 of the Revised Statutes its skirts are as yet not even technically clear.

As we expected, the decision at which the Alaska Boundary Commission was enabled to arrive, through the impartial position of Lord Alverstone, has started a movement for a revival of the arbitration treaty between the United States and Great Britain, which in 1897 fell short by only four votes of the two-thirds vote required for ratification by the American Senate. It is an interesting fact that Lord Alverstone had a good deal to do with the framing of that treaty, and a characteristic feature of it was reproduced in the convention

which created the Alaska Boundary Commission. The international tribunal contemplated by the abortive treaty of 1897 was not, to speak strictly, a board of arbitration, but a board of conciliation. That is to say, there was to be no umpire, but the court was to consist of a certain number of justices of the United States Supreme Court and of an equal number of persons occupying high judicial posts in Great Britain. It is obvious that the composition of the proposed tribunal involved the assumption that the members, or some of them, would be open to conviction, even in cases wherein the interests of their country were deeply concerned. Some of the Senators who opposed the treaty of 1897 took for granted that no judge could be found to decide any question against his native country, and that, consequently, no decision could be expected from the suggested tribunal. Lord Alverstone has proved that the assumption was unfounded. It must be admitted, however, that the London *Saturday Review* and some other British newspapers, by their outcry at Lord Alverstone's refusal to uphold the Canadian claim, whether right or wrong, are doing their best to deter any other British jurist from conforming to the honorable precedent which he has established.

It is improbable that the Colombian Congress will invalidate the extension of the canal franchise to 1910 which was given to the French company by an executive decree, because it would then be necessary to return the one million dollars in gold paid for the extension, and, in the present straitened condition of Colombia's finances, it would prove difficult, if not impossible, to find the money. It is by no means certain, however, that France would permit Colombia to rescind the contract. Public opinion would probably compel the French government to undertake a coercive demonstration against Colombian seaports. It is quite possible, however, that some of the Bogotá politicians have planned to protract the negotiations with the United States until 1910, so that the extension of the canal franchise may expire by limitation, whereupon the plant of the canal company would become the property of Colombia, and the forty million dollars which we have agreed to pay for it would be demanded by the new owner. We doubt, however, whether the derivers of this precious scheme would remain faithful to one another for six years. It is much more likely that some of them would, at the last moment, betray their co-conspirators and accept a bribe for granting a further extension to the French company. There is another reason why this iniquitous project is destined to prove abortive. The United States government could not afford to make itself an accessory after the fact to such an infamous transaction as the confiscation of the French company's rights. It would be infinitely better to renounce the hope of building any canal at all than to become an accomplice in such a shameless deed. The forty million dollars which we have covetously to pay the French company for its plant, provided we could secure the desired privileges from Colombia, represent but a small fraction of the savings enabled by French presents to the company headed by M. de Lesseps, and it would be an indelible disgrace to continue at an attempt to rob that company's legal successors of their sole remaining asset. We are not reduced, however, to the alternative of countenancing a discreditable project on the part of Colombia, or of abandoning our intention to construct an interoceanic canal. We can always fall back on a Nicaragua canal, and, although, as we have often pointed out, the Nicaragua route is, on several grounds, inferior to the other, we may have to take it, if it shall turn out to be the only route that we can adopt with promptitude and honor.

We have elsewhere directed attention to the remarkable pamphlet in which the labor question is discussed from an employer's view-point, by Mr. David M. Parry, president of the National Association of Manufacturers. We desire to note here what Mr. Parry says with reference to the lawfulness of boycotting. Replying to a question on the subject addressed to him by the Central Labor Union, he expressed the opinion that the courts of last resort in cases now pending in several parts of the country would, at an distant date, demonstrate that boycotting is contrary to law, and that boycotters are personally liable in damages for the injury they cause. There is no doubt that among the cases which Mr. Parry has in mind, and, doubtless, chief among them, is the appeal to the United States Supreme Court, which raises the question of the

constitutionality of the anti-boycott statute of Wisconsin, the validity of which has been affirmed by the Supreme Court of that State. Alabama also has lately enacted a law against boycotting, the provisions of which are particularly stringent. It is, of course, the manufacturers of Birmingham who have secured the enactment of the Alabama law. It is to be hoped that the legislatures of all the great manufacturing States will follow the example. If Pennsylvania had an anti-boycott statute, the last strike in the anthracite-coal region would have been quickly terminated. Hitherto it has been found impracticable to secure the passage of an anti-boycott law at Harrisburg or at Albany, because the Pennsylvania and New York politicians are afraid of alienating the labor-unions vote.

The appointment of Sir Henry Mortimer Durand, British ambassador at Madrid, to be the successor of the late Sir Michael Herbert, bears witness to the importance now attached by the British Foreign Office to the embassy at Washington. This is the first time that a British diplomatist who has reached the rank of ambassador has been deputed to represent his country at our Federal capital. Lord Pauncefote, then Sir Julian Pauncefote, was simply the permanent Under-Secretary for Foreign Affairs when he was made minister to Washington, and we scarcely need point out that Sir Michael Herbert had by no means reached high rank in the diplomatic service when he succeeded Lord Pauncefote. Sir Henry Mortimer Durand's appointment shows that a transfer from Madrid to Washington is now regarded as promotion, and we shall not be surprised if, within a decade, the embassy to the United States shall be placed on a level, in respect of pay and distinction, with the embassy to France, which, hitherto, has been accounted the blue ribbon of the British diplomatic service. Sir Henry, or, as he is said to prefer to be called, Sir Mortimer, although but fifty-three years old, has been employed in important posts for a quarter of a century, having been for a decade Foreign Secretary to the Calcutta government, and for some six years minister at Teheran, from which place he was transferred in 1900 to Madrid. The date mentioned disposes of the report that, as British ambassador at Madrid, he showed himself unfriendly to the United States during our war with Spain. He was thousands of miles distant from the Spanish capital in 1908. The new ambassador is not only a Knight Commander of St. Michael and St. George, a Knight Commander of the Star of India, and a Knight Commander of the Indian Empire, but also a Privy Councillor, and he will, doubtless, be made a peer at an early date. He has some pretensions to be a man of letters, having published two books of his own and edited his father's history of the first Afghan war. The fact that he has been admitted to the Athenæum Club indicates that his writings are deemed to possess considerable merit.

Notwithstanding the attempts at reassurance that have been made by diplomatists, the latest news from the Far East is of a very ominous character. According to a telegram from Tokio, the outcome of a prolonged conference held there on Sunday, October 25, by the ministers and the so-called "Elder Statesmen" was the decision that Japan shall adhere to the policy previously announced, and insist that Russia fulfill her pledges touching the evacuation of Manchuria. This, it will be observed, is a very different position from that which some of the Mikado's advisers have been supposed to favor. The Marquis Ito, for example, is believed to have advocated a compromise whereby, in return for Japan's refraining from a demand that Russia forthwith evacuate Manchuria, the Czar, on his part, would pledge himself to respect the territorial integrity and political independence of Korea, or, in other words, would practically recognize that this peninsula belongs exclusively within Japan's sphere of influence. The chances are, though, that, after Russia had firmly established herself in Manchuria, her encroachment upon Korea would be resumed. The interests of Russia and Japan in the Far East are essentially irconcilable, and a conflict, therefore, is irrepressible. The conflict may not come immediately, but that it is much more imminent than has of late been supposed may be inferred from the significant fact that the marine underwriters in London, who last week doubled the premium for war risks on vessels going to Russian or Japanese ports

in the Far East, now refuse to accept war risks on Japanese steamers, even at the tempting price of twenty-five guineas per hundred.

Sir Wilfrid Laurier has for the third time made clear in what light he views the imperial connection. He has already declared that Canada would assert her independence, rather than give up a single iota of her right to arrange all fiscal and financial matters wholly in her own interests. He has firmly refused to let Canada be drawn into the maelstrom of militarism; that is, pay a reasonable contribution towards the total war bills of the empire. He tells us now, in connection with the Alaskan award, that Canada should herself have the treaty-making power, and that her interests are constantly sacrificed, because she must present her demands to Washington through the British ambassador, who is far more preoccupied with establishing good relations between England and the United States than with serving the interests of the Dominion. Should he carry his point, and actually obtain the treaty-making power for Canada, it is difficult to see in what way Canada would differ from an independent sovereign state, except in the pagantry and form of receiving an English governor-general, who exercises some of the functions of royalty, and in the perpetuation of titles, such as that of Sir Wilfrid himself, as would hardly be done were Canada a republic. One cannot fail to be struck by the fact that in this growing desire for one after another of the functions of independent sovereignty we have a force making for separation, much stronger and deeper than the forces of union foreshadowed by Mr. Chamberlain, supposing, what is by no means certain, that the ex-Colonial Secretary ever lives to see his schemes carried into effect.

The success of the new Austro-Russian plan of reform for Macedonia depends almost wholly on the attitude of three powers—England, France, and Italy. Without their help, it is certain that Count Lamsdorff and Count Goluchowski, however humble their intentions may be, will find their progress barred at every step by the invisible hand of Germany. With the hearty co-operation of the powers, Russia and Austria can so far introduce better conditions in the three valleys of Monastir, Kosovo, and Salonica, and the Bulgarian parts of Adrianople, that, when spring brings new opportunities to the insurgents, they may find their occupation taken away by the comparative well-being of the peasants. Two assessors are to be attached to Hilmi Pasha's staff, an Austrian and a Russian, with a body of assistants, secretaries, and dragomans, who are to exercise supervision and control over all the acts of the provincial authorities. A European general in the Turkish army is to be appointed to command the gendarmerie, who will be assisted by a number of Austrian and Russian officers familiar with the languages of the country, and, if necessary, by a number of Austrian and Russian non-commissioned officers. Further, communal autonomy is to be secured, and the communal boundaries are to be so altered as to bring together, so far as possible, families of the same race and faith in the same commune. This will mean a separation of the Bulgarian, Servian, and Albanian elements from each other, and the removal of a fruitful source of discord. Then the starving refugees, who are hiding in the forests and mountains, are to be relieved and resettled; villages, schools, and churches burned by the Turkish troops are to be rebuilt; irregular troops and bashi-bazook "headhunters" are to be disbanded, on the ground that they are the chief agents of plundering and outrage. The future well-being of the Macedonians, therefore, is in the hands of England, France, and Italy, with whom it lies to undo, as far as may be, the mischief wrought by the Berlin Treaty, and, even more, by the failure honestly to carry out its provisions, so far as they protected the Macedonians and provided for their autonomy.

There are indications of a new ministerial crisis in France, which may mean the upsetting of M. Combes's cabinet, and the formation of a new "ministry of all the talents" out of all parties. It is becoming evident that M. Combes has far exceeded the intentions of his wiser and more moderate predecessor, M. Waldeck-Rousseau, dealing with the religious orders in a spirit of extreme intolerance and severity, and yet

so far as one can learn, without actually accomplishing much. Under various guises the religious orders continue to teach and to exercise a great influence as ever, while the feeling stirred up by the violent methods of M. Combes increases. A much graver matter is raised by his declared intention to denounce the Concordat, and break the slender bonds which still bind Church and state together in France, or, to speak plainly, to put an end to the salaries and expenses of the priests and their superiors. As in the case of the temporal power, there is a good deal to be said on both sides of the question, even from the point of view of the Church. There can be no doubt that the moral prestige of the Holy See has risen since the Pontiff ceased to be an Italian prince. In just the same way, when the Catholic Church in France is dependent wholly on the support of its followers, it may take a new base of moral and spiritual life. This has been notably the case in Ireland, where the Catholic Church was not only not supported by the state, but, on the contrary, was proscribed and persecuted; it is largely the case in the United States, where no Church is supported by the state, and where all religious bodies are, therefore, dependent on the zeal of their adherents.

Replying apparently to assertions which have been made (though not generally credited) that a considerable percentage of the graduates of Tuskegee Institute turn out to be idlers and criminals, Principal Booker Washington begins his twenty-second annual report by saying that "not a single one of our graduates has ever been convicted of crime or sent to a State penitentiary." This statement, he adds, is based on a carefully kept record. The institute had an average attendance of 1441 pupils during the last school year. Its income from funds and appropriations for the year now in progress is estimated to be \$71,993, and its estimated expenses are \$155,000, leaving about \$83,000 to be raised. From the first it has been a part of the mission of the institute to try to reach and help the colored people in the country districts, but Mr. Washington finds several influences which are constantly working at present to detach the negro from the soil. One is the lack of public-school facilities in the country, and another the lack of police protection. In the larger towns and cities, says Mr. Washington, negroes can usually get eight months of good schooling in a comfortable schoolhouse, as against from three to five months of poor schooling in a wretched schoolhouse in the country. As for the attractions of police protection, he says, "I think I do not overstate the matter when I say that for every lynching or attempted lynching, that takes place in the country, a score of colored people leave the vicinity for the city." This is an effect of lynching which has not been much discussed, and Mr. Washington is right in thinking that it should receive serious attention. We are all used to hearing, and to believing, that white women who live in the country in some parts of the South don't dare go far from their homes without an escort, for fear of being attacked by some dangerous negro, but this fitting of colored families after a lynching, for fear of dangerous white men, is also worth thinking about. In a district where white women are not safe, black men—decent black men—seem not to be safe, either.

The WEEKLY lately remarked that though nine-tenths of the discussion about the lynching of negroes deals with it as a punishment for crimes against women, a large majority of the victims of lynchings are lynched for murder, arson, or other violent crimes. Commenting thereon, the *Masses Telegraph* says that while that may be true, the WEEKLY overlooks the very important point that in the South, at least, crimes against women provoked lynchings in the first place, and that if such crimes ceased "there is every reason to believe that lynchings for other crimes would cease also, the cause of meddling race having thus been removed." The consciousness of this among Southern people explains, says the *Telegraph*, why nearly all the discussion of lynching is confined to its bearing on crimes against women. This is the first explanation of the phenomenon of which it treats that we remember to have seen; and no such it is at least interesting. But it is an explanation that works both ways. The argument that lynching is a necessary and inevitable punishment for negro crimes against women is not helped by the admission that the lynching of one negro for criminal assault

eventually involves the lynching of two more negroes for crimes of another species. It comes natural to lynch a man who has committed an atrocious assault on a woman or a child. The most effectual reason why the natural inclination should be curbed in such a case is that the consequences of yielding to it are subversive of law, destructive of security, and fruitful of far-reaching indirect effects which hurt society.

The newspapers report that the messengers employed at the White House have appeared in dark blue uniforms accented with plain silver buttons. It is intimated that if the foundations of our liberties do not vibrate too violently under this innovation the President's messengers will go further, and put other of the male employees of the White House into special clothes. The White House itself has been fixed up at large expense, and the inclination of its keeper to give its human accessories a stylish appearance in keeping with their environment is at worst a very human weakness. Private Secretary Loeb is theoretically responsible for the new clothes, and if he incite the rural press to uncork vials of wrath, it is on his head that the vial should be emptied. For our part, our sensitiveness to uniforms, and even to liveries, has been a good deal blunted by living a good while in a large city. The coachmen and footmen in this town wear all sorts of ornamental raiment, the retainers of the big hotels have clothes that are thought to be proper to their jobs, and our policemen, messenger-boys, car-conductors, motor-men, firemen, street-cleaners, and others have gone about in uniforms under our observation so long that our sense of the impropriety of prescribing distinctive garb to retainers is all but lost. To us, demoralized as we are, it seems rather fit to put the White House messengers in blue coats and trousers, and even the silver buttons do not stick in our crop. But if the country papers, insured to a higher standard of simplicity, disapprove this departure, the man to assail is Secretary Loeb. He ought not be pounded too hard, however, until Congress has met and the people have had time to hear from their accredited representatives how the uniforms look.

The very latest development in the organization of labor is the formation of a book agents' union at Syracuse, New York. The founder of this union, which already numbers a good many members, and is about to apply for affiliation to the Trades Assembly, has explained in an interview that he has personally sold books for twelve years, has during that time walked about five thousand miles, and has been subjected to all kinds of rebuffs and insults. He has come to the conclusion that the time is ripe for the assumption of a bold stand by book agents, and for concerted reprisals against all those who display hostility to book-purveyors. The rules of the new union have been published, and will be found of considerable interest. One of them prescribes that any member who has been subjected to an insult by a business or professional man must forthwith report the same to the secretary, whereupon a special meeting of the union will be called, and a committee appointed to wait upon the offending person. In the event of an apology not being offered, the person insulting the book agent is to be placed under a boycott, notice of the same being made public on the telegraph and telephone poles, and on the billboards of the city or town in which the boycotted person resides. Business men in whose offices are displayed signs reading, "Book agents not allowed here," are warned to remove such signs, under penalty of being boycotted. Any member of the union who purchases supplies of any kind from a business man that has been boycotted is to be fined five dollars, and union book agents are also fined if they patronize merchants who sell to a boycotted person. It may strike our readers that some of these provisions sever strongly of blackmail. From the fact that the founder of the union proposes to drop the book-selling business in order to become the walking delegate, we infer that he sees some promising opportunities of profit. We observe, further, that a business or professional man must not only be careful how he treats a union book agent, but must refrain from purchasing a book of an agent not a member of the union, lest in this case also he be subjected to a boycott. We note, finally, that it will be impossible to get rid of a book agent's impertunity by offering fifty cents or a dollar for a cheap publication, because the union forbids its members to "handle" any book that sells for less than two dollars and fifty cents.

## A Representative American Manufacturer on the Labor Question

It is well known that the organization of labor in this country has impelled employers to organize in their turn by forming the National Association of Manufacturers. The attitude of the one body toward the other is defined in a pamphlet just issued by Mr. David M. Parry, who, as president of the organized manufacturers, discusses the labor question from an employer's viewpoint. The pamphlet is prepared in the form of replies to a number of queries submitted recently by Mr. E. P. Parry, of Indianapolis, president of the Central Labor Union. As the queries go straight to the point, and as no attempt is made to excite, labor-unionists will know hereafter precisely where American employers have made up their minds to stand.

Let us mark, first, some general propositions which Mr. David M. Parry lays down. Man must work, he says, for a living, and each man is entitled to the results of his own exertions. Personal ownership of property in a necessary deduction from the law that man must work for a living. Again, each individual is entitled to freedom of action. It follows that each man has a right to dispose of his own time and labor as he sees fit, or, in other words, that he is entitled to the right and just to work out his own destiny. Over more, it is right and just that one man should receive more of this world's goods than another. Attempts to distribute rewards of toil would prove, if temporarily successful, fatal to the interests of the whole nation concerned; and the indolent and inert, in whose behalf these efforts presumably would be made, would inevitably suffer with the rest. What we call capital arises from the fact that one man can, as a matter of fact, and does, produce more than another. Some men find that they can produce more than others, and absolutely need for themselves, and for their families, the extra goods which they produce. This stored-up labor is capital. In a word, Mr. David M. Parry is a believer in the individualist régime, under which, in all enlightened countries, men live and work. Under this individualist régime industry is unquestionably regulated by the law of supply and demand. This law operates to direct the energies of a nation along channels that will be the most profitable to all; it makes, on the whole, the wisest possible use of every individual, according to his capability, and according to the need that exists for the kind of service he can perform. It regulates the accumulation of capital, tending to increase the accumulation of it more at one time than another, according to the urgency of the need for it. Finally, it increases nominal wages, and decreases the prices of commodities, thus automatically giving to labor the benefits of capital as fast as it is to the interest of labor that this should be done.

No much for the general propositions formulated by the president of the National Association of Manufacturers. Now let us note some of the replies to questions put by the representative of labor-unions. Should, for instance, unions have anything to say about the wages of their members, the hours of work, and the conditions under which work is to be done? Mr. David M. Parry answers—we are obliged to repeat his full name to distinguish him from the president of the Central Labor Union in Indianapolis—that it is the right of every man to get honestly all he can, and men may associate themselves together for that purpose. Neither an individual, however, nor an association should be permitted to adopt methods of force to increase wages or reduce hours of labor. Considered as means of bettering the industrial condition of the masses, or such measure as their own purposes, instead of raising the general rate of real wages, they must necessarily lower it. If a particular labor union succeeds in forcing the payment to its members of a wage scale above the economic level fixed by supply and demand, it takes a share of the aggregate production larger than it is justly entitled to, and there is left a smaller amount than there should be for division among the other classes of labor. Inasmuch as the wage extracted by a labor-union is charged up to the cost of the product which its members are engaged in creating. The effects are, first, to raise the price of the product to the consumer, thus making it impossible for some people to purchase it who had previously been able to do so, while those who pay the advanced price have their power to buy other articles proportionately diminished. Secondly, to throw men into idleness or to put them in such positions as to make it impossible for them to demand for articles occasioned by the decrease in the purchasing power of labor in general. Thirdly, to discourage the investment of capital, and check its accumulation, because of the instability and uncertainty of business conditions resulting from the power of a labor organization to dictate terms to employers.

Turning to the demand of labor-unions to prescribe the hours of labor, Mr. David M. Parry discusses as follows the assertion that a man can do as much in eight hours as he can in ten. To insist that the same pay shall be received for eight hours which was given for ten makes, obviously, an advance in wages of twenty-five per cent. The cost of production is inevitably increased by the same percentage. It is true that, during the last hundred years, the number of working hours per day has been reduced from

sixteen and fourteen to about ten, and that the cost of manufacturing many articles has not proportionately increased. This reduction has been the result, however, not of the efforts of organized labor, or of any cause so much as the increased use of capital, which has so enhanced the productive power per capita that a nation's necessary work can now be performed in a much shorter time than formerly was the case. Mr. D. M. Parry also denies that labor-unions should be credited with causing the general rise of wages in this country or in any other country. Industrial development under free conditions is what has raised wages and reduced the hours of employment. Mr. Parry, in truth, does not hesitate to describe organized labor as an effect, rather than a cause, of prosperity. He points out that in periods of industrial depression labor-unions disintegrate. It is only when there is a great demand for labor, and wages, consequently, are advancing, that the ranks of labor-unions become full and the labor agitator becomes active. The demands which he enforces, however, instead of effecting a permanent increase in wages, are more apt to be the means of killing the goose that laid the golden eggs. Of what benefit, asks Mr. Parry, is a high-wage scale if you cannot obtain work under it? The prostration of the building trades during the last summer, not only in New York, but in nearly every large city in the United States, offers an instructive lesson on this point.

It is interesting to note the replies made to two other questions put by the representative of labor-unions. Is not the laborer, Mr. D. M. Parry was asked, on an unequal footing with the employer when he attempts to settle the question of his wage individually, and is it not a reasonable proposal that laborers should undertake to settle wage questions collectively through accredited representatives? As to a workman's alleged inability to settle the wage question individually, Mr. Parry directs attention to the fact that labor-unions comprehend only fifteen per cent. of the workers in the United States, and that the other eighty-four per cent. habitually settle the wage question by individual bargains with their employers. Why could not the other fifteen per cent. do likewise? At the same time, Mr. Parry sees no good reason, in cases where a large number of men are employed in the same kind of work, why a readjustment of wages, when conditions appear to demand it, should not be arranged by a committee of the men dealing with the employer in behalf of the rest? He insists, however, that, in this dealing with employers, through a committee named by the workers, there must be no coercion or intimidation, express or implied; and that, if an agreement is reached, and the men exercise their right to quit the employment, they shall in no wise interfere with the employer in his further conduct of his business, or with the men he secures to take the vacant places. It must, in a word, be understood by labor that it has no more right to say to the employer that he shall employ certain men, than the employer has the right to say to his employees that they shall work for no other person than himself. Mr. Parry's ultimate conclusion is that the fight waged by organized labor is more of a fight against the accumulation and the utilization of capital under private ownership than it is anything else. In such a fight the owners of capital may incur some temporary inconveniences, but eventually the hardship and suffering fall upon the masses of the people. When this fact comes to be generally realized, the destruction of labor-unionism, or its radical reformation, may be expected to ensue.

It must not be inferred from what we have here written that Mr. D. M. Parry denies that labor-unions have accomplished any good in the past, or are qualified to accomplish any good in the future. On the contrary, he gives them credit for the part they have taken in securing legislation calculated to promote the health and safety of workmen in factories, and to regulate the employment of women and children. He recognizes that the great reformatory brotherhoods have often followed rational methods in their dealings with employers. Nor is he unwilling to concede that trade-unionism, as a business institution, operating on lawful lines, and contented to assume the responsibility that other business institutions have to bear, could be made a source of valuable assistance to its members. As a society, on the other hand, organized for conducting lawless strikes and boycott conspiracies, trade-unionism is denounced as illegitimate, un-American, and deserving of disintegration or suppression.

## Canada and the Alaska Boundary Award

Our Canadian friends seem to have imagined that either the Alaska Boundary Commission would be equally divided, or that which event the arbitrament of a line of delimitation would be committed to diplomatic negotiation, or else the "chain" would be upheld by the force of the six commissioners. In other words, they took for granted that the three British commissioners would not diverge by a hair's breadth from the position taken at Ottawa, and that the soundness of this position would be eventually conceded by at least one of the three American members of the commission. Nor is there any doubt that had one of the American commissioners arrived at the conclusion that, on the whole, a right construction

of the Anglo-Russian Treaty of 1825 upheld the Canadian claim, he would have been applauded throughout British North America as a Daniel come to judgment. When, however, a precisely analogous case is pursued by one of the three British commissioners—when Lord Chief-Justice Alverstone holds that in many, though not in all particulars, the American claim seems to be sustained by the terms and purpose of the treaty aforementioned—the decision which his opinion entitles the commission to reach is disowned by his two Canadian colleagues as "non-judicial," and they decline to sign the award. Moreover, the firm adherence on the part of the American commissioners in a belief in the correctness of their country's view of the treaty of 1825—an adherence which, in the case of the Canadian commissioners is preliminary—is depicted by the Canadian press as little short of discreditable, and is imputed to the ill-fated fact that the American commissioners are not "jurists of repute." Evidently the Canadians are "bad losers." We by no means suppose that the Canadians consented to refer the boundary dispute to a commission with the deliberate intention of relinquishing the decision unless it should be favorable to themselves. This would be an avowal of playing with loaded dice; of violating the Elizabethan principle, "heads, I win; tails, you lose" into a solemn international scamper. We prefer to believe that they have been carried away by invitation, and by their keen disappointment are disabled for availing the equanimity, the recognition, the cheerful acceptance of accomplished facts which were exhibited by the American members of the board to whom the Bering Sea controversy was submitted. There were some Americans who thought that the decision rendered in this case, as also the decision rendered about the Vancouver boundary, was a diplomatic compromise rather than a strictly judicial interpretation of the facts; nevertheless, they recognized the wisdom of acquiescing in the decision without protest or complaint.

It is, of course, the case of the Conservative Opposition in the Canadian Dominion to lament the outcome of a commission for the creation of which the party in power at Ottawa is responsible. We think, however, that when Sir Wilfrid Laurier and other clear-sighted and cool-headed persons examine the text of the commission's award, and the maps that accompany it, they will arrive at the conclusion that Canada's interests have not, by any means, been so ruthlessly sacrificed as has been hastily alleged. They will find that, throughout a considerable section of the Alaskan coast, the commission has recognized and marked ranges of mountains so near the coast that the riparian strip awarded to the United States is very much narrower than the territory which our counsel claimed. They will find, moreover, that, though their claim to Dyes and Skagway is disallowed, yet, inasmuch as the commission has drawn the boundary through the western, instead of the eastern branch of the country known as the Portland Canal, it will not be difficult to connect the Klondike region by railway with a Canadian port on the said eastern branch of the Portland Canal. Sir Wilfrid, moreover, is too reasonable a man not to acknowledge that, since he permitted two representatives of his government to take part in the Alaskan Commission, he is now stopped from objecting to the composition of that tribunal on the ground that the American commissioners were not jurists in the technical sense of the word. Neither is Sir Wilfrid likely to deny that, even if the commission's decision may be regarded as an equitable compromise, rather than a rigorously judicial construction of treaties, the Americans have had to suffer a considerable abatement of claims from which our State Department, before the commission was created, had firmly declined to recede. In other words, Canadians see not the only losers through the assumption of equal powers by the commission.

There is another question which sensible Canadians will not themselves. Is it a bad thing or a good thing for Canada that the impartiality exhibited by Lord Chief-Justice Alverstone may possibly tend to dispel the feeling of distrust and dislike with which Great Britain has long and generally regarded in the United States?

### Sir Henry Mortimer Durand

The new English ambassador will represent at Washington a side of the British tradition which has never heretofore been brought close to the imagination of the American people; the Indian Empire, which is, in its way, the greatest work of administration ever carried out on earth. If we think of a teeming population, more than four times as great as that of the United States, made up of varied races with wonderful histories, woven of the very material of romance, and consider that this vast and overwhelming multitude is ruled and well ruled by some six hundred men of British race, we shall have some reasons by which to judge an achievement beside which all the triumphs of the Roman Empire read like local and provincial exploits. If we further remember that, mainly through the instrumentality of these alien rulers, there will be preserved to posterity one of the most venerable and beautiful languages in the world, with a splendid literature going back to the very dawn of time, the traces of a mar-

vellous culture which in many things, and those of the deepest import, begins where modern nations end, we shall have a further view of what England has accomplished in India. And this wonderful empire will now for the first time be represented in the American nation in the person of our new ambassador.

Sir Henry Mortimer Durand is a man of fifty-three, the son of a distinguished general, whose name he bears. He entered the English diplomatic service, and became joint attaché in the Foreign Department in 1874, and assistant secretary in the same department in 1877. His destiny soon after called him to India; and during all the years he spent there he was treated chiefly with one great and ever-recurring question, the threatened approach of Russia over the Hindu Kush Mountains or through the passes of Afghanistan. The Indian Empire had suddenly entered on a new and seemingly epochal epoch of its history. For more than a hundred years a solitary and isolated power, cut off by immense distances from every civilized neighbor, India had gradually been consolidated and uniformized under its white rulers. Then, about 1874, the great change came. The forces of Russia, moving southward and eastward from the mouth of the Volga, began to attack the northern frontiers of Turkestan, Skuderief, the province of war in the campaign against Turkey, and Karakortak, the present Minister of War at St. Petersburg, won their spurs in that advance. The weight of the Russian armies was overwhelming, and by rapid stages the whole of Turkestan, down in the northern frontiers of Persia and Afghanistan, passed into the power of the Tsar.

The English in India were full of apprehensions, well or ill founded. They at once inaugurated a new policy, founded on a new principle, which has dominated all Indian history from that time. Formerly the frontier of India towards the northwest was drawn beneath the giant ranges which about the plains of the Indus off from hill Afghanistan and Baluchistan. It was decided now to advance the frontier among the hills, so that the battle with the expected foe should be fought away from the Indian plains, out of sight of the Indian people. With the whole of this policy, from its inception, Sir Henry Mortimer Durand was identified, and among the Afghan hills he first won honor and distinction.

The Afghan campaigns of 1879 and 1880 had one prime object, and made one first-class reputation in military history, and one great success in diplomacy. Their object was to secure a ruler of Afghanistan who should be friendly to England, and if not actually hostile to Russia, at least in no wise disposed to receive any advances from that power. There all was suspected of receiving subsidies from Russia; and his days as Amer of Afghanistan were numbered. A quarrel developed; and we find an Indian army, one column of which was led by Sir Frederick Roberts, on its way toward Kandahar. Shere Ali fled, leaving the power in the hands of Yakub Khan, and if not actually the British Indian Empire was planted at Kabul, and, whether through treachery or mutiny, most of its members, with Major Cavagnari at their head, were attacked and murdered. Sir Frederick Roberts was at one seat to invade Afghanistan and occupy Kabul; and his wonderful march thither and the rapidity and decision with which he retrieved one prime disaster won universal admiration, and gained him the title of Lord Roberts of Kandahar.

As the outcome of this campaign we find the late Abdurrahman Khan on the Amer's throne, a man who for a series of years strongly upheld the British policy in the Afghan hills, and a man who possessed a genius and force rare in any epoch or in any land. From this campaign emerged also one first-class civil reputation—that of Sir H. M. Durand. This belongs to the vicereignty of Lord Ripon, famous for his liberal policy towards the natives, and of Lord Dufferin, who added Durand to the British dominions, and gained for himself the title of Marquis of Ayn. During this period Sir H. M. Durand was first Under Secretary and then Secretary to the government of India in the Foreign Department, where his chief exploit was the successful Afghan expedition of 1878, which won for him the title of Lord of the Indian Empire and Sir Durand of India. Here again the question was the advance of Russia, and the possibility of stemming that advance by annexing the hill regions to the northwest of Kashmir, with whose history the name of Colonel Durand, brother of the new ambassador, is so intimately bound up.

In 1874 Sir H. M. Durand was sent to Tehran, as minister plenipotentiary to the Persian court, and he ever since has been himself free to fare with Russian expansion. Here, however, all the successes were on Russia's side, and it is in this period that Russia's two greatest achievements in Persia belong—the securing of the exclusive right to build railroads in Persia, and the reduction of Persia almost to the position of a vassal state, by bringing her finances under the control of St. Petersburg. This was largely accomplished by recognition by the new Persian ruler, who was enabled the Shah Nuzar Mir Dja to pay a long desired visit to Europe, in the spring of 1890. A few weeks before the Shah started on his journey Sir H. M. Durand left Persia on leave, and during his stay in England he was transferred to the court of Madrid, thus at last turning his back to the gorgeous East and setting his face towards the West. One wonders what impression will be made by the world's newest ambassador and young-

## THE TRAINING OF ITALIAN CAVALRY OFFICERS

*The school of the Torre di Quinto, in Rome, was established fifteen years ago for the training of Italian cavalry officers in difficult feats of horsemanship. A recent photograph in the "Weekly" showed some of the dangerous feats performed by cavalry riders who were trained in this school. The above snap shot shows an officer in the school going through one of the exercises in high jumping.*

*All of the Boat under Water—the Flagstaff would be removed in Action*

*Almost completely Submerged, and going at full Speed*

*Rising from a Dive-half under Water*

*The "Protector" going on the Surface*

## **TRIAL TRIP OF THE SUBMARINE "PROTECTOR"**

*At the last session of Congress half a million dollars was appropriated to encourage the builders of submarine boats, and on November 16 the Navy Department will make exhaustive competitive tests for the purpose of determining the type of boat best fitted for the government service. At these maneuvers the submarine development "Protector," designed by Captain Simon Lake, will compete. The distinctive feature of this boat is that it may be submerged and run on an even keel, instead of having to dive downward from the surface, as in the case of the Holland boat. The photographs show the "Protector" starting on a submerged run, from the time when the keel is to sink until she is entirely under water.*

*Photographs copyright by R. G. Shoen*

### UNVEILING THE NEW SHERMAN STATUE IN WASHINGTON

*A new equestrian statue of General William T. Sherman by the Danish sculptor Carl Rahl-Smith was recently unveiled in Washington. The American flags which concealed the statue were removed by General Sherman's nine-year-old grandson William Tecumseh Sherman Thornecke. President Roosevelt delivered the dedicatory address, and a military and moral parade was held in honor of the occasion. The statue, which was built through the efforts of the Society of the Army of the Tennessee, measures nearly seventy feet in height, and is decorated at the base with groups and bas-reliefs.*

**ALEXANDER'S PAINTING OF DR. FRANCIS L. PATTON**

*This portrait of Dr. Patton is Mr. John W. Alexander's most recent work. It was painted by commission of the alumni and trustees of Princeton University at the time of Dr. Patton's resignation of the presidency of that institution, and has just been hung in the Princeton University Library.*

# Books and Bookmen

By James MacArthur

THE year has brought no greater treat—I was going to say that Mr. Howells has given his readers no greater treat—than is to be found in *Letters Home*. It may not be, as some aver, his greatest book, though I cannot recollect any book of his that left so vivid an impression with me and gave me so much pleasure. And in delivering this opinion I find myself in excellent company. Veteran readers of Mr. Howells who have taken him for granted, so to speak, as a novelist who reached his meridian with *A Hazard of New Fortunes*, declare that *Letters Home*—to quote the words of one of them—stands unequalled in contemporary fiction, and marks a new epoch in his distinguished career. Together with his maturity of power and execution, its ripeness of thought and uncollected vision, there are charm and vivacity of an imagination still young and throbbing with freshness of feeling and the warmth and glow of youthful outlook. This latest effluence of Mr. Howells's rejuvenescence recalls a saying of his favorite, Swedenborg, to the effect that the angels are always advancing toward their spring. It would seem to be so with the remarkably

found genius of Mr. Howells. There is a spring-time wonder and glory about his young Americans, but the idealism of Mr. Howells is tempered by the wisdom of maturity, and his young gods are found to be compounded of human elements and to wear natural habiliments; not one of them is very far from any of us. The story itself is happily conceived, and unfolded in a surprisingly novel manner. I confess that the epistolary form in which the story is related appealed to me at first, and I realized from reading the Letters as they originally appeared serially until they were published in book form. Then I took the book up no matter of course, and because Mr. Howells long ago had become a habit. The first letter is written by a Bostonian resident in New York, caught my interest, but it was personal. It had the Howells touch—the reserve, which came to New York trailing intellectual clouds of Boston. Not with the second letter, from Wallace Ardith to a friend in Wotomina, Iowa, written three days after his arrival in New York, one lost sight and touch of Mr. Howells and was engrossed in the very live young Westerner who had come on to the great city in search of heart-cure, and who is already writing of New York: "She has inspired me with a new passion; she herself is my passion, and I will never learn to love her over-meer. . . . I ache to get it all in verse; I want to write the epic of New York, and I am going to." But, like a reverse post, Wallace Ardith had first and that's the story. With the advent of Amer J. Boyley, a victim of the "Trust," in the third letter there was a fresh departure, and with the Letters following from Miss Annetta Balton, the heiress of the "Trust," and Miss Frances Deeman, who becomes companion and secretary to the heiress and her mother, the reader had forgotten all else in a still hunt for the story. These are the letters told, and the chief actors in this very modern comedy—the Letters are all written between December, 1901, and March, 1902—the other dramatic personae being drifts wrought into the fabric of the correspondence. And what a delicious comedy it is, with what a bit of heart-break consistent on the tragic seriousness of youth, to make its appeal to life deep and enduring!

Ever since Mr. Henry James wrote his charming papers on London, accompanied by Mr. Pennell's admirable drawings in the *Custary*. Fifteen years ago, and afterwards collected in *London and Elsewhere*—one of his most delightful and readable volumes—I have wished that some writer might be inspired to do the same service for New York. Mr. Howells has not only come nearer than any previous writer to visualizing for us the fresh, crude, big effects that the great American metropolis produces on the mind as a whole, but his inscription of the life and spirit peculiar to New York, its individuality as a living, throbbing organism; he has made it all more real and appealing by dramatizing its char-

acteristic elements, and passing them through the sensitive perception of his characters who hail from every corner of New York State, and Boston. Thus he enables us to gain a fresh point of view from various angles; a recourse to imaginative ends which is at once enlightening and entertaining; causing familiar things to take on a new and sometimes startling significance, and our brains to pause in the most unlooked-for places. I had intended to quote several passages by way of illustration, but space forbids; besides, it is difficult to quote where all is of a tempting excellence that clamors to be read. Mr. Howells has redeemed the epistolary art in fiction in *Letters Home* from an odium the last few years, in the hands of spurious writers. In that first letter, his Bostonian writes to an invalid sister: "Your nature may be good for you, or it may not; but for me I am sure it will be good if it gives me back that long period of life, when I wrote letters willingly and wrote them long. I have already a pleasing presence of an earlier time; in the mere purpose of writing you, I feel the glow of that charming adolescence of the world in the eighteenth cen-

ture, when everybody, so matter of what age, willingly wrote such long letters as to give the epistolary novel a happy air of verisimilitude." It remained for Mr. Howells, all of those who have sought to revive it, to recover the lost art of the epistolary novel in the twentieth century, and to impart to it the recollection of the magic and forgotten delights of letter-writing. I have indicated the maturity and ripeness of power and vision which have gone to the making of this book; it is the fruit of a long life, years of rich observation and mellow philosophy. It will bear pondering. The book has written itself at no single moment, but through all the years of Mr. Howells's sojourn in his native Western State, in Boston, and finally in New York. When it did come to write itself, it may have been a happy inspiration; if we see but the effluence of the moment we can still trace, if we have a mind to, its roots lying deep in the experience of the past. In this lies its charm and power, almost hidden, certainly without any pretentiousness, but so sincere in its art, a charm that gives it to our writer at least an imperishable quality.

The latest portrait of W. D. Howells. Mr. Howells's new novel, "Letters Home," has just been published.

In a child's *Letters to her Husband*, by Helen Watterson Moody, the epistolary form of fiction has been applied to a refreshing and novel end. It is scarcely fiction, for story there is none; it is simply a passing episode in the solitary life of a child, and the letters are written with an air of "happy verisimilitude," which, but for the intrusion of certain traces of the author's unuttered retrospection, read as if they might actually have been written by a Virginia, aged ten. "There is a tide in the affairs of children," it was a tide in the affairs of Virginia which led her to seek a respite from her exiled childhood in an imaginary husband, and to accompany herself in him with a new mother and simple hut which are only known to children. Sent from her motherless home in New York "to Uncle Devere's to stay all summer," she comments on her neighborhood and her companions and experience, with a mingling of gravity and amusement, provoked by humor which are only known to children. Sent from her motherless home in New York "to Uncle Devere's to stay all summer," she comments on her neighborhood and her companions and experience, with a mingling of gravity and amusement, provoked by humor which are only known to children. Sent from her motherless home in New York "to Uncle Devere's to stay all summer," she comments on her neighborhood and her companions and experience, with a mingling of gravity and amusement, provoked by humor which are only known to children. **MISS MARY JOHNSTON**

*Miss Johnston's new serial, "Sir Mortimer," which is now appearing serially in "Harper's Magazine," is a romance of Elizabethan times. It deals with the love-story of an officer in the Royal Navy and one of the Queen's ladies-in-waiting, and is a searching study in character as well as a story of action and adventure.*

Blessing the Hounds before starting on the Hunt

## Wild-Stag Hunting in France

By Frank Sherman Peer

**O**UR first day in stag was with the celebrated pack of French hounds owned by the Marquis de Courmouler. These hounds are certainly the most musical pack I have ever heard. They are said to have originally been produced by a cross between the bloodhound and the greyhound, or, possibly, the greyhound was in some cases used as the sire.

The stag in this particular chase kept twisting and doubling his track, not going more than a mile in any one direction, until finally, as they usually do, he took to water, a small pond of some twenty or thirty acres. The shores for the most part are fringed with cattails, marsh grass, and flags. The stag was quite fresh when he entered the pond. The hounds, however, were right at his heels, and twenty-five couples went plunging over the bank—a drop of three or four feet—in the most fearless style that can be imagined, all giving tongue, and the lot of them swimming as fast as possible after their game. Across the pond the stag took to a patch of thick-growing rushes, which closed in behind him, and shut out the hounds, as they were unable to touch their feet on the bottom or penetrate the mass by swimming. They finally went ashore in open water. The stag, meanwhile hid in the rushes. The hounds are now sent in from shore, the huntsman wading through the break to encourage them on. In ten or fifteen minutes out goes the stag into the pond again, the hounds plunging after him, and once more the "heavenly music" fills valley, hill, and forest for miles around. Forward and back, up and down the pond goes the deer, with the same stately air and majestic carriage of the head as he had on land, plunging through the water like a steaming, with forty or more hounds swimming after him.

On the opposite shore some men are unloading a flat-bottomed boat. The huntsman fastens a short sword to a pole, and with another man to help paddle and punt the craft along, goes in pur-

suit. The stag's strength begins to fail. Every time he crosses the pond it is at less speed. Game as he is, the hounds are never so. Finally they overtake him and literally crawl upon his back. One grand hound, more emboldened than the rest, swims along until he catches hold of the stag's ear. The stag, to throw him off, ducks his head under the water, but when he finally comes up the hound is still hanging fast. With half a dozen hounds clawing and actually riding on his back, and another holding to his ear with the grip of an iron vice, the poor stag can do no more. The ten men in the row-boat wade the craft alongside. A well-directed thrust of the glistening blade, and the hounds are literally swimming in blood. A rope is meantime thrown over the stag's antlers and the men at the oars tow the creature to shallow water. The grand hound that nearly drowned himself, rather than let go his hold, reared the bank, but reeled and staggered, and fell prostrate on reaching land. Two attendants set to rubbing him dry, and he was soon restored and joined the pack in their reward. It was dark by this time, but a bonfire lit up the scene, and the funeral dirge was sounded, the hounds giving tongue the while. When the last honors had been paid to the stag and the story of the chase, and the entrance of the hounds had been recounted in song, we said farewell to one of the most interesting day's sport it has ever been the writer's good-fortune to participate in.

After two days' wild bear hunting with the Baron de Berlede's hounds, and the day to the Marquis de Courmouler's staghounds, just described, it was arranged that we should spend the fourth and last day of my visit in following the staghounds of the Marquis de Chambrey, some twenty miles distant.

"For," said mine host, "the Marquis de Chambrey is the most noted master of hounds in France, and his hounds are the direct descendants of the royal pack of King Louis XI."

Pursuing its Game across a Pond—the Stag's strength begins to fail

"But twenty miles is too far to go to a meet."  
 "We will go in the automobile. I will wire to a livewoman in the neighborhood to meet us with a two-wheeled cart, and we will see what we can, driving along the roads and lanes of the forest."

The next day, just as the clock had gone eleven, we started for the meet, which was at noon and twenty miles away. My host, the Baron de Durbodet, sent the machine flying over the beautiful roads at the rate of forty miles an hour for a good part of the journey. We arrived at the meet in time for a good part of the day. We had time to inspect the hounds before going on to covert.

Lambert and the inspection of the hounds over, the venerable master sounds the horn as a signal for moving on to covert, and we look at the two-wheeled cart which the Baron de Durbodet said he would wire to have on hand. Imagine the writer's surprise to see the Baron making for a big, lumbering, two-wheeled cart, a sort of a gig. At least it had a top, let down for the occasion, and was hung on platform-springs. The wheels of this cart were quite heavy enough for a farm wagon, the shafts were great big poles of natural second-growth oak, while between them was a great white Percheron stallion, over sixteen hands high, weighing something like 1600 pounds. The trap itself was about half that weight, and the three occupants added at least 500 more.

"Fancy," said the writer to himself, "our trying to keep the pace of a pack of hounds after deer in such a torment as this." The whole thing seemed such a farcical that the writer never expected to see even the tail of a crippled hound. He felt sure he could get on quite as well, and probably quite as fast and a great deal more comfortably, on foot. Fortunately he kept most of these thoughts to himself, but he evidently said or looked enough to call from the Baron "You shall see."

The driver probed himself upon an improvised seat on the dashboard, his feet braced against the crumple of the shafts, while the grained Baron and the writer occupied the blanket-covered seat behind him. The traces were very slack, and when this great stallion went into the collar the conveyance started with a jerk that nearly upset as all backwards into the top. The hounds and riders had gone on to take up their respective stations, two or three couples only remaining with the master in charge of one of the hunt servants. These hounds in England are called "tufflers," and are the most trusty and obedient hounds of the pack. The forests are full of deer, therefore it is necessary to single out and get the one to be

hunted well away before letting on the pack. The stags of ill age are the ones hunted. Such a one is located in the early hours of the morning. Presently we arrive at a place where deer tracks cross a road in such numbers as to suggest a flock of sheep. The master invites me to alight and inspect the footprints made by the stag we are to follow. While we are carefully examining them the relays of hounds and kennels have stationed themselves as the master has directed. At a signal from the master the "tufflers" are slipped, and away they go into the forest, covered on by voice and horn to the lair of their game.

What, he, there! back to our stallion! No longer can he be called a lumbering cart-horse, for at the sound of the horns he rears in his track until it looks as if he would turn a somersault backwards into our laps. With a flourish and a creak like the report of a gun, our driver draws down under his blue-jean jacket, what in the Western country would be called a "blacksnake," a limber black leather cutting whip about four feet long. The great stallion coaxes down to the earth again, with a wild challenging neigh that fairly shakes the forest. He springs into a canter with his feet stride, and away we go. Talk about riding on a gun-carriage of light-artillery, or on a fire-engine at full gallop, or being run away with in a lumber wagon over a rutted road in the timber woods! Well, this two-wheeled French gig, with a wild stallion to draw it, and a very devil of a driver with a blacksnake to drive him, was gun-carriage, fire-engine, and a runaway lumber wagon combined.

Out from their retreat broke at least twenty wild and startled deer. It was as grand a sight as ever a hunting-man could wish to see. Among the lot, his head with towering antlers cropping high, came forth the lordly stag. What a sight! The females and younger members of the herd bounded away, but not the monarch. Stately and proudly he moved along as became his station. The woods, meanwhile, were ringing with shouts of men, tossing of horns, and baying of hounds, to which heavenly music our stallion bowed such a roar as would shame a lion. The writer has witnessed many stirring sights in the forests after the lordly monarch, but the carriage and grandly bearing of this noble stag was a sight never to be forgotten. He recalled that portion of an old school-day complot among the favorite selections for "speaking pieces."

Ho, regards, have ye left me in meet them all alone.

Thus our grand, our happy, our noble game disdaining to run, walked across the opening and disappeared among the dense

The Marquis de Chaulbray, who has taken 2000 Stags

The End of the Chase

underbrush. On came the hounds, joined by reins from different directions.

Crack! Crack! went the Mecklenbe, and the chase was on. What a ride! It was not enough along the forest road. We entered a lane with such a sharp turn to the right that the left wheel of the cart went spinning around in circles. There were no carriages in front of us, and the way that great wild stallion snatched that two-wheeled trap down this lane was, I am sure, a record-breaker. Farm wagons had cut great ruts in soft places during the wet season. Now it was dry, hard, and lumpy. In some places the undergrowth met over the centre of the lane, for which we had to duck our heads and be sharp about it too. Dead sticks and limbs sprang from trees lay here and there across the track. Some of them crushed beneath our chariot wheels, others sent us in midair above the seat, which piked us up now and again in a way to loosen our back hair. On we rode, hanging on for dear life. My saw it all, at least we believe we saw us much of the run as any one mounted driver. Halls! Halls!

We are driving more slowly now. At last the stag appeared not two rods away, moving slowly along parallel to the way we were going, both arched, his tail drooping and shaking like a horse—down to a turn. His head, however, he still carried erect, but not in the jaunty light air as at the beginning; his crown of antlers

was getting heavy. Thirty hounds were barking and baying in his wake. The end was near at hand. He halted, thrown up his head in his usual lordly fashion, and stands as motionless as a bronze statue. Halls! Halls! about the riders. Halls! Halls!

All fear seems to have left the stag. He is entirely oblivious to anything and anything about him. He looks as unconcerned as the great bronze stag on the lawn in front the Chateau de Chambrey. He seems to be listening for some far-away sound in a dreamy sort of a way. This is his last stand. The master inquires who would like to dispatch him. A young gentleman in a coat and carrying the head of the stag in his hand quickly dismounts, walks straight up to the stag, which neither turns nor moves a muscle. In fact, one would think this young man was going up to his amount. That comes the careful blade, a straight short sword, from his scabbard. Who is the point of the sword as he fixed at the heart—just back of the elbow-joint—a quick, banging thrust lays the crimson fount. A shudder passes through the noble frame of the stag, but there is still the grand and noble carriage of the head; the legs begin to weaken. At this the hounds come boldly on, and are permitted to pull down their game. The notes of the death-song from the accompanying horns tell the great forest for miles about that the noble spirit at the stag has paid the debt.

The Pack and the Huntsmen—After the Chase

## The Science of Flight

By Louis Bell, Ph.D.

THE failure of Professor Langley's experiments will in no way daunt him or other students of aerodynamics. The reasons for this are therefore worthy of some attention. To begin with, there are two entirely distinct lines of attacking aerial navigation. The easiest and most obvious is through automobile and dirigible balloons. These have been tried many times, with varying success, most thoroughly and successfully by M. Santos Dumont. An airship of such kind is merely a balloon, reduced to the shape of a blunt spindle in order that it may drive the easier, and furnished with propellers and with horizontal and vertical rudders. In the earlier trials of such airships electric motors were used to drive the propellers, and in spite of meagre power. Transmitters and afterwards M. Renard and Krebs demonstrated the possibility of the type. The great work of Santos Dumont and some of his confederates in the adaptation of the gasoline motor to driving the screws, gaining sufficient power to make headway against moderate winds and to get a moderate speed as that of a fast clipper ship when the air is not unfavorable.

The weak points of the balloon type are lack of carrying capacity, mechanical weakness, and inability to combat heavy winds. It does not seem at present possible, excepting on an entirely rough and powerful enough to give a balloon big enough to carry it an adequate amount of reserve power. Nevertheless, it does seem feasible to build such airships strong enough and speedy enough to do some useful work in military reconnaissance, and in solving some important scientific problems. Their design is difficult and their operation seems to be rather dangerous, but they are by no means to be despised.

All this, however, is very far from flight in the ordinary sense, and a second group of experiments are working on an entirely different plan. A bird has no initial buoyancy, but is borne up by the air through which it drives. The flight of birds is in-day an open secret as regards its vital features. A bird is practically an automobile kite. Any one who has ever flown a modern kite of the "box" or "Molly" varieties understands that the wind forcing under the standing planes of the kite surface bows the structure, and that so long as the string tension keeps it from reasonable lightness. This fact alone is enough to render successful with the materials of construction so far available, and to it is to be charged the failure of all experiments who have, like Langley, tried to work on a practical scale. Nature keeps witness to the same effect, for there are no very large birds capable of flight, and is there any record of such in past ages.

holds his balance in a sudden gust. When he dies into the wind's eye it is with frequent strong strokes that urge him forward, and in a calm he strikes less frequently, sliding along between strokes with his kite surfaces tilted up in the way that every boy understands.

If, therefore, one could put a propeller on a kite so that it would be driven forward with its planes at the proper slope, it would slip through the air unharmed as when flying unaided in a wind, with the upward component of the air rushing against the slope. The motor would replace the eagle's wing beats, and the wind would have a flying machine in the proper sense of the word. Along just this line have worked Sir Hiram Maxim, Professor Langley, and others.

But there are many and grave difficulties to be overcome. The first is the design of motor power sufficiently light and powerful to drive the structure hard enough to give it the requisite lift and speed. A kite cannot fly any considerable weight except in a high wind, and the automobile kite has to make its own wind. At the present time the steam-engine gives the best promise of success in machines of any considerable size, but even so, it is a feat of rapid and perfect balancing, the intricate result of ages of evolution. How far it would be possible to balance a soaring-machine in a few minutes will be seen. The late Herr Lilienthal, with skillfully planned hite-planes attached to his body, was able by a running start down a declivity to windward to set distances of several hundred yards, but finally lost his life by a downward gust that plunged him earthwards.

It is quite possible to construct small soaring-machines, driven by inflated bands, or the like, capable of flying yards; but, unhappily, the difficulties of the problem increase rapidly with the size of the machine. Hence the larger machine one builds the harder it is to get an adequate margin of strength while retaining reasonable lightness. This fact alone is enough to render successful with the materials of construction so far available, and to it is to be charged the failure of all experiments who have, like Langley, tried to work on a practical scale. Nature keeps witness to the same effect, for there are no very large birds capable of flight, and is there any record of such in past ages.

The Cause of the Visit of the Kaiser to the King, and What Came of It

By Albert Levering

Wilhelm: "You rich you are schmand copping dem Vanden, no? Dem who is it not make dem beds on de blue sea? I come you to wash you all off dem sea and other stags, yes? Look me in de face!"  
Eddy: "No-nobody dahn—I did it myself. I-I-I'm looking."

Wilhelm: "I know best! Yes, I bet me what, it's dat long Chamberlain's boy—and he got his kins out off dat cabinet, no? You look at me, boy?"  
Eddy: "I-I-I'm looking."

Wilhelm: "You so dem big waddel fers? Dat's not Chamberlain gas you he free dem protection marks, passers out off dat cabinet met me? Look at my eye?"  
Eddy: "I-I-I-I'm looking."

Wilhelm: "Cher yes! Ain't you got no back spine? Now you go ahead and tell dat Chamberlain fellow you will fix dat cabinet yourself, yet; and dat dem Chamberlain axons and dahn his two waddles—and dem me and you... see fix dem Vanden. Do you look on me I say?"  
Eddy: "I am looking."

Chamberlain: "FI fix dis cabinet?"  
Eddy: "Cwas!" Cwas!

Chamberlain: "Nite, then, at your Majesty's command, we will go— with our iron-building!"  
Eddy: "Wilhelm, I am still looking!"

### SIR HENRY IRVING'S PRODUCTION OF "DANTE"

Sir Henry Irving opened his American tour last week at the Broadway Theatre, appearing for the first time in this country in Savlow and Moreau's spectacular drama "Dante." The play, which was produced last spring at the Drury Lane Theatre, London, is based upon several real and imaginary episodes in the life of the Florentine poet.

## A COLORED CLERGYMAN SPEAKS

By MATTHEW BARRETT.  
 Detroit, Michigan, October 25, 1903.

To the Editor of Harper's Weekly:

Sir—Your valuable and widely read paper has been entertaining the public at large on the criminal classes of the negro race in this country. Your editorial comments on various phases of this question seem to tacitly accept the views of many of your Southern correspondents, to such an extent, that you have been pleased to manufacture for the crime in question a name which is not only inappropriate, but historically incorrect. The "Negro Crime," as you call the raping of white women by negro men, is a term which very naturally impresses the ordinary reader with horror and disgust, and implants a spirit of revenge; both of which the public press should, for the peace of society, endeavor to modify as much as possible. But since these seem to be a journalistic propaganda to instill into the minds of Northern people a bitter prejudice against the negro—ostensibly of the criminal classes, but actually to give prominence to the views of white men of the South—I beg to offer a protest against much that has recently appeared in your periodical on this question.

Your version of the Boston incident, and the motives you attribute to the colored men who opposed Mr. Washington there, I am unable to dispute. Your deflections, however, leave the very impressions on my mind which you seem to seek by the use of not politicians or public leaders, but have forced upon them. Any impartial reader must realize how very intimately you have associated Mr. Washington's work in Alabama with the sentiment of a class of men whose desire is to find such a remedy for the ills with which they are surrounded as to step the readily—but no more. Mr. Washington's tonic seems to suit their purpose. But that the negro should be possessed of manly energy; native aspiration to reach out for the best which a citizen of this country may hope to enjoy; and to have an unshakable pluck thrown in the way to block his door to opportunity, is the rock of defense which the intelligent negroes of this country have set up as their feet, and against which the Southern white people strike and separate from us.

But we are considering the condition of the criminal classes, and your use of the term "Negro Crime" is misleading. Neither you nor your correspondents are true to the history of amalgamation of the races in the South when you separate the victim who is able to be heard in her own defense from the one who must bear her disgrace in silence. Do you know, sir, that no one purloined African can be found among any hundred negroes that can be hurriedly collected together in this country? and I am credibly informed that mulattoes are also the victims of lynch-law for the very crime in question. Do you account for this by the mixing of the blood of these criminals? or shall we be more charitable to the example which the white men in those parts have set the colored people? Verily, if we see the wind, we shall reap the whirlwind.

I am not condoning the action of the lawless and criminal classes of my race. I desire, however, to be emphatic in declaring that the raping of white women by colored men is a crime which has been tolerated; and in the perpetration of which the white men of the South still indulge—for there are numbers of mulatto and octoroon girls who are thrown upon the world to seek colored husbands after they have satisfied the passions of white men. We colored men have feelings as well as white men; and while the social class among us revere the Caucasian for all that is good, and imitate his virtues, it is no more surprising that the victims among our race should imitate his vices, and that our race should produce criminals as well as other races. The crime of raping is not the "Negro Crime," and all men alike who are guilty of it should be summarily dealt with by the laws of the land.

Mr. John Temple Graves suggests a remedy which vitiates the force of his denials, and must horrify the feelings of those who lay claim to a higher civilization. Tostrate a negro for the crime would not only bring us to the level of the Turk, but would present a very unseemly side of our civilization to the world.

Perhaps you would like to have a colored race as to what should be done. Let a conference be held, at which both colored and white leaders be assembled to discuss prominently this matter, with the end in view of speedily silencing the disordered state of society as it exists in the Southern today.

I am, sir,  
 J. R. MANNING.

## THE NEW NATIONAL GUARD

CHICAGO, ILLINOIS, October 21, 1903.

To the Editor of Harper's Weekly:

SIR—In HARPER'S WEEKLY of September 5, 1903, an article appears under the heading—"The New National Guard," by Frank Matthews. In this article a national guard colonel of the State of New York of twenty-five years' experience, is credited with the following statement:

"I never had from 150 to 200 colored men on the Governor's staff list, the staff of the Illinois National Guard, at St. Louis in April cavalry, made up of raw recruits."

I have the honor to inform you, and through you the readers of your valuable publication, that the above statement is so broad,

false, and misleading that the writer feels it his duty to correct the same.

The old military and naval code of Illinois provided that the staff of the commander-in-chief "shall consist of an adjutant-general, with the rank of brigadier-general, an inspector-general, a surgeon-general, a judge-advocate-general, one general-in-chief of rifle practice, each with the rank of colonel, one aide each of each congressional district, each with rank of colonel, and one assistant adjutant-general, with the rank of colonel." This gave the Governor the right to appoint and commission twenty-five officers, as aides on his staff, to represent the Twenty-Eight Congressional districts in the State of Illinois. In March, 1862, the new military and naval code for the State of Illinois, known as House Bill No. 609, was introduced in the Forty-third General Assembly, passed by the House and Senate, and approved by the Governor, becoming a law on July 1, 1862. It provided for ten aide-de-camp on the staff of the commander-in-chief, four of whom he may appoint in any grade not above that of colonel, and all of whom shall have served in the national guard or naval reserve, or in the regular or volunteer forces of the United States; the remaining six shall be appointed by the Governor from the commissioned officers of the Illinois National Guard and the Illinois Naval Reserve in active service, of grade below that of colonel, and their appointments shall operate as a commission as aide-de-camp, but shall not add to the actual grade of the officers so appointed.

At no time has a Governor of the State of Illinois had from 150 to 200 colored men on his staff, and therefore so untruthful a statement is calculated to bring contempt upon the service.

At the dedication of the World's Fair in St. Louis, in April, last, the staff of the Governor, commanding-in-chief, consisted of the adjutant-general, assistant adjutant-general, eight officers of the line, and seventeen aides, a total of twenty-seven officers. The Governor of Illinois was formerly a member of the Fifth Regiment of Infantry for a period of five years, has seen active service, and was an efficient soldier. Several of the staff served throughout the civil war, one of them with General Custer in his Indian campaigns, and eight are veterans of the Spanish-American war. Among these officers are former cadets of West Point and other military academies in the State of New York. Therefore, to classify the staff of the Illinois Governor at St. Louis as representing "a regiment of cavalry, made up of raw recruits," is absurd.

The writer was detailed to represent the State of Illinois on the staff of Major-General Corbin, U. S. A., grand marshal upon this occasion, and was at the reviewing stand when the Governor of Illinois and staff passed in review. He is therefore in a position to refute the allegation that the staff of the Illinois Governor resembled a regiment of cavalry, made up of raw recruits.

The regulations for military forces of the State of New York, article 1, section 8, "Military Discipline," provide as follows:

"Deliberations, discussions, statements, or remarks with respect to military matters, whether oral, written, or printed, by officers or enlisted men of the National Guard of this State, criticizing or reflecting upon others of the military service, in this or any other State, or of the United States, are prohibited."

The colonel of twenty-five years' experience, while sitting on a camp-stool outside of his tent during the State encampment of the National Guard of the State of New York therefore violated section 8 of the regulations governing his command.

I am, sir,

WALTER FELDHOUSE,  
 Colonel and Inspector-General, Illinois National Guard.

## THE NEW NEGRO CRIME AGAIN

CHICAGO, ILLINOIS, October 19, 1903.

To the Editor of Harper's Weekly:

SIR—It is one of the remarkable discoveries of this remarkable age, which some of your correspondents have claimed to have made, that the deplorable crime committed by negroes against white women is a modern crime. In other words, that from Amos down to 1862 the crime of rape was a white man's crime. One would think that this virtue of the negro race would have been discovered and commented on long since by some ethnologist or criminologist, but from the beginning down to A. D. 1862 such a thing was not suspected.

The writer, in order to enlighten himself on this point, has made a hurried examination of the digest paragraphs under the above title "rape" in the United States Digest. This digest, as the above title-page, digests the cases from the beginning of our history down to the year 1870, which have been appealed to the highest courts of the different States. One-sixth of the cases under this title, as appears from the wording of the digest paragraphs, are cases of crimes of negroes against white women, or the reverse. In other words, that as a rule, the digest paragraphs would not state the color of the defendant, and the further fact that few of the slaves would be able to carry a case to the Supreme Court of the State, we are inclined to believe that the one-sixth of the cases cited is but the minimum fraction of the number of such crimes that occurred during the early part of the last century, and that some other cause for their remains to be discovered than the Emancipation Proclamation.

I am, sir,

E. H. W.

Millions for Rubber Boots

More than fifty million pounds of india-rubber, valued at over \$20,000,000, were imported into the United States last year. In 1890 the quantity was only thirty three million pounds; in 1899, sixteen millions; in 1910, nine millions; and in 1911, the earliest date at which it was separately shown in the import statements, only 2,125,561 pounds. This very rapid growth in the importation of crude india-rubber is due to the great increase in its use in manufacturing, both as to rubber garments, shoes, etc., and its use in machinery and as tires for vehicles. Over one hundred million dollars' worth of manufactures from india-rubber is now turned out from the factories of the country every year, and about half of this total is in the form of boots and shoes. So great is the demand for india-rubber for its use in manufacturing that its importation has grown from two million pounds in 1862 to over fifty million annually at the present period.

Always use Mergal—Man. Wagoner's Mergal. First should always be used for children. It makes the child, when the gums allow all pain, warm wind cold, and is the best remedy for diarrhoea.—[Ad.]

ADVERTISEMENTS.

LIKED HIS "NIP"

Not a Whiskey but a Coffee Toper.

Give coffee half a chance, and with some people it sets its grip hard and fast. "Up to a couple of years ago," says a business man of Brooklyn, N. Y., "I was an constant coffee-drinker as it was possible to be; indeed, my craving for coffee was equal to that of a drunkard for his regular 'nip,' and the effect of the coffee drug upon my system was indeed deplorable.

"My skin lacked its natural color, my features were pinched, and my nerves were shattered to such an extent as to render me very irritable. I also suffered from palpitation of the heart."

"It was while in this condition I read an article about Postum Food Coffee and concluded to try it. It was not long before Postum had entirely destroyed my raging passion for coffee, and in a short time I had entirely given up coffee for delicious Postum.

"The change that followed was so extraordinary I am unable to describe it. Suffering it to say, however, that all my troubles have disappeared. I am my original happy self again, and on the whole the soothing and pleasant effects produced by my cup of Postum make me feel as though I have been 'lulled at another station.'"

"Not long ago I converted one of my friends to Postum, and he is now as loud in its praise as I am." Name furnished by Postum Co., Battle Creek, Mich.

Look in each package for a copy of the famous little book, "The Road to Wellville."

It is easy to claim "pure beer," but one must double the cost to make it.

Schlitz is actually pure.

We go 1400 feet down for water.

We spend fortunes on cleanliness.

We not only filter the beer, but filter all the air that touches it.

We age the beer for months, so it cannot cause biliousness. We Pasteurize every bottle after it is sealed.

For fifty years we have insisted on purity, and now all the world knows it. The result is a sale exceeding a million barrels annually.

Isn't absolute purity as important to you as to others?

# THE SUBCONSCIOUS FINNEGAN

By MORGAN ROBERTSON

THEY were on the after part of the superstructure deck—the loading place of officers off duty—and they were discussing poor old Finnegan. Mr. Clarkson, the executive, was there; Mr. Parmlee, the chaplain; Dr. Bryce, the surgeon; and the chief engineer—a man sceptical of all things unproved by mathematics. Finnegan was down in the "brig"—the slatted ship's prison on the berth-deck—sweeping off the effects of the drink that had infused him, and so could take no part in a discussion affecting himself. But he had an able champion in the surgeon, who had just answered the chaplain's assertion that he was past redemption.

"Not at all," he had said. "All he needs is enough Dutch courage, and he is a better man than he ever could have been without it."

"But is not that an index of failure?" asked Mr. Parmlee. "God never created man in His image to then depend upon whiskey. At no stage of intoxication is the ordinary man roused to his fullest mental activity."

"Yes, he is," quickly rejoined the surgeon. "Only he doesn't realize it. The mood passes too quickly. In Finnegan's case, seasoned as he is, he can make the most of this stage. In fact, he falls back upon his subconscious mind. And the subconscious mind, gentlemen, though almost absolute in its intelligence and knowledge, will believe anything told it, no matter how absurd."

"Do you mean," said the executive, "that if Finnegan's subconscious mind were told that he didn't like whiskey it would believe it?"

"Not only would it believe, but would act upon it, and Finnegan would lose the taste for it."

"Then, in the name of all that is good, let us try," said the chaplain, enthusiastically.

"There are strong reasons why we should not," said the surgeon. "First, Finnegan is already in the subjective, or subconscious, state when drunk, and bound by auto-suggestions in favor of whiskey that would overcome any from an outside source that would conflict. When sober he is a nervous wreck, unable to be hypnotized—too irritable and antagonistic, you see. Second, he is better off under his present form of subjectivity than he ever could be otherwise, either as a normal man or a continuous hypnotic subject. Third, it might kill him. Though the spirit might be willing, as Mr. Parmlee would say, the flesh is weak, and with his whole nervous system attuned to alcohol—every brain cell charged with it—he could not survive the change."

"Well," said Mr. Clarkson, determinedly, "you could watch him, couldn't you, and, if things went wrong, straighten him up with whiskey?"

"Yes, provided I could make things go wrong. I am not a hypnotist."

"What is a hypnotist?"

"Any person who is positive, for lack of a better term, compared with the subject's negative. Any person whom Finnegan fears, loves, or respects—in short, any one who has a commanding influence over him—can hypnotize him by the ordinary method. "I am all that," said Mr. Clarkson. "What are the methods?"

"The simplest is to induce the subject to look steadily at some bright object—such as a brass ball or button, a dancing spot of sunlight reflected from a mirror, a star in the sky, or anything that will fix the attention and slowly distract the objective mind—the brain—from the world. Then that brain will close off, as it were, and the subjective brain will arise to the situation."

Mr. Clarkson stepped to the break of the superstructure, then looked back and said to the surgeon: "He's been in about four hours. Is that long enough to order him up?"

"Plenty, if he has slept."

"Always does," said Mr. Clarkson. Then he called down to an orderly to direct the master-at-arms to release Finnegan from the brig and bring him up.

Finnegan soon appeared, in the custody of the master-at-arms, unkempt and unwashed, his gray hair tousled over his wrinkled face, his eyes blinking stupidly in the strong sunlight. "Just waked up, sir," said the master-at-arms. "Hungry and on my bed terms with himself. His language is very disrespectful to the service, sir."

"Very well," said the executive officer. "We'll attend to him." The petty officer departed; Finnegan looked sourly around on his investigators, and smiled. They returned the scrutiny, and all answered the salute.

"Finnegan," said Mr. Clarkson, sternly, "fix your eyes on that gilt ball of the flagstaff. Look at it steadily, and see if you can see anything wrong with it."

"Got a twist in it, sir. The shelve looks don't lay 'neathships. One's foreword and 'other aft. But I'm an old man, sir; I can't climb like I—"

"Never mind. Look at it."

Finnegan looked. "Wants a new coat, sir," he said at length. "Yes, we know that. What else. Look steadily at it."

"Flagstaff has a little list to port, sir. It got warped in the graving-dock at Malta, when we lay one way so long."

"That's all right. Look at it. Look hard."

Finnegan stared at the ball; the rest stared at him. Mr. Parmlee with almost boyish eagerness in his face, the engineer with grinning incredulity.

The surgeon beckoned the first lieutenant aside. "Ain't it won't work, Clarkson," he said, softly. "Try pure mesmerism. Sit him down, make him look into your eyes, and pass your hands downward before his face. Command him mentally—that it, will

that he go to sleep. It is possible that you have perceptive force. There is such a thing distinct from the subjective power of the other."

"Sit down on that skylight," commanded Mr. Clarkson, approaching Finnegan.

Finnegan gingerly seated himself, looking around nervously. Mr. Clarkson faced him, and said, sternly, "Look me right in the eyes."

**The Experiment**

Finnegan did so. Mr. Clarkson elevated his hands and brought them down with a sweeping gesture before the face of the victim. The victim looked curiously at him. Agria the officer raised his hands and brought them down, while his face assumed a stern, almost fierce, expression.

"Tell him he's sleepy," whispered the surgeon in his ear.

"You are sleepy," said the officer. "You are very sleepy. Go to sleep."

"I never could sleep on deck, sir," protested the old fellow. "Some men can talk of the whole water in a coil of rope, but I have to turn in, sir."

Mr. Clarkson continued the passes. "You are sleepy," he repeated. "Look me right in the eyes and go to sleep, my boy, sir."

"I ain't sleepy a bit, sir."

"Look me in the eyes," sternly commanded the lieutenant. Finnegan obeyed him, and the magnetic passes continued.

"They do say, sir," said Finnegan, with a half-confident, half-depressing smile—"the fellows on the water, I mean, sir—they say that at times, a-sakin' yer pardon, I say, that sometimes yer not quite yerself, or—that is, not quite right in yer head, sir."

A year of laughter went up, and Mr. Clarkson desisted.

"That'll do," he said, angrily. "Go below." The old man arose saluted and departed.

"Did he speak from his subconscious knowledge?" asked the engineer. "What do you think, doctor? Did Finnegan diagnose correctly?"

"Contrary Auto-Suggestion"

"Not at all," answered the surgeon, gravely. "The experiment has failed because of contrary auto-suggestion, and because of the presence of suspicions. An incredulous engineer, whose soul never rises above grain surface and coal supply, will spoil any psychic investigation. Clarkson, does Finnegan ever take the wheel?"

"No; he's not a quarter-masthead."

"Can you put him there to-night?"

"Why, yes; but what for?"

"This: I've talked with many sailors in my time, and they all agree that when at the wheel on a dark night with no stars to range by—no that they have to steer by compass alone—they get into a sleepy, half-conscious condition, in which they calculate their pay, dream of home, hear voices, talk to people a thousand miles away, and—in fact, give every evidence to me of being in the subjective state. Yet they credit that when at the wheel on a dark night or 'steyr a straight course from pure habit or steyr a straight course from blind faith of muscle and brain. The compass, properly illuminated, by-passes them. But there must be an engineer around." He spoke meaningfully at the sub-pilot, who left the party with a grin on his face.

"Go ahead with your experiment," he said over his shoulder. "I prefer sleep."

"Finnegan's a good fellow," said Mr. Clarkson. "I'll try him in the first watch. It'll be a dark night."

**Through the Fog**

It was more than a dark night. It was foggy; and the big steel hull-ship ebbed through it with a dozen lookouts posted about the deck from right to left. Mr. Felton, near the bridge himself, to right, stood bleaker of darkness ahead. On the other side of the binocular stood his assistant, a was to look at the compass and say nothing. Though not a watch officer, Mr. Clarkson was on the bridge, as were the surgeon and pilot-house—there he had gone grudgingly—a quarter-master, kept watch beside the door to relieve Finnegan at a second's notice.

"How long, doctor," asked the executive

On October 1, 1903, a regular stock model Columbia 24 H.P. Gasoline Touring Car reached New York City from Chicago, having covered 1,277 miles in 76 hours (netal elapsed time), establishing the greatest of road records. During this wonder-ful run not a repair was made to the machine other than stopping a piston.

### LOW-RATE ROUND-TRIPE EXCURSION TO FLORIDA.

For the benefit of tourists, the various railroads in Florida will sell on November 11 special excursion tickets from Washington for the following points at rates quoted—

Sarasota, Fla.	39 00
Bradenton, "	39 00
Ellenton, "	39 00
Palmetto, "	39 00
Manatee, "	39 00
Punta Gorda, "	39 00
Arcadia, "	39 00

These tickets will be good going on November 11 only, and to return within fifteen days, and will not be good to stop off in other direction.

In connection with these excursions, the Pennsylvania Railroad Company will sell one-way tickets to Washington at regular rates, from all stations on its line west of Philadelphia and Erie, together with exchange orders on the railroads west of Washington for an excursion ticket from Washington to the above-named points at rates quoted.

### BREAD MACHINE

tain, with full confidence in his officers, was asleep.

"Five bells struck, then six and seven; and the last half-hour of the watch was drawing to an end when the subalternant peeped into the binnacle and started them all with a yell.

"She's four points off her course," he said, earnestly. "What's the matter with you? Are you asleep?"

### The Command

Mr. Clarkson had been looking at Finnegan through the window a moment before. The old man had not changed his attitude. He still looked steadily at the compass with eyes that were wide open, yet dead—in the dimmed light. But now, as the subalternant's voice broke the silence, and the first lieutenant looked again, he saw Finnegan's face working convulsively, though his posture was rigid as before and his eyes still dead in the dim light from the binnacle. He sprang to the bridge binnacle and looked in.

"Finnegan!" he shouted. "Wake up! Stand by your wheel and bring her back to the course. Jump in there, quartermaster, and take the wheel!"

"Yessir, yessir," answered Finnegan, in the nervous tones of one suddenly awakened. Then the convulsions left his face and an anxious look came to it, while he ground the wheel over. Then the quartermaster hurried him headlong against the door of the pilot-house and seized the spokes. "Coming back, sir," he called, after a moment's scrutiny of the compass.

### "Hard Aport"

But at that instant an uproar of shouts sounded from the various lockouts.

"Ship dead ahead, sir," they cried. "Steaming dead ahead, sir—port the wheel, sir—for God's sake."

Mr. Clarkson took one look into the darkness and fog, then almost screamed the order to the quartermaster: "Steady as you go, 'hard aport' again. 'Hard over the wheel.'" Then he jammed the engine-room telegraph to "stop." The quartermaster spun the wheel, the rudder responded, and the ten thousand tons of steel shot past the stern of an equally large, but dimmer, ocean greyhound, from whose multitude of windows and headlights shone the light of a thousand electric bulbs—from whose decks, rising as the masts in the fog, came the shouts of startled men and the screams of women and children.

Mr. Clarkson moved the telegraph to "full speed ahead," and again directed the quartermaster to return to the course; then he called Finnegan from the pilot-house.

"You were asleep," said Mr. Clarkson, sternly. "What have you to say?"

"No, sir," answered Finnegan, "no, sir. I swear before God, Mr. Clarkson, I wasn't asleep. I know my watchin' off; I saw the lubber's point a-minut' over to starboard, but I couldn't see my binnacle, and I was a dead man. I know, but I couldn't move."

### An Unsolved Problem

"Finnegan"—and Mr. Clarkson's tone was very gentle considering the enormity of his offense—"go down, ask the main-deck surgeon to awaken the surgeon, and send him to my room. Then turn in."

An hour later, at the end of a long conversation between the surgeon and first lieutenant, the former said: "There is no doubt in my mind, Clarkson, that Finnegan put himself into the subjective state, and that his subconscious self took charge of him—that is, his subconscious mind had clairvoyant knowledge of the position of that steamship, out of sight in the fog, and simply prevented his muscles from acting until you commanded him to 'wake up.' That command awakened him, and the ignorant and very much limited objective brain took charge, and he moved the wheel."

"But," said Mr. Clarkson, "admitting this—what put him into this subjective and clairvoyant state? Was it whiskey or long gazing at the compass?"

The surgeon reached for a cigar, lit it, and puffed vigorously before replying. "I do not know," he said. "Neither, I believe, does any man on earth."

PISO'S CURE FOR CONSUMPTION

The Progress of Science

Thomas Edison's New Miracles

Mr. Edison is not a man given to making startling promises which do not result in performance, so that his claim of having at last solved the problem of generating electricity at a trifling cost for common use may be accepted as the announcement of an accomplished fact. And such a fact is little less than a miracle, for it means the production, at will, of an almost limitless and widely adaptable power. The electrical power which Mr. Edison has perfected after years of toil derives its power from a so-called fuel of marvellous potency. It will make it possible for the day laborer, as well as the millionaire, to light his home with electricity and have some sort of a motor vehicle. For a few cents a day light and power may be produced in sufficient quantities to supply the needs of any family, and the generation is so simple that any person of ordinary intelligence can act as engineer. In the inventor's own words, "you can wire your house for electric bells, tele-phones from room to room, or for anything electricity will do, and the batteries in your automobile will operate them. The cost is so trifling after you are provided with your plant that it is not worth mentioning. . . . It has always been my ambition to bring the uses of electricity within the reach of men of moderate means." Mr. Edison warns the public that there is yet much work to do (just before the harvest he has worn out) to be reaped. But the invention is perfected and the problem of saving electrical generation is definitely solved.

Why the Stomach does not Digest Itself

When we consider the extraordinary dissolvent potency which the juices of the human stomach possess in order to digest the strange assortment of substances that we are in the habit of putting down our throats, we wonder how it is that these juices do not turn the walls of the digestive tract and the whole digestive apparatus into chyle and clogs. The digestive tract is filled with ferments capable of dissolving food; but these ferments do not attack the intestinal walls nor the parasitic worms that inhabit its tube. Recent investigations conducted by E. Weizsäcker have shown that this immunity is due to the secretion by the living tissues of certain anti-ferments. The following interesting experiment was made: A mixture of fibrin and trypsin or pepsin was prepared and, after the addition of a small quantity of the juice of succinea or round worms, it was found that no digestion of the fibrin took place. The ferment did not attack the fibrin even when no trace of the juice of parasitic worms was added for an hour. It is thus not the living tissues that resist digestion, it is the juices that impregnate them, which they themselves have produced.

The Unity of Creation

"The nineteenth century," says Dr. Newcomb, in an article on the "New Problems of the Universe," in the current number of *HARPER'S MAGAZINE*, "cannot so it has done, set forth a new problem for this century to solve than it has ever itself succeeded in mastering. . . . The nineteenth century was marked by a separation of the sciences into specialties. But the great work of the twentieth century will be to combine many of these specialties. . . . The physical philosopher of the present time is discovering his thought to the demonstration of the unity of creation."

In this connection, it is interesting to note how many great problems seem to be resolving themselves into a sort of common denominator, the problems of electro-magnetic energy. Such problems as those of radium energy, auroral light, the manifestation of sun spots, the light and heat of the sun itself, the Heronian electrical waves, magnetic storms, electric waves, even the constitution of matter and the organization of life, all seem to be converging into his field of inquiry. The whole universe, indeed, has all come together spontaneously into his field of inquiry. It is fair to yield itself up to explanation, as far as it ever can be explained, by a process theory of universal electro-magnetic action.

## Immigrants and Music

By Charles Johnson

"IMMIGRATION under present conditions," said Commissioner Sargent, referring to the annual report just issued, "presents a serious problem. I am not an alarmist, but when I see hundreds of thousands of ignorant foreigners coming into our great cities every year, I think I can realize in some degree the danger that will come from their discontent and dissatisfaction, when there are no wages to be earned."

The report shows that, in the twelve months up to July 1, the tide of immigration overhauled all previous marks. The number of aliens entering the States exceeded nine hundred thousand; and every indication shows that, for the twelve months following, they will total more than a million.

What becomes of them? One interesting example came under my notice. Last summer I was up in the northern corner of Maine, where the fir forests pour down to the cold coast. They were building a trolley-line from opposite Portland up to Green-  
 arre. We had been having a good deal of folk music, and some one suggested a concert of Italian music by the Italian laborers. The invitations were delivered, and that same evening we had our first rehearsal. The accompanist found the Italians hard to satisfy. They finally decided that he could not play accompaniments, and took the matter into their own hands. Discarding the piano, they fell back on the primitive "under-song," or "burden," singing a wordless bass, as a background for the tenor solo. This was a revelation to every one who heard it, showing how a certain kind of orchestral richness may have existed in folk music, long before our modern harmony had any existence.

At the concert the next evening we had an audience of nearly two hundred to listen to Italian solos, duets, and quartettes, with and without the "monotonous under-song." Many of the songs were full of poetry, and all were sung with a dramatic verve that would be simply impossible for the self-conscious and untrained Anglo-Saxon. We had, among others, the love-song to "Marie," which is fairly well known; another, of high tragedy, the chorus of which was:

Proché (tradit' me?)  
 Proché (tradit' me?)

"Why did you betray me? Why did you fly from me?" a song as poignant and high-spirited as Burns's "Bonnie Doon." Another was frankly and delightfully comic, describing the wooing of a wifful daughter of Eve, of whom it is declared, at the end of every verse:

Dice No! jesus si!  
 Dice No! jesus si!

"She says No! but she thinks Yes!"

The general effect was very melodious and musical, and the notable thing was the great musical enthusiasm and varied resources of our singers, and, even more perhaps, the intrinsic value of the words of their songs. My great regret is that I did not copy several sets of words, but they are probably included in collections of Italian folk-music. We were riveted, however, in reviving among the hills of Maine a wave of Italian song that had reached for generations among the hills and valleys of Naples. For days after the roads and fields about Portland echoed with Italian folk-songs, producing an effect as charming as it was strange.

### By Way of Chicago

A FEW of one of the public schools in Chicago sends this communication to the *Illustrated*—in our school this morning an amusing dialogue took place.

A primary teacher of Chicago, wishing to impress upon her pupils the necessity of that way of you, yet I don't make any noise when I walk round the room."

"Perhaps," remarked little seven-year-old Kenneth, "you don't wear shoes."

"Oh, yes, I do," quickly replied the teacher. "Just look. Did you ever see any larger than mine?"

Kenneth surveyed them carefully. "Yes," he replied, slowly, "once,—in a show."

# THE PROUD PRINCE

BY

Justin Huntly McCarthy

Author of "If I Were King"

FOR SALE AT ALL BOOK STORES

A novel daring in its plot and  
 daring in its situations. A  
 dramatization of this book, now  
 being produced by Mr. E. H.  
 Sothern, has aroused the talk  
 of the entire country. Every  
 one is sure to discuss it—every  
 one must read it.

Illustrated with Pictures of  
 Mr. Sothern and His Company

## Experienced Canvassers Wanted

We can give remunerative, dignified employment to men and women in every city and village in this country—even to those who can spare but part of their time. We give four periodicals to work with, each distinctively the best of its class. Experienced canvassers, and all those who wish to increase their incomes, should write at once for what is perhaps the most attractive offer ever made.

HARPER & BROTHERS, FRANKLIN SQUARE, NEW YORK

OUTSIDE THE BREASTWORKS.

## Hawthorne & His Circle

By JULIAN HAWTHORNE

Author of "Love is a Spirit," etc.

The son of the greatest writer of romance yet produced in America, Nathaniel Hawthorne, has written in this entertaining volume his remembrances of his father and his father's friends. The author's standpoint is personal throughout, which adds greatly to the charm of the narrative. Little details of Hawthorne's life are recounted which have not been available to any other biographer.

Illustrated with Sketches by Mrs. Nathaniel Hawthorne, Portraits, Reproductions of Rare Prints, etc. Crown, 8vo, Ornamented Cloth, Untrimmed Edges, Gilt Top, \$2.25 net (postage extra)

HARPER & BROTHERS, PUBLISHERS, FRANKLIN SQUARE, N. Y.

## NORTHERN AUTOMOBILE

Built for speed, strength, style and comfort. The sturdy Northern ideally combines these qualities essential to a high-grade gasoline runabout. Not an experiment, but a proven leader in its class.

NORTHERN MANUFACTURING COMPANY, Detroit, Mich.

Los Angeles—Four Days from New York or Boston—By New York Central.

# HARPERS BOOK NEWS

BY PETER NEWELL AND  
LEWIS CARROLL

The author of immortal *Alice in Wonderland* wrote many merry poems in addition to "Jaberwocky" and "The Walrus and the Carpenter." Chief among these is "The Hunting of the Snark," known to all disciples of nonsense. These poems, gathered under the title of *The Hunting of the Snark*, and *Other Poems*, in themselves are a charming collection for any household; but, illustrated as they are by Peter Newell, they become invaluable to any family where children are. Yet why call the book a juvenile? Grown-ups who do not rejoice in Carroll's verse are in a very small minority.

## ORCHARD-LAND

Mr. Robert W. Chambers, one of our most brilliant novelists, a year or two ago wrote *Outdoorland*, a book for little folk which had great success. Mr. Chambers has just written a similar book called *Orchard-land*, which was published recently. In it the trees, birds, insects, and animals tell their stories to the same little children whom we knew in *Outdoorland*. Reginald Birch has made many beautiful pictures in color for the book.

## THE STORIES OF PETER AND ELLEN

These delightful tales for little folk are by the author of the well-known *Roggie and Reggie Stories* and *The Lovable Tales of Janie and Josie and Joe*. It is an entertaining book for very young children, full of simple, pleasing stories that can be understood without help from grown-ups, and of large pictures in bright colors.

## A NEW FAIRY STORY

One of the daintiest and most successful among the elaborately illustrated juveniles is Bennet Mussen's *Maisie and her Dog Snip in Fairyland*. For charming simplicity and rare adventure the book commands comparison with *Alice in Wonderland*. F. Y. Cory is at her very best in the illustration of the book—and that is saying a great deal.

# You Can Play Tennis in California

all the year around. Outdoor sports that are elsewhere abandoned before Christmas are most popular there throughout the winter.

Nowhere except in California can one behold such opposites. Millions of roses bloom in midwinter at the foot of some gray old mountain, the summit white with its perpetual crown of snow. The sunset tints fall softly upon luxuriant foliage in the valley and touch with golden shafts of light the hilltop's canopy of frost. In this land of summer the sting of the North King is forgotten, but his handiwork glitters in the California sunshine. It is none too early to plan your trip now. California is easily accessible from Chicago. The trip can be made quickly and comfortably and at comparatively slight expense by any of the three through trains of the

## Are You Looking for a Location?

We want the names and addresses of 10,000 readers of **HARPER'S WEEKLY** who are dissatisfied with their present surroundings and are anxious to make a change for the better.

We cannot undertake to find employment for them, or to assist them in starting in business, but we can—and will—help them to the extent of giving them such information as will be of great benefit.

The condition is this: Arkansas, Oklahoma, Indian Territory, and Texas need more men. In these states and territories are vast areas of unimproved and unoccupied land—land which does not yield the crops Nature intended it should. The same thing, in a different way, prevails in the towns and cities. Few lines of business are adequately represented. There are openings of all sorts—for mills and manufacturing plants; for drug, grocery, and dry goods stores; for banks and lumber yards. Mechanics are needed. Professional men are in demand.

The other side of the story is this: The East is overcrowded. Competition is keen. Expenses are high. Opportunities are few.

The common-sense solution of the problem is to induce twenty or thirty thousand men and women who now live East to move West. And that is what we are trying to accomplish.

"Going West" is not half as big an undertaking as one would suppose. Oklahoma and Indian Territory are less than two days from Chicago, and have been settled long enough to enable residents to provide themselves with all the comforts and most of the luxuries of life. The towns are well built, the people are law-abiding, and the climate has no superior anywhere on the continent. The winters are mild, and while the summers are hot the heat is not exhausting and the nights are always cool.

Here is my suggestion: Write me a letter stating what line of business you wish to engage in, how much money you have, and where you prefer to locate. As soon as I can, I will place before you full and complete information as to desirable locations. You can then decide for yourself whether or not you wish to "try the Southwest."

The Rock Island System has no lands to sell, and its only object in encouraging immigration to the Southwest is to do its share in the up-building of that section.

**JOHN SEBASTIAN**, Passenger Traffic Manager, Rock Island System, Chicago

# SOME REMARKABLE FICTION

## Cherry

by **BOOTH TARKINGTON**, author of "The Gentleman from Indiana," "Monsieur Beaucaire," etc.

A sparkling romance, in which Mr. Sudgeberry, a conceited and hopeless prig, tells of his love for charming Sylvia Gray, whose beauty, wit, cherry ribbons dazzle and ensnare him. Sprightly, clever comedy.

Illustrated in color by A. I. Keller.  
Ornamented cloth, gilt top, \$1.25.

## Letters Home

by **WILLIAM DEAN HOWELLS**.

An exceedingly interesting story told in letters written home by various people in New York. They not only describe New York life from novel viewpoints, but unfold to the reader a fascinating story of the American metropolis.

Uniform with Mr. Howells' other works, \$1.50.

## Judgment

by **ALICE BROWN**, author of "The Mannerings," etc.

Shall a woman forgive a man for the sins of his early life? Are there as many judgments to be passed as there are such cases? In this novel a woman has to decide the question for herself, and she does it in her own way. She meets a man; she loves him—and then she learns his history. And from the story the author makes a live heroine of a fictitious one.

Illustrated by W. T. Smedley.  
Ornamented cloth, \$1.25.

## The Heart of Hyacinth

by **ONOTO WATANNA**, author of "A Japanese Nightingale," etc.

An exquisite love story of Japan, told with tender sentiment and dainty comedy. Beautifully bound, uniform with *A Japanese Nightingale*; lavender cloth, with gold and colored decorations, pictures in color, and marginal drawings in tint by Japanese artists.

Deckled edges and gilt top, in box, \$2.00 net.

## The Relentless City

by **E. F. BENSON**, author of "Dodo," "The Book of Monty," etc.

A novel of New York. It tells of English and American society, the scenes laid in London and in New York—"the relentless city"—and in charming country resorts. The plot concerns the wedding of an English nobleman to an American heiress and the exciting complications which follow.

Ornamented cloth, \$1.50.

## The Maids of Paradise

by **ROBERT W. CHAMBERS**, author of "Cardigan," etc.

The maids of Paradise, an idyllic French village, live in the stirring days of the Franco-Prussian War. Fighting is rife through many of the pages, but the dominant note is love, and 'tis the happiest romance that the author has done.

Illustrated by André Castaigne and others.  
Ornamented red cloth, \$1.50.

## Hesper

by **HAMLIN GARLAND**, author of "The Captain of the Gray-Horse Troop."

A love story of the West, strong and virile, in which Mr. Garland is at home amongst his wild mountains, plains, mining camps, and cattle ranches. The life is described in all of its primitive vigor and disregard of conventions. The work is one of remarkable realism and dramatic intensity—a worthy successor to *The Captain of the Gray-Horse Troop*.

Ornamented cloth, \$1.50.

## Dr. Lavendar's People

by **MARGARET DELAND**, author of "Old Chester Tales."

Similar to this latter book, these stories of a quiet old town and its quaint but lovable people are told with power, fluency, and mastery precision. Dr. Lavendar appears in the stories as the friend and father of his people, whose joys and sorrows are even as his own.

Illustrated by Lucius Hitchcock.  
Ornamented Cloth, \$1.50.

## Judith of the Plains

by **MARIE MANNING**, author of "Lord Alinghton Bonnet." etc.

A romance of the plains at the end of the cattle days in Wyoming, rich in humor. Judith stands out against the background of cattle stealing, cattle stampeding, and lynching, a noble figure, throbbing with passion and life, dominating the action of the tale and carrying it to a thrilling climax.

Ornamented cloth, \$1.50.

## Lady Rose's Daughter

by **MRS. HUMPHRY WARD**.

Here is a book which, when first published in the spring of the year, was read, it seemed, by every one who reads novels, good, bad, or indifferent. Yet now, in the heart of the fall-publication season, the public continues to buy *Lady Rose's Daughter* even more eagerly than it did nine months ago.

Illustrated by Howard Chandler Christy.

## COMMENT

If Tammany can furnish the sort of government New York wants, New York will have that sort of government after New Year's. Perhaps Tammany can do it; perhaps not. In the doubt lies hope. At any rate, Tammany's chance has come again, and, on the whole, it is a very good chance for Tammany. Its leader, Charles Murphy, has won a conclusive victory over all his rivals and foes, inside and outside of his organization. He has beaten Finney, beaten McLaughlin, beaten Devery, and beaten all the mutinous subchiefs of the Tammany fold who were ready to defy him the moment it became safe. Murphy comes strong to the throne in Manhattan. His victory is first to be considered; let us think of it as longly as we may. He drove out Devery. That was a courageous action at least. He chose for Comptroller Mr. Grout, a man of proved ability, who will doubtless administer the office at least as well in the two years to come as in the two years past. He chose for Mayor a presentable man, of good private character, good manners, and, we doubt not, good intentions. Mr. McClellan has borne himself well in a trying campaign. We don't doubt that he means to be as good a Mayor as he can, or as Charles Murphy will let him. How good that will be we must wait to see. It seems to be the desire of a majority of the people of New York that certain individuals shall enjoy special privileges, and that the laws shall be enforced with reservations. Under Murphy the laws will doubtless be enforced in that way, and favors will be granted at the cost of the public to persons whose deserts seem to the boss to warrant it. If that is what the people of New York want, they are going to have their desire. We cannot believe that there is any general mourning among the great corporations, whose interests are mixed up with those of the city, because Tammany has won. It has always been possible to do business with Tammany. That Murphy and McClellan will forthwith contrive and promote the reformation of the police force, the protection of all forms of vice as a means of political revenue, and the prostitution of all branches of the city government to purposes of greed and graft we shall not believe until we have to. After all, Tammany has had a lesson. We shall have time enough to see whether it has learned any part of it.

We discuss elsewhere at greater length the result of the elections, so far as this is deducible from the early returns of Wednesday, November 4. We desire to say here that, while it was impetuous for the fusionists to refuse a renomination to Mayor Low if he desired it, yet if that gentleman had himself declined to run again, and had urged his friends to put forward an Independent Democrat, he would have rendered it impossible for the adherents of Tammany Hall to pretend that the defeat of their candidate would imperil the success of the Democracy throughout the nation in 1904. That the argument has but little weight is known to well-informed residents of the city, for Mr. Van Wyck, a representa-

tive of Tammany Hall, was Mayor in 1900 when Mr. McKinley carried the State of New York by a plurality of more than 143,000, and Mr. Low was Mayor in 1902 when Mr. Coker carried the city by a colossal majority. It is true, nevertheless, that, outside of the city, and especially in distant parts of the Union, many doubtful voters might be influenced by the fact that the voters of New York had been afraid to confide their municipal interests to a Democrat. The utmost was made of this argument by Mr. McClellan's supporters, and it probably exercised a good deal of influence. We must, on the other hand, admit that nothing could be more reasonable than Mayor Low's desire to see his administration stamped with popular approval. He has tried to do his duty, and he was entitled to his reward. Nor was it, perhaps, to be expected that, as a Republican, he could feel particularly anxious that the announcement should go forth on the eve of a national election that Democrats, even of the Independent type, had gained control of the commercial metropolis.

Another point must not be lost sight of by those who assert that the Citizens' Union should have ignored Mayor Low's claim to recognition and insisted upon nominating an Independent Democrat. The Citizens' Union had to reckon with Mr. Platt, who defeated their candidate in 1897 by putting forward General Tracy on a regular Republican ticket. It is by no means certain that he would not have pursued a similar course this year had an Independent Democrat been named by the Citizens' Union. Under all the circumstances, there seems to have been nothing for the fusionists to do but to renominate Mayor Low, in spite of the fact that he had ceased to be popular among German-American citizens and had given offence to some powerful corporations. We add that one of the best, if not the best, of Mayor Low's appointments, was that of General Greene to be Police Commissioner, yet the latter's connection with the Asphalt Trust presented a weak point in his armor, upon which the opponents of the Low administration concentrated their attack during the last week of the canvass. By thus assuming the aggressive against General Greene, and by their overthrow of Mr. McLaughlin in Brooklyn, the leaders of Tammany Hall managed somewhat to improve their prospect of victory at the ballot-box.

When Mayor Van Wyck went out of office on January 1, 1902, there was a general expectation that some, if not many, of his appointees could be punished for malfeasance in a criminal court. The expectation has been disappointed. The conviction, however, remains unshaken that the leaders of Tammany Hall used their control of the municipal government for the purpose of making money. How could this purpose be fulfilled without entanglement in the meshes of the criminal law? This is a question of keen and abiding interest to taxpayers, and Mr. Alfred Henry Lewis has undertaken to answer it in a book entitled *The Boss, and How He Comes to Rule New York*. This book purports to be an explanation of the methods by which "graft" is secured and punishment avoided when the government of New York city is in the hands of Tammany Hall. Mr. Lewis begins his exposition by saying that each year of the Van Wyck administration a valuation would be made of the personal property of the residents of the city. Ostensibly this valuation would be a reasonable one; nevertheless, in the course of a few months it would be cut down to less than one-ninth of the estimated total, on the affidavits of the individuals whose property had been appraised. Mr. Lewis gives us to understand that those persons whose personal-property tax bills were thus reduced contributed a fraction of the sum saved to the representatives of the machine. Now there is no doubt that this method of procuring funds was practised under the Tweed régime. The records of the Tax Commissioners will show, for instance, that, not long before Tweed's overthrow, the valuation of the personal property of a citizen who was then the largest wholesale dry-goods merchant in the city of New York was cut down to an insignificant fraction of the original figure, through the interposition of a Republican lawyer suspected of being one of Tweed's agents.

Mr. Lewis goes on to assert that of the \$20,000,000 which, in round numbers, were annually allotted to official salaries, five per cent. was annually assessed for the benefit of the machine, and that of the one million dollars thus accruing

two-thirds found its way to district leaders of Tammany, and the other one-third into the general coffers—that is to say, into the hands of the chairman of the Finance Committee, who was never called upon to render an account of his receipts and disbursements. Of the \$40,000,000 annually expended on supplies for public needs, one-fifth, according to Mr. Lewis, went to the machine under the guise of "commissions." The further avowal is made that of the \$65,000,000 representing the yearly payments on contracts, the machine received at least forty per cent. How can these charges be proved? They cannot be proved, we are told, because the only persons who could prove them were themselves accomplices in the swindling of the city. Mr. Lewis goes on to enumerate other sources of illicit revenue. He points out that a guaranty company was organized for the purpose of bonding officials, contractors, and purveyors of supplies. As the annual charge was two per cent. on the amount guaranteed, and as the aggregate guaranteed amounted to nearly one hundred million dollars, the resultant profit for certain representatives of the machine would not fall far short of two million dollars. As regards face-banks, pool-rooms, and disorderly resorts, Mr. Lewis alleges that the monthly ransom paid by each ran from fifty dollars to two thousand dollars, and that the aggregate return from this source was about four million dollars. Large sums are also said to be paid by corporations doing business in New York for the purpose of securing favors or averting extortion. We are assured that many millions were obtained in this way during each year of the Van Wyck administration. We need not say that Mr. Lewis's charges will hurt nobody in particular, so long as they are unaccompanied by legal proof. They might suggest, however, to a fusionist municipal government some fruitful lines of investigation. There is one question, nevertheless, which taxpayers would have been glad to hear Mr. Lewis answer. If it be true that so much was stolen under the Van Wyck régime, and that absolutely nothing is stolen under a fusionist administration, how does it happen that the budget approved by the Board of Estimates on October 31, 1903, was the largest ever made up for New York city? The total figures are \$106,674,955, which represent an increase of \$9,555,923. If every dollar received from the taxpayers during the last two years has been honestly expended on salaries, supplies, and contracts, why is so large an addition to the budget required? No doubt an explanation can be given, but we wish that it had been forthcoming.

The important news of the secession of Panama from Colombia as a consequence of the rejection of the Hay-Herran canal treaty by the Colombian Congress was not unexpected. That Panama would be likely to take such a course when the ratification of the treaty became hopeless has been repeatedly suggested in this paper. The canal means vastly more to Panama than to any of her sister states whose votes threaten to deprive her of it. That she was convinced that she ought to have it was well understood. It appears now that she has the courage of her convictions. If she can maintain her position as a separate republic she can not only insure the building of the canal, but can keep for herself the considerable emoluments that will result from the concessions she will be able to make. In the course of another week fuller and further news may indicate how this interesting situation will work out.

Secretary of the Treasury Shaw, speaking at Boston on October 29, advocated a subsidy for American ships. It is well known that a bill framed for the purpose was introduced in the Fifty-seventh Congress, and had the earnest support of Senator Frye and Senator Hanna, but was nevertheless defeated. Mr. Shaw says that he had the experts of the Treasury Department compute what it would have been the cost to the nation of that bill had it become a law. They showed, we are informed, that, under the provisions of the bill, not more than nine million dollars could have been expended in any one year. Mr. Shaw contrasted that sum with the large amount now annually paid by us to foreign subsidized ships, in order to get our foreign commerce carried. He put the amount thus annually paid at two hundred million dollars. What Mr. Shaw omits to mention is the fact that the subsidy bill was killed, not through Democratic opposition, which, taken by itself, would have proved futile, but through the refusal of influential Republican Senators—among them Sen-

ator Allison—to support it. There is no reason to believe that the leaders of the Republican party will permit final action to be taken on the subsidy bill at either the extra session or the first regular session of the Fifty-eighth Congress. Should Mr. Roosevelt be elected President in November, 1904, the bill may be taken up and passed at the second, or long, regular session. No measure that would put the Republican party on the defensive during the approaching campaign has any chance of being passed. The same determination to do nothing that may require apology or explanation on the stump is expected to smother any project to expand the currency or render it more elastic. It is also certain that economy will be the watchword of the Republican majority from November 9 until the first regular session of Congress ends. The virtual disappearance of the surplus is a warning that Mr. Roosevelt's advisers will be sure to heed.

It would not be easy to exaggerate the importance of the Citizens' Industrial Association of America, the formation of which was completed on October 30, at Chicago. Delegates from nearly sixty cities, ranging geographically from San Francisco to New York, and including several large towns in Canada, took part in the convention by which the society was organized. Not only is this association national in scope, but it is catholic as regards the interests represented. It admits employees as well as employers, and its fundamental purpose is to establish harmony between capital and labor. Its aims are set forth in detail by the constitution and by-laws, which state the object of the organization to be to assist by all lawful means the properly constituted authorities of the State and nation in maintaining and defending the supremacy of the law and the rights of the citizen. Also, to assist local, State, and national associations of manufacturers and employers in their efforts to establish and maintain industrial peace, and to create a sentiment in opposition to all forms of coercion, violence, and intimidation. The resolutions which were adopted, with a close approach to unanimity, set forth that while determined to carry on a firm and uncompromising contest with the abuses of labor-unions as now constituted and managed, the association, at the same time, acknowledges the right of workmen to combine, and admits that their combination, when rightly effected and conducted, may prove highly useful to the community at large. That is to say, the Citizens' Industrial Association of America declares that while it is resolved to afford ample protection to all seeking to earn a livelihood, and would, therefore, favor the "open shop," it will set in the true interests of the great mass of working-men themselves. Mr. David N. Parry, of Indianapolis, was elected president without opposition. That the association will be well provided with funds is evident from the provision that all members of the association shall pay an initiation fee of \$25 to \$100, and annual dues which shall be not less than \$10 nor greater than \$200. The large resources thus secured will be employed primarily to extend the organization of the movement throughout the country. Mr. C. N. Chadwick, of Brooklyn, one of the speakers in the convention, insisted that no initiative was intended to encroach upon the right of the new association, which was organized with no other intent than to put down tumult and disorder, and uphold the constitutional right of every American citizen to work when, where, and at what wage he chooses. The action taken at Chicago means, of course, that hereafter labor-unions will find themselves confronted all over the United States with a mighty organization formed for the specific purpose of putting an end to boycotting and to the intimidation of non-unionist workers.

The irritation caused in Canada by the award of the Alaska Boundary Commission might possibly have some serious consequences but for the tempting prospect opened by Mr. Chamberlain of a preference for Canadian wheat in the British market. The Halifax *Chronicle* has not hesitated to say that the Alaska episode has made it clear that the existing relations of the Dominion to the British Empire cannot be continued much longer. The Nova Scotia paper goes on to declare that there is much to be said in favor of asserting complete political independence for Canada. Such a step would free her from the danger of being entangled with the United States on account of her relation to Great Britain, and at the same time would secure for her the benefit that would accrue

from the application to her of the protection of the Monroe Doctrine. More important than the utterance of any newspaper was the avowal made in the Ottawa House of Commons by Sir Wilfrid Laurier, the Premier of the Dominion. He had arrived, he said, at the conviction that, so long as Canada remains a dependency of the British Crown, the powers that Canadians now have are not sufficient for the maintenance of their rights. They must ask the British Parliament, he added, for more extensive power, so that hereafter, if the Canadians should ever have occasion to deal with a boundary question, they can deal with it in their own way. This means, if it means anything, that Sir Wilfrid would ask the British Parliament so to amend the British North-America Act of 1867 as to give the Dominion of Canada the right to conclude treaties in her own name, and through her own diplomatic agents. We scarcely need point out that the concession of such a right would be tantamount to the acknowledgment of entire political independence on the part of Canada. We do not believe, however, that Canadians will go so far, unless Mr. Chamberlain's scheme of a preferential tariff should come to be looked upon as hopeless.

It may be that Senator Gorman found it indispensable to inject the race issue into the Maryland canvass this year in order to elect his candidate for Governor. As we have often pointed out, the negro vote is an important factor in New York, New Jersey and Indiana, but, of late years, in those States, it has been divided to a considerable extent between the two great political parties. Senator Gorman's introduction of the race issue into the Maryland canvass provoked the Washington Suffrage League, an influential association of colored men, to send circulars to negro voters in all the States where elections took place this year, urging them to vote the Republican ticket, on the ground that negro suffrage is in peril. The same association has issued a call for a national negro suffrage convention, to be held in Washington on December 14 and 15. We repeat that there will be time enough for Democrats to raise the race issue when the Republican administration introduces in Congress a "force bill," for the purpose of compelling Southern States to respect the Fourteenth and Fifteenth Amendments of the Federal Constitution. We would not for a moment deny that the cry "No force bill; no negro domination!" had much to do with the defeat of President Harrison in 1892, but we submit that no proposition of the kind has been given in the Fifty-seventh Congress, or is likely to be offered in the Congress that convenes on November 9. Not only have long-headed Republicans ceased to talk about force bills, but some of them have openly expressed regret for the passage of the Fourteenth and Fifteenth Amendments.

The statement issued by the Federal Treasury on October 31 will tend to check the discussion of the disposition of the surplus. Undoubtedly there has been for some years a large excess of revenue over expenditure, and, so far as this excess was due to customs duties, it represented a continual drain of currency from the pockets of the people into the Treasury vaults. Without some change in the existing law, the surplus arising from customs duties cannot be brought back into circulation. There seems to be no likelihood, however, of any further increase of the surplus. The receipts and expenditures of the Federal government during the first four months of the current fiscal year practically balanced one another. The surplus for the same four months of the last fiscal year amounted to about \$18,500,000, including \$5,000,000 of anticipated interest. The present shrinkage of revenue is due to a decline of the customs receipts, especially in the sugar and steel schedules. There is no reason to expect a material change in this respect during the ensuing twelvemonth. Moreover, the falling off in the importation of articles of luxury is likely to be even more noticeable six months hence than it is now. As regards the crops, it seems to be now generally admitted that this year's yield of cotton will fall considerably below the estimate which was current a fortnight ago. A trustworthy computation of the wheat harvest will not be forthcoming before December 10, but the news from some of the most important wheat-producing States is encouraging, and it now looks as if the output of this cereal would not drop below that of 1902 by more than a few million

bushels. It appears, from an estimate just issued by the Director of the Mint, that the gold output of the United States for the calendar year 1902 was 3,570,000 ounces (valued at \$80,000,000), which represents an increase of 64,500 ounces over the yield of 1901. The output of silver during the same twelvemonth was 55,500,000 ounces, or 298,000 ounces more than in 1901. The coinage value of the silver produced in 1902 was \$71,757,575, but the commercial value was only \$39,415,000. Obviously, there are some suspicious features in our economic situation, but, on the whole, it seems probable that the readjustment of values and of wages rendered necessary by overproduction and overpeculation in certain fields of enterprise is by no means completed.

The latest news from the Far East is, to some extent, reassuring, and indicates an interposition on the part of England and France in favor of the maintenance of peace. As we have formerly pointed out, neither Russia nor Japan is willing to commit an overt act of aggression, lest the aid of an ally be lost. The treaty between Russia and France on the one hand, and that between Japan and Great Britain on the other, provide that assistance shall be rendered only in the event of one of the signatories being attacked by two or more powers. It follows *a fortiori* that no signatory could claim co-operation if, instead of being attacked by even one power, it was itself the aggressor. Now, neither Russia nor Japan feels absolutely certain of success in a naval contest, and both powers, therefore, hesitate to put themselves in a position where they would forfeit the right to call on an ally for help. As things are now, both France and England are desirous of avoiding entanglement in a conflict that would compel them to oppose one another. The only way of averting such an unwelcome collision is to exert moral pressure on their respective allies: to make the Czar and the Mikado understand that the Russo-French and Anglo-Japanese treaties will be strictly construed. Under the circumstances, it is manifest that neither Japan nor Russia would feel like beginning a war. The visit of Count Lamsdorff, the Russian Minister for Foreign Affairs, to Paris has convinced him, apparently, that while France will support her Russian ally, should she be attacked by two enemies at once, she will not transcend by a hair's breadth the precise terms of her treaty with the Czar, provided she would thereby risk a collision with England. It is a curious fact, as showing the influence still exerted by royal personages on public affairs, that, but for the visit of King Edward VII. to Paris, and the subsequent establishment of extremely friendly relations between France and England, a war between Russia and Japan would probably have broken out ere now.

Count Lamsdorff's visit to President Loubet and Premier Combes is a further development of that new phase of European politics, several factors in which we have from time to time commented on. It is of a piece with the creation of jealousy between Austria and Russia, in the face of the dire need of the Macedonians; with the visits of King Edward to Rome and Paris; with the better relations, thenceforward resulting, between England, France, and Italy; and in an even closer degree with the meeting of King Edward and the Emperor Franz Josef. To speak more directly, Count Lamsdorff has gone to Paris to strengthen and advance the Austro-Russian policy in Turkey, the main obstacle to which lies in the interested opposition of the German embassy at Constantinople. In writing of the new Macedonian programme, we said that its success largely depended on the western European powers acting as a counterpoise to Berlin, and Count Lamsdorff shows how well he realizes this by his visit to Paris, bearing a message which frankly acknowledges, and rejoices in, the cordial relations between France and England, since, without the help of both, the Macedonian reforms are doomed beforehand. It must be remembered that France and England, as well as Russia and Austria, and, for the matter of that, Germany also, were all pledged by the Berlin Treaty to introduce just such reforms in the three vilayets and Adrianople twenty-five years ago; and this promise has been violated year after year, owing to dissensions and jealousies between the powers. To remove this stumbling-block, there was needed just such a general establishing of truce and more honest

relations among the powers as was foreshadowed, though not effectively achieved, by the Hague conference; such relations resting in the same connection is the declaration of Mr. Macdonald in favor of England's more effective intervention in Mr. Gladstone. Mr. Asquith may, perhaps, be Foreign Secretary in the next Liberal cabinet.

The death of Theodor Mommsen removes almost the last of a great generation of Germans, though, indeed, Mommsen was by birth a Dane, rather than a German, as was also Von Meibler. Both belonged to the great cycle before "Bismarck made Germany great and the Germans small," as Sir Robert Morier puts it. Mommsen further represented the iconoclastic epoch of criticism, which inclined to disbelief everything which cannot be demonstrated by legal evidence. He was of the school whose Homeric criticism has been happily parodied by Homer, but by some one else of the same name. Much of the so-called Hübner Criticism of the Old and New Testaments, in the hands of men like Strauss, took on a similar coloring, and, in the same spirit, Theodor Mommsen played havoc among the early kings of Rome, almost as great havoc as was played by one of them among the poppies of his garden. The peculiar bent of his mind came from his study in inscriptions, and his editorship of the great *Corpus Inscriptionum*, and he came to his *History of Rome* imbued with the idea that only that was to be accepted as true for which there was documentary or monumental evidence. But the chief value of his work is when we come to fully historical times, where his keen insight and clear sense enabled him to analyze characters like Caesar, Cicero, and Pompey in a manner full of originality and force. Like his great contemporary Virchow, Mommsen was not merely a servant, but was also a citizen, full of the best old German traditions of liberty and responsibility, and his uncompromising spirit of independence brought him more than once into collision with the authorities. He was a noble representative of a great type, which becomes rarer every year.

At the very hour when Mommsen, the historian of Rome, and the editor of the *Inscriptiones*, was dying, the Gallery of Inscriptions in the Vatican caught fire, as though igniting a classic pyre to the departing hero. Happily the loss to the Roman collections was not very great, for any serious damage to the Vatican would mean a loss irreparable for Christendom. Whether we think of the invaluable early Christian manuscripts in both Greek and Latin, or the Renaissance paintings of the great Italian masters, we cannot but be heartily grateful that the damage was so small; and it is pleasant to record that the fire made an occasion for Pope Pius X. to impress his personality, courage, and possession of mind on the Roman populace. Here, as elsewhere, there are symptoms of better relations between the two powers which still divide Rome.

It would seem as though the efforts of the American Federation of Musicians to discipline the Marine Band of Washington were somewhat disproportionate to the possible result. The Marine Band is about the only government band which competes with the union musicians to any important extent, and if the organized musicians succeed in destroying its efficiency, or driving it out of their field, they will not be so very much ahead. Twenty-five hundred musicians refused to play for the parades in the Chicago centennial celebration because the Marine Band took part. The wages lost on that one occasion must have amounted to a greater sum than the members of the federation have lost by the Marine Band's competition for many years. The federation does not demand that the band shall disband, nor even that it shall play only in the government service. It can play if it plays gratis. The union objects to its playing for money in competition with private bands. It is the enjoyment of this privilege that has brought in money enough to make the band the efficient musical organization it is. Government pay is not liberal enough to retain musicians of the degree of skill the band needs. The federation has asked Secretary Moody to forbid

the band from accepting contracts from private parties, and the Secretary has excused himself from complying. Now Congress is to be asked to pass a law on the subject. The difficulty for the union.

If it is permissible to find amusement in anything pertaining to so grim a miscarriage of justice as the acquittal of James Tillman for shooting Editor Gonzales, food for mirth might be found in the letter of W. J. Risinger, one of the jurymen who found Tillman not guilty, to the *Spartanburg Journal*. Mr. Risinger complains of the criticism which the jury's verdict has called out. Declaring that the "annals of history" fail to disclose a simple conviction of any man for shooting an editor, he deprecates the apparent desire of the press for "more blood, which can be found by walking in the footsteps of N. G. Gonzales." The State and "the masses" being apparently satisfied with the verdict, the press, he thinks, ought not to complain. And he adds: "If I was an Editor, and not satisfied with the Defendant's acquittal which would be more patriotic to my fellowman than to sit in my sanctum and abuse him with my pen. In extending if I should prove the unfortunate one in the affair not to call it murder but suicide by the abuse of liberty with the wrong man." Mr. Risinger is evidently a survival, and in some respects a delightful one, of the good old times. That a person of his sentiments should bring about a miscarriage in a jury of which he was a member would not be surprising, but that the whole jury in the Tillman case felt as he did about the veracity of shooting editors does seem extraordinary. He seems to be an honest man according to his lights, but his lights are the lights of the eighteenth century.

President Merrill of Colgate University finds much fault with football as at present played, as being a game that is seriously deficient in the element of sport, but he credits it with some virtues, and, among others, with cultivating observation. President Eliot, writing in the *Atlantic Monthly* about schools, mentions it as one of the ill results of the great increase of interest in sports among schoolboys, that the boys' powers of observation are less cultivated than formerly. That children should learn to observe he considers of great importance, and thinks boys fortunate who go to school in the country, where animals, tame and wild, and natural growths and objects provoke their attention. But he finds that the present overpowering interest in sports draws away the minds of the boys from nature study, and as for the observation that games develop, he says it becomes automatic, and therefore not of much educational value. Not that he disparages sport as sport, for he does not.

No doubt the best speaker who took part in the recent political campaign in New York was Mr. Bourke Cockran. He is a born orator with a wonderful voice, a rare and edifying command of language, the power to think on his feet, and most of the other talents and arts that oratory comprises. In the recent Mayor's race in New York he spoke for Tammany. At the Mayorality campaign preceding he spoke against it. He usually speaks on one side or the other whenever an important campaign is on. We hope he will continue to do so. His art is highly remarkable. His display always entertains and edifies thousands of listeners. But why should Mr. Cockran speak only on one side in a given campaign? His disposition to favor each side turns about in different years is very fair and friendly, but why not speak for both sides in each campaign? That would be friendlier and fairer still. The same brass bands play for both sides every campaign. Mr. Cockran possesses and plays upon a rarer and more delectable instrument than is in use in any brass band in town, but he only plays for one party in any given season. It restricts himself. He could certainly have made better speeches for Dr. Low last month than for Colonel McClellan, but he only spoke for McClellan. We don't think he does his talent justice when he restricts it in that way.

## The Municipal Election in New York City

There has seldom been a more sweeping victory than was won by Tammany Hall on Tuesday, November 3, in New York city. Not only was Mr. George B. McClellan elected Mayor by more than 50,000 plurality, but the fusionist ticket was beaten in every one of the five boroughs, except the borough of Richmond, where it secured a very small plurality for Mr. Cromwell, who headed it. Besides the Mayor, the fusionists have lost the Comptroller and the President of the Board of Aldermen, and the presidents of the boroughs of Manhattan, Brooklyn, Queens, and the Bronx. The result is that, whereas the fusionists now have fourteen out of sixteen votes in the Board of Estimates, it will have during the next two years but one vote. In the next Board of Aldermen Tammany will have fifty-five votes, against twenty-four votes belonging to Republicans and fusionists. In a word, Tammany Hall has secured absolute control of the American commercial metropolis for two years to come.

What do these facts signify? We do not concur with Police-Commissioner Greene in thinking that they prove that the people of New York do not like the sort of administration they have had since January 1, 1892, but prefer a "wide-open" town. We do not believe that the fusionists mean anything of the kind. We believe that the majority of independent Democrats voted the Tammany ticket for the following reasons: first, they thought, whether rightly or wrongly, that the election of a Democratic Mayor in New York this year would help their party to carry the State of New York for a Democratic candidate for the Presidency in 1904; secondly, they thought that Messrs. Grout and Foran had been proved to be honest men, and could be trusted to remain honest, notwithstanding their acceptance of nominations from two political parties; thirdly, they regarded Mr. George B. McClellan as an upright and able man, who would not disgrace his personal and family record, but would make the most of a splendid opportunity. The astonishing result in Brooklyn, which, in spite of Mr. McLaughlin, gave pluralities to Messrs. Grout and Foran, as well as to Mr. McClellan, although, two years ago, the same borough gave Mr. Low a plurality of more than 25,000, proves that the voters could not be persuaded that they were threatened with an invasion of "red lights," or that any one of the three gentlemen named was unworthy of the confidence of his fellow citizens. As to the willingness to put faith in Mr. George B. McClellan, it must be acknowledged that, although a microscope has been applied to his public and private life, not a single net or weed that could be criticized has been discovered, except the over-zealousness and indiscriminate approval of the Van Wyck administration expressed by him in 1891. That he has no intention of following Mr. Van Wyck's example may be inferred from the fact that, instead of going to Lakewood, for the purpose of distributing appointments under his forthcoming administration, he announced on the evening of November 3 that he should proceed at once to Washington, there to discharge his duties as a member of the Fifty-eighth Congress; and that there would be time enough to talk about appointments after he had taken the oath of office as Mayor of New York.

What, then, is the conclusion to which the municipal election in New York city must lead? It is this: District-Attorney Jerome was right when he said that if the Citizens' Union really desired to beat Tammany Hall in a year preceding a Presidential contest it must nominate an independent Democrat. We have no doubt that the Citizens' Union would gladly have taken Jerome's advice, if Mayor Low had rendered such a course possible by declining a re-nomination. We are also inclined to believe that Mayor Low, had he been left to himself, would, in his single-hearted devotion to reform, have accepted the desired declination. If he refrained from taking that step it was because he yielded to the pressure of Senator Platt, Governor Odell, and President Roosevelt, who, for their part, were under no illusions as to the effect of the municipal election in New York city on the outcome of the Presidential campaign. As for Mr. Platt, we have the best of reasons for thinking that, had Mr. Low declared a re-nomination, and had the Citizens' Union put forward an independent Democrat, the Senator would have refused to support him, and would have caused the Republican organization in the city of New York to set up a candidate of its own. Independent Democrats have not forgotten that Mr. Platt in 1888 did his best to beat Mr. Hewitt, and to throw the city into the hands of Henry George, by persuading Mr. Roosevelt to run as a Republican nominee for Mayor. We also have a lively remembrance of Mr. Platt's performance in 1897, when he forced General Tracy to accept the Republican nomination, though he knew that the inevitable result of the maneuver would be the capture of the Mayoralty by Tammany Hall. When the whole truth is known we shall very likely find that Mayor Low has been unjustly blamed for accepting a re-nomination, and that he personally concurred with District-Attorney Jerome in thinking that this year as an independent Democrat should have been nominated by the fusionists. We shall probably learn, too, that he was privately informed that, if any such course should be taken by the Citizens' Union, the

Republicans would nominate a candidate of their own, on the pretext that it was needful to keep their organization intact, with a view to the approaching contest for the Presidency.

## Results of the Election throughout the Country

There is no doubt that the elections, viewed as a whole, have a bearing on the prospects of certain candidates for the Republican and Democratic nominations for the Presidency. We are unable to concur with those students of the returns who discern in them any particular encouragement for Mr. Roosevelt. To us it seems that whatever he was vitally interested in, and wherever he personally interposed, the response of the voters was by no means satisfactory. Before we attempt to elicit the true significance of the outcome of the appeal to the ballot-box we shall do well to eliminate certain States wherein the result might have been predicted with absolute certainty. The news that the Republicans have carried Pennsylvania and Iowa by immense majorities excites no more surprise than would the announcement that the Dutch have taken Holland. No sane man has ever imagined that either this year or next year Massachusetts could be carried by the Democrats. So far as the Old Bay State is concerned, the result of Tuesday's contest means nothing with reference to Mr. Roosevelt, but it deals a quietus to the notion that ex-Secretary of State Olney might be seriously considered in the next Democratic national convention as a candidate for the Presidency. A man who has not the slightest chance of carrying his own State may as well be counted out of the race. At the hour when we write it seems probable that Governor Garvin will be re-elected in Rhode Island, though by a reduced plurality. The matter is of no great consequence, except as throwing light upon what may happen next year in Connecticut, provided the Democrats put forward the right sort of nominee for the Presidency. The Republican success in Nebraska is not unexpected, because, although Mr. Bryan succeeded in effecting a fusion between the Democrats and the Populists, it has been for three years evident that his former ascendancy in the State has vanished. It was in Ohio that the surprising strength of Bryanism was to be tested, and nobody will deny that there Mr. Bryan's principal lieutenant, Mayor Johnson, conducted the campaign with extraordinary energy. Moreover, an earnest effort was made to reconstitute the Gold Democrats and the Bryanites, by the nomination of Mr. John H. Clarke for United States Senator. Mr. Bryan personally sanctioned the effort, but it was unavailing. Mr. John W. Bookwalter being the only former Democratic candidate for Governor who actively supported the Democratic State ticket. Such men as McClain, Powell, Nest, Chalmers and Kilbourne maintained an enormous influence, the significance of which is disclosed in the electoral majority obtained by Colonel M. T. Herrick, the Republican candidate for Governor. Even more portentous, so far as the future influence of the Bryan-Johnson combination is concerned, are the tremendous gains secured by the Republicans in both branches of the Ohio Legislature. So overwhelming, indeed, is Mayor Johnson's defeat that his chance of heading the Ohio delegation to the next Democratic national convention seems well-nigh extinct. On the other hand, the unexpected magnitude of the victory gained by Senator Hanna, whose seat, it will be remembered, is to be filled by the Legislature just elected, has driven home to the consciousness of the Republicans all over the country that he, and not Mr. Roosevelt, is the real leader of their party. In all appearances Mr. Roosevelt's State, New York, is lost irreversibly to the Republicans, who have no man, on the other hand, not even Mr. McKinley, has shown himself such an unmitigated master of Ohio as is Mr. Hanna. We should not yet be surprised if the contrast between the results of the elections in New York and in Ohio should have a profound effect on the next Republican national convention.

We pass to the two border States, Kentucky and Maryland, which have been regarded as doubtful. It is now evident that Kentucky has resumed her former place in the column of States that may be relied upon to go Democratic. In Maryland, as we write, it seems likely that the Democratic majority in Baltimore city will be large enough to overcome any unexpected reverse in the rural districts. The success of Mr. Warfield, Senator German's candidate for Governor, will naturally be looked upon as a personal rebuff to Mr. Roosevelt, inasmuch as the latter was at much pains to reconcile the Republican factions in Maryland. Unless, however, Senator German shall manage to obtain larger majorities for the Governorship and the Legislature than were secured by the Democrats in 1899, he will not receive much credit for his victory, and his prestige will be utterly eclipsed by that of Mr. Charles F. Murphy, the triumphant leader of Tammany Hall, in the next Democratic national convention. On the whole, the impression made upon us by a review of the whole contest is that Senator Hanna has been thrust once more into the Republican foreground, while on the Democratic side, events seem to be vitally preparing for the advent of ex-President Grover Cleveland.

## What Can King Edward do for England?

A Briton who signs himself "Anglo-American," but who is described as an Englishman who was some years ago an observing visitor to the United States, contributes to the November North American Review an article which has as its somewhat startling title "An Incident of the British Monarchy." It is not an argument for the removal of the British throne to the British Museum, and the setting up of a British republic, but for something different. The writer speaks of the propensity of the modern Englishman to self-depreciation—a propensity that is a new development, quite out of keeping with the English spirit as history has known it. It is to be ascribed, he thinks, chiefly to the passing of the age of monopoly in which England became the workshop of the world. It is the expression of the feelings of "a monopolist who has lost his monopoly and finds himself singularly unequal to the stress of competitive conditions." The very qualities that monopoly fosters are precisely those that competition begins by discarding. But the Englishman has been very loath to discard them. The peculiarities of his temperament have made the monopolistic atmosphere excessively congenial, and therefore excessively hard to grow out of. Consequently, there comes first to him a resentful assessment that any change should be necessary, and then a want of acknowledgment that England is unprepared and has lost her ability to "rough it."

Hence the low spirits which England, alone among the great powers, has met the opening of the new century. In every section of the national life is heard the "note" of self-criticism, complaint, discouragement. All things, all systems and dogmas, are questioned and distrusted: witness Mr. Chamberlain's revolt from free trade. The comfortable faith that whatever is British must be a law of nature has yielded to a suspicion that the opposite of that is nearer the truth. Things are suspected merely because they are British. This, at any rate, says the North American's contributor, is the true spirit of reform, and it has led to the discovery of that blessed word "Efficiency." Efficiency: that is what Englishmen now clamor for. They see Parliament falling into incapacity and indifference, the standard of administration deteriorating, politics becoming an affair of friends, and rich friends at that, their educational system weak in science, privilege, vested interests, and nepotism dominating the army and the diplomatic service—in short, a state where the career is not yet open to talent, where almost every form of inefficiency is condoned so long as it is not too palpably tainted with dishonesty. Englishmen to a surprising number are desperate at the spectacle. An awakening has begun which "we only end in a readaptation of the national spirit, and hence of the national framework, to the new needs of these changing times."

But while all things else are being overhauled, nobody wants to meddle with the monarchy. It is by far the strongest institution in the kingdom. Republican talk so prevalent thirty years ago is no longer heard. The crown to-day finds an unshelving reception. Politically, its direct power is largely a convention. Socially, it runs never so much a reality as to-day. Now, in this social influence of the crown a good or bad thing? Asking that question, "Anglo-American" answers that depends of course on how it is wielded, and in England's case the conclusion of any thorough and dispassionate inquirer must be that the monarchy militates against national efficiency, emphasizes and encourages what is least desirable in the national character, and perpetuates an atmosphere which is fatal to the realization of the country's best self. This conclusion, he adds, is not based, or, at any rate, not entirely, on the actions or personality of the present King. King Edward lives and acts about as England expects and likes her monarch to live and act. He devotes himself to court ceremonies, domestic and foreign visits, society, sport, and what his critic calls "charity mongering"—that is, to the patronage of hospitals and charitable institutions, and to the encouragement of those who support them. As to this last royal occupation our writer suggests that it would have been far better for England if the crown had patronized education more, and got its documents for that, instead of spending its influence in behalf of philanthropy, and letting education shift for itself. We have not heard it suggested before that the lack of royal instigation was the secret of the dearth of gifts to education in Great Britain, but it may be true.

That, however, is only a detail of the comprehensive complaint that the English monarchy is not an intellectual force, that no stimulus radiates from it, and that it patronizes naturally the wrong thing. Of course an English monarch cannot do that. No one expects him to rule. Efficiency on his part consists in making no trouble about things that really matter. The present King, to be sure, is credited with being an important factor in promoting advantageous relations between his country and various of the continental powers. "Anglo-American" suggests to mention that, but, at home, at least, he says, the monarch, restricted by the limitations of his position, is unable to do anything. He is, in fact, not so much a ruler as a benefactor. He indulges in a little easy philanthropy, or frankly gives himself up to "pleasure." The

example of such a life, we are told, cannot make for efficiency. The habit of honoring a monarch who is nothing, as though he were everything, "puts a premium on make-believe, and propagates the fatal notion that the office makes the man, and that birth and worth must necessarily go together." Monarchy and aristocracy gravitate naturally towards one another. In England the peerage and the great land-owning families form a sort of governing class, make politics an affair of friends, and restrict the highest honors to themselves and a limited number of rich people who are in "society." A Disraeli, a Bright, a Chamberlain may from time to time break into their circle, but it remains substantially true that a man who is not congenial to the court cannot hope to play a foremost part in English affairs. Consequently, in every monarchy far too many places go to members of the aristocracy who are not the best men for the offices they fill, and who are peculiarly susceptible to the influence of a monarchy that is without firmness or vigor of any sort. Only the King's example and pressure could break them up, and the British King is not like the German Kaiser. "Tact, amiability, graciousness, are the qualities in which the English monarchy has buried itself." Monarchy begins by restricting the largest share of the national business to a set of wealthy, titled, coast-guarding amateurs, and then sets them an example of resplendent idleness. The results may be learned from the report of the inquiry into the loss of the "Batavia," an whole system of honors, of which nothing can prevent monarchy from being regarded as the source, sets efficiency equally at defiance. The honors go to the wrong people, with the result that "the system of precedence and honors in England is nothing but a grotesque sham." The common run of Englishmen don't see it. Those that do see it suffer from it, but can't help it. "That unapproachable monarchy which infects the American mind like a kind of challenge and brown error, America has no illustration that has a chance in life, is something that the English have so utterly lost as to be incapable of realizing it. The caste system makes for stagnation, just as certainly as it makes for that class reform which gives to English trade-unionism its peculiarly bitter strength."

So speaks an observer who seems to have tried to see the thing that was, and to write it down dispassionately. We have quoted at length from his discourse, because it is both novel and intelligent. He is not a sepiableness seeking to apout a throne. He simply avers that monarchy in England is not only not worth its salt, but is doing a vast damage. The cure he suggests is not to abolish it, but to reform it. "I do not see," he says, "how England, being what she is, the caste system with its enormous disabilities, its pretensions, and its habits, can be constitutionally in so ready a reprobation should not, in England as in Germany, flow from the top downwards. The monarchy must lead England in the path of efficiency; but to do it most first must effluent itself."

How can a monarch become efficient who is constitutionally constrained to inefficiency? The Kaiser can be efficient, but would England tolerate in her King the sort of efficiency that Germany sustains at her Kaiser's hands? The Kaiser has some real power. The King—well, to be sure, the King has enormous social influence at home, and very important personal and official influence with other monarchs and heads of European governments. Possibly King Edward could stimulate efficiency in England if he bent himself to the work—a camel may pass through the Needle's Eye—but it would be difficult. Caste, more than royalty, is hurting England. The aristocracy is on trial more than the throne.

## Congress should not Overlook the Philippines

The sole reason given by the President for proroguing the Fifty-eighth Congress in extra session on November 9 is the necessity of securing with all possible promptness such legislation as will render operative the reciprocity treaty concluded with Cuba, and already ratified by the Senate. As we have often pointed out, such legislation is required by the plainest dictates of justice and of decency. We obtained certain concessions from Cuba, including two naval stations, on the express understanding that Cuban products should receive a preference in our markets.

But is our duty to Cuba the only moral obligation which Congress ought to discharge without delay? Do we not owe to the Philippines, which belong to us, as much as we owe to Cuba, which is already indebted to us for political independence? Do we not owe to the Philippines as much as we owe to Porto Rico, the sovereignty ever which we secured from Spain by the same treaty? The answer to these questions is self-evident. It cannot be denied, however, that there is a flagrant difference between the treatment which Porto Rico has received and that which we have given the Philippines. The products of Porto Rico are admitted to the ports of the United States duty free, whereas the products of the Philippines have to pay for admission to our markets 75 per cent. of the Dingley rates levied on foreign commodities. By the act of March 3, 1902, 25 per cent. of the Dingley

### THE ROXBURGHE-GOELET WEDDING

*The marriage, on November 10, of Miss May Goelet and the Duke of Roxburghe, at St. Thomas Church, New York, adds one more to the list of American girls who have married into the British Peerage. The Duchess of Roxburghe is the daughter of the late Ogden Goelet, and is one of the richest of living heiresses. Her husband is head of the Scotch family of James Kerr, and a direct descendant of John Churchill, the original Duke of Marlborough. He is an officer in the Royal Horse Guards. In the photograph the Duchess appears in the costume of Cleopatra, which she wore at a fancy dress ball given last spring in London.*

# King Edward as a Statesman

By Sydney Brooks

London, October 21, 1913.

A GOOD deal of nonsense has been written of late about the King. The worst of it has appeared, I am afraid, in American papers, but even over here, where journalists might be supposed to know something of the constitutional prerogatives of the crown, the King's actions, or supposed actions, in the recent cabinet crisis has been made the text of I know not how many fantastic editorials. "The King insists on War Office reform"; "the King no longer a mere figure-head"; "the King, and not Balfour, the true cabinet-maker"; "the King ruling as well as reigning"; "the truest of the truest journalistic comment." Now, what are the facts? It is, I am assured, the bare truth that King Edward seized upon the reconstruction of the cabinet to press upon Mr. Balfour the necessity of reorganizing the War Office and bearing up the army. I am told that he is somewhat astonished the Premier for the closeness of his acquaintance with the findings of the Commission of Inquiry and the warmth with which he spoke of the state of affairs it had revealed. So far the two men were substantially at one, but when the King went on to urge that Mr. Brodrick had not shown himself quite the man to deal with so complex and difficult a crisis and ought therefore to be dropped, they differed. Mr. Balfour's loyalty to his colleagues is one of his fundamental and most endearing traits; he would not admit that Mr. Brodrick's failure had been an egregious one to warrant his dismissal from the cabinet. There was for a while a sort of deadlock, ending, as every one knows, in a compromise. Mr. Brodrick left the War Office, but not the cabinet. He was transferred to the Secretaryship for India.

This, surely, is a somewhat flimsy basis on which to enthuse the King as cabinet-maker-in-chief. In fact, only ignorance of a peculiarly unnecessary kind can excuse much of this talk about the crown's "increasing prominence and activity in public affairs." We are still far from knowing everything about Queen Victoria as a politician, but we know enough to assert that her intervention in affairs of state was more constant, close, and effectual than King Edward's is ever likely to be. We know, for instance, that during the crisis of the Schleswig-Holstein question she protested, and protested successfully, against English interference on behalf of the Danes—this, too, in the face of a noted episode and an allied unionist. We know that before that episode was settled she had three fought and three beaten Palmerston in his own cabinet, for the sake of peace. We know how sharply she rebuked Palmerston for taking decisions of grave importance in foreign affairs without consulting her; how she insisted on seeing, studying, and at times altering every despatch of any significance that was sent out by the Foreign Office; how she made it a rule to attend all important conversations with foreign ambassadors reported to her. We know how she commanded that the British ambassador in Paris should remain passive and neutral during the *crise d'effort*, and how she caused Palmerston's dispatch to the Emperor to be signed with that lightning stroke of policy. We know that more than once she flatly refused to approve of the Queen's speech that ministers had prepared for her, and that she altered it to her own liking. We know that, through her insistence, the royal proclamation that closed the Indian mutiny and laid down the lines of future policy was rewritten and amended to square with her suggestions. We know, too, that these suggestions were an immense improvement on the original draft, and showed the Queen a better statesman than all her ministers. We know how she modified and toned down the despatch demanding the release of Sidiell and Mason, and that it was her modifications, as Seton admitted, that preserved the peace between England and America. We know how it was her influence and tact that persuaded the House of Lords to pass the bill for the disestablishment of the Irish Church—a measure of which she heartily disapproved. We know that she fought Gladstone over the abandonment of Kanahar, that she severely criticised the ministry for its failure to relieve Gordon, that she did all she could to induce the Duke of Devonshire to form a cabinet in 1880. We know that a letter from her to the old German Emperor was largely instrumental in preventing a war between Germany and France in 1873. We know that throughout her life she entered thoroughly into all political questions, and was free with blame and praise, criticism and suggestion; that she made many appointments, especially to high offices, and practically vetoed others "off her own hat." She was, in short, a sort of Permanent Under-Secretary of State, as much the counsellor of her ministers as they were her advisers, never withdrawing their when they were unanimous, but insisting that all their policies and proposals should first of all run the gauntlet of her shrewd, stout, and often informing criticism.

It is strictly constitutional and strictly normal, the King did absolutely nothing that Queen Victoria had not done a score of times before him. The only difference is that Queen Victoria was not aware at the time, and even now only half-realized, how far the late Queen was from playing a merely passive and decorative part in public affairs. Publicity is greater now than it used to be; cabinet secrets are not so long kept; the press grows in candour and ubiquity. The consequence is that people know what before was hidden; and, seeing, they think it novel; and thinking it novel, they begin to spin the most astounding theories to ac-

count for it. But the tale itself is really an old one; better printed to-day and more widely circulated—otherwise the same.

What are the constitutional rights of an English sovereign? According to Walter Flagghed they are three in number—the right to be consulted, the right to encourage, and the right to warn; and he shrewdly added that a king of great sense and sagacity would want no others. He is entitled to full knowledge and full discussion of all public transactions. He cannot overrule the cabinet's decisions, but he may criticize and so alter or modify them. He may suggest amendments, raise doubts, propose alterations, and he may help to clarify the ministerial mind. Mr. Gladstone once insisted on the great advantages a King has in these consultations. He is permanent and his ministers are fugitive; he is an onlooker and they are the combatants; he can take a calm and leisurely survey, while they are blinded by a thousand bewildering details. "Every discovery of a blot that the studies of a sovereign in the domain of business enable him to make," said Mr. Gladstone, "strengthens his hands and enhances his authority." Rightly used these, obviously, are very real powers; and the late Queen, through long practice and intuitive clear-headedness, learned how to use them to perfection. "No minister," it has been rightly said, "in all her long reign ever disregarded her advice without afterwards feeling that he had incurred a dangerous responsibility."

For this function of adviser, mediator, King Edward VII. has all his mother's qualifications. He is an excellent judge of men and affairs; he learns and assimilates with extraordinary quickness; he has no prejudices; he is a pastmaster at staying off friction, bringing men together, and putting them at their ease; and he knows England and Englishmen as Mr. McKinley knew Americans. There are excellent assets, and in the last thirty months the King has shown that he knows how to turn them to excellent account. All through the Boer war his attitude was admirable; in fact, the expression he gave to English sympathy at the time of President McKinley's assassination. His decision not to delay or interrupt the colonial tour of the Duke and Duchess of Cornwall showed real statesmanship. His visits to Lisbon, to Rome, to Paris, and to Vienna were all triumphant examples of his social skill. His Irish tour was something more than that; it was a token of the royal determination that Ireland and England shall henceforward be friends. This is a cause which the King has closely at heart, one too which his encouragement of Mr. Wyndham and the Land Purchase Bill has done more to further than any act of the last century. Moreover, the King has proved himself unexpectedly "manageable." He gives way with a grace and readiness that the late Queen could not always command. He has re-established the court, and made the sovereign once more a real leader of society; he has revived, in something like its ancient pomp, the splendor of the monarchy. England, in short, is absolutely satisfied with King Edward as a ruler. He has done many sound and useful things; he has increased, and is yet increasing, his wonderful popularity. But no one can pretend that he is yet the power in the state that Queen Victoria was, or that he has pushed his prerogatives anything like so far as she did.

## Singing He Rode

By Fanny Memble Johnson

SONG that clangs like the battle,  
Song, keen as the wind that slips,  
I rode away to the dawn of day,  
And such song rose to my lips.

Youth—surely I spent it!  
Life—it was mine to spend!  
And the clear red line of the morning lay  
Eastward without an end.

Further than thought could reach them,  
Backward into the dark,  
The Lords of my House were ranged away,  
The men of might and of mark.

Possessing the heights behind me,  
The Towers of my own brave line—  
Mine as the arrow true of the heart  
And the bend of the bow be mine.

My shadow galloped behind me,  
The heights of my home were lit,  
A gold sun broke through a scarlet sky  
And I rode in the blaze of it.

And ever recurrent singing—  
I sang it under my breath—  
The gathered flower of the singing,  
The chorus of Love and Death.

Till I knew not the time that knew me,  
Was now from the past apart,  
For the song that clanged on the line of swords,  
For the chorus that broke the heart.

**The ROYAL GAME OF GOLF**  
 In Which the Kaiser & the King discuss the Russo-Japanese Question  
 Drawn By Albert Levering

Wilhelm "Der Russos-Kapitaneer gesesselt? Au, est de you know  
 almost go? I can realize der whole business right here on this golf  
 game, and I?"  
 Edly "Au—er—what I want to know is, where Chapp?"

Wilhelm "You notice der little nice ball—1—2—3, huh? Well she  
 is Chappin, no?"  
 Edly "Yes; but where's Chapp?"

Wilhelm "P—o—o—o! Hah! He's mad! Now he'll you agree der  
 chharrack—yes? Also he der Russos?"  
 Edly "H—er—no, now which is Chapp?"

Wilhelm "Au, don't bother me! Now you look fast on der ball's  
 ball—such der Chappin—and you see not happens to her from der chharrack,  
 such der Russos—er—yes—does?"  
 Edly "What did you say stands for Chapp?"

Wilhelm "You see not you get you stand to wear by Chappin?"  
 Edly "And I stand for Chapp?"

### A NOTABLE STATUE FOR ST. LOUIS

A new decoration for the St. Louis Exposition has recently been completed by the well-known sculptor M. Tonnin. It is a statue of Victory and is to be placed above the main entrance of the Manufactures Building. Victory is represented as a winged female figure, who stands in her right hand a laurel wreath and in her left a palm branch. The realistic effect of the flying draperies was secured in an interesting manner. The drapery on the model was kept in motion by a current of air from an electric fan, and by working rapidly from this Mr. Tonnin succeeded in getting an admirable reproduction.

**A SNAP SHOT OF THE PRESIDENT AT CHEVY CHASE,  
WASHINGTON**

*In the hour set apart by the President for daily exercise, it is his custom to send a horse and groom to the outskirts of Washington, and to start from there on horseback over the surrounding country. One special photographer met the President recently at Chevy Chase, the Country Club near Washington, and secured this interesting snap shot of the Chief Executive.*

## THE SPECIAL SESSION OF CONGRESS—SCENE

Cannon started in bravely, hands in pockets, and held himself under unobtrusive restraint for fully sixty seconds; then, in an impassioned flight of eloquence, out came his left hand followed immediately afterwards by his right. Cox called "time," and the House rose. He had the trick of pulling his coat-sleeves tautly over his shoulders, as if he were stripping for the fray, and his waistcoat is generally open or only closed by the two lower buttons. His voice is rather hoarse, and he has no gift of eloquence, no wealth of classical allusion, no power to make phrases, none of that mordant sarcasm that seduces the fatuous and flatters. But although he has an eloquence, he is not without the power of oratory.

The power of direct speech, the use of simple words, homely similes, and a certain quaint philosophy convey what he has to say in such a way that no man misunderstands him. His speeches, which are never prolix, (but his facts always are), do not stand the steno-grapher very well; and there is so little of vanity in him that, unlike most of his colleagues, he does not revise and polish his manuscript before it goes to the printer; but although his speeches make little impression when read, they produce their effect at delivery. That effect is due to the fact that when he talks he is more anxious to accomplish results than he is to embellish literature with rhy-ming phrases; and also to the fact that his words carry conviction, men believe in his sincerity and are assured of his honesty.

Cannon has to a limited degree the gift of repartee. He can deliver a rough streamer that makes him a formidable opponent in all American speaking, that man of superb courage, mightily in-terpreted by his own imagination, unapproached power of sarcasm, and lofty self-conception of public duty. Thomas B. Reed, of Maine, is the only one who can match him, and especially has power to spar men with severity. To kill, as the mood possessed him. No man could tell, would simply scorch his antagonist, or bound him for the rest of his days, or slay.

Mr. Reed could gauge his words so exactly that he could tag a man by ridicule or annihilate him. Cannon is no such captain of two-and-a-half. Equipped for the fray, he fights with a sword, a weight. He is no master of the path ahead of him by shrewdness of his art; he has some of those tricks, knows nothing of the anatomy of suppleness, subtilty, that scintillating wit, which opens like lightning, to crush by ridicule, to mock and jeer and make sport of an opponent. But his speech, even when not in the way of repartee, is vigorous. He is impatient of words, more words; of silly non-sense which simply wastes time. Once during the last session, when he was presiding over the Committee of the Whole, a motion was made, from the Democratic side, naturally, solely to put the majority on record and with no hope that it would be carried. A rising vote was demanded, and Cannon, as in duty bound, put it to the committee. Half a dozen members stoged to their feet in the affirmative and then half the House rose to the negative. Mr. Cannon began to count, "One, two, three," he said; "four—oh, hell! a hundred," and a hundred the vote stands on the record until this day. And yet with all his fighting proclivities, his hard hitting, his rough-and-tumble methods, there is no man who has a softer heart, no man who overdoes more with the milk of human kindness. His speeches show this.

There runs through them a vein of tender sentiment; he constantly quotes poetry, the poetry which takes out a man back to his boyhood, and from the picture of his mother. Cannon is an intense partisan. Republicanism, the faith of Lincoln, whose lustre sheds imperishable renown on the State of Illinois, the mere recollection of which pride, is to him a creed, may be that it is a conviction. But all this in whom party means every-

Miss Helen Cannon  
Daughter of Speaker Cannon

thing, he has never been accused of being unfair or playing politics partly for the sake of temporary party advantage.

Cannon is self-made, as he says. At fourteen his father died, and he had to leave school and go to work. He was a clerk in a grocery store for six years, working like a Trojan and becoming a practical lawyer. He went into politics early, and won his wife and his first election, for State's Attorney, in the same case. Cannon comes of Quaker parents, to whose dancing and other immoderate amusements were anathema. For some reason that no one has ever yet been able to explain—perhaps it was in the blood derived from a long forgotten ancestor and had to come out—young Joe was passionately fond of dancing, and every night after the old folks had gone to bed he had tagged out in his best and most un-Quakerlike garments, stole off to village dances, for his partners were the prettiest girls from the country. His terpsichorean skill was acknowledged even by his rivals.

And then the young fellow fell in love, loved over his head, with Mary Reed, a girl of unusual beauty and still more unusual character and intellect. But although she smiled on him, she wanted something more for a husband than a mere dancer.

Joe discovered the state of affairs he did some serious thinking. Mary Reed's brother was the opposition candidate for State's Attorney, and the problem Joe had to face was this: If he can and enough of women to know that they, even more than men, would support him for having defeated her brother. Cannon wrestled with nature, and finally came to the conclusion that success would come word was the hand of the girl he loved and won, and his man he defeated. To Mrs. Cannon, for years they studied together, and she knows more about some things of practical value than her married life when the wisdom of her husband was his teacher.

He is a just student of the art of listening, as well as of his colleagues. A few Congresses ago, in the course of a story told by a colleague, he was called upon to give a speech, a usual number of small jobs which he had done after the House had passed the bill, which Cannon was determined to eliminate. The conferees on the part of the Senate were Hale Allison, the most courteous and polished man in the Senate, one end of the Capitol in his other an egg and not break one; and

George M. Maynard, smooth, serene, unshuffled. With Cannon representing the House were Moody of Massachusetts, now the Secretary of the Navy, and McFarr of Arkansas. The end of the session was only a few hours away, and the conferees were as hopefully apart as at the time they first met. Then said Cannon: "Gentlemen, either take the bill on its own merits, or else take the responsibility of its falling." Then up got Senator Hale, "I thought," he said, "this was to be a full and free conference. Of course if we are to be covered we might as well end this conference now as at any other time." Mr. Allison got up, and rebuked the sentiments of Mr. Hale, and Mr. Garrison repeated them. Cannon, looked around the room. "Here," he said to his colleagues of the House, "shall we call this a dead bill now or do it later?" To Moody, an Eastern man of Puritan ancestry, the liberal term was almost new to him, but it was his duty to stand by his chief, and he nodded assent. To McFarr, a Western man, the language was familiar. "Call them," he replied. Mr. Cannon got up. "Very well, gentlemen," he said to the Senators, "let it go at that," and, followed by his colleagues, he walked out of the room. The Senators went back to the Senate and deliberated about the House of Lords, but in the end they agreed. Cannon had called their bluff.

Mrs. A. P. L. Cannon  
The speaker's married daughter

# The Machinery of a Campaign

By Arthur F. Cosby

Chairman of the Citizens' Union Committee on Press and Literature

THE entire country has watched with interest the feverishly fought municipal campaign in New York city. It was recognized in the first instance by the fusion party that the old issues of 1901 which had so stirred the city had changed. The first work before the fusion party, therefore, was to get the record of the administration in such shape that it could educate the public and bring that record home to every voter. As New York is a city covering some hundred and forty square miles of space, divided into five different boroughs, separated by waterways, and having a population of many different interests, this was a difficult problem.

The work of preparation for the campaign of education was begun last summer by engaging an expert newspaper man. As reports came in from the various departments the newspaper expert prepared a brief digest in the form of a chapter of a book. This was then sent to the head of the department for verification as to the facts and figures, and then stored away for future use. In this way by the end of the summer a mass of accurate information had been obtained and put into shape for immediate use. Occasionally a one-page leaflet or a two-page circular was issued, so as to have something to send to the local headquarters to help stir up their interest. A statement was given showing how the percentage of losses at fires had been lowered by the present administration as compared with that of Tammany's. Again, a one-page leaflet was issued showing how many bridges, tunnels, subways, and railroad terminals had been started by the Low administration as compared with Tammany's. Wherever one of these was prepared, copies were always sent to the different newspapers, and in this way the matter was brought before the general reading public. Early in September the work of preparing these different chapters for the campaign book had been completed. Bids were called for from various printers for printing ten thousand copies of the campaign book, and the contract was awarded to one. As the proofs were received they were sent for publication and editorial notice in the great daily newspapers.

By the end of September the different organizations had made their resolutions and the campaign proper was on. It then became necessary to extend the work of education beyond the newspapers and bring it home directly to the people. In a political campaign there are certain oral symbols, such as signs, lanterns, lithographs, etc., which bring the public from long usage less grown to expect, and these insignia have a considerable influence in arousing enthusiasm among the voters. Some of the quantities used are as follows: In the campaign of two years ago the Citizens' Union alone, irrespective of the Republicans and Tammany, used 275,000 small lapel-buttons of Lin.

After the candidates were nominated, seventy-five thousand lithographs of Mayor Low were ordered at six dollars a thousand. The lithographs, as well as the buttons, were then sent to all of the local district headquarters, there to be given free of charge to such citizens as cared to use them. The lithographs were to be put up in

local headquarters, shop windows, and the windows of private homes.

Next the question of street banners was taken up, and ten were ordered to be made and set up in the leading points of the city by the Citizens' Union. Each banner had the one general phrase which it had been decided to repeat again and again as representing the special issues of the campaign: "Vote for Low and keep the streets out." In addition, there were notices and inscriptions suitable to the local neighborhood. One banner was made entirely in Yiddish and placed in the Russian Jew quarter.

Two years ago Tammany Hall spent an enormous amount of money in its outdoor advertising of all kinds, its printing bills with one concern alone being over \$400,000, and its total amount for advertising probably footing up as much as between \$130,000 and \$200,000. During the present campaign the Citizens' Union took all the available empty space from one of the sign painting companies, from the battery to the Bronx, covering them—no matter how large—with a solid background of brilliant red, and then having in large conspicuous white letters the campaign slogan.

Very little bill-posting proper was done outside of the painted signs, although a few boards were taken on the Elevated railroad stands. "Snapping"—posting on empty barrels, boxes, walls, fences, and so on—was reserved until the last ten days of the campaign. This is of questionable value, but it is the only way of reaching the people in certain sections of the city, and it is not very costly.

Probably one of the most important bits of successful campaign work accomplished by the Citizens' Union was preparing for each of the six Assembly districts, in all the different boroughs of the city, a one-page circular mentioning by name the specific benefits accomplished by the Low administration for that district. In preparing these it was found that there was not a single district in the city that did not have one peculiarly local benefit, such as a park or a playground, a public bath, or a new schoolhouse hall.

While these pamphlets were being printed and distributed, signs painted and placards posted, a general discussion of the campaign was getting well under way. In a New York municipal election the speaking end of the campaign is always of short duration. This year, owing to the mix-up in candidates, this was especially true, neither side having its first big ratification meeting until within three days of election-day. The campaign signs on both sides began a "white-heat" two weeks' campaign of large indoor and outdoor meetings. For two weeks the struggle went on, and on certain of the leading thoroughfares you could see the "speakers" and "couriers" manning the crowds from the top of a truck or express wagon. Other crowds thronged the leading halls, where the men of the respective parties hurriedly appeared, made their addresses, then dashed off in an automobile to the point to which they were scheduled. By election-day it is safe to say that voters knew at least how good the fusion managers thought was the record of the Low administration. That Mr. Low was not elected is in no wise due to failure in getting the issues before the people.

## A New Light—The N-Rays

By Louis Bell, Ph.D.

SINCE the discovery of the X-rays, the announcement of a new and queer kind of radiation has gradually ceased to be a startling novelty. Most of the new-rays, however, have been radiant freaks, very curious, indeed, but refusing to be properly co-ordinated with each other or with the good old established radiations familiar to science. Therefore the very recent discovery by M. Blondlot of a new variety of light, which behaves as light ought and yet displays some rather unusual properties, is no small comfort to the puzzled investigator. I use "light" here in its broader sense of a regular wave-radiation irrespective of color, or, in fact, of visibility to the unaided eye.

M. Blondlot started in to investigate the "X-rays," using as an indicator a tiny, faint, electric spark from a little induction coil. The spark flashed more brightly when the X-rays fell upon it, and by its aid he was enabled to measure their velocity and thus to clear up much of the mystery which had surrounded them. Presently he found that with the X-rays appeared a new kind of radiation which obeyed all the ordinary laws of light, although the visible light had already been filtered out of the beam by an opaque screen. The new rays penetrated freely aluminum foil, black paper, and other apparently opaque substances, but were readily reflected, refracted, and polarized. They were as powerfully refracted by a quartz lens as prism as to appear at first sight, denizens of the extreme ultraviolet, perhaps only a half-millimeter of an inch long.

As if this discovery were not sensational enough to suit the most exacting, M. Blondlot presently found a similar group of radiations from a common Argand flame, and even from a bit of silver heated to incandescence.

The new radiations are grouped by their discoverer under the

tentative name of N-rays. In their properties they are unmistakably light, but of as yet unknown wave-length, and possess properties which vary upon some of these qualities, as refractivity. Their behavior, however, refrangibility and their powerful action upon electric discharges would naturally suggest a very short wave-length, but their fire radiation from comparatively low temperature sources points in exactly the opposite direction. The mere matter of high refrangibility does not decide the question, for substances refract because they slow down the light waves, and disperse the various colors because they slow down and absorb one wave-length more than another. Great local absorption and great dispersion go hand in hand, and the latter is frequently associated with extraordinary transparency for some particular colors, as if all the opacity of the stuff were concentrated against a single enemy. Thus it appears that while a substance which is fairly transparent to light in general always disperses that light rainbow-wise, with the colors in the order red, orange, yellow, green, blue, indigo, violet, a prism of strongly colored material may mix up the rainbow order in the most chaotic fashion.

The great refrangibility of the N-rays does not, therefore, prove that they are of short wave-length, since quartz has powerful local absorption enough at, unhappily, each end of the spectrum, extreme ultraviolet and extreme infra-red, to account for the most erratic freaks of refraction. Briefly one sort of refraction is as entirely as the other; in the general concentration of the colors, but to generalize in this direction is probably nothing wholly opaque or wholly transparent. We do not know the nature of the complete relation of any one substance to all kinds of light, but the discovery of the N-rays is likely to stretch far the bounds of knowledge.

*Developing the Film on Shipboard.*

*Attaching the Negative to the Pigeon*

*Setting the Pigeon free with the photographic Film which is to be carried to Land*

## PHOTOGRAPHS AND WIRELESS TELEGRAPHY AT SEA

*A new feat in news transmission is being tried in connection with the use of wireless telegraphy at sea by which a photograph of an event may be sent ashore almost simultaneously with the message describing it. A snap shot is taken and rapidly developed. The negative, in the shape of a film, is dried, rolled into as small a compass as possible, and secured to a carrier-pigeon. The bird is then released, and the photograph sent to its destination on shore.*

**"Marta of the Lowlands"**

"Marsick," a peasant, is induced by the village landlord to marry "Marta," a naive girl whom he has wronged. After the marriage the landlord again becomes estranged with "Marta," but is finally killed by "Marsick," who has been told by his wife of the squire's design to betray his former master.

**"The Man from Blankley's"**

Mr. Hawtry plays the part of "Lord Southcopper," who appears as a guest at the wrong house, and is mistaken for a hired detective from "Blankley's." The governess, whom he takes to be dressed, turns out to be the old nurse of his. The situation is embarrassing, but matters are cleared up, and the governess is asked to become his wife.

**"The Fisher Maiden"**

In Mr. Van Tilver's opera, "Marilyn" ("The Fisher Maiden") is in love with a sailor whom she has not seen since childhood. An extraordinary coincidence, in order to further his own ends, persuades an officer to play the sailor. The plot is based on the situation which follows the arrest of the real lover.

**"Raffles, the Amateur Crackman"**

"Raffles" (Mr. Bellet) is a gentleman burglar who steals for the sport of the game. The theft of a diamond necklace at a country house in which he is a guest very nearly brings about his capture by the detective "Captain Bellet" (E. M. Hollenb). The final escape of "Raffles" is one of the most thrilling incidents of the play.

## AMONG THE NEW PLAYS

Gwinna's Spanish drama, "Marta of the Lowlands," has recently finished a successful run at the Manhattan and West End Theatres, New York, and has now gone on the road. At the Garrick Theatre Mr. Charles Hawtry is appearing in Anstey's comedy of London life, "The Man from Blankley's." "The Fisher Maiden" an opera by Harry Van Tilver, is playing at the Victoria, and at the Princess Theatre "Raffles," with Mr. Cyril Bellet as the amateur crackman, succeeds Mr. D'Oray and "The End of Punctured"

### MISS ROSE COGHLAN AS "PENELOPE"

*Miss Coghlan plays the part of "Ulysses's" faithful wife in the poetic drama by Stephen Phillips now running at the Garden Theatre, New York. During the hero's long absence from Ithaca she has remained constant to him in spite of the offers of many suitors. When "Ulysses" finally returns, he finds that she has agreed to accept that one among her suitors who can bend her husband's great bow. Each tries and fails, whereupon "Ulysses" appears in disguise, performs the required feat, and is reunited with "Penelope."*

What We Sell to Manchuria

The trade of the United States with Manchuria, China, shows no perceptible change in 1932 as compared with 1931. Figures just compiled by the Department of Commerce and Labor show that the total imports into the port of Newchwang, the principal doorway through which Manchuria is at present supplied, amounted in 1932 to eighteen million baikwan taels in value, against seventeen million in 1931, and eight millions in 1930. The official report of the Chinese government does not specify all classes of merchandise received into Newchwang from the United States, but does specify the four principal articles—American jeans, drills, sheetings, and kerosene. The total value of these four articles of American production reported as brought into Newchwang in 1932, either coming direct from the United States or from other parts of China, was 6,118,920 baikwan taels, which at the official valuation of the baikwan tael in 1932 would make the total value in United States currency \$3,934,920. (The average value of the baikwan tael during 1932 is shown by the Chinese government in its report as sixty-three cents.) The total value of merchandise from the United States imported into China in 1932 was 30,138,713 taels, against 23,326,096 taels in 1931.

# The Alterkrontz Conspiracy

By N. G. Smith

"I took seven days to make the world and forty to destroy it," the ex-Chancellor smiled. "For thirty years I have labored to uphold this kingdom. In six months it shall be no more. Ritzler," he said, and turned half-condescendingly to the earnest man at his elbow, "together we must inevitably triumph."

The other nodded. "If it were not for the Crown-Princess," he said, finally, "there would be nothing easier. His Majesty, as you know, can't live through the war."

The knob turned and the door swung open, revealing a young man who looked about him with a slow deliberateness that in a person of more energy might have been curiosity. "What the devil are you doing here?" the Count, asked, angrily.

"You don't seem to be glad to see me," said the young man, "Fritz."

The ex-Chancellor looked at his son, and his face relaxed. "Seriously, Fritz," he said, "you ought not to be here at this time. And you interrupted a sale. But"—turning to Ritzler—"if I decide to take the horses, I'll let you know by four o'clock."

Ritzler rose and bowed with some formality. "At your service, Chancellor, at any time," he said. "Good morning, Count."

The old man sighed. "Now you are here, what are you going to do with yourself?" he asked. "I suppose you've already been made to feel that I am no longer Chancellor."

"Can't say I have. I met Prince Ludwig at the club, and he insisted that I go to the ball to-night. Wants me to see his royal facade. It's a pity any woman should have to marry that little scub. By the way, he says she's pretty."

"Yes," replied the ex-Chancellor, "she is."

"It is rather warm for dancing," the young Prince was saying, "but I have known it warmer. I remember the night that I came of age." What happened on that evening the Princess never knew. In that instant her eyes, resting on Fritz von Linden, grew large and wonderfully lustrous, and her face became as suddenly white.

"Take me where I can get a breath of air!" she said. And not waiting his answer, she led the way to the nearby balcony. "I have danced too much and need the air. You may come for me in five minutes."

His Royal Highness rose with alacrity. "I'll smoke a cigar and come back," he said, and stepped into the ball-room.

The Princess was relieved to be alone. She closed her eyes, and before she opened them again knew that von Linden had stepped from the window on to the balcony. Dazed by his audacity, she was hardly conscious that, fighting to see her for the first time, he stammered, "I beg your pardon!" and started, very slowly, to withdraw.

It was then she remembered her rank and its privileges with a sudden thrill of pleasure. "Will you get me a glass of water?" she said, calmly.

When von Linden returned she drank the water slowly, and looked at him critically between sips.

"You are the new lord-in-waiting?" she asked, finally.

"No," said von Linden.

The brevity of his answer was annoying. "I thought you must be. I don't think I ever saw you before," she continued.

"Possibly not, your Highness." His manner was frankly admiring, and his forgetfulness of her rank was contagious.

"Oh, I know who you are?" she retorted. "You are the Chancellor's son."

"Yes," he said, smiling, "as rather the ex-Chancellor. How did you know?"

She hesitated, then lowered her eyes. "I think I must have known you from description. I have heard the maids of honor talk about you."

The young man hesitated. "I had never seen your Highness before to-night," he began.

"I have an liberty in town," she interrupted. Then added meditatively: "We are going to the summer palace next week, you know. At Kronheim I run about quite like a country girl, and take long rides or walks in the woods. We have a summer-house overlooking the Stralitz Valley where I sometimes sit for hours in the afternoons. It is such a relief to be alone."

"But Prince Ludwig will accompany you!"

"No. He says it would be too quiet for him. But he will visit us from time to time. I think we will stay there till—" She paused, overcome with a sudden emotion.

"Till the autumn," she amended, quickly.

The night air had become oppressive, uncharged with the cloying odor of roses that bloomed below. Far off in the palace garden a fountain plashed, and from within came the notes of a Strauss waltz. But the Princess did not hear the music, nor smell the roses, nor yield to the soft influence of the night. For the young man bending over her seemed to have absorbed the beauty of the earth and sky, to exhale the freshness of spring and the ardor of its sunshine. She felt his gaze upon her face, and the next instant his fingers closed over hers. She felt, she knew that he was about to kiss her, and all the danger of the situation rushed upon her. Her rank, her betrothal, her own self-respect, but for one moment she experienced what seemed the obsession of all sensation, perhaps one of those short eclipses of the moral sense which the good know only in dreams; the next he had kissed her, and she more shocked than she at his presumption, sank to his knees in an appeal for forgiveness that was nevertheless a tremulous protestation of love. But the Princess had risen to her feet, her face had sunk suffused. "I must go in," she said, in a dazed way.

Von Linden raised his eyes. "Please forgive me," he pleaded.

She looked at him, and her eyes softened. "It must have been my fault or it couldn't have happened," she said; then added, tremulously, as she moved away, "I will forgive you if you will forget it."

Von Linden bent his head. "I prefer to remain unforgiven," he said, and looking up saw that she had gone. For a moment he wondered if she had heard him.

In the course of the succeeding fortnight young von Linden smoked a little more, and perhaps played a little higher than was his custom. And he wondered at intervals whether the Princess in telling him she was going to Kronheim where she often went about alone, had meant to give him a rendezvous.

It was one day while in this shifting mood of indecision that the ex-Chancellor said to him, "Fritz, when are you going to Kronheim?"

The question had presented itself to his own mind so often that mechanically he gave the stereotyped reply. "I don't know that I'll go at all."

The next morning, however, when he remarked that he thought of running up to Paris for a day or so, his father received the announcement in apparent good faith, and remarking that it might do him good, stirred his coffee, reflectively. And the same afternoon when the Princess Isabel, looking tired and slightly pale from the heat, took her way to the little summer-house overlooking the Stralitz Valley, the figure which she had expected to see, in the same time suddenly appeared, and she darkened her face a little. As she stood, slender, dark, glowing with delight in his presence, she seemed so little the Princess he remembered and so much the woman he loved that von Linden at once lost sight of the barriers of decorum and the common sense of the morning after had raised between them.

"Your Highness is glad to see me?" he asked, as he kissed the hand she extended.

"Don't call me your Highness," she answered. "It reminds me of a rank you must try to make me forget."

"I would have to forget it myself first," he bantered.

She looked at him between half-closed lids. "Such things have happened," she smiled. "But they must never happen again!"

Von Linden laughed. "Does the Princess say that or the woman?" he asked.

She sat down. "I think it ought to be both, don't you? A house divided against itself cannot stand," she added.

Then, involuntarily she touched his arm with a light caressing movement. "I am so glad you have come," she said. "Prince Ludwig is expected this afternoon. Is it anything to you that they will make me marry him?"

Her remark recalled to von Linden all the difficulties of a

situation, which is the enjoyment of the moment he had forgotten. "You needn't have him unless you like," he protested.

He smiled bitterly. Had she guessed the wild dream he had been indulging as he sat beside her, and moaned to shatter them with a careless word? But the next moment she smiled. "You know there is very little choice in princes."

"Then a prince is not your ideal? What is your ideal?" he asked abruptly.

She turned and looked at him.

"What a magnificent view!" said a voice behind them. Von Linden sprang to his feet. Small, compact, self-assured, His Royal Highness nodded to him. "This is an unexpected pleasure," he said glibly. "They told me I'd find you alone, Isabel. Von Linden, what are you doing here, more than twenty miles from a diw-lax?"

It was a long speech for His Royal Highness, and delivered with much apparent ease. In reply the Princess greeted him cordially and simply. Of the three, only von Linden seemed embarrassed, and perceiving this returned to him, smiling. "I am afraid Ludwig wants me to think you a gambler, Count."

"A gambler!" echoed Prince Ludwig. "I rather think so. He plays for higher stakes than any man in Europe."

Isabel looked at him in amazement. There was no mistaking the point of his words. "And generally wins them?" she asked.

For a month the King treated his daughter's refusal to marry Prince Ludwig as a joke; indeed, not until their return to the capital did he realize that she was wholly serious in her determination.

Since their meeting at Kronheim the Princess had not seen von Linden, but the day after his departure he had received a slip of paper upon which the announcement of the rupture of her engagement was written by a woman. It had puzzled him greatly at first, but after ten minutes' reflective musing it occurred to him that it might have come from her, and as he heard nothing about it at the palace, this soon grew to be a conviction. And he had written her several notes which in some way found their way to her hands. Short, disconnected, sincere, and with a tendency to anti-climax, they nevertheless served to sustain her during many stormy interviews with the King. But where argument had failed, where abuse and threats against von Linden had been met with contemptuous silence, her father, older and more broken than she had ever seen him, had by an appeal to her honor as a member of the reigning house, and to her filial affection, extracted a half promise that she would do as he wished, and had left her. For ten minutes she held back the tears, but when the room began to swim and her head seemed full to bursting she flung herself upon her bed and wept. How long she never knew. She was aroused by a knock at her door.

"Young Highness," said the young woman who entered, "Chancellor von Alter and Count Mindheim ask an audience."

"Now?" said the Princess, startled. "What can they want with me?" But, red-eyed and with disheveled hair, she walked into her drawing-room.

The old Chancellor bowed over her hand, then looked at her long and gently, but did not speak.

"You asked for me?" she began, in a puzzled voice.

His glance turned to Count Mindheim, as though for assistance, but the Count did not break the silence. "We bring your Majesty sad news," he said at last. "The King was stricken with apoplexy while driving in the park." Then, in a voice that was scarcely audible, "He is dead."

Isabel, Queen of Alferkraatz! She looked at herself in her trailing black and wondered if she could be the creature of careless moods and fancies of a young lover. The week succeeding her father's death had been full of haste and incident; save in her sleeping hours she had not had a moment's solitude. She saw ever more the swollen body as it lay in state, the sombre pageantry of the majestic funeral that had been followed by countless interviews with self-important ministers whose attitudes seemed to blend defiance to the Queen and condescension to the woman.

Name \_\_\_\_\_ Address \_\_\_\_\_

The outcome of these interviews she hardly knew; she had signed the papers brought her, reading them sometimes, but without grasping their meaning. One brief conversation with von Altler she remembered clearly; it concerned her marriage.

"I hesitate to approach your Majesty upon such a subject at this time," he had begun, "but your Majesty is at an age when it is natural to think of marriage. Among the princes whose proposals are known to you, has your Majesty any choice?"

"No," she answered, curtly, "none."

"I may infer, then, they are all equally acceptable?"

"Equally unacceptable."

There was a silence. "Has your Majesty any one else in view?"

he had asked. Finally,

"The question

of your Majesty's

choice of a husband

is one of paramount

importance. The

situation in the

country is one that

needs a strong

head and a united

ministry to meet it.

It would be a relief

to have these minor

questions settled as

soon as possible."

"These minor

questions!" The

young Queen almost

laughed. "I will

consider your sug-

gestions, Baron,"

she said, and the

slight tinge of wre-

ddiness in her voice

closed the interview.

Perhaps the per-

son most aggrieved

by the King's death

in all the country

had been ex-Chan-

cellor von Linden

for with the news

his slowly maturing

plans of vengeance

had collapsed. His

stern, the man who

had humiliated him

by his ingratitude,

was dead. He had

no longer any desire

to make Altkrona

a republic. He cer-

tainly knew the

young Queen no ill

will. Perhaps, if

she were really in

love with his son,

but, even so, the

thing was impos-

sible. Nevertheless,

the fire of an un-

quenchable ambition

rose in his heart,

and within twenty-

four hours he had

notified Bittler that

their agreement to

overthrow the gov-

ernment was at an

end. It was two

days later he deter-

mined to get some

definite grasp of the

situation from his

son. Touching a

bell, he said to the

old servant who an-

swered it, "Send the

young Count to me."

When his son en-

tered the ex-Chan-

cellor looked at him

gavely, "Fried-

rich," he began.

The young man

looked puzzled, then

his face broadened

into its slow smile. He

remembered that when

he was a child his

father had never

called him Friedrich

except when about

to beg him.

"Tell me just how

matters stand between

you and the Queen,"

he continued. "It is

important that I should

know."

For three minutes

Drawn by T. de Thuldoer

"My reign is over," she sighed, wearily

for; then they passed out. Suddenly there was a succession of crashes, and from the windows above a shower of shattered glass. The Queen swung forward. She was no longer frightened, but determined. She surveyed the crowd below. She raised her hand as a sign that she wished to speak to them.

"I don't know what you want," she said. "Perhaps you do not. But if there is anything I am responsible for it can soon be settled. If you have any leader who can guarantee protection to my people I will surrender the Palace to him and the crown to you."

Then she turned to von Linden, who now stood beside her, silent and dazed by the sudden turn of events. "My reign is over," she sighed, wearily.

He took her hand and kissed it, holding her eyes with his.

"No," he said, smiling brightly, "it has just begun."

had been a dairy-maid and I a gardener's assistant I suppose we might have been considered engaged. But," he added, with assumed carelessness, "of course it is all over now."

"I don't know that," was the reply. "You are taking a man's point of view. There is an accounting for women."

Young von Linden sighed. A servant entered and handed the ex-Chancellor a note. One glimpse of the handwriting and the young man sprang forward. "That must be for me!" he said.

Young von Linden read it.

"Please come to the Palace at once."

He laughed joyously. Then he turned to the waiting serv-

vant. "Who brought this?"

"An orderly. He

appeared to be in a

great hurry to go

and said you were

to follow him. The

streets are full of

strikers," the man

added. "The order

for a general strike

went out at four

this morning."

The ex-Chancellor

started. Bittler was

evidently playing it

alone. But Fritz

had already arisen.

"We must go at

once," he said.

It was five blocks

to the Queen

Boulevard, and

along it fifteen to

the Palace. The

side streets seemed

deserted, but the

avenue was throng-

ed, not with its

usual holiday

crowd, but with

groups of excited

strikers.

When they reached

the Palace they saw

that already a large

crowd had gathered

about its gates,

above which rose

the royal lions mas-

sively impressive.

They were shown

into the Queen's

apartment. Fritz

von Linden's eyes,

eagerly seeking

Isabel, ignored the

group of gray-

bearded men gath-

ered about a table,

and saw only the

slender figure at its

head, and in the an-

swering glow of her

eyes and the sudden

troubling of the

fingers that rested

on the great table

he read that she

was glad of his

presence.

She walked to the

window where he

was standing. "Let

us go out," she

said, indicating a

small balcony. "We

are nothing more

than spectators, you

and I."

She put her arm

in his, and for a mo-

ment they stood re-

fracted in a large ma-

hedral of crashes,

and from the windows

above a shower of

shattered glass. The

Queen swung forward.

She was no longer

frightened, but de-

termined. She sur-

veyed the crowd below.

She raised her hand

as a sign that she

wished to speak to

them.

"I don't know what

you want," she said.

"Perhaps you do not.

But if there is any-

# Dr. Lapponi

Physician to the Late Pope Leo XIII. and Now Physician in Ordinary to Pope Pius X. Finds

## BUFFALO LITHIA WATER

Of "Marvelous Efficacy in Gout, Rheumatism, Gastro-intestinal Dyspepsia, and in all the Various Forms of Uric Acid Diathesis."

Following is an Exact Translation of Dr. Lapponi's Testimonial as Written by Himself:

Rome, August 24, 1903.—In the Hospital of San Giovanni Calibrita (del Fiesabene Fratelli) in Rome, directed by myself, I have largely experimented with the natural mineral water placed in commerce under the name of **BUFFALO LITHIA WATER** and am glad to state that, by its richness of composition of lithia, it is of marvelous efficacy in cases of Gout, of Chronic, Articular, and Muscular Rheumatism, of Hepatic Congestions and Functional Disorders, of Gastro-intestinal Dyspepsia, of Gravel and Renal Insufficiency, of light Nephritic Affections and of all the various forms of Uric Acid Diathesis. The same water is also to be recommended highly in the initial processes of Arterio-sclerosis and in obdurate forms of Bronchitis Asthmatica.

May also be used as a good table water. So much I declare for the truth.

(Signed) PROF. GIUSEPPE LAPPONI.

Principal Physician of the Hospital of San Giovanni Calibrita (del Fiesabene Fratelli) in Rome, Member of the Academy of Medicine of Rome, etc., etc.

**BUFFALO LITHIA WATER** is for sale by Grocers and Druggists, generally. Testimonials which defy all imputation or question sent to any address.

PROPRIETOR BUFFALO LITHIA SPRINGS, VIRGINIA.

### The Progress of Science

#### A Picturesque Fact

In that admirable record of scientific achievement, *The Story of Nineteenth Century Science*, written just before the discovery of radium, Dr. Williams says that chemistry has by an exact calculation the resources of the earth's supply of raw material. During the preceding year two new terrestrial elements had been discovered; but one of these had for years been known to the astronomer as a solar element and named helium because of its abundance in the sun. The spectroscopist had reached out millions of miles into space and brought back this new element, and it took the chemist a score of years to discover that he had all along had samples of the same substance unrecognized in his terrestrial laboratory. There is hardly a more picturesque fact than that in the entire history of scientific investigation.

#### Nitrogen the Inexhaustible Fertilizer

There is a happy coincidence in the appearance, in the current number of HARPER'S MAGAZINE, of Mr. Ray Standaard Fisher's article on "The Scientist and the Food Problem." In it he states the facts in connection with the exhaustion of the soil in agricultural lands, the resulting depletion of nitrogenous products, which are the greatest of all natural fertilizers. "The problem," he says, "as seen by the pessimists, is simple: The world is reaching the limits of its capacity for food production, while the population continues to increase enormously. How soon will starvation begin?" But Mr. Fisher is not pessimistic.

When man seems just at the limit of his resources, science and invention step in and open new fields, literally as well as figuratively. The writer proceeds to give an account of the fine work in scientific fertilization that is being accomplished. Almost simultaneously with the publication of this useful article comes the announcement that two American electrochemists, Mr. C. S. Bradley and Mr. D. R. Lovley, have perfected an invention by which the nitrogen of the atmosphere is readily turned to nitric acid and made available, in abundance and at a moderate cost, for agricultural fertilization and commercial use. This fixation of nitrogen is effected by electrolytic treatment of the atmosphere. The inventors of the process seem to have arrived at this important achievement by following up a clue furnished by Dr. Priestley, a famous philosopher, as long ago as the eighteenth century. Sir William Crookes, too, recently proposed that nitrogen be obtained in this way. There are seven tons of nitrogen gas weighting down every square yard of the surface of the earth. Thus a building the size of Carnegie Music Hall holds about twenty-seven tons of nitrogen, and if this could be fixed in the form of nitrate of soda it would be worth at least \$10,000. The immense quantities of the new invention may be gathered from the following remarks of Mr. Baker in the article before mentioned: "The failure of the nitrogen of the soil, the lack of ability to supply it in sufficient quantities by artificial means has formed the basis of the prediction of coming starvation made by Sir William Crookes and others. Indeed, if the world ever starved it will starve from lack of nitrogen; and yet if such starvation takes place it will be a world full of nitrogen."

#### The New Edison Battery

It is now announced that Mr. Edison's new "charging machine," as he calls his perfected battery—to which reference was made in this column last week—will at first cost \$450, but a reduction in price is promised. It is still claimed that this battery will run your automobile, light your house, cook your meals, and do almost any other odd job of a motive order that you like to impose on the laws of nature. The cells of the battery have just been made public. The cells are oblong in shape, 14 inches high, 4 inches wide, and 3½ inches thick. They weigh a fraction over 14 pounds each, and three of them represent one horsepower. These cells fit the body of a vehicle, side by side, and are connected by insulating wires. There is no leakage or deterioration in the batteries. They are made of nickel and iron oxides immersed in an alkaline liquid.

Music

The Season's Opening—Mr. Wetzier's Concert

The musical season of 1903-4—the most promising and momentous in several years—was opened with impressive ceremonies on October 20 at Carnegie Hall. Mr. Hermann Haas Wetzier, his orchestra, and M. Jacques Thibaud serving as the important incidents of the occasion. Mr. Wetzier cherishes a wholly laudable ambition to become a commanding figure in the local orchestral field. It has been questioned whether he is as yet quite adequate to the demands of so eminent a place as he aspires to fill, and it must be admitted that judgment, poise, and authority are scarcely his most striking possessions. On the other hand, he has individuality, ideas, and a most contagious enthusiasm. His reading the other evening of Liszt's "Mazepa" was eloquent and telling; rich in color and emotion; one must, however, emphatically dissent from his view of the Beethoven symphony (the seventh) which he played, for this was ragged, ill-balanced, at times feeble-minded.

M. Thibaud, the young French violinist whom Mr. Wetzier's concert served to introduce to America, is a musician of exquisite cogarity. He has a tone like spun honey, a singular purity and refinement of technique, and is severely unconscious of the heights, and he makes a continual sacrifice of virility and significance to more lusciousness of effect; but he is, nevertheless, in his slight and limited way, a master.

Paul Once More

Adrián Patti, otherwise the Baroness Cedersjö, returned to the American concert stage last week for what we are earnestly assured is "the very last time." The wits have done admirably in the past with the subject of the diva's bear-takings, so we may verge to them the surprising opportunities of the present. But what of that sonorous voice which has been for generations an international tradition? The most scrupulous palliast cannot blink the fact that the voice which so valiantly projected itself into the spaces of Carnegie Hall last week has lost all but a pitiable remnant of its former loveliness, its inimitable and haunting magic. The art which is its controlling impulse is as dexterously heedful as of old, but the voice itself is soulless and worn. It has still its appealing tones—but these are occasional only. And at the end one realizes, a little sadly, that the Patti of yesterday—the Patti of our mothers—is but a unique and receding memory.

The Kneisel Quartet

That rare flower of the musical life of America, the Kneisel Quartet, seems happily to have become active to our immediate neighborhood. The twelfth season of the quartet in New York was inaugurated last week at Mendelssohn Hall by a concert of familiar complexion—familiar in its fairness of accomplishment, its loveliness of mood, its charming artistic dignity. Mr. Kneisel, Mr. Theodorovic, Mr. Stevenson, and Mr. Schroeder played Schubert's B minor quartet as they alone can play it—with superb and flawless excellence, and, at the end, a slight but charming quartet in G major by one of the neo-Rossinis, Alexander Kopylov. With Mr. Schroeder played the beautiful A major waltz, sonata of Beethoven—a eloquent and virile performance.

Music and the Solar Plexus

We print herewith a portion of an interesting communication which has been received from Mr. Adair Weicker, of San Francisco, concerning a recent noteworthy achievement in American music.

"The Rosemary March, by my sister Miss Henrietta Weicker, is one that, played on the piano, it has caused in some cases, when he to them seemed like an almost unendurable or irresistible impulse to do so, and, played on the piano, warmth will be conveyed in and fire aroused in the Solar plexus."

The Substitute

By WILL N. HARBEN  
Author of "Abner Damsel," etc.

A love story of Northern Georgia. A young man of humble birth but entirely fine character is befriended by an old man who desires in stone for a part time by so educating and training him that he may become his moral substitute in the eyes of Providence. Hence the name. From the first chapter to the last there is a continuous flow of anecdote and humorous reminiscences.

The latest Portrait of Margaret Deland, whose new Volume of Stories, "Dr. Lavender's People," has recently been published

## Margaret Deland

FIVE years ago Mrs. Harriet Prescott Spofford wrote: "Mrs. Deland may write many books rich with love of nature and knowledge of human nature, with well constructed and sustained plot and all the fine sparkle of the give and take of dialogue; but both she and her readers will be very fortunate if she ever achieves any finer work than the best of that in *Old Chester Tales*." It would be interesting to hear Mrs. Spofford's judgment of the new volume of this Chester tales just published under the title, *Dr. Lavender's People*. We may be sure that she would find in it not only finer work, but back of it a richness and maturity of power, a fertility of imagination, a deep and moving sense of the human drama which have ripened and expanded her vision and strengthened her grasp of reality. Her faculty of observation is as acute, her intuition as profound and

true, her characterization as firm and sure, her humor as subtle and searching, and her ethical insight as keen and clear as in the work of five years ago. But there is that something more in *Dr. Lavender's People* which is better felt than described; that something which is the reward of living to the imaginative mind, and the secret of genius. For the growth of the imagination is as subtle and elusive as the processes of biology.

It is a significant fact that Mrs. Deland's literary efflorescence bloomed first in verse, and that some of those early poems were scribbled on the leaves of a market book which fortunately fell into the hands of a sympathetic friend who recognized and encouraged the awakening of the young writer's power. The justification of poetry and the market-place has been strongly marked in Mrs. Deland's work from the beginning. Her hold on the

The Hallway and Stairway

Mrs. Deland's Home in Boston

The Library and Study

physical and material needs of life has been as strong as her grasp on the moral and spiritual. It is this deep humanity in her, this breadth of sympathy and comprehensive insight which sees life whole and enables her to present all sides of the drama that asks so close and intimate an appeal, and gives nobility and sanity to her view of life. The waywardness and limitations of human nature are ever present with her in sight of the depths of human tragedy and the heights of spiritual victory or defeat. The case of Alvington Keen and Mary Gordon in "The Note" is one of the best examples in the new volume. "I tell you," says Dr. Lavendar, himself an exponent of this truth, "only the Lord knows what is lying in the darkness of human nature. In fact," he proceeds, as he reflects on poor slumped Almy struggling with "the stirring of God within him,"—"in fact, as I get older, there is nothing more constantly astonishing to me than the goodness of the Bad;—unless it is the madness of the Good." One feels the insistence of the note struck by Almy: "I guess God's more easy than some people"; and in this enlightened optimism and its dramatic development in these stories Mrs. Deland's genius is more spiritually allied with George Eliot's than some others for whom the claim has been made. That is an illuminating passage in which the clergyman and the physician are arranged humorously by Miss Harriet—and, like George Eliot, it is more often than not by a shaft of humor Mrs. Deland wings her moral: "The trouble with you doctors is that you make people think about their insides. It's stomachs with Willy and souls with you. Nobody ought to know that they have a stomach or a soul. I don't. A tree don't. And there isn't an oak in Old Chester that isn't pleasanter than Mrs. Drayton. Yet she's always frowning about her insides—spiritual and material!" To which Dr. Lavendar rejoins, "It's when you don't have 'em that you fuss; the trouble isn't too much soul, it's too little. And I guess it's the same with stomachs." And there is this phrase which crystallizes the truth that finds dramatic solution in all of Mrs. Deland's work: "It was the elemental protest of the flesh, which cannot understand the regal and unacquainted soul."

Not by that *tour de force*, *Johanna Ward, Preacher*, will Mrs. Deland find permanent place in literature any more than will Mrs. Humphrey Ward by *Robert Elwood*, which rose and fell with the wind of religious controversy that raged around their respective problems; but by *Old Chester Tales* and *Dr. Lavendar's People* and the novels which we hope are to follow soon, will Mrs. Deland assert herself of her best, and take that distinctive leadership in American fiction which we believe is now at her command. She has never shown so perfect and supreme a mastery of her art as she does in this new book, and she bids us instinctively look for a work that will combine the variety and

range of her ripened gifts with the sustained and more elaborate proportions of the novel. Not that *Old Chester Tales* and *Dr. Lavendar's People* are to be measured by the common collection of short stories. They have a reality and community of place and people with a variety of theme and situations, which pertain to the quality of a long novel, and in the central figure of Dr. Lavendar, surrounded by his people in Old Chester, we are made to perceive the separate stories as sketches composing a single picture. Mrs. Deland's loving portraits of Dr. Lavendar has reached Dr. Maclure and other large human figures in fiction to some minds; her imaginative use of the village of Manchester, near Pittsburg (Mervee in the stories) for the quiet setting of Old Chester, where her childhood was passed, has tempered others in like her habitat to Cromford; and her style and treatment of village life have brought to mind Jane Austen and Miss Mitford. But the fact remains that Mrs. Deland has shown an original quality, and a selection of material which is indubitably her own. In her own field she is inimitable, and has invited no one. There is no one writing to-day whose work more undeniably possesses that distinction which is the hall mark of literature, and which conveys the classic touch that ensures remembrance.

Mrs. Deland has never sought publicity, although she is no recluse. Her days are spent mainly out-of-doors, and it is the odor of flowers and not the smell of the lamp that exudes from her fragrant pages. Her passion for flowers and old gardens is apparent in her work were there so other evidence. In *An Old Garden*, her volume of poems, was a spontaneous expression of this passion, and was the impulse that led her into literature. One of the prosaic bits of ruled paper torn from the market book aforementioned is still in existence, I believe, containing the pencilled lines of "The Clover," with a graceful sprig of the flower traced over the page. Her home on Beacon Hill, Boston, blossoms within like spring with plants and flowers in the chilled New England water. Her study window looks toward the Common, and the eye sweeps a wide horizon over the neighboring chimney-tops from the south to where in the north Mrs. Deland takes her flight with the swallow to her summer home at Kennebunkport, Maine. Here she loves to work for hours in the large garden surrounding the long, low attractive house that breathes an atmosphere of content and peace. The jongsils which are seen in the picture below are her special pride. Like the author of *Laura's Poems*, the creator of Dr. Lavendar and his people is jealous of her personal life, though sharing an unlimited hospitality with a wide circle of friends, content to live her own life in her own way, and when her books are written to "throw them over the garden wall," as Blackmore put it, for that larger hospitality of intellectual commonwealth which has made the world of readers greatly her debtor.

Mrs. Deland in her Garden at Kennebunkport

# Books and Bookmen

By James MacArthur

**I**N *The Reluctant City*, Mr. E. F. Benson has given us a novel of London and New York which, like everything he writes, is clever and lively reading. There is a body, so to speak, a solidity of mind in English fiction, even of the most mediocre, which is generally lacking in American novels. We have our compositions, to be sure. We are not profound thinkers perhaps, like the Earl of Fawceter, but we are at least superficially alert. And so to us much English fiction is dull and stupid. But Mr. Benson has a lively wit and brilliancy which give sparkle to his profuse passages, and it is entertaining, not to say enlightening, obviously enlightening, to see ourselves as Mr. Benson sees us in *The Reluctant City*. The *Reluctant City* is, of course, New York, though why "of course," one might pause to ask who has laid the grim brutality of London with Henry James—she as like a mighty ogre who detours human flesh." This reluctance is carried like a dominant note throughout the novel, and is not without its dramatic effect.

It sounds it in the opening chapter in a passage that has the ominous forecast of a prelude: "All the old landmarks, as the great wheel of human life whirled down the road of the centuries, seemed to be passing out of sight; the world was racing westward, where America sat high on the sea, grown like some portentous mammoth in a single night. There, at the present moment, the inexorable, the relentless, the inevitable of nature was working out its everlasting proposition that the oneforce in the material world was wealth. England had had her turn, as Rome had had her turn, and even as the borders of barbarism had swept over the countries that had been hers, till they reached and took the capital itself—even so." "It must be confessed," Mr. Benson admits, "that England has fallen into the hands of very kindly foes."

Again, later in the story, when it is asked of America: "Is he quite unscrupulous?" the answer is: "Not unscrupulous exactly, but relentless. That is the spirit of America. It fascinates me and it repels me. Some of them remind me of destiny." At first the reader may, like Bertie, be "jaded by the voices, manners, aims, methods of looking at life of the society" that Mr. Benson has satirized in his novel, but the ready wit of the native will quickly demonstrate the truth of character and the exaggeration of caricature which this satirist

has used to paint and adorn a tale. The satire is seldom biting or bitter except where deserved; one is made to feel that Mr. Benson, while not quite sure what to make of us, admires us, and stands just a bit in awe of us. He appreciates the wider area and latitude of our general geography. He appears to like, more and more, the quality of mind in us which may be broadly rated wealthlessness. And the effect which a visit to New York has upon Mrs. Nydal Massington is surely a tribute to our strenuous life.

"To work—that was the impulse she had brought back with her from America; not to scheme merely with her busy brain, to intrigue, to flail, as she always had found, endless amusement and entertainment in watching others, even though she carried her intellect to its fullest in intently watching them, but to make some plan, and carry it out, to find some work to do and do it." After all, it is very much with London as with New York the Reluctant: not in obstinacy does she fill her man and play the ogress (in call on Mr. James again), but to keep herself alive and in her tremendous work.

No novel of character is without its moral, but the moral of *The Reluctant City* is lightly winged, and speeds home through

kindling mirth and laughter. Mr. Benson's purpose was primarily to amuse, and his characters, whether English or American, serve that end. The plot has a touch of melodrama, and we can scarcely forgive Mr. Benson the inconsistency of character in making a heavy villain out of Mr. Hilton, who, as type of the enterprising American improviser or theatrical manager, is drawn with rare fidelity and truth to life. Dolly Eastworth, too, the clever actress who comes to see and conquer an American audience on her first appearance, is a pitifully reminiscent of her kind—the embodiment of vitality and serene passion. Not even her friends, and they were many, ever accused her of morality, but, on the other hand, all children adored her. That is an item not to be disregarded when the moralist adds up his balance-sheet." It is Dolly who is the innocent cause of all the trouble in the story, for she thought she had destroyed Bertie's "lyrical love-letter" to her in a magnanimous moment, but it is subsequently used as a means of black-

mail on Bertie, who marries the American millionaire's daughter; and it is Dolly who, in the nick of time, averts the domestic tragedy which threatens to engulf the peace and happiness of the Anglo-American alliance. As frequently happens where beautiful women play the devil and the angel with equal charm and vivacity, Dolly is the most alluring and attractive creature in the book. The story is certainly highly amusing, and if viewed as affording glimpses of some aspect of the social world, and not the whole world, or the best of it by any means, one will close the book with a sense of having been entertained a lot, and coiffed a little, by the spectacle of a comedy of manners in high life. Otherwise one might be tempted to say to Mr. Benson: "Almost thou perchance me to be a cynic!"

Is the influence of Mark Twain's earlier work being missed to any extent in our fiction? It looks like it. I heard it contended the other day that the greatest American novel was Tom Sawyer and not *The Scarlet Letter*. I believe that library statistics show that no living author's old books are so widely read in this country as Mark Twain's, so that the influence of Tom Sawyer and *Huckleberry Finn* must be widespread indeed. Mark Twain sought his heroes among the boys of the lowest democratic level, and if you have observed the trend of current fiction lately, you will find that

present-day novelists are emulating Mark Twain's democratic and simple ideals. Not to multiply examples, I have in mind three works of fiction issued within the year in which the hero emerges from a boyhood of obscure parentage and the rudest surroundings. It is *Robert in our democracy* that the child who is shown to be father of the man should spring from pioneer stock and be fitted with picturesque credulity and practical romance. Tom Sawyer is the natural forerunner of "Jawn" blood in *The Whirlwind*, of Billy Williams in *The Vagabond*, and of Chad in *The Little Shepherd of Kingdom Come*. And the notable thing about these three novels is that their finest and most original quality resides in their portrayal of boyhood life. It is when the boy reaches manhood that the story in each case becomes more conventional and less original. A curious coincidence, by the way, has led these three authors to lay the track of their story through the colossal field of the Civil War, and in the beginning both the "Little Shepherd" and the "Vagabond" ran away to the large adventure of their boyhood dreams. Both boys come into their kingdom and win the lady of their choice, as romance would have it, stays on the opposite side, the Southern, of the national struggle until it is ended. The *Vagabond* has already been reviewed in these columns, and some

E. F. Benson  
Author of "The Reluctant City"

months ago I called attention to Mr. Hughes's remarkably strong work, *The Whirlwind*. Of Mr. Fox's *The Little Shepherd of Kingdom* I may be said that it contains the most mature and artistic work, and makes a strong case for popularity. It is built on broad romantic lines, and has little to do with the realism of human events, but it is a healthy, picturesque romance of civil-war days which will attract many readers. I will have a lingering fondness for this work, which I like to see neglected, and should be a phase of existence which was distinctively American. Nothing this young author has yet written will live so long as his *Ball for Madam*, A Cumberland *Widdowet*, and *A Mountain Karoon*, which I admonish the reader to procure if he has neglected them. Of the three novellas named, I like to add that *The Whirlwind* seems to me to be by far the most finished and original work. Mr. Hughes had the courage of his artistic convictions, and refused to strain probability for the sake of the momentary triumph of sentimentalism. Nothing in the book excites me so much as his convincing study of the inevitable tragedy at the close, which instinctively imparts a thrill that compels submission to the mysterious drama of life. It is also noteworthy that *The Whirlwind* possesses a spiritual quality without which no literature can touch greatness.

Mr. Herman Klein, in his *Thirty Years of Musical Life in London*, just published, contributes an interesting chapter of reminiscences of Adeline Patti at home which will attract attention on account of the great prima donna's forthcoming reappearance in this country. The purely personal incidents relating about her, as about other great singers and musicians in these pages, are printed for the first time. It has been a frequent cause of wonder why Madame Patti, at the end of her professional career, should have cherished her home at Craig-y-nos castle with the elaborate structure of "a Boyouth theatre on a miniature," as it has been called. To Mr. Klein she made this explanation: "I love the stage. I love to act and to portray every species, every shade of human emotion. Only I want freedom—more freedom than opera, with its restricted movements and its wear and tear on the voice, can possibly allow the actors. I care not whether it be comedy or tragedy, so long as I feel that I can devote my whole energy, my whole being, to realizing the character that I have to delineate. . . . I want to act, to live myself upon the boards, playing to myself and a few chosen friends on each side of the footlights. . . . Give me only a dramatic idea, with music that aids in depicting it, and I will play you any part you choose (in pantomime), from one of Saech Bernhard's down to Paganini in 'Siseland.' . . . While they are rehearsing one of these musical pantomimes with 'La Tosca' or 'The Three Kings,' Mr. Klein's visit to Craig-y-nos in 1891, Sir Augustus Harris, the famous impresario, quietly slipped in and took a seat in the dark auditorium of the theatre. He watched the proceedings with the amusement of a spectator of the same exciting a holiday. Madame Patti soon perceived him, and called out: 'Gus, what are you doing there? Why don't you come on the stage and help us?' 'My dear Adeline,' answered Sir Augustus, 'if this were an open or a play I should with pleasure. But it is neither, and whatever it may be, there is no need of my help long as you are there. I am just beginning to realize that if you had not been the world's greatest singer you could have been one of its best actresses.' He meant it, adds Mr. Klein,—and it was true. Mr. Klein's memoirs of these thirty years in London present a most delectable panorama of gossip, personalia, and intimate narrative of events pertaining to the notable personages and movements in the musical world. The galaxy of vocal and instrumental stars and impressive that swing into his ken during these years is fully represented by the numerous portraits which are scattered in profusion through his pages.

A translation of the Countess Agathe Potocka's intimate study of Theodore Leschetzky, which appeared in French ten years ago, has just reached us from the pen of Genevieve Seymour Lincoln. It is the record of a happy and romantic life, rare in musical annals. For over half a century this greatest of living piano maestrae has been a prominent figure in the social and musical life of Russia, Hungary, and Poland. The same observations a holiday. Madame Patti soon perceived him, and called out: "Gus, what are you doing there? Why don't you come on the stage and help us?" "My dear Adeline," answered Sir Augustus, "if this were an open or a play I should with pleasure. But it is neither, and whatever it may be, there is no need of my help long as you are there. I am just beginning to realize that if you had not been the world's greatest singer you could have been one of its best actresses." He meant it, adds Mr. Klein,—and it was true. Mr. Klein's memoirs of these thirty years in London present a most delectable panorama of gossip, personalia, and intimate narrative of events pertaining to the notable personages and movements in the musical world. The galaxy of vocal and instrumental stars and impressive that swing into his ken during these years is fully represented by the numerous portraits which are scattered in profusion through his pages.

*Hawthorne and His Circle* is one of the richest literary heritages of the year, a gossip chronicle of significant events and memorable faces, becoming invaluable in the mass, concerning the author of *The Scarlet Letter* and his circle of friends, recorded by his son, Julian Hawthorne, who remains to this generation one of the best links connecting us with the glorious names of the post-half-century. The pages abound in recollections of Hawthorne and many of his great contemporaries in the personal side, which have not appeared in print before. It is a study of people of events, and not a study in literary criticism. One very naturally turns to the

chapter in which Mr. Hawthorne tells how *The Scarlet Letter* came to be written, and under what distressing conditions Hawthorne sweated and labored to find himself degraded by political chicanery of the income of a custom-house surveyorship with which he supported his small family. He was then forty-five, and his son Julian three years old. He closed his desk in the Salem Custom-house for the last time, and went out alone to face with the disaster which was instrumental in giving *The Scarlet Letter* to the world. When he reached home and broke the bad news to his wife, she opened a drawer and disclosed a store of bank-notes which she had saved from his income by frugal economy. Stimulated by this unexpected miracle, Hawthorne readily recalled the nebulous elements of a story that had been for months past rumbling around in his head, a story in which was to figure prominently a letter A, cut out of red cloth or embroidered in scarlet thread, and fastened to a woman's bosom. His spirits rose. After all, it was a relief to be rid of the surveyorship, and donning his borrowed dressing-gown and slippers donned at bed, he sat down at the old mahogany desk, so long unused, by the window. There would be time to dash the story before the marvellous store of bank-notes gave out, and then he could go on writing others. The *Dissociated Review* only paid twenty dollars for four pages, and terribly shy pay at that, but he would work out the problem somehow.

Upon coming in close quarters with *The Scarlet Letter*, Hawthorne found that his temperance in what he would do himself within the limits of the sketches he had been used to writing, and that instead of a month it was more likely to take over a year to complete. But he had started the work, and even if it had been ungenial he could not turn back or put out, for he had had his mind set to substitute for it, he could not free himself from the thrall of the story until it had been told. He began the book, jaded from years of office drudgery, with the wolf almost at the door. The noise of traffic in the narrow street without and the anxiety domestic affairs within unceasingly attacked him as he worked on. His mother, whom he deeply loved, fell ill and died, and interrupted the work for a while. His health was shaken, his children became ill, his wife was suffering acutely, and financial need was pressing, but through it all he wrote on. Like Robert Louis Stevenson, he "stared to his paralysis." He wrote moments till night at this time, though afterward he never worked after noon. As a child, his son ran dandy remember the quiet quaking sotto voce the smooth paper, with frequent quick dips into the ink-bottle—a few words scribbled, he would write swiftly, then a pause, he would scribble a while the pen lay idle, and then a word or two to his mind. Then the shadows closed in on the child, who was written with illness after his grandmother's death. What happened subsequently was learned later in life. When *The Scarlet Letter* was at last complete, Hawthorne said the story was forming in his wife; his voice faltered and broke as he proceeded, and she slipped to her knees and hid her face on her arms in the chair beside him. "I had been suffering," Hawthorne said long afterward, "from a great diversity and severity of emotion. One day a big man with a brown beard and shining brown eyes, who I never saw or knew with enthusiasm and fan, made his appearance in the Hawthorne home. The child noted that he talked volubly about something, and that when he was gone, the mother and father smiled at each other. The mother cried that she was forming a new idea. Fields had read it and declared it the greatest book of the age. That was the last of Salem for the Hawthornes.

"Artful fiction being more convincing than artless fact, it is not likely," says Mr. Janvier by way of introduction to his new work, *The Dutch Foundress of New York*, "that the highly untruthful impression of the Dutch colonists of Manhattan given by Washington Irving ever will be effaced." Yet when Mr. Janvier comes to tell the plain truth about those rough old Dutchmen who settled here in Manhattan nearly three hundred years ago, his charm of historical virtue is well-nigh as pleasing in the narrative as Irving's fancy in his subtly mendacious *History of New York from the Beginning of the World to the End of the Dutch Dynasty*. The mother critic had been written, and James T. Fields had read it and declared it the greatest book of the age. That was the last of Salem for the Hawthornes.

Mr. Janvier deserves grateful recognition for his arduous task in delving among old documents and dusty archives for his data, sifting to the laborious hunt, and resolving the results of his research into a clear and graphic narrative. Some of these valuable documents and plans are reproduced for the first time, and are of popular note of old Dutch New York, dedicating the new edition to Mr. Janvier.

## Complete Writings

IN TWENTY-FIVE VOLUMES

*A Set of Thackeray is not a Luxury—it is a Necessity*

THACKERAY'S creations place him at the head, perhaps, of the English novelists of the nineteenth century. His characters are always human. There are no immaculate heroes, no perfect heroines, no utterly unredeemed persons of either sex to be met with in the pages of his books. He conceived it a duty to describe the world as he saw it, and he drew his characters with admirable realism, and with a marvellous insight into the natures of men and women. We take pleasure in announcing a new edition of Thackeray's complete works, and we feel confident that this edition will meet with the approval of all lovers of good library books.

**OUR  
OFFER**

*Gilt Tops  
Untrimmed Edges*

WE will send you the entire set of twenty-five volumes, charges prepaid, on receipt of \$1.00. If you do not like the books when they reach you, send them back at our expense, and we will return the \$1.00. If you do like them, send us \$2.00 every month for twelve months. In order to keep you in touch with us during these months,

on receipt of your request for these books we will enter you as a subscriber for one year, without additional cost to you, for either HARPER'S MAGAZINE, HARPER'S WEEKLY, HARPER'S BAZAR, or THE NORTH AMERICAN REVIEW.

In writing, please state which periodical you want. Address

**HELD UP THE WRONG MAN**

one State convention cannot possibly bind its successor; nor should it be able to do so, as events may entirely transform the political situation in the interval. Inasmuch as a bare majority of one suffices to determine the choice of a Republican national convention, there is no doubt that if the delegations of the great States of New York, Pennsylvania, and Illinois should decide to co-operate with the delegates of Ohio and the Solid South in support of Mr. Hanna, he would be the nominee.

It virtually lies with five United States Senators—Mr. Platt of New York, Mr. Quay of Pennsylvania, Mr. Cullom of Illinois, Mr. Allison of Iowa, and Mr. Spooner of Wisconsin—to say, at the last moment, whether Mr. Roosevelt or Mr. Hanna shall be put forward as the standard-bearer of the Republican party. In view of what happened in New York on November 3, it is pretty clear that neither Mr. Roosevelt nor Mr. Odell, nor both combined, can prevent Mr. Platt from controlling the delegation of that State. As for Mr. Quay, it is certain that he will hold the delegates of Pennsylvania in his hand. The same absolute local supremacy cannot be predicated of the three other Senators named, but each of these would have great influence in his State delegation. This is emphatically true of Senator Cullom and Senator Allison. It follows that Mr. Roosevelt cannot feel absolutely sure of the nomination for the Presidency until it has been actually made. Senator Hanna, for his part, protests that he adheres to the resolution formally expressed not to be a candidate before the national convention, and declares that he himself favors Mr. Roosevelt's nomination. No doubt the declaration is sincere, but it would not prevent the five Senators just named from arranging to give their colleague from Ohio a surprise party if they should arrive at the belief that such a demonstration would be for the good of the party. There are many New-Yorkers who think that Mr. Hanna would run incomparably better in the State of New York than would Mr. Roosevelt, and should the prospect of carrying the Empire commonwealth look doubtful, Mr. Roosevelt may be set aside. Senator Hanna may not want the crown, but he is scarcely the man to refuse it if it be offered.

The fact that the net outcome of the election on November 3 was to show the Republicans decidedly more preponderant in the State of New York than they were in 1902, when Mr. Odell was re-elected Governor, or than they were in 1898, when Mr. Roosevelt gained the Governorship, must needs have an important bearing on the candidates for the Democratic nomination for the Presidency. What reason is there to suppose that Senator Gorman, an outsider, could secure more votes than were given last year to Mr. Cole, who, nevertheless, was beaten? No well-informed person will deny that Mr. Roosevelt will get more votes for President in New York next year than Mr. Odell got for Governor in 1902. Mr. Gorman, therefore, would have to do considerably better than Mr. Cole to have any chance of success. It is possible, of course, that a twelvemonth hence the whole political situation may be profoundly changed; but if a Presidential election were to take place next week, we know of but three possible Democratic candidates for the Presidency who could with any show of confidence be pitted against Mr. Roosevelt. Those three are Judge Gray of Delaware, Chief-Judge Parker of New York, and Grover Cleveland, now of New Jersey, but formerly of the Empire commonwealth. That, under existing circumstances, Mr. Cleveland could beat Mr. Roosevelt in New York we have not the slightest doubt, and we think that either of the other gentlemen named would have a fair chance of victory. Any one of them would secure more votes than would Mr. Gorman.

Nor is this all. It would be hopeless for Mr. Gorman to try to regain Connecticut for the Democracy, and for him the recovery of New Jersey would be even more impracticable. There is but one Democrat alive who is absolutely certain to carry New Jersey, and that is Mr. Cleveland, who, aside from his other qualifications, is a Jerseyman by birth. Now Jersey-men have never had a President, and there is no commonwealth in the Union where State pride is more pervasive and deep-rooted. The sentiment is the more widespread and indelible because, for upwards of two centuries, New-Yorkers have habitually sneered at Jerseymen. Whether Mr.

Cleveland could carry Indiana and two or three of the States west of the Rocky Mountains it is difficult to say at this time, when the election is a year distant. Nobody can doubt, however, that he would run better in Indiana than would Mr. Gorman. There is no difference between them as regards the chance of securing Mr. Bryan's personal endorsement. He has proclaimed himself opposed to both Mr. Cleveland and Mr. Gorman, but we do not believe that he would commit political suicide by organizing a bolt against the nominee of the Democratic national convention, no matter who the nominee might be.

We long ago expressed the conviction that Mr. Bryan and his friends had not the slightest chance of securing a majority of the delegates to the next Democratic national convention, and of thereby shaping the platform of the party in 1904. It will be remembered that in 1900 they only managed to get the Chicago platform reaffirmed at Kansas City by a majority of one in the committee to which the question was referred—the one indispensable vote being furnished by the delegate from Hawaii, which, being a Territory, could take no part in the election of a President. We have always admitted, on the other hand, that should the Bryanites secure enough delegates to constitute a third plus one, they would be able to prevent the selection of a nominee for the Presidency unacceptable to themselves. In other words, they would be able to do precisely what was done by the opponents of Martin Van Buren in the Democratic national convention of 1844. There was a time—some months ago—when it seemed not unlikely that Mr. Bryan and his coadjutors might secure such a fraction of the delegates. Such an event now seems improbable. Mr. Bryan's influence is rapidly dwindling,—not so much by reason of his connection with the will of Philo S. Bennett, for, although some high-minded lawyers would shrink from drawing wills in which they were made legatees, Mr. Bryan has been absolved from the charge of undue influence by the judge of the Connecticut probate court.

When we say that Mr. Bryan's influence is weakened, and, in truth, seems tending to disappear, we mean that his ideas and his adherents have lost ground in the States where they seemed most likely to retain a good deal of strength. If there is one State in the Union which the Bryanites might have hoped to carry on November 3, it is Colorado, yet even there they were beaten. Nebraska, which Mr. Bryan carried in 1900, but lost in 1900, he hoped this year to regain, and he did succeed in effecting a fusion of the Democrats and the Populists. The fusion ticket, however, was disastrously defeated, even in Mr. Bryan's county, where his neighbors might have been expected to stand by him. It was in Ohio, however, that Bryanism received its death-blow. In view of the overwhelming repudiation of Mayor Tom L. Johnson, who has been looked upon as Mr. Bryan's chief lieutenant, it is by no means improbable that the Ohio delegation to the Democratic national convention will be anti-Bryanite. In that event, Mr. Bryan would be unable to control a third of the members, and he would, consequently, be powerless to interfere with the selection of candidates.

It seems certain that no serious attempt will be made in the extra session of the Fifty-eighth Congress to prevent the enactment of the legislation needed to render the reciprocity treaty with Cuba operative. Representative Joseph G. Cannon, of Illinois, in returning thanks on November 7 to the Republican caucus for its unanimous nomination of him for the Speakership of the House, declared that, in his judgment, the policy of the majority party should be to consider and pass the legislation proper for carrying out the convention for reciprocal trade between the United States and Cuba. The only question as to which there is some difference between the House and the Senate is whether the enabling legislation should take the form of a joint resolution or of a bill. There is no doubt that the reciprocity treaty with Hawaii was made effective by a joint resolution, and the Senate evidently had this precedent in mind when it amended the treaty with Cuba by adding that the approval of the Congress should be needed to give the agreement validity. Many influential members of the House, on the other hand, insist that the Hawaiian precedent was a bad one and should not be followed, but that the tariff changes called for by the treaty with Cuba ought to

be embodied in a bill. As it would be absurd for the two Houses to quarrel on a matter of form, we assume that the Senate will assent to the wishes of the popular branch of the Federal Legislature.

We should find it hard to treat as serious the demand uttered by some Canadian newspapers for the concession of the treaty-making power to the Dominion, but for the declaration made by the Premier, Sir Wilfrid Laurier, in the Ottawa House of Commons. We have seen no contradiction of the statement that he drew from the award of the Alaska Boundary Commission the deduction that hereafter Canada must be permitted to conclude her treaties for herself, without interference on the part of Great Britain. As we have previously pointed out, the exercise of the treaty-making power would be tantamount to an assertion of absolute independence. But how could the establishment of an independent Canadian nationality be reconciled with the preference for a monarchy over a republic professed by many of the descendants of the United Loyalists of the eighteenth century? There is a curious report that, if the Dominion should secede from the mother country, it would organize a government monarchical in form. Where would it look for a king? Would it invite a member of the family now reigning in Britain to become its sovereign? There is a rumor that some of the British-Canadians would prefer the Scottish Duke of Hamilton, who is descended, through the Princess Margaret Tudor, from the Plantagenets, who were claimants of the throne of France, through Isabelle, daughter of Philippe IV., King of that country. On the other hand, the French-Canadians are said to look with more favor on the present Baron De Loquand, a descendant of one of the founders of Montreal, and now chief of the seigneurial Order in the province of Quebec. If we mention these matters at all, it is only to show how wildly Canadians talk when they try to reconcile their alleged liking for monarchy with a proposed declaration of political independence. In our opinion, the present agitation for a concession of the treaty-making power is pure bravado, if which nothing will be heard a few weeks hence.

We at first regarded as incredible the report published in a Vienna newspaper that at Wiesbaden the Emperor William II. entered into an agreement to support the Czar Nicholas II. in the Far East, provided Great Britain should co-operate with Japan against Russia. The report has since been accepted as trustworthy in quarters usually well informed, though it is said that the agreement was made, not at Wiesbaden, but some time before the recent meeting of the Emperor, and that Count Lamdorff's visit to Paris was intended to explain it to the satisfaction of the French Foreign Office. We are unable to imagine an explanation that would be satisfactory. It was hard enough for Frenchmen to brook the joint action of Russia, France, and Germany in the Far East in 1895, although the victim of the action was Japan, in which, at that time, Frenchmen were not much interested. Now, on the other hand, if the report to which we refer is well founded, the Russian sovereign is practically asking France to side with Germany, her worst enemy, against Great Britain, whom she is beginning to regard as one of her best friends. What must render the complication peculiarly objectionable to the French Foreign Office is the knowledge that, by the Anglo-Japanese treaty, England is not bound to aid Japan as long as the latter power and Russia are engaged in a duel. Only in the event that Russia is assisted by some other power can Japan call upon Great Britain for counterbalancing success.

As long as France was the only power to which Russia could apply for help, it was practicable for the French Foreign Office to exert a moderating influence on the St. Petersburg government, pointing out that only with extreme reticence would it pursue any course likely to involve it in war with Great Britain. On the other hand, if Russia has an understanding with Germany, she might bring the last-named power into the field, and, when German interposition made the Anglo-Japanese treaty operative, Russia would remind France of the agreement whereby each of the parties bound itself to assist the other, should the latter be assailed by two powers at once. So far as France is concerned, however, the

Franco-Russian League never had Great Britain for an objective, but solely Germany, or rather the Triple Alliance, in which Germany was the preponderant partner. So to mix the cards as to make France a partner of Germany and an enemy of Great Britain is a piece of manipulation at which French common sense is likely to revolt. We have dwelt upon this possible new phase of the entanglement in the Far East because Americans are obviously interested in it. The validity of our new treaty of commerce with China is at stake. Moreover, if France should allow herself to be drawn into a combination of Russia and Germany against Great Britain and Japan, it is practically certain that we should be earnestly entreated to take the opposite side. Nor is there much doubt that our commercial interests would tempt us to do so.

It is a mistake to suppose that the Alaska Boundary Commission failed to finish the work assigned to it, and that, as regards a considerable section of the frontier, the delineation will have to be arranged by diplomatic negotiation, or confided to another commission, or to a board of arbitrators. Some support seems to have been lent to this erroneous supposition by a remark attributed (perhaps incorrectly) to one of the counsel employed to present the Canadian case. He is said to have declared that Canada will never assent to another commission for the purpose of defining the undetermined part of her boundary. The remark, if made, must have referred to some section of Canada's frontier other than that which borders on Alaska. It is true that on the map which sets forth the award there is a fraction of the boundary—the length of which is variously estimated at from 130 to 300 miles—that could not be precisely fixed, owing to the fact that materials adequate for the purpose had not been placed before the Commission. All that will be needed, however, in order to draw the line will be a joint survey. It will be practically impossible for the American and Canadian surveyors to differ, inasmuch as the Commission carefully laid down the principle upon which the survey is to be made, namely, from peak to peak. The application of this principle will be the same in the case of the unmarked section as in the rest of the boundary. How soon the joint survey will be undertaken is unknown, but it might be well to present the work with promptitude, lest a discovery of gold in the undelimited region should again cause friction between American and Canadian miners.

It is sincerely to be hoped that the operation which on November 7 was performed on the Emperor William II. does not justify the apprehension that he is threatened with his father's fate. According to the official diagnosis made and published by Professor Johann Orth, the successor of Professor Virchow at the Berlin University, the polypus which was removed from the patient's larynx consisted of a soft, white membrane, some of the cells of which contained brown-colored grains. So far as an investigation has been made, Professor Orth does not regard the polypus as of a malignant character, but he adds that it remains to be seen whether the grains just mentioned are really benignant. The fact is recalled that, after the first operation on Emperor Frederick, an international inquiry was instituted for the purpose of ascertaining whether what seemed to be benignant tumors might develop eventually into malignant ones. The outcome of the investigation was that in some cases the development of a benign into a malignant type of tumor has been observed. The Emperor himself is said to make light of the matter, but the German people are not easily reassured, remembering, as they do, that both of his parents died of cancer. The fear that he may be doomed to suffer from the same affliction will have the effect of demonstrating how deeply William II. is beloved by the great majority of his subjects, and how thoroughly he is respected all over the world. Nowhere outside of Germany is he more certain of commanding heartfelt sympathy than he is in the United States. We have sometimes smiled at his extravagancies, but we have esteemed him and admired him as a man.

The salient feature in Mr. Balfour's great speech at the Lord Mayor's banquet was his extremely friendly feeling towards Russia, and Russia's attitude in both the Near and the Far East. This is in part due to the very close relation

now existing between England and Russia's ally, France, and in part to the larger and more generous views which now characterize England's foreign policy, and which are, in part, due to the moral lessons of the South-African war, and in an even greater degree to the personal power and statesman-like qualities of King Edward, in honor of whose birthday the Lord Mayor's banquet was held. In responding to the toast of His Majesty's Ministers, Mr. Balfour said that there was every reason to feel sanguine that there would be no serious outcome to the situation in the Far East. This assurance he based on the passionate desire of the Tsar of Russia to promote the general peace, and on the fact that Japan, as the ally of Great Britain, would be certain to display moderation, discretion and judgment in its demands. Mr. Balfour was equally clear in what he said concerning the Near East. The Macedonian question, he told his auditors, raised issues more difficult and more complicated than even those of the Far East, because it touched the almost perennial difficulty of the problem of the government of its European and Christian subjects by the Sublime Porte. This question had been the cause of infinite political complications, and serious wars, bringing anxiety to every court in Europe; and Mr. Balfour declared that it was impossible for a disease of such long standing to be instantaneously cured, but he was convinced that the question would be ultimately settled by the concert of Europe, which could not more effectively carry out its designs than through the medium of those great powers, Russia and Austria, which had undertaken to deal with the situation. This strong declaration from Mr. Balfour comes most opportunely, at the moment when the Sultan Abdul Hamid is once again trying his tactics of delay and intrigue, hoping that some question will turn up, which may sow the seeds of jealousy in the concert, and give him the chance he usually finds, of evading his undertakings. The meeting of the Tsar and the Kaiser at Wiesbaden makes this much less likely, and all things seem to point for a general clearing of the Macedonian sky, especially as the insurgents have been compelled, by the approach of winter, to suspend their martial operations for the present, thus opening the way for more peaceful methods, and removing a valid excuse for Turkey's inaction.

We cannot fail to be struck by the announcement, just published by certain of the great transatlantic lines, that there is a rush of stowage passengers to Europe, that is, of returning emigrants, such as has never been known in all their history. In the spring months, we spoke of the marvelous returns, which made the immigration record something to wonder at, and caused grave apprehension as to the ultimate result of adding to our nation great masses of Italians, Sicilians, Polish Jews, and Austrian and Hungarian Slavs. The present ebb-tide is in a measure an answer to these apprehensions; but it is also a symptom of conditions in this country, which we may find to be somewhat more serious than even the addition of droves of almost pauper immigrants. Many of these Italians, Poles, and Austrians are now going home again because, having made a good round sum during the spring and summer months, at gang labor of various kinds, and disliking out-of-door labor in our climate in winter, they prefer to take their savings home and spend some months in idleness. But many more are returning to Europe because they have sought, and failed to find, work here for the winter months. The announcement, which, by one of those undesigned coincidences that the press so often furnishes, appears in the column next to that concerning the returning tide of immigrants, that one hundred thousand miners have just struck, in the coal-mining regions of Colorado, because they failed to secure an eight-hour day, sheds a flood of light on this question. We are familiar with strike conditions here, and the misery which they entail; we remember the coal-strike in the anthracite region. We can, therefore, understand that the gang laborers of the Italian, Austrian and Polish type, many of whom work as miners, should prefer to winter in some warmer land. Nevertheless, there is an ominous note in the announcement of their departure.

The Atlanta Constitution heartily indorses Booker Washington and the Tuskegee Institute. It has printed a long,

illustrated article about the Institute, describing its work, and commending it with frank admiration. Of the Institute's head it says editorially: "Booker Washington is a sane, serious and sufficient man for the lifework in which he is engaged. . . . Opposition to fitting citizenship education for the negro race in the South is archaic, unwise and unjust. . . . The sane and sensible thing for every man to do who is interested in the safe and profitable future of the South is to encourage that practical education of the negro that will fit and inspire him for useful and creative service for the general welfare." This is excellent sense, propounded by an influential authority. Booker Washington is fortunate in his friends, and fortunate too, perhaps, in the enemies he has made. These latter include a few prominent negroes in Washington and Boston and a few moss-grown white men in the South. The disaffected moss-backs decry him because he is lifting up the negroes; the disaffected negroes decry him because he concedes that the negroes need lifting up, and because he keeps out of politics. The hostility of both these groups is valuable evidence of the sanity of his ideas.

The theatres in New York report an unsatisfactory rate of attendance. There are many theatres—half a dozen new ones have been opened this season—and there seem not to be theatre-goers enough to fill them, even when the shows they offer are acceptable. Probably the trouble is not a deficiency of people, but of dollars. Good seats at the theatres—when the box-offices have them for sale, which is seldom—cost two dollars apiece. Few persons go to the theatre alone, so that it costs at least four dollars to see a play. Four-dollar lumps of money are not so prevalent as they have been. Considerations of thrift come this year between many willing theatre-goers and the plays they would like to see. What seems to be needed is something in the nature of a bargain-counter where theatres that have more seats than they can fill may offer them at reduced rates to persons who are constrained to get as much as possible for their money.

We don't hear so much of the American pie habit as we did twenty years ago. Americans eat other foods than pie now. Patent breakfast foods compete anxiously with pie for the supremacy of the breakfast-table. Pie does not advertise, and a food that does not advertise cannot expect to maintain its tyranny over the digestive apparatus of a nation of madders. Pie is no longer the champion of the food list, but it is still far from extinct. The New York papers have reported that owing to the unseasonable heat of a recent Monday 750,000 pies were thrown away by lunch-room keepers in the city of New York. These pies spoiled on the lunch-room keepers' hands, and the pie trust would not take them back. Pies used to be returnable, but when the pie trust was formed it issued an edict that no pie that was once put into circulation would be taken back. Before that when pies deteriorated on the lunch-room keepers' hands they were exchanged for new pies of a later edition. What the pie-bakers did with spoiled pies is not known. Maybe they broke them up, melted them, and had them reconstituted; but, at any rate, they took them back. But since the bakers have joined the trust it has been different. Ten thousand lunch-room keepers in Greater New York object to the change. They protest against having the responsibility for the conduct of the pie-trust pies thrust upon them. Not being seventh sons they cannot tell how many pies they need on a given day, nor what the weather will be, nor whether the pies will keep. Nor can they embalm their left-over pies and so preserve them, for embalmed pies are not good. It is the irony of the situation that when the weather is warm and pies don't keep less pies are eaten, but the lunch-room keepers can neither dictate nor foresee what the weather will be. They have formed the United Lunch-room Keepers' Association, and propose either to compel the pie trust to take back the impaired pies or to bake for themselves. It is an interesting contest. What seems especially remarkable about it is the lack of individuality about the pie of commerce. The lunch-room keeper recognizes only two kinds of pie—good pie and spoiled pie. Consumers must be equally indiscriminating. In the age when pie was king it was not so. Then there were pies and pies.

## The Revolution at Panama

The revolution which began on November 3 in the city of Panama, which quickly spread to other points on the isthmus, and which eventually compelled the evacuation of Colon by a detachment of Colombian troops, thus had recently been sent thither, should have been a surprise to no intelligent person in Bogota. President Marroquin said the members of the Colombian Congress had been repeatedly warned that the inhabitants of the State of Panama, almost without exception, looked upon the ratification of the naval treaty with the United States as of vital moment to their actual and prospective interests, and that they would deem a rejection of it ample ground for a declaration of independence. No heed was paid to the warning, and the Colombian Congress, after a unanimous rejection of the treaty, adjourned *pro tempore*. Thereupon the inhabitants of the isthmus proceeded to do precisely what they had threatened. They seceded from Colombia, organized a provisional government, and proclaimed their political independence under the name of the Republic of Panama. In order that Americans should get clear notions of their duty in the premises, it would be well for them to consider and answer the following questions: Is the State of Panama justified in seceding from Colombia? Is there any analogy between her secession and the present case of the Confederate States in 1861-7? What position ought we to take toward the new Republic of Panama in view of the paramount obligation contracted by us toward the civilized world, and unqualified by us for more than half a century, the obligation, namely, of maintaining peace and order on the isthmus, and of assuring freedom of transit between the Pacific and Atlantic oceans?

There has seldom been a revolution more thoroughly justified on economical and moral grounds than this which has taken place at Panama. There has scarcely been a year since the repudiation of Spanish authority in Latin America when the inhabitants of the isthmus have not had reason to deplore their political connection with a country to which they are linked by no geographical, industrial, or commercial ties. They have had even stronger reasons for political separation than those which prompted Venezuela in 1829 and Ecuador in 1830 to secede from the original Republic of Colombia. Almost all the taxes levied on the isthmus by the Colombian government in the form of harbor dues and other imposts, together with the annual revenue subsequently derived from the Panama Railroad, have been spent at Bogota, the most modest requests that small sums might be appropriated for road building and other elementary public needs of the isthmian population having been persistently rejected. For upwards of seventy years Bogota has been a stepmother to Panama, which, on her part, has missed no promising opportunity of relieving herself from a hateful association. Scarcely had President Hertran acquired control of the Republic of New Granada in 1841 than the provinces of Panama and Veragua seceded, and proclaimed their political independence under the title of the Republic of the State of Panama. The restoration of these provinces was before long effected, however, partly by force, and partly by promises of concessions that were not kept. In 1853 a new Constitution was framed for New Granada, which recognized the right of every province to declare itself independent, and to enter into merely federal connection with the central government. Panama and Antioquia soon availed themselves of the permission, but discovered that the Bogota politicians had no intention of granting to them practical autonomy, including the control of their own revenues. Again, during the Presidency of Santos Gutierrez (1868-70) the inhabitants of the isthmus made up their minds that their sole hope of industrial and commercial development lay in political separation from the remote central power, and they organized an independent government, which succeeded, however, to superior fate. Once more, driven to desperation, the natives of Panama fell back on the remedy of secession in 1885. This time they might have made good their independence, and escaped massacre and spoliation at the hands of their Bogota oppressors, had not our government permitted the Colombians to despatch by sea large bodies of troops to the isthmus, the outcome of the invasion being not only the interruption of railroad transit and of work on the canal, but the annihilation of Colon by fire, the fate of which town would have been shared by Panama had not some American and British war vessels eventually recognized the duty that they owed to civilization, and interposed to save the last-named city.

Now experience had taught the natives of the isthmus that they would never receive a penny of the heave, ten million dollars, or of the annual contribution of two hundred and fifty thousand dollars, to be paid by the United States for the right to construct a canal through their territory. They were resigned to the wholesale diversion of those sums, and also of the Colombian taxes, which, under various pretexts, would be imposed on the contractors employed to complete the interoceanic waterway. Of one thing, however, the inhabitants of the isthmus could not be deprived, to wit, the tremendous stimulus which the prosecution of the colossal work would apply to their industries and trade. That is all

that they could hope for from the completion of the canal, but that would have sufficed, for activity and prosperity would have been forthwith substituted for the existing stagnation and depression. From this last hope of rehabilitation the natives of Panama now themselves cut off by the decisive rejection of the canal treaty at Bogota. Had they acquiesced in this shameful sacrifice of their fundamental interests, the State of Panama would have received a deathblow. They thought themselves, however, that the isthmus was their own property, and that it was for them, rather than for a far-distant government, to say what should be done with it; they recalled, also, the examples set by their fathers in 1829, and by their grandfathers in 1841; and they resolved, in their turn, to organize a government independent of Colombia.

Is there any analogy between the secession of Panama and that of our Confederate States? In 1861 our Union had been unborn for eighty years. It had been embodied in two documents, one of which, the Articles of Confederation, declared it to be perpetual, while the other, our existing Constitution, proclaimed the purpose of establishing "a more perfect union." The South alleged that any State had a right to withdraw from the Confederation, and there is no doubt that, theoretically, such may be said for the assertion. The North, on its side, contended that, even if the right of secession actually existed, it had been lost by non-user, and that the uninterrupted maintenance of the Union for eighty years had established a prescriptive right to perpetuity which the South ought to recognize. The counterpart of this state of things is not presented in Colombia. Within the region which bears that name innumerable constitutions have been established and swept away during the seventy-seven years which have elapsed since the United States recognized the independence of the Colombian Confederation which, at that time, as we have said, included Venezuela and Ecuador, as well as New Granada. The right of secession has been formally acknowledged by Colombia herself in the case of Venezuela and in that of Ecuador, and no tenable distinction can be drawn between their claims to independence and the claim of the State of Panama. Just fifty years ago, as we have mentioned, the right of any province of New Granada to proclaim its independence was declared to be constitutional. In the repeated subsequent oppressions of Panama's passionate desire for liberty there has never been any pretence of an appeal to constitutional law; the appeal has been simply to brute force. There is, therefore, nothing in common between the present secession of Panama from Colombia and the secession of the Confederate States from the American Union in 1861.

In view of all the facts above set forth, what position ought we to take with reference to the Republic of Panama? Are we stopped from recognizing the new Commonwealth by any obligations contracted under the treaty with New Granada (into which our interests in 1848)? That treaty bound us, in the first place, to maintain peace and order on the isthmus, and to safeguard freedom of transit between the Pacific and Atlantic oceans. Incidentally, also, in order to show that we meant to throw the axis of the Monroe Doctrine over the isthmian territory, and in order to prove that we have no intention of seizing the territory for ourselves, we vowed that to uphold the authority of New Granada, which, at that time, happened to be the political entity that claimed sovereignty over the isthmus. This was a covenant, however, which ran with the land. We never held that it bound us to defend the sovereignty of New Granada when that political entity became defunct, and was succeeded by the Republic of Colombia. We did not hold that it bound us to defend the authority of the Republic of Colombia when, in 1853-7, the States of Panama and Antioquia proclaimed themselves independent. It follows that we are not bound at the present time to co-operate in restoring the authority of Colombia, which has been unconstitutionally repudiated on the isthmus, but, on the contrary, are justified in recognizing the provisional government established at Panama as the only *de facto* government of the territory affected by the treaty of 1848. It also follows that, when a constitutional convention shall have been held, and permanent executive and legislative departments shall have been created, we shall be justified in recognizing the new political entity thus evolved as a government *de jure*.

But, it will be asked, on some former occasions, when the natives of Panama have declared their independence, have not permitted Colombia to land troops at Panama and Colon, and to use the Panama Railroad for the purpose of subjugating the isthmian republic? It must be admitted that on several occasions we have allowed Colombia to perform such high-handed acts, and that, in this misconstruing our duty in the premises, we have lost sight of the primary purpose of the treaty of 1848, which was the uninterrupted maintenance of peace and order on the isthmus. Whenever we have allowed Colombia to land troops for the purpose of extinguishing the provisional government established at Panama as a consequence of the massacre and spoliation of men whose only crime was their position for self-government, and we have continued at a prolonged interruption of the peace and order which lie the eyes of all maritime nations, we were pledged to uphold. By such a mistaken view of our duty we practically made ourselves

responsible, as accessories, for the conflagration which eighteen years ago swept out the flourishing town of Colon. There is scarcely any doubt that, infuriated by the present animosities arising against their jurisdiction, the Bogota authorities, if we suffered them to land an army on the isthmus, would now level not only Colon, but Panama also, to the ground.

We can only maintain peace and order on the isthmus by acting hereafter on the theory that the covenant into which we entered in 1846 is one that runs with the land, and imposes on us the obligation to uphold the *de facto* government at Panama against exterior aggression, no matter from what source it may emanate.

### Will the new Canals assure New York's Commercial Supremacy?

ALTHOUGH the official returns have not yet been published, there is no doubt that on November 3 the people of the State of New York ratified the amendment of their State Constitution which authorizes the issuance of bonds to the amount of \$101,000,000 for the purpose of widening and deepening the Erie, Oswego, and Champlain canals, so as to make them traversable by barges of one-thousand-ton burden. From the popular vote thus registered there is an appeal. It is a mistake to suppose that any further legislation is needed. There is no doubt that the first installment of the bonds authorized will shortly be put forth, and that the work of canal improvement will soon thereafter be begun. As to the nature of the security thus offered to investors, we need only say that the bonds are to be sold to the highest bidder, that each bond is redeemable in eighteen years from the date of issue, that the bonds will pay three per cent. interest, and will be exempt from taxation. The law provides for interest and a sinking-fund by levying a very small annual tax on the real and personal property of the State subject to taxation. If the whole \$101,000,000 were to be paid in one year, the canal tax on each one thousand dollars' worth of assessed property would be about \$16.84, but as the bonds are to be issued in installments, as that the payments will be spread over a period of fifty years, the annual tax will be small. We add that more than 90 per cent. of the whole tax will be paid by the two cities, New York and Buffalo, which form the terminals of the Erie Canal.

It has been alleged that the cost of widening and deepening the two canals is likely materially to exceed the estimated sum of \$101,000,000 named in the constitutional amendment. Touching this assertion, it should be pointed out that the estimate of \$101,000,000 is based on a survey, the work was carried out by State Engineer Bond, assisted by a corps of eminent experts in civil engineering, and the other by the Deep Waterways Commission, called into being by the Federal Congress. For the purpose of guarding against an under-computation of the cost, twenty per cent. was added to the figures at which the two boards of engineers arrived, and the cost of deepening the upper Hudson and the Niagara rivers was also included in the estimate, although there is good reason to believe that this work will be undertaken and paid for by the Federal government. There are not the only precautions that have been taken to prevent the expenditure for canal improvement exceeding the sum which has been voted by the people. The law provides that all work authorized shall be done by contract, and that no contract shall be awarded if the pay demanded for the work shall exceed by more than ten per cent. the cost of such work as estimated by the State Engineer, or by more than twenty per cent. the cost of any item in the State Engineer's calculations on which the sum named in the constitutional amendment was based; unless, indeed, such award shall be approved by the State Engineer with the consent of the canal board. It seems scarcely credible that such consent could be improperly given, when we call to mind that the canal board consists of the Lieutenant-Governor, the State Treasurer, the Attorney-General, the Commissioner of Public Works, the State Comptroller, and the Secretary of State, as well as the State Engineer.

Why was the expenditure of so vast a sum for canal improvements needed? For two reasons. First, in order to lower the charge for transporting freight from Buffalo to New York; and, secondly, in order to abolish the differentials in railroad freights which, for many years, have been steadily diverting commerce from the port of New York to other *entrepôts* on the Atlantic coast. The differentials now operative against traffic to and from New York range from 25 cents to 81 per cent in favor of Philadelphia, Baltimore, and Newport News. According to a report issued by the New York Chamber of Commerce, the result of railroad discrimination against the port of New York during the two decades following 1877 has been a decrease of the commerce to and from New York from 53.7 per cent. to 51 per cent., and an advance of all other ports from 45.3 per cent. to 49 per cent. Instead of starting according to its former ratio in the growing commerce of the nation, it is computed that, during the last twenty years, the port of New York has fallen behind to the extent of

\$300,000,000. Will this relative decline of the commercial metropolis accredited by the proposed deepening and widening of the canals? It has been computed by experts that the improved waterways will enable one-thousand-ton barges to carry freight at a profit for a rate of about half a mill per ton-mile, or for 20 to 1.10 cents per ton from Buffalo to New York. According to the New York State Canal Committee, which made a careful investigation of the matter, there is no likelihood of railroads being able to carry freight at one mill per ton-mile. Can the vessels which are expected to be used as improved canal craft forward in securing return freights in considerable quantities? The advocates of the widening and deepening of the New York canals are counting upon the one-thousand-ton barges to restore the coal-carrying trade to the Northwest, which has gradually been transferred from canals to railroads. If the one-thousand-ton barges are able to secure real and heavy manufactured goods for their return cargoes, they should be able sensibly to reduce the charge for conveying grain from Buffalo to New York city.

Whatever may be the outcome of the immense expenditure proposed for canal improvement, there is no doubt that the arguments put forward in its favor have convinced the people of New York. It is settled that a tremendous effort will be made to renew in the twentieth century the economical triumph achieved by De Witt Clinton about eighty years ago.

### Liquor at the Capitol

A QUESTION which disturbs some good Americans, and which will soon be to the fore again, is as to the sale of liquor in the restaurant of the House of Representatives at Washington. It is a question which a few people take peculiarly, treating it as one which affects the personal rights and liberties of individual Representatives, and rather holding those who raise a hardly-berly to be kin to the wiles in "Macbeth," or at least to be interlopers who should be taught a lesson.

As a matter of fact, the question is not as to whether liquor should or should not be sold in the Capitol. The root of the matter is quite different; the question is whether or not the Representatives are going to keep their word to the people of the country, who do not like to think that liquor, beer, or wine are sold in the national House of Representatives. Are members of Congress honest gentlemen, or are they unscrupulous tipplers? This is the point at issue. It has sometimes been suspected by the well-informed that Congress has been fooling the temperance element in their constituencies for the purpose of getting their votes. Now it is for members, and Senators, too, to say whether or not this is a just suspicion. They have surrendered to an attack on the army rations, which many people believe to be, on the whole, a salubrious institution, especially if it be permitted to sell only light wines and beer. Congress, however, took the view of the extreme temperance people, or total abstinents, and excluded wines and beers from the canteens. There has been a great deal of complaint from officers and men, but Congress has remained firm; it has gone with the total-abstainers people, and the soldiers cannot have wine and beer on their posts because the law of Congress is enforced by army officers.

Congress has also joined the total abstinents on the question of wine, beer, and liquor selling in the restaurants of the Capitol. But here there has been double-dealing. The law as to the canteens is expected to be enforced. The sale as to liquor-selling at the Capitol is made to satisfy "civilians" and is to be evaded. The only question is, will Congress be so considerate to their own rank as army officers have been in enforcing the rations law which they think to be antagonistic to the best interests of the service. Eminent Congressmen have not dealt honestly with the people to whom they appear to have surrendered, and who, for this reason and for others, have the right to believe that the national legislators have only apparently denied themselves stimulants, for the purpose of "pleasing the temperance vote." Now, a right-speaking legislator who upholds the rule excluding all intoxicants from the public restaurant, but who drinks whiskey there out of a teacup, is an unworthy person. The deceived temperance people have a right to complain of him; more than that, honest and sane tipplers ought to decline his company. The rule being made, the Member who drinks champagne, bought at the restaurant, in his private room, or the ordinary member who hides his whiskey in a teacup are both doing that of which they ought to be ashamed, and they who sell them to account for not abiding by their own rules and keeping their own promises are not only right in selling them to account, but ought to have the support of the community. What kind of law-makers are these who, to secure the temperance vote, deprive the soldier of his beer and wine, but who, for the same purpose, only pretend to deny themselves, and resort to subterfuge to conceal their violating of their promise! A teacup of whiskey ought hereafter to be the sign and symbol of the dissolvent and skulker.

Notwithstanding the many signs to the contrary that may be

seen in our great cities, the American people are for what is generally called temperance, and especially is this true of the generally honest and the personal acquaintances of our Congressmen. The stoutest and the personal acquaintances of our Congressmen. The honest men and women from our small cities and from our rural districts, who visit Washington to catch a sight of the great machine of government, are shunning people to whom drink is an abomination. When the Representative is at home he goes to the restaurant at the Capitol is a rule, in effect, which directs him to observe his customary habits. Being adopted, it ought to be observed by those who have agreed to it and for whose benefit it was made. But, above all, let us have done with the wretched leopards. There are honest tipplers who would have none of a man who is willing to satisfy his thirst for whiskey by drinking it behind a door, or by pretending to be consuming the cheering and non-intoxicating beverage of China while all the while he is swallowing whiskey and breaking his own law.

## Russia and Germany in the Far East

The reported alliance between Germany and Russia, as a result of the Test's meeting with his cousin the Kaiser at Wiesbaden, is apparently to be taken rather as a warning than as an accomplished fact. It is, of course, certain that the two Emperors talked of the difficulty between Russia and Japan; it is even quite likely that they came to certain arrangements on the subject, but it is in the last degree unlikely that, having done so, they would hand a copy of their pact to the press, for immediate dissemination by telegram.

We must, however, hold in mind that such an agreement is wholly possible. We well know that the Kaiser holds the most extreme views of the "Yellow Peril," and that he regards Japan as a standing menace to all Christians, not only in its Asian possessions, but even at home. He cannot fail to see that the Japanese are daily gaining ground, if not at the coast of Peking, at least in the various departments of government at the Chinese capital. The whole course of the negotiations with Russia over the evacuation of Manchuria shows this. The probable future result is equally clear. Inspired by the example and guided by the experience of Japan, China will presently try to become mistress in her own house, and this will bode no good to the German settlements at Kiao-chau, and German influence generally. It will be remembered that the Chinese Emperor Kwang-Su, during the brief period of his independent rule, was strongly pro-Japanese; the Emperor-Dowager is not immortal—her influence will presently give place to his, and the court will throw its whole weight into the scale for Japan, as certain of the departments of government have already done. The Kaiser knows this very well, and wisely apprehends the future outcome. He has large ambitions in connection with China, and the leased area on the southern side of the Shantung peninsula is, for him, merely the thin end of the wedge.

Germany would, therefore, have many good reasons for making common cause with Russia as against Japan. Not only so, but she has already done this, at a most critical moment. After the war with China, ten years ago, Japan, in the first peace negotiations, proposed to annex the whole of Manchuria. Russia had previously declared that she could not consent to any acquisition of territory on the Asian mainland by Japan, and Japan had declared that she intended so annexation. When she announced her desire to acquire the whole of Manchuria, a territory more than twice as large as the entire Japanese Empire, Russia naturally sought to prevent this, and was able to do so, because she called to her aid not only Germany, but also France. Through the united influence of these three powers, the treaty of Shimoda was barred Japan from the mainland, while giving her Formosa and a large indemnity. This union of France with Germany and Russia should dispose of the rumor that accompanied the report of the Wiesbaden treaty—that France would so strongly resent the alliance of Russia with Germany that this would mean the dissolution of the dual alliance and a new grouping of the powers. France would not only not resent such an arrangement, but has already been a party to it, as much as eight years ago.

Therefore the alliance between France and Russia would in no way bar the latter from making an arrangement with Germany. The French Foreign Office is too modern and practical for that. Further, Germany has recently shown a decided disposition to come in with the other powers in the Balkan peninsula; the German ambassador supported the representatives of the other powers when they recently called on the Sultan, to press for wider reforms in Macedonia, with less delay and more through application of the principle of control. Germany has, therefore, already taken the first step in a rapprochement with Russia in the Near East, where rivalries are far more bitter and deep-seated than in

Eastern Asia and the Pacific. And in this rapprochement France entirely acquiesces, while England has recently become decidedly more Russian than of old.

An understanding between Russia and Germany, touching the situation in the Far East, is therefore altogether possible and even probable. Let us consider what would be likely to bring such an understanding about. The menace of Japan would hardly do this, since it has existed in much the same degree for three years at least, and the present time is no more propitious for a Russo-German entente than any time since 1900. Something more would be needed. Nor must we lose sight of the fact that the present account of the dispute between Russia and Japan does not stick very closely to the real facts. Japan has no such invincible superiority to the presence of Russia in Manchuria as the telegrams aptly to the presence of Russia in Korea. The matter is really somewhat otherwise, would have us believe. Japan does want certain things in Korea. Her influence was paramount there shortly after the war of 1894-5, but it began to wane, and much ground was lost, which Japan is anxious to regain. She has large and defined views, but they concern Korea and not Manchuria. To further these views she seized on the Manchurian question as a plausible pretext and a basis of bargaining.

Japan then evidently persuaded the Chinese Foreign Office to drag on the negotiations with Russia, on one pretext or another, until after October 8, precisely to create a cause of complaint against Russia, and to give Japan something solid to seize, something which she could urge as a substantial argument when pushing her Korean claims. The various war-scars of the past few weeks have been simply a part of the bigging of the market; as was rumored that China meant to go to war with Russia after the occupation of Mukden. (China never had the remotest intention of doing anything of the sort, but it was hoped that the Russo might strike a point, her sake of peace and as the price for being let alone.)

Therefore the Japanese question would not be sufficient in itself to drive Russia into the arms of Germany. It would need something else; and we cannot conceal the uneasy consciousness that this something else is to be found in the proposed American treaty, which would open Jantung and Mukden to the world's trade, and the very definite pressure which has accompanied the negotiation of this treaty. The papers speak of Mukden as a new "treaty port," this is, of course, a misunderstanding, as Mukden is an inland town, whose case connection with the sea is by Russia's Manchurian railroad. Not only does this suggest all kinds of practical obstacles, but there is the further serious difficulty of what is called "extra-territoriality." Every treaty port has its group of foreign settlements. They are not under Chinese law, but under the jurisdiction of its own consul. There are now within Russia might foreign colonies in everything but name. Now while Russia might not object to any amount of foreign trade, under whatever pretext so formed, would open the door to Japanese colonies, under Japanese jurisdiction, within her sphere of influence in Manchuria. She has, in fact, a kind of Manchurian Monroe Doctrine, which is recognized formally by France and Germany, and tacitly by England; and we can best understand her feelings by comparing the German question with the proposition to establish coaling stations for Germany at both sides of the Panama isthmus. Russia is as unwilling as we are to see German colonies in Columbia, under the rule of Berlin.

But the proposed treaty with China does exactly this: it opens the door to such Japanese colonies, and thus violates Russia's Manchurian Monroe Doctrine. And with this doctrine is bound up the status of all the leased areas in China, such as the British Wei-hai-wei, the German Kiao-chau, the French district opposite the island of Hainan. Therefore, if all these powers are practically on Russia's side, and say attempt to force the clause of the treaty making Mukden an open field for colonization will reap the power mentioned in opposition, and will inevitably do, what is the last thing in the world to be desired—drive Russia into Germany's arms.

One consideration more. Germany's political dispositions are often platonic, but not always. They may not be so in the case we have supposed, let us imagine Germany saying to Russia: We invincible Teutons, together with our special Providence, are most willing to safeguard your position in Manchuria against barbarous nations from both shores of the Pacific. Our mailed fist is at your disposition. Our luck is good—but not invariably so. For instance, there was Venezuela. There is also Argentina. And Margarita Island, where we took soundings last summer. Also Mandingou. In all these our luck has hitherto imperceptibly melted. We are most anxious to try again, in the spirit of the French aphorism: "Après trois saluts, le drapeau! Après trois Français, la chance!" By the way, "Vive la France! Hech!" Suppose we make a deal—

Here the conversation may be imagined to grow impassible; but it may suggest that the "extra-territorial" settlements in Mukden might come high.

### WHERE A CITY CAMPS OUT IN WINTER

Yosemite House, in Southern California, is situated a single mile west here in Yosemite Park. It is a city in winter, with just about everything, sporting facilities, a police force of its own, restaurants, a mail-delivery service, a library, messengers, mail-carriers, etc. There are accommodations in the city for several thousand people.

### A VERMONT MARBLE QUARRY

One of the largest marble quarries in America is situated at Proctor, Vermont. The photograph gives a graphic idea of the size of the quarry. The pillar of marble standing at the left is almost a hundred feet high, and the workers on the bed of the opening look like pinpoints beside it. From these quarries and those at Thetford, Vermont, is obtained the marble used in the construction of many of the most noted buildings in America, a recent instance being the new building for the New York Public Library now in course of construction on Fifth Avenue, between Fortieth and Forty-second Streets, New York.

A Detachment of Marines on their Way to the Capital at Panama

Map showing the Colombian States and the new Panama Republic Mr. W. B. Russell, United States Minister to Bogota, Colombia

American Marines at Colon, Panama

**RECOGNITION OF THE NEW PANAMA REPUBLIC**

The rebel government of Panama, which seceded from the United States of Colombia, was recognized by President Roosevelt on November 11 as an independent republic, and Colombia has been warned against any further opposition to the new State. American war-ships which have been sent to the straits have loaded marines at Colon, the capital of the new republic, for the purpose of maintaining order and protecting American interests

# The New Cabinet

By Sydney Brooks

London, November 7, 1918.

As I sat, within limits, where we are. After a delay almost without precedent in English history Mr. Balfour has succeeded in republishing his cabinet. The result has been given to the world in the daily papers. They are interesting, and not so interesting as the item which appeared alongside of them. Still less are they so interesting as the circumstances with which that item is attended. The Duke of Devonshire's resignation and Mr. Balfour's reply are comments upon it. It is that primarily engages the public. To Americans there must be something strange in the position which the Duke has won for himself in the public life of England. He is a man of whom the masses have an unusually accurate perception. It was my fortune some few years ago to spend several hours with him. I found him to be, what one rarely finds any one to be, just what I had expected, just what a knowledge of his public career and a study of the man from the outside had led me to think he was. I question whether there is any prominent Englishman about whose agreement or disagreement with my own most friends do not state for him any sort of bewilderment. His most eager detractors, if he had any, would not deny to him the possession of a robust common-sense. He is naturally a slow, heavy, lethargic temperament. I doubt whether he has ever had any real political opinions. There is probably truth in the gossip that has always ascribed his interest and activity in public life, not to personal inclinations, but to the domestic pressure of the Duchess. Even in the most moving crises, he always impressed people as yawning mightily at the part.

It is a pity that the Duke's first speech in the House of Commons, and of how the spectacle of such imperturbable indifference drew from Disraeli an admiring, "He'll do." I have heard him deliver many speeches on all sorts of occasions, and never one which rose above the commonplace, never one in which the thought and expression were not of the most platitudeous order, and the delivery a palpable mirror of the speaker's boredom. A man more destitute of fire, of "magnetism," never lived. And with all this he has never shown himself anything but the most business-like of administrators. He has originated nothing, has written nothing on the statute-book, has really achieved nothing. How comes it, then, that thousands of Englishmen have grown to look upon him as their leader, and that his resignation can be so generally and truthfully regarded as a shattering blow to Mr. Balfour's ministry? Well, one reason is that the Duke is a duke, with all the influence and authority that in England go out in such fatal abundance to a man of his position. But a greater reason is that the country has learned to trust the Duke absolutely in every political crisis, and that the Duke says he believes, and it has nurtured down his mind so packed with honesty and common sense. No one has ever dreamed of suspecting that in anything he might do or say the Duke has been moved by personal considerations, by motives of self-seeking, by narrow party expediency, or, indeed, by anything but an irrevocable devotion to what he believed to be best for the country. Not for a single moment has his sincerity or his disinterestedness been called into question. He twice refused the Premiership, and again and again he gave evidence of supreme political courage and independence. So that this sluggish, stolid man came to exercise an influence over the minds and respect of his countrymen altogether disproportionate to his abilities and capacity for affairs. The shock of his resignation, which, even though it had been prepared for and to some extent discounted, is still enormous, is one more tribute to the transcendent political value of character.

Of the new men brought in and of the old ones promoted or transferred, Austen Chamberlain is the one in whom the country feels the most interest. He is rather a difficult man to describe, and will probably continue to be so during his father's lifetime. No one, even of those who know him well, can quite say whether he is capable of standing alone. He has a good head for affairs, though not a remarkably good one, certainly nothing like so good as his father's. Nor has he inherited his father's force and energy. On the other hand, his character is cast in a finer mould than the ex-Colonial Secretary's. He would never do the violently mean things or say the violently partisan things that come so naturally to his father. Education and an early mingling in good society have brought him to a higher pitch of refinement. His manners are exceptionally polished and agreeable, his flow of talk easy and attractive in a mundane way, his tastes are all wholesome. Both at Cambridge and on his first entrance into public life he made a wide impression as a man fundamentally sound, careful, without his father's "foynness," a man who could be trusted to the uttermost. He added to that impression by making himself widely liked. I have never come across any one who disliked him. He is a warm favorite with Mr. King and Owen, with his colleagues (especially with Mr. Balfour) and to some extent with the public. His rise has been phenomenally rapid, and if it would be too much to say he has earned it by his own merits, it is not too much to say that he has so far proved every step he has taken. Essentially of course, he is about the same as Chamberlain of the Evesham. He is only finer, and he knows next to nothing about Disraeli. Everybody wishes him well, but no one pretends that he is likely to be a great Chamberlain. It is, as in all the offices he has hitherto filled, as in all he is ever destined to fill, he will do nothing distinguished and nothing undistinguished. He is quite an adequate man, but no more than adequate; that is really about all that can be said for or against him.

Mr. Horder's removal from the Secretaryship for War to the

Secretaryship for India is an immense relief. I do not suppose it will particularly please the English in India; in fact, I know that nothing could be less to their liking than to have Mr. Horder over there. Nor does it greatly gratify that growing number of fanatics who are preaching the most un-English doctrine that a man who has failed in one office is not bound to be given a chance of failing in another. But to the country at large, to the average intelligence, to have Horder out of the War Office seems like that of a great relief. Nor does it greatly gratify that growing number of fanatics who are preaching the most un-English doctrine that a man who has failed in one office is not bound to be given a chance of failing in another. But to the country at large, to the average intelligence, to have Horder out of the War Office seems like that of a great relief. Nor does it greatly gratify that growing number of fanatics who are preaching the most un-English doctrine that a man who has failed in one office is not bound to be given a chance of failing in another. But to the country at large, to the average intelligence, to have Horder out of the War Office seems like that of a great relief.

—yes, if possible, false still. He is the most official Englishman and the most English type of official I have yet come across. He departs unawares from the War Office, almost bewildered by his failure, and quite unconscious that he is not a constructive statesman of the first rank. At the India office he will be kept busy by the limitations of his post, and may therefore do well. His successor at the War Office, Mr. Arnold-Forster, is, I think, the man of all others whom the unanimous vote of the country would have chosen out. Much is expected of him, and he has given proof in the past that much may be expected of his successor. He is a poor consolation. Mr. Horder has done much that is really good in the way of military reforms and reorganization, and from the first he meant extremely well, but his basic conception of the military needs of the country was an altogether false one, and the form in which he gave expression to that conception—the six army corps—was, if possible, false still. He is the most official Englishman and the most English type of official I have yet come across. He departs unawares from the War Office, almost bewildered by his failure, and quite unconscious that he is not a constructive statesman of the first rank. At the India office he will be kept busy by the limitations of his post, and may therefore do well. His successor at the War Office, Mr. Arnold-Forster, is, I think, the man of all others whom the unanimous vote of the country would have chosen out. Much is expected of him, and he has given proof in the past that much may be expected of his successor.

## The Land of the Open Air

By Burgess Johnson

BLOW, ye sweet southwestern breezes.

See, the sky is grim and grey!

Blow ye, for my heart's blood freezes

In lands where ice-lies every day.

Soften these unloving faces,—

Mould them with a gentle hand,—

Bring a hint of Latin grace,—

Whisper of a lady land!

See ye any cactus blooming?

Heavy-scented, white as snow?

Saw ye cane-fields waving their plumes,—

And against a sunset glow

Ragged purple mountains looming?—

Saw ye night of Mexico?

Blow, ye turbulent northeasters,

Sleeping down on mighty wings!

Blow, ye from the arctic wastes,

Whence devour the buds of spring.

Howl ye, howl about my caemnet,

Spirits of a leaden sky!

Leave ye your mantles of effacement

Gleaming white as ye hurl by.

See, my spirit leaps and strides you,

Shouting with you as ye go—

Toward the fair southwest it rides you,

Hands outstretched to Mexico.

Toward a balmy dawn it guides you,—

Sweet and sunny Mexico.

I am driving great-horned cattle

Where the tiny chuckles lead.

I am bent in merry battle

With a wry, stubborn steed.

While my soul sings glad sonnets,

Eaching life and leaving care

To a land and far "manana" —

In the land of open air.

Then though every word be sweeping

Through this gray abode of woe,—

In my dream I am leaving

In some wild sweet song I know,—

Leave me, leave me to my sleeping

When I dream of Mexico!

# QUIXOTE WILHELM And Faithful SANCHEO EDDY

In Which the Kaiser liberates the Unfortunate Cjar  
 Drawn By Albert Levering

Quixote Wilhelm: "Der unuerpogge says der Jar ell Raxta is  
 raus! azens holden mit dem Nihilist. Lrap dem Jostak cabent dach  
 and lassen at me! If I was der Jar ell Raxta!"  
 Sancho Eddy: "But you're not the Cjar!"

Quixote Wilhelm: "Keep quiet! I can settle the matter without your  
 over. If I was der Jar ell Raxta I would put das cat out of  
 my you!"  
 Sancho Eddy: "But, I say, you're not the Jar!"

Quixote Wilhelm: "Hark, dead talk! How I would put dass  
 leben on you - and you look clean like the Russian chief of policeman,  
 Vaz! Den mit der jar disquise-posta! I am de Jar ell Raxta!"  
 Sancho Eddy: "The wall Tachar!"

Quixote Wilhelm: "Und was wir die crecher, such tin der maist fel,  
 and die dshward, rich te voll call der Nihilist. I, as der rest Jar ell  
 ell der Raxta -uch' such me. Here comes der Nihilist!"  
 Sancho Eddy: "Are you sure you are the Dichtar?"

Quixote Wilhelm: "You asked me?"  
 Sancho Eddy: "Nobstut! I know you are der Jar."

### "THE BIRDS" OF ARISTOPHANES AT AMERICA'S GREEK THEATRE

The new operatic Greek theatre of the University of California is the only structure of the kind in America. The theatre stands in a quadrangle near the campus, and is almost entirely surrounded by trees. The photograph was taken during a recent performance of Aristophanes' comedy, "The Birds," given by the students of the university. The photograph was not retouched in the auditorium. The photograph was taken during a recent performance of Aristophanes' comedy, "The Birds," given by the students of the university.

### CROSS-COUNTRY RIDING BY ITALIAN OFFICERS

*The Italian cavalry officers are enthusiastic sportsmen, cross-country riding being one of their favorite pursuits. The photograph is a snap shot taken of Lieutenant Bertolotti, a prominent officer and sportsman in the Italian army, as he was jumping a stone wall during a cross-country ride near Turin, where the lieutenant's squadron is quartered. Photographs of Italian equestrians at drill, published recently in the "Weekly," show that the officers of the army are carefully trained to meet the most difficult problems in horsemanship. No cavalry officers in the world are better trained in daring feats of riding.*

# Views of the Stage and Players

By Booth Tarkington

MANY years ago, an American paragraphist for a weekly humorist paper, being hard pushed for a joke, cited some sad examples taken from the periodicals on this side of the water, to prove that Englishmen had no sense of humor. The idea was accepted seriously; it prospered, and, by the habit of imperious confidence exhibited by our English visitors and by Parson's singular practice of explaining puns in parenthesis, until sunny, many Americans are solemnly convinced that Englishmen have no sense of humor.

For those who have been reared on this coast, the prevailing humor of the London streets, from the fanciful delusion of retail clerks to the historical subtleties of the custom, need suffer the explanation that London is the chief city of Ireland.

And the London stage could not but strike home with a series of pleasant shocks; for surely it affords more surprises of humor than any other in the world, and when a bit of humor does not carry surprise it is not particularly humorous.

The American, in pursuit to his creed, may take refuge in believing that Mr. John Hare, Sir Charles Wyndham, Mr. Hootery, Miss Vanbrugh, Miss Bowdler, Miss Moore, and many others are all Irish or Scotch, but he cannot quite claim that the audiences which greet these players in London are American. It must appear to the observer that London audiences are of all the world the readiest in their perceptions of the humor given forth from behind the footlights, quickest to understand, and pleasantest with the desired laughter.

And yet it is true that for some species of humor Englishmen and Americans vary in readiness of perception in accordance with the difference in their customary surroundings, climate, and habits of thought.

Some very intelligent Western American audiences were, once on a time, totally befogged by W. S. Gilbert's "Engaged," and there have been American comedies, well received at home, which one could not imagine succeeding over here.

However, many old fogies will agree with me in believing that we are to be facilitated because we prefer to read the "literary" play at home in the library corner, rather than to sit publicly with some discomfort to hear it declaimed across the footlights. I should be only too ready to confess a mistake in this, but it does not appear that the most conspicuous English playwrights are more and more possessed by a feeling that all types and situations available for pure comedy have been exhausted; it is as if they believed it impossible to be original in the old way, and were impelled by the necessity to be original in a new way. More and more, therefore, their comedies are disturbed by interpolations of verse, satire, or allegory, often delicious in themselves and possibly valuable, too, as indicative of a transition stage, but a grief to the unaided.

I do not think that such American playwrights as Mr. Augustus

Thomas, for instance, feel a like exhaustion of types and situations. Some of our "typical" characters have been exhausted, thank heaven! the "Western Millionaire" (with daughter) and the New York banker (with niece) and the silver king and the kermis-like rambler and the dashing Southwestern and the politician with silk hat and lambskin moustache—we go to see them as never.

There are those, however, who believe that actual types are never to be exhausted, that even in the case of an old type, a new view of him is always possible, and that an old type very truthfully treated is not so much rejuvenated as actually new. We had been seeing Southwestern sheriffs in dramas for years, but when Mr. Thomas and Mr. Goodwin gave us the real sheriff in "In Missouri," we were sure we had never seen him before—except in Missouri.

If there is an obvious distinction between the better English comedies and the better American, it is that usually the former exhibit a greater general excellence of taste.

Perhaps that is not so much the fault of our actors as of a system we have come to labor under. Many of our "stars" find the footing insecure a few steps in any direction from the centre. The brief scenes (which grow shorter and shorter) in which the "star" does not appear, we hurried over inconspicuously; the great one is also very often given all the "good lines"—the sense of the play being sacrificed to maintain for that purpose—and when he isn't given them, he takes them.

American actors in me to have a more vehement interest in the personality of the player; when they go to see a play in which Miss Marlowe appears they want to see a lot of Miss Marlowe; they want her on the stage all the time; they want to hear her voice; it is she they are interested in much more than in the character she is presenting. Their interest in the latter is usually in seeing what Miss Marlowe will prove herself to be.

I believe the most ardent American patron might be brought to suspect that England possesses more actors of distinguished merit than we have at home, but however that may be, our appreciation of fine English acting is not tempered by our loss in such useless comparisons, as the happily protracted visits of many English companies in the United States must testify.

I imagine that nothing could be more impossible than to formulate a set of rules for the conclusions of plays. A little originality combined with a great deal of craft might sport any of them at will. Probably people who care for art only might hold such a creed to be of a vicious outliness, but speaking as a human being, I do believe that all plays, whether courting "happily" or "unhappily," should end wholesomely. I mean the difference in feeling between Mr. Barrie's or Mr. Shaw's or Mr. Pinero's conclusion and d'Annunzio's.

Is Not Pursuit—The Hounds crossing a stream

## A Day with the Essex Otter-Hounds

By Frank Sherman Peer

FOX-HUNTING men who have never hunted with otter-hounds generally look on the sport as something suitable only for boys and girls to play at when foxes are scarce or fastidiously. The writer's preconceived ideas of the game were after the prevailing notion, but he believes it is only fair word to be used to bound music, for the men and women, too, who have the true hunting instinct in their blood, otter-hunting takes the writer's experience in the hunting fields may be surprised to find him say that he has never had a day in hounds that for unflagging interest and hunting excitement outranks the day's sport with the Essex otter hounds.

The most of the Essex hounds was at Bishop's Hall Mill, Chelms-

ford, Essex, England. Most of the men of the company were dressed in flannel knickerbockers, with shirt and jacket to match, puff stockings, and heavy shoes. Dark blue with white trimmings was the dress for master and whipper-in. The ladies—bless their smiling faces—wore short skirts of some homespun material that would stand grief, a blouse to match, stout shoes that held up high, and head gear in variety, from a high theater hat covered with posies to a plain straw sailor. Some of the ladies wore the hunt club blue. All carried a straight, iron-pointed staff, about six feet in length, a most useful instrument in negotiating fences, ditches, brooks, etc. Besides being very useful at times, it was like carrying a gun, it made you feel as if you were really going hunting. In older times it was customary for the followers to use a spear on the otter whenever the opportunity offered, but this

is not nowadays considered "good form" in sportsmanship, and the spear of former days is now carried as a staff like an Alpine walking-stick.

Hark! No—yes—in the sweet, mellow note of a distant horn that announces the approach of hounds. It is quite enough to set our blood going. Conversation comes to a standstill; the otter stops for want of a listener. It is a sound that cheers you like the view of your dearest friend.

"Vagabond! Vagabond! Croak! Vagabond!" It's only the huntsman ruffing a hound, but it puts your heart in the right place without further ado, and your blood at a gallop in anticipation of the pleasure that's coming on.

"Here they come!"

Headed by three little wire-haired, go-as-you-please fox-terriers, the huntman,

Marching as for war,

comes leading the pack around the bend on the road.

Here they come, hard as nails every one of them. The fox-hounds come on with a grand, stately air, the heavy artillery of the command, the otter-hounds look as if they would hold on like death. They are the infantry. Then the lighter Welch hounds, the cavalry contingent, full of endurance, speed, fire, and dash. Finally the little wire-haired Irish terriers (three of them), with each particular hair standing by itself. Their importance, in their own estimation at least, was in reverse ratio to their diminutive size. They went as they pleased, and took upon themselves the welfare of the whole command. They barked at a small boy who only sat on a fence and looked at the hounds, and again at a big traction-engine for committing the same offense. Chickens and farm dogs, however, were beneath their notice. However, they drove a vile-smelling motor-car down the road in a hurry, and a rattling mowing-machine to the other side of the field. They went anywhere without let or hindrance,

Mr. L. Rose  
Master of the Hunt Otter-hounds

and acted as if they were it all the while. If a big foxhound jumped down a four-foot bank into the stream the little wire-haired threw himself headlong after. When the master rallied the hounds to the "drag" of an otter, the little beasts were as like as not in the very middle of the fray.

The horn was sounded, and headed by the master, Mr. L. Rose, the skirmish begins. After a short turn down stream, the hounds retrace, and all move on up water, the followers and hounds about equally divided on either bank, with two whippers-in on one side of the stream, the master with another whipper-in on the other side.

Hounds were making good every inch of the way, some on land, some swimming along either bank, and poking their sensitive noses in every crevice likely to harbor an otter. Up the stream for a mile or more go the followers in single file along the narrow trails. Presently an otter-bound gives tongue under an overhanging clump of bushes on the right bank. Into the water rush the hounds from either shore, each one straining to obtain a nostril full of the seductive scent. 'Twas a false report, or a drag so old as not to be considered worth mentioning, and a hairy-faced otter-bound, Harmaid, who had much to say about it was reproached by the master with, "Now, then, far medd, hold your tongue," the woe for another forty rods; meanwhile most of the hounds have clustered out and gone racing up the bank, shaking themselves free of water that flew in all directions like sparks from a pin-wheel. Some halted and braced themselves for this relief, while others managed it as they went. They were never at all particular where they shook themselves; the dresses of the ladies made a good sponge for absorbing it; the grass, of course, was wet from their dripping, but the ladies paid not the slightest heed to these shower-baths, and marched on through the wet grass with no concern.

The Master and his Pack

As we move up stream the challenge becomes more frequent and more pronounced. Half the pack are now coming to it with increasing clamor. They are working now with ever-increasing vigor, until presently it becomes an almost unbroken song, the utter-hound leading in depth of voice, the Welsh hound exerting in sweetness, and the fathomed for melody.

Thus the trial moves on with ever-increasing interest. Halting, trying back, and again going forward. The hounds are now full of fire, and their dash and drive through branches and under-bush is something beautiful to see. And again when they jump off the bank and land in the stream, three to five feet below, splash, splash, three, four, or five at a time disappearing beneath the water to appear again while actually giving tongue to the scent as they come to the surface with a mouthful of water. Then again when slipping backwards into the stream is attempting to climb out at some wet, slippery or yielding bank, dog, dog goes their tongue as if they would sooner die in the attempt than neglect to proclaim the good news. More than one hound was thus seen going under with a flounder, then bravely coming to the surface just as another lost his footing and fell onto him. Again he comes up, like an otter with more than a half-drowned beneath, to try again in a different place, only to repeat the fruitless exertion. Such fortitude, such endurance, and amidst it all such manifestations of joy: the joy of living; the joy of hunting; it was indeed a glorious sight.

On pushes the crowd, nearly every hound taking to land that he may get on the faster. A few old reliable hounds, however, are taking their time or are waiting the horn. They have learned that when you see an otter come to the surface he's not there. The next time he shows himself he will probably be many rods either up water or down.

The river-tallyho was near a large elm-tree that leaned far over the stream. It stood on the very brink of a perpendicular bank, which at this point was some four feet above the water. It was about the roots and bank beneath this tree the hounds had gathered. Two or three even climbed the slanting trunk for twenty feet or more, giving tongue as they went. Those in the water, if they had been growing more clamorous as the drag went on, were now at the very climax of rage and fury. While the eagerness of the hounds for scent of fox and wild bear is very great, that of the otter seems to put them in a state little short of madness. The otter-hounds were particularly free of tongue, especially Barnmaid, who was many times corrected by the master, for she loved too well to hear the notes of her own musical tongue, which went clanging on when nearly all the other hounds had said their say. "Barnmaid, Barnmaid, pretty; more pretty, Barnmaid," calls the master; then, with a half-stifled bay, she plunges on, muttering her disappointment. In the water at the roots there was a regular football scrimmage, while on the bank the little terriers were digging at a "holt" (a hole in the earth). When the fury of the onslaught had somewhat spent itself, the master walked on up stream, calling to the hounds, who reluctantly obeyed. Even then some of them kept returning to the tree, until raised on to the call by the whippers-in. From now on for the next forty rods hound music ceased. This brought us to a grier-mill. The master tries for a little way above it, and then we all return to the leaning tree. Again the hounds proclaimed the find. This seemed to settle the question beyond a doubt. Then the master casts back or down water for forty rods or more, working slowly back again to the leaning tree. Then from the opposite bank he wades, waist-deep, across the stream for a more critical examination of the bank under the tree. By prodding the bank under water a "holt" was discovered. This was awkward for the otter who evidently went into a "holt" above water might escape by the one beneath water

if they were connected. Some one was therefore despatched to the mill below to ask the owner if he would draw off the water so as to leave the stream at this point, which was much too deep for successful otter-hunting. The situation was also described to the sport-loving miller above this point, and straightway his mill ceased turning.

For about an hour now all hands gave themselves to rest, goup, woadsiches, and tete-a-tetes against cocks of new-mown hay. Tires.

Once more the within hounds, men, bills, Rocks and woods in full concert join.

The self-appointed members and the whippers-in have stationed themselves on either bank, both above and below the holt, to see that the evasive otter does not go away unnoticed. The master, wading across the stream, which is still nearly leg-deep in the middle, makes another investigation. He one hound he carries his staff. In his arms the three wet, dirty wire-haired terriers are squirming in their eagerness to reach the holt; meanwhile two or three followers go into the water about the tree to keep back the hounds and fool, if they cannot see, the artful otter if he swims past their legs under water. Sometimes a shovel has been brought in the event that the terriers are unable to enter the holt.

It was rare fun to see the courageous little terriers charge these bolts, one on the bank, the other at the holt, which was formerly under water, but now exposed. How they did make the mud and dirt fly in their frantic efforts to dig their way in, but the numerous roots prevented their entering much beyond their length. Just as the master had made up his mind to take off the terriers and resort to pick and shovel there was a great cry from twenty or more rods down stream, *Tallyho Otter, Tallyho Otter!* Hounds and followers rush along down stream to the view-hallo, then on further down to another view. Now comes a long wait, with much swarming and music from the hounds. Presently from way up stream comes another view, this time some distance above the leaning tree, and as it went on for three whole hours, first up stream, then down, then back to the holt. By this time the followers were well strung out on either bank for possibly forty rods above and as far below the slanting tree. Now the master cheers on the hounds, and the game grows steadily in interest and excitement. Views are now becoming more frequent up stream, then down. Finally, after a grand rally far up stream, in which direction the master was always endeavoring to drive the enemy on account of getting him into more shallow water, a dozen new followers go into the stream (standing side by side, forming a sort of fence to keep the otter from again going down stream). The water here was about knee-deep. From now on the battle was a hand-to-hand engagement. The otter was coming abreast of the surface to breathe, and excitement among followers and hounds was very great. Finally the otter came up in reach of a hound, and such a struggle between beast and game I have never seen. The otter went under and the hound went with him, and stayed with him until he brought him to the surface. By this time the other hounds had gathered, and the death struggle began. The followers were cheering, hounds were furious, while the otter probably seemed greater than it was, owing to its being in the water. Finally the master succeeded in getting the otter by the tail, while others were engaged in whipping off the hounds, and when finally he handed the otter up the bank by the tail, the three wire-hairs were hanging to the surface like leeches, never letting go their hold until brought to the bank and their mouths were forced open by a staff. The trophies—mask, pads, and tail—were presented to whichever the master thought best to have. A splendid luncheon followed at a fine old manor-house near-by.

The End of the Hunt—The Otter, with the Dogs still hanging to it

# The Plaza of the Three Dumas

By André Sardou

QUITE recently the sculptor Saint-Marceaux, commissioned to execute the statue of Alexandre Dumas fils, placed the plaster model in the position where the monument is to be erected at the Place Malherbes, which will soon change its name and be known as the *Place des Trois Dumas*. The statue of the son will look upon that of the father and that of General Dumas, soldier of the republic, the general standing, sword in hand, between the two celebrated writers. What a splendid dynasty! Grandfather, father, and son, united in glory, and presenting themselves to the admiration and respect of all who pass that way.

And on this autumn morning, lit by the pale sun, in the midst of the committee invited by the artist to be present and judge the effect of his work, a number of memories of Dumas, more vivid than ever, came back to me, charming and intimate remembrances, and I saw again at Marly-le-Roi, Dumas climbing slowly up the hill on the way to see my father, his body swaying markedly, with a sort of heaving of the shoulders, his hands behind his back holding his cane. His property was only about a couple of hundred yards from ours, and often in the evening he would come up after dinner to our place to chat while smoking on the terrace. As soon as he appeared, I used to run to him, and he would bid me good day, pat my cheek with his hand, and ask me if I was still working well.

He was a great friend of mine. Sometimes he would take me across the country in his little carriage drawn by two Oriental ponies, and teach me to drive.

In private life Dumas was simple, affable, inclined to grumble good-naturedly, and generally rather sad; he hid his natural good nature under a rough exterior, but his eyes always betrayed him in this. A charming conversationalist, he would become quite animated in telling anecdotes. How I wish I could remember all the conversations which he had in this way, in my presence, with my father, in which every subject was discussed—art, drama, literature, philosophy, adjectives of every sort! I used to listen most eagerly to these long evening conversations. A great friendship bound me to my father, a friendship which dated from the day when Dumas lost his mother. He was much grieved at her loss. The author of *Le Drame aux Chénobos*, ten, always had the greatest affection for his father, and the following pleasantry, often quoted, is rather apocryphal: "I recognized my son, and he wrote *The Natural Son*." I raised myself for my son, and he wrote *The Product Father*." Alexandre Dumas never uttered such words, for the greatest filial love united the two, and it was never disturbed by anything whatever. Besides, he could never reproach his son with his rita, for he himself took care to spend more than he earned. The younger Dumas passed his entire youth with his father; it used to please him to recount how, until the age of twenty-five years, he led a life which, if not useless, had at least no other aim than pleasure. His was a life of caprice; he was made much of by all women, loved by all women; he lived at the property of Monte Crisio, between Saint-Germain and Versailles, and followed his father in his travels. It was an adventurous and delightful life, and how would it be adherent with the author of *The Three Musketeers*? Here is an anecdote which he related in my presence. One day, on arriving at Lyons, the elder Dumas gave

a porter his valise to carry. At a turning of the street the man disappeared, carrying off his booty as quickly as possible. Dumas perceived that the man was making off. Rushing after him, he caught him on the bridge. Seizing him by the arm, and confident of his own herculean strength, he dangled him over the balustrade of the Rhone. Frightened out of his wits, the man screamed and wriggled. After a few moments, Dumas put him back quietly on the sidewalk and took no further notice of him, but hinted the valise on his own back and went on his way looking for a hotel. The elder Dumas, indeed, was a coxcomb; he inherited rich, young blood, which was not cooled by successive generations worn out by civilization; his kinky hair and his flat nose recalled his agrarian origin; he did not attempt to conceal it, but used to joke about it, by replying to persons who asked him what his father was,

"A mulatto." "And your grandfather?"

"A negro." "And your great-grandfather?"

"A monkey." His mother was a poor negress from the Antilles, a servant whose parents were almost slaves, as the origin of his name indicates—in *du*, which means, of course, of the house. Also, through heredity, the elder Dumas had the culinary taste highly developed, and he loved to prepare special dishes which he himself invented and into which he put various ingredients of the most violent order. Many a person repented of having tasted of these dishes. He was such a gourmand that one day, his son told us, having gone to his father's house at Marseilles, he found him in the act of cutting up a fine melon. At that time cholera was raging. "What," said the son, "you are eating melons?" To which the father calmly returned this admirable phrase: "My dear boy, there is nothing in them."

Travels and a life of adventure form and develop youth, says a proverb. The younger Dumas had proof of it. He had matured early, in spite of his dissipation; but the future author of *Le Drame-Ronde* pulled himself up, settled down, and saved himself by work. He wrote novels, and later on he was proud to remember this conquest which he had made over himself.

Moreover, like his father, he felt the need of holding a pen in his hand, one of those goose-quills of which he always had two or three scree before him, and temptingly, with their points well trimmed. Very often he would take one up to write to friends, to correspondents who consulted him on such and such a problem of morals and to whom he delighted to reply; for he was a correspondent all his life. What a splendid monument his correspondence would form if it were ever published! Precisely because he had lived much when he was young, it pleased him to speak frequently of his life as a young man. He told us one day how his father read his first dramatic work. He had made a play from his novel, *Le Drame aux Chénobos*, and was carrying the manuscript out of the house; his father met him on the staircase, stopped him, and asked him what he had under his arm. "A play," replied the son. Without saying a word, Alexandre Dumas took the sheets, obliged his son to follow him into his study, read the pages without interruption, and after having finished took his son in his arms, exclaiming: "My dear boy, you are a dramatic author! What a fine conversation, simple and touching, of the son by the father. That day, I remember, under the light of the lamp, Dumas was much moved by this remembrance, but soon he continued in

"Ariadne Abandoned,"—By Bryson Burroughs

"Autumn,"—By John W. Alexander

"A Woman Reading,"—By F. W. Benson

John S. Bergen's Portrait of Mr. A. J. Conant

**REPRESENTATIVE PAINTINGS AT THE CARNEGIE INSTITUTE EXHIBITION**

At the annual art exhibition of the Carnegie Institute at Pittsburg, Mr. Frank W. Benson's "A Woman Reading" received first prize, and Mr. Bryson Burroughs's "Ariadne Abandoned" second prize. Other notable paintings shown at the exhibition were "Autumn," by John W. Alexander, and the portrait of Mr. A. J. Conant by John S. Bergen.

Miss Elliott and Mr. Robertson in "The Light that Failed"

In the dramatization of Kipling's novel, now playing at the Ambassador Theatre, Mr. Forbes Robertson has the part of Dick Dicker, an English artist and war hero wounded. "Maud" (Miss Gertrude Elliott), with whom he is to live, is also an artist, but refuses to give up her work to become "Dick's" wife. He loses his sight during her absence in Florence, and at the same time learns that his murderer has been destroyed by his model in a fit of rage. At this juncture, "Maud" is visited by "Dick's" friend "Farrington," who tells her of the artist's desperate plight. Her heart is softened by the news. She returns to England, and offers to become "Dick's" wife.

James K. Hackett as "John Ermine"

Mr. Hackett's new play, "John Ermine of the Wilderness," by Louis Frank Robinson, was suggested by Broadway's abolition of Western life. "John Ermine, a white man, has lived from his childhood among the Indians. He is persuaded to become a scout in the United States service. He finds on the trail a photograph of a young girl whom he is told he may meet among the white dress people. It turns out that the photograph was lent by the girl's lover. He demands it of "Ermine," and during the quarrel which ensues is shot by the scout in self-defense. "Ermine" is accused of murder, but his innocence is promptly established, and he wins the girl for his wife.

Miss Jessie Millard in "A Clean State"

Miss Millard is appearing at the Madison Square Theatre in a new comedy by Mr. R. F. Carter, whose "Lady Love" was once one of Miss Millard's most successful roles. In "A Clean State" she has the part of "Miss Tompkins," a young man in a woman, who discovers her husband having his flirt with another woman. This woman's husband is not of the able of the district lawyer by "Mrs. Johnson." They prostitute each other as former acquaintances, their mutual affection is revived, and they return to each other. The playing pair has many other scenes from their past, and when they return and each forsakes the other. "Mrs. Johnson" finally marries the man of her choice.

AT THE NEW YORK THEATRES

### MISS FRITZI SCHEFF IN COMIC OPERA

Miss Fritzi Scheff, who has hitherto been known chiefly as a grand-opera singer, makes her appearance this week in a new comic opera, "Babette," written for her by Victor Herbert and Harry B. Smith. Miss Scheff has the title part of "Babette," a villain letter-writer in a small Belgian town. She quarrels with her betrothed, a travelling painter, and becomes a strolling player. Eventually she is heard by Louis XIV. of France, while on a hunting expedition. He is enchanted with her voice, and sends messengers to find her and bring her to court. At the same time a Spanish embassy is on its way to the French court. "Babette" and her fellow strollers take the place of the ambassadors. The fun comes from their misadventures.

# Correspondence

## THE DEMAND FOR MR. ROOSEVELT

MEMPHIS, TENN., November 6, 1903.

To the Editor of *Harper's Weekly*:

Sir,—In a recent issue of a weekly periodical I notice Mr. Roosevelt is spoken of as "one of the best Presidents since the war." I also observe in a more recent issue another weekly that "the nomination of Theodore Roosevelt by the Republican party is conceded by everybody." I am at a loss to know what is meant by the word "best" as implied here; and what authority has any writer in assuming that the nomination of Mr. Roosevelt is conceded by everybody? To say that he is one of the best Presidents since the war is to place him among such officials as Lincoln, Grant, Hayes, and McKinley. Best, as applied to these men as Presidents, means that they came nearest to pleasing all the people than did any of the other Presidents since the war. It means that they were great men because they knew how to handle the affairs of the government in any emergency without disturbing or jeopardizing the welfare of the people. Best as applied to Presidents is the President that creates the greatest confidence.

"The people are for Theodore Roosevelt," says one writer; "the West, the East, and the Pacific coast Republicans and a good many Democrats in these sections will support him with vigor and earnestness." Are the people for Mr. Roosevelt? Have they conceded his nomination? Not in the sections where I have travelled. During the past year I have been in every State east of the Mississippi River and I have yet to find the section where even half the people concede Mr. Roosevelt's nomination. And I have yet to find the section where even one man in five will class him as one of the best Presidents since the war. If Mr. Roosevelt's nomination by the Republican party is conceded it is by the politicians and office-holders of the party and not the people who vote the Republican ticket. Mr. Roosevelt may be able to force his nomination, but the people will defeat him at the polls if he is opposed by a man with sound common sense, with the united party supporting him.

I am, sir, MONROE DOMINIS.

## A SOUTHERN WOMAN'S VIEWS

GREENSBORO, N. C., October 20, 1903.

To the Editor of *Harper's Weekly*:

Sir,—I am a most interested reader of every number of your paper. Your Comments give me a most correct and just view of all I wish to know of the doings of the world—correct, and correct, almost entirely, even according to my Southern ideas. Your remarks on the negro question are so true, so to the point, that, living as I have for fifty years in a country where this very important issue, I could not advance any better. Like all great historical questions, time, with its conservative movements, will smooth over and bring the desired result. We of the South love the negro as parts of our families, in many instances, even yet, after thirty-eight years of unbridled liberty, which means to the most of them work two or three days through the week, then spend what wages that may bring, in—what is to them their idea of freedom—frolic. But there are those of this race who work the entire year, with only the ordinary holidays of Christmas and Fourth of July, together with one outing of a week to a church conference; who save their wages, and have good names among white and black. These will save the day and solve the question. The Southern people know the South and negro, and in no manner will they impose upon them. Actual contact with all problems is indispensable in their solution. There are men of brains in the South to work out the negro problem; women of culture and kindness of heart to look these poor and dependent upon them to higher and nobler lives.

As to lynching for the "new crime" (you so justly named), the world might just as well stand entirely by and leave it just as it is. To stop the crime will stop the lynching.

I am keenly interested in—who shall be the next Democratic nominee for President? Have read every word you write on the subject. My choice is Jim Gray; for many reasons he is, and will continue to be growing all the time the most consistent and popular man. His ability and learning alone should place him in the highest position of this government; then consider what he has done for the peace, safety, and prosperity of the country within the past few years. I admire Cleveland, but it is not polite or Democratic principle to give the same title the same office three times.

I am, sir, L. W. F.

## THE NEGRO CRIME AGAIN

CHARLESTON, S. C., November 2, 1903.

To the Editor of *Harper's Weekly*:

Sir,—In your article "The New Negro Crime Again Considered," I think you have entirely missed the mark. This is a subject which I have studied much, and I have had excellent opportunities for doing so, making my observations and getting my information at first hands. You conclude that these assaults of negroes on white women are prompted by a desire of the negro and popular prejudice—a resentment at being deprived by law to be a wife, be some ten and the usual custom of the law to be a woman on the white man in regard to the negro woman; but we never hear of criminal assault as a consequence. You say that the negroes of the present generation have not that high regard for

the white woman that the slaves and ex-slaves had. In this you are right, and you are approaching the truth of the matter. The state of law in this country is a fiction, causing the negro of both sexes is such as to destroy all respect and reverence for anything. The most of them think, and with reason, that there is no such thing as a virtue. Such is the case among those they know. The negroes that commit these crimes know nothing of Fourteenth and Fifteenth amendments, or any of the civil-rights acts. They simply have no respect for women. You say such assaults do not occur in those countries where marriage between the races is not against law and popular sentiment. If you will notice you will see that such assaults do not occur in this country on negro women. And for the same reason in both cases, that the luxury of morals is such that there is no occasion for it.

We have, then, this condition—given a man without the restraint of religion, or morals, or social position, and with the animal desires more strongly developed than usual, and with no idea of the unapproachableness of any woman, and what else can we expect but that which now so often happens? A man himself intoxicated or drugged cannot distinguish between others not in his condition and himself, so those unused to virtue are unable to conceive of it.

I have given you my diagnosis of the disease. I will now suggest a remedy. The one that is being tried now is terror. I do not think it is the best. People who have been used to act, or rather, who have been restrained from acting, entirely by fear, cannot all at once be relieved from it. A man without law is not a natural man. How many of us could have been brought through childhood without it? It is certainly one of the most useful safeguards, and the one on which the body politic mainly depends. But Christ taught a better way—of the most universal and most desirable to do good and not evil. He would get us away with fear, but would add another motive to influence actions, and one that would be ever present. The cause of the moral decline of the negro is apparent to every observant person who has been with them for the last thirty years. It is the bad religious leadership they have been under. Substitute for the present set of libertines true, virtue-loving Christians, and in ten years there would be such a change that to be a Negro would not be a byword and "The New Crime" would be a thing of the past. Create a foundation for respect and respect will come. The same remedy would not only cure the new crime, but the many others that are now filling our jails and leading to the horrors of civil war. Speedy trials and executions would have some effect. But nothing will create a real reformation of character, such as would raise up friends for the negro, will save him.

I am, sir, C. N. MELLWEATHER.

## DESERTIONS IN THE NAVY

November 2, 1903.

To the Editor of *Harper's Weekly*:

Sir,—The great number of desertions in the navy at the present time is appalling. It is one of the most serious of the great problems with which the Navy Department has yet had to contend. During a single month recently there were three hundred deserters. The reason for this disgrace to the "pride of our country" can be attributed to many causes.

Within the past two or three years an experiment has been made which has, it seems, proved a complete failure. Reformatory stations in charge of naval officers, have been opened throughout the interior of the country. Here are enlisted men of almost every occupation. When a sufficient number are recruited they are sent in crowds in the different training-ships on the Atlantic and Pacific coasts, where they are again transferred to training ships. On these they are given a few weeks' training in the rudiments of seamanship; they are then drafted to regular ships of war and entered upon the routine of their service. Here they become known as "incubator sailors." As a general rule these men have never seen salt water, and have less idea of what constitutes a sailor's life than it is possible to imagine. This sudden change of living invariably brings on dissatisfaction. All of this course only tends to increase the raw recruits' dissatisfaction.

Our navy is by no means free from foreigners—it is, in fact, overladen with them. Many of them, on account of their seamanship, are made petty officers. Thus, here and here American men are superadded to the service of their own country by foreigners, many of whom can hardly speak the English language. Though these foreigners are always good mariners, being for the most part Norwegian and Swedish, they have not the knack of discipline, and are intolerable to any one with American principles. Again, according to the present system of maintaining the navy, a sailor is never settled—that is, he never knows how long he is to remain aboard the vessel on which he is serving. Hence he loses all interest in his own ship, being constantly thrown among strangers.

In spite of the new ration introduced into the service it is not much better off. The men are now, as always, required to pay in part for their meals, out of their own pockets. The equivalent ration served is supposed to be thirty cents, in which case the men never receive the benefit of their own country. Here they, if all rations were consumed, instead of every fourth or one as at present, which necessitates a lieutenant, whose pay is only \$16 a month, in paying \$3 of this amount for his own subsistence, it would be far more profitable for the service of one of its own sailors than for that in paying great numbers to draw their pay and return to their homes.

I am, sir, H. H. BYRNE.

**A Touching "Appele"**

The following notice is said to be posted over the altar-box of a certain outdoor altar in northern Italy: "Appele to Christ! The Brothers, so called, of Mercy, asks slender alms for the Hospital. They harbour all kinds of diseases, and have no respect to religion."

**APPELE TO MOTHERS.**—Miss WIGMORE'S "SOCIETY" WOULD send five copies for each of the children passing. It contains the full address the goods, prices of each, prices with color, and is the best society for charities.—[Adv.]

As a health-giver, no tonic made equals **ARMER'S**, the Oriental Anagallis Balm. (Vegetable and mineral).—[Adv.]

Buy K. for it is a wine of exquisite bouquet—**COOK'S** DELICIOUS EXTRA DRY CHAMPAGNE. It is the superior to any other.—[Adv.]

In many cases of **ARTHUR FAY'S CURE FOR CONSUMPTION** gives relief that is almost equal to a cure.—[Adv.]

There are some which are really properly made, and as a good history of each of them is in a book of the late "Napoleon," a perfectly business proposition, some which have been adopted by our government.

Ladies whose delicate skins are still the most delicate even of the **Superior Cream**—although quite sensibly "old-fashioned" in its origin—ought to use the latest creation, "Ladies' Cream," which is applied to the face with regularity, and which is used in the guise of a soap.—[Adv.]

**ADVERTISEMENTS.**

**BAD HABITS**

**Improper Food Often Leads to Tobacco and Drink**

Improper food creates abnormal tastes, and there are many cases on the medical records where the liquor habit and tobacco habit have been caused by wrong food and have easily been cured by the use of the scientific food Grape-Nuts, which so thoroughly nourishes and rebuilds the nerves that they stop the cry for stimulants.

A business man says: "For 30 years I smoked on an average of 10 or 15 cigars a day, and then my nervous system collapsed and I had about my mind that it was all up with me, for I had tried many times to break off from the tobacco, but it always failed."

"Last May I was so run down I only weighed 111 pounds, and I realized that I must stop smoking, and stuck to it for about 10 days, but was so nervous and out of sorts my family told me I had better go back to smoking, as it was impossible to live with me. It was just about this time my wife brought a package of Grape-Nuts on the table one morning, and as I could eat nothing else she induced me to try a little of that. So I took a teaspoonful of it, and, strange to say, it tasted good, and by the time I had it down I knew it had gone to the right spot, so I took some more, and it was the first food I had relished for weeks."

"So I kept up the use of Grape-Nuts, and as my appetite came back added other foods, and I am now back to my old weight of 133 pounds, never felt better in my life, and, strange as it may seem, I have no further craving for the tobacco, and I thoroughly believe that only the cereals and nutrition I got out of the food Grape-Nuts has given me the strength to quit smoking. If every one knew the power of this wonderful food you would not be able to build a factory big enough to supply it." Name given by Postum Co., Battle Creek, Mich.

There's a reason. Look in each package for a copy of the famous little book, "The Road to Wellville."

It is easy to claim "pure beer," but one must double the cost to make it.

Schlitz is actually pure.

We go 1400 feet down for water.

We spend fortunes on cleanliness.

We not only filter the beer, but filter all the air that touches it.

We age the beer for months, so it cannot cause biliousness. We Pasteurize every bottle after it is sealed.

For fifty years we have insisted on purity, and now all the world knows it. The result is a sale exceeding a million barrels annually.

Isn't absolute purity as important to you as to others?

Ask for the Brewery Bottling.

To have the correct flavor a Cocktail should be freshly made, and should contain that most delightful, aromatic tonic

## Christian Science in Cow-camp

By William R. Lighton

"DEAR SIR,—Well Billy god Widing & no more rain the roundup will be at foot Cloud tonight Noon may 17th or if not there then at the lower Windmill down on Six Mile Creek, the Boss & the Boys says you better come down you Prodiggle & get you a good feed of Beef & besides there is lots of folks here that you know, the D-Bar boys & Blacks Jim with the comick eye & Coffey's fellows & a lot from the P.F outfit & more, 37 head of men for dinner today not counting no much don't feed much a man at this Cooking job. You can find the Way if you want too by following the Rawhide trail to below Coffey's & if we ain't at the Steugh you go up on the flat south & keep Spoon Butten a little to your left & keep a Gowing till you see our horse herd. Come there, Yours resp. STEVE."

This letter came to me at Lusk, and Red Cloud Steugh lay fifty miles away on a new trail. To hunt for an isolated and unsteady cow-camp in the heart of those measureless plains, with nothing but Steve's single offhand sentence for guidance, would be much like searching out a particular misplaced type in a Sunday newspaper. No matter; it was worth a far journey to investigate once again with that company; for they were known to me of old—a mighty herd, men to their heart's core. Missions and strays were quite forgotten when at noon of the second day I sid from my saddle beside the big mess-wagon on Six Mile; for there was the giant Steve at the cooking job, with his gut-die, his downy-busted Dutch ears, his attendant cloud of wondrous odors, and, best of all, his brown and friendly face.

His greeting had all the unimpaired melancholy of out-door Wyoming. He did not even take his huge fist out of the biscuit-dough.

"Hello!" he said, simply, as though our last parting had been but yesterday, instead of three years gone. "Strip your harness and turn him loose. He'll be took care of."

When that was done, I stretched at my ease in the shadow of the wagon, rolling a cigarette, and we talked the talk of reunion.

"The boys is late to-day," he said, presently. "Rein's been holdin' us back ever since we left the Platte. But they'll be comin' in soon. Oh, say!" His face flashed into an animation which belated the unusual in his thoughts. "We've got a new one—a brand-new kind. The Bosses fetched him in day before yesterday. He's right from Missouri, and awful unusual to this country; but that ain't the worst. He's all bungged down in religion. What is it, now, you call them shapes that burrs and don't know it?—Christian Scientist! That's him. Say, did you ever go against one of them?"

I shook my head. "They're mostly too many for me, Steve."

"It's a religion a woman made up. This chap has got a book along with him she wrote—a whole of a big book, like some kind of a harness doctor book, it is, and he knows how to it same as them Hebrew children did to that Pharaoh-king's bull calf. He's awful wroty over it. When he reads any kind of a physic he says he just read himself a dose out of his book, and that's sufficient. Do you understand that? The boys is terrible hawthered to know what they're goin' to do with him, because he sure don't believe here, and that news has got to be broke to him somehow."

He stood erect, and his face took on the look of duty. "There comes the boys," he said, and beatified himself.

Topping the brow of a hill two miles in the distance appeared three shapes, dark against the brilliant sky; then half a dozen; then a score; more and more—horsesmen riding free and wild across the big, empty plain, lusty banners urging them in haste. On they came in full charge, sitting their beasts as none can but those Western cousins of the gods—as inspiring a sight as ever I looked upon. While they were yet afar off I stood up and swung my hat in gladness, and on that rare and wonderful air, across a full mile of space, came their shouts answering yells of recognition and welcome. Two minutes more and my hand was squared numb and overripe.

Then we fed. O feed of blessed memory! Open air, open plain,

open sky, and open hearts! I felt indeed a "Prodiggle" returned to my own. Never was fatter, half of old to compare with that grass-fed Wyoming steers; all the fat of the land besides was heaped upon my pletter, and I was arrayed in the purple of a royal hospitality, a matchless friendliness. It was fat, fat!

But there was one who had small share in this. He sat with the rest and ate with them; nevertheless, he was plainly an alien. He secured a meaningless sort of fellow, lean as to body, pallid as to face, anemic as to mind, with lips that hung loosely apart and eyes that wandered aimlessly. I knew him at once; Steve's word helped me: "sooty." He was the "Christian Scientist."

He felt his separateness, without knowing what to do about it. In the intervals of feeding his lips were a fixed snarl of weak, vague animosity, and in his eyes was a look of wistfulness, as if for a word or a sign of comradeship. But none was given him. I felt sorry for him, knowing what the silence meant. To be mercilessly belittled by husky pitilessness is sometimes hard to bear, even though you know it is merely a friendly test of your temper; but to be ignored—that is altogether different; it is a very final way of saying that you "don't believe." The situation was curious. A man who had done a murder might have been heartily welcomed to that company because of some stanch, manlike quality that was in him, while this mild, colorless, harmless little fellow was outlawed.

While we ate, cloud masses gathered from beyond the purple chain of buttes that loomed against the west; the air grew opaque with thick mist; and then the rain came in broad, gray sheets, blotting out the horizon, ablunting the world away behind an impenetrable curtain. It would clear by four o'clock, the weather-wise Boss said, and in the mean time we could loaf. A big salt-tan was put up, and within it we gathered, two-score strong, and surrendered ourselves to a jocund forgetfulness of duty and of every stern thing. Robust, out-door masculinity dissolves dissolves in its diversions, inclining to heresy; and there was plenty of it here, with much speech between-usuals—such speech!—about wit that deep, kindly humor that managed every hurt of the wounds, with sometimes a word or two that showed these men to be masters of the truest wisdom of earth—the wisdom that let them enjoy their days.

"Billy, when did you shave last?" one asked, presently, gravely studying my chin.

"Day before yesterday," I answered, in unassuming simplicity.

"Billy needs a shave!" they chorused. I was stretched upon the ground, head and feet, with one sturly fellow seated on my chest to officiate; my face was smeared thick with exorcise, a butcher-knife was brought from the mess-wagon, and I was treated to the shave of my life. It was not an indignity, but a compliment rather, for it acknowledged me as one of them.

Then the giant Steve was fringed with ropes and hung head down from the centre pole, not to be released until he had said a prayer aloud; which he did promptly, in a fashion that earned a thunderous applause. The pity of it is that the prayer was quite appropriate.

They did not treat the Christian Scientist to any such tokens of brotherly feeling; they merely let him alone. For a time he sat looking on, grinning his weak, foolish, wistful grin; then from somewhere he brought his "kind of a harness doctor book," and withdrew into a corner. By and by they observed him, as he followed the lines with a slow, phobbing flap of his loose lips whispering the words inaudibly, and they gave him a brief, puzzled attention. Noon Red Metjee spoke, not at all inaudibly.

"Seems to get a lot of comfort out of it, don't he?"

He looked up from the page, marking his place, flushing with pleasure because of this timely notice. Big Steve was the one nearest him, and in Steve he spoke.

"It is mighty comfortin'," he said, taking Red's remark at its literal worth. "Did you ever investigate Christian Science?"

Steve answered gravely: "I've never had no right healthy. A healthy man don't neither much about religion, I reckon."

Black's Jim—lie of the "cumack eye"—laughed aloud. "Steve

and religious Steve and the angels! I'll bet Steve don't never think of heaven except as a place where he could have a ball of clay.

"That's no lie," Steve said, in placid earnest.

"You healthy folks don't know," the Christian Scientist cut in crossly. "But I know. I used to be a Baptist—all my kin was Baptists—but it didn't seem to do me no good. I was that unhealthy! I had a terrible indigestion. If I'd eat just the bottled ones of fried potatoes for breakfast I'd bech an' suffer awful till I took up Christian Science. An' that taught me to know I didn't have no such thing as indigestion; it was only a belief in evil, that my spirit could demonstrate over. All I had to do was to deny the evil, an' now I can eat all the fried potatoes I want to, an' never bech a nut."

They listened without a word. It was not a hostile silence, but quite fascinated; they were giving the man his chance. It was Steve who spoke next.

"Then you saved religions just to get shot of a disease you didn't have now?" he asked. "That seems right funny to me."

"But I thought I had it," the other returned. "My spirit had the belief in it, an' that was just as bad as the disease."

"Was it only your spirit that belied them there apes?" another questioned, gravely matter of fact.

The Christian Scientist appeared a bit dubious. "I guess maybe you might say it was," he hazarded.

"I don't rightly understand you," said Black's Jim. "You say there ain't no such thing as a disease, unless a man believes in it first. Look here; suppose I was blind an' deaf an' dumb, an' stood close to a feller that had the smallpox, with my back to him, you not knowin' he was there at all, wouldn't I catch it?"

"Maybe you might catch the belief in it," the other explained.

"An' wouldn't it peck-mark me?"

"Why, maybe the belief might peck-mark you, if you didn't deny it; but the disease couldn't, because it's like I tell you: there ain't no disease. Of course, there's some beliefs that's more ketch'n' than others. A feller with them strong beliefs, like small-pox, you'd have to have right smart of practice before you could deny 'em proper; but after you'd had some experience you could do it." Evidently the indulgent was warmed to his subject. "Mind is superior to matter," he said, in the sounding phrase of his faith. "The body don't catch no disease the mind ain't willin' it should have. If the spirit will just keep on denyin' evil, faithful, the body won't never have no diseases whatever. That's what the book says."

"If I was a Christian Scientist, would it keep me from gettin' no horrible sick when I'm drunk?" asked Red Meeker.

"It would cure you of wantin' to drink," answered the zealous devotee.

"Oh, Lord!" cried the critic, in quick disgust, and there was one possible convert the less.

Something of the missionary motive stirred in the simple fellow's soul. "Just lemme try, you, he argued, and proceeded to blunder lateriously through a long and awful page in his "bible's" volume. None of his listeners could make head or tail of it; indeed, they were not trying, having something else to think about just then. Black's Jim was edging nearer to the reader, his face a mask of blood, absorbed attention; but in his hand he clasped a dried, thorny frond of prickly pear. We all divined his purpose. It was feebly contrived. I would have saved the hay if I could have seen my way clear; but one must be very sure before the trick is interposed with manifold dangers. Besides, I really wanted to see the outcome.

"You see!" the enthusiast cried, when the paragraph was finished. "The body's reborn! only except just a little matter, without no feelin' to it except what the mind gives it; so it's really the soul that suffers when you're hurt. But then, don't you see the mind won't suffer, because it's just another part spirit, an' can't get no substance to it to hurt. So there can't be no such thing, show you fix it, as sickness or pain; they're both just evil material beliefs."

Interest was completely centered in him

Illustration by L. Boyd Smith

"With clutching hands he cast himself bodily upon his prey"

now. He drew his stooping body erect, shifting to an easier posture for argument—and sat full upon the cruel carter which the sinful Jim adroitly shunted beneath him. With a shrill shriek of agony he flung himself into the air—a very volcanic eruption of blue overalls, spurred boots, wide hat, and pain-distorted face; and the carter, its inch-long spikes bedded deep in the most material part of his material body, swung close.

Far across Wyoming sounded the din we made. I helped, because I couldn't help it.

"It's nothin' but a evil belief that's stickin' to your pants!" one shouted. And another: "Deny it, Chris! Keep up a faithful doavin' of it, an' it can't hurt you none whatever!" "Better try belchin' it off!" another cried. "Let your spirit rise and prescribe herself!" clamored Steve. "It's only your spirit that's hurt; let her rise up and be strong, and that thing 'll drop off by herself."

A good twenty minutes passed before the barbed spikes were all pulled free. Then, pale, humiliated, crushed, the poor chap returned to his corner and sat him down, leaning tenderly to the left. He had nothing more to say thereafter. Truly his spirit was suffering sorely.

The next day we moved camp down on Red Cloud Slough. In the interval the boy had managed to triumph over his hurt pride, and was smiling his mild, meaningless smile—"It to numbah his teeth," Micie said, it was not all a comedy. He wanted no such to "believe," and his desire was so impossible of fulfillment. We sat at our dinner, our thoughts grossly centered upon our platters, when the outcast suddenly asked, "What's that there?"

It was a great black-and-white-striped skunk, as large as a middle-sized dog, missing along over the sands near by, regarding the camp with the impudent and insatiable curiosity of its tribe. It was on my tongue to pronounce the name of the beast, but the Boss got in ahead of me.

"Look at that, boys," he said, with a pleased surprise whose aim was exquisite. "It's a conger's kitten, George! I wish I could get it to take to the kids in the ranch. They've been wantin' one."

The Christian Scientist was on his feet, eager for approval.

"Won't it bite me?" he questioned.

"Bite mekin'!" the Boss assured him. "It's a regular 'skinkin' dove for bitin'! It's kinder on its hoofs, that's all, so it takes a sin, quick man to get hold of it."

That was enough. Straightway the boy was off, stepping warily forward, using his light voice in soft endearments. The animal seemed unafraid, slouching easily along, stopping now and then to regard its pursuer with alert, inquisitive gaze, as if it enjoyed the game. Twice the boy had it almost within his grasp; twice it eluded him.

"Kitty, kitty!" he cooed, drawing slower; then, with clutching hands, he cast himself bodily down upon his prey. In another

moment he was afflicted with a most desperate case of belief in an evil odor.

When next I realized myself my cheeks were tear-stained, stiff with the pain of laughter, and the sands about me were strewn with the prone bodies of hysterically happy men. The angry little skunk was sidling away into the sage-brush; and where the Christian Scientist had fallen, there he lay, inert.

Slowly he got to his feet and stood, his eyes tightly shut, his nose spilted to the breeze, his gasping mouth wide open, his arms hanging limp at his sides, his whole presentment one of sick, faint, utter weariness of life.

"Come on! help me, somebody!" he wailed. "What 'll I do-o-o?"

Blindly he started to grope his way towards us; but Steve halted him. "Don't you come near here," he bellowed, "till you've demonstrated over that thing some! It's an awful hatchin' smell! You stay right where you be, or I'll fill you plum full of lead." And his huge Colt's thundered a warning second.

"Change them damp clothes, Chris, quick," another called to him, "or you'll be gettin' your death o' cold."

"Nrip! nrip!" they chorused; and slowly he did as they bade him, casting the discarded garments into the brush.

"I ain't got no more clothes," he moaned, wretchedly; and pandemonium broke loose again.

"I don't need but one o' my spurs. You can have the other one." "I'll lend you a chew o' tobacco." "Say, old man, I've got an 'xtry cartridge-belt in the wagon; that 'll help a lot."

Various things were flung to him across the sand, from which he might make up a costume. When he returned to us he wore a ragged woollen shirt, a hat that sat upon his ears, and a pair of riding-boots.

"Ain't nobody got an 'xtry pair o' pants!" he pleaded. "This one 'll peel the hinges off o' me."

Steve regarded the thin shanks with disfavour. "No, it won't," he said. "Them ain't hips; them's only a sinful belief in legs." But a gray blanket was found, and thus the boy secured about his waist with twine. That garb would have to serve him for a day or so, until we came within speaking distance of a friendly ranch-house.

Of course he could not ride, and in his smother outfit, so he remained at camp with Steve and me—a sorry figure, deeply dejected, mooping mindlessly about. There was little for him to do, and through long hours he sat in the shadow of the wagon, his beloved look open upon his haecus. It seemed to give him the cheer he sought; or perhaps there was some good stuff in him, after all; for by mid-afternoon his grin returned to him—a little dimpled and the worse for wear, saveing less of mirth than of a sheepish melancholy; still it was a grin, and in my secret heart I admired him for it.

**Our Oriental Customers**

Commerce between the United States and Turkey amounts to \$4,000,000 annually. This seems like a very considerable sum, but its apparent magnitude is somewhat reduced by the matter-of-fact announcement of the Department of Commerce and Labor, through its Bureau of Statistics, that a piaster is only four and a half cents in value (or, to be more accurate, 4.4 cents). These are the figures of the Turkish government. Reduced to United States currency, they give a total value of a little more than two million dollars. The figures of the Bureau of Statistics, however, state our total commerce with Turkey last year at about six million dollars with Turkey in Europe and about five million dollars with Turkey in Asia. If that of Turkey's dependency in Africa—Egypt—were included, the total would be about twenty-three million dollars, but the figures of the Turkish government do not include that of Egypt.

With Turkey in Asia the commerce of last year was over five million dollars, but of this sum only \$276,347 was exports and \$4,897,428 was imports. If we consider Egypt as a part of Turkey, the total would be considerably enlarged, though still with a heavy balance of trade against the United States, as the figures of our commerce show our total exports to Egypt last year to be \$476,375, and the total imports from Egypt \$10,861,978. The Bureau of Statistics, it is proper to say, classifies Egypt as a part of Turkey, under the title of "Turkey in Africa," including all of the possessions of Turkey, our total commerce with it last year was, in round terms, twenty-three million dollars.

**How the British Museum was Started**

AN observer recalls the interesting circumstances of the establishment of the British Museum. The funds for the institution were raised by a lottery which was authorized in 1753 by an act of Parliament, the Archbishop of Canterbury, the Lord Chancellor, and the Speaker being the managers and trustees, each to receive £100 as an honorarium. The amount of the lottery is said to have been a million and a half dollars (\$390,000), which was raised by 13 tickets, to provide £390,000 for prizes, varying in value from £10,000 to £10, and £100,000 for the purchase of the Museum's nucleus—the Sloane collections and the Harleian Library; also to provide cases for the acquisitions and to meet other expenses. It will be remembered that the lottery became notorious through the activities of a certain Peter Leboep, who absconded with the tickets and had them sold at a premium. Leboep was afterwards prosecuted for breach of trust and fined £1000, which could not have troubled him much, as his profits from the deal were £40,000.

**What Constitutes Death**

Is the cessation of the heart's action an inflexible sign of death? There is an anecdote of a woman whose heart action was revived by artificial respiration some time after she was supposed to have died; but the heart stopped again when the artificial respiration was given up. There is on record, also, the case of a decapitated murderer whose heart continued to beat for an hour after the execution. Was the man dead? Obviously the cessation of the brain's activities is no criterion. A medical authority who has lately considered this absorbing and important question offers the following definition of what we call "death." "Death," it is suggested, is the name given to the inability of the organs of the body to act together with that harmony which is characteristic of "life," although the derangement of this vital harmony does not preclude a possible activity of the individual organs. Which recalls Herbert Spencer's well-known definition of life as a continued adjustment of internal relations to external relations.

## Music

### Boston Romance

It was during the intermission. The men from Boston, otherwise the Boston Symphony Orchestra, had just played the "Waldsehn" from Wagner's "Siegfried"—that magic idyl of woodland life—and now one was complaining of the lack of poetic truth in the interpretation, which was inelastic, metronomic, icily regular. These, surely, it was observed, were not Siegfried's words!

"Oh no," was the illuminating response: "these were Boston words."

It was an admirable criticism. These were, essentially, Boston words; and, by the same token, Mr. Gericke's emotion in Boston music: his impulses, his method of approach, are characteristic. To praise his orchestra—that orchestra whose virtuosity has become almost vulgarly traditional—is merely to indulge in the unacknowledging postulate of acknowledging the obvious. But perfection has its disadvantages. Do we not too complacently witness the splendor and purity of tone, the flawless technical accomplishment, of this unique band, ignoring the vital shortcomings which are palpable under the present direction, in its performances? If our memory serves, it is Mr. Finck who has frankly declared his preference for an inspired pianist and an indifferent piano over a perfect instrument and a poor performer. Not to make too harsh an application of the parable, one may say that the Boston Symphony Orchestra is the perfect instrument, and Mr. Gericke, its conductor, the—well, let us say, unsatisfying performer. For color and movement, for passion, for romantic suggestion, you are offered the metronome and the stop-watch. We recall his conducting at the second of the orchestra's recent performances in New York. There was the brilliant "Sakuntala" overture of Goldmark, played with an entire disregard for suspense and suspense; there was a new tone-poem by the Frenchman, Vincent d'Indy—"The Enchanted Forest," a vividly imagined paraphrase of a ballad of Voltaire, and here again Mr. Gericke was mechanical, insipid, although the orchestra played exquisitely; there was a new and agreeably unimportant symphony by Glazounoff—his fourth—and in this Mr. Gericke was acceptably effective.

The subject is not brought forward in any zealous spirit of discovery; for the inadequate direction of the Boston band is a matter of familiar observation. But what an unseemly peak of fortune it is that so superb an instrument should suffer for lack of a master player!

### Elgar's new work

Critical authorities in England are not agreed as to the merits of "The Apostles," the new oratorio by Edward Elgar, whose "Ivan of Terrible" set music in New York by the opera last spring. The reviews of the recent performance of the new work at Birmingham are diversely various. For Mr. Vernon Blackburn, the most glowing superlatives barely suffice. "What have we here?" he declares. "A masterpiece, an invaluable contribution to the art of the world; a score of pure gold throughout." Mr. Ernest Newman, on the other hand, finds the music "not sufficiently inspired to satisfy the musical mind," and "impressive only to minds that are already disposed to consider anything beautiful that is associated with a sacred text."

### Has Oratorio had its Day?

Mr. John F. Runciman, whose ideas on musical matters are refreshingly unorthodox, takes a pessimistic view of the condition of the oratorio form in our day. "The moralizing chorus in which lay the strength of the old oratorio," he says in the *London Standard Review*, "has no longer any raison d'être." The mixture of the dramatic and narrative method adopted by modern composers can be productive, he thinks, of no fine result. "Oratorio has had its day; it was an Old World form, and it went out with the Old World. Opera or music drama has taken its place."

## WILLIAMS' SHAVING STICK

### Shaving—and Saving

Shaving with greater comfort, luxury, convenience.

Saving in time, temper and money. A single stick affords over 300 shaves. No cup required. Only the shaving stick and brush.

**GIVE HER A GENEROUS SLICE**

to obey the Spooner act and proceed at once to negotiate for a canal by way of Lake Nicaragua. We doubt whether the Gulf State Senators can be controlled by Mr. Gorman in this matter. They not only want a canal, but they want to see it finished as soon as possible. They will recognize that by a defeat of the treaty with Panama the fulfillment of their desire would be indefinitely postponed. The Spooner act makes the President the sole judge of the reasonableness of the time required for gaining the right to complete the canal by way of Panama, which, by the Spooner act itself, is acknowledged to be the superior route. It is extremely improbable that Mr. Roosevelt would consider that the reasonable time allowed him had been brought to a close because Mr. Gorman had temporarily availed the rejection of a particular treaty. Moreover, all engineering experts admit that many more years would be needed to construct a canal by way of Lake Nicaragua than would be required to finish the partly dug canal at Panama. If the Gulf State Senators wish for an interoceanic canal—and about the sincerity of their wishes there can be no doubt—they can probably be trusted to adopt the surest and quickest means of getting one. They are likely to hear from the Chambers of Commerce of New Orleans, Mobile, Galveston, and Memphis on the subject. To throw away such privileges as the Republic of Panama seems likely to offer would be an act of stupendous folly.

It has been decided that the legislation needed to render operative the reciprocity treaty with Cuba will take the form not of a resolution, but of a bill, introduced in the House of Representatives. Thanks to the good sense and foresight evinced by Mr. John Sharpe Williams, of Mississippi, the leader of the Democratic minority in that body, the bill is likely to be passed with reasonable promptitude. At a caucus called by him, for the purpose of determining the position of the party, the enabling bill encountered a good deal of opposition from the spokesmen of Louisiana, Texas, and California. Mr. Williams, on his part, pointed out that the Democrats could not set their faces immovably against a reciprocity treaty, without renouncing the issue of tariff reform on which they must go before the country in 1904. The passage of the Cuban reciprocity bill would prove to the American people that there was nothing sacred about the Dingley act; and the Republicans, having lowered the tariff wall in one place, could not, with any show of consistency, resist hereafter a demand for lowering it in some other places. The real objection to the reciprocity treaty was, he added, that it did not go far enough. It would be improved by an excision of the provision that, while the convention should be in force, no sugar imported from Cuba should be admitted into the United States at a reduction of duty greater than twenty per cent. from the Dingley rates, and the further provision that, during the life of the treaty, no sugar the product of any foreign country except Cuba should be admitted into the United States at a lower rate of duty than that prescribed by the Dingley act. These provisions deprive the House of Representatives of its constitutional power to reduce duties at any time.

Mr. Williams also thought that fidelity to the cause of tariff reform required the Democrats to insist on a removal of the differential on refined sugar, which is alleged to have been inserted in the reciprocity treaty for the benefit of the Sugar Trust. That the new leader is likely to give a long-needed unity and energy of action to the Democratic minority in the House was indicated by the derivation of the caucus, which, by a vote of 95 to 15, resolved that while it would advocate an amendment of the treaty making the changes which we have described, yet, upon the adoption or rejection thereof, the Democratic Representatives should vote for the bill, as at least a step in the direction of freer trade between the United States and Cuba. There is no doubt that any amendment of the treaty will be rejected by the Republican majority in the House, and the position taken by the Democratic caucus simply means that the Democrats will allow the bill to pass after recording a formal protest against two of its provisions.

That the now assured passage of the Cuban reciprocity bill will impart a considerable stimulus to the sugar industry of the island is indisputable. The hope of a revival of prosperity will come in the nick of time to allay the unpopularity of the

insular Executive, due to the new stamp taxes on wine, beer, alcohol, tobacco, and other luxuries, levied for the purpose of providing interest and a sinking-fund for the loan needed to pay the officers and soldiers who fought for the independence of the island. The law imposing these taxes was enacted on February 27, 1903, but it did not become operative until eight months thereafter. Under the new law, wines of home manufacture—these, we scarcely need to say, are seldom, if ever, made of grapes, since very few grapes are grown in Cuba—pay twenty-five cents a litre, while imported wines pay only two cents a litre. This discrimination may seem, at first glance, unreasonable, but it must be remembered that imported wines pay an import duty. The tax on native alcohol is acutely felt, for the reason that the manufacture of rum from sugar refuse is an almost inseparable feature of a sugar-plantation. The stamp tax on beer is not high—only five cents a half-dozen bottles; cigars pay five cents on each box of twenty, and cigarettes one-third of a cent on each package of sixteen. The price of a package of cigarettes, consequently, remains the same—five cents—but the vendor ceases to throw in a box of matches.

By the death of Mr. Andrew H. Green, New York city has lost a man who had earned and received the splendid title of First Citizen. He had earned it by forty years of zealous, intelligent, and upright service. There is scarcely one of the reforms, the enlargements, the improvements, and the embellishments of which New York city has been the theatre, from an epoch antedating the civil war, in which Andrew H. Green failed to take an active and conspicuous part. It is almost half a century since he became president of the Board of Education and began a drastic transformation of the city's educational system. As successively commissioner, secretary, president, and comptroller of the Park Board, he is largely to be credited with the magnitude and the beauty of Central Park. It was he who caused the northern boundary to be extended from 106th to 110th Street, and who secured the retention of the natural features of the site within the widest practicable limits. It was the commission of which he was the controlling spirit which was eventually authorized to lay out the northern part of Manhattan Island, and a considerable section of what is now the Borough of the Bronx. To him, more than to any other man, the city owes the Museum of Natural History and the Metropolitan Museum of Art. When Samuel J. Tilden, Charles O'Connor, and other honest Democrats combined with honest Republicans—there were Tweed Republicans in those days—to overthrow the Tweed Ring, it was natural that Mr. Tilden should turn for assistance to Andrew H. Green, who was his law partner. When Mr. Green succeeded Consoley as Comptroller, he found the city treasury empty, and, on his personal credit, borrowed half a million dollars with which to pay the policemen, the firemen, and other indispensable public servants. In 1876 a nomination for Mayor on the Citizens' ticket was offered to him, but he declined it, believing that his acceptance might impair Mr. Tilden's chance of carrying the State of New York.

In 1881 he was appointed by a Republican Governor one of the commissioners to revise the tax laws, and two years later Governor Cleveland made him a member of the Niagara Park Commission, of which he subsequently became president. It was due largely to his advocacy of the project that the eastern shore of Niagara Falls was set apart by the State of New York to be a pleasure-ground for the people. It was in commemoration of his services in this direction that the Niagara Reservation Commission lately changed the name of Bath Island, just above the Falls, to Green Island. In 1890 the Legislature made him a commissioner for the New York and New Jersey Bridge, of which he had long been a promoter, pointing out that if Long Island was conceded to require many bridges, the continent itself, which lay behind New Jersey, must be acknowledged to need one. He also had much to do with the creation of Fort Washington Park and the annexed district parks, including the New York Zoological Park, with the authorization of the East River Bridge and the new aqueduct, and with the consolidation of the Astor, Lenox, and Tilden libraries. By far the greatest of Mr. Green's services, however, to his fellow citizens was the part he played in effecting a union of New York, Brooklyn, Staten Island, and parts of Queens and Westchester counties in one vast metropolis. It

was in 1868 that he began, single-handed, the long struggle to this end, and never were his efforts relaxed until the plan was consummated in 1898. When in that year a Charter Commission was appointed, he became one of its most useful members, and on October 6, 1898, his seventy-eighth birthday, he was presented with a gold medal, which had been struck to attest his relation of fatherhood to the Greater New York. It is an interesting fact that one of the latest projects to which he devoted himself with characteristic ardor was the erection in Central Park of a statue of the author of "Paradise Lost" and of the "Aeropagitic." He deplored the fact that the Puritan poet should have waited so long in vain for adequate recognition at the hands of descendants of the Puritans.

We pointed out last week that the outcome of the elections which took place on November 3 was to make Senator Hanna by far the most commanding figure in the Republican party, next to the President himself. Mr. Roosevelt forthwith proceeded to test the Senator's relation to himself by requesting him to retain the chairmanship of the Republican National Committee during the campaign of 1904. Had Mr. Hanna accepted the invitation, he would have been stepped as a man of honor from countenancing the undisguised efforts of his friends to bring about his nomination next year for the Presidency. It will be remembered that Mr. Blaine, the moment that he had made up his mind to be a competitor of President Harrison's in the Republican national convention of 1892, resigned the office of Secretary of State. Mr. Hanna still proffers that he is favorable to Mr. Roosevelt's nomination for the Presidency in 1904, but he has thus far refrained from promising to retain the chairmanship of the Republican National Committee during the next campaign, on the plea that he is reluctant to assume for the third time the burden of so much responsibility. Meanwhile, the "Lily White" Republicans in the Southern States are arranging to send Hanna delegations to the next national convention, and Postmaster-General Payne, with the patronage at his command, has begun to build up Roosevelt organizations, superseding so-called "McKinley postmasters" by appointees whose faces are turned toward the rising sun.

That is the kind of service for which Mr. Payne was presumed to have been made Postmaster-General, and he is certainly better adapted by past experience to perform it than he is to post as a purger and reformer of the Post-office Department—a pile in which, much to his own surprise and uneasiness, he has been, of late, constrained to figure by Fourth Assistant Postmaster-General Bristow. We repeat what we have formerly said, that, in the eyes of multitudes of Republicans, Senator Hanna, not Mr. Roosevelt, is Mr. McKinley's true heir, and there is no doubt that he would have received the Republican nomination in 1904 but for Mr. McKinley's assassination. As events have shaped themselves, he is the only member of the Republican party who conceivably might beat Mr. Roosevelt in the Republican national convention, and even he could not do it without the support of Mr. Platt of New York and Mr. Quay of Pennsylvania, both of whom, it will be remembered, opposed Mr. McKinley and desired the nomination of ex-Speaker Reed in 1896. It was also against Mr. Hanna's will that Mr. Platt forced the convention of 1900 to nominate Mr. Roosevelt for the Vice-Presidency. That is ancient history, however. As things are now, it is doubtless true that Messrs. Platt and Quay would rather see Mr. Hanna in the White House than Mr. Roosevelt, and probably the same thing may be said of Senator Fairbanks, Senator Cullon, Senator Spooner, and Senator Allison. Unless Mr. Hanna consents to retain the chairmanship of the Republican National Committee next year, there is a chance that, even at the last moment, Mr. Roosevelt may lose the nomination for the Presidency.

It was to be expected that professional politicians would look without much sympathy on the popular movement in favor of a re-nomination of Mr. Cleveland for the Presidency by the Democratic national convention. Mr. Cleveland has never been liked by men who make a living out of politics, because from the outset he has declined to regard public office as a private "snap." It is because the people have divined the motives for the disparagement of Mr. Cleveland on the part of professional wire-pullers that they have been said to

love him for the enemies that he has made. The evidence is becoming, with every week, more overwhelming that they love him, and want him once more for Chief Magistrate. On Friday, November 13, Judge John Martin, of Topeka, now a fusion Democrat, but formerly a Populist United States Senator from Kansas, came out in favor of the nomination of Mr. Cleveland for President. He admitted frankly that Mr. Cleveland was not precisely the kind of Democrat that he, Martin, would pick out were the choice delegated to him, but he went on to say that, in his opinion, the ex-President was a stronger man intellectually than Mr. Roosevelt, and would cause the country less trouble. What is even more to the point, Judge Martin is convinced that Mr. Cleveland is the only man living whom the Democrats can elect in 1904.

Of course the Western Democrats do not like his position on the silver question, but that is at present a dead issue, and, according to Judge Martin, they have too much sense to let it determine their selection of a candidate at this time. They want to win, and they recognize in Mr. Cleveland the man to win with. Much the same view of the situation is taken by the editor of the *Montgomery Advertiser*, who, while he admits that Alabama would be carried by any nominee of the Democratic national convention, is convinced that in doubtful States Mr. Cleveland would poll more independent votes than could any other candidate of the Democracy. He bears witness to a marked change of opinion on the subject in Alabama, many influential citizens who were decidedly opposed to Mr. Cleveland two years ago now advocating his nomination. Another Alabama newspaper, the *Mobile Register*, sees in Cleveland a "magnetic name," and *New Orleans* papers report that an allusion to Mr. Cleveland caused an outburst of enthusiasm at a recent meeting of the Mississippi Levee Association, in which twenty-four States were represented. Mr. James H. Eckels, of Chicago, has expressed the belief that Mr. Cleveland can obtain a larger vote than any other Democrat, and, if he can be nominated, will be elected. He appeals to more citizens, irrespective of party, than does any other man in the country. There, too, is ex-Senator Allen of Nebraska, who, like Judge Martin, is a quondam Populist; he sees that the result of the New York city election points to the nomination of Mr. Cleveland. According to ex-Senator Smith and Mr. Staff Little, of New Jersey, the present leader of Tammany Hall, Mr. Charles F. Murphy, was favorable to the nomination of Mr. Cleveland as long ago as last summer. There is no reason to suppose that Mr. Murphy has changed his mind, now that events have given him the power to dictate the choice of the New York delegation to the Democratic national convention. It seems to us scarcely credible that Democrats from the Southern States would turn their backs upon a candidate supported by the united delegations of New York, New Jersey, and Connecticut. That the ex-President can have these delegations we have no doubt.

The member of the Democratic national committee from Illinois has expressed in an interview a doubt whether Mr. Cleveland could secure the support of the delegation from that State in the national convention of his party. He adds that Senator Gorman is popular in Illinois. We dare say he is, among the professional politicians, but nobody this side of Boddam imagines that Mr. Gorman could carry Illinois in 1904. That State has never been carried by a Democratic candidate for the Presidency since the civil war, except by Grover Cleveland in 1892. Mr. Cantor, president of the Borough of Manhattan, said on Sunday, November 15, that he was sure ex-President Cleveland would be elected if nominated. Mr. If the feeling in the South should prevent his nomination, Mr. Cantor thought that Judge Parker would run almost as well. We deem it probable enough that Chief-Judge Parker would run almost as well as Mr. Cleveland in the State of New York. But could he carry the State of New Jersey, which also would be indispensable? New Jersey Republicans would be saying that Mr. Cleveland is the only Democrat delegates to be afraid of. Our own belief is that Southern delegates to the Democratic national convention in 1904 will pick out the man that they think has the best chance of winning. They have too much at stake to allow their selection to be shaped by any other consideration.

The fight in the Senate against the promotion of General Wood seems at this writing to be pretty serious. We hope sidetrack in the matter is the effect on the army of making General Wood a major-general. He may have studied wisely and unlawfully with Major Rathbone's trial. We hope he was not at fault in that matter; indeed we hope he was not at fault at all, though if Major Rathbone has done it, he is accused of licensing invidiously in Havana for gaming purposes, and of receiving gifts of considerable value from its proprietors. He did receive the gifts, openly, but we should be sorry to see misconduct in either of these particulars brought home to him. We prefer to think well of General Wood as a brave and able man who has served the country with ability. Opposition to his confirmation as major-general is quite consistent with such an opinion of him. We don't want to see him a major-general at this time because he has never earned that rank in our army, because he has already had more military promotion than he was entitled to, because there are scores of officers of merit and long service who are better entitled, and—so far as any one can judge—far better qualified to be major-generals than he is. If he is confirmed, and lives, in a very few years he will be the ranking general of the army. He will have attained that rank not by distinguished military service, but by administrative service. What he would amount to in a military way as a general officer nobody knows. There is basis for the opinion that he is an efficient doctor. There is basis for the opinion that he is of force and courage, but there is scarcely any basis for an opinion one way or another as to his competency as a general officer. His case is like that of the man who was asked if he could play the fiddle and said he had never tried.

The cause of freedom and civil rights in Russia is distinctly furthered by the report of the Tsar's commission on peasant poverty. The commission, appointed some time ago, is thoroughly representative in character, being made up of leading villagers, landowners, and officials, in due proportion; it cannot, therefore, be suspected of favoring any one class, whether the bureaucracy, the nobility, or the cultivators, at the expense of the rest. This commission supports the view, recently expressed by many of the foremost Russians, including Minister Plevne, that recent developments in Russia have been carried on to some degree at the expense of the peasant class; Minister Witte bears a good share of the blame, it being questionable that his policy of fostering manufactures by a high tariff, and of making great government outlays, such as the Siberian and Manchurian railways, in the interest of prosperity, has impoverished the agricultural class. It is, therefore, well that, having practically completed his plan, he should give way to a more conservative man. The commission, however, finds the chief cause of the peasant's low status in his low power of self-protection; the militant agitation of the Anglo-Saxon being wholly missing in the grainless Slav, who has so keen individual sense, whether of pain or pleasure. The commission therefore suggests that the legal status of the peasant must be heightened and individualized; such things as collective ownership and collective responsibility for taxes giving place to separate liability and property.

This is in the highest degree interesting to us, since we in America are going in exactly the opposite direction: towards collective ownership and responsibility, whether in trusts or trade-unions. The Slav is, therefore, Americanizing, while the American is Slavizing. This commission's decision marks a stage in the great struggle for civil rights now going on in Russia; and the leader of this struggle is the Tsar himself. He has two chief enemies: the sluggishness of age and the rashness of revolutionists. The former he can overcome; but the latter, if unbridled, may overcome him, and put off once more the day of constitutional freedom in Russia, as happened twice before: once through the December insurrection in the year of Nicholas the First's accession, and again, when the Nihilists assassinated Alexander II. on the very day on which he had signed a Constitution. The temper of General Dragomiroff, who ruthlessly put down the strike agitation

in Kieff. The Tsar dismissed him with the words: "I cannot keep him at Kieff. His hands are stained with human blood."

The recent contest in the French Senate is especially interesting, because it brought Premier Combes into direct collision with his predecessor, M. Waldeck-Rousseau, over the question of religious teaching in France. It will be remembered that, when M. Waldeck-Rousseau resigned, immediately after the general election had given him a substantial majority and distinctly vindicated the policy of his ministry, we were somewhat at a loss to account for his retirement. It was then suggested that, having successfully passed the law against congregations, and thus vindicated the dogmas of republican France, that "the clerical party is the eternal enemy," M. Waldeck-Rousseau rather feared the odium which would undoubtedly attach itself to the carrying out of this law, especially in his native Brittany, where the Church is held in special reverence, and party feeling runs high. We at that time reviewed a novel by "Gyp," which had this contest as its motive, and which was laid close to M. Waldeck-Rousseau's birthplace. "Gyp" made it clear that the aristocratic feeling was wholly on the side of the Church and the teaching orders, especially "the good sisters." It is fairly clear that M. Waldeck-Rousseau sees in himself an eligible successor to President Loubet, and was unwilling to impair his popularity, especially in his home province of Brittany; and for these reasons his retirement from the Premiership became intelligible. But it is evidently a case of King Lear and King Stork; and Premier Combes is fired with a persecuting zeal, a bigotry of unbelief, which M. Waldeck-Rousseau evidently did not bargain for or foresee. He has suppressed the orders with considerable rigor, only to see them reappear in civilian guise, to continue the work of teaching. He now wishes to strike at them again, and proposes that the French government should have power to suppress any school by administrative order, or being contrary to the Constitution, to law, or morals. It is further suggested that no one who has taken a vow of celibacy should be allowed to teach.

Here is an interesting comment from the outside upon recent municipal occurrences in this city. A correspondent writes: "I am much interested to observe that no one seems to realize the real reason why reform doesn't go in New York. There is a little milliner in Blankville who goes to New York once a year to do her shopping. She blows herself off to the good. Ben writes me that he is going to take ten days off and go to New York to have his hair cut. What rich man who would do something rash ever thinks of blowing in his money at home! He always waits till he can go to New York, and while that town is the receptacle for the money spent in self-indulgence and vice by a large part of the American community, there will always be too much profit in wrongdoing to permit of reform." It is true, as this correspondent points out, that New York is the pleasure-ground of a vast number of people who do not live here, and that the problem of keeping order and promoting righteousness on Manhattan Island includes not only the regulation of the folk whose homes are here, or whose work is here, but of a great multitude of visitors; and it is true, too, that an important proportion of the visitors come here seeking pleasure and are not disposed to take it sadly. But still it is the voters, not the visitors, who determine the character of the town. We never heard of a reform administration that sundered the town so good that the visitors stayed away. Cleaning the streets doesn't scare visitors off. Closing the gambling-houses would displease some visitors, but not very many. The lawful gaieties of the town—the theatres and restaurants and the like—and the shops and streets are ample to attract visitors, and the lawful profits of entertaining them are ample, too. Of course the tribute from vice is worth collecting, and of course it is vastly greater because of the patronage that comes from out of town, but it is not great enough to demoralize the town and determine the quality of its government provided the voters are getting what they want. We don't think the doing for a wicked New York carried the late election. The milliner from Blankville finds it quite as reviving this fall as when Van Wyck was Mayor, nor need Ben be bored a minute while his hair is being cut.

## Latest Aspects of the Panama Affair

Since the last number of the *Weekley* went to press, the Republic of Panama has been recognized by the United States as not only a *de facto*, but a *de jure* political entity. Such recognition was involved in the formal reception by President Roosevelt of Mr. P. Bonau-Varilla, ex-vice extraordinary and minister plenipotentiary of the new commonwealth. There seems to be no doubt that the course pursued by this country will be adopted at no distant date by the British, French, German, Italian, and other European governments. That their example will be ultimately followed by the Latin-American States may be taken for granted, although, for the moment, there would be among these some misapprehension as to the significance of the attitude assumed by the Roosevelt administration toward the revolution at Panama. Among the questions mooted by them are some that deserve consideration. For instance: Did the uprising at Panama against the Bogota government represent a spontaneous and practically unanimous outburst of local public opinion? Secondly, did our government invite or connive at the uprising? Thirdly, is our recognition of the independence of a second province of Colombia a violation of the Monroe Doctrine? Fourthly, did our Treaty of 1846 with New Granada tend us to assist any government that might happen to install itself by force at Bogota, in suppressing an Isthmian revolt against its authority?

Those who are inclined to question the assertion that the feeling on the Isthmus in favor of secession and independence is virtually unanimous, point out that the province or Department of Panama was represented in the Colombian Senate, which is said to have rejected the canal treaty by a unanimous vote. There must, then, it is argued, be some inhabitants of Panama who objected to the treaty, since their representatives in the Colombian Senate opposed it. The deduction would be perfectly justified if there had been even a pretence of honest elections in Colombia during the last three years since the *de facto* government headed by Marroquin established itself by force at Bogota. As a matter of fact, the mode of election which has been adopted in Colombia during the last three years has been characterized by a simplicity even more striking than that which is exemplified in Spain. The Governor of Panama, who, it must be remembered, is an appointee of Marroquin's, would be provided with a list of the persons who were to be returned from the Isthmus to the Colombian Senate and House of Representatives, and with a list of the persons who would be permitted to vote for those prospective lawmakers. Under the circumstances, the ostensible spokesmen of the Department of Panama at Bogota would represent nobody but the usurping Colombian Executive. As all the other Senators were chosen in the same way, the fact that they all voted against the canal treaty indicates that Marroquin must have secretly connived at the rejection of the treaty which his personal agent, Dr. Herrera, had negotiated. This is why the people of Bogota are now furious against the usurping President. They knew very well that Marroquin could have secured a ratification of the treaty had he really desired it. The supposition that any inhabitants of Panama, except appointees of the Colombian government, would favor a rejection of the canal treaty is inadmissible on a priori grounds, and is contradicted by all the evidence forthcoming. There is, in fine, no reason to doubt that the Colombian officials who have been politely requested to leave the Isthmus constituted the only persons in the Department of Panama who were disposed to defend the action of the Colombian Senate.

The completion of the canal begun by the French company is a matter of such vital moment to the natives of the Isthmus that the rejection of our offer to complete it gave ample provocation for secession than has ever been afforded for like movements on the Western Hemisphere. The original Republic of Colombia, to the creation of which Bolivar contributed so much, had nothing like equivalent ground for its separation from Spain. The Cubans never had so much justification for their revolts against the Madrid government. As for our own Declaration of Independence, set forth in 1776, the grievances of which we complained were decried compared with the sweeping sacrifice of her local interests, imposed upon Panama by the Colombian Senate. It should also be borne in mind that the ruin with which Panama was threatened by the rejection of the canal treaty was but the latest and deadliest injury in a long tale of wrong. Ever since the Isthmus became a part of New Granada it has been plundered and victimized for the benefit of its politicians. Over and over again have the inhabitants been driven to assert their independence. Of the income that used to be derived from customs duties and harbor dues, seldom was a dollar applied to the needs of the local government. The natives of Panama could not even secure from the central administration money enough to build a wagon road. Of the five thousand dollars which the Panama Railroad Company agreed to pay yearly for its franchise, the Bogota politicians have always taken \$1000 for themselves, and when they felt good-natured, would allow the Department of Panama to reserve five hundred dollars for itself. Of the huge sums of money paid by the de Lesseps Company as bonuses for the original canal franchise

and for the extension thereof, the Department of Panama has never received a dollar. In the matter of the bonus of ten million dollars and the annual subvention of two hundred and fifty thousand dollars offered by the United States, every penny would have gone to Bogota. All this, however, might have been assured, for the natives of the Isthmus understood that the construction and operation of an interoceanic waterway would be of incalculable benefit to the territory through which it should run. When they saw themselves assailed, however, with the loss of even the indirect advantage that might accrue to them, they comprehended that the hour had come to choose between revolution and despair. Who can doubt that, with such alternatives before them, their decision was practically unanimous?

As to the second inquiry, which has been posed by some Latin-Americans, whether, namely, our government incited or connived at the uprising in Panama, we are glad to be able to answer it squarely in the negative. We have not always been able to approve of Mr. Roosevelt's proceedings—we hold, for instance, that he transcended his constitutional powers when he appointed the Ambrosio Urdal Commission—but we believe him to be incapable of resorting to an indirect and surreptitious method of attaining a given end. That is not his way of doing things. He has shown himself on all occasions frank, bold, and straightforward. He has always thrown his cards upon the table. His worst enemies have never accused him of dissimulation, much less of treachery. From the charge of complicity in the Panama revolution we should willingly have absolved him on a priori grounds, but he has himself supplied conclusive proof of innocence and ignorance, by permitting to be published certain passages which he himself had incorporated in his annual message before the inhabitants of the Isthmus declared their independence. Whatever may be thought of the propriety or expediency of the intonation therein expressed—we have elsewhere glanced at this purely academic question—it must be pronounced absolutely certain that the intonation would never have been formed, much less reduced to writing, had Mr. Roosevelt even suspected that, before the opening of the regular session of the Fifty-eighth Congress, the case a problem would be solved by the natives of Panama themselves. It was not necessary for Mr. Roosevelt to publish those suppressed passages, which events have rendered superfluous. That he should have done so reflects credit upon his candor, however difficult we find it to reconcile with international law the conception therein expressed of his duty to his country and to civilization. The point to be borne clearly in mind is that reasonable and honorable men will acquit Mr. Roosevelt of being in any sense an accessory to the secession of the Department of Panama from Colombia.

It is almost incredible to regard our recognition of the Republic of Panama as a violation of the Monroe Doctrine. What was it that President Monroe averred in 1823? He said that the United States could not view with indifference any attempt of European power to extend their political system to the New World; to treat the Western Hemisphere as a field for future colonization; or in any way to control the destiny of those American communities which had declared their independence. President Monroe never asserted that the United States would assent to each Latin-American community the possession of the territory which it then occupied, no against the claims and assaults of other Latin-American States. Had any such guarantee been given we should have found ourselves engaged in uninterrupted war for upwards of three-quarters of a century. As a matter of fact, since 1823 we have been impassive spectators of countless revolutions in the region, which now calls itself Argentina. We have seen the independent republic of Uruguay erected on a tract of land long disputed by Brazil and Buenos Ayres with force of arms. We have seen Paraguay attacked and dismembered by its neighbors. We have seen Bolivia made the theatre of almost continuous anarchy. We have seen Ecuador convulsed by a nearly ceaseless struggle between the Clerical and the Liberal parties. We have beheld without interposition the mutilation of Peru by Chile, and the refusal of the latter power to execute treaty obligations with regard to the districts of Tacna and Arica. We have seen all forms of government succeed one another in Mexico, from the empire of Iturbide and Maximilian to federal and unitary republics. We have seen the Central-American Confederation split into its five component parts. We have seen, lastly, the original Republic of Colombia, founded by Bolivar, shorn, successively, of Venezuela and of Ecuador. In every one of these instances we have recognized the succeeding or before has such recognition been looked upon as inconsistent with fidelity to the Monroe Doctrine. To take an example nearer home—we recognized the Republic of Texas, after its secession from Mexico, and, subsequently, at its request, we admitted it to the Union. We have never been told that the Monroe Doctrine was ignored in either of those acts. The Monroe Doctrine is, of course, limited exclusively at the interference of European powers with the Western Hemisphere, and has absolutely nothing to do with independent movements in which Americans may see fit to engage. We come, lastly, to the inquiry whether the treaty into which

we entered in 1846 with New Granada bound to assist any government that might happen to install itself by force at Bogota, in suppressing an insurrection revolt against its authority. What was the motive that prompted us to enter into this treaty? Our motive was twofold. First, to secure the maintenance of peace and order on the isthmian route, which, evidently, was about to be traversed by American citizens in large numbers on their way from the Atlantic States to California. Secondly, to prevent any European power—and especially Great Britain, which already occupied the Belize, and was encroaching on the Mosquito coast—from acquiring ascendancy also on the isthmus of Panama. What was the motive of New Granada? That republic had but one, namely, the desire to gain our assistance in the defence of the isthmus, which had become a tempting prize to European aggression. Such were the motives actuating the parties to the Treaty of 1846, and had that instrument been rightly construed, we should always have recognized that the only duties imposed upon us were those of preserving peace and order and of protecting the isthmus against European aggression. We certainly did not suppose, at the time when the treaty was signed, that it bound us to uphold the authority of New Granada, for, in that event, we should have deemed ourselves obliged to prevent the transformation of that political entity into the Republic of Colombia. In like manner we should have deemed ourselves constrained to put down the secession of the Department of Cartagena, the secession of the Departments of Panama and Veraguas, and, at a later date, the secession of Panama and Antioquia. Neither we nor the Bogota government took such a view of our obligations on those occasions.

There is, in a word no doubt that the province of Panama has as good a right legally, and a better right morally, to secede from Colombia than Venezuela had the right to do in the middle of the last century, or than Texas had in the fourth decade to secede from Mexico. Moreover, the Treaty of 1846 simply binds us to maintain tranquillity and order on the isthmus, and to protect the political entity which happens there to be established against European assault. If we now do what we ought always to have done, when the State of Panama has revolted against Bogota oppression, and prohibit Colombia from committing a breach of the peace on the isthmus, we are but obeying the primary, humane, and honorable purpose for which the Treaty of 1846 was framed.

### The Alleged New Sayings of Jesus

The reported discovery by archaeologists in Egypt of papyri containing sayings attributed to Jesus is, of course, extremely interesting, but is evidently of no great importance from a theological point of view. The dicta are all introduced with the words "Jesus saith," and, apparently, were all addressed to St. Thomas. With one exception, the significance of the newly discovered dicta does not differ materially from that of the sayings ascribed to the Nazarene in the canonical gospels. The exception to which we refer is the answer, said to have been returned to the question as to when Christ's kingdom should be realized, the reply being, "When ye return to the state of innocence which existed before the fall." The currency in Egypt of such a dictum, which virtually amounts to a prohibition of sexual relations between men and women, may help to explain the appearance of celibacy and monasticism in that country at an early date. No warrant for such a prohibition can be found in the canonical gospels, and the celibacy enjoined upon priests in a comparatively late date by the Church of Rome finds most of its support in what lawyers would describe as an abster dictum uttered by St. Paul. The precise date to which the papyri that we are now considering belonged seems not to have been authoritatively determined, though the discoverers, Dr. Grenfell and Dr. Hunt, assert that the writing on them cannot be referred to a date later than three hundred years after Christ, and probably belonged to a period earlier by some two hundred years. That is a matter for experts to determine. Meanwhile let us point out how little such discoveries can affect the authority of the four canonical gospels, and especially of the first three, which are usually grouped together and described as the "Synoptics."

It is, we presume, generally known that, so far as the New Testament is concerned, a canon, or definite list of writings regarded as holy or inspired, was not formed until about 170 years from the coming of Christ. It is generally acknowledged that the earliest Church fathers did not use the books of the New Testament as sacred documents clothed with divine authority, but followed, for the most part, at least till the middle of the second century, apostolic traditions orally transmitted. In the second half of the second century, however, it is certain that there existed a canon of the New Testament consisting of two parts, called the "Gospel" and the "Apostle." The first was complete and exclusive, containing the four evangelists now accepted, and no others. The canon adopted by the Council of Laodicea, 363 A.D., contains our four gospels, and also the epistles of the sayings and doings of Jesus. The same thing might be said of the council held at Hippo (A.D. 393) and of the Council of Carthage (A.D. 397). Augustine

was the animating spirit of both councils, and it is evident that they expressed his views on canonical questions. It is true that, notwithstanding the numerous endeavors made both in the East and in the West to settle the New Testament canon during the fourth and fifth centuries, it was not finally closed as regards some of the Epistles and the Apocrypha, but was left to be practically determined by usage. There seems to be no doubt, however, that, from A.D. 170 onward, the four gospels translated in King James's version, and no other evangelists, were accepted as canonical. For at least a century, however, after the death of Jesus, disciples desired to learn about his life and teachings read such books as they had access to, often failing to distinguish between documents of genuine value and worthless fancies. They were uncritical, and there was an enormous swelling mass of unauthentic literature, including recensions of the gospel altered by heretical sects to suit their own dogmas. The earliest evidence on this point is given in the prologue to Luke's Gospel, which speaks of many previous essays as towards a regularly depicted evangelist history based on traditions handed down from eye-witnesses who had followed the whole course of Christ's ministry. Such recitals of the doings or such collections of the sayings of Jesus would naturally seek to give themselves authority by borrowing the name of one of the apostles. There is nothing surprising, therefore, in the fact that in particular collections of sayings, should be attributed to St. Thomas. It was doubtless in the course of their contact with the heretics of the second century that orthodox Christians were aroused to the necessity of their forming a strict list of really authoritative writings. It is certain that heretics on their part made collections of Christian writings for themselves. Thus Marcion in the middle of the second century selected for himself on dogmatical grounds a gospel which seems to have been founded on Luke. Nestorianism in tradition recognizes the Apostle Matthew as the author of the First Gospel, but the tradition is always combined with the statement that Matthew wrote in Hebrew, by which was meant, apparently, Aramaic, for the reason that Hebrew had long ceased to be a written language. From the time of Erasmus, however, the best Greek scholars have been convinced that the Greek evangelist attributed by us to Matthew is not a translation. Either, then, the tradition of a directly apostolic Aramaic gospel is a mistake, or what Matthew really wrote in Aramaic was different from the Greek book which now bears his name. The latter inference seems to be supported by the statement of Papias that Matthew wrote the *Logos* (oracles or sayings)—an expression which would be more naturally applied to a compilation of the words of Christ than to a consecutive gospel narrative.

The hypothesis that newly discovered sayings ascribed to Jesus on the alleged authority of St. Thomas or of some other apostle should be accepted as authentic will not bear scrutiny when we call to mind that a multitude of such traditions were current in the latter half of the second century of our era, but that, among them all, only the four gospels now accepted withstood the criticism of the fathers and of the councils of the Church. By the close of the second century A.D., the authorized gospel comprised the four evangelists, now known to us, and no others.

This is not to say that fragments of gospel narratives once current, but rejected by the judgment of the fathers, or that early translations of the canonical evangelists into Syriac or Old Latin, or into the Memphitic or Thebaic dialects of Egyptian, or into the Ethiopic and Armenian languages, may not be useful from the view-point of critics, who desire to arrive at a correct text. To suppose, however, that any dicta contained in spurious gospels would now be permitted by scholars or theologians to supersede statements of the canonical evangelists would be absurd. Yet this is precisely the suggestion that is indirectly made by some of the daily newspapers which have chronicled the recent discovery in Egypt.

### The Korean Question: Russia and Japan

The real apple of discord between Russia and Japan in the Far East is Korea. While Japan has certainly views and hopes touching Manchuria, the Tokio government is, nevertheless, upon the Manchurian question rather as the lover for its Korean policy than as a distinct and immediate goal. That Japan may have ulterior views for Manchuria, just as Russia may have ulterior views for Korea, is of course true. But that concerns the dim and distant future, and is not the cause of the present strain.

To understand the position we must see what it is that Japan wants in Korea, and in what way Russia may be inclined to object to these desires. When we have got so far we shall be able to see daylight, and to forecast with some probability the outcome of the present situation. The Korean question has a certain historical background, without some understanding of which the whole question is hopelessly obscure. We must, therefore, seek for the roots of the present in the past.

Strictly speaking, Korea is a Chinese colony, planted among Mongolian aborigines. But the planting of the colony is so re-

note that it goes back before the foundation of Rome—even before the traditional date of the Trojan war. Nevertheless, the Chinese coloring remains clear and definite to-day, though it is true that the picture has once or twice been reworked by later Chinese con-quests. Korea inherited from China the religion of ancestor-worship, and ideograph system still in use, the religion of a ancestor-worship, and the arts and sciences, as known to the ancient Chinese. Ancestor-worship, which fixes the memory in the past, is the most conservative of all forces, and inevitably tends to crystallization. All moral shrinkage, to narrowness, bigotry, and obscurantism. These things worked in Korea. Then Korea is in a sense more Chinese than China, because the Manchus conquered, and gave it its China up so largely in the seventeenth century, which stirred the present dynasty and ruling race, never touched Korea. The Manchus made the Chinese alter their dress, and wear pig-tails. In the present the Koreans preserve the old Chinese fashions unaltered.

Thus the Hermit Kingdom is, in a way, the museum of China. It is also the refuge of all Chinese abuses. Ten years ago its government, an absolute monarchy supported by a privileged aristocracy, was the most backward, obtuse, and obscurantist in the world. The "lower orders" were treated much as the Turks treat the Macedonians. The one function of government was extortion, through the burning out of taxable areas, with the descending cascade of bribery which that implies, and the endless misery therefrom inevitably flowing.

The "religion" of Korea was something like what we are accustomed familiar with in this country—a methodical spiritualism, lined by lies. The magicians, astrologers, necromancers, palmists, mid-wives, did a business almost as good as that testified to by our own Sunday papers, and superstition was rampant. Korea was in every way enlightened, miserable, weak, and corrupt. In 1876 Japan overthrew the Shogunate, liberated the Mikado as such Japan overthrew the feudal system, and set her feet firmly on the path of constitutionalism and progress. The process of law was made uniform, taxation was pruned with restriction, and the "career open to talent" was proclaimed with conviction, and this was the birth of "the new Japan." And, just as the fathers of this country, freed with their new evangel, looked with pity on the degeneracy of Old World, and hoped to see the benighted monarchies of Europe enter the path of democracy, so, no sooner was her own house set in order, then Japan began to consider the pitiable plight of her neighbor on the Asian continent. Something must be done, it was felt, to spread the light in darkest Korea.

Japan began to strengthen her position in Korea just as the powers have recently done in Belgium—by adding to her embassy guards. She gradually gathered the nucleus of a small army at Seoul, and at the same time her minister to the Korean court encouraged the Radical, or pro-Japanese, party, which opposed the court and all the abuses of the court. As a result of some of these abuses insurrection broke out in southern Korea some nine years ago. The Korean soldiers sent to quell them refused to obey orders, as they strongly sympathized with the insurgents. Then Korea appealed for assistance to China, as a victory for the pro-Chinese, or extreme Tory, party, and, as the Chinese troops were sent in spite of the protest, Japan replied by bringing a considerable number of troops to Chemulpho, the port of Seoul. The Japanese were soon in practical occupation of the capital, and held the Korean king in a sort of bondage, constantly bringing pressure on him to sign constitutional reforms and various measures of modernity. The Chinese resisted, and the quarrel soon led to war between China and Japan, which was a matter of course. The Japanese were completely victorious, though the Chinese fought courageously and with much persistence in adversity, and the Japanese armies were presently in occupation of Korea, southern Manchuria, and Wei-hai-wan, on the Shantung peninsula, directly south of Port Arthur. Japan proposed terms of peace which would have given her the whole of Manchuria, three hundred and sixty thousand square miles in area, the island of Formosa, and the Pescadore group, and a large money indemnity. China was by compromise by the cession of southern Manchuria and Formosa, and the payment of a smaller indemnity, when the powers intervened. Russia, Germany, and France acted together, while England strongly advised Japan to accept the decision of the powers. This was that Japan should receive a cash payment in lieu of Manchuria; that she should have Formosa, and that the independence and full sovereignty of Korea should be recognized by all parties. After the treaty of Shimonoseki, the Japanese, although coveting themselves as strenuously as before, began to lose ground at Seoul. The queen, the strongest antagonist of the Japanese, was murdered, and the flag fled for safety to the Russian Embassy, where she remained for over a year. The torosa of conservatism began gradually to get the upper hand, and it was soon evident that Korea was not to become a modern country within a few months by the fiat of Japan.

Nevertheless, the Japanese hold a position of great strength in Korea. They have flourishing settlements at Seoul, Chemulpho,

and Fusan. They have telegraph from the Yalu River to Seoul, and from Fusan, and thence a rail to Nagasaki. They have concessions to mine gold, anthracite coal, iron, and other minerals in their hands. They conduct a postal department, carry on twenty schools, and support twenty missionaries of the Buddhist faith. They have acquired out large hosiery reclamations at Chemulpho, Kusanapho, and Jusanpho. They own most of the Mokpho, Kusanapho, and Jusanpho banks, have built a mine, and keep the account of the Korean treasury. Twelve hundred steamer cargoes of Korean goods go annually to Japan, which sends more than half the total imports to Chemulpho. They are thus gradually acquiring the whole of the country, and the contest with Russia arises from the latter's apprehension that her own interests in Korea may thereby be prejudiced. But she is likely to give Japan practically a free hand in Korea in return for Japan's acquiescence in the Russian occupation of Manchuria.

## Great Houses in New York

A YONKS New York millionaire—a very rich millionaire—has interested his fellows who read the newspapers and Dr. Parkhurst have been quoted as declaring that home life is not practicable in a flat, but it is, if the flat is a good one and big enough for the family that lives in it. A good apartment that fits its occupants is a pretty good place to live in in town. The question is whether it is not about as much of a residence as it is worth while to have in New York. They tell us, and reiterate it, that practically every one who lives in New York will be living in flats and every one who lives in New York does not believe that is so, but it is apartments before long. We very bad prospect. There is not so much motive for keeping up in New York a bigger and more expensive domestic establishment than the comfort of one's house as requires as in some other cities. Great houses are useful here as places of storage. Rich men want a place to keep their collections in, and there are many splendid houses in our town that are filled with splendid objects of art.

But Manhattan Island is not especially well adapted nowadays to be a city of homes, and in that respect it is not improving. The whole island is "on the railroad." It is noisy; it is restless; it is crowded. It is also brilliant and stimulating—a good place to work in, a good place to visit, a good place to keep in touch with. But for people who do not work, and who have their own place to where they shall live, it is not really a first-rate place to live in. And the people who can choose do not live here. They have houses or apartments here, where they can lodge comfortably when they are in town, but they do most of their real living somewhere else. "Korea" the season" does not hold them. "The season" is pleasant for young people who like to dance, but to us who look at it from the outside it seems to lack motive and distinction. Society in Washington is going to be more attractive and interesting than in New York, and we suspect that society is more interesting and better worth while in Boston and Philadelphia than here. There are too many other labors and amusements here besides society. There is, of course, no lack of agreeable people. The trouble is rather that there are so many that they split up into a great number of little groups, most of which are too small to have any organization.

It is a curious town, full of busy people who hurry along, and in one way or another are amply amused; but it is not a place where it pays to sacrifice much to maintain a big house, for all people seem to think so. There were over forty new houses built here last month at prices exceeding two hundred thousand dollars each, and most of these are probably still on the market, though in these times a two-hundred thousand dollar house makes a comparatively modest establishment. The rich young man with a young wife, who seems to feel that a mere perch is all he needs in New York, can find ample support for his splendor. A person comfortable one—in New York is about enough for any one who works does not tie him to the town when his inclinations would take him else, whether thought whether the perch shall be a flat or a real house with a cellar is a matter of taste. Most of the great New York houses stand empty three-fourths of the time, and it must take skillful management to prevent the task of opening and closing them, and looking after them when closed, from adding oppressively to the cares of their owners. Then the servant problem comes in, and it is probably not an easy problem in a great house even for people who can bring to it all the help that money can hire.

Mr. Carnegie has built a great house in New York; Mr. Schwab is building another; but these gentlemen when they devised these undertakings were comparatively new to the town, and were looking ahead for some agreeable means of spending money. How pleasurable and advantageous to them their new dwellings will be in time is still to be determined. The natural use of a great house is for large entertainments, but the greatest ball given in recent years to "society" in New York was given in a hotel.

Drawn by Tim Kluge

## THE END OF THE FOOTBALL SEASON

The victory of Princeton over Yale on November 14 gave Princeton the nation's championship of the "Big Ten." The result of the Harvard-Yale game at New Bridge did not affect the championship based on the season's record. The Army and Navy game on November 28 will be the last of the season.

# Diversions of the Higher Journalist

## The American Field for English Fiction

THE amelioration of English fiction is not such a burning question with us now as it was when we read more of it. At present we are primarily concerned with the reform of American fiction, but as a lesson in literary eye is much more difficult to extract than the mote which is in one's brother's eye, one naturally defers one's case to him. We can go to the oculist any time, but he may be very much worse if he does not go at once. There is the mere reason for haste with him because he seems to be entering a field which we have supposed our own, but which really has an open door where any alien power may come in and occupy the areas abandoned by us in our efforts to colonize the imaginary realms where our invention has of late curried the flag. His eye cannot be in too perfect condition for the location of his claim, and while he is about it, he had as well have his ears looked to. The strange phenomena, the novel secrets, of the natives will naturally form a large part of the effect he is seeking, and with an imperfect sight and hearing he cannot catch them perfectly. If he is an Englishman he will have a congenital defect of the senses to overcome, because of the self-satisfaction with which every Englishman is born, not so much as to his personality as his nationality. This thickens his hearing and clouds his sight in such measure that he sees and hears other people with difficulty, and though he sees and hears enough of them to perceive that they are not English, he does not see and hear enough of them to make out what they are like in their surprising difference from himself.

All this and more the reprobated expatriate who has figured in these studies before as a Mysterious Stranger, said, and said so much into the air, as it were, that the Higher Journalist was obliged to ask him, "What are you driving at?"

"A number of things, and so I am making what you may reply regard as a scattering shot." The mysterious stranger filled rapidly, but specifically I was thinking of Mr. Benson's comparative success in his treatment of American conditions and characters in his new—or, if we count by weeks, his old—novel of 'The Relentless City'. Most Englishmen, perhaps all Englishmen, who have dealt with us hitherto, have given us only their comparative failure to think of, for the reasons which I have generalized. We have always formed a temptation for them, apparently, both because of the family likeness which makes us seem easy, and because of the favor which our own literature has used to meet with in their fields. We have seemed to them that they had a right in their field of fiction, the right that Englishmen have in anything when they want it; and I rather wonder they have not neglected it more in the past. They would never have found many Americans in it to be so friendly as we are, and we are a people far more than a land in their native country. But when the English have made a frenzy amongst us it has been to make captives of our own and spear a selection of unfortunate whom we are not only unwilling, but honestly unable, to recognize as Americans.

"There is something in what you say," the higher journalist admitted.

"There ought to be," the mysterious stranger returned, "since I seem to be saying so much. If you will run your mind back over the English moralists who have tried to do American persons and things in the past, perhaps you will conclude that there is everything in what I say. We will let the tourists go, but the novelists have endeavored to be fairer, with a result almost as disappointing. If you begin with Dickens you have an assortment of impossibilities in which the traces of verisimilitude only lighten the grotesque want of reality. You may say that he always caricatured his own countrymen, that he never caught the look of life, but this hardly answers. His countrymen knew where to look for the truth which caricature always leaves itself on, but they had to take his caricature of us for the whole truth and nothing but the truth. Of course, it was not a thing to beat the breast for, even at the time, and now we know ourselves to be ridiculous too well to become more so by repeating ridicule. But the question is of Dickens's attitude in catching our likeness, and it was such a dreary failure that it possibly may have warranted Thackeray away from our ground. At any rate, he never attempted any but American sketches glimpsed at German watering places, and American novels, who were not yet Americans at all, but only in the way of being so. Charles Dickens made some attempts at wandering Americans, but his Captain Fallalero, and the like, had hardly the salt sea savor of our Deaconship skippers. When Trollope seems to undertake the same difficult work, he sees, in his way, as best as he can, though he was not so friendly to do."

"I think Mr. Hardy hasn't tried us, has he?" the higher journalist asked, in an interest he was just beginning to feel in the matter.

"I don't remember that he has," the mysterious stranger answered. "He is too wise to leave his men for another people, though they were too of the same speech, race, and religion, in their dissimilarity from the ancestral stock. Hardy shows his greatness not only in what he has done, but what he has not done."

"Oh! this," the higher journalist protested, "Do you think that sort of thing will hold? Besides, aren't you shooting rather wide of the mark? I think you began by praising Mr. Benson for his success with us, and here you fall a-cursing, by your applause of a novelist who has left himself far from our field. Besides, what have you to say of Mrs. Humphrey Ward's successful 'American girl, Lucy Foster'?"

"You mean in 'Eliot's'? Well, she certainly gives one pause.

But isn't she a proof of the skill with which some of our new novelists have studied a sort of American girl, rather than the English novelist's divination? Mrs. Ward has never been here; she may have met her Lucy Foster in some ground; but always in reading of her I was haunted by the feeling that I had met her before in American books, and that the author had corrected her really admirable likeness—her extraordinary likeness—by the frank knowledge of people who had been in America, in New England. The study of her affected me like a portrait painted from a photograph."

"Isn't that rather nasty of you, if I may be so frank?" the higher journalist commented.

"Perhaps it is, rather. 'Eliotism is nasty.'"

"And what does it prove to Mr. Benson's favor?"

"Merely that if he wished to do Americans he did well to come to America for them, and not trust quite to the stray examples, or the literary effluents of them in our own books. Of course, Mrs. Palmer, as a type of the sharking and screaming American nation, is his main success, but her husband, the dry, kindly, clean, ruthless financier is not so bad either. He is very fine. Their daughter might have been born anywhere. But her plate-earrings fitright fitted her to the universal aristocrat, who so more differs from country to country than hotels do. That Long Island 'house' of the Palmers is mighty well done, too, with its instantaneous perfection, and its exquisite details of impersonal taste. The water-party there, the holding for pearls by the household of noble and spiritless guests, is delightful, and not excessive, if what we read in our newspapers is true of the hospitalities of our upper classes elsewhere. The whole book is pretty good, and more than pretty good—since you won't let me be nasty. Of course there are breaks in it, and in the American palace which is commonly so well caught, there is an awfully bad break, where the author lets one of his educated, or semi-educated, Americans say, 'I want to know!' I fancy he got that out of a book."

"But what has all this to do with your opening proposition? Do you really believe that there is going to be an English invasion of the American field of fiction? Isn't it enough for their nobility to come here and marry all our heiresses, without their novelists following, and gathering up the rich harvests of our civilization? Is the Great American Novel, after all, to be written by an Englishman?"

"Who knows? And what is to kinder the invasions of the English novelist? The rich harvests that you talk of are rotting on the ground for want of native reapers, who have gone off gleaming in the barren fields of historical romance, or who at best gather a few sheaves from our touring acres, and here the alien to drive the self-riding reaper over their root extent. I like Mr. Benson's measurable success for his own sake; if it could lighten our own novelists back to their native fields I should like it still better."

"Ah," the higher journalist sighed, "these fine spirits will not be commanded, still less frightened."

## Reality

By Edith M. Thomas

THUS spake the seer of seers:  
"The world of sight is nought,  
Reality inheres  
But in the dreamer's thought."

"Thy brave time-dream unfurled  
Returneth unto thee,—  
Thou soul of all the world,  
And no world else can be!"

I shut my sage's book,  
I looked upon the rose;  
The rose sent back a look—  
Its purports?—ah, who knows?

It said, or seemed to say:  
"Not all of soul is thine;  
I only came to-day,  
But yet some share is mine."

"How dares thy seer of seers  
Exclude me from the Scheme?  
The World-As-It-Appears  
May be a rose's dream!"

# Quixote Wilhelm and Faithful Sancho Eddy

In Which the Kaiser Forecasts to Eddy the Result of next Season's Cup Races

Drawn by Albert Levering

Wilhelm - "Vor's also, Eddy? You are playing dum-  
dum through the der Atlantic Ocean, and der Lipton's boy  
will get a cup for der fastest boat that sails after it? You  
do you know about sailing, yes?"  
Eddy - "Well, I like the Americans."

Wilhelm - "Oh, indeed? Now, Lipton boy, you go east!  
I will write the crew up sixteen hundred! Now, you  
Eddy, you catch me?"  
Eddy - "But my friends, the Americans?"

Wilhelm - "After wash down, I like the job. First you  
will wash said der Lipton ship, and then..."  
Eddy - "Yes. But the Americans-my friends?"

Wilhelm - "In a minute. Now, don't feel of that cup;  
that's only in Germany. And you see this boat? That  
will win-oh, well, after said race..."  
Eddy - "Ah-ah-ah in America?"

Wilhelm - "Now you are me, and my cup, and my boat,  
and my wind..."

Wilhelm - "I win! You lose, and I drink to your  
health!"  
Eddy - "But do my friends the Americans lose?"

# America in the Far East

By Sydney Brooks

LONDON, November 10, 1903.

**H**AS America a Far Eastern policy? The question is one that threatens before long to become of such pressing significance that it will need to be solved for centuries. It concerns the United States primarily, it is only of little less moment to England, to Russia, to Japan, and, indeed, to the whole world. It may perhaps surprise Americans that there should be any doubts on this score. Did not the United States bear her share in the relief of the Peking legations? Has not Mr. Hay again and again asserted that his government stands for the open door? Is not the Manchurian question one of the great preoccupations of American diplomacy? Have there not been times within the last few years when Russia and the United States were obviously at diplomatic logger-heads, and at such times has Mr. Hay ever shrunk from pressing home with sharp insistence the American point of view? How, then, can there be any question that the United States must be reckoned an active, tangible factor in the Far Eastern crisis, or that her great and growing stake in the commercial development of China, and especially of Manchuria, has committed her to a fixed and definite policy?

Well, I can only answer these questions by saying that doubts do exist, and that the United States is still, in European eyes, the one inescapable element in the situation. In England especially these doubts are almost embarrassing in their keenness, all the more so at this particular moment, as the problem around which they revolve is fast becoming of crucial and immediate importance. The tension between Russia and Japan is, of course, mainly responsible for this. English opinion, official as well as lay, has all but reached the point of placing a conflict between Russia and Japan on the list of inevitabilities. Putting everything on the other side that can be put there—the financial necessities of Russia, the peevable instincts of the Tsar, the prudence and level-headedness of the rulers of Japan—it still remains the general belief that those primal forces, which statesmanship can neither guide nor even greatly restrain, are inexorably dragging Russia and Japan to the point of irreparable collision. That the Korean question must ultimately involve the two nations in war is now considered little short of axiomatic. The reasons for this belief are broad and pregnant. Like England, Japan is an island kingdom, destined to depend on other countries for the bulk of her food-supply; like England, it is less ambitious to become a great manufacturing and industrial nation; like England, she needs a strong fleet to protect her coasts and commerce and—more so perhaps in the future than at present—opportunities for expansion.

A mere glance at the map is enough to show what influence these considerations must exercise on the foreign policy of Japan. China and Korea are the natural, the obvious markets for her goods. They are the only ones that she has to seek, but they are able to produce precisely what she needs in the way of food and raw material. She is, therefore, committed by the simple necessities of her position (1) to the maintenance of the open door in China, and (2) to the independence of Korea. The latter, apart from all sentiment, is vital to her very existence. A hostile power in possession of the Korean peninsula would have an invaluable jumping-off ground from which to spring at Japan's throat. Russia in Korea could starve or strangle Japan or do both at will. It is on this consideration that Japan's Korean policy finally rests. She is linked to the country, of course, by many other ties. It was through Korea that civilization, Buddhism, and the arts first came to Japan. The history of the two nations has always been closely intertwined. At least twice the Japanese overran the country, and for some centuries Korea paid tribute to the Mikado. And besides this, there are to-day the more material ties of commerce and immigration. Japan already draws largely upon Korea for her rice and beans. Korea too is important, as in the future will be more so, as a source of emigration. Rights in Korea, America, Canada, Australia, and Hawaii, Japanese emigrants are sure and more being encouraged by the government to settle in Fokue, Formosa, and especially in Korea. Already there are flourishing Japanese settlements at Seoul, Chemulpo, and Pusan; they own the chief railway and holding all the mining rights; and a telegraph office; nine-tenths of the shipping and over half the banks are in their hands.

But there and beyond this heavy commercial and political stake, it is, I repeat, the aspect of Korea that most concerns Japan. A foreign power established on the peninsula would be a permanent menace to her security. It was to avert her still tale on the subject of the Hermit Kingdom that Japan brought on the war with China, and whenever the question comes up again she must and will risk all to maintain her position. At the point the nation has but one resolve—Korea must either be independent or Japanese. Russia for her part finds the peninsula a most inconvenient sledge driver in between Vladivostok and Port Arthur. To go from one to the other Russian men-of-war must pass through the Korean strait, where the Japanese island of Tsushima threatens them "like a second Gibraltar." Without the command of either shore of the strait, Russia cannot lead herself strategically secure. Hence or later she will be irresistibly tempted into meddling with the peninsula. The only connecting link in the absorption of Korea. To Japan that spells extinction; to Russia it is but one step onward in her imperial march.

The deduction from all this that war between Russia and Japan

is as inevitable as the Franco-Prussian war, as the Boer war, as the Spanish-American war, is a deduction that the present and recent tension in the Far East has enormously strengthened. As yet this matter was discussed not once, but often, by the American members of the Alaska Tribunal, and some of the leading soldiers and statesmen in Great Britain. I am betraying no confidence when I assert that the vigor of the American leaders' utterance on the subject and the boldness of their declarations that the United States meant at all costs to protect her treaty rights in Manchuria, created something like a sensation. Once more, it has just become known that an agreement exists between Germany and Russia by which, in the event of a Russo-Japanese war, Russia in return for another slice of China and for some commercial concessions, the former power is pledged to stand the latter to the utmost limits that are compatible with a formal show of neutrality. There is, I say, every reason to believe that this momentous agreement is actually in existence, and I do not think that either Lord Lansdowne or Mr. Hay would deny it except, of course, "officially." I have, at any rate, no hesitation in saying that both statesmen are regulating their policies in accordance with its terms.

These, then, are the circumstances which have brought the Far Eastern question into prominence once more, and led Englishmen to canvass the subject of American policy. It is understood perfectly well over here that the defeat of Japan would leave Russia the uncontest of Manchuria and in a position to kill American trade in that region at a stroke. But that is a point understood, what remains simply a subject for speculative guesswork, is this: How far is the United States prepared to go in safeguarding her commerce and her commercial rights in the Far East? To that question Englishmen can return no definite answer. Can America stand by? Do Americans themselves know their own minds in the matter? It all comes in the end to this: Is there any conceivable development in the Far East, not affecting American lives or property, that would tempt the United States to draw the sword? The English profess to see a good deal of significance in the appointment of "Bosh" Evans to the command of the Pacific squadron. They take it as a sign that any "accidental" chance for American intervention would not be neglected. But having accident out of account, Englishmen want to know whether America has any broad and settled policy. Diplomacy to be successful must rest ultimately on the implication of force. Does Mr. Hay's rest on force or is it despatch-writing the beginning and the end of it? Would America back him up in resisting, if need be by war, a Russian invasion of American rights? Or is it the fact that Mr. Hay is in the heart of America, a sort of final impotence, knows that public opinion will support him only so long as he spills ink, not blood, and is therefore all the time conscious that his "protests" and "demands" are founded really on bluff? And if the bluff were the real weapon, do Russians ever suddenly announce that she would "see" America, what would be Mr. Hay's next move? Could he do anything but throw the cards on the table and escape with more or less indignity from a position essentially that of the French at Fashoda? These are the sort of questions which Englishmen are asking with growing insistence, but without getting any very satisfactory reply. If any reply is possible, it would clear away a good many myths and uncertainties were some American journal of repute "inspired" to frame and publish it.

## A Plainsman's Song

By Philip Verrill Mighels

**O**h give me a cluck in my hand as my mouth  
Of desert and a horse and a hold  
And let his desire to be gone be able,  
And let him be soaring and bold!  
And then with a swing, on his back let me fling  
My leg that is naked as steel,  
And let us away, to the end of the day,  
To quiet the tempest I feel!

And keen as the wind, with the cities behind,  
And prairie before, like a sea,  
With billows of grass, that lash as we pass,—  
Make way for my stallion and me!  
And up with his nose, till his nostrils glow,  
And out with his tail and his mane,  
And up with my breast till the breath of the West  
Is smiting me—knight of the plain!

Ah, give me a gleam of your eyes, love, adream  
With the kiss of the sun and the dew,  
And mountain nor swale, nor scorch nor the hail  
Shall halt me from spurring to you!  
For wild as a flood—molten snow for his blood—  
By crag, gorge or trenched or shoal,  
I'll ride on my steed and lay, tho' it bleed,  
My heart at your feet—and my soul!

A recent Portrait of the Author of "The Martyrdom of an Empress," and "A Keystone of Empire," which was published last Week

Drawn by H. R. Pott

### THE NEW FOURTEEN-MILLION-DOLLAR STATION AT WASHINGTON

The new Union Station in Washington, the site for which at the intersection of Potomac and Massachusetts Avenues was authorized by Congress last February, is to be one of the most completely equipped railroad stations in the world. The building will face a plaza 300 feet wide, by about 1000 feet long, into which new streets will converge. The station building proper will be 420 feet long and 135 feet in height. Around the ground waiting room, 126 by 220 feet, are to be grouped the dining-room, lunch-room, first-class smoking-room, and women's waiting-room. The building will contain also, as incidental rooms, dressing-rooms, and Turkish baths for the convenience of travellers, together with a library and recreation rooms for employees of the railroad. In all, twenty-eight tracks will enter the station. Two out of the twelve improvements in part at \$1,000,000

# LE VERGER

By Edmond Rostand

Member of the French Academy

[The following verses were written by M. Rostand, the Academician and playwright, on the occasion of a performance given recently in Paris in aid of the Actors' Home. This home—the "Maison des Comédiens"—is for actors who have grown old in their profession, and is situated at Cautilly, near Paris. It will be opened during the coming year. The verses are dedicated to M. Coquelin, who, as President of the French Society of Actors, was largely instrumental in making the Maison des Comédiens possible.]

QUEL est ce grand verger où le Cid se promène  
Et se chauffe au soleil en chevroant des vers?  
Où, moins impatient de la sottise humaine  
Depuis qu'il voit blanchir le front de Célimène,  
Aiceste à son habit met des feuillages verts? . . .  
Quel est ce grand verger où le Cid se promène?

Ses lointains sont dorés de gloire qui s'envole,  
Les passants sont raafs comme de vieux marquis.  
Quel est ce parc, Théâtre, où ta grande âme folle  
—Ta grande âme qui fait semblant d'être frivole! . . . —  
Se mêle au souffle frais d'un paysage exquis. . .  
Sous un ciel tout doré de gloire qui s'envole?

Des vieilles qui n'ont l'air que d'être un peu grimées  
Cueillent la fleur où luit l'insecte smaragdin.  
Plus de sombre avenir! de chambres enfumées!  
Et, de tous les côtés, c'est le côté Jardin!  
Et l'on voit doucement marcher, sous les ramées,  
Des vieilles qui n'ont l'air que d'être un peu grimées.

Un vieux châle est drapé d'un geste de princesse;  
La main de Hernani boutonne un vieux carrick;  
On se jette des noms à la tête, sans cesse. . .  
L'un entendit Rachel et l'autre Frédéric!  
Et les arbres du bois devenant un public,  
Un vieux châle est drapé d'un geste de princesse!

La tristesse s'en va comme un ridiau qu'on lève.  
Ah! ne vous doit-on pas verser du rêve un peu,  
Vous qui fûtes, longtemps, les échantons du rêve,  
Et, charmeurs de nos soirs, quand votre soir s'achève,  
Ne doit-on pas, pour vous, mettre la rampe au bleu? . . .  
Ia tristesse s'en va comme un ridiau qu'on lève!

Quel est ce grand jardin plein de songe bleuâtre  
Et de comédiens, comme un pare de Watteau?  
Où Mascariile errant, sans masque et sans couteau,  
Croît remettre un instant sa cape de théâtre,  
Lorsque l'ombre des pins vient rayer son manteau? . . .  
Quel est ce beau verger plein de songe bleuâtre?

Quel est ce beau verger que protège un Molière,  
Tout pensif de sentir l'amour profond du sol  
Envelopper son marbre avec les bras du terre,  
Tout souriant de voir Elmire et dona Sol  
Causer sous les berceaux de façon familière?  
Quel est ce beau verger que protège un Molière?

Ah! la treille au mouvant feston  
N'est plus un décor adventice!  
Le platé n'est plus en carton  
Qu'il faut que Gringoire engloutisse!  
Le malheur signe un armistice;  
Léandre devient châtelain;  
Scapin dort; Buridan raisise.  
C'est le verger de Coquelin.

Le traltes caresse un mouton;  
L'amoureux humant un calice  
N'a plus sa voix de mirthon. . .  
Mais garde encor l'œil en coulisse!  
L'Étoile voit avec délice  
Celle du ciel crépusculin  
Luire au miroir d'une onde lisse.  
C'est le verger de Coquelin.

Don César porte un bon veston;  
Harpagon, guéri de son vice,  
Redemande du miroton;  
Agnès rêve, un peu moins novice;  
Perdican pêche l'écrevisse;  
Quand Argan fait drelin, drelin,  
Vite on accourt à son service. . .  
C'est le verger de Coquelin.

## ENVOI

Princes, princesses, l'on vous tisse  
Des soirs d'or clair et de fin lin,  
Et le soleil n'est pas factice!  
C'est le verger de Coquelin.

# The Stranglehold of Labor

This is the first of a series of four articles on the tremendous power of labor as it affects the home, the actual cost of living—rent, the price of food, clothes, transportation, every-day necessities. These four articles emphasize most vitally the personal phase of a situation which seriously threatens not only business prosperity, but individual liberty. One article a week will appear in the forthcoming issues of "Harper's Weekly"

## I. The Rent Rack.—By John Keith

**T**HIF individual rent-payer whose pockets are affected by the price of food, the cost of an apartment, and of the every-day necessities of living—is beginning to pay the tribute of labor. In the matter of rent alone a conservative estimate places the advance at ten per cent. over last year. A large dealer in the rental of houses and apartments in New York has to say:

"The rents in living-apartments have generally advanced. The demand has greatly increased with the growth of the city, but the supply has not kept pace. The labor troubles have not only delayed buildings in course of construction, but have prevented many buildings from being started. Some of the large loan associations have refused to lend money at all for building operations. The prolonged strikes and the unsettled labor situation have rendered the building industry so uncertain that they dare not risk their money."

The opening of new districts for New York's growing population, the building of new houses, so far from providing at an increased pace in real-estate building at all. Throughout New York unimproved lots yaw in crowded districts; little two-story hotels squat on corners belaguered by night to sky-scrapers; in the outlying districts whole tracts lie unutilized. As late as November 14, Mr. Charles T. Borney, at the head of a speculative building Washington Heights properties valued at millions of dollars, withdrew these vacant lots absolutely from the market. These properties would be especially fed by the subway which will soon be opened, and buildings should now be under way upon them to be ready for rental next fall. Yet even the vacant lots are most restricted from the market because the general situation, of which the labor troubles are chiefly to blame, has turned these investments into a gamble and a "running of the gauntlet" for builders.

This means a further increase of rents in the apartment-houses, new ones, and what is here said of apartment houses equally to private dwellings and hotels. The burden of paying for a roof, a few rooms, and a little floor space in New York had almost reached the unendurable last year. This season rents have advanced. In one instance, an apartment in New York, of seven rooms and bath, rented for \$75 a month last year. The rooms were small and all were very dark except the front and back; at high noon one could not see without gas in the dining room or kitchen, or in two of the bedrooms. This year the price of that apartment has been raised from \$75 a month, or \$900 a year, to \$1000 a year. In the same building larger outside apartments that rented for \$1200, rent for \$1300 this year. All over New York the advance has been similar. In consequence of the small area of New York proper, the separate dwelling houses are increasingly less numerous in proportion to the apartment structures, and of the dwelling-houses a high percentage are used as boarding-houses, and packed full at high prices.

This great demand for homes and apartments with a relatively inadequate supply is, of course, one reason why New-Yorkers are confronted with increased rents at a time of general financial depression. But behind both the increased rents and the financial depression is the ill-advised ambition of labor. A prominent student of the situation wrote the other day: "In dealing with the present condition of affairs, one is dealing with a rather abnormal rent situation. Rentals of living-apartments are still higher than they ought to be—that is to say, higher than they would have been if labor troubles had not greatly restricted the usual and needed output of apartment-houses and tenements."

A writer in close touch with the financial side of the building situation says: "The most discouraging aspect of the situation is still the loan market. And when we have said that the outlook in this respect is unfavorable, we have said that the general situation is far from promising. Unless builders succeed in negotiating permanent loans for the numerous operations now nearing completion serious embarrassment is likely to follow. At present they are being carried by the operators, but actually this cannot go on indefinitely. New construction, under present conditions, are, of course, out of the question. With the economic outlook never better for middle class housing, its purveyors find themselves absolutely incapable of seeing their opportunities. The progress of the whole city is checked, as it were, by the impossibility of obtaining the wherewithal to do the work."

One of the leading authorities upon this subject said to me the other day: "It is due to the labor situation, the cost and expenses delays of strikes, that the building business has been as a rule a losing business in recent years. New buildings are rated commonly as only a two-per-cent. investment. The risk, however, he continued, 'is a striking strike for the various unions and combinations of unions. He gets 'struck,' harrassed, delayed, and his risk even then is heavily redoubled ten per cent. on his capital and his risk even when he gets as high as they are now."

"The speculative builder has almost no chance at all. We call his method 'running the gauntlet,' and it is well named. It takes about thirty different trades to complete a large building. All

these are strongly organized, of course, like the stone-cutters, the structural iron workers, the gas-fitters, the gas-fitters' helpers, the bricklayers, the carpenters, the plasterers, and the roof. All of these trades-nations have their clubs out for the building. Some of these are sure to land a man, and unless he's a good dodger, they may all get him at once. Then he's bankrupt. If he slips through one deal safely, he may clear up a good sum—'make a killing,' as we say, but he is almost sure to 'go broke' on the next. It's a proverb in the building business."

"Then there are all the other risks in building, the conspiracies and combinations, the jealousies and secret plots. These all tend to make building investments uncertain and unusually expensive. This raises the cost of the buildings that do go up, and prevents the erection of buildings in sufficient numbers and speed to keep pace with the demand. For two reasons, then, rents are raised as high as possible. The high-waged trades have bought things to this pass by their conspiracies. They have stirred up jealousies among the lower-priced trades, and some of these internal fights have lifted the lid off the hell that is boiling around us."

What, then, is the exact state of the building industry which brings a stuporous rent from all New-Yorkers and threatens yet a higher exacting?

In the first place, two schools of builders have recently been warring together over the heads of all this war of laboring men. These schools are the old and the new. They may be differentiated as the Sub-Contractor Method and the Department-More Method.

By the old custom, the owner let the job to a builder or contractor, who sublet everything here and there to the bosses or sub-contractors of the twenty or thirty trades needed for a large steel structure. The building of the big department store at Eighth Street and Sixth Avenue is a case in point. Trade after trade quoted on the same or another with the builder, made demands that were not merely exorbitant, but impossible to grant, and then went out on strike. The contractor had been over-enthusiastic on his splendid luck in winning so large a contract. The result of his struggle with the labor-unions and the reward of his energy was bankruptcy.

It is not easy to learn figures in matters of this sort, but the enormous cost of a strike to the builder may be roughly estimated. Above Fifth Street it is customary to erect a building which costs about the same as the ground itself. If a man had a strip of land above Fifth Street for \$300,000, he would probably put a \$300,000 building on it. The interest on building loans is usually estimated at six per cent., owing to waste and risks. If, then, a strike caused a year's delay in completing this building, which with its land cost \$1,000,000, the interest on the mortgage loss for one year would be \$300,000, and all this while there would be no rental coming in.

Take a more definite instance: the new building of the Stock Exchange was begun in 1903, and the builder, Charles T. Willis, was under contract to finish it by May 1, 1907. Various delays, especially strikes, hampered the work till the last of May, 1907, had passed. The last of May, 1903, had also nearly gone before the building could be opened to house the members. It is not actually finished even yet, and the scaffolding still shows where the job was not yet completed. Mr. Willis had incidentally to get the rent of the old Stock Exchange building for the year 1902-1903 when the members could not move as they planned. Since ground and building cost about \$4,000,000, there was a further loss of \$200,000 interest.

When the Ansonia apartment-house was building, the owner, W. E. D. Stokes, was the target for every inopportune strike. The Ansonia was taken as a sort of laboratory of industrial experiment. A disagreement as where in town between workmen and employers, or between the different trades, was usually fought out by calling a strike at the Ansonia. The building was delayed over a year, requiring two years to build, the loss was estimated at not far from half a million dollars in rental alone, to say nothing of the interest on the money tied up.

Mr. Stokes acted as his own contractor in the vain hope of avoiding labor disputes, and he managed to avoid difficulties on the vital questions of wages and hours. His difficulties were chiefly the family squabbles of rival labor-unions. They ran only down the margins and kept each other on the edge of starvation. They do one another as much harm as they do capital, and the hardship is the greater, as the laboring man's wage is at best not far off this side of nothing at all.

A typical instance of "professional jealousy" or rather of trade jealousy was shown here. The building trades unions were at that time about evenly divided under the control of two bodies, the Building Trades Council and the Board of Delegates. Each of the factions contained a union disputing the matter of mental health. Mr. Stokes was forced to make some choice, he favored the walking delegates. Immediately the Council pulled out all the other trades in its province. Mr. Stokes then gave the contract to the

ritual union. Immediately all the trades in the Board struck. Now no one was at work and neither faction would listen to a settlement till Mr. Frank Croker, secretary of the Roebbing Company, was called in as umpire, and at last work began again. The result of these unjustifiable methods of preventing industry was that the Amosia required, as I have said, over two years to build. Thousands of workmen spent months of idleness without pay, and hundreds of unfinished buildings rusted untouched because the Plumbers' Union fought the Steamfitters' Union on the question of which trade should have the honor of screwing the steam-boilers on the registers of steam-heating appliances. The trick is done in half an hour at most by any one with a little knack, yet for months almost every large building in New York was tied up, including the buildings of Columbia University, whose president was finally accepted as umpire, and decided in favor of the plumbers.

The Electricians' Trade Union and the Marble and Etched Metal Trade Union quarreled over the privilege of laying a certain groove in the ceiling after strike failed to settle the matter. Even when the Board of Delegates gave the latter union the award, the former would not yield till it had been suspended and fined.

The question of running electric wires through gas fixtures shook the latter world, as did the matter of punching holes through plaster for electric wires, and the Electric Workers' Union brought strike after strike against the unskily employers of the gas and Electrical Trades' Union till it was a victory through arbitration, and incidentally ruined the entire existence of the electric union, whose members after disbandment were paraded and received into the successful union.

Who is to continue such unions how suicidal their policy is, how hostile to the prosperity of labor, how much more expensive than a great and bloody war to the industries of the nation, and, most of all, how much harder they make the rent problem and the problem of their own employment!

The Portable Hoisting Engineers' Union had an annual strike, due to the exclusive right to hoist brick mortar, girders, and such other material as the United Brickmen had not already monopolized. The Electrical Workers' Union took away from the Elevator Constructors' Union the privilege of stringing wires for electrical elevators, after a long series of strikes and the suspension of the latter for a time from the Board of Delegates.

Now, if all this chaos of guerrilla warfare meant that the laboring men were rising in the scale of comfort and well being, there would be some consolation. But the increase of the scale of wages has not always meant an increase in the total earnings. It would seem to make little difference to a man whether he had \$2 50 or \$4 a day, if the year's income were the same in both cases. Yet this is frequently true.

Owing to the number of strikes, the heavy contributions to his union, and the fact that employers avoid hiring the high-priced trades as much as possible, the workman who has reached the handsome payment of \$6 a day will probably not earn more than \$300 a year.

There is at least one landlord in New York who does not want to let his houses to high-waged people. He says: "I'd rather have tenants earning only from \$12 to \$16 a week. They get steady jobs and are pretty sure of them. They know what is before them. But when the high priced mechanic is working, his wife buys plush photograph-albums, and crayon-portraits, and fine clothes. Then, in a week's time, a strike is called; the \$6 a day stops; and when I send round for my rent, there is nothing to pay it with. The workmen dream of a 'Porterhouse-at-Work Paradise.' I can tell you that the laborer has a far better chance for porterhouse steak when the average wage is \$3 a day, than when he is getting \$6 a day this month and making at all next month. The high wage increases the price of everything, raises rents and the cost of living; and, loaded, by its irregularity causes improvidence and shiftlessness."

As a proof of the solidity of the smaller wage, it may be stated

that in the steamfitters' trade there are two unions, the steamfitters who get \$4 50 a day when they get it; and the steamfitters' helpers who get \$2 65 a day—and get it. The latter have the stronger union and the higher influence.

Besides the impudence caused by the fanatic struggle for an unnatural increase in wages, there is the corruption to be expected on our indictment that he might expect trial on numerous other indictments. Others of his type have gone to Sing Sing, or soon will go there. In his vocabulary, Sam Parks warned his fellow laborers to cease the cross-knives of their relations with employers. He said:

"It's only taken a little more than seven years to get me here. I am the victim of a custom that is older than I am. I want the boys to know that the salvation of the masses lies in stopping the practice of having money transactions with employers. They must give up fines, waiting time, back pay for strikes, and everything like that. That's the loophole where 'grafting' creeps in." He branded the employees in the building trade as "the cross-knives set of men in the world."

But when laboring men refuse to work and refuse to listen, is it not foolishly Utopian to expect builders to go into bankruptcy and go out of business rather than slip a little dirty coin into the upturned palm of a delegate?

Henry J. Willis was a revenue-maker, living at 121 River Street, Brooklyn. He was only twenty-five years old. He had married and his wife had borne him two children. They had lived frugally and saved a little money. In August his wife bore him a third child. That very day a strike was called by his union. On only a few occasions since had he been able to earn anything at his trade, for his union had forbidden work for any of the firms in the Brooklyn Association. Neither the employers nor the walking delegates would yield, and the poor laborer was ground between the upper and the nether millstones. His savings coasted away and no earnings took their place.

Friday, November 13, he went into the kitchen where his wife was at work, and told her he was going to give up waiting for the end of the labor war. He produced a bottle of carbolic acid and tried to swallow it; she struggled and prevented him, but he broke away and ran into the next room, where he gulped down enough to kill him. It would have been hard to convince either Henry J. Willis or his wife that the attitude of his labor union had done much toward "the amelioration of the workman's lot."

In many other cities conditions are similar to those in New York. 10,000 men out of employment, and held up contracts estimated at \$4,000,000. In New York the sum tied up has been reckoned at \$70,000,000, and every street has its giant building skeletons, as deserted and as melancholy as stranded ships. On one tall structure a sunflower took root and flourished in the dust and soil of the neglected gardens. In Chicago the building situation has been so miserable for so many years, that the housing arrangements of modern requirements in no sense approach the city's needs.

It was the state of inaction in the New York building world that gave rise to the new school of builders. They arrived on the scene in the shape of the large construction company which sublets, practically no contracts (except to the malleable-workers, who have always stayed out), and does all its work by its own foremen and its own special staff of laborers, hired not for one job, but by the year. This was called "departmentalizing" the building industry. The expense saved by eliminating middlemen, while very great, was a minor feat compared with the fact that it was possible to finish a building on contract time. In fact, the speed with which these steel mushroomers with their veneer of stone soaring to the heights is nothing short of marvellous. Instances are familiar, but one will serve a double purpose.

The George A. Fuller Company was one of the first of the con-

The Real Victim

struction companies. It managed, during the postlude of strikes that marked the heyday of San Pedro, to keep clear of enforced idleness by various means which have doubtless been much misrepresented. The owner Company are constructors of the huge new building which is to occupy the old Macy site at Fourteenth Street. It was begun May 1 and was promised in time for its Christmas shopping! And it could have been done had not all its contracts been struck November 12.

"Another thing in the following statement was issued from the office of the company:—  
 "The United States Realty Company is not going to do away with its operating department, but on account of the extraordinary labor troubles of the summer we have reduced our working force to a minimum. We have discharged all the estimators, except the chief estimator. We will finish up our present contracts, but may not undertake any new ones until business is more stable in the building trades.  
 "Other contracting firms are reducing their working forces. Capitalists are not willing to invest, owing to the depressed state of the building trade through the labor troubles."  
 "This statement with the conditions prompting it is one of the most important comments on the financial side of the present situation which has yet come to public notice. When building contractors are forced to curtail business, it means not only loss of employment and hardship to the laborer, but more than that, an added tribute from the individual rent-payer.

In the war between the old school with its commissioned sub-contractors and the new school with its salaried staff, the walking delegate found his opportunity. The sub-contractor hired the walking delegate to assail the construction companies with strikes and boycotts of every description in order to prevent the completion of contracts and drive them out of business.  
 Thus the cut-throat contractors and the Stone Carvers' Union

made a solemn compact by which they united their forces. The masters agreed to pay one per cent. of all business into the union. All bids were to be referred to a central committee. This committee, a strike of an average of the remainder, and, without further ado, gave the contract to the man whose bid was nearest.

This scheme was meant to stifle all competition, and it added one per cent. to all bids as a "fall-off." The agreement was actually carried out into writing; it is laid out in other hands, and was published in December nineteen sheet-metal contractors were invited for a similar "compact."  
 "These compacts were so dangerous when put in writing that the latest fashion is for so-called 'gentlemen's agreements.' There is at least one association in New York whose members, after every meeting, stand up and solemnly revise in chorus their agreement.  
 "What would be the nature of such a clause?" I asked one authority.

"I don't know the words," he answered, "but the gist of it would be, 'We solemnly swear on our honor as gentlemen to stick together and ruin everybody who tries to interfere.'  
 "What is the result? The owner or the speculative builder must pay the freight. Therefore, he must collect it. But where? From you and from me when we go hunting for a corner in one of his buildings, whether a private house, an apartment-house, or a hotel. The consequence is that we must pay an exorbitant price for what we get, and must live in cheaper lodgings than our own homes. Rents are high, and with high rents the value of living goes up.

Thus the people in general suffer hardships and humiliation: the employer goes into bankruptcy, the walking delegates to the penitentiary, and the laboring men to the poorhouse. It is difficult to see who gets the benefit.

## A Bulwark of Finance

By Franklin Matthews

THE New York Clearing House is fifty years old. No special attention marked the event. The manager simply called the anniversary, and the most conservative and most potent force in the financial world of America went on about its business of exchanging debits by the millions, almost in the twinkling of an eye.

The Clearing House, however, is far more than a meeting-place where the representatives of banks come together and exchange obligations from one another, and then, later in the day, settle the balances due. It is the great moral power in the banking world. Without any actual authority it has a force the like of which exists nowhere in the world. The right to discipline its members is the mechanism by which it steers the great financial ship true and straight.

No bank, no banker dares to oppose its will or set against its frown. Its strength is not the strength of the fifty-six weekly banking institutions that compose its membership, taken individually, but rather the strength of those fifty-six and sixty-one others, with whom they are allied, all bound together, a power that can neither be broken nor bent, and that stands indelibly for the most elementary principles in business, conservation, and the prompt payment of debts.

It is through the medium of this great institution that in the fifty years of its existence more than one trillion, six hundred billions of dollars of debts of the business world, so recorded in banking transactions in New York city, have been settled. The figures stagger the imagination, and really mean little more than so many digits. No human mind can grasp what such a sum means; it can only partly comprehend what it means when thirteen figures are set down in a row. Almost incomprehensible as these figures are, let this summary of the transactions of the Clearing House be put down for the sake of the record:

The total transactions of the year ending September 30, 1903, were, in round numbers, \$74,150,000,000. The average daily transactions were \$244,000,000. The largest transactions on any one day of the year were \$492,000,000, on January 3, 1903. The smallest transactions were \$107,000,000, on April 11, 1903. The largest transactions on record occurred on May 10, 1901, when the ex-amount here what you see before 1:30 p.m. If you over the other banks bring assume all the debts and credits. If you over the other banks you come around here after 1:30 p.m. and get what is coming to you. Now present your checks, one to the other."  
 The clerks stand behind their desks ready to receive the claims and receipt for them. Each messenger stands in front of the clerk and his own bank. The check strikes two. The messenger up in the gallery rings a gong. Each messenger, with his bundle of checks, starts off on his rounds from desk to desk in rotation. He hands in his checks at each desk, gets his receipts, and through a slit in the desks leaves a memorandum of what is due his bank. When the rounds are over each messenger is back in front of his own desk. He gathers up the parcels left by the other messengers with the clerk, and hurries off to his bank, where the packages are opened and verified.

Now how does a clearing-house do its work? Every bank in its daily business accumulates checks on practically every other bank in the city. It would require a large company of men to go from any one bank to all the other banks, presenting claims and settling them. Instead of the use of thousands of men would be occupied with the work. It would be almost physically impossible to clear up the banking transactions of the community each day. The Clearing House is the place where the messenger of each bank says to the clerk of every other bank, "You owe me such and such money, and here are the checks of yours that are cashed yesterday," and he hands them over.

The clerk of each bank knows what each of the other banks owe his institution before the evenings begin. When the messenger of the bank has delivered to him the claims of the other banks he knows what his own owes the others. Each clerk looks up what the other banks owe him and what his bank owes the

others, and it goes down on the Clearing House books. That debit and credit must be equal, because the sum total of what is owed must be the sum total of what is due, and the Clearing House says to the banks:

"All right; don't go to the trouble and bother of carrying a lot of money around town in paying one another off. You banks that owe the others money send it here before 1:30 p.m. When it is all here then we'll pay it out to those to whom it is owed. Send it in the largest kind of notes or certificates that you can get.

The daily transactions of the Clearing House, therefore, consists of two functions, the first exchanging the checks that the banks hold against one another and of ascertaining how much balance each bank is to pay or receive from each other bank, these balances being assumed by the Clearing House, and, second, of paying out and receiving each check for what is due to the party to whom it is due. When evening claims are made every rent that has come to the Clearing House is paid out, and the cash drawer is here until the next day.

The work of clearing—that is, handing the checks around, usually occupies about seven minutes each morning. The work usually occupies about forty minutes more. Fancy paying millions of dollars, due from scores of banks to one another, in three-quarters of an hour. That is done every business morning in New York. Just before ten o'clock about 150 men stand the stairs of the beautiful million-dollar building in Cedar Street, erected by the building association of the Clearing House, and go to a large room on the top floor, lighted by a great dome. These men are of two kinds—the messengers, carrying large bags of claims and receipts, and the clerks to receive the checks. These bundles have been made up the night before. The clerk hands to the Clearing House manager a statement saying practically,

"We hold checks against the other banks to the amount of such and such."  
 "All right," says the manager; "when the claims against you are handed to you we'll figure up whether you owe the other banks money or whether they owe you money. For the time being we'll assume all the debts and credits. If you owe the other banks you come around here after 1:30 p.m. and get what is coming to you. Now present your checks, one to the other."  
 The clerks stand behind their desks ready to receive the claims and receipt for them. Each messenger stands in front of the clerk and his own bank. The check strikes two. The messenger up in the gallery rings a gong. Each messenger, with his bundle of checks, starts off on his rounds from desk to desk in rotation. He hands in his checks at each desk, gets his receipts, and through a slit in the desks leaves a memorandum of what is due his bank. When the rounds are over each messenger is back in front of his own desk. He gathers up the parcels left by the other messengers with the clerk, and hurries off to his bank, where the packages are opened and verified.

Each bank takes the word of the others as to what is in the envelope. There would be no time for verification. If any mistake has been made the individual banks settle it between themselves. The clerks do the footings from the little memoranda that have been made up. When the footings are made and each bank has made a memorandum saying it owes so much to Clearing House for what it really owes to the other banks, the Clearing House manager in the gal-

lery anonymous. "Proof is made," and the clerks hurry away to their respective institutions. The exchanging has been done; the balances must be paid or received later in the day.

Some of three bank messengers bring and carry away as many as 10,000 checks in a single morning. It takes a vast amount of clerical labor to sort those brought to the Clearing House, and takes just as much labor to sort and verify those that have been received.

The manager of the Clearing House, Mr. Sherer, says that banking transactions by checks have practically ceased in the last ten years, and the amount of the detailed work of banks has therefore increased tremendously. The payments of balances must be made in cash.

The Clearing House performs another function here peculiar to itself. It has one of the strongest safes ever built. The banks have deposited in it millions upon millions in gold, and in return have received from the Clearing House certificates of deposit. It would be inconvenient to carry a vast sum of money each day to the Clearing House and take it away in settling balances. The convenience is that most of the balances are paid in Clearing House certificates, the gold actually being in the Clearing House vaults all the time and remaining there. For example, the balance paid in the year ending September 30, 1902, amounted to \$3,313,000,000. Of this sum \$2,910,000,000 was paid in Clearing House certificates, \$323,000,000 in United States bearer gold certificates, \$21,250,000 in United States legal tender and change. These Clearing House certificates therefore play a most important part in the financial transactions of the metropolis. The sale of the Clearing House also becomes a handy place in which a bank may store its reserve of gold.

Still another function of the highest importance is assumed by the Clearing House—that of placing the entire resources of all its members in order when in trouble and when the most careful examination has shown that the bank is sound. This is done in time of panic, when unnecessary bank failures would mean untold disaster. Eight times have these certificates been issued, four of them in the civil-war days, on one of which occasions the

The Main Office of the Clearing House  
Through the lens of a camera  
The manager, Mr. William Sherer, is sitting in the chair; the assistant manager, Mr. W. J. Gilpin, is at the central desk

There are sixty-one banks and trust companies, not members of the house, that clear through it by means of those that are members. Several trust companies no longer make use of this medium of exchanging balances because the Clearing House has limited responsibility for their paper, but still insist that a certain reserve be kept on hand. These trust companies that withdrew simply seem to do business in their own way, and the withdrawal is no thought too much was required of them.

The Clearing House records are almost perfect embodiments of statistical work. Records of the business done are so tabulated that every phase of it is within reach in an instant. Statements are made and brought up to date, printed and transferred, until it is possible to learn any information involved in the transactions of the banks with one another in a few minutes. There never has been but one

Clearing House practically saved the credit of the government. After that they were issued in 1873, 1884, 1890, and in 1903. The highest amount outstanding at any time was in 1903, when \$38,250,000 were in existence. They were all redeemed, however, in about four months.

These certificates mean practically that the entire credit of the banking and business interests of New York, as represented in banking, are pledged to uphold the institution to which they are issued. They are put out in denominations of five, ten, and twenty thousand dollars, on the basis of seventy-five per cent. of the collateral pledged to secure them. They draw interest at six per cent. while in existence. When a bank gets ready to redeem them the Clearing House sends word to the holder to produce them, and they are cancelled. Since 1870 the enormous sum of \$169,774,000 of these certificates has been issued without the loss of a dollar, and all have been redeemed within less than six months from the date of issue.

The highest number of members in the Clearing House was sixty-seven in 1883. Since then the tendency toward consolidation has reduced the number to fifty-six.

There were fifty at the beginning. The Assistant Treasurer of the United States in New York is also practically a member.

The Interior of the New York Clearing House, where over Two Hundred Million Dollars' worth of Business is transacted daily  
Through the lens of a camera

less, and that of only a few hundred dollars, in the history of the concern. An aged clerk, after twenty years' experience, even came over one day. A blind figure did it, and some one took the money. There is no reason to believe that he did it. The loss crushed him, and in a short time he died.

There have been times of storm and stress in the Clearing House, when the great bankers have been called in and their serious faces have been the barometer indicating financial storm. The officers of the Clearing House are loath to talk of these times. One of these was when, after the Grant & Ward failure, the exchanges of the Marine Bank were taken and held for a time. The receiver finally paid off most of the debts of the institution's history, and practically all of them have been bright days.

To handle all of these transactions a force of about seven men only is required. There have been only three managers in the

fifty years of the Clearing House's existence—George D. Lyman, who served from 1853 to 1860; William A. Camp, who served from 1860 to 1892; and the present manager, William Shaver, who succeeded Mr. Camp. Mr. Shaver has been engaged in banking since 1859. He has spent on three contiguous corners of Pine Street, for twenty-five years he was in the Sub-Treasury, and for six years was its cashier. He is assisted by William J. Gilpin, who has been in the Clearing House since 1871.

The expenses of the Clearing House are borne pro rata by the banks that make up its membership. The assessment is based upon a certain rate per million of its exchanges. To belong to the association is an asset of itself, and the great moral force of the institution exercises some severity toward its power to discipline its members. No bank could afford to have its membership cancelled.

## Where is the Sun Going?

By Harold Jacoby, Ph.D.

Professor of Astronomy at Columbia University

**A**GAIN a small number of devoted astronomers have called themselves from home, and gone forth to a distant part of planet Earth to study a profound problem of the universe. This time it is an expedition from the Lick observatory, and its work is to be done in far-away Santiago de Chile, in South America, a long distance below the equator. The most gripping problem, in the active astronomer, as well as the general public, are certainly those that have to do with man's relation to the universe. There has never been a time when men have not wished to know whether our Earth is a sort of center, a body of special importance, because carrying that important creature, man himself, or whether our planet is but one of many similar bodies scattered through space, and man but one variety of a myriad different kinds of men. As to any complete solution of such questions as this exact science holds her peace. Only by an unshakable and improper use of the imagination can such problems be fully answered at present—that scientific imagination which successful investigators must possess to a superlative degree, but must yet check and curb at every moment.

To Newton we owe that beautifully simple law, the Law of Gravitation, with the help of which mathematical astronomers have been able to explain all the apparently intractable intricacies of planetary orbits within the solar system. The law declares that every particle of matter attracts or pulls every other particle of matter. It is true that there is a mystery involved in this, a mystery that has never been explained satisfactorily. For how can anything pull something else without a connecting link by which to pull it? The inability of the human mind to visualize just how this can be done has led many paradoxes to doubt or even deny the law itself, and has entrained not a few otherwise sensible persons to listen to such fallacies. But we have a simple laboratory experiment that proves at least the possibility of attraction between material bodies visibly unconnected. It is merely necessary to place a magnet near a small piece of steel. Instantly a strong attraction is set up between the two; the steel flies to the magnet. Why? The possibility of attraction without visible connection thus demonstrated, the fact that the law of gravitation can explain completely the most complex planetary and cometary orbits, and predict future motions with unerring precision, transforms the possibility of the law's truth into a certainty as great as human certainty can ever be.

The sway of gravitation throughout the entire extent of our solar system being thus admitted, we come next to the all-important cosmic question: Does gravitation extend also through outer space? Does it bind with its frictionless, impalpable moving chain alike the countless stars of the Milky Way, the clustered Pleiads, and the boundless Nebulae? To gather the means whereby astronomers of some generations far in the future shall have a glimmer of light on some such questions as these—for this the Lick astronomers have gone forth on their expedition to South America.

There is a popular notion that the planets in our solar system revolve about the sun. This is a close approximation to the truth but it is not completely in accord with the facts of Nature. The sun is so despot, ruling the motions of his subject planets. On the contrary, he is as much a slave of law and order as the smallest satellite. Like the planets, he is in motion. If there were in the solar system but two bodies, sun and planet, then it can be

shown mathematically that under the law of gravitation both bodies would pursue orbits precisely similar in shape, but different in size. If the planet were very small compared with the sun, then the planet's orbit would be correspondingly large compared with that of the greater orb. For it would be manifestly impossible for the little planet to pull the big sun in its orbit as much as the sun could pull the little planet. While, therefore, the two orbits would be of widely different sizes, yet both sun and planet would revolve about a common fixed point. That point is called the center of gravity of the system. It is a fact that such a center of gravity must exist in any system of bodies, no matter how complicated that system may be; and it possesses the remarkable property of invariability relative to all bodies of the system. It is the beginning of things, some particle of matter were placed at this center, then would that atom remain forever unswerving throughout all subsequent gyrations of cosmic motion.

In the case of our own system, the solar bulk is so vast compared with all the planets that the center of gravity is situated near the sun's own center. In fact, it is within the limits of the sun's surface; yet true orbital motion of the sun exists, since he revolves about the center of gravity of the system. So we see that every body in the solar system has orbital motion; the only fixed point is the center of gravity itself.

Having thus made clear the conditions of motion within the solar system, we must now consider motions of the system as a whole in relation to other possible suns in space. It is a property peculiar to the center of gravity, and quite distinct from its mobility, that the combined pull of sun and planets upon distant stars acts just as though all the matter comprising the solar system were combined into one vast globe having its centre at our centre of gravity. This point is not only unswerving, so far as sun and planets are concerned, but it acts like a sort of centre of inertia of them all in their relations with distant stars. It is in relation of this kind that the sun and planets to systems whose centres of gravity combine with ours and others to form an almost inconceivably vast system of systems. Visionary theories of motion of a central sun controlling the motions of all the stars must be discarded as far too daring; but there may be a central centre of gravity—indeed, there must be one, if Newton's law extends its operations into remote space.

Granting, then, that there is such a centre in the universe, we should expect to find orbital motions of the so-called "fixed" stars. The cause lies fixed in reality, but each must be pursuing some path or orbit, obedient to Newton's law of universal gravitation. It is a fact that small individual motions of this kind have been actually observed in the case of most stars. When we compare carefully stellar catalogues made by successive generations of astronomers we find that the relative positions of individual bodies change slightly, and that these changes seem to be progressing uniformly.

Having this now-tainted, both by theoretical reasoning and by actual observation, that the stars are really in motion, we now approach the most interesting question of all. Can we find out anything about the motions of our own solar system regarded as a star? The older astronomer, before the invention of spectroscopic methods, could attack the problem only by a consideration of stellar motions, determined from a comparison of star-catalogues in the

master explained above. It has been found that these motions are not altogether casual in character, as we should expect, but there is a tendency to a grouping of the motions—an arrangement other than fortuitous. It appears that the individual stars, forming the so-called constellations on the sky, are slowly rising up near a certain point of the heavens, and as slowly opening out near a point diametrically opposite. This is just what we should expect if the solar system is approaching the point where the stars are opening out. The phenomena has been compared to what we see when a regiment of soldiers marches toward us. At first there is visible a confused mass of men only; but as distance diminishes, the ranks open out, until each individual becomes at last plainly visible.

In this way it has been possible to determine approximately the position on the sky of the "apex" of solar motion, or that point toward which our solar system is at present travelling. It is in the constellation Hercules. We are obliged to assume that our path is for the moment a straight line; but we mean that "moment" which began when James Bradley commenced the first star catalogue of modern precision, about 1750, and which will end long after present generations of men have passed away. So mighty is the orbit in question that many centuries must come and go as moments before we can hope to detect the orbit's curvature. We are like travellers in the famous "corkscrew" tunnel of the St. Gothard Railway. Trains enter on a low level, and after going around a huge curve out in the mountains, emerge from the tunnel again on a higher level, and at a point almost directly above the entrance. Passengers, while in the dark tunnel, often sense themselves by watching the needle of a pocket compass, which makes a complete revolution during the passage. But without the compass they could not know whether the train was moving on a straight or curved track; and so we passengers of the solar system, too, cannot know by observation whether our great cosmic track is straight or curved until, like the compass, the astronomer's instruments shall tell us the truth.

We have now outlined briefly the state of our knowledge and the methods by which it was attained before the spectroscopy came into general use about twenty years ago. With this instrument it is possible to do something entirely different from what could be done with the older weapons of the astronomer. For these could measure the directions only of the heavenly bodies, never their distances. They could record the apparent rate of motion of a star although the face of the sky, but never ascertain whether any motion exists toward the earth, or away from it. It is just this lacking element of stellar motion that the spectroscopy supplies, and thus renders complete the kind of knowledge we get observationally about stellar motions.

The manner in which the spectroscopy does this work is quite simple and admits of explanation without entering too much into technical details. The reader will remember that any star's light comes to us through space in the form of waves. A light-wave disturbance is set up at the star, just as a water-wave disturbance is started in a still pond by throwing in a stone; and then the light waves ripple out into space in all directions just like the wave-rings in the pond. It is a very general popular mistake to suppose that the waves of ocean are caused by great masses of water rolling along the surface. This is not the case at all. The water particles, in general, simply move up and down, and do not travel any considerable distance horizontally. Any one can convince himself of this by watching a wind-wave travel across a field of grain. Waves are plainly visible in the grain, yet the individual particles are certainly not travelling across the field, since each is fast to its own stalk.

What we call seeing a star, then, is merely the happening on our eye of a light-wave disturbance travelling toward us from outer space. But the eye or telescope can merely "see" the star, or become aware of its existence. The spectroscopy can do much more than this; it can count the number of waves per second reaching us from that particular disturbance. Now it is evident that this number will be different from a star at rest than from a star in motion toward the earth, or away from it. For if the star is moving toward us, the waves in its light will be somewhat crowded together, as it were, and more will reach us than would come from the same star if at rest. Similarly, a star receding from the earth will have its waves lengthened out somewhat, and fewer will reach the spectroscopy in a second than should normally be the case from a quiescent star.

The spectroscopy, in this way, can even evaluate the rate of motion, and tell us in miles per second whether the star is coming earthward or going hence. We see at once how this supplements and completes our old knowledge of the solar system's path. If we are travelling toward an apex, then stars near that apex must in general show spectroscopic evidence that their distance is diminishing. This has actually been found to be the case, and constitutes, perhaps, this generation's most remarkable observational advance in cosmic astronomy.

But the result has been secured for the northern apex only. It remains to check it in the southern hemisphere; to show that stars near the "anti-apex" are increasing their distance from us, and at a rate about equal to the rate of approach in the case of the northern "apex" stars.

It is for the study of this problem that the members of the Lick expedition have gone to the southern hemisphere, fitted out with a great telescope and photographic spectroscopy.

The New Telescope used by the Lick Observatory Expedition to Chile

The photographic spectroscopy at the lower end will be used to measure, for the first time, the speed with which stars of the southern hemisphere are approaching the solar system or receding from it.

**DECORATIONS BY WENZELL AND BLUM FOR THE NEW AMSTERDAM THEATRE**

One of the outside doors of the New Amsterdam Theatre, in New York, is the scene of paintings depicting the central scene above the architectural arch, and the two side portions of this scene, which was subsequently finished by Mr. Wenzell, who executed also the statue, figures, drapery, etc. for the central scene, and the drapery and statue for the side panels, shown at the right and left hand side at the bottom of the page. The central scene and the side panels were both completed by Mr. Wenzell.

**MISS MINOLA MADA HURST**

*Miss Hurst, who played last season in "The Chinese Honeycomb," is to appear during the winter in a new comic opera on an Oriental subject which is being written by Robert Smith, the librettist, and the composer Raymond Hubbel. Miss Hurst is a daughter of the late Hal Hurst, the journalist and war correspondent*

# Correspondence

FAIR PLAY, ALWAYS

New York, November 4, 1901.

To the Editor of *Berger's Weekly*:

Sir,—Throughout the recent municipal campaign I have read your editorials with pleasure and gratification. They have seemed to me uniformly sane and right-minded in their opinions—strong and forcible in their expression, and always tending toward the one object—a clean and honest government.

To-day I read the opening paragraph on the results of the election in your issue of November 14. It is difficult for me to tell you the effect which this curiously non-committal piece of writing has produced upon me.

For weeks you have held up to your readers the inevitable results of a possible Tammany victory. Now that that victory has become actual, what is your attitude? You mildly regret the failure of the faction which has elected him, and the man who is certain degree of confidence in the forthcoming Tammany administration. You are "unwilling to believe," etc., that Murphy and McCellan have it in mind to revive the old and hated state of affairs in the police force.

You seem to have the same confidence in a politician who, though successful, has not, I believe, on a single occasion shown sufficient brains or character to justify the hope that he will be better than his party or of sufficiently large moral caliber to dominate the organization which has elected him, and the man who is, beyond question, the real power behind the throne.

What has given you this exalted opinion of Mr. McCellan, and why, if you have not such an opinion, is it not the better and more honest journalism to state openly the danger which now menaces the city, to renounce your intention of doing your utmost to elect Tammany in the future, as you have in the past, and to call upon all good citizens to follow in this direction.

"Because," you say, "it is possible that Mr. McCellan may, after all, give us a good administration." My dear sir, may I ask again what justifies this belief? Is there anything to be found in his earlier career, in his campaign for Congress, in his entire political life?

He has been throughout a man who has been willing to purchase political preferment at the price of personal honor, a man whose speeches during this campaign have been a miserably weak lie and insinuation and purilla in expression that the fusion papers have not sacrificed the space to ridicule them.

I am confident that no clear-minded man as yourself must agree with this view of the successful candidate.

This being the case you must lose your hopes on the belief that in these past four years Tammany Hall has reformed, has become a good government association in plans of the most corrupt and thoroughly dishonest political body that we have ever known. Surely this belief is poorly grounded.

Do you suppose that a hardened criminal, reared in wickedness from childhood, is converted into a gospel preacher merely because the law has taken him in hand and has deprived him of his liberty for a brief time? Areat number of Statistics will show you that ninety-nine times in a hundred the man will, on his release, care again return to his old ways, a little more covertly, perhaps, but for that very reason he is even more dangerous than before to public safety.

This seems to me a case exactly parallel with that of Tammany Hall. Can you say that it is not so? The organization, you admit, is dominated by the personality of one man—Charles Murphy. You place his name before that of Mr. McCellan in discussing this victory. He is a man who has held the entire situation in his grasp, and now holds it more absolutely than ever before. It has been said that he even dictated the subjects to be discussed in the speeches made by his "pupils" candidate.

He is a man who has made no pretence, he is crafty; he will doubtless cloak the misdeeds of the Tammany administration under a mantle of good and honest government, but it will still be a government by Tammany Hall, a government by an organization in which "graft" is always admitted, and dishonesty taken as a matter of course.

Do these things give you confidence? Sir, I congratulate you on your optimism. It is enviable, if misleading.

Why not express our opinions openly and honestly? Does it occur to the greatly of yellow journalism to denounce the vices of corrupt and indecent politics even in the hour of their victory? If it does, let us take refuge in this yellow journalism and be consistent. Above all, let us not content for a clean administration during a campaign and deny the futility of expelling it from Tammany, and then look writer and withdraw our protests from Tammany as on the point of assuming control and the voice of every respectable paper is needed to keep things from sliding back so far that it may be beyond the power of the people to prevent this disgraceful defect from recurring again at the end of another two years.

I am, sir,

JOHN B. MILLS.

[We have no time to try over spilled milk. Give the young man a chance.—EUPON.]

## A VIEW OF MR. HANNA

NEWARK, NEW YORK, November 1, 1901.

To the Editor of *Berger's Weekly*:

SIR.—The ship subsidy bill and Senator Hanna's advocacy of it constituted the chief argument of Ohio Democrats in opposing his reelection to the United States Senate. The voters of this elected 114 Republicans and 25 Democrats to the State Legislature. This

means that Senator Hanna will be returned to the Senate by a majority of 10. That is Ohio's answer to the attack on Senator Hanna because of his ship-subsidy advocacy.

The Ohio Republican platform declared in favor of legislation for American shipping. Senator Hanna said publicly in the beginning of the campaign that he had advocated the ship-subsidy bill and voted for it, and he wanted every voter in Ohio to understand that if he were re-elected he would again work and vote for a ship-subsidy bill.

Senator Hanna wants to protect our unprotected shipping in the foreign carrying-trade. When our ships were protected they carried 92 per cent. of our imports and exports; now, having been unprotected for more than a generation, they carry 9 per cent. The high wages paid to the men employed in building and running American ships make the cost greater than the cost of building and running foreign ships. Senator Hanna wants to maintain the American standard of wages unimpaired, and he realizes that this can only be done by giving the same protection to our ships upon the seas that is given to our industries upon the land. He wants to do an act of long-deferred justice for American shipping, and so he advocates subsidies for American ships. This indicates that proposition emphatically and unambiguously, and the fact and its significance cannot be too widely published and commented upon.

I am, sir,

A. E. SMITH.

## THE SCIENCE OF FOOD

LEVENSON, MICH., November 3, 1901.

To the Editor of *Berger's Weekly*:

SIR.—In your WEEKLY of October 31 appeared an article on the science of food. It was interesting to me, as I have made the study of food a lifetime vocation, and I write to express my own views regarding the same, believing as I do, that it is a world question, and one of which the majority of people are profoundly ignorant. Little thought is expended as to what and how we shall eat. Many people sit down to eat with an eye single to the filling up of their stomachs, not once giving a moment's thought to the after effects. Small wonder that so many of the humans race are afflicted with bowel complaints. Nor is an explanation required why doctors, druggists, and dentists reap such harvests. When God created man, He had to create elements to sustain life. He put into man a sound body and a sound mind, and it was not God's intention that this mind and body should be abused by very things He made for their sustenance. Intemperance in food and drink is a stain on the human family. It is the primary cause of the deaths of thousands of children annually, and has wrought havoc to millions of people. It has wrecked many a home, caused innumerable divorces, and lighted many a life. Asylums, hospitals, and prisons are filled with people who owe their confinement to this very cause. Everything seems to be taken into the human body nowadays regardless of consequences. The filling up pre-dominates. If every human being early in life would give more thought to the study of food and its relation to the health of the mind and body, we would have a stronger race of people and fewer infants' deaths. I firmly believe that the mind and body are as affected through the stomach, when that useful member is in an unhealthy condition, and as long as all manner of unwholesome food is consumed the stomach cannot be in a healthy condition. It is a well-established fact, and has been proved, that proper and nutritious food has an essential connection with moral and mental development.

I take it for granted that space would not be given to write more of this subject, suffice it to say that there is no one known to man that will benefit the human race more than a proper study of the science of food.

I am, sir,

OSCAR BATES.

## THE AWARD OF ONE MAN

New York, November 3, 1901.

To the Editor of *Berger's Weekly*:

SIR.—In the discussions about the Canadian boundary award it seems to be forgotten that the judgment of a court depends for its authority quite as much upon popular confidence in the impartiality of the tribunal as upon the righteousness of its decision. The vice of all mixed commissions is that the judges are not impartial, and the empire is the one who really decides. In the case Lord Alton was, in fact, the one judge who rendered the judgment. I do not doubt that his decision was just, but other considerations can be carried to a court composed of five or seven, or, as in the case of the Supreme Court of the United States, nine impartial judges, who should two nations submit an important question of boundary to the final arbitrament of one man, however wise? This was all the more unfortunate because in the Hague convention we have a treaty to which both Great Britain and the United States are parties by which they agree to submit controversies of all kinds to an impartial court, composed of five judges "of acknowledged skill on questions of international law, possessing the highest moral reputation." No one of these can be a citizen or resident of either litigant state. Ample provision is made for taking testimony and for solely and full hearing.

Can we doubt that if the Canadian boundary question had been submitted to this great international court its decision would have commanded far greater respect than that of the commission before whom, in fact, it was debated?

I am, sir,

EVERETT P. WHEELER.

Cash in the Treasury

A GLANCE over a recent official statement issued from the office of the Secretary of the Treasury at Washington shows some interesting facts about our national bank account. On the day of issue, October 6, there was in the reserve fund of the "Division of Redemption," gold coin and bullion to the amount of \$150,000,000. The division of the statement, titled "General Fund" gives the available cash balance as \$237,974,323 73. On another page, under the heading "Receipts, Expenditures, Receipts, etc.," the customs receipts for the fiscal year are given as \$76,845,322 06; the receipts from internal revenue as \$64,363,087 64; and "miscellaneous" receipts as \$11,526,041 04—making the total receipts \$152,734,450 74. The tabulated expenditures are worth studying. They are stated for the fiscal year as follows: Civil and miscellaneous, \$36,224,314 06; war, \$37,702,314 75; navy, \$24,204,221 69; Indians, \$2,953,024 06; pensions, \$40,470,650 61; interest, \$5,971,760 34; total expenditures, \$147,713,097 28.

Then the horse bolted, and that was all I ever saw of that calm and leisurely Belgian wolf.

## Wolf! Wolf!

By Robert W. Chambers

"**N**O," said I, "it's no use. Once upon a time, in my career, when anybody shouted 'Wolf!' I ran with the rest. But I'm too old now."

"Monsieur," persisted my driver, "do you not believe that there are very wolves here?"

"None at all," I replied. "I have hunted and fished in many lands. And in all lands and in all languages I have heard the same old song: 'Aha! You are too late. If you had only been here last week you could have had fine shooting. Why, everybody made fine bags last week!' And, again: 'Aha! You are too early! Come next week, and then you shall carry out tons of trout!'"

"And now you ask me to pick up my ears and run this way and that where you cry 'Wolf!' Alas, my friend, you are driving a disenchanted Yankee to-day; and of all living organisms, a disenchanted Yankee is the most hopelessly hopeless. Say so! Say so, my untutored Belgian friend. Prattle to me of the wolf and the coney and the behemoth, and any other kind of myth, or island. But don't, don't expect me to arise and caper and hit you for a guide. I would if I could sealow; I am so old that I am obliged to die. Voila!"

"Monsieur," said my driver, Nikola, "I swear to you by several species of holy saints that there are wolves in this country on both sides of the frontier!"

"True," said I, "Hagelbeek shows at Brussels and Sedan."

"Monsieur does not believe me!"

"Nikola, I came here to make the acquaintance of the Belgian trout. Let's discourse upon the Belgian trout!"

"Last week," said he, obstinately, "a wolf took two of our sheep."

"Suppose," said I, "a trout had taken them. That would be more wonderful still, Nikola. Why draw the line at a wolf!"

"Thursday," persisted the pig-headed Belgian, "a big wolf caught our turkey gobbler in plain daylight. My uncle saw him and threw his hat at him."

"A case of shoe-fly," I suggested. "Comment?"

"I was about to light my pipe, and had already struck the match when, happening to glance across a field of turnips, I saw a big, scuffling, dusty gray animal trotting along the edge of the woods. For a moment I took it to be one of those northern sheep-dogs peculiar to that region; the next instant I dropped my match and stared."

"What is it, Monsieur?" began Nikola, then broke off sharply. "Bow," he muttered, "there's your wolf!"

"It was useless for me to rub my eyes; the animal was a wolf, trotting along parallel with our road, skirting the dark edge of the forest. The fields only separated us. The wolf paid no attention to us, but kept on in a steady dogged trot, sometimes lazily jumping a ditch, sometimes running out among the turnips to avoid a thick waistfall, a loose, gray plodding shape, scarcely sixty yards away. For nearly two minutes he kept up with us, never once even glancing in our direction. Then, of a sudden, our horse caught the scent, bounded aside, and stood on two legs, while Nikola plied the whip and yelled."

"I had a glimpse of the wolf, halting, head turned in our direction. Then the horse bolted, and that was all I ever saw of that calm and leisurely Belgian wolf. But that was enough for me; and when, after a lively scurry, Nikola regained control of the gray mare, I started to talk business as fast as I was able. And Nikola the Belgian never cracked a single smile during the next hour which I devoted to an explanation of how much I wanted to shoot a wolf from the fabled, the historic, the eternally celebrated forest of the Ardennes. About three o'clock a sash-box and two striped frontier posts warned us to make ready, even before a sentinel stepped into the road, calling halt."

"Vons n'avez rien a déclarer," he demanded.

"Si, monsieur," I said, smiling, handing him a handful of cigars.

A customs official came up, grinning, checked my baggage with-

out examination, and touched his cap, saying, "Passez, monsieur!"

And so, through fragrant lanes, past green and golden fields and yellowing patches of woodlands, we came to the shade of one Aletia Bloch. At the sign of the "Silver Fish." The inn was perched up on a bank, half buried in trees. A grey stream cascaded like a moat, then wound away westward through the green and swarms of dragon-flies played, glittering in the sun.

An ample gentleman appeared to welcome me; servants here my baggage to my quarters; Nikola the driver accepted his tip with a grave bow, and drove off toward the stable. No, I wanted no luncheon; it took me a few moments to select a rod, posted out inquired in a Belgian newspaper.

"New about your famous trout stream," I began.

"Certainly, sir. There it is."

"Where?" I demanded, gazing around. "You don't mean that running ditch?"

"Ditch, sir! That is the trout stream," he said, calmly. Too much taken aback to protest, I walked out into the meadow, mechanically lowering my line. The tiny meadow stream was scarcely a foot wide. It appeared to be anywhere from one to three feet in depth, but so hidden by weeds and grass that it was next to impossible to drop a fly on the water. And when I did succeed in doing this, swarms of tiny trout came at the fly. In a matter of fact, there was not in that brook a trout five inches long. For one hour I followed the little brook, getting madder and madder, then I returned to the Inn of the Silver Fish and its proprietor, Monsieur Bloch. He rose affably to meet me.

"Did you," I began, "ever insert an advertisement to the effect that you controlled the fishing on a fine trout stream?"

"I did," he said, calmly.

"And this is the stream?"

"Oui, monsieur."

"You did not mention the size of the trout?"

"No, monsieur."

"Perhaps," I said, fiercely, "it is well that you did not!"

"Perhaps," he said, courteously.

He was the pleasantest and politest swindler I ever encountered; his inn was charming, his table beyond praise. And, as for his beer, never in all my life, whether in Munich or Tognos, have I ever tasted such beer. We became good friends.

"You see," he said, "my advertisement was for French people who have the mania for things English. They read that the English inland throws flies for trout, then they see that the trout are small as white-fly. It is nothing to them that the trout are small as white-fly. They fish to eat and to imitate the English. They would really be much happier fishing with astocots and a scurvy quill for seine sudpon. But, trout are the rage! Voila!"

After all, he was right; it was scarcely his fault that a Yankee became entangled in the meshes lashed for small fry.

"I'll forgive you," said I, offering him a cigar, "if you will tell me the truth about the wolves here."

"The truth, monsieur? What is there to tell. Everybody here knows they are about."

"Then why is Heaven's name don't you profit by it?"

"Profit! An contraire! I keep none. If Parisien fishermen believed there were wolves here, what would become of my trade! Pas si bete, monsieur! And he winked."

"Are they as plenty as that?" I demanded.

"Plenty! Well, I don't know, if you go to hunt them you may run all day and see nothing. If you have sheep, cattle, fowl, fish! The wolves also follow the deer. Wherever one finds rabbits and hares in abundance, there one may look for wolf signs. There is a reward for the head and skin."

"Do you mean to tell me that here in this work, dried-up

(Continued on page 1914.)

BIRD'S-EYE VIEW OF MACON, GA.

But a finer view is furnished by the above illustration of the structure and scenic beauty of Macon, Ga., which Henry Ward Beecher and Joseph Miller declare to be "The fairest of all cities." In climate it stands unrivaled, even by California alone; in healthfulness it is above, population considered, in stand first among American cities; in the purity of its water supply, cleared and in its destination that it is equalled by only one other in the world.

Situated in the very center of Georgia, with reference to population as well as geographical location, having a navigable river and eleven miles of railway, reaching in an easy direction, Macon is in command of the whole State, and more than a hundred flourishing factories, whose products find ready market throughout the globe, beneath the advertisement and laudable life with which the city holds itself.

Welcoming hands are outstretched by every one of Macon's fifty thousand inhabitants, leading the capitalist, the laborer, proprietor, manufacturer and wealthy immigrant—no matter what his calling—in peace and amity with them, to show the abundant blessings which they enjoy, and contribute to the greater and more glorious city which they are engaged in building.

### There Wasn't Any Story

A NEWSPAPER story that is going the rounds of one of the larger Western cities concerns a young and very green reporter who had just been taken on the staff of the town's leading daily. It happened that several theatrical openings occurred on the same night, and the staff of the paper's dramatic department was able to "cover" only three out of the four events. Space was reserved for a story on Madame Modjeska, who was to open that night in a new play, and the young reporter was assigned to the story.

About nine o'clock he strolled into the office. The city editor greeted him with astonishment.

"Why, how's this?" he exclaimed. "Didn't you get any story?"

"No," explained the reporter; "there wasn't any story. I saw Madame Modjeska attacked by a footpad as she was leaving her carriage at the stage door, and as she didn't come to I knew that the performance was off; so I didn't wait."

### An Oriental Love-Letter

ESOTICISM is put to strange and elegant use in the Oriental. Here, for instance, is a letter addressed to a native gentleman by a youth seeking the hand of his daughter:

"To His Honor ———, Paternal father of Miss ——— Dear Sir ——— It is with a faltering penmanship that I write to have communication with you about the prospective condition of your damsel offspring. For some remote time to past a secret passion has firing my bosom internally with loving for your daughter. I have navigated every channel in the magnitude of my extensive jurisdiction to cruelly smother the growing love-knot that is being constructed in my withinside, but the boundless leap of affection trimmed by Cupid's productive hand still nourishes my love-sick-rav'd heart. Needless would it be for me to numerically extemporize the great configuration that has been generatively in my head and heart. Hoping that having debated this proposition in your pregnant mind you will concordantly corroborate in espousing your female progeny to my tender bosom and thereby acquire me into your family circle. Your dutiful Sen-i-law."

### An Author Abroad

EDMUND CLARENCE STEDMAN, the veteran author, is the subject of an amusing anecdote which is current just now in literary circles. Mr. Stedman, it seems, while on a visit to France, stopped one day on a country road to admire the surrounding scenery. As he stood gazing meditatively over the fields he noticed that several peasants who passed him on the road bowed and took off their hats to him. Mr. Stedman was at first surprised at their salutes in his honor, and wondered for whom these polite peasants mistook him; but as they were repeated by peasant after peasant, he finally concluded that his reputation had penetrated further than he had ventured to suppose. As he moved away from the spot he happened to glance behind him. He had been standing in front of a statue of the Virgin.

squeezed-out old Continent of Europe there are wolves enough to call a bounty!"

"Certainly, sir. And I wish they would put a bounty on the wild boars that roam out of the forest and root up my vegetables and scare my calves till they run themselves as thin as stouts," said Sef as he sat down. Before dinner we had arranged for a wolf hunt. About sunrise next morning I descended to the breakfast room to find an animated company of people inhaling coffee. They were a rascal cut, amiable lot, the sons of neighboring farmers, officials, and small landed proprietors,—well set up, ruddy, muscular youths, who, one by one approached me, and courteously thanked me for inviting them to attend a wolf drive.

"So I was giving this party! I had not exactly understood that. (Lapsing out of the window at the company of beavers assembled to drink at my expense, I wondered just what the bill might be.

But one can do much on little, and little on next to nothing in that country. So I ate my toast and swallowed my coffee undisturbed, listening to the conversation of the ones about me. To them the hunt was a holiday, nothing more, apparently, and nothing new enough to excite anybody. Evidently, every man there had accounted for more than one wolf; I caught fragments of conversation, careless references to former wolf drives, amusing anecdotes of reminiscences. The mayor's son, a shy young giant, was teased about an episode in which, it appeared, that to save his overmated dog, he had seized a wolf by the hind leg, and had well bitten by his paws.

It was almost time to start. Cartridge belts were examined, rifles locked over. I noticed that nobody carried a magazine rifle. With true politeness, nobody apparently noticed my Winchester, but, a few moments later, Niklas, who attached himself to me, came up, carrying a single-shot weapon, with the compliments of the mayor, and would I be good enough to try it and give my opinion. A delicate fashion of instantiating that magazine guns were not considered perfectly sportsmanlike.

There were no vehicles to carry us; the forest stretched away on every side of us. Here it were, it seemed, in the very heart of the wolf country; and, beavers following, we set out in a good-humored group, crossing Monsieur Black's wonderful trout preserve, and striking northwest across the dewy upland. I walked with Herbert Jossias, the mayor's son, and his diffident remarks and modest suggestions gave me a vague idea of what we were to do and what was expected of me. Young Jossias evidently had charge of the proceedings; for, as we came to the first fringe of forest, he noticed the blue-smocked beavers to the right, and they presently disappeared.

"Move over to your posts, if you please," he said; "the same old posts. Remember at noon, carefree St. Jacques."

Then, taking pause for providing me, he led the way straight into the forest, conducting us to my post. For half a mile we walked on in silence over the springy forest soil. Once or twice rabbits scuttled off down the trail; again and again great gray wood-pigeons cleared out of tree-tops and zigzagged away among the branches. At last we came to a thin edge of timber. Through it I could see a cultivated field set in between the dark flanks of the forest; in the woods a small stream bubbled down a rocky gully.

"Game use that gully as a runway," he said, "the right bush.

Usually a wolf, running, crosses the edge of that field under shelter of the pines, where it is dark, then follows the line to the west and grows; then enters these woods, keeping close along the right bank of the gully."

He lifted his cap with a pleasant smile; we saluted one another; then he walked off at a good swiftness pace, and soon I lost sight of him among the evergreens. Well, here I was, after a moment's delay, the old, old shout of "Wolf!" And I was not sorry; the incomparable beauty of the free Ardennes, the sunlight straying into wet hollows, gliding the dead leaves, the silvery beauty of the great clouded herches whose bright yellow leaves, scuttled already with purple, drifted down from above. And overhead a sky of sapphire, glowing through ashly branches interlaced. Was not this still, sunny harmony enough reward, without the slaying of a furtive creature whose home and whose rights I had invaded with murderous intent? Philosophy is all right; but it seldom ejects carictures, never's the pity.

I sat still and listened. A buzz, tinted with rose color, had spired me out; and now he had come closer to express his opinion of me. Scarcely flattened, I threw a stick at him, and he left, screeching, winging his brilliant way across the glade and out along the forest's shaggy edge. I had not very quiet for about an hour when the far report of a rifle noted my absence.

"One wolf," I said to myself. "I bet I don't get a shot!"

Half an hour passed in utter silence; then another distant shot sounded, followed by two more. Presently, in the distance, a faint, far away sound came to me—the noise of the beavers. A few minutes later a hare passed the runway at full speed, and close behind, a robust-looking beaver, halting every twenty yards to turn and look back. It was a charming episode. The buck stood within thirty feet of me, looking quietly up and down the brook, stooped to touch the water with twitching lips, looked back once more, and trotted off down the gully, disappearing among the evergreens.

No, it was not such-ferre that served him. Nothing else came. So quiet and still grew the woods that the noise of the rivulet seemed to fill the stream. Again I saw the shadowy forms of beavers sneaking; a great owl sailed up to a branch overhead. Following the forest's eastern edge, I began my journey to the rendezvous, enjoying every instant of the autumn morning, marvelling at the grotesque beauty of the free Ardennes. There came a surprise; I rounded a point of wood and came on a pair of beavers and a shepherd-dog, and a group of peasants standing in a field and looking down at something. That something was a big gray wolf, freshly killed, sprawling there on the ploughed ground. With mixed feelings I inspected the dusty lifeless thing; with feelings still more mixed I listened to the modest account of the murder.

"I was ploughing, mister, when the wolf ran out. My dog took him. Max and I ran up to save the dog. We killed him with our spades, mister."

"With your spades?" I repeated, thoughtfully.

"The murdering thief took one of my sheep," observed the oldest peasant.

"He took each that belonged to others," said Max. "Now we'll regulate the account with his head and pelt—unless mister desires to buy him!"

"No," I said, and walked on, musing.

"The murdering thief took one of my sheep," observed the peasant

## About Panama

The commerce of Panama, according to the latest available data, amounts to about three million dollars per annum; its population to about 300,000 annually; and its area to 31,571 square miles, or nearly equal to that of the State of Indiana. The estimate of the population is based upon the latest official enumeration, which shows the population in 1901, and was based upon the census of 1871; while the figures of area are those accepted by geographical authorities and are those of the area of the "Department of Panama" of the Colombian Republic. The principal ports are Panama, on the Pacific coast, and Colon, on the Atlantic side, and these ports are visited annually by more than one million tons of merchandise and nearly 100 thousand passengers, chiefly for transfer over the Panama Railway, forty-seven miles in length, connecting the Pacific port of Panama with the Atlantic port of Colon.

Colon, or Aspinwall, as it is sometimes called, has a population of about three thousand persons. The city of Panama has a population of about twenty-five thousand. It was founded in 1519, burned in 1671, and rebuilt in 1673, while Colon is of much more recent date, having been founded in 1851.

### The People

The population, which, as already indicated, amounts in number to about 300 thousand, is composed of various elements—Spanish, Indian, negro, and a limited number of persons from the European countries and the United States, especially those engaged in commerce and transportation and the operation of the Panama Railway. A considerable number of the population is composed of persons brought to the isthmus as laborers for the construction of the canal, and of their descendants. Since the abolition of slavery in Jamaica a considerable number of blacks and mulattoes have settled on the isthmus as small dealers and farmers, and in some villages on the Atlantic side they are said to be in the majority, and as a result the English language is much in use, especially on the Atlantic side. Some of the native population have retained their customs, speech, and physical type, especially those in the western part of the province, and claim to be descendants of the natives found in that section by the Spaniards when they discovered and conquered the country.

### Our Trade with Panama.

Of the commerce of Panama, the United States supplies a larger share than any other country. The importations at the port of Colon during the fiscal year ended June 30, 1903, as shown by the report of the United States consul, amounted to \$952,084, of which \$614,179 was from the United States, \$119,668 from Germany, \$128,322 from England, \$76,386 from France, and the exports to the United States from Colon in 1903 amounted to \$173,370. From the port of Panama the exports to the United States in the fiscal year 1903 amounted to \$193,242.

### How to get There

Panama is connected with San Francisco by a weekly steamer schedule operated by the Pacific Mail Steamship Company, and with Valparaiso by a weekly steamer schedule operated by the Pacific Steam Navigation Company and South-American Steamship Company. Two passenger and two freight trains leave Panama daily for Colon, and Colon daily for Panama. The time for passenger-trains over the forty-seven miles of railway is three hours.

From Panama there is an cable line north to American ports, and one to the south. The actual time consumed in communicating with the United States and receiving an answer is stated by the consul to be usually about four hours. There are also cable lines from Colon to the United States and Europe.

The money of the country is silver, the price of exchange having averaged during the past year about 130 per cent.

# The CADILLAC

the  
Automobile  
of All Seasons

This car will give the same excellent service in the cold of Winter that it will the hot day of Summer. Any day a wheeling vehicle will go is a good day to get out in a Cadillac.

The Cadillac is graceful in design, handsome in finish and appointments, simple in construction, strong and rigid in frame work, flexible in gear, wonderful in durability. Speed range four to thirty miles an hour; control absolute. The Cadillac has all the desirable features of the costliest machines, but is only \$300 with taxicab for four, facing forward. Without taxicab, \$750—the smartest roadster ever built.

See the Cadillac dealer. It gives address of every dealer you have where the Cadillac may be seen and tested.

The Progress of Science

The Inheritance in Man of Mental and Moral Characters

This was the subject of the fourth annual Huxley Memorial Lecture delivered lately in London, the lecturer this year being Professor Karl Pearson, F.R.S. Since the publication of Francis Galton's epoch-making books on heredity, it has been impossible easily to deny the inheritance of mental characters. But it was necessary to go a stage further and ask for an exact quantitative measure of the inheritance of such characters, and the comparison of such measurements with that of inherited physical characters. Accordingly, six or seven years ago, Professor Pearson set to work on the problem, and in the course of his investigations he made physical measurements of the members of about a thousand families, and gathered information as to the physical, mental, and moral resemblances between brother and sister, sister and sister, and brother and sister, in several thousand cases. He found that intelligence or ability follows precisely the same laws of inheritance as general health, and both followed the same laws as head measurements or any other physical characters. We inherit our patterns, he says, their conscientiousness, shyness, and ability, just as we inherit their stature, forearm, and eyes. The results of these researches are, in the main, quite in agreement with popular notions on heredity, the value of his patient and accurate work lying in the fact that his investigations have proved scientifically what were before hardly more than unsubstantiated suggestions. It would appear also that he has definitely settled the moot question of the relative formative influence of heredity, on the one hand, and environment and training, on the other. He has strongly emphasized the great preponderance of inherited faculties and dispositions. The establishment of the relation between the mental and the physical characters, he holds, teaches the lesson that gentility and probity and ability may be fostered by home environment and good schools, but that their origin, like the origin of health and muscle, is deeper down than those things. They are inherited, and are not to be created or improved by training and post-natal circumstances. The stock itself makes the home environment, and education is of small service unless it is applied to an intelligent race of men. Intelligence must be bred; good human stock must be maintained; that is the broad conclusion to be drawn from the scientific proof of the equality in inheritance of the physical and physical characters; and that conclusion constitutes a problem for statescraft to deal with.

How Radium is Obtained

M. Curie has explained the process by which radium is separated from the substances which contain it. It exists in combination with lead, chalk, silicon, iron, and other things which must be eliminated in a series of complicated and costly operations. For days a ton or so of waste powder, which is obtained mostly from pitchblende, simmers over a slow fire with water and soda; this mixture is then put into big barrels, where a sediment is deposited; the sediment is then washed and re-washed, and put on the fire to simmer again with carbonate of soda. These tedious mere sedimentations and repeated washing, after which the residue is treated with hydrochloric acid. A colorless liquid results, containing small quantities of radium. The chemist's object is now to separate these small quantities, and this he does by a series of reactions and crystallizations. At each crystallization the crystals become progressively richer in radium as the mother liquor is taken, until after six weeks' manipulation, some twenty-five grammes of white crystals remain. The radium contained in these is of low radio-activity (about 2000), and the greater part of their bulk is eliminated away by M. Curie herself in successive crystallizations. At the end there are left only a few centigrammes (but 1,200,000,000 as much as would cover the point of a needle), to show for a ton or so of waste powder and acetate of lead.

"I hardly thought I'd ever have been daily, like father was."

Doctors Counsel the Daily Use of SHREDED WHOLE WHEAT BISCUIT

Because it is the all-completing food, made in the most hygienic and scientific Food Laboratory in the world. Only the finest American wheat of choice and the finest machinery are thoroughly cleaned, washed in spritzed water and then thoroughly dried and ground into powder which gives greater surface for the action of the digestive fluids than that given by any other food-stuff which involves perfect digestion and freedom from constipation.

Music

A French Conductor

"Krit res literature in art music—a romance in its tone!"—and M. Edouard Colonne, the eminent French conductor, illustrated with graphic gesture, half singing passage from Berlioz's "Symphonie Fantastique." M. Colonne, the first of the great European conductors whom the New York Philharmonic Society has hitherto arranged to import this season, conducted November 14 at Carnegie Hall, and a discussion of its artistic value had aroused his enthusiasm. The "Symphonie Fantastique" is, indeed, as M. Colonne very truly observed, an orchestral fiction; and his exposition of it was, in a way, a revelation. No eloquence of interpretation could by any possibility make of this score a moving utterance—these are the dry bones of romanticism—the theoretic and turbulent romanticism of 1830. But Colonne achieved the memorable feat of making this barren score seem almost a thing of vital beauty; one realized the immense emphasis, the bombast, the speciousness, of the music; and yet it was astonishingly effective. Here were the pastoral moods, the storm and turmoil, of Berlioz's scenic programme; here, too, the melodramatic horror of that absurd symphonic execution, and of the wretched "egg at the rise." If the score were a living organism, instead of a vast and empty book, Colonne's exposition of it would have been overwhelming; as it was, he got out of it the utmost that his own unbounded enthusiasm and the responsive gusto of the orchestra could force it to yield. The Philharmonic band has not, indeed, played so ably, so effectively, in five years as it did under this magnetic and authoritative conductor. The new "Patrie" overture of Liszt—an indifferent expression of his genius—went with stirring fervency; the Bach D-minor suite was done up with lovely grace and an infinite variety of nuance, although one missed something of the largeness and virility of the essential Bach.

If the Society has been as fortunate in its selection of the rest of its "leton prima donna" as it has been in the case of M. Colonne, there can be no question that its somewhat damaged prestige will be fully restored before the season's end.

"The Dream of Gerontius" Again

When is a masterpiece not a masterpiece? One is tempted to answer: When is a work by Mr. Edward Elgar. Mr. Elgar's music seems to possess the singular property of giving rise to hopelessly antipodal opinions concerning it. Only the other day his new oratorio, "The Apostles," was hailed by some in England as "a masterpiece—a score of pure gold throughout," and dismissed by others as "anomalous in merit, excellent in intention, but mediocre in result." Precisely the same thing happened last April when Mr. Elgar's "Dream of Gerontius" was given, for the first time in New York, by the Oratorio Society. The critical chorus was then equally extreme and equally irrevocable. Here, said some, was the logical successor of "Parsifal"—the finest flower of English music since Purcell—a work of high distinction and grandeur. The opposition was quite as emphatic in its disapproval: there were observers who found Mr. Elgar's work elevated by conception and feeling, but lacking in original inspiration. Musical history, like any other, is wont to repeat itself. Last week, at Carnegie Hall, the Oratorio Society, under Mr. Frank Damrosch, again gave Mr. Elgar's famous setting of Cardinal Newman's poem, and again arose the curiously mingled voices of adulation and disparage.

In Mr. Elgar's work, then, excellent and important, or is it mediocre and perishable? We do not know. It was suggested last April in the WEEKLY, after the first New York performance of the Oratorio, that Mr. Elgar had been unable to transmit his fervor and his piety into music of original, compelling power; and from that opinion there seems to be no present reason to depart.

For nearly a century this trade-mark has been famous  
 in Havana and has always represented the  
 finest quality of cigars ever  
 made in Cuba

These cigars are the best cigars that are now made in Cuba. They have been sold almost exclusively in Spain and England on account of their extremely fine quality and straight shape.

They are now offered to American smokers and have been given these new grading names to identify them in size and price.

No better cigars can be made, as only the choicest tobacco, the ripest, most mature and sweetest leaf is used in making them.

The straight shape is the original and best shape, as it burns better, draws more evenly and gives you more tobacco to smoke than the pointed shape.

*"Smoke them slowly, as you would sip old wine."*

The darker colors are the most to be desired, as they smoke sweeter and mellow.

*"A light wrapper does not make a mild cigar!"*

These statements are responsibly made and can be verified—and all discriminating smokers of Havana cigars will be gratified to know that cigars of this highest quality, finest workmanship and choicest leaf can now be obtained from the leading dealers in the United States.

Miss Marie Manning, the Author of "Judith of the Plains"

## Marie Manning

WHEN *Lord Altonham, Bankrupt*, was being reviewed on its appearance a year ago last spring, I remember that one enthusiastic critic, who found the book "so deliciously humorous, so entirely refreshing," wound up by urging Miss Manning to cross the English Channel—it would be so interesting, he pressed, to read what her nimble wit and discriminating pen could set down about the French, particularly the women. But Miss Manning was wiser. Her second novel, *Judith of the Plains*, recently published, is neither of the French nor of the English, but of her own country, and of a section which she knows and writes of with an intimacy born not only of close acquaintance, but of a deep, obscure sympathy and un-

derstanding. To touch the springs of feeling it is necessary that the literary artist should be more than a spectator of life; he must have lived the life and participated in its struggle for existence; to use a forcible phrase, he must get beneath the skin. In the English scenes of *Lord Altonham, Bankrupt*, there was evidence of an intimate knowledge, and a keen observing faculty operating on every detail, which spoke for the author's residence in England, even if we hadn't known it, but the effect aimed at and gained was frank satire—such pitiless and penetrating satire as one seldom gets from an American writer on the shabby shifts of a certain segment of English aristocracy. It was shrewdly clever; it was audacious, even to the compelling of one's sympathy for a

her (but he wasn't); he was simply human, and that's why we liked him) who was an English peer and fortune-hunter. Throughout these scenes we were held by the good-natured wit and satire, the clever characterization, the lively humor of the dialogue, often brilliant in repartee, the comedy of the situations, frequently verging on farce, and the American girl, Alice Dean, whose simple, direct, ingenuous nature breathed the freshness of her native prairies in the murky London atmosphere and artificial conventions of the drawing-room. It was when the scene was abruptly shifted from England to the western wilds of Wyoming, near the close of the book, that we suddenly felt the thrill of life and the instinctive touch of an awakened sympathy. We must not forget that much of this contrasted effect between the old world and the new was artistically conceived and intentional. But while the artist may always depict his scenes with vraisemblance and identity and cold precision, he cannot hide his passion when he touches the thing he loves. The freshness of feeling, the deep emotion, the vigorous expression of living, the passionate response to nature—all of which come with such sudden surprised delight as to make the transport seem like another story—were too personal and subjective to be accounted for outside the author's experience and keenness of sympathetic perception. Kenneth G. Sibley, the author of *The Book of Months* declares to be the greatest cause of happiness, and Miss Manning, who is the fortunate possessor of this gift, has also the power of making us revel in the pleasure it conveys. For several years she had a rich and varied experience of ranch life in Colorado, Montana, and Wyoming, and out of that experience came the impulse to write *Judith of the Plains*, the scenes of which are laid entirely in Wyoming. Her a long visit to England interested, and doubting her ability to handle the material she had gathered in the West, she drew on her English experiences instead, and wrote *Lord Alphonso, Breakrap!*, though, as we have seen, the pull of the West was too strong to be denied entirely. In this decision she was also wise.

*Lord Alphonso, Breakrap!* was one of the strongest and most original novels that came from the pen of a new writer last year. *Judith of the Plains* shows greater strength, and stands out among the best American fictions of this year. It is one of the small minority of Western novels that deserves to live, and know nothing of the West except by report, but if the convincing pictures of life in the rude West which this book so vividly presents be not based on the realism of truth, then it is a most astonishing feat of the imagination. The period is picturesque and pathetic, just at the close of the big cattle days in Wyoming, and all the pathos and tragedy of the passing of those days for the cowboy and the cattleman are lightly and poignantly betrayed. The sense of drama involved in that crucial transition has appealed to many writers, but I have never read a novel in which the exact irony of the conditions were brought home with such force and artistic circumspection as in *Judith of the Plains*. The figure of Jim Rodney, from the moment it darkens the door of the low sheddike eating-house, hovers like a victim, pursued more by inexorable fate—the fate that dogs the victims of the law of progressive civilization—than by any individual enemy bent on vengeance, until he is overthrown in the end. He is wrongly in the book as an actor in the scene; but the shadow of his living figure as he seeks to elude justice falls on the others, and is felt in the affection and enmity of those related to him. Somehow one does not understand this rustler; one pities him, and would have had him spared for the sake of those who loved him. "Go in to the kids, old girl, this is no place for you," were his last words. "Remember the children ain't to know," he said to his wife; and to the lynchers, "Gentlemen, I'm ready." The foreshadowing of the capture and the lynching in his wife's dream,

and the fulfillment of the dreadful presage on the heels of her waking anguish are conceived with an original power and impressiveness that clutch the throat and thrill one with the frightful horror and agony of the scene. It is a genuine stroke of art, and one of the most dramatic scenes in fiction. I have not read anything more impressive for many a day, and I recall five chapters in fiction that can equal these in conveying the sense of the tragic in the heart of a wife and mother.

There is a chapter, describing a cattle stampede, in which Miss Manning reaches a height of graphic power with a vigor and vivacity seldom vouchsafed to the feminine imagination. The strong, vivid impression it makes is, indeed, only diminished by the strength of the lynching chapters.

Judith of the Plains is a fit heroine of these wild surroundings; one cannot imagine her on any other stage, and I am as sceptical of her happiness in the future with the man who won her as I have always been of Babble's with the little *Minstrel*. But as Stevenson said of Mr. Harris's story, it began well and it had to end well. You feel that Judith was a woman to command the love of men. The Indian blood in her veins gave stateliness and reserve to her alluring beauty and jealous passion. There isn't a man in this Glad-fer-saken country wouldn't leap at the chance to die for her—but the women!

... It's her independence that riles the women. They take an awful about her ridin' in pants, an' it certainly is a heap more modest than ridin' strouble in a hitched-up calico skirt, same as some of them do. . . . Hol, you see, an' that's where the grudge comes in." Judith's first appearance, riding like a galloping heroine across the plain, is certainly one of the most picturesque entrances I have seen a heroine make into the pages of a novel. "There was inspiration for a hundred pictures in the way that horse was ridden."

One of the most important things about *Judith of the Plains* remains yet to be said. A new humorist must be pronounced in Miss Manning. The pages are full of humor; the dialogue has the very savor and salt of Western humor; and the characters had

the character of humorous treatment. The garrulous Leander, whose mouth, Mrs. Yellett said, "do run about eight and a half octaves," is a host in himself, and there are others only shadowed by the irrepressible Mrs. Yellett, as refreshing and delectable as the Cabbage Patch. Not a reader but will wish there were more of her in those pages, and more of her witty sallies and pungent sayings from the scepterical front of *Hecuba*. The experiences of the Yellett family with the gnomes, or "go'wood," as Mrs. Yellett persists in calling this educational missionary from the mysterious center of culture in the East, are side-splitting in their provocative witfulness. The criticism of the neighbors on her "go'wood" talks meets with the good-natured but caustic rejoinder: "You're all so swell over other folks' dirt causes a heap of anxiety over their reckless driving!" Miss Manning must certainly be persuaded to give us more of Mrs. Yellett. She is sufficient in herself for many an *American Night's* entertainment.

*Judith of the Plains* is a better novel, structurally, than *Lord Alphonso, Breakrap!* It has a firmer creative touch, a finer maturity, and more depth of feeling. It is a book that will be thoroughly enjoyed, and its success is therefore well assured.

Miss Manning in her Library in Washington Square

# Books and Bookmen

By James MacArthur

SOME years ago, ten or twelve it must be, Mr. Howells welcomed a fearless adventure on the part of the publishers to put forth volumes of short stories by new writers, largely by due to the prodigious popularity at that time of Mr. Kipling. Mr. Howells's popularity at that time of Mr. Kipling for the reinfluence to publish short fiction, even by authors of repute, is as strong today as ever—as strong as that of the public to read short stories except in the magazines. But the triumph of the moment gave Mr. Howells a chance to plead the young author's case, and in the particular instance I speak of, to set forth the merits of a new writer who had come out of the West with a book of short stories called *Main-Travelled Roads*. The new condition of things favoring, as Mr. Howells thought, a larger reception of the short-story volume, would gain for the young author definition and fixity in the reader's knowledge. "It entitles the public not to be surprised at him if he turns out a novelist." Well, the author of *Main-Travelled Roads* has turned out a novelist, and if the fact is not a surprise to the public it is because since the advent of that first volume of short stories the name of Hamlin Garland has become more and more familiar to readers. When *The Captain of the Grey Horse Troop* appeared last year I predicted a success for it beyond that of Mr. Garland's previous books, and the result has borne me out. For the first time the author had written a story that appealed to the popular imagination. It marked a new development in his career. It was as if he had suddenly lifted his head and found the sun shining; as if he had turned a corner and come out on a path into the larger world. No disparagement of his earlier work is intended; *Main-Travelled Roads*, for instance, stands in our fiction almost alone to account for that uprising of the farmers in the West, which, as Mr. Howells put it, is the translation of the Present's War into modern and republican terms. Notwithstanding the tragedy and satire, the grim pathos and sordid, ugly, ferocious figures, the heartbreak and corroding misery, it bears the stamp of fine art. But the years have brought Mr. Garland a larger and more generous vision; he has ceased to be parochial in his view of life, and has learned, so to speak, to reckon with the universe. Moreover, he has discovered the truth that every life has its hidden romance, its hope of happiness, its glory in the dream. Like his own Hesper, he has brought back from youth the recovered joy of life. The realist may call it a illusion if he will, and prefer the earlier death of sunshine, but the Apostle Paul was right when he said we are saved by hope, and the instinct for joy, the mighty hopes that make us men, cannot be all in vain. Nothing could be more significant of Mr. Garland's fresh and inspiring outlook than the chapter in *Hesper*, his new novel, headed "Ann's New Philosophy." It recapitulates the new uplift which has come to Mr. Garland's art, and elucidates the theory of life he has worked out. There is nothing so potent in art, as in life, as the fresh access of its balance, and lifts it on to a new plane of vision. And whether we read our fiction to be amused or to grow wiser, there is always the healthy protest against being allowed to despair, as there is always the latent desire for the uplifting and quickening of the spirit.

Many years before *Hesper* opens, Philip Rupert had made a trip to the Rocky Mountains, and had kept a journal in which he recorded the daily happenings and impressions of his sojourn among

the "Hesperian Mountains," as he called this romantic land he had seen but once, but whose splendor stirred with him for the rest of his days, and whose subtle romance was transmitted to the sensitive, variable lad who inherited his father's temperament. Louis had discovered the worn, little red book in a box of old papers in their Eastern home in New York, and his imagination caught fire from his father's passion; so that when the doctor ordered a change for the delicate, high-strung, and so pliant but reluctantly; only her love for her younger brother would have compelled her to leave her comfortable surroundings in the East to leave the vague, alarming disconcerts of the West. The last entry in that journal which was to have so strong and unforeseen an influence on the lives of brother and sister ran thus: "I can still see the purple peaks looking over the plain. The peaks of the West are closing behind me. In an hour my mountain of Hesper will have sunk beneath the plains. I love my home and my friends in the East, but this primordial world has laid its spell upon me. I shall come again next year." But he never returned. He married, and would have called his brothers "Hesper" and "Star of the West"—but his wish was overruled in favor of "Ann." To the daughter, who took after her mother, the name also seemed odd, but there came a time when her father's nature asserted itself, and she grew to secretly, as her lover had secretly learned to love it before she did. The life and interests of Ann and Louis became inextricably woven with the life of the ranchers and miners on Hesperian Range, and a succession of scenes followed, rapidly through which the girl is transformed and finds the "recovered joy of life." The conflict between pride and attraction in her attraction to Raymond, her manly lover, and the barriers he has to overcome before she finally conquers her, are followed with increasing human interest against a background of wild, lawless life in a mountain mining-camp. The power of making an artificiality of Ann's luxurious life are accentuated by the primitive demands and stern reality of the rude, monstrous conditions that surround her. The story bristles with rough comedy and racy adventure—Mr. Garland never did regard the possibilities, and is full of stirring action. The men and women of the Sky. Every mining camp abounds with a crudeness and vigorous vitality. Mr. Garland has the power of making in all this wonderland in all its quite as strong and winning as was that of the little red book, and, like Philip Rupert, he inspires us with a longing to behold his "Hesperian Mountains." *Hesper* is a worthy successor to *The Captain of the Grey Horse Troop*, and will undoubtedly enjoy a still greater popularity.

A *Reverence in Honor* is a first novel by a writer whose name has lately appeared as a reviewer of other people's novels. In spite of herself mastered the art of writing fiction, and this book leaves her tired with a dangerous superficial cleverness. The temptation to say smart literary taste. It does not seem either that Miss Moss has found a story to tell yet; the thread of narrative in *A Reverence of Honor* is of the thinnest, and is so more than an episode. But what it serves characteristic, to impart pleasure, to give the feeling of life in its adolescence. She has done some clever character sketches

Mr. Hamlin Garland

"A CLEAN, WHOLESOME SPORTING PAPER"

## The Illustrated Sporting News

WEEKLY  
DEVOTED TO HIGH-CLASS SPORT AND OUTDOOR LIFE

THE attention by the public of each number of THE ILLUSTRATED SPORTING NEWS shows clearly the desire for a high-class weekly magazine devoted to clean sports and healthful outdoor life generally. The presentation of the subjects within its pages, treated interestingly by writers of substance and accuracy and the presentation of the illustrations—Sporting News in a class distinctly its own. Two features of the winter numbers will be of particular interest to our readers: first, the "Sporting News" will have a special section devoted to the winter sports, and second, a weekly article on new plays and papers for the winter season.

### The Christmas Number

A Few of the Special Features of this Number

- A Short Story by Cyrus Townsend Brady
- Skating in the Capital of Northern Europe
- Vasco Thompson
- Christmas and Sports
- An Editorial by Edward S. Martin
- A Duffer of St. Andrew (Scotland)
- John Kendrick Bagg
- Our Presidents who were Sportsmen—Hastley Davis
- Cover page in three colors by Edward Peckell.
- Various full-page illustrations, many of them in color.
- 72 pages, 10 1/2 in.
- 25 cents a copy.
- More than 100 illustrations.

**SPECIAL SUBSCRIPTION OFFERS**  
We know that every reader of *Sporting News* will be interested in THE ILLUSTRATED SPORTING NEWS. The regular subscription price is \$2.00 a year in advance. To introduce it to you, we will send it from the week we receive your subscription to January 1, 1903, for \$1.00. This includes our search & feature number described above, which alone will sell for 50 cents. The money you save will be like the THE ILLUSTRATED SPORTING NEWS, we will send it from now until March 1st, 1903. A sample copy (with names) free on request. The current issue is on hand.

THE ILLUSTRATED SPORTING NEWS, 7 West 32nd Street, New York City

# ARPER'S WEEKLY

Edited by George Harvey

COLLEGE LIBRARY  
JOE TENZA, STATE COLLEGE

R & BROTHERS NEW YORK  
Price 10 Cents

# Harper's Magazine

For Nineteen Hundred and Four

**PLANS OF HARPER'S MAGAZINE** for the coming year are so far perfected that the publishers feel assured that the **MAGAZINE** for 1904 will be the greatest magazine the world has ever seen. It will be richer, more varied, and more brilliant, both from the literary and artistic stand-point, than it or any other magazine ever has been.

It will present *authoritative* articles covering every important field of human activity, going to original sources for its studies. The greatest scientists are now engaged in experiments, and will write of their new discoveries in science; great historians will write on history, and at first hand will come accounts of discovery and travel by men who are now on their way to the South Pole, by others who are breaking a way through unexplored South America, etc. Archaeology, art, nature, sociology, language, etc., will be treated in original essays.

It will print at least eight short stories in every number.

It will have paintings in colors in every number.

It will, above all, maintain a distinctly literary standard, avoiding such subjects as sports, politics, "graft," crime, coronations, volcanic catastrophes, etc. It will publish nothing "timely," nothing of temporary or journalistic interest.

A remarkable love story by **MARY JOHNSTON**, author of "To Have and To Hold," has just begun. **MRS. HUMPHRY WARD's** greatest novel begins in May, and a new story by **SIR GILBERT PARKER** (author of "The Right of Way") in the Fall.

By exclusive arrangement a number of the leading American writers will write only for Harper's during the coming year. Among them are: **MARK TWAIN**, **W. D. HOWELLS**, **THOMAS A. JANVIER**, and **ROBERT W. CHAMBERS**.

## Travel

**T**HE conventional descriptive article of travel has no place in **HARPER'S MAGAZINE**. It sits in its travel articles always to present to the reader something entirely new.

Explorers and travellers now ranging in almost every part of the world will present the results of their expeditions in **HARPER'S MAGAZINE** for 1904.

Dr. Chiroux, of Paris, and M. Poyet, of the University of Bordeaux, have already started an expedition the purpose of which is to reach the South Pole. The first account of their adventures will be given in **HARPER'S MAGAZINE**.

Frank F. Schoedter, the well-known illustrator and writer, is now on his way to the little-known regions around Hudson Bay. He will contribute both pictures and text of several articles to the **MAGAZINE**.

Thomas A. Janvier, one of the most charming of our writers, and Walter Appleton Clark, the artist, are now touring the French coast for the **MAGAZINE**. Their articles will be a distinctive feature of the year.

Norman Duncan, the story-writer, is on his way from Labrador, where he has lived among the fishermen. He will write of some hitherto unexplored features of their dangerous and lonely life.

Arthur Symons, the English writer, and Israel Zangwill will contribute delightful studies of Continental life, and André Castaigne will furnish both text and illustrations of several papers on some of the least-known and most attractive corners of Europe.

President Charles F. Thwing, of Western Reserve University, has visited some of the great cities of the East, and in **HARPER'S MAGAZINE** will write of the life in those great places of learning.

THE SOUTH POLE

THE FAR NORTH

COAST OF BRAZIL

LABRADOR

THE FAR WEST

CONTINENTAL LIFE

EXPLORATIONS OF THE EAST

**H**ARPER'S MAGAZINE has published during the past few years more scientific articles of importance than any other periodical of the world over. Among those who will contribute scientific articles are:

Prof. J. J. THURMOND, of Cambridge, England — Prof. J. THOMPSON, of McGill University — E. H. DARWIN, F. R. S., of Cambridge, England — Prof. SIMON NEWCOMB

Professor Thomas R. Lounsbury, LL. D., of Yale University, perhaps the greatest living authority on the English language, will contribute a number of papers dealing with questions in the use of English—their use and abuse. Edmund Gosse, the English critic, and one of the most facile of English writers, has written for the **MAGAZINE** a number of delightful articles on "Phases and Fashions in Literature." Other writers who will contribute in this field are: **MARIE MAETERLINCK**, **EMANUEL SWENSSON**, **ALICE MEYNELL**, **RICHARD LE GALLIENNE**.

John Bassett Moore, Professor of International Law and Diplomacy at Columbia University and one of the world's greatest authorities on diplomatic history, is writing a number of papers on great periods in our diplomatic history, which will be published during the coming year. The importance and interest of these papers, appearing at this time, can scarcely be overestimated.

A most important serious feature of the **MAGAZINE** will be a number of articles by eminent writers descriptive of the legislative bodies of various European countries and their mode of procedure. The first of these articles will be by **William Sharp**, who will write on the Chamber at Athens. These articles will be fully illustrated.

## Science

## Language and Literature

## Diplomacy

## Governments of the World

By virtue of wholly unusual arrangements, these—perhaps the greatest magazine artists alive to-day—will paint only for Harper's Magazine: **Edwin A. Abbey, R.A.**, **Howard Pyle**, **Miss Elizabeth Shippen Green**, and **Lucius Hitchcock**. Practically every author and artist of reputation the world over will contribute to Harper's the coming year.

## COMMENT

We discuss elsewhere the new canal treaty with Panama, and the international situation resulting therefrom. At the hour when we write the ratification of the treaty by the Senate during the first regular session of the Fifty-eighth Congress seems assured. Thereby hangs a tale of disappointment for Senator Gorman, who, in a caucus of his Democratic colleagues, tried to commit them to united condemnation of the agreement. His purpose was frustrated, and the caucus adjourned with the understanding that each Democratic Senator would vote upon the treaty in accordance with his individual judgment. Mr. Gorman's failure to control his colleagues presents a striking contrast to Mr. John Sharpe Williams's success in persuading almost all the Democratic members of the House of Representatives to concur with the Republicans in passing the legislation needed to render operative the Cuban reciprocity treaty. When the Congress met in extra session, most onlookers would have predicted that Mr. Williams's task would prove much more difficult than Mr. Gorman's. Nor is there much doubt that, if the Democratic Representatives had unanimously determined to oppose the projected Cuban legislation, they could have secured the support of enough Republicans from beet-sugar States to make their opposition effective. Such a proceeding would have been merely obstructive, however, and would have involved the abandonment of the principle of tariff revision to which the Democratic party is pledged by its traditions. It is true that the Cuban reciprocity treaty, conceding, as it does, a reduction of only 20 per cent. of the Dingley rates to certain Cuban commodities, does not constitute a long step in the path of revision; but a step it is, and, as such, establishes a precedent which Republicans cannot disavow. If, therefore, the Democratic party was to show itself faithful to principles, instead of merely opportunistic, and, if it wished to provide itself with an urgent and vital issue on which to go before the people in 1904, it could not logically refuse to accept the Cuban reciprocity legislation proposed by the Republicans.

Mr. John Sharpe Williams deserves and receives all the credit for discerning the duty of his party in the premises, and for persuading his colleagues to perform it. Evidently, the Democratic Representatives have got a veritable leader at last, under whom united and sagacious action seems likely to be substituted for the short-sighted, vainglorious, and discordant course pursued by the minority in the House for several recent sessions. Nor should we be surprised to see Mr. Williams ultimately acknowledged as leader of the Democratic party in the Upper Chamber also, so far as the formulation of policies is concerned. It is no secret that many of the Senators who opposed Mr. Gorman in the caucus relating to the Panama affair were influenced by Mr. Williams, who does not hesitate to say that, on the eve of a Presidential election, the Democratic party should not repeat the blunder which it made in 1898, by chasing the anti-imperialist outcry for a surrender of the Philippines. The new leader of the Democratic

minority in the House is thoroughly familiar with the record of his party, and he has no desire to see it repudiate one of the principal planks in the Democratic platform on which Mr. Buchanan was elected President in 1856. The national convention of the party in that year resolved that the construction of a waterway across the American isthmus should be secured by a timely and efficient exertion of the control which we have a right to claim over it, and no power on earth should be suffered to impede or clog its progress by any interference with the relations it may suit our policy to establish between our government and the governments of the States within whose dominions it lies. We can, added the convention, under no circumstances surrender our preponderance in the adjustment of all questions arising out of it. It is also evident that Mr. Williams believes the American people to be much more deeply interested at the present time in the completion and operation of the Panama canal by the United States than they were three years ago in the retention of the Philippines. Under the circumstances his influence, which seems likely to be dominant, will be arrayed against the assumption by the Democracy of a position with relation to the new canal treaty which would prove repugnant to the interests and wishes of the people of the United States.

We pointed out last week that the unprecedented success achieved by Senator Hanna in Ohio on November 5 would probably cause a movement on the part of many Republicans in favor of nominating him for the Presidency next year. We also expressed the opinion that, whatever protestations he might make of unwillingness to enter the field, nothing but a promise to retain the chairmanship of the Republican campaign committee during the next Presidential contest could be accepted as unequivocal proof of self-denying intentions. No such promise has yet been given, although it is known that, since the Ohio election, the President has earnestly requested Mr. Hanna to occupy next year the position in which he proved so serviceable in 1896 and 1898. Evidently, the Senator is still undecided as to whether he will become a candidate for the Presidency. Meanwhile, he is opposing with the utmost energy a project which the President has at heart, namely, the confirmation of ex-Surgeon Wood to be a Major General in the regular army. Contemporaneously, Mr. Hanna's lieutenant, Governor-elect Myron T. Herrick, has been sojourning in the city of New York, and is believed to have sounded Governor Odell and Senator Platt with reference to Mr. Hanna's chance of securing the support of the New York delegation in the next Republican national convention. The current impression is that Governor Odell will adhere to Mr. Roosevelt, but he would scarcely be able to control a majority of the New York delegation against the wishes of Mr. Platt.

We have said repeatedly that Mr. Hanna might enter the field with a fair prospect of success, if he could secure the co-operation of Senator Platt of New York and Senator Quay of Pennsylvania. Those two king-makers were not able to beat General Harrison in the Republican national convention of 1892, but, with Mr. Hanna for a candidate, they would, doubtless, find themselves much stronger in the convention of 1904. Mr. Blair entered the canvass far too late, and, moreover, he was handicapped in the eyes of honorable men by the fact that, up to almost the eve of the convention, he continued to hold the office of Secretary of State in his rival's cabinet. It does not appear that Mr. Hanna is under any obligation to Mr. Roosevelt, but, on the contrary, has reason to complain of the treatment of his friend, Major Rathbone at the hands of the President's protégé, General Wood. If Mr. Hanna means to be a candidate, it would be judicious, apparently, to announce his purpose without much delay, in order to stop the drift toward Mr. Roosevelt in such important States of the Central West as Indiana, Illinois, Wisconsin, and Michigan. It is possible that the President's friends might gain the Indiana delegation by an offer to give Governor Durbin the nomination for the Vice-Presidency. A similar offer could not be made by Mr. Hanna's adherents, because it is contrary to usage, though not to the Constitution, to take the candidates for both the Presidency and the Vice-Presidency from the same section of the Republic. As a matter of law, they might both be taken from the same State, but, in that event, the Presidential electors of that State could not vote for both. The ar-

assumption that the Indiana delegation could be obtained in the way that we have named implies that Senator Fairbanks would be a party to the agreement, or would be powerless to prevent its fulfillment. It is by no means certain that either of these implications is well founded.

That Mr. Hanna would be a formidable opponent of the President in Illinois, Wisconsin, and Michigan, and also in Missouri, Iowa, and Minnesota, may be taken for granted. Neither is there much doubt that he would get the delegations of most of the States south of the Potomac and the Ohio, in spite of the influence that Mr. Payne might try to exercise through the Post-Office Department. As regards New England, it is probable that Senator Lodge could give the Massachusetts delegation to Mr. Roosevelt, but it is far from certain that he could control the other five Eastern States. We assume that New Jersey would follow the lead of New York and Pennsylvania. We concede that Mr. Roosevelt could rely on the support of the delegations from the Rocky Mountain States and from the Pacific slope. We are unable to perceive, however, how he can secure a majority of the Republican national convention, if Mr. Hanna should have for his coadjutors Senator Platt, Senator Quay, Senator Cullom, Senator Allison, Senator Spooner, and Senator Alger. We leave out Senator Fairbanks, although it is by no means impossible that he might join the combination, and prove himself more than a match for Governor Durbin and Senator Beveridge in Indiana.

As we have repeatedly pointed out, the more or less machine-made endorsements of Mr. Roosevelt's candidacy at many of the State conventions held during the present year do not bind the Republican party. The business of instructing delegates belongs to the conventions that will be convoked for that express purpose in the spring of 1904. The watchers on the political Zion are agreed that the President is much less popular in the East, South, and Middle West, than he was a year ago, and that he is growing weaker daily. The position taken by him with reference to the Panama canal will not help him politically, because, thanks to the sagacity of Mr. John Sharp Williams, it is unlikely to become a party issue. That Mr. Hanna has an even firmer hold on the good-will of organized labor seems to have been proved conclusively by the amazing outcome of the State election in Ohio this year. The earnest part that he has taken, as a member of the Civic Federation, in attempts to settle disputes between capital and labor by arbitration or by timely and liberal concessions to workmen has strongly commended him to labor leaders. It would not be practicable to discredit Mr. Hanna with the voters by describing him as the candidate of the multi-millionaires, for all well-informed persons are aware that the factor known as "Wall Street," is likely to be arrayed on the side of the Democratic nominee, provided he be a conservative. On the whole, however, Mr. Hanna's chance of winning the Republican nomination for the Presidency depends on the success of the initial move which, naturally, will be directed toward the control of the machines in New York and Pennsylvania.

Are the people of the United States disposed to condone corruption in Federal office? Must we not answer the question in the affirmative, when we contrast the rigorous punishment of bribe-takers in the Missouri Legislature with the grievous miscarriage of justice in the case of Miller and Johns, who have just been tried in Cincinnati for corrupt conduct with reference to the postal service, and have been acquitted? It has been generally supposed that the case prepared against Miller and Johns by Fourth Assistant Postmaster-General Bristol was the strongest that could be presented. The evidence accumulated against Miller and his alleged go-between Johns, was believed to be irrefragable. Miller, it may be remembered, was one of Tyler's assistants, and was accused of selling protection to offenders against the postal laws. The man to whom he was accused of selling protection was a witness for the government, and was corroborated by circumstantial evidence. As regards Tyler and Barrett, who are charged with similar crimes, it is understood that the government relies exclusively on circumstantial evidence. What hope is there of convicting these men if Miller is to escape?

The crime imputed to State Senator Green, who has just been examined by a United States Commissioner at Binghamton, New York, is that of complicity in a conspiracy with a contractor to obtain exorbitant prices for commodities sold to the government, the difference between the sums secured and the proper prices going into the pockets of the accomplices.

Should Green escape, it is to be feared that both Beavers and Machen will go unscathed of justice. The only penalty which they will suffer has been already indicated, that, namely of dismissal or enforced resignation. How easy we account for a state of public opinion which will tolerate the acquittal of these men! Is the defiance of the Federal government popularly regarded as a more venial offence than the cheating of a State or city? Is the crime believed to be so common that the public sense of equity revolts at the singling out of particular criminals as scapegoats? If either of these questions must be answered in the affirmative, a shameful state of things is implied. Is it the fault of the newspaper press that public opinion does not hold judges and juries to a rigorous performance of their duties? Is it not patent that, if such men as Miller, Johns, Green, Machen, Beavers, and Tyler shall go unwhipped of justice, we may as well abandon the hope of securing common honesty on the part of the Federal officials? Have American citizens made up their minds to connive such a state of things? One might have supposed that all the decent newspapers in the country would have combined to create a tidal wave of reprobation that would sweep, and would have purged the Federal Civil Service of scoundrels for a generation. The bitter truth is that American newspapers have failed to do their duty in the premises. The great majority of them have seemed to condone the perpetration of crimes upon the Federal Treasury. Their readers ought to hold them to a stern account, for it is absolutely certain that a given community will get just such a government as its spokesmen in the public press demand.

There seems to be current a good deal of misconception of the grounds on which an attempt may be made to oust Mr. Smoot of Utah from his seat in the United States Senate. Some newspapers appear to imagine that, if it can be proved that Senator Smoot approves of polygamy in the abstract, the case against him is complete, and he can be expelled from the Upper House of the Federal Legislature. The assumption is based on a misunderstanding of our Federal Constitution, and of the Act of Congress passed in pursuance thereof, for the admission of Utah to the Union. There is no doubt that the Federal Congress is competent to prohibit in any Territory an act which it regards as *contra bonos mores*, and to make the prohibition of such an act by its State Constitution a condition of the admission of the said Territory to Statehood. The prohibition of an act is one thing; the prohibition of a belief, or theoretical opinion, is quite another. Under our Constitution, a Jew is at perfect liberty to hold that polygamy is sanctioned by his Bible, i. e., the Old Testament, as is evident from the examples of the Patriarchs, and of the Kings of Israel and Judah. It is only when he attempts to pass from belief to practice that he finds himself caught in the net of Federal or State legislation. A Mohammedan is entirely eligible to citizenship in the United States, although, by the code of Islam, each adult male of the faithful is entitled to four legitimate wives, to say nothing of concubines. Should a Moslem citizen of the United States, however, attempt to carry out in practice the code of his religion, he would find himself blocked by the criminal law.

Nobody has yet alleged that Senator Smoot has more than one wife, or, in other words, is practicing polygamy. It follows that the demand for his expulsion from the Senate must be based upon the assertion that he is a believer in Mormonism, and that, as a matter of theory, Mormonism sanctions a plurality of wives. It would be impossible to exaggerate the mischief of the consequences of expelling a Senator on the score of his theoretical opinions. Such a proceeding would be a flagrant violation of the first amendment of the Federal Constitution, which prescribes that Congress shall make no law respecting an establishment of reli-

gion, or prohibiting the free exercise thereof. The Act of Congress by which Utah was admitted to the Union did not violate this amendment, because it did not forbid the profession of the tenets characteristic of Mormonism. It simply prohibited the practice of polygamy. We repeat that, so far as any evidence has been yet brought forward, Senator Smoot is a monogamist. As regards his private opinions concerning the religious or moral propriety of polygamy, he is as free from restraint as would be a Jew or a Mohammedan, either of whom is at liberty to hold what doctrines on the subject he may choose, so long as he refrains in practice from a violation of State or Federal law. This is all there is to the Smoot business, and the sooner people stop petitioning the Senate to transcend its constitutional powers, the better it will be for all concerned.

Was Dr. Leonard Wood, when promoted to be a Major-General of Volunteers, and invested with the powers of Governor-General of Cuba, guilty of conduct unworthy of an officer and a gentleman? Such a charge has been distinctly made, and the specifications are as follows: First, General Wood, while at Santiago, made an intimate personal friend of an ex-convict, secured his retention as a correspondent of the Associated Press, and employed him to blacken the reputation of eminent American officers, and to glorify his protector. Secondly, that General Wood, while at Santiago, inspired an article in an American periodical which unjustly denounced the administration of General Brooke, his predecessor at Havana, and caused that officer's recall. Thirdly, that, when Major Estes G. Rathbone was accused of wastefulness in the Cuban postal service, and of an unwarranted expenditure of public money for personal expenses, General Wood personally influenced the Cuban courts of justice to condemn him, although he, Wood, had been guilty of extravagance more flagrant, and equally unwarranted by law. Fourthly, that General Wood, while Governor-General of Cuba, accepted for himself and his wife presents valued at thousands of dollars from a gambling corporation in Havana, in return for his concession of a privilege to ply its nefarious trade for a considerable term of years. Now the evidence on which these very serious specifications are founded is to be laid before a committee of the Senate in executive session. Under the circumstances, we are unable to indicate what the evidence is, except by unauthorized reports, which we are unwilling to use. We cannot, therefore, forecast the decision at which the committee will arrive.

Let us assume, however, for the sake of argument that the committee of the United States Senate will acquit General Wood of any conduct unworthy of an officer and a gentleman during his tenure of the office of Governor-General of Cuba. The gravest objection to the confirmation of Wood to be a Major-General in the regular army will remain intact. The fundamental question which will then confront the Senate is this: Will the military service of the United States be benefited or gravely prejudiced by the quick promotion of a doctor of medicine, who has never had any technical military training, or any extended military experience, to be a Major-General in the regular army, with the prospect of attaining presently to the chief command thereof? Is it conducive to the indispensable belief that promotion in the army is the prize of desert, and not of favoritism; that a surgeon, after taking part as a colonel of volunteers in a single skirmish of no great importance, should be jumped to a brigadier-generalship over 456 officers, who could either point to a lifetime of work under the colors, or who had enjoyed the advantage of a West Point education, together with an extensive experience of military life. It would seem that the awful discouragement which Dr. Wood's previous promotions must have caused a multitude of deserving officers who happen to lack friends at the White House should make the Senate reject his nomination to be a Major-General in the regular army. The *Public Ledger* of Philadelphia is right in averring that should the Senators confirm Wood's nomination, they are logically bound to go further and put an end to the West Point Academy; to insist that hereafter technical training and long experience in the field shall be disregarded in promotions to high posts in the army; and, finally to abolish as superfluous and futile the new General Staff, which was to study the science of war.

It begins really to look as if Mr. Charles F. Murphy, the leader of Tammany Hall, was determined during the next two years to give the city of New York a clean, honest, and efficient government. No reasonable person can doubt that, for such an exemplary programme, Mr. Murphy can rely on the zealous co-operation of Mr. McClellan, Mr. Grout, and Mr. Fergus, who will respectively hold the posts of Mayor, of Comptroller, and of President of the Board of Aldermen in the new municipal administration. If Mr. Murphy shall bar out from all the important commissions the notorious spoilsmen of the Tammany organization, and shall fill those offices with citizens who command the respect and confidence of the community, he may revolutionize the position of the Democratic party, not only in the city of New York, but in the State and in the nation. If the next nominee of the Democracy for the Presidency should be a tried and trusted conservative, Mr. Murphy would be able to assure to him, as against Mr. Roosevelt, a plurality considerably larger in the city of New York than that which Mr. Coler obtained last year over Governor Odell, and the chances are that, elated by the purification of their party, the Democrats of such inland cities as Troy, Albany, Rochester, Elmira, and Buffalo, would make corresponding gains. Should Mr. Murphy carry out the honorable purpose which is ascribed to him, we deem it probable that either Chief-Judge Parker or Mr. Olney or Judge Gray or even Mr. Gorman, could beat Mr. Roosevelt in the State of New York. If, on the other hand, the Republicans should decide to put forward Senator Hanna, we know of only one Democrat alive who could be relied upon to beat him, and that is Grover Cleveland.

Tewfik Pasha has advised the Sultan to accept in full the reform plan of Austria and Russia, whose main features we have already outlined. This removes the last barrier to the formal success of the Lamsdorff-Goluchowski policy. It still remains to be seen how far this will be converted into a real success. The obstacles are really very great and grave. It cannot be doubted that the meeting of the Tsar and the Kaiser at Wiesbaden has been one of the forces brought to bear on the Porte, the German Emperor, feeling this previous isolation, having decided to cast in the vote of Germany, along with England, France, and Italy, in favor of the reform schemes. But it is not certain that the German financial powers, which have such large interests, and still larger hopes, in Turkey, will follow the Kaiser's lead; and they have very effective means at their disposal, for thwarting and obstructing the efforts of Russia and Germany. The collapse of the Bagdad railway plan, due in the first instance to the open hostility of Mr. Witté, will not dispose them to second the efforts of Russia and Austria, in which they see a Slav influence certain to be hostile to Teutonic designs, and which seems to them a greater evil than the worst excesses of Turkish oppression.

Sir Michael Hicks-Beach has given in his allegiance to Mr. Balfour and the policy of retaliation. Speaking at Bristol the other day, to an assembly which had just been addressed by the Premier, Sir Michael declared his belief that great damage had been done to British trade by the protectionist policies of foreign countries, and practically gave in his adhesion to the Balfour platform, as outlined in the Sheffield speech. Sir Michael said that the government ought to be armed with the weapons of retaliation. If the choice was to be between the old lines and a genuine change of fiscal policy, he frankly preferred the latter alternative. In conclusion, Sir Michael contended that the question before the Unionist party was not the unauthorized programme of Mr. Joseph Chamberlain, which he had steadily opposed, but the policy of Mr. Balfour, and that he thought that they should now patiently await the government's proposals, and strive for unity. The effect of this hit at the ex-Colonial Secretary was, however, somewhat weakened by the fact that Mr. Balfour himself, speaking immediately before his former Chancellor of the Exchequer, had given Mr. Chamberlain very high praise, declaring that the latter had given up everything for what he considered the good of the British Empire. Mr. Balfour went on to say that a new situation had arisen since the present fiscal policy of the empire was established, and that it seemed to him little short of lunacy, if they did not prepare themselves for the dangers which were foreshadowed. The adhesion of Sir Michael Hicks-Beach decidedly strengthens Mr. Balfour's hand, though the

Premier must greatly regret that it did not come soon enough for him to include Sir Michael in his reconstructed cabinet.

Any one who can find out a method of extirpating, or even of restraining, the boll-weevil could make a good bargain for his discovery with the State of Texas, or even with the national government. The average Northern reader has only heard of the boll-weevil within the last few months. He is a small beetle with a long proboscis, and seems to have been originally a resident of Mexico. He gets into the cotton-boll when he is young and grows with the boll, and eventually blights it. When the cotton crop extended into the southern counties of Texas the weevil crossed the Rio Grande and began to thrive on Texas cotton. That was about 1894. In nine years the weevil has done so well in his business that he is now estimated to cost the State of Texas thirty million dollars a year. He is one of the causes for the shortage of cotton, which is felt wherever there are cotton-mills, but especially in this country, and in England. As a hull factor in the cotton market he has done wonders, but the world does not want him, and Texas especially is exceedingly desirous of being quit of him. The Department of Agriculture has had its eye on him for some years, and the government bug experts have studied him attentively with sinister designs. A convention of cotton men sat on his case last year at Dallas, and, at their request, the State of Texas offered a prize of \$50,000 for a cure for him. This year, on November 5, the National Boll-weevil and Cotton convention met again at Dallas. Five hundred delegates discussed the intrusive bug, and four times as many visitors listened to them. Secretary-of-Agriculture Wilson was there, and declared that the boll-weevil could not be exterminated, nor even confined to Texas. It is bound, he thinks, to cross the Sabine, and presently the Mississippi rivers. His idea is to cope with the intruder by better methods of farming, and especially by deep ploughing. The government has since been invited to establish an experimental farm in each of the counties of Texas, so that the resident farmers may see what can be done in fighting the weevil. Meanwhile the government has arranged to send about three hundred tons of improved cottonseed to Texas, to be tried on selected farms. So far as yet appears, a hand to hand conflict with this deplorable bug is the only kind of resistance that is practicable. Of course the fight will be made. The world must have cotton and the more mischief the weevil does the higher cotton will go, and the better the planters can afford to fight the bug.

The other day when Dr. Benjamin Andrews warned society that culture was becoming obscured and that there were dark ages ahead, he declared, among other things, that there was no fear that our population was too small, but much that it was losing virility. He said he hoped that President Roosevelt would take early occasion to amend his plea for swelling the census, by urging quality of population as more to be desired than number, "thus undoing a little of the incalculable evil his recent words on this subject have wrought among the poor and thoughtless." Dr. Andrews seems somewhat overconfident about this evil that has been done. Exhortation is not a lasting means of producing a rapid increase of population. Hard facts, like the cost of maintenance, may be trusted to check any such tendency before it has become an evil, calculable or otherwise. But Dr. Andrews's words suggest an idea that reaction usually follows energetic action, and that we may expect in the natural order of events that presently there will be a noticeable reaction from the various sentiments which Dr. Roosevelt with such vigor, and indeed with such remarkable success, has impressed upon the American people. He has had ideas, and most of them have been good ideas, and in season and out, impetuously and persistently, he has dinged them into the American people. No doubt the good seed that he has sown will bear fruit; it has already borne much; but if in due time the gospel of the strenuous life shall seem to give way for a time to a look-before-you-leap gospel which favors more contemplation and more repose, that will not be an unnatural development. There are fashions in ideas as well as in garments, and the Roosevelt style of thought has had a remarkably brisk run. It will not perish, but it may presently subside and let some other style of thought have an inning.

The four sons of the late Charles Francis Adams are all students of history, and are all liable to have something inter-

esting to say, and to say it, from time to time, in print. Mr. Brooks Adams contributes to the November *American* a thoughtful piece that has a bearing on current events. Humanity, he says, is waging a ceaseless and pitiless struggle for existence in which the unfit perish, and history teaches that nothing can compensate a community for defeat in battle. Observing the detachment of Mr. Chamberlain from free trade, he points out that free trade, which is suitable to certain social conditions, means the survival of the fittest in a peaceful environment, or the elimination of the martial qualities as a factor in competition. Rome is an example. Free trade flourished for several centuries under the Roman Emperors. The Roman Empire consisted of a base, a vent, and a central market, or capital. The base lay in Egypt and Asia, the vent in Gaul and Spain, the market in Italy. When Augustus sent Varus to reduce Germany in A.D. 9, and Varus and his command were trapped and wiped out, the limits of Rome's vent were restricted, and the decay of her trade began. England in the eighteenth century, by beating France, Spain, and Holland, got in India and America a base and a vent for her market. But by failing, contrary to the entreaties of Pitt, to pacify the American colonies, she lost America.

From that time, we are told, dates the beginning of the embarrassment for which, more than a century later, Mr. Chamberlain is constrained to seek a remedy. "If our people," Mr. Adams says, "would know the price which Great Britain is paying for defeats a century ago, they may learn it in Mr. Chamberlain's manifestoes, or in the report of the Inspector-General of Recruiting on the degeneracy of the British army." Bringing home his lesson he points out that iron can be produced cheaper and in unlimited supply in North China, a region which Russia proposes to absorb. Asia is the only certain base from which we can draw raw material, and South America is the only certain vent for our future surplus. "Should Russia," he says, "absorb Northern China, and by means of German talent and capital establish an industrial centre there, and should Germany occupy South America and develop it with Chinese steel, the overland economic system would gridle the world and the United States would suffocate. Both base and vent would be closed." His comment, a grim one, is that dreams of peace have always allured mankind to their undoing; that the story of the United States has been written in blood, and that common sense teaches us that as has been the past, so will be the future. Nature's law for animals is destroy or be destroyed. We can hope, he thinks, for no exemption from the common lot. We submit Mr. Adams's forecast to the consideration of gentlemen who are meditating Christmas sermons. Will they admit that superior destructiveness rules the world?

The WEEKLY lately quoted "a Northern student of affairs in the South" as being impressed with the curious contrast of sentiment in different localities on the subject of negro labor, and as finding in the same State townships which no negro is permitted to enter, and laws against negro emigration. This is news to some of our Southern neighbors, though not to others. The Austin (Texas) *Statesman* finds "nothing strange in some Northerner drawing solely on his imagination to defame the Southern people," but wonders at the "patent gullibility" of HARPER'S WEEKLY in being taken in by "such a transparent fraud." The *Knoxville Sentinel* says: "We don't know of any such places. Let the WEEKLY mention them. The only parts of this country where negroes are not permitted to live are sections of Ohio and Indiana." But the Galveston (Texas) *News* is better informed, and says: "The Southern traveller quoted by HARPER'S unquestionably told the truth. There are striking contrasts of sentiment in the South on the subject of negro labor. Even in Texas these contrasts are sharp. There are counties within the State where the negro population exceeds the white population. There are other counties where negroes are not permitted to reside." We should have said "parishes" or "precincts" in speaking of county subdivisions in the Southern States, but aside from that, as the Galveston *News* points out, the WEEKLY was right. The particular county alluded to was Mitchell County in North Carolina. We print on another page a very interesting letter on this subject from Professor A. B. Hart, of Cambridge, who lately spent a year in the South.

## The New Canal Treaty with Panama

The text of the canal treaty signed at Washington on November 18 by Secretary of State Hay for the United States and Minister Buzan-Varela for the Republic of Panama, has been published, and comprises some two and a half columns in the daily newspapers. An examination of its provisions reveals many marks of improvement on the Hay-Herran treaty with Colombia, which was rejected at Bogota. In the first place, the canal zone ceded to the United States is ten miles, instead of six miles, wide. It begins to the Caribbean Sea, three marine miles from the mean low water line, and stretches across the Isthmus to a distance of three marine miles from the mean low-water line to the Bay of Panama. The cities of Panama and Colon, however, and the harbors adjacent thereto, are not included within the grant. In addition to the zone thus described, the Republic of Panama cedes to the United States in perpetuity the use, occupation, and control of any other lands and waters outside of the zone which shall be deemed necessary or convenient for the construction, maintenance, operation, sanitation, and protection of the canal, or of any auxiliary canals or other works indispensable or useful to the prosecution of the enterprise. Likewise comprehended in the grant is a group of four small islands in the Bay of Panama, which, if fortified, will serve to protect the Pacific terminal. It may be remembered that the Hay-Herran treaty did not give the United States sovereignty over the canal zone, and that the complicated provisions with reference to jurisdiction within the zone were almost certain to provoke a conflict of authority. The danger of such a conflict is averted in the present treaty, the third article of which expressly gives to the United States all the rights and powers within the zone and auxiliary lands which the United States would possess and exercise, if they were the sovereign of said territory, to the entire exclusion of the exercise therein by the Republic of Panama of any sovereign rights or powers.

It is further to be noted that, by the fifth article, the Republic of Panama grants to the United States in perpetuity a monopoly for the construction, maintenance, and operation of any system of communication by means of canal or railroad across its territory between the Caribbean Sea and the Pacific Ocean. It is most improbable that a second interoceanic canal would ever be undertaken, but it is by no means certain that, in the absence of this stipulation, the Panama railway might not have had some day a competitor. We should next observe that the sanitation of the canal zone would have proved impracticable had not adequate provisions been taken to prevent the export of Panama and Colon from becoming breeding-places of miasmas. By the seventh article of the treaty, the sovereignty which the new republic is to retain over the towns named is materially qualified. The United States are invested with the power to acquire in those towns by purchase, or by the exercise of the right of eminent domain, any lands, buildings, or water rights necessary or useful for the construction, maintenance, operation, and protection of any work of sanitation, such as the collection and disposition of sewage, and the distribution of drinking water. All such sanitary work is to be performed at the expense of the United States, which, in return, are authorized to impose water-rates and sewage-rates for a period of fifty years, after the expiration of which term the sewers and water-works shall become the properties of the towns of Panama and Colon. Could they be trusted to keep a sanitary system effective? Here, also, a provision has been taken. The seventh article provides that the towns named shall comply in perpetuity with the sanitary ordinances prescribed by the United States, and, if any breach of duty in this respect shall occur, the United States are clothed with the right and authority to enforce those ordinances.

The United States are also authorized to maintain public order in the towns of Panama and Colon, in case the new republic should be unable to preserve it. Of great importance to all maritime nations is the eighth article, which stipulates that the Republic of Panama declares free for all time the ports at either entrance of the canal, including Panama and Colon, in such manner that there shall not be collected by the government of Panama any customs, tolls, or tonnage, anchorage, lighthouse, wharf, pilot, or quarantine dues, or any other charges or taxes of any kind on any vessel passing through the canal, or employed by the United States in connection with the construction and operation of the main works or of their auxiliaries, or upon the cargo, officers, crew, or passengers of any vessel. The obvious intent of this provision is that the vessels of all nations and their cargoes, crews, and passengers shall be permitted to use and pass through the canal and the ports leading thereto, subject to no demands or impositions, except such tolls or charges as may be levied by the United States for the use of the canal or other works. This agreement is in strict pursuance of the promise embodied in the Hay-Panadeles treaty, by which the Clayton-Bulwer treaty of 1850 was annulled, while the ports of Panama and Colon are to be free and open to the commerce of the world, so far as the use of the canal or the importation of merchandise destined to be consumed in those towns is concerned, the government of the new republic is, nevertheless, authorized to

establish at Panama and Colon such custom houses and guards as may be necessary to collect duties on merchandise destined to be introduced for the consumption of the maritime territory of the commonwealth. As that territory shall become peopled and cultivated, the revenues thus authorized should become a main source of the income needed for the public expenditure of the State of Panama. The United States are, of course, authorized to import at any time, free of customs duties or taxes of any kind, all machinery, materials, and supplies needed for the construction, maintenance, and operation of the canal and auxiliary works, together with all provisions, medicines, and clothing required for the officers, crews, and soldiers in the service of the United States, and for their families. If any such articles, however, shall be disposed of for use outside of the canal zone, and outside of the towns of Panama and Colon, they will be subject to import or other duties, under the laws of the Republic of Panama. By the fourteenth article, adequate provision is to be made by agreement between the United States and the Republic of Panama for the reciprocal extradition of persons charged with the commission of crimes or misdemeanors within or without the canal zone.

We now come to the provisions whereby the United States assume a protectorate. By the first article the United States guarantees the independence of the Republic of Panama. To render this guarantee effective, Article XI provides that if, at any time, it should become necessary to employ armed forces for the safety or protection of the canal, or of the ships that make use of the same, or of the railway or other works, the United States shall have the right, in their discretion, to use their police, or their land and naval forces, or to establish fortifications for those purposes. By Article XX, the Republic of Panama agrees that no change in its government, or in its laws and treaties shall, without the consent of the United States, affect any right of the United States, under the present convention, or under any treaty stipulation between the two countries that now exists, or may hereafter exist, touching the subject matter of this convention. A possible reconsolidation of Panama with Colombia, or a fusion with the neighboring departments of Cauca and Antioquia is foreseen, for it is stipulated that should the Republic of Panama hereafter enter, as a constituent, into any other government, or into any union or confederation of states, so as to merge her sovereignty or independence therein, the rights of the United States under this convention shall be in no respect lessened or impaired. Finally, for the better performance of the engagements contracted, and in order to secure the efficient protection of the canal and the preservation of its neutrality, the Republic of Panama agrees to sell or lease to the United States lands, adequate or necessary for sailing stations, both on the Pacific coast and on the Caribbean coast of the new-born commonwealth.

So much for the provisions of the new canal treaty, the superiority of which, from the view-point of our national interests, to the Hay-Herran convention is unmistakable. The treaty will become operative when it shall have been ratified on the Isthmus by the government of the new republic, an event which is expected to occur early in December, and when it shall have subsequently received ratification at the hands of the United States Senate, which, for reasons elsewhere pointed out, may doubtless be looked upon as assured. It remains to indicate the international situation which will have been created when the treaty goes into operation. As regards all foreign countries, whether European or Latin-American, the independence of the new republic, and its immunity from attack, will be guaranteed by the United States. Should an attempt be made by Colombia, or by any other Latin-American commonwealth, to invade its territory, the whole power of our army and navy will be employed for its protection. Safeguarded against encroachment from without and against revolution from within, the new commonwealth of Panama should enter upon a career of growth and of prosperity unequalled in the history of tropical America. Within its area, which is about as large as that of South Carolina or of Maine, are mineral resources which have been largely unaccounted for, but which are believed to be of incalculable value. The agricultural capabilities of parts of its territory are in no wise inferior to those of Cuba Rico, the coffee-plantations of which are proverbially flourishing and lucrative. Nor is there any doubt that the Isthmus, lying as it does between two seas, may, with proper sanitary regulations, be made a healthful and agreeable dwelling-place for representatives of the white race.

We pass to the question whether, in the future, of equity, the new republic is burdened with any obligations to Colombia or the European creditors of the bankrupt commonwealth. To Colombia she owes nothing. She has been the victim of incessant spoliation at the hands of the Bogota politicians for some three-quarters of a century. Her revenues have been habitually confiscated for the benefit of a far-off central government. By the Colombia Convention of 1850, which itself was the outcome of a *caveat emptor*, and was invested with no moral or legal authority, the former State of Panama was stripped of every vestige of autonomy, and subjected to the direct control of the highly centralized administration installed at Bogota. The extent to which the department was plundered will be appreciated when we mention the fact that the

Colombian politicians supposed themselves to have performed an act of unprecedented magnificence when they permitted the inhabitants of the isthmus to retain for their local necessities one-tenth of the five thousand dollars payable weekly by the Panama Railroad Company. The notion that, under the circumstances, the new Republic of Panama should accept any pecuniary independence in Colombia is preposterous. Should it not, however, be held accountable for a part of Colombia's foreign debt, which is held mainly in Holland and Great Britain? The Dutch bondholders insist that the question should be answered in the affirmative, and that a part of the ten million dollars to be paid by the United States to Panama should be applied to the liquidation of the Colombian bonds held abroad. When were those bonds issued? It appears that all, or nearly all, were put forth in the early years of the Colombian struggle for independence, at a time when the isthmus was not included in the republic founded by Bolívar, but was still subject to Spain. It is possible, however, that, in order to hasten a resumption of friendly relations with a kindred and neighboring commonwealth, the Republic of Panama may acknowledge herself accountable for a fraction of the Colombian public debt, and may make over to the Republic government a part of the lump sum which it is to receive by way of purchase money for the canal franchise. If Colombia is wise, she will welcome an arrangement of the kind, and thus make the best of a situation which she is powerless to remedy.

### The Cuban Reciprocity Legislation and its Prospective Effect

THE Fifty-eighth Congress, which, regularly, would have met on December 7, was convened in extra session on November 9, for the purpose of enacting with all possible promptitude the legislation needed to render operative the reciprocity treaty with Cuba which was ratified by the United States Senate in the last session of the Fifty-seventh Congress. The desired bill was quickly introduced in the House of Representatives, and was passed with a close approach to unanimity. It encountered obstruction in the Senate, however, for certain Democratic members of that body announced that they would not permit a vote on the measure to be reached before December 17. The Republican Senators were constrained to submit to the delay, inasmuch as no means existed of cutting short debate on a measure pending before the Upper Chamber. By what motive most the obstructionists be supposed to have been actuated? They can scarcely have any other motive but that of humiliating the President, by holding him up to ridicule as having called an extra session to no purpose. But the extra session has not been useless. On the contrary, it has hastened materially the enactment of the reciprocity legislation. But for the course which the President has pursued, the bill would scarcely have been passed by the House of Representatives before Christmas-day, and its adoption by the Senate might have been postponed until March.

It is, of course, understood that the reciprocity treaty does not give Cuba all that she wants, but it gives her all that is obtainable just now. A reduction of even twenty per cent. of the Duties levied on sugar and tobacco will have the effect of applying a considerable stimulus to the output of those commodities which constitute, it is well known, the staple products of the island. The preference which, by way of compensation, Cuba gives to the products of the United States is decidedly more generous, and should signify increase the volume and value of our exports to the island. We shall be helped to estimate the economical outcome of the treaty if we glance back over the history of Cuba's commercial relations to the United States. The history is marked by surprising fluctuations. For instance, the total trade (export and import) between the two countries was valued in round numbers at \$54,000,000 in 1837, yet it dropped to \$54,000,000 in the very next year. In 1874 it had advanced to \$105,000,000, the highest figure on record, but such in the following year to \$80,000,000. In 1885, it was valued at only \$51,000,000, or less than it had been twenty-eight years before. In 1893, it almost touched again the highest mark, reaching \$103,000,000, but, in 1898, the year of the war with Spain, it had collapsed to less than a quarter of the sum last named, or, in other words, to \$24,000,000. In the current year, 1903, the value of the total trade between Cuba and the United States is computed at \$84,000,000. These amazing fluctuations had been due partly to physical, partly to political, partly to economical, and partly to fiscal causes. Cuba's industry suffered interference from the so-called ten years' war (1895-78) and from the recent successful revolution. Cuban crops have been damaged seriously by hurricanes and droughts. The market prices of Cuban staples have undergone wide variations, and, finally, the tariffs of the two countries have experienced drastic alterations.

We have always bought from Cuba more than we have sold to her, yet there have been remarkable changes in the ratio of our exports to the island, as compared with our imports therefrom. In 1857 the ratio was about one to five, yet, in the very next year, it rose to about one to two. In 1863, before the outbreak of the

ten years' war, the ratio of our exports to our imports was about three to five; in 1872, about the middle of that contest, it was only about one to five; and a decade later, it dropped still lower, being then only about one to six. In 1893, when the total trade was valued at \$103,000,000, our exports to the island contributed only about a third of that amount. After the cessation of Cuba by Spain, the ratio rose rapidly until in 1898, it was about five to six. This year it has sunk again, being only about one to three, but the proportion of our exports to our imports is certain to increase when the reciprocity treaty goes into operation. It is, of course, the harvest of cane-sugar and the value thereof on which the prosperity of Cuba mainly depends. Between 1835 and 1885, the reciprocity treaty of 1801 with Spain, by which Cuban sugar was admitted into the United States free of duty came into operation, and it was a lively result of the profits derived by them from the agreement of 1891 that has made Cuban sugar-planters eager to secure the present reciprocity treaty.

### Our Expedition to Abyssinia

THE arrival of United States Consul Skinner in Abyssinia, on a special mission to the Negus, is extremely interesting and important, because it marks what is practically the first apparition of this country on the stage of African politics and commerce. Consul Skinner, who is posted at Marouéli, and is on very good terms with the French authorities, had no difficulty in procuring the consent of the French government, through the Duke of Djibouti on the Red Sea, and they even went so far as to furnish him with an armed escort to Harar, the great mart of Abyssinia, where he proceeded by camel-train to the capital of the Negus. At that capital Consul Skinner came into contact with one of the most interesting states in the world, a historical relic of a bygone age. For Abyssinia is the one remaining indigenous Christian state in Africa; the one survivor of the pre-Moslem Christian kingdoms which succeeded the epoch of the Alexandrian Greeks. When the Moslems, breaking through the rock-bound barriers of Arabia, sent their conquering hordes north, east, and west, they overran not only the whole of western Asia, including Jerusalem and the sacred places of Palestine, but also Egypt, with its venerable civilization and its sacred lore. They swept onward, along the north coast of Africa, as far as the Pillars of Heracles, and were arrested only by the Atlantic. They crossed the Straits of Gibraltar, and their northward impulse was checked, their progress, destroying state after state, ritt furnishing, through their wars and the heroic resistance they provoked, the raw material of medieval romance which culminated in splendid story of Boadicea, just as the like contest in western Asia inspired the crusades, and gave birth to the "Jerusalem Liberated" of Tasso.

Above all this deluge of Mohammedanism, the ancient Christian land of Abyssinia rose like an island upon its African mountainsides. With an unbroken ecclesiastical tradition, which popular belief carries back to the Ethiopian, a man of authority under Candace, Queen of the Ethiopians, to whom the apostle Philip addressed the words, "Understandest thou what thou readest?" the Abyssinian or Ethiopian Church possesses one of the oldest translations of the New Testament, and has added at least one book, the famous Book of Enock, cited in the Epistle of Jude, to our knowledge of sacred writings, for this book survives only in the Ethiopian—that is, Abyssinian—version. The Abyssinian tradition carries us back to the old mainly epoch of the monks of the Thebaid, to the days which Charles Kingsley has painted, with more zeal than impartiality, in *Hypatia*; to the days when the great Alexandrian tradition of Greek culture, and the Septuagint, or Greek Old Testament, were blending with the newer growths of Platonism, and the lore of Palestine.

It is evident, therefore, that Consul Skinner's mission will take him to a land of genuine romance, which goes back further to early Christian tradition than any European land except Greece and Italy, and has a tradition more unbroken, because more isolated, than any European country. The arrestors of all the northern Europeans were barbarians and pagans for centuries after the Christian and civilized life of Abyssinia had its beginning, and it is interesting in an especial degree to find America, the youngest land in Christendom, thus coming into touch with Ethiopia, one of the oldest.

Ethiopia, or, to give it the more modern name, Abyssinia, is some hundred and fifty thousand square miles in area, about twice the size of Great Britain, or almost exactly the size of California or Montana. It is estimated to have a population of some three to four millions, and, since the greater part of the country is a lofty plateau, upborne by high mountains, it enjoys a tolerably mild climate, fairly comparable to that of California, and almost as uniform. There are a dozen towns of some size, though even Harar, with its population of only thirty-five thousand, is more what we should call an overgrown village. One of the noteworthy features of the country is the existence of a large monastic body, including ten thousand members, who are the spiritual descendants

of the old devotees and hermits of the Egyptian Thebaid. These monks teach the Abyssinian children grammar, choral singing, poetry, and scripture texts, using a form of writing derived from the old Koptic, which is fairly like the older European alphabet.

But neither archeology nor ecclesiastical tradition was the main motive which led Consul Skinner to visit King Menelik. His aim is commerce. He believes that Abyssinia presents a vast and fruitful field for American manufactured articles, particularly cotton goods, and he hopes to secure from King Menelik such commercial treaties as will aid in building up a market for American goods. Mr. Skinner holds that American goods have for some time been filtering into Abyssinia almost without the knowledge even of the American manufacturers who produce them, as they are re shipped from various Mediterranean ports to Djibouti and Port Said. He thinks that, as the middlemen are thus absorbing a large share of the profits of American trade, it is directly our interest to agree up relations direct, the more so as the recently constructed railroad to Harrar from the sea makes access to the main market of Abyssinia easy and cheap. We have, therefore, a very vital interest in ascertaining accurately the conditions under which business is being transacted in that region, with a view to retaining our hold and increasing our commerce.

We now supply Abyssinia with cotton shawls, petroleum, and other staples, and we are buying from her hides, carpets, wool, ivory, and resin. Our relations are important and reciprocal, but not direct. Hitherto the trade route has been by sea from Aden to Zoolia, and thence by caravan to Harrar, but the new railway just finished by a French company will make Abyssinia much more accessible, increase its wants, and thereby increase its value to our trade. We shall look with interest for Consul Skinner's report on his return.

### Woman and the Religion of the Future

"The woman has charge of the good," said Roman. "Woman is the archeologist of religion," says another. These sayings reflect a heavy opinion. Indeed, no constant has woman been in the orthodoxy of her time, and no loyal in her devotion to the professional and established teachers of religion, that it has been said.

Mothers, wives, and maids

These be the tools wherewith priests manage men.

The conventional assumption is that woman gains her truth of the spiritual world through her intuitions, and that, consequently, she would rather let reason alone. Yet, even more, it is assumed by some that she is constitutionally disqualified for dealing with problems of theology or philosophy. It was F. D. Maurice's justifiable opinion—he probably learned better later in life—that there probably was not a female in England who, in 1828, had any knowledge of theology; and he also held that unless women were given a scientific education it was useless to expect anything more than religion of the heart from them. "How many women do you know who are religious," wrote Elizabeth Barrett Browning to Miss Harcourt, referring to Harriet Beecher Stowe, "who are religious, and yet analyze point by point what they believe in? She (Mrs. Stowe) lives in the midst of the traditional churches, and is full of reverence by nature; and yet if you knew how fearfully that woman has torn up the old ornaments and taken note of what is a dead letter within, yet preserved her faith in essential spiritual truth, you would feel more admiration for her than even for writing *Eucæ Tom*." What impressed Mrs. Browning about Mrs. Stowe was that she dared to think on matters of religion. So she did, and so did her sister Catherine; in fact, all the Beecher children, boys and girls, men and women, did their own thinking. From the days of Anne Bradstreet down to the present time we have not been without women who dared to speak and affirm, heterodox views in matters of religion, and a woman to-day is the leader of the most flourishing religious movement outside of the conventional churches that there is in this country, albeit it is a movement partaking more of the mystical than of the rational. But taking American women by and large, and they have been a conservative element in a people which, as people go, is very conservative, theologically speaking, although prolific in innovations in religion practically applied.

The problem which both Roman Catholic and Protestant churches in this country face now with respect to their women is, Will they—that is, the women—continue to be conservative? For they are receiving—very many of them, among the well-to-do classes at least, and very often at the hands of the State—the scientific education which Maurice forewarned that they must have before they could ever be anything else than religiousists of an emotional, instinctive type. Higher criticism of the Bible is taught at Smith and Bryn Mawr, as well as at Harvard and Johns Hopkins. Nothing that is destructive of the old and constructive of the new in matters of philosophy, theology, and ethics is wanting now in the curricula of the best women's colleges. To imply that the influence of our educational institutions for men or for women makes against essential religion or against the spiritual life would

be unjust, but no one aware of the facts of to-day can deny that there is a gulf between the universities and colleges, on the one hand, and the churches, on the other hand, viewed broadly, in their attitudes toward the origins and ultimates of life, literature, and history. The point is that when the ecclesiastical and conservative of the traditions and the customs of the past comes to deal with the educated woman of to-day and to-morrow he may not find her the unreasoning, credulous adherent of institutional religion and orthodoxy that he has found women in the past to be. She may decline to be the

the tool wherewith  
Priests manage men.

And more. She may refuse to be managed herself.

It is not without significance that one of the leading preachers of New York city, Rev. Dr. D. S. Mackay, last May, dealing in his pulpit with some timely issues of society, gave it as his opinion that men in the metropolis were attending church more now than they were a decade ago. But women of leisure, he said, were attending less regularly and in fewer numbers than formerly. Nor is it without considerable significance that the most explicit, outspoken plea for absolute individualism in matters of religion, and the ablest argument in favor of abatement from social forms of worship and repudiating the authority of the professional religious teacher, should have just been made by a woman—Margaret Deland, the well-known, gifted writer of fiction, and philanthropist. If women of leisure are to absent themselves from church, and if women of culture are to argue that such absenteeism is often the highest expression of spiritual attainment, then it is quite apparent that the church must address itself to retaining a constituency which hitherto has been so loyal in its attendance upon worship, however much men might scorn it, that the church has not been concerned.

There are those, however, who are quite confident that woman's eating of the fruit of the tree of knowledge will be good for the church, as well as rewarding to its women. That the theology of the future will be different from the theology of the past, as the result of woman's taking up to get the higher education, seems to be the thought of Bishop Lawrence, of Massachusetts, the broad and tolerant successor of Phillips Brooks. Addressing the students of Radcliffe College a year ago, he said:

"The whole realm of theology has until the present generation been interpreted to us by men. Women have worshipped and revealed the graces of the saintly life. Here it has not been recommended to women to enter deeply into the study of the Bible or its interpretation. Who knows what a different theology we might have had in the past if women's minds had been at work on the problem? Would Mariology taken the form it did? Would Calvinism have captured the intellect of Protestantism? Would any man have dared to say that hell was paved with the skulls of infants?"

Rev. Dr. A. J. Lyman, of Brooklyn, addressing the students of Mt. Holyoke College last June, forewarned the coming of a time when women, more rational and scientific in her methods than she had been in the past, and yet not losing her ancient specialties as she and agnostic might be the "subtle living link between the spirit of intellectual freedom and the spirit of religious faith." "Is it quite a dream," he asked, "that a cultivated and Christian womanhood is to be in this land our real coming mediator in the new field and incident issues between scientific affirmation, on the one hand, and spiritual aspiration on the other, leading both together in even and equal hands, and so establishing through her beautiful and mighty ministry the practical union of reason and faith?" At a time when emphasis is being put more and more upon feeling and willing, upon a rationalized mysticism; when Mrs. Humphry Ward (see the last *Hibbert Journal*), reviewing a work on theology and rejecting it—"the breakdown of revelation and miracle," nevertheless also rejoices that "most speculation is intrinsic, the note of stoic calm, and is taking on the note of mysticism, of deep and passionate feeling"—it does not seem altogether chimerical to cherish a hope similar to that which Lyman, even though one dare not venture in more than a hope. But whether his prophecy be proved to be of the old-fashioned predictive type or not, it still remains true that things cannot be as they formerly were between women and priests. The pupil now addresses a new type of woman, whose attitude toward philosophy, theology, and religion is not that of her mother, or her mother's mother, and the Sunday-school of to-morrow must adjust its old pedagogic and its methods to the mother who knows about pedagogics and psychology, or its population, during the next decade will decrease faster than it has during the past ten years.

Amiel declared banishing things over to "the Eternal Womanly" because he thought that it favored exaggeration, mysticism, sentimentality—all that excites and startles." He declared it to be the enemy of clearness, of a calm and rational view of things, the antipodes of criticism and science." Amiel did not know the American college-bred woman, who bids fair to be omnipresent and omnipotent—two attributes of the Eternal—and who is Womanly without.

## EMPEROR WILLIAM ON BOARD HIS YACHT, THE "HOHENZOLLERN"

The emperor, in a graceful and hospitable manner, is seen on board his yacht, the "Hohenzollern," at the time of his visit to the United States. The Emperor is seated at the head of the table, and is surrounded by other men in formal attire. The table is set with various dishes and glasses. The background shows the interior of the yacht, including a staircase and a doorway.

### W. B. YEATS

Mr. William Butler Yeats, the Irish poet, has come to America to deliver a course of lectures on subjects connected with the Celtic literary revival. Mr. Yeats is among the foremost of those who are working for the "renaissance" of Ireland and the advancement of new ideals in its literature, politics, and national life. He was one of the principal organizers of the Irish Literary Theatre, established some years ago, which undertook to do for Irish drama what M. Antoine did for the French drama through his Théâtre Libre. He is now President of the Irish National Theatre Society. Three plays by Mr. Yeats, which were produced in New York last summer by the Irish Literary Society, were described in the "Weekly" of June 20

### DEER-STALKING WITH A CAMERA IN NEWFOUNDLAND

This photograph was taken by one of a party who have just returned from Newfoundland after a hunting expedition with the camera. Deer-stalking is still one of the popular sports in Newfoundland, and the party who made this photograph were successful in their hunt. The doe was shot by one of the party and is now in the hands of the photographer. The photograph was taken under great difficulties, as it is almost impossible to approach the deer without being discovered. The specimen in the picture is a two-year-old stag.

# The Strangle-hold of Labor

This is the second of a series of four articles on the tremendous power of labor as it affects the home, the actual cost of living—rent, the price of food, clothes, transportation, every-day necessities. These four articles emphasize most vitally the personal phase of a situation which seriously threatens not only commercial growth, but individual liberty. One article a week will appear in the forthcoming issues of "Harper's Weekly"

## II. The Problem of Transportation.—By John Keith

LAST week I showed how, through the double-dealing of certain unscrupulous labor leaders and employers in the building trades, rents in New York have advanced ten per cent in the last few weeks. The people of Chicago have just paid their tribute to the labor leaders who control the city's transportation. And what has happened there has happened elsewhere and will happen again. There is hardly a community, hardly a city or town from San Francisco to Brooklyn—Pittsburg, Cleveland, Waterbury, Richmond—and there are only a few when disastrous street-railway strikes have occurred—which has not suffered from the violence of mob rule in the matter of street transit. In the street-union strike in St. Louis, scores of men are arrested that could only be compared to the Terror of Revolutionary France; women who dared to ride in the boycotted street-cars on any errand whatsoever—to go for food or medicine or to visit the sick—were stripped naked, stoned, and driven into cellars where house-holders feared to open a door to their knockers.

The details of the street-railway problem in Chicago need not be recounted here, except in so far as certain features require emphasis for their bearing on the general subject of the enormous power organized labor has acquired over unorganized labor, over capital, over the populace in general, over the police and municipal authorities, and over the whole status of individual liberty.

The Chicago strike was entered upon by the union with loud professions of its peaceful character, and it has been a strike go, notably free from the ugly phases of mob violence. This fact makes it all the more important as a demonstration of the hold the labor-union has acquired. There is hardly longer any awe even of a mob or a club. Violence is no longer the chief weapon. The chief weapon now is the unscrupulous delinquency of the union.

In October certain street-car men of Chicago decided that the time was ripe both for raising their wages and for securing a full recognition of the sovereignty of the union over their employers. William D. Mahon, president of the National Organization of Street-Railway Employees, an infamous Liberal-Manager McCulloch. The latter replied that, only a year before, wages had been raised three cents an hour, an aggregate increase to the company of \$200,000, which had absorbed the entire increase in the net earnings. Thanks also to the organization of the working and coal interests, the company's expense had risen \$25,000 higher. The net demand meant a further increase of \$100,000, and Mr. McCulloch averred that the company's business had not grown enough to meet it. He pointed out that the men already received better pay than that given by any other traction corporation in the world, and showed by his books that certain men had earned as high as the following amounts in two weeks: a cable-car conductor, \$30 88; a gripman, \$56 32; a motorman, \$37 92; a conductor of a motor, \$38 90.

As to the demand for recognition of the union, Mr. McCulloch made the incontestable statement that to grant it as it stood meant that the control and discipline of the business would completely leave the hands of those who were responsible for it and who had capitalized it. He resented its arbitration on grievances and to the recognition of the union's right to a conference on any point of difference; but he refused to promise pay for medical attendance and full pay for time lost through accident, as "the company could not undertake to extend an insurance scheme."

With regard to "the closed-shop" principle—by which the company was to bind itself to employ only union men, or to give new men only forty-five days of grace to be received into the union, to suspend those whom the union thought unjustly suspended, and to discharge any whom the union expelled—these demands he refused, since it would give the employer themselves complete and absolute control of the selection, employment, retention in service, and discipline of all practitioners. He also showed an agreement signed April 28, 1905, guaranteeing the company against any strike for a year.

To any reasonable man the answer seems thorough and convincing, yet it did not satisfy the heads of the union. They called the men together and gave them this curious ballot:

Strike Vote.

Are you in favor of standing by your demands?

Yes.

The result was 1865 votes for a strike and 183 against; but 345 did not vote at all. The strike accordingly barely secured a two-thirds majority. November 12 at 4 a. m. the cars stopped running. The total number of men employed on the South Side lines was 3803; of these 2480 were union trainmen and 1310 union shopmen.

The strike meant to these men a total daily wage of \$6196. It also involved a contribution from all the 1000 other trainmen and carmen of Chicago not affected by the strike except in sympathy. San Francisco sent money, and the National Federation of Labor in congress at Boston sent \$1000.

The strike meant to the city a loss of nearly \$20,000 a day in fares; the receipts of an average day, November 9, had been

\$19,583. It meant to the public the loss of as many daily rides as were represented by nearly 400,000 fares and 300,000 transfers. Shortly after the trainmen quit work, the firemen, coal-handlers, coal-passers, coal-carry men, and ash-handlers in six power-houses, 250 men in all—went out; later twenty-five electricians and some sixty union trainmen in the company's employ left off work. There was great danger for a time of a general sympathetic strike throughout the city in numerous unrelated industries, but cooler heads averted the calamity.

The street-car men were ostentatiously instructed to "preserve order and peace." On the first day fourteen persons were injured, some of them seriously; this was a broken back. Property of the company to the amount of \$10,000 was ruined. The next day the Mayor, somewhat disappointed in the union ideas of order and peace, put 800 policemen on special duty.

By this means it was possible to run a few cars a day along routes in the interest of traffic. This did not meet the demand for the trips of these cars resembled rather the running of a blockade or a cavalry dash through the enemy's country. A car surrounded by policemen, and containing a few reporters or a desperate passenger or two, would move slowly along the tracks, checked every few yards by a broken-down wagon loaded with coal, a stalled iron-truck which had been towed on the track and left, or by a tangle of drays whose drivers were strangely incapable of getting them off the track. To these passive obstacles were added tiles thrown from roofs, bricks, things from all sides, occasional pistol-shots from windows, and the assaults of mobs armed with clubs and stones. Ropes were thrown over the trolley wires, which were pulled down to the street, where they lay with all the latent power of live wires loose in a crowd.

How did all this affect the great public—the people whose needs and whose needs brought these lines into existence, the people whose franchise permitted these street-cars the use of the streets in return for sufficient and regular service?

There were only 3000 employees affected by the strike. There were 250,000 people whom it robbed of their privileges and of their rights. In Chicago there are at least 160,000 women who earn their own living. These had to get from their homes and back to best they could. It became a common sight to see a black coal-wagon with the driver's name, the large packing-houses sent thousands of their women employees to their homes, and the women walked. This meant, for many, rising before daybreak and getting home after dark. Of 128,000 persons employed at the stock-yards, 25,000 were affected by the strike, and more than 45,000 of these five miles from a mile away. The streets of Chicago were streaming with pedestrians. Carriage services, always a luxury, was over-worked at extra prices. Express companies filled their wagons with human freight. The steam railroads and the elevated system put six extra trains, which were packed in suffocation, but did not suffice. Three hundred thousand people crowded the limited capacity of the elevated. The suburb, Brighton Park, was almost as badly cut off as by a flood. The postal service was handicapped, omitting three of its regular morning trips the first day. This brought the strike into the Federal domain, as the Pullman strike had been brought, by interference with the mails; but governmental aid was not invoked.

The effect on business was incalculable. The savings-banks noted the change by the small number of depositors. This meant a large sum had disappeared. The retail shops—grocers, confectioners, haberdashers, dealers in notions, books, shoes, cigars, jewelry, pianos, furniture, wall-paper—all industries felt the death of trade. From what I have been able to learn, the loss in the shopping district alone amounted to tens of thousands of dollars. For the theatre-going public, the stopping of street-car service left many of them almost deserted. The average theatre and its company cannot pay expenses on less than \$300 a performance. From the information I have been able to gather, a direct loss of \$20,000 to the numerous theatres the first week of the strike would not be an excessive estimate.

Meanwhile the absorption of so large a part of the police force in moving a few gas-bus cars along the streets was a golden opportunity for the footpad, the sneak thief, and the burglar, and complaints of their increased activity were common.

To realize the cost of such a strike to the comfort of the people it is only necessary to remember the absolute dep. advice of the great majority of the people of a big city on the far-future of public transit. The breakdown in the street-car service for half an hour means more than discomfort. Multiply this loss in actual time and money by 750,000, and one will get some idea of what the people of the South Side of Chicago have just gone through. Multiply the half-hour delays into days and weeks, and one begins to realize what it is to multiply the labor-union's loss on the comfort, the welfare, and the personal interests of every member of society.

The labor-unions brought all this about in order to compel their employers to surrender the management of their own investments. They reversed their demand with the misuse of the word "arbitration." In the language of one of the largest stockholders, John J.

Mitchell: "The attitude of the men regarding arbitration reminds me of a highwayman holding a gun to the head of the victim. Mr. Mahon, with a strike as his weapon, informed the company that it must arbitrate or have its head blown off. This was challenge too unjust and inequitable to be considered; the company has done what it self-respectfully and opposed the proposition."

The word arbitration in such a phrase means that a company is asked to put its own property up for a raffle, or, as a garrotter might say, "I either like your current; I'll match you for it."

"But," you say, "it's my own, and I need it. You have no right to it."

The answer is merely a stronger grip on your throat. On this occasion the demand for arbitration had no more justice than this. The city of Chicago, with its thousands of dollars lost in property and in business, and its hundreds of thousands of people losing time and money, levels a condition which they did not select, and under present conditions cannot ehok, offers a timely example of what the labor-unions can do without half trying. For they were not half trying. Suppose they had called a sympathetic strike on all the lines? It has been done before. Suppose that other unions had joined. It has happened before. On one occasion the milk-wagon drivers of Chicago refused to deliver milk, and babies were wrongly fed for days till the death-rate rose to a second slaughter of innocents. On July 7, 1902, the freight-handlers in Chicago, to the number of 90,000, struck for higher wages and for recognition of their union. The truckmen struck in sympathy. So did the ironmen, though it was in July. Fruit, eggs, and other perishable stuffs lay rotting in the freight cars, and before the strike was over it had cost Chicago, in the loss of these perishable things alone, over \$12,000,000. Who can estimate the cost to the sick, the weak, the children? In Kansas City not long ago 30,000 freight-handlers stayed on strike for several months, then went back to work at the old rate. They had left the city as badly as the flood, and they had accomplished no good for themselves. In March, 1902, the Western Federation of Miners, and they made an urgent appeal to the Brotherhoods of Trainmen, Conductors, Locomotive Engineers, and Switchmen to make a sympathetic strike. Fortunately the grand masters all refused; but they were bitterly upbraided by the miners, and a vast national disaster hung on the decision of a few men.

If Grand Master Morrissey of the Trainmen, Grand Master Arthur of the Engineers, and a few other men had not dared to disobey the call of their brothers and endure their fierce rebukes, then, for the sake of a group of Western miners, the train service would have stopped. For the sake of certain miners, lumberless farmers could not have had their grain and livestock to market; thousands of car-loads of produce and manufactures could not have been delivered; tens of thousands of travellers would have been lodged in strange towns; millions of dollars would have been lost; millions of hours of productive time and labor; the result—violence, burning of cars, buildings wrecked, people shot, clubbed to death, maimed—and all because one union asked another a aid and got it. Will the people, who in the last resort control the laws affecting these conditions, continue to tolerate them?

It cannot be too strongly emphasized that these reigns of terror, which have been seen before, may be seen again at any moment, whenever a few men see fit to demand higher wages, shorter hours, "the closed shop," or even the punishment of some rival union. The grand masters and the councils rule the unions with an iron hand, and in the hands of these lie untold powers for the destruction of public and private property, the defiance of the police, the municipal or State authorities, or the troops, the derangement of public peace and prosperity, and the taking of many lives.

Now will the labor-unions consider the fitness of the moment, foremen prefer to strike in July, coolmen in December. At Pittsburgh a few weeks ago the street-car men raised the slogan of strike for the sake of coolmen, and the company both to discharge any man at the request of the coolmen and to discharge no man except by the permission of the union. Pittsburgh, like New York, is suffering from a great tie-up in the building trades. The iron-workers are

decreasing their forces. Yet at such a time the street-railway unions threaten to add more thousands to the list of work-

In Texas, October 15, the employers of the Pacific Express Company struck by order of the Brotherhood of Railway Expressmen. There was no little violence. Other express companies were warned not to handle the Pacific Express baggage. The Order of Railway Trainmen threatened a sympathetic strike. Suppose that this strike had become national, as it will might have done, since the union leaders completely controlled the situation. It is easy to estimate the effect—an effect so far-reaching that not only would traffic across the continent have come to a standstill, resulting in a loss of millions of dollars to business men, with a corresponding loss of more than a million dollars to employers, but it would have interfered with the privileges of more than six hundred million passengers. Let us see what this means in figures. Last year in the United States 252,131 miles of railroad earned \$1,293,514,906, with operating expenses of \$1,160,790,423.

The total number of employees was 1,180,215, of which some 30,000 were officers and clerks. There were 45,000 engineers, 30,000 firemen, 35,000 conductors, 91,000 other trainmen, and 50,000 switch-tenders. This single million of employees makes an imposing army, but it is swelled up in the number of passengers for there were more than six hundred million passengers carried a mileage of more than seventeen billion. In exact figures, 800,483,790 passengers travelled 17,789,699,925 miles. The Pullman cars alone carry more than a dozen million passengers a year.

Consider also the freight: well over a billion tons of it were carried. In Chicago alone, 100,000 tons of dairy traffic rolled in a year, and in nine months in 1902 there were 11,257,815 head of live-stock taken there. Think, too, of the wheat, whose oceanic tide Frank Norris so aptly pictured. The freight (twice alone give these ideas their motion. In a train crew control them absolutely.

At the word of any of these unions the whole flood of the passengers may be checked, the wheat may rot in stagnation, and the price of bread and meat go soaring in a thousand cities. Will the voters of our cities tolerate these conditions?

In Greater New York alone the street-railways carry twice as many passengers every year as all the rest of the country put together. Let us see what is possible here, as a type of what may happen to any city in the country.

The authorities of the elevated railroads recently fell it necessary to the safety of passengers that they should know at annual intervals the physical trustworthiness of their employees in respect to their physical and mental strength. The need of this was shown in the terrible Brooklyn crash of November 9, when a motorman

drove his train bustling into a train standing in plain view with all signals set.

A few weeks before the company had ordered its men to appear for examination—only in the points of age, weight, height, respiration, pulse, heart, color-sense, vision, and hearing. There was nothing humiliating in this to the men, and the wages and hours were not involved. The Board of Health might well have demanded just such tests. Yet the rulers of the unions felt insulted, and prepared for a general strike. It was barely averted by an agreement signed November 7.

What would this have meant, especially if a sympathetic strike had been ordered on the surface lines? In one year the surface and the elevated roads of New York have carried over 1,350,000,000 people, an average of nearly four million a day.

Whether this service shall continue is a question which a few labor leaders can decide. It is worth while stopping to think what happens in any city when a simple breakdown checks the street-car service an hour. Multiply this again by all the services in a great city, and stretch the hour to days and weeks. Consider the stupendous business interests that are quickly involved to the peril of bankruptcy. Then realize that the convenience, the prosperity, the very existence of our society is in the power of a few thousands of employees under the control of a score of able leaders. Is it a condition which the voters of our cities will tolerate?

**WILL HE MAKE IT?**

# Fox-hunting in the Genesee Valley

By Frank Sherman Peer

WHAT prettier sight can any one wish to see than a level, hard-working pack of hounds in covert? How they sing and drive, working like pointers, testing each clump of grass in hope of detecting a particle of the elusive quarry which they love so well. Now and then they charge ahead, feathering madly. This leads our huntsman to suspect that the hounds are on the "drag" (the line the fox left in coming to the wood early in the morning to hunt), and he cheers them on to draw with "Edawick, Edawick, Edawick!" Sampson gives evidence of giving tongue. "Speak! speak to it, Sampson; speak, good dog." At this half a dozen hounds fling themselves ahead of Sampson, eager to be the first to bound the news; but go, the honest fellows will not lie stent it even to please the huntsman.

So we move on through the wood. It begins to look as if we were to draw the covert blank. It is from this very wood a fox has three times led the riders this season, to make both hounds and hunters look foolish with defeat when they thought the game was as good as won.

Our huntsman's blood is up. He has studied over the last game, and has come to the conclusion that he knows the tricks Reynard played so successfully on former occasions, and has a well-matured plan of action—a sure winner—which he is very anxious to put into execution. Therefore, after he has drawn the covert once over he returns again to the very beginning, where the hounds seem most inclined to hunt. He seems more convinced than ever that there is a fox in this particular covert. The riders have meanwhile given up the idea of a find, and are riding aimlessly about, scattered all over the wood; some even are grumbling and asking, "What's the use of pottering round here all day?"

Presently, right in the midst of half a dozen riders, up jumps the pampered desperado. Hounds had already gone twice over the ground (sleeping faces give little or no scent, and if they are quiet, as they sometimes have the craft and courage to do, hounds will, as in this case, go right past them); the likelihood of the horses stopping on him was probably what caused him to move. Away he goes, counter to the direction the hounds are moving. Oh, the sly little devil! how he crouches and skulks along, his body set down to the very ground to make himself as little as possible.

Away he goes, in full view of half the field, who are certainly with "frayz raised." Such a shooting, raising such was never heard by a fox before. The woods were indeed a howling wilderness. It was certainly not the orthodox way of setting a fox on foot to chase him out of covert ahead of the hounds, but it was, as some one expressed it, "fun alive!" besides, this is an orthodox lot, and, what's more, this is not an orthodox day. On came the huntsman at full gallop through the forest, the whippers-in rounding up and cheering on the pack.

On came the hounds, with bairmaid leading. How proud she looks, setting the pace for her sons and daughters. Look! her backles begin to rise. She whippers—a whipper from her is as good as a find. "Speak to it, Barmad. Speak! Speak! good dog!" cries the huntsman, who now leans far over his horse's withers, with cap in hand, cheering on the pack with "Bossa him, rouse him, my beauties! Away with him!" and, sure enough, Barmad, with a fling to the right, hits off the line. On comes the straining, eager pack, with the fury of a bursting storm along the vale. First Barmad, then Villager, then another, then others, until in a full chorus the "heavenly music" fills all the wood like the grand finale of the great church-organ, with every stop let loose and every pipe doing its level best.

Now, my hearties, you may indulge your moments' No long already has resentment been upon them that their tempers are at the hottest edge, or well-sigh gone altogether. Who ever described this first burst of speed with hounds at full cry? It cannot be done.

A check at last—five miles in twenty-one minutes. From now on it will be down-wind. Reynard has made up his mind that there is no pass-in-covert game—that he himself is the "individual they would find." Therefore he turns short down-wind (the way the wind is blowing), that he may keep better posted as to what is going on behind him at the greatest distance, and

run no farther ahead of the hounds than the limit of his hearing. This enables him to rest occasionally, study the game, and mature a plan for his next move.

"Look sharp, huntsman!" But there is little need of caution. Our huntsman is as full of action as a boy killing snakes. He is fairly lifting the hounds, before they have made their own race, to a quick back-cut, down-wind. Right! A whimper, a challenge, and away we go, smoking along at a fearful pace, for the scent is heart-high.

"Oh," cries some one, "we are headed for Wheeler Gully!" Sure enough, the dreaded "Wheeler" is Mr. Reynard's point. Down the steep wooded bank we follow our horses, hanging on to the tails as they pick their way along steep treils, where a mis-step may mean disaster. We mount to jump the ditch in the bottom. What an awful hole we are in! 'Tis like being in the bottom of a well. The cold, damp air and sweaty stones make you quite sure of it. Then almost again for the ascent. Hounds are long since up the bank, and our heart goes down to zero as we hear the last faint echoes. This may mean that we are out of the game, and have seen the last of the hounds for the day, while we wallow and stagger and puff and blow our cheeks coarse up the hundred and fifty feet of this almost perpendicular gully, with our hearts fairly beating a hole through our chests and our minds in a state at the possible loss of the hounds. Every now and then our noble hunter comes to a stand, his knees shaking as if an axe chill was upon him. His pumping flanks, his drooping head, all tell how much we are taking out of him; and possibly to lose all in the bargain.

Now, then, partner, ease mora, and we are out of it. Dig your toe in and scramble for it. Bless your great big heart! but how your legs do shake, your tail butter; you look as if you hadn't a friend in the world. Wait a minute till we have recovered our breath. Look down into the hole, and see the poor struggling fellows coming after—how they claw and clutch and climb! Some horses are alone, their riders thrown off or lost their hold on their horses' tails, poor fellows! Crumb! What's that? Only an under-conditioned horse, whose heart and legs gave way to the strain, has toppled over when nearly to the brink; has rolled half-way down the precipitous bank, and has lodged head up against a clump of bushes, while the unfortunate rider, pale and trembling, stands speechless, looking on.

Now, another horse has quit. His legs are giving out entirely, and down he goes in the troll, resting heavily against a sapling.

What, partner, pricking your ears? Do you indeed hear the "heavenly music" (now more)? You are a game sportsman, and so mistake. You want to go. How you make us love you! We are with you, dear man, and the gods give us wings.

Steady, steady, my beauty; easy now. Down the slope we fall. Your legs are some too steady, and the field is full of hounds. What! I do believe hounds are returning, and are once more headed for the Wheeler Gully. Let us wait here. Now, my brave little mare, keep a good heart. May the hounds roll the culprit over before he reaches the Gully. Here they come! What a sight! The fox in one field, hounds in another, our huntsman—God bless him!—alone in the third. Oh, hounds,—you must go on; our more field means a return to the Wheeler Gully. It is not to be! Hounds are at fault again. Now, huntsman, come to the rescue with all your thirty years of experience; you need it all, you need it now, and quickly; a sinking fox is before you. A "tramp card," as you are fond of saying, is still "up his sleeves," and Wheeler Gully his priest. If you err in judgment now the game is up. What! hounds are being lifted. "As we live," says some one, "huntsman is making a mistake." "No, not he; 'tis a master stroke!" replies another.

The pack is brought on to the edge of the Gully, while the first whipper-in, with four good, trusty hounds, are laid on to the line. "Now, Mr. Reynard, come on. If you try for the Gully you must go through the pack to reach it. Treat very clever, your running fall. But you are outgeneraled again."

Away goes the whipper-in with his four, full cry, not for the Gully, but for the river. Mr. Reynard, do you mean it? No!

The Huntsman and Pack on the Way to Covert

and ministers of grace, defend me! There is not a ridge or a ford within a mile. It means a swim for it. Now, my brave little mare, you must harden your heart; the Gully was bad, but the river, with its steep yielding banks, is as bad or worse. Away goes the whopper;—on goes our huntsman with the pack to overtake him. Away race the riders, their horses quite rested, straight for the river. Hounds go plunging into the stream. Such courage! Not a waver or faltering one left on the brink. Biuehelle and Barmald for it neck and neck. See them breasting through it, and gamely giving tongue, while the current sweeps them along down the stream.

Down the steep crumpling banks ride our huntsman. The first whipper-in remains to hunt the pack should Reynard cross the stream. The second whipper-in comes along, and is looking for a place for himself. Fortunately the water, to begin with is shallow—log-deep. It might have been a hole twenty feet or more. On goes the huntsman, the water growing deeper. With such an example before us we wait our turn, three lines of us. Now the water rises,—the saddle, our boots are filling; another lough and our game little mare must swim for it. A sort of sickening feeling comes over us as we see the deep current moving by and feel the footing of our mounts giving way; fortunately it is only for a few feet. When drifting helplessly down-stream our horses regain their footing.

The worst of the adventure remains in the climbing of the valley, yielding back no horse can ever take a rider up it. It means that we must dismount, take the bridle rein with us, and with our mount scramble out as best we can on all-fours. Nobly done, good boy, but what a sight! No led knee-deep. You should see our new white riding-breeches! We lie on our faces, with our heels up, to empty our boots. The hounds and huntsman, though out of sight, are still in hearing, from behind a patch of undergrowth. We are just as well here for a moment, for the chances are that our game, now that he has us on this side of the river, will retrace it, and make for the Wheeler Gully, which was his original pit. Our huntsman has already executed a counterplot, and Mr. Reynard must again put on his thinking cap, or face the

On the Hunting-field in full Cry

gate. Can his mount ever do it after such a run? Let Williams tell how she accomplished it!

Whirls for the gate, will she tam't never fear it.  
Nearer she jumps it, gamely she tries.  
Is it too much for her? now will she clear it?  
Up it is, close to it, over she goes!

Who! Whoop! Who! Whoop! Among the flying chickens, squawking ducks, and squalling pigs. The Outlaw is called over by a touch from Barmald, and the brush, snook, and pads are extracted.

High over his head the huntsman throws the remains to light in the teeth of the surging pack, while everybody cheers on the departing spirit with—

For he was a jolly old fellow,  
He was a jolly good fellow;  
No one disdains to give him  
As we now can say.

Out come Mr. and Mrs. Farmer to—

Applaud the glorious deed,  
Add, grateful, call us to a short retreat,  
In a full glass of brandy stout (brandy),  
Our due tribute! And his good smiling mate  
With cheerful voice brags the liberal host,  
To crown our triumphs and reward our toil.

riders on both sides of the stream.

"It's your turn next, Mr. Fox. Take your time, while we scrape the thickest of the mud from our boots and breeches and gloves."

"Must be off. Hounds are at it again full cry. In the next field, with brood-mares, colts, and bull-dogs taking the fence, they run their game from scot to view."

"Now, little mare, summon up all your courage; the end is at hand."

There is little left in fox, hound, horse, or man.

Hi! Hi! Hi! Call the riders in one rallying cheer. Reynard heads for a farmyard. Can he make it? Biuehelle, Barmald are within a yard of his brush. How he calls along; yes, under the barnyard gate he goes, the pack hard after. But look! our huntsman is going to take that

## The Invention of Smokeless Powder

By Sir Hiram Maxim, C.E., M.E.

ORDINARY black powder is a mechanical mixture of nitrate (nitrate of potash), charcoal, and sulphur. When it is ignited, the oxygen which forms a part of the nitre combines with the carbon and the sulphur. The sulphurous acids combine with the nitrate of the nitre, and the whole becomes nitrate of barium. The porous parts expand with great force and produce the explosion. The nitrate, however, which is converted into sulphate of potash, is a solid, and this is the source of smoke. It will therefore be seen that in black powder the oxygen for consuming the combustible materials is imprisoned in a solid, and when the oxygen is given up the solid still remains, producing the smoke. Artificers sought for a long time to discover some source of oxygen which should not be encumbered with a solid. Many years ago gunpowder was employed in sporting arms as a smokeless powder, but it was too unreliable and dangerous in its action, and was abandoned.

In 1866 I commenced a series of experiments in Scotland, with a view of producing a high explosive which might be safely used as the bursting charge in large projectiles. These experiments were continued into the beginning of 1887, and, as often occurred, led to discoveries which were not at first anticipated. These experiments demonstrated that a slow-burning compound could be made from two of the most violent explosives, namely, nitroglycerine and gunpowder. I succeeded in making the violence of one explosive wipe out, as it were, the violence of the other. The nitroglycerine and gunpowder together formed a hard plastic compound which could be spun out into threads by placing the material in a powerful press and forcing it through small bores. Thus early in 1887 I made the first cordite, and probably the first smokeless powder ever made in Great Britain.

About the same time the French government experimented, with

a view of developing a suitable smokeless powder to be employed in the "Lebel" rifle. The first French powder was pure gunpowder. I did not at first avail myself of the discovery which I had made, as it was generally understood that no government would look at a smokeless powder which contained nitroglycerine. My decisive protest! And his good smiling mate  
With cheerful voice brags the liberal host,  
To crown our triumphs and reward our toil.

Sir Frederick Abel and Professor Dewar, two eminent English chemists, shortly after this made a smokeless powder containing fifty-eight per cent. nitroglycerine, thirty-seven per cent. gunpowder, and five per cent. cylinder oil. However, when the great cordite case came on in England, Sir Richard Webster, then the British Attorney-General, admitted that I was the first to make a smokeless powder containing nitroglycerine and gunpowder.

Nobel's ballistite, which was invented in 1888, contained sixty per cent. cordite, cotton (di-nitrocellulose) and forty per cent. nitroglycerine. This powder is extensively used on the Continent. But it has been found that when smokeless powders contain a considerable quantity of nitroglycerine, the erosion or wearing away of the gun due to the escape of the gases past the projectile is very great indeed—in fact, so great that the arm is very rapidly destroyed; so we find at the present moment that there is a tendency to greatly reduce the quantity of nitroglycerine employed, or to do away with it altogether. Nitrated wood pulp, instead of nitrated cotton, is used to a considerable extent in many forms of smokeless powder, especially those which are employed in shot-guns.

# The Bread We Eat

By Harry Snyder

Chemist of the United States Agricultural Experiment Station, University of Minnesota.

**A** FLOUR is valuable not alone for what it contains, but for what the body can get from it. As an extreme example, leather contains about eighty per cent. of protein, but in such a form that the body cannot utilize it; on the other hand, a juicy beefsteak has only eighteen per cent. of protein, nearly all of which is available to the body.

While Graham flour contains slightly more of some nutrients than white flour, the Graham is less digestible, and the result is that there are more available nutrients in white bread. The body secures from it more energy. A number of investigations have been made upon this point. Every digestion experiment which has been made has shown that white bread is more completely absorbed by the body than whole-wheat bread. So many experiments have been made in so many different places by Rubner, Goodfellow, Meyer, Emsberg, Voit, and later by the United States Department of Agriculture, with the same general conclusion, that it is safe to accept the results as founded upon good experimental evidence.

The recent experiments by the United States Department of Agriculture have shown that the gluten and other nutrients in Graham bread are less completely digested than the same nutrients in white bread, the bran and other wheat offals in the Graham flour lessening its digestibility. This conclusion has been reached from a series of comparative digestion trials covering a period of six years. A number of men in sound health were experimented upon; some were young men, others were elderly; men of both sedentary and active habits being included in the trials. A teamster, a college athlete, a naturally lazy fellow, and both corpulent and lean men were subjects of experiment. In one set of tests, the men were fed for several days upon Graham bread and milk. Then white bread was substituted for the Graham, and for the same number of days the ration consisted of white bread and milk. All of the food consumed was weighed, and samples were analyzed, as were also all of the waste products from the body. The Graham and the white flours were milled from the same lot of wheat. The conclusions reached is briefly stated as follows: "According to the chemical analysis of Graham, entire-wheat, and standard patent flours milled from the same lot of hard Scotch Fife wheat, the Graham flour contained the highest and the patent flour the lowest percentage of total protein (calculated matter). But according to the results of digestion experiments with these flours, the proportions of digestible or available protein and avail-

able energy in the patent flour were larger than in either the entire-wheat or the Graham flour. The lower digestibility of the protein in the Graham flour is due to the fact that in both of these a considerable portion of the protein is contained in the coarser particles (bran), and so resists the action of the digestive juices and escapes digestion. Thus while there actually may be more protein in a given amount of Graham or entire-wheat flour than in the same weight of patent flour from the same wheat, the body obtains less of the protein and energy from the coarse flour than it does from the fine, because, although the insolubling of the bran and germ increases the percentage of protein, it decreases the digestibility." White bread supplies more available nutrients to the body than bread made from Graham, entire-wheat, or any other kind of flour milled at the present time.

Graham bread has its place in the dietary of some persons of sedentary habits who do not have sufficient physical exercise. In such cases the bran exerts peristalsis, gives the muscles of the intestines needed exercise, and assists in correcting constipation. This is a purely physiological action, and is due mainly to the mechanical action of the branny particles upon the intestinal tract.

While white bread contains more available nutrients in the form of gluten and starch than Graham bread, it is claimed by some that Graham is preferable because it contains more available phosphates. Experimental evidence does not bear out this claim. The phosphates of Graham, like the gluten, while greater in amount, are in less available forms than in white bread. A rational white bread alone contains sufficient phosphates to establish a phosphate equilibrium in the body of an adult; and, furthermore, not all of the phosphates of white bread are absorbed by the body, and if more were needed, they would be digested and absorbed.

Dr. Robert Hitchcock, of the London Hospital, in his recent work on Food and the Principles of Dietetics, states that "When we pass on to consider the relative nutritive values of white and whole-meal bread, we are on ground which has been the scene of many a controversy."

"On the whole, we may fairly regard the varied question of whole-meal versus white bread as finally settled, and settled in favor of the latter."

Those who really enjoy Graham bread and find that it agrees with them should continue its use. The beneficial results it secures from increased nutrients secured from the food, but from the mechanical action of the food.

## My Discovery of the Mississippi

By Julius Chambers

**T**HE large White Earth Indian Reservation in Minnesota, occupied by five tribes of the Chippewa nation, has just been thrown open to colonists. It is an area of 1148

square miles, lying between the Red River and the young Mississippi, and includes thirty-two townships in the three counties of Norman, Becker, and Beltrami. The reservation's eastern line abuts upon the range of ragged, volcanic hills that surround the source of the "Father of Waters"—a mentally repellent region of indescribable desolation. This event draws renewed attention to the Hassen region and the discovery of the head waters of the Mississippi.

My trip to Hassen in 1872 led to the discovery of a lake beyond the then reputed source of the Mississippi. Sir Samuel Baker was then at the sources of the Nile, completing the work of Speke and Grant; but very little was known regarding the head waters of our great Northern American River. Nevertheless, in 1812, I had discovered and named Hassen Lake; Nicollet, in 1836, had confirmed the researches of his predecessor.

After reading all the reports of these explorers on file in the Congressional Library at Washington, I was bound to admit that there were not only those who could not spend only a few hours in the region; Nicollet's work had been more thorough, but his reports dealt chiefly with one feeder of Hassen Lake, Cur-

Map showing the Head Waters of the Mississippi, with Elk Lake, its source, which was discovered by Mr. Chambers

sonderer with Rev. W. T. Boutwell, of Stillwater, Minnesota, who had accompanied Scheraff, disclosed the fact that he had suggested the two Latin nouns, "veritas caput," from which the practical but unscholarly Scheraff coined the name "Hassen." This curious misuse of Latin strengthened my suspicion that the explorer's investigations had been as superficial as his language. Of course, the adjective form for "true source" should have been "verum caput"; "Hassen" would have sounded like excellent Ojibwa, although it carries a suggestion of "any water."

But, not wishing to be a party to controversy regarding the work of other travelers in the Hassen country, I content myself with asserting a claim conceded to me by Commissioner Brown and the Minnesota Historical Society, namely, the discovery of actual maps to be the ultimate reservoir of the Mississippi.

When I set out from New York, in May, 1872, the entire Hassen region was a blank upon the best map of Minnesota that Cotton could make for my use, and the State Surveyor in St. Paul could not interfere on that point. The surest means of contact to the district was the Northern Pacific Railroad, but building across Minnesota, the headwaters of the Mississippi, the train was highly problematical.

I travelled by way of Chicago, St. Paul, Duluth, and Brainerd.

to Oak Lake station. The new prosperity at the head of Lake Superior, Duluth, was then only a village of white frame houses, standing in a clearing on a side hill.

A wagon carried us from Oak Lake twenty-odd miles over the prairie to White Mountain, where I became a guest of a "daughter of 'Hole-in-the-Day,'" a child, distinguished among the people of his race. At that point the expedition fitted out. We were a party of four when we left White Earth Mission—two Chippewa carriers, a French-Canadian guide, and myself.

Our route lay by Lake Umbagog, through tracts of fallen timber—some tomanio pulp requiring half a day to cross—over a desert of red sand from which all trees had been burned. Never saw I such a bleak and desolate region as this last mentioned until two years ago in Nain, between Assomau and Shellab.

The Itasca Highlands were entered. They are outside the White Earth reservation. We forded through tremendous tamarac bogs filled with thorny underbrush, until we emerged, at the end of our fourth day, into a meadow two miles broad, from side to side of which meandered a sluggish stream. It was twelve feet wide at that point, twenty-odd miles north of Itasca Lake, but it was the Mississippi!

Two days' climbing up-stream brought us to Schoolcraft's Lake. The task was fraught with much hardship, for the river was filled with bowlders and travel by canoe was impossible. Bents and provisions had to be "ported."

We remained at Itasca four days, during which period I explored every foot of its coast line, and prepared a sketch of its afterward printed by Lydon of New York. That sketch map was inaccurate in some respects; but let it be remembered that the present survey was not made until three years later.

At the time of my visit no trail existed leading to or from Itasca Lake. The pioneer settler, Peter Turnbull, did not locate on its shores until September, 1858—sixteen years later. On the first day at Itasca I observed a small stream that entered its southwestern arm, and followed it to a smaller lake beyond. This was Elk Lake. That stream, connecting the Itasca reservoir with the larger body of water, has been named in my honor by State Commissioner Brower.

Itasca Lake resembles a three-pronged starfish more than any other notable object, animate or inanimate. It has been likened by a recent writer to "an expanded U with a handle." The lake is about three miles in length from its outlet to its eastern or western extremity. A low bluff, resembling that upon which many Mississippi River towns are built, faces the outlet. The highest hills in the locality are seen in the eastern background, and are the dividing ridge between Leech and Itasca lakes. They are covered with white and Norway pines. The promontory that extends into the lake from the southward is high and dry. It is well timbered, and would be a fine site for a village. The extremity of the western arm is filled with grass, through which the stream from Elk Lake enters that from a chain of small ponds, known as the Nieldlet lakes, enter Itasca. The western shore is low, bluffs of ten feet in height rising half a mile back from the water. The higher ground is well wooded, but tamaracs, fir, and birch cover the low lands. The single island in the lake is a narrow ledge of rocks, three hundred feet long, and is located near the point at which the three arms of Itasca join.

Those were busy days spent at Itasca and Elk lakes. Our camp was pitched near the outlet of Itasca, and from that point we started each morning at daylight. Accompanied by two paddlers, I first worked southward along the eastern coast line, round a bluff that enters the lake opposite Schoolcraft Island, then into a cove full of grass and floating soil. Thence we followed the east shore, looking for the mouth of the stream from Elk Lake by which Schoolcraft and Nieldlet had come. Not a stream entered the lake until the extreme southeastern point; there a rivulet trickled down a gully. Disembarking, I walked up that ravine to the crest of the hill, at which point the brooklet had disappeared. I saw no signs of a lake; but the official survey shows that a pond forms there in the rainy season, and doubtless overflows into the lake.

The coast line of the hilly promontory that intrudes itself into Itasca was laboriously scrutinized, and does not contain a single inflowing creek. On the north side of the next arm, near its extremity, I noticed a stream of clear water, six feet wide, entering the lake below the grass line. It clung to the edge of a

tamarac swamp, having a low bluff on its western border. Although much encumbered with brush and fallen logs, the presence of an outflowing current was unmistakable.

With difficulty, owing to shallows and obstructions, I pushed through to a pretty lake, near its margin. Recent survey proves that the distance separating Itasca and Elk lakes is only 1400 feet, but on that June day the way seemed much longer. I remember that more than an hour was consumed in making the trip. On the right of this neck of land between the two lakes is a picturesque knoll, since named Marquette Hill, was upon this spot a giant tree trunk, decayed of bark, bears the name of pioneer explorers of the locality.

Elk Lake is a pretty sheet of water more than half a mile long by a third of a mile in width, and lies in a basin formed by low hills on three sides. Tamarac swamps, interspersed with dry timbered spots, are to the southward. It is fed by three large streams, all of which are more sturdy than the affluents of Nieldlet's series of small ponds. At the northern end of Elk Lake is Chamberlain Bay, that Commissioner J. V. Brewer, of the Minnesota Land Office, has named after his discoverer.

After leaving Itasca Lake, I spent two months on the Mississippi. I paddled my canoe as far as Alton, Illinois, where I took steamer for New Orleans.

The descent of the upper river through the three large lakes shown on all maps of Minnesota was a highly interesting experience. Once out of the Itasca Highlands, two days' paddling Marquette River, a larger stream than the Mississippi, in which it loses its identity, two miles farther was Lake Pepin—in reality two bodies of water connected by a strait hardly a hundred feet in width. To this day I recall the high copper-colored cliffs on the northern shore of Pepin], six miles away. Emerging from the smaller or southern part, the main body is liable to give a nervous chill to a timid craftsman. The pull to the outlet is across four miles of rough water.

The Mississippi flows placidly out Pepin], through a charming forest of hemlocks and hardwoods. So clear is the water that the pebbly bottom may be seen at a depth of ten feet. Fish were very plentiful, and the Chippewas speared many of them. At the end of a mile the banks became rocky, and a bend in the river disclosed an angry rapid. The current swept headlong among jagged boulders, requiring active work to prevent disaster. Seven miles of similar rapids follow before the descent to Cass Lake is made. Many narrow escapes occurred. The wreck of a boat in the wilderness would have been a serious occurrence.

Although Cass Lake looks like a large body of water upon the maps, it contains so many islands that it can be navigated in canoes without hazard. I camped that night at the mouth of Turtle River—the stream that General Cass and Beltrami have named after the Pottawatomie tribe. The person who named those people did well. My fishing-tackle and cooking utensils were all washed away. Lake Cass is very shallow, and its shore line is thick with rushes. It is probably a highly malarious region.

The upper Mississippi between Lakes Cass and Winnepesaukee, is well remembered as a sequence of hard-frozen rills about two feet above the water. A sod of linnælike smoothness is underfoot; the Norway pines are so tall they do not obstruct the sunshine. Not a particle of underbrush was seen.

One mile from the entrance to the lake I went ashore and ascended a hill to get a view of the largest inland sea of the Mississippi watershed. It is a highly impressive sight to the traveller who knows that ten miles of open water must be crossed in a frail canoe! Northward, along the coast, we found a pretty knoll and went into camp.

The morning opened with a half-gale, and we were "wind-bound" for two days. Oceanlike surf rolled upon the shore, and the broad expanse of water was covered with whitecaps. We crossed "Little Winnipeg" as the lake is called to distinguish it from the larger body of water near the Manitoba frontier, on the fourth day. It was not a pleasant experience, and proved to be the most dangerous incident of the entire journey.

The creation of the Itasca State Park—due to the cooperation of the general and Minnesota governments—it will preserve the source of "the Father of Waters" as a national property, that everybody may visit, in the near future, when the railroads are extended into its domain.

Elk Lake, the Source of the Mississippi, Discovered by Julius Plancher

lived to be the Mississippi. I was visited by members of the Pottawatomie tribe. The person who named those people did well. My fishing-tackle and cooking utensils were all washed away.

### "LADY ROSE'S DAUGHTER" ON THE STAGE

The dramatization of Mrs. Humphry Ward's novel, "Lady Rose's Daughter," by George Fleming, was produced at the Garrick Theatre, New York, on November 16. The plot of the novel carries slightly in the stage version. "Warkworth" does not die in Africa, as in the book, but returns to England, and is married by "Lady Henry" to be present at the wedding of "Julia" and "Jacob Holmfeld," in the hope that "Julia's" infatuation for him will be revived. The plan fails, however, for "Julia" declares her devotion to "Jacob," and becomes his wife and the Duchess of Cheshire.

**MISS MARGARET ILLINGTON IN "A JAPANESE NIGHTINGALE"**

Miss Illington plays the part of "Yuki" in William Young's adaptation of Onoda Watanabe's novel, "A Japanese Nightingale," now running at Italy's Theatre, New York. The action of the play, which departs in several respects from the plot of the novel, turns on the complications which follow a marriage between "Yuki," a Japanese girl—and "The Japanese Nightingale"—and a young American, "Jack Ripston." The United States Consul at Tokio, with whom the record of the marriage has been filed, is killed by "Ripston's" cousin, and the records of the marriage stolen. The heroine is also stolen by the conspirators, and when "Yuki's" brother appears and demands proof of the marriage, none is forthcoming. "Yuki" becomes a prisoner in order to save her lover from persecution, but in the end is united to him.

WHERE NEGROES MAY NOT COME

CAMBRIDGE, MASS., November 5, 1902.

To the Editor of *Harper's Weekly*:

Sir.—In a recent number of *Harper's Weekly* the statement was made that a traveling "township" in the South into which no negro was allowed to come; and that from other regions negroes were not allowed to depart. Several Southern journals have taken issue with this statement upon two grounds. First, that there are no such things as "townships" in the South, and therefore the whole is false; and, second, that "the only parts of this country where negroes are not permitted to live are sections of Ohio and Indiana." Neither of these lines of argument seems conclusive against the evidence of those who have observed both these phenomena.

It is true that there are no "townships" in which negroes are forbidden to live, because townships in the South are called "parishes" or "precincts"; but it is equally true that there are regions, areas, counties, or what you will, that are surrounded by an invisible wall which no negro is allowed to pass. The particular county, the existence of which is thought impossible by your Texas and Tennessee contemporaries, is Mitchell County, North Carolina, inhabited by mountain whites who have never held slaves, and in anti-bellum times felt anything but cordial toward their slave-owning neighbors. A typical white of this type was Elton R. Helper, who in 1857 published a book called *The Impending Crisis*, which was intended to persuade his poor white neighbors that the rich planter got all the profits of slavery.

For the benefit of those who are not correspondents who dwell in the lower country we may say that many thousands of square miles in the mountains of the South are inhabited by people almost exclusively white, and that there is more than one county in which negroes who attempted to enter would be driven out with shotguns, provided the instrument did not begin to work before the mark at which it was directed disappeared. The Constitution of the United States has a significant clause to the effect that "the citizens of each State shall be entitled to all the privileges and immunities of citizens in the several States." It appears to have escaped the attention of these lively people in North Carolina and of many other of our Southern neighbors, as well as of some people in Illinois and other Northern States, that this clause asserts the right of any citizen of the United States, black or white, to be able to travel from one township and his family to every line of any State, and presumably to move about within the State in which he lives. Of course fire does not come out of heaven and she-bears do not descend from the mountains to dispose of people who deny this right of migration to their neighbors who happen to be negro citizens. Yet it is not always a good thing to ignore the Constitution, for that process may work both ways: if negroes may be kept out of a county because they are not liked, why may not white men of foreign birth or natives who go to find a job be kept out of a county?

No Southern newspaper has denied that the negro is not allowed to leave communities in which he does not feel comfortable, because everybody in the South knows that the emigration of negroes on a large scale is never permitted. In 1880 somebody tried to start a brigade of negroes to Kansas. Thousands of them made the start, and boarded trains, or loaded themselves on river steamers, having the money in their pockets wherewith to satisfy the legal demands of the transportation companies; but in many cases they were obliged to lose some of the coupons on their tickets, because the boats and trains were stopped by men armed with the shotgun, that detainer which does not wait for the adversary to reply. The negroes were driven back, and several of the Southern States at once placed laws on their statute-books making it a serious misdemeanor or crime to induce people to leave the State and go to another State without a license, and the license fee in one State was humorously placed at a thousand dollars. Nor is a formal statute considered necessary for the protection of the South from the people whose presence seems to be so disagreeable. Within a few weeks a negro was shot in Mississippi as the result of a row the cause of which was that he was trying to get other negroes to go somewhere else and take work. Everybody who knows the South at all is aware that no organized movement of negroes will be permitted, even out of one Southern State into another Southern State.

What is the reason that communities that have no negroes are ready to shoot members of the colored race to keep them out, and those that have many are ready to shoot them to keep them in? The reason is as brutal as blowing cold and blowing hot: The Southern white people do not cordially like the negroes in any relation, and many of them speak with unfriendly disrespect of our Northern ancestors who brought the African to America. In respect to the Southern States, many of the white habitations own their own farms and can get on without hired laborers, they prefer to make it in all respects a white man's country, but in the cities and the thickly settled cotton-growing regions the negro is the backbone of the economic life of the community. If the negroes should all take ship for Africa, who would chop the wood to-morrow morning, and who would make the fire, and who would cook the breakfast, and who would serve it, and who would dress the calves, and who would hitch up the horses, and who would ply the plow, and who would cultivate the rice? Although there are thousands of white men working for wages in the South, the negro does so much of the coarse labor that without him the community could not keep up civilization. Foreign immigrants into the South, and into the very few workmen from the North. Hence, an exodus of the negroes would mean ruin for the South.

Nevertheless, thousands of negroes are now moving out of the

Southern States in ones and twos and threes and families. There is probably not a negro builder in the South who does not know that if he could get employment in New York he would earn double or triple the wages. Many of the most forward-looking of the Southern negroes go North because they hope for better schools and advantages for their children. Indeed, a very thoughtful, though caustic, leader of Southern opinion declares that he advises his people to educate the negro just as much as possible, so that he may learn enough about the rest of the country to go away and leave the South and let the North see how like a negro station. Thousands of negroes are now settling in Pennsylvania, Ohio, Indiana, Illinois, and States farther North. They move for the same reason that 250,000 white people have left North Carolina since the civil war—because they think they can do better elsewhere. Nothing would stop them short of the old-fashioned "lor-a-de-wa" patrol system, which stopped every person of color on the roads to find out where he was going and whether he had a written pass from a white man. This process of slow migration leads added interest to the lives of both sections of the country. The Southern people are stirred up because they are losing that part of the negro population that would be most useful if it stayed; and the North will sooner or later wake up to the fact that it is soon going to experience the pleasure of trying to keep too races content within its own limits. I am, sir,

ALBERT BRUNNELL HART.

## THE REAL MEANING OF SPORT

DES MOINES, IOWA, November 5, 1902.

To the Editor of *Harper's Weekly*:

Sir.—I am surprised to find my lifelong friend HARPER'S WEEKLY sharing with other magazines in the exhibition of English and Continental gamesmanship and its kind of sport. No man of kindly heart can read of the wretched stag-hunting affairs, as depicted in your article on "Wild-Stage Hunting in France," without protesting against the merciless and barbarous hunter, and without feeling a choking thirst of pity for the hunted.

The people of the United States may not yet have reached a perfect understanding of the ethics of true sportsmanship, but they have advanced so far beyond the spirit of the chase depicted in your article as to raise pride and gratification to every citizen among us. Running deer with dogs is absolutely foreign to the spirit of sportsmanship in this country, and the feeling against this practice is so strong in some communities that bounds which trail deer of their own volition are sometimes destroyed by persons who take the law into their own hands for the protection of game. Such a case came to my notice recently in the back-hills of the Adirondacks, and in northern Wisconsin the man who runs deer with bounds is regarded as a degenerate and a menace to sport. This is a natural manifestation of the American idea of "fair play."

Knowing these things, and feeling a deep regard for the rights of hunted animals, I have been grieved to read in your columns words which sanction the most barbarous practices. I really mean barbarous. For your sake it is always diminished, other conditions being equal. Such a case came to my notice recently in the back-hills of the Adirondacks, and in northern Wisconsin the man who runs deer with bounds is regarded as a degenerate and a menace to sport. This is a natural manifestation of the American idea of "fair play."

I am glad to know that "the spirit of the chase" in France is, in my opinion, a greater respect for my honorable countrymen, whom one often imagines—especially in the height of the game season—deplorably lax in questions of sportsmanship. But I feel sure that this contribution has, by some chance, evaded the searching eye of justice with which HARPER'S WEEKLY has always viewed every question concerned with the upholding of national character. By all means let us about those things. They are instructive and helpful. But do not let an American critic applaud them. And yet there be used only as contrasting examples with which to reveal the true intent and spirit of American sportsmanship. You will find no more worthy cause than this to which to open the pages of your WEEKLY. I am, sir, F. E. EBBEL.

## A MONUMENT TO ANDREW H. GREEN

NEW YORK, November 5, 1902.

To the Editor of *Harper's Weekly*:

Sir.—As chairman of the Citizens' Committee which prevented the destruction of New York's beautiful City Hall and park, may I suggest that an adequate law be enacted providing that the present New York City Hall and park be forever preserved as a monument to "The Father of Greater New York," Andrew H. Green.

He asked me to form the committee, and aided in every way to prevent the destruction of what he considered New York's most historic and artistic public building.

Such a memorial would necessarily be unique, and I believe harmonious with his ideals.

Should the other buildings in the park be removed, leaving the present City Hall building alone therein, another of his ambitions would be achieved. I am, sir,

JOHN WINFIELD SCOTT,  
Chairman.

## THE SHADOW OF A TRAGEDY

BY CANDACE WHEELER

IT was near a small railway station known as "Willow Tree," that the shadow fell. The scene of it was a small white house placed near what was then known as the Hempstead Road, on Long Island. It had not at all the look of a house doomed to tragedy, as certain houses unmistakably have; it was simply a home, by the wayide, built by an honest carpenter, containing just the number of rooms consistent with his ideas of comfort. The white clapboards and green blinds were kept up to the neighborhood standard of whiteness and cheerfulness. There were plenty of houses in the neighborhood which looked far more appropriate to the things which happened in this one—houses with high old mouldy roofs, and searotic wooden shutters, and wells of mysterious and assumed depths—but nothing more awful than births and marriages and deaths had ever happened in them—three things the awfulness of which would be unquestionable if they did not happen, in their turn, to every human soul.

This house had been bought from the thrifty carpenter by a woman over whom everybody who knew her had been tender-hearted and enthusiastic ever since she had grown into womanhood. On this particular morning when my chronicle of the tragedy begins, she sat at the breakfast-table spreading bread-and-butter for three children, who had finished their breakfasts and were going through the regular morning rout for the school paraphernalia belonging to each.

She was lovely to look at, clear-browed and soft-eyed, dark-haired and coral-faced, with a skin like new ivory. It was not the kind of face which is impervious to all emotions, as if it were covered with a shell, for every thought seemed to smile or shine through it and make itself friendly with the world. Perhaps that was the special charm with which she wielded humanity.

She was wearing this morning a black lustrous gown, which gave itself to her motions as if it were some live material like the velvet skin of a mole. Instead of being dead and dyed like women's old cloth. You could not imagine her in any other costume than just this one. If there was a subtle suggestion of widowhood in it, it would seem as if she was born widowed.

As she finished spreading the last slice of bread, she announced in a voice which was charming enough to have been the only and sufficient charm of any other woman.

"I am going to town this morning, and shall take the 8.30 train from Willow Tree, and return on the 1.10."

In answer, four young people of various ages exclaimed together, in tone different degrees.

"Oh!" "Why?" "What for?" "Don't!"

The fifth and lacking exclamation seemed to stand like an interrogation point in the eyes of a tall young man who sat at the foot of the table and looked tenderly across it at the coral-faced woman. She smiled back across the space at him, and at the eighteen-year-old daughter who had made haste to speak, and at the three small girls whose mouths were still open waiting for more words to pass. The daughter was graceful, slender, and positively pretty, but looking at the moment half disinterested and remonstrative.

"I know," said her mother, answering the look, "that you are going to Miss Van Brunsweaver's luncheon, but Ben will see to the children, and I really must go; so good-by, all of you, dear;" and with an impulsive caressing gesture she left the room.

Else rose after a moment or two and followed her, thinking she would help her mother pin on her veil, and perhaps get an explanation of this sudden and unexpected sitting to town. She found her already in the hall, with the broad black hood under her chin well pulled out, and her gloves in her hand.

"I have some shopping to do, dear," said she, hurriedly, "and I shall be back early; so good-by, and have a good time," and she hurried down the steps.

A noble willow tree shaded the railroad platform, giving its name to the stopping-place. There was no house, not even a shelter. Before Mrs. Hamilton reached it her tall son Ben was waiting beside her. When they stood together in the rippling

shadows of the willow branches, Ben leaned towards his mother, and putting a finger under her chin, lifted her face to his, as one does that of a child. "What is it, mammy?" he said.

There was no answer in words, but a sudden convulsion, like a stifled sob, passed over her face, leaving behind it a frightened, heated look, the helplessness and hopelessness of which struck her boy to the heart. Then he was conscious of the coining of the thundering train, and her momentary grasp of his hand, and she was gone.

When the mother's brief journey was ended, she crossed the town on an unaccustomed street, and came out on Madison Avenue, dreading her errand, and yet hurrying to its conclusion. She rang the bell of one of the sober, half old-fashioned brownstone houses of the avenue, and handing a card to the servant, turned into a room where a dozen other persons were sitting, hoping in her own heart that she might not have to wait until her desperate cousin was quite gone.

It was a part of the personal welcome which always attended her that her card brought an immediate message from Dr. Bliss, bringing her into his consulting room. He met her with two outstretched hands and an unmistakable welcome.

"Well, Kate," going back at once to the child's and girl's name by which he had always known her—"well, Kate, and how goes the world? You have not come to see me because you are ill, for you are fine, fine!" And the doctor smiled at her in a way that brought a sudden warmth to her heart. She was smiling back at him, with her hands still held in his. It seemed as if she was like Kate once more, and her father had come back, and for one brief moment the trouble dropped out of her face. The doctor was still looking at her with his keen, shrewd eyes, and almost with an effort kept the smile on his face, while her fingers fluttered and passed.

"And the children," said the doctor. "How is my aged friend Ben, and pretty Elsie, and the youngsters? None of you have come to see me for a long time. It is my misfortune that nobody comes to see me for pleasure."

His broadside of cheerfulness had its effect, and the positiveness of assertion was authoritative, and, above all, comforting. She took hope by the hand and held it, and yet she trembled as she said, "Doctor, it is not the body; it is the mind."

There came the laziest difference, a fitting difference, like the shadow of a swift-flying bird, in the look with which the doctor regarded her, but his smile remained.

"Well, well! I don't credit it a job! But tell me all about it."

She was mute for a moment, a quiet moment in which she heard the door-bell ring, and waited half unconsciously as if it were a messenger which she had to do with, until another patient had been ushered into the distant waiting room. Her lips moved without sound, her eyes half covered themselves with their lids, and then an almost whispered sentence fell from her lips into the silence—

"I see apparitions," said the doctor. "Nonsense! You have eaten something that disagreed with you, and couldn't sleep after it;" and he frowned at her as if she had committed the unforgivable sin, saying, "You know it!"

"But I don't," she protested, with a faint gleam of amusement at the ways of this dear old friend and physician. The smile laden as she added, "I see them often, and you know—you know."

Yes, the doctor knew; he knew the story of the sad beautiful Aunt in his old friend's home, and of the young and beautiful girl who had suddenly dropped terror, and after three haunting years, had as suddenly dropped her torments and came smilingly to meet death. He remembered how he had loved that Kate; she was his first dream, and she had known that she loved her, she had known it, perhaps, through all the horrors of her madness. Certainly she knew it in the brief interval when she walked so gladly into the land of sleep.

The doctor's eyelids quivered, and his strong mouth settled into firmer lines. "Kate," said he, very gently, "it is different with

**WHERE CAPITAL AND LABOR STILL WORK TOGETHER.**

It is pleasing and profitable to do business where this is true. This statement is verified in Georgia by the extraordinary growth of the manufacturing industries. One reason for the excellent understanding between wage-workers and employers is largely in the character of the population. It is an Anglo-Saxon people and thereby well educated. The South's natural destiny of the Georgia resources makes them good operators. A cotton mill in that State is opening year up to 100, with active labor, after one year's training. The South's cotton mills since their first year in England and the fact is not far distant when it will surpass old England. The West has been aided up by immigration and prices are high on all kinds of property. In Georgia there is yet more for investment, and the time of opportunity is wide open. The day of materialism has already had an appreciable effect on local values. In a few years everything will be higher. The time for investment is before this when the Georgia Georgia Association was organized to make the State a success known all the world. Many of the most progressive towns and cities have voted in this month, and leading Georgia citizens are active. The President of the Association is the President of the Atlanta Chamber of Commerce, and the Treasurer is the member of the Atlanta National Bank. The Secretary holds a fine position with the Atlanta Chamber. For information, address G. K. PATTER, GEORGIA ASSOCIATION, ATLANTA, GA. Mention Harper's Weekly.

The doctor sprang up. "You!" said he, wrathfully. "You to take up this notion!" Ben roused himself. "I must get home as soon as I can. There must be some reason for it," he explained. And he disappeared through the door. The doctor rushed after him. "Come back, come back," he said. "I will drive you out. We shall get there sooner than by train."

The horses were at the door—a pair of thin California bred trotters. As they neared Ben's house, a strange dread and curiosity settled upon them both. When they came to the hearth of a little slope and looked down at the house, it was as if their apprehensions had taken bodily shape, for a close-covered black wagon waited in front of it, and five or six figures of men were standing in excited talk around the wagon. Ben sprang out and stood among them. A neighbor beckoned him with a finger.

**The Solution of It**  
A boating get away from a private asylum three weeks ago, and they think he is here."

"Stand by my horses," said the doctor to the men. Ben unhooked the door, and three or four men followed him and the doctor into the house. They went through the bedrooms, looking into closets and wardrobes and under beds, and Ben thought, with a shiver, of this unquieted intelligence roaming through the house by night and by day, seeking literally what it might devour. Nothing remained unexplored but the garret. But there was nothing there—nothing but the usual furnishings of garrets. No shape of man or beast, or of that terrible thing, the head-man, for whom they were looking; but in a corner under the rafters was a pile like the hair of a wild animal. Everything in the garret had contributed to it. Winter clothing which had been hung there during the summer had been spread upon the floor, and ends and ends of every sort, with trunks of heads, and bottles, and candle ends.

It was an episode of suffering and degradation Ben gazed at it speechlessly, and walked away, with the men from the asylum stood examining and conjecturing. "Let us go down," said he.

**FOXY GRANDPA**

A handsome book in boards 1 1/2 inches, with an embossed cover in five colors. This book has 96 colored pages of fun for old and young. The jolly old gentleman, dead to grown people as well as children, might almost be called the "Mr. Fawcett" of comic pictures. The success of the series in the New York Herald was instantaneous, for who has not heard of Foxy Grandpa and Bunny? Everybody should have the Foxy Grandpa Book in their household; it keeps boys and girls amused for hours at a time. It makes an interesting and beautiful present.

## Delightful Comfort

Nowhere can a person secure more real, delightful comfort on a railway journey than on the great trains over the Lake Shore and Michigan Southern Railway.

And this is due to the equipment—always the best—excellence of road bed and nicety of track adjustment, features which insure ease of comfort and pleasure.

When you have occasion to travel between Chicago and Cleveland, Buffalo, New York and Boston, by using the Lake Shore you will secure absolutely the best in travel that money can buy.

For "Book of Tables," or travel information, address  
A. J. SMITH,  
Ticket Agent, Cleveland, O.

## The Progress of Science

## Science and Happiness

THE Library of Hannover possesses a large number of unpublished manuscripts left by the philosopher Leibniz. Among them is a *Methodus doctus*, which reveals much of the nature of the man and his mental attitude. Leibniz was not a professor; he even refused emphatically to enter on a university career. But pedagogical questions had considerable interest for him. He conceived of an education much vaster than that of the universities. His doctrine of science led him to believe that everything can be taught, including happiness. He was veritably possessed with a zeal for the public good, and, according to his view, the happiness of humanity depends on the progress of the sciences. Happiness, he believed, consists of three things—perfection of the soul, health of the body, and the commodities of life. Perfection of the soul is obtained through science, which teaches us what we are and what we ought to do, and is the base of rational ethics; health of the body is also obtained through science, for medicine and medical skill depend on the knowledge of nature; finally, the commodities of life are furnished by science, which evolves the useful arts and makes man independent of, if not master over, Nature. The only way of making man happier and better is to work at the development of the sciences.

## Effects of the Use of Alcohol

The committee of fifty scientists which has for ten years been studying the liquor question has issued its fourth preliminary report in two volumes. The following are the main conclusions drawn: Effects of moderate or occasional use of alcoholic drinks differ with individuals, age, occupation, and climate. With the majority of occasional and moderate drinkers no special effect upon health seems to be observed by themselves or their physicians. In some such cases drinking is harmful; in a few it is thought to be beneficial. Eighty per cent of the leading brain-workers of the United States use alcoholic drinks occasionally or regularly or in moderation. The use of such drinks to stimulate mental effort gives, on the whole, bad results. Even occasional or moderate use is thought to be harmful to young persons, mainly because of the danger of its leading to excess. Among diseased or infirm persons over fifty years of age, alcoholic beverages, while sometimes useful, should be taken, if at all, with the last meal of the day. "Fine old whiskeys" and "fine old brandies" are nearly as likely to produce injurious effects as are the cheaper sorts, if taken in the same quantities. In moderate quantities, beer, wine, and diluted whiskey have a certain food value, but they are seldom good for food purposes—rather for their effect on the brain. In large quantities, and for some persons even in moderate quantities, they are poison. Alcoholic drinks in moderate quantities may be useful as restoratives in fatigue after work is done, but, on the contrary, they seem to lessen the power of the organism to resist the cause of such diseases.

## The Stomach not Indispensable

At a meeting of medical men in Vienna the other day, Dr. Ullmann presented a case of a sixty-two-year-old man, whose entire stomach had been removed in an operation for cancer. Nevertheless, he digests all his food, and has gained weight since the operation. The doctor stated that the operation of removing the stomach had been performed successfully performed over twenty times. The stomach really plays only a small part in the complex act of digestion, its principal use being that of a reservoir. Hence it is that without this organ meals have to be taken in exceedingly small and unpalatable quantities. There are several little organs, of considerable chemical function, far more indispensable than the stomach, which are seldom found of those who die of starvation, without the suprarenal capsules, and the pancreas.

Music

The Opening of the Opera.

The best advertised and most eagerly awaited opera season within memory has begun. On the night of November 25, in the refurbished and modernized Metropolitan Opera House, Mr. Heinrich Coarled began his career as master of New York's lyric-dramatic destinies. "Ildegioleto," that diverting parody of Verdi who was to come, served as—in an extended sense—a curtain-raiser, and as a medium for the display of Mr. Coarled's aw and loudly heralded tenor, Enrico Caruso. Public expectation had set a difficult standard for Mr. Caruso to attain. No tenor in recent years has been more loudly acclaimed; the cables have shaken with fervent praise of him. It is a signal triumph for Caruso that he succeeded in justifying, to a large extent, all that had been said of him. His is, beyond any doubt at all, a remarkable singer. There are wonderful tones in his voice—tones that recall at times the velvet and gold of the elder De Rossa, and he sings with art, with intelligence, with the fervor of his race. As that staid figure of Flax's book, the rakish *H. Duca*, there was little, of course, to put his acting to the test. But it seems certain that Mr. Coarled will find him a distinguished and profitable acquisition.

A word of praise must be written for the improvement in the management of the stage which Mr. Coarled has brought about. It is in this department that the most striking advance has been made over the record of other years. An increased orchestra and an enlarged and deepened orchestral pit will tell conspicuously, especially in the Wagner scores. Arturo Vigna, the new Italian conductor, is decisive and efficient. And as a setting for his achievements, Mr. Coarled has provided an auditorium freshly decorated in red and gold, a new proscenium, a divided curtain, a thoroughly adequate and modern stage, a new foyer, and a new and luxurious smoking-alley. Altogether, he is to be congratulated upon a brilliant and exhilarating beginning of his first year as successor to Mr. Grau.

Carbon-Copies of the Classics

On November 18 Mr. Danzreuther and his amiable accomplices in quartet-playing gave a concert in the chamber-music room at Caraglio Hall. Mr. Danzreuther had made up his programme from music by three native composers—Professor Horatio W. Parker, of Yale; Mr. George W. Chadwick, and Mr. Arthur Foote. The works selected were Professor Parker's *Amazur suite* for piano, violin, and 'cello; Mr. Chadwick's quartet in D-minor, and Mr. Foote's quartet in A-minor. Professor Parker came down from New Haven for the occasion, and assisted in the performance of his own work.

No one would think of denying that Messrs. Parker, Chadwick, and Foote are justly eminent as musicians. They know precisely how a score should be put together; their mastery of musical mechanics is admirable and complete; and there is nothing in such of the music as we heard the other evening that could possibly offend the most exacting champion of conservatory ethics. One's emotions are not assailed; there is no absorbing address to the brain or to the spirit; nor are there any sudden and disturbing revelations of beauty, or emotion, or poetic significance. Is it not enough that the conventions are heedfully observed; that all is orderly and decorous; that the frontier of the improvisational is vigilantly policed? And yet there are some lawless souls who are still not quite content—who demand that music written by Americans should be not merely in the fortunate phrase of Mr. Rupert Hughes, a "pale carbon-copy of the classics," but that it should utter an original inspiration in original and vital forms. And such music is, it is good to realize, being written in America to-day. But imagine the idea of our musical development which a foreigner would form after listening to the A-major suite of Professor Parker, the D-minor quartet of Mr. Chadwick, and the A-minor quartet of Mr. Foote!

The latest portrait of Onoto Watanna, author of "A Japanese Nightingale" and "The Heart of Hyacinth"

## Onoto Watanna

**T**WO years ago the name of Onoto Watanna was entirely unknown, except to a coterie in Chicago; to-day it is known everywhere, and her new volume, *The Heart of Hyacinth*, is one of the most popular books of the season. She had written a number of Japanese stories and sketches which found their way into the magazines and periodicals of the Middle West, and a Chicago firm had published a short novel written when she was only nineteen, which, with pardonable pride, she is now anxious to forget. Then she wrote *A Japanese Nightingale*, and with the sum she received for its serial use in a woman's paper, she left Chicago in the spring of 1901, and came to New York to take a course in Columbia, and to try her fortune in the East. After several rebuffs she found a publisher at last for the manuscript she had brought with her, and with the publication of a short story in *HARPER'S MAGAZINE*, other magazines and periodicals at once opened their pages to her.

Apart from its exotic flavor and the charm of its novelty, *A*

*Japanese Nightingale* had an inimitable grace and an exquisite coquette which gave the story an alluring and irresistible appeal. Not only was it the most charming and delightful story that had ever come out of Japan—and it must be remembered that its Japanese atmosphere had a picturesque and inviting interest—it was also an exquisite bit of art by a writer who possessed the essential qualities of commanding human interest—sympathy, humor, freshness of feeling, together with a dainty fancy and delicacy of touch which were peculiar to the author.

A year later *The Heart of Hyacinth* was published—her first attempt at a full-length novel. This book contains some of the finest things she has written. The pathos of passion in the love scenes between the Shining Prince and Wataria in the first half of the book and at the happy close as felt with a fierce joy and poignancy that have led critics to speak of them as a Japanese Romeo and Juliet. Some readers have found less interest in the conflict between Old and New Japan which fills the second half

of the book with a sound of war's alarms that is alien to Onoto Watanna's idyllic art; but the picture of the struggle is drawn with verisimilitude, and has the romance of history for those who value it in this picturesque form. Even so, there is enough of human interest in the novel to lend it that peculiar attractiveness which won the readers of *A Japanese Nightingale*. The story has plot and dramatic power too; indeed, had not *The Darling of the Gods* anticipated it. *The Waning of Wisdom* would have easily lent itself to adaptation, and made a strong and moving play. Here, it may be said, that Mr. William Young, who adapted *Ben Hur* to the stage, has caught the atmosphere and dramatic suggestiveness of *A Japanese Nightingale* with a fine sense of fitness and refinement and poetic justice, and has carried out the intention of the author with a dexterity and dramatic effect of which she need not be ashamed. Nor can too much be said in praise of Miss Margaret Ellington's Yuki, which retains all the piquancy, the diverting drollery, the naive simplicity of the original, with an added charm of artistic grace and winning personality. There has never been a more captivating impersonation of a Japanese girl on the stage.

*The Heart of Hysciath*, in which the author returns to her idyllic manner, is by far her best piece of work. As in the case of *A Japanese Nightingale*, the publishers have enhanced the beauty of the work, and added to its attractiveness by putting it out in a form that has an aesthetic value in suggesting the color and atmosphere of the story to the

Onoto Watanna in her library

eye. The cover design, the illustrations in color, the tinted marginal decorations by Kiyokichi Sano, a Japanese artist, are worthy of the story they ensnare. The story itself is an interesting study of the heart of a child, passing through girlhood to that moment of awakening womanhood when the knowledge of love comes to her. The situation is curiously complex, but the development and treatment of it are simple and sincere. The child is the daughter of American parents, left in infancy by her dying mother to the Japanese widow of an Englishman. The widow has a son, who is, of course, a half-caste, and the boy and girl are like brother and sister until he leaves Japan to be educated in England and to claim his father's patrimony. Hysciath has been reared as a Japanese child, but the time comes when blood tells, and the racial instincts rebel and conflict with her Japanese training and sympathies. Kousu learns to love her, but in his absence, his mother, true to Japanese instinct and custom, betroths her to a rich young native. Thus the threads of the story become tangled as the father of Hysciath arrives from America in search of his daughter, led by a clue he has received to her existence.

Not the least element in the hold which *Onoto Watanna* has on her readers is her power to surprise and to interest new turns to the human comedy she plays with; and in her fresh sympathetic handling of child life in *The Heart of Hysciath* she has again proved her fertility of resource to awaken new delights in the minds of her already delighted audience.

Onoto Watanna starting from her home at Fordham Heights, New York, for a spin in her automobile

## Indians of the Southwest

Where they live and how to get there—their homes, handicrafts and ceremonies—an intensely interesting book of more than two hundred pages—written by Gen. A. ## HARPER'S BOOK NEWS

### THE MAIDS OF PARADISE

Mr. Chambers creates inimitable heroines. The countess in *The Maids of Paradise* is a glorious woman, fit central figure to such a romance, where fighting and intrigue and the plots of the French secret service make every page of intense interest. There has been no story of adventure to equal it for years.

### DR. LAVENDAR'S PEOPLE

Mrs. Margaret Deland's new book of stories concerning Dr. Lavendar and the other dwellers of Old Chester seems to have awakened the interest in these characters created by the publication of "Old Chester Tales." "It will be a lump of pure delight to those who have aforesaid known and loved Old Chester," says the *New York Daily News*. The *Chicago Tribune* thinks that "the author has done on a small scale what Balzac, Zola, and others have done on a larger scale." The illustrations by Lucius Hitchcock are in close sympathy with the spirit of the text.

### BOOTH TARKINGTON'S CHERRY

Faithfulness of plot, a delicacy of style, a charm of characterization beyond anything he has ever done before mark this latest work of Booth Tarkington's. A love story of subtler charm has not appeared for years—nor has its author done anything hitherto so delicately humorous.

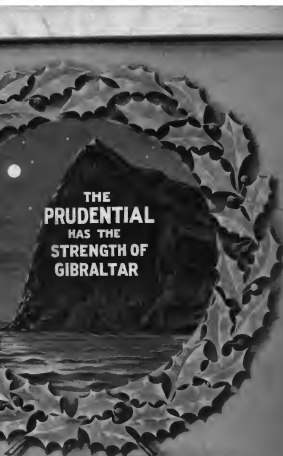

### LADY ROSE'S DAUGHTER

Unquestionably this has been the novel of the year. Other books have come, achieved popularity, and been superseded by others, but *Lady Rose's Daughter* has remained head and shoulders above the other novels of the year. Truly, in the words of the *Commercial Advertiser* (N. Y.), "it leads contemporary fiction."

### HESPER BY HAMLIN GARLAND

Hamlin Garland did a notable deed when he chose a New York society girl for a heroine and set her down in a rough mining country in the midst of a miners' war. *Hesper* is a love story where a cowboy worth your knowing matches his rough-hewn manliness against the social traditions that hedge in his lady's heart. That battle equals in interest the battle of the mines.

## THE GOLDEN POOL

By Robert W. Chambers

**S**

the doctor, finding his patient's quarters untenanted for the first time in many months, hastened down stairs and out to the veranda, where he discovered a lean, soldierly-looking young fellow clad in fishing coat fussing with rod and reel. "Oh! my enterprising friend," he said, "What mischief are you hatching now?"

"I'm going to try for your big trout in the Golden Pool," said his patient, calmly.

This unlucked-for energy appeared to embarrass the doctor. His grim mouth tightened.

"Don't go now," he said; "it's too late in the morning."

"I'm going anyhow," retorted his patient.

"Don't be obstinate; that fish won't rise till evening."

"I know it, but I'm going."  
 "Against my orders!" demanded the exasperated doctor.  
 "With pleasure," replied the young man, gaily. "And it's your own doing, too. Do you remember what you said last night?"  
 "I said I saw a big fish rising in that pool," growled the doctor.  
 "Exactly; and that has done more to brace me up than all your purple pills for peccant people."  
 "Don't go to the Golden Pool now!" said the doctor, with emphasis. "I have a particular reason for making this request."  
 "What reason?"  
 "I must tell you."  
 "You're after that fish yourself! No, you don't!"  
 "That's idiotic."  
 "Well, say how, good-by."  
 "You 'shant!" exclaimed the doctor, wrathfully. "Give me that rod!"

But his patient clung to the rod, laughing.  
 "Now what the devil possesses you to make for the Golden Pool at this particular moment?" demanded the vexed doctor. "You're been an invalid for a year and more, and up to this moment you've done what I told you."  
 His patient continued to laugh—that same light-hearted, infectious laugh which the doctor had not heard in many a month, and he looked at him kindly.

"All the same, you're not well yet, and you know it," he said.  
 "My aversion to women!"  
 "Partly."  
 "You mean my memory still fails me? Well, then, what do you think of my saying this morning?"  
 "What?" inquired the doctor, sulkily.

"This: I went out to the stables and recognized Phœbe and Riley! How's that for a start? Then—"he glanced across the lawn where an old parsonage peered about among the pines—"there's Dawson, isn't it? And this is my own place—Gleasons' isn't it? Besides," he added, "my aversion to women is disappearing; I saw a girl on the lawn from my window this morning. Who is she?"  
 "Was she dressed in white?" asked the doctor.

"Don't remember."  
 "You never before saw her?"  
 "No—I don't know. I didn't see her face."  
 "So it seems you can't recollect the look of a relative or a neighbor! Now what do you think of yourself!"

"Relative? Nonsense," he laughed. "I haven't any. As for the neighbors, give me time, for Heaven's sake! I'm doing beautifully. There are millions of things that set me thinking and worrying now—many flashes of memory—hints of the past, vague glimpses that excite me to effort; but nothing—absolutely nothing—yet of that bluish year. Was it a year?"

"How; never mind that!"  
 "How long was it?" asked his patient, wistfully.  
 "Sixteen months."  
 "You said I was shot, I think."

"No, I didn't. You think you were, but it was done with a Malay kris. Now, what can you remember about it?"  
 The young man stood silent, fumbling with his rod.

"And you tell me you're cured!" observed the doctor, sarcastically, "and you can't even recollect how you got awaked with a Malay kris?"

"I might if I could see the Malay—or the kris."  
 The doctor, who had begun to pace the veranda, halted and glanced sharply at his patient.

"The best way to remember things is to see 'em! Is that your idea?"  
 "I think so. It's true I've seen Phœbe many times without remembering him, but to-day I recognized him. Isn't that good medicine?"

The doctor thought a moment, fished out his watch from the fob-pocket, regarded it absently, and came down the steps to the lawn, where his patient stood making practice casts with his light bamboo rod.

"I'll tell you why I didn't want you to go to the Golden Pool," he said.  
 "Well, why?"

"Poachers," replied the doctor, watching him. "They fish in the pools, and they use your canoe, and they even have the impudence to go bathing in the Golden Pool. . . . I didn't want you to worry."

"I think the poacher I catch will do the worrying," said the young man, laughing. "Is that all?"  
 "That is all. Go ahead if you want to. If you run across that girl invite her to dinner. She's a friend of mine." And the doctor walked off, showing his hands deep into his capacious pockets.

His patient rested in the fire, smiling to himself, and started off across the meadow at a good swinging pace. He entered the forest by the meadow hedge, where a bush yoked was mowing grass.

"Mornin'!" ventured the native, with a doubtful grin of recognition.  
 "Look here," said the young man, kneeling in the path of the scythe, "ought I to have your name? Tell me the truth."  
 "I callate you aster," replied the yokel. "I've been chovin' for five close ten year."

A shadow fell over the master's lean face, and he went on through the underbrush, muttering to himself, musing his thin "Oh, well, I'll stick to it," he said, aloud; "a man can't dance on a broken leg nor think with a broken head; they've got to be mended first—well, never!"

Walking on through the fragrant forest, the shadow of care

slipped from his face again, leaving it placid once more. The scent of the June woods, the far, dull throbbing of a partridge drumming in leafy depths, the happy sighing of a woodland wood thrush, all these were gentle stimuli that assuaged toward the shadowy border of which he had so long been struggling from the regions of dreadful night.

Spreading branches, dew-spangled, sloped his face as he passed; the moist rich odor of clean earth filled throat and lungs; a subdued, almost breathless expectancy brooded in the wake of the south wind.

When he emerged from the forest and entered the long glade, mountain and thicket were swimming in crystalline light; ferns hung weighted with dew; the outline of bird music was increased.

Far in the wet woods he could hear the river flowing—or was it the breeze freshening the pines?

Listening, enraptured, boyish recollections awoke, and he instinctively took his bearings from the blue peak in the east. So the Ousel Pool lay to the west. He would fish that uncertain water later; but first the Golden Pool, where the great trout had been seen, rising as rockboldy as a minnow in a meadow brook.

Now, all excitement and expectancy, he waded on, knee-deep in dew-drenched grasses, watching the soft modulate flutter of the bluebirds among the firs. They had always hovered over this spot in June, he remembered now. Truly summer skies were hovering him of his hurt; he recognized the bell of blue-beech saplings all cross-hatched with sunlight, and he heard the familiar rush of water below.

Suddenly, beyond the sprayed undergrowth, he caught a glimpse of a glen of the rich sunny foliage which gave the Golden Pool its name; and now the familiar water lay glimmering before him through the trees, and he began the descent, stepping quietly in a deer entering a strange corner.

At the water's edge he paused cautiously; but there was no canoe lying under the alders. Mrs. Wainwright, then began groping backward through the ferns.

Where was the canoe? There had always been one here—in his boyhood and ever since,—up to that obscure and cloudy space of time.

He dropped to his knees and parted the leafy thicket with his hands. There was no canoe there, nothing except a book lying on a hemlock stump; and—what was this?—and this?

He stared stupidly for a moment, then rose and stepped through the thicket to the edge of the water. A canoe glimmered out there, pulled up on a flat, sunny rock in midstream, and upon the rock lay a girl in a dripping bathing dress drying her hair in the sun.

Instantly an odd sense of it all having happened before related him,—the sun on the water, the canoe, the dim figure lying there. And when she indolently raised her head, stifling a dainty yawn, and stretched her arms luxuriously, it seemed to him the repetition of a forgotten scene too familiar to surprise him.

Then, as she sat up, leisurely twisting her sun-browned hair, a chance turn of her head brought him into direct line of vision. They stared at one another across the sunny water.

For one second the thought flashed on him that he knew her; then in the same moment all that had seemed familiar in the situation faded into strangeness and apprehension, and he was aware that he had never before looked upon her face.

Yet, curiously enough, his long and melancholy aversion to women had not returned at sight of her. She had risen in surprise, wide dark eyes on him; and he spoke immediately, saying he had not meant to disturb her, and that she was quite welcome to see the canoe.

Her first stammered words annoyed him. "Did the doctor—come with you? Are you—are you alone?"

"I suppose the entire countryside knows I have been ill," he said; "but I'm perfectly able to be about without a doctor." He began to laugh. "Just those are all the questions. The questions are what are people doing in these woods with luncheon-baskets and summer music, and how am I to fish this pool if people enter it; and how am I to fish at all if an attractive stranger takes possession of my canoe?"

"I—I had no idea you were coming here," she faltered. "I rather here every morning, and then I lunch here and rest."  
 He laughed outright at her innocent acknowledgment of the trespass.

"I've a clear case against you," he said. "Haven't you read all my notices nailed up on trees? 'Beware! All trespassers will be dealt with to the full extent of the law'—and much more in similar effect. And do you know what a very dreadful thing it is to be dealt with to the full extent of the law?"

"But—I am not—not trespassing," she said. "Can you not remember?"

"I'm afraid I can't," he replied, smiling. "I'm afraid I have a clear case against you. The doctor warned me that trespassers were about."

"Did he know you were coming here?" she asked, incredulously. "He did. And I'm afraid somebody has been caught in *Myself's* den!"  
 "What do you think?"

He stood there, amused, carefully noting the play of emotions over her delicate features. Unconsciously, dimly, had given place to quick resentment; that in turn died out, leaving some glow of comprehension in her perplexed eyes.

"So he sent you to catch a trespasser?" she said.  
 "I was coming to fish. Well, yes; he said I might find one."  
 "A trespasser? A stranger?" She hesitated; there was hard astonishment in her eyes. Suddenly her face took a deeper flush, as though she had come to an unreviewed decision; her entire manner changed to avowed self-possession. "What are you going to do with me?" she asked, calmly.

"I'm afraid I can't put you in jail," he admitted. "You see,

there's no punishment for swimming in favorite trout pools and speeling a man's morning sport. Now if you had only thought of catching one of my trout, I could arrange to have you imprisoned."

"Please arrange it, immediately, then," she said, lifting an enormous trout from the canoe and holding it up by the gills with both hands.

"Good Lord!" he gasped, "it's the big one!" And he sat down suddenly on a log.

Her smiling defiance softened a trifle. "Did you really wish to catch this fish very much?" she asked. "I—I never supposed you would come here—to-day."

"The courtesy of your crime stays no," he said. "First you invade my domain, then you molest my canoe, then you swim in my favorite pool, then you catch the biggest fish that ever came out of it."

"No," she said, "I was not such a goose as to swim first. I caught the fish first."

"Reverent to me the bottle," he said, with a groan. "Fish like that only rise once in a lifetime. Tell me how you did it—what's the useless. It was the usual case of a twig and a bent pin, I suppose?"

She smiled unrepentantly, and lifted a rod from the canoe.

"By Jove! that looks like one of my rods!" he exclaimed.

"Where did you get it?"

"Her eyes were bright with excitement; she shook her head, laughing.

"Are you in league with my doctor? Who are you?" he insisted.

"Only a passerby," she admitted. "I creep about and lurk outside windows where doctors talk in loud voices about big trout they have seen. Then—I go and catch them."

They were both laughing now; she standing beside the canoe, rod in hand, he balanced on a rock opposite.

Yet, even while laughing, his thin face sobered, darkening as though a gray shadow had crept across it.

"Are you a neighbor of mine?" he asked. "If you are, you will know why I ask it. If you are not, sorry mind," he added, wearily.

She shook her head. His face cleared.

"I thought you were not a neighbor; I was certain that I had never seen you—a certain—a man can be unweaking from—from illness, with his mind—his memory—shaky—almost blank."

"You know the doctor? I think I saw you on the lawn this morning."

"Are you sure you have ever before seen me?" she asked, with a ghost of a smile.

"I thought at first—for an instant—the canoe on the rock, and the sunshine, and you—" he fell silent, groping through the darkened corridors of thought for the key to memory.

In the sunlit bank a rippling noise sounded far out across the pool; then up out of the glassy water shot a slanting shape, darkening against the sun—a fish in silhouette, carrying over with a flap-flapping splash. Wilding circles spread from a center where for the tapestry of golden thickets set with the heavenly hue above.

The long dormant position which sheeps but never dies swells in him; the flash on his lean cheeks deepened as he turned and looked across the pool where the pretty intruder stood watching him, an eager question dancing in her eyes.

"I'd like to try," he said. "Do you mind?"

"Fiddle very quietly over here—very carefully and without a splash. Can you do it?"

She loosened the canoe miserably, a lithe figure in her wet brown skirt and stockings. The milky glow creeps over her as she moved into the shadows; and she seemed, in the soft forest light, a part of the woodland harmony, blending with it no tawny-tinted shadows blend.

The canoe slipped into the pool; she knelt in the stern; then, with one silent push, sent it like an arrow across the water. He sprang without a sound into the green shadows beside him.

He was muttering to himself: "I've forgotten some things—but not how to throw a fly, I think. Let us see—let us see—"

She stood motionless as he embarked, watching him raise his rod and send the tiny brightly colored fish out over the water. The delicate accuracy seemed to fascinate her; her dark eyes followed the long upward bend of the back-rod, the whistling curved, straightened out, and fell, dropping three fish softly on the still surface of the pool.

As the canoe drifted nearer, nearer to the spot where the trout had leaped, the sharp dry click of the reel, the windlike whistle of the line, grew fainter. Suddenly, far ahead of the floating flies, a dark lump broke the water: there came a spatter of spray, a flash of pink and silver, and that was all—all, though for two hours the silver line darted out across the water, and many of feathered flies of many hues fell vainly across the glassy mirror of the Golden Pool.

She was still standing in the same place when he returned. He drew a long deep breath of disappointment as he stepped ashore, and she echoed his sigh. The tension had ended.

"Showed color, but wouldn't fight," he said, in a low voice.

"I can't you possibly do anything?" she asked, tremulously.

"Not now; I must rest him. You can't force a fish like that by persistent yet. There's a chance he may come again; he's not serious yet. I don't bother him for an hour or two."

He looked into her sensitive face; then, suddenly conscious of its youthful beauty, he fell silent, feeling in his wet line inch by inch.

"All this has happened before"

Through the heated stillness dragon-flies darted; the mounting perfume of brake and fern, the almost imperceptible odor of earth and water, seemed to envelop him in a delicate spell, soothing, healing, while pale-blue moments drifted away in the smooth flow of a summer hour.

The rod slipped from his hand; his aching eyes rested on her. She was seated on a mossy log, head bent, slender stockinged feet trailing in the pool.

"All this has happened before," he said, quietly. But there was no conviction in his voice.

She raised her dreamy eyes; the color came and went in throat and cheeks; through her half-parted lips the breath's sweetly stirred.

He rose with a restless laugh, and stood a moment, his thin hand pressed across his forehead. Her eyes fell, were lifted to his, then fell again.

"Can't you help me?" he said, wistfully.

"Can you not remember?" she breathed.

"Then we—we have known one another, have we?"

"I once knew a friend of yours—a close friend—named Eucourt."

"Eucourt," he repeated, blankly.

And after a long silence he turned away with a gesture that seemed to frighten her. But into her face came a flash of determination, reddening her cheeks again.

# CHRISTMAS

**"IN THE NORTH ATLANTIC**

The officer's Christmas treatise in the North is not to be a cup of coffee on deck; yet the coffee has for that day a different name

**"SWEETHEARTS AND WIVES"**

In the wardroom on Christmas night the officers, wherever they may be, offer their health to the President, the navy, and an un-come, flatter, as the evening wears on, to the officer's love and real toast of "Sweethearts and Wives." It has come to be the toast of the naval man

# IN THE NAVY

"PLUM DUFF"

In the forenoon the tables do not stand so high in the general opinion as the Jacky's Christmas pudding, "plum duff," which her executive has served in all navies and on all merchantmen as the sign of Christmas festivity, as the ideal of holiday making and feasting

IN THE SOUTH PACIFIC

Out among the Philippine Islands, under the hot sun, the 23d of December has little of the popular idea of Christmas in it. It is the day for some letters

(Continued from page 5.)

"It does not matter," she said, "nothing matters on a summer day like this. . . I did not mean to trouble you."

He turned in his steps and stood looking at her.

"You say my friend's name was Escourt? Is my friend dead?"

"Please don't let it matter."

"It does matter. I—it is a fancy, perhaps, but the name of Escourt was once familiar—and pleasant. It is not your name, is it?"

"Yes," she said.

As last he began, fruitfully: "That is the strangest thing in the world. I have never before seen you, and yet I am perfectly conscious that your name has haunted me for years. Escourt—Escourt—for years, I tell you, he went on in a sort of impatient abandonment, 'ever since I can remember anything I can remember that name.'"

"And my first name?" Flushed, voice scarcely steady, she avoided his troubled gaze.

And as he did not answer, she said: "You once knew my husband? Can you not remember?"

He shook his head, studying her intently.

"No," he said, in a dull voice, "I have forgotten; I have been very ill. The same troubles me; it is strange how the name troubles me."

"If it troubles you, let us talk of other things, will you?" she asked, almost timidly. "I did not think to awaken the memory of anything sad."

"It is not sad," reading his sudden, perplexed eyes on her: "It is something intimate—almost part of my life that I seem to have forgotten." His hand sought the same spot over his right eye. "What were we doing when you interrupted everything?" His wandering glance fell on the canoe and the red lying in the bottom, and his face cleared.

"I might be worrying that trout again," he said. "You won't go away, will you?"

"No, but I wish you would go," she said, laughing; "I'd dress if you would give me half an hour."

"You won't go—you will wait!" he repeated, almost childishly.

"Yes, I will wait."

She shook her head, watching him embark; standing there looking out across the water where the paddles-bubbles marked his course long after the canoe had vanished around the curved shore of the Golden Pool.

Suddenly her eyes filled; but she set her lips resolutely, grasping with white hands for her knitted hat, the lacy shining towel, loosened, fell, veiling face and shoulders—a golden mask, for sorrow and falling tears.

It was high noon when his far hail brought her to the water's edge, and she emerged with a clear, prettily modulated voice.

"Do you observe?" she asked, as he climbed the bank; and she made a little gesture of invitation toward a white napkin spread upon the moss.

A jug of milk, lettuce, bread, and a great bunch of herbaceous grapes—and a basket in a summer gown, smiling an invitation: what wonder that the laggard lines in his visage softened till something of the alertness of youth lay like a ray of sun across his face.

"This is perfectly charming," he said, dropping to his knees beside her. "I—I am very happy that you waited for me."

She sat silent for a moment, with lowered eyes, then raised them shyly. "Let us eat bread and salt together, will you—that nothing break our friendship."

"From your hands," he said.

She leaned over, took a tiny pinch of salt between her thumb and forefinger, and offered it to him on a bit of bread. He gratefully broke the bread, returned half to her, and they ate, watching one another in silence.

"By the bread and salt I have shared with you," he said, half seriously, half smiling. "I promise to cherish this forest friend ship. Let this day begin it."

"Let it," she said.

"Let pleasant years continue it."

"Yes—the coming years. So be it!"

"Let nothing end it—nothing—not even—"

"Nothing—and, amen," she said, faintly.

Again, unbidden, the ghosts of the past stirred, whispering together within him; echoes of unquiet days awoke, blind consciousness of that summer year where darkness dwelt, where memory lay dim forever.

She sat watching him there on the moss, supporting her weight on one arm.

"I am striving," he said, "to trace my thoughts. There was dull apoplexy in his voice. 'All this is not accident—you and I here together. I am haunted by something long forgotten, something that I am almost conscious of. When your voice sounds I seem to be quivering on the verge of memory. . . . Do you know what it is I have forgotten?'"

She trembled to her lips. "Have you forgotten?"

"Yes—a great deal. Is it you I have forgotten?"

"Try to remember," she said, under her breath.

"Remember! God knows I am trying. Begin with me, will you?"

"Yes, let us begin together. You were hurt."

"Yes, I was hurt."

"In a battle?"

"I was hurt in a skirmish."

"Where?" she whispered.

"Why, on the Subig," he answered, surprised; "I was in the Philippine scouts."

He sat bolt upright, electrified, and struck his knee sharply with the fist of his wasted hand.

"Do you know," he said, excitedly, "that until this very instant I have not thought of the Philippine scouts. Isn't that extraordinary?"

She strove to speak; her breast rose and fell, and she closed her lips convulsively.

He sat there, head drooping, passing his hand repeatedly across the scar over his right temple.

She waited, whitening under the tension. His face became pained; he looked up at her; and a smile touched her wet lips in response.

The excitement of convalescence seemed to banish his restlessness; his voice broke the silence, and its low, even tones satisfied the half-unconscious longing for dead echoes.

So the gleam of happiness arose and set between them; and she lay back, resting against a tree, smiling replies to his lary husband. And after a long while his laughter awoke to echo his, laughter as delicate as the breeze stirring her light hair.

And afterward, long afterward, when the sunshine painted orange patches on the westward tree-trunks and a breeze veiled the taller spires, she reminded him of the great trout, but he would not go without her; so together they descended to the stream's edge.

Floating in the canoe there through the mellow light, he remembered that he had left his rod ashore, but would not go back, and she laughed outright, through the thread of the song she had been humming:

"Fair is a dragon,

Faith the aim shame that beaves it;

Hope holds the striver—

That it who craves it."

She smiled, singing carelessly:

"Who art thou, young and brave?"

*Lo ric est un seaward, favour on est it thee!*

"There is more," he said, watching her intently.

"How do you know?"

"I know that song; I remember it, and there is more to it!"

"Is it this, then?" and she sang again:

"Life is but a dream—"

Leave the sad dream that haunts it.

Death is the waking gift;

Take it who wants it!"

"Who art thou, young and brave?"

*Lo ric est un seaward, favour on est it thee!*

He sat for a long while, very still, head buried in his hands. A violet mist veiled water and trees; through it the setting sun sent fiery shafts through the mountain cleft. And when the last crimson shaft was sped and true and water faded into darker bay misty, the canoe had drifted far down stream, and now lay still in the shoreward sands; and they stood together on the water's edge.

Her fingers had become interlocked with his; she half withdrew them, eyes lowered.

"It is strange that our names should be the same," he said.

"Is your name Escourt too?" she faltered.

"Yes; I know it now. . . . I have been ill—very ill. God alone knows what my hurt has done to me. There is a doctor at the house; he's been with me for a long time—a long time. I—I wonder why I wonder if it was because I had forgotten—even my own name. . . . Who are you who bear my name?"

She averted almost imperceptibly where she stood; he lifted both her hands and laid them against his lips, looking deep into her eyes.

"Who are you, bearing my name?" he whispered. "Enclose your eyes."

In the twilight her dark eyes opened; she was in his arms now, her head fallen a little backward, yielding to his embrace crushing her.

"Try—try to remember—before you kiss me," she breathed.

"I wish you to love me—I desire it—but not like this. Oh try to remember before—before it is too late!"

"Do remember—Helen! Helen!"

Her lips on his stirred the cry; a long sigh, a sob, and she lay quivering in her husband's arms.

"Pull to the left! Pull to the left!"

## THE ISLAND CHUTE

By Joseph A. Altsheler

**H**OW she flies!" said Steve Boone, the pilot, to the rower in the centre of the raft. "We must be beating the current by at least two miles an hour!"

Perkins, the rower, glanced down at the yellow torrent of the Cumberland, the swiftest and deepest river in the world in proportion to its length, and then up at the lofty banks that sped by, misty in the twilight. But he said nothing, merely nodding his assent. There were five men on the raft, and they never changed their positions.

The river began to curve again and to shoot around dangerous angles, and the pilot's orders now came sharp and fast. The night settled thick and black. Boone looked anxiously at the river.

"How far ahead do you call it is to Corn Island?" he said to Perkins.

"About six miles, I reckon," replied the rower, never taking his eyes from the stream. "You take the chute to the right!"

"O' course; it's the only safe passage."

The cliffs rose higher above their heads, and the stream, narrowing, grew swifter than ever. There was a dull moaning of the wind through the forest, mingled with the angry lashing of the current on the rocks.

They whirled around a cape, dashed down the middle of the stream, and then saw ahead of them a dark object.

"Corn Island!" said Boone.

The rowers nodded.

"Pull her to the right!" called Boone, sharply, and the rowers swung the great raft toward the narrow passage around the island. Here the river was flowing swift and deep between the high bank of the mainland and the low rocky shore of the island.

The island was two miles long, and already Boone wished that he was clear of it; the channel was too narrow. Suddenly Perkins, the oarsman, a man with the ear of a hound, raised his head, and Boone saw by the light of the shanty fire that his face had turned pale.

"Did you hear that?" he asked, eagerly.

"Hear what? I don't hear anything!"

"I do! It's music, an' it's in the island chute as sure as shoote's!"

The raft rushed on, sending away little waves of yellow foam, and the wind still moaned on the high bank above them. To Boone's own ears came the unmistakable sound of music, and then out of the darkness in front of them shot a great light. Behind this light loomed the shape of a river steamer, like a great white ghost, its decks crowded with people.

"It's the Nancy Belle, an' we're nertin' in the island chute!"

The rowers said nothing, but their faces were white as they looked up at their leader and awaited his orders. A few minutes more and the great raft with its tons and tons of weight would crash directly into the Nancy Belle, which still came swiftly on. The two could not pass in that narrow channel. Boone hesitated only a moment, but in that moment all the long year's work and the glory of his great raft passed before him. Then he shouted:

"Pull to the left! Pull to the left! Pull to the left!"

The five rowers, though they knew well what the command meant, pulled as if they were one machine, to the left, and the raft swung sharply at an angle toward the low shore of Corn Island. Then the powerful voice of Boone was raised again:

"Jump! Jump for your lives!"

When the raft struck with a crash upon the rocks the six men

sprang for the shore. Boone fell in deep water, and when he came up again his ears were filled with a tearing, crashing sound, as the current and the rocks broke the "strapping" of the raft and sent the detached logs whirling down the river.

A log struck his left arm, and with a thrill of pain it fell useless by his side. But a strong hand seized him by the collar and dragged him to the shore.

"Are you hurt?" asked Perkins.

"Only a broken arm. Are we all here?"

"Yes, all here, bruised, but safe."

Up the river shined the stern light of the Nancy Belle, streaming safely past, and from her decks still came the soft sound of music, dying away presently in the darkness.

A strong hand seized him by the collar

"Hoity toity! What's all this racket about?"

# Lady Jane's Highwayman

## A Play

### By Frances Aymar Mathews

Author of "Pretty Peggy," "Lady Peggy goes to Town," etc.

#### PERSONS.

LADY JANE GUNN, Sir Daniel's young wife.  
LADY PEGGY PURLEACH, Lady Jane's twin sister.  
SIR DANIEL GUNN, Barronet and state.  
CYRIL STAMBOURNE, Sir Daniel's nephew.  
TIME.—CHRISTMAS EVE. PLACE.—Library of Goslington Manor, Fenian.—Eighteenth Century. Discovered, Lady Jane with newspaper.

*Lady Jane (reads).* "A highwayman breaks into Hedleigh Castle and nearly frightens the darlings to death!" Oh, could one but break in here and break up the dullness! And ne broke up entirely already with leins' married to a good, peaceable old gentleman that I only took so that he'd take me out of County Cork up to London, and because I thought him a bit of a rake that needed a handle to reform it. Which same he is not, and never does one single thing that he has to ask forgiveness for. Lud! it's me that's just killin' myself with quietness. Hark! He's coming down the stairs now. Ah, if he was only a bit wild like!

*Enter Sir Daniel, C., with open letter.*

*Sir Daniel, Monstrous! Outrageous! Villainous!*

*Lady Jane, Sure, whatever's the matter?*

*Sir Daniel, My nephew!*

*Lady Jane, End even to him! He hates me that he silver set eyes on, because you married me and settled twenty thousand pounds on me which he expected to have! Well, what about him?*

*Sir Daniel, He writes me he's dead broke; lost every penny betting at Newmarket, Scamp! Vagabond! Gamster! Trick-st! Rogue! Rascal!*

*Lady Jane, For the love of Heaven, this, if he's all that, send for him to come here immediately!*

*Sir Daniel, Madam!*

*Lady Jane, So that I can reform him! Sure, I've sirt for my sister, Lady Peggy, to spend Christmas with us, and it's a pretty pair the two of 'em I make.*

*Sir Daniel, Lady Jane, did I not expressly forbid you to ask your relatives to visit you?*

*Lady Jane, Indeed 'n' you did, Sir Daniel.*

*Sir Daniel, Then, madam, what is the meaning of this—this dishonour!*

*Lady Jane, Oh, sure 'n' what's the use of lavin' a husband if you can't disobey him? Besides, Sir Daniel Gunn, you promised to fetch me up to London. This ain't London! I've spiltter for*

mischief, so I am, and it's not in nature for a girl of nineteen to be buried down here in the country, so it isn't, with nothing to amuse her. Even the highwaymen wait to the Castle instead of coming (sobs) to us!

*Sir Daniel, P'm my soul! Zounds! Madam! perhaps it would have been better had you married this jakesnapper, my nephew!*

*Lady Jane, Maybe it would, but how could I while I never set eyes on him!*

*Sir Daniel, You little mind! How am I beset on every side! This is the letter of a highwayman, anyway!*

*Lady Jane, Oh, give it to me! I'm dyin' to get hold of something that ain't good!*

*Sir Daniel, Silence! The young rascal says—"Send me the diamond-framed portrait of my holy mother you have in your possession. It is mine, and if 'tis not forthcoming at once I'll, by fair or foul means, get it in my hands." What do you think of that, Jane?*

*Lady Jane, I think he's just the kind of a lad I'd like to thry my hand on.*

*Sir Daniel, Madam, I'll shut you up in the dungeons below.*

*Lady Jane, Oh no, you won't. (Curses Sir Daniel.) Sind for the rogue and let me handle him.*

*Sir Daniel, Listen! Further he writes, "I burn you are home from Cork with your heirs, and report hath it the lady has a very pretty—"*

*Lady Jane, Sind for him! Sind for him!*

*Sir Daniel, "—temper of her own!" Eh?*

*Lady Jane, The unprincipled wretch! Oh, sind for him, say-here, and if Peggy don't pay him up for his evil speech my name ain't Jane!*

*Sir Daniel, Madam, your sister shall not darken these doors!*

*(Pursued.)*

*Lady Jane, Thine for you, Sir Daniel, She'll lighten 'em nightly with six crosses and seven your nephew. I can tell you that!*

*Sir Daniel (going, blustering), Madam, my nephew shall never (takes up candle; Cyril sees outside of window, R., peering in at portrait) cross this threshold!*

*(Exit with candle, stage darkness.)*

*Lady Jane, Thin, sure we'll 'vot him in through the window! Cyril half enters through window, snatches at portrait, opens it on floor, Lady Jane takes, perceives him, screams with shriek.)*

\* Stage rights reserved by the author.

"Hush, fair lady! I'm no highwayman!"

*Lady Jane.* A highwayman? [*Laughs loudly.*]  
*Cyril.* For Heaven's sake, hush, fair lady! I am no highwayman! [*Unwieldy portrait.*]  
*Lady Jane.* Yes, you are! I know you are! I want you to be a highwayman! You are the one sent by Sir Daniel's nephew, Cyril Stavordale, to steal that portrait. He wants the diamonds to pay his debts with. I know all! Don't I?  
*Cyril.* Almost all. [*Aside.*] She is beautiful!  
*Lady Jane.* I am so glad to see you.  
*Cyril.* Are you? Why? may I ask?  
*Lady Jane.* I was wishing for a highwayman, it's that dull here; anything for a distraction. Sit down. Oh! don't! highwaymen ever sit down! Well, stand, then. Don't fear. I'll not call any one, I want to reform you.  
*Cyril.* Sweet lady, I fear that I'm past that.  
*Lady Jane.* Sure, don't be talking of the past. The present's worth two of it any time. Don't be edging off to the window again. [*Proceeds to window; sits on window-sill.*] You'll not be let out of this until I see an improvement in you.  
*Cyril.* For my soul, nothing, then improvement is something you'll never see. [*Lady Jane's admiring.*]  
*Lady Jane.* [*Aside.*] Sure, what's your name?  
*Cyril.* I am Cyril Stavordale himself.

*Lady Jane.* "A scamp! Vagabond! Gamester! Trickster! Rogue! Rapscallion! Dead broke!" [*Cyril nods at each word.*]  
 Sure, now, I was wishin' for you! You're better than a highwayman. There'd be more credit in makin' a suit out of such material than if you were simply a footpad.

*Cyril.* Sweetest of ladies, if any one could make a better use of me it would be you; but it's too late.

*Lady Jane.* [*Glances at clock.*] Go along wid you, Mr. Stavordale; it's only seven o'clock. I'll wager you by tin I'll have you reformed altogether.

*Cyril.* Done. The stakes!

*Lady Jane.* You may name 'em yourself.

*Cyril.* A kiss.

*Lady Jane.* [*Gravely.*] Sure, he's my own nephew-in-law—what ever's law's legal. [*To Cyril.*] Twenty of 'em!

*Cyril.* I shall win.

*Lady Jane.* How do you know that?

*Cyril.* You bet on a certainty. Give me one in advance, I beg.

*Lady Jane.* The ingenuity of him!

*Cyril.* Tell me who you are?

*Lady Jane.* Guess.

*Cyril.* An angel!

*Lady Jane.* [*Aside.*] All the same thing: I'm a woman!

*Cyril.* A guest here at the manor-house? A friend of— [*Coming.*] By George! [*To Lady Jane.*] A friend of my uncle's wife, doubtless!

*Lady Jane.* [*Shakes her head vigorously.*] Nay, I am her worst enemy. I never open my mouth without saying something that lowers her in her own estimation.

*Cyril.* You don't like her, then?

*Lady Jane.* I never could put up with her at all, at all. Who ever I see even the look of her in the mirror it makes me furious.

*Cyril.* How so? Is she so hideous?

*Lady Jane.* [*Indignant.*] She is not; but the clothes of her! She's one that'd set off London gowns.

*Cyril.* You set off that hourglass.

*Lady Jane.* I know I'd put it off as I could.

*Cyril.* But your name? Vow now, I implore!

*Lady Jane.* My name's the very same as hers that married your uncle.

*Cyril.* Jane? Sweetest name ever any lady bore. Jane, you are not happy here. I could make you happy in London!

*Lady Jane.* Ah, listen to him now! Like all the rest of his sex, talks of makin' a lady happy while he names makin' his self so!

*Cyril.* 'Tis because I'd make you a part of me, we two—one! [*Admiringly.*]

*Lady Jane.* [*Laughing.*] Sir, that's impossible. Two was never made one yet, no more's the circle was ever squared.

*Cyril.* Don't mock at me, Jane; but answer if you can't.

*Lady Jane.* "Scherer!" Is it possible I've not touched a drop since—dinner!

*Cyril.* Sweet Jane, listen to reason.

*Lady Jane.* Sure, how can I? There's no one talking but you, and reason is something a gentleman in your case never understands his conversation with.

*Cyril.* Dearest Jane, I swear by the heavens above as I never loved lady before I beheld you!

*Lady Jane.* Sure, then, I've no use for you. I'd rather be any man's last love than his first!

*Cyril.* First and last.

*Lady Jane.* Now you're byin' to me most inmodest.

*Cyril.* Fairest Jane, I'm that modest I'd clothe the naked with in twenty down here for your sweet sake!

*Lady Jane.* Sir, 'tis not for love that I'm detaining of you here, but to preach repentance.

*Cyril.* Dear saint, preach on forever. But give me the right to call you mine. I'll stand by the church!

*Lady Jane.* A highwayman! Ah, sure it's sweet to hear you talking like that. I wish I'd met you a couple of months ago!

*Cyril.* Why?

*Lady Jane.* I might have listened to you then.

*Cyril.* You shall listen to me now. Dear Jane, I adore you. Let us run off.

*Lady Jane.* Aye, from you. [*Crosses.*] I must do that.

*Cyril.* My coach awaits. None ever loved lady as I do you. Say me not nay! Oh, reflect upon—

*Lady Jane.* [*Resolves.*] Give me a mirror and I will, I always do what there's one at hand.

*Cyril.* Fairest Jane! Make up your mind to run—

*Lady Jane.* I'd rather make up my face!

*Cyril.* I am thirsty and hungry for you—

*Lady Jane.* "Honey!" is it "Barley"? Sure, it's my own self that'll fetch you food. Sit there now. Don't stir, and I'll be back in a jiffy with cakes and ale! [*Going.*]

*Cyril.* Oh, leave me not in suspense.

*Lady Jane.* Sure, I ain't! I've leavin' ye in the library.

*Cyril.* But suppose my uncle should enter in your absence?

*Lady Jane.* I'll take care of him. [*Re-entering her.*]

*Cyril.* Or (continuing) his wife?

*Lady Jane.* I'll not let her in without me, I promise you!

*Cyril.* The any of the servants? "Barley!"

*Lady Jane.* That's soon settled, [*Looks down covert door.*]

*Cyril.* I'm in your pocket, [*Looks down covert door.*]

*Lady Jane.* That's soon settled, [*Looks down covert door.*]

*Cyril.* Don't be any longer than you can help, dearest Jane!

*Lady Jane.* [*Exit.*] Sure, five feet five is the length of me. I don't think I'll grow any before I get back. [*Laughs. Exit to garden.*]

Cyrl. Most adorable of her sex. Even has she not a shilling to her dowry and no a bigger, save for those diamonds (crosses portrait), yet will I woo and wed her, or die in the attempt!

Enter, C., from garden Lady Peggy in cloak, and honest foot under her chin, carrying reticule, two handbags, and large sun-brella.

\* Cyrl. Beloved one!

[Rushes to Lady Peggy, who starts back in fright.]

Lady Peggy. Sir!

Cyrl. Ah! you have put on your bonnet and cloak, fetched your reticule and boxes. You expect me, you will fly with me, adored creature!

Lady Peggy. "Spake," is it? "Boxes," is it? There's one of 'em. (Whisks Cyrl with sun-brella.) Now, sir, who are you that ventures to talk in such bold fashion to a lady you never saw before in your life?

Cyrl. (In amazement). Oh, sweetest lady, waste not the precious minutes in jesting. The coach waits, as you know. Let us begone before Sir Daniel or his wife can come.

Lady Peggy. Sir, you mistake me for some one else. Pray, put down my boxes.

Cyrl. Dearest Jane, I do not mistake you for any one else. You are you and I am—

Lady Peggy. Well, who are you?

Cyrl. (In astonishment). Your own (shows portrait) highwayman!

Lady Peggy. (In amazement). Let me out of this! (Rushes to door R.) Looked! (Rushes to door L.) Looked too! Merciful heaven!

(Rushes C. Cyrl bears door C.) Sir, I implore—

Cyrl. Sweet life, 'twas you that locked both doors, and gave me the keys so that none could intrude upon us while you went to fetch the cakes and ale. Don't you remember?

Lady Peggy. No, I do not, Sir, you are beside yourself.

(Frustrated.) Ye villain!

Cyrl. Nay, dearest of ladies, I am beside you!

(Crossing, Aside.) Has she suddenly gone mad?

Lady Peggy. Sir, how dare you say I locked those doors?

Cyrl. Sweetheart, don't you recall that you are to reform me? that I asked you to run away with me? that you quitted me to seek food? and now you return without it, but cloaked ready for our journey to Gretton Green, oh?

Lady Peggy. (Crossing). A madman! I see it plainly, and in order to preserve my life I must humor him.

(To Cyrl.) Of course, certainly I remember! (Laughs hysterically.) I quitted you to seek for food. I'll go fetch it now, by your leave.

(Exit. Goes up C.)

Cyrl. (Crossing, Aside.) There's luxury in her eye. Temporary, doubtless. I'll not let her out of sight, but humor her.

(To Lady Peggy.) Pray, you leave me not!

Lady Peggy. (Persuaded). Ah, but for a second, to seek the ale-bayad.

Cyrl. Ah, 'tis I would be ailing without you. I cannot let you go.

Lady Peggy. Let us sit down, then.

Cyrl. Let us rather be off.

Lady Peggy. (Crossing). There's murder in his aspect.

(To Cyrl.) You said you were a highwayman?

Cyrl. Nay, dearest one, 'twas you said that.

Lady Peggy. (Crossing). He wants pill.

(To Cyrl.) See, here's my purse! my trinkets, brooch, and chain! Take all, but do not kill me!

(Gives trinkets)

Cyrl. (Crossing, Aside.) 'Tis best not to cross her.

(To Lady Peggy.) Sweet life, I'll take 'em and keep 'em safe for you.

Lady Peggy. I've nothing more. You've all there is.

(Sighing)

Cyrl. Nay, one other thing—the dearest prize on earth—yourself!

Lady Peggy. (Aside). Oh, if his kapers would only come! I must beguile him.

(To Cyrl.) Well, well, (Aside.) I'll try fright-ning him.

(To Cyrl.) This house is (whispers) haunted. The ghost walks every Christmas eve.

Cyrl. (Crossing, Aside.) I'll essay to fright her back into her senses.

(Whispers. To Lady Peggy.) I know—! (To Cyrl.) By whom? (Whispers.) Tell me.

Cyrl. (Points to him in air. Melodramatic. Mysterious.) Look you, sweet lady, how he smiles on his own deed!

Lady Peggy. (Frighted). Heavily mother, where?

Cyrl. You see! His eyeballs, glinting like fiery stars, his teeth chattering!

(Lady Peggy's teeth clatter and eyes glare.) He unshakes his rasper! Do you not see him, Jane?

Lady Peggy. (Frighted). To humor him is my only salvation!

(To Cyrl.) I see him, Mr. Highwayman.

(Frenzied. Glances at the distance.)

Cyrl. (Looks anxiously down at her. Aside.) Alas! a mild undone!

(To Lady Peggy.) You do! Describe him to me, dear Jane.

Lady Peggy. He waves his rasper towards me.

(Crossing, Aside.) Blood sainted! (Cyrl covers his rasper. To Cyrl.) He binds his gaze upon me. Oh! save me! save me, somebody!

Cyrl. (Crossing his sword). Where is the monster? He has escaped me!

(Rushes about.) (Rushes about.) Whether has he fled? (Crossing, Aside.) Dear Jane! Could I but restore her sanity!

Lady Peggy. No, he has not escaped! Look! (Aside.) I must keep his attention on the ghost until help arrives.

(To Cyrl.) He is— (Whispering. Pointing up)

Cyrl. Where? dear Jane, where?

Lady Peggy. Nitti's yates on the ceiling, take this chair—

(Cyrl. Jumping on chair.) I will! I will!

Enter, C., carrying Lady Peggy's attempted crier, Lady Jane with a plate of cold and Besson of ale.

Lady Peggy. Look! What's that?

Lady Jane. Peggy Philpuck! You've come!

"Spake," is it? "Boxes," is it?"

Cyrl. (In a tone as Lady Jane, straying from one to the other.) Peggy Philpuck? Which is which?

(Enter Sir Daniel, C.)

Sir Daniel. Hoighly 'tighly! What's all this racket about? (Springs Cyrl on the chair. The portrait under his arm.) My nephew, Cyrl Stavordale!

Lady Peggy. Cyrl Stavordale!

Lady Peggy. Cyrl Stavordale!

Sir Daniel. Begone, sir! begone! I don't know you!

Lady Jane. Sir, 'e I do, thin. Man and wife I win, Sir Daniel. Your nephew's my nephew. I tould you I'd sint for my nephew Peggy. There she is, an fine a lump of a girl as ever lived.

(To Cyrl.) I wagered you I'd have you reformed by tin o'clock. So I have, haven't I? (To Lady Peggy.) Whisht! I tould me husband if you and Mr. Stavordale met, the two of you'd make a pair—wasn't I right, eh?

Cyrl. Sweet sister Jane, you were. But I've won the wager, for you bet on a certainty.

Lady Peggy. What was the stakes?

Cyrl. A kiss.

Sir Daniel. What? what?

Cyrl. Oh, I'll take it by proxy if Lady Peggy wills, and if she will accept Lady Jane's highwayman as her (kisses Lady Peggy); Sir Daniel kisses Lady Jane's Christmas present.

Cheerily.

# Christmas

By William Dean Howells

YOUTH, in the heart of faith  
now wearing old,  
Hope, in the darkness of  
this doubt and fear,  
Love, in the law inexorably severe,  
Home, in the cosmic exile  
I, in the cold,  
Soon dusk of this my latest  
year, behold  
The beauty of thy coming, and the cheer  
Familiar, mystical, divine and dear,  
Feel as in all the years that have been told.  
About thy forehead and within thine eyes  
The innocent wisdom of the sage and child—  
Experience with expectance reconciled—  
Shines, with ineffable presence: the surmise  
Of being, when the years no longer come,  
Eternal in youth, and hope, and love and home!

## The Gods of Rule and Riot

BY HALL CAINE

**I**T is six o'clock in the morning in this angle of the Bay of Biscay which is called Biarritz. The air is thin and clear—the early sun shines with a gentle warmth through an atmosphere which has still some memories of the salt of last night's spray; and the sun, often so wrathful on the rocks of this coast, and full of unambrosial wrecks, is rolling on the long reaches of the sandy shore with a softened and measured roar.

In the market-places of the little town the day's work is beginning. The big doors are open and the country people are carrying their produce to the stalls within. They have come in their donkey-carts, multi-carts and oxen drays from the Basque province round about. Here is a multi-cart full of green vegetables from some farm at the foot of the Pyrenees. At the heart of the lettuce the dew is still hiding its head, and you know they were plucked from the fields this morning, while the sky was gray and the air was laden, for a line of women and girls who stooped double over the ridges and then rose to look at the crumpling clouds that came up over the outward hills. Here is a donkey cart full of fresh eggs, of butter in wet cabbage-leaves, and of milk in larch pails. And the owners of the produce, be it sold this morning—stripped to their clean white shirts, with their waist scarfs of red cotton and their tawny bree as they spread their baskets on the stalls and sell in each other and laugh.

As seven strikes from the market clock, the buyers begin to appear—thirty busonnes in black gowns with apron aprons and and vegetables, bargain, haggle, and buy while the sellers cry under their shawl-cloaks overhead, when the red and drop into a dash. At eight o'clock the little city has begun to smoke in breakfast-attrition, as smoking along the streets with horses, stabled with coming stone, and the sea is beginning to clamor.

When the "six" strikes—the end of business in the market is met, the other are shutting up their stalls, pulling on their coats, and hurrying to their donkey, and milk, and preparing to make their

own purchases before setting off for home. One of them draws up at a cabinet's shop and buys a thin roll of cloth. It is Irish frieze, and you can imagine you hear the shuffling of the wooden loom in the far-off factory in which it was spun. Another stops to give two coppers to a blind woman led by a little girl, and you feel the spell of that sweetest part of charity by which the giver makes himself one in welfare and interest with her to whom he gives. All are obeying in their different ways the homely but irresistible god who governs all men—whose rule began with creation and ran only mad with chaos; who binds together the farthest parts of the earth, and unites the peoples of the world into one family. They are his willing and cheerful subjects, happy to serve him and the better for his service. And they go about with his little counters in their hands—gold counters, silver counters, and bronze counters—symbols of green fields, of forests, of farms, of vineyards, of orange groves, of lemon orchards, of houses, of factories, of flocks, of mills, of ships, of everything wherewith they eat and drink and live.

That god is the god of Industry, and his name is Fate.

### II

It is twelve o'clock midnight in the Municipal Casino; the performance of "Boris Godunov" has just finished in the little blue and white theatre; the curtain has risen again and fallen for the last time on the painted and powdered mimics in grotesque costumes who have made merry for three hours, and the audience of men in frocked shirts and black cravats, and women in silver silks and white feathers, is pouring out of the double doors which open into the gaming-rooms.

There are two gaming-rooms. One of them, the outer one, is well filled with people who—as actors not, so longer as audience—are crowding about a table on which little numbered by boxes of various colors are made in upon around a wretched circle. The room rings with money voices—the voice of the man who cries "no stakes," the voice of the man who turns the crank which moves the numbers, the voice of the man who calls the winners, and the voice of the man who receives and pays the money that is won and lost.

The other room, the inner room, is silent with a muggy and

climby silence—the silence of the dusk and empty hour that goes between the darkest hour and dawn. Some fifty persons are gathered there. A few of them are seated about a green-topped table; the rest are standing behind and looking down. At intervals single words fall on the ear like the plip of fish in the stillness of a wounded pond at night. "Care?" "Innocent?"—then come the swish of the crumpler's smile as he scoops up the ivory counters, the ruffling of outtered words that drum through the air like a message mumbled in a cave, and then silence once again. The only light is from the chandelier of electric jets which stretch down their arms to the table—the rest of the room is in shadow, and the ends of it are gloomy and asleep.

Charles itself is not so wide in moral charity as the Casino. The Duchess sits beside the courtesan, exchanging smiles and even words with her; the blacking who has been turned out of half the clubs of Europe elbows the heir of an English earl who is famous for philanthropy; the young bride stands behind the mistress of a financier who is in prison.

The young man, with the heavy eyes who took the bank for a hundred louis is losing heavily. He has lost heavily every night for a week, and, chewing the end of a dead cigarette, he is waiting for his luck to turn. It did not turn last night, therefore it must turn to-night; it is not turning to-night, consequently it is certain to turn to-morrow night. Such is the logic of this slave of Chance, straggling under the law of that mysterious force, which must ever remain lawless, or else cease to be Chance, and therefore the subject for a game. Meantime the substitutes his father left him is disappearing like a snowflake falling on the sea. Hence, instead of the law of that mysterious force of industry by many hands in many countries, are melting away one by one.

The young woman in the silver-gray blouse and the ostrich feather, with the pink and white cheeks, has been winning all night through. She began nervously with the little red counters which represent five francs, and now she is playing boldly with the large white octagonal pieces which stand for five hundred. Her eyes are gleaming; a laugh not yet loosed in the air is playing about her parted lips; at intervals she looks into the faces around and smiles at strangers. Presently she rises, gathers into a little basket the pile of shining ivory which lies on her section of the table, and carries it to the treasury to be changed into coin. She has won, but she has also lost—lost something of that most precious corner of the soul.

The elderly man with the ruddy cheeks, smoking a long cigar from a ivory-cashmere holder, thinks he at least is no offender. His income is 40,000 sterling, and if he cares to waste some of it in the Casino who shall say he may not do so? If he gave suppose they would cost him something; if he kept horses or yachts or women nobody would question his right to do what he liked with his own—why not waste his wealth in this way if he will? So he loses with a laugh, and wins with an equal countenance, and rises from the table with the easy conscience of one who has amused himself and done harm to no one. But that man has, nevertheless, committed the gravest crime against social morality—he has robbed money of its meaning, and has set up nothing in its stead. Therefore he is a criminal against the oldest and firmest of the laws of life—the law which says, "In the event of thy face shalt thou eat bread."

They are all criminals, though they sit here in silk and broadcloth, in the Casino that was built by the municipality and is licensed by the state. For the god they serve is the god of idleness, and his name is Risk.

## THE SCHOOL-MASTER AND FELICIA

BY A. E. W. MASON

"Y"ou'll call at the Villa Pontignard at noon to-morrow. The Duchess will herself receive you," said the butler, with a superb cordiality, and he passed away up the narrow winding streets of Roquebrune, wondering, with perhaps a little contempt for the incomprehensible eccentricities of rank, what in the world the Duchess of Pontignard could have in common with a little village schoolmaster, that she should be at the pains to command his presence.

The schoolmaster, however, had no doubts as to the reason of the summons. He leaned over the parapet of the tiny square before the schoolhouse, and from head to foot he tingled and glowed. It was his brochure upon the history of the village—written with what timidity, printed at what cost to his meagre purse!—which had brought him this recognition from the great lady of the villa upon the spur of the hill.

"To-morrow, at noon," he repeated, and he turned back again with a shiver of fear at the thought of the mistakes in behavior which he was likely to make.

The Duchess, an elderly lady, who had long since retired from the world, received him the next morning with a simplicity which put him at his ease. She held his brochure in her hand, and she bowed to him. There was a look of relief upon the schoolmaster's face as he returned the bow. She had not held out her hand.

"You are a native of Roquebrune, monsieur?" said she.

"No, madame," he answered. "My father was a peasant at Aigue-Mortes. I was born there."

The Duchess nodded in approval of the simplicity of his reply.

"Yet you write, if one who is unlettered may say it without presumption, with the love of a native for his village."

The flattery unhooked, as it was intended to do, the schoolmaster's heart. The Duchess made him sit down, and he found himself, to his intense astonishment, confining to this graceful old lady truths about himself without any feeling of timidity.

He had no doubts as to the reason of his summons

"It was not love for Roquebrune which led me to write the little book," said he.

"My daughter, monsieur," the Duchess said, "is now seventeen. It will be my duty soon to present her to the world, but I would have her educated first, as completely as is possible. It is not easy to obtain governesses proficient in every branch, and I will not part with her. I thought, therefore, that I might be able to arrange with you to read history with her during your spare hours."

The schoolmaster felt his head turning. That he was the recipient of the great lady's charity he was not for an instant aware, and, indeed, it was intended that he should not be. The Duchess had noticed this poor solitary youth, had pitied him on account of his

poverty, and had thus found her way in some measure to relieve it. She had the firmest faith in her instincts, she had sounded the man, she believed him trustworthy, and by offering him this work she would be suggesting his pitiless and not diminishing, but, on the contrary, increasing his self-respect.

From that time, therefore, on three afternoons a week, the schoolmaster climbed up to the villa. And if he taught the daughter Felicia a little, a very little, history, he got from her much more instruction than he gave.

One day she said to him: "You let me always talk now. Why have you grown silent, monsieur?"

"You know more than I do," she exclaimed, and then she laughed. "Really we both know nothing. We can only guess—and guess. But it is pleasant work guessing, isn't it? Then why have you stopped?"

"I will tell you, mademoiselle. It is because I have come to guess through your eyes. I see the world through them."

Thus he came one afternoon to the terrace with his eyes fixed and his face drawn.

"You are ill," said Felicia. "We will not work to-day."

"It is nothing," he replied. "Two travellers came up to Roquebrune yesterday. I met them walking by the church. I spoke to them and showed them the village, and took them by that short cut of the steps down to the railway station. They were from Paris. They talked of Paris. I have not slept all night," said he clasped and unclasped his hands.

Felicia looked down at her history, and said: "Hannibal crossed the Alps. You must go to Paris. Why not become a Deputy?" and she clasped her hands as the idea occurred to her.

"A Deputy?" exclaimed the schoolmaster, flushing with pride. "Of course," said Felicia, utterly assured that she had not thought of so simple a solution before.

Hannibal's passage of the Alps was forgotten for that afternoon, and Felicia's project was developed instead. The ways and means of becoming a Deputy were of course left out of the question. The schoolmaster was to become a Deputy. Therefore he was as good as a Deputy already. They started with the premise that he was a Deputy, and the Deputy's future was stepped out. Felicia was to marry—some one of course who loved her very dearly, but the same one was to be, at the same time, a person of great importance. Felicia would have a salon with weekly receptions of distinguished people, where the rising young politician, who had once been a state schoolmaster at Roquebrune, was to be introduced in proper notice. Felicia saw no difficulties. He must have a dress suit, that was all. She even got so far as describing, from hearsay, the imposing public funeral of a President of the Republic. And the schoolmaster still saw the world through her eyes.

But the time came when the history books were shut, and Felicia prepared for her first season in Paris. "But I shall miss my quiet afternoons on the terrace," she said, speaking out of her friendliness rather than out of her convictions. "Besides, I shall come back to Roquebrune," she added, quickly, "and you are to come to Paris, too. That is arranged, is it not?"

And so Felicia went to Paris. And in due time she returned. With a woman's inimitable quickness she had acquired in those few months the case, the polish, the armor of a woman of the world. He was still the village schoolmaster, and he stood confused before her. She spoke again, asking after his school. He could barely answer her.

"But you must come up to the villa," she said. "We have much to talk over. I have much to tell you."

But she had nothing to tell him. The schoolmaster stood upon the platform and knew. The afternoons spent the terrace, the speculations, the encouragements, these things were of the past.

His window was darkened, he would never find his way out of the room—he felt it very surely. But, none the less, he went up to the villa, and that evening. He did not go to the house; he crept through the garden to the terrace, and sat there in the shadow of a cypress. Felicia and a youth walked the terrace.

"My cousin," said Felicia, "I have spent waxy hours upon this terrace."

"Of all those hours," replied the cousin, "I am very jealous, and the more jealous because you speak of them with regret."

"Regret, not on my own account," replied Felicia. She was silent for a little while, and the schoolmaster sat still as a mouse, for he saw the world through Felicia's eyes. He had the more reason so to see it now after her sojourn there. She continued: "The schoolmaster came up from the village to read

It is pleasant work guessing, isn't it?

history with me here. It was a plan of mother's. He was poor, lonely, and she pitied him. He became my friend. We both knew nothing, and so we were less hampered in making plans. I was to become a Deputy. Then, the good God would decide. I was to marry—oh! not him, there was no thought of that, but some great person, and held salons at which my Deputy would figure—"

"What nonsense!" interrupted the cousin.

"No doubt, no doubt," said Felicia, with just a hint of sadness. "But it was rather pretty swansong."

The schoolmaster climbed down to Roquebrune as soon as the terrace was empty. He still saw the world through Felicia's eyes, but now he saw, through the same eyes, himself, the poor, bald, old man in view, looking upon vain dreams and accepting the baronet's dignity as a recognition of merit. The schoolmaster's lesson was learned!

## A Relapse into Barbarism

By van Tassel Sutphen

**O**f course John Wayne III, went to college. There had been a Wayne at Nassau Hall in every generation since the Revolution, and when, in due time, the succession devolved upon our hero it was accepted as one of the inevitable incidents of life, something akin to the darning of the tops *en route* by a Roman youth. And so, having put in a little extra time under the direction of an accomplished grammar, John Wayne III, was duly matriculated at his hereditary alma mater—his cherishing great-great-grandfather, if you insist upon the precise intellectual relationship.

To a young gentleman possessed of good health, pleasing address, and a fair allotment of pocket-money, the collegiate period of existence affords singular opportunities for amusing oneself. John Wayne III, took life easily—perhaps too easily; for at the end of his Freshman year the faculty decided that, until certain academic deficiencies should be made up, young Mr. Wayne need not return to Nassau's classic shades. A blanket "condition" in Greek and mathematics was the substance of the official communication from the registrar of the university, and Mr. Wayne senior pondered over the document in indignant astonishment for upwards of an hour; then he sent for John III.

The interview was an unpleasant one, but mercifully short. Young Mr. Wayne acknowledged his fault, and seemed anxious to repair it; the father was not inclined to be unreasonable, but he did desire the lesson impressed upon the heedless youth.

"It's not a question of taking honors," he continued; "so Wayne ever did that. But we all managed to graduate honorably, sir. What is the pass-mark? Sixty per cent. I really think you might manage that. You would never have made the nine with such a fielding average."

"Right you are, Peter," answered the young gentleman, cheerfully. "Mine was 979, which isn't bad for short-stop, considering the chance you have to take."

"Now I propose," concluded the elder gentleman, "that you buckle down to work at once, with a view to making up those conditions the first thing in the autumn, and so start Sophomore year with a clean sheet. You can't do it at Bar Harbor; there are too many side issues there. I think you had better go out and spend the summer with McWilliams at the 'Tin Cup.' Take your books along and put in two or three stiff hours a day. Incidentally, you can get some insight into the cattle business which may come in useful later on. What do you say?"

John III, hesitated. There was no particular novelty in the proposition, for he had once spent a week at his father's ranch in Wyoming, and he thought he knew the cow country pretty well. The scenery around Badville isn't much, the shooting was non-existent, and while a round-up, with its attendant festivities, is well enough in its way, you see it once and you have seen it for all time. At Bar Harbor now—several of the fellows would be there during August—they had been planning to put in some preliminary football practice—yes, and Elan Fielding—Elan Fielding—

"Well?" said Mr. Wayne, a trifle sharply.

"I'll go, sir," answered John III, dutifully.

A week later witnessed the arrival of our hero at the "Tin Cup." McWilliams, his father's superintendent, gave him a dour Scotch welcome; he had received some private advices from Mr. Wayne senior as to the disposition of the young gentleman in the political economy of the establishment, and apparently the commission was not to his liking. But the sooner over the better, according to the McWilliams creed, and immediately upon the conclusion of supper, the superintendent proceeded to amuse himself.

"He says I'm to put you out on the range wif the boys," he began, frowning ominously. "Eh, now, Mr. John Wayne III, is it that your feyther will have been having trouble wif his head o' late?"

"Not in the least," answered John III, with valiant manliness. "It was my own request, and I'll thank you to make no more comment upon it. All I want is an outfit; you can manage that, I dare say."

"Aye," granted McWilliams, tacitly amused, "we'll look it up somehow. Na doot it's a verra incredible world, young gentleman, and we're born in it to trouble, as the sports ferying uppit. But look, now! there will have been ger goings-on at the university, I take it, to bring about a these civvies."

"Good night, Mr. McWilliams," said John III, with dignity. "We can settle the details in the morning. Will you kindly leave my bed taken up stairs?"

"So it seems I'm not to play 'owner's son,'" said John III, to himself, and smiled somewhat grimly as he sought his pillow.

"But it's all right, governor, all right. Fer made a fool of myself, and I'll pay for it, no fear."

The outfitting camp was some eight miles away from the ranch house, straight towards the foot hills of the Big Smoky. After all, it was a pleasant thing to be riding abroad on a fine June morning.

with the breath of the infant filling one's lungs and all God's world to look at. John Wayne III, threw back his head and chanted his college yell joyously, while Kitty, the bookish mare, took some contemptible side-steps and pretended to be dreadfully afraid of that delicately pricking spear. Then a mad gallop for a quarter of a mile—

*Quadrupedante patrem secuta, quatit angula comam*

—to finally pull up breathless and shaken on the crest of the next divide and exultantly view the wide prospect over. Then a quiet snaffle, nimbly Kitty the buck should have recovered her wind and so on.

But with the ramp actually in sight John III, felt his spirits sinking again. The long, low shark, built of alaba chinked with mud, was not an attractive place of residence, and the company of his father's cowpunchers might be endurable, but could hardly prove congenial. John III, reflected, with a certain distant satisfaction, that the situation would afford splendid opportunity for putting in some desperate licks at Greek prose composition and that beastly analytical geometry. The text-books were in his saddle-bags; he would be a peer from Polkville until he had everything down pat. Then, he! for Bar Harbor and its side issues, as the pater called them—the fellow—football—Elee—

"Hi there! how bridge break away! break away!"  
A confused melody of exclamations, set in unison oburgations, filled the astonished ears of Mr. Echo Wayne III. Absorbed in his reverie, he had ridden to a smart pace around the corner of the house, and rambled plump into a cowboy, who, mounted on a determined looking raysue, was having a desperate tug of war with a young grizzly cub; the bear, half strangled by the pressure of the rope about its windpipe, was yet far from subdued, and the half-

circle of cowpunchers watched the Homeric struggle approvingly. It was upon this exclusive family gathering that John Wayne III, had chanced to butt in, and he was speedily made "one of us," as a bystander remarked.

It was apparent, at the outset, that Kitty the buck did not care for grizzly society; with a squeal she dropped to a fore-leg pivot and lashed out once, twice, at the snarling bunch of tawny hair. The second kick put Mr. Bear out of business, and then the lady proceeded to give an exhibition on her own account. John III, felt her spine stiffen beneath him, and—"It's another eruption of Most Pains," he thought, vaguely, and held on.

"Never saw such buckin' and ridin' in all my darn days," said Mr. "Beef" McCook, detailing the scene for the edification of a friend who arrived too late to assist. "Ground and lifty (umble); grand aerial ascensions with balls of colored fire; Green-Roman and catch-as-catch-can; Barrel of Love and Shoot the Chutes; the whole performance to conclude with the uncalculated feat of Leapin' the Loop on roller-skates. And fact! he done it—that tenderfoot, that tawny boy—and done it easy. Why?" but that was breaco-breaco for you. Talk about your human postage-stamps!"

And truly after Kitty the buck had exhausted her bag of tricks John III, still bestrode her, a trifle dazed, but unmistakably in the ring. They helped him out of his saddle, led him into the house and dusted him off solicitously. One of the punchers complimented him solemnly upon his horsemanship.

"I was afraid to get off," explained John III, blushing ingeniously, and thrust a great roar went up.  
"You're adopted, sonny," said "Beef" McCook, his big hand coming down on the boy's shoulder, and with the words a curious sense of exaltation possessed our hero's spirit. He felt that in some odd fashion he had suddenly been made free of something—everything. It was an odd sensation, unpleasantly pleasant.

The weeks grew into months; the summer was almost at an end. And what a summer! Long days upon the range, with its pure joys of living—speed and motion; the fresh breath of the first dawn and the keat of noonday sun; the feeding of mountain ponds, perched monkeylike on horse's crupper; the hazy edge of hunger; and the emotional increase of evening camp-fires. Then the occasional night in the open, stretched prone beneath the elon arch of the firmament, sinking to dreamless slumber under the secret influence of the Pleiades. The underlying primal instincts had arisen in their night, and he yielded, shamelessly at the first, then glacially as one entering upon an unexpected vertigin. This was life, this was living; let the aphorix of existence answer her own riddles and be hanged to her.

And yet what our young grizzly-man did not forget was this. He was still John Wayne III, and he had a debt of honor to pay before he could enter upon the full enjoyment of this new and glorious life. Through everything he managed to keep at his books, until mastery of the loutish subjects was his at last. Then he consulted with the academic authorities, and obtained permission to pass the conditions with the university resident in Denver. He took a week off and went there for the ordeal, emerging triumphant. Then he went back to the "Tin Cap" and wrote a letter to his father.

It was brief but pertinent. John III, enclosed the examiner's certificate ratifying him to full standing in his class. "The old settler," he wrote, "and I don't intend to run up a new one. Billy (his younger brother) will perpetrate the name of Wayne on the academic rolls; he may even take honors, governor, for he is a good right dickerer than me. I should like a set of new shirts, and if you could use your influence with Secretary Grandson—to take up a quarter-section—"

It was at this point that Mr. Wayne senior realized the loss and in a report of his extraordinary communication. A Wayne extraordinary communication. A Wayne extraordinary, and yet its truth finally forced (itself home. John III, had a mind of his own and he had made it up. Arguments, counsels, threats, prayers—none of these things moved him. His mother's trip to Texas, his father's made a distant trip to Texas. "Tin Cap." And out of the dust and turmoil of controversy John III, emerged calm, triumphant, and wearing his new shirts, while Mr. Wayne senior went back to New York. In the glowing conclusion of a Pullman statement. The paternal man had conquered; the fight had lasted but a single round.

Autumn passed into winter, and it was

Lashed out . . . at the bunch of tawny hair

new late in December. The family had begged for the poor lion of his presence at the Christmas festivities, but John III, after brief deliberation, had declined, to effete civilization for him, even under the guise of the holiday season. He wrote kindly but firmly, explaining that his presence at "Tin Cup" was absolutely necessary throughout this abominably long spell of open water. The cattle were out on the range, and any day now a blizzard might come, when every pair of hoofs would be invaluable. Sorry, of course; he might manage a flying trip East by the following May. Love to all. It had been a rattling good football season; he did regret missing that.

It was one of the warmest days of that extraordinary December—the 20th of the month, to be exact—and John Wayne III, riding leisurely through section 10, came upon a pot-hole, known throughout that region as the "Compuchoes' Semiasmat." It was a warm spring, of just the right temperature for a bath, and its appearance stirred certain strange emotions in John Wayne's breast. "Twice a year, whether he needs it or not"—the merry old witlarian rose unconsciously to his lips. "It must be some old time with me," he mused, looking at the length of time with me; he continued, speaking half aloud. His eye fell on a small silver-plated case lying at the edge of the pool. "Soap," he exclaimed, as the lid sprang open. "Some chap must have been taking a bath and forgotten it. I do believe—by George, I will!"

He stripped quickly and slid into the water; his grateful warmth rose about him, and he watched with delight the creamy lather gathering on chest and limb as he rubbed the cake of soap over them. What a delicious sudsy smell! This was luxury. Now that he thought of it, he had missed his bath. It was faulty, it was great, and—ouch! he must have stepped on an old tin can half ashen in the mud; it was a mean trick to throw such stuff in the pool. He changed his position, treading gingerly the soft, muddy bottom. But he couldn't seem to get comfortably settled again; the water was too shallow here, and the coarse grasses that fringed the bank were scratching his shoulder-blades considerably. The remembrance of his own bath-room at home rose vividly before him—the cold, white-porcelain tub; the shower with its douche and needle sprays; the clean-smelling bars of Castile; the lag, rough, generous bath-towels. "By Jove!" murmured John III, under his breath. "By Jove!"

Some eminent investigator has pointed out that the decadence of a nation is invariably coincident with an increase in its bathing facilities. The Romans in the past, the Turks of to-day—really, there is an air of possibility in the contention, and the experience of John Wayne III may be fairly adduced as an *ad hominem* argument. The hero, slipping out upon the bank, looked upon himself and saw that he was clean; he became suddenly aware that the "overman" within him had

closed a joint upon his primal herd. To be strenuous and live just successfully one must take care never to lay aside the protective armor of the soul. As between the primitive instinct and the acquired habit the balance may swing first up and then down, and generally it needs only a grass or so in either scale pan to act the it—in this case a piece of soap.

John III, looked at his watch. "I can reach Deadwater by eight o'clock," he said to himself. "I can catch the 'Twentieth Century' at Chicago on Tuesday, and make No. — East Sixty-fourth Street by Christmas etc."

A delicious sudsy smell! This was luxury

"John dear," said his mother, gazing at him with fond, admiring eyes. "It seems too impossible to be true. So, really, little old New York is good enough for you, and you are not going back to the 'Tin Cup'! I only wish I knew what or whom to thank for bringing about the miracle."

John III, drew the silver-plated soap-rose from his pocket; he was about to prowl his magic charm in rock-herald lines. But at this instant his glance traveled into the drawing-room beyond, brilliant with the green and scarlet of the holly. Some one was there, standing under the mistletoe; it was Elia Fielding.

"Some-day I will tell you, Mater," said John III, and smiled a perfectly inscrutable smile.

# JOY

By Mary E. Wilkins-Freeman

**A**LTHOUGH it was December in the mountains, these were a day so strangely mild that it suggested spring. A strong soft wind blew from the south, the sun's rays were distinctly warm, the snow around the trees melted imperceptibly until a curious effect was produced. It was as if a tree stood in a whirlpool of blue crystals. On the mountain road and on the cleared fields the tracks of wild animals and birds had individual characteristics and ran together; the brook, which was almost a torrent in the spring, ran with an insistent roar, being augmented by soft droppings from the shaggy boughs which arched over it. The brook crossed the road under the bridge, within a few feet of William Deane's house. The house stood close to the road, after the old fashion of the times when men built as near the haunts of their kind as possible, when humans huddled together for protection against the savage and inhuman forces of matter and wind. The house was very old, and of an indescribable color, or rather lack of color. It was gloom rather than any tint on the old walls. The house looked almost, so black it was, as if it had been scorched by fire, and, in fact, the three suns and storms and winds of over a hundred years had burnt it like fire. Still it was stanch. It had been built by an artisan who worked with the best of his strength. The roof did not sag, except for a slight depression around the central chimney. The roof was sealed with black shingles like some old sea monster, but it did not leak. William Deane cared for the old house as tenderly as if it had been some fine thing. Not a black shingle flapped on the roof in a northern gale but the man was prompt in fastening it; not a leak when the wintry snow began to melt was neglected. The house, ancient as it was, would outlast the man, whose house of life had no such strenuous care for its earthly preservation. The walls sagged a little, the floors undulated like waves, the doors swung awry, that could not be avoided. It leaped, as the years went on toward its final end, but it was no nearer falling than a stanch old tree whose roots held with a grasp of life in the soil, and even wear tracks of the stern mountain sides had a more precarious tenure of place than the old human dwelling.

And William Deane exercised the same zealous protection over all the simple, even primitive furnishings which had endured from his mother's girlhood, and were, in fact, her marriage treasures. There was a wealth of old tables and drawers and bedsteads in the clean dry rooms. William cleaned house, springs and outflows, as scrupulously as a woman. The old carpets sagged the

line on the small level under the frown of the mountain back of the house every May and September. Every inch of woodwork was scrubbed. Williams purchased paint, and kept all the old window-sills well whitened, the windows shone like sheets of crystals from faithful polishing, the stained beds were ever mounts of white linen, the house was a marvel of exquisite order and cleanliness, and all brought about by one man. He, however, lived only in two rooms of it, the kitchen and adjoining bedroom, except possibly in some summer days, when the heat was intense for a few hours even in that northern country. Then he would slip carelessly into the cool dark sitting-room or the parlor, open a window a little way, and sit beside it with his book, gazing now and then at the familiar outlines of the opposite mountain and the long grandeur of the undulations with which it rose from his native valley.

The house, although a cottage with the ceiling of the upper rooms slanting with the slant of the roof, was quite a large building, and had at one time after the marriage of William Deane's parents accommodated two families. The large kitchen and living-room had been divided and the great hearth cut in two. There were two square rooms, one on either side of the front door, and each family used one, and it was the same with the chambers. After the old people had gone, the son, William's father, used the whole house, but the kitchen partition remained. Indeed, each kitchen, although only half of the original, was a large room. It was the half with the southwest exposure which William tenanted, in his solitary estate. He had his nicely kept cooking-stove, his cushioned rocking-chair, his ancient table which served him for cooking and dining, and another old mahogany card-table, which he had removed from the parlor, for his books. That stood between the south windows, and the books were piled thereon in orderly fashion. William literally knew this small library by heart. For most of them he did not in one sense note, but they were to him like familiar companions of his solitude, to whom he owed a certain loyalty. He was conscious of being distinctly at variance with some of the views in these black-bound volumes of religious wisdom produced by the eminent theologians of the last century, and yet he got from them a certain keen enjoyment, they acting as stimulants upon his own mind, and forcing him to silent but none the less eager controversy. Many an evening did William Deane engage in a spirited discussion with some long-dead divines, and come off glowing with triumph in the rectitude of his own vision. There was about the man an innocent optimism which

loved him up above the dead monastery of his life like wings. He had lived alone for fifteen years, ever since Grace Edwards had gone west, after his mother's death. Grace Edwards was the daughter of a lawyer, the attorney-at-law, in the miles down country. She had come, when very young, not more than eighteen, to assist his mother in her household duties. She was practically homeless, her mother being dead and her father married to a woman who regarded her as a home. So the girl, who was, moreover, delicate and young and beautiful, had been glad to enter into the dignified domestic service of that part of the country. William's mother had grown speedily very fond of the girl, had petted and cuddled her, and came to think of her as her own, especially after Grace's father's death, leaving a will which gave everything to the stepdaughter and her heirs. William had been betrothed to her, after Grace had lived with himself and his mother three years, and was twenty years old. At that time the girl, although still delicate, was charming, sweet and gentle and fair, and yet with a quick flash of spirit in her blue eyes. William, who was grave and sedate as to demeanor, and of an awkward shambling length of limb and neck, adored her. He worked the farm as it had never been worked before for her sake. He made new ventures, he added by tiny details to his tiny income. He kept chickens and turkeys, and sold them, with vegetables, in a hotel about three miles distant. He in reality made an unusual income for a farmer in that part of the country. He purchased a parlor organ, and paid for Grace's music lessons in the village of Lowe, six miles away. He painted and furnished up the ancient vehicle in which he carried her back and forth for her lessons. Then he sailed patiently during the hour and a half drive her home. Nothing could exceed the pride and joy which filled him with a species of ecstasy as he sat by the girl's side, carefully driving his horse, which was, somewhat skittish, and realized the eyes of people upon him and Grace, and was sure that they were coupling them in their thoughts and reflecting that this fair darling of a girl was sometimes being brought with a sort of shy reverence at the soft, fair face beside him his own seemed to lose its characteristics and reflect hers as a mirror of love. At those times the man's face, above the long straggly neck was a marvel, but the girl saw always the long neck and the awkwardness of her lover. She had agreed to marry him, but she did not like to look at his neck. Sometimes her spiritual illumination toward this other faithful soul who loved her, but she also had a physical repulsion, which her soul was not strong enough to conquer. Her opinion about his straggly neck was in a collar, and there was something about the strangely humble and pathetic combination of long neck, prominent Adam's apple, no collar, and loving patient brown eyes which irritated her unreasonably. She could not always conceal it, although she tried. At last William's mother, who was a sharp woman, in spite of a premature festiveness, had teased her with it. "I'd like to know why you set so standoffish with William," said she. Then Grace, who was timid with a nature that seemed before a stronger one like a flower before a wind, had professed her innocence of any intentional coldness, still the older woman was not satisfied. She was constantly on the watch for some slight to her son, and at last westerner reached a climax. It was one August evening when William came home from the hay-field, where he had been gathering a small stack of rye, that he heard, as he drew near the house, the sound of contending voices—his mother's, long pitched almost as a man's, and the girl's, and sweet-strained treble. William was heated and dusty, his colorless neck looked longer than ever, every line and motion of his gaunt figure was awkward as he entered the sitting-room which was the scene of contention. "You are a good-for-nothing and a coward," said his mother, disdainfully as he entered. She was pale and gasping for breath; she had a weak heart, but her voice was firm. Grace's face was flushed red with anger, her blue eyes had a hard glitter, her soft mouth was tense. She was transformed. "Then I will go away where my indignation will not trouble you any more," she declared, shrilly. Then the tears came. She felt blindly for her handkerchief, and could not find it, then put up both little hands before her face. William went soberly into his mother's bedroom, which opened out of the sitting-room, got a handkerchief, and gave it to the girl. Then he spoke, looking from one to the other. "What is the matter?" he said.

"His mother spoke first, to the accompaniment of the girl's sobs. "She treats you like a dog, and you haven't got sense enough to see it, nor spirit enough to pay her back," said she, fiercely. "I have had to run so to find heart with Grace," William replied, with a certain dignity.

"Oh, stand up for her against your own mother if you want," his mother retorted. Then suddenly her face went paler, and she gazed frightfully, and William caught her and laid her on the

lounge, while Grace, still sobbing, ran for water. William's mother only lived a week after that; the strain had been too much. After she was dead and buried, William and the girl had a discussion one evening. He had ventured to ask her to consent to an immediate marriage, but she refused. "I don't want to get married yet," said she, and remained firm with the unchangeable firmness of a gentle nature when it is aroused.

"But, don't, how can you live on here unless we are," William said, finally, and at once the face of the girl's flushed scarlet.

"I'm going away," said she.

"Where?" asked William.

"I am going down in Littlefield."

"What will you do there? Go live with your stepmother?"

"I guess not. I am going to learn millinery. I am going into Mrs. Adkin's store. She said she would take me any time."

It was quite true that Grace had a pretty taste, and had trimmed her own hair with such success that the milliner's attention had been gained and the place offered.

William looked at her. "But there ain't any need of your working for a living," said he, pitifully. "I don't want you to work for a living, Grace."

"I want to be independent," said she.

"There is no need of your working for a living, even if you don't feel that you want to get married to me at all," William said, broodingly. "You can live in our side of the house, and see in the corner, Grace."

But the girl was firm in her determination, she packed her trunk, and William carried her in his light wagon to Littlefield, and left her at the milliner's. She was to board with her.

"Now any time you feel that you want to come back and live in the other side of the house you can," he said at parting. "You needn't worry about getting married if you don't want to. All I want is for you to be happy and not work too hard."

There were tears in the man's eyes; the girl thanked him, and went away without looking at him. The milliner noticed at supper that her eyes were red, and wondered if she had been crying.

As for William, he took up his lonely life with his compensations. He lived quite alone for fifteen years. He never heard from Grace, except indirectly. Shortly after her departure, the man's eyes; the girl thanked him, and went away without looking at him. The milliner noticed at supper that her eyes were red, and wondered if she had been crying.

Grace

went. He was slay of other women than Grace from a species of unselfish loyalty, a never sense had he given up her return some day. The helpfulness of his nature was inherent; he had not needed to cultivate it. For his stomach had always been the precursor of sunshine, wadis of calm, spiritual exhilaration of peace. He said always to himself during the long years that each brought Grace nearer. That some day, water by many, she would come. The love in his heart made of it a home and a nest, and sooner or later birds fly home. There was a pair of robins which returned to their nest in an old apple-tree on the south side of the house under the kitchen window every spring, and the sight always filled him with new certainty as to his own coming joy. Now it was December, and the tree was bare and the old nest plainly discernible. The snow had all dropped from the branches in the hot days of that unusual December day, three days before Christmas. The branches looked black and stark, and every twig stood out silhouetted against the clear yellow of the sunset sky. In the sky at sunset was a low red of violet cloud, which William eyed wisely. "It will be colder tomorrow," he told himself. When he returned from the barn, having finished his nightly tasks there, a blast from the northwest struck him. The snow was over, and winter was again ahead. The man faced the latter wind with delight. The thaw of the day, the soft droppings and gargles, the warmth of the sun had weakened in him the upper part of his body. His nose gave out music in his ears to all the phases of nature. "It is cold again," he told himself, and he filled up his kitchen stove with wood, and got out the frying pan to cook some ham and eggs for his supper, with a postural rather than a physical sense of comfort and home in the midst of winter.

He sat at his neatly laid table, for he was as particular as a woman in such matters, and always had his rapin and white tablecloth and polished silver spoons, when suddenly he stopped eating and gave a great start. He had heard a noise on the other side of the partition which separated the kitchen. He sat motionless, listening, and as he listened his face became blanched. He smiled, then he laughed silently, the laugh of delight of a child. He had not a doubt as to what the noise was. Grace had come home.

There was a door leading from one kitchen to the other. He rose, and opened it, and there was the swift passing of a light and the rush of a figure from the other room. William stopped. Grace did not wish to see her, and his mind fell at once into its attitude of acquiescence before the onslaught of love. But the cold air from the other kitchen was deadly. He did not shut the door, but hurriedly got some coals from his own glowing stove, carried them through on a shovel, and soon had a fire blazing in the other stove. He also carried in a slice of ham and some eggs and a plate of bread and butter and his own tea. He did it swiftly, for he knew that Grace must be shivering in one of the cold rooms the while. Then he returned to his own kitchen and closed the door and sat down before the fire and was happy. Soon he heard movements on the other side of the kitchen. He sniffed the ham boiling. He finished his own supper with ineffable content. His nerves wondered how she had come. He was one to accept events as he did the most unaccountable question or investigation. She had come, and that was all he wished to know. All the concern he had was for her comfort. After a while he heard a door open through on the other side, and he seized the opportunity to carry in a gossamer store of wood for her stove. He also, with the thoughtfulness of a woman, took the sheets and quilts from the bed in the little room adjoining the kitchen, where she would presumably sleep for the night, and spread them on chairs to bore the stove, reasoning that Grace had always been sensitive to colds and inclined to be careless, and that it was dangerous to sleep in a long-nosed bed. Then he retreated, after placing more ham and eggs and bread on the table, beside coffee and cream, for her breakfast.

The next morning he heard again the soft sounds on the other side of the partition; he sniffed the coffee boiling. He killed a chicken that morning, dressed it, and roasted it with vegetables, and watched his chance to deposit the one on the table in the other room. The day passed and he had not seen Grace, but he was not impatient. He told himself that for some reason she did not wish yet to see him, that he must wait and do what he could for her comfort. Suddenly it occurred to him that it was only two days before Christmas, and a happy thought came to him. He would go to Lowe and buy some Christmas presents for Grace. That afternoon he put the horse in the old driver and started. He was gone about two hours. It was a long drive over bad roads, and he was not an experienced hand, but he had a good horse. When he returned and had put the horse up and entered the kitchen with his arms full of parcels there was a loaf of frosted cake on the

table. There was also a dish of cream toast set back on the stove to keep it warm, and the tea was steeping. The man laughed his silent laugh of extreme delight. He ate his supper, then examined his purchases. He had spent a good deal of money, more than he had ever spent in a day in his whole life, but he gloated over the presents without a thought of the cost. He had gotten more than the value of his money.

The weather was very bitter. He was careful to keep enough wood for the other kitchen stove in readiness, he was obliged to keep it warm, and the tea was steeping. The man laughed his silent laugh of extreme delight. He ate his supper, then examined his purchases. He had spent a good deal of money, more than he had ever spent in a day in his whole life, but he gloated over the presents without a thought of the cost. He had gotten more than the value of his money.

The weather was very bitter. He was careful to keep enough wood for the other kitchen stove in readiness, he was obliged to keep it warm, and the tea was steeping. The man laughed his silent laugh of extreme delight. He ate his supper, then examined his purchases. He had spent a good deal of money, more than he had ever spent in a day in his whole life, but he gloated over the presents without a thought of the cost. He had gotten more than the value of his money.

He remembered how once he and his mother had made a Christmas tree for her, and her delight, and he resolved that she should have one now she had come home, and he set out to do it. He went out into the woods and looked about for a perfect little tree. He returned an hour later with a fine little tree, as symmetrical as a bouquet, and also with ground pine trailing over his shoulder. As he neared his old house a few swiftly disappeared from the front windows, and his own face lit up with a tender smile. That night, after he was sure that Grace had gone to bed, he set up the little fir-tree in the parlor on the other side of the house, hung the presents thereon, and laid some wood ready to kindle in the stove. Early the next morning he arose and lighted the fire in the parlor stove and made up his own kitchen fire and got the turkey in the oven. Then he returned to the parlor with more wood. The key atmosphere had softened. The little tree made a brave show. He had hung some of the ground pine over two old steel engravings. It looked beautiful, although the morning was dark. There was a driving snow-storm. As he stood surveying the fire in the door opened, and Grace entered, and he turned and they stood looking at each other. And the man saw that the woman had changed. That the face of the girl he had known was gone forever, and that had he met her on the street of a strange city he might have passed her by unknowing, but the love in him kept to meet the change, and he loved her as she stood there, timid, warm, and pale, as he had never loved her before.

"You have come," he said, and held out his hands to her, and she put her little trembling rosy ones in them. "Yes," said she. Then she lifted her changed little face to him, and spoke with a certain dignity. "I was not obliged to come," said she. "I have supported myself well. I have worked hard, but I have supported myself. I have money in the bank." "You were always smart," said the man, gently, gazing at her with fastidious eyes. Her own dejected before them. "I never forgot you," said she, faintly. "and—and I heard you weren't married." "Of course not," said the man. "You knew I was waiting for you, Grace. She made a little abrupt motion away from him as that. "If you want to we can live this way awhile, you in this side and me in the other," said the man, in a soothing voice, as if he were addressing a frightened child. "The man could not get here in such a storm as this," said she, and her averted face blushed. Then suddenly she turned, and her thin little arms were around his neck. "I'm willing to shewer you say so," she whispered. "I never ought to have gone."

"That is so," said William, "and you have had a hard time, dear; but, after all, if you had not gone there could not have been this coming back. You haven't looked at your Christmas tree, Grace."

But she continued to look at him with childish blue eyes. "Somehow you look different to me," she said. "I have grown older," said William.

"No, you are handsome now," said she, and it was indeed a stately head of a man that she saw, and the thin long neck with the prominent Adam's apple had filled out and was embosomed by a collar. Tears welled up in her blue eyes and her mouth quivered a little. She raised one little hand to her face, and said, "I have grown gray," said she, feebly. "I don't look as I used." But the man smiled down at her, and suddenly she saw herself as she was in his heart, and a look of wonder and inquiry came over her face, transfiguring it, for in a second, as it were, she mastered the conception of her own beauty. "I am sorry I went away," she said. "and I will try to make up for it."

William laughed. "Look at your tree, dear," he said. "I have had a present on it for you, too," said she. "That night the storm cleared away. It was arranged that the next morning they were to drive down to Lowe and be married. After all was still in Grace's side of the house, William sat at a window in his kitchen gazing out at the sky in which the stars

blazed with a wonderful majesty and serenity of making its thought of the sleeping woman on the other side who was to be his wife, with a tenderness which was akin to pain, and the a solitariness of joy was over him.

William

# LOST: A SANTA CLAUS

BY KATHRYN JARBOE

**D**ONALD was just seven years old when he lost the first saint in his calendar. Into his neighborhood there had come some boys with a few more years and vastly more worldly knowledge to their credit, and from them he learned many facts and theories of lay life. Most startling of all their statements, however, was this:

"There ain't no such person in all the world as Santa Claus."  
"But I know there is," Donald answered the challenge valiantly. "I know there is, because he brings me things that I write for."  
"Huh! It's only your father and your mother that give you the things, and they tell you it's Santa Claus."  
Donald retorted with his little arguments laced. But the boys added reason to reason, proof to proof, and at last Donald's faith in the old saint was dispelled forever. The loss meant little to him; in fact, it was, in his own small brain, a distinct gain. Did not this freshly acquired knowledge bring him nearer to these new heroes in his life, these boys who know everything?

The trouble all came later, when he looked with wide-open brown eyes straight into his mother's face and said, "There really and truly is no Santa Claus, is there, mamma?"  
Mrs. Vane, forgetting that babies do grow into boys, answered, carelessly, "Why, of course, dearie, you know there is."

"But, mamma," persisted the boy, "I know there isn't. A man couldn't come down the chimney that way, and carry all those things, and be at all the chimneys at once, and bring the toys I've seen in the shops and—"

"But, Don, boy," cried his mother, half laughing, wholly wroth because her baby was prying behind life's veil of mystery, "you know there is a Santa Claus as well as I do. Haven't you seen his pictures? Now, how could they make pictures of Santa Claus if he were not a such person? Tell me, that. He'll be here jerry soon, too, slipping down the chimney, oh, so quietly, with a bundle of toys on his back."

She did not look at the round, questioning eyes, out of which a tiny soul was asking for faith and truth and finding them not.

Donald turned away, and looked down from the window upon his playmates in the garden.

"What do you want Santa Claus to bring you this year, Don?" asked Mrs. Vane; and not noticing the boy's silence, she went on: "Will you write him a letter and tell him—"

"He wouldn't get it, would he? Honestly, would he get it?" The simple baby faith was making one last effort to restore order out of chaos.

But Mrs. Vane was a bit vexed by the child's pesterery.

"Of course he will, Donald," she answered. "Haven't he always gotten your letters? Why do you ask such silly questions? Would mother ask you to write the letters if he wouldn't get them? Run right out now and play, and don't be a silly baby."

After he had gone, she wondered vaguely if she ought not to have told him the truth. "He really is such a baby, though," she argued; "it would be a pity to destroy his faith in baby things."

Donald, down in the garden, was digging his toes into the gravel, his eyes absorbed in his work.

"There is no 'Santa Claus!'" He made the statement boldly, bravely. "I know it all the time. He really does come down the chimneys, too. My"—there was just a moment's hesitation, in which the small soul struggled to protect its shattered lid—"my nurse says there is, and she knows."

"Oh, your nurse!" jeered his companions. "She'd tell you anything, you're such a baby."

"I'm not a baby," growled Donald, savagely. "I'm not a baby any more; I'm a boy."  
And the childish lips, that trembled babyishly even while they made the stalwart assertion, spoke the truth. For doubt and unbelief have no place in a baby's world, and Donald's eyes were looking dimly into a universe of shadow and of broken faith. He knew well enough that there was no Santa Claus; that it was only his mother, only his mother, that gave him the toys, that trimmed the tree and filled his stocking. But it was not for the pretty old saint that he grieved. It was for the lost trust in his mother, the confidence destroyed. The world seemed to slip from under his baby feet when he realized that she, his own, own mother, had lied to him, had deceived him. What was true in all the world if what she said was not true? If she said that there was a Santa Claus, when there really wasn't—and there surely wasn't—what was there of all the other things she had told him about that was true? Wasn't anything true or real? Weren't the

fairies real? Perhaps she wasn't real. Perhaps she'd be gone now if he went to look for her. Perhaps if he could only find out, he would know that even papa wasn't real. And Donald's poor little distracted soul slipped, down and down into the blackest abysses of despair.

He crept from the garden to the nursery, avoiding the hall that led to his mother's room. He refused to eat his nursery supper, refused to go down to see his parents after their dinner, although this had always been one of his dearest privileges. Mandy, his nurse, seeing a illness, asked if he had pains here or pains there, if his head ached, if his throat was sore, but to all her questions he only shook his head. Even pains seemed unreal to him to-night. When he was ready for bed, in his long white gown, he stood for a moment stiff and still, and then plunged bravely under the covers.

"Now, Donald," cautioned the nurse, "you've got to get right up and say your prayers."

She did not hear his smothered "I won't; there's no one." For even so far as this had Donald's doubts carried him, if there was no Santa Claus, there might be no God either. His mother had told him that there was a Santa Claus, and she also had told him of God.

"I'll never say my prayers again." He raised a defiant face above the sheets.

"For shame, Donald!" cried the nurse. "You know how unhappy mamma'll be when I go down and tell her how naughty you are."

And then Donald, knowing that he must not make mamma unhappy, chivalrous still in a distorted way, knelt and prayed—prayed words that seemed to him to float away into space; that were heard by no near, dear, loving father who would guard him tenderly through the dark night, who was glad if he was good, even if he tried to be good, who was sorry if he was naughty. The loneliness of an empty nursery opened out before his childish mind, and Donald, under the covers, sobbed himself to sleep.

The next night he knelt in silence before his bed.

"You must say your prayers out loud, Donald," cautioned the nurse.

"I'd rather whisper," muttered Donald; but no prayers were crossing the set lips, no prayers were in his stubborn little mind—only rage and unbelief filled his soul as he knelt there, a little white liar in a world of liars, a golden-haired hypocrite in a world of hypocrites. He did not believe that there was any God to be prayed to, but he would not argue with the nurse, neither would he make mamma unhappy by disobeying her; and since it was all a lie, all just pretending, he would pretend to obey, pretend to pray.

The same spirit he wrote his letter to Santa Claus. His mother asked him to write it, and he told himself that if she wanted to pretend in that way, why, he would, too. But in truth, he did write two letters. In one he listed the toys and games and books he wanted. The other was very short:

"Mr. Santa Claus if you are real please let me see you I don't want any thing else."

He was ashamed of this last letter. He would not, for worlds, have let any one see it. But might not the boys be wrong? Was there not one little tiny chance that they were wrong and that everything else in the world was right? The list of toys was laid upon the coals of the library fireplace with time-honored interest and ceremony, but the other letter was burned in secret in the nursery, late at night, while Mandy slept. Even so Donald put the paper on the coal-dotted ashes he felt a thrill of his new-born scorn of all the world's usage through him. How can he get the letters, he questioned, when I see them burn up myself? In his own mind, though, an answer was born. Of course the thoughts could go up in the smoke and be carried to him that way! But that he was not anywhere. There was no Santa Claus anywhere.

The outside air was full of a Christmas chill, and indoors a Christmas cheer and gawdy flared every heart—every heart, that is, save Donald's own. He was valiantly pretending—pretending to care for things, pretending to believe in Santa Claus, pretending to believe what his mother told him. And all the time there was a horrible lump in his throat that would not be swallowed, and all the time he was afraid that he would cry—cry like a baby right before everybody.

He had never been down to buy his Christmas presents, and he had nipped his own taste in the gifts he had purchased. He was a long, long time finding anything that pleased him for his

mother, but at last he discovered a tiny silver image of Santa Claus.

"But what will your mother want of that?" questioned Mandy.

"I—I want it for her," answered Donald, and the expression on his face was one that Mandy had learned not to combat.

On Christmas morning the library doors were thrown wide apart with Christmas pomp and the Christmas tree was revealed. But Donald was blind to the glories of tinsel and glass, blind to the piles of toys. He saw only his mother in the beautiful violet gown he loved, and he wanted to run to her, to bury his face in her lap, and to beg her to tell him what was real and true in the world, if anything at all was real and true. But this he could not do.

"See what a lovely tree Santa Claus has brought you, dear!"

Mrs. Vane cried, and pointing to the chimney, she added: "He left a bit of his for right here in the corner. That's because you asked me if he really and truly did come down the chimney, you know. He wanted you to be quite sure."

For a moment Donald's world grew white and full of joy. Was it true, after all—was it really and honestly true? His mother's words were so bright and gay. He was not gay like that when he lived. Was this truth or was she just lying still? But only for an instant did this thought linger, then darkness again closed over him. It was none of it true, and he—oh, he must just go on perceiving.

When he distributed his own gifts the list the package for his mother could not be found. No one knew where it was. No one had seen it. Nowhere could it be found, though Donald, apparently, searched for it as diligently as any one. But that Christmas night he lay alone in his little bed, his gift for his mother clasped tight in his hand.

"I couldn't give it to her," he sobbed over and over again, speaking to the empty darkness.

He was wide awake, listening to the noises of the night. At last he heard, coming down the passage that led to the nursery, his mother's footsteps. He tried to pretend to be asleep! He lay there breathing quietly, even to. He heard the soft creak of her silk skirts on the floor, but she could not see his quivering eyelids in the darkened nursery. He knew that she was going to a dance, that she was dressed for it, that her soft white dress were on his pillow.

"Mama's boy, mother's blessed boy, mother's own blessed baby!" she whispered, leaning over him, resting her soft lips on his. There was a passionate tenderness in her tones, adoring, worshipful love, but the boy lay still. She left the room, and again he heard the swishing skirts, the light footsteps in the hall.

There was no doubting the love in her voice. She *did* love him.

Her love was real and true. Quite sure of this, Donald rested for a time, forgetting all his doubts and unbeliefs. Then he remembered that, one night, she had told him that God was love, a love so great that it would fill all the world, that it could guard him and keep even him, a little boy, from all hurt and harm. And he had asked her if she meant that God was just a name for that sort of love, the sort that he couldn't see and feel as he felt hers, and she had said that he was too small to understand, that while he was a little boy she could only tell him things in ways that he could understand.

From this memory his thoughts flew to his present love. But—perhaps—might it not be that Santa Claus was just the name for the sort of Christmas love that trimmed the tree for him and gave him the toys he wanted? And—it was his love for mamma and papa and Mandy that made him want to give presents to them. Perhaps that might be Santa Claus love. The world might all be love, with just different names given to it for different things at different times. And of course Santa Claus really and truly was Santa Claus, as mamma said, if Santa Claus only meant love at Christmas time.

And of course, then, that kind of a Santa Claus really might get the letters. Here Donald laughed aloud. Didn't papa and mamma read them? And—oh, well, of course mamma could joke about papa's coming down the chimney if she wanted to—mamma always was laughing and joking about things—and a joke is only a joke, not a lie. And so, on and on, out of love and his own faith in love, the child reconstructed his world with its God and saints.

Mandy looked into the nursery as her way to her own room, but the boy seemed to be asleep. The hall clock chimed one, then two, three in the street. Donald heard carriage wheels, out of bed he jumped, and hurrying through the halls reached the front door just as his father opened it. His mother's sash slipped from her as she knelt to take the little white porcelain figure in her arms.

"Who, Donald?" she exclaimed in surprise.

But Mandy, his arms around his mother's neck, laid the little silver saint against her cheek.

"Oh, mamma," he cried, his lips touching her ear. "It's your, for you!" "Santa Claus did truly bring it to you. For my own love was Santa Claus—wasn't it?"

And then the mother, love, drawing all at once the long memory, realized the faith that had been lost in the faith that was restored, unspoken.

"That's what love is at Christmas, dear. For Christmas love is Santa Claus himself."

"That's what love is at Christmas, dear"

### THE SHEPHERDS' FIELD

By E. S. Martin

The shepherds are dead: their flocks are gone; but there their field is still—  
The same rough stones, the same bare stretch, the same blue distant hill.  
The same stars watch from their tranquil dome in the same mysterious way  
As they watched on the night when the great star led to the place  
where the Christ-Child lay.

Drawn by Clarence T. Underwood

**WITHOUT BENEFIT OF MISTLETOE**

## Remembrance

By Thomas Hardy

SHE told how they used to form for the country dances—  
 "The Triumph," "The New Ragged Ship"—  
 To the light of the guttering wax in the paneled manors,  
 And in cots to the blink of a dip.

She spoke of the wild "posnetting" and "allemanding"  
 On carpet on oak and on green;  
 And the two long rows of ladies and gentlemen standing,  
 And the couples that tripped between.

She showed us the spot where the May-pole was yearly planted,  
 And where the handmen stood,  
 While breched and kerchiefed-partners whirled, and panted  
 To choose each other for good.

She told of that distant day when they learnt astounded  
 Of the death of the King of France;  
 Of the Terror; and then of Bonaparte's unbounded  
 Ambition and arrogance.

Of how his threats woke warlike preparations  
 Along the Southern strand,  
 And how each night brought terrors and trepidations  
 Lest more should see him land.

She said she had often heard the gibbet creaking  
 As it swayed in the lightning flash,  
 Had caught from the distant borough a small child's shrieking  
 At the cart-tail under the lash. . . .

With cap-framed face, and long gaze into the embers—  
 We seated around her knees—  
 She would dwell on such dead themes, not as one who remembers  
 But rather as one who sees.

She seemed one left behind of a band gone distant  
 So far that no tongue could hail  
 Past things retold were to her as things existent,  
 Things present but as a tale.

While shepherds watched their flocks by night,  
All seated on the ground,  
The angel of the Lord came down,  
And glory shone around.

Joy fills our inmost hearts to-day!  
 The royal Child is born;  
 And angel hosts in glad array  
 His advent keep this morn. Rejoice, rejoice!

Oh come, all ye faithful, joyful and triumphant;  
 Oh come ye, oh come ye to Bethlehem;  
 Come and behold Him born the King of angels;

## BETHLEHEM

By E. S. Martin

Where Bethlehem was is Bethlehem still, spread out on a sacred  
site,  
But convents crowd where the lowly bed held the Hope of the World  
that night.  
Gone are the shepherds and all they saw. Roman and Jew are  
gone,  
But still shine down the same calm stars, and the patient world  
hopes on.

### THE HOLY SEPULCHRE

By E. S. Martin

Where is the Christ? No bone of Him in the tomb where they laid  
Him lies.  
Kings have adorned an empty grave that could not hold its  
prize.  
But where for man men strive and strain, where faith lifts the  
fainting will,  
Where love o'ercomes, and truth brings light, there Christ is living  
still.

## SANTA CLAUS UP TO DATE

What Happened to WAGGERS, of the Pifflicio Country Club, on Being Appointed Committee of One for Christmas Festivities at the Club  
 Drawn By Albert Levering

Wagg. "That wonderful idea of mine is magnificent. The best one I've sprung on them yet."

Wagg. "How is where I've got all the Papa Santa Clauses chased back up the chimney?"

Wagg. "What's that? You're not! Don't say anything naughty. Remember it's Christmas, and peace on earth, etc., etc."

Wagg. "Going to have the fun on me? Ah, now you wouldn't treat old Santa Claus that badly, would you?"

Wagg. "In a hurry? All right. Here a little wooden horse on me—right of the Christmas tree, too."

Wagg. "Well, good-by. Sorry can't wait for you. Wish you a merry—"

The Iron Fairy "N-no, my smart head, I rather think the little wooden horse is on you."

"Merry Christmas!!!!"

The Meet

## A Day with Lord Rothschild's Stag-hounds

By Frank Sherman Peer

**I**T was New-year's eve in London. It was a day that even a Londoner, who seldom sees the sun, would call a "beautify day." The lamps in the streets had been burning with a soft light all the afternoon. A thick, yellow, greasy fog enveloped everything, bringing with it from the air above the smoke and soot from a million fires. It smarted your eyes and irritated your lungs and hampered your linen. It not only made everything damp and clammy to the touch, but it penetrated your bones and chilled the marrow.

We had spent our Christmas away from home, and now the New-year was at hand, but in such a melancholy garb as to bring us a fit of homesickness or something worse—the blues.

"Here's a letter for you, sir," said mine host, as we wondered who was dead or dying, or what "please remit" had tracked us to this infernal place. A letter, yes; and it was a letter! It read:

"Mr. Leopold de Rothschild wishes me to inform you that there is to be a meet of Lord Rothschild's hounds to-morrow at Vinegar Farm, Wincgrave, Leighton Buzzard, although it is a bye-day. Mr. Rothschild thinks you would enjoy it, as it will be over some of our most beautiful country, and this being a holiday for many, the attendance is sure to be good. Mr. Rothschild also wishes me to

say that if you can come, to answer by wire, so I can arrange for your mount, which I have in reserve pending your reply.

Yours truly,  
"TAVER,"  
Private Secretary to Leopold de Rothschild."

If I can come! If I can come! I would go anywhere to get out of this!

We were slow making friends with Morpheus that night, and when he finally took a hand he was so sly about it that our dreams came in a tangle. It seemed that while lying in a puddle of ice-water a great stag came to the puddle to quench his thirst, which was so great that it seemed as if he would drink all the water and thus expose our hiding place, for the dreamer had "nothing to wear," and had taken to this refuge in the hope that the riders would pass him unobserved. Then came the hounds, and they all commenced to drink, and were as thirsty as the stag, who still continued to guzzle down the water until the pond was nearly dry.

Then the riders came galloping up to water their horses. All the ladies I had met at the meet would soon be there. Just then there was a pull at the pond-lily leaves. The stag was eating them. No—it was a mistake. It was only a gentle pull on the bedclothes by the chambermaid, who came in to announce: "I have brought

"Enlarging the Stag"—Releasing the Game from a closed Van at the Start of the Hunt

Full Cry over the Fields near Leighton

your hot water, sir; the clock has gone five, sir. The 'boots' will bring your riding breeches and hunting boots in a moment."

"How is the weather?"

"The fog is still on, sir—going to the window to raise the shade—" but I think it's surely going to clear, sir."

It was evident that she had waited on hunting-men before. She knew her business, and received a shilling, when otherwise she would have had to do with a sixpence.

"Will you have your tea brought up or will you take it in the smoking-room? The cat has been ordered for you at five-thirty, sir."

What a relief it was only a dream, and that "It was surely going to clear—" for hadn't the chambermaid said it would! The bill was not much by a couple of sixpences. Well, no matter. The chambermaid, boots, and hall porter received a double fee, for it's "surely going to clear," and we must go on hunting to-day.

"Eatin' Station," shouted the hall porter to "Cobby," "and look sharp to catch the six train for Leighton."

The fog seemed thicker and thicker that day, but only thick if it should be clear at Leighton and we not there!

The Red Lion Inn, a hostelry designed for sportsmen, stood at attention, and Madam Hoste was as full of go for the occasion as a brass band. The breakfast was splendid, and although the fog had not lifted, there were indications that it was trying to.

Others had come from London with their horses—a dozen or more—which were brought along by the same train. These especially disguised cars for hunters—which are put on all the regular trains the day of any meet with any pack of hounds within twenty-five or thirty miles of London—are the best that can be contrived for the occasion. They are set on the switch at the station nearest the fixtures, and the groom in charge looks after them until they are wanted to ride to the meet—or perhaps they are sent on at once to the meet and the riders go later in a public conveyance. The train from the north brought in as many more riders and hunters, and soon after breakfast men and women in riding costume were all about the place. Hiders from a distance, say twelve to twenty miles, were riding up singly and in pairs, so as to give their mounts a taste before going on in the meet.

The landlady said she knew I was from America, for she heard me say "guess." She said she had a brother in America. Although I had never had the pleasure of meeting her brother, she took me especially in hand.

"Is this your first visit to the Red Lion?"

"Indeed it is, but I am sure it will not be the last. You have won my heart."

"No!"

"Yes! I have just had the best breakfast I have ever had in England."

Then we fell into a bit of gossiping concerning the interesting people in the house and those arriving or passing the door.

"That's the Earl of Essex and his son, Lord Maden," she volunteered as an elderly man and youth rode up together. Lady Surgran was next pointed out as one of the best lady riders in England. That's the Earl of Heberston, the Earl of Claremont, and Lady Edith, his daughter.

That stout man is the Hon. Walter Rothschild, M. P., son of Lord Rothschild. He rides at eighteen stone (120 pounds).

Colonel Woodhouse, Lilian Rich and son, and Commander Rich were next pointed out.

"The two young men who have just ridden up," said my host, "are the sons of the Earl of Rosebery, and the young ladies, the Hon. Neil Primrose and Sybil Primrose, are their sisters," etc., etc.

Many notable persons were pointed out to me by Mr. Traver, who, when we were mounted, piloted me to the meet, where he presented me to Mr. Leopold Rothschild, who in turn introduced me to his brother, Lord Rothschild, and several others.

The meet, as before stated, was at Vauxhall Farm, Wiegman, some three or four miles from Leighton Buzzard.

Each cross-road that we passed poured into the main road its contribution of riders, so that before the meet was reached the highway contained almost an unbroken procession. Occasionally a youth or a light-headed rider in a new hunting-out, or a horse-dealer who could not resist the opportunity to display himself or his horse, went galloping by on the side of the road, as though he had been thrown out of the run and was making all speed to recover the bounds. There was a timid city chap in a nervous three-cornered rick of a thoroughbred horse that the best architect or land-surveyor could neither design nor measure. A very uncomfortable partnership they made for each other, but they afforded a lot of amusement for the lookers-on. The horse, instead of going forward head first, went drifting down the road sideways, like a yacht that had slipped her moorings and was going down-river beam first, sometimes stern first.

New and again the horse would bore his head and throw the rider—a tall slim man—on to his neck, and then he would start ahead as if a flag had fallen before him, straight on in the way he was headed, down off the meadows, as if he were going to take the hedge. But just as he reached the hedge he dived into and changed from the port to the starboard tack, and continued until he finally staked up on the bridge on the opposite side of the road, drifting, drifting, bolting ahead, coming in stays, and so on from one side of the road to the other, greatly to the amusement of small boys and farm lads, who offered suggestions to the pair as they went past.

"Your horse is giving you lots o' ride for your money," retorted one farm-hand over the fence.

Said another farm-hand to his companion, loud enough for all to hear: "I say, Bill, there goes a 'orse what 'ad 'is 'ead put so where 'is tail oughter be. 'E's built to go 'o'her end!"

"No, his 'orse the rider is cross-eyed, and 'e can't no more go the way 'e's looking than 's own look the way 's going. 'E oughter wear blinkers."

"Bill, you are wrong again. His 's my opinion as 'is only got out is pricking 'im. 'E'll straighten out when it gets past the tickling spot."

Here we are now at the meet, a typical English cross-roads, where there is a big sign on a very small inn under a thick straw roof. It stands facing the village green, and is called "The Golden Fleece." Near it stands the blacksmith shop. A private house on the other side of the green does duty as a store, post, and telegraph office. A few other thatched cottages covered with English ivy and set flat on the ground behind neatly trimmed bridge enclosures, and in a yard filled with ornamental shrubs, flowers, and roses, help in a fine in the village green. In the center of the green is the public duck-pond, the green itself being a pasture for the town's playground for the neighboring children, a whitening-place for the village talent, and a lounging-place for any one so disposed.

Just back of all this, but hidden by a high hedge and planted shrubs and tree border, stands the rectory, which is better seen from a little way down the road, where the snug little rectory lodge makes a break in the hedge and where you may look down the beautiful circling drive and across a great meadow to the rectory, which, although more than half hidden by vines and shrubbery, looks ideal. On the opposite side of the road, back from the high way, in a meadow of great spreading oaks, stands the "Hall," the house of the village squire, a man who, if his temperance

suits, lives an ideal life—a few hunters to ride, a four to drive, a family of children, a game preserve on his own land, a shooting-lodge in Scotland, and a yacht on the Solent, the owner of a thousand brood acres, where he or his tenants breed pure-bred stock which win honors at the fair in competition with Her Majesty the Queen, his Royal Highness the Prince of Wales, and other of the English nobility who so universally go in for farming and the breeding of blooded stock.

The squire is an old man now, judging by his white hair and portly build; but he at the meet on a trusty Norfolk cob that looks as if he could carry a ton, and while he may not "cut it down" across the country with the younger bloods, he will see quite as much of the fun, for he knows every lane and gate in all the country round. It is his own land the hunt is to ride over. His sons are out on hunters of his own breeding. His granddaughter is by his side, sitting astride on a little Welsh cob that will carry her to perfection, and, as you can easily imagine, greatly to her grandfather's delight.

What a crowd there was! Something over a hundred mounted riders assembled at this meet, which is a hundred short of the usual attendance at the opening meet or when the fixture is at Ascot or at Tring Park.

Here come the hounds, headed by the huntsman, Moore, and the whippers-in, and followed by a score or more riders who have purposely lingered to keep them company. If the hounds looked a grand lot at the hounds, what shall we say of their now—this twenty-odd couple stag-hounds selected with care as to size and markings? As they come trotting on to the village green beside the superbly mounted huntsman and whippers in their pink leaping coats, white breeches, and green velvet caps, the crowd receives them with a cheer. At this moment Mr. Leopold de Rothschild drives up with other members of his family, while his brother, Lord Rothschild, who is also driving, comes from the opposite direction, having driven over from Tring Park, some twenty miles away.

By the time they have answered the salutations of their friends and a few strangers and out-of-town visitors have been introduced, their mounts are led up, their overcoats are dropped off, and in a moment more they are both in the saddle.

The meet ended, if not the most interesting, pageant is yet to arrive. We have not long to wait. The side of a coach horn down the road makes every one turn.

"The stag! the stag! Here comes the stag!" Again the crowd on the green part like the waters of the Jordan to receive Pharaoh's chariot, and likewise to close upon it when it entered the crowded green. The stag, drawn by four magnificent coach-horses with coachman and attendant in livery, is now the centre of attraction. The rickshaw van that carries the stag is beautifully built, painted, and varnished, consistent with his exalted position.

At a signal from Lord Rothschild, who, together with his brother, headed the procession, followed by the crated stag and riders, we all moved on to witness the "entertainment," as the liberality of the stag is called. This took place a mile or more from the meet. The hounds, however, remained at the village to allow twenty minutes or half an hour "law" to the stag before they were put upon his trail.

Finally, after entering a most beautiful field with great rolling meadows, a wide expanse of the richest and most beautiful agricultural district came in view. The crated stag came to a halt; the door was thrown open, and out stepped his lightness. Then, as the crowd of spectators gave a cheer, he crouched for a mighty spring that sent him high in the air. Thus, in a succession of bounds, he circled the field, returning to within a hair-dread feet or so of the van, jumping the hedge almost in the presence of the crowd, whose repeated cheering sent him away across the field and to the right, giving us all a splendid chance to view him away over the crest of a distant hill, where he disappeared.

After allowing twenty or thirty minutes "law," as above referred to, the huntsman and whippers then came smartly on with the hounds. Instantly they began to feel the scent, away went their tongues in a grand chorus, and another instant, when they crossed the line, away went the hounds themselves the steepest ascent at the starting-post.

It was a glorious sight—hounds, horses, men. How we did race away down the vale, across the great grass-fields, up the slope, over ditches, hedges, and timber into the wood where the stag was seen to disappear. And that first twenty minutes, what a ride that was! It was such a twenty minutes as comes only now and then to those who frequent the fox-hunting fields, and is one of the enjoyable features of riding to the crated stag. These beautiful fields, that wonderful turf, and the hedges, how they flew past as if they were coming at us like driftwood down a mighty stream!

No ships with wind and tide  
And all their canvas wings  
Scud half so fast.

We gained the hill, passed the wood, and away again we swept along the vale. The blood of my Irish mount was up in earnest now, and go he would. The stag had taken to water in a small pond in front of some gentleman's house. It was a bad move; for now the hounds were upon him, and raced him from crest to view had, through the very village of the meet, and finally to buy in the outer entry of a little chapel of an adjoining town. Facing the open door, he stood the hounds at bay. He was once around, and we all returned to our hotel at Leighton Station, where one of the best dinners the writer has ever had in England was served to earls and dukes, lords and ladies, and at which game the American took second place to none.

Wife Fell in Love With Husband  
"All Over Again."

The wife of a well-known attorney-at-law of Newark, Neb., tells the tale worth reading: "My husband was a soldier in the Civil War, and was, as he called himself, 'an old coffee-croaker,' and had always drunk very strong coffee.

"About a year ago he complained of a feeling of faintness every time after climbing his office stairs, and was also troubled by terrible headaches that almost drove him wild.

"He gradually grew weaker and weaker, until his affliction culminated in nervous collapse, and for weeks he seemed to be fading away from us in spite of all our efforts.

"The physicians pronounced him strong and well, with no organic trouble whatever, and there seemed to be nothing the matter except the complete giving out of his nervous system.

"The doctors decided that coffee was at the bottom of all his trouble, and ordered Postum Cereal in its place. He improved daily since he quit coffee and began drinking Postum, and now says he feels better than he has felt for 20 years, headaches are gone, no more fainting spells, and is gaining in flesh every day, and he seems so much younger and heartier and happier than he has for years that I have fallen in love with him over again.

"Now for my brother's case: a few years ago he had a peculiar trouble. His tongue was swollen and sore at the roots and covered underneath with festers.

"He thought his affliction was of a cancerous nature, and his doctor was of the same opinion. He could scarcely eat anything, and became so poor and run down he was simply a nervous wreck. He consulted various physicians, but none were able to diagnose his case or help him in the least.

"At last a doctor to whom he applied said he believed my brother was coffee poisoned, and advised him to quit coffee and drink Postum. He gave him no medicine, but told him to give Postum fair trial and return to him in 6 weeks. My brother had used Postum only about ten days when the festers disappeared from his tongue, and at the end of two weeks the soreness and swelling were gone and he began to pick up in flesh and spirits.

"He has never touched coffee since, but drinks Postum all the time, and he has never had the slightest return of the trouble.

"To look at my experience, is it any wonder I can write a heartfelt testimonial for Postum? Name given by Postum Co., Battle Creek, Mich. Look in each package for a copy of the famous little book, "The Road to Wellville."

**My Book Is Free**

My treatment too—if that fails.

But if it helps—if it succeeds, If health is yours again, I ask you to pay—\$5.50.

The book tells all. I send it to you free If you but write.

And further, I will send the name of a druggist near you who will let you take six bottles of my remedy,

**Dr. Shoop's Restorative**

On a month's trial. If it succeeds, the cost to you is \$5.50. If it fails, the druggist will bill the cost to me.

**Don't Wait Until You Are Worse.**

Taken in time, the suffering of this little one would have been prevented.—

"Two years ago my little girl was sick continuously for six months. We tried many doctors, but they failed, yet it took only two bottles of your remedy to cure her, and she has remained cured. You can tell others of this cure if you so desire." Mrs. C. H. Avery, Rockland, N. Y.

The wife of Omer Andrus, of Bayou Chicot, La., had been sick for 20 years. For 8 years could do practically no work. He writes:

"When she first started taking the Restorative she hardly weighed 60 pounds, now she weighs 125, and is easily able to do all her household work."

J. G. Billingsly, of Thomasville, Ga. He writes:

"I spent \$2000 for other medicines, and the \$200 I have spent with you have done me more good than all the rest."

Both money and suffering might have been saved.

And there are only three from over 65,000 similar cases. Such letters—many of them—come every day to me.

How serious illness the Restorative has prevented I have no means of knowing, for the slightly ill and the indisposed simply get a bottle or two of their druggist, are cured, and I never hear from them.

But of 600,000 sick ones—seriously sick, mind you—who asked for my guarantee, 39 out of 40 have paid.

If I can succeed in cases like these—fail but one time in 40 in diseases deep-seated and chronic, isn't it certain I can cure the slightly ill?

**All You Need Do.**

Simply write me—that is all. Tell me the book you need. The offer I make may sound extravagant. But it isn't. It would mean bankruptcy to me, though, were it not for my discovery. That discovery—the treatment of the inside nerves—taught me a way to cure. I do not doctor the mere organs. I doctor the nerves that operate them—that give them strength and power.

And failures are seldom—so seldom that I make this offer gladly, freely—so that those who might doubt may learn without risk.

Tell of it, please, to some sick friend. Or send me his name. That's but a trifling—minute's time—a postal. He is your friend. You can help him. My way may be his only way to get well.

If I, a stranger, will do this for him, you should at least write.

Drop me a postal to-day.

Simply state which Book 1 on Dyspepsia Book 2 on the Heart Book 3 on the Kidneys Book 4 for Women Book 5 for Men Book 6 on Rheumatism

Mild cases, not chronic, are often cured with one or two bottles. At druggists'.

### The Talisman

A Poem  
By "Ouida"

In a past century a magician gave a talisman to a traveller, who was young, but poor.

"Do not delay too long to use it," the magician said. "For time ripens, sometimes, it is true, but more often it dries and rusts. Wish once on you, breathe upon it, and once your wish will be granted; once only."

The traveller put the precious gift in his breast, and went on his way, happy in his possession of it. But he said to himself: "I will wait a little while before I use it, not long, but just a little while. The sun may say it will grant me one wish; one only. How can I be sure what is best to desire? I will go to some quiet place where the roses grow and the nightingales sing, and there I will ponder well."

So he went on his way with the talisman in his breast, and the road, so it chanced, was full of people going to a fair, and he passed to talk with this one, and with that; and he laughed with summers, and he played with young fresh maidens fair to see. By the wayside there were signs of leaders' goods in which he had no faith; but seeing that the other people knelt before them, he knelt also, lest, if he did not worship with them, they should do him wrong. There were thickets of laurel growing by the path, and he saw many men struggling violently to break off branches of these trees, so he likewise strove to get one, but he hurt his hands, and was pushed about by others, and bruised, and vexed, and the laurel was not for him; and on the high way, as it approached a city, the thorns were rougher and ruder; there were great noise and strife, and dust, and odors were foul, and songs were louder, and the fair fresh maidens became wretches, who would not tarry for him because he was but a poor wayfarer.

Then he thought: "It is time for me to leave this crowd and turn aside into the woodlands where there are peace and stillness, and where I can think of what will be best to wish for with my talisman."

He slipped unperceived out of the throng and got away by himself into the outlying country where there were still green fields and blossoming orchards, deep forests and little calm waters; and he sat down beside a little running river, on which the great golden sword-rush grew, and by them the dog-rose began to flower and the nightingales began to sing.

Then he said to himself, "Now I will choose well, for there is only one to wish."

But his brain was dizzy from the heat of the crowds, and his eyes were hot and half blind, and his ears were filled with the half-echoes of the loud songs; so that he could not think clearly, nor could he care for the scent of the dog-roses or for the melody of the nightingales. And when he put his hand within his shirt to take out the talisman, he found it was there no longer. He had lost it on the highway.

Therefore he retraced his steps in sorrow, and searched for it everywhere that he had passed, but always in vain. The magic gift was gone. He had let it drop in the dust, or under the laurels, and the crowds had trodden it under foot, and it was broken. He had wanted his day, and lost his treasure.

### A Literary Light

ATTEN a lecture in the western part of the State of New York recently, Mr. John Kendrick Bangs was entertained by some members of his audience, who frankly confessed to a great admiration for Mr. Elbert Hubbard, of Roycroft fame.

"You do not consider Mr. Hubbard one of the lights of letters down your way, do you, Mr. Bangs?" asked a young woman of Philistine tendencies.

"Of course we do," replied Mr. Bangs. "We consider him one of the Northern lights of letters—a regular East Aurora hero."

## DR. LAVENDAR'S PEOPLE

Mrs. Margaret Deland's new book of stories concerning Dr. Lavendar and the other dwellers of Old Chester seems to have awakened the interest in these characters created by the publication of "Old Chester Tales." Speaking of the leading character, the Chicago *Interior* says that "Dr. Lavendar takes precedence over all country parsons with the possible (only possible) exceptions of the Vicar of Wakefield and Balzac's Village Priest. Let no one who loves the fine things of the soul pass this book by." **\$1.50**

## Booth Tarkington's CHERRY

Says the *Interior*, speaking of Booth Tarkington's dainty new comedy: "Anything more utterly delicious than the comedy of this narrative can scarcely be conceived. It is simply beyond price or praise. The humor of it all is so exquisite it moves one far beyond laughter, to the point of tears." The book is attractively made and is illustrated in color. **\$1.25**

"Back Up!"

In the central part of the city of Buffalo is Booth Alley, extending the distance of a long block. The alley is paved, but too narrow to allow two teams to pass each other. One day two teams met in the alley, halted when they had gone as far as possible, and for a moment the two drivers glared at each other.

"Back up!" said one of them in a voice of authority.

"Back up yourself," replied the other.

"If you don't back up I'll show you what I'll do," said the first speaker, putting his whip in the socket and making a move as if about to jump from the wagon.

The men addressed also and with a surly air climbed out of his wagon, and, taking his horse by the bit, backed him out the alley.

"Say," he called to the other men, "what were you going to do if I didn't back up?"

"I was going to back up myself. Get up!"

Born Married

A CERTAIN editor in a country town not far from New York is not so intimately acquainted with the French language as he might be. A rich and benevolent widow living in the editor's town married a second time. When she died the town felt her loss, and the editor took occasion to comment editorially on the event.

"We note with regret," he wrote, "the death of our esteemed fellow-townswoman, Mrs. Roger Nussbaum, nee Mrs. Jones. She will be missed by many in the community."

The Letter of the Law

Miss PEARL EDWARDS, the actress, is responsible for the following anecdote:

"A friend in New York recently imported from Maryland one of those rare household treasures—a genuine colored mummy. As the family opinions regarding the care to be exercised in admitting such things in the guise of gas-inspectors, repairers, etc. But there came a day when my friend decided to have a telephone installed, and before leaving the house she instructed mummy to have the instrument put up in a head in the front hall.

"When she returned she found, to her dismay, that the telephone employees were at work in the dining-room, and had already put the instrument partly in place, with the wretched mummy polishing silver at the table. When the mistake had been corrected, my friend drew the guardian of the household into the kitchen and reprimanded her for not giving proper instructions to the mechanics. Mummy folded her arms over her ample chest, and smiled complacently. "No, honey, she said, 'I don't forget nothin' you told me. I knowed der oughter put it in de hall, but I couldn't stan' der all mornin' watchin' 'em, so I let 'em work in de dinin' room, when I could watch 'em, to keep 'em busy till you come. I ain't forgot 'bout dem sneak thives."

Great Canals of the World

THE renewed attention being given to the proposed isthmian canal at this time leads to special interest to a summarizing of the great canals of the world, presented by the Department of Commerce and Labor. The ship canals of the world are nine in number: The Suez Canal, begun in 1859 and completed in 1869; the Cronstadt and St. Petersburg Canal, begun in 1877 and completed in 1880; the Corinth Canal, begun in 1884 and completed in 1893; The Manchester Ship Canal, completed in 1894; The Kaiser Wilhelm Canal, connecting the Baltic and North seas, completed in 1905; the Elbe and Trave Canal, connecting the North Sea and Baltic, opened in 1906; the Welland Canal, connecting Lake Erie with the Ontario, the two canals, United States and Canadian, respectively, connecting Lake Superior with Lake Huron.

**WHERE CAPITAL AND LABOR STILL WORK TOGETHER.**

In a city like Atlanta, where capital and labor work together, it is not surprising to find business growing four times as fast as population, although population grows twice as fast as the average rate of increase in the country at large. There are other factors in Atlanta's growth worthy of the consideration of business-men. It is the natural distributing-point of the Southeastern States. Railroad lines radiate from it to the South Atlantic and Gulf ports and to the Northern and Western States. There are seventy-nine towns of 4,000 population and upward in Georgia, the Carolina, Alabama, and Mississippi. The average distance of these towns from Atlanta is from eighty to one hundred and seventy miles less than the distance from the next nearest important centers. The rapid growth of business is shown by the number of ten, twelve, and fourteen story fireproof office buildings which have been erected in the last eight years. These buildings are full and others are going up. A new passenger depot is erecting a million dollars is under construction, and the Government has bought a block of land on which it proposes to erect a million-dollar post-office. Manufacturing industries are rapidly increasing and remarkably prosperous.

A Great Georgia man invents a machinery of supplying richness and distribution manufactured products to every State of the Union. Costly developments of the Chattanooga water power are in progress, will bring 11,000 horse of electric current into the city the middle of next year. The street car mileage is larger than any other city of 1st class population can boast, and a public utility master, Atlanta for a city and place of equal population. The post office receipts in second-class matter exceed those of Baltimore, Brooklyn, Buffalo, Chicago, New Orleans and Louisville. Manufacturers of business men who think of going South would do well to correspond with the

**The Pennsylvania Limited "Immeasurably Ahead" of Any Train in the World**

**THE PENNSYLVANIA LIMITED**

**THE NORTHWESTERN THEATRICAL ASSOCIATION**

**CHICAGO, ILL. 9-7-05.**

Dear Sir:

In making my recent trip of fifty-four days around the world I used the Pennsylvania Railroad between New York and Chicago. In my journey around the globe I traveled by rail in Japan, China, Siberia, Russia, Germany, Holland, England and the United States, and I found that the Pennsylvania Limited ran immeasurably ahead of any of these other trains. Not only is your "Limited" superior in equipment, but it brought me into Chicago, after a 1000-mile run, five minutes ahead of time. If you will advertise the "Pennsylvania Limited" as the "Finest Train in the World" I will back you up to it.

Very Respectfully,  
*James Miller Duff*  
 Seattle Times.

Waterman  
Ideal  
Fountain Pen

Your writing is of sufficient importance to warrant the use of a good writing instrument. You lose time with every slip of an old-fashioned steel pen, and eventually it comes in from the holder it causes trouble and your thoughts are interrupted and lost.

To be able to write when you like and where you like without dipping or scratching with Waterman's Ideal Pen, which is a pocket-pen and ink-bottle combined. It is the one which never leaks, slips, breaks or scratches.

We can duplicate the action of your favorite pen, for we furnish every style of pen, gold, silver, and steel, ranging from \$1.00 to \$100.00. Any pen not exactly suited to your hand may be written on request.

### MANAGER WANTED

Who can enter an income of \$2,000 to \$3,000 per annum, according to territory and ability. One has been grown to such an extent that we now need a competent advertiser in every territory in the United States. In connection therewith we are offering the employ of the largest, most prominent, and wealthiest concern of its kind in the United States, a firm whose references include National Banks and Commercial Associations. The man we want as manager must be able to advertise with our requirements be that he is a man of the highest character, able to furnish thoroughly in earnest, energetic and honest. If necessary, we will accept special arrangements can be made by which our work can be done in connection with the agency, or even this, then opening up an opportunity to law-press, physicians, chemists, and persons now holding other positions. Address R. D. A., Box 1818, New York City.

### An Illustration of Survival

By John H. Flynt

President of the College of the City of New York

The shores of the old Castilian days and of Andalusian ways is still over Cuba in spite of her American-made constitution. The sailors still sing their Cuban or Galleon songs about her shores to keep the spirit which "reciprocity" may some day break. The old monarchy has given title to the new democracy, but it has not surrendered the repository of the traditions and its present teachers, its pastimes and its methods of work, its views of life, its faith, and its hopes. In the frenzy of the revolution the Cuban patriots were not less zealous of all that suggested an upheaval really than our Revolutionary ancestors. In the principal square of Havana I saw, on the first day of the new republic, a small-sized improved Goddess of Liberty, done in some transient material, standing on a pedestal which once supported the marble effigy of a Spanish queen that has been dismantled in hatred. There can be no question as to the genuineness and the depth of the Cuban independence; but the love of old Spain survives the long struggle. A Cuban sailing vessel on which I travelled along the shores of the island here proudly the name of the discontinued crown, though his master was wishing for American rule and consensus. They will not take me kindly to the plain, uncolored garb of democracy and to alterations, some lifting out the Puritan and Quaker. With all their love of political freedom, they still have a fondness for the trappings and pageantry of their ancestral kings. This is instinctive; it is in the temperament and fibre of the people, and is historically, scientifically excusable, even if to our sober, less sentimental minds the results seem somewhat incongruous. It gives our present notions a shock to find the President of the republic lodged in a palace. I was told that he, with a taste cultivated in a New York village, wished to have his official residence called an "Executive mansion" or a "house"; but the people prefer the old royal designation, and so the imperious little schoolmaster President is living and performing his republican office in a "palace." But this love of survival has not altogether obliterated in us incidents which I witnessed on the day of President Pallas's inauguration. I doubt if other Americans saw it, and probably no Cuban or Spaniard remarked it as unusual. The American ships, with General Wood and his men on board, were barely out of the harbor when a special service was held in the old cathedral, where the bones of Columbus had reposed for a century, in an appropriate conclusion of what under other circumstances would be called coronation exercises. The Church was to give sanction to the wish of the people and to invoke blessing upon the new government. The Te Deum with which it had for ages made thanksgiving for the divine appointment of kings and emperors in the establishment of a republic and the election of a President. I had been watching the last of the vessels pass beyond the Castle, and when I reached the cathedral the Te Deum had been sung and the processions were approaching the altar. Bishops were already making its slow way from the altar, still indolent from inactivity, toward the altar. It was a sight to be remembered. In the procession were representatives of the different orders of the islands, or so I inferred from their diverse tenure, cassocks, and Church high above them. In the rear of the Archbishop in purple vestments conversing with the President clad in our American dress were representatives of the old official habit. But it was the leader of the procession whose office attracted my attention. A tall, pale, feverish young priest wearing, solemnly and with important air, a great silver sash, and on his breast a great venerable ecclesiastical symbol, not the purple emblem of kingship nor the red and green of nobles, but the purple insignia of a vicar, but the pink, unadorned, somewhat ragged, tall, black silk hat of the President of the republic. Democracy may have its crown, but the Church had found it in the conventional, servile, every day covering of a cleric.

**A Spy in Cracow**

By Spencer Wilkinson

THE year 1887 began amid rumors of war on the European continent. General Bismarck was building hats for large bodies of troops at various points near the German frontier. The relations between Austria-Hungary and Russia were strained in consequence of the treatment by Russia of the young principality of Bulgaria and the Russian kidnapping of the heroic Prince Alexander. The German government was increasing the peace strength of its army by 50,000 men, and on the refusal of the Reichstag to pass the bill for a *spruzen*, dissolved that body in the middle of January.

I was at that time under contract with the editor of the *Manchester Guardian*, in case of a continental war, to accompany one of the armies as special correspondent, and it was arranged that I should make a short tour abroad in order to prepare for the transmission of news in case of war, and to find out if possible the true state of affairs. I left Manchester in the second half of February, and travelled by Paris to Strasburg, getting on the way a glimpse of General Bismarck's famous hats. At Strasburg I made the acquaintance of the governor, General von Verdier du Vernois, the great military writer and teacher, who kindly arranged for me to visit under the happiest auspices the battle-field of Witzth. There I made my way by Cologne, where there was newspaper business to transact, to Berlin, and in a stay of some days at the German capital I renewed and extended my acquaintance with the Prussian army, and paid several visits to the great general staff. I had just translated and carried with me the proofs of some German exercises in strategy and tactics, and the head of the Cartographic Department very kindly promised to supply me, for the English edition, with original copies of a sheet of the Prussian staff map.

My next destination being Vienna, I had reasons for preferring the route through Silesia to the shorter route through Prague. There were in Silesia places of much interest to the student of military history, and moreover, there was a political rate present importance which, by making a short excursion into Galicia, I hoped to be able to settle. I had heard in London the statement, made by a well-known war correspondent, that the Austrians were heavily fortifying the ancient city of Cracow, a place of great strategical importance. If this report were false I might be mistaken in my view that the relations between Austria-Hungary and Russia were extremely strained; if it were founded on fact my view would be confirmed. To visit a great frontier fortress in time of preparations for war is, of course, to run certain risks. I had no intention of getting into trouble, and therefore took the precaution, while in Berlin, of studying the Austrian civil and military codes in order to ascertain what constituted espionage. I found that in Austria-Hungary the characteristic mark of a spy is the secrecy of his acts and movements.

After a tiring journey I reached Cracow at nine in the morning on Monday, March 1, intending to go on to Vienna by the night express which leaves Cracow about 10 P.M. So I left my portmanteau in charge of a porter at the station and moved into the town, armed with nothing but a field glass and a Harleker. My plan was to look at the principal sights mentioned in Harleker, for I was sure that in that way I should eventually gather all the military information I wanted. I went to the best hotel and had breakfast, ordered a carriage, and while it was getting ready went to a bookshop and bought the government map of Cracow and its environs. The driver was a Pole who understood no German, so I put on the hat beside him the commissionaire of the hotel, who spoke German, and having picked out the first sight in Harleker, gave the word, "To the Museum of Kosciusko." We drove through the town, which was full of soldiers, a party of whom were making a military bridge near the Vistula, out to the westward, and up a pretty rising hill.

A mile and a half from the town we were

**To California**

Tens of thousands are going to California for their Winter vacations. Are you?

If you once know the charm of California's climate and scenery you will want to go again. That is the experience of others.

The trip can be made quickly, comfortably, and at slight expense by the through train service of the Chicago, Milwaukee & St. Paul and Union Pacific Line. The Overland Limited via this line takes you from Chicago to California in less than three days.

## CHARMING BOOKS FOR YOUNG FOLK

### Two Prisoners

Author of *Gordon Keith, A Captured Sassa Cloas*, etc. Molly is a little poor girl who is so lame she has to stay in bed. She is one prisoner. Then there is a bird in a cage. He is the other prisoner. Then there is a fat puppy which belongs to a rich little girl on the hill. And the puppy helps to eat the two prisoners free. It is all very interesting indeed. Five dainty full-page drawings by Virginia Keep, in colors. (Imprint of R. H. Russell) Ornamented cloth. \$1.00

Thomas Nelson Page

### Orchard-land

Author of *Outdoorland*, etc. You ought to know about the little animals that work and play all around you. Chipmunks and birds and caterpillars live very interesting lives, and this book has stories about them that will teach you strange and interesting and funny things. Companion volume to *Outdoorland*. Illustrated with seven full-page pictures in color by Reginald Birch, the illustrator of *Little Lord Fauntleroy*, and many marginal drawings. Richly ornamented cloth cover (postage extra). \$1.50 net

Robert W. Chambers

### Maisie and Her Dog Snip in Fairyland

Maisie is a poor girl who lives in the woods. She and her little dog visit fairyland and have the finest times that were ever heard of. She and the fairies become great friends, and if you don't know about them this story will tell you. It is full of funny animals and funny happenings, and is very exciting. Illustrated in tint by F. Y. Cory. Square octavo, ornamented cloth (postage extra). \$1.50 net

Bennet Musson

### The Stories of Peter and Ellen

Author of *The Roggie and Reggie Stories, The Lovable Tales of Jancy and Jancy and Joe*. These stories tell all about the jolliest, happiest little brother and sister you ever knew. They have a pet pony and a monkey all their own, and make mud-pies, and they know all about fairies and such things. You ought to get acquainted with them. Companion volume to *The Lovable Tales of Jancy and Jancy and Joe*. Illustrated with sixteen full pages in color. Square octavo, richly ornamented cloth (postage extra). \$1.50 net

Gertrude Smith

### L'l Verses for L'l Fellers

Some of the funniest verses and funniest pictures for little folks that you ever saw. You can learn the verses by heart. Frontispiece in full color. George V. Hobart

### Six Giants and a Griffin

These are short stories with interesting pictures all about strange fairyland people. Illustrated with eight full-page drawings in half-tone by Beatrice Baxter Ruyll. Quarto, ornamented red cloth (postage extra). \$1.25 net

Birdsall Otis Eddy

HARPER & BROTHERS, PUBLISHERS, FRANKLIN SQUARE, N. Y.

at the top of the hill, about 300 feet above the river, and, to my surprise, at the entrance to a great detached fort. Here was the notice that "Visitors are admitted to the Monument of Kosciuszko." The commissaire led me into the fort, and we ascended a high conical mound, from the top of which there was a bird's-eye view of the city and the surrounding country. Cracow is an exceedingly picturesque town, full of quaint churches and old buildings, so that the view would have delighted an artist, especially as the sun lit up the broad head of the Vistula, and there was a slight haze on the rolling hills which to north and south bounded the prospect. To me the view revealed in a moment all that I wanted to know.

The fort which enclosed the mound was one of an inner ring of detached forts, and beyond was a series of larger works placed at distances of five or six miles from the town itself. Most of these works could be seen from our mound, and, still more interesting, we could see thousands of people at work on a line of fortifications which the forts nearest to the town were being joined together so as to form a continuous defense. On the great north road a large new fort was under construction. Everything pointed to a great effort to have the place ready to meet an attack within as short a time as possible. My companion was voluble about these works and the preparations, but I tried to suppress him, and merely asked, pointing to the great north road, "Where does that road go to?"

"To Russia," he answered.

"How far is it?"

"Severa miles from Cracow."

"Then tell the driver to go back through the town and drive along that road till he comes to the frontier," I was determined to have a look at Russia, if only a peep across the frontier line.

Our route took us through a number of works of stone or construction, and the first impression that Austria was coming in haste and in all seriousness was fully confirmed. About six miles from the town we passed a customs post, where the officer came out, stopped us, and asked me where I was going. I said, "To the frontier and back," and he asked me not to buy tobacco from the Russians and not to allow my men to do so, as there was a great deal of smuggling.

I proposed, and we went on. Half a mile farther we came to the frontier, in the shape of a tall bar with a Russian sentry behind it, and beyond, a Russian inn with a crowd of peasants. I could not understand or make myself intelligible to the sentry, and after a few minutes I drove back to the town. Then I dismissed the carriage and went to see the sights; the cathedral with the tomb of the kings; the great bell in the tower; the university; the famous Cloth Hall; the Jewish quarter; and the stone bridge over the Vistula. I bought some photographs and a second copy of the map, and went to the theatre, where I saw the first two acts of a Polish play.

As yet I had not been to the hotel and asked for my bill, which was brought by the landlord, a Frenchman. Finding me alone, he shut the door, and then offered to do me a service if I would promise not to betray him. He seemed much agitated, and I promised to keep his secret.

"The police have been here to look for you," he said.

"I told him not to distress himself; if the police would not hurt me. What did they take me for?"

"They believe you are a Prussian spy."

"Don't you mean a Russian?" I said.

No, he was quite sure it was Prussia. He evidently thought me in real danger, so I did my best to reassure him, promised not to give him away, and, while waiting for a cab, wrote on a visiting card, "Captain, 20th Lancers Rifle Volunteers," and Manchester Guardian.

I drove to the station, and as the booking-office was not yet open, sat down in the large refreshment room, which was full of people, ordered some rum, and lit a cigar. When I had been sitting about five minutes, two young men of a better type than most in the room, dressed in fur coats, came together. They glanced round the room and came up to me, and

**A

SPIRIT**

**Club Cocktails**

**A DELICIOUS  
CHRISTMAS GREETING**

is offered with a CLUB COCKTAIL. With CLUB COCKTAILS at hand one is prepared to start the Christmas dinner with a proper spirit. A one to year old friend will be much appreciated. Send these in time, so that he will be sure to have them for his Christmas dinner.

**The Best  
Materials  
Blended  
and Mellowed  
with age**

**Cocktails**

CLUB COCKTAILS are standard; they are not an experiment. They have been on the market for years, and every large grocer or general wine merchant knows them and has them for sale. Seven kinds:

**Manhattan, Martini, Vermouth, Whiskey, Holland Gin, Tom Gin and York.**

They are the original bottled Cocktails. Years of experience have made them the perfect Cocktails that they are. Do not be lured into buying some imitation. The original of anything is good enough. Indeed, when others are offered, it is for the purpose of larger profits. Instead, upon having the CLUB COCKTAILS, and taste no others.

G. F. HEUBLEIN & BRO., Sole Proprietors, New York, Hartford, London.

# A HISTORY OF THE AMERICAN PEOPLE

*In Five Volumes*

By **WOODROW WILSON, Ph.D., Litt.D., LL.D.**

*President of Princeton University*

**PRESIDENT WOODROW WILSON** has devoted the best years of his life to the preparation of his great work, "A History of the American People," from the earliest times to the accession of President Theodore Roosevelt. The work, which is just completed, is monumental in character and scope, represents the genius of the greatest historical writer of the present time, and is written in that delightfully flowing style which translates historical facts into the romance of a nation. It is printed from new type specially cast in 1902.

In the matter of illustration, every field of human activity has been searched, and hundreds upon hundreds of new portraits, prints, maps (in colors), plans, and pictures make the pictorial features alone tell their wonderful story of the finding of the continent and the birth and growth of what is the United States of America. There is a photogravure frontispiece to each volume, and portraits in India tint and black.

It is a curious fact that there was not a single complete narrative history of the United States in existence until now. Dr. Woodrow Wilson's is the first.

It is bound in dark-blue vellum cloth, leather stamped, lettered with gold, untrimmed edges, gilt tops, etc. The edition is in five volumes, and the price is \$25.00.

WOODROW WILSON

**OUR OFFER** We will send you the entire set of five volumes, charges prepaid, on receipt of \$1.00. If you do not like the books when they reach you, send them back at our expense, and we will return the \$1.00. If you do like them, send us \$2.00 every month for twelve months. On receipt of this dollar, we will send you, without cost, beginning at once, a year's subscription to either Harper's Magazine, Harper's Weekly, Harper's Bazar, or The North American Review. In writing, state which periodical you want. Address

Cheer and comfort warm the hearthstone, health and happiness beam like sunshine at this festive season, the merriest of the year.

# Hunter Baltimore Rye

Pure, Ripe, Mellow plays its part with host and guest in dispensing gracious hospitality.

Wm. LARFARAN & SON, Baltimore, Md.

I said I should be charmed, so he led the way, and at the front door of the station was a brougham, into which he showed me, and we drove off into the darkness. In a few minutes we were, I suppose, in the ritual; a door was opened, and the Commissary led the way through a few corridors to a small room, screened by a stove, with a second room beyond it, and with a writing-desk by the window. Here appeared directly the Commissary's companions from the station, and a new man, the secretary or clerk. It must have been half past five, and the Commissary went out for his supper. I was asked to be allowed, at the same time, to send for beer and cigars, and this was granted. The clerk sat down at the desk; the Commissary began to ask me questions and to dictate to the clerk, who wrote in longhand, what he was to put down in the "protocol." It would be necessary for me to give a detail of every account of my movements and doings from the time I left home until the moment of my arrest. I explained that that would be a long business; that it was getting late, which, though I, as a journalist, was accustomed to it, would be very tiresome for them. Wouldn't they prefer to go to bed and take the protocol in the morning, seeing that there was to be a whole fortnight before I should come before the court?

The Commissary explained that the law required the protocol to be taken at once, and completed at one sitting without interruption. I expressed my regret that he and the rest of them should thus be committed to an all-night sitting. When he was dictating what purported to be my answer to his second question, he altered what I had said in such a way that the answer as he dictated it would have been an admission that was a spy. This was serious. If that were written down I might a few days later be taken out and shot without any one who knew me being the wiser. In such moments the mind works quickly. After all, the Commissary and I were not alone; there were three others present besides the clerk, and I was sure that I had secured their faith in my innocence, or at least their sympathy. I interrupted the Commissary.

"Excuse me," I said, "one moment's interruption. I see you have been trained as a lawyer. I, too, am a lawyer by training, being an English barrister, and have the honor of being your colleague." He was pleased, and bowed.

"I am sure," I said, "that you would not willingly do me any wrong, or put me in a worse position than that in which for the moment I happen to be."

He protested that he was anxious to be fair. I assured him that I believed so, but was afraid that he might unintentionally do me harm.

"My words in answer to your question were these," and I repeated my own answer, "if the clerk writes down the other words," and I repeated the words he had dictated, "the court might form a very different idea of me from that conveyed by my own words." I pointed out the exact difference between the two sentences, and, as it was then quite obvious to all present, the Commissary said, "Yes, you are quite right. I am much obliged to you," and told the clerk to write down my words. That was the crisis; upon that I knew I was safe, so I suggested that as I understood that what was required was a full account of my doings since I left home, the simplest plan would be for me to dictate it straightaway to the clerk.

"You might kindly interrupt me," I added, "if I give needless detail, and I should be grateful if you would correct my German whenever that may be necessary."

The Commissary agreed. As I began to dictate, the humor of the situation began to predominate in my mind. I was accustomed to write or dictate from midnight to the small hours; I had had a hair dresser, had a bundle of cigars and a set of beer. The other men were evidently not night-birds; they were beginning to yawn already, and dictating to the listeners a sleepy business. Why should I hurry to let them go to bed? So I kept the story going with plenty of detail. Midnight came, and I was only at Strasburg; one of

the men dropped off to sleep. One o'clock, and I was not yet at Berlin. I appeared to the Commissary to let the rest wait till morning; I was afraid he would have a headache from these late hours. But no. Duty and the law bound him. We must go on. By two o'clock, when I reached Cracow, the Commissary had a real headache; I again expressed my sympathy. But there was still my day in Cracow to describe. It was nearly three when I finished the story with my arrest. As the clerk wrote the last words the Commissary exclaimed, "Thank God, we've finished at last!"

"Not so fast," I said. "Now my turn begins."

"Your turn! What do you mean?"

"Let him now write! I ask to be set at liberty at once, as I have offended against no law and no regulation of the Austro-Hungarian monarchy; and in case the authorities wish to continue their investigations, I demand that I may be treated as becomes my rank." ("Standesgemäß behandelt zu werden.") The Commissary consented to this being added to the protocol, which we both signed. The Commissary then said I might go to bed, and as the inner room had been fitted out as a bedroom during the early part of the detention, I said "Good-night" to every one, expressing my regret for the late hour to which they had been kept up. They were by this time all very friendly, and said "Sleep well!" The door was locked and a sentry posted outside. I went to bed and slept the sleep of the just. About eight I was awakened by one of the subalternates of the previous evening, who offered to bring me coffee and rolls if I would provide the money. I gave him sixpence, and by the time I was dressed he brought me the coffee and fresh rolls, and fourpence halfpenny change. It was evident that one might live well and cheaply in prison. About nine my Commissary appeared, looking much the worse for wear, but most amiable. I consoled with him on his fatigue, which he frankly admitted; he hoped I had been comfortable, and said:

"The authorities accede to your request to be treated as becomes your rank, and you are at liberty to go where you like until two o'clock, if you will give your word to come back here at that time."

I replied, "I think not. You publicly arrested me last night, so doubt as an spy, though you won't tell me on what ground. All the Cracow papers this morning will announce that you have sought a spy. Now you want to turn me out on the mob. That doesn't suit me. You will have to take care of me yourselves till you have quite done with me."

"Well," said he, "will you do me the honor to breakfast with me at my house? I have been given a holiday to-day in consideration of my night work."

Of course I accepted the invitation, and we walked off the best of friends. The Commissary improved on acquaintance. He was a man of some education, had plenty to say about life in Galicia, and was anxious to learn a little about England. After breakfast he suggested that we should stroll through the town, and he would show me some places of interest. "Isn't you think I did Cracow pretty well yesterday? You have had it all down in the protocol."

"For a stranger you did pretty well. But don't you think that the police authorities can show you a little more?"

He did show me a good deal that is not in Biedeker, and in particular what the municipality was doing by way of bringing

Purity—above everything—distinguishes Schlitz beer from the common.

There's a difference, of course, in the barley, the hops, the yeast. We use the costliest materials. But the goodness of Schlitz is mainly due to its healthfulness.

The artesian water used—the absolute cleanliness—the filtering of the beer, and of even the air that touches it—the extreme aging—the sterilizing of every bottle after it is sealed; those are the facts that make Schlitz what it is.

Those are the reasons why the demand for Schlitz exceeds a million barrels annually.

Yet no standard beer—no beer that is good for you—costs less.

Ask for the Brewery Bottling.

## The Heart of Hyacinth By ONOTO WATANNA

Author of "A JAPANESE NIGHTINGALE," Etc.

Japan—the land of flowers—is the scene of this new love story by the author of "A Japanese Nightingale." It is marked by all the delicacy and naive charm of style of the earlier book. The story is even more original. Bound in lavender cloth, with gold and colored decorations; delicately colored illustrations and quaint Japanese decorations on every page. A marvel of artistic book-making.

country producers into easy contact with town customers. About one o'clock he was in the arcade of the Cloth Hall, and he took me to a restaurant for lunch.

"Well," I said, as we sat down, "I suppose you are satisfied now that you've caught the wrong man?"  
"The fact is," he said, "we have never had an Englishman before. I have met all the Englishmen's culottes, but I had no idea what it was like till now. I have never seen any one arrested before as you did." "What is the normal behavior in the circumstances?"

"The usual thing is to be severely reprimanded and subsequently; to make violent protestations of innocence, especially if the man is innocent, and very often to make a struggle to escape arrest. We supposed you would fight, and I had a company of soldiers ready in the station where you couldn't see them."

At two o'clock we went back to the city. My companion asked me to wait a few minutes while he interviewed the Governor. He returned almost immediately and said, "Now you are at liberty, and I congratulate you."

"Thank you," I said, "now I must go home."

"Impossible."  
"I shall go till I have seen him, as you had better go and ask him." He disappeared again, and in two minutes showed me up the great staircase into a large, warm, carpeted room, where it was received by a beaming-looking old gentleman like a German professor.

"I am so sorry," said the old gentleman, "that you have had all this inconvenience," as he took my hand between both his own.  
"I asked to see you," I said, "first because I wished to tell you that your Commissioner of Police and his assistants all treated me with courtesy, and that I have no complaint to make."

"A report that is as pleasant as it is rare."

"Next, I thought you might be willing to explain the mystery that fell on me when I was arrested."

The Governor smiled as he answered, "You are a Russian spy. After what you have seen it would be idle to conceal from you as secret to that condition as possible. He naturally don't want the Russian to know too much of what we are doing, so we kept a sharp look-out for their agents, and I think we have taken a fair number. Yesterday morning it was reported from the station that a foreigner, looking like an officer and speaking German fluently, had arrived in a first-class carriage—a very unusual event in these parts. He might be a Russian officer from the Baltic provinces. We ordered that he should be watched, and we examined every one whom he spoke to during the day. He went first up the Mount of Konevka, from which he saw all our works and all that we are doing. Then he drove to the frontier and made a reconnaissance, of which you now know the result, to the Russian post. He came back, brought photographs and maps, inspected our bridge, and went up the east-draw tower, to do this in the hope of a second all-round view. Don't you think there was a good ground for our case against him?"

"No doubt, and that is why I think I have nothing to complain of. In that question, he will you allow me to ask your Commissioner, who has been so hospitable to me this morning, to dine with me this evening before I leave by the night mail?"  
"I am afraid that cannot be permitted in the interests of the service."

"As a journalist it will be my duty to read to my newspaper some account of this experience. My sympathies are with America, and I should be sorry to do anything that would embarrass you. Is there anything that you would wish not to be published?"  
"You will hardly wish to disclose for the benefit of the Russians what you have learned of what we are doing; and you would prefer, if you describe your arrest, that you did not reveal that it was a Russian whom we hoped to catch."

With these reasonable suggestions I promised to comply, and therefore need you I have never written the true story of my visit to Moscow.

A Christmas Carol

By Theodosia Garrison

"Mr house is light for guest and kin  
And fell my board is spread."  
("Mise host, there standeth twen without  
Who lay for rest and bread.")  
"Now bid them go upon their ways—  
My guests are housed and fed."  
"The flame is warm upon the hearth,  
My friends make carnival."  
("Mise host, twen stand in wind and rain,  
And spent, for shelter call.")  
"Now bid them find a lesser place—  
My guests are gathered all."

This was one in Bethlehem's inn,  
Who spake him in this wise,  
Nor knew who waited at his gate  
Was King of Paradise,  
Albeit in an men's stall  
He opened first his eyes.

Amen! Amen! And so to-night,  
What time my guests carouse,  
And loud the cry of "Noel" rings  
Beneath green holly boughs,  
Who so may stand before my door  
Is welcome in my house.

Because of one in Bethlehem,  
Who reeked not of his sin,  
Each beggar at my door to-night  
Is kith of mine and kin,  
Seeing, perchance, with every one  
The Lord Christ enters in.

Press Notices

By W. Pau Ridge

"We beg to enclose a newspaper cutting which refers to you, and we shall be glad to enroll your name as a client and to forward 100 press notices on payment of one guinea. We are, dear Sir, Yours respectfully,"

The notice, posted on a green slip, concerned a public dinner, and mentioned that "Amongst those present were Messrs. So-and-So, So-and-So, Mr. Armitage Lamb, and others." A small thing, perhaps, but the gratification it gave was so great that Mr. Lamb's accustomed breakfast appetite vanished; his aunt observed that he took only two helpings of marmalade, and coasting this into a studied insult directed at her domestic management, began to talk dourly of finding at Heron Bay the appreciation that Brockley seemed unwilling to afford.

That afternoon, Mr. Lamb's nap was occupied with brief fantastic dreams of post-men arriving with pockets of notices so bulky that the front of the house had to be taken out to make it possible for them to be delivered. His awakening awoke still warm with those anticipations, he wrote a check that evening and despatched it with a letter to the press-cutting agency. A few days later he wrote again; this time in terms of remembrance.

Mr. Armitage Lamb received a civil reply, pointing out that the agency did its best to satisfy its clients, but that, so far as it could ascertain, no reference to Mr. Armitage Lamb had appeared in the public journals since the one which it had had the honor of sending. In these circumstances, the agency hoped Mr. Lamb would see that it was blameless in the matter. This, on reflection, did indeed seem a fairly reasonable answer.

"Only thing for me to do," said Mr. Lamb to his aunt—"only thing for me to do is to get my name in the papers."

"I've known people," remarked his aunt, precisely, "who have had their names in the papers and wished they hadn't. Everybody reads the paper's intelligence."

"You don't understand it."

"That's right," cried the old lady, heat-

This half-size illustration of a woman is the only portrait in the entire series of the Anheuser-Busch Art Plaques.

The four women figures appearing on the Anheuser-Busch Art Plaques are the four seasons: Spring, Summer, Autumn, and Winter.

The Anheuser-Busch Art Plaques  
With Calendar Plaque for 1904

AT GREAT expense, Anheuser-Busch Brewing Ass'n. has secured from the brush of the celebrated color artist, A. Van Buren, a series of magnificent oil paintings, representing the artist's conception of the four seasons. These are reproduced with splendid fidelity in a small and colorful form of four plaques, —Spring, Summer, Autumn, and Winter. Each of these four plaques is an additional plaque containing the twelve monthly calendars for 1904. The five plaques are each 12 inches in diameter, illustrated in the highest style of art, hand-colored by the finest workmen in the world, and each plaque is mounted on a special metal plate, with the artist's name and design of the illustration embossed, giving the effect of hand-painted metal plates.

The five plaques will be mailed to any address on receipt of the money or check payable to the Anheuser-Busch Brewing Ass'n, 200 N. 2nd St., St. Louis, Mo. A full list of the names of the artists who painted the four seasons is given in the accompanying leaflet, which will be sent to you on request. The price of the five plaques is \$1.00. The price of the five plaques and the calendar plaque is \$1.50. The price of the five plaques and the calendar plaque is \$1.50.

edly: "throw me want of education in me face. Go on! Never mind me! I'm only a silly old woman, who's devoting the best years of her life to seeing that you wait for nothing in the way of eggs that are eggs, and making sure that your things come back all right from the wash, and—" "Yes!" Mr. Armitage Lamb scolded the old lady, and went out to consider his plan. The Hilly Fields had no other patron, the morning being cold, and he was able to exercise his mind without interruption.

That afternoon he wrote busily, posting the result of his work with secrecy. A few mornings later, to his intense satisfaction, came a packet from the agency enclosing cuttings headed variously, "Barrery at Brockley!" "A Gallant Ex-Civil Servant!" "The Lady and the Lamb!" Two paragraphs, differently worded, referred to an identical incident, and related how last evening a quiet road in the well-known suburb of Brockley was suddenly disturbed by shrieks of "Fire!" Flames were seen proceeding from an upper window of one of the houses, and a gentleman, who was passing by loosened, with the utmost alacrity, a house-painter's ladder from an adjoining villa, carried it to the scene, and, ascending swiftly, brought down a fainting, terrified young lady of agreeable appearance. The fiery element was shortly afterwards quelled. On making inquiries we find (said the paragraphs) that the courageous individual was Mr. Armitage Lamb, late of the Quill department, Whitehall.

"Fanny thing you never told me," said the aunt. "Where did this affair happen?" asked his friends. "It wasn't in our road. And who was the fair damsel?"

To his aunt Mr. Lamb gave reply that he had refrained from informing her because he feared the news might bring on an attack of her scissions; to his friends he said most civilly that he would prefer not to speak of a matter where a lady was concerned, declaring himself, further, greatly annoyed that the newspapers should have gained possession of the facts. "I'm sure," said Mr. Lamb, impatiently, there seemed, with the halfpenny press and the evening journals, to be no longer anything like privacy in English life. All he could do to protect the matter carefully and bought for their letter preservation a large blank-leaved book entitled *Newspaper Cuttings*. For a time Mr. Lamb was content.

"You don't seem to have been giving your name in the papers lately," remarked his aunt one morning when the post had given no news. "Rose dropped you, didn't they?"

"My dear aunt," said Mr. Lamb, testily. "I'm not a man to force myself into the public eye."

"Is that so?" remarked the old lady, doubtfully.

"If the public journals like to take notice of me," he said, with stressfulness, "they can. If not, they can ignore me. I don't mind being ignored. I prefer it. If I ever saw my name in print again I should not experience a single pang of regret."

"Fanny that, now!" said his aunt.

Nevertheless, Mr. Lamb passed about the house, walked over to the Hilly Fields, by awash of an afternoon, always trying to think of some means for the better protection of press notices. He joined in current discussions in the daily papers; but only once he found inserted his communications, and this (to his bitter disappointment) at the notice of a metropolitan society gave him a chance. He had no political opinions worth mentioning, therefore he announced himself as an Independent, and posters were soon on the walls, saying: "Don't be Deaf to the Voice without!" "For Armitage Lamb!" Most of the papers ridiculed him, and his little meetings could not be truthfully described as successful, but the brilliant of morning and evening hours of press notices attended for everything. He shared with another two candidates (to their satisfaction) the expense of the returning-officer, and on the night of the election, entered the web of the meeting of the Hilly Fields, where he had by securing forty-eight votes, whilst those of the other two men ran into four large figures.

Now the fever for public notice possessed Mr. Lamb and held him tightly. Now to see

his name in print had become a necessity to him as great as food, drink, or sleep. But at intervals of a few blank days, and in all Brooklyn you could not have found a more depressed, a more sombre person than he, and when the post brought only tailors' samples, melancholy triumphed, and he found himself weeping silently. His doctor from Wickham Road, called in by the aunt, could say only that Mr. Lamb was allowing himself to get run down, a sympathetic phrase that has helped medical men, before and since, to avoid disastrous confusion of ignorance.

"You must try," added the doctor—"you must try to get more enjoyment out of life. Do you play golf?"

"No," said Armistead Lamb, sighing: "I don't think I ever saw in my life."

"Take up a hobby of some kind," urged the doctor. "Distract your mind from painful subjects." Mr. Lamb nodded helplessly, when you don't mind my asking, I hope, but—

is there a love-affair? Not trying!  
Later Mr. Lamb reconsidered this hint. To a young woman in Lewisham who taught elocution in ten easy lessons until perfect he consented to pay court with the charmlessness of the amateur, and pupils being rare and the recitation market just then rather slack, the Lewisham lady beamed upon him, and, with a coyness that gave Brooklyn a tremor, the engagement was arranged, the trousseau purchased, the day of the wedding fixed.

This being done, a column in an evening paper, headed "Amazing Breach of Promise Case," gave Mr. Armistead Lamb an idea (reviving the old craving for public notice) for which you who read these words will never forgive him. I wish to dwell lightly on this deplorable incident in Mr. Lamb's career, and I ask you to allow me to say only this—that, in the article brought by the Lewisham lady, the diverting character of the love-letters, the humorous scanning up, all combined to make very excellent reading, and many a soulless suburban carriage, many a driver's suburban home, found, by reason of the case, happiness and laughter.

The expenses thereon entailed by the credit on Mr. Lamb were more than compensated for by the voluminous reports which came to him afterwards from the press-cutting agency.

The end of this career approaches. Of the many diabolical schemes, of the many ingenious but unworthy dodges that he invented and carried out, one would rather not write in detail; but there came a day when the elderly aunt, standing by the mantelpiece, denounced her nephew as a mad lunatic (using the adjective as though under the impression that there were other kinds).

"You never saw any of the rest of the family act like this," cried the old lady.

"Not one of the rest of the family ever had a chance of acting like this," retorted Mr. Lamb, crying her angrily.

A boy out in the roadway was selling an afternoon edition in the raucous voice that makes suburbs livable. "Interesting murder at Kew-Forest," he was shouting. "Full Description of the Prisoner Papers!"

A sudden idea came into poor Mr. Lamb's confined head. "There's a pretty bird!" he said to his aunt, pointing to the window. The old lady turned to look. In that moment Mr. Lamb, with a clumsy wayward apology, . . . The doctor from Holloway and the chaplain of Newgate came every day to the condemned cell, and each found that his charge exhibited the happiness of interest when reference was made casually to the attention given to the case by the public journals. Only on the Sunday preceding the last day did Mr. Lamb show signs of melancholy.

"Sincerely trust," said the doctor from Holloway, on whom rested the responsibility for bringing his men up to the scratch well and hearty—"I sincerely trust you are not allowing anything to disturb you. Touch of mere throat, perhaps?"

"It's nothing," he replied, sadly. "Just occurs to me that—ah!—that I never receive the press notices of next Monday's affair."

**The Customs of Venice**

By Israel Zangwill

I WISH I were an irresponsible hamlet. What fun I could get out of my little experience at Venice! How I could exaggerate it and adore it till it became inevitable to the staidest midriff! But the institutions of a country are at stake, and I recognize my responsibility towards truth. With a sigh I rein in the Pegasus of extravagance, and state plain facts.

In an ill-happened moment—and for the sake of economy—I sent some luggage from Bile to Venice by the ironically entitled "grande vitesse." I did not then know that "grande vitesse" means, even in railway parlance, slow train. The same day I journeyed to Milan, where I spent several days, before going on to Venice. Ereas when I arrived at Venice, I remained a day or two before calling at the Custom-house with my big pink form. Needless to say, therefore, that when I did go, it was in the full expectation of seeing my two boxes standing on the floor. I was prepared to grumble at having to produce my keys, but soon found myself grumbling instead of not having to produce them. Shoulders were shrugged, and I was told that the boxes would probably arrive on the morrow. The Custom-house is a grand hall, white-washed place, at the extremity of the Grand Canal, half of the floor elevated as a kind of platform, on which a few odd trunks and jet mantles stood about. How I got to know that platform and how hopelessly my eye would rove daily over it, in search of my boxes, while vague porters hovered around me with a cumulative suggestion all lips! At last great energy on my part, and speculations that I was leaving Venice, led to my being headed to and fro betwixt the railway officials and the Custom-house, with the final result that a telegram was sent to the frontier. The next morning, to my amazement, I saw the boxes on the platform. Blithely I summoned a porter, I produced my paper and my keys. In my imagination the boxes were already on the gondola, gliding to my hotel. There was absolutely no other business doing in the place except the transfer to me of my boxes; the slipping them off the platform on to the porter's truck seemed, at the moment, the whole staff was concentrated on the deliverance of those boxes to their rightful owners. Yet it took one hour and a quarter to get them two boxes outside. I timed it by the Custom-house clock, and that was probably slow.

I started with a light heart, for, declining an inquiry that I had nothing contraband, I was told "All right," and I thought I should even save the time of opening the boxes. But an attempt to hand them over to the porter I ruled out, side to fetch, was heartily ripped in the bud. How that hour and a quarter was filled up I shall never precisely remember, but bits of the nightmare remain with me. Porters hunched to and fro, clanked and tapped the boxes and carried pieces of paper backwards and forwards. At one point I heark in bravely upon the official including in his assortment. He was laboriously occupied with my case. Conscientiously his pen ran on and on, filling up endless forms and dockets. He smiled amiably on me and went out, and was away for twenty minutes in an inner room. Rounds of lively altercation came from there, but when he reappeared he was holding a freshly written sheet. I have by me now all the documents in my case—the dossier comprises seven papers, big and little, pink, white, and blue, swarming with statistics, signatures, figures, and hieroglyphics, and sealed with strong stamps, and engendering a complicated lawsuit. These seven do not, of course, include the entire in the official books nor the copy of the telegram furnished me. Now come the paying for the luggage; the cost was appalling; even the telegram to the frontier had been charged to me, and at so reduced rate. Oh, the extravagance of economy! But I would have paid anything to be rid of that Custom-house.

More documents of receipt, more licking of my heels; I ironically drew the stick

To own one of these beautiful calendars is to have in your home a work of art, a picture which will give you a new and different view of the world. It is the only way to get a new and different view of the world. It is the only way to get a new and different view of the world. It is the only way to get a new and different view of the world.

tion of casual officials to the motto posted up, "Despatch"; but they smiled and shrugged on. At last I actually arrived at the stage of opening my boxes for the excise officers. Now arose savoured energy. A ferus bravo slashed at my valise cord with his knife, another saturnine brigand threw a box down and broke a corner of it. After a long search I was permitted to close my trunks. I called the porter. He began to lift a box. A gravel voice bade him desist. I had yet to receive my certificate. I wandered about fuming. I went outside and looked at Venice—waiting patiently—and ceased to wonder that the once mighty Empress of the Seas had decayed. Armed with it, and carrying my heap of other documents, I marched at the head of my porter and the truck. Half-way from the door the procession was stopped by an official who demanded to see my passport to leave. He saw it and I went on. A moment later, a second official asked to see it. Then I understood that in a land of tips the government has so little reliance on its servants that it sets one to watch over the other. Brooding over this, I was nearing the doorway when "light" came a loud cry, and I saw three glittering bayonets fixed at me with soldiers attached to them. Again I had to show my certificate. And thus I came at last into the free air, and the Custom-house had completed its day's work.

### A Psalm for Nineteen-Four

By Virginia Fraser Boyle

Lure up, ye range of everlasting hills,  
Ring out, forgotten music of the spheres,—  
Unfold, ye virgin train, attendants still,  
Against the dark seal of the cyclid years.

Oh! Cherubim and Seraphim that cry  
By day and night around the great white throne—

Oh! silver winged Ariel, give back  
To dulled and earthly ears the raptured tone.

For we who live, but stand on Nebo's dim,  
And gaze with huddled eyes, half dim  
With shame.

From wrecks our hands have left upon the  
past,  
To waver the horns of dawn-tipped promise  
flame.

Jerorah!—Thou art God,—we cry to Thee,—  
Back from the primal morn our voices  
rise—

Jerorah-jeroh,—blot the Eden page,  
And look in ours, as is Thy Adam's eyes.

Forgive the doubting acts of fadish hearts,  
Forgetful that Thy head would shield from  
barms;

Beshrive those who have closed the golden  
year,  
With shout of war and sounding clash of  
arms.

We question of the skies, for rumors drop  
Like sharpened stones upon the path of  
youth;

Clear Thou these pebbles of confusing  
doubt,—  
Give us to see the sureties of truth.

Burn with Thy Word the tangled creeds that  
fret.

The stumbling feet of children at Thy  
skirt;

Turn back the wisdom of the sage who prates  
A blazon dogma to his brother's hurt.

Give Thou this new-born thing to us for  
peace:  
Beneath the shields of warring nations  
fad.

Tombid by Thy finger, scourged and purified,  
The Brotherhood of every kinsmankind.

Thou art Jerorah of the quick and dead,  
The passion-swept, the dreamers in the  
mid;

Who art the King Almighty, Lord of  
Heavens,—

Be Thou, through faith, our Father and  
our God!

**APPROVED**

criticism on the composition of the committee, for the reason, doubtless, that Mr. Cannon, unlike Mr. Reed and other Republican Speakers, has allowed the Democratic committee to be designated in a caucus of their party. We are not surprised that the minority leader feels grateful for so important a concession. Nevertheless, Mr. De Armand, who is Mr. Williams' chief lieutenant, protested against the great preponderance given to Republicans on each of the sixteen principal committees. Each of these consists of seventeen members, and it seems that the Republicans have eleven, and the Democrats but six. There is no doubt that the minority is entitled to a much larger representation, and it is a modest proposal that Mr. De Armand makes when he asks that one Democrat be added to each of the sixteen chief committees.

We regret to see that the Naval Committee, which, in the Fifty-seventh Congress, was watched with considerable suspicion, has not undergone a more drastic transformation. There is some new blood in it, however. Three vacancies created by retirements, and one caused by promotion to the Committee on Ways and Means, have been filled by the appointment of Messrs. Vreeland of New York, Brick of Indiana, Brambooge of Connecticut, and Lord of Michigan. Among the Democratic members, Wheeler of Kentucky has been dropped, and Wade of Iowa has been substituted. The Post-office Committee has been materially changed. Of the seventeen members, nine are new, and the chairman is Mr. Overstreet of Indiana, who was not on the committee in the last Congress. It is satisfactory to learn that Chairman Overstreet has already introduced in the House a resolution giving his committee authority to request the Postmaster-General to send to that committee all papers connected with the recent investigation of that department. Nobody knows better than Speaker Cannon how much room there is for improvement in the methods of the government of the District of Columbia. In former years he has more than once avowed opposition to the practice of making the Washington municipal government an annex to the political machines of Maryland and Virginia. He has never believed that political evils, due to partisan workers in Virginia and Maryland, should be paid with Federal offices in the District of Columbia. On the new District Committee there is not a single Representative from Maryland, and the only Virginia is one from the southwestern corner of the State. Interesting also is the composition of the Labor Committee. Of the four old members who are retained, one is a farmer, one a newspaper man, one a bank president, and one a lawyer. Of the new men, six are lawyers, one is a bank president, and one, William B. Hearst, of New York, is a newspaper proprietor.

The report of Fourth Assistant Postmaster-General Bristol, setting forth the results of his investigation of the Post-office Department scandals, has not been published in full—it is said to have comprised 120,000 words—but an abstract containing 12,000 words was issued on November 29. The abstract was accompanied by a "memorandum," written by President Roosevelt, which deserves careful attention. The President endeavors to exonerate Postmaster-General Payne from the charge of slackness or indifference, by pointing out that before public scrutiny was fixed upon the corruption pervading certain sections of the department, that official asked for an appropriation of five thousand dollars to be applied to an investigation. This is true. But, unfortunately, it is very doubtful whether the inquiry contemplated by Mr. Payne would have touched Machen or Beavers, the principal offenders. American citizens are not likely to forget that, after suspicion had fastened upon those officials, the Postmaster-General did his best to divert it by denouncing the accusations levelled against them as "hot air." It is also obvious that the President has tried to absolve his own and Mr. McKinley's administrations from responsibility for the frauds of which the postal-service has been the victim, so far as this was practicable. He points out that, in the case of Assistant Attorney-General Tyler, malfeasance has gone on for a number of years, though he finds it impossible to say exactly when it began. In the case of Machen, it is unquestionably true that the evidence shows that his misconduct commenced immediately after his appointment in September, 1893, or, in other words, under the Cleveland administration. With regard to Beavers, however, the General Superintendent of

Salaries and Allowances, it is undisputed that he was appointed to that place in 1897, and that he lost no time in introducing systematic frauds upon the government.

We need not say that Republican administrations are chargeable with failure to discover and punish all the frauds of which Tyler and Machen are said to have been guilty after March 4, 1897. That for nearly six years those persons committed crimes with absolute impunity is, according to the President, the "melancholy feature of the affair." Those who have read Mr. Bristol's report will have noticed that the so-called Tulloch charges, relating mainly to the lax methods employed in the department when Heath was First Assistant Postmaster-General, are not mentioned. Mr. Bristol does not fail to report, however, that Beavers, the former chief of the salaries and allowances division, who is now under indictment, has alleged that, in at least one instance, he was compelled to share bribe-money with Heath. Although this assertion has been denied by Heath, and, although the evidence in support of it has been pronounced by the district attorney for the District of Columbia insufficient to warrant an indictment, the President refers to it in his memorandum, and expresses a significant regret that the statute of limitations in the case of law-breaking Federal officials applies at the expiration of three years from the date of the offence. He indorses the Attorney-General's recommendation that the time limit should be extended to at least five years, the inference being that Heath would be prosecuted if the law did not prevent it. But if Heath has only escaped prosecution through the operation of the statute of limitations, it seems to follow that he is scarcely a fit person to figure any longer as the secretary of the Republican National Committee.

The letter addressed by ex-President Cleveland to the editor of the Brooklyn Eagle has, naturally, attracted a great deal of attention. Mr. Cleveland said, in substance, that, having been thrice nominated, and twice elected, to the office of Chief Magistrate, he could not foresee any combination of circumstances under which he would deem it his duty to become for the fourth time the nominee of the Democratic party for the Presidency. What else could he have said? Did any sane person expect him to avow himself a candidate, or to declare in advance that he would accept a nomination if tendered? Is the fact forgotten that in 1880 ex-President Grant never sanctioned the movement for his re-nomination? Mr. Cleveland recognized that the time had come for him to take some notice of the widespread demand for his re-nomination, and that he could take notice of it in but one way. He saw that he must declare in the most unequivocal language that he was not a candidate. Had he taken any other position, the feeling that the country has a right to his services would have been chilled. Curiously enough, attention has been concentrated on Mr. Cleveland's positive assertion, and nobody seems to have perceived that the omissions in his letter are equally significant. Nowhere in the utterance do we find any allusion to the supposed incompetency of giving any American citizen a third term of the Presidency. Mr. Cleveland's silence on the subject indicates that he concurs with a large majority of his countrymen in holding that a third term is unquestionable, provided it be not consecutive.

We have discussed elsewhere various views of the position taken by our Federal government with respect to the new Republic of Panama. A valued correspondent asks us what we think of certain assertions made by our respected contemporary the *Commercial Appeal* of Memphis. The *Appeal* asks whether the Roosevelt administration has acted honorably in the Panama business, and proceeds to answer the question in the negative on the following grounds: It alleges that our government allied itself with the rebellion before it had taken place, and actively connived at the secession of Panama. The *Appeal* further contends that we have no just grounds for complaint against Colombia, because, if she did not want this country to build the Panama canal, it was *her own business*. The *Appeal* concludes with the assertion that nobody has ever been able to adduce a single argument to justify the administration's course, either in law or morals. Let us look a little closely at these statements, premising that we hold no brief for the Roosevelt administration, and have often had occasion to commend or deprecate its acts. There is not a particle

of evidence for the averment that our government allied itself with the rebellion before it had taken place, or promoted the secession of Panama. Nobody has ever accused Secretary Hay of mendacity, of prevarication, or of the suppression of testimony. The documents submitted by him to Congress show conclusively that although the resolve of the inhabitants of the isthmus to secede from Colombia in the event of a rejection of the Hay-Herran treaty—a resolve long notorious, even at Bogota—was made known to our State Department several weeks before the secession took place, the Secretary firmly refused to promote the movement in any way.

We feel constrained to differ also with the Appen's second assertion—that if Colombia did not want the United States to build the Panama canal "it was her own business." It strikes us that whether the Panama Canal should be built, or should be considered forever to the limbo of abandoned enterprises, was primarily and mainly, if not exclusively, the "business" of the inhabitants of the State of Panama. For eighty-two years they have been the victims of wholesale and unremitting spoliation at the hands of Bogota politicians. Since the last pretended Constitution of Colombia was declared operative by a coup d'état in 1886, the inhabitants of the State of Panama have been robbed even of the slender powers of self-government which formerly had been vouchsafed to them. During the last seventeen years they have had no more control of their own concerns than was enjoyed by the people of New Orleans when General B. F. Butler was master of that city. They have never assented to the loss of their local autonomy. They have incessantly protested, and they have frequently rebelled, but their protests have been contemned and their rebellions have been put down by superior force. They would have been destitute of mankind if the utter sacrifice of their interests involved in the rejection of the Hay-Herran treaty had not guided them to a final and desperate uprising for independence. In that uprising they deserved the sympathy of every honest man who is acquainted with Panama's sad history. It is to the honor of the Roosevelt administration that it did not survey unmoved the last struggle of a plundered and oppressed people to be free.

An extended reference to the President's third annual message will be found in another column. The accompanying report of the Secretary of War is of exceptional interest, because, as his resignation will presently become operative, it is the last that Mr. Elihu Root will make in his dual functions of head of the War Office and Secretary of the Colonies. He may well look back with satisfaction on the record that he leaves. Largely at his suggestion, and wholly under his supervision, have been accomplished the following tasks, the difficulty of which is measurable only by experts: The reorganization of the regular army under the General Staff Act of February 14, 1905; the reorganization of the militia under the act to increase the efficiency of that arm of defence; the collection of statistics regarding the strength, cost, and equipment of the regular army; the military and civil administration of the Philippines. All of these, and many other subjects, receive copious illumination in Mr. Root's report to the President. We learn, for instance, that on October 15, 1905, the total strength of the regular army was 59,181 (including officers as well as enlisted men), which represents a reduction of 10,503 from the preceding year. To the aggregate of regular soldiers should be added 25 officers and 250 enlisted men of the Porto Rico regiment, 99 officers and 4805 enlisted Philippine scouts, and 2807 men belonging to the hospital corps. The total annual cost of maintaining the military establishment to the end of the fiscal year, June 30, 1905, was a little more than seventy million dollars. During the same fiscal twelvemonth the outlay for the extensive public works prosecuted under the direction of the War Department (including not only fortifications, but river and harbor improvements), was upwards of \$30,341,000.

The important military event of the year is, of course, the reorganization of the army under the General Staff Act, and special credit is awarded by the Secretary to Brigadier-General W. H. Carter for services in the application of that law. Neither would it be easy to exaggerate the militancy of the

act designed to increase the efficiency of the State militia and to harmonize militia organizations with the regular army. It appears that the total strength of the existing militia is 9120 officers and 107,422 enlisted men. From the militia viewpoint, New York stands first with 15,860 men, and Pennsylvania second with 9065. The Secretary reports that, on the whole, the condition of the arms and equipments of the organized militia was found satisfactory, and such shortcomings as were discovered have, to a great extent, been remedied. Gratifying progress has been made in the construction and armament of seacoast fortifications, the annual food charge for which is placed at about sixteen million dollars. It is pointed out that there should be no delay in the fortifying of naval stations in the West Indies, and in organizing defenses at certain designated points in Hawaii and Guam and in the Philippines. In that part of the report which deals with the Philippines, we learn that on October 15, 1905, the regular American troops in the archipelago consisted of 943 officers and 14,667 enlisted men. The Secretary reports that the number can be still further reduced, but he thinks that the reduction should be deferred until the construction of barracks and quarters in the United States is more advanced. He commends the policy of drawing the regular soldiers in the Philippines into a few large posts, and of leaving the smaller posts to be occupied by the Philippine scouts. Mr. Root also renews earnestly his former recommendation for a reduction of duties upon Philippine imports into the United States. He submits that there is no just reason why the people of the Philippines should not be treated with some fair approach to the advantages which are awarded to the people of Porto Rico and the Hawaiian Islands. This journal has always gone further, and insisted that, in equity, the Filipinos should be placed on precisely the same footing as the Hawaiians and the Porto-Ricicans. On what possible ground can discrimination against them be justified!

The report of the Secretary of the Navy to the President is also deserving of separate notice. Mr. Moody advises a reorganization of the naval establishment and the creation of a general staff, which shall be responsible for the efficiency of the vessels afloat and of the personnel of the navy; which shall collect and digest information upon which plans for active operations may be formulated; and which, finally, shall act as the Secretary's military counsellors, though clothed with no authority except such as the Secretary may from time to time confer on them. It is pointed out that although some differences of opinion still exist as to the measure of success which has attended the consolidation of the Engineer Corps with the line, effected by the act of March 3, 1899, yet the majority of naval officers, including the Chief of the Bureau of Navigation and the Chief of the Bureau of Steam Engineering, concur in the belief that the consolidation has worked well. The Secretary does not advocate it in so many words, but he seems to approve of the introduction of a system of early compulsory retirement in the higher grades of the navy as the only practicable remedy for the evils attending the tardy attainment of command rank. It is suggested that an officer of fifty years of age who shall not have attained the rank of captain, and a captain who at fifty-five shall not have attained the rank of rear-admiral, should be retired.

It is well known that, under a recent provision of law, the commission grades have been left open to warrant-officers who satisfy certain conditions. Mr. Moody reports that of fourteen warrant-officers who have applied for examination, five proved ineligible on account of age or other disqualifications, five failed to pass the prescribed examination as to educational and technical requirements, while four, having succeeded in passing, were commissioned as ensigns. Mr. Moody transmits a recommendation of the Chief of the Bureau of Navigation that the period during which warrant-officers are required to serve before becoming eligible for examination for the rank of ensign should be reduced from six to two years. We learn that during the fiscal year the effective force of the navy was increased by the addition of twenty-five new vessels, including the battle-ship *Maine*; and that since the close of the fiscal year one protected cruiser, the *Cleveland*, and one torpedo-boat-destroyer have been added. As regards the delay

encountered in securing the completion of vessels under contract. Mr. Moody states that, notwithstanding the youth of the steel ship-building industry in this country, the average time required for the construction of a battle-ship is not materially greater than it is in foreign countries. The report concludes with a declaration that experience has confirmed the Secretary in the conviction that the upbuilding of the United States navy should be continued by the annual authorization of new vessels.

H. J. Schultheis is described as the legislative agent of the labor-union interests at Washington. A week before Thanksgiving, Mr. Schultheis called on Speaker Cannon to say that Representative Livernash of San Francisco, a Union-Labor Democrat, was the proper man to be chairman of the House Committee on Labor. Mr. Cannon explained why Mr. Livernash could not possibly be chairman of that committee, and Mr. Schultheis went away. But on December 4 he came back to the Speaker's room, and said to Mr. Cannon: "The public press says the Labor Committee has been packed against us; I tell you labor will have its rights." "Whoever you are," replied Mr. Cannon, "you will have the same treatment as any other citizen, but you can't pack the Committee on Labor." "You were a member of the Committee on Rules in the Fifty-first Congress," retorted Schultheis, "and prevented our measures from being considered. I went out to your district in 1890, and you know what happened." Mr. Cannon was defeated for Congress in that year; nevertheless, he made no reply to Mr. Schultheis. But he said to his messenger: "Put that man out of the door, and see that he comes into this room no more." Sometimes it is well to turn away wrath with a soft answer, and at other times it is best to turn it away bodily and forbid it to come back. Mr. Cannon seems to have done well to choose the latter course in the case of Mr. Schultheis. The Speaker of the House fills a large place and one of grave responsibility. It is unbecoming even a labor leader to try to influence his selections by threats.

Bishop Burgess of Long Island is the latest clergyman of eminence to protest against the representation of "Parsifal" in New York. He objects very much to having sundry sacred scenes shown on the stage, but the particular scenes which he specifies are said not to be included in Wagner's great work. The performance at the Metropolitan Opera House will be one of great dignity, and, we should think, may rather be expected to stimulate pious and Christian emotions than to jar on anybody's reverent sensibilities. Our belief is that Bishop Burgess and others who are of his mind are mistaken in their contentions, but we shall know certainly as to that when the opera has been given. It will be seen and heard by very large audiences of intelligent people, and so far as concerns its religious bearings, the impression it makes upon them may surely be accepted as the index of its quality. Everything connected with it—the subject, the cost of production, the extremely protracted duration of the performance—seems very, very serious. It is hard to imagine that any one is going to see "Parsifal" for a lark, and whoever does will probably end in slumber at least, if not in contrition. Some clergymen, and others who are closely concerned with churches and their work, fail to realize that religion is a bigger element in life than all the churches can hold, and that traces of it are to be found in almost every one. It would be impossible to fill the Metropolitan Opera House, even at ten dollars a head, with an audience that did not include a large proportion of people in whom religion was an active force and reverence for sacred things an instinct. It is as unusual to find a worldly who is all worldly as it is to find a pious person who is all pious.

Herbert Spencer died on December 8, full of years and honors, his life's work wonderfully completed. As a child he was so far from robust that he was not sent to school, but was reared at home by his father and uncle. His labors over his first great work, *The Principles of Psychology*, left him, at thirty-five, with a nervous prostration which kept him an invalid the rest of his days. Yet he lived to be eighty-three,

and in due time accomplished all the great succession of labors which he had planned. Making haste slowly, hoarding his strength, and using the industry of others as far as practicable, he managed to leave his *Synthetic Philosophy* a complete work. There are five parts of it—the First Principles, and the Principles of Biology, of Psychology, of Sociology, and of Ethics. They constitute a great well of knowledge, theory, and thought, from which the present generation of men have freely drawn ideas. Not all of his conclusions have stood the test of so much time as he himself lived to see, and it is of course debatable how far his theories will be supported by the knowledge that is to come; but with the materials that he found, his mind worked to great purpose, for the advancement of thought and the edification of his fellows. His education, apart from schools and universities, was particularly well adapted to develop habits of independent thought. Pulling out of professional life after a few years' experience as an engineer, he devoted the rest of his days to research and reflection, and to putting the results of his reasonings into books. It is gratifying to all Americans to remember that when lack of funds had brought his chosen work to a standstill there came from this country, through Professor E. L. Youmans and the Messrs. Appleton, the appreciation and financial support which enabled him to go on.

The attention of the WEEKLY'S readers is called to the articles now in course of publication in this paper under the title of "The Struggle-hold of Labor." There are to be four of them. The first, in the issue of November 29, considered the effect of strikes in the building trades in various cities, and especially in New York, resulting in increased rent. These strikes, many of which were the result of quarrels between rival unions and of various frivolous and absurd disputes, have frightened most of the holders out of business for the present, and are now bearing their natural fruits of public inconvenience, high rents, great losses to contractors and owners of property, and great distress to the strikers themselves who cannot get work, and to their families. The second article, published last week, had to do with the problem of transportation, showing what loss and misery it is possible for the unions to bring on the people of the whole country by their control of the means of distribution. The third article, in this issue, is concerned with the influence of organized labor on the cost of living and the price of food. The facts which Mr. Keith sets forth in these pieces are not novel nor obscure. Most of them will be recognized as heretofore published in the newspapers. But it is highly instructive to have them gathered and put together as he has done it. The labor-unions have indeed got a strange-hold on the people of this country. It behooves every citizen and voter to consider carefully what they have done, what they are doing, and what they will do if they can, and to ask himself what are the proper limits of their powers, and by what processes they are to be restrained within these limits. The unions include altogether only a comparatively small fraction of our population, but they occupy a position of such strength and advantage, that they are able in an extraordinary degree to impose their will on the whole country.

In response to many requests from readers of HARPER'S WEEKLY with regard to personality of the authors and artists who have contributed to the various publications from Franklin Square during the past year and with whom arrangements have been made for the coming year, we take pleasure in printing, as a special supplement to this issue of the WEEKLY, the portraits of a number of authors and artists in whose work readers throughout the country have shown special interest. At this season of the year interest in the men and women who have done most and who promise most in literature and art is most apparent. The great number of anecdotes and personal reminiscences of well-known writers and artists which appear during the year, and especially during the Christmas season, are always in demand by readers, and lend a special timeliness to the portraits which are printed in this issue. The portraits are the latest ones taken of each author and artist in the group, and while many of them have been printed separately, our readers will doubtless find it valuable to have them gathered together in a single picture.

## The President's Message

For obvious reasons, Mr. Roosevelt's third annual message is of exceptional importance to himself, and of peculiar interest to the American people. It constitutes the last opportunity that he will have of setting forth on an extensive scale his views, aims, and principles before the assembling conventions shall begin the next Presidential campaign. Next to the Executive acts which compose his official record, which he now says regarding public questions will necessarily have a direct, if not direct, bearing on the selection of a candidate by the Republican national convention, and on the choice of a Chief Magistrate at the ballot-box. Under the circumstances, it is not surprising that the document is a long one, and bears the marks of unusual care. We may say at once that this state paper is calculated to commend the author to his own political party, and we do not hesitate to add that, if it stood alone, and did not need to be interpreted in the light of the author's acts and other utterances, it would command lines in many independent voters. So much will be recognized, we think, by all careful readers of the message. The President has avoided giving expression to certain views (if he still entertains them) that would prove obnoxious to a large geographical section of the Union, and by professing impartiality between capital and labor he has striven not to aggravate the animosity of the qualifications for the Presidency attributed to powerful financial forces. Where so wide a variety of topics are considered, it is impossible for us to comment on all of them at this time, and some of them must, therefore, be reserved for another occasion.

What the President himself believes to be a matter of superlative moment to himself and to the country is indicated at the outset of the message. It is the right of the people of the United States should be congratulated on what has been achieved in the direction of providing for the exercise of supervision over the great corporations and combinations of corporations engaged in interstate commerce. He has reference, in part, to the creation by Congress of the Department of Commerce and Labor, including a Bureau of Corporations, supposed to be invested with authority to secure publicity to the proceedings of corporations as, in the judgment of the bureau, the public has a right to know. We say "supposed" because, in view of the refusal of the Standard Oil Company to furnish the information called for, the Supreme Court of the United States will, in due time, be invited to decide whether the injunctive powers conferred by Congress on the Bureau of Corporations are warranted by the Constitution. Until the precise scope of those powers has been defined by the highest Federal tribunal, it is premature, Mr. Roosevelt is apt to assert that the establishment of the bureau marks a real advance in the direction of doing all that is possible for the solution of the questions vitally affecting capitalists and wage-workers.

Meanwhile the President tries to reassure those citizens and voters who regard with considerable distrust recent Federal legislation concerning aggregations of capital, by asserting that the creators of the Bureau of Corporations have not aimed to restrict or control the liberty of legitimate business action, but merely to secure such exact and authentic information as might aid the Executive in enforcing existing laws, and enable Congress to enact new laws, should any prove necessary, in order to prevent opportunities for the many. Mr. Roosevelt dwells at length upon this point, declaring that the corporation which is honestly and fairly organized, and whose managers in the conduct of its business recognize their obligation to deal squarely with their stockholders, their competitors, and the public, has nothing to fear from the supervision authorized by Congress. In a word, the anti-trust legislation is described as inspired throughout by the idea that "we are not attacking corporations, but endeavoring to provide for doing what the public may wish; we draw the line against misconduct, not against wealth, and, gladly recognizing the great good done by the capitalist who abides, in its conjunction with his fellows, does his work along proper and legitimate lines."

That such is Mr. Roosevelt's personal purpose, and that, so long as he is President, he will try to have it carried out, all who know him will cheerfully concede. It does not follow that, under all circumstances, the present measure by Congress on the Bureau of Corporations—we assume them, for the moment, to be constitutional—would be honestly and wisely executed. What would happen if that bureau should become as greasy with corruption as has lately been the Post-office Department?

What has the President to say about labor-union and their arrogation of a right to deprive non-union workers of employment? His pronouncement on this subject is a fundamental question in union, a labor-union, or an individual disregards the laws and acts in a spirit of arbitrary and tyrannical interference with the rights of others, whether corporations or individuals, then, where the Federal government has jurisdiction, it will see to it that the conduct is stopped, paying not the slightest heed to the position

or power of the corporation, the union, or the individual, but only to one vital fact—that is, the injury to either or not—the conduct of the individual or aggregate of individuals in accordance with the law of the land. To every man must be "guaranteed his liberty and his right to do as he likes with his property and his labor, so long as he does not infringe the rights of others." That is to say, so long as Mr. Roosevelt is President there will be no "closed shop" in the Federal service.

The necessity of careful economy in Federal expenditure during the next twelve months is emphasized for two reasons: first, because it is doubtful whether there will be any surplus of revenue, and there may even be a deficit; and, secondly, because it is important that there should be no relaxation of outlay on the genuine needs of the nation, high among which Mr. Roosevelt ranks the steady enlargement and studious maintenance of the navy. "We cannot afford," he says, "to be parsimonious in providing for what is essential to our national well-being." Touching the condition of the currency, it is declared unwise and unnecessary to attempt at this time a reconstruction of our arrangements for providing a circulating medium, but, with a view of relieving the stringency of the money-market, which has from time to time occurred, Mr. Roosevelt advises that Congress should give the Secretary of the Treasury the same liberty to deposit currency receipts in national banks that is granted to him with reference to the deposit of receipts from other sources.

The measure of some kind should be taken to secure for the United States a larger share of the ocean-carrying trade the President is convinced, but he does not advocate the Ship Subsidy Bill that was introduced in the last Congress, or any definite project of the sort. He recommends the creation of what would be called in England a royal commission for devising a practicable and generally acceptable scheme. He advises that Congress direct the Secretary of the Navy, the Postmaster-General, and the Secretary of Commerce and Labor, associated with delegates from the Senate and House of Representatives, to serve as a commission for investigating and reporting what legislation is desirable for the development of the American merchant marine. As to immigration, the President says vigorously that we cannot have too many immigrants of the right kind, and should have none of the wrong kind. Precisely what he means by the "wrong kind," and how he would keep them out, he does not say. Does he concern with Senator Lodge in thinking that illiterate should be excluded? If so, he differs diametrically from the views of the President. Mr. Cleveland during the latter's tenure of the Presidency, Mr. Cleveland pointed out that if illiterate had been a bar to immigration in the second and third quarters of the last century, we should have shut out hundreds of thousands of Irishmen who have constituted a valuable element to our population.

We observe that Mr. Roosevelt, having, apparently, the fear of our feet-ago and tobacco interests before his eyes, does not endorse in so many words the obviously just proposal that the inhabitants of the Philippines should be placed upon exactly the same footing as the people of Porto Rico and Hawaii in respect of free trade with the United States. We read in the message that "the Philippines should be kept closer to us by tariff arrangements"; but this is a very different thing from a declaration that it is monstrous to treat the Porto-Rican in one way and the Filipino in another.

Another statement which is made by Mr. Roosevelt is obviously incorrect. "No one people," he says, "ever benefited another people more than we have benefited the Filipinos by taking possession of the islands." The island of Hawaii has benefited more than has the island of Luzon by the establishment of our sovereignty.

We pass over at this time the sections of the message which deal with the army and navy, because we have referred elsewhere to the reports of Secretary Root and Secretary Moody on November 21, than a quarter of the space at the President's disposal is devoted to a discussion of the Panama affair. We have had something to say about this topic in another column, and merely note here that Mr. Roosevelt holds the duty of the United States in the premises was constrained by Secretary Root and Secretary Seward, he declares that it was in strict accordance with their own principles of international law, that, after the isthmian revolution occurred in November 3, the United States gave notice to representatives of Colombia that we would prevent the landing of no expeditionary force for the purpose of making war on the new Republic of Panama, a purpose which could not be prevented without interrupting transit, and of the proposed canal. Under the circumstances, Mr. Roosevelt thinks that the government of the United States would have been guilty of folly and weakness, amounting, in their sum, to a crime against the nation, had it acted otherwise than it did. A treaty authorizing us to complete and operate the Panama Canal ratified by the Senate, the work of construction can forthwith begin.

## Various Views of the Panama Revolution

In the *North American Review* for December will be found two articles on the revolution at Panama that deserve to be carefully examined, because their authors are particularly qualified to discuss the subject from their respective points of view. One of the articles is penned by Mr. Estel Pérez, a representative Colombian, whose name was at one time President of Colombia, and whose father was long the leader of the Colombian Liberals. The author of the other article to which we shall refer is Mr. Eusebio Morales, Minister of State in the provisional government of the Republic of Panama. Mr. Pérez admits that the Treaty of 1846 between the United States and the Republic of New Granada did not bind the former signatory to uphold the sovereignty of the latter on the isthmus against domestic revolutionaries. He quotes with approval the declaration of an attorney-general of the United States to the effect that the guarantee of sovereignty given by the United States referred only to aggression on the part of foreign powers. That treaty did not authorize the United States to take sides with one or another party in the internal troubles of Colombia, unless such intervention should be indispensable for the protection of American lives and property, or for the maintenance of peace and order on the isthmus. In 1885 the Cleveland administration recognized that the preservation of order required its interference with the republicans, the effect of its interference was to bring about the defeat of the Liberals and the triumph of the reactionary dictator Núñez. There is reason to believe that a grave mistake was made by our government at the time, and that, had it sided with the revolutionists, not only would order have been restored on the isthmus with equal promptitude, but the State of Panama would have established its independence. Mr. Pérez also points out that since 1886 Colombia has had no organic law possessed of any claim upon the obedience of its inhabitants. The Constitution of 1863 was abolished by the fiat of the dictator Núñez, and the so-called Constitution of 1886 rests upon no basis except his autocratic proclamation. Mr. Pérez does not draw the deduction, which, nevertheless, is patent, the deduction, namely, that the people of the State or Department of Panama were no more bound to recognize the authority of that pretended Constitution, or of the *de facto* governments springing to act under it, than were the inhabitants of any other department. Indeed, as we shall presently see, the people of Panama had special grounds for rejecting its authority, inasmuch as they were deprived of even the semblance of local autonomy, which was conceded to other sections of Colombia. At the end of his article Mr. Pérez enumerates seven reasons for the rejection of the Hay-Herran treaty, the last of which is "the unwillingness of the sun offered." It is unnecessary to review those reasons, inasmuch as the unanimous rejection of the treaty by the Colombian Senate, followed by a definite adjournment of the Colombian Congress, justified the inhabitants of the isthmus, who, since 1846, had been treated as subjects, rather than as citizens, in feeling that their vital interests had been sacrificed, and that they must act for themselves.

That the rejection of the canal treaty by the Colombian Senate was due mainly to greed is evident from the Project of Law which was submitted to the Senate at Bogotá on August 29 by commissioners appointed for the purpose of solving the canal problem. The fantastic purport of this "Project" is set forth by Mr. Mariano Willson, who contributes to the same number of the *North American Review* an article entitled "Colombia's Last Vision of Eldorado." It seems that the Project of Law drawn up by the Senatorial commission provided that Colombia should receive, instead of ten million dollars, thirty million dollars, one-third of which was to be paid by the French canal company, and two-thirds by the United States. The total sum was to be forthcoming as soon as the ratifications of the new treaty should be obtained. For the Panama Railway the United States were to pay an annual rental of \$250,000, until the end of 1967, when the road must either be surrendered to Colombia or purchased at a price to be fixed by arbitration. For the purpose, finally, of cutting and maintaining a canal, a zone of territory ten miles wide was to be leased for a hundred years, the lessee paying therefor \$150,000 annually until the end of 1967, and \$400,000 annually thereafter until the expiration of the lease. The lease was to be renewable, but only on the basis of an increase of twenty-five per cent. in the annual rent. This preposterous scheme was denounced in the Senate itself by Mr. Rivas Groot, but, as it had been unanimously endorsed by the commissioners, there is reason to think that it faithfully reflected the eagerness of most of the Senators. The inhabitants of Panama were warranted in assuming that there was no hope of securing a canal treaty from a legislative body which could discuss seriously such exorbitant demands, and, accordingly, when the Bogotá Congress adjourned at the end of October, a revolution immediately took place on the isthmus.

There is no man more competent than Mr. Eusebio A. Morales, who has long been a leader of the Panama bar, to demonstrate the right of the State of Panama to an independent existence. There have been many successful secessions in the history of Latin Amer-

ica, but never has a secession been so thoroughly justified, on legal, moral, and economical grounds, as is that of the isthmus republic from Colombia. Venezuela seceded from the old Republic of Colombia founded by Bolívar. So did Ecuador. Bolivia seceded from Peru. Uruguay seceded from Brazil. The States of Guatemalan, Salvador, Honduras, Nicaragua, and Costa Rica seceded, one after another, from the old Central-American Confederation. Texas had a title of its own to secede from the United States, and so did Mexico. Not one of these seceding commonwealths had a title of its own to secede from the State of Panama when the isthmus voluntarily became incorporated in the Republic of Colombia they found themselves unfairly dealt with by the centralized government installed at Bogotá. They were subjected to fiscal burdens from which they derived an benefit. Hence the uprising that occurred in 1846, and the declaration of independence made in the following year by the provinces of Panama and Veraguas, in which at that time the isthmus was divided. A convention gave the nation which it created the name of the State of the Isthmus, and proclaimed it to be the irrevocable will of the Isthmians under the centralized régime. In the end, however, centralism was re-established by force, but the opposition to it, for fourteen years later, the Congress of New Granada enacted a law by which the State of Panama was made an autonomous political entity. By the end of 1856 the principles of local self-government and federalism had triumphed throughout the Republic of New Granada, even, that Constitution remained the organic law of all the States confederated under the name of Colombia until 1888, when it was overthrown by the dictator Núñez.

The intensely centralized régime established at the date last mentioned has been, as we have said, peculiarly oppressive to the State of Panama, which was reduced to a condition of exceptional dependence on the usurping government at Bogotá. Mr. Morales points out that since 1885 the public functionaries of the isthmus have always been appointed, directly or indirectly, by the Bogotá administration, and have been chosen, not for their qualifications for public service, but for their subservience to the men in power. As a party, moreover, to the contract for the cutting of the Panama Canal, the central government, like its predecessor of the 1850s, which authorized the building of the Panama Railway, received a compensation for franchises large amounts of money, all of which was spent at Bogotá without even the pretence of an inquiry as to whether the people of the isthmus, who were, obviously, most concerned in these enterprises, needed help for works of public utility. The consequences of such treatment may be seen in the extraordinary backwardness of the isthmus. Mr. Morales asserts that the territory of the new republic is large enough to accommodate nine millions of inhabitants; the actual population is barely three hundred thousand. The soil of the isthmus is so fertile that of Costa Rica, yet it only exhibits a few patches, cultivated in the style of the aborigines. Its mineral resources are known to be of exceptional richness, but only one mine of importance is worked. It possesses on the Atlantic and the Pacific a seaboard thirteen hundred miles in length; nevertheless, its maritime commerce is still in its infancy. Between its towns there are no roads. There does not exist a bridge whereon to cross even one of its 412 rivers. Possessed, in a word, of incalculable natural treasures and advantages, the people of the isthmus have been plunged in misery. Under the circumstances, it was inevitable that they should see in the proposed resumption of the building of the Panama Canal by the United States a prospect of redemption for their industrial development and material welfare; but their hopes were dashed to the ground by the Bogotá politicians, who, for reasons satisfactory to themselves, rejected the Hay-Herran treaty. The inhabitants, once more seeing their interests and aspirations treated with sovereign indifference, and knowing that they would be irretrievably ruined should the United States select the Nicaragua route for a canal, broke, by a unanimous impulse, the bond of union with Colombia, which had been imposed by force, and to which they justly attributed their past misfortunes and their actual decay.

We repeat the never in the history of Latin America has a country had such ample cause for secession, and for the assertion of its independence, as had the State of Panama in November of the current year. Compared with its provocations, those which caused England's American colonies to revolt in 1776 were insignificant or imaginary.

As a member of the provisional government, Mr. Morales is manifestly qualified to forecast the internal and external policy of the new Republic. As regards its internal affairs, it will aim, he says, to establish the public peace on a solid basis; to stimulate all kinds of industry adapted to its soil; by technical instruction, by judicious protective legislation, and by the construction of public roads; and, lastly, to encourage the immigration needed to people the unoccupied lands and to turn their natural resources to account. Over the external policy of the Republic of Panama the United States will necessarily exercise a preponderating influence. The force of events has made us the natural ally of the new commonwealth, and the building of the canal will make the

alliance inextinguishable. It is, obviously, for our national interest to guarantee the sovereignty of the republic within whose territory we are about to exercise the most important engineering work of the twentieth century.

### Disunited Britons

For years nothing has so clearly brought out the immense difference in political methods between our own country and England as the present ministerial and Parliamentary crisis in the Unionist ranks. Can we, for instance, imagine our Secretary of War suddenly deciding that the party required new issues if the Union was to be preserved; and proceeding first to stir up strife and discussion within the cabinet, and then, on failing to bring round his views the Secretary of State, the Secretary of the Navy, and their colleagues, resigning his office, and setting forth to stump the country in the interest of his new revelation, or his new heresy, as one might choose to regard it? Can we further carry the work of imagination to the point of picturing to ourselves the President, practically on his own responsibility, publicly pledging the Republican party to the new evangel, although many of his staunchest supporters, both in the cabinet and outside it, wholly differed from him, and renounced his course as highly dangerous and likely to end in disaster? We can imagine none of these things, simply because our political methods are the polar opposite of England's; because we, in this country, are, in small things as in great, practically ruled by "machines" and organizations; whereas in England the individual is still supreme. The present crisis in England is a triumph for English individualism; and the universal acceptance of this principle by all Englishmen, of whatever views, is shown by the total absence of accusations of disloyalty to party, even in the heat of the contest, where every one is on the lookout for a handy club to use against his neighbor.

In this country the national convention settles on both platform and candidate; the ticket is only filed, and the rest as we go to the polls and vote in a spirit of sweet obedience. In England they have no national convention, no platform and no nomination, candidates for the premiership. Any one can peacefully nominate himself for anything, standing for any principle that to him seems good; and the voters are expected to resolve order out of this chaos, and make up their minds what they want, why they want it, and whom they want to put it in force. In England individuality as everything, and organization is loose and elastic in the extreme. In the United States organization is rigid and the instrument of the organization. He must secure a majority in the organization before he can even become a candidate.

The result of the English method is that the electors are going to have a highly perplexing time at the next election; and we have the declaration of Mr. Balfour that he will not introduce his protective schemes until after the election, which means that the appeal to the country cannot in any case be long delayed. To dissolve Parliament and appeal to the country is easy enough, but the moment that point is passed the troubles of the English electorate will begin. Let us take some fine old Unionist borough. We shall have, of course, a Liberal, or perhaps a Radical, or even a Labor candidate contesting the seat. Who will be put up against him? With us it would be the nominee of the "regular Unionist machine," and the voter would be expected to take him or vote for his opponent. But in England, where the candidate is all intents and purposes nominates himself, we may have two or three different claimants; we may have a food-tax candidate, a follower of Mr. Chamberlain; a mild protection and preference candidate, who espouses the principles of Mr. Balfour; and a free-trade Unionist, who adheres to the Duke of Devonshire, Lord Goschen, Lord George Hamilton, Mr. Ritchie, Lord Hunsden, Cecil, Mr. Winston Churchill, and their friends. What is the unhappy voter to do? He cannot vote for all three, even supposing him so inclined; he cannot divide his vote and give a third to each; and if he could this would certainly mean a joint defeat, a triumph for the Liberal, Radical, or Labor candidate.

Nor is there the least probability that the contending sections of the one strong Unionist party will agree to delineate spheres of influence, dividing the several districts among them, and not opposing each other's candidates in the contended area. Mr. Chamberlain has already kicked over the traces; while Mr. Balfour has practically foregone the resignation of Mr. Ritchie and the Duke of Devonshire. Therefore they cannot be expected to settle the question of seats by amicable agreement, since each section wants them all.

Theoretically complicated to the last degree, the thing is really fairly simple in practice; just like the British Constitution, which would perplex the Lord Chancellor to define, but which, nevertheless, works out not so badly. The solution of the electors' difficulty is found in the fact that, in virtue of the great English principle of individualism, there is practically only one available man in such constituency, the "county god," as Mrs. Browning would say,

or his urban equivalent. The British voter will vote for the same old standby, or vote against him, as the case may be. And the local decision will largely depend on the question whether the said good old standby has already made up his mind for Mr. Chamberlain or for Mr. Balfour or for the Duke of Devonshire. English Parliamentary candidates happen, they are not nominated, and the candidates will practically settle the issue, or, as we would say, the "platform," according to his individual taste in each constituency.

Not until Parliament actually assembles, and Mr. Balfour, who will still be Prime Minister, under the British constitutional system, challenges a division, shall we know accurately how the parties stand. At that point, should Mr. Balfour be found to have lost his majority, the matter will lie with King Edward, who will have a thrilling time deciding what to do next, and whom to send for, as prospective head of the new ministry. Meanwhile we shall all have an admirable opportunity to compare the polar opposites of constitutional government, as exemplified in the United States and England.

### "Chromos"

Some of the Paris newspapers have been developing a device originally perpetrated by a London weekly, and have sought to increase public interest in themselves by concealing checks enclosed in tubes, in various parts of the city, and inciting their readers to search for them. A Paris letter writer in September records that one of the *Journaux*'s checks had just been dug up in the Tuilleries gardens, and that at the time of writing hundreds of people were poking about in the Bois de Boulogne, the Bois de Vincennes, and the park at Versailles looking for the hidden treasures. The writer complained that since the Paris editors took to this plan of burying good things in the earth they have been noticeably at less pains to put good things into their papers, and that the literary and news value of their sheets was rapidly falling off. There are a good many tricks in the trade of selling newspapers and periodicals, and some of them succeed for a time pretty well. But nothing so helpful in the long run as put into your paper—into every issue of it, if possible,—discourse that is profitable to read, and that people are willing to pay for. When chromo-lithographs were still a novelty and it was the fashion to give them away as bonuses with various articles of merchandise, a wise and humorous observer declared that "it will perish by the chromo shall perish by the chromo." So it is. The chromo for a time may serve a useful turn, but it will not of itself give life to a paper; it is a useful staff, but it is a bad crutch. No profusion or rarity of chromos, gifts, stamps, bonuses, opportunities of a lifetime or other enticements to buy, will permanently take the place of good goods.

The one great apparent exception is the quack who deals in cures. Some of the proprietary medicines are sound enough merchandise, others are of some value but not much, many are alcoholics and satisfy buyers even though it may be to their harm, and of course many are worthless. But the buyer who buys patent medicine gets something tangible. There is another class of cure-people who do an enormous business that seems to be pure chromo. They sell what they call magnetic healing, or psychical treatment,—or whatever they may happen to name it—by correspondence. One sample of this species has three establishments which are advertising independently of one another, each promising to divulge their secrets of power, influence, "success" and health to earnest seekers after knowledge. He makes abundance of money in return for which he gives information and advice. He will perish finally by his chromo, of course. Morally and mentally he has probably perished already, but he is making an excellent living and perhaps a fortune. The secret of the prosperity of such persons—and there are herds of them—is, first, that so very large a proportion of the population is immensely gullible; that the supply of fraud is not nearly exhausted; second, that the superstitions of cure and occult information work in a field where knowledge is imperfect; and where wise men still grieve. You can't all people be better, for they know better; but if they happen to have a craving for "psychopathic treatment" or "the secret of magnetism" you can sell them anything in that line you happen to have in stock. So for a time you can sell tips on the stock market, or on horse-racing, when there happens to be a demand for these, because the wisdom of the market, or the issue of a horse-race, is always uncertain. But commonly speaking, the course of all trading in "chromo" and worthless wares is brief and inglorious. And a curious and very interesting moral consequence of it is that it corrupts the vendor's mind and saps his judgment, so that he comes himself to believe in the value of what is worthless, and is more likely than an honest man to become the victim of those, because the wise man's revenge is wonderful. The automatic reaction of all get-rich-quick peddlers and crooked dealers from stock-peddling down to bribing walking delegates is marvellous. Honest goods are best; honest methods are best. He who liveth by the chromo shall perish by the chromo.

### A RECENT PUBLIC APPEARANCE OF POPE PIUS X.

This interesting photograph was taken in Rome during a recent address made by His Holiness Pope Pius X., from a porch of the Vatican, to the workers of the Catholic Association. During the later years of his life, His Holiness Leo XIII, did not make the entire participation in public exercises which is now being taken by His successor.

# Diversions of the Higher Journalist

## The Superstition of the Society Page

**I**n his very amusing book, *The Bremen Golf*, that blithe satirist, Mr. James L. Ford, makes merry with the vast and still growing number of our fellow men of both sexes, and especially our fellow men of the female sex, who put their faith in the society intelligence of the metropolitan press. It is his gay thesis that the famous Four Hundred do not exist. It is his gay thesis, outside of the society page, that the metropolitan press, at least the fancy, that of a certain moment of journalistic evolution, it became the necessity of the newspapers to found a patriarchy; the Four Hundred were then called into being; and they have ever since been kept alive, in the food imagination of their plebeian and provincial readers, by the creative force that evoked them from their native nothingness. It was originally a question of circulation with the serious founders of the Four Hundred, and they have prospered ever and more, through the eager superstition of their readers in the back-country cities and towns, and the basement dining-rooms of the New York boarding-houses.

Mr. Ford knows his newspaper world as perhaps no one else does, and he burlesques its habits and practices with captivating extravagance, catching and mocking its characteristic poses and phrases with a felicity quite his own; but he keeps a due seriousness for the consideration of the sinister effect of the society page on the ignorant vulgar, who take the society intelligence of their newspapers in earnest. These poor believers are vulgar to begin with, of course, but they are made more vulgar, and more mischievous to themselves and one another by their active reverence of the society-page gospel. Their industry has spread so far and wide and deep, that it has infected the whole country with its error. What began as a joke, a bluff, a bait, a scoop, has become a cult, with an innumerable following. The Four Hundred have grown even to believe in themselves through the faith in their reality which they find all round them, and which finally they could not escape. They are not sensible of being recruited from the freaks whom their investors add to them from time to time, when they fancy the real of the provincial towns and basement dining-rooms wanting; and they take themselves seriously as their worshippers take them. They foster the feeling public interest by the proffer of their pictures, and the story of their eccentric doings, and the intimate intelligence of their scandals; they send their investors and readers work into one another's hands in an endless chain.

To accept all this is perhaps too much, and we do not know that Mr. Ford expects it. We do not know that he insists upon a real patriarchy as the solution, or maintains that the logic of the situation is a return to the old Southern idea of social dignity. It is of too loose a vision, too flimsy a wit, not to see the breaks in that ideal, or to feel smiling at them; for that ideal too was a vulgar superstition. In fact, every ideal that supposes an equality among men, except such as their conduct creates, is in

vulgar superstition. The wretched women who mobbed an English duke driving with his American bride to and from the church where they were married, and tried to get into their carriage and crawled down each other's hair and hid under persimmons and lemons pulled out by their heels and having their clothes torn half off them, in their struggles for the sight of the bride and groom, were frightfully vulgar; but were they vulgarer than people who perpetrate a mobility, with its grosser claims of superiority, as part of the social and political system?

If our Four Hundred are a fragment of the lively imagination of Park Row, as Mr. Ford would have us make-believe for the pleasant time-being of his diverting argument, we are better off than if they were a genuine patriarchy. So long as they are a joke, a by-product, a source of amiable pleasure, and at worst the stock in trade of the poor society reporter, there is no harm done except to the multitude of snobs and fools who would be snobs and fools, any way. With a genuine aristocracy there would be kept groveling for ages, as the snobs and fools of Europe are still groveling, after all the centuries since apes began to stand upright; but with a fake aristocracy like the Four Hundred, sorely by journalistic enterprise, and paying for its existence out of its own pocket, there is always a chance of the snobs and fools turning men and women, and commencing good, hard-working husbands and wives, fathers and mothers. As snobs and fools they still have a great many civil and domestic virtues, and in the constant chance of a change in the goals of their idolatry there is a very present hope for them.

A generation ago the Upper Ten Thousand were the type and talk of the visionaries of society splendor; it was a tremendous gain when the Ten Thousand were reduced to the Four Hundred; the Four Hundred may be suddenly hilt to Four; and when the bottom drops out of them, as a source of circulation for the yellow, or yellowish, journals, we may find ourselves without our "prominent club-man" or "leading society woman" to feed our passion for social superiority or our appetite for scandal. That will be a fatal day for the picturesque and the dramatic, that day of the "dead level of equality," so it is called by those who prefer an inferiority of their own if they cannot have the inferiority of others. But it may not be so very far off; our phylactery at least pays for its supremacy, and many know where the money comes from; and it may be the beginning of the end. One of the real losses we shall suffer in the end will be the loss of Mr. Ford's fun with his fellow journalists and the society page basement dining-rooms. That will be a pity, and though there will be many counter-vailing merits, it will still be a pity that the humorist who has given us the only satire we have had since *The Politician Papers* should fall of employment.

# The Revolution in City Manners

By Herbert W. Horwill

**A**n etymological dictionary, read with imagination, presents an illuminating series of pictures of the world's history. Again and again a temporary phase of the development of the race is crystallized into a word, which remains remembered only by scholars. Thus, the word "pagan" recalls the fact that Christianity, when first proclaimed, spread most rapidly in the cities, so that the countryside, the "pagani," were still heathen when the preachers had become converts of the new faith. So, too, "urbane" and "bores" are signs of a period when the city man could be distinguished at a glance from the villagers by his better manners.

The distinction recognized in "pagan" has long been obsolete, for whatever heathen dross our worshippers in our time can certainly claim as many virtues in city streets as in country lanes. Has this religious change been followed by a social change also? Neglecting the lesson of tolerance. Moving in the midst of the crowd, and setting the standard of perfect manners where it involves an selfishness and tact, shall we be able, without hesitation, to ward the pride of excellence to the New Yorker in comparison with the "bores"?

There was a time when urbanity was a natural product of urban life. To apprentices in the social art the city gave the discipline of self-control, intercourse with a number of one's fellows, of varied qualities and tendencies, bestowed the aggressive spirit and taught the lesson of tolerance. Moving in the midst of the crowd, as ruled off the angles of a jagged temperament. The newcomer had to learn that, if he were to succeed, he must not look upon his own things, but upon the things of others. In this way the pressure of his surroundings often without any deliberate contribution on his own part, transformed the rustic freshman into a graduate of the school of polite living.

But that this might happen it was essential that the crowd should not be too thick, that the city, no longer, near the stress of cutting a hot-blooded life severe. In our modern conditions there are many

who cannot afford to have their angles smoothed; they need all the sharp points and edges possible in order to cut their way through the mobs. Self must be obtunded instead of suppressed. When man meets man, it is in conflict and fellowship. We read sometimes of "the social arena," and when civilization has come to that it is vain to expect any politeness of a higher type than the etiquette of the gladiator. No our contemporary windowless air-Spartanisms, Push, Vim, Kinsler One. And in any street or at any such hours we can see part of the cause and part of the effect.

From such strain upon the tender virtues the life of the city-man is exempt. His freedom from the storm and stress of city life gives him space in the pursuit of refinement. Whether he makes good use of it or not, he has at least the opportunity of frequent practice in thoughtfulness and self-control. If there is closed to him the door of intercourse with men of high culture, he that respect he is no worse off to-day than his brother of the town, whereas he enjoys an ample leisure for companionship with noble thoughts. The oasis of his life are more frequent, and their streams gush from deeper springs. Even though he is exposed to the heavy stress of being "fresh" and "green," he has his indication ready to hand if those qualities are the mark of an smothering leaf on a living tree. And if a certain restfulness is an essential of good manners, if it is repose that stamps the seals of Vere de Vere, shall we turn to the city or to the village for this security of the true aristocracy?

It is harder to filter the dictionary than to amend the Constitution of the United States. We may give anything else up to date, but no Radical will ever secure the adoption of the definition of "Urbanity—the quality of a person occupying an 'all Street' who turns a day by a Broadway car; sometimes also attributed to hotel clerks." But Urbanity being what it has become, the great problems of the future—not so much for Keatsiansphere as for socialists—will be: What is Suburbanity going to mean?

## HERBERT SPENCER

*Herbert Spencer died in England on December 8, at the age of eighty-three. Spencer's first book, "Social Statics," appeared in 1850. He could find no publisher willing to undertake the risk of bringing it out, and was obliged to print it at his own expense. It was fourteen years before the original edition of 750 copies was disposed of. Twelve years later, in 1862, appeared the first volume of his most famous work, the "System of Synthetic Philosophy," a development of the theory of evolution. Its publication was made possible through American interest in the project, and the work was issued by subscription. It is a noteworthy fact that the prospectus outlining the series was planned by Spencer prior to the appearance of Darwin's "Origin of Species"*

### NEW SCULPTURE FOR THE ST. LOUIS EXPOSITION

One of the most striking decorations for the St. Louis Fair is Mr. Michel Tonnetti's group entitled "The Dance," which is to be placed above the entrance to the Hall of Festivals. The grotesque figure bearing cymbals typifies the Spirit of Music, and is supposed to summon the dancers to the revelry. The wood-nymph and faun on the left represent the pagan Spirit of the Forest, while the figures on the right, in more moderate movements, represent the dance of to-day. The figure in the centre typifies the spirit of the Greek dance. A photograph of Mr. Tonnetti's "Victory" appeared recently in the "Weekly"

# Books and Bookmen

By James MacArthur

THE spectacle of a "miracle-play" crowding the theatre at every performance in the ultramodern days is a triumph at once for the dramatist and for stage-craft. Nelson has Mr. E. H. Nelson been so fitted with a part that calls into play all the versatile gifts of this talented actor as that of King Robert of Sicily in "The Proud Prince." It was a happy thought that inspired Mr. Justin Hanly McCarthy to adapt the well-known legend to the needs of the drama. Few who read *If I were King*, or witnessed the performance of the play, had heard of Francesco Villone, the vagabond poet, until that long fellow's narrative poem had familiarized the story of Robert of Sicily in the public mind, and therein lay a strong advantage to the hand of the dramatist and novelist. It was also a daring thing to attempt—the rehabilitation of a medieval tale that involved supernatural agency in the process of its dramatic development. To be sure, Mr. McCarthy had a precedent in "Faust," and as that play had the support of Sir Henry Irving, so Mr. McCarthy had the splendid assistance of Mr. Sobern in aiding him to stamp his dramatic endeavor with the reality that only creative genius can produce. But, as a rule, such honors have been left to grand opera as the best medium for their dramatic expression. As in "Faust," so in "The Proud Prince," the archaic story is made a vehicle for a truth imbedded in universal experience, and appealing to the sense of spiritual conflict between the good and the bad that never grows old in human nature. The story of Robert of Sicily—the proud prince—who is made to bite the dust, and to work his way back to his former exalted position through suffering and suffering, and the purifying force of an emboding love, is, indeed, a miracle in its outward semblance; but it is a parable of that hidden transmutation of character experienced by all who eschew the lust of the flesh, the lust of the eyes, and the pride of life in striving for righteousness, and its, after all, the stupendous and unchanging miracle in the spiritual history of mankind. I am not concerned here with the moral trend of Mr. McCarthy's work, except in so far as its ethical basis gives the support of truth to its spiritual and artistic significance, and it is with regard to this that I have to say that the stage has rarely seen such a masterly portrayal of a character as Mr. Nelson presents in the gradual metamorphoses by which he descends the spiritual ascent of the king from the depths to which he has been cast down. The characterization illuminates the pages in the novel, and realizes for us the tragic beauty of a soul thrusting its way toward the light through baffled rage, despair, humility, and, finally, the self-sacrifice born of a noble passion. *The Proud Prince* in book form, it should be said, is not a "modernization" of the play, as was *If I were King*. The novel, although following faithfully the action of the play, was written independently, and completed in time to be published simultaneously with the dramatic production. It is illustrated with scenes of the play from photographs taken especially for this purpose while the play was in rehearsal. Mr. McCarthy has strayed into devious paths of fiction in his time; but in none of these essays have his imaginative powers mastered the elements of romance and infused them with strong human interest as in *The Proud Prince*, which will take its place as the best and most popular book he has written.

Local color has seldom been made tributary to more successful ends than in *Borlase*, a story of modern London in the depressing twilight mood of *Conoverwell*. Mr. J. Barron Russell is gratefully remembered for two novels of London life, *The Mandate* and *A Guardian of the Poor*, which showed the careful hand of an observing student of human nature. *Borlase* & *Soa* is the firm name of a drapery business which stands as a type of a shopping institution known all over London, where the employees board on the premises. Mr. Wells gave us some insight into the workings of these institutions in his *Wheels of Chance*, but nowhere in fiction has a picture been so exactly and realistically produced as in Mr. Russell's new novel. Strange to say, there is no love-story in it, and yet it compels the interest from start to finish by its vivid touches and graphic depiction of a condition of things that we feel instinctively are true, though untried to our experience. It would be unfair to the author to hint at his story here, but it may be said that it concerns the growth of character in a boy adopted by *Borlase*, and that it develops some unexpected situations that come as a surprise to the reader. The story though gray and gloomy in tone, as it must be, perforce from its very environment, has a subtle humor and a sincerity of feeling which command interest and impart no little pleasure.

The author of *The Merchant of an Empress* has returned to the historic scenes of her first work, which made so wide an impression, and has written a companion volume entitled *A Knight of Empire*. In *The Merchant of an Empress* we had the pathetic present memoir we have the story of the life of the Emperor, Francis Joseph, thus forming a complement to the previous volume. It is most interesting reading, and presents the remarkable days of Old-World monarchs in a singularly fascinating light, because of its unromantic and unostentatious disclosure of facts that the bays surrounding royalty usually conceal. Needless to say, this startling chronicle of events that inspired in the coast life of Austria, as told by one who was an eyewitness and an actor in the scenes, is full of interesting details that have hitherto evaded publication. The story of the Emperor's life is unfolded from his earliest childhood, and many incidents are related of his happy, merry boyhood which furnish a peep into the life of the man he became. One morning he encountered the celebrated priest Doppelbauer, who was his boyhood's greatest friend, in a corner of his garden, kneeling among his potatoes, with gray hands. "What good woe have you here?" the priest greeted young "Franz" with a laugh; "I can't shake hands with you, I'm too dirty." "That's nothing," exclaimed the royal sprig, extending his smooth, pink palm. But the priest still refused to grasp the boy's hand, and, with a frown, "Franz!" stooped quickly, thrust his hand deep into the mouldy earth of the potato-bed, and withdrawing it thoroughly covered with mire, waved it triumphantly under the nose of his amazed host. "Now," he cried, with a mischievous laugh, "I'm just as dirty as you are, and you will have to shake hands!" Where the ceremony was accordingly performed with much merriment on both sides.

Spurred, perhaps, by the fact that my copy was marked "second edition," and upon learning that the book was already being well received in the Middle West, I opened a book, lately called *The Roadside of Balthazar*, by Mr. Roswell Field, a brother of the lamented Eugene Field, and himself no novice in letters. My interest was mild, and the quiet narrative style of the preceding pages soon began to stir my mind to any unusual degree. But by and by an unexpected charm began to steal over me, and I found myself turning back and re-reading the pages I had lightly scanned. From that moment I was as completely in bondage to Mr. Field, as Balthazar was to the thrall of the bibliophile. There is no story to speak of; there is nothing to prick sensation, nothing to stir the blood of those who need the clasp of steel or the noise of ruddy excitement to beguile their reading propensities. Simply, it is the quiet, unadorned tale of a bibliophile from youth to old age; tracing the inheritance of bibliomania from his ancestors and its extreme and sinister development in his nature. But how little this tells of the beauty that lurks in every line that underlines his practicality, in a quiet way, in a figure that ever lived between the covers of a book. The patient pathos of Hannah, his wife, is never allowed to become a reproach to the serene self-absorption of the book lover, but acts as a foil to the humor that enlivens the saddest quest and never-satisfied passion of the book-hunter. Up and down the land, from town to town, one follows the restless couple until they settle at last in the cottage which reared the beautiful friendship that grew up between the old man and the daughter of his Meermans. How Mr. Barris would have loved Balthazar; in fact, I felt it borne in upon me that no other living writer, except the author of *The Little White Bird*, could have conceived so novel a theme or carried it out with such delicate humor and kindness, all with a touch of phantasy and just that dip into romance at the end which is so characteristic of both writers. One read *The Roadside of Balthazar* is a book that will be gratefully treasured.

In *A Christmas Wreath*, Mr. Richard Watson Gilder has gathered those of his poems which have emanated from the thought of Christmas in all its deep and various meanings. There are twenty-two poems in the volume, including some of his best-known verse—"In Poesdalen," "The Passing of Christ," "The Christ-Child," for example. The book is a thin novel, bound in white parchment, and is embellished with two full-page illustrations and rich border designs drawn by Mr. Henry McCarthy. The selected poems are intended to symbolize the life and teachings of Christ. The volume will no doubt appeal to many as an appropriate gift-book for the Christmas season.

Justin Hanly McCarthy  
The author of "The Proud Prince"

# The Stage and Playgoers

By W. W. Harrison

**T**HIS year it seems that the most splendid productions have been unable to draw the public to the playhouses in large numbers. Art and technique have suffered together. The expectations of the managers have fallen so low that "standing-room only"—that in abridgment last year with a dip-pant N. E. 11—has now ceased to be even a plausible hope. Good business now means a house more than half-full. The blank verse, the problem play, the social picture, the farce with its many doors, the musical comedy, the comic opera, the costume play, the colonial, the patriotic, the rural drama, the melodrama of the tenement-house, the race-track, war, sawmill, railroad—each and all have been involved in a common famine which is almost without parallel in stage annals.

Here are a few instances: Miss Julia Marlowe disbanded her company in St. Louis, November 29, and retired from the stage for the season. A few weeks before Vestis Tilley disbanded her company in Chicago, and was engaged for a between-the-acts turn in Edward Harrigan's "Under Cover." This play, itself a good specimen of the Harrigan character-drama, failed to attract in spite of excellent newspaper notices, and the popularity of the star. Miss Blanche King, in one of the few musical pieces of the season, "The Jersey Lily," abandoned her play on the road, and fled to the London music-halls.

If the people would not go to musical comedy, one would say they must be seeking the higher drama. Two such offerings were made, one, a magnificent Shakespearean production, with one of our most popular actors—Nat Goodwin—in the cast. There were 150 people in the company, but after the first night, hardly so many in the audience. The piece went to Boston, where it was reported to have an advance sale of only \$4 for the first night. The other play was written by a contemporary poetic dramatist; it was lavishly mounted, and warmly received by the press. Yet it was reported from reliable sources that the receipts ran as low as \$7 for one night, while on one evening, up to eight o'clock, not a single seat had been sold. Unhappily the worst failure will deceive a number of visitors, yet at a certain rate in Broadway recently only four seats had been bought before the curtain rose, and hardly any stragglers came in during the play.

One of the most popular social stars in the country, in a piece by a famous novelist, left New York after a short stay at two different theatres; it was said that his receipts had gone as low as \$17 for one night. A comedy success, which had run in crowded houses all last winter and through the summer, fell before \$200 for one night. Sir Henry Irving's "Bacon" was played but one week in New York, and for the first time in all his visits he reduced his charge for seats.

Mr. Clyde Fitch's play, "Major André," was produced and received by the usual first-night throng with enthusiasm. Even before the press notices appear there should ordinarily be a good advance sale for the second and following nights. Yet not one seat was sold for these performances until late the second afternoon. The manager withdrew the piece and disbanded the company in a week.

Miss Jessie Millward scored a complete success in "A Crowned Slave" for her company, and the play, and yet the box-office showed almost a clean slate, and the

manager immediately ordered the disbandment of the troupe. There was much breaking of hearts and of custom in the process. One of these managers, yet they simply showed an uncommon acuteness. In "John Ermine of the Yellow

"The Sponders" and James K. Hackett failed to draw in New York. The dramatized novel was blamed for many of the disasters of the season, although one of the few plays approaching old-time success was "Raf-She," a dramatization, while "Resurrection," "Ben Hur," "The Bonnie Briar Bush," and "Cheekers" are doing fairly well. Two companies are playing "David Harum," two "The Christian," two "Quincy Adams Sawyer," four are playing "Peck's Bad Boy," and at least as many "Iselin Tom's Cabin"; and other book plays are holding the boards as successes.

In light comedy, Mr. and Mrs. Royle won a success of esteem in "My Wife's Husband," but could not keep going. In farce, Henry E. Dickey's production of "Facing the Music" had a summer run, but was given up; the actor himself is said to have bought the production for \$500; he tried to continue it, but without profit. "A Fool and his Money" had a success in New York last year, and started on the road with James Lee Flaney in the chief part, but it could not go on. It was revived by William Collier, who had previously made two short but disastrous attempts in "Personal" and "Are You My Father?" Another farce, "Civian's Papa," came back in distress before it started on its second tour with a new leading woman.

A superfluity of musical comedy last year was blamed by some of the present falling off, but there have been very few attempts in this form this year, and they have been of a more logical sort; yet they have done no better. Two or three English triumphs have won no patronage here, while native works have, as a rule, fared sadly. Even melodramas had found the gallery quite unwilling to venture their pennies.

The excessive number of new theatres has been plausibly advanced as an explanation of the lack of success. With four theatres in a city of 50,000 people, like Springfield, Massachusetts, it is impossible to expect good attendance. New York has recently had several additions to its large number of playhouses; but the total audience of all the attractions could not be profitably divided among the old number of theatres. The fact is that the people are not in a theatre mood, and that the plays which were called triumphs this year are playing to only small houses. Nowadays in pay expenses is a matter of congratulation.

The fight between the "theatrical trust" and the "independents" has been mentioned as an active cause. But the theatres in London have neither the syndicate nor the overbuilding of new theatres to blame, yet the reason there is a very straitened circumstance. In America, the report of hard times blighted New York first, or at least it was felt first in the metropolis, because the new plays were having their trial runs, while the rest of the country was getting the approved and well-advertised shows of the previous year of prosperity. But soon New England joined the blacklist, Chicago and the Middle West followed. The Pacific coast and the South, at first solid, are showing evidences of panic.

Up to the present moment 180 companies have given up the bitter struggle, and more than 2000 actors are without employment in New York.

## THE STRANGLE-

This is the third of a series of four articles on the tremendous power of labor as it affects the home, the emphasize most vitally the personal phase of a situation which seriously threatens not only commercial

## III. The Influence of Organized Labor upon the C

**I**N the last five years the cost of living throughout the country has increased 17 per cent.—about a correspondingly high increase in salaries and wages. In 1902 the price of food was 16 per cent. higher than in 1896 (its lowest year), and nearly 11 per cent. higher than the average for the decade 1896-1902. In Chicago, a city peculiarly dominated by unscrupulous labor leaders, the increase in the cost of living is 18.8 per cent. over 1902. That is to say, a family spending \$1000 in 1898 would have to spend \$1198.11 in 1903 for the same quantities of the same things.

It has come to this—that even when we eat, it is by the grace of the walking delegate. The milk that comes to us in the morning is brought by a union milk-wagon driver, who took it from a union teamster, who brought it from the country in a union-made can and a union-made car. In most cases, the bread we eat in the morning is delivered by a union man, who had it from a union shop, where a union baker made it from union-made flour. The meat we order comes by the same channel; and that channel may be stopped at any moment, on any pretext, by almost any union through a direct or a sympathetic strike. Let us see what this means. The dairy industry in this country is second in value to only one in the value of animal product, and is valued at nearly six hundred million dollars. In the month of October, 1903, 898,825 cans of milk, with forty quarts to the can, were consumed, and nearly 40,000 cans of cream, a total of over eighteen million gallons of milk. The city of Chicago alone consumed 100,000 gallons of milk. New York city in the same month consumed a much greater quantity. The distribution of this white avalanche requires an army of men. The union ranks are large. The comfort of the consumers of any of our big cities lies, therefore, at the mercy of a few leaders of organized labor. The details in the case of New York, October 10 and 11 of this year, set off half the milk supply of New York for those two days. In 1903 a militant kept New York from having a drop of fresh milk for four days. Equal distress may be caused by a labor union. This means to the gross-up amateur and dilettante: to the afflicted, mere starvation and death.

The effect is even more far-reaching. An instance of loss the farmer may be indirectly injured, and the public annoyed by the unions, was given in the month of June in Chicago, where a strike of the workers in Kuhn's a hardware store, a lack-out in two branches of the National Biscuit Company, and the closing down of the Hammond Packing Company by labor demands cut down the sources of the market for milk to the extent of 1500 cases, or 60,000 quarts, daily. Again, not long ago, in Chicago, the Milk Wagon Drivers' Association resolved to make only one delivery of milk a day. They were in such close conspiracy with one organized employer—the Milk Shippers' Union and the Milk Dealers' Association—that no effort at coercion was made. The Board of Health put up a pathetic appeal, but even the Board of Health had no weight or power in such a case. It was in the heat of June that this step was taken, and in most cases the milk could not be kept sweet from delivery to delivery. The result was that in one week the death-rate of children increased nearly 40 per cent., and the deaths from convulsions or intestinal diseases rose to 90 per cent.

If the milk is under the control of the unions, so is everything else that requires transportation by train or truck. Consider the other dairy products which town people obtain only from the farmers outside. There are 5,239,000 farms in the United States. They produce 300,000,000 heads of poultry. This poultry lays eighteen thousand million eggs a year, of which the average consumes a third at home. The rest brings a cash price of \$25,000,000. The annual egg crop, indeed, reaches a higher cash value than the gold and silver output combined.

The egg output is in the hands of small farmers. Their profits are limited and precarious. Any union that interferes with the quick, regular, and cheap marketing of milk, poultry, or eggs—or, indeed, any of the farm products, vegetables, grain, and live-stock—must work serious harm to the total income and prosperity of the country. The unions control the channel, and any moment may bring serious damage to the farmer and enormous discomfort on the consumer.

For example, in Chicago in one year the surrounding region shipped 10,000 tons of butter, 60,000 tons of eggs, 10,000 tons of cheese, and 100,000 tons of dressed poultry. A strike among the union freight-handlers some months ago disrupted the stream of food. The teamsters struck in sympathy, and even the carriers of the produce were forbidden to remove it. Tons of it rotted in the cars. One merchant, Samuel Hines, unable to buy a driver, drove his own wagon to the freight yard to get a consignment of eggs that was spoiling there. He was killed

by a union teamster. In the recent street-car strike teamsters tampered with a general sympathetic strike. During the argument over this the Teamsters' Joint Council was split into two factions. One of these, consisting mainly of the truck drivers, followed November 25. Many of the delegates of the mail and the union followed. An insurrection like this holds no good in the future, for the risks are likely to fight each other with strikes as weapons. They have done it before. The public standing between them will win no blows from either. The farmers will also feel every shock.

It is not, however, the transportation unions alone that affect the income from farm products. All the trades-unions engaged in manufacturing farm implements or any of the necessities of life harm the farmer and, in the long run, the people who buy what the farmer sells. Forty years ago farmers owned 35 per cent. of the country's wealth. Now they own barely a fifth, 21 per cent. In November the National Grange held a convention, at which the national master in his address laid the blame for this vast decline upon tariff-made trusts and labor unions. Condemnation of capital had, he said, required power to do the

## THE END!

prices of what farmers bought and sold. Labor-unions compelled manufacturers to yield to unwarranted demands, and then the excessive cost was meted out to the consumer. These evasions, according to the national master, discouraged the average citizen, who found himself "the packhorse" both of trade and of labor.

Recently, in addition to the unfair burden of the trusts and transportation-unions, the farmer, and again through him the consumer, has been confronted with a direct union among farm laborers. The "hard man" has of late grown audacious under the personalness of the walking delegate, and the Harvest Hands' Union has sprung into the field. It was organized by John Brown, who began it in the wheat and maize section of Indiana. The disorganized population of farm laborers had interfered with the powers of the miners' unions, and it was partly a deliberate idea that led to their organization.

The pay of the farm-hand had been a dollar a day, but after Dean had organized two-thirds of them, he raised the price to \$2.50 a day during harvest and to \$40 a month on an eight months' contract. Farm labor unions have been widely organized, and while it has not yet been possible to settle a national scale or drastic laws, owing to the different productiveness of different fields and seasons, wages have been materially advanced. In Kansas the great harvest was a golden opportunity, and harvesters secured, according to skill, from \$1 to \$3 a day, working from sun to sun; wheat-stalkers received from \$3 to \$5 a day, and engineers \$2.50 to \$3 a day.

And now the live-stock which the farmer raises is under the minute guardianship of the unions. In spite of all that vegetable consumers desire, we are a nation of meat-eaters—by permission of the unions. All that is said of the transportation unions applies to the meat industry. If the transport union cannot obtain our flesh-foods at all, if they compel an increase of wages, the freight rates go up, and the railroad fares the meat dealers, who in turn tax the public. The Beef Trust goes no not long ago an appalling proof of the power of a combination of capitalists. There have been many proofs of the power of laboring men, also, when they form a union, shut out competition, and raise prices.

## HOLD OF LABOR

normal cost of living—rent, the price of food, clothes, transportation, every-day necessities. These four articles of daily life, but individual liberty. The last article will appear in the forthcoming issue of "Harper's Weekly"

## Cost of Living and the Price of Food.—By John Keith

Now that the labor-union has invaded the agricultural domain, the chain is complete. A head of live-stock raised under union conditions is placed on a unionized train, delivered to a union-built slaughter-house, where a union-made car is loaded by a union stockman. The carcass is divided up and treated by various processes, all of them unionized. Some of it is given to union canners, who put it in union-made cans; some of it goes into boxes or refrigerator cars, who put it in union-made cars; by union packers, loaded by union freight-dealers in union-made cars, conducted by a union-made locomotive run by a Brotherhood engineer and union freight-handlers, who transport it to a destination, where more union freight-handlers put it in charge of union stockmen, who deliver it to a butcher who is employing union beef-cutters. They sell as much of it as you can afford to buy; it is weighed in union scales, wrapped in union paper, and taken to your home by a union driver. The chain is only as strong as its weakest link. But any one of these union links may prevent you from receiving your meat, or make the transit so costly or so difficult that it costs more. In fact, it is possible, in case the consumer employs non-union labor, that the meat would not be delivered at any price.

their meals at a union packing house in Buffalo; they sold these meals at a higher rate than the Buffalo retail price, and the walking delegate and the State organizer who acted as distributors were proved guilty of pocketing a private commission as well as bullying and bullying the public.

One of the sixty-nine signers was complained of by a woman named Henry Rapp, who had been found guilty of having his wife help in his shop. He had been compelled to pay the union a \$300 fine to prevent his shop being closed, though two other suitors with a personal grudge had been permitted to enjoy the aid of their wives. The item is important as showing how even in little matters favoritism and graft walk hand in hand with the walking delegate. The public, as usual, paid a high price for inconvenience.

In October the packers in Jersey City struck, not for shorter hours or larger wages, but to force the "closed shop." In November there were various local strikes in the Chicago packing-houses. They had been brewing for a month, and a national sympathetic strike was planned. The Chicago union accepted a temporary compromise, but the Missouri unions voted for it. This would have involved the wages and time of the following workmen: 32,000 in Chicago, 6,000 in South Omaha, and 300 in St. Joseph, Missouri; 7,000 in Kansas City, 3,000 in East St. Louis, 1,000 in St. Paul, 1,000 in Fort Worth, Texas, 1,000 in Sioux City, 1,000 in New York—total, 55,200.

The low in wages and produce would have been disastrous, but the general public is still more concerned in its own food and in the related industries affected. An authority in close personal touch with this situation has thus described what would have happened had the strike been called as it might well have been, and, indeed, as it may yet be at any moment: "In the five countries—Chicago, Kansas City, St. Joseph, Omaha, and St. Louis—alone the slaughter of 125,000 cattle and 200,000 hogs would be stopped. In six weeks this would mean 750,000 cattle, 1,200,000, or the equivalent of 325,000,000 pounds of beef and 1,200,000,000 pounds of pork. A study of the stocks on hand at any time would at once show that a meat famine would result. It is hard to see how slaughter on the farms might alleviate the distress there, but the large cities could not be supplied for two reasons: There would be no place for killing the stock, and there would be no one to kill the stuff.

Drawn by W. A. Rogers

## SS CHAIN

In Williamsburg, New York, a week or two ago, patrons of a certain butcher shop were threatened with bodily injury for trying to buy a steak there. This firm had been paying even better wages than the union requires, and they did not discriminate against the union, though it claimed that of their twenty employees only one belonged to the Journeymen Butchers' Union. A walking delegate offered the other nineteen a bonus of \$1 each if they would join the union. They said: "Why should we join the union and pay dues and strike assessments in order to get less money than we now receive? None of us get \$30. Why should we insist on taking only \$12?"

The delegate insisted, and called out his one man, who later went back, and the others were followed and threatened with injury and even with death. Customers were warned against entering the place. Circulars with a skull and crossbones were plastered outside the shop. Finally the shop itself was invaded and the men attacked. The police were called out to prevent a riot.

Thus is pure logic on the part of the labor leaders, but it is the reduction of thousands of unsatisfied that men should be beaten, a shop boycotted, and the general public warned in order to reduce wages for the sake of discipline and monopoly. How long will our voters tolerate it?

The city of Rochester, New York, has been undergoing a meat war since October. The hours and wages were satisfactory, and the unions were fully recognized. The Rochester Packing and Cold Storage Company had a written agreement with the unions. When the time came for the renewal, the unions refused, and made heavy demands. The company showed that it had actually paid better than union wages; but when it declined still further concessions, it was not only struck but boycotted. All butchers in Rochester were commanded to buy nothing from this company. Sixty-nine of them refused. Their employees were ordered out.

The proprietors issued declarations of independence describing the behavior of the walking delegates, and declaring their intention of serving their own customers. When the Rochester public presented in visiting the boycotted shops, rather than confine themselves to a strictly vegetable diet, the walking delegates spread shops of their own. They bought

paralyzed the building trades in New York city for months indicates the possibilities of the same force if determinedly applied to the packing trades. The stagnation of the big plants would mean more than the turning of 60,000 or 70,000 workmen from the salary list. It would mean national hunger, the virtual cessation of our export trade, the stopping of the live-stock movement, and distress in many other places. In the struggle the general public would be hurt more than either capital or labor. One may economize on clothing, but we must eat.

The general public is between the upper and the rather millstone between extortion at the hands of the Beef Trust and starvation at the hands of the live-labor trust; there is small choice and great distress. The very sandy we eat is under the eye of the order the country. The has been recently devised to boycott all non-union sweetmeats. The teachers in Chicago have a federation which is affiliated with the labor unions. The president, Catherine Goggin, was reported to have said that a teacher must decline even a gift of non-union candy, according to an order issued November 13, in support of certain striking canners. She added, "If there were a large quantity to send back, I should, of course, hire only a union messenger to deliver it." Under the banner of the hyperbole there is the solemn fact that not only the necessities of every-day living, but the luxuries are under the control of the strong hand of the walking delegate. It is a question of personal liberty which touches the pockets of every one who pays rent or buys food.

In Minneapolis, on the 24th of September, the labor unions closed fourteen of the seventeen largest flour-mills by a strike. What were they striking for? The unskilled flour-leaders wanted to raise their wages 25 per cent, and they demanded also that all the money at work in the mill should receive the same pay as the men. This meant an addition of from 125 per cent, to 175 per cent, of the wages of hundreds of women. The various employees said that trade did not want the increase. The expert millers were satisfied with wages and hours, but were not in the general union, and were outvoted two to one by the flour-leaders. Nineteen hundred men were called out. The owners gradually found other expert millers, and slowly resumed operations. The flour-leaders

found other jobs, the expert millers remained idle, or drifted to other towns. The result was a defeat for the union, though it had gone so far in attempts at boycott as to send circulars to Europe, warning consumers not to use certain flours and ordering union men not to handle them. The expert millers were repaid with hardship and idleness for their support of the strike. But the public flour supply is a dangerous piece for those experiments in the unnatural forcing up of wages.

The smallest bakeries, as well as the great flour-mills, are the victims of union ambition. In October 600 members of the Hebrew Journeyman Bakers and Confectioners' Union of New York struck for more pay and shorter hours, to the great discomfort of the tenement district.

The cakes and pie are no less open to war than the bread itself, and the strikes come from all directions, with a common result that the public supply is hampered and made more costly. In November the delivery-wagon drivers of six of the largest wholesale bakers in Chicago threatened strike, and the pie-wagon drivers joined in the demand.

In New York recently the wagon drivers of the so-called "Fla Trust" forced an increase in wages. The pie manufacturers therefore increased the wholesale price of small pies from three to four cents. The smaller restaurant-keepers raised a wild outcry that they could not afford to continue to sell the pies to the public at five cents. The result of such a strike from the wagon drivers means then that the public will pay more or get smaller pies, or that the restaurant business will suffer in its reasonable profits. This, in its turn, reacts on the public welfare.

During a strike in Milwaukee a walking delegate opened a shop to supply believers in boycott. But the unions made flour and union-made wages made it impossible even for him to make and sell pie for five cents. He began to buy non-union pies; then his own bakers struck, and the walking delegate was boycotted by his own union. There was some poetic justice in all this, but meanwhile the union wages and the union-made flour stay high in price. In Washington the three-cent loaf has been discontinued, as union wages and methods made it unprofitable. To the very poor this means much.

In a bakery the weather affects the speed and speed of rising, so that it does not burn twice alike, workmen differ in speed, hence it is difficult to arrange regular hours. A slow workman requires more than the union number of hours. Yet when these hours are up the rules compel the men to leave, even if the oven is full of bread. Sometimes a walking delegate comes round Friday night and says to the master baker: "The union has fined you \$10. Pay up or your Sunday baking stops!" he may present a contract with the union and demand a \$100 cash deposit as security. To stop the Saturday sale would almost mean ruin to many small dealers. The blackmail usually succeeds.

In Brooklyn, last October, a boycott was declared against a master baker who kept a non-union shop. Two union men bought bread from him, then took it outside, threw it to the ground, and trampled on it, with loud exclamations of scorn for the boycotted baker. They were arrested and held for trial. In Wilmington, Delaware, a boycotted baker was asked for a conference, and insisted on having reporters present. The union delegates refused to talk. Publicity is not desisting in their methods. In Poughkeepsie a recent strike of journeyman bakers compelled many women to do their own baking. The union issued an edict calling on union men to prevent their own wives aiding the non-union cause, and ordering them to do without bread at all if necessary. The astounding principle was plainly stated that "no man has a right to do even for himself what he could have a union man to do!"

It is the aim of the unions to have a union label on every loaf of bread. The hanging of a yard in the window is not considered enough. Now, in the first place, to have a union label stuck on a loaf of bread is useless and offensive. In the second place, the label does not mean cleanliness of manufacture. In New York on the East Side the journeyman bakers have their chief loaf, yet the fill in the bakeries there is indescribable, and the unions permit it.

In Newark recently, at a meeting of the trade council, a bakery inspector told the men that they were themselves to blame for the uncleanliness of their shops; they answered that they were not paid to clean up their own disorder.

On occasion, too, the labor-union can lead itself to illegal combinations of certain employers against certain other employers. I have previously spoken of such a conspiracy among the Chicago teamsters' unions and an association of employers. The same plan was recently tried in St. Louis, where a great effort was begun in November to combine certain of the dealers in bread and milk into an association which was to combine with the labor-unions to restrict all competition and regulate prices and service. It may succeed, and the public will endure high prices, bad service, and intimidation as a reward for its apathy to its own rights.

Such was the case recently in Chicago when the Master Bakers' Association decided to raise the price of bread from five cents to six cents a loaf. The numerous bakeries and lunch-rooms of H. H. Kehlbasht resisted the movement. The Master Bakers' Union enlisted the aid of the Waiters' Union, and closed all of the Kehlbasht restaurants, throwing 600 employes out of work, and setting the dinner to thousands of the public. The question at issue had nothing humane in it; it had no excuse of bitterness for the poor laborer, his hours, his wages, or his union. It meant to charge the laborer and the public in general 20 per cent. more for every loaf of bread. The unions fostered this piracy even at the cost of calling their own men out of employment.

We have here seen the union waiter combining with the journeyman baker. The waiter can also raise prices directly. Denver and Omaha, as well as Chicago, have had strikes by waiters. But for all his haughty demeanor, the union waiter has not yet reached that he is about taking a tip. He thus costs the public double. The hotel and restaurant proprietors and the club stewards do not, of course, pay their waiters out of their own pockets. They add the wages to the price of the articles of food. In addition to this, the public must add at least 10 per cent. more as a personal tip to the waiter. Until the waiters' unions throw down their own expensive servility they have small claims on justice.

The cooks, too, are organized to increase the cost of service in hotels and restaurants. The strengthening of their organization goes on actively, and even in the last few days the Marine Cooks and Stewards' Association and the local Marine Cooks' Union, claiming 1446 members, have had their committees bringing procedure to bear on the chefs of cruise-boats and tugboats to join the cause.

Thus all the world of purveyors is leagued against all the world of eaters. From the soil to the table each product of another-earth is watched by labor-unions, who pass it along the line to us, the poor citizens, whose rights, if we have or deserve any, they treat with the scorn our timidity and inactivity encourage. It is in their power to maul us of all we can earn, or even to starve us to death.

It is a question how long the voters of our cities and of the country at large will tolerate those raids upon their pockets and upon their very rights to live without the coercion and tyranny of a few unscrupulous leaders of organized labor.

## A Forecast of the New Year

By the Duke of Argyll, K. T.

LIKE giants eager for the race  
Our English nations are.  
O New Year, let thy record trace  
In peace their fortunes' star.

For petty spite, nor lust of gain,  
Loose hand now clasped in hand  
Whose commerce covers every main—  
Advancing every land.

Brothers and Sons o'er all the world,  
One tongue—to-day one speech—  
War's flag shall be the last unfurled,  
Love's flag the first for each.

# MARSH SHOOTING

BY ROBERT W. CHAMBERS

Written by Sydney Adairson

**A** MARSH always was attractive to me. To many people a marsh means muck, mosquitoes, and malaria; to me it means color and life—a riotous symphony of greens in summer; in autumn a harmonious quartette in browns and misty purples and those exquisite wet greys that hint of sea-winds blowing from far off. In summer the marsh thrills, hums, vibrates with throbbing life—in the air, on the water, under the water; anarsms of brilliant gauzy-winged creatures dart above the still, sky-tinted pools or hang glittering in the sunshine; hawk and swallow, heron and crane, haunt the wet green velvet plain. When delicate pastel tints of dawn or sunset stain the quiet waters, fish rise, making widening rings upon the pool, or spring quivering out of water for the dilly air bath. And when the first silvered ripple widens under the rising moon the shy creatures of the woods come down to drink and bathe; deer moving like ghosts in the fairy radiance, a fox lapping his fill at a pool, perhaps a lynx, tasselled ears flattened, snuffing in the reeds, listening, moving apparently at hazard, with now and then a dainty shake of rounded paw.

Dawn on the marsh sets the wild ducks stringing out to sea or to open inland waters; the great blue heron moves, ruffles, rises, and soars over the woods; the crane spreads enormous pinions, and flees upward and away. Swallows dash through the level sun's rays; dragon-flies, asleep on the tall reeds, begin to shiver and quiver. All day long swallows soar, drift, dart, skim; all day long the red-winged blackbirds croak and chatter. The clear whistle of the meadow lark floats from the upland; the marsh-harrier's querulous

gurgulous cry sounds interminably. The first deepening bar of color in the west sends the first returning black duck whirling back to his favorite pool; the herons follow, solemnly flapping; the last of the cranes leave and drift away toward the blue woodlands on the hill. Fisher and fowler come to the ducks; a drake mallard circles overhead, quacking interrogatively, and drops wings, almost and red webbed feet spread wide. Then come the killer phalar, noisily harmonious in the sky long before you see them drive in with a rush, while their wistful scented oull rings out in the gathering dusk. Npshah! A shell-drake drops in. Npshah! Was it a duck striking water somewhere in the darkness, or a great fish flopping up?

For it is the feeding hour of the fish; misty-winged moths hover over the water; the resonant strumming of frogs begins; the trilling of other frogs breaks out; tree-toads twitter from thickets. And now a shadowy, soft-winged bird floats out of the dusk and into it again. You must have quick eyes to catch a glimpse of the great barred owl.

Surrounding life and richest color; that is

the marsh. Southern swamps have drawbacks, and the sluggish, stumpy, death-dealing miasma is not the least. Still, if one does not drink swamp water, and if one is fairly mosquito-proof, there is delight in all swamps after their kind; a full moon and a high tide and a shot at the Virginia rail; a reedy point, and the crack o' dawn, and whistling flocks of bluebirds driving seaward—these are some of the delights of the marsh.

My first swamp shooting was interesting. Acres on acres of ruddy gray cranberry marsh swept west to the horizon, split by a fat gray sluggish stream, the Valse Water. And along that leader curvet the wood-ducks, flushed in couples as we walked them up, right and left, until it grew too dim to see, and we could only hear the spluttering racket of wings, and the red flash of our guns lighted up a terrified but unwatched dark bowling away into the darkness on rapid little wings.

I remember one day on that same Valse when we began the day in a woodcock covert. The birds flushed close enough, but the willows were so thick that it was almost useless to shoot. However, some of the birds took to the tussocks in the open, and it was warm work for a while. On the "Hacking Ridge" two black ducks blundered up from dry land, and fell to our fire. Two hours were spent in the point of woods to the north, where a brace of grouse rewarded us—and several other braces did not. It was there that I saw (with one exception) my last passenger-pigeon—eight of them. We might have shot them, but did not.

Virtue does not always insure prosperity; we missed a goose a few minutes later. Distinguishing plover, we headed in the midst of a scattered bunch of jack-snipe, and pocketed eight, one member of the party missing every shot. I did not mention his name. Dusk brought the returning ducks; we scattered our bunch with a phosphen fire as they drove past like a flight of feathered cannon balls. It was a pretty bag, take it all in all, the most interesting kind—a mixed bag.

Where that hot howling hell called Coney Island now lies, an effort in the zenith of the desert, once were sand-dunes, sweet bay, cedars, and marshlands teazed by millions of fiddler-crabs, and by sea-fowl in satisfying quantities. My brother and I shot our first ducks there, red-head and old-squaw. We also let loose four barrels into a bunch of Canada geese in Sheephead Cove. Where the Brighton Beach Hotel now stands I have shot many a rail and snipe; and in the meadows I have walked up many a fine piping duck. This was not many years ago, either.

To me a curlew is and has always been a mysterious creature. I hunted usually as a game-bird, few, however, fall to the snipe-shooter's gun. Yet they appear to be

Drawn by Sydney Adairson

"A perfect whiffled of curlew, snipe, and plover filled the air"

easy enough to shoot. My first experience with curlew was on a vast marsh bordering the Bay of Biensay. We had been hammering the jack-snipe with varying luck, and I was half a mile from my companions, my dog, chest-deep in water, leading, when, just out of gunshot, I saw a huge snipe-like bird walking along the muddy edge of a pool. To my chagrin, the dog paid no heed to the bird, although he passed within ten feet. Since then I have learned that some snipe will not "stand" curlew.

It seemed to be a matter of walking up the bird, and I innocently started to accomplish it. The bird moved off, walking a pace equal to my own, and when I quickened my steps the bird merely hid his pace to suit. At first I did not perceive that I was being trifled with; that idea took shape gradually after I had followed that infernal bird a mile without either flushing him or getting one inch closer. And he looked so big, so tame, so juicy—and I could not, to save my soul, get within gunshot. Meanwhile my dog, a distant speck on the marsh, stood faithfully pointing a squinting jack-snipe, stanch as a sign-post. The night refused me to fresh endeavor. Thus the sad happened; I ran after the curlew, who ran away.

Experience did not seem to cure me; every new curlew I saw seemed bigger, tamer, and juicier than the last; the irresistible desire to follow and get a shot led me many a shabby, mushy mile; cost me many a tumble into black holes. I might as well admit that I never got a shot by following curlew. Curlew I have shot, sometimes while passing overhead at dawn or twilight, once when storm shooting, and once when a pair came into some snipe decoys on the seaward edge of the dunes.

Personally, I could not help make up my mind to class curlew as game birds; and after a while I ignored all chances to score on them. The same feeling extended to the vaneauzes, those bronze-green, ploverlike, crested marsh birds that may shoot in preference to jack-snipe. The vaneauzes are anything but easy to approach; I never aimed a dog that would "stand" them, although I have seen dogs point them. As a rule, they will not tie to a dog; neither will curlew. Vaneauzes go in bunches larger than curlew; the only shots at them that I got were from blinds or boats, although at times flocks would bank inland or fly almost if not quite within range overhead.

Along a river in western France stretched a chain of marshes thickly with still, clear canals. Curlew, vaneauzes, plover, and jack-snipe were there, also a species of large grey snipe resembling our own yellowlegs. In the canals were widgeon and mallard—the magnificent wild mallard of Europe, which I believe is larger and more vigorously colored than our own stately green-head. The shooting belonged to an estate, but permission was not denied us; and one day, after mowing three grass on the marsh looked forward to warm work.

Work began promptly; a magnificent drake flushed and fell to my gun; a pair of incoming widgeon followed, as much to my sur-

prise as to their own. Then a jack-snipe went sailing away like a big grey clam shell, and he flew directly into the water of my second barrel. I was missing nothing, it appeared. Two more snipe followed, and that was more than my comrades could endure.

"For Heaven's sake," they called out, "change station and give us a show! There's nothing over to the right!"

We exchanged; almost immediately my dog, running wild, started two mallards, one of which fell at very long range. Angry amused, my comrades strung out wide; but hull luck lay in my path, and, for one of the few occasions in my career, I felt as though I was going to stop everything that rose; and I did. A long shot and a score on a widgeon comforted my comrades; then half an hour of blank followed.

On their side the marsh grew unpleasantly deep, and they demanded that I exchange again. So I did, with a heroic resolve; for, as I floundered across a channel and set foot on an oozy green island, the dog stopped, and the next moment a perfect whirlwind of curlew, snipe, and plover filled the air, rattling me as though I fired into the brown, scoring two birds only. As the air appeared almost solid with birds, I do not see how it was possible to miss like that. Never but once before, excepting on quail, did I see two harrets driven through a squall of shore birds with smaller result. And that time two and a quarter scores of shot swept through a bunch of some sixty birds without scoring one single bit of down. Righteous judgment! and serve us right who lose our heads and blaze away into the brown. A course of "brown" shooting with our Southern quail usually cures the idiot who practices it.

One sad feature of marsh shooting is the destruction of herons and the larger marsh birds. Only a rigid adherence to decency of conduct can prevent that, for it is, after all, sometimes a temptation on a blank day. But it is wrong, all wrong; and unless a man sticks to the principle that nothing except a game-killed excuse for shooting, our marshes will lose some of their most picturesque and beautiful inhabitants. I know that anglers bowel interminably for the extermination of all heron, crane, and kingfisher; I know also what damage the latter birds do, and also certain species of heron, such as the little green heron. Yet I have no desire to drive out these feathered fellow fishermen—no wish to fish in solitary hoggish comfort. Where herons and kingfishers become too numerous, there is no reason why their number should not be thinned out. But as for a wild and general lustitude upon the appearance of these birds, it is brutal and needless, and a policy which never can appeal to me. Jealous greed and intolerant selfishness are at the root of it; and I think that men who hasten to slay the first heron because there's a trout stream in the neighborhood, or the first hawk because there are quail near by, in the person capable of taking the last trout from the pond and the last bird from the covey.

## Photographing the Sun

By George H. Peters

Of the United States Naval Observatory

**A**T present this subject is one of considerable popular interest on account of the recent great outbreak of sun spots. Although an ordinary telescope will show considerable solar detail, the aid of photography is generally involved. The photographic plate can delineate features found on the sun much more accurately and quickly than hand can draw them. Besides, more can be seen on the photographic plate than the eye can detect. Moreover, with a powerful telescope but a small portion of the solar surface can be examined at a time. With the photographic method, however, the entire disk can be pictured at once, and the details subsequently magnified. This enables better comparisons of different surface features to be made, and the photographs, moreover, are permanent records.

In visual observations of this kind the viewing surface, or reflecting of the image, caused by atmospheric "seeing," greatly interferes with definition. On the quickly exposed solar photograph this motion is stopped, and the same principle that rapidly moving object can be "taken" with a "snap-shot."

The position of objects found on the solar photograph can also be measured with accuracy, their areas and locations on the

spherical body of the sun being ascertained by calculation. It is possible, on the photographic plate, by the employment of suitable chemical agents and processes of manipulation, to increase the surface contrasts in the resulting negative. This treatment brings out clearly features which the eye cannot detect, on the brilliant solar image, an amount of lack of contrast in many of the delicate markings.

The sun is an incandescent gaseous body, the immensity of whose vast bulk it is hard to realize. Supposing the earth to occupy a position at its centre, the sun could pursue its orbit within the sea, and reach but little more than half-way to its surface. On our scale of things, the solar photosphere envelope many interesting phenomena occur. These are due principally to the circulation of the matter composing its outer layers as radiation takes place. A dense cloud converge so dense more fitting for an "inferno" than the brilliant surface which we see. Masses of glowing matter many times the bulk of the earth are projected thousands of miles into space, only to fall back into the fiery depths beneath. Billows and mountains of incandescent gaseous matter form and disappear with great rapidity. The shining surface, known as the photosphere, with

A Solar Photograph, showing Groups of Sun spots, taken November 4, 1903, at the United States Naval Observatory

which we are all familiar, is composed mostly of clouds. These are mainly formed of calcium, carbon, and silicon at a super-white heat. It is from these we receive a large part of the solar radiations, while above them is a great atmospheric envelope containing metallic vapors.

The clouds of helium and other materials are at times elevated above the general surface of the photosphere and are then known as *faculae*. They have under these conditions an extremely brilliant appearance, especially when near the edge of the disc. It is generally in the neighborhood of these *faculae* that sun-spots are formed. They appear as black spots or blotches on the photosphere. Sun-spots, as can be seen in the photographs reproduced with this article, generally consist of two parts. The dark central nucleus is called the *umbra*, and the lighter fringe surrounding it is known as the *penumbra*.

Cyclical rotation, similar to that of hurricanes and typhoons on the earth, is often detected in these solar spots.

The great group recently photographed at the Naval Observatory had a total length of 172,000 miles, while its greatest width was 30,000 miles. These observations are made daily, weather permitting, and an extended series of solar photographs are now on file. The great sun-spot group was first detected on the negative of October 3, when one of the enormous spots composing it was seen projected as a notch on the edge of the sun. A careful examination of the plate showed that this notch was not devoid of detail, but that its surface outline could be followed. This was seen to be slightly elevated above the general contour of the edge, proving these spots to be elevations, and not depressions, as had generally been supposed.

In the series of solar photographs showing this group, as it was revolved across the sun's disc, by his axial rotation, great changes were seen to take place. To some extent there was a gradual absorption of several of the smaller outlying spots, while others formed.

The solar photographs also show the entire surface of the sun to have a mottled appearance, which has been likened to rice grains or willow leaves, and the sun is seen to be shaded off towards the edges on the photographs, owing to the absorption of light by the solar atmosphere. This absorption is, of course, greater near the edge of his disc than at the centre, because of the greater thickness of this gaseous envelope that light has to traverse from the edges to reach us. This same effect can be seen by the eye, but the blue rays used in photography are much more absorbed than the visual ones, and consequently greater contrast is produced.

The photograph with which these solar observations are made is seen by the illustration to be quite unlike an ordinary telescope, enclosed in its great dome. The sunlight is reflected horizontally into a lens by the first surface of a flat, wedge-shaped disc of glass. By leaving this mirror unaltered, only about one-twentieth of the light received upon it is reflected, but still enough remains for the purpose required.

Apparatus by which Sun Photographs are made at the United States Naval Observatory

tures detected on the sun. In other words, the solar latitudes and longitudes can be calculated from this data.

Between the pier holding the lens and mirror and the laboratory is a long shed or roof. This serves to keep off the light from the sky, but allows of ventilation beneath. A large disarranged-table also extends from the dark-room under the shed. It has a length of about ten feet, and serves to protect the plate from stray light.

The exposure is made through a narrow slit in a shutter on the focal-plane principle. This is operated by hand, and gives an estimated exposure of 1-300ths of a second.

The solar image is set on a "target," on the outer side of the photographic plate when the exposure is made. The image after exposure is developed, fixed, and the plate washed, when it is filed away for measurement, after a record has been made of it.

Through the courtesy of Rear-Admiral C. M. Chester, Superintendent of the Naval Observatory, I am able to use the accompanying illustrations and the information derived from the records of this institution.

Exterior View of the Laboratory at the United States Naval Observatory, where Photographs of the Sun are taken

### "BABES IN TOYLAND" AT THE MAJESTIC

"Babes in Toyland," an extravaganza by Glen Mac Donough with music by Victor Herbert, which succeeded "The Wizard of Oz" at the Majestic Theatre, New York, is being one of the few successes of the New York season. Mr. Mac Donough's book tells the story of "Jane" and "Alan"—the two "Babes"—whose wicked uncle tries to dispose of them so that he may get their money. After trying unsuccessfully to drown them, he sends them into a haunted forest, where they are saved by a fairy whom they had rescued in the form of a moth caught in a spider's web. Later on they find themselves in England, and are rescued by the friendly fairy from the lands of a villainous toy-maker. "Jane" and "Alan" are played, respectively, by Mabel Barrison and William Morris, who, on shows in the dancing, lead the search of the toys in the last act.

Copyright, 1911, by William Nicholson

Portrait of Marie Tempest—Painted by William Nicholson

## Marie Tempest in French Farce

**M**ISS MARIE TEMPEST is appearing at the Hudson Theatre, New York, in "The Marriage of Kitty," an English adaptation of a French farce, "La Passerelle," made by Miss Tempest's husband, Commo Gordon Lennox.

Kitty is a young country girl in hard circumstances who visits her godfather, a solicitor, to consult him about an occupation. While she is there the solicitor is consulted by Reginald Beloise, a young baronet who is about to inherit a large fortune from a deceased uncle, which is left to him only on condition that he does not marry a certain Peruvian widow of whom the rich relative disappeared. The lawyer suggests as a happy solution of the difficulty that he contract a temporary marriage with some one else, and after reviving his fortune, divorce her and marry Madame de Senecio, the widow from Peru. Beloise likes the idea, and Kitty, for a consideration, consents to become the nominal Lady Beloise. After the marriage the baronet and the Peruvian, properly chaperoned, go travelling together, while Kitty keeps house alone in her husband's Swiss villa. When Beloise, having wearied of the widow, returns to his home and falls a victim to the charms of his wife, the complications of the piece begin. The Peruvian appears on the scene, and finds the baronet making ardent love to his own wife. Beloise refuses to be divorced, and the widow goes into hysterics. Finally, the baronet and his wife

elope, and Madame de Senecio reverts to a former lover, whom she discovers to be her real affinity.

Miss Tempest's last appearance in America was as a comic-opera singer a decade ago, but the only suggestion of her theatrical past to be found in her work in "The Marriage of Kitty" is when she sits at the piano in the second act and captivates Sir Reginald by her roush singing of a ballad. She is an admirable *comédienne*, and when, in the first act, she makes up as an aged and spectacled frump in order to allay the widow's suspicions of her charms, the result is irresistible.

Mr. Leonard Byrne, who was last seen in America as a sporting character in melodrama, plays the part of Beloise, the hair-brained but winning baronet, Madame de Senecio is excellently acted by Miss Ada Ferrar.

The portrait of Miss Tempest, by William Nicholson, which was painted this year in London, is the first example of Nicholson's work as a painter that has been exhibited in America. He has been known here hitherto for his collections of prints in color,—"Characters of Romance," the "Portfolio of Portraits," "Twelve Portraits," and "Sporting Prints,"—although his paintings are well known in London. One of his most striking canvases, the portrait of Max Beerhoben, has recently been shown here. Mr. Nicholson is now in this country filling some important commissions.

# Correspondence

AS TO MR. COCKRAN

November 21, 1891.

To the Editor of Harper's Weekly:

SIR,—In an editorial paragraph of the week's issue of the WEEKLY there is a criticism of Mr. Hozerk Cockran, which, however witty and sarcastic it may be, possesses one serious defect—it is untrue. Mr. Cockran did not oppose the Tammany ticket two years ago. On the contrary, he supported it, and spoke for Mr. Shepard at Carnegie Hall during the campaign. In the municipal campaign of 1887, in the three-cornered fight of Van Wyck, Low, and Tracy, Mr. Cockran supported Tracy, presumably because he supposed Tracy would make the best Mayor of the three. In 1892 there was practically no Democratic party in either the nation or the city, and not the slightest evidence on the party's part of a desire to return to the sound principles of Democracy. In supporting General Tracy, therefore, solely on the ground that he was the strongest man of the three—he unquestionably was—it appears to me Mr. Cockran was in no wise guilty of lack of fealty to either his party or his principles. In any event, when you look back to the campaign of 1890, and recollect the services which Hozerk Cockran rendered the cause of sound money at that time—how he entered the arena against Bryan, and demolished the financial heresies of that demagogue, the wild platitudes he received at the hands of the press and the public—it seems to me that reflections on Mr. Cockran as a man, as made in the article I have referred to in the present issue of the WEEKLY, come with very ill grace from a journal which so highly praised his character and abilities, and so warmly welcomed his efforts at a time when the country was in such dire need of them.

I AM, SIR,  
E. HARBINGTON SIMONS.

## THE NEW NATIONAL GUARD AGAIN

ALABAMA, CAL., November 7, 1891.

To the Editor of Harper's Weekly:

SIR,—Agreeing with Mr. Walter Fieldhouse's letter in HANSEN'S WEEKLY of even date, I beg to state that I have had opportunities to observe not only the Governor's staff of several different States, including Illinois and New York, but also the regimental staffs of the national guards of several States, and need say that to compare any of them with recitals in the regular cavalry service is to libel the latter. Some of such staff officers, Governor's as well as regimental, seem to be instructed or experienced in a degree as to wear their uniforms and arms properly and manage their horses in a creditable manner. Others, however, display a degree of helplessness, lack of horsemanship, and lack of knowledge how the soldier is to be worn, and mounted, the reins to be held, etc., that no regular cavalry recruit is permitted to display.

During President Roosevelt's visit in San Francisco the comically helpless appearance of some of the regimental staff officers of the California National Guard—officers who at least are supposed to have some military experience—caused jeers to be heard among the masses of people that crowded the streets.

No self-respecting ex-regular, enlisted or commissioned, unless proscribed by strong political reasons, cares to affiliate himself with a national guard organization that is offered by men apparently ignorant of the rudimentary military knowledge.

It is to be hoped that the reorganization of the national guard will make it more attractive for ex-regulars as well as ex-volunteers, whose experience and discipline would be invaluable to the new establishment.

I AM, SIR,  
J. A. ERDMAN, M.D.

## SHOULD WHITES AND BLACKS BE SEPARATED?

MISSISSIPPI, November 7, 1891.

To the Editor of Harper's Weekly:

SIR,—Georgia is the largest State east of the Mississippi River. The amount of labor conditions the agricultural resources of Georgia are not being developed as they deserve. To say nothing of the grade of the labor, there is a serious shortage of agricultural laborers. No more negroes are available, and white people in sufficient numbers will not settle there until the negroes leave.

Georgia ranks third in cotton production. The one-crop system and other methods or lack of methods of commercial fertilizer are used to raise cotton. These lands yield abundantly under the diversified farming of the skilled white farmer. Except for the presence of the negro cottonmen, they are now ripe for Georgia to promptly fill up with an excellent class of white farmers from the North.

The mass of negroes in Georgia are cotton farmers. With the same labor and methods of fertilizer they could raise almost twice as much cotton on the alluvial lands of Mississippi, Louisiana, and Arkansas. There is plenty of room on those lands for all the colored people in the United States, and their offspring for many years to come. Not a dollar of public money is needed to move them. Right now the planters in the Yazoo-Mississippi Delta are taking as tenants all the negro families they run get, paying their

travelling expenses, and furnishing all they need on credit until a crop is made. If a new tenant does not succeed in paying all he owes at the end of the first year, many planters rob with the deficit to encourage him by starting him the second year free from debt.

Opportunities for the negro on the alluvial lands are good now, and are improving through plain business competition. It is serious that his patriotism, bearing present restrictions in Georgia would benefit both whites and blacks.

In Illinois the negro is not needed, and, at best, is now only tolerated. The negro only in good standing with the people of Illinois is the product of slavery. The negro now in Illinois is the product of reconstruction; he is not popular. On the percentage basis during the current year Illinois has outstripped any other State in the Union in violence and attempts at violence to negroes.

A great Chicago paper, until recently a zealous advocate of abolition of the color-line, but now showing many signs of wanting a seat on the negroes' bench, says: "For years the colored people have been gradually driven out of occupations which they at one time almost monopolized. Once they were found in most of the barber shops. They found ready employment as caddies and butlers. They have been pretty much forced out of these fields of labor. There was a time when they were preferred for waiters, but the time has gone by, and in most places they are set aside in favor of the whites." There are towns in Illinois where a colored person is not permitted to dwell. Briefly, the white people of Illinois now accept colored people only to wash dirty linen, to polish boots, to perform the proverbial woadlike function, or for other purposes for which they cannot get white people on equal terms.

For many years the good white citizen of Illinois has held himself not as being willing to give the negro an equal chance in life with the white man. He is not a hypocrite. He is unswerving and correspondingly complacent—but his own experience shows that he is under an illusion. The truth is he is willing for the negro to have the chance, provided somebody else furnish it. Personally, he does not give the adult negro any chance at all on an equal terms with the white man. He chooses for himself white associates and white employees, and gives the white man the preference in awarding his patronage. His advocates educating the negro child to the limit of his raggedity, contributes aid and encouragement toward that end, and, as a result, a colored boy has succeeded in developing into a capable, high-toned man with fine feelings and lofty aspirations; he finds himself on a desert waste of liberty unprovided by means of opportunity.

Secretary Root says reconstruction was a failure and the entire subject should be studied anew. What error may be the error that have grown out of the Fourteenth and Fifteenth amendments, their repeal would not suffice, and the agitation would revive sectionalism and tend to obscure the real issues.

Regardless of sectional or political limitations, students of the negro question are now practically in accord as to the evils. The wide differences as to remedies are based chiefly on the fact that each man wants what is adapted to his particular neck of the woods, and that is the correct principle. But we are a family of forty-five States. However capable the physician, it would not be wise to diagnose the condition of one member or more, prescribe the proper remedy, and then proceed to dose the entire family.

The South should not take the initiative in any national movement relating to the negro. It would prejudice many good people in the North, and the North controls.

The time will come—if it is not here—when the people of Illinois will be ready for an amendment to the Constitution of the United States to about this effect, "Any State may exclude negroes from the State at large or by counties."

The good citizen of a New England State, who might still be in favor of trying to force the white people of his own State to live side by side with colored people, in accordance with the principles of liberty, equality, fraternity, would not feel justified in offering serious opposition when, in his capacity as a citizen of the United States, he was confronted with this plain question: "Are you willing for the people of Illinois or any other State to decide for themselves whether or not to exclude negroes?"

Illinois, Missouri, Indiana, and Ohio would probably lead in excluding by States. The Southern States would exclude by counties, and there would soon be no negroes in a large majority of the dominant political except in delegations to Republican national conventions.

White men now make, interpret, and execute the laws of the nation and of every State. Is there any reason to fear that the white men of any Southern State cannot be trusted as solely as the white men elsewhere to refrain from passing laws that would injure the negro?

Senator Hozer is probably the most learned man in public life in the United States to-day. Nobody would accuse him of partiality to the South. Ask him if there is a single State government in the South that is not less corrupt than the national government or the State government of Illinois.

Lawlessness, not State law, is the trouble in the South, and most of the lawlessness is or relating to the negro is due primarily to influences from the outside.

I AM, SIR,  
JOHN M. F. EDWIN.

The Grand Panjandrum

None us recently applied the term "the Great Panjandrum" to the Hon. Joseph Chamberlain, and there was a good deal of perplexity over the meaning of the words. The appellation should be "the Grand Panjandrum." Oidly enough, Dr. Brewer declares it as no village potentate or "Brammagen magnate." The name originated in some nonsense with which the actor Samuel Foote buffed the memory of one Macklin, who, at a tavern, boasted that he could repeat anything after once hearing it. The jargonous sentences of Foote's recitations conclude in this manner: "So he died, and she very imprudently married the barber, and there was present the Plemminis and the Jobillilies and the Garrydills and the Grand Panjandrum himself, with the little round button at top, and they all fell to playing the game of catch-a-catch-an, till the pumptender ran out of the hole of their boots." The wild inconsequence of those doings (cleverly illustrated at a later day by Randolph Caldecott) was too much for Macklin's memory, so it is for that of most other people who try to wrestle with it.

Feminine Criticism

CAMILLE SAINT-SAENS, the eminent French composer, is as interested in current criticism and in the work of his contemporaries as he is in his own music.

He was talking recently with a young woman who had just been to the first recital of a young pianist whose talents had had much preliminary advertising. The young woman speaks enthusiastically of the pianist's good looks, his clothes, his way of sitting at the piano, his charming manner of acknowledging applause. Saint-Saens listened patiently until she stopped a moment for breath.

"Um," he commented thoughtfully: "And did you notice anything about his playing?"

More about Canals

THE Suez Canal is usually considered the most important example of ship canals, though the number of vessels passing through it annually does not surpass that passing through the canals connecting Lake Superior with the chain of Great Lakes at the south. In length, however, it exceeds any of the other great ship canals, its total length being ninety miles, of which about two-thirds is through shallow lakes.

The canal connecting the Bay of Cronstadt with St. Petersburg is a work of great strategic and commercial importance to Russia. The canal and sailing course in the bay are about sixteen miles long, the canal proper being about six miles and the bay channel about ten miles, and they together extend from Cronstadt on the Gulf of Finland, to St. Petersburg.

The next of the great ship canals connecting bodies of salt water in the order of date of construction is the Corinth Canal, which connects the Gulf of Corinth with the Gulf of Argolis. The canal reduces the distance from Adriatic ports about 175 miles, and from Mediterranean ports about 100 miles. Its length is about four miles.

The Manchester Ship Canal, which connects Manchester, England, with the Mersey River, Liverpool, and the Atlantic Ocean, is thirty-five and a half miles long.

In Germany and America.

Two canals connect the Baltic and North seas through Germany, the first, known as the Kaiser Wilhelm Canal, having been completed in 1905 and constructed largely for military and naval purposes, but proving also of great value to general mercantile traffic. The other is the Elbe and Trave Canal, which was opened in 1900.

Three ship canals intended to give continuous passage to vessels from the head of Lake Superior to Lake Ontario and the St. Lawrence River are the Welland Canal, originally constructed in 1823 and enlarged in 1871 and 1900; the St. Marys Falls Canal at

Sault Ste. Marie, Michigan, opened in 1855 and enlarged in 1881 and 1906; and the Canadian canal at St. Marys River, opened in 1905. In point of importance, measured at least by their present use, the canals at the St. Marys River by far surpass that of the Welland Canal.

The Welland Canal connects Lake Ontario and Lake Erie on the Canadian side of the river.

The canals of Sault Ste. Marie, Michigan, and Ontario, are located adjacent to the falls of the St. Marys River, which connects Lake Superior with Lake Huron, and lower or raise vessels from one level to the other, a height of seventeen to twenty feet. The canal belonging to the United States was begun in 1853 by the State of Michigan, and opened in 1855. Its length being 5674 feet. The Canadian canal, one and one-eighth miles long, one hundred and fifty feet wide, and twenty-two feet deep, with lock nine hundred feet long, sixty feet wide, with twenty-two feet on the water side, was built on the north side of the river during the years 1889 to 1905. The number of vessels passing through the United States canal in 1902 was 17,008, and through the Canadian canal, 6204.

Mark Twain's Audiences

It was on the train somewhere between New York and the West. Mark Twain was travelling between towns on a lecture-tour, and a friend had been drawing the humorist out on the subject of his experiences.

"What sort of audience," he asked, "do you like best? Who, in your opinion, make the most responsive and sympathetic listeners?"

"College men," replied Mark after a moment's thought—"college men and convicts."

# THE TREMENDOUS ADVENTURES OF MAJOR BROWN

By G. K. CHESTERTON

**R**ARELAIUS or his wild illustrator, Gustave Doré, must have had something to do with the designing of the things called flats in England and America; there is something awfully Gargantuan in the idea of economizing space by piling houses on top of each other, front doors and all. And in the chaos and complexity of those perpendicular streets anything may dwell or happen, and it is in one of them, I believe, that the inquirer may find the offices of the Club of Queer Trades.

The nature of this society, such as we afterwards discovered it to be, is soon and simply told. It is an eccentric and bohemian club, of which the absolute condition of membership lies in this, that the candidate must have invented the method by which he makes his living. It must be an entirely new trade.

The Club of Queer Trades was not discovered by me; it was discovered by my friend Basil Gyre, a star-gazer, a mystic, and a man who scarcely stirred out of his attic.

Very few people know anything of Basil, not because he was in the least unobscure, for if a man out of the street had walked into his room he would have kept him talking till morning. Few people knew him, because, like all parts, he could do without them. He lived in a queer and comfortable garret in the roofs of Lambeth. He was surrounded by a chaos of things that were in odd contrast to the shams around him—old fantastic books, swords, armor, the whole dust-hole of romanticism. But his face, amid all these quaintic relics, appeared curiously keen and modern, a powerful level face. And no one but I knew who he was.

I was sitting there with him one evening about six o'clock when the door was flung open, and a pale, grey man, with red hair and a huge furred overcoat, swung himself panting into the room.

"Sorry to bother you, Basil," he gasped. "I took a liberty—made an appointment here with a man—a client—in five minutes—I beg your pardon, sir, and he gave me a box of opium."

Basil smiled at me. "You don't know," he said, "that I had a peaceful brother. This is Rupert Gyre, Esq., who can and does do all these to be done. Just as I was a failure at one thing, he is a success at everything. I remember him as a journalist, a house agent, a naturalist, an inventor, a publisher, a schoolmaster, a—what are you now, Rupert?"

"I am and have been for some time," said Rupert, with some dignity, "a private detective. And there's my client."

A loud rap at the door had cut him short, and, on permission being given, the door was thrown sharply open, and a stout, dapper man walked swiftly into the room, set his silk hat with a clasp on the table, and said "Good evening, gentlemen," with a stress on the last syllable that somehow marked him out as a martinet—military, literary, and social. He had a large head streaked with black and gray and an abrupt black mustache, which gave him a look of ferocity which was contradicted by his sad sea-blue eyes. Basil involuntarily said to me, "Let us come into the next room, Gully," and was moving towards the door, but the stranger said:

"Not at all. Friends remain. Acquaintance possibly." The moment I heard him speak I remembered who he was; a

certain Major Brown I had not years before in Basil's society. I had forgotten altogether the black dashed figure and the large solemn head, but I remembered the peculiar speech, which consisted of saying only about a quarter of each sentence, and that sharply, like the crack of a gun. I do not know; it may have come from giving orders to troops.

Major Brown was a V.C., and an able and distinguished soldier; but he was anything but a warlike person. Like many other among the Iron men who recovered British India, he was a man with all the natural belief and tastes of an old maid. In his dress he was dapper and yet demure; in his habits he was precise to the point of the exact adjustment of a tenpenny. One enthusiasm he had, which was of the nature of a religion: the growing of beans. And when he talked about his collection his blue eyes glittered like a child's at a new toy—the eyes that had remained untroubled when the troops were roaring victory round Roberts at Candahar.

"Well, Major," said Rupert Gyre, with a level, heartless, flinging himself into a chair, "what is the matter with you?"

"Yellow panacea. Coal-cellar. P. G. Northover," said the Major, with righteous indignation.

We glanced at each other with ineffectiveness. Basil, who had his eyes shut in his abstrused way, said simply:

"I beg your pardon."

"Fact in. Street, you know. Man panacea. On wall. Death in me. Something. Preposterous."

We shook our heads gently. But by bit, and mainly by the seemingly sleepy assistance of Basil Gyre, I pieced together the Major's fragments, but excitably uncertain. It would be inhuman to submit the reader to what we endured; therefore I will tell the story of Major Brown in my own words. But the reader must imagine the scene; the eyes of Basil closed as in a trance, after his habit, and the eyes of Rupert and myself growing rounder and rounder as we listened to one of the most astounding stories in the world from the lips of the little man in black sitting bolt upright in his chair and talking like a telegram.

Major Brown was, as I have mentioned, a soldier, but by no means an enthusiastic one. So far from regretting his retirement on half-pay, it was with delight that he took a small neat villa, very like a doll's house, and devoted the rest of his life to panics and weak tea. Assuredly he would not have believed, as we understood, any one who had told him that within a few yards of his little Paradise he was destined to be engulfed in a whirlpool of incredible adventures, such as he had never seen or dreamed of in the horrible jungles or the heart of the hell of battle.

One certain bright and steady morning, the Major, attired in his usual faultless manner, had set out for his usual constitutional. It crossing from one great residential thoroughfare to another, he happened to pass along one of those timeless-looking lanes which lie along the back-garden walls of a row of mansions, and which in their empty and deserted appearance give one an odd sensation as of being behind the scenes of a theatre. But men and mules as the scene might be in the eyes of most of us, it was not altogether so in the Major's, for along the course gravel footway was

running a thing which was to him what the passing of a religious procession is to a devout person. A large heavy man, with feline eyes and a ring of iridescent red beard, was pushing before him a barrow, which was alike with imperishable flowers. There were several odd specimens almost every order, but the Major's own favorite pansies predominated. The Major stopped, and fell in conversation and then into laughing. He treated the man after the manner of collectors and other madmen—that is to say, he carefully and with a sort of anxious solicitude at the best results from the very excellent, pointed some, disappointed others, made a subtle scold ranging from a thrilling woe and rarity to a degraded insignificance, and then thought them all. The man was just pushing off his barrow when he stopped and came close to the Major.

"I'll tell you what, sir," he said, "if you're interested in these things, you just get on to that wall."

"On the wall!" cried the astonished Major, whose conventional soul quailed within him at the thought of such fantastic trespass.

"First of five panacea in England is that that garden, sir," bowed the tramp. "It help you sir."

How it happened to me will ever know, but that positive enthusiasm of the Major's life triumphed over all its negative traditions, and with an eye leap and swing that showed he was in no accord of physical resistance, he stood on the wall at the end of the strange garden. The second after the snapping of the iron-coat at his knees made him feel irrespectively a fool. But the next instant all such trifling sentiments were swallowed up by the most appalling shock of surprise the old soldier had ever felt in all his bold and wandering existence. His eyes fell into the garden; and there, across a large bed in the centre of the lawn, was a vast pattern of pansies; they were splendid flowers, but for once it was not their horticultural aspect that Major Brown beheld. For the pansies were arranged in gigantic capital letters, so as to form

the sentence, "Death to Major Brown." A kindly looking old man with white whiskers was watering there.

Brown looked sharply back at the road behind them; the man with the harrow had suddenly vanished. Then he looked again at the lawn with its incredible inscription. Another man might have thought he had gone mad, but Brown did not. Another man, indeed, might have thought himself the victim of a passing practical joke; but Brown could not easily believe this. He knew, from his own quaint learning, that the garden arrangement was an elaborate and expensive one; he thought it extravagantly improbable that any one would pour out money like water for a joke against him. Having no explanation whatever to offer, he admitted the fact to himself, like a clear-headed man, and waited as he would have done in the presence of a man with six legs.

At this moment the stout old man with white whiskers looked up, and the watering-can fell from his hand, shooting a swirl of water down the gravel path.

"Who on earth are you?" he gasped, trembling violently.

"I am Major Brown," said that individual, who was always cool in the hour of action.

The old man gasped helplessly like some nocturnal fish. At last he stammered wildly, "Come down—come down here."

"At your service," said the Major, and alighted at a bound on the grass beside him, without disarranging his silk hat.

The old man turned his broad back and set off at a sort of sauntering run towards the house, followed with swift steps by the Major. His guide led him through the back passages of a gloomy, but gorgeously appointed house, until they reached the door of the front room. Then the old man turned with a face of apposite terror dimly showing in the twilight.

"For Heaven's sake," he said, "don't mention jackals."

Then he threw open the door, releasing a burst of red lamplight, and ran down stairs with a celerity.

The Major, hat in hand, stepped into a rich, glowing room, full of red copper and purple and purple hangings and the finest manners in the world, and, though mystified, was not in the least embarrassed to see that the only occupant was a lady sitting by the window looking out.

"Madam," he said, bowing simply, "I am Major Brown."

"Sit down," said the lady; but she did not turn her head. She was a graceful, graceful creature, with fiery red hair, and a flavor of Bedford Park.

"You have come, I suppose," she said, mournfully, "to tax me about the hateful title-deeds."

"I have come, madam," he said, "to know what is the matter. To know why my name is written across your garden. Not amicably, either."

He spoke grimly, for the thing had hit him.

"You know I must not turn round," said the lady; "every afternoon till the stroke of six I must keep my face turned to the street."

Some queer and unusual inspiration made the prosaic soldier resolve to accept these outrageous riddles without surprise.

"It is almost six," he said, and even as he spoke the heretic copper clock upon the wall elapsed the first stroke of the hour. At the sixth the lady sprang up and turned on the Major one of the queerest and yet most beautiful faces he had ever seen in his life; open and yet tantalizing, the face of an elf.

"That makes the third year I have waited," she cried. "This is an anniversary. The waiting almost asks one with the frightful thing would happen once and for all."

And even as she spoke, a sudden rattling cry broke the stillness. From low down on the pavement of the dim street (it was already twilight) a voice cried out with a raucous and nervous distinctness:

"Major Brown, Major Brown, where does the jackal dwell?"

Brown was decisive and silent in action. He strode to the front door and looked out. There was no sign of life in the blue gloom of the street, where one or two street-

lamps were beginning to light their lemon sparks. On returning he found the lady in green trembling.

"It is the end," she cried, with shaking lips; "it may be death for both of us—where?"

But even as she spoke her speech was stolen by another hoarse proclamation from the dark street, again horribly articulate.

"Major Brown, Major Brown, how did the jerk die?"

Brown dashed out of the door and down the steps, but again he was frustrated: there was no figure in sight, and the street was far too long and empty for the shout to have run away. Even the rational Major was a little shaken as he returned a second time to the drawing-room. Secretly he had done so than the terrific voice came.

"Major Brown, Major Brown, where did—"

Brown was in the street almost at a bound, and he was in time—in time to see something which at first glance froze the blood. The cries appeared to come from a despoiled head resting on the pavement.

The next moment the pale Major understood. It was the head of a man thrust up through the oval hole in the street.

The next moment, again, it had vanished, and Major Brown returned to the lady. "Where is your confidant?" he said, and stepped out into the passage.

She looked at him with wild gray eyes. "You will not go down"—she cried—"alone—into the dark hole, with that head!"

"Is this the way?" replied Brown, and descended the kitchen stairs three at a time.

He flung open the door of a black cavity, and stepped in, feeling in his pocket for matches. As his right hand was thus detained, a pair of great slimy hands came out of the darkness, hands clearly belonging to a man of gigantic stature, and seized him by the back of the head. They forced him down, down in the suffocating darkness, a brutal inquest of destiny. But the Major's head, though upside down, was perfectly clear. He gave quickly under the pressure until he had slid down almost to his hands and knees. Then, finding the knees of the invisible monster within a foot of him, he simply put out one of his long, bony, and

stiff hands, and gripping the leg by a muscle, pulled it off the ground, and laid the vast living man with a crash along the floor. He strove to rise, but Brown was on top like a cat. They rolled over and over. It was as the man was, he had evidently now no desire but to escape; he made spry little hitches and thitches to get past the Major to the door; but that tenacious person had him held by the coat collar, and hung with the other hand to a beam. At length there came a strain in his holding back, this human bull, a strain under which Brown expected his hand to rend and part from the arm. But something else rent and parted, and the slim fat figure of the giant vanished out of the cellar, leaving the form of the Major's hand, the only fruit of his adventure and the only clue to the mystery. For when he went up and out at the front door, the rich hangings, and the whole equipment of the house had disappeared. It had only two boards and white-washed walls.

"The lady was in the company, of course," said Rupert.

Major Brown turned back red. "I beg your pardon," he said;

"I think not."

Rupert raised his eyebrows and looked at him for a moment, but said nothing. When next he spoke he asked:

"Was there anything in the pockets of the coat?"

"There was scrap-iron half-penny in coppers and a threepenny bit," said the Major, carefully; "there was a cigarette-holder, a piece of string, and this letter," and he laid it on the table. It ran as follows:

"Dear Mr. Proctor—I am annoyed to hear that some delay has occurred in the arrangements re Major Brown. Please see that he is attacked as per arrangement-to-morrow. The anti-cellar, of course. Yours faithfully,

Rupert Gryce was leaning forward, listening with hawklike eyes; he cut in: "Is it dated from anywhere?"

"No—oh, yes," replied Brown, glancing at the paper; "14, Tan-

ners Court, North—"

Rupert sprang up and struck his hands together.

"Then why are you hanging here! Let's get along! Basil, lead me your revolver."

"Certainly," said Basil, getting up. "But I am coming with you," and taking a sword-slash from the corner, he led the way out into the purple night.

As they were along the Darling Lane both streets in the direction of that part of Fleet Street which contained Tanner's Court. When we reached the door of No. 14, Rupert turned sharply. Basil's revolver glittering in his hand.

"Stand close," he said, in the voice of a commander. "The scoundrel may be attempting an escape at this moment. We must slip open the door and rush in."

The four creased instantly under the doorway.

"Now," cried Rupert Gryce, turning his pale face and burning eyes over his shoulder. "When I say 'four!' follow me with a rush. If I say 'Hold him!' pin the fellow down, whoever he is. If I say 'Stop!' stop; I shall say it if there are more than three. If they attack as I shall empty my revolver on them. Basil, have your sword-slash ready. One, two, three, four—"

With the sound of the ward the door burst open, and we fell into the room like an invasion, only to stop dead.

The room, which was an ordinary and neatly appointed office, appeared, at the first glance, to be empty. But on a second and more careful glance we saw seated behind a very large desk with pigeon-hole and drawers of bewildering multiplicity a small man with a black waist-coat and the air of a very average clerk, writing hard. He looked up as we came to a standstill.

"Did you knock?" he asked, pleasantly. "I am sorry if I did not hear. What can I do for you?"

There was a doubtful pause, and then, by general consent, the Major himself, the spring of the outrage, stepped forward. The letter was in his hand, and he looked steadily at the man.

"Is your name P. G. Northover?" he asked.

"That is my name," replied the other, smiling.

"I think," said Brown, with an increase in the dark glow of his face, "that this letter was written by you." And with a loud clap he struck open the letter on the desk with his clenched fist. The man called Northover looked at it with unaffected interest and

neerly nodded.

"Well, sir," said the Major, breathing hard, "what about that?"

A pair of great slimy hands . . . forced him down in the suffocating darkness

"What about it, precisely?" said the man with the mustache.

"I am Major Brown," said that gentleman, sternly.

Northover bowed. "Pleased to meet you, sir. What have you to say to me?"

"Say," cried the Major, losing a sudden temper, "why, I want this damned thing settled. I want—"

"Certainly, sir," said Northover, jumping up with a slight elevation of the eyebrows. "Will you take a chair for a moment." And he pressed an electric bell just above him. The next moment an inner glass door was opened, and a fair, weedy young man in a frock-coat entered from within, placed a paper before Mr. Northover, and disappeared again.

The man at the desk handed it to the frantic Brown.

"I think you will find that all right, Major," he said, briefly. The Major looked at it; whether he found it all right or not will appear later; but he found it like this:

Major Brown, to P. G. Northover.	£	s.	d.
January 1, to account rendered.	5	0	0
April 6, to potato and smoking 200	0	8	0
panies			
To cost of horse and harness	12	0	0
To hiring of man with barrow	5	0	0
To hire of house and garden, for one	1	0	0
year			
To furnishing of room in petcock cur-	0	0	0
tain, copper meat safe	1	0	0
To salary of Miss Jamison	1	0	0
To salary of Mr. Flower	1	0	0
Total	14	8	0

A restitutions will show.

"What!" said Brown, after a dead pause and with eyes that seemed slowly rising out of his head—"What is the name of God is this?"

"What is it?" repeated Northover, coughing his eyebrow with amusement. "It's your account, of course."

The Major's hand was still resting on the back of the chair as the words came. He scarcely stirred otherwise, but he lifted the chair bodily into the air with one hand and hurled it at Northover's head.

The legs crashed against the desk, so that Northover only got a blow on the elbow as he sprang up with clenched fists, only to be seized by the untied rask of the rest of us. "Let me go, you scoundrel," he shouted. "Let me—"

"Stand still," cried Rupert, authoritatively. "Your crimes are discovered. A policeman is stationed at the corner of the court. Though only a private detective myself I will take the responsibility of telling you that anything you say—"

And at this moment, for the first time, there struck us among them the strange, sleepy voice of Basil Gryce.

"Major Brown," he said, "what was the name of the man who lived in your house before you?"

The unhappy Major was only faintly more disturbed by this last irrelevance, and he answered, vaguely.

"Grazey something—a name with a hyphen—Grazey-Brown, that was it."

"And when did the horse change hands?" said Basil, looking up sharply.

"I came in last month," said the Major. And at the mere word the criminal Northover suddenly fell into his great office chair and shouted with a volleys laughter.

"Permit me, sir, to explain," he said.

"And, first of all, permit me to apologize to you, Major Brown, for a most abominable and unpardonable blunder which has caused you annoyance and inconvenience in which, if you will allow me to say so, you have behaved with astonishing courage and dignity. Of course you need not trouble about the bill. We will stand the loss. And tearing the paper across he flung the halves into the waste-paper basket and bowed. Poor Brown's face was still a picture of distraction.

"But I don't even begin to understand," he cried: "what bill? What blunder? What loss?"

Mr. G. P. Northover advanced to the centre of the room thoughtfully and with a great deal of unconscious dignity.

"Do you know where you are, Major?" he said.

"God knows I don't," said that warrior, with fervor.

"You are standing," replied Northover.

### The Anheuser-Busch Art Plaques With Calendar Plaque for 1904

AT GREAT expense, Anheuser-Busch Brewing Ass'n has secured from the brush of the celebrated color artist, A. Von Demm, a series of magnificent oil paintings, representing the artist's conception of the four seasons. These are reproduced with exquisite fidelity as to detail and coloring, in the form of four plaques, "Spring Blossoms," "Summer Flowers," "Autumn Rhythms," "Winter Winds," and an additional plaque containing the twelve months carefully calculated for 1904. The four plaques are each 12 1/2 inches by 12 inches, lithographed in the highest style of art, hand-painted on the most lustrous china-finish, and framed with rich embossing, giving the effect of harmonized metal discs.

The four plaques will be mailed by first-class mail in a special box for the quantity of one dozen to the Anheuser-Busch Advertising Dept., 120 N. 3rd St., St. Louis, Mo. They will be shipped from weekly assortments by the hundred dozens. The shipping charges are \$1.00 per dozen, and \$1.00 per dozen for the extra. The quantity of one dozen and more will be shipped by express and subject to the usual and selling rules by telephone and green.

# Hawthorne & His Circle

By JULIAN HAWTHORNE

Author of "Love in a Spirit," etc.

The son of the greatest writer of romance yet produced in America, Nathaniel Hawthorne, has written in this entertaining volume his remembrances of his father and his father's friends. The author's standpoint is personal throughout, which adds greatly to the charm of the narrative. Little details of Hawthorne's life are recounted which have not been available to any other biographer.

Illustrated with Sketches by Mrs. Nathaniel Hawthorne, Portraits, Reproductions of Rare Prints, etc. Crown 8vo, Ornamented Cloth, Untrimmed Edges, Gilt Top, \$2.25 net (postage extra)

HARPER & BROTHERS, PUBLISHERS, FRANKLIN SQUARE, N. Y.

"In the office of the Adventure and Romance Agency, Limited."  
"And what's that?" blankly inquired Brown.  
The man of business leaned over the back of the chair and fixed his dark eyes on the other's face.  
"Major," said he, "did you ever, as you walked along the empty street upon some idle afternoon, feel the utter hunger for something to happen, something in the splendid words of Walt Whitman—'Something precious and dread, something far removed from a pious and pious life, something unproved, something in a trance, something beyond from its atmosphere and delving free. Did you ever feel that?'"

"Certainly not," said the Major, shortly.  
"Then I must explain with more elaboration than," said Mr. Northover, with a sigh.  
"The Adventure and Romance Agency has been started to meet a great modern desire on every side, in conversation and in literature, we hear of the desire for a larger theatre of events, for something to weary us and lead us splendidly astray. Now the man who feels this desire for a varied life pays a yearly or quarterly sum to the Adventure and Romance Agency; in return, the Adventure and Romance Agency undertakes to surround him with startling and wild events. A very picturesque and moving story is first written by one of the staff of distinguished novelists who are at present hard at work in the adjoining room. Yours, Major Brown (designed by our Mr. Gelpoly), I consider peculiarly fertile and pointed; it is almost a pity you did not see the end of it. I need scarcely explain further the monstrous mistake. Your professor in your present home, Mr. Gurney Brown, was a subscriber to my agency, and our foolish clerk, ignoring alike the dignity of the letter and the glory of military rank, positively insisted that Major Brown and Mr. Gurney Brown were the same person. Thus you were suddenly hurled into the middle of another man's story."

Major Brown received the explanation with complete simplicity and good humor.  
"I should be obliged for your card, sir," he said, in his abrupt but courteous voice.

"Pay for what?"

The agent of Romance and Adventure handed his card, laughing.

It ran "F. G. Northover, B.A. C.Q.T. Adventure and Romance Agency, 13, Taber's Court, Fleet Street."

"What on earth is C.Q.T.?" asked Rupert Gryve, looking over the Major's shoulder.

"Don't you know?" returned Northover.  
"The Club of Queer Trades is a society consisting exclusively of people who have invented some new and curious way of making money. I was one of the earliest members."

"You deserve to be," said Basil, taking up his great white hat with a smile and speaking for the last time that evening. When they had passed out, the Adventure and Romance Agent laughed aloud in the silence.

Just as the laugh echoed away there came a sharp knock at the door. An English head with dark, wavy hair was thrust in with deprecating and somewhat absurd inquiry.

"What, here again, Major?" cried Northover, in surprise. "What can I do for you?"

The Major shuffled feverishly into the room.

"It's horribly absurd," he said. "Some thing has just started in me that I never knew before. (But upon my soul I feel the most desperate desire to know the end of it all.)"

"The end of it all?"  
"Yes," said the Major; "Jackab' and the 'title deeds' and 'death to Major Brown.'"

The agent's face grew grave, but his eyes were amused.

"I am terribly sorry, Major," said he, "but what you ask is impossible. I don't know any one I could sooner oblige than you; but the rules of the agency are strict. The Adventures are confidential. I do hope you understand."

"There is no one," said Brown, "who understands discipline better than I do. Thank you very much. Good night." And the English man withdrew for the last time.

## Music

## Wagner and Mr. Conried

WHAT is one to think of the quality of the stage management which requires *Der Wald*, in the first scene in the second act of Wagner's "Walküre," to crawl under the descending clouds before he can reach his adversary on the heights; which makes of *Loep's* magic fire ring an illuminated vapor bath; which leaves spectators in the back drop of Venus's groin through which an edified audience is invited to watch the stage hands setting the next scene? Those, and other blunders, have been far too common in the Wagner performances which Mr. Conried has so far given at the recognized and refitted Metropolitan Opera-house. We do not speak of the carelessness of direction which has marred some of the recent representations of the Latin works in the repertoire; for it is in the staging of the Wagner dramas that such lapses are of most vital consequence, and it was in the presentation of them that extraordinary reforms were to be effected. It is to be feared that Mr. Conried is attempting the impossible task of giving adequate performances without sufficient preparation. However, all that one may fairly do at the present stage of events is impartially to take note of defects which are too grave and too obvious to go long unrecorded.

Aside from the matter of stage management, Mr. Conried has done well by us in his treatment of Wagner. He has put forward the eminent Felix Mottl,—one of the Bayreuth crop of authentic interpreters of the great Richard—a new and delightful *Forstner* and admirable *Tomas*—Miss Olive Fremstad,—an improved orchestral body, and some fresh and appropriate settings—the rugged and desolate mountain-top at the end of "Walküre" is particularly good, and the Wartburg Valley in its autumnal russets and gold, in the last act of "Tannhäuser," is uncommonly poetic and effective. If Mr. Conried had given us Mottl alone there would still be cause for the heartiest gratitude. He is a conductor of superb forcefulness, of masterful breadth and vitality; if one misses in his readings something of the sensitive delicacy, the color and vivaciousness of his younger colleagues, Alfred Hertz, there is greater compensation in the largeness and vigor of his work. Of Gadsch's *Bronschilde*, on the other hand, one can only say that it is everything but compelling. The *Sungard* and *Franke* of Kraus are inadequate, and the *Prisca* of Louise Hesser suffers from an inevitable comparison with the memorable impersonation of Schumann-Heink. *Termin* as *Edeleib*, Van Hony as *Wotan* and *Wolfram*, Blase as *Dasung*, and *Platon* as *Herrmann*, have repeated performances of familiar caprice.

It remains to be seen what Mr. Conried, having discarded his version of "Walküre," and "Tannhäuser," will do with the rest of the "Ring," with "Lohengrin," with "Tristan," with "Meistersinger," and with "Parsifal."

## The Russian Advance

by

SENATOR ALBERT J. BEVERIDGE

An important book on the situation in the Far East. Senator Beveridge recently spent many months in Russia, Manchuria, and Korea, studying the controversy over Korea, and making an investigation of Russian conditions as compared with those in the United States. This book contains the result of his valuable work, and seems to point to war between Russia and Japan over the situation.

## Don't Forget!

WHEN YOU BUY a ticket don't forget to tell the ticket agent plainly that you wish it over the Lake Shore & Michigan Southern Railway. You will secure the best in travel that money can buy.

**Nineteen Through Trains**

In daily service over the Lake Shore & Michigan Southern Railway between the cities of Chicago and Toledo, Cleveland, Buffalo, St. Louis, Indianapolis, Cincinnati, Pittsburgh, New York and Boston, in connection with the New York Central, Boston & Albany, Pittsburgh & Lake Erie and Cleveland, Cincinnati, Chicago and St. Louis Railroads.

Send for booklet, "Privileges for Lake Shore Passengers," also "Book of Trains."

Address, A. J. SMITH, G. P. & T. A. Cleveland, Ohio

BY GEORGE ADE

Author of "The Girl Proposition," "Fables in Slang," etc.

### PEOPLE YOU KNOW

Mr. ADE is perhaps the most thoroughly American of our humorists. *People You Know* is his latest book, and it is made up of more of his inimitable "fables in slang." There is something more than mere humor of expression in these fables. Each of them is a brilliant little satire on some phase of American life. *People You Know* is a book that every one will read and laugh over.

# SOME REMARKABLE FICTION

## Cherry

by **BOOTH TARKINGTON**, author of "The Gentleman from Indiana," "Monsieur Beaucaire," etc.

A sparkling romance, in which Mr. Sudgeberry, a conceited and hopeless prig, tells of his love for charming Sylvia Gray, whose beauty, wit, cherry ribbons dazzle and ensnare him. Sprightly, clever comedy.

Illustrated in color by A. I. Keller.  
Ornamented cloth, gilt top, \$1.25.

## Letters Home

by **WILLIAM DEAN HOWELLS**.

An exceedingly interesting story told in letters written home by various people in New York. They not only describe New York life from novel viewpoints, but unfold to the reader a fascinating story of the American metropolis.

Uniform with Mr. Howells' other works, \$1.50.

## Judgment

by **ALICE BROWN**, author of "The Mannerings," etc.

Shall a woman forgive a man for the sins of his early life? Are there as many judgments to be passed as there are such cases? In this novel a woman has to decide the question for herself, and she does it in her own way. She meets a man; she loves him—and then she learns his history. And from the story the author makes a live heroine of a fictitious one.

Illustrated by W. T. Smedley.  
Ornamented cloth, \$1.25.

## The Heart of Hyacinth

by **ONOTO WATANNA**, author of "A Japanese Nightingale," etc.

An exquisite love story of Japan, told with tender sentiment and dainty comedy. Beautifully bound, uniform with "A Japanese Nightingale"; lavender cloth, with gold and colored decorations, pictures in color, and marginal drawings in tint by Japanese artists.

Deckel edges and gilt top, in box, \$2.00 net.

## The Relentless City

by **E. F. BENSON**, author of "Dodo," "The Book of Months," etc.

A novel of New York. It tells of English and American society, the scenes laid in London and in New York—"the relentless city"—and in charming country resorts. The plot concerns the wedding of an English nobleman to an American heiress and the exciting complications which follow.

Ornamented cloth, \$1.50.

## The Maids of Paradise

by **ROBERT W. CHAMBERS**, author of "Candida," etc.

The maids of Paradise, an idyllic French village, live in the stirring days of the Franco-Prussian War. Fighting is rife through many of the pages, but the dominant note is love, and this is the happiest romance that the author has done.

Illustrated by André Castaigne and others.  
Ornamented red cloth, \$1.50.

## Hesper

by **HAMLIN GARLAND**, author of "The Captain of the Gray-Horse Troop."

A love story of the West, strong and virile, in which Mr. Garland is at home amongst his wild mountains, plains, mining camps, and cattle ranches. The life is described in all of its primitive vigor and disregard of conventions. The work is one of remarkable realism and dramatic intensity—a worthy successor to *The Captain of the Gray-Horse Troop*.

Ornamented cloth, \$1.50.

## Dr. Lavendar's People

by **MARGARET DELAND**, author of "Old Chester Tales."

Similar to this latter book, these stories of a quiet old town and its quaint but lovable people are told with power, finesse, and mastery precision. Dr. Lavendar appears in the stories as the friend and father of his people, whose joys and sorrows are even as his own.

Illustrated by Lucius Hückcock.  
Ornamented Cloth, \$1.50.

## Judith of the Plains

by **MARIE MANNING**, author of "Lord Alingham, Bankrupt."

A romance of the plains at the end of the cattle days in Wyoming, rich in humor. Judith stands out against the background of cattle stealing, cattle stampeding, and lynching, a noble figure, throbbing with passion and life, dominating the action of the tale and carrying it to a thrilling climax.

Ornamented cloth, \$1.50.

## Lady Rose's Daughter

by **MRS. HUMPHRY WARD**.

Here is a book which, when first published in the spring of the year, was read, it seemed, by every one who reads novels, good, bad, or indifferent. Yet now, in the heart of the fall-publication season, the public continues to buy *Lady Rose's Daughter* even more eagerly than it did nine months ago.

Illustrated by Howard Chandler Christy.

## COMMENT

WHAT does General Groves mean by saying irritably that Roosevelt can be elected without the electoral vote of his own State? Are we to infer that the Republican managers already count New York as lost? And if so, why? These are interesting questions, indicating a most curious and wholly unprecedented condition in national politics. Contemplate the possibility, nearly a year before election day and six months before the nomination, of a virtual admission that McKinley could not have expected to carry Ohio, or Harrison Indiana, or Blaine Maine, or any one of them New York! It is unthinkable; it would have presaged certain defeat, if not in the convention, at the polls. And yet the assertion is made by a staunch and serious-minded friend of the President, with no apparent appreciation of its extraordinary character and obviously no apprehension of its outward effect upon Mr. Roosevelt's candidacy.

Strange, however, as this surely seems, hardly less noteworthy is the unanimity of opinion that the basis of the speculation is sound, and that Mr. Roosevelt cannot carry New York against a suitable Democratic candidate. It is recalled that he barely won his election as Governor while the laurels of San Juan were yet green on his brow, and it is urged, with much force, we must admit, that the current of feeling against him, not only in financial but also in commercial and mercantile circles, is very strong. Moreover, the party organization is rent asunder. Senator Platt, for thirty years the undisputed leader, has been humiliated at the behest of Governor Odell, who in turn has on hand a most bitter personal quarrel with the *Sun*, the ablest, most persistent, most unflinching, and most deadly of newspaper antagonists. This is not the President's fault; it is his misfortune; but it is a fact pregnant with menace. Ordinarily the effect of such a quarrel may be at least minimized by tactful endeavor and appeal to party loyalty, but in this case there seems to be no cure except the extermination of one or the other of the parties to the controversy. The New York Senators have not only prestige and friends, but the support of all the powerful corporations, while Governor Odell has that of only one—and *there*, as well as he, must fight for their lives. Unfortunately for the President, the contest is not unequal; on the contrary, it is so even that it bodes frightful ill, and it is he, blameless though he is, as we believe, who must suffer most.

That is hard luck for both the President and the country. No good can come from the political supremacy of a commercial boss who by brutal methods brings obloquy upon the splendid title bestowed upon him by the people. The World's change that the President connived at the advancement of Governor Odell is baseless. He did no more than his duty from the view-point of an organization man, no more than McKinley or Harrison or any recent President except

Cleveland might have done. He advocated peace for the sake of the party—such peace as could come only from amicable understanding—hence the meeting at the White House. Mr. Roosevelt's part in this transaction was wholly creditable; Governor Odell's thoroughly despicable. He boasted of being summoned to the White House, boasted *en route*, and boasted after he came away, coming dangerously near violating confidence after having been treated as a gentleman. That hark rather than good come from that conference was no fault of the President or Senator Platt, but such unquestionably was the result, contributing greatly to the strange belief, previously noted, that already, nearly a year before election day, New York must be placed in the Democratic column.

But—who is the man? Nobody is so foolish as to maintain that anybody could defeat Mr. Roosevelt. Mr. Bryan could not, for example. Could Judge Gray or Senator Gorman? We doubt it. Mr. Cleveland, of course, Judge Parker, probably. But we learn from a source which in the past we have found to be authoritative that Mr. Murphy—by suggestion of Mr. Croker—will not support Judge Parker because of his intimate relationship with Mr. Hill. You can generally rely upon Democratic politicians to make a mess of an opportunity.

The Republican National Committee, which has just held a meeting in Washington, decided that the next Republican national convention shall be held on June 21, 1904, at Chicago. The rules of the Republican party require that notifications of the date and place of the State conventions to be called for the purpose of electing delegates to the national convention shall be issued at least sixty days before the convening of the latter body. The proceedings of the Republican National Committee were unexpectedly harmonious. No opposition to the nomination of President Roosevelt was publicly avowed, although it is reported that a good deal of dissatisfaction with his administration, and doubt concerning his availability, was privately expressed. As Chairman Hanna's ascendancy over the committee was apparently complete, there would have been no bar to an impressive demonstration against Mr. Roosevelt had the Senator from Ohio been willing to permit it. The position taken by him is generally regarded as conclusive proof of his determination not to be a candidate. It will be remembered, however, that such was Mr. Blaine's resolve in December, 1891, and even later, nor was it long before the meeting of the Republican national convention in 1892 that he suddenly changed his mind, resigned the office of Secretary of State, and became a formidable rival of President Harrison for the nomination. Thereby hangs a story that is well known to old residents of Washington. It is probable that had not a request preferred by Mrs. Blaine in favor of a son-in-law been firmly and even sternly refused by Mr. Harrison, the latter would not have encountered Mr. Blaine's rivalry in the convention, and thus having at his back a united party, might have been reelected.

It was settled, in a caucus held on December 12, that Democratic Senators would make no attempt to amend the Cuban reciprocity bill, but would vote for the measure as it stood on December 16, the day agreed upon at the time when the Senate resolved not to discuss the bills during the extra session of Congress. The caucus adjourned to meet on December 14, for the purpose of discussing at that time the policies to be pursued by Democratic Senators during the present session with reference to the situation at Panama and the post-office scandal. Hitherto there has been much difference of opinion among leading Democrats in Congress regarding the tactics that their party should pursue during the coming campaign. Some have advocated a vigorous prosecution of a Congressional investigation of the Post-office Department, on the assumption that high Republican officials might be involved. Unless the assumption is well founded—unless, in other words, a Congressional inquiry is absolutely certain to disclose scandals much more serious than those revealed through the investigation ordered by Mr. Roosevelt—the move would be a foolish one. As to the Panama affair, there is no doubt that Mr. Williams, leader of the Democratic minority in the House of Representatives, has evinced sagacity and foresight by sit-

vising that his party should recognize accomplished facts and accept the canal treaty which has been negotiated with the Republic of Panama.

Mr. Williams sees that the common sense of the American people will never permit an abandonment of a canal zone over which we have at last secured the full jurisdiction which we had vainly sought for half a century. It will no more permit such a renunciation than it contemned the anti-imperialist demand for a renunciation of the Philippines. Mr. Williams, of course, is at liberty to accuse the administration of complicity in the Panama revolution, and we presume that a similar charge will be made by Democratic Senators, but we opine that Mr. Roosevelt and Secretary Hay will be able to repel the imputation. At all events, the Republic of Panama exists, and it has made a treaty giving us the canal franchise that we have long desired. A rejection of that treaty by Democratic Senators would not constitute an issue on which the Democratic party could safely go before the country. There is, in truth, but one issue, aside from the personal one, that is bright with promise, and that is certain to become more promising every day, as influential Republicans like Governor Cummins of Iowa grow the conviction that the tariff must be immediately revised, and its certain schedules reduced. Such a program, if confronted by nothing more cogent and captivating than a "stand-pat" policy, would be likely to cost the Republicans many of the doubtful States, and might possibly dislodge them from some of their reputed strongholds; from Illinois and Wisconsin, for example.

In the speech which he prepared for the banquet of the Boston Merchants' Association, Governor Cummins made it clear that he did not purpose to continue any longer the reticence which he was persecuted by Senator Allison to maintain during the recent campaign for State officers in Iowa. He advocated, and Representative McCall of Massachusetts, who spoke at the same banquet, concurred in advocating, the reciprocity policy of which Blaine and McKinley were earnest supporters. Governor Cummins attached no importance to the assertion that some of our manufacturers sell their products abroad for less money than they sell them at home. He did not intend, he said, to inquire whether the charge was true or false, for to him it was a matter of indifference whether our manufacturers sell at higher or lower prices in foreign markets than they sell in their home markets, provided our tariff laws do not permit them to sell at home for more than a fair "American price," without meeting with the competition of other lands. What was meant by "American price"? Evidently a price that would render it possible to conform to the American standard of wages and to the American standard of profit on an investment of capital. In other words, our tariff schedule should be so adjusted that our manufacturers can pay American wages to their employees, and reward the capital invested with a fair American profit; but no more. So much the American consumers ought to pay, but it should be made impossible to exact a penny more from them.

The tariff should provide that the moment that the price of a domestic commodity rose above the point just named, a foreign competitor might enter. Governor Cummins, for his part, is convinced that some of the schedules of the tariff of 1897 are too high, and that during the period of overwhelming demand which we have witnessed in the last three or four years our home producers have been able to exact more than a fair price for what they have sold. He is not blind to the difficulty of preparing tariff schedules so that they will answer with absolute accuracy the abstract test above formulated. He does not look for perfection. He holds, however, that in certain schedules the disparity is so great between rightful and actual prices that, even without regard to the advantages derivable from reciprocity treaties, there ought to be a revision. Let the tariff once be made to conform with reasonable closeness to the theoretical standard named, and Governor Cummins would not care at what price our exporters sell in other countries. If we pay only a fair price, and the exporter finds it profitable to sell abroad at less than a fair price, we are not injured, for American workmen have been employed to produce the exports. It is evident that Governor Cummins and Representative McCall have no patience with the "stand-patters." The former did not hesitate to deprecate what he

called the habit of shivering into which many Republicans seem in danger of falling. He ridiculed the bogie of industrial depression and unsettled commercial conditions which, he said, has been carried up and down the country by timorous souls who never took a step forward in their lives, followed by a mob of men who have all they want and more than they deserve. Whenever it is suggested to "stand-patters" that we can perpetuate the prosperity we have, and, with our expanding capacity, increase it, the answer is, Hush! do not awaken the sleeping American people, for they have not sense enough to see what is true and do what is right. Manifestly there are some Republicans, and influential ones at that, who agree with all Democrats in refusing to believe that our industrial and commercial structure rests upon a foundation so insecure as the "stand-patters" would have us imagine.

As chairman of the Republican National Committee, Senator Hanna invited his fellow members to dine with him at the Arlington Hotel on Saturday, December 12. The invitation inevitably included Judson W. Lyons, the negro national committeeman from Georgia, who holds the office of Register of the United States Treasury. Several of the Southern white members of the committee are said to have refrained from attending the dinner, because they did not care to meet a negro socially. Lyons is the man whose attendance at a reception given by President Roosevelt aroused criticism at the South. As we pointed out at the time, negroes who happened to be occupants of Federal offices in the District of Columbia had repeatedly attended receptions at the White House under previous administrations, Democratic as well as Republican. We added, however, that public opinion at the North had undergone so widespread and profound a change with regard to the wisdom of the Fourteenth and Fifteenth amendments of the Federal Constitution, that an incident which formerly passed unchallenged now provoked objection. Curiously enough, Mr. Roosevelt's willingness to treat negroes as social equals seems to have failed to rivet the allegiance of colored politicians at the South.

Equally fruitless has been his refusal to uphold the "Lily-White" Republicans in North Carolina, and his appointment of the negro Crum to be Collector of the Port of Charleston. It is said that E. H. Deas, the negro chairman of the South Carolina Republican State Committee, is resolved to send an anti-Roosevelt delegation to the Republican national convention. That Mr. Hanna is making no effort to secure negro delegations from the Southern States for himself is evident from the fact that he refused to heed the protest of Deas against his designation of Mr. J. G. Capers, of South Carolina, to be a member of the executive committee of the Republican National Committee. It is hard for Mr. Roosevelt to lose negro delegates, when he is debited with extinguishing the "Lily-White" organization at the South which Mr. McKinley did so much to create. It will be remembered that the Lily-White movement, which began in the sugar, rice, and lumber districts of Louisiana, had become so strong in the State election of 1896 that it very nearly elected its candidate for Governor. The result was in doubt for two months, and the Legislature had to determine it. It will also be remembered that the Lily-Whites of Louisiana ultimately received official recognition from the Republican party, and had their delegates seated in the last Republican national convention. Not only is a representative of theirs the present national committeeman for Louisiana, but persons recommended by them have been appointed collectors of customs and postmasters. Since Mr. Roosevelt became President, however, the Lily-White party in Louisiana has crumbled away, and its members are rapidly drifting back to the Democracy.

We have previously pointed out that the movement to secure the expulsion of Senator Smoot of Utah from the United States Senate would necessarily fail unless it could be proved that he was guilty of polygamy. The fact that he is a Mormon, and that the Mormon Church declines to regard polygamy as sinful, would not suffice, unless the practice of polygamy could be brought home to him. As we said, a Mohammedan can become a citizen of the United States, provided he does not avail himself of the Islamic permission to have more than one wife. Since we directed attention to the fact, the opponents of Senator Smoot have changed their tactics. On

December 12, is a petition filed with the Senate Committee on Privileges and Elections, the Senator from Utah was specifically charged with being personally a polygamist. In another protest Mr. Smoot was charged with being constructively an accessory to the commission of polygamy by others. It is well known that the accused Senator from Utah is one of the so-called twelve apostles of the Mormon Church. The protest to which we refer is signed by eighteen citizens of Utah, of whom fourteen are Republicans and four Democrats. It avers that the Mormon hierarchy is invested with supreme authority in all things, temporal and spiritual; that the mandates of this authority are announced and transmitted by the first president and twelve apostles; that, as a matter of faith or belief, this body of men has not abandoned polygamy, and that, consequently, it must be held to connive at and encourage polygamous practices.

This protest may seem, at the first glance, to raise a nice question, but we do not believe that the Federal Senate or the United States Supreme Court would have much difficulty in deciding it. It should be obvious to all intelligent men that the absolute religious liberty guaranteed by our Constitution would be devoid of practical significance if the professor of particular beliefs could be held responsible for the translation of those beliefs into acts by others. How could a Chinese, a Japanese, a Moslem, a Jew, or even an agnostic, be secure in his citizenship under such an interpretation of our Federal organic law? There is but one reasonable and endurable construction of the Constitution. With a man's personal beliefs, or with the tenets of the church to which he sees fit to belong, our Federal authorities have absolutely nothing to do, so long as the citizen does not personally commit acts which are prohibited by a Federal statute. It would be in the highest degree dangerous—nay, ultimately fatal—to the principle of complete toleration in matters of opinion and belief if the construction of the Constitution advocated by many well-meaning persons in the case of Senator Smoot could be accepted by the Senate and sanctioned by the United States Supreme Court.

With regard to the proposed relinquishment of the Isle of Pines to the Republic of Cuba, it is undoubtedly important that not only both Houses of Congress, but the Supreme Court of the United States, should consider and decide two questions, namely, first, Was full sovereignty over the Isle of Pines ceded to the United States by Spain in 1898 by the Treaty of Paris? Secondly, Has the Senate, through the exercise of its treaty-making power, the right to alienate national territory? The very fact that we are not vitally interested in the retention of the Isle of Pines makes the present hour an admirable one for pondering and answering the second question. It is certain that in assenting to boundary treaties, as, for example, with reference to our northeastern and northwestern boundaries, the Senate has asserted the right to say whether particular claims of ours to territory were unfounded. That is a very different thing from ceding territory over which our sovereignty is undisputed. Obviously, therefore, the first thing to determine is what the framers of the Treaty of Paris in 1898 meant to say with reference to the Isle of Pines.

It is true that, geographically, the Isle of Pines is a near neighbor of Cuba, and that, under the Spanish régime, it was treated as an adjunct of the larger island for administrative purposes. It should be borne in mind, however, that the representatives of Spain who cooperated in making the Treaty of Paris were by no means desirous of favoring an independent Republic of Cuba, and were well aware that the Isle of Pines might be useful to the United States, considered as a naval station. It is certain that the Isle of Pines is not mentioned in the treaty as an adjunct of Cuba, but that, on the contrary, all islands in or near the Caribbean, except Cuba, previously the property of Spain, are ceded to the United States. It seems *gaul*, we cannot avoid the conclusion that the Isle of Pines therein is as complete as it is in Porto Rico. If this assumption be warranted, we think that the House of Representatives is entirely right in saying that the treaty power of the Senate does not cover the alienation of territory acknowledged by the former owner to be the property of the United States.

Not, of course, that we are opposed to a cession of the Isle of Pines to Cuba. Cuba has granted us two coaling stations on her own territory, and we have no desire to withhold from her the Isle of Pines if she wants it. We do think, however, that we ought to proceed carefully, bearing in mind the risk of establishing a dangerous precedent. We also hold that if American citizens have made investments in the Isle of Pines, relying on official statements that the island would remain American territory, their interests ought to be protected in any treaty with Cuba whereby sovereignty over the island should be transferred.

It is a flagrant disgrace to many encyclopedias, the latest editions of which have been published since his death, that they do not even mention the names of the Scandinavian philanthropist Nobel, whose bequests, devised for the promotion of the intellectual elevation and the moral and physical well-being of the human race, have never yet been equalled in respect of munificence and utility. Mr. Nobel recognized what the founders of the Roman Catholic Church had perceived many centuries before, that to provide facilities for research or for intellectual activity in any direction was one thing; and that to hold up a great reward for individual success in profiting by such facilities was quite another. He saw that both incentives to intellectual and moral progress had been employed by Catholicism. The Roman Catholic Church provided the facilities in its convents, schools, and universities; it provided the rewards in its priories, abbeys, bishoprics, and archbishoprics; nay, even in the chase of succeeding to the papacy, which many a scholar like Aeneas Sylvius attained. Mr. Nobel consecrated the fortune which he had acquired to the endowment of five annual prizes, worth about \$40,000 apiece, and he took adequate precautions for the discriminating and just selection of the beneficiaries. Of the five honoraria of about \$40,000 each awarded this year by the Norwegian Parliament, one has gone to William R. Crozer, M.P., publisher of the *Aritrator* of London, for the work performed by him during many years in behalf of international arbitration; the prize for physics has been divided between Henri Becquerel, of Norway, and M. and Madame Curie of Paris; the chemical prize has been allotted to the Swedish professor Arrhenius; the medical prize to Dr. Finzen of Denmark; and the prize for literature to Bjørnstjerne Bjørnson, the Norwegian poet and dramatist. It is well known that Dr. Finzen is the inventor of the Finzen-ray system for the cure of lupus; Professor Becquerel is the discoverer of the Becquerel rays; and M. and Madame Curie are among the original elements of the discovery of radium.

Leong Kai-Chan, leader of the Chinese reform movement, has just left Seattle for his native land, carrying with him a hundred and fifty thousand dollars, gathered from the Chinese colonies in this country, to be devoted to the cause of reform in the Celestial Empire. When Leong Kai-Chan was in New York, his eloquence created a furor among the residents of Chinatown, and he had like successes in Boston, and San Francisco. He is the chief apostle of the doctrines of Kan Yu-Wei, who made a nearly successful attempt, a few years ago, to lead the young Emperor Hwang Su into the paths of modernity. Briefly, it is the ambition of the Chinese reformers to imitate the modernization of Japan, to abolish the Confucian educational hierarchy which is based on the ancient five classics, and to introduce Western science and the practical methods of Western lands. A chief object of the reformers is to abolish the system of revenue by tax-farming, originally universal in all Asian lands, and the cause, when introduced by the conquering Turks, of most of the ertik in the Balkan peninsula. It is notorious that boundless corruption accompanies the collection of revenue in China, where the system of "squeeze" is practised from the highest mandarin to the lowest hang-over of the local yamen, many times the amount of revenue which ultimately reaches the Treasury at Peking sticking to the fingers of the second-year officials who collect it from the hard-working Chinese peasants. It is certain that the policy of Kan Yu-Wei and Leong Kai-Chan will ultimately triumph, since it is well known that the Emperor will ultimately convert to their views and aspirations. It seems equally certain that Japan will play the part of mentor in this modern education of China, since it is an axiom with the reformers that they should learn their science

from the Japs, who have revised and perfected, and adapted to the Oriental mind, the crude product of Western thought.

Now that the Panama canal is practically assured, the inhabitants of the great Pacific ports of Seattle, Tacoma, and Portland are giving voice to their uneasy apprehensions of a loss of a large part of their carrying trade. They fear that all slow freight, instead of passing through their hands on its way from the Northwestern States to the Orient, will find its way through the canal. They are especially fearful that that part of their commerce which is drawn from the Gulf States will dwindle away, and they even declare that they are in danger of losing that part of the lumber trade, their own particular specialty, which goes East overland. At present they pay the railroads forty cents a thousand cubic feet for the transport of lumber, about half what the freight was a few years ago; but it is claimed that, once the canal is open, lumber can be taken to New York for half the present rate. While one sees the reason of these fears, one cannot seriously endorse them; for a little consideration will show that the growth of the Pacific Northwest is so rapid that new resources are constantly being tapped, and that this increase in commodities and produce will more than make up for whatever the canal may take away. The irrigation of immense areas of Idaho and eastern Oregon, the constant additions to the wheat-lands of eastern Washington, the almost inexhaustible and excellent lumber, the salmon fisheries of the Columbia River, with purely local products like hops, apples, and berries, assure to the Pacific Northwest a steady development which will give it lasting prosperity; and it will be found that the canal will bring more than it takes away, as increasing wealth on the Pacific coast opens up new wants and a desire for new luxuries, to be brought not merely from the Eastern seaboard of the States, but even across the Atlantic from Europe.

Mr. John Turner, Englishman, seems to be an orderly man, who wears a white shirt—not a red one—and keeps it on in public. He landed on these shores late in October, with the intention of spending five months here in travel and discourse. He has friends in this country, with one of whom, Miss Emma Goldman, the papers say, he expected to stay while in New York. On October 23 he lectured at the Murray Hill Lyceum, Miss Goldman was there, and Herr Most, and the audience also included the Supervising Inspector of Immigration at this port and some police inspectors. Mr. Turner talked about labor-union matters, and said, among other things, that all Europe was getting ready for a general strike which would give the workers a chance to assert their power and "determine as quickly as possible their emancipation." When he had finished his address the Inspector of Immigration had him arrested in a polite fashion, took him to the police station, searched him for bombs, but found none, and presently sent him to Ellis Island. There he was examined by Commissioner Williams, found to be an anarchist, and ordered to be deported under the law of March 3, 1903. That law provides that no person shall be permitted to enter the United States "who disbelieves in, or who is opposed to, all organized government." The law was devised to exclude anarchists. The London police think Mr. Turner is an anarchist, and Mr. Turner thinks so also. Indeed, he assured Commissioner Williams that he was an anarchist. He seems to believe in organized government for labor-unions, but thinks that he does not believe in it for nations. Prince Krapotkin, who lately visited this country, and was hospitably entertained here by all sorts of people, and later contributed an interesting autobiography to the *Atlantic Monthly*, also gave out that he was an anarchist, and if he came here again Commissioner Williams would have to send him back to England. For the law of March 3 makes no distinction between the philosophical anarchists who use argument and the practical anarchists who use gunpowder. It put all along anarchists in the category of undesirable newcomers, also with sore-eyed Slavs, paupers, crazy persons, and other victims of misfortune. The feeling is that we have troubles enough of these sorts of our own, and should not import any more.

It scandalized Turner's friends that he should be arrested while talking mildly in a white shirt, as has been said. He had expected to make an address in a few days on the Haymarket anarchists, and perhaps there was special disappointment that

that oration should be denied a vent. They got a writ of Habeas corpus and had him before Judge Lacombe of the United States Circuit Court, and counsel argued for him that he wasn't the kind of anarchist our new law objected to, and that so much of the new law as applied to him was unconstitutional. But the court upheld the law, and appeal was taken to the Supreme Court, and until a final decision is reached Turner will stay at Ellis Island. He could go home if he chose, but if he did our courts would concern themselves no more about him, so he is waiting in order to test the law. His case has brought the law to the notice of many persons who find themselves mortified that respectable persons whose conduct in orderly should be excluded from this country because of their opinions. If we are going to keep aliens out because of their beliefs, say these reformers, the next step will be to shut citizens up because of their beliefs. They don't at all like the apparent drift from English precedents and principles to Russian ones. A mass-meeting of persons of this way of feeling was held in New York on December 3. Mr. John S. Crosby was the chairman, and among the vice-presidents were Moore, Carl Schurz, W. H. Baldwin, Jr., James Byrne, H. E. Deming, and Felix Adler. Addresses were made, a letter from Mr. Edward M. Shepard was read, and resolutions were adopted protesting against so much of the immigration law as authorizes the exclusion and deportation of an alien solely because of his opinions.

The law as it stands will hardly do. The provision against opinions would not keep out the murderous scoundrels whom the government really wants to reach. Of course it is a nuisance to have agitators with fantastic theories come into the country and preach discontent. But if such persons are of decent and orderly behavior it seems less mischievous to let them in than to bar them out because their theories are wrong. Turner came here with the intention, presumably, of raising his voice according to his ability. We are entirely warranted in excluding him if we think it expedient, but in our population so stupid, and are things going so ill with us, that we dare not let a Briton in a white shirt expound his theories of government to our voters! Are not such precautions fitter for the nursery than for a grown-up nation with Anglo-Saxon traditions? If Turner is merely an ass, it is a great pity to accord him the distinction of being a martyr to free speech. He is a nuisance, of course, but he is a worse nuisance in a cell on Ellis Island than he would be on a platform in Chicago.

The *Syracuse Post-Standard*, an ordinarily intelligent paper, says:

It is apparent that the esteemed contemporary and journal of civilization, HARPER'S WEEKLY, is among those who would be glad to believe, if they could, that General Wood while at Santiago made an intimate personal friend of an ex-convict and employed him to blacken the reputations of various American officers; that General Wood inspired an article in an American periodical which caused the recall of General Brooke from Havana; that he personally influenced the Cuban Courts of Justice to condemn Rabinow, although he would have been guilty of extravagance more flagrant and equally unwarranted by law; that General Wood, while Governor-General of Cuba, accepted for himself and his wife presents valued at thousands of dollars from a gambling corporation in Havana, in return for the concession of a privilege to continue its nefarious trade.

To which we reply that all these things could be "apparent" only to a blind man. We oppose the confirmation of General Wood, not because we believe him to be either dishonest or dishonorable, but because he has done nothing to justify such extraordinary promotion, and his further elevation would be not only unjust to hundreds of other deserving officers, but also a serious menace to the efficiency of the army. There may or may not be sound basis for the personal charges against him; we do not assume to know whether there is or not, and therefore express no opinion. Of one fact, however, we are tolerably certain, namely, that if, as Secretary Root, with uncharacteristic futility maintains, General Wood suffers unduly from false reports of the secret committee hearings, he has only his own friends to blame; his opponents were outspoken for public sessions. Moreover, why shouldn't General Wood come home and face his accusers? Surely he is not the only American officer capable of directing the movement of three thousand United States troops against a few hundred ill-equipped natives. And he is a manly man—isn't he?—and would like to do it—wouldn't he?

## What Will the Democrats Do?

In about six months the Republican nomination for the Presidency will have been made, and the Democratic nomination will quickly follow. It is a time that Democrats should begin to consider carefully the platform and the candidate that they will present to the country. The situation in which they find themselves is, from several points of view, unique. Never before in the history of the republic has a Vice-President who became President by accident succeeded in securing from his party a nomination for the succeeding term of the Presidency. Yet since the meeting of the Republican National Committee, Mr. Roosevelt's nomination seems as certain as any future event on earth. He has not a single avowed rival; there is scarcely a sign of opposition to him in the Republican ranks. This seems an astonishing state of things when we recall what strenuous resistance the candidacy of such men as Blaine and McKinley encountered. What day of such men as Blaine and McKinley encountered. What day of such men as Blaine and McKinley encountered. What day of such men as Blaine and McKinley encountered.

When even some Republican politicians evince a certain amount of apprehension, it is not surprising that in the business world the prospect of Mr. Roosevelt's nomination and election is regarded with something like dismay. By the business world we do not mean the financial magnates of any particular city, nor the great corporations engaged in production or transportation, we mean every man who, by dint of hard work, enterprise, and thrift, has managed to accumulate some money, and who capitalizes, he it may be large, in some branch of industry or in trade. In a country like the United States, indeed, where there is no leisure class and no proletariat, the term business world is almost synonymous with the whole mass of able-bodied males who have enough intellect and character to be self-sustaining. Not only the so-called financier who handles large blocks of securities, but every skilled and economical workman whose savings have purchased the home he lives in or are drawing interest in a savings-bank, or have made provision for old age in the form of a life-insurance policy, is vitally interested in a wise, sober, cautious, and conservative administration of the Federal government, that will scrupulously avoid fiscal dilution or financial disturbance, and strive strenuously to maintain prosperity, confidence, and peace. When we say, then, that Mr. Roosevelt is beginning to be eyed with some mistrust by the business world, we mean that the feeling is shared by every sound, sane, well-balanced, and clear-sighted intellect in the country. Not only does the feeling exist, but it is tending to grow more widespread and intense; nor are there wanting already some careful observers of Mr. Roosevelt's career who look forward to his election to the Presidency with anxiety, not to say repugnance.

What is to be done? Apparently, it is useless to expect help from the Republican party. Its machinery is in the hands of Mr. Roosevelt's friends. The President's nomination, therefore, may be taken for granted. The only hope of deliverance from a Chief Magistrate whose many sane and wise members of his own party distrust lies in the national Democracy, whose convention will meet a week or two after the Republican nomination has been made. Not for twelve years will the Democratic party have had such a golden opportunity. Mr. Williams of Mississippi, the leader of the minority in the House of Representatives, is right in thinking and saying that the outlook for the Democracy is brighter than it has been for many years, partly because their opponents are committed to a dangerous candidate, and partly because their own national differences have been removed to a very large extent, than it has been at any time since the autumn of 1852. Mr. Williams does not hesitate to express the belief that any good, square, plain Democrat can next year defeat Mr. Roosevelt, in whom the Republicans are chained, and from whom they cannot escape. They have gone too far to retreat, and cannot now refuse to com-

inate him, much as the conservative members of the party may regret the lot. Mr. Williams holds that Mr. Roosevelt's election would not only impair the business interests of the United States, but would be viewed by intelligent outsiders all over the world as a menace to the peace of nations. The leader of the Democratic minority in the House goes so far as to say that Mr. Roosevelt is the easiest man in the Republican party to beat; much easier than Senator Hanna, who would have been a strong candidate, but who is now well-eliminated from the race. Mr. Williams preferred not to mention at this time the names of possible candidates for the Democratic nomination, but he declared the conviction that any Democrat faithful to the fundamental historical Democratic principles, and unassociated with any special interest, would win against an unsafe and spectacular Republican nominee. Requested to indicate what he thought about Mr. Gorman's candidacy, Mr. Williams described the Maryland Senator as an able man of affairs, and praised the services rendered by him to the Southern States in the defeat of the loam bill under the Harrison administration. He added that there are other good men in the Democratic party who would be strong candidates. It will have been noted that Mr. Williams had nothing to say about Chief-Judge Parker of New York. Other leading Democrats in Congress profess to be for Parker, but there is some reason to suspect that the judge's name is used as a cover for a candidate as yet unrevealed. It is also rumored that Mr. Gorman's candidacy is only nominal, and that the Maryland Senator intends to turn over whatever strength he may be able to secure to New York's candidate, whoever that may be. There seems to be no doubt that Judge Gray can have the support of the delegation from his own State, Delaware, if he wants it, both Mr. F. J. Ford, the Democratic boss of Wilmington, and former Congressman Handy, the head of the Bryan faction, having declared themselves in favor of the Federal jurist. It looks, at this time, as if any sound-minded Democrat could carry New York, in view of the far-reaching and raucous discussion between the friends of Mr. Platt and those of Governor Odell. The casting of the veteran Senator from the leadership of the party in his State, which he has held for many years, threatens to have consequences no less serious than those which followed President Arthur's alienation of the Half-Breed by the forced nomination of Judge Feltner for the Governorship. The outcome of that tactical mistake was, it will be remembered, that the Republicans lost the State by nearly 200,000, and Mr. Cleveland's phenomenal career began.

Two members of the House of Representatives, General Grover and Mr. Payne, have lately asserted that Mr. Roosevelt does not need to carry the State of New York in order to be elected. Now it is perfectly true that in 1896 the deduction of New York's thirty-six electoral votes from Mr. McKinley's total (271) would not have given the Presidency to Mr. Bryan. It is a matter of common observation, however, that when the State of New York is carried with a large majority by a given political party, that party is almost certain to carry the adjoining States—New Jersey and Connecticut. If the fifty-two electoral votes of New York, New Jersey, and Connecticut had been subtracted from Mr. McKinley's aggregate in 1896 he would have been defeated. Only in 1890 could he, on the face of the returns, have afforded to lose the combined vote of those three commonwealths. Had he lost them, however, the loss would have indicated a tidal-wave against him which, probably, would have prevented him from carrying Indiana, Maryland, and West Virginia. In the latter event he would have been defeated. Ominously, Mr. Cleveland in 1892 could have afforded to lose New York, New Jersey, and Connecticut, but not Indiana also. In 1888 it is notorious that Governor Harrison was elected by the vote of the State of New York. At that time, both New Jersey and Connecticut gave their electoral votes to Mr. Cleveland. If Mr. Cleveland was elected in 1884 it was by virtue of a plurality of less than 1200 in the State of New York. The same thing is true of Garfield. We add that it was because Mr. Tilden got the electoral votes of New York, New Jersey, Connecticut, and Indiana that even the partition vote of the electoral commission had to concede him 184 electors out of an aggregate 185 given to Mr. Hayes. In view of the part played during the last quarter of a century by New York, either directly, or indirectly through New Jersey and Connecticut, it is absurd to say that Mr. Roosevelt can afford to lose his native State.

We have formerly pointed out that it has seldom happened that the tremendous powers of the Presidency, transcending as they do in magnitude those of any constitutional sovereign, have ever centered upon a man against whom the business world has been arrayed with a close approach to unanimity. In the history of the republic, there are three apparent exceptions to the rule, but three, upon close inspection, turn out not to be true exceptions. They are Jefferson, Jackson, and Lincoln. It cannot be denied that almost all of the law bankers, manufacturers, and great merchants that we possessed in 1800 were Federalists, and repudiated Thomas Jefferson not only with profound distrust, but with positive detestation. It is well known that Jefferson obtained seventy-three electoral votes, against the sixty-six cast for

John Adams, the Federalist candidate. It should be borne in mind, however, that at that time the few bankers and great merchants existing in the United States were concentrated in such small seaport towns as Charleston, Baltimore, Philadelphia, New York, Newport, Boston, and Salem. In the absence of the facilities at present afforded by steam and electricity, their means of communicating their opinions were extremely defective. If they could have reached every trader in every country village as he can now be reached, it is certain that the Federalists would easily have beaten Jefferson, notwithstanding the fact that the bulk of the republic's capital was then invested in agriculture. The election of Andrew Jackson in 1828 is explicable on somewhat similar grounds. His known hostility to the United States Bank had arrayed against him a large majority of business men in certain seaboard cities—to wit, Charleston, Baltimore, Philadelphia, and Boston. In the city of New York the business community was at that time somewhat divided in sentiment, owing partly to jealousy of Philadelphia, which then was the banking centre of the United States, and partly to sympathy for Jackson, based on the belief that his defeat in the House of Representatives in the winter of 1824-5 was the result of a bargain between John Q. Adams and Henry Clay. As for Abraham Lincoln, it is obvious that in his case the ostensible exception proves the rule. There is no doubt that the bankers and merchants, not only of New Orleans, Charleston, and Baltimore, but also of Philadelphia, New York, and Boston, were, for the most part, vehemently opposed to Mr. Lincoln's candidacy. They assumed, and the event proved that they were justified in assuming, that his election would be followed by civil war. Their opposition would have been fatal to Mr. Lincoln had his opponents been able to unite upon a candidate. The combined vote cast for Douglas, Breckinridge, and Bell was almost a million greater than that cast for Lincoln. As for Mr. Bryan, against whom the business world was practically unanimous, he was beaten in 1896 by 95 and in 1900 by 137 electoral votes. The tremendous effort produced by business interests on those occasions should manifestly be ascribed to the thoroughness with which the whole country has been knit together by electricity, which now permits convictions and warnings formulated in business centres to be flashed in a second from one end of the republic to the other.

### Feast-days and Fast-days

It is an hour when thought inevitably turns to feast-days and, by the great law of contrast, to fast-days. I have come to the conclusion that such festivals are a divinely appointed institution for knitting up the ravell'd shreds of our relations; a shove, almost so ill-voiced in the beginning that but for these set seasons of picking up dropped stitches, ay, even of darning in a brooding way the awful holes of misunderstanding and cross purposes, we should find ourselves from year to year in the pitiful plight of being entirely clothed on with new faces, new friends, new well-wishers. Even a bride, at that most conservative step of putting off the old and putting on the new, is cautioned to wear "something old and something new." The truth is, new things are cheap; they can be bought with money, and whatever can be bought with money, though it cost millions, is cheap, and the dear things can only be bought with care, and years, and loyalty, and a pure instinct; such things as old habits, old faiths, old loves, old friends. Without these, how poor and tawdry a mortal looks! A person walking through the world dressed up in new human relations is no better than a painted wax lady in a shop window showing off the boyish clothes.

So, by divine Providence—there are still those old-fashioned enough not to feel this phrase an insult—or by human providence, or perhaps both, the fast-days and the feast-days are set apart for a man to think upon the dignity of his position in the universe. A position in the universe? Oh, horrid arrogance of a handful of senseless dust! What is a man but his relations? Leave him to stand alone without conscious ties to the rest of the world, unreciprocated by friends and kindfolk and the pitying charity that lends him his white and purple, and he is, in very deed, little more than "a fecked, straddling animal with handy legs."

However, such are the exigencies of human life for the most of us that we have to accept ourselves as we are; we keep our eyes steadily turned away from the thought that we are—we know not what!—mere atoms in a void or "light-sparkles floating in the ether of Deity," and we admit ourselves to be animated organisms concocted of organic processes that require effort. Yes, despiteful or not, we feel called upon for the most part to hoard our little pelf, to hustle about for food and raiment and empty honors and even a few wholesome and necessary, if fleshly, pleasures and exercises. And from this we are called by our fast-days and feast-days.

Ecclesiastical fasting is wasteful. It is a time when not only sound and hearty people receive priestly dispensation from fasting during Lent, but even people who are ill from overfeeding receive the same. And who knows but the law works both ways, and

that without such dispensation a physical buoyancy might result which would turn the penitential office into exultant melody? However, if one bemoans the restriction of fasting in the churches, it is good to see it being introduced, on all sides, as a hygienic measure; and, on the other hand, if the old habit of meditation is discouraged since the abolishing of the monastic houses, so that the average Christian looks upon it as a kind of intellectual presumption and as a way of arrogating to oneself the privileges of saints, it is heartening to see the American Buddhists, theosophists and Mental Healers and such Christian Scientists and other sects who nowadays replace worship with intellectualism—however diluted—by stress again upon the little daily quiet, the occasional moment held apart for self-recollection.

It would seem to me that fast-days are particularly suited to knitting up the infinite relations. One feels that the bodily processes may not overheat the brain, but that it may be clear and cool for the influx of thought from outside. One facts in solitude. This is no time when swift-coursing blood sends the ready repartee or witty jest to the lips. Jests are at bottom of the wise-up, but not most plentiful, but fasting and solitude bring the slow-moving meditation that strips man bare of all his warm self-glory, and shows him himself; himself alone in a universe so great that, though he sees and dimly conceives, he dare not try to think of it. And so his meditation is for the closet. Shut in, in the dark which has no boundaries, or in a glimmering half-light where he faces some symbol of the life beyond—some carved bit of wood, picture, or text, alone he begins to know his own insignificance in a boundless universe of life. Another method, though I am not sure it is authoritatively prescribed anywhere, is midnight meditation with the stars, and roof and a blanket, or a sheep-forsaken hill and a horizontal position, may show one the great heavenly luminaries wheeling slowly in widening circles about "that same star that the westward fall is." It is even enlarging, in a way, to remember that that stately light glowed there for thousands of eons centuries before, and that he spoke of its fondness even as the ghost was about to appear from

"The undecorated country from whose hours  
No traveller returns."

While luminous worlds wheel by on their infinite courses. Vega, the blue and the dazzling, stands up in her lyre, and athwart the guide-posts of the polar star she smiles upon Kapella. Cassiopeia, with her arms stretched high in amazement, courses from the east to west, eternally romping the Big Bear. Aldebaran, in the wider circle which Taurus makes, marks the corner of the Hyades' good V, and the group of the Pleiades, the most poetic cluster in the starry heavens, perhaps because Nappo sang of them, upholds the foot of Perseus. Below the Bull, the martial Orion stalks, followed by Sirius, glowing and wonderful, and the well-known group stand from a background of pulsating streams and convoluted wandings of lesser stars, intricately interwrought in infinite space. Shall a man measure the significance of this? Whatever, possibly he may have felt about himself as he went in the morning to his counting-house, a night of such a journey through the universal silence must give him pause. What atom in the whole is he?

"A little dust that life blows up and down  
And death will fly."

This is by law of contrast, for the feast of the year is at hand. We shall shortly, the best and the best of us, be eating and drinking of our best, and we are even now counting our friends and our fingers and calculating how much we can spend to stretch up the broken stitches. What matter that our all most go? There are worse remorses than that of letting January find us with not a penny for the opera and with no fur around our necks. What matter, such regrets if the friend who knew us when we were twelve but we is himself, "He was a disagreeable little chap, goodness knows, but it's odd how those and boys remember old friends." And so my plan is for a tightening of all the human bonds, and that the great feast be one more chance to help

"Our days to be  
Bound each to each in natural piety."

So that somehow by stretching hands overseas and across worlds to those who have loved us once, long since, and may yet be signalled to us, we force a kind of continuity into this strange, detached, conglomerate experience called Life.

We need not grieve that we are unimportant to the world in which we live. We are in no worse plight than the millionaire in his mansion, the crowned head in his palace. They rest upon us as we pass. It is but a breathing-space between a sleep and a sleep. But we have our feast-day, and we are all alike, rich in gracious words and tender thoughts, that which costs a whole treasury of mind and is worth more than millions.

So as the great day of the greatest name draws near, we realize that man is, only in so far as he has established, on his fast-days, relations with the infinite, on his feast-days, relations to man.

## ELIHU ROOT, WHO RETIRES FROM THE PRESIDENT'S CABINET AS SECRETARY OF WAR IN JANUARY, 1904

*Mr. Root will return to New York City next month and resume the practice of law. He was appointed Secretary of War in August, 1898, by Mr. McKinley, and was reappointed in March, 1901. When Mr. Roosevelt became President he reappointed Mr. Root in the cabinet, where he has not only served as Minister of War, but has also discharged the functions which in England belong to the Secretary of the Colonies. He will be succeeded in Mr. Roosevelt's cabinet by William H. Taft. On the opposite page will be found some interesting reminiscences of Mr. Root told by his friends and classmates of college.*

various in years and inclined to be indulgent. During term time the most of the members of the class of '64 were the leaders of the physical recreation either locally, but when examination time approached those who had been diligent in term work found themselves in an altogether unpleasant predicament.

"One of the class, however, Franklin Jay Locke, a leading lawyer of Buffalo and a joint author of former President Cleveland's conservative platform scheme, by which the class, to a man, was able to pass without a hitch. We got through more by the help of what we had 'up our sleeves' than by what was carried in our hands."

"The examination proved to be a case of 'wanting ambition that o'er leaped itself and fell on the other side.' In fact the examination was so unaccountably brilliant that the faculty threw it out altogether. Ethus hearing this and fearful lest the prospects of his classmates might operate to his prejudice, went to the president and offered to be examined on any part of the book or the whole of it and take his marks accordingly. A man who will do that ought to get the valedictory, and he did get it, and has been getting it ever since."

"A classmate says that in the planning of college escapades Ethus was invariably counted out. His failure to take part in them was not due to the lack of college spirit, but rather to the fact that he lived at home and did not mingle much with the students in their dormitory life, where much of the mischief was planned, and to the additional and quite important fact that his father was a prominent member of the faculty. That Mr. Root was fond of fun, however, is evidenced by an incident which occurred during his senior year, when the burden of college duties are supposed to weigh less heavily than in preceding years. The incident is related as follows by a college class of Mr. Root's:

"Root came into one room one afternoon, Windsor, now the Rev. Dr. Willing, and Mr. Root had scribbled over the room the previous year, and had left an amateur printer's kit in the wood room. Some of us knew anything about printing, but we were disposed to put the affair in practical use. In those days excess were at high tide. The writings of these scholars, however, served a great want of valuable time and energy, not to mention the occasional moral strain. Why not economize and have a set form for all papers? But what should the form be. That was an easy problem. The legal and constitutional talent of Ethus was made to read. A sufficient number of copies to meet supposed future needs were struck off after much toil. It proved a veritable labor-saving device, whereby for the remainder of our course, all courses could be rendered with zest and despatch."

"While Mr. Root was generally regarded in college as a prominent preacher in every way, still his productions were thought to have failed to make an impression on his hearers. A classmate, who is now a highly successful lawyer in a prominent western city, in speaking of Mr. Root, recently said: 'The one thing that impressed me the most regarding him as a college student was no one could read by him in his Sophomore year, on 'The Disadvantage of Being Rich.' The essay was in the nature of an argument to

prove that the rich man's son is compelled to meet much greater obstacles in his life's struggle for success than is the poor man's son. He maintained that if the rich man's son is able to overcome such obstacles and achieve success, he is entitled to much greater credit than is the poor boy who overcomes poverty and succeeds. The essay was well written, particularly as was the younger man in our class. It is the only essay written by a member of '64 that I recall."

"Mr. Root's efforts as an orator have for many years furnished masterpieces, but it is more difficult to find success in this line, as in all others, have been the result of conversations, practical work, rather than unusual natural gifts. One who readily recalls his record as a student, says:

"Ethus Root was not by nature a fine speaker. Fortunately Hamilton College, which for many years has been spoken of as the 'home of modern oratory,' demanded attention to expression, and as well as written, as a part of the regular work. Young Root met this obligation, as he did others, with conscientious hard work. His worse prize comes year after year, though he was no prize. But he learned how to write effectively, and his Clark Prize oration on 'The Jew of Dikem, Root and Shakespeare' was a remarkable effort for a boy of nineteen. He drilled carefully on his declamation for the Chapel stage. The gifted speakers were appointed competitors for Freshman year; Ethus won a place among the Sophomore competitors. He did not take a prize, but he had learned how to use himself and his voice before an audience."

"A few years ago Mr. Root is reported by an intimate friend to have said that he wished to take only those cases in law that he was sure he could win. He was, however, not so sure of himself as these Hercules tasks by the breadth and thoroughness of his education. His opponents have often endeavored to make capital out of the fact that he was one of the counsel for the defense in the famous Tweed litigation some years ago. Here in that one who has known Mr. Root since his birth, and who is not only familiar with his career, but who also thoroughly understands his motives, says regarding the matter:

"Mr. Root's connection with the Tweed litigation was hered upon him. I think who knew him in his spare time was involved. Mr. Root felt bound to protect this client's interests under the law, and so was drawn into the array of lawyers on the defense. He has said, once and again, that he did in the Tweed affair no more than to urge that not prejudice or public outcry but the law should control in the trial and in the punishment of the offender. Many of the public statements in this matter are abused. As Mr. Root was admitted to the bar in 1867, he could have had no share whatever in matters prior to the Tweed break-up."

"That Mr. Root has retained the simplicity of manner, kindness of heart and loyalty to friends so noticeable in his boyhood and college days is shown by the following words of a classmate now a prominent preacher in New York:

"I called at the Secretary's office last long ago, and I can certify that it is not a case of mistaken identity. I had come to return some letters, after reading in the papers about the hard times through which Mr. Root was passing. He was greeted by a friend, but I just the next old Ethus. I mentioned in his hearing, a scholar in his statements, and a jolly good fellow to his friends."

## Divorce and Remarriage

By the Rt. Rev. William Crowell Doane, D.D., Bishop of Albany

PEOPLE approach convictions about the question of the rightness of remarriage after divorce along very different paths, partly because they approach the whole question of marriage from very different starting points. (a)

Marriage is a civil contract which the State recognizes and also sanctions entered into by an act of common consent. (b) Marriage is the natural relation between a man and a woman entered into by an act of common consent. (c) Marriage is a divine institution, "instituted of God in the likeness of man's incestuous," and recognized and confirmed to such by our Lord. This last description includes and involves the other two.

But the first two definitions exclude and deny the last. So as to the question of remarriage after divorce there are varying views. The Roman Church recognizes no divorce at all with any right to re-marry. The Episcopal Church and the Methodist Episcopal church in America admit remarriage in the innocent party divorced for the cause of the adultery of the other. The Presbyterian Church adds incurable desolation as an admitted cause, etc., while in the civil law there is a wide range from the absolute prohibition in South Carolina, and the single acknowledged cause in New York, to desolation, lack of support, etc., in the different States.

The divorce is more easy to detect than to cure. I do not believe the effort to secure a uniform divorce law by Congressional action through an amendment to the Constitution. I do believe that the churches need to speak more plainly about the evil, to try to cause to some mutual understanding about their meeting of public opinion, which is most important to reach in the meeting of public opinion, and the association of society with sound convictions to be put in practice.

There is a grave question, and the question is growing graver, whether the religious sanction for divorcing the bond of marriage for any cause whatever. But there is an question making a divorce possible. In all other cases it must be a separation. My own conviction is that the bond is indissoluble

except by death. Surely the Christian sentiment of thoughtful men might come to feel the danger of going beyond the letter of Scripture. This would considerably reduce the frequency of divorce, although it would still leave untouched the scandal of adultery, and the difficulty of finding what is called the innocent party in a divorce suit.

A public journal, not coming to enter into the theological discussion or to deal with it from the purely religious point of view, is more concerned with the practical side of the matter as it exists in the country today. The *Evening Post* continued the other day this news, not exaggerated, of what recently occurred in a place of public society recent. "The groom, Mr. X., had already been married once, but Mrs. X. had, thanks to the mercy of the divorce court, been able to get another husband. The bride, Mrs. Y., had also been married, but she had entered a suit for divorce. While waiting for the decision, she had lost no time in re-marrying, but had become engaged to Mr. X. The decree was handed yesterday, and at the end of one hour and twenty minutes Mrs. Y. became Mrs. X. No. 2. The judge who granted the decree, also performed the ceremony; and, in order to preserve the sanctity, he was the same judicial robes." Of course these more concrete instances attract the largest attention, but they are gradually indications of innumerable cases in the hidden world of life.

The power of the press should be noted to create and mold a public opinion which shall denounce such flagrant outrages, and shall insist on the sanctity of marriage, and shall insist on family relation and destroying the security of the home, all which underlie human society. Much has been accomplished by laws enacted through the influence of the American Bar Association, and by the second and careful legislation which controls the District of Columbia. But the demand still exists, that the attention of the people at large shall be called to the disgrace and danger of existing conditions; and as one pulls down blocks of houses to arrest a fire, or extreme and drastic measures are justified in order to check the progress of this spreading social disease.

# A FORECAST OF TAMMANY

## PLEDGES OF PURITY FOR THE NEW YEAR.

BY ALBERT LEVERING

Here they come! (With aig, reluctant jolt.)

"Thank you very much for your kind information. May I offer you a reward?"  
"Oh no, thank you; the crowd would torch my heels."

"Tannery Clerk. - What are you do you want?"  
"Oh - Oh - I want a towel and a half shoe."  
"Tannery Clerk. - All right. You take a stir and a half sale."

"Oh no, thank you; the crowd would torch my heels!"

"Thank you very much for your kind information. May I offer you a reward?"  
"Oh no, thank you; the crowd would torch my heels."

The Millionaire—U—?

Let us hope that he doesn't wake up.

# The Strangle-hold of Labor

This is the last of a series of four articles on the tremendous power of labor as it affects the home, the actual cost of living—the price of food, clothes, transportation, every-day necessities. These four articles emphasize most vitally the personal phase of a situation which seriously threatens not only commercial growth, but individual liberty

## IV. Clothes and Every-day Necessities.—By John Keith

I HAVE already shown how the general public has been uneducated in respect to the places where it lives and works, the street-cars and trains that transport it, and the household that support it. In this article I shall describe the grip of labor upon things to wear and upon other actual necessities of every-day living.

The Journeymen Tailors are among the earliest labor unions. They were organized in some places before 1800. Their prosperity is largely to blame for the fact that clothes in America cost nearly twice as much as anywhere else. They are at present engaged in a mortal struggle with their employers, the Merchant Tailors' Protective Association, whose president, David M. Parry, has enlarged the struggle by organizing a National Association of Manufacturers, of which he is president. He is a bitter warrior, and proposes that capital and labor settle down for a fight to the finish. His conception of the rights and responsibilities of labor is, in a word, this:

"If a union succeeds in forcing the payment to its members of a wage scale that is above the economic level fixed by supply and demand it is taking a share of the aggregate production larger than it is justly entitled to, and there is left a less amount than there should be for division among the other classes of labor. The manner in which the body of this hold-up system is extorted becomes evident upon an analysis of its results.

"Does the employer get his profit? He does not, for he will refuse to allow arrears to be made on his capital, and will insist on a fair profit even on the extra wages he is made to pay. The normal result is that the body is charged up to the cost of production, and the efforts are (1) to raise the price of the product to the consumer, thus making it impossible for some people to purchase it who had previously been able to do so, while those who pay the advanced price have their power to buy other articles proportionally diminished; (2) to throw men into illness or partial idleness because of the shrinkage in the demand for articles necessitated by the decrease in the purchasing power of labor in general, and (3) to discourage the investment of capital and check its accumulation because of the instability and uncertainty of business conditions resulting from the power of an organization to dictate terms according to its own whims and desires."

Mr. Parry is president of the Merchant Tailors' Protective Association, which has been for some time waging war against an alliance of the Amalgamated Union of Clothing Workers and the Workers' Association. It claims to be a war to the death, the object being determined to compel a recognition of the union and the recognition of a fixed wage scale, and the employers being determined to hire or discharge as they please, to work workmen according to their convenience, and to discontinue carrying the "backshop" where the men can work instead of at home.

The unions made their demands. The employers responded July 1 by "lock-outs." In Kansas City, Denver, Cleveland, and Birmingham the two unions considered with the boycott and with strenuous efforts to prevent non-union tailors from working. The Federation has sent out a national appeal for contributions to aid the tailors, and the two unions involved have assessed those who work twenty-four cents a week for the benefit of those who are locked out. The Journeymen Tailors' Union contains 391 local unions. As a sample of its activity and wealth, we may note that in the year previous to the strike of July 1 it paid to eighty-one of its local unions strike benefits amounting to \$34,392 for a total of 113 strikes and lockouts. By means of these various sources of its members have received a twelve-per-cent advance in wages in the course of two years.

The new strike is the most desperate yet waged, and the union has issued an appeal calling for aid from other unions in other trades. In the course of the proclamation the following paragraph appears, and shows what light upon the tactics adopted.

"The tailors in Kansas City are doing all in their power to win this lockout. It is costing them lots of money to carry this contest on. Last Saturday alone cost them about \$250 to get letters to quit their jobs and leave town."

The cost of the general lockout will, of course be paid in the long run by the greatest number of the disorganized workmen. The Association, which has locked out the disorganized workmen, has been hard put to it to keep up a semblance of activity. Its members are determined, however, to put an end now for all to the demands of the tailors unless they give up the boycott and will do it. Mr. Parry has been active in the organization of a national coalition of manufacturers against the national combination of labor. The next great labor war will probably be a dual between these two powerful organizations.

It is claimed by many opponents of the labor unions that they do not cease wages in spite of their extensive and violent effects. The present wholesale reduction of wages in the cotton industries, and demand and the general commercial situation regulate the increase of their own members, there can be little doubt that they almost always cease a price to the public, or lower the quality, or bring the manufacturer to the point of bankruptcy, which rests upon general prostration.

Those who deal in union goods must, in practically every case,

pay a higher wholesale price. This is the experience of drapers everywhere. For instance, a Milwaukee tailor concludes that union overalls and jumpers could be sold for \$1.50 a pair of the same grade for seventy-five cents. Consequently, a non-union trader got away all his trade. Another union tailor in Milwaukee stated that he had carried on business for three years and had to pay higher prices for everything he dealt in. Another expressed himself vigorously: "The union label is a curse; it does not stand for sanitary conditions; it goes on poor and cheap goods, and makes them cost more."

It is inevitable that a union relying for the prosperity of its wares mainly upon boycott, strike, and threats of violence should be felt compelled to reconsume its goods by unusual excellence or cheapness.

In a time of general prosperity such as we have recently gone through, the unions have been able to boost prices generally. When there comes a collapse of trade, the unions find themselves helpless, or are destroyed by their own obstinacy. It is doubtful if revival of the unions, in the building trades especially, will be able to last through the winter. The cotton industry in Lowell, Massachusetts, were threatened by a strike for higher wages. The men would not listen to the assurance of their employers that trade would not permit an advance. Scarcely two days of them prepared to strike, and the employers seized the opportunity to prove their assertion by a lock-out. The mills are closed and no wages paid at all. And now the failure of the cotton crop has embarrassed all manufacturers of textiles, and 50,000 operatives have been compelled not only to give up hopes of increase, but to accept a ten per cent reduction of their wages, which have, in fact, gone back to where they were in 1902.

A sharp advance in the price of all clothing in which cotton is used may be expected this coming season. For this the lock out is wholly to blame, but the unusual conditions in the labor market have also contributed very largely. The market wanted a few cents pay even the wages of 1902, and yet the manufacturers dare not push the prices further down, lest there be a general strike.

Such clothes are not all that labor loses. The shoes we wear pay wages. It is collected first in a stock yard, and then the quilt is lowered from its original producer. All the money it comes again under the union sway. When it goes to the boot and shoe manufacturer it finds itself again in the union. Even the women who work on boots and shoes are organized into unions. There are over 15,000 shoe factories in the United States, employing 150,000 shoe-workers, of whom 40,000 are organized. This army of employees can, it is claimed, make all the national supply for six months. Of the surplus there have been large exports in recent years, and Europe is flooded with American shoes, which, as a rule, sell cheaper abroad than here.

The national demand, to repeat, can be filled in six months' time by the present resources. To keep these factories going the year round, at the normal rate, should happily cut the wages in half, but it is easier to charge the public an excessive price. Three hundred factories use the union label, and are compelled to pay increased wages, which hampers them seriously in competition. Strikes are frequent and costly, and, of course, retard production.

The boot-makers of Rochester went on strike the 12th of October, in Napa, California, there has been a long strike by the Boot and Shoemakers' Union. The glazed-kid plant of J. E. Mathew & Co. was closed because eighty-six workmen wanted more wages. The fact that the firm paid higher wages than any other in the city did not prevent these men from striking or 600 other hands from following them out.

The labor unions do not always make war upon their employers. I have shown in previous articles, however, that the factory into a battleground for the union jealousy, to the employer's and the public's expense. In St. Louis two rival factories have been at war in the union, and there has been a serious strike, which kept out both factories, and cut down the output at the busy season of civilization. Last month four manufacturers in the employ of the Marsh Company demanded an increase of wages, but declined to submit their demand to the board. They left, and on the 15th of November 5000 followed them, shutting down twenty boot and shoe factories. It is my wonder that the shoe manufacturers now refuse to recognize the Shoe Machinery Union further, and insist upon making contracts individually with their men.

As every instance of the rivalry between factories in the labor war may be mentioned a war now waging. The so-called Shoe Cutters' Union is affiliated with the Knights of Labor, an ancient terror to manufacturers, but now robbed of most of its power to injure. Its success is the American Federation of Labor, which was recently holding a congress in Boston. The Boot and Shoe Workers' Union is affiliated with the Federation, and is at war with the Shoe Cutters' Union, who have a stronghold in Lynn, Massachusetts. It is the intention of the Federation to boycott all the products of all factories in Lynn employing Knights of

labor, especially as the Lynn factories do not use the union label, so the workman cuts his own throat to take toll of the public by the union label.

That these methods actually do raise prices can hardly be more frankly stated than by the editor of a union newspaper, who recently wrote: "The union label seldom appears on the bargain-counter or bargain days."

From the tip of the toe to the top of the head we are union-

labelled. The extra sums we pay for our hats enable organized labor to indulge in long wars, to pay thousands of dollars in strike benefits, to employ walking disturbers of peace, and to enjoy lengthy periods of idleness. All employers who have yielded to the unions have been compelled to suffer disastrously from the competition, or to keep up their price, thus, in Milwaukee, a hat dealer recently testified that he was compelled to charge \$1.50 for a union hat, while he could sell a non-union hat of the same quality for \$1. Here the price is plainly increased fifty per cent. And this extra price is forced upon the public by various methods of boycott outside of the union and of intimidation inside.

There has been war in the hat-market recently, as in almost every other field of industry. A sample of the slight protests upon which a widespread war can be declared is to be found in the following:

On the 28th of October the workers in the employ of G. A. Shepard & Sons, manufacturers of hat leathers, at Bethel, Connecticut, threatened to quit work unless the company discharged the one non-union man employed. The company refused, and this one man's livelihood was made the excuse for not only closing the works, but raising all the other employees of their livelihood, but for issuing a general boycott. Certain hat-makers in Danbury bought their hat leathers from Shepard & Sons. The Danbury hat-makers refused to work on these hat leathers, and the manufacturers were compelled to cancel their orders.

This roused the Leather Manufacturers' Association in its pert, and it resolved to forbid all of its members to deliver leathers to any of the hat-makers of Danbury or Bethel, except to three non-union factories. The effect of this deadlock upon the cheapness of hats is undeniable.

The D. F. Lowe Company, of Danbury, was boycotted in September, and the boycotters have been working throughout the country against their wares, employing for this purpose the elaborate machinery of the American Federation of Labor. The Lowe Company has entered a suit for damages against the officers and 215 of their former employees in the United States of North America, as well as against the Federation of Labor. I told last week of other such suits against labor organizations, and they may indicate a solution of the boycott problem. On December 4 Judge Holton, of Chicago, found the American Union No. 4 Press-federators guilty of illegal acts as a corporate body.

The grievances of the strikers are thus set forth by President Harley of the Finishers' Union:

"The company has changed the material in two of the cheaper grades of hats," he said. "The new material is harder to handle, being less yielding and slower to shrink on the cones. This cut down the pay of the men who had to handle the material, and they asked for higher piece-rates. Makers earn from \$12 to \$15 a week on the average. They would not stand the cut, and struck when the company refused to raise the rates."

On December 5 the makers and finishers of the Knox Hat Manufacturing Company struck when this company had had for fifty years.

The shirt-makers are also under the thumb of the unions, which show their willingness to use the manufacturers at any time as a weapon of discipline over their own members. On the 28th of November the cutters of the Washburn & Kennerly Company shirt and waist factories entered their employers to discharge a cutter because

he was behind in his dues to the union. The company declined to be the tool of such rigor, and the workmen struck. As the season is slack the company was wiser than that they should stay out.

The laundries are as much a part of our industries as the shirt-makers. A large part of the Chicago laundries have been closed for months by the union demands.

On December 6 the shirt-makers, a branch of the Skirt-makers' Union of New York,

began a strike for twenty per cent. higher wages, freshly stating that they realized that it was the most embarrassing time to the trade.

The glove-market falls into line, and a pitiless rigor extends to the extent to which the fidelity to the union can be carried was recently given. The oath of fidelity given by the typographical union, recently created a sensation by placing the union above God and country. It was preached against as sacrilegious in many pulpits. It remained for a glove-maker to put his union above his sense of filial duty.

On October 7, in Chicago, Samuel R. Clifton, president of the Glove-makers' Union No. 4, demanded that his father, a glove manufacturer, should renew an old agreement with an ascendant increasing wages. When the father refused the advance, the son called out the employees, closed the father's shop, justifying himself with the Mason remark, "My union has first claim on my duty!"

In furniture, wages are now higher than they have ever been before in history, and yet there is an upholsterer's strike in Grand Rapids. In October the Amalgamated Wood-Workers' demanded a fifteen-per-cent. increase from the Harpo Furniture Company, of Indianapolis. When this demand was refused all the employees were called out, and great violence was used to prevent the employment of non-union labor.

This winter will show an increase in the price of carpets of from one and a half to five cents a yard. This increase is largely due to an extended strike in Philadelphia, beginning June 1, and keeping idle thousands of carpet-workers, upholstery weavers, and dyers. It is estimated that this strike has withheld 80,000 rolls of grain carpet from the market.

There is hardly space here to recount the strikes of the coal-mines, though coal is one of the chief necessities of life and industry. Every one remembers the coal famine of last winter, brought about by a great anthracite strike, which compelled the closing of many factories, the abandonment of many trades, the universal violation of social ordinances, and untold suffering. The price of coal rose from \$6 to \$8, then to \$10, to \$12 and finally to more than \$25. The poor, being compelled to buy coal in small quantities, often paid for it at the rate of over \$30 a ton. On account of the excessive demand the price of bituminous coal also rose with great rapidity.

The strike had been declared on the 15th of May by a vote of 461 to 349. This narrow majority was permitted to throw 150,000 miners, men and boys, out of work next October 23. It is not necessary to recall the scenes of violence which ended only when President Roosevelt himself announced a conference at the White House, and appealed to the patriotism of the strikers to discontinue the national disaster.

Thus the spectacle was seen of a whole nation begging mercy of a labor union and certain employers. The result of the strike was that the miners gained very little of what they demanded, and spent great sums of their own and that of other miners' savings. Their loss in wages alone was \$25,000,000. The expenditure, of course, had enormously. The State of Pennsylvania lost enormously in money and in dignity. And the public, as always, paid the bills.

There is a new coal strike on at present in the West which has assumed most serious proportions. On November 9, 10,000 coal-miners of Colorado struck for an increase of wages and an eight-hour day. The operators explained that these demands would mean an increase of twenty per cent. in the cost of production, but the men could not be kept at work. In the first week the cost of

"From the Tip of the Toe to the Top of the Head we are Union-labelled."

the strike was estimated as follows: To the State, \$200,000; to the operators, \$222,000; to the miners in wages, \$67,000.

The coal problem in Chicago has been solved to the satisfaction of the labor-unions, the coal employers and to the general opinion of the public by a combination of the Coal Train Owners' Association and the Coal Transmitters' Union, with its 40,000 members. After fighting each other five years they have agreed that the former will employ more than 40,000 union transmitters and the latter driven out competition and have actually compelled the absolute discontinuance of natural gas in the business district. They hold prices at their mercy.

Among the miseries of modern life the schoolbook has certainly a place. On November 17, at the Boston labor congress, a resolution was offered demanding uniform text-books in the public schools and a union label on these books. The resolution was not passed, on the ground that it was a matter for State and not national legislation. But the mere suggestion, as well as the excuse given for its non-acceptance, threw a vivid light upon the all-encompassing domination of the labor-unions.

Among other strikes which affect the general public may be briefly mentioned that in the American Optical Company for the sake of forcing a recognition of the union; one in Philadelphia saving the plastic-glass men by their 10,000 workers get advanced wages and so raise the price of plastic-glass, probably from fifteen cents per ounce, but a recent cut strike in New York, which began on a cold and snowy night. The result of this is a probable increase of twenty per cent. in the already exorbitant prices among fire-works, who cannot be rescued by city officials. At this writing it is announced that 1,000 Chicago fire-works are about to strike for shorter hours and better wages. They threaten to tie up even the funerals. It appears that even the dead are not out of reach of union domination.

The fine arts are being saved. The Plasterers' Association at the St. Louis Exposition, by a threat of general strike, has taken away from its fellow workmen, the Modelers' and Sculptors' Union, the privilege of repairing damaged plaster casts.

The executives of the Mutual Union have recently been prominent through its unscrupulous tyranny to two women harpists who have come from abroad to play at the opera, and have been forbidden to play even after expressing a willingness to pay the dues and join the union. At the present moment, it seems that the opera for which they were brought over will have to be given without harp music, or without orchestra. The Mutual Mutual Protective Union has also recently ordered a disbandment of the Theatrical Musical Club, which is properly organized and affiliated with the United Actors' Trade.

Cigars have long been a battle-ground for strikers, and the tobacco trust has been long boycotted by the International Cigar

makers' Union, to such an extent that their shops have been watched and members of other unions have been photographed entering the place. Any union man so caught is liable to a fine.

Now the household servants are organizing. At its recent congress the American Federation of Labor granted a charter to the Household Employers' Union of Holyoke, Massachusetts, with Mary Williams as president. The platform demands an eight-hour day, with one afternoon and one evening and part of Sunday off each week; cooks to have \$3, chambermaids \$1, apron-wives \$1; cooks are not permitted to wash or iron. It is difficult to say how any possible act could make the domestic-servant problem more serious than it already is.

Among the hardships the public endures from the labor-unions there are a number of petty annoyances, which are, tragically, however, in a free country. During the Chicago street-car strike not only was the non-union men forbidden to ride in various restaurants, but one doctor refused to examine an injured man because he did not wear a union button. At Glen Ridge, New Jersey, a private citizen was forbidden to send his own rent, and a walking delegate, finding him there, threatened to throw him to the ground. The Central Labor Union of Philadelphia has decided that a union man cannot be a waiter at a restaurant of his own organization, and has also issued this statement: "A union man who gets his wife to teach his coat violates the sanctities of matrimony." Alfred Ruk, a butcher in Foughkearrie, New York, was fined last September for being shaved by his own brother, who was a non-union barber.

The labor-unions have annihilated everything, and are now attempting to take it in a union truth that they have forgotten the original purpose of their foundation, and have annulled the justice of their cause by their infinite injustices. They have complained loudly of tyranny until they have had the opportunity to be tyrants themselves. We have seen a few of the multitudinous ways in which they have violated the principles of human justice, the Constitution of the country, of the State; they have drudged the police and the militia and the courts; they have killed and maimed where they opposed them; they have abused and fined and humiliated their own members, and sought relentless duels against rival unions. As a result of this warfare, the work of the world is no longer done by slaves or serfs, or by the poor; it is done by antagonists who are not content with a normal and profitable share of wages, but have forced prices to the breaking-point and employers to the point of bankruptcy.

The laboring man having conquered equality has not been satisfied with his just deserts, but has forced his way on to despotism. Not only the consumers and the manufacturers and the general mass, but the prosperity of the country are at his mercy, but the liberty, safety, and the very life of the private citizen are in his clutch. How long will the public endure this strangle-hold upon its throat?

## An Epoch in Bridge-Building

By L. L. Buck, C. E.

Designer and Consulting Engineer of the new Williamsburg Bridge, opened December 19

**T**HE Williamsburg Bridge ranks as the largest suspension bridge in the world, although it is not the largest bridge ever built, but it is a milestone bridge. Williamsburg Bridge will exceed those of the Brooklyn Bridge. It will have about four times the carrying capacity of the Brooklyn Bridge, and will be equivalent to a street nearly 140 feet wide. The main span of the Williamsburg Bridge is 1600 feet long—four and a half feet longer than that of the Brooklyn Bridge—but the Williamsburg Bridge is thirty feet wider than the Brooklyn Bridge. The approaches of the Williamsburg Bridge are far longer than those of the Brooklyn Bridge. The Brooklyn approach is nearly twice as long, and the Manhattan approach over twice the length of the respective approaches of the Brooklyn Bridge. The total length of the carrying-way of the Williamsburg Bridge is 7284 feet, 2 inches—1274 feet, 2 inches longer than that of the Brooklyn Bridge. The Williamsburg Bridge has heavier cables than the Brooklyn Bridge, and each of its four great cables has over twice the ultimate strength in tons of the cables of the Brooklyn Bridge. In every respect the height, length, and capacity of the Bridge 17,422 miles away will have been used—3071 one mile of wire that are in the four sides of the Brooklyn Bridge.

Where the Brooklyn Bridge has two trolley tracks and two bridge-train tracks, the Williamsburg Bridge will have two elevated railroad tracks and four trolley tracks. The Brooklyn Bridge has one footwalk; the Williamsburg Bridge will have two footwalks. On the lower deck of the Williamsburg Bridge the trolley and elevated railway tracks and the roadways will be placed, the tracks and the bicycle-paths will be above the tracks, the footwalks in the center.

The Williamsburg Bridge will undoubtedly relieve the appalling congestion now witnessed at the Brooklyn Bridge terminals. Nearly 300,000 passengers cross the Brooklyn Bridge, Brooklyn Bridge railway and outdoor lines every twenty-four hours. The Williamsburg Bridge will divert a part of this traffic, although greater relief will be experienced until the Manhattan Bridge—which is to run from Canal Street and the Bowery to Fulton Street and Flatbush Avenue—is completed. But many of the obstacles

with which transportation has to contend over the Brooklyn Bridge will not be an evidence on the Williamsburg Bridge. The roadways for vehicles on the Williamsburg Bridge will be entirely separated from the railway tracks, both elevated and trolley. This will insure the trolley-cars unobstructed passage, free from the obstructions of vehicular traffic. The terminals of the Williamsburg Bridge will be so arranged as to give the most ample space. They will have the fullest facilities for trolley and elevated tracks and for passengers.

It is estimated that each of the four trolley tracks on the Williamsburg Bridge will accommodate 350 cars every hour if necessary. Calculating a maximum of fifty passengers to each car, this would give 17,500 persons transported every hour on the two tracks to Manhattan, and the same number on the other two tracks to Brooklyn—a total of 70,000 persons an hour going in both directions. It is estimated that the elevated railroads will be able to transport at least 20,000 persons every hour in one direction to Manhattan, and the same number in the other. It is estimated that, at a minimum, 64,000 passengers will have good transportation facilities in one direction every hour, or 128,000 passengers in both directions every hour.

The right to build a bridge on the present site of the Williamsburg Bridge was granted to the East River Bridge Company by the Legislature in 1892. In 1895, the city bought out the firm whose rights of this company and proceeded to plan and build the bridge. The general plan of the bridge was adopted by the East River Bridge Commission on August 10th, 1896, and an amended plan was adopted in May, 1907. The first actual work on the bridge was begun on the Manhattan tower foundation on October 18, 1896.

The tower foundations on both sides of the river rest on solid rock. The north pier on the Manhattan side sinks to a depth of fifty-six feet below high water, and the south pier sixty-six feet below high water. On the Brooklyn side the north pier extends to a maximum depth of about 110 feet below high water and the south pier to a maximum depth of about ninety feet below high water. The Manhattan tower rests on a pier 2500 piers drive through clay to a bed of sand overlying the rock. The Brooklyn anchorage rests on natural sand. The first wire for the construction of the temporary foot-bridge was strung on April 11, 1891.

## THE OPENING OF THE NEW WILLIAMSBURG BRIDGE, NEW YORK CITY

Drawn by F. Courten Smith

New York's new bridge, connecting Manhattan and Williamsburg, and spanning the East River above the Brooklyn Bridge, was officially opened on December 23. Mayor Lane walked over the bridge from east to east and declared it open to traffic, and there was an elaborate celebration in honor of the event. Engineers had been specially appointed for the city to meet the expense of the construction and maintenance, which consisted in electrical displays and fireworks. Possibly none of wire and 2,000,000 could reach a more electric bath ever used in the Manhattan, requiring a force of almost 1000 men here. The water is referred to as interesting article by the designer of the new bridge, on the opposite page.

# A Leader not to be Forgotten

By Henry Mills Alden

THE unveiling of the bronze bust of George William Curtis and the formal presentation at it to the New York Public Library on Monday evening, December 7, recall historic moments in the life of the republic directly and intimately associated with Mr. Curtis's leadership of public opinion—a leadership unparalleled in our history; while to those who knew the man or who were his associates they recall vivid and enduring memories of a singular personality.

Mr. Curtis was the most unforgettable man I ever knew. In 1842 he became the political editor of HAARLEM'S WEEKLY, to which for some years he had been contributing "The Lounger." Already for ten years he had been known to the readers of HAARLEM'S MIRROR as the occupant of the "Editor's Easy Chair." The association with these two periodicals, in these so different positions, was continued to the year of his death, 1857. He lived two lives. One was that which he set out to live when, after his residence at Brook Farm, and later at Concord, he went to Europe and the East at the age of twenty-two, meeting Thackeray in London and the Brownings in Venice, and on the Nile the haunting mystery of an older world. What that life might have yielded to American literature is dimly fore-shadowed in the books he wrote after his return, in the early fifties—the Nile pictures of the young dramas; the very wide-awake but genial satires of American social life, whose centre was then at Saratoga; and the tender and beautiful romance of "Prue and L." The mature intimations of his possible literary achievement were given during nearly forty years in the "Easy Chair"—the most delightful monthly savour of personal reminiscence, of art criticism (including music and the drama), and of comment on men and women and books, ever written.

But when I first knew Mr. Curtis he had entered upon that other life which found expression in his political editorials and public addresses—a life of public service. He had hatched on his armor. In his view "public spirit is the main-spring of the republic," and for the generous succoring that of Webster he was pre-eminently the expression of that spirit and its leader. His publishers and associates regarded him as their knight, with the grand and low finding of appropriation, but his knight-hood transcended all ownership, and was devoted to the victory of a principle at the time when that principle was meeting its crucial test—the principle of public justice.

His personal presence in those who met him frequently in the very atmosphere of his work, seemed instant to familiarity. No

one was ever gentler or more affable to all men or more cordial and sympathetic in friendly intercourse. It was not the feeling of distance that impressed one, but rather that of intimate appeal—something closer than familiarity, yet having in it some strangeness of surprise. His ordinary expression had become an art, in vibrancy and form. He did not talk like a book, yet his speech impressed you very much in the same way as we imagine his talk about Robert Burns impressed the Scotchmen who listened to him when that poet's statue was unveiled in Central Park. He did not wear his knight-hood in stiff and formal fashion, but you felt its inspiration, as if you listened to martial music. He was our greatest master of the art of speech, in private and in public discourse. "How was it done?" he asked, concerning the charm wrought by Wendell Phillips upon his hearers, and his answer is applicable to the still greater charm of his own speech: "Ah! how did Mozart do it, how Raphael! The secret of the rose's sweetness, of the bird's ecstasy, of the sunset's glory—that is the secret of genius and of eloquence." He was so easily the master of every form of personal expression, having the readiness, the versatility, and the debonair grace of an Admirable Crichton, without Admirable Crichton's vanity and self-conceit. What he impressed was as impressive as what he personified, and more surprising. In his grandeur was no condescension. He needed not to mislead, for, whatever the lesson, he had the clarity of a Damascus blade, always flexible and always effective.

I dwell upon the manner of the man rather than upon his achievement. This was conspicuous to all—that could be appreciated only by those who personally knew him. The form was of the spirit, and became the rhythmic and flexible restraint of his speech and action, so that the beauty of his discourse was never spoiled by too much stress or ornament, and the earnestness of his livelihood was never dissipated in caprice, stentorianity, or fanaticism.

It is especially fitting that the bust of Mr. Curtis be in great honor and enshrinement in the New York Public Library—if only that it may lead the frequenters of that library to read his best speeches, which are, as he said of Burke's, "not only historical events, but splendid possessions of literature." The young American will find in these speeches not only the exemplar of an ideal eloquence and of a "sublime scholarship" which, like that of John Milton, "begins in literature and ends in life," but the essential solution of his country's history and the meaning of that history in the organization of human liberty.

# NORTHERN CALIFORNIA

## THE STORY OF THE SACRAMENTO VALLEY

BY DOUGLAS WHITE AND WILLIAM A. LAWSON

**N**ORTHERN CALIFORNIA, as applied to that section of the Golden State lying north of the bay of San Francisco, is purely a geographical title, for, in fact, the difference in extent and quality of productivity possessed by the different divisions of California is so slight as to render it almost impossible to establish any great point of superiority possessed by one portion which does not find its peer in every one of the other sections of this great Pacific commonwealth.

Under these conditions northern California takes its place as one of the divisions in that great territory which, bordering the Pacific for seven hundred miles and extending inland to an average width of two hundred miles, covers an area of latitude parallelized upon the Atlantic by that included between the southern line of South Carolina and the southern line of Massachusetts. The natural inference would be that a great diversity of climate and productions would be found within this immense area, but the investigator of to-day finds the orange, olive, lemon, and lime, together with other classes of subtropical fruits, thriving in equal profusion upon the mesas of southern, the plains of central, and the rolling foot-hills of northern California. But one distinction exists, that, strangely enough, wheat is favored in the northern section, for here the orange ripens earliest, and thus gains the advantage of first reaching the markets of the East.

Like the whole of the State, northern California is shut in on the east by the towering heights of the Sierra Nevada, which range of protecting mountains, arising in the west, joins the Coast Range near the northern border, thus forming a barrier that effectually protects the resultant valleys from the chilly blasts of northern water. Moreover, this same mountain formation diverts the western breezes which sweep in from the Pacific through the Golden Gate, and thus causes their effects to be noted at points hundreds of miles north of where they first reach the coast.

Thus guarded on the east by the heights of the Sierras, and divided laterally by the smaller peaks of the Coast Range, northern California exists as a succession of valleys separated from each other by rolling hills and towering mountains, and made up of soils so prolific as to maintain the shepherd with the variety and perfection of their productions.

Principal among these is that subdivision of the intermountain basin known as the Sacramento Valley. This great basin, covering with its almost level bottom lands millions of fertile acres, is known in central California as the San Joaquin Valley, and is there drained by a river of the same name. The Sacramento likewise has its immense waterway, also bearing the same title as the valley, the diverting point of the basin lying close by, where the two streams find their outlet into the Bay of San Francisco. Thus, like a great ellipse divided at its increased portion, the basin becomes two valleys, which form, the one a great subdivision of northern, and the other an equally important section of central, California.

Those who predict a great future for the Sacramento Valley, including the best hill belts of the Sierra Nevada and Coast ranges, have a convincing array of facts to support their faith. Of late the two commercial bodies having headquarters at Sacramento, known as the Sacramento Chamber of Commerce and the Sacramento Valley Development Association, have taken up the work of furthering the progress of this portion of the State, and have organized a campaign of information. In truth, the wonder is that with all its natural advantages this section has in many respects lagged so far behind others.

Truly enough, it appears that the very advantages of the great valley, and chiefly its capability of producing wheat and barley without irrigation, have been among the reasons why it has not

made more progress. Wheat still remains the chief crop of the farmers, and its production has tended to increase the size of farms, rather than to promote subdivision of large tracts, which is one of the essentials of development and increase of rural population. But now large irrigation enterprises are under way that have resulted in the cutting up of several great ranches into small farms, thus giving opportunity to many homesteaders.

While irrigation is not needed for the cereals, and on the great river lands such fruit, alfalfa, and vegetables are grown without it, yet experience has shown it to be a highly desirable aid to the best success in farming and horticulture, even on lands naturally moist. The old prejudice against it is fast passing away, and the truth is now realized and admitted that in the matchless capabilities for irrigation is one of the most valuable resources of this region. There is scarcely an acre of the Sacramento Valley or its foot-hills not irrigable from some source. Among the means of irrigation are wells, from which water is cheaply raised by gasoline or crude-oil engines or by windmills; canals from the rivers of the valley, and ditches and reservoirs in the mountains, furnishing water to the hill lands.

Professor Elwood Mead, in his report on Irrigation Investigation in California, made to the United States government, has given enthusiastic testimony as to the capabilities of this valley under irrigation. Its available water-supply, he says, ought to make it "the Egypt of the Western Hemisphere." The irrigable area of the valley is estimated to be more than 3,000,000 acres, and calculations show that the average annual discharge of the Sacramento River at its mouth is sufficient to irrigate every acre of this great area. Professor Mead, after remarking that it is a waste to allow so much water to flow unused to the sea, save for purposes of navigation, thus illustrates the astonishing variety of the products of the soil:

"Within a radius of five miles in the Sacramento Valley I saw every product of the temperate and semitropical zones which I could call to mind. Apples and oranges grew side by side, as did oak and almond trees. There were olives from the south and cherries from the north. A date palm stood equally at home with an alfalfa meadow; figs and Tokay grapes were apparently as much in their element as the fields of wheat or barley or the rows of Indian corn, some of the stalks of which measured fifteen feet in height. All of these could have been grown on a single acre, and doubtless have been."

A great canal, taking water from the Sacramento to irrigate many thousands of acres on the west side of the valley, is now almost completed. Along the stream much water is pumped at slight cost to irrigate alfalfa and truck farms during the summer months, thus enabling crop after crop to be taken from the land without interruption from the changing seasons.

The present full development of the Sacramento Valley centralizes about the city of Sacramento, which, besides being the valley's metropolis, is the State's capital as well. Here lies the junction of all the many branches of the Northern Pacific railway system, the lines reaching out to both the east and west sections of the Sacramento Valley, with short branches to every principal point, but here also is the crossing of the trunk line of the system which connect the northern and southern borders of the country, and its eastern and western coasts as well. Located upon the banks of the Sacramento, this capital city enjoys the privilege of water transportation to the coast, as well as in the entire length of its own valley, which, with its network of rail lines, renders it the real central point of the State.

Sacramento is the county seat of the county of the same name, and within a radius of fifty miles is surrounded by a perfection in

The Sacramento River at California's Capital

*Sacramento Palms*

*In a Sacramento Garden*

horticultural development which will at once bear witness to the truth of the Sacramento Valley's climatic claims.

It seems a little odd that the first date palm in the United States to bear edible fruit, and until recent years the most northern of bearing date palms in the world, is in about the same latitude as Washington, D. C. The tree thus distinguished is near a place called Winters, at the western margin of the Sacramento Valley, and but a few miles distant from the capital, its exact location being in latitude 39° 30' north. It is worth while to remember that this remarkable palm is not in southern California, and, strange as it may seem, there are probably no bearing date palms in that section of the State, though five hundred miles south of Sacramento.

This tree produces fruit richly colored, sweet, and palatable. The fruit, however, does not ripen every year, but only in those years when rains are absent in September and October, permitting the dates to mature.

These facts have so much climatic significance, and hint at such remarkable possibilities as to merit more than passing attention.

The Winters palm was grown from a seed planted on the spot where the tree now lifts its graceful fronds above the horizon of its owner, Colonel Taylor. It has never been hurt by frost. Knowing these things, it is less surprising to learn that Walter T. Swingle, an expert of the United States Department of Agriculture, has written a pamphlet to show the feasibility of date culture in the Sacramento Valley. He expressly says "it will be possible for settlers all through this region to produce fresh dates for their own tables, and quite probable that these fresh dates can be shipped to the principal Pacific-coast cities without spoiling."

The truth is, though but little known as yet on the Atlantic coast, that the Sacramento region is an semi-tropical as that located many miles farther toward the equator. The records of the United States Weather Bureau warrant this conclusion, and are cited in support of the assertion.

The visitor from the East—and to the Californians all of the country east of the Rocky Mountains is "the East"—comes in the flourishing orange groves, the orchards of citrus, the banana-trees and palms grown for ornament and shade, and other flourishing subtropical vegetation, convincing evidence of the mildness of the climate of Sacramento.

Figures published by the State Board of Trade show that last year northern and central California shipped upwards of 1,000 cars of oranges, and that in the northern and central counties there are thousands of acres of orange orchards yet to come into bearing.

Yet while Sacramentoans are proud of the fast-developing citrus industry of the fertile region round about them, they will tell you that it is but a small thing compared with the great deciduous-fruit industry. They show hundreds of acres of orange-trees on the uplands of the American River, at Unaugvale and Fair Oaks, but place more stress upon the fact that lying along the Sacramento River, for a distance of forty or fifty miles below the city, and all in the county of Sacramento, is a broad belt of deciduous orchards, on land unsurpassed in richness, whose annual product

of cherries, apples, plums, peaches, Bartlett pears, and other fruits is measured by thousands of car-loads, and gives business enough for half a dozen tiger seasons during the summer season.

Sacramento is one of the principal shipping points of the luscious deciduous or citrus fruits and table grapes that are sent eastward from California each season, to the extent of 7,000 or 8,000 car-loads of twelve tons each. And yet the mistake is constantly made at the East of crediting to other regions the fine cherries, apples, peaches, pears, and table grapes that come from the orchards and vineyards round about Sacramento. Such errors are naturally, in fact, to the people of the Sacramento section, who, somewhat sensitive on this score, are yet entirely willing to give every portion of California the credit that is due.

It is a strange anomaly that a climate which permits the growth to perfection of such

semitropic fruits as the orange, fig, olive, and lemon, likewise admit of the equally successful production of all the fruits of the temperate zone, such as the apple, cherry, plum, peach, and pear, along with the strawberry and other small fruits of northern climes. It is a never ceasing wonder that all these fruits, and many more, are found growing side by side in some of the orchards near Sacramento. The shadow of the palm falls over lawns of blue grass, and while the Sacramentoist at steadily sits beneath the shade of his vine and fig tree he may not suppose grown within his own dooryard. Latitude does not account for it, since that of California's capital is the same as that of southern Illinois, where nothing of a semitropic nature can be grown. The secret of the climate lies in the great Pacific Ocean, which imparts heat and yields moisture for the season of rains, and also in the mountain ranges on the east and north, which exclude the cold winds of winter. It is not latitude, but altitude and distance from the sea that determine the climate of any place in California. Anywhere in Sacramento County or in its bordering foothills, up to an elevation of 1000 or 1500 feet, the olive and the citrus fruits may be successfully grown, so far as climatic conditions are concerned. The foothills, in fact, are even more favorable than most of the valley for success with the orange and lemon, the higher lands being less liable to frost.

The climate of Sacramento has often been compared with that of famous Mediterranean resorts. In the advantage of the Californian city. The record for a long period of years shows that the annual average number of clear days at the capital is 232, which is greater than that of Neutone and Nice. The summer in the Sacramento region is rainless and almost cloudless, and autumn is nearly so. There may be light showers on a few days in September and October, but the seasons when rain may be expected does not fairly open until November, and is virtually over early in April. During the months of winter there are often weeks without rain, and always many days of sunshine. The average number of cloudy days is but 32 in the whole year, and the average number of days without any rain is over 300. The annual rainfall at Sacramento is between 30 and 20 inches, a quantity sufficient to insure good crops of wheat, barley, hay, orchard fruits, grapes, and other products of the soil.

While the record of temperature shows that the average daily maximum reading of the thermometer for the warmest months is but little less than 90 degrees, the humidity is so low, particularly

during the hours of the day when the heat is greatest, that little discomfort is experienced and sunstrokes is unknown, while the nights are always relatively cool. Evening usually brings a pleasant breeze from the Bay of San Francisco, and after a night of sound sleep the mornings are delightfully fresh and bracing. The temperature never rises after five o'clock in the afternoon, but steadily falls from that hour until after sunrise the next day. There is an utter absence of that increased mortality due to heat common on the Atlantic slope, and statistics show the climate of Sacramento to be one of the most healthful in the world.

The winters in this favored region are free from snow and ice, sometimes passing without the temperature falling to the freezing point, though during the coldest months the mercury may in some years give a minimum record of a few degrees lower than 32. This minimum, however, will be touched but rarely, and then only during the early morning hours. The average winter temperature is 47° Fahrenheit.

All through the year there is an endless procession of fruits going out of Sacramento, apples, succowding the late peaches and pears, and these giving way to the golden citrus fruits.

This brings one to a strong point in favor of the oranges of this northern section. The novel orange of the northern districts, such as Fair Oaks and Orangevale on the American River, in Sacramento County, and the foot-hills of Placer and Butte counties, still farther north, so early as to be marketable at Thanksgiving and Christmas on the East. This insures good prices, and enables them to be picked before there is danger of frost, such as has often done much injury to the orange crop of regions in which the fruit matures later. The novel of the northern grove is not only early, but also delicious, as perfect a fruit as one could wish to see.

What irrigation will do for small fruits in this valley is illustrated in the Florin district of Sacramento County, nine miles southeast of the capital, where water is found at a depth of from ten to fourteen feet, and is used for the irrigation of strawberries and grapes. The area in berries here exceeds 6000 acres. In 1900 W. R. Taylor, of Florin, sold twenty-one tons of strawberries from six acres of land, yielding him a net profit of over \$1900, with an average of 400 crates to the acre. Like instances could be multiplied. Many Japanese have of late years engaged in berry culture, and their thrift has been well rewarded.

The Flunco Tokay, one of the handsomest varieties of table grapes, which brings high prices and is very popular in the Eastern markets, is likewise grown extensively about Florin and other localities. In the rich and productive American River district, east of Sacramento, there are numerous vineyards devoted largely to this grape. A fair yield is about 250 crates to the acre, and net returns of \$300 an acre or more in a single season have been reported, the fruit selling in New York auction-rooms at \$1 20 per crate or more.

In this American River district is situated the great Natoma vineyard, covering upwards of 1200 acres. It is devoted chiefly to wine grapes, and is one of the largest in the world. Near by is the Coolors vineyard of wine-grape varieties, the largest, as resistant stock in California. The wines from this vineyard, under the "Coolors" trade-mark, have gained a national reputation for the well which produces them as well as for the California wines where the vineyards are matured.

In the thriving Galt district, on the railroad between Sacramento and Stockton, there are numerous vineyards and orchards and good farming lands. One of the remarkable things in this locality is a 40-foot tree of the Mission variety, which bears each year three crops of dark purple fruit, amounting to ten or three tons in all. In a single season this tree has furnished 4000 pounds of dried fruit.

Monmouth Rice Mills at the California Winery

Auburn, "Queen of the Foot hills"

## PLACER

## A COUNTY OF THE FOOT-HILLS

**H**ARDLY an hour's ride east from the capital city brings one into the limits of Placer County, one of the best known and most productive of northern California's subdivisions. Piled tier on tier, each one rising a trifle higher than the last, lie the rolling lines of the foot-hills which form the first approaches to the heights of the Sierras themselves. A half-century ago these hills teemed with those divers after the yellow metal whose access first brought to California the title of the "Golden State." All through the entire county may still be seen the ruins of the mines from which the county takes its name, and in the records of those gilded days Placer was one of the best known among the great mining sections of the Pacific. Her mining is by no means a thing of the past, for there are within her confines at the present time several most productive properties, but the days of the azules and long ton have gone by, and instead of those primitive methods the precious metal yields itself in those advanced times to the persuasion of the quartz mill and concentrator.

Placer has developed a wealth which is even greater than her golden promise of '49. The slopes of the foot-hills so often prospected for gold are now being brought to the very highest condition of cultivation, with the result that in seasons past this county of Placer has shipped out no less than thirty-five per cent. of all the fresh deciduous fruit that the whole State of California has sent to markets beyond her borders. The main transcontinental line of the Southern Pacific system passes through the entire length of the county, and within those limits are three principal points, as well as many smaller ones, which are entitled to recognition for productiveness. Nearly every kind of fruit is successfully grown, from the semitropical orange to the great luscious cherry of the temperate zone.

Of the three important points in Placer, the most western is Rocklin, which is the terminal of the mountain division of the railway. Lying in the very centre of a vast territory in which every acre is capable of the highest development, Rocklin has drawn the attention of horticulturists from every corner of the country. On the Whitney ranch, located here, the first raisins of California were grown, cured, and shipped. In citrus fruits as well Mr. J. Parker Whitney has been a pioneer. Through his industry thousands of acres have been transformed from grazing-land and wheat field into groves and vineyards. It has been a life study with him to prove what may be produced upon these lower mesas of the Sierra, and he has shown, on those lands formerly

given over to rattle and wheat, that in and about Rocklin lies one of California's most valuable sections. Mr. Whitney's knowledge, gained by experiment, has been scattered broadcast, and by following his example Rocklin has become the centre of a most interesting and productive territory. Here is seen the evidence that foot-hill lands are often much less liable to damage by frost than the lands of the lower valley, and conclusive proof is presented that the Sacramento Valley is alike valuable as a citrus belt and for the cultivation of the hardier fruits. It is claimed that its better seasons, no more disastrous plagues or cherries, are grown there those which come from these lands about Rocklin.

One of Rocklin's advantages—in fact, an advantage possessed by the whole of Placer County—lies in the fact that within her borders there are unnumbered chances for the small farmer and rancher. Together with the opportunities for the purchase and development of modest orchards and orange groves, the small operator of this section has, by co-operative selling, a chance to market his product equal to that of his more fortunate neighbor whose lands run to hundreds of acres. Rocklin is a thriving community in constant communication with all the principal points on the coast. It has a plant for electric lighting, modern stores and markets, churches, and schools—in fact, everything to render rural life comfortable and attractive. Though in the surrounding districts thousands of acres have already been developed, the division of many large tracts will increase the population and give many additional and thrifty farms.

A few miles to the eastward and almost in the centre of the county is the town of Newcastle, famed in the days of gold as a great placer mining centre. Here the resources of the county have been most successfully developed. Near the railway at Newcastle stands the great line of fruit sheds and warehouses through which passes each year a large percentage of California's fresh shipping fruit. There is gathered about this point a business community which may rightly be termed the centre of the fruit industry. There are here the headquarters of several of the largest fruit-shipping corporations of the valley, as well as branch houses of those whose principal offices are elsewhere. In fact, no firm of any prominence in the fruit-buying line is without direct representation in this little hamlet among the hills. Its principal hotel, which, by the way, would do credit to many a larger community, houses in the fruit season the greatest operators in the products of this industry.

A reason for Newcastle's prominence is found in her production of the earliest fruits along this great transcontinental highway. This gives her producers a decided advantage. Like the lands of the lower valley, these Newcastle hills, with their eight or nine hundred feet of elevation, produce every class of citrus and deciduous fruits, and produce them in perfection. April brings

A One-gauge-old Orange Grove near Rocklin owned by J. Parker Whitney

A Newcastle Orange Grove

A typical Placer County home.

the cherries and berries. From then, until the last orange is gathered in December, the immense fruit warehouses are filled with the products of these fertile acres.

Records show that in 1908 many of the most productive fruit sections of the State were injured by a late frost. Then came the proof that these hot-hills of Placer County were immune against such an unlooked-for event. Newcastle, as well as some of her neighbors, escaped the chill, and in that year shipped from this railway point over one-third of all the fresh fruit leaving California for Eastern markets. In 1902, with successful crops over the entire State, Newcastle shipped 1654 cars, nearly one-fourth of the State's Eastern shipments.

Newcastle, like her sister towns in Placer County, is the centre of a community made up of well-developed homes, to which the summer is being added each year. Subdivisions of great holdings are being made, and with each new home established there comes an addition to her developed area. Her fruit-growers are more business men than ranchers. There is an association of groovers formed for business purposes, and a Newcastle Development Committee, whose purpose is to give information and to exchange views on the advancement of the country and of individuals. The schools and churches are one of the attractions which, with the fine climate of the lower slopes of the Sierras, give Newcastle its attractive and prosperous homes.

Auburn, the county-seat of Placer, is located at a still higher elevation than either of her neighbors to the west, and possesses the distinction of being called one of the handsomest mountain towns in California. Enthusiasts over her location and climate have named her "The Queen of the Foot-hills." Like Newcastle, she was, in those bygone days of placer mining, a great centre of activity. In the older quarter of the town may still be seen the quaint buildings which formed the hotel, stage station, express-office, and general store in those days when Auburn was a principal point among the "diggings."

The little city no longer clusters close about these old landmarks, but has spread over the surrounding hills until it covers their slopes with green-lawed homes.

Here, again, at Auburn is seen the diversity of horticulture which marks the lower heights. Lined beyond the reach of valley fogs, the town records a percentage of brilliant sunshiny days in every year which to the Eastern visitor is remarkable. In summer the heat is not oppressive, while the nights are cool.

In a Plumas County Forest

A Placer County Irrigating Dam

## PLUMAS

### A COUNTY OF THE HIGH SIERRAS

LIKE a saddle on the back of a patient burro, Plumas County lies on the topmost ridge of the Sierra Nevada. Her climate is that of the temperate zone, with plenty of zero weather in winter, although in many of her valleys this chill is decidedly tempered. Up to the present Plumas has been well off the arteries of travel, but two surveys for transcontinental lines have already been made through Brockway Pass, which lies within her border, one of the practical rail routes through the Sierras, and it is certain that the completion of one of these lines will bring this mountain county into direct connection with the outer world.

The mountain fruits of Plumas are noted for their flavor, while her acres of cereals have given proof of the excellence of their product. Her valleys are all well watered, and along her mountain streams many paying mining properties have for years been in operation. None of her placer deposits are among the great producers of the State.

Plumas will always be a county of great agricultural and mineral resources, but her great industry in the immediate future will come from her immense forests of white and sugar pine. These forests have already attracted the investor and mill-operator. Thousands of acres within the county's borders have been handled and "exploited" by Mr. J. M. Engle, who claims that in all the world there are no growths of the same class of timber to equal those of Plumas. Like the redwood of the coast counties, these trees gain an immense size, and cut the choicest kind of lumber in exceptional lengths. Mills are already starting the work of turning these great trees into marketable lumber, using the small rail-ways which enter the county from Nevada as a means of reaching the market. With direct rail communication Plumas's lumber industry will become one of the most important on the coast, and her immense area of timber, which for years has appeared to no one, will take on a value equal to its real worth. With the rapidly approaching shortage in the lumber product of the East, these great herds of the Sierras assume a special interest based upon their importance in the commerce of the world.

Coring, the Central Fruit of Tehama County

## CORNING AND THE MAYWOOD COLONY

**W**ELL toward the northern limits of the Sacramento Valley, where its level plains first change to gently rolling areas and thus give notice of the foot hills and rugged steeply beyond, lies the town of Corning. Ten years ago Corning was but little more than a settlement on the west side branch of the Southern Pacific Railway, where was clustered the usual group of business places indistinctly drawn together at a railway stopping place. Round about the little hamlet were broad fields of grain, and upon the higher slopes grazed the herds of the ranchers who populated the floor of the valley. Beyond the confines of the little town, houses were separated by long stretches of grain fields. Here and there in the yards of the ranch houses there blossomed and bore fruit a few of the different varieties of deciduous trees, which, though ill cared for, paid to the housewives an ample revenue for the labor expended on them. Two in a great distance might be found an orange or a lemon tree which had been brought from the southland and nurtured almost as a curiosity. For years those conditions had existed; every husbandman seemed satisfied, and sought not for the fulness of the soil's possibilities. This satisfaction out of all experimental work in horticulture, and brought about the same yearly round of seed-time and harvest and descending to the warehouses of Corning of the annual yield from the broad fields.

But the rich soil was by no means destined to forever be devoted to the production of cereals. In 1884 the change first began. Keen eyes noted the productiveness of the scattered fruit trees, and speculative brains figured that if the soil would produce such fruits almost without care, then certainly with modern methods of culture it would do still more. The result was a combining by purchase of the most available lands surrounding Corning, and the founding of what is today one of the brightest examples of California possibilities—the Maywood Colony.

The history of Maywood tells of a small beginning wherein favoring investors looked into the future for their reward. Gradually the acres of the colony's lands extended until it comprises to-day, in the eleventh year of its existence, thirty nine thousand acres, twelve-thirtieths of which has passed into the hands of individual owners. The town, where but a decade since there was little of life or business, has been transformed into a bustling community, with its shops and markets, its schools and churches.

Maywood Colony may certainly attribute its success to a combination of natural advantages. Noting that in the seeker after a home in this favored section blocks of ten acres were the most attractive, the colony's founders reserved the entire area to be cut into such tracts, and between all of these subdivisions constructed

broad roadways, which are today among the most perfect in the State. There are in the colony no less than one hundred and eighty-six miles of these highways, hard and firm, like a park driveway, and owing to the class of soil from which they are constructed, in less than a day after the severest rain storm they are as dry as the most expensively constructed macadam. Most of these roads are bordered by trees of some kind, thus fringing these miles of driveway with examples of the colony's prosperity.

Upon hundreds of the ten-acre tracts there have been constructed comfortable homes, many of them surrounded with a wealth of flora which blossoms from end to end of the year.

At the outset the attention of Maywood's people was turned principally to deciduous fruits. All classes of this horticultural family will grow upon any acre of Maywood without irrigation, and the result is shown to-day in seven thousand acres planted to this class of fruits, much of which has already reached a point where it is a source of revenue to its owners. Where less than ten years ago there existed great holdings of land exclusively devoted to wheat culture, there flourish to-day six hundred and thirty thousand deciduous fruit trees, divided into scores of holdings, each one not only capable of self-sustenance, but producing a rich interest on the amount invested. One of the great secrets of deciduous success at Maywood is the water question, which is forever thoroughly settled by the nature of the soil and its surroundings. The formation of the land is such that water exists at a depth never more than twelve feet, and its supply is unceasing even in the driest season. Thus irrigation for deciduous fruits becomes absolutely unnecessary at all times.

While classed as a deciduous fruit, the olive is always considered separately from its sisters—the peach, the apricot, and the almond. Maywood successfully fosters the entire family, and, in addition to these deciduous productions already mentioned, there are to-day growing within the colony's limits four thousand two hundred acres of these delicate fruits. The fig, too, has found a home here, most attention being given to the white fig of Smyrna, which grows in profusion, matures quickly, and possesses a delicious flavor.

Maywood Colony is an example of the oft-repeated fallacy that the climate of northern California is antagonistic in the perfect development of citrus fruits. Nowhere in the State is there produced more perfect oranges, lemons, and limes than within the colony's limits. With these fruits irrigation becomes a necessity, but the water is here in immense quantities and at little cost. Anywhere in the colony a well sunk to the depth of twelve feet will develop an ample water supply, and these conditions have caused the planting of thirty-six thousand citrus fruit trees, now varying from one to eight years in age, the older trees in full bearing. The quality of the fruit is the best, its date of ripening preceding that of southern California by about four weeks.

The lowest range of thermometer ever recorded at Maywood was 28 degrees above zero. There has never been a known case of injury to either fruit or trees from frost.

View of the Maywood Colony from "Cous Lotta"

## OROVILLE

### THE LAND OF OLIVES, GOLD, AND ORANGES

**O**ROVILLE, the thriving county-seat of Butte County, situated 134 miles from San Francisco, is not only in one of the most fertile and delightful portions of the Sacramento Valley, but it is an example of a community which has taken an unswerving hold upon the new development of California, as represented by her agricultural, horticultural, and viticultural interests, without in any degree lessening its grip upon the old, as illustrated by her mining interests. For Oroville has the remarkable distinction of being both at the head of orange and olive culture in the northern part of the State, and at the head of the dredger-mining industry. In each of these industries she has been both a leader and a creator. Oroville and her immediate vicinity ship the largest number of oranges of any section of the State north of Tehachapi; she has done more for olive culture than any locality in State or country, and she is the pioneer in dredger mining, a process which in five years has added one of the most interesting and valuable phases to gold-mining.

It is unusual to find mineral and agricultural wealth in such close proximity to so abundant water. It is natural to expect orchards and vineyards to be well removed from mining operations, but near Oroville the dredger miner can cut his trenches beneath the branches of a bearing orange-tree, and make his desert of the finest Tokay grapes plucked from the vines at his hand. In one instance a vineyard that produced some of the finest table grapes grown in the State, and yielded its owner something like \$20,000 a year, is now being turned over to dredging, because its soil is found to be even more rich in gold than in the elements of plant life. From this a hint can be had of the great values to be found in Oroville ground.

The diversity of attractions which Oroville offers to home-seekers can hardly be overrated. The situation possesses all of the famed advantages of the wonderful California climate, including absence of both summer and snow; it has abundance of water, for irrigation, for power, and for domestic uses; it has excellent shipping facilities, the best of school and church advantages, and a variety of soil product that cannot be excelled in the world. In addition to this fact is the further and important fact that its neighboring lands are abundant, and can be purchased at prices out of all proportion to the yield to be obtained by intelligent cultivation. Land can be purchased in the best localities at from \$25 to \$100 an acre, which in five years will pay better than 30 per cent, upon a valuation of \$1000 an acre. There are conditions which are not rare to find, and they exist nowhere in a greater degree than in the Oroville section.

In addition to the branch railroad of the Southern Pacific Company, running from Marysville to Oroville, surveys are now being made for new lines of railway which will materially improve the shipping facilities of the section and increase the value of its lands. Surveys are now being made on the Yard line, the Butte and Plumas Railway, and the Ladies Valley Railway, running through Butte and Plumas County, adjoining, which will open up new districts. It is also probable that the transcontinental line projected through Beckwith Pass will pass through Oroville.

The first orange orchard planted in northern California as a commercial venture is across the Feather River from Oroville, and

An Oroville Gold-dredger at Work.  
Plant of the Butte and California Dredging Company

is an example of what can be done in this class of horticulture in the Oroville section. The orchard comprises seventy-five acres, and was planted in 1880. Fifty acres are in bearing, and the last crop sold for over \$11,000. The total investment represents \$24,000, and the orchard has paid its owners \$17,000 in dividends. Other orange lands in the vicinity pay a net return of from \$100 an acre to \$300 an acre. The average cost of bringing an orange orchard into bearing in the Oroville section is from \$300 to \$350 an acre. This represents the total output, including price of land, trees, planting, etc. for a period of five years. At the end of that time the orchard will yield in the vicinity of \$100 an acre, if intelligently cultivated, and will be in full bearing in about seven years. The figures taken are from actual results.

The Oroville orange is among the first in the market, ripening early in November, or a month to six weeks earlier than in the southern part of the State. This gives the grower the highest possible price. As a result of what has been demonstrated at Oroville, the northern section of the State has for the past few years taken an increasing interest in citrus fruit culture, with results that have proved in the highest degree satisfactory.

In the olive industry Oroville has accomplished equally notable results. The California ripe olive, which as a food has qualities both health-giving and nutritious, which are more fully appreciated year by year, has been brought to its highest state of perfection at Oroville, principally through the efforts of the Ekmann Olive Company, which has both the largest olive-picking plant in the State and the largest olive-press for the manufacture of oil as well. Even with its great output the company cannot supply the demand for its product, and other growers are in a similar situation. Ripe olives and pure olive oil are Californian products which are but in their infancy, and yet are rapidly becoming of its most valuable industries. The eastern portion of the country is but beginning to realize the fact that no imported food product has been so generally adulterated as olive oil, and that in the bulk of the imported oil the olive does not enter as an element, cottonseed and corn oil taking its place. The result is an increasing demand for the California product, the purity of which has been fully demonstrated.

Grapes have proven one of the most profitable products of the section, particularly the Tokay, the highest priced table grape in the market. The list of other products which are grown successfully in the Oroville district comprises practically the entire list of California products. Figs, peaches, pears, plums, prunes, apricots, apples, cherries, and nutmegs are the principal products of the 20,000 acres of orchards in Butte County.

Oroville's development of the fruit industry has not turned her people aside from the original industry which made the section famous and gave to this Butte-County city its name. There has been a steady increase in the production of her quartz-mines, new properties being constantly opened up, many of them rivaling those of early days. The advent of electricity has been a great factor in successful mining about Oroville, most of the operating properties depending upon the great power-plants for their supply.

It is not, however, to the methods of times past that this section owes its greatest present activity in mining. Oroville is the original in this country of a system for the extraction of gold from the ancient river beds and waterways. The interest in these bottom-lands of the section began with experimental mining carried on by W. P. Hanson and Warren Trent, who may be termed the pioneers of dredger mining in America. They began work in 1853, believing that the gravel on the river bottoms could be made to pay if a proper system could be found for extracting the metal. After a long series of experiments, some of which brought a moderate success, their attention was called by a dredger then in successful operation on the River Marymere in New Zealand. A plant of the same kind was constructed and placed in operation near Oroville, with the result that it was the predecessor of a dozen more of the same pattern, all of which have been in successful operation for several years.

Great Olive-press at the Ekmann Olive Grove, Oroville

## SHASTA COUNTY

### THE REALM OF COPPER

**T**HIS county of the mountains is at once one of the most picturesque as well as one of the most productive among all the divisions of the Golden State. Its location, at the very head of the Sacramento Valley, gives to its area a combination of topography which renders it interesting to every class of observer. Around three of its sides sweep the towering heights of gigantic mountain ranges, while to the southward opens out the great basin of California, with its millions of acres level as a tennis-court. To the eastward loom the ridges of the Sierras, curving in to a meeting-point with the Siiskiyou, which swing across the northern border of the State, meeting upon the west the line of lower peaks which form the Coast Range. At the centre of this great arc of mountains the peak of Mount Shasta, blanketed with its robe of eternal snow, stands like a sentinelle on guard over the northern counties.

From those uncertain heights flow many ever-living streams, which finally become merged into the Sacramento, giving in that stream, long before it leaves the confines of Shasta County, an immense and never-failing body of water. These very streams and their final confluence go to form one of the factors which make up the prosperity of not alone Shasta, but every county which covers the valley to the south. Among the mountain valleys, where they rush and roar through narrow passages between the rocky walls, they possess a force measured in thousands of horse-power, which is already being chained, and by modern methods transformed into electric fluid, which is transmitted over hundreds of miles of wire to the points where it is used for the operation of mining plants, lighting of cities, turning of factory wheels, and the operation of traction lines. Almost every town of any size in the northern Sacramento Valley is lit by means of this current developed from the streams which receive their supply of water from the glaciers of Shasta. Yet the development of power from these waterways is hardly in its infancy.

Even though Shasta is a mountain county, its southern end contains many thousands of acres lying close beside the Sacramento River, which, in point of horticultural products, are the peer of any section of the valley. Round about the towns of Anderson are clustered many farms and ranches where are produced some of the choicest deciduous fruits sent out from this great fruit-producing territory. The principal among these is the French prune, which thrives on these lands of the upper valley. Prunes in great number of varieties, with pears, plums, and cherries, follow close behind the prune, while special excellence is noted in the apples grown upon the foot-hill lands. This area gives over to fruit culture begins at the county's southern line, and extends northward close on to forty miles, to where the valley narrows into the cañon of the Sacramento. Of the bearing orchards there are nearly four thousand acres, with many young trees still to develop, and yet but a small percentage of the area possible of producing first-class fruits is under complete cultivation. There is still another district of Shasta which has gained a reputation as a fruit producer. This is known as Happy Valley. Here the experience of the Anderson section has been duplicated, but the producers of Happy Valley have added the olive to their list, with a fair sprinkling of vines. Their success with these more delicate fruits, in which they have used irrigation, bids fair to greatly increase the area of Shasta's producing land. To the eastward upon the table-lands of the mountains lies another section made up of tillable land capable of being

A Shasta County Smelter

rendered highly profitable in fruit, but up to the present used solely for the production of cereals.

Though hardly one-tenth of the county has so far been proven to be arable, those districts which have come under the hand of the rancher and horticulturist are found to be of such value that it is but a question of time when this producing area is greatly increased. In the matter of cereals there is every opportunity for success in an increase of the territory growing them, for of these commodities Shasta is to-day a much greater consumer than she is a producer.

Within the confines of Shasta there are thousands of acres of excellent grazing land, which has caused the development of an extensive industry in live stock. Her mountain valleys all contain herds of well-sustained cattle which have been sustained upon the succulent native grasses of the foot-hills and higher mesas.

Shasta's history as a mining county begins in those days of the pioneers when California was yet under the serpent-blessed flag of Mexico. There has never been a cessation in her success, but the dawn of her copper era has been by far the most important event in all her mining history.

Modern mining is just now beginning to be applied to California mines, and greater headway has been made in this direction during the past decade than was made during the previous history of the State. Mining States of more recent development started with the advantage of knowledge attained and huddled from this foundation. While the mining interests sought elsewhere for the opportunity that be thought exhausted in the Golden State, the industry—or at least the methods employed—stood practically unchanged for twenty-five years. The reawakening is demonstrating that the pioneer miner who produced a billion dollars in gold surely marked the pathway that leads to larger production. Fifty-four years have passed since the discovery of gold turned the tide to California, yet within the past few years Californians were made aware that within the border of their State a district exists that now promises to rival such sections as Butte, Montana, or Cripple Creek, Colorado, in the production of its metal values.

Six years ago Shasta County produced but \$623,443. From that year dates the new epoch in the mining history of the section, and in five years an increase to over seven million dollars is officially recorded. This truly wonderful advance in the production of metals, great as it is, represents only the beginning of the activity which is destined to bring the production of the county up to \$25,000,000

Business Block of Redding

A Shasta County Fruit Orchard

annually before the first decade of the new century has passed. To the development of the Base Ore Belt of this district the present activity of Shasta County must be mainly attributed. That large bodies of rich-lode ores existed here was known for a quarter of a century or more, and attempts made to operate the properties and recover the values contained in the mammoth ore deposits have a history of varying success, but nothing of exceptional importance or permanency was accomplished until, with the availability of ample capital and the erection of modern reduction plants, the Mountain Copper Company, Limited, an English corporation, entered the field in 1906.

For several years this company alone occupied the district, but its increasing output has caused it to rank seventh in the world in the production of copper, and in the six years of its operation has practically earned its capitalization of \$6,250,000. The magnitude and growth of the company's operations can best be understood by reference to the following table:

	On Hand,	Copper Market,	Net
	Tons		Profit.
1907	97,195	6,225	\$63,143
1908	105,741	6,273	103,235
1909	178,080	6,647	202,111
1910	297,171	10,258	311,894
1911	425,000	12,000	380,000

The second large mine to enter the productive stage on the Base Ore Belt of Shasta County is the now famous Bully Hill property, of which Captain J. R. De La Mar is the principal owner and controlling factor. The success of this property has proven even more phenomenal than the first to enter the field, and while the capacity of the reduction plant as yet does not exceed one-fourth of the capacity of the older plant reducing the ores of the belt, the percentage of profit is much larger, due to the higher values of the ores, and it can be safely said that De La Mar in the first year of his operations more than realized in profits the original cost of the property and equipment.

The De La Mar smelting-plant, located at the town of De La Mar, near Bully Hill, is a model of modern smelter construction, and has no equal on the Pacific coast for economy in operation. In addition to the two large operators here referred to that are responsible for the marvelous increase in the mineral yield of Shasta County, a number of other large holdings have been developed in a point where they no longer remain in the prospective stage, but newly await the construction of reduction-plants to equal the showing or improvement that the pioneer operators of the district.

Without taking into consideration prospective properties, a conservative estimate warrants the prediction that within ten years the output of the Base Ore Belt, ten years the output will reach \$25,000,000 annually—a statement that is more than warranted by the showing made during the past six years, as shown by the following table:

	Price	Value
1907	\$14.17	\$1,817,397
1908	13.75	1,537,826
1909	11.41	2,005,410
1910	12.80	3,806,222
1911	30.50	4,184,715
1911	30,000,241	4,800,000

In addition to the copper output, the gold and silver product exceed the million-dollar mark. Also the sulphides treated, principally for the copper

values, contain sufficient gold and silver to, on the average, pay for the cost of reduction, and in some instances the gold and silver product alone—not taking into consideration the copper values contained in the ores—pay a handsome profit on the operation of the mill.

The natural opportunities for mining in Shasta County are unusually favorable. Climatic conditions are such that mining can be continued throughout the year entirely unimpeded. The fruits and flowers of a semitropical climate thrive in bedding, the distributing centre of this new world of wealth, and it is no uncommon sight to see orange-trees with their golden fruit clustering about the residence of the mine-manager in some of the camps of the lower altitudes. Even at the higher altitudes snow will remain only a few weeks throughout the year.

The presence of timber in profusion and the rivers and mountain streams with an inexhaustible supply for all purposes, including power transmission, represent one of the great resources of the district. The Mountain Copper Company alone employs from 1500 to 2000 horsepower, generated by the mountain streams and electrically transmitted.

The Base Ore Belt—the centre of activity—is divided north and south by the Sacramento River and the California and Oregon Railroad. Every facility for cheap transportation exists, and within a few miles of the mines fertile lands produce all that a large consuming population may require.

Mining capital, like other capital, is attracted by success. The ordinary mining successes recorded year after year in different parts of the world do not, as a rule, cause capital to enter the district where they are achieved, but the phenomenal success that marks the discovery of a new district, or the awakening of an old one, in time attracts mining capital generally, and then after a few years the public roads of the marvelous production of the regions that have made history or are making history in the mining world.

The increase in the production of metal values shown by Shasta County in the past six years caused the alert mining investor to enter the field and assume a part in the development of what evidently would prove to be another phenomenal mining region. Among the companies to enter the field early and acquire some of the most valuable and extensive holdings is the Mount Shasta Gold Mines Corporation. The property of particular value to this company, and which assures for it a long life of profitable operation, is its holdings on Bully Hill adjoining the mines operated by the De La Mar interests. This extension of the De La Mar's Bully Hill lode is now being developed, and a large vein of ore, similar in character and grade, has been developed by means of a cross-cut tunnel at a depth of about 400 feet. Drifts are now being extended along the strike of the vein, and ore is being systematically blocked out.

The possibilities of this camp are truly marvelous; with a smelting capacity of a little over 500 tons a day, the De La Mar Company is producing not less than \$200,000 a month in copper, gold, and silver. This plant will be increased to 500 tons a day as soon as railroad construction, connecting Bully Hill with the main line, is completed, and thereafter an output of over \$3,000,000 a year can be confidently relied upon. That the Mount Shasta Gold Mines Corporation will equal his neighbor in the magnitude of its operations and value of its product seems a certainty, and included in a radius of a half-mile from the apex of Bully Hill will rank with the most productive external regions of the world.

In a Shasta County Mining District

Sausalito, the Harbor of the North Shore

## THE NORTH SHORE

### A SAN FRANCISCO SUBURB

OVER across the bay from San Francisco, where Mount Tamalpais raises its rocky crest thousands of feet above the glistening waters, lies that section of Marin County known as the North Shore. From where it follows the sweeps and heights of beach line up to and around the base of the towering mountain it fills an area possessing an individuality thoroughly its own among all the most attractive spots in California. It is a land of picturesque valleys, rolling hills, and wooded heights, which, though within less than an hour's journey from the centre of California's metropolis, presents a most fascinating array of rustic and rural attractions.

Strange enough at first glance, but really explained when the topography of the county is considered, the North Shore possesses climatic conditions so thoroughly different from those of San Francisco as to cause the short journey to resemble a transition into another zone. Sheltered from the western winds and fog by the rugged hills which form the base of Tamalpais, the North Shore's meads and valleys lie steeped in an almost eternal sunshine. The towns and villages scattered through its territory, which winds about the base of the mountain, are made up of flower-enlivened homes, dotting the hillside or nestled amid the forests of massive redwoods which here and there fill the valleys. It is but a few years since the exodus from San Francisco to this charming suburban section began, but in that short period of time there have arisen hundreds of cottages and villas peopled by the families of San Francisco business men. With the building up of these clusters of suburban homes have come all those conveniences of perfect dwelling places, such as abundant water supply, electric-lighting plants, and good markets, in any nothing of educational advantages in the shape of the best of schools and churches of all denominations.

Of the towns along the North Shore there is not one which does not present a myriad of attractions to those who desire to make their home amongst healthy natural surroundings, and yet do not wish to remove so far from the business of the city but that their dwelling may be reached by a few minutes' travel.

Nearest to San Francisco, and where the ferry steamers transfer their passengers to the swiftly running electric lines, lies the town of Sausalito, one of the gems among San Francisco's suburbs. Its principal street stretching directly along the bay-front, the arm of this charming spot is spread over sharply rising hills, where are constructed the most delightful of residences. With a series of views embracing mountain, sea, and the busy city beyond the bay, Sausalito is within the metropolis and yet not of it, for the brief water journey of twenty minutes has taken the traveller to a town of rustic beauty, its dwellings each a haven of ever-blossoming flora, its streets lying upon terraces cut from the hillside, with every home overlooking the waters of the Pacific's most beautiful harbor. From Sausalito the rails of the electric line wind along the beach, branches reaching out from the main line into the dell-like valleys among the hills. Principal among these meads already devoted to suburban residences are Mill and Rose valleys, two most charming spots under the very shadow of old Tamalpais. Each of these little towns has been laid out amid groves of towering redwoods, and Mill Valley has gained a reputation as "Little Switzerland," for from where her dwellings cluster on the side of the little valley the line of scenic railway which climbs upward to the very summit of Tamal-

pais has its beginning, operating directly in connection with the Mill Valley branch of the electric system. The main line of electric rails, following the trend of the bay shore, yet bearing slightly away from it, passes through charming hills of scenic beauty, with here and there a villa surrounded by its well-kept lawns or a cottage peeping from its hedges of living green. Through little villages, which already show their destiny as suburban dwelling places, the road makes its way to San Rafael, the county-seat of Marin County, and one of the renowned climatic spots in northern California. Much other than its nearby neighbors, San Rafael is a little home-city by itself, separated from the sea by but a few miles, and presenting as an inland town parallel advantages and attractions to Sausalito, its sister by the beach.

Throughout this whole stretch of territory known as the North Shore there is to-day a constant increase in the demand for home sites, mostly brought about by the perfect transportation facilities inaugurated by the North Shore Railway, which takes its name from the territory it operates through. With its swift ferries plying between San Francisco and its terminal at Sausalito, it has combined one of the most successful electric railways in America. A perfect third-rail system has done away with the disagreeing poles, which could do naught but mar the beauties of this picturesque country, and fed with electricity generated hundreds of miles away in the high Sierras, its one hundred and nine daily trains haul over a perfect road-bed at steam-railway speed, carrying their passengers from the terminal at San Rafael to San Francisco in less than sixty minutes. Stations in plenty furnish opportunities for thousands of suburban homes to be peopled by business men who must perforce spend their days amid the city's hums. San Francisco did not formerly turn toward suburban homes, but by the opening up of this attractive North Shore country hundreds have turned their attention to the finding of a dwelling place here in the valleys about Tamalpais.

From the station at Sausalito, a short distance cityward from San Rafael, the steam lines of the North Shore system start on their northward stretch. Up through the valleys of Marin County the lines run, and easily make their way into the heart of the redwood forests, where, at Cotati, a beautiful spot eighty-six miles from San Francisco, they find their northern terminus.

Across a corner of Sonoma County the road winds, rearing into the famous Russian River district, which stream is followed for several miles, where its channel cuts through the forests of giant redwoods. Among these hills and glades and along the banks of the beautiful Russian River there are scores of spots which, though too far removed to attract the permanent resident from the metropolis, present in summer a host of attractions to the cottager or camper. The streams are alive with trout, while deer and all classes of game abound among the hills. The effect of thoroughly modern transportation facilities has already made itself felt even in this portion of the North Shore territory farthest removed from the city. At Camp Baker, Sloss Grande, and Mount Rio Park, all located on the banks of the Russian River, there have sprung up large summer colonies, more than a hundred cottages having been erected at these three points during the past year. Nearly every station on the line has its summer hotel, where the sojourner may find comfort while enjoying either a restful instance of sport in whipping the streams for trout or sealing the bill for game. Two points are noted among sportsmen—Point Reyes and Tomales Bay. Both offer in season attractions for the hunter or angler. San Francisco's famous Country Club has its headquarters and many new game preserves on the peninsula lying between Tomales Bay and the Pacific. To the holder of either rod or gun the North Shore is a sportsman's paradise.

A North Shore Electric Train at Rose Station

## SONOMA COUNTY

### A REGION OF UNLIMITED RESOURCES

**N**O county in the whole State of California presents a greater diversity of products than Sonoma. Its list of horticultural and viticultural productions includes everything in citrus and deciduous fruits, all classes of berries, every variety of wine and table grapes, and apples of specially delicious flavor. In early days its great acres were, like most of northern California, given over to cereals, in which the yield was record-breaking. Thus it is seen that any addition to Sonoma's roster of successes is well-nigh impossible.

The citrus fruits of Sonoma, mostly grown in that section of the county about Cloverdale, have attracted the notice of all experts, and at the citrus fair held in February of each year at Cloverdale are exhibited examples in the production of the lemon, lime, and orange which are typical of this section's success. The olive of Sonoma has gained precedence abroad, its oil receiving the highest award at Chicago's World's Fair, and a gold medal at Paris. Sonoma's situation is admirable, being neither directly on the seacoast nor far enough removed to be a portion of the State's interior. Consequently, its climate is particularly equable, with little variation. Fully one-half of the county's million acres is valley or foot-hill land, all capable of the highest development, and of this total less than one-half is to-day under cultivation, leaving for future development an immense field of action.

The population of the county is forty thousand, with an assessed valuation of \$22,000,000. Its annual production is \$7,500,000. This gives an average annual per capita of \$175 for every man, woman, and child, or \$900 for every registered voter of the county. Sonoma has an abundance of water, although irrigation is absolutely unnecessary in the production of its fruits.

The transportation question is a known quantity at every point in the county. The lines of the California Northwestern Railway cut the county's entire length, passing through every principal point, and, by an admirable schedule, giving facilities of travel between these places and the metropolis. This line of railway, which extends through and beyond Sonoma into Mendocino County and the redwood forests, is noted as the heaviest freight-carrying road, in proportion to its length, of any in America. The lines of the Southern Pacific system enter the county from the east, with a terminal at Santa Rosa, the county-seat, thus giving direct connection with the great trans-continental highways. The northwestern corner of Sonoma is cut by the line of the North Shore Railway, which opens up a rich agricultural district and a corner of the great redwood forest. Water transportation is possible as far north as Petaluma, where an arm of San Francisco Bay extends, and a system of electric lines is now projected which will place every corner of the county in direct connection with this land of navigation.

The beauty of Sonoma's location can hardly be expressed. Its

Among the Vines and Olive Groves of Eucos Heights

central valley is protected upon the west by a chain of mountains, while its eastern border is marked by the ridges of the Mayacmas Range, of which Mount St. Helena is the central figure. Besides, there are chains of low foot-hills, producing many beautiful valleys sheltered from wind and storm, which are most profitable in their development.

The county-seat of Sonoma is Santa Rosa, a beautifully located city of eight thousand population, occupying a central position on the floor of Sonoma's great valley. Its name was rightly chosen, for its wealth of flora is a part of its reputation. It is the centre of an acre given over to small but highly cultivated orchards, and has a large orcharding district devoted to the fruit, wine, and hop interests which centre in the city. The canning industry has lately extended to the preserving of vegetables, especially tomatoes, asparagus, and string beans, in addition to a heavy portion in the preserving of all classes of fruits.

Among the many examples of Sonoma's possibilities to be found in close proximity to the county-seat is the property known as Eucos Heights. This magnificent ranch consists of three hundred and twenty acres, located just east of Santa Rosa, its ceiling area slightly raised above the valley's floor. One-half of its extent is in the highest state of horticultural and viticultural cultivation, being given over principally to olives and vines of the choicest wine variety. The property was originally developed by a gentleman famed in Sonoma as an expert, and is now in the possession of the Santa Rosa Bank.

While the grapes and small fruits produced at Eucos Heights have given the place an envied reputation, it is to its olives that its greatest honors are due, the resultant product being absolutely superior to that of any other olive. Having a climate particularly advantageous for this class of fruit, the resultant product is cured olives and their oil has become notable among the delicacies which Sonoma sends out to the world's markets. The plant for curing of olives and extracting their oil is perfectly equipped, and is operated by skilled manipulators from the oldest of Italy's olive districts. Besides the common cured olives of commerce, each year sees an immense production at Eucos Heights of that more modern, though none the less delicious, cured ripe olive. The oils of Eucos are famed for their purity, they being absolutely devoid of even the slightest adulteration.

Eucos Heights' location is one of the most beautiful in the whole county, being situated at the junction of one of the number valleys and Sonoma's principal arts. Its acres are spread over several rounded hills, the slopes of which are covered with verdant trees and changing vines. From every elevation there is a commanding view of valley and mountains, with snow-crowned Santa Rosa in the foreground. While there are many other magnificent properties close by the county-seat, Eucos Heights holds its position of note as a perfect illustration of what can be done with these rich acres, the beauty of its location and the perfection of its products, of course, forming important factors in its attractions.

Santa Rosa has four financial institutions, including the Bank of Santa Rosa. All these are on the soundest financial basis, their correspondents extending to every centre of the world.

Besides its canneries, Santa Rosa has

The Santa Rosa Bank

The Home of a Petaluma Industry

Mines of Sonoma Quicksilver Company

In the last few years developed several important manufactures, including tanneries, a woolen and flooring mills, fruit-drying factories, and several of minor importance. The city is equipped with both gas and electric lighting systems, and possesses a municipal water-supply, being the only city in the United States where the domestic water-supply comes without cost to the inhabitants.

The schools of Santa Rosa include five high and one hundred and forty grammar-schools, upon which the annual expenditure is over two hundred thousand dollars. In addition, there are several private educational institutions. The city has a public library, and its churches include every denomination. Santa Rosa has long been noted as the home and work-shop of that "Wizard of Horticulture," Luther Burbank, whose marvellous productions have astonished the world. Every successful experiment carried out by this student of nature has been carried on here in the centre of the Sonoma Valley. Santa Rosa is to-day the most important centre northwest of San Francisco, and, instead of lessening, its influence and power must increase with the full development of the thousands of rich acres which surround it.

But a short distance south of Santa Rosa lies the city of Petaluma, with its population of five thousand, and its river, which, being a tide-water stream, renders it the head of navigation of Sonoma County. This fact has rendered Petaluma the centre of a rich and productive country, which finds its market-place where transportation conditions are most favorable. Besides its water transportation, which includes two daily steamers to and from San Francisco, Petaluma is located on the line of the California Northwestern Railway, and is the terminal of Sonoma's projected electric system.

Petaluma's transportation facilities have rendered it a most important industrial point. Its manufactures including a silk-mill, shoe-factories, leather-factories, saddle-tree factory, foundries, machine-shops, planing-mills, tanneries, fruit driers, and sawmills. In addition, there are immense warehouses for the handling of the products from the surrounding country. Petaluma's schools already accommodate one thousand pupils, the standing of these institutions being particularly high. There is an abundant supply of purest water, and light is supplied from a local gas-plant, and electricity generated in the high Sierras and transmitted one hundred and seventy miles.

The fruit product of Petaluma's surrounding country possesses the same characteristics as the balance of Sonoma County, but the city has one industry individual to itself. It is the centre of the poultry-raising industry of the entire State. That this industry has grown in such proportions as to develop an income for Petaluma poultrymen, averaging over two million dollars per year, is due to the fact that here the mechanical hatching of eggs was first successfully developed.

Twenty six years ago Mr. L. C. Ryan, a scientific enthusiast on the subject of incubation, took up the work of developing a perfect

machine for this purpose, and hunted his labors at Petaluma. His success as an inventor led to the organization of the Petaluma Incubator Company, and the establishing of a plant for the manufacture of the machines. This plant has grown to be one of the largest industries in northern California and one of the most important of its class in the world. Constant improvement has brought the Petaluma incubator to a condition of perfection which is recognized in every country where poultry raising is carried on. No great is the scope of the machines that they have been successful in the hatching of every class of eggs, from those of the silk-worm to those of the ostrich, and are the only mechanical device which have ever accomplished these extreme results.

It would be unjust to turn from Sonoma's resources of soil without a mention of her wines, which were among the first of her products to carry her reputation abroad. At several points in the county

the vineyards where are produced vintages equal in every respect to those of famed Bordeaux or sunny Italy. In open competition with the world Sonoma wines have gold medals from the Exposition of 1892 at Gona, the World's Fair at Chicago, the Duken Fair of 1892, and San Francisco's Midwinter Fair of 1894, while its wines and American wine world's competition were awarded the silver medal at Bordeaux, France.

### SONOMA'S QUICKSILVER

**Y**OU might travel far in the Golden State before you would find an individual who could tell you the story of "Pine Flat." If found he would be a grizzled miner, and his story would be made up of chapters full of mining riches which brought about the building up of that wild and woolly mining-camp under the shadow of Mount St. Helena. His life was a merry one, and it was not gold, but quicksilver, which gave it glory. Its location was in the mountains of Sonoma, close by where that county's eastern line borders on Lake County. Pine Flat flourished with that wild impetus which has given fame to many another mining camp. Its lifetime existed for about one-half the stretch of time between '70 and '80.

The tales of Pine Flat's greatness are all true, and more than likely the tale of its wickedness are true likewise, but it is a poor-factor in California life, so let its wickedness remain buried in its rains, even though its greatness bids fair to be revived. It was a minor prospecting for gold who first made the strike destined to give life to Pine Flat. This miner found shimmer, with its delicate shades of pink, and he found an immense deposit of it. He was puzzled to know its character, and sought an assay. His samples were rich in quicksilver, and word went forth that Sonoma possessed deposits of this mineral rivaling those of old Castile. There was the consequent rush to the district. Pine Flat became the center while, roundabout claims were opened up, furnaces erected, and in but a few weeks the principal mines were almost making good their early promises, and Pine Flat had taken its place among the mining centres of the Pacific.

All this occurred in 1872. There was the usual era of "wild-cat" speculation, and then the district settled down to legitimate production and looked like a permanency. Pine Flat threw, and though far removed from a railway look upon itself metropolitan airs. Round about were the stacks of the furnaces where the successful mines were located, and double shifts of men kept the plants at work night and day delving for the elusive metal. For five years the success continued. Various estimates are made of the results accomplished, but it is certain that many fortunes were piled up in that time. Following this time of success came a serious discovery which meant an absolute, though temporary, abandonment of Pine Flat. Gradually it became apparent that the facilities then in use for the roasting of the ores were not sufficiently perfect to permit of the operations being successfully continued. Confronted by these discouraging conditions the plants of the various com-

The Tunnel of a Quicksilver Mine

Making Brick for Quicksilver Furnaces

panies were shut down, and an era of ill-fame came to Pine Flat's mines. One by one the stacks of the furnaces ceased to throw off their clouds of smoke, and the throng which made Pine Flat ring with wild Western life turned its back upon the spot, seeking some new camp.

This was the reason for Pine Flat's existence removed. Her dance-halls became silent, and the click of the poker-check and hum of the roulette-wheel ceased to be part of her nightly life. Her hotels and stores became tenantless, and her hundreds of buildings were given over to the wind and gopher. Then, as if at the command of nature, that all marks of human occupation should be removed, a great forest swept over the district, leaving behind only the ashes of Pine Flat and the half-dead mining plants which had brought life and prosperity to the district.

For nearly thirty years these Sonoma mountains remained in their condition of original solitude. Then the supremacy of quicksilver having declined in the great mines of Europe and America as well, attention was turned again to the once abandoned deposits, when, with modern appliances and improved methods of roasting and condensing, their operation has become once more profitable. One of the old mines was opened, and immediately turned

out a bonanza. Then followed the centralizing of endeavor and the organization of the Sonoma Consolidated Quicksilver Company, which, by purchase and otherwise, secured control of the greater portion of the promising properties. Modern methods were applied, and the entire group of twenty five claims thoroughly prospected, with the result that the revival of the district's prosperity is only a question of the completion of the plants now under way. The old deposits have been unmined and now are being opened, showing thousands of tons of ore, varying from one to five per cent. of pure metal. A twenty-five-ton Scott furnace has been lately completed on these properties of the Sonoma Consolidated Quicksilver Company, and this plant is at present operating successfully and to its full capacity. A like furnace of double this capacity is planned, as the company has already on its dumps upward of twelve thousand tons of ores ready for the roaster and condenser. The company's underground workings are equipped with a modern compressed-air plant, and its development work is being rapidly pushed forward by means of a series of machine-drills. In the opening up of the properties upward of three thousand feet of tunnels have been driven into the hills, and up to the present time no development work has been abandoned through failure to find ore sufficiently rich to pay for working. These present owners of this deposit enjoy many advantages over their predecessors, the principal among these being a simplification of the methods for the extraction of the metal from the ore. Even the two years which have been spent in the prospecting and development of the properties have been valuable in that they have brought forward methods which eliminate much of the cost of reduction, and that to-day can be embodied in the original construction of the plant.

But sixteen miles separates these mines from the lines of the California Northwestern Railway, and they are but thirty-two miles from Santa Rosa, the county seat. One by one the old mines of other sections have ceased to produce quicksilver in paying quantities, therefore these Sonoma deposits bid fair to materially assist in the product of this valuable metal. Their prospecting seems much to the advantage and to California as well. Perhaps there will be another Pine Flat. If so it will not be the Pine Flat of the early '70's for the mining camp of tomorrow has passed, and the new quicksilver centre of Sonoma will be a city of the present, where its predecessor will be known only through the tales of days ago.

In a Humboldt Redwood Forest

## HUMBOLDT COUNTY THE HOME OF THE GIANT REDWOOD

**A**LTHOUGH possessed of resources, beauties, and diversified advantages which render it at once the peer of any section within the confines of California, Humboldt has, through the fact of its location, remained practically an unknown land to most of those who dwell beyond its borders. The location of this division of the Golden State is north of the parallel marking 40° north, its western border occupying 108 miles along the coast-line of the rolling Pacific, from which coast-line its area extends inland an average distance of thirty-five miles, including a total of 3,017 square miles, or 2,344,000 acres. Physically, Humboldt is mountainous, the Coast Range occupying its entire length, with foot-hills extending close down to the shore-line, where they terminate in bold headlands and rugged cliffs. From the sea the entire county seems to be an almost unbroken forest extending to the towering heights of the mountains, although, in fact, but half of the county's area is forest proper.

Paralleling the coast-line and within a short distance of it lies the Redwood belt, extending the entire length of the county, and averaging ten miles in width. East of this great forest, and occupying the middle heights between it and the peaks of the Coast Range, lie thousands of acres, consisting of open lands rich in native grasses and given over in cattle and sheep raising. Still farther to the east and covering the borders of the county in that direction are timber areas consisting of immense growths made up of Oregon pine, oak, California laurel, madrone, and other smaller classes of trees.

Several streams cut the mountain ranges of Humboldt, making their way to the sea in a north-westerly direction, at least two of these being worthy the title of river. The valleys formed by these streams consist of lands which are most productive in all crop countries to temperate zones. Humboldt would receive the first prize for quality at the Chicago Exposition, with a heavier record of from 20 to 100 bushels per acre for various samples. In the production of oats and corn, the United States census reports award

A Lumber Mill at Scotia

The Eureka Shipyard at Eureka

Humboldt the first place, while potatoes, peas, barley, beets, seeds, and all classes of grasses are produced, with crops which furnish amazing acre averages. In horticulture the Pacific coast is better fitted for general production. The nectarine, peach, pear, apricot, plum, and even the walnut and almond are produced with the most gratifying success, but the principal fruit product of Humboldt is the apple, of which every variety matures in perfection. Cherries and small fruits grow in abundance in all sections—*in fact*, with the exception of citrus fruits, Humboldt not only supplies itself with every class of horticultural products, but ships annually upward of 2000 tons. All of this agricultural and horticultural production is carried on without irrigation, for it must be borne in mind that, as an adjunct to the development of Humboldt's broad acres, the irrigating ditch is an unknown quantity. The area of lands suitable to successful horticulture is large, and the time is not far distant when the fruit shipments from Humboldt will be materially increased. Humboldt possesses both soil and climate. It only needs the horticultural and increased transportation facilities. The latter is a certainty, and with Humboldt rendered accessible to the thousands of housewives her valley will quickly become the field of labor for thousands of thrifty home-builders. One of the principal factors in Humboldt's present thrust is her dairying industry. About twenty years ago these ranch owners were among the county's farmers of the possibilities offered in this line, which was quickly followed by a transformation of the valley ranches from fields of cereals to acres of fragrant clover and succulent grasses. Upon these dairy herds thrives, with now and then the addition of veal and pig stables, the result being that, instead of six or seven acres required to keep a single cow, from one to one and a half is ample. Still more important, the yield per acre is greater, the quality of product is better, and thus encouraged the Humboldt dairyman has improved the quality of his herds, which now include the best milk and butter breeds. The average gross earnings per cow have reached \$70 per year. There are today thirty-two creameries in operation within the county, a cheese factory, and a condensed milk and cream works. The creameries are all operated by the producers, and Humboldt latter demands the highest price in the State. Humboldt county shipped 4,812,318 pounds of butter

and 769,544 pounds of condensed milk and cream, besides supplying its home demand, thus earning an income for the county of an average of over \$100,000 per month. Stock-raising is another of Humboldt's prolific industries; 4000 head of beef cattle, 3500 sheep, and 5500 hogs are annually shipped, while as many more are driven out overland, of which no record is kept. The sheep herds produce an average of 1,500,000 pounds of wool per year. In minerals Humboldt produces \$75,000 per annum. Her hills contain unlimited quantities of granite and sandstone for building purposes. Lime and mineral paint are produced at several points. The smaller industries include fishing, salmon, rock cod, herring, halibut, founders, perch, sea trout, and shad abounding in her waters. From this it may be seen that Humboldt's agricultural, horticultural, dairying, and minor industries are sufficient to give prominence to an average county, but the crowning glory of this northern clime is the forest of redwood, which are native to these western slopes of the Coast Range. Of these forest giants Humboldt has now standing nearly 50,000 acres, which conservative estimates reckon to contain no less than 50,000,000 feet of redwood lumber. This added to Humboldt's forests of oak, fir, and other trees give in the county a total of standing timber one and a half greater than the combined timber total of Michigan, Wisconsin, and Minnesota.

By far the most important of these Humboldt forests is within that section known as the Redwood belt. This includes an area averaging ten miles in width and extending the entire length of the county, and, in addition to its immense acreage, carries an added interest from the fact that outside the coast counties of California the class of timber known as the Sequoia sempervirens, or California redwood, does not exist. These forests consist of absolute giants, the trees averaging two hundred feet in height, many towering to three hundred feet above the ground. No thickly are they scattered over these Humboldt hills that it is not at all uncommon to find acres that will cut more than a quarter million feet of sawed lumber. One instance under observation is a solid tract of 160 acres owned by the Redwood Land and Investment Company, where these stark, hoary trees which will when cut yield a total of forty millions of feet.

The Bank of Eureka

A Road through the Redwoods

Of still greater importance is the quality of this lumber. It conforms with great rapidity, and is practically free from resin. This cures the timber product, insures to climatic action, and a redwood tree once felled practically remains sound for generations. The grain is principally straight, but some logs show a curly defect, from which most beautiful interior fittings are produced. A general building wood, redwood is unequalled, and here another of its qualities comes into direct prominence. There is in red of this quality that it has been recognized by the insurance companies as the most perfect roofing wood in the whole world. A most impressive example of its use in this manner is to be found in the last remaining building of old Fort Humboldt, near Eureka, which was a fortifying army post in the earlier times, and commanded at that time by General, then Captain, Charles B. Grand. The roof of this half-century-old building shows examples of shingles, which are, in spite of their exposure to storms swept in from sea, and the driving mountainic tempests, not only sound, but also useful at the present day. These facts considered with redwood shingles have caused the establishing of a great industry in this building necessity.

The export of redwood has, since its qualities have begun to be recognized, reached enormous figures. During the year 1902 there was shipped from the port of Eureka lumber products to the value of \$3,766,000, which total included 623,788,000 finished shingles. This roofing material being all of redwood. There are at present in operation within the limits of Humboldt County ten lumber-mills and thirty-five plants devoted to the manufacture of shingles. These mills are producing an average of 200,000,000 feet annually. It might seem that at this rate the lumber of Humboldt would be quickly exhausted, but the present generation need have no fear of a lumber famine, for it would take three centuries to strip the country at this speed of production.

An example of what is being done in the production of lumber here among the redwoods may be gained from the record of the Pacific Lumber Company, whose mills are located at South, thirty-five miles from the coast. This company has built its own town, constructed a private railway to a junction with the Yel River line, and is to-day operating a plant which turns out two hundred thousand feet of lumber daily and gives employment to four hundred men. And this is only one of the great plants of Humboldt County.

Like its redwood forests, the climate of Humboldt County is among the wonders of California. It is a section which is almost devoid of either summer or winter. The thermometer's highest figure since records have been kept is 85, while the lowest is 39 above zero, this latter figure being recorded on one day only, and outside that one occasion the lowest record is 27 above. From this a judgment may be formed of Humboldt's climatic perfection in such a country there can be no question of agricultural or horticultural success, and with thousands of acres available to the homeseeker, the price of which is far below its value when computed from possible returns. Humboldt offers opportunities which will fill the valleys with earnest workers when once she is placed in direct connection with the outside world.

For years Humboldt has depended upon her waterway for communication in points beyond her border. Many times has she risen to glimmers of hope when it has been asserted that rail communication would soon become a fact. Now, however, there is a practical certainty that no less than two railways will connect her with the countries north and south. The transportation magnates here at last recognized the vast importance of Humboldt's natural products, and from both north and south work is being pushed which will cause Eureka to be the tide-water terminal of rail lines extending to San Francisco on the one side and Portland, Oregon, on the other. This is but the beginning, for as vast will become the volume of traffic from this northern California port that sooner or later other lines will reach out to this point in the hope of gathering in at least a portion of the gigantic revenue.

## EUREKA

NORTHERN CALIFORNIA'S GREATEST HARBOR

A **W**IDE midway on the coast-line of Humboldt County lies Humboldt Bay, a magnificent ice-locked harbor four to five miles in length by from one-half to four in width, possessing a total area of thirty-five miles and thirty-five lined miles of navigable channels. For years after the settlement of Humboldt County this magnificent harbor lay practically unused for anything like large commerce by reason of the shifting sand-bars which barred its entrance. It

was not until 1880 that the government took cognizance of the possibilities in this ice-locked bay located on a coast barren of good harbors. The result was a general improvement, beginning with the construction of two rock jetties, one on each side of the mouth. This work was carried to completion in a cost of over two millions, and was principally handled by two Humboldt County men, Mr. J. C. Bull, Jr., and Mr. Thomas Blair. A survey of the channel just completed shows how well the work was done, for the United States engineers now report a depth of water of ten feet in the shallowest place over the bar. This survey stamps forever the possibilities of Humboldt Bay as one of the Pacific coast's great commercial points, for it carries the announcement that the harbor is accessible to ships of the greatest draft, and renews the future of Eureka, Humboldt County, a brilliant one.

Thus little city of Eureka, like many another of the great West, is almost unknown to the outside world, but way up here, on the rock-bound coast of California, it has nestled upon the only harbor for hundreds of miles, providing gradually as it widened, one when it could come into familiar touch with its neighbors. Its population has increased until it exceeds twelve thousand, and the result is a thriving city which carries in every quarter the marks of prosperity. The wealth and culture of Humboldt have centered here, and the result is a community of homes tastefully constructed, beautiful in surroundings, and thoroughly in touch with the brightest and best in the educational and artistic world.

Eureka has many industries allied to her great lumber production, there being here at present a saw-mill, an excelsior mill, and the largest mill in the county. The Dalbey and Carson mill is one of the important among these institutions, producing not only a great output of lumber, but millions of shingles as well.

Another of the industries closely connected with Humboldt's wealth of forests and developed by the close proximity of Eureka's splendid harbor is that of shipbuilding. The yards of the Headway Shipbuilding Company are located at Eureka, and have since their establishment turned out more than a hundred and fifty coasting and off-shore craft, many of them being of large tonnage. There is now under construction at the Headway the largest five-masted schooner ever built on the Pacific coast, and contracts are in force which will test the capacity of the yard for many months to come.

Up to the present year Eureka has been wholly without suburban transportation. This condition has existed, in spite of the fact that during the last few years the city's residence area has practically doubled, thereby offering a prolific field for an investment leading to the establishment of a street railway system in accordance with the growing traffic. For some reason, most likely bearing on the city's isolation, foreign capital failed to note this opportunity, and like many other Eureka enterprises, it remained for local investors to take up the task. The result was a company organized by J. C. Bull, Jr., and Mr. Thomas Blair, of the Dalbey Page Cutler, and backed wholly by Eureka capital. This corporation has constructed and equipped a thoroughly up-to-date railway, which was first put into operation during September of the present year. That it was a much-needed improvement is shown by its record of nearly ten times the number of passengers carried during its first operating week as there are inhabitants in Eureka. That, too, with but little more than two miles of its lines in operation. Eventually the system will be extended to reach the other principal towns about Humboldt Bay. The organization of this Humboldt Traction Company is a most important factor in Eureka's advancement, for, besides the construction of its transportation lines, the company will establish upon property along the Klamath River and sixty miles northwest of Eureka an electric plant where not alone will its own power be generated, but its power plant will be of such magnitude as to allow the sale of thousands of horse-power to other manufacturing plants within the county. Its location on the Klamath will permit of the development of no less than fifty thousand horse-power when the full force of the river is harnessed, one-quarter of which will be developed from the plant to first installed, the balance to be developed as a demand is made for the power.

From a business standpoint Eureka is exemplary. Her shops would do credit to any city in America, her financial institutions are rated among the best in California, and, better than all, she is operated under a clean and wholesome municipal government. Her advantages are manifold, and she is on the way to place at her feet. From her wharves there sail ships to every corner of the world, carrying the vast timber riches of Humboldt, and here-Francisco and the other ports to both north and south. It is now only a question of months when instead of being the terminal of several little rail lines which found their other ending within the county's limits, her depots will be the stopping places of trains connecting directly with all the great transcontinental systems. "Where rail and water meet, the center of commerce will be found," is an old saying, but directly applicable to Humboldt's principal city, and with direct communication to the great centers, Eureka has bound to become one of the great cities of the Pacific. Within her confines are vast opportunities for the investment of both energy and capital, for in the great power which is sure to place at her feet and a back country which is to-day producing millions, is certain to become a prime factor.

A Correction

There's an oversight, top right and credit are omitted from the photographs of the decorative panels by Mr. A. B. Wenzell and Mr. Robert Blum for the New Amsterdam Theatre, which were published in the WEEKLY of November 28. Credit should have been given to the Detroit Photographic Company, owners of the copyright.

The Coast-line of the Philippines

A GEOGRAPHICAL magazine makes the interesting statement that the Philippine Islands have a coast-line double that of the main part of the United States. The measurement given is 11,444 statute miles, while the total area is stated as 115,020 square miles. In the Philippines there is one mile of coast-line in every ten miles of area; in the United States the proportion is 1 to 400. It is said that 2000 islands and islets can be counted on the charts.

THE HEART OF HYACINTH

By ONOTO WATANNA  
 Author of "A JAPANESE NIGHTINGALE," Etc.

Japan—the land of flowers—is the scene of this new love story by the author of "A Japanese Nightingale." It is marked by all the delicacy and naive charm of style of the earlier book. The story is even more original. Bound in lavender cloth, with gold and colored decorations; delicately colored illustrations and quaint Japanese decorations on every page. A novel of artistic book making.

Gift Top, Uncut Edges, in a Box, \$2.00 net (Postage extra)

HARPER & BROTHERS, NEW YORK

HYGIENIC MATTRESS

This mattress is made from the very best grade of Java Silk Floss, which is the seed of the Kapok-tree. Java silk floss may be heated, tanned and refined same as hair. The "Hygienic" mattress meets a hitherto unmet demand for a mattress—piled with a material which is pure, clean, sweet-smelling and capable of proper renovation. It will not pack or lose its shape. We guarantee purchasers of this mattress entire satisfaction or a return of the money. Double size (weight 72 lbs.) price, \$84.50; three-quarter size (weight 42 lbs.) price, \$49.50; single size (weight 28 lbs.) price, \$35.

# THE UNPLEASANT

By  
Robert W. Chambers

I MEAN, by the "unpleasant" affair, those unenviable experiences which go to swell up the total of the day's play, as well as of the day's work. Not of sufficient moment to be classed as episodes, nor yet trivial enough to be dismissed as incidents, they stand out in one's memory with almost startling distinctness, each experience labeled with its own brand of peril, such a lesson in itself, and a healthy one for foolishness. To them that hath shall be given; therefore this warning is profitable in its wisdom only to the wise.

The more familiar with the use of firearms an intelligent person becomes, the more he dreads accidents. What man who has used a rifle or fowling piece can look back over his career afield without thankfulness for escapes not due to his own foresight? My first experience as a boy I can never recall without a sickening sensation, even to-day. My brother and I had laid our guns down, unshouldered. A few moments later my foot came in contact with the stock of my gun, and the weapon was discharged, tearing the hair from a tree where, a second before, my brother's head had rested. And to this day I cannot imagine how that cartridge could have remained in my gun. That in the usual story—a horridly trifling one, I believe leaves. Again, in the yellow days of youth and mink self-confidence, and also in the days when there were no humorous fowling pieces, I and two companions came to the edge of a stream one hot September day, thirty as spike bucks in a drought. Very carefully and conscientiously we uncocked our guns, laid them down, beside us, muzzles pointing ahead, and built to drink. My companions finished quickly, rose, and corked their pieces, starting ahead. I, supporting my weight on my hands, wrist-deep in water, lay slaking my thirst, then jumped up, and started to cock the left barrel. But my hand was not perfectly dry; the hammer slipped at half-cock from under the ball of my wet thumb, and the charge tore through the willows within an inch of my companions' heads. One never forgets such moments.

The newspapers are full of accounts of accidents; they have a horrid fascination for me, and I read them. As a matter of fact, modern weapons, in skilled or unskilled hands, make life so unsafe that it's safer to be dead. But it is not of such experiences that I mean to write; everybody has run the same chances; everybody has been peppered at least once or twice, and has peppered others; and it's usually a toss-up which is the more culpable one, the pepperer or the peppered.

Every one, too, has his own particular brand of assistance. Mine was (and is) the silly yet absolute conviction that when I want to go anywhere the best and quickest route is straight ahead. An example of the result of this delusion occurred in the Bavarian Alps.

For two months I had been fishing a beautiful trout stream called the Red Valley. There were miles of good fishing on the Red Valley before it crossed the Austrian frontier and became the Arben water, and was thereafter subject to the regulations of the Austrian government's fishing laws, of which I knew nothing, farther on—always bigger trout around the corner.

I fished the Arben in defiance of the laws of Austria! There was literally nothing in it. Satisfied again with my own Red Valley, I had settled into comfortable habits once more, when some detention prompted the head forester to speak of the White Valley, and, naturally, I wanted to know all about it. It seemed that this White Valley was a stream never visited by anglers, in-

stantly visions of enormous trout haunted me; but the forester said that he had never seen any trout in the White Valley any larger than those in the Red Valley, which statement had not the slightest effect on me or my visions.

Pursuing the subject, the head forester remarked that it was a good stream to keep away from; that a dozen tourists and hunters of chamois had met death along the White Valley; that he himself never fished it, and avoided it when attending to business. Three fingers nodded approval when he finished. The only idiot present went off to bed, leaving a request to be called at daylight.

By eight o'clock I struck the White Valley; and of all lily-of-the-valley waters that I had seen in Bavaria, this was the most likely. As for danger, I could see none. The stream rippled through the mountain cleft, not with long amber reaches, brown sunny pools, silvery ripples fringing rapids that sparkled like shoals of toads. From the highroad a gentle green slope led to the water; and down the slope went the writer, wading out, thrilled with that delicious expectation which follows a first cast made into unknown waters. The thrill subsided after a quarter of a mile wading downstream; there were trout there, and they could be taken; but not a fish, so far, approached in size those of the familiar and handsome Red Valley. Another quarter of a mile completed the disillusion.

There were two courses now open to me; at least I imagined there were two. The first was to return to my starting-point, strike the road, and amble peacefully back to the Red Valley; the alternative was to continue at a rapid pace downstream until I reached the junction of the two Valleys. I chose the latter. A few rods, and the character of the river changed. Pools deepened so that it was not possible to wade; the boulders were bigger and farther apart and very slippery, and it took long jumps to traverse deep, rising slalows of unfordable water. A thunder-storm had come up; the ravine grew oppressively dark, and I got more than one ducking and more than a dozen cracks on the skin from over-confidence in jumping.

The last jump I took was from a wet, slippery shelf down across a pool in which a great volume of water was swirling and boiling. And after I had taken that jump it was plain to me that I could not go farther. In the gloom of the ravine I saw that the laws of two mountains formed the banks of the stream; but instead of sloping to the water, preventing curved surfaces, they were cut under, forming the sides of a smooth tunnel, through which the White Valley, now swollen to a torrent, roared, rising higher every minute. Having taken the fool jump, my first instinct was to take a wise jump back again. I couldn't. Where it had been possible to jump down, it was impossible to jump up to that shelf across the whirling foam-charged eddies. And the eddies were filling rapidly to overflowing.

It had now become so dark in the gorge that it was not easy to see except when the lightning flashed. However, it was apparently necessary for me to get out of that ravine, and the only way open appeared to be a V-shaped cleft in the flesh of the mountain. It seemed to be not too difficult; I thrashed across the stream, shoulder-deep, and began the ascent. Sharper and sharper grew the angle; my rod butt was fitted with a spike, and I used it until I found myself facing a sheer wall of rock which leaned outward, overhanging the gorge below.

And now, for the first time, I realized how high I had climbed. For the roar of the torrent had dwindled to a murmur in my ears.

(Continued on page 2118.)

(Continued from page 217.)  
 now perceived that the general was making himself very disagreeable, and, as his mother insisted and yet again insisted on getting ahead of him, he suddenly found himself wanting in all the virtues.

**The Rebellion of Goggles**

"Ladies first," he snapped, taking the senhora ahead with a startling jounce. Whereupon the race began.

The poor American senhora gritted her teeth and shut her eyes. Her hair streamed down her back, and she clutched the middle piece frantically. The general was in little better plight, though he managed to belabor his head with his stick at odd moments; and, due in a degree to those harassing attacks, Goggles squatted further and yet further ahead, and with a mighty and unexpected swerve, turned directly across the path of his oncoming adversary—and stopped.

The result was instantaneous. The American senhora went over his head with the grace and agility of a circus girl turning handspins, and landed in a brush heap at the side of the road; the advancing general went through similar manœuvres in a different direction; the head of Goggles's mother butted into the soft side of Goggles with a force that was eminently satisfactory, and compensated for many things.

The general was much shaken, but rose with no great difficulty. The senhora was also fortunate in that no bones were broken, though she was fearfully scratched.

**The Senhora Retaliates**

"It was all Goggles's fault," she declared as soon as she could speak; and nothing could induce her to mount her pet again, or, indeed, any other donkey. The general, too, felt diminished toward donkeys, while Gil announced that he would walk with them. So, leaving the senhora's aunt to go on ahead with the Harvard man, the three started on foot for the village. As the senhora, however, was hoarse and shaken and very tired, Gil conceived the idea of making a seat with their crossed hazels and carrying her. To this she at last consented, though stipulating that she be put down on approaching the first house. Having then thus at an undoubted disadvantage and being exceeding and ever-increasingly wroth with the general, she suddenly said:

"Gil, dear, the general has just been cautioning me not to fall in love with you."

General Oliveira gave a gasp of dismay. Heave man that he was, this was carrying warfare into the enemy's camp to a degree he was not prepared for; when Gil redoubled to the edge of his high forehead and nearly dropped his hold of the general's hands.

"And what did you say to him?" asked Gil, stolidly.

"Oh, of course I said that I didn't love you the very best little bit—or if I didn't say so, I meant to; for, you see, in the first place, I don't, so I should be telling the truth; and in the second place, that is what he wanted me to say; and in the third place, I was always very polite, the General and I; and in the third place, I wouldn't have told him if I did, because I should be ashamed to tell any one but you; and"—she became rather incoherent in her circumlocution, which Gil thinks believe—perhaps I had better get down now, please. We are nearly at the village, and—and—I thank you both very much indeed for helping me."

So saying, she slipped to the ground almost before they knew what she was doing,—leaving the old man and the young man glaring into each other's eyes.

**Millions for Autos**

According to an authority on automobile-billing, Great Britain provides the world's largest market for motor-cars. The great majority of these machines come from the Continent, the importation figures for last year being 3500 cars, valued at \$5,230,000; for the current year the figures have increased to 5230 cars, amounting in value to \$8,000,000. It is said that most of the response in a matter of weeks as the raw material of the machines is of little comparative value.

The left-hand reproduction of "Autumn Evening," and, various scenes, the finest and most of the Art Plaque group.

The four round Plaques containing the reproductions of the "Calendar" group make beautiful and unique decorations.

**The Anheuser-Busch Art Plaques**  
 With Calendar Plaque for 1904

AT GREAT expense, Anheuser-Busch Brewing Ass'n has secured from the brush of the celebrated color artist, A. Van Dine, a series of magnificent oil paintings, representing the artist's conception of the best seasons. These are reproduced with scientific fidelity as to detail and coloring, in the form of four plaques,—"Spring Evening," "Summer Evening," "Autumn Evening," and "Winter Evening." It uses an additional plaque containing the twelve monthly calendars for 1904. The five plaques are each 12 1/2 inches in diameter, illustrated in the highest style of art, featuring paintings of great beauty, a fine-finish, and executed with relief embossing, giving the effect of hand-hammered metal work.

The five plaques will be mailed to any address, all members of the order of members and their clubs. Order, Anheuser-Busch Brewing Ass'n, St. Louis, U.S.A.

A list of Retail Dealers may be obtained by the "General" member. It is also to be noted that the order will be mailed to the member and the order will be mailed to the member and the order will be mailed to the member.

## The Progress of Science

### Is It Transmutation?

In the past few months something little short of confusion has been wrought in the ranks of science by the revelation of the mortal radium. The atomic theory, long established, was upset; the principle of the conservation of energy, which seemed impregnable, was threatened; and a general insecurity in scientific belief began to be felt. But a great hope also arose, the hope that humanity was on the verge of some marvelous discovery of the true constitution of things and perhaps of the meaning of life and nature. That hope has not yet been fulfilled, and it is gradually subsiding again. But radium reserved at least one other surprise for the scientists. Sir William Ramsay, professor of chemistry at University College, London, has made the discovery that this mysterious element has the power of changing by some subtle process into another element, namely, helium. He found that, besides its other manifestations, radium constantly gives off an emanation which seems to behave in all respects like a heavy gas. It can be collected in masks, condensed, weighed, but its odor a month it entirely disappears. What becomes of it? By the aid of the spectroscopy, Sir William Ramsay found that it changes into helium. Thus, it is claimed, one element has been detected in the very process of transformation into another. The realization of one of the oldest of human dreams, says Professor Ramsay, is very suggestive of transmutation. It has been pointed out by critics, however, that the phenomenon is one which admits of several explanations without involving the unqualified acceptance of the theory of transmutation. Radium may not be an element at all. Indeed, there is much to warrant the conclusion that it is a highly complex and very unstable compound, and if it is a compound one of its components may very well be helium.

### Life-Span of the Human Race

Science has given the human race only a limited span of existence. This was one of the subjects which distressed Darwin, and it has wrighed on many other sensitive minds. Some three millions of years or so is about the average estimate. The discovery of radioactivity led to the question whether the existence of the metal in the sun might not indefinitely prolong that luminary's active life. Much disappointment was therefore felt at the results of investigations undertaken by a Cambridge scientist. After some months' exposure of very sensitive solutions to the sun, he was unable to discover any of the signs characteristic of radium rays. The verdict, therefore, was that the discovery of radium afforded no reason for altering the cosmic time-scale. But Sir William Ramsay's proof of the transmutation of radium gas into helium, receives the hope that radium may, after all, be a constituent of the sun. It is well known that the spectroscopy reveals the abundant existence in the sun of helium—in this metal, indeed, was discovered. In the sun, before it was known to be a terrestrial property—and it seems possible that all this helium may be transformed radium gas. So helium may be transformed radium gas, so that once more it appears promising to limit the existence of the human race to any definite number of millions years.

### A New Light

For a number of years electrical experts, among them the able Professor Crookes and Mr. Nikola Tesla, have been trying to produce for practical purposes a cold, wire-less, electric light—a light that does not consume. Mr. H. Wolf, of this country, it is claimed, has now solved the problem by perfecting his invention of electric tube lighting. The system is based on the projection of a compressed current of electricity through a length of glass tubing which has been exhausted. The current is flowing through the ultragenuous matter in the tube gives off a brilliant phosphorescent light all round the tube. This light is hardly distinguishable from daylight in color and quality; it is said to be at least twenty-five per cent. cheaper than incandescent light; it has no discernible or injurious effect on the eyes; and it is perfectly safe.

## Skin Diseases

Eczema, Salt Rheum, Pimples, Ringworm, Itch, Ivy Poison, Acne or other skin troubles, can be promptly cured by

# Hydrozone

Hydrozone is endorsed by leading physicians. It is absolutely harmless, yet most powerful healing agent. Hydrozone destroys parasites which cause these diseases. Take no substitutes and see that every bottle bears my signature.

# MUDLAVIA

This great ointment opens the great blood, cleansing the blood and purifying the system. It is a true blood purifier. It is the only ointment that cures the skin diseases. It is the only ointment that cures the skin diseases. It is the only ointment that cures the skin diseases.

# THE MAIDS OF PARADISE

Robert W. Chambers possesses, more than any other American novelist, the feeling and quality of romance. The present tale carries the reader into the heart of the Franco-Prussian war. The Boston Herald writes that "Mr. Chambers is a superb master of his art as a story-teller of romantic fiction." Another Boston paper calls this romance "a wide-awake book, with plenty of dash and crash in it and many tender passages." Indeed, this charming story is, to quote the Philadelphia North American, "the foremost of modern romances."

## Music

## Berlioz

"A gigantic nightingale," was Heine's characterization of Hector Berlioz. The adjective may be admitted without qualification; but the more one hears of Berlioz the less possible it becomes to regard him as a nightingale of any sort—gigantic or otherwise. There has been so lack, lately, of opportunity for forming a definite and fairly comprehensive estimate of the first of the musical Romantics. The centenary of Berlioz's birth fell on December 11, and the musical world has not been slow in doing honor to his memory. Here in New York there has been a surfeit of Berlioz performances. Colonne began it by putting the "Symphonie Fantastique" on the program of the first Philharmonic concert. Since then we have heard, in rapid succession, excerpts from the "Roméo and Juliet" symphony and the "Danse des Faunes"; the "Deuxième Cellini," "Roman Carnival," and "Beatrice and Benedict" overtures; a portion of the Requiem; certain songs; and the "March in Italy" symphony. In this celebration, the Boston Orchestra, the New York Symphony Orchestra, the Metropolitan Opera-house Orchestra (under Mr. Metell), and the People's Symphony Orchestra, as well as the Philharmonic Society, have participated. And now that the tumult and the shouting have ceased, what remains?—The memory of a talent of prodigious energy, a pictorial instinct working upon vast and original schemes of surpassing brilliancy. Berlioz was, in a way, the Victor Hugo of music: a master of grandiose expression, an architect of magnificent audacity and imagination, although the grandiose was, unlike Hugo's, empty and ineffective, and the imagination led upon dust and ashes. His eloquence, impressive and weighty as it is, rings hollow; he had, finally, nothing to say; nor, as Mr. Runciman has observed, had he an especially inviting way of saying it. Nowhere in his work is it evident that he had a sense of style. He alters the most preposterous compositions with an impudence and elaboration which are pathetic in their fertility. It is true, as Mr. Richard Aldrich has recently remarked, that "Berlioz's credit as the originator of the modern orchestra and of the modern development of program-music can never be shaken"; it is, in the end, his chief title to greatness. Nor can one help being touched, again to quote Mr. Runciman, by "his sincere belief in his instance romanticism, that is genuinely and finely appealing. But his edifices are of lath and plaster; huge and soaring as they are, they have already begun to crumble."

## A Note on "Parsifal"

At the present time "Parsifal" lectures abound, and explanatory guide-books are as the sands of the sea; but it may be inapt to suggest in this place the preparation which will best fit one to comprehend the significance of Wagner's work.

It cannot be too often insisted upon as so intelligent comprehension of this or any other of Wagner's music-dramas is possible unless the text of the music is thoroughly understood; and as the vocalization of the singers at the Metropolitan is not always as clear as crystal, it is essential that the printed play should be read and digested in advance of the performance. There are several translations of the book of "Parsifal." A serviceable one by the Cordes is printed in the Kleinmichel piano arrangement of the score, and the version by John P. Jackson is trustworthy. By far the best, however, is that prepared by Mr. Alfred Forman. An admirable analysis of "Parsifal" is contained in Mr. Krehbiel's *Studies in the Wagnerian Drama*.

For those who care to penetrate the intricacies of the musical structure, an acquaintance with the arrangement of the score for voice and piano will be sufficiently informing in many cases; but points of detail will be found by some to be striking in the orchestral score in the possession of the Lenox Library. A miniature edition, published in three volumes, is also to be had.

## Harper Book Notes

In choosing Christmas gifts, a few suggestions of books of permanent interest and value may be helpful:

### A KEYSTONE OF EMPIRE

The anonymous author of *The Martyrdom of an Empress* has applied her intimate personal knowledge of the Austrian Court and her delightful literary style to the production of a book which reads like a romance, but gains added value and charm from the fact that it is true in every incident. Autograph portraits and the facsimiles of documents add to the vividness of this story of Emperor Joseph's eventful career.

### THE RUSSIAN ADVANCE

Senator Beveridge, after months spent in travelling through the Far East, has written a book on questions of vital import which are agitating world politics to-day. It is an authoritative consideration of the Russian problem, with a discussion of that country's relation to Korea, Japan, etc., and to the United States. A work of unusual importance.

### PORTRAITS OF THE SIXTIES

A book of reminiscence by Justin McCarthy, bringing before those of the present generation likenesses of men and women who were famous or conspicuous half a century ago. A book of rare, permanent value, gaining added interest with every passing year. There were few men of importance in the century just flown whom this veteran author did not know. The book is a vital picture of a decade full of historic importance.

### THE DIVERSIONS OF A BOOK-LOVER

Mr. Joline has found an audience, delighted by his *Meditations of an Autograph-Collector*, awaiting this second work. It is a fascinating book to those who love books. In the friendliest spirit it chats of authors, book-collectors, their friends and foes, bindings, odd editions, as well as all the small-talk dear to a book-lover's heart. Full of delightful and intimate conversation with the reader.

F. A. MILLER, General Passenger Agent, Chicago

## "PARSIFAL"

ONE of the most authoritative and interesting studies of "Parsifal" ever written is that contained in Mr. Henry E. Krehbiel's

### STUDIES IN THE WAGNERIAN DRAMA

In it Mr. Krehbiel considers Wagner's great music drama from the historic, musical, and philosophic viewpoints, with that clearness of exposition and brilliant scholarship which have earned him an international reputation as a Wagnerian authority. In view of the approaching production of "Parsifal" in New York, a knowledge of Mr. Krehbiel's study will be of especial profit to music-lovers. Cloth, \$1.25.

## Receives World's Highest Endorsement

European government scientist awards Schlitz the highest honor.

From Weihenstephan, Bavaria, the most renowned school of brewing in the world, comes this triumph for Schlitz.

The Beer That Made Milwaukee Famous pronounced best American beer by the Bavarian Government's famous scientist, Prof. Dr. Hans Vogel, Director of the Scientific Station for the Art of Brewing, subventioned by the Royal Bavarian Government. Bavaria is the cradle of the art of brewing.

We spend fortunes on cleanliness.

We clean every tub, every boiling vat, tank or barrel, every pipe and pump, every time we use it.

We bore wells down 1400 feet to rock for pure water.

We cool the beer in filtered air.

We filter the beer by machinery.

We store Schlitz beer for months in refrigerating rooms, until it is well fermented — until it cannot cause biliousness.

SCIENTIFIC STATION FOR THE ART  
OF BREWING  
WEIHENSTEPHAN, near FREISING  
(Subventioned by the Royal Bavarian Govt.)  
PROF. DR. HANS VOGEL  
ACADEMICAL DIRECTOR

WEIHENSTEPHAN, Nov. 27, 1905.

Schlitz Brewing Co.,  
Milwaukee, U. S. A.

Through the courtesy of Commerzienrath (Counselor of Commerce) Dr. Datterer, I have received several bottles of your beer.

I have not only partaken of same, but have also made a searching chemical analysis, the result of which I enclose.

The analysis, as a matter of course, can give no idea of an important feature, the flavor of the beer.

I frequently receive samples of American beers for analysis, but I can truthfully say without flattery, that I never drank a better American beer than yours.

The beer tasted full (round) and fresh, and no trace of the usual disagreeable pasteurization flavor was discernible.

Once more permit me to express my recognition.

Very respectfully,

HANS VOGEL.
