WYATT'S SPRING CATALOG
Our FIFTY-FOURTH Year of Service
1881 - 1935

Dear Friends:

In presenting this 1935 Spring Catalog at the beginning of our fifty-fourth consecutive year of service to the homes and farms of the South, we want to express again to you, our customers and friends, our deep appreciation of your patronage.

The true measure of the success of any business is the acceptance of its policies by its friends. And so, with the encouragement you have given us down through the years, we adopt again as our policy for the New Year the single purpose that we have held since 1881 - to so constantly improve the quality of our merchandise and service that old friendships will be more closely bound and many new ones earned.

We realize that a catalog, no matter how complete, deals only in generalities. We, therefore, invite your correspondence relative to any subject on which we may be of assistance to you.

Cordially extending you our heartiest wish for happiness and prosperity throughout 1935, we await your commands.

Yours very truly,

JOB P. WYATT & SONS COMPANY

WGQ:S

BETTER SEEDS

RELIEF GARDENS

We will supply you carefully tested seeds on your relief orders. Just send the order given you by relief officer to Wyatt's.

We will accept relief orders for seeds, when issued by any State, County or City Relief Agency or Office, in exchange for vegetable seeds at prices named in this catalog. The Relief Orders you send in payment for seeds should state that it is for seeds only; must be on printed form of the Relief Office; must have written or printed on it the amount it is good for in dollars and cents and be signed by the authorized Relief Agent. The printed form should show that it is issued by state, county or city relief office and signed by the authorized relief officer and should also be signed by the person ordering the seed in the place for signing for receipt of the seeds. Seeds selected must be vegetable seeds only and no quantity larger than one pound of any one variety will be supplied on these orders.

Non-Warranty—Owing to the many conditions beyond our control which might affect the germination and crop, and in accordance with the universal custom of the seed trade, Job P. Wyatt & Sons Co., gives no warranty, express or implied, as to description, quality, productiveness or any other matter, of seeds, bulbs or plants it sends out, and will not be in any way responsible for the crop. If the purchaser does not accept the goods on these terms they are at once to be returned. This does not mean that we lack confidence in the seeds we sell, but we have no control over the seeds after they leave our possession, especially as to methods of planting, cultivating and fertilizing, all of which are important factors in the success of any crop. Crops are dependent for success or failure on so many things besides seed that it is impossible for us to give any warranty or guarantee.

PLANT ORDERS

All orders for plants, such as Cabbage, Beets, Lettuce, Onions, Strawberry, Asparagus and Rhubarb Roots, also Baby Chicks, are shipped from our Grower's station and entirely separate from seeds and bulb orders. If you order seeds and also plants you will receive the seeds by return mail and the plants will be forwarded to you separately within a few days, weather permitting.

54 YEARS EXPERIENCE

For over a half century the Job P. Wyatt & Sons Company has served thousands of friends and customers throughout the entire South. Fifty-four years of service means more than mere proof of our ability to serve—it means that we have had 54 years of experience in selecting strains and varieties best adapted to the conditions of the South. This year we offer again seeds that are the Standard of Quality and varieties that represent the very latest improvements.

VEGETABLE PLANTING CALENDAR

This planting Calendar is prepared so it's easy to follow and we suggest you use it as it will be found very valuable when planting your garden. Of course planting time varies depending on your location and remember this calendar is based on Raleigh and farther south so naturally for farther north planting time would be later. If you live north of Raleigh your planting would be one week to one month later. New York latitude would average one month later. Depth of planting may be slightly varied with soil density—this is, on light sandy soils seeds or bulbs are planted deeper than on heavy or clay soils.

Let Wyatt's assist you with your garden problems and we will be glad for you to call on us for any particular information you may need regarding planting.

ASPARAGUS

Asparagus No. 14

Culture—The ground should be well manured and prepared before either the roots or seeds are planted. Plant the seed in early spring; soak overnight in water; plant in rows, or rather hills, 1 foot apart and 2 feet between, or 3 feet between if to be cultivated with a plow; put from 4 to 5 seeds in each hill; when well up, thin out to 2 plants.

No. 14—New Pedigreed Washington—

Pedigreed Washington Asparagus stands ahead of all other varieties as a standard for the home or market garden. Seed prices: Pkt. 10c; oz. 15c; ¼ lb. 35c; lb. \$1.00 postpaid.

No. 12—Palmetto—An excellent variety, especially adapted to the South. Prices: Pkt. 10c; oz. 20c; ¼ lb. 35c; lb. \$1, postpaid.

ARTICHOKEE ROOTS: See page 25.

Bean Culture—Beans are sensitive to both cold and wet, so do not plant till the ground is warm. To have a continuous supply plant every two weeks till the middle of August; farther South they may be planted even later. Make the rows 2 to 3 feet apart, drop the beans 3 inches apart and cover 1½ to 2 inches deep. Give frequent but shallow cultivation up to blossoming time, not afterward and never when the plants are wet. Plant in a light leamy soil that warms up quickly. One pound plants 60 feet; 75 lbs. will plant an acre. Wyatt's Garden Beans are produced from the finest stock seed and are grown in the mountain states of the West. They are disease-free.

WYATT'S BUSH SNAP BEANS

HAND PICKED

IDAHO GROWN

No. 17—Bountiful—

This variety is largely planted by the Florida truckers for shipment to northern markets. It has steadily gained in popularity on account of its prolific bearing qualities. Bountiful is practically rust and mildew proof, very hardy, extremely early and bears continuously for many weeks. The pods are large, rich green in color, and almost flat and straight, as you will notice by the illustration on this page. They are uniform in shape, solid, meaty, tender and delicious flavor. Wyatt's stock of this splendid variety is preferred by the leading truckers. 45 days. Prices: Pkt. 10c; ½ lb. 20c; lb. 35c; 2 lbs. 55c; 5 lbs. \$1.10, postpaid. Not prepaid, 15 lbs. (peck) \$2.50; 60 lbs. (bu.) \$8.75; 100 lbs. or more at 14c lb.

Bountiful Stringless Beans No. 17

No. 18—Burpee's Stringless Green Pod—

Our stock of this bean is used extensively by the home gardeners, truckers and the canning factories. It is unquestionably one of the finest round-podded stringless green beans in existence. The large green pods are very fleshy, five to six inches long and remain crisp and tender longer than other varieties. Burpee's Stringless is very early and productive. The beans are handsome in appearance and sell readily at local markets, besides bring top prices when shipped. The pods are absolutely stringless, tender, brittle, round and delicately flavored. We sell thousands of bushels of this wonderful bean every year. 48 days. Prices: Pkt. 10c; ½ lb. 20c; lb. 35c; 2 lbs. 55c; 5 lbs. \$1.10, postpaid. Not prepaid, 15 lbs. (peck) \$2.25; 60 lbs. Perfectly stringless and so tender they snap off easily when bent. They come into bearing early, are productive and last a long time. We can highly recommend this new stringless bean, as wherever grown it has proved a real success. WYATT'S CABBAGE SEEDS

Days indicated represent time from setting plants to heading

CULTURE—If the plants are started in a seed-bed, they should not be crowded or they will run up weak and slender and will not endure transplanting well. When 4 to 6 inches high, transplant to open field, setting the plants as deep as the first leaf stems; give frequent and deep cultivation, drawing the earth to the plants at each working. Set the early varieties 18 inches apart in rows 2½ feet; the larger and later sorts, 2 feet apart in 3-foot rows. They need a light and well watered soil, rich in nitrogen. One ounce will produce about 1,500 plants; ½ lb. will produce sufficient plants to set an acre. Thousands of successful growers depend on Wyatt's Tested Cabbage Seed. Be sure to plant the best seed from Wyatt's.

CARROTS ONE OF THE MOST WHOLESOME VEGETABLES CULTIVATED - AND A SURE CROP

CAULIFLOWER

Chantenay
Carrot No. 183

CULTURE—One ounce of seed for 100 feet drill, 3 to 4 pounds for an acre

For several generations the carrot has been one of the common garden vegetables but only in recent years has it come to be recognized as one of our most nutritious and wholesome foods. Health authorities assert that carrots contain in high degree those elements which constitute a nourishing article of diet. The plant has no serious insect enemies and is rarely subject to disease. The culture of carrots is easy, being practically the same as that of beets. When practicable it is best to plant them in soil that has been richly fertilized the previous season. Freshly manured soil will often produce divided roots. Plant the seed ½ inch deep in loose, well prepared soil, making rows 16 to 24 inches apart. Cultivate as soon as the plants are well established and thin to 2 to 4 inches in the row, according to the size of the variety. Plantings may be made from early spring until mid-June and again in the early fall.

No. 183—Chantenay—A half-long variety most extensively used for both home garden and market. It is a medium early variety and matures in about 65 days, besides it is very productive. Wyatt's stock is extra select and is planted by many of the leading growers. 65 days. Prices: Pkt. 5c; oz. 10c; ¼ lb. 25c; lb. 90c; 5 lbs. \$3.50, postpaid.

Prices: Pkt. 5c; oz. 10c; ¼ lb. 35c; lb. \$1.25; 5 lbs. \$5.00, postpaid.

No. 185 — Danvers Half - Long —

They are very uniform in shape and size, 6 to 7 inches long, by 1¼ inches through; clean skinned, smooth and the color is a rich red orange, so attractive when served. 65 days. Prices: Pkt. 5c; oz. 10c; ¼ lb. 35c; lb. \$1.25; 5 lbs. \$5.00, postpaid.

No. 186—Long Orange—A fine variety for light soils as the roots grow 10 to 12 inches long and taper in a straight line to the tip. The flesh is deep orange and this variety is considered the heaviest cropper of all carrots. It can be used for home use and is also a splendid variety for stock feeding. 80 days. One ounce of seed will produce 1,500 plants, ½ pound sufficient for an acre.

CULTURE—Cauliflower will do well in any land that is suitable for cabbage, and in general the same cultural directions apply as for cabbage. Plenty of moisture is necessary for their development, especially at heading time. Sow seed in hotbed in November, transplant into cold frame for protection during the winter, and set out in the fields early in April, in rows 2 to 2½ feet apart, and 18 to 24 inches apart in the row. For late crop, sow seed about the 15th of April, transplanting when plants are large enough. Cultivate like cabbage. When the head commences to form, draw the outside leaves over the head to protect from the sunlight, thus keeping it white.

WYATT'S ROASTING EAR AND SUGAR CORN

One pound will plant about 200 hills; 12 pounds will plant an acre.

CULTURE—Plant 5 or 6 grains, 1½ inches deep, 8 feet apart, in rows 3 feet apart. When plants are 4 inches high pull out all but two plants to the hill. For very early Corn, the hardiest and earliest varieties can be planted the latter part of March, if the weather is mild, but Sweet Corn should not be planted until April, or until the Spring weather opens and the ground gets warm, as it has a tendency to rot in the ground if planted too early or during a continued cold or rainy spell of weather. It should be planted at intervals of every two weeks until August, so as to have Corn for use during the entire season.

If you have never tasted any REAL SUGAR CORN you owe yourself this treat. Try at least two varieties this Spring and see how good corn really is.

VEGETABLE ROOTS ASPARAGUS ROOTS

CULTURE—Dig or plow out a trench 15 to 18 inches deep, put in plenty of well-rotted manure, covering it with a few inches of soil, then set the roots 1½ to 2 feet apart and cover with 4 inches of soil. In the fall, cut off and burn the top growth, plow or throw down the earth and give a good application of stable manure. Early in the spring fork this in and apply ground animal bone. If white asparagus is wanted draw earth around the stalks as they grow. Do not continue cutting too long, as this exhausts the plants. 100 roots plant about 15x50 feet; 5,000 to 7,000 will plant an acre.

KALE OR BORECOLE

CULTURE—1 ounce of either Green Curled or Spring Kale or 2 ounces of Scotch are sufficient for 100 feet of drill. For an acre, 1½ pounds of either Green Curled or Spring, and from 8 to 7 pounds of the Scotch. Scotch Kale being particularly subject to the attacks of insects, both before and after coming up, it is necessary to sow it very thickly. Scotch Kale should be sown from the first to the last of August, and the Green Curled from the middle of August until the first of October. Spring Kale is sown nearly all the year round, either in drills or broadcast, and should be sown at intervals of 10 days in order to always have it tender. Sow ½ inch deep in rows 2½ feet apart, allowing from 6 to 10 inches between the plants, and cultivate as cabbage. Kale, being a very strong feeder, heavy manuring is necessary to make a good crop.

No. 342—Extra Dwarf Blue Curled Scotch—

The plants of this splendid Kale grow low and compact and of a spreading habit. The leaves are far more attractive than the regular green curled Kale as the color is a dark bluish-green. The leaves are beautifully curled and will stand for a long time before turning yellow. We can highly recommend Wyatt's strain of this variety as it always brings the top price at market. 55 days. Prices: Pkt. 5c; oz. 15c; ¼ lb. 35c; lb. \$1.25; 5 lbs. \$5.00, postpaid.

No. 341—Dwarf Green Curled Scotch—

A green Kale grown in some sections but we recommend the No. 342—listed above as far superior. 55 days. Prices: Pkt. 5c; oz. 10c; ¼ lb. 30c; lb. 90c; 5 lbs. \$3.50, postpaid.

No. 343—Early Siberian Kale—

This variety is also called Dwarf German Greens. It is very hardy, vigorous grower and the leaves are finely curled. Retains its fresh crisp appearance long after being cut and is hardy enough to stand zero weather. 60 days. Prices: Pkt. 5c; oz. 10c; ¼ lb. 30c; lb. 90c; 5 lbs. \$3.50, postpaid.

Extra Dwarf Blue Curled Scotch Kale No. 342

EGG PLANT

CULTURE—One of the most delicious vegetables grown, yet it is not cultivated to the extent it would be if its superior qualities were better known. Seed germinates slowly and should be started in hot-beds. When plants have two rough leaves transplant 8 to 4 inches apart. When the weather is sufficiently warm, set plants in open ground, allowing 3 feet space between rows, and 2½ feet space between the plants in the row. Hoe frequently, keeping the soil loose and fine. Earlier plantings may be made in open ground if protected by Hotkaps. One ounce will produce 1,000 plants; ¼ lb. will sow an acre.

No. 314—Black Beauty—

The earliest and best of all large-fruited Eggplants. It is valuable alike to the private planter and the extensive grower for market. Black Beauty produces fruits fully as large and ready for use ten days to two weeks earlier than the New York Purple. The plants branch very freely near the ground and grow in well rounded bushes. The grand, large fruits are thick, of most attractive form. The skin is a rich lustrous purplish black—the satin gloss and rich coloring adding greatly to its beauty. The intensely brilliant coloring is uniform over the whole fruit and does not fade or change to a lighter color. 120 days. Prices: Pkt. 10c; ½ oz. 15c; oz. 25c; ¼ lb. 85c; lb. \$3.00; 5 lbs. \$12.50, postpaid.

No. 315—Florida High Bush—

A wonderful shipping variety and a good keeper. Of strong, upright growth, holding its fruit well above the ground. The fruits are similar in form and size to the New York Purple, though not so dark in color, and more club-shaped. 115 days. Prices: Pkt. 10c; ½ oz. 20c; oz. 35c; ¼ lb. \$1.25; lb. \$4.00; 5 lbs. \$15.00, postpaid.

No. 313—New York Purple—

KOHL RABI—A Delicious Vegetable

CULTURE—1 ounce is sufficient for 100 feet of drill. For an acre 1½ pounds. The rows are usually made 18 inches apart, and the plants are thinned from 6 to 10 inches, the thinnings being transplanted if wanted. Work well to keep down weeds, but avoid throwing any earth in the crown.

MUSKMELONS OR CANTALOUPE

CULTURE—The Melon delights in warm rich soil with perfect drainage, and they can never be grown to perfection under unfavorable conditions. Very good Melons, however, can be grown on almost any land if the trouble is taken to dig holes 2 feet square, filling them with a rich compost of wood-mould and cow-pen manure. Plant three-fourths to one inch deep from April to June in rows 6 feet apart, leaving not less than 4 feet between the hills, putting about 10 seeds to the hill. As insects are often very destructive, it is best not to thin at all until the plants are well started. When they are large enough to be safe, thin to two in a hill, and keep the ground mellow and free from weeds. Those who make a specialty of Muskmelons will find it advantageous to start the seed under protection of glass, so as to have the plants ready by the time seeds could be usually planted in the open ground.

Every bit of the brilliant red flesh of this melon is sweet to the rind; it is free of cores or hard centers and the rind is thin, yet sufficiently tough to stand ordinary handling. The melon is a dark glossy green with small crease like markings on the larger sizes, a most attractive product for market display. We can strongly recommend this melon but advise intending planters to be sure and get the true stock direct from Wyatt's. 85 days. Prices: Pkt. 5c; oz. 10c; ¼ lb. 25c; lb. 75c; 5 lbs. \$3.00; 10 lbs. \$5.00, postpaid.

WYATT'S PEPPER SEED

One Ounce of Seed Produces About 1,000 Plants

CULTURE—Sow the seed in hotbed or a window box at a temperature of about 70 degrees on or about February 15. Transplant to the open ground when all danger of frost is over, in rows 3 to 5 feet apart and plants set 15 to 20 inches apart in the row—about 9,000 plants are required to set an acre. Cultivate frequently and keep free from weeds. A mixture of sheep manure and chicken manure is most desirable for distributing in the rows a week or ten days before the plant is set out. When the plants are well set and started at about 7 inches high, guano or any well-rotted manure, hoed into the surface soil will also increase plant growth and fruiting qualities. We are large growers of Pepper seed. Can supply large orders. The seed is grown from well selected and transplanted plants which show purity and excellent quality. All our Pepper seed are true American grown—we have no cheap pulp mill or imported stocks to offer.

Keep a Vegetable Garden the Year 'Round

One ounce of the bush varieties to 40 hills; 2 to 3 lbs. to the acre.
 One ounce of the large-seeded varieties to 15 hills; 3 to 4 lbs. per acre.

CULTURE—Squashes should not be planted until danger of frost is past and the ground has become warm, but plant the Winter kinds as soon as safe in order that they mature. Plant in hills 5 feet apart for bush varieties, and 6 to 8 feet apart for running varieties, putting 6 to 8 seeds to the hill, finally leaving but 3 plants. A rich, warm, mellow soil is conducive to high yields and early maturity, but Squashes grow quite well in almost any well drained soil. It pays to enrich each hill with rotted manure or commercial fertilizer. During the early stages of growth keep the plants well sprinkled with "Slug Shot" or Tobacco Dust, to save them from insects. The Winter Squashes may be grown in cornfields in the same manner as pumpkins. In the small garden, Squash may follow early beets, early cabbage, corn salad and spinach.

New Break O' Day
Tomato No. 745

CULTURE—1 ounce is sufficient for 100 feet of drill; 4 ounces will produce enough plants to set an acre. The tomato flourishes best in warm, light soil, moderately rich. For early use sow $\frac{1}{2}$ of an inch deep in January or February in a hot-bed, or, if only a few plants are wanted, they may be sown in a box. In order to get the plants strong and stocky, they should be transplanted when 2 to 3 inches high. When all danger of frost has passed set out in the open ground in rows 3 feet apart, leaving the same distance between the plants, and if convenient, furnish a support for the vine. For late crops sow in the open ground as above directed. Wyatt's Tomato Seeds are planted by many of the leading truckers in the South.

No. 745—New Break O' Day Tomato—The earliest, disease resistant, globe-shaped, scarlet-fruited, meaty Tomato yet introduced. 10 to 12 days earlier than Marglobe, and very productive. Break O' Day will fill a long felt want for an early Tomato with the good qualities of the popular later sorts. It was developed by Dr. Fred J. Pritchard, senior Physiologist of the U. S. Dept. of Agriculture, and is a cross between Marglobe and Marvona, having the disease-resistant qualities of its parents. Vine is of open habit similar to Marvona, but heavier in growth. Fruits are of the Marglobe type, deep, globe-shaped, solid, meaty, with few seeds, and a beautiful scarlet color. Excellent for home gardens, truck farmers or canners. It is destined to be the "PEER" of early Tomatoes. 95 days. Prices: New Break O' Day Tomato: Pkt. 10c; $\frac{1}{2}$ oz. 20c; oz. 35c; $\frac{1}{4}$ lb. \$1.25; lb. \$4.00; 5 lbs. \$18.75, postpaid.

Wyatt's Marglobe Tomato No. 738
A Wilt Resistant Variety

WYATT'S TURNIPS AND RUTABAGAS

CULTURE—Sow in drills 18 to 24 inches apart; cover ½ inch deep, or sow broadcast. Thin early, for any overcrowding will result in rough and poorly flavored roots. 1 ounce of seed will sow 200 feet of row; 1 lb. will sow an acre in drills; 2 lbs. broadcast.

No. 782—Wyatt's Wonderful Japanese Turnip—

Anyone who plants this splendid new variety will be highly pleased with it. It is especially valuable for turnip greens, which are always in good demand during the summer months. This variety is louse resistant and we recommend it for summer planting, as it will grow and yield a better crop during the hot summer months than other sorts. The leaves grow upright about 2 feet high when fully developed, which makes it practically free from insect attacks. The roots are pure white, nearly globe shape and very sweet, of excellent turnip flavor. It can also be planted in the spring months and again in the fall. HERBS FOR BEAUTY-FLAVOR-FRAGRANCE

In Cultivation Before the Christian Era, Herbs Form the Most Fascinating Group of Subjects in Modern Gardening*

For all round interest most gardeners will admit that the versatility of the aromatic herbs makes this group of plants amongst the most fascinating. A small assortment of herbs will furnish food, flavoring, medicine, fragrance in the garden and in the home, beside their beauty as garden subjects and cut flowers. Herbs thrive in most soils and should be sown early in the spring. Thin out to about one foot apart. Those grown for foliage should be cut before they come into full bloom and hung in bunches or spread thinly where they can dry quickly.

This fascinating study, one that was practised so diligently thousands of years ago—Herb gardening—is once more coming into popularity. Be the first to have a complete herb garden in your neighborhood. Our stock of herb seeds is one of the most complete in America.

We are also pleased to offer and recommend to our customers the two first ranking books on herbs. "The Herb Garden" by Frances A. Bardswell (\$3.00 postpaid) noted English authority and "Gardening with Herbs" by Helen Morgen-thau Fox (\$3.50 postpaid) eminent American author of garden subjects.

PETUNIAS

Sow the small seeds in a warm, sunny, open place outdoors, thinning to 15 inches apart, or in frames for transplanting. Scatter seeds thinly, barely cover and firm soil over them; water seedlings with a fine spray to prevent drying out. The weakest looking seedlings usually produce the finest flowers, so save the weak plants for transplanting. Seed of the double and fringed sorts should be pressed into a shallow pot of sifted soil and covered with only a sprinkling of sand. The pot should be watered from below by placing the pot in water. Never allow to become too dry or too moist.

WYATT'S GIANT ORCHID FLOWERING SPENCER SWEET PEAS

WYATT'S SPENCER SWEET PEAS are produced for us under almost perfect growing conditions in the fertile Lompoc Valley in California. As is true of all other Wyatt's seeds, our special strain of Sweet Peas is the very best. Four tremendous ruffled flowers on long stems often 14 inches, clear refined colors and vigorous, long blooming plants are characteristic of all varieties of Wyatt's Sweet Peas.

CULTURE—One ounce will sow from 15 to 20 feet. Sow from November to March. For spring plantings we recommend the sowing of Sweet Pea seeds slightly below the ground level in a bed thoroughly pulverized 2 feet wide by 12 to 18 inches deep. Well rotted (but no other) compost or a liberal sprinkling of Bone Meal might be added when the bed is prepared and when the peas are growing slight applications of Bloomaid or Vigoro at 4- to 6-week intervals should be made.

DAHLIAS

WE LIST ONLY THE VERY FINEST DAHLIAS
FOR SOUTHERN CULTURE

CULTURE—Dahlias thrive best in a sunny location. Work the soil to a depth of 8 inches and pulverize thoroughly, mixing with it dry sheep manure. Plant the bulbs, about 6 inches deep, laid flat with the eye up and cover with 2 inches of soil, filling in as the plants develop. For the largest flower, leave only the terminal bud to a single stem plant, pinching off all other buds as they appear, clear to the ground. For 4 to 6 fine, large flowers per plant, pinch out the top of plant, leaving 2 or 3 pairs of leaves. Water copiously. All Dahlia Roots are postpaid.

Wyatt's Grass Seeds used exclusively

WYATT'S "WONDERLAWN" LAWN GRASS

You will find something different in this Wyatt's "Wonderlawn" Lawn Grass and as the name implies it will produce a wonderful lawn and give entire satisfaction in the Southern States. It is a properly blended mixture of grasses adapted to our southern soil and climate and only contains grasses that we have found after years of scientific experiments to be the best for the South. Do it differently this year! Instead of buying "grab bag" lawn seed, why not select the right seed for your section and conditions. All the grasses used in this "Wonderlawn" mixture are field ripened, sun cured and double processed. By double processed we mean that all the weed seeds, chaff, dirt and other impurities have been removed. You will be delighted with this new mixture and you can enjoy that perfect Velvety Green Lawn that you have always longed for.

HOW TO MAKE A LAWN

Harrow or rake the surface to the finest possible condition and roll until all elevations and depressions have been removed. Rake the seeds in lightly, following with a roller, a firmly rolled surface being absolutely necessary; small areas may readily be packed firm by the back of a spade. In the South we often have trouble getting good lawns because it has been found that no one grass will give satisfactory results at all seasons and on all soils. By careful experiments we have succeeded in getting a combination of grasses that will produce an evergreen lawn, giving permanency and beauty of sward. By the use of Wyatt's "Wonderlawn" Lawn Grass Seed a rich, velvety lawn can be made and maintained. One pound will sow a space 10 by 20 feet or 200 square feet; 75 to 90 pounds to an acre.

SHADY NOOK LAWN GRASS

Wyatt's FIELD AND FARM SEEDS

RECLEANED CLOVER SEED

No. F97 — Alfalfa, Kansas Grown —

We offer nothing but the very finest grade of genuine Kansas Grown Alfalfa and our seed is usually 99% or better pure Alfalfa. The hay is remarkably palatable and the feeding value worth nearly twice that of the very best Timothy. Droughts have no effect upon Alfalfa, as its roots penetrate to astonishing depths. Alfalfa can be sown in either fall or spring. The cleaner the ground, the better the stand will be. Sow on deep, well drained, good loamy land. Alfalfa will not grow on acid soils, and to correct this condition spread 1 to 1½ tons of finely ground lime to the acre after plowing, and a few weeks before sowing. Cutting should be done always as blooming begins. Sow 30 to 40 lbs. to the acre. Prices: Lb. 45c; 5 lbs. \$1.75, postpaid. Not prepaid, 10 lbs. \$3.00; 25 lbs. \$6.75; 100 lbs. or more 25c lb.

No. F87—White Blossom Sweet Clover or Bokhara—

This is known as Melilotus Alba. It is adapted to a wide variety of soils; is useful for pasture, for forage, for ensilage, for bees, for turning under to improve the land. The deep roots break up, aerate and drain stiff soils and add humus. Spring sowings will yield a crop the following fall and two crops the following year. The first season it grows 1½ to 2½ feet high, but if cut when 6 inches high it stools out and makes a more tender growth for grazing. Sow 20 lbs. per acre. Prices: Lb. 35c; 5 lbs. \$1.50, postpaid. Not prepaid, 10 lbs. \$2.00; 25 lbs. \$4.25; 100 lbs. or more at 15c per lb.

No. F82—Red Clover—

A valuable farm crop in northern part of the Cotton Belt. Equally good for pasture, hay or soil improvement. Even the first crop makes rich feed and is most valuable for hay. Sow in fall or spring, September and March being the best months. 15 lbs. per acre. Prices: Lb. 45c; 5 lbs. \$2.10, postpaid. Not prepaid, 10 lbs. \$3.80; 25 lbs. \$8.75; 100 lbs. or more at 34c lb.

No. F84—Bur Clover—

Is an annual winter legume, coming from seed each year, and furnishes grazing during the winter. If allowed to go to seed, it will reseed the ground for another winter's grazing. Bur clover at the rate of 20 to 25 lbs. per acre of hulled, recleaned seed to the acre broadcast, or if sown in the burr 60 to 80 lbs. per acre. Prices: ¼ lb. 15c; lb. 45c; 5 lbs. \$2.00, postpaid. Not prepaid, 10 lbs. \$3.50; 25 lbs. \$7.50; 100 lbs. or more 25c per lb.

No. F80—White Dutch Clover—

A dwarf clover, green summer and winter. Best for pastures and lawns. Prices: Lb. 60c; 5 lbs. \$2.50; 10 lbs. \$4.50, postpaid.

No. F91—Common Lespedeza or Japan Clover—

It grows on galled hillsides and on all soils, even on the poorest, and being a legume will extract nitrogen from the atmosphere and store it in the roots for later crops. Its abundant long tap-roots and laterals, when decayed, open up the subsoil and leave in it great quantities of nitrogenous matter that will increase the yield of succeeding crops. Once started it soon spreads and takes possession. Sown on old pastures, it will add very materially to the value of the pasture. Sow 25 lbs. per acre. Prices: Lb. 30c; 5 lbs. \$1.00, postpaid. Not prepaid, 10 lbs. \$1.60; 25 lbs. \$3.75; 100 lbs. or more at 14c per lb.

No. F94 — Tennessee 76 Lespedeza —

This variety is best for eastern North Carolina, Virginia and South Carolina. The leaves and stems are fine and it produces a great quantity of hay even on poor land. Tennessee 76 grows 12 to 24 inches high and is three weeks later than Common. The close resemblance in the seeds of these two varieties prompts us to urge all of our customers to use every care when buying Tennessee 76. Why not buy pure stock direct from Wyatt's? Then you'll know you've got the genuine Tennessee 76. Sow 25 to 30 lbs. per acre.

PRICES: TENNESSEE 76—(re-cleaned): Lb. 30c; 5 lbs. \$1.25, postpaid. Not prepaid, 10 lbs. \$1.80; 25 lbs. \$4.25; 100 lbs. or more at 16c per lb.

No. F93—Kobe Lespedeza—

A variety particularly adapted to lowlands. Kobe is only about 10 days later than Common and grows fully as tall as Tennessee 76. The leaves and stems are slightly coarser making a slightly heavier hay crop. This variety with the Tennessee 76 is being highly recommended by the N. O. Experiment Stations for all but the mountainous regions of North Carolina, South Carolina and Virginia. Sow 25 to 30 lbs. per acre.

PRICES: KOBE—(re-cleaned): Lb. 30c; 5 lbs. \$1.25, postpaid. Not prepaid, 10 lbs. \$1.80; 25 lbs. \$4.25; 100 lbs. or more at 16c per lb.

No. F92—Korean Lespedeza—

This popular new Japanese type clover is coming into large demand. Korean Lespedeza will grow on any soil, wet or dry, rich or poor, sour or sweet, and has never been killed by a drought. When a good crop of Korean Lespedeza is turned under it will double the corn yield in one year. Unexcelled for hay crop since it will produce from 2 to 4 tons of good hay per acre on a good thick even stand. It is equal to alfalfa in feeding value, and compares favorably in fineness, palatability and protein content. A good stand will make one ton hay per acre for each 4 to 5 inches above cutter bar. The hay is easier to cure and handle than soybeans, red clover, or alfalfa. When cutting for hay cut in August or early September. If hay crop is to reseed the land, hay must be either early and high enough for stubble to make sufficient growth to produce seed; or wait until seed have formed on bottom branches, which seed shatters to the ground for re-seeding. Korean Lespedeza is earlier than other lespedezas, this insures harvest before fall rains and early frost and gives time for seed bed preparation for small grain that fall. If a good stand is expected the first year sow from 20 to 25 pounds of seed per acre. Prices: Lb. 30c; 5 lbs. \$1.00, postpaid. Not prepaid, 10 lbs. \$1.50; 25 lbs. \$3.25; 100 lbs. or more at 12c per lb.

As big a yielder as Johnson grass, but it has none of the latter's objectionable features, for Sudan grass can never become a pest, for it is an annual. Sow it after the ground becomes thoroughly warm, either broadcast or in rows two feet apart, and cultivate like corn. When sown in rows it grows six to seven feet high; when sown broadcast it grows four to five feet high. Sudan grass may be profitably grown with cowpeas and soybeans, as helug of erect growth it supports the pea vines and makes the cutting easier and allows them to cure more quickly; the mixture will give a better-balanced ration than either fed alone. When grown with cowpeas or soy beans make the sowing of Sudan grass after the peas or beans are planted and covered. Almost any soil, from heavy clay to light sand, will grow Sudan grass. Sow 5 to 6 lbs. to the acre in 2-foot rows; 20 to 25 lbs. broadcast. Prices: Lb. 25c; 5 lbs. \$1.00, postpaid. Not prepaid, 10 lbs. \$1.60; 25 lbs. \$3.75; 100 lbs. or more at 14c lb.

SEEDS OF FORAGE AND GRAIN CROPS

No. F292—Egyptian Wheat or Shallu

Sometimes called Chicken Corn. It grows tall, stools out, frequently three or six stalks from a single root. Cut when at the dough stage, and a second cutting may be obtained. When grown for grain, the tops are cut, cured in a dry place and threshed like other grains. For cattle, horses, hogs, and poultry, the grain may be fed either whole or ground. It is of high feeding value, and will take the place of corn. Plant 8 to 10 lbs. to the acre in rows 3½ to 4 feet apart. Prices: Lb. 30c; 5 lbs. \$1.00, postpaid.

No. F293—Milo Maize

The plant makes fine feed and ensilage, especially when mixed with soy beans or cowpeas, and the grain is fattening for cattle and poultry. For fodder and ensilage cut when in the dough state; at this stage it has a feeding value practically equal to corn. It grows on all soils. 6 to 8 lbs. will plant an acre. Prices: Lb. 25c; 2 lbs. 40c; 5 lbs. 75c, postpaid. Not prepaid, 10 lbs. 90c; 25 lbs. \$1.90; 100 lbs. or more at 6c lb.

No. F289—Teosinte

A single seed producing from thirty to sixty stalks, each 10 to 12 feet high, gives some idea of what an enormous yield may be had from Teosinte—the Louisiana Experiment Station reported a crop of more than 50 tons on an acre. If cut when 4 or 5 feet high, it makes an excellent fodder, starts immediately into growth again, and will give several more cuttings as large as the first. If sufficient is planted a continuous supply of nutritious green feed can be had daily right up to frost. Plant in May or June in drills 3½ to 4 feet apart; 3 to 4 lbs. plants an acre. Prices: ¼ lb. 20c; lb. 60c; 2 lbs. \$1.10; 5 lbs. \$2.50; 10 lbs. \$4.50, postpaid.

TENNESSEE GOLDEN MILLET

No. F185—Tennessee Golden Millet

German or Golden Millet makes a quickly grown, easily cured and large yielding, nutritious hay crop. Relished by horses and cattle. Seed thickly, not less than 50 lbs. to the acre, any time from the middle of April until the end of July. It's a quick crop, maturing in six to eight weeks. Cut while in bloom, before the seed hardens in the head. Growing millet with an early variety of cowpeas, like Whippoorwill, is becoming quite popular, 40 lbs. of millet being sown with a bushel of cowpeas. The crop should be cut when the millet is coming into bloom, regardless of the maturity of the cowpeas, for at that stage the feeding value of the millet hay is the highest. Prices: Lb. 30c; 5 lbs. 90c, postpaid. Not prepaid, 10 lbs. \$1.25; 25 lbs. \$2.75; 100 lbs. or more at 10c lb.

No. F186—Pearl, or Cat-Tail Millet

One of the best and most nutritious of the continuous cutting green forage plants. Grows 10 to 12 feet high, but cutting can commence when it has attained the height of 3 to 4 feet, when it will stool out enormously and make rapid growth; can be cut in this way three to four times during a season. It does well even on poor land, and surprisingly well in dry seasons. All kinds of stock eat it greedily. Should not be planted until the ground is thoroughly warmed. Sow 6 to 8 lbs. to the acre in rows 3 feet apart. Prices: Lb. 30c; 5 lbs. 90c, postpaid. Not prepaid, 10 lbs. \$1.25; 25 lbs. \$2.75; 100 lbs. or more at 10c lb.

No. F187—Japanese Millet—(Billion Dollar Grass) Also known as Barnyard Millet. Distinct from other millets; grows 4 to 6 feet high, yielding an enormous crop. When green, feed a moderate quantity at first, gradually increasing the quantity as the animals become accustomed to it. Prices: Lb. 25c; 5 lbs. 85c, postpaid. Not prepaid, 10 lbs. or more \$1.25; 25 lbs. \$2.50; 100 lbs. or more at 9c lb.

SELECTED AND CERTIFIED SEED OATS

Pedigree Fulghum Oats No. F175

PRICES SUBJECT TO CHANGE—WRITE FOR QUANTITY PRICES
Sow 2½ Bushels Per Acre

No. F175—Wyatt's Pedigree Fulghum Oats

We consider this variety most satisfactory for spring planting. It is a heavy yielder and rust-proof, has plump full heads that mature early. Its productiveness, probably more than any of its other good qualities, has contributed to its wide popularity. They stool out splendidly, have large, full heads, fine, plump grains and strong straw that stands about three feet high. The average yield from Fulghum 12 bushels to the acre more than all other varieties. It has plump grains and exceptional heavy weight. Prices: 8 lbs. (peck) 55c; bu. \$1.60, postpaid. Not prepaid, peck 35c; bu. \$1.25; 5 bu. or more at \$1.10 per bu.

No. F174—Burt or 90 Day Oats

The Burt is a prime favorite for growing on the light sandy soils of the coast sections of the South Atlantic States, where the results have been uniformly good. The grains somewhat resemble the Red Rust-Proof. It makes a good growth of straw, is an abundant yielder of bright, clean heavy grain, is free from rust, and what is of equal importance when plantings are late, it is of early maturity. Early plantings can be cut in time to put the same land in corn, peanuts, cowpeas, millet or other summer crops. Prices: 8 lbs. (peck) 55c; bu. \$1.45, postpaid. Not prepaid, peck 30c; bu. \$1.10; 5 bu. or more at \$1.05.

No. F170—Red Rust-Proof Oats

These are vigorous growers, very robust and productive. The heads are heavy and this variety is preferred for sowing on low grounds. Prices: 8 lbs. (peck) 60c; 32 lbs. (bu.) \$1.60, postpaid. Not prepaid, peck 35c; bu. \$1.10; 5 bu. or more at \$1.05 per bu.

No. F177—White Swedish Oats

One of the State Experiment Stations reports in a test covering several years an average yield of slightly more than 10 bushels to the acre more than varieties tested, and that the proportion of kernel to the whole grain averaged about 75 per cent. It has given especially good crops on light soils without any tendency to lodge, yet the straw is not large in proportion to the grain, which is large, thick and plump. Prices: 8 lbs. (peck) 60c; bu. \$1.60, postpaid. Not prepaid, peck 35c; bu. \$1.10; 5 bu. or more at \$1.05 per bu.

No. F176—Gray Winter or Turf Oats

Probably the best reason for the wide popularity of Gray Winter Oats is their extreme hardiness for there is no other oat that will stand such extreme cold. Another good claim for their popularity is their stooling propensity, which accounts in part for the heavy yield. Their strong turfing and stooling characteristics give them advantages for grazing purposes. Prices: 8 lbs. (peck) 55c; bu. \$1.60, postpaid. Not prepaid, peck 35c; bu. \$1.25; 10 bu. or more at \$1.15 per bu.

PLANT PLENTY OF PEANUTS

Any soil that will grow corn or cotton will grow peanuts; on light sandy or loamy soils there are few crops more profitable. In addition to the yield of nuts, the hay is superior to alfalfa in fat and almost equal in protein. After the oil is extracted the meal ranks with cottonseed meal and linseed meal in feeding value. Plant 1½ to 2 bushels per acre.

No. F223—Tennessee Red Peanuts

A variety that satisfies anyone who desires a peanut well adapted to the South and yet larger in size, with a greater number of nuts or kernels than in most sorts planted in the South. Prices: Lb. 30c; 2 lbs. 50c; 5 lbs. \$1.00, postpaid. Not prepaid, 10 lbs. \$1.50; 25 lbs. \$3.50; 100 lbs. or more at 12½c lb.

No. F224—Spanish Peanuts

Although not as large as the other kinds, there is no peanut grown that so entirely fills the pod nor can compare with it in sweetness and flavor. There is also a marked freedom from pops, so frequently found in the large varieties when grown under unfavorable conditions. Prices: Lb. 30c; 2 lbs. 50c; 5 lbs. \$1.00, postpaid. Not prepaid, 10 lbs. \$1.50; 25 lbs. \$3.50; 100 lbs. or more at 12½c lb.

WYATT'S TREATED TOBACCO SEED

Wyatt's Cash Tobacco No. F263

ALL THE TOBACCO SEEDS WE SEND OUT ARE TREATED TO PREVENT WILDFIRE, BLACK FIRE, ANGULAR LEAF SPOT AND OTHER TOBACCO DISEASES

CULTURE—A very clean piece of land is best for the tobacco plant beds, hence it is customary to burn a piece of land in the woods for plant beds. The seeds are sown about February and protected by plant-bed cloth from frost and insects. When large enough and weather is settled (about May), set the plants out in highly manured or fertilized soil in 3½ foot rows, 3 feet between the plants. Constant care must be given, cultivating, suckering, worming, etc.

NO. F272—WYATT'S IMPROVED GOLD LEAF—A splendid combination of size, weight and quality. It has been thoroughly tried out by both growers and manufacturers, and has stood every test and proved one of the best bright Tobaccos. Use medium soil.

NO. F265—YELLOW MAMMOTH—This fine bright leaf tobacco is always in the big money at the market. Our carefully selected strain of Yellow Mammoth is the best that can be bought. Best in light or medium soil.

WYATT'S N. C. CERTIFIED TOBACCO SEEDS

There is no reasonable argument against the use of Wyatt's North Carolina State Certified Tobacco Seeds. When it is taken into consideration that one ounce of Certified seeds will produce enough strong healthy plants to set from one to three acres, and that the seeds have been harvested from only those plants that measure up in every way to the very highest standard set by the North Carolina Crop Improvement Association. The North Carolina Crop Improvement Association has carefully inspected the growing of the crops and the seeds have been tested for 1934. Prices: Oz. \$1.00, postpaid.

MULCH PAPER

Valuable Booklet, "The Miracle of Mulch Paper," Mailed Free

Mulch Paper is heavy Gator-Hide Kraft Paper impregnated with asphalt. It is black in color, very tough and is used on the soil surface. Seeds may be planted or plants set in holes punched in the paper or paper laid between the rows. It has worked miracles in increased, earlier yields; it is essentially an agent for increasing soil warmth, eliminating cultivation, weeding and retaining soil moisture.

Mulch Paper comes in rolls, 18 and 36 inches wide.

It comes in two weights of paper. The light weight is for one season use, easy handling among flowers and in home gardens, but of course may be used on any scale of planting. The light weight comes 800 lineal yards to the roll. The heavy weight is double thickness, stands rough use, should last much longer and comes 150 lineal yards to the roll. It is by far the best.

MULCH PAPER PRICES—Light or Heavy Weight. Not Prepaid—18-inch Roll, 30 lbs. \$3.00; 36-inch Roll, 60 lbs. \$6.00.

TRIAL PACKAGE—About 15 yds., heavy weight, 65c, postpaid.

WYATT'S BLOOD TESTED BABY CHICKS

100% LIVE DELIVERY GUARANTEED—POSTPAID

You are guaranteed 100 per cent live delivery of chicks from us, so with a good brooder and house 500 or more may be purchased and cared for, fed and reared with much less expenditure of time and money than was required with one-half that number under the old method. You can get your chicks early and raise early pullets that will begin laying in the early fall and continue through the winter, when eggs are high. Your broilers may be sold on an early market when the price is always high.

HOW TO ORDER

To avoid any delay, use the order blank. Orders are filled in turn, so book your's in advance, if possible. State second and third choice if you can use other breeds.

Straight orders of one kind are best. Do not order too many different kinds at one time. We do not always have chicks of every breed hatching and this may delay your order. Do not wait until a week before you are ready for the chicks and expect to receive them by return mail, for the wise poultryman has placed his order weeks in advance and is likely to be getting them the same day you want them.

TERMS

Our terms are cash with order. We will book orders with a 25 per cent cash deposit, balance of remittance to be made when we notify you. No chicks are shipped C. O. D. Refusal to accept chicks or remit balance forfeits first payment. Remittance may be made as customer prefers, but all payments must be honored before shipment is made.

Oliver 8 Foot, 24 Tooth Rake

OLIVER SELF DUMP RAKE

THE OLIVER SELF DUMP RAKE is built with a strong rigid frame of hot riveted angle steel. A heavy truss rod runs the entire length of the frame and supports the center of the rake. It is a bridge trussed frame that is built to prevent sagging or twisting. The rake teeth are lifted, and the hay dumped, by a pair of strong lift rods operating from each wheel. The ends of the lift rods are shaped into pawls to fit into the ratchets in the wheel hubs. The large number of ratchet teeth in the wheel hubs cause the rake to dump, the instant pressure is applied to the foot dump pedal. The rake teeth drop to the ground immediately, without leaving an unraked strip next to the windrow. The teeth are made of heat treated high carbon spring steel. They are strong, but have sufficient springiness to prevent breakage when they encounter an obstruction. The wheels are unusually strong. The concave tires are 1 3/4 inches wide and 54 inches in diameter. Price, \$45.00.

Oliver 9 Blade Stalk Cutter

OLIVER MOWER

THE OLIVER MOWER is a fast-cutting, long-lasting machine, in which every part does its share.

The Oliver Mower Frame is strongly built and braced with a solid cross member to the pitman drive end, and braced back again to the tongue. This Big Frame holds the driving parts in rigid alignment and provides the solid base that allows the cutter bar the flexibility it needs, while holding it to its straight cutting line. The Oliver Frame is big, sturdy and solid. It will last and do its work, for many years to come.

In the big frame the full length solid axle runs in long roller bearings, spaced far apart, to give the lightest bearing load, which aids in securing the easiest draft.

All gear teeth of the spur gears, and also the bevel gears are correctly designed to mesh and secure the greatest power with the least loss to play and friction.

The clutch is of the four-jaw dog type, wide on its faces to keep down wear, positive and sure in action. It is controlled by a two pad, double acting foot lever that throws it quickly, either in or out.

No mower has any higher cutter bar speed than the Oliver—many are slower. This higher speed is very essential in cutting wild hay and especially so when mowing roadsides. Prices: 4 1/2 ft. cut, \$80.00; 5 ft. cut, \$82.50.
