Robert L. Hagan, Deputy Director  
Shirley Kallek, Associate Director for Economic Fields  
Melvin A. Hendry, Assistant Director for Economic and Agriculture Censuses

### INDUSTRY DIVISION

Milton Eisen, Chief

**ACKNOWLEDGMENTS**—Many persons participated in the various activities of the 1972 Census of Manufactures. Primary direction of the program was performed by Shirley Kallek, Associate Director for Economic Fields, and Melvin A. Hendry, Assistant Director for Economic and Agriculture Censuses.

This report was prepared under the direction of Elmer S. Biles, Chief, Industry Division (until February 1975), and Milton Eisen, his successor. Arthur W. Horowitz, assisted by John S. Berube, was responsible for the overall management of the census and was the Industry Division's liaison officer with other divisions.

Program responsibility was shared by the following individuals, who participated importantly in the entire program: Kenneth I. Hansen and Dale W. Gordon, Census Durables; Michael Zampogna, Census Non-durables; Ruth Runyan, Census Subject and Special Reports; Malcolm E. Bernhardt, Current Durables; Robert J. Nealon, Current Non-durables; and John P. McNamee, Minerals. The names of the supporting statisticians in the commodity areas who made significant contributions are shown in the acknowledgment statements in the 81 individually published industry reports.

Edward A. Robinson made significant contributions to the basic economic concepts and content of the census. The mathematical techniques used in editing the data and sampling the respondents were developed by Donald F. Clark. Robert E. Crowther was responsible for the annual survey component of the census of manufactures. Computer programs were prepared under the direction of Howard Hamilton, assisted by Mary H. Johnson.

The mailing, collecting of data, and processing of administrative record information were conducted by the Economic Surveys Division under the direction of Roger Bugenhagen, Chief. Assistance was provided by Samuel Schweid, Andrew Grieco, Charles Venters, Shirley Roberts, Robert Viehman, Jerry McDonald, Joel Richardson, and Sandra Katis.

Forms design was performed in the Administrative Services Division, Henry J. Husmann, Chief. Gladys Potts, Joyce Teague, Helen Hindt, and Margaret Swinton made significant contributions.

Within the Publications Services Division, many individuals made significant contributions in the areas of publication planning and design, editorial review, composition, and printing procurement.

Clerical and data keying operations were performed in the Data Preparation Division at Jeffersonville, Indiana, under the direction of O. Bryant Benton, Chief, who was assisted by Don L. Adams and Robert L. Allen.

The geographic coding procedures were developed in the Geography Division under the direction of Jacob Silver, Chief, assisted by Zigmund Decker, Terence McDowell, Silla Tomasi, Robert Hamill, David Christy, Kurt LeGait, and John Hawkins. Computer processing was directed by James R. Pepal, Chief, Computer Services Division. C. Thomas DiNenna, Jesse Verdeja, and Willie E. Clark provided staff assistance.

Donald Young of the Economic Census Staff participated in the overall planning and review of the census operations.

Special acknowledgment is also due the many businesses whose cooperation has contributed to the publication of these data.

The statistics presented in this volume incorporate the subject and area report series MC72(1)-1 and MC72(3).

The review and issuance of the final industry and State publications were done on a flow basis. Errors were uncovered for a limited number of data cells after the final publications were issued. Because of the expense involved, corrections were made to the previously published data only if they resulted in a revision of 3 percent or more for an individual industry or 1 percent or more for a State. These corrections are included in the final volumes.

All errors identified in any phase of the review were carried to the computer file used to produce the final subject and special reports. Therefore, those reports represent the most accurate data available.

## I. GENERAL BACKGROUND

### 1. THE ECONOMIC CENSUSES

**General.**—The economic censuses provide a comprehensive statistical profile of a large segment of the national economy. This program includes censuses of manufactures, retail trade, wholesale trade, selected services industries, mineral industries, construction industries, and transportation. In 1972, these censuses accounted for nearly 77 percent of the \$785 billion of national income originating in the private sector. The principal industry groups not covered were finance, insurance, and real estate; agriculture and forestry; communications; electric, gas, and sanitary services; and health and medical services, except for laboratories operating on a profit basis.

**Uses and Users of Census Data.**—The economic censuses are the primary source of facts about the structure and functioning of the economy and therefore provide information essential both for government and business. They furnish an important part of the framework for such composite measures as the national accounts. The census measures also provide weights and serve as benchmarks for current surveys of industrial activity and for indexes of industrial production, productivity, and price, all of which are essential in developing the general background for understanding particular economic situations.

There is widespread use of the economic censuses by manufacturers and distributors who need to establish measures of

their potential markets in terms of areas, kinds of business, and kinds of products; and by managers in various industries and trades who need facts for purposes of economic or sales forecasting, for analysis of sales performance, for the layout of sales territories, for the allocation of advertising budgets, and for the location of plants, warehouses, and stores. For these business purposes, census facts are invaluable. Likewise, trade and professional associations need census information to learn how their industry is changing; chambers of commerce and State and local governments need to understand the business structure and changes occurring in their areas. Business magazines and academic researchers rely on census facts as background for many of their articles.

Following every census, reports are purchased by thousands of business and other users; likewise, census facts are widely disseminated by trade associations, business journals, and the daily press; and census volumes are available in all the major public and college libraries.

**History.**—The first statistical survey which can be called an economic census covered the year 1809, when inquiries on manufacturing were included with the 1810 census of population. Although the results of this pioneer effort were unsatisfactory by modern standards,<sup>1</sup> continued interest in measure-

<sup>1</sup> For an appraisal of early censuses of manufacturing, see Meyer H. Fishbein, "The Censuses of Manufactures 1810-1890," National Archives Publication No. 63-22, June 1963, Government Printing Office.

## INTRODUCTION—Continued

ment of the Nation's economic progress led to successive improvements during the 19th century. By 1890, the statistical standards and procedures followed in conducting the censuses were of a fully professional quality.

All of the decennial censuses from 1810 through 1940, with the exception of 1830, included questions on manufacturing. Inquiries on mining first appeared in 1840, and censuses of mineral industries were conducted decennially through 1940. Although some business-related data were

collected in 1840, the first census of business was taken for the year 1929. This included retail trade, wholesale trade, and construction; selected service trades were covered beginning with 1933. Dates of these and other economic censuses from 1809 are shown in table A.

**Enterprise Statistics.**—The coordinated collection and tabulation of comparable data for several sectors beginning with 1954 has permitted the Census Bureau to develop its enter-

## INTRODUCTION—Continued

prise statistics program, which relates census company-level data to the establishment data. Thus, a measurement of the integration and diversification of the American enterprise system becomes available. Also, through the enterprise statistics program, it has become possible to link census establishment-based data on a modified basis to other statistical systems such as the Internal Revenue Service's "Statistics of Income" for corporations.

**Legal Provisions.**—Title 13 of the United States Code specifies the frequency of the censuses, the kinds of activities to be covered, the obligation to report, the penalties for failure to report, and the confidentiality of returns. It also authorizes

the use of sampling techniques in conducting censuses. As amended in 1964, Title 13 requires the economic censuses to be taken at 5-year intervals, covering the years ending in "2" and "7." The next censuses will cover the year 1977. The pertinent portions of Title 13 are quoted in appendix D.

### 2. CHARACTERISTICS OF THE INDUSTRIAL SECTOR

**General.**—In terms of the major industry divisions established in the national accounts, manufacturing is the largest sector of the economy. In 1972, manufacturing plants employed 19 million persons, 22 percent of the civilian labor force of 86.5 million. Over the past 20 years, as shown in table B, national

## INTRODUCTION—Continued

income originating in manufacturing averages almost 30 percent of the total. In 1972, government and government enterprises surpassed wholesale and retail trade which historically was the next largest sector.

**Cyclical Changes.**—The need for frequent and comprehensive statistics on manufacturing derives as much from its sensitivity to cyclical influences as from its relative size. Cyclical changes in income originating in manufacturing tend to be relatively larger than in the economy as a whole, as can be seen in the movement from 1929 to 1933 to 1939 in table C.

Within manufacturing, durable goods industries accounted for about 60 percent of all manufactures during recent periods. This category tends to be more volatile than nondurable goods, generally accounting for a smaller percentage of all manufactures during periods of contraction and a larger percentage during periods of expansion. In the early thirties, for example, as shown in table C, durable goods manufacturing amounted to only about one-third of the total.

**Geographic Distribution.**—In the early and middle 19th century, manufacturing activity was concentrated in the

## INTRODUCTION—Continued

Northeast. Over the past hundred and twenty years, as shown in table D, there has been a steady decline in the proportion accounted for by the Northeastern States. Industry expanded into the North Central Region in the latter part of the 19th century and, in more recent years, displayed a marked growth in the South and West.

**Size Distribution.**—Manufacturing activity tends to be characterized by relative large-scale operations. While there are many small manufacturing plants, they account for a relatively small part of the total output of goods. As shown in table E, over half of the plants covered in the 1972 census had less than 10 employees and they accounted for less than 3 percent of the total value added by manufacture.

### 3. ROLE OF THE CENSUS OF MANUFACTURES

In the farm-oriented economy of the early 19th century, industrial statistics played a relatively small role in government policy formation. A few series on physical output of commodities originated either from private sources (flour, iron, and steel, etc.) or as a byproduct of tax collection or other government functions (liquors, beer, tobacco products, etc.). Other than these, the only sources of information on the manufacturing sector were the censuses of manufactures, then taken at 10-year intervals. Today, the need for industrial statistics has greatly increased, and the user finds a vast array of detailed information covering virtually every measurable aspect of industrial activity including employment, payrolls, hours worked, production, prices, inventories, orders, investment in structures, machinery, and equipment, and consumption of raw materials, fuels, and water. Many of these statistics are available at frequent intervals and on a timely basis. Sophisticated indicators of economic progress have also been developed such as price and production indexes, gross national product, and national income, published at monthly or quarterly intervals.

In this setting, the census of manufactures still plays an essential role since no other source provides such comprehensive and detailed information on the structure of the industrial sector.

The census obtains, for every manufacturing plant with one employee or more, data on its input of labor, materials, and capital, its output of products and services, its location, and the legal form of organization of the owning firm.<sup>2</sup> These facts are obtained in sufficient detail to permit classification by industry, by size of plant, by homogeneity of output and, where desirable, by type of operation, extent of vertical integration, kind of equipment, relationship to other plants of the same firm, and other characteristics.

<sup>2</sup> For 1967 and 1972, some of this information for 120,000 small companies was not obtained directly but estimated from administrative records. See the discussion of coverage of establishments in sections 4 and 6 below.

**TABLE D. Employment in Manufacturing Establishments,  
by Region: 1849 to 1972**

Year	United States	Northeast	North Central	South	West
Number of employees (thousands)					
1972 .....	19,029	5,306	6,135	5,221	2,367
1967 .....	18,492	5,573	6,059	4,553	2,305
1963 .....	16,235	5,190	5,239	3,780	2,025
1958 .....	15,423	5,242	5,017	3,382	1,779
1947 .....	14,294	5,429	5,109	2,710	1,054
1939 .....	9,527	3,879	3,184	1,852	612
1929 .....	10,198	4,246	3,516	1,758	675
1899 .....	5,077	2,629	1,474	793	181
1849 .....	957	696	110	146	4
Percent of U.S. total					
1972 .....	100	28	32	27	13
1967 .....	100	30	33	25	12
1963 .....	100	32	32	23	13
1958 .....	100	34	33	22	12
1947 .....	100	38	36	19	7
1939 .....	100	41	34	20	6
1929 .....	100	42	35	17	7
1899 .....	100	52	29	16	4
1849 .....	100	73	12	15	—

Note: Detail may not add to totals because of independent rounding. 1849 data include hand and neighborhood industries, which were excluded from the censuses of manufactures beginning with 1899.

— Represents zero.

**TABLE E. Number of Manufacturing Establishments and  
Value Added by Manufacture, by Size Class of Establish-  
ment: 1972**

(Cumulative percentage)		
Size class	Number of establishments	Value added by manufacture
All establishments, total .....	100.0	100.0
1 to 4 employees .....	35.9	1.1
1 to 9 employees .....	50.8	2.5
1 to 19 employees .....	64.8	5.4
1 to 49 employees .....	77.6	12.6
1 to 99 employees .....	89.0	20.9
1 to 249 employees .....	95.6	36.9
1 to 499 employees .....	98.2	51.4
1 to 999 employees .....	99.3	65.1
1 to 2,499 employees .....	99.8	79.3

## INTRODUCTION—Continued

General statistics (that is, total employment, payroll, production-worker employment, man-hours, wages, cost of materials, value of shipments, inventories, capital expenditures, and value added by manufacture) from the census of manufactures are published by industry, by area, by employment size of establishment, by degree of product specialization within plant, and by type of ownership. Information is supplied on the detailed industrial characteristics of each State and large standard metropolitan statistical area (SMSA); and overall measures of manufacturing activity are shown at the county and individual-city level provided there are at least 450 employees in manufacturing and the information can be published without compromising the confidentiality of individual company data. Since a significant amount of industry detail cannot be published for the 3,140 counties and county equivalents in the United States, a special computer tape on "Location of Manufacturing Plants" is available for data users. This tape includes the number of establishments in each of the 450 industries by county or county equivalent area, by employment size. Information such as this constitutes a periodic inventory of the geographic dispersion of the Nation's manufacturing economy that provides a benchmark for measuring the change in its structure.

The census of manufactures also provides benchmarks from which more frequent surveys can be developed on a sample basis. In fact, the present legislation specifying that censuses be conducted every 5 years authorizes an Annual Survey of Manufactures (ASM) on a sample basis during the intervening years. After each 5-year census, a new sample is drawn utilizing the characteristics recorded for each company in the census. The sample, constituting about one-fifth of the establishments but with complete coverage of all large ones, provides an annual updating of the census of manufactures in terms of broad measures of economic activity. It provides the same basic measures of economic activity of the plant such as employment, payrolls, value of shipments, value added by manufacture, as does the census of manufactures, but contains less detailed information on products, materials consumption, and equipment.<sup>3</sup>

The census of manufactures not only is a benchmark for many of the surveys conducted by the Census Bureau itself on a more frequent basis but also is the means of updating other indicators of economic activity. It provides very important information on the manufacturing segment used in the national income accounts. Census data on materials consumed and product output are basic to the manufactures sector of the

<sup>3</sup>Since the ASM is based on a sample, the cross-classifications by industry and by area are fewer than in the census of manufactures. At the U.S. level, statistics are published in the annual survey for practically all of the 450 industries. However, at the State and SMSA levels, statistics are published only for 3-digit and 2-digit industry groupings, respectively. At the county level, information is published for about 10 percent of the 3,140 counties and equivalent areas. These 300-odd counties are the larger ones in terms of manufacturing activity and account for about 80 percent of total manufacturing employment. Data for cities are shown for those cities having over 20,000 manufacturing employees.

input-output studies of the Bureau of Economic Analysis. The information derived from the census of manufactures is also used to develop indexes of industrial production for census years. These indexes are used as benchmarks for the monthly Federal Reserve Board Index of Industrial Production—a key indicator of current economic activity. The census and ASM also provide benchmarks for hundreds of monthly and quarterly surveys of commodity output conducted by the Census Bureau, other government agencies, and by manufacturers' associations.

## 4. INDUSTRY AND PRODUCT CLASSIFICATION

**Structure of the Standard Industrial Classification.**—The basic classification system employed in the economic censuses is the Standard Industrial Classification (SIC). The SIC was developed for use in the classification of establishments (see "Establishment Basis of Reporting," page 9) by type of activity in which engaged. It covers the entire field of economic activities, subdivided as follows:

Industrial division	Title	Major groups
A	Agriculture, forestry, and fisheries	01-09
B	Mining	10-14
C	Contract construction	15-17
D	Manufacturing	20-39
E	Transportation, communication, electric, gas, and sanitary services	40-49
F	Wholesale and retail trade	50-59
G	Finance, insurance, and real estate	60-67
H	Services	70-89
I	Public administration	91-97
J	Nonclassifiable establishments	99

Below the major group level, the SIC provides for 3-digit groups and finally for 4-digit industries. To illustrate—

### Division D.—Manufacturing

Major Group 20 ..... Food and kindred products  
Industry group 202 ..... Dairy products  
Industry 2023 ..... Condensed and evaporated milk

The SIC is the responsibility of an intragovernmental technical committee headed by the Office of Management and Budget. The system is used by all Federal Government agencies engaged in the classification of establishments. To

## INTRODUCTION—Continued

facilitate comparison with Federal statistics and the filing of reports, many State and local governments and business concerns organize their own records along SIC lines.

The first SIC manual was issued in 1939. For the manufacturing sector, the nucleus of the manual was the census of manufactures industry classifications developed over a period of many years. A revised manual was issued for the manufacturing industries in 1945 which, with minor modifications, was used in the 1947 census of manufactures. For the 1954 census, the classification structure used in 1947 was again employed, with minor modifications. In 1957, the SIC system was extensively revised for manufacturing industries and the historical comparability of some data was seriously affected. This revision and its effects on census series are described in the introduction and appendixes to the 1958 census volumes. Minor revisions of the SIC between 1958 and 1967 introduced some 4-digit industry changes but none of them crossed 3-digit group lines. Another extensive revision of the SIC was completed in 1972 which also affected the comparability of industry data. The discussion of the revisions and the impact on comparability appears in appendix B, as well as in parts of each individual industry chapter.

**Structure of the SIC Manufacturing Division.**—For the manufacturing division, the 20 2-digit SIC Major Groups (20 to 39) are subdivided into 143 3-digit SIC Groups (201 to 399) and into 451 4-digit industries (2011 to 3999). While the SIC contains 451 industries, the Bureau of the Census has combined one small industry with another for a total of 450 industries.

Most of the 451 manufacturing industries are defined in terms of specific groups of related products. Usually the products are made of similar materials and by similar processes and are competitive. In determining the boundaries of product-defined industries,<sup>4</sup> it is essential that each industry comprise a group of establishments whose output of products defining the industry (primary products) accounts for a relatively high proportion of the total shipments of the industry as well as of the total shipments of these primary products by establishments in all manufacturing industries. Some industries are defined in terms of the processes or equipment used regardless of the final product of the establishment. (Example: Industry 3361, Aluminum Foundries (castings). A small number of industries are basically defined by material used as well as final product of the plant. (Example: Industry 2521, Wood Office Furniture).

<sup>4</sup> Frequently, business analysts and other data users look at a group of products from more than one point of view. For example, modern high-speed computers are classified as office machines. This describes the purpose of the product. In a physical sense, however, such computers would be described as electronic devices. Similarly, paper bags, wooden boxes, glass bottles, tin cans, and steel barrels may all be classified as containers or they may be individually grouped with other products of similar materials such as converted paper products, wood products, glass products, etc.

There are wide differences among industries in the extent to which the establishments classified in the industry (a) account for the total production of commodities "primary" to the industry, (b) produce products or services "belonging" to other industries (that is, secondary products), and (c) use similar materials or processes. While these variations are frequently construed to be shortcomings, the fact is that the limitations observed in the classification structure arise from the inherent complexity of our economic system and from the disparity in the methods of production among the individual producing units of which it is comprised. The data collected in the census of manufactures provide a statistical basis for a critical evaluation of the classification system; that is, for assessing the boundaries between industries, the growth and decline of industries, and the impact of technological change on the classification of industries.<sup>5</sup>

No general-purpose system of industrial classification can hope to satisfy all users of census data. Some business users will be interested primarily in data relating only to themselves and to their competitors in the production of a narrow range of products; others will wish data relating to all products, including complementary and substitutable products, competing in a particular market; others may wish data relating to the consumers of one or more types of materials. Some may be interested only in the data for plants producing a specific product; others only for those plants producing a "full line" of products. The large number of SIC industries provides the analyst with the "building blocks" for obtaining useful approximations, if not "clean" data, relevant to many of these problems. But, at best, a single general-purpose system of classification can only partially satisfy these diverse needs; a point is soon reached beyond which the adaptation of a system to serve one use somewhat better will reduce its ability, often disproportionately, to serve an alternative use.

Accordingly, users of data frequently regroup detailed SIC industries into broad groupings along lines different from those in the SIC 2- and 3-digit categories. The Federal Reserve Board for many years has made combinations to stress such criteria as durable, nondurable, consumers, producers, finished, intermediate goods, etc. Other public and private agencies also recombine the detailed classes. By and large, the 4-digit industries are susceptible to allocation to such categories, while the 2-digit SIC groups are not.

**Subindustries.**—To increase the usefulness or improve the editing of the data, the Census Bureau frequently has further classified the basic 4-digit SIC industries into "subindustries." This device is employed where there are wide disparities in the

<sup>5</sup> See "Industry Classification and Sector Measures of Industrial Production" by James W. McKie, Bureau of the Census Working Paper No. 20, 1965, and "Historical Comparability of Census of Manufactures Industries, 1929-1958" by Harold T. Goldstein, Bureau of the Census Working Paper No. 9, 1959.

operating ratios of the plants in the industry because of differences among plants in the degree of vertical integration, technology, methods of distribution, geographic location, types of materials used, etc. This technique was used for about 61 manufacturing industries for editing purposes and many were regarded as significant enough to be used for publication: For example, the bakery industry (SIC 2051) is subdivided into wholesale bakeries, chain-store bakeries, home-service bakeries, and retail multioutlet bakeries, and many apparel industries (Group 23) are subclassified into manufacturers, contractors, and jobbers.

To provide a further measurement of variations within 4-digit industries, the Bureau also subclassifies establishments by the degree to which they produce the primary products or specific classes of primary products of the 4-digit industry. This is in effect a subindustry classification based on degree of product specialization which is published in table 5A of the industry chapters.

**Definition of Manufacturing.**—As defined in the SIC, manufacturing is the mechanical or chemical transformation of inorganic or organic substances into new products. The assembly of component parts of products is also considered to be manufacturing if the resulting product is neither a structure nor other fixed improvement. These activities are usually carried on in plants, factories, or mills, which characteristically use power-driven machines and materials-handling equipment.

Manufacturing production is usually carried on for the wholesale market, for transfer to other plants of the same company, or to the order of industrial users rather than for direct sale to the household consumer. However, some manufacturers (for example, baking, milk bottling, etc.) sell chiefly at retail to household consumers through the mail, through house-to-house routes, or through salesmen. Some activities of a service nature (enameling, binding, platemaking, etc.) are included in manufacturing when they are performed primarily for trade; but they are considered nonmanufacturing when they are performed primarily to the order of the household consumer. On the other hand, some manufacturing industries include business firms which perform only the entrepreneurial functions of buying the materials and designing and marketing the product, but have the actual production done on contract (for example, apparel jobbers).

**Auxiliary Units.**—In addition to the production of goods and manufacturing services, manufacturing plants engaged in related and diverse supporting activities. These activities encompass the acquisition of materials to be processed, their movement into the manufacturing facility, their storage at the manufacturing site, the operation and maintenance of plant and equipment, the design of flow of work through the production process, and necessary arrangements for shipment of output to customers. Also included are a host of subsidiary

activities associated with the operation of the establishment as a manufacturing entity (for example, management and policy formation, product and market orientation, engineering and quality control, recordkeeping and accounting, physical security of plant and equipment, and the like). Such subsidiary activities may be performed by personnel located at the manufacturing facility or at an auxiliary unit serving one or more manufacturing locations of the same company. Where these activities are carried on at a different physical location or are performed for more than one plant, they are excluded from the figures for operating manufacturing establishments and are included in the data shown for central administrative offices and auxiliaries. (See the description of the questionnaire used for these establishments, Form NC-X6, in section 7, below.)

**Marginal Activities.**—The following types of activities, while having some of the characteristics usually found in manufacturing, are considered as nonmanufacturing and, therefore, are excluded from the census:

- (a) Processing on farms when the raw materials are grown on the farm and the manufacturing activities (poultry dressing, milk and butter production, logging) are on a small scale without extensive use of paid labor. Also custom milling, egg hatching, cotton ginning, and similar activities closely associated with agriculture are excluded.
- (b) Mineral preparation such as the crushing, screening, and concentrating of ores. However, mining performed as a secondary activity in conjunction with manufacturing is included in the census unless a separate report for the mining activity was filed; for example, stone and clay mining at cement, lime, and clay products plants.
- (c) Custom work to the individual order of household consumers. Examples are custom tailoring, woodworking, lettering on monuments, setting of diamonds, and the making of orthopedic appliances.
- (d) Repair and other service activities, except specified services performed "for the trade." Repair shops of railroads are also excluded.
- (e) Production of coke for own use by establishments owned by public utility companies.

In the 1972 census, no attempt was made to measure the extent of manufacturing at locations which are not primarily manufacturing plants, such as retail establishments which sell most of their products on the premises directly to household consumers (retail bakeries,<sup>6</sup> ice cream stores, etc.), or manufacturing by construction contractors at the site (for example, production of paving mixtures).

<sup>6</sup> Separate data for retail bakeries with baking on the premises were included in the retail census publications, however.

## INTRODUCTION—Continued

Conversely, it is not unusual for manufacturing establishments to engage also in nonmanufacturing activities such as repair work, merchandising of products without further processing, and installation work. Ordinarily, these nonmanufacturing receipts are small in relation to the manufacturing activities and, therefore, it is not difficult to determine that the establishments should be included in the manufactures area. However, if the nonmanufacturing activities account for a significant proportion of total receipts of an establishment, the classification of that establishment into the appropriate major economic sector is more difficult.

In the 1972 economic censuses, an establishment engaged in a combination of manufacturing and merchandising was assigned either to the manufacturing or the trade industries depending on which of these activities was estimated to account for the larger share of its "value added" or "income produced." This criterion, even though based on approximation, was considered preferable to reported dollar volume of receipts from each type of activity in determining the primary industry, since manufacturing requires considerably more man-hours, salaries and wages, and capital inputs per dollar of receipts than either wholesaling or retailing. However, in classifying establishments engaged in manufacturing and also in mining, repair work, installation, construction, or other nonmanufacturing services, dollar receipts were used as the basis of classification because these activities require substantially comparable input per dollar of receipts.

**Establishment Basis of Reporting.**—The SIC is an establishment classification system, and the census of manufactures is conducted on an establishment basis. That is, a company operating establishments at more than one location is required to submit a report for each location; also, a company engaged in distinctly different lines of activity at one location is required to submit separate reports if the plant records permit such a separation and if the activities are substantial in size.

The requirement that distinct lines of activity at the same location be separately reported was selectively applied where the establishment produced and shipped significant amounts of products classified in different SIC industries. In widely varying degrees, this product overlap exists in many manufacturing establishments. Generally, the amounts involved are not significant enough to warrant the filing of separate reports, even if feasible. However, there are a number of locations at which large numbers of employees are engaged in each of two or more distinct lines of manufacturing as defined in the SIC. Frequently, companies organize their operations and their records separately where diverse activities are large (for example, with more than 100 employees in each line of activity) and choose to report them as separate plants. When they do not do so on their own initiative, the Census Bureau requests separate reports. For the most part, companies have

responded favorable, particularly for very large operations where failure to "split out" the different activities would significantly distort the relationship of the industry and product statistics. Not infrequently, though, the two groups of products were made on the same production lines by many of the same employees and could not be distinguished sufficiently in company records to provide establishment-type reporting.

SIC industry definition takes account of special situations where otherwise separately classifiable activities are frequently combined at one location. For example, in the lumber area the definition of industry 2421, Sawmills and Planing Mills, General, recognizes the situation that sawmills may include logging operations. Similarly, in the pulp and paper area, pulp-mills operated in combination with papermills are included in one report.

**Coverage of Establishments.**—The censuses of manufactures for 1947 to date have included establishments with one employee or more. Beginning with the 1967 census, reports were not obtained directly from all such establishments. Approximately 120,000 small single-unit manufacturing firms<sup>7</sup> identified as having less than 10 employees were excused from filing reports. Under special arrangements which safeguarded the confidentiality of both tax and census records, limited data on payrolls, sales, and industry classification from the administrative records of the Social Security Administration (SSA) and the Internal Revenue Service (IRS) were made available to the Census Bureau for use in the 1967 and 1972 economic censuses. Estimates for data other than payrolls and sales for these small establishments were constructed from historical industry ratios. The effect on industry aggregates is slight in most industries; for manufacturing as a whole, they account for only 1.2 percent of the value added. Detailed product and materials data for these small establishments were not estimated; the entire value of product shipments and cost of materials was imputed to a "not specified by kind" category.

In the censuses of 1921 through 1939, establishments with less than \$5,000 value of products were excluded. For 1899 to 1919, the limit was \$500. The change in the minimum size limit to an employment basis in 1947 did not appreciably affect the overall comparability of earlier census figures, except for the number of establishments.<sup>8</sup>

A sample survey of manufacturing plants with no paid employees was conducted in conjunction with the 1958 census. While there were nearly 52,000 establishments in this category in that year, they accounted for only about one-quarter of 1 percent of the total value of shipments of all manufacturing industries. The proportion was higher for certain industry groups such as lumber and wood products and printing and

<sup>7</sup> The characteristics of these firms are discussed below in section 15.

<sup>8</sup> This point is discussed at greater length in the Introduction to the 1947 volumes.

publishing. Tabulation of IRS data for 1972 indicates that there were 104,000 tax returns completed as manufacturing that had no payrolls under SSA standards. These accounted for a little over one-quarter of 1 percent of the total value of shipments for all manufacturing industries.

As indicated above, report forms were not mailed to 120,000 very small establishments. These establishments were assigned the industry classifications to which they had been coded in the 1967<sup>9</sup> Census of Manufactures if they had been in business for that year, or if they had begun in business after 1967 they were coded on the basis of brief descriptions of the general activity of the establishment as reported to the Social Security Administration. Where the description is incomplete or there are relatively fine lines of demarcation between industries or between manufacturing and nonmanufacturing activity, the code assigned to an establishment could differ from that which would have been assigned on the basis of more complete product information. Therefore, the total establishment count should be viewed as an approximation rather than a precise measurement. The counts for establishments with 20 or more employees are far more reliable than the total number of establishments.

**Primary and Secondary Products.**—As applied in the economic censuses, the SIC coding system operates in such a way that the definitions become progressively narrower with successive additions of numerical digits. There are 20 very broad 2-digit groups, 143 3-digit groups, and 451 4-digit industries. In addition, the Census Bureau has developed a product coding system based on the SIC, which contains 1,293 5-digit product classes and approximately 10,500 individual 7-digit products. (See "The Classification of Products and Materials" below.) The 7-digit products and 5-digit product classes are considered the primary products of the industry with the first four digits the same as the product code. Accordingly, an establishment is classified in a particular industry if its production of the primary products of that industry exceeds in value its production of products of any other single industry. The industry code assigned to the establishment is derived from a summation of values for 7-digit product codes to their 4-digit industry and the selection of the largest such value as the establishment's industry classification. However as mentioned earlier, the industry classification of an establishment may be determined not only by the products it makes but also by the processes employed or materials used in making those products.

While some establishments produce only the primary products of the industry in which they are classified, it rarely happens that all the establishments in an industry specialize to this extent. Therefore, the general statistics (employment, pay-

rolls, inventories, value added by manufacture, total value of shipments, capital expenditures, etc.) shown for an industry (tables 1 to 4 of the industry chapters in Volume II) reflect not only the primary activities of the establishments in that industry but also their activities of a secondary nature. The product statistics in tables 5A and 6B of the industry chapters represent the total output of specific products whether they are produced by establishments classified in the same industry as the product or not. For this reason, in relating the industry statistics in the industry chapters, especially the industry total value of shipments (tables 1 to 4), to the product statistics (table 6), the composition of the industry's output as shown in tables 5B and 5C should be considered.

The extent to which industry and product statistics may be matched with each other is measured by the two ratios which are computed from tables 5B and 5C. The first of the ratios, called the primary product specialization ratio, describes the proportion of product shipments (both primary and secondary) of the industry represented by primary products. The second, defined as the coverage ratio, is the proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

**Degrees of Integration.**—In many industries, establishments making products falling into the same industry category use a wide variety of processes and materials to produce them. Also, within the same industry classification based on end products, those establishments may be included which are vertically integrated and those which put only the finishing touches on an already highly fabricated purchased item. For example, in the refrigeration industry, there are instances of almost complete process integration in which the production of the compressor and condensing unit, electric motor, and even the castings for those intermediate products, as well as the stamping of the case and the final assembly, are all carried on at one plant. In other plants, the condensing unit, the motor, and the case may be purchased and merely assembled into the finished product.

In some instances, nonintegrated plants have been placed in separate industry categories from the integrated plants. In many industries, the census provides separate statistics on departmental operations or on the production of intermediate commodities made and used in the producing plant. When an industry includes plants which ship a significant proportion of their output to other plants of the same company, separate figures are usually shown on the interplant transfers.

These differences in the integration of production processes, types of operations, and types of materials used should be taken into account when relating the general items (employment, payrolls, value added, etc.) to the product and materials data. For those industries where the integrated type of operations is of consequence, that fact is pointed out in the explanatory text for the industry.

<sup>9</sup> Establishments which were in the 1967 Administrative Record File would have been assigned industry codes from the 1963 Census of Manufactures.

**Industry Code Resistance.**—The production of many establishments is so evenly divided among two or more industry-determining product groups that the predominant groups (which can represent less than half of the total value if there are three or more groups) change from year to year. In the ASM, these plants are prevented from shifting back and forth among industries due to minor shifts in product mix, by the application of a "resistance formula" in assigning industry classifications.

A resistance formula of the ASM type was first used in the 1963 Census of Manufactures and again applied in the 1967 census. In the 1972 census, the formula was applied only to establishments included in the 1971 ASM sample panel with certainty (that is, included with a probability of "1"). In general, certainty cases included all establishments of companies with at least one manufacturing plant with 250 employees or more.

The formula gives approximately equal weight to the need for maintaining continuity in the establishment composition of an industry, thus improving the measurement of change and the need for reflecting the industry's exact status at a point in time.

In the 1972 census, the industry classification of certainty establishments was allowed to change from that assigned in 1971 under one of the following conditions:

- (a) The value of the 1972 primary products constituted 60 percent or more of its total value of product shipments, or
- (b) The value of the 1972 primary products, while less than 60 percent, was at least twice the value of products which had been primary in 1971.
- (c) The value of 1972 primary products, while not meeting either of the two prior conditions, exceeded the value of the 1970 primary industry's products in both 1972 and 1971 by at least 20 percent.

**The Classification of Products and Materials.**—In census industrial statistics, a commodity classification system based on the SIC is employed. The code numbers used in this system relate the commodity to the industry in which it is produced. For example, the 7-digit product code number 2023212 refers to canned evaporated milk. The first five digits of this code number, 20232, refer to the "product class" canned milk, and the first four digits, 2023, refer to the industry in which these products are made (the condensed and evaporated milk industry). The system is also applied to the coding of materials insofar as the first four digits are concerned; for example, the code number 024111 refers to whole milk used as a material, and the first four digits of this code number 0241, refer to the agricultural industry, dairy farms, where this product originates.

This SIC-based system is simpler than other systems for the coding of industrial products and materials used, since there is a direct numerical relationship between commodities and industries. Complications occur in the few SIC industries defined in terms of processes or equipment used as well as products made. As an example, women's sweaters are produced in knitting mills (industry 2253) and also in cut-and-sew shops (industry 2339). To retain the industry-of-origin concept, therefore, it is necessary to assign different product code numbers to women's sweaters, depending on where they are made.

The SIC-based commodity classification is used in the Census Bureau's entire industrial statistics program, including monthly, quarterly, and annual surveys, and also in the census of wholesale trade. The Bureau also publishes data on imports and exports in terms of SIC-based categories as well as the traditional Schedule B and TSUSA systems.<sup>10</sup>

### 5. GEOGRAPHIC CLASSIFICATION

**Census Divisions and Regions.**—In order to present census data at a level intermediate between the U.S. total and those for the individual 50 States and the District of Columbia, the Census Bureau has used regional groupings for over a century. Since the 1909 Census of Manufactures, the present nine geographic divisions have been used. Beginning with the 1939 census, the nine divisions were also classified into four geographic regions: Northeast, South, North Central, and West.

Not only are these groupings convenient for the summary presentation of census data below the U.S. level, but they are also essential to presenting a maximum of geographic information where the individual State data cannot be shown without disclosing figures for individual companies. (See section 22, "Confidentiality".) The relative importance of manufacturing among the regions, divisions, and States is shown in table F.

**Standard Metropolitan Statistical Areas.**—In addition to the data for the legally constituted geographic units (States, counties, and cities), all manufacturing totals are shown for approximately 263 standard metropolitan statistical areas (SMSA).<sup>11</sup> In the 1972 tables, detail for 2-, 3-, and 4-digit industries is shown for any SMSA when it would not disclose data for individual companies and the industry had at least 250 manufacturing employees. This is the same procedure as that used in the 1967 census. Prior to 1967, detail had not been shown for SMSA's with under 40,000 total manufacturing employment, and only industry group figures were

shown for SMSA's with 40,000 to 190,000 employees. Between 1967 and 1972, a significant number of SMSA's were redefined in content or became new SMSA's. These changes are discussed in appendix E.

Standard metropolitan statistical areas are integrated economic and social units with a large volume of daily travel and communication between the central city (having 50,000 or more population) and outlying parts of the area. Each area (except in New England) consists of one whole county or more. An area may contain not only highly industrialized

counties but also adjoining counties which, though primarily residential in character, contribute significantly to the industrial counties' labor force and are socially and economically integrated with the central city. These areas were defined by the Federal Committee on Standard Metropolitan Statistical Areas for general-purpose use in presenting economic and social data. In the New England States, similar integration criteria have been applied in defining standard metropolitan statistical areas, but on a city and town basis because towns are regarded as the significant unit in this region of the country.

Note: The Flint, Mich., SMSA falls within the top 50 SMSA's but is excluded from this table to avoid disclosing figures for individual companies.

— Represents zero. \*The definition of this SMSA changed for 1972. See appendix F for a description of each SMSA and changes in content.

The requirement that each SMSA consist of county units (except in New England) sometimes results in the inclusion in an area of a considerable amount of territory which would not ordinarily be considered "metropolitan," much less "industrial." It is recognized that metropolitan areas could be more accurately defined in terms of smaller area segments such as minor civil divisions, but the usefulness of areas so defined

would be limited by the fact that many types of economic and social data are available only on a county basis.

Each SMSA is designated by the name of the principal city of the area. In addition to the name of the principal city, the area title may include one or two additional city names.

Value added by manufacture in all SMSA's accounted for 78 percent of the U.S. total in 1972. The relative importance

of the 50 largest SMSA's in 1972 and their rankings in the 1967 and 1963 censuses are shown in table G.

**Industrial Counties.**—In addition to industry statistics for standard metropolitan statistical areas, table 7 of each State report, presents data by county for each industry group (2- and 3-digit) that had at least 450 manufacturing employees

and where it would not result in disclosure of figures reported by individual companies.

**Cities with 450 Manufacturing Employees or More.**—Summary totals and industry detail at the 2-digit level are shown for individual cities with 450 manufacturing employees or more, provided the data do not disclose information for individual companies.

## II. METHODS

### 6. PLANNING AND PREPARATION

**General.**—The Census Bureau has an obligation to meet public needs for timely and reliable information while holding costs and the burden on respondents to a minimum. During the planning stages of each economic census, the advice of trade and professional associations, Federal and State government agencies, individual companies, labor unions, and research and educational organizations is solicited in an effort to reach both the users of data and the respondents who supply the basic figures. Simultaneously, studies of the problems encountered in the previous censuses are undertaken, and proposals to improve the methods of collection, processing, and tabulation are explored.

**Mailing Lists.**—Beginning with the 1954 economic censuses, the basic mailing lists have been obtained from Internal Revenue Service (IRS) and Social Security Administration (SSA) records.<sup>12</sup> These records were also sampled to develop statistics for retail and service establishments with no employees. After the 1963 censuses, it was decided to investigate the feasibility of making greater use of the data in the IRS-SSA records. This effort led, in the 1967 censuses, to the exemption of over 2,000,000 firms from the filing requirement, including 120,000 small manufacturers. Instead, census-type statistics for this group were developed from IRS-SSA records. Well in advance of the data collection phase of the censuses, plans for using these records for small employers were developed in close cooperation with those agencies. Specific procedures for this use and for assuring confidential treatment of individual tax returns were set forth in Executive Order No. 10911, dated January 17, 1961, and Treasury Decision No. 6547 of the same date. The basic records used were business income tax returns (IRS forms 1040C, 1065, 1120, and 1120S) and payroll tax returns (IRS form 941). The information obtained from these reports was the name and address, payrolls, and gross business receipts. In addition, an SIC indus-

trial activity code was assigned by use of the permanent SSA records which indicate the industry or kind of business of each employer. Other census statistics for these small firms were imputed, using industry average ratios to payrolls and sales.<sup>13</sup>

Since the 1967 procedure was successful, it was repeated in the 1972 economic censuses. In 1972, there was a concerted effort by the Census Bureau to improve the industry coding of the administrative record by mailing a nature-of-business inquiry to establishments whose industry codes could have been affected by the 1972 revision to the SIC. (A sample classification card is reproduced in appendix C.)

**Planning the Content of Questionnaires.**—As in previous censuses, the content of the 1972 questionnaires was developed in consultation with a large number of organizations and individuals, representing both the manufacturers who supply the basic data and those who use the resulting statistics. Those consulted included government agencies, individual firms, labor unions, the American Statistical Association, the American Economic Association, the American Marketing Association, the National Association of Manufacturers, and all national manufacturers' associations covering specific industries.

A special effort was made to obtain the advice of individual manufacturers and their trade associations as to the content of the sections of the report forms dealing with the output of specific products. Drafts of the proposed 1972 product sections were circulated among 800 trade associations and about 4,000 manufacturing companies, both large and small. These inquiries followed the pattern of the 1967 census inquiries, with the introduction of new product detail reflecting suggestions received by the Census Bureau after the 1967 canvass. Small items (those valued at \$5 million or less) were not retained in the list unless they were needed to simplify the classification of other products or were of strategic importance. The manufacturers and others consulted in this clearance procedure were requested to comment particularly as to whether

<sup>12</sup> The 1947 Census of Manufactures list was also obtained from the SSA.

<sup>13</sup> As discussed elsewhere in this introduction, the amount of imputation introduced by this procedure was only about 1 percent of the overall totals.

the proposed detail was readily reportable from business records, and whether it represented the most appropriate set of items for the industry. A restriction was placed on proposals for additional detail; it was stipulated that the 1972 value of any new product category should exceed \$20 million.

The thousands of comments and suggestions received in this clearance procedure were analyzed by the census staff. Finally, a detailed account of the review procedure and the decisions reached was forwarded to the Office of Statistical Standards, Office of Management and Budget, along with the Census Bureau's recommendations for the content of the product sections.

The final review of the content was performed by the Office of Statistical Standards with the assistance of the Advisory Council on Federal Reports. The latter organization is a group of business executives representing a cross section of industries and various professions within companies such as controllers, economists, and market research directors.

## 7. REPORTING FORMS

A representative selection of the reporting forms used in the census is reproduced in appendix C. The uses of each of them are discussed below.

**General Forms.**—This group of forms was used in the economic censuses generally, either as companywide reports or as reports for establishments whose classification was not known precisely in advance of mailing.

**NC-X1A, Report of Company Organization.**—This companywide report and its companion forms NC-X1B and NC-X1C were used in the precanvass of multiunit companies conducted in 1972. A more detailed account of their use is given in section 8, "The Mailing Lists."

**NC-X2, Listing of Additional Establishments.**—This form was mailed to all multiestablishment companies together with the 1972 Census of Manufactures forms to obtain a list of establishments that were acquired after the NC-X1A was filed. These plants were then classified, added to form NC-X1A, and mailed report forms. Plants under construction were requested to report expenditures put in place during 1972 and the total gross book value of assets at the end of the year.

**NC-X3, General Schedule.**—This questionnaire was designed to obtain information from small companies for which the industry code available in the SSA records was not precise enough to indicate which one of the standard census questionnaires should be mailed. The information provided on form NC-X3 was used to classify these companies by industry and tabulate their data in the appropriate census.<sup>14</sup>

<sup>14</sup>The use of Form NC-X3 is also discussed in section 8, "The Mailing Lists."

**NC-X6, Central Administrative Offices or Auxiliary Establishments.**—Many multiunit companies maintain separate establishments to provide centralized administrative, management, or other supporting services for other establishments of the same company, but not for the general public or other companies. These establishments were asked to complete form NC-X6. The form contained questions on approximate employment for such functions as centralized administration, research and development, warehousing, and other auxiliary activities, and on the cost of research and development work performed by these nonmanufacturing establishments.

**NC-K1, Company Summary Report.**—Each multiunit company with 250 employees or more received a form NC-K1, Company Summary Report, along with the appropriate questionnaires for its establishments. The NC-K1 requested consolidated company totals for key data items, such as receipts, new capital expenditures, inventories, and fixed assets. In addition, each company was asked to distribute the 1972 employment reported on its establishment questionnaires by its IRS-SSA employer identification numbers (EI numbers) and to compare these totals to the figures reported on its Treasury Form 941 tax returns. This comparison provided assurance that all domestic establishments of each large multiunit firm and its subsidiaries would be included in the censuses. Form NC-K1 served this operational purpose and also provided essential data for the enterprise statistics program described above in section 1.

**Census of Manufactures Forms.**—The questionnaire reproduced in the appendix, form MC-36B, is typical of the 180 forms used for operating manufacturing establishments. Each of these forms was designed to be used for a specific group of industries. For establishments included in the Annual Survey of Manufactures sample, form MA-100 was substituted for the front sheet of form MC-36B and its companion forms, since the content was virtually the same and it was desired to maintain continuity of reporting in the ASM. Whether or not form MA-100 was used, the inquiries on the 180 forms were identical except for the detailed questions on products shipped, materials used, and miscellaneous topics such as operations performed, equipment used, and delivery of products.

**Annual Survey of Manufactures Forms.**—Form MA-100 is the establishment report used in the ASM since 1949 (with modifications). As mentioned above, this form was used in 1972 as the first sheet of the census of manufactures report for the establishments included in the ASM sample. The establishment's 1971 data were imprinted on the report form before mailing, thus aiding the respondent in following the instructions for the census. Item 9, "Quantity and value of products shipped and other receipts," on form MA-100 corresponds to item 18 on the census form MC-36B and its companion forms,

the difference being that item 18 called for more detailed information on product shipments.

**Other Related Forms.**—Form CB-51J, "Manufacturers' Sales Branches and Sales Offices," which is reproduced in appendix C, is typical of the several forms used for these establishments in the census of business. The forms differed only in the kinds of products sold as listed in item 12. In item 5, line b provided verification of the classification of the establishment as a sales branch or sales office. If the line-b percentage indicated that more than half of the goods sold were not manufactured by the parent company, the establishment was reclassified into one of the merchant wholesaler categories.

**MC-171**, Department of Defense Establishments, and **MC-D4**, Penal Institutions.—These forms were used to collect information on government-owned and government-operated manufacturing establishments. They were used for two types of establishments: (1) Manufacturing facilities owned and operated by the Department of Defense, and (2) prison industries (Federal, District of Columbia, and State). The data were prepared with the cooperation of the Department of Defense, the Department of Justice, and the District of Columbia and State prison systems. For Department of Defense installations, information was provided on employment, man-hours, payrolls, cost, and value of work done, by industry group and by State. For prison industries, however, only product data were requested. The data are presented in a special report included in Volume I and are not included in the totals for operating manufacturing establishments.

## 8. THE MAILING LISTS

**General.**—As discussed in section 6 above, the basic lists for 1972 were obtained from IRS-SSA records, supplemented importantly by the inclusion of the ASM list of 68,000 establishments. Since the IRS-SSA lists consist essentially of the names and addresses of companies rather than establishments,<sup>15</sup> it was necessary to follow separate procedures for multiunit companies (those operating at more than one location).

**The Precanvass.**—Multiunit companies were required to file at least one establishment report<sup>16</sup> covering each location. In order to select the appropriate questionnaires, it was necessary

<sup>15</sup>The SSA records for multiunit companies identify "reporting units," which in many instances correspond to census establishments. The differences are such, however, that it was found necessary to obtain up-to-date lists of establishments as described in this section. Also, the Census Bureau concept of a company differs from the IRS-SSA definition, since the Census company includes all establishments under common ownership or control; in the IRS-SSA records, subsidiary corporations are often treated as independent companies.

<sup>16</sup>If two or more distinct lines of activity were carried on at one location, separate reports were obtained under some circumstances. (For a complete discussion, see "Establishment Basis of Reporting" in section 4, above.)

to determine in advance the nature of operations at each location. Beginning early in 1972, therefore, a "Report of Company Organization" (forms NC-X1A, NC-X1B, and NC-X1C)<sup>17</sup> was obtained from firms known to be multiunits from previous census records. Form NC-X1A was mailed to all of the larger multiunit companies. Form NC-X1B was mailed to multiunit companies operating under 4 or less employer-identification numbers and having 13 or less operating establishments. Form NC-X1C was mailed to multiunit companies which were operating under one employer-identification number, having 4 or less operating establishments and a total employment of 100 or less.

All of these forms consisted essentially of a report on company affiliation and a list of the domestic establishments operated by the company. Before the forms were mailed, the company's establishments as identified in census records were prelisted. In the instructions for form NC-X1A, the respondents were asked to make any necessary corrections to this list. In addition, they were asked to supply descriptions of any new establishments not already listed, including their approximate size.

Large multiunit companies were segregated for special handling in the precanvass because problems involving overlap and duplication were anticipated. Many of these companies were active in retail and wholesale trade as well as in manufacturing. The instructions for the precanvass were reviewed with these firms in personal discussions with officials of their accounting departments, in order to make certain that the procedure was understood and the establishments properly described on form NC-X1A.

**Initial Control File.**—This file, consisting of about 10 million names and addresses of companies, was assembled from IRS-SSA records and other sources including the 1972 economic census records. For manufacturing, the ASM records were incorporated in the file.

**Single-Unit Companies.**—The mailing lists for single-unit companies (those operating at only one location) were developed from the initial control file by removing out-of-scope companies (those whose activities were not to be surveyed in the economic censuses) and those identified as multiunits in the precanvass. A special survey of out-of-scope companies with more than 50 employees in selected industries was conducted to doublecheck their eligibility, and some names were added to the mailing list as a result. Single units with over 150 employees were mailed form NC-X1B to determine if they were multiunits.

The final step was to set aside the records of the small companies for which census-type statistics were to be developed from administrative records. The remaining records constituted the mailing lists for single-unit companies.

<sup>17</sup>These forms are reproduced in appendix C.

Classification cards (a sample form is reproduced in appendix C) were mailed to the administrative record cases if their historical code was involved in the 1972 SIC revision. Each establishment was requested to describe on the questionnaire the products manufactured or activity performed at their plant, the establishment was then classified according the response received. If a response was not received, the establishment was reclassified to the most probable industry.

**General Schedule.**—While the lists assembled in these ways were generally adequate in providing sufficient industry information to determine the proper form for mailing, a number of the records did not have precise industry information associated with them. Form NC-X3, "General Schedule," which is reproduced in appendix C, was mailed to all such companies. Since it was assumed that these companies were quite small, only a few key figures were requested. On the basis of the information reported, these reports were coded and included in the basic tabulations. If form NC-X3 indicated that the company was actually large, it was later requested to file one or more of the appropriate standard questionnaires.

### 9. GEOGRAPHIC AREA CODING

Accurate and complete information on the physical location of each establishment is required in order to tabulate the census data by standard metropolitan statistical areas, counties, and cities. As in previous censuses, the post office address and ZIP code of the establishment were not always accepted as defining the physical location, but respondents were required to describe the actual location in terms of street address, city, town or village, county, and State. For establishments located in rural territory, the name or number of the nearest highway was requested and the distance from the nearest town or other urban place.

In censuses prior to 1963, clerks assigned geographic code numbers to each establishment based on the description furnished by the respondent. This process was slow and required careful verification. Beginning with 1963, a computerized system was developed which assigned an area code number and a prefix symbol to the mailing address before the questionnaires were mailed. The prefix symbol indicated whether or not the mailing address was clearly acceptable as describing the physical location. If there was any question about its acceptability, the respondent's description was later carefully reviewed after the questionnaire was received. The assignment of tentative code numbers by the computer was based on extensive reference files containing nearly a million business names and addresses.

The geographic coding system used in the 1972 economic censuses was based on the 1967 system with some improvements and revisions. The major changes included updating and

expanding the address reference file and the use of new techniques in coding and unscrambling addresses against the reference file.

### 10. DATA COLLECTION

**General.**—Although the greater use of administrative records in 1972 substantially reduced the number of companies canvassed directly, there remained nearly 2 million which were required to file, including about 192,000 manufacturers. The assembly of several hundred different questionnaires into mailing packages, correctly labeled and coded, combined with the correct instruction booklets, was an extensive operation.

**Instructions.**—Several general instruction booklets were prepared to assist respondents in completing questionnaires for the 1972 economic censuses. In addition, separate detailed instruction manuals were printed for establishments in a few kinds of business and in certain mineral industries with peculiar reporting problems, as well as for manufacturing establishments reporting on the detailed standard forms.

**Timing.**—The bulk of the 1972 questionnaires was mailed by mid-January 1973 with a due date of February 15, about 2 months earlier than the corresponding due date for the 1967 censuses. The collection phase was completed in late July 1973, which was about 3 months earlier than the 1967 census.

**Followup.**—Companies which did not return their questionnaires by the due date had to be reminded that their returns were overdue. A reminder card was used for the first followup, and form letters were used in the four subsequent mailings. Two basic letter formats were used: one for multiunit companies that had returned questionnaires for some but not all establishments and the other for companies that had not responded at all.

In addition to the letters for the 3d, 4th and 5th followups, analysts made telephone calls to the large companies to help with reporting problems and to request that the forms be completed and returned.

The last followup letter was mailed in June 1973. Estimates based on data from administrative records were included in the census tabulations for the relatively small number which had not responded by the closeout date in July 1973. Thus, all companies and establishments included in the original mailing list (except those determined to be inactive during 1972) were represented in the final statistical results, either by actual returns or by proxy returns generated from administrative records. A special effort was made to obtain actual returns from all large firms, so that the volume of business represented by proxy returns was relatively very small.

## 11. DATA PROCESSING

**General.**—The editing,<sup>18</sup> coding, and tabulation of data for the five million establishments represented in the 1972 economic censuses was a complicated task requiring extensive advance planning and careful coordination among the Census Bureau's organization subdivisions. Automatic data processing and other advanced techniques were used in all phases to a considerable extent.

**Facilities.**—In the mail collection phase, the questionnaires were returned by respondents to the Census office at Jeffersonville, Ind., where most noncomputer (that is, clerical) processing operations were performed. The Jeffersonville functions consisted mainly of preliminary screening of questionnaires, carrying on routine correspondence with respondents, keying data on a key-to-disk system, and transmitting the tape encoded data to Washington on a high-speed transmission system. The Washington staff handled computer operations and all operations in connection with the use of IRS and SSA records.

**Preliminary Screening.**—After they were checked in against control lists and assigned geographic codes, the questionnaires were reviewed clerically to see that they conformed to certain minimum requirements before further processing. In the case of multiunit companies, the sum of employment and payrolls reported on its establishment questionnaires was compared with the control totals reported on form NC-K1, "Company Summary Report." Questionnaires received from ostensibly single-unit firms were reviewed to ascertain whether they had become multiunits through merger or acquisition. All questionnaires were reviewed to see that the entries were legible and keyable and that entries appeared for a number of key items. For manufacturing establishments returns, the key items were payrolls and value of shipments. Questions arising in the screening operation were resolved by writing or telephoning the respondents. Complex problems involving multi-unit companies were either handled by a special task force of experienced analysts in Jeffersonville or were referred to the Washington office.

**Computer Editing.**—All of the establishment records from the 1972 censuses of manufactures and mineral industries underwent computerized processes of screening and detailed testing of data. While many of these programs were newly devised in 1972 they were largely based on similar programs in use during previous censuses. Average values and tolerance limits for key

operating ratios (for example, cost of materials per dollar of shipments, payroll per employee, production-worker wages per man-hour, etc.) played a fundamental role in the editing process. However, more extensive testing and more sophisticated routines for adjusting data which failed the tests were incorporated into the 1972 programs. The need for computer editing may be judged by the fact that more than half of all 4-digit SIC industries had one or more data cells changed by more than 5 percent as a result of application of these programs.

In the 1972 census of manufactures, nearly 386,000 establishments were initially defined as being potentially in scope of manufacturing establishments. Approximately 55,000 were identified as having no activity in 1972 or actually out of scope of manufacturing. There were approximately 18,000 duplicate establishment records, which were removed. The ending file consisted of nearly 313,000 establishments engaged in manufacturing activities.

In sequence, the computer programs used included a Housekeeping and Screening Edit, a Coverage Control and Matching Edit, a Magnitude Edit, a General Statistics Edit, an Intercard-Intercolumn Edit, a Product and Materials Edit, Duplicate Removal Programs, and various programs of referral and of aggregate testing. These programs are described in outline form below. Also included within this sequence were programs of geographic coding and of industry coding, subindustry coding, and SIC recoding which are described elsewhere in this Introduction.

The *Housekeeping and Screening Edit* was designed to inspect each record for the presence of basic information such as identification numbers, geographic codes, and source codes (that is, ASM, census of manufactures, or census of minerals). This program also included some simple data adjustments, such as the replacement of a missing total by a corresponding sum of detail.

The *Coverage Control and Matching Edit* was a system of programs which checked the consistency of clerically assigned codes with information reported on the ownership status of the establishment. For ASM establishments, the program included matching with the 1971 ASM record file to identify corresponding prior-year records.

The *Magnitude Edit* was designed to test the size of two key items—payrolls and value of shipments. For ASM establishments, these items were compared with the corresponding entries for 1971 and were accepted if satisfactory. If not accepted, the ASM records were channeled through the standard edit which compared payrolls to a historical employment-size code. Payroll figures passing the test were then used, in conjunction with cost of materials, in testing the value of shipments.

When failures in the magnitude tests were encountered, a fixed sequence of attempts to adjust the data were performed,

<sup>18</sup>In data processing, the term "editing" means the review of information collected on questionnaires or from other sources, with the objective of locating and correcting erroneous entries.

which included dividing a reported figure by 1,000 (a common error was the reporting of values in dollars rather than in thousands of dollars as requested), or replacing a total by a sum of detail where these differed.

More than 34,000 establishments were rejected from the combined output of the Housekeeping and Screening Edit, from the Coverage Control and Matching Edit, and from the Magnitude Edit. These rejects were clerically reviewed, corrected where necessary, and recycled back into the computer.

The *General Statistics Edit* tested key operating ratios and adjusted the record or flagged it for later attention if it failed the test. Fifty-two such ratios were assigned for use in testing census of manufactures records, and 41 ratios of change between 1971 and 1972 were used in testing the ASM reports. The tolerance limits and average values for these 93 ratios were based on the limits used for the corresponding tests in the 1967 census, with some correction and updating based on the 1971 ASM information.

In the presence of ratio failures, the computer program was designed to determine the component of the ratio which was most likely to have caused the failure. This was done by a process of inspecting other ratios containing each of the suspect components, and by computing an overall weighted-reliability index for each. The component with the lowest reliability index was judged to be incorrect. The computer then attempted to adjust the questionable figure by a process of "rounding" (multiplying or dividing by successive powers of 10), substitution of a total by a sum of detail, or by imputation based on one of the several ratios in which the suspect component was contained. After each such attempted adjustment, the new figure was accepted if it resulted in an improved reliability index.

In addition to the testing and correction of reported information, the *General Statistics Edit* was the vehicle for the imputation of data for the 120,000 establishments designated as administrative-record cases, as well as data for companies whose reports were not received at the time the data were tabulated. Imputation for all reasons, failure to report as well as administrative records, accounted overall for about 5 percent of the total value of shipments. Records were not rejected and removed from the computer tapes in the *General Statistics Edit*, but were flagged and printed out for review by an analyst whenever the computer made a large adjustment, found a large year-to-year change, or could not make an acceptable adjustment after test failure. Excluding administrative records, about 22,000 such cases were printed out for review and possible correction.

The *Intercard-Intercolumn Edit* was designed to test specific relationships among products, materials, and special inquiries. The record was flagged for inspection if the test failed; some 11,000 records were printed out for review from this edit.

*The SIC recoding program* recoded industry codes, product codes, and material codes, which were reported on the 1967 SIC system by means of reference tapes to the 1972 SIC system. Each establishment was assigned an old (1967) SIC industry code and a new (1972) SIC industry code based on the product mix reported in item 18 of the report forms. These industry codes were retained in the establishment record in order to tabulate and bridge the information. (See appendix B for a comparison of the old and new SIC's).

*The Product and Materials Edit* was performed after the data on products and materials had been extracted from the basic establishment records, assembled in product (or material) sequence, and recoded to the 1972 SIC code system. The edit was designed to inspect the reported quantities of production and of consumption after the corresponding values were tested and found acceptable. Unit values, in terms of dollar value per unit of quantity, were computed and ranked from highest to lowest. The most extreme values were removed, and the truncated data were used in the formulation of parameters (average deviation, central value, and upper and lower tolerance limits) which were printed out for review by analysts. This routine differs from those in other edits in that the parameters for editing were developed from the data at hand rather than from historic data or predetermined reasonableness limits.

*The Duplicate Removal Programs* were designed to identify and eliminate duplicate establishment records from the census. The sources of duplication were many; imputed records which were followed by late receipts of a report from the respondent were typical; multiunit companies having plants duplicated on their list of establishments; receiving or imputing full-year plant reports from the selling (predecessor) and acquiring (successor) companies; companies being imputed as single units which had reported as multiunits. A potential duplicate program was used to identify, for analysts' inspection, establishments which were in the same industry, same area, and approximately the same size. These programs resulted in the elimination of nearly 18,000 duplicate establishment records from the census file.

As in previous censuses, this preliminary round of computer editing and professional correction was followed by a more detailed review of establishment records. Among the devices used at this stage was an "outlier" program which printed out ASM establishment reports of dubious quality in terms of their internal consistency. The outlier program used some of the same ratios as the *General Statistics Edit*, but with parameters updated to reflect the characteristics of 1972, rather than earlier data. Records with one or more suspicious ratios were printed out for review. In addition, aggregates of records at the industry and the geographic cell level were inspected with ratio tolerance limits adjusted to reflect the number of establishments contributing to the cell.

## 12. COVERAGE AND ACCURACY

Since the list of companies obtained from IRS and SSA records was considered to be complete, no field coverage check was conducted. The precanvass and other special procedures for multiunit companies described in section 8, "The Mailing Lists," and section 10, "Data Collection," were designed to secure complete lists of establishments, thereby amplifying the IRS-SSA company list. Control totals, in terms of employment and payrolls of multiunit companies, were also used to verify the completeness of establishment coverage. This procedure is discussed in section 11, "Data Processing."

Comparison of statistics tabulated from the census of manufactures with the Census Bureau's Current Industrial Reports series, or with data originating with other agencies was possible

in many instances, thus providing a further confirmation of completeness and accuracy. These figures range from employment and wage totals compiled by the Bureau of Labor Statistics to detailed commodity output figures published by the Internal Revenue Service, the Fish and Wildlife Service, and the Department of Agriculture. In the industry reports in Volume II, differences between the census of manufactures and other statistics are explained wherever possible. Census of manufactures comparability with broad measures such as national income, new capital expenditures, and production indexes are discussed elsewhere in this introduction. The Census Bureau's other procedures designed to improve the accuracy of the census data are discussed above in the sections on data collection and processing. Comments on the valuation of intracompany shipments by multiunit companies are included in section 15.

## III. COMMENTS ON STATISTICAL MEASURES AND TABLES

*(Explanations and definitions of the various measures of activity for which statistics are compiled in the census of manufactures are presented in appendix A. In the following sections, the limitations and other characteristics of some of these measures are discussed, the content of the statistical tables is described, and comparisons with other statistical series are presented.)*

## 13. EMPLOYMENT AND PAYROLLS IN ADMINISTRATIVE OFFICES AND AUXILIARY ESTABLISHMENTS

In the industry chapters of Volume II, the data on employment and payrolls refer to operating manufacturing establishments and are so described. In the summary tables and the area reports, the employment and payrolls of central administrative offices and auxiliary establishments are included as well. However, whereas the operating establishments were coded to a 4-digit manufacturing industry, the administrative offices and auxiliaries were coded only to the 2-digit industry group of the establishments they served. In most of the tables with industry detail, the administrative offices and auxiliaries are shown as a separate industry group, but statistics for them by 2-digit industry appear in each volume in the General Summary tables. The relative importance of administrative offices and auxiliaries has increased substantially in recent years, because of a tendency to centralize functions formerly performed in manufacturing plants. Such functions include accounting (particularly where computerized), warehousing,

repair services, and miscellaneous others. As indicated in table H, this tendency was quite marked between 1954 and 1963 and between 1967 and 1972.

TABLE H. Employment in Central Administrative Offices and Auxiliaries and in Operating Manufacturing Plants: 1972 and Earlier Census Years

Census year	Employees in operating manufacturing establishments		Employees in central administrative offices and auxiliaries		
	Thousands of employees	Percent change from previous census year	Thousands of employees	Percent change from previous census year	Percent of total employment
1972 .....	19,029	+2.9	994	+19.8	5.2
1967 .....	18,492	+14.0	830	+14.3	4.3
1963 .....	16,235	+5.3	726	+20.6	4.3
1958 .....	15,423	-1.4	602	<sup>2</sup> +32.9	3.8
1954 .....	15,645	(NA)	453	(NA)	2.8

(NA) Not available.

<sup>1</sup>The total includes manufacturing establishments, central administrative offices, and auxiliaries.

<sup>2</sup>The apparent increase from 1954 to 1958 is believed to be somewhat overstated, because coverage of administrative offices and auxiliaries was more complete in the 1958 census.

Source: Census of manufactures.

#### 14. MATERIALS

In addition to the total cost of materials which every establishment was requested to report, quantity and cost information was collected for approximately a thousand specific materials. About 350 of these were "complete coverage" materials; i.e., every industry that consumed appreciable quantities of the material was canvassed so that the data would represent at least 90 percent of manufacturing consumption. For the remaining materials, information on consumption was obtained on a more limited basis, generally only in those industries in which the materials were important inputs. Detailed consumption information was collected in the standard materials inquiry, in the product inquiries (for items which were produced and consumed in the same plant), or in a few instances in special inquiries. The resulting statistics are presented mainly in tables 6A and 7A of the industry chapters, Volume II.

Because American industry uses an enormous variety of materials, the choice of materials for which "complete coverage" consumption data (90 percent or higher) were obtained had to be strictly limited. The selection of a particular material for such coverage was based on the following criteria:

- (a) The importance of the material as measured by the total value of U.S. consumption of the material;
- (b) The percentage of total consumption accounted for by manufacturing establishments;
- (c) The availability of consumption information from manufacturers' records, and
- (d) In certain instances, other factors such as the strategic importance of the material or the availability of historical data on the use of the material.

The materials included on a limited-coverage basis were chosen not only because they constituted important inputs for particular industries but frequently because they provided information necessary to classify plants by SIC industry. In using the detailed data on materials consumed which appear in table 7A in the industry chapters of Volume II, the following limitations should be noted:

- (a) Materials were reported for the establishment as a whole and no attempt was made to ascertain how much of the material was used in each of various products. Thus, the industry totals appearing in table 7A represent consumption in secondary products as well as primary products of the industry represented. The extent of secondary production is measured by the specialization and coverage ratios shown in table 5B of the industry chapters.
- (b) Attention should be paid to the codes ending in "000" and captioned "materials, parts, containers, and

supplies, not specified by kind." The amounts appearing on these lines represent imputed totals for establishments whose statistics were developed by use of administrative records, and totals for other establishments which failed to report their consumption in specific terms. Thus, for most industries, the specific categories are understated. A judgment on the statistical significance of the understatement for each industry may be made on the basis of the relationship of the value shown for the "not specified by kind" (code 000) line compared with the total of materials, components, parts, containers, and supplies for the industry.

(c) Establishments consuming less than a specified amount of material were not requested to report consumption of the material separately. For the majority of individual materials, the minimum amount was \$5,000. The use of this cutoff is not believed to have had a significant effect on the totals.

(d) A total of "not elsewhere classified" (n.e.c.) material code 970099 was collected on most forms and is published for each industry. This represents the total cost of materials for an industry for which no material items were prelisted on the form. Survey MA-131, 1972 Supplemental Survey of Materials Consumed, a sample survey of 141 industries, was conducted in 1972 to provide material consumption estimates for the cost of materials reported in material code 970099. Results of this survey are shown in chapter 5, Materials Consumed.

#### 15. VALUE OF SHIPMENTS BY MULTIUNIT COMPANIES

**General.**—Except for a few industries as indicated in appendix A, the respondents were instructed to report net selling values, f.o.b. plant, after discounts and allowances and excluding freight charges and excise taxes. Multiunit companies were instructed to report for each establishment as if it were a separate economic unit and, in particular, to report interplant transfers at their full economic value, including not only the cost of production but also a reasonable proportion of company overhead and profits. Since there is no advertising or other selling cost involved, it would be expected that the value per unit of such transfers would be less than that for commercial sales. The plant receiving the transferred goods was instructed to include them in its cost of materials, valued as at the shipping point plus the cost of freight and other handling charges.

In the case of goods transferred to sales branches, or sold through separate sales offices, the implication of the "f.o.b. plant" instruction is that the value is at a somewhat lower level than the final invoice value, because the cost of selling (mainly the cost of operating the sales branch or office) is excluded.

In practice, there is reason to believe that these instructions were not followed by all companies. In a recordkeeping practices study of 54 multiunit companies conducted a few years ago, it was found that about half of them had reported interplant transfers of semifinished products at commercial or market prices, which tend to be somewhat higher than the "cost plus overhead and profit" requested in the census instructions. In the case of finished products transferred to separate selling organizations, half of the companies interviewed valued the products at their final or invoice price, which again would be somewhat higher than the "f.o.b. plant" transfer value requested. It appears from this study and other observations that the value of shipments of products reported by multiunit companies tends to be overstated. For products characterized by a substantial amount of interplant shipments, separate quantity and value figures were requested on the census forms. Data on these shipments, the unit value of which is less accurate than the unit value for shipments outside the company, are presented separately in table 6A in the industry chapters of Volume II.

**Individual Products.**—In the 1972 census program, information was collected on the output of approximately 10,500 individual product items.<sup>20</sup> The term "product" as used in the census of manufactures represents the finest level of detail for which output information was requested. Consequently, it is not necessarily synonymous with the term product as used in the marketing sense. In some cases, it may be much more detailed, and in other cases, it is more aggregative. For example, pharmaceutical preparations were reported in terms of 160 products, while canned meats was a single product. Frequently, large aggregative values at the product level indicated that detailed production figures were available from other government sources or reliable private surveys.

Some 5,500 of the product items were listed separately on the 1972 census report forms. Data for the remaining 5,000 products were obtained in the monthly, quarterly, or annual commodity surveys comprising the Current Industrial Reports series of the Census Bureau. Totals for the year 1972 for these items as derived from the commodity surveys are shown in the "product shipped" table (table 6A) in the industry chapters of Volume II together with the tieline total value collected in the census for reconciliation.

Typically, both quantity and value of shipments information was collected. However, if there was no meaningful physical quantity measure that could be reported by manufacturers, only value of shipments was collected. For products which are used to a large degree within the same establishment as materials or components in the fabrication of other products, total quantities produced and often the quantities con-

sumed within the plant were collected. Typically, the information on production was also collected for products for which there are significant differences between total production and shipments in a given year because of wide fluctuations in finished goods inventories. Alternate measures of output of products, such as value of work done for products with long production cycles, were used as appropriate and feasible.

**Classes of Products.**—For the purpose of summarizing the product information, the separate products were aggregated into classes of products which were, in turn, grouped into all primary products of each industry. The code structure used is a 7-digit number for the individual product, a 5-digit code for the class of product, and a 4-digit code for the total primary products in an industry (see section 4 for application of coding structure to the assignment of SIC codes for establishments).

The 10,500 product items in the 1972 census (including products from the Current Industrial Reports program) were grouped into approximately 1,293 separate classes. Products were grouped into product classes to bring out significant differences in the broad types of products within a 4-digit industry. General similarity of the kind or purpose of the products or of the manufacturing processes, type of markets, or of materials used, were the basis for product combinations. The economic significance of the class was also taken into account; residual products of an industry were grouped when the products were not sufficiently significant in dollar value to warrant separate classes.

As a result of the increased number of respondents included in the product-class shipments totals, these categories lend themselves to many more cross tabulations than do the 7-digit products, without disclosing information about the operations of individual companies. In the industry chapters of Volume II, table 6B provides information on the value of shipments of product classes by State; and table 5C, by industry of the establishment producing them. The latter table is the best vehicle for showing the primary and secondary product mix of an industry, as well as the interrelationship between the 4-digit industry value of shipments and the 4-digit product group value of shipments. In table 5A the product class is used to provide finer industry-type general statistics by classifying establishments within an industry according to the degree to which they specialize in producing a specific class of products.

The class-of-product concept was incorporated by the Census Bureau into its own program with the 1947 Census of Manufactures after it developed the technique in the compilation of World War II production statistics. Product classes formed the basis of collecting product information in the annual survey of manufactures when that survey was initiated in 1949. The classes have been revised over the succeeding years to improve the balance and significance of product combinations within each industry and to keep abreast of the growth and decline of products.

<sup>20</sup>See 1972 Census of Manufactures, MC72-1.2 "Numerical List of Manufactured Products," and MC72-1.1 "Alphabetic List of Manufactured Products," (1967 SIC basis).

INTRODUCTION—Continued

**Effect of Use of Administrative Records on Product Data.**—As noted elsewhere in this Introduction, 1972 census statistics for about 120,000 small manufacturers were developed by use of IRS and SSA records. Since the SSA records were coded only to the 4-digit SIC level, it was not considered feasible to estimate the product output of these small companies in terms of specific 5-digit product classes or 7-digit products. The total value of output was therefore coded to the 4-digit level and published separately in table 6A of the industry chapters of Volume II. In table I, page 18, these data have been summarized together with other undistributed 4-digit totals reported

by the larger companies. It will be seen from table I that the contribution of the small companies (administrative records) to product totals was of little importance except in lumber, furniture, and printing and publishing (groups 24, 25 and 27). The large companies (mailed establishments) which for various reasons reported only in terms of group totals were of somewhat more importance, accounting overall for about 3 percent of the total value of product shipments.

Nominally, the shipments of "small companies" as shown in table I represent the output of all establishments with less than 10 employees. Actually, only 35 percent of the value of

TABLE I. Value of Products Not Specified by Kind: 1972 and 1967

Note: These values represent product shipments, irrespective of the industry in which the products were made, and therefore differ from the industry group totals shown in the General Summary tables.

<sup>1</sup>The product shipment data for 1972 are tabulated on the 1972 (new) SIC basis; therefore data for 1972 and 1967 are not completely comparable for most of the major 2-digit groups due to the reclassification of products in the 1972 SIC revision across 2-digit groups. See appendix B for the products of 4-digit industries that were reclassified across 2-digit major groups.

<sup>2</sup>Estimates derived from administrative records. See text for further discussion.

<sup>3</sup>In the 1972 SIC revision, the products for Major Group 19 were reclassified to Major Groups 34, 36, 37 and 38.

shipments of establishments with less than 10 employees was obtained from administrative records. This was due to several factors, the most important of which were—

(a) Many of the establishments with less than 10 employees were owned by multiunit companies and were covered in the mail canvass.

(b) Questionnaires were mailed to about 4,000 of the companies identified as having less than 10 employees. These were the small companies included in the ASM sample; the rest were included in the mail canvass to improve the estimates of general statistics, products, and materials.

(c) Some companies identified originally as having 10 employees or more turned out to have less than 10 employees in 1972.

Another factor tended to reduce the value of products not specified by kind attributed to small companies, thus affecting table 1 particularly. This was the fact that some 4-digit industries were represented by only one product category (an example is industry 3273, Ready-Mixed Concrete). Administrative-record estimates for products such as this were treated as specific information and not tabulated under the "not specified by kind" heading.

These factors taken together explain why the value of products "not specified by kind" attributed to small companies in table 1 is only 1.5 percent of the total, while the 159,000 establishments with less than 10 employees account for 2.5 percent of the total value added by manufacture in table E.

The value of product shipments accounted for by the small companies increased from 1.0 percent in the 1967 census to 1.5 percent in 1972. This is because considerably more establishments, initially identified as having less than 10 employees, actually had more than 10 employees in 1972.

The data for many of the specific 7-digit products shown in table 6A are understated by a proportion of the "not specified by kind" codes in each industry.

### 16. DUPLICATION IN COST OF MATERIALS AND VALUE OF PRODUCTS

The aggregates of the cost of materials and value of shipments figures for industry groups and for all manufacturing industries include large amounts of duplication since the products of some industries are used as materials by others. With some important exceptions, such as SIC 3312, Blast Furnaces and Steel Mills, this duplication is not significant within individual 4-digit industries. However, it is significant at the 2-digit and 3-digit industry level because these group totals often include industries which represent successive stages in

the production of a finished manufactured product. Examples are the addition of flour mills to bakeries in the total value of shipments of SIC Major Group 20 and the addition of pulp-mills to papermills in Group 26. Economists have estimated that the value of manufactured products exclusive of such duplication—the value of finished manufactures—tends to approximate two-thirds of the total value of shipments reported in the census of manufactures.

Because the amounts of duplication contained in the cost of materials and value of products figures cannot be measured with any degree of precision, caution is urged with their use when they are provided at the 2- and 3-digit industry group level.

Even where no significant amount of duplication is involved, value of shipments figures are of limited use as measures of the relative economic importance of individual manufacturing industries or geographic areas because of the wide variation in ratio of materials, labor, and other processing costs to value of shipments, both among industries and within the same industry. To a large extent, value added by manufacture does not have these limitations and is therefore a better measure for comparison.

### 17. VALUE ADDED BY MANUFACTURE

**General.**—Value added by manufacture is derived by subtracting the total cost of materials (including materials, supplies, fuel, electric energy, cost of resales, and miscellaneous receipts) from the value of shipments (including resales) and other receipts and adjusting the resulting amount by the net change in finished products and work-in-process inventories between the beginning and end of the year.<sup>21</sup>

Value added avoids the duplication in the value of shipments figure which results from the inclusion of the shipments of establishments producing materials and components along with the shipments of establishments producing finished products. It does not exclude purchased business services, as does the national income concept described below.<sup>22</sup> Nevertheless, it is considered to be the best value measure now available for comparing the relative economic importance of manufacturing among industries and geographic areas.

---

<sup>21</sup> For a few industries (for example, ship building) where value of work done is substituted for value of shipments, no adjustment is made for change in inventories. In a few other industries where value of production is collected, the inventory adjustment is made only on the basis of change in work-in-process inventories.

<sup>22</sup> Collection of data on the cost of purchased business services at the plant level presents many problems. Advertising by multiunit companies, for example, is frequently charged at the company level and the cost either not allocated to plants or if allocated are only included as part of a broader company overhead category. National income data, on the other hand, are compiled in part from company rather than plant data, such as the IRS Statistics of Income in which advertising is presented as a separate cost item based on company reports.

## INTRODUCTION—Continued

National income originating in the manufacturing sector, as developed in the national accounts maintained by the Bureau of Economic Analysis (BEA), is somewhat similar to value added in concept, but there are important differences. National income is the aggregate earnings of labor and capital which arise in the current production of goods and services in the manufacturing sector. Thus it measures the total factor costs incurred and is a more "net" conception of value added than that which it has been found feasible to compile in the economic censuses on an establishment basis. National income

excludes, in addition to cost of materials, such other costs as depreciation charges, State and local taxes (other than corporate income taxes), allowance for bad debts, and purchases of services from nonmanufacturing enterprises, such as contract costs involved in maintenance and repair, services of development and research firms, services of engineering and management consultants, advertising, telephone and telegraph expense, insurance, royalties, patent fees, etc.

In part, the national income estimates are prepared from company rather than establishment data. This method results

<sup>2</sup> This Major Group was recoded to Major Groups 34, 36, 37 and 38 in the 1972 SIC revision.

## INTRODUCTION—Continued

in the inclusion of some part of the net value added by non-manufacturing establishments of companies classified as being primarily manufacturing and, conversely, in the exclusion of some part of the net value added by manufacturing establishments of companies classified as primarily nonmanufacturing. It is believed that for manufacturing as a whole the net effect increases national income. In the Petroleum and Coal Products major industry group, nonmanufacturing activities of manufacturing companies are so significant that this is the one group in which national income exceeds value added, as shown in table J.

**Historical Comparison.**—Whatever changes have taken place in the relative importance of the costs included in value added but excluded from national income have been gradual. As shown in table K, the ratio between the two figures has been fairly constant over the past decade.

**TABLE K. National Income Originating in Manufacturing and Value Added by Manufacture: 1972 and Earlier Years**

Year	National income originating in manufacturing (bil. dol.) (1)	Value added by manufacture (bil. dol.) (2)	Column 1 divided by column 2
1972 .....	252.6	354.0	.71
1971 .....	226.4	314.1	.72
1970 .....	217.5	300.2	.72
1969 .....	222.3	304.4	.73

<sup>1</sup>Unadjusted.

Sources: National income, survey of current business; value added, census of manufactures and annual survey of manufactures.

**Reconciliation with National Income Components.**—Figures are not available to permit a reconciliation of the estimates for value added in manufacturing and the national income originating in manufacturing for the current period. However, in 1957, the Census Bureau conducted a special survey, MC-D11, "Selected Costs and Assets of Manufacturing Establishments," which collected information on some of the costs included in value added for services purchased from other sectors or excluded from the national income estimates. These specific costs which accounted for about \$15 billion of the \$148 billion of value added in 1957 were maintenance and repairs, \$4.5 billion; insurance, \$.7 billion; property taxes, \$1.5 billion; rental payments, \$1.4 billion; and depreciation, \$7.3 billion. The residual value added, \$132 billion, was approximately \$16 billion in excess of national income of \$116 billion.

Table L presents an approximate reconciliation of national income and value added figures for manufacturing in 1957. The national income estimates for payrolls and other factor income in that year are based on the unrevised national income figures which are somewhat lower than the revised estimate appearing in table K. It should be noted that the labor costs included in national income and value added are reasonably close despite the fact that they are computed on a slightly different basis. If the proprietary and profit incomes of the company-based national income estimates are allocated to the establishments included in the census of manufactures, value added exceeds national income by \$35 billion of which \$15 billion is attributable to costs reported on survey MC-D11. Somewhat more than half of the \$35 billion excess represents the inclusion in value added by manufacture of purchased business services arising in other economic sectors; the remainder reflects conceptual differences arising from the inclusion, in value added, of indirect business taxes and depreciation which are excluded by definition from national income.

### 18. CAPITAL EXPENDITURES

Under this heading, manufacturers were instructed to report expenditures of the type chargeable to fixed assets accounts, for which depreciation reserves are normally maintained. Actual capital outlays during the year were requested, not the final value of equipment put in place or structures completed during the year.

The Census Bureau estimates of capital expenditures tend to be lower than those published in the joint Bureau of Economic Analysis-Securities and Exchange Commission survey. In addition to normal sampling variation, a major source of difference is to be found in the scope of the two series. Census data relate only to manufacturing establishments,

**TABLE L. 1957 Comparative Statistics on Value Added and National Income in Manufacturing**  
(Billions of dollars)

Item	Value added	National income <sup>1</sup>
Total .....	147.8	112.5
Payrolls .....	89.4	87.9
Payrolls of operating manufacturing establishments .....	76.4	
Supplements to wages in operating manufacturing establishments .....	6.0	<sup>2</sup> 80.6
Payrolls of central administrative offices and auxiliaries, sales branches and offices of manufacturing companies .....	<sup>4</sup> 7.0	<sup>3</sup> 7.2
Other factor incomes (Corporate profits, proprietary income) .....	24.6	24.6
Costs of manufacturing establishments reported on MC-D11 .....	15.4	(X)
Not part of national income:		
Depreciation .....	7.3	(X)
Property taxes .....	1.5	(X)
Probably included in other sectors:		
Maintenance and repairs .....	4.5	(X)
Rental payments .....	1.4	(X)
Insurance .....	.7	(X)
Other costs (company overhead other than payrolls included above; e.g., company-level depreciation, business taxes, and services purchased, and services purchased directly by plants, advertising, legal, accounting, and other professional services; communications, patent fees, royalties, travel costs, etc. . .	18.4	(X)

(X) Not applicable.

<sup>1</sup> Prior to 1958 revisions of national income. The revised total was \$116.3 billion.

<sup>2</sup> Payrolls.

<sup>3</sup> Supplements to wages.

<sup>4</sup> Estimate based on figures reported in the 1958 economic censuses.

whereas the BEA-SEC series covers all establishments of manufacturing companies—nonmanufacturing as well as manufacturing. This factor is particularly important in the petroleum industry where company expenditures for developing new wells and new distribution facilities are ordinarily much larger than their capital expenditures at refineries. On the other hand, manufacturing establishments of companies engaged primarily in nonmanufacturing activities are excluded from

the BEA-SEC series but included in census figures. The BEA-SEC and census data for recent years are shown in tables M and N.

### 19. PLANT SPECIALIZATION

As discussed in section 4 above, the primary products of a plant are those which determine its industry classification; all other products are referred to as secondary products. The value of a plant's primary products in comparison to its total production is referred to as its degree of specialization. For each plant, two measures of specialization were computed: (1) A 4-digit primary product-specialization ratio, which is the sum of the values of all the plant's primary products divided by the sum of all its primary and secondary products; and (2) a 5-digit primary product-class specialization ratio, which is the sum of the largest 5-digit product-class value divided by the sum of its primary and secondary products (the miscellaneous receipts of the establishment were not included in these

TABLE N. Expenditures for New Plant and Equipment—  
BEA-SEC Series and Census of Manufactures, by Industry  
Group: 1972

Industry groups	BEA-SEC series <sup>1</sup> (bil. dol.) (1)	Census of manu-fac-tures, (bil. dol.) (2)	Column 2 divided by column 1
All manufacturing, total .....	31.4	24.1	0.77
Durable goods, total .....	15.7	12.7	.81
Primary metals .....	2.8	2.1	.75
Electric machinery .....	2.4	1.4	.58
Machinery, except electric .....	2.9	1.9	.66
Transportation equipment .....	2.5	2.7	1.08
Stone, clay, and glass .....	1.2	1.2	1.00
Other durables .....	3.9	3.4	.87
Nondurable goods, total .....	15.7	11.4	.73
Food and beverages .....	2.6	2.4	.92
Textiles .....	.7	1.1	1.57
Paper .....	1.4	1.3	.93
Chemicals .....	3.5	2.7	.77
Petroleum .....	5.3	1.2	.23
Rubber .....	1.1	1.1	1.00
Other nondurables .....	1.1	1.6	1.45

<sup>1</sup>Source: 1974 Business Statistics, U.S. Department of Commerce, Bureau of Economic Analysis.

calculations). For example, assume that an establishment reported the following:

Total value of shipments and other receipts	\$1,000
Miscellaneous receipts (resales, etc.)	15
Total value of products shipped	985
32721 Concrete pipe products	100
32722 Precast concrete products	785
32730 Ready-mixed concrete	100

This plant would be coded into SIC industry 3272, Concrete Products, with a primary product specialization ratio of 90 percent ( $\$885 \div 985$ ); it would be subclassified into the 5-digit class 32722, Precast Concrete, with a primary product class specialization ratio of 80 percent ( $\$785 \div 985$ ).

In the 1972 census, selected general statistics (number of establishments, employment, payrolls, value added, cost of materials, value of shipments, and capital expenditures) were tabulated to primary product-class levels by assigning the plant totals to the principal 5-digit codes. These data are presented in table 5A of the industry chapters, Volume II. For most product classes, table 5A also provides general statistics for establishments specializing in the class to the extent of 75 percent or more.

Table 5A permits analysis of an industry in terms of the differences introduced by variation among establishments in the degree of specialization in the products of the industry or a subgroup (5-digit). For example, where the ratios among various statistics tend to be different for establishments specializing to different degrees in the products of the industry or in different product classes, the ratios for the industry as a whole would be significantly affected by changes in its product mix.

## 20. OPERATING RATIOS

Since all of the data collected in the census on establishment reports are interrelated, comparisons of the various measures of activity are of considerable interest. Beginning with the 1963 census, several ratios have been routinely computed and presented in the industry chapters of Volume II. For 1972 and earlier years, the following nine ratios were published for each 4-digit industry:

- Payroll per employee
- Production workers as percent of total employment
- Annual man-hours of production workers
- Average hourly earnings of production workers
- Cost of materials per dollar of shipments
- Cost of materials and payrolls per dollar of shipments
- Value added per employee
- Payrolls as percent of value added
- Value added per man-hour of production worker

## 21. SUBJECT AND SPECIAL REPORTS SHOWN IN VOLUME I, SUMMARY AND SUBJECT STATISTICS

Volume I includes the seven subject reports and the six special reports presenting statistics which are not published

elsewhere. The following chapters were originally published in the subject series:

**Chapter 1. General Summary.**—This chapter, which appears in other volumes as well as Volume I, provides summary tabulations of data presented in greater detail in other census tables.

**Chapter 2. Employment and Labor Costs in Operating Manufacturing Establishments.**—This chapter presents the compilation of employment and labor costs for the United States as a whole and for each industry group and 4-digit industry. A more detailed description of the report and explanation of the terms employed is given in the introduction to the chapter.

**Chapter 3. Manufacturers' Inventories.**—These tables summarize the inventory data published in table 3 of the industry chapters of Volume II. A description of the statistics is given in appendix A.

**Chapter 4. Expenditures for Plant and Equipment.**—These tables summarize the expenditures data published in table 3 of the industry chapters of Volume II. A description of the data is given in appendix A and in section 18, "Capital Expenditures."

**Chapter 5. Materials Consumed.**—This chapter consists of a compilation of detailed statistics on consumption of materials, fuels, and electricity. These figures also appear in Volume II, Industry Statistics, as tables 7A and 7B for each industry.

**Chapter 6. Gross Book Value of Depreciable Assets and Rental Payments.**—This chapter presents the compilation of the gross book value of total assets and separate data for structure and machinery by industry group and industry. Rental payments for structures and machinery are also presented by industry group and industry. A more detailed description of the report and explanation of the terms employed is given in the introduction to the chapter.

**Chapter 7. Selected Metalworking Operations.**—This chapter presents the results of an inquiry concerning employment in metalworking plants such as foundry, forge shop, die casting department, and heat treating. The number of establishments in which these facilities are operated is presented, as well as the number of production workers engaged.

The following chapters were originally published in the special report series:

**Chapter 8. Manufacturing Activity in Government Establishments.**—This chapter presents data on manufacturing activities in selected types of government establishments in the United States. The statistics are not included in other census of manufactures tables, which cover only privately operated establishments. A more detailed description of the report is given in the introduction to the chapter.

**Chapter 9. Concentration Ratios.**—This chapter presents concentration ratios and other information on the share of industrial activity accounted for by the largest companies, both for the United States as a whole and for each of the 450 manufacturing industries. A more detailed description of the report and explanations of the terms employed is given in the introduction to the chapter.

**Chapter 10. Type of Organization.**—This chapter presents data for manufacturing establishments classified as to the legal form of ownership (corporate, individual proprietor, or partnership) and the establishment owner as a multiunit or single-unit company.

**Chapter 11. Water Use in Manufacturing.**—This chapter presents the results of a survey of the 1973 consumption of water in establishments consuming 20 million gallons or more annually. A more detailed description of the report and definitions of the terms employed, is given in the introduction to the chapter.

**Chapter 12. Textile Machinery in Place.**—This chapter presents the results of a 1973 survey on the number, by kind, of the various textile machines. Geographic breakdowns of the major textile operations are presented. The data are also broken out by industry for the various textile machines. A description of the statistics is given in the chapter.

**Chapter 13. Fuels and Electric Energy Consumed.**—This chapter consists of a compilation of detailed statistics on the consumption of fuels and electric energy from the 1971 Annual Survey of Manufactures. Data are presented on the quantity and costs of fuels and electric energy consumed for major groups and industries. A more detailed explanation of the estimates derived and terms employed are given in the introduction and the explanatory text for the chapter.

---

## INTRODUCTION—Continued

### 22. CONFIDENTIALITY

The Bureau of the Census is prohibited by law from publishing any statistics that disclose information reported by individual companies. In suppressing figures to avoid disclosing information of individual companies, geographic region and division totals are given precedence over individual States; States are given precedence over standard metropolitan statistical areas; standard metropolitan statistical areas over counties; and counties over cities. In tables showing industry detail, major industry group (2-digit) totals take precedence over industry group (3-digit) totals which, in turn, take precedence over individual (4-digit) industries. Similarly, in product tables, 4-digit product groupings take precedence over 5-digit product classes and the latter over individual 7-digit products.

Such order of precedence was used because (1) it was considered preferable to show regional data for an industry, even at the cost of withholding data for another (usually the least significant) State in a region, rather than to show all publishable data for the individual States and group the disclosure States throughout the United States in an "all other" category as was done in the 1939 and earlier censuses; and (2) by giving preference to industry-group statistics over individual industries within each State, the extent to which individual States can be compared within the SIC industry classification framework is greatly increased.

### 23. ABBREVIATIONS

The following abbreviations and symbols occur frequently in text, tables, and footnotes:

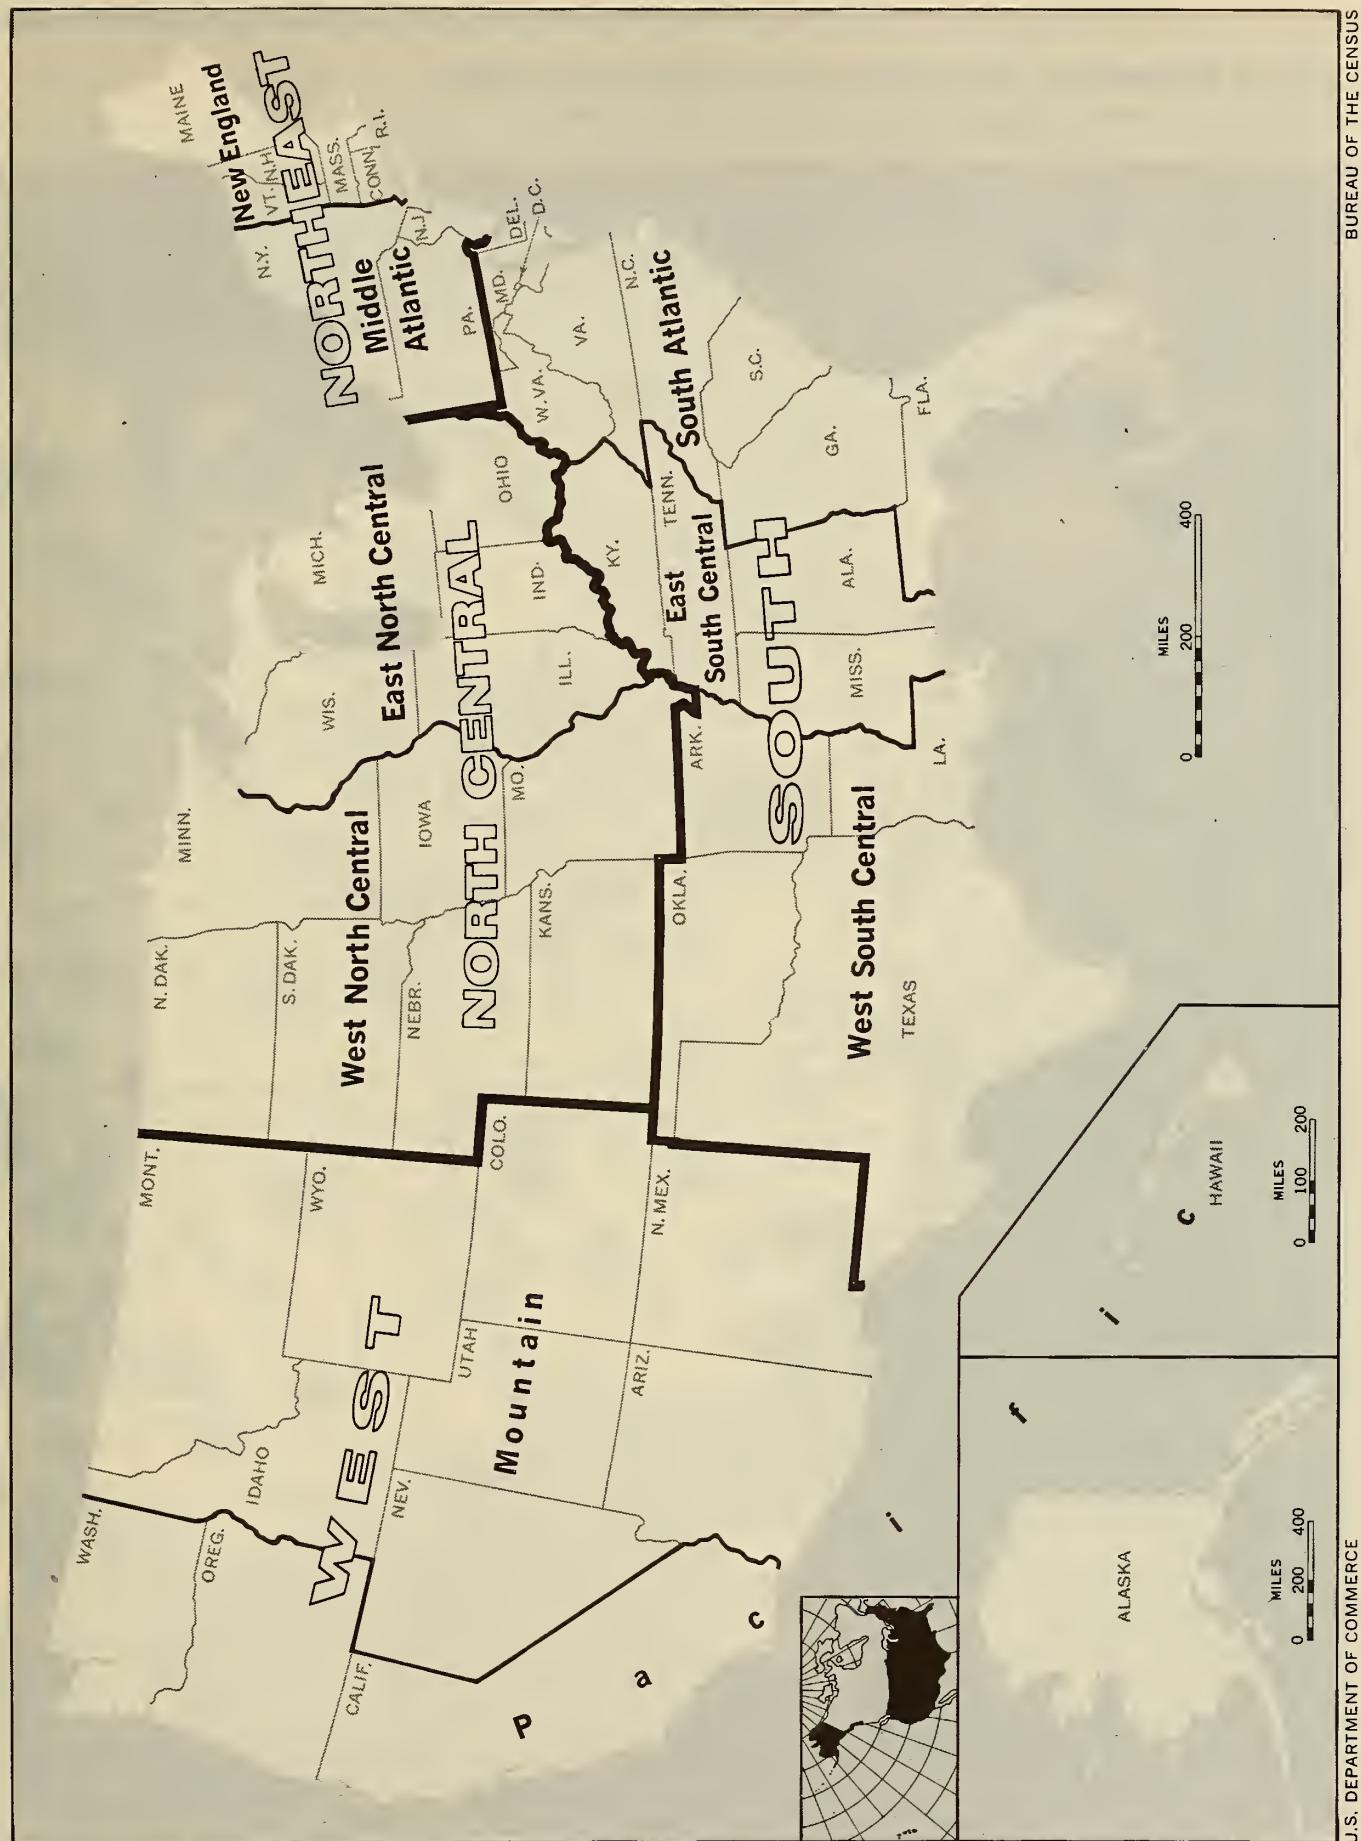

—	Zero
X	Not applicable
NA	Not available
D	Withheld to avoid disclosing figures for individual companies
n.e.c.	Not elsewhere classified
n.s.k.	Not specified by kind
lin.	Linear
equiv.	Equivalent
hp	Horsepower
kWh	Kilowatt-hours
SIC	Standard Industrial Classification
IRS	Internal Revenue Service
SSA	Social Security Administration
ASM	Annual Survey of Manufactures
CIR	Current Industrial Reports
BEA	Bureau of Economic Analysis
SEC	Securities and Exchange Commission

Other abbreviations, such as lb., gal., yd., doz., and bbl., are used in the customary sense. Where the term "tons" only is used, it refers to short tons of 2,000 pounds; where the figures are expressed in tons of 2,240 pounds, the unit of measure is specified as "long tons" or "gross tons."

---

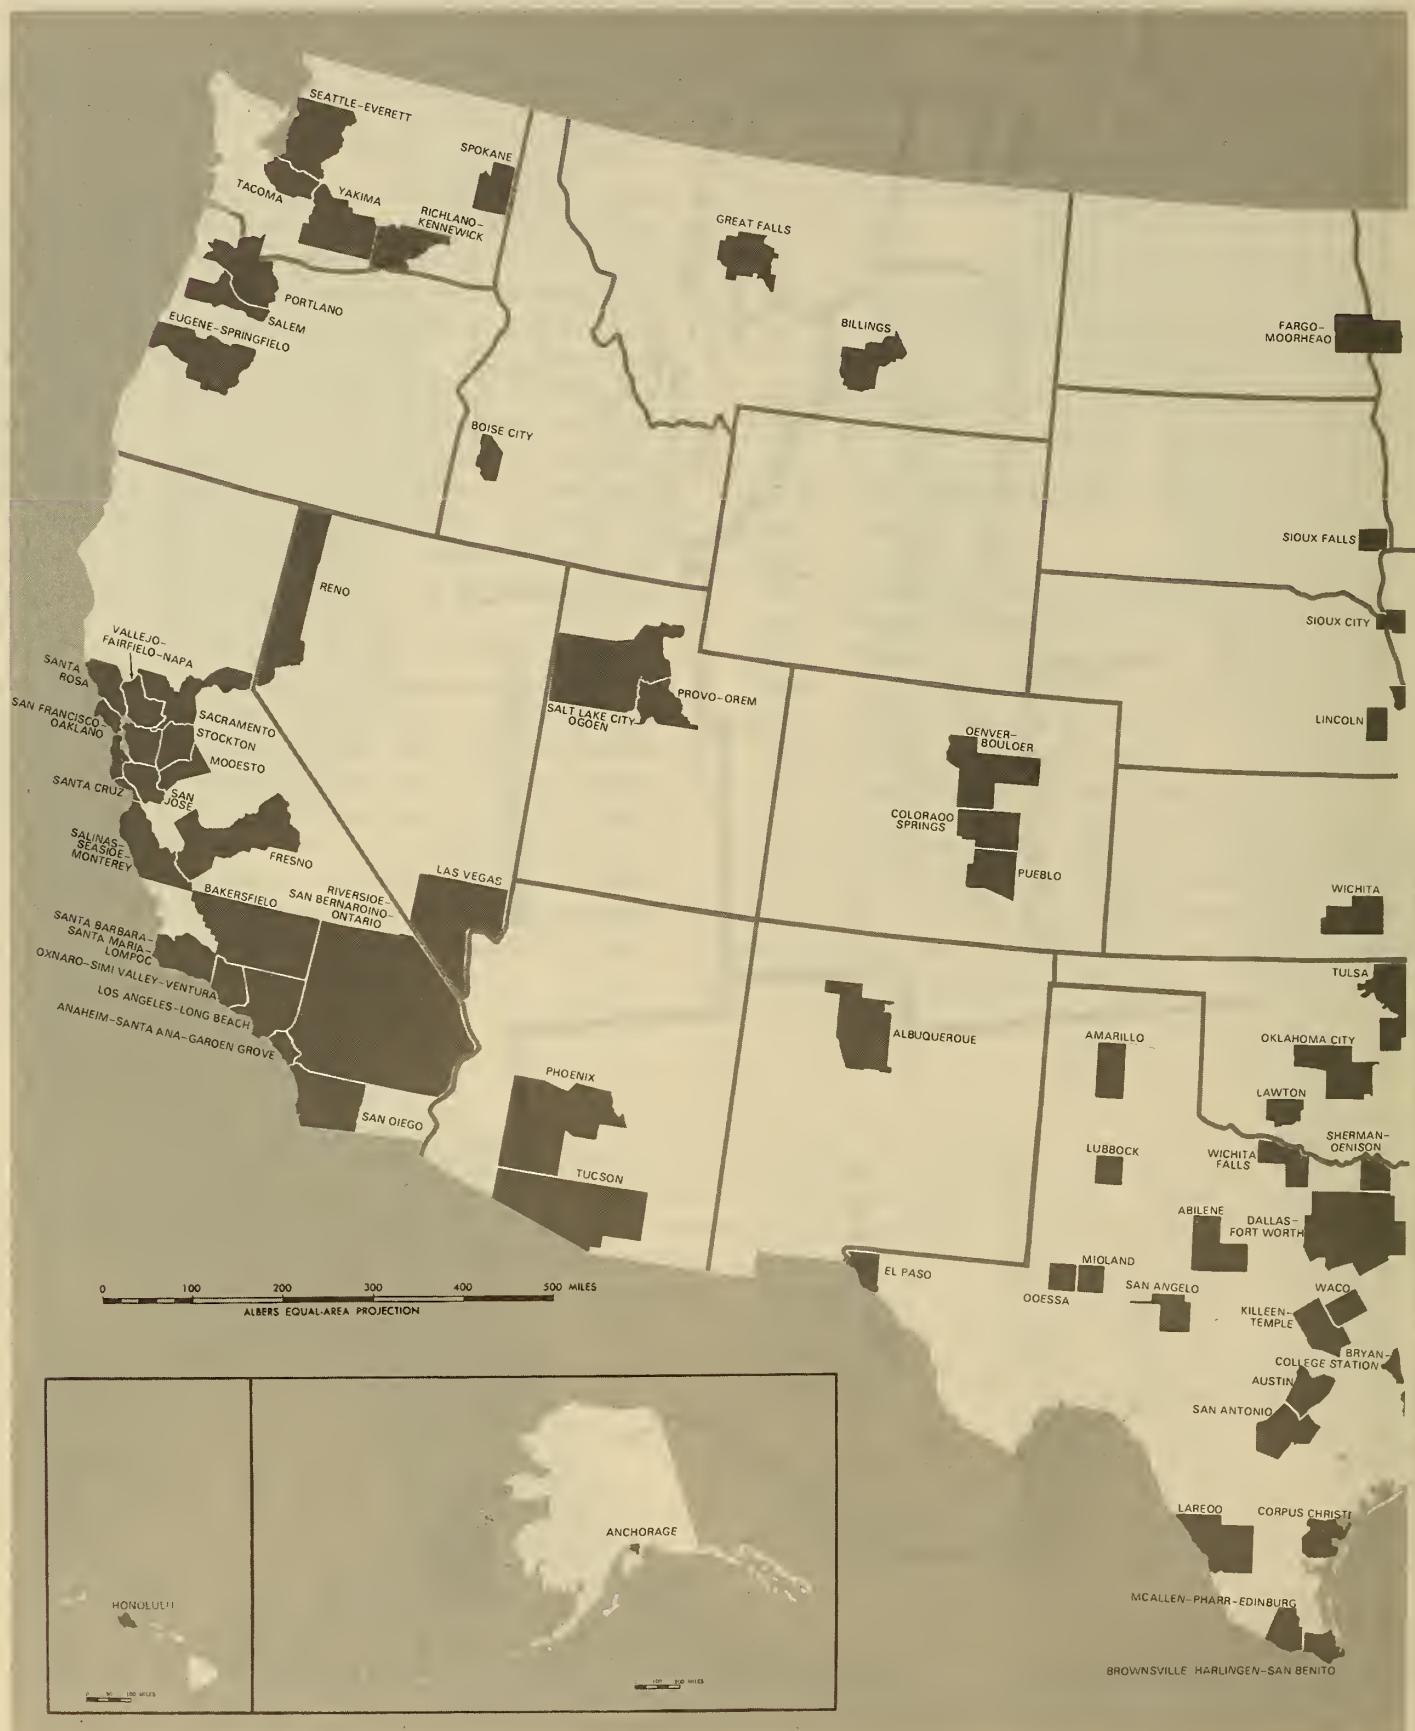

*Data in this publication may differ slightly from the industry and area reports previously published. These differences are due to corrections which were made for minor errors identified after the industry and area reports were issued. This report reflects these corrections.*

(NA) Not available.

<sup>1</sup>The figures for 1939 to 1972 include data for employees at manufacturing establishments who were engaged in distribution and in construction work. The extent to which data for such employees were included in the figures for earlier years is not known. In addition to the employment and payroll for operating manufacturing establishments, manufacturing concerns ordinarily reported separately for central administrative offices or auxiliary units (e.g., research laboratories, storage warehouses, power plants, garages, repair shops, etc.) which service the manufacturing establishment(s) of a company.

<sup>2</sup>The method of compiling these figures varied, as follows: All employees: For 1955 to 1972, figures represent the average of the number of production workers for the payroll period ended nearest the 12th of March, May, August, and November, plus all other employees for the payroll period ended nearest the 12th of March; for 1949 to 1954, they represent an average of all employees for the payroll period ended nearest the 12th of March, May, August, and November; for 1947, an average of 12 monthly figures for all employees; and for 1939 and prior years, the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). Production workers: For 1949 to 1972, figures are based on employment for the payroll period ended nearest the 12th of March, May, August, and November; and for 1947 and prior years, they represent the average of 12 monthly figures.

<sup>3</sup>For the period 1954 to 1972 value added by manufacture represents adjusted value added and for earlier years, unadjusted value added. Unadjusted value added is obtained by subtracting the cost of materials, supplies and containers, fuel, purchased electric energy, and contract work from the value of shipments for products manufactured plus receipts for services rendered. Adjusted value added also takes into account (a) value added by merchandising operations (that is, the difference between the sales value and cost of merchandise sold without further manufacture, processing, or assembly), plus (b) the net change in finished goods and work-in-process inventories between the beginning and end of the year. For 1849 to 1933, cost of contract work was not subtracted from value of shipments in calculating value added by manufacture.

<sup>4</sup>The figures for 1951 to 1972 include expenditures for plants under construction and not yet in operation. This information was not collected prior to 1951.

<sup>5</sup>These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.

Footnotes continued on next page.

TABLE 1. General Statistics for All Operating Manufacturing Establishments: 1972 and Earlier Years—Continued

(Footnotes for table 1)--Continued

<sup>6</sup>The 1958 and subsequent years figures include establishments classified in industry 3273, Ready-Mixed Concrete, and establishments classified in industry 3599, Machinery, Except Electrical, N.E.C., that were engaged exclusively or almost exclusively in machine shop repair work. The data for such establishments are excluded from the figures for the period 1939 to 1957, but are included for 1929 and earlier years. The 1954 to 1966 figures include data for establishments engaged in the processing and distribution of fluid milk industry group 202, Dairy Products. These establishments were not included in the figures for earlier census years. In addition, beginning with 1954, the figures include data for industry 2411, Logging Camps and Logging Contractors, which were not included within the scope of the 1947 census. There were also a number of changes in the definition of manufacturing industries during earlier census years that affect the comparability of the historical series. Among the more important of these were the following: Figures for 1935 and later years exclude data for railroad repair shops and manufactured gas, which were included in 1899 to 1933 figures; the minimum size of establishment included for 1947 to 1966 was one employee; for 1921 to 1939, manufacturing establishments reporting value of shipments of \$5,000 or more were within scope, whereas for 1919 and earlier years the cutoff was \$500. (These changes in procedure have not appreciably affected the comparability of the historical data except for the figures on number of establishments.)

<sup>7</sup>The figures for 1939, but not for earlier years, have been revised on the basis of retabulation of the returns to exclude data for establishments classified as manufacturing in 1939 and prior years but classified as nonmanufacturing beginning with 1947. Value added by manufacture for 1939, prior to revision and on a basis comparable with 1937 and previous years, was \$24.7 billion.

<sup>8</sup>The 1939 figures for "all employees" were revised on the basis of estimates rather than by retabulation of the 1939 reports. The estimates were made in the following manner: For the number of employees, by multiplying the retabulated figure for number of production workers by the ratio of all employees to production workers computed from the unrevised 1939 statistics; for salaries and wages, by multiplying the retabulated wage figure by the ratio for salaries and wages also derived from the unrevised 1939 statistics.

<sup>9</sup>Not including data for salaried officers of corporations and their salaries and, therefore, not strictly comparable with figures for other years.

<sup>10</sup>These figures for 1899 and earlier years represent hand and neighborhood manufacturing operations.

<sup>1</sup>The 1972, 1967, 1963, and most of the 1958 figures represent data for establishments located in the conterminous United States, Alaska, and Hawaii. However, when the 1958 figures were previously published they did not include data for Alaska and Hawaii since these areas did not achieve statehood until 1959. The addition of the 1958 Alaska and Hawaii figures to the previously published figures for major industry groups 26 and 29 would have resulted in a disclosure. Therefore, the 1958 Alaska and Hawaii data are excluded from these major groups but are included at the "all industries" level.

<sup>2</sup>Excludes ordnance and accessories. In the 1972 SIC revision, Major Group 19 was eliminated as a separate major industry group and its industries were reclassified to Major Groups 34, 36, 37, and 38.

TABLE 3. General Statistics for Establishments by Industry Group and Industry: 1972 and 1967

(See appendix, Explanation of Terms)

Note: In 1972, the payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent      E3--30 to 39 percent      E5--50 to 59 percent      E7--70 to 79 percent      E9--90 to 99 percent  
 E2--20 to 29 percent      E4--40 to 49 percent      E6--60 to 69 percent      E8--80 to 89 percent      EO--100 percent

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

<sup>a</sup>The total value of shipments for industry groups (2- and 3-digit) and a few individual industries (4-digit) includes extensive duplication arising from shipments between establishments in the same industry classification.

<sup>b</sup>Establishments in this industry reported value of production instead of value of shipments. Consequently, the formula for computing value added by manufacture was modified to exclude any change in finished product inventories between the beginning and end of the year.

<sup>c</sup>Value added data include government-owned, contractor-operated plants which were estimated based upon averages reported for commercial establishments in prior years. Cost of materials data exclude government-owned materials furnished to government-owned, contractor-operated plants and include fuel and electricity purchased by or for

The establishments. Value of shipments data include a calculated value of shipments for government-owned, contractor-operated plants comprised of adjusted value added plus the cost of fuels and electric energy. Capital expenditures, new, include expenditures for plants under construction but not in operation. Capital expenditures of government-owned, contractor-operated plants are excluded from the totals for the industry.

<sup>a</sup>Includes expenditures for plants in operation and for plants under construction but not yet in operation.

<sup>b</sup>Government-owned, privately operated establishments did not enter into the calculation of "Primary product specialization ratio" or "Coverage ratio" as all other dollar receipts for these establishments were included in "Miscellaneous receipts."

<sup>c</sup>The value of shipments and cost of materials for this industry include substantial duplication; therefore, the specialization ratios and coverage ratios were not calculated.

<sup>d</sup>Relationships are not meaningful because of the predominance of receipts for contract and commission work on materials owned by others. Such receipts are treated as primary products for this industry.

<sup>e</sup>Establishments in this industry were requested to report value of work done instead of value of shipments. Consequently, the formula for computing value added by manufacture was not adjusted for any inventory change between the beginning and end of the year.

<sup>f</sup>In 1972 and 1967, in addition to the employment and payroll reported for operating manufacturing establishments, manufacturing concerns reported separately for central administrative offices or auxiliary units which serve the manufacturing establishments of a company (e.g., storage warehouses, power plants, research laboratories, garages, repair shops, etc.) rather than the general public. Separate reports were obtained if these units were at different general locations from the establishments served or if they serviced more than one manufacturing establishment. The figures shown for these units do not represent a separate industry but rather a balancing total for all manufacturing industries.

TABLE 4. Selected Statistics on Central Administrative Offices and Auxiliaries, by Major Industry Group of Establishments Serviced: 1972

- Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

<sup>1</sup>The definitions of the standard consolidated areas and the standard metropolitan statistical areas are shown in appendix F.

<sup>2</sup>For the SCA listed in the table below (whose definition was revised for 1972), historical data do not include establishments located in the specified SMSA.

Standard consolidated area	Standard metropolitan statistical area
New York, NY-Northeastern New Jersey.....	Nassau-Suffolk in New York

Footnotes continued on next page.

TABLE 6. Manufacturing Employment and Payroll for Geographic Areas: 1972 and Prior Census Years—Continued

Footnotes for table 6--Continued

<sup>3</sup>For the SMSA's listed in the table below (whose definitions were revised for 1972), historical data do not include establishments located in the specified areas. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition.

Standard metropolitan statistical area	County, parish, city, and town	Standard metropolitan statistical area	County, parish, city, and town
Abilene, TX.....	Callahan County	Louisville, KY-IN.....	Bullitt and Oldham Counties
Asheville, NC.....	Madison County	Lowell, MA-NH.....	Pelham town in Hillsborough County, NH
Augusta, GA-SC.....	Columbia County	Lynchburg, VA.....	Appomattox County
Austin, TX.....	Hays County	Macon, GA.....	Jones and Twiggs Counties
Beaumont-Port Arthur-Orange, TX.....	Hardin County	Manchester, NH.....	Allenstown and Pembroke towns in Merrimack County, Derry and Londonderry towns in Rockingham County
Birmingham, AL.....	St. Clair County	Memphis, TN-AR-MS.....	Tipton County, TN; De Soto County, MS
Boston, MA.....	Boxford town in Essex County; Acton, Boxborough, Carlisle, and Holliston towns in Middlesex County; Bellingham, Foxborough, Franklin, Medway, and Stoughton towns in Norfolk County; Abington and Kingston towns in Plymouth County	Minneapolis-St. Paul, MN-WI.....	Carver, Chisago, Scott, and Wright Counties, MN; St. Croix County, WI
Bridgeport, CT.....	Derby city in New Haven County	Muskegon-Muskegon Heights, MI.....	Oceana County
Brockton, MA.....	Halifax town in Plymouth County. The following are included in historical data only: Stoughton town in Norfolk County, Abington and Hanson towns in Plymouth County	New Bedford, MA.....	Freetown town in Bristol County, Lakeville town in Plymouth County
Canton, OH.....	Carroll County	New York, NY-NJ.....	Bergen County, NJ; and Putnam County, NY. The following are included in historical data only: Nassau and Suffolk Counties, NY
Charleston, WV.....	Putnam County	Newark, NJ.....	Somerset County
Chattanooga, TN-GA.....	Marion and Sequatchie Counties, TN; Catoosa and Dade Counties, GA	Norwalk, CT.....	Weston town in Fairfield County
Colorado Springs, CO.....	Teller County	Oklahoma City, OK.....	McClain and Pottawatomie Counties
Columbus, GA-AL.....	Columbus city, GA. The following are included in historical data only: Muscogee County, GA	Orlando, FL.....	Osceola County
Columbus, OH.....	Fairfield and Madison Counties	Pittsfield, MA.....	Adams and Cheshire towns in Berkshire County
Denver-Boulder, CO.....	Gilpin County	Portland, ME.....	Freeport and Windham towns in Cumberland County; Old Orchard Beach town and Saco city in York County
Des Moines, IA.....	Warren County	Providence-Warwick-Pawtucket, MA-RI.....	Norton town in Bristol County, MA; Warwick city in Kent County, Scituate town in Providence County, and South Kingston town in Washington County, RI. The following are included in historical data only: Bellingham, Franklin, and Wrentham towns in Norfolk County, MA
Detroit, MI.....	Lapeer, Livingston, and St. Clair Counties	Richmond, VA.....	Charles City, Goochland and Powhatan Counties
Fall River, MA-RI.....	Dighton town in Bristol County, MA; Little Compton and Portsmouth towns in Newport County, RI	Roanoke, VA.....	Botetourt and Craig Counties
Flint, MI.....	Shiawassee County. The following are included in historical data only: Lapeer County	St. Joseph, MO.....	Andrew County
Hartford, CT.....	Marlborough town in Hartford County; New Hartford town in Litchfield County; East Hampton and Portland towns in Middlesex County; Colchester town in New London County; Columbia, Hebron, Stafford, Tolland, and Willington towns in Tolland County	St. Louis, MO-IL.....	Clinton and Monroe Counties, IL
Houston, TX.....	Waller County	Salt Lake City-Ogden, UT.....	Tooele and Weber Counties
Huntington-Ashland, WV-KY-OH.....	Greenup County, KY	San Antonio, TX.....	Comal County
Kansas City, MO-KS.....	Ray County, MO	Savannah, GA.....	Bryan and Effingham Counties
Knoxville, TN.....	Union County	Springfield, IL.....	Menard County
Lawrence-Haverhill, MA-NH.....	Atkinson, Hampstead, Kingston, and Windham towns in Rockingham County, NH; Amesbury and Salisbury towns in Essex County, MA	Springfield-Chicopee-Holyoke, MA-CT.....	Belchertown, Hatfield, and Southampton towns in Hampshire County, MA
		Tallahassee, FL.....	Wakulla County
		Topeka, KS.....	Jefferson and Osage Counties
		Washington, DC-MD-VA.....	Charles County, MD
		Waterbury, CT.....	Southbury town in New Haven County
		Wichita Falls, TX.....	Clay County. The following are included in historical data only: Archer County
		Worcester, MA.....	Charlton, Uxbridge, and Webster towns in Worcester County

<sup>4</sup>For the SMSA's listed in the table below (whose definitions were revised for 1972), historical data do not include establishments located in the specified areas. Data tabulated under the new 1972 definitions differ by more than 5 percent from 1972 data tabulated under the old definition.

Standard metropolitan statistical area	County, parish, city, and town	Standard metropolitan statistical area	County, parish, city, and town
Albany, GA.....	Lee County	Montgomery, AL.....	Autauga County
Albany-Schenectady-Troy, NY.....	Montgomery County	Nashville-Davidson, TN.....	Cheatham, Dickson, Robertson, Rutherford, and Williamson Counties
Albuquerque, NM.....	Sandoval County	New Haven-West Haven, CT....	Clinton and Killingworth towns in Middlesex County; Madison, Orange, and Wallingford towns in New Haven County
Allentown-Bethlehem-Easton, PA-NJ.....	Carbon County, PA	New London-Norwich, CT-RI...	Hopkinton and Westerly towns in Washington County, RI; Old Saybrook town in Middlesex County, CT; Bozrah town in New London County, CT
Atlanta, GA.....	Butts, Cherokee, Douglas, Fayette, Forsyth, Henry, Newton, Paulding, Rockdale, and Walton Counties	Newport News-Hampton, VA...	Williamsburg city, Gloucester, and James City, Counties
Baton Rouge, LA.....	Ascension, Livingston, and West Baton Rouge Parishes	Norfolk-Virginia Beach-Portsmouth, VA-NC.....	Nansemond and Suffolk cities, VA; and Currituck County, NC
Biloxi-Gulfport, MS.....	Hancock and Stone Counties	Patterson-Clifton-Passaic, NJ.....	The following is included in historical data only: Bergen County
Charleston, SC.....	Dorchester County	Rochester, NY.....	Ontario County
Charlotte-Gastonia, NC.....	Gaston County	Shreveport, LA.....	Webster Parish
Evansville, IN-KY.....	Gibson and Posey Counties, IN	Springfield, MO.....	Christian County
Fort Wayne, IN.....	Adams, De Kalb, and Wells Counties	Springfield, OH.....	Champaign County
Greensboro-Winston-Salem-High Point, NC.....	Davidson and Stokes Counties	Tampa-St. Petersburg, FL...	Pasco County
Greenville-Spartanburg, SC.....	Spartanburg County	Texarkana, TX-Texarkana, AR.....	Little River County, AR
Huntsville, AL.....	Marshall County	Toledo, OH-MI.....	Fulton and Ottawa Counties, OH
Jacksonville, FL.....	Baker, Clay, Nassau, and St. Johns Counties	Tulsa, OK.....	Mayes, Rogers, and Wagoner Counties
Kalamazoo-Portage, MI.....	Van Buren County		
Lansing-East Lansing, MI.....	Ionia County		
Lexington, KY.....	Bourbon, Clark, Jessamine, Scott, and Woodford Counties		
Lima, OH.....	Auglaize County		

Footnotes continued on next page.

TABLE 6. Manufacturing Employment and Payroll for Geographic Areas: 1972 and Prior Census Years—Continued

(Footnotes for table 6)--Continued

<sup>5</sup>For the SMSA's listed in the table below (which were defined after the 1967 census), historical data are not available. The counties, parishes, cities, and towns which comprise the SMSA are listed on the right.

Standard metropolitan statistical area	County, parish, city, and town	Standard metropolitan statistical area	County, parish, city, and town
Alexandria, LA.....	Grant and Rapides Parishes	Long Branch-Asbury Park, NJ.	Monmouth County
Anchorage, AK.....	Anchorage Division	Melbourne-Titusville-	
Appleton-Oshkosh, WI.....	Calumet, Outagamie, and Winnebago Counties	Cocoa, FL.....	Brevard County
Battle Creek, MI.....	Barry and Calhoun Counties	Modesto, CA.....	Stanislaus County
Bristol, CT.....	Bristol city and Burlington town in Hartford County, Plymouth town in Litchfield County	Nashua, NH.....	Nashua city, and Amherst, Hudson, Merrimack, and Milford towns in Hillsborough County
Bryan-College Station, TX.....	Brazos County	Nassau-Suffolk, NY.....	Nassau and Suffolk Counties
Burlington, NC.....	Alamance County	New Brunswick-Perth Amboy-Sayreville, NJ.....	
Columbia, MO.....	Boone County	Owensboro, KY.....	Middlesex County
Danbury, CT.....	Danbury city and Bethel, Brookfield, New Fairfield, Newton, and Redding towns in Fairfield County; New Milford town in Litchfield County	Parkersburg-Marietta, WV-OH.	Daviess County
Daytona Beach, FL.....	Volusia County	Petersburg-Colonial Heights-Hopewell, VA.....	Washington County, OH, Wirt and Wood Counties, WV
Elmira, NY.....	Chemung County	Poughkeepsie, NY.....	Dinwiddie and Prince George Counties and Colonial Heights, Hopewell, and Petersburg cities
Fayetteville-Springdale, AR.	Benton and Washington Counties	Richland-Kennewick, WA.....	Dutchess County
Florence, AL.....	Colbert and Lauderdale Counties	Rochester, MN.....	Benton and Franklin Counties
Fort Myers, FL.....	Lee County	St. Cloud, MN.....	Olmsted County
Gainesville, FL.....	Alachua County	Santa Cruz, CA.....	Benton, Sherburne, and Stearns Counties
Killeen-Temple, TX.....	Bell and Coryell Counties	Santa Rosa, CA.....	Santa Cruz County
Kingsport-Bristol, TN-VA....	Bristol city, and Scott and Washington Counties, VA; Hawkins and Sullivan Counties, TN	Sarasota, FL.....	Sonoma County
La Crosse, WI.....	La Crosse County	Williamsport, PA.....	Sarasota County
Lakeland-Winter Haven, FL...	Polk County	Yakima, WA.....	Lycoming County
			Yakima County

<sup>6</sup>For the SMSA's listed in the table below (which were retitled for 1972), historical data is revised to the current definition in this table.

New title	Old titles
Dallas-Fort Worth SMSA.....	Dallas SMSA and Fort Worth SMSA
Northeast Pennsylvania SMSA.....	Scranton SMSA and Wilkes-Barre-Hazleton SMSA
Raleigh-Durham SMSA.....	Raleigh SMSA and Durham SMSA

- Represents zero.

(NA) Not available.

(D) Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>The 1958 and subsequent years' figures include establishments classified in industry 3273, Ready-Mixed Concrete, and establishments classified in industry 3599, Machinery, Except Electrical, N.E.C., that were engaged exclusively, or almost exclusively, in machine shop repair work. The data for such establishments are excluded from the figures for the period 1939 to 1957, but are included for 1929 and earlier years. The 1954 to 1972 figures include data for establishments engaged in the processing and distribution of fluid milk, industry group 202, Dairy Products. These establishments were not included in the figures for earlier census years. In addition, beginning with 1954, the figures include data for Logging Camps and Logging Contractors, industry 2411, which were not included within the scope of the 1947 census. There were also a number of changes in the definition of manufacturing industries during earlier census years that affect the comparability of the historical series. Among the more important of these were the following: Figures for 1935 and later years exclude data for railroad repair shops and manufactured gas which were included in 1899 to 1933 figures; the minimum size of establishment included for 1947 to 1963 was 1 employee; for 1921 to 1939, manufacturing establishments reporting value of shipments of \$5,000 or more were within scope whereas for 1919 and earlier years, the cutoff was \$500. (These changes in procedure have not appreciably affected the comparability of the historical data except for the figures on number of establishments.)

<sup>2</sup>Employment and payroll totals for central administrative offices and auxiliaries are included in the statistics shown for the years 1954 to 1972. Prior to 1954, this information was not available. The "number of establishments with 20 employees or more" total for 1958 and all previous years and "total number of establishments" total for 1954 and previous years does not include data for central administrative offices and auxiliaries.

<sup>3</sup>For the years 1958 to 1972, includes expenditures for plants under construction but not in operation in addition to expenditures at operating manufacturing establishments. Prior to 1958, the data represents expenditures at operating manufacturing establishments only.

<sup>4</sup>Does not include data for Alaska and Hawaii.<sup>5</sup>Data for 1954 employment and payroll exclude central administrative offices and auxiliary units. This information was not collected for Alaska and Hawaii in 1954.<sup>6</sup>This SCA changed definition in 1972. Historical data prior to 1972 are based on the old definition. (See appendix F for the old and new definitions.)<sup>7</sup>This table includes data only for standard metropolitan statistical areas with 40,000 or more manufacturing employees in 1972 or 1967. The definitions of the standard metropolitan statistical areas are shown in appendix F.<sup>8</sup>This SMSA changed definition in 1972. Historical data prior to 1972 are based on the old definition. Data tabulated under the new 1972 definition differ by more than 5 percent from 1972 data tabulated under the old definition. (See appendix F for the old and new definitions.)<sup>9</sup>This SMSA changed definition in 1972. Historical data prior to 1972 are based on the old definition. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. (See appendix F for the old and new definitions.)<sup>10</sup>Comparable data for years prior to 1958 are not available due to a revision in the definition of the standard metropolitan statistical area. See the 1958 or 1954 Census of Manufactures, Area Statistics, Volume III, for statistics for the area as defined at that time.<sup>11</sup>This SMSA changed definition in 1972. Historical data have been revised accordingly. (See appendix F for the old and new definitions.)<sup>12</sup>This SMSA was defined after the 1967 census. Historical data are not available.

TABLE 8. General Statistics, by Employment Size of Establishment: 1972

ESTABLS. COVERED BY ADMIN. RECORDS <sup>1</sup> EO	7 170	23.0	143.9	19.7	34.2	93.6	344.1	271.4	615.4	13.3	110.0

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent      E3--30 to 39 percent      E5--50 to 59 percent      E7--70 to 79 percent      E9--90 to 99 percent  
 E2--20 to 29 percent      E4--40 to 49 percent      E6--60 to 69 percent      E8--80 to 89 percent      EO--100 percent

(D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

<sup>1</sup>Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

(NA) Not available.

<sup>1</sup>The "number of establishments with 20 employees or more" total for 1958 does not include data for central administrative offices and auxiliaries.<sup>2</sup>The data are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period.<sup>3</sup>Data prior to 1958 appear in Volume III, 1963 Census of Manufactures, in table 1 of the chapter devoted to this division.

(NA) Not available.

<sup>1</sup>The "number of establishments with 20 employees or more" total for 1958 does not include data for central administrative offices and auxiliaries.<sup>2</sup>The data are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period.<sup>3</sup>Data prior to 1958 appear in Volume III, 1963 Census of Manufactures, in table 1 of the chapter devoted to this division.

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees. BB--250 to 499 employees. CC--500 to 999 employees. EE--1,000 to 2,400 employees. FF--2,500 employees and over.

TABLE 3. Distribution of Establishments by Employment Size Class and Major Industry Group for the Division: 1972

20 Food and kindred products  
21 Tobacco manufactures  
22 Textile mill products  
23 Apparel and other textile products  
24 Lumber and wood products

25 Furniture and fixtures  
26 Paper and allied products  
27 Printing and publishing  
28 Chemicals and allied products  
29 Petroleum and coal products

30 Rubber and plastics products, n.e.c.  
31 Leather and leather products  
32 Stone, clay, and glass products  
33 Primary metal industries  
34 Fabricated metal products

35 Machinery, except electrical  
36 Electrical equipment, supplies  
37 Transportation equipment  
38 Instruments and related products  
39 Miscellaneous manufacturing industries

(NA) Not available.

<sup>1</sup>The "number of establishments with 20 employees or more" total for 1958 does not include data for central administrative offices and auxiliaries.<sup>2</sup>The data are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period.<sup>3</sup>Data prior to 1958 appear in Volume III, 1963 Census of Manufactures, in table 1 of the chapter devoted to this division.

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees. BB--250 to 499 employees. CC--500 to 999 employees. EE--1,000 to 2,499 employees. FF--2,500 employees and over

(NA) Not available.

<sup>1</sup>The "number of establishments with 20 employees or more" total for 1958 does not include data for central administrative offices and auxiliaries.<sup>2</sup>The data are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period.<sup>3</sup>Data prior to 1958 appear in Volume III, 1963 Census of Manufactures, in table 1 of the chapter devoted to this division.

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees. BB--250 to 499 employees. CC--500 to 999 employees. EE--1,000 to 2,400 employees. FF--2,500 employees and over.

(NA) Not available.

<sup>1</sup>The "number of establishments with 20 employees or more" total for 1958 does not include data for central administrative offices and auxiliaries.<sup>2</sup>The data are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period.<sup>3</sup>Data prior to 1958 appear in Volume III, 1963 Census of Manufactures, in table 1 of the chapter devoted to this division.

TABLE 2. General Statistics by Industry Group and Industry: 1972 and 1967

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

(Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees.)

<sup>1</sup>General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees.

BB--250 to 499 employees.

CC--500 to 999 employees.

EE--1,000 to 2,499 employees.

FF--2,500 employees and over.

TABLE 3. Distribution of Establishments by Employment Size Class and Major Industry Group for the Division: 1972

(NA) Not available.

<sup>1</sup>The "number of establishments with 20 employees or more" total for 1958 does not include data for central administrative offices and auxiliaries.<sup>2</sup>The data are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period.<sup>3</sup>Data prior to 1958 appear in Volume III, 1963 Census of Manufactures, in table 1 of the chapter devoted to this division.

TABLE 2. General Statistics by Industry Group and Industry: 1972 and 1967

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees. BB--250 to 499 employees. CC--500 to 999 employees. EE--1,000 to 2,499 employees. FF--2,500 employees and over.

TABLE 3. Distribution of Establishments by Employment Size Class and Major Industry Group for the Division: 1972

20 Food and kindred products	25 Furniture and fixtures	30 Rubber and plastics products, n.e.c.	35 Machinery, except electrical
21 Tobacco manufactures	26 Paper and allied products	31 Leather and leather products	36 Electrical equipment and supplies
22 Textile mill products	27 Printing and publishing	32 Stone, clay, and glass products	37 Transportation equipment
23 Apparel and other textile products	28 Chemicals and allied products	33 Primary metal industries	38 Instruments and related products
24 Lumber and wood products	29 Petroleum and coal products	34 Fabricated metal products	39 Miscellaneous manufacturing industries
		CAO Central administrative offices

(NA) Not available.

<sup>1</sup>The "number of establishments with 20 employees or more" total for 1958 does not include data for central administrative offices and auxiliaries.<sup>2</sup>The data are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period.<sup>3</sup>Data prior to 1958 appear in Volume III, 1963 Census of Manufactures, in table 1 of the chapter devoted to this division.

(NA) Not available.

<sup>1</sup>The "number of establishments with 20 employees or more" total for 1958 does not include data for central administrative offices and auxiliaries.<sup>2</sup>The data are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period.<sup>3</sup>Data prior to 1958 appear in Volume III, 1963 Census of Manufactures, in table 1 of the chapter devoted to this Division.

TABLE 2. General Statistics by Industry Group and Industry: 1972 and 1967

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees.)

\*General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees

BB--250 to 499 employees

CC--500 to 999 employees

EE--1,000 to 2,499 employees

FF--2,500 employees and over

(NA) Not available.

<sup>1</sup>The "number of establishments with 20 employees or more" total for 1958 does not include data for central administrative offices and auxiliaries.<sup>2</sup>The data are estimates derived from a representative sample of manufacturing establishments canvassed in the annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period.<sup>3</sup>Data prior to 1958 appear in Volume III, 1963 Census of Manufactures, in table 1 of the chapter devoted to this division.

Note: See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (D) Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.

<sup>2</sup>This SMSA was defined after the 1967 census; no historical data are available.

<sup>3</sup>The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by more than 5 percent from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.

TABLE 2. General and Comparative Statistics for the State and Selected Standard Metropolitan Statistical Areas:  
1972 and Earlier Years

(Selected standard metropolitan statistical areas include those with 40,000 manufacturing employees or more)

Year <sup>1</sup>	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments, new	Comparative indexes and U.S. employment		
	Total	With 20 employees or more	Number	Payroll	Number	Man-hours	Wages				Percent of U.S. employment	Index of employment change	United States

(NA) Not available.

<sup>1</sup>For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume III, 1963 Census of Manufactures, in table 2 of the chapter devoted to this State.

<sup>2</sup>Does not include central administrative offices and auxiliaries.

<sup>3</sup>The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.

- Represents zero.

<sup>1</sup>The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent      E3--30 to 39 percent      E5--50 to 59 percent      E7--70 to 79 percent      E9--90 to 99 percent  
 E2--20 to 29 percent      E4--40 to 49 percent      E6--60 to 69 percent      E8--80 to 89 percent      EO--100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Data for 1967 are based on prior census-year definitions.

<sup>2</sup>This SMSA was defined after the 1967 census; no historical data are available.

<sup>3</sup>The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by more than 5 percent from 1972 data tabulated under the old definition. Comparable 1967 data are not available.

TABLE 5. General Statistics by Industry Group and Industry: 1972 and 1967

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent      E3--30 to 39 percent      E5--50 to 59 percent      E7--70 to 79 percent      E9--90 to 99 percent  
 E2--20 to 29 percent      E4--40 to 49 percent      E6--60 to 69 percent      E8--80 to 89 percent      EO--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees      BB--250 to 499 employees      CC--500 to 999 employees      EE--1,000 to 2,499 employees      FF--2,500 employees and over

TABLE 6. General Statistics by Industry for Standard Metropolitan Statistical Areas: 1972 and 1967—Continued

(Footnotes for table 6)

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent	E3--30 to 39 percent	E5--50 to 59 percent	E7--70 to 79 percent	E9--90 to 99 percent
E2--20 to 29 percent	E4--40 to 49 percent	E6--60 to 69 percent	E8--80 to 89 percent	EO--100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (2) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

<sup>1</sup>The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Data for 1967 are based on prior census-year definitions.

<sup>2</sup>This SMSA was defined after the 1967 census; no historical data are available.

<sup>3</sup>The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by more than 5 percent from 1972 data tabulated under the old definition. Comparable 1967 data are not available.

TABLE 7. General Statistics by Industry Group for Selected Counties: 1972 and 1967

(Separate industry group data are shown for all industry groups with 450 employees or more within a county except those that would disclose figures for individual companies)

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 29 percent      E3--30 to 39 percent      E5--50 to 59 percent      E7--70 to 79 percent      E9--90 to 99 percent  
 E2--20 to 29 percent      E4--40 to 49 percent      E6--60 to 69 percent      E8--80 to 89 percent      E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (2) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

<sup>1</sup>Data for counties that are coextensive with Standard Metropolitan Statistical Areas (SMSA) are shown in the SMSA table.

TABLE 8. General Statistics by Industry Group for Selected Cities: 1972 and 1967

(Separate industry group data are shown for all major industry groups with 450 employees or more within a city except those that would disclose figures for individual companies)

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent	E3--30 to 39 percent	E5--50 to 59 percent	E7--70 to 79 percent	E9--90 to 99 percent
E2--20 to 29 percent	E4--40 to 49 percent	E6--60 to 69 percent	E8--80 to 89 percent	E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (2) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

TABLE 9. Distribution of Establishments, by Employment Size Class and Major Industry Group, for Counties: 1972

20 Food and kindred products  
21 Tobacco manufactures  
22 Textile mill products  
23 Apparel and other textile products  
24 Lumber and wood products  
25 Furniture and fixtures  
26 Paper and allied products  
27 Printing and publishing  
28 Chemicals and allied products  
29 Petroleum and coal products  
30 Rubber and plastics products, n.a.c.  
31 Leather and leather products  
32 Stone, clay, and glass products  
33 Primary metal industries  
34 Fabricated metal products  
35 Machinery, except electrical  
36 Electrical equipment and supplies  
37 Transportation equipment  
38 Instruments and related products  
39 Miscellaneous manufacturing industries

(Counties and size classes in which no manufacturing establishments were reported are omitted)

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume III, 1963 Census of Manufactures, in table 2 of the chapter devoted to this State.<sup>2</sup>Does not include central administrative offices and auxiliaries.

- Represents zero. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

<sup>1</sup>The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent      E3--30 to 39 percent      E5--50 to 59 percent      E7--70 to 79 percent      E9--90 to 99 percent  
 E2--20 to 29 percent      E4--40 to 49 percent      E6--60 to 69 percent      E8--80 to 89 percent      E0--100 percent

See appendix B for definitions of Standard Metropolitan Statistical Area (SMSA) in this State.

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.  
thousand dollars or man-hours; under 50 employees). (Z) Less than half of the unit of measurement shown (under 50

<sup>1</sup>This SMSA was defined after the 1967 census.

(NA) Not available.

<sup>1</sup>For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume III, 1963 Census of Manufactures, in table 2 of the chapter devoted to this State.

<sup>2</sup>Does not include central administrative offices and auxiliaries.

- Represents zero. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

<sup>1</sup>The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1—10 to 19 percent    E3—30 to 39 percent    E5—50 to 59 percent    E7—70 to 79 percent    E9—90 to 99 percent  
 E2—20 to 29 percent    E4—40 to 49 percent    E6—60 to 69 percent    E8—80 to 89 percent    EO—100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

--	ADMINISTRATIVE AND AUXILIARY . .	41	19	1.7	24.6	-	-	-	-	-	-	-	1.1	-

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent      E3--30 to 39 percent      E5--50 to 59 percent      E7--70 to 79 percent      E9--90 to 99 percent  
 E2--20 to 29 percent      E4--40 to 49 percent      E6--60 to 69 percent      E8--80 to 89 percent      EO--100 percent

— Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

<sup>1</sup>General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees      BB--250 to 499 employees      CC--500 to 999 employees      EE--1,000 to 2,499 employees      FF--2,500 employees and over

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1=10 to 19 percent      E3=30 to 39 percent      E5=50 to 59 percent      E7=70 to 79 percent      E9=90 to 99 percent  
 E2=20 to 29 percent      E4=40 to 49 percent      E6=60 to 69 percent      E8=80 to 89 percent      EO=100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

TABLE 7. General Statistics by Industry Group for Selected Counties: 1972 and 1967

Note: See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or under 50 employees).

<sup>1</sup>This SMSA was defined after the 1967 census.

<sup>2</sup>The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.

<sup>3</sup>The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by more than 5 percent from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.

TABLE 2. General and Comparative Statistics for the State and Selected Standard Metropolitan Statistical Areas:  
1972 and Earlier Years

(Selected standard metropolitan statistical areas include those with 40,000 manufacturing employees or more)

Note: See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

(NA) Not available.

<sup>1</sup>For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume III, 1963 Census of Manufactures, in table 2 of the chapter devoted to this State.

<sup>2</sup>Does not include central administrative offices and auxiliaries.

<sup>3</sup>The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.

- Represents zero. (2) Less than half of the unit of measurement shown under \$0 thousand dollars or man-hours; under 50 employees).

<sup>1</sup>The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments.

Note: The payroll and sales data for small establishments (general single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent  
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

<sup>1</sup>This SMSA was defined after the 1967 census.

<sup>2</sup>The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Data for 1967 are based on prior census-year definitions.

<sup>3</sup>The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by more than 5 percent from 1972 data tabulated under the old definition.

--	ADMINISTRATIVE AND AUXILIARY . . . . .	55	23	2.4	25.1	-	-	-	-	-	-	-	1.4	-

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

EL--10 to 19 percent      E3--30 to 39 percent      E5--50 to 59 percent      ET--70 to 79 percent      E9--90 to 99 percent  
 E2--20 to 29 percent      E4--40 to 49 percent      E6--60 to 69 percent      E8--80 to 89 percent      EO--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

<sup>1</sup>General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees      BB--250 to 499 employees      CC--500 to 999 employees      EE--1,000 to 2,499 employees      FF--2,500 employees and over

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent	E3--30 to 39 percent	E5--50 to 59 percent	E7--70 to 79 percent	E9--90 to 99 percent
E2--20 to 29 percent	E4--40 to 49 percent	E6--60 to 69 percent	E8--80 to 89 percent	E0--100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

<sup>1</sup>This SMSA was defined after the 1967 census.

<sup>2</sup>The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Data for 1967 are based on prior census-year definitions.

<sup>3</sup>The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by more than 5 percent from 1972 data tabulated under the old definition.

TABLE 7. General Statistics by Industry Group for Selected Counties: 1972 and 1967

(Separate industry group data are shown for all industry groups with 450 employees or more within a county except those that would disclose figures for individual companies)

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent      E3--30 to 39 percent      E5--50 to 59 percent      E7--70 to 79 percent      E9--90 to 99 percent  
 E2--20 to 29 percent      E4--40 to 49 percent      E6--60 to 69 percent      E8--80 to 89 percent      E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

<sup>1</sup>Data for counties that are coextensive with Standard Metropolitan Statistical Areas (SMSA) are shown in the SMSA table.

TABLE 8. General Statistics by Industry Group for Selected Cities: 1972 and 1967

(Separate industry group data are shown for all major industry groups with 450 employees or more within a city except those that would disclose figures for individual companies)

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent      E3--30 to 39 percent      E5--50 to 59 percent      E7--70 to 79 percent      E9--90 to 99 percent  
 E2--20 to 29 percent      E4--40 to 49 percent      E6--60 to 69 percent      E8--80 to 89 percent      E0--100 percent

- Represents zero.      (NA) Not available.      (D) Withheld to avoid disclosing figures for individual companies.

TABLE 9. Distribution of Establishments, by Employment Size Class and Major Industry Group, for Counties: 1972

20 Food and kindred products  
25 Furniture and fixtures  
30 Rubber and plastics products, n.e.c.  
31 Leather and leather products  
35 Machinery, except electrical  
36 Electrical equipment and supplies  
37 Transportation equipment  
38 Instruments and related products  
39 Miscellaneous manufacturing industries

(Counts and size classes in which no manufacturing establishments were reported are omitted)

1958.....		4.5	22.2		4.2	20.3	.3	1.9	

Note: See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or under 50 employees).

<sup>1</sup>This SMSA was defined after the 1967 census.

TABLE 2. General and Comparative Statistics for the State and Selected Standard Metropolitan Statistical Areas: 1972 and Earlier Years

(Selected standard metropolitan statistical areas include those with 40,000 manufacturing employees or more)

Year <sup>1</sup>	Establishments		All employees		Production workers			Value added by manufacturer	Cost of materials	Value of shipments	Capital expenditures, new	Comparative indexes and U.S. employment		
	Total	With 20 employees or more	Number	Payroll	Number	Man-hours	Wages					Percent of U.S. employment	Index of employment change	United States

Note: See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

(NA) Not available. (S) Withheld because the data did not meet publication standards.

<sup>1</sup>For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume III, 1963 Census of Manufactures, in table 2 of the chapter devoted to this State.

<sup>2</sup>Does not include central administrative offices and auxiliaries.

- Represents zero.

<sup>1</sup>The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent      E3--30 to 39 percent      E5--50 to 59 percent      E7--70 to 79 percent      E9--90 to 99 percent  
 E2--20 to 29 percent      E4--40 to 49 percent      E6--60 to 69 percent      E8--80 to 89 percent      E0--100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

<sup>1</sup>This SMSA was defined after the 1967 census.

TABLE 5. General Statistics by Industry Group and Industry: 1972 and 1967

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent      E3--30 to 39 percent      E5--50 to 59 percent      E7--70 to 79 percent      E9--90 to 99 percent  
 E2--20 to 29 percent      E4--40 to 49 percent      E6--60 to 69 percent      E8--80 to 89 percent      E0--100 percent

— Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

\*General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees      BB--250 to 499 employees      CC--500 to 999 employees      EE--1,000 to 2,499 employees      FF--2,500 employees and over

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent      E3--30 to 39 percent      E5--50 to 59 percent      E7--70 to 79 percent      E9--90 to 99 percent  
 E2--20 to 29 percent      E4--40 to 49 percent      E6--60 to 69 percent      E8--80 to 89 percent      EO--100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

<sup>1</sup>This SMSA was defined after the 1967 census.

TABLE 7. General Statistics by Industry Group for Selected Counties: 1972 and 1967  
(Separate industry group data are shown for all industry groups with 450 employees or more within a county except those that would disclose figures for individual companies)

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1—10 to 19 percent      E3—30 to 39 percent      E5—50 to 59 percent      E7—70 to 79 percent      E9—90 to 99 percent  
 E2—20 to 29 percent      E4—40 to 49 percent      E6—60 to 69 percent      E8—80 to 89 percent      E0—100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

<sup>1</sup>Data for counties that are coextensive with Standard Metropolitan Statistical Areas (SMSA) are shown in the SMSA table.

TABLE 8. General Statistics by Industry Group for Selected Cities: 1972 and 1967

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent	E3--30 to 39 percent	E5--50 to 59 percent	E7--70 to 79 percent	E9--90 to 99 percent
E2--20 to 29 percent	E4--40 to 49 percent	E6--60 to 69 percent	E8--80 to 89 percent	E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

Note: See appendix B for definition of Standard Metropolitan Statistical Area (SMSA) in this State.

(NA) Not available.

<sup>1</sup>For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume III, 1963 Census of Manufactures, in table 2 of the chapter devoted to this State.

<sup>2</sup>Does not include central administrative offices and auxiliaries.<sup>3</sup>This SMSA changed definition for 1972, affecting data by 5 percent or less. Historical data prior to 1972 are based on prior census-year definitions.

- Represents zero. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

<sup>1</sup>The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent    E3--30 to 39 percent    E5--50 to 59 percent    E7--70 to 79 percent    E9--90 to 99 percent  
 E2--20 to 29 percent    E4--40 to 49 percent    E6--60 to 69 percent    E8--80 to 89 percent    E0--100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

— Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

<sup>1</sup>This SMSA changed definition for 1972; 1967 data are based on the 1967 definition. See appendix B for change in SMSA definition for 1972.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent    E3--30 to 39 percent    E5--50 to 59 percent    E7--70 to 79 percent    E9--90 to 99 percent  
 E2--20 to 29 percent    E4--40 to 49 percent    E6--60 to 69 percent    E8--80 to 89 percent    ED--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

<sup>1</sup>General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees    BB--250 to 499 employees    CC--500 to 999 employees    EE--1,000 to 2,499 employees    FF--2,500 employees and over

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent    E3--30 to 39 percent    E5--50 to 59 percent    E7--70 to 79 percent    E9--90 to 99 percent  
 E2--20 to 29 percent    E4--40 to 49 percent    E6--60 to 69 percent    E8--80 to 89 percent    E0--100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>This SMSA changed definition for 1972; 1967 data are based on the 1967 definition. See appendix B for change in SMSA definition for 1972.

TABLE 7. General Statistics by Industry Group for Selected Counties: 1972 and 1967

(Separate industry group data are shown for all industry groups with 450 employees or more within a county except those that would disclose figures for individual companies)

Ind. code	County <sup>1</sup> and industry	1972										1967		
		Establishments		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	All employees	Value added by manufacture

TABLE 7. General Statistics by Industry Group for Selected Counties: 1972 and 1967—Continued

(Footnotes for table 7)

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent	E3--30 to 39 percent	E5--50 to 59 percent	E7--70 to 79 percent	E9--90 to 99 percent
E2--20 to 29 percent	E4--40 to 49 percent	E6--60 to 69 percent	E8--80 to 89 percent	E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>Data for counties that are coextensive with Standard Metropolitan Statistical Areas (SMSA) are shown in the SMSA table.

TABLE 8. General Statistics by Industry Group for Selected Cities: 1972 and 1967

(Separate industry group data are shown for all major industry groups with 450 employees or more within a city except those that would disclose figures for individual companies)

Note: See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.<sup>2</sup>This SMSA was defined after the 1967 census.<sup>3</sup>The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by more than 5 percent from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.

TABLE 2. General and Comparative Statistics for the State and Selected Standard Metropolitan Statistical Areas:  
1972 and Earlier Years

(Selected standard metropolitan statistical areas include those with 40,000 manufacturing employees or more)

Year <sup>1</sup>	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	Comparative indexes and U.S. employment		
	Total	With 20 employees or more	Number	Payroll	Number	Man-hours	Wages					Percent of U.S. employment	Index of employment change	United States

Note: See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

(NA) Not available.

<sup>1</sup>For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume III, 1963 Census of Manufactures, in table 2 of the chapter devoted to this State.

<sup>2</sup>Does not include central administrative offices and auxiliaries.

<sup>3</sup>The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.

<sup>4</sup>The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by more than 5 percent from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.

- Represents zero.

<sup>1</sup>The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments.

TABLE 4. General Statistics for Standard Metropolitan Statistical Areas, Counties, and Selected Cities and Towns: 1972 and 1967

Standard metropolitan statistical area, county, city, and town	1972											1967

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent    E3--30 to 39 percent    E5--50 to 59 percent    E7--70 to 79 percent    E9--90 to 99 percent  
 E2--20 to 29 percent    E4--40 to 49 percent    E6--60 to 69 percent    E8--80 to 89 percent    E0--100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Data for 1967 are based on prior census-year definitions.

<sup>2</sup>This SMSA was defined after the 1967 census.

<sup>3</sup>The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by more than 5 percent from 1972 data tabulated under the old definition.

--	ADMINISTRATIVE AND AUXILIARY . . . .	172	91	18.9	279.7	-	-	-	-	-	-	-	16.D	-

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent    E3--30 to 39 percent    E5--50 to 59 percent    E7--70 to 79 percent    E9--90 to 99 percent  
E2--20 to 29 percent    E4--40 to 49 percent    E6--60 to 69 percent    E8--80 to 89 percent    EO--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

<sup>1</sup>General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees    BB--250 to 499 employees    CC--500 to 999 employees    EE--1,000 to 2,499 employees    FF--2,500 employees and over

TABLE 6. General Statistics by Industry for Standard Metropolitan Statistical Areas: 1972 and 1967

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1-10 to 19 percent    E3-30 to 39 percent    E5-50 to 59 percent    E7-70 to 79 percent    E9-90 to 99 percent  
 E2-20 to 29 percent    E4-40 to 49 percent    E6-60 to 69 percent    E8-80 to 89 percent    EO-100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

<sup>1</sup>The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Data for 1967 are based on prior census-year definitions.

<sup>2</sup>This SMSA was defined after the 1967 census.

<sup>3</sup>The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by more than 5 percent from 1972 data tabulated under the old definition.

TABLE 7. General Statistics by Industry Group for Selected Counties: 1972 and 1967

(Separate industry group data are shown for all industry groups with 450 employees or more within a county except those that would disclose figures for individual companies)

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent      E3--30 to 39 percent      E5--50 to 59 percent      E7--70 to 79 percent      E9--90 to 99 percent  
 E2--20 to 29 percent      E4--40 to 49 percent      E6--60 to 69 percent      E8--80 to 89 percent      EO--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

TABLE 9. Distribution of Establishments, by Employment Size Class and Major Industry Group, for Counties: 1972

20 Food and kindred products  
 21 Furniture and fixtures  
 22 Textile mill products  
 23 Apparel and other textile products  
 24 Lumber and wood products  
 25 Furniture and allied products  
 26 Paper and allied products  
 27 Printing and publishing  
 28 Chemicals and allied products  
 29 Petroleum and coal products  
 30 Rubber and plastics products, n.a.c.  
 31 Leather and leather products  
 32 Stone, clay, and glass products  
 33 Primary metal industries  
 34 Fabricated metal products  
 35 Machinery, except electrical  
 36 Electrical equipment and supplies  
 37 Transportation equipment  
 38 Instruments and related products  
 39 Miscellaneous manufacturing industries

(Counties and size classes in which no manufacturing establishments were reported are omitted)

(NA) Not available.

<sup>1</sup>For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume III, 1963 Census of Manufactures, in table 2 of the chapter devoted to this State.

<sup>2</sup>Does not include central administrative offices and auxiliaries.

- Represents zero. (Z) less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

<sup>1</sup>The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent    E3--30 to 39 percent    E5--50 to 59 percent    E7--70 to 79 percent    E9--90 to 99 percent  
 E2--20 to 29 percent    E4--40 to 49 percent    E6--60 to 69 percent    E8--80 to 89 percent    EO--100 percent

See appendix B for definition of Standard Metropolitan Statistical Area (SMSA) in this State.

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

TABLE 5. General Statistics by Industry Group and Industry: 1972 and 1967

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent    E3--30 to 39 percent    E5--50 to 59 percent    E7--70 to 79 percent    E9--90 to 99 percent  
 E2--20 to 29 percent    E4--40 to 49 percent    E6--60 to 69 percent    E8--80 to 89 percent    EO--100 percent

Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

<sup>1</sup>General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees    BB--250 to 499 employees    CC--500 to 999 employees    EE--1,000 to 2,499 employees    FF--2,500 employees and over

U.S. DEPARTMENT OF COMMERCE  
BUREAU OF THE CENSUS

TABLE 1. Manufacturing Employment Statistics for the District and Standard Metropolitan Statistical Area:  
1972 and Earlier Years

District, standard metropolitan statistical area, and year	All establishments		Operating manufacturing establishments		Administrative offices and auxiliaries	
	Employees (1,000)	Payroll (million dollars)	Employees (1,000)	Payroll (million dollars)	Employees (1,000)	Payroll (million dollars)
District of Columbia:						
1972.....	19.4	219.6	18.4	202.8	1.0	16.8
1967.....	23.1	178.7	22.4	168.3	.7	10.4
1963.....	22.1	147.6	21.3	138.8	.9	8.9
1958.....	21.3	114.0	20.8	109.7	.5	4.4
STANDARD METROPOLITAN STATISTICAL AREA						
Washington, DC-MD-VA: <sup>1</sup>						
1972.....	54.9	578.7	52.2	534.5	2.7	44.2
1967.....	55.5	410.1	53.5	384.3	2.0	25.8
1963.....	50.1	324.3	47.0	291.3	3.1	33.0
1958.....	34.7	177.7	34.0	172.1	.7	5.6

Note: See appendix B for definition of Standard Metropolitan Statistical Area (SMSA) in the District.

<sup>1</sup>The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.

TABLE 2. General and Comparative Statistics for the District and Standard Metropolitan Statistical Area:  
1972 and Earlier Years

(Selected standard metropolitan statistical areas include those with 40,000 manufacturing employees or more)

Year <sup>1</sup>	Establishments		All employees		Production workers		Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	Comparative indexes and U.S. employment		
	Total	With 20 employees or more	Number	Payroll	Number	Man-hours					Percent of U.S. employment	Index of employment change	United States
	(number)	(number)	(1,000)	(million dollars)	(1,000)	(millions)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(1958=100)	(1,000)

Note: See appendix B for definitions of Standard Metropolitan Statistical Area (SMSA) in the District.

(NA) Not available. (S) Withheld because the estimate did not meet publication standards.

<sup>1</sup>For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume III, 1963 Census of Manufactures, in table 2, of the chapter devoted to this State.

<sup>2</sup>Does not include central administrative offices and auxiliaries.

<sup>3</sup>The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.

				(Z)

- Represents zero. (Z) Less than half of the unit of measurement shown (shown 50 thousand dollars or man-hours; under 50 employees).

<sup>1</sup>The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments.

TABLE 4. General Statistics for Standard Metropolitan Statistical Area: 1972 and 1967

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 29 percent      E3--30 to 39 percent      E5--50 to 59 percent      E7--70 to 79 percent      E9--90 to 99 percent  
 E2--20 to 29 percent      E4--40 to 49 percent      E6--60 to 69 percent      E8--80 to 89 percent      E0--100 percent

See appendix B for definition of Standard Metropolitan Statistical Area (SMSA) in the District.

<sup>1</sup>The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Data for 1967 are based on prior census-year definitions.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent      E3--30 to 39 percent      E5--50 to 59 percent      E7--70 to 79 percent      E9--90 to 99 percent  
 E2--20 to 29 percent      E4--40 to 49 percent      E6--60 to 69 percent      E8--80 to 89 percent      EO--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

\*General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees      BB--250 to 499 employees      CC--500 to 999 employees      EE--1,000 to 2,499 employees      FF--2,500 employees and over

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

EL--10 to 19 percent      E3--30 to 39 percent      E5--50 to 59 percent      E7--70 to 79 percent      E9--90 to 99 percent  
E2--20 to 29 percent      E4--40 to 49 percent      E6--60 to 69 percent      E8--80 to 89 percent      EO--100 percent

See appendix B for definition of Standard Metropolitan Statistical Area (SMSA) in the District.

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

<sup>1</sup>The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Data for 1967 are based on prior census-year definitions.

Note: See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (D) Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>This SMSA was defined after the 1967 census.<sup>2</sup>The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by more than 5 percent from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.<sup>3</sup>The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.

TABLE 2. General and Comparative Statistics for the State and Selected Standard Metropolitan Statistical Areas:  
1972 and Earlier Years

(Selected standard metropolitan statistical areas include those with 40,000 manufacturing employees or more)

Year <sup>1</sup>	Establishments		All employees		Production workers			Value added by manufacturer	Cost of materials	Value of shipments	Capital expenditures, new	Comparative indexes and U.S. employment

Note: See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

(NA) Not available. (S) Withheld because the data did not meet publication standards.

<sup>1</sup>For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume III, 1963 Census of Manufactures, in table 2 of the chapter devoted to this State.

<sup>2</sup>Does not include central administrative offices and auxiliaries.<sup>3</sup>The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by more than 5 percent from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.

<sup>1</sup>The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent      E3--30 to 39 percent      E5--50 to 59 percent      E7--70 to 79 percent      E9--90 to 99 percent  
 E2--20 to 29 percent      E4--40 to 49 percent      E6--60 to 69 percent      E8--80 to 89 percent      EO--100 percent

See appendix 8 for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

<sup>1</sup>This SMSA was defined after the 1967 census.

<sup>2</sup>The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by more than 5 percent from 1972 data tabulated under the old definition. Comparable 1967 data are not available.

<sup>3</sup>The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Data for 1967 are based on prior census-year definitions.
