December 22, 1939

THE FRUIT SITUATION

Summary

Market prices of most varieties of apples, pears, and grapes rose slightly, whereas those of citrus fruits declined during November. These price changes were due largely to seasonal factors. The exception were declines in prices of McIntosh and Delicious apples, which are in heavy supply this season in the East. Market prices of grapes, pears, grapefruit, and lemons in early December were slightly higher than a year earlier, but prices of apples and California oranges averaged slightly lower than in early December 1938.

The total supply of apples available for market during the remainder of the season is about the same as was available a year earlier despite the fact that the commercial crop was about one-fifth larger and exports have been reduced materially. Marketings from the beginning of the season to date have been unusually large this season. Because of the reduced export prospect for the remainder of the season, however, the supply of apples remaining to be marketed in domestic markets is indicated to be about 5 million bushels larger than the quantity so marketed during the comparable period last season. For this reason the Federal Surplus Commodities Corporation is continuing to purchase apples for relief distribution.

---

: The 1940 Agricultural Outlook Chart Book for Fruit :  
: and Nuts is now available to readers of The Fruit Situation. :  
: Any reader who wants a copy may obtain it upon request to :  
: the Division of Economic Information, Bureau of Agricultural :  
: Economics, Washington, D. C. :

Supplies of pears available for marketing after December 1 are about 20 percent below those of a year earlier but because of reduced export prospects the quantity available for domestic markets probably will be about the same as that of the previous season.

Citrus fruit prospects changed little during November. The California navel orange crop increased slightly, and the first estimate of the California Valencia orange crop is indicated to be slightly larger than the crop last year. Total orange production, therefore, is indicated to be only slightly below the record large crop produced from the bloom of 1938. California lemon production is indicated to be reduced 6 percent from last year.

#### APPLES

Cold storage stocks of apples on December 1 were reported at 30.7 million bushels, or only slightly below the 30.8 million bushels (revised) on hand a year earlier and 700,000 bushels less than the recent 5-year average. Although accurate information concerning stocks of apples in common storages is not available, there are indications that the quantity this year is slightly smaller than it was last year. The indicated total supply of apples available for market after December 1, therefore, is about the same as that available for the corresponding marketing period a year earlier.

Because the commercial crop was about 18 million bushels larger in 1939 than in 1938 and exports from the beginning of the season to December totaled only about 2.0 million bushels against 4.5 million in the same period of 1938, total marketings of apples in the fresh state this fall in the regular domestic trade have been extremely heavy, or close to 65 million bushels as compared with about 47 million last year. Market prices have reflected these heavier offerings and have averaged considerably below those of a year earlier although consumer purchasing power has been on a higher level.

In order that apple producers would not have to bear the brunt of the reduced export markets this season the Federal Surplus Commodities Corporation has purchased approximately 4.5 million bushels of apples for relief distribution. These purchases were made with the proviso that producers would divert an equal quantity of merchantable apples to byproducts or other than normal trade channels. This would indicate that approximately 9.0 million bushels have been diverted from the regular fresh fruit trade.

Despite this heavy early season movement the situation for the remainder of the apple marketing season is likely to be extremely difficult unless exports increase materially. About 2.0 million bushels were exported this season to December 1, and it is probable that only 2.0 or 3.0 million bushels will be exported after that date this year. This compares with 7.6 million bushels exported after December 1, 1938. If the present British embargo on imports from the United States were removed soon, exports might be in somewhat larger volume than indicated. With total supplies available as of December 1, 1939 about the same as a year earlier, the quantity available for the domestic fresh fruit trade probably is about 5.0 million bushels larger than a year earlier but considerably below that of 2 years earlier.

Because of this situation, grower representatives of the apple industry met with representatives of the Department recently and agreed upon a marketing program for the remainder of the 1939 season. This program provides for a continuation of purchases of high grade apples at market prices by the Federal Surplus Commodities Corporation, and for a concerted action on the part of producers in the orderly marketing of their holdings. Holdings are relatively the largest in New York and the New England States.

#### PEARS

Cold storage holdings of fresh pears on December 1 totaled approximately 1,803,000 packed boxes and 31,000 bushel baskets as compared with 2,188,000 packed boxes and 116,000 bushel baskets on the same date last year. The out-of-storage movement during November amounted to about 811,000 packed boxes and 42,000 bushel baskets as compared with the November 1938 movement of 939,000 packed boxes and 51,000 bushel baskets. The most recent 5-year average movement of pears during November totaled 694,000 packed boxes and 44,000 bushel baskets. On account of the sharp reduction in exports this season, the quantity moving into domestic markets in November was nearly as large as that of last year. Although domestic demand conditions were improved, prices in recent weeks were only slightly higher than in November. In eastern markets they were slightly higher than a year earlier.

Last year a total of 766,000 bushels (the equivalent of about 830,000 boxes) was exported after December 1, or about 36 percent of the cold storage holdings of that date. This left approximately 1,470,000 boxes for the domestic trade. Exports after December 1 this season probably will be considerably below those of a year earlier unless the present British embargo on pear imports from the United States is discontinued. The supply moving into the domestic trade after December 1 probably will be as large as or slightly larger than the 1,470,000 boxes so marketed after December 1 last season.

## CITRUS FRUITS

Prospects for the winter citrus crops changed little during November, except that the California navel orange estimate was increased slightly. The first estimate of the California Valencia crop is slightly larger than the production from the bloom of 1938. Total orange production from the bloom of 1939, therefore, is indicated to be only slightly below the record large crop produced from the bloom of the previous season. California lemon production is indicated to be about 6 percent below that of last year.

Market prices of oranges averaged slightly below those of last month and a year earlier, because of the increased marketings of the heavy Florida crop. Grapefruit and lemon prices have been slightly higher than a year earlier, reflecting the influence of smaller total supplies and improved demand conditions.
