THERE was a group at the unfenced cemetery. The Bee Parson, gaunt with the sickness that had sent him West too weak to assume a charge, seeking to make a living by the sale of sage-honey, clad in faded khaki, the dignity of his relinquished calling apparent in voice and action. Bluff Furniss, present at every affair of public importance. A quartette of dance-hall girls, wearing their soberest attire, in a group by themselves. A score of listless spectators, they could not be called mourners, save for a sob or two from the Magdalens, prone to surface emotions. Four sweating coffin-bearers. A Mexican grave-digger. A girl, hardly a woman, certainly in her late teens, clad in makeshift black, sun-bonneted in black, her pale face framed in the frill like a cameo carved from onyx.

She was as sweet and fair as the sand-lilies that bloom amid the sage, but the regular features were set in a mask, less stamped for grief than for despair and utter loneliness. Back of the hideous sunbonnet a plait of pale gold hair reached to her waist, burnished by the

sun. Upon her the beady bull eyes of Furniss were focused greedily.

"I am the Resurrection and the Life—" The voice of the Bee Parson was husky but eloquent with promise. In his faded eyes burned the fire of belief. For the moment he was no longer the tender of insects but the minister and prophet of things everlasting. The words seemed to echo in the silence and the cloudless vault of the blue heavens.

A bee or two boomed through the sage, hovering above the untended graves, darting off to more auspicious harvesting. At a distance prairie dogs squatted on their mounds, curious but alert. The sexton leaned heavily upon his shovel, the onlookers stood inert and apathetic. Only the voice of the Bee Parson, speaking of Death and Life Eternal, held anything of hope.

A MILE away a man on horseback loped toward Vacada, short-cutting across the plain toward the windmills of the wells. The bay pony showed signs of travel—it had come thirty miles since

much as urging her to wheel and approach the decapitated death, bringing her at length, shuddering in every muscle tense for flight, to gaze and snuff at the terror. The man slid from the saddle, ground-anchoring the mare with the reins.

"There, lady-hawss, trouble's all over. Some trouble! Nine buttons to that rattler an' a dandy new skin. I'm needin' that skin, Nellie Bly, for a fancy hatband. Best I've seen yet. You take it easy a bit; you've sure got it comin' to you."

Squatting beside the snake, he trimmed the neck with his knife and stripped the skin from the firm, cream-colored flesh. The specimen was nearly five feet in full length and the skin showy with dark, greenish-black blotches vividly outlined with white upon a pinkish ground, the tail chalky white and banded with jet.

"Salt you down when we hit town," he said as he arranged the skin for traveling and remounted. The mare, patently relieved to be able to leave the vicinity, broke into a lope. The prairie dogs, that had summoned courage and curiosity

many weeks. Yore uncle died of the high cost of whisky, Alice. He spoiled himself drinking too much when it was cheap but he had to have it to live."

"He was all I had. His wife was my real aunt and they did what they could for me."

"Too bad she ain't alive." The girl ignored the sneer as his eyes wandered to a weathered cross of poor carpentry, standing askew, on the arms the fading words:

RUTH BOWMAN  
Beloved Wife Of  
HARVEY BOWMAN  
Died 19... Age ..

The figures were already obliterated. "There's nothing else for you to do, my girl," Furniss continued. "I run this town an' you know it. I come near runnin' the county. You head in where it's easy going or you'll find yourself up against it."

She drew her slight form erect, quivering under the insult of his manner, her tossed head throwing the sun-bonnet hood clear of her face.

His face grew black with rage at her scorn. "You'll do what I say," he snarled.

Catching her wrists in his powerful grip, he flung his free arm about her and forced her to him, struggling futilely, though she fought like a wildcat. Suddenly she bent and set her teeth into the back of his hand. Cursing, he released her wrists and chitched at her. Spurred by fear, the girl eluded him and started to run through the little cemetery, sobbing as she went, Furniss in hot pursuit.

Racing down the far side of the slope, the girl in her flight had set the hill between them and sight of Vacada. Panting with alarm, hindering her own best efforts, she crossed the swale and essayed the opposing ascent. Her foot touched the unstable side of a prairie dog's burrow; the soft earth gave way; her ankle twisted and she went down with a little cry of pain and apprehension. Just as Bluff Furniss came up and stooped to jerk her to her feet the cowboy on the bay mare came loping over the crest of the slope.

A touch to the flanks and the mare broke into her full stride, halting with word and rein in her tracks, ten feet from the pair. Furniss looked up, ugly at the interference. The girl tried to rise and sank back again. The cowboy slid out of his saddle and came on with a swinging gait, his young face suddenly stern, the gray eyes cold, the smiling lips set.

"Looks like a Pil trouble," he said. "That's my middle name, gettin' rid of it."

"There'll be enough if you don't vamoose," said Furniss. The cowboy laughed.

"I reckon the prairie's free. Anything I can do for you, miss? This hombre bin makin' you cry?" His quick sight had taken in the black dress of the girl, crosses and headboards silhouetted on the hilltop. He was not quite sure of the situation. He had seen what he fancied was the end of a pursuit as he had topped the rise, and he did not like the looks of Furniss. He had known others of his pattern before and he was far from a tenderfoot. The girl's tears might be those of grief, but . . .

She looked up at him, testing him with woman's instinct. She saw his stern young eyes soften, the lips relax for her.

"I was running away from that brute," she said simply.

"Ah!" The cowboy's exclamation was one of quiet satisfaction. "Got no right to hold you, has he?"

"No."

Furniss started to bluster, but the other stopped him.

"I shot one snake this mawnin'," he said in a careless tone that Furniss, himself judge of men, recognized as a screen for purpose. "I skinned him, but he had

(Continued on page 198)

## Our New Story, An Exciting Western Tale

**"THE Girl at Vacada," which starts this week, is another of the short serial stories which have proven so popular with AMERICAN AGRICULTURIST readers. It will be completed in three generous installments. Mr. Dunn sets his tale in the far southwest, still a primitive country where life is exciting and often dangerous, but full of color and romance. To all who like stories of adventure, as well as a clean love tale, we can heartily recommend "The Girl at Vacada."**

sunrise—but there was a toss to its head and a springiness to its gait that bespoke spirit and gameness. The man rode as part of the beast. The lariat at his pommel was not needed to stamp him as a cowboy, a *vaquero*. Both were young, the bay mare rising six, the man midway between twenty and thirty; both seemed charged with a surplus vitality that defied the alkali dust clouding about them, the blaze of the sun and the dreary monotony of the scene. The mare curveted; the man sang in rollicking baritone:

"Out of the sagebrush four cowboys came ridin',  
Four buckaroos who rode for Camp Ten.  
An' four better men never came out of hidin',  
Bound for the An-nu-al Bust at Cheyenne."

*Chaparejos* were in his blanket-roll back of the saddle. He wore striped pants of gray above his high-heeled boots of soft leather, a vest of the same material as his shirt. His red and yellow bandanna was silk, his Stetson a costly broadrim worn with a slight cock that matched the general air of dare-devil efficiency that the pair suggested. His hair did not show beneath the Stetson, but his eyes were gray, his nose aquiline, his shaven lips humorous above a firm chin.

The two entered a prairie dog city and the fawn-colored inhabitants scuttled and dived for safety. The horse did not break pace and the rider trusted it to keep out of the burrows.

"There was Buck Jones from Texas an'  
Slim Wood from nowhere  
An' young Sammy Wilder from Lake, Idaho;  
With Baldy Jim Harder who hailed from Nevada;  
No better *vaqueros* e'er forked a broncho  
Their saddles . . .

THE bay mare gave a sudden sidewise bound, ears back, eyes showing the rims, nostrils showing their crimson lining, muscles bunched. The man's body swayed in graceful balance, his thighs welding to the leather. In mid-jump his arm moved; there was a blue glint from his gun; its muzzle spat pale yellow flame, and a headless rattlesnake, writhing on the dirt, attested his perfect coordination. Then he soothed the mare with word and neck-patting, coaxing as

during the skinning, bolted once more for cover.

AS the Bee Parson turned away from the grave his thin face suddenly grayed; a spasm came over his features, and a fit of coughing racked his lean frame. Two men jumped for him as he swayed and eased him to the ground, where he sat with head bowed on knees. For the moment he was on the threshold of death, of his own tomb as well as that of the man over whose body he had just read the burial service.

The idle crowd gathered and were dismissed by one of the coffin-bearers with a demand to give him air. They obeyed, trailing back to the street from the low hillside while the two assistants helped the stricken Bee Parson away in the direction of his own shack and apiary.

The girl stood alone, one small fist set in the palm of her other hand, twisting and turning like a pestle in a mortar, her eyes vague, her attitude despairing. Bluff Furniss saw the rest leave, followed them a little way and then came back to the girl, treading softly on the alkali soil. The Mexican sexton had already swiftly shoveled back the loose, fine dirt, patting down the little mound where the random breeze was already fingering the friable stuff.

The sound of Furniss' voice startled the girl and she whirled round, anger and something of fear—the fear of a trapped animal—in the eyes that blazed darkly within the hood of her sun-bonnet.

"What you figuring on doing now, Alice?"

Contempt, blent with the fear and anger, forbade an answer.

"Like I told you before, I can place you down to Mandigo's. He don't rightly need but four dancers, but he'll do as I say." He eyed her narrowly, repressing a smile.

"You know I'll not do anything as common as that," she answered.

"He didn't leave you anything. If it hadn't been for me there wouldn't have been a coffin, or a grave. Nor a thing to eat in the house, my girl, for the past

**A New Chair for an Old One**  
*Re-Upholstering Not Hard if Rightly Done—Fall Recipes*

LAST fall when house cleaning time came around we were very much puzzled to know just what to do with an arm-chair which, although its wood-work was in excellent condition, sadly needed repairs to its upholstery. We first thought we would use cretonne but as this material is so easily soiled and requires so much laundering, we looked around for something more serviceable and at the same time attractive.

First, we considered the quality of the material. It must be something that would stand continual use and still not get shabby. We looked at a great many different kinds of upholstering goods and were about to give up in despair as the material that was really good looking and serviceable seemed quite beyond our reach, when the salesman showed us a manufactured material like leather, called fabrikoid. It came in a great range of colors and finishes, but the piece we finally selected was a rich brown, as this matched the other furniture in the room.

**Use the Old Covering as a Pattern**

When dressing up our old chair, the old leather with which the cushions had been covered was removed, straightened out and used as a pattern so the new covering could be cut to fit properly. This was a very simple task, as the only thing we did was to recover the cushions for the back and one for the seat of the chair. The coverings for the chair cushions were cut somewhat rectangular in shape as the pillows are more long than wide. The covering was allowed to lap over the

back of the cushions for about six inches. This left a rectangular space on the back of the pillow uncovered, so we cut a piece of the fabrikoid two inches longer and wider than this space and tacked the corners in place so we would be sure that it would be exactly straight, then we turned the front part over the flat piece of material and sewed it in place with a coarse needle and heavy linen thread. To allow the corners to fit nicely, we cut a V-shaped piece out of each corner and lapped the goods, sewing the cut portions together. This left a slight fullness at the extreme corners which was gathered in and finished off with an ornamental button.

The goods was so soft and pliable that it folded and tucked nicely and the finished cushions are extremely good looking. We are finding it wearing well, too.

The chair itself was given a coat of transparent varnish, and when it had dried thoroughly we put the newly covered cushions in place and behold, a beautiful new chair for father! It is a joy to the whole family, too, on account of its pleasing appearance and welcoming air, and best of all the cost was very small.—MRS. RICH LUCAS.

**For the "R" Months**

**Brown Oyster Stew:**—Fry four thin slices of bacon and to the fat in the bottom of the pan add half a sliced onion and two tablespoonfuls of flour, rubbing it to a smooth paste. When brown add one

quart of oysters with their liquor and salt and pepper to taste. Serve as you would ordinary oyster stew with crackers or toasted bits of bread.

**Delicious Oysters:**—Put one pint of oysters over the fire and cook until the edges begin to curl, then set dish in which they are cooked in a pan of hot water over the fire, add one tablespoonful of lemon juice, and a liberal seasoning of salt and pepper. Mix two beaten eggs with three teaspoonfuls of melted butter and stir into the oysters. Cook until the mixture thickens, but do not bring to boiling point as that might cause it to curdle. Serve on toast.

**Italian Oysters:**—To two cupfuls of oysters, add one cupful of egg macaroni, broken in short lengths and cooked in salted water, one tablespoonful of melted butter and a seasoning of salt, pepper and tabasco sauce. Mix by tossing lightly with a fork, cook until the edges of the oysters begin to curl, being careful to keep from burning. To one cupful of tomato juice, add a pinch of soda, bring to boiling point, pour into the oysters and serve.

**Baked Oysters**—Toast slices of bread, not too brown. On each slice put three or four large, plump oysters, dot with butter, season with salt and pepper and set in oven until oysters are done. Just before serving lay a thin slice of lemon on top of each piece.

**Creamed Oysters:**—Cook one pint of oysters in their own liquor until the edges begin to curl. Pour in a sauce made of one-half cupful thin cream, two tablespoonfuls cornstarch, three tablespoonfuls of butter and a seasoning of salt, pepper and Worcestershire sauce. Cook until it thickens and serve in small individual dishes.

**Oyster Pie:**—Line a deep pie dish with rich pastry and bake. Remove but do not cool, pour in one pint of oysters from which all liquor has been drained and one cupful of rich cream seasoned with salt and pepper. Put on top crust and brown in a quick oven. The oysters will be done by the time crust is well browned.—L. M. THORNTON.

**SEPTEMBER BRINGS THE SMART NEW FALL STYLES**

**T**HE tunic blouse is the definitely new note in the autumn fashions. You see them everywhere, in all the shops, in gay materials and somber ones, suitable for every-day or for really dressy wear. They follow accepted lines in being loosely fitted, comfortable, and trimmed simply or not at all.

No. 2224 is made with round neck, finished at the back with a collar. It is perforated for short sleeves, if desired. In sizes 14 and 16 years, and 36, 38, 40, 42 and 44 inches bust measure. Size 36 takes 2 3/4 yards 36-inch material, with 2 1/2 yards binding. Price, 12c.

Is she starting in school again? Outfit her with a smart one-piece dress of becoming color and serviceable material. No. 2221 has style without fussiness and the schoolgirl will feel comfortable and well dressed in it. In sizes 6, 8, 10, 12 and 14 years, taking 2 yards of 40-inch material for size 8, with 3/8 yard contrasting. Price, 12c.

No. 2178 is a skillfully cut apron, easy to make, with "non-skid" shoulder straps to delight the busy housewife. The pattern comes in only one size, taking 1 3/4 yards of 36-inch material, with 7/8 yards binding. Price, 12c.

No. 2114 is an ideal dress for any figure, so it cuts in both small and large sizes. It closes at the left side, under the collar, has kimono sleeves and a simple belt finish. Sizes 36, 38, 40, 42, 44 and 46 inches bust measure. Size 36 takes 3 3/4 yards of 40-inch material. Price, 12c.

For the first day of school, No. 2237 is suggested. The diagram shows how it cuts in one piece and buttons right down to the hem at the back, making it easy to iron. Sizes 2, 4, and 6 years. Size 4 requires 1 3/4 yards 32-inch material, with 1/4 yard contrasting. Price, 12c.

**TO ORDER:** Write clearly your name, address, pattern numbers and sizes, enclose 12c for each pattern ordered, and send to the Pattern Department, AMERICAN AGRICULTURIST, 461 Fourth Ave., N. Y. City. Always keep a record of your order in case of any difficulty. Add 10c if you wish our big new fall and winter style book, full of up-to-date designs, suggestions for Christmas presents, embroidery transfer designs (the new hot-iron sort) and other original features.

**The Girl at Vacada**

(Continued from page 197)

a good-lookin' hide. Mostly I just git rid of 'em. Better take yore own advice an' vamose, senior."

"You can't run a bluff on me, stranger," said Furniss. "You 'tend to your own business. I reckon you don't know who I am."

"I'm pinin' none to make your acquaintance, but I've a good idea of what you are. Matter of fact, I jest told you. I ain't aimin' to run a bluff with you. Ruther hold the right cards—an' I'll be mighty careful how I draw."

His eyes held those of Furniss. His right hand was near his hip and the butt of his holstered gun. By some strange reflex, such as makes the crudest man take off his hat at a funeral, Furniss had left his own gun, which he carried in a shoulder sheath, in his desk in the private room at El Solaz that he termed his office. He strove to outstare the stranger but failed, surrendering the situation with a shrug.

"I'm not heeled, my friend," he said before he turned on his heel. "But I'll be looking for you later."

"I'll be right easy to find. Name's James Hughes, Jimmy Hughes. Adios, hombre."

Furniss went striding over the slope and disappeared.

(To be continued)

Always rinse glasses which have contained milk in cold water first. If put into warm water the milk will harden and be difficult to remove.—J. CARNEY.

# The Kitchen Ideal

Set a High Standard and Work Towards It

THE whole domestic life of woman is tremendously influenced by her intimate surroundings, and a bright, comfortable kitchen is the safest insurance policy for an ideal home.

First, kitchen walls demand the most careful attention, for a well-thought-out treatment in the first instance will often effect very decided economy in the long run.

Distemper can claim many advantages, and its use for kitchen walls is rapidly increasing. This, no doubt, is largely due to the fact that most of the well-known firms have specialized in the manufacture of distemper, which is generally washable; and this, together with the wide range of light colors, has resulted in washable distemper being one of the most popular methods of treating kitchen walls.

Rather more expensive, but almost everlasting, are walls which are first painted and finally enameled with a flat

Another labor-saving device that is much favored in newly constructed kitchens is the rounded corner, both for floors and ceilings. It reduces any accumulation of dirt to the minimum.

Perhaps the most attractive treatment for the kitchen is the wooden block floor, but where this is impossible, then a good inlaid linoleum is difficult to surpass. Here, again, either the parquet or tiled pattern is admirable for the purpose. There is far more economy in buying the inlaid variety than the merely surface-printed patterns. In the latter case the design is liable to disappear with frequent polishings, whereas the former, with the aid of a thoroughly good preservative polish, will outlive many successive surface-printed linoleums.

The floor-covering can often be made to link up with the walls or curtains with regard to color and even design, as exemplified in a modern kitchen where pale green distempered walls, pale green and white check curtains and darker green and white tiled linoleum were the main decorative features. Both harmony of color and the geometrical design were observed.

### Kitchen Curtains Are Washed Open

Kitchen curtains should be essentially practical, with no superfluous frills. They should be distinctly simple, so that they can be easily laundered. Personal taste must decide the question of material, but even so the scope is wide, and manufacturers have never for one moment forgotten the requirements of the kitchen. Unpatterned, fadeless casement-cloth, serviceable ginghams and block-printed linens are among the favorites.

With regard to furniture of the kitchen, it would seem that the modern ideal is to have all shelves and dressers enclosed by cupboards. Some of the recent gas and electric cookers are veritable additions to the modern kitchen, even from the point of view of appearance only, and furthermore, from the hard-working cook's point-of-view, leave nothing to be desired.

In fixing a gas cooker it is best to arrange it so as to insure a left-hand light if possible, and while mentioning this it should be noted that the general arrangement of the kitchen is important. The individual pieces in the kitchen should be so placed as to avoid any unnecessary running backwards and forwards, and retracing of footsteps. Here, of course, some of the really well-constructed kitchen cabinets come to the rescue, and no kitchen is complete without one. It is the housewife's best friend.—JULIA W. WOLFE.

### Digging and Storing the Sweets

SWEET potatoes are not so easily kept as Irish potatoes, but I have kept them and know of others keeping them, even to seeding time the next year, and with no facilities other than those everyone can have. In the first place, it must be remembered that digging and drying is more than half the battle with sweets. If dug when the ground is either muddy or so hard you cannot dig without bruising, you will have little chance of saving them. They should be dug when they will come out clean and not be handled roughly at any time, for they bruise readily and rot where bruised. Dry thoroughly in shade before putting away. For small supplies packing in barrels of sand is about the best way, keeping in a warm even temperature.—BERTHA ALZADA.

When ironing, some housekeepers find a sprig of cedar very satisfactory for oiling the iron.

\* \* \*

Water-glass for preserving eggs should be used in the proportion of one part water-glass to nine parts of water. The eggs should be clean, smooth, and infertile; the container a clean earthenware crock.

### Teacher's Pet

WHEN I was just a little lad,  
She taught the District School,  
And though I really worshipped her,  
I said she was a fool.  
For fear the boys would laugh and jeer  
And call me "teacher's pet,"  
And though the years have chastened me,  
Her smile I can't forget.

One day in strolling round the room,  
She chanced to stop by me,  
And idly stroked my "carrot" head,  
Such anguish should not be!  
My flaming face was target  
For boyish jokes and jeers,  
And hotly I decided  
To settle all my fears.

Next day I came all spick and span,  
She praised me for my looks,  
While all the boys, like imps of hell,  
Made smirks behind their books.  
Ere long she paused beside my seat,  
And pressed her hands down hard,  
Then horror stricken hurried out,  
My hair was greased with lard!  
—Esther H. Doolittle.

finish. The number of coats necessary depends entirely upon the amount of money to be expended, but given sufficient enamel of good reputation, and good walls, the interior of the kitchen can almost rival porcelain.

### Two-Toned Walls Popular

Quite a favorite method of treating the walls is to have them enameled or distempered in contrasting colors—the upper half being carried out in a light shade and the lower in a dark shade.

Glazed bricks, too, are much in favor on account of their brightening effect, and many a naturally dull kitchen would be made a far more inviting room if glazed bricks were used for the lower part of the walls. Now that they are obtainable in every color, these bricks can put forward their claims purely from an artistic point of view in addition to being easy to clean, durable and exceedingly hygienic.

Where the strictest immediate economy has to be considered, there is much to be said in favor of varnished paper, which is also washable. This can be obtained in a variety of tiled designs, which are more suited to the kitchen surroundings than a fanciful floral pattern. The geometrical severity of the square or rectangular tile somehow seems more in keeping with the methodical régime of the kitchen.

### The Less Woodwork, the Less Dirt

In the ideal kitchen woodwork is conspicuous by its absence—that is to say, all non-essential woodwork, such as skirting-boards, etc., should go, and what does appear should be plain with no quirks or beadings to harbor dust and germs. All doors should be entirely innocent of ornament; panels and ledges must be foregone.

# UNION CARBIDE

makes washday  
a holiday

**F**IRST the water-heating. The Carbide-gas water heater delivers hot water a few minutes after it is lighted.

Then for cooking on washday. Time is valuable and much of it is saved by the convenience of a Carbide-gas stove.

And finally for ironing. The Carbide-gas iron saves many steps and minutes, by making it unnecessary to change irons. It insures better ironing because it maintains an even temperature.

Thus Union Carbide gas makes washday's tasks lighter, and when evening comes wives and daughters are not too tired to sit under the Carbide-gas light in the living-room, and sew or read.

Union Carbide itself is a manufactured crystalline material, in general appearance like crushed granite. Dropped into water, it immediately produces Carbide gas. This contact with water is made in a simple, easily understood, automatic apparatus known as a generator. From the generator the Carbide gas is piped throughout house, porches, barns and poultry buildings, by means of concealed iron pipes.

Highest insurance authorities rate Union Carbide-gas lighting safer than the illuminants it replaces.

More than 409,000 plants using Carbide gas for lighting and cooking have been installed in the past 25 years.

Interesting booklets are ready for you. Send for them today.

# Reviewing the Latest Eastern Markets and Prices

## MILK PRICES

THE Dairymen's League Cooperative Association announces the following prices for the month of September for milk testing 3% in the basic zone of 201 to 210 miles from New York City: *Class 1*, milk used chiefly for fluid purposes, \$2.60 per 100 pounds; *Class 2A*, used chiefly as fluid cream, \$1.90. If skim-milk is used for any other purposes, additional payment over this base price is added, depending on use. *Class 2B*, used chiefly in the manufacture of plain condensed milk and ice-cream, \$2.05; *Class 2C*, used chiefly in the manufacture of soft cheese, \$2.05; *Class 3*, used chiefly in the manufacture of whole milk and sweetened whole condensed milk, powdered and evaporated whole milk, \$1.45; *Classes 4A and 4B*, based on butter and American cheese quotations on the New York market.

### Sheffield Producers

The Sheffield Farms Company Producers announce the following prices for September for 3% milk in the 201 to 210-mile freight zone: *Class 1*, \$2.60 per 100; *Class 2*, \$1.70; *Class 3*, \$1.55; *Class 4*, to be determined by market quotations of butter and cheese.

### Non Pool Cooperative

The Non-Pool Dairymen's Cooperative announced that the September price for *Class 1* milk is \$2.40 per 100 pounds; *Class 2*, \$1.85; *Class 3A*, \$1.55; *Class 3B*, \$1.45.

### Interstate Producers

Interstate Milk Producers Association (Philadelphia) receiving station price for September for 3% milk in the basic zone of 201 to 210 miles from Philadelphia is \$2.19. In the 101 to 110-mile zone the price is \$2.29.

### August Pool Prices

The League announces August pool prices as follows: Gross price \$1.72; deducting 8 1/2c for expenses leaves a net pool price of \$1.63 1/2; deducting 10c on certificates of indebtedness leaves a net cash price to farmers of \$1.53 1/2.

## FANCY BUTTER FIRMER

As the week ending September 13 progressed the market for fancy butter steadily developed stronger. This firmness on top grades of creamery is due partially to an improved demand for such stock and partly on account of the relatively small portion of such stock that meets the requirements of the better trade. It looks as though prices were holding

their own all along the line, for shippers are reporting a little better consumption demand, and buyers are giving evidence of more confidence. Chain stores also are operating very well. There is considerable complaint of too much salt for one thing and a lot of creameries still show the effects of hot weather. This is more true, however, of Western make.

The market is not any too good as yet, and there isn't the free feeling that we would like to see. Advices state that cool weather in nearly all parts of the country and good fall pastures will keep the make of butter way ahead of the output for September, 1923. There is too much butter in the country to see much of an advance on average-run stocks.

## CHEESE MARKET MUCH FIRMER

The cheese market has taken on a decidedly firm tone from the opening of the market on the 8th and this tone has gained consistently since. The west is offering cheese very sparingly and the dealers in New York are somewhat inclined to raise asking prices in view of higher replacement costs. Up-state dealers are reporting more active business and there is a greater feeling of confidence in the market. There is a general tendency to ask more money for the more popular styles. The make in up-State New York is rather limited, and under these circumstances it is reasonable to expect that the market will continue its strong position.

## FANCY EGGS HIGHER

Fancy eggs have taken a jump and the finest Jersey and nearby hennerly whites are bringing anywhere from 57 to 60c a dozen with a few marks, specially candled and graded, bringing 1 to 2c more. Fancy nearby white eggs have been in light receipt right along, and they have been meeting a generally firm market. Receivers report difficulty in getting enough of this real fancy stuff to fill immediate orders, and as a consequence the market is in the sellers' favor. With approaching colder weather it is reasonable to expect that this condition is going to persist. On medium and average grades, trade is only moderate. Most buying is very selective. Storage eggs are still competing with this average run of fresh stock, and naturally have an effect on clearances of this stock. Storage eggs are coming out quite freely for this time of the year.

## LIVE FOWL MARKET STRONG

Live fowls both freight and express have met a very firm market from the time the market opened on the 8th. Freight shipments from western points have not been heavy enough to cause any weakening of prices with the result that the express market has benefited right along. In fact prices had a tendency to harden up to Wednesday, gaining from 28 to 29c on heavy stuff with a 1 to 2c premium for especially fancy marks. The demand has been exceedingly good and express fowls have been averaging 2 to 3c higher than the freight market. The market for express chickens was not too good on Monday but the fowl market had a tendency to carry them over so that by the middle of the week the market was clearing promptly and in the sellers' favor.

September 24, 25 and 26 will be the days to hit the market with fat fowls, turkeys and ducks, to supply the Hebrew holiday trade that falls on September 29 and 30. Shippers who are planning to meet this market should so arrange their shipments that they will arrive on those days. This means shipping either on Monday or Tuesday, the 22nd and 23rd, depending on location.

## POTATOES SLIGHTLY BETTER

There is a slightly better tone and feeling in the potato market, although this feeling has not been reflected in prices as yet. Long Islands are averaging around \$2 per 150 pounds f. o. b. Riverhead which means in the neighborhood of about 65c a bushel to growers in the field. South side Green Mountains have reached 75c a bushel. Strange to say, Jersey Cobblers are \$2.10 per 150 pound sack f. o. b., slightly better than Long Island. The reason for this is said to be that a good deal of Jersey stock is going South and West. Severe weather has hindered digging in these sections and consequently Jersey growers are benefiting.

## The Fruit Outlook from the Market End

(Continued from page 192)

pects look that way at the present time. There are some orchards that report a good crop but such reports are spotty, taking the entire territory of western New York as a whole it doesn't look good for Baldwins this year. Where there is a crop they are reported to be rather small.

### Good Activity in Export Trade

There is good inquiry and good activity in the export trade. There is good inquiry for both Baldwins and Ben Davis for export. One operator we have been talking to has had quite a call for both of these varieties from Norway and has shipped several cars of Ben Davis from Virginia that have been bringing in the neighborhood of \$3 to 3.25 F. O. B. shipping point for 2 1/4-inch stock.

### Baldwins Scarce in New York

According to R. L. Gillett, Agricultural Statistician, in a letter to the members of the New York Horticultural Society, reports from 167 members of the society indicate a harvest that will be 22 per cent. less than last year's, speaking only in terms of marketable fruit. The report states that McIntoshes are about the same as last year. Baldwins however are reported as only 31% of a crop compared with 68% last year or less than half as good. Northern Spies are only 39% compared with 46% last year. Greenings are better than last year, members report 59% normal compared with 38% in 1923. In general the relationship between percentages this year are fairly uniform in western New York and Hudson Valley sections.

Mr. Gillett reports that of the 167 members that replied to a questionnaire, only ten reported on prices of tree-run apples and fifteen of A-grade pack. For tree run stock western New York ranged from \$1 to \$2.50 per barrel,

and in the Hudson Valley from \$2.25 to \$3, with an average for all reports of \$2.75. The range of A grade was from \$3 to \$4 per barrel in western New York to \$2.75 to \$6 in the Hudson Valley, with the average of all reports at \$3.97. Many members reported price offers had not started.

## The Dairy Outlook

(Continued from page 195)

transaction. WHY NOT EAT THEM? We have been boarding them. Let them board us a spell. In the early days, our fathers did not buy meat at expensive prices from the butcher; they grew it. They cooperated with their neighbors so that a fresh beef was killed frequently in the neighborhood. If you do not want to cooperate with your neighbor, eat what you can of the beef and eat the rest. If we could fatten, sell to the butcher or eat on our own table, ten thousand poor producing cows in this territory this winter, it would be the greatest single step for dairy improvement, particularly for better marketing, that has been done in many a long day. And the best of it is, it can be done with profit.

The following is just a simple agreement to get enough farmers to work together on this suggestion to make it worth while. Why not sign it and send it to the AMERICAN AGRICULTURIST, 461 Fourth Avenue, New York City? If you do not want your name made public, say so when you send in this slip.

I hereby agree to kill or sell for meat purposes before March 1, 1925, at least one dairy cow from my herd.

It is understood that this is not a promise until at least one thousand farmers in the New York milk-shed have agreed to do likewise.

Signed.....

**Embury SUPREME OIL LANTERNS**

You cannot go wrong with an Embury. There is no other lantern anywhere that gives you so much for the money—more light, more convenience, better and longer service, at the same cost as ordinary lanterns.

Don't take our word for it, but compare the Embury with any other lantern and judge for yourself.

No. 160 for \$1.50, (except in the far west) is a beauty. Burns 35 hours, gives 20% more light, and is wind-, dust-, dirt- and rain-proof.

There's an Embury for every purpose

# Feed the Pullets Grain

*They Can't Do Much on Green Grass and Bugs*

DAIRYMEN know absolutely that if they want a good producer they have got to raise the cow from calfhood in the most approved manner. The calf and heifer has got to have the proper feed right up to the time she freshens. She's got to grow right in both bone and flesh. She's got to be fully developed. Why, in the name of common sense, do some folks think that they can raise high producing hens on green grass and bugs?

Just because a pullet can roam of her own free will through barnyard and field, is no reason to believe that it can get enough food to satisfy the requirements of its growing body. A hen has got to have a certain amount of backing to produce, the same as everything else. And she's got to have the right kind of feed to do it. If a pullet is on range the little she picks up just about takes care of the amount of flesh she runs off. Range is good for exercise and green food, but it doesn't supply those elements that come in the regular ration.

### Recommended Rations

The ration should not only consist of grain, but mash should also be included. A good grain mixture consists of five parts of cracked corn, two parts of barley, two parts of wheat and one part of heavy oats. This is fed in the litter in the morning. As the birds approach maturity they can be fed whole corn at night, all they will clean up.

In addition to the grain a mash should be before the flock at all times. A good mixture consists of equal parts of wheat bran, wheat middlings, corn meal, ground oats and meat scrap, with about twelve ounces of salt per every two pounds of the mixture. If it happens that the birds refuse their grain feeding, it is a good idea to take away the mash for a portion of the day and immediately reduce the amount of grain that is being fed. Given these two mixtures and enough green food, fresh water and oyster shell and a good clean dry place to sleep in, the pullets should come into laying in a good husky and healthy condition.—FRED WILLIAMS, New York.

### Hens Versus Pullets

ADDIE GRAVES

EXCEPT for the reservation of fancy breeding stock, it is the custom of some poultrymen to kill off everything each year, retaining only the pullets. This is because the pullets are supposed to lay more eggs in a year than the hens. But the pullet's first year is measured from her laying age—six to seven months. She is really eighteen or more months old. It costs more to feed the pullet to laying age than it does to feed the hen while she is shedding her feathers and it is a great deal of work to rear the pullets.

There are, also, two things to consider in regard to the eggs—yes, three. Buyers cut the price of pullet eggs severely now. At the present writing the New York market is paying from 50 to 60 cents for hen's eggs and from 35 to 40 cents for the best pullet eggs. Of course, all pullet eggs are not smaller than hen's eggs but there are a good many small eggs the first of the season during the high egg price.

As soon as the hatcheries start, the old hen's eggs will bring twenty-five cents a dozen, sold to them, more than will pullet eggs. This consideration holds good for three months. This fact nets us \$20 a

Mrs. Duck: I can't find that egg I produced this morning anywhere.  
Mrs. Hen: You must have mislaid it. —Life.

week on the hatching eggs from 300 hens for twelve weeks, amounting to the neat sum of \$240.

There is a third consideration in favor of the old hen. From the time she begins to lay, she usually lays an egg every day unless she is sitting, and our hens do not sit oftener than the pullets. Last year, the sitting birds were mostly pullets and we could do nothing with them, and we wanted 500 hen-hatched chicks.

As for records of hens up to six years of age, the following are from the University of California College of Agriculture:

	Pullet Year	Year-ling	3rd Year	4th Year	5th Year	6th Year
Hen No. 4107	178	173	144	179	157	...
Hen No. 4162	176	160	186	182	180	166
Hen No. 5123	161	189	194	170	...	...

### Water, Green Food and Milk

In last week's issue, on page 185, the name of the writer of "Getting the Pullets Ready for Winter" was omitted through an oversight. The article was written by Mr. R. A. Steele of Ohio. The following is also by Mr. Steele relative to those factors mentioned in the heading.

AS an egg contains over 65% water it is very essential that the birds have all the fresh water that they can drink, as it is the cheapest egg-making material. If the laying houses are equipped with running water the birds are assured of plenty of fresh water. If the conditions are so that you have to use drinking fountains, wash them out once a day with some kind of a brush.

I have found that by taking the chill off the drinking water in cold weather it is possible to increase egg production considerably. Do not make the mistake, however, by giving them hot water, as this will give them the diarrhea.

There are lots of different makes of non-freezing drinking fountains on the market that are very good. They will also keep the water cool in the hot weather.

As the pullets have been on the range with plenty of green stuff we must supply it to them when they are indoors.

When the weather is so that it does not freeze in the laying houses, hang up the cabbage, mangel beets, etc., in a wire mesh bag. When the weather is freezing cut the cabbage into halves or quarters, also the mangel beets, and throw them on top of the litter so the birds can eat it up before it freezes. Any greenstuff that is frozen is very dangerous to feed the birds.

Milk of all kinds, such as skim-milk, buttermilk and semi-solid buttermilk is very nutritious and should be given to the birds at all times.—R. A. STEELE.

### Keeping the Henhouse Clean

I STEPPED into a neighbor's henhouse one day that made me gasp as soon as the house was opened, and it had a third of the front open with a hardware wire screen over windows. It had been left to get so foul that the ammonia smell was strangling. Mites and lice could get a firm hold where things were given such care, and this was an exceptionally well-built house at that, with concrete floor. No matter what kind of house we have, it should be cleaned out at least often enough to keep down foul odors to excess, and all water and feed vessels should be cleaned out often. Then the scratching material should be cleaned up every week or so and new put in its place.—L. H. COBB.

# To-morrow's Telephones

So vital a factor has the telephone become in American life that the demand for it would undoubtedly grow even without increases in population. New businesses are founded; others expand. New homes are established in town and city, in suburban dwellings and apartment houses.

To meet the needs of America, to-day and to-morrow, with the best and cheapest telephone service, is the responsibility of the Bell System. The telephone will grow with the population and prosperity of the country, and the plans of to-day must anticipate the growth of to-morrow.

The service which is given to-day was anticipated and provision was made for it, long in advance. Money was provided, new developments were undertaken, construction work was carried through on a large scale. The Bell System, that is, the American Telephone and Telegraph Company and Associated Companies, has continuously met these requirements. It has enlisted the genius of technical development and the savings of investors for investment in plant construction.

Over 315,000 men and women are owners of the American Company's stock and over half a million are investors in the securities of the System. With a sound financial structure, a management which is reflected in a high quality of telephone service, the Bell System is enabled to serve the increasing requirements of the American public.

# The WINDMILL with a RECORD

The Auto-oiled Aermotor has behind it 9 years of wonderful success. It is not an experiment.

The Auto-oiled Aermotor is the Genuine Self-Oiling Windmill, with every moving part fully and constantly oiled.

Oil an Aermotor once a year and it is always oiled. It never makes a squeak.

The double gears run in oil in a tightly enclosed gear case. They are always flooded with oil and are protected from dust and sleet.

The Auto-oiled Aermotor is so thoroughly oiled that it runs in the slightest breeze. It gives more service for the money invested than any other piece of machinery on the farm.

You do not have to experiment to get a windmill that will run a year with one oiling. The Auto-oiled Aermotor is a tried and perfected machine.

Our large factory and our superior equipment enable us to produce economically and accurately. Every purchaser of an Aermotor gets the benefit from quantity production. The Aermotor is made by a responsible company which has specialized in steel windmills for 36 years.

# To Make Farming More Profitable

## Fordson

To make farming more profitable—to make the farmer's life and the lives of his family happier and more abundant, is the aim of the Ford Motor Company in manufacturing the Fordson Tractor.

For by helping him to get more work done in less time and at less cost than formerly, the Fordson Tractor lightens the farmer's burden.

The vast resources of the Ford organization and the highly scientific factory methods which produce them so economically in such large numbers, and of such splendid quality, make possible the low cost price of Fordson Tractors and their superb performance.

Nowhere can the American farmer secure for so little a Tractor that will accomplish so much. The Fordson Tractor is a practical, time-saving aid in plowing, harrowing, planting, mowing, harvesting, threshing, road-mending and scraping, timber-cutting and sawing, hauling, pumping, excavating—in fact every duty the farmer must perform which requires power.

Ask your Fordson Dealer, or write us, for an actual demonstration, on your farm, of what the Fordson can do for you.

# Boys and Girls Had Good Time at State Fair

*Jefferson and Orange County Junior Project Teams Share in Gold Medal Honors*

THIS year's Boys' and Girls' Junior Project camp at the State Fair was without a doubt the best that has ever been held. There were something like sixty boy and girl demonstrators in the agricultural and home-making contests, to say nothing of those who attended the camp to take part in live stock exhibits or the stock judging contests. The counties represented in the Junior Project demonstration contests were Delaware, Orange, Oswego, Otsego, Madison,

Here is the Jefferson County team that won the gold medals in the agricultural project contest

Genesee, Allegany and Steuben (both counties represented by one team), Nassau, Onondaga, Tioga, Wyoming, Chenango, Livingston, Jefferson and Rensselaer.

Prof. W. J. Wright was superintendent of the entire boys' and girls' department and Dan Chase of the State Department of Education at Albany, had direct charge of the camp. He did a good job. I attended the camp on Friday and it certainly was great to see how much the boys and girls got out of it.

The outstanding improvement this year in the camp was the dining-room, in charge of Miss Stevens, who is Assistant State Leader, directing home-making projects. Before this year the boys and girls had very unsatisfactory conditions to face as far as the meals were concerned, to say nothing of sleeping quarters. Last year there

By FRED W. OHM  
Associate Editor, American Agriculturist

was some improvement when the dining-room was established on the porch of the fair grounds restaurant but the weather was so cold that the boys and girls were not at all comfortable. This year the second floor of the restaurant was reserved for the Juniors and it was ideal. Between courses they sang their club songs, gave yells and had a good time. If the sleeping accommodations and demonstration quarters were only as good as the dining facilities this year, it would be magnificent.

There is no question but what the boys and girls need a building of their own on the grounds that will take care of their dormitory problems and dining-room and at the same time be adequate to house their exhibits, at least their demonstrating booths.

This Junior Project demonstrating contest at the State Fair has become quite an institution and with a little encouraging it is going to become one of its outstanding features. If there were a boys' and girls' building on the grounds, there would be no question of it becoming one of the most popular, for folks naturally like to hear boys and girls get up and tell what they have done. During the past five years there has been a magnificent gain in the work. The writer was the first full-time county club agent in New York State and it is mighty gratifying to see what strides have been made since that time we had a Junior Project Exhibit.

In the demonstration contest, the agricultural and home-making projects were divided. Miss C. C. Williams and Miss Mary L. Chase, of the State College of Agriculture, judged the home-making projects and the *writer* judged the agricultural projects. The North Country and the lower Hudson shared the honors for the gold medal awards. The girls' team, consisting of Evelyn Hock and Catherine Berrian of New Hampton, Orange County, were by far the outstanding home-making demonstrators. Both Miss Williams and Miss Chase marveled at the ability of the girls in the demonstration of the selection of materials

and lines in dressmaking. This demonstration was all the more creditable for it was original and home-trained.

Jefferson County shared the honors with Orange, two of its boys, Kent Stoodley and Lawrence White, both of Adams Center, taking the gold medals with their rope splicing demonstration. It was the first time that a mechanics project had ever been given at the State Fair and the two Jefferson County boys did magnificently. My only criticism of their demonstration was that they might have used a little larger rope and had the two ends of different colors in order that the audience could more easily follow the splice.

Oswego County took second honors in the home-making contest with Onondaga third. In the agricultural projects, Chenango County took second with its garden planting demonstration

Here are the Orange County girls who won the gold medals in the home-making contest

and the Onondaga boys, not to be outdone by their fair colleagues, just nosed out Orange County by a single point for third place.

The counties represented and the personnel of the teams are as follows:

Allegany-Steuben: Vera Bovee and Mabel Jones of Canesteo demonstrated how to make a kimono dress. Frank Randolph and Earl Wilcox of Bath, showed how to treat potato seed for disease.

(Continued on page 219)

## Developing Farm Leadership Along Business Lines

*An American Agriculturist Wednesday Evening Radio Talk Broadcast from WEAJ*

By O. S. MORGAN

*School of Business, Columbia University*

FARMERS of America want additional farmer leadership. They freely and vigorously state their want. Friends in town and city heartily agree and ask what is to be done about it.

Farmers heretofore have needed added leaders, but have said little about it, few recognizing the fact, many actually opposing moves to supply leaders. Such was the case when they needed agricultural college trained leaders, and when in 1855 Michigan boldly started out to meet the need. Another faint, at least far from vociferous call was for leadership from agricultural experiment station workers, first volunteered in 1877 by Connecticut. In a somewhat similar way was provided new leaders, when in 1889 the United States Department of Agriculture was organized, headed by its cabinet member secretary. We might trace, in connection with outgrowths of these three leading features of our system, a similar tendency on the part of farmers. But time limits us to-night. Since 1900, however, the farmer's voice has been noticeably developing strength, and since 1917 he can shout with the best of them.

Now, three years after the crest of the crisis, twice or three times as many years after its start, a partially satisfactory leadership has been worked up to meet the farmers' need and demand for safe guidance in these larger aspects of their business.

Let us stop to consider—is it likely that this occasion is to be the last widely felt one for emergency leaders? Does it not seem certain that other crises even more costly to farmers will occur, and that, too, in near-by years, probably in this generation?

Our national system of agricultural leadership, barely set forth in earlier remarks, is, when we consider the extent and diversity of the production area served thereby, the most efficient in the world. This system if not perfect is not therefore adversely criticized. We depend chiefly upon the leadership of the colleges of agriculture with their offerings of short and long courses together with much of the rest of the system. In national emergencies, however, we need additional leaders, trained up by the system PLUS. The *plus* we shall call the specialists with additional training in university and business.

One after the other, telephone, rural mail delivery, automobile, good roads, this consummate communication medium, the radio, has set out thought and action free and freer. The young man or woman preparing for agricultural leadership should take a lesson from this procession of seven-day wonders. Training that yesterday would win chief places will to-day hardly secure second-rate. So where formerly a professional training in a four-year course in college was the last word, now, additional preparation is the necessary investment.

The university course should be in part general, this to include selected studies in economics, sociology, psychology, mathematics, the natural and physical sciences. In part the course should be specifically a business course, studies carefully selected from accounting, advertising, banking,

finance, industrial management, insurance, law, marketing, statistics, and transportation.

After completing two or three years of university or post-graduate work the future leader of farmers should be positioned in some well-organized city business. Positions will be waiting for him in accounting, banking, insurance, journalism, marketing, transportation, and other pertinent business in office, factory, store or street. Active participation in this type of business training should persist for two years or more, until he had a trustworthy sample of city business methods.

If hundreds of men and women having this kind of super training were now ready for leadership they would effectively supplement the more narrowly trained and shortly treble the number of efficient leaders. The benefit to farmers would be twofold: first, the courage and assurance to carry on, and next, marked material prosperity.

These remarks are prepared primarily as suggesting a plan for those young people who have already demonstrated farmer leadership timber or are ambitious to do so. Individuals of this quality are entitled to place and power among farmers on the usual condition; viz., exceptional fitness. Large, extended, wisely selected preparation in addition to the certain ability to interpret farm life is demanded of prospective leaders. Positions of great and immediate service to farmers wait for men and women who will make this large preparation. Similar heroic preparations have supplied adequate leadership to other producing classes in America. A no less heroic course will supply farmers.

## Getting Down to Rock Bottom

*Some Experiences of the Western New York Fruit Growers' Cooperative*

**T**HE Western New York Fruit Growers' Cooperative Packing Association, Inc., has recently undergone a rather drastic reorganization which both Executive Committee and Board of Representatives, as well as outside competent opinion, believe have put the organization on a sounder basis than before. So many inquiries have come to the writer as well as to the office and so many rumors are afloat, that it seems desirable to set forth frankly the essential facts. AMERICAN AGRICULTURIST readers have previously been informed of the progress of the movement and are entitled to this information. I shall speak frankly but omit as far as possible reference to personalities. These are inevitably involved but they are after all subordinate to sound principles and policies. And it is a pleasure to be able to say that no personal criticism, no charges of gross incompetency, no dishonest act attaches itself to any of the individuals concerned. In fact it would be hard to find a more sincere, devoted and hard-working group of employees in any cooperative organization anywhere.

### Responsibility of Membership

It is one of the advantages of the cooperative method of marketing that the organization must be responsive to the will of its members if it is to survive. The full force and significance of this will is frequently not expressed in votes and formal action but rather manifests itself in support or lack of it—back home. So it has been with the Western New York Fruit Growers' Cooperative Packing Association, Inc. For some time there has been a feeling among members, and non-members too, that the overhead central costs were too high. In spite of the fact that the finances of the Central had been fully presented at annual and other meetings and the annual budget and special campaign expenses had been approved by members through their representatives at these meetings, this feeling of too high central costs would not down, and more and more expressed itself in lack of support of the organization. It was inevitable that the budget be brought into harmony with this view of the membership if support was to be maintained and growth assured.

The directors, or executive committee, had been aware of the feeling of the members and of the necessity of lower costs of unit operation for some time. There were two ways to correct the situation; cut down expenses to the bone and increase the number of cars of fruit handled. The Directors adopted both. They first asked the management to prune every unnecessary item from the budget and this was finally done. They next approved of a vigorous and, as the event proved, an expensive effort by the management to increase membership and put it on a five-year basis. This resulted in the establishment of four new locals, in doubling the membership in five old locals and in slight growth in a few others. This growth was, however, more than offset by the

By M. C. BURRITT

withdrawal of five or six old locals who didn't want a five-year contract or for other reasons, and in the inability of several others to function because of lack of volume locally.

It must be admitted that the campaign as a whole for increased tonnage on a five-year basis was a practical failure as measured by tangible results. Superficial reasons for this failure were delay in getting started and in carrying it on rapidly enough, and failure of team captains and members in the majority of the localities worked in to function so as to get results. Back of these reasons were the real ones, viz., that too many

was asked to recommend further budget revision.

There had already been some discussion of the advisability of using Federal instead of State grades because of their better standing in the markets and because Government inspection at shipping point would then be available. Federal grading and inspection had been tried out in New York with satisfaction by potato growers. Inspection could be had for four dollars (\$4.00) per car. The cost to the association of doing its own inspection had been pretty high even in the big crop year of 1922, but with reduced tonnage of the present season inspection costs would have been prohibitive. Hence after conferences with officials at Washington and Albany and the securing of promises that inspection could be made available if requested, the general manager recommended the adoption of Federal grades, and the substitution of Government for our own inspection system. This meant the dropping of three inspectors, which would also curtail field work with locals and put many operating duties back on locals and upon the sales force. The directors accepted the recommendation and thus effected a net saving of \$10,000 to \$12,000 per annum. Whether the organization can operate as smoothly and efficiently under the new plan remains to be seen. The directors believe that it can and will.

### An Encouraging Action

**N**OTHING that has happened among farm organizations in a long time is more encouraging than the drastic overhauling of the Western New York Fruit Growers' Association which is explained by M. C. Burritt on this page. It will interest not only every fruit grower, but every other farmer, whether he is for or against the cooperative way of marketing. One of the best things about this action was that the demand came from the members and was heeded by the directors.

There are other cooperative organizations that must have the same overhauling, the sooner the better, for they never can succeed until too expensive overhead is cut down. Farming is never a business of big profits. It can therefore never support big expenses either in production or marketing. It takes real courage to do what the directors of this packing association have done. It often means real injustice, too, to employees who have served faithfully and well. But it is sometimes necessary to use the surgeon's knife to save the patient.—The Editors.

members lacked sufficient confidence in the performance of the Central (the pool price in particular) to date to sign five-year contracts, and lacking it themselves, they failed, of course, to inspire confidence in others, together with the general feeling that the cost of the Central was too high.

### The Problem

Immediately after the annual meeting in June, the directors were faced with the problem of a budget for 1924-25. The management presented one which, though reduced 15 to 20 per cent. from the previous year, was still too high for the tonnage in sight. Action was postponed until the August 15 crop estimates were in so that a budget could be more intelligently determined in relation to the tonnage on which it would necessarily have to be assessed. Owing to a small crop in what was reasonably expected to be a full crop year, the crop estimates, instead of showing an expected increase in tonnage over 1923-24, showed an actual decrease to about one-third of the tonnage of the last full crop year of 1922-23. The effort to lower unit costs by increasing volume had failed. Then it became clear to the directors that nothing but the most drastic budget revision would keep costs down to a reasonable percentage or per car basis. So the management

in the management itself. Expensive management can be justified only when it can be spread over large enough tonnage so that results can be produced in proportion to unit costs. When the number of units is so small and the cost of management so high that it amounts to practically ten dollars or more per car, it is almost impossible for any management to show a profitable return on itself. In this situation there was no alternative. Less costly management must be substituted. This was done by releasing the general manager and temporarily designating President W. J. Hall of Lockport, himself a grower and with experience as a local superintendent, as acting manager. The chief function of a general manager is to say "yes" and "no" as occasion requires, and to hold himself available for consultation with division heads. With experienced men in these positions, such as L. S. Benham, Auditor and Office Manager; L. E. Waters as Federated Salesman, and Geo. Miller in charge of field service, and experienced helpers, and a veteran grower at the helm, the directors believe that the association is adequately equipped to handle the fruit of its members and at greatly reduced costs after relatively small obligations incurred to date are liquidated as they will be this year. The association is now

### The September Outlook

IT is figured that the average farmer of the United States is \$200 better off than he was two months ago. The farmer does not have that much more in cash, but the inventory value of grains in the barn or crib and the prospective value of growing crops on the average farm is increased by that amount. Grains, hogs, and cotton have furnished the bulk of the estimated increase in farm wealth.

The United States Department of Agriculture in a recent statement says:

"Agriculture has traveled a long lane of distress but the upturn in wheat and hogs and the well-sustained cotton prices have brought it to a turn in the road. This has been widely heralded and numerous urban spokesmen have been busily counting the farmers' blessings ever since corn was knee high."

Of course it must be kept definitely in mind that not all the farmers will share in this increased prosperity. Increased grain prices mean more costs for dairymen but at the same time there is a certain solidarity about agriculture so that when one part succeeds, sooner or later all the rest come along. There is, for instance, a definite tendency in milk prices.

The wheat farmers of America who suffered the most from hard times are the ones who will get the biggest relief from increased prices this fall. It is estimated that the wheat acreage in the northern hemisphere, excluding Russia, is about 4½ per cent. less than last year. At the same time the United States has a large crop now estimated at 836,000,000 bushels, which is 50,000,000 bushels more than in 1923. Only seven times in the past 55 years have we had such a large crop, and the price on the Chicago market is around \$1.30 a bushel. This is a good time to call attention to the foolishness of price-fixing. In spite of the large crop of wheat in this country the price is remarkably high because it is fixed on a world market and the world's wheat crop is short.

With corn it is a different story. On a recent trip to Chicago we were impressed with the hundreds of acres in big corn fields that will not pay to harvest. The Department of Agriculture Economics at the New York State College of Agriculture says that in only three years in the past 62 has the corn crop been as poor as it is this year. Those who have corn to sell though, will

be in good shape. The price has increased from about \$.72 in December, 1923, to \$.98 in July and the cash price on the Chicago markets at this writing on September 17, is \$1.19 a bushel. For the husked corn and silage corn and other late crops much depends upon how long the frosts hold off.

The corn situation has influenced the hog market. The rise in hog prices has added about \$3 a head to the average value of 10,000,000 hogs that are now near a finishing stage, and it has added at least \$1.50 a head to the appraisal value of 40,000,000 spring pigs.

Prospects are excellent for a large potato crop throughout the East, and there is a general feeling that the prices will be good also, especially for the man who is able to store his crop and keep it in good condition until after the first of the year. Blight has already appeared and if it develops rapidly prices are likely to rise so that good sales for well graded, late potatoes can be made from the field. If we had potatoes this year we would store them, but we want to caution you that when we make a statement of this kind we do not pretend to be sure prophets. All that we can hope to do is to base our opinions on a careful study of market conditions. The above comment on potatoes is for the East as a whole. The dry weather conditions in Long Island and New Jersey, will probably result in a serious decrease in the yields in those sections.

Indications point now to a heavy cabbage yield. In other years when similar weather conditions prevailed in the cabbage sections the heavy production resulted in extremely low prices. Mr. E. G. Misner of the New York State College of Agriculture says that in view of the extremely high prices in concentrates and the low prices for milk it seems that the most complete use of cabbage refuse should be made at the dairy farms and that if the cabbage is low in price, more should be fed to the live stock. This will save grain and help the cabbage market.

For a recent review of the market and production situation in fruits, we refer you to page 192 of our September 20th issue.

In the dairy business things are not so bright although we are not pessimistic. As we have pointed out in these columns before, the amount of by-products and particularly of butter and cheese in storage is way above the five-year average. There has been only one short period in 1924 when there was anything near a shortage of fluid milk. This was in August. We have thought that the high price of concentrates would lead to less grain feeding and to a shortage of milk. Maybe it will later but at the present time there is more than enough fluid milk on the market. This may be due to the excellent pastures throughout the East, caused by so much rain and also to a somewhat lessened consumption in the city. While the present prices and conditions are discouraging, in the end, however, things must improve for the good dairyman just as they have improved for the wheat farmer, though they never will be any better for the man who tries to make a living from low-producing cows.

Much study and care is given each week to getting reliable information for our market page. A careful reading may save you money when you come to marketing your products.

### Thanks to the "Golfers"

NO BETTER proof of the interest in Barnyard Golf and the good sportsmanship of the horseshoe pitchers is needed than the way the men stuck to the job at Syracuse, even though the courts were muddy and the weather as bad as it possibly could be.

We feel that the County Farm Bureau and State horseshoe pitching contests held this summer have done much to revive interest in the good old game of quoits. On the farms all over the State, men and women too, now are playing the game more than it has ever been played before. One of the fine things about it is that it can be played anywhere; it costs practically nothing; and the skill required gives it an absorbing interest.

We have learned quite a lot about conducting contests. Next year we are going to have the biggest ever. All red tape rules will be cut to a minimum and we have already put in an order for good weather.

We want to take this opportunity of extending our thanks to the Farm Bureau men all over the State who have taken so much interest to organize the local contests. We also want to thank the contestants who came from all parts of the State to take part with such good sportsmanship in the tournament at Syracuse and we particularly want to express our appreciation to Mr. G. E. Snyder of Rochester, himself a noted pitcher, whose excellent management at the State Fair insured the success of the contest, and to Mr. D. D. Cottrell of North Cohocton, statistician of the National Horseshoe Pitching Association, who kept the complicated records for us at the Syracuse contest. Interesting results and pictures are on the next page.

### Keep Copies of Your Letters

ONE of the most important practices in all business offices is the custom of keeping copies of every letter written. If a general business office did not do this it would be in constant trouble, for it is impossible to remember just what has been said in a letter after it is mailed, and in case of a misunderstanding the other fellow has all of the evidence and all the writer has to depend upon is an unreliable memory.

The need of copies of business correspondence is constantly impressed upon us in the Service Bureau Department of the AMERICAN AGRICULTURIST. When we come to try to settle a dispute or collect a claim for a farmer he usually has little or nothing to show of the negotiations that have preceded the misunderstanding.

It is, of course, much more difficult for a farmer to keep a copy of his correspondence than it is for a business office if the farmer has no typewriter, but business letters are usually short and the extra effort spent in making a copy may save the writer sometimes a good many dollars. Incidentally, the ease of making a carbon copy with the typewriter is one of the many reasons why more farmers are acquiring typewriters.

### The Barnum Dinner

ONE of the best and most enjoyable events of the New York State Fair was the annual farm dinner given on Wednesday evening of the week by Jerome D. Barnum, publisher of the *Syracuse Post Standard*. This year over two hundred farmers attended. After the dinner, S. L. Striving, Master of the New York State Grange, served as toastmaster and introduced as the speakers Gov. Alfred E. Smith, Speaker H. E. Machold, of the New York State Assembly, Judge Hiscock, Pierpont Noyes, President of the Oneida Community and L. J. Saber, Master of the National Grange, all of whom spoke on the problems directly or indirectly affecting agriculture. Perhaps the best part of the occasion was the opportunity it gave so many representative farmers all concerned with the progress of farming to get together for a real visit and an exchange of information.

### Eastman's Chestnuts

HENRY MORGENTHAU, JR., publisher of the AMERICAN AGRICULTURIST, just told me one that I thought I would save to tell on the women folks at some farm meeting but it is really too good to keep, so here goes.

"There is certainly no use talking," said a politician to a friend, "the women have much better morals than the men."

"What makes you think so?" inquired the friend.

"Well," said the politician, "you can give a man three dollars for his vote and even then you never can be sure how he will vote, BUT YOU CAN GIVE THREE DOLLARS TO A WOMAN AND SHE WILL VOTE THE WAY SHE AGREED TO EVERY TIME!"

# Horseshoe Pitching Is On the Map

## County and State Fair Tournaments Have Given New Start to an Old Game

CONSIDERING everything I was surprised at the enthusiasm shown by the players and the interest shown by the onlookers as they watched the games. It looks as though AMERICAN AGRICULTURIST has put horseshoes on the map as a sport that in a few years will be among the leaders in New York State.

By D. D. COTTRELL

Statistician, National Horseshoe Pitchers' Association.  
Chief Score Keeper, American Agriculturist-Farm Bureau  
Horseshoe Pitching Contest, New York State Fair.

In the second group Chenango won the most games and was put into the finals. In the third group Chemung tied with Cayuga, 10 games won and 5 lost, but as Chemung had the most points they were placed in the finals. Table A gives a record of all the games played by all the teams that completed the three group series.

After the preliminary series it was agreed that the three winning teams should each play each other three 21-point games to decide the position of each in receiving the prizes. These games were played in the Coliseum.

Table B shows the result of this series of games.

of Tioga County were entered but did not play any games.

It is worthy of note that Clark and Ball, the

viously made a ringer and 3 points, tossed another ringer and ended the game. In this game Blaine pitched 83.3 per cent. ringers. In this series of three games Blaine and Kinne of Seneca made 65 points, 15 ringers, 4 double ringers, in pitching 42 shoes, or an average of 36.7 per cent. ringers, while Brown and Thomas of Allegany made 16 points, 3 ringers, and no double ringers.

(Continued on page 221)

Here are the team winners in the American Agriculturist Horseshoe Pitching Contest held at the New York State Fair. Left to right they are Alton Coy and his father, Herbert Coy of Norwich, third; R. J. Clark and Alden Ball, both of Hammondsport, first; and J. P. Moran of Elmira and John Monks of Pine City, second.

There were twenty-three teams from the farm bureaus of the different counties who came to the State Fair at Syracuse, N. Y., that were qualified under the conditions to enter the first State tournament held by the AMERICAN AGRICULTURIST. These teams were certified by the farm bureau agents in their respective counties as having stood first or second in the county horseshoe-pitching tournaments.

Because of the rain, Tuesday, September 9, the day it was planned to play the tournament, it was not possible to start pitching until afternoon. As the time was limited in which to finish, it was

Key: W, Games Won; L, Games Lost; Pts., Points Made; R, Ringers; D.R., Double Ringers; S.P., Number of Shoes Pitched; Pct., Percent of Ringers.

decided by the committee to divide the twenty-three teams as nearly as possible into three equal groups. Each team in each group played every other team in the same group three 21-point games. A number of the teams quit playing before the series of each group was completed. The games of all who did not finish were taken out. The rain continued so that the preliminary series of games were not completed until early Wednesday afternoon. In the first group Seneca and Steuben Counties tied on 12 games won and 3 lost, but as it had been agreed that in case of a tie the highest number of points, counting 21 points to the game, should control, Steuben having the most points won a place in the finals.

R. J. Clark of Hammondsport (left) and Henry Morgenthau, Jr., publisher of American Agriculturist, holding the silver cup won by Mr. Clark and donated by Mr. Morgenthau to the champion horseshoe pitcher of the contest.

Because the other games had taken so much time and it was getting late the six men in the three winning teams then agreed to each play each other only one 21-point game to decide who should win the grand championship cup.

Table C gives the result of these games.

Mr. Monks was the only one to beat Mr. Clark in the Championship Cup Contest. Mr. Monks made 21 points, 3 ringers, no doubles; Alden Ball, 13 points, 1 ringer, no doubles, in 46 shoes pitched by each.

Table D is a list of the teams that started and played a few games but did not finish in the preliminary contest. Frank Forbes and Fred Seager

Even Senator Royal S. Copeland (right) and Lieutenant-Governor George R. Lunn (left) could not pass the American Agriculturist-Farm Bureau Barnyard Golf Tournament at the State Fair without trying their hand at the game with Henry Morgenthau, Jr. (center), publisher of American Agriculturist. (Photo by Post Standard)

# When-feeders say this

## Quality as Well as Quantity

"I have used Larro for over 9 years and there is nothing that will duplicate it. Larro is the best milk feed there is. It does increase milk production."

JOSEPH NOWAK, Thompsonville, Conn.

"We have a herd of 15 Holstein cows which give nearly as much milk as some of our neighbors who are milking 25. My father says it is all in the feed. We feed Larro."

H. E. COLE, Epping, N. H.

## Good Condition and High Production

"We have fed enough Larro to test it thoroughly. We find it an excellent milk producer—at the same time keeping the heavy producer in good flesh."

O. O. BUSCHLEN, Bad Axe, Mich.

"My cows are in the 'pink' of condition and produce heavily. Four of my cows have tipped the scale at 60 lbs. of milk in one day; two of them have reached 65 $\frac{3}{4}$  and 64 $\frac{1}{4}$  lbs.—cows that were producing very little milk on all kinds of miscellaneous feeds. This is my result from feeding Larro and I shall continue to feed same as long as I have cows."

A. HERBERT, Westport, Mass.

## Larro for Long-Time Results

"We started with one cow for our own family use and now we are keeping between 400 and 500 head on our farm, and the cows we started with and have been milking for more than 12 years are yet profitable producers. We are glad that we commenced our dairying experience in feeding Larro and have never changed since our beginning with our family milk cow."

WHITE BELT DAIRY, Lemon City, Fla.

"Your feed is the best feed on the market, as it produces the richest milk and cream. We have tried other feeds but have not found them satisfactory. We have used Larro for over 7 years."

H. A. COUCH, New Milford, Conn.

"We have fed Larro along with other dairy rations and it gives us better results than any we have tried. We also find the longer we keep the cows on Larro, the better they milk."

W. B. BRADSHAW, Cartersville, Ga.

## Where Other Feeds Had Failed

"My first sack of Larro ruined my patronage for other feeds with the exception of Larro. From that one sack I got an increase in milk and as I kept on using Larro I got better results. I wouldn't give one sack of Larro for any two sacks of other feed I have ever used."

E. H. BAKER, Ironton, Ohio.

"We have been feeding Larro for several months in a test with several other feeds, with results which are highly favorable to Larro."

PEYTON T. GISH, Mt. Sydney, Va.

## For Young Stock and Old

"I have two cows milking 100 lbs. of milk on 10 lbs. of feed apiece a day. If I could get alfalfa, I think I could get 60 lbs. from these cows apiece on 12 lbs. of Larro. One of these cows is 17 years old."

C. C. ROBINSON, Annapolis, Md.

"We think Larro feed is certainly great, and our whole herd looks fat and nice, and has produced lots of milk this winter. We have one cow 14 years old that gives 42 lbs. of milk a day. We feed the calves on Larro and like the feed."

L. E. WETMORE, Canfield, Ohio.

## For Economy and Profit

"I have thoroughly tried out practically all standard makes of dairy feed and mixed many kinds myself, but have found nothing which will produce as much milk of fine quality—a regular amount—and keep the cows in fine condition like Larro does. It will give me at least 15% to 25% more profit than anything else I have ever found. If I had used it exclusively for the past five years, I would have saved many thousands of dollars."

LORING BROWN, Orlando, Fla.

"I use Larro as ever and am satisfied with the results from it. I did try some cheaper feeds, but lost out in production and was out money in the long run."

LAWRENCE BACHMAN, Tarentum, Pa.

## Holsteins Lead in Live Stock Exhibit at State Fair

HOLDING its own in comparison with previous live stock shows at Syracuse, the 84th State Fair brought together an aggregation of herds and flocks that contained some of the best individuals in the live-stock world. Entries in the cattle division were not quite as numerous as in past years, but the small decrease in numbers was offset by a showing that ranked high in quality. Particularly is this true of the Holsteins. The breeders of the Black and White staged one of the strongest Holstein exhibits in years.

Sheep and swine were the best ever seen at Syracuse. The same can be said of the draft and breeding horse classes. The new Coliseum enabled the horsemen to show their animals to advantage for the first time at the Fair. In previous years the horse judging has been held in an outdoor ring.

A material falling off in numbers was noticeable in the county herd exhibits. The Holstein County associations had the largest number of entries and the Ayrshire associations were not represented at all. Erie County was awarded the blue ribbon in the Holstein exhibit, while Cayuga County captured first honors for the Guernseys. Onondaga County won second place in both the Holstein and Guernsey classes.

## Need for Sheep-Judging Pavilion

The need of proper facilities for judging sheep and swine is very evident. Under the present system the judges and exhibitors are compelled to work in the alleyways between the pens—a system that is by no means fair. Both the quality and quantity of the sheep and swine shown at Syracuse warrant proper provision being made for judging. The cost of building a judging ring would not be so large as to be prohibitive.

## Holsteins Lead

In number of entries the Holstein led, with the Guernseys, Jerseys and Ayrshires following in the order given. Over 900 herd of cattle, including dairy, dual purpose, and beef types, made up the cattle show. In many of the classes, particularly among the Jerseys, Guernseys, and Holsteins, there was keen competition for places at the head of the line. Considerable rivalry developed in the Holstein aged cow class with over thirty animals entered. The presence of a number of western herds did much to make the Holstein show such a strong one. Hargrove & Arnold, of Norwalk, Iowa, Pinery Farms of Mentor, Ohio and Yates Farm of Orchard Park, N. Y., showed the top placings among the Black and Whites. The royal purple went to Pinery Farms on their aged bull, King Pieterje Jewel Korndyke, and to Hargrove and Arnold's three-year-old cow, Dorothy Ormsby Piebe.

In the Ayrshire classes the lion's share of the awards went to Adam Seitz & Son of Waukesha, Wis., Lippitt Farm of Providence, R. I., Ash-Grove Farm of Saratoga Springs, N. Y., and Alta Crest Farms of Spencer, Mass. Adam Seitz and Alta Crest Farm divided honors in both the champion and grand champion classes; the grand champion bull award going to Cavalier's Ping Pong, which heads the Adam Setiz's herd, while the purple rosette for grand champion cow was awarded Buttonhill Mabel Chance, Imp., from the Alta Crest herd.

## Guernseys and Jerseys Strong

Both the Guernseys and Jerseys had strong classes in practically every case. It was the general opinion that the Jerseys showed more of a tendency toward farmer-bred cows than toward the highly bred product of the large breeding estate. Rockcliffe Farm of Golden's Bridge, R. I., took the grand champion award on their aged bull Fern's Noble Oxford Sultan. The grand champion cow was Queen Plymouth of Lehigh, owned by Elm Hill Farm, Brookfield, Mass.

A standard poultry house design. Price includes all lumber, sash and doors, also material for roosts and nests. Also 12 x 50 poultry house, same design, for \$135.

The biggest yellow pine lumber sale in the United States is now right at your door. Think of 120 acres of selected lumber in piles 20 ft. high. 40,000,000 board feet of the best building lumber. Every kind and size needed in building—2x4, 2x6, 2x8, etc., flooring, drop siding, sheathing, dressed and matched, joists, rafters, etc. From gigantic Camp Meade and Camp Dix. Every piece of lumber is selected, sound, clean and bright. Every order filled from our mammoth stocks is exactly as specified as to size, length and full count. No waste! We sell any quantity for quick delivery—no delays! **BINDING GUARANTEE OF SATISFACTION.**

**SAVE \$200.00 to \$500.00 ON YOUR BUILDING**  
**GET OUR FREIGHT PREPAID ESTIMATE ON YOUR MATERIAL**

No matter what kind of building or material you need, get our figures before you buy a thing! Just send us your own sketch or description of what you want. Tell us size and number of rooms in your building and our expert estimators will send you itemized list and lump sum prices for all materials, **FREIGHT PREPAID.** If you can, make up your own list of materials and send it for our estimate. No obligation! Our materials enable you to build at lowest cost without sacrifice of quality. Our select yellow pine lumber is stronger, more durable and better seasoned than most building lumber now being sold at much higher prices. And when we say "select" we mean just that! Every piece of lumber shipped to our customers is selected stock. We do not ship lumber "as it comes" or "as it runs." Dollar for dollar, we give you the lowest prices in this Decade on good, sound, selected lumber.

#### COME TO THE CAMPS

**We pay your R. R. Fare and Expense**

Seeing is believing! See this lumber with your own eyes. It's easy to come to Camp Meade or Camp Dix. Excellent automobile roads lead to both camps. Or come by railroad. Camp Meade is near Baltimore, Maryland. Camp Dix is near Trenton, New Jersey. We invite you to come to either camp and figure with us. You can select your materials right on the grounds. If you buy a minimum carload of materials from us we will allow your railroad fare and expenses to the camp.

#### We Ship as Far as 700 Miles and Still Save You Big Money

We have already shipped thousands of orders to all parts of Pennsylvania, Ohio, New York, New Jersey, Maryland, Delaware, Virginia, West Virginia, Connecticut, Massachusetts, New Hampshire, Vermont, and many other states. Get our freight prepaid prices for convincing proof that we can ship anywhere in the East and still save you 1/3 to 1/2. If you live within 100 miles of either Camp we can deliver right to your premises by motor truck at small extra cost.

**WARM AIR  
FURNACES**  
**\$40 WORTH \$120  
NEW**

High grade warm air furnaces made by leading manufacturers. All parts complete. Can be used as pipeless or pipe furnaces. Also large number of heating stoves known as egg stoves or pot stoves. Prices from \$8.00 up.

**6-Light SASH**  
**95c EACH**

These sash are extremely well made with rabbetted joints. Each light 10"x15" with glass, already in. Worth \$1.75 new. Our sash just as good as new. Just the thing for poultry houses, barns, sun porches, etc.

**Galv. Roofing**  
**\$350 Per 100  
Square Feet**

High grade galvanized sheet steel. Random sizes from 36"x40" to 36"x80" and larger. Heavy stock from 18 to 22 gauge. Clean and bright. Suitable for roofing or general sheet metal work.

#### Cooking Stoves

Stove illustrated is 36" wide by 52" long, with good baking oven, and sound condition throughout. Regular \$95.00 value if new. Many other styles in stock.

**\$35**

#### Water Closets

Low tank closet outfit. White vitreous china bowl and tank. Wash down syphon action. Full description in catalog.

**\$1350  
AND UP**

## Better Vegetable Exhibits at Syracuse and Rochester

PAUL WORK

PERHAPS the outstanding feature of the vegetable show at the Rochester Exposition, Labor Day week, was the victory of Greece Grange over its ancient rival, Irondequoit. These two towns both adjoin Rochester. The latter has for three generations grown vegetables so well as to rank it with the best market garden sections of the country. Greece has entered the field more recently, many of its growers having learned their art in Irondequoit. Ever since the Rochester Exposition has included agricultural features, these two granges have contested for the first premium for the best display of vegetables and Irondequoit has been a consistent winner. The shift of ribbons, this year will mean much in the history of the competition, for both put up simple and complete displays in which the outstanding feature was quality.

The management has done a good deed in limiting the collections as to kinds and varieties, thus discouraging the hodgepodge that has so often resulted from the attempt to show everything. A separate premium is offered for background decoration and Irondequoit won this with a picture of a greenhouse establishment done wholly in seeds.

### Boys and Girls to the Front

G. H. Vogt of Stanley took the \$75 award for the best display of products from one farm while J. H. West and Sons won the prize for the best collection of vegetables. The West Sons, Wm. Howard and George Smallridge, all of Irondequoit, were heavy winners in the individual classes.

County Club Leader Fuller of Monroe County mustered a splendid display of vegetables grown by his boys and girls. The quantity was at least four times as great as last year and the quality has now reached the point where some entries would take money in the main show. In a few years these youngsters will make some of the old stagers look to their laurels.

### New Quarters Improve State Fair Exhibit

The Farm Produce Department at the State Fair has been removed to commodious quarters in the old "M. & L. A." Building, taking up fully half of the huge space, thus testifying to the growing interest in their field of agriculture. For the first time there was enough room to display the entries and ample wall spaces were available for the collections. The entries in individual classes at Syracuse are heavier than at Rochester and under the constructive judging through several years by Professors Schnech and Harnden, the quality standards have made steady progress.

### Still Room for Improvement

While the new quarters for the vegetable show at Syracuse mark a great improvement, the space is not adapted to its special use. Refrigerated cases for perishables, cold storage rooms and other special facilities are really needed. To permit further development of educational features there should be a meeting room and a small amphitheater for judging demonstrations. Thus the vegetable men have not relaxed in their demand for a new and modernly equipped horticultural building. The State Vegetable Growers' Association meeting at the Fair appointed a committee of three, headed by Secretary T. H. Townsend, to carry forward the fight which has been on for several years. This committee expects to work with the other horticultural and agricultural societies in the hope that there can soon be adequate housing for what is probably the greatest vegetable show in the country. Syracuse gardeners are considering the possibility of bringing the convention of the Vegetable Growers' Association of America to Syracuse for State Fair week as soon as the new building can be realized.

## As Low as \$10

Buy your saw direct at lowest factory prices. Guaranteed staunch, durable and dependable. Cost as little as \$10.

### Hertler & Zook PORTABLE WOOD SAW

## WITTE LOG & TREE Saw

Cuts down trees and saws them up FAST—one man does the work of 10—saws 10 to 25 cords a day. Makes ties. A one-man outfit. Easy to run and trouble-proof. Thousands in use. Powerful engine runs all other farm machinery. Uses Kerosene, Gasoline, Distillate or Gas.

Easy Payments down and take a year for balance of low price. Make your own terms.

FREE Just send name for full details, pictures and low prices. No obligation by writing.

WITTE ENGINE WORKS  
6801 Witte Building, Kansas City, Mo.  
6801 Empire Building, Pittsburgh, Pa.

## My Engine Will Do the Work of 6

"I set out to build a farm engine that would have every feature the farmer wanted and none he didn't want. It has now been on the market six years. Thousands of satisfied users tell me I've succeeded. I'm proud to have this engine bear my name."  
—A. Y. EDWARDS

**EDWARDS FARM ENGINE**

## Try This Remarkable Engine

# FREE

There is no other farm engine like it. Simple in construction and easy to operate. It is only one engine, yet it takes the place of six engines. It will give from 1 1/2 to 6 H. P., yet it is so light that two men can carry it easily. Set it anywhere and put it to work.

### Change Power as Needed

It is a 6 H. P. when you need 6, or 1 1/2 H. P. when you need only 1 1/2, or any power in between. Fuel consumption in proportion to power used and remarkably low at all times. Adjustment from one power to another is instantaneous.

### Burns Kerosene

Operates with kerosene or gasoline. Easy starting, no cranking. The greatest gas engine

value on the market. And you can prove all of these statements to your own satisfaction.

### What Users Say

Ivan L. Blake, of Hannibal, New York, says: "Only engine economical for all jobs. I run a 28-inch cord wood saw, a 24-inch rip saw, a washer, a pump, and a grinder, and it sure runs them fine. It has perfect running balance, and it sets quiet anywhere."

Clarence Rutledge, of Manitoulin Island, Ontario, says: "Have given my Edwards four years' steady work and like it fine. It uses very little fuel. I run a 28-inch cord wood saw, also a rip saw, 8-inch grinder, ensilage cutter, line shaft for shop, churn, washer, separator and pump. Have had ten other engines and the Edwards beats them all."

Frank Foell, of Cologne, New Jersey, says: "It's a great pleasure to own an Edwards engine. I run a wood saw, cement mixer,

threshing machine, etc. Do work for my neighbors. Easy to move around and easy to run. I would not have any other."

### Free Trial Offer

Now—I want to prove my claims to you. I want to send you an Edwards Engine for absolutely free trial. Just write your name and address on coupon and mail. I will send at once complete details about my farm engine and about my free trial offer. No cost or obligation. Mail coupon now.

## Prolong the Life of your Linoleum or Congoleum with Valspar!

*The famous  
Valspar  
boiling water test*

It pays to Valspar your hard-surfaced floor-coverings! This is the opinion of Mrs. C. E. Fisher of Greensburg, Pa., who wrote us recently the following very interesting letter:

“Some years ago, during spring house-cleaning, we gave our linoleum a coat of clear Valspar Varnish, and the result was so very gratifying that it has become part of cleanup season just as much as cleaning wall-paper and scrubbing paint.

“*First*, it saves the linoleum by offering a protective coat of hard varnish against daily wear; *second*, dirt and dust

cannot be ground into the material, but are easily wiped or brushed away; *third*, the whole kitchen is brightened; and best of all, it is really clean.”

If you will Valspar your Linoleum, Congoleum or Oil Cloth you will add greatly to its life and keep the surface bright and smiling. Spilled greases or acids will not spot it and repeated washings with hot, soapy water will never turn it white. A Valsparred surface is absolutely waterproof, and accident-proof.

*Send the coupon below for sample—  
enough to cover 20 square feet of surface.*

Remington Game Loads are scientifically loaded to a uniform standard of velocity, pattern and penetration with moderate recoil. They are loaded exclusively with the finest American-made smokeless powders in Nitro Club Wetproof Shells. Wetproof means just what it says.

# Remington Game Loads

## Good Common Sense Applied to Shotgun Shells

**U**P to June, 1922—there was no such thing as a specific, standardized load for a *specific kind of game*.

Then Remington Game Loads were brought out. A few thousand sportsmen tried them.

And now in 1924—hundreds of thousands of men are shooting Remington Game Loads. Shipments are going out in carload lots.

Now, *why* have Remington Game Loads become so popular in such a short time?

Simply this. As every shooter knows, there never *had* been any previous standard in loaded shells.

Sportsmen held many opinions as to the best load for shooting any specific kind of game—ducks, for instance. There were 390 loads commonly used for shooting ducks. Naturally some of these were better than others. Probably half a dozen of these loads were really better than the other 384. Many sportsmen were *guessing* at the "best load." This was equally true of suitable loads, for other game.

There are only a few really distinct varieties of game hunted with a shotgun. Yet there were 3200 "prescription" loads to hunt them with. The sportsman who didn't *know* the best load to use was often given an unsuitable one.

So, Remington in a common-sense way and with its unequalled facilities for finding out just what loads are *best* for each kind of game developed *Specific Loads for Specific Game—Game Loads*.

Every Remington Quail Load is the right load—the *best* load—for Quail—and the same is true of Remington Squirrel Loads, Duck Loads and so on through the whole Game Load line. Each load is made for a specific purpose.

### Shoot Out the Facts

Remington provides you with shells made to a *predetermined performance* in the three necessary respects—the velocity or speed, the pattern or spread and the penetration, all with moderate recoil.

Remington Laboratory science takes the place of "guess-work" or hearsay recommendations. Remington has a definite basis of fact on which to recommend a specific load for a specific game.

No wonder hunters everywhere demand Remington Game Loads.

Study the picture opposite and the information under the boxes on this page. Select the Remington Game Load that is made to get the game you are going out after.

Get some Remington Game Loads and shoot out the facts *for yourself*.

**Duck Load**

Recommended for Duck, Pheasant, Hawk, Crow, Rabbit, Partridge, Prairie Chicken and Grouse. 12, 16 and 20-gauge; No. 5, 6 or 7 Chilled or Soft Shot.

**Grouse Load**

Recommended for Grouse, Prairie Chicken, Pheasant, Partridge, Dove, Rabbit, Duck and Squirrel. 12, 16 and 20-gauge; No. 7 Chilled or Soft Shot.

**Buck Shot Load**

Recommended for Deer, Black Bear and Wolf. 12-gauge; loaded with 12 pellets of No. 0 Eastern Shot.

**Quail Load**

Recommended for Quail, Dove, Woodcock, Rail, Plover and Snipe. 12, 16, and 20-gauge; No. 8 Chilled or Soft Shot.

## Memorable Days in a Knight

Coupe-Sedan  
\$1550

F·O·B TOLEDO

On school days, on shopping days, on Sundays, on all days of the calendar, season in and season out, the Willys-Knight Coupe-Sedan is keeping owners young and happy—a family car faithful to every trust, and smart and stylish as Fifth Avenue!

This is the car that made folding seats as old-fashioned as hair-cloth furniture. Doors both *front* and *rear* let everybody enter and leave without climbing over seats or feet. A Wilson-built-Body—with the *capacity* of a sedan and the *sociability* of a coupe—finished in a beautiful color scheme of blue, black and nickel.

As fine as it looks, it is yet finer internally. The Willys-Knight sleeve-valve engine is famous around the world as *the engine that improves with use*—supremely smooth and quiet at any gait you drive! No valve-grinding. No bother with carbon. *None* of the clatter and griefs so often associated with ordinary poppet-valve engines.

You can have utter faith in Willys-Knight reliability. Owners report 50,000 miles and more without once having had a mechanic tinker with the engine. And in ten years of Willys-Knight history, no Willys-Knight engine has been known to wear out!

There is a definite social distinction in owning a Willys-Knight . . . abiding pride in its charm . . . lasting satisfaction in performance. The longer you drive the more you enjoy the driving—and the more value you attach to the car. Try a Knight on the road today!

Willys-Knight Models: 2-pass. Roadster \$1175, 5-pass. Touring \$1195, 7-pass. Touring \$1325, 5-pass. Sedan \$1695 (De Luxe \$1895), 7-pass. Sedan \$1995; all prices f.o.b. Toledo. We reserve the right to change prices and specifications without notice.

# Among the Farmers

## Don't Forget Your Operator's License

THE attention of our readers in New York State who own automobiles is called to the announcement of the State Motor Vehicle Department that the new law passed by the last legislature is to be rigidly enforced after October 1. In order to make it convenient for automobile owners, arrangements were made so that county clerks in every county were equipped to issue the licenses, and these licenses could be obtained without examination before the first of October.

A statement just received from Commissioner Charles A. Harnett says that he is very much disappointed in the lack of response on the part of up-State people to get their licenses before October 1. At the middle of September, only about 300,000 of the up-State automobile owners, out of the 1,500,000, had applied for the operator's license necessary under the new motor vehicle law.

The Commissioner announces that after the first of the month a force of one hundred and fifty inspectors will begin a patrol of the highways and every driver without a license will be liable to arrest.

### Along the Southern Tier of New York

THE James Quinn farm on the road from Binghamton to Chenango Forks, having been sold to real estate men, is being cut up into building lots and sold. A number of houses are already under process of construction. "Broad Acres" is the name which has been given to this tract. This land in the early history of Broome County was the home of people who came from "downeast" and settled on the banks of the Chenango river.

The hay crop along the Susquehanna and Chenango rivers proved to be a good one. Little hay is being sold locally now, however. The price when sales are made, is about \$20 a ton, delivered.

Several farmers in the vicinity of Conklin Centre suffered severely about the 20th of August by a heavy downpour of rain, accompanied by wind and lightning. Some buildings were entirely torn down. Friends of one farmer are getting up a purse for him. He had no insurance on his property against tornadoes.

George Wakefield in the town of Maine has had an auction and sold off his cows. Other farmers are reducing their herds. One reason given is the high price of feed and the low price of milk. The recent advance in the price of milk may have a tendency to check this drift away from dairy farming. We hope so.

The Farm Bureau is giving a number of demonstrations in poultry culling and management.

The Broome County fair had good weather except the first day, which was wet in the morning, but the attendance even on that day was very good. The fair has been declared better than usual and it is almost always good.

Oats do not turn out very well. Corn has greatly improved with recent warm weather and rain.—E. L. V.

### Central Pennsylvania Notes

J. N. GLOVER

THE Milton fair was held the week of the 7th with fairly good attendance. Center Hall had a great fair last week. The Union County fair will be held September 30, October 1, 2, and 3. Some improvements have been made on the grounds and buildings, and the premiums have been enlarged.

Mifflinburg began using their new high-school building this week, but Lewisburg has been unable to buy the field west of town upon which to build their new building.

Preparations are being made for wheat seeding, and some fields will be seeded this week. No. 44 wheat is not yielding so well per acre according to the amount

of straw which it grows. Corn is earing better than expected a month ago, yet all corn needs this month to mature it. Even then late planted corn will be poor. Clover seed is ready to cut, but much second-crop hay will be made rather than to cut for seed.

Cow sales are being held every two weeks lately, yet cows are not in good demand, except for fresh ones. Late potatoes are very promising but early ones were a medium crop only.

### Holsteins Lead in Live Stock Exhibit at State Fair

[(Continued from page 208)]

New York and Wisconsin were the strong contenders in the Guernsey classes, Emmadine Farm at Hopewell Junction, N. Y., and F. J. Rueping of Fond du Lac, Wis., divided the major honors about evenly; although Emmadine ran away with both grand champions, winning that coveted honor on Shorewood Resolute, an entry in the aged bull class, and Daylo Yuletide, a two-year-old heifer.

In the Brown Swiss classes Hull Bros. of Painesville, Ohio, captured both grand champions. The Connecticut Agricultural College and Batchelder Farms of Mount Vernon, N. H., divided honors in the two top awards among the Devon entries.

### Good Turnout of Sheep and Swine

With over 1,200 entries of sheep and swine this Department staged perhaps the best exhibition of its kind at Syracuse. Among the sheep, the Oxford, Hampshire, Cheviots and Dorsets were outstanding because of their quality and numbers.

In the Shropshire classes W. S. Hutchings of Coldwater, N. Y., was a large winner, while in the Southdown classes, Hutchings Brothers of Coldwater made a clean sweep. Among the fine wools, R. D. Sly of Wakeman, Ohio, and I. B. Patridge of Leicester, N. Y., divided honors. New York State was well represented after the final decisions had been made.

In the Berkshire classes the entries by F. E. Kite & Son, of St. Paris, Ohio, and Pinehurst Farm of Pinchurst, N. C., were exceptionally good. Judge Harpending of Dundee, N. Y., also spoke highly of the Hampshire exhibit. It was noticeable that the quality of the New York State herds was not quite as strong as usual, the better exhibits coming from out of the State. Competition in the Duroc Jersey classes was largely between Curles Neck Farm of Richmond, Va., and Cassell and McGarvey of Fallston, Md.

The sheep at the fair were estimated at a value of \$60,000 and the hogs were considered to be worth about \$25,000.

### Fine Horses Shown

Some excellent specimens of draft horses were shown State Fair visitors who watched the judges at their work in the ring. Perhaps the most outstanding individual among the draft entries was Louis de Mater, the Belgian stallion owned by Bell Bros., of Wooster, Ohio. He is said to be the finest Belgian stallion ever shown at the State Fair. In the Belgian classes, E. J. Snider of New Paris, Ind., took the largest number of awards. Bell Farms of Wooster, Ohio, and Ash-Grove Farms of Saratoga Springs, N. Y., were also strong contenders for first honors.

Among the Percherons, the stallion Jerome, owned by Highland Farms of Greensburg, Pa., was awarded the royal purple. Highland Farms also took junior and senior champion stallion and junior champion mare. Grand champion mare went to Carfait, an entry by Tom Corwin Farm of Coalton, Ohio.

In the Clydesdale classes Hayfield Farm, Wilkes-Barre, Pa., made a clean sweep, taking every first place but one, and all the grand championships.

# LUMBER!

PER THOUSAND FEET \$9<sup>00</sup>

**LAST CALL!** This startling offer is made because we must vacate Government land. Price is for good sound seasoned lumber in carload lots of 16,000 feet or more to the car. ### HONEY

FOR SALE—New white extracted honey in 5-lb. pails, \$1.10; delivered into third zone. JOHN MOSHER, Moravia, N. Y.

# Service Bureau

## The Literacy Law for New Voters

THE law requiring all new voters to be able to read and write English is the result of an amendment to the State Constitution passed by the people of New York State at the general election of 1921. In brief, the subsequent legislation of 1923 provides that all new voters must present evidence of literacy to the election inspectors as an additional qualification for voting. The evidence of literacy is either a diploma from an eighth grade elementary school in which English has been the language of instruction or of a

high school, or a Certificate of Literacy issued by the school authorities of a State under the Rules and Regulations of the Regents.

A new voter is a person who became qualified to vote in New York State on or after January 1, 1922. Any person who became qualified to vote after that date, whether he be native-born or foreign-born, man or woman, or even if he has voted in some other State, is a new voter and must present evidence of literacy. In order to make this point somewhat more explicit, the following persons are new voters:

### New Voters and Old

(a) All men and women born in the United States who become qualified to vote in New York State after January 1, 1922.

(b) All men and women of foreign birth who become qualified to vote in New York State after January 1, 1922.

(c) All persons who have previously voted in one or more other States, but who became qualified to vote in New York State for the first time after January 1, 1922.

The following persons are not new voters:

(a) Men, both of native and foreign birth, who have not yet voted but who were qualified to vote before January 1, 1922. (A person who votes for the first time is not necessarily a "new voter.")

(b) Women, both of native and foreign birth, who have not yet voted but who were qualified to vote before January 1, 1922. (This will include many women who have not yet taken advantage of the Federal suffrage amendment and who will be casting their first vote this year.)

(c) Illiterate men and women who were qualified to vote and have actually voted in New York State before January 1, 1922. (Present law not retroactive.)

(d) World War veterans who took out their final citizenship papers (under the special act of Congress of July 19, 1919) before January 1, 1922.

(e) A woman of foreign birth whose husband became naturalized before January 1, 1922.

In places where there is personal registration like New York City the evidence of literacy must be presented by the new voter to the election inspector at the time the new voter registers. In communities of the State where personal registration is not required (this includes all communities below 5,000 population) evidence of literacy must be presented to the election inspectors on election day.

### New York Has Good Plan

It is expected that a large number of new voters will present themselves this year on account of the election of both President and Governor. There is no doubt that New York State has the best simple and practical test of reading and writing English understandingly that has yet been devised. New York is also the only State that entrusts to its teachers the sole duty and responsibility of examining new voters in regard to their literacy. Those best qualified to act in this capacity have by law been chosen to do so.

A public service for the cause of good citizenship and government will be rendered by all who assist in the publicity of the above statements of the law. It is strongly urged that effort be made by all readers of this journal to inform the new voters, whether they be of native or foreign birth, of the provisions of this law and to urge new voters to cooperate to the fullest as well. The local superintendent of schools is the person who determines the particular schools that shall be opened for the issuance of certificates of literacy within his district, as well as the days and hours when such schools shall be opened. Let us all help to improve the voting population of our State and to develop on the part of the citizens a sense of cooperation.

### MISCELLANEOUS

60 CHEMICAL Indoor Toilet Outfits, regular price \$12.50, only \$6.50 each. (Satisfaction guaranteed.) IDEAL CLOSET CO., Seneca Falls, N. Y.

# The Girl at Vacada—By J. Allan Dunn

As Jimmy "Trouble" Hughes comes riding gaily into sight of the little settlement of Vacada, he passes a newly-made grave, beside which a young girl, clad in black, is struggling against the unwelcome advances of a man. Jimmy promptly "horns in," routs the man—a formidable-looking opponent—and steadies the girl, who has twisted her ankle in trying to run from her annoyers. Bluff Furniss, "Boss" of Vacada, goes off muttering ugly threats, at which the cowboy only laughs.

Jimmy Hughes turned to the girl. "Hurt yore ankle bad?"

"I twisted it. I think I can walk. I've got to." She tested her foot and turned pale with the pain of it.

"You got to do nothin' of the sort while I got a hawss," he said. "Nellie Bly's got good manners. I'll set you up and then we'll strap up that ankle. It ain't swollen yet. Just a wrench."

Before she realized it he had lifted her with an easy strength that brought a flush to her cheeks as he put her sideways in the saddle, speaking a word to the mare who swung back her head, looking at the new burden with intelligent eyes, out-breathing a soft purr of complaisance. Jimmy took the injured foot in his hand and handled it gently, removing the shoe that was sadly scuffed and worn.

"Adhesive 'ud be the best," he said, talking casually, not looking up at her. "Get some later, maybe. This'll help right now." He produced some even strips of latigo that had been about his saddle roll, wetted them from his canteen and deftly bound them firmly about the ankle, strapping it with the dexterity of a surgeon. "It'll shrink a bit as it dries, likely, an' grip it fine. Now, then, where can I take you?"

The girl had been observing him, almost anxiously, with growing approval. He had taken off his hat and his brown hair, sun-scorched here and there, seemed foolishly to reassure her. That and the shape of his head, she told herself. His question took the interest from her eyes.

"I—I don't know. I have nowhere to go."

"No home? No folks?"

"No. I only had my uncle, my aunt's husband. We just buried him." Slow tears welled over and trickled down her cheeks. Jimmy affected not to see them. "Furniss owns the shack. I can't go back there. He—he—" She hesitated.

"You go on, miss. You'll feel better if you tell it, I reckon. Ain't there some women folk round here who'd take you in?"

"None." Her voice trembled. She was crying frankly now, the tears that had been repressed flowing without check. "None that he don't own—or their husbands. There are only two in Vacada, aside from the girls at the dance hall. He owns that. He wanted me to go there on the floor—"

JIMMY looked up at her and saw her face flood with hot blood. His own rose in sympathy. Involuntarily his hand went to his gun.

"The darned snake. I shu'd have shot him on sight."

Her hand went down and clutched his arm.

"No, no," she cried in quick alarm. "You must not do that."

"I've a notion that's what he intends to do to me," said Jimmy grimly.

"Please! Not on my account. It would not help me. And you must go on. He's a deputy sheriff."

"I never did admire that breed of cats."

"And he runs the country. He has his own crowd. Mexicans, some of them. And—"

"You tryin' to scare me?" He looked at her with genuine good humor. "A bad man and a bad gang, includin' greasers. You figger I'm goin' to shack on an' leave you to handle 'em? I told you trouble was my middle name. Jimmy Trouble Hughes. I take it he didn't offer to marry you?"

She shook her head.

"You've told me quite a heap. Won't hurt you to finish it."

She bit her lip, made decision in her helplessness.

"My name is Alice Joyce," she told him. "I have lived here for six years—since I was twelve. I came out to my aunt when my own father died. My mother was dead then for two years."

"You poor kid." Jimmy said it under his breath, but she caught it.

"He did the best he could for me, but Furniss had something on him. And he drank." Her voice quickened and she told her story in a few sentences, Jimmy listening, plaiting strands of the mare's black mane.

"You got as much chance with this bunch as a lamb in a ring of coyotes," he said. "No one to write to?"

She shook her head. "I have written. But they have moved—or they have forgotten me. They never answered."

"Maybe Brother Furniss monkeys with the mails. No beau?"

"No."

He worked at the plaiting, his face judicious. His eyes were a little embarrassed when he finally looked at her again.

"I reckon that 'ud be the best thing for you. To be married to some chap that 'ud treat you right. Take care of you an' take you away from here, pronto."

THEIR glances clung in a strange silence. Jimmy went on, his easy glibness reduced to palpable effort.

"How about me? I ain't married. I ain't seen no one I aimed to marry, so far. I'm sure no angel, but I ain't a bad lot altogether. And I'd treat you right." He stole a glance at her averted face and found courage to go on. "I'm trailin' across to Big Nose Gap in the Bitter Root range. Goin' to a friend of mine who owns a ranch. Big Bill Axtell, who's a white man if God ever made one. And a wife better'n he is. Two kiddies. They'd be glad to see you. How about it? You're sure in one tight hole. It 'ud be a way out. I'll make the goin' good as I can."

She gazed at him long and steadily. Jimmy felt the probe of her searching through his being. At last she shook her head, slowly.

"I couldn't do that."

"Why not?"

"It wouldn't be right. I—I don't love you."

"How do you know that? I figgered you ain't been in love before. No more'n I have." He flushed a little as he said that but maintained his look.

"If I loved you, I'd know it. I'm grateful, but a girl ought to want to go with the man she marries. She ought to ache to go with him. And it ought to be the same with you. You are trying

to help me out of the hole, but I can't accept it."

"Never hear of love at first sight?"

He saw she took this wrongly and changed his manner. "You got anything better to suggest? You don't have to treat me like I was yore husband unless you happen to want to, some time. It's a day an' night ride to Axtell's but I'd sure treat you like you was my sister. If we didn't make out you c'ud leave me easy enough. Jane Axtell'll take you under her wing. She's allus motherin' something. That ranch is plumb full of orphans, ducks an' calves, pups and kittens. She'd admire to have a girl like you for company an' to take care of."

The girl broke down, burying her face in Nellie Bly's mane.

"I don't know what to do. I don't know," she sobbed.

Jimmy's face tightened to decision.

"Then you'll do what I say. Shucks, there's nothin' else to do. You an' me ought to git along first-rate. Lots of folks that git married ain't half so well suited as us. Don't know any more about each other. Do it on trust. You'll trust Jimmy Trouble Hughes, Alice Joyce. Won't you?" She looked at him again through wet eyes, her lip caught up with her teeth. Then she nodded.

"Good," cried Jimmy. "Bueno! Muy bueno! Can you ride?"

"Yes."

"Fine. I'll rustle you a hawss an' saddle. We'll go over to yore shack an' git yore duds. He can't hold them. He won't. First—who did the buryin', meanin' the service?"

"The Bee Parson."

"That's a new brand to me. Sure enough parson? Bueno! Where's he live?"

"Over there." She pointed. "He keeps bees. He's sick, you see. There's no church."

"I hardly figgered one, in this man's town."

"He was ill at the funeral. I—"

"We'll hang a fee on him an' make him well. Come on—Alice."

He turned the mare toward the parson's little sod house, a mile from Vacada, the girl riding, Jimmy walking beside her, one hand on the horn of the saddle, Nellie Bly docile. As they went, Bluff Furniss saw them going on together and half guessed their errand.

HALF-WAY they met the two men who had helped the Bee Parson and who looked at them curiously. Jimmy hailed them.

"Howdy? I reckon we'll need you two gents, if you're agreeable. You see Alice an' me are goin' to be married. I come sooner than she expected but, seein' her folks has gone west, there's no sense in waitin' over."

They looked at each other, misled by his easy assurance.

"Thet so, Alice?" asked one of them.

She nodded, her face clear of tears. Jimmy sized up his men.

"No time for a fiesta," he said. "But there's a bankroll big enough to stand fees, witnesses and all. And I got to git me a hawss. Maybe one of you got one to sell?" Their uncertainty vanished.

"Might have one to suit you," admitted the one who had spoken. "How 'bout it, Gus?"

"Suits me, but if you aim to git married 'thout a county license the parson'll git in trubble. You two got one?"

THE girl blanched. Jimmy's eyes widened, narrowed again.

"How big trouble?"

"Fine. Fifty bucks. Hundred, mebber."

"Shucks! That's easy. Man's bound to spend some on his weddin' day."

The girl's hand went out. Jimmy caught it, patted it.

"That's all right," he said. "Come along, gents. Much obliged."

The Bee Parson lay languidly on his bed but sat up as the group came in. Jimmy explained the situation, cannily leaving much of it to the minister's imagination. The Bee Parson surveyed them from eyes, deep sunk in sockets, graved by pain and weakness.

"You are willing, Alice?" he asked in his husky voice, made gentle. "If you are I am willing to run the risk."

"It will be a real marriage?"

"In the sight of God and of man. The laws of this State permit of such an exigency. There will be a fine, in all probability. I should advise later registration at the county seat. I understand the circumstances and I am willing to conduct the ceremony."

His air of authority dominated the four, gathering at his direction while he secured his prayer-book. They stood silent, impressed by a certain solemnity that weighed most heavily upon the girl, affected strongly the more volatile Jimmy. The Bee Parson, he decided, was a man. He might be sick in body but he was sure a he-man. Then a question staggered him.

"Have you a ring?" Jimmy looked helplessly, almost foolishly, at the girl, then at the grinning witnesses. "Any kind do?" he inquired. "Then hold on a minute." And he went out to where Nellie Bly patiently waited.

"You're in on this, I'll hawss," said Jimmy, and he plucked hairs from her mane, swiftly braiding them in a black circlet that he tested on the end of his little finger, figuring that about right for measurement, before he finished off the ends of the plait, trimmed the ring and exhibited it to the Bee Parson, who gravely approved the device.

The ceremony proceeded. To Alice Joyce, becoming Alice Hughes, it seemed incredibly brief and momentarily unreal. Jimmy made no attempt to kiss his bride but retained her hand in his while the Bee Parson made out the certificate and the two witnesses appended sprawling signatures. Nor did the latter indulge in the horseplay that suggested itself inevitably to their crude minds.

There was something about the Bee Parson, something too about the kid, as they styled Jimmy, that handicapped familiarities. Then Jimmy drew a roll of bills from his pocket that made them gasp. The girl's eyes distended at the denominations. For a cowboy such a stake was a phenomenal. To the Bee Parson he gave a hundred-dollar bill and a fifty, to each witness a twenty.

"That'll cover the ante for the fine," he said to the former. "If it's less than a hundred you can pass the change on to some one that needs it. Boys, you can drink our healths."

The witnesses thrust away their bills; the Bee Parson held his unfolded with a questioning look at Jimmy Hughes.

"You came by this money rightfully?" he asked.

Betty (in the country): Uncle Hiram, why does that pig wear a ring in her nose? Is she engaged?—Life.

# Women at the State Fair

## Home Bureau Exhibits Draw Crowds of Observers

THOUGH every woman who attended the State Fair at Syracuse found much of interest in the different buildings and on the different days, the "one big day" of the whole week came Tuesday when the Home Bureau exhibits were judged and their relative merits explained. And let it be said here that to an impartial observer every single exhibit deserved honorable mention for one feature or another, but that the decision of the judges as to their relative standing met with unanimous approval.

Cortland County won, with a percentage of 91 out of a possible 100. Close behind was Tompkins with 90 and Cattaraugus came third with 88. Broome County was fourth and Oswego fifth. The other contestants—Oneida, Otsego, Seneca, Sullivan and Tioga—all ranged within a few points of each other.

The judges were Miss Vera McCrea, Mrs. H. M. Eppes and Mrs. Ida S. Harrington, who gave the committee's report and explained the awards in some detail. The exhibits were judged, she said, for correctness in typifying the program, for quality of workmanship, for educational value and for attractiveness of appearance.

### Cortland Awarded First Prize

Mrs. Burnham, the county chairman of Cortland, who bore off the blue ribbon in triumph, presided over this prize winning exhibit. It showed in graphic form the widely diversified activities of this county, including civics, landscape gardening, basketry, and the nutrition program which was the major activity of all the Home Bureaus this year. One of the features which attracted a great deal of attention was a tiny model showing how an impure water supply was changed to a safe one. Miss Ferne Wayne is the Cortland County agent, and among the loyal members is Mrs. A. E. Brigden, ex-president of the Federation.

Visitors to the Tompkins County booth were fascinated by the possibilities in handloom weaving of rugs and in the reclamation of old furniture by refinishing and recaning, as exemplified in the expert work of Tompkins Home Bureau members. This exhibit showed many fine examples of characteristic American period furniture, good in line and workmanship and made thoroughly serviceable by intelligent care. Another rather unique exhibit showed the kitchen equipment tried out by the "testing circle," which used, reported on and passed along sample time- and labor-savers submitted by local merchants. Many of the devices had been approved by this "board of censorship" and duly installed in the respective kitchens.

The Cattaraugus County exhibit featured especially the correct feeding of children and had some fascinating little models of games and inexpensive playground equipment.

### Each Exhibit Had Something to Remember

Passing briefly over the other exhibits, one recalls especially the circulating nutrition exhibit designed by a mechanically-minded member of the Oswego Home Bureau, the really charming ink-bottle lamp and home-designed and painted shades shown by Oneida County; the amusing reducing exercise charts of Tioga; the analysis of cereals displayed by Otsego; the model of a delightful modern home remodelled from an old barn in Broome County; "Freddie and Friend Fruit" as introduced by Sullivan County, and the excellent exhibit of nutrition and other activities put on by Seneca County, the six months' old "baby" of the Home Bureaus, presided over by the county agent, Miss Williams.

The same day was made notable for the women by the appearance of Mrs. T. G. Powell, President of the New York State Federation of Home Bureaus, on

the program with Senator Royal S. Copeland. Mrs. Powell spoke, as always, simply and earnestly and the 30,000 women whom she represented might well be proud of their leader. She spoke of Governor Smith's action in giving the Home Bureau representation on the committee to work out plans for bettering rural health, and stressed the part that the members have taken in school work, in arousing the true "spirit of play" in recreation and in organizing "voting mothers" for better community conditions.

The general impression left by the exhibits was well summed up in Mrs. Powell's statement that "home needs no praise to make it beautiful." Greater things are already being planned for next year, according to the leaders, but New York women are to be congratulated on what they accomplished in 1924.

### The Girl at Vacada

(Continued from page 217)

Alice looked at Jimmy, crimson under his tan. One of the witnesses snickered and then backed out of the shack, followed by his companion. One winked at the other, who thrust his tongue in his cheek by way of reply. Then they started for Vacada, their fast walk breaking into a run, carrying the news to the local boss, Bluff Furniss.

"That money's clean, Parson," said Jimmy. To the girl, his wife, he seemed to say it doggedly. But the Bee Parson accepted the statement. He had sat down again upon the bed, apologizing for his weakness.

"I'm getting stronger out here, right along," he told them with a wan smile. "Good-by and God's good-will to both of you."

As they passed out of the hut constraint fettered both of them.

"He's pretty sick," said the girl. Jimmy nodded.

"Thinks he's better all the time. They all do. But there's one *hombre* that ain't afraid to go. He's sure got his pass made out. How's the foot?" Excitement, with the aid of Jimmy's arm, had caused the girl to practically forget her injury. Now she limped again and felt discomfort, but made light of it.

"We'll get that adhesive," said Jimmy. "Tire tape 'ud be good. Get that at the store with grub for to-night an' to-morrer mornin'. I'll leave you up to yore shack for a while an' go rustle a hawss. Reckon I'll let you ride Nelly Bly; she's bin packin' me since sun-up an' yore weight'll even things up. You got a lock up to yore cabin door?"

"Yes." "You ain't goin' to be afraid to pack yore things an' be there alone for a l'il while?"

"No." The answer was prompt and firm. Since they had come from the Bee Parson the girl's eyes had lost their hunted look. Jimmy surveyed her approvingly.

"You'll sure do to take along," he said. "I reckon most of the stiffenin' is out of Furniss. He bluffs best when he's sure the other chap's out of luck. You ain't alone now. But we won't take no more chances than we have to."

(To be continued)

Keep a piece of tailor's mending tissue in the sewing machine drawer and use it for first-aid patching of all kinds. When there is a small tear or nag in a woolen or silk garment put a piece of the tissue under the tear and back of it a piece of cloth from the same garment and matching, if there is a figure or plaid. Hold firmly in place and pass a warm iron over the torn place. This is usually all the mending that will be required.—L. M. THORNTON.

# Oversize Heating at Undersize Cost

Get Air and Water to Help out Coal!

YOU get more than your money's worth in any Moncrief Furnace you select,—Pipe, Pipeless, Three Pipe, or Majestic-Moncrief.

The secret of Moncrief economy lies in the fact that Moncriefs utilize sufficient air circulation and proper humidifying of air to produce comfortable heat. That takes the burden off the fire pot and consequently off your pocketbook.

The first cost of a Moncrief Furnace is more than reasonable, and will be entirely absorbed in a few years by the fuel savings.

Only the finest grey iron is used for Moncrief Furnaces. The castings are carefully fitted and ground and each furnace assembled as a unit before shipment from the foundry. This means tight joints,—no escaping gases to foul the air in your rooms and assures the free combustion of fuel in the fire pot and smoke chamber.

RANGES FOR GAS, COAL, WOOD—COMBINATION RANGES FOR GAS AND COAL OR COAL AND WOOD—PIPE AND PIPELESS WARM AIR FURNACES

# Boys and Girls Had a Good Time

(Continued from page 204)

Chenango: John Ireland and Richard Goodwin of Guilford demonstrated garden planting.

Delaware: Evelyn Henderson and Mildred Scott of Harpersfield showed how to make a kimono dress. Morris Riddell, Davenport, and Wilburn Barkley, Delhi, demonstrated the points of a good dairy cow.

Genesee: Arlo Berg and Richard Kogle of East Pembroke showed how to cull poultry and Doris Wickens and Lulu Krauss of Darien Center prepared a school lunch.

Jefferson: Ruth Poor and Dorothea Thomas of Black River demonstrated the use of patterns and Keat Stoodley and Lawrence White of Adams Center gave a rope splicing demonstration.

Livingston: Mildred Boies and Elizabeth Redman of Leicester made a kimono dress and Glenn Turner and Theo. Forsythe of Dansville showed how to control poultry lice.

Madison: Edna Brown and Delia Abrams of Brookfield gave a clothing demonstration and Arthur Fletcher and Gordon Sprague of Hubbardville treated potato seed.

Nassau: Loretta Walbroehl and Edith Bergesen of Valley Stream showed how to prepare a light lunch and two Westbury boys,

State College of Agriculture, who did the judging, they were as nice a batch of young stock as a man would want to look upon. Professor Hopper was especially enthusiastic over the Jersey heifer of Barbara Luchsinger of Syracuse. However, she was not alone when it came to honors, for her brother, John, won a first prize with his yearling Jersey heifer and Wayne Brown of Liverpool took the championship with his young Holstein. These three, with Wendell Wicks of Oxbow, whose Ayrshire took the Ayrshire championship, will be sent to the National Dairy Show at Milwaukee in November.

In the live-stock judging contest for Junior Project workers, the Livingston County team, consisting of Ralph Johnson and Donald Kieth, both of Caledonia, and Edward Barrows of South Livonia, won the contest. It is expected that these boys will be sent to the National Dairy Show to represent New York in the Junior Judging contest.

## The Whole House Warmed by ONE LITTLE HEATER

Every room in an average sized house, with or without a cellar, can be kept warm by a 'Radio' Hot Water Radiator Installation. And the coal will cost less than for stove heat for one room. 'Radio's' downdraft draws smoke into the fire — greatest heat with least coal. Burns stove or nut sizes of hard coal and feeds automatically. Handsomely designed—gives the appearance of luxurious open hearth fire. Easy to install. Hundreds of homes kept warm by the moderate priced 'Radio'.

SELF-FEEDING Needs coal only once every 12 hours

### FOR THE CHILD, THE SLIM WOMAN, AND THE STOUT

No. 1862 is the most popular bloomer design, for it may be made short or with the below-the-knee extension which gives additional warmth and also takes the place of a cumbersome petticoat. This pattern comes in sizes 16 years, 28, 32 and 36 inches waist measure. Size 28 requires 2 1/4 yards of 36 or 40 inch material. Price, 12c.

No. 2234 is a pattern by which you may make over last year's outgrown school dress, for both the skirt and the waist offer combination possibilities. It is pretty in new material, too, as well as in two different fabrics which "spell out" each other. It cuts in sizes 6, 8, 10, 12 and 14 years, size 8 taking 1 3/8 yards 40-inch material. Price, 12c.

No. 2231 is cut up into large sizes, because it is so flattering to the mature figure. It is suitable for a simple everyday dress or for a more elaborate one, according to the materials and trimmings used. It cuts in sizes 36, 38, 40, 42, 44, 46 and 48 inches bust measure. Size 36 takes 3 1/2 yards 40-inch material with 1/2 yard contrasting. Price, 12c.

No. 2229 shows the three-tiered skirt, very much in vogue this season. The woman of slender or medium figure will look especially well in this design. Cut in sizes 16 years, 36, 38, 40, 42 and 44 inches bust measure. Size 36 requires 4 3/8 yards of 40-inch material. Price, 12c.

TO ORDER: Write name, address, pattern numbers and sizes and enclose 12c for each pattern ordered. Send to Pattern Department, AMERICAN AGRICULTURIST, 461 Fourth Ave., New York City.

Chester Stevenson and Alfred Weber, gave a garden planting demonstration.

Onondaga: Ruth Rice and Alice Rolfe of Kirkville made a kimono dress while Peter and Joseph Newell of Skaneateles gave a potato seed treatment demonstration.

Orange: Evelyn Hock and Katherine Berrian of New Hampton demonstrated how to select garment materials, while Sam Ayres and Benedict Cline of Warwick showed how to mix poultry feed.

Oswego: Florence and Dorothy Sheldon of Sandy Creek showed how to prepare a breakfast and Ivan and Edward Williamson of Hannibal showed how to prepare Bordeaux mixture.

Otsego: Henry Madsen of Westville and Harry Christenson of Fly Creek showed how to treat seed potatoes for disease.

Tioga: Pauline Personins and Marion Powers of Candor prepared a school lunch and Roy Seeber and Charles Walker of Oswego showed how to cull poultry.

Wyoming: Marie and Mabel Seeley of Warsaw gave a clothing demonstration and two other Warsawites, Fred Meisel and Albert Evans, planted a garden.

The Junior Calf Club exhibit was the finest that has ever been staged. There were about thirty heifer calves exhibited and according to Professor Hopper of the

We cannot close without saying a word about the Junior Poultry Exhibits. The excellent work of the Poultry Department at the New York State College of Agriculture in junior project work is making itself most evident. There were something like 400 birds exhibited by the boys and girls of the various standard breeds. Not only is the teaching of desirable rations becoming evident, but more desirable breeding stock as well.

As a matter of fact, the junior work all along the line is giving these boys and girls a different conception of farm business. Of course the greatest thing in all project work is the spirit of achievement, assuming the responsibility of a job and carrying it through to a successful finish. That is the big thing in Junior Project Work. The second big thing is the fact that they are learning better methods and better practice. Sometime it may be that a boy or girl will be the guiding light of a father who is reluctant to adopt more modern methods. But that is only a mere side line. Boys and girls who do things when they are young will be in a much better position to do things when they assume greater responsibilities.

# Eggs vs. Fancy Feathers

## State Fair Poultry Exhibit Shows Contrast

There was a whole lot, more than ever, for the poultryman at the State Fair this year. It would be a pretty long-drawn-out and dry story to tell who won the blue, red and yellow ribbons in all the different classes. There was something a sight more interesting and a great deal more educational than mere figures and places—more than ever before.

This year the exhibits of pens of hens to be judged on the production basis were larger than ever and if a fellow got right down to business to make a study of the differences between fancy feathers and production, he saw something to open his eyes. There is about as much difference between the "string" birds and the production pens, blues for blues, as there is between day and night. Anyone wanting to buy blue ribbon stock hereafter, especially those who saw the exhibit, and studied it, will have to specify whether they want fancy feathers or eggs. Kent's flock, which took the blue ribbon for production, had a different looking lot of hens in it compared to the single entries of the fanciers. The fancy birds had yellow legs, beautiful, sleek feathers, while Kent's birds looked a little rough, their tails were whipped out and their legs were almost white. But we keep hens for eggs, not feathers. You can't eat feathers.

### Egg Laying Types Proven

That flock belonging to Kent has vindicated the college, which has been preaching the selection of layers and the principle of judging on production lines. Any man who has doubted the ability of Rice, Hurd, Krum, Andrews and the rest of the poultrymen from the college, to pick out a laying hen by her appearance, has no longer an argument in his favor, for facts tell the story. Those who judged Kent's birds and gave them first award, did not know to whom they belonged, but their practiced eye picked out layers. After the judging was completed and the award had been made, the records of the hens in Kent's exhibit were revealed. The individual records, trap nest, showed that the members of that flock had produced anywhere from 200 to 250 eggs in a year. That shows pretty

conclusively that a man who knows his job can pick out a layer with a pretty accurate degree of certainty. There is no question but what the man who is in the poultry business for the money that is in it, has got to learn how to pick his layers and discard the boarders.

It is not reasonable to expect that any man is going to keep a flock of 200 to 300 hens for the fun of it and therefore it holds true with every man who keeps hens. We have reached the point when we have got to stop supporting a lot of non-producers and the Fair this year shows without the semblance of a doubt that it is possible to pick them out by their physical characteristics.—F. W. OHM.

### Getting Down to Rock Bottom

(Continued from page 205)

on a budget which is considerably less than half the average annual rate of the last two years.

These somewhat radical changes which also included replacing of the Federated sales manager who has handled the business since 1920, were not made without advising with experienced growers, the association's bankers, experts of the State College and others. When finally determined upon, they were fully and frankly laid before the Board of Representatives which endorsed and commended them. Some representatives even received the news enthusiastically as indicating progress in the right direction. The hard thing for all was the letting go of employees who had served the organization so zealously and well through its period of early development. In recognition of services rendered by Messrs. Peet, Rees and Blades, a resolution of appreciation was adopted by the Board of Representatives.

### The Future

The general feeling of representatives and members alike seems to be summed up in the phrase, "We are now on rock bottom," a solid foundation. The association has been through the period of promotion, has weathered the reaction which usually comes to new enterprises after the cooling of the first enthusiasms. Members and directors have gained much experience which they have paid for. They know some things that are not possible or practicable. The organization is finding itself. It is functioning and solvent.

Many future policies remain to be finally determined. The place of the local packing house is generally conceded, though it has many problems to solve yet. The Federated Sales Agency now seems to be giving satisfaction. What are the place and functions of the Central between these two? How much authority and responsibility should be turned over to it and how much fixed on the locals? To what extent is centralization necessary or desirable? Are central or local pools most desirable? And many others. Some of these, with the Editor's approval, I may discuss in these pages later.

### Horseshoe Pitching Is On the Map

(Continued from page 207)

Clark and Ball of Steuben also pitched with Brown and Thomas of Allegany one game in which neither of the last two got a point.

The ardor of the players and of the thousands of horseshoe enthusiasts, who watched the games, encouraging their favorites, did not seem to wane because of the rain and cold weather. However, the bad weather conditions Monday, Tuesday, and Wednesday, without doubt, kept a great many players from coming to the tournament and thousands of horseshoe fans were kept away who otherwise would have come. A great deal of credit is due G. E. Snyder, who acted as manager and general referee of the tournament.

# How much of your poultry feed is wasted?

"I have been feeding Fleischmann's Pure Dry Yeast to my poultry for the last few months," writes Emma Bowen, of Chestertown, Md., "and will say that the results received have been splendid. My flock is now producing more eggs, and Fleischmann's Pure Dry Yeast is keeping the flock in a healthy condition."

"My flock of poultry began molting the latter part of August," writes D. S. Cobb, of Morrison, Ill. "I have been feeding Fleischmann's Pure Dry Yeast during the past three months. I have never seen poultry molt so easily and finish in such short time. I attribute this entirely to Fleischmann's Pure Dry Yeast."

"I have used Fleischmann's Pure Dry Yeast on my flocks," writes G. W. Bradshaw, of Sumner, Wash. "It is a wonderful help to chickens during their most critical period, that of molting. It brings them through the molt quicker and with lots of pep."

In every flock, there are many birds that fail to assimilate enough of their food. Their delicate digestive organs refuse to act properly even on the best possible rations.

Much of the feed, therefore, passes unused out of the fowl's system, instead of being quickly absorbed to make bone, flesh, and energy.

Fleischmann's Pure Dry Yeast, added to the feed, makes it easy for every bird in the flock to digest and assimilate it—to get the last ounce of nourishment from the feed.

Growth is speeded up. Vitality and strength are improved. Yeast-fed birds become the best layers of winter eggs!

Fleischmann's Pure Dry Yeast can be bought in 1 lb. or 2½ lb. packages, 25 lb. cartons or 100 lb. barrels. It will keep indefinitely. Full directions in every container. Your dealer should be able to supply you. If not, order direct from us. Transportation charges prepaid.

## Now—this trial package for \$1

So you can thoroughly test for yourself the amazing results of Fleischmann's Pure Dry Yeast, a special trial package is now ready. One dollar brings it to you. Enough Yeast to ferment the feed for 100 hens for a month and a half or 5 pigs for 20 days! Send today—enclose check, cash, or money order with the coupon below.

### To the dealer:

Progressive retailers the country over have stocked Fleischmann's Pure Dry Yeast—to supply the fast-growing demand for this remarkable food adjunct. Poultrymen and stock-raisers who can't get it from their dealers send their orders direct to us by the hundreds. You should be getting your share of this business! Be the first in your town to have it on your shelves! Send today for our plan of cooperation. It shows how you can add to your profits with Fleischmann's Pure Dry Yeast!

# some "Alfalpa Logic"

Let these facts aid your search  
for lower operating costs

**N**O farmer expects a profitable stand of alfalfa from thin or acid soils. Sour land may be all right for soy beans and alsike, but all wrong for alfalfa. Likewise, the wrong oil in a motor will give results just as unsatisfactory.

Motors are just as different as soils; just as different as live stock. There isn't any problem on the farm that requires more individual treatment than the lubrication of gasoline motors. Proper lubrication is real economy. Improper lubrication is added expense.

Just because the differences in oils cannot be seen, do not be misled into buying cheap oils. Don't make the mistake of using an oil of wrong body and character. Your motor can tell the difference instantly. So can you—in the long run. A single unnecessary repair bill, one part prematurely worn out, and all you've "saved" on cheap oil "goes up in smoke." *Mobiloil is the cheapest oil at any price.*

## Why Correct Lubrication is the Cheapest

Gargoyle Mobiloil is not a gasoline by-product, as cheaper oils nearly always are. The crude stock from which it is made is chosen solely for its lubricating quality, not for its gasoline or

kerosene yield. Every batch of Mobiloil is tested to assure its constant high standards and uniformity.

The Vacuum Oil Company has specialized in correct lubrication for over 58 years. It maintains a Board of Engineers—twenty-three men who spend all their time analyzing motors under every conceivable operating condition. The one purpose of their work is to determine the oil which will give greatest economy in every make and model of automobile, truck, or tractor.

The result is the Gargoyle Mobiloil Chart of Recommendations. For the cheapest lubrication at any price make the Chart your absolute guide. It is shown here in part. If your automobile, motor truck, or farm tractor is not listed in this particular Chart, see the complete Chart which hangs on the dealer's walls. Or write our nearest Branch for our booklet, "Correct Lubrication."

## TRACTOR Lubrication

The correct engine Lubrication for the Fordson Tractor is Gargoyle Mobiloil "BB" in summer and Gargoyle Mobiloil "A" in winter. The correct oil for all other tractors is specified in our Chart. Ask for it at your dealer's.

# Mobiloil

Make the chart your guide

## Chart of Recommendations

(Abbreviated Edition)

THE correct grades of Gargoyle Mobiloil for engine lubrication of both passenger cars and motor trucks are specified in the Chart below.

A means Gargoyle Mobiloil "A"  
B means Gargoyle Mobiloil "B"  
BB means Gargoyle Mobiloil "BB"  
E means Gargoyle Mobiloil "E"  
Arc. means Gargoyle Mobiloil Arctic

Where different grades are recommended for summer and winter use, the winter recommendation should be followed during the entire period when freezing temperatures are experienced.

The Chart of Recommendations is compiled by the Vacuum Oil Company's Board of Automotive Engineers, and represents our professional advice on correct automobile lubrication.

# Now It's So Easy to Own a WITTE Only

**\$5<sup>69</sup>**  
A MONTH

Equipped With WICO Magneto

For a Few Months

NOW I have gone the limit—with prices for farm products going up and new prosperity in sight, I have made it easier than ever before to own the standard WITTE Throttling-Governor ENGINE, and at the lowest price in many years. You can show a profit of from \$500 to \$1000 extra every year you have the rugged, dependable WITTE at work for you. Get away from high-priced help—get away from the hard, back-breaking chores with the lowest-priced, high-quality engine I've ever offered.

## No Big First Payment—New Low Prices on All Sizes

ED. H. WITTE  
President

Just a few dollars a month for a few months—owning a Standard WITTE is a sure saving every year—the engine more than pays for itself as you go. You'll find the WITTE always delivers a big surplus of power [the 2 H-P. size pulls 3 H-P. easily] that you need for the heavier jobs but does the light work with a big saving in fuel. So simple that a boy can operate it. Trouble-proof too—you can work the WITTE every day in any kind of weather. Easily moved from place to place, it answers every power need on your place.

**Fully Equipped** The WITTE has many exclusive features not found on any other engine, such as the celebrated WICO Magneto, the best system of high tension ignition known. Far superior to the old-style battery engine—dependable and

economical. A new device makes starting easy in the coldest weather—just a turn and away it goes. The patented motor-style carburetor and WITTE Hot Spot get the last bit of power out of every charge of fuel. Any speed you want by merely turning a thumbscrew on the Witte Speed Regulator. The WITTE ENGINE is scientifically designed and built to last a life-time.

**Uses Kerosene, Gasoline, Distillate or Gas** The WITTE uses any fuel—kerosene, gasoline, distillate or gas. Costs less than 2 cents an hour to run on a full load. No need to bother about fuel prices—always use the cheapest and get the best results—50% surplus power.

**Sold Direct from Factory to You—Save 20 to 40 Per Cent** I employ no salesmen—WITTE Throttling-Governor ENGINES come from my factory direct to you at the lowest price. You can save as much as 40% by buying direct.

### Easy Terms To Suit Your Own Convenience

I make it very easy for anyone to own a WITTE—if you want easy terms you can have them. Take a year to pay if you want to—just suit yourself on time.

**90 Days FREE Trial on Any Size** WITTE Throttling-Governor ENGINES come in all styles and sizes from 2 to 25 H-P. So confident am I that this engine will make you money and is the best and cheapest power you can buy, that I will gladly let you try a WITTE for 90 days at my risk. And if for any reason it's not right, I simply say "I'LL MAKE IT RIGHT AND IT WON'T COST YOU A CENT."

### The Famous Thirty Year WITTE Crankshaft Guarantee

WITTE Crankshafts are Guaranteed absolutely against breaking, bending, warping, crystallization and wear for thirty (30) years, regardless of nature of work done, climate or any other conditions. Ed. H. Witte, WITTE ENGINE WORKS.

I know of no other engine crankshaft with such a guarantee. WITTE Crankshafts are drop forged and heat treated in oil. They are ground to a glass finish on precision lathes to an accuracy of one-thousandth of an inch. Is it any wonder that WITTE Throttling-Governor Engines are known all over the world for their continuous superior performance?

For over 42 years I have been building this better quality engine—honest value at rock-bottom, direct-to-you price. Into it has gone the experience of more than 150,000 users—a guarantee that the WITTE Throttling-Governor Engine meets every need.

### A RECORD!

Over 29 Years of Service

"I have a WITTE Engine, its number is 1766. It has been running about 29 years on the same cylinder. It still is working good, but it needs a new cylinder and piston. This is the first repair I have ever needed. What will it cost? It is a 15 horse." S. J. PEMBERTON, Winchester, Kansas.

## My New Illustrated Engine Book—FREE!

**Write for It Today!** I want to send you my new engine book—the most interesting book about farm power that you have ever read. Fully illustrated. Tells all about this remarkable engine and how easily you can get it to do the hard jobs on your place. Shows details of equipment, many exclusive features and hundreds of vital points about the application of power to your farm.

I'll also send you letters from my customers all over the world—over 150,000 of them—people who are actually using WITTES on hard jobs and who know how it can work.

## Absolutely No Obligation

Write me today, a postal will do or clip out the coupon and send it in. You are under absolutely no obligation by writing me, and my big book is sent at once, all postage paid.

ED. H. WITTE, President

## WITTE ENGINE WORKS

## From Chicken Thief to Social Pillar

*Can We Keep Young Folks Out of Mischief?—A Personal Experience*

By H. H. KROLL

**T**O-DAY I am an entirely respectable high school principal, with two degrees after my name, and mostly considered an efficient school man and pillar of society. But when I was a boy in my 'teens I suppose I was about as tough a customer as the worst of those I to-day try to teach.

The other evening, after supper, when I was turning over some of my school problems in my mind, I fell to thinking of those boyhood days of my own. One occasion in particular remained vivid. It was a night when I went chicken stealing. The gang in the little village in which I grew up frequently enjoyed a banquet at midnight out in the woods at the expense of the neighborhood chicken roosts. On this particular night Buck Nolan and I were delegated to rob the roost of a man who was rather handy with his shotgun. To complicate the matter, Buck was hard of hearing, and not as careful in handling a chicken as he might have been under more favorable and fearful circumstances. Well, we repaired to the neighbor's barn. I slipped in ahead—I knew right where the hens roosted. Buck followed. Each of us grabbed at exactly the same moment, and he got a rooster and I got a pullet. In spite of his infirmity and my fear, we got away with that job. But it was a squally time. We met the rest of the gang at a small farmhouse a mile from the village, habited by my bachelor brother who was absent from home much of the time. There we cooked the chickens collected by each member, throwing away all the old roosters and elderly hens, and concentrating on the young fry that would cook tender, easily. While the chicken simmered, we played penny-edge poker. Along in the early hours of the morning the gang broke up and went to their respective homes. It was voted to have been a grand success—"one of a time," in fact. On another occasion the gang visited another neighbor's melon patch. It was a very fine patch. We stole all the ripe ones in sight. Some one suggested that we stamp or cut up all the green ones, "just for fun," but the suggestion was voted down. We got away with that joke too—and laughed vastly when we heard, the following day, how old Hogenstatter cursed and wept over the loss of his melons. On another occasion the gang nearly landed in jail because we got into the Union church and each took a turn at preaching a sermon. And so on, and so forth.

\* \* \*

Do I recite these incidents as humorous? By no means. I fancied at the moment I was having the time of my life. I know now that I was acting the fool. Perhaps I should have been arrested and put in jail, along with the others, as sometimes seemed imminent. But I don't know, after all.

For I am teaching in a small town consolidated school now—dealing with boys of exactly the type I was no more than fifteen years ago. They have Sunday-schools and the church to attend—

on Sundays. So did I, and I went, just as these young folks mostly do. They have an occasional "set-around"—polite young folks' party, so-called—and so did I. I used to go to them, as most of these young folks do. But I didn't enjoy them, nor do my school children—if I can see straight. I used to hear my elders sermonize me about manners and behavior and religion and spirituality and education, just as the boys and girls I teach hear it—sometimes from my learned lips. And it all runs right off their backs, just as it did with me. The fellow that said that human

I know only one dramatic club. It is functioning in my school now, but is having rough sledding of it. I don't like to pester the young people with too close supervision, and the school authorities do not like to furnish electric current for their rehearsals.

Nor do I know anything about regular and really entertaining parties for young folks. You find an occasional one everywhere—reported later in the county paper about like this: "Miss Dayse Mae Gillispie entertained a number of select guests at Mah Jongg on Friday evening. Delicious refreshments were served. The guest room was decorated in a color scheme to represent the great wall of China," etc., etc. It sounds fine, but where were the boys who like to steal chickens—or ditch a flivver to the tune of The Bootlegger's Death Cry?

\* \* \*

What am I doing to rectify this unfortunate condition in my own immediate environment? Little enough, I confess sadly. But it's more than a man's size job to buck the center of rural conservatism. The schoolmaster in the rural social order dare not turn the world over all at one time, even if he could. I am, however, doing one thing—just one. I am concentrating on that one thing, and letting everything else slide for the moment—although I have a number of potential plans secretly on foot. I am providing in my school a good, lively, clean moving picture once a week. The goodness knows it is little enough. But for one night the gang is at the schoolhouse, behaving itself and having a good time of the better sort, instead of being

in some devilment.

I bought the machine largely upon my own credit, and at present am operating it myself. The local ministers and school board assist me in the selection of films, and there their responsibility ceases. I get the best pictures I can with the money I have at my disposal, for the outfit has to be paid for, and there is only one source of revenue—the outfit itself. Of course, I have had the aid and comfort of the better class folks in the community. They started behind me and they are still there. That is about the only pay a rural schoolmaster frequently gets—the aid and comfort of his better people. And the thanks of the boys and girls he is serving. These latter don't always pay promptly—theirs is a promissory note which sometimes is not taken up until the holder has lain down in his six-by-two bed to sleep for an eon or so. But who worries about that? The note is always paid in the end. The social system pays for it if the individual forgets.

There are many more things I am hoping to do as time goes on. But this one thing, I repeat, I am concentrating upon. And I have an abiding faith that in the end I shall have helped a chicken thief to become a pillar of society—perhaps one that otherwise might not have managed to make it.

### Worrying About the Young Folks

**E**VERYONE who likes young folks will be much interested in Mr. Kroll's story on this page about the chicken thieves. Parents are always wondering how it is possible for children to escape the physical and moral dangers that constantly beset them and live to grow to be fairly decent citizens. When we sit up all night worrying over the sick baby, we long for the time when he will be older and better able to resist disease. Then when he does get older, and reaches the "young savage" stage, we sometimes wish he were a baby again.

Fortunately, though most of our worry about children is for nothing, for there seems to be a certain natural resistance to both physical and moral disease, a certain natural decency that in the end helps the majority to win out. However, as Mr. Kroll suggests, with all of the progress that has been made along other lines, we have not yet learned much about how to deal with the younger generation. One trouble is, perhaps, that older people so soon forget how they looked at things, and how they felt when they were young.

nature remains the same down through the ages knew exactly what he was talking about.

I didn't go to the devil—somehow I managed to get out of it. Most young folks do. It's a good thing for the race that in the seeds of humanity is the germ of uprightness. If it were not so this world would have gone to the devil many a long year ago. It isn't the old folks that have preserved it, either. It is the young folks themselves.

\* \* \*

Why did I steal chickens and watermelons and play poker and cuss and smoke? For the same reason that young boys in the rural regions do those things, or about the same things, to-day. It's because grown people haven't sense enough to provide good, wholesome entertainment for them. Good moving pictures—I have been up and down the land these past five years, studying rural schools, and I have yet to find in those I know first hand a single moving picture machine in actual operation. I know one high school that owns a machine, but during the year I was in that village no program was offered. Good dramatic clubs, sponsored by adults, but not boss-ridden by them—where are they in this land? I know them not. I know intimately perhaps a hundred small-town and rural consolidated schools. But

### The Politicians and Farm Taxes

WE have not been saying much of late about the farm-tax problem, but we have by no means forgotten it, nor have we forgotten that we have more than fifteen thousand farmers registered in AMERICAN AGRICULTURIST editorial office, in an appeal to State and local officers for economy in government and for less taxes.

Now is the time when all the politicians are making promises to the voters to get support in the coming elections. We give credit for sincerity to most of those who are seeking public office. If they promise help in bringing about more economy and to lower the farm taxes, the most of them will make at least some effort to carry out their promise. It is, therefore, our responsibility as voters to find out how these candidates stand on the question of lowering farm taxes.

Last year, AMERICAN AGRICULTURIST, using the petitions received from fifteen thousand farmers, told Gov. Alfred E. Smith of New York and the State Legislature that the farmers of this State must have some tax relief, and we suggested that the direct State tax of two mills should be abolished.

Shortly after our talk with the Governor, he sent a special message to the Legislature, calling for a reduction of one-half mill in direct property tax. The Legislature accepted his suggestion and passed the bill. This measure will bring a few dollars relief to every farmer taxpayer.

But it is only a start. All of the property tax should be abolished. Direct taxes by the State are wrong in principle and unfair to the farmer whose tax burden is, even without this extra mill tax, almost unbearable. We want to ask you to think about this problem and to work with us again during the fall and winter to bring this most important problem to the attention of those who can remedy it. It is time now to start such action by asking those who are seeking your vote how they stand on the question of reduced taxes on farm real estate. Will you help?

### Suggestions for Roadside Markets

NO one, either from the farm or from the city, has ridden along a country highway without being impressed with the growing number of roadside markets. Without question, these markets have done a lot of good and have enabled farmers to dispose of a lot of miscellaneous products at a profit. On the other hand, there are

so many of them, so close together, in many neighborhoods, that none are paying, and many other farmers have found that for some reason or other their attempt at maintaining a roadside market was a failure.

Circular Number 27, entitled, "Farmers' Roadside Markets," issued recently by the New Jersey Department of Agriculture at Trenton, gives some very interesting and worth-while pointers to those who are conducting roadside markets or are thinking of doing so. Perhaps the best suggestion in this circular is that instead of having too many markets in the same community, a few of the farmers could cooperate to run only one good market. This would give a better variety of products and eliminate competition.

Another excellent suggestion made in the circular is to the effect that such a market should stick pretty well to farm products. The addition of too much outside material will tend to lower the tone of the market and some of the best trade will pass on to a market which gives a better appearance.

In summing up the subject, the circular says:

"For a successful roadside market the needs are as follows:

"A good location, an attractive method of display, carefully graded and well-packed products, a fair price, a sufficient number of buyers, an even supply and a sufficient quantity of products so that the volume of business will be large enough to make it pay. A market which has not enough products to sell or a sufficient number of buyers often costs more to run than it is worth. Too many markets along a road tend to cheapen and handicap all. It is better to combine at a few good points and have a larger volume of business at a lower overhead cost, with each farmer paying his share. Consumers often compare the prices of inferior, poorly packed produce in the city with the prices of higher quality, well-packed produce in the country and feel that the country prices are unjust. To be fair to the roadside market, care should be taken to consider the quality, grade, pack and freshness of the products offered for sale."

### A Lot of Cows Elected for Slaughter

"In accordance with the suggestion of E. R. Eastman in the columns of AMERICAN AGRICULTURIST, September 20th issue, I am enclosing signed slip.

"This seems like a timely suggestion to me, one that should be seriously considered by all dairymen. My herd of twenty-five cows is an accredited herd of pure-breds, but if after one thousand signers had been obtained another thousand could be prevailed upon to do likewise, I would agree to slaughter a second cow.

"The suggestion above might be profitably supplemented with another—that of testing all dairy cows for milk and butterfat production, in order to be certain of disposing of the poorest cows. What do you think about it?"—W. P. M., Schoharie County, N. Y.

THIS letter is an encouraging indication of the way dairymen are accepting our proposition to kill or sell for meat purposes before March 1, 1925, at least one dairy cow from the herd. This campaign has already attracted much attention, and it is just started. Mr. C. E. E. Foster, of Jacksonville, Pennsylvania, has the honor of being the first man to head the list, and Mr. A. W. Sprague, of Hartwick, New York, was the second. Every mail is bringing more. It will be remembered that we said that the great majority of dairymen, even though they are keeping no record, know of at least one cow in their herd that does not pay her keep. We suggested that this cow might well be fattened and killed for beef; that a few farmers in each neighborhood might cooperate to divide up one beef at a time so that all would have fresh meat during the winter without paying expensive retail prices for it; that any surplus might well be canned; or, if necessary, that the farmer could sell at least one beef to the butcher.

If we can get even a thousand farmers to do this, the standard of living on their own table will be improved at low cost, they will be ahead financially by not having to feed the worthless cow more than she will return in milk prices, and the surplus milk marketing problem will be relieved by just so much for the whole industry. If we can extend this thousand men to ten thousand, or even to twenty

thousand, what a great boon it would be for every dairyman! We believe it is practical, that it can be done not only without loss, but at actual profit. Therefore, why not do it?

In the lower right-hand corner of page 232 there is a little informal agreement. Sign and return this to us, or just write a card or letter that you will support the plan if enough others will.

### Either "A Feast or a Famine"

THE more one thinks of it, the more it is plain that the farmer's great economic trouble is that of distribution. There never is an over-production of food as far as the whole world is concerned, for always there are people who do not have enough. In other words, there never would be any surplus nor any glutted market if there were proper and ideal distribution. People and cities are constantly increasing, so that there is going to be more and more demand from the standpoint of the whole nation and of the whole world for everything that the decreasing number of farmers can produce.

But until the problem of distribution is solved, farmers will never get the benefit of the full nation and world demand for their products, unless they can figure out some way of curtailing their production. Eugene H. Grubb, one of the best authorities on farm conditions in the world, says that we are cultivating too much land in America. He thinks that we should permit 25 per cent. of our tilled fields to go back to pasture or woods.

For a generation farmers of America not only have been practicing giving away the labor of their wives and children in the too low prices which they receive for their products, but they have also been exhausting the fertility of the land at a very rapid rate.

It has been suggested that the remedy lies in national organization, an organization, for instance, like the Federated Fruit Growers, who ship potatoes or apples to New York when there is a glut in Philadelphia or some other city, and who ship those products to Philadelphia when there is a glut in New York. No individual farmer is equipped to do this. Neither can a small organization do it, unless it is federated with others of the same kind, because without agreement these competing organizations will put the same products into the same city at the same time, and cause a glut.

There has been a good deal of nonsense preached of late years about the wonders that cooperatives would be able to do. But thinking farmers have come to realize that the better cooperatives, those with good business management, have been able to accomplish at least some results on the great problem of distribution by the better merchandising of the products and in getting them on the right market at the right time.

### Eastman's Chestnuts

IT has been said often that one reason why boys leave the farm is that many fathers never recognize that "All work and no play make Jack a dull boy." It is this same kind of a father who gives his boy a calf to raise but as soon as it is grown it becomes dad's cow. Personally, I think such fathers are in the minority. Furthermore, I believe also that all play and no work makes Jack a bad boy.

Anyway, you have heard probably about the youngster whose father had forgotten that he had ever been a boy. The boy had worked all summer in the hot fields and hadn't been anywhere or had any fun. Along in the Fall a circus came to town and he asked his father for fifty cents to go to the show with. Dad wouldn't let him have it. Shortly afterwards the boy was down in the front yard sulking because he couldn't go when a stranger came along. "Hello," says the stranger, "where is your father?"

"He's down in the hog pen feeding the hogs," said the boy and then after a brief pause he added, "YOU'LL KNOW HIM 'CAUSE HE'S GOT HIS HAT ON!"

# Should Women Help with Farm Work?

## Some Interesting Letters from Women on this Subject

**EDITORS' NOTE:**—In answer to our article in a recent issue discussing the part that women should take in farm work outside the home, we have received quite a few letters, all of them from farm women. We are publishing some of these letters on this page. We do not believe that the majority of farm women will agree with the dark pictures painted by some of these correspondents. Also—maybe this is a man's point of view—but we thoroughly believe that while there may be exceptions, most farmer men have no desire or intention of working their women folks to the extent of injuring their health.

\* \* \*

**H**AVING been born and raised on a farm, and with the exception of the years spent in school and teaching, my life has been spent on a farm, as I married a farmer.

With very few exceptions the farmer's wife does all of her own work, makes and tends the garden and raises chickens (this for a little money of her own).

I have known of farmers' wives who rose early, did their work in the house, worked all day in the field with the men, and worked part of the night (while the men were sleeping) preparing food for the next day. But I have never known of one who did this who did not ruin her health in a few years and spend her remaining days paying doctor's bills and suffering.

As a rule people think farmers' wives are stronger than their city sisters, but the same God created both and all after the same plan. The farmer's wife was no more intended to do man's heavy work than any other woman.

It has been said there is more insanity among farmers' wives than any other class. I believe this is due to the fact that they have so little recreation, no vacations and no time for reading. With this daily routine of work they lose interest in life itself. Many are like this, but all are not content with this narrow life and realize that a farmer's wife is as worthy a vocation as any other. With the modern conveniences we can find a little time for recreation, and if we use our brains, we can master our work and not become its slave.

Give the farmer's wife a chance, don't work her to death, and you will find a class of women equal to any, morally, physically and intellectually. —L. J. W., Livingston County, N. Y.

\* \* \*

### Circumstances Determine

**EDITOR EASTMAN** has asked for comments on his article—"Should Women Help With Farm Work?"—and no doubt the majority of replies will be from women as it is a question that so vitally concerns them.

How much, if any, farm work a woman should do must depend first of all on her own health and strength and also on the conditions peculiar to the family of which she is a member.

That "circumstances alter cases" is never more true than in a case of this kind.

Certain it is that there can be no wisdom in any course that results in an over-burdened wife and mother, or in daughters worked beyond their strength, and no right-thinking husband or father will expect or allow it.

Few wives are physically able to do the heavy housework on a farm and rear a family and add to those duties even part of the work of a hired man.

I do not say that this cannot be done. I know of one instance where it has been done successfully, but there are few such superwomen in the world and it is the exception that proves the rule.

When this is attempted it too often means broken health, if not a shortened life and a step-

By A. A. READERS

mother in the family. Even without any such dire results a perpetually overworked and tired-out mother cannot possibly do justice to her most important job, the bringing up of her children.

On the other hand, where there is more than one woman in the family, growing daughters, perhaps, or as sometimes happens, a still-active grandmother, or both, mother and the girls may be able to help with farm work in emergencies to great advantage and no harm to themselves.

At this time of scarce and high-priced hired help it is luck if conditions are such that the women can sometimes lend a hand. Often saving the wages

desire gratified, has the power to change work from drudgery to joy.

Should women help with the farm work—is a serious question that each family must work out for itself, always remembering it is possible that such a saving may be made at too great an ultimate expense.—Mrs. E. S. T. C., Erie County, N. Y.

\* \* \*

### Such Cases Are Rare

**W**HEN my husband lost his job of 26 years standing in a mill in town, we thought of farming, and securing a large, good farm we moved.

Husband had me promise to help him, and I agreed, supposing he meant only in the ordinary way as advice, meals on time, mending and other work fitted to a woman. But later I understood he never intended hiring a man, fearing the expense, but I and my eight little children, the older ones, mostly girls, he expected to help him.

Well, the children and I worked in the hay field until a \$150 operation was necessary for me. The eldest, a frail daughter, soon had to give up. But the next daughter of 14 years was her father's "right-hand man." She loved a farm. Her father said he could depend on her much better than he could the elder boy, the other boys being much younger.

Daughter went to school and graduated as valedictorian at high school, won a scholarship and mostly under hard conditions (as she lived so far from school the most of the time). She even went to college two years and worked for her board and room while there, but during vacation was still the "hired man." At college under examinations (which now is required at all colleges) her right shoulder was found to be drawn out of shape from pitching hay.

After awhile she married, but only to be happy a very short year. After working very hard outdoors on a farm of their own, a little daughter was forced into the world, as the young mother's life went out. The poor little mother's organs as well as her shoulder were strained out of shape with too much heavy outdoor farming. Did it pay to not hire a man? Her motherless babe to never know a true mother's love? No!!! A woman

should not work out of doors on a farm. It may be once in a while at light tasks she might if she wishes to, but never to feel it compulsory. A woman, especially if she has a family, has enough to do indoors. Her organism is of a finer texture than a man's and more susceptible to injury.

A farmer should expect to hire a man. No woman should be expected to milk cows, especially if she is young and raising a family. It "hardens the muscles" the doctors say and causes serious trouble sometimes.

What mother has not returned from milking or other outdoor work to find the children have committed some misdemeanor to each other, broken dishes, or in some way has caused a waste or disobeyed. Whereas if mother had been there, how differently all would have been. And if they or the home should be set afire or a permanent injury happen to them, it would more than balance all the saving in out-door work that mother ever did (if they are left alone), and there is not every time that she can take them with her, as in the early morning, or be a helpmate to "hubby" when all she can think of is overtired feeling and her aches and pains. Generally the offspring "come up" more than being "brought up." A mother

(Continued on page 232)

Copyright, 1924, New York Tribune, Inc.

A fine opportunity for some candidate to win the farmer vote.

—Darling in the New York Tribune.

and board of hired help means the difference between loss and gain, but this should always be worked out with care and judgment, keeping far over to the safe side.

The care of poultry and garden is generally conceded to be part of the wives' "chores," and with some help from the men-folks may be a source of both pleasure and health, but heavy work in the hay and harvest fields, the potato patch and the sugar-bush, together with endless milking of cows, must soon become such a burden as to take all the joy out of living.

It goes without saying that the wife should be consulted concerning business. Her judgment is apt to be sound, and occasionally she has an even better head for business than the husband.

Now—to go outside the question—too often the help of women with the farm work is taken for granted, with no thought of recompense. Of course mother and the girls are glad to help dad out and would never ask or expect pay, but having been saved the wages of a hired man it is up to dad to show his appreciation by taking pains to find out what would especially please them. There is sure to be something they have set their hearts on. Think it over, dad, and remember that a little money in the purse, or a comparatively small

# WOLVERINE

## The 1000 Mile Shoe

### CORDOVAN HORSE-HIDE

"LEATHER STOCKING"

Elmira, N. Y.  
March 16, 1924  
Wolverine Shoe & Tanning Corp.,  
Rockford, Michigan

Dear Sir:

I have had one pair of your shoes while living in Geneva, N. Y., and wish to say they were the best pair of shoes I ever had. I wore them a year on a farm and have worn them two years in shop and the uppers are still good. Would like to get hold of another pair of same kind of leather.

Yours truly,

E. C. ROBY,  
103 S. William St.,  
Elmira, N. Y.

## Three Years Wear and the Uppers Still Good It's Horsehide Tanned a Secret Way

A work shoe that wears 1,000 miles. Men said it was impossible to make one. Now they write us every day. Letters like the one above tell us that Wolverines are actually wearing *more* than the thousand miles we claim for them. Some now tell us to call them 10,000 mile shoes!

Wolverines are different from any other work shoes we know of.

It's a different leather to begin with. Genuine Cordovan horsehide. The world's toughest leather. For centuries it has been used to cover the saddles of the hard-riding Cosacks. It's the only material strong enough to cover baseballs—and stand the terrific pounding.

But never before could it be used in work shoes. For it always "tanned up" too stiff. Now we have a new process. Developed in our own tanneries. It makes this tough leather as soft as a buckskin glove.

And it *always stays soft*. Get these shoes soaking wet. They dry out soft as velvet. Here's a comfort feature you'll find in no other work shoe. So try Wolverines.

Feel the thick pliable horsehide. Soft as buckskin. Tough as rawhide. You'll realize at once why you can expect so much longer wear from these shoes.

We are work shoe specialists. We make horsehide shoes only. And we tan every hide ourselves. We produce a model work shoe for every need. For farm, lumber camp, mine or factory—and for every season too. Send today for our complete catalog. Find the shoe for your particular needs. It's important to get the right shoe.

If your dealer hasn't Wolverines, please write us. We will send our catalog and the name of the nearest Wolverine dealer.

### Wolverine Comfort Shoe

This Wolverine is supple and soft you can double it up like a moccasin. It wears like iron but you'll hardly know you have a shoe on, it is so soft and easy.

For tender feet, or where you do not encounter wet weather, wear this Comfort Shoe. A blessing to the feet.

### Western New York Fruit and Crop Notes

LAST week most growers finished picking Bartlett pears. The crop is comparatively small, but yielded rather better than estimated. In spite of fairly good prices a good many pears are going into cold storage. Dealers have paid growers generally 3 to 3½ cents a pound for A grade 2¼ to 2½-inch and up. Probably \$2.50 per bushel F. O. B. for 2½-inch Bartletts A grade, with a few ears at \$4.75 has been the ruling price to dealers for straight cars.

Growers are now picking Alexander apples. A few Wealthies are beginning to come in, but the main crop will not be ready until next week. A dollar or a dollar and a quarter a bushel for the best grades seems to be top price being paid growers. The crop of these varieties is large.

Elberta peaches will begin to move this week, having sized and colored remarkably fast this past week. They are about two weeks late. The crop is fair to good but there is not an overload on the trees as in 1922. Quality will be good, except possibly for color. Dealers started out to buy the crop at \$1.10 to 1.15 per bushel A grade, then raised the price to \$1.25 and now are even offering as high as \$1.50 per bushel. A number of ears have been sold as high as \$1.75 to \$1.85 F. O. B. shipping point.

Harvesting the main apple crop in western New York will not get under way much before October 1st, which means that it will be mid-November before the crop is picked and packed.

Thousands of acres of wheat were sown in Western New York during the week of September 15th-20th, which was excellent weather—a whole week without rain has come to be quite unusual this season. The present week will see the greater part of the acreage sown, except what follows beans, which will be pretty late this year. Bean harvest is hardly begun generally, yet, though a few fields have been cut. It will start this week. No corn has been cut for grain as yet, though silos are being filled. Most corn will require a week or ten days yet for reasonable maturity. Let us hope frost permits it. Potatoes and cabbage promise good crops, but prices, especially on cabbage are not encouraging.—M. C. B.

### Farmers and Railroad Men Meet

AN unusually well attended and representative conference of farmers and railroad transportation men was held at the Rochester Chamber of Commerce, under the auspices of the State Farm Bureau Federation on September 18th. Sixty or seventy farmers were present and met representatives, some thirty in number, of practically all the railroads in New York State.

Secretary Woodward of the Rochester Chamber in welcoming the conference well pointed out that it typed the new spirit of approach to problems, that these two groups should meet to discuss their needs and facilities. The old way was to curse and fight without even getting personally acquainted. No outstanding problems were brought up, but almost universal commendation on the present service of the railroads was heard. President Lee of the Farm Bureau Federation who presided called it a "love feast." Although Fred Slater, President of the Monroe County Farm Bureau who presented the farmer's point of view, undoubtedly expressed the general sentiment of farmers when he said that farmers were more interested in adequate and satisfactory service than in lower freight rates, there were those present who, had they been called upon, would have attacked not only the rates, but the rate-making structure.

Donald Conn of the American Railway Association gave the principal talk of the day, which was mainly a presentation of the problem of the increasingly expensive idle car and a plea for heavier loading and more prompt loading and unloading of

(Continued on page 240)

### SPECIAL Introductory PRICE!

The Drew Line dealer in your town is featuring the remarkable new Drew Stanchion at a Special Low Introductory Price. Be sure and see this new Stanchion. It represents the simplest and most satisfactory construction ever devised.

# Special Bargain Prices All Next Week—Oct. 6 to 11 on Gold-Seal Congoleum Rugs

## The Floor-Covering Event of the Year!

For the first time in two years, genuine nationally advertised *Gold-Seal* Congoleum Art-Rugs, By-the-Yard and Rug-Border will be offered at special bargain prices. This nation-wide Sale comes just at the time when women everywhere are putting their homes in readiness for winter. It gives every woman the opportunity to place these richly colored, labor-saving floor-coverings in every room of her home at a real saving in money.

If you have used *Gold-Seal* Congoleum Rugs you know their beauty — their remarkable money and labor-saving features — and you cannot fail to appreciate the bargains that the special prices represent. If you have not yet had Congoleum in your home, you should see what beautiful, sanitary, and practical floor-covering you can buy for amazingly little money.

One of the greatest charms of Congoleum Rugs—the warmth and artistry of their colors—cannot be appreciated from this advertisement. You must see the rugs to realize how beautiful your floors can be made at such small cost.

### Don't Miss This Opportunity

All the *Gold-Seal* Congoleum offered in this Sale is fresh, new, perfect goods. All of it carries the famous Gold Seal pledge of "Satisfaction Guaranteed or Your Money Back." For your own protection, don't fail to look for the Gold Seal! It is pasted on the face of the patterns.

Remember that these reduced prices are in force October 6th to 11th only. Wherever you may live you will find a Congoleum dealer near you. Don't delay. After Saturday evening, October 11th, regular prices will be reinstated.

**Beautiful, Harmonious Patterns.** Congoleum patterns are the most distinctive you can imagine. There are elaborate effects for living-room, dining-room and bedroom—simple designs for kitchen and bathroom.

**Easily Cleaned.** No tiresome sweeping or beating as with old-fashioned, woven floor-coverings—a damp cloth quickly removes every speck of dust and dirt.

**Waterproof and Greaseproof.** The firm, sanitary surface is waterproof and rotproof. Even grease can be wiped up in a jiffy.

**Need No Fastening.** Congoleum Rugs lie flat and will not curl at the edges or corners. No tacks or cement are ever required.

**Economical.** Congoleum Rugs at regular prices are a real bargain. At these special prices they represent unusual value.

### Important Warning!

There is only one "Congoleum" and it is identified by the Gold Seal pasted on the face of every pattern. The name "Congoleum" is a registered trade name and the exclusive property of Congoleum Company, Incorporated. If you want "Congoleum" be sure to ask for it by name and look for the Gold Seal.

# Seasonal Crop Notes

## Indications for Smaller Bean Crop

REPORTS coming from all over New York State seem to indicate that this year's bean crop is going to be below that of last year, at least. A late spring, with consequent late planting, made the crop two weeks late all along the line, with the result that fall rains, cold nights and frost in some sections cut the crop materially. Further reductions in yields will depend entirely on the weather we experience during the last week in September and the first week in October. Advices from Geneseo in Genesee Valley are as follows:

"There is a great deal of variation in the condition of the bean crop in various sections and of different varieties in the same section. We do not look for as large a crop of beans as we had last year. In some sections Red Kidneys are practically a failure as in the Perry section. Yellow Eyes are very short, while Marrows are very good. Red Kidneys in the Eastern sections of the State are in fair condition, but they will not yield as they did last year. The prices should range about as they did last year on all varieties except pea beans, which may be higher. It is too early for anything definite as the next two or three weeks determine in what condition beans will be harvested."—H. A. D.

The following letter from Bath, Steuben County, seems to indicate similar conditions as those in Genesee:

"Our acreage, we feel, is a little larger than last year. Owing to weather conditions, the seed went in later, and in some cases it has blighted, been hit by frost and set back to such an extent that at the present time prospects point to a yield a little under last year. To begin with new beans will be about 10 days to two weeks later on the market this year than they were last. From now on we must have ideal weather to cure the beans because if we should have a severe frost or exceptionally heavy fall rains our crop would be seriously damaged."—J. B. C.

Orleans County, like Genesee and Steuben, is also looking for a short crop, according to the following letter from Albion:

"The acreage planted in New York State this year is somewhat heavier than last year. However, very unfavorable weather conditions which have prevailed, both during planting time and during the growing season, have made the crop two or three weeks later than last year, and on account of excess rainfall, has been considerably damaged. Our estimate is that the crop in the State will produce about 15% less than it would have produced had weather conditions been normal. This wet season has caused the spread of considerable disease and inasmuch as we must have two weeks at least of good weather to insure any kind of a crop and the thermometer almost every night is hovering around the freezing mark, it is altogether too uncertain to attempt to predict either the yield or prices."—G. E. C.

### A Silo Insures the Corn Crop

E. S. SAVAGE

THE season has been a rather poor one for corn in many of the sections here in the East. Many farmers who were trying to grow corn for grain found that a late spring coupled with cool, damp weather and frosts early in the fall made the growing season too short to mature the crop. As the planting season approaches, some of these farmers are hesitating about putting in much corn again this year. Thus, it is timely to call attention to the fact that the best way to insure getting the most out of the corn crop is to have a silo.

Corn which is frosted before the ears mature cannot be husked for grain unless it can be fed immediately, because the kernels contain too much water for storage or shipment. Further, the leaves begin to drop off as soon as corn is frosted, while rains may leach out the most nutritious parts from the stalks and remaining leaves. Thus, the curing of frosted corn as dry fodder means a large loss in feeding value. On the other hand, all the nutrients in frosted corn, both ears and stalks, can be saved if it is immediately put into the silo, and enough water added so that it will pack well. The best way to add the water is through the blower as the silo is filled. Every farmer in the northern sections of the East must take some chance on frost to grow his corn to maturity. He does not need to worry if he has a silo.

Frequently, the weather permits the corn to mature but proper curing is prevented by a period of damp or rainy weather. The silo can be filled in any weather and good silage can thus be

secured from a crop which would otherwise yield a very poor dry fodder.

For a given acreage and for a given amount of labor, corn excels all other cereals as to yield of animal food in both grain and forage. Fortunate is the farmer who can grow plenty of it. Of course, there are areas where the growing season is so short or the weather conditions so unfavorable that a good yield of properly matured corn can seldom be expected. Here again the silo comes in. For silage, mature corn is not necessary. There are many who prefer an immature corn for silage anyway. The point I want to make, however, is that the silo affords a means by which the growth of this premier source of animal food can be extended into regions where it is not practicable to grow it otherwise. Through the silo, the farmer who is otherwise denied this crop which makes for cheaper milk production, may have it abundantly.

### Dusting Cantaloupes Pays

T. M. SMITH

LAST year in this section many acres of cantaloupes did not ripen right, bringing the growers little or no profit. They used good seed, planted in good soil properly fertilized and gave them careful cultivation. But because they did not protect the vines from the bugs and beetles the vines prematurely shed their leaves, leaving the melons exposed to the sun.

This year our vines were dusted and sprayed until the melons formed, as we did for several years with success. Several years ago we lost part of the crop and learned we had to protect the vines until picking time, which we have been doing since. We have a duster that sends the dust with some force and we get it on top and underneath the leaves. For the leaf-eating beetles it seems to do more good to apply the dust when the vines are damp and for the sucking variety when the vines are dry. The vines that were dusted yielded from ten to twelve merchantable melons to the hill, while the ones not dusted after the melons set were not good after the first week. We used a dry bordeaux mixture which costs us \$9.00 per 100 lbs. This dust is very fine, green in color and sticks to the leaves. The dust paid us and other growers who used it.

Will the readers of this paper help stop the picking and shipping of green cantaloupes? Put eastern melons in the class where they belong, at the top, and all the growers will benefit.

### Why Lancaster County Leads

CORN and wheat production on Lancaster County, Pa., farms offers a basis for some interesting comparisons. The real importance of the figures given below is to be found when the comparisons are made in the acre yields, the relation to the amount of fertilizer used, and the number of farmers using fertilizers.

	Bus. Corn Per Acre	Bus. Wheat Per Acre	Value of all crops per im-proved acre	% Farmers using fertilizer	Amt. Used per farmer
Lancaster County	57.0	21.5	68.56	94.0	3.2 ton
Pennsylvania	45.6	16.6	48.51	80.0	2.3 ton
3 Iowa Counties	43.2		34.84	.85	— *
Iowa	41.2		31.13	1.5	— *
6 Kansas Counties		12.4	20.17	.79	— *
Kansas		18.1	19.24	3.7	— *

It is evident that Lancaster County farmers are maintaining an unusually high production of corn and wheat. They are averaging 25 per cent. more corn and 30 per cent. more wheat per acre than the whole State, about 32 per cent. more corn than the three largest corn-producing counties of Iowa, and nearly 37 per cent. more than the Iowa average. They are also raising over 73 per cent. more wheat per acre than the six best wheat counties in Kansas and 69 per cent. more than the Kansas average.

500,000 More Customers were won by Ward's low prices and reliable merchandise last year. This book gives you the same opportunity for satisfaction and saving.

## Are you getting your share of the Savings this Catalogue offers?

**W**HENEVER you need to buy anything for your farm, your home or your family, do you look through Ward's Catalogue? You will find here great assortments of just the things you want. You will see the prices you should pay — the lowest price for goods of dependable quality.

In buying from Ward's it is a satisfaction to know that you are getting the best goods and at the lowest prices that any one else pays.

Ward's Catalogue shows you the right goods and gives you the right price — always.

It is easy and pleasant to order from Ward's

Turning through your 726-page Catalogue, choosing the things you want at your leisure, not being influenced to buy this or that, but deciding for yourself the thing you like best — that is the modern, the satisfactory way of buying.

And you can select from Ward's Catalogue without any doubt of value and without the slightest risk, because you are

protected by our 52 year old guarantee "Your Money Back if you are not Satisfied!"

### Everything for the home

We try to picture and describe accurately every piece of merchandise, trying never to exaggerate, so that when you open your package you will be fully satisfied with your purchase.

Read what Mrs. R. A. Bower of Toledo, Ohio, says:—"I wish to express my appreciation of your good service and the good quality of your merchandise. And I always receive my orders inside of a week and everything satisfactory. Many times I am surprised at such wonderful values for the price. It is a pleasure to order from your catalogue."

We say look through your Catalogue for everything you need to buy. You will be amazed to find how nearly all your needs will be met in this Catalogue.

The latest fashions, dresses, coats, hats, everything a woman wears. And everything for the home — furniture, carpets, the newest things for comfort and convenience — and always of Ward Quality.

By "Ward Quality" we mean just this — that we do not sell goods where the wear has been shortened, where the actual service an article will give has been lessened, in order to sell it a little cheaper.

We do not sacrifice quality to make a low price. We offer no price baits on "cheap," unsatisfactory merchandise.

### Everything for the man and for the farmer's needs

Over 50 million dollars' worth of new merchandise has been bought and manufactured for this book. Bought for cash. Bought by our great international staff of expert buyers, in America, in Europe, wherever cash would buy the largest amount of actual value.

Whether it be something for the home — tools, hardware, radio; something for the car — tires, batteries, accessories; or something for the man's or boy's personal use — clothing, shoes — whatever a man needs or uses, this Catalogue offers it of standard quality at the very lowest cash prices.

Use this catalogue — its large savings may just as well be yours

You may as well benefit by the almost weekly saving this Catalogue offers. Each week you buy something. First look it up in your Catalogue. Use this book as millions of other families do. There is just as great a saving in this book each week for you.

Your orders will be shipped within 24 hours

Your orders are appreciated at Ward's. Your letter is opened immediately, your order filled at once, and your goods are on their way to you within 24 hours.

# Among the Farmers

## Robertson Resigns from Maple Co-op-County News

F. E. ROBERTSON, who has been acting manager of the Maple Producers' Cooperative Association since January, 1923, has severed his connection with the association. H. P. Nicholson, who has been bookkeeper and acting treasurer, will be in charge of operations for the immediate future. The association recently moved its offices from 307 S. Franklin Street to the warehouse at the corner of Vine Street and Burnett Avenue.

The association now owns its equipment free and clear and its officers have been relieved of the personal liabilities which they at one time incurred in the interest of the organization. Because of the unusually heavy expenses incurred in its first year of organization and the high cost of operating the plant it has been impossible to make satisfactory returns to producers.

The association handled in 1922 about 147,000 gallons of syrup; in 1923 about 51,000 gallons, and in 1924 about 20,000 gallons.

## Sheep Growers Find Wool Values Strong

SHEEP growers are finding present wool values strong and markets active, more so than in any previous year at this period since the wool growers of this state began to sell their wool cooperatively, according to officers of the New York State Sheep Growers' Cooperative Association.

The 1924 pool will exceed that of 1923 by several thousand pounds. On September 1 it amounted to over 470,000 lbs. The following sales have been made at what most sheep growers consider very satisfactory prices:  $\frac{3}{8}$  combing, 54 cents;  $\frac{3}{8}$  clothing, 48 cents;  $\frac{1}{4}$  combing, 52 cents;  $\frac{1}{4}$  clothing, 44 cents; low and common, 40 cents; rejects, 38 cents; tags, 18 cents. These prices are f. o. b. the warehouse at Syracuse.

## New York County Notes

**Cortland County**—Potatoes, cabbage and corn have made excellent and rapid growth during the past two weeks. Early cabbage has been selling at the car at \$6 a ton, while early potatoes are being sold anywhere from 80c to \$1 a bushel. The oat crop is fairly good, threshing has been held up on account of the heavy rains during the last week in August. The pastures are in much better condition than in several years at this time of the year.—G. A. B.

**Warren County**—We are having unusually cold nights for this time of the year. Corn is not ripe yet, and will take fully two weeks before it will be anywhere near mature. Potatoes will make a fair crop, but they are late, still green. In fact, everything is late, not up-to-date for this time of the year, and early frosts will do great damage. Pastures have been poor all year and cows have not been doing well. Grain is advancing in price each week. Stock of all kinds is not in much demand on account of the short hay crop and the high price of grains. Very little fall plowing done as yet.—R. T. A.

**Tioga County**—Tioga County Fair experienced a rather disagreeable week. The first and last day were very rainy. The parking plans for autos this year were fine. Any one could get his car out at any time without inconveniencing his neighbor. The entire parking place was one sea of cars. Nevertheless many teams and rigs were in evidence. At the quoit pitching contest, which was hotly contested by twelve teams, Frank Forbs and Fred Seager, both of Candor took the first place. They represented Tioga County at the State Fair. Charles Marvin, president of the village of Owego, recently purchased the grounds of the Agricultural Society for \$5,500, the debt

the society owed, and then presented these grounds to the village of Owego as a park and playground. The society is to have the privilege of holding its annual affairs there. Thus the society is out of debt and the village has gained a fine park. Mr. Marvin has made several fine gifts of late. One he shared with his sister in presenting to the Home of Aged Ladies of Owego. Another donation was to the Fire Department of Owego to purchase new apparatus.—Mrs. D. B.

## In Western New York

**Chautauqua County**.—Barns are full of hay. Cows are selling all the way from \$50 to \$100, while fat cattle are bringing about \$18. Grape picking will begin about October 10, the latest in years. This year Chautauqua County fair was the best in years. There was very good displays of fruit. There were ten granges represented. Other features were large cattle and sheep exhibits as well as the exhibits by the school children. Butter is bringing 50c a pound, eggs 42c, fowls 20c, chickens 25c, potatoes \$1 a bushel, sweet corn 12c a dozen, tomatoes \$15 a ton at the factories, \$1 a bushel on the market.—C. L. B., Forestville.

**Genesee County**.—We are having so much wet weather that it is injuring the bean crop. Threshing has started and the yield of wheat is very light. Oats and barley are turning out fairly well.—J. H.

**Ontario County**.—We are having a fine growing season, no frost as yet. Corn needs three or four weeks of good warm weather. Cabbage is bringing \$15 a ton, very good crop.—H. D. S.

**Wyoming County**.—Farmers very much discouraged over oats and beans as they are unable to harvest them owing to the rainy weather. Very little threshing has been done yet. Hay selling for \$12, second crop being cut in some places. Butter 50c.—J. E.

## Such Cases are Rare

(Continued from page 227)

to guard her children's thoughts and actions and to administer to their soul's education as well as to their physical well-being, must not be worn out with unnatural labor.—Mrs. C. V. L., Chenango County, N. Y.

\* \* \*

## This Woman Says Yes

IN LOOKING over your interesting magazine I noticed this: "Should Women Help with the Farm Work?"

I say yes, do anything that will help from raking hay to milking the cows. I was born on a farm and worked at everything from milking to driving the fastest and youngest horse on the farm and loved to do it, too. I think that a farm is the most beautiful thing under the beautiful sky. If a woman has a good, loving, faithful husband it is her duty to help in any way, indoors or outdoors. I call it a blessing to work so near to nature and to God. We surely are who live on a farm well taken care off.—Mrs. H. E., Massachusetts.

## Cow Campaign

CUT this out, sign it and send it to American Agriculturist. It is a simple agreement among farmers for each man to get rid of the poorest cow in his herd. Each agrees to kill or sell for meat purposes this individual animal. It is understood the agreement is not binding until at least 1,000 farmers in the New York milk shed have agreed to do likewise. (Signed)

### Good Livestock Shown at Springfield

IN MANY ways the live-stock exhibit at the Eastern States Exposition was the best ever held at Springfield. While not quite as large as last year's showing, the 2046 entries of cattle, horses, sheep and hogs were on a high plane of quality. It was the best balanced live-stock show ever staged at the Exposition. Particularly outstanding was the Jersey exhibit. The statement was made that many of the old time Jersey breeders considered the Jersey show the best ever held in America. That is a pretty strong claim without first making a careful comparison with previous shows, but it does serve to indicate the exceedingly high quality that characterized the Jersey showing.

In number of entries the Holsteins led with the Jerseys standing second. Both the Ayrshire and Holstein exhibitors staged very strong shows.

Emmadine Farm of Hopewell Junction, N. Y., has the distinction of winning every blue ribbon except one in the Guernsey classes. New York and New Jersey breeders won a large share of the ribbons, including four out of the five championships, with their Jersey herds. Barclay Farm of Rosemont, Penn., an Ayrshire exhibitor, took a number of first places and junior and reserve championships on both male and female.

Beef cattle were stronger this year than ever before. For the first time the exposition provided a class for carload lots of fat steers.

In the sheep department the majority of the important places were won by New York and Pennsylvania breeders.—H. W. BALDWIN.

#### Eastern Pennsylvania Notes

OLIVER D. SCHOCK

A CONSIDERABLE amount of wheat has been threshed and stored. The yield has fallen short of expectations, while its grading also falls below last year's high average. Corn fields were greatly benefited by recent heavy rains. Sweet corn of quality commands 50 cents a dozen ears. The buckwheat crop holds out no promises for low-priced buckwheat flour, being decidedly short in production.

Numerous barns, completely filled with the season's crops, were set on fire by lightning and destroyed, causing heavy losses for farmers' mutual fire insurance companies. Spontaneous combustion was another cause for barn fires. Since teachers' salaries are being increased in rural localities, school directors insist upon a higher standard for teachers. County or township high schools are becoming more popular.

#### New Jersey County Notes

**Salem County**—The acreage of late potatoes is smaller this year. Various varieties of red skins and pink eyes which are usually planted in south Jersey between the middle of July and on into August, were not planted as heavily this year as usual. This was mainly due to the fact that we had a very severe drouth with the result that the ground could not be plowed and fitted to receive the tubers. Furthermore early potatoes were so dirt cheap that farmers were too discouraged to go in very heavily. The same holds true with rutabagas and beans of all kinds. Cranberries are selling well.—S. B.

**Cumberland County**—Crops are fair with the exception of corn and canning house tomatoes. Farmers are having hard times to make both ends meet. Early potatoes are good, but prices are extremely low, averaging around \$1.00 per hundred. Hay made a good crop, as did wheat and oats. Peaches also made a good crop, while apples and pears will be light. Late potatoes are fair. Prices in general for farm products are only fair.—A. P. S.

# CHEVROLET

## Indicating Chevrolet Quality

### Power!

Power to speed over the steepest hills—to pull through the most difficult roads. Endurance that gives dependable, trouble-free performance and long life. Economy—the greatest in any automobile engine.

These are outstanding characteristics of Chevrolet's famous valve-in-head motor.

The Chevrolet power plant includes a modern 3-speed sliding-gear transmission with hand lever, Remy electric starter, generator and ignition—water pump to insure perfect cooling, and oil pump for efficient lubrication. The fuel is fed by a modern vacuum feed system.

This is the type of construction found on cars far above Chevrolet in price and it is a fair indication of the quality to be found in a Chevrolet car throughout.

## "A railroad man's railroad"

FROM the ranks, New York Central men rise by merit through positions of greater and greater responsibility.

Ability, industry and character are the sole tests of promotion, and they are applied all the way up the ladder to the highest executive positions.

Because of the rigid application of this democratic process of selection, the New York Central has built up a morale that railroad men throughout the country regard as a model.

New York Central standards of public service have been developed on the solid foundation of individual opportunity.

## The WINDMILL with a RECORD

The Auto-oiled Aermotor has behind it 9 years of wonderful success. It is not an experiment.

The Auto-oiled Aermotor is the Genuine Self-Oiling Windmill, with every moving part fully and constantly oiled.

Oil an Aermotor once a year and it is always oiled. It never makes a squeak.

The double gears run in oil in a tightly enclosed gear case. They are always flooded with oil and are protected from dust and sleet.

The Auto-oiled Aermotor is so thoroughly oiled that it runs in the slightest breeze. It gives more service for the money invested than any other piece of machinery on the farm.

You do not have to experiment to get a windmill that will run a year with one oiling. The Auto-oiled Aermotor is a tried and perfected machine.

Our large factory and our superior equipment enable us to produce economically and accurately. Every purchaser of an Aermotor gets the benefit from quantity production. The Aermotor is made by a responsible company which has specialized in steel windmills for 36 years.

## Farmer-owned Milk Plants

An A. A. Radio Talk Broadcast from WEA F

MOST New York State dairy farms can be purchased at less than

By M. B. GARLOCK  
President Eastern States  
Milk Producers, Inc.

have the organization, information and facilities which will enable him to bargain

on an even basis with the organized buyer of his products. Either the farm lands or the buildings on them are worth nothing. If the buildings burn, the owner cannot ordinarily afford, as a business proposition, to put up new ones, because the new buildings will not add their cost to the value of the farm. It is better to spend the money in buying another farm already equipped. This condition which has existed in practically all branches of farming in the United States for over a generation, indicates the unhealthy condition of our great basic dairy industry.

As a result of economic pressure, farmer-owned and controlled country marketing organizations have been developed in all parts of the United States by farmers producing all kinds of farm produce. They process, store and market a very large part of our total agricultural products. They are the big outstanding

on an even basis with the organized buyer of his products.

The farmer has learned that the isolated, independent creamery which endeavors to market its milk without contact with other farmer organizations doing likewise is at a big disadvantage. It is equipped with a limited fund of information and experience when negotiating with an experienced buyer who has available information gathered from other plants which he may own or control or from an Association of which he is a member. If the farmer sells his goods for less than they are worth, the benefit is seldom passed on to the consumer. These local units, therefore, recognize the necessity for their grouping together in larger associations for the purposes of mutual protection and to enable them to render collectively services which they cannot render singly.

One of the outstanding exhibits, if not the most attractive, at the New York State Fair this year was that of the Department of Farms and Markets, representing the milk production of New York State. It was in the form of a miniature Niagara Falls in milk, shown above, finding its origin in little rivulets of milk with their headwaters, the dairy farms of the Empire State. According to the Department, the production of milk per minute is 9,970 pounds or 4,980 quarts, or a daily production of 14,350,000 pounds or 7,170,000 quarts. After the milk came over the falls, representing production, it was diverted into various channels representing consumption. In the foreground it ran into large bottles, while to the right and left the milk ran into miniature cheese factories or creameries representing the dairy manufacturing interests of New York.

features of the agricultural movement of the present day. They are the result of a real, economic need and are a recognition on the part of the producer that he must solve his own problems by his business ability and must not rely on political measures for relief.

The New York Milk Producers, pioneers in this movement, have during the past decade and especially during the past five years been acquiring the country facilities needed for the processing and shipping of their milk. At present, New York dairymen own over two hundred modern milk plants capable of supplying New York City on short notice with its entire requirements.

The experience acquired in the creation and operation of these farmer-owned marketing organizations has taught the farmer much:—He has learned that his farmer-owned enterprises depend for their ultimate success upon their ability to quicken, shorten and cheapen the processing, grading, storing and distributing of his products. They must justify their right to permanent existence by their ability to render necessary service economically and to the satisfaction of the consuming public. The farmer realizes that the most he can get for his products is their value as established by the free operation of the law of supply and demand. But this law does not operate freely when the farmer is at a disadvantage. He must

The farmer has learned that the size of his organizations is limited by the abilities of the farm leadership available for directing and carrying them on. It is unsafe to hire experts to run a business for which the farm leadership is responsible but which the farm leadership has not yet developed the ability to supervise or direct. Fortunately, this farm leadership is growing and developing all the time and each year it is possible, using the talent already developing, to successfully undertake larger and more complicated tasks. Our farms have furnished men qualified to head our National, State and Municipal Governments and leaders for every line of worthwhile endeavor. They will certainly furnish these farmer-owned organizations men of equal caliber who will successfully and conscientiously serve the farmer marketing organizations of the immediate future.

### Can Operate Without Monopoly

The farmer has learned that farmer-owned marketing organizations can and will succeed without monopoly. There is no farmer organization which has adopted a program which can succeed only with monopolistic control. It is, however, to the interest of both producer and consumer that these organizations be large enough and strong enough to secure the men, money, materials, equipment and volume of business necessary

It will keep you warm and comfortable because

But act quick before this offer is withdrawn. **INTERNATIONAL COMM. HOUSE,** Dept. B-346 433 Broadway, New York, N. Y.

to enable them to carry on their business economically. It is the proper ambition for each farmer-owned organization to secure a volume of business which will enable it to operate at a minimum cost and make possible a fair price to both producer and consumer. The consumer should always bear in mind that it is to the producer's interest to market his product in a direct, orderly and regular manner and that to do so it must be priced to move the largest possible volume.

He has learned that the farmer-owned company will ultimately determine the scale of prices paid by competing dealers in the country. In the long run the competing dealer will not pay farmers more than the farmers who own and operate their country shipping stations are able to pay themselves. The independent or unorganized farmer has as much at stake in the success or failure of the farmer-owned organizations as have their owners and patrons. There will be a growing recognition on the part of the unorganized farmer of his obligations to and dependence on the farmer-owned milk company.

### Milk Business Highly Competitive

The farmer has also learned from bitter experience that the milk business is highly competitive; that it is easy to make costly mistakes; that responsibility develops conservatism. He realizes the magnitude of the interests at stake and of the responsibilities which go with them. He wants nothing but a conservative, constructive type of leadership. He hopes he will never be compelled to take over the entire process of distribution. The city wholesale and retail business he believes should remain in the hands of dealers who will recognize his right to organize and have a voice in determining the price of his milk. The farmer should own and control facilities enough to always assure him of access to his markets and the ability to secure a fair price in them. He wants nothing more than this and business prudence demands nothing less.

### "The Eastern States," Organized

One of the constructive marketing efforts to bring economic relief to the dairymen was made by a group of farmer-owned and operated creameries in the New York Milk Zone, nearly three years ago, when they organized the **EASTERN STATES MILK PRODUCERS, INC.** These creameries, owning about twenty plants, which represent an investment of approximately a million and a half dollars, handle the milk of nearly three thousand farmers. They are located in the old, established, milk-shipping territory and during the flush of the season receive approximately nine thousand cans of milk a day, an amount equivalent to 9 per cent. of the Metropolitan District's total requirements. These plants are all owned and operated by their farmer owners. They are equipped to ship pasteurized milk, to make cream, butter, cheese and condensed milk, and three of them distribute milk in the cities where located. The Eastern States do not control the operation of these plants, but serves them as a Conference Board or Trade Association. It keeps these different companies posted on general market conditions, assists them in the sale of their milk and affords them an opportunity to meet and discuss general matters affecting their branch of the milk business.

### How It Operates

The Eastern States' group of farmer-owned milk companies include those which have been in business longest—which have the oldest fund of accumulated experience and which have been able to survive in the Struggle for Existence. They are all shipping loose milk, that is milk in forty-quart cans, into New York City. This milk is received at the country plants before 9:00 o'clock A. M., is pasteurized, cooled, placed in forty-quart cans and put on the

(Continued on page 236)

WM. LOUDEN

Exhibited in 1907 the first all steel stall ever displayed at a National Dairy Show.

## Keep Cows Comfortable—Increase Milk Flow

Good dairymen realize that the capacity of a cow to produce milk is governed very largely by her state of health and condition of comfort. Many an apparently mediocre dairy cow has been revealed as a high producer by a change of ownership, presenting the cow with more comfortable conditions under which to work and make milk.

From Ocean to Ocean and from Lakes to Gulf, thousands of practical dairymen are making extra milk profits from their cows, every year, as a result of installing Louden Steel Stalls and Stanchions. Their cows at the same time have a greater measure of protection against disease while much less time is required to take care of them.

### Get the Most Out of YOUR Cows

Maximum comfort—"pasture comfort"—in the barn can be obtained only with Louden Steel Stalls and Stanchions.

**Louden Swinging Stanchion** holds the cow in her place yet allows her to get up and lie down comfortably, without lunging and struggling, without jamming her knees or bruising her shoulders. She can easily turn her head and card herself or lie with her head comfortably at her side. And the Louden is the only stanchion permitting the use of the High Built-Up Manger Curb, which prevents cows from nosing feed back onto the stall floor and wasting it in the bedding—a saving that counts up to many dollars in a short time.

**Louden Stalls** stand severe shocks and strains—do not get wobbly—outlast the barn. Made of Open-Heath high carbon steel—strongest and best. Built with the famous Louden Interlocking Dust-Proof Coupling—a thoroughly patented Louden feature—smooth on top with no open crack to catch and hold dirt or disease germs.

**Louden Steel Stalls and Stanchions** were the first on the market and have been standard ever since. Selected by the U. S. Government. Write for illustrated printed matter and full details. Check the coupon.

The Louden Machinery Company

CLOVER HONEY in No. 60 lb. cans, \$7.50. Buckwheat, \$6.50, F. O. B. G. W. BELDEN, Berkshire, N. Y.

# Service Bureau

## What Went on at Standard Carbide Meeting

AS many of our subscribers who invested money in the Farmers' Standard Carbide Company were informed a meeting of stockholders was held on September 20th. The AMERICAN AGRICULTURIST lawyer attended the meeting in the interest of our subscribers, and reported as follows:

At the meeting of the stockholders of the Farmers' Standard Carbide Company, held at the office of the company September 20th, at 10 A. M., it was voted to change the place of the principal office of the company from the town of Plattsburgh to the City of Plattsburgh, and a resolution was passed reducing the number of directors from fifteen (15) to eleven (11).

The following resolutions and amendments to the by-laws were made.

1. Requiring that only two-thirds of the directors need be stockholders.

2. Special meetings of the stockholders may be called, (a) By a resolution of the board of directors, or (b) By a written request upon the president by one-third of the directors, or (c) Written request upon the president by five hundred (500) shares of any class of stock.

3. The annual meeting of the stockholders shall be held at the principal office of the Company on the second Saturday of each February of each year at 10:00 A. M.

4. The regular meeting of the board of directors shall be held at the principal office of the Company on the second Saturday of each month at 12:00 noon. A quorum at any meeting of the board of directors shall be one-third of the entire membership of the board and a majority of such quorum shall decide any question that shall come before the meeting.

5. The board of directors are hereby authorized to direct the election of an executive committee to carry on the functions conferred upon it by the board. And the following board of directors were elected: Victor F. Boire, Platts-

burgh, N. Y.; Elton H. Miller, Watertown, N. Y., Box 93; G. H. Renard, Kingston, N. Y.; W. H. Mandeville, 521 Robinson Building, Elmira, N. Y.; Omer T. Kaylor, Hagerstown, Md.; W. H. Mears, 236 West 44th St., New York; Harold A. Jerry, Plattsburgh, N. Y.; John W. Guibord, Plattsburgh, N. Y.; Samuel Null, 51 Chambers St., New York City; Seth S. Allen, Plattsburgh, N. Y.; B. N. Allyn, Tioga Center, N. Y.

It seemed to be the opinion of a large majority of the stockholders present that an investigation and study should be made by experts upon the following eight topics to report to a later meeting as to the advisability of continuing the operations of the company, and manufacturing carbide at Plattsburgh. The questions to be investigated by M. H. Avran & Co., Inc. of New York City. The topics being as follows, and the investigators' names who are to report on each of the eight topics are as follows:

1. Hydraulic Water Power Development, Prof. C. P. Bliss; 2. Electrical Power Development, Mr. R. E. Denike; 3. Chemistry of Calcium Carbide Production, Prof. H. J. Nasson; 4. Manufacturing of Calcium Carbide, Dr. N. M. Hopkins; 5. Raw materials, and source of supply, Mr. K. Thomas and Mr. J. E. Kelly; 6. Market, Mr. R. C. Schroth; 7. Re-organization and Management Plan, Mr. M. H. Avram; 8. Financial Plan, Mr. J. E. Sawhil.

The stockholders thereupon adjourned until the last Saturday of November at 10 A. M. to the Court House in the City of Plattsburgh, at which time the reports of the various experts will be made and final action can be taken as to whether it will be advisable to continue to operate the company, or whether the property will be sold and the affairs of the company closed out.

### Farmer-owned Milk Plants

(Continued from page 235)

railroad cars by noon, consigned to regular dealers in New York City, who take it from the railroad platform when it arrives there, about midnight, direct to the storekeeper who sells it. The bulk of this milk is delivered at the stores between three and six o'clock in the morning. Many of these stores are located in densely-settled parts of the city. They open about 5:00 o'clock. The housewife buys two or three quarts of milk for breakfast, at the same time she gets her daily supply of groceries. The bulk of this milk is consumed by seven or eight o'clock, or within twenty-four hours of its delivery to the creamery. There is no large country or city overhead. There is no step in this process of distribution which it is possible to eliminate. It is the cheapest, quickest, possible way of getting this milk from the producer to the consumer. Only 40 to 50 per cent. of the ultimate cost to the housewife is absorbed by creamery charges, freight, the city dealer and the storekeeper. The farmer gets the rest. This loose milk is the freshest milk on sale in New York City. It complies with the same Board of Health requirements as Grade B bottled milk; is twenty-four hours fresher and costs four cents a quart less. The abundant supply of this high quality milk has done much to keep down the sickness and death rate in the congested parts of the city where most of it is sold.

Dairymen may well be proud of the business structures they have reared around the farmer-owned milk company. These companies insure the farmer a permanent outlet for the products of his labor. They give him the opportunity to exercise the business ability needed to bring him the fair value of his goods in the markets where sold. They assure the consumer a continuous supply of the best quality milk from a source which seeks to market it by the most direct method at a price which will stimulate consumption to the greatest possible degree.

# The Girl at Vacada—By J. Allan Dunn

(For synopsis, see page 241)

THE little community was agog by the time they reached the store. When Nellie Bly halted in front of the store and stood there with Alice Hughes on her back while Jimmy went in to make her purchases, there were few eyes in Vacada not focused on the bride. That she had had the temerity to defy Furniss none knew but that unworthy.

Some believed that Jimmy Hughes was an old acquaintance; all wondered what part Furniss had taken, or would take, in the romance. And Furniss, from the window of his office in El Solaz, opposite the general store, nursed his own grievance and closely surveyed Jimmy and his mare, pondering how best to get even and serve his own ends. The witnesses were with him, drinking at Furniss' expense, saving their twenties, of which they said nothing.

"Had a roll on him 'ud choke a steer," said one of them. "Four or five thousand, easy. Mebbe more."

"Ought to git a good price for yore hawss," said the other.

Furniss turned on them.

"He'll buy no horse from you," he ordered savagely. "He'll buy no horse in this town or the one sellin' it is goin' to get in bad, early and deep. You can pass that word round as coming from me. Hop to it."

They looked at him, saw he meant it and, natural serfs that they were, went to do his bidding while Furniss glowered through the grimy window. Alice sat her saddle, not unconscious of the leering inquisition of the town, but proudly ignoring it, upborne by the fact that she was getting away from the place where she had seen disgrace, shared poverty and faced ignominy. Jimmy came out with some packages and led the mare toward the shack where she had lived. It was the last in town, a hundred yards from the nearest neighbors, and those Mexicans, a forlorn abiding place.

THE door was open. Jimmy examined the bolt as they passed through to the poor interior, putting down his purchases. The one original room had been divided in half, then subdivided again into three. The girl passed on to her own chamber and Jimmy gave one comprehensive glance about the place, neat enough but eloquent of pinched resources. His wife came out after a few minutes in which she had taken off her sunbonnet and, with marital propriety, changed the long gold plait to massed braids that made a coronet about her head. She smiled at him faintly.

"I'll change my dress before we go," she said. "This ain't very much like a wedding gown. I don't have to wear black for him, I reckon."

Jimmy, with a look that made her tingle, exhibited his goods.

"Jar of sliced bacon, coffee, condensed milk, crackers, can corned beef, ha'f a dozen pertaters, sack of Durham an' papers for me. I got a mess outfit for cookin'. I saw this an' thought you might like it."

He watched a bit sheepishly while she unwrapped a package and disclosed a bolt of blue ribbon, wide, and the part protected by the paper entirely unfaded. She exclaimed with delight as she saw the real color unfold.

"Color of Lupines," said Jimmy. "Same as your eyes."

She looked at him half wonderingly, her eyes soft, filling with tears.

"It's lovely. I—no one ever bought me ribbon like that before."

Jimmy warded off the gratitude he did not know how to accept. It was a queer sort of wedding morning, he decided, but he did not want to alter it. There were other things to do. Despite his assurance to Alice, he did not underestimate Furniss' willingness to block the exodus of the girl. Nor had he relied upon the one opportunity to buy a horse offered by the marriage witnesses. Jimmy

knew and cared too much about horses to buy the first one presented.

"Here's the adhesive," he continued. "An' here's this. Storekeeper swears they're gold." He dropped two rings into her palm, one a slender twist of intertwinning hoops set with a garnet and two tiny pearls, the other a plain circle.

"Oh!" She tried them on her finger to the second knuckle, then held her hand out to him. "They're beautiful. You put them on. And thank you." Her eyes shone with surprised gratitude. "Don't take off the horsehair one," she said as Jimmy clumsily, for all his deft fingers, set engagement token and wedding ring in place. Lastly he took from his pocket a thirty-two Colt's revolver of blued steel.

"It's loaded," he said. "You might need it if Furniss comes snoopin' around while I'm gone. An' anyway, it might make you feel easier to pack it. Sabe how to work it? Thought so. Now then, I'm after that hawss an' saddle. You pack what you need in a warbag so's it'll

"You can drag your freight, Gus," said Furniss. "I'm handling this."

Furniss made his way back to the stable back of El Solaz where his horse was barned, saddled, mounted and rode to the girl's shack, coming up at the back and alighting. He went to the window and peered in, triumph in his eyes that faded, turned to malice. The girl was folding some clothes and laying them on the table, passing back and forth to her own room. She walked lamely, supporting herself by the back of a chair or bureau top, but her face shone and she was singing, softly, plainly enough for him to catch the tune.

"It was there that Annie Laurie  
Gie'd me her promise true."

"Gie'd me her promise true,  
That ne'er forgot shall be."

The singing stopped as Furniss tapped on the back door. Next moment the girl opened it, her face alight with welcome that vanished as Furniss pushed his way in, slammed the door and shot a bolt. The girl turned to the table where

REWARD

Five hundred dollars Reward is offered by the Wells Fargo Co. for the arrest or information leading to the arrest of Buck Purdy who held up and robbed the Cuchara Stage at Slow Creek on the evening of June twenty-fifth.

Thought to be heading west. Is likely to be traveling under alias. Five feet ten, weight about a hundred and sixty-five pounds, gray eyes, prominent nose, brown hair. Age about twenty-eight.

Was riding a bay horse at the time of crime.

Sheriffs and officers of the law take notice.

"How's that?" jeered Furniss. "I got that bill two weeks ago. Been hopin' he'd trail this way. But I sure never figured on so much luck. Five hundred bucks and a hornin'-in fool put where he belongs. He won't flash the roll he copped from the stage in the penitentiary."

THE girl stood with lips tight closed, breathing hard through her expanded nostrils, her hands clenched till the knuckles showed white.

"That don't prove he's Buck Purdy," she said. "That description might fit a dozen."

"It sure fits him. Good enough for me or any other officer to click the cuffs on him and turn him over. Oh, it's him. That bill ain't all. I wanted to be sure myself. So I wired the sheriff and here's the answer.

R. A. Furniss,  
Deputy Sheriff,  
Vacada, N. M.

If your man is riding bay mare branded V in a ring you collect five hundred. Aliases of Daly, Ryan, Hughes. Arrest and bring on first train. ALBERT HOWE.

"Want to see it?" He offered her the form, but she made no effort to take it. Her head wilted. Once more despair established itself in her eyes. "We'll get him coming back from the Two-Bar. Cobb's got no horses for sale. I happen to know that. And I phoned him. So your Hughes, alias Ryan, alias Purdy, won't get a chance to spend any more of the money he stole. Fifteen years he'll get, unless—"

"Unless—what?"

"You stay and do like I said, an' I'll give you the chance to tip him off for a getaway. I'll forget the bill and the telegram long enough for him to get a good start. If not, we arrest him as he rides in from Cobb's. He might even get hurt—resisting," he added, watching her narrowly. "That's my proposition. You can trust my end of it because you could doublecross me afterward. I want you, willing. Sabe?"

HER eyes rounded with horror. "I am married to him," she said slowly.

"You want to stay married to a crook? Aside from what I can do up at the State House, you're as good as a widow right now."

"Married, for better and worse, in the sight of God and of man. The Bee Parson said so."

"So, you're gone on him, after all? Then you'd better give him his chance for a getaway. Sticking by him'll land him where you'll get to see him once a month, if he don't land in a morgue."

He had her in a cleft stick and he watched her with all the cruelty in him dominant, despite his longing for her possession. She wrung her hands in an agony of indecision.

"You stick here and he gets the chance to go free," summed up Furniss. "You stick with him and he goes to the penitentiary—if we take him alive. Then where are you?" Her face twisted pitifully.

There came the tinkle of glass and the breaking of wood. Jimmy, outside the low-silled window, kicked in the sash

(Continued on page 241)

## Coming Very Soon—A Serial About You!

THIS is the most interesting announcement about a serial story that we have ever made. At least we think so and we believe that you will agree with us.

Within a few weeks we shall start on this page a serial called "The Trouble Maker," written especially for the American Agriculturist by the Editor, E. R. Eastman. As you would know from that fact alone, it is intimately concerned with the daily life, the hopes and fears, trials and triumphs of farm people and farm life.

But more than that: it is a serial about you—it is actual fact, in fiction form. It tells of a time you all remember, of circumstances you can easily place, of real people right here in this part of the country. It is about you and your neighbors.

What is it about? That we'll tell you later. Watch this space for further announcements. We are proud of being able to give our readers the first publication of this important and interesting serial.

ride. You don't have to take everything. Ma Axtell'll help you buy yore trousseau."

With that he precipitously went out the door. The girl went to the window, hiding back of the worn curtain to see him mount and gallop off. Her eyes were troubled as she watched. She still held the gun in her hand, and she put it on the table. He had meant that as protection against him as well as Furniss, she knew. Yet he had married her. Her perplexity grew, resentment struggling with approval. She caught the fingers of her left hand, lifting them for closer inspection of the rings; then she kissed them softly, the hair circlet last of all.

AN hour later, an hour wasted, Jimmy raced out of town toward the Two-Bar ranch, five miles out, following a tip from the storekeeper. The henchmen of Bluff Furniss had done his bidding. There were no horses for sale in Vacada. Shortly afterward Furniss emerged from the little depot carrying an open telegram, a grin on his face. The man called Gus met him.

"He's gone out to Two-Bar," he said. "Fowler tipped him before I see him."

"That's all right, Gus," he said. "I've got him where I want him."

Gus, who had expected reprimand, grinned vacuously and tried to steal a look at the telegram, but Furniss anticipated him. Gus knew it was no use to interview the operator. Furniss had the latter's allegiance. Bluff had something on him, as he had on Gus. For that matter they had things on Bluff, but he had the pull.

the gun still lay but her lameness halted her and Furniss brushed her aside, laughing as he pocketed the pistol.

"Too speedy for you, eh? Sorry to stop the singin'. But I reckon you'll have to break that *promise true* you gave up at the Bee Parson's. I'll settle his hash for him later. An' you'll be willin' to break promise when I show up thet fourflushing crook you think you're married to, flashing his roll, the sucker."

"I am married to him. He's not a crook." She faced Furniss defiantly. "He'll be back any minute and you'll talk differently."

She talked bravely, but the confidence of Bluff's attitude dismayed her a little. The thought of the roll of big bills troubled her again. But she held her head high, her eyes bright, her breast displaying her agitation. Furniss laughed out loud.

"He'll be back in two hours, if he's got luck. Tried to buy him a horse in my town. An' c'udn't. So he's off to the Two-Bar an' back. Just started a while ago. So that's him. As to bein' married, a tip-off from me an' the civil authorities'll get busy. That certificate you got from that broken-lunged whiner won't be worth the paper it's written on. I'll fix that. As for his not being a crook; you listen to this."

He sat on the edge of the table, exhibiting two sheets of paper, one the telegram brought from the depot, the other a small poster, clean and crisp, the word REWARD prominent at the head of its printing. Alice looked at it as a bird gazes at the hypnotizing snake.

# How to Put Up Chicken

Every Step Described by an Expert Canner

NOWADAYS when our home demonstration agent and poultry specialists are traveling around telling us to sell the cockrels, the housewife wishes some of the nice, tender, juicy meat could be saved for home consumption.

The process is very simple and easy and what a pleasure it is to know that when company unexpectedly arrives you can serve them with an extra fine meal! A platter of cold roast chicken garnished with parsley—chicken croquettes, pie, or even a tasty chicken soup, and best of all you can enjoy your guests more because you are not so tired.

A little practice makes it easy to can chicken for winter use. The bird should not be fed for twenty-four hours before killing. Kill in the usual manner, remove feathers, singe and plunge into cold water, and cleanse carefully. In drawing the chicken, care should be taken that the contents of the digestive tract do not come in contact with the meat. The following procedure is the best known for cutting up the bird:

1. Remove the tips of the wings, cutting at the first joint.
2. Remove the wings.
3. Remove the foot, cutting at the knee joint.
4. Remove the leg, cutting at the hip or saddle joint.
5. Cut the removed portions of the leg into two parts at the joint.
6. Place the bird on the back so the head is toward you, and cut through the neck-bone with a sharp knife. Don't cut the windpipe or gullet.
7. With the index finger, separate the gullet and windpipe from the skin of the neck.
8. Cut through the skin of the neck.
9. With a pointed knife cut through the skin from the upper part of the neck, thus separating the wing opening made by removing the wing.
10. With a sharp, well-pointed knife, cut around the shoulder blade, pull it out of position, and break it.
11. Find the white spots on the ribs and cut through these points, separating the ribs.

12. Cut back to the vent, cut around it, and loosen.
13. Begin at the crop and remove the digestive tract from the bird, pulling it back to the vent.
14. Remove the lungs and kidneys.
15. Cut through the back-bone at the joint or just above the diaphragm.
16. Remove the oil sack.
17. Remove the breast from the back-bone by cutting through the white spots.
18. Cut the fillet from the sides of the breast-bone.

19. Cut in sharply at the point of the breast-bone, turning the knife and cutting away the wish-bone with the meat. Bend in the bones of the breast.

A skillful packer can place a whole chicken in a quart jar, and this is the method used:

1. Pack the saddle with a thigh inside a hot jar.
2. Pack the breast-bone with a thigh inside.
3. Pack the back-bone and ribs with a leg inside:
4. Pack the leg, large end downward, alongside the breast-bone.
5. Pack the wings.
6. Pack the wish-bone.
7. Pack the fillets.
8. Pack the neck-bone.
9. Never pack the giblets with the meat.

10. Pour on boiling water to one inch of the top, add a level teaspoon salt, place rubber and top in position, partially seal, and sterilize for three and a half hours in a hot water canner, or twenty-five minutes at twenty pounds pressure in a steam pressure canner. Remove the jars, tighten the covers, invert to test joints, and wrap jars in paper before storing.

If you so desire you can can your chicken after cooking. Place the chicken in wire basket, and cook until meat will remove from bones. Or only partially cook, fill into jars, remove bones from meat cooked done, and fill spaces in jar with boiling liquor. Many prefer this method but we find the meat is too well done to suit our tastes. You may also fry or bake the birds and then fill into jars. There is no reason why anyone who can successfully can fruits and vegetables will not have success if above instructions are followed.—MABEL FERN MITCHELL.

## THE A. A. PATTERN SERVICE

WHEN school begins, the one-piece dress is the thing! Easy to slip into in a hurry, it still has a pretty, becoming air and suits the growing girl as well as it does her mother. No. 2217 may be made with short or long sleeves, and the waistline may be finished in two different ways. Sizes: 6, 8, 10, 12 and 14 years. Size 8 requires 2 yards 36-inch material. Pattern 12c. Hot-iron transfer 706, in blue or yellow, 15c.

2217 Emb. 706

Any woman who can sew at all can make herself either of the dresses shown this week. No. 2179 is a diagram dress which allows for pleated side-insets and a becoming sash. It comes in sizes 16 years, 36, 38, 40, 42 and 44 inches bust measure. Size 36 takes 3 yards 44-inch material. Price 12c.

2179

No. 2219 is a one-piece slip-on, cut as the diagram illustrates, which has the trig, boyish effect so much seen in the best shops this year. It needs only becoming collar and cuffs to complete the smart effect. No. 2219 cuts in sizes 16 years, 36, 38, 40, 42 and 44 inches bust measure. Size 36 requires 3 1/4 yards of 40-inch material, with 3 yards binding and 3/8 yard contrasting. Price 12c.

2219

TO ORDER: Be sure your name, address, pattern numbers and sizes are clearly written; enclose the proper remittance in stamps (if coins are sent, wrap very carefully) and send to Pattern Department, AMERICAN AGRICULTURIST, 461 Fourth Avenue, New York City.

It costs only 10c—our big new Fall and Winter Catalogue. It gives all the new styles for women, misses' and children, designs for men and boys, embroidery suggestions, dressmaking lessons and many other useful features. Add only 10c to your order and ask to have it sent you.

## FUR LINED COATS and FUR GLOVES

Have a warm, fur lined coat at litt'e cost. Write today for free booklet of fur goods. MICHIGAN FUR CO., THREE RIVERS, MICH.

## When the Children Come Home From School

FROM experience we have learned to expect the chorus, "Oh, I'm hungry," or as the little Irish girl put it, "I'm starved with the hunger," when the children come in from school. This, too, when we have sent them away in the morning with well-filled dinner pails as "balanced" as we could make them. But there has been a strain on the young brain and nerves and they need to be fed. It is not time for the regular supper. This is where a hot, nourishing soup will be found useful, a cup of which, served with a piece of bread or crackers will prove very satisfying.

The following have been tried and found to be good. Make some for dinner and be sure to leave enough to reheat when children come from school.

### Cream of Onion Soup

Cut in small slices 4 or 5 onions, or more if needed, put on to cook in 1½ pts. water. When nearly done salt to taste and add potatoes cut in about 1 inch cubes. Boil until done, then add 1 teacupful good rich milk, dash of cayenne pepper, and serve hot.

### Cream of Chicken Soup

Prepare onions as in previous recipe, with them boil the neck, back bones and leftover bits of chicken. Add potatoes and season well, adding milk or cream before serving.

### Cream of Carrot Soup

Carrots are said to be one of the most healthful vegetables, being rich in iron. Encourage the children to eat them. Add 1 cup grated carrot or a few diced carrots to the onion prepared as directed above. Season well, and add one cup rich milk at the last.—ANNA E. LANGDON.

### Soap Economy

THE art of soap-making, which a hundred years ago was known to almost every housekeeper, has never quite died out and could profitably be revived these days.

However, few housekeepers care to make their soap, but the amount required in a household may be cut almost in half by careful use. It is economy to buy soap by the box, as it is usually cheaper, and goes much farther when cured. The cakes should be cut in two and piled in a dry place. You will find it will last twice as long as the "green" product.

Quantities of soap are wasted by being left in the dishpan or floor pail to soak away. Then there are the seraps. To dispose of them we often use more than needed, while we might utilize them to advantage. Put through a food-chopper, using the finest knife and mixed with four times the quantity of cornmeal, soap seraps make the best of cleansers for the hands, leaving them soft and smooth.

Keep this cleanser in a box so it will be dry and use a small quantity as needed. If you prefer it in the cake, put the seraps over the fire with enough water to cover. When dissolved and near the boiling point, stir in all the cornmeal it will take and spread in a square shallow pan to harden. When cold, cut in squares and it is ready to use. A good liquid soap is made by cutting up the seraps of toilet soap and putting in bottles with just enough water to cover. In a few days it will be ready for use.—MRS. GEORGE GRAY.

Many A. A. readers make their own soap by a recipe which we have often been called on to furnish. It is an economy, but there are other ways of saving soap, as Mrs. Gray shows.—Household Editor.

### The A. A. Is a Friend in Need

"A year ago, a 'green' city girl, I arrived on the farm with no experience whatsoever in farm matters, and only a tourist's knowledge of the farm. In fact I thought planting and harvesting were the two main occupations of a farmer's life, and little realized that the preparation and constant treatment of the land was all important. The AGRICULTURIST has been invaluable to me. It has given me an insight into national as well as local farm conditions, and has taught some rudiments of farming that my husband neglected to mention (which, of course, were few and far between). In the AGRICULTURIST I have found a definite and logical answer to innumerable questions that have risen in my mind at different times, and a thorough, yet clear and concise, discussion of all present day problems."—M. K. C., N. Y.

# New FREE Catalog

New features!

Just out - Get your copy today

### 24 Years in Business

Here's wonderful news! The greatest Kalamazoo Factory SALE in 24 years is now on. Prices have been cut to the bone. Never before has there been such a sweeping, money-saving event. Send for this big book now. It's full of real bargains.

### Above All Else—QUALITY

There are over 200 styles and sizes—new heating stoves, beautiful new gas stoves, attractive new porcelain enamel ranges, in blue and gray, combination gas and coal ranges, and new, improved furnaces, both pipe and pipeless. Also oil stoves, cedar chests, kitchen cabinets and tables, washing machines, vacuum cleaners and aluminum ware. You will see new designs and new features.

### 530,000 Satisfied Customers

We have never before offered so much for so little. Never have you been able to buy such high quality merchandise at such low prices. The entire line is the largest, most complete, most modern we have ever shown. You will want this interesting book—hundreds upon hundreds of thousands of others will too, so write immediately. You save ¼ to ½ by buying direct from the factory and taking advantage of this big SALE.

### Cash or Easy Terms

Cash or easy terms, just as you desire. Terms as low as \$3.00 monthly. Small down payments. Pay as you use. Furnaces easy to install by our method—thousands of our customers have put their furnaces up themselves in a few hours' time. We furnish FREE plans and FREE service without obligation. Ranges and stoves shipped ready to put up in a jiffy. Quick 24-hour shipments. Low freight rates to all points. Safe delivery guaranteed.

### \$100,000 Bond Guarantee

Every piece of merchandise in this catalog is strongly guaranteed to satisfy you in every respect or we will refund your money, including freight charges. Kalamazoo has the reputation of being exceptionally fair and square, as over half a million pleased customers will tell you. A \$100,000 gold bond has been placed in the First National Bank of Kalamazoo and this bond stands behind everything we sell.

### 'Factory-to-You Prices'

Because we make every Kalamazoo stove and furnace in our own tremendous factory in Kalamazoo, Mich., covering 13 acres—the largest stove, range, and furnace factory in the world selling direct to the consumer—we sell to you at the same price we would charge the dealer. We cut distribution costs. Somebody has to buy from the factory first, why not you? Get factory prices and pocket the savings. Nowhere can you find such low prices, such astounding offers as we make in this new catalog.

### 30 Days' Trial—360 Days' Approval Test

Anything you order you can have on 30 days' trial in your own home. We let you satisfy yourself that our quality is the highest and our prices the lowest. You have 360 days' approval test—could anything be fairer than that?

### Save Money—24-Hour Shipments

You not only save by buying direct from the factory but you make a double saving during this great sale. Remember: everything in this catalog can be bought on easy payments so small that you will scarcely miss the money. Don't wait a day. Write for this catalog now. Prices may advance any time.

### Saved \$69.00 on Furnace

"Gentlemen: Our Kalamazoo Pipeless furnace keeps every nook and corner of our home, which is a six-room house, comfortable all winter. We saved \$69.00 on the purchase price and about \$25.00 on the winter's supply of coal."  
J. H. Bowman, Bridgeport, Ohio.

### Saved \$40.00 on Range

"The Prince Range arrived in fine condition, and wish we could tell you personally how much we're pleased. You gave it right name when you named it 'Prince'. I consider I saved nearly \$40.00 in buying from you."  
A. J. Zebley, Oneida, N. Y.

# Reviewing the Latest Eastern Markets and Prices

## MILK PRICES

**T**HE Dairymen's League Cooperative Association announces the following prices for the month of October for milk testing 3% in the basic zone of 201 to 210 miles from New York City: *Class 1*, milk used chiefly for fluid purposes, \$2.60 per 100 pounds; *Class 2A*, used chiefly as fluid cream, \$1.90. If skim-milk is used for any other purposes, additional payment over this base price is added, depending on use. *Class 2B*, used chiefly in the manufacture of plain condensed milk and ice-cream, \$2.05; *Class 2C*, used chiefly in the manufacture of soft cheese, \$2.05; *Class 3*, used chiefly in the manufacture of whole milk and sweetened whole condensed milk, powdered and evaporated whole milk, \$1.45; *Classes 4A and 4B*, based on butter and American cheese quotations on the New York market.

These prices are the same as September, due, according to the League, to surplus, market conditions, etc.

### Sheffield Producers

The Sheffield Farms Company Producers announce the following prices for October for 3% milk in the 201 to 210-mile freight zone until further notice; *Class 1*, \$2.60 per 100; *Class 2*, \$1.70; *Class 3*, \$1.55; *Class 4*, to be determined by market quotations of butter and cheese.

### Non-Pool Cooperative

The Non-Pool Dairymen's Cooperative October price for *Class 1* milk is \$2.40; per 100 pounds; *Class 2*, \$1.85; *Class 3A*, \$1.55; *Class 3B*, \$1.45 until further notice.

### Interstate Producers

Interstate Milk Producers Association (Philadelphia) receiving station price for October for 3% milk in the basic zone of 201 to 210 miles from Philadelphia is \$2.19. In the 101 to 110-mile zone the price is \$2.29 until further notice.

## FANCY BUTTER STEADY

Fancy butter has held rather a steady position in the market all week. That's about all the optimism we can scatter. A little optimistic feeling may also be derived from the fact that our export business may open up a temporary outlet and relieve the situation to some extent. However, it seems that values can be sliced a little bit to interest the export trade to any extent. During the week ending the 27th over 5,000 tubs of American salted and unsalted creamery were shipped to England on consignment. These shipments may lead to more business. The trade is anxiously waiting to see what develops for the stocks in this country are without question too heavy for home consumption.

The market on undergrades is in a pretty poor condition. Consumptive needs of the trade are absorbing top grades fairly well but seconds and undergrades are accumulating

with the result that there is a decided pressure to sell. On these grades we may see a weaker market next week.

The make in the country is continuing quite liberally. Advances indicate that this week will be up to last week. However, we may look for a smaller turnout from the country plants soon with the approach of fall. This may react so that values will be sustained.

## CHEESE MARKET STILL FIRM

The cheese market still continues its firm tone, which has been characteristic of the past two weeks. Trading is not over boisterous but with high country prices and the consumptive demand what it is, the firmness continues. Asking prices up-State are high and Wisconsin prices are about the same level as last week. State flats are not being offered too freely, in fact the offerings are quite light in New York. State whole milk flats, held, grading fancy are bringing around 21½¢ while a few pct marks bring a full cent premium. Average run goods, held, vary from 20½ to 21c. Fancy fresh, whole milk flats vary from 20½ to 22c, while average runs are about a cent lower.

## FANCY NEARBY EGGS HIGHER

The very fanciest Jersey and other nearby whites are now bringing anywhere from 67 to 71c on the market. A few fancier marks in cartons and candled are bringing a premium over those figures. This is an increase over last week, although the increase is not as great as last week prices over those of the week previous. Strictly fancy nearby whites are still wanted and many operators report that they are not getting enough stock to fill orders. The egg market in general is very strong. *The latest warehouse reports covering the four largest cities show that storage holdings are about 635,000 cases less than at the same time last year.* That is very important. It indicates that we can look for a good egg market right through the winter up to storage time next year. While the supplies of strictly fancy marks from nearby points are rather short, there is some report that intermediate grades are not selling readily, meeting competition with fancy storage stock at the same prices and as a result the accumulation is taking place. Just because supplies of fancy to extra fancy nearby are short, does not indicate that the weak egg here and there can be slipped through. Buyers at present are very critical and eggs are being examined very, very carefully. Where any indication is found that some held stock is being shoved through, such consignments are quickly passed up. It is therefore up to the poultryman, if he wants to get the benefit of this strong condition, to exert the greatest care.

## LIVE POULTRY MARKET

By the time this review of the market reaches the reader, the strong live fowl market, which exists at the present time, will undoubtedly have taken on a considerably different tone. This may not be true with real high grade fancy stock, but for average run stock we may look for a change. In fact, it is pretty hard to say just what will happen. As we are going to press, shipments are coming in for the Jewish New Year, September 29 and 30. As we have

said on this page right along the best market days would be the 24th, 25th and 26th. It has developed that way. We also said that fat fowls would be most in demand. This also happened. The market has turned very strongly upward on fancy colored fowls, while Leghorns took a decided tumble. The quotations are the widest they have been in some time. Fancy colored express fowls are bringing anywhere from 29 to 31c, while average run Leghorns by express are down as low as 15 to 19c. Chickens have not enjoyed such a good market. In fact, there is some pressure to sell. The demand is greatest right now for fancy colored fowls.

**There will be another Jewish holiday October 8. The best market days will be October 3, 4 and 6.** It will take some careful planning to get your shipments off by express so that they will arrive in New York on Monday, which will undoubtedly be the best market day. Stuff that comes in late Saturday will not meet active trading and will have to be carried over. Of course, it is impossible to say how Monday's market will be on this held stock, but it is better to have the fresh shipments come in the first thing Monday morning.

Just before this page was set the writer talked with an authority in the market. He said that the market was flooded with poor stuff, Leghorns and undergrades, while fancy fat fowls were firm. For holiday trade, never ship any old thing, because the trade is too critical to take it and it only causes a slump on the market.

## POTATO MARKET DULL

The potato market has been a pretty sick affair about all week and about the only explanations for it is that there are too many potatoes coming in. Long Island Cobblers are bringing in the neighborhood of 60c to 65c per bushel for the farmer, while North Shore Green Mountains are bringing 65c to 70c and South Shore Mountains 75c.

It is possible to get good Cobblers at \$1.85 a bag F O B Riverhead and if a fellow were to look closely he could get Mountains for \$1.90. However, the majority of growers are holding for \$2 a 150-lb. bag. Jerseys are bringing \$1.75 for round stock and \$1.60 for Giants. Maine has been shipping in Cobblers at \$1.20 per cwt. in bulk or \$2 per 150 pound sack. Up-State potatoes appeared on the market this past week for the first time. They were too green to draw much attention.

Cobblers are pretty well cleaned up. There are a few around yet but most of the growers and shippers are swinging into Mountains.

It is pretty difficult to say just what to do about the potato market. Nothing can be done in fact, but it looks as though it is going to pay a fellow, if he can possibly do so, to store his stock until this dull period is over. There is no question but what there are too many potatoes coming in for the trade and the city market is absolutely dead.

## KRAUT CABBAGE

Kraut cabbage is quoted anywhere from \$6 to \$6.50 F O B up-State points, while grocery stock is worth on the average of \$1 per ton

more. Long Island salting stations are paying \$12 a ton and have got all they can take. We have been out on the Island of late and cabbage looks exceedingly fine. Recent rains have not only hardened the heads but have been responsible for a large number of "busts."

## GRAINS AND FEED

According to New York State Department of Farms and Markets, the following prices prevailed September 20.

The quotations given in this report show the approximate prices at which feed can be purchased per ton, and grain per bushel, in straight carlots through billed from Western points, delivered on track at points in the freight zones as indicated. Mixed carlots cost approximately \$2 per ton more.

Retail feed and grain prices vary with different local dealers depending upon their individual cost of doing business, volume handled, etc. In the case of feeds the retail price may sometimes be as high as \$5 per ton above the wholesale prices given in this report.

Beet Pulp...	—	—	—	—	—

Since Buffalo is an important milling center for wheat feeds and lusc-ed meal, quotations are given for this point on both a through-billed and a local basis. No. 2 White Oats, 53½; No. 3 White Oats, 52¾; No. 2 Yellow corn, —; No. 3 Yellow corn, \$1.26; Ground oats \$42.50; spring wheat bran \$26.50; hard wheat bran, \$30.50; standard middlings \$29; soft wheat middling \$35; flour middlings \$35; red dog flour \$40; dry brewers grains —; white hominy \$43.25; yellow hominy, \$42.75; cornmeal, \$49; gluten feed \$44.75; gluten meal \$56.75; 31% old process oil meal —; 34% old process oil meal \$47.

For points taking New York rate add to Albany price ¼ cent on oats; ½ cent on corn; 10 cents on cottonseed meal; and 20 cents on other feeds.

## Western New York Fruit and Crop Notes

(Continued from page 228)

The idle car, he said, is the greatest liability of the transportation system. He also remarked that he had been at least three times in every State in the Union this summer, and that business is sound and picking up right along and paying little attention to politics.

About the only recommendation growing out of the meeting was that for further study and wider dissemination of information on transportation problems. The proposed Cornell marketing courses were cited and commended in this connection. —M. C. BURRITT.

## Federal Land Bank in New Home

**T**HE Federal Land Bank of Springfield, located at Springfield, Mass., is now occupying its new home, which was formally opened on September 10. Professor G. H. Thomson, President of the Federal Land Bank, writes:

"This new building represents the financial home of the northeastern farmer. Nearly four-fifths of the capital is owned by farmer-operators, and it is their home. As an illustration, we have several rooms where agricultural organizations may hold gatherings and conferences at any time upon giving us due notice and without charge to the organization."

The Federal Land Bank at Springfield covers what is known as the First District, a territory which includes the States of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York and New Jersey.

## Color Your Butter

"Dandelion Butter Color" Gives That Golden June Shade Which Brings Top Prices

Before churning add one-half teaspoonful to each gallon of cream and out of your churn comes butter of Golden June shade. "Dandelion Butter Color" is purely vegetable, harmless, and meets all State and National food laws. Used for 50 years by all large creameries. Doesn't color buttermilk. Absolutely tasteless. Large bottles cost only 35 cents at drug or grocery stores.

Write for free sample bottle. Wells & Richardson Co., Burlington, Vt.

Sheep, common to good ewes	3½ to 7¾		
Hogs, Yorkers	10½ to 10¾		
Rabbits	28		

# Hens Need Water

## All the Time, And NOT Ice Water

IT MAY seem a little previous to some folks to be talking about watering the hens during the winter. But cold weather is going to be on us before we know it and with eggs bringing the price they are, the long-headed poultryman is going to take everything into consideration to make sure his hens are in shape to keep on producing. Hens need water just as much as they need mash, grain, green food, fresh air and dry, clean quarters. Furthermore they need water from the time they start work until they hop back on the roosts. They need water just as much as cows and horses.

It is needless to say that the water fountains, whether they consist only of an open pan or some of our more elaborate devices, should be kept scrupulously clean. Disease is most easily spread through a flock of hens by means of an infected drinking fountain and therefore it is money in a man's pocket to keep the fountains clean. Not only that, but hens want water all the time. As I said before, from the time they start work in the morning it should be before them. This holds particularly true of the man who is using lights. As soon as the hens jump down from the roosts they invariably go directly to the mash. They don't eat a whole lot before they want to wash it down and unless there is a good clean supply of water handy, they are not going to get what they actually need.

### Ice Water Not a Winter Drink.

There is another point that comes up right here and it holds true in other places besides the henhouse. Dairyman who have been through the experience will tell you what a difference it makes not only to have water before the cows at all times, but to have the chill taken off slightly. This doesn't mean warm water for the animals' consumption, but it means water that has not got that sharp frosty snap to it that sends a chill up and down a fellow's spine when he takes a drink of it.

There is something about a drink of ice water that seems to paralyze a fellow's insides for a moment. How different it is to take a warming drink in the cold weather. You can do a whole lot better work.

Now just put yourself in the place of the cow who is working every minute of the day making milk and imagine the difference it means to her. Records prove water bowls soon pay for themselves when they follow the "open trough in the barnyard" method of watering. It holds just as true with the hen. If she gets ice water, it is going to take a certain amount of the food that she eats to overcome that chill. If she doesn't have to overcome a chill that feed will go into eggs and eggs will put money into a man's pocket these days. So it comes down to pretty near a prospect of making money by giving the hens water that has the chill off it and having it before them all of the time. Anyway, who wants ice water in winter? I don't, you don't (if you're on the farm), cows don't and neither do the hens.—FRED WILLIAMS, New York.

### Another Early Pullet

HAVING read in the A. A. the report of H. F. Warner of Belmore, Long Island, that he gathered his first pullet egg from a pullet four months, three days old, I would like to say that we have a White Leghorn pullet who laid her first egg August 20, being three months twenty-eight days old. And she has laid two eggs since.—C. C. ADAMS & SON, Griffins Mills, N. Y.

### The Girl at Vacada

(Continued from page 237)

and shouldered through. Brushing aside the fragments of the frame, he stood with legs apart, crouching slightly, gun in hand. Furniss whirled to meet him from his table seat, his hands in his coat pockets.

"Keep 'em there," said Jimmy tensely, his voice cold and crisp, his eyes icy.

The girl caught sight of Furniss's face and suddenly remembered what he had done with her pistol. She shrilled a warning as she thrust the table against Furniss just as he pulled the trigger. The bullet buried itself in the window casing. Jimmy's return targeted in Furniss' shoulder and he sagged back,

### What Has Happened

WHEN Jimmy Hughes comes riding by the Vacada cemetery and finds the sheriff, "Bluff" Furniss, annoying a friendless girl whose uncle has just been buried, he promptly intervenes, drives away the angry sheriff and offers his help to the frightened girl. Finding her utterly alone in the world and helpless, he chivalrously suggests that Alice marry him simply for his protection, and the tubercular "Bee Parson" performs the ceremony, Jimmy rewarding him with an extravagant fee from a huge roll of bills. Two henchmen of Furniss' are witnesses of the marriage.

his arm limp, the pocket smoldering from ignition by the powder gas.

Jimmy covered the distance between them in one bound, jamming his gun muzzle against the other's stomach while his left hand sought and found, first the pistol he had given the girl, then Furniss's heavier weapon, sheathed in the shoulder holster.

"If I'd killed you, like I had the right," he said, "there'd have been a fuss over who fired that gun. I want a talk with you, anyway. You go sit down in that chair. Never mind yore shoulder. You've got a sight too much bad blood in you, anyway. Alice, get me that belt an' some linc. Furniss, you talk outside of answerin' questions an' you'll end the sentence in hell. Sabe?"

(Concluded next week)

# LUMBER!

PER THOUSAND FEET \$9.00

**LAST CALL!** This startling offer is made because we must vacate Government land. Price is for good sound seasoned lumber in carload lots of 16,000 feet or more to the car. Includes flooring, ceiling, drop siding, sheathing, 2x4, 2x6, 2x8's in lengths up to and including 8 feet. Fair proportion of each length guaranteed. No orders accepted for specified lengths at the \$9.00 price. This price good only while present surplus stock is on hand. Orders filled promptly as received. Suitable for all sorts of farm, out buildings, elevator cribbing and general repair work.

### Along with the Remarkable Value Above

We offer lumber in regular specified lengths at the lowest prices. All sound, seasoned, southern pine guaranteed free from nails and full measure.

### 5% Discount

will be allowed on all carload Lumber orders of \$300.00 or more received during the months of September and October when cash in full accompanies order.

### The Last Call!

The last and best of our 12 large Army Campments. BUY NOW! Don't Wait! Prices on lumber are advancing.

# He Studied Oat Family-Trees

*The Story of How the Jefferson County No. 343 Oat Was Born*

By W. I. ROE

**A**LTHOUGH an oat kernel is a small thing in itself, multiplied by millions and even larger numbers as it affects the farmers of Northern New York, its influence is almost incalculable upon the various businesses and industries. Looking at the humble oat from this angle it assumes a new significance and the history of its family tree becomes of much importance.

Jay D. Warner of Chaumont, Jefferson County, who has had about as much intimate contact with oat family-trees as any one farmer in this part of the State, finds that there is not only interest but profit as well in making a study of the idiosyncrasies of oats, and has been following along lines of this kind for several years. The story of his work and its results reads almost like a fairy tale.

In 1914 Mr. Warner became interested through discussions opened by the farm bureau and the State College of Agriculture at Ithaca, in securing greater returns for the labor that he was compelled to put on an acre of land in order to secure a crop of oats and decided to cooperate with these agencies in working out his problem. With the visit of the County agent, who at that time was F. E. Robertson, and Prof. H. H. Love to his farm at harvest time that summer, the initial step was taken.

These men with Mr. Warner went through the best field of oats that was on the farm looking for oat heads that possessed the characteristics which would point to something better than the average. The variety used for the beginning of the work was known as American Beauty—a strain of the Banner variety well known all through the North Country for its vigor and

productivity. As fast as a head was discovered that would meet the requirements—and the appearance of the straw was taken into consideration as well—it was picked and put into a sack. In this way several hundred heads were secured that represented the very best that the field afforded.

One of the interesting things that came out in this work was the fact that oat flower is a self-

The Oat Crop is a Crop of the Cow Country. The field pictured here is situated in Delaware County, N. Y.

fertilized flower and a black oat and a white oat can be grown alongside each other for many years without mixing in any way. This fact was taken advantage of by Mr. Warner in his work. The heads were taken in charge by the Department of Plant Breeding at Ithaca and were gone over very thoroughly, some that showed up rather poorly on close examination being removed. Despite this 600 heads passed the test and were threshed out for planting the following spring, the

kernels from each head being put in an envelope by itself and given a number that would designate all future progeny.

The following spring Mr. Warner sowed the kernels from each head in a row side by side so that each would have an equal show with its neighbors. These 600 rows of oats were a great revelation in showing the habits of growth of oats. The progeny from each head all showed the same characteristics—one row would all be tall plants with long branching heads, another would be short plants and thick compact heads, and so on. Again Mr. Warner and Dr. Love and Mr. Robertson went through the selection process at harvest time, but this time picking only the best rows from the 600. Each row was harvested and kept separate and the grain threshed out and weighed.

The following year oats from each of the best rows saved were planted side by side for comparison again. The same process was repeated for several years—as larger amounts of the best seed became available larger areas were planted until the few left were being planted under actual field conditions.

After a particularly hard storm one day Mr. Warner noticed that one particular selection was standing up while the others were all practically flat. This strange characteristic attracted him immediately, for one of the things that caused severe loss in some seasons was the oats going down before harvest time. If he could get an oat that would stay up when the others went down he felt that his work would have been of some actual value to farmers of New York State.

The following year the same thing was noticed with the same oat not only at Mr. Warner's farm

(Continued on page 261)

## Why the Holstein Appeals to Me as a Dairy Cow

*An American Agriculturist Wednesday Evening Radio Talk Broadcast from WEA F*

By C. F. BIGLER

**W**ELL, before I begin this talk I must qualify. You know there are hundreds of speakers who tell you about farming and dairying (and during the fall campaign there will be many more) who never trespassed on a farm nor milked a cow.

I am a dairyman who owns a herd and can pull the lacteal fluid into the pail. Do I know cows? Well, I have owned every kind and color—the Jerseys and Guernseys whose calves you have to watch for months lest the cats catch them—the Brown Swiss with her Buffalo appearance and the stately Ayrshire, second only to the goat in climbing but lacking in his tin-can appetite, and last but not least the Holstein—my Holstein, the real dairy cow. And why did I choose her? I must tell you.

First, she is beautiful with her coal black and pure white coat; second, she is sociable, always talking to you with her large mellow eyes, and third, she is kind and companionable, since for generations she lived under the same roof with her masters and their families in her native land.

Why do dairymen keep cows anyway? Simply because it is their business and they want that which will return to them the greatest net income. Will the Holstein cow do it? I say she will and I have proof. Dairying has become a science and only by weighing milk and testing for butterfat do we know whether a cow is an asset or a boarder. And what is the result of these tests? A Holstein cow holds the championship of all breeds for a year's milk record of 37,391.4 lbs. in 365 days. Fifty-five other Holstein cows made over 30,000 lbs. of milk in a year and no cow of any other dairy breed ever approached it. Eighty-five Holstein cows have made over

1,250 lbs. of butter per year while only nineteen of all other breeds have equaled it, or in other words, four out of every five cows to make this record were Holsteins. Holsteins average 60% greater milk production than all other breeds and it is therefore not to be wondered that 60% of all the dairy cows in the United States are Holsteins.

With this great production they are also eco-

swimming in milk. With 2,000,000 cows in this State, producing as our champions do, you would not have to depend on Hydro-electric power from Niagara but would have Lacto-electro power from the farms and still have all of the milk, ice cream, butter and cheese you now consume. The fact is that the average dairy cow in the State gives from 4,000 to 5,000 lbs. of milk per year, so with the great production of Holsteins you can see how small the production of the scrubs and other dairy breeds must average.

If a dairy farmer makes a profit his cows must make an average of 8,000 lbs. of milk per year, so when you are using milk you must think of someone somewhere producing it at a loss at present prices. Cities can thrive only as agricultural districts thrive and so as a consuming public you can lend a hand in agricultural prosperity if you help the dairyman to eliminate this unprofitable cow. How can you do this? By asking your milk man to bring you Holstein milk and soon I will tell you why.

I believe I have convinced any thinking person that my choice of the Holstein as a dairy cow was right,

but there are other reasons why she appeals to me. If she is to gain in popularity she must be an outstanding figure to a consuming public. As dairymen we cannot succeed by large production alone. We must have our consumers satisfied that we are giving them the best and that in using Holstein milk they are getting health, strength and vitality.

An appeal has been made to the consuming public by the owners of other breeds which give yellow milk to watch the cream line—an appeal

(Continued on page 261)

### The Same Old Fight

**H**ERE again is the old scrap among dairymen about which is the best dairy breed. Mr. Bigler, Secretary of the New York Holstein-Friesian Association, certainly believes in the Holstein breed and he says so emphatically. Owners of other breeds, when they read this, will feel like saying some emphatic things also, so we are going to give them the chance. We expect to invite officers of other leading dairy breeds to give radio talks during the winter on why they prefer their particular breed.

In the meantime, if you get real "het up" when you read this, tell us in a short letter why your breed is best, and so far as we have room, we will publish the letters.

The attention of our radio audience is called to the fact that the American Agriculturist-WEAF Wednesday evening farm program starts at 7:50 P.M., instead of 6:50 as it did during the summer.

nomical. They will consume and convert into milk and butter a greater amount of roughage, hay, silage and pasture grass than any other breed. They are large and healthy and when through producing milk are converted into beef at a profit. Their calves are more easy to raise than any other breed and it is not an uncommon sight to see a Holstein cow kept as a wet nurse for calves from the smaller dairy breeds.

I do not want my audience to gain from this talk that all dairy cows produce these large amounts of milk and that dairy farmers are just

## The Market Outlook for Small Grains

*Shall I Sell or Hold My Oats, Barley or Rye?*

By GILBERT GUSLER

**A** STRONG case can be made out for the maintenance of much higher prices for oats, rye and barley than prevailed in the past year. It is unlikely that the advances thus far discount all the strength in the outlook for these grains.

In painting a picture of the market situation and outlook for oats, broad strokes can be used to advantage.

First, the crop harvested this year is 14 per cent. larger than last year's production. Likewise, it is 14 per cent. more than the amount of oats consumed in the United States in the past 12 months and 240 million bushels, or 20 per cent. more than the average domestic consumption in the last five years.

Second, new oats were marketed at a record rate late in August and early in September, but the period of heavy selling direct from the machine is about over and the peak of receipts is behind us. Terminal markets were practically bare of supplies when the movement started and the visible supply accumulated thus far does not look burdensome.

Third, while oats prices are about 10 to 12 cents higher than a year ago, they have advanced less than corn. Before the war, oats prices at Chicago averaged about 75 per cent. as high as corn, whereas, at the present time, oats are bringing less than half as much as corn.

### More Farm Feeding of Oats

Fourth, the certainty of a small corn crop will result in heavier farm feeding of oats and some of the commercial demand from dairymen and feeders that would go to corn will be diverted to oats at the present ratio of prices.

Fifth, Canada has only a small crop of oats this year. She has been furnishing a third to a half of the oats bought by importing countries in the last few years. This should mean larger exports from the United States in the coming year. During the last month, export sales of oats have been the largest since the war. Oats production forecasts from 14 countries outside of the United States show a yield of 20.6 per cent. less than last year.

In short, the large oats supply in this country is offset by the small crop in Canada, the poor crop of corn in the United States and the huge discount at which oats are now selling below corn. Under the circumstances, oats prices logically should gain on corn during the coming year.

### Oats-Corn Ratio Below Normal

However, we should not expect that oats prices this year will approach the pre-war ratio with corn. To begin with, the supply situation in the two grains is entirely different. Also, a long distance view of the oats situation shows that the acreage in this country was increased during the war period when prices were high. Exports were unusually large at that time but dropped off rapidly when hostilities ceased. In the 1917-1918 crop year, for example, we exported 135 million bushels of oats, whereas in the last 12 months we

exported only about 9 million bushels. Since production has not declined as rapidly as exports, it has been necessary to increase domestic consumption in order to dispose of the crops, and this could only be done through the stimulation brought about by lower prices for oats as compared with other feed grains. This has tended to hold oats prices at a greater discount below corn than in pre-war days.

### Fewer Horses Affect Oats

Again, the decline in the horse population both on the farms and in the cities has had a similar

effect. Farm consumption of oats by horses has fallen off and the feeding demand for oats in cities and towns is much smaller than it used to be. In Chicago, for example, the number of cars of oats bought by dealers each day to take care of the city's feed requirements is much smaller than it used to be.

The increase in the number of dairy cows in the oats producing States has partly offset the decline in the horse population so far as farm consumption is concerned. Likewise, the steady rise in commercial dairying, where shipped-in feeds are used extensively, partially, but not fully, counterbalances the drop in the number of horses at work on city streets as a factor in the commercial demand for oats.

### Barley Production Centers Change

During the last fifteen years, the barley acreage in the United States has been fairly constant from year to year with the exception of part of the war period when a substantial increase took place. However, a significant change has occurred in the chief areas of production. Before the advent of prohibition, barley was grown extensively as a money crop in Wisconsin, Minnesota, and the Dakotas. During the last few years, the acreage has declined in those States but has increased elsewhere in the Middle West as well as in regions where corn and oats do not yield well. Such barley is largely fed on the farm where grown

instead of being sold, so that a smaller percentage of our total production is reaching terminal markets than before prohibition. Manufacturers of near-beers use some barley, of course, but the total amount absorbed by them is only about one-third of the 50 million bushels formerly used by breweries in the United States. Exports remain about the same as before.

### Feed and Malting Demand is Broad

Conditions affecting prices in the United States for the present crop year outline a strong situation. While prices already are materially higher than last year, they seem likely to advance further. The outlook for feed barley is colored by the prospective shortage in corn, and there appears to be a shortage of malting barley throughout the world.

The crop in the United States is forecast at 194 million bushels, which is 4 million bushels less than last year. In the Middle West the crop is fairly large, but the tendency will be to use it in place of corn. Of the States which usually sell large amounts of barley on the market, North Dakota has the largest crop in several years and 14 million bushels more than last year. The bulk of our exports of barley in recent years has come from California because of the low ocean freight rate to Europe and the desirable malting grade produced in that State. California has only about a third of a normal crop this year and 23 million bushels less than last year. The crop is about half as much as is usually consumed within the State. It will be necessary to haul large quantities of other grains overland to California if any barley at all is to be spared from that State for export this year.

### Buyers Recognize Strong Position

The world situation, so far as barley is concerned, is summed up in a statement by Broomhall to the effect that "there is nothing cheerful to report with regard to the outlook for supplies." He is speaking from the standpoint of importers and buyers rather than sellers. He had in mind both the feeding and malting grades of barley. Besides the shortage in the California crop, yields are small in other exporting countries. Other North African countries have only negligible surpluses. India had a good crop but has already sold her surplus. Chile has either shipped or contracted practically all she can spare. Canada has a short crop, and little is expected from Russia, which formerly was the biggest exporter of them all. In the importing countries of Europe, supplies of old crop barley are small, their new crop prospect is no more than average, and rains during the harvest have seriously damaged its quality.

The situation is most severe so far as malting barley is concerned, because of a comparative crop failure in practically all the countries producing barley of that grade. As a result, choice barley in the United States should bring high prices this year and should be at more than the usual premium over feeding grades.

### Announcement

WE are enthusiastic over being able to announce the addition to our editorial staff of nine men who are, perhaps, the best editors and writers on farm subjects in America.

For some time AMERICAN AGRICULTURIST has belonged to a group of farm journals known as the Standard Farm Papers. This organization, working together for the common good of the American farmer, has over a million circulation. The names of the papers in the group, together with their editors, are as follows:

The Farmer	D. A. Wallace
Wallace's Farmer	H. A. Wallace
Progressive Farmer	Clarence Poe
Pacific Rural Press	Donald Keefer
Nebraska Farmer	T. A. Leadley
Wisconsin Agriculturist	John Cunningham
Prairie Farmer	C. V. Gregory
Hoard's Dairyman	A. J. Glover
Breeders' Gazette	DeWitt C. Wing
American Agriculturist	E. R. Eastman

At a recent meeting we all agreed that the editors of these papers should become a contributing staff to the other papers in the group. Thus, with one act, AMERICAN AGRICULTURIST is able to offer you editorial thought, observations and writings that cannot be duplicated by any other publication outside of this group in America.

Space will not allow us to expand in any detail upon the experience and qualifications of these editors, but we might, for example, mention that before long we will be able to offer you an article by Dan A. Wallace, the brother of the Secretary of Agriculture, an editor who is known and loved by farm people throughout the Northwest as a fearless champion of the farmers' cause. As a part of this program the Secretary of Agriculture himself, Mr. H. C. Wallace, will contribute an article in March on "The Farmers' Interest in Foreign Trade."

In November there will be one by Samuel McKelvie, the publisher of Nebraska Farmer. The subject of Mr. McKelvie's article will be "The Farmers' Interest in Government." Mr. McKelvie knows wherewith he speaks, for the Nebraska farmers liked him well enough to elect him Governor of Nebraska.

During October there will be an article entitled "How Farmers Are Reducing Their Tax Bills," by C. V. Gregory, editor of Prairie Farmer, one of the best farm papers in America.

These are only a few of the subjects we have in store for you. Announcements of other subjects from this editorial staff will appear in an early issue. The best of it all is that not only are we able to furnish you writings from the best informed group of men, but we have joined these farm papers, with over a million farmers back of us, to work together on a united program for the advancement of the farmers' interests.

### Farm Taxes in Pennsylvania

REAL estate owners in Pennsylvania own less than one-half of the taxable property in the State, yet they pay over four times as much tax as do the other property owners.

Farmers are real estate owners whose property never escapes the assessor. Farmers do not want to escape, but they do not want the other fellow to escape either. It is only common justice that the tax burden be equitably distributed, yet this is far from being the case at the present time.

The Pennsylvania tax law, like that of most of the other States, badly needs overhauling to make it apply more fairly to farm property.

The Pennsylvania Farmer very properly asks the question, "How does your candidate for the legislature stand on this problem for improving tax legislation?" Before election and not after, is the time to get his answer.

### Deer in New Jersey

THE sight of even one deer in old Tioga County, where we were born and raised, would cause considerable wonder among farmers for weeks. Yet there are well settled counties in New Jersey where deer have become so numerous as to be a serious pest. At a recent meeting, which we attended, of New Jersey farmers, several of them testified how the deer had entered their orchards and eaten off the new growth, causing thousands of dollars' damage.

Left to themselves, without any help from the State, deer gradually disappeared in practically all sections of the East, except in the mountains. But of late years it has been the policy of the State to preserve and protect game with the result that there are sections like a few counties in New Jersey where there are now more deer probably than there were before the country was cleared. This makes it fine for the sportsman, and bad for the farmer who depends upon his orchard and crops for a livelihood. The law in New Jersey allows a man to kill a deer on his own premises providing he turns the carcass over to the authorities. The farmers state that it is practically impossible to kill them. They seem to flourish on apple trees sprayed with poison and the average farmer cannot get close enough to make much impression upon them with a gun.

After some discussion, the farm organizations in New Jersey recently voted to ask the State legislature for a law compensating the farmer for any damage caused by deer. This is probably as good a solution as any, and yet it will be very difficult to find any practical way to estimate damage.

As one farmer put it: "How is anyone going to figure the amount of damage caused by deer who set an entire orchard back a year or more by eating off the new growth?"

### Radio Is Coming

ACCORDING to the United States Department of Agriculture, there are, this year, three times as many radios on farms as there were last year. It is estimated that farmers own at least 370,000 sets. The reason for this rapid increase is thought to be in the fact that farmers have begun to appreciate the great practical value of the radio in addition to its entertainment attractions.

Many of the broadcasting stations now are doing much in putting in their program with the entertainment, much educational information in the way of lectures on literature, music and science. Several of the stations also are broadcasting

market reports which farmers find particularly valuable at this time of the year.

In cooperation with the Department of Agriculture and the State Department of Farms and Markets, the AMERICAN AGRICULTURIST is broadcasting the latest market reports on Tuesday, Wednesday, Thursday and Friday. The hour of broadcasting is 11:50 a. m., standard time. You will note that this has been changed from 10:50 to 11:50, which will make it a more satisfactory hour for farmers to listen in. Much time and effort is made in getting these latest market reports and they should be very valuable to all those who want to get their products on the market at the time when the market is in the best condition to receive them.

On every Wednesday evening at 7:50 p. m. the AMERICAN AGRICULTURIST, cooperating with WEAFF, broadcasts a farm talk. In more than a year that we have been doing this we have tried to bring you a great variety of speakers and addresses. Moreover, because thousands of city people listen in, we have carried to them also a great deal of information about farm problems.

We hope that you are listening in and that you will drop us a line giving us suggestions as to what you like and do not like in these radio talks.

### Our Job is to Serve

WE publish a letter like that which follows below not from any motives of self-satisfaction, but from the deep sense of responsibility which it gives us to so publish and edit the AMERICAN AGRICULTURIST that it may continue to be received as an influence for good in the thousands of farm homes into which it goes.

Forty-three years ago we named our youngest child Orange Judd Deffenbaugh because we thought there was no farm paper like the AMERICAN AGRICULTURIST and its editor, Orange Judd. This son, O. J. Deffenbaugh, is Pullman conductor on the Pennsylvania line from Pittsburgh to New York, making two trips every five days. We also have the picture "Strawberry Girl" hanging in our dining-room which we got ten years before from Orange Judd when our first-born was a babe (a daughter), who is now the wife of the present Congressman from the 11th Ohio District, Edwin D. Ricketts.

Somchow I am persuaded that the AMERICAN AGRICULTURIST has been a great benefit to me and my family. One of my boys is the equal of any farmer in his neighborhood. Another is the equal of any lawyer in Lancaster, the birthplace of John and W. T. Sherman.

Enclosed find check for which please send papers to my address as above. Success to the AMERICAN AGRICULTURIST.

Isaiah Deffenbaugh,  
Lancaster, Fairfield Co., Ohio,  
119 West Allen Street.

### Eastman's Chestnuts

IF you knew all I have to stand over these attempts at "would be" humor, you would at least sympathize with me even if you can find nothing to laugh at. Many and varied are the endearing terms that members of the AMERICAN AGRICULTURIST's staff have applied to these "chestnuts." Associate Editor Ohm smiles a polite smile when I call his attention to one, and immediately asks me if I mean it for a joke. "If so," says he, "you'd better label it!" Then when I get a particularly good one, I go and read it to the Household Editor and ask her if it is not a dandy. "Yes," she says, looking me innocently in the eyes, "but would you mind telling me what the point is?" That is all right. They say a whole lot of women have no sense of humor any way. Then again it is slightly disconcerting to read one of the "chestnuts" to the publisher of A. A., expecting to get a laugh, only to have him look at me rather pityingly and ask if I don't think that is pretty "wormy."

However, once in a while I get even. Do you remember the one I told in the September 27th issue on what the politicians said about women being more honest than men? Well, I got that story from our publisher. I thought it was pretty good and NEW ALSO. So after I had written it up I read it to the Household Editor. When I finished she smiled a sickly smile and said, "My goodness, is the publisher telling that old gag again? I've heard him get that off dozens of times way back in the Harding-Cox campaign years ago!"

# Schemes for Saving Labor

## Another Page of Handy Devices to Lighten the Day's Work

**H**ERE is another page of handy devices. The last one seemed to take pretty well. Several folks sent in pictures and drawings of devices they have put into practice and it was mighty easy to see how those simple little contrivances not only saved steps but a strained back or a strained temper.

\* \* \*

### Put the Gate on Wheels

**F**OR a real back breaker, and one that's especially hard on the children, is a gate that doesn't swing right. Lots of times it is almost impossible to keep some gates swinging right for a day and the only solution seems to be to put

a wheel on them. The accompanying illustrations show two possibilities. The larger wheel is more adapted to a place where the ground is rough, soft or stony. A buggy wheel is just the thing. It will roll through a rut or through soft soil, where a little wheel will mire. It is easy to attach a wheel of this type. A wooden axle may be made out of such good seasoned wood as hickory or oak. As long as it is thoroughly greased it will function just as well as an iron axle. Sometimes an old broom handle is handy and will be found to answer the purpose perfectly.

Where the ground is hard and level, a small wheel is just as practical and a great deal less cumbersome. A wheel from an old cultivator or plow will suffice. In this case the axle may be a large bolt, stapled to the lower corner.

\* \* \*

### The Old-Fashioned Swinging Gate

**T**HIS is another bariyard gate that is familiar to us all. The cable is used to hold up the farther end so that a fellow doesn't have to break his back to open and close it. The chances are that if this gate is properly hung, it will be less bothersome to open and close than a gate secured with wheels and for that reason easier on the women and children who have to pass through it.

\* \* \*

### A Low-down Potato Truck

**T**HIS picture was taken in the vicinity of Caribou, Me., in the great potato district of that State. It shows very well how potato

growers can save their backs loading potatoes by having the axles of an old wagon dropped, permitting the floor of the wagon to be constructed only a foot or so above the ground. Potato-growers who have a large acreage will

appreciate a wagon of this kind. As a matter of fact a low-down wagon is a wonderful convenience in more ways than in hauling potatoes. It is possible to use an old set of wheels to build a labor saving rack for hauling silage, corn from the field to the silo. Instead of putting the reaches on top of the axles, they are underslung using ordinary iron bars bent U or V shape to hold the beams firmly. Of course they are bolted in place, otherwise the wagon would fall apart. The main idea is to get the wagon down low enough to avoid high lifting, which will save many an aching back.

\* \* \*

### Two Handy Root Cutters

**H**ERE are a couple of handy devices for the poultryman. As a matter of fact it applies to the dairyman just as well. We all know the value of cow-beets as a food during the winter months for both poultry and cows. It is not really necessary to cut the beets up because chickens will peck at whole beets and cows can bite into them. But it is a whole lot better to cut them up.

One of these devices is a hand-operated affair,

while the other works by power. The hand-operated affair is a cheaply gotten up contrivance. An old worn out cross-cut saw is used as a knife, working up and down through a brace made out of two pieces of inch-square material. The beets are fed from the small table under the knife and the pieces drop into a basket below.

The machine-operated affair, which is illustrated also, is self-explanatory. A home made driving pulley is connected to the knife by a wooden Pitman. The knife operates on a small table on which the beets are fed. This device could be improved by supplying a guard for

the knife to play in to prevent sidelashing. The beets are pushed up to the knife with a board to avoid an accident.

\* \* \*

### A Good Home-Made Sheep Shelter

**I**T IS pretty late in the season to talk about building sun shelters for the sheep, but here is something for the sheepmen to think about during the winter if they are going to use pastures next year that are not well equipped with shade. The four wheels are four old wagon wheels on their original axles. On these axles are placed two 2 x 6

planks. These planks are used as a base for a framework on which the four-sided shed is built. To prevent the tires and rims rusting and rotting before their time, each wheel is stood on a small pile of stones. It is a cheap contrivance and a mighty handy one. It can be moved from field to field and with reasonable care will last for a good many years. It can be made to serve a double purpose by building a feed rack in the center of the shed between the wheels.

\* \* \*

### An Improved Pruning Saw

**T**HIS pruning saw was made from an old shovel handle and a broken cross-cut saw. In the three years since it was made it has proved as good as many on the market, yet it was made from two broken parts, each in themselves, worthless.

The handle of the shovel was cut off where the

head joins the round shaft. The portion left was cut with a saw for the end of the blade. Only the outer portion of the saw blade was used. Holes were drilled for three rivets as shown.

This saw is about eighteen inches in length exclusive of the handle. Because of its shape, considerable leverage can be exerted without difficulty.

\* \* \*

### A Mail Box on a Trolley

**T**HIS device isn't to encourage folks to be lazy but there is no question but what it would be mighty convenient in some instances during the more severe seasons of the year. Where the house stands back some distance from the highway a trolley can be erected, not only to save steps, but to save a lot of tramping through snow drifts or through water to get the mail. This means that it may save a lot of dirt and muck being dragged into the house. A strong post with a metal arm extended, as in the illustration, is set near the highway. Suspended between it and the house is a trolley,

A, on which the box runs. A pulley is fastened in or to the post and over it runs the cord, BC, which is attached to the box, being used to pull the box back and forth between the house and the road. The box is sent down to meet the carrier who places the mail in it and it is then pulled back to the house.

## Western New York Crop and Fruit Notes

HOW fickle the seasons are. For weeks and weeks, nearly all summer, it has rained every week, often for two or three days. Now we have finished two weeks of beautiful dry sunny weather and it is getting dry and dusty. Some farmers, and there are quite a few this year, who are late with the plowing for wheat are finding it pretty hard. There is still considerable grain threshing to be done.

Wheat is now pretty well sown, except the decreased acreage which will go in after beans, and the earlier fields are beginning to show green. A good rain would help this grain off to a better start. The acreage appears to be about normal.

Bean harvest has begun. Many fields are cut and a few in the barn. But many still show green, though they were browned a little with two light frosts last week. It is ideal bean weather.

Silo filling is on in earnest and not a few silos are filled already. Now and then a field of corn for grain is cut, but most of these need a week or two yet to bring the grain to full maturity. Frost has held off providentially, the light frosts of the 23rd and 24th of September doing surprisingly little damage here.

### Fruit Harvest in Full Swing

Fruit harvest is in full swing and the drive and rush of getting the fruit to market before overripe, the worry over damage by winds (it is blowing hard today) and the maturing anxiety of the season as to yield and quality, are all at high pitch and likely to stay there for several weeks now.

Elberta peaches moved rapidly the latter part of the week. Forchanded growers began to pick about the middle of the week though it was then rather cool and peaches were quite green. But by Friday and Saturday, which were warm bright days, the fruit was fully ready and the worry of overripe and "softs" had begun. It would have been well if Sunday had been a day late this week. It is to be feared that too many growers are not observing it. The size and quality of the peaches are generally good this year, with a few crops under-size. The yield seems to be about up to or a little better than the expectation. With the impetus of warm weather and good quality, markets stiffened slightly this week. Some cars have been sold f. o. b. as high as \$2.10 per bushel. Doubtless the heavy shipping will cause a reaction. The crop is less than half harvested yet.

Alexander apples are finished and the bulk of the Wealthies have gone. Twenty-ounce will be ready about the week of October 6th. They are still pretty green and not of very good quality. Greenings and Kings will follow closely.—M. C. BURRITT.

### The Market Outlook for Small Grains

(Continued from page 245)

#### Rye Crop Far Above Pre-War

Counting both the new crop and the carry-over of old rye at terminal markets, we have a total supply for this year of 83 million bushels or 5 million bushels more than a year ago. This is about equal to the average of the last five or six years. It is far above the pre-war figure, however, as rye production in this country was greatly stimulated by high prices during the war when export demand was keen and domestic consumption expanded as a result of compulsory substitution for wheat in the making of war bread. Production has been trending downward in the last two or three years, but it has not yet pruned off the war time increase so that each year we still have a large surplus for export.

In the last 12 months, our exports of rye were the lightest in five years and only about 35 per cent. of the amount sold abroad in the preceding year. Russia, (Continued on page 260)

# BIG 'C' LINE

RUBBER FOOTWEAR

## Longer Wear Saves Money!

### 'Nebraska' All-Rubber Overshoe

Ruggedly built to stand heavy work around the farm and gives extra long service. Warm wool lining and a gusset reinforced against chafing of buckles. Wide extension sole and 'Stubgard' toe and heel prevents snagged or scuffed uppers. You can't buy a sturdier, warmer overshoe than 'Nebraska.'

When the snow is deep, wear "Nebraska" over our "Warmfut" gaiter shown at right

The best always costs less in the long run because of longer wear. Big 'C' Line Rubber footwear can't be made any better!

### 'Warmfut' Cold Proof Gaiter

### 'Caboose' World's Best Work Rubber

On coldest days wear this practical combination and keep your feet warm and dry. In the spring and fall wear 'Caboose' alone over your regular shoes.

'Warmfut' is made from wool yarn knitted and shrunk into a solid fabric. Felt sole and leather back stay.

'Caboose', the world's best work rubber, has no equal for wear. Four-ply upper and extra thick White Tire Sole.

Don't accept a substitute. You can tell the genuine by the White Top Band and the Big 'C' on the White Tire Sole. Remember, "something just as good" if it is as good can't be sold for any less.

### 'Watershed'

**Waterproof Cloth Overshoe**  
The protection of an all rubber overshoe plus the warmth of a cloth top. A sheet of pure gum rubber between the wool fleece inner lining and the cashmerette outer fabric makes 'Watershed' absolutely waterproof. Warm and comfortable. Same sturdy sole as on 'Nebraska'. A cheaper shoe won't wear as long!

## Ask your dealer

to show you these Big 'C' favorites. Find out, also about the rest of the Big 'C' Line — warm overshoes for the women folks — husky rubbers, overshoes and boots for the youngsters. If your dealer is out of what you want he will quickly get it from our nearest office.

Send for circular and give your dealer's name

### 'Ruff Shod'

For long, hard service and real comfort you can depend on "Ruff Shod". Fits perfectly because made over our "foot-shape" last. Will not shuck up and down at the heel or "break" at instep. Heavy extension sole saves uppers from hard knocks. Don't accept a substitute. Demand "Ruff Shod".

**Wanted! The Lives of At Least 10,000 Cows**

WE CAN report progress on "Eat the Cow Campaign," but not enough progress. Hundreds of farmers all through the East are interested in the idea and believe that it is a good thing, but not enough are expressing themselves so that we can use the combined enthusiasm to encourage others to come along on the same idea.

The whole plan is very simple. We have explained it several times in these columns, but to make it clear, we repeat: First, nearly every farmer has one or more cows which he knows is not paying her keep. Second, it is suggested that farmers agree either to fat this low producer and sell her to the butcher, or divide her up among the neighbors and later when they kill one, take your share; or if neither of these plans are practical, eat what you can of the beef on your own table and can the rest. That's all there is to the suggestion.

But here's what it will do. First, it will furnish fresh meat at a very low price for your own table. Second, it will cut down your costs of milk production so that you can make a profit. As it is now, in most dairies it takes many of the good cows to carry the poor ones along. Third, if several thousand farmers will agree to follow this simple suggestion, it will have a decided effect on surplus milk production and result in gain for every producer in the industry.

Many of those who have studied the present milk situation have told us that if farmers would follow this little plan, it would do more than any other one thing to solve the problem and put the milk production business on a paying basis again.

There is a little agreement form on this page which is the simplest way to follow our suggestion if you want to sign it. But we do not care whether you sign any agreement or not. All we want you to do is drop us a postal card or a letter telling us you are for this plan and will do your part, provided at least a thousand other farmers will agree to it. A thousand is only a start. Ten thousand men ought to have interest enough in the business to come along on this suggestion within the next few months.

**League Buys More Certificates**

THE September meeting of the Dairy-men's League Board of Directors authorized the treasurer of the Association to purchase all series "A" Certificates of Indebtedness, whose numbers end with the figure "3." These certificates must be received at the New York office not later than the 24th of October, and for them the treasurer will pay 95 cents on the dollar together with interest to October 1st.

If you hold such certificates, and wish the cash, here is your opportunity. They should be endorsed with the owner's name written on the back and sent to the League at 120 West 42nd Street, New York City, by registered mail.

This is the third lot of certificates which the Association has offered to buy. The first lot included those which ended with "0," and the second lot included those ending with the figure "8."

In spite of the fact that the League offered within 5 cents of par for the certificates, many dairymen failed to take advantage of the opportunity and have held on to these certificates. This fact speaks well for the confidence which the dairymen have in the financial management of the League association.

## New Jersey Farmers Agree on Legislative Bills

**O**N Friday, September 26th, the New Jersey Federation of Farm Bureaus, cooperating with the New Jersey State Grange, met at Trenton and outlined a farmers' legislative program for the coming year. The meeting, consisting of some fifty or sixty men representing nearly every section and every kind of agriculture in Jersey, was one of the most interesting and worth while gatherings of farmers that we have attended in a long time.

When President H. E. Taylor of the Farm Bureau Federation called the meeting to order, he said that its object was to work out a unified legislative program for the farmers of New Jersey, one which the farmers could get back of. Dr. W. H. Whiton, chairman of the legislative committee of the Federation, stated that it was of no use to go to the legislature and ask for legislation for agriculture unless the farmers themselves were a unit in desiring the same and wanted it hard enough to fight for it.

### For a General Trespass Law

The meeting then proceeded to take up proposed legislative bills and disposing of them one by one in regular order.

The first thing that received consideration was a discussion of the bill permitting farmers to organize mutual insurance companies. Mr. J. C. Cooley explained that this bill passed the New Jersey Senate last year but was lost in the House during the rush of closing. A resolution was carried by the conference asking for its passage this year.

The question of a trespass bill of a general nature received a large amount of attention by the meeting. New Jersey farmers, perhaps, more than farmers elsewhere, because of their large amount of fruit and market gardening, suffer from automobile thieves and from general trespassing. Bills designed to give farmers adequate protection are opposed by sportsmen and by the fish and game commission. Also, there are many farmers who do not like to see too drastic trespass legislation because they themselves like to hunt. At present there is a good law on the books against trespassing on posted lands while hunting or fishing. The meeting adopted a resolution asking for a bill extending the present hunting or fishing trespass law to cover all kinds of trespassing on cultivated lands. In the discussion, one farmer got a good laugh. Someone had said that many farmers like to be sportsmen and hunt and fish. "Yes," this farmer said, "it takes a pretty good sport to be a farmer these days anyway!"

### Heavier Penalty for Roaming Bulls

The bill passed in the Senate and lost in the House last year for increasing the fine on roving bulls, received attention. It was brought out that it was very discouraging to take a lot of trouble in getting purebred herds and then to lose the results for years from one or several of the good individuals because of a roving scrub bull. The resolution carried asked the legislature to raise the fine to the careless owner of such bulls from twenty-five to one hundred dollars for each offense.

New Jersey's genial Secretary of Agriculture, Alva Agee, explained that more specific legislation was needed to make the act of 1917 regulating milk dealers enforceable. On his suggestion, the conference passed a resolution to ask the legislature for a more specific law governing the licensing and bonding of milk dealers.

The proposed federal amendment on child labor came up for a long and emphatic discussion. It was brought out that the farmers of New Jersey are not opposed to reasonable legislation governing the employment of children but they were most emphatically opposed to the Federal Child Labor Amendment and a resolution to that effect was carried.

On the floor is shown Gold-Seal Congoleum Rug No. 516. The 6 x 9-foot size costs only \$9.00.

## Six new and beautiful Congoleum Rug designs—

Gold-Seal Congoleum Rugs have always been renowned for the beauty and richness of their designs. And now—six new patterns, expressing the latest trend in floor-covering artistry, are ready for your inspection.

Especially interesting are the two new Chippendale designs, shown first and fourth at the right, which reflect the latest vogue in the most expensive floor-coverings. The small all-over floral motifs, illustrated third and sixth, come in soft tones that make them admirably suited for quiet, inviting guest rooms. A fascinating antique Oriental rug now exhibited in the British Museum inspired the second and fifth designs.

### Patterns for Every Room

Don't fail to see these new designs at your dealer's. He has in addition other beautiful Congoleum Art-Rug patterns for you to see in a variety of color combinations that are in perfect taste for any room.

Seamless throughout and absolutely waterproof, these rugs need only a light mopping to make them spotless. They require no

fastening yet always cling tight to the floor.

All their artistic and practical qualities make Gold Seal Congoleum Art-Rugs the favorite floor-covering in thousands of homes.

### Popular Sizes—Low Prices

6 x 9 ft. \$ 9.00	The patterns illustrated	1½ x 3 ft. \$ .60
7½ x 9 ft. 11.25	are made in the five	3 x 3 ft. 1.40
9 x 9 ft. 13.50	large sizes only. The	3 x 4½ ft. 1.95
9 x 10½ ft. 15.75	smaller rugs are made	3 x 6 ft. 2.50
9 x 12 ft. 18.00	in patterns to harmo-	
	nize with them.	

Owing to freight rates, prices in the South and west of the Mississippi are higher than those quoted.

### Beware of Substitutes

Don't be misled into buying some other material represented as Gold-Seal Congoleum. Insist that the Gold Seal appear on the face of the goods you buy. It is the only way by which you can be sure of getting the genuine, guaranteed, nationally advertised Gold-Seal Congoleum.

# for ROOFS

*test it!*

## —prove the quality of Vulcanite Roofing for yourself

You can be certain that Beaver Vulcanite Roofing will more than stand the tests of cold, heat, wind, rain, ice, snow, fire hazards—or any other natural strain a roof must endure. You don't need to take anybody's word for it. You can—and should—prove it for yourself before you spend a cent for any roof.

*Write for a sample—test and compare*

Let us send you a sample of Slate-Surfaced Beaver Vulcanite. Then give it these daring tests: Twist it. Bend it. Throw it on the floor. Jump on it. Kick it. Scuff it. Lay it on ice. Then pour hot water on it. Leave it on a hot radiator. Lay burning

embers on it. Take it with you when you buy. Make every comparison you can. Judge for yourself whether Beaver Vulcanite is the most serviceable and the most economical roofing you can buy.

*Your dealer can supply you*

Any reputable dealer can supply you with this better-looking, husky, fire-safe roofing for any type of roof or building—rolls, slabs, shingles in various colors or blended shades. Don't forget the tests you've made. Depend on your own judgment. You're the one who saves if you insist on Vulcanite—the one who loses if you don't. Mail the coupon now, for your sample of Beaver Vulcanite.

# Among the Farmers

## Marketing Included in Cornell Short Course

THE twelve weeks' winter courses at the New York State College of Agriculture start this year on November 5 and end with Farmers' Week, February 13, 1925.

Among the new courses offered this year those in agricultural business and marketing are expected to be popular along with the specialized courses formerly given, such as animal husbandry, fruit growing, poultry, dairy industry, and others.

Any person at least eighteen years of age who has had a good common school education may enter the winter courses at Cornell. Tuition is free to those who are or have been residents of New York for one year; to others it is \$25.

Complete information about the various courses given can be had by writing to the secretary, State College of Agriculture, Ithaca, N. Y.

### New York County Notes

**Essex County.**—Grain has been harvested and some farmers have threshed. Oats are light. Other grains about right. Many fine fields of corn need a month more without frost to ripen. Potatoes are yielding well, but the frequent rains may cause rotting. Apples promise a good crop. August butter-fat was 39c a pound, eggs 45c a dozen, fowls 25c a pound, live.—Mrs. M. E. B.

**Delaware County.**—Oats have been harvested but up to a week ago little threshing had been done because of the wet rainy weather. Cows are being fed green feed to keep up the flow of milk. Ayer-McKinney at Delhi paid \$2.05 for August milk. Eggs are bringing 40c at the local market, potatoes \$1 a bushel, apples \$1.—Mrs. E. L. N.

**Chautauqua County.**—Farmers are trying to get their grains threshed, but the wet weather is a great hindrance. Oats are a good crop, also buckwheat. Corn will be much better than expected. Some potato rot is reported. They are generally a good crop, but late in maturing. Milk flow is keeping up good for the season. Farmers are not buying much grain, as the price is too high. But there is plenty of green feed. The farmers complain mostly about the low price of milk and high taxes. The apple crop is poor, the fruit is small and gnarly. Dairy cows are in poor demand, generally. Springers bring a fair price.—A. J. N., Sinclairville.

**Chautauqua County.**—We are having some fine weather, which is giving the farmers a chance to draw and thresh their oats. It will help the grapes to ripen. Milk is so low that a great many prefer to keep hens. Feed is so high, the profit in that line is small at present. Meal is \$3 a hundred in our town. Corn will not amount to much only for the silo. Potatoes are a good crop and are selling for 75c per bushel.—P. S. S., Dewittville.

### Eastern Pennsylvania Notes

OLIVER D. SCHOCK

BUCKWHEAT and many yields are far below the average this year. Eastern Pennsylvania corn growers are selecting corn while the beans are still on the stalks. This is a practical method and insures a sound seed for next year. Those who had good sound seed stock last spring sold all their surplus at attractive prices.

An analysis of the fruit exhibits at the county fair reveal that the Yellow Elberta peach continues as the most popular commercial variety in Pennsylvania. One of its outstanding qualities is its ability to withstand shipments.

Tobacco wild fire was less troublesome this year than in preceding years, according to reports in tobacco-growing

districts. The harvesting of a large crop has been progressing favorably and it seems to be the consensus of opinion that when it will be cured it will be above the average in quality of leaf.

### Pennsylvania County News

**Erie County.**—The fore part of September was cold, cloudy and very disagreeable. We didn't see the sun for two weeks. Grape-growers have been very anxious over their crop, as there was no sun to ripen the fruit. All crops have matured very slowly this year and we will need a late fall. We have been having lots of rain. Potatoes will make a fair crop selling along \$1 a bushel. Butter is bringing from 45 to 48c., eggs are bringing from 45 to 50c. Oats have turned out good and wheat is fair. Threshing is well under way in many localities.—Mrs. R. R. McA.

**Cumberland County.**—We have been having quite a spell of dry weather during the fore part of September. It has been pretty cold at times, in fact, we had a light frost the night of September 11. However, it did no damage. There is quite a little fall plowing to be done as yet but farmers have been handicapped because it was too dry. During the dry weather, threshing was rushed. Wheat turned out very poorly, while oats were quite the opposite. The corn crop will be short and we do not expect the fruit crop to be of any consequence with the exception of peaches, which seem to be turning out fair.—J. B. K.

### New Jersey Horticulturist to Meet With National Grange

THE annual meeting of the New Jersey State Horticultural Society will be held in the Vernon Room of Haddon Hall Hotel, Atlantic City, on November 12, 13 and 14. The exhibit will be staged on the Steel Pier in connection with the State exhibit under the direction of the State Grange.

The meetings will be held during the week that the National Grange is holding their Annual Meeting in Atlantic City.

### New Jersey Farmers Agree on Legislative Bills

(Continued from page 250)

#### Protection from Deer Urged

An interesting argument developed over a proposed amendment to the regulating of shooting of deer in New Jersey. It seems that deer are very greatly on the increase in certain counties and that they do a large amount of damage in the destruction of fruit trees and farm crops. Under the present law the farmer is permitted to kill the deer on his own premises providing he turns over the carcass. But those who have suffered damages said it was practically impossible to either poison or shoot the deer. It was suggested that perhaps one way to handle the proposition was to extend the open season and allow hunters to kill more than one. Someone answered this by saying that then there would be too many hunters and the hunters themselves are nuisances. A resolution was carried asking for a law by which owners of property damaged by the deer should receive adequate compensation for such damage from the State.

Perhaps the chief outstanding impression to be had from this gathering of New Jersey farmers was the fact that although they disagreed on details, yet they were always able to reach a final decision and the spirit of cooperation constantly manifested among the men and different organizations represented was something which would have been absolutely impossible among farmers or their organizations a few years ago.

## Classified Advertising Rates

ADVERTISEMENTS are inserted in this department at the rate of 5 cents a word. The minimum charge per insertion is \$1 per week. Count as one word each initial, abbreviation and whole number, including name and address. Thus: "J. B. Jones, 44 E. Main St., Mount Morris, N. Y." counts as eleven words.

Place your wants by following the style of the advertisements on this page.

### The More You Tell, The Quicker You Sell

EVERY week the AMERICAN AGRICULTURIST reaches over 130,000 farmers in New York, New Jersey, Pennsylvania and adjacent States. Advertising orders must reach our office at 461 Fourth Avenue, New York City, not later than the second Monday previous to date of issue. Cancellation orders must reach us on the same schedule. Because of the low rate to subscribers and their friends, cash or money order must accompany your order.

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS OF AUGUST 24, 1912.

Of AMERICAN AGRICULTURIST published weekly at 405 Hudson St., New York, N. Y., for October 1, 1924.

State of New York, County of New York, ss. Before me, a notary public in and for the State and county aforesaid, personally appeared Henry Morgenthau, Jr., who, having been duly sworn according to law, deposes and says that he is the president of American Agriculturist, Inc., and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and address of the publisher, editor, managing editor and business managers are:

Publisher, Henry Morgenthau, Jr., Hopewell Junction, N. Y.; Editor, E. R. Eastman, 557 Van Cortlandt Avenue, Yonkers, N. Y.; Managing Editor, E. R. Eastman, 557 Van Cortlandt Avenue, Yonkers, N. Y.; Business Manager, Henry Morgenthau, Jr., Hopewell Junction, N. Y.

2. That the owners are: (Give names and addresses of individual owners, or, if a corporation, give its name and the names and address of stockholders owning or holding 1 per cent. or more of the total amount of stock.) American Agriculturist, Inc., New York, N. Y.; Henry Morgenthau, Jr., Hopewell Junction, N. Y.; E. R. Eastman, 557 Van Cortlandt Avenue, Yonkers, N. Y.; Elton F. Morgenthau, Hopewell Junction, N. Y.; Henry Morgenthau, 417 Park Ave., New York, N. Y.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent. or more of total amount of bonds, mortgages, or other securities are: (If there are none, so state.) None.

4. That the two paragraphs next above, giving the names of the owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear on the books of the company, but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him.

That the average number of copies of each issue of this publication sold or distributed, through the mails or otherwise, to paid subscribers during the six months preceding the date shown above is . . . . . (This information is required from daily publications only.)

Henry Morgenthau, Jr.

President.

Sworn to and subscribed before me this 17th day of September, 1924.

(Seal) Philip Ganz.  
(My commission expires March 1925)

# Service Bureau

## The A. A. Insurance Service

ONE of the special types of service which this magazine gives its readers—and one of which we are decidedly proud—is the very moderate rate on an insurance policy issued by a company of unquestionable security.

New subscribers and old alike are eligible for the policy and hundreds have taken advantage of the very reasonable terms which we have been able to secure. The rate is much less than any individual

could obtain and is only made possible by the volume of business which a publication like ours can handle.

It would hardly be consistent for us to urge our subscribers continually to invest in sound, loss-proof securities and then to contract for insurance, even at a low rate, with a firm that was not absolutely trustworthy and financially responsible. It was only after long and thorough investigation that we entered into our present arrangement with the North American Accident Insurance Company, the country's oldest and largest company writing accident and health insurance exclusively. It is thirty-eight years old, has paid more than ten million dollars to sick and disabled policy holders, and has always on hand large surplus assets for the protection of policy holders.

Like any sound accident insurance, the policies issued to AMERICAN AGRICULTURIST subscribers have certain conditions which the holder must observe. There is also a certain amount of necessary formality in applying for and entering a policy at the home office. There are no confusing details, no blind clauses to exempt the company later from responsibility. What few regulations there are simply protect the policy holder as well as the company.

The insurance policy, as an AMERICAN AGRICULTURIST service feature, is backed both by the AMERICAN AGRICULTURIST and the North American Accident Insurance Company. Sums ranging from \$10 to \$1,000 have been paid out in settlement of the claims of subscribers, and in every case the adjustment was made promptly. Have our subscription agent show you a sample policy, next time he is in your neighborhood, or write us for further details on this unique protection service.

### Better Than Three Per Cent.

Financial Department: Could you tell me anything about The American Bond and Mortgage Company? They are putting up an apartment building in Philadelphia and have 6½ per cent. gold bonds for sale on this property. Would it be a safe investment? Tell me how to find out about these different investment houses, whether they are safe to deal with or not. I have some money lying in the bank at 3 per cent. and wish a higher rate of interest, but something absolutely safe. What can you recommend?—W. I. L., Pennsylvania.

THIS real estate mortgage company has a good reputation for its loans. In every case, however, the security is the particular property on which the bond is a lien and not the credit of the company which sells the bond. If you are going to take money out of the bank, however, we think you ought to have something even more conservative. Do not try to jump from 3 per cent. to 6½ per cent. It is safer to take 5 per cent. and be sure. You can get that by buying a New York Central refunding 5 of 2013 which is listed on the New York Stock Exchange and sells about par. It has the advantage of being readily marketable.

#### REAL ESTATE

OWN A FLORIDA FARM. Grow 2 and 3 crops annually. Enjoy Florida's year-round healthful climate, and its semi-tropic beauty. Hillsborough County, surrounding Tampa, South Florida's metropolis, offers exceptional opportunities for new settlers. Citrus fruits, vegetables, livestock, poultry. New developments in bananas, grapes, figs, blackberries, avocados. Paved highways; mainline railroads. Good schools. Land, \$30 to \$100 acre. Write for free agricultural booklet. BOARD OF TRADE, Box H407, Tampa, Florida.

FOR SALE—102 acres, dairy and poultry farm, 8 miles from Poughkeepsie, silt loam soil yields big crops of hay and grain. Good buildings, wood, fruit and plenty of water; price and terms reasonable. T. J. OWENS, Poughkeepsie, N. Y., Route 1.

MR. FARM BUYER. Good farms for sale. Equipped, with small payment down on easy terms. Reason selling, old age, sickness. Estates settled up, etc. Let me submit your offer to Owners. Tell your wants to C. M. DOUGLAS, Herkimer, N. Y.

MONEY MAKING FARMS FOR SALE in central New York State. For sizes, descriptions, price and terms, write PERRY FARM AGENCY, Canajoharie, N. Y.

STATE ROAD farm, 56 acres, near city. R. F. D. 138, Leominster, Mass.

FOR SALE—400 acres, Otsego County dairy and grain farm. A bargain for quick sale. IRA HUBBARD, Middlefield, N. Y.

Send for free loom book, it tells all about the weaving business and our wonderful \$9.90 and other looms. UNION LOOM WORKS, 332 Factory St., Boonville, N. Y.

# The Girl at Vacada—By J. Allan Dunn

(For synopsis, see page 259)

THE girl brought the belt and two straps that she took from an old carry-all. Jimmy trussed up Furniss in the chair, pinching out the fire in his coat.

"I sabe you fixed it so I sh'udn't get a hawss," he said. "I reckon you were laughin' at me goin' out to the Two-Bar. Cobb said he had none to spare an' you knew it. Only, I happened to meet him comin' in to town. Saved me most of two hours. Now then, what have you been doin' in here with my wife?"

He saw the poster on the table, the telegram beside it, took them up and deliberately read them through, his legs swinging from the table top. Not a nerve twitched in his face as the girl watched him.

"Figgerin' to arrest me an' make her go with you? What did you tell him, Alice?"

"I told him I married you for better or for worse, that the Bee Parson said it was a real marriage. Furniss said he could have it set aside. He said if I'd stay here and take his orders he'd give you a chance to get clear."

"Sweet of him. Sayin' that as I came through the winder?"

"Yes."

"Well, there'll be no arrest. I'm makin' my own getaway. What do you aim to do now, Alice?" He exhibited poster and message.

"I'm goin' with you."

"Knowin' I'm a crook? With five hundred set up for me?"

"If you're a crook, you tried to keep me from something worse. I'm goin' with you."

"You don't have to, Alice. I'll set you on the train for anywheres you want to go an' stake you till you land a job."

"I packed to go with you. I haven't changed my mind."

THE set look vanished from Jimmy's features. Youth returned.

"Hear that, Mister Deppity? We're goin'! Leavin' you to chew over the best thing to do. Sheriff, I'm goin' to buy yore hawss. An' saddle. What do you value it at? Make it fair, for I don't plan to argue. Call the saddle forty an' the hawss a hundred. I'll make it two hundred. Is that a go?"

"You're doin' all the bidding," said Furniss sullenly. Jimmy took the money from his roll, two bills of one hundred each, and stuffed them in the pocket of Furniss's coat.

"I'll make out a bill of sale," he said. "Just in case you might forget you ever sold it to me."

Alice got him materials, and, when he had written, he pushed the table over to the chair and set the pen in Furniss's hand after he had loosened the arm and lifted it.

"You sign that best way you can an' I'll fix up yore shoulder. Don't fake yore signature. How about it, Alice?"

"It's his usual writing," she said.

"*Bueno!* Now we're off, Sheriff. You don't look a bit like a reg'lar movie picture sheriff. I'll have to fix that." With chuckling glee, after he had banded the shoulder and rebound Furniss, Jimmy lifted a stove lid and, with black soot, traced fierce mustachios with curling ends beneath Furniss's nose. "I sure hate to hide it," he said, "but I've got to gag you."

"It's admirable," he declared finally. "Got all the stuff, Alice? *Adios, Senior Jerif, I'm borrowin' yore gun. Spoils of war. Sabe?*"

Behind the shack he worked rapidly, stowing their baggage, shortening stirrups for the girl. She had changed to a faded khaki divided skirt and a white waist with an open collar about which she had achieved a bow of the blue ribbon. For hat she took her uncle's sombrero. Within five minutes they were loping out of town, around the Mexican *cabanas*, heading for the range.

A man sleeping on a bench was wakened

by a woman who pointed to Jimmy and the girl with excited gestures. The Mexican ran and flung himself upon a sleepy pony, spurring it to a gallop as he raced back to town.

"Lookin' for Furniss. They'll be out after us. Recognized the hawss, likely. There'll be a posse."

"How about machines?" the girl asked. "There are two in town. Furniss hires them sometimes."

"Country we're goin' through ain't an automobile country. Give us five miles, an' hoofs have got tires beaten. You spoke right when you said you c'ud ride, honey." It was the first endearing word he had spoken. She pretended not to have heard it and he not to have said it.

Side by side they drummed over the prairie mountainward. Gradually the plain rose, tilting up from the railroad. After ten minutes Jimmy looked back. So did the girl. Two miles behind them came a cloud of dust.

"No machine," he said. "Jest hawsses. Ten or eleven of 'em. That means they got *el jerif* free. I wonder how they liked his mustash?"

## Starting Next Week! "The Trouble Maker"

**IT is written right out of the lives and experiences of eastern farm folk, this story by E. R. Eastman, Editor of American Agriculturist. It will start next week, on this page, and is sure to be one of the most popular serials we have ever had.**

**No one in this part of the country knows better the actual conditions under which farm people have lived during the past decade than Mr. Eastman. His story will recall to you the ups and downs, the defeats and victories which you yourself have experienced in the past ten years.**

**Don't miss a single number of it! You will want to keep a file of the copies from the first. "The Trouble Maker" will start with a generous installment next week.**

The girl giggled. Jimmy looked at her warmly.

"At-a-girl," he said. "That's the way to play the game."

Ten miles out and up and a sudden gash appeared in the seemingly uninterrupted plain. At the bottom of fifty-foot, abruptly sloping cliffs, Bitter Root River swung muddily in one of its wide, serpentine loops, running in the trough it had carved out of the soft soil. The formation existed for miles on either side.

"No autos here," said Jimmy briefly. They had not been talking much. The cloud of dust was still behind them, perhaps a little closer. "Let the mare do the work," he told her. She nodded, leaving the reins loose.

THE mare and the big roan Jimmy had purchased at forced sale snorted as they took survey of their job, squatted, slid on their haunches, then on their tails, slithering down to the river, floundering through its girth-deep current, scrambling up the opposite side like cats, shaking themselves cat fashion as they reached the summit.

There came the crack of guns, the deeper note of a rifle. A bullet sang high above them. Their pursuers had reached the ravine. It was about a hundred yards from edge to edge, a useless range for pistols. The rifleman was kneeling, pumping lead as they galloped off.

"Furniss doin' the big shootin'," said Jimmy. "He's got more gall than I thought. But he's so plumb mad he's forgot to wipe off that mustash." Alice laughed, a little anxiously. Jimmy wore a devil-may-care expression.

"Mare's goin' well," he said. "But she can't go all night. Don't have to. We'll eat an' rest, I reckon. We'll let out a bit after a while when we get close

to Big Nose Gap. We'll blind trail an' fool 'em. It'll be close to dark by then. They may pick it up by daylight but we'll have the heels of 'em."

The sun wheeled westward and the shadow of the mountains-reached out to meet them. The air grew cooler and was burdened with sweet scent of the sage and other herbage on the slopes. The pursuit hung on, slowly closing in again. The heightening mountain wall showed a darker rent in its evening gown of purple.

"There's the Cap," announced Jimmy. "Now then, ol' hawss, beat her out. Come on, you Nelly Bly."

The gallant mare, forty miles back of her since daylight, responded to the call and the roan made a race of it. Their strides lengthened and with bellies close to the ground they flew through the increasing dusk where scarlet painter's brush and golden sunflowers began to loom up amid the sage. Clumps of cactus appeared. Minute after minute they galloped at top speed toward a line of willows that marked another loop of the erratic river. Toward it the mountain shouldered out. Behind them the posse was almost invisible in the twilight.

see the smoke drift this time of day. We'll go through in the mornin'. Home to Axtell's by noon."

They sat by the light of the fire, burning wood from the ancient timbering. Afterward they let the fire down. Jimmy fed the horses oats in a nearby stope. The girl listened to their contented munching, watching the light of Jimmy's cigarette, thinking, reviewing the day. One thing puzzled her, Jimmy's reply to the Bee Parson. He had said the money was clean money and she did not think he had lied to the minister. But he had appeared embarrassed.

"Sorry you came?"

"No, Jimmy." The name was so close in her thought she used it involuntarily and heard him catch his breath. "You stuck to me when I was in trouble," she went on. "Why shouldn't I do the same?"

"You would," he answered. "Better turn in, sister. We start early. I'm goin' in with the hawsses."

She saw his shadowy figure disappear into the stope. She felt safe, perfectly safe. She had her pistol. He had promised to treat her as a sister but why had he had to call her that?

ONLY the mountain tops were pink when they set out after a quick breakfast, emerging from the far end of the tunnel into a tortuous ravine that opened at last into Big Nose Gap. All sign of pursuit had vanished. Cicadas chirped; a few birds sang as they worked up through the pass and came to a mountain park. Through it flowed a silver creek, one of the headwaters of Bitter Root. In the midst of the place trees grouped about ranch buildings.

"Axtell's, Alice," said Jimmy. "We'll fetch there for noon, easy."

At noon the girl found herself in the arms of a woman, not as maternal as she had fancied, perhaps six or seven years her senior, welcoming her gladly, taking her indoors to a pleasant room where she was left to freshen herself after the long, long ride. As she cleansed and dressed she heard the prattle of two children asking about the strange lady calling on Uncle Jimmy. It was a pleasant place, a real home.

There came a rap on the door presently and Mrs. Axtell reappeared. She went straight to the girl and took her in her arms, kissing her. Alice wondered at the warmth of this second greeting.

"You poor girl, did you believe Jimmy Hughes, Jimmy Trouble Hughes, was a crook?"

"I saw the poster and the telegram."

"I fancy that poster was an old one picked out of the sheriff's collection to suit his own purposes. The message was faked, Jimmy says. He could easily have got a blank at the depot at Vacada, where he ran the town. Jimmy—why Jimmy never hurt a kitten. He was never in Cuchara but once, and my husband and I were both with him. That was late in the fall, three years ago. Never in the neighborhood before or since."

"But the money. He's a cowboy, isn't he? How did he—?"

"Earn it? He didn't. Your Jimmy has one fault, Alice Hughes. You can cure it if you want to, I imagine. He's a born gambler. Ten days ago he broke faro bank at Aguas Caliente and wrote my Bill he was coming to buy into the ranch. They've always been chums and they've got a scheme for improvements that ought to make big money. I hope you'll like it here, my dear."

"But," the girl's head was still whirling, "why did he let me think that? Why did he let Furniss bluff him, chase us?"

"You'd better let him tell you that. I'll tell you one thing—two. Jimmy was in Aguas Caliente last July twenty-fifth, that's one. The other is that Jimmy is fond of excitement and likes to handle things his own way. He's out in my little

*A Testing Circle Provides Them—Stories and Games for the Children*

THE display of kitchen utensils which had been tested by members of the Tompkins County Home Bureau attracted a good deal of attention at The State Fair booth and many visitors were heard to comment upon its very practical nature. Since it is a project which could be offered to any group of housewives, small or large, a copy of the outline for the testing circle was obtained. The steps are as follows:

1. The Home Bureau Household Management Project leader procures information sheets from the project specialist, Prof. Ruth M. Kellogg, at Cornell.

2. A meeting is called to organize the group; or the leader may personally interview the membership, and others who might be interested, to explain the plan and get the signatures of those who wish to test certain articles of equipment.

3. A carefully selected list of equipment is obtained from local merchants. (These have been loaned by merchants with the understanding that articles which meet with approval will be purchased by the group and that articles which do not meet with approval may be returned.) In the first testing circle two members of the bureau kindly offered the use of their pressure cookers.

4. The leader maps out the most convenient route for passing the equipment around the circle.

5. Each tester keeps and uses the articles she chooses to test for three days. Then she passes them promptly to the next person in line.

6. Each woman records, on blanks provided for the purpose, why she liked or did not like each article tested. This blank she gives to the leader, who in turn sends all the records to Professor Kellogg.

7. At the end of the test the circle meets to discuss these and other household conveniences.

**Some Results of the First Test**

1. Each woman learned of some conveniences new to her.
2. Every member developed improved standards for selecting equipment.
3. Five service wagons were bought; two more are being home-made; five long handled dustpans have gone into use; a pressure cooker has been purchased;

and many of the smaller articles are adding convenience in the kitchens of the enthusiastic testers.

4. Each woman gained new interest in her household equipment.

5. The group voted unanimously to continue the circle.

**Make Up Your Own Stories**

EVERY child loves music and stories. I have always envied the mothers who could sing their babies to sleep, but since I learned that "little boy" is quite as well pleased with a bed-time story, I am in a measure comforted.

The story-telling followed the gift of a book dear to every child heart—The Three Bears. I had read it to him one evening just before his bed time and after he was cuddled down, the little eyes refused to stay closed and he begged me to tell him something more about the Little Bear.

It was really surprisingly easy to go on with the adventures of big Father Bear and Middle-Sized Mother Bear and wee, wee Little Bear, their bowls of porridge, the other things they had to eat, and their friends the rabbits and squirrels.

**Mr. Man Came In, Too**

When the woods and wood folks began to grow monotonous to the story teller (never to the listener!) we invented Mr. Man who with Mrs. Man and Little Girl and Little Boy lived at the edge of the forest. Little Dog from Mr. Man's house soon became the friend of Little Bear and in due time Mr. Man's family and the Three Bears became fast friends, and so the story went on night after night. Little Girl was lost in the woods but was found by Little Bear and Mr. Dog. Little Bear learned to swim. Little Boy and Little Bear played games. Always there was a pleasant ending of the kind that brought happy dreams to my own bairn.

Once bed time was dreaded, as it is by most active children, but the mere suggestion, "I wonder what the Three Bears will do to-night," changed it to the most welcome hour of the day.

When a lesson was to be taught, Little Bear taught it and because Little Boy and Little Girl were kind to every living thing I feel sure my own Little Lad who admires them so much will learn to be gentle and good to dumb animals.

Building on a foundation of almost any of the favorite child stories any mother can weave bed-time tales, for little folk are not critical and although it may sound like heresy, I believe the stories born of mother love are better than many of the tales of giants and witches that fill the pages of some so-called children's books.—L. M. THORNTON.

**Mossy Roofs**

A FEW weeks ago we moved into a new home, a house built a number of years ago and still solid and substantial. It looked like a story-book house, with the trees drooping down to the very roof, and people said how fortunate it was that we had shade instead of waiting years for it to grow. But the first thing we did before getting settled was to have those ancient trees trimmed so that the sun would have a chance to dry up the decaying moss on the roof. People thought it almost a sacrilege that we should touch the trees planted by hands now dead and gone to think that moss on the roof is not good for the living—in fact, if the man who planted the trees were living he probably would commend our course.

It is a safe guess that there would be less tuberculosis in the country, and the doctors tell us that tuberculosis is to a surprisingly large extent a country disease, if people did not fear to lay hands on the trees planted too close to the house.

There should be a wide open space near each house and the sun should touch the roof all day. Just calculate how many really hot days there were during the past summer, when a house was overheated, and then put that number over against the cold and dark and damp days when one needs light and air. The attractive house is the one with sunshine, not gloom.

So we are not worried about hot weather next summer, for a month or two of sweltering days will not make us regret trimming those trees, and cutting out others. Shade is good at the edge of the lawn or the back or even in front

**Winter**

YOU may sing me a song of the beauty of June,  
And the glories of Summer extol;  
You may paint me a scene with a vista of green  
And a rose bush abloom by the wall.  
You may tell me a story of hours of delight  
Of lilies and buttercups gay,  
But I'll write you a tome on the pleasures of home  
At the close of a cold Winter's day.

You may whisper of birds in the maple and beach,  
And butterflies bright in the sun;  
You may offer your praise of the whip-poor-will's lays,  
The quail may your plaudits have won.  
You may prate of the breeze over meadows and leas,  
And the chatter of chaffinches gay,  
But the tea-kettle sings of the dear homey things  
At the close of a cold Winter's day.

You may pen me a page of the wanderers joy,  
And the world in its Summertime dress.  
You may reckon me o'er its delights by the score  
And to each I will answer you; Yes.  
You may say what you will of lake, fountain and rill,  
But their memory withers away  
When hearthfires glow red and lights gleam overhead  
At the close of a cold Winter's day.

L. M. THORNTON.

if not too close, but no moss on the roof for health. Our house is now bright and light and airy and on a hot day it is possible to sit under a tree, provided there is time for that pastime.

**Simple Games for Farm Children**

AN unusually helpful and entertaining book on the subject of home play has just been issued by the Playground Association of America. It is a pamphlet which any farm family might well study carefully, for it tells not only the simple types of play which any family might enjoy together, but also explains how to make the appropriate equipment when anything of the sort is needed. It has been prepared by Mr. W. C. Batchelor, a man who has had actual practice in planning and directing the recreation of a typical American community. The pamphlet costs 10c and may be obtained by addressing the Playground and Recreation Association of America, 315 Fourth Avenue, New York City.

**The Early Apple**

WE ARE all enjoying the early apples, particularly in pie, but are liable to tire of it if made the same every time. One family enjoys it with a few raisins sprinkled in. A spoonful of strawberry or raspberry jam dotted in the filling gives a bit of color as well as flavor. Various kinds of jelly are quite adaptable and gives a use for left-overs. Then if you want to really "dress it up" top it with whipped cream. It certainly is good. For a change use cinnamon, nutmeg, or cloves as a flavor for the apple sauce, and occasionally a few nuts added will please the youngsters. Apples, celery and raisins make an excellent salad for supper. Mix with whipped cream well sweetened.—MRS. GEORGE GRAY.

**"Dinner Is Served"**

An appetizing meal awaits the fortunate diners in homes where RED CROSS Ranges do the cooking and baking.

RED CROSS Ranges cook and bake perfectly and provide an ever-ready supply of hot water. Their many labor-saving conveniences make work in the kitchen a pleasure.

Sold by leading dealers. WRITE us for name of dealer in your locality. Booklet on modern cooking or heating science and illustrated folders free on request.

## Farm Women Study Ways to Increase Income

MRS. LEWIS SEYMOUR of Binghamton, chairman of the central district of the New York State Federation of Home Bureaus, has worked out a practical way to help farm women to increase the family income. Mrs. Seymour is planning for the instruction and entertainment of a large number of farmers' wives in Binghamton on October 10 and 11, when they will be given the opportunity of studying the leading wayside markets of this little city near the Pennsylvania border, and of inspecting the public markets of Johnson City and Endicott.

On Friday afternoon the women will meet to discuss marketing problems. A number of women in this territory give their husbands very real assistance in the marketing of garden produce. They help to prepare the stuff, and even drive big truck loads to these early morning sales.

The women will be invited to tell their experiences at the meeting on Friday, at 1:30 P. M. in the Binghamton Public Library. On Saturday morning A. S. Merchant, a former Farm Bureau manager and a present director of agricultural work for the Lackawanna Railroad, will conduct the party through these really wonderful public markets, and will give advice on what to grow and how to develop the market for the products of the farm.

### Benefit to Both Producer and Consumer

Mrs. Seymour points out that the matter of the proper marketing of the produce of the farm and of the farm home is one of the most vital questions confronting rural sections to-day. She believes it to be equally important to the urban centers, since the producer is dependent for his sales upon the consumer, and the consumer must look to the producer for his sustenance. "The problem," she says, "is not one of town and country as separate and distinct interests, but as one big and united group, each part of which exists solely with and by and for its companion portion of the great whole."

Any farm woman or other person residing in any nearby community who is interested in this project is invited to attend this event. It is hoped that some organization for the development of better rural produce and better marketing methods may result.—MABEL G. FEINT.

### The Girl at Vacada

(Continued from page 257)

garden by the well pool. Go to him. You look mighty sweet."

"WELL," said Jimmy, "as for the Bee Parson, I was wonderin' if he'd think I lied about the money bein' clean. I

### WHAT HAS HAPPENED

JIMMY "TROUBLE" HUGHES has rescued Alice from a desperate situation, when, penniless, without friends or relatives, she has seemed in the power of "Bluff" Furniss, the rascally sheriff of Vacada. She marries Jimmy and he goes to buy horses to effect their escape. Bluff finds her alone in the cabin and shows her a poster and telegram identifying Jimmy as a notorious mail robber. He offers to let him escape if Alice will repudiate the marriage. She refuses and just in time Jimmy breaks the locked window and after a short fight, wounds and disarms the sheriff.

sabied he thought I might have pinched it. I took a chance that gamblin' was no worse than a good many other ways of gettin' it. As for not callin' Furniss, that's different. You see"—he cleared his throat and faced her in plain embarrassment—"you see, I figgered if you really liked me—if there was goin' to be any chance later on for you carin'—

mebbe that was a good way to find out. If you stuck you was sure the sort of girl I thought you. I—I had a sort of hunch you liked me some." Her eyes shone on him.

"How about you, Jimmy? Was it just because you were sorry for me?"

"I reckon you don't believe in love at first sight. I do. That's what happened to me."

"Honest?"

"And true. Why wouldn't I?"

"Jimmy, perhaps I didn't believe—in love at first sight—but I guess I do now, Jimmy. It was that way with me."

"You want to come with me—for always?"

"I just ache to, Jimmy Trouble Hughes."

(The End)

### A. A. PATTERN SERVICE

A DRESS that will make one look taller is No. 2170, which has becoming slenderizing downward lines. It is suitable for an everyday dress, or, in handsomer materials, for better wear. The pattern cuts in sizes 36, 38, 40, 42, 44 and 46 inches bust measure. Size 36 takes 3 3/4 yards of 40-inch material. The dress may be trimmed with braid, embroidery or a contrasting material for the front panel. Price, 12c.

A PLAY and Sunday frock from one pattern! No. 2190 serves several purposes for the mother who wants to economize time and effort. For two or three little dresses at a time may be cut from it. It comes in sizes 2, 4 and 6 years, and size 4 takes 2 1/2 yards of 40-inch material, with 3/8 yard contrasting. Price, 12c.

NOTHING is so comfortable or so easy to slip into, on cold winter mornings before the fire is started, as a warm, roomy bathrobe. Mother and daughter would both like robes made from pattern No. 2216, which cuts in sizes 16 years, 36, 38, 40, 42 and 44 inches bust measure. Size 36 takes 3 3/4 yards of 48-inch material, with 7 yards of braid. Price, 12c.

TO ORDER: Be sure name, address, pattern numbers and sizes are clearly written; enclose correct remittance and address your order to Pattern Department, AMERICAN AGRICULTURIST, 461 Fourth Avenue, New York City. Always keep a copy of your order.

## One Little Heater For The Whole House

A 'RadiO' Hot Water Radiator Installation will heat every room in an average sized house, with or without a cellar, at less than the cost of stove heat for one room. Most economical in fuel—the downdraft forces smoke and gases into the fire to be burned. Automatic fuel-feed saves work. Burns stove or nut sizes of hard coal. Attractive in appearance, with effect of luxurious open hearth. Ruggedly built. Moderate in cost. Easy to install. Hundreds of homes have solved their heating problems with the 'RadiO'.

SELF-FEEDING Needs coal only once every 12 hours

# Reviewing the Latest Eastern Markets

### MILK PRICES

THE Dairymen's League Cooperative Association announces the following prices the dealers will pay the League during the month of October for milk testing 3 per cent. in the basic zone of 201-210 miles from New York City: *Class 1*, milk used chiefly for fluid purposes, \$2.60 per 100 pounds; *Class 2A*, used chiefly as fluid cream, \$1.90. If skim-milk is used for any other purposes, additional payment over this base price is added, depending on use. *Class 2B*, used chiefly in the manufacture of plain condensed milk and ice-cream, \$2.05; *Class 2C*, used chiefly in the manufacture of soft cheese, \$2.05; *Class 3*, used chiefly in the manufacture of whole milk and sweetened whole condensed milk, powdered and evaporated whole milk, \$1.45; *Classes 4A and 4B*, based on butter and American cheese quotations on the New York market.

#### Sheffield Producers

The Sheffield Farms Company Producers announce the following prices for October for 3% milk in the 201 to 210-mile freight zone until further notice; *Class 1*, \$2.60 per 100; *Class 2*, \$1.70; *Class 3*, \$1.55; *Class 4*, to be determined by market quotations of butter and cheese.

#### Non-Pool Cooperative

The Non-Pool Dairymen's Cooperative October price for *Class 1* milk is \$2.40 per 100 pounds; *Class 2*, \$1.85; *Class 3A*, \$1.55; *Class 3B*, \$1.45, until further notice.

#### Interstate Producers

The Interstate Milk Producers' Association (Philadelphia Price Plan) announces that receiving station prices or the price to farmers, in the 201 to 210-mile zone from Philadelphia for 3% milk is \$2.19. In the 101 to 110-mile zone the price is \$2.29.

All the foregoing prices are the same as in September.

### BUTTER LOOKS UPWARD AGAIN

The outstanding feature in the whole market this past week has been the better tone and more pessimistic and confident feeling that has permeated the butter trade. Buying interest has improved consistently and prices have reacted in accordance. Once more 92 score butter is quoted at 38 3/4 to 39c with higher marks reaching 40c. The Jewish holiday on the 29th and 30th kept the market pretty quiet. Even on the 30th there was a better tone and buying was active in spite of the absence of the Jewish dealers. By Wednesday, October 1, trade had become stimulated to a marked degree, and prices advanced. Shortening of receipts and advices of cold weather with consequent falling off in production, coupled with this free trading, was responsible for the stronger tone and upward advance. It is reasonable to expect that if this condition continues we will see butter continue at this price and advance to some slight degree. As receipts of fancy fresh creamery decrease, we are going to see a greater widening of quotations and we may see some withdrawals from storage. Heavy storage holdings will tend to hold back any strong price advances. When prices get too high dealers are going to become more discriminating, and in order to keep their trade moving, will use storage stocks in preference to the fresh goods.

There has been considerable export trade during the past week. Most of the stock going forward is on consignment. Something like 8,000 tubs were expected to go across during the week ending October 4. English markets, according to advices, are quite firm.

### CHEESE MARKET QUIET

The cheese market is quite lifeless. Trading is light and asking prices in the country are unchanged. There is some movement reported in State flats, chiefly around 20 1/2 to 21 1/2c. Fancy Septembers are held higher but are moving very slowly. The trade seems to be just strong enough to take care of the offerings at these prices. Any heavier make would undoubtedly cause a much weaker market.

### EGG MARKET STILL STRONG

The Jewish holidays on September 29 and 30 were responsible for some accumulations of near-by white eggs. However, this accumulation was not severe enough to embarrass the market. Receivers feel very confident that stocks will clear at unchanged prices. There was absolutely no trading in the market on Monday and Tuesday, but Wednesday saw a resumption of trade to normal proportions. The firm tone on fancy eggs continues, and in view of advices there seems to be no reason for an immediate change in the next few weeks. Extremely fancy Jersey and other near-by hennery whites that are closely graded for interior quality and size are now selling anywhere from 68c to 72c, depending on the pack

with near-by gathered whites, first to extra first from 52c to 60c.

### LIVE POULTRY IRREGULAR

The live poultry market is off. This condition even goes back to a week ago when arrivals were coming in for the Jewish holidays. Entirely too much mediocre stuff was shipped to New York, and this broke the market, as can be seen from the quotations. Fancy colored fowls via express are bringing from 29c to 30c, while Leghorns are down as low as 15c and 16c. There is the whole story in a nutshell. Just because the Jewish holidays demanded live poultry was no excuse for sending in all the old stuff available. During the Jewish holidays is just the time that real fancy stuff will bring the premium. The holiday spirit induces folks to spend money for good stuff. Fancy goods during the Jewish holiday trading days brought good money, and in some cases there was just enough stuff to satisfy the trade. When it came to undergrades there was so much stuff on the market that it was actually a drug.

The next Jewish holiday will be October 13 and 14, and the market will be October 8, 9 and 10. It is better to have stuff in by the 9th.

October 20 and 21 is another Jewish holiday, the Feast of Law. The best market days will be the 15th, 16th and 17th. Ship so your stuff reaches New York at that time. At this time all kinds of prime poultry will be in demand. Notice the qualifying word, *prime*.

### GRAINS AND FEED

Wheat turned sharply upward on October 2, gaining from 4 1/2 to 4 3/4c at Chicago and 5 1/4 to 5 3/4c at Winnipeg. In face of this sharp upturn, there was no apparent let-up in European demand, which continues active. May wheat is now up to \$1.51 1/2, the best figure since May, 1921, and the highest for the month of October, with the exception of 1916.

May corn went to \$1.15 1/2 and May oats went up to 62c or within 3/4 of a cent of the best price on the crop.

New York cash wheat F. O. B. for export for No. 2 hard winter is \$1.60. Chicago cash wheat for No. 2 red is \$1.49.

According to New York State Department of Farms and Markets, the following prices prevailed September 27.

The quotations given in this report show the approximate prices at which feed can be purchased per ton, and grain per bushel, in straight carlots through billed from Western points, delivered on track at points in the freight zones as indicated. Mixed carlots cost approximately \$2 per ton more.

Retail feed and grain prices vary with different local dealers depending upon their individual cost of doing business, volume handled, etc. In the case of feeds the retail price may sometimes be as high as \$5 per ton above the wholesale prices given in this report.

Since Buffalo is an important milling center for wheat feeds and linseed meal, quotations are given for this point on both a through-billed and a local basis. No. 2 White Oats, .55; No. 3 White Oats, .53 1/2; No. 2 Yellow corn, \$1.21; No. 3 Yellow corn, \$1.20; Ground oats \$43; spring wheat bran \$26.50; hard wheat bran, \$30; standard middlings \$28.50; soft wheat middlings \$35; flour middlings \$30; red dog flour \$40; dry brewers grains —; white hominy \$42.75; yellow hominy, \$42.25; corn meal \$50; gluten feed \$44.75; gluten meal \$56.75; 31% old process oil meal —; 34% old process oil meal \$46.50.

For points taking New York rate add to Albany price 1/4 cents on oats; 5/8 cent on corn, 10 cents on cottonseed meal, and 20 cents on other feeds.

### POTATOES STILL DULL

Potato market continues its dull, weak tone in spite of everything. There seems to be practically nothing doing in that line in the market at all. Most business is being done in Green Mountains. North Shore Long Islands are bringing 65c to the farmer, while South Side are getting a nickel more. Some potatoes have been bought up-State for 40c a bushel f.o.b. shipping point (in central New York territory). Local markets are said to be paying more than this. However, where New York City prices are involved, carrying price is 40c at the present time. Maine are being placed in New York City at \$1.20 per cwt., which means about 50 or 60c a ewt. f.o.b.

There is no likelihood of any immediate change in the potato market. Digging on Long Island is in full swing and growers are shoving the stuff into the market as fast as they can. They won't start storing for another week or so, anyway. This means that for the next two

or three weeks we can look for practically the same conditions. Of course weather conditions may set in to throw this out of line, and if receipts are curtailed we will see more advance, although it may be only temporary.

### APPLE MARKET EXCELLENT

The apple market in general is in a firm, healthy condition. As one of the men in the market told the writer, *this is a good year for apples*.

The high light for the apple market, or the outstanding feature of it, is the remarkable export demand for Ben Davis. South America, Denmark, Norway and England are actively buying Ben Davis. As a matter of fact, as soon as a car is in it is immediately sold, indicating that there is room for more stock. Fortunately South America prefers stock only 2 1/2 inches, while European market prefer sizes under that.

Baldwins are meeting a good market. There are a few in at the present time. Most business is being done in futures. Stock that grades 2 1/2-inch and better, A grade, is easily bringing \$4. Hudson Valley are holding for \$4.25 and \$4.50. Baldwins under 2 1/2-inch and above 2 1/2 are bringing anywhere from \$3.25 and \$3.75.

Greenings are selling anywhere from \$4 to \$5 f.o.b.

Kings are meeting a good market. 2 3/4-inch stuff is bringing from \$5 to \$5.50 with \$5 a prevailing price in the Hudson Valley. A good many growers are holding, however, asking \$6.

Hubbardstons are another shining light, breaking into the chain-store trade with apparent ease. Heretofore this variety has been sold to the chain-stores at a discount. This year they are entering the trade freely.

Wealthies from western New York are bringing anywhere from \$1.20 to \$1.35 a bushel basket for 2 1/2 inch A grade stuff, while barreled goods are bringing from \$3.74 to \$4.25.

### The Market Outlook for Small Grains

(Continued from page 248)

which before the war, was the principal producer and exporter of rye, suddenly began to furnish the importing countries of Europe with that grain after an absence from the international market since 1914. She shipped about 45 million bushels in the last 12 months, or about two and one-half times the amount exported by the United States. As a result of this competition, rye prices in this country have been unusually low compared with wheat and other grains.

### World Rye Crop is Smaller

While the United States has a slightly larger supply than a year ago, the world crop is considerably smaller. Estimates of yields from 11 countries outside of the United States show a combined yield of 19 per cent. less than last year. These countries produced 40 per cent. of the 1923 crop in the Northern Hemisphere. Both Poland and Germany, which, next to Russia, are the big producers and consumers of rye, have much smaller crops than last year. The Russian crop is not included in these figures upon the world yield, but reports indicate a near crop failure in some of the chief rye areas and the chances are that much less will be exported than last year.

Besides the indications of a smaller world crop, the acceptance of the Dawes plan for the settlement of the reparations question should help rye, as it is the main bread cereal of Germany. Per capita consumption in that country has been below normal in recent years and the settlement of political differences coupled with loans to aid in starting up the German industrial machine once more should lead to a larger export demand for American rye than in the past year.

Rye prices have already made a strong response to the changed outlook for the current crop year. Export sales were lighter than expected until within the last month when the foreign demand, which it seemed must inevitably come to the United States, began to appear. The United States has a surplus of about 45 million bushels and probably a third of it has already been contracted for shipment abroad. Throughout the year it is to be expected that rye will sell on a bread grain basis instead of on a feed grain basis as in the most of last twelve months.

## Would You Refuse To Collect Accident Insurance?

The G.L.F. Exchange was set up by 35,000 farmers to insure them honest supplies at fair prices. They paid their policy in the form of subscriptions to stock.

Now a bad seed situation has arisen. The G.L.F. knows how to meet it, if its shareholders will cooperate. You can make use of the insurance of your G.L.F. Seed Service and collect on your policy as a shareholder of the G. L. F.

Your Seed Hired Man reports in the October issue of the G.L.F. SHAREHOLDER, which will be in your hands by October 15. Read your copy carefully. As a result of his report, you may find it advisable to change your crop plans.

Cooperative G.L.F. Exchange, Inc.  
Ithaca New York

## ALL LEATHER HERCULES WORK SHOE

**AT WHOLESALE**  
MADE on the famous Army Munson last, of heavy pliable leather, double tanned to resist soil acids and to stand hardest wear. Double leather soles. Soft toe. Mahogany brown. in SIZES 6 to 11. Wide Widths. No. 01171.

**Money Back If Not Delighted**  
WEPAYPOSTAGE, if money or check accompanies order. Or you can PAY POSTMAN on delivery plus postage. Mention No. 01171, size and width, or all numbers in shoe you wear.

**SEND TODAY FOR FREE CATALOG** with wonderful values in men's, women's and children's shoes at 99c and up.

ANDERSON SHOE CO., Inc., Dept. 5 R 22

# How Much Shall I Feed?

## Something That Must Be Studied in Each Flock

"I HAVE read a great deal about the rations to feed hens," said a farm woman recently, "and I suppose that almost any one of them is good because experiments have shown that they give the hen the various food elements she needs to produce eggs. But what I should like to know is just how much of the ration to feed a hundred hens. It would make the feeding of my flock a much simpler matter."

The reason why much more has been written about proper rations than about the amount to feed is that no hard and fast rule can be laid down for the latter. Too many factors enter into it.

The breed, housing, time of year, section of country, condition of flock and supplementary feeds are all factors that must be taken into consideration. As a rule, the lighter breeds, such as Leg-horns and Anconas, do not consume as much feed as the heavier breeds, such as Plymouth Rocks and Wyandottes. When the flock is out on range during spring and summer, the grain ration is decreased. In winter, more corn must be fed to keep up the body heat. Some grains are more available and cheaper in one section than another, and they must be fed in different proportions. The condition of the flock and the size and condition of the hen-house also affect the amount. It is still further affected by the amount of green feed and milk fed.

### Heavier Feeding at Night

In general, it may be said that a laying flock should be fed from eight to twelve quarts of whole grain per hundred hens, much the greater part to be fed at night. It is necessary that hens go to roost with full crops, but the morning feed of grain should serve mainly as an appetizer. It is understood, of course, that the hens will have a laying mash before them at all times. Green feed in some form, as well as milk and its products, should also be fed, and this will have some effect on the amount of whole grain to feed.

To get right down to brass tacks, it is

just this fact that each poultry raiser must learn for himself exactly how much to feed his flock that accounts for the difference in success achieved by those who raise chickens. It requires study of the individual flock, and if you really have a liking for chickens you will find that the more you study them, the more interesting and fascinating the work becomes—and the more profitable.—W. C. MUELENBURG.

### We Hatch Late Friers

AS late as the first of September we have set hens to rear friers for winter use. If we will make a dry, warm coop for them the hen will stay with the chicks very late and they will feather quickly, and they grow fast at this time. Thanksgiving will find them just right for nice friers, and they will be good all winter, much better than eating salt pork all the time, as is done so often on farms. Of course some extra care is necessary to avoid their chilling in the cold wet grass during cold fall mornings, but if they are active and have a dry coop, they will come out in the morning after the dew has dried off, full of pep, and will make up for lost time hunting bugs. A small pen to keep them in until late is better than just a coop.—L. H. COBB.

### Incubator School Coming

POULTRYMEN who do considerable hatching or are contemplating entering the business will be interested in an announcement that just comes to us from the James Manufacturing Company. The company is going to conduct a three-day school at Elmira some time during the middle of November. Definite announcement will be made later. The idea was originally conceived by Dr. J. H. Krum of Elmira, N. Y., one of the poultry experts connected with the James Manufacturing Company. It is the first school of its kind and will consist of demonstrations and lectures by Professor A. B. Dann, Dr. Krum, and other well-known poultry authorities.

## He Studied Oat Family-Trees

(Continued from page 244)

but in other parts of the State, for the best of his selections were being tried out in some other counties as well. The reputation of Mr. Warner and his oat had been made and the oat now known as Jefferson County No. 343 came into being from a practical and commercial standpoint.

In 1923 many hundred acres were planted with the Jefferson County No. 343 oat, throughout New York State. Wherever farmers had been having trouble with oats lodging there was a place for this sturdy oat that gives a goodly yield as well as standing up when other members of its clan give up the fight and lay down. It seems almost too much to believe that a single head selected in 1914 would give enough oats to seed down thousands of acres in 1923, but a few minutes spent with a pencil will show numbers of oats mounting up almost like Henry Ford's profits on a year's output.

It is hard to figure this all down in cold dollars, but in all business enterprises the one with the lowest production costs keeps up with the procession longest. Mr. Warner figures that producing five, ten or fifteen more bushels of oats from the same acre of land and with comparatively little additional cost other than that of thrashing and handling the extra bushels, is a paying proposition.

Other improved selections and types of oats have made their appearance throughout New York State during the past five years and the story of their development would read much the same as that of the No. 343. The Comewell and the Cornelian varieties are two others of exceptional worth that are being much sought after. One farmer in a northern county secured

five bushels of one of these last spring and sowed two acres. The rest of his farm he sowed to his old type of oat. In the fall he told the tax collector that if he had only sowed the entire acreage (about 50) to the Comewell oat he would have had enough extra from his oat crop to have paid the taxes on his 150-acre farm.

## Why the Holstein Appeals to Me as a Dairy Cow

(Continued from page 244)

to the eye. Yet how many things appeal to the eye which are not genuine.

What is more perfect than nature and the workmanship of Nature's God? After God had created man he knew that there must be food for babes, and so in his great wisdom he selected milk—mother's milk. And how did he make it? Did he make it yellow with a cream line? No, he knew it would be too rich in fat for that delicate stomach and so he made it white, almost blue with small white globules of fat which comprises only 3 to 3½% in content and which could be easily assimilated. He watched—he waited and saw that his work was perfect.

His wisdom told him that other babes would follow even before time for the first to be moved from the mother's breast and so with loving kindness for babes, invalids, the infirm and aged he created the Foster Mother of Mankind—the Holstein cow.

And so as her great producing power becomes known to dairymen and her great nutritive power becomes known to the consuming public, I predict that her popularity will continue to increase, hence do you wonder that the Holstein appeals to me as the real dairy cow?

## EASY NOW TO SAW LOGS AND FELL TREES

WITTE Log-Saw Does the Work of 10 Men At 1/20 the Cost—Saws 25 Cords a Day

A log-saw that will burn any fuel and deliver the surplus power so necessary to fast sawing is sure to show every owner an extra profit of over \$1,000.00 a year.

Such an outfit is the Witte Log-Saw which has met such sensational success. The WICO Magneto equipped Witte is known as the standard of power saws—fast cutting, with a natural "arm-swing" and free from the usual log-saw troubles. It burns kerosene, gasoline or distillate so economically that a full day's work costs only twenty-two cents.

Wm. Middlestadt reports that the Witte has replaced forty men using buck-saws. Hundreds of users saw as much as twenty-five cords a day.

Mr. Witte says that the average user of a Witte Log and Tree saw can make easily \$50.00 a day with the outfit and so confident is he that he offers to send the complete combination log and tree saw on ninety days' free trial to anyone who will write to him. The prices are lowest in history and under the method of easy payments spread over a year, only a few dollars down puts the Witte to work for you.

If you are interested in making more money sawing wood and clearing your place at small cost, write Mr. Witte today at the Witte Engine Works, 6803 Witte Bldg., Kansas City, Mo., or 6803 Empire Bldg., Pittsburgh, Pa., for full details of this remarkable offer. You are under no obligation by writing.

## Send Us Your Name

### And We'll Send You This Genuine Tweed Topcoat

Don't send a penny now. Just your name and address and we'll send you this stylish, Tweed Topcoat for your inspection. You can't help liking this coat for not only is it the latest style but it is made of rubberized Tweed by an amazing scientific process. It's just the coat to wear on cool, damp mornings, just the coat to protect you on showery days. Colors: Gray and Brown; Sizes 32 to 54.

**FREE DELIVERY**  
Send us your name and address today. When coat arrives pay postman our remarkably low price of \$4.95. No more. We pay all delivery charges.

**GUARANTEE**  
If you do not like coat for any reason whatsoever return it to us at our expense and we'll cheerfully refund your money. You take no risk. Order today. State size and color.

first thing to do.

## The joy of new paint

Away, every trace of dinginess! Woodwork, yesterday streaked and dull, today lights up the whole house with its fresh whiteness. Scratched floors that embarrassed beautiful rugs now set them off as a new frame enhances a fine picture. You can see your home begin to smile as each stroke of the brush covers an old surface.

LOOK on the "Guide" for the *right thing* to use for woodwork.

Consult the "Guide" before selecting the finish for *any* surface.

Something is wrong when a once beautiful room has to be done over again too soon. The chances are the wrong type of material was used.

Every expert knows that each type of surface (indoors and out) calls for its own type of paint. Paints must be selected according to *type*. The same is true of varnishes, of stains and enamels.

When you look at the Farm Painting Guide you look at authoritative recommendations. On a line with the surface to be finished you pick out the correct material as easily as you select a color from the color card.

Save this copy of the "Guide" for use when needed.

Your "Paint Headquarters" serves you with the Sherwin-Williams Painting Guide. It will pay you to look up this store.

You will know "Paint Headquarters" by the Painting Guide displayed in the window and inside the store. This store serves you intelligently, backed by the "Guide." The proprietor and clerks help you save money by avoiding mistakes. Look for this store and "follow the 'Guide'." It costs you nothing to be *sure*.

Write for free suggestions on your painting problems to the S-W Dep't of Home Decoration. Ask, also, for free booklet B 450 and the handsome set of color plates giving eight beautiful color schemes for different rooms. Send 50c (65c in Canada) for the 177 page book of valuable detailed information on beautifying the home. Reproductions of the latest color ideas for interior and exterior—a book you would not part with for many times its price. Write Dept. B 435 at address below.

## Getting good work

Hire a good painter if you have big work that calls for help. Ask your Paint Headquarters to recommend a man. If you hire a painter, hire a good one.

# What Does Your Credit Cost?

*Buying Credit More Efficiently May be the Means of Lowering Your Production Costs*

By W. I. MYERS

THE story is told of an aged farmer who, realizing that his end was near, called his wife to his side to tell her whom he wished to have as pallbearers. In naming them over he included the feed dealer, the implement dealer, the store keeper, the blacksmith, and a couple of other merchants. His good wife looked troubled, and finally, after assuring him that she would carry out his wishes, asked him why he included only merchants and left out all his good neighbors. "Well," replied the farmer, "these men have been carrying me all my life, and they might as well carry me to the end."

In too many cases, this story reflects the actual farm credit situation, even today. Whenever expenses exceed receipts credit in some form becomes necessary. There is no system in farming in which the receipts exceed the expenses every month in the year. Even in dairy farming there are some months when the cows are dry and the milk checks small, but the farmer's family insists on eating and wearing clothes just the same. In crop farming, the receipts are largely in the fall, and more credit is necessary to carry the expenses until the crops are harvested and sold. Hence, credit is as necessary for farm production as for other business. It is important, therefore, that the credit necessary for agricultural production be obtained as economically and efficiently as possible.

A study of actual farm credit conditions in a typical dairy farming region in Tioga County, New York, showed that these farmers could pay nearly two-thirds of their year's expenditures for business and living without borrowing. For the other third, some kind of credit was necessary. Country stores were the most important source of this credit. About *three-fourths* of the necessary credit for these dairymen was obtained by buying feed or groceries or other things "on time," to be paid for at a later date. About one-fifth of the necessary credit was obtained by giving notes to merchants or relatives, or neighbors—persons other than banks. Less than one-twelfth of the

credit necessary to carry on farm production was obtained directly from *banks*.

Similar conditions were found in a crop-growing region in Genesee County, New York. Here also it was found that credit in some form was necessary to finance one-third of the year's expenditure, and here again, country stores were found to be the most important sources of credit. About one-

kinds of stores were found to run from about 11 to about 21 per cent. per year, the average of about 180 stores of all kinds being 13 per cent. The principal items of cost were interest, accounting, collection and bad debts.

The business of merchants is to sell goods. They are not equipped to sell credit, and cannot do it economically. When they are asked to extend credit, the costs are included in the price of goods and are borne by the people who buy them. When a merchant sells cheaper for cash, the customer who gets credit pays for it, as he should. When a merchant sells at the same price either for cash or credit, the cash customer is forced to pay for part of the credit furnished to others. A large part of the necessary credit now being used to carry on farm production is expensive and inefficient—store credit. This situation is not good for merchants, for bankers, or for farmers.

The merchant is blamed for the high cost of retailing. A large part of this cost is credit. A merchant can and should do business on a smaller margin for cash. The merchant who charges the same price for cash as for credit is literally encouraging people to ask for credit.

An important part of the banker's business is selling credit. He is equipped to do this, and can do it at a lower cost than the merchant. The banker lends only to those who have a reputation for paying their bills promptly, and so saves the costs of collection and of losses from bad debts.

A feed store is an excellent place to buy feed, but a poor place to buy credit. It is just as sensible to go to a bank to buy feed as it is to go to a feed store to buy credit.

Farm profits can be increased by increasing prices or by decreasing costs. The individual farmer cannot change prices, but he can reduce costs by more efficient production. More efficient financing of the credit necessary for farm production offers one way of reducing costs.

(Continued on page 269)

## Credit Necessary for Nearly Every Farmer

THE article on this page was broadcast recently from the Schenectady station by W. I. Myers on the Farm Bureau radio program. We want to call attention to Mr. Myers's statement that there is no system in farming in which the receipts exceed the expenditures every month in the year, and therefore credit in some form must be used by every farmer. But the difficulty is, as we have many times pointed out in these columns, this credit is costing the farmer on the average of from two to five times as much as it should. Therefore, perhaps the biggest job of farmers, more important even than marketing, is to find some kind of a plan that will enable the farmer to buy his credit at a reasonable price.

You will be interested in Mr. Myers's practical suggestions as to how this may be done. We have a letter from one of our readers suggesting that it does not help the average farmer any to pay cash because he can buy just as cheaply for credit as he can for cash. In next week's issue we will publish this letter and an answer. In the meantime, read Mr. Myers's article and write us your opinion as to the solution of this problem.—The Editors.

half of the necessary credit was "store" credit, about one-fourth was obtained by notes to others than banks, and about one-fourth by notes to banks.

In both regions, only a small part of the credit necessary for farm production was obtained directly from the institutions whose most important business is the selling of credit, that is *the banks*.

As a part of this same study, information was obtained from country merchants in these same regions as to the costs of the "store" credit that they extend. The average costs for different

# Getting the Hens Ready for Winter Production

*An American Agriculturist Wednesday Evening Radio Talk Broadcast from WEAJ*

By F. W. OHM

Associate Editor, American Agriculturist

THE last time I was on the air, about six months ago, I gave a ten-minute chat for the special benefit of suburbanites and other folks who have a small backyard flock of hens. At that time I said that if there were any city folks listening in who were not interested, I wouldn't feel bad at all if they cut out while I held forth. The same holds true to-night.

Last spring my topic centered around the care of the young chicks, to give them the right start in life. In the brief time allowed me I was able to mention only a few of the more essential points that must be taken into consideration.

Now by this time, those baby chicks should be in laying condition, but the precautions which we must take with these pullets are quite similar, in a general way, to those that applied to them as baby chicks. The layers that are going into winter quarters must be watched and cared for, just as thoroughly and diligently. Of course, an older bird can take care of itself better than a baby chick. It can rustle for its food. But unless we give them the right conditions to live under, we are going to run into difficulties.

The winter quarters must meet only a few requirements, but those must be adhered to closely. Dampness in the house is without question responsible for more poultry troubles than any other single factor. Dampness makes possible the contraction of colds and attendant diseases which are responsible for huge losses in our poultry population. Roup can almost always be traced to a damp hen-house. If the house is to be kept dry, ventilation is necessary, so that both of these

factors go hand in hand. A dry, well-ventilated but cold house is not nearly as serious as a damp one. In fact, the man who closes up his poultry house tight, is simply courting trouble. A tight house is almost always sure to be damp. In the place of at least half of the glass windows, cloth or muslin curtains should be substituted. If the wind is high a burlap curtain may be hung in front of the roosts to act as a baffle and stop any drafts. But under no consideration close the house up tight simply because a wind is

blowing. Stop the drafts, but allow the air to circulate.

Of course, the house must be clean. No one can expect a hen to lay eggs while she has got a lot of lice and mites feeding on her body. And right here it may be said that it is useless to apply insect powder to the hen as long as the roosts and the interior of the house have not been taken care of. There are a number of commercial preparations on the market for spraying the interior of the hen-house that will destroy all insect life. They are convenient for they need little preparation. These sprays, any spray in fact, must be applied thoroughly in every crack and crevice, otherwise those little red mites are going to continue to live and make the hen's life miserable. A very cheap substitute for these sprays is ordinary lubricating oil that has been drained out of the automobile engine. This is applied very thoroughly to the roosts and walls about the roosts. It is painted into every last nook and corner. When once applied, no insect will ever live there. It is a cheap remedy, but a little more unpleasant to apply. It may be diluted slightly with kerosene. Kerosene is a good insecticide, but it is a little dangerous, because of the possibility of fire, at least for a while after it has been applied.

The ration of the hens naturally is very important. However, that subject is so thoroughly discussed in our agricultural bulletins, and on account of local conditions, may be modified in so many ways, I shall only summarize a few essentials. The hens should always have mash in

## The Judgment of Experience

*What an Old Man Thinks of a Boy's Chances on the Farm*

By A. K. GETMAN

THE large white house of the Whitman place stood high on a green knoll overlooking the grain fields and the orchard. It cast a long morning shadow across the neatly kept lawn, a shadow which ended at the base of several stately maples. Across the road, and placed at an attractive distance from the house, stood a group of barns and outbuildings, all painted red with white trimming.

I had walked along the macadam early that morning on my way from town to the Whitman farm. The neat appearance of these buildings and the well-kept premises were a source of real attraction. They were made impressively so by contrast with a few of the ill-kept farmsteads which I had passed on my two-mile walk out from town. I had written Mr. Whitman (for that is what I shall call him here) that I was anxious to stop off for a little chat with him. He was expecting me for as I came up the drive to the side entrance he appeared in the doorway. After an informal introduction he invited me to join him on the front veranda.

I was impressed with the old gentleman's elastic vigorous step and his strong handshake in spite of his 72 years and his slightly bent shoulders.

I had chosen Mr. Whitman for my interview because he represented a successful farmer in a broad sense of the word. He was known over the State as a man who took an active part in farmers' meetings and one who practised the best progressive methods in agriculture. At the hotel in the town I learned that his neighbors regarded him as a good father, and an honest, law-abiding citizen with a keen interest in community affairs.

"I am interested in boys, Mr. Whitman," I began. "I asked if you could see me for a little while this morning because I want you to give me some suggestions out of your years of experience that will help the young lads who are thinking about following farming as a vocation."

"There isn't much that I can say to help the boys now-days," replied Mr. Whitman. "Boys do about as they please anyway, no matter what you say."

"That may be true," I suggested, "but I am sure that there are hundreds of fathers and mothers and boys who read the AMERICAN AGRICULTURIST who would like to know what you think of farming as a business and what suggestions you have for boys who want to follow it. How long have you lived on this farm?"

"I've never lived anywhere else" said he. "My father and grandfather were both carried from that parlor to their last resting places and I have always said that I wanted to start my last journey from that same spot. This is the old homestead and we're proud of it. From time to time we've bought on 'till we're operating about 250 acres. My oldest boy was the only one of the four boys who liked to farm so he and I agreed about fifteen years ago to run the place in partnership. The other lads after finishing school went to town

and are all doing decently well. Fred, who stayed here with me, agreed to buy the other boys' share in the place, and before I realized it he had them paid-off. We built Fred a house down the road a piece and he and his family live there. For about twelve years Fred has had entire charge of the farm. Just as soon as he got into the swing of it I gave him the reins."

"Keeping in mind Fred's best interests and knowing what you do now about the difficulties that farmers are experiencing, if you were back

storm and when the cloud passes those who stood pat will see the big advantage of having stood by one's life work in spite of discouragements. To be sure a few who haven't any love for country life and who haven't farmed long enough to get interested in it will leave. I think they ought to. There are too many farmers of this sort anyway."

"Yes, but who should stay and who should go?" I asked.

"America is a free country. Each one must make his own decision. I'm done with active life but as I look back over the years and look out over the community I'm impressed that more of

the boys would be better off to take over the homestead than to try to live in the cities. There are many stories about the farm boy who goes to town and becomes president of a corporation and gets rich, but we don't hear much about those who don't become presidents and who don't like town life and town jobs after they get there. Some men can't work for themselves. They should go to town and work for a boss. Another conclusion of mine is that there are just as good opportunities as ever on the farms for those who like it and for those who are willing to get ready for it. One never gets to be a millionaire but the farmer has an independent life. If one derives happiness from a good home and takes pleasure in out-door work he would have to look far and wide to equal the opportunities on the farms."

"You're quite right," I put in. "We are often so close to the woods that we can't see the trees. We are quite apt to look over into the other fellow's pasture and think that it is greener than ours. I think you have expressed some excellent conclusions about farming and the best of it is that they have grown out of ex-

perience. (I'm long on experience and short on theory.) Turning again to some of the problems that many of the lads are facing may I ask how you think a young man can best get into farming?"

"A lot more experienced and grayer heads than mine have puzzled over that problem," he replied. "Almost no other business is like farming. In the first place a farmer has to have capital and that is the one thing the young man usually does not have. Then again the farmer is a boss, laborer and mechanic all in one. He's got to have good business judgment and know a thousand and one facts and reasons about raising stock and crops. To plunge a young fellow into this sort of business with the difficulties that didn't exist when I started in, is a big jump. My first choice would be to have the boys who want to farm, do as Fred and I have done, take over the home place and let the father gradually drop out of the business side. In this scheme one of the first things to do is to build a separate house for the young man as soon as he is married. Another important thing is to get enough land or otherwise enlarge the business to make a good-sized business of it."

(Continued on page 268)

STATE CHAMPION CALF RAISERS

JUVENILE state calf club champions from twelve states, who won a trip through their agricultural supremacy as the guests of the Blue Valley Creamery Company at the National Dairy Show in Milwaukee, were brought to Chicago. After being taken to the principal points of interest they were given a banquet at the Hotel Sherman as the guests of the Creamery Company. Left to right, front row: Kieron Hoyt, Hawkeye, Iowa; Jerome Olson, Britton, South Dakota; Walter Nierman, Concordia, Missouri; Miss Rowena McBane, Morristown, Indiana; Willard Whitney, Valley, Nebraska; and Victor Uhlig, Backus, Minnesota. Left to right, back row: John Haedt, Cathay, North Dakota; Thomas Patterson, Plainfield, Illinois; Wallace Newman, Mattingly, Kentucky; Ralph Schwartz, Marietta, Ohio; and Douglas Curran, Taylor, Wisconsin.

fifteen years would you advise Fred to stay on the place?" I asked.

"Most certainly," he ejaculated. "These bad times are scaring a lot of folks. I don't believe Fred would swap places with any of his brothers. I have reached some conclusions of my own about the farming business in this country. Lots of people don't agree with me but that doesn't affect my opinion any. Farmers have always been the balance wheel. They have always stayed in the middle of the road. Season in and season out, in good weather and bad weather, in peace and in war, in hard times and in good times, they are always found on the job striving to earn an honest living and to educate their children. When food was needed "to win the war" they produced it. They met the demand and because of the over-supply of food these farmers found themselves in a bad hole. They are a long way from being out of that hole even yet. One of the points of my conclusions is that a fair share of the farmers are going to stick in the business because they like it and because they can't afford to change their life work because of temporary bad prices. But the big point is that farmers WILL weather the

### "The Trouble-Maker"

WITH the publishing of my story, "The Trouble Maker," which starts in serial form in this issue, I have reached one of the goals toward which I have striven all of my life.

I have always wanted to write.

How well do I remember that big day, now some years since, when the *Country Gentleman* sent me a check for forty dollars for an article which they later published as a feature. It was my first real success, attained after years of practice and discouragement from returned manuscripts. Few people realize that success in writing, like success in all other business, does not just happen. It is a trade, requiring, as do other trades and professions, years of training, study and practice—especially practice and then more practice.

Writing articles and editorials alone, however, was not enough. I always longed to write a story, but somehow in the hurry of every-day work, there never seemed to be time, and I knew that writing a book is a big job. Had I known how big, I surely would never have had the courage to start, for "The Trouble Maker" has taken my spare time for nearly two years. And certainly had it not been for the constant encouragement and enthusiasm of Mrs. Eastman and a few of my intimate friends, who read each chapter as it was written, the book never would have been finished.

But it is done, and I hope you will like it. Anyway, it expresses to the best of my ability the love and respect I have for farm people, and it tells of their struggles to get better prices for their products, a kind of story which I do not think has ever been written before.

After you become acquainted with obstinate but lovable old Johnny Ball, with young Jim, the "Trouble Maker," with Bill Mead, the typical Yankee hired man, and with Dave Messenger, who longed for "peaceable folks," maybe you will think that they are just like the people you have known all of your lives.

If you like them, and like the story, and if it sets forth in some small part your own hopes and struggles for a better life in the country, then I shall know that all of the work in writing the book has been worth while.—E. R. EASTMAN.

### Wheat Prices Soaring

AS you will notice by our Market Page, wheat prices have reached a new high level. Prices of wheat in the primary markets are now better than a dollar and a half a bushel. Prices of other grains are also rising in proportion. It is estimated that this year's wheat crop will bring the American farmers better than a billion dollars in cash. The best of it is that they and not the speculators will get most of this for farmers still had their crop after the prices began to go up.

When we think of wheat, we are apt to think of

it as being grown exclusively in the West. As a matter of fact, wheat growing is no small industry in many Eastern States. Some of the finest wheat in the world is grown in Central Pennsylvania, and in New York State alone it is grown on more than 50,000 farms. Moreover, many more Eastern farms grow large quantities of other grain. New York, for instance, is one of the largest buckwheat-growing States, and buckwheat is high in price this fall. All of which means that the Eastern farmer is going to have no small share in these better grain prices. Further than this, there is a distinct upward tendency for other farm products, all of which is encouraging.

Just at present, the only part of the farm business that is lagging behind is dairying, and of course high grain prices increase the dairymen's problem. However, even here it may be a good thing. In the first place, when one part of the farm business prospers, sooner or later all of the rest does; and then again, perhaps the higher prices of feed will cause less of it to be fed to worthless cows and this in turn will reduce the volume of milk and increase milk prices.

One of the encouraging features about the farmer's market problem this fall is the efficiency with which the railroads are moving the crops. Those farmers who have waited to get car space while their crops have perished or the crops declined, know that good railroad service is as fully important as are low freight rates. The moving of grain during the past few weeks has been extremely heavy. Yet in spite of this, Eugene Meyer, managing director of the United States War Finance Corporation, states that railroad efficiency in moving crops this fall is almost without precedent.

### Bring Back the Flour Mills

THE picture of the old mill on our cover this time reminds one of a passing industry. "Going to mill" was as much a part of the life of our farmer fathers as was going to church. They raised their buckwheat and their corn, and the miller ground it. The breads, pancakes, the johnny cakes, and the good old mush-and-milk made from these home-grown grains were wholesome and appetizing and they made a large part of the family diet. But with our modern times and our diversified agriculture "going to mill" has become less and less a custom. We seem to prefer, in fact, to sell all of our stuff at low wholesale prices and buy back our supplies and foods for our own tables at the highest retail prices.

Some of this change has been necessary and in the way of progress, but we believe it perfectly practical and perfectly possible to bring back to our modern farms some of the ways of our fathers, among which might well be the raising of more home-grown foods.

In recent years, the acreage of wheat has greatly increased in the East. Many of our dairy farmers are now growing a few acres of this fine old grain. Why not go another step and make arrangements through your Farm Bureau, your Grange, or in some other way, to establish and use mills for manufacturing some of this wheat into good wheat flour?

### Should Boys Drive Cars?

THE new automobile law which went into effect in New York State on October 1st, while excellent in most respects, raises some real inconvenience and problems for farmer owners. Among these is the question of boys driving cars who are under eighteen years of age. It is now against the law for any one under eighteen to drive. There are many valid reasons for this requirement, for statistics show that quite a proportion of accidents happened when boys or girls were driving. Often also, it has been these youngsters who were responsible for the so-called joy-riding, and there has been altogether too much burning of gasoline by young people at night when they should have been at home.

On the other hand, the farm automobile is much more than a pleasure vehicle. It has become a necessary machine in the operation of the farm

business, and on thousands of farms fathers have depended upon their boys to drive the car to town on necessary errands to get supplies and especially to carry the milk.

In the State, also, the farm automobile has done much to help the rural boy and girl to get a high school education. It has helped them to cover easily and quickly the long distance between the farm and the high school.

Under the new law, all this will be impossible. If these reasons why young people should be allowed to drive are sufficiently strong to overbalance some of the dangers of such driving, then undoubtedly the law can be amended. What do you think about it? We would like to hear both sides of the question discussed.

### A Failure at Being a Failure

DID you ever stop to think that much of this talk about lack of prohibition enforcement is just straight propaganda started by the big liquor interests? The manufacturers of booze well know that prohibition works and that their only hope for future business is to bring about the repeal of the amendment. To be sure, there is sand in the enforcing machinery; to be sure, there are violations of the law in every community. These are discouraging and disheartening; but after all, they were to be expected.

All that one needs to do in the midst of discouragement is to compare actual conditions now to what they were before the Eighteenth Amendment was passed. For all of the loud talking, there is not one-tenth of the liquor drunk in the United States now that there was before prohibition. The *Michigan Farmer*, commenting on the situation, says:

"The booze restaurants of the wet age are out of business. Charitable institutions have been relieved of from 25 to 75 per cent. of their burden. Church memberships have increased at the rate of 2,500 per day during 1923. The banks are doing better, the insurance companies are doing better, but the breweries, such as they are, are delivering in hip-pocket quantities instead of in truck loads.

"Remember the prophecies of all the grass that would grow on the streets when things were dry? Well, they are not using lawn-mowers on the city streets yet. Perhaps it was too dry for the grass to grow.

"Oh, yes, you can get it, but you can get anything you want if you have the money and a sufficient amount of disrespect for law and decency. But even so, if prohibition is a failure it is one of the greatest failures at being a failure we have seen for some time."

### Eastman's Chestnuts

HERE'S one that George Duff and I used to tell on the hired man when we were boys. Before writing it this time, I looked over a list of my friends to get some one to tell it on, but I did not quite dare to do it for fear the victim would lack a sense of humor and decide it was the open season for editors!

The story went something like this:

It seems that there was a man in a certain neighborhood (yours, maybe) who was so confoundedly lazy that he was absolutely no good. The neighbors even had to furnish his food, which his poor wife fed him with a spoon. Finally, the neighbors' patience wore out—as you have probably noticed, it is none too long in such affairs anyway—so they loaded him into a coffin and set out to bury him.

On the way, they passed a man who wanted to know what was the matter. The neighbors explained that the man in the coffin was so lazy that he was worthless, and that they had decided to bury him because they were tired of feeding him for nothing.

"Now, that's too bad," said the stranger. "Here, I've got a bushel of corn. I'll give it to him so he can have another chance."

The man in the coffin raised himself languidly to a sitting position and said to the stranger: "Is it shelled?"

"Why, no," said the other apologetically, "it ain't shelled."

Whereupon the man sank back to his rest and said softly, "CARRY ME ALONG, BOYS."

# How Wormy Fruit Ruins the Market

## Apple-eaters Do Not Want Their "Meat" that Way

EDITORS' NOTE:—The following is a very frank letter written by Mr. C. M. Palmer, of the Williams and Cunningham Advertising Agency of Chicago to Mr. J. B. Greiner, representing the Standard Farm Papers, of which group AMERICAN AGRICULTURIST is a member.

We received a copy of the letter and found it so interesting and on the whole so filled with such good common sense about the old apple trees to be found on every farm, that we asked for and received permission to publish the letter. Mr. Palmer was formerly connected with the Western Fruit Jobbers' Association, so he is very familiar with fruit marketing conditions.

We might add to the thoughts in Mr. Palmer's letter that the uncared for fruit trees on the average farm not only do not bring any revenue, but moreover, they are a prolific breeding place for all of the diseases and insects which attack fruit trees. Therefore, these uncared for trees are a source of danger to every fruit grower in the country.

\* \* \*

REFERRING to our conversation today on the subject of fruit advertising in its relation to the farm press, it occurs to me that your publication could have a very beneficial effect upon the development of paid publicity in the interest of farm products and could serve a very useful purpose to the farmer himself by going to him with the information that he is something more than a mere agriculturist. He is a manufacturer, but he will never attain the strong position he desires in commerce until he comes to a full realization of this fact and its bearing upon his responsibilities and relationships with the consumer.

For instance, there is local apple production in almost every agricultural state in the Union. Next to potatoes and grain, the apple is the most staple article grown on farms. Yet how many of the readers of your publications realize its immense importance as an article of commerce? Very few, except in those states wherein apple culture is a specialized industry. Iowa is thirteenth among the states in the production of apples, but only one-seventh of her annual crop is considered fit for commercial use. And when I say fit for commercial use from the standpoint of Iowa production, I mean far from fit for commercial use from the standpoint of specialized apple production as known in the Northwest.

There is scarcely a farmhouse in any of the Mid-Western, Central or Eastern States but has its few or many apple trees. For the most part these trees are the most neglected and least profitable of the farmer's possessions. Yet they are potential money-makers, and every influence that is interested in the betterment of farm life ought to take a hand in turning the dooryard orchards from liabilities to assets. Not so long ago the poultry and dairy money earned on the farm was considered the housewife's personal "graft." She tended the chickens, fed them from kitchen scraps, gathered the eggs, marketed the pullets and spring friers, and bought herself a gingham dress with the proceeds. The same was true of dairy products. The housewife did a large share of the milking, all of the churning, and she kept the few dollars this branch of farming brought in.

And then the farmer discovered that there was money in poultry raising and dairying. Your publications and the state agricultural schools and other agencies helped him to realize the safety in diversification offered by these pursuits, and the good housewife lost her "graft," to get it back in the shape of greater prosperity on the farm. Now, perhaps, she is looking for another unplowed field in which to sow the seeds of her energy and industry to make a nest-egg for Christmas shopping or the children's education. I believe she

will find it in the few neglected apple trees or other fruit trees in the garden lot. If the farm wife will take an interest in the money-making possibilities of the orchard, she will help agriculture and incidentally help business, generally.

I was in Iowa recently with a plan for the advertising and better marketing of apples. This plan is built around the idea of selling the home production to the home folks. The men who sell fruit in the state—the wholesalers and the retailers—approved the plan, but said it couldn't be worked in Iowa because the state produces too many wormy apples. "What happens to these wormy apples?" was my natural question. "Oh, they are dumped on the market for what they will

must have reasonable care and the fruit must be reasonably sorted and attractively packed to compete with the specialized products from elsewhere. Your farmers are encouraged to go to extremes in procuring and maintaining first-class dairy herds, fine poultry stocks, good seed, and right fertilizers and the proper machinery and equipment with which to make the most of their farming. We don't find little worms that cause all the mischief in the bacon or "side meat" any more, but we are likely to commit mayhem on a lively little boarder if we undertake to eat a home-grown apple without our glasses on.

Why not start a crusade for better apples on the farm? It wouldn't do the farmer any harm.

If it did nothing more than insure a plentiful supply of good fruit for his family's use during the winter, it would work a great good. Farmers need apples as well as city folks do. Apples are good food for everybody, but they must be good, sound, wholesome and free from insects to make them worth much to anybody. Why not interest the State Legislatures in the passage of laws against the sale of wormy fruit? I know they would hesitate on the theory that to prohibit the farmer from marketing his wormy apples would work a hardship on him, but anybody can see that he is working the greatest hardship on himself by following his present methods. Where he loses money on his orchards now, he could make money if he properly pruned, sprayed, cultivated and tended his trees.

Perhaps you wonder why I, interested in the sale of specialized products, can consistently take this position. Perhaps it would appear that the best interests of those who are with me in trying to stimulate markets for perishable food products generally would be served by permitting the farmer to cut his own throat in the matter of apple production. But the fact is that a few poor apples hurt any market. The jobbing trade confines its operations largely to the boxed apple and the better grades and known qualities of barreled stock, because they realize that only sound fruit will satisfy the retailer and again satisfy the consumer. But the same retailer, who will complain bitterly to a jobber when his stock is not up to par, will often buy a load of very inferior fruit from a passing farmer on the theory that he is buying a chance at an extremely long profit.

This long profit doesn't come, however, as the retailer's first act is to offer the wormy or otherwise inferior stock to the public at prices for which he could and should be selling the highest grade fruit on the market. There are two results: First, the customer is dissatisfied and ceases buying apples for a time. Second, the retailer's sales are slow because of a high price on an inferior article, and he loses through deterioration of the stock left on his hands. The farmer may have secured a small advance when he sold to the retailer—or even through a wholesale dealer—but both he and the retailer and the consumer lose in the long run.

During the Fall months, when the apple trade should be at its best, we frequently find stagnation because "there is so much home-grown junk on the market." "Junk" is the word they use, or another and uglier word, and it describes much of the fruit that is offered as the best local production. The farming industry is not doing itself any good by keeping down its standards on this one branch of its activity while all concerned are trying to improve standards in other directions.

(Continued on page 276)

What good is our immigration law, anyway, if it won't keep out such undesirables?

—Darling in the New York Tribune.

bring," was the usual reply, and that set me to wondering what sort of a state government there must be to permit the sale or offering for sale of wormy food.

What if the manufacturers of breakfast foods, the packers of canned goods, the sellers of dried fruits or the handlers of meat products were to offer to consumers in the State of Iowa a lot of wormy products? Such products would be condemned out of hand, their purveyors would be denounced by press, pulpit and politicians, and Fort Madison would gain in population if the practice were not stopped immediately. Yet wormy apples appear on the market year after year because of "what they will bring." Perhaps a small worm in a home-grown apple is an insignificant thing to make a fuss about, but most people like to consider themselves strict vegetarians while they are eating apples. At any rate, I never heard anybody claim that a worm made an apple taste any better, and I do know that the presence of any wormy fruit in a market makes the sale of all fruits more difficult and less profitable.

Iowa and the other States in which your publications flourish can produce as good apples on the average as can be grown anywhere, but the trees

# A Word of Appreciation

OCTOBER marks the Twenty-Fifth Anniversary of this company. A quarter century of hard-earned experience, toil, and growth is behind us. The years to come offer rich opportunities for continued service.

On this occasion it is fitting that we express our thanks to the friends who have helped us achieve success by their ready recognition of our high standards of manufacture.

We thank each of them and are proud and happy that there are so many to whom we can address these words of friendship and appreciation.

# The Judgment of Experience

(Continued from page 265)

"That point is especially good," I suggested. "Some figures gathered recently by the College in Jefferson and Livingston counties showed very conclusively that the percentage of boys staying on the farms increased as the size of the farm business increased. Pardon for the interruption, go ahead."

"I think the next best bet is for a lad to work as a hired man under a good farmer for a few years and get onto a farm as soon as he can as a tenant looking forward to owning as soon as he can secure the capital. To some this may seem a long tedious struggle, but when viewed as the work of ten or twenty years a man has built up for himself a good home and business. That's a mighty sight more than most city workers ever accomplish."

"I have noticed frequently, Mr. Whitman, that boys don't get along with their dads for some reason or other. Have you ever noticed that?"

"Indeed, I have, and that brings up a point in connection with a boy's staying on the home farm that's worth thinking about. There are usually two sides to every controversy. When it comes to dads and the boys, each must do his part. Too many dads simply look at the labor of the boys as just that much that hasn't got to be paid for. (Besides driving them too hard the boys often get no money and scarcely a holiday.) They soon get the attitude that they are through with such a life even though inwardly they enjoyed the out-door work. Then again the father sometimes gets the notion that the lad is lazy, and maybe some of them are. When most of us were boys we liked to play better than work until we became really interested in our jobs. It seems to me that if more fathers tried to interest their boys in the business by pointing out its bright side and its future, there would be less trouble on this score.

"I haven't any cut-and-dried remedy for such cases but I do know that a little old-fashioned family love and respect won't do any harm. In a lot of instances boys have found that the boss was harder to get along with by a long way than dad."

"I know the boys will be interested in what training you had for farming," I suggested.

"As far as schooling goes I didn't attend a day after I was twelve. In fact in those days there weren't many who stayed much longer. When I quit school I came home on the farm with father, and, as I said earlier, I have been here ever since. My father was a great reader and I remember his taking a great deal of interest in what Horace Greeley had to say about farming. From him I learned to enjoy reading. I was twenty-three or four before there was much to be read about farming. And what there was the farmers were skeptical about because they didn't have any confidence in theories or 'book farming.' My father was a prodigious worker and could perform all kinds of work on the farm with great skill. He took pains to

teach me to work just as rapidly as I grew strong enough to stand it. Beyond this I should say that my education had been secured in the 'school of hard knocks'—and a mighty expensive and toilsome school it was, I can assure you."

"That's certainly quite a contrast to present day methods," I said. "I should say that you would agree that experience was a good teacher but an expensive one. Out of your experience have you any suggestions for the boys of today regarding preparation for farming?"

"I hate to give any advice," protested Mr. Whitman. "It sounds so preachy and besides most boys are fed-up on advice already. There is one thought, however, that may help some of the boys. Many of the mistakes which I made were very expensive in time and money. These mistakes I would have been saved if I could have had the benefit of other people's experience. To me that is one of the biggest things that an education accomplishes. Franklin wrote that an education pays. From the standpoint of success in farming I think it pays because you may profit by the mistakes and successes of other people and the teachings of the experiment stations and colleges. Speaking of the colleges I am reminded of the talk that passed between farmers when I was about twenty. They poked all manner of fun at the idea of teaching farming at a school. And now, after fifty years, see what a change. The experiment stations, the colleges and the schools which are assisting and training farmers have the respect and backing of practically every farmer."

"It's inspiring to hear you review the big change in fifty years but coming back to the boys, specifically do you think a lad is fair to himself to attempt to enter a farming business without some training for it?"

"Positively no," he replied. "The problems of growing crops, animals and animal products, and marketing them, are many times as complicated as when I started farming. The best training for farming that a boy can get is none too good a preparation to meet these difficulties. From what I can gather of your statements about the opportunities at the present time it seems to me that boys who want to be farmers are making the mistake of their lives not to take advantage of the opportunities and get ready for the business. That may sound preachy but I actually mean every word of it."

"No, I wouldn't call that preachy," said I. "In fact, it is just such statements that help the boys decide to make the most of their lives."

Glancing at my watch, I realized that I had only a few minutes to get back to town for my train. I reluctantly drew our conference to a close with an expression of appreciation for the time he had given me and the many helpful suggestions that I felt confident would be of interest to the boys and young men who, here we are aware of it, will be directing the destinies of American agriculture.

NOW that haying and harvest is over, it is a mighty good plan to see that all of the machines and implements are put under cover. Those parts that show rust spots should be scraped and painted. A half a day's work spent in this manner once a year will increase the life of an implement many fold. Blue sky and an apple tree are beautiful, but they don't serve to protect farm tools from the weather and elements.

# To Fight Seed Frauds

## Wholesalers Meet with State to Stop Abuses

THE wholesale seed dealers of New York State met on October 8th at the New York State Department of Farms and Markets at Albany on the request of Commissioner Berne A. Pyrke, to hear charges against some seed dealers for misrepresentation and fraud in the sale of alfalfa and clover seed.

When the conference was called to order by Commissioner Pyrke, he stated that there were many cases of fraud in the sale of seed, particularly in alfalfa and clover seed, constantly brought to his attention, and that it was the responsibility of the industry to clean its own house, or there was danger of the public tearing it down. The Commissioner said that he had faith in human nature and that therefore he believed at least 90 per cent. of the men in business were honest; but that the big difficulty was in controlling the other 10 per cent. who were carrying on a fraudulent business. He said that he had called this conference to put the situation squarely up to the seed men, and to ask them what could be done to end it.

### State a Big Seed Buyer

Then Commissioner Pyrke proceeded to read specific cases and charges where evidence existed that fraud and misrepresentation had been committed.

He stated first that the State itself was the largest farmer in the State, operating some 36,000 acres on 40 different institutional farms. Last fall when the Department of Farms and Markets purchased its alfalfa and clover seed for their State farms, specifications were made in the contracts of purchase for northern grown domestic seed. When this seed was received, samples were submitted to the Geneva Station for analysis, and it was found that some of it was from Argentine and that of the thirty-eight different lots, at least fifteen were imported.

The chief trouble is due to practices of some seedsmen in selling foreign seed for domestic, and southern grown for northern. Neither southern grown alfalfa nor clover seed will succeed in New York State. Northern grown foreign seed will probably grow fairly well in New York. But domestic, according to most authorities, is better and besides it is difficult to be certain that foreign grown seed is not of southern origin.

The Commissioner said that the State could protect itself through its Attorney-General, but that he was much concerned over the small farmer who purchased such seed under the impression that it was the best kind, and who had no means of protecting himself. The Commissioner then mentioned cases where small farmers had

purchased clover and alfalfa seed, believing it to be northern grown and domestic and that later analyses of samples of this seed showed it to be otherwise than as represented.

Commissioner Pyrke concluded his opening talk by asking the seed men the direct question, "Here is the situation. Now what is the seed industry going to do about it?"

Mr. Curtis Nye Smith, representing the American Seed Trade Association, stated that the reputable men in the industry were anxious to clean up cases of fraud and promised that his association would do all that it could to remedy the situation. He stated that there was no excuse for a dealer to offer foreign grown seed as domestic, and that his association would take any charge against anyone in the trade, get the facts, and then punish. He asked for the cooperation of the Department in furnishing detailed facts whenever cases of fraud or alleged fraud arose.

### Where Some of the Blame Lies

Several of the seedsmen stated that the wholesalers were not always to blame, that often the retailers changed the tags on the seed bags in order to get a larger profit. Some of the seedsmen claimed that the Geneva Experiment Station had been partial in its services in analyzing seed, and that seed experts, either at Geneva or elsewhere, could not absolutely analyze seeds and be sure of their point of origin. These charges were ably defended by Mr. Munn of the Geneva Station, who said that the services of the station were open to everybody and that if the seed men had not received as much as they thought they should, it was their fault in not asking for such service.

One good result of the conference will likely be a larger use of the seed laboratories of the Geneva Station by the seedsmen, and more cooperation between them and the Station in getting only good seed onto the market.

### Up to Seedmen Themselves

Nearly everyone in the conference took part in discussing the situation, and Commissioner Pyrke asked each speaker as to suggestions of how to control the situation. It was the consensus of opinion that more laws will not help much, that it was the job of the seedsmen themselves to work out the problem, and that failing to do this, full publicity will be given to the names of firms who fail to properly label their seed or who in any way try to work fraud on farmers through misrepresentation.

## What Does Your Credit Cost?

(Continued from page 264)

There are four fundamental planks in a program for sound efficient financing of farm operations. The first one is "Pay Cash." In paying cash a farmer can make a double saving. He does not buy what he cannot afford, and he gets a cash discount on what he does buy. If your store will not give you a cheaper price for cash, go to the one that will. Cash stores are making rapid headway in all lines, and they have come to stay.

The second plank in this program of sound financing is "Buying in quantity." Discounts are usually given for quantity purchases, making a further saving possible.

The third plank is "Buy when the commodity is cheap." It is good business for dairymen to buy a large part of their year's feed requirements in summer when demand is slack and prices are usually low. It pays to figure out your probable needs. By buying in quantity, for cash, and when feed is cheap a saving can be made in three ways: a cash discount, a quantity discount, and a saving in price by buying when the commodity is cheap. But perhaps you can't pay cash. That

brings up the fourth plank in this program for more efficient farm financing. "Borrow at the bank, when credit is necessary." Any farmer who has saved a little money, is honest, and has a reputation for paying his debts promptly, can get credit at his bank more cheaply than from his feed or fertilizer dealer.

The answer to the farm credit question in New York State is the greater use of banks by farmers for the credit necessary to carry on farm operations. The banker will usually be glad to cooperate. It is his business. The banker cannot be asked to furnish credit, however, unless the farmer is willing to do his part. In building up credit standing with a bank there are several things that a farmer should do.

1. Be prompt in looking after obligations on or before the date they are due. Promptness costs nothing and is worth much. The easiest way to lose credit is to let a note run overdue. The man who won't pay without compulsion must continue to pay someone to collect his bills.
2. Always pay cash. Don't run store

# UNION CARBIDE

## Niagara lights the farm

AT NIAGARA FALLS, New York, is located one of the immense works in which Union Carbide is made.

From these works Union Carbide is shipped to 175 direct factory warehouses and from them direct to thousands of farms lighted by Union Carbide.

The power of Niagara is used in producing this granite-like material, and the almost unbelievable temperature of 6026° F is required in the furnaces! (Water boils at 212° F, steel melts at about 2500° F.)

Hundreds of thousands of farm homes depend on the continued operation of this and other great Union Carbide works for their "artificial sunlight." And thirty years of service have proved that the Union Carbide supply is as dependable as Niagara herself.

But these thirty years have proved more than Union Carbide's dependability. They have demonstrated that it yields the largest amount of pure, clean gas, with highest illuminating power. They have seen the growth of Carbide-gas lighting and cooking, from its discovery to a place in 409,000 farm homes!

Union Carbide is always packed in blue and gray drums

UNION CARBIDE SALES COMPANY  
30 East 42d Street, Dept. 15, New York, N.Y.

Please send me, without obligation, information on UNION CARBIDE Lighting and Cooking.

Note: Every owner of a Carbide-gas Lighting and Cooking Plant should write us, so he will be kept advised of our lowest direct-to-consumer prices and nearest warehouse address, and his name placed on our mailing list for future helpful service.

## The WINDMILL with a RECORD

The Auto-oiled Aermotor has behind it 9 years of wonderful success. It is not an experiment.

The Auto-oiled Aermotor is the Genuine Self-Oiling Windmill, with every moving part fully and constantly oiled.

Oil an Aermotor once a year and it is always oiled. It never makes a squeak.

The double gears run in oil in a tightly enclosed gear case. They are always flooded with oil and are protected from dust and sleet.

The Auto-oiled Aermotor is so thoroughly oiled that it runs in the slightest breeze. It gives more service for the money invested than any other piece of machinery on the farm.

You do not have to experiment to get a windmill that will run a year with one oiling. The Auto-oiled Aermotor is a tried and perfected machine.

Our large factory and our superior equipment enable us to produce economically and accurately. Every purchaser of an Aermotor gets the benefit from quantity production. The Aermotor is made by a responsible company which has specialized in steel windmills for 36 years.

## Try This Improved Water Bowl for 30 Days FREE

**SIMPLEX**  
"Cleaned in 5 Seconds"

Operates on any pressure up to 100 lbs.

Many of the most prominent breeders in America have installed Simplex bowls after making this trial. E. C. Shroeder, Holstein breeder, Moorhead, Minn., says, "The Simplex is the best bowl we have ever seen." Why risk buying a less efficient bowl when you can test the Simplex without cost or obligation? Sample sent free, prepaid. No deposits or promises asked of you. Try it, test it in every way. Then buy for your barn, pay for the sample only; or return it—just as you please.

We know the Simplex is so plainly superior that it will sell itself. YOU know the vital importance of providing your stock the best possible bowl. Hence this offer.

**Send the Coupon—that's all**

**F. RASSMANN MFG. CO.**  
Dept. 30-67 Beaver Dam, Wis.

You may send me a sample Simplex Automatic Water Bowl, free and prepaid. It is understood that I will try this bowl for 30 days without any obligation to buy. After trial, I will either return the bowl to you or remit its price of \$3.50—or order for my barn.

# Among the Farmers

## Watch Out for Next Year's Seed Corn Supply

THIS year has been a hard one on crops, especially corn, and if ever a warning was needed it certainly is this year. Reports from all over the A. A. territory indicate clearly that the corn crop is way off this year. The same is true out West.

It is old, old advice that two years' supply of seeds be kept on hand. The fellow who followed that advice last year did well and he will be particularly mindful of his seed corn this year.

The corn crop is far from normal and only in a few sections has it really matured properly. Long Island growers of the famous Luce's Favorite have been paying particular attention to their seed stock this year. Seed supplies are going to be short and prices of seed corn next spring, if present indications mean anything at all, are going to be high.

### New York Farm News from Along the Southern Tier

**BORDEN'S** are contemplating establishing a plant at Walton in Delaware County.

A part of the big Nestle's plant at Binghamton is to be occupied as a storehouse and distributing station for the Grand Union Groceries output for this vicinity.

Frosts have visited certain places along the valleys of the Susquehanna and Chenango rivers, but not in killing degree up to the first of October. Potatoes are still green in many localities and few pieces have been struck by the blight. Digging of late potatoes has not progressed far enough so that a safe estimate of the crop can be made. Early potatoes, however, have not turned out very well.

The township of Vestal, in Broome County, has been pronounced clean and free from bovine tuberculosis. Several other townships will soon have the same distinction.

The highway from Endicott to Union Centre which has been under construction for several months is approaching completion.

The Memorial Bridge across the Chenango River at Binghamton will be practically completed by the first of the new year. The floor is not to be laid down, however, until next spring.

The Endicott-Johnson Co. announces the construction of 100 houses north of the Erie R. R. at Johnson City this fall, to be sold to employees of that corporation.

Farmers from seventy-five to one hundred miles distant bring their products to the new Binghamton public market. In such numbers do these producers come that the market master is discouraging them from overloading the market and thereby forcing the prices to producers down to an unprofitable point.

Corn proves to be very spotted. Along the river flats we note some good crops. The highlands are mostly very light.—E. L. V.

**Tioga County.**—Crops in general turned out pretty good. Hay yielded well but the continual drizzly rains make curing almost an impossibility and some fields were ruined. Corn is late, but much better than was anticipated. Silos are either filled or being filled. Frosts got some corn but not enough to injure it materially. Threshing has been under way for some time. Oats turned out well as did the other winter grains. Buckwheat made rank growth this year, but filled well. Milk is doing a little better. The farmer who has his farm paid off can easily keep his head above the water. But those who are not so fortunately situated are having a pretty hard time of it. It seems that this latter class predominates. Eggs are scarce and consequently high, selling at 54c a dozen. Butter has advanced, the best selling at stores for 50c a pound. All meats are on the up grade. So are groceries. Fruit

in Tioga County is quite plentiful and there seems to be no scarcity of apples. In some sections, tomatoes, ripe ones, are scarce because the cold season has not been conducive to ripening.

#### Heavy Floods Along Southern Tier

Southern Tioga County was swept with floods on September 29 and 30. A rain that continued for thirty-nine hours caused all streams to rise to unusual proportions. The Susquehanna River rose to the height of 16 feet above the low water mark. Late crops were destroyed. Half of Nichols Village was flooded when the Wapasening Creek overflowed its bank. One woman, Mrs. Frank Regan drowned. Her car became stalled in a small creek which flows through the Regan farm. While Mr. Regan left the car to go to the barn to get the horses to haul the stalled car from the creek, Mrs. Regan, it is supposed, became frightened at the rapidly rising water and attempted to wade ashore. Although the water was only three feet deep, it was a raging torrent and she was swept from her feet.

Although a tremendous amount of damage was done to late unharvested crops and gardens, nevertheless the amount of damage is not compared to that created by the cloud burst we had in August. All during the summer folks feared that we would have a water famine this winter, but we will not have one this year. The damage to crops in all Tioga County cannot be estimated. We know the damage was quite serious.—Mrs. D.B.

#### Central Pennsylvania Notes

J. N. GLOVER

**T**HE Union County fair was a great success in spite of the rain. The exhibitions of cows, hogs and poultry were large and good, while the display of apples was one of the best in recent years, showing the benefits of spraying.

Silos are being filled, and the ground where the corn was grown is being seeded to wheat, and seeding of wheat is still going on where potatoes have been dug. Potatoes are very uniform in size, but the yield is not as large per acre as the stalks would indicate. They are selling around 75c a bushel.

#### More Soy Beans and Alfalfa

Several fields of soy beans were grown or corn stubbles instead of oats, and they yielded from 2 to 3 tons of good hay per acre.

A number of farmers have sown alfalfa this year, after having seen the splendid hay which some farmers have grown of it, and the big lot of hay made per acre from 2 or 3 cuttings in one year.

Some corn has been cut, but it needs a week or two of warm weather to mature it, so it will keep when cribbed or germinate for seed.

Apple picking has begun, but apples are not as well colored as they should be. There is only a half crop of apples in this section and there is more of a demand for cider apples than there is for good cooking apples.

Threshing is well under way for the time of year, and will end earlier than usual. Some wheat is being marketed at \$1.30 to \$1.35. Old corn is selling at \$1.15 to \$1.20 with much old corn unsold.

**Tioga County.**—We had a lot of rain around the first of October and it resulted in quite a flood. Farmers are busy filling silos. The corn crop was pretty fair. We have never seen nicer potatoes than this year's crop which will be quite heavy through this section. The tobacco crop was practically all cut and hung before the frosts. We didn't have any frost to speak of until the last week in September. Pears made a big crop this year. There was plenty of apples but they were poor in quality.

## LESS WORK MORE PROFIT with the Reliable Drew Line

### WATER BOWL

If you have one cow or one hundred—you must want to make them give as much milk as possible. A Drew

Detachable Water Bowl in the cow's stall often increases the milk yield 25 per cent or more, right away! It automatically gives the cow all the water she wants when she wants it.

#### A FREEZE-UP CAN'T HARM THIS BOWL

No miserable driving out in cold to icy tanks—no fires to keep. Everything is simple—durable—efficient. Built on scientific principles. Drew Bowls actually pay for themselves. Install them before icy weather causes a falling off in the milk flow. **THE DREW LINE DEALER SAVES YOU MONEY.** See him for all your barn and poultry equipment. Drew supplies are made and priced for practical men. 27 years of winning good-will save you a lot of money. Write for catalog A—free.

# "Books" on the Cows

*How to Make Tests With Little Labor*

WITH the low price of milk and the high prices of feed and other costs, many dairymen this fall are giving more attention than ever before to checking up on the individual cows of their dairy.

As a result, they are asking questions as to the simplest methods of making tests and keeping records. In a few words, there are three ways of putting the dairy on a business basis, so far as records are concerned. First, and probably best, the dairyman can join a dairy improvement association. This usually consists of about twenty-four members, living not far apart, who unite and hire a tester. This man visits each dairy at least once a month, weighs the milk and feed of each cow and tests her milk for butterfat, and keeps a careful record of her production for a year. Before many months have passed, the farmer has a fairly accurate idea of just what each cow in his herd is doing. If you are interested in joining an association, write to the AMERICAN AGRICULTURIST, and we will give you the details.

### Using the Babcock Tester

A second way to get a check on the dairy is to buy a Babcock tester and do the weighing and testing of the milk of each cow and her feed yourself. This is probably a cheaper way than belonging to a cow-testing association, and is also an excellent way of getting your boy or girl really interested in dairying. A Babcock tester is not very expensive, and neither are good milk scales. Milk sheets for keeping weights can be had free of charge. Full information, telling just how to get started, will be gladly furnished if you will write AMERICAN AGRICULTURIST.

For dairy farmers who find it impossible to become members of a dairy improvement association, the dairy improvement club seems likely to offer an effective means of improving their herds and learning better dairying methods.

For the dairymen who have less than ten cows, the expense of membership in the improvement association is rather high on account of the cost of maintaining the tester who is employed by the association.

### How the Improvement Club Works

In the dairy improvement club, the farmer keeps his own records and takes his own samples, which he sends to some central point to be tested for butterfat.

During the year, club meetings are held for discussion of the herd records, feeding methods, and similar problems. At these meetings records are frequently displayed on a blackboard and the discussions led by a representative from the State college.

One of the first of these clubs formed in New York State was in Gardiner, Ulster County, where it was organized in September, 1922.

Some of the members find that they prefer the club plan to that of the association. As one club member expressed it:

"Any dairyman who will not weigh the milk at least twice a month and take samples bi-monthly would also not take the time to study his herd record book if he was in a regular association, and thus he could not secure the greatest benefit from the organization."

### Simpler But Not So Accurate

The third way of checking on the dairy is simpler than the other two, but not so good. It consists in obtaining milk weight sheets and milk scales, and then weighing the milk from each cow and possibly her feed, and making note of it on the record sheets. It is possible also that by sending samples of each cow's milk occasionally to some agricultural institution you can get a record of her butterfat production. This method also will be explained in detail if you will write to us.

All of these suggestions and help that we are trying to render to dairymen is in

line with our established belief that conditions have so changed in the dairy business that the future holds no promise whatever for the man who will not take the time and make the effort to get his dairy on a business basis.

### Train to Show How Costs Lower Milk Production

WE are glad to give notice of the demonstration train which will be run by the New York Central Railroad, cooperating with seven agricultural organizations in New York State to show factors which will help to lower the costs of milk production. The train which will consist of four cars, will start from Earlville, Madison County, on October 20th and will continue for four weeks, making stops all through the Mohawk Valley, and from Albany south to Montgomery; and then on the east side of the Hudson, stops will be made on the Harlem and Putnam divisions.

One of the interesting features of this train will be two ears of cattle which will be used to show the methods of keeping down costs and as examples of good and poor individuals. Three of these cows will have much the same physical appearance and characteristics; that is, they will look alike, but one of them will have a yearly record of 12,000 pounds of milk produced at a profit, the second will be an average producer, and the third a distinct loser. The audience at each stop of the train will be invited to guess on the production of these cows.

### In line with A. A. Policy

Accompanying the train will be representatives of the agricultural department of the railroad, colleges of agriculture, breeders' associations, the State Department of Farms and Markets, and the Dairymen's League Cooperative Association, and the AMERICAN AGRICULTURIST.

This publication is interested in work of this kind because it is in line with what we have repeatedly stated, that the only kind of a dairyman who will be able to remain in the business in the future is the one who is willing to find out which cows in the herd are the losers and then to get rid of them.

Work of this kind is just what we are trying to do in urging at least 10,000 farmers in the New York milk shed to kill and eat at least one cow between now and March 1st. We are daily receiving the names of men who have agreed to do this.

### Get Rid of the Poorest Cow

According to the plan, between now and March 1st, farmers will pick out at least one cow in their herd which they know is making no profit and will either eat her on their own table and can the surplus, or else they will cooperate with their neighbors, letting them have some fresh meat from them when they kill their beef. Or of course, the cow may be sold to the butcher. Anyway, get rid of her so long as she is not continued in milk production.

The little agreement is given below on this page. If you do not want to sign this, just write us a letter and tell us you are for this plan and will do your part providing enough others will do theirs. Let's eat up these cows that are making all of the trouble in the dairy industry.

### Cow Campaign

CUT this out, sign it and send it to American Agriculturist. It is a simple agreement among farmers for each man to get rid of the poorest cow in his herd. Each agrees to kill or sell for meat purposes this individual animal. It is understood the agreement is not binding until at least 1,000 farmers in the New York milk shed have agreed to do likewise. (Signed)

# PAN-A-CE-A

## starts both pullets and moulted hens to laying

ARE YOUR moulted hens back on the egg job?

Are your pullets laying?

Is their feed going to flesh or eggs—which?

What you want is to start the feed the egg way.

Do it with Dr. Hess Poultry Pan-a-ce-a.

Pan-a-ce-a is a tonic that puts the dormant egg organs to work.

That's when you get the eggs.

Add Pan-a-ce-a to the ration once a day and your hens will give a good account of themselves in the egg basket.

### Costs Little to Use Pan-a-ce-a

The price of just one egg pays for all the Pan-a-ce-a a hen will eat in six months.

There's a right-size package for every flock.

- 100 hens the 12-lb. pkg.
- 60 hens the 5-lb. pkg.
- 200 hens the 25-lb. pail
- 500 hens the 100-lb. drum

For 25 hens there is a smaller package

REMEMBER—When you buy any Dr. Hess product, our responsibility does not end until you are satisfied that your investment is a profitable one. Otherwise, return the empty container to your dealer and get your money back.

DR. HESS & CLARK, Inc., Ashland, Ohio

# Buy The Best Silo on the Easiest Terms

For more than a quarter century the Harder has been the standard silo for Eastern Farmers. The earliest Harder Silos are still giving service. The new patented Harder-Victor Front is the most important silo improvement of recent years.

Now, you can buy this genuine improved Harder Silo on the most liberal terms ever offered to silo purchasers. You can meet the payments out of your milk checks, making the Harder pay for itself.

## HARDER SILOS

You owe it to your business to investigate this new and different offer. Write for full particulars and our free book "Saving with Silos." Tell us how many cows you milk and we'll send you also a Handy Pocket Record Book, arranged to show income and outgo, profit and loss. You will be pleased.

HARDER MFG. CORP., Box F, Cobleskill, N.Y.

### Dehorn with the Keystone

Dehorn your cattle in the modern humane way. No crushing—a single stroke does the work. Dehorned cows and steers are gentler and safer. The Keystone is sold on a money-back guarantee. We also make Keystone Bull Staffs. Write for circular.

JAS. SCULLY  
Box 124 Pomeroy, Pa.

### EMPIRE WAGONS STEEL WHEELS

Low steel wheels (plain or grooved wide tires) make loading and hauling easier. Steel Wheels to fit any axle; carry any load. Make any wagon good as new. Reduced prices Catalog Free

EMPIRE Mfg. Co., Box 379, Quincy, Ill.

## Classified Advertising Rates

ADVERTISEMENTS are inserted in this department at the rate of 5 cents a word. The minimum charge per insertion is \$1 per week. Count as one word each initial, abbreviation and whole number, including name and address. Thus: "J. B. Jones, 44 E. Main St., Mount Morris, N. Y." counts as eleven words.

Place your wants by following the style of the advertisements on this page.

### The More You Tell, The Quicker You Sell

EVERY week the AMERICAN AGRICULTURIST reaches over 130,000 farmers in New York, New Jersey, Pennsylvania and adjacent States. Advertising orders must reach our office at 461 Fourth Avenue, New York City, not later than the second Monday previous to date of issue. Cancellation orders must reach us on the same schedule. Because of the low rate to subscribers and their friends, cash or money order must accompany your order.

KIRSTIN STUMP PULLER, triple power, first-class condition. Best offer will get it. H. ANGEHR, Quakertown, Pa., R. 1.

FOR SALE—Cheap Frick portable steam engine, 22 H.P. Also 17-acre farm along state highway. LEVI SMOKER, Bird-in-hand, Pa.

# Service Department

## Advertising Butter Substitutes

AS AN illustration that the AMERICAN AGRICULTURIST tries to practice what it preaches, we have just refused an advertising order amounting to \$161, advertising a certain brand of oleomargarine.

AMERICAN AGRICULTURIST, like the great majority of its readers, is feeling severely the present hard times, but we believe nevertheless that we must build absolutely on the principle of right service to our people all of the time. Interpreted in action, this means that not only must we refuse to accept any advertising which is not absolutely square, but we must go further than this and refuse to accept that which will in any way injure the farm business. On this principle we turn away thousands of dollars of advertising. We feel, and have said in our editorial columns that farmers as a matter of principle should not eat oleomargarine or other substitutes for dairy products. Therefore, we have no hesitation in turning down advertisements urging our readers to eat these substitutes.

### Let Us Know If We Can Help

DURING the month of September, our Service Bureau collected or adjusted accounts for our subscribers amounting to \$697.47. Practically all of this was in small amounts, so that the number of claims involved was large, and it took hundreds of letters to get these adjustments.

A few dollars may not mean much to people with plenty of money, but to the thousands of our folks who have to work for every cent they get, the loss of even ten dollars is a small tragedy. Therefore, no part of the work which AMERICAN AGRICULTURIST does gives our staff as much satisfaction as does the collection or the saving for our people of these Service Bureau claims.

So if you have troubles which you think we can help you with, do not hesitate to give us the details. There are certain kinds of problems which are entirely local or personal in their nature that are impossible for us to handle because we do not have all the facts. But we can and will give full information about laws affecting the farm and the farm business, such as trespass and hunting laws, milk cans, line fences, etc. Also, we will make an investigation and advise you as to

#### AGENTS WANTED

WE WILL PAY YOU \$8.00 PER BARREL selling Quality Oils and Grease direct to automobile and tractor owners, garages, and stores, in small towns and rural districts. All products guaranteed by a 40 year old company. MANUFACTURERS OIL & GREASE COMPANY, Dept. 7, Cleveland, Ohio.

AGENTS. Write for free catalog. 200 sure sellers wearing apparel, Novelties, etc. ECONOMY SALES CO., Dept. 208, Boston, Mass.

#### WOMEN'S WANTS

PATCHWORK. Send fifteen cents for household package, bright new calicoes and percales. Your money's worth every time. PATCHWORK COMPANY, Meriden, Conn.

reputable dealers in farm products of all kinds, of supply houses with which you may wish to do business, or we will adjust claims where you have had trouble or misunderstanding with some firm or company; we will advise you as to investment schemes and we, in fact, can probably help you with many other problems if we have the full details. Remember that this service is absolutely free and that it is a pleasure for us to help you if we can.

When writing us, be sure to sign your full name and address. If you do not wish us to use your name or initials, tell us so, and your wishes will be respected.

### The Best Kind of Payment

SPEAKING of payment for services, no money, no matter how welcome, can quite bring us the same satisfaction that a little note like the following does:

"The magazine is a splendid value for the money, especially in the fact that it serves as a medium of insurance against fraudulent advertising schemes. The rural people as a class are gullible, and your work along this line is a wonderful thing for them. Wishing you every success, I am.—J. R. M."

### Don't Fall for Dalea Clover

THERE are some seed companies, particularly from the West, who are trying to sell seeds of a new plant to the farmer. It is said that it will cure all his plant food troubles. This new crop is called *dalea* or *woods clover*. It has been grown successfully in some of the Central Western States from Illinois to Nebraska, especially on the rich river bottom land. It is said to be well adapted to sour land. It is an annual that grows a little more erect than our common red and alsike clover.

It is being tried out at the New York State College of Agriculture, but thus far it has made a poor showing. The college reports that a number of inquiries have been received concerning *dalea* or *woods clover* and some farmers have gone so far as to purchase quantities at 50 cents a pound. According to L. A. Dalton of the Department of Agronomy, this exorbitant price seems to be the principal asset of the crop. Better stand by your known seeds of known origin of known quality.

### What Does Your Credit Cost?

(Continued from page 269)

accounts. Few things hurt a man's credit like a lot of small bills.

3. Furnish your banker with a credit statement at least once a year. A credit statement is a summary of one's property and of his debts. The College of Agriculture has prepared a form for taking a farm inventory and making out a credit statement that will be sent free to anyone who will use it. The banker who is asked to lend a farmer money is entitled to confidential information as to his financial position. The farmer needs the credit standing that a credit statement will give him.

4. Borrow to make money. Borrowing to buy feed or fertilizer on which to make money is good business. The profit to be made will put the farmer in a position to repay the loan when it is due. Borrowing to buy luxuries is not wicked, but is dangerous. A hard luck story is poor security for a loan.

5. Keep a bank account. The first step in putting a farm on a business basis is to open a checking account. The second step is to use it. A farmer who keeps a checking account is asking a bank to do a good deal of bookkeeping for him without charge. In fairness to the bank he should avoid overdrafts, and should try to keep enough of a balance in his account to pay the bank for its trouble. The advantages of a checking account are so numerous that they should appeal to every business farmer.

# The Trouble Maker—By E. R. Eastman

JIM TAYLOR leaned against the cross-piece between the handles of his cultivator and watched his neighbor, old Johnny Ball, come up the lot toward him on his way to the back pasture after the cows.

Near where Jim stood was the new corn which he had been cultivating, just nicely showing the rows. Back of him along the stone-wall wild roses were in bloom. Beyond and across the valley, the afternoon sun, shining on a patch of woods, brought out and emphasized a million different shades of green. On every side, and as far as he could see, the green of the clover and the grass of the meadows was contrasted with the plowed fields of his neighbors, representing the mighty work of the seed time. All around him, and stretching away to the horizon, bloomed the lavishness of Nature in the summerland, for it was June, June in the hill country of New York.

Had Jim been in the mood, he might, as he looked at the panorama, have thought of those lines of Lowell:

"The flush of life may well be seen,  
Thrilling back o'er hills and valleys—"

Or again, he might, as he saw across the valley the cows of his neighbors busy feeding on the pastures which had not yet turned brown from the hot summer sun, have thought of that other line so descriptive of the dairy country:

"The cattle on a thousand hills—"

But judging by the boy's face, these pleasant things were not registered on his consciousness, for there was a moody shadow in his eyes and stern lines showed about his mouth.

WHEN Ball came up to where Jim was standing, the two men left the horses in the row and climbed over the stone-wall fence to rest and to visit for a few minutes in the long shade of a nearby maple.

"Johnny," said Jim, after the old man had gotten his pipe well started, "I was a-wonderin' as I watched you coming skatin' across the old side hill so sort of full of pep and life, how you managed to keep such a cheerful outlook after sixty years of contendin' with these hills. You know of late I've begun to have my doubts about this whole farm business, and about the business of life itself, for that matter."

"How old are you, boy?" asked the old man.

"Twenty-seven."

"Well, son, twenty-seven is pretty young to get doubtful and cynical." Then John Ball grinned as he concluded: "But I guess you will find it like the other diseases of childhood, likely to soon pass away with the years."

"No, I am serious," said the young man. "What does it matter whether we cultivate a little corn or a lot of corn in a day, if in the end we get nothing for it? Same with everything else we do. Ever since I could straddle a milk pail I have been workin' early and late on this farm, as my old Dad did before me. And where has it got me?"

"Pretty husky, healthy, young animal, I should judge."

"Health isn't any good," returned Jim, "if all you use it for is hard work. I have been nowhere; had no fun; I'm just chief cook and bottle washer for a lot of cows. The farm is mortgaged to the hilt. Mother is a bed-ridden invalid, and has been for years as a result of over-work to make both ends meet."

"Yes, it is pretty hard about your mother," said Ball.

"On the other hand," continued the boy, "there's young Green over the other side of your place. He don't get up in the mornin' till he feels like it, trots to town two or three times a week, always has time to stop and visit, starts hayin' when the last of us are through, and milks his cows whenever he feels like it. All of us have been laughing at him about his

farmin' for years, but, by George, dunno but what he is the one that ought to laugh. Some way or other, he always has enough to eat and wear, and always seems to get fun out of life as he goes along, which is more than the rest of us can say."

"That's all right," said Johnny, "if you want to live as Green does. Most of us don't get much out of bein' shiftless."

"No longer ago than this morning," continued Taylor, "the dealer sent all of my milk back, claiming that I had not cooled it low enough. Maybe not. But after the stuff had been churned clear to the station and back again in the hot sun it was still perfectly sweet this noon. When a feller is fightin' along, needin' every last cent just to make both ends

meet, the way these milk buyers are acting is just the last straw. No, sir, as you say, this corn gives promise of being a middlin' success, but I don't take no pride in it no more, or with any of the other crops. I'm sick of the whole business."

## It Starts This Week—"The Trouble Maker"

THE serial which American Agriculturist readers have been eagerly awaiting begins this week. In the first installment Mr. Eastman introduces you to three leading characters—Jim Taylor, a stalwart young farmer, who puzzles over the inequalities of life; crochety Johnny Ball, his neighbor, who thinks the younger generation should be content with "what was good enough for their fathers," and lovely Dorothy Ball, Jim's childhood playmate, who can make both men forget their arguments when she comes on the scene.

Next time—trouble brewing! Don't miss an issue of this splendid farm serial.

THE boy stopped talking and both men sat quietly looking into the hills across the valley.

Then the boy said half to himself: "If it wasn't for Mother and my kid sister, I'd quit and enlist with the Canadians to help lick Bill Kaiser's dutchmen."

The old man made no immediate reply, but busied himself taking his pipe from one pocket and tobacco from another, slowly filling the bowl, and ramming it down with his thumb. Then when it was going well, he turned to Jim and said: "You young fellers make me a little tired sometimes, Jimmy. Your generation is certainly the most complainingest set I ever saw. All of you want to start in where your dads left off."

"Well, that's natural, isn't it?" interrupted Jim. "It may be natural, but it ain't reasonable," replied the older man. "You ought to be willin' to start back a ways and work forwards as your pas and mas did before you. I got my farm and got it paid for, but all the wife and I had when we started was a little second-hand furniture, two cows and a pair of horses, some tools that I owed Dad for, and one hundred dollars in cash. Going without autos, motion pictures and other modern contraptions didn't worry us because then there wasn't no such."

"Yes," said the boy, "but you had some fun, I'll bet."

"Not what you call fun," said Ball. "Once in a while in a slack time we'd go visitin', and sometimes we had a neighborhood spellin' match, or some other kind of party; but most of the time we worked and we got our fun out of our work."

"No fun in work when you don't get nothin' for it," said Jim.

"Yes there is fun in honest work, too, if you set your mind to think about it that way, and not be thinkin' all the time about somethin' that you can't have."

"How can you help thinkin' about it,

Johnny, when we don't have anything to make life a little pleasanter?"

"Take that corn, now," continued the old man. "When I look at my field, I think that with my own hands I turned over the sod, drew the manure, and planted the seed. Later I will come up here some Sunday when it's about ready to cut and when I see it wavin' and rustlin' in the sunlight, I'll feel maybe like an artist does when he has just painted a nice picture. And the satisfaction I'll get will be part of my fun for the labor that it took to grow the crop. But you young fellers, you look at it and all you think of is the hard work you've done and the money you ain't goin' to get for it."

"Even artists can't live on looks alone," said Jim sarcastically.

embarrassment, turned quickly to Jim and said:

"Life's too short for the waiting game, isn't it, Jimmy?"

"Yes," answered the boy bitterly. "But some of us have to wait just the same."

AS SHE stood there bantering with the men and swinging her pail of strawberries in one hand and an old sunbonnet in the other, some of the bitterness faded out of Jim's heart. What a thoroughbred she is, he thought.

He would have had to be something more than human not to have responded to the good spirits which the girl fairly radiated. She was tall, but not too tall, with that round slenderness so much desired and admired in our modern American girl. The rays of the sun coming through the shade of the maple struck glints of gold in her brown hair, and her brown eyes dancing with life and twinkling with mischief gave the boy a thrilling glimpse into the unfathomable and unknown soul of girlhood.

Noticing the boy's too intent gaze, Dorothy turned a little away from him and said:

"Jimmy, haven't you a water pail up here so that I can send some of these berries down to your mother for supper to-night?"

Jim, followed by Dorothy, went over in the shade of the fence, found a pail and held it while Dorothy poured a part of the berries out of her pail into his.

As the old man lay for a moment watching the young couple together, in the natural setting of field and young and growing life, he said softly to himself:

"Created He the world and all manner of living things, and man to rule over all; and then it was not good for man to live alone, so He created woman."

Jim heard a part of this remark, and turning around he inquired:

"What'd you say, Johnny?"

"Didn't say nothin'," said Ball, sitting up straight. "Gittin' old and foolish," and he got up and walked away.

With a tender, whimsical smile drawing up the corners of her mouth, Dorothy stood watching her father as he slowly climbed the steep hill after his cows, while the boy was very busy watching Dorothy.

Finally, turning to Jim, Dorothy said:

"What do you and Father find to argue so much about lately, Jimmy? Really, every time you get together, which is nearly every day, I notice quite heated conversations. First thing you know, you'll get to quarreling, and I shouldn't like that."

"Oh I guess not. He just tries to make me believe that this dairy business is all right when he knows and I know darn well that it isn't, but we wouldn't really quarrel."

"What's the matter with the dairy business?" asked the girl.

"The matter is, it makes no difference how hard a farmer works in these times, he never can get where it's safe to try to plan for a home of his own. We work, and we work, and we never get anything for it. You know what so much over-work did for Mother, and it certainly wasn't Father's fault for he did the very best he could."

THE girl stood looking a moment at the boy's gloomy face and bowed head.

"Sometimes I think the trouble with you is, you take life too seriously, Jimmy. Maybe you've got too much of that old New England conscience."

He made no reply, and Dorothy picked a daisy and absentmindedly pulled off the petals one by one. She loosened the yellow seeds in the center, threw them in the air, and caught some of them on the back of her hand. As she noticed what she had done and remembered the old country legend about telling fortunes

# Helping the Child with a Temper

## Self-Control Can Be Taught—A Canadian Sister's Experience

At three or four years, my wee daughter, whose sunny face and ready smile won her the love of the entire neighborhood, would give way to violent temper when thwarted or crossed. Stamping her little feet and screaming in rage, she seemed beside herself. Deaf, temporarily, to entreaty, threat or argument, she presented a problem for the solution of which I have to thank my experience as a kindergartner.

Knowing well the folly of most "cures" for temper and the actual harm done by many of them, I set about to think out the thing as logically as possible. To spank a child during a "brain storm" adds fuel to the flame with which the whole individuality is already consumed; to threaten with "black-man," "bogy man," and so on, as some benighted mothers do, is criminal and short-sighted, while the "dark closet" only complicates the chaos in the child's mind by adding fear. I had seen these remedies tried and witnessed their inefficiency.

### Learning the Lesson of Self-Control

Obviously self-control was the only satisfactory answer to the puzzle, but how bring it about at such an early age? First, I must create a desire not to show anger before I could expect small daughter to control her temper. I must shame her out of it, show her that other people didn't do it, that nobody would love her if she acted that way. I must describe to her just how unattractive she looked in a "tantrum" and appeal to her vanity a bit. So we began to have little daily talks about "getting angry." Only for a

minute or so but each time I contrived to drop a suggestion along one of these lines.

I succeeded in awakening shame in her mind and a sense of doing something that was not done in polite society. Indirectly I introduced the idea of taking things as they come. We talked about "ups" (things we liked) and "downs" (things we did not like). In the meantime I had to be very careful not to be floored by any "downs" of my own or to lose my temper, knowing that my example was far more valuable than anything I could possibly say.

### Cold Water Subdues a Tantrum

The rest of the "cure" was an inspiration and as important at first as the talks. One day, as I expected, the inevitable happened and little daughter flew into a furious rage, notwithstanding her dislike of the picture of herself in a temper which I had shown her. I could not make myself heard in the din, so in desperation I took her by the hand and gently led and pulled her to the bathroom. There I closed the door and turning on the cold water I soaked a soft face cloth and sopped it again and again on her red and swollen face, and eyes and forehead. The result was a shocked and surprised let-up of the screams almost immediately. Then, until the ensuing sobs were quieted, I bathed head and wrists in cold water, using a slow caressing motion over face and eyes and letting the water flow on the wrists now and then. I was obliged to resort to this "cold water" method several times and it never failed to quell the fierceness of the "tantrum." We never discussed the trouble at the time, my one object being to quiet the child and get her back to normal. I knew, however, that each "brainstorm" yielded to made the habit that much stronger, so I lost no favorable opportunity for suggestions and was very careful not to allow small daughter to get over-tired, as fatigue is often the forerunner of temper in a nervous child. It took patience and forbearance, but I have cured the little girl, who is now a big girl, of exhibitions of temper and I recommend this method instead of spanking and so on for any high-strung, excitable child.—ESTHER H. DOOLITTLE.

### What a Nice Breakfast!

(A Scotch sister living in nearby Canada sends us this amusing account of a painful domestic incident.)

ONE afternoon lately, I spent a pleasant hour or two picking blackberries (or brambles as we call them) which were growing in abundance in a ditch at the side of the road. One of my pussy-eats was with me, the sun was hot, and I could see my husband in the distance busy at his work of scything the oats. I enjoyed myself immensely in this happy period of freedom from house and farm duties and thought pleasantly of the jam I would make at night. Not a soul passed along the road, all was quiet and pleasant—only the sound of the scythe, an occasional meow from Pussy and the distant cackling of our hens, to break the stillness of the afternoon.

When the day's work was over, I made the preserve, and found that sufficient berries remained to fill a "nappie" for each of us. "Well," thought I, "with cream and sugar, this will be a little treat for breakfast to-morrow."

### A Valuable Find

The morning dawned, and soon I was setting the table for breakfast. The tea was infused, the eggs were boiling, when "Oh, those brambles!" I thought. "I must get cream for them." I poured cream over the berries, then went to the pantry to fill the sugar dish. But as I passed a certain shelf, I noticed a paper bag containing something.

"By the way, what is in that bag?" was my inward query. Opening it I exclaimed, "Good luck! A nice little find. Here is the sugar Mrs. Wilson returned to me a while ago. Fancy for-

getting about it. I'll just begin to use it up now." (Other housekeepers in those days of high-priced sugar will understand my pleasure). Feeling quite rich, I put sugar into our cups and liberally sugared the brambles.

The door opened and in entered hubby. "Breakfast is quite ready now," I announced. "I will fill up the cups."

Hubby gave an appreciative glance at the fruit, but first began to eat some bread and butter, and then took a draught of tea while I was attending to the cats' breakfast. I heard a gurgling noise and looked up.

"What did you put into the tea, my dear lady?" he asked, his face twitching as if in convulsions.

"What should I put in but cream and sugar," I retorted. "Surely the cream is not sour?"

"Taste your own tea," was my husband's suggestion.

Wae's me! The tea was salted! "Oh, boy, I'm so sorry! The berries are salted

**Home Brew**

**WHEN** your sweetie and you have disagreed  
And the world seems dull and drear,  
Follow this prescription, carefully filled,  
And the trouble will disappear.

Dissolve two lumps of foolish pride  
In two glasses of common sense;  
Add patience, forbearance and sympathy  
And allow it to condense.

Pour the mixture into a loving cup  
Get your sweetie to drink with you,  
Then drown all the fancied hurts and stings  
In this wonderful old home brew.

**BERTHA R. McDONALD.**

too!" I screamed, as I saw he was going to eat them to put away the taste of the tea.

Lowering his spoon, my patient spouse said mildly, "How in all the earth did you manage to do this, Ellen!" "Goodness, it was dairy salt that Mrs. Wilson returned to me I remember now;—but it did look so like powdered sugar. Our lovely berries are done for." I lamented.

My good husband mercifully refrained from indulging in one word of deserved sarcasm, but encouragingly hinted, "Likely there's lots of brambles growing yct."—MRS. HELEN MACFADGEN.

### A List of Good Films

TO SPREAD information about better films and at the same time to promote the reading of good books, the National Committee for Better Films has made up a list of 282 motion pictures based upon standard or current works of fiction or other literature. This list represents a careful selection from the different companies and covers currently available pictures chosen by the skilled volunteer committees of the National Board of Review as "better films" during the past three years.

Tie-up between exhibitors, libraries, booksellers, schools and clubs is urged whenever these films are shown, but the week of November 9-15, which is Children's Book Week, is that in which particular stress will be laid on the showing of these films. Many on the list are especially suitable for boys and girls, so that they fit in appropriately with the observance of that week with motion pictures. In previous Book Weeks, many exhibitors in rural centres took advantage of the National Committee's suggestion to arrange special book-film programs which were community events sponsored by local organizations.

Those wishing to know of good films, and interested in making the motion picture a cultural force as well as a wholesome form of recreation, may obtain this list from the National Committee for Better Films, 70 Fifth Ave., New York City, return postage only being requested.

Call on your local exhibitor and see if he has booked any of these pictures!

# "For Better Heating" ANDES FURNACES

The Andes 3-Pipe Warm Air Furnace has a large one-piece ash pit. Its depth prevents ashes piling up under the grates and makes ash removal easy. This is only one of its many exclusive advantages.

Stove, Range or Furnace Catalogs on Request

**PHILLIPS & CLARK STOVE CO., INC., GENEVA, N. Y.**

Manufacturers since 1868 of the famous Andes line of Coal, Gas and Combination Ranges and 1-Pipe, 3-Pipe and Pipe Furnaces.

# Getting Ready for Winter Evenings

*The Fireside Call Already Heard—Fall Sewing Suggestions*

HALF the shock of adjustment from the warm, dreamy Indian Summer time to the shivery unpleasantness of the "melancholy days" liable to follow close on its heels may be avoided by getting ready for the change.

In time we do get settled down to the comforts of the fireside, after a probationary period of cheerless, fireless evenings when we hie ourselves early to bed to keep warm.

To be sure it is not always possible, nor perhaps advisable, to set up the heater on the first chilly day. But some temporary provision for comfort can be made ahead, even though it be only a bit of fuel for the fireplace, a small electric heater, or just an oil-burner. Personal comfort goes far toward making home life happy.

Let us have the warm clothing all ready for the first day, it will "feel good"; extra covering handy for the beds on the first frosty night. The sleeping-porch need not be abandoned until late in the season if plenty of blankets and a hot-water bag be provided.

Better to begin early and plan ahead for the indoor evenings. One of the first essentials is a good reading light. The old gentleman who was heard to complain that the lamp in the family living room gave "no more light than a white bean" had a real grievance.

In this day when many farmhouses are electrically lighted, or gas-lighted, the droplight is available to some households. For others there are the mantle oil lamps, or at least a good circular-wick, shaded lamp. Lights that ruin the eyesight are expensive, however small their cost.

### Family Study Groups for Evening Hours

At this particularly "uncheery" late autumn time the longing to go to California or to Florida or some tropical clime is keen. Why not have all the family go—in a way? Call a fireside council and decide on the country to be visited. Commission different members to look up tourist routes, rates, steamers, hotels, luggage to be taken, and so on, as far as possible to obtain the information. Then with the aid of books, magazines and geographies, make a study of the selected country.

Traveling libraries are available now in almost every locality where stationary ones are not maintained, and many of the country towns afford library service for the rural districts adjacent.

Begin early to make preparations for these study evenings, and start off with the first indoor call. Get the corn-popper out, lay in a store of apples and nuts, plan to have daddy's slippers and easy chair, and mother's work-basket at hand for the first cosy evening. Then while the reading is done aloud by individuals in turn, the others can busy their fingers with light tasks.

A definite hour should be set for the study time. If it be the early part of the evening, as soon as the day's work is out of the way, it will be less interfered with by social affairs and at the same time will leave the family free to attend such neighborhood doings as desired. Children should be taught to find delight in all the seasons. Help them to welcome the advent of November.

Someone has said that the wisest thing Columbus ever did was to get started. Do not put off starting the "comfortable evenings" until the winter has forced us to the wall. By that time the family will have settled itself to some other routine and the "strategic moment" of the first fireside appeal has passed. Be ready when the season changes.—JOSEPHINE E. TOAL.

### Clean Up the Garden

AS soon as everything is ripened up in the garden and the old stalks are of no further use, all the trash should be removed. It is these old stalks, tufts of grass, and other hiding places that winter

over many of the insect pests that we have to fight in summer. Prompt cleaning up will get rid of these and growing some low matting crop or any quick growing crop and plowing this under in late fall finishes up the work of combating insects. The plowing should be done after the insects and larva have made their winter homes secure so they will be exposed to natural enemies and frost when they are powerless to escape and make other homes.—L. H. COBB.

### Economy in Patterns

A WOMAN who prides herself on her economy borrowed a pattern from a neighbor to make her little girl a dress. The neighbor was perfectly willing to lend the pattern, but she doubted the ability of the seamstress to make a dress for a six-year-old with a nine-year pattern and said so. The economical woman said she could not afford to buy a new pattern for each garment she made and was willing to run the risk of turning out

factory manner, and competent dress-makers seldom undertake it. Money spent for good patterns is always an economy. Of course, where one can be borrowed, that is the right size, all is well, but to try to make a big one fit a small child is worse than the old problem about how old is Ann. The things worn nowadays look and are simple enough, but that does not mean that anyone can be careless and still get good results. In fact good dressmakers say the more simple the cut the more careful one should be to have everything exact, as the least deviation from the pattern shows more than in the days when fussy trimmings hid many defects.—HILDA RICHMOND.

### Sugarless Gingerbread

MIX one cupful of molasses with one-fourth cupful of melted fat. Add one teaspoonful each of cinnamon, cloves and ginger. Dissolve one teaspoonful of soda in two-thirds cupful of boiling water.

### SENSIBLE STYLES FOR THE COOLER DAYS

ABOVE, No. 2222 the new tunic blouse. It has convertible collar, and two styles of sleeves. Cut in sizes 14 and 16 years, 36, 38, 40, 42 and 44 inches bust measure. Size 36 requires 2 3/4 yards, 40-inch material. Price, 12c.

No. 1939, nightgown with either high neck or low, round neck, with long or short sleeves and with or without pockets as desired. Cut in sizes 16 years, 36, 40 and 44 bust measure. Size 36 requires 3 1/2 yards of 36-inch material. Price, 12c.

No. 2239, a one-piece dress, has the popular convertible collar and inserted pockets. The diagram shows how simply it cuts. No. 2239 comes in sizes 16 years, 36, 38, 40 and 42 inches bust measure. Size 36 requires 3 3/4 yards of 36-inch material with 5/8 yard contrasting. Price, 12c.

TO ORDER: Be sure name, address, pattern numbers and sizes are clearly written; enclose correct remittance and address your order to Pattern Department, AMERICAN AGRICULTURIST, 461 Fourth Avenue, New York City. Always keep a copy of your order.

WHEN we say that we take particular pride in our pattern service, we do so because hundreds of our readers have written to praise the patterns themselves and the advice service given by the Fashion Editor. If you do not see a pattern for a certain garment illustrated, or if you want advice on colors, materials or styles write to her, sending a stamped, self-addressed envelope, and you will have a personal reply.

Our patterns are chosen with the needs of the farm woman in mind. They are seam-allowing and guaranteed to fit perfectly. The price is so low that it barely covers the cost of service. As a result, many of our readers turn first to our fashion illustrations and order A. A. patterns for every dressmaking need.

an up-to-date frock with the pattern too large.

I wish you could see the result! There is a storm of tears every time the poor child must wear the dress, for even six-year-olds have sense enough to know when a thing looks like the clothes other children wear, but the mother feels that she saved ten or fifteen cents and the matter rests at that.

As a matter of fact it is economy to buy patterns that fit the child rather than to cut by guess or to borrow a large or smaller one and make allowances. It takes a wonderful amount of skill and knowledge to alter a pattern in a satis-

Stir this into the cake, add two beaten eggs, a little salt and two cupfuls of flour. Bake in a square tin.—L. M. THORNTON.

### Candied Quinces

PARÉ, core, cut in quarter-inch pieces and cook in boiling water until tender, about twenty minutes. Drain, make a sugar syrup, pour it over quinces and boil eight minutes. Put in sun until syrup evaporates. Remove quinces, dip in sugar, pack in jars and keep in a cool, dry place. Pineapple may be candied in the same way but needs no preliminary cooking.—L. M. THORNTON.

## SUNRAY FURNACES

*Built to Heat Every Room in Your Home at a Minimum Cost*

A BETTER FURNACE AT A LOWER PRICE

# Reviewing the Latest Eastern Markets and Prices

## MILK PRICES

THE Dairymen's League Cooperative Association announces the following prices the dealers will pay the League during the month of October for milk testing 3 per cent. in the basic zone of 201-210 miles from New York City: *Class 1*, milk used chiefly for fluid purposes, \$2.60 per 100 pounds; *Class 2A*, used chiefly as fluid cream, \$1.90. If skim-milk is used for any other purposes, additional payment over this base price is added, depending on use. *Class 2B*, used chiefly in the manufacture of plain condensed milk and ice-cream, \$2.05; *Class 2C*, used chiefly in the manufacture of soft cheese, \$2.05; *Class 3*, used chiefly in the manufacture of whole milk and sweetened whole condensed milk, powdered and evaporated whole milk, \$1.45; *Classes 4A and 4B*, based on butter and American cheese quotations on the New York market.

### Sheffield Producers

The Sheffield Farms Company Producers announce the following prices for October for 3% milk in the 201 to 210-mile freight zone until further notice; *Class 1*, \$2.60 per 100; *Class 2*, \$1.70; *Class 3*, \$1.55; *Class 4*, to be determined by market quotations of butter and cheese.

### Non-pool Cooperative

The Non-Pool Dairymen's Cooperative October price for *Class 1* milk is \$2.40 per 100 pounds; *Class 2*, \$1.85; *Class 3A*, \$1.55; *Class 3B*, \$1.45, until further notice.

### Interstate Producers

The Interstate Milk Producers' Association (Philadelphia Price Plan) announces that receiving station prices or the price to farmers, in the 201 to 210-mile zone from Philadelphia for 3% milk is \$2.19. In the 101 to 110-mile zone the price is \$2.29.

All the foregoing prices are the same as in September.

## BUTTER HOLDS ITS OWN

\* In spite of the fact that butter eased off early in the week ending October 11, and in spite of the important Jewish market, which fell on October 8, nevertheless a fair amount of business was transacted in the butter market this week. On Monday and Tuesday there was a slightly easier tone in evidence and prices slipped a little. This unsettled condition was doubtless due to the fact that receipts were fairly liberal and advices indicate that supplies are coming on rather freely. As a result, receivers feel it necessary to broaden outlets by reducing quotations. Storage stocks are

## Color Your Butter

"Dandelion Butter Color" Gives That Golden June Shade Which Brings Top Prices

Before churning add one-half teaspoonful to each gallon of cream and out of your churn comes butter of Golden June shade. "Dandelion Butter Color" is purely vegetable, harmless, and meets all State and National food laws. Used for 50 years by all large creameries. Doesn't color buttermilk. Absolutely tasteless. Large bottles cost only 35 cents at drug or grocery stores. Write for free sample bottle.

Wells & Richardson Co., Burlington, Vt.

331 Greenwich Street New York

## SHIP YOUR EGGS

WHITE AND BROWN

To R. BRENNER & SONS

Bonded Commission Merchants

358 Greenwich St., New York City

extremely heavy and although the trade is pulling on them to some extent the reduction is not heavy enough to satisfy operators. To get an idea of the amount of make at the present time receipts were 10% heavier on the first of October than they were on the first of October a year ago. At the same time consumption has not increased in proportion. This situation makes it clear to understand why the butter market is not any stronger than it is.

In spite of the easier tone, prices are about the same as last week. Fancy butter, 93 score is bringing 39c, while 92 score is worth 38c.

The export situation is one small bright light that helps to keep a somewhat optimistic feeling in the market. The English markets are firm. Just how good they really are we will not know till early next week. This week's consignment consists of something like 6,000 packages consigned to New England. The foreign situation has had the tendency to keep Danish and other foreign makes off the New York market. If we had the competition of cheap foreign butter we would be in a worse situation.

## CHEESE TRADE STILL QUIET

Just why it is that the cheese trade is so quiet is hard to say; whether it is because of high prices or just because people are not buying. But the cheese market in general is a very dull affair. In fact, so little business has been done during the latter part of the week that it was with difficulty that quotations were accurately determined. There seems to be some pressure to sell both State flats and Wisconsin marks with the result that outside quotations are extreme. Extra fancy whole milk State flats, held, are mostly turning at 20½c, although a few sales are reported at 21c. Average-run, held flats are mostly going at 19½c. Fresh flats that are extra fancy are bringing 21c, but this is extreme. 20c is the more logical figure for this grade of goods, while average-run goods bring 19c.

## EGGS STILL FIRM

The Jewish holiday on the 8th stagnated trading in the egg market. Business was practically suspended for the day. However, there seems to be little or no change in the situation. Nearby white eggs closed on Tuesday with a satisfactory clearance and a fairly firm tone on all fancy qualities. Of course, after the holiday there was some accumulation, but in view of the fact that arrivals are not too heavy, the trade expects to clear without any difficulty. Quotations are practically the same as last week. Real fancy New Jersey and other nearby henery whites that are closely selected are bringing anywhere from 67 to 73 cents a dozen, depending on the pack. Firsts are worth anywhere from 52 to 63c, while gathered whites covered about the same range depending on quality, both exterior and interior and pack.

A year ago, fancy nearby whites, grading first or better were bringing anywhere from 48 to 68c, while in 1922 they were bringing from 50 to 65c, showing that the present market is on the average from 2 to 5c better all the way along the line. Prices on gathered goods are from 7 to 8c better this year than during the past two years. These prices are on firsts.

## GOOD LIVE POULTRY MARKET

Live poultry met a pretty good market this past week. Express fowls especially were in a strong position. Express chickens were just about as good and as the market closed, just previous to the holiday, prices were tending upward. 32c was easy to get for fat fowls, but, as was the case last week, qualities were wide. A lot of poor quality Leghorns came in and such brought as low as 19c, showing a spread of 13c in the fowl market, all depending on quality. As this is being written, the market is getting ready for the Feast of the Tabernacles, and in spite of the fact that the market has just been closed, nevertheless the situation is healthy.

The 15th, 16th and 17th of October will be the best market days for the Jewish holiday known as the Feast of Law which falls on the 20th and 21st. All kinds of poultry of prime quality should be in good demand at that time.

## NO CHANGE IN POTATOES

There is little or no change in the potato market. Trading has been dull and quotations remain about the same. Long Islands are bringing anywhere from \$2.25 to 2.40 while poor stocks have been going as low as 75c per 150 pounds. There are too many potatoes on the market right now and consumption has not been up to snuff. Growers who haven't got storage facilities naturally have got to ship in and consequently we are getting quite

a flood. When this early deluge has a chance to drift off, chances are we are going to see a little better situation in the market.

## GRAINS AND FEED

According to New York State Department of Farms and Markets, the following prices prevailed October 4:

The quotations given in this report show the approximate prices at which feed can be purchased per ton, and grain per bushel, in straight carlots through billed from Western points, delivered on track at points in the freight zones as indicated. Mixed carlots cost approximately \$2 per ton more. Retail feed and grain prices vary with different local dealers depending upon their individual cost of doing business, volume handled, etc. In the case of feeds the retail price may sometimes be as high as \$5 per ton above the wholesale prices given in this report.

Since Buffalo is an important milling center for wheat feeds and linseed meal, quotations are given for this point on both a through-billed and a local basis. No. 2 White Oats .61; No. 3 White Oats —; No. 2 Yellow corn \$1.25; No. 3 Yellow corn, \$1.24; Ground oats \$41; spring wheat bran \$26.50; hard wheat bran \$30; standard middlings \$29; soft wheat middlings \$35.50; flour middlings \$35; red dog flour \$40; dry brewers grains —; white hominy \$42; yellow hominy \$42; cornmeal \$50; gluten feed \$43.75; gluten meal \$56.75; 31% old process oil meal —; 34% old process oil meal \$47. For points taking New York rate add to Albany price ¼ cent on oats; ½ cent on corn; 10 cents on cottonseed meal; and 20 cents on other feeds.

## How Wormy Fruit Ruins the Market

(Continued from page 267)

Agricultural schools and state departments are doing some good, but their approach of the subject seems to me to be rather too academic. The farmer ought to look at this thing from a business man's standpoint. He ought to consider himself a manufacturer, and to be just as willing to put the best there is in him back of his apples as he does back of his other products.

I can think of a lot more to say on this subject, but I'm not going to say it for fear of being charged with not being a friend of the farmer. I am the farmer's friend, but I fear he is his own worst enemy in some respects. I want to eat his products, and I want to help induce millions of people to eat more of them and to be healthier, wealthier and happier, but the farmer must come to the front and help by giving us the best he can produce. He can produce something better than wormy apples, and he knows it.

## Getting the Hens Ready for Winter Production

(Continued from page 264)

front of them. Their morning meal should consist of a light feeding of scratch grains scattered in the litter. This will induce activity and consequently an appetite, with the result that they will go directly to the mash, and then it will not be long before they will have a desire for water.

The water supply should be constant and clean,—scrupulously clean. A great deal of water goes into the chemical make up of the egg and therefore it should be always available. The drinking fountain may be made, if not properly taken care of, the chief means of transmitting disease through the flock. In freezing weather the water should just have the chill off. Ice water does not help make eggs. The evening meal may best consist of whole corn,—all the hens will clean up. They go to bed early and it is necessary that they carry enough in their crops to keep them supplied all through the long night.

Green food is absolutely an essential, if the birds are to be kept healthy. There is not a whole lot of nutriment in cabbage or mangels, commonly known as beets. But these two feeds are wonderful conditioners and unless they constitute a liberal part of the ration, the birds are bound to come down with liver complaint and some digestive disorders. There is little preference between cabbage and mangels or cow beets. Possibly the beets are a little more easily stored, but either one is perfectly satisfactory. When cabbage and beets are unavailable, the next best form of green food is sprouted oats. A rack may be constructed with several shelves on it, each holding a very shallow box. The oats are placed in this tray and kept moist until they sprout. When the sprouts are a couple of inches long, they are fed to the hens the same as any ordinary green food.

Milk is an excellent addition to the ration. In fact, it is quite an essential constituent. It is not necessary that it be sweet milk. Milk in any form is good. Possibly the most convenient form for a man who has a flock of any size, is semi-solid buttermilk. It is needless to go into any detail to explain why milk is so good in the ration. We all know the value of milk, the only problem being in what form it is most convenient.

These factors that I have mentioned do not include all of the many details that must be taken into consideration with a flock that is going into winter quarters. It may be said that they are the more important factors, but there are several other points that we must watch for.

For instance, the house must be cleaned

# EASY NOW TO OWN THE FAMOUS WITTE ENGINE

Plan of Only \$5.69 for a Few Months Sets Record Low Price

The rugged, dependable Witte Throttling Governor Engine—known for over 42 years as the standard of farm power—surely is within the reach of every progressive farmer now, according to a new plan just announced by Ed H. Witte, world-famous engine builder.

Now only \$5.69 a month for a short time buys the standard Witte Throttling Governor Engine, fully equipped with the celebrated waterproof WICO Magneto. In spite of this low price, which sets a record, the engine has nearly 40 new improvements, including a new device that makes starting easy at even 40 degrees below zero.

Long regarded as the cheapest and most dependable farm engine built, the WITTE develops 50% extra power on either kerosene, gasoline, distillate or gas. Operation on full load figures under 2c an hour. Trouble-proof and so simple that the women folks can operate it. Easily moved from job to job. More than 150,000 WITTEs are in daily use.

To introduce this remarkable engine to a million new users, Mr. Witte will send it anywhere, direct from factory, for a guaranteed 90-day test.

Every reader of this paper who is interested in doing all jobs by engine power should write today for a free copy of a remarkable new, illustrated book just issued by Mr. Witte, which explains the engine fully. You are under no obligations by writing. Just send your name, a postcard will do, to the Witte Engine Works, 1806 Witte Bldg., Kansas City, Mo., or 1806 Empire Bldg., Pittsburgh, Pa., and receive this interesting and valuable book that gives you valuable information about the application of engine power on your farm.

## Getting the Hens Ready for Winter

(Continued from page 276)

regularly. The dropping boards should be scraped at least once a week. A small hand hoe works very well and after the boards have been cleaned they should be covered with fine ashes. The nests must be cleaned and sprayed. The litter is another detail that needs watching. It should always be fresh. Mold is to be carefully guarded against. Our colleges of agriculture have prepared some very excellent literature on the subject of winter management of the flock. If you wish any of these bulletins write me and I shall be only too glad to send them to you. If you wish to write to your state college of agriculture, the poultry department at that institution is always ready to be of service. New Jersey has its college of agriculture and experiment station at New Brunswick. New York State's college of agriculture is at Ithaca, while Connecticut has its headquarters at Storrs. All stand ready to help you.

We get many letters from our friends who desire information relative to poultry diseases. It is hard to diagnose a disease by mail. It is really necessary to see the hen. If you take into consideration all of the details that I have mentioned with those other smaller incidentals that you will find mentioned in the bulletins, there is very little reason why you should have difficulty with your flock this winter. If you are having trouble, the first thing to do is to isolate the bird that is showing some abnormal condition. Then treat the entire flock with Epsom salts at the rate of one pound for every 100 birds. This may be administered in the drinking water or it may be mixed in the mash. If the bird gets real sick, do not run any chance. Destroy it and bury it, where all the other fowls cannot dig it out at some later date. A sick hen about the premises is really a menace.

It is going to pay to take care of the hens this winter. Eggs are high right now and everything indicates that they are going a lot higher. Recent reports of the Department of Agricultural Economics of the United States Department of Agriculture, show that our storage holdings are between 350,000 and 400,000 cases below last year. That means we have at least 10½ million dozen less on hand than a year ago. On top of this shortage, current receipts of fresh eggs are just about equal to the market demands. In fact, fancy eggs from nearby points have been scarce right along. Everything points to a healthy egg market from the sellers' standpoint and it is going to make the backyard flock a decided utility this year.

## The Trouble Maker

(Continued from page 273)

with the petals of the daisy and estimating the number of future children by catching the yellow seed on the back of the hand, she blushed a little and quickly brushed the seeds off, glancing at the boy to see if he had noticed.

But Jim was too absorbed in his thoughts to remember any childhood rite, and they stood in silence for a few moments while they watched John Ball disappear slowly over the brow of the hill.

Then, turning to Dorothy, the boy said:

"Your father was saying a little while ago that we young folks were always wantin' something awfully hard, but didn't know what it was."

"Well, as far as I am concerned," interrupted the girl quickly, "he was only partly right. I do want something, and I want it darn hard," and she paused a moment before concluding, "but I know what it is."

"Tell me," said Jim.  
 The girl hesitated a moment, while the blood showed red under the tan of her face and neck, and then moving a little farther away, she looked shyly up at him and laughed.

"I'll never tell!" she said, and then turned and fled down across the lot.

(To be Continued)

# LUMBER!

PER THOUSAND FEET \$9.00

**LAST CALL!** This startling offer is made because we must vacate Government land. Price is for good sound seasoned lumber in carload lots of 16,000 feet or more to the car. Includes flooring, ceiling, drop siding, sheathing, 2x4, 2x6, 2x8's in lengths up to and including 8 feet. Fair proportion of each length guaranteed. No orders accepted for specified lengths at the \$9.00 price. This price good only while present surplus stock is on hand. Orders filled promptly as received. Suitable for all sorts of farm, out buildings, elevator cribbing and general repair work.

**Along with the Remarkable Value Above**  
 We offer lumber in regular specified lengths at the lowest prices. All sound, seasoned, southern pine guaranteed free from nails and full measure.

**5% Discount** will be allowed on all carload Lumber orders of \$300.00 or more received during the months of September and October when cash in full accompanies order.

**The Last Call!** The last and best of our 12 large Army Cantonments. BUY NOW! Don't Wait! Prices on lumber are advancing.

<b>2 x 4s 2 x 6s and 2 x 8s</b>	Flooring specially selected, per thousand ft. .... \$19.00

## Are You in a Rut?

Thousands of farmers have pulled out of the rut and are saving time and money with the engine designed and built for farm work—The Edwards Farm Engine. I want to tell you how it is different from any other engine—how this one engine will fill your silo or run your washing machine; or do practically every power job on your farm—how it is changed from a 1½ H. P. engine all the way up to a 6 H. P. engine—how it saves fuel, how it starts without cranking, how it is never fastened down, does not vibrate, is light enough to be moved by two men, yet is rugged and durable—how it has made good in the hands of farmers for eight years.

**GET THE FACTS FREE**  
 You risk nothing. Just send me your name and address, and without cost or obligation I will send you all of the facts about this remarkable engine and my free trial offer. Write today.

The Edwards Motor Company 833 Main Street Springfield, Ohio

 State Breed and color. Order today.

DEALTON VALENTINE

# He threw away his butter-fat

*Let this Iowa story throw some light on your farming profits*

**A** PROMINENT farm paper tells about a Corn Belt farmer who purchased a separator at public auction for \$11.00. He was congratulating himself on his thrift, when along came an Association Tester. The "bargain" was tested. The test disclosed that \$7.60 worth of butter-fat had slipped by into the skimmed milk.

No State or Government inspector comes around to test the lubrication of your automobile, truck or tractor. If there were lubrication inspectors there certainly would be even more farmers who use Gargoyle Mobiloil.

### "Bargain price" oils or low-cost lubrication?

Cheap oils are just as uncertain and expensive to use as cheap separators. That is why practically every manufacturer of automobiles, motor trucks and tractors endorses the Gargoyle Mobiloil Chart of Recommendations.

These experts have inspected thousands of automobile engines. They know that over half of all moving parts wear out prematurely because of incorrect lubrication. They know that millions of horsepower are lost

every year because of incorrect oil. They know that correct lubrication would save millions of dollars of farm profits which now get away because of unnecessary repairs and replacements.

Consumers, too, have discovered that Mobiloil is the cheapest oil at any price. "Suppose it does cost more by the barrel," they say, "It also costs less by the year."

Gargoyle Mobiloil is made by a company which for more than 58 years has specialized solely in lubrication. That is why the Chart of Recommendation is the accepted scientific guide to low cost lubrication.

The chart is shown here in part. If your automobile, motor truck, or farm tractor is not listed in this partial chart, see the complete Chart which hangs on the dealer's walls. Or write our nearest Branch for our booklet "Correct Lubrication."

### Tractor Lubrication

The correct engine Lubrication for the Fordson Tractor is Gargoyle Mobiloil "BB" in summer and "A" in winter. The correct oil for all other tractors is specified in our Chart. Ask for it at your dealer's.

# Mobiloil

Make the chart your guide

- Domestic Branches: New York (Main Office) Philadelphia Indianapolis Des Moines Milwaukee Oklahoma City Portland, Me. Detroit Minneapolis Dallas Buffalo Peoria Springfield, Mass. Boston Pittsburgh St. Louis Kansas City, Mo. Rochester Albany New Haven Chicago

## Chart of Recommendations

(Abbreviated Edition)

THE correct grades of Gargoyle Mobiloil for engine lubrication of both passenger cars and motor trucks are specified in the Chart below.

A means Gargoyle Mobiloil "A"  
 How to B means Gargoyle Mobiloil "B"  
 Read the BB means Gargoyle Mobiloil "BB"  
 Chart: E means Gargoyle Mobiloil "E"  
 Arc. means Gargoyle Mobiloil Arctic

Where different grades are recommended for summer and winter use, the winter recommendation should be followed during the entire period when freezing temperatures are experienced.

The Chart of Recommendations is compiled by the Vacuum Oil Company's Board of Automotive Engineers, and represents our professional advice on correct automobile lubrication.

# What Consumers Pay For

An A. A. Radio Talk Broadcast from WEAJ

FOOD is used by everybody. Food is tasted and tested by all. It is a more

By A. G. CLARK  
Chief Bureau of Markets, New Jersey  
State Department of Agriculture

customers. Back of the wholesaler is the carlot receiver in the large cities, and then,

of course, the storage man comes in, the manufacturer, the broker, the carlot shipper at the country points, all of whom are the modern consumers' best friends, ever alert to serve and to save. Taken altogether we have a great service chain which serves the humblest American family in a way which kings could not conceive fifty years ago.

common subject for consideration by all people than is clothing, shelter or even the weather. Dairy farmers often wonder why a raise of one cent a quart in milk causes such a stir among consumers while a jump in the price of gasoline or an increase in the price of silks passes by without comment. Food comes before the minds of all people at least three times each day and in one way or another before many people several more times each day. It lends itself to comment easily. The old high cost of living slogan was aimed principally at the food cost problem. As is so often the case with things that are very common the actual facts concerning food costs are little understood. We take altogether too much for granted. Someone tells us that middlemen profiteer and hence food is high or we read somewhere that in a certain state one farmer out of every four owns an automobile of some kind and that is the reason why bread loaves are smaller than they used to be when these farmers were contented to drive horses.

customers. Back of the wholesaler is the carlot receiver in the large cities, and then, of course, the storage man comes in, the manufacturer, the broker, the carlot shipper at the country points, all of whom are the modern consumers' best friends, ever alert to serve and to save. Taken altogether we have a great service chain which serves the humblest American family in a way which kings could not conceive fifty years ago.

### An Analysis of This Service

Let us analyze these services and decide for ourselves if we can reduce them and open up the way for such savings to be shown in reduced retail prices.

**Quantity.** Large quantities can be bought cheaply and a reasonably large store handling large quantities of food has certain advantages. In speaking of quantity we ought not to forget the advantage of consumer quantity buying. Twenty grocery store operators found that nearby fruits and vegetables were handled on a margin only half as large when their sales were in half-bushel lots as when their sales were in quart peck lots. Many homes could practice to advantage quantity buying of potatoes and apples in the fall as well as of certain canned goods. Any retailer must add a greater margin to a dollar's worth of sales when made in quart peck sales than when it is made in one straight sale.

**Variety.** One brand of manufactured foods or at most two should be enough. The same principle could be followed economically in the number of kinds of fresh fruits. Why demand plums when the storekeeper has a stock of peaches that day?

**Advertising.** Judicious advertising is the very best means of education in this business but money may easily be spent unnecessarily, which of course has to be added to our food costs.

**Promptness.** Thrifty people will wait during the rush hours and will readily learn to spread their shopping out over the entire day. Three clerks very busy for three hours and not busy for five cost more than one clerk who is busy eight hours.

### A Public Market That Attracts

**Accessibility.** If we require a grocery store or a meat market in each block we are going to have too many small businesses. In Perth Amboy, N. J., a thousand or more housewives come an average distance of three-quarters of a mile to buy fresh fruits and vegetables from a City Public Market. An economical storekeeper can attract buyers, even if his store is in an out-of-way place. Accessible places often cost more in taxes, rent, etc., than places on side streets or a little out of the shopping district.

**Attractive displays.** The large expensive show windows are beautiful to look at but when one recognizes the dollar sign and knows that the cost dollars have to be added to the commodity prices, they do not look quite so tempting to the thrifty home buying agent. Attractiveness is a question of appreciation. A display of good products, moderately priced with other indications of cost-reducing factors, looks mighty attractive to some of us.

**Credit.** Bookkeepers get fifteen to fifty dollars per week salary. It makes quite a cost factor to a \$300 per week sales total. Then, of course, a certain proportion of charge accounts are never paid. Wholesalers, jobbers and manufacturers demand cash within ten days from the retail merchant. Wealthy people particularly are often very slow payers. Credit is an important cost factor.

**Delivery.** The speaker has been told of a woman who ordered a yeast cake delivered immediately a mile from the store and on the sixth floor. Doubtless a fifty cent loss at the least was incurred on such a transaction. Some one, of course, had to pay it back on other articles.

### Many Too Opinionated

Adults are prone to be opinionated and prejudiced. The Government market reports offer a great scope of information to all those who will familiarize themselves with them. Many of our mothers knew just which varieties of apples were best suited for every purpose. To-day the young housewife buys Rome Beauty apples for fresh eating and Stayman Wine-sap for baking and throws them all away.

 Send me the Louden Barn Plan Book.

## Extra Dollars Coming In While You Sleep

You, too, can make more money from your cows this winter, with no additional feed expense, if you'll keep drinking water before them day and night.

Ten per cent gains in milk flow are commonly reported by users whose cows have the benefit of Louden Water Bowls. Figure it out for yourself and see how much more clear money this would mean to you in six months after allowing for the cost of the Bowls.

### Figure These Savings Also

Add to this extra income the value of the tank heater fuel you save and the time and labor saved through avoiding the disagreeable job of turning the cows out-of-doors to water every day.

From the standpoint of sanitation, Louden Water Bowls, which absolutely prevent the spread of disease from one cow to another through their drinking water, may save you the loss of several high priced cows (it's always the best ones that go wrong) during a single season of close stabling.

Whether you have two cows or two hundred, Louden Water Bowls offer you one of the biggest money-making investments you can make. In fact, Water Bowls alone will soon pay for a full outfit of modern barn equipment, including Stalls, Stanchions, Manure Carrier, etc.

Write today for fully illustrated descriptive matter and all the details about Louden Water Bowls. Just check the coupon and mail it now, while you're thinking of it.

There's no obligation.

## The Farmer's Interest In Government

"The More We Ask the State to Do, the More Taxes We Have to Pay"

THE farmer's interest in government is the same as that of any other good citizen. He has no reliance upon the State that is peculiar to his business, and he requires only the same type of laws and law enforcement that apply to citizens in other lines of endeavor.

The rural citizen is the strongest bulwark of the State. This is essentially so, for the finest elements of individual responsibility and self-reliance are developed and fostered in the tiller of the soil. Since the beginning of the Republic, the farmer has been the real pioneer. To him, the State has stood as the symbol of protection in his rights of private endeavor. Out of this has come countless homes, free schools, good churches, and the other elements that make for patriotism and service to country.

© Harris & Ewing  
SAMUEL R. MCKELVIE

There are those who would have the farmer feel that his interests in government and in laws are not in common with other classes and groups of citizens. I do not agree with this. The highest guaranty that the State can make the citizen was contained in the Declaration of Independence. Life, liberty and the pursuit of happiness are all that the State honestly can promise to anyone, and this is all the farmer needs or asks. But he does insist upon this, and any departure from it is discrimination, whether it be done especially in his interest or for any other class or group.

The appeal is made to the farmer that so long as others have been specially favored by the State, he is entitled to like consideration. I believe this is putting the cart before the horse. Would it not be better to assume that no one is entitled to special favor by the State, not even the farmer? Injustices that may have been done cannot be rectified by enacting more unjust laws. The remedy lies in repealing any unjust laws that already exist.

### Too Much Class Legislation

During recent years we have followed a process of enacting class legislation, and it has brought down upon us a host of ills and almost endless complaint. These laws have not accomplished anything worth while for the farmer, and too frequently have been held out to him as a bait to catch his vote. One thing they have done has been to increase taxes through the creation of numerous new agencies of government. This brings us to a feature of government in which the farmer is vitally interested.

Some one has said, and wisely, that the power to tax is the power to destroy. Taxes fall with heavy hand upon the farmer. Farm property in Nebraska, including one-half of all the automobiles in the State, represents nearly 65 per cent. of all taxable values in the State. The percentage will vary in other States, but there can be no doubt that the rural citizen is bearing a

By SAMUEL R. MCKELVIE

Publisher of *The Nebraska Farmer*

very heavy share of the burden of taxation. Therefore, every increase in taxes represents an added barrier against rural progress unless in turn a service is rendered to justify it.

There are many theories of taxation that would render the load less arduous for the farmer to carry, but in the last analysis, taxes must be paid, either directly or indirectly, and while we may evade the issue, we cannot avoid it. Therefore, the thing of utmost importance is that the activities and expenditures of the State should be so confined that taxes will not be increased out of proportion to the actual needs of good government.

### Heavy Tax Burden

The war left our nation with a burden of taxes that economically cannot be discharged by this generation. This overhead item hangs like a heavy cloud over economic progress. The weight of it may be minimized only by the practice of the wisest economy by the citizen and the State. Some countries, notably Germany, discharged their war obligation to their people through depreciating the currency, and now they are left to reflect upon the damage that was done. Our country has not and cannot pursue such an unwise policy. Our only recourse must be the creation and the conservation of wealth by the people and the State. And this does not admit of extravagance by either.

Of this we may be quite sure—the more we ask the State to do for us, the more we shall have to pay in taxes. Thus should we pause when proposals are made for the State to enter upon new enterprises, or greatly increase the activities in

which it is already engaged. Illustrative of this point would be the public ownership of the railroads. The effect of such a move would be at once to increase the taxes on private property in Nebraska 10 per cent., for the railroads now pay 10 per cent. of all State taxes in Nebraska, and this would have to be borne by some one else if the railroads were publicly owned. Nor does this take into account the increase in taxes that would be necessary in order to pay for the carriers if they were purchased by the State, the estimated value of which is approximately \$20,000,000,000.

Those who advocate greater public activity in matters that are now handled privately argue that rate reductions and economy in management would offset the increase in taxes. This remains to be proven, for thus far it has not been shown that the State handles its business more economically or efficiently than is done under private initiative. Probably, the best we can do with our public utilities is to have them wisely controlled by the State so that they may not impose upon the rights of the public.

And while we are considering the question of taxation, it is important to reflect upon the fact that the greatest share of all taxes goes for the support of local units of government. Strangely enough, the nearer the government to the people, the greater the taxes. Really, the tax question roosts on the front doorstep of every taxpayer, for the individual has more to do with determining what his taxes shall be than the Legislature or the Congress. Therefore, it behooves us to manifest an increasing interest in the management and the control of our local institutions of government.

The State of Nebraska has no debt, bonded or otherwise. When the Constitution of this State was written, it was provided therein that State bonds should not be voted for any purpose, and the limit of the State debt was very nominal. Had it not been for this, Nebraska would have been in exactly the same condition to-day as the most of the other States of the Union. Bonds would have been voted for numerous purposes, and this would have represented a taxable item that possibly could not be avoided.

### States Heavily in Debt

It is not sufficient to say that the next generation will pay, for each generation has its own obligations to meet, and usually they are increasing. We can not be too careful in lifting the limitations against the incurrence of debt. It is better to err on the side of conservatism than to throw down the bars so that in a moment of apparent need or temporary prosperity we may incur unnecessary obligations.

Because of his attitude on the tax question the farmer is often referred to as a reactionary, a moss-back and an ultra-conservative, but the same people who thus characterize him are wont to refer to him in the next breath as a radical. The farmer is neither an ultra-conservative nor a radical. Inherently, he is a progressive in everything that the term implies. He believes in our free institutions, and the majority of farmers own their own homes. The farmer believes in

### Standard Farm Paper Editorial Service

THE Standard Farm Papers are a group of farm publications working together for the mutual interest of the farmers in their territory. The editors of these papers meet frequently to discuss mutual problems and to work methods of working together in the interest of the Standard Farm Paper Editorial platform. These editors make up the Standard Farm Paper Editorial Board, which is as follows:—

C. V. Gregory . . . . . *Prairie Farmer, Chicago, Ill.*  
D. A. Wallace . . . . . *The Farmer, St. Paul, Minn.*  
H. A. Wallace . . . . . *Wallace's Farmer, Des Moines, Iowa*  
Clarence Poe . . . . . *Progressive Farmer, Birmingham, Ala.*  
Donald Keefer . . . . . *Pacific Rural Press, San Francisco, Cal.*  
E. R. Eastman . . . . . *American Agriculturist, New York City*  
T. L. Leadley . . . . . *Nebraska Farmer, Lincoln, Neb.*  
John Cunningham . . . . . *Wisconsin Agriculturist, Racine, Wis.*  
A. J. Glover . . . . . *Hoard's Dairyman, Atkinson, Wis.*  
DeWitt C. Wing . . . . . *Breeder's Gazette, Chicago, Ill.*

Once each month during the coming year each of the Standard Farm Papers will print a special article on some subject of general interest, written by a member of this editorial board or one of his associates. These articles, written from a broad viewpoint and dealing with topics of current interest, will be authoritative and interesting. The first article of this series, written by Samuel R. McKelvie, publisher of the "Nebraska Farmer" and formerly Governor of Nebraska, appears herewith.

### Political Advertising

THE appearance of the advertising of any political party in these columns does not mean that AMERICAN AGRICULTURIST is pledged in any way to that party or to any party or individual candidate. This advertising is accepted at the regular space rents and is paid for by the party or individuals mentioned the same as any other advertising. Readers are requested to consider all political advertising as impersonal as far as AMERICAN AGRICULTURIST is concerned as this paper is absolutely non-partisan. We make this statement in order that there may be no misunderstanding in the matter.

### McKelvie on Farm Taxes

A SHORT time ago we spoke of adding to the editorial staff of AMERICAN AGRICULTURIST the editors of the Standard Farm Paper group. These papers are the greatest farm journals in America. We are enthusiastic about this because we can give you through these men the best thought on farm subjects that can be had. After you read the article by Samuel R. McKelvie on our feature page this time, you will be enthusiastic, too.

Mr. McKelvie is publisher of the *Nebraska Farmer*, and was formerly Governor of Nebraska. When he speaks on the subject of taxation, we can be sure that he knows what he is talking about. Some of his statements are so outstanding that they are worth repeating here. He says, for instance, that more than 65 per cent. of all taxable values in Nebraska are owned by farmers; that the only way to win back from the conditions caused by the war is to avoid extravagance either on the part of the State or the individual.

"Each generation," says Governor McKelvie, "has its own obligations to meet. Therefore, it is unfair to tax the future. *We should pay as we go.*"

And the following statement, we wish we could write as an axiom into the hearts of every American citizen: "THE MORE WE ASK THE STATE TO DO, THE MORE MUST WE PAY IN TAXES."

### New Jersey Commission Merchants

DURING the course of a year, AMERICAN AGRICULTURIST Service Bureau answers thousands of letters from our people about commission merchants. Some of these letters want to know which firms are reliable and can be safely dealt with; others get our help in adjusting misunder-

standings and unpaid accounts. If these questions are about dealers doing business in New York State, our problem is comparatively simple for reliable dealers in this State are licensed and bonded under the New York State law. In answering questions about New York dealers, we can send a list of those who are licensed and bonded, and feel fairly sure that the farmer will get a square deal in doing business with anyone on this list. Then, too, these men who are licensed and bonded are reputable business men, making it fairly easy to adjust complaints against them.

But in New Jersey there is no such bonded list. Time and again in handling a complaint we have found that a commission merchant in that State has done business for a time and then when complaints against him began to be embarrassing, he has closed his business and opened somewhere else under a new name. There is not much hope for a farmer who is unlucky enough to have shipped produce to such a man.

The remedy that would at least partially help this situation is a licensing and bonding law in New Jersey similar to the one we have in New York. But when we make this suggestion, we are informed by reliable sources that it would be impossible to get such a bill through the New Jersey legislature, that there is not enough sentiment in New Jersey to pass such a law. This, it seems to us is a strange situation, for all reliable dealers ought to welcome a bill of this kind, and certainly there is not a farmer who will not desire it. Therefore, who stands in the way? We would be glad to hear from the New Jersey farmers on this subject.

### The General Farm Situation

MR. A. B. GENUNG, of the Bureau of Economics of the United States Department of Agriculture, writing on the agricultural situation, has this to say about farm conditions in general over the country at this harvest time:

The harvest is on once more. Wagon-loads of cotton lined up at the gins; threshing wheat in Dakota and rice in Louisiana; digging potatoes in Maine; picking apples in Oregon; drying raisins and prunes in California; cattle working down out of the high ranges of the Rockies; long trains of sheep rolling eastward; corn harvest beginning in the Mississippi Valley.

It is by all odds the finest harvest in five years—not the greatest in physical volume of products, but the best balanced and representing the best income. There is no single case of serious scarcity among the major products; neither is there any serious over-production.

The Cotton Belt and the Wheat Belt, two regions that were plunged into a nightmare of depression in 1921, will come back with this harvest—the South to fair prosperity and the wheat country to at least a more tolerable state of things.

Corn is the one important crop of which shortage appears likely, but corn is a feed crop and will be substituted for in one way and another. There is every likelihood that the proportion of soft, immature corn will be large. How best to dispose of this soft corn looms as one of the Corn Belt's outstanding problems.

Apart from the cattle depression, however, most other basic agricultural enterprises have moved into materially improved position. The general index of purchasing power of farm products has moved up to 90, the year 1913 being considered as 100. The up-swing of the last five months is the best sustained period of improvement since the war-time boom in the spring of 1917. Agriculture is working back toward a more reasonable balance with urban industry—fruit at last of infinite labor, privation, shifted population, and last but not least, the weather. This is a harvest of deferred dividends.

### To Study Marketing

THE New York State College of Agriculture announces that with the beginning of the college year this fall, special courses will be given for the training of men in the science and business of marketing farm products. Several other agricultural colleges are already doing this work.

Such teaching is commendable. Perhaps the biggest obstacle to success in cooperation is the lack of trained men. In fact, we feel that farmers have formed too many cooperative organizations before there were enough trained leaders to handle the business.

When it comes right down to it, there are not

enough known facts about the real problems of marketing. It is easy to say that the spread between the farmers' prices and what the consumers pay is too great. No one disputes this point, but when we get to the point of actually reducing this spread, no one seems to know how to do it. There has been a lot of talk and a lot of theory, but not enough real study of the actual facts and experience.

### Horseshoes and Happiness

SINCE completing our horseshoe pitching tournament at Syracuse, one farmer said that he had his opinion of an editor or a paper that would give time to such foolishness when there were so many important problems in the world to be solved.

In cooperation with the Farm Bureaus, the AMERICAN AGRICULTURIST encouraged a good many thousand men all over the State to get interested in the old-fashioned game of horseshoes this summer, and in so doing we have no apologies to offer, for we believe we helped these men a little in solving the greatest of all human problems, that of getting a little happiness out of life as they go along.

For a time, as they engaged in the friendly sport, maybe they were able to forget care and trouble; for a time they did not have to think of the too low price of milk, or of high taxes, or where the money was coming from to pay the grain bills. Sometimes we think that a good many folks forget that the right kind of happiness is the real aim in life. The wise founders of this nation knew this when they wrote into the Declaration of Independence those three great fundamentals—life, liberty and the pursuit of happiness.

Whether people realize it or not, no matter what they do or where they go, no matter whether they run a farm or edit a farm paper, if they do not get some happiness out of it all, or if they do not add to the sum total of human happiness, then their life has indeed been a failure.

### The Chestnut Is Going

"Under the spreading chestnut tree  
The village smithy stands."

A FEW more years and there will be no more "Spreading Chestnut Trees" over the blacksmith's shop nor anywhere else. The chestnut blight will soon finish the few that remain. All lovers of country life will be sorry to see these trees disappear. Aside from its high economic value, the chestnut dotting the hills and pasture lands of all the eastern farm country was an outstanding landmark, recalling one's boyhood and memories of the pleasant times of other years.

### Eastman's Chestnuts

A FEW weeks ago a gentleman from Dixie was in my office when I was writing one of these stories. He became interested, and forgetting all about the business which he came for, he proceeded to tell me a string of old Southern yarns a yard long. As usual, I forgot most of them, but here are a couple that I happened to remember.

A Yankee was remonstrating with a Southern farmer about his shiftlessness in keeping "razor back" hogs.

"Why," said the Yankee, "I'll bet that hog there is at least three years old, and if you had fed him right and taken the right care of him, you could have growed him twice as big in eight or ten months."

"You-all may be right," drawled the Southerner, "BUT WHAT'S TIME TO A HOG?"

\* \* \*

On another occasion, a Northerner pointed out a lanky porker, which just then happened to be in the act of rubbing himself against a tree, to a Southern farmer friend, and inquired:

"I suppose that's what you call a 'razor back' hog, isn't it?"

"Yes," agreed the other, "SEE, HE'S HONORING HISSELF NOW!"

# Kill a Kow!

## Dairymen Rallying Around Plan to Cut Costs and Raise Milk Prices

**EDITORS' NOTE:**—The letters on this page indicate that our folks are beginning to see what our "Kill a Kow" plan will mean to the dairy industry if enough farmers will support it. We can not for any reason see why dairymen should hesitate to get back of this plan for they win both going and coming. There are few dairies that do not have at least one cow that does not pay her costs of production. If she is fattened and killed for beef the farmer is money ahead and certainly the whole dairy industry is, for it is this class of cows that is furnishing the surplus milk and keeping milk prices down.

We think that nearly every farmer knows which cow to kill, but if there is any doubt, why not weigh her milk for a little while and get your county agent, or your local milk dealer, or your State College of Agriculture, to test your milk for fat a few times? AMERICAN AGRICULTURIST will furnish sheets for keeping records free of charge upon request.

A still better plan is to form a dairy improvement club, or join a cow-testing association. We will be glad to tell you how this is done if you will write to us.

But while this work is excellent for giving you a record on your whole dairy, you do not need to wait in your plan to save money, for we repeat that most farmers know in their own hearts of at least one cow in the dairy that is not making good. Let's fat and kill her, and eat her this winter.

For the encouragement of one another, let's all join together in doing this. The agreement is on this page. If you do not want to sign the agreement, write us a letter and tell us that you are with us. We will keep your name confidential if you prefer it. There is nothing hard and fast about this agreement either. If for some reason you are unable to carry it out later, all you will have to do is write us and tell us so.

We have no desire to put anything irksome on any dairyman. All we want to do is to use the combined strength of the more than 100,000 dairymen who take AMERICAN AGRICULTURIST to help their own business.

Read the interesting letters below and then write us and tell us that you are with us.

\* \* \*

### Says It's Sensible

Your "Kill a Kow" campaign is the most sensible proposal yet to help the milk situation.—H. R. R., Orange County, N. Y.

### "Farmers Will Support It"

We are with you on your plan for farmers to kill at least one cow this winter. Keep up the good work. I believe a lot of farmers will support this when they realize how much it will do. You can count on me —J. W. M., Pennsylvania.

### Neighbors Are Talking About It

Our neighbors have been talking about your plan of killing and eating the poor-producing cow. If enough farmers will do this, I know of nothing that will do so much good. It has the double advantage of helping to raise the price of milk and at the same time lowering the costs of production. There are too many cows anyway, especially too many that are not paying their keep. We will beef at least one this winter.—H. M. K., Cortland County, N. Y.

### Back to the Ways of Our Fathers

I like the work AMERICAN AGRICULTURIST is doing in trying to revive some of the customs of our forefathers. Your idea of getting dairymen to kill their "boarders" for beef is all right.

Also, I agree with what you say about raising

at home more feed both for cattle and for the farmer's own table. Most of us are working too much for the middlemen. They were not necessary in our forefathers' business at all. We have to use them some now, but not as much as we do. I, for one, will kill a beef this winter.—E. N. W., Cayuga County, N. Y.

### Has "Killed a Kow" Every Year

I have been killing a beef every fall for years, so your plan is not new to me. But it is all right. Keep it up. There is too much milk and too many poor cows.

Did you know it is possible to can meat so that it is just as fresh when it is opened? We have been doing it for three years now and can laugh at the butcher.

We can also laugh at the baker, for the wife makes her own bread, and better than you can buy, too. If there was a flouring mill near here, we would try your scheme and get our own flour.—H. J. L., Sullivan County, N. Y.

**EDITORS' NOTE:** If there were enough sentiment of this kind, farmers could encourage someone to open a

years a straight mature young cow could have been bought for less money.

**Conclusion.**—It's not profitable for us but incurs a loss to raise calves. We don't want to increase the number of dairy cows. No thoughtful dairyman wants us to increase the number of dairy cows.

Killing our culls increases our average per cow both on production and possible profit and our neighbors don't want them, for a cull is never cheap at any price and we refuse to sell them except for slaughter.

**Conclusion.**—It's profitable to kill culls. It raises our average of possible profit at home, and our average possible profit from sales of cows for we enjoy a better reputation on our sales of cows and we get more satisfaction from our business.

I suggest you extend your "Kill a Kow" to "Kill a Kow and Most or More of the Calves as Well." In sympathy with your fine efforts and the best interests of all dairymen, I pledge myself to kill something that might give milk.—H. D. K., Wyoming County, N. Y.

No, he's not proud of her as a milk producer! Instead he is exhibiting her as a candidate for American Agriculturist's "Kill a Kow" campaign to aid the dairy industry.

flour mill, or get some miller to put in the necessary machinery.

### It Pays to Kill Culls

We recently sold our entire dairy on this, a 50-cow dairy farm, because of the ruinous price of milk and high feed prices and I want to write you a word of encouragement on your "Kill a Kow" plan.

We foresaw some years ago something of what all dairymen are now experiencing and worked out a policy which we have fairly well adhered to. It was this: to raise no calves until our culls were slaughtered. We have raised about 10 calves in the last 10 years, and have acquired by purchase in the same time probably 200 cows, some of which were resold. Last fall we purchased over 50 head for a price of \$45 to \$60 each in entire dairies and the cows which we culled out were sold for slaughter (and they were slaughtered), at prices of \$15, \$16, \$18, \$18, \$18, and \$25 and fattened two more for slaughter at home, or over 10 per cent. of entire purchases.

Our policy has worked out well for us on two lines of reasoning from a study of our books and accounts. First our plan is to raise no calves. A careful account of cost on three choice calves raised this year shows they cost us \$35 a head at 1 year old without any charge for labor or overhead and they brought at auction on an average of \$38 and we could have bought cows by putting \$10 a head to their cost. Other accounts show us that fall calves raised to freshen at 24 months cost \$65, spring calves raised to freshen at 24 months cost around \$80 and then we only have a fresh, untried and unjudged 2-year-old that possibly did not freshen that soon, while in ordinary

ity for all, and special favors for none, should be his slogan with respect to government.

From the beginning of our national history, the progress of agriculture has been an inspiration. This development has been wrought in spite of the unorganized state of the farmer compared with other interests and classes. This industry is now upon the threshold of a new era of progress. It can not be aided by appeals to the class interest of the farmer. It can be helped principally through more thoughtful attention to organization by farmers, and the prevention of action by

(Continued on page 297)

### The Farmers' Interest in Government

(Continued from page 281)

property rights, and he would not wittingly do anything to thwart the incentive that our Constitution gives to the untrammled expression of individual initiative.

Sometimes, the farmer becomes overwrought on account of injustices that have been done him, but in the last analysis he thinks straight, and government reaches its even keel principally through the deliberate, thoughtful action of the rural voter.

If I were to issue a warning to farm folks, it would be to avoid confusing economics with politics. The business of farming must win on its merits, and not through things that may be done for it especially by the State. Meanwhile, the farmer should be vigilant in opposing grants to other industries that would hamper his progress. Equal-

### Kill a Kow!

I will be glad to cooperate, providing at least one thousand other dairymen will do the same, in selling or killing FOR BEEF PURPOSES at least one of the poorest producers in my herd between now and March 1, 1925.

**Seasonable Fruit Notes**

*Western New York Busy Harvesting—Red Hook Growers Try New Plan*

FRUIT harvest is at its height now with everybody in a rush, racing with frost and wind to get the apples. Practically all varieties except the very late ones like Spy and Ben Davis are ready to pick. Most of the Twenty Ounce were picked last week and Greenings are pretty well along also. Tompkins King, Hubbardston and McIntosh will be finished this week. Some Baldwins have been picked already.

Prices are more satisfactory to growers than they have been any year since 1921, due both to a comparatively light crop locally and generally, and to poor quality. Really good crops which will pack a high percentage of A grade fruit are scarce. Not in many years have there been so few barrels delivered to growers at the orchards. Many crops are being sold in bulk and to the canning factories. Prevailing prices in such sales are one dollar a hundredweight, although many have sold at seventy-five cents. The Cooperative Packing Association has sold a large quantity at \$1.25 a hundred, bad side worms out. Canning factories have paid as high as \$1.50 a hundredweight for Twenty Ounce B grade and culls. Culls and dryers are bringing from 70 to 85 cents a hundredweight according to variety

and quality while ciders are selling at from 50 to 65 cents.

The packed fruit is bringing good prices. A grades of standard varieties range from \$4 to \$6 a barrel according to variety—Hubbardstons bringing the lower figure and McIntosh the higher. One fine orchard of McIntosh has been sold at \$6. Twenty Ounce are bringing \$4.50 per barrel A grade, Greenings \$4.75 to \$5. Baldwins are being quoted at \$5 to \$5.25 with few takers as yet. Such as have been sold have been at a considerable less price. But many prefer storing to taking less. B grade sells at from \$3 to \$3.75, according to variety.

Sickel pears were picked last week. Kieffers will be ready the last of this week or the first of next.

In my last "notes" I remarked about the fickleness of the weather. We had just had two weeks of fine weather. The next two days, September 29 and 30, it rained hard and steadily. This was right in the midst of Elberta peach picking and right at the beginning of bean harvest. Some peaches were lost from over-ripeness over Sunday and two days' rain, again proving the wisdom of being forehanded in picking a highly perishable crop like peaches. Beans suffered some

but no serious damage was done this crop. Most of the wheat was sown and this rain gave it a grand start. The last sowing has been made this past week. This date is pretty nearly the deadline for sowing wheat and even this is risky. Beans are now pretty well harvested and corn is mostly cut, although there is enough of this to do yet.—M. C. BURRITT.

**Red Hook Apple Growers Try New Marketing Stunt**

AN experiment in merchandising apples direct to the retail trade is being tried by the Red Hook Cooperative Apple Growers' Association, in cooperation with one of the largest department stores in New York City, R. H. Macy & Company. In a nutshell, the plan is as follows: The Cooperative packs A grade apples in cartons, holding 32 apples, only 2 3/4 inch stock or larger being used. The apples are sold at 74c per carton.

A member of the AMERICAN AGRICULTURIST staff visited Macy's store on the first day of the experiment and had an opportunity to look over the packages. They made an excellent show and according to salesmen on the floor, indications were that the entire consignment of a carload would be sold out during the second day. Hubbardstons and Baldwins were the varieties on sale.

A great deal of credit is due R. H. Macy & Company in this enterprise, inasmuch as it cooperates by placing its merchandising organization at the disposal of the Red Hook growers. The sale was liberally advertised in the metropolitan papers by the department store which made the deliveries as well. It is about as near to direct "producer to consumer trade" as we can get in a practical manner. The packages sold for 74 cents, which brings the apple to the consumer at a cost of about 2 1/4 cents. Apples of the same quality at the same time were selling in retail fruit stores at 3 and 4 cents each and in many cases at 5 cents.

**An Opportunity for New York Growers**

Without waiting for any final details on the outcome of the experiment, it appears to us that here is an opportunity for New York fruit growers to crash into the store trade of New York which for a long time has been partial to Western apples. It is going to take a long time and it will take money for advertising, but once the growers get on the inside of the trade, they are going to have a wonderful outlet for their product. This kind of an experiment takes money and a strong determination to maintain high standards of quality. A trade of this sort demands the larger grades, but it is a means of merchandising that should eventually prove decidedly profitable. The ice has been broken and it is now up to the growers to play the game. It will be a long-drawn-out affair. However, if New York apples are to hold the New York trade, York State growers have got to grade better and then keep grading better. If we fall down, the fruit business is all going West.

**National Apple Week October 31 to November 6**

NATIONAL Apple Week is a piece of publicity work inaugurated by the International Apple Shippers' Association to induce an increased consumption of apples. The slogan this year is "Tell 'em About Apples." It seems that every conceivable organization has been induced to cooperate in this movement. Apple shippers and receivers are taking a most intensive interest in the stunt. Furthermore, State and municipal departments are actively cooperating. The New York State Department of Farms and Markets is doing a great deal of work to boost the campaign. Governor Smith has expressed his whole-hearted approval of it as well as New York City officials from the Mayor down.

**BIG 'C' LINE RUBBER FOOTWEAR**

**For Economy, Buy WEAR!**

*The best costs less in the long run because it wears longer!*

**'Warmfut'**  
Cold-Proof Gaiter  
**'Caboose'**  
World's Best Work Rubber

This combination takes the place of the old fashioned felt boot and is much more practical. Service, comfort and economy because in the spring and fall wear 'Caboose' alone over regular shoes. When cold weather sets in wear 'Caboose' over 'Warmfut' and keep warm and dry.

'Warmfut' gaiter is made from wool yarn knitted and shrunk into a solid fabric. Has a tough felt sole and leather back stay. Made in different heights.

'Caboose' is the world's best work rubber. Has no equal for wear. Slips on easily and fits perfectly. Four ply upper and heavy White Tire Sole.

When the snow is deep wear 'Warmfut' with 'Nebraska' shown at left.

Only the genuine has the White Top Band and Big "C" on the tough White Tire Sole!

**'Nebraska'**  
All Rubber Overshoe

Gives maximum wear and comfort under hardest conditions. Wool lined, warm and dry. Gusset reinforced against chafing of buckles. Heavy extension sole and "Stubgard" toe and heel prevent snagged or scuffed uppers.

**'Watershed'**  
Waterproof Cloth Overshoe

Made with a sheet of pure gum rubber between wool fleece inner lining and fabric outer layer and waterproof clear to the top! Always warm and gives the long, hard service you expect from Big 'C' footwear. Sturdy extension sole and 'Stubgard' toe and heel.

**Ask Your Dealer**

to show you these Big "C" leaders. Find out, also about the famous "Ruff Shod" boot. Rubber footwear for the women folks, too, and the youngsters. All made by Converse and there isn't any better. If your dealer hasn't a complete stock in he will quickly get what you want from our nearest office. Send for circular and give dealer's name.

CHAMPLAIN STUDIOS INC.

FOR PRESIDENT  
**JOHN W. DAVIS**

**Heavy Decline In  
Buying Power Of  
Farmer's Dollar**

Figures prepared by the Joint Commission (Congressional) of Agricultural Inquiry and by Henry C. Wallace, Secretary of Agriculture in the Harding-Coolidge administration, picture the serious plight of the farmer.

The purchasing power of the farmer's dollar represents what he gets for the products of the farm he sells and what he pays for food and other necessities of life which he must buy.

From 1913 to 1919, under a Democratic administration and Democratic tariff, the farmer's dollar was worth: In 1913, 100 cents; in 1914, 105 cents; in 1915, 103 cents; in 1916, 97 cents; in 1917, 107 cents; in 1918, 112 cents; in 1919, 112 cents. These are the figures of the Agriculture Commission, whose study went only to 1920.

Secretary Wallace brought them through 1922. In 1921, the first year of the Harding-Coolidge administration, the farmer's dollar was worth only 84 cents, and in 1922, only 89 cents.

In 1923, because of the increased prices for clothing, fuel, farm implements and other things the farmer must buy, measured in other than food and farm products, the purchasing power was only 59.5 cents!

**What the  
Democrats Offer  
the Farmer**

*The Democratic party has a definite program by means of which we hope to restore to the farmer the economic equality of which he has been unjustly deprived. We undertake:*

*To adopt an international policy of such co-operation, by direct official instead of indirect and evasive unofficial means, as will re-establish the farmer's export market by restoring the industrial balance in Europe and the normal flow of international trade with the settlement of Europe's economic problems.*

*To adjust the tariff so that the farmer and all other classes can buy again in a competitive market.*

*To reduce taxation, both direct and indirect, and by strict economy to lighten the burdens of Government.*

*To readjust and lower rail and water rates, which will make our markets, both for the buyer and the seller, national and international instead of regional and local.*

*To bring about the early completion of internal waterway systems for transportation, and to develop our water powers for cheaper fertilizer and use on our farms.*

*To stimulate by every proper governmental activity the progress of the co-operative market movement and the establishment of an export marketing corporation or commission in order that the exportable surplus may not establish the price of the whole crop.*

*To secure for the farmer credits suitable for his needs. This is our platform and our program; and if elected, I purpose with the aid of a Democratic Congress, to put it into effect.*

*From the speech of John W. Davis, at Omaha, Neb., September 6, 1924.*

# Handy Helps About the Car

## Getting Service from the Spare Tire—Care of the Battery

AS a rule the spare tire does not give its share of service. Heat, moisture and improper care get in their deadly work and make the tire old even if it is not used.

I have found it a good plan to "rest" one tire for 500 miles and then put it back in service again, "resting" one of the other tires. On a new car, for instance, the spare tire would be put in service at the end of 500 miles and one of the regular tires carried as a spare. After another 500 miles this tire would again be put in service and another rested—and so on until the round is made.—P. T. HINES.

\* \* \*

### Care of Battery Terminals

THE new battery is not likely to give trouble if it is refilled with distilled water every week or ten days. But as soon as a battery is put into use the terminals begin to corrode. While this corrosion is not immediately disastrous, it will soon lead to improper battery connections.

To prevent corrosion it is usually suggested that they be greased with vaseline. This is well and good but I have found the vaseline not quite fluid enough to give best results. It will not seep into the small crevices of the connections where corrosion is most likely to start.

Best results will be obtained by painting these terminals with gear grease ("600W" or "steam cylinder oil", as it is often called) every time the battery is given distilled water. For doing this work, keep a cup of the grease and a 10-cent varnish brush in some handy place.—P. T. HINES.

\* \* \*

### Carry Spare Light Bulbs

SAY, Hines," said a neighbor to me the other Sunday night after church, "will you lend me one of the light bulbs from your car headlights? The bulbs in my headlights are burned out. I can manage to get home with a single lamp and perhaps you can do the same."

"I could get home with a single headlight, perhaps, and so could you," was my reply, "but such one-light driving is dangerous. Anyone meeting you in a car cannot tell on which side of the car the single light is burning and the result may be a collision.

"Better than lending you a single bulb, I can let you have a full set, as I always carry 'spares'."

"You carry spare light bulbs just as you do a spare tire and tubes?" the neighbor asked.

"I certainly do. They are just about as important."

"I'll buy two sets when I'm in town tomorrow—one to replace yours and another for myself," was his final remark.  
P. T. HINES.

\* \* \*

### A Use For Old Lubricating Oil

HAVE the old lubricating oil when drained from the automobile, truck, or tractor crankcase and use it for oiling squeaky springs on the car or truck. When springs begin to squeak, simply squirt this old oil all over them with a grease gun. If no grease gun is available, pour on the oil with an old tin cup. Avoid splashing the oil on the car body, wheels, or tires.

This oil, being of light body, will seep between the leaves of the springs and thoroughly lubricate them. The springs will then collect dust, of course, but to no greater degree than when they are lubricated in other ways. This method utilizes a waste product; the work may be quickly done.—P. T. HINES.

\* \* \*

### Make Use of Automobile Door Pockets

AUTOMOBILE door pockets are made for convenience, so why not use them and at the same time keep them in decent order instead of filling them with junk?

In one pocket it is well to keep a small kit of often-used tools—screwdriver, pliers, one or two small wrenches together with ignition system wrench and spark plug and breaker-point gauges. This same pocket may also hold one or two extra spark plugs, a tire repair outfit, a box of extra light bulbs for the car, a tire pressure gauge, a pocket knife or pair of scissors, and a handful of cotton waste together with some preparation for removing grime from the hands.

Another pocket should be supplied with a large bath towel, a dust mop or brush, and a whisk broom. Several clean rags of various sizes will be found useful also.

If a pair of overalls are carried for emergency, they may also be placed in one of the door pockets, though the wife will as a rule give up only two pockets to the driver—in which case the overalls must be placed under one of the seats. A good plan is to wrap the overalls about the curtain rods or tools which will cut out much rattle.—P. T. HINES.

### Why Overcharge Batteries?

What is an overcharge for the ordinary cell of a farm lighting-plant battery?—J. D. N., New York.

AN overcharge is ordinarily given for any one or all of three reasons. First it may be given to compensate at regular intervals for any undercharging the battery may have received between overcharging periods. That is, it is not necessary to bring a battery to an absolute state of full charge each time it is recharged. However, inasmuch as undercharging, if persisted in, would be detrimental to the battery, an overcharge is recommended at regular intervals to break up any sulphate which may have been left in the battery at the end of the intermediate charges.

For various reasons, all of the cells in a battery may not discharge uniformly, especially if the battery has discharged intermittently. In case one or more cells have discharged more than the others, an overcharge given periodically would compensate for this bringing up the cells which were lower to a state of full charge, even though the others may be charged slightly more than is necessary.

A third reason for an overcharge is that it is necessary to keep the electrolyte in all of the cells well stirred up just enough to keep it from getting stronger in the bottom of the cells than on the top. An overcharge should be carried sufficiently far to cause all of the cells to gas freely thereby creating agitation.

## What will you save?

If a fire started in your barn tonight, what could you save? What about the other things?

Remember this: For practically every risk a farmer takes there is insurance in the Hartford Fire Insurance Company. Insure your buildings and their contents, your grain, feed, machinery, live stock, everything that might be damaged or destroyed by fire, lightning, hail or windstorm.

The Hartford local agent specializes in farm insurance. Ask him for a copy of "My Property" or write to the company. It is free. It makes it easy to figure the amount and kind of insurance you need.

# 50,000 Miles in a KNIGHT

One year—two years—three years—four years . . . adding up the miles like an adding machine . . . laughing time and distance down the wind . . . still young in looks and young in action . . . and you, the owner, living over and over again the first thrills of possession!

This big, luxurious Willys-Knight Sedan further endears itself the farther you drive. It carries its secret of long life under the hood—a whispering engine that literally *improves with use*—a fountain of power scotfree from all need of valve-grinding or carbon cleaning!

WILLYS-OVERLAND, INC., TOLEDO, OHIO

Time has never yet measured the full life of a Willys-Knight sleeve-valve engine. In ten years, now, no Willys-Knight engine has ever been known to wear out. Owners report 50,000 miles and more without spending a cent for repairs on the engine!

Fifty thousand miles of unshadowed pride and pleasure—and more to follow! Miles of lazy comfort—deep velour cushions to rest you—weathertight windows to protect you from storm and cold—and the easiest of all cars to handle. It steers as easily as you turn your head!

WILLYS-OVERLAND SALES CO. LTD., TORONTO, CANADA

Suitable for Dove, Quail, Rabbit, Partridge, Plover, Grouse and Woodcock. 12, 16 and 20-gauge; No. 7½ Chilled or Soft Shot.

### Trap Load

12-gauge only; regulation charge of 3 drams finest smokeless powder and 1¼ ounces of No. 7½ Chilled Shot. Special wadding.

## The Highest Quality Shotgun Shells Ever Produced

REMINGTON Game Loads are just two years old. Yet there are thousands and thousands of sportsmen the country over who will shoot no other shell. There are more and more Game Loads being bought and shot each day—the strongest possible endorsement of their superior shooting quality.

*Specific Loads for Specific Game plus Quality*—there you have the whole story of the success of Remington Game Loads.

The *right* load for duck, the *right* load for squirrel, the *right* load for quail and so on down the list.

And by "right load" we mean not only the right size and amount of shot, but the right *velocity*, the right *pattern*, the right *penetration* for the particular game. Every Remington Game Load is scientifically loaded to a *uniform standard* of velocity, pattern and penetration, all with moderate recoil.

Remington made it possible for sportsmen to buy *shotgun shells* with the same confidence they have been buying Remington rifle and pistol cartridges for over sixty years. Leaving it up to Remington to settle every detail—including the kind or powder and the weight of powder.

\* \* \*

The Remington Game Load idea is the biggest forward step in shotgun ammunition since Remington produced the first successful loaded shell back in the 80's. But the idea *alone* would not have swept from coast to coast as it has without the backing of *first and finest quality* behind it.

Remington Game loads are loaded in *Nitro Club Shells*.

They are loaded with the finest American-made smokeless powders. The finest brass bases, the finest battery cups, primers, shell bodies, wadding and shot that 108 years' experience in firearms and ammunition can produce.

They are made *Wetproof* by the patented and exclusive Remington Process. They are inspected and tested as are no other shells in the world.

\* \* \*

# "ECONOMY" Specified Loads

TRADE MARK

Made by Remington

There are three master loads—"Economy" Light Load, "Economy" Medium Load and "Economy" Heavy Load. Each master load comes in 12, 16 and 20-gauge with chilled or soft shot of various sizes. See the table below.

Heavy Load

Remington has also developed an "Economy" Target (Trapshooting) Load for the man who wants a low priced load for practice use at the traps. 12-gauge only—loaded with 3 drams No. 2 Smokeless Powder and 1/4 oz. No. 7 1/2 Chilled Shot.

Medium Load

"ECONOMY" Loads	Weight of Powder	Weight of Shot
12-gauge Light	3 drms.	1 ozs.
12-gauge Medium	3 "	1 1/8 "
12-gauge Heavy	3 1/4 "	1 1/8 "
16-gauge Light	2 1/2 drms.	7/8 ozs.
16-gauge Medium	2 3/4 "	7/8 "
16-gauge Heavy	2 3/4 "	1 "
20-gauge Light	2 1/4 drms.	3/4 ozs.
20-gauge Medium	2 1/4 "	7/8 "

Shot sizes supplied in all the above:  
 Chilled Shot—sizes 4, 5, 6, 7 1/2 only  
 Soft (Drop) Shot—sizes 4, 5, 6, 7, 8 only

Light Load

## A new Smokeless Shell at a lower price

THERE are many men who want a *moderately priced* smokeless shell for ordinary shooting.

Up to now they have had to buy either black powder shells, shells loaded with a mixture of black and smokeless powders, or unknown brands of "smokeless" shells of doubtful origin and shooting quality.

Remington has an obligation to these sportsmen—no less than to the men who want the very finest shells—Remington Game Loads.

So Remington has produced the "Economy" Loads.

They are loaded with genuine smokeless powder—

the No. 2 Smokeless made by DuPont, Hercules and Dead Shot.

They are made *Wetproof*.

They are carefully made and carefully inspected. That is the Remington way of doing things.

They are good, honest shells—the very best that can be produced *at the price*.

FIREARMS - AMMUNITION - CUTLERY - CASH REGISTERS

A strip of rubber cut from a "U.S." Boot will stretch more than five times its length  
—without breaking

# THIS TEST SHOWS one big reason why "U.S." gives longer wear ~ ~ ~

## "U.S." Walrus —

**T**HOUSANDS of farmers have found that nothing else gives them the convenience of the "U.S." Walrus—the famous all-rubber overshoe.

Worn right over the shoe—it is slipped on or off in a second.

No need to track mud and mire into the house.

The Walrus is made with the same elastic rubber and strong reinforcements that go into the boot.

**FIVE TIMES** its length! It takes real rubber to stretch like that.

But that's what a strip of rubber cut from a "U.S." boot will do.

No higher quality rubber has ever been put into a boot—and that's one of the big reasons why "U.S." boots wear longer.

It explains why they stand the constant bending and wrinkling that makes ordinary rubber crack and break—why they stay pliable and *waterproof*.

Then, too, there's layer on layer of tough fabric reinforcements built into every "U.S." boot. *Where the hardest strains come, there are as many as eleven separate layers of rubber and fabric.*

Farmers everywhere have discovered that "U.S." boots are a big economy—that they wear longer and give better

service. It will pay you to ask for "U.S." and get the longest wear your money can buy.

### Other "U.S." Rubber Footwear

You'll find every type of rubber footwear in the big "U.S." line. There's the "U.S." lace Bootee, a rubber workshoe for fall and spring—and "U.S." Arctics and Rubbers for every member of the family. Look for the "U.S." trade mark whenever you buy.

United States Rubber Company

# "U.S." Boots Walrus Arctics Rubbers

**Among the Farmers**

**Franklin County.**—We had fine weather for our county fair at Malone. Some farmers had not finished crops up to the first of October. In fact, most folks started filling silos at that time. A few have finished and are now digging potatoes. Corn made a poor crop on low ground this year. We had two killing frosts in some parts of the county around the first of the month. About the same time we had three days of heavy rains that swelled streams and rivers and flooded areas of land in the northern part of the country. It reminded one of spring with the swollen freshets. Considerable damage was done to crops. As the river overflowed it carried away grain and corn. Some potatoes were under water. Considerable land has been made so soft that corn cutting has to be finished by hand. Testing for T. B. started in Westville last month and it is progressing very rapidly. This is the second test. There is a surplus of hay and fodder in our section owing to so many cattle being shipped out. Help has been scarce all over and wages are high.—W. R.

**Jefferson County.**—We had a three-day rain recently that put farm work back considerably. Corn was still standing but very hard to cut because the ground was so wet. A good deal of hand-cutting was made necessary. Potatoes are a bumper crop and the price has dropped to 65c a bushel. Many are storing with the hope that better prices will come later on. Apples have been selling very well. Frank Hungerford, a neighbor of ours, has a fine crop of Wealthys and has turned quite a bit of them into cider. Veal brings 12c live weight. Bob calves are \$3.50 to \$5. Buyers are beginning to look at hay and offer anywhere from \$8 to \$12, but farmers are not anxious to sell at those prices. Eggs are bringing from 45c to 50c, chickens are worth 22c to 25c live weight. Many dairies are being reduced in order to cut down labor.—Mrs. C. J. D.

**In Western New York**

**Wyoming County.**—Oats are nearly all threshed. The average yield is about 50 bushels per acre. Beans are all harvested and the yield is light. Some corn is going into the silo. Some of it has been frosted. Every one is anxious to get potatoes out of the ground before it freezes. The potato crop is a good one, of fine quality. Quite a portion of the crop is being trucked to Buffalo and Niagara Falls. The apple sections of the county have some nice fruit this year. Several car-loads of sheep are being sold to farmers who have become discouraged with cows.—O. F. R.

**Ontario County.**—The first part of September was cold and dry, but the last couple of weeks have brought us some good weather for corn. The dry weather was broken by a good rain which was much needed. Corn has been slow in ripening, but we expect it will come through now as we do not look for any immediate killing frosts. Red kidney beans are slow in ripening and not very good. Potatoes are making a heavy crop. Wheat seeding has been the latest in years. Some did not complete their sowing by the first week in October. Cabbage is a good crop but low in price.—E. T. B.

**Ontario County.**—Frost still holds off and here it is the second week in October. We hope it will continue to hold off for a week or two longer. Cabbage is a good crop, bringing \$5 a ton. Wheat seeding is late this year. We have had an abundance of rain. In fact, all crops are late.—H. D. S.

**On Long Island**

Potato digging is going on rapidly. Growers are hustling to get their potatoes out of the ground before heavy frost comes; however, there is not a whole lot of danger from that. Indications are that we are going to have a good late fall. The weather we have been having for the past few weeks has been perfectly wonderful and a great deal of field work has been accomplished. We had one frost that hit late beans but sufferers from this were few.

**PROFITS! RECORDS!  
From Grade Cows or Pure-breds**

It's a feather in the cap of any dairyman to own a champion cow in any breed or class. But no dairyman can afford at any time to take his eyes off profits. When all is said and done, the value of a dairy cow depends on her ability to earn money for her owner. Right feeding is the biggest single factor in this business of getting from a cow all that she is capable of producing.

To make money from milk you must use a feed that builds and maintains health and condition—that brings cows quickly to peak production and keeps them there.

Larro does this. Larro has many splendid milk records to its credit; but it is more significant that dairymen who use Larro consistently also produce milk profitably. This can be done with grade cows or pure-breds alike.

There is a grade cow on the Larro Research Farm that in two years increased her milk yield from 5,851.2 lbs. to 13,157.1 lbs. for corresponding 270-day periods. There is another grade cow in the same herd that produced 13,646.4 lbs. milk the past year—yielding 3.2 lbs. of milk for every lb. of grain she ate.

Take Sadie, champion grade cow of the South, who produced 23,245 lbs. milk and 1,144.9 lbs. butter in a year. She is Larro-fed. Or, among pure-breds, the Meadowbrook herd of Jerseys at Jeanette, Pa.—a herd of 50 cows fed no grain but Larro—which holds 45 Register of Merit records and is lead by Prince's Rose of Meadowbrook, with 14,292 lbs. milk and 639.5 lbs. of butter fat—a state record.

Production like that is profitable—whether it comes from grade cows or pure-breds—whether the cow ever sets a record or not.

You are milking cows to make money. They'll make the most money on Larro. Order now from your nearest dealer.

## Answers to Legal Tangles That May Help You

EDITOR'S NOTE:—Here are a few of the many letters which our Service Bureau has received. They may help you. At any rate, you will find them interesting.

We can answer legal problems of a general nature such as those bearing on the application of state laws to the farm business. Personal questions and those entirely of local nature should be referred to a local attorney. As a general principle, we would advise you to settle your ease out of court if you can.

\* \* \*

### Widow's Right to Insurance

Question: In New York State, if a man dies leaving a widow, and his property is involved in debt, can they take her insurance left by husband for debt?

Have heard it remarked that if husband leaves a will so she would be entitled to all his property, they could take insurance, but if no will was made, where she would be entitled to only the use of one-third, they could not take insurance. Kindly give me your opinion or the facts as you know them.

Answer: Under the Insurance Law, a wife is entitled to keep as much insurance free from such claims as premium of \$500 per year will buy. Hence, if your premium does not amount to more than that amount, and if your wife and not your estate is named in the policy as the beneficiary, you need have no fear of creditors touching it. Creditors are, however, paid from estate assets before any distribution is made to wife and children; but under no circumstances can the dower right of your wife to a third in your real estate during her life be interfered with by creditors.

### PRINTING

200 NOTE HEADS, 100 envelopes printed with your name and address, \$1 delivered. QUALITY PRINT SHOP, Arcade, N. Y.

EVERYTHING PRINTED! Write FRANKLIN PRESS, Milford, New Hampshire.

wanted for seed. The day before he hauled them, Mr. B. comes and asks Mr. A. to save him ten bushels for seed, which Mr. A. does. He measured them and put them in the granary under lock. In a month or two thieves came, pulled the staple, and took the beans. What I would like to know is, who should be the loser of the beans, Mr. A or Mr. B? If Mr. B hadn't ordered the beans, Mr. A. would have taken them with the others. I hope I have made this clear. I would greatly appreciate your opinion in this matter.

Answer: Your ease states one of the most difficult questions involved in the law, namely, the risk of loss in a contract for the sale of goods. After careful thought upon the facts as you have given them, it is our opinion that this loss should fall upon Mr. B. After you measured out his ten bushels and set them aside, they were his beans, and under the Personal Property Law the risk would seem to be on him. You have asked us, however, to answer a question that can only be answered by a jury; and while we believe our opinion as expressed is correct, upon consideration of all the evidence that would have to be introduced in an actual suit upon the contract, a jury might come to the opposite conclusion.

\* \* \*

### Question of Joint Deed

Question: When the deed for a home is in both wife and husband's name, and this husband signs a judgment and the note is entered against the home, is it lawful without the wife's name on it, or in other words, is that note of any account to the owner of it? The note was given for five years. Could you sell your home and make a clear deed for it?

When I subscribed for your paper, the man that was getting up the subscriptions told me we could ask any legal advice through the paper.

Answer: We would say that whether the judgment entered against your husband creates a lien on your land depends upon the wording of your deed. If the deed creates a "tenancy in common" there is a valid lien. If it creates a "tenancy by the entirety" there is only a contingent lien; i. e., the lien does not become valid unless you die first. If you survive your husband, in this latter case the lien would not be good.

\* \* \*

### Insure With Reliable Companies

Question: Kindly let me know your opinion on the following: My son bought a Ford on the credit plan for which he paid altogether \$477 including insurance for fire and theft. The policy rates the car at \$441 and the policy is for \$355 in case of a loss.

His car was stolen after using it to go to work (9 miles each way) five months. He had to wait sixty days to get a settlement from the insurance company. When the sixty days were up, they offered him \$250 and have come up to \$275 by now. Have they the right to pay him just what they please? You see, he has to buy another car while the one stolen was just as good as new to him. What do they take the premium for on a certain amount when they afterwards give what they please?

I know a car depreciates, but \$355 was all the car depreciated to in five months. My son being a mechanic kept it in first class condition.

Would you kindly let me know what we can do in his case? The insurance company has him insured since June 19th and still they are not willing to clear it up. Our dealer has tried to get it but can not. We could have insured with reliable people but when I inquired after the policy was given to him by the dealer, I was told it was a good company. Now why don't they pay the policy according to what it calls for?

Answer: It is our opinion that the only way in which you can recover more than the company offers is to bring suit and then prove that your loss was greater. An insurance policy permits recovery only of the value of the car at the time it was stolen. Such value is a question of fact to be determined by a jury. You would have to go into court and prove your actual damage. That is expensive and would probably cost you more than the difference between the amount offered and the amount claimed.

\* \* \*

### Taxes in Farm Sale

Question: Suppose a man should sell a farm after it had been assessed and nothing had been said in regard to the taxes, could the man that bought it make the seller pay the taxes?

Answer: It is our opinion that if the tax has not become a lien on the land the buyer cannot compel the seller to pay such tax. Whether or not it is a lien can be discovered by inquiring of the treasurer of your county.

# The Trouble Maker—By E. R. Eastman

Jim Taylor broods on the hard conditions under which farmers work, but his neighbor, Johnny Ball, believes it is foolish to try to improve them. Johnny's pretty daughter, Dorothy, wonders why her old school playmate is so abstracted and tries to tease him back to good humor.

## CHAPTER II

THE little village of Speedtown laid no claim nor made any special effort to live up to its name. In early times, perhaps, in days when it boasted of a tannery and three saloons, it might have had more speed, but those days were gone, and like thousands of other villages in the farm country, the town's only reason for or means of existence was the business that it lived on from the surrounding farms. The blacksmith shod the farmer's horses, the merchants bought his eggs and sold him his groceries, the feed and implement dealer furnished the supplies for his business, the high school educated his boys and girls, the churches tried, at least, to take care of his spiritual wants, and the village undertaker buried him when the struggle with his acres was over.

The morning, when the farmers came to town to deliver their milk, was the only time in the day when Speedtown showed some real activity. From all of the farms on the hills and in the valleys for a radius of five miles, teams were coming on this June morning of 1916 bringing in the milk. Teams were standing along the main street while the men were in the stores getting something that "Ma" had told them not to forget. Another long line of horses was waiting at the milk station to unload. Here eight or ten men had left their horses, and while they waited their turn, were deep in argument and discussion over the milk situation. In this group were Jim Taylor, and Johnny Ball's hired man, Bill Mead.

"Did you ever stop to think," said Jim, addressing the group in general, "what a whale of a business this milk industry is? When you think of it, we farmers might be proud of the job we are doing in furnishing milk for so many people to drink—and for my part, I would take a little pride in it if we could make a decent living out of it. Twenty-five million cows must be bred, housed, and carefully fed and milked twice a day, three hundred and sixty-five days a year, and the milk hauled to market. I read the other day that the milk from these cows for one year amounts to forty-eight billion quarts, enough to make a line of milk bottles that would reach to the moon eleven times!"

"That's just the trouble," said another one of the men. "We make too darn much milk. If there was a little less of it, maybe we'd get more for it."

"THAT makes me think," said another. "Did you hear about that Dairy-men's League feller over in my neighborhood yesterday? Well, he didn't come to my place, but one of the neighbors was tellin' my wife over the 'phone last night that this League man was tryin' to get him to join the League so that farmers could get more for their milk. Said there'd been a meetin' of the directors of the League up to Albany, or somewhere, and that these directors had decided to set the winter prices of milk themselves 'stead of lettin' the dealers do it."

"That'll mean a big scrap," spoke up one of the older men, "and it won't do no good. The dealers have got all the stations, a lot of money and power, and even most of the milk cans, and the farmers can't even stick together. If we go to fightin' them, all we will get is a darn good licking."

"Maybe you're right," said young Taylor, "but we farmers are gettin' whipped anyway, and I don't know but what I'd rather get licked doing something than just sittin' still and taking it."

"Right you are, Taylor," said another man. "If the milk prices stay where they are much longer, cows are goin' to get

scarcer than snowballs in a July hayfield. Things can't be any worse than they are now."

"They're pretty bad," agreed the older man who had spoken first, "but if you go to foolin' with them dealers, you'll find out that things can be worse."

"Anyway," answered Taylor, "I feel like giving them a run for their money, and if that League man comes around here, I for one will join."

"And so will I," said four or five others in the group.

"LISTEN, boys," said Bill Mead. "One of them there dealers' barn inspectors was up at the Jenkins' place yesterday tryin' to locate somethin' to find fault about. One of them city dudes, he was, and I 'speat about the farthest

From all of the farms on the hills and in the valleys, teams were coming on this June morning of 1916 bringing in the milk

from Broadway he'd ever been. Old man Jenkins was away from home, so the old lady had to go down while the inspector nosed around the cow stable. Now, if you don't know Ma Jenkins, you've missed somethin'. She's a holy terror! Old man Jenkins don't dare say his soul's his own. She's always bein' surprised at people's actions that don't suit her, so up there in the neighborhood folks call her 'S'prize Jenkins."

"Well, that there inspector looked all over the cow stable and everything seemed all right. Never do, though, to let his report go in to headquarters that way. His job was to find fault, and he was goin' to do it if he busted a button. So after he looks the place over once, he starts over again, the old lady taggin' him around, lookin' like a thunder cloud and gettin' more 'surprised' every minute. Finally he came to a box where Jenkins kept his bedding for the stock. The young squirt scooped up a handful, sniffed two or three times, and then turnin' to the old lady, he says, says he: 'I must insist, Mrs. Jenkins, that your husband stop feedin' this grain. It isn't fit for the cattle to eat. It's sour, and it will taint the milk. I am sorry, but I have got to report this carelessness to headquarters.'

"The old lady glared at him a minute and then she snorted, 'You dinged fool, I'm s'prized at you! You don't know nothin'. That ain't feed, it's sawdust!' She said a lot of other things, and the more she talked the madder she got. Finally she stepped back and picked up a pitchfork and said, 'Now, you git.'

"I heard old man Jenkins tellin' Johnny Ball about it, and I guess by all accounts, that fool inspector hasn't stopped runnin' yet!"

THE men laughed and drifted back to their wagons. Jim Taylor climbed on his and drove up in turn to unload his milk.

"What was that you were just saying a few minutes ago about joining the League?" asked Shepherd, the superintendent of the milk station.

"Why, I just said," answered Jim, "that it was about time you milk dealers had a run for your money, and that maybe the way to do it was to join this Dairy-men's League that we hear being talked about these days."

The superintendent glowered at Jim a minute, but made no reply. Then he pulled the cover off of one of Jim's cans, smelled of it, and put the cover back, all without dumping the milk.

"Take that stuff back home," he ordered. "It's sour. You ought to know better than to try to get it off on me. If you farmers would pay a little more attention to your business and a little

eral feeling that Jim had been fighting their cause as well as his. But there was a smaller group of the older farmers who shook their heads and, while they had no sympathy for the dealer, thought that Jim had been unwise and had made a bad matter worse. In this group was old Johnny Ball, Jim's neighbor.

That night at the supper table, with his wife and daughter and the hired man, old Johnny mildly deprecated the whole affair and said that Jim had made a mistake.

To his surprise, Dorothy flew into a rage greater than her father had seen since she had been a child.

"I'm just as glad of it as I can be," she said with glowing cheeks. "That man Shepherd got just what was coming to him!"

"Why, why," said the old man gently. "Why so much excitement, Dorothy?"

"I don't care," she answered, lapsing into slang which she did not ordinarily use. "I wish that Jimmy had knocked that old Shepherd into the middle of next week!"

"My sentiments persactly, Dot," said Bill Mead, "and if you change your middle of next week to the middle of the milk vat, that's just what Jim did do!"

## CHAPTER III

JUNE passed and July came, and with it the long hot days in the hayfield. Sitting on his porch in the cool of the early evening, Jim Taylor could hear some of his neighbors driving into their fields or shouting at their horses, hustling in the last loads of hay. As he listened, he scowled unpleasantly and muttered to himself:

"What fools we farmers are, rushing out after supper to work just as long as we can see, and the longer we work the less we get. Never catch organized labor doing that. Pay and a half for them for overtime, you bet. Some of the farmers can't stop long enough to attend a meeting, even when it's put on Saturday night."

Just then Harry Bradley, the county farm bureau agent, drove up to Jim's house and hailed him, and the two men drove down to the other end of the North Speedtown community to attend a meeting that the county agent had advertised on the milk situation. It was understood that a representative of the Dairy-men's League was going to speak.

When the two men drove up in the battered old farm bureau flivver, they found the little school house jammed with men who, in spite of the heat and their weariness, were there hoping to find some remedy for a situation that had become desperate.

The farm bureau man called the meeting to order and asked for the election of the chairman.

"I nominate Johnny Ball," said a farmer.

"Second the motion," said another.

Bradley put the vote, and Ball was elected and took his seat at the teacher's desk.

"As Mr. Bradley here, our farm bureau agent, called this meeting," said Ball, "we'll now hear what he has to say. I guess he needs no introduction in this neighborhood."

THE big county agent got slowly to his feet. He was an outstanding and striking figure anywhere. Although he was probably the tallest man in the whole county, his great height never gave him the impression of being slim. His long arms ended in hamlike hands. When he walked he seemed to glide, and his head, topped with a mass of brick red hair, taken with his general bigness, left with you a feeling of clean strength and virility. Deep blue eyes, wide set in a boyish face, and mouth which seemed always to be laughing, made for him friends and followers everywhere.

(Continued on page 297)

THE news soon spread all through the township that Jim Taylor had licked the milk dealer. On every hand there were chuckles of amusement and a gen-

# Make Your Vote Count

Be Out Yourself and Help Others Get Out

THERE is now going on a stirring attempt to rouse the women to use their right of franchise. It is a good action, and it is hoped that it will be far-reaching enough to take in the rural women, for they are a class of women that are wanted at the polls. Women have not been as active in voting as was expected they would be, or as they should be. Of course, four years has been a short time in which to fully comprehend the reality of this privilege, its importance, and how best to make use of it. If the importance of voting could be made plain enough, every good woman in the land would be at the polls in this fall election. It is going to be a critical, important election, an election when the people upholding the right principles will be needed there.

### Need for Voters to Appear

There are certain types of politicians, and, sad to say, this kind is in the majority, who see to it that the women with lax principles are made aware of the value of their vote and the necessity of using it. So, thinking of it, it is plain that the good, moral women of the country must inform themselves on political questions and vote, as they see the right.

We are not satisfied with the rottenness of politics. Such a state not only affects us in a general way, but in an intimate way. For it is an absolute truth that every office-holder without exception has a power over the community conditions in which our families have to live. The environments of our growing boys and girls are better or worse, according to the character of the men and women holding office throughout our country. Then why not take the trouble to familiarize ourselves with party platforms, characters of candidates, the principles candidates are upholding, and use the privilege we have to help the best to win out?

It is easy to get a line on office-seekers living in your vicinity. About them with whom you cannot come in personal contact you must read and, perhaps, question. If uncertain about their stand on important issues, write to them, enclosing stamped, addressed envelop, putting direct questions requiring straight answers. Help also may be had from the League of Women Voters. In their literature this League does a great service for women, giving reliable gist of political issues, and being non-partisan, it treats the issues of all parties with the same fairness.

### Do Missionary Work

Beside informing yourself, it would be a great thing to create interest. In groups of women friends, at your club, your Home Bureau, your Grange, turn the talk to politics, not by critical fault-finding, but by giving, and bringing out from others, instructive comment on principles and constructive uses of politics. Impressing at the same time the need of decent people in office and the value of a vote to help. Make it plain that it is not the point whether one approves of Woman Suffrage or not, whether one wants to bother with voting or not; the point is: now women have the vote, have the power to make conditions in the Nation better, it is their business, convenient or not, to do it. To do it, we have got to elect the best kind of people in our town, county, state and at the National Capital. —ELIZABETH M. HOAG.

### A Pancake Picnic for Hallowe'en

THE jolliest picnic is not always the elaborate affair. A club or church society in search of a good plan for an outing in the afternoon might give a nutting picnic on the outskirts of the wood, adopting the pancake plan for refreshments.

For these small gatherings, the "eats" can be much more simple and inexpensive

than for an outing at a distance. Coffee and pancakes cooked on the spot make a supper that is as "filling" as is economical.

If you send out written invitations in advance christen the party a Pancake Picnic. This will excite curiosity and will give an advance hint of the menu.

One might use yellow wrapping paper for the "invites" cutting it to about the size and shape of a big flapjack. Write the invitation in rhyme, giving place, day and hour where the company are to meet.

Following are the necessaries for the feast!

- A large crock of pancake batter.
- Frying pans for all.
- Butter, sugar, syrup, bacon.
- Tin cups, knives, forks, spoons.
- A large coffeepot, ground coffee and cream.

For an evening frolic light the scene with Japanese lanterns, or pumpkin heads swung from the trees. Ask those who play stringed instruments to bring them, and sing the songs which everyone knows, in chorus, around the fire.

### Yours for Only Ten Cents

"THE most fascinating style book you've ever published," says Mrs. G. M. R., Jr., of Oswego Co., New York. We agree with Mrs. R., who found in her copy of the new Fashion Catalogue "enough designs to keep me sewing all winter." She completely outfitted herself, a young high school sister, an eight-year-old daughter and a four-year-old son from its pages, and made her husband some shirts and pajamas too!

You may not have as large a family to sew for as Mrs. R., but you have one person at least to please—yourself—and possibly others. Ten cents is a mighty small amount to pay for the smart style insurance a book of AMERICAN AGRICULTURIST designs will give you. Send five 2c stamps and it goes by return mail. Address, Pattern Department, AMERICAN AGRICULTURIST, 461 Fourth Avenue, New York.

### An Up-to-Date Bathroom \$60

# A Page About Clothes

Whether You Make Them New or Mend Old Ones

THE old adage, "A stitch in time saves nine," can be worked in two ways to reduce the high cost of living. If a garment is mended before it is beyond repair, it increases its life, and by preserving the clothing already on hand, you do not have to spend so much to replenish your wardrobe.

Classify, or grade your mending. In the first group, place the really good articles that require only a stitch or two, or have met with some accidental injury. Example—a shirt with a pulled-out shoulder seam, or a good petticoat with torn lace.

garment so thin it will scarcely hold the patches, whereas you are justified in spending a good deal of time on one garment that is thereby made as good as new.

Immediate attention to rips, sewing on loosened buttons and hooks, reworking buttonholes, and "preventive" darning will help to prolong the life of a garment. "Preventive" darning consists of reinforcing a worn place with rows of fine stitches or by laying a piece of cloth under it and darning it down. This is a good way to treat hose and sox.

To actually preserve and lengthen the life of a garment it must above all be kept

## FALL STYLES FOR ALL AGES AND PURPOSES

No. 1758. To look slim, wear well-fitted underclothes. This corset cover makes the best of the full figure. Sizes, 36, 38, 40, 42, 44, 46, 48 and 50 inches bust measure. Size 40 takes only 1 yard 40 inch material. Price 12c.

Two cunning styles for either a girl or a boy are Nos. 1255 and 1124.

No. 1255. One-piece pajamas, in sizes 2, 4, 6, 8, 10 and 12 years. Ideal for winter wear in outing flannel. Size 8 years takes 2 3/4 yards of 36-inch material. Price 12c.

No. 1124. Raglan coat for tweed, wool rep or other warm material. Easy for mother to make, comfortable for the child to slip on. Sizes 2, 4, 6 and 8 years. Size 4 takes 1 5/8 yards of 44-inch material. Price 12c.

No. 1797 is a simple little school frock for the growing girl. The diagram shows how little sewing it requires. It cuts in sizes 6, 8, 10, 12 and 14 years. Size 8 take 1 3/4 yards of 36-inch material. Price 12c.

No. 2247 adapts in our famous "diagram dress" the pretty new cape back and tucked waistline. Charming for dressy wear. In sizes 14 and 16 years, 36, 38 and 40 bust measure. Size 36 takes 3 5/8 yards 36-inch material. Price 12c. Hot iron transfer pattern 726 in blue or yellow, 15c extra.

The Wasteless Apron! No. 2204 cuts all in one and the pockets and belt come out of the scraps left over. You can get the entire apron out of 1 1/2 yards of 36-inch material. Sizes small, medium and large. Price 12c.

TO ORDER: Write name, address, pattern numbers and sizes very clearly, enclose correct remittance and send to Pattern Department, AMERICAN AGRICULTURIST, 461 Fourth Avenue, New York City.

In group two, place articles that are beginning to show wear, but will still give considerable service. These deserve neat mending, though not such careful work as group one.

In group three place garments that are worn thin, yet too good to discard. Run up a tear in a morning dress as quickly as possible, rip the collar off a frayed work shirt and sew it in again other side out. With heavy heelless socks, sew on a patch, and reserve them for wear with the heavy boots later in the season.

### When It is Wise to Make Over

Shall we make over? The advisability of doing this depends upon the material. Good silk or wool is always worth using again. A discarded gingham morning dress will make a useful morning petticoat. The secret of all successful and sensible mending lies in the wise judgment of your materials. It certainly is not sensible to spend valuable time mending a

clean. Use a stiff brush for woolen goods, a soft one for silks and velvets. Use a good cleansing preparation for spots and stains. Preserving the shape of a garment prolongs its life. Anyone can learn how to press. Woolen clothing should be covered with a damp cloth, and pressed with a moderately hot iron, until nearly dry. If the cloth is absolutely dry, one is likely to have a shiny garment. Hang a silk dress over a tub of steaming water some time, instead of pressing so often. After wearing thoroughly, air your garments and they will look better, feel fresher and last longer.

Good judgment shows in the mending basket as quickly as anywhere in the house.—MABEL FERN MITCHELL.

Use the garden hose for rinsing blankets and rugs on the line. Blankets will dry without wrinkles. Rugs should first be scrubbed with ammonia and water. Use a brush for that work, then rinse.

## The Whole House Warmed by ONE LITTLE HEATER

Every room in an average sized house, with or without a cellar, can be kept warm by a 'RadiO' Hot Water Radiator Installation. And the coal will cost less than for stove heat for one room. 'RadiO's' downdraft draws smoke into the fire—greatest heat with least coal. Burns stove or nut sizes of hard coal and feeds automatically. Handsomely designed—gives the appearance of luxurious open hearth fire. Easy to install. Hundreds of homes kept warm by the moderate priced 'RadiO'.

SELF-FEEDING Needs coal only once every 12 hours

Write for Illustrated Folders.

# SAW LOGS AND FELL TREES THIS QUICK, EASY WAY

**WITTE Log-Saw Does the Work of  
10 Men at 1/20 the Cost—  
Saws 25 Cords a Day**

You can clear your place easily and quickly with a dependable log and tree saw that delivers a big surplus of power necessary to fast sawing.

Such an outfit is the Witte Log-Saw which has met such sensational success. The WICO Magneto equipped Witte is known as the standard of power saws—fast cutting, with a natural "arm-swing" and free from the usual log-saw troubles. It burns kerosene, gasoline or distillate so economically that a full day's work costs only twenty-two cents.

Hundreds of Witte users make big money every year from their outfits, as payment for felling trees and sawing logs is very good.

Wm. Middlestadt, Iowa, reports that the Witte has replaced forty men using buck-saws. Hundreds of users saw as much as twenty-five cords a day.

Mr. Witte says that the average user of a Witte Log and Tree saw can make easily \$50.00 a day with the outfit and so confident is he that he offers to send the complete combination log and tree saw on ninety days' free trial to anyone who will write to him. The prices are lowest in history and under the method of easy payments spread over a year, only a few dollars down puts the Witte to work for you.

If you are interested in making more money sawing wood and clearing your place at small cost, write Mr. Witte today at the Witte Engine Works, 6806 Witte Bldg., Kansas City, Mo., or 6806 Empire Bldg., Pittsburgh, Pa., for full details of this remarkable offer. You are under no obligation by writing.

# Reviewing the Latest Eastern Markets

## MILK PRICES

The Dairymen's League Cooperative Association announces the following prices the dealers will pay the League during the month of October for milk testing 3 per cent. in the basic zone of 201-210 miles from New York City: *Class 1*, milk used chiefly for fluid purposes, \$2.60 per 100 pounds; *Class 2A*, used chiefly as fluid cream, \$1.90. If skim-milk is used for any other purposes, additional payment over this base price is added, depending on use. *Class 2B*, used chiefly in the manufacture of plain condensed milk and ice-cream, \$2.05; *Class 2C*, used chiefly in the manufacture of soft cheese, \$2.05; *Class 3*, used chiefly in the manufacture of whole milk and sweetened whole condensed milk, powdered and evaporated whole milk, \$1.45; *Classes 4A and 4B*, based on butter and American cheese quotations on the New York market.

### Sheffield Producers

The Sheffield Farms Company Producers announce the following prices for October for 3% milk in the 201 to 210-mile freight zone until further notice; *Class 1*, \$2.60 per 100; *Class 2*, \$1.70; *Class 3*, \$1.55; *Class 4*, to be determined by market quotations of butter and cheese.

### Non-pool Cooperative

The Non-Pool Dairymen's Cooperative October price for *Class 1* milk is \$2.40 per 100 pounds; *Class 2*, \$1.85; *Class 3A*, \$1.55; *Class 3B*, \$1.45, until further notice.

### Interstate Producers

The Interstate Milk Producers' Association (Philadelphia Price Plan) announces that receiving station prices, or the price to farmers in the 201 to 210-mile zone from Philadelphia for 3% milk is \$2.19. In the 101 to 110-mile zone the price is \$2.29.

### September Pool Prices

The Dairymen's League announces that the September gross pool price for 3% milk in the 201-210 mile zone, is \$1.93. From this there will be deducted 8 1/2 c for expenses, which leaves \$1.84 as a net pool price. There will also be deducted 10c on the certificates of indebtedness which leaves a NET CASH price to the farmer of \$1.74 1/2. The NET CASH price for August was \$1.53 1/2. The NET CASH price for September, 1923, was \$2.10.

## BETTER TONE TO BUTTER

During the week ending October 18, the butter market took on a decidedly better tone and prices advanced. Creamery, scoring higher than 92 score, is now selling in the neighborhood of 40c while 92 score butter is selling between 39c and 40c. However, this improvement is more or less restricted to these finer grades. The market still feels the heavy pressure of excessive stores of medium grades and lower qualities. As a consequence the range of offerings is widening and indications are that this is going to continue.

As a whole there seems to be a more optimistic feeling in the butter market. Reports indicate that the consumptive demand is fairly large and is showing enough force to keep the arrivals of fancy marks pretty well cleaned up. The sore spot in the market is in the lower grade goods. There has been some hopes that England would furnish an outlet for these medium grade goods, but it develops that such is not the case. Europe offers an excellent outlet for fancy American butter and such is selling well on English markets. Lower qualities are dragging heavily and the trade in New York is strongly advised by those who know, not to attempt to merchandise anything but the finest stock abroad.

The chain stores have been a decided factor during this week in maintaining an active market. These chain stores have been buying heavily and with the regular jobbing trade showing considerable activity in the face of good consumptive demand, the market has taken on a firmer tone. Receipts have been sufficient to meet current needs so that any hopes for a shortage of arrivals and a consequent drawing on storage has not materialized.

## CHEESE MARKET STILL QUIET

The cheese market continues to drag along the same as it has for the past several weeks. Trading is inactive and a dull tone prevails. The market seems to be turning somewhat weaker. Average run fresh New York State flats can be bought anywhere from 18c to 19c and it is pretty hard to get over 20c for real fancy goods. Held flats in general are a cent higher all along the line, compared to fresh stock.

## EGGS TAKE BIG JUMP

Fancy nearby eggs are actually scarce and competitive bidding has resulted in much higher prices. The very fanciest Jersey and other nearby hennery whites, extremely closely graded, are bringing anywhere from 76c

to 82c, depending on package and general quality. Nearbys that grade only as firsts are bringing from 55c to 62c, while extra firsts and average extras vary from 64c to 75c. Nearby gathered whites that grade anywhere from firsts to extra first bring 55c to 69c. Even "undergrade whites" are bringing 45c. Pullets known as "pewees" or tiny eggs, are bringing 35c to 40c. It is a good plan to keep those eggs home. At any rate in view of the present market, a man is following a very poor policy if he tries to slip any small eggs into a real fancy crate. In other words, a half-dozen pewees or small eggs will pull down the price of a case of average whites say from 65c to 70c to as low as 45c or 50c. When the trade begins to bid against itself and prices get where they are now, buyers are very discriminating. But when a man has got the goods, he gets the price.

The strength of the market is chiefly on very fancy goods. There are ample intermediate and lower grades to supply the demand. From that it may be seen that the quality man has got things all his way at the present time.

## LIVE POULTRY MARKET STEADY

The live poultry market is holding fairly steady, although prices are not quite as strong as they were a week ago. It must be a very fine consignment to bring 32c for fowls. Most business is being done at a slightly lower figure. However, real fancy goods, colored will bring the price. White Leghorn fowls are not doing nearly as well. In fact they are selling slowly. Express chickens are in the neighborhood of 26c and 27c for colored stock while Leghorn roosters are 1c to 2c lower. Supplies are ample, the freight market bringing in ample supplies to meet the demand with some accumulations in some quarters. This has a tendency to put a slight damper on the express market.

## GRAINS AND FEED

According to New York State Department of Farms and Markets, the following prices prevailed October 11.

The quotations given in this report show the approximate prices at which feed can be purchased per ton, and grain per bushel, in straight carlots through billed from Western points, delivered on track at points in the freight zones as indicated. Mixed carlots cost approximately \$2 per ton more.

Retail feed and grain prices vary with different local dealers depending upon their individual cost of doing business, volume handled, etc. In the case of feeds the retail price may sometimes be as high as \$5 per ton above the wholesale prices given in this report.

Since Buffalo is an important milling center for wheat feeds and linseed meal, quotations are given for this point on both a through-billed and a local basis. No. 2, White Oats —; No. 3 White Oats, 57 1/2; No. 2 Yellow corn, \$1.24; No. 3 Yellow corn, \$1.23; Ground oats, \$40; spring wheat bran \$27.50; hard wheat bran, \$31.50; standard middlings \$30; soft wheat middlings \$35; flour middlings \$36; red dog flour \$42; dry brewers grains —; white hominy \$43; yellow hominy, \$43; corn meal \$49.75; gluten feed \$44.75; gluten meal \$56.75; 31% old process oil meal —; 34% old process oil meal \$48.50.

For points taking New York rate add to Albany price 1/2 cents on oats; 5/8 cent on corn, 10 cents on cottonseed meal; and 20 cents on other feeds.

## POTATOES VERY CHEAP,

Potatoes are the cheapest in years. Maines are offered at \$1.05 per hundredweight deliveries in New York. Freight is 65c which leaves 40c to the grower from which he must deduct loading charges. The best price offered on States is 30c to 35c per bushel, while Long Islands are bringing 60c to 65c to the grower.

## HAY MARKET QUIET

Nothing exciting is going on in the hay market. Arrivals have been liberal both via rail and water. As a matter of fact it looks as though a little weakness is developing. Top quotations are a little hard to get. \$26 seems to be about the top price on No. 2 hay and while No. 1, which is scarce, will bring \$27 and \$28 at the outside. Small bales in general are at least \$1 a ton under large bales.

## LIVE CALVES STEADY

The live calf market has had a steadier tendency of late. Real fancy prime veals are worth anywhere from \$14 to \$14.50 with offerings ranging down to \$8.50 for common stock

and culls will bring anywhere from \$7 to \$8. Anything that is fair to good will bring from \$12.50 to \$13.50.

## What Consumers Pay For

(Continued from page 280)

A very large proportion of our national egg yield is placed in artificial refrigerators during the spring months of peak production and are taken out when the hens have their vacation in the fall. Cold storage eggs are just as good as fresh eggs for many purposes and yet one can hardly buy them in retail stores. Eggs are either "fresh" or "strictly fresh" or "New Laid."

# October Chicken Chatter

## It Pays to Ship Good Poultry—Opinions on Pullets

THE live poultry market in New York City has been through rather a hectic period. The recent Hebrew holidays called upon the market for heavy supplies of live poultry. It was an opportunity for the man who had a lot of surplus stock to unload. When anything is in real demand, that is the time it is usually wise to sell, but everybody didn't get the high prices they expected. Some fowls and chickens didn't sell as it was hoped they would and the reason is very apparent.

Just because a commodity is in demand, it doesn't mean that anything and everything will be acceptable. Holidays usually have something of a psychological effect. The holiday spirit induces a little more inclination to luxury and consequently folks tend to buy more choice commodities. And this is just what happened in the poultry trade. During the Jewish holidays, prime poultry was in demand and it brought real fancy prices. Fancy fat fowls sold as high as 32 cents and there was not what one could call an over-supply.

On the other hand, common and ordinary stock was a drug on the market. Poor leghorns were so plentiful that prices had to be slashed in order to move stock; as low as 15 to 19 cents. This mediocre stock would have sold fairly well a few weeks earlier, but to try to get rid of it during the holiday trade is the height of folly. Where leghorns had been fattened and primed they met a fairly good outlet, but common stuff was absolutely side-tracked as far as any price was concerned. It will be sometime before another holiday shows up when so much poultry will be consumed, but right now is the time for the express shipper to study the lesson that has just been taught. It pays to feed poultry for market at times like those mentioned about. Fitting pays.

### Spray Poultry Coops

EXPRESS shippers of live poultry who have been sending live poultry into New York City, may well take the precaution of spraying their shipping coops before using them, after they have been returned from the city. There seems to be quite an epidemic of poultry disease which looks like pneumonia and at other times has the symptoms of chicken cholera. This disease is prevalent in freight arrivals from western States, such as Illinois and Iowa. However, there is the possibility of crates coming in via express becoming infected through contact with these western arrivals. If you are shipping any number of birds, it is a good plan to spray your coops with an ordinary disinfectant before filling for reshipment to the city.

### Favors the Pullet

THE views of poultrymen are apt to change with the seasons. Just now, with a goodly proportion of the hens still laying and the pullets either not laying at all or laying very small eggs, I might at first reading agree with the writer of the article which claimed that hens were better than pullets. But looking backward to winters that have passed I find that the years the pullet coop was small, the winter egg basket was very light indeed, and I am never so anxious to find eggs in the nests as I am then.

The older hen may lay nearly as many eggs as the pullet but they are apt to be mostly 20 cents a dozen eggs. I would not go the length of killing all but the breeders every year, but I do believe in a good weeding out in the summer of all hens who are not up to standard. There are hens who continue to lay well but have some fault we do not like. They can be kept till they have finished laying and then go into the bean jar, my favorite place for cooking hens.

Pullets have another good point about them. They are very easy to sell in the fall. I got \$36 for 20 a few weeks ago and I am sure they did not eat as much as the three pigs my husband sold which brought about the same price. I do not think I could have sold hens as easily. They are usually looked on with suspicion, either they are poor layers, or aged.

When pullet eggs can be sold for 32 cents a dozen with hens at 45 cents, does it pay to use pullets' eggs at home? I have come to the conclusion that it does not. When I started keeping hens I was ashamed to sell the small eggs, but with the larger flock I have quite a quantity and I think now it pays to sell them and use hens' eggs for the house.—Mrs. T. THOMSON.

### Hens in Preference to Pullets

ADDIE GRAVES hits the nail squarely on the head when she writes in favor of the hen. We always tried to raise enough pullets to keep our flock around 100. Some years we had 120 and they ranged from pullets to three- and four-year-olds and we knew that they did full better than the pullets. One of the older hens stole her nest. We kept her with others at another barn and did not want her to mix with those at the house. But we had to take her and her thirteen chicks home and care for them. Long before she weaned those chicks, she began laying in the loft of the granary, but still roosted in her coop with the chicks. We thought that when she was "laid out," we would take her back where she belonged. But she kept on laying until she laid forty-two eggs and then a severe snow-storm came and we had to remove her home, so we never knew how many more she did lay. Hens require care and lots of it and we kept our hen-houses clean and had no mites or lice. Fowls with lice cannot lay as the lice and mites sap their very life and strength.

We used kerosene on the roosts and on the sides of the hen-houses where the fowls touch when on the roosts, also saturated the nests with it. We did this once each month, the year around. We also used freshly slaked lime under the roosts and fine coal ashes all over the floors. Since we began using these things regularly each month, and cleaning out all the refuse, we have never been troubled with the mites or lice. I used an old sock drawn over my hand and wrist to sop on the kerosene.—Mrs. DANA BURCHARD, Tioga County, N. Y.

### The Farmers' Interest in Government

(Continued from page 283)

the State that may favor other classes or groups as opposed to agriculture.

As citizens, we have but one duty with respect to our government, and that is to serve it unselfishly. There is relatively little that the State can do for us, but we can do everything for the State. This is the course that must be pursued if we are to maintain the freedom of action and thought and purpose that has animated our finest eras of progress in the past. Other governments have resorted to paternalism, and the rights of the sovereign citizen have been greatly impaired. Our purpose has been in the other direction, and we must keep it so.

### The Trouble Maker

(Continued from page 293)

His leadership, ability and personality had sold the farm bureau and the college extension movement to the doubting farmers, and even those who had little respect for science in agriculture, for which young Bradley stood, were nevertheless always glad to see him coming.

In a plain, matter-of-fact voice he began to talk.

(Continued next week)

# If you want a healthy productive flock—make sure your birds get the nourishment they need

"I have used Fleischmann's Pure Dry Yeast for a period of four months," writes Burton Steere, of Springfield, Mass. (One of his yeast-fed flocks is shown here.) "The birds showed a higher egg production than in previous years."

"We are now using Yeast in all houses," writes T. S. Edwards, of the Lone Oak Poultry Farm, at Babylon, L. I., where these fine yeast-fed birds were raised, "and have placed a standing order for 24 packages a month, which bespeaks our faith in Fleischmann's Pure Dry Yeast."

"Ever since I started feeding Yeast," writes H. Borden, of East San Gabriel, Calif., owner of these fine yeast-fed birds, "my flock has been in a very healthy condition. Mortality has been nothing to speak of."

**POULTRYMEN** have long sought for something that would benefit the fowl throughout its life—

Something that would lower mortality and promote growth, bring growing birds into early laying, keep egg production constantly high, shorten the moulting period, and invigorate the birds so that their eggs would be fertile and hatchable.

Now they have found it.

As soon as Fleischmann's Pure Dry Yeast, dissolved in water or milk, is added to the feed, it begins at once to ferment. It acts upon the feed in a way similar to digestion itself, breaking up the hard, tight-packed granules of the grain (which must be broken up before they can be digested)

and making them ready for quick absorption.

It makes it easier for the fowls to turn their food quickly into sound flesh, bone, and energy, and so keeps the flock at a high point of healthy productiveness the year round. Successful poultrymen everywhere are making it a regular part of the ration. They would no more omit it from their feeding program than the grain itself!

Fleischmann's Pure Dry Yeast can be bought in 1 lb. or 2½ lb. packages, 25 lb. cartons or 100 lb. barrels. It will keep indefinitely. Full directions in every container. Your dealer should be able to supply you. If not, order direct from us. Transportation charges prepaid.

## Now—this trial package for \$1

So you can thoroughly test for yourself the amazing results of Fleischmann's Pure Dry Yeast, a special trial package is now ready. One dollar brings it to you. Enough Yeast to ferment the feed for 100 hens for a month and a half or 5 pigs for 20 days! Send today—enclose check, cash, or money order with the coupon below.

### To the dealer:

Progressive retailers the country over have stocked Fleischmann's Pure Dry Yeast—to supply the fast-growing demand for this remarkable food adjunct. Poultrymen and stock-raisers who can't get it from their dealers send their orders direct to us by the hundreds. You should be getting your share of this business! Be the first in your town to have it on your shelves! Send today for our plan of cooperation. It shows how you can add to your profits with Fleischmann's Pure Dry Yeast!

# \$1,000,000 Lumber Sale

## at Camp Meade and Camp Dix

**Largest  
Stocks of Pine  
Lumber in  
Eastern  
U. S.**

**\$648-**  
Buys the Lumber  
and Sash for  
this 36'x40'  
Barn

**Blueprints FREE on  
Request for Any  
Building Design  
Shown on this Page**

### Selected Lumber at Lowest Prices:

**\$150 BUYS THIS 29x40  
BARN MATERIAL**

Most practical and economical barn ever designed. Price includes all lumber and sash complete. Also 29 x 80 at \$279; 29 x 110 at \$379.

**\$219 BUYS THIS 20x30  
Pemberton Bungalow**

Extremely popular design, 3 or 4 rooms and bath. Large porch. Price includes all lumber, doors and sash. Many other house designs in our catalog.

**\$477 BUYS the MATERIAL  
for this 2-Story Home**

The Dixmeade Home. Size 20 x 36. Price includes all lumber, doors and sash. A big value!

**\$75 BUYS THIS 12 x 25  
POULTRY HOUSE**

A standard poultry house design. Price includes all lumber, sash and doors, also material for roosts and nests. Also 12 x 50 poultry house, same design, for \$135.

The biggest yellow pine lumber sale in the United States is now right at your door. Think of 120 acres of selected lumber in piles 20 ft. high. 40,000,000 board feet of the best building lumber. Every kind and size needed in building—2x4, 2x6, 2x8, etc., flooring, drop siding, sheathing, dressed and matched, joists, rafters, etc. From gigantic Camp Meade and Camp Dix. Every piece of lumber is selected, sound, clean and bright. Every order filled from our mammoth stocks is exactly as specified as to size, length and full count. No waste! We sell any quantity for quick delivery—no delays! **BINDING GUARANTEE OF SATISFACTION.**

**SAVE \$200.00 to \$500.00 ON YOUR BUILDING  
GET OUR FREIGHT PREPAID ESTIMATE ON YOUR MATERIAL**

No matter what kind of building or material you need, get our figures before you buy a thing! Just send us your own sketch or description of what you want. Tell us size and number of rooms in your building and our expert estimators will send you itemized list and lump sum prices for all materials, **FREIGHT PREPAID.** If you can, make up your own list of materials and send it for our estimate. No obligation! Our materials enable you to build at lowest cost without sacrifice of quality. Our select yellow pine lumber is stronger, more durable and better seasoned than most building lumber now being sold at much higher prices. And when we say "select" we mean just that! Every piece of lumber shipped to our customers is selected stock. We do not ship lumber "as it comes" or "as it runs." Dollar for dollar, we give you the lowest prices in this Decade on good, sound, selected lumber.

#### COME TO THE CAMPS

**We pay your R. R. Fare and Expense**

Seeing is believing! See this lumber with your own eyes. It's easy to come to Camp Meade or Camp Dix. Excellent automobile roads lead to both camps. Or come by railroad. Camp Meade is near Baltimore, Maryland. Camp Dix is near Trenton, New Jersey. We invite you to come to either camp and figure with us. You can select your materials right on the grounds. If you buy a minimum carload of materials from us we will allow your railroad fare and expenses to the camp.

#### We Ship as Far as 700 Miles and Still Save You Big Money

We have already shipped thousands of orders to all parts of Pennsylvania, Ohio, New York, New Jersey, Maryland, Delaware, Virginia, West Virginia, Connecticut, Massachusetts, New Hampshire, Vermont, and many other states. Get our freight prepaid prices for convincing proof that we can ship anywhere in the East and still save you 1/3 to 1/2. If you live within 100 miles of either Camp we can deliver right to your premises by motor truck at small extra cost.

**WARM AIR  
FURNACES  
\$40 WORTH \$120  
NEW**

High grade warm air furnaces made by leading manufacturers. All parts complete. Can be used as pipeless or pipe furnaces. Also large number of heating stoves known as egg stoves or pot stoves. Prices from \$8.00 up.

**6-Light SASH  
95c EACH**

These sash are extremely well made with rabbetted joints. Each light 10"x15" with glass, already in. Worth \$1.75 new. Our sash just as good as new. Just the thing for poultry houses, barns, sun porches, etc.

**Galv. Roofing  
\$350 Per 100  
Square Feet**

High grade galvanized sheet steel. Random sizes from 36"x40" to 36"x80" and larger. Heavy stock from 18 to 22 gauge. Clean and bright. Suitable for roofing or general sheet metal work.

#### Cooking Stoves

Stove illustrated is 36" wide by 52" long, with good baking oven, and sound condition throughout. Regular \$95.00 value if new. Many other styles in stock.

**\$35**

#### Water Closets

Low tank closet outfit. White vitreous china bowl and tank. Wash down syphon action. Full description in catalog.

**\$1350  
AND UP**

**Tank  
560  
Gallon**

**\$47 Look  
Like New**

48"x72", for hot water heating supply or for gasoline, oils, etc. Worth \$90.00 new. First class condition.

#### Hundreds of Bargains Illustrated in our catalog

Our free catalog illustrates hundreds of bargains in plumbing, heating, electrical supplies, pipe, valves, refrigerators, building material of every kind. Simply mail coupon at right for your free copy. Enclose letter stating what materials you want and we will quote freight prepaid prices. Get catalog first if you wish, and then come to either camp to purchase. Or order by mail direct from this ad with security.

# Hunting the World Over for the Ideal Forage Crop

*But the Average Farmer Must Go Slowly with New Crops Before They are Well Established*

By U. V. WILCOX

THOSE who are these days following closely the work of the scientists of the Government, men who, little known and poorly paid, are giving life service for the farmers and the tables of America, could well glory in the painstaking effort that is found in the development of just such common things as forage crops.

For instance, a plant that digs a hole and deposits therein its own seeds is now being developed by a series of experiments at the farms of the Department of Agriculture. The Bureau of Plant Industry is attempting to find a more suitable forage crop that will be greater value than the various kinds now grown.

## The Subterranean Clover

One plant that has thus far proved of value in this experimental work is the subterranean clover, and if certain difficulties can be overcome in its culture it will be a boon to farmers in many parts of the United States.

It is this so-called subterranean feature that recommends it so highly—its ability to plant its own seed—a self-sowing plant. Once sown the farmer never has occasion to sow it again, as is necessary with nearly every other type of forage.

With subterranean clover, once the seed pods are formed, the stem bearing them starts to bend and in a few days reaches the surface of the ground. But instead of running along the ground as most plants of that sort do, this strange clover plant continues the downward growth with such force that if the soil is reasonably soft, a slight excavation is made into which the ripe seed is dropped. All other varieties of clover depend upon the seed dropping and finding its way by chance into the soil, thus perpetuating themselves. There is always a great loss of seed, for but a small portion finds its way into friendly soil.

A species of subterranean clover is fairly common throughout many sections of Europe, and is found as far north as Ireland, according to Dr. A. J. Pieters, agronomist, in charge of clover investigations. In Europe its growth is usually abundant and it makes an excellent feed for stock. It is because of these qualities plus its ability to

easily perpetuate itself that plants of that nature are being experimented upon by government scientists.

When first brought here and attempts made to domesticate it and acclimate it, there seemed to be some reason why it did not grow well, probably because the sections chosen experienced some chilly weather. But at the experimental farms at Arlington, Virginia, under the care of the scientists, this strange clover has survived winter and summer weather and now shows splendid promise for being one of the best forage crops that the farmer can obtain. Efforts are now being made to obtain a stock that can be adapted to all sections of the United States.

## Hunting the World Over for Clover

The clover plant in its many species is the farmer's forage standby, and the Bureau of Plant

This is the appearance of the Korean cloverlike plant—*Lespedeza stipulacea*—upon volunteer growth. This plant measured 3 feet 8 inches across. It offers nearly ideal forage.

Industry is looking the world over for the best obtainable that will suit climatic conditions on American farms. To this end, and in pursuit of the ideal, parts of the Orient have been searched.

It is interesting right here to note that foreign missionaries and commercial travelers and those

who are serving various interests abroad often lend their services to the Government and send in of their finds. Many times the seeds or plants found are not of special value, but now and then they may prove to be a real agricultural bonanza.

Back in 1919 Dr. Ralph G. Mills of the Severance Union General Hospital at Seoul, Chosen (Korea) sent in to the Office of Foreign Seed and Plant Introduction a package of lespedeza seed, which he thought might be of value.

According to the regular routine of the Department this seed was given a serial number and investigated. In this instance it was planted at the government experiment farm at Arlington, Virginia, in 1921, and found of great potential value.

To-day experiments are in progress with this Oriental cloverlike plant which also helps to perpetuate itself, due to the fact that the seeds do not form in bunches at the end of the stems, but occur at intervals along the main stalk. Even if it is mowed within an inch of the ground there are certain to be seeds left on the remaining stem to cause the plant to grow again without the need of a fresh sowing.

## Saving the Farmer's Time

Science is thus making easier for the farmer in self-perpetuating forage crops that once given a chance will just keep on growing year after year for the benefit of stock and for the benefit of the farmer's bank account and thus for the increasing of the nation's wealth.

Unlike the subterranean clover this Korean lespedeza seems to thrive somewhat farther north, however, not as far north as was hoped. Of the two varieties brought over from the Orient, one from Japan and known as lespedeza striata and the other from Korea and known by the scientific name as lespedeza stipulacea, the Korean plant has the very practical advantage of ripening its seeds fully two weeks earlier than those of any other kind of clover now grown in this country. That gives the plant an opportunity to get its seed started before the soil becomes too cold.

Here then are three clover-like plants. One brought from southern Europe and two from the

# This Farmer Says Bank Credit Not Practical

*Answer Says Cash Stores Are Rapidly Increasing*

REFERRING to issue of September 6th, the editorial, "What Credit Costs the Farmer," either local conditions are different than what you describe, or I fail to see the point.

Locally, I can buy a mowing-machine, an axe, a barrel of flour, a ton of feed or have a horse shod on credit for the same price as though I paid cash. The credit time is not limited, though eventually one has to pay. In what way would it be cheaper to pay cash? If anything, it would appear to be cheaper to ask credit, for one has the use of their money for a period of time from two to six months.

As to borrowing from the bank, our local bank will not loan a dollar without an endorser, regardless of standing in community, and will not loan on real or chattel mortgage, and we do not always wish to tell a third party our business, ask a friend to endorse, or ask a person to endorse our note without recompense, especially as we do not see where we can save any money by so doing. Please set me straight.—E. F. W., Oneida County, N. Y.

\* \* \*

## Mr. Myers's Answer

I THINK it is very doubtful if it is true in many regions that a farmer can buy a mowing-machine as cheaply for credit as for cash. A few months ago I had occasion to buy one and at that time the price for cash was \$80 or \$85 for credit. If I obtained credit I paid \$5 and in addition paid

6 per cent. on a larger amount. If I obtained the credit for six to nine months the cost would be \$5 plus 6 per cent. or about 12 to 15 per cent. per year.

In feed stores it is more generally true that the same price is charged for cash as for credit. If that is true with Mr. Wilson's local store then

ods or be forced out of business. There is only one sound way of merchandizing feed or anything else and that is to sell cheaply at the car door for cash, adding margins to cover the cost of any additional services that are required, such as credit, delivery, or warehousing. There is no sound reason for charging the man who gets his feed at the car door and pays cash for it for services he does not want, does not get, and does not want to pay for. Give every man the services he wants and charge him the costs of these services. That is the only sound way of merchandizing.

More and more the cash grocery stores, department stores, and other sorts of stores are making their way into the small country communities. These cash stores are the outstanding commercial development of the past decade. They have made fabulous profits but they have sold cheap for cash. It is an unusual condition indeed if your correspondent does not have cash and carry grocery store within easy driving distance from his home from which he can buy his groceries on a cash basis. When people begin to realize more fully the costs of store credit the trend towards sounder merchandizing methods will be accelerated. You will remember that our friend Mr. Boyce of the Boyce Feed Company of Attica said that the G. L. F. was a good thing for the feed business in that it was forcing feed dealers to put their credit on a sounder basis,

(Continued on page 306)

## A Letter and Its Answer

A FEW issues ago we printed an editorial saying that farm credit at the feed dealer's or other stores costs from two to three times as much as it should and that the place to get credit is at the bank. Last week Prof. W. I. Myers of the Department of Economics and Farm Management of the New York State College again discussed the subject of cash at the feed store and credit at the bank.

In answer to our editorial, a farmer wrote a letter, which we are printing on this page, raising some practical objections to our suggestions. This letter is answered by one from Mr. Myers. You will be interested in these discussions on one of the most important farm problems.—The Editors.

the thing to do is to go to some store that will give a discount for cash. If there is no store that will give a discount for cash, then the farmers in that community should get together and select a car-door pooler to handle feeds and get their feed more cheaply for cash.

If dealers continue this practice of charging everyone for credit whether he gets it or not they should get this kind of treatment. Eventually, these dealers will be forced to change their meth-

## A Bird's-Eye View

An Autumn Glance at the Greatest Business in the Greatest Country

By A. B. GENUNG

United States Department of Agriculture

THIS is a big country. What a marvelous panorama, could one but get into an airplane and go high enough to view it all. The hill country of the East, studded with cities set in a pattern of dairying, hay, potatoes, fruit, and truck crops that go with the urban East. The rolling South with its pine forests, its endless fields of cotton, its warm-country crops. The magnificent Corn Belt, flat, fertile—the Nation's agricultural heart. Farther west, the Wheat Belt—a two-thousand-mile strip of plains, irregularly carpeted now with pale stubble or the brown of newly planted land. Then the vast, sweeping ranges of the Rocky Mountain country with its great valleys into which whole empires might be dropped—itsself an empire of grazing cattle and sheep. And beyond all the Pacific Coast, self-contained, diverse, boundless in its resources. No agricultural picture like this, the world over.

Go into the South this fall and you will be impressed with its prosperity. Last year went a long way to wipe out the pressing burden of indebtedness. Another cotton crop bringing one and a half billion dollars cash, plus a fairly good season with truck crops, potatoes, rice and small fruits will put the South into very comfortable position. General sentiment through the region is distinctly optimistic.

In the East, meaning essentially the dairy and diversified region, things are not materially different from last year. Dairymen are beginning to feel the pressure from higher prices of grain feeds. Milk prices have stayed at rather discouraging levels; butter, however, has held pretty well to a price level which maintains production. Through the market milk sections there are apparently fewer heifer calves than a year ago, indicating a probable tendency toward somewhat lighter production. The East is in good shape as to feed crops, that is hay, silage corn, and oats; and it is doing fully as well as last year with the leading money crops such as potatoes, apples, etc. Altogether, the East is going into winter on about the same basis as the last two years. The prevailing frame of mind among farmers is rather static. Men find little to be enthusiastic about.

In the Corn Belt, farmers are in better spirits than for four years—not so much from any great increase in income as from a feeling that the stage is being set for better times. At last the hog situation is coming out from under its burden of overproduction, which in turn represented an effort to work off the corn surplus of 1920-21. Corn prices are up and the expectation is that hog prices are going to ride at higher levels during the coming year. The corn outlook is bad enough. Frosts have hit the North before this is written. A heavy percentage of corn will certainly be soft and one of the Corn Belt's real farm management problems this fall is how best to dispose of the

soft corn. Notwithstanding the poor corn crop, the central States are obviously breathing easier than they have along back.

The Wheat Belt is in infinitely better shape than for three years. Yields are splendid, the crop of high quality, and prices improved just at harvest time. Up in the Western spring wheat territory, where nobody has had a new pair of shoes since the winter of 1919-20, there is particular rejoicing. All through the wheat country growers have hustled grain to market and new money is circulating rapidly in the process of

"This is a big country"—from the dairy lands of the East "to the Pacific Coast, self-contained, diverse, boundless in its resources."

paying debts. Men are inclined once more to regard the wheat country as good property.

In the range country the situation is somewhat mixed, in that sheep men and growers of grain and many irrigated crops are in very fair shape while cattle men are just the reverse. Sheep are everywhere in favor and flocks increasing, except in certain local areas where drought has cut the feed. The cattle situation remains an enigma. It has been a four-year story of liquidation, which still continues. In spite of which—even of the continued selling off of breeding stock—there are a lot of cattle left in the range country. Old, long-headed operators are not lacking who believe that the industry has hit bottom and that this is the time to begin stocking up, and they are doing so to the tune of thousands of head. So far as this year's income goes, however, it may be tersely said that sheep have made money and cattle have lost money. The ranges are in good shape and winter feed abundant, generally speaking, everywhere east of the continental divide.

The Pacific Coast has been seriously hurt by drought and to a lesser degree by frosts and the foot-and-mouth disease. Feed is short and the livestock situation is certainly no more favorable than last year. Grain yields did turn out better than were expected earlier in the season and of course the higher prices have cheered such growers. Many of the deciduous fruits have suffered in yield and quality from the drought. However, the

coast, taken altogether, produces a tremendous diversity of things and it will never be without an income. It may not be wide of the mark to say that the coast country is in just fair condition this fall but, on the whole, does not seem in quite as good shape as one year ago.

If one is inclined to think in terms of five years or ten, say, there are several interesting things in view over the country.

For one thing there are more people. That is the most significant of all economic developments. We have 9 or 10 million more people in American towns than five years ago. The increased population is in the towns, not in the open country. It is directly evident in the numbers of people in

city streets. It is further evident in the expanded residential fringe about the cities. East, West, North and South, the towns have mushroomed out into new suburban districts. A tremendous expansion in small homes especially—probably greater than will take place again in a generation. This latter a contrast, too, with the open country; the last five years have put no new buildings of any kind on the farms, least of all houses.

The next most outstanding development over the country is the automobile. The road horses of ten years ago—and for that matter a thousand years ago—have been replaced. We hardly appreciate yet how profoundly this shift has affected

American farm life. Still less do we appreciate how it has contributed to efficiency in agricultural production. The time necessarily spent between farm and town has always been one of the biggest factors of overhead in agricultural production. The automobile has cut down this item of overhead as effectively as the binder cut down the direct labor in grain harvest. No thoughtful person can look over this country to-day without being impressed by the automobile's part in farming.

Coincident is the amazing program of road-building. That, however, is a project in the making.

There is a little new farm machinery in the fields this fall; not much, but occasionally a new sulky plow or perhaps a harrow or a wagon or a binder, etc. Here and there one sees a new tractor. There is occasionally a new stretch of fencing to be seen also. All of which represents a start toward replenishment of the productive farm plant, a matter which begins to be urgent.

Apparently more land has been put back into sod, taking the country as a whole. Seemingly, also, there is quite a bit more leguminous sod; alfalfa and the clovers in particular. This in line with the more conservative policy thrust upon farmers by the deflation period. It is part of the slow upbuilding, once more, of reserves.

One noticeable trend among types of farming

### Backing Our Tax Fight

"I wonder if farmers really know what they owe to AMERICAN AGRICULTURIST for the fight it put up last year to reduce farm taxes. I followed the situation pretty carefully and I know that if your paper had not brought the farm tax situation to the attention of Governor Smith and to the Legislature, we certainly would not have received a reduction in the direct State tax. This reduction means some saving to every farmer taxpayer in the State.

"Others are always claiming and talking about what they are going to do for farmers. It looks to me as if you went ahead and did something besides talk in getting and presenting to the 'powers that be' at Albany the real facts which resulted in some benefit to us fellows who are paying the bill, and I want you to know that some of us anyway appreciate it."—H. E. D., Oneida County, N. Y.

LETTERS like this help and we are human enough to like to receive them. But what would help still more is your continued support of AMERICAN AGRICULTURIST in the fight we are going to make this winter for economy in government and for further reduction of taxes all the way along the line.

### "Marginal" Dairymen Must Go

AS we have stated several times recently, a dangerous situation exists in the dairy markets. Whether or not this situation becomes better or worse depends almost entirely upon the producers themselves. There are better than fifty million pounds of butter more in storage this year than last. Nearly as bad a situation exists with the amounts of cheese and canned milk in storage, and from nearly every producing section in the country come reports that the markets are flooded with fluid milk.

The low prices of other farm products as compared with dairy products that have prevailed until this year is the chief reason for the greatly increased milk production. Milk and its products have paid better than almost any other farm product, so farmers throughout the country turned to dairying.

These comparatively better dairy prices brought in what is known as the "marginal" milk. One good thing about it is that the marginal milk can not stay in. It is produced from cows that can not pay their costs of production unless the price of dairy products is high. Much of it is made by unskilled dairymen who have turned from other farming to milk production. Grain prices have gone up, other milk products costs have increased; and milk prices have gone down. Therefore,

these marginal producers will rush back to growing other farm products and will get out of the dairy business as soon as possible. If they stay too long, they will be ruined.

Every farmer who has marginal cows in his dairy, that is, cows that pay less than the costs of production, will lose money under the present situation so long as he keeps them. Gradually such men and such cows will be forced out of the business. This will adjust production and prices will come back to a better level.

Another satisfactory phase of the situation is the gradually increasing consumption of milk and other dairy products.

In the meantime, let's eat our marginal producers. This will add beef to our tables and money in our pockets. It will reduce the costs of production in every individual dairy and improve the market situation. Turn to page 303 and sign the little statement and send it to us, or write us a letter and tell us that you are with us in our "Kill A Kow" campaign, providing enough other dairymen come along too.

### Adjusted Production

IN a recent talk, Commissioner Berne A. Pyrke, of the New York State Department of Farms and Markets, said that the State itself was the largest farmer in the State, operating, mostly around its institutions, some 36,000 acres of land. The Commissioner said, too, that the capitalization on these State farms was heavy, chiefly because of the expensive buildings. Yet in spite of this high investment during the last year these farms paid an interest of five per cent. upon their total investment, and in addition returned to the State a profit of 11 per cent.

We can see the eyebrows of our farmer friends being raised at this statement, for we all know how few farms have broken even during the recent hard times, to say nothing of paying any interest or profit.

But the Commissioner had an explanation of this phenomenon. A very careful record was kept of all expenses in the operation of the farms, and every cent was charged against them that properly could be. But on the other hand, these State farms were credited at wholesale market prices for every single bit of produce which they raised. There was absolutely nothing wasted, and no matter what any particular farm raised, it could not go wrong, because it was sure of a market. Putting it in a different way, the State was able to do what no individual farmer can do in having its market adjusted to its production. Most of the produce was used in its own institutions, but whether it was or not the farms got credit at market prices.

Some time, perhaps, production will be so balanced (see cartoon on opposite page) to consumption as to give every farmer a market for everything he raises, no matter what it is. In the whole world there is none too much food, but there is too much in particular spots. In the meantime, while we wait for this ideal of adjusted production and consumption, the farmer who will survive in the hard business will be the one who is constantly on the alert in studying the markets so that he produces with a strict regard to what can be well sold. He can never hope to find a ready sale for everything as the State's institutional farms do, but by figuring for a long period ahead and by learning to interpret the demand, he can come nearer to growing for the market what the market wants at the time when it most wants it.

### Buy in Quantity

HOW often the men folks find fault when going to town with the milk and other produce because the women always seem to have so many errands for them to do. It is a spool of thread number so-and-so to be bought at one store, a couple of yards of calico to match something at another, and five pounds of sugar at some other store. Inasmuch as the men get as much, or more, benefit out of the purchases eventually, as do the women, there is little for them to find fault about.

But from another standpoint, buying in such small quantities is a waste of time and money. It seems to us that it is another way by which we have gone too far "from the ways of our fathers." Mrs. Ruby Green Smith said recently that some of the women of Colorado buy at one time enough supplies to last them for a whole year. We can not help but wonder about the loneliness and isolation from which these women must suffer because of not getting away from the farm oftener, but from an economic standpoint, they have the right idea. Our forefathers were independent of the markets. They went only a few times a year and purchased in quantities supplies that would last for months.

We of today are market slaves. The women of the city and village especially have the habit of visiting the stores, often several times a day. Moreover, they depend upon the storekeepers to deliver their supplies, thus adding to the already high costs. The custom is spreading to the country. Under modern conditions it is not possible or practical to buy in too large quantities, but there is a happy medium. What a satisfaction there is in plentiful supplies stored against the wants of the future; a satisfaction doubly good because they were bought at better prices than could be had from buying in small quantities.

### The American Agriculturist Service

WHAT particular problem is troubling you? Is there something about your farm organization or about the operation of some other public institution that affects your business that you do not understand? Are some of your animals sick or not doing well? Perhaps you are worried about crop plans for the coming year. Maybe you have hay or potatoes on hand or some other crop and want some definite information about the markets.

Or it may be that some law like that of cutting brush or weeds, or making a lease or will is not clear and you want more information. It may be too that you have been offered what looks like a good investment for some of your funds, but you are not quite sure; or it is possible that you have replied to an advertisement or had dealings with some commission men that were not satisfactory. To answer all of these and many other questions, AMERICAN AGRICULTURIST maintains a service bureau and a corps of trained workers to get the correct information for you. All you have to do to make adjustments and to clear up misunderstanding is to send full information about your problem to AMERICAN AGRICULTURIST, 461 Fourth Avenue, New York City. This service costs you nothing but a two-cent stamp.

### Eastman's Chestnuts

THERE is a lot of talk going the rounds all of the time about the lack of enforcement of prohibition. I have no doubt that there is still a lot of booze finding its way to the consumer, but here is one of the things I have wondered about.

In the course of the year, I see a good many thousand people, both in the country and city, but I cannot now recollect having seen during the past year a single person who was badly under the influence of liquor. So I think the gentleman in the following story must have had his adventure back in the good (?) old days.

This particular chap, so the story goes, was on his way home after a nice hilarious party, which had lasted into the wee small hours of the morning. In order to save time, he took a short-cut across the city park and managed to fall into a large fountain in the center, which fountain was well filled with statuary of various kinds and sizes.

When he struck the cold water, he set up a howl and a policeman came running to haul him out. When the policeman reached down to grab him, the drunk pulled away and, waving an expansive and heroic hand at the statuary, he stuttered:

"N-NEVER M-MIND ME, OFFISHER—N-NEVER MIND ME; RESHCUE THE WOMEN—AND SH-SHILDREN FIRST—WOMEN AND SH-SHILDREN FIRST, OFFISHER!"

# What YOU Are Thinking About!!

## Our Readers Emphatic About Boy Drivers and Farmer Licenses

I AM accepting the invitation to express my opinion on the subject of "Should Boys Drive Cars?" I live in your old stamping-ground and you may even remember my name, as you have visited at my farm.

My son will be seventeen years old in a few days, is well-grown and strong and just as capable of driving a car as he will ever be. If he cannot drive a car for another year it is going to be a serious matter for us. We would be willing to have him take any reasonable test that might be applied.

On the other hand, there is a young man in this section who is far below normal mentally, who, though he went to school for some time, was absolutely unable to learn to read or write. He owns a car and had no difficulty in getting a driver's license without a test. Also the drunks are being licensed, just as readily as any one else. All they have to do is to say they don't drink, and that lets them out.

Capable young men are not allowed to drive, but idiots and drunks are just as good as ever. What will the answer be?—G. W. S., New York.

\* \* \*

### Says It Is a Good Law

UNDER the new automobile law, said to have gone into effect in New York State, October 1st, we must first remember that an automobile is no "play thing," but a very dangerous machine when not handled by a competent person, and one capable or experienced in the business should at all times be compelled to operate or run it.

I for one, think it is an excellent law and should be properly enforced, and only wish such a law would go into effect in every State in the Union, as there would be far less deaths and serious accidents. Most farmers could so arrange as to make their necessary trips to the city and also get their children to the High School without having a boy or girl under eighteen years of age to run the car. Boys and girls from ten to twelve years of age are often seen driving an automobile, and nine out of ten would not know how to make repairs in case the car got out of order. Again, the average boy or girl under eighteen years of age is too reckless, as just so they are going along is about all they are thinking or caring about, regardless of the speed or danger they are encountering.

Yes! by all means, let's have such a law go into effect in every State in the Union. It would be one of the best automobile laws ever passed for the country at large.—Wm. H. H., Virginia.

\* \* \*

### How About High School Now?

SEEING in your last issue a request for people to write their opinion of the new "motor vehicle law," I am afraid if I wrote just what I feel about this law it would not look good on paper, for I consider it an outrage, and I am going to do my best to find out who framed such a bill and will endeavor to do all in my power to have them voted out of office.

In my especial case I have a daughter, now in her seventeenth year, and to-day she could be in High School if it were not for the fact that she is prohibited from driving. She has driven a car since fourteen years of age, always accompanied by myself, the owner of same; in fact, she attended High School one year a distance of seven miles and I always went with her, spending the day in town, so as to comply with the law, which at that time would allow her to drive so long as owner of car accompanied her.

Now this was not so bad, but now I have an operator's license myself, as I learned to drive a Ford, but now we have a three speed car and I do not seem to be able to manage it and, as I before stated, my daughter has driven under any and all kinds of circumstances, when roads were literally torn to pieces after the recent flood. Her father is "Road Superintendent," and away in another part of the town it was necessary for her to take a truck to him. I am doubtful if many men could have driven where she did, and in all her driving, of perhaps twenty or thirty thousand miles, she has never had an accident of any kind; and besides at the present time, she could help in many ways, such as taking milk to station, etc., but dares not on account of the foolish law en-

obtaining an education. They own motor wheels and have from four and one-half to eight miles to go to school. As they cannot drive the wheels or cars, they have to walk this distance, which makes them late for school nearly every morning. I think this new law is a very inconvenient thing in many ways.

\* \* \*

### Too Many Licenses Now

I SEE on Page 148 of the September 6th issue an article about licensing farmers. We don't have enough licenses to pay, so we ought to have some more! I have paid \$37.75 already for licenses this year and now I have got to get another before I can operate my car and truck.—E. C. H., Chautauqua County, N. Y.

\* \* \*

I AM writing what I think about a farmer's license. We have too many licenses now. The hunter's license, the fishing license, the automobile license, two cents a gallon on gasoline, twenty-five cents or more for getting your automobile lenses adjusted—anything at all, you might say, to get money from the public. For instance, what would the farmer's license be used for? How many salaried jobs would it create? Where would it benefit the farmer? The newspapers give accounts where the money from hunter's licenses is deposited; so much in this bank and so much in that bank, and so forth. It looks to me like a good thing for the banks, as they loan the money to the public at a good rate of interest and at the same time it is the public's money. And so it is in various ways. This is my way of looking at it.—P. E. H., Chester County, Pa.

\* \* \*

### A Farmer's License

THE idea of licensing farmers to operate their farms certainly presents new food for thought. Not so long ago a certain man, who provokes much mirth because of his super-scientific tendencies, originated the opinion that the operator of any kind of machinery should be required to obtain a license to do so, and one of his hearers said jokingly, "Yes, and a farmer should have a license to farm."

(Continued on page 309)

acted by some crank or fanatic. I do not believe statistics will show that accidents are due to young people's driving, for of the many thousand accidents of which I have read and heard, I can only recall one of under eighteen years.

I am and always have been a law-abiding citizen and a member of Church since childhood; am also a member of W. C. T. U. and I never have felt before that the laws of our country were foolish, but when I think of all the years I have worked on a farm at all kinds of farm labor, having had two nervous breakdowns, and now could take a little comfort with the car but am deprived of it by some who perhaps never did a stroke of honest labor in their lives, I feel like rebelling. By the time my daughter is eighteen she will have to be away from home and cannot drive for us; it sure makes one feel sore to think of such fool laws.—Mrs. G. E. S.

\* \* \*

### What the Boys Think

I READ your article on the new motor vehicle law in October 18th issue of your paper. I am one of the boys who hauled milk to the factory and now cannot on account of the new law. I am an expert driver and have driven a car for the past seven years. Below are the names of other boys in my locality who are not only handicapped in drawing milk for their fathers, but also in

## The 1000 Mile Shoe

### CORDOVAN HORSE-HIDE

Maywood, Nebr.  
February 12, 1924

Wolverine Shoe & Tanning Corp.  
Rockford, Michigan

Dear Sir:

On April 5, 1922, I bought a pair of No. 340 1000-mile shoes. Now I am still wearing these shoes and they certainly were worth the price I paid for them. Would like to have your latest catalog on men's shoes as I am going to need a pair in the near future.

Respectfully,  
C. G. JOHNSTON,  
D. 3, Maywood, Nebr.

"DREADNOUGHT"  
Genuine Horsehide  
Throughout

## Try This, Men— A 1000-Mile Shoe That Stays Soft—Wet or Dry

*Double-tanned by Our Secret Process*

Here's something unique in a work shoe. A shoe that actually wears 1,000 miles and more. Men doubted this at first. Now thousands write us letters like the one above. They say they never knew shoes could be made to give such wear as these do. Now we ask you to try them too.

There's a reason why Wolverines are different from any other shoes.

First, they are the only work shoes that we know of, made throughout of Cordovan horsehide. The toughest leather known. The leather

that the finest Cossack saddles are made of. It is also used to cover big league baseballs. For it is the only material strong enough to stand the terrific pounding.

But heretofore it could not be used in work shoes. For it always tanned up too stiff. Now in our own tanneries we have a special process that makes it pliable. Even softer than ordinary leathers. And it *always stays soft*.

Even after many wettings it dries out soft as velvet. Something you will find in no other work shoe.

We use only the choicest horsehides. We tan them ourselves. And we specialize on work shoes only. That's why

you'll find Wolverines different from any other shoe you ever wore.

You'll never know just how good this shoe is till you try a pair. Feel the thick pliable leather. Soft as buckskin. Tough as rawhide. You'll know why it outwears three ordinary pairs. And feels "as comfortable as an old shoe"—even when it's brand new.

There's a Wolverine horsehide shoe for every job. For lumber camp, mine, factory and farm—and for every season. Send today for our catalog that will show you *your* shoe

—the one exactly suited to *your* needs.

If your dealer hasn't Wolverines, please write us. We will send our catalog at once, and the name of your nearest Wolverine dealer.

### Wolverine Comfort Shoe

This Wolverine is so pliable and soft you can double it up like a moccasin. It wears like iron but you'll hardly know you have a shoe on, it is so soft and easy.

For tender feet, or where you do not encounter wet weather, wear this Comfort Shoe. A blessing to the feet.

## Putting Stuff in Storage

*Conditions Must Be Right to Make It Successful*

ORDINARILY when we speak of storage most folks immediately call to mind the idea of cold storage. Cold storage is the natural method for holding perishables for any length of time. But for the farmer, common storage is a practical method of holding at least part of his products for a later date, when the market may be more advantageous or labor conditions may be such that it will be more convenient to give a crop more intensive attention as far as preparation for market is concerned.

There is a big question whether it pays to store. I have heard more fellows argue the question back and forth and in the end no real conclusion could be gathered from the argument. As I see it there are a lot of factors that control the practice even to the personal affairs of the individual farmer involved.

### Playing the 50-50 Game

If a fellow is hard up for immediate cash he can hardly afford to store unless the market is particularly strong. If that is the case, it may be that he can borrow against his holdings and thereby satisfy his immediate cash needs. Most farmers that I know, who store to any degree, play the 50-50 game; they sell part of the crop and store the rest. Then at the end of the year, if prices have gone down considerably, they feel they are lucky to have sold at least part when the market was up. If the market goes up they have the satisfaction of getting better prices on at least part of their crop.

Of course, following that method a fellow doesn't do quite as much speculating as though he were to take a chance on the entire crop. When a fellow stores everything he has got, then he is speculating. In fact, he is skating on pretty thin ice because a lot of things can happen that no one can foresee.

Right now every one is wondering whether it will pay to store potatoes for the spring. We have a few facts to work on and they are not very encouraging. We know that this year's potato crop is one of the biggest we have ever had and prices right now are way down. It seems hardly possible that prices can go any lower, although I have known them to do so. It does not look much like real high potato prices this year.

### Will It Pay This Year?

Now the question is, Will it pay to store and take a chance on the mid-winter and spring market? For myself I think it is a pretty good gamble. It looks as though right now, in the heart of the digging season, this glut on the market could have been foreseen weeks and weeks ago. With a heavy crop, storing facilities have not been ample and farmers simply had to ship into the markets. After this glut is over, it looks as though things would settle down and after the first of the year we may see an improvement.

One of the things that is going to determine what a fellow will get out of

these stored products, whether they be potatoes, cabbage, carrots or turnips, is the kind of storage house he has. If the cellar or store-house, whatever it may be, is well-ventilated, well drained and so constructed that it maintains fairly even temperature, he is quite sure of having his stock keep fairly well.

### Watch How You Store Your Seed Corn

While I am on the subject it is well to include the subject of seed corn storage. The corn crop was short this year. We all know that and a lot of men are going to sail pretty close to the wind when it comes seed time next spring. It is several years since we have faced a condition quite the same as this. Corn did not harden right this fall and there is a lot of soft corn that will not make good seed and a lot more corn that is only medium which will also not make good seed unless it is well taken care of. Seed corn must be stored in a place where it will dry out thoroughly. Corn that is wet or even moist and then subject to freezing and thawing is bound to fail when it comes to seed time in the spring. It will not germinate.

There is not a lot of work to storing seed corn properly. Any place that is dry is a good place to store it. And as far as equipment is concerned, a piece of ordinary chicken wire will do the job. We had some corn one year that we divided into two batches. One was hung in chicken wire, each ear being placed in every alternate mesh while the other bunch was kept in baskets. The basket stock was not properly ventilated and therefore not properly dried. In the spring it tested something like 50 to 60 per cent. germination. The seed we hung in the chicken mesh tested over 90. That is the difference for a little pains, no expense and a couple of hours' time.—FRED WILLIAMS, New York.

### Buy Good Seeds

I want to get some alfalfa seed at reasonable prices. I am in the market for Grimm alfalfa. Can you give me any advice where to get it?—C. W. G., Pennsylvania.

THERE are several reputable concerns advertised in the AMERICAN AGRICULTURIST that handle alfalfa seed. When you buy genuine Grimm alfalfa from a reliable house you can depend upon it that you will get genuine Grimm. There is one factor, however, that you should specify in ordering your clover seed; that the seed is northern grown. Our northern winters are too severe on southern grown seed, while farmers farther south can plant southern seed and get away with it very well. Scarified seed is also to be preferred.

Do not try to buy good seed cheap. It is the same to try to buy a good automobile tire cheap or a good second-hand automobile cheap. If you want good seed, pay the price, it is a whole lot cheaper in the end. If seed is much cheaper than the average, there is usually a reason for it. It is well to beware.

Success in storing farm produce, such as potatoes, depends a great deal on the manner in which the storehouse or cellar is constructed. This house is so built that a bank of earth is taken advantage of, concrete adding to its permanence.

This book  
is saving millions of dollars  
for the American people.  
*Are you getting your share?*

## Do you realize the opportunity for Saving Ward's Catalogue brings into your home?

*Are you using this book?*

**THERE** is one sure rule for saving — one sure way to make certain that the price you pay is the right price for everything you buy.

Whatever you need to buy, shoes or clothing, hardware or automobile tires, turn to your Ward Catalogue and see the price.

*Use this catalogue. It can be to you a means of almost weekly saving.*

**500,000 more customers  
won by Ward's last year**

We tell you that 500,000 new customers sent their orders to Ward's last year, that several million families buy their household and personal needs from Ward's Catalogue, because there is in this fact food for thought.

These millions of careful buyers find in this book a saving. They find at Ward's a service that *can be just as valuable to you.*

**Ward's brings you the services of an  
international staff of expert buyers**

Supposing you are going to buy a pair of shoes — and supposing you knew leather as well as an expert tanner — you knew the fine points of shoe making — and you had the backing of a great company and could

go anywhere to get yourself the best pair of shoes the world could produce at the price you wished to pay.

That is exactly what we do for you. That is the value of Ward's service to you.

Our expert buyers search all markets with ready cash — looking for quality merchandise at the world's lowest cash prices.

**We sell only goods that stand  
inspection and use**

But we do more than search for low prices. We look for quality. We buy only merchandise that will give you satisfaction. We never sacrifice wearing quality merely to offer you a seemingly low price.

It is part of our service to you to make sure of your satisfaction with everything you buy.

**Everything for the farm, the home  
and the family**

This great merchandise book contains 726 pages of interest to men, women and children.

It shows the latest fashions, coats made in Paris by Carha and imported by us. There is everything a woman needs for her personal use, for her family and for her home. This Catalogue fully supplies the man's and the boy's needs: clothing, everything for personal use, everything for the farm and the automobile.

**20 Complete  
CHRISTMAS STORES  
in this Catalogue**

Hundreds and hundreds of the best Christmas Gifts are shown in your Ward Catalogue.

There is everything to give to every member of the family — useful gifts as well as toys, games, jewelry, and all the season's novelties.

There are no "Christmas Profits" in Ward's prices. You pay the lowest prices of the year for every gift you buy.

Let Ward's Catalogue be your Christmas shopping guide.

**Your orders will be  
shipped within 24 hours**

Your orders are appreciated at Ward's. Your letter is opened immediately, your order filled at once, and your goods are on their way to you within 24 hours.

**Look through your  
catalogue again**

You buy something almost every week. This book offers you almost a weekly saving.

So look through your Catalogue before you buy. Compare prices. And remember that in comparing prices, everything we sell is backed by our 52 year old guarantee:

**"SATISFACTION GUARANTEED  
OR YOUR MONEY BACK"**

## Ready for the Winter

New York Central Lines carry one-tenth of the commerce of the country. Upon their efficient performance through the winter depend the comfort and welfare of millions of people.

Food, fuel and other necessities—the raw materials of industry—must be kept moving hour after hour in all kinds of weather to prevent the slowing up of industry and human suffering. Reserves would quickly vanish if the railroads failed.

New York Central Lines have made ready for the winter. Reserves of cars and locomotives, standing idle all summer, are now being called upon to move the crops, fuel supplies and raw materials. Box cars for grain, open cars for coal, special refrigerator cars for perishable products—a quarter of a million cars bearing the familiar mark of the New York Central Lines—are moving over the country. Road beds, bridges, signals—all are ready for the demands of winter.

And 175,000 men of the New York Central family, on 12,000 miles of lines from the Mississippi Valley to the Atlantic Coast—the men who operate the New York Central Lines—they, too, are ready for the test. They have a tradition of public service to maintain—a tradition that has grown up through nearly a century of railroad achievement.

## A Bird's-Eye View

(Continued from page 301)

has been the drift of dairying into "marginal" territory of the West and South. Men who have been at their wits' end to make any income at all have turned to the dairy cow, and in many cases with some profit. Not all of them will stick to dairying now that cotton, wheat and various irrigated crops are selling at higher prices again. But it is probably true not only that the United States will ultimately support a much larger dairy industry than we now have, but that many areas in the West and South which have been following essentially exploitive systems of farming must slowly give these over in favor of the more conservative systems. In hard times the exploitive systems feel the pressure.

Almost everywhere farms are beginning to sell once more; a hopeful sign. Nothing but hard-boiled adversity could make the farm real estate market so stagnant as it has been in the last three years. Among other things, there are enough city buyers of farm property to make that a noteworthy item. Farm values are low enough to attract city money, which in turn is evidence of the constant tendency of economic forces to balance things up.

There is apparently little movement away from the farms this fall compared with a year or two ago. This is a reflection both of the easier position of agriculture and of the tapered-off condition of urban industry.

Indeed, it now seems as though agriculture is almost a few laps ahead of the urban community in respect to certain

basic adjustments. The cities have this year experienced what was brought home to farmers more than a year ago; that it is possible to temporarily over-expand the producing plant and that liquid capital disappears in the process. Urban industry has had its boom; has flooded the country with such required goods as houses, automobiles, textiles and so on. Now consumers are mostly supplied and mostly in debt. The latter part of the business boom has been accompanied by a veritable orgy of "partial payment." Spot the nearest householder or automobile owner in town and you have a debtor.

But among farmers, the entire emphasis has shifted over to rigid economy. All over the country farmers are straining every nerve to get their financial obligations fixed up and swearing never again in this generation to contract a dollar of new debt. This sort of thing is noticeable this fall. It is part of the cycle from bad times and low price level back up to prosperity again. In the current picture, it is part of the leveling-up process between city and country.

It may be that for a considerable period agriculture will stand at some disparity with urban industry. But for the moment—this fall—it is swinging up toward par, and the readjustment is a mighty healthy one for the country. Not in five years has the United States presented so nearly a picture of balanced prosperity as it does now. The more deeply that fact sinks home to us all, the longer it is likely to last.

## This Farmer Says Bank Credit Not Practical

(Continued from page 300)

selling cheaply for cash and charging for credit.

As regards borrowing from the bank, it is true that many banks require an endorser. In most cases, however, this more or less rigorous requirement for two names on a note can be made satisfactory by having one's wife endorse his note. No man can object to this. His wife certainly ought to know what his business affairs are and if she does know she will help and scheme to get the notes paid. Of course, a farmer should be willing to tell his banker frankly in regard to his financial position. This involves furnishing the banker with a confidential credit statement from time to time to show him what one is worth above his debts. I cannot see any reason why a farmer should refuse to do this. The man whom I ask to loan me money certainly has a right to know what my financial position is other than from general inference from what he knows about me. If Mr. W. is a sound farmer of financial responsibility, and if his local bank will not accept his note for a reasonable amount with his wife's signature, I would like to know it.

The bankers' associations have expressed a very cordial wish to cooperate with us in every possible way. Banker-Farmer Conferences have been held in many counties in New York at which I have discussed the principles brought out in the article which you printed last week. Invariably the response has been cordial. Right now the Agricultural Committee of the New York State Bankers' Association has asked us for ways in

which they can be helpful in agriculture. If there are any regions in New York where bankers are not meeting the legitimate needs of sound farmers I would like to know about it. Perhaps here is a real service for your paper. There are a few such banks. I know of one or two. If the need is great enough it might be wise to organize another bank or a cooperative credit association under the new cooperative law. In any event, I am glad to see you take an interest in this farm credit situation. The need for more efficient credit is great and better methods can only be brought about by a campaign of education in which farm papers such as yours play a very important part. I shall be glad to have your answer to these suggestions.—W. I. MYERS.

## First Ag. School in New York

THE Rensselaer Polytechnic Institute has just celebrated the hundredth anniversary of its foundation. This is one of the oldest and the best technical schools in the country, and it is particularly interesting to know that it was the first institution of the others in New York to establish a course in agriculture.

Mr. Ebenezer Emmons, who was graduated from the agricultural course in this institution in 1826, founded the first State department of agriculture in this State. Asa Fitch, Jr., who was graduated from the agricultural course in 1827, founded in New York the first bureau of entomology, and George Emill Cook, who completed his work in the institute in 1839, established the New Jersey Experiment Station, one of the first in America.

Friend: What have you taken out of your garden this summer, Jones?  
Jones (sadly): Three boys, a stray cow and miscellaneous chickens.—Life.

# How the Republican Tariff Works

## John W. Davis's Program for the Farmer

1. To adopt an international policy of full cooperation with the rest of the world which will reestablish the farmer's export markets.
2. To adjust the tariff so that the farmer and all other classes can buy again in a competitive market.
3. To reduce taxation, both direct and indirect, and to lighten the burden of government by strict economy.
4. To readjust and lower freight rates, particularly on bulky agricultural products, which will make markets both for buyer and seller national and international instead of regional and local.
5. To establish an export marketing corporation or commission in order that the exportable surplus may not fix the price of the whole crop and to stimulate by every government activity the progress of cooperative marketing.
6. To secure for the farmer credits suitable for his needs.

**Vote for DAVIS and Prosperity**

# PUT A WITTE ON YOUR PLACE FOR ONLY \$5.69

Now Easier Than Ever to Own a Witte Throttling Governor Engine.

The Famous Standard Witte Can Be Had Now for Only \$5.69 A Month—Low Price Sets Record.

With the need for cheap, dependable power more pressing than ever before, farmers everywhere will be glad to learn of the new low-price plan just announced by Ed. H. Witte, world-famous engine manufacturer for 42 years.

Now only \$5.69 a month for a short time buys the standard Witte Throttling Governor Engine, fully equipped with the celebrated waterproof WICO Magneto. In spite of this low price, which sets a record, the engine has nearly 40 new improvements, including a new device that makes starting easy at even 40 degrees below zero.

Long regarded as the cheapest and most dependable farm engine built, the WITTE develops 50% extra power on either kerosene, gasoline, distillate or gas. Operation on full load figures under 2c an hour. Trouble-proof and so simple that the women folks can operate it. Easily moved from job to job. More than 150,000 WITTES are in daily use.

To introduce this remarkable engine to a million new users, Mr. Witte will send it anywhere, direct from factory, for a guaranteed 90-day test.

Every reader of this paper who is interested in doing all jobs by engine power should write today for a free copy of a remarkable new, illustrated book just issued by Mr. Witte, which explains the engine fully. You are under no obligations by writing. Just send your name, a postcard will do, to the Witte Engine Works, 1807 Witte Bldg., Kansas City, Mo., or 1807 Empire Bldg., Pittsburgh, Pa., and receive this interesting and valuable book that gives you valuable information about the application of engine power on your farm.

# New York Farm News

Western County Fruit Notes by M. C. Burritt

**TWENTY OUNCE**, King and Rhode Island Greening, were pretty well cleaned up last week. With exceptions the pack of "A" grade fruit was disappointing. In fact, in many cases the tree run pick was below expectation, especially in the case of Twenty Ounce, the fruit seemed to be all on the outside of the tree, and absent in the centers and tops. The market continues strong on all these varieties except Greening, which has weakened slightly. Hubbards are also mostly picked and quite a number of growers have started Baldwins.

Kieffer pear harvest is in full swing this week. Except in orchards badly affected by psylla, the fruits are large and clean and pack up well. The crop is not large but seems to be exceeding estimates. The going price appears to be a cent and half a pound, package furnished. This is being paid by local dealers and the cooperatives alike. So it is a race to see which can pack most cheaply and efficiently. In the cooperative the grower gets the dealers' profit, if he makes one, or assumes his loss if he has it.

About one week or ten days more will see the fruit pretty well off the trees.

### Crop Notes—Wheat Sown Late

Never have I seen wheat sown later than this year, or so much wheat sown so late. The greater part of the acreage, probably 75 per cent., went in on time as I have previously reported, but a large number of fields were sown from October 10 to October 18, and a number of farmers intend to sow yet this week. What will the harvest be? Everything depends on the weather from now on through the spring. With a late fall to give the young plants a little start, a continuous covering of snow during the winter, and without excessive freezing in the spring and these late-sown crops may come through surprisingly well. But the chances are against them and for a large percentage abandonment and lower yields next year.

### Few Potatoes Dug Yet

The last fields of beans are being gathered this week. A large number of cornfields are still uncut, although appreciable progress has been made during the last week. As far as my observation goes, not a single field of potatoes has been dug in this part of the country yet. Although the vines were killed with frost two weeks ago cabbage are beginning to move, the first cars being loaded out this week at \$6, a discouragingly low price.

In general there is let-up in the rush to harvest crop before the freeze-up, but good progress is being made. Farmers are doing the greater part of the work themselves, and with regular help, refusing to pay the \$5 a day, \$4 and board, demanded by transient helpers, except where they are driven to it. The need for the utmost economy is still keenly felt. The answer is lots of hard work, long hours and a late finish, with some possible losses.—M. C. BURRITT.

### Farm Women to Meet in Syracuse, November 5-7

THE annual meeting of the New York State Federation of Home Bureaus will be held at the Onondaga Hotel in Syracuse on November 5 to 7, inclusive. One day will be given to county reports, with full time for discussion. In accordance with recommendations made at this meeting a year ago, the session will be a longer one than last year's in order to attend properly to the great variety of interests embraced in the State-wide program, and, as advised, there will be one inspirational session in the form of a banquet. This will be held the first evening.

On the second day, a joint meeting will be held with the Farm Bureau Federation. Dr. Liberty Hyde Bailey and Mrs. Anna Botsford Comstock will be the chief speakers at this meeting, and two more popular or beloved leaders could not have

been found to speak to rural people of this State. Through their work in nature study both have done much to interest the adults and children of the State in the useful as well as the beautiful on the farm.

### Farm Activities Discussed

The rest of the three-day program will deal with such varied interests as county libraries, rural schools and churches, health, child labor, community projects, better films, and international peace. Meetings will be held in the Hiawatha room, and all will be open ones. A very large attendance is hoped for and those living within motoring distance will be highly repaid if they will take advantage of this wonderful opportunity and attend as many of the sessions as possible.

Official delegates from each county belonging to the Federation will constitute the voting body at this meeting. The officers want especially to announce that every home-maker of the State is cordially invited to attend these inspiring and helpful discussions, whether a member of the Home Bureau or not.

### Short Winter Courses to Open Next Week at Ithaca

THE short winter courses of the New York State College of Agriculture at Ithaca will open November 5, with registration at the office of the secretary of the college. Six courses are open to students wishing to take the work: general agriculture, dairy industry, poultry husbandry, fruit-growing, flower-growing, and vegetable gardening. There is a special combination of vegetable growing and fruit culture.

A student may register in only one course; and a practice that has been followed in past years is to take the general agricultural work one winter and then come back to specialize in the line that appeals to the particular person the following year.

Advices from the different departments giving the specialized courses indicate that there is a likelihood of their being crowded this winter, and that it would be wise for prospective students to send in their applications early. Full information about the winter courses may be obtained by writing the secretary of the college of agriculture at Ithaca. He will send to anyone interested a copy of the winter course announcement, which gives a list of the various subjects offered, as well as information about the cost of living in Ithaca and the total expense liable to be incurred during the three months' stay. Tuition is free to all residents of New York State, though students from out of the State must pay \$25.

### Moravia Team Best at Morrisville Judging Contest

THE Moravia High School, Moravia, N. Y., had almost everything their own way at the Annual Judging Contest held at the State School of Agriculture, Morrisville, N. Y., on October 7, 1924.

The Moravia team proved to be high scoring team and won the Silver Trophy Cup donated by the Madison County Holstein-Friesian Association. This cup, which must be won three times to obtain permanent possession, has never been won twice by the same school. The highest scoring individual was not a member of the winning team, however. Merwin Robbins, a member of the team representing the Pulaski High School, made the highest score. The Pulaski High School team placed second in the contest.

The registered Holstein-Friesian bull calf was won by Clifford Wilcox of Moravia High School. This calf aroused a great deal of interest among the boys and we wish we had had a calf for each boy. Clifford couldn't bear to leave the calf behind when he went home after the contest. The calf, four boys and their

# Among the Farmers

## Of New Jersey and Pennsylvania

**T**HE New Jersey Federation of County Boards of Agriculture in cooperation with the Atlantic County Board of Agriculture has invited the New Jersey Fish and Game Commission to make a field inspection of damage done by deer in Southern New Jersey counties. The invitation was given as the result of repeated attempts on the part of organized farmers in southern New Jersey to focus public attention upon the tremendous harm which the increasing numbers of protected deer in New Jersey are doing to young fruit trees, vegetables and general field crops.

The plan of inspection by the farmers and the Game Commission calls for an automobile tour covering a random list of orchards and farms in Atlantic and adjacent counties, including the northern end of Cape May. The program is in charge of Arthur R. Eldred, Atlantic County Agricultural Agent, at whose office in Mays Landing, N. J., the farmers and State officials will be scheduled to assemble for the trip.

Tentative details of the proposed tour, announced this week by the New Jersey Federation of County Boards of Agriculture, list a visit to the farm of William J. Slack of Hammonton, N. J., prominent member of the Atlantic County Legislative Committee and Executive Committeeman of the County Board of Agriculture. The third week in November has been suggested as a logical time for the inspection tour, although the exact date has not yet been fixed.

Commenting upon the importance of public interest in the deer situation in New Jersey, Secretary Louis A. Cooley of the New Jersey Federation said:

"The rapid increase of deer in the State may not appear to be a menace in itself, but when losses of \$100 to \$2,000 in young trees and vegetable crops are reported from hundreds of farms the seriousness of the damage is apparent. Estimates presented at the fall legislative conference of the organized farm groups in New Jersey last month indicated an increasing number of deer per county in several of the southern New Jersey counties, in spite of the number killed off during the open season. "The proposed tour of the farmers and the Fish and Game Commission should establish the facts concerning damage by deer, and the proper course for the State to take concerning its rapidly increasing wards will become apparent."

### Home Buyers Strongest at New Jersey Holstein Sale

**N**EW JERSEY buyers took practically the entire offering at the New Jersey State Holstein Consignment Sale at College Farm, New Brunswick, October 15. Only one out-of-State buyer, a Pennsylvania breeder, was a successful bidder. The sale was attended by about 135 people.

The fifty-six animals sold for an average of \$175, a low price considering the general quality of the animals offered. A number of the cows had calves at side, and a number were near springers. These animals drew the greatest interest from the buyers. Albert Winters of Mahwah, N. J., paid \$425 for the cow that topped the sale. Mr. Winters owns one of the finest Holstein herds in New Jersey. He developed Tranquility Sadie Vale Wayne, a cow with a 44-pound record, in seven days. Bernard Meyers of FINDERNE, N. J., was the heaviest buyer, paying \$1,125 for eleven head.

Four head sold for over \$300, thirteen head brought between \$200 and \$300, and twenty-five head were bid off between \$100 and \$200. Col. George W. Baxter did the selling with R. Austin Backus as the pedigree expert.—H. W. BALDWIN.

### Eastern Pennsylvania Notes

OLIVER D. SCHOCK

**T**HE Kreitz Valley grangers of York County made a phenomenal display of field, orchard, garden and domestic products at the York County fair. It was

the largest grange exhibit seen at any Pennsylvania fair this year and attracted much attention.

York County fruit-growers produced the largest and finest colored apples ever seen in Southern Pennsylvania. The trees did not overbear, but size and appearance surpassed. About 80 per cent. of Lancaster County's tobacco crop was cut and housed in an excellent condition, having escaped injury from early frosts. Stalks with leaves measuring forty inches in length were prize-winners at the Lancaster fair, where growers made a very creditable display.

Lancaster cattle markets are fairly firm but irregular, higher prices of corn having some effect upon buyers of steers for fattening. Even speculative operators exercised unusual caution in their selections.

William L. Hampton of Pottstown, Montgomery County, constructed a large trout hatchery on his fruit farm expected to produce 125,000 fingerling trout yearly. S. T. Smith of Buttonwood, Lycoming County, harvested 155 bushels of potatoes from one-fourth of an acre. Fertilizing, spraying and cultivation accomplished this result.

Recent sales of farm properties show a renewed trend toward small farms as investments for city buyers who desire suburban homes.

### Central Pennsylvania Notes

J. N. GLOVER

**T**HE Hughesville fair, which was held last week with good weather and big exhibits, ends the fairs in this section of the State. Generally, they were clean of gambling devices.

Corn is nearly all in the shock and husking has begun, but there will be very much soft corn which will have to be fed to hogs or cattle this fall and winter to get any good from it. To select good seed corn will be difficult on many farms. Potato digging is being done and they are being marketed at from 65 cents to \$1 and then one has to hunt for a market for them, as they are one of the most difficult crops to sell to advantage. Apple picking is about done, though the crop is only half a crop in most orchards, so prices are better for perfect apples, which are selling at \$1.50 a bushel for choice varieties.

There are a number of farms still for rent on account of so many farmers quitting and very few new men are taking up or beginning to farm. Some second crop hay is being made on wheat stubbles which were not pastured. There were fewer cattle sales in this section this fall than any time for years, as very few farmers are stocking up with either steers or extra cows.

### What YOU Are Thinking About !!

(Continued from page 303)

The thought was supposed only to be funny, but taken seriously and administered advisedly, it might not prove so bad an idea after all. Surely it would deter the perfectly incompetent back-to-the-lander from launching his farm enterprise, though it is doubtful if he would produce much anyway. Obviously multitudes of him might swell the surplus, so it might be well to curb the multitudes. The man who is not farming at present but who has previously done so and knows perfectly well how to do it, would undoubtedly have no trouble in securing a license, so only the incompetent would be hindered and the ultimate result would be somewhat similar to that of weeding out the boarder cows in a dairy or cutting the poor layers from among the poultry (since the poor farmers now farming won't live always), and perhaps agriculture as a whole might be materially benefited by such an innovation.—MRS. E. M. A., Chautauqua County, New York.

**Success With Sheep**

*The Man Factor Important—Veterinary Inquiries*

WE have always kept sheep more or less, but generally on the same principle that we do many other things—when the other fellow wants to buy, we sell; and when the other fellow wants to sell, we buy.

Sometimes we start with a few old ewes simply because very little money goes into them and because we know we can take a few old ones, get a start from them and sell them before the flock gets large enough for them to become a nuisance. However, my advice to a beginner would be: first, don't buy old sheep because they require the best care an experienced hand can give them; second, buy a few, and when I say a few I don't mean 40 or 50, but 8 or 10, and grow into the business.

**Shepherds Are Born**

Sheep require very little care as compared with cows, but that little is just as important. I have observed a number of farmers who went into sheep thinking they would take care of themselves, and soon return a fortune to their owners. But such sheep men usually get out as suddenly as they get in. To a certain degree, I believe some men are born good shepherds while others just simply cannot do anything with sheep. For instance, I have a neighbor who has good success with cows, but he has long since given up bothering with sheep and says he never had any luck with them.

One must learn the sheep business, go among them quietly and never allow them to become excited more than is absolutely necessary. Give them all the range possible. Sheep like a change of pasture and never do better than when they can roam as they please. After harvest time we usually give ours the run of the whole farm. We have neighbors about 30 rods away on one side and 50 rods on the other side, but the sheep very seldom stray off the place.

**Sheep Rustle Their Food**

When there is a moderate snowfall of only a few inches the sheep will nose around under it as happy as can be. We also give ours the run of the threshing floor where there is plenty of seed, chaff, etc., and they work part of the time there and the rest of the time out in the snow, always keep busy, and come in at night full and contented.

We live on a 60-acre farm in a strictly dairy section. Fifteen acres of our land is woods, so we always thought we had not sufficient pasture and that being a trifle swampy, it was not adapted to sheep. But while it is not ideal it is fairly good and our flocks have almost invariably done exceptionally well. It requires considerable time and patience to become familiar with the habits and requirements of sheep, but I believe it pays as well as

any branch of farming, especially when the wool is made up at custom mills and sold as the finished product rather than as raw material. Incidentally, if farmers would do a larger retail and a smaller wholesale business in marketing their products of all kinds, agriculture would be infinitely more profitable.—MRS. E. M. ANDERSON.

**Questions About Horse Ailments**

I have a horse nine years old that has a little swelling just above the hoof. Where the hair starts the swelling is hard and about two inches long and about half way from the heel to the front of the foot. The horse is quite lame when first taken out of the stable, but as soon as he is well started he seems to be all right. Please tell me what to do for him and the difference between a blister for a side bone and a blister for a ring bone.—MRS. J. H., New York.

FROM the description you have given it would lead us to infer that the animal has a side bone. On each side of the bone of the hoof there are normally two supplementary cartilages of the foot. They are soft and though in a degree elastic, yet somewhat resisting and implanted on the lateral wings of the coffin bone, which when they become hardened are side bones.

Side bones may be caused from a low inflammatory condition, or from an injury such as sprains, bruises or blows to parts. Treatment consists of the free use of cold baths, frequent soaking of the foot. The use of one ounce of Crystal Iodine and four ounces of Vaseline prepared at your local pharmacy, and rubbed in once a day for several days, may prove beneficial. If this treatment does not bring relief, we would suggest that you call your local veterinarian to fire and blister the animal. There is no difference between a blister used for a side bone and one that is used for a ring bone.

\* \* \*

I have a seventeen-year-old mare that seems to stock-up when allowed to stand idle. She suffers from indigestion, generating a large amount of gas. Her passage is very loose and her food is apparently not well digested. Otherwise the condition is fair, only she has a ravenous appetite. What would you suggest to overcome this?—C. S. B., Columbiana County, Ohio.

THE stocking-up is undoubtedly caused by lack of exercise. Evidently the animal has been accustomed to an abundance of work and her system has become so accustomed to this that when there is little or no exercise the digestive organs do not function as well. Furthermore, it would be a good idea to have your animal's teeth dressed. This is quite evident in view of the fact that the food is apparently not well digested. Bad teeth may be also considered responsible for the manner in which the mare goes after her rations. In order to bring the bowels into normal condition it would be advisable to give a dose of linseed oil occasionally. Furthermore, an occasional change of food would have a tendency to adjust the digestive system.

A. M. LUX, 206 Washington St., Woburn, Mass.

Here is a "colt creep." It is made of pools and rails, an inexpensive contrivance, which gives the youngsters access to grain feed and keeps the mares away. It is an idea that can be used with sheep, hogs, and hens. Many a time, young stock has to go hungry because they are forced from the feed trough by the older members of the flock or herd.

**ABSORBINE** TRADE MARK REG. U.S. PAT. OFF.

**\$25 Down Buys HOLSTEIN BULL**

We have several exceptionally well bred registered Holstein bull calves that we offer for sale on the installment plan. Here is your opportunity to break into the purebred game without an immediate outlay of cash. This should appeal to the average farmer who wants to boost the average production of his herd without having it cost him too much money right on the jump.

**SON OF A 1000-LB. COW**

Among the stock for sale is a royally-bred son of the best daughter of King Segis Pontiac Hero, who is a full brother to the famous King Segis Pontiac Count, whose daughters have broken over 100 world records. The dam of this bull calf has a record of over 24,000 pounds of milk in a year and over 1,000 pounds of butter. The sire is a son of Dutchland Colantha Sir Inka, who has 16 30-pound daughters and is the greatest proven transmitting son of the famous milk sire Colantha Johanna Lad. This wonderfully bred animal can be bought on very attractive terms considering the high quality of his breeding.

# Why I Chose Guernseys

An A. A. Radio Talk Broadcast from WEA F

MR. EASTMAN,  
Editor of  
AMERICAN AGRICUL-  
TURIST, has asked me

By L. A. TOAN  
President, New York State Guernsey  
Breeders' Assn.

Guernsey cow as  
shown by these rec-  
ords is about 9,400  
pounds of milk or

to tell you who are listening in this evening, why I chose the Guernsey cow of all dairy breeds for my farm.

I should first tell my friends from the city who may never have seen a Guernsey, that the Guernsey cow is one of the four major breeds of dairy cattle. They were originally developed on the Island of Guernsey, one of the Channel Islands, off the coast of France.

Centuries ago the monks from Normandy brought with them cows from their old home, and through the years that followed, through careful selection and breeding, developed a distinct breed of cattle.

These early Guernsey breeders wished to develop a producing cow of considerable constitution, a producer of highly colored rich milk. We have to-day as a result of many years of constructive breeding a cow which not only combines the beauty of the show-ring individual but also the producing ability of a business cow.

### Consistent in its Yellow Color

The Guernsey cow is fawn and white in color. Fawn predominates over the body, being broken up in places by white. The switch, legs and under parts of the body are usually white. This golden fawn color is not confined to the hair alone. The hoofs, horns and even the secretions from the skin are yellow in color. This color characteristic is closely allied to the golden color of the milk.

In size the Guernsey cow is larger than the Jersey and smaller than the Holstein.

Twenty-six years ago this past summer my father took me, a boy of twelve, nearly twenty miles by horse and wagon to LeRoy, where he purchased two cows and a calf only a few months old. That calf was my especial property. Like all Guernseys, she was kind and affectionate in disposition and easily handled.

This heifer grew to be a fine big, deep-bodied cow. I was a happy boy one morning, when she was two years old, and I found she had a nice heifer calf. My cow replaced one of the scrub cows in the barn and really surprised everyone by the rich yellow milk which she produced. No one regretted the sale of the scrub with the chalky-white thin milk.

### Entire Herd Descends from One Cow

Our first cow lived to be eighteen and her first daughter seventeen. To-day every pure-bred cow or calf in our herd of forty-five head descended from this cow. We were glad to replace the cows in our original herd with the daughters, granddaughters, etc., of our foundation cow. We found them to be uniformly good, heavy producers, easy milkers, and economical to maintain.

What has pleased us best of all was the high quality of the milk. Guernsey milk has a deep golden cream line and a flavor hard to find in any other breed. The milk tests 5 per cent. butterfat, while ordinary milk contains only 3.5 per cent. fat. There is fully 30 per cent. more actual food in a quart of Guernsey milk than ordinary milk.

Many of my friends from the city come to our farm with the idea that they cannot drink milk. They almost invariably go away with the conviction that Guernsey milk is different and pleasing to drink.

Our herd is no different than other Guernsey herds. Under official test, supervised by men sent out by Cornell University, our cows of all ages have averaged about 10,500 pounds of milk and 525 pounds of fat, equal to 650 pounds of butter in one year.

The American Guernsey Cattle Club, located at Peterboro, N. H., has records covering over 18,000 Guernsey cows. The production of the cow is supervised for a year. The average production of the

4,700 quarts and about 473 pounds of butterfat. This is the average of cows tested between two and eighteen years. The mature Guernsey cow averages 10,668 pounds of milk according to these official records.

Our own best cow made nearly 14,500 pounds of milk and 850 pounds of butterfat in one year. This is equal to about 1,060 pounds of butter. She is one of the last daughters of that foundation cow which we took home as a calf twenty-six years ago. Her milk is golden yellow in color and far more like cream than some of the so-called cream which is served to me when I visit some of your large city hotels.

### Guernsey Bulls Prepotent

One wonderful thing about the Guernsey is the prepotency of the Guernsey bull. A good Guernsey bull readily transmits his desirable breed characteristics to the resulting progeny when used in a scrub herd. Pure-bred Guernsey bulls have increased the production of their daughters over the records of the cows to which they were bred by as much as 186 per cent.

A grade Guernsey cow in Wisconsin last year produced 17,555 pounds of milk containing 887 pounds of butterfat. This cow's owner was an ordinary so-called "dirt farmer." He sold his butterfat for over 50 cents per pound, receiving nearly \$450 from this cow for a year's work. Good profits received by owners of both purebreds and grades are making this breed very popular.

Last year the average price received for purebred Guernseys at public auction was \$353. In the first six months of 1924, 15 per cent. more cattle have been sold in the Guernsey breed, but in spite of this increased supply, the average price was \$368. Many farmers are adopting the slogan we did—"Buy one, raise a herd."

One of the principal reasons for this demand for Guernsey cattle lies in the demand of the public for Guernsey milk. When once the public learns about Guernsey milk in a city the demand increases rapidly. Cleveland is selling over 4,000 quarts daily. Rochester has just started the sale of Guernsey milk and already fully 1,000 quarts are being sold daily.

There are about 14,000 farmers in the United States breeding Guernseys. There are between 80,000 and 100,000 living Guernsey animals. The business of keeping the records of such a big and growing industry is in the hands of the American Guernsey Cattle Club at Peterboro, N. H. This organization is constantly in touch with Guernsey breeders all over the country. It also serves as an information bureau for the breed. Why don't you write them to-night for information about Guernseys, and Guernsey milk?

The Guernsey cow, with the help of the American Guernsey Cattle Club, our State, county and local Guernsey clubs, is helping to make dairying more profitable. Buy some Guernsey milk tomorrow and you will agree with me that the Guernsey breed has a great future.

### "Marguerite" Led the State

G. W. TAILBY, State Supervisor of Dairy Improvement Associations, shows in his latest report that F. H. Thomson and son of Holland Patent, Oneida County, New York, have three of the five cows highest in butterfat in the whole State for the month of June, two of them taking first two places. "Marguerite" led the list with 86.5 pounds of fat for the month. "Jessie" produced 84.9 pounds. Mr. Lee Bales of Cayuta, Schuyler County, took third place in the list with Lady Colantha Queen de Kol, who made 79.2 pounds of butter in the month, and W. W. Fortune of Essex County won the next place with "Gold Dust," who produced 79 pounds.

## For Your Fall and Winter Feeding

With oats and hominy still high in price you can save money by feeding your dairy herd one of the following rations:

- |  |  |
|--|--|
| (1) 300 lbs. Diamond<br>Corn Gluten Meal | (2) 400 lbs. Buffalo Corn<br>Gluten Feed |
| 600 lbs. Bran                            | 500 lbs. Bran                            |
| 100 lbs. Oilmeal                         | 100 lbs. Oilmeal                         |
| 1000 lbs. (25% Protein)                  | 1000 lbs. (20.6% Protein)                |

Feed No. 1 if your roughage is timothy or mixed hay; No. 2 if you have much clover or alfalfa. Feed a pound of either ration to 3 lbs. of milk if your cows are Jerseys or Guernseys; a pound to 4 lbs. of milk if Holsteins or Ayrshires.

Each ration is productive, economical, easy to mix, safe to feed and palatable. Each will give you as much milk for less feed cost. You can prove it by keeping records of feed consumed and milk produced.

MEN'S SHIRTS. Easy to sell. Big demand everywhere. Make \$15.00 daily. Undersell stores. Complete line. Exclusive patterns. Free Samples. CHICAGO SHIRT MANUFACTURERS, 229 W. Van Buren, Factory 222, Chicago.

# Service Department

## These Women Signed and Then They Were Sorry

TWO very pathetic letters almost identical in nature have come to us this week, and they are worth commenting upon in the hope that they may save others from similar trouble. The first was from a woman who listened to a glib-tongued book salesman and allowed him to sell her a set of books. She paid him a small amount down, and signed an iron-bound contract agreeing to pay the remainder of a fairly large sum on the installment plan. When she got to thinking it over, she realized that the books could not possibly be worth half of what she had agreed to pay for them. Still she was game to see it through, until sickness developed in her family and the increasing expenses made it seem impossible for her to go forward with the contract. Then she wrote to us for help.

### Victim of a Book Agent

The other case was a farm woman who also allowed a book agent to hypnotize her and get her name on a contract for what to her was a large sum of money for a set of books. She did not tell her husband at first, but continued to worry about the matter until she finally confessed to him what she had done. Thereupon he told her that because of her ill health, he had kept the news from her that they were likely to lose the farm through mortgage foreclosure and it seemed like the last straw when she agreed to spend the money for these books without consulting him. Then in her despair she, too, wrote to the AMERICAN AGRICULTURIST Service Bureau.

We have turned both of these cases over to our lawyer and if there is any possible way by which we can help these women out of their difficulties, we will do so. But the situation is difficult, if not impossible, from the start because their names are on ironbound contracts, and usually the directors of the companies who employ this type of salesman are of the same type themselves. That is, they will squeeze, if they can, even the widow and the orphan to their utmost farthing.

It is an unfortunate part of human nature that so many married people live so much in fear and trembling of the other partner that they fail to talk over frankly and freely the business affairs which affect them both. This is especially true of the farm business because affairs of the home are tied up so closely with the whole farm business. It is unfortunate also that in spite of all the warnings there are still so many perfectly intelligent people who allow these smooth agents to get their names on sales contracts for something for which they are sorry three minutes after the agent is gone.

### Look Out for Unlicensed Brokers

READING the hundreds of letters which come to our Service Bureau, is the best study we have ever had of human nature. Of course, in this work we find lots of dishonest people, but on the other hand, those who are square and want to do the right thing far outnumber the others.

The average business man wants to do right naturally, and anyway he knows, if he has any common sense, that he cannot do business at the same old place all of the time unless he comes through clean. But right there is often the rub. Those who do not want to do business on the square do not expect to do their business in the same place under the same name and address for any length of time. Probably a third of our correspondence comes from readers who have had trouble in getting returns from commission men to whom they have sent their products, and in many of these cases when we come to follow up the claim, we find that that particular commission man has moved on to parts unknown.

Of course, there is no help for a situa-

tion of this kind. The only help is prevention, which means that in New York State at least, no farmer should ever, under any circumstances, ship to any dealer who is not licensed and bonded under the New York State law. A list of such dealers, brokers and commission men who are approved by the State will be forwarded free of charge gladly.

### An Honest Concern

WHAT a lot of trouble there has always been between nurseries and farmers! How many, many times a farmer has bought a lot of fruit trees from an agent or direct from the nursery only to find that the trees did not grow well, or did not come true to the variety. It is a pretty serious matter, too, for a farmer to work several years growing his orchard to find, when the orchard begins bearing, that he did not have what he thought he planted.

However, the better class of nurseries do not do this kind of business. Recently, our Service Bureau had an interesting and satisfactory experience with a nursery of the better type.

One of our subscribers wrote us that on March 10, 1924, he had sent an order to the West Hill Nurseries at Fredonia, New York, for plants amounting to \$11.48. The plants were to be delivered on April 10, by parcel post, and enough additional money was enclosed to cover the postage. The nursery company mailed the plants by parcel post, and they were lost in the mails.

The subscriber wrote to our Service Bureau and we wrote to the nursery. This company replied that during their fifty years in business there had been a good many shipments lost by freight and express, but that the freight or express companies had always paid the claims. However, the government does not hold itself responsible for parcel post packages. The nursery is not held responsible by law for the safe arrival of packages and therefore it seemed on the face of the matter as if our subscriber would have to lose his order.

However, the West Hill Nurseries happened to be a little bit more than honest. When we put the case squarely up to them, they agreed to replace the whole stock free of charge. They had already previously offered to replace the order for one-half charge. We appreciate the way in which this company handled the matter, and have informed them that we do not think they will lose anything in the long run by this way of doing business.

### Maybe We Can Help You

"I RECEIVED to-day your letter containing statement and check relative to sale of apples in the fall of 1923, for which please accept my thanks for the diligence displayed in obtaining a settlement.

"I shall ever speak a good word for your service to me in this matter.

"Thanking you again, and with best wishes for AMERICAN AGRICULTURIST, I am—J. S. W., Dutchess County, N. Y.

### Reasonably Good: Outlook Favorable

Financial Department: Will you kindly advise me as soon as possible if you consider the stock of the Adirondack Power and Light Corporation as a good sound investment. And do you think it is better than the banks. Please give me full particulars on this firm.—H. E. T., New York.

ADIRONDACK Power & Light preferred is a reasonably good investment for a customer of the company or one able to keep in touch with earnings. Present income covers dividend requirements by a good margin. You must understand, however, that unless the company continues to operate profitably there is no assurance of the keeping up of dividends. That is a risk any stockholder always takes. The present outlook is favorable, however.

# The Trouble Maker—By E. R. Eastman

## The Story Thus Far

*Jim Taylor, a young dairyman of the East, broods over the hard lot of the farmer. He and his neighbor, Johnny Ball, have a rather heated argument over the situation and discuss the treatment of the dairymen at the hands of the milk dealers. The following day Jim's milk is refused by Shepherd, the superintendent of the milk receiving station at Speedtown. An argument ensues and Jim strikes Shepherd, knocking him into a milk vat. Dairymen realize a fight is coming. They soon assemble to listen to a representative of a newly organized farmer association known as the Dairymen's League.*

"BOYS," he said, "I didn't come over here to make a speech. I couldn't if I wanted to, anyway. But I do want to take a few minutes to tell you why I asked you to come to this meeting right in the middle of haying. If you will excuse my being personal, I would like to tell you that I was born and raised on a large dairy farm. I mention this because it has a bearing on what I have to say.

"When I was a kid I went without all of the luxuries and many of the necessities of life because my father was a dairyman, and dairying didn't pay. Every time I see children eating oranges now as commonly as they eat apples, I think of the few times in my young life when Mother brought home just one orange, and even though she divided that orange among five children, it was a great treat. Bitter poverty was my portion as a child, and it was the lot of every farm family that I knew; and while conditions have improved somewhat, the great majority of farm people make only a bare living."

ALL over the dimly lighted room men were nodding their heads in emphatic agreement.

"These things," Bradley went on, "so impressed themselves upon me that I early had the desire to do something in my life that would help to bring about a better day in farming. Somehow I had gained the notion that to do this I must get some education, so I worked out at starvation wages for neighbor farmers, raised potatoes on shares and sold them from ten to fifty cents a bushel, and did every other thing that came to my hand to work my way through high school. And then I went to agricultural college and finally became a farm bureau man."

"A darned good one, too," shouted one of the younger farmers. Then Bradley had to wait, embarrassed, until they had finished cheering him.

"Two years ago," he continued, "I came down to this county, happy and enthusiastic that at last I was in a position to do something worth while for farmers. I had great dreams of bringing a new prosperity to these farmers. I saw the fields that needed drainage, the buildings that needed repairing, the crops that needed improvement; I saw what could be done with lime to make the clover grow and with spraying and pruning to rejuvenate the orchards, so I began to ride your hills and valleys and to talk to you at meetings, in your barns and in your lots about the gospel of better farming.

"But something was wrong. Friends I made, to be sure, but progress toward that New Day seemed to be mighty slow, and I blamed you at times for standing in your own light. I finally saw what was the matter. I realized that there were two parts to the farming business, production and marketing. These many years all of us have been emphasizing and working to make two blades of grass grow where one grew before, without even trying to sell the first blade at a profit. Farmers are pretty good producers. The American farmers are the most efficient in the world. This does not mean that there is no room for improvement. We should use better seed; we should study varieties; we should spray our orchards; we should weed out the poor cattle; and all of us will keep our costs of production down. But none of these things touched the greatest

of all of our problems, that of marketing.

"It was father's poor marketing ability that kept us all in poverty, working the long days for a bare living. It is our poor sales methods that are making our women old before their time, and driving our boys and girls to the cities. It is our lack of study of our selling problem that has put farm people into the control of middlemen and is losing us our much-vaunted independence.

"My father sold milk at forty cents a hundred pounds, or one cent a quart; the consumer paid seven or eight cents for the same milk. Some of that great difference paid for honest transportation and distribution. But the dealers got most of it in profit."

"Right!" shouted a young farmer. "Them hogs always have their noses in the trough whether they get anything or not."

THREE or four others began to shout, and Bradley waited for them to get quiet before continuing. He held up his hand.

"But, gentlemen, let us be perfectly fair. I don't blame the dealers. We would probably do the same thing in their place. You are the ones to blame and there never will be any difference until you get busy yourselves to make the change.

"So I have been considering this problem and wondering what might be done. Lately there has been considerable talk in this county about the organization called the Dairymen's League. I have looked it up and while no one can be sure that the League can settle our difficulties, I believe it has possibilities. They will be as great as we farmers make them, so I have asked Mr. Stevens, a League representative, to come over with me to-night and tell you about this Dairymen's League. Mr. Chairman, may I suggest that you now call on Mr. Stevens?"

Old John Ball, the chairman, then arose and said:

"Of course, we all agree with the facts our county agent has just given us, but we mustn't forget that the milk dealers are very powerful and that they could make it hot for all of us if they wanted to be disagreeable. It's all very well for us to talk about a poor market, but a poor market is better than none at all. I think we'd better be mighty careful about goin' too far with this discussion and talkin' about joining some fly-by-night organization that we don't know nothin' about.

"I suggest that we adjourn and go home and pay attention to somethin' that we know somethin' about."

JIM TAYLOR unwound himself from a cramped position in a primary seat near the front and said:

"Just a moment, Mr. Chairman. I just want to ask, are we American men living in a free country, or are we a lot of spineless old women so afraid of the tyranny of the milk dealers that we don't even dare talk above a whisper about the rotten deal that is being handed us? That idea to adjourn without hearing this League man makes me plumb mad.

"No, I'm goin' to make a motion. I move that we proceed to listen to this League representative and that any farmer here who is afraid to stay be excused to go home."

The motion was seconded and carried, and Stevens was introduced.

"Gentlemen," he said, "I am sorry that I got off to such a poor start with you. But this incident illustrates the strangle-hold that the dealers have on the milk business. As the gentleman just said, things have come to a pretty pass when free-born American farmers hesitate to discuss their common problems in open meetings.

"Mr. Bradley of the farm bureau has told you why I am here. He has given you some idea also of why the League is here. I believe that it is here to stay. Let me tell you why.

"I need only to call to your mind the bitter experiences which you producers are having every day, and have had for

years in the making of milk. Let me first mention briefly what goes into the production of milk. Nearly all of your work and the work of your women and children is spent in raising the crops to feed your cattle, and taking care of and milking them. The corn that you raise, the hay that you harvest, and the grain that you buy with the little cash that you get hold of, all goes the same way. You spend years in growing the cows and in feeding them to get milk which you put into the dealer's cans, and deliver it to the dealer's station on the railroads. Did I say dealer's station? Excuse me, I meant your station. Although the dealer owns it in name, it really belongs to you, for it was your money that paid for it many times over.

"For the privilege which he confers upon you in buying your milk, you must appear at his station twice a year, in March and September, and sign a contract agreeing to deliver your milk under such and such conditions for the next six months at starvation prices.

"At these contract periods you go to these stations and you stand in line with your brother farmer, and when your turn comes, you put your 'John Hancock' down on the dotted line where the dealer tells you to sign, and you sign the contract."

"If we don't sign, we don't sell," interrupted a voice in the audience.

"EXACTLY," continued the speaker.

"The farmers' independence is the one thing that has kept our people on the farms; but I ask you in all seriousness, how much independence have you when you go to the milk station and sign a contract to sell your milk for prices about which you have nothing to say, and then go over to the feed dealer or the merchant and buy your groceries and farm supplies at prices that the other fellow sets?"

"Although these conditions have been in existence for years, farm people have been able to worry along because they raised their own food, were willing to go without the luxuries and some of the necessities of life, and because of the cheap help of the women and children. But those times are past. Farms are being abandoned, buildings are without paint or repair; our young folks have gone, and are going, to the cities. Sheep have disappeared from the East, and unless conditions change, the cattle are going, too.

"But there is a way out if we can only come to it—through organization. Back in 1907, a few farmers down in Orange County got together and formed a little dairy organization which they called the Dairymen's League. Since 1907, a few of those farmers who realized, as we all do, the bitter hard times in the dairy industry, looked ahead and saw that the way out was through their own efforts. In every generation there are a few men who have faith and vision; faith in the fundamental principle that right will triumph in time, and vision to see what is needed to set forces working toward right. Men such as these are working for the Dairymen's League. On every hand they have met discouragement. They have been told hundreds of times, even by farmers themselves, that farmers can never stick together. Time and again some men will say, 'The League is all right, a good idea, but it's no use for me to join because if I did, there's my neighbor Smith on this side and Brown on the other that will never join; and if they did, they'd never stick.'"

AS Stevens was talking, Jim Taylor sat partly facing the audience. The few smoking lamps dispelled some of the gloom near the front of the room and filled the place with that peculiar odor of burning kerosene. Jim watched the faces of his neighbors grow more and more interested and excited, and he lost some of the gloom which had been with him for months.

He said to himself: "At last they are ready. If there is anything to stick to, they'll do it!"

Then he brought his attention back to the speaker again.

"But these leaders," Stevens was saying, "have kept everlastingly at it until now 13,000 men have signed the League contract to sell their milk collectively. So the other day up in Albany, the directors of the Dairymen's League—farmers and dairymen themselves—got together and voted that in September the farmers, through their organization, would set the price on their own milk instead of letting the dealers set it. If the dealers won't pay the price, they won't get the milk!"

There was a noisy clapping of hands and stamping of feet. The chairman pounded for order. When it was quiet, Stevens concluded:

"Gentlemen, that completes my story. I have some contracts here for you to look over and, if you wish, to sign. I expect to spend the next few days in Speedtown and the vicinity, giving every dairyman a chance to come in with his neighbor and stand for a fair deal in the milk business. Gentlemen, I thank you."

The speaker sat down and again there was vigorous hand-clapping, but Taylor saw it was not unanimous.

Ball again pounded for order, and recognized a farmer on his feet in the rear of the room.

"Mister Speaker," said this man, "let me tell you somethin'. Some years ago, a feller came up in here and made the same kind of a speech that you've made about a dairymen's organization called the Five States Association. He made such a good speech and we were so hard up that most of us older fellers signed up and paid so much a cow to join. The leaders of that so-called organization took our money, and probably some from the dealers, and that's the last we ever heard from them. You can't blame us for being a little slow in coughing up our pennies to give some of you fellers a job riding around the country."

"Shame!" shouted a voice.

"Sit down!" said someone else.

Stevens arose and held up a hand.

"I might be angry at what the gentleman has just said," he said, "but I am only hurt, for I happen to be a farmer, too, and all the pay I get out of the few days I am leaving my farm to do this work is my expenses. I am hurt and disappointed because every time farmers try to do anything in a body they don't go far before someone begins to holler about the leaders selling them out, and the dealers have come to know that the quickest way to break up an organization is to sow such propaganda.

"Now let me tell you something about the Five States Association, for I happen to know some of the leaders. They are farmers like yourselves; they were not dishonest. They put in weeks of service, for which they never received a cent; they made an honest effort to get you more money for your milk; they made the mistake of staging their fight with the dealers in June, when the country was flooded with milk, instead of doing it in the fall when milk is scarce. But the chief reason why the Five States Association failed was not due to the leaders, but because the farmers themselves did not stick."

Jim Taylor got the floor.

"I for one am ready to give the League a trial. Men, that's the least we can do. Let Mr. Stevens get his contracts ready at the desk and let every man who wants to—and I hope that means everybody—come up and put his name on this farmer's contract. Mr. Chairman, there has been talk enough. It's time to act. I move that the meeting be adjourned."

The motion was carried and Jim marched forward and signed the Dairymen's League contract, the first one in that neighborhood, a contract which marked the beginning of a long-drawn-out fight of rankling bitterness and of change in Eastern agriculture, a change which only time could tell to be for better or for worse.

(Continued next week)

## Let Old Man Winter Act Up! You can be comfortable if your house is Moncrief Furnace heated-

SUPPOSE the thermometer hits zero and the winds blow a gale, that Moncrief Furnace will keep your house well warmed, without drawing excessively on the coal pile either. You will have abundant heat, made healthful by proper moisture, and extra big casings assure absence of floor drafts.

For thirty years Moncrief Furnaces have been making homes cheery and pocketbooks happy. The best of materials and unusually good construction make Moncrief Furnaces the biggest value per dollar you can find. Made in Pipe, Pipeless and Majestic-Moncrief, and in all sizes—there is a Moncrief exactly suited to your needs.

If no Moncrief Dealer is near you, write our distributor regarding details of our special proposition.

# Plant an Indoor Garden

## Now Is the Time to Prepare for Winter Bloom

IF there is any time in which we long for flowers, it is during the long winter months when all out-of-doors is bleak and dismal.

November sounds the knell of the flower season. A few chrysanthemums still bloom in the garden, but, with the first frost, they, too, will have vanished. This then is the month we must think of our indoor gardens if we would have springtime indoors.

There are so many attractive flowers which can be raised in the house—the hyacinth, the tulip, the scilla, all too well known to be described. In their brilliant reds and pinks, they add a

pan and half-way over the edge of the dish.

For the nature lover, the woodland bouquet is most attractive. This is made by taking a small fish globe and filling it with all sorts of sweet-smelling, woody things. For example, moss, carefully arranged, in which is planted the graceful partridge berry vine and the delicate trailing arbutus. And, if one cares to achieve a more artistic result, a few pieces of bark covered with lichens may be added.

The care of such a globe-garden is very simple, water being needed only every six weeks or seven. While it lasts (and it

### PATTERNS FOR JUNIOR, MOTHER AND BIG SISTER

No. 2110. Blouse with surplice closing. Sizes 16 years, 36, 38, 40, 42 and 44 inches bust measure. Size 36 takes 1 7/8 yards 40-inch with 1 yard 20-inch contrasting material. Price 12c.

TO ORDER: AMERICAN AGRICULTURIST patterns are seam-allowing and guaranteed to fit. They are up-to-date, yet simple enough for the busiest woman to use. Order several at once for your winter needs. Write name, address, size and number clearly, enclose correct remittance and mail to Pattern Department, AMERICAN AGRICULTURIST, 461 Fourth Avenue, New York City. Coins sent at your own risk, stamps are safer.

Have you seen our big new style book? For every design on our pages there are dozens in this useful fashion guide. You need it on your sewing table. Add only 10c to your order and say "send me my copy of the Fall and Winter Catalogue." It will go to you at once.

No. 1681. Play suit for boys. Sizes 2, 4, 6 and 8 years. Size 4 requires 1 1/2 yards 36-inch material. Ideal in khaki for the boy who is hard on his clothes. Price 12c.

No. 2249. Combination in long-waisted style. Sizes 16 years, 34, 40, 44 and 48 inches bust measure. Price 12c. Embroidery transfer 709, 15c extra.

No. 1354. Slip-on House Dress. Sizes 36, 38, 40, 42, and 44 inches bust measure. Size 36 takes 3 1/4 yards of 36-inch material. Can be used as all-over apron. Price, 12c.

No. 2209. Slenderizing Dress for stout women. Sizes 36, 38, 40, 42, 44, 46 and 48 bust. For size 36, use 4 5/8 yards 40-inch material. Price 12c.

## Post Your Farm

and  
Keep Trespassers Off

We have had a new supply of trespass signs made up. This time they are made of extra heavy linen on which the lettering is printed directly. There is no card facing to be water-soaked by the rain and blown away by the wind. We have had these new signs made up of extra heavy material because severe storms will tear and otherwise make useless a lighter constructed material. We unreservedly advise farmers to post their land and the notices we have prepared comply in all respects with the law. The price to subscribers is 95 cents a dozen, the same rate applying to larger quantities.

touch of sunshine to the most somber room.

Another favorite with all indoor gardeners is the dainty crocus. An acquaintance of mine who grows especially beautiful crocuses, has formed the habit of saving all odd-sized pewter dishes. In November, she fills these dishes with crocus bulbs, the number depending upon the size of the dish. Inside each pewter dish is a garden seed pan in which the bulbs are sown irregularly, thus insuring a more natural and a prettier effect. The seed pan (and this fact is one to be remembered) stands on a few sections of cork. Through this method of planting, the bulbs receive plenty of moisture and, at the same time, are never water-logged. Later, when the crocuses are ready to bloom, the seed pan can be hidden most successfully with fresh moss arranged in such a manner that it is half-way over the edge of the

always lasts more than a year) it is beautiful, odorous and cheerful. What more can one ask of an indoor garden?

Those who are adept in the art of gardening often grow orchids to advantage. These plants, however, require broad, spacious receptacles which take up a great deal of room. They also require a special method of watering and are not readily grown by the amateur.

For first experiments, it is better to choose the simple plants and then, as one's knowledge of gardening expands, choice of plants grows accordingly.

The main thing is to have an indoor garden—crocuses in a sunny, bedroom window, a box of yellow tulips in the library, a nodding, fragrant bunch of hyacinths in the dining-room. These plants are the ones which bring springtime indoors while winter is still without. Start planting them this month!—I. R. HEGEL.

### Hand Painted Weeds for Gifts or to Sell

I HAVE derived so much enjoyment from the rare beauty of two bouquets of hand painted weeds made by a friend for Christmas that I cannot refrain from telling others about them. I have seen many expensive bouquets of hand painted weeds in the gift shops of the city but none done so well or so beautifully as these. Any woman can learn to do the work, and when artistically arranged in vases on the mantle or in little wall baskets where the sun shines on them the painted weeds are exquisite.

In summer the country roadside abounds in many different kinds of weeds in a profusion of blossoms. Then along comes Jack Frost who helps to change their brilliant hues into the drab and unobtrusive garments of winter. And, now, someone has developed the idea of gathering these dry weeds, painting them and arranging them about the house to bring cheer and color during the cold, dreary days of winter.

#### Start Collecting in the Fall

If the weeds are to be painted for Christmas presents, one has only to take a car any time in November or December and go out along a country road to gather plenty of dry milk weed pods, everlasting, broad-bladed grasses, golden rod, teasels, ragweed and cat-tails picked on long stems. One would expect the leaves or flowers to shake off the dry stalks, but they do not seem to do so. Remember, though, that dried weeds are brittle and handle carefully. The next thing is to invest in several colors of oil paints (in small tubes) and a can of enamel stove black, the only expense incurred.

When an old apron is donned and everything is ready, the actual painting begins. The stems are all painted black. Some of the teasels are given a coat of green, some gold, while others are dressed in silver. A very few of the golden rod flowers were used in my favorite collection and when they were painted they were done in a rusty gold color. But it seems there is an insect which stings the stem of the golden rod thus forming a round ball about two-thirds of the way up the stem and these are painted in gold and silver. Against the black stems they are very colorful and add much to any bouquet. The grasses are painted gold or green with outlines of yellow.

Of course, only one coat of paint can be put on at a time. This must be dried thoroughly before another is put on. For instance, a blade of grass may be painted yellow first. The next day green is painted on, leaving a little margin of the yellow around the edges to lend contrast.

#### Use Ingenuity in Coloring

The ragweeds were done in blue or green with touches of yellow here and there. The cat-tails touched up with a little gold give the appearance of being true to their natural dress of summer. But the prettiest and most graceful of all are the milk-weed pods. These are so prettily blended and grouped in themselves that when painted are very artistic indeed. Some may be painted on the upper part of the pods in green outlined with yellow and lined with the same yellow underneath. Others are done in deep wine color with touches of gold and lined with a rusty gold. The wine colored ones mottled with silver and lined with silver are beautiful and so are those done in silver and lined with a rusty gold.

These all take quite a little time in the making, but to see beauty grow under one's hand is an æsthetic pleasure. To share one's own handiwork with friends or relatives is also a treat. It may be, too, that the painted grasses can be sold through neighboring stores or thrift shops, and when Christmas comes round again, you should have a good supply for gifts or to place on sale.—ELLEN ACKERMAN ELLIOT.

Remove iron rust stains by soaking in rice water.

## Home-made daylight!

ONLY A TWIST of the automatic ignitor—and "home-made daylight" floods the room.

Not even matches are required, because each fixture is equipped with a little friction sparker (such as those on cigar lighters in idea—but actually efficient in operation).

Cooking

The light given by the J. B. Colt Carbide-gas system is often known as "artificial sunlight," because it is scientifically found to contain more of the color ingredients and quality of actual daylight than any other artificial illuminant.

For cooking, the Colt system of Carbide-gas furnishes a clean flame, not unpleasant in odor and concentrated at the point where the heat is needed. It will not overheat the kitchen. It gives no smoke, no soot; there is no carrying of wood or coal, nor danger of burning embers or leaking oil.

Ironing

For ironing, the Carbide-gas self-heating iron also saves time and trouble. There is no waiting for it to heat and no changing of irons. An even temperature is automatically maintained.

The College of Agriculture of the University of Wisconsin conducted investigations on the subject of farm lighting, the results of which have been published.

Among other things they found that the cost of operating an average Carbide-gas lighting plant was cheaper by half than any other modern lighting system for rural use.

Another interesting fact demonstrated was that cows can be stabled and fed under good lighting in one-third less time than under old-fashioned lighting. The J. B. Colt barn-light is specially designed, and is the result of many years' experience in barn lighting.

Barn Lighting

Perhaps its most valuable use, in addition to lighting the barn, is in chicken-houses.

We have been informed by some users that increased egg production alone has paid for the cost of the entire installation. Under the soft "artificial daylight" of Carbide-gas, hens will lay uniformly the year round.

\* \* \* \* \*

The J. B. Colt system consists of a simple automatic generator, buried at some convenient place in the yard. It holds 200 lbs. of Union Carbide at one filling—

More Eggs

which means that the only attention it requires is recharging on an average of two or three times a year, and removal at the same time of residue which

then serves as whitewash, soil corrective, or germicide.

From the "gas-well" the gas is carried through concealed iron pipes, throughout house, barn, porches, poultry buildings and grounds.

Very attractive terms can be arranged for the purchase of a Colt plant if you are a farm owner. Ask us about them.

N. B. Do not be deceived by inferior imitations of the Colt plant. Representatives for the genuine Colt system can furnish credentials.

Union Carbide for use in the Colt system is distributed from more than 175 conveniently located Union Carbide warehouses throughout the country—direct to the user at factory prices. There is one near you.

# Reviewing the Latest Eastern Markets and Prices

## MILK PRICES

**T**HE Dairymen's League Cooperative Association announces the following prices dealers will pay the League during the month of November for milk testing 3% in the basic zone of 201 to 210 miles from New York City:

Class 1, milk used chiefly for fluid purposes \$3.07 per 100 pounds. *This is an advance of 47c per 100 pounds over the October price; Class 2A used chiefly as fluid cream, \$1.90; Class 2B, used chiefly in the manufacture of plain and condensed milk and ice cream \$2.05; Class 2C, used chiefly in the manufacture of soft cheese, \$2.05. These prices in Class 2 are the same as in October Class 3, used chiefly in the manufacture of whole milk and sweetened whole condensed milk, powdered and evaporated whole milk, \$1.60. This is a 15 cent advance over October's Price.*

Class 4 milk will as usual be based on butter and American cheese quotations on the New York market.

The 47 cent advance in Class 1 and the 15 cent advance in Class 3 will be most welcome to League members.

### Sheffield Producers

The Sheffield Farms Company Producers announce the following prices for 3% milk in the 201 to 210-mile freight zone until further notice; Class 1, \$2.60 per 100; Class 2, \$1.70; Class 3, \$1.55; Class 4, to be determined by market quotations of butter and cheese. No changes announced for November.

### Non-pool Cooperative

The Non-Pool Dairymen's Cooperative price for Class 1 milk is \$2.40 per 100 pounds; Class 2, \$1.85; Class 3A, \$1.55; Class 3B, \$1.45, until further notice of November changes.

### Interstate Producers

The Interstate Milk Producers' Association (Philadelphia Price Plan) announces that receiving station prices, or the price to farmers in the 201 to 210-mile zone from Philadelphia for 3% milk, is \$2.19. In the 101 to 110-mile zone the price is \$2.29.

## BUTTER SLIGHTLY WEAKER

The butter market has turned weaker due to continued heavy receipts. Very little real good butter is arriving and such meets fair trade. Medium grades are in heavy accumulation and turn slowly, causing wide spread of value.

Creamery 92 score, is now 37½ cents. Higher than 92 score is bringing 38 to 38½. Most arrivals are lower than these grades, are in heavy accumulation and bring from 30c. to 36c.

## CHEESE MARKET SLOWER

During the past week the cheese market has continued with the same slow tone and lack of activity that has characterized the market for the past several weeks. In fact, there has been a slight decline in fresh State flats. Even this decline did not stimulate much buying interest. Most of the business reported is in cured cheese and in small lots at that. Buyers seem to be only taking on enough to satisfy their current needs. Fancy New York State held flats are bringing around 20c with a few pet marks reaching 21c. Average-run marks are bringing anywhere from 18½c to 19c. Real fancy fresh flats, whole milk, are in about the same price range as held goods with a tendency to come down to 19c. Average run fresh goods are

## Color Your Butter

**"Dandelion Butter Color" Gives That Golden June Shade Which Brings Top Prices**

Before churning add one-half teaspoonful to each gallon of cream and out of your churn comes butter of Golden June shade. "Dandelion Butter Color" is purely vegetable, harmless, and meets all State and National food laws. Used for 50 years by all large creameries. Doesn't color buttermilk. Absolutely tasteless. Large bottles cost only 35 cents at drug or grocery stores. Write for free sample bottle.

Wells & Richardson Co., Burlington, Vt.

about 18½c. Advice states, and conditions prove it, that the make has not been running as heavy as was expected, but in spite of this, speculative interest has been lagging with the result that we have an uninteresting market. If we had a heavy make at this time we could expect prices to take an awful slump, but conditions in the market indicate that present quotations will hold for a while, with possibly slight variations one way or the other.

## EGGS GO HIGHER

Fancy nearby fresh eggs took another jump during the past week with the result that extra fancy closely selected nearby hennerly whites are now bringing anywhere from 81c to 86c depending on the kind of packages they are arriving in. In fact, stock of this quality is so scarce that a stronger tone has been reflected into the market for the more medium grades and they are being taken at fair values. However, buyers are still critical when paying these high prices and there is still rather a free use of storage eggs which is quite seriously interfering with the sale of competing qualities of fresh receipts. There is some complaint of mixed quality and a considerable proportion of these goods is shrunken and weak bodied due to country holding. The market is showing enough strength now for shippers to pay a great deal of attention to the methods they employ in holding eggs. The spread between gathered stock and fresh goods is anywhere from 15c to 20c a dozen or an item of \$4.50 to \$6 a crate, an item worth taking into consideration where a little care is the only outlay. The market on nearbys has been showing such strength of late that it can be said the market is pretty much in the seller's favor.

## POULTRY QUIET AND EASIER

The tone of the poultry market is very quiet and prices are slightly easier than last week. When trading was resumed on Tuesday, Monday being a Jewish holiday, there was some accumulation, with the result that the market opened in a very unsettled condition. This was primarily due to the fact that there was an unusual influx of chickens and old fowls on previous days. It was the same old story as on the occasion of other Hebrew holidays. As the week progressed, the market seemed to gain slightly, but this was more in trade than in prices. Consumptive demand is picking up and next week we should see things in pretty good shape. It has taken some time to clear accumulations and when arrivals are only mediocre, we can't expect changes to take place over night.

The express market on chickens has been showing a great deal more activity than fowls and the market on them is firm. White Leghorn chickens are selling in the neighborhood of 24c with small stock reaching 25. Small stock usually approaches fryer size and therefore brings a slight premium. Leghorn fowls of average quality are down as low as 18c, with the best marks bringing 22c, colored fowls are bringing anywhere from 26 to 30c, depending on quality.

Poultrymen who have young stock that weighs in the neighborhood of 1½ pounds will find a satisfactory market at the present time. Broilers are bringing 35 to 40c. Stock that is slightly heavier than that is not worth quite as much, falling into the class known as fryers. Chickens are those birds weighing 4 pounds or over.

## POTATOES STILL CHEAP

There is no improvement in the potato market. Consumption seems to be pretty good, but prices do not seem to get any better. One of the large car lot operators in New York told the writer that if consumptive demand were to increase 50 per cent, he doubts very much if prices would react to any degree. That shows pretty conclusively that there are too many potatoes in the market and in the country. Down on the East end of Long Island, in the Riverhead and Southampton section, potatoes are bringing anywhere from 60 to 70c per bushel to the farmer. In Nassau County, where farmers are trucking into the market, they are getting better prices; in fact, some are getting relatively fancy prices, depending how they are marketing their stocks. Some are getting \$1 a bushel straight, but that is almost a retail price. Maine potatoes are now being delivered in New York City at \$1.10 per 100 lbs. in bulk. Deduct from this about 65c freight and you will see how much Maine growers are getting after they have put potatoes in the car. Maine potatoes in 150-pound sacks are being delivered in New York for \$1.90. States are almost bringing as much money as Maines, sacks holding 150-pounds bringing \$1.70 delivered in New York.

According to recent Government reports, the potato crop is not as short as was originally expected. The U. S. D. A. crop report of September 9 reads as follows:

Late potatoes in the Northern States have been favored by the August weather. The total potato crop is now forecast at 412,761,000 bushels, which is about 14,000,000 bushels more than promised on August 1, almost the same as the crop of 1923, and about 22,000,000 bushels greater than the five-year average.

## APPLE EXPORTS OFF

The export apple market has had a slump. Several shippers have sold their Ben Davis and Yorks at a loss, the English markets paying less than what buyers on this side had to pay for the stock they shipped. This has had rather a dampening effect on the market in general. One prominent operator in the trade tells us that this reaction is likely to be felt for another month. By the end of November, or the first week in December, he looks for better export trade when English markets will be interested in apples for the Christmas holiday trade. For three weeks at least he looks for no improvement on the other side.

Baldwins have been passing in the trade at anywhere from \$4 to \$4.50 F.O.B. Farmers both in western New York and Hudson Valley are holding for \$5 where cold storage is available. Whether they are going to \$5 or not remains to be seen. One man's guess is as good as another. We do know that the Baldwin crop is short.

There is some complaint in the trade about the method which New York growers are following in their pack and we shall hear more of this at a later date. Sufficient to say, the trade is not satisfied with the way many New York growers are packing their apples, and in view of methods employed by western growers, we are apt to experience a loss of business, unless this is watched more closely.

There is a strong demand for 3-inch apples for baking purposes. Kings have been selling anywhere from \$6.50 to \$7.50, 3-inch size. Baldwins and Greenings of this same size are reported to be bringing up to \$17.

## GRAINS AND FEED

According to New York State Department of Farms and Markets, the following prices prevailed October 18.

The quotations given in this report show the approximate prices at which feed can be purchased per ton, and grain per bushel, in straight carlots through billed from Western points, delivered on track at points in the freight zones as indicated. Mixed carlots cost approximately \$2 per ton more.

Retail feed and grain prices vary with different local dealers depending upon their individual cost of doing business, volume handled, etc. In the case of feeds the retail price may sometimes be as high as \$5 per ton above the wholesale prices given in this report.

For points taking New York rate add to Albany price ¼ cents on oats; ½ cent on corn, 10 cents on cotton seed meal; and 20 cents on other feeds.

## MEATS AND LIVE STOCK

Live calves are a little bit lower than last week. Real prime stock will bring \$14 per hundred, which is 50c under recent market. However, at this price the market is steady with fair to good marks bringing from \$12.50 to 13.50. Common stock is as low as \$8.50. Prime lambs are worth in the neighborhood of \$14.50, a few extra fancy marks bringing 25c more. Fair to good stuff is \$1 lower. Common stock is down in the neighborhood of \$9 to 10.

There is moderate demand for live hogs, but nevertheless the market is irregular. Yorkers, weighing in the neighborhood of 200 pounds, are bringing from \$10.25 to 10.50 per hundred. Country dressed veal have been meeting a steady market right along. The outlet has been good and here and there choice marks are working out at a premium, bringing anywhere from 18 to 19c a pound. Primes are worth from 15 to 17c, with fairly good stuff bringing 11 to 14c. Small veals are down as low as 8 to 10c. Roasting pigs are bringing 28 to 30c for

10 to 15 pound stock, while 25 to 30 pound stock is worth 17 to 20c. Intermediate weights fall somewhere between these extremes.

## Hunting for the Ideal Forage Crop

(Continued from page 300)

Orient. One helps the farmer by automatically planting itself season after season, the other two have a special value in time and forage saving. The plant from Korea comes early in the year before other forage crops are ready, but is ripe and dead at least a month before the killing frosts come, but then the farmer by having a mixture of the two can depend upon the Japanese cloverlike plant that is still green until late in the year. Scientists are thus lengthening the season and giving more forage and saving farmer's time and making money for him.

Science is, however, never fully satisfied. Hundreds of experiments are necessary, Dr. A. J. Pieters warns, before a variety is found that is in all respects absolutely satisfactory and is certain to be of the greatest value to American farmers.

The ideal of the Department of Agriculture scientists is to make the American farmer the most prosperous in the world and the most intelligent as far as his business is concerned of supplying foods for the dining-tables of the nation.

Special importance is attached to the clover experiments because this plant is fundamental in all crop rotation plans and consequently may be considered the basis of scientific farming.

## Moravia Team Best at Morrisville

(Continued from page 308)

teacher, De Alton Smith, rode to Moravia from Morrisville in a Ford touring car. The boy wouldn't trust the express companies.

There were six events in the contest with medals for the two highest in each event. The boys judged fruit, crops, White Leghorn poultry, Barred Rock poultry, a ring of 4 Holstein-Friesian cows, and a ring of 4 Holstein-Friesian heifers. In addition to receiving medals, the two highest scoring individuals in the two poultry classes received White Leghorn cockerels. The silver and bronze medals, presented the two highest scorers in each event, were awarded as follows: Fruit, 1st, John McIntyre, Jordon; 2nd, Bernard Norton, Boonville; Crops, Merwin Robbins, Pulaski, and Allen Wyekoff, Marcellus, tied for 1st place; Leghorns, 1st, Clifford Wileox, Moravia; 2nd, Maurice Richardson, Pulaski; Plymouth Rocks, 1st, Merwin Robbins, Pulaski; 2nd, Allen Wyekoff, Marcellus; Cows, 1st Clifford Wileox, Moravia; 2nd, Foster Brown, Boonville; Heifers, Thomas O'Toole, Moravia, and Glenn Morse, Moravia, tied for first.—D. H. T. B.

# Green Food for the Hens

Adds Variety to Ration and Acts as Tonic

AT this time of the year along with the harvest, one has a chance to do the hen a good turn by setting aside some sort of green or succulent food for her use in the winter time. Perhaps it is a few beets or carrots left over from the garden, apples from the orchard, heads of cabbage that split or were too small for setting. They are worth saving; put them in the cellar or cover them over with dirt and straw in some corner where the wind will not sweep the ground bare of snow.

The hen really has a dreary outlook when the fall comes. One day she eats grass and bugs; the next day frost or snow removes this part of her daily ration and her body suffers. Overnight she has been robbed of a vital part of her ration; scientists say that she has lost vitamine B and some of vitamine C, but, for our purpose, it will be enough to say that she, by loss of greens, fruits, and vegetables, has lost certain essential factors which are necessary for her well being, whether she is a hen or a pullet. Hence the necessity for green food in the daily ration of any flock of hens.

### Green Food Tones Up the Ration

As I have already said almost any vegetable or fruit constitutes a green food. It does not follow, however, that you are supplying hens with green food simply because your mash contains Alfalfa Meal. Green food implies succulence and freshness of quality. It adds variety to a very much cut and dried winter diet, and, above all, it stimulates a bird's appetite and tones up her system.

While there are numerous fruits and vegetables which come under the general heading of green food, there are three specific feeds that find popular favor among poultrymen: sprouted oats, beet mangels and cabbage. The use of one of these three green stuffs lies open to every farmer, because one or more of them represent a part of the yearly crop. To the commercial poultryman who has no crop of this nature the necessity of buying and storage becomes a problem which must be met, for a hen to do well, to pay well, must have green food.

### Vary in Composition

The composition of these three foods is, however, not the same. Sprouted oats and mangels are the most desirable of the three feeds and have a better vitamine content; or, to put it another way, these two feeds give the hen more nearly what she requires for her physical well being. Cabbage, on the other hand, is not to be scoffed at; it, too, contains the necessary vitamins, but, because it is largely composed of water, a hen must consume much more cabbage to get the same amount of good out of it as she would out of oats or beets. To use an illustration, the writer tested a pen of birds out. The hens had been fed sprouted oats, but, when early cabbage came, it was quoted at such a low price that he gradually changed from sprouted oats to cabbage, all other conditions in the pen remaining the same. The egg production decreased and decreased as the cabbage increased. From a production of 40 per cent., the decrease continued until there was practically no egg production left. A hasty return to sprouted oats saved a few dozen eggs, but the cabbage had already produced disastrous results. Just the same, cabbage is succulent and contains some value. By all means feed it to a hen, and, to remedy its water composition, keep them hanging on a string or stuck on a spike where the hens can have them all the time.

### Cow Beets Excellent

Cow beets or mangels are excellent for feed. As a crop they have good keeping qualities whether they are stored in a cellar or covered over with straw and dirt. Hens relish them as a food, and, no matter whether they are split or thrown

in whole, they readily pitch into them. Twenty to twenty-five pounds a day is a good allowance for 100 hens.

Sprouted oats is the most fussy food of all and is probably the most expensive, considering the labor. There is some compensation in the fact that, for all the oats set, they expand to three times the amount during the sprouting process. The chief trouble, however, is that heat of some kind is necessary in the sprouting process: the trays of oats must be kept near the stove or furnace. The more heat they receive, the quicker they sprout. On the other hand, it is better to have the temperature as nearly uniform as possible. This will keep the sprouting process steadily going on and insure a steady, consistent supply of green food, for nothing is worse for a flock of hens than to give them a good feeding of greens one day and then none for two or three days.

### How to Sprout Oats

To sprout oats soak them in a pail of warm water over night. Next day spread them about an inch deep in your oat tray and continue the process until six or seven trays are set. By that time the oats will have sprouted enough for feeding. They will constitute the best feed when the sprouts are from one to two inches high. Allow each hen one to one and a half square inches of this feed a day. As it is concentrated feed, it should not be used hit or miss. A failure to use it day in and day out will result in poor egg production. Likewise, an over-supply is none too good for laying.

### Avoid Mouldy Oats

There is one other factor that may cause trouble when oats are sprouted, and that is mould. Clean oats, oats free from dust and dirt, do not mould.

The writer has not meant to slight other green foods. Rather has he taken these three as being typical of and possessing the good qualities that any green food ought to possess. Green food in a commercial poultry plant is a necessity, a necessity that repays the poultryman with good dividends. Its use in a farm flock cannot help but increase winter egg production.

### Fall Henhouse Cleaning Time Is Here

THE season is here when the hens must be put in winter quarters. Are you ready? If not, begin right now while the weather is nice and pleasant, clean the houses, wash the windows, put fresh cloth on the open spaces, as the ones now in are dusty, if not torn, and a good circulation of air is impossible. If there are any broken glass put in new and look for cracks where a draft may get in. We use curtains in front of roosts and some on ends. Be sure that these are clean and ready to use, for often the first cold rains come while the hens are on range and, if they are obliged to go to bed some night cold and wet, put up the curtains until they get warm and dry and the chances are they will not take cold; but do not leave them up so they get too warm, for they will take cold that way just as well.

### Get After the Lice

It is a good plan to spray the houses or pens with a soap and sulphur solution, a nice warm day when it will dry out and not leave dampness. Paint the roosts and nests with kerosene or, if you have it, the used oil of a car or tractor. We like to have our roosts loose so we can take them down, stand on end in a pail of oil and paint all sides. Then paint carefully the sides all around where the hens roost, and the nests. If depluming mites or head lice of any kind are on the hens dip the hens. Another louse remedy we find very good is to dust with a good louse powder over the birds while on the roosts.

—MRS. C. J. DOXTATER.

# TRAPPERS—Ship To

# An Old-fashioned Plow-handle Talk

## *The Little Things Are the Big Things in the Everyday Life of the Farmer*

By H. E. COOK

THE editor asks why not write some old-fashioned plow-handle notes referring directly to the daily movements and incidents on the farm. I find in these days of cheap, I mean low cost, printed matter bringing to ones door every day the outstanding events of the whole world there is a tendency to side step the small events of a farm. I have just returned from a couple of days business trip to the big city with the good fortune to see the big air ship come sailing into, or rather over the city. After that I spent an hour with the milk company, who sells our certified milk in the city. Which do you

H. E. Cook

suppose I talked about the most after arriving home? Why the ZR-3 of course.

While we have had what seems like an unusual season, we seem to have gotten through about on time.

Haying time was catchy, but we were only a week late and as we open our hay mows the quality is fully up to the average.

Our grain was out during the protracted rains but the drawing and threshing came out so that not a kernel was damaged nor has it warmed in the bins, and is heavy. My, how the liberal use of acid roek does make for real grain kernels! No light, chaffy stuff; even the late sowed barley and oats are heavy, not quite equal to the early sowed.

It is an open question now with some farmers whether grain growing on dairy farms is profitable—however I like to see the big bins for horse feed all of the time, and for cows when I want it, even though expensive.

I don't know how to combine a mixture for horses like these soundly filled barley and oat kernels, and if horses teeth are kept floated, we find but small gain by grinding and horses grind these fat kernels much better than those with tough outsides and lean insides. Horses like folks, chew best what they like best—in the long run, good things pay best—of course sound hard spun wools cost more when we buy our clothing. Thoroughly tanned whole stock leather costs a good deal more when made into shoes than split leather, and so on through the list, but it's worth more.

There are always certain fixed overhead charges that remain the same whatever the quality may be. Probably manufacturing profits are not always higher with good stuff but they are as a rule the safe bet as a buy.

There is a shortage of high-testing, good-milking dairy cows in New York state, and prices are high, and with milk as with other goods mentioned above, consumers are looking to total solids as well as bacteria count, and because of the cow scarcity and high prices, less and less discrimination is made in breeding and rearing the young things. We are sending a lot of money to Wisconsin for seconds and thirds, because we do not have them near by, and I speak from experience.

Clover seeds, from reports, will be very high for the coming year. G. L. F. reports say prices will be almost prohibitive. What are we to do about it? I shall sow less, keep our meadows at work as they are, with more top dressing and keep the plowed land as plowed land. Our present meadow treatment is showing gains in production as the years pass and with alfalfa sown freely, the hay cut is a pretty good milk-making product. Top dressing with stable manure and the use of phosphoric acid, shows on alfalfa even though the roots are working deep.

A friend asked me recently what was presently our hard problem. I made the following classifications: In our business, soils, crops, cows, sanitation, marketing, which includes transportation and labor. Quickly I answered marketing and labor—and cows a good third, I refer to high-testing ones. But, he said, you have boasted of your ability to get good workers and plenty of them. Yes, I said, but you have never heard me brag about any patented or psychological power for paying them by any means. As a rule, men come to us, but organize them in working units which they like and will lower the cost of production and keep the marketing end alive and active with a constant flow of cash to pay them, that's a problem and a real one, and keeps all guessing, and no one has ever heard me boasting.

There wouldn't be any time to boast after the thing has been done, however much I wanted to do so. These are real problems and I expect they are no bigger at our house than with others who are manufacturing and marketing.

After all has been said, I don't believe there is a happier, more contented and financially safer group

## Yates Farms and Farmers

*A Fireside Reflection on the Finger Lake People and Their Customs*

By JARED VAN WAGENEN, JR.

I AM an ardent supporter of the 18th Amendment and have every confidence that the world is and increasingly will be a better place to live because of it. It must be confessed, however, that the grape industry instead of being ruined, as expected, has really experienced a boom as the result of prohibition. Apparently there are a good many people who are experimenting with home-made wine in an effort to out-wit Mr. Volstead. They tell me that last year's sales for this purpose were not as large as for two or three years previous which may indicate that these private vintages have proved less satisfactory than was hoped.

Jared Van Wagenen, Jr.

So far as varieties of grapes are concerned, it seems that in Yates County only one sort is being planted—the Concord. It was first introduced about three-quarters of a century ago, and while literally hundreds of other varieties have been tried out, Ephraim Bull's chance seedling still remains far and away the leading grape of eastern North America. Not even the Baldwin apple has such an unchallenged supremacy.

But Yates County grows a big variety of crops besides grapes. Almost every farm produces wheat. Of course many grumble about the price and declare that it runs them into debt but they continue to put in about the usual area because they understand it and because no other crop, unless it might be rye, fits into their established rotation. It only proves how slowly old agricultural communities change their crop habits.

Then Yates produces a good many beans. I was told of one crop at least which averaged twenty-eight bushels per acre. In addition to the value of the beans, the straw is the equivalent of a very good quality of legume hay.

\* \* \*

In parts of the county a good many canning peas are grown. Absolutely no special equipment is required. They are sown with an ordinary grain drill at the rate of four bushels or a little more per acre and are cut with an ordinary mowing machine. A survey of the operations of some 265 growers indicate gross returns of a little more than \$80 per acre. As a legume crop they ought to be a soil renovator and they are considered an especially good crop to precede wheat. Some varieties occupy the ground as little as fifty-five days. This

ought to be a splendid cash crop in a dairy community because the green vines after the peas are threshed will either make a most palatable succulence or can be put into a silo and make a valuable although rather stinking ensilage.

The county has some first-class orchards, while down in the southeast is a very local but highly developed black raspberry industry. These berries are not picked in baskets for the city markets but are allowed to get dead ripe and are then batted off the bushes with paddles and caught in canvas trays and sold to the evaporators.

I had the opportunity to make a very brief visit of only a few moments to the widely known Harpending Berkshire establishment at Dundee. The outstanding point is that while it is one of the largest Berkshire farms in this county, yet there are no expensive permanent hog barns. The pens are cheap, movable structures and are widely scattered over the fields and through the woods and the breeding stock must take its daily exercise regardless of weather conditions. Another thing is the very great use of alfalfa hay as hog forage. It is fed outdoors in special feeding racks and it seems to play almost as large a part as in the feeding of lambs. I have no doubt that the whole system makes for vigor and hardiness as well as for wonderfully economical production.

I wish my flying visit might have been considerably prolonged. Mr. Harry Harpending is very emphatic on one point. Feeding hogs on garbage may go well for a long time and while it does go well there is money in it, but sooner or later the owner will encounter most serious disaster in the form of an outbreak of cholera. Experiments have positively shown that a hog in the early stages of cholera may be slaughtered and the meat pass inspection, but the germ is present and is so resistant that it survives both pickling and smoking, and a ham rind in the garbage will light the fires of disease.

\* \* \*

After all, in any community the really interesting things are not just the crops and farms. Pope was right: "The proper study of mankind is Man." So I visited what is really a sort of shrine. Down close by the shore of Seneca Lake is the pretty little village of Dresden with four or five hundred people, and here, by a strange irony of fate, was born in a parsonage the son of a Presbyterian minister, a boy who was destined to be known as the arch infidel and most famous agnostic of his time, Robert G. Ingersoll.

The simple white parsonage has been converted into the village Community House. On the outer wall is a

bronze tablet stating merely that he was born in this house August 11, 1833. Within is a small but excellent library including of course a complete set of his writings. On the walls are many portraits in various poses including one in the blue uniform of the Northern army of Civil War days, in which struggle he was a gallant soldier. It is said of him that physically he was a magnificent specimen of a man, and his pictures bear out the statement—a great domed head with the prominent eye which is sometimes said to be the peculiar characteristic of the born orator. There are also some framed manuscripts in his handwriting, and letters of appreciation from various admirers. Upstairs they show you the room where he was born, and this has been furnished in accordance with the ideas of that day. In the rear is a fastidiously kept lawn and garden and I judge that in summer it must be indeed a lovely and peaceful spot.

One thing is sure: his family, to whom I understand the village is indebted for the house, have made absolutely no effort to perpetuate his peculiar tenets. The framed quotations on the walls reflect not his bitterness toward Christianity but rather his kindness toward men. Strangest of all, perhaps, the rules of the house which are conspicuously posted, are if anything rather more rigorous than govern a modern Y. M. C. A. building. For example no smoking is permitted. Also no games of chance may be played at any time and no games of any kind between Saturday night and Monday morning—strange rules perhaps in a shrine set up in memory of that once famous freethinker—I hear some one object because they are too Puritanical. Moreover the village preacher tells me that he was invited to hold his prayer meeting there if for any reason it seemed desirable.

\* \* \*

I have no slightest bit of sympathy with or comprehension of his theological position. It was a pitiful thing that he gave up most of his splendid talents to gibes and taunts of the dearest hopes and loves of many men—but this remains: that in a degree which surely has never been surpassed he was master of our English tongue. No man living or dead has eclipsed him in his ability to marshal in orderly array all the battalions of speech. And men yet unborn will read and marvel at his, the stately, rolling music of his marching prose. He barely missed enduring fame, but the same easy facility of language which led him to make a jest of all that men held dear won for him no warmer name than "Bob"—and this bestowed in mockery rather than affection.

Perhaps he was the greatest of "Idol Breakers" but after all, that is a ruthless sport which in the end does not pay.

## Curbing the Land Shark

*A State-wide License Law, with Teeth in It, Needed*

By GABRIEL DAVIDSON

*General Manager, The Jewish Agricultural Society, Inc.*

IN 1922 two million people left the farm. The cross current during the same year carried eight hundred and eighty thousand back to the land. Whether the shrinkage in our farm population by over a million in a single year is a bane or a boon, is outside of the scope of this discussion. It is evident, however, that though the drift from the farm is heavy, there is also a strong current in the other direction. The fact that at a time when farming was perhaps at its lowest ebb, when the plight of the farmers was being lamented throughout the land, only little short of a million people exchanged city for farm, proves that farming is still the goal toward which the energies of many city people are directed. Whether the number will grow or diminish, whether or not it will be sufficient to offset the tide cityward, farming will always remain the magnet toward which many city workers, many toilers in shop, factory or foundry, will be attracted.

The purpose of this article is to consider the first step which all such entrants into farming must take—the purchase of the farm. Being the first step it is, in a sense, the most important. Many a farm failure is directly traceable to the injudicious selection or improper purchase of the farm. Too often a farm is bought with little or no regard to its agricultural possibilities and little or no study of whether it can be made to produce an income large enough to cover overhead and family maintenance. Too many people weigh the matter in the same way as the purchase of city real estate, considering merely intrinsic value. They overlook the important fact that unlike city property—bought mostly as a home, an investment, or a speculation—a farm must be able to carry itself and afford a means of support for the operator's family. Under the best of circumstances, the matter demands the utmost deliberation. There are many angles from which it must be viewed. The problem is intensified by the fraudulent methods practiced to inveigle farm buyers. This article is not intended to deal with the general subject of farm purchases, but to sound a note of warning against the farm vulture, and to point a way by which it is hoped his wings can be clipped.

The cupidity of land sharks and the rapacity of dishonest real estate speculators are responsible for many a wrecked farming enterprise. Farm buyers, especially of the immigrant classes, are mulcted out of large sums of money by pirates who are ever ready to prey upon them. Not alone are farms sold at inflated prices, but gross misrepresentation is indulged in as to the character of the soil, its productive possibilities, the crops to which it is adapted, marketing conditions, etc. Exorbitant rates of commission are charged and heavy bonuses are exacted for the placement or renewal of mortgages, even on prime security and for short periods. Mean advantage is taken in withholding knowledge of the terms of existing mortgages where they are unfavorable, or in actually misrepresenting them, and in fixing the terms of a purchase mortgage in such a manner as

to make it a foregone conclusion that an early default will soon cause the farm to revert to the seller to be resold on the same impossible conditions.

A case came to the knowledge of the writer where, after title had passed, it was discovered that a strip of land bordering on a state road had deliberately been left out of the deed of conveyance. Another, in which it developed that a

### Investigate Him First

ONE of the hopeful things about the deplorable situation described in the article on this page is that the good real estate men frown on questionable practices and are making an effort to drive the real estate sharks out of business. A recent meeting of farm real estate operators made a lengthy report on progress that has been made in driving the land sharks out of business during the past year, and took steps to continue to use the force of their organization against unscrupulous real estate dealers.

Of course, reputable dealers perform a real service. Often it is only through them that a farmer can sell his farm, and when the sale is made on business principles, both the buyer and the seller benefit.

In dealing with such men, one should take the same precautions that American Agriculturist is constantly calling attention to in our Service Bureau, in regard to all dealers; that is, find out through your local banker or lawyer that the man through whom you wish to buy or sell your farm is honest with a reputation in the community for fair dealing.

farm represented as consisting of twenty contiguous acres, comprised two separate ten acre parcels about three quarters of a mile apart. One of the most dastardly instances of crooked dealing brought to our attention was that of a sufferer from tuberculosis for whom a fund of \$1500 had been collected toward the purchase of a farm. The farm was represented as being a mile from one village, two miles from another, four miles from the station, with a state road a half mile away. The prospective purchaser was told that a truck calls to collect the milk at a point a mile and a quarter from the farm. As a matter of fact the villages were four and seven miles distant, respectively, the railroad station was eleven miles from the farm, there was a road a half mile away but merely a dirt road, not a state road, and the point at which the milk truck called was four miles instead of a mile and a quarter away from the farm. The result was that the purchaser was, within less than a year, compelled to deed the farm back to the seller for a small consideration to prevent foreclosure.

It is a sad commentary upon human nature that these offenses are committed, mostly by men of the same nativity as their victims, and what is worse, by those who underwent the same early struggles of adjustment to new-world conditions. Indeed, it is this common bond which is used by these glib-tongued fellows to ensnare their victims. Such harmful practices have their pernicious reactions not only in that these hard-working people are filched of their savings but also that, after a futile struggle, they are thrown back upon the city, shorn of their means, robbed of their hopes, disgruntled and discouraged, to take up anew the burdens from which they toiled so hard to escape. The cause of agriculture suffers.

The Jewish Agricultural Society has for years

been waging relentless warfare against these vipers. It caused the prosecution of malefactors, drove one such pirate by indictment out of the State of Massachusetts, and by means of a civil suit, compelled a band of swindlers to disgorge their ill-gotten gain which, in turn, was distributed among the victims. Acting the rôle of watch dog, it has nipped many a questionable deal in the bud. Its success, however, lay in preventing frauds rather than having punishment meted out for their commission. While this may be more desirable, it is less effective in that it leaves the perpetrators free to continue their depredations.

Prosecution in this class of cases, whether civil or criminal, is bound up with many legal intricacies. For one thing, the scenes of these transactions are in most cases laid in different counties, even in different states, and a conflict of jurisdiction is apt to arise. Moreover, these rascals, often advised by lawyers no more scrupulous than they, are clever enough to conceal evidence or to stop just short of the boundary line between what is legally legitimate and illegitimate. Criminal prosecution is even harder than civil. The law wisely surrounds the accused with every

safeguard. It is hard to forge legal evidence that will shut out all reasonable doubt. In a case in which a client of the Society was defrauded, the prosecutor, while admitting that the transaction bore every earmark of fraud, refused to entertain a complaint because he felt convinced that a conviction could not be obtained. He even expressed doubt that a civil suit for fraud could be maintained.

Probably the most effective means of combating this evil is provided by real estate licensing laws such as now exist in 15 or 16 states. These laws compel real estate brokers and salesmen to be licensed, and make the conduct of such business without a license a misdemeanor, subject to suitable penalties. The New York law provides that every licensed real estate broker must maintain a definite place of business within the state; that the license be conspicuously displayed; that no action for unpaid commissions can be maintained by an unlicensed broker. The Commission may revoke the license of a real estate broker or salesman, or suspend the same, upon conviction of the licensee of a violation of any provision of the license law, or if such licensee has been found guilty of fraud, or if he has demonstrated untrustworthiness or incompetency to act in that capacity. In case the offender shall have received any sum of money as commission in consequence of his violation of any provisions of the law, he is liable to a penalty up to four times the amount received by him. A recent amendment to the law gives the Commission the right to apply a competency test of applicants for licenses, and an examination is soon to be held.

It is to be regretted that the New York Law is not state-wide. It is applicable only to cities and to six counties. What logical basis exists for exempting the other counties from the provisions of the law is not apparent. (Continued on page 334)

### Economy Brings Prosperity

THERE was an article in the New York Times of October 20, 1924, on Page 26, which contained the following statement:

"This great rise in export trade and export surplus is a natural accompaniment of a harvest season such as the World has witnessed in 1924. All the familiar earmarks of a season of foreign scarcity and home abundance, of which the people learned in such years as 1915, 1897, and 1879, have already been repeated—the crowded freight cars, the congested seaboard market, the prosperous farmer and the huge export balance. But there has still been one thing missing. The revival of home trade, which on those occasions was always impressive and sometimes spectacular, has as yet come into sight only faintly. A month from now, perhaps, we shall be able to say more positively how far the analogy will be rounded out."

It no doubt will interest the readers of this paper if it is called to their attention that on January 1, 1879, the United States Government resumed specie payment. Although there was great confidence as to the ability of the government to shake off the lethargy and depression that had prevailed in this country during the hard times from 1873 to 1879, everyone was surprised that the economies practiced by the people during these years saved so much that many became investors who readily absorbed the U. S. government bond issue. This enabled the treasury to carry out its programs. The prosperity reached in every direction. The Union and Southern Pacific Railroad which had become bankrupt and had fallen into the hands of the Government was reorganized and given a fresh start. Factories all over the country resumed their old vigor and activity. Real estate in New York and other large cities which had gone a-begging, and large quantities of which had fallen into the hands of the mortgagees, again became the fashion and was redistributed among the public.

Some years ago I had made a calculation which showed that if a man had invested \$30,500 at the valuation prevailing in 1878 in certain standard securities, he could have sold those same securities in 1880 and realized a profit of \$142,000. Everything went along merrily until the assassination of President Garfield in July, 1883, which caused a sudden and complete suspension of all progressive business activities. In 1896, we had by defeating William Jennings Bryan forever destroyed the silver heresy, and as a result of it and as well as of the abundance of crops at home, there followed ten years of the greatest prosperity that perhaps any country ever experienced. From 1897 to 1907 the wealth of the United States was

doubled. Iron ingots, which had been piled up in the fields down in Tennessee and could not be sold for better than \$6 per ton, immediately doubled in value. Everybody who was conducting business or promoting enterprises or manipulating values of any kind became rich and many of the largest American fortunes were created during this epoch.

In 1915, we had just escaped a serious panic through the tremendous demand for our produce and goods created by the war and the enactment of the Federal Reserve Act gave such confidence to the people and enabled the banks throughout the country to finance the increasing operations of their customers that we again had one of those almost indescribable bursts of prosperity. So it seems that besides "foreign scarcities" and "home abundance of crops" other things occurred to help along these spells of prosperity.

The writer in the Times alludes to the fact that the revival of home trade, which on those occasions was always impressive and sometimes spectacular, has as yet come into sight only faintly. This is undoubtedly so and is largely due to the fact that the manufacturers, distributors, and retailers have all been living from hand to mouth and have limited their purchases so that even if a great demand for goods arises this winter, they will find great difficulty to fill the orders. The empty warehouses of the manufacturers and wholesalers and the empty shelves of the retailers will promptly change their appearance as soon as confidence is restored and the buying fever spreads throughout the country.

One strange thing to note is that neither 1879, 1897, nor 1915 were election years and that probably the uncertainty of the present election is delaying the revival of home trade.

—HENRY MORGENTHAU.

### Henry C. Wallace

HENRY C. WALLACE, United States Secretary of Agriculture, died in Washington, on October 25, following an operation for appendicitis.

In Mr. Wallace, the farmers of America had a secretary of agriculture whose integrity was beyond reproach, who had an intimate knowledge from first-hand experience of farming and farmers, and who had the sincerity and courage to stand for the things in his powerful position as secretary that he thought farmers needed. His death is a real loss to agriculture. Secretary Wallace came from a long line of farmers and it is said of him that he was able to call more farmers by their first names than any other man in the country.

As far back as family records go, the Wallaces have been identified with the tilling of the soil. His father, familiarly known through the Central West as "Uncle Henry," became a famous Presbyterian minister in Illinois and Iowa. Ill health forced him to return to the farm, where he was a leader in his community. Later, he became editor of "Wallace's Farmer." Young Henry C. was assistant editor, and another brother was the business manager. Through their good management and thorough understanding of farm affairs, and their courageous leadership for things the farmers needed, the Wallaces made this one of the outstanding farm papers in America. On the death of his father in 1916, Henry C. Wallace became editor of the publication.

Directly after his marriage, and before entering the agricultural publication business, Mr. Wallace farmed it for five lean years on an Iowa farm, selling corn at ten and fifteen dollars a bushel and hogs at three or four cents a pound. It was through this experience that he came to know the real problems of agriculture.

Perhaps Mr. Wallace's lifetime of good works can best be expressed by the motto at the head of his paper, "Wallace's Farmer," which reads:

"Good farming, clear thinking, right living."

### Large Crops Mean Low Prices

A NOTE from a Clinton County farmer in this issue speaks of a potato yield in that county of two hundred and fifty to three hundred bushels per acre and a cardoor price of thirty cents a

bushel. Reports from all localities indicate a very heavy potato yield and low prices, although in some sections there is considerable rot. Again we have an illustration of the old truth known to every farmer that a big yield of any particular crop is usually a calamity, for it results in a large amount of harvest labor and a very small financial return.

We do not know that we agree with the cartoon on the opposite page, that over-production teaches its lesson. As a matter of fact, it does not.

This year, wheat prices are good. The result is, we are informed, that each wheat farmer thought he would put in just a few more acres this year, thinking that it was too late for his neighbor to "get into the game." But the trouble was that several hundred thousand "neighbors" did the same thing. So next year, if weather conditions break just right, there likely will be more wheat than the world market can absorb, with discouraging low prices because of the over-production.

Strange to say, it seems to us that there is much encouragement in the present dairy situation because this period will be followed by a lowered production. Prices are low, and just because they are low, the thousands of "marginal" farmers, who rushed into dairying when dairy prices were higher than those of other farm products, are now rushing out again. When enough of them get out, production will come down, and prices will go up, and the good dairy farmers will be able to make things pay again.

In the meantime, you can help the situation by coming along with the hundreds of others who are sending their names in our "Kill a Kow" campaign. The letters that we are getting from farmers about this plan are very encouraging. Next week we are going to publish some more of them. Why not be feeding yourself and your family on some good beef, and at the same time help the whole dairy business by signing the "Kill a Kow" slip on the opposite page, or by sending us a letter saying that you will support the idea?

### Get Your Seed Corn

THIS of all years is the one to select and preserve carefully seed corn for next season. Everything that we hear from the great Corn Belt indicates that corn for next year's planting is going to be scarce in quantity, poor in quality, and very high-priced.

### Eastman's Chestnuts

OF course, tramps are a nuisance, but there are certain times of the year, particularly when the responsibilities of life weigh especially heavily when I can understand something of the appeal of the broad highway, when I can even see something of the point of view of the vagrant who begs from door to door, wears ragged old clothes, and sleeps under the hedge. In exchange for the ordinary physical comforts of life and for the loss of the self-respect which he may have once had, he gains a kind of independence, has no responsibility, and the broad highway is always stretching away to the Promised Land.

Here is a tramp story, one so old that it will probably make most of you groan if you are foolish enough to read it. Anyway, you are warned, so you do not have to go any further than this point if you do not want to.

A tramp came up to a farmhouse door, and when the lady came to the door, he fell on his hands and knees and began to eat ravenously the grass in the front yard. The lady said to him:

"Oh, my poor man, what is the matter?"

The tramp paused in his grazing and looking up piteously at her, said:

"Oh, lady, I haven't had a thing to eat in three days, and I'm so starved that I am finally reduced to eating this grass."

Whereupon the lady with trembling voice and tears in her eyes, replied:

"YOU POOR FELLOW. I AM SO SORRY. COME RIGHT AROUND IN THE BACK YARD. THE GRASS IS FULLY FOUR INCHES HIGHER THERE!"

# Fall Farm Practices

## From Spreading Lime to Putting the Bees to Bed

**T**HE shortage of clover seed for the coming season will make it necessary for farmers to take especial care to make the most of the clover sod which they already have and of new seedings to be made next year.

The one outstanding way to do this is to be liberal with lime. The wise farmer will haul more lime this winter than before in years, and the good thing about it is that lime can be hauled and applied on the land during the winter when there is more time to do it. When the sleighing is good, larger loads can be drawn on sleighs than can be hauled on a wagon other times of the year. If the snow is not too deep, limestone may be applied at any time during the winter. Burned and hydrated lime, however, may be put on more advantageously when the soil can be worked so as to mix the lime with the surface soil soon after spreading. Unless this is done, hydrated and burned lime cannot be mixed in the soil well later.

Any kind of lime should be kept in a dry place until applied. Lump lime is sometimes piled in the field to slake. This results in waste. Hydrated lime, if not kept dry, will slake and the bags burst open, making them difficult to handle, and causing some waste. In many ways, the ground limestone, if ground finely, is a better proposition for most farmers.

As to how much lime should be applied, different counties have different needs. If the soil is acid, of course a larger amount of lime is needed. It is easier to apply too little than too much. A small amount of land might better be covered liberally than a large acreage too thinly. For many of our acid soils, two tons of ground limestone is none too much, or three-fourths of that amount of hydrated lime.

Clover, alfalfa and the other legumes have a special need of lime. A normal yield of alfalfa will contain about two hundred and twenty-five pounds of carbonate of lime to an acre.

Lime more than anything else has done more to bring back the large acreages and yields of the old-fashioned clover growths that our fathers used to get; and we repeat that if progress in keeping and increasing these clover growths is maintained next year, more than an ordinary amount of lime will have to be hauled and applied this winter.

### Storing Vegetables in Pits and Cellars

**O**F late we have received a number of inquiries relative to a procedure followed in storing vegetables, such as celery, cabbage, carrots and potatoes. There are certain fundamentals necessary in storing whether pits or cellars are used, but different vegetables do better under certain conditions. Celery invariably does better in a temporary outdoor pit or trench. This mode of storing will adequately protect such a crop as celery against severe freezing until it is marketed in the early winter.

A trench is dug to a depth not quite equal to the height of the celery. The celery is packed in quite tightly, standing it upright with the roots still on. It is a little better if some soil still adheres to the roots. When the trench is packed full, straw is placed over the tops of the celery. Sometimes growers lay boards over the tops of the straw before covering with soil. The one essential in pit storage is to make sure that the pit is so located that drainage is thorough. A vent is also

desirable every 15 or 20 feet. A common drain tile stood upright will suffice. It is a good idea to have a covering over the top of it, however, to prevent rain water from getting in.

Pit storage is also ideal for such root crops as carrots and beets. Long Island growers build their pits very narrow to avoid heavy frost damage if it reaches down to the vegetables. Only the surface vegetables are hit in this case. They make their pits quite deep. The roots are simply dumped into the pit, covered with straw and then covered with earth. The earth covering is heaped quite high to shed the water off to the sides.

Where cellar storage is available there should be cold intakes to allow perfect ventilation. A ventilator at the top will allow the moisture to pass out and the cold air intake allows removal of any unwanted gases. To secure best circulation, false walls and floors made of one-inch boards on 2 x 4 timbers should be provided. This will permit the cool air to pass underneath and on all sides of the vegetables being stored.

might add that what I have done others are doing, or at least are learning to do. The following therefore may be of practical help and value to those who seek to create a permanent market for their products.

First: Attractiveness of the product to be sold; by this I mean the manner it is put up and the attention given to display. First impressions are lasting ones, remember.

Second: Cleanliness, not only in marketing, but about the home and premises. Many of my customers come to see us and take away much produce in their joy cars, saving me lots of extra trouble in getting the product ready for market.

Third: Be liberal in measure and always give full weight. That is paramount. Be friendly with all. Businesslike. Specialize.—Mrs. EDITH SWOPE, Pennsylvania.

### Packing Bees for Winter

**O**UR success as honey producers will depend entirely upon the manner in which our bees go through the winter, for if a colony has been seriously depleted in numbers it will not be strong enough to gather a surplus of honey, no matter how abundantly the flowers may yield. Many beekeepers store their bees in cellars for the winter in absolute darkness, and with a temperature ranging between 45 and 60 degrees.

The most progressive beekeepers are coming around to the outdoor wintering idea, as it not only saves the trouble of carting the bees in and out of the cellar every year, but it also saves them from dysentery and spring dwindling, to which celled bees are especially prone. Bees wintered out of doors take advantage of mild days to have a cleansing flight, and free their bowels of the accumulations of weeks, a thing impossible to those wintered in cellars.

The best feed is equal parts of hot water and best granulated sugar, stirred until thoroughly

dissolved, and fed the colony in an overhead feeder. If your hives are the single walled ones and you do not care to go to the expense of buying chaff ones, then a fair substitute is to wrap the hive with thick waterproof paper. Before doing so, place an empty full-depth hive body on top of the under cover and fill it with chaff or planer shavings.

Where the winters are severe, it is best to have the regular double walled chaff hives, though in most sections the paper covering with chaff in the upper story will suffice. When fixed for the winter, the bees should be let alone until the following spring. A heavy fall of snow should be left on the hives; it is nature's blanket and conserves the warmth. I like to see mine covered out of sight all winter long.—C. A. UMOSELLE.

Constant temperature, correct ventilation and protection against heavy frost damage, are essential to proper storage.

### How I Sell Butter and Vegetables

**Y**EARs ago, about the only money I could get together handy was what I was able to make from the butter and eggs. To-day things have changed to some extent and I market much of the produce, vegetables, berries, etc.

It might be of interest for me to briefly outline the methods that have made us money and at the same time created an unusual demand for our products, especially my butter and eggs, strawberries and cherries.

In the first place I want to say that butter-making is within itself an art. Good butter will always sell at a premium. What makes good butter? Good cows to start with, cleanliness in handling. By this I mean the process from milking until the finished product is put up ready for market. Attractiveness of the product. My butter is put up in pound prints carefully wrapped in waxed paper in order to keep out all dirt. The product sells itself. Have had one customer 12 years. That's proof.

My eggs are always sorted as to color and size, guaranteed strictly fresh or your money back. I have been able to sell my eggs when they were a drug on the market.

My strawberries and cherries have been sold because of the good variety and manner of appearance, good measure and fair treatment of the customer.

Summing up my experience along this line, I

### Kill a Kow

I will be glad to cooperate, providing at least one thousand other dairymen will do the same, in selling or killing FOR BEEF PURPOSES at least one of the poorest producers in my herd between now and March 1, 1925.

# Among the Fruit Growers

Western New York Fruit and Crop Notes By M. C. Burritt

ANOTHER week of remarkably fine October weather has passed, and during the six days a large amount of fruit has been taken off the trees. But there is still a lot left and another week or ten days is needed to finish the picking. It looks as if we were going to get it, too. A few growers have already finished, but on the other hand some growers haven't finished Greenings yet. Kieffer pears were pretty well harvested during the past week.

Prices are holding strong on most varieties, but buyers are not as active in buying as usual and a considerable number of growers are storing, not because they want or intended to, but because they cannot make a sale at what they consider a fair price. "A" grades are being sold at from \$4 a barrel for Hubbardson to \$5 for King and "B" grades from \$2.50 to 3.50. Good hand-picked cull Baldwins and Greenings have been sold as high as 90 cents a hundredweight, while drops for dryers bring 70 cents. Ciders advanced to sixty cents a hundred last week.

### Wheat Still Being Sown

I have several times remarked about the lateness of wheat sowing this year. Last week I thought certainly it was all

sown but three fields were sown in this neighborhood during the week of October 20, one on the twenty-fourth. In my opinion the chances of these sowers reaping even a fair crop are not more than one or two in ten. I have secured a twenty-four-bushel yield sowing between October 4 and October 14 and plowed up a field sown October 14. I never remember of wheat being sown before after October 20. Nothing but the most favorable conditions from now on can pull these crops through.

The last fields of beans and corn were cut this last week. No potatoes have been dug yet and little if any cabbage harvested.—M. C. BURRITT.

### Look Out for Mice in the Orchard: How to Make Poisoned Bait

ALONG about this time of the year is when the far-sighted orchardist makes preparations to guard against possible injury to his trees by hungry field mice which gnaw the trunks and roots. Such injury is liable to occur at any time after November 1, although most of it usually is inflicted in mid-winter or very early in spring under cover of heavy snow and when the more favored food supply is running low.

That serious injury to orchard trees by mice occurs only at irregular intervals makes the menace the greater, for it usually catches the orchardist unprepared and wholly unaware of the damage being done until the melting snow in spring uncovers girdled trunks, or the wilting trees in mid-summer betray the hidden work of the mice on the roots.

### "Ounce of Prevention Worth Pound of Cure"

Preventive measures cost little in comparison with the protection afforded, and although frequently a girdled tree may be saved by timely bridge grafting, an ounce of prevention is worth a pound of cure. Many progressive fruit growers realize this truth and each fall and several times during the winter, examine their orchards carefully for mouse signs.

Methods of preventing mouse injury vary according to the species of mouse and the cultural practices followed. In much of the eastern United States pine mice are present and their injury is usually inflicted below the surface of the ground. It is necessary to destroy such mice unless they are driven out by deep and clean cultivation of the whole orchard. Where meadow mice only are concerned, such methods as mechanical protectors and repellent washes are practicable, although the destruction of the mice is preferable.

Clearing grass and rubbish away from the tree trunks and mounding the trunks with earth will protect the trees to a certain extent. Mechanical devices such as wire netting and tarred paper may be used, but in most cases, poisoning will prove an effectual and inexpensive method of controlling destructive rodents.

### How to Make Poisoned Bait

The United States Department of Agriculture recommends the following formula: Mix together, dry, ¼ ounce of powdered strychnine and ½ ounce of baking soda. Sift the strychnine-soda mixture over 1 quart of rolled oats, stirring constantly to insure an even distribution of the poison through the grain. Heat the poisoned rolled oats in an oven until thoroughly warm. Mix 3 parts of melted beef fat with 1 part of melted paraffin, and sprinkle 6 tablespoonfuls of this mixture over the warm, poisoned rolled oats, mixing until the oats are evenly coated. Allow the grain to cool and it is ready for use.

If large quantities of the bait are needed, use 1 ounce of strychnine, 1 ounce of soda, 8 quarts of rolled oats, and 1¼ pints of the beef-fat-paraffin

mixture. It is very important to have the beef-fat-paraffin mixture hot and the poisoned rolled oats thoroughly warm, otherwise it will not be possible to obtain an even coating.

Tablespoonful quantities of the poisoned oats should be put in containers placed in the orchard. If mice are very abundant, a container should be used under every tree.

All poisoned baits and poison containers and utensils used in the preparation of poisoned baits should be kept plainly labeled and out of the reach of children, irresponsible persons, and livestock.

### Points to Watch When Apples are Put in Common Storage

EVERY year some fruit growers put away part of their apples in common storage with the expectation of higher prices later in the season. Last year this common storage practice almost ruined the market. But year in and year out it seems to be a pretty good idea for the man who is in a position to make this more or less speculative move. One of the troubles with common storage, however, is the fact that we do not always find ideal conditions under which the apples are stored. A. F. Mason of the extension staff at the New Jersey State College of Agriculture states:

"With proper farm storage facilities and careful handling, Stayman, Rome, Baldwin, Paragon, Stark, York, Imperial, Winesap, and other varieties of apples may be marketed through the winter, thus lengthening the apple season, removing the usual glut on the market, increasing consumption and generally returning a greater profit for the grower.

"The essential features of a storage room are: protection from heat, frost, and rodents; ample ventilation to carry off gases developed by the ripening processes; and the maintenance of humidity to prevent shriveling.

"A cool, damp cellar with several windows, doorways, or ventilators which can be opened at any time the outside temperature is lower than that of the inside, makes a desirable storage. A building above ground, having double walls and ceiling insulated either with dead air space or with sawdust, is also good. It is very necessary to keep sufficient moisture in the air. This will be possible if the floor is a damp earthen one, but if concrete or wood, it must be sprinkled daily, or as often as it becomes dry.

### Slat Crates Make Good Storage Package

"Slat crates make the best storage package, because they are economical of space and are well-ventilated. The 5/8-basket is also desirable. Round bushel baskets, hampers, and barrels do not offer as good a ventilation as crates, but they may be used. Barrels should never be headed when put in common storage.

"Wrapped apples keep best. Newspaper or tissue wraps may be used. Oiled wraps, coated with an absorbent oil which takes up the injurious gases given off by the ripening fruit and thus preventing scald, are on the market and are highly recommended."

### City No Place for Bees

THE city council of Petaluma, California, widely advertised as the world egg capital, has decided that bees and hens do not mix and has passed an ordinance forbidding the keeping of bees within the city limits.

Residents of the city had found bee keeping a profitable industry that could be carried on in back yards because of the profusion of blossoms and flowers hereabouts. Hundreds of hives were distributed about the city. The bees led to the filing of many complaints with city authorities. Children, women and men were severely stung. In several instances the bees swarmed in automobiles parked on down-town streets and caused trouble before they could be hived.

City authorities said they could not determine ownership of bees which stung the citizenry nor could the bees be ordered muzzled as in the case of dogs. The anti-bee ordinance resulted.

# The Child Labor Amendment

## What It Is—How and Why Congress Passed It

THE amendment designed to give Congress power to legislate in the matter of child labor has been passed by both the Senate and the House, and is now before the State Legislatures for ratification. This bill, known as J. H. R. 184, was introduced by Israel M. Foster of Ohio, and reads as follows:

Section 1. The Congress shall have power to limit, regulate and prohibit the labor of persons under the age of 18 years.

Section 2. The power of the several States is unimpaired by this Article except that the operation of State laws shall be suspended to the extent necessary to give effect to legislation enacted by the Congress.

This bill was the one chosen, because of its wording and scope, from some twenty-two proposed amendments designed to bear upon the child labor problem. A hearing before the committee of the judiciary of the House was held during February and March, at which both advocates and opponents of the bill were heard. It was then submitted to the House, passing on April 26 with a vote of 297 to 69, after a two-day debate. Some time elapsed before the Senate considered the bill, but in the last few days of the session, June 2, it went through, and is now before the individual States.

Ratification has already come from one State, Arkansas, but as some legislatures will not convene for some time to come, it may be several years before all the States have an opportunity to act upon the measure.

The first organized attempt to check child labor in the United States resulted from the disclosures of the census of 1900, which showed that nearly two million children between 10 and 15 years (or practically one out of every six) were gainfully employed.

The first move to decrease this figure came from the South, when Alabama organized a State committee. The national committee was founded in 1904 and incorporated in 1907.

The first federal legislation came in

1916. It excluded from interstate commerce articles manufactured in factories by children under 14 years of age. This law was in operation until 1918, when the Supreme Court declared it unconstitutional. In 1919, a second federal law was passed, placing a 10 per cent. tax on the net profits of factories and mines employing child labor. In 1922 the Supreme Court declared this also unconstitutional.

Aside from federal legislation, every State in the Union but one has, during the past twenty years, placed on its statute books some law to protect its child workers. Among the points covered are

30 "black." The white States are those now having laws equal or superior to the standards of the first and second federal laws, while the black are those now below these former standards.

The last census (1920) showed a marked decrease in the number of child laborers, but more than one million are still "gainfully employed" (1,060,858). This report covers children between 10 and 15, with no count of those under 10, many of whom are employed in certain sections of the country. It shows a falling off to a ratio of one to twelve instead of one to six, as in 1900. It was the testimony of

Bureau; Mr. Edgar Wallace of the American Federation of Labor, Mr. Gray Silver of the American Farm Bureau Federation, Mr. Owen Lovejoy, Executive Secretary of the National Child Labor Committee; Mr. David Clark, editor of the Southern Textile Bulletin, and many lawyers, welfare executives and representatives of the women's committees of various political and religious bodies. The testimony and evidence read into the record fills a volume of 307 pages.

In the main, the arguments for and against grouped themselves under the head of States' Rights vs. Federal Control. Very little was said as to the question of child labor itself, even the opponents of the measure declaring themselves for regulation of some sort. There was contradictory testimony as to various points, notably the efficacy of federal control. Government agents testified that the existence of the federal laws had made it much easier to enforce local laws; that since the federal statute was declared unconstitutional, the regulations in many States had been difficult or impossible to enforce. They cited the case of New Jersey, a "white" State, adjoining Pennsylvania, from which migratory families with children came to work in the cranberry bogs, thus evading the school laws of Pennsylvania, but not subject to those of New Jersey.

Opponents of the bill claimed, on the other hand, that federal interference made the enforcement of local laws more difficult and that the States would do better if allowed to work out their own problems.

However, the storm center of the discussion was the question of States' rights, regarded by many witnesses as imperilled by the addition of a new amendment to the constitution.

In addition to arguing the benefits of the bill, its supporters sought to establish several things that it is *not*. Among them are:

1. That it is not in itself a statute. It

(Continued on page 333)

### Here Are the Facts

**ONE of the most important things before the people and the different States to consider during the coming year is the proposed Child Labor Amendment to the United States Constitution. This amendment has been passed by Congress and is now before the States for ratification. Because of the very great importance of this amendment, we are publishing on this page, first, a carefully prepared statement of the amendment itself, and of the arguments both for and against it used in Congress when it was passed. This article is followed by a second one by H. E. Cook, author of "Plow Handle Talks," stating why he is opposed to it.**

**In publishing these two statements, we are putting all of the facts we could obtain on this proposed legislation before you in the belief that when you have all of the information you will be able to arrive at correct and just conclusions.—The Editor.**

the length of the working day, the prohibition of night work under certain ages, the prohibition of employment in certain dangerous trades, provisions for health certificates and compulsory school attendance. Among the States having high-standard child labor laws is New York, but on the other hand, certain States have so few provisions of the sort as to bring the average child labor standards of the United States below that of all the important European countries, which we once far surpassed.

On the map which indicates the relative standing of the States since the last federal law was declared unconstitutional there are 18 "white" States and

federal officials at the hearing that since the repeal of the last federal law, the number had increased considerably, so that the 1920 figures are not now accurate. They must, however, be taken as the latest official compilation.

The alignment for and against the proposed amendment has been brought out in two ways: At the special hearing before the judiciary committee and on the floor in Congress.

The committee, composed of members from 19 different States, met over a period of four weeks to hear witnesses on both sides. Among those who appeared were several members of Congress, Miss Grace Abbott, chief of the Children's

# Why I Am Opposed to the Child Labor Amendment

## H. E. Cook Gives Some Reasons Why He Is Against Its Ratification

MAYBE I am not qualified to speak on the proposed amendment to our federal constitution giving Congress the power to prohibit or to regulate the labor of children under the age of 18 years. And on the other hand, maybe I am qualified. If not, then pass this—if I am, listen.

I have written and spoken openly for a good many years, more than thirty, against the prevention of farm youth from receiving a school education because they were kept home and away from educational influences until an age when other habits had been formed and all desire had been lost for the knowledge that comes through our public school and college system.

### Some First-Hand Experience

I have been in a good many farm homes soliciting students for the St. Lawrence State School of Agriculture, where very capable parents were restraining their young men, less often the girls, of the family from getting an education because they wanted their labor at home—very seldom are the boys wanted at home because of their administrative ability, but for the physical labor involved. And I am wondering now how long rural life can stand this sort of viewpoint. But at the same time the proposed regulation is far more dangerous—the first problem will be settled as economic conditions are more nearly balanced and the farm has its share of industrial favor, if we grant that it has not now.

The proposed plan becomes in its settlement wholly political and our

experience has not been especially satisfactory in the political control of economic problems. If the motive back of this proposed law is righteous, surely farm children cannot be exempted, and then what? When reduced down to its final working analysis, I doubt about the enforcement of any such law on farms—no legal supervision so far as my imagination ventures can be made available without a supervisory agent in every farm home—many children who are not very ambitious would welcome with delight a chance to back up against the United States Constitution when asked by their parents to fill up the woodbox, or bring the cows, or to do innumerable things that are humanly sound and sensible. Who is to interpret for the dairy farm or for the trucking farm where the labor on each is unlike that on the other? Or on one farm where labor is plenty and the parents have well-balanced viewpoints and on another where the opposite prevails? Do you think we are inviting anarchy and chaos? I fear the remedy for a lack of school training is worse than the disease.

### Work Does Young Folks Good

Reasonable rules are possible of execution in shops and factories but not on farms. I expect that a majority of educators and employers of labor having to do with farm boys and girls in after life, will say that city children would be more efficient and effective when they take their places in life if they had been privileged to have these same advantages now possessed by farm boys and girls.

My observation is that there are com-

paratively few young folks overworked in school or out. I am acquainted with many over 18 and under 18 who are over-dissipated in an endless number of ways—lack of sleep, overeating and hilarious society. Most young folks of the so-called nervous type who are specially pitied by their parents will get over their trouble if put to bed early and allowed to get up when rested and fed wholesome food only, and obliged by their parents and teachers to do worthwhile work.

### Not As Dangerous As Loafing

When young farm laborers yawn all the forenoon because of dissipation and lack of sleep the night before and complain of the hard work they have to do, you know and I know where the trouble is. During my school experience there was always ready one stock-phrase in reply to the overworked student, "no normal young or middle-aged person who has eight hours of sound sleep every twenty-four hours and is properly fed can be overworked in the remaining sixteen hours." When we run down the exceptions to this rule we shall find either some organic trouble which should be removed or that the eight hours a day sound sleep is not that kind at all, or that some way the actual truth of the ease has been tampered with. Nature has provided in most of us a strain of laziness which provides against danger. There will be more young people injured by automobiles in the next twelve months than by overwork. So far as I have been able to judge in the time since my birth, December 12, 1858, this overwork business is principally indisposition

and bunk, in this United States of America, and we don't want any constitutional amendment or legislative enactment to prevent plain, old-fashioned work. On our youngsters, on the other hand, we can safely use more home discipline and in some cases the "birch" of my youthful days. And from the larger number to be acted upon as compared to a half-century ago and because we are, through inventive genius, building up a machine-age someone should be able to contrive a way of handling this piece of flexible hardwood by gasoline motive power and thereby save a lot of human energy for other purposes.

### Farmers Against It

Now if I am right in this matter a campaign should be started at once after election to make it clear to legislators that this proposed amendment has more bad than good in it so far as the farm is concerned.

It is a painful forecast to me of what the future will be to note this tendency to go to our law-making bodies for action upon so many things that come properly under the function of the home. Germany tried out detailed human control by government law and action and the results are pretty well known. How many of our readers will say that our homes are having taken away some of those very fundamentals that have made us a strong nation?

To be up-to-date every village must have a men's club and a women's club for evening assembly and now in order to

# News from Among New York Farmers

## Enos Lee Replaces F. J. Smith as A. F. B. F. Executive—County Notes

**ENOS LEE** of Yorktown Heights, N. Y., president of the New York State Farm Bureau Federation, was recently appointed a member of the executive committee of the American Farm Bureau Federation to fill the unexpired term of Frank J. Smith of Springfield Center. Mr. Smith, who resides in Otsego County, resigned from the committee when he accepted the nomination to run for member of assembly in his district. This was in accordance with an unwritten rule of the farm bureau whereby its officers have no political affiliations, as the farm bureau itself is non-partisan and non-political.

crop was carried down the river by the rushing waters. The river was nearly up to high-water mark, such as it gets at flood tide in the spring when Black River is augmented by the melting of the heavy snows on Tug Hill, east of the valley. Threshing is the order of the day and grain is yielding more than was expected earlier in the season, as it was badly damaged in the fields by the heavy rains. Corn that was very backward early in the season has developed into about an average crop. Some was damaged slightly by the frosts of the last week in September. The warm weather of early October permitted farmers to fill their silos with a good quality of ensilage.

Some threshing is still being done.—**M. E. B.**

### Along the Southern Tier

A community picnic was held on the schoolhouse grounds at Maine village, October 11. About 200 were present. The program included speaking, singing and finally a fine dinner. One of the unique features was a band which used kitchen utensils for instruments. So successful was this first venture at Maine that it was decided to repeat it another year, and officers were elected with that purpose in view.

Wellington Carley and son Ralph have the reputation of producing the finest cauliflowers of anybody in this part of the country. Their caulies have a large sale, not only in Binghamton markets but among the farmers of the community.

George Wakefield, who not long ago sold his herd of cows, must feel lonesome without them, for he is buying into the business again. It is a good time when making such a change to get better cows, and we hope George has done it.

A community house is well under way at West Chenango, eight miles north of Binghamton. The building is entirely new and has the advantage of being connected with the Methodist Church, the only one in this hamlet. Much has previously been made of the community life of this part of Broome County and this new house will no doubt still further increase interest in this feature of rural life.

Great changes are coming in the vicinity of the old Quinn farm near Kattellville, Broome County. The farm, except that part which was reserved by Mr. Quinn when he sold his place, is being laid out in streets which are being already opened up. Some houses have been built on the tract and more are in process of construction. The effect of this boom is being felt far beyond Quinn's corners.—**E. L. V.**

Potatoes are giving more than an average yield. In some cases fields have been struck by the blight, and there is some rotting on the lowlands along the river valley. With the immense crop that is being harvested along the northern border, it has brought about a big slump in prices in this section with the result that not much stock is being moved on to market.

A large amount of reforestation has been done in this locality the past season, particularly in the towns along the east side of Black River. The Northern New York Utilities Company has been very active in the work, as have private individuals to quite an extent. The State has established an up-to-date nursery farm two miles east of Lowville, which is very convenient for parties interested in forest preservation.—**C. L. STILES.**

**Essex County**—The last two days of September were notable for a steady downpour of rain that was responsible for much damage to crops and roads. Bridges were washed away and corn fields inundated. Many fields of corn matured this fall in spite of late start. Potatoes are yielding well but some rot is being reported. Most silos are filled.

### County Notes From Among Farmers

**Suffolk County**—The first killing frost of the season was on the night of October 15. Corn is about all stacked. It will not yield as many bushels per acre as last year. Potatoes are bringing \$2.25 per barrel of 180 pounds. Cabbage \$10 a ton at the kraut factory. Hay is bringing \$1.25 per ewt. Not as many fields are planted to grain in this locality on the North Shore as usual.—**E. S. S.**

**Cortland County**—The middle of October showed us the first real touch of winter. As this is a county of maple products, frost has turned the timber into a glorious show of colors. Dairymen have been turning steadily from grade cattle to registered stock. Silo filling is about all over and little threshing is being done, especially buckwheat.—**J. B. A.**

### Northern New York—Lewis County

The extremely heavy rains of the last days of September greatly delayed work among the farmers. Some were caught with large fields of grain out in the open. In some cases cornfields on the river flats were partially submerged. In one or two instances a good portion of the

# New Jersey to Entertain National Grange

## State Vegetable and National Fruit Societies to Meet at Same Time

**NEW JERSEY** will act as host to three great farm organizations next week when the New Jersey State Horticultural Society, the American Pomological Society and the National Grange will hold their meetings in Atlantic City.

The 58th annual session of the National Grange will be held November 12 to 21, inclusive. President Coolidge will attend this session and make an address on the evening of November 14. The sessions of the first week will be held in the great ballroom of the Steel Pier. The meetings from Sunday, November 16, to the close of the session will be held in the Vernon Room of the Haddon Hall Hotel, which will be official headquarters. Rates from all parts of the United States will be fare-and-a-half on the certificate plan.

A special feature of this year's session of the National Grange will be the celebration of the fiftieth anniversary of the adoption of the Declaration of Purposes of the Order. This Declaration of Purposes is a document which has been referred to many times as the "Declaration of Independence of Agriculture." It was written by the founders of the Grange, adopted by the Order in 1874.

Louis J. Taber of Columbus, Ohio, will preside. The principal shares in the Grange session will be filled by B. J. Black, Maryland, Overseer; O. L. Martin, Vermont, Lecturer; W. W. Deal, Idaho, Chaplain; Herman Ihde, Wisconsin, Steward; C. M. Freeman, Ohio, Secretary. Ezra C. Bell, President of the Atlantic City Convention and Publicity Bureau, in speaking of the coming event, says:

and the maintenance of her reputation as the "Playground of the World," feel confident of our ability to make the Grange visit here one of pleasant and never-to-be-forgotten memories. Atlantic City will be glad to see you and we trust you will take advantage of this, our sincere invitation, to spend a few pleasant and profitable days in the "World's Premier Health and Pleasure Resort."

### Horticulturalists and Fruit Growers to Meet

The Horticultural and Pomological Societies will hold their meetings November 11 to 14, jointly, in the Vernon Room of Haddon Hall. On Tuesday, November 11, there will be a country-wide conference by the American Pomological Society, the national association of fruit growers, to bring together the leading men of the industry from all over the country to discuss problems of fruit marketing.

On Wednesday morning, November 12, "Developing the Local Market" will be the topic of speakers from three States. "The Future of the Roadside Market" will be the subject of a report by marketing officials of two States. On Wednesday afternoon, a report of the Fruit Committee of Horticultural Society will be read on the behavior of different varieties of fruit in different sections of the country.

On Thursday morning, November 13, spraying topics will include reports by experts on the Japanese Beetle, Oriental Peach Moth, fungus diseases and injury by arsenicals. The vegetable session on Thursday afternoon will be of great interest to market gardeners and truck growers. Thursday evening will be featured by the addresses of the Presidents of the two societies and a discussion of efficiency in farm management by farmers and a representative of the United States Department of Agriculture.

Friday morning, November 14, will be devoted to a round table discussion on peach growing. This will include reports from several States, but will bear largely on the growing and handling of peaches in New Jersey.

It is said that the exhibit of the State Horticultural Society and State Grange, to be held on the Steel Pier, will be the greatest display of the kind ever staged in New Jersey.

### New Jersey County Notes

**Mercer County**—The Mercer County Pomona Grange met on November 5 to discuss the Child Labor Amendment. At the National Grange meeting at Atlantic City on November 12 to 20, Mercer County's new sixth degree class of 206 will take the national degree.

Corn is pretty well harvested, but not much has been husked to date. We had our first killing frost on October 20, putting an end to tomato pickling. The apple crop is fair and prices are pretty good. The crop is pretty well picked. There is good demand for sprayed fruit. We are having a beautiful fall for outdoor work, but it is a little dry for fall grain, which is coming on well. Light pork is bringing a good price and there is a good demand for it. Eggs are scarce and high. The crop of pumpkins is poor, because of the cold, wet spring.—**Mrs. J. E. H.**

**Salem County**—This season was certainly a very peculiar one, especially on fruit and berries. They set heavy but growth was stunted on account of the hot, dry mid-season. At the same time prices were quite low. We have gone through a very poor season but we hope the next one will make up for this. Truckers did very well. Peas, snap beans, cucumbers, sweet corn and best of all tomatoes, made up for the early loss on potatoes. Sweet potatoes are pretty good. Hay, corn and eggs are bringing good prices.—**S. B.**

## EASY NOW TO SAW LOGS AND FELL TREES

WITTE Log-Saw Does the Work of 10 Men at 1/20 the Cost—Saws 25 Cords a Day.

A log-saw that will burn any fuel and deliver the surplus power so necessary to fast sawing is sure to show every owner an extra profit of over \$1,000.00 a year.

Such an outfit is the Witte Log-Saw which has met such sensational success. The WICO Magneto equipped Witte is known as the standard of power saws—fast cutting, with a natural "arm-swing" and free from the usual log-saw troubles. It burns kerosene, gasoline or distillate so economically that a full day's work costs only twenty-two cents.

Wm. Middlestadt reports that the Witte has replaced forty men using buck-saws. Hundreds of users saw as much as twenty-five cords a day.

Mr. Witte says that the average user of a Witte Log and Tree saw can make easily \$50.00 a day with the outfit and so confident is he that he offers to send the complete combination log and tree saw on ninety days' free trial to anyone who will write to him. The prices are lowest in history and under the method of easy payments spread over a year, only a few dollars down puts the Witte to work for you.

If you are interested in making more money sawing wood and clearing your place at small cost, write Mr. Witte today at the Witte Engine Works, 6803 Witte Bldg., Kansas City, Mo., or 6803 Empire Bldg., Pittsburgh, Pa., for full details of this remarkable offer. You are under no obligation by writing.

## ALL LEATHER HERCULES WORK SHOE AT WHOLESALE

# The Cow's Udder—

How Much Do You Really Know About It?

I HAVE found the udder to be a very delicate organ, which is about as sensitive to abuse, ill-treatment and improper care—or the reverse of good treatment and care—as a good timepiece. I find that nothing adds more to the value of a dairy cow than a capacious, well-shaped and placed udder. Either at the sale or in a show ring the udder is one of the main points on which the final decision is based. Really, it is the one thing above everything else that indicates whether or not a cow will be a non-supporter or a revenue producer. Therefore we should strive to learn about and understand the udder.

It is composed of four parts, which are separated by fibrous tissues.

There is no connection between these parts, so it is impossible to draw milk from one to the other. The milk glands proper are located near the abdomen and extend downward to the udder, the remainder of which is occupied by blood vessels, nerves, muscles, ducts and tissues which make it rather open and spongy like. The muscle at the lower end of the teat keeps the milk from escaping. The upper end of the canal in the teat is connected with the milk reservoir, the size of which varies in different cows. The opening from this reservoir into the teat is also guarded by a muscle over which the cow has little control. In dealing with the udder of a cow we are therefore working with a very complex mechanism.

### Length and Width of Greatest Import

Length and width of the udder are of greater importance than depth. We get the length desired in an udder that is attached high behind and runs well forward on the belly. Width is determined by the conformation of the thighs. The inside of the thighs should curve outward, forming a well-defined arch that begins high, has its widest part at the top and inside of which the udder hangs free and easy. An udder that is long toward the ground is a pendulous udder and very objectionable in many ways. It swings as the cow walks or runs, hitting her legs, often becoming bruised, causing bloody milk and other troubles. It comes in contact with the dirt, manure, etc., in the barn. With this kind of an udder the secretory glands are farther removed from the blood supply than in the case with the long udder that is closely attached to the body. A cow with such an udder as this is most disagreeable to milk and is a sure indication of a poor producer.

### Guard Against Tilted Udder

Another shape of udder to guard against is the "tilted udder," one that is fully developed in the hind quarters but greatly lacking in the fore quarters. Two-thirds or more of the milk is given from the hind quarters.

Sometimes the teats are very close together and cause great inconvenience when milking. It is natural to suppose that were the fore quarters developed like the hind ones a much larger production of milk would be obtained from the increased capacity.

Another objectionable form of udder is what is termed the "pointed udder." Such an udder is lacking in all of the quarters and comes to a point like a funnel, the teats being very close together. It is not only disagreeable to milk cows with such udders but they seldom yield very much milk.

It is really not safe to buy a cow with a large udder without seeing her milked out. The practice of "bagging up the udder" is followed by many and is very harmful and dangerous. Many a good cow has been ruined by it in preparation for public auction sales, for showing at various fairs and other contests. The better the cow the more dangerous is the practice. It is also very difficult to detect a bad quarter when the cow's udder is very large and tight from the need of milking out. The size, however, may be due to a "fleshy udder" as well as to be not milked out. It is not unusual to milk a cow with a very large udder, getting perhaps a little over a gallon of milk with no more to be had even though from appearances of the udder there should still be one to two or more gallons. Such an udder has a large number of fatty cells incapable of secreting milk and the udder remains large and hard to the touch even after the cow is milked, whereas it should collapse, being soft and spongy to the touch. Since a good udder should be attached high behind there should be loose folds of soft and oily skin hanging from the attachment after the udder is milked out. Such an udder denotes quality and efficiency, just what we are looking for to be profitable milkers.—R. B. RUSHING.

### One Cow or Thirty-one

THAT comparisons are not odious but on the contrary enlightening and valuable is the deduction to be obtained from a little pamphlet "Annual Report of McGregor, Iowa, Cow Testing Association," published by the tester of the Association, Oliver Constable.

Of the 243 cows in the association which were on test nine months or longer, the report shows that the twelve highest fat-producing cows earned their owners thirty-one times as much on an average as the twelve lowest fat producers.

Here are the figures:

	Average 12 highest	Average 12 lowest
Milk, pounds.....	8911.7	2761.1
Fat, pounds.....	446.8	112.6
Value of fat.....	225.40	47.00
Cost of roughage.....	35.85	33.20
Cost of concentrates.....	36.83	8.83
Total cost of feed.....	72.69	42.02
Income above cost of feed.....	152.76	4.97
Returns for \$1.00 expended for Feed.....	3.10	1.12
Feed cost of lb. fat.....	.163	.37
Feed cost of 100 lbs. milk.....	.82	1.53

From these figures it will be seen that the twelve high cows produced on an average three times as much milk as the twelve low cows and about four times as much butter-fat. The value of the fat of the twelve highest was on an average five times as much as that of the twelve lowest. The cost of feeding for the high production was less than twice the cost of feed for the low producers. The high

(Continued on page 332)

### An Old-Fashioned Virginia Churning Apparatus

THE labors of hand churning were evidently appreciated years ago. The accompanying illustration was taken from the 1843 volume of AMERICAN AGRICULTURIST and shows a contrivance described in that issue by John Lewis of Kentucky, which he saw on one of his travels through Virginia. In his description of it he said: "Its merits are its cheapness and its simplicity. A boy or girl of twelve years of age can with great ease work three or four churns. The principle, you will perceive, may be applied to any number of churns."

Here's one sign that thousands of dairymen believe in

EXPERIENCE is a great teacher. If you doubt your ability to materially add to your cows' milk production, why not prove it for yourself by an actual trial?

The winter months, with the long period of dry feeding, are a severe strain on the cow's digestion and assimilation. To get from the feed ALL the milk-value these organs must be even more vigorous than when green pasturage is available.

Kow-Kare is a medicinal invigorator that acts directly on the milk-making organs. Even if your cows are, apparently, healthy, a tablespoonful of Kow-Kare twice a day, one week out of each month will surprisingly increase the milk-flow.

For the actual treatment of such cow diseases as Barrenness, Abortion, Retained Afterbirth, Scours, Garget, Milk Fever, Lost Appetite, etc., the value of Kow-Kare is undisputed. Its success lies in its invigorating action on the digestive and genital organs—the seat of nearly all cow disorders

Prove the value of Kow-Kare this winter. Your feed dealer, general store or druggist has it—in \$1.25 or 65c packages. Order direct if dealer is not supplied.

DAIRY ASSOCIATION CO., Inc. Lyndonville, Vermont

## THIS LOG AND TREE SAW \$21.95

Fitted with Atkins Special Steel Guaranteed Saw RUNS EASY NO BACKLAGS WEIGHT ONLY 45 LBS. EASILY BARRIED SAWS DOWN TREES

WANTED—Postage stamps of the Civil War period and before—on the original letters or envelopes—good prices. COLLECTOR, 18 Hewlett St., Waterbury, Conn.

RAILROAD POSTAL CLERKS start \$133, month, railroad pass. Send stamp for questions. COLUMBUS INSTITUTE, V-32, Columbus, Ohio.

# Service Department

## "Home Work" Schemes Not Reliable

IN looking over the Service Bureau letters this week, we cannot help but note the large proportion of letters from farm women either inquiring about some scheme for earning money at home, or asking us for help to get them out of trouble after they have tried out such a scheme.

For instance, we have before us a letter from a lady asking about the reliability of a music publishing house. This concern offers "big wages for home work, positively no canvassing!" When this alluring literature is answered, it is found that the concern will sell you music for ten cents a sheet and furnish you a list of names to whom you can write to resell the music at thirty cents. Then they go on to tell how much money can be made on such a big profit per sheet.

It ought to be perfectly plain that if there were any such profits there, the company would do its own writing and selling, and keep the profits. As a matter of fact, it is just an ordinary sales scheme for getting rid of cheap sheet music for ten cents a copy.

\* \* \*

Another subscriber writes to inquire about a correspondence school that promises huge profits if you will just take their course in show card writing. At least a dollar an hour is promised to the student who successfully completes the course.

Now there are many excellent correspondence schools, and there are thousands of students successfully taking correspondence courses at home. But a promise of one dollar an hour for the home work of a student is a fake on the face of it. Show card writing is a trade in itself. Those who practice it live for the most part in cities near the sources of demand, and it is practically impossible to sell the work at long range.

\* \* \*

Another letter about home work is from a lady who spent weeks of work crocheting for a knitting company. When she sent in her work she was unable to collect anything for it.

Some of the knitting companies that have work of this kind are reliable, but the pay is very small and many of them are not honest.

Then, too, every mail brings letters from our women folks asking about knitting machines. Some of the companies that sell knitting machines are perfectly reliable, and their machines will do good work. But there are few people who can successfully operate them.

Nearly all of the inquiries about home work are from the women folks, who are making a commendable effort to piece out the family income by trying to do something for pay at home. It is too bad that such efforts have to be discouraged, but most of the companies who advertise to pay for home work are not dependable or even honest and are merely putting out their tentacles to get hold of hard-earned savings. A very careful investigation should be made every time before any money is invested in these home-work schemes.

\* \* \*

### Fifteen Thousand From a Hundred!

It is always a source of wonder to us to know the number of people who can be taken in by the glowing descriptions of stock-selling schemes.

Here is a letter from a subscriber who was wise enough to write first before he invested his savings:

"Enclosed find reading matter of the Grocers Baking Company, Inc., of Schenectady, New York. Will you kindly let me know through the Service Bureau of your valued paper what you think of investing money in that company. Would it be a safe investment or not? They have been trying to sell my husband and myself stock in the company, but we refused to buy until we heard what AMERICAN AGRICULTURIST thought of it.

"A good many people around here have invested money in it.

"As my husband has been a subscriber to your paper for a good many years and we have never taken advantage of your Service Bureau before, we thought we would ask for a little advice concerning this. My husband is a paid-in-advance subscriber. Kindly let us know as soon as possible through your columns of Service Bureau."

With the letter was a very beautifully printed circular with a lot of pictures describing the business of the Grocers Baking Company. Here are some of the statements:

"Common stock of the Grocers Baking Company with no par value sold for \$6 a share in 1919. It is now worth to the original holders over \$900 per share.

"In other words, \$100 invested in this stock only five years ago now has a value of just \$15,000."

There are several pages of this sort of argument and it would seem that all that any person would need to know about this company is its own printed matter. As a general principle, when somebody tries to prove that you can turn \$100 into \$15,000 in five years, the investment is absolutely unsafe. We answered the inquiry as follows:

"We were very glad to have your letter of October 1 in regard to investing in the Grocers Baking Company. This thing illustrates what we have been trying to warn our readers against for years.

"The Grocers Baking Company is not listed in our commercial register. This may not mean that they are necessarily not square, but it does mean that the least you can say for them is that they are a small, obscure company, absolutely unsafe for people with a little money to invest their savings with.

"Furthermore, their literature itself is against the dictates of common sense. I am speaking rather plainly because I want to be just as emphatic as I can that there is not a day goes by that we do not get mail saying that people have lost their life-time savings just as a result of too hasty investment in concerns like this one. The only safe investments are those, first pertaining to the farm business like tools, better stock or home conveniences or interest on mortgages. Second, if one does not care to invest their savings in their own business, they should buy absolutely reliable stocks and bonds in old established concerns, such as Strauss bonds, government liberty bonds, U. S. Postoffice savings certificates, etc.

"I want to repeat that I cannot be too emphatic in warning you and others of our friends in investing hard-earned savings in unreliable concerns."

\* \* \*

### Let Someone Else Finance This

While we are talking about investments, we want to speak of a scheme being advocated by the Rural Life and Farm Stock Journal, of Rochester, which we think is decidedly unsafe as an investment proposition.

In a page advertisement in the November issue, *Rural Life* says that it is "ready to take its place in the front ranks with the foremost farm publications that are 'cutting melons' every year in the dividends to stockholders."

In the first place, there are few farm journals in recent years that are "cutting melons," or even making enough to meet expenses; and in the second place, if *Rural Life* or any other journal is paying large dividends, it would have no difficulty in borrowing necessary capital at the banks. *Rural Life* states that it is going to sell \$50,000 worth of 7% debenture bonds, and with each bond there will be sold also two shares of common stock.

A similar scheme was advanced some years ago by another publication in this territory, and those farmers who invested their savings lost them. Whether the scheme is reliable or not, there is only one safe rule in all investments, and that is, put your money into your own farm business, something you know about, or else consult your lawyer or your banker and invest in standard high-grade securities.

When writing to advertisers be sure to mention the AMERICAN AGRICULTURIST

# The Trouble Maker—By E. R. Eastman

## CHAPTER IV

**H**AYING is not a one-man job. Some farmers manage it alone, with the help of the women folks, but Jim Taylor's mother was an invalid and his sister already had too much on her youthful hands to help Jim in the fields, so for years Jim had obtained help to get his haying and harvesting done by changing works with his neighbor, John Ball.

It was a blistering hot week following the meeting in the schoolhouse in the North Speedtown community. John Ball, with Taylor, and Bill Mead, the hired man, had been busy all day cleaning up a piece of swamp grass which was the last of Ball's haying. Swamp grass is slippery, hard to pitch either by hand or horse fork, and difficult to load. It was the first day that Ball and Taylor had seen each other since the meeting, and there had been very little talk between them. The almost breathless atmosphere and the slippery hay were straining their usually good-natured tempers.

All day Bill had been trying to relieve the tension, but to little effect. After one period of unusually long silence, Bill could stand the gloom no longer.

"Johnny," he said, "you're gittin' old. A feller would have to sight along a fence to tell whether you were moving or not. I think I've caught an awful cold waitin' around for you to put a little hay up here to-day!"

Old Johnny exploded. "By cracky, if I couldn't lay a load of hay better than that round robin of yours, I'd keep my dumb mouth shut! I've been lookin' for every load to-day to fall off before we could get into the barn."

Being a good loader was Bill's special pride and boast, so muttering something under his breath that sounded like "a cantankerous old fool," he, too, lapsed into silence.

**T**HE hot day wore on to the middle of the afternoon when the last load was on and started for the barn. Bill was driving, as usual, and Ball and Taylor, with pitchforks over their shoulders, were following along behind.

"Jim," said the old man, "ever since the meetin' down at the schoolhouse the other night, I've been thinkin' about what happened, and the more I think, the madder I get. I just want to take this occasion to tell you that you put me in a hole down there. Tried to show me up as a coward, which I ain't, and you know I ain't, and I don't take it to kindly at all."

"What do you mean, Johnny?" asked Jim. "What did I do? I certainly didn't mean to call you a coward; of course I know you're not."

"You know darn well what you said about my not having the backbone of an old maid because I didn't want to stir up the milk dealers. That's a nice way to talk about a neighbor that's looked after you ever since you were a kid."

"And I was right, too. It's all right for that League feller to talk, but talkin' is one thing and sellin' milk is another. We've all got milk for sale and those dealers you were cussin' so much are the only ones who will buy it."

"Might better throw it in the ditch," said the boy, "than sell it all the time for less than it costs to make it."

"That's just fool talk," replied Ball. "I used to think you had some brains, but you're getting foolisher every day, fightin' down at the milk station like a common rowdy, and talkin' all of the time, stirrin' everybody in the neighborhood up and makin' a lot of trouble."

"Now, you hold on, Johnny. You're an old neighbor, but I'm here to tell you that you or no one else can talk to me like that."

"Will if I want to," said the old man, sticking his beard out belligerently, and now fully aroused. "You and your fool talk about this cooperation business makes me sick. All you want is some-

body else to lean onto, and do your work for you. Never heard us old fellers talk about cooperation in the old days, but we got a sight more than some of this younger set."

"Times change, Johnny. We used to use scythes, but even you use a mowing machine now."

"Well, I'm tellin' you, young feller, that you may find out some day that the way to get things done is to talk less about them, or some fool theory, and go ahead and work them out for yourself. Got so you can't even get in a load of hay without runnin' over here for help."

"All right, Johnny, I guess you and I have come to the parting of the ways. We've neighbored back and forth since I was a kid, and it has sort of seemed like home to me down here. But I always thought that I returned value received. I am sorry that I have been so long learning that you thought you were doing me a favor when we changed work."

"The real trouble is that we don't see things alike. We've reached a New Day in this farm business, and some of you

their troubles without any hope of relieving them."

"Maybe there is some chance, Dot, who knows? Don't seem as if times could be any worse."

"You know they could be worse, Jim, and you know, if you have any common sense, that stirring up a row is not going to help things any. Dad said that the League man admitted the other night at the meeting that the dealers had all of the money, all of the equipment for handling the milk, and all the power and influence."

"They haven't got the milk," said Jim, "and if the farmers just hang on to that, what could the dealers do?"

"Well, the farmers won't hang on. They never have, and they never will. They can't stick together. In the meantime, you are getting them quarreling among themselves. First thing you know, there will be all kinds of neighborhood hatreds and feuds. If that doesn't mean anything to you, you might at least think of your mother. I've just been over talking with her. She lies

the milk station when you knocked Shepherd into the milk vat. Dad says, too, that you made a fool of yourself the other night down at the meeting. Dad says if you don't look out, you're going to get us all into a lot of trouble."

Jim jumped to his feet. That was the last straw.

"I don't know that I made any bigger fool of myself than your father did! Besides, I don't care what he says. He's getting to be a regular darned old stick-in-the-mud anyway!"

"Jim Taylor!" cried the girl, "no one can talk that way to me about my father. I am absolutely disgusted with you and the way you have been acting lately."

"And I'm sayin' here," said Jim, "you might expect an old fogey like your father would be opposed to all progress, but I had hopes of a little something better from you."

With these bitter words, they climbed under the fence, and turned their backs on each other, while Jim went up the road and Dorothy down.

## CHAPTER V

**T**HE passing of each season, except winter, brings to the country dweller a certain indefinable regret and sadness. Particularly is this true when summer fades into fall. Then there is a lull in the farm work which comes usually in the latter days of August. Haying is over, and with the exception of the corn, the buckwheat and the potatoes, the harvest is mostly done. Fields that earlier in the summer were covered with waving grass and grain now are bare and lonesome. Like an old man with his life work completed, they await winter's long sleep under the mantle of the snows before they can bloom again in the resurrection of the springtime.

The crickets with their incessant chirp, the gentle rustling of the grown corn, the softer heat of the late August sun already well started on its southward journey, and the mellow haze softening the distant hills are all signs to him who lives on the land that another summer is passing.

As the summer of 1916 approached the fall, the interest in the milk situation increased. It was certain that a big fight was coming. The Dairymen's League had definitely determined to set the prices on the milk to be delivered after October first and it was just as definitely known that the dealers would not pay the League price.

Representatives of the League were busy among the farmers trying to get them to join the organization and prepare for the approaching crisis. They had some success, but the majority—although agreeing that it was a good cause—held back for one reason or another and there was much pessimism, shaking of heads, and discouragement as to the outcome.

Harry Bradley, the county agent, put in a busy summer riding the country almost night and day spreading information about the League and the general situation, and urging the farmers to the need of doing something to solve the serious situation which confronted them. The work brought him often to North Speedtown and he and Jim Taylor became good friends.

**O**NE evening in late August, the two men were sitting on Jim's porch discussing the milk problem and the League prospects. After a time the talk slowed up and stopped, while the men listened to the sounds of the peaceful summer night in the country. A frog or two croaked down in the swamp below the barn. From a distant back road came the rattle of a lumber wagon returning late from town. A warm south wind soured softly through the trees in the yard, giving promise of rain in the near future.

(Continued on page 330)

## What Has Happened So Far

**J**IM TAYLOR has "done it," according to the farmers who live in the typical little up-state community of Speedtown. After long brooding over the unequalities of life which make farm men and women work so hard to get so little, he has taken a public stand with a new organization called the Dairymen's League. Opinion is divided as to whether the fight for better conditions is worth undertaking. Chief among the stand-patters violently antagonized by Jim's "new-fangled notions" is old Johnny Ball, father of Dorothy, Jim's childhood sweetheart. At a meeting of farmers, young Bradley, the farm bureau agent, introduces a speaker for the new organization, who enlists the support of most of the men, in spite of Ball's open opposition. Many sign the Dairymen's League contract, with Jim Taylor leading off the list. It looks as though there might be a new day coming for Speedtown farmers.

fellows don't know it—and wouldn't admit it if you did. You will have to keep on going the same old road while some of the rest of us are going to turn off, Johnny. We believe the way to meet change is with change. I can't help thinkin' that there is something to this cooperative idea, but you can rest assured that I will not bother you with it any more and that when you and I do any more, cooperating, you will have to say the word first."

**J**IM turned on his heel and went through the barnyard gate into the road toward home.

Staring moodily down the road as he walked, he did not notice Dorothy, returning from an afternoon visit with his mother, until she spoke to him.

"Hello, Jim," she said. "Don't even notice common folks when you meet them right on the road." And then without waiting for him to answer, "Come on over here in the shade a little while. I want to visit with you."

"Don't feel much like visitin'," said Jim. "All right, don't," said the girl starting down the road, "but it will be a long day before I ask you to talk with me again."

"Oh, now, Dot, forgive me," replied the boy. "I didn't mean to answer you that way, but I haven't got much disposition anyway, and it seems as though it has been tried mighty hard lately. If you'll just come back, I'll listen to you as long as you will talk."

When they had climbed through the wire fence and seated themselves in the shade, Dorothy said:

"I am sorry, Jim, that you are stirring up so much trouble in the neighborhood about this milk business."

"About time somebody stirred these farmers up to do somethin', I'm thinking."

"Now, Jim, be sensible. Just stop and think what you are doing. Everybody is talking and everybody is excited. You can't do any good and you are just making these folks more conscious of

there in bed and worries about what you are doing all of the time."

"**M**OTHER is just the reason why I'm doing it," said the boy. "It's on her account I am so bitter. She is where she is because we farmers have never had a square deal in this milk business. These farm women have been worked to death, slaving in the house without any conveniences, taking care of large families, and then like as not, having to milk some six to a dozen cows every night and morning. Women like clothes—"

"You do know something about us, don't you?" Dorothy interrupted smiling.

"These farm women don't get one new calico dress a year," continued Jim, paying no attention to the interruption.

"They don't have any fun and they are old women at thirty. Go over to Speedtown to church, Dot, and look over the women in the congregation. Most of them are from the farms. And then go to Binghamton, or to any other city, and watch the women of the same age pass by on the street, and you'll see what farming under present conditions does for our women. You know what it did to my mother. You'll see why I know unless conditions change, I can't ever ask the girl I love to share them with me."

"Yes," said Dorothy, "but it's no worse for the women than it is for the men. One of the nice things about the farm business is that the women folks are real partners with the men, and most farm girls want to share the burden. Of course we are feminine and we like pretty things. What you say about things being pretty hard is right, but still I don't see how you can make them any better by getting the dealers down on us so they won't buy our milk at all."

"And another thing, Jim," said the girl, placing her hand gently on his arm, "I've always had the highest ideals about you. I've always been so proud of you. And it came as a shock when I heard about that public brawl of yours down at

# Things to Make for Christmas

The Wise Woman Starts Planning Now—Beginning Housekeeping

THINGS to make! Christmas means busy hours of preparation and the sooner you start, the prettier things you will have ready as gifts.

No. 1579: Sizes 14½ to 19 neckband

Dolls: No. 1598

Pillows: round, No. 2013; cylinder, 1780

AMERICAN AGRICULTURIST patterns are planned for the home woman, the woman who likes to sew, but has not much time to waste on unnecessary frills and furbelows. Patterns for gifts, like those for clothes, are smart without being fussy.

For a very few cents you can make any of the articles shown in the small pictures. Every man likes—and gets—plenty of ties for Christmas, but a well-made shirt is as necessary and even more welcome. Children adore “cuddle dolls” and washable ones are easy to make. The lady of the house is “crazy” about the new smart pillows, in odd shapes and colors, and these

too cost little to make from gay bits of material.

So you have a gift for every member of the family, and it is not a bit too soon to start in making them.

A good many more, with fascinating embroidery designs, are illustrated in our fall and winter Fashion Magazine. It is ten cents. Patterns are twelve cents. Embroidery transfers are fifteen cents. No more inexpensive styles can be found anywhere and no other patterns surpass ours in style or simplicity. Send your order with correct remittance to Pattern Department, AMERICAN AGRICULTURIST, 461 Fourth Avenue, New York, N. Y.

into a home. Every bit of labor put into it will make it so much dearer to her.

The first requisite is comfort and good light. Easy chairs and pleasant surroundings are strong factors. It is not wise to economize on our beds and beddings. A really comfortable bed means much to us after a day of hard work. Poor springs and lumpy mattresses are much too common. It is estimated that one third of our life is spent in bed, so if we have to economize let it be on something else, and have a comfortable resting place when we lay our weary bodies down for the night.

Good lighting facilities are a blessing. A home having gas or electricity needs no discussion. If those methods of lighting are not available, there are mantel lamps, both kerosene and gasoline, which are very satisfactory and quite inexpensive. They give a strong, clear light, very agreeable to the eyes, are perfectly safe and operate easily. Seated near one of these, the good man can read his daily and the bride do her embroidery without eye strain. Then again, it is not economy to scrimp on working utensils, especially in the kitchen. With good tools better work is done in less time and the young housekeeper will have more time for other pursuits.—MRS. GEORGE GRAY.

## “Do You Know That”

YOLKS of eggs may be kept for several days if they are placed in a cup, covered with cold water and set in a cool place. They may be used for salad dressings, custards, cakes and stuffings.

\* \* \*

Whites of eggs may be used for cakes, meringues, frostings, souffles and puddings.

\* \* \*

Egg shells may be used for clearing coffee and soups, for clearing the inside of vinegar, cruets or any narrow necked bottle.

\* \* \*

Meat leftovers should be carefully picked over, all bones, gristle and skin removed before being ground. It can be scalloped, made into hash, timbales, meat loaves, turnovers and croquettes.

\* \* \*

Bones, meat trimmings, etc., should be saved for soup stock.

\* \* \*

Cloves makes a good seasoning for warmed-up meat.—MATHILDA LUDWIG.

## The Trouble Maker

(Continued from page 329)

“Sort of peaceful, ain’t it, Brad?” said Jim. “If only a feller could get hold of a little more money so he wouldn’t have to worry all the time, the country would sure be a great place to live in.”

“You’re right,” replied Bradley, “and anyway the country is the place to raise a family.”

“Yeah, if you have one to raise, and I’ll say the folks who first settled this valley had ‘em, and to spare. I’ve heard Dad tell that in his father’s day there was hardly a family in these parts that did not have some six to a dozen kids. There was a big bunch on every farm in both the hills and the valleys, and the old red schoolhouse was crowded to the door.”

“Same was true all through the East,” said Bradley. “That was the day before the large cities and the country folks far outnumbered the city dwellers. Such great families and so little to do with were mighty hard on the women, though. There is an old saying that it took at least two New England mothers to raise one New England family. It sometimes makes me tired to hear some of you farmers talk about the abandoned farms and the boys going away to the city. What the deuce would you do now if a lot of them hadn’t gone? You farmers would holler worse than you do now if all the folks had stayed here and competed with you in trying to make a living from

these rocks. Instead, they went to the city and made a market for your products.”

“I EXPECT you’re right, Brad. There are still too many farmers working too hard and too long. All summer long you can sit on this old stoop until after dark and hear the rattle of mowing machines and later the reapers driven by men so scared of old man Poverty, who camps on their door’sill, that they dassn’t stop work long enough to even eat and sleep. And in the morning, too, I don’t need any alarm clock, for about four o’clock there comes floatin’ in through my bedroom window the brass-lunged voices of old John Kortright on one side and John Ball’s hired man, Bill Mead, on the other, calling their cows for the morning milking.

“Sometime, maybe, if a poet ever happens to get up early enough in the morning to hear it, he may write a real poem about the rallying call of the herdsman. Old neighbor John over here falls out of his bed and before he is more than half awake, he starts for the pasture pulling on his pants and his boots, and hollering in a voice that ought to raise the dead if it doesn’t the cows, ‘Ca-boss, ca-boss, ca-boss.’ You can hear him rounding up and swearing at each cow until he drives her up and starts her with the rest of them toward the barn, ‘Whey there, blankety-blank you! Whey! Whey!’ So the dairyman’s day begins, a couple of hours before the city man has to get out of bed.” (To be continued)

# When You Have a Child in School

*Suggestions for the Mother of the Family—Clothes, Recipes and Short Cuts*

THE initials P. T. A., which often fall glibly from the lips of mothers who have children of school age, do not always mean much to those who hear them, particularly if there are no children in the family. But they stand for a very decided influence in the life of the school children and the little groups which they represent are growing in number every year.

P. T. A. stands for Parent-Teacher Associations. Instead of working against each other or merely ignoring each other, the two influences of the home and the school are being linked up through these groups. The mothers get together with the teachers and stand behind them in the working out of the educational program and also in helping with some activities which may be very useful and yet just a little outside the ability of the teacher to handle.

One of the most important services launched by the Parent-Teacher Association in rural districts is the help in putting in hot lunches. Some have provided oil stoves, others have a rotating system by which each mother gives one or two days a month to help prepare the lunch and others pay a small sum to have somebody do the work of preparing the daily hot dish all through a school season.

### Parents Help Make School Model

But this is by no means all the lines of service open to the Parent-Teacher Associations. In some schools better pictures are being provided for the reception room. Others have secured home demonstration agents to talk at stated times to the classes. Others have cooperated in getting playground equipment and keeping it in order.

One of the best reports on the Parent-Teacher Association has come in from Missouri. In Boone County there is a rural school which is a model for all the others in the vicinity. Miss Allie Crews, the teacher, says, "The reason my school is so good is because it has an active, wide-awake, hustling parent-teacher association. All I have to do is to tell the mothers of something I think ought to be furnished and lo! in a short time we have it. They have given us 'Comfy' rugs for the little tots, books for the older boys and girls, subscribed to the 'Youth's Companion' for the school, bought a victrola with just the records we need, among them being Walter Camp's 'Daily Dozen,' which the children like to use in bad weather, and now they are working in our playground. I do not wish to teach in a school without a parent-teacher association."

### Do You Know Your Children's Other Home?

JEAN HENRY  
of the

Child Health Organization

### WHAT is a schoolhouse anyway?

It is your boy's or your girl's other home. In it your children live five or six precious hours each day—hours of intense growth and development.

You cannot afford to stint your child of his supply of air and sunlight. You cannot afford to place him in the midst of unsanitary conditions. You cannot afford to give him less than the full equipment for his use in studying, in playing, in working.

Next to planning her own house and its garden, every woman likes to plan a school. Take a pencil in your hand and a piece of paper. Here you have the library and assembly room that could be used for entertainments by the whole community. You plan classrooms with large windows and thorough ventilation. You have a furnace, thoroughly insulated for the economical heating of the school. You plan the toilet rooms to be light and easily cleaned. You provide for a large play yard that could be divided into space for the older boys for their sports,

the younger children and the girls. You may even provide for gardens where the children could experiment with seeds and planting.

### But Do What You Can—Now!

But don't let your drawing discourage you. It sometimes takes years for a dream to come to pass and then, too, you

## A. A. PATTERN SERVICE

2175  
Emb. 706

Add 10c for the Fall and Winter catalogue.

### School Frock for a Girl

A pretty one-piece dress for girls is No. 2175, which also may be used to make over last winter's school frock, grown too small. It cuts in sizes 4, 6, 8, 10, 12 and 14 years. Size 8 takes 1 3/4 yards of 32-inch material with 3/8 yard contrasting. Price, 12c.

Add a pretty touch of embroidery with hot iron transfer pattern No. 709 (blue and yellow), 15c extra.

### Party Frock for the Young Lady

You always need one dressy frock for evening wear and any girl or woman would find this long-waisted, full-skirted model very becoming. The skirt, gathered with a straight lower edge, is suitable for lace flouncing. No. 2215 cuts in sizes 34, 36, 38, 40 and 42 inches bust measure. Size 36 requires 3 3/4 yards of 36-inch material. Price, 12c.

2215

Add 10c for the Fall and Winter catalogue.

### Every day Suit for Junior

Make this little suit of slip-on blouse and straight trousers in non-crushable linen, cambray or a light woolen material. No. 2192 cuts in sizes 2, 4, 6, 8 and 10 years, size 4 taking 1 5/8 yards of 36-inch material, 1/4 yard contrasting and 3/8 yards lining. Price, 12c.

2192

TO ORDER: Write name, address, pattern numbers and sizes carefully, enclose correct remittance in stamps and send to Pattern Department, AMERICAN AGRICULTURIST, 461 Fourth Avenue, New York City.

will probably need the help of a competent architect who can save money and trouble when it comes to actual planning and construction. In the meantime a pail of whitewash, paint for the walls, the placing of a new window here and there in the old schoolhouse, a guaranteed supply of plenty of water for the school,—all these will help to give your children the proper conditions.

Do you—do any of the women of your neighborhood know your schoolhouse intimately? Do you know the bad lighting of the schoolroom? The cramped playground conditions? The dinginess of the lunchroom?

You will find the teacher eager to help you in your efforts to find the most urgent needs. Installing the school lunch will bring many improvements in its train, such as the plentiful supply of water and the cheerful decoration of the room. The medical examination of the children may show that there should be more and better toilet facilities in the school.

You mothers of the pupils in your school district can make your children's other home the beautiful place it should be for their development.

Books to read: 1. "American Schoolhouses," by Fletcher B. Dresslar, can be secured from the Superintendent of Documents, Government Printing Office, Washington, D. C., 75c the copy.

2. "A School Health Program," by Grace T. Hallock, published by the Child Health Organization of America, 370 Seventh Avenue, New York City, 15c the copy, \$14 a hundred.

## Buns and Fancy Bread

I DON'T know why buns and rusks should be called fancy breads. When one has the dough on hand, they are almost as simple as loaves.

Cut off about enough bread dough to make one loaf, roll lightly into a sheet one-half inch thick, spread with melted butter and sugar creamed together, roll up like jelly roll, moisten the edges and pinch firmly together. Begin at one end and cut into inch slices. Place in a baking tin like biscuits, let rise, and bake to a delicate brown in a hot oven.

**Hot Cross Buns**—Cream 1/4 cup butter with 1/2 cup sugar, stir in gradually 1 cup boiling milk. When cool add a well-soaked yeast cake, 1 cup new milk and flour to make rather thin batter. Keep warm 3 hours, add 4 well-beaten eggs, and flour to make a soft dough. When very light form into buns, let rise, cut across in the center with a sharp knife, brush over lightly with a little milk and bake in a moderate oven.

**Rusks**—To about a pound of bread dough ready for loaves, add 1 cup sugar and 1 well-beaten egg creamed together. The dough should be in a dish and the filling may be done by cutting in the filling with a knife as one mixes lard with flour for pie crust. When well mixed, add flour enough to knead, form into rusks, place together rather closely in the pan and let rise very light. Bake to a rich brown.

The same dough is delicious formed into balls, left to rise till the bulk is doubled and fried in deep fat like doughnuts. Roll in sugar and serve with hot coffee and nice cream.—Mrs. E. M. ANDERSON.

## For the "Exchange Corner"

TRY putting in some either fresh or canned raspberries with your apple jelly while it is cooking, before straining. A most delicious flavor is the result.

\* \* \*

To make "Lazy Pickles" select the fairest of the Siberian crabs, those with stems preferred. Wash well and rub off the blow ends. Put a layer in a jar or other suitable dish for baking, fitting them in and sprinkle sugar (brown preferred), fill in the crevices with it and sprinkle spices—cinnamon I like best—over the layer and proceed with the layers till the dish is full, then cover and bake until tender. They may be kept in any dish or can while covered with their own juice. Try them—they are excellent!

\* \* \*

Try canning some pie plant with blackberries, a third or a quarter quantity of the former. Thin out the seeds some.—Mrs. J. B. A.

# Eat more Toast

Advocated by  
Medical Authorities

Toast promotes mastication and thereby aids digestion of bread, "the staff of life." What could make a better breakfast than delicious, brown, crispy, piping hot toast. Medical authorities advocate it not only for the delicate in health, but for all. Now you can have toast every morning and for every meal, the equal of which you never before have tasted.

Sterno has solved the problem. Sterno Canned Heat makes toast far superior to other methods. And to prove it to you, we offer you without charge, a Sterno Toaster to make toast quickly, easily, conveniently, to have it PIPING HOT RIGHT ON THE TABLE. No waiting, no running to the kitchen stove.

## Everybody, Everywhere, Needs Sterno Canned Heat

It has hundreds of uses. Indoors or outdoors, all year around you can use it for cooking meals, heating milk, or water for shaving, or for the curling iron or sad iron. No matter what your walk in life, you can enjoy its comforts, whether you are a traveler, farmer, doctor, teacher, nurse, office or shop worker, etc.

## GIVEN FREE

## this TOASTER

with this 25c Stove  
or with 6 cans of

# STERNO Canned Heat

### How to Get the Toaster Free

If you are a user of Sterno Canned Heat, go to your dealer and buy six cans of Sterno. Send the six labels to us and a Sterno Toaster will be sent you at once. You can use it on any Sterno stove.

If you have never used Sterno, for only 25c buy the folding Sterno Stove with can of Sterno and extinguisher. Cut out and send us the name and phrase "Sterno folding stove for light housekeeping" from the box and receive the Sterno Toaster.

**If Your Dealer Cannot Supply You** send to us direct for either the stove or the six cans of heat—or both at the following prices: Stove—U. S. 25c. Canada 35c. Heat—East of Rockies 10c can. West of Rockies 15c can—2 for 25c. Canada 15c can. We will ship free toaster with either order.

# Reviewing the Latest Eastern Markets and Prices

## MILK PRICES

**THE** Dairymen's League Cooperative Association announces the following prices that dealers will pay the League during the month of November for milk testing 3% in the basic zone of 201 to 210 miles from New York City. It is to be understood of course that the prices mentioned below are not received by the farmer but go into the pool. They represent the prices dealers pay to the League. *Class 1:* milk used chiefly for fluid purposes, \$3.07 per hundred pounds, an advance of 47c per hundred over the October price. *Class 2A,* used chiefly as fluid cream, \$1.90; *Class 2B,* used chiefly in the manufacture of condensed milk and ice cream, \$2.05; *Class 2C,* used chiefly in the manufacture of soft cheese, \$2.05.

Prices for *Class 3* are to be determined on a different basis than has been used heretofore. The New York League price will be based on the average price paid by a specific group of condenseries located in the Middle West with a freight differential added. This agreement was reached with condenseries in the League territory with the understanding that they will release fluid milk to the League during the short season. It is said it will be an added advantage to the patrons of these condenseries in that their market will be insured year around. It will be recalled, in 1920 condenseries had to shut down for a period due to conditions in the milk market and patrons were compelled to dispose of their milk in the form of butter as best they could. It is only through strong organization that such an ideal as this could be put through.

*Class 4,* prices will as usual be based on the butter and American cheese quotations on the New York market.

### Sheffield Producers

The Sheffield Farms Producers announce the following price for 3% milk in the 201 to 210-mile zone; *Class 1,* \$2.60 per hundred; *Class 2,* \$1.70; *Class 3,* \$1.55; *Class 4,* determined by market quotations on butter and cheese. In the absence of information to the contrary, November prices are the same as October.

### Non-Pool Cooperative

The Non-pooling Dairymen's Cooperative prices for *Class 1* milk is \$2.40 per hundred; *Class 2,* \$1.85; *Class 3A,* \$1.60, *Class 3B,* \$1.45. No information has been received that November prices will change from those of October.

### Interstate Producers

The Interstate Milk Producers' Association (Philadelphia Price Plan) announces that receiving station prices, or the price to farmers in the 201 to 210-mile zone from Philadelphia for 3% milk, is \$2.19. In the 101 to 110-mile zone the price is \$2.29.

### City Milk Prices Advance

On the first of November, the price of milk to consumers in New York City advanced 1 cent a quart. Grade B, bottled milk, is now 15c a quart in New York, Kings and Queens Boroughs. Grade A bottled is 18c a quart. The price of cream and certified milk remains unchanged.

### BUTTER ON THE UP GRADE

The butter market has improved considerably over what it was last week. In fact, there

### FARMS FOR SALE

\$6000 Bldgs. On \$3300 Farm  
362 Acres, Crops and

Equipment included if settled at once; 1 1/2 miles busy village, convenient markets; 150 acres mostly level tillage, big wire-fenced pasture, abundantly watered; estimated 3,000 eds. wood, 200,000 ft. timber worth small fortune, fruit; 1923 income over \$3,400; fine 8-room house, sun-parlor, good barns, other bldgs. The bargain of the year at \$3,300, only part cash. Details pg. 61 New Illus. Catalog, 152 pages money-making farm bargains. Free. STROUT FARM AGENCY, 150R Nassau St., New York City.

is a very optimistic outlook at the present time. Trade on the whole is good, and it is very evident that consumptive demand is on the increase. The upward look that the market has had for the past several days has encouraged more free buying not only by the regular jobbing trade and chain stores, but from out-of-town points as well. This has resulted in satisfactory clearances of fresh receipts, especially of the finer grades. In addition to that it has been responsible for a heavier withdrawal of storage butter, which is really the most encouraging feature of the market. Storage stocks are tremendous and the sooner these reserves are cut down, the sooner we will have a more healthy condition in the butter market.

Lower retail prices have been in vogue for the past week in retail stores, and these have attracted more consumer attention, with the result that the outlets have tended to increase.

The supply of fine and fancy fresh creameries continues short and as a result prices have advanced during the past week to 41c on 93-score butter, which is a 3 1/2c advance over last week. Furthermore, up to the present the market has been very dull and draggy on lower grades of first and seconds. However, with shorter receipts of fancy butter and an improved condition of the market, these lower grades have advanced, somewhat. Creamery, scoring higher than extra, 93 score is now selling from 40 1/2 to 41c; 92 score, 42c; firsts (90 to 91 score), 36 1/2 to 39c; 88 to 89 score, 33 1/2 to 35 1/2c; creamery second (84 to 87 score), 31 1/2 to 33c.

## CHEESE STILL QUIET

The New York cheese market still shows very little activity. Advices from the West indicate a steadier market on daisies. Locally there is very little speculative interest either among receivers or the jobbing trade. Most business is being done in held stock. Receipts of fresh state flats have been moving slowly and quotations are irregular on account of the wide selection. The receipts of this stock, however, are not very heavy. Fancy to special held state flats are bringing from 20 to 21c with average run held goods from 18 1/2 to 19c. Fancy whole milk state flats, fresh, are from 19 to 20 1/2c with average run going mostly at 18 1/2c.

## FRESH EGGS VERY SCARCE

Fresh nearby white eggs are extremely scarce and the trade is having difficulty in supplying orders. Only a small proportion of the incoming stocks can really be classed in the fancy grades. Much of the supply is now undersized, either mediums or pullets. There is a lot of complaint about shrunken eggs. Prices are firm for all good to fancy qualities, running about the same as last week. Closely selected extras from Jersey and other nearby points are bringing anywhere from 81 to 86c. Fresh nearby whites, grading first or better, will bring anywhere from 60 to 80c, depending on how they grade as to size, shape, color, etc. Nearby gathered whites, grading firsts to extra firsts are bringing 60 to 62c, with undergrades 50 to 88c. Nearby pullets are bringing anywhere from 40 to 58c, depending on size.

It is a big mistake for poultrymen to hold their eggs any length of time these days, to make up a big shipment. Common storage is bound to result in some shrinkage and this will soon be detected by receivers. As soon as low quality is detected, the classification of an incoming case is knocked down quite severely. This is always true when prices for fancy goods are way up. As we have said many times in these columns before, poultrymen cannot afford to get careless just because prices are strong. They can get careless if they wish but they are going to lose money heavily, for the spread in prices at the present time is enough to make it a big item on a case.

## POULTRY MARKET QUIET

The poultry market has been more or less quiet all during the past week. Receipts have not been very heavy, which has been more or less of a blessing, as the trade did not show any disposition to absorb heavy receipts. As it stands now if arrivals increase to any degree we are almost sure to see an easier market, with a tendency to weaken. Fancy quality fowls via express have dropped to a top figure of 28c. Average to good stuff will vary anywhere from 24c up to 27c. The best Leghorn fowls are bringing as much as 21c, but the average run will only return between 18c and 20c. Fowls have been selling rather slowly during the past few days. In fact, the fowl market could be even called dragging. Colored chickens that are fancy will bring as much as 27c, although most of the business is being done at an inside figure of 26c. Leghorn chickens are from a cent to two below the colored market. Turkeys coming in via express are worth anywhere from 32c to 40c and

young ducks from nearby points are from 25c to 26c. Old ducks are from 3c to 4c lower.

## POTATO MARKET UNCHANGED

The New York potato market shows little or no improvement. The only single feature that does stand out is the slight advance that Maines have made during the past week. They are now bringing \$1.20 a hundred in bulk delivered, a 10-cent advance over last week's prices. There is little likelihood that the market will increase to any extent. There are too many potatoes in the market to create very much interest. The heavy stocks on hand are responsible for practically no speculative interest and buyers are following a hand-to-mouth policy. We have had a remarkable run of good weather and men in the market feel that this has been responsible for the more or less lack of interest that has been evident. If we get a spell of bad weather it may help but at best that will be only temporary due to the fact that the potato crop is such a heavy one. Cooler weather may create a little stronger consumptive demand. New York has been experiencing some very unusually mild weather, which has not been conducive to heavy potato consumption.

States are now being bought for \$1 a hundred F. O. B. shipping point. Long Islands are not quite as strong as they were. They are bringing \$1.90 for 150-pound sack F. O. B. cast end points. Maines are practically dictating the market at the present time. The crop in the State of Maine is heavy and of particularly fine quality.

## FANCY APPLES HIGHER

The apple market is divided into two classes. One class seems to be going upward and the other down. A lot of low-grade B stuff has been rolling in and this has had a rather dampening and weakening tendency. Just as soon as this mass is cleared out we are going to see much better apple prices. The other class fancy apples is on the upward trend. There is good demand for large size McIntosh, Kings and Greenings, meaning 3-inch stock. McIntosh are bringing anywhere from \$8 up, depending on quality and size. Kings are really scarce and there is a strong demand for them. They are bringing from \$7 to 7.50. The Greening market is in strong hands. Fancy large stock is scarce and will bring anywhere from \$6.75 to 7.25. There is a tendency on all varieties, where the stock is large and fancy, to harden in price. Baldwins are receiving a great deal more attention and there is a strong interest about them and prices are going higher. Last week, the market averaged around \$4 to 4.25 F. O. B. This week the price runs anywhere from \$4.50 to 5, depending on size and most growers who have them are holding for \$5 and 5.50. Ben Davis are meeting a fairly good demand, holding their own, although prices are no better. The South American and European markets for Ben Davis have fallen off heavily.

## COMB HONEY SCARCE

Comb honey is scarce in New York. Strictly fancy stuff is worth anywhere from \$6 to 6.50 a case in New York City. No. 1 U. S. grade will bring from \$5.50 to \$6 and No. 2 U. S. grade, \$4.50 to \$5.50. Buckwheat No. 1 U. S. grade is bringing from \$5.25 to \$5.75. Extracted clover is worth from 12 1/2 to 13c a pound delivered, with extracted buckwheat at 10c. These high prices are dragging a lot of very fine clover from the West, which is selling from 10 3/4 to 11 3/4c.

New York State honey producers have got to learn something about grading. What they call No. 1 this year is far different from the quality of their No. 1 of last year. In other words, we cannot establish a No. 1 grade every year. We have got to adopt here in New York and the East, the U. S. grades and adhere to them strictly. As a result receipts from New York State and other Eastern points are very irregular. What one man calls No. 1 is very different from that of another. This only has a tendency to demoralize the market and gives the receivers an excellent opportunity to whip-saw the producers and pull them down to a lower classification. It is to the advantage of the producer to adopt uniform grades.

## HAY MARKET WEAKER

The hay market has fallen off during the past few days and \$27 a ton is the top price for No. 1 with small bales \$1 lower. No. 2 brings from \$24 to 26 in large bales, small bales \$1 less. Rye straw is worth \$18 to 19 a ton and is meeting a firmer market.

## GRAINS AND FEED

According to New York State Department of Farms and Markets, the following prices prevailed October 25:

The quotations given in this report show the approximate prices at which feed can be purchased per ton, and grain per bushel, in straight carlots through billed from Western

points, delivered on track at points in the freight zones as indicated. Mixed earlots cost approximately \$2 per ton more.

Retail feed and grain prices vary with different local dealers depending upon their individual cost of doing business, volume handled, etc. In the case of feeds the retail price may sometimes be as high as \$5 per ton above the wholesale prices given in this report.

For points taking New York rate add to Albany price 1/2 cents on oats; 5/8 cents on corn, 10 cents on cottonseed meal, and 20 cents on other feeds

## One Cow or Thirty-one

(Continued from page 327)

producers earned nearly thirty-one times as much profit above cost of feed.

The twelve lowest cows had earned their owners less than five dollars in a year. Suppose the milking period was 300 days. Then each milking brought a return of less than a cent.

"If there is so much more profit to be obtained from high producing cows, then," says Mr. Constable, "why in the name of sense are there not more of them? If the farmers who are milking those low producing cows would sell them all and spend the time they have spent on them sleeping, they would be making more money because they would not be wasting their time and feed."—F. L. CLARK.

# Getting Turkeys Ready for Thanksgiving

## The Turkey Outlook for the Early Holiday Trade

ONCE the turkeys are able to take care of themselves, and that is usually at the age of six to eight weeks, they will begin to fly upon a roost somewhere nearby the buildings, providing we feed them regularly. Otherwise they may roam about and roost half a mile or so away from home, which is not at all desirable. Turkey losses are minimized when they are reared to the point where they can roost according to their natural inclinations, which is always high off the ground. Their ration from this time on until fattening time, when ready for market, should consist of cracked corn and wheat. I do not know of anything better than this to feed them for frame and health in addition to what they find during the day and they are usually busy late and early when given plenty of range. By the way, turkeys must have plenty of range, especially the bronze type, in order to do best and thrive and grow as they should. Some other types are more lazily inclined and do not wander so much, but I have found they are not so profitable as those of the bronze variety. Shelter for grown turkeys is never provided. We let them roost as they choose, but I always feed them daily, if only once. They will remember this if regularly done and will not wander so far away.

Turkeys should be fattened several weeks ahead of marketing time. It is good policy to start about first week in November for fattening those for Thanksgiving. They should be fed sparingly at first, and the feeding ration gradually increased until they are on a full ration.

Never overfeed. That is more injurious than not feeding enough. The turkeys may be penned while being fattened but even then the quarters should be large for a flock of any size. Some years I have penned them, but I believe it is better to let them out on range until the last week of the fattening period. They are then healthy and hearty and ready for the market, of which there is always a good demand for many years past.

It does not pay to sell all the flock. Some should be kept for next year. Whatever number is selected it pays to keep the best, those of good frame and weight, either yearling hens or early pullets of good weight.—Mrs. EDITH SWOPE, Pennsylvania.

### The Turkey Outlook

Thanksgiving will occur Thursday, November 27, and as we near this national holiday interest increases as to the probable supply of turkeys and prices likely to prevail. Last spring and early summer the weather was cold and wet and season so backward in most sections of the country that turkeys did poorly and the fatalities among the young birds was unusually large. This resulted in a lighter crop than last year. In the eastern and nearby southern States few turkeys were raised. In Texas, Oklahoma, Kentucky and Tennessee the crop is perhaps 15 to 20 per cent. smaller than last year, but the turkeys have matured early and so many in fit condition to ship for Thanksgiving that the tonnage likely to be marketed will be fully equal to last year. In Colorado, Wyoming, Utah and some other far western States the production is reported larger and in Minnesota, North Dakota and the northwest the crop is nearly up to last year's

big crop, but the season is late and turkeys backward with the proportion fit for Thanksgiving uncertain.

There will undoubtedly be the usual big demand and there will probably be enough turkeys to supply this demand, but probable prices are uncertain. Many of the large operators seem to think fancy western will sell around 40c seaboard, others favor 45c as a more likely figure.

### Good Demand: Prices Uncertain

On October 1 there were 5,365,000 lbs. in storage against 6,352,000 on October 1 last year. These storage holdings are heavy, as there were only 2,645,000 lbs. in storage against 6,352,000 on October 1, 1921.

The serious break in prices in the wholesale markets last Thanksgiving which caused paying prices in the country to fall very low will have a tendency to cause a freer selling on the part of the growers and country buyers and shippers as well as other operators will be more conservative as regards prices paid at producing and shipping points. There will also be a tightening of credits among the country banks.

Selling prices in New York Thanksgiving week for fancy western turkeys for the past three years were as follows:

	1921	1922	1923
Monday	54 to 57c	59 to 60c	35 to 40c
Tuesday	56 to 58c	59 to 60c	30 to 35c
Wednesday	56 to 58c	58 to 60c	27 to 35c

TEXAS EMBARGO—The embargo of the New York State Department of Farms and Markets against shipping turkeys and other stock from Texas into New York State except under restrictions and with certificate attached will curtail shipments of turkeys from that State for Thanksgiving owing to the difficulty in complying with the necessary conditions. Effort is being made to have the embargo lifted.—(From THE PRICE-CURRENT.)

## The Child Labor Amendment

(Continued from page 325)  
simply gives power to Congress to legislate with reference to the subject—a power which some legal authorities believe it already has but which it is thought necessary to establish firmly. It does not dictate in any way the trend of possible subsequent legislation.

2. That it does not prohibit the employment of children under 18 years of age. It sets this as the limit within which Congress may exercise its authority to regulate and if necessary prohibit the employment of boys and girls in certain occupations. This is a power which State legislatures already possess, although there is no age limit to their power.

3. That it does not forecast any attempt to regulate children working on their home farms or helping with the housework. The Child Labor Amendment advocates unanimously subscribed to a statement denying all intention to rob the farm father or mother of the help of their children.

### State's Rights Major Issue: Farm Children Next

Taking up the two most strongly advanced arguments against child labor, it is found that radically different opinions were voiced both at the hearing and before Congress, and certainly no one could say that either side had not been fully represented. The argument against the proposed amendment on the basis of State's rights was the most hotly contested. In the ranks of those who appeared to urge that the Constitution was endangered by any process of amending were many who had opposed the previous child labor bills on the ground of actual opposition to any regulation of child labor. Among these champions of the Constitution were several representatives of organizations formed to combat the Prohibition Amendment and also at least one organization which had fought the Suffrage Amendment. The argument of State's rights was very skillfully put by several lawyers who maintained that any such protective legislation should come from the States themselves and that a State which had perhaps higher standards

should not attempt to foist them upon the neighboring State which did not agree.

The question of the effect of the proposed bill on children in agriculture was pretty thoroughly discussed, although it did not take anything like the prominence given the State's rights argument. Of course both sides were arguing as to what Congress might do. An opponent would say that Congress would be able to make it illegal for a girl to help her mother wipe the dishes, whereupon a supporter of the measure would reply that Congress would have too much sense to do any such thing. In spite of the fact that the opponents were able to mention a good many far-from-sensible things done by Congress, the supporters of the bill had rather the best of it in that they could point to the two child labor laws Congress had already passed. Both of these laws dealt only with employment in mines and quarries, mills, factories, workshops and manufacturing establishments. In both, the child in agriculture was specifically exempt and in all bills now being discussed in case the amendment goes through, the same exemption is made. The strongest and most idealistic supporters of the Anti-Child Labor movement make a distinction between child labor and child work. They state frankly that work is good for every child and that children are often more harmed by lack of work than by too much of it. These supporters say that inasmuch as the amendment is simply to make any legislation constitutional, Congress will naturally go back to the first laws it passed and when its right to do so is established, will simply put through practically the same thing in a form that is constitutional.

### New York Above the Average

Neither side can say exactly what Congress will do. It would seem, however, that the probabilities are certainly on the side of the enactment of legislation similar to that enforced before. This is especially true inasmuch as the forces working actively for the amendment have declared themselves definitely as opposing any attempt to regulate the farmer in using the help of his own child.

As far as New York goes it has been pointed out that no change will be made in the present state of affairs if Congress passes legislation similar to that already passed. New York has extremely high standards and the whole intention of the federal law is to establish a minimum standard for the nation. New York is so far ahead of many of the States that any such law would be sure to demand less rather than more regulation than it has.

Rather than endeavor to restrict the use of the child's work on the farm, those opposing child labor concentrate in urging all communities to maintain a reasonable compulsory school law. Here again New York children are all protected, although in some communities there has undoubtedly been a disposition to keep children out of school at times when their labor is especially needed on the farm.

### Political Line-up

Both the Republican and the Democratic parties are on record as favoring the proposed amendment. It is remembered that at the time the last federal law, since declared unconstitutional, was pending, President Wilson himself went in person to the Capitol to use his influence in having it put through. President Coolidge, during the time when the Senate had delayed considering the bill after it had passed the House, issued a statement urging its passage. Both the Democratic and Republican organs have come out urging the enactment of this legislation.

It would seem after carefully reading all the testimony and evidence on both sides, that opposition to the constitutional amendment is based upon unnecessary apprehension. If it is passed there will still be the necessity of drafting the new law and it is then that any opponents of regulation or those who wish certain trades or callings exempt will have ample opportunity to be heard. It is true that Congress may do certain things which do not seem likely, but judging from the long deliberation given simply to the enabling act, it is doubtful whether they will jam through any legislation which is opposed by public opinion or even by any one body of citizenry.

## TRAPPERS—Ship To

1,000,000 shippers in North America and each one can be satisfied!

Thousands ship to us every year. Do you ship to DORMAN? If not, you are missing that confidence and peace of mind that OUR shippers enjoy. They know that they can depend on getting top market prices, correct grading, and quick returns.

We pay express, and parcel post, charges, and deduct no commissions. Make a new friend. Write NOW for our price list.

## Curbing the Land Shark

(Continued from page 321)

The crook whom this law is designed to curb makes no distinction. He plies his trade wherever he believes there is a fertile field, irrespective of the size or location of the county. It is to be hoped that the legislature will make the law co-extensive with state boundaries. Fortunately, the Commission, in a case recently presented to it by The Jewish Agricultural Society, ruled that the place of the residence of the broker, not the location of the property, determines the jurisdiction of the Commission. Indeed, in the case before the Commission, the property was located in a county not included in the law. The Commission entertained the complaint because the broker had an office in New York City.

### Law with Teeth Needed

A real estate licensing law with teeth should prove much more effective than criminal prosecution in rooting out fraud. For one thing, it is easier to establish a case. Immoral character, general unfitness, unethical conduct, unfair business methods, are sufficient ground for refusing to grant a license, or for revoking a license already granted. The investment of the Commission with the power to hear complaints, should make the most disreputable real estate man wary of engaging in questionable practices. The right of the Commission to revoke a license should go a big way toward ridding the business of the human leeches who would suck out the life blood of their own brothers. Real estate agents perform a legitimate and useful function. As a class they are men of irreproachable character and integrity. By weeding out the undesirables, the odium which at times attaches to the business will disappear and the business be placed upon a higher level.

A good example is furnished in the report of the New Jersey Real Estate Commission for the fiscal year ended June 30th, 1923, its first full year of operation. It had investigated 452 complaints and held hearings in 189 cases. As a result, five licenses were revoked, twelve were suspended, and information in the cases of eighteen persons found guilty of operating without licenses was sent to the Attorney General for prosecution. Almost one hundred licenses were warned to discontinue their sharp practices. Approximately \$50,000 wrongfully withheld by licensed brokers and salesmen was recovered.

### Commission Alone Not Sufficient

The existence of a Licensing Commission is, however, not in itself sufficient to cure the land shark ills. Few people know that such a Commission exists, or knowing it, are ignorant of the method of procedure in bringing complaints before it. This is especially true of farmers. That accounts for the fact that out of approximately three hundred complaints lodged with the New York Commission not more than twelve came from duped farm buyers. And this is easily understandable. Real estate transactions in the city are of larger size, even if not more important in their consequences to misguided buyers. The money invested by the city buyer, as a rule, represents his savings utilized to provide a home, an added income, or a prospective profit. If he discovers that he has been cheated he has an attorney to turn to to seek redress, and can afford to pay for his services. The farm purchaser buys not merely a home but a business, a business which requires, in addition to the real estate, a large investment for equipment and operating capital. By the time a farmer finds that he has been fleeced he is usually beyond hope and without means to employ counsel.

The Legislature enacted the law under which the Commission was created but the Commission cannot per se become fully operative. It resembles in this respect a court of law. The court's jurisdiction is limited to the adjudication

of issues brought before it. It cannot of its own motion initiate a suit. The Commission can only function full if people will lay their grievances before it for determination. It is a judicial tribunal, not an agency to ferret out fraud. In a case instituted by a Jewish farmer the Jewish Agricultural Society drew up the complaint and will prepare the evidence for presentation. A body that can act in a similar capacity for all, that can undertake to sift out the evidence, formulate the charges, and prepare a case for hearing, would make the law a vital force in eradicating the land pirate. Lacking such an agency, it becomes all the more important to spread a knowledge of the existence of the Commission, of the manner in which it operates, and of the end which it aims to attain.

We need not argue that it is just as well to let the weaklings fall by the wayside, that there is room only for the strong in a business which some believe is overcrowded. The man who sees his hope in farming has a right to his chance. If he fails, let it be through his proved incapacity or inherent ineptitude, not through the machinations of ruthless profiteers. He is entitled to protection. But above the fate of the individual is the welfare of the community. This cancerous growth must be cut out for the good of agriculture and for the preservation of the integrity of American ideals.

After the completion of this manuscript, the writer learned that the New York State Commission had just revoked the license of a Farm Sales Co., on the ground of incompetency.

### An Old-fashioned Plow-handle Talk

(Continued from page 320)

of people in the whole world than the farm family folks who have administrative and working duties, and a Grange feast meeting is the place to observe it all. If one wants to see a good time exemplified, go and see a gathering of a capitalistic labor combination in a home atmosphere, the best expression of true democracy and national security, the world has ever seen or known. These people do not want to dynamite the constitution in order to give them greater security.

Yesterday we were putting away late used farm tools and I wondered how we were able to pay for and repair them and then the reverse thought went through my mind. How could we get on without them? I don't buy tools just for the sake of having a big show by any means. Only those that have a necessary place in farm economy are used, and yet they foot up in cost. Personally I don't like machinery and if we didn't have men who are farm experts in the care and handling I don't know what would happen.

Now on the other hand what would we do without them? I know we just wouldn't do—and the whole business from soils to the finished baby food delivered to the home would go busted. And so the whole lesson after all to every farmer who has a desire to keep up, is to keep watch of his final goal and then educate himself to employ the most economical means to that end, whether he likes it or not at the outset.

### Why I Oppose the Amendment

(Continued from page 325)

save the children from abandonment some municipal or privately managed agency is necessary to take care of the children—so busy are the parents. Maybe this proposed law is necessary in certain highly specialized factory and mining localities of which I cannot speak. But even then I am suggesting that the remedy, a real lasting remedy, will be found through the presently established Departments of Education under compulsory school attendance rather than to be cared for by Congressional enactment.—H. E. Cook.

Good appetite  
Good digestion

## MORE MILK

GOOD HEALTH, good appetite and good digestion are the essentials of a good milker.

## Dr. Hess Stock Tonic

A Cow Tonic and Regulator

Your cow is a machine. To convert your grain, hay, silage and fodder into pails of milk is her function. The more she eats each day, if she is able to digest it, the more milk you get.

Dr. Hess Stock Tonic contains the dairyman's favorite remedy, Nux Vomica—the greatest of all nerve tonics—cow remedy, appetizer and digester. It contains Quassia, a stomach tonic; whets the appetite, promotes digestion. It contains Diuretics, to keep the kidneys active. It contains Laxatives, to keep the bowels regular, so that there is no clogging of the system during heavy feeding.

Just regular milk giving where Dr. Hess Stock Tonic is included in the ration.

Excellent for cows at calving time. No retained afterbirth. Feed it before freshing. Good alike for all cattle.

### Costs Little to Use

The price of one gallon of milk tonics a cow for two weeks.  
25-lb. pail, \$2.25; 100-lb. drum, \$8.00  
(Except in the far West, South and Canada)

Honest Goods—Honest Price. Why Pay More?

REMEMBER—When you buy any Dr. Hess product, our responsibility does not end until you are satisfied that your investment is a profitable one. Otherwise, return the empty container to your dealer and get your money back.

Christmas giving  
—all priced low.

**GOOD NEWS!** It will be a bigger and a happier Christmas for your family and your friends if you use Your Bargain Book for your Yuletide shopping guide—and it'll be a far more economical Christmas for you.

Buying at The Charles William Stores is a money-saving transaction any time . . . But, at Christmas, when pennies count even more than usual, the savings seem even more pronounced.

You'll find that whatever you have on your list is almost sure to be in Your Bargain Book. You'll find, too, that the catalog will suggest many things you may not have thought of. Is it a fur for daughter? You'll find them on pages 38 and 39. Is it a sweater for Dad? They are on pages 112 to 115, priced from 85c to \$7.98. Does Sonny expect a watch? There is a dandy with a compass fitted in the stem, shown on page 365, priced at \$1.25.

And so it goes, on almost every possible kind of merchandise.

### Everything Guaranteed to Please

We guarantee to please you or to return your money together with every cent you have paid out—ask any banker anywhere.

# The East Still Leads

An A. A. Radio Talk Broadcast from WEA F

By A. W. Gilbert  
Commissioner of Agriculture,  
State of Massachusetts

IT is not generally known that the business of farming in the eastern quarter of the United States is rapidly improving, and it is less generally recognized that this has significance to general business prosperity. Urban and rural prosperity must in the long run go hand in hand.

The great movement westward, which followed the Civil War, so much associated with Horace Greeley's advice, "Go West, young man, go West," constitutes an important chapter in American history. The "Covered Wagon" will always hold a place in the hearts and thoughts of men. Pioneer days present pictures of adventure, suffering, and conquest well-known to all American men and women. For generations the East has given up much of its best blood to people the new country west of the Alleghenies. Prosperous farming in the East, on the other hand, gave way to the buzz of the mill wheel. As time went on the rough and hill lands back home could not compete with the fertile prairies in the new country. Freight rates were low and food could be hauled at great distances from the new country back to the well-established markets of the old.

The development of the *local idea*, one of the greatest ideas in all American history, has given rise to the County Agricultural Extension Service and the Farm Bureau, with a farm expert in each county. Think what that means! Each agricultural community throughout the whole region teaching itself, with the advice of technical experts, the latest application of science and method to their agricultural business. The great East, with its rugged but fertile farms, has begun to raise those food products which it is best fitted to raise and market to best advantage, such as fruit and vegetables, poultry and dairy products. The greatest of world-markets lies right at the very doors of our farmers.

Progressive agriculturists in the East are awake to the present economic situation. If one attends the New York State Fair at Syracuse or the great Eastern States Exposition held every year at Springfield he will get a survey of agriculture in this region and he will be impressed with the magnitude and quality of farming in this part of the country, and the volume and importance of its products. At both these big fairs one finds a great exposition with one and a half to two million dollars' worth of permanent equipment. This year 2,500 head of cattle, swine, sheep and horses were exhibited at the Eastern States Exposition. In the famous parade were to be seen all at once cattle valued at over one million dollars. It is a region with ideals toward which it is consciously striving; it has a definite program. In New England the organized agricultural interests of all the various States are represented in the Agricultural Conference, appointed by the Governors of the six New England States. This body has made a thorough study of the agricultural situation as it exists and has formulated a definite ten-year program.

One of the largest publishing houses in the East is about to issue from its presses a book on the Food Supply of New England. As the title indicates, it treats especially of that territory east of Lake Champlain and the Hudson River, but in

its breadth of treatment much it discusses applies equally to New York, New Jersey and Pennsylvania as well as New England.

We hear much of the California Fruit Growers' Exchange that is so largely responsible for filling our shops with beautiful oranges, lemons and grapefruits. It is always cited as the classic example of successful cooperative organization amongst farmers. We are perhaps not aware of the extent to which cooperative organization is practiced by eastern farmers. In New York State there were listed over a year ago 1,224 cooperative associations. They comprised thirty-nine different lines of activity, most of them being agricultural; 720 of them were local members of the Dairymen's League. In

### A GREAT INDUSTRY

**ALTOGETHER** too many people in the United States have obtained the idea from somewhere that the only farming that is done of any importance is done in the Central West. Too often when the Department of Agriculture at Washington, or the national government, does any thinking or acting for agriculture, they seem to forget entirely that New York State and other parts of the East still take the lead in the production of many crop and animal products. We have mentioned this point a good many times in *American Agriculturist* and we have called it to the attention of leaders of national farm organizations and in the Department of Agriculture.

It gives us a great deal of pleasure, therefore, to publish on this page an address by Commissioner A. W. Gilbert, of the Department of Agriculture of the State of Massachusetts, showing why Eastern agriculture is a great industry.—The Editors.

Massachusetts there are large cooperative milk associations and a movement is now on foot to organize the majority of all milk producers in New England into one vast cooperative system.

The volume and value of eastern agriculture is not inconsiderable: in 1923 the value of the main crops of the New England States, exclusive of the big items of fruit, market-garden and maple products, was almost \$177,000,000 and that of the Middle Atlantic States over one-half a billion dollars. The livestock of New England was valued at

\$116,854,000 on January 1, 1924.

These figures are large in themselves, but in their relation to the food supply for this region they assume the utmost importance. It is estimated that one-quarter of all the population of the United States lives in the region that comprises New England and the North Atlantic States. This region is notably industrial, but in order to maintain the industries with raw materials and to feed the workers, agriculture must flourish. It is basic, and all other industries and businesses depend upon it, either directly or indirectly.

If the metropolitan papers tomorrow were to have in big headlines, "A Great Industry Springs Up in the East," the title would catch the eye and fire the imagination. But if in reading further we were to find that it concerned the Eastern farmer our interest would wane. It would lack romance. Or if the papers were to record that wealth was discovered thousands of feet underground, it would be a great deal more romantic than a few inches underground in the fertile plow furrow. Perhaps the logical conclusion would be that we have become deep thinkers. At any rate, let's say the Covered Wagon has turned back East. To remark that if Henry Ford had done his work fifty years earlier there would have been no Civil War challenges thought, but to say that the Ford car is one of the greatest single agents in the great new Industry of Eastern Agriculture is passed by unnoticed.

But the fact remains that agriculture in the East has been reorganized on a new basis and has emerged in a form and magnitude far different from the past, and to an extent not generally realized by the public at large. We may well refer to it as a new industry. It is one of our largest industries and the one of most basic importance to the life and welfare of us all.

## A Public Market in a Dairy Section

*How Producers and Consumers of Binghamton Are Cutting the Spread*

By MABEL A. FEINT

UNTIL quite recently the section surrounding the city of Binghamton had been primarily a dairy section. Recent stringent times in the dairy business, coupled with frequent suggestions from public market-master J. L. Cosletto, of the curb market, who in various capacities had opportunity to meet the farmers, led to the custom of growing vegetables and other foods for this rapidly growing market.

"Why not get some ready money to handle in return for your work, instead of waiting fifty-five days for your milk checks all the time?" he said to them. And the results are pretty satisfactory to a goodly number of farmers over a radius of thirty miles. Yes, some come at times nearly sixty miles with loads of produce. One man even drives to the market from Moravia, a distance of seventy miles.

Due to the demand on the part of the consumers for better prices on foodstuffs, and to the need of farmers for better returns for their labor, and due to the generosity of George F. Johnson of Johnson City, who built the markets, there are now three of the finest markets in the country to be found in Binghamton, Johnson City, and Endicott. These three sister municipalities lie so closely together that the casual observer would call them one.

Last month the two smaller markets, Johnson City and Endicott, did a business of \$82,000 and 325 teams were on the market. In August the volume of business was \$95,000. The

Binghamton market is a larger market, and in September there were 933 farmers on the market, with a like increase in business over that of the others.

These figures are stupendous. They can be realized only by a visit to the markets to see the throngs of people eagerly buying the vast quantities of all sorts of things that can be grown on an eastern farm, or made in a farm kitchen.

Such a visit was made last week, when representatives of eleven Home Bureaus, constituting the central district of the New York State Federation of Home Bureaus, met for an afternoon of discussion of common problems along marketing lines, rounding off the trip with a thorough inspection of these markets on Saturday morning, with the market-masters as guides and instructors. The experience was one to be remembered, and the delegates were most enthusiastic over the possibilities, to consumers, to producers, and to the business interests of the entire section fortunate enough to have such a service.

These markets seem to be starting out on right lines—a square deal to consumers, to farmers, and to the grocers of the city. The Board of Health and Public Safety of the City of Binghamton has assumed supervision of its own market, while Mr. Johnson employs John Paterson, a very competent and popular man for the place, to supervise the other two. John L. Cosletto, meat

and sanitary inspector, is market-master of the Binghamton market, and to him is due a great deal in the way of clean foods of high quality. He had been in close touch with the dairy farmers for fifteen years, and knows their problems. He has interested dairymen in enlarging their activities and, by diversifying, to greatly increase their incomes. Two other inspectors and a regular caretaker are employed in the Binghamton market.

No charge of any sort is made to any farmer who sells on this market. The motto is "first come first served" in the choice of booths in the building, which is 300 feet long, and has three

out many facts of interest to farmers, as did Friday's discussion of farm problems. A Tompkins County woman called attention to the great need of some measure of relief to producers, when she said, "I have paid \$80 a week to two men for the last two weeks to build me a silo. I can get but fifty-five cents a bushel for my potatoes, and have sold my dairy and have stopped producing milk temporarily because conditions are so bad."

This same woman paid the equivalent of a bushel of potatoes on this trip for a seat in the movies, two bushels each for her meals while in the city, six bushels for the use of a bed one night, and four bushels each way to travel the short distance from her home to the meeting. At that,

on her return home, local shipping stations in her county were reported to be paying but thirty cents a bushel for potatoes. She saw on her trip through the markets, a man from her county who had hauled his load fifty-seven miles, getting \$1.00 a bushel for his potatoes—marketing under difficulties, it is conceded—but at any rate he is getting hold of a little money.

Commissioner of Agriculture B. A. Pyrke, in addressing the group, said, "Farming would be a profitable business if there were a market at the door of every farm." This trip of investigation convinced many that public city markets would be a big help to both consumers and producers. Many old established markets are under a cloud because they are being operated on wrong principles. One nearby market was reported as of doubtful

value to the farming circle, also to the consumers it serves, as it has been turned over to a vegetable growers association, and membership in this association is required before a farmer can sell a load of meat or chickens or other produce. Prices likewise have suffered, it was said, from making it a close corporation of this sort. Another nearby city had lost its really fine new open market, because it was a dairy section and no one had ever convinced the farmers that it would pay them to "bother" with vegetables and such things. The truckers of the locality had absorbed the entire production and had set such high prices that the housewives would not pay as much as the grocers asked and carry home their purchases, even though the goods might be nice and fresh. A fair deal all around seems to be an essential if a public market is to be a success.

Dr. Ruby Green Smith, of Cornell, one of the speakers at the discussions, who helped to organize a market in her home city, and in forty-two other cities of the country, said that the first thing to do in looking over the possibilities for a public market was to take two very careful surveys, one of the needs of the housewives, and another of those who will agree to grow produce for the market. "Be sure you have someone to buy, as well as someone to sell," she said. "When

(Continued on page 350)

The interior of one of the Binghamton market houses. In September there were 933 farmers on the market

rows of booths, the full length. The building is of steel, and is closed, with doors the whole length on both sides to admit a truck to each booth. Each booth has a frontage on the aisles for buyers, of eight feet, and there is one row of booths down the center. Skylights and ventilators, with six or eight big heaters using coke for fuel, take care of light, ventilation, and heat. There is a restaurant in each building where good food at very moderate prices can be had by the farmers, and there is an office and also rest-rooms for men and women, and a meat inspection room.

The floor is cement, and is flushed with a hose after each day's business is closed. The market days are Tuesdays, Thursdays, and Saturdays, from 9 A. M. to noon. The maximum prices to be charged each day are announced in the dailies of the preceding day. No farmer can sell for more than these prices, though he can, and does, sell as much under as he likes, or as circumstances warrant. These prices in general will range about half way between the wholesale and retail prices prevailing in the city, thus satisfying all concerned, either directly or indirectly. There is no monopoly of any kind or any favoritism. Dealers are not permitted to bring produce of any kind that the farmers can raise, though after ten o'clock each day the dealers may come in and buy of the farmers if they wish to.

Saturday's inspection of these markets brought

### A Campaign to Lower Taxes

**R**AILROAD taxes have increased 421% in twenty-five years. Most of the increase has been in the last decade. Last year the tax on the railroads for the whole country was \$305,000,000.

We cite these figures to show how alarming the tax situation is becoming. We believe, of course, that the railroads should pay their just share of taxes. But we believe even more strongly that government activities must be drastically cut so that all of us will pay less taxes. The most of the railroad taxes are really property taxes, the same kind that farmers pay. When railroad taxes are high, farmers' taxes are high. Moreover, the farmers in the end pay a large part of the railroad taxes for the farmers pay the freight.

The direct State property tax should be abolished. It is wrong in principle and unfair in practice. Now that the election dust is settling, it is time to turn to our representatives to get from them some real action on this tax situation. Last year AMERICAN AGRICULTURIST, through your help, was able to accomplish one real step. We succeeded in getting the direct State tax in New York reduced one-half mill.

Next week we will carry an article in this publication stating our program for lower taxes. Will you look for it, and if it meets with your approval, help us carry it through?

### Keep Them and Make Them Better

**I**N practically every really worthwhile accomplishment in farm affairs, made during the last ten years, the Farm Bureaus have had a leading part. During and since the World War the farm road has been pretty rocky going, but without the silent but efficient help of the Farm Bureaus, the road might at times have been impassable. The trouble is that the air is so full of the shoutings of individuals and publications blowing their own horns, that often credit is not given where credit is due; that is, to those real friends and organizations that are working a lot and talking little.

It is impossible here to set forth even a smattering of what the Bureaus have accomplished. Almost from the beginning they recognized that the outstanding problem of farmers is to find a market for farm products at fair prices. The Bureaus have never ceased to work on this problem and they have accomplished much. They have aided every worthwhile marketing association. Some of these associations could not have

gotten started without the backing and hard work of the Farm Bureaus. More than this, the Bureaus have been unceasing in their efforts to get information and help to individual farmers that would aid them to find markets and get better prices for their products.

Instances after instances could be cited showing that the Bureaus have succeeded in reducing freight rates on both farm supplies, like lime, and on farm products, like apples. They have been instrumental also time and again in helping farm shippers to get sufficient cars on time.

The Farm Bureaus have been unjustly criticized for increasing production. Rather, their work has not been a larger production, but a better one. This paper has stated constantly that with the increasing competition in the farm business only those farmers will be able to last who learn how to keep down their costs of production. Helping farmers to lower their costs has been one of the big accomplishments of the bureaus.

During the past decade, in spite of the hard times, and in spite of a large number of young people leaving the farms, there has been a distinct upward lift in the spirits of farm people, a little more of the recognition of the great fundamental fact that happiness and not material riches is the real pot of gold at the end of the rainbow toward which we are striving. We believe that not a little of this spiritual awakening has been due to the Farm Bureaus in the organization of such affairs as community singing, worthwhile farm meetings, great agricultural picnics, and successful county fairs. After all, it is perhaps even more necessary to organize ourselves for happiness than it is for material gain.

The Farm Bureau associations as they are organized in the East belong to the farmers themselves. They are an instrument, a machine, if you please, that farmers can use for the accomplishment of certain worthwhile things. If agriculture is going to continue to be a real occupation, it will have to be through the farmers' own efforts, and the Bureaus are one means by which these efforts can be used to bring results.

As in any large movement involving a lot of men, there have of course been many errors and foolish moves made in Farm Bureau work. But make no mistake. He who condemns the Farm Bureaus is either a demagogic enemy of agriculture, or else he does not know what he is talking about. Their loss would be irreparable to the farm interests of this section.

### Amend the Automobile Law

**T**HE sentiment of New York State farmers is strongly against the provision in the new automobile law which forbids boys or girls under eighteen from driving cars. The letters on the opposite page reflect farm opinion on this subject.

Farmers are for the main provisions of the law. All agree that a drastic law is needed to curb reckless driving. But as we have pointed out before, placing the age limit at eighteen is seriously handicapping rural boys and girls in their efforts to get a high school education, and they have difficulties enough in this respect without any more being added. Many thousands of young people have been accustomed to driving back and forth from their farm homes to the village high school. Under the new law, many of them will either have to give up school, or break the law.

There is another aspect of the ease which is also important. Farmers, more than any other class, use the automobile for business purposes and the young people have been of untold help in operating automobiles to draw the milk, to make sudden trips to town, and to do other important farm errands. The new law, therefore, interferes with the farm labor situation which is already bad.

AMERICAN AGRICULTURIST has no sympathy with reckless driving by anybody. But we believe a farm boy or girl, raised in the habits of responsibility, is a better driver often at sixteen than thousands of others who are older. We believe that the law should be amended, placing the age limit at sixteen, and that a severe examination or test should be given to young people

between this age and eighteen who apply for a license, and that their license should be revoked at the first indication that they have not been driving the car in a proper manner.

### The Real Problem of Agriculture

**D**R. T. C. ATKESON, Washington representative of the National Grange, spent his vacation this summer in the old West Virginia farm valley, where he was born and raised, and while there he made a study for 90 miles up and down this valley of the farmers who now inhabit it. From this study, Dr. Atkeson draws some very interesting conclusions. He says that seventy per cent. of the land which is very fertile and high-class farm land is not at present being farmed. In the language of the farmers it is "lying out." Seventy per cent. of the land which is being farmed hardly makes enough profit to pay the taxes. Ninety per cent. of the present owners or tenants are preparing to leave the farms as soon as they can. The character of the farm population is entirely changed since the period when Dr. Atkeson was an active farmer in this valley thirty years ago.

As we have stated many times in these columns, we do not get excited from an economic standpoint about this talk of abandoning farms. The more farmers that go to the city, the less competition there will be for those who stay on the land. With modern machinery, those who are left can still raise more products than the market will pay a fair price for, but from the social standpoint, it is a different story. The farmer has always been the "backbone" of America and from his home have gone those who have acquired the greatest places of leadership in the political and business life of the nation. Dr. Atkeson says that the real problem of agriculture is to keep as high-class men and women on the land in the future as has been there in the past. This is not being done at the present time, because conditions are so much harder on the farm than they are elsewhere that the old stock is rapidly leaving.

### A Dangerous Beast

**W**E respect the man that is afraid of a bull. Such a man shows plain common sense. Hardly a day goes by that we do not pick up a country paper and read about some farmer being killed by a bull. Oh, yes, he may be as gentle as a kitten, and has never shown any ugly disposition whatever, but all the same we fully agree with our friend "Seotty" of Warren County, N. Y., when he says:

"Sure he may be as gentle as a kitten, but it should always be borne in mind that 'he isn't that kind of a kitty.'"

No other animal in the world is responsible for so many deaths in the course of a year as is the good old domestic bull.

### Eastman's Chestnuts

**I** SUPPOSE it's a sort of thing that we must expect and discount, but I have always deplored the "hot air" and the insincere statements that are made by many candidates of all political faiths at every pre-election time. It belittles a man, and the greater he is the more it hurts him when he stoops to the usual mud-slinging that characterizes every political campaign.

Judge told a little joke in one of its recent issues to which I heartily subscribe. It said that the yell of the electoral college this year ought to be "Raw! Raw! Raw!"

One of our Canadian friends tells of an election meeting where the candidate was constantly being interrupted by a man in a back seat who shouted after every statement of the speaker, "Liar! Liar! Liar!"

The speaker finally stopped.

"If," he said, "the gentleman who is so fond of telling us his profession will kindly let the audience know his name, I am sure we will all be very pleased to know him!"

There were no more interruptions.

# Automobile Law Should Be Amended

*Our Readers Say It Interferes with Both Education and Business*

I AM teaching in a small rural high school. We have one hundred and sixteen students in the Academic department, forty-seven of which are non-resident students, and the majority of them drove or rode in cars to school up to October first. Many still do, as some are over eighteen years of age, and others come with them.

I know of several cases, however, where the new law has worked as a hardship upon farmers with boys and girls of high school age. I do not believe that the framers of the law considered that angle of the problem when drafting the law.

I know of at least one boy who is now driving a car to school without a driver's license. He does not drive on a main road, and may not be caught, but I dislike the idea, if for no other reason than that it is teaching some measure of disrespect for law. I know of another case where a father is bringing his daughter to school and coming for her, a twelve-mile round trip twice each day. Quite a few boys are now riding horses, which means

ANOTHER OLD-TIMER IN THE A. A. FAMILY

This is a picture of "Joe," a horse owned by Daniel Handschin of Fair Hill. I do not know exactly how old "Joe" is but he is somewhere around the age of "Charlie," the horse pictured some weeks ago in *Agriculturist*. "Joe" has been in this vicinity for over fourteen years and he was an old horse already then. He must be around thirty-six years old.—J. H., Bucks County, Pa.

added expense and loss of time. Several girls are driving horses to school.

I know that the majority of farmers are fully in sympathy with the objects for which the bill was passed, but they believe that those objects can be reached without causing them so much inconvenience. It is difficult enough and costly enough for a farm boy or girl to attend high school, even without extra handicaps.

I believe this can be brought about by a special license to be given boys and girls who prove themselves competent to operate a car after a road test—this license to be given only for driving a car to and from school, and not good for driving at any other time. There are many boys and girls who are under 18 years of age who are fully competent to drive a car. I believe that if farm people really want this provision added to the law that they can secure it.—H. L. C., Chautauqua County, N. Y.

\* \* \*

## Eighteen Not Too High

AT what minimum age would you suggest permitting a minor to drive a car? From what may be seen on the highways, there is none at which some parents will not allow their children to mishandle a steering wheel, except that at which they can neither reach it nor turn it.

But perhaps most parents are powerless in these times of peace, no longer piping but roaring. Surely their indifference as to whether or not the average citizen in the path of their offspring lives out his normal span of life should be balanced by anxiety, concerning the junking of machinery, in most cases, not yet escaped from its instalment bondages, but the evidence is adverse. Of course, not all the autos strung along roadway fences, or

resting peacefully against jammed up trees or telephone poles, or hanging like the coffin of Mahomet, between heaven and earth on the edges of bridges, are put there by the young. There is no age at which the hearts of certain varieties of idiot grow old enough to affect the bony structure of the skull sufficiently to prevent them from becoming a menace to the public.

But, in a general way, unless some method can be devised by which parents, without respect to their wealth or their influence in the community, can be held to a strict accountability for allowing their children to convert the public roads to a "No Man's Land," eighteen is not an oppressive limit for conferring the power of life or death on prospective speed maniacs.—H. B. G., Sullivan County, N. Y.

\* \* \*

## This Boy Drove 1700 Miles One Trip

I IN looking over your paper of October 18th, I noticed this, "Should Boys Drive Cars?" I say give the boys a chance. In the future, some one of those boys may be president of this beautiful country. Many of our distinguished men were born and brought up as farmers' sons in country homes, and the boys of to-day, who lend a helping hand on their father's farm, morning and evening, have not much time to spare.

Can we blame them if they speed up a bit to get to school on time to line up when the bell rings? In every boy's heart, no matter how mischievous he is, there is an inborn sense of honor and right. Many boys of 18 years are more observing and careful than some men many years older.

I have a boy of my own who drove me 1700 miles in his auto this past summer. I noticed his love of speed and of being a leader on the road, yet the smallest chicken that crossed our path was sure of its life as well as the many folks who passed us by. Some of my friends had quite a laugh at my taking a boy as driver as far away as Prince Edward Island, Canada, one who had never been over that road before. He brought me back home without a scratch. Some record that, and I think that where there is one boy who will defy the law there are many others who will respect the law and order of the road.—H. E. R., Essex County, Mass.

\* \* \*

## A Word for the Girl

I READ your paper every week, and in your October 18th number I read a piece on "Should Boys Drive Cars?" I say yes. I have no boys, but I have a girl just passed 16 and she has run our car for two years and drives it well. I think she is able to drive without trouble, yet she goes to Gloversville High School, which is three miles away, and has to walk. This is her last year in High. Then she plans to go to Training Class for teachers at Broadalbin and that is six miles from home. I wish she could be home every night where I would rather have her than out among strangers. I think the government is doing more harm to keep a child from an education than it is saving auto accidents.

I know a good many youngsters who went to the city schools with their little cars to get an education, but I don't know how they are getting there now, unless they walk, and that is probably three miles or more. I think if the government would enforce the law and not let bootleggers or drunken men drive cars that would save most of our auto troubles.—Mrs. L. B., Fulton County, N. Y.

\* \* \*

## For a Rigid Examination

YOUR inquiry as to boys and girls under 18 years driving autos should be more than overwhelmingly responded to, and it is not likely that one out of 100, that have children drivers, will reflect the injustice. One of the gross injustices ever dealt to farmers is that act, as most any farmer child can steer a sled successfully at a terrific speed, which is more difficult and dangerous than driving autos.

The law should be made to grant licenses to any person that can see and pass a rigid examination. It would cut out many old road-hogs. They think that all they have to do is "hook and run" and never stop until someone is ditched.

I know many a child that can drive autos more successfully on country roads than many chauffeurs from the cities that obtain licenses and don't know how to follow a country road. This is actually the truth.—D. J. B., Ulster County, N. Y.

## Topsy, Another Rival of Charlie

I DO not wish to pluck one spray of laurel from the ancient topknot of "Charlie" as the oldest horse. Topsy is very nearly the same age. We will say just a very little younger. In the old days when each man worked his road tax, when noon came the whole gang went to the nearest farmhouse, ate a hearty dinner of potatoes, side pork and pie and went back to their road work. We did not hear anything about county superintendents. Each commissioner was responsible for the roads of his own town and each "path-master" for his own beat. Thirty years ago last May the Commissioner for this town was a jolly, good-hearted farmer known as "Big Jack." He had been a blacksmith in his younger days, and his special pride was his team, a pair of prancing blacks, of which Topsy was one. She was at that time at least five years old, possibly a little older, strong enough to plow the deep furrows on the hill roads and help pull the road worker. While Topsy

TOPSY, WILMA UP

was still a young horse, Big Jack died and his possessions passed into the hands of others. The day of the sale, no doubt there were both good and bad masters bidding on Topsy. But when she was "knocked down" to the highest bidder, it was not a stranger's hand that reached for her halter. Less than half a mile from her old home she is spending her last days in peace and plenty. She worked in the team until long past twenty, then growing stiff and overfat, a younger horse took her place. Her last job was doing the raking during haying. But now during winter a good barn keeps the chill from her old bones, and in summer she spends her time dozing under the shade of the maples in the pasture or gossiping over the fence with Dick, the fat pensioner on the next farm; but he is only twenty-four, a mere colt compared with Topsy. How I wish all old horses were just as well off as those two.—J. Y., Delaware County, New York.

## Where the Farmer Has the Best of It

RECENT press dispatches have called attention to an acute food situation in Germany. It has been reported that some classes of the people are starving, although this statement seems to be exaggerated. The harvests of the past few years have been bountiful, but the depreciation in the value of the currency has made it difficult for the people of the towns and cities to accumulate enough money to buy sufficient amounts of food. The farmers have the grain and the live stock, but they naturally refuse to sell for paper marks which are decreasing in value every day and only put their products on the market when they must have money to pay interest or to buy necessary supplies.

The situation is not one of shortage of food but rather one of surplus of money. The German farmer, at least, is in no danger of starving and the foodstuffs which he holds he can exchange for other products on almost any terms which suit him. One advantage which the farmer has in any economic emergency is that every other class will know the pangs of hunger before he does.—ERNEST CORDEAL, Nebraska.

# Plowing

is one of the many jobs the McCormick-Deering does well

**Y**OUR late fall and winter work would be a lot easier and more profitable all around if you were in partnership with a McCormick-Deering 2- or 3-plow tractor.

Now is as good a time as any in the year for a man to come into McCormick-Deering tractor ownership. Weeks of hard work and hot weather have been exhausting man and horse. Many weeks of trying work lie ahead. Labor is scarce and high-priced, and every week's wages takes money out of pocket. Take plowing, for instance—the slowest, most laborious, most expensive farm work. It must be faced now and next year and every year.

With the McCormick-Deering 15-30 tractor one man plows 12 acres a day; with a 3-horse

team he averages only 3 acres. *With the tractor he does 4 days' work in 1 day.*

With the tractor he plows deeper and better, and at the right time; heat and hard ground don't stop him; he saves the moisture and gets ahead of weeds. Between-times his tractor tackles the grain and corn harvest—runs the binders and the corn picker, fills the silo, runs the shredder or sheller—and then it finds all kinds of winter belt jobs ahead of spring's work.

Farm product prices have taken the upgrade. Better times are on the way to the farm. Be in position to farm efficiently all the year, without yielding your profits to surplus labor costs. See the dealer about a McCormick-Deering Tractor—lasting, dependable, all-around farm power.

## Urges Better Apple Marketing Methods

**Y**OUR criticism regarding the large number of varieties grown in the East is well taken. There have been innumerable remedies prescribed during the past few years to cure the bad marketing conditions that confront the New York State apple grower, but two most important features of the subject have been given scant attention. The present requirements of the trade in all kinds of fruit require the small package and a choice product. The man who produces fancy apples of any one of not to exceed a dozen of the best varieties, selects them carefully and packs in small containers, so that when exposed for sale every apple will be in good condition, will as a rule have very little trouble in getting fair prices for his apples.

The waste caused by packing and shipping in barrels, in too many instances, is greater than would be the extra cost of a smaller container and a better pack. It is very generally true that the ultimate consumer pays about as much per pound for apples out of the barrel of very common quality as for those out of the box of superior quality because the consumer in the final purchase pays for all of the imperfect and bruised apples in the barrel whether they are sold or not. The better class trade demands the better varieties of apples and it wants them in good condition and the sooner we meet these requirements the better for the New York apple grower.—T. E. C., LeGrangeville, N. Y.

## Mulberry Trees as Windbreaks

**A** FEW years ago, Ross I. Miller, a young farmer of Cass County, Iowa, decided to plant a number of trees to serve as a windbreak for his home and his large poultry yard. He knew what trees were planted for that purpose in his section of the State, but instead of selecting any one of a dozen varieties common around there, he selected the mulberry tree and planted 500 of them on the west and north sides of his farm.

The mulberry trees now serve two purposes. They are not only proving satisfactory as a windbreak, but also provide good crops of fruit. The canned mulberry is good, but it is far more delicious when canned in combination with some tart fruit such as the gooseberry. But they serve still another purpose. Birds are very fond of the mulberry and a few of them will keep our feathered friends away from other fruit which ripens at about the same time, especially the cherry.

I also found a number of these trees on the farm of Ira Stetzel in Audubon County. Stetzel specializes in White Leghorn chickens and the trees were set out on the north side of the large laying house. But here they also protected cherries as well as chickens, for on the day I was there Mrs. Stetzel was putting up the last of seventy-five quarts of the fruit.—W. C. MULLENBURG.

## Putting the Strawberries to Bed

**S**TRAWBERRIES are perfectly hardy but it is an advantage to cover them lightly with stable manure. It keeps the sun and winter winds from striking the crowns and the soil from being loosened by frost. Be careful and do not cover too deep or with material that will become soggy and press down tight over the crowns. Coarse straw bedding is better than fine, and straw from which chaff has been sifted in handling will serve, though the manure will add fertility by leaching into the soil during winter rains. Watch in the spring, for the covering should be cleared from the plants in the row as soon as they start growth, but may be left between the rows and if you wish to mulch more heavily with clean straw before fruiting it will not interfere. The blooming time may be retarded some by leaving covered as late as possible.—L. H. COBB.

# November Farm Days

## Making Vinegar, Killing Hogs, Fixing Up Next Year's Roses

**T**O make good cider vinegar, pure cider from clean, ripe apples is kept at a warm temperature under sanitary conditions, according to C. J. Schollenberger, assistant chemist Ohio Experiment Station:

"Fresh cider is plentifully seeded with yeasts and acetic acid bacteria, which at a temperature of 65 to 75 degrees and in containers admitting air, will transform the cider into vinegar. Although the yeast can change the sugars to alcohol without air, the gas must be allowed to escape. From two to six weeks is required for this fermentation. When it is complete, the cider ceases to foam, and should be poured or siphoned off to clear of dregs and be placed in a clean barrel only partly filled and admitting air freely through a screened bung hole. Old barrels must be thoroughly cleaned and scalded to insure a good product.

"Adding a quart or two of first-class cider vinegar with a little active 'mother' from the surface hastens the process. However, the acetic acid bacteria present in the cider multiply rapidly under favorable temperature and in the presence of air and soon form a whitish film over the surface. On no account should this film be disturbed, for, should it sink to the bottom of the container, the bacteria will be shut off from the oxygen of the air and will use up the acetic acid already formed."

### Hog Killin' Days

BY ADELAIDE UTTER

**T**O the woman in the country these are truly busy days, but days that are always enjoyed by those living on a farm. The supply of spareribs and back bones brings a welcome change in the diet, and the other parts of the meat if properly cared for, mean many delicious meals for months to come.

In caring for the meat, the lard demands one's first attention. The fat should be freed from skin and any meaty or bloody particles and cut into small pieces. To each gallon of the fat, add a teaspoonful of soda and a pint of cold water, and cook carefully until the lard is clear and the cracklings are a light brown. Then take a colander and place it over a stone jar; put a piece of cheesecloth or other thin muslin over it and pour the hot lard through. Lift the cloth at the sides to hasten the lard running through, but if directions have been followed there will be few cracklings and little sediment, and there will be no necessity for squeezing the cloth. When you have finished the process you will have sweet, white lard that will keep for a long time.

After disposing of the lard, the sausage comes next. Cut up your meat in small pieces, having about equal quantities of fat and lean. Run it through the grinder and then add the seasoning. To each twenty-five pounds of meat use ten ounces of salt, one and one-half ounces of pepper and sage to taste. This can be mixed with the hands and if you wish it to be particularly well blended, run it through the grinder the second time.

One of the easiest and best ways of preserving the sausage for future use is to form it into small cakes and fry it; pack the cakes in sterilized jars, pour the grease that fries out of the sausage over

it, cap the jars and invert and the fat will then form a perfect scaling of the sausage, and it will keep till late spring. When you wish to use the sausage, place a jar in a pan of hot water till the grease melts, then take out the cakes and heat in a frying-pan. The tenderloin can be roasted, cut into strips and canned in exactly the same way.

By this time the hams, shoulders and bacon will be entirely cool and should be given a thorough rubbing with a mixture of salt, brown sugar, pepper and salt

conditions, where sharp obstacles stick out of the road and cause soreness in horses' feet, the college recommends the use of leather padding under the shoe. But the use of leather padding is restricted quite largely to city streets, where the wear is unusually hard.

For the average winter work about the farm, however, it is not absolutely necessary to have work teams shod, but it is advisable to keep a careful watch on the hoofs, keeping them well-trimmed and shaped.

### Help Us Write the Paper

**E**VERY day we are becoming more convinced that what farm people most want to see in their papers are the discussions of the perplexing problems that come up in the everyday work on the farm. What you are thinking about, for instance, most of the time, is not the tariff or some new proposed legislation to help farmers, but rather how you are going to cure a sick cow, or how you are going to get a few more eggs out of your flock of hens, or whether or not you should hire help at four or five dollars a day to get some pressing job done. The only ones who can write worth-while letters or articles on such subjects are the farmers themselves. They know from their own experience what they are talking about. Therefore, we are coming to YOU to get more of you to help write the American Agriculturist.

Here is the first subject: "HOW I SAVE MONEY BY GOOD USE OF CROP WASTE AND BY-PRODUCTS." We would like to get a lot of letters on this subject which may, for instance, tell how you use bean pods and vines, how you get the best use out of straw of various kinds, broken or undeveloped cabbage, small and cull potatoes, corn stover, skim milk, cow and horse manure, particularly how to handle these in winter time; what you do with your calves, the best way to get the most out of hen manure, feathers, apple culls, corn cobs, or any other subject of a similar nature.

For every letter that we can publish we will send the writer a check for one dollar. They should be long enough to tell the story, but not long enough to be of article length or so "wordy" as to be tiresome. Do not put more than one subject in the same letter but anyone can write on more than one subject if he wishes.—The Editors.

petre. This is the formula for each one hundred pounds:

- 4 pounds salt,
- 1 pound brown sugar,
- ½ pound black pepper,
- ½ pound cayenne pepper,
- ½ ounce salt petre.

Use about one-half of the quantity for the first rubbing, and then put your meat into a barrel, box or other container, meat side down. I use galvanized tubs, putting the meat in one, covering with an old sheet, and then turning a second tub over it. Let the meat stand for ten days, and then take it out and rub it with the remaining part of the mixture. Rinse your tubs, and repack the meat and let stand for about six weeks when it will be ready to be smoked. The meat should then be washed and drained, and hung up in your smokehouse. I prefer hickory wood for smoking, but some like oak or corn cobs equally as well. Ignite your wood each day with live coals and watch carefully to prevent the fire becoming too hot. Smoke till the meat is the right degree of brownness—I usually smoke my meat from a week to ten days. Then put a tiny bit of borax around the joints, wrap with paper and sew tightly in a muslin bag. The bacon does not need to be wrapped, but I usually wrap mine.

Scrapple or head cheese can be made out of the heads, and the feet can be pickled. If the pickled pigs feet are dipped in flour and then fried, they make a delicious dish.

### Horses Feet Need Watching

**H**UMAN beings have no monopoly on foot ills. Horses likewise know what it means to have sore and tender feet, especially in freezing and thawing weather.

For that reason, the animal husbandry men at our state colleges of agriculture suggest that special attention be given in winter to old Dobbin's hoofs.

Roads that have frozen rough after a thaw are extremely hard on horses' feet if the feet are not protected by some kind of calked shoes. For heavy hauling work in the winter time, the feet should be protected by a good set of well-fitted calk shoes.

Under particularly heavy hauling con-

ditions, where sharp obstacles stick out of the road and cause soreness in horses' feet, the college recommends the use of leather padding under the shoe. But the use of leather padding is restricted quite largely to city streets, where the wear is unusually hard.

### Protecting the Bees in Winter

**W**HILE bees will live over winter if the colony is a strong one and the hive is closed down to just the hive body or, if very strong, a body and one super of honey, it is a saving of honey and often of the bees to give them protection, and it is easily arranged. A windbreak is the first essential. Then when settled cold weather arrives the hive entrance should be closed down to about three or four inches and filled in under with packing to keep the cold from the bottom of the hive as much as possible. Cut a cover to fit all over the hive from the bottom board up. Oil cloth is good or rubber roofing may be used. Place several thicknesses of newspapers over the hive first and then the cover, which should be tacked securely. Top and sides may be made separately if top laps over sides and tacked closely.

### Do Not Leave the Hives Empty

If a colony loses their queen and dies during the winter and spring, or winter kills from any cause do not leave the hives unoccupied, for the moths will ruin the combs, and they are worth keeping. Get a package of bees from the south and put on the frames and you will find they will do about as well as a strong colony kept over winter. I tested this myself and bought two two-frame nuclei, as they ship safer and are the same price as two-pound packages of bees, which is the size generally used. I received the bees the twenty-second of April when fruit trees were in bloom and before the flow the hives were running over with bees, and they did better than a very strong colony that wintered well.

### The Bees Should Have Good Stores

There is no economy in cutting short the store of honey for the bees to winter on except when we plan to unite and ex-

tract the honey from the weaker hives. Such hives as we plan to unite with others can be cut short when extracting even if the uniting is not done at the time. If the colony has double as much honey as they will consume it is no detriment, for they will have plenty in the hive in the spring to prevent any loss from spring killing of brood when a bad spell shuts down the flow after the bees have begun to rear brood heavily. I would rather have honey enough in the hives to feed them safely until the regular flow comes, for if they do not use it then they will gather. Bees do not spend it just because they have it like so many of us humans do.—L. H. COBB.

### Prepare the Rose Garden in Fall

**F**ALL is the time to prepare the beds for a rose garden, says bulletin of the state college of agriculture at Ithaca. The beds should be dug from eighteen to twenty-four inches deep for the best results.

If the subsoil is clayey or otherwise offers poor drainage, a six-inch layer of stones, gravel, broken bricks, or clinkers should be placed in the bottom of the excavation and then a six-inch layer of manure. Garden soil mixed with well-rotted manure may then be filled in to bring the beds up a little above the surface of the ground to allow for settling.

In the spring the beds should be dug over with a fork, so as to mix thoroughly the upper soil and the manure, and to bring about a general good condition of tilth. Fresh manure may be used if placed in the beds in the fall and the planting deferred until spring; but fresh manure used in the spring in contact with the roots of the roses is fatal to the plants.

All kinds of roses do not thrive equally well in the same kind of soil. Hybrid perpetuals succeed best in a heavy clay loam, and teas and hybrid teas in a warmer and more sandy loam. The rugosas grow well in a rather sandy soil. Altogether, the bulletin says, the encouraging part of it for a beginner is that roses give satisfactory results on a wide range of soil conditions.

This bulletin was first issued in 1917, and the demand for it made several reprints necessary; it is now available to anyone who will send in his name and address to the State college at Ithaca and ask for F 121.

Speaking of hog killing, here is a 535-pound beauty raised by James Sutton of Sparta, Livingston County, N. Y. That was the weight of the carcass when it was ready for market. Note the use to which Mr. Sutton has put a block-and-fall. It surely is needed with a hog of this size.

Native: Be ye tourists?  
Weary Motorist: No, detourists.—Life.

# LESS WORK MORE PROFIT with the Reliable Drew Line

## WATER BOWL

If you have one cow or one hundred—you must want to make them give as much milk as possible. A Drew

Detachable Water Bowl in the cow's stall often increases the milk yield 25 per cent or more, right away! It automatically gives the cow all the water she wants when she wants it.

### A FREEZE-UP CAN'T HARM THIS BOWL

No miserable driving out in cold to icy tanks—no fires to keep. Everything is simple—durable—efficient. Built on scientific principles. Drew Bowls actually pay for themselves. Install them before icy weather causes a falling off in the milk flow. THE DREW LINE DEALER SAVES YOU MONEY. See him for all your barn and poultry equipment. Drew supplies are made and priced for practical men. 27 years of winning good-will save you a lot of money. Write for catalog A—free.

# Among the Farmers

## League Buys More Certificates—County Notes

THE Board of Directors of the Dairy-men's League Cooperative Association, Inc., has decided to buy the fourth lot of the Association's certificates of indebtedness, series "A," maturing in 1927. Certificates with serial numbers ending in the digit "5," chosen by lot, will be purchased at the Association's office, 120 West 42nd Street, New York City, up to November 21, 1924, at 95 per cent. of the face value and accrued interest at 6 per cent. to November 1st. All certificates offered to the Association must be endorsed across the back with the name of the holder.

Since last June, the directors have made six separate appropriations, aggregating \$1,044,000, to a special sinking fund for the purchase of certificates. The certificates in lot numbers 1, 2, and 3, already turned in, represent securities whose serial numbers end in the digits "0," "8," and "3" respectively, and amount to only \$425,000.

The certificates which the Association offered to purchase were valued approximately at \$1,500,000. The Association was able to buy actually less than one-third of that amount.

### New York County Notes

COUNTY agents, home demonstration agents and leaders of boys' and girls' club work in New York State, held their fall conference at the New York State College of Agriculture at Ithaca, during the last week in October. The principal speaker on the program was Dr. George F. Warren, of the Department of Farm Management, who spoke on the European situation. Professor Warren just returned from an extended tour in Europe.

Tioga County—On October 21 immense flocks of wild geese were seen flying southward. We had flurries of snow on that day and a regular little blizzard the evening before. But since then the weather has been fine—all that could be desired. Some fall plowing has been done, silo filling, threshing and cider making still in progress.

Several of the men folks of this section go to the Adirondacks every year deer hunting. Clifford Brink of Candor has gone to the North woods every year for the past five years and each year has brought down a fine buck. The one he killed this year weighed 165 pounds.

E. H. Wands of Candor has opened up a glove factory there which gives employment to a number of local people. It succeeds the shoe factory which went out of business last spring.

A farmer over on the West hill from Owego not having an adequate water supply is having a new well drilled. The drilling has gone down to 125 feet. However, at this depth the well fills very slowly, so he is going down deeper. To date it is said that the work cost over \$400—pretty steep for a poor man. It is somewhat different from our little 13 foot well in the town of Candor that never goes dry, producing an abundant supply of soft water of 45 degrees.—Mrs. D. B.

### In Western New York

Genesee County—Bean threshing has started and reports so far indicate that the yield will be light. Potato crop is a very heavy one. Some say they are getting as high as 400 bushels to the acre; however, there is a lot of rot being reported.—J. H.

Ontario County—We are having fine weather for fall work. There is lots to do. Potatoes are turning out fine. Some apples are good but most of the crop is made up of small ones. Cabbage is a drug on the market at \$3 a ton. Help is scarce.—H. D. S.

Erie County—Farmers are busy digging potatoes which are a bumper crop. Corn is cut and silos are all filled. The

corn crop was a lot better than folks expected. A good deal of hay is sold. Pressed hay sold for \$12 a ton. Some thrashing still being done. Oats turned out well. Butter 42c a pound and eggs 54c a dozen.—Mrs. T. C.

Wyoming County.—Farmers are making the best of these fine days by threshing buckwheat, digging potatoes and harvesting apples. All other necessary work is pretty well cleaned up. The next thing on the program will be to get up the winter's wood supply. A few have done some fall plowing. There is not much demand for live stock. There is quite a call for timber of several kinds.—P. S. S.

Steuben County.—This fall has been very favorable for farm work. It has been quite cool but no extremely cold weather is the usual case. Potatoes, our main crop, were nearly all harvested about the first of the month. The yield was very uneven. It does not look to be any better than that of a year ago. A few fields are reported to be rotting and in some cases there is considerable damage by insects. The market is dull at 35c while even at a distance of 50 miles dealers are selling them out for \$1 a bushel. Fruit is very late. Many farmers will quit business this year unless prices pick up.—C. H. E.

### In the North Country

Franklin County.—Farmers have their crops all harvested and many are threshing a fair grain yield, so it is reported. Potatoes are quite a loss to farmers this year. Good yields were recorded in most fields but in many instances half of the crop has rotted and a large part of the acreage has been left unharvested as the price is only 30 cents a bushel at shipping stations and dealers do not even care to handle the crop even at that price. Milch cows are in the barns and on winter feed, with prospects for better milk prices this month. But feeds still remain very high. Farmers are busy plowing and putting in their winter fuel.—H. T. J.

Clinton County—Farmers in Clinton County are very much discouraged financially. Potatoes are yielding 250 to 300 bushels to the acre and there is no market for them. Some rotting reported. Some points loading at 30c. Most farmers are said to be holding. Some have a few apples which they are consigning. It is disappointing to find farmers with so much production and no market for it.—E. C. W.

### Pennsylvania County Notes

Crawford County.—The last two weeks of October brought us excellent weather, which was really needed. Silos are now all filled, at least the corn is in, but the silos are only partly filled. About the first of the month potatoes were pretty well harvested. The crop is not up to average in this section. Wheat is still very small. We had quite a second crop of hay. Buckwheat is mostly all threshing, an average crop, bringing anywhere from \$2.10 to \$2.15 a hundred pounds at the car. Potatoes are bringing 90c to \$1 a bushel, eggs 55c to 60c a dozen, butter 45c to 50c a pound. Chestnuts are scarce, while butternuts and hickory nuts are quite plentiful.—P. L. S.

Erie County.—October was a lovely month. A three-day rain made it necessary for some farmers to cut their corn by hand and brought silo filling, threshing, and potato digging all together in one heap. It has been pretty hard to get help and when you do find a man, he wants big money. This excellent-dry weather has helped farmers immensely. Every one has been hustling to get the potatoes out of the ground, they are selling around 75c a bushel, although shippers are only paying from 35c to 45c. Some crops were frozen as we had one hard freeze. Fowls are bringing 18c, chickens 22c, eggs 55c, butter 50c to 55c.—Mrs. R. McA.

# T B in Columbia County

## How the Township Plan Is Stamping It Out

ONE of the most interesting pieces of work that has been done during the past summer under the lines of T. B. eradication, is that which has been accomplished in Columbia County, N. Y., under the direction of the county T. B. committee and the county farm bureau. This county is one of the first to finish a township in the campaign since the beginning of the fiscal year of the State on July 1st. The success of the work being due in no small measure to the careful management that it has been fostered under, points clearly to what may be accomplished in strictly area work.

### Started Year Ago

Early in the fall of 1923 there was a growing sentiment for an organization to take care of the T. B. tests, and at the requests of its community committees, the Farm Bureau took up the work as a part of its county program. At the annual meeting of the association, after an open discussion of the work in other counties that were already organized and in line, a county committee of five members was appointed to study the problem from all angles with full authority to proceed as they saw fit. This committee met many times during the winter months together with the Executive Committee of the Farm Bureau, the County Agent, County Agents from adjoining counties who had had previous experience in the work, officials from the Bureau of Animal Industry of the State Department of Farms and Markets and others and studied the work in all of its many details. This preliminary work was invaluable and much of the results that have been achieved can be attributed to the thoroughness of the knowledge of the work on the part of the committee and the working out of policies from a county standpoint prior to the arising of a need for such policies. In short, the committee started out to profit by the mistakes of others and tried to foresee trouble and to prepare for it.

On the first of April, although no definite course had been decided upon, the Farm Bureau in cooperation with the T. B. committee secured the services of a former county agent who had had three years' experience in organized effort toward the eradication of Bovine Tuberculosis in another county similar in many respects to Columbia County as far as the cattle industry was concerned. This man had brought one county from an area in which there was no organized work to a condition where 90 per cent. of the cattle were under test. The Farm Bureau in assuming the responsibility of the assistant's salary, obtaining some help from the State College, believed that the value of the experienced assistant would offset the financial obligations incurred.

### How the Work Was Financed

Up to this time there had been many different plans discussed for the carrying on of the work, especially as regards the financing of it. All forms of the fee system, and the county appropriation systems were considered as well as combinations of these two plans. The members of

By D. V. RIVENBURGH the committee felt that no plan should be adopted as any general recommendation simply on the merits of its success in other counties, but rather that a plan should be worked out if possible that would best serve the needs and the wishes of the county at large.

However, the committee finally decided to lay the proposition for the work before the County Board of Supervisors and to ask for county support with certain reservations. The chief of these was that no county office of County Veterinarian was to be created but rather an emergency appropriation was to be given to the Farm Bureau for expenditure in the county as they and the T. B. committee saw fit in an attempt to control Bovine Tuberculosis. This gave the control of the work to the best-fitted group to assume the responsibility and did not necessitate the creation of another county office. There is ample opportunity for outside elements to enter and to detract from the success of the project. The Board of Supervisors were favorably inclined towards the work and an appropriation was made to cover the period from July 1st until January 1st.

### 75% Signed Up

Immediately the results of the discussion of the project at the winter community meetings of the Farm Bureau were summarized and it was found that the major part of the response had come from two townships, Kinderhook and Stuyvesant, in the extreme northern part of the county. Meetings were called in these townships by the township committees under direction of the Bureau and the matter of testing under the accredited herd plan was discussed at length. In each case a community committee was appointed and the list of cattle owners were divided up among the members of the committee. The men were provided with blanks and full information with the understanding that they were to see all men that were on their lists in a ten-day interval and were to report results back to the Bureau. In this way 75 per cent. of the cattle owners in the two towns were signed-up. The county committee immediately set about to find a suitable county veterinarian to carry on the work under their direction. With the assistant employed by the Farm Bureau who had been placed in charge of the work from the standpoint of the Bureau, a veterinarian was secured who had a very high record for efficiency and who had had four successive years' experience in testing, during which time he had tested some 75,000 head of stock.

### Work Progressed Rapidly

The veterinarian started in on his work on July 14th and on September 1st had 116 herds in the township of Kinderhook under test. There are 155 herds in this township and immediately after all of the applications that had been secured in the campaign had been attended to, a meeting of the committee of the township together with the Chairman of the County T. B. Committee and the report of the work was given at length. As the 116 herds

(Continued on page 349)

### Kill a Kow

I will be glad to cooperate, providing at least one thousand other dairymen will do the same, in selling or killing FOR BEEF PURPOSES at least one of the poorest producers in my herd between now and March 1, 1925.

# Try This OTTAWA ENGINE FREE For 30 Days

## No Money Down

Never before has any farm or shop engine manufacturer made a bona fide no-money-down offer on his engines. We are daring to make such an offer because we know what OTTAWA Engines will do. We want you to prove to yourself that the OTTAWA is the easiest engine to start; uses less fuel and does more work per horse-power than any other engine you ever saw.

Your request to try this engine is all we ask. You do not send a penny down—you get your engine first. After you have tried the engine right at your own work for full THIRTY DAYS, then send us the small payment of \$4.95 a month.

## DIRECT FROM FACTORY

We don't buy our engines from someone else and then sell them to you. We build them in our own plant. We know just what goes into them and we test every engine 3 times before you receive it. You keep your money while you test it. Then pay for it in Small Monthly Payments, Without Interest.

AFTER FREE TRIAL—  
**\$4.95**  
MONTHLY

### Use KEROSENE or GASOLINE

OTTAWA Engines run on kerosene or gasoline without changing. New patented Venturi makes the OTTAWA easier to start. Throttling governor, WICO Magneto ignition. Thousands upon thousands of shopmen and farmers will only use the OTTAWA. It is the most reliable engine and will last longer. Investigate it now before you try any others. It costs you nothing to TEST IT FOR THIRTY DAYS.

How to KNOW BETTER ENGINES

### Smallest Monthly Payments

ever made on a 1½ horse-power engine. Other sizes 2½ to 22 horse-power at proportionally low monthly payments—a whole year to pay if you want. No interest; no C. O. D.; no tiresome red tape. GET FULL INFORMATION RIGHT NOW.

## Write For FREE Book!

Use the Coupon—Just send your name and address on a post card or the attached coupon for the New OTTAWA Catalog. It's yours FREE. We want you to have this book before you test any engine. Find out about this trial offer before you choose an engine. Write Today.

# Service Department

## Licensed Fruit Dealers in New York City

WE receive many hundreds of letters asking us for the names of reliable commission men or dealers who sell the different farm products. In order to serve you, we are publishing below a list of dealers in New York City who handle fruit, and issued by the New York State Department of Farms and Markets. Lists of dealers in other commodities will be printed in early issues. CUT THESE LISTS OUT AND SAVE THEM.

All of these dealers are licensed and bonded by the New York State Department of Farms and Markets. This does not mean that they are all strictly reliable for once in a while one will slip through who cannot be trusted or who, through lack of business ability, fails. We do not guarantee the integrity of these firms, but the fact that they are licensed and bonded gives some assurance that they are more to be depended upon than unlicensed dealers.

The following are FRUIT DEALERS in New York City ONLY. Next week we will publish the names of dealers in Brooklyn and other New York State cities. CUT OUT THESE LISTS AND SAVE THEM. Dealers in Butter, Cheese, Eggs, Poultry, Potatoes, Hay, etc., will follow.

# The Trouble Maker—By E. R. Eastman

"THE worst of it is," said Bradley, "I don't see how farmers are going to stop working their long hours. It is all right to talk about cutting down production, but any one farmer or several farmers who did it would starve as long as all the other farmers did not stop also."

"Yes," said Jim. "It is like a great treadmill, dreary enough to keep going, but the minute you stop you fall."

"Maybe," continued Jim, "some organization like the Dairymen's League will come along some day that will be strong enough to restrict production generally, like the Labor Unions do now."

"Well, I dunno. It's pretty doubtful," said the county agent. "Farmers are too darn independent and there are too many of them widely scattered for any general plan of reducing production to work. About the only thing that lessens the surplus is low prices and they have to be starvation low at that, or else the farmers go right on piling it up."

"That's one thing that worries me about this Dairymen's League," Bradley continued. "This economic law of supply and demand is a funny thing. Suppose the League does succeed in getting good prices for a while. Just as soon as the prices go up, all the farmers will break their necks to crowd the last pound of milk out of every old crowbar of a cow in the country, and a greatly increased supply of milk will bring the prices down again, in spite of all the organizations in the world. Maybe, though, a good organization might advertise milk and help the demand keep up with the supply."

"Anyway, I'm kind of tired of the subject," he added. "It's too nice a night to talk about milk."

TAYLOR made no reply, and after a little silence, Bradley said:

"Jim, we were talking a little while ago about the big families of the old-time farmers. Don't see many of that kind to-day. One reason they were big was that folks married young. Boys and girls both used to marry as young as sixteen, and a girl that got much beyond twenty began to be looked upon as an old maid. We don't even dare call them old maids any more. Nowadays, the marrying age seems to be getting higher all the time."

"Good thing," said Jim. "What's the use of such large families anyway? Too many folks now, that's one thing ails the country."

"You're right from that angle," replied the county agent, "but all the same, you can't pick up a paper anywhere without seeing dozens of accounts of divorces. There seems to be less and less respect and liking for the ideals of the old-time American family. I believe it is this late marrying business, or no marrying at all, that causes so much immorality and so much trouble after marriage. As I see it, a successful marriage is a matter of two people adjusting themselves to each other; and the older we get the more set we become in our ways and the less likely to make allowances for the other partner in the harness."

"That all may be true, and probably is," interrupted Jim, "but let me tell you something. Bringing this right down to cases, for ten years I have wanted to get married. She's the dearest girl in the world, and I never will be interested in anybody else. I have even gone so far as to think that she cared something about me. But I haven't asked her because I knew I could not give her as easy a life as she has now in her father's home. I expect there are tens of thousands of other young men that don't get married for the same reason."

"In olden times, things were different. The majority of people lived in about the same way. Most of them were farmers and they supplied nearly all of their wants from their own farms. In those days, the girls were lucky if they had one

Sunday go-to-meetin' dress. To-day they wear much better dresses in the kitchen than their grandmothers used to wear to church.

"But I think, Brad, if a man really loves a girl he wants her to be happy, and it sure is risking a woman's happiness and even her health to ask her to share a life that has as little prospects as I have to grub anything worth while out of this old farm."

"Oh, pshaw!" said Bradley. "You're getting to be such a sour old pessimist lately that you're almost morbid. If the girl loves you, she ought to be given a chance to determine for herself where her happiness lies."

THE men stopped talking and smoked for a while in silence.

Then Jim continued rather bitterly.

"Oh, well, I'm not even sure that she cares anyway. In fact, it's likely that she doesn't, judging by the way she acts lately. She won't even speak to me."

## What Has Happened in the Story So Far

WITH the best intentions in the world, Jim Taylor is getting the reputation, among some of his neighbors, of being anxious to stir up trouble. Having pondered long over the unfairness which forces the farm family to work day and night for a bare living, he begins talking organized rebellion to the dairymen around him. Many agree, but his bitterest opponent is his nearest neighbor, old Johnny Ball, father of Dorothy, Jim's childhood sweetheart.

The dealer's agent in Speedtown refuses Jim's load of milk and Jim knocks him into a milk vat and drives away. A protest meeting is called at which the farmers hear a speaker for a new organization; the Dairymen's League, and many sign the contract, which means a milk strike, Jim being first on the list. Bradley, the young county agent, supports the progressives.

"But say, Brad, old man, you're no spring rooster yourself to be talkin' to me about getting married. How come you're not traveling in double harness?"

For a moment Bradley did not answer. Then he said:

"Well, I don't know, Jim. Guess I've been too busy trying to get an education. A fellow doesn't have much time to think about women when he earns his own way through college. And it's been about the same way since. Too much interest in my work, and too busy. However, to be honest, I've begun to think something about it this summer."

He paused for a few moments and Jim waited without comment for him to go on, while he watched Bradley's pipe glowing in the dusk in his corner of the porch.

"You and I are pretty good friends, Jim," he went on, "and there's something about getting interested in a nice girl that makes a fellow want to talk about it. I don't mind telling you that lately I think I've found the girl, and I've been doing some dreaming and planning about getting married."

At that, Jim removed his pipe and turned to look more intently toward the county agent.

"Yes, I am sure I have found the girl," said Bradley. "Funny how a fellow can go on all of his life not paying a lot of attention to girls, and thinking that one of them is much the same as another, until suddenly he gets acquainted with one and, biff! just like that, he knows or feels that some way she is different, and out of all the herd she is the only one that matters."

JIM made no comment, and after a pause, Bradley continued:

"Maybe you've noticed, Jim, that I've been stopping down at Johnny Ball's quite frequently in my trips around this end of the county."

"Yes, I have noticed," said the other.

"Well, I've had a chance to get acquainted with Dorothy, and I'm telling you she is some girl. She has ridden around some with me in my old flivver, and between spells when I was traveling

from farm to farm, we have had some fine talks."

Jim pulled his feet off of the railing and his chair came down on forelegs with so loud a bang that it startled the other man.

"What's the matter, Jim?" Bradley asked quickly.

"Nothing," replied Taylor. "Chair slipped."

Bradley, in the dusk of the porch, could not see Jim's tense body as he leaned forward in his chair waiting for the other to go on. If he could, he would have been shocked, for with clenched fingers and tense muscles, Jim sat straining forward toward Bradley, desperately intent on every word.

"Yes," mused Bradley, unconscious of the effect of his words upon his friend, "I know I have found the girl for me. The only trouble is, I don't know whether she loves me; but somehow I think maybe she does. Anyway, I'm going to find out. Next week, Dorothy has promised

Over them rose a thick cloud of dust, filling nose, mouth and eyes. But what did a little thing like that matter? They were jolly, wholesome farm folks, a hegira of people seeking happiness as a thirsty man seeks water.

In the procession were Bradley in his farm bureau car with Dorothy Ball on the seat beside him. No one had more of the holiday spirit than he. To be sure, his car might be old and wheezy, and the dust might be as thick as a fog. The devil and all his works might be to pay on all other days. But this was his day. Back of him and ahead of him were the voices and laughter of happy folks whom he liked, and beside him was the girl he loved.

Bradley handled his old "Lizzie" in the crowded traffic with a skill and daring that kept the girl beside him almost breathless. No one who has heart-disease should ever ride with farm bureau men! They learn to drive a car up a barn roof or down a telephone pole with a nonchalance and indifference that makes the blood of him who is foolish enough to ride with them turn cold. The only satisfaction is that if the passenger hangs on long enough and retains breath and sanity, the county agent will usually get him home on time and intact.

IN spite of the difficulty of driving in the crowded traffic, Bradley found opportunity to study the girl beside him. As she leaned forward in the seat to wave enthusiastically at some neighbor or friend, or as she turned her face with its healthy color and sparkling eyes to speak to him, his heart beat a little faster as he thought of what it would mean to him if she were his. And then as she turned to him to speak with a tender little smile about a young cripple boy they had just passed on his way for a holiday at the fair, he saw only her generous mouth with kissable up-turned corners, and he gripped the wheel hard with both hands as he thought of that mouth smiling for him in that same tender way.

"What a partner she would make," he thought. "Up hill or down dale, she would always be right there by a fellow's side, loyal, tender and brave."

"The only trouble is, Dorothy," he told her, "that I can't be with you as much as I would like to. I had it all fixed up so I would not have to be at the farm bureau booth much and then some of the Speedtown boys got hold of me and made me promise to play on their ball team against Richland this morning. You know," he added, "I used to play ball a little in my college days. The boys are quite excited about the game to-day, and I hear it promises to be a hot time."

"Oh, that will be fun," answered Dorothy. "I shall be anxious to see you play. I've heard of your prowess in baseball."

"Thanks," said Harry with a modest little bow. This praise was sweet to him. "I understand that each team has won a game so far this season and that there is a special interest in the one to-day in playing off the tie."

"Won't you drive the car out near the diamond where I can watch the game? I'm a regular baseball fan when I know the players, though I never could develop very much enthusiasm for the two or three big league games I saw. Sitting away back in the grandstand, it seemed more like a moving picture than a real game."

So Bradley drove his car through the entrance gates down by the merry-go-round, across the race track, and out to the edge of the ball diamond. Then he left Dorothy while he went to get into his baseball suit.

\* \* \*

FOR Jim Taylor, the fair this year had no attractions. In fact, he was reflecting rather bitterly as he milked his (Continued on page 350)

to go to the County Fair with me, and coming home, I am going to ask her to marry me."

He stopped and waited for Jim to speak.

"Well, Jim," he said. "I thought maybe you would wish me good luck."

"I wish you luck, Bradley. Shall we turn in?"

## CHAPTER VI

IT is difficult for those who are privileged to dwell in these modern days of automobiles, moving-pictures, radios, and other amusements of every kind and description within the reach of all to understand how keenly the Speedtown farm folks of a few years ago could look forward with so much anticipation to a holiday off to attend the County Agricultural Fair.

Nearly every family for miles around planned to go to the second day of the fair. Everyone got up an hour earlier than usual and the men hurried through the chores while the last squawk of the luckless rooster showed the preparations of the women for the picnic luncheon. How roosters must curse farm holidays, visiting ministers, and threshing and silo-filling gangs!

The chores done, and the breakfast out of the way, the whole countryside started on its way to the fair grounds. Although a few had automobiles, it was still the day of the horse, and most of the folks rode behind the old farm work horses. Then, as now, degrees of prosperity were indicated by the turn-out. There were the fancy surreys, drawn by the lithe, high-stepping young road horses; there were the shiny buggies; and there were a few dog carts, the old two-wheel gigs which jerked their riders along with every step of the horse. But most frequent of all were the farm "Democrats," which were well named, for they truly were the democratic vehicle of the average farm family, loaded with "Ma, Pa and all the kids."

Out of the hills and the valleys they came, a long stream from every direction, converging toward the fair grounds.

**This Great Outfit Complete**

**COOKING STOVE ONLY 25c**  
**FUEL and EXTINGUISHER**

By Mail—Satisfaction Guaranteed  
 This handy stove cooks regular meals, with instant Sterno Canned Heat—does anything a kitchen stove can do—but you can take it anywhere, folds flat, weighs only 8 oz. Use it in bedroom, sick room, dining room, home, office, camping. Fries, broils, boils meats, eggs, soup, spaghetti, heats water for shaving, flat and curling irons, baby's milk.  
 Sold by dealers or direct. Send this Ad. and 25c to STERNO CORP., 9 E. 37th St., New York City, Dept. 231. We will send, prepaid, stove, can of Sterno and extinguisher. Satisfaction guaranteed or money back. Send now, while special offer lasts.

**Ways to Make Money at Home**

*A. A. Readers Tell Schemes that Have Worked—Our Pattern Service*

**H**ERRICK, Illinois, is one of those small towns where you almost have to include the box cars when enumerating the inhabitants. In the spring of 1919, when the local milliner sold her stock of goods for \$150, the local gossips said that she had done a very wise thing, for nobody would ever make anything of a millinery shop in so small a place.

And they gossiped still more when they learned that a farmer's wife, who had recently moved to town, had purchased the stock of goods. But Mrs. Janie Lee, the proprietor of the Ladies' Furnishing Shop, to-day has an income of over \$100 per week. She sells about 500 hats a year, ranging in price from \$3 to \$15; 300 silk dresses from \$15 to \$40 each, coats from \$10 to \$60, and suits from \$15 to \$35.

**Altering While You Wait**

She carries in stock all kinds of notions, and a variety of garments for women and children. If you purchase a dress that requires altering, it is done while you wait, as Mrs. Lee keeps a sewing machine in the shop for this purpose. If you have in mind a certain dress or hat, and she doesn't have it in stock, she will order it for you by mail from St. Louis. This mail-order service and her "alter-while-you-wait" system has won her hundreds of satisfied customers, scattered far and near. Women have even come from Decatur, Illinois, fifty miles away, to buy at her little shop. And if they come once they always come back again.

Another popular feature of her business policy is that if you haven't the money, she will sell you a dress or a hat on the installment plan just as the mail-order houses do. July and August are dull business months, but Christmas and Easter are such busy times that she finds it necessary to employ an assistant.

Mrs. Lee has built up a profitable trade because she plans to give her customers what they want in the way most convenient to them. Again it is proved that "service counts."—MRS. CARMEN WELCH.

**Using What We Have**

**I**T is a severe hardship when an untrained woman is suddenly left to support herself and young children. One such woman of my acquaintance had a small farm, but she sold it at once and with the money, plus a small insurance, started anew in the city.

She bought a lot and built a small house; on time payments she bought an electric washing-machine. A canning factory, employing help only during the summer and fall, gave her its laundry work and this income she devoted to improvements on her place. The first year she secured city water, cement walks, paid for her machine and installed a telephone.

She had kept the older child in school, using him to collect and deliver the laundries outside of school hours. Laundry work for the townspeople paid current expenses and started a bank account.

**Home Work Keeps a Family Together**

More family work was offered her, but she was unable to handle it alone. For a few weeks during the busiest season she had a woman to help, but to have enlarged her business, as would have been easily possible, she felt would add to her responsibilities and take away the home atmosphere. She had only a moderate education and had always had rather poor health, but the regular hours, assured income and freedom from anxiety agreed with her and she kept in good health, even during the busy canning season when her work was heavy. She refused to work on Sunday, and had no vacation the first year, but she had established a prosperous business and succeeded in keeping her children with her.

To accomplish this demanded the

qualities which bring success in any line of work—constant application to the task in hand, willingness to work hard, and the ability to deny oneself small pleasures, plus a painstaking attention to details of excellence.—VINCY PRESTON LOOPS.

**Enter the "Middle-Woman"**

**MISS IDA PEYTON** always wanted to go into business. She is on the sunny side of fifty. And "sunny" plus "efficient and energetic" form a first-class description of her.

She lives on a little farm, and nearly always boards the teacher and, until recently, has always had an ailing relative on her hands. But now she has a Ford roadster and a telephone, and has realized the ambition of her life.

The neighborhood where she resides is two miles from the post-office and eight miles from town.

She goes around and gathers everything that the farm women have to sell even if it is only an extra cucumber, and puts it with what someone else has. She sells everything over the telephone; gathers them up, packs, and carries them to the post-office and ships by parcel post. She carries our berries to town three times a week herself, to be sure that they get there fresh and in good shape.

She begins with cowslip and dandelion greens in the spring, and sells a surprising amount of them. Then come asparagus, Swiss chard lettuce, onions, radishes, etc. Mrs. Eaton sends light homemade bread and biscuit, Mrs. Tallman doughnuts and cookies, and Miss Elsie Gray pin-cherry jelly, the prettiest eatable you

ever saw as well as excellent. Cottage cheese and dressed poultry also sell well. Pop corn is an excellent seller. Miss Peyton will not take anything that is not fresh and first class. She packs her garden truck in strong paper bags tied with a string that is unbreakable, a point that is appreciated by the postmaster.

She calls herself a "middle-woman" and I do not know what we would do without her. None of us are getting rich, but we have much more than ever before, and Miss Peyton says she is satisfied with her percentage. "I saw how short our farm women were for money," she says, "myself even more than the rest, and I saw much going to waste that might be sold, so I started out to see what I could do to help all of us a little."—MARY S. HITCHCOCK.

**Selling Late Vegetables**

**T**HE best money for garden truck is made before and after others grow garden ordinarily. I have sold fall garden truck to good advantage and it is at this season that it is easier to grow as it comes on so much more rapidly. You can plant corn after potatoes, plant beans for snapbeans in August and sell them freely for canning, plant beets about the same time, greens like mustard and spinach, even peas of the early sorts, and you will find them welcomed at this season when so little garden truck is available. Housewives like to eat vegetables in the cool fall weather and if they can buy them at a reasonable price will use them in quantity, and it is this quantity selling that makes it especially profitable.—BERTHA ALZADA.

**A VARIETY OF PATTERNS FOR HOME DRESSMAKERS**

No. 1528—A cunning romper for a little boy or girl. Suitable for linen, gingham or chambray. Sizes 2, 4 and 6 years. Size 4 takes 2 yards of 36-inch material with 3/4 yard contrasting. Price 12c.

TO ORDER: Write name, address, pattern numbers and sizes clearly, enclose proper remittance, in either stamps or coin (stamps are safer) and send to the Pattern Department, AMERICAN AGRICULTURIST, 461 Fourth Avenue, New York, N. Y.

No. 2153—An attractive house dress which is comfortable and loose on any figure. It cuts in sizes 36, 38, 40, 42, 44 and 46 inches. Size 36 takes 3 1/4 yards of 36-inch material with 1/2 yard contrasting. Price, 12c.

No. 2227—A one-piece style with short or long sleeves. If your last year's dress was spotted down the front, make it over with a new panel front by this pattern. Sizes, 16 years, 36, 38, 40, 42 and 44 inches bust measure. Size 36 takes 3 1/4 yards material. Price, 12c. Hot iron transfer pattern 706, in blue or yellow, 15c extra.

No. 2256—Is the new straightline tunic-blouse with short or flowing sleeves. It cuts in sizes 16 years, 36, 38, 40, 42 and 44 inches bust measure. Price, 12c. Skirt No. 2073 comes in sizes 14 and 16 years, 36, 38, 40, 42, 44, 46 and 48 inches bust measure (to scale). Price, 12c. Hot iron transfer No. 729 (blue or yellow), 15c extra.

No. 1439—Girl's bloomers and underwaist for wear in the "gym" or on cold days. Sizes 2, 4, 6, 8, 10, 12 and 14 years. The 8-year size takes 1 3/4 yards of 36-inch material for bloomers and 1/2 yard 36 for waist. Price, 12c.

# Cabinet for Medicines

## Useful Kitchen Chest—Amusing the Baby

EVERY kitchen should have a medicine cabinet for the storage of all bottles and boxes which do not rightly belong in the cupboard. The cabinet shown, you will notice, is high enough so that small children cannot open the doors from the floor. But inside is a small compartment with a second door which is kept locked at all times. In this compartment are the poisons and the key is kept by an adult. To prevent taking the wrong bottle in

the dark, however, each bottle of poison should be marked. One way is to place a cardboard disk about the necks of the bottles. Another is to glue sandpaper about the bottle. For boxes of poison, sandpaper glued on all four sides and the top will notify fingers in the dark that it contains poison.

The cabinet is ten inches deep, eighteen inches high and about thirty inches wide. The sides and door frames are cut from half-inch pine while the panel effects are secured by nailing composition on the back of the door frames. When painted the result is quite attractive, yet no special tools have been required.

Notice that the top forms a convenient and useful shelf.—DALE R. VAN HORN.

### Dressing Up Cold Meat

MAKE a sauce of 2 tablespoons butter, 2 tablespoons flour, 2 peeled onions, parsley, 2 bay leaves, 3/4 cupful of gravy or meat stock, 1/2 cupful grape juice or the juice of a lemon. Make it exactly like a cream sauce, using the gravy in place of milk and adding the grape or lemon juice after it has thickened. Let simmer for 1/2 hour. Then take out the onions, salt and juice of 1/2 lemon. Put in the meat and heat through. This is a French concoction. Another sauce they use is:

#### Tomato Sauce

- |                          |                     |
|--------------------------|---------------------|
| 6 tomatoes               | 1 bay leaf          |
| 2 large onions           | 4 sprigs of parsley |
| 1/2 cupful of cold water | pepper, salt        |
| 2 tablespoons flour      | 1 tablespoon butter |
| 1 cupful milk            |                     |

Put the first five ingredients together in a small pan and boil for 1/2 hour, then put through a sieve. Reheat the liquid. Smooth the flour in a little cold milk and bring remainder of milk to a boil. Add the smoothed flour, the butter and the seasoning to the hot tomato mixture, stirring until it thickens. Thin as much as you wish with the hot milk and add the slices of meat. They will be better than a fresh stew. This sauce is excellent with fish, rice, macaroni, and vegetables that need something to give them flavor.—MRS. GEORGE GRAY.

### Amusing the Baby

WHEN my children were babies, I hit upon a very successful scheme for keeping them busy while I did my housework. The distracted mother, in the story, who gave her young hopeful a feather dipped in molasses to play with had the right idea so far as he was con-

cerned. He must have been blissfully happy for a time, pulling the feather off first one finger then another and sucking the molasses. That's only a story anyhow, but I can think of things I'd rather do than wash molasses-gummed furniture, clothes and babies! Besides, suppose the precious infant had swallowed the feather along with the molasses!

Acting on my experience as a kindergarten, I laid out my campaign of amusement. It applies to a very young baby not yet walking, as well as to an older one. The mother must, of course, use her judgment as to the objects selected in connection with the age of the child. First I secured two shoe boxes (you can have as many as you like) of the common paper variety. Next I scoured my house and my relatives' houses for playthings to put in them. I don't mean toys, necessarily. You know, a baby learns by handling things and at first he has no conception of anything outside himself. Soon he becomes conscious of his hands and feet and other objects which for some reason attract his wavering attention. At this stage, where he begins to investigate toes and fingers, he will be vitally interested in a "box of junk," as my son puts it. Something to handle and feel of.

### Paint Is Indigestible

Right here, let me caution you, concerning this "junk." Be very, very sure that there is nothing injurious in any of the boxes. Nothing with a small top that can come off and be sucked down the throat. Nothing with paint to be sucked off, nothing sharp and so on. You know, after the baby has held each object in his hand a bit, he will next try to see if it is edible, by any chance, and here is the danger. Of course you expect to teach your offspring, eventually, not to put everything in his mouth, but until then don't take chances. It makes me positively feel ill every time I think of the poor mother, of whom I read a short while ago. Her baby in some way managed to open a talcum powder box with which he was playing and drew the powder into his lungs. He died soon after in spite of every effort to save him. There are many safe objects with which to play, however—as safe, that is, as anything can be in this world.

In my collection of "junk" there was a rubber ball (too large to swallow), a cloth dolly, a woolly lamb, a small cardboard box with sliding cover, a rubber tiger, a small wicker basket, several clothes pins, a stocking darning, a needle book (minus the needles), a small shiny silver dish, several empty spools, a tablespoon and other comparatively innocuous and attractive things. A baby who is well will sit in his chair or carriage a long time, contentedly handling and fingering the contents of one of these boxes. When he is tired of it, remove it always, before giving him another, thus keeping a fresh and, from his point of view, a new box in reserve. Many an ironing and many a mending basket I have conquered, with my baby near me, entertaining himself busily with his "box of junk."—ESTHER HULL DOOLITTLE.

Do you stop, look, and listen at grade crossings?

### Stamped Towels for Gifts

AN unusual embroidery bargain! If you order at once, we can supply two stamped and hemstitched towels, 18 by 27 inches, one yellow and one blue, on excellent quality material, for \$1.00 for the two. Order by number—E42-71. Towels are not sold separately. Send to Embroidery Department, AMERICAN AGRICULTURIST, 461 Fourth Ave., New York.

# UNION CARBIDE

## Increases egg production

PROGRESSIVE FARMERS who desire to increase their income, find that the installation of Union Carbide-gas lighting in their hen-houses lengthens the hen's winter day to fourteen hours.

This added feeding and exercising secure greatly increased egg production at a small cost—and at the time of year when eggs are most profitable.

Union Carbide itself is a crystalline material, like crushed granite in appearance. It has many uses besides lighting of farm homes and buildings—such as for cooking, ironing, oxy-acetylene welding. It is used in millions of miners' lamps; in many government lighthouses and buoys.

Over 409,000 Carbide-gas plants have been installed on farms during the last twenty-five years, and each year adds thousands of new ones.

Carbide-gas is made in a simple, easily-operated apparatus known as a generator. In this generator Union Carbide is brought into contact with water, which immediately produces the gas. Concealed iron piping (which does not disfigure walls, floors, or ceilings) then carries it to the rooms where its cheerfulness and comfort are enjoyed; to the kitchen for cooking, ironing and heating water; to the barn for light and safety; to the hen-houses for increasing egg production in winter.

If you already have a Carbide-gas plant but are not using its light in the hen-house, send for our interesting booklet on the subject of egg production. You can easily have your piping extended to the poultry buildings.

Ironing

Cooking

Lighting

We supply Union Carbide in generator sizes direct to the consumer at factory prices through 175 Union Carbide warehouses. There is one near you.

### UNION CARBIDE

World's Best Quality, Highest Gas Yield, Standard Throughout the World for More Than a Quarter-Century, Greatest Gas Value, Purest Gas.

### UNION CARBIDE SALES COMPANY

## HEAR MUSIC and TALKING 1000 MILES AWAY

### New Radio Set Has No Outside Wires or Storage Batteries

The new Trans-continental Radiophone which is the most simple, and the clearest toned radio set you have ever listened to, is the invention of Mr. Coats, of Chicago. This radio outfit is entirely different from all others. No outside wires needed. No troublesome storage batteries. It comes complete, in a beautiful mahogany finish cabinet (console type) and a loud speaker built right in so the entire family can listen to it just like a phonograph. It is guaranteed to have a range of 1,000 miles. Listen to the musical concerts, singing, lectures and speeches. Get the market reports, latest news and sports by radio. Mr. Coats wants to place one of his amazing new radio outfits in each locality and is making a special reduction of 40 per cent for the first outfit placed in each community. Write Mr. E. L. Coats, 338 W. 47th St., Chicago, for his special low price offer and be the first in your locality.

## Post Your Farm

### and Keep Trespassers Off

We have had a new supply of trespass signs made up. This time they are made of extra heavy linen on which the lettering is printed directly. There is no card facing to be water-soaked by the rain and blown away by the wind. We have had these new signs made up of extra heavy material because severe storms will tear and otherwise make useless a lighter constructed material. We unreservedly advise farmers to post their land and the notices we have prepared comply in all respects with the New York law. The price to subscribers is 95 cents a dozen, the same rate applying to larger quantities.

AMERICAN AGRICULTURIST  
461 4th Ave., New York City

## Girls! It's Yours

### BIG MA-MA DOLL + SWING AND GLASSES

Yes, it is yours! Just think! This big, beautiful Ma-Ma Doll with glasses and swing. She talks, walks, sleeps, and winks. Over 15 inches tall. It's yours for distributing only 25 packages beautiful Post Cards at 10c a package. It's easy, because everyone buys Post Cards. Extra prize for promptness, so mail your order for Post Cards Today, NOW. Sent Postpaid. SUN MFG. CO. Dept 561 Chicago

# Reviewing the Latest Eastern Markets

## MILK PRICES

**THE Dairymen's League Cooperative Association** announces the following prices that dealers will pay the League during the month of November for milk testing 3% in the basic zone of 201 to 210 miles from New York City. *It is to be understood of course that the prices mentioned below are not received by the farmer but go into the pool. They represent the prices dealers pay to the League.* *Class 1:* milk used chiefly for fluid purposes, \$3.07 per hundred pounds, an advance of 47c per hundred over the October price. *Class 2A,* used chiefly as fluid cream, \$1.90; *Class 2B,* used chiefly in the manufacture of condensed milk and ice cream, \$2.05; *Class 2C,* used chiefly in the manufacture of soft cheese, \$2.05.

Prices for *Class 3* are to be determined on a different basis than has been used heretofore. The New York League price will be based on the average price paid by a specific group of condenseries located in the Middle West with a freight differential added.

*Class 4,* prices will as usual be based on the butter and American cheese quotations on the New York market.

### Sheffield Producers

The Sheffield Farms Producers announce the following price for 3% milk in the 201 to 210-mile zone: *Class 1,* \$3.07 per hundred; *Class 2,* \$2.00; *Class 3,* \$1.50; *Class 4,* determined by market quotations on butter and cheese.

### Non-Pool Cooperative

The Non-pooling Dairymen's Cooperative prices for *Class 1* milk is \$2.80 per hundred; *Class 2,* \$2.00; *Class 3A,* \$1.60, with freight and fat differentials.

### Interstate Producers

The Interstate Milk Producers' Association (Philadelphia Price Plan) announces that receiving station prices, or the price to farmers in the 201 to 210-mile zone from Philadelphia for 3% milk, is \$2.19. In the 101 to 110-mile zone the price is \$2.29.

## BUTTER TENDING EASIER

The butter market has been holding up remarkably well for the past week. As the week ending November 8 closed, there was some feeling that we could look for a slight break in the market, at least an easier turn. This did not materialize, for on Monday, the 10th, business was as brisk as ever and the market held its own, with a firmer undertone clearly evident. The chain stores have been buying quite freely due to the consumptive demand, which is reported as very satisfactory. On top of this good consumptive demand we are receiving only light receipts of fresh goods that can be called at all fancy. As a matter of fact, not enough fresh goods are arriving to go around and as a result there is a larger amount of business being done in storage butter, and withdrawals are on the increase.

Prices have advanced slightly during the week on fresh goods and unless we see a radical change they bid fair to hold their own, although there is little likelihood of their going beyond. Creameries scoring better than extras (93 score) is now quoted from 41½ to 42c. Creamery extras (92 score) reach 41c with enough firmness to establish that price

### FARMS FOR SALE

125 Acres, Valuable Wood  
18 Cattle, Horses, Crops

Bull, hogs, separator, gas engine, machinery, vehicles, hay, vegetables, firewood included, to settle affairs; estimated pulp, 100,000 ft.; timber should pay for all; good quality soil, brook-watered, wire-fenced pasture, variety choice fruit; good 6-room house, piped water; large basement barn, silo, garage, etc. Unusual value at \$4,500, only one-third cash. Details: p. 26, New Illustrated Catalog, 152 pages money-making farm bargains. Free. STROUT FARM AGENCY, 150R Nassau St., New York City.

168 Acre Dutchess Co. Farm  
Tractor, 3 Horses, 30 Cows and

Heifers, 150 poultry, 9 hogs, implements, 40 tons hay, big quantity oats, corn, buckwheat, potatoes; overlooks beautiful lake, near R. R. town; city markets, 150 acres tillable, woodlot; 50 apple trees, pears, plums, cherries, grapes; 8-room house, good 62 ft. barn, new silo, cow barn, tenant house. To settle immediately, all for \$12,000, part cash. G. W. Travis, Hopewell Junction, N. Y.

as a definite quotation, although a great deal of business has been done at 40½c. Creamery scoring 90 to 91 is bringing from 37 to 40c, while 88 to 89 score is quoted at 34 to 36c with lower grades ranging downward.

## CHEESE NOT MUCH BETTER

The cheese market has not shown very much improvement over its condition of the last several weeks. A little more confidence has been shown in the New York market and prices in some cases have advanced slightly. However, on the whole trading is slow to expand. Advices from the West give evidence of a firmer tone out there with a result that Daisies advanced slightly. This strengthens the views in the local market with the result that prices advanced correspondingly. New York State flats are held steady, primarily because they are not in heavy supply. If the demand were more active, we would be very likely to see lower prices in the cheese market.

Wholemilk State flats, held, grading fancy to special, are quoted from 20½ to 21½c with average run goods selling from 19½ to 20c. Fresh wholemilk State flats, grading as fancy and special, are bringing from 20 to 20½c with average run good, selling at 18½ to 19c and undergrades a cent lower.

## EGG MARKET SHOWS NO CHANGE

The egg market remains just about the same as it was last week and what we have said before holds true now. Fancy large new laid nearby whites are scarce and firm in price. Receivers are having difficulty in filling orders. Lower grades and less desirable qualities are very irregular and consequently are showing a wide range of offerings. "It is practically impossible to get real fancy eggs at the present time," said a retail merchant to the writer during the past week. This is the situation in a nutshell and the poultryman who takes advantage of conditions and is shipping in real fancy eggs is getting good prices and has the market eating out of his hands. It is a seller's market almost all the way through.

Fancy, closely selected extras from Jersey and other nearby henneries whites are still bringing anywhere from 81 to 86c, depending upon package, etc., while average extras are worth 76 to 80c; extra firsts 70 to 75c and firsts 60 to 68c. Nearby gathered whites grading firsts to extra firsts are bringing from 60 to 72c with undergrades from 50 to 58c. Pullets are bringing anywhere from 40 to 58c, depending on size. Fancy nearby brown eggs are bringing anywhere from 60 to 70c.

## LIVE POULTRY MARKET SLOW

The live poultry market has been slow all the week and unless things turn in a hurry we are going to see it continue that way. The freight market is slow and this has had a corresponding effect on the express market. However, there is a slightly steadier undertone for good fowls. Where stock is mediocre to poor, it is practically impossible to find an outlet.

Express fowls have been hitting slow trading and in general offerings are down. This is especially true with white Leghorns and other breeds of that class. Express chickens are slightly steadier, although they have been selling none too well and outside quotations are rather extreme. Fancy colored fowls arriving via express are selling for 24c, while average stock is selling anywhere from 19 to 23c. Stock has got to be real fancy to bring 24c. The fanciest Leghorn fowls are selling from 18 to 19c but most of the stock is average run which brings from 15 to 19c.

Colored chickens are bringing from 25 to 26c, while Leghorn stock is holding about the same price with most business a cent below. Broilers are bringing anywhere from 28 to 35c a pound. Extremely fancy stuff may bring a few cents premium.

## POTATO MARKET DEAD

The potato market seems to be deader than a door nail. In fact there is no market at all. To get an idea of the situation, on Friday the 14th, there were 350 or 400 cars of potatoes in the city yards. That is quite a pile of potatoes and is one of the chief reasons why prices are way down. There are too many potatoes in the country. Another reason why there is little or no trading is because people are not buying potatoes. As this copy is being written, the weather is delightfully mild and New York feels like a spring day.

As a result of this dull situation, prices have slumped, and now States are quoted at \$1.60 a bag and between 95c and \$1 per cwt. in bulk. Maines are worth \$2 in 150 pound sacks and \$1.15 per cwt. in bulk. Long Islands have also taken a slump. As a matter of fact buyers aren't very eager to take on stocks and they are offering \$1.90 to \$1.95 a bag, but they will not take on stocks at prices any higher

than that. A few nearby farmers who are delivering direct to grocers are getting slightly better prices. Some are getting as much as \$1 a bushel, but the grocer in this case is paying for service and extremely closely selected goods.

## NO CHANGE IN HAY

The hay market continues about the same as it has been for the past several weeks. Prices are holding fairly steady and there is pretty good trading going on. No. 1 timothy is worth \$27 while No. 2 grade is bringing from \$24 to \$25 and No. 3 from \$22 to \$23. This is for stock in large bales. Light clover mixed is bringing anywhere from \$20 to \$26 depending on the grade it comes in. Second cutting alfalfa is bringing from \$30 to \$31 for No. 1 stuff, while No. 2 grade is bringing from \$25 to \$26.

## GRAINS AND FEED

According to New York State Department of Farms and Markets, the following prices prevailed November 1.

The quotations given in this report show the approximate prices at which feed can be purchased per ton, and grain per bushel, in straight carlots through billed from Western points, delivered on track at points in the freight zones as indicated. Mixed carlots cost approximately \$2 per ton more.

Retail feed and grain prices vary with different local dealers depending upon their individual cost of doing business, volume handled, etc. In the case of feeds the retail price may sometimes be as high as 5c per ton above the wholesale prices given in this report.

Beet Pulp...					

Since Buffalo is an important milling center for wheat feeds and linseed meal, quotations are given for this point on both a through-billed and a local basis. No. 2 White Oats, —; No. 3 White Oats, —; No. 2 Yellow corn, —; No. 3 Yellow corn, \$1.15; Ground oats, —; spring wheat bran \$26; hard wheat bran, \$30.50; standard middlings, \$28.50; soft wheat middlings, \$35; flour middlings, \$36.50; red dog flour, \$42; dry brewers grains, —; white hominy, \$40; yellow hominy, \$40; corn meal, \$45; gluten feed, \$42.75; gluten meal \$51.75; 31% old process oil meal, —; 34% old process oil meal, \$45.50.

For points taking New York rate add to Albany price ¼ cents on oats; ½ cent on corn, 10 cents on cotton seed meal; and 20 cents on other feeds.

## BEAN MARKET FAIRLY STEADY

The bean market is holding fairly steady. Old stocks are practically all cleaned up and only new goods are being reported. The market has been more or less unsettled but with the cleaning up of old stocks and the taking on of new interest have calmed down with offerings somewhat more clearly defined. Pea beans are selling at fairly steady figures, while red kidneys are somewhat irregular. White kidneys are reported as meeting a dull market, when higher prices are talked. Pea beans are quoted at \$6.35 to \$6.50; red kidneys \$9.25 to \$9.50; white kidneys \$10 to \$10.50; yellow eyes \$6.75 to \$7.00.

## FANCY APPLES SCARCE

Fancy apples of the larger size are quite scarce and when they do come in they are selling very promptly at firm prices. Undergrades and poor qualities and, in fact, ordinary qualities of pretty near all varieties are rather quiet and easy in price. Fancy Greenings are bringing anywhere from \$5 to \$7.50. Fancy New York State McIntosh are bringing up to \$7 and \$8 with Vermonts reported as commanding \$9 and \$10. Wealthies of A grade strictly fancy have reached as high as \$5.50, some sales reported at \$6. Very few fancy Baldwins are arriving and these are bringing anywhere from \$4.50 to \$7.50, depending on size, pack, etc. Some extra fancy marks are reported bringing lighter quotations than mentioned above. The apple market in general can be called strong where fancy uniformly packed goods are involved. "Tree-run" is not finding rather such a good outlet.

## LIVE STOCK

There was practically no change in the live-stock market. Prime state veals top at \$14 with most business going on at \$12.50 to \$13.50. Common veals are down as low as \$8. Prime lambs are bringing from \$14 to \$14.25 with average stuff quoted anywhere from \$10 to \$13, depending on grade. Common to good ewes are worth from \$4.50 to \$6 per hundred

## Color Your Butter

"Dandelion Butter Color" Gives That Golden June Shade which Brings Top Prices

Before churning add one-half teaspoonful to each gallon of cream and out of your churn comes butter of Golden June shade. "Dandelion Butter Color" is purely vegetable, harmless, and meets all State and National food laws. Used for 50 years by all large creameries. Doesn't color buttermilk. Absolutely tasteless. Large bottles cost only 35 cents at drug or grocery stores. Write for free sample bottle. Wells & Richardson Co., Burlington, Vt.

## PATENTS

Write for my free Guide Books "How to Obtain a Patent" and "Invention and Industry" and "Record of Invention" blank before disclosing inventions. Send model or sketch of your invention for instructions. Promptness assured. No charge for above information. CLARENCE A. O'BRIEN, Registered Patent Lawyer, 734 Security Bank Building, directly across street from Patent Office, Washington, D. C.

## TRAPPERS

Money counts. Better prices—better grading—reliable quotations means more money. We need your Furs—You need us. Free bait. Price lists, tags, etc. O. FERRIS & CO., Dept. 17, Chatham, N. Y.

PRINTING and advertising for farmers and poultrymen. 250 bond letterheads and 250 envelopes, \$3; 500 of each, \$4.50; 1000 of each, \$7. Postpaid. PARK PRESS, 74 Green St., Leominster, Mass.

EVERYTHING PRINTED! WRITE FRANKLIN PRESS, Milford, New Hampshire.

with 50c premium for prime stuff. Hogs are meeting a fairly steady market with a good demand, Yorkers bringing from \$10 to \$10.25 a cwt. In general the live-stock market seems to be steady, good demand all the way through, with the exception of cows, meeting slow demand.

# Chicken Chatter

## Forcing the Hen's Molt Hinders Early Laying

THE common idea that if hens are compelled to molt early they will quickly feather out and commence laying early in the winter is erroneous. This statement is made by the poultry men of the New Jersey State College of Agriculture, after several years of observation.

Laying hens should be allowed to molt naturally. An early molt does not signify quick resumption of production. Usually the late-molting hen is the heavier producer. In fact, a lack of feather growth is one of the things to look for when selecting hens for holding over a second year for the breeding pen.

Very often show birds are forced into a molt by a restriction of feed. This is done so that the birds may be in full feather once more for the show season. This should never be practiced with utility stock. It will cause production to stop and will weaken the hens at a time when their full strength is needed.

It is unwise to change the general character of the feed during the molt. The addition of some oil-carrying ingredient, however, such as sunflower seed, will aid in the development of new feathers.

### A Creditable Pullet Record

THE items we have published about early pullets have created quite a bit of interest. We received dozens of letters from subscribers, telling of their success

with early-laying pullets. Mr. A. H. Hotaling of West Lebanon, N. Y., writes that he had a utility White Leghorn pullet in April and in 3½ months she laid her first egg. But more interesting still is Mr. Hotaling's note that from a flock of 115 pullets hatched on June 19 he had an egg record of 2,700 eggs and the birds were housed in NO up-to-date hen-house. That is quite a record for pullets. Part of this can be explained by the fact that Mr. Hotaling culls his flock thoroughly every year.

### Easy Method of Picking Fowl

WHEN picking a fowl, first scald the bird in hot water at a temperature of about 160 degrees Fahrenheit. A minute or two at this temperature is sufficient. Then wrap the bird quickly in a burlap sack, leaving only the neck exposed. This permits very thorough steaming.

The feathers are removed by rubbing instead of picking, starting from the neck and working back. The burlap sack is removed as the work proceeds. The sack should not be removed more quickly than the feathers, for the feathers must be steaming while being rubbed off. It will not take more than ten minutes to clean a duck or goose in this way, and a chicken can be cleaned in four minutes. —E. WHITTAKER.

## T B in Columbia County

(Continued from page 343)

that were under test represented about 75 per cent. of the entire township the names of those who had not applied for the test were again divided up among the committee and this time different individuals were given new names. In addition two men agreed in each case to make the trip to the various men and to urge their cooperation in the work towards the end that the town could be cleaned as an area.

### A Thorough Piece of Work

As a consequence of this clean-up 32 more men signed the agreements and had their herds tested. This left seven herds of the total of 155 in the town who had not been reached. The total number of cattle owned by these 7 men was less than 20 head. This being over 95 per cent. of the herds, a report was made to the Commissioner of the Department of Farm and Markets in regard to the situation, calling his attention particularly to the fact that these seven men were mostly those who owned cattle for their own use and who were as a rule working at other trades and for this reason were hard to reach to bring proper information to.

The Commissioner addressed these men at some length, calling their attention to the fact that the greater part of the township had been tested and that for the good of the community they should subject their animals to the test, thereby avoiding the necessity of an individual quarantine on the part of the State. This letter immediately brought results, for of the seven, five immediately applied for a test. Leaving two who did not, one of these two owned one animal and the other two.

Thus, in a period of two months a township was tested with the exception of three animals. It will be no question but what these will also very shortly come under the test, as there is no opportunity for the owners to secure bull service in the county unless their animals are tested.

### Follow-up Well Organized

To follow up the work of eliminating diseased cattle the county purchased a spray outfit and a quantity of disinfectant. Immediately that reactors were removed from an owner's premises the veterinarian made a trip to the place and

supervised the thorough disinfection of the premises. Usually this has been done by a man that was hired especially for this work but the committee felt that this was one of the most important parts of the work to hold the area free from subsequent infection and that the most qualified man that they could assign to the work was the man that made the test. Such a procedure brought a man to supervise the work that was thoroughly familiar with conditions at that particular farm. This supervision of disinfection was made at no cost to the owner with the exception of the wholesale cost of the disinfectant that was used, this usually running from a dollar to two dollars per man. The fact that 24 per cent. of the cattle in the township were condemned at the first test as tuberculosis made the follow-up work in the cleaning of the stables very important.

An arrangement was made in the township whereby cattle could be removed for slaughter at a New York City packing-house the day after they were appraised. This prompt removal of animals was greatly appreciated by the farmers and was one of the well-worked out plans of the committee. In addition excellent service was maintained as far as the appraiser was concerned, orders being rapidly executed from seven to ten days after the tests were completed.

### How Campaign was Conducted

At the same time as this was taking place in the township of Kinderhook other sign-up campaigns were in process under direction of the manager. The way that these campaigns developed was left almost solely to the initiative of the communities themselves. The ground was prepared by a certain amount of publicity on the part of the Bureau and as a result three townships made definite requests for area work at the start. Meetings were called in these communities and the work was explained in detail, and the methods of proceeding about the work were set forth. As a result in all three cases from the initiative of those in attendance, a committee was appointed, one man from each school district, to canvass the district for cooperators in the work and to report back to the Farm Bureau office so that a summary could be made. Further plans will establish the names of the cattle

### My Engine Will Do the Work of 6

## Try This Remarkable Engine FREE

**Burns Kerosene**  
Operates with kerosene or gasoline. Easy starting, no cranking. The greatest gas engine value on the market. And you can prove all of these statements to your own satisfaction.

**How About This Sawing Record!**  
G. E. Gilbert, of Frost, Ohio, says: "I bought an Edwards Engine in October 1920. I have been sawing wood right beside an 8 H. P. engine. The 8 H. P. sawed twenty-four cords and, in the same length of time, I sawed thirty-two cords and we had the same kinds of saws. He used four gallons of kerosene and I used two gallons, so you see that the Edwards is some motor. I can tear up and move while the other fellow is tearing up, on account of the weight and teams it takes to haul a big engine. "Well, I have tried it on loads that surprised the people and

**Change Power as Needed**  
It is a 6 H. P. when you need 6, or 1½ H. P. when you need only 1½, or any power in between. Fuel consumption in proportion to power used and remarkably low at all times. Adjustment from one power to another is instantaneous.

"I set out to build a farm engine that would have every feature the farmer wanted and none he didn't want. It has now been on the market six years. Thousands of satisfied users tell me I've succeeded. I'm proud to have this engine bear my name."  
—A. V. EDWARDS

ROYAL MANUFACTURING CO., Dept. 114, TOLEDO, O.

owners in the towns and a comparison may be had between the number that is signed-up and the total number of owners. The County T. B. Committee is pledged to authorize work in that township that has the largest percentage signed-up at the conclusion of the work in the preceding town.

Following the completion of the work in the town of Kinderhook, work was started in the town of Stuyvesant. In three weeks out of the total of one hundred and four herds in the town there were under test some eighty-five. The names of the owners of the remaining nineteen herds were given back to the committee the same as was done in the case of the preceding town of Kinderhook. Although all records are not as yet complete indications are that equally good results will be had in this case as well. This will make two towns that have been completed in a little over five months while at the same time the retests have been regularly made at ninety-day intervals. This will provide for the starting of the third township about the first of January.

### Factors that Control Success

The orderly proceeding of the work is due mainly to the following factors: (1) Intelligent knowledge of the work and local county conditions on the part of the men in charge; (2) Control being centered in an organization that is qualified to represent the county interests for the farmers; (3) Testing being done by a highly competent veterinarian; (4) A thorough sign-up campaign at the minimum of effort; (5) Prompt appraisals and removal of reactors; (6) Thorough disinfectant of premises under strict supervision of a competent man; (7) No retests allowed to run more than ninety days after the condemnation of reactors; (8) No community being urged to conduct a sign-up campaign but rather that the request to enter the work came from their own choice; (9) and lastly only that work was promised that could reasonably be completed within the period of a year.

## STRONG, STURDY

# LEGHORN AND RHODE ISLAND RED CHICKS

From the best strain in existence; no better at any price; parents raised on my own model farm. February, March and April delivery. Limited number to be sold. 10% down; balance three days before delivery. Order now and be assured of something better in chick line than you ever saw.

## The Trouble Maker

(Continued from page 345)

cows on the morning of the second day of the fair that he seemed to have lost interest in nearly everything, and for a young man was thinking altogether too frequently. "What's the use?"

But his sister wanted to go to the fair. She was nothing but a kid anyway, Jim thought, and she had far too little fun for him and his grouching to stand in the way of her holiday. So after the chores were done, the two Taylors joined the procession toward the fair grounds. When they got there, he drove the horse down in the back end of the grounds, unhitched her from the wagon, and tied her to the tree. Then they went back up to see the sights.

His sister soon found some girl friends, and Jim strolled about talking with friends and listening to the various inducements put forth by the mid-way artists to sell their wares or to get the passing crowd into their fake shows.

Among these was a grizzled veteran of the Civil War who had seen better days, but who for years had been coming to the Speedtown fair as a vendor of cheap merchandise. No one knew what this man's real name was, but there were hundreds who attended the fair who always listened with pleasure to the sales talk and lectures of "George, the Whip Man," for the whips were the leading articles which he sold. In the most perfect English he would entertain the crowd with lecture, anecdote and story, and wind up by selling them some of his wares for which they had no need.

When Jim came along, old George was just opening up, and the boy paused to hear the harangue.

"Look at me," cried the old man. "Once I was high in the councils of the Republican party, once I was mayor of a big city. Look at me now."

**Y**ANKING away his collar and pointing to an ugly weal on the side of his neck, he cried:

"Do you see that scar? That is where one of old John Gordon's men put his mark with a peak-pointed iron on the end of a rebel musket. He is dead now, that fellow; been dead a long time; been deader than Julius Cæsar thirty years on the tenth of next June, the anniversary of that unpleasant time at Coal Harbor.

"But look at these other scars that were cut deeper than the Johnny bayonet thrust, cut way deeper into the soul. And the party that made them is still alive, and up to all of his old deviltry! Look at the lines on my face, look at these dim, bleared eyes, these trembling hands, this gray head, this stooped, slouched body, that should yet be erect and vigorous! Those are the marks left by old John Barleycorn, the rampant rebel of the Inferno, whose accursed legions have never yet met up with a Gettysburg nor come to an Appomattox Court House."

Turning abruptly to the big trunk on the platform at his side, old George picked out and held up an article of small merchandise.

"We have here," he said, "an ordinary comb, such as the daughter of a family uses to arrange her locks on an evening when she expects male company. Its ordinary price is thirty-five cents but I am not going to ask that for it. I shall just put in another comb of the same size," suiting the action to the words, "and another one still a size smaller, and another with fine teeth for the hired man to rake the June bugs out of his whiskers. And with it, this package of gold strings, a paper of pins and two spools of cotton thread, number forty, and the first man, woman, child, or other creature who offers two York shillings, twenty-five cents, or a quarter of a dollar, gets the lot."

**T**RADER was brisk for a few moments and when it began to slacken the salesman tried another scheme. Select-

ing a razor from among the endless variety of articles in the big trunk, he removed it from the case and held it up for inspection.

"This little throat tickler of genuine Sheffield steel is something that every man in this fair audience stands in need of. Gentlemen, buy one and peel off those dismal shrouds of hay-colored draping that now obscure your countenances; and your wives will cease to run away with lightning rod salesmen.

"Ladies, buy a razor; keep your corns peeled, and your tempers will improve to an extent that your husbands will come to prefer your company to that of the young widow who is the object of your suspicion and dislike.

"This razor sells for a dollar, but the first party who hands me a dollar bill as its purchase price is going to get the surprise of his life!"

**J**IM, who had been listening to the salesman's patter with considerable amusement, at once pulled a dollar from his pocket and handed it to George. Taking the bill, the old fellow wrapped it around the case containing the razor and handed both it and the razor back to Jim. Immediately the whole crowd surged forward waving dollar bills.

"Hold on," old George shouted, "just give me a minute and I shall tend to all of your wants in the corn-paring line. Now, gentlemen, if I were to give you each a razor and a dollar in return for your dollar, I would soon be unable to attend these annual and joyous reunions of you people whom I love. Ah, yes, my dear friends, I do love you all. I wish that my arms were long enough and strong enough to gather you all, men, women and children, in my embrace—in order that I might extract a half dollar from each of your pockets!"

Having halted the charge of the dollar-wild crowd with this sally, George picked up another razor case, dropped it into a small pasteboard box, added to it a coin whose denomination could not be ascertained by the onlookers, and held the package toward the crowd.

"Who will give me a dollar for this?" he demanded. "Take it or leave it now on terms of your money back if you are not satisfied."

In the brisk exchanges that followed, a purchaser sometimes found a dollar bill in the box with his razor, sometimes a quarter or a ten-cent piece, and more often nothing. Such was the humor of the crowd, however, and its deep American sense of taking "hoss-trade" loss without a murmur that few, if any, demanded their money back in settlement of a poor "deal." (Continued next week)

### A Public Market in a Dairy Section

(Continued from page 337)

conditions are right the public market offers a fine solution of the high cost of living for city cooks, and of how to increase the incomes on the farms."

She pronounced the Binghamton markets the finest of any she had ever seen, unless those of Seattle be excepted.

E. R. Eastman, editor of the AMERICAN AGRICULTURIST, was one of the chief speakers on Friday. His slogan "Kill a cow this winter" applies well in this section, as the farmer can sell a part of it on the market if it is more than his wife cares to eat, pickle, or smoke.

This study was brought about through the foresight of Mrs. Lewis Seymour of Binghamton, Chairman of the district, who recognized the great truth that before a great deal can be done to improve the farm home, the farm income must be strengthened. The Broome County Home Bureau, and its popular agent Mrs. Anne Phillips Dunbar, also did much to make the tour a success.

Always sign your letters. Communications with initials attached cannot be answered. We will not use your name if you do not wish it printed.

# 4 FORD questions asked every day

## HERE ARE THE ANSWERS

**QUES.** How can I minimize carbon deposit in my Ford engine?

**ANS.** Ford owners who use Gargoyle Mobiloil "E" frequently report running 10,000 and even 20,000 miles without taking off the head. The reason for this is that when Mobiloil "E" reaches the combustion chamber and burns, it leaves only a very light, fluffy soot, most of which is blown out through the exhaust.

**QUES.** How can I overcome "chattering"?

**ANS.** Gargoyle Mobiloil "E" gives all the freedom from "chattering" that can be secured from a *high-grade, pure petroleum* lubricating oil. "Chattering" is usually due to incorrectly adjusted bands or worn out linings, and is aggravated by the mixture of unburned fuel with the lubricating oil. When Mobiloil "E" is used from the beginning (when the band linings are new) little trouble from "chattering" will be experienced.

**QUES.** How can I avoid overheating—particularly when it is necessary to use low speed continuously?

**ANS.** One most common comment of Ford owners who use Mobiloil "E" is that they enjoy marked freedom from overheating. This is because the scientifically correct body and character of the oil enable it to resist to an unusual degree the heat developed under any condition of operation.

**QUES.** Isn't it true that I may get better results by using a heavier-bodied oil?

**ANS.** Serious damage may accompany the use of oil heavier than Mobiloil "E". Your primary need is to adequately protect every moving part. Mobiloil "E" reaches every friction surface and protects your Ford regardless of its age or the mileage which it has covered.

For the differential of your Ford car use Gargoyle Mobiloil "CC" or Mobilubricant as specified by the Chart of Recommendations.

## The People's Telephone

The telephone knows no favorites. It does the bidding of the country store and of the city bank. It is found in the ranch house kitchen and in the drawing-room of the city mansion. Its wires penetrate the northern forest, stretch across the prairie, are tunneled under city streets.

The telephone knows no favorites. Its service to all the people is of the same high standard—the Bell System standard. Twenty-four hours a day it carries the voices of all. For the benefit of all, the long-distance circuits are kept in tune. Numberless discoveries and improvements developed by the Bell System have made the telephone more useful for all the people. In America, all can afford the telephone, for Bell System service is the cheapest, as well as the best, in the world.

The telephone knows no favorites. It is not owned in any one locality or by any particular group of men. It is owned by 350,000 stockholders, who represent a cross-section of the thrift of the whole country. The owners of the telephone are those it serves.

In America today the 15,000,000 telephones of the Bell System contribute to the security, happiness and efficiency of all the people.

# Importance of Local Units

They Put the "Operation" in Cooperation

By M. C. BURRITT

Twenty-five of us were seated around the office in the Grange Building when President Wilbur Chase called the meeting to order. It was the weekly session of the Parma Cooperative Fruit Growers' Association at Hilton, N. Y., held each Wednesday night during the busy packing season. The purpose of these meetings is to keep members well informed about their business and to settle the problems which are constantly arising in democratic fashion. Some of the matters requiring attention to-night were: plans for the ensuing week, what varieties should be picked next, whether or not members wanted to load a car of ciders, whether the second grade Twenty-Ounce should be packed B's or sold in bulk to the canning factory, whether or not we should purchase another car of bushel baskets and where, and other minor matters. Checks for Dutchess apples were also distributed.

The meeting began promptly at 8 p. m. and the chairman promised adjournment not later than nine o'clock, remarking that both he and the secretary had to go on the Rochester Public Market early the next morning and that they didn't intend to meet themselves getting up when they went home to bed. We have found that the members like this promptness of opening and closing a meeting and the dispatch with which business is done and that many more attend than used to when the meetings were started late and dragged along to eleven o'clock. Three years has taught us how to work together effectively.

The chairman conducts the meeting in a most democratic and yet expeditious way. He asks each member his wishes or gives him a chance to express his opinion on each question. Were his Kings ready to pick this week? When did he think Kieffer pears would be ready? Would he draw any ciders at sixty cents a hundred weight if enough others could do so to fill a car this week? Did members prefer to accept an offer of \$1.50 per hundred for B grade Twenty-Ounce, ciders and culls out, buyer to haul from packing-house or would they prefer to pack them B grade in barrels and chance getting a larger net return that way? How many bushels baskets would each member need for Kieffer pears? Every member expressed himself freely and majority opinion ruled. Sometimes there is unanimous agreement without vote. Usually there are differences of opinion but close votes are rare. After full discussion, differences are settled by a showing of hands.

### A Superintendent's Troubles

Superintendent Smith was called upon for suggestions. Abe has his troubles trying to keep 34 members happy, a packing-crew of twenty working efficiently and the Central's orders filled and shipped promptly. But he is always cheerful, a hard worker and with the good backing he gets from officers and members alike always comes out on top of his problems smiling. As usual he had some recommendations and some questions to be settled. Members would have to regulate their deliveries this week to varieties being run and to floor capacity. The regular packing-crew was working overtime four nights this week to try and keep ahead of the rush of Twenty-Ounce and Greenings, but even so without the coop-

eration of members in accommodating this week he couldn't keep ahead. The packing floor was not only jammed at one end with tree run stuff to be packed, but at the other with culls and with packed barrels for which Central had orders and wanted loaded at once, so they couldn't be rolled into storage—a short cut out of the way and often a source of needless expense. The culls must be sold at once and he had an offer of 80 cents for Greening culls and 65 cents for all other. Should he sell? He was authorized to do so, and incidentally assured that no one would think he had exceeded his authority if he got 90 and 70 cents. A lively sense of humor in some of the members always enlivens the meetings.

M. C. BURRITT

Kieffer pears would probably have to be packed next week. They were to go over the Burke grader and could be packed on the Grange Hall floor. The regular crew was too busy. Would members work evenings from seven to ten o'clock next week at regular help's pay and relieve the pressure. Sure they would. Twelve men were selected and scheduled for two nights and twelve for two other evenings. So all Abe would have to do was to superintend the day and evening crews, load a car of ciders, two cars of 3-inch Cataract Twenty-Ounce, a car of 2 1/4-inch Cataract Greenings, a car of 2 1/2-inch Greenings, a car of Pound Sweets and a mixed car. Does it take a real man to keep sweet, not lose his head, and get the work done in a cooperative packing house? It does!

### What a Local Unit Is

This local cooperative unit is one of the members of the Western New York Fruit Growers' Cooperative Packing Association. It is organized under Article 13A of the cooperative law and is a non-stock corporation financed on members' non-interest bearing notes, which are used as collateral to borrow operating funds at the bank. This unit does not own but rents its packing-house. It owns its graders and other equipment. Last winter it doubled its membership and its members now have a production capacity in a full crop year like 1922 of more than 40,000 barrels of apples, 4,000 bushels of pears and 4,000 bushels of peaches.

The local unit's function is to assemble, grade and pack the fruit of its members. It contracts with the Central to sell and pool its fruit under the Central's Cataract Brand and rules and regulations. Government inspection at shipping point is the buyer's guarantee of the product. Eighty to ninety per cent. of all fruit is sold F. O. B.

### The Grower's Viewpoint

As operated this cooperative is absolutely in the grower's hands. Its policies and plans are determined by him. He participates, if he will, in all decision and his interests are always first in mind. He is as efficient as he and his associates can be and he shares the results of good and poor decisions with all.

Some individual growers think that they can do better by themselves but most growers feel that they arrive at wiser decisions by talking problems—picking dates, selling prices, grades, storing, etc.—over together. They feel that they are running their own business and

## Developing the Rural Community

By Clarence Poe, Editor of the Progressive Farmer

ALL of us, whether farmers or agricultural workers, who want to make American country life a little better for our having lived and labored—what are the most important facts for us to keep constantly in mind?

The fundamental fact about the rural problem, as I see it, is that farm life must be made both financially satisfying and socially satisfying. Neither larger profits alone nor a richer community life alone will avail. We must have both.

Edwin Markham, the famous author of "The Man with the Hoe," once remarked to me that "Man's supreme needs are represented by three B's—Bread, Beauty, and Brotherhood"—a profound truth. By bread he meant the material satisfactions of life which we must all have. But equally essential to any well-rounded life is the satisfaction of our innate craving for human comradeship and for brotherhood. Consider this remarkable statement by one famous American student of agricultural conditions, Dr. Thomas N. Carver:

MR. POE

"Paradoxical as it may seem, it is a matter of actual observation that the sections of the country where the land is richest, where crops have been most abundant, where land has reached the highest price and the farm owners attain to the highest degree of prosperity, are the very sections from which the farm owners are retiring from the farms most rapidly and leaving them to tenants."

### Country Life Not Organized

Why are they leaving? Why does Iowa, the richest agricultural state, yet show a steadily declining agricultural population? As I see it, there can be but one answer. The country life of America has not yet been adequately organized in recognition of the fact that man is "a social animal."

"In all his politics, in all his economies, in all his movements," says a distinguished thinker, "man is feeling his way to his inevitable destiny of harmonious life." There you have, in my opinion, a phrase which largely explains the continuous drift to the cities. It is not for larger profits only that farmers go to town. "Man, instinctively a social animal," is indeed ever "feeling his way to his inevitable destiny of harmonious life," that is to say, toward a life which fully improves upon all the rich possibilities of comradeship and of cooperative action with his fellows, industrial, civic, and social; and he goes to the city largely because he feels we have not yet provided for the development of these relations in our country districts.

So it is that the chief task of the rural reformer today is the creation of the Rural Community—involving, of course, the three essentials of (1) scientific farming, (2) business cooperation, and (3) an adequate social life. The first two necessary to make it financially satisfying, the second two to make it socially satisfying.

Mr. George W. Russell of Ireland (whom I am tempted to call the greatest of rural sociologists), reminds us of our elemental

weakness when he says that while we have had people living here and there in rural sections heretofore, we have not had rural "communities," the word "community" signifying a group of people with common interests organized to work together as one body in their aspirations, hopes, ideals, ambitions.

### Too Few Country Communities

Just to have a number of dwelling-houses scattered here and there over a farming area does not make a community; it becomes a real community only when it passes through the experience of Kipling's "Ship That Found Itself" and there develops among the people a common feeling of loyalty, pride, and identity of interest. This is what the organization of the town quickly develops, and what the lack of organization of the country has prevented from developing there. In the town there are ample agencies and organizations through which the townsman may work for better streets and better lights and better schools, and for parks and playgrounds and public buildings and country clubs and pretty suburbs, and to get more progressive people to come for neighbors with him, and so on, and so on. But it is a sad fact that while we have had people living here and there in country sections, we have not had country "communities." We have not had this unity of interest, this community consciousness.

And why have we not had them? Partly, of course, because of the individual character of farm life—a characteristic which cooperation in buying and selling, and in farm work, will steadily overcome. But in an even larger measure I believe the failure to develop the Rural Community has been due to a failure to provide the machinery for its development and expression.

### Not Purely Economic

It is an indictment, and a true indictment, of

the leaders of our race which Mr. Russell draws up when he says that great minds from Aristotle in Ancient Greece to Alexander Hamilton in our own country have given much thought to the organization of cities and States, to the problems of municipalities and commonwealths, but have "treated the rural problem as purely economic—as if agriculture were a business only and not a life." The result he finds exemplified in the contrast between facilities for progress in his own city of Dublin and the absence of such facilities in the surrounding rural regions:

"If Dublin or any other city wants an art gallery or public baths, or recreation grounds, there is a machinery which can be set in motion, there are corporations and urban councils which can be approached. If public opinion is evident—and it is easy to organize public opinion in a town—the city representatives will consider the scheme, and if they approve and it is within their power as a corporation or council, they are able to levy taxes to finance the art gallery, public bath-houses, recreation grounds, public gardens, or whatever else. Now let us go to a country district where there is no organization. It may be obvious to one or two people that the place is decaying, lacking some center of life. They want a village hall (a community meeting-place), but how is it to be obtained? They begin talking about it to this person and that. They ask these people to talk to their friends, and the ripples go out weakening and widening for months, perhaps years."

And so nothing is done. In other words, the civic impulse, the social instinct, can find machinery for expression in the city, but cannot in the country; and so, as Mr. Russell says: "The difficulty of moving the countryman, which has become traditional, is not due to the fact that he lives in the country, but to the fact that he lives in an unorganized society."

There, as I see it, is the whole situation in a nutshell. Country people are in heart and mind just as progressive as city people, but haven't the facilities for expressing the spirit of progress. The power-belt of organization has not been attached to the throbbing dynamo of rural aspirations.

Consider this fact, that the country community is the only social unit known to our civilization without definite boundaries and without machinery for self-expression and development—"without form and void," as was chaos before creation.

There is the Nation, with its government and its flag and its definite boundaries—and we are all ready to fight for it, sing of it, die for it!

There is the State, too, with its government, its history, its flag—and each of us is passionately devoted to his State.

There likewise is the county, with its definite boundaries, its history, its government by means of which its people can express themselves—and there is all over the country a more or less definite feeling of county pride among all classes.

And then for the townsmen, there is the town or city with its definite boundaries, its local government, its varied local organizations, its ample machinery for proper self-expression.

### Standard Farm Paper Editorial Service

This is the second of a series of special articles by members of the Standard Farm Paper Editorial Board. The members of this Editorial Board are as follows:

C. V. Gregory.....Prairie Farmer, Chicago, Ill.  
D. A. Wallace.....The Farmer, St. Paul, Minn.  
H. A. Wallace.....Wallace's Farmer, Des Moines, Iowa  
Clarence Poe.....Progressive Farmer, Birmingham, Ala.  
Donald Keefer.....Pacific Rural Press, San Francisco, Cal.  
E. R. Eastman.....American Agriculturist, New York City  
T. A. Leadley.....Nebraska Farmer, Lincoln, Neb.  
John Cunningham.....Wisconsin Agriculturist, Racine, Wis.  
A. J. Glover.....Hoard's Dairyman, Ft. Atkinson, Wis.  
DeWitt C. Wing.....Breeder's Gazette, Chicago, Ill.

Clarence Poe, author of this article, has been identified with the development and progress of Southern agriculture for a generation. He is one of the outstanding leaders of the South. Mr. Poe has always been deeply interested in people and in their relationship to one another in the social life of the community. You will find his article full of interest and inspiration.

The next article in this series will be by DeWitt C. Wing, editor of the "Breeder's Gazette," entitled "Pitfalls of the Young Breeder." It will appear in our December 20 issue.

### Announcement

IT has been our aim ever since we have been with the AMERICAN AGRICULTURIST to keep the fads and the frills out of the paper, and to have everything in it written by men and women who know what they are talking about. We believe that farmers are tired of being told this and that by writers and speakers who would be flat failures as farmers. First-hand experience by first-hand and first-rate farmers, written in an interesting way, makes, in our opinion, the best kind of a farm paper.

That is the reason we are pleased to have such men on our staff as the veteran farmer, H. E. Cook, of Denmark, New York, one of the best and most successful diarymen in the State.

Another one is your good friend, Jared Van Wagenen, Jr., whose people have lived for generations on the same farm in Schoharie County, New York.

And now we have added M. C. Burritt, fruit-grower of Hilton, New York. Mr. Burritt is known all over the East as the successful extension director of the New York State College of Agriculture. But he never got very far away from his large fruit farm at Hilton, and now he has taken his family back there, depending upon the farm and his own efforts for a daily livelihood.

Few men in the State have a better knowledge of actual fruit-growing and of general farming as it is practiced in western New York than Mr. Burritt. For several weeks, he has been writing for AMERICAN AGRICULTURIST fruit and farm notes from Western New York. He will also furnish an occasional feature article about the problems that the farmer faces in his daily work.

We are glad that we have been able to get Mr. Burritt to write for you, because he fits into our plans of furnishing a practical farm paper which will be of some use in the hard job of farming on which all of you work every day.

### No More Land Reclamation

"As a subscriber to the AMERICAN AGRICULTURIST, and as a callous-handed practical—perhaps it is impractical—farmer, suffering from acute vacuum of the bank account, I wish to call your attention to the enclosed clipping from a Philadelphia, Pa., paper:

"With normal crops resulting in world surplus, as you have intimated in the AMERICAN AGRICULTURIST, and these normal crops selling always on a buyer's market, do you agree that reclamation work, other than that already begun or that designed as relief in districts already colonized, should be attempted?"

"Do you think that in considering future reclamation

projects we may safely 'ignore agricultural depression?' You will note Mr. Mead refers to 'increasing arrears of payments by settlers' and 'widespread demand for postponement of payments . . . on irrigated projects.' Is this consistent with anything but an extremely conservative, if not absolutely antagonistic, policy regarding future reclamation projects? Why tax farmers—or others—to extend agriculture, to help glut already glutted markets, to make more farmers miserable, and to increase the difficulty the already established farmer has, by further increasing production?"

"I say, 'Let a shortage of food in this country be the next stimulant for land reclamation, and to those who ignorantly continue to clamor for cheaper food, 'a prosperous farmer means a prosperous country.'

"What do you say?"—W. D. L., Bucks County, Pennsylvania.

THIS correspondent has put his finger on a movement in this country that every farm paper, every farm organization, and every farmer ought to oppose. The clipping refers to a report made by Dr. Elwood Mead, Commissioner of Reclamation, after he had made a nine thousand mile inspection trip in the West.

The report urges more Government activity in reclaiming land for farm purposes. Thus we have one set of so-called Government experts talking about aiding farmers all of the time, and another set urging the expenditure of large sums of Government money for the expensive reclaiming of land projects.

The curse of farmers for generations has been the low prices caused chiefly by overproduction. There is enough good land already in cultivation to swamp the country with farm products any time that prices are fair enough to pay the costs of production. The huge expenditure of federal funds for reclamation schemes is foolish from every standpoint and would be a direct injury to the American farm industry.

### Taxes Must Come Down

THE cost of government—national, state and local—has reached staggering proportions. When taxes were low, it did not make so much difference who paid them. They were not unduly burdensome to anyone. Now that they are high, it is imperative that they be distributed more fairly. Farm land is carrying an unfair proportion of the tax load. It cannot stand the strain. That is why we must have a square deal in taxation.

Read the outline of what AMERICAN AGRICULTURIST proposes to do in its tax-reduction program, and then do not fail to write us.

### The Best Place to Live

WE hope you will not miss the article about the farm community on the feature page of this issue by Clarence Poe, editor of *Progressive Farmer*. This is the second one in the series by the Standard Farm Paper editors.

Clarence Poe is not only a great farm editor, but he is noted throughout the entire South for his good words and work. His particular hobby has been to do what he could to make the farm neighborhood the best place in the world to live.

### The Majority Want the Truth

"I have been going carefully over each number of the AMERICAN AGRICULTURIST as it comes out and have noticed the constant building up of the paper with considerable enjoyment. I believe your efforts for the things you stand for will in the long run reap reward."—O. H. C.

LETTERS like the above help along the day's work. We are trying to carry out certain fundamental policies which seem to us to be based on plain common sense. Unfortunately for us, perhaps, there is nothing spectacular or loud-sounding in these policies. Common sense and worse are seldom team mates. Sometimes when we are a bit discouraged, it seems to us that loud noise, sensationalism and propaganda are what the people want.

But we cannot believe this to be true of farmers. We think that a majority of farm people want

facts. They want the truth, even if it hurts sometimes. Anyway, this paper, even at the risk of failure, will not court popularity if we have to do it by advocating schemes that we know are not sound.

### The Real Feed Test

IN a recent address the president of a large feed manufacturing company stated that it is a fair estimate that during the current year of 1924 farmers of New York State will purchase grain and feed for their dairy cattle at a cost to them of more than forty million dollars.

"And it is likewise an equally fair estimate," said the speaker, "in fact a very moderate one, to state that five million dollars of this amount represents an economic waste; that is, unnecessarily spent for milk production."

He goes on to call attention to a bulletin published by Cornell University showing an actual study of 149 farms in Broome County. This study showed that it took an average of 42.8 pounds of grain to produce 100 pounds of milk. The manufacturer said that this same milk production could have been secured by proper feeding methods with 28 pounds of grain per 100 pounds, and the saving thus resulting on the 149 farms would have amounted to more than seven thousand dollars.

We think the above estimates to be very moderate. We believe it a fair statement that there is a loss of from 20 to 25 per cent. on grain fed to dairy cows in the average dairy, which amounts to eight or ten million dollars a year to the farmers of New York State alone. Much of this loss is caused by indiscriminate feeding without regard and often without exact knowledge of the production of each cow.

We have nothing to say, for we have been guilty of this kind of feeding ourselves in years past. But how often you can go into a barn at feeding time and see the dairymen take a bushel of feed and a smaller measure and go down the long line of cows, dipping it out to them without much regard to whether the individual is producing ten pounds or sixty pounds a day. At \$50 a ton, every pound of feed is worth 2½ cents. If a man will stop to think of this, perhaps he will be more careful how he throws the valuable stuff around.

Even where a farmer has made a careful study of feeding values, and knows the protein and other food content of his grain, he is quite apt to feed at a loss. The speaker went on to say that the only true test of a feed is the response the cow will make to it. It may show, he said, quite a large protein content and yet not come through in actual milk production.

He is largely right. We believe that the analysis of feed to determine the amount of protein, carbohydrates, etc., may be used for a rough guide, but in the end, the real test is the cow herself.

And it is comparatively easy to make this test. All that is necessary in testing out different feeds is to be sure that other factors in the cow's feeding and care practically remain the same. There is so much involved and the difference between profit and loss in milk production is so close that it is well worth every farmer's attention to make absolutely sure that he is getting full value from his concentrates.

### Eastman's Chestnuts

YOU have probably heard of the New York City consumer who said she was not worried about the dairymen's problems because, as for her, she got her milk from the milk man!

This may be a little like what Mark Twain said about reports of his death, "Very much exaggerated"; but it certainly is true that the lack of knowledge of farm conditions on the part of the average dweller in the big city is perfectly astounding.

What started me off with this thought was the story that one of the men on our staff just told about the city boy who refused to go to the country for a summer vacation. "Because," said he, "they have thrashing machines in the country, and it's bad enough for a feller in the city where they do it by hand!"

# Farm Taxes Must Come Down

*American Agriculturist Outlines Plans of Campaign—Will You Help?*

FOR nearly two years AMERICAN AGRICULTURIST has carried on a constant, insistent campaign against the high taxes that are ruining so many farmers. They are a burden to all of them. As our readers know, this campaign has not been one of words, but of action, with the result that we secured through the aid of the Governor and the State Legislature of New York last year a reduction of one-half mill in the direct property tax. This single reduction amounted to approximately eight million dollars in which every farmer owner of property in the State benefited to some extent.

We have stated, however, that this was only the beginning and last week we promised you in an editorial an outline of the things we wanted to work for during the coming year that would result in further relief in the tax situation. In this article, there is a brief outline of some of the things that we believe are wrong, with suggestions as to how we think they should be remedied. This work will be done not only for the farmers of New York but in all the States where AMERICAN AGRICULTURIST has large numbers of subscribers.

## Everyone Must Help

Without your help, we can do nothing. But with more than 135,000 farmers who subscribe to AMERICAN AGRICULTURIST back of us, we can do much, as has already been demonstrated. Will you, therefore, carefully read this article and preserve it. Are the principles that we have outlined in accordance with your belief? If so, will you lend us your support? We ought to have thousands of letters telling us wherein you agree and disagree with the suggestions in this article, letters that we can use with the Governor and the Legislators showing them how you really feel on this tax situation. Failing to hear from you with at least a brief note, in support of what we are trying to do will mean to us that you are perfectly satisfied in going on and paying the high taxes.

Now let us consider for a moment some of the reasons why the tax situation is so bad. The taxes which the farmers of the United States were called upon to pay in 1922 amounted to a larger sum of money than the total net incomes of the farms of the United States of the same year. Think of it! It took the net income of every farmer in the country to pay the cost of maintaining the government!

Look at it another way. In the nine years from 1912 to 1921, taxes increased \$280,000,000, or more than 140 per cent. During this period not a single State in the United States decreased its expenditures and hardly a State showed an increase of less than 100 per cent. New York almost exactly doubled its expenditures. Massachusetts increased from \$6,250,000 to \$14,500,000. Pennsylvania increased from approximately \$32,300,000 to \$62,250,000. Those are the increases for nine years. They were as bad for the ten years previous to 1912, so that in the last twenty years the burden of support of the State governments alone has been multiplied by four.

## Local Conditions Also Need Attention

So much for the Nation and the State. What about the county and the local government? County expenses increased in about the same ratio as State expenses. Cost of county government in New York grew during that period from \$19,000,000 to \$38,500,000. Taxes in the districts and townships are worse still. The cost of local government in New York, county, township and district, grew from \$62,250,000 to \$139,300,000.

Summing this up in percentage figures, there has been an increase in the last nine years of 140 per

cent. in State taxes, about 100 per cent. in county taxes, and from 100 to 300 per cent. in local, township and district taxes. These figures are only up to 1921. Since then, the increases have been even more startling.

These are a lot of statistics maybe, but they tell a dangerous story, for unless farmers and other taxpayers of this country pay some attention to them, we may as well quit business.

Every farmer knows what the growing tax burden has meant to his business, to his family, and to his happiness. AMERICAN AGRICULTURIST received last year over 15,000 petitions from our readers asking for help in reducing the farm taxes. Many of these petitions were accompanied by letters which one could hardly read without tears in his eyes. Thousands of farmers were unable to get hold of enough cash to meet their taxes. It was without exception the most saddening,

should be raised in some other way. Tax experts state that this is about the only country in the world where direct property tax is collected.

Taxation should be on income and not on property. A man may have a \$10,000 farm, but if conditions are such that he makes no income on that farm, it is unfair to tax him.

SECOND: There should be no further reduction of income taxes until government expenses are reduced, so that taxes will not have to be raised in other ways. This seems to be so right and plain to us that it should need no discussion. When a man is making a large income why should he not be the one to pay the taxes? Some business men argue that this discourages business and brings about hard times and that it particularly leads to the investment of capital in tax exemption bonds instead of regular business enterprises. This leads us then to

THIRD: The issuance of tax exempt securities should be discontinued. The exemptions of securities or incomes of any kind from its just share of the tax burden is absolutely wrong. We will discuss this in detail in other statements. We are sure that a great majority of farm people agree with us.

## Some Astounding Figures

Sufficient to say here that there are approximately \$24,000,000,000 of income accumulated during the six years of 1916 to 1921, inclusive, which escaped the individual Federal income tax because such income was held by corporations as undivided profits. Such a sum is beyond the comprehension of any mortal, but we can all realize how much lighter the tax burden would be if this vast income was paying its share of taxes. Then we will add to that some more billions, \$12,310,000,000 to be exact, which is invested in tax free bonds

and therefore pays nothing toward government support. In the name of common sense, and in the name of all justice, why should farm people be taxed to ruination when all of these billions, most of which belong to the wealthy, go untaxed?

Some argue that the tax free bond is the taxpayer's own credit instrument, from which the public derives a direct and considerable benefit because it is issued and sold bearing a low rate of interest. That argument may hold for that share of the public which lives in the villages and the cities. It does not hold to any great extent for farmers.

FOURTH: There should be a carefully planned and prepared budget of proposed government expenses in the nation, in every state, and in every county, city and town. Many of these divisions now have budgets. The national budget system has already saved the nation many millions. In some States and in many counties the budgets are more or less of a joke. They should be uniform; they should show in considerable detail what is proposed to be spent for the coming year and for what purposes. They should be published in the local papers and under no circumstances should the allowances for any particular item be exceeded. Then at the close of the year, every municipality from the nation to the last town should furnish to taxpayers a copy of the budget and a report showing just how much money was spent and for what purposes.

## For Publicity of Tax Expenditures

FIFTH: This report should be published in the newspapers and it should be rendered to every taxpayer with his tax bill. In New York City and in a few other cities when the taxpayer receives his bill for taxes, he finds on it a statement of what his moneys have been used for. This gives the taxpayer an opportunity of check-

(Continued on page 368)

## American Agriculturist Tax Program

- I. The abolition of a direct State tax on property.
- II. No further reduction of income taxes until government expenses are reduced.
- III. Discontinuance of the issuing of tax exempt securities.
- IV. A carefully prepared detailed budget for every government unit from the nation to the county.
- V. Full publicity and information to taxpayers showing the exact purposes, with amounts, for which taxes are spent.
- VI. We are also in favor of:
  1. Larger taxation of personal property.
  2. Gasoline sales tax, and
  3. Taxing billboards along sides of State highways.

Read the explanation of this program on this page and then write American Agriculturist, either giving your approval or stating wherein you disagree.

disheartening situation which it has ever been our misfortune to know intimately about.

"All right," you say, "what can be done about it?"

Nothing so long as you are willing to let the situation drift along without even writing a letter. Speaking generally, the big thing that must be done is for the people of this country to so assert themselves that the outstanding thing in every official's mind, from the town supervisor to the President of the United States, is the absolute necessity of cutting out so many government activities, of increasing the efficiency of government and of cutting down the taxes.

## What A. A. Stands For

Speaking specifically, there are certain definite things that AMERICAN AGRICULTURIST believes we may rightfully demand of all of our representatives in local, state and national government. You will find these specific things outlined in the box in the center of this page. We will discuss each of them very briefly here and will have much more to say about them later. Particularly do we want to know what you think about them and have you discuss them in the paper, so we can use your arguments and your opinions where they will do the most good.

FIRST: The quickest way to bring some relief to every farmer taxpayer is to get a further reduction or an entire elimination of the direct State tax. Last year in New York State, before AMERICAN AGRICULTURIST tackled the job, the direct property tax was two mills; that is, two dollars on every thousand dollars of assessed valuation. We got the State government to reduce this one-half a mill, so that the tax is now one mill and a half.

Direct property tax by the State is wrong in principle. It should be eliminated entirely, and government expenses reduced to meet the smaller revenue, or else if absolutely necessary, the money

# Buy The Best Silo on the Easiest Terms

For more than a quarter century the Harder has been the standard silo for Eastern Farmers. The earliest Harder Silos are still giving service. The new patented Harder-Victor Front is the most important silo improvement of recent years.

Now, you can buy this genuine improved Harder Silo on the most liberal terms ever offered to silo purchasers. You can meet the payments out of your milk checks, making the Harder pay for itself.

## HARDER SILOS

You owe it to your business to investigate this new and different offer. Write for particulars and our free book, "Saving with Silos." It contains chapters by Prof. C. H. Eckles, Prof. E. S. Savage, and others noted in the dairy world. It explains the exclusive features found only in the Harder-Victor Front.

HARDER MFG. CORP., Box F, Cobleskill, N. Y.

## Feed for MORE MILK and Bigger Profits

Fully 90% of all dairy rations are lacking in bulk and succulence, say authorities. Bulky feeds, mixed with concentrates, aid digestion. They also keep the bowels open.

### Make DRIED BEET PULP

A part of your dairy ration

This succulent vegetable feed gives bulk in a remarkably palatable and healthful form. It is laxative, easily digested and rich in carbohydrates. It is a wonderful milk producer, promotes health and increases profits. You can use Dried Beet Pulp with corn silage or to replace it.

Ask Your Feed Dealer

THE LARROWE MILLING CO., Detroit, Mich.

### CATTLE

## Guernsey Bull Calves

**Special Offer** We are offering choice of two bull calves about eight months old for **Price \$100.00**

Both bulls sired by May Rose bulls and out of cows either on test or with official records. Send for pedigrees and description, they are bargains. Herd officially tested for tuberculosis.

OAKS FARM Cohasset, Mass.

## REDVALE FARM Guernseys of Quality

ACCREDITED HERD

Two bull calves five and six months old, by Herdlea Enterprise No. 63632 out of dams with records or on test for quick sale, \$75 each. Send for pedigrees or call. JOHN W. GERMAN, REDDING, CONN.

## HOLSTEINS & GUERNSEYS

250 head of fresh cows and close springers to select from. If you are in the market for fancy young cows that are large in size and heavy producers it will pay you to see this stock. Tuberculin test.

A. F. SAUNDERS, Cortland, N. Y. Telephone 1476

FOR SALE

## JERSEY HERD

Consisting of 19 head of Registered Stock. Herd Sire, Dogwood Oxford Raleigh No. 196391. All young good Blooded Stock. Tested. To be sold at a sacrifice.

MIDDLE BROOK FARM, FAR HILLS, N. J.

**I OFFER** Reg. Jersey bull 6 months old whose Dams produced 18,050 lb. milk, 938 lb. fat, 12,000 lb. milk, 600 lb. fat each per year. Buy now for next Spring and save half cost of bull. Price \$75. S. B. Hunt, Hunt, N. Y.

### SWINE BREEDERS

## 200—Pigs For Sale—200

Yorkshire and Chester Cross and Berkshire and Chester Cross. All good healthy pigs six to seven weeks old, \$3.75 each; eight weeks old, \$4.00 each. I will ship from one to fifty C.O.D. on your approval. No charge for crating. A. M. LUX, 206 Washington St., Woburn, Mass.

An Ad This Size Will Help Sell Your SURPLUS STOCK 10 Lines, \$3.50 per Insertion

## SAFEGUARD Your Cows During the Dry-Feeding Period,

**I**N WINTER the milk-making organs are subject to severe strain. Dry, rough feeds are harder to digest and assimilate than green pasturage.

To keep up the health standard and the milk yield as well, some outside aid is needed. Otherwise a profitable volume of milk is doubtful and disease is likely to creep in.

Kow-Kare is a sure winter aid to profitable dairying. It is a great medicine- tonic to build permanent vigor into the milk-making organs. A tablespoonful twice a day, one week in each month enables the cow to make the maximum of milk from her winter diet.

As a preventive or as a reliable treatment for Barrenness, Abortion, Retained Afterbirth, Scours, Garget, Milk Fever, Lost Appetite, etc. Kow-Kare is known and praised from Coast to Coast. No dairyman should be without it.

Let Kow-Kare help you insure your dairy profits this winter. Your feed dealer, general store or druggist can supply you. \$1.25 and 65c packages. Order direct if dealer is not supplied.

Write us for free copy of our valuable book, "The Home Cow Doctor." Thousands of dairymen ask for it each year.

DAIRY ASSOCIATION CO., Inc. Lyndonville, Vermont

# Montgomery Milkers Meet

## Discuss Surplus and Distribution—Kow Letters

**F**OLLOWING an adjournment through the several summer months, the first monthly fall meeting of the County Milk Conference Committee, held at the Old Court House, Fonda, on October 29, afforded an interesting and profitable program for about 125 dairymen who assembled from all parts of Montgomery County. The meeting was called to order by John Ingersoll, chairman, who briefly outlined the original purpose of why the committee was chosen. Mr. Ingersoll pointed out the apparent need of all dairymen gaining a clearer conception of the marketing problem, which would better prepare for greater harmony among producers and ultimately stimulate a greater directing force for constructive action in marketing fluid milk.

### Reviews Work of Committee of 15

Frank Bauder of Fort Plain, member of the Committee of Fifteen and who has attended regularly the meetings of this body, gave a comprehensive report of the work of the Committee. He stated that the Committee of Fifteen was striving for closer harmony between the several groups and to unify dairy interests in New York State. Considerable stress was placed upon the business side of approaching the problem with closer unison between the groups and that time must necessarily be allowed for results.

He also pointed out that a solution of the problem was not up to a few of the dairymen in every section, but rather to every dairyman throughout the State. Concerted action is constantly needed, not of the sensational type but along sound far-seeing lines.

C. E. Sniffen, statistician and market reporter for the Dairymen's League Cooperative, was next introduced by the Chairman. By the use of charts, Mr. Sniffen presented very graphically some of the many intricate phases of the milk marketing problem in New York City. He stated that so far as New York City affords a market all milk of classes number one and number two, also cream, rightly belong to the producers in this territory and that outside milk should never be received only in case of an actual shortage. But outside of these two classes, classes three and four would naturally elaim competition. Because milk is perishable and not readily transported over long distances only under very ideal conditions, the present range of shipping distances is very apt to prevail.

### Where Competition Comes

The speaker next pointed out the two typical groups of venders of milk who largely control the milk after it leaves the producers. One group is the retailer who engages his milk very largely direct from the producers. Here little competition exists. The retail consumption is a very uniform factor throughout the year and the price to the consumer is very stable, without great fluctuation.

The peddler who comprises the second group is by far the greater in number. He does not operate country plants, but purchases milk largely through the wholesale dealers. This milk goes to the

various trades, like stores, restaurants, etc. And it is here where the competition exists and where price-cutting is carried out. The peddler is unconcerned with the price he is obliged to pay for his milk so long as he can hold his class of trade and make the desired margin, which ranges from a cent and upwards per quart. It is the dealings between the peddler and the stores where continuous competition exists.

### Surplus Determines Price

On the whole, competition is based on the original price of milk and the factor of surplus is responsible in determining this price. But the producer is able to control this situation if he will only understand and realize his position as a collective body toward the whole.

As a suggestion of correcting some of these abuses which so generally affect the producer, producers should not sell a greater amount of milk than their ability to furnish in the short season. A persistent and careful study must be made of the milk territory contributing to the large market centers. This will reveal a basis of getting at the factor of surplus. As far as determining what the surplus factor is in depressing the New York City market, figures taken of the State are not adequate, without a careful survey of the amount of milk used in upstate centers, the milk used for cheese and butter, also all condensed and similar milk products.

The speaker presented a very interesting report of the many phases of the marketing of milk. Following this a very full discussion was entered into by the many who attended. Everybody felt that a clearer and sounder grasp of the marketing problem had been gained.

### We Are Killing Kows

**H**ERE are a few messages from our readers who are taking active part in The AMERICAN AGRICULTURIST Kill a Kow campaign. Read what they say:

"I am sending in a 'Kill a Kow' agreement. I have already sold one cow for beef and am going to sell another soon."—W. J. T., New York.

"I killed a cow October 23rd, and sold for meat on October 24th. It brought \$39.52."—C. J. M., New York.

"Being very much interested in your plan of reducing surplus milk and increasing profits of dairymen suggested in your valuable paper, I am enclosing slip properly filled out, and hope the campaign will not stop with ten thousand but twenty."—F. M. A., New York.

"I endorse your proposition to slaughter one cow for meat purposes before March 1. This is to certify that I intend to kill one cow for meat."—M. C. J., Penna.

"Go to it! I sold one fine two-year-old heifer to a butcher for beef and will sell two cows or kill them myself. I see no other way to raise the price of milk."—A. R. M., New York.

"I think if every farmer will cut his dairy in half, it would be better still."—A. A. F., New York.

"It's not one cow that ought to be killed by each farmer, but nine times out of ten the herd should be cut in half. Few cows get enough feed for good production."—E. N. H., New York.

"I am a reader of your paper and think it a very fine farm paper. In your last paper of October 18th I saw a coupon for the 'Kill a Kow' campaign. I will agree to get rid of two. Here is hoping you can get 5,000 boarders and near-boarders besides mine."—O. W. M., Penna.

### Kill a Kow

I will be glad to cooperate, providing at least one thousand other dairymen will do the same, in selling or killing FOR BEEF PURPOSES at least one of the poorest producers in my herd between now and March 1, 1925.

# "How Doth the Busy Little Bee"

## An American Agriculturist Radio Talk Broadcast from WEA F

By R. B. WILLSON

AS FAR back in history as we have written accounts we have records of bees and honey. The early Egyptians used the queen bee as a symbol of royalty, for, since she was the only one of her kind within the hive, large and always the center of a ring of attendant bees, she was thought to be the leader or king. Instead of being an adored monarch modern times have discovered her to be merely a highly specialized female, mother of all the bees in the hive and perhaps the hardest worker of them all, since she is a veritable egg-laying machine capable of laying more than her own weight in eggs in a day.

Aristotle, the ancient Greek philosopher, was a beekeeper and wrote extensively about them. Virgil, the Latin poet, devoted a fourth of his great poetical treatise on agriculture, his Georgics, to beekeeping. But in those days beekeeping was very important, for honey was practically the only source of sweet. Beekeeping or honey production is not so essential today, but that bees be kept abundantly in existence is more important now than then, for our agriculture is largely dependent on the pollination of blossoms by insects, chief among which insects is the honeybee.

### Honey Industry on the Increase

The advent of cane sugar in the sixteenth century brought a cheap and abundant sweet and until the middle of the last century beekeeping slumbered on. From about 1850 until the end of that century great and rapid development was made in honey production, so that it emerged into the twentieth century a

thoroughly modernized industry which affords a good field as an occupation to men adapted to the keeping of bees. This improvement has resulted in the raising of tremendous crops of honey from a natural resource, the nectar of flowers, that otherwise would be wasted, and the placing on the shelves of our food stores everywhere in our country at a price within the reach of all the only other food besides milk that apparently is made exclusively for food.

### What Bees Do With Honey

The bees are able to do some remarkable things with honey. The baby bees, from the time the egg hatches until they are ready to spin their cocoons and pupate, multiply in size fifteen hundred times. Their diet is largely honey. The queen that was mentioned, some days lays more than her weight in eggs, is fed about every twenty-five minutes, and her food is mainly honey. In the winter the bees, contrary to general belief, do not freeze up and hibernate, but prove themselves to be in one respect equal to man, being the only other animal besides him capable of keeping its house warm. This they do by creating heat from muscular activity; and their food during the winter is entirely honey. Perhaps still more remarkable than these phenomena that we might be tempted to call feats is the fact that the beeswax itself is made from honey. This the bees do by gorging themselves with honey, when wax is needed, raising the temperature to

about 95° F. and about twenty-four hours after the process has commenced tiny scales of wax start to appear on the four pairs of wax plates on the under sides of their abdomens. Delicate as we all know tender honeycomb to be, it is so strong and skillfully made that two pounds of wax will hold one hundred and eight pounds of honey.

It is evident from these few things that honey is no common food. The very processes of its making are full of interest. Its source, as you know, is the nectar of flowers. In its search for nectar the bee carries pollen from one blossom to the stigmas of others and in this way very materially assists in the wedding of the flowers that the parent plants may bear fruit. Thus is honey born in the fragrance of blossoms and in the purity of golden sunshine.

### What Goes on in the Hive

Nectar comes into the hive a thin liquid about 60% water, but should you go out to a hive on a warm night late in June after bees had spent a busy day on the clover blossoms, by holding your hand at the entrance you could feel a great rush of air coming out. This evidence of insect power, the result of organized direction of self-created air currents inside, will give a great thrill to any nature lover experiencing it. What the bees are doing, of course, is evaporating from the newly stored sweet all of the excess water. Not until it is but 20% water is it sealed over as the ripened product—honey.

## Developing the Rural Community

(Continued from page 353)

But for the country community there is no organic means of expression whatever. There is, of course, in many States, that shadowy and futile geographical division known as the township—but it likewise often serves no purpose except to define voting boundaries and limit the spheres of constables and sheriffs' deputies—a mere ghostly phantom of a social entity that we need not consider at all.

So it is true we have Nation, State, County, and Town, each with machinery for self-expression and development, and only the country community voiceless—formless, indeed, "powerless to be born." Thomas Jefferson a hundred years ago saw just the situation thus described—saw that County, State, and Nation were organized and that the town was organized, but that there was no organization in the rural communities; and time after time he declared that as long as he had breath in his body he would fight for two things—education and provision for organized rural communities—"the subdivision of the counties into wards," as he put it. His idea was to organize all over America rural communities of about six miles square into forceful, capable rural democracy—republics—corresponding in size somewhat to our consolidated school districts; and it is now our duty to work out in some fashion the realization of his ancient dream. Though we can't do it through government—as yet—we can do it through voluntary organization.

As I see it, for the development of the Rural Community, there must be:

- (1) Community Organization;
- (2) Community Centers;
- (3) Community Self-Knowledge;
- (4) Community Rivalry.

First of all there must be Community Organization. And foremost in effecting this result we must have the local organization of the farmers themselves, a Farm Bureau, a Farmers' Union, a Grange, the local organizations of the general cooperative marketing association, or some other farmers' club—a practical, wide-awake business organization that amounts to something. In learning the value of cooperation in making, marketing, and

financing farm crops, our farmers will learn the value of cooperation in a hundred brightening and socially uplifting ways, and in the long run this by-product of business cooperation may prove its more valuable result.

God helps them that help themselves; and while other agencies may and should help, it is our farmers themselves individually and through their organizations who must chiefly work out all our problems of rural betterment. It is better for the farmer to belong to the wrong sort of farmers' organization than to none at all. The local farmers' club must be the foundation of community organization, working along with equally progressive local organizations of farm women and of the boys and girls. The most successful town organizations are now those that combine the ancient pastime of eating with their social and business activities—"luncheon clubs" such as the Rotary, Kiwanis, Lions, Civitans, etc. I am almost persuaded that the most successful and enduring farmers' clubs must be modeled along the same lines. Down in Georgia recently I was greatly interested in a club which has been working successfully for 40 years—twelve members meeting once a month at the farm homes of the members, in rotation, for a dinner served by the host, a tour of his farm, a discussion of some important farm subject, and

the transaction of such business of buying and selling as they wish. I commend this plan to farmers everywhere.

Then in the second place there must be Community Centers. The development of such centers must be a growth, of course, but if we only have the ideal and realize keenly enough the value of that ideal, it will come—slowly perhaps, but surely. The consolidated school with high school features—with its school farm, its cooking and sewing room, its library and museum of nature study and local history—this should be the central feature, and about its beautiful lawns and grounds should be grouped the neighborhood churches, lodge halls, fair grounds, the athletic grounds, the homes of preacher, doctor, school principal, etc., and to this center all the people of the neighborhood should come, not only for school and church and Sunday school occasions, but for the public speakings, the meetings of farmers and farm women's clubs, for picnics, ball games, debates, musicals, lectures, local fairs, moving-picture shows, corn club or canning club meetings, etc., etc. There comes to my memory now the long twilight of an English summer evening when on such a community playground I saw a survival of the practice which obtained in Goldsmith's "sweet smiling village" of another era:

In the ripening process, fortunately, the essential oils which give to the flowers their fragrance and to honey its savor, are not dispelled. And somewhere between the time the nectar is gathered out in the fields and the time it becomes real honey there is added to it from the bee's body a magical substance, an enzyme called invertase, which changes the sugars to simple invert sugars that render honey virtually a predigested food. This property of honey is one by which it may well lay claim to preeminence as a health food.

There is something uncanny about the neglect by the public of this choice food. It cannot be because of its price, for butter at twice the price of honey never ceases to be bought by all classes. It cannot be because it is not liked, for most adults and all children, as far as I know, like honey. The food experts and dieticians have done their best, for to a man, they recommend the use of honey. Perhaps it is the fault of the bee men themselves who, according to a prominent corporation lawyer in New York city, ought to have their bees taken away from them and "Any group," he continued, "Who can so successfully withhold from the public the wonderful story of the food value of honey ought to be put in the U. S. Secret Service."

As a result of this challenge to their wakefulness and as a result of stimuli from other sources, beekeepers in America this week are celebrating their first National Honey Week having decided that it will be good for them and good for the public that they divulge their secrets.

(Continued on page 369)

"And all the village train, from labor free,  
Led up their sports beneath the spreading  
tree . . .  
The young contending as the old surveyed."

The most encouraging fact I know with regard to the whole problem of rural community development is found in the gradual but sure and steady recognition of the modern, consolidated rural school as the logical community center. Such a school fast becomes the virtual capital of a little rural community—republic—just as Washington is the capital of our national republic and some other city our State capital. And the coming of the automobile, happily for this generation, has made it possible for us to enlarge our school districts and hence our community boundaries so as to take in large enough rural groups to really get effective organization along all lines.

Thirdly, there must be Community Self-knowledge, which means as a prerequisite that there must be community surveys. It is a prime duty of the community leadership to make such a survey covering roads, wealth, occupations, agricultural conditions, schools, churches, social life, sanitary and health conditions.

Fourthly and lastly, there must be Community Rivalry. What stirs the civic spirit in our towns like generous rivalry with neighboring towns—rivalry exhibited in everything: Chambers of Commerce, baseball teams, population figures, post-office receipts, motto slogans, etc., etc.

So I believe in our country districts we shall add this incentive of generous rivalry as soon as we get a sense of community boundaries and community organization. Besides having each community working to distinguish itself in each line of activity. I believe we should have in every county a county fair or some organization which should award some form of trophy or pennant or certificate of honor to the school district or community distinguishing itself in any of a dozen forms of civic achievement.

Such, all to inadequately sketched, is my vision of the Country Community of

# Farm Federation for Tax Reduction

*New York Farm Bureau Holds Annual Meeting—Lee Reelected*

By MARY K. FENNELL

IF AN annual farm bureau federation meeting may be considered as a cross section of sane and progressive farm opinion and outlook—as I think it may—in New York State there is evidently a rather general feeling that “things have been as bad as possible, now they are on the up-grade.” The hundred farmers from fifty counties who attended the annual meeting of the New York State Farm Bureau Federation at Syracuse on November 6 and 7 seemed unanimous in this. Farm bureau membership follows the fortunes of farmers and in some counties during the past year they got down to bed rock, but, as one delegate declared “that’s where you have to get to build a skyscraper.”

**Service on the Increase**

Fortunately farm bureau service did not decrease with membership. In fact, President Enos Lee, in his opening address, stated “the county agent leader’s office can give you statistics to prove that more service was rendered by the county farm bureaus this past year than any year since bureaus were organized, and fifty per cent of this service was given to persons not members of the organization. This same spirit of service has been dominant in the federation. By the way, this continued service is now being

recognized in many counties by many new members.

The federation’s place in New York agriculture was defined by the president in these words “I emphasize the same statements I have made many times, that the farm bureau must be an educational service organization, that legislation, co-operative marketing, and other panaceas are not the only means to agricultural success, but we can, through working and thinking together, keep this fundamental industry in its proper relationship to all other activities.”

The report of secretary E. V. Underwood and of the committees on marketing, transportation, legislation, reforestation, and T. B. eradication summarized the federation’s activities during the year past.

The committee on marketing reported on two important investigations, one into the opportunities for marketing New York’s poultry products through the Atlantic Coast Poultry Producers Co-operative Association, and the other into the canning crops marketing situation. After the first investigation the committee refused to recommend the Atlantic Coast Association to New York poultrymen until certain changes in policy and

management had been made. These having been made, the committee in its report offered for consideration the organization’s plan of taking shipments of eggs on trial for two months for New York poultrymen, charging them one per cent more per dozen for sales than by members paid.

Also at the suggestion of this committee, their report stated, certain changes were made in the New York State Canning Crops Cooperative Association. As to the future of cooperative marketing for canning crops, the committee had this to say: “We believe there is need for a bargaining organization to handle canning crops, particularly tomatoes and possibly cherries, and that the experience of the past two years should be used as a basis for developing a strong association for the future.”

**Coverdale the Main Speaker**

The chief speaker of the meeting was John Coverdale, secretary of the new \$26,000,000 Grain Marketing Company of Chicago. Being grain users, rather than grain growers, the delegates were interested in the possibilities of the patronage dividend plan which, Mr. Coverdale stated, is an important feature of the new cooperative association. H. E. Babcock of Ithaca, who followed Mr. Coverdale, explained that New York State farmers are set up, through the G. L. F. Exchange, to take advantage of this plan if it proves practicable. Mr. Babcock talked on cooperative buying.

Carl Ladd, director of extension at the state college of agriculture, talked on farm organization, particularly cooperative marketing. “We have these assets,” he said, “four or five years of successful effort, trained management, and some working capital. Our liabilities are these: Some local organizations are very much over-capitalized, the membership expects too much; there are too few leaders. In the farm bureau, as well as in the co-operative associations, we need a much larger rotation of effort, more men who step up from the membership to become leaders and then take their place in the ranks again where with their experience they can do as much good, or more, than “up front.”

**Resolutions Include Tax Reduction**

The general property tax, as it applies to farmers, was discussed with keen interest by the delegates after a short talk on the subject by H. E. McKenzie of Walton. Two of the seven resolutions passed were concerned with taxes. It was recommended that the agricultural conference board give careful attention to the state and local tax system and that a united program of tax revision be agreed upon. Another resolution stated “we are opposed to any further issues of state or county bonds for road construction and recommend that the users of the roads be taxed through license, gasoline, personal property tax, or otherwise in an amount sufficient to provide for the entire upkeep and from 59 to 75 per cent of the cost of new construction.”

A resolution was passed urging a modification of the highway law so that a special license may be granted after proper road test to persons over 15 years to drive to and from school. The suggestion that farm boys be privileged to drive the truck to the milk station mornings was approved but not included in the resolution for fear it might cause unfavorable action on the entire request.

**Rural School Situation Discussed**

The rural school situation was the subject of a long resolution declaring that “First, there should be a local unit of administration and taxation larger than the present district unit, and of adequate size to make it possible to provide within such unit of administration and taxation necessary school facilities from the

# More Popular Than Ever with All-Steel Bodies

In adopting *all-steel* bodies for both closed and open models, Overland has risen to even greater strength in public favor. After all, everybody knows that steel is far superior to wood; that steel will not warp or crack; that steel outlives wood many times over. *Steel is 30 times stronger than wood!*

Most motor car bodies are skeletons of wood with thin sheets of steel nailed outside. The modern *all-steel* body is a frame of steel covered with steel—*all-steel*—welded into one-piece solidity and strength. Only coachwork built entirely of steel can be finished in hard-baked enamel—a finish that defies mud, dust, miles and the flight of time.

Everybody appreciates the great added safety of all-steel coachwork—and the lasting beauty of it. Overland's big power, its reliability, its fine comfort and great economy have always appealed to owners, because they know Overland is a "round trip" car—a car that gets you there and brings you back!

# Valspar on the Farm— Mrs. Miller tells an interesting story!

Dear Sirs:—

MAGNOLIA, IOWA,  
April 11, 1923.

I have often thought I would write to you of our experience using Valspar Varnish, and on opening the American Magazine I saw your page and decided that now was the time.

Some years ago, in the fall, I Valsparred different pieces of furniture. After giving them several coats of varnish, I had almost a pint left. My husband had just finished his fall plowing and had driven into the yard. He started to grease his plow with the axle grease, like all farmers do, saying as he did so, "What's the use? The pigs just lick it off. Now if we had a machinery shed, my cultivator, shovels, lister and plow would be bright and shiny next spring."

I said, "Let me put some of this on." I Valsparred cultivator, shovels, plow and riding lister. Had about one-half cup left, and for good luck started on one side of our new planter. After painting one seed box and side, the Valspar gave out. The next spring the implements stood out bright and shining. Also the planter has been out for four years in the sun, rain, and snow. The Valsparred

side still looks new, but the other side shows its age. Use Valspar on the farm to save the implements from rust and wear.

Hoping you can use this, I am

Respectfully yours,  
(Signed) MRS. R. E. MILLER,  
Magnolia, Iowa.

Mrs. Miller's letter is only one of thousands we have received from farmers and housewives telling us of the wonderful satisfaction given by Valspar. You, too, should use Valspar for waterproof protection or beautiful finish on either wood or metal surfaces indoors and out—in the house and dairy—on farm implements, tools, automobiles, incubators, brooders, chicken houses, etc.

Valspar is also made in a variety of beautiful colors—Valspar Varnish-Stains and Valspar-Enamels. Unequalled for floors, doors, walls, chairs and all farm equipment—in fact, wherever you want waterproof protection combined with lustrous beauty.

# Among the Farmers

## Western New York Fruit and Crop Notes

At last the apple crop is picked and in the packing houses and storages. Practically every grower is through picking Baldwins and Ben Davis, the last varieties to be harvested. We finished up with Rome Beauty on Election Day, November 4. There may be a few Russets and possibly Ben Davis to pick yet, but not many. High winds have prevailed during the last week or ten days, and many growers, late with their picking, have suffered quite a little loss through wind-falls. The late varieties, especially Baldwins, seem to have held out well, in most cases exceeding the estimates by from ten to twenty-five per cent. But the total amount is so small and the quality so poor that this will not affect the visible supply materially.

### Prices Holding Up Well

Prices have held up well, and finished stronger than they opened sixty days ago. The fall varieties ranged upward from \$3.75 to \$4.50 per "A" grade barrel for Hubbardsons to \$5.50 for Greenings and \$6.00 to \$6.50 for McIntosh. Not many "A" grade Baldwins have moved out of the territory but have been sent to cold storage. The Baldwin price has moved up from \$5.00 or \$5.25 to \$5.50 and \$6.00 for "A" grades. Spys are being held at from \$7.00 to \$8.00. Ben Davis move at from \$4.00 to \$4.50 "A" grade.

By-product prices are still stronger relatively. Bulk and tree run sales average around \$1.75, with eiders and eulls out. Good dryer stock brings 85c to \$1.10 and even \$1.25, while eiders have brought as high as one dollar a hundred-weight. The prevailing price for eiders, however, is from 65 to 74 cents.

Only a few cold storage houses will be well filled with Eastern apples this fall, most of them having much empty space. It looks like a safe year to store, in spite of good fall prices, because the quantity of high grade winter fruit is simply not available. After last year's experience, everybody is slow to put many "B" grades into cold storage. High storage rates and the high cost of barrels added to bulk fall prices with shrinkage and losses making a "B" grade apple rather expensive by spring.

### Crops Need Rain

Western New York is experiencing the first real drouth of the season. With the exception of a light shower on November 7th, no rain has fallen since September 30th. Wheat, especially late sown wheat, shows the lack of rain seriously. Cisterns are beginning to go dry and even wells are very low. A soaking rain before freezing is very important to this country.

Most growers still have their orchards to "clean up" of drop apples. But since picking was finished last week, most of the potatoes have been dug. This is not a potato section, soils being too heavy and poorly drained but the season has been so favorable that yields have ranged from 100 up to 250 bushels per acre. Quality is good, with the exception of size which tends to run too large. Prices range from 35 to 40 cents at loading stations up to 60 and 65 cents on the Rochester market. Many potatoes will be stored.

Cabbage harvest has begun. The price dropped from \$6 or \$8 dollars to \$5, and last week one dealer was offering only \$3.50 a ton. The yield is high and the quality good except for over-size. Growers hesitate to store as the price outlook is none too good, and yet present prices hardly warrant harvesting. Many crops will undoubtedly be fed to stock or left in the field.—M. C. BURRITT.

### Cornell Poultry and Egg Show December 2-4

The Third New York State Production Poultry Show Judging Demonstration, Judging Contest and Egg Show will be held on December 2, 3 and 4 in the Animal Husbandry Judging

Pavilion at the College of Agriculture at Ithaca. This show and contest has become an annual feature of the work of the Poultry Department at the College of Agriculture. The show is radically different from all other poultry shows in that the birds are judged on those physical characteristics which indicate powers of production. Furthermore, the exhibitors are able to see their own and their competitors' birds placed by expert judges and hear the reason why the judges place the birds as they do. This educational feature has been responsible for the popularity which the show at the college has enjoyed.

The egg exhibit is another outstanding feature of the show. In connection with this, demonstrations and lectures are conducted to show the importance of breeding for egg quality as well as egg production. Those who are interested in not only exhibiting but attending the show are urged to communicate with the Department of Poultry Husbandry of the New York State College of Agriculture, which department will gladly give all the details regarding exhibits and judging contests.

### Boys and Girls to Exhibit

An added feature of the show this year will be the poultry exhibits of the members of the poultry clubs from all over the State. This is the first time a special department has been provided for the boys and girls and indications are that they will be well represented. One feature of this junior exhibit, will be the award of the Tioga Sweepstakes trophy, a solid silver cup, donated by the Tioga Mill and Elevator Company of Waverly. It will go to the county whose junior exhibitors win the most points on the scale of a certain number for each premium won, so many for second, third and so on. This trophy will be awarded each year and becomes the permanent property of the club members of the county when won three times.

### National Grange Proposes Balanced Production

ONE of the largest and most enthusiastic meetings of the National Grange opened its sessions at Atlantic City, New Jersey, November 12. Delegates were present representing one million farmer members.

The most outstanding sentiment expressed by the Grange was its proposal for a nation-wide system of balancing production. In line with this sentiment a resolution will be passed favoring the amending of the Tariff Commission Act so as to give the Department of Agriculture authority to compile costs of production statistics at home and abroad, that this information may be used to prevent crop shortages one year and a big surplus another.

On the same principle, the Grange will oppose any further irrigation and reclamation work by States or the government in the far West, "because no artificial stimulation of agricultural production is either justifiable or desirable from the standpoint of the welfare of our nation."

### Opposes Issuing Tax-Exempt Securities

Another proposition which is receiving much discussion and will undoubtedly be followed by a strong resolution for opposition to the issuance of any more tax-exempt securities. Like the AMERICAN AGRICULTURIST, the Grange believes that the unfair tax situation which unjustly discriminates against farm real estate should be adjusted so that all property pays its rightful proportion for government support. The Grange is practically unanimous against daylight saving and will pass a resolution condemning it.

The sessions will continue until Wednesday, November 19th. The next week's AMERICAN AGRICULTURIST will contain a further report.

## EASY NOW TO SAW LOGS AND FELL TREES

**WITTE Log-Saw Does the Work of 10 Men at 1/20 the Cost—Saws 25 Cords a Day.**

A log-saw that will burn any fuel and deliver the surplus power so necessary to fast sawing is sure to show every owner an extra profit of over \$1,000.00 a year.

Such an outfit is the WITTE Log-Saw which has met such sensational success. The Witte, equipped with the celebrated Wico Magneto, is known as the standard of power saws—fast cutting, with a natural "arm-swing" and free from the usual log-saw troubles. It uses kerosene, gasoline or distillate so economically that a full day's work costs only twenty-two cents.

In addition to sawing from 10 to 25 cords a day, the powerful Witte Engine can be used to run all other farm machinery—pump water, grind feed, and other back-breaking chores.

Mr. Witte says that the average user of a WITTE Log and Tree Saw can make easily \$40.00 a day with the outfit and so confident is he that he offers to send the complete combination log and tree saw on ninety days' guaranteed test to anyone who will write to him. The prices are lowest in history and under the method of easy payments you can make your own terms. Only a few dollars down puts the Witte to work for you.

If you are interested in making more money sawing wood and clearing your place at small cost, write Mr. Witte today at the Witte Engine Works, 6802 Witte Bldg., Kansas City, Mo., or 6802 Empire Bldg., Pittsburgh, Pa., for full details of this remarkable offer. You are under no obligation by writing.

## \$25 Down Buys Holstein Bull

We have several exceptionally well-bred registered Holstein bull calves that we offer for sale on the installment plan. Here is your opportunity to break into the purebred game without an immediate heavy outlay of cash. This should appeal to the average farmer who wants to boost the average production of his herd without having it cost him too much money right on the jump.

### A Double Descendant of "OLD DUTCH"

One of these offerings traces back, both on his sire's and his dam's side, to Dutch-land Colantha Sir Inka, "Old Dutch," the greatest proven transmitting son of Colantha Johanna Lad, the famous "milk" sire. The calf's sire is a grandson and his dam is an own daughter, of Dutch-milk blood on both sides of the family. Dutch has 95 A.R.O. daughters, 16 having 7-day records of 30 pounds of butter or better, two are in the 1000-pound class. The calf's sire has 22 A.R.O. daughters with records up to 29.83 pounds butter in 7 days, and is the son of a 30-pound cow. This well-bred individual can be bought "on time."

Henry Morgenthau, Jr., Owner  
Hopewell Junction New York

## Post Your Farm and Keep Trespassers Off

We have had a new supply of trespass signs made up. This time they are made of extra heavy linen on which the lettering is printed directly. There is no card facing to be water-soaked by the rain and blown away by the wind. We have had these new signs made up of extra heavy material because severe storms will tear and otherwise make useless a lighter constructed material. We unreservedly advise farmers to post their land and the notices we have prepared comply in all respects with the New York law. The price to subscribers is 95 cents a dozen, the same rate applying to larger quantities.

**AMERICAN AGRICULTURIST**  
461 Fourth Ave., New York City

## Classified Advertising Rates

ADVERTISEMENTS are inserted in this department at the rate of 5 cents a word. The minimum charge per insertion is \$1 per week. Count as one word each initial, abbreviation and whole number, including name and address. Thus: "J. B. Jones, 44 E. Main St., Mount Morris, N. Y." counts as eleven words. Place your wants by following the style of the advertisements on this page.

### The More You Tell, The Quicker You Sell

EVERY week the AMERICAN AGRICULTURIST reaches over 130,000 farmers in New York, New Jersey, Pennsylvania and adjacent States. Advertising orders must reach our office at 461 Fourth Avenue, New York City, not later than the second Monday previous to date of issue. Cancellation orders must reach us on the same schedule. Because of the low rate to subscribers and their friends, cash or money order must accompany your order.

## Licensed Fruit Dealers Outside of New York City

LAST week we published the list of fruit dealers operating in New York City exclusively. In the following list are fruit dealers operating in New York State, outside of the city of New York. This includes Brooklyn and such cities as Rochester, Buffalo, Albany, etc. These dealers are licensed and bonded by the New York State Department of Farms and Markets. As we said last week, we do not guarantee the integrity of these firms, but the fact that they are licensed and bonded gives some assurance that they are more to be depended upon than unlicensed dealers. Cut out this list and save it for future reference.

## Look Out for Acme Plant Food

The Pennsylvania Department of Agriculture is warning Pennsylvania farmers against the fertilizer fraud that has just been discovered. The so-called fertilizer is called the Acme plant food, made by the Acme Fertilizer and Plant Food Company in Lancaster County. An analysis of a sample of this fertilizer by the State Bureau of Foods and Chemistry showed it to contain only about \$1.75 worth of plant food per ton and yet the material was selling for about \$28.

While only 2 per cent. of total plant food—nitrogen, phosphoric acid and potash—was guaranteed, the fertilizer contained less than one per cent., Dr. James W. Kellogg, Chief Chemist in charge of the analysis, reports. Furthermore, over 60 per cent. of the material in the fertilizer was either sand or other matter which would not dissolve, even in acid. Records show that the Acme Company sold 300 tons of the "plant food" to farmers largely in Pennsylvania last year. The manufacturer was prosecuted and fined.

## Tell Us Your Troubles

"Accept my sincere thanks for the collection. I believe your bureau bears the relation to the rural people that the good fairy bore to the princess." H. W. P., Ontario Co., N. Y.

Every mail brings us nice little notes like the above, which do much to help us over a hard day. We do not claim to be a "good fairy," but it is a source of satisfaction to feel that we can help out our folks when they are in trouble.

# The Trouble Maker—By E. R. Eastman

## CHAPTER VII

LEAVING old George, the Whip Man, Jim walked down the midway. The ball game or the speech-making had not yet begun and the folks were wandering back and forth in quest of novelty and amusement. Country boys loitered along swinging hands blissfully with their "best girls," while conversation between them was somewhat slowed up by the newly made sticky taffy on which they chewed industriously. The cheerful rattle of the soft-drink bottles mingled with the popping of the corks constantly enticed nickles from the pockets of the hot and thirsty crowd. The merry-go-round, with its tunes ten years behind the times, surrounded by a pushing, jostling crowd of hilarious children, all added to the jollity of the holiday spirit.

While it was rather early in the season for crop and vegetable exhibits, a trip through the exhibition halls reminded Jim again of the ability of farmers to produce, and produce well. Great yellow pumpkins and squash, any one of which would have taxed his strength to carry far; early varieties of husk corn and the green stalks of the silage corn rising fifteen feet in the air; colorful apples of every variety, pears, peaches, grapes, and in fact nearly everything which can be grown in the north temperate zone filled the halls and the booths to overflowing, all striking proof that farmers could, if necessary, still live, and live well, as their fathers lived before them, from the products that they themselves grew on their own farms.

BECOMING tired, Jim left the exhibits and wandered over to the race-track. Faintly above the noise of the midway he could hear the approach of beating drums and on the other end of the grounds he could see the Speedtown band coming through the entrance gate. Resplendent in their uniforms with shining instruments gleaming in the morning sunshine, they swung across the lot and came up the race-track toward Jim. A body of uniformed men, large or small, marching to drums stirs one of the strongest and most elemental emotions of men. If religion is an appeal to all that is noble and uplifting in our natures, then the insistent and powerful call of the drum and of music is indeed true religion. "Come!" it says, "Come! Come along with me! Come! Come! Come along with me! Leave that earthy body of yours and come with me to the land of spirit, to the land of beauty and exaltation and happiness, where all things are right!"

Against that call of the drums of the band, the attractions of the midway paled and the people rushed toward the track to hear and see the village band marching up the track to their stand. Most of the crowd knew the boys who played in the band. Many worked with them in the same fields, or in the village stores.

But the bandsman now was not plain Joe Barrett, the farmer, or Henry Underwood, the mail carrier. They were instead, somehow, some kind of higher beings who marched in uniform to the call of the drums. Lucky indeed, you were if they saw you as they marched by, and gave you a brief nod of recognition!

AS THE band came near where Jim stood, there was an extra rattle of drums and then the opening strains of a march. Watching them go by, Jim, with a blur in his eyes and a lump in his throat, thought of that older brother who had once played in a country band and had marched gaily by to the call of the drum. Perhaps now in the Unknown Somewhere, Charlie was still in line, keeping cheerful step to the onward beat of the drum:

"Come! Come! Come along with me! Come! Come! Come along with me!"

With the band in its stand, the crowd flocked back to the midway and Jim drifted along with it, nodding to ac-

quaintances here and there, and stopping often to visit with friends.

Suddenly, someone slapped him on the shoulder so hard as almost to knock him from under his hat. Turning around, somewhat irritated, he saw Bill Mead grinning at him. Bill had found a drink or two and was feeling, as he expressed it, "mighty fit."

"Come over here, Jim," he said. "Got a little somethin' I want to let you in on."

"I don't want a drink, Bill, thank you just the same."

"Drink nothin'," snorted Bill. "Who said anything about drink, you darn fool? If I had one, s'pose I'd give it away?"

"Well, what's bitin' you then?"

BILL was always interesting. He could always be depended upon to furnish entertainment, and just then Jim was willing to be entertained.

"What ails you, Bill?" he repeated.

Bill was hauling him to one side.

"Wait till we get out of this cussed crowd and I'll tell you."

### What Has Happened in the Story Thus Far

**BRADLEY**, the young county agent, has taken Dorothy to the county fair, and Jim Taylor, her childhood sweetheart, goes by himself. Jim, after much thought about the unfairness of farm conditions, has started to talk organized rebellion among the dairymen around him and his bitterest opponent is old Johnny Ball, Dorothy's father. So when Bradley confides to Jim his love for Dorothy, the young farmer feels that everything is going against him.

However, he goes to the fair, where he expects to talk with neighbors about a new organization, the Dairymen's League. He stops to listen to "George the Whip Man," an old-time trader, who amuses a growing crowd.

"First place," said Bill, when they got where they could talk, "I thought I wasn't goin' to have no fun at all at this gosh-danged old fair. Got started wrong-end-to, this morning."

"How's that?" asked Jim.

"Well, I've always held this fair charges too much admission. Two bits is two bits. Have to milk a lot of cows for old Johnny Ball to earn twenty-five cents. Ma always told me to be savin', too. So this mornin' 'stead of comin' in at the gate and payin' good coin of the realm to them grafters, I sneaked down the backside of the grounds and elum over the high, tight-board fence."

"It's a wonder you didn't get caught," said Taylor.

"Gosh hang it! That's just what did happen. When I lit on the inside, I'll be hornswoggled if there wasn't old Jerry Snaggs, one of them fair cops, settin' on a stump waitin' fer me big as a coffin! I started to go away from there as fast as I could, but the danged old gooseberry hollered fer me to stop or he'd shoot. Wouldn't know no better than to pop away either, so I put on the brakes and the old tin sojer came up and said he was goin' to run me in."

"I told him I wasn't aimin' to stay to see his cussed bunch of swindlers anyway, that I'd just dropped in as 't were fer a minute while I was lookin' fer some strayed young stock, and if he'd let me go, I'd drop right back out again."

"Well, did he?"

"The dod-rotted old pepper-pod said he was lookin' fer strayed stock, too, and that by heck, he'd found one—found a breechy jackass that had strayed right over the top of the fair ground fence!"

"Then he put you in the coop, I suppose."

"No, the old blue-bellied Presbyterian took me up to the gate and made me pay a whole dollar for a family ticket! What do you know about that—me with a family ticket, and no family and no prospects of none!"

"What are you kicking about?" asked Jim. "I think you got off mighty lucky. Had no business climbing over the fence anyway."

"Mebbe so, but it took me a long time

to earn that dollar to get in here with, and now I'm goin' to raise a little ruction 'fore I git out. And that brings me to what I really sot out to tell you in the first place. You seen this wild man show down on this here midway?"

"I saw where it is," said Jim. "I saw the pen and heard the barker, but didn't go inside."

Bill stepped up closer and lowered his voice.

"Well, I did, and what do you think I found?"

"A real wild man, maybe."

"Wild man nothin'! I found an imitation and a danged poor one at that. What's more, I knew him!"

"What!" said Jim. "You knew him?"

"Yes, sir, I knew him."

"Do you mean to tell me you associated with wild niggers in your younger days, Bill?"

"Hain't no nigger. His face is all painted up and he's got some special false teeth with long tusks colored black. Over his dirty, worthless hide they've

BY THIS time, Bill had the close attention of everyone in the crowd, and it was also plain that he had the wild man worried.

"Have reason to remember that there Harkness, too," he drawled on. "Lent him a dollar once and never got it back, by heck. Might've let me in his blasted old show free anyway."

The wild man edged over as closely to Bill as he could get and those nearby were very much surprised to hear him say to Bill in a low voice:

"Shut up, you dinged fool, and go away from here!"

"Hear that, folks?" said Bill. "You all ought to pay me for making this wild man talk. Uses English, too. Probably learned it from the missionaries in wildest Africa. Then again," he added, "he might've picked it up farmin' down Cadwell Settlement way."

By this time even the children in the crowd knew that something unusual was going on, and everyone was laughing and crowding closer to watch the horse-play. Those who had come first made no move to go away, and the crowd was constantly increased by new recruits.

The wild man was plainly uncertain as to how to handle the situation. Should he plead with Bill to go away, or should he treat him with lofty disdain? He decided upon the latter course, and put much new energy into raving up and down in his enclosure, moaning and bellowing and stamping his feet in a loud and vain effort to distract the crowd's attention from Bill's comments.

BUT Bill had called the cows from the pasture for too many years to have his raucous voice easily drowned out by even a wild man, and in spite of the racket, the crowd had no difficulty in hearing his running comment.

"Yes, sir, the more I look at this specimen, the more I feel as if I'd met an old friend. Them ears, now, f'r instance. Just look at them, folks. Bigger than cauliflower, they be. Come to think of it Hank Harkness had ears just like 'em. And that nose, now; I'd know it anywhere, even in darkest Africa! Come to think of it, too, old Hank was so danged homely that he wouldn't need much changin' to make him look wild."

The frantic creature in the pen again edged over under Bill and looking up at him said sotto voce:

"If you'll go away from here and go away fast, I'll give you ten dollars."

"Come to remember," continued Bill, paying no attention to the interruption, "Hank Harkness was always sort of wild, too. Seems as though I recall some story about Hank gettin' drunk a year or so ago and tryin' to rob a store. Disappeared right after that and the officer's been lookin' fer poor Hank ever since."

"By George, that's right," said Jim, catching the cue. "We've been lookin' for the fellow that robbed that store for over a year."

All the crowd, including the wild man, turned to stare at Jim.

"I'm the sheriff, you know," he added, throwing back his coat and giving them a glimpse of his badge, "and I'm certainly obliged to you, sir," turning to Bill, "for locating this Harkness for me."

Then to the dazed man in the pit below, Jim said, pointing to his badge:

"Henry Harkness, in the name of the people of the State of New York, I arrest you. Will you come with me peacefully, or shall I put the irons on?"

Harkness took one long startled look at the badge of authority and with a hoarse bellow of rage and fear, he plunged under the platform, lit running on the ground on the other side, hit the earth about three times between his pen and the outside fair ground fence, and before the amazed crowd had quite realized what had happened, the wild man, scaling the high board fence, disappeared on the other side, and those parts knew him no more.

PERFECTION  
Oil Heaters

in the improved models

STANDARD OIL CO.  
OF NEW YORK  
26 Broadway

**TO PRESERVE PUMPKIN:** Select small, hard-shelled pumpkins, that are perfectly smooth, and wash in cold water, being careful not to bruise them. Wipe dry and seal the end of the stem with warm, not hot, wax. Hang by the stem in a cool storeroom and they will keep until February or March.

**Dried Pumpkin:** Peel inch thick slices of pumpkin, remove the seeds and cut to form pieces about one inch square. Cook until tender and put in colander, pressing out all water possible. Spread out on earthen plates and set in moderately hot oven for ten hours to dry. Remove from

the pumpkin in glass jars, pour syrup over and seal.

**Pumpkin Bread:** Mix one cupful corn meal with one cupful stewed pumpkin. Add one level teaspoonful salt and one small tablespoonful of butter. Beat one egg and add one tablespoonful of sugar and tablespoonful baking powder and one tablespoonful wheat flour. Beat into the pumpkin, pour out in well buttered pan and bake thirty minutes.

**Eggless Pumpkin Pie:** To one quart of sifted pumpkin add three cupfuls boiling milk, two thirds cupful New Orleans Molasses, one half cupful brown sugar and one half teaspoonful salt. Season with one half teaspoonful ginger and the same of ground cinnamon. Pour into tins lined with a good pie crust and put in very hot oven for five minutes. Then reduce the heat and bake one hour.—L. M. THORNTON.

season with a little salt and pepper. This is fine served with mashed potatoes for tea.—IDA A. BROWN.

## Jelly Apple Dessert

Bake as many apples as needed, removing the cores and filling with sugar. When cold, put in cups and pour on jello. Add a little whipped cream to each cup when set.—IDA A. BROWN.

## Cheese-Pepper Salad

Combine one cupful cooked rice with one cupful grated cheese and a teaspoonful of salt. Cook in double boiler until cheese is melted. Let cool, pack into plump green peppers and set in ice box to chill. Just before serving, slice through pepper and filling making slices about one half inch thick and on top of each put a teaspoonful of salad dressing.

## Cheese Sandwiches

Melt one teaspoonful of butter in saucepan, add one slice of onion and fry until a light brown, then stir in one cupful canned tomatoes a seasoning of salt and pepper and a dust of cinnamon. Cook until tomato, begins to thicken, add one cupful of grated cheese and cook until it melts. Remove from fire, stir in beaten yolks of two eggs and set in ice box. When cold spread between layers of freshly buttered sandwich bread.—L. M. THORNTON.

## Snug and Warm for Winter

**NOW-A-DAYS,** the sensible mother does not keep her baby indoors just because it is cold. She knows that sunlight and fresh air—even cold air—are good for baby, if he is snugly wrapped up and protected from direct wind.

So this appealing little set will be just

## Set of "Raggedy Dolls"

**A DOLL,** with dress and cap, a long-eared bunny and a smiling pussycat make up this set of cuddle-dolls for the very small person. You need only scraps of material, or even old stockings to fashion this lovable family and no Christmas present you may give will be more of a hit! Pattern No. 1598 comes in one size only. Send 12c for it to the Pattern Department, AMERICAN AGRICULTURIST, 461 Fourth Avenue, New York, N. Y.

plates and put in dry, warm steamer for two or three hours. Keep in a large can or in paper sacks in cool storeroom.

**Pumpkin Butter:** Remove paring and seeds from sweet pumpkin and cut into cubes. Stew four or five hours, setting on back of range the last hour to dry out as much moisture as possible. Season with butter and a little salt and serve with fresh or salt pork.

**Pumpkin Preserves:** Cut sweet pumpkin into cubes after it has been pared and the seeds removed. To each pound of pumpkin allow one pound of sugar. Put a thick layer of pumpkin in large earthen dish, spread a layer of sugar over top and pour over the sugar a half cupful of lemon juice. Let stand two days, pour over the sugar a half cupful of lemon juice. Let stand two days, pour in one cupful of water for each three cupfuls of pumpkin. Remove to granite dish and cook until pumpkin is tender. Set away for 48 hours, drain off syrup, add one half ounce ginger root to each two cupfuls of syrup and boil down until thick. Heat

## Other Practical Fall Recipes

**I WAS** interested in the article printed some time ago about using left-over pickle vinegar and wanted to tell you my experience. I had some very thick vinegar left from sweet pear pickles and I hated to waste it, so I added flour and more sugar and it made a delicious filling for a two crust pie. Another time I used a combination of sweet pickle, vinegar and some left-over pear butter, and elderberry and apple pulp with very good results.

Following is my real recipe for using any sweet pickle vinegar:

1/2 cup water	1 cup sugar
1 cup vinegar	4 tablespoons flour
1 egg yolk	1 tablespoon butter

Beat together the egg yolk, flour and sugar. Add the vinegar and water slowly, then the butter and cook until thick in a double boiler. Pour into a baked crust, cover with a meringue and brown slightly in the oven. Serve cold.—MRS. ERY CAMP.

## Finest Sausage

10 lbs. of pork.  
1 ounce finely ground black pepper  
1 teaspoonful finely ground ginger root  
4 ounces fine table salt.  
1/2 ounce finely ground sage leaves.

Have the pork about half lean and half fat. Remove every vestige of the rind or skin and run through a sausage grinder or food chopper. If it is ground through twice it is all the better.

Put the ground meat into a large pan and sprinkle over it the salt, sage, pepper, and ginger, as evenly as possible. Then with perfectly clean hands, thoroughly mix the ingredients as if you were mixing bread. Then I pack it in pans (as when wanted it slices off so nicely to fry). It will require no added grease. Cover the pan tops with melted lard. Keep in a cool place but not in the cellar. It will keep a long time.

I make a strong brine of coarse salt, and immerse all the discarded pork rinds, placing all in a jar and cover with a plate to keep them under the brine. They are fine for cooking in potato stews, soups, or with beans—or a boiled dinner with vegetables. By no means throw any away.—CLARICE RAYMOND.

## Tuna or Salmon Salad

Break with a fork the fish in an earthen dish, then add to an ordinary size can, one cup of celery chopped fine, also two pimentos and 1/2 green sweet pepper cut fine; a small onion, a dash of pepper and salt to taste.

This is fine for supper and is easily made if one has the ingredients in the house.—IDA A. BROWN.

## Salmon Salad

To one can of salmon broken up with fork in granite dish (never use metal), add one cup chopped celery, one small onion chopped fine, and enough of canned yellow mustard to mix thoroughly,

the thing to provide for the winter baby's airings. It is not hard to make, but gay ribbons make it look very dressy. Directions for making both the cap and the saeque will be sent for 15c. Ask for E-4 and address, Embroidery Department, AMERICAN AGRICULTURIST, 461 Fourth Avenue, New York, N. Y.

When it is necessary to weigh molasses flour the scale well before pouring the molasses in and it will run off smoothly, leaving no trace of stickiness.

\* \* \*

All baked puddings if placed in cold water for a few minutes before taking to table will leave the dish freely.—JOHN CARNEY.

# Looking Forward to the New House

If You Are Planning to Build Next Spring, Consider These Ideas

I SUPPOSE the great majority of farm women still do their washing in the kitchen, boiling the clothes in a tin or copper boiler on the kitchen stove. Many have not yet got the length of a washing-machine and some I know, who did get them, have gone back to the old wooden tub again.

I have always hated wash-days, but necessity and a large family kept me at it one day every week and before it was over I was always tired out by the stooping and scrubbing, the heat of the kitchen and the smell of soap burning on the stove (for the boiler always would boil over and as often as not, there would be a leak somewhere to make matters worse!) Then my attention was always being taken off my work with something about the house, and after I did get the clothes hung out there was the wearisome task of getting the stove clean again and the kitchen floor washed.

At last, one day a brilliant idea struck me. I should have a wash-house. There was a little talk needed to get the man of the house started, but I had my way and in a few days he built a little house about a dozen yards or so from the back door. It looked almost the same as the ehickens' colony houses, only it had no cotton screens, just one single glass window in front. It measured 9'x12' and had a single pitch roof.

## Outfitting the House

We had a large iron boiler which my husband bought in a fit of enthusiasm once to boil roots, etc., for the pigs, but it was seldom used after the first year. We gave this a thorough cleaning out and it was set on its iron stand in one corner of the house. A sheet of tin surrounded the stovepipe in the roof, and the wood behind the boiler was also protected with sheets of metal, so that there was no danger of fire starting. The floor was made of cement, sloping to an opening in the corner where the door was. Then a bench was made for the tubs, a permanent stand for the wringer, a wooden grating for standing on, a shelf for soap, etc., and an open wire frame on the wall to hold the soiled clothes.

Wash-day after that lost many of its terrors. There is no need of heating up the kitchen, for the big copper kettle boils in a few minutes after a good fire is set going under it and it is large enough to hold all the white things at once. I have the tubs set high so that I do not need to stoop, and that in itself keeps one fresh much longer. The change from working in the house also puts more spirit into me for the work and—what I hated most—there is no cleaning up to do afterwards in the kitchen. A pail or two of water and a sweep with the broom is all that is needed. I hope that this will inspire some other farmer's wife to get her husband to bestir himself and provide her also with a little wash-house and an iron boiler that will last for years and years, and into which she can put lye and soap without any fear of their burning the tin off.—MRS. T. THOMSON.

## When You Plan Your Farm Home

THERE are certain rooms that are necessary in every farmhouse. The kitchen is first always, as it is usually the workshop of the housewife. As it is a workshop it should be arranged to save all unnecessary steps. Other rooms are dining-room, which is sometimes a combination of sitting-room and parlor; bedrooms, and occasionally a library, which should be more popular. There is one room, however, that is more often overlooked than the library, and in many cases could in a way take the place of it. This is the office and is the one I wish to tell about.

The farmer's workshop covers a large territory. The average farm contains well over a hundred acres which is all the

farmer's workshop or factory. Did you ever hear of a city business without its office? The farm business is just as big as any city business and a whole lot more important. People live on food and food is produced on the farm. And yet where are the best methods practiced? You all

dump for the whole house. I'll have to admit that ours here at home is in that same condition many times. The room wasn't intended as office in the first place and was "fixed" up to fulfill the duty as best it could.

Here's the kind of office I would like to see on nearly every farm of over fifty acres and in some cases smaller farms. A fairly large sized room with two or three windows to furnish plenty of light and in summer by opening them plenty of fresh air. I would like to see two doors opening into one of the other rooms of the house and one directly to the outdoors. The outside door could well have a glass section to displace one of the windows. The wall could be wallboard or plastered and papered or tinted plaster.

The interior furnishings would be most important. A large table in the center of the room, with books and the latest issues of the best farm papers and magazines on it. I would have the AMERICAN AGRICULTURIST in that pile. The older issues of the magazines should be kept in a suitable rack and the most important articles indexed in some way so they may be found easily. There should be ample bookshelves with some of the best books on the subject of agriculture; a few novels would add variety and in a way serve a useful purpose. Of course there should be a good desk and a typewriter would find a use on many farms. There should be files for livestock registration, papers, and letters. All these should be arranged conveniently and the plan of the rest of the house will have some influence on the arrangement of the office. Much of the farmer's spare time would properly be spent in the office, so it should be comfortably furnished and convenient. Most of all it should encourage the keeping of records of farm enterprises.—ARCHIE M. BLOHM, New York.

## Thanksgiving Contrasts

THANKSGIVING, the farmer's holiday, is with us again, and like the Pilgrim Fathers we would return thanks for the harvest.

As the housewife prepares the feast she will hardly realize the blessings which are hers, for during the first two hundred years of our nation's history, ways and means were very primitive. There were available only the vegetables that could be stored for winter use, for the art of canning was unknown. Tomatoes, corn, peas, string beans, etc., could be had only in their season. Oranges, bananas and other tropical fruits were unknown, for there were no means of transportation; and hot-houses did not furnish delicacies out of season as now. There was no range, no cook stove, of any kind; not even a match to light the fire in the fireplace. Ice-cream freezers, egg beaters, lemon squeezers, double boilers and food choppers had not been invented. The housekeeper of those days did not have these labor savers, nor anything like borax, bon ami or ammonia for cleaning. Moreover, she did not have baking powder, yeast cake, granulated sugar, flavoring extracts, cocoa, gelatine or mustard. Where is the lady of this age brave enough to undertake a Thanksgiving dinner under such conditions?—MRS. GEORGE GRAY.

## Tomato Preserves

ONE pound yellow pear tomatoes, two sliced lemons, two ounces preserved Canton ginger and one pound of sugar are required. Put tomatoes in aluminum or agate kettle and pour sugar over them. After eight hours add ginger and lemon, bring to boiling point and cook five minutes. Sun cook for three days.—L. M. THORNTON.

## PIECE-BOX PATTERNS

HAVE you in your piece-box a couple of yards of batiste, longcloth or crepe de chine? Cut it out, run up the seams, lace-edge the hems and you have as dainty a combination as you would want to see. At holiday times, no present is more acceptable to a woman than a pretty underthing and No. 1233 is the ideal style to use. It cuts in sizes 36, 40 and 44 inches bust measure. Size 36 takes 1 3/4 yards of 36-inch material. Price, 12c.

Send 10 cents for pattern catalog

DO you need a new dress for the holidays? Don't buy new material when your pocketbook is a bit depleted from preparing your gifts! Get out the piece-box again and from two old dresses or remnants you may have make No. 2084, as smart a dress as you could want. Patterns cut in sizes 16 years, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 36 takes 2 yards 40-inch with 2 1/2 yard 36-inch. Pattern, 12c.

Send 10 cents for pattern catalog

AND here is an apron made from—it's a fact—a cretonne curtain! An old gingham dress might do as well, but the curtain was an inspiration, you'll agree. Some "straight and narrow" piece of goods in your piece-box will suggest itself for the purpose. No. 2085 cuts in sizes 36, 40, 44 and 48 inches bust measure. Size 36 takes 2 3/4 yards of material. Price, 12c.

TO ORDER: Write name, address, pattern numbers and sizes, clearly and enclose proper remittance in stamps or coin (wrap coin carefully) and send to the Pattern Department, AMERICAN AGRICULTURIST, 461 Fourth Avenue, New York, N. Y.

know the answer. The farmer needs a central point to his business, a headquarters from which to direct operations. This is the need the farm office fills.

I have been in many farm offices and have not been favorably impressed by the majority. They were generally very small and often a combination of coat room, "flivver" repair parts department and office—and, oh yes!—a waste paper

# Reviewing the Latest Eastern Markets

## MILK PRICES

THE Dairymen's League Cooperative Association announces the following prices that dealers will pay the League during the month of November for milk testing 3% in the basic zone of 201 to 210 miles from New York City. It is to be understood, of course, that the prices mentioned below are not received by the farmer but go into the pool. They represent the prices dealers pay to the League. Class 1: milk used chiefly for fluid purposes, \$3.07 per hundred pounds, an advance of 47c per hundred over the October price. Class 2A, used chiefly as fluid cream, \$1.90; Class 2B, used chiefly in the manufacture of condensed milk and ice cream, \$2.05; Class 2C, used chiefly in the manufacture of soft cheese, \$2.05.

Prices for Class 3 are to be determined on a different basis than has been used heretofore. The New York League price will be based on the average price paid by a specific group of condenseries located in the Middle West with a freight differential added.

Class 4, prices will as usual be based on the butter and American cheese quotations on the New York market.

### Sheffield Producers

The Sheffield Farms Producers announce the following price for 3% milk in the 201 to 210-mile zone: Class 1, \$3.07 per hundred; Class 2, \$2.00; Class 3, \$1.50; Class 4, determined by market quotations on butter and cheese.

### Non-Pool Cooperative

The Non-pooling Dairymen's Cooperative prices for Class 1 milk is \$2.80 per hundred; Class 2, \$2.00; Class 3A, \$1.60; with freight and fat differentials.

### Interstate Producers

The Interstate Milk Producers' Association (Philadelphia Price Plan) announces that receiving station prices, or the price to farmers in the 201 to 210-mile zone from Philadelphia for 3% milk, is \$2.19. In the 101 to 110-mile zone the price is \$2.29.

## BUTTER CONTINUES ACTIVE

The butter market has maintained its strong and active tone during the past week. In fact it has gone beyond this in that it has shown improvement, not only in trading but in actual price increase. Creamery butter scoring higher than extra (93 score) is now quoted at 42 to 42½c. The leading grades of fresh creameries have consistently held a strong position in the market for the past couple of weeks. With advices indicating a reduced make, the position of these marks has grown steadily stronger. The recent advance, however, as may be ex-

pected in view of the heavy storage holdings, has had a tendency to restrict buying to some extent. As a result jobbers and chain stores switched to storage stock.

The outstanding feature of the butter market is not only in the advance of price of these extremely fancy marks, but in the greater activity in undergrades of local creamery butter.

Creamery extras (92 score) are now quoted ½c, which was the price of 93 score butter last week, showing that the market has improved practically a full cent; 90 to 91 score is now 37½ to 40½c, which indicates that buyers are selective and values extend over a wide range; 80 to 89 score butter varies from 34 to 36½c, while lower grades vary all the way from 30½ to 33½c.

According to the Bureau of Agricultural Economics on November 1 there were in storage in the United States 135,251,000 pounds of butter compared to only 76,472,000 pounds on November 1, 1923. Our storage holdings are almost 59 million pounds more this year than last year.

## CHEESE MARKET MORE ACTIVE

One of the features of the week was the increased activity manifest in the cheese market. This activity goes back to a week ago when Western markets indicated that there would

prices. There is, however, a slightly better sentiment in the market. Just why this is so does not seem to be known. But there is such a feeling. States are worth \$1.50 per 150 pound sack delivered or 90c a hundred in bulk. Maines are quoted at \$1.90 per 150 pound sack delivered or \$1.10 per cwt. in bulk. There is a decidedly better feeling down on the eastern end of Long Island. North side growers are getting 65 to 70c a bushel for bright clean stock, while those on the South side are getting 75c.

Reports are current that the damage from rot up-State is very heavy. In fact there is considerable complaint from New York City receivers. Rot is very evident in many receipts. Maine is coming in for some criticism also, frost damage being evident in many cars.

Extreme care in grading is about the only salvation a potato grower has with a market such as exists at the present time. Bright, clean, well-graded smooth stock will get some consideration, but ordinary stuff is dragging badly. In a recent issue of the New York Paeker, Maine potato growers are reported to be looking to the election of President Coolidge to bring about relief in the potato market. President Coolidge and no other mortal can help the potato situation when the national crop is the largest in the history of the country. Reports from the Department of Agricultural

## When the Radio Markets will be Broadcast

THE "American Agriculturist" radio market reports, broadcast through the cooperation of the New York State Department of Farms and Markets, have been put on a definite noon-day schedule for Tuesday, Wednesday and Thursday. The only possibility of any fluctuation from this schedule is on Wednesday when the reports may be delayed a few minutes. However, the reports on the other days will be on this definite schedule. Farmers will find it to their advantage to listen in on these reports to get the daily fluctuation of prices. At this time of the year radio reports will undoubtedly be of particular value to shippers of eggs, potatoes and fruits.

be an advance. This has been reflected in an immediate manner in our Eastern markets by an increase in prices. The demand is supporting the increase in price. Fancy to special whole milk State flats, held are now bringing from 22c to 22½c with average run held goods bringing 20c to 21½c. Fancy fresh whole milk State flats are bringing from 20½c to 21½c, while average runs are fairly strong at 20 with undergrades bringing 18c to 19c.

## FANCY EGGS SCARCE

The scarcity of fancy eggs is becoming more acute every day, especially fancy fresh stock for the best carton trade. There is considerable competition in the market to obtain sufficient stores to supply the trade needs with the result that indications are we will see further advances in price during the next week. The supply of mediums and pullet eggs is reported on the increase, which means that it is doubtful if we will see any increase in that grade of stock. The active situation exists where fancy marks are involved.

Prices are as follows: closely selected extras, Jersey and other nearby whites, 81 to 86c, average extras 77 to 80c and extra firsts 71 to 76c; firsts 62 to 70c. Nearby gathered whites of the better grades, first to extra firsts, 62 to 73c, nearby undergrades whites 52 to 60c. Pullets 62 to 58c.

According to the Bureau of Agricultural Economics of the U. S. Department of Agriculture, storage stocks on November 1, totaled 5,295,000 cases compared with 6,645,000 cases at the same time in 1923.

## LIVE POULTRY MARKET BETTER

The live poultry market has shown a decided improvement over a week ago not only in activity but in price. Fancy colored express fowls have been meeting active trade all during the week and the same can be said of fancy express chickens. Fancy colored fowls are now bringing from 29c to 30c with average marks from 23c to 28c. The best Leghorns can not do any better than 22c, while average run Leghorns are from 2c to 3c lower. Fancy colored chickens of medium weight are about the same price as fowls, ranging from 28c to 30c. Heavy chickens are not quite as much in demand and as a consequence are bringing only 26c to 27c. Chickens of broiler size are meeting a much better market and prices are now from 35c to 40c. Long Island spring ducks are quoted at 29c, with breeders at 25c. Other nearby ducks coming in via express are quoted anywhere from 22c to 26c. Express turkeys are meeting a range of 32c to 40c, depending on quality. Geese are only worth 12c.

## POTATO PRICES NO BETTER

Potato prices are no better than they have been since our last report. Arrivals are too heavy right now to permit an advance in

Economics show that the potato crop exceeds all previous records and the New York State crop is the second largest in the history of the State. With those facts facing us, it seems ridiculous to call upon one man to change the situation.

## BEANS STILL DULL

The bean market is very dull and trading is lifeless. Advices and business trend seem to indicate that prices have a tendency to become a little easier. Marrows are quoted at \$11 per hundred for real choice stock. Pea beans are being offered freely at \$6.25 for choice marks. Red kidneys are selling mostly at \$9.25, which is about the top price for fancy. White kidneys are from \$1.25 to \$1.50 better than Reds. Yellow Eyes vary from \$6.75 to \$7. The weather is undoubtedly responsible for much of this lack of activity.

## HAY STAYS THE SAME

Prices are about the same on hay as they have been for the past few weeks. Trading is more or less quiet and receipts are fully ample to take care of the demands. Shipping hay has been scarce. There seems to be a little more No. 3 on the market than will be early taken care of. No. 1 timothy is quoted at \$27 with \$1 less for small bales; No. 2 from \$23 to \$26, depending on size of bales. Rye straw is weak.

## Importance of Local Units

(Continued from page 352)

that while in some years and on some varieties they may take losses that if any profits are to be made by anybody they will make them also. They like the feeling that they don't have to worry about selling their fruit or even packing it, but that they have facilities of their own and a certain market for their fruit. The system is generally satisfactory. It needs to operate more efficiently in order that the grower may get the full results.

## Farm Taxes Must Come Down

(Continued from page 355)

ing up on his representatives and at least some small chance of knowing how and why his money was spent.

AMERICAN AGRICULTURIST, with your approval, will stand for the utmost publicity of all tax expenditures.

SIXTH: This part of our program deals with the class of property which largely escapes taxation; that is, personal property. No system of taxation is fair which gets all of the real estate

because it cannot be hidden, and misses such a large proportion of the personal property because it can be concealed. An equitable adjustment of this injustice would greatly relieve the farmer taxpayer. We will have more to say about this later.

A tax on gasoline sales and billboards along the State highways also enter into our program and these will receive additional attention and discussion in future issues.

Now these fundamental principles make up our tax program. We beseech you again to study them, disagree if you wish, but in any case, either approve the whole program as outlined so that we know we have your support, or make any suggested changes. But anyway, let us hear from our great army of readers so that we may have your organized help for accomplishing something on what is perhaps the most serious problem before the American people.

## Farm Federation for Tax Reduction

(Continued from page 358)

kindergarten through the four years of high school. Second, there should be an increase of state aid to rural schools, and such aid should be distributed under a plan that will equalize taxation in the local units of administration, and encourage localities to establish courses of study, and to conduct desirable school activities in addition to those required to meet minimum standards. Third, that no consolidation of school districts shall occur, except on majority vote of the qualified voters in each district affected."

The delegates were divided in opinion on a resolution opposing the proposed amendment to the constitution to make possible further federal regulation of child labor but as those opposing were in the minority the resolution went through.

Enos Lee of Yorktown Heights, N. Y., was re-elected president. Other officers elected were: Peter G. Ten Eyck, Albany first vice-president; E. V. Titus, Glen Cove, L. I., second vice-president; R. M. Thompson, Heuvelton, treasurer. G. W. Young of Broome County was elected director for four years. Mr. Lee and Mr. Ten Eyck were selected as delegates to attend the annual meeting of the American Farm Bureau Federation in Chicago; alternates chosen were Henry Burden, Cazenovia, and E. R. Lupton of Mattituck, L. I.

The biggest opportunity of the year. Must be settled at once. E. J. Steward, Ravena, N. Y.

# Fancy Turkeys Pay

*Folks Will Pay the Price for Good Stock*

IT may not be a well-known fact, but turkeys mature and fatten far more rapidly in autumn when the atmosphere is crisp and fairly cold, such as usually prevails a few weeks prior to Thanksgiving and Christmas. During these holiday seasons such birds are greatly in demand. Warm weather during the week preceding the Thanksgiving and Christmas holidays has a marked effect on the demand, and other conditions being equal, the quality of dressed turkeys for the holiday market may be predicted to a great degree by weather conditions.

It is very difficult to ship turkeys alive to market, since the shrinkage is very heavy; that is, when shipped to a distant market. Ordinarily turkeys do not consume much food when confined, therefore, they are usually killed and dressed (which I have always found the best plan), then shipped to market, packed in barrels or boxes.

Turkeys, like chickens, may be either scalded or dry-picked, but the dry-picked birds are preferred, because they keep better and there is no loss of their substance by means of a great deal of the soluble substance being removed by soaking in water, or by packing in ice. There are conditions, of course, where there is no alternative but to pack the birds in ice and ship in barrels. The objection to scalded-dressed turkeys does not obtain to the extent where the birds are dressed and sold immediately to the consumer.

### Our Best Holiday Friend

Thanksgiving and Christmas is only one-half observed when the turkey is absent from the dinner meal, with its highly flavored cloud of steam and sundry tantalizing odors trailing in its wake. The turkey is first in the hearts of his countrymen during the holiday season. However, not every turkey is fit for a king or a feast, as a turkey is only a turkey, when it is in proper condition and then, properly cooked. Some people will buy turkeys at any cost and in any condition, just so they are getting our

feathered friends. A turkey seems to be all they are after and often, oh, such a turkey!

None of your old, poor, thin, bony variety for me, if you please, but the very best that money can buy or can be had, the one that is well-fattened, yellow, of a sweet, fresh odor, dry-picked, and presenting an attractive appearance. For the possession of such a turkey the dealers will strive, and the man or woman will often go to the very bottom of his or her purse. I have always noticed that a fat, neatly dressed turkey will bring from 8 to 10 cents more per pound than a poor, shabby, dirty looking one.

### Good Stock Costs More to Raise

Now, if such quality birds are so much in demand and command such extremely high prices, what is the cost of producing such, over that of the ordinary or common grades? If you will only consider for a moment, you will see that it is very little when compared to the gain thereby. I find that the one secret is simply a little better feeding, say one good feed a day of a ration composed of whole corn, wheat and oats mixed. This feed is only required two or three weeks prior to marketing to put them in the best possible condition for marketing. I say one good feed a day because the turkey is a great forager, thus securing all that is necessary the balance of the day. It also requires a little more care or painstaking when dressing and preparing for shipping. All of the above used together will make the difference in value equal to several times the slight increase in time, labor and expense required.

### The Whole Secret of Marketing

I have always advocated, if we are going to raise anything, why not raise the best, and put it in the best possible shape before marketing. Right here is where the profit or loss comes in raising poultry of any kind and not only poultry, but anything else for marketing.—W. H. HARRISON.

## "How Doth the Busy Little Bee"

(Continued from page 357)

If the food experts recommended honey (and you may check me up on this by referring to any modern text on foods and diet) what are their reasons? The fact that honey is a predigested food has already been mentioned. This property makes it a safe sweet for young and old, for those whose digestive systems have already broken down and for those whose digestive systems as yet have not.

It is recommended because it is a natural food that has not been robbed of its vitamin or mineral content by a so-called "refining" or "purifying" process. It is significant that the death rate from sugar diabetes in the United States has kept an evenly increased pace with the increase in the enormous per capita consumption of granulated sugar. It is also significant that the public is adopting one after another nationally advertised dentifrices that strangely enough are sweetened with the very substance that causes a great deal of our tooth trouble—granulated sugar. Honey not only has its appetite for minerals satisfied but compared to other foods in its class supplies the body with an abundance of minerals, notably iron, so essential for red blood corpuscles, and calcium and phosphorus, needed for bone and brain.

### Some Other Properties of Honey

Honey is also slightly laxative. Old folks and young folks and folks who sit all day in chairs could cultivate with profit to their health the habit of finishing up breakfast with toast and honey or beginning it with grapefruit or any fresh fruit sweetened with honey.

Honey is antiseptic. Fear not that it harbors a culture of germs. Bacteria and

moulds will not grow in it and if kept in a dry warm place it will keep indefinitely.

Honey is deliquescent, i.e., it can absorb moisture from the air. Combined with its antiseptic property it keeps bread, cakes and cookies made with it fresh for months. For your holiday fruit cake which you may want to enjoy for a long time, in making your icing use ¼ cup of honey to each cup of granulated sugar. Your icing will stay soft and fresh till the cake has been consumed.

This and forty-nine other recipes are contained in a U. S. Department of Agriculture Bulletin entitled "Honey and its Uses in the Home" which we shall be glad to send to anyone free of charge. Address your request to the speaker at the College of Agriculture, Cornell University, Ithaca, N. Y.

### Honey Not Adulterated Easily

The constituent factors of honey that have been discussed, together with its unequalled deliciousness should be sufficient reason to make it a very popular food. I suspect from my contact with the public that there are still those people who think much honey is adulterated. This cannot be, however, for comb honey has positively never been manufactured and the adulteration of extracted honey is too easily detected by our food inspectors even if the public could thus be fooled. The price of honey in the little glass containers it is often found in, to be sure, a hindrance to its increased consumption, but when larger quantities are wanted effort should be made to get directly in touch with the producer through whom a saving of one-third to one-half may usually be effected.

# PAN-A-CE-A

## starts both pullets and moulted hens to laying

ARE YOUR moulted hens back on the egg job?

Are your pullets laying?

Is their feed going to flesh or eggs—which?

What you want is to start the feed the egg way.

Do it with Dr. Hess Poultry Pan-a-ce-a.

Pan-a-ce-a is a tonic that puts the dormant egg organs to work.

That's when you get the eggs.

Add Pan-a-ce-a to the ration once a day and your hens will give a good account of themselves in the egg basket.

### Costs Little to Use Pan-a-ce-a

The price of just one egg pays for all the Pan-a-ce-a a hen will eat in six months.

There's a right-size package for every flock.

100 hens the 12-lb. pkg.

60 hens the 5-lb. pkg.

200 hens the 25-lb. pail

500 hens the 100-lb. drum

For 25 hens there is a smaller package

REMEMBER—When you buy any Dr. Hess product, our responsibility does not end until you are satisfied that your investment is a profitable one. Otherwise, return the empty container to your dealer and get your money back.

DR. HESS & CLARK, Inc., Ashland, Ohio

## CHAPTER VIII

"WELL, you're doing pretty well keeping me entertained," said Jim to Bill Mead as they were coming down from the now empty wild man's stand. "Where do we go now? Got any more such friends as Brother Harkness around here?"

"Time for the ball game. Let's go over," said Bill.

So the two men crossed the track and approached the crowd already gathered around the ball diamond.

As Jim crowded through between two cars parked as closely as possible to the roped-off diamond, he glanced idly at one of the automobiles—and then wished he had picked out some other place to get through the line, for the car was Bradley's fivver, and in it sat Dorothy Ball.

In as casual a voice as he could muster, Jim said:

"Hello, Dorothy. Having a good time?"

Dorothy took one glance at the speaker, and without replying turned away her head.

"Well, I'll be hornswoggled!" said Bill, looking curiously at his companion.

But Jim made no comment, and the two crowded under the ropes and crossed to the other side of the diamond where they could get a good view of the game.

There was delay in calling the game. It seemed that Speedtown had pinned its faith and some of its money on young Greene, but early that morning he had sprained his ankle, so that he was now out of consideration.

Jim was too much preoccupied to pay much attention to the conversation, but Bill gathered from the talk around him that Speedtown was put to it to find a substitute for Greene. Greene's injury left only Tom Lynch, who was a fairly good pitcher, but he was so young his judgment was not always to be relied upon. The home fans were sorry to have to depend upon him for this important game.

THE crowd had concluded that perhaps Speedtown had sent a hurried call for a special out-of-town pitcher for the day, and that waiting for him had caused the delay.

However, when Archie Van Norman, who was lame, but in spite of his lameness was the best umpire in that section, limped into the diamond and opened the game with a gruff "Play ball!" he handed the shiny new ball to young Lynch.

Tom Lynch took it from Archie, watched his catcher for the signal, dug in his toes, wound himself up, suddenly straightened out and released the ball. For a split second, the crowd held its breath while the Richland batter fanned the air. Then Archie held up a single finger.

"Strike!" he said.

Speedtown fans raised a great cheer. "Atta boy, Tom," they yelled, "atta boy!"

"Just show 'im a little greased lightning'."

"He missed it by a yard, Tom."

"He's gone to sleep on duty!"

"Give 'im another hot one, Lynch!"

The Richland rooters were just as free with their advice to their batter.

"It only takes one to hit it!"

"Put it over the fence!"

"Pound the leather off'n 'er, Al."

But Al could not find it. Three times in succession he fanned the air with grunts that made even his own friends smile when the lightning went by, and then ingloriously released his club to his successor.

But the new man had no better luck.

RICHLAND'S third batter "popped" a light fly too short, and Richland retired from the field without seeing first base. But in spite of the advice and the both prayerful and swearful encouragement of the home rooters, the Richland battery fanned every one of the Speed-

town batters and the first inning ended with even honors, as did all that followed, up to the sixth. There were no scores and few errors, with no hits on either side.

In his excitement after one of the particularly good plays, Bill Mead jumped up from his seat on the ground in front of the line, and with tobacco juice running down from each corner of his mouth, he ran back and forth shouting and waving his arms. This shut off the view of those behind him, and the crowd began to object. Finally, one of them was so loudly vociferous of his opinions of Bill that he attracted Mead's attention.

"Set down and shut up, you big lunkhead!" he shouted.

"Shut up yourself, you big hunk of cheese!" Bill retorted.

At that, the man ducked under the ropes and came for Bill, who met him on the way and in a half a minute they were tearing up the sod in a very earnest endeavor to break each other's nose. In a short time the fans lost interest in the ball game and began to mill and crowd around the fighting men. The players left their posts and came running across the field to see the scrap.

THERE is only one thing that interests a crowd of American men more than a dog fight, and that is a man fight.

But it only lasted a few minutes. Old Jerry Snaggs saw the commotion, came running down the field flourishing his club and shouting. The crowd opened, letting him through, then closed again. The old fellow waded into the fighters with his stick so vigorously that they gave way before him and finally broke loose.

Turning a belligerent eye on poor Bill, the officer said:

"Twice in the same day is twice too many. Come with me!"

Taking the hired man, he led him back through the crowd out to the fair grounds gate and said to him as a parting shot:

"Now you go on home, milk your cows, and stay there. The only reason I ain't puttin' you in jail is that they ain't none on the grounds!"

Bill glared at the officer a moment and then he grinned.

"Oh, go to h—!" he said. "I told you I'd get my dollar's worth when you made me buy that there family ticket, and I guess I did all right. If you'd let me alone another hour, I'd have busted up your danged old fair!"

Then Bill trudged off up the road, back to a hired man's daily grind.

(Continued next week)

## Developing the Rural Community

(Continued from page 357)

the future. I have of course assumed that it will have as its basis a people of sturdy virtue and that strong religious faith that has always characterized those who live nearest to nature and to nature's God, and that there will also be the two other fundamental prerequisites of education and home-ownership, without which no enduring civilization can be built up. It is on these broad foundations that Denmark has built her new rural civilization, as everybody there assured me, and so it must be here. The importance of education I need not argue; and as for home-ownership, I would only repeat Dr. Carver's declaration that next to war, pestilence, and famine, nothing is so ruinous to a rural commonwealth as absentee landlordism. When Goldsmith could say of what had been his "sweet smiling" rural village or community—

"One only master grasps the whole domain" the doom of that hauntingly beautiful bit of English rural life was forever sealed.

But when we have the prerequisites of character, education, and home-ownership, the development of such facilities for rural organization as I have pointed out should insure sooner or later the Rural Community and with it a new and brighter era in American country life.

WM. LOUDEN  
holds the first patent  
ever issued by the  
U. S. Government on  
a Manure Carrier.

## The Meanest Farm Job Made Easy

Cleaning out the barn! How you would like to cut out that back-breaking job! You can. Install a Louden Manure Carrier. No more heavy lifting and shoving of wheel-barrow load after wheel-barrow load out onto the manure pile, for the Louden takes the equal of 5 wheel-barrow loads at one trip—takes it clean without dripping and scattering.

And while this big, easy-lifting, easy-running manure carrier is taking the dull monotony and hard work out of barn cleaning it is saving half the time.

### Easy to Install in Any Barn

Whether your barn is new or old you can install a Louden Manure Carrier and use it to profitable advantage. It is one of the biggest time savers you can put on the place. And, because it takes the meanness out of barn cleaning, you have less trouble keeping the hired help or your boys on the farm.

All corners of the Louden Manure Carrier tub are soldered—water tight. Ends and sides are welded to the steel frame—not riveted. Load is suspended squarely under track—no side buckle. These are but a few of the reasons why so many Louden Carriers are still giving daily satisfactory service after 20 years or more of hard usage.

Write today for full details with illustrations on this famous Louden Manure Carrier. No obligation at all. Check the coupon now.

# The Fine Old Art of Quilting

*Mrs. J. Leland Fowler Tells How She Classified Pattern Squares*

**M**ANY years of searching and clipping had resulted in the acquisition of a generous collection of paper patterns which always succeeded in becoming well-scattered through my pattern drawer.

At last in disgust at the litter, I sorted the quilt patterns into two piles, selecting them according to the number of pieces in each. Those containing the most pieces were drafted into cutting patterns eighteen inches square, while those containing a lesser number made blocks twelve inches square.

One block was then made like each pattern and enough of these were set together with three-inch stripes of turkey-red cotton cloth to form a convenient-sized quilt. The result was an odd and attractive quilt and a convenient method of conserving my designs. I have four of the quilts, each containing different designs, many of them original.

## Many Are Familiar Patterns

I will not attempt to name them, as I find that different communities know the old patterns under different names. Some of my own designing I have named while others are still without a proper cognomen. I have numbered these blocks, beginning with one at the upper left hand corner.

To cut a pattern from a small picture I fold a paper of the size desired, cross way, then fold it in the opposite direction, thus dividing it into four

six-inch squares for each block divided like the one in the upper left hand corner.

Then with a rule I sub-divide each square into the desired sizes and shapes and cut out each piece for my pattern. When cutting the goods I allow one-fourth of an inch for seams all around. For blocks divided like the one in the lower left hand corner I divide my square into thirds each way, making four-inch squares for a twelve-inch block. Some of the blocks must be formed with the

dividers and you may have to have the assistance of hubby or one of the children who has studied geometrical drawing, but many patterns can be easily fashioned with the lowly twelve-inch rule.

## Keep a Piece Box Going

In making quilts or comforts I always use the scraps which are left from my regular sewing, but if one prefers a quilt with a less-variable assortment of colors or has not accumulated enough scraps they might purchase some of the less-expensive calicoes or gingham and have the quilt of two or more contrasting shades.

With a careful choice of colors one can easily develop a covering that is fit to grace the finest sleeping couch and yet use only waste material.

Often you will find some busy mother who has a generous collection of scraps which she would gladly have made up on shares, and if you live near a dress or other clothes factory you can purchase for a song waste material which can be used to good advantage.

If you have time to make more quilts than you need for your own use, it is usually easy to find a market for them and you will find the work pleasant and profitable. Of course when making them for sale you should make all the blocks of one design, unless you are making to order.

Mrs. Fowler will furnish patterns of her quilt squares at 15c per square. Order through American Agriculturist, 461-4th Avenue, N. Y. C. Give letter and number to indicate horizontal and vertical stripes.

You Can Get Square Patterns If You Wish

## Holiday Cookery

*The Most Toothsome Viands in the World Grace Our Tables This Time of Year*

By GABRIELLE E. FORBUSH

**P**IES, fruit cake, roast fowl, creamy soups, spicy pickles, sugared sweet potatoes, tart cranberry, rich puddings—Thanksgiving, Christmas and New Year's are three festival occasions which tradition demands should be welcomed by groaning boards loaded with such tempting edibles. American holiday cookery has developed into something decidedly unique, and delicious are the viands which will overflow our larders during the coming weeks.

The backbone of a typical American holiday dinner is roast fowl, and the turkey is the national bird for part of the year at least. But there are other appetizing possibilities for this course and high in the list stands roast goose. Here is the good old-fashioned way of cooking it:

### Roast Goose

Remove the internal parts, reserving the liver, the heart and the stomach for later use. Wash the goose with cold water, both inside and out, and wipe it dry.

Prepare the dressing by soaking several slices of stale bread (preferably wheat) in water. When the bread is thoroughly moistened, squeeze any remaining liquid out and place the bread in a mixing-bowl. Take the liver, a small onion, one peeled apple and a piece of cold pork chop (if you have it). Run these ingredients through your food-chopper and place in the mixing-bowl with the bread. Add salt and pepper to suit taste, and just a pinch of thyme. Mix well and add two eggs, well-beaten.

Place the dressing in a buttered saucepan and hold over the flame for a few moments in order to heat the mixture thoroughly before placing it in the goose.

When it is thoroughly warmed, fill the goose and sew it up. Place the bird in a roasting-pan. In the bottom of this roasting-pan should be a small amount of water into which just a little salt has been added. Be sure to put no salt on the goose. Now place the pan in the oven, making certain the oven is very hot.

While the goose roasts, boil the heart and stomach in two cups of water and a pinch of salt.

When the goose is in the oven for half an hour, turn it over on the other side, remove any escaping fat from roasting pan and baste with liquid made by boiling heart and stomach. This makes the goose more digestible and certainly more tasty.

Every half hour repeat this process. When the goose has been in the oven one hour, turn down the heat a few degrees.

Two hours should be sufficient to roast a young goose.

Nuts are abundant and usually grace the fall table uncooked. But the native chestnut, as well as the large imported one, lends itself to several sorts of cooked dishes. Perhaps its most familiar form is as stuffing for the turkey. Make it as follows:

### Chestnut Stuffing

4 cupfuls chestnuts  
½ cupful butter  
1 teaspoonful salt

¼ teaspoonful pepper  
4 tablespoonfuls cream  
1 cupful cracker crumbs

Shell and blanch the chestnuts by cutting a half-inch gash on the flat sides and putting into a frying pan, allowing 2 teaspoonfuls of butter. Shake over the stove until the butter is melted. Put in the oven and let stand 5 minutes. Remove from the oven and take off the shells with a small knife. The shelling and blanching are accomplished at the same time. Cook the chestnuts in salted boiling water until tender. Drain, mash, add the butter, salt, pepper, cream and cracker crumbs and mix thoroughly.

People often used to serve both turkey and ham, but those lavish days are passing. Still, a baked ham is most acceptable in place of fowl, and baked in sweet cider it has a most delicious flavor. Prepare it as follows:

### Ham Baked in Cider

Scrape the ham with the dull edge of a knife and wash thoroughly in hot water, using a brush if one is available. Soak it in cold water overnight. Rinse carefully in the morning and place on the

stove in a large kettle with sufficient fresh water to cover. Bring slowly to the boiling point, skimming off the scum as it appears. Then add 6 whole cloves, 6 allspice berries and 1 small red peppercorn. Simmer, but do not boil rapidly, until the ham is so tender that it may be pierced with a fork. Keep the ham covered with water all the time. When tender, remove the kettle from the stove and let the ham cool in the liquor. Then drain it and trim off the surplus fat, the skin and all uneven pieces. Pour 1½ quarts of sweet cider over the ham and let it soak in this eight hours or overnight. Wipe dry, stick in whole cloves to make a pattern, brush lightly with beaten egg and sprinkle generously with a mixture made by combining equal parts of brown sugar and bread crumbs. Place the ham in a baking pan, pour cider about it and bake in a slow oven until it is neatly browned. This takes from 1 to 2 hours, depending on the size of the ham. Baste frequently with the cider during the baking.

### Not Forgetting Dessert

Now for desserts! Pumpkin and mince pie, steamed pudding, fruit cake, fig pudding with lemon sauce are all holiday delicacies.

Standard recipes for pumpkin and mince pie are given here. Almost every housewife has her own private variations of these popular favorites, but with these you cannot go wrong.

### Pumpkin Pie

2 cupfuls stewed pumpkin  
1 egg  
1 cupful milk  
1 tablespoonful flour

2 tablespoonfuls sugar  
½ teaspoonful ginger  
½ teaspoonful cinnamon  
¼ teaspoonful salt

Combine the ingredients, beating the egg well, and pour in a pie lined with pastry. If a brown crust is desired on top of the pumpkin mixture, pour 5 teaspoonfuls of cold milk on top of the pie before setting it in the oven. This milk will brown. Have the oven rather hot at first to set the crust before any of the pumpkin filling can

## Let's Have a Christmas Pageant

*A New Way of Presenting the Familiar Christmas Story*

By MRS. E. B. TERBUSH

WITH every Christmas or Easter time, there arises the question, "What sort of entertainment shall we have?" and thereupon the superintendent of the Sunday-school appoints some unfortunates to act as a committee, to make plans, select pieces for the youngsters, and keep everybody happy as well as entertained. In a small rural community this is a real problem.

Last year, in our community, the time for another Christmas program had rolled round. The Sunday-school superintendent was sending out "feelers" to locate his committee. It seemed to the committee that there couldn't be found a single Christmas piece or exercise that hadn't been used before. And there were more children than ever!

In the mind of one of the committee had been forming the outline for a Christmas Pageant. This took definite shape and after some discussion was adopted by the committee. It proved an entertainment that was different—at least for our community—included a goodly number of people, both the children and grown-ups, and required a minimum amount of practice, an important item for consideration in the country during the winter months.

It was a simple pageant, portraying the Christmas story by song and verse. We used for the music a piano and a small chorus of six women's voices, all that could well be spared from the pageant. Different communities

should be guided by their resources in the line of singers and musicians. A violin with the piano always makes the music far more effective.

An outline of the pageant is given later and the episodes may of course be adapted to local wishes. It opened with the march of eight bell-ringers, young women in white robes carrying red paper bells. They took their station in the choir loft behind the stage.

The episodes, as well as each entrance, were heralded by a reader, who gave the Bible story. At the opening of the first episode the full lights were turned off, the only light coming from a huge yellow star above the stage. The stage was set for the shepherds, their vision and the entrance of the angel. With their rough garbs and crooks the shepherds entered to the song, "While shepherds watched their flocks by night." The second episode disclosed the manger with Mary and Joseph beside it, while three stately Wise Men came to pay their homage. Lastly came old Simeon, one of our farmer folk, with gray hair, bent over and walking with a stick.

The third episode introduced a different phase. The lights were turned on full, and an aged couple, a young couple, and the smallest children offered their gifts. When all were on the platform, the congregation rose and joined in the grand finale, "Oh, come all ye faithful!"

It was a simple pageant, easily put on, and impressive. The thing that was best about it was the splendid cooperation of all the folks. Everybody seemed to get into the spirit of the thing. One angelic husband fashioned the star and the camp-

fire, lit by an electric light covered with red paper; another made the crooks; others provided the shepherds' dresses, which the women made up. Everybody helped. Forty-five people took part.

Of course there were some rather upsetting things. Chicken-pox was visiting the youngsters, and every practice found new ones succumbed while others, who had passed through the siege, filled up the depleted ranks. At the last moment one of the wise men developed a "crick" in his back and another had to be hastily secured. But

### The Experience of One Community Passed On to Others

MRS. E. B. TERBUSH is known to women readers of the *American Agriculturist* by occasional pointed, helpful articles on household problems. It is not generally known, perhaps, that she comes by her writing ability naturally, for she is the daughter of our own Jared Van Wagenen, Jr., whose philosophy and humor have won him warm friends among men and women readers alike.

This account of a Christmas pageant in which Mrs. Terbush herself participated may furnish suggestions for other small communities which do not wish anything expensive or difficult, but are looking for something a little unusual. It uses familiar music, has easy costuming and lighting and presents the Christmas story, old yet ever new, in a reverent and beautiful dramatic form. Two or three weeks of semi-weekly rehearsals would be sufficient time to prepare it.

such things are all in the day's work. The important thing was that, though everything was not perfect, everybody went into it with a zest, and the audience seemed to enjoy it.

THE PAGEANT: GIFTS FOR THE KING  
(*Music may come from chorus or quartette, or the participants may do the singing.*)

I. PROLOGUE. Use full lights with exception of star through Prologue.

A. Bell-Ringers (6 or more) enter from back of auditorium at beginning of second verse of song, "Oh, Little Town of Bethlehem!" by chorus. March up side aisles and take places in choir loft, or at back of stage on raised platform, if possible.

B. Reader enters from side. Reads prophecies of Christ's birth, found in Malachi 3:1; Gen. 3:15; Ps. 89:20; Isaiah 2:2, 28:16, 23:1, 35:4; Micah 4:1; Ps. 116:4. Other references may be used if desired. Reader exits.

II. EPISODE 1. Only light comes from big star, which is hung above center of stage. Shows stage set with camp-fire at left.

A. Reader enters. Reads from Luke 2:8, 9. Exits.

B. Shepherds (4 to 6 in number) enter from left side of stage and take reclining positions around camp-fire. While in this position chorus sings, "While Shepherds Kept Their Watch by Night."

C. Angel comes slowly up right aisle at beginning of second verse and after taking her

position at right of stage, speaks to shepherds from Luke 2:10-12. When finished, withdraws to right and remains there throughout.

D. As angel speaks, shepherds start up and turn toward her as if to follow. When angel has finished, voices chant, "Glory to God in the Highest and on earth, peace, good-will towards men."

(*Music while stage scenery is again shifted.*)

III. EPISODE 2. Use starlight throughout episode.

A. Stage set with manger in center. While one verse of "Holy Night" is played very softly Mary and Joseph enter, and take positions at left side of manger, Mary kneeling at the head and Joseph standing at foot, looking at Babe.

B. Reader enters and reads from Luke 2:15-20. Exits.

C. Shepherds come from back of auditorium up side aisles to march music, and kneel around Babe while chorus sings, "Holy Night." At conclusion of song, Shepherds withdraw to right of stage.

D. Reader enters and reads Matt. 2:1-12, and exits.

E. Three Wise Men bearing gifts, enter slowly from back of auditorium up right aisles, while Chorus sings, "We Three Kings of Orient Are." They kneel around manger and

each presents his gift while verses are being sung. (If preferred, Wise Men may sing the hymn themselves.) During last verse they withdraw to left of stage.

F. Reader enters and reads, Luke 2:25-28. Exits.

G. Simeon enters from back of auditorium to slow music up right aisle. He kneels at head of manger while voices chant the "Nunc Dimittus." At end of chant Simeon withdraws to right of stage.

(*No scene-shifting necessary at end of this Episode. Participants keep positions for next.*)

IV. EPISODE 3. Use full lights with star.

A. Reader enters and says, "As the men of olden times gave gifts to the Christ Child, so we of to-day give gifts to our King."

B. Old couple comes up right aisle very slowly to music. They bow before the manger and the man repeats the verse, "The time of my departure is at hand. I have fought a good fight, I have finished my course, I have kept the faith. Henceforth there is laid up for me a crown of righteousness, which the Lord the righteous Judge shall give me at that day, and not to me only, but unto all them that love his appearing." (Couple withdraws to right.)

C. Maid and youth enter from back briskly up right to inspiring music and stand at manger—man steps forward and consecrates service and money. "We conse-

### They Will Be Judged as Women

**H**UNDREDS of offices were filled by the voters this year. Four elections are of special interest to women—to the whole country indeed. For the United States now has two women Governors, a woman in the House of Representatives and a woman Secretary of State.

New York is one of the progressive states, for it elected Mrs. Florence Knapp, dean of the college of Economics at Syracuse, to serve with Governor Smith in Albany. The most satisfactory thing about these elections is that the women ran on their own merits, with no special organization to push them *as women*. They were recognized as able citizens, and their principles and character endorsed by the general vote they received.

Mrs. Miriam A. Ferguson, because of the somewhat sensational features of the Texas situation, attracted the most attention during pre-election days. She fought on an out-and-out anti-Klan issue and carried a southern state triumphantly. She is described as a sensible, efficient woman and has declared herself to be independent of any influence in shaping her policies as Governor. Mrs. Nellie T. Ross of Wyoming—one of the first States to recognize woman's suffrage—is said to be the finest type of western woman, only a generation or so removed from the pioneers who knew no sex distinction in the hard labor of opening up a new and unfamiliar country. New Jersey has the distinction of being the first eastern state to send a woman—Mrs. Mary Hopkins Norton—to the House of Representatives.

Of all the officers-elect, Mrs. Knapp is probably most interesting to AMERICAN AGRICULTURIST readers. When interviewed in her demonstration kitchen at the Home Economics School, she spoke simply and directly of her political principles. Cooperation with her associates and a watchful eye to women's interests in legislation were her main "planks." She was quoted as saying that with straight-thinking many of the States' problems could be solved and added, "I don't see why I can't conduct the affairs of state much on the plan of a giant school."

It is unfortunate that the strong light of publicity will beat with special intensity upon these women, for that means that their actions down to the most insignificant detail will be published and criticized by the whole country. If they succeed, feminine equality will be judged successful. If they fail, it will be imputed to them as women, not as individuals. They take office

under conditions of peculiar difficulty and the good wishes of east, west and south—for the three great sections of the country are all represented—go with them as they shoulder their new responsibility.

### Who Has the Answer?

**T**HE other day we were poking a little fun at a friend because he was nearing thirty and had not yet married. He laughed a little, and then becoming serious, said:

"Do you really want to know the chief reason why I do not marry?"

We answered him that it really was none of our business, but perhaps if he would answer for himself, the reply would be good for the thousands of other young people who seemed to be hesitating in these times to put on the double harness.

"Well," he said, "I will answer your question like a Yankee, by asking you a couple. How many are there in your family?"

We told him that there were six, including Mrs. Eastman and myself.

"Well," he said, "that should be a good average size for an American family. How much milk do you buy, and what does it cost?"

We answered that we averaged about five quarts a day, and at present were paying fifteen cents a quart.

"Seventy-five cents a day for milk alone!" was his comment. "That's more clear profit than the average dairyman makes from his whole dairy. How many potatoes do you eat in a year?"

"Oh, twenty or twenty-five bushels."

"And the price?"

"We are paying at present one dollar and a half a bushel, in spite of the fact that the farmer is glad to take about forty cents for them now."

"And everything else you buy in the way of food or shelter or clothing comes at the same high prices?"

We admitted that they did.

"Well," he said, "you have answered your own question. Under present conditions, there is a lot of us young fellows who simply do not dare to get married because it's too expensive a luxury."

Then we changed the subject, but it still stuck in our minds. We do not believe in crying "calamity!" all of the time, but something certainly is radically wrong in our present economic system when both farmers and consumers have so much difficulty in making both ends meet. A fair salary in the city does not amount to anything at all because none of it can be saved; and the hard work and the most careful management in the country brings little or no reward.

Discussing this situation with a farmer friend recently, he said that most of the trouble was due to too high-priced labor and then he went on to prove his statement by showing that every food product had to be handled several times under our present system before it reached the consumer and every time it is handled, the labor cost adds to it almost or as much as the price that the farmer receives for it in the first place.

But on the other hand, unless the laborer gets high prices for his work, he simply cannot buy the high-priced food. So we have a vicious cycle. Whether we live in town or country, what we are most in need of to-day is a great genius who can come forward with a workable plan which will really solve this most serious problem of food distribution.

### Consumer Cooperation

**T**HE great problem of production is not too much food, but too much in the same place at the same time; in other words, the glutted market. Inasmuch as the consumer suffers just as much from too high prices for food as the producer suffers from too low, we have wondered why more of an effort has not been made by consumers toward getting their supplies at more reasonable prices. The problem of marketing is only half solved by good farmer marketing organizations. To do the job right, the farmer needs to be met half way by the consumer cooperation.

For instance, suppose there was an over-supply of potatoes or apples or any other commodity, in some city, if there was a good consumer's co-operative there with a secretary or manager who understood markets, he could inform his members of this over-supply and of the lower prices, and save them much in the course of the year. He could also do a lot in helping his members to a better knowledge of quality, grades and prices. And all of it could be done through a very simple informal organization, for about all that is necessary is to hire a manager who had a good understanding of market conditions.

The city-dwellers of Europe have realized the possibilities of consumers' cooperatives and are working them out much faster and better than we here in America.

### The Effect of the Sire

**M**R. MERTON MOORE, writing in the *Holstein-Friesian World* of October 18th, tells a fascinating story of interest to every breeder. In India it has been impossible to import dairy cattle because they cannot stand the climate. The native cattle are very poor milk producers, the best of which produce less than two thousand pounds of milk in the year. There are several different breeds of these natives, but all of them are characterized by a hump behind the head. So well established is this hump, says Mr. Moore, that in the minds of the people of India it is as permanent as the Ganges River, or the mountain Dhaulgiri.

That is, it was before the arrival of a purebred Holstein bull. "He came, he saw, he conquered," with the result that not a one of his offspring has a hump, while every one has the hardihood of her mother, and is thus enabled to stand the climate.

The story is interesting because it shows the wonderful prepotency of a bull with long generations of good breeding back of him, and also because it opens the possibilities for better dairy products in countries where conditions have been prohibitive heretofore.

### Paint and Farm Machinery

**O**FF and on we have done a good many little odd jobs brightening up the house and furniture and the farm tools with paint, and never have we failed when finished to be surprised at what a little paint mixed with elbow grease will do. We do not believe that we exaggerate any when we state that paint properly applied to most farm machines will add 10 to 15 per cent. to their life, and it can be applied at the time of the year when a farmer is not rushed with work. There is a good deal of nonsense about the trade of painting. Anyone who will follow directions for using the standard ready-made paints and varnishes can do a nice job.

### Eastman's Chestnuts

**I**F ONE likes people and is interested in them, there are a good many laughs to be had every day from the funny things that they do when in public. I get a good deal of fun out of just watching folks. As some writer recently said, "Ain't human nature human?"

One of the things that never fails to amuse me is the critical way a woman will give another the "once over" on the street to see how she is dressed. She does it very quickly and out of the corner of her eye, but from that one coldly critical glance she can tell what the other wears and how badly she wears it, down to the last button.

"Did you," said the kind bystander, "get the number of the car that knocked you down, madam?"

"No," said the victim with emphasis, "but the hussy that was driving it wore a three-piece tweed suit lined with canton crepe and she had on a periwinkle hat with artificial cherries!"

# Making Money from Waste Products

## Our Readers Tell of Practices That Saved Dollars

**EDITOR'S NOTE:**—In our November 15th issue we told you that we wanted you to give us more help to write the paper. AMERICAN AGRICULTURIST has always made this a policy, believing that those who can be of the most help to farmers are the farmers themselves. We asked that you write us on the subject "How I Save Money By Good Use of Crop Waste and By-products," and we have already received quite a few letters, some of the best of which we are publishing on this page this time.

We will be glad to have more. It is the common, everyday problems of the farm that are the most perplexing and on which farmers are looking for help. Nearly everyone has something that they can do a little better than somebody else. Why not pass this experience on so that all of the thousands in our big family can have the benefit of it? We will pay a dollar for every experience letter that we can use.

Turn to page 341 of the November 15th issue for a list of subjects which may suggest something about which you can write.

\* \* \*

### Let The Straw Walk Off

ON every farm of any size there is sure to be a large quantity of straw after the threshing is over, and this is in many cases piled up in a stack in the barnyard or in some cases returned to the mow at the time of threshing. Some farmers practice feeding a quantity of straw during the winter in order to save hay for market.

For my part I doubt if there is much economy in feeding much straw to cows that we expect to milk the next spring. In order to get the best out of an animal the next year, she must have the best all the time. No man can take more money out of a bank than he puts in and no dairyman can take more out of his dairy than he puts in during the year. I feel that the best way to dispose of the surplus straw raised on the farm is to use it very freely during the winter as bedding for the animals and to freely use it to bed down the barnyard each week during the winter months. In this way the straw will be worked into manure and by spring there will be a lot of humus ready to be hauled out upon the fields. By so doing we can increase the fertility of the soil.

I would never sell a pound of straw or hay from the farm. Use it up on the farm and so make the old place worth more money as the years go by. If straw must be sold off of the farm, sell it in this way. Let it walk off in the shape of good beef or mutton by using plenty of straw for manure and so raise more corn and hay to feed more stock to produce more milk and meat on the old farm that Mother and Daddy once owned.—A. C. V. L., Steuben County, N. Y.

\* \* \*

### Saving The Leghorn's Energy

A FLOCK of poultry and a market garden make a combination that nearly eliminate waste. The by-products from the hens are applied to the garden and all unsalable material from the garden is used for the hens, a complete and beautiful circle.

Our place is too small to give free range to the poultry, but the weeds, thinnings, and cull vegetables provide the necessary green feed. The cull cabbage, beets, carrots, etc., with a few mangels, make winter feed. Coarser material, pea and bean vines, etc., are dried and used for litter together with leaves.

This litter, when scratched to pieces, is spread on the garden, with the droppings, and keeps up fertility very well.

We think that very little goes to waste unless it be our Leghorn's energy in flying over fences, but

we're raising Wyandottes now to save that.—A. C. H., Windsor County, Vt.

\* \* \*

### Not Bean Porridge But Bean Pods

IN regard to the use of bean pods and vines, it seems to me that this by-product of the farm is a mighty easy one to dispose of in order to make it show a profit on the right side of the farm management. On most farms where beans are raised for market, after the crop has been threshed, it is the custom to store the pods and vines of the bean crop in a dry place for winter use.

We all know that the bean pod contains a certain amount of oil, therefore the wise feeder will feed only a small amount of this fodder at a time to each animal.

Bean pods are very fine for sheep or cows, if fed

feed for your hens and they are very fond of it.

It is also useful made into sourkraut for the family's winter use. This is made by cutting fine and putting in layers with a little salt between each layer and pounding until juice covers it. Let work in a warm place for three or four days. Then when it is worked enough put away in cellar for the future use.

Thus there are three ways in which you may dispose of your broken heads of cabbage.—H. L. H., Otsego County, N. Y.

\* \* \*

### Use the Nectar of the Flower

HONEY bees are a source of income, but they are overlooked by many who are thinking of a way to make a little extra money at home. It is pleasant work and can be successfully conducted by women.

Any stand of bees that is healthy and strong ought to make from 100 to 300 pounds of honey each season. The bees work for nothing and board themselves. There is no difficulty in finding a market for honey and prices are always good. A woman I know lives on a road where many automobiles pass daily and she has a stand on this road, with attractive signs, prices on cards, etc., and the honey put up in attractive jars, and she has more demand for it than she can supply.

Some sell their honey in the local stores, others ship it to the larger cities.

It is important that you buy good healthy bees. They are subject to diseases same as anyone else, so in order not to buy diseased bees, buy from reliable people who will guarantee the health of the bees they sell you. Put your bees in modern, standard hives.

Any woman can manage several stands of bees and make a nice little income from it, without giving it much of her time or attention. And

there is always a demand on the market for honey, right at her own door or in the nearby towns.—A. M. H., New Jersey.

\* \* \*

### Flour Bags Are Valuable

The things I do with flour bags are many. I can buy them from a baker, fifteen for a dollar. I wash them, soaking in kerosene first to get all the colored letters and pictures out, and bleach them well. I make pillow slips, underwear, such as children's waists, summer union suits, petticoats, bloomers, and corset covers. I dye them for quilt linings, rompers, dresses and any that are torn or have holes in I dye and put in rugs that I am braiding. Unbleached and stamped for embroidering, they sell at a good profit, as fudge aprons.—MRS. G. R. F., Franklin County, New York.

HOW a roadside stand and a cider press turned a lot of cull apples into real money is told of a Connecticut farm woman who reported \$80 in receipts in a single day's business. Of course, not all farmers are located so desirably that they can take advantage of the automobile traffic along State highways. It shows, however, what can be done in the way of making money from waste products. Cull apples are practically always a drug on the market and it is a heady farmer or farm woman who can turn them into money. Where a man is not located on a State highway, he can very often merchandise his product in the nearby village and the returns will usually pay him well for his efforts. It is something worth trying at any rate.

in connection with other roughage and even some horses like to nibble a little at the pods if a few are placed in the manger once in a while. It is easy if one keeps sheep or cows to work off quite a lot of bean pods during the winter months, just a small handful to start with and gradually increase the feeding. I find that sheep like this by-product of the farm and do well upon it.—A. C. V. L., Steuben County, N. Y.

\* \* \*

### Quilts From Strainers

WE USE a sanitary strainer for the milk and as the squares of outing can be used only once, I wash them, scalding well and dry them. When I have saved enough for a quilt lining I dye them some pretty color, sometimes using two (harmonizing) colors. It makes a pretty cover or lining for a quilt or comfortable, and very warm; also, being new, will wear very well.

I have told others about it and all whom I have told think it a true economy, so I thought others would be glad to know about it.—MRS. G. R. F., Franklin County, N. Y.

\* \* \*

### What To Do With A Broken Head

THE broken heads of cabbage may be disposed of in many different ways. If you have rabbits, give your broken heads of cabbage to them. They will show you, after you have given it to them once that they like it very much and have a great feast on it.

Another way that you may dispose of this cabbage is to give it to your hens. Place a head of cabbage on a sharp stick and set it up in the hen house so the hens may work at it. See how quickly it will disappear. This furnishes green

### Kill a Kow

I will be glad to cooperate, providing at least one thousand other dairymen will do the same, in selling or killing FOR BEEF PURPOSES at least one of the poorest producers in my herd between now and March 1, 1925.

**Holiday Cookery**

(Continued from page 372)

soak into it; then lower the heat and bake rather slowly.

**Mince Meat**

- |                             |   |
|-----------------------------|---|
| 1-2 pound meat              | 1 teaspoonful cloves                          |
| 1 pound of apples           | 1 tablespoonful mace                          |
| 1-2 pound raisins           | 1 1-2 teaspoonful all-spice                   |
| 1-2 pound currants          | 1 1-2 teaspoonful nutmeg water or fruit juice |
| 1-8 pound citron            |   |
| 1-2 cupful sugar            |   |
| 1-2 tablespoonful cin-namon |   |

Boil the meat and cool. Pare and core the apples. Force the meat and apples through the food grinder. Wash the currants, raisins and citron and cut in tiny pieces. Moisten with water or fruit juice. Cook gently until the meat and apples are tender, adding the spices during the cookery. To make mince pies, line a pie tin with plain pastry, fill with mince meat, and cover, with pastry and bake.

**Let's Have a Christmas Pageant**

(Continued from page 373)

crate our service: 'I will take the cup of salvation and call upon the name of the Lord, I will pay my vows unto the Lord now in the presence of all His people.' We consecrate our wealth, 'As the wise men presented unto Thee gifts of gold and frankincense and myrrh, so we give our gifts to Thee, remembering how Thou hast said 'It is more blessed to give than to receive.'"

The woman steps forward and speaks, consecrating youth and love. "We also consecrate our youth, 'They that seek Thee early shall find Thee.' We therefore come now to dedicate to Thee the strength of our Youth—We consecrate our love—"We love Thee because Thou hast first loved us." (They both withdraw to left of stage.)

D. Small children (12 in number) enter to music by couples from back of auditorium, up side aisle. They kneel around manger looking at Babe while chorus softly sings "Away in a Manger." At the end of the song, the children rise and present gifts by couples.

1st Couple (laying hands on heart)—"I will praise Thee with all my heart."

2d—"Open Thou my lips and my mouth shall show forth Thy praise."

3d (Pointing to feet)—"Yea and Thou shalt be called the Prophet of the Most High, to guide our feet in the way of peace."

4th (Pointing to lips)—"Because Thy loving kindness is better than life, our lips shall praise Thee."

5th (Holding out hands)—"Thus will I bless Thee while I live—I will lift up my hands in Thy name."

6th (Pointing to eyes)—"Unto Thee do I lift up mine eyes."

E. Children join hands around manger and recite in unison, "Suffer little children to come unto Me and forbid them not, for of such is the kingdom of heaven."

(Children withdraw to right of stage and sit down in front of other participants.)

EPISODE IV. Larger children representing all nations. 12 or more in number.

Enter to music from back of auditorium and come up side aisles. They surround manger and recite in unison:

"He shall have dominion from sea to sea and from the river unto the ends of the earth." (They withdraw to left and remain standing.)

GRAND FINALE. Children rise, and all join in chorus: "Oh Come, all ye Faithful." At end of chorus, actors march down side aisle, led by children.

# A Promise to Dairymen

*The quality of Larro will never be lowered so long as Larro is made. Regardless of what changes take place in the price of ingredients, Larro will always remain the same!*

**L**ONG ago we decided upon this policy, and wrote this pledge into our manufacturing creed.

There were two reasons for this decision—we knew it to be correct, both in theory and practice, and we knew we could keep the promise.

Years of experiment and practical feeding have proved that a dairy feed must be more than just "a good feed." It must also be absolutely uniform and its formula must not be changed.

Sudden changes in feed—putting in more of this, or less of that, the substitution of poorer ingredients, imperfect blending or mixing—result in lower milk yield and smaller profits for the farmer.

Your cows do not eat a printed formula. They are not concerned with price changes. Whether the market is high or low, they need a feed that will build condition and keep milk flow at its peak

The Larro Milling Company is able to keep its promise of uniformity and unchanging formula because it has the experience and equipment to manufacture a feed that never varies. It has a formula that can be depended upon to produce milk profitably. This formula will never be changed unless the Larro Research Farm proves that a better one has been found.

LARRO is *more* than a *good* feed; it is always the *same* feed.

We repeat that we shall continue to manufacture LARRO on this basis—the basis of more profit to those who buy it.

THE LARROWE MILLING COMPANY  
DETROIT, MICHIGAN

**Among the Farmers.**

*Fruit and Crop Notes from Western New York*

**WESTERN New York** experienced its first hard freeze on November 16 and 17, the mercury falling as low as fourteen degrees. The ground was frozen solid to a depth of two or three inches, and with it a considerable amount of unharvested cabbage and not a few drop apples, which even the long fine had not permitted gathering. Farmers have felt so poor this fall that they did not hire the usual amount of extra help. Had winter set in any earlier the loss of crops would have been very heavy. A bad feature of the freeze up is that it came without any rain or even snow. Many cisterns are dry. Wells are low and the ground so dry that in many fields surface lumps of earth did not even freeze but crumble yet under the foot.

**Cabbage Market Gone to Smash**

The cabbage market is practically gone to smash. Every available storage is crammed to the doors. The cash price has dropped from five dollars to three and a half per ton. Many buyers have stopped buying altogether at any price. There is much discussion of the effect of the freeze on cabbage. Most experienced growers and shippers seem to agree that if frozen cabbage is not handled until it thaws out, naturally that it may be marketed. But its keeping quality is injured and especially in a year like this it would probably not be advisable to pay storage on such cabbage. A certain per cent. get black hearts and rot, but it is almost impossible to pick these out now. A minority opinion holds that there is no injury from freezing. One grower of eighteen years' experience, for example, is now cutting, hauling and storing frozen cabbage and says that he has never suffered any loss by so doing. But both reason and majority competent opinion are against him. If the freeze reduces the tonnage stored and marketed it may prove a blessing in disguise.

**Apple Market Strong**

The weather is fine again to-day, November 18th, though cold. We are all looking for more warm and open weather before the final freeze up. Drop apples will be all right if not handled until they thaw out and thousands of bushels will be picked up during the first warm days.

The apple market continues strong, as it should. December 1st cold storage holdings report is bound to show very low holdings compared with last year and average years.

Many storages now have not more than one-third of their space filled. Confidence in the future apple market is shown by the fact that both growers and dealers are holding on to their A grade stuff, even though \$5.50 to \$6 may be had to-day for good stock as it lays in storage.

Bean threshing is in progress. Some corn is husked. A further report on yields and quality will be made later.

These last two days have given a little respite from the rush of field work to get the crops under cover, while the cold weather has supplied the incentive, to do the usual fall fixing up and mak-

ing things snug for winter. We have been taking off the screens, putting on storm doors, replacing broken window lights, putting away machinery and equipment, etc. There is something about this kind of work that gives a man a comfortable feeling of satisfaction. A woodshed full of dry wood for the kitchen stove and fireplace, plenty of coal, potatoes, apples, squash and the like in the cellar, the stock comfortably housed in a tight barn, the summer's tools put away in the shed for the winter—all these things and the prospect of a little more leisure, or at least not such an awful rush, seem right and good. Riley has put it well:

"Then your apples is all gathered, and the ones a feller keeps Is poured around the cellar floor in red and yell'er heaps; And your cider-makin's over, and your wimmen folks is through With their mince and apple-butter and they're souse and sausage, too! I don't know how to tell it—but if such a thing could be As the angels wantin' boardin', and they'd call around on me—I'd want to 'commode 'em—all the whole—indurin' flock— When the Frost is on the pumpkin and the fodder's in the shock!

**Central Pennsylvania Notes**

J. N. GLOVER

**THE Clarence Schure Farm** of 100 acres in Lewis township, Union County, was sold at private sale for \$10,000 to a Mr. Showalter. Edwin Hauck bought the Swengle farm of 110 acres in East Buffalo township for \$3,500. Both of these farms have good brick houses on them and the buildings on the latter farm cost much more than the price paid for the farm. Dr. Eyer Walter paid the Mertz heirs \$2,500 for their 100-acre farm in the same township. George K. Schell bought the Smith farm of 108 acres for \$8,500 in East Buffalo township also. All these farms were sold at private sale, as very few farms have been sold at public sale this year.

Some wheat was seeded on corn-stalks on the first of this month. Wheat needs rain to help along the late seeding on dry soils. Pastures are about eaten off for this season. Corn husking is well under way with more soft corn in the yellow varieties than of the whip-cap dent, though some corn is fairly well matured where it was planted early.

Winter apples have been sold out at from \$1 to \$2 per bushel. Potatoes are selling at 50 cents a bushel now and the market furnishes no good outlet, even at

that price. An effort is being made to start a potato growers' association in Union County to help buy seed potatoes and to sell the big crops now grown in this section.

**Snyder County.**

—We have been having real spring-like weather with the temperature reaching as high as 88. It is very dry and we have had little or no rain for a number of weeks. Farmers are bush husking corn and digging potatoes. Lots of soft corn is reported through this section. Pastures are generally good, apples are scarce. They have been retailing from 75 to 80 cents a bushel.  
—D. S. S.

**An Appropriate Christmas Present**

**and a Gift for You, Too!**

Do your Christmas shopping at home—and at the same time send something to your friends that will be a pleasant reminder of your thought all through the year. The American Agriculturist comes fifty-two times a year, and you can make no more appropriate and welcome present to your friends and relatives. Take advantage of our special \$2 offer which brings the A. A. for THREE years. To add the Christmas touch we send to the recipient of your gift, a beautiful Christmas card, saying that the American Agriculturist is sent with your compliments.

**A Gift to You, From Us**

And in addition we send direct to you, a copy of the most beautiful book ever written about Christmas—Dickens' immortal *Christmas Carol*, bound in leather and carefully packed—a book you should dip into often and read aloud to the whole family at least once a year. Add only 12c to our subscription offer to cover the cost of packing and mailing this exquisite classic. It will be sent you at once, while the card will inform the new subscriber of your Christmas thought.

The Years Have Proven That There Is Nothing Like

**Brown's Beach Jacket**

for wear, warmth and comfort

The same good quality of material and care in manufacture which first gave it its reputation make it the best cold-weather garment of its kind today. It has an almost wind-proof exterior with knit-in wool fleece lining and is made to fit the body snugly, yet allowing perfect freedom of movement. It wears like iron, can be washed and keeps its shape. Three styles—coat with or without collar, and vest.

Ask your dealer

**BROWN'S BEACH JACKET COMPANY**  
Worcester, Massachusetts

**LET US TAN YOUR HIDE.**

Horse or cow hides, calf, dog, deer, etc., made into coats (for men or women), robes, rugs or gloves. Or we tan your hides into oak tanned harness, sole or belt leather; your calf skins into shoe upper leather. Any desired color. FINE FURS, such as fox, coon, skunk, mink, muskrat, etc., made into latest style coats, muffs, vests, caps, neck-pieces or other garments.

**No Middleman Needed In Dealing With Us**

Factory prices mean a big saving to you. Write for free CATALOG and STYLE BOOK. Tells how to take off hides, about our safe dyeing process on cow, horse and calf skins. Gives prices on all work. If you haven't enough pelts for garment you want, send what you have and we will supply the rest; or garment can be made complete from high grade skins we carry in stock. Furs repaired or remodeled. Estimates if desired. Automatic cold storage. Taxidermy and Head Mounting. Write today.

**The Crosby Frisian Fur Company**  
Largest custom tanners and furriers in the World  
560 Lyell Ave., Rochester, N. Y.

**STURDINESS**

You or your child may be too thin or rundown in vitality but you need not be.

**Scott's Emulsion**

is wholesome, pleasant tasting food and tonic that gives the body that needed urge toward sturdiness. Try it!

Scott & Bowne, Bloomfield, N. J. 24-34

**It Pays To Dehorn**

Dehorned cows and steers are gentler, safer and more profitable. Use the Key-stone. It does the work in a single stroke—no crushing. Sold on money-back guarantee. Write for circular.

**JAS. SCULLY**  
Box 124 Pomeroy, Pa.

**IWAN POST HOLE & WELL AUGER**

Most easily operated and fastest earth auger made. See your hardware or implement dealer. Look for IWAN BROS. on handle casting. Not sold by mail order houses. 8 inch most popular. Write for easy digging booklet on posthole diggers, hay knives, barn scrapers, etc. **IWAN BROS., 1505 Prairie Ave., South Bend, Ind.**

**Post Your Farm and Keep Trespassers Off**

We have had a new supply of trespass signs made up. This time they are made of extra heavy linen on which the lettering is printed directly. There is no card facing to be water-soaked by the rain and blown away by the wind. We have had these new signs made up of extra heavy material because severe storms will tear and otherwise make useless a lighter constructed material. We unreservedly advise farmers to post their land and the notices we have prepared comply in all respects with the New York law. The price to subscribers is 95 cents a dozen, the same rate applying to larger quantities.

**AMERICAN AGRICULTURIST**  
461 Fourth Ave., New York City

## National Grange Passes Many Resolutions

THE National Grange, which has been in session in Atlantic City, N. J., closed its convention on Friday, November 21. Inasmuch as there was no election of Master this year, the primary offices stayed the same. The only election coming at this time was that of the member of the Executive Committee. A. S. Goss of the State of Washington was elected as executive member of the National Grange to take the place of W. T. Thompson of Maine. This office is for a duration of three years. Mr. Goss is being recommended by the American Farm Bureau Federation for Secretary of Agriculture in the new Cabinet which President Coolidge will form after the inauguration on March 4th. The only other election was of C. Palmer Chapman to the Board of Managers of the National Grange Monthly to succeed Dr. C. T. Atkeson of Washington.

### Many Resolutions Passed

A number of resolutions were passed by the convention dealing with the foremost agricultural problems of the day. The Grange came out in strong opposition to Daylight Saving and passed a resolution to that effect with the addition that it will seek uniform return to standard time in every State and municipality. Another resolution was passed opposing national or State financial aid for reclamation, irrigation or colonization of land until the need for greater agricultural acreage in the country is apparent. The Grange opposes propaganda and excessive printing expenditures by Federal departments which clutter up the mails with duplicate and needless publicity material from Washington. A resolution was passed to this effect.

### Against Income Tax Reduction

Any reduction in income tax program, either State or national, was strongly opposed in a resolution on the tax question. Along the same line, a resolution was passed opposing any reduction in present tariff rates on dairy products. Other resolutions included the endorsement of the construction of the Great Lakes—St. Lawrence Waterway; the endorsement of high export tariff or embargo on logs and unfinished lumber; the completion and operation of Muscle Shoals or the immediate lease of that property on the most favorable terms that will guarantee fertilizer production at cost; the endorsement of a Federal public service commission, as provided in the Norris Kellar Public Super-Power bill; the reorganization of the postal service and the adjustment of salaries and administrations to increase postal efficiency; recommends the supervision of moving picture films and the barring of objectionable features.

### For Extension of T. B. Eradication

Bovine tuberculosis came in for much consideration and a resolution was passed recommending the increase of Federal and State appropriations for the reduction of this disease. The same resolution carried the recommendation that appropriations also be made for checking the spread of the European corn borer. Furthermore, the Grange went on record as supporting a constructive program for national cooperative marketing and the support of such bills before Congress this winter as shall be found most practical. The Grange strongly opposes any shifting of any bureaus or departments from the National Department of Agriculture to the Department of Commerce and is also opposed to the creation of any new departments at Washington. These resolutions will be dealt with editorially in next week's issue of AMERICAN AGRICULTURIST.

It was voted to hold the 1925 convention of the National Grange at Sacramento, Calif.

The convention was temporarily interrupted by a \$500,000 fire which destroyed the Hotel Bothwell and several hostels where Grange members were staying.

Has Used His Louden Manure Carrier for 22 Years

I installed a Louden Manure Carrier in 1902 and it has been in constant use every day since. I consider it one of the best investments I ever made and I would not be without it.  
D. C. Fulton, Pennsylvania.

## Why Pay For These Carriers And Not Have Them?

If any man will figure it out, he will find that it actually costs more in time and labor *not* to have a Louden Manure Carrier and a Louden Feed Carrier in his barn than it does to have them. That's the verdict of people that use them. In labor saved they will pay for themselves almost before the new is worn off.

The Manure Carrier takes out 12 bushels at a trip and cuts short a nasty job. The Feed Carrier takes 16 bushels of grain or silage at a load. These Carriers save hours of time and miles of walking.

### Easily Installed In Any Barn

No locks or levers to break and let the loaded box or tub crash to the floor. Smooth running and easy lifting. The best built, easiest operated and longest lasting Carriers made. Can be easily installed in old or new barns.

You're paying for these Louden Carriers whether you have them or not. Why not put them in and get the benefit of them? The time when you need them most is at hand—winter is just ahead. See or write your nearest dealer today for prices and printed matter. If no dealer is near you, write to the address below.

## Feed for MORE MILK and Bigger Profits

Fully 90% of all dairy rations are lacking in bulk and succulence, say authorities. Bulky feeds, mixed with concentrates, aid digestion. They also keep the bowels open.

### Make DRIED BEET PULP

A part of your dairy ration

This succulent vegetable feed gives bulk in a remarkably palatable and healthful form. It is laxative, easily digested and rich in carbohydrates. It is a wonderful milk producer, promotes health and increases profits. You can use Dried Beet Pulp with corn silage or to replace it.

Ask Your Feed Dealer

THE LARROWE MILLING CO., Detroit, Mich.

### SWINE BREEDERS

### GOATS

GOATS Pure breed registered Nubians, beautiful young doe, No. P4497, \$40. Buck, chestnut brown, No. P4495, \$35. Pair, pure bred, unrelated, \$60. Bargain. Others registered, \$25 up. Lloyd Goldsboro, Mohnton, Pa.

## \$25 Down Buys Holstein Bull

We have several exceptionally well-bred registered Holstein bull calves that we offer for sale on the installment plan. Here is your opportunity to break into the purebred game without an immediate heavy outlay of cash. This should appeal to the average farmer who wants to boost the average production of his herd without having it cost him too much money right on the jump.

### A Double Descendant of "OLD DUTCH"

One of these offerings traces back, both on his sire's and his dam's side, to Dutch-land Colantha Sir Inka, "Old Dutch," the greatest proven transmitting son of Colantha Johanna Lad, the famous "milk" sire. The calf's sire is a grandson and his dam is an own daughter, of Dutch-milk blood on both sides of the family. Dutch has 95 A.R.O. daughters, 16 having 7-day records of 30 pounds of butter or better, two are in the 1000-pound class. The calf's sire has 22 A.R.O. daughters with records up to 29.83 pounds butter in 7 days, and is the son of a 30-pound cow. This well-bred individual can be bought "on time."

# Service Department

## Egg Dealers that are Licensed and Bonded

THE following list includes the names of egg dealers doing a commission business in New York State cities. These dealers are licensed and bonded by the New York State Department of Farms and Markets. It is to be understood that we are not responsible for any of these firms. We do believe that a man is safer when he does business with licensed and bonded commission men. We handle literally hundreds of cases through the service Bureau every year where egg shippers are not satisfied with the returns made by receivers.

The egg business is peculiar. There are a large number of factors that are responsible for high or low returns. Sometimes the shipper is to blame, sometimes the carrier and sometimes the receiver. There are a few certain essentials that the shipper must take into consideration if he is to get the price. If eggs are plentiful and the market is flooded, off color eggs, small eggs, long eggs, misshapen eggs, thin-shelled eggs, cracked eggs or shrunken eggs are bound to pull down the value of the case. Even when eggs are scarce it is true that these off colors, off sizes and cracked eggs, will not stand up in competition with fancy packs. If you are going to get top prices remember that you must grade very carefully as to color, size and shape and that you cannot afford to hold your eggs so long that interior quality will be affected. It is very easy for receivers to detect held eggs, for candling reveals everything that is on the inside. Keep out the long eggs and sell them at home, for nine times out of ten, they are received cracked when the express companies are through with them. The carrier cannot be blamed, for long eggs stand up above the others, inviting destruction.

Cut out this list and save it for future reference:

# The Trouble Maker—By E. R. Eastman

IN the beginning of the sixth inning Tom Lynch's lack of years began to show. Experienced fans saw the signs of overconfidence before the actual break came. Like many another, he could stand neither praise nor success. He became too sure of himself, more interested in his "grand stand" than in his game, and almost before he knew what had happened, the Richland boys began to knock him all over the lot, and piled up four runs. Pandemonium broke loose among the Richland rooters, while those on the other side were marked mostly by a discouraged silence. Lynch had blown up, and blown up badly.

A hurried council failed to suggest a substitute. Finally, Bradley, who had been holding down right field, called the captain to one side and said:

"Hank, I used to be called quite a twirler in college days, and, in fact, while I would not speak of it ordinarily, I ought to say, in view of the situation now, that I carried the old varsity team through some hot scraps. I haven't played in two years, am out of practice and condition; but you're in sort of a bad fix, and I might be able to last through the last two innings, at least hold them from running up many more."

Hank looked him up and down, scratched his head, and said:

"Well, things can't be very much worse. We're probably licked anyway, so go to it, Bradley."

When the seventh opened, Bradley was in the box.

"See who's come," yelled Richland. "Look't! The farm doctor!"

THERE was much craning of necks and crowding to get a look at Speedtown's new pitcher.

Bradley was not excited, but he was out of practice and pretty wild, so his first batter got to first on balls, amid the hoots of Richland and the groans of Speedtown. Then he began to tighten up and the crowd saw some of the pitching that had once made Bradley and his team famous in college days. Not a Richland batter could touch the leather. Whist! and the catcher had it while the batter blinked. The Speedtown crowd started to revive. So did the players. In their half of the eighth, they found the tired Richland pitcher, and knocked him to the tune of five runs.

Then the crowd went wild. Dorothy climbed out of the car and crowded into the front line so as not to miss a move. Jim Taylor got up from his seat on the ground and paced back and forth while the spectators back of him, whose view was shut off, swore at him to "Sit down in front." The great waves of noise ebbed and flowed in a continuous bellow of inharmonious sound.

Four to five, in favor of Speedtown, and the beginning of the ninth! Richland's crack batter was up. Bradley let him have one a little wide; the batter reached for it, and hit a little pop fly inside of third. The baseman and short-stop both went for it, collided, and in the mix-up the batter reached first.

Bradley's old speed had come back. His catcher was not used to him, and found it hard to hold him. Bradley fanned the second man, but the catcher dropped the third strike, and when he threw to first he was wild. This resulted in getting a runner on both first and second. Bradley was a little afraid to put them straight over the plate for the next one up, and the batter refused to bite on the wide ones. The result was that Archie, the "Ump," gave the man his base on balls. Three men on base, and no one out!

THE ninth inning, and the score four to five! Time to tighten up! Speedtown probably never saw such pitching before, nor after. The next two batters had just six balls, three apiece, and then they went back and sat down, as quietly and as inconspicuously as possible.

Then came old grizzly Frank Stone, seasoned ball player of two decades, pinch hitter, calm, confident, smiling. Bradley threw a ball wide and high. Frank nodded at it, as it went by, and smiled.

Archie said: "Ball one!"

Again the white leather whizzed, and again old Stone smiled and nodded. Then Bradley straightened another one out shoulder high and right over the plate. There was an incredibly swift move from the batter, a sharp crack, and the ball leaped from the club so swiftly that the eye could hardly follow it, straight ahead with a slightly upward slant.

Almost as the batter swung, Bradley jumped and with extended right bare hand picked the red hot ball out of the air. So hard was the blow when it struck his hand that it carried Bradley off of his feet, but when he came up he still had the ball.

Archie, the "Ump," said: "Batter out!" and the game was done.

## What Has Happened in the Story Thus Far

**JIM TAYLOR, after much thought about the farmer's hard work and small pay, signs the agreement of a new organization, The Dairymen's League, and some of his neighbors follow his example. Old Johnny Ball, his nearest neighbor and father of Dorothy, Jim's childhood sweetheart, is bitterly opposed to the young man's ideas. A coolness comes between the two families and when Bradley, the county agent, confides in Jim his love for Dorothy, Jim gives up hope of winning her.**

**Bradley takes Dorothy to the county fair and Jim goes alone. He falls in with Bill Mead, Ball's hired man, and has some amusing adventures. But Dorothy cuts him before Bradley and Bill, and when Bill is ejected from the fair grounds for starting a fight, Jim is left to watch the ball game alone.**

Then all the noise that had gone before was as nothing compared with that which broke loose. Old man Kortwright's voice would not wake Jim calling the cows the next morning, for he had lost it yelling for Speedtown. There were many others, too, but they continued to open their mouths and go through the motions.

Finally a bunch of Speedtown players surged toward Bradley, and, putting him on their shoulders, followed by a crowd, started a wild and triumphant march around and around the diamond.

When they came to Bradley's car the second time, he pleaded with them to put him down, and they finally did. There stood Dorothy with her hair awry, cheeks red and eyes shining with excitement.

"Oh, Harry," she cried, "wasn't it glorious? And I think you were just splendid!"

## CHAPTER IX

AFTER the ball game, Jim went down to the back of the grounds in the grove where he had tied his horse and there found his sister waiting for him, ready to eat the picnic luncheon. Before he could enjoy his own meal, he fed his horse with the oats in the old box that he had brought along in the back of the buggy, for whatever the occasion, no good farmer ever fails to feed the beasts that serve him. His sister had already taken the big basket of lunch out of the wagon. When Jim was ready, they joined a party of friends and spread the good things on the blanket laid on the ground for a tablecloth.

The program for the afternoon consisted mostly of horse trotting races. To a lot of people, a horse trot is worth going a long way to see, but Jim was not interested. He could never be quite sure, with all the crowding and jockeying for position, together with the betting that was going on, that the best horse would be the winner.

A running race, though, was a different matter. Here was some real excitement, a race where great skill was needed to control the excitable horses on the narrow half-mile track.

After several heats of the trotting races were finished, the running race was called and six beautiful but crazy, rearing, plunging and dangerous beasts with their gaily-clad jockeys lined up for the starter's signal.

Down below the grandstand, there was a heavy fence along the track, back of which the amateur policemen were having great difficulty in holding the unruly crowd. Farther down the track there was an open gate in the fence where wagons and automobiles could cross the track from one part of the grounds to another. To be sure that he would have a good view of the running race, Jim strolled down out of the crowd and took his position close to the track near this open gate.

When the race was called, there was much excitement. Men and women stood up in the grandstand shutting off the view of those back of them; those down on the ground shoved and jammed the fortunate ones in front in an effort to push their way through so that they could

tense and silent, almost holding its breath, for all realized that tragedy was imminent as the horse passed the grandstand. It was plain that he was slackening his gait. No animal could stand that terrible pace. If the driver could only hold on for a few minutes more, and keep the horse on the track, he would tire himself out and stop. But as he thundered down the track toward where Jim stood at the break in the track fence, the saddle slipped and the jockey plunged sideways off of the beast with one foot caught in the stirrup. As he fell, his pull on the bridle and his weight swerved the horse to the left, straight toward the open gate in the track fence where Jim stood.

In the path of the running horse, across the fair grounds between the track and the entrance gate, were hundreds of the holiday crowd, women with their babies, children with their gay balloons and squawkers, old men renewing their youth by taking their young grandsons to the fair, young men with their sweethearts, all jolly and gay, in enjoyment of their holiday.

Jim saw the saddle slip, the sickening sideways lurch of the boy driver, and the wild, plunging horse coming toward him. With every muscle in obedience to a lightning-quick command of the brain, the young farmer plunged straight toward the head and breast of the running horse, while shouting men and screaming women fell over one another to get out of the way. By great good luck one hand caught the bridle close to the mouth, and in a second more he had both hands fast.

Jim's heavy weight soon slowed the horse to a standstill, and then, frightened, the horse reared and began to strike with vicious forefeet at the weight which stuck so like a bulldog to his head. Finally, his foot did strike Jim a glancing blow, and the world of lost sweethearts, spoiled holidays and runaway race-horses faded into darkness and peace.

THE first instinct of man may be that of self-preservation and to flinch from danger; the second impulse is to stay or come back and stand by the guns. When the runaway horse turned toward the track entrance, the men in his path instinctively dodged back, but during the moment that Jim struggled at his feet, the farmer men came back and, regardless of the danger, they grabbed the horse in such numbers that when Jim lapsed into unconsciousness, a dozen men held the horse from further damage. Others picked up Jim and the injured jockey and tenderly laid them on blankets from the nearby cars. Other men ran to find a doctor.

In the constant fight of humanity, led by the doctor, old Death must have many a grim laugh. Well he knows that even a doctor's best victories are but sadly temporary affairs and that in the end he and the undertaker will get them all, even to the doctor himself. Then, to round off the good measure, like the man who stole the mill and came back after the dam, the undertaker himself will open his eyes some fine night and find his "Business Partner" leering over the foot of the bed at him.

Dr. Westman heard the call to arms and went down out of the grandstand to the injured man.

In that crowd that opened as he approached, there were few who did not know, respect and love this silent doctor, for among them were dozens whom he had helped into the world, and then, in turn, had come a generation later to see that their children safely saw the first light. Many there were, too, with whom he had stood shoulder to shoulder in imminent crises of farm sickrooms, for Dr. Westman, during more than fifty years, had ridden the country hills and valleys of the farm country in the rains and sun of summer and through the drifted roads of winter to ease his people's

(Continued on page 382)

see the track. Others climbed on the top of the fence, the band stand and the performer's stand. Everyone was shouting at the top of his voice.

The horses lined up, and at the signal from the starter, they were off. As they bounded by Jim, he was interested in the tense faces of the jockeys leaning over the necks of their horses. Some of them were whipping and spurring their animals, but there was one little fellow, hardly more than a boy, on a big, rangy, beautiful chestnut who used neither whip nor spur, but drove his horse by a constant stream of encouraging talk.

This rider and his horse were well in the lead when they went by Jim. When they reached the other side of the track, he could see in the dust that the chestnut was still leading, but a gray was slowly lessening the distance between. Head to flank, then a second more, and the gray's head reached the chestnut's neck. The wild crowd rocked the air with noise. Now they were around the curve and on the home stretch. They were neck and neck, and the gray was still gaining. Only two hundred yards to go!

The crowd was tensely silent. Now the gray was ahead! In an effort to keep his lead, his jockey was whipping him at every leap. The chestnut's little rider leaned forward and said something to the horse. He responded with a great leap and it seemed as though his rider fairly lifted him in a great bound ahead of his rival, and they passed under the wire a few inches in the lead. Then the crowd went crazy again.

As the big gray came down the track toward where Jim was standing, he saw that something was the matter; then as he came abreast of Jim, he knew that the horse was beyond the control of his driver. The excitement and the flogging from his desperate rider had driven him crazy. He was running away. On he plunged, the jockey barely managing to hold him on the track. For the second time, the runaway made the complete circuit of the half-mile track and again came under the wire which stretched between the judges' stand and the grandstand.

The crowd cheered no longer, but stood

# Smart Things They Are Wearing

*Lenore Dunningan Makes the Rounds of the Shops for You*

I HAVE just made the rounds of the fashion shops. The newest winter modes make one look as slim as a pencil! Occasionally, we find fullness introduced low in the skirts by means of circular godets or pleats placed at each side or in the front. The back is flat and plain.

We hear rumors of the short waist line returning and there is a hint of it in the placing of trimmings. The majority of the frocks are beltless. For those who can not wear this style, there is the narrow string belt still worn at the hips.

Skirts are decidedly short, averaging ten to twelve inches from the floor, depending on the type of the dress and—while skirts go up sleeves come down. The new cloth and silk dresses for daytime wear show long, tight-fitting sleeves. Fabrics are more gorgeous than ever.

The three-piece suit, or ensemble suit as it is called this year, is both fashionable and practical. It makes a lovely afternoon dress and it is not too dressy for street wear. It consists of a dress and full-length coat made of taupe junio cloth, one of the new suede fabrics, trimmed with bands of flying squirrel. The dress is a narrow straight-line beltless style made of taupe silhouette crepe. The V-shaped neck and the bottom of the skirt and sleeves are trimmed with applique bands of the coat fabric.

The full-length coat is lined with silhouette crepe. It is graceful and becoming to either miss or matron. It is serviceable because it can be worn for a long coat over other dresses this winter and will make a nice top-coat for the spring. A serviceable suit is of dark bottle green

of the waist and a yoke across the back add a tailored effect. The collar and cuffs are of black moire ribbon edged with bands of China-yellow crepe de Chine. A black moire ribbon tie adds a smart touch.

The afternoon frock proves the popularity of vivid colors. It consists of a long tunic fashioned of embroidered tangerine crepe and worn over a black satin slip. The slip is made narrow and sleeveless with a round neck bound with narrow bias folds of satin. The tunic is cut straight in line, extending to two inches from the bottom of the slip and finished with a four-inch hem. Narrow bias folds finish the edge of the round neck and the back edges of the tunic. The dress is trimmed at the hip line and wrists with a band of black stain applied with tangerine crepe. One bound button-hole at the neck and four at the hip line and black satin buttons fasten the tunic to the slip at the back so that the black slip gives the appearance of a back panel.

The winter coat of rust brown suede-finished material introduces the new shawl collar with revers extending to the hem line and cuffs of natural muskrat. A self-colored lining is used with a band trimming of crepe to match the fur.

Many of the coats are seven-eighth length, but for all-occasion wear the full length is preferred. There are many novelty furs featured this year for coat trimmings, such as fisher fitch, various dyes of squirrel, nutria and panther.

Coats of chinchilla in soldier blue, brown, grey and rust shades with nutria collar and cuffs in the style illustrated are seen in the junior sections. Some have the set-in sleeve and some the raglan.

Jersey, serge, flannels in checks and Scotch plaids are trimmed with linen or pique for school dresses. For dress, velvet, crepe and wool challis with crepe de Chine bands and applique trimming are considered smart.

## The Trouble Maker

*(Continued from page 381)*

pain and to give confidence to those who faced despair.

Now they stood back to let him take command. He quickly crossed the little circle enclosed by the crowd and knelt by Jim. Rapid and efficient hands and eyes, trained to know the vital spots, went over the unconscious form. Then he turned to the little jockey. This last examination was short.

"This man is dead," he said gruffly, to the officer with him. "Send for the undertaker and have him removed."

When Dr. Westman turned back to Jim again, he found the young farmer sitting up looking rather dazedly upon a world which insisted upon going around and around. The doctor gave him a stimulant and in a few minutes Jim was able to walk, with the help of the doctor's arm and with his scared little sister, to where his horse was tied.

Everyone had heard what Jim had done and his unsteady walk was something of a triumphant march. Not in many a long day would the farm folks of Speedtown forget how Jim Taylor had risked his life to prevent the horse from running amuck in the crowd. Willing hands hitched his horse to the buggy, and he and his sister drove home.

When Dr. Westman was returning to the main part of the grounds, a timid hand touched his arm. He turned and found Dorothy Ball trying to ask a question.

"Doctor," she said, "was he—was he badly hurt?"

"Which one?" asked the old man with an odd gleam in his eye.

"Jimmy," said the girl. "I—I mean Jim Taylor. Is—is it serious?"

"Serious? Of course not," smiled the physician. "Couldn't kill young Taylor with a meat axe. Be all right in a day or so."  
*(To be continued)*

Taupe Ensemble Suit with Flying Squirrel Trim. Winter Coat in Russet with Muskrat. Street Dress of Faille. Afternoon Frock of Tangerine Crepe. See Article for Description.

Lovely soft suede-finished fabrics are extremely smart for coats and suits. They are shown in rosewood, penny, saddle and seal browns, navy and black. The woman who loves color can have green, cranberry and ox-blood reds.

Cashmere weaves and kasha, a material resembling flannel though much softer in texture, are used for cloth dresses. Bengaline is by far the newest in silk fabrics for street and tailored frocks. Canton faille, silhouette crepe, which closely resembles crepe faille, crepe satin, velvet and brocaded georgettes are used for the dressier frocks.

Black and navy dresses are illuminated with vivid trimmings and facings in flame, jade and a new shade called lacquer red.

Light beige, champagne, putty, cinnamon, rust and shades of blue are used in afternoon frocks. The colors are not harsh like the shades used this summer, but lovely soft shades that blend in beautifully with the winter furs and wraps.

For evening parties, white, pink, light tomato, pale rose, maize, Nile, orchid, peach, and a new cherry shade are favorites.

### Styles the Picture Illustrates

I have selected some new winter garments which I think are particularly good looking and which illustrate the styles worn this season.

suede finish cloth combined with grey kasha cloth. The tailored dress of this material is buttoned down the front with green buttons. The coat is lined with grey kasha with collar and cuffs of grey 'possum. With a matching dress of crepe silk the young miss has a complete winter wardrobe.

If you are not planning to get a new winter suit, you can have an ensemble suit by making a dress of crepe to match your winter coat. Be sure to use one of the narrow straight-line dress patterns. If you prefer a dress for street wear, choose a pattern for one of the boyish styles or a coat-style dress with tailored set-in pockets.

### Coat Dresses Continue Good

Speaking of coat dresses, they continue to be fashionable, especially for the older woman. This year the coat dress is straight in line with tuxedo or shawl collar. It closes at the side front with a large button or decorative tassel ornament. It is not difficult to make and there are so many pattern variations for this type of dress that one can always find a becoming style.

The straight-line dress is made of black canton faille with fullness suggested by the new box-pleated tunic which starts just below the hip line and extends three inches from the hem of the skirt. Tiny set-in pockets on each side of the front

# A Puzzle for the Family

Guessing Cross-Words is Fun for Everybody

HAS the crossword puzzle craze hit you? If it hasn't, here is your chance to start figuring out these fascinating dark and light squares. If you are already an expert, here is a new sort to entertain you.

With the puzzle on this page, the AMERICAN AGRICULTURIST starts a series of original crossword puzzles, all especially designed for our readers and using a farm vocabulary. Hidden in the squares and spaces you will find the names of familiar vegetables, animals, country occupations and so forth.

We are starting out with a puzzle that is fairly simple to work out but we know that as you get more expert you will demand harder ones.

The idea is this: every number in a white square indicates the beginning of a word. It may read across the puzzle or in a straight line down. Sometimes one letter starts two words, one going each way. But in every case, you will find in the list below the definition of the word, which should enable you to write

even, ope for open, eve for evening, etc. *Abbr.* signifies abbreviation, for initials or abbreviations in common use are allowed. Among them might be, for instance, b. e. and a. d. for eras of time, p. s. for postscript, dr. or md. for doctor, Va. for the State of Virginia, n.e. for north-east, etc.

Other notations sometimes used are *pl.* for plural, *obs.* for obsolete, etc. If two words are used, that is stated.

In other words, all variations are explained so that there are no traps to throw you off the track. Sometimes a definition is purposely made a little difficult, because as you get used to doing them, you will find that certain words are frequently used and you would recognize them too easily if the same definition were always given.

Crossword puzzle parties are very popular, with as many people as you want, all trying to solve the same puzzle and perhaps a prize for the one who gets it first. Refreshments naturally follow, for brain work makes you hungry!

© AMERICAN AGRICULTURIST

it in the spaces. It must fill the white spaces up to the next black square, for the black squares represent the beginning or the end of a word.

Of course you do not have to fill the numbers in order. If you glance over the definitions, you may see one which you can instantly guess. Note the number, go back to the diagram and fill in the letters. These will furnish clues to other words, which cross the one you have guessed.

### Start with the Easiest Definitions

For instance, in Puzzle 1, you may see on the list of words reading down, No. 3—to take a short sleep. It is a three letter word and after a little guessing you hit upon "nap" and write it in. That gives you letters in three other words. No. 8 is defined as "rescues" and has an a as second letter. That's easy! "Saves!" Now what three letter word beginning with p means a hole dug in the ground? And after you get *pit*, it isn't hard to guess what four-letter word with *vi* in it means wicked.

When the puzzle is solved, it should read both across and down, with correctly spelled words corresponding to the definitions.

If you see the notation *poet.* after a definition it means the poetical form of a word, such as e'er for ever, e'en for

Next week we will print the answer to this puzzle and a new one to unravel. The whole family can work together on these amusing and at the same time educational puzzles. So get out your dictionary, sharpen your pencil and your wits and get to work!

- | Down  | Across                            |
|---|-----------------------------------|
| 2 exists                                    | 1 a sour liquid made from apples  |
| 3 to take a short sleep                     | 8 rescues                         |
| 4 wicked                                    | 10 a boy's nickname               |
| 5 obtain                                    | 12 a hole dug in the ground       |
| 6 like (a preposition)                      | 13 father                         |

## My Engine Will Do the Work of 6

"I set out to build a farm engine that would have every feature the farmer wanted and none he didn't want. It has now been on the market six years. Thousands of satisfied users tell me I've succeeded. I'm proud to have this engine bear my name."  
—A. Y. EDWARDS

**EDWARDS FARM ENGINE**

### Try This Remarkable Engine FREE

There is no other farm engine like it. Simple in construction and easy to operate. It is only one engine, yet it takes the place of six engines. It will give from 1½ to 6 H. P., yet it is so light that two men can carry it easily. Set it anywhere and put it to work.

#### Change Power as Needed

It is a 6 H. P. when you need 6, or 1½ H. P. when you need only 1½, or any power in between. Fuel consumption in proportion to power used and remarkably low at all times. Adjustment from one power to another is instantaneous.

#### Burns Kerosene

Operates with kerosene or gasoline. Easy starting, no cranking. The greatest gas engine

value on the market. And you can prove all of these statements to your own satisfaction.

#### What Users Say

Ivan L. Blake, of Hannibal, New York, says: "Only engine economical for all jobs. I run a 28-inch cord wood saw, a 24-inch rip saw, a washer, a pump, and a grinder, and it sure runs them fine. It has perfect running balance, and it sets quiet anywhere."

Clarence Rutledge, of Manitoulan Island, Ontario, says: "Have given my Edwards four years' steady work and like it fine. It uses very little fuel. I run a 28-inch cord wood saw, also a rip saw, 8-inch grinder, ensilage cutter, line shaft for shop, churn, washer, separator and pump. Have had ten other engines and the Edwards beats them all."

Frank Foell, of Cologne, New Jersey, says: "It's a great pleasure to own an Edwards engine. I run a wood saw, cement mixer,

threshing machine, etc. Do work for my neighbors. Easy to move around and easy to run. I would not have any other."

#### Free Trial Offer

Now—I want to prove my claims to you. I want to send you an Edwards Engine for absolutely free trial. Just write your name and address on coupon and mail. I will send at once complete details about my farm engine and about my free trial offer. No cost or obligation. Mail coupon now.

**MAIL THIS COUPON**

EDWARDS MOTOR CO.

# Reviewing the Latest Eastern Markets

## MILK PRICES

THE Dairymen's League Cooperative Association announces the following prices that dealers will pay the League during the month of December for milk testing 3% in the basic zone of 201 to 210 miles from New York City. It is to be understood, of course, that the prices mentioned below are not received by the farmer but go into the pool. They represent the prices dealers pay to the League. Class 1: milk used chiefly for fluid purposes, \$3.07 per hundred pounds, an advance of 47c per hundred over the October price. Class 2A, used chiefly as fluid cream, \$2.10; Class 2B, used chiefly in the manufacture of condensed milk and ice cream, \$2.25; Class 2C, used chiefly in the manufacture of soft cheese, \$2.15. Class 3A, \$1.80. Class 3B, \$1.75. Class 3C, \$1.65.

Class 4, prices will as usual be based on the butter and American cheese quotations on the New York market.

The only increases are in Class 2, 20 cents per hundred in 2A and 2B and a 10 cent increase in 2C.

### Sheffield Producers

The Sheffield Farms Producers announce the following price for 3% milk in the 201 to 210-mile zone: Class 1, \$3.07 per hundred; Class 2, \$2.00; Class 3, \$1.50; Class 4, determined by market quotations on butter and cheese.

### Non-Pool Cooperative

The Non-pooling Dairymen's Cooperative prices for Class 1 milk is \$2.80 per hundred; Class 2, \$2.00; Class 3A, \$1.60; with freight and fat differentials.

### Interstate Producers

The Interstate Milk Producers' Association (Philadelphia Price Plan) announces that receiving station prices, or the price to farmers in the 201 to 210-mile zone from Philadelphia for 3% milk, is \$2.19. In the 101 to 110-mile zone the price is \$2. 9.

### League Announces October Pool Price

The Dairymen's League announces that the gross pool price for October is \$1.95 per 100 pounds for 3 per cent. milk in the 201-210-mile zone. From this there will be deducted 9c for expenses, leaving a net pool price of \$1.86. Another reduction of 10c per hundred is made on certificates of indebtedness, leaving a net cash price to farmers of \$1.76.

## FANCY BUTTER HIGHER

Fancy butter went literally sky-rocketing during the past week, reaching as high as 45c for creamery scoring higher than extra. This activity in strictly fancy butter was due to the light receipts and the active demand on the part of the consumptive trade. Along with the advances on fancy butter, the market experienced a sympathetic advance in the intermediate and lower grades. At the same time there was a stronger movement from storage, with the result that the entire butter

## Live Poultry Shippers

### FARMS FOR SALE

**\$500 Monthly From 345-A. Farm Modern Home, 43 Cows, Crops**

4 Horses, heifers, bull, tractor, auto truck, valuable machinery, vehicles, included by retiring owner; milk for 20 months averaged over \$500; mammoth fields, 160-ton hay crop, others in proportion; valuable woodland, 1,000 sugar maples and outfit; choice fruit; 11-room house, cement cellar, bath, furnace, lighting plants; 100-ft. cement basement barn, individual drinking buckets, exceptional other barns outbuildings, 6-room farm house. Exceptional value at \$18,000; part cash. Picture and details pg. 48 big Bargain Catalog, illus. money-making farms and business chances. Free. **STROUT FARM AGENCY, 150R Nassau St., New York City.**

market had a much better tone to it during the week.

However, the strong advance resulted in quieter trading toward the end of the week with the result that top quotations were shaded from a 1/2 cent to a full cent. When prices take such a sharp upward turn, we can usually expect slightly easing off, when storing holdings are so extensive, such as is true of the present market. The receipts during the past week run considerably below those of the week previous.

As the week closes, prices are as follows: Creamery scoring higher than extra (93 score) 44 to 44 1/2c; extras 92 score, 43c; firsts 90 to 91 score, 40 1/2 to 43c; firsts 88 to 89 score, 35 1/2 to 38c; seconds 84 to 87 score, 33 1/2 to 34 1/2c.

## CHEESE TRADING ACTIVE

Trade in the cheese market continued fairly active all during the past week. In view of the fact that advices indicate a continued restricted make, it is reasonable to expect that conditions are going to continue for the time being. The market at the present time is particularly well supported in the leading grades of well-cured cheese. It is reported that some dealers have sold New York State cheese, storing up-State at a price above current quotations in the market both in held and fresh stock. The western make is also said to be lighter. Fancy to special whole milk State flats, held, are quoted anywhere from 22 to 23c, while average run, held, goods are bringing from 20c to 21 1/2c. Fresh whole milk State flats that are fancy are bringing a cent under held stock, while average run fresh goods are bringing from 20c to 20 1/2c and undergrades one cent less.

## NEARBY EGGS MORE PLENTIFUL

There has been a gradual but steady increase in the receipts of white eggs from nearby points, especially New Jersey and Long Island. Other sections are still rather light in their shipments. In spite of these slightly heavier arrivals, the market continues to hold its strength on fancy marks. Fresh mediums of good quality and fancy pullets are cleaning up promptly. In general there has been little or no accumulation to speak of and prices are holding firm. Closely selected extras in Jersey and other nearby hennerly whites are still quoted anywhere from 81 to 86c, with average extras bringing 76 to 80c; extra firsts 71 to 75c and first 62 to 70c. Nearby gathered whites, grading firsts to extra firsts are bringing 62 to 73c with undergrades usually 10c a dozen lower. Pullets are bringing anywhere from 45 to 58c, depending on size.

Fancy brown eggs have been scarce in the market and as a result quotations on these marks have been advancing. Fancy nearby hennerly browns are now quoted anywhere from 69 to 77c depending on quality.

## EXPRESS FOWLS SELLING WELL

Express colored fowls have been selling satisfactorily right along. The market has been active and firm on fancy stock, such as well filled Wyandottes, Rocks and Reds, while light Leghorns have been more or less draggy and quiet. Fancy colored fowls still hold their top quotations of from 29 to 30c with average marks 24 to 28c. The best Leghorns fowls coming in by express find it hard to get above 21 to 22c, while average run stock seldom brings better than 19c.

Not many express chickens are arriving. Most of those that are coming in are too large to satisfy the trade and are reported to be more or less staggy. Naturally these are having a rather quiet outlet. These average run chickens will only bring 22 to 24c, while medium weights will bring 2c or 3c more. Chickens or broiler size that are fancy will bring as much as 30 to 32c. Very few express geese and turkeys are arriving. Undoubtedly the low prices for turkeys is cutting down supplies at the present time. Express turkeys are bringing only 26 to 28c, while geese are only worth 12c. Long Island spring ducks are quoted at 29c with stock from other nearby points bringing anywhere from 23 to 26c.

## POTATOES SLIGHTLY FIRMER

The recent cold snap that the entire country seemed to have experienced, has had a tendency to bolster up the potato market. The firmness is more in the tone of the market than in actual prices. There are too many potatoes in the city at the present time and too much stock showing frost to have much of an effect on the market. As far as price is concerned, about the only stocks that have really taken a strong upward turn are Long Island's. They are now quoted at \$2.35 per 150 pound sack delivered. Maines cannot do any better than \$2.25 and most of them are going around \$2.00 to \$2.10 delivered. States are usually bringing \$1.75. It is quite evident

that the cold snap has held up shipments because advices indicate that arrivals will be lighter and during the next week we may see a stronger potato market. This cannot be long-lived, however, in view of the fact that storage holdings are so very heavy. As soon as much of a spurt comes, we are going to see a flood on the market with consequent weakening prices. It may be that some growers will find a stronger market nearer at home compared to New York City. It is well to look around this year. Everybody is shipping into New York and with a heavy crop that is now on hand, it is natural that the market is weaker down here.

## CABBAGE HIGHER

Cabbage took a strong upward turn with the coming of cold weather. One big dealer reported confirmation of \$10 a ton F.O.B. shipping point which means \$7 or \$8 per ton to the farmer. Just how long this condition will last is hard to say. It doesn't seem that it can exist any length of time in view of the fact that storage holdings are so heavy. It is well to keep in close touch with the market and take advantage of every upward turn, because sky-rocketing is going to be of short duration. Of course a man is privileged to hold some cabbage way late in the season as a mere matter of speculation but if his holdings are very strong he will keep a close watch on the market and take advantage of these short upward jumps.

## NO CHANGE IN BEANS

There is no change of note in the bean market, all varieties moving along at the same slow pace with no material change in quotations. There seems to be a somewhat easier feeling in the market. Marrows are offered freely at \$11, although a few choice are bringing 25c more. Common to fair stock is selling 50c below this price. Pea beans are bringing anywhere from \$5.75 to \$6 for common to fair stocks while a few fancies will bring \$6.25. Red kidneys are dull and weak with common marks down to \$8.50 with a few choice lots bringing \$9. White kidneys are also meeting a slow market with \$10 for common lots and choice marks bringing from \$10.25 to \$10.40. Yellow Eyes are running along about the same pace, with \$6.75 to \$7 quoted for choice lots.

## GRAINS AND FEED

According to New York State Department of Farms and Markets, the following prices prevailed November 8.

The quotations given in this report show the approximate prices at which feed can be purchased per ton, and grain per bushel, in straight carlots through billed from Western points, delivered on track at points in the freight zones as indicated. Mixed carlots cost approximately \$2 per ton more.

Retail feed and grain prices vary with different local dealers depending upon their individual cost of doing business, volume handled, etc. In the case of feeds the retail price may sometimes be as high as \$5 per ton above the wholesale prices given in this report:

	Albany	Ogdensburg	Utica	Rochester	Buffalo

Since Buffalo is an important milling center for wheat feeds and linseed meal, quotations are given for this point on both a through-billed and a local basis. No. 2 White Oats, 58 1/2; No. 3 White Oats, —; No. 2 Yellow Corn, No. 3 Yellow Corn, —; Ground Oats, 40.00; Spring Wheat Bran, \$28.50; Hard Wheat Bran, \$32.50; Standard Middlings, \$30.50; Soft Wheat Middlings, \$36; Flour Middlings, \$37.00; Red Dog Flour, \$43; Dry Brewers Grains, —; White Hominy, \$44; Yellow Hominy, \$42; Corn Meal, \$45; Gluten Feed, \$42.75; Gluten Meal, \$51.75; 31% Old Process Oil Meal, —; 34% Old Process Oil Meal, \$47.00.

For points taking New York rate add to Albany price 1/4 cents on oats; 1/2 cent on corn, 10 cents on cotton seed meal; and 20 cents on other feeds.

## HAY MARKET LIFELESS

There is little or no life to the hay market. Receipts are absolutely sufficient to take care of the demand, although they are not very heavy at that. There is an over-supply of hay in small bales. If this keeps up we will possibly see a small strengthening of choice hay of No. 1 grades in large bales. Prices remain about the same as last week. Timothy No. 1, \$26 to \$27; No. 2, \$24 to \$25; No. 3, \$21 to \$23. Light clover mixed, No. 1, \$24 to \$25; No. 2, \$21 to \$23; No. 3, \$17 to \$19. Second cutting, alfalfa, No. 1, \$30; No. 2, \$25 to \$26; No. 3, \$23 to \$24.

## CATTLE

# GUERNSEYS

are uniformly high producers. It is breed average that tells the story. The average mature Guernsey cow produces 10,640 lbs. of milk, testing 5%, or 525 lbs. of butter fat in a year.

# Making Poultry Pay

## Selection, Care and Breeding Show Results

**W**E grew into the poultry business on our farm so gradually that our mistakes were not very expensive. The chickens paid for all equipment, and helped keep the bank account on the right side of the ledger besides. I want to state right here that we have done nothing extraordinary; indeed, the average of laying was not high, but we made money.

By breeding up the flock we expect to do better.

The hens did fairly well in the fall and winter, with the exception of the year 1917. That year was a hard one for the poultry keeper. The price of eggs did not advance to keep pace with the price of feed at all worth mentioning, but we found it difficult to get feed at all worth feeding. Twice in the year 1917 we got some bad bran. The hens refused to eat their mash, and there was no other to be had at any price. This stopped their laying twice, and it took time to get them back. As a result they did not make a good showing.

### Breeding Selected Birds for Winter Eggs

We thought it was worth while to try to secure better eggs in winter, so we bred only winter layers. During the months of December, January and February we trap-nested to tell which were laying. From these winter-laying hens we selected from fifty to seventy-five of the best looking ones that had the most egg record, for our breeders for spring. We trap-nested them three days, about the seventh, twenty-first and twenty-eight of each month, marking all that laid in that month with leg-bands. Every three years we sent off for our males to put with our flock. This year we are going to get the best we can find, and believe it will pay us well. Now, that such strides have been made in judging hens by the pelvic-bone test, I do not know that trap-nesting will be necessary, but we knew nothing about that at first.

I don't think there is any short-cut to fortune by way of the poultry-farming route. One works for all he gets, but that holds true in most walks of life. A person who is not physically able to farm or do any heavy work can care for a fair-sized flock of hens. I am not a strong woman, but, besides doing a good share of my own housework, I have taken the entire care of our chickens until last year. Since then my daughter has kept the hen-houses clean, and helps in other ways in bad weather. But the poultry is a side issue with her.

### Anconas the Favored Breed

In the summer of 1910 we moved on a farm knowing nothing about the care of chickens. There was a small flock of hens on the farm, which were very indifferent layers. A brother of mine sent us ten Ancona eggs, saying he believed we would like that breed of hens. We raised five pullets which were such persistent layers that winter that we concluded that they were the breed of hens we wanted.

In 1911 we raised thirty-two pullets from these five making thirty-seven in all. In 1912 we got an incubator and hatched about 350 chickens, raising about 125 pullets. We used lamp brooders, and kept them warm, losing only two chickens from sickness that year, with the exception of some that were hatched crippled. The hawks got quite a few, though, and at night rats got into the hen-house and destroyed a number of them. My husband decided that a cement floor was a necessity. This was our first lesson.

### Experiences With Roup

In 1913 I didn't try to raise any chickens, as I thought I had enough of the chicken business. That year we had our first experience with roup and cholera. The hen-house had cracks behind the roosts, and I had several cases of roup. I

By MRS. C. A. UMOSELLE learned I must have no cracks near the perches, and must have the hen-house in a well-drained location with a raised cement floor, and this was lesson number two.

### Sells Eggs at Year-'Round Price

In 1914 I decided to keep books on the poultry, so I would know what they were doing. On January first, I had a flock of 130 hens. The following table shows the feed the hens consumed, with the cost from January 1, 1914, to January 1, 1915. It also shows the number of eggs laid, with the price received for them. We shipped all our eggs to a commission merchant in New York only ninety miles away, and the price is net after deducting expenses. Receipts in 1914; Eggs, 1,444 dozens at 50 cents per dozen; sold 75 pounds of broilers, \$17.75; raised 70 pullets valued at 75 cents, \$52.50; four cocks kept for breeding, \$4.00. Total receipts \$796.25. Supplies, \$150.00

In 1916 I had 195 hens and pullets to start with. The hawks got several, and a few died from sickness and accident. I also sold a few of the older ones. In 1917 I raised 250 pullets. Receipts for the year 2,004 dozen, eggs sold all to an Atlantic City hotel at a yearly price of 50 cents a dozen; poultry sold, \$75; raised 250 pullets, at one dollar, \$250; feed, supplies, etc., cost me just \$425.00. In 1918 I set an incubator and 20 hens at the same time, then gave all the chicks to the hens. They got along nicely, except when the roof sprang a leak during a heavy rain-storm, wetting the chicks and causing them to pile up in a corner, where over 50 were smothered.

### Work of Culling Shows Up

I am going to give you my last year's results, to make a long story short. I raised 125 pullets. We could see the results of our trap-nesting, as this was the best-looking lot of pullets we had ever raised, broad-shouldered and deep in the back. Receipts 2,425 dozen eggs, all sold to the same Atlantic City hotel at 50 cents a dozen; 150 pounds of broilers at 35 cents a pound; feed, other supplies, etc, cost \$400.00. During all this time I kept no account of eggs and chickens which supplied our own table, and our family is ten children. I could get sometimes 75 cents for my eggs in the market but I contract the year around at 50 cents, and that pays well when nothing happens to the flock. Keep them clean and you will get eggs.

### An Ambitious Pullet

**I** HAVE been reading with interest of all the early laying pullets in our good paper and wish to tell of one of mine. I can not give the date of the first egg, but she could not have been much more than 4 months old when she began laying, as I found her sitting on a nest of 18 of her own eggs the 20th of September. She was hatched April 5, which made her just 5½ months old. She had been sitting for a week or 10 days when I found her. She is a large Single Comb White Leghorn and if I had allowed her to sit she would have laid her eggs and hatched her chicks by the time she was 6 months old. I think this is quite a record. Several of her sisters have been laying since August 10th and are fine large birds.—Mrs. FLOYD OWEN, New York.

### Juniors To Go To Madison Square

This year New York State will be represented at the Madison Square Poultry Show by a team of junior project workers who will compete with teams from other States. Through the generosity of the Tioga Mill and Elevator Company of Waverly, N. Y., a team of junior project workers will be sent to New York City in January to compete in the National Poultry Judging contest for 4-H club members.

# The pullet that lays the greatest number of eggs is the pullet that can digest its food most easily

"I have used Fleischmann's Pure Dry Yeast for a period of four months," writes Burton Steere, of Springfield, Mass. (One of his yeast-fed flocks is shown here.) "The birds showed a larger egg production than in previous years and the whole flock were kept in the pink of condition."

"Ever since I started feeding Yeast," writes H. Borden, of East San Gabriel, Calif., owner of the yeast-fed fowls shown here, "my flock has been in a very healthy condition. Mortality has been nothing to speak of."

"I have been using Fleischmann's Pure Dry Yeast for three years," writes Mrs. Alfred Kramer, of La Crosse, Wis., "and think there is nothing better for chickens."

"A HEN which lays heavily or poorly eats very nearly the same amount of feed," writes one of America's foremost authorities.

What makes the difference? Breeding? Care? Of course. But chiefly this: the good producer assimilates her food easily.

Fermentation of the feed with Fleischmann's Pure Dry Yeast makes it easier for the fowls to turn their food quickly into sound flesh, bone, and energy.

As soon as the Yeast, dissolved in water or milk, is added to the feed, it begins at once to ferment. It acts upon the feed in a way similar to digestion itself, breaking down the food elements of the grain (which *must* be broken down before they can be completely di-

gested) and making them ready for quick absorption. The results are positively amazing—quick growth, increased vigor, *more eggs!*

Fleischmann's Pure Dry Yeast can be bought in 1 lb. or 2½ lb. packages, 25 lb. cartons or 100 lb. barrels. It will keep indefinitely. Full directions in every container. Your dealer should be able to supply you. If not, order direct from us. Transportation charges prepaid.

### Now—this trial package for \$1

So you can thoroughly test for yourself the amazing results of Fleischmann's Pure Dry Yeast, a special trial package is now ready. One dollar brings it to you. Enough yeast to ferment the feed for 100 hens for a month and a half! Send today—check, cash or money order with the coupon below.

### To the dealer:

Progressive retailers the country over have stocked Fleischmann's Pure Dry Yeast—to supply the fast-growing demand for this remarkable food adjunct. Poultrymen and stock-raisers who can't get it from their dealers send their orders direct to us by the hundreds. You should be getting your share of this business! Be the first in your town to have it on your shelves! Send today for our plan of cooperation. It shows how you can add to your profits with Fleischmann's Pure Dry Yeast!

## These Are Your Christmas Gifts From Hartman If You Order Dinnerware!

For Christmas only we are offering 2 FREE GIFTS

Don't miss this great opportunity. Order the beautiful 110-Piece Dinner Set and Hartman will send you absolutely FREE the two wonderful gifts pictured here. Keep them for yourself or give them away as Christmas gifts.

### 7-Piece Porcelain Fish or Game Set

This handsome set of durable porcelain includes one 11 1/2-inch platter and six 7-inch plates, all with assorted tinted borders and attractive colored designs in center. A beautiful and extremely practical gift, useful in serving fish and fowl.

### 7-Piece Linen Finish Luncheon Set

Includes a large 36-inch center piece and six 12-inch doilies to match. All of celebrated linen finish "Indian Head" with dainty scalloped edges, embroidered in color. A set that will please any woman. Not one cent to pay for these splendid gifts at any time. Both sets come to you free with the Dinner Set above. Limited offer.

## 110-Piece Gold Decorated Set Special No-Money-Down Terms for Xmas

No C. O. D.—Nothing to Pay on Arrival—First Payment January 15, 1925

Give your relatives, friends or family this exquisite 110-Piece Dinner Set for Christmas; or buy it for your own use. In order to enable you to do your Christmas shopping now, Hartman, the largest Home Furnishing Concern in the World, will send you these wonderful dishes without a penny in advance and without paying one cent until after the first of next year. And to make this offer even more remarkable, Hartman will send you absolutely FREE with the Dinner Set, both the handsome 7-Piece Porcelain Fish or Game Set and the dainty 7-Piece Linen Finish Luncheon Set.

Send only the coupon—no money. Pay nothing for goods on arrival. No C. O. D. All three Sets will be sent you on 5-Days' Free Trial. If not amazed at Hartman's special bargain price on the Dinner Set, send the goods back and we will pay transportation charges both ways. If you decide to make someone a present of the handsome Dinnerware, or even to keep it yourself, take nearly a year to pay—a little every month. The 7-Piece Porcelain Set and 7-Piece Luncheon Set cost you not a penny. They are FREE—Your Christmas Gifts from Hartman.

## Sensational Bargain! Shipped Without Any Delay

Think what joy such a gift will bring to someone dear to you. Just imagine sitting down to Christmas Dinner served on such a handsome, brand new set in the latest, most popular Colonial pattern. Anyone would be proud to use Dinnerware of this fine quality for the most important occasions. But you must actually see the set to appreciate its exquisite beauty and superior quality. Every piece has a clear, white, lustrous body, decorated with rich gold band edge and a mazarine blue follow band. Every piece is also decorated with two pure gold initials in Old English design, surrounded by graceful gold wreaths. All Handles are Covered with Gold. Many of the most expensive imported sets have not such elaborate decorations. And every piece is perfect; in fact, Hartman guarantees that every piece in this set is absolutely first quality—"no seconds." This is a standard or "open" pattern and replacement pieces may be obtained from Hartman at any time within 3 years. Be sure to order while this great Christmas offer holds good. Settle your gift problem by taking advantage of Hartman's bargain price, no-money-down terms and the splendid Free Gift feature. Send the Coupon—Now!

### HARTMAN Furniture & Carpet Co. Dept. 6980 Chicago, Illinois

Send the 110-Pc. Dinner Set No. 320FFMA26, Price \$33.85, and with it the 7-Piece Porcelain Set and 7-Piece Luncheon Set absolutely FREE. I am to pay nothing for goods on arrival—only the small delivery cost. These goods are to be shipped to my own home. I am to have 5 days' free trial. If satisfied, I will send you \$4 beginning January 15, 1925, and \$4 monthly, thereafter, until full price, \$33.85, is paid. Will pay nothing at any time for the 7-Piece Porcelain Set and 7-Piece Luncheon Set. Title remains with you until paid in full. If not satisfied after 5 days' free trial, I will ship all goods back and you will pay transportation charges both ways.

The Outlook for Farm Land Values—By Gilbert Gusler

# A Home That Never Was

## A Fireside Reflection

THE little tale that I am about to set forth came to me almost thirty years ago. I heard it only in bare outline and doubtless there are some things which I have forgotten but he who told it has departed whence he can never be questioned any more. It came to me from a farmer of Alleghany County and I cannot be sure just where the scene was laid but it was once a current folk tale of Southwestern New York. It is quite possible that someone who reads this may remember it and be familiar with the facts and if he can give me further details and perhaps locate the place upon the map he will earn my gratitude.

I may add that the words which I have put into the mouth of the girl are exactly those that were given me and that the incident of the load of lumber that had stood for thirty years on the barn floor was one of the precise details that made up the story as it was told to me. If any names were given, I have forgotten them and perhaps that is best for so I shall violate no confidence.

The narrative itself is so brief—so lacking in detail that it scarce seems worth retelling but it is after all a tragedy for it is the story of how a girl's unthinking, shallow, thoughtless speech and a man's narrow, cruel, unjust suspicion sundered forever two lovers whose romance under happier auspices might have endured through many golden years that would have meant wondrous happiness to both and been an ever widening blessing to the world.

So the story is this. There was to be a marriage—union of two farm families—a mating on which everybody smiled their approval for the girl was young and lovely and sweet and true and the Boy was worthy of her—stalwart and clean and reverent and with their marriage would be the mating of a pair that by every test were suited to each other and fit to be the progenitors of children that should prove a blessing to society and a priceless asset to the state.

Both were scions of old farm families and according to the very modest standards of his time and class the boy was well to do—"rich," the neighbors said.

So with parental approval the Boy be-thought himself to build a new house on the old farm—a country mansion that should be the best farm house for miles around and that should set a new standard of comfort and luxury for a house on the land. The house was to crown a hillock and stand in the midst of a little grove—a tiny remnant of the splendid forests that once blanketed our state. Cunning, old-time master-craftsmen wrought at it and the timbers were oak and pine hewn with the broad-ax for at that time there were still vast stores of virgin timber nor were there lacking carpenters who could strike a chalk line and score the logs and then hew them with the great twelve-inch ax so smoothly that it was hard to tell if they had been hewn or planed.

So the house took shape and began to rise—wide spreading and generous of size with the broad front door and the beautiful old-time fan light above it and the ample hall and the great rooms on either side and big airy chambers above—all in accordance with the best standards

of the country carpenters of the time, and the summer days passed by and the big house approached completion.

So the builders wrought into the house brick and stone and mortar and timber framed with honest skill and in their minds' eye they saw a great square farm house that should be a landmark for the county and an enduring monument to their craft. But the Boy saw other and finer things, for Love had made him a Scer and he built into the house all a young man's visions and a lover's dreams and always and everywhere the picture was dominated by a woman—sometimes by a Girl that was young as he was, then—a laughing, starry-eyed Girl that he might kiss and fondle and who would not say him nay—or again the same girl grown older and matronly but still more beautiful and always when he saw her thus there was a young child on her knees and other sturdy children running through and in and out of the big rooms. O, they were wondrous tender and lovely visions—those boyish dreams!

\* \* \*

And the time to make the dreams come true drew near for it was past midsummer and when the harvest was gathered in there would be a wedding at the old home of the bride and the relatives and friends from far and near would come and the white-haired pastor would lift his hands above the wedded pair in benediction, and there would be a great feast spread and fun and frolic and, with the coming of the dusky autumn night he and she would go to the new house and according to the old whimsey, he would not lead but carry his bride bodily across the threshold of her future home and with her own hands she would light the first fire on the hearth and then they would draw close the curtains and be alone with their love and their joy and their dreams. Stuff like this the Boy built into the house.

\* \* \*

Then without warning burst the crack of doom.

Came a day when the house was roofed and enclosed and little was left to do except the interior finishing and the Girl with the pride of an already acknowledged Mistress came as she had done before with her nearest girl friend and confidant to inspect it and the two girls daintily picked their way over heaps of rubbish and piles of shavings and wandered through the unfinished rooms. The Boy was there, impatient for its completion, urging on his men and hammers rang and saws rasped and the long jointer plane hissed and sang as the satiny curled shavings rolled from it. Everywhere there was bustle and the pungent fragrance of new pine and the spicy tang of oak and the faint aroma of seasoned hemlock and through it all the two light-hearted girls wandered with laughter and chatter and unknown to either, close behind hovered the Boy so that he might be near his Beloved.

Then her friend spoke with admiration of the fine home that was so soon to be hers and anxious to flatter and please added, "And best of all—they say there will be plenty of money left when all this is done." Then the Girl, so foolishly, could not resist the very human temptation to astonish and to boast a little and she made reply, "Yes, that is quite so—but just you wait until after we are married. I'll show you how to make his money fly," and the Boy listening to their chatter overheard and understood her poor, silly, boastful speech.

\* \* \*

Always my sympathies are with the Girl. Foolish and shallow she might have been but false or wicked—No. But the Boy was hard and suspicious and cruel as the grave. Her little folly, her exulting boast, was a transgression to be atoned for with protestations and with kisses but

(Continued from page 392)

## Improving the Dairy Herd

The Department of Agricultural Relations of the New York Central Lines is continuously at work with cattle breeding associations, agricultural colleges, farm bureaus and progressive farmers in the important work of improving dairy cattle.

Better cattle means better milk. Better milk means better prices for the farmer.

Transporting milk from the farms to the city has come to be a considerable part of our day's work, and we want to help increase this traffic.

Recently a "Better Cattle Train" operated in cooperation with New York State Department of Farms and Markets, Breeders' Associations, Farm Bureau, Grange, Dairy-men's League and Syracuse University, visited the important dairy counties of the State, giving demonstrations and lectures on the care and feeding of herds, and on modern dairy methods. Similar trips are being planned for other States served by our lines.

We recognize that working with the farmer helps to make him prosperous, and we prosper only as the communities we serve prosper.

## The Outlook for Farm Land Values

*Inflation During the War Caused Trouble—Sound Basis Ahead*

By GILBERT GUSLER

**A** DISCUSSION of the outlook for farm land values can hardly be approached without fear and trembling. To assume to say with confidence what the future will bring involves a much fuller comprehension of the trend of events in the agricultural field than this writer claims to have.

Such questions as the long time trend of prices of farm products, of prices of industrial commodities that farmers must buy, of changes in farm labor costs, of increasing or decreasing competition from foreign farm products in our own markets, or changing demand for our farm products abroad, the trend of taxes and of interest rates need to be considered. In short, the whole range of economic factors entering into the determination of farm profits, or the lack of them, will in the long run, decide what farm land and prices are to be.

In spite of the difficulty of appraising all these influences, the man who buys a farm really makes a market forecast that involves consideration of such forces and he backs his judgment with his money. By making a purchase, he implies that these factors will be sufficiently in his favor to enable him to make the farm pay out in due course of time.

As has been pointed out so forcibly by Dr. Ely, the eminent land economist, a large share of the agricultural distress of the last few years has been due to a faulty forecast of the future of farm land values. The principal sufferers during the depression have been those who bought land at high prices, with only moderate cash payments, seemingly on the assumption that war prices for farm products would continue indefinitely. A nationwide mistake in judgment was made as to the farm land market from which many individual farmers will be a long time in recovering.

"The cause of panics is 'avin' 'igh 'opes." This was the sage comment of a London cockney, source forgotten. Farmers' hopes, apparently, were a few notches too high back in 1919 and 1920. Since so many people made such a bad guess at that time, it may not be out of place to risk a few observations as to the outlook.

An examination of the trend of land prices in the last sixty years and an examination of the factors that determined the trend should be helpful in sizing up what may happen in the future. Four fairly well defined periods can be isolated. The first three of these periods are illustrated by the land price curve on the accompanying chart.

In the first period, from 1860 to 1900, average farm land prices in the United States, as reported when the census was taken every ten years, showed a slight upward trend. New land was available so that the desire for a farm could be satisfied more readily merely by moving on, taking up raw timber or prairie land and forging a farm out of it, rather than by the purchase

of improved farms in the older settled sections. The opening up of fertile new lands in the middle-west and west furnished such a surplus of grains and live stock to be forced on foreign markets that prices were low and farm profits were small. The chart shows that the average value per acre of the ten leading crops followed a downward trend during most of this period.

In the second period, extending up to 1915, land prices advanced steadily and much more

ing from about 1915 up to 1920. The chart shows the sharp rise in crop values per acre brought about by the war-time increase in demand for farm products. Farm profits increased and the assumption that these profits would continue indefinitely finally led to a runaway boom in farm lands. Some of the buyers were speculators, but actual farmers predominated. Some were already owners who wished to farm on a larger scale. Others were tenants who had saved money and desired to become farm owners. Still others were farm boys who wished to start farming on their own. The prices paid reflected the belief that prices for farm products would remain lofty and that the land market would go still higher. In most cases, cash payments were relatively small and new farm debt totalling several billion dollars was created.

The fourth period is the recent agricultural depression. Crop values per acre, based on December 1 farm prices, dropped from \$35.74 in 1919 to \$14.45 two years later. There was a recovery to \$21.55 in 1923, and 1924 will record a further gain.

The average value of plow lands, as reported by the United States Department of Agriculture, dropped from \$90 per acre on January 1, 1920, to \$65 four years later, a decline of 28 per cent. The same percentage of decline as applied to census values of farm land and buildings is shown on the chart. The value of the average farm declined nearly \$3,000 and the total loss was 18 billion dollars. Naturally, the shrinkage was most severe in the mid-west where the boom has been most marked. This brings prices back to about the same level as in 1915 or 1916.

The equities of many of the buyers of land during the boom period were wiped out when prices of farm products became too low to permit continuation of payments on mortgages and the market price of the land itself declined. A year ago, records collected by the Department of Agriculture showed that more than 8½ per cent of the land owners in fifteen corn and wheat producing states in the upper Mississippi valley had lost their farms.

This brings us down to the present time. Numerous unfavorable conditions still cloud the land situation, although signs of improvement can be seen. Prices of farm products are doing better just now but, until this year, cash or crop rentals, after deducting taxes, were not enough to pay ordinary interest rates on current land prices. The farm owner who credited himself with a fair labor income did not have enough left to pay a return on his investment. If he assumed that the land earned a fair rate of interest, he had to work for less than hired man's wages or, perhaps, for nothing at all.

There have been enough farmers at the end of their financial string to (Continued on page 404)

Land values showed a slight upward trend from 1860 to 1900 while crop values followed a slight downward trend. During that period the average annual crop values per acre ran from 50 to 75 per cent of the price of the land and buildings. In those days it was much easier to become a farm owner than at present. In 1897, crop values started upward and the price of farm land began its climb which terminated in 1920. The sharp advance in crop values per acre which started in 1916 accelerated the rise in land prices. Crop values dropped about 60 per cent from the peak. Land values dropped nearly 30 per cent. Crop values have shown a sharp recovery in the last three years. The land market is only beginning to show the effect of this improvement. Land prices have hardly turned but buyers are more willing to take hold.

rapidly than in the preceding forty years. Close observers of this period consider that the starting point of this advance was around 1897 when prices of farm products were just emerging from the effects of the depression of 1893. The census reports show that land prices more than doubled from 1900 to 1910.

But little good new land was brought into cultivation in this period. The population kept growing while our land resources did not. Agricultural production did not keep pace with the growth of domestic demand so that the exportable surplus declined. Industrial expansion made an excellent home market. The chart shows that crop values per acre advanced although less sharply than land prices.

The savings of agriculture were largely invested in clearing, fencing and draining of fields and the construction of farm buildings. Roads, schools and courthouses were built and paid for to a large extent out of taxes on farm lands. With but little new land available, the tendency was to capitalize such values in the form of higher land prices. Increased profits in farming brought about by the application of scientific methods and modern machinery had a similar effect.

Then followed the period of inflation, extend-

### Do You Want Tax Reduction? Then Help!

"I am heartily in accord with the sentiments expressed in your article on page 365, issue of November 22nd. I have felt for some time that the matter of taxation is a very grave proposition. A move to awaken people to the crying need is very much needed. The six items appearing in your program fully meet my views as they must also meet the views of many or most of the rural population."—H. B. O., Otsego Co., N. Y.

THE above is a sample of the letters that are beginning to come in regarding our suggested program for tax reduction published in our November 22nd issue.

We have had one, which we will later publish, agreeing to all of our suggestions except the tax on gasoline. Thirty-four other states have this gasoline tax and it is one way to make the people who use the roads pay for them. However, if there is enough sentiment from our people against this proposal, we will remove it from the program.

In order to refresh your mind, here are the items we are standing for:

- I. The abolition of a direct State tax on property.
- II. No further reduction of income taxes until government expenses are reduced.
- III. Discontinuance of the issuing of tax exempt securities.
- IV. A carefully prepared detailed budget for every government unit from the nation to the county.
- V. Full publicity and information to taxpayers showing the exact purposes, with amounts, for which taxes are spent.
- VI. We are also in favor of:
  1. Larger taxation of personal property.
  2. Gasoline sales tax, and
  3. Taxing billboards along sides of State highways.

Are these in accord with your views? If so, let us know. With your support, there is much that we can do. Write now, while you think about it.

### Beware of the St. Lawrence Project

THE resolutions passed by the National Grange at Atlantic City which we published in last week's issue were for the most part filled with common sense and based on what farmers need and want done.

But there was one notable exception. We

refer to the approval which the Grange put on the project to widen and deepen the St. Lawrence River to make a waterway for large ships through the St. Lawrence to the sea. This is one of the most foolhardy and nonsensical proposals of many years. In the first place, we understand that there are several great engineers who have said that the undertaking was physically impossible. Whether it is or not, it would cost many millions at a time when the national government should be thinking of conserving its money and not spending it.

During at least five months of the year these northern waters would be frozen solid and this period would come at the time when the waterway would be most needed for exporting farm products. Moreover, the business would be taken from the railroads during a part of the year, but the railroads would have to be depended upon during the other part. This would either necessitate a great raise in railroad rates, or else the railroads would be forced to dispose of their rolling stock so that during part of the year when farmers needed shipping facilities there would be neither waterway nor railroad facilities.

We already have one big ditch in the barge canal across New York. Why not demonstrate that this is practical before sinking more millions into another one? Farmers should be a unit in opposing this foolish expenditure of money for the St. Lawrence project, and we are surprised at the action of the National Grange in approving it.

### Are You Using This Free Service?

"The check for \$114.02 from Mr. \_\_\_\_\_ was received in due time. My delay in acknowledging receipt was caused by waiting to hear from Pittsfield Bank. I thank you very much for your efforts in my behalf. It is wonderful the way you get things, and more wonderful that it is without charge, and evidence of good will and diligent endeavor for the benefit of your subscribers."—A. L., Columbia Co., N. Y.

THIS letter is an example of the many we receive every week acknowledging the work done by our Service Bureau. Not all of them, of course, are for such large amounts. We work just as hard to get five dollars as we do to get five hundred.

Our Service Bureau work is constantly growing, but we want it to grow faster, for we feel that this is one of the best ways in which we can render service to our people, and "Service" is the watchword of American Agriculturist.

Remember that we keep a lawyer on our staff, a financial adviser, crop and market experts, a household editor and a staff of office workers, and all of this service costs you nothing except a two cent stamp. We answer all questions of a general nature, including legal questions about deeds, line fences, wills, dower rights, recovering of damages, and insurance; we investigate the financial standing of a firm with whom you want to do business; we advise you in regard to investments; we collect claims against commission men, business firms, and others if the claims are not personal in their nature; we answer all kinds of questions relating to farm problems including general veterinary advice; and we try to help to solve your personal market problems.

If you are in trouble or if you think we can help you in any way, write us giving us all of the details. If we cannot help you, we will let you know frankly; if we can, you can rest assured that we will.

### The East Is a Good Place to Farm

ANYONE who gets the idea that New York or adjacent states are not good farm states has another guess coming. Horace Greeley's famous advice: "Young man, go west," no longer holds true.

In January, 1920, according to the New York State Department of Farms and Markets, the farms of New York State were valued at \$69 per acre; at the same time, the farms of Iowa were valued at \$227 per acre, or more than three times as much. In 1923, the crops of New York State had an average valuation of \$35 per

acre, while those of Iowa averaged only \$22 per acre, or less than two-thirds as much.

In spite of the fact that several of the Western States are much larger than New York, it ranked sixth in 1923 in the valuation of its agricultural products. Texas, Iowa, Illinois, California and North Carolina were the first five in the above order.

### Amend the Automobile Law

"I am in sympathy with those who are protesting against the new automobile law. It has certainly taken a good deal of the joy of living out of our family as only our son under eighteen years of age is thoroughly capable of operating the car.

"We live on a farm and are now obliged to use a horse and buggy whenever we go, which is far from a safe way of travel in this section as so many are struck by motor-driven vehicles.

"But in all accidents that I have heard of I do not remember one where the driver was under eighteen years.

"We are law-abiding people who would very much like to use our car and hope something will be done this coming winter to amend this law."—J. O. B., Jefferson Co., N. Y.

THIS letter expresses briefly why American Agriculturist believes that the New York State new automobile law should be amended. The general principles of the law are all right. Reckless driving should be controlled, but that feature of the law which places the age limit at eighteen is working grave hardship and injustice especially on country people.

American Agriculturist will ask the legislature this year for an amendment. We will need all the support that we can get. Therefore, won't you write us on this important subject?

### Kill a Kow!

TURN to page 393 and read how our farmers are adding their culls to our growing herd of scrubs, then sign the slip at the bottom of the page and drive your poorest cow in with the rest.

We do not want to be misunderstood. We are no pessimists in regard to the future of the dairy business. We believe there is a good future for good dairymen, but in nearly every herd there is at least one cow that is doing her part to curse the whole dairy business. As long as she is there she is eating the profits made by the good cows and she is ruining the market with surplus milk.

Why keep her?

### Forty Days of Sunshine

THERE was this fall the nicest spell of weather within our memory. Day after day for nearly forty days during October and early November the warm sun rose in the East and traveled its majestic way across the cloudless skies. These were days, too, mellowed and made pleasant by the cool wind and the blue haze of autumn.

It has been dry, and there have been some forest fires, but the rains have come in time, as they always do, before winter closes in, and for the most part there was enough time to get the fall work done and plenty of opportunity to appreciate the blessing of a long spell of sunshine.

### Eastman's Chestnuts

ONCE heard a fat man say that the worst thing about being so heavy is the lack of sympathy a fat person gets when he is in trouble or sick. There is usually something so good-natured and prosperous looking about a big man or woman that it is difficult to think of them as in need of sympathy. Yet they suffer their full share of misfortune; in fact, maybe a little more than their share, for there is something in the saying, "A lean horse for a long race."

The story is told of a fat woman who weighed—poor thing—more than 350 pounds. She got appendicitis, and was taken to the hospital for an operation. The surgeon took one look at her, and said:

"YE GODS! SHALL WE CUT OR BLAST?"

# The Making of Good Farmers

These Boys Tell How They Worked for the A. A. Scholarship

**E**ACH year Henry Morgenthau, Jr., offers through the American Agriculturist a \$200 scholarship in the winter course at the New York State College of Agriculture to the farm boy who has the best crop or animal project during the preceding year. Last year the winner was Leonard J. Strang of Akron, Erie County. This year Harold Winsor of Guilford, Chenango County, won the prize with his dairy project. The second in line was James Richmond of Phelps, Ontario County, who raised an acre of potatoes. The third was Kent Stoodley of Adams Center, Jefferson County, who raised a calf as his project.

One of the conditions of the contest for the scholarship required that each boy write an article describing just how he conducted it. We take pleasure in publishing these three articles on this page and we ask you to take particular note of what these boys have written. They show in a striking way what junior project work is doing to train our young farm people to meet the problems of the future and in giving them true ideas and ideals of the great business of agriculture. American Agriculturist congratulates these boys, their parents and their teachers on this worthy and worthwhile work. Read in their articles given below what they accomplished. There is much in these achievements for all of us.

\* \* \*

## The Story of My Dairy Project

HAROLD WINSOR

**I**T was in March 1923 that I first started my calf club work. On March 29, 1923, I bought a purebred Guernsey heifer calf of Mr. Homer H. Higley, Norwich, N. Y., on a promissory note of one hundred dollars. During the summer I took a great deal of care of my calf. I also raised some chickens which I hoped to sell to help pay for my calf.

At the county fair of 1923 I won two second

Harold Winsor and his embryo herd

prizes, one in the free-for-all and the other in the calf club.

Then the first of October came and my note was due. I had earned enough prize money on my calf and chickens together with the money from the surplus chickens that I sold, to more than pay the note.

After the note was paid I had fifteen dollars left over and so I bought a grade Guernsey heifer calf to have in the club work this year.

In February 1924 I wanted another heifer that would be a junior calf at the fairs, so I bought a purebred Guernsey heifer calf of E. V. Salisbury, Oxford, N. Y., with what money I had earned during the winter and also the money received from eggs sold from my little flock of hens. Now I had three head of Guernsey to have in the club work during the year 1924.

In April I had a chance to buy a splendid purebred Guernsey heifer that was seven months old for a low price, which was special to a club worker. So I borrowed the money, \$150 from the National Bank of Norwich on a promissory note.

This year at the county fair I won first and third prizes on my two yearlings, first on my senior calf and first and champion of the breed on my junior calf.

This fall I went to the State Fair and there I won first and second on my yearlings and first on my junior calf. I did not show my senior calf at the State Fair because she was a grade and there was no class for grades. At the two fairs I won enough money to pay the note of \$150 and had \$30 left over which I used to buy another purebred Guernsey heifer calf to have in the club work for the year 1925.

I think the club work is very interesting and like it very much, especially as I have an aim for which to work. I aim to build up a herd in a few years and so that inspires me to do the best I can.

## My Experience in Raising an Acre of Potatoes

JAMES RICHMOND

**T**HE first work that I did in preparation for my crop of potatoes was to draw eight loads of well rotted straw manure and spread it on the plot of ground which I had selected—a level,

James Richmond digging his spuds

clean piece where the clover grew unusually rank the year before.

The spring was very rainy and cold but as the potato ground is all tile-drained, I was able to plow it in May. I did this with two horses and a walking plow, taking care to turn a good even furrow at all times. The last week in May I double-disked the ground and dragged it twice. This left the ground in a very loose and very fine condition, there being no quack grass and very little foul stuff on top of the ground.

On the fourth of June I set about preparing the seed potatoes. Our home stock was certified four years ago by experts from Cornell and every year since then the seed, which is of the Heavyweight variety, has been carefully selected at planting time. The potatoes had been stored all winter in the cellar and kept very well. I used only good firm medium-sized tubers, rejecting all that had any scab or sign of disease. I cut sixteen bushels of this seed and after dragging the ground again, planted it on the sixth of June. I dropped the pieces twelve inches apart in rows three feet apart using a "Star" two-man planter. Directly after planting I rolled the piece to pack the ground firmly around the seed.

After this, nothing was done on the potatoes until the sixteenth of June when I went over them with a peg-tooth harrow to destroy the small weeds appearing in the row. This did not harm the potatoes but it "fixed" the grass and weeds. A few days after this I cultivated them with an "International" two-horse cultivator using the discs to throw the dirt upon the row. This covered the potatoes and weeds but in a few days the potatoes came through without the weeds. I cultivated them twice more at intervals of from ten days to two weeks, the last time just barely loosening the surface for the roots were then fairly well developed and very near the surface.

I sprayed my potatoes only once, using a

5-5-50 solution of Bordeaux mixture which I made myself, adding a pound of Paris green to kill the bugs. I would have sprayed more if I had had the time but as it is I believe my potatoes are as good as though they had been sprayed three or four times for as it happened the season has been unusually good for the growth of potatoes.

The vines did not blight but died of their own accord and are now ready to be dug. Scarcely a weed is to be seen in the piece. I have dug into a few hills and find four or five—sometimes more—good, large, smooth, potatoes in a hill.

From my experience in raising this acre of potatoes I concluded that there are at least four things necessary for a good crop; *First*, good ground. By this I mean that the ground must have had good care and management for the past three years and must be in a good state of fertility and tilth. *Second*, good seed. It is a good plan to buy some certified seed, if one's own seed has become infected with disease, for in this way the percentage of diseased hills is greatly reduced and the yield increased.

*Third*, thorough cultivation. The ground must be plowed well and worked in good shape. After the potatoes are planted the harrow should be used to prevent the growth of weeds before the potatoes get started. After this the small weeds in the row can be kept covered by the use of the discs or wings.

*Fourth*, efficient control of disease and insect pests. This includes disinfecting the seed and spraying the vines throughout the growing season.

\* \* \*

## How I Raised My Calf

KENT STOODLEY

**I** SELECTED my calf from my Uncle Clayton's dairy farm of purebred Holsteins. I selected one that I thought would make a good producer and had good show points. I bought her with money I had in the bank and when I took her home she was a week old and weighed ninety-seven pounds,

The pen that I put her in was one that had good ventilation and lots of sunlight. I cleaned it all out and disinfected it before I stabled her there. I always kept her stall clean and fresh bedding in it so she would be warm, clean and dry because these were very essential regarding her health.

I fed her from a galvanized pail which I washed every day and kept so clean that I

Kent Stoodley grooming his pure bred Holstein

would just as soon drink from it myself. I also weighed and took the temperature of the milk before feeding and found that I got results from doing so. I gave her a little salt every now and then and was very careful not to overfeed.

When she was about five weeks old I began giving her grain ration that I found in the bulletin No. 73 sent out by the State College of Agriculture. I also weighed this before feeding every time. Clover and alfalfa are the best hay

(Continued on page 392)

**"From Dot and Daddy"—a Kodak**

It has been hard for Dot to keep the big secret but she managed somehow, and mother is the most surprised person in the world. And pleased, too. A Kodak is just what she wanted.

*Autographic Kodaks \$6.50 up*

Eastman Kodak Company, Rochester, N.Y.

**A Home That Never Was**

(Continued from page 388)

not by a soul-withering quarrel. But in that moment the mischief was done past all repair. The Girl on her part was quick and proud and the Boy was bitter and hard and almost in a moment words were passed on both sides—burning phrases that could neither be forgiven nor forgotten.

And then it was over. I suppose the Boy went out and "had his dark hour alone" while all the castle of his hopes and dreams crashed about him. At any rate in an hour he was a Man—a very different man than might have grown from such a boy. That night he paid off the builders—offering no word of explanation—only telling them that they need not return.

So the house was left that day with its floors littered with sawdust and shavings, with mouldings that were never placed and finished doors that were never hung and window sash that were never set and no cheerful blaze was ever kindled in the great fireplace—the fireplace beside which the Boy a thousand times in fancy had seen the Girl sitting while the dancing flames revealed and then concealed her dear face. In the barn a new lumber wagon stood piled high with dressed lumber drawn that day from the planing mill. That wagon was never unloaded but stood for a generation—stood still when I heard the story, like the house—a monument to a man's dead hopes.

\* \* \*

I do not know the final fate of the house. For a generation it stood—a gaunt, unpainted, eyeless Thing, slowly crumbling to its end. In its tenantless chambers bats and owls roosted unafraid and on its attic rafters swallows hung their nests of mud and reared their young. Now and again the school children came and explored it and ran up and down its stairs and romped through it with noisy glee. But it was never a trysting-place for lovers for its story was remembered and for them it was a place of sad memories and evil omen. I could wish that it might go up in a great flare of flame some midnight reddening the low clouds for a little and thus being purified forever of its curse and its portent.

Romance never again touched the Boy or Girl. She grew old and faded—faded before her time—with a face set always toward the past. He lived long and prospered—in the way that some men count prosperity and waxed harder and more selfish and bitter with the years and was a hermit rather than a man. And tonight as I think of these two, my heart aches for them because they came so near to grasping the greatest and most beautiful happiness that this old world knows and then because of a little folly, missed—and lost.

**The Making of Good Farmers**

(Continued from page 391)

because they contain lots of vitamins so essential to a growing heifer. I weighed this so as to keep a record of what it cost to raise her.

When she was about nine weeks old I began taking the milk from her ration, substituting water. I made the change gradual and was about ten days changing from milk to water and as the milk was taken from her I added grain.

I kept her in the barn in the summer the same as the winter and when fly time came, I made a blanket of burlap and put this on her. I also brushed her once a day to keep her clean and shiny.

In September I had to take her to the county fair where she was shown with the other calf club calves. After the fair I took her home and got a large wooden block and hitched her around in the meadow for a half a day at a time and let her clean up some second growth clover.

Besides taking care of her I have taken care of four other calves and a team of horses and milked seven cows twice a day. When I have been in doubt as to what to do I have asked my county leader, Alton Adams, and he has given me several helpful suggestions. I have also read in the bulletins on calf raising, published by the State College of Agriculture. My project has been very helpful to me and I have learned a lot and I wish that every boy who plans to stay on the farm would enter into the calf project or any other project.

Comes in Black Only

**\$7.50 Down**  
Puts this **Olde-Tan Metal-to-Metal** Harness on Your Horses

We trust you wherever you live... Only \$7.50 down. Pay the rest monthly. Write for free harness book. Learn all about this improved metal-to-metal harness construction. Metal wherever there is wear or strain. No old-fashioned buckles.

# A Saving of \$1,804

## What The "Kill a Kow" Plan Can Do

"IF the members of a certain dairy improvement association in New York State had butchered the poorest 27% of their cows averaging 4,682 pounds of milk, they would have kept off of the market 290,000 pounds of milk, saved \$4,524 for feed, saved the labor on 72 cows and increased their net return \$1,804." This statement, based on absolutely carefully kept records, shows exactly why American Agriculturist is conducting its "Kill A Kow" campaign. We do not hesitate to make the statement that every cow producing less than 5,000 pounds of milk is kept at a loss.

The above statement is based on disposing of 27%. If this were all done at once it would work hardship, but just stop to think for a moment what it would mean for both the production and the marketing profits of the milk business if the dairymen who are now supplying the New York market would dispose of only 5% of their cows! This could be done by taking only those cows who are producing around 4,000 pounds of milk a year, every one of whom is kept at a big loss to her owner.

### Would Make a Scrawny Herd

This proposition seems to be such plain common sense to us that we fail to see why any dairyman can long hesitate to join in the movement. We are glad to say that many are joining. We have enough already signed up on our "Kill A Kow" campaign to make a big showing if they were driven down the road in one great herd. But what a scrawny, disreputable lot they would be! That is, so far as milking characteristics are concerned, for every one of them whose owners have listed them to be killed between now and the first of March is a poor producer. Probably most of them would be fat, but they certainly would be a dairy from which every good dairyman would turn away in disgust.

If there were added to these, however, all the others that should travel the same road to the butcher's block, they would make an army of "boarders" that would take days to drive by the same spot, a great herd of trouble makers responsible for the surplus and the gluts which result in constantly low prices to producers in the market, and responsible too for high labor and feed cost that keep down the profits in nearly every dairy.

Some farmers have written us that they would be glad to dispose of such cows if they could get good beef prices for them. Of course, this is a problem, but we still maintain that they could be knocked in the head and buried in the back lot and still the owner would be ahead of the game financially. Surely they can be fattened and eaten or canned for home consumption.

### Kill Only "Known" Boarders

We have only one word of caution to offer. We see no point in killing heifers, unless it is certain that those heifers will never make good producers. The future of the dairy business looks well for the man who is keeping good cows and taking good care of them. Heifers of good promise should not be butchered. We

are only after those brutes who are eating their heads off to produce milk at a loss to flood the surplus market.

Won't you add at least one cow to our rapidly increasing herd that is stealing the dairymen's profits? Read the letters on this page and sign the slip at the bottom. We know of no single act that you can do that would bring your business so much good.

\* \* \*

### Kill a Kow and the Surplus

IN compliance to your request to "Kill A Kow," I wish to extend my hearty support.

We as dairymen realized several months ago, that we were producing milk at a loss because partly of competitive conditions and partly for the amount of surplus there appeared to be in all the markets of our large cities.

In order that we could intelligently select the boarder cow from our dairy, we placed our herds in the Cow Test Association of an adjoining county, and for the past few months have been watching results rather closely that we might eliminate 25 (10%) of our dairy of our poorer or boarder cows from our herd. These cows we are feeding for beef and expect they will all disappear from our herds within 2 months. In picking out the poor cows we not only watch for the cow who is low in milk production but for the cow which is a fair milker but low in butter fat, as we believe that a higher butter fat test in the milk will bring a better and more stable demand.

If we could reduce the number of cows producing milk for the New York market 10%, we likely could reduce the quantity of milk about 8%. This would do away or reduce greatly the actual surplus for which today we as producers receive only the surplus or butter prices.

By excluding these boarder cows from our herds, we increase the average production of the dairy, thereby reducing slightly the cost of production, and we also reduce the surplus which will naturally make a slight increase in the blended price we shall receive.

Then shall we as farmers inspire our situation in a permanent and substantial way, and shall all feel we have been a partner in this important undertaking.—H. J. H., Cortland County, N. Y.

\* \* \*

### Doing It For Years

**KILL A KOW:** I have been doing this since 1922 and even a little better. In 1923, I sold two for beef. This fall I will have another for beef for my family and one or two others for the butcher. I would like to do better still and am in hopes of getting a good cow barn with modern improvements so that good cows will have no reason for not giving good results and any and all of those that will not give fair returns will go to the butcher's.

With a good modern barn, water buckets, good light and ventilation and good attendance from the caretaker, I feel that twelve good cows will do as well as eighteen kept in an easy-going way.—A. M. N., Oneida County, N. Y.

## What is

# KOW-KARE?

## and how does it help your Cows to higher yields

One way to increase the milk flow is to feed abnormally rich foods and so-called concentrates. This is expensive and full of danger. The rich foods are costly. They put an added strain on the digestive and milk-making organs which, so often, are already jaded from overwork and forcing. Even if these vital functions do not actually break down, the milk flow drops off the instant this unnatural and expensive stimulant is withdrawn.

seases as Barrenness, Abortion, Retained Afterbirth, Scours, Garget, Milk Fever, Lost Appetite, etc., all of which originate in run-down genital and digestive organs.

### What Cow Ailments Trouble You?

Cow diseases are too expensive to tolerate. A short illness may easily make a liability of a cow that ought to be a profit-maker. If disease does creep in call *Kow-Kare* to your aid promptly. Its direct medicinal action on the vital organs has won it ever increasing popularity as the reliable "home cow doctor."

So that you may know just how to treat the various cow ailments successfully, write us for free copy of our famous book, "The Home Cow Doctor."

### A Safe Invigorator

The other method - the only one with genuine and permanent results - is to build up the organs of digestion, assimilation and milk-secretion to a natural vigor that will enable them to turn into milk ALL the milk values in the cow's natural diet.

The latter method is the *Kow-Kare* method. *Kow-Kare* is not a stock food. It is a compound of scientific medicinal properties that build up and invigorate the digestive and genital organs. In itself *Kow-Kare* has no food value, but it vitalizes the milk-making functions so that the ordinary cow diet is consumed and turned into the maximum milk flow.

Used in this way - regularly and in small quantities *Kow-Kare* pays for its slight cost scores of times over in added milk income. Besides, the cow that is aided with *Kow-Kare* seldom becomes a prey to such di-

### Try This More-Milk Plan

To make this your banner winter in milk production follow the plan that is now winning thousands of new recruits among dairymen each year. Give all of your cows a tablespoonful of *Kow-Kare* in the feed twice a day, one week of each month during the winter and spring.

This *Kow-Kare* treatment really costs you nothing because the slight expense is returned many times over in added milk yield. Besides, every penny spent on *Kow-Kare* is an investment in cow health.

Feed dealers, general stores and druggists sell *Kow-Kare*, in \$1.25 and 65c sizes. If your dealer is not supplied, order direct from us.

## Use Dried Beet Pulp Instead of hay or corn silage

Don't let shortage of hay or corn silage worry you. Experiment stations and wide investigation have found a wonderful substitute.

In tests, 6 pounds of dried beet pulp have replaced 10 pounds of mixed hay. It costs no more and increases milk yield 2 to 5 pounds a day. In other tests, 1 pound of Dried Beet Pulp replaced 5 pounds of corn silage. It produced 10% more milk and improved health of cows.

Feed Dried Beet Pulp. It is the sugar beet, dried, after the extraction of the sugar. It is a succulent, palatable, nutritious and wholesome feed and means bigger profits.

## Fruit Growers to Meet at Rochester

THE annual meeting of the New York State Horticultural Society will be held at Rochester, N. Y. on January 14, 15 and 16, according to Roy P. McPherson, secretary of the society. The annual meeting of the society is the big fruit event of the year, attracting thousands of growers from all parts of New York and adjoining States. The exhibit, both of fruit and equipment are worth going a long distance to see. Those who are contemplating exhibiting should get in communication with Mr. McPherson. His address is at LeRoy, N. Y.

The society also holds an eastern meeting in the Hudson River Valley, at Poughkeepsie. The dates for this have not been decided as yet. T. E. Cross of LeGrangeville is in charge of the exhibit spacings at this eastern meeting.

- Dec. 12—Lottsville, Pa., 2 P.M., I. O. O. F. Hall, Warren County sub-district; H. J. Kershaw, speaker.

### New York County Notes

**Saratoga County.**—We are having a pleasant fall for outdoor work. Rain is much needed at present time. Frosts held off until very late in the season, which gave potatoes and corn an opportunity to make late growth. Neither crop is quite up to the average yield. But few silos are filled to capacity. Much of the corn is soft and not filled well. Cattle are reported to be in good condition and most farmers have plenty of fodder for the winter. Eggs are very scarce and are bringing 65c a dozen wholesale. Apples are very scarce indeed. There seems to be none in the market. Butter is bringing 45c a pound wholesale. Milk prices are generally more satisfactory. Grains and feed of all kinds are high priced. The high cost of coal is creating a good demand for hard wood for good prices quoted. There seems to be a strong tone of optimism among farmers this fall. The demand for scrub cattle is weak but fresh milch cows are bringing high prices.—E. S. R.

**Washington County.**—Wheat is about all sown with about the usual acreage going into that crop. It is coming up fine. Farmers are now in the middle of corn husking, reporting about half a crop. Practically all of the apples have been picked, the crop is not as good as it was last year. Very few horses or cows are being sold, but hogs are meeting good

sale at \$10 a hundred. Butter 40c a pound, eggs 40c a dozen.—D. J. W.

**Broome County.**—Fall work had been very backward. Much more corn than usual was hit by frost before cutting. Most farmers have finished threshing, reporting fair grain yields and advancing prices. Very few have finished digging potatoes. Apples and pears are abundant through this section but quality is rather poor. Markets seem to be flooded and prices way down. Pears are bringing from \$1 to \$2.75 and apples are around \$1. Eggs are scarce and are bringing from 60 to 65c. Very few are offered on the market. Chickens and fowls are less plentiful than usual.—Mrs. E. M. C.

**Ontario County.**—We have had a fine fall for farm work. There is still plenty to do. Potatoes and cabbage are very low in price. Potatoes are bringing 35 to 40c a bushel and cabbage anywhere from \$3 to \$5 a ton. The ground is getting quite dry. We have had no rain for some time and the ground is therefore very hard.—H. D. S.

### North Country Notes

THE first of November finds the farm work much farther along relatively than the first of October. The uncertain weather conditions of September had held up silo filling and thrashing until it seemed like a hopeless task. As a result a lot of corn went into the silos during the last month in rather poor condition—both as to moisture and mould.

Not a drop of water fell during the whole month of October following the deluge of late September which soaked and packed the ground.

The oat crop was very irregular. Some localities had a good yield while others were relatively low. Individual farms varied widely too. Some men had the largest yield in years and others had almost failure. Most of the oats were more or less discolored, regardless of the yield however, as the weather was very catchy during most of the harvest which came nearly two weeks later than usual. Most of the oats will be ground for cattle feed during the winter.

A lot of farmers are sowing a peas, oats and barley mixture for their grain crop, and this gives them a good mixture for their dairy ration with the addition of some higher protein feeds. With clover hay very little else is required for the summer milking farms. The mixture as a rule came out with good weight this year although the aere yield was not all that could be desired.

Milk prices are averaging low, and farmers have to watch their step very carefully. Hay is moving slowly at \$10 to \$14 according to the quality and the buyer. There is a large quantity of lower grades of hay this year, and the tendency is upward on the high grades as far as price is concerned. Potatoes have been bringing thirty-five to sixty cents, and extreme large ones making more or less trouble for the growers. Some men had a number run as large as two and a half to three pounds each.—W. I. R.

### Maryland Notes

**Cumberland County.**—We have been having very dry, pleasant weather. Water is very scarce. Many cisterns are perfectly dry and many farmers are hauling water quite a distance. Newly sown wheat is in great need of rain. Some of the late sown wheat is not even up yet. The apple crop was a failure through this section. Corn is also in bad shape, not fit even to crib on account of so much soft corn, which is a general complaint. Very little corn has been husked as yet. Many hogs are being fed for market. Wheat is bringing \$1.30, corn \$1.20, oats 50c, with prospects of going higher very soon.—J. B. K.

# You'll get Extra Wear from this live elastic rubber

**R**UGGED construction makes a lot of difference in the wear of your boots—of course.

But it's every bit as vital to have rubber that won't soon crack and break!

Thousands upon thousands of times your boots are bent and wrinkled. It takes *real live rubber* to stand this constant wrinkling and still *stay waterproof*.

And that's what the rubber in "U.S." Boots will do! No more live and elastic rubber has ever been used in boot construction.

Cut a strip of this rubber from a "U.S." Boot and you'll find it will stretch *more than five times its length without breaking!* And it will snap back into shape every time—like an elastic band.

This live, tough rubber means longer wear. Anchored in this elastic rubber are layer

on layer of strong fabric reinforcements. Where the hardest strains come there are *as many as eleven separate layers* of rubber and fabric.

They give to "U.S." Boots strength to stand the hardest knocks and strains.

"U.S." Boots wear longer because they're *built* to wear longer. It will pay you to ask for "U.S."

## Other "U.S." Rubber Footwear

You'll find every type of rubber footwear in the big "U.S." line. There's the Walrus, the famous all-rubber overshoe—the "U.S."

lace Bootee, a rubber workshoe for fall and spring—"U.S." Arctics and Rubbers—all styles and sizes for the whole family. Look for the "U.S." Trade

Mark whenever you buy—the honor mark of the largest rubber organization in the world.

# The Greatest Gift of All!

There is more than passing pleasure in the gift of a Willys-Knight—infinitely more! Such a gift will bring your family boundless joy and happiness, now and in the years to come.

Pride in its distinctive beauty of line and contour—its brilliant performance—its smooth, velvety power. Satisfaction in the amazing quietness, flexibility and economy of the world-famous Willys-Knight sleeve-valve engine.

This is the same type of engine that powers the most expensive, hand-built cars of Europe; the *only* type of engine in the world that actually *improves with use*. Simple, sliding sleeves instead of noisy poppet-valves. The annoyance and expense of carbon-cleaning and valve-grinding are banished forever. Carbon only makes this engine quieter, smoother and more powerful, mile after mile and season after season.

And finally—in addition to matchless beauty, comfort, economy and long life—all Willys-Knight models are now equipped with the famous Lanchester Balancer, which gives Willys-Knight freedom from vibration so common in motor cars.

At the wheel of a Willys-Knight car, you can loll back in the deep, soft, yielding cushions and relax. Driving is as effortless as breathing; steering as easy as turning your head. Control levers are just the proper length. An unusually light pressure operates the foot pedals.

Why not make *this* Christmas memorable? Give yourself and your family a Willys-Knight—a car you can keep for years and years.

THE ENGINE IMPROVES WITH USE

# Reviewing the Latest Eastern Markets and Prices

## MILK PRICES

**THE** Dairymen's League Cooperative Association announces the following prices that dealers will pay the League during the month of December for milk testing 3% in the basic zone of 201 to 210 miles from New York City. It is to be understood, of course, that the prices mentioned below are not received by the farmer but go into the pool. They represent the prices dealers pay to the League. **Class 1:** milk used chiefly for fluid purposes, \$3.07 per hundred pounds. **Class 2A,** used chiefly as fluid cream, \$2.10; **Class 2B,** used chiefly in the manufacture of condensed milk and ice cream, \$2.25; **Class 2C,** used chiefly in the manufacture of soft cheese, \$2.15. **Class 3A,** \$1.80. **Class 3B,** \$1.75. **Class 3C,** \$1.65.

**Class 4,** prices will as usual be based on the butter and American cheese quotations on the New York market.

The only increases over November prices are in **Class 2,** 20 cents per hundred in 2A and 2B and a 10 cent increase in 2C.

### Sheffield Producers

The Sheffield Farms Producers announce the following price for 3% milk in the 201 to 210-mile zone: **Class 1,** \$3.07 per hundred; **Class 2,** \$2.00; **Class 3,** \$1.50; **Class 4,** determined by market quotations on butter and cheese.

### Non-Pool Cooperative

The Non-pooling Dairymen's Cooperative prices for **Class 1** milk is \$2.80 per hundred; **Class 2,** \$2.00; **Class 3A,** \$1.60; with freight and fat differentials.

### Interstate Producers

The Interstate Milk Producers' Association (Philadelphia Price Plan) announces that receiving station prices, or the price to farmers in the 201 to 210-mile zone from Philadelphia for 3% milk, is \$2.10. In the 101 to 110-mile zone the price is \$2.29.

## BUTTER PRICES ADVANCE

The butter market has made a rather spectacular advance during the past week. Creamery marks scoring higher than extras are selling better than 47½¢ where pet marks are concerned. Even creamery extras, scoring 92, reached 46½¢ by the middle of the week. This unusual turn has been due primarily to the fact that the Chicago market has been above par with New York right along, and there is no question but what the light make of butter is having a material effect on the market. There is a light supply of really fancy butter. The advances have been more pronounced in the higher scores than in the

## Color Your Butter

**"Dandelion Butter Color" Gives That Golden June Shade which Brings Top Prices**

Before churning add one-half teaspoonful to each gallon of cream and out of your churn comes butter of Golden June shade. "Dandelion Butter Color" is purely vegetable, harmless, and meets all State

and National food laws. Used for 50 years by all large creameries. Doesn't color buttermilk. Absolutely tasteless. Large bottles cost only 35 cents at drug or grocery stores. Write for free sample bottle.

Wells & Richardson Co., Burlington, Vt.

## Live Poultry Shippers

**IF YOU WANT HIGHEST PRICES** returned promptly—market reports and information—free use of coops **AND SERVICE UNEXCELLED—SHIP TO: BERMAN & BAEDCKER, Inc.** West Washington Mkt., 28 Thirteenth Avenue New York City

## SHIP YOUR EGGS

**WHITE AND BROWN To R. BRENNER & SONS** Bonded Commission Merchants 358 Greenwich St., New York City

mediums and lower grades. It is a problem to forecast just how long these advanced prices will hold. Weather conditions have a great deal to do with it. Trading is active at these higher prices, and unless receipts increase materially and as long as consumptive demand stays as it is, we will see the market hold its own on these top grades of fresh butter. Naturally with the advance on fancy grades, there has been a corresponding advance, although not as extensive, in the intermediate and lower grades. However, there is not the activity in and the snap to the demand for these intermediate and lower grades that the trade would like to see. Storage holdings are still very heavy and naturally the better grades will compete with the intermediates at relative prices. Medium grades are a whole lot better than they were a month ago. In general, there is a marked contrast in the butter market as it is at the present time compared with the condition it was in a month ago. It is just about reversed.

## CHEESE MARKET FIRMER

Activity in the cheese market and the general firm tone continues. Although the market is in a very good condition, nevertheless dealers have not been inclined to push prices any higher, generally showing a disposition to keep

## The Market at a Glance

The following are the prices on the New York Market, at which farm products of special interest to eastern farmers, sold on November 26.

<b>Eggs, nearbys (cents per dozen)</b>	
Jersey hennery whites, closely selected...	73 to 73
Other hennery whites, extras...	70 to 75
Extra firsts...	63 to 72
Firsts...	62 to 67
Gathered, whites, first to extra firsts...	62 to 71
Undergrades...	52 to 61
Pullets...	45 to 56
Hennery browns, extras...	79 to 75
Gathered browns and mixed colors...	54 to 63

<b>Butter (cents per pound)</b>	
Creamery (salted) high score (93 score)...	47 to 47½
Extra (92 score) e.c.	46½ to 46½
Firsts (90-91 score)...	42½ to 43½
Firsts (88-89 score)...	33 to 41

<b>Hay and Straw, large bales (per ton)</b>	
Timothy No. 2...	24 to 25
Timothy No. 3...	21 to 23
Timothy Sample...	15 to 20
Fancy light clover mixed No. 2...	21 to 23
Alfalfa, second cutting No. 2...	25 to 26
Oat Straw No. 1...	15 to 16

<b>Beans (domestic, per lb.)</b>	
Marrow...	10½ to 11¼
Pea...	5¾ to 6¼
Red Kidney...	8½ to 9
White Kidney...	9¾ to 10½
Yellow Eyes...	6½ to 7

<b>Live Poultry, via express (cents per lb.)</b>	
Fowls, colored fancy, heavy...	23 to 30
Fowls, leghorns and poor...	17 to 21
Chickens, colored fancy...	23 to 31
Chickens, leghorns...	25 to 27
Broilers, colored...	32 to 43
Broilers, leghorns...	23 to 25
Ducks, nearby...	23 to 25
Ducks, Long Island...	29 to 29
Turkeys...	35 to 43

<b>Live Stock (cents per lb.)</b>	
Calves, good to medium...	10 to 12
Bulls, common to good...	2½ to 3½
Lambs, common to good...	11½ to 13½
Sheep, common to good...	3¾ to 5
Hogs, Yorkers (200 lbs.)...	9 to 9½

stocks moving. The demand in New York is more for cured stock. New York State whole milk flats, held, grading fancy to special, are selling chiefly at 22½¢ with a few pet marks reaching 23¢. Average run, held, whole milk flats, are selling anywhere from 20½¢ to 22¢. Fresh, State flats, are bringing anywhere from 1¢ to 2¢ per pound lower than held goods. Fancy fresh, whole milk flats, are bringing from 21¢ to 22¢, and average run flats are seldom bringing any better than 20½¢, while undergrades are bringing anywhere from 18¢ to 19½¢. As a matter of fact there are very few fresh flats arriving.

## FANCY EGGS EASIER

The market for fancy nearby white eggs has taken on something of an easier tone and prices have lowered as a consequence. The market opened on the 24th with a considerable accumulation of nearby white eggs. Trading was not very active and as a result pressure to sell developed at lower prices. This weakness is greatest on the higher priced stocks. Mediums and small sizes have maintained their position better than higher priced goods. During the week the market continued in the buyers' favor as trading was quiet and accumulations were reported in some quarters with a consequent pressure to sell. Eggs have got to be extra fancy, as to size, shape, color and interior quality to bring 78¢. Most fresh nearby hennery whites are bringing in the neighborhood of anywhere from 62¢ to 73¢. The fanciest gathered whites range from 62¢ to 70¢, while pullets are bringing from 45¢ to 56¢. These

medium grades are maintaining their position much better than the higher priced eggs, which is quite natural. The trade is always very critical when it pays high prices while supplies are ample to meet trade needs.

## LIVE POULTRY SELLING WELL

Just previous to Thanksgiving holiday, fancy poultry made a very active market. Express colored fowls sold well when fancy. Average run Leghorns dragged badly, falling as low as 17¢ to 19¢. Express chickens enjoyed the same kind of market as fancy colored fowls, meeting active trading and a firm market consistently. As has been true with the poultry market on holidays previous to this, shippers have taken the stand that because it is a holiday anything will sell. This is not true. Mediocre stock is dragging and only fancy marks are getting real attention.

The turkey market was a an unknown quantity up to within a day or so before Thanksgiving. Prices were not well established and with a more or less weak market, quotations covered a wide range. The main trouble with the turkey market has been the heavy storage holdings of last year. A lot of this storage stock has to move and prices were cut to the bone with the consequent reaction of this year's fresh stock. Express turkeys had to be extremely fancy to bring 40¢ and a precious few were able to meet the critics. Most arrivals brought from 35¢ to 38¢.

## POTATOES STILL DULL

There is nothing to report in the potato market of a news nature. Conditions are just the same as they were last week, the week before and the week before that. There seems to be a little more interest in Long Islands. Farmers on the north side of the Island (down at the East End) are getting 75¢ a bushel, while South Siders are getting a nickel more. Maines and States seem to be dragging badly, especially in New York City. The Brooklyn market has been a little bit better. While States were bringing \$2 per 180 pound sack at 33rd Street and in the Bronx, they were bringing \$2.25 per 180 pound sack in the Brooklyn yards. There was not a whole lot of buying just previous to Thanksgiving. Most dealers were busy making deliveries and were not in a buying mood. States in general are bringing \$1.75 a 150 pound sack in car lots delivered in New York City while Maines are about 25¢ per sack better.

About a week ago we had the pleasure of a visit from a prominent up-State grower who was in the city to sell a couple of cars of potatoes. He grows a superior stock and grades very closely, giving the market exactly what it wants. He called upon a number of the men in the trade and spent some time in the 33rd Street yards. He told the writer it was no wonder States were dragging on the market for he saw several cars opened that revealed about as poor stock as a man would want to be troubled with. He said that as long as New York State continues to ship such potatoes, it can expect the tail end position in the market.

## GRAINS AND FEED

According to New York State Department of Farms and Markets, the following prices prevailed November 15.

The quotations given in this report show the approximate prices at which feed can be purchased per ton, and grain per bushel, in straight carlots through billed from Western points, delivered on track at points in the freight zones as indicated. Mixed carlots cost approximately \$2 per ton more.

Retail feed and grain prices vary with different local dealers depending upon their individual cost of doing business, volume handled, etc. In the case of feeds the retail price may sometimes be as high as \$5 per ton above the wholesale prices given in this report:

	Albany	Ogdensburg	Utica	Rochester	Buffalo

Since Buffalo is an important milling center for wheat feeds and linseed meal, quotations are given for this point on both a through-billed and a local basis. No. 2 White Oats, —; No. 3 White Oats, —; No. 2 Yellow Corn, —; No. 3 Yellow Corn, —; Ground Oats, 40.00; Spring Wheat Bran, \$29.50; Hard Wheat Bran, \$31.50; Standard Middlings, \$31.50; Soft Wheat Middlings, \$36.50; Flour Middlings, \$37.50; Red Dog Flour, \$13; Dry Brewers Grains, —; White Hominy, \$45; Yellow Hominy, \$44; Corn Meal, \$48; Gluten Feed,

\$43.75; Gluten Meal, \$52.75; 34% Old Process Oil Meal, \$47.00.

For points taking New York rate add to Albany price 1¢ cent on oats; ½ cent on corn, 10 cents on cotton seed meal; and 20 cents on other feeds.

## BEAN MARKET DULL

There is no improvement in the bean market, business continues to drag and there is a dull movement in all varieties. Values show no material change from last week. The general feeling is steady, however. Pea beans are offered freely at 6¼¢, which is about the top price for that variety. Red and white kidneys are barely holding their own. It is very seldom that red kidneys exceed 9¢ and white kidneys are slow at about 10¢ to 10¼¢. Arrivals are not very heavy due to the fact that the New York market offers little encouragement to shippers. The best inquiry is for small white beans.

## HAY SLIGHTLY EASIER

Trading on the hay market has been rather light of late and if anything the market shows more of an easier tendency. Hay has got to be extra fine to bring \$27. For these really fancy grades, there is a good demand. However, there is an over-supply of small bales and with advices indicating more stocks rolling, it is quite natural that we will see a slightly easier tone.

## CASH GRAIN PRICES

Cash grain prices, F.O.B. NEW YORK, are as follows: WHEAT, No. 2, hard winter, \$1.69¼; No. 2, red, \$1.73; No. 2, mixed, \$1.67½. CORN, No. 2, yellow, \$1.30¼; No. 2, mixed, \$1.29½. OATS, No. 2, white, 61¢; fancy white clipped, 66¢ to 67½¢; ordinary white clipped, 61½¢ to 62½¢. RYE, \$1.44½. BUCKWHEAT, sound milling, \$2.20 per hundred pounds.

Cash prices, F.O.B. CHICAGO, are as follows: WHEAT, No. 2, red, \$1.65¾; No. 2, hard, \$1.55½. CORN, No. 2, mixed, \$1.14; No. 2, yellow, \$1.16; No. 2, white, \$1.13. OATS, No. 2, white, 51½¢.

## More "Kill a Kow" Comments

I AM also enclosing the "Kill A Kow" blank from our paper. We hope your plan affords farmers some relief from conditions as they are now.—E. C. L., Crawford County, Pa.

# A Special Holiday Offer TO AMERICAN AGRICULTURIST Readers

TWO of them, in fact, and both planned to give you unusual value for your money. By taking advantage of Offer 1, and extending your subscription or taking a new one for 3 years, you receive for the price of postage, a copy of Dickens' Christmas Carol, the most beautiful Christmas story ever written. Under Offer 2, with a 3-year subscription and only 50c additional, you receive a copy of Dr. Royal S. Copeland's magnificent Health Book, the very last word in up-to-date medical advice so clearly written that a child could understand and apply it.

Act quickly, for supplies are limited. Mail the coupon with the correct remittance, and the book you choose will be sent immediately, while the *American Agriculturist* will be a welcome weekly visitor, for the next three years.

### Offer No. 1

*American Agriculturist* every week for 3 years,  
A copy of Charles Dickens' *Christmas Carol*, leather bound, in a two-colored holiday box—  
All for only \$2.12

### Offer No. 2

*American Agriculturist* every week for 3 years,  
*The Health Book* by Dr. Royal S. Copeland—the great authority on home care of illness, who tells you how to get and stay well.  
All for only \$2.50

COUPON

AMERICAN AGRICULTURIST, 461 Fourth Avenue, New York City

## Insulating A Storage Cellar

I am building a cabbage house which is 40 feet wide, 50 feet long and 15 feet high, with space over the ceiling to store baskets. Stone walls are 8 feet high and 20 inches thick. The studs are 2 x 4's with matched boards on the outside. This building was formerly an evaporator with two floors and basement. I would like to know if I sheathe the outside with heavy paper and clapboards and add 2 x 8 studs inside the 2 x 4's, making 12 inch studs, and also sheathe the inside as I do on the outside, and fill the space between with sawdust, as well as a sawdust-filled double ceiling, would this keep out the frost?—P. M., New York.

THERE is every reason for us to believe that the alterations as you are planning them, will give satisfaction except in the case of very low temperatures. Under those conditions it may be necessary to put an oilstove in the cellar to keep the temperature above the danger point. One place that should be especially protected is where the roof joins the walls. If there are, as there usually are, any open places, they should be packed solid so that frost cannot enter. Considerable cold is likely to enter at the doors and it would therefore be advisable to put on double doors or to build a vestibule. There is one other factor that you should not overlook and that is the ventilating system, which is very important. We would advise that you write to the New York State College of Agriculture at Ithaca and ask for their latest bulletin on underground storage houses.

## A Feeding Problem

I have a dairy problem that I wish you would help me solve. I have oats, rye, corn fodder and mixed clover and timothy hay. I can spare very little corn as I have a lot of chickens to feed it to. I am grinding oats and rye and to this mixture I am adding a little oil meal. What preparations would you suggest for best results. Would you mix gluten or cotton seed meal in it also?—J. R., Pennsylvania.

ABOUT the cheapest feed that you can put together this year to give you satisfactory results, would be as follows: Grind the oats and rye in the proportion in which you have them and add to the mixture all of the corn that you can spare. Then make the following mixture for your dairy cows: 300 pounds ground oats and rye, 100 pounds wheat bran, 300 pounds oil meal, 300 pounds gluten feed. Inasmuch as you have corn fodder in stead of silage, it is much more desirable to use oil meal than cotton seed meal.

## Horse Has Nasal Discharge

I have an eleven-year-old horse that had distemper a year ago. Since that time he has done poorly. He has a discharge at the nose occasionally and this spring his appetite is very poor. He is losing flesh although I feed him well. At times he won't touch his oats. I have seen so much good advice in the AMERICAN AGRICULTURIST I thought I would write and see if you could tell me what to do.—R. E. B., Bradford County, Pa.

TO OVERCOME the discharge that you speak of it would be well to steam the animal's head. Place a hot brick in a pail and pour over it one ounce of tincture of Benzoin which has been diluted with six ounces of vinegar. The animal will inhale the fumes which will pass through the nasal and bronchial passages and have a healing effect. No doubt a tonic will also be beneficial. The following may be compounded at your local druggist and administered at the rate of one teaspoonful in the feed three times a day. Ferri sulphate, pvd. 1 oz.; nux vomica, 3 oz.; gentian 2 lbs.

## A Remedy for Worms and Bots

I HAVE been reading with much interest about horses in the AMERICAN AGRICULTURIST. I am a man sixty-five years old and have had the care of horses all my life, so I would like to have you put in your paper one of the best

recipes for worms and bots there is on earth. It is as follows: one quart wood ashes, one quart salt, one quart ground flax seed, one pound sulphur, one pound ginger, half pound salt-peter. Mix all together and feed a small handful in grain for four or five weeks.

For worms or bots feed the wood ashes and salt mixed half and half. A good handful at night in grain. I am a great lover of horses and like to see them looking well. My horses are never sick and always ready for their feed and work.

More than five years ago I was called in to see a sick mare. The man that had her said that she had sick spells very often. He said he would sell her very cheap. He said: "Maxim, you are a neighbor and I don't want to cheat you." I said, "Never mind, what will you take?" And he named his price. I bought her and led her home.

The first thing I gave her was a bran mash and all the wood ashes I could hold in my two hands. The next day I got two large worms—one measured 9 inches and the other 3, and lots of small ones. I kept her in the barn for four weeks and fed her the salt and ashes and the rest of the recipe. She hasn't had a sick day since and is fat and sleek and always ready for her grain.—F. E. Maxim, Watertown, N. Y.

## Remedy for Calf's Cold

Please inform me what to give a young pure bred calf three or four weeks old that caught a cold being out in a tornado and storm two weeks ago. He has a cough sometimes, but never had it before the storm as he is from strictly tested parent from T. B. That is why we want to get this cold cleared up. We gave him a dose or two of epsom salts. This calf eats grass, has the clear cow's milk still and feels good. Runs and plays, but occasionally coughs.

COUGHS are only symptoms of some disease. It may be caused from a sore throat, or some lung trouble. We would suggest that you apply a stimulating liniment to the throat. Also have the following compounded: Fl, extract of Belladonna 1 ounce, Syrup Hypophosphitis with Quinine 8 ounces. Sig. One tablespoonful three or four times daily.

## Too Little Air Pressure In Pneumatic Water System

I have installed a pneumatic water system equipped with a hand pump. It takes a lot of pumping to supply the kitchen, bathroom and range. Can I hook up a small engine, 1 1/2 or 2 h.p., to the pump. What would be the best way to do it, to put up a shaft with a large pulley attaching a pitman to it and the pump handle, or shall I get a pump jack, or shall I discard the jack and get a power pump? I have just installed this system, got it second hand. I would like to keep this pump if possible, as it is a good one. I have an engine at the barn, 1 1/2 h.p. that pumps the water there, using a jack on the pump. Would this engine be big enough to run the house outfit, which takes too much work when we get pressure up over 25 pounds and the water in the gauge registers the tank as two-thirds full. Several times I have pumped the tank two-thirds full and had the pressure up to 40 pounds and in 24 hours it would be practically empty. I can find no leaks but it hardly seems possible that we could use that much water in such a short time.—F. M. H., New York

IT would be more advisable to purchase a pump-jack, being preferable to a pulley and pitman. Your pump should prove satisfactory when operated with an engine. The only objection to it that we can see is that it will take longer to fill your tank than if you had a pump of larger capacity.

Although there is no question but what the engine you have will be able to handle the job very nicely, nevertheless we cannot state definitely, not knowing the size of the pump.

Has your pump an air valve on it so that it will pump water and air? If so, we would suggest that you pump air with the water so that when your glass shows the tank is two-thirds full, the pressure will read 60 pounds. If it has not an air valve, drain the tank and while it is empty pump in air with a hand pump until the pressure reads fifteen pounds. Undoubtedly the reason you have to pump so often is because you do not have enough air in your tank. Therefore your tank delivers but a portion of its water before it is necessary to pump in more water.

# The Trouble Maker—By E. R. Eastman

## CHAPTER X

TURNING his bruised body over and over on his bed that night after his accident, in an effort to get a little relief, Jim Taylor had plenty of time to think, plenty of time to realize that pleasant memories of past happiness may sometimes turn to gall and wormwood, and become accursed. Gifted with an active imagination, he pictured that ride home from the fair with his friend Bradley making love to Dorothy. His mind swung from mad revolt to sick despair, and back again, as he saw behind his closed lids that face once softened in tenderness to him looking with love at another man. One by one came back to him all the little ventures of a boy and girl friendship.

There was that time, when Dorothy was about sixteen, when Kortwright's bull drove her up a chestnut tree in the middle of the pasture and kept her there for hours. Jim smiled a little as he remembered how, while returning from a trip for blackberries, he had come upon her perched precariously on a high limb, and had chased off the bull.

Nice to remember, too, how Dorothy, usually so strong and self-contained, had climbed and slid down that tree, and with loosened hair and clothes awry, had thrown her arms impulsively around his neck and clung to him while she had sobbed out her nervousness and fright. Never had he forgotten either how her slim and boyish taut young body had felt against his. Was it then, or years before, that his feeling of tenderness toward the little girl had been born? It must have been before, for never could he remember when he had not loved her.

Happy years went by, happy in spite of the poverty and hard work, years filled with the sweetness of companionship with Dorothy. There were the long rides on a Sunday afternoon to look forward to during the week; there were the times when they had gone berrying and fishing together, for Dorothy was an all-around girl. There was that time when a bee had stung her and she had been grateful to Jim for trying to draw the poison out of her arm with his mouth.

THEN came that Sunday evening in late August, when Dorothy was going away to school—she was to leave the next day—when he had taken her for a long good-bye ride.

How every detail of that evening stood out! How it hurt now to think of it—yet he could not help but think. What had they talked about that night? Nothing much. They understood each other anyway.

"Going to be pretty lonesome, Dot, when I can't see you."

"Will be for me, too, Jim. But we can write."

"Most likely you'll forget all about me. There'll be lots doing at your school, and you'll meet a lot of boys."

"Why, I hope so. I want to see some of the world outside of Speedtown and some of its folks, but I could never forget you, Jim."

It was then, he remembered, that he had shifted his lines and covered with his warm little hand in Dorothy's lap. It was not hard to recall how he had thrilled when she sat motionless for a moment before she shyly had withdrawn her hand.

A little more talk—then silence. He had recaptured her hand again, and the wonder of it was that this time she had given his great paw a little squeeze in return.

More silence, while they had ridden along the friendly country road in the dusk of a summer evening. He had not been conscious of them at the time, but now all of the country sounds stood out in his memory as the background of that evening of happiness. Away off on the hill some neighbor's dog had barked, and the crickets and tree-toads—what a

chorus they had made in the harvest meadows.

Never again would he get that fragrance of a ripening cornfield without feeling a stab of pain, for never could he forget how he had stopped the horse that night where the road was bordered on both sides by corn higher than a man's head, where the summer stars looked down and saw him take little Dorothy into his arms and kiss her laughing mouth. She had kissed him, too, sobered momentarily.

BUT tonight the memory of it was only pain to him. The next day Dorothy had gone away to school to learn the ways of the world and to find perhaps that the ways of Speedtown and its folks were slow and uncouth, for when she had come back, things had been somehow different. Yet to be fair, thought the boy, had it been she who had changed, or was it himself? Had more years brought

With a groan, the tortured boy buried his head in his pillow . . .

He thought he could not bear it, but he knew he must. There was this milk fight coming . . . He could throw himself into that . . . If he could forget, maybe dull the pain a little . . .

So, slowly out of his bitterness, a kind of calm came to Jim, a calm based upon resignation to the belief that Dorothy had forever passed out of his life, and on a grim determination to devote himself to a fight for better things for the dairy farmer.

At last came sleep.

## CHAPTER XI

IT was a cold, almost frosty morning in September, a week after the Speedtown fair. Jim Taylor, none the worse for his accident, except for a slight limp, was on his way with team and wagon to change works with a neighbor to fill silo. Although he could not see them for the

### Read This First, Then Start the Story

THE county fair proved an exciting day for Jim Taylor. It started badly, because Harry Bradley, the popular young county agent, took Dorothy Ball while Jim roamed about the grounds alone. Then Bradley proved the star of a baseball game, while Dorothy cheered him, although for her old friend Jim, now her father's opponent in a local feud over the threatened milk strike, she had only a cold glance. Finally, after an exciting horse race, one of the racers ran amuck and Jim risked his own life and was knocked unconscious stopping the frantic animal.

He comes to, weak and dizzy, and is sent home the hero of the fair, but he does not know that sweet Dorothy Ball seeks out the village doctor and tremulously inquires about his injuries.

a better perspective to teach him, as it was teaching others of his generation, that marriage was a luxury, and that he who must toil to the end of his days in poverty had no right to saddle that poverty upon another life, and perhaps other lives? Maybe in his sensitiveness on this point he had seemed cool and indifferent to Dorothy. Certainly on that day back in June she had seemed to care for him still.

But of course she had been joking then, he thought. She always was a great hand at trying to kid him. Anyway, all of that was behind him now for sure, for this summer had come their differences over the milk quarrel and she had taken sides with her father against him.

THEN Bradley had come. With searing vividness, Jim saw in imagination Dorothy and Bradley as they returned from the fair. He could see them as they left the fair grounds after nearly everyone else had gone. He could see Bradley driving slowly to prolong the ride home. Then later he saw them taking the untraveled crossroad through the cornfield . . .

Let her go! He couldn't help it . . . If that was where her happiness lay, why he ought to be glad . . . Might as well go to sleep and forget it . . . But he never could forget . . . And he could not sleep . . .

Then back again his mind came to the same old subject. Opposite the deserted Johnson farmhouse Bradley would be stopping now. Then the talk would grow more intimate, with long silences. Jim well remembered that Dorothy knew how to make silences say more than words. But he knew too that Bradley could not keep silent. He was always talking over his plans, ambitions and what he was going to do in the world. And this would interest Dorothy, and win her sympathy—that sympathy which was akin to love.

Perhaps Bradley would put his arm around her, as he himself had done on that summer night long ago. Then he imagined a look of soft tenderness coming into her eyes for his friend, her arms around his neck, and her face lifted for his kiss.

dense fog, he could hear the rattle of the other neighbors' wagons similarly bound on the country roads. In a few moments six or eight teams with fifteen or more men arrived at the Kortwright farm where the blower was already erected. After a moment spent in visiting, Jim drove his team on down the road a little way and turned through the gate into the big cornfield.

Ten minutes after his wagon with its big flat rigging had reached the field, the men had it loaded and on its way back to the roaring monster which chewed the heavy armfuls of cornstalks into inch pieces and blew them into the huge silo. Before the first wagon was unloaded, another waited in line, and others would constantly follow all day long, before the maw of the big "can" would be satisfied.

In the field, the men had pinned heavy feed sacks around them in an attempt to protect themselves from the dew-soaked corn; but after less than ten minutes of lifting the heavy bundles, they were all wet through. There was not much time to grumble, or even to think about sore wrists, poisoned with corn, or backs lame from many days of heavy lifting, for unless this silo and all the others in the neighborhood, and of the whole farm country, were filled, the cattle could not eat—and the cattle must eat to give milk.

AMONG the teamsters whose turn for loading came just before Jim's, was a pompous, dignified little farmer, whom the boys called "Shorty." Shorty made up in braggadocio the very considerable which he lacked in brains. When he was not boasting, he was wont to improve spare moments by lecturing the men upon their evil habits.

"Look at me now," he would say in all seriousness. "Once I was as unregenerate as you, but now —" and then he would trail off in as long a sermon as the patience of his audience would stand for.

In the middle of the forenoon, after the teams had made several trips back and forth from the field to the blower, Jim and Shorty drove into the field together. The machine had shut down a few moments for some minor adjustment, so the men had a welcome rest. Immedi-

ately Shorty began to complain about the light loads the field men were giving him.

"What say, Shorty? What say?" Bill Mead asked. "Load too light, is it? Well, we're sort of sorry for your horses, but if you feel that way about it, we'll try and give you a real load."

"Now, Shorty," said Jim, in a low voice, "why don't you keep your mouth shut? You'll just get yourself into trouble."

But Shorty knew not the fine art of silence. He could not keep still.

"Yes," he answered. "I want you men to understand that my horses can pull twice as much, and it isn't efficient for me to be traveling back and forth with such light loads. I'll bet any man here five dollars that you fellers can't load enough corn on this wagon to stick these horses."

With a wink at the other men, Bill picked up a big bundle of corn and slammed it on Shorty's wagon. No sooner was he out of the way than five or six others stood with their arms full of corn, holding it up for him to take. Ordinarily, he and Jim and the other teamsters stood on the edge of the wagon and took the corn from each man in turn, and so placed it on the load that it could be picked up and unloaded easily at the blower. But now the corn came so fast that before Shorty could get rid of one armful, two more men were clamoring for him to take theirs.

FINALLY, he became so excited and nervous that he slowed up and did little more than dance helplessly up and down while the men threw corn on the wagon without waiting for him to take it. Some of it went on head first, some butt first, and some of it stood upright, making it almost impossible for it to be torn loose and rapidly unloaded.

Higher and higher it piled up, until almost before Shorty realized it, he had a load three times the ordinary size. At last, in despair, he rushed up to the end of the wagon and shouted to his horses. They strained forward for a moment in perfect cooperation, and the large load finally moved forward slowly but surely out of the lot. The men followed to the end of the field, still throwing on the corn.

As it went from the lot into the road, Shorty was more intent in shaking his fist at his tormentors than he was in his driving, with the result that a corner of the rigging ripped out one of the posts and destroyed a section of the fence. The last the men saw of Shorty on that particular trip, while they were drifting back to load the next wagon, he was yanking his horses into the road, and there floated up to them some decidedly unchurchlike language about the "gosh-danged devils hadn't stuck and couldn't stick his blankety-blank horses."

"Pretty good language for a feller that's always preachin'," said Bill.

"Well, he got away with it," said another one of the men.

"Never mind," said Bill, "we'll get him next time!"

THE teams came and went in turn until Shorty and Jim again drove into the field. Poor Shorty was a little the worse for wear. His shirt was wet through with sweat and was ripped clear across the back where it had plastered to his skin. Streaks of white through the black corn smut showed where the sweat had rolled down his face in his terrific labor of unloading the tangled corn at the blower.

Most of the men were a little sorry for him, and he might have escaped further trouble, but no sooner was he within ear-shot than he began to twit and jeer them, and boast about their failure to stick his horses.

"You fellers weren't so smart as you thought you were, were you?" he shouted.

"Wait till old man Kortwright finds out how you smashed his fence gettin'

(Continued on page 404)

## Stove and Outfit only 25c. complete for all cooking

The Sterno handy, all purpose stove does a big stove's job—anywhere, any time. Folds flat—weighs only 8 ounces. Cooks regular meals, with instant Sterno Canned Heat—fries, broils, boils, meats, eggs, etc. A household necessity for sick-room and quick night use.

### Aluminum Boiler—FREE

Every home should have a Sterno Stove. Costs only 25 cents—complete with can of fuel and extinguisher. **An Appropriate Christmas Present and a Gift for You, Too!**

Do your Christmas shopping at home—and at the same time send something to your friends that will be a pleasant reminder of your thought all through the year. The American Agriculturist comes fifty-two times a year, and you can make no more appropriate and welcome present to your friends and relatives. Take advantage of our special \$2 offer which brings the A. A. for THREE years. To add the Christmas touch we send to the recipient of your gift, a beautiful Christmas card, saying that the American Agriculturist is sent with your compliments.

### A Gift to You, from Us

And in addition we send *direct to you*, a copy of the most beautiful book ever written about Christmas—Dickens' immortal *Christmas Carol*, bound in leather and carefully packed—a book you should dip into often and read aloud to the whole family at least once a year.

Add only 12c to our subscription offer to cover the cost of packing and mailing this exquisite classic. It will be sent you at once, while the card will inform the new subscriber of your Christmas thought.

# The Boy Who Is No Longer a Baby

## Valuable Hints on the "Difficult Age"—Time Savers and Money Makers

HOW hard it is to remember not to caress or otherwise baby that adolescent boy! And how he does resent any forgetfulness in the matter! A wise mother, one who wishes to stay close to her son figuratively, will in public at least, do just the opposite. No loving rearrangement of necktie, no maternal pulling or patting of coat collar and most certainly, no petting. He keenly feels his new independence and instantly rebels at any infringement of it. That does not mean that he loves his mother and family any the less, however, and my own son, though he is desperately afraid of any public demonstration, is still very affectionate at home, and even more thoughtful than formerly.

It takes grit, self-control and foresight for a mother to stand aside after eight or ten years of absolute guidance and authority to let the youngster try his wings. Some unfortunate women never do learn to do it and on them hangs the responsibility for the time-worn jokes and jibes about "mother-in-laws." It is only one of the many lessons of motherhood, this matter of curbing one's anxieties and forebodings, in order not to make a baby of one's son. I remember a mistake of my own, whereby I won a (from a boy's point of view) just rebuke. Finding him, with a friend, consuming chocolates before dinner, I inquired the source and was duly informed that "Richard stood treat." Thoughtlessly I rejoined, "But you know you shouldn't eat candy before meals." I received a black look and the whispered admonition, "That's no way to talk when a fellow treats you." I realized I had sinned in the matter of etiquette and said no more on the subject, then.

### It Takes Self-Control

Sometimes I think self-control is more necessary in a mother, when dealing with boys than girls. Their point of view is so different from a woman's. To this day I breathe a smothered sigh of relief, when my son, now thirteen, comes home after a long ride on his bike with the boys and my heart still skips a beat when he regales me with thrilling tales of double ripper coasting escapades. I smile and appear deeply interested, however, knowing well that it would not take much wet-blanketing to stop the daily flow of confidences which are the secret of my hold on him. Likewise I go easy in my corrections of his "goshes," "darn," "gees," and so on, even though they seem verily to compose his entire conversation, realizing that they might so easily be worse.

I believe all these little things are in preparation for the great test, when my son will find another woman to take first place in his life and I do not dare fail in the preliminaries, lest I prove not equal to the final trial. If I can keep the place I now hold, as friend and adviser, if I can always be to him a sure source of sympathy and understanding, I know I can be big enough to take his wife, when she comes along, into my heart, too. With this in mind, I try to curb my habit of babying my boy, even mentally, expecting thereby to win his everlasting respect added to his love. To me that will be worth any self-denial.—ESTHER HULL DOOLITTLE.

### Use the Newspapers

WHAT a vastly greater number of newspapers go into farm homes than did several years ago! I well remember when one weekly newspaper was all that nearly every home afforded, aside from perhaps one religious journal.

We had never torn up one of the farm papers or religious magazines, for there are so many who can ill afford the price of them. Many of the youngsters are very much interested in these periodicals and as far as possible we aid them in supplying their needs in those directions.

But there are the numerous dailies and county weeklies that, once read, will aid

the housewives in their daily round of duties. Use paper to remove the grease on dishes, then burn the paper. You will find your soap bill far less and your dishwasher more free from grease. Then, too, the "kink" in the sink drain pipes is much less likely to elog with accumulations of the grease, thus lessening plumbers' bills and we all know what they are.

Recently I was in a home where the sink drain pipe had been elogged up with grease accumulations and the housewife said: "I must use more soap."

I said, "Before you use soap, scrape all the dishes and pans, then use newspapers to wipe off this mass of grease."

"Oh!" said my friend, "I sell all the old newspapers."

"Yes," said I, "for ten cents a hundred pounds, and they are worth far more than that for grease absorbers and kindling wood. We do not sell them, we use them and to a most profitable end."—CLARICE RAYMOND.

### Earning a Little

MRS. X., who lives in the country, on an R. F. D. Route, and has a power washer, makes a little pocket money washing for some people who live in a city 40 miles away.

A friend wrote her that she was paying

### Three Useful Patterns

No. 1942, an apron that is life insurance for your dresses. It comes in sizes 36, 40, 42, 44 and 48 inches bust measure. Size 36 requires 2 3/4 yards of 36 inch material. Price, 12c.

No. 2125, a one piece dress for girls. Takes only 1 3/4 yards of material with 1/4 yard contrasting, in the 8 year size. It comes in sizes 2, 4, 6, 8, 10 and 12 years. Price, 12c.

No. 2201 is becoming to the growing girl. It comes in sizes 6, 8, 10, 12 and 14. Size 8 takes 2 3/4 yards of 36 inch material. Price, 12c.

To order: write name and address, pattern numbers and sizes clearly and send with correct amount in stamps to Pattern Department, American Agriculturist, 461 Fourth Avenue, New York City.

\$3.00 a week to get her washing done for herself and husband. Mrs. X. wrote that she would do it for \$1.00, and she does; and it costs the city woman \$1.00 plus the parcel post, which amounts to from 18 to 28 cents a week.

The parcel post rate in the first zone (50 miles) is nine cents for five pounds and fourteen cents for ten pounds; and these washings always weigh somewhere from five to ten pounds.

Mrs. X. discovered that with her power washer she could do three washings a

week and not overtax herself. The parcel post brings them to her very door and carries them away again in one of these canvas covered suit cases, with a double address slip, that seem to be made expressly for this business.

She contents herself with doing three, although she has more offered her than she can possibly do.—MARY S. HITCHCOCK.

### Seals for Health

THIS is the 1924 Christmas Seal—one should adorn every envelope or bundle you mail during the holiday season.

These penny seals, the happy thought of the National Tuberculosis Association, have been sold since 1907 and have literally cured or prevented hundreds of cases of tuberculosis. For the combined pennies have totalled nearly \$30,000,000

in 17 years and the death rate from the white plague has been cut in half.

There are still thousands of lives needlessly lost because of ignorance or neglect, so the little green and white and red stamp must go on spreading its holiday message. It still helps to support more than 600 hospitals and sanatoria, and at least 10,000 public health nurses who are detecting the disease in schools and homes and helping mothers to avert the threatened illness or care for stricken children.

American Agriculturist readers are never slow in supporting a worthy cause. We know of no case where a penny goes farther than in buying a Christmas Seal. If you in your turn want help or advice from the society back of the anti-tuberculosis campaign, it is yours for the asking. Write to the National Tuberculosis Association, 370 Seventh Avenue, New York City.

### The Exchange Corner

IN many sections there is a scarcity of winter apples, but a fair yield of the earlier varieties. It will be possible to have baked apples this winter, however, as they are easily canned. They are cored and baked as for immediate use, then packed in the jars and the syrup in the pan poured over them. There will not be sufficient to fill the jars, so a rich syrup should be used—the same as that prepared for other canning. Fill to overflowing, seal lightly and process in water about fifteen minutes and complete the sealing.—MRS. GEORGE GRAY.

\* \* \*

Moths may be kept out of a piano by hanging a little bag of muslin filled with camphor gum on a tack placed near the top of the piano on the inside.—L. M. THORNTON.

\* \* \*

Dip each slice of bacon in cold sweet milk and then put in hot skillet. A cheaper grade of meat will taste as sweet as the most expensive and both bacon and gravy will be nice and brown.—L. M. THORNTON.

Put your cheese through your fine food chopper disc and you can use every scrap for macaroni.—I. A. BROWN

# First Aid to the Cheerful Giver

*Suggestions of Acceptable Presents for "Him" and "Her"*

THE question of the Christmas gift list looms up about this time every year. For perplexed mothers and fathers, sisters, brothers, relatives or friends these short lists of acceptable offerings may prove useful. They have been compiled to include some useful things and some more frivolous "extras" and also to cover quite a range of possible pieces. In the several issues before Christmas, *American Agriculturist* readers will give other suggestions for home-made presents they have found to be most welcome.

### FOR THE BOY

- Radio set or the materials to make his own
- Sled
- Cap with ear-muffs
- Rubber boots or arctics
- Sweater
- Howard Pyle's "Book of Pirates"
- Subscription to boys' magazine
- Set of carpenters' tools
- Small "printing press" and box of type
- Thoroughbred puppy
- Camera and films
- Watch with compass attachment
- Boy Scout knife

### FOR THE MEN FOLKS

- Silk or wool muffler
- Fur lined gloves
- Neckties
- Socks
- Automobile accessories: First aid kit, robe, road map, etc.
- Fleece-lined jacket or mackinaw
- Rubber boots or arctics
- Shirts
- Handkerchiefs
- Subscription to farm magazine
- Smoke accessories: pipe, humidior, etc.
- Good pocket knife
- Watch
- Portable typewriter
- Safety razor and blades
- Thermos bottle

### FOR THE GIRL

- Party dress
- Sewing basket
- Bureau set

- Books
- String of beads
- Sweater and tam
- Things for her room: pictures, curtains, bureau scarf, bookshelf, lamp
- Hair ribbons
- Fudge-apron
- Shoe-bag
- Ice-skates
- Wool or silk stockings
- Folding lunch box
- School bag

### FOR THE WOMEN FOLKS

- Set of silverware (from the family)
- Set of dishes
- Bread mixer
- New range
- Set of furs
- Dressy blouse
- Table linen
- Aprons
- Loom for home-weaving
- Glass baking dish
- Vacuum cleaner
- Washing machine
- Electric iron
- Subscription to good woman's magazine
- Books—Mother likes a good story once in a while
- Material for a dress
- Pretty underclothes
- Handbag or leather purse
- Lamp
- Card file for her recipes

### WHOLE FAMILY

- Phonograph records
- Lamp
- Radio
- New rug for sitting room
- Picnic or camp-kitchen set
- American flag

### Growing Early Onions

WINTER onions furnish green-onions very early and are good if we have no other kind, but I like the onion sets or some of the multipliers, scallops, or potato onions better. Better yet are onions grown from sets planted during a warm spell in winter when the soil is

thawed out. Most seasons we have a spell of warm weather long before regular planting time, when the soil is in fair condition to work. If we plant onion sets at this time, they will grow during every warm spell until it becomes settled weather and we will have onions long before we could by waiting until we can plant them in the spring. A surplus can be sold at a good profit. Onion sets are perfectly hardy in the ground and many plant them even in the fall, but I prefer the later planting.—BERTHA ALZADA.

### Dry Your Green Peppers

GREEN peppers can be dried for winter use, and used in seasoning pickles and cheese.

Steam the peppers open, till the skin softens, then peel them. After peeling, split them and remove the pulp and seeds.

They can be placed in the warming oven to dry, or in the sun. Be sure they are dry before storing away. When wanted for use, soak them in cold water over night.—PAULINE CARMEN.

### Do You Know That—

In baking pork and beans, put both in pan and parboil. Drain, remove the pork and put it through a food chopper, then return to beans, stir thoroughly and bake. This gives a delicious flavor.—ELLA D. HULL.

Try sprinkling soda on scorched spots in pans and dishes where food has stuck fast, let stand a while and see how easily it will come off.

Try kerosene to remove paint spots from porcelain or glassware.

Try peroxide of hydrogen on ink stains and scorched spots on clothing and let it lie in the sun several hours.

Postpaid, circular free. CERTIFIED PLANT FARM, Macedon, N. Y.

# Service Department

## Licensed and Bonded Poultry Dealers

FOLLOWING is a list of poultry dealers in New York state cities who handle poultry on a commission basis. This list includes only those merchants who are licensed and bonded by the New York State Department of Farms and Markets. It is to be thoroughly understood that we are not responsible for these firms in any way. There are too many opportunities for differences of opinion and complaint over which we have no control to stand responsible to the shipper or the receiver. We believe that shippers are safer doing business with licensed and bonded commission merchants because the state has investigated them to a certain extent and when one of these firms get into difficulty, the department protects the consigner to a certain degree.

### Do Not Crowd Fowls

There are a lot of details in shipping poultry, especially live poultry, that shippers should take into consideration. In the first place coops should be disinfected before birds are shipped in them and they should be so constructed that they will not break in transit. It is bad practice to put too many fowls in one coop, especially large birds, for it is easy for them to become suffocated. Another detail to watch in shipping live poultry is to have the birds in the coop uniform. It may mean dollars to you. When a crate of chickens arrive a buyer is usually attracted by birds that are uniform in size, color and general physical appearance. If a crate contains 6 or 8 nicely finished colored fowls, and a dozen scrawny looking Leghorns, he is not going to be attracted to that crate as much as if it contained a dozen or fifteen nice plump fowls of the yellow-skinned breeds; likewise, if the crate contains nothing but Leghorns, they do not look as badly as when they stand in comparison to the larger well-filled colored birds.

### Watch Shipping Schedule

Another detail to watch in shipping poultry is the routing and time of shipments so that it will reach the market at the most opportune time. Live poultry that reaches New York City on Saturday is usually held till Monday and does not meet as strong a market as if it were received on Thursday or Friday morning. Friday afternoon is often too late.

Cut this list out and save it for future reference.

**Cleaning the Hen House**

*Ma Supervises While Pa Follows Instructions*

ONE very rarely sees a group of farm buildings without a henhouse among them. And while occasionally it may be a nondescript affair, large enough to hold only a few hens as a general thing it is a sizable building housing a flourishing sideline that returns a goodly profit in the course of the year.

But big or little, old or new, it has to be cleaned from top to bottom every fall and put in good repair for the winter and there's the rub.

More often than not, as in our case, mother is head of the poultry enterprise with father as working partner and chief beneficiary and as early as September 1, she nearly every day mentions with growing insistence the need of having it done, but it is a job nobody loves and with farm work pressing hard it is put off from week to week until she finally takes the matters firmly in hand by inquiring, "What's to hinder having the hen house cleaned today? It will soon be October and the pullets are coming on so fast that they must be settled in winter quarters without any more delay. Can't we go right at it this morning?"

**Prepare Lime Ahead**

"Well, no, not today," Dad thinks. But a morning or two after he says, "This is hen house day, mother. Going to come out and help?" Oh yes, she'll be there as soon as she can, and dad goes along out and begins operations by putting some lime to slacking. Two gallons of water to ten pounds of lime is about the right proportion and it is stirred a few minutes until slacking is well started. Then it is covered with some bags and left to finish by itself while he "rassels" with the first part of the job proper.

Everything removable—nests, hoppers, dust boxes, water pails, perches and dropping boards are taken outside and the cobwebs and dust swept from ceiling and walls with a good stiff broom and mindful of mother's searching eyes, not a cranny nor corner is slighted. Next the litter is wheeled out and the floor scraped clean with hoe and shovel and finished off with a vigorous sweeping.

**Ma Surveys the Work**

By the time the dust is settled mother appears and says he is getting along famously and please don't forget there's some window panes that are only tacked in and need to be puttied, the roof leaks in two places, one end of the doorstep is loose and two or three frames must have new cloth tacked on. She'll bring the cheese cloth and tacks out after a while but must run in now and see if her pie is done and start dinner.

Dad thins and strains the slacked lime and pours in some crude carbolic acid, hunts up the sprayer and begins white-washing, finishing up right after dinner. As soon as the dishes are washed, out comes mother with suds, brush and cloth and windows are washed and waterpails scrubbed while outside dad sprays nests and dropping boards and paints the roosts with wornout motor oil.

Next he does the tinkering mother spoke about and some besides and by the time everything is back in place and new litter on the floor it is pretty near chore time and mother in fresh gingham appears on the scene again to say that supper is ready and to give the completed work high praise—and it does look good with the sunlight slanting in through the clean windows and the hens straggling cautiously in pecking all about and scratching in the fresh straw. White with lime, full of dust and dog-tired, dad only growls that it is by all odds the meanest job on the farm and that if it had to be done more than once a year he'd sell every hen on the place before tomorrow night, but mother knows better than to take him seriously. Past experience has taught her that such an attack is due reg-

ularly every year on hen house cleaning day. The other 364 days he is just as enthusiastic about the hen business as she is.—**NANCY KNIGHT, New York.**

**Give the Hens Enough Nests**

WHEN I started with a small flock of hens, I put up in different parts of the chicken house what I considered a sufficient number of nests. But it did not take me long to learn that the hens seemed to have one or two favorite nests and I often found as many as three hens crowded on one.

As a consequence, the straw would be thrown out and often one or two eggs were broken. Coming at a time when eggs were bringing a high price, I figured it was more economical to put up additional nests than to have an egg or two broken and wasted almost every day. Instead of adding a nest here and there, I changed the entire nesting arrangement, placing the nests side by side and putting them up where there was the least light. That stopped the fight for particular nests.

A nest to six or eight hens is supposed to be about the proper proportion, but I believe it pays to put up a few more. The majority of hens lay in the forenoon and often a number of them take a notion to lay at the same time. When a hen has her mind set on laying, she's going to lay, and if she can't find a nest she will lay elsewhere. That is one reason why eggs are often found in the litter, where they become either broken or dirty. Two advantages in having the nests together are economy in nest material and the saving in footsteps when gathering eggs.—**W. C. MULLENBERG.**

**Cull Scrub Pullets to Boost Production**

EGGS from runty pullets are as rare as golden eggs from geese these days. That is why it pays to get rid of runty pullets and so fatten up the flocks production average. Culling pullets, as some seem to think, is not a weighty, intricate problem, a job requiring occult powers. Any ordinary human being with a fair share of horse-sense can do it.

"Culling the pullets," according to G. S. Vickers of the Ohio College of Agriculture, "is nothing but getting out the runts and scrubs. Last week, for instance, I saw a fine bunch of late March Leghorns just coming into production. Among them were a couple that weighed only 1 1/2 pounds each. They were clearly culls. Remove such birds and you have your pullets culled."

"When pullets are being housed, as they should be, early in October, watch for signs of worms, tuberculosis, and colds. A good way to treat a cold is to stick the chicken's head into a can of kerosene. It won't hurt the chicken, and it will help kill the cold."

**A Creditable Pullet Record**

THE items we have published about early pullets have created quite a bit of interest. We received dozens of letters from subscribers, telling of their success with early-laying pullets. Mr. A. H. Hotaling of West Lebanon, N. Y., writes that he had a utility White Leghorn pullet in April and in 3 1/2 months she laid her first egg. But more interesting still is Mr. Hotaling's note that from a flock of 115 pullets hatched on June 19 he had an egg record of 2,700 eggs and the birds were housed in no up-to-date hen house. That is quite a record for pullets. Part of this can be explained by the fact that Mr. Hotaling culls his flock thoroughly every year, and consequently he has gradually built up a flock of heavy producers.

**Use Your Ford**  
 to SAW YOUR WOOD GRIND YOUR FEED PUMP YOUR WATER SHELL YOUR CORN And for all other belt-power jobs  
 Why Buy an Engine When a Low-Priced "WORK-A-FORD" can be used with your Ford for all belt work? Your Ford has a powerful engine. (Continued from page 399)

out of the field. Nice driver you be," returned Bill. "Can't get out of a fifteen-foot gate without taking a whole section of the fence along with you!"

"Some preacher ye be!" said another fellow. "Nice church language you were usin' while you were goin' out of the field, wasn't you?"

"Seems to me," said another, smiling, "that you're a little bit the worse for wear, Shorty. What did they do to you down at the blower this time?"

"That's all right. Talk all you mind to," said Shorty. "I said you couldn't stick these horses, and you didn't, in spite of all your meanness. Couldn't put on a load big enough to stiek 'em. You're nothin' but a lot of lazy loafers anyway. We teamsters have to spend most of our time ridin' back and forth 'cause you fellers are too lazy to put on decent loads."

"All right, Shorty," said Bill. "Mebbe you're right. This time we'll give you a real load."

SUITING the action to the words, the men with a common impulse began grabbing armfuls of corn and rushing them on the wagon again. They piled the corn high on the rigging and tangled it in every way possible until finally Shorty rushed again to the head of the load to hurry his horses away from his tormentors before they could put on any more.

But this time, in spite of the fact that the powerful beasts strained forward faithfully and together, the big load stirred not a foot. Again and again, Shorty urged them frantically, but they did their gallant utmost to no avail.

Meanwhile, the corn continued going on the load all of the time and in any old way. Finally, unable to reach it up from the ground, because the load was so high, Bill jumped up on the rigging and took the corn from the men and piled it higher and higher.

At last Shorty turned from his futile attempt to start his horses and in a rage began to throw the corn back off of the load. Bill ran toward him to stop him, and Shorty gave a mighty lunge, caught Mead off of his balance, and he rolled ignominiously off the load so that he struck the ground with a decided bump, amid the haw-haws of the men.

Again the matter might have ended there, but Bill had had a drink or so of hard cider that morning, and the fall off of the wagon and the laughter of the men made him ugly. He jumped to his feet, reached up, caught Shorty by the leg, pulled him roughly to the ground, then slapped him sharply in the face.

IN the meantime, Jim Taylor had driven up and stood watching the performance while waiting to have his wagon loaded. He had noticed Bill climbing under Shorty's wagon to chain the wheels so that the horses could not start the load, and he had laughed with the rest of the men when Shorty turned the tables by throwing Bill off on the ground. But when Bill pulled the little man roughly from the wagon and slapped him, Jim thought the matter had ceased to be a joke.

"Hey there, Bill," he called. "Pick someone your own size."

"Mind your own business," shouted Bill, slapping Shorty again.

Jim jumped down from his wagon and ran up to the men.

"You'd better cut it out, Bill," he said.

"Maybe you'd like the job of stoppin' me!"

"Well, that's all right, Bill," said Jim, speaking mildly. "I like fun just as well as anybody, but hitting a man that is smaller than you are in the face is no joke."

"That's right," said one of the other men. "That's goin' too far."

"You're gettin' too fresh lately, young feller," said Bill. "You think you're runnin' this whole neighborhood, jest cause you hit that there milk dealer

**BIG 'C' LINE**  
RUBBER FOOTWEAR

**'Watershed'**  
Waterproof Cloth Overshoe

A sheet of pure gum rubber between the wool fleece inner lining and cashmerette outer fabric makes 'Watershed' waterproof to the very top. Always warm and comfortable.

Converse extension White Tire Sole and 'Stubgard' toe and heel make it next to impossible to snag or scuff uppers. Not quite as heavy an overshoe as the 'Nebraska' shown below, but gives the long, hard service you expect, and get, from all Big "C" Line footwear.

when he wasn't lookin'. You think you're pretty smart, but here's somethin' to show you you ain't as smart as you think you be."

And without further warning, he smashed Jim squarely in the face and knocked him down. The men swarmed in between to prevent further trouble, and Jim got slowly to his feet.

"Stand aside, boys," he said quietly. "I can't let the matter rest here, and none of you will blame me if I don't."

THE men stepped aside without further argument, and Jim showed what he had on his mind by taking off his coat and tossing it to one of the men. He had hardly done this before Bill rushed him. Jim swayed a little uncertainly on his feet and then stepped swiftly aside to avoid the rush. As Bill went by, propelled by his own momentum, Jim managed to land a good right on the side of Mead's head.

After this, they settled down to real business, circling each other for a moment, each watching alertly for an opening. Then they came together with a swift but equal exchange of compliments and parted, Bill with a missing tooth and Jim with nose spouting blood.

Again they stepped in, each landing blows which could be heard for rods; both men were becoming winded, but it was plain that Bill's age and his occasional boozing were telling on his staying power. He circled around the other and tried to gain time; Jim pressed his advantage and finally closed in a clinch and they fell together and rolled over and over in the sharp corn stubbles.

When they ceased to roll, Jim was on top and stayed there, punching Mead whenever a free arm and an opening

offered, until the other finally confessed that he had "had enough."

"Get under that wagon and unchain those wheels," Jim ordered, and after a moment Bill slowly and painfully obeyed.

Then turning to Shorty, Jim said: "Now, you fool, pull out of here and see if you know enough to keep your mouth shut in the future."

(Continued next week)

**The Outlook for Farm Land Values**

(Continued from page 389)

keep up a lot of forced sales of land, most of which went into the hands of mortgage holders at prices below the figure at which solvent farmers would be willing to sell. The unprofitable returns from farming have encouraged farmers to leave the land and go to the cities, increasing the amount of land for sale and reducing the number of buyers.

Local taxes are extremely high because of public improvements started several years ago. The cost of government and maintenance of schools is high. Investigations seem to show that farm lands are taxed relatively higher than town and city real estate. Land economists point out the disadvantage that farmers are under by being taxed on land valuations, while other business is taxed chiefly on its income. Recently, the ownership of a farm has not meant that the owner had any income out of which to pay taxes. High taxes tend to discourage investment in farm land in contrast with the many tax exempt securities available to the investor.

This resume of the conditions which have prevailed in the past and which exist in the immediate present leads di-

rectly to some conclusions, or impressions, as to the future of farm land values.

The drift of population to the cities is reducing the number of food producers and adding to the number of food consumers. Furthermore, our total population is gaining at the rate of about 1 1/2 per cent a year. Government officials estimate that we will have about 150 million people to support by 1950.

These factors in the long run will diminish the volume of farm products that must be forced on foreign markets. Unless the efficiency with which our land is used is raised, agricultural production in the United States will be practically on a domestic basis in fifteen or twenty years. When that time comes, assuming that our farmers have tariff protection, the buying power of our urban population will dominate in the setting of farm prices rather than competition in international markets with the new countries of the world having low production costs.

This would mean a return of conditions similar to those that prevailed from 1897 to 1915. Eventually this might lead to enough advance in prices of farm products and enough change in relative prosperity between the farm and the city to turn the tide of population to the country again and stimulate agricultural production. But in any case, farm land prices would probably advance.

It will be possible to increase the amount of land in cultivation and farm the present area more intensively, but this will only be done in response to higher prices for farm products and under conditions that will tend to elevate farm land prices.

**The Lamb and Wool Market Outlook—By Gilbert Gusler**

## How MOBILLOIL "E" wins your warm cold weather friendship

**T**HE first snow-storm—Mobiloil "E" in your engine. You go out in the morning to start up.

A few more turns with the starter, but that is all. Correctly lubricated, the engine turns almost as freely as in warmer weather. With judicious use of the choke and a slightly richer mixture, your Ford will give you the same reliable service in winter as in summer. And with the lightest possible burden to the battery.

For Mobiloil "E" flows freely in the coldest weather. The moment you press on the starter the oil splashes up and begins to feed to every frictional surface—including the close-fitting bearings and clutch plates.

So although the cold cylinders make it harder for the gasoline to vaporize, there is no additional difficulty imposed by congealed oil which may cause stiffness and drag between moving surfaces. Mobiloil "E" lets all the parts move freely—even on the coldest days.

**Results:** A saving of the battery, a saving in gasoline, insurance of a perfect oil film over all surfaces, a powerful and thoroughly protected engine.

Unsuitable lubricants frequently congeal at low temperatures and cause unnecessary stiffness and drag. This means added load for the battery, reduced cranking speed, and much harder starting.

Put Mobiloil "E" into your Ford crankcase and notice the difference.

## Late Fall Thoughts

### A Plow Handle Talk

I AGREE with the editor that most

By H. E. COOK

at the time of his death to have been New

York's most distinguished citizen. Of course, he addressed the student body and I was amazed when he began without a general introduction to his subject to give a lecture on corn growing. I was at that time giving the classroom work on field crops and was supposed to have some knowledge of corn and its culture. And yet here stood an ex-President of Columbia and an ex-Mayor of New York making the hot flashes play over my face because of ignorance. While at the barn he led for fully ten minutes in a discussion of milking stools from a useful and sanitary standpoint and at equally great length of house refrigerators while inspecting equipment in the D. S. department. Among other things that left a lasting impression and which I hope to have profited by was this, "When I was elected President of Columbia the first I did was to set about learning everything I did not know about running a university." Afterwards for two years I was a member of a tuberculosis committee of which Seth Low was an active member where the same knowledge of details was always in evidence.

H. E. Cook

In proclaiming some big doctrine on say—what is the matter with farming these days, one does not expect to prove his case in detail because remedies for all sorts of diseases, both physical and economic, act in the future. And even if your plan is right, it won't work out exactly as prescribed and one has a chance to dodge a bit and explain. But daily farm methods, if not a fraud, must have been worked out before one talks about them. Then again there are a lot of things that may be good, but one sort of feels that they are personal property or rather private property and are not for the public. Anyhow, if they are good, you rather some one else would tell of them, and if otherwise we feel about the same except that we would like to have that someone else keep still about them.

#### Beautiful Days—Weather Breeders

There are some methods very hard for me to decide, as they come up for decision many times a day in dealing with folks. I know, on general principles, that I get on best when I try to get the other person's viewpoint as well as my own on the principle that a pleased customer is generally a profitable one. But just where to draw the line between having him satisfied and protecting your own interest is where the rub comes. Not every one with whom you deal is unselfish. Now I think that a wise decision on this thing may have as much to do with getting money enough to pay our bills and to keep out of bankruptcy as any one single thing and yet how to write about it in detail I do not know and so I might continue at length.

I am studying every day to make our farm organization function efficiently and smoothly and when it does I let up or rather take a rest. Maybe it is a rest and maybe I do some job which does not take in the regular farm force—things, I mean, that no one else can do expecting the farm affairs will sort of move along without personal attention. Sometimes these peaceful days are breeding something. Everyone will remember the old farmer's comment on his friend's congratulations that these were beautiful days for farm work—"Yes, but they are weather breeders." This tendency is a weakness of mine, chiefly because I naturally like to relax and probably the only reason I stay up against things somehow every day is because I have to do so in order to get a living.

#### Study Is Absolutely Necessary

Studying to know every detail, whether we do them all ourselves or not, is absolutely necessary. That is what makes men. It has been by observation that outstanding men and women are made so by knowing a lot of little things well.

The state school, during my association with it, served as host and hostess for a whole day to Seth Low, generally agreed

I wonder if you and I have such a knowledge of details of our own business? If not, we could easily find a couple of hours each day to study them. Maybe it would help to drive away a feeling that farming is bad and that we would be better off to quit and do something else.

#### Fall as Busy as Summer

We are as busy in November as in summer. Really I feel we are pressed harder than in the so-called busy season. Our milk output does not change and animal care increases. Weather conditions are not as favorable and actual accomplishments per man hour is less.

Plowing, cutting brush, harrowing fall-plowed land, putting stacked hay in the barn, doing fall repair work on buildings and tools if necessary and repairs are always on hand. While we cannot afford to build anew always, we do keep up repairs so that the working conditions are reasonably good. Present high labor costs demand that tools, power, buildings, etc., shall at the least be wholesome. Not only will we be more efficient as workers but there is also an inspiration that coaxes us on to more speedy action.

#### Cow Test Work Does Good

One year ago we joined a local cow test association, the first one locally organized and it has done me a lot of good. While we do a good deal of testing ourselves, somehow it doesn't get hold of a fellow like public testing and this year one of the outstanding jobs is to raise the average production of our herd.

I feel sure now that the high prices we get for milk and the constant large returns per cow have rather lessened my ambition to keep up a high milk or fat production over former years. If it didn't cost any more to produce this milk than ordinary market milk, everything would go along swimmingly. But it does cost more and we need high production per cow just as much as a market milk dairyman. Another factor in our game has been the difficulty in getting high Jersey and Guernsey producers for which I am blaming no one but myself. Although I must confess that they are not plentiful. I believe the average dairyman, if you know who and where he is, needs this associated work more than he needs any other kind of cooperation that has developed within recent times and no expensive equipment nor high salaried outfit is necessary to put it over. Am I right?—H. E. Cook.

Have killed one cow and two heifers. Expect to kill two more cows. Sell eight heifers that I will kill if I can save the beef.—M. H. T., Chautauqua County, N. Y.

## The Lamb and Wool Market Outlook

If You Keep Sheep or Plan To, Read This Article

By GILBERT GUSLER

ONE of the classic anecdotes of the stockyards deals with a Texas sheepman who sent a trainload of sheep to market a number of years ago in one of the periods of adversity in the industry. The shipment failed to sell for enough to pay the freight and other costs. When the commission firm wired to him for money to balance the account, the shipper wired back, "Have no money but will send another trainload of sheep."

The story is extreme, of course, but was almost duplicated in the fall of 1921, when a shipment of western ewes on one of the central markets realized only 35 cents a head after paying marketing costs. Since 1921, the sheep business has been looking up. The sheepmen have been the princes rather than the paupers of the live stock markets.

### Prices Far Above Pre-War

Fat lambs at Chicago averaged \$9.85 for the year 1921. The market advanced enough to make an average of \$13.50 in 1922 and 1923. Thus far in 1924 it has ruled a trifle higher than in 1922 and 1923. The average in 1914 was only \$8 or but little more than half the average price of the last 33 months. Lambs have been higher priced and much more profitable to produce than either hogs or beef cattle.

Wool also has been bringing a good figure. In the five years before the war, farmers received an average price of 15 to 20 cents for their wool. This increased to 60 cents in 1918 but the deflation period carried the wool market down to an average of only 16.4 cents for 1921. The market has recovered until farm prices averaged 30 cents in 1922 and 39 cents in 1923, or practically double the pre-war figure.

In the three or four years just before the war, our sheep population was relatively high but it was declining. Sheep of all ages were being thrown on the market and the largest number ever slaughtered in one year was back in 1912. High prices during the war caused slight expansion of the industry but the general trend of production from 1910 to 1922 was downward. On January 1, 1922, fewer sheep were reported on farms than in any year since 1878. Likewise, there were only two sheep where there had been three reported ten or eleven years before.

In appraising the extent of the decline in production resulting from the small sheep population compared with 10 or 15 years ago, it is important to bear in mind that at that time the western ranges had a larger number of wethers which could be kept profitably for the sake of the fleece alone. Today, the western flocks are composed more largely of ewes so that the total number of lambs produced for market each year has not declined as much as the decrease in the number of sheep kept on farms and ranges might indicate.

The fact that lamb and wool production had

dropped to such a low level, combined with improved industrial conditions, is the explanation of the strength in the lamb and wool market since early in 1922. With the sheepmen restored to prosperity, the current of production has shifted again and the tendency has been to expand once more both on the range and in the cornbelt. This is shown by the strong demand for breeding ewes in all sections and the increase reported in the sheep population.

Then there is enough margin of profit in lamb production at present prices that no decline in the market sufficient to wipe it all out is likely to occur at an early date.

### Factors In Immediate Outlook

So much for the more distant outlook. The situation during the next month or two will be dominated by the size of the end-of-the-season run from the range states, by the supply of grass fat natives from the corn belt and by the number of "comebacks" from the feeder lambs recently taken to the country.

This year's western range lamb crop was estimated at about three-quarters of a million head more than last year. The movement out of the range states increased although the full number shown by the estimate does not seem to have put in its appearance. The corn belt also had a larger lamb crop than last year. The peak of the marketing season from both sections is already over, however, and receipts have diminished from 35 to 50 per cent in the last five or six weeks. Whatever the comparison with last year may show, the pressure is gradually lifting from the lamb market because of this seasonal diminution in the supply.

### Small Gain In Winter Feeding

During the summer when feeder lambs first began to go to the country, the movement was far in excess of last year when the total was also large. During September and October, however, feeders became less zealous and shipments from July 1 to October 18 into seven corn belt states from the leading markets were 1,401,000 head against 1,354,000 head a year ago. "Comebacks" from this movement are already showing up but, owing to the poor corn crop, they are in poor finish and more of them than usual must be sent to the country a second time before they will be ready for slaughter.

After the middle of December, fed lambs predominate in the supply. Based on the movement to the country, market receipts will be much the same as, or slightly larger than last year. Judging by the ability of the market to absorb fat lambs in the last few months, prices should work slightly higher than they now are.

After the first of February, fed lambs from the irrigated districts in Colorado and adjacent states comprise the bulk of the supply. Early in the season, a large number of lambs were contracted for shipment into these districts but it remains to be seen just what the total movement will be compared with last year.

Lamb feeding operations are not likely to be so profitable this year as they were last because of higher feed costs. This factor will be offset to some extent, however, by the slightly lower average price for feeder lambs, purchased on the open market.

Coming now to the wool situation, we have the spectacle of the (Continued on page 418)

TRENDS IN THE SHEEP INDUSTRY

This chart shows (1) the number of lambs and sheep slaughtered under federal inspection; (2) the number of feeding and breeding sheep and lambs shipped from public stockyards, and (3) the farm price of lambs and wool each month since January, 1921. Market receipts are heaviest in September and October as a rule. Most of the increase is in feeders, although slaughter usually is heavier in those months than at any other time of year. Prices for both lambs and wool in the last two years have been about twice as high as in the latter part of 1921.

The rate of expansion has not been rapid, however. About two million head have been added to the farm and range sheep population in about two years, or a gain of only 6 per cent. Since the human population has probably gained about 3 per cent in that period, the sheep population remains relatively small. Market receipts have not reflected the increase in production except in a very limited way, so that lamb prices thus far in 1924 have averaged slightly higher than in the corresponding period of either of the two preceding years.

The tendency to increase production leads to the conclusion that over the next five years lamb prices are likely to take a moderate downward trend. The sheep population has begun to gain on the human population. Employment conditions and consumer buying power in the cities have been about as favorable as could be expected. It would not be surprising if 1924 should prove to be the high year in the lamb market for a long time to come.

The change promises to be slow, however, and the sheep and wool grower should be in a position of relative advantage for several years. Not only are there natural limitations on the rate of expansion of sheep production, but there are some indications that the public appetite for lamb grows a little keener from year to year.

More Tax Publicity

"Notice is hereby given to the taxable inhabitants of school district No. 10, Town of East Fishkill, that I have received a warrant from the trustee of said district for collection of taxes for the present year, with one per cent for the first thirty days as my fee, after that my fee will be five per cent."

THE above school tax notice, which was recently posted in a rural school district in New York State, illustrates very well why we advocate in our tax program more publicity about taxes. The notice speaks for itself. It is certainly bare of information. The taxpayer must go to the collector in person to find out what his tax is and he does not know until then whether or not his valuation has been raised, nor does he know in advance the amount of his taxes or why they are lower or higher than they were the preceding year.

We believe that every taxpayer has a right to receive an individual written notice immediately after his valuation is raised and in plenty of time for him to appear at the proper place to state causes why the valuation is too high.

In the case of school taxes, reports are rendered at the local school meeting, but for other taxes no taxpayer knows the details of how or why or for what his money has been spent. He has a right to this information and the time for him to get it is with his tax bill. With it also should be a detailed statement or budget of proposed tax expenditures for the coming year. If public officials were obliged to make these detailed budget statements to every taxpayer and were obliged to follow them by full reports of how the money was spent when the tax bills are rendered, then there certainly would be more care and thought given to the expenditure of public money.

We believe this is one definite way to bring about a better and more efficient government and lower taxes. Are we right? Let us hear from you. If we make these tax reduction principles count with public officials we must have your support. Write us. A postal card will do.

The Cross-Word Puzzle Craze

THE folks here in the office have the laugh on the editor. We never have liked puzzles; it has always seemed to us that there was enough to make a fellow's head ache without puzzling one's head over something that led to nowhere. So when the cross-word puzzles struck the coun-

try, we would have nothing to do with them, although everybody in the office had one or two stuffed in their pockets, and every commuters' train is filled with the cross-word crazed enthusiasts.

But our friends have all been prophesying that it would get us yet. They were right! The other day we fell! George, our ten-year-old, wanted us to show him how to work out the first cross-word puzzle that appeared in the American Agriculturist. This was in the November 29th issue. In showing him, we suddenly became interested. Then we dug up some more in newspapers and two hours went by before we knew it. The things are certainly fascinating. Moreover, they will do a lot of good for they improve everybody's vocabulary.

On Page 417 is the third of the series of the cross-word puzzles that are now appearing in American Agriculturist. Read the instructions and give it a trial. But we warn you before you start that the thing is likely to get you fast in its clutches! It is worse than strong drink.

"The Trouble Maker"

"I wish to express my appreciation of your story 'The Trouble Maker' even though it is only started. I have often said that there has been almost no stories of farm life written by people who understand farm conditions."—H. L. C.

\* \* \*

"For sometime I have been intending to write you how much I have enjoyed your story which is running in the American Agriculturist. I want to compliment you on it."—J. C.

NATURALLY, these communications are very pleasing because they are an indication of how some of you at least like my story. One reader was enthusiastic enough to want to know if the sequel was ready to follow when this story was ended.

I have not been sure of how good the story was from a fiction standpoint. In fact, I have a good many doubts about it. But one thing I have tried to do in it is to picture farm people as they really are, particularly when they gather in meetings, and I shall be interested to see how you like the exciting milk meetings, the mob at the jail delivery, the gang who dumped Johnny Ball's milk into the ditch, the Ladies' Aid meeting, the country funeral and one other meeting of our lovable farm folks that I shall not spoil the story by mentioning until you have read it.

If in your opinion these descriptions of country folks are true to life, I shall think that all of the hard work in writing the book has been well worthwhile, for there has been altogether too little accurate writing and accurate description of country life and country people.—E. R. EASTMAN.

Says Borden's Farms Pay

IN an interesting article in the October issue of *Farm and Fireside*, Mr. F. H. Cronk, Vice-president and General Manager of the Borden's Farm Products Company, stated that his company owns and operates ten certified milk farms and that every one of these farms is showing a profit even during the depression.

Mr. Cronk gives two reasons why these farms are successfully operated. He said that the only advantage they have in working these farms over other farmers is that they do not have to wait for profits out of any farm to improve and equip that farm properly. In other words, they are not bothered for capital.

His chief reason, however, for their success is the keeping of careful records on all the farm business, and the constant study of these records in order to cut out or change every part of the business that does not pay.

There might be some advantage in the sale of certified milk for a fairly high price, but we think this is mostly offset by the extra costs of producing certified milk.

We agree with Mr. Cronk on the importance of farm accounts. He stated very frankly that the Borden Company is not in business for its health,

and that if these farms did not pay, the men who managed them would be changed, and if this was not the trouble, the farms themselves would be disposed of.

In showing what part the records played in their business, Mr. Cronk said:

"The first half of the year 1920 our tractor maintenance on one farm cost \$147.92; the last half \$793.06, or \$941.88 for the year. By strict investigation we found it did not pay to use the tractor to run the ensilage cutter and blower. The following year we hired a gasoline engine for this purpose and our tractor expense was reduced to \$585 for the year. A further investigation induced us to change our style of tractor, with the result that in the year ending June 30, 1923, our tractor maintenance was only \$150.13.

"In 1920, we fed 1.31 pounds of grain to produce each quart of milk. In 1923, it required 1.25 pounds of grain per quart of milk. The saving in grain fed per quart produced was 5%.

"Here you have two concrete instances of how accounts carefully and accurately kept have paid us on one farm. . . . By guessing and estimating we could not have done this. To achieve similar results on any farm, it is not necessary to have a staff of bookkeepers. Your county agent can obtain for you through the Extension Department of the State Agricultural College forms that are easy and simple to keep. . . .

"We know not only what each cow costs, but also how many pounds of milk she produces daily and annually; what it tests; what it costs to feed her; and what the milk costs per quart; and what it costs to milk and care for her. . . .

"Low producing and low testing cows are the sneak-thieves who are constantly draining the farm of its profits. The loss is so small that it is not perceptible in the milk pail, but it can be proved by accurate weighing and testing. . . .

"The time a farmer spends keeping books and studying them is some of the best time he spends. I do not presume to advise anybody else how to run his affairs, but I do think that if a man's farm work does not leave him time to keep accounts, it will pay him to plan to have less work so he can keep records.

"The Borden's Farm Products Company distributes more than a fourth of the approximately one billion quarts of milk used annually in New York City. This business runs into many millions. We absolutely could not run this distributing business without accurate and complete accounts of every single item involved. We would not think of trying it. No more would we try to run our certified milk farms without accounts, and I think they are even more essential on the individual farms."

Will You Kill A Cow?

"I am enclosing a coupon for your 'Kill A KOW' campaign and would say that we killed one here yesterday and kept one-fourth for our own use and sold the balance to the local dealer. We expect to kill another sometime in December. This is one way for farmers to help themselves."

THE American Agriculturist herd of worthless "crowbaits" is increasing every day. Why not do as the writer of this letter did and drive your poor cow in with the rest? The little blank by which you can show your cooperation is on Page 409.

Eastman's Chestnuts

I AM quite sure that if the man who wrote the following advertisement in a California newspaper lived in the East, he would sign up his cow in the American Agriculturist "Kill A Kow" campaign!

The ad, as I remember it, ran something like this:

FOR SALE.—One large red and white cow, three-eighths mule and five-eighths wild cat. She usually goes on a visit every summer but is at present attached to her home by means of a long chain. To any person wishing to buy her, I will throw in the chain and a sledge hammer. Would be delighted to sell this cow to some citizen of San Diego who thinks he can whip Mexico single handed.

# Cash Prizes for Best Letters

*We Want Your Ideas and Help to Make A Great Farm Paper*

**I**T may be a little early for making 1925 resolutions, but we are making the one that more than ever the readers of AMERICAN AGRICULTURIST shall determine the policies of the paper and through their ideas and letters furnish much of the material that we will publish.

We have plans already under way for giving what we hope will be the best and most interesting farm paper in 1925 that has ever been published. But before we go forward with these plans, we want your approval or disapproval so that we can be sure that the service we are furnishing is what you want and what you need. Therefore, we are printing on this page an outline or an announcement of some of the leading policies, writers, and articles which have been appearing in AMERICAN AGRICULTURIST and which we expect to continue and improve in 1925, if you approve them.

### The Cash Prizes

For the best letter discussing the AMERICAN AGRICULTURIST its writers, articles and policies, we will pay a prize of \$5; for the second best we will pay \$3; for the third, \$2; and \$1 each for the next ten best. If any prize winning letters are of equal merit, we will give the same prize to both writers.

### Here Are the Conditions

1. Letters must be written by men or women actually residing on a farm.
2. They should be from 200 to 500 words in length.
3. They should tell what article or policy you like best in AMERICAN AGRICULTURIST, giving your reasons.
4. Name and discuss your second and third choice with reasons.
5. Mention other good features, articles or writers that you especially like.
6. Give some constructive criticism of things that you do not like in the paper and why.
7. Perhaps you can suggest some new features or ideas that you would like to have appear in the OLD RELIABLE AMERICAN AGRICULTURIST in 1925.

Just write a friendly letter which you think will help us in getting out a paper that you will like to read. We may or may not publish any of the letters. We particularly want them for our own information.

Whether or not you get one of the prizes, you can know that your letter and its suggestions will be appreciated and will be of help to us in increasing and perfecting our service to 135,000 people.

Below is the statement of what we have been trying to do and are planning to do next year. Look it over, and then write us.

### What American Agriculturist Is Trying to Do

1. *Articles on Farm Life* by Jared Van Wagenen, Jr.: Mr. Van Wagenen lives on his farm at Lawyersville, Schoharie County, New York, but for years he has worked during the winter on the farmers' institute programs.
2. *Articles on Farming and Subjects of Interest to Farmers* by H. E. Cook: Mr. Cook lives on his farm at Denmark. He is one of the most successful farmers in Northern New York and for many years has been a regular contributor of Plow Handle Talks in AMERICAN AGRICULTURIST.
3. *Articles on Fruit, Fruit Growing, General Farm Conditions, and Cooperative Organizations in Western New York* by M. C. Burritt: Mr. Burritt

was formerly extension director of the New York State College of Agriculture, but has retired to take active charge of his fruit farm at Hilton, Monroe County.

4. *Farm Engineering and Farm Mechanics Articles:* Most of these articles are contributed by Prof. F. C. Behrends of the New York State College of Agriculture, one of the best experts on the operation of farm machinery in America. Mr. Behrends is also a very pleasing writer.
5. *Marketing:* Special attention is paid every week to the preparation of what we think is one of the best market pages in America. This is supplemented by frequent editorials and summaries and reviews of the market situation. All of this is published in the belief that if the farmer knows the facts, he

under rural leadership; lower costs of production legislation favorable to the farm business; happier farm life, health, convenience, and recreation, such as horseshoe pitching, etc.

10. *Eastman's Chestnuts:* These appear each week in the corner of the Editorial page. They are written on the theory that a smile once in a while is good for all of us.
11. *Investment Articles:* Through the articles and letters by G. T. Hughes, our investment expert, we save our readers from losing many thousands of dollars every year.
12. *Farm News:* AMERICAN AGRICULTURIST makes a special feature of farm news, and tries to get in each week the news of particular interest to farmers. This includes "Among the Farmers,"

notes, written by farmers of the different sections, accounts of important farm meetings, and all other news events which apply to farmers of our territory. Do you like these news stories? What part should be continued and what omitted?

13. *Production Problems:* In the different departments in the paper we publish regularly articles on poultry, dairy, sheep, swine, farm crops, and fruit. Do we have enough of such materials? Do you like these articles long or short? How can we make them better?
14. *Serial Story:* We run one good serial story all of the time. Some of the recent ones have been "The Brown Mouse," "The Broad Highway," and "The Valley of the Giants." Do you read them? Are you reading the present one, "The Trouble Maker?" Do you want them continued?
15. *Short Letters and Discussions* by A. A. Readers: We believe farmers should have a considerable part in writing a farm paper and we plan to continue and enlarge this feature.
16. *Service Bureau:* We consider this, next to marketing, the most important part of our paper. Do you read it? Have you ever used it? If so, with what results? If not, why not give it a trial? It costs you nothing.
17. *Articles About the Radio:* The time is not far distant when a radio will be in every farm home. It is useful for both pleasure and business. If there is an increasing demand to know how they are built and how to get the best results from them.
18. *Regular Weekly Non-Sectarian Sermon:* Not yet started. Do you want them?
19. *Discussions of Existing Cooperative Organizations:* This includes telling the news and discussing both the good and

Copyright, 1924, New York Tribune, Inc.

WHAT EVERY HEAD OF THE HOUSE CAN APPRECIATE

—Daring in the New York Tribune

can be trusted to use his own judgment. Is this work worth while? How can it be improved?

6. *Broadcasting Radio Market Reports:* In cooperation with the New York State Department of Farms and Markets and the United States Department of Agriculture, market reports are broadcast every Tuesday, Wednesday, Thursday and Friday at twelve o'clock from WEAJ broadcasting station.
7. *Articles of Special Interest and Help to Farm Women:* The services of Mrs. Gabrielle Elliot Forbush are employed constantly to bring to the farm womenfolk in addition to the regular features of the paper, matters that pertain especially to the home; and in addition to this, three or four times a year, we publish a special home number. How can we better this work?
8. *Cartoons, Comic Pictures and Regular Pictures:* During the course of the year, we publish a lot of illustrations, bringing out every phase of country life and some of them are used also in the hope of getting a smile and making the paper more readable.
9. *Eastman's Editorials:* A great deal of time is given by the editor in the preparation of editorials that are worth while to our great farm family. If they are not, say so frankly and tell us why. These include: Discussions of lower taxes on farm property; better marketing facilities; enforcement of prohibition; rural school improvement; developed

bad features so that farmers can make their organizations better.

20. *Occasional Discussions of World Problems:* Of course farm people are just as much or more interested in national and international affairs as other folks. Therefore, we believe their own paper should carry as much discussions of such problems as space permits.

### Kill a Kow

I will be glad to cooperate, providing at least one thousand other dairymen will do the same, in selling or killing FOR BEEF PURPOSES at least one of the poorest producers in my herd between now and March 1, 1925.

Name.....

Address.....

Cut this out, sign it and send it to American Agriculturist, 461 Fourth Ave., New York, N. Y.

# Jersey Spud at the Bar

## Potato Mock Trial Creates Fun and Interest

THE New Jersey potato has come under the public eye, charged with being an undesirable citizen, and so far has been proved "Not Guilty." For four years the New Jersey "spud" has been gaining more and more disfavor, due to particularly heavy crops, and competition from other potato areas and from new potato sections, all of which have meant lower prices and an unsatisfactory situation in the important New Jersey early potato belt.

three years, and an advanced scale of living have caused serious financial conditions.

And so the prosecutor pleaded his case. Of course, he attempted to place the entire blame on the potato. Earle Dilatish of Robbinsville, N. J., who grows close to a hundred acres of potatoes, was called to the witness chair. Ellwood Douglas of Freehold, N. J., County Agent for Monmouth County was escorted to the stand. The banker, in this case, Charles A. Spaulding of Allentown, N. J., stated that the potato lends itself to speculation, but Mr. Spaulding does not believe the potato should be deported from the County.

### The Defendant's Case

Is the New Jersey potato guilty of the situation in which it finds itself? That is what New Jersey farmers have now set about to prove, and the method which they are following is one of the most ingenious and novel plans of focusing public attention upon the potato yet devised. Under the direction of the State Potato Improvement Committee, with W. B. Duryee, prominent potato authority and President of the New Jersey State Potato Association, as Field Agent, a series of mock trials of the "New Jersey potato" is being held in leading producing centers.

Then came the opportunity for the Defendant. The counsel for the Defendant, H. J. Butcher of Middlesex County, rallied to the defense of the potato and cleverly showed that the New Jersey "spud" is suffering from the results of conditions outside of its own control. He contended that the use of poor seed, indifferent production methods and chaotic marketing, added to over-production in the East and the opening up of new potato growing areas, have brought about an entirely different situation from that existing years ago. Witnesses brought to the stand bore out his contention. H. E. Hulsart of Allentown, N. J., prominent farmer, Benjamin Yard, District Manager of the Monmouth County Farmers Exchange and Frank G. Rue of Imlaystown, N. J., a leading potato grower, brought out that the reduction in acreage, improved methods of production and better marketing would make the potato a crop yielding a fair profit when used as a part of a crop rotation on the average farm.

### Trial Includes All Concerned

The mock trials of the New Jersey potato, with leading growers, county agents, bankers and potato dealers comprising the cast, are creating an interest which is bringing out hundreds of potato growers to the meetings. The presiding judge, prosecutor, defense counsel, court clerk, defendant and jury are all potato farmers, and comprise the permanent cast conducting the trials throughout the State. Witnesses and jury are drawn from the various communities. The witnesses, usually three for the prosecutor and three for the defendant are large potato growers, bankers, dealers or county agents.

### Big Turnout at Allentown

Typical of these mock trials was that held in late November at Allentown, N. J., in the center of the big Monmouth County potato area. Frank Brunner, potato farmer of Middlesex County, N. J., acted as Presiding Judge. The Court Clerk, Fred F. Grove, of Middlesex County, well-known grower, opened court in the formal way and provided for the panel of jurors. Frank M. Smith, prominent potato grower of Monmouth County was the Prosecutor. Through witnesses Mr. Smith attempted to prove that the potato is an undesirable citizen. It has inherent qualities which make it undesirable for Monmouth County. It appeared from the testimony that some high grade farmers have failed in the potato business; it further appeared that the most serious trouble has come from among the young farmers who started potato growing during or just preceding the war period. The heavy investment in potato farms due to good prices and profits for a period of two or

### The Potato Appears

Just previous to the summing up by the prosecuting and defending attorneys, the New Jersey potato itself, in the person of a masked figure, was placed in the witness chair. Back of the mask and potato costume was W. B. Duryee, Field Agent for the Potato Improvement Committee, and from whose direct leadership New Jersey farmers are finding that the conditions surrounding the potato rather than the potato itself, are responsible for the unsatisfactory situation in New Jersey potato areas.

At the conclusion of the trial, the jury retired to consider its verdict. The Allentown meeting, as at two previous trials held in nearby sections of the State, give the verdict of "Not Guilty." While the jury was in deliberation a poll is taken of the audience. At all of the trials so far, the audience has likewise returned a verdict of "Not Guilty." From beginning

# Before You Buy an Engine

Let me tell you how thousands of farmers are saving time and money with the only engine designed and built for farm work—The Edwards Farm Engine. I want to tell you how it is different from any other engine—how this one engine will fill your silo or run your washing machine, or do practically every power job on your farm; how it is changed from a 1 1/2 H. P. all the way up to a 6 H. P.—how it saves fuel, starts without cranking, how it does not have to be fastened down, does not vibrate, is light and easy to move from one job to another, yet is rugged and durable—and how it has made good with farmers for eight years.

**Read What Users Say**

"Clarence Rutledge, of Ontario, says: "Have given my Edwards four years' steady work and like it fine. Runs 23-in. saw, 8-in. grinder, ensilage cutter and does all chores. Have had ten other engines. The Edwards beats them all." G. N. Jerd of Vermont says: "Would not buy any other engine at one-half the price."

Others say: "Fills a long felt want for us farmers;" "Years of hard service and not a cent for repairs;" "A little giant for work;" "has anything beat I ever saw in the shape of an engine."

Don't buy an engine until you get the facts about this marvelous engine. There is no obligation. Write now.

**THE EDWARDS MOTOR COMPANY**  
333 Main St., Springfield, Ohio

**Get the Facts about MY FREE TRIAL OFFER**

You risk nothing. Just send me your name and address, and without the slightest cost or obligation, I will send you all of the facts about this remarkable engine, tell you how it will do practically every power job on your farm, and give you all of the details of my liberal free trial offer. Write today.

# LONG TERM FARM MORTGAGES

We grant loans to farmers in New York and New Jersey by first mortgages under the United States Government Plan. This plan gives you capital for thirty-three years and the installment plan of payment provides for the payment of the principal and interest in full on the due date.

Write now for information to:

**NEW YORK AND NEW JERSEY JOINT STOCK LAND BANK**  
31 CLINTON STREET, NEWARK, N. J.

Saws Logs—Falls Trees—  
Buzzes Branches—

Most easily operated and fastest earth auger made. See your hardware or implement dealer. Look for IWAN BROS. on handle casting. Not sold by mail order houses. Write for easy digging booklet on posthole diggers, hay knives, barn scrapers, etc. IWAN BROS., 1505 Prairie Ave., South Bend, Ind.

**KITSELMAN FENCE**

"Saved \$22.05," says I. F. Fisher, New Bethlehem, Pa. You, too, can save. We Pay the Freight. Write for Free Catalog of Farm, Poultry, Lawn Fence.

**KITSELMAN BROS., Dept. 205 MUNCIE, IND.**

# What Is Silage Worth?

## How to Estimate the Content of a Silo

WE have had a number of inquiries from our readers recently as to how to figure the value of silage and to estimate the contents of a silo. During the winter there are always a good many occasions when farms change hands or new tenants take control, when it is necessary to estimate the amount of silage left in the silo and its value. Such estimates are very difficult to make because of the great variation in quality of silage and because there are few standards of value with which silage can be compared. However, we have secured considerable opinion and advice from which we are making the following suggestions as a guide in getting the amount and value of silage.

### How To Determine Cubic Content

Let us consider first how to determine the contents of any silo in tons. The New York State College of Agriculture points out that figuring the contents of a silo would be a very simple matter if the silo contained nothing but air or water or rocks; but silage packs down, so that the higher the silo the greater pressure on the bottom layers, which means that there are more pounds to the square foot at the bottom of the silo than at the top. The time of filling the silo and the condition of the corn also cause a variation of the weight.

However, the following table shows the weight of average silage at various depths of a cubic foot. Another and more complete table will be found at the bottom of this page. The first figure indicates the feet and the second the number of pounds: 10-26; 12-27½; 14-29; 16-30½; 18-32; 20-33½; 22-34½; 24-36; 26-37½; 28-38½; 30-39½; 32-40½; 34-41½; 36-42½; 38-44; 40-45; 42-46; 44-47; 46-48; 50-50; 60-54.

### An Illustration Worked Out

Now let us, for an illustration, figure the contents in a silo 12 feet in diameter, 40 feet high, containing 36 feet of silage, after the silage has settled. It is first necessary to get the area of the bottom. Some of you will remember the old arithmetic rule that the area of any circle is obtained by squaring the radius and multiplying by 3.1416. Putting it another way, the area is figured by multiplying half the diameter by itself and then by 3.1416. The diameter of this silo is 12 feet. The radius, therefore, is 6 feet, and 6 times 6 times 3.1416 gives 113.1 square feet.

Multiplying this area of 113.1 square feet by 36 feet (the depth of the silage), gives 4,071.6 cubic feet of silage. By consulting the above table, it will be found that the number of pounds per cubic foot, when the height of silage is 36 feet, is 42¾ pounds. Therefore, if we multiply 4,071.6 cubic feet by 42¾, we find that the silo contains, in round numbers, 174,000 pounds. Dividing this by 2,000 gives 87 tons.

Now let us suppose that 16 feet have been fed off and you desire to know the remaining tonnage. By consulting the table it will be found that 16 feet of silage averages over 30½ pounds to the cubic foot. Therefore, multiplying the number of cubic feet—1,809.6—by 30½, we have 53,175 pounds fed out. The cubic content of 1,809.6 is obtained by multiplying one-half the diameter (6 feet), by itself, then by 3.1416 and then again by the height, 16, (6 x 6 x 3.1416 x 16). By multiplying this cubic content, as we said above, by 30½, we get 53,175 pounds fed out. Subtract this amount fed out from 174,000 pounds (the total amount in the silo), which gives a difference of 118,825 pounds remaining, which is approximately 59 tons.

### What Is Silage Worth?

Now what is this silage worth this year? Professor W. I. Myers, of the Department of Agricultural Economics and Farm Management at the New York State College of Agriculture, writing on

the value of silage says: "On the basis of digestible nutrients, a ton of silage is approximately equal to 60 pounds of corn plus 320 pounds of hay. However, if its succulence does not make it worth more than the digestible nutrients, it is not a cheap feed and probably would not be worth raising on a large proportion of the farms."

### Some Cost Figures

At present prices, silage figured on this basis, that is, by comparing the digestible nutrients with corn and hay, will be worth only about \$3.38 a ton. But as Prof. Myers suggests, this value is far too low because silage is worth more than dry feed on account of its succulence and being so palatable to the cattle.

Prof. Myers says also that the average cost of production per ton of silage on 190 different farms during the eight years, 1914-1922, was \$7.78 per ton, with an average yield of about 7 tons per acre. In 1922, on 22 farms, the average cost of production was \$8.30 per ton.

While the plan of comparing silage with the nutrient value of corn and hay gives a too low price, on the other hand, the cost of production figures under present conditions are too high. Milk and many other farm products at present are bringing considerably under the cost of production and therefore it would be unfair to ask cost of production prices for silage.

Mr. C. O. Cromer, Professor of Farm Crops at the Pennsylvania State College, states that the price of silage which is being used by the Pennsylvania State College this year is between \$5 and \$6 per ton. Other years it has ranged around \$4 to \$5.

Mr. Charles H. Baldwin, Director of the Bureau of State Institution Farms of New York State, thinks that \$6 a ton would be a very fair price for silage this year.

### All Silage Is Not Uniform

All of these authorities, however, make a qualifying statement that the quality of the corn, how well it is matured, and how well it has been cut and packed in the silo would have a great influence on the value of the ensilage.

In 1914, the average price of silage was about \$4.50 a ton. Costs of production have of course risen since then, but prices of milk at the present time are not so much higher. Therefore, it would seem fair in figuring the cost per ton of ensilage to consider both the costs of production and the value of the ensilage as compared to the nutrients in hay and corn. Figure—

**"My DeLaval is milking my cows better than they were ever milked by hand"**

So says a prominent Holstein breeder who is always careful about his milking. This is not an exceptional instance, in view of the evidence that is coming from De Laval Milker users, such as the following:

"After using the De Laval Milker on our herd of forty cows we find that the cows respond freely to the machine. We believe this is due to its uniform action."

"The action of the De Laval Teat-Cup is entirely different from all other makes of machines. It is mild and pleasing to the cow, causing her to respond quickly."

"I can milk in just half the time with the De Laval, for my cows give down their milk better, and now in-

stead of sitting in a barn and milking 23 cows by hand, I can just watch the work being done and it is a pleasure."

"I say that the De Laval Milker will absolutely get more milk over hand milking and save so much time that it will pay for itself in a short time."

And in this manner we could go on quoting from among the thousands of other satisfied users, proving the claims made for the De Laval Milker—that it

1. Increases milk production;
2. Saves time and labor;
3. Produces cleaner milk;
4. Makes dairying more pleasant;
5. Makes more money.

# LESS WORK MORE PROFIT with the Reliable Drew Line

## WATER BOWL

If you have one cow or one hundred—you must want to make them give as much milk as possible. A Drew

Detachable Water Bowl in the cow's stall often increases the milk yield 25 per cent or more, right away! It automatically gives the cow all the water she wants when she wants it.

### A FREEZE-UP CAN'T HARM THIS BOWL

No miserable driving out in cold to icy tanks—no fires to keep. Everything is simple—durable—efficient. Built on scientific principles. Drew Bowls actually pay for themselves. Install them before icy weather causes a falling off in the milk flow. **THE DREW LINE DEALER SAVES YOU MONEY.** See him for all your barn and poultry equipment. Drew supplies are made and priced for practical men. 27 years of winning good-will save you a lot of money. Write for catalog A—free.

## CRASCO STEEL RODDED SILOS

# \$25 Down Buys Holstein Bull

We have several exceptionally well-bred registered Holstein bull calves that we offer for sale on the installment plan. Here is your opportunity to break into the purebred game without an immediate heavy outlay of cash. This should appeal to the average farmer who wants to boost the average production of his herd without having it cost him too much money right on the jump.

### A Double Descendant of "OLD DUTCH"

One of these offerings traces back, both on his sire's and his dam's side, to Dutch-land Colantha Sir Inka, "Old Dutch," the greatest proven transmitting son of Colantha Johanna Lad, the famous "milk" sire. The calf's sire is a grandson and his dam is an own daughter, of Dutch-milk blood on both sides of the family. Dutch has 95 A.R.O. daughters, 16 having 7-day records of 30 pounds of butter or better, two are in the 1000-pound class. The calf's sire has 22 A.R.O. daughters with records up to 29.83 pounds butter in 7 days, and is the son of a 30-pound cow. This well-bred individual can be bought "on time."

# New York Farm News

Crop and Fruit Notes by M. C. Burritt

**W**INTER is on and still no rain to amount to anything. It is really remarkable how rain holds off this fall. It will cloud up with every indication of rain, the weather bureau even predicting it, only to clear the next day without rain, or at most a light shower. Last summer it was just the opposite. Any cloud would produce rain. Meanwhile, more cisterns and wells are going dry which, if it freezes up without rain, will cause much inconvenience this winter. Last night about two inches of snow fell and the ground has remained white all day with a sharp air. The ground is frozen hardly at all yet.

The most active farm enterprise this last week was cabbage harvest and marketing. Almost as much cabbage has been hauled into storage and shipped in the last two weeks or since the freeze as was brought into our local shipping point, before the freeze upon November 17th. Some buyers will not take frozen cabbage claiming it is practically worthless while others are still buying and a few even storing it. Growers have stored and shipped heavily themselves. The freeze had a remarkable stimulating effect on prices, which rose from \$5 and below to \$8 and \$10. Our local cooperative has loaded several cars at \$12 and one at \$14 this week. Demand is much stronger and inquiries more active. If the cabbage arrives in the markets in good condition the freeze may prove a blessing in disguise.

### Few Apples and Potatoes Frozen

There are still a few apples on the ground which may be salvaged for cider if there are no further hard freezes for a few days. Drops which were picked up and left out in crates and bags were badly frozen and are rotten now, except in the centers of the containers. The apple market is rather slow just now, not many sales being made, although prices remain firm. Everyone seems to be expecting more activity right after December first.

Some potatoes were frozen in the ground and more in barns. But the loss is small. South of us, buyers are offering from thirty to thirty-five cents a bushel for shipping. Such prices are disheartening to growers. Potatoes have the lowest buying power in many years. "This shirt cost eight bushels of potatoes," one grower remarked as he donned a new one. How many would it take to buy a good enclosed car no one cares to figure.

### Wheat Buys More This Year

Time now permitting, farmers are beginning to deliver their wheat to local mills. The price ranges from \$1.40 to \$1.50 a bushel. Wheat buys about half as much more than it did last year.

The relief from the pressure of field work is real and greatly needed for it gives opportunity to do so many necessary things that have been long neglected because of the pressure of harvest. Thrifty farmers seize this opportunity to open surface ditches, bank up young fruit trees to protect them from mice, repair broken floors, windows and leaky roofs, make the stock snug for winter, store the last vegetables for winter and innumerable other small jobs. The livestock on a fruit and general farm must be particularly glad of this time for during fruit harvest they are more or less neglected. Now they are beginning to get the attention which they deserve. "Chores" occupy a much larger part of the day's duties.—M. C. BURRITT.

\* \* \*

### In the Hudson Valley

The first rain in forty-two days set in last Saturday and continued over into Sunday night. In all some two and sixteen-hundredths inches fell. This was a very welcome rain for the farmers, as all cisterns and other water supplies are now plentiful. A considerable number who had been drawing water from a considerable distance for their stock are relieved.

On Monday, a number of farmers took advantage of the condition of the soil and were hard at work plowing on the lighter soils. There has been less fall plowing done this year in the county than usual owing to the unusual drouth.

### Frost Caused Heavy Losses

The freeze of last week apparently hits other persons as well as the farmer, as several commission firms lost rather heavily in apples that they had not packed as yet out of the orchards. Several cases of a loss of two to three hundred barrels are reported as well as many smaller ones. Many cars are not in commission as yet, as it has been hard to obtain enough cylinder blocks to go round. One local garage placed an order for two thousand dollars worth of heads the day following the freeze and this amount has been undoubtedly increased. Several tractors were severely damaged that had been left standing in the field. There is always some damage the first frost of the season but not so heavy as this usually.

### Marauders Kill Stock

A week or so ago in the southern parts of the county hunters or rather marauders in the guise of hunters, entered on the premises of a farmer and shot and carried away six valuable Red Bourbon turkeys, at the same time leaving another gobbler lying with a broken wing and another with a shattered leg. No arrests were made, altho a fifty dollar reward was offered by the owner. A few days later, at the annual meeting of the County Fish and Game Club, resolutions were offered which said in part: "That all law abiding hunters and fishers are constantly being brought into disrepute by irresponsible hoodlums and loafers and in view of this suitable rewards are offered by the club for information that leads to conviction of persons guilty of violations of the game laws as affecting the farmer and that every member of the club stand ready to assist the farmer in any way that he is able in the protection of his property from damage in return for the courtesies allowed in not posting his land." A great deal more of a spirit of cooperation might be developed between the constantly growing membership of the Fish and Game clubs and the rural people. If the members of those associations will try to understand the problems and the attitude of the farmer, they may be assured of every courtesy of the land owners. But if the acts of the game and farm product hog continue it may not be very far in the future when the majority of the farm lands will be posted.

### Watching Rye Market

As Columbia County is and has been for many years now a heavy producer of rye, considerable comment has arisen lately over the fact that according to a recently published report, there is a world shortage of 173,000,000 bushels of rye. Exports of rye last year to Europe were 72,000,000 bushels, while estimates show that this year about 65,000,000 bushels out of an estimated surplus of 68,000,000 bushels. For a number of years now the price of rye has been low, so low, in fact, that it is forcing the growers out of rye production against their will. Discussion now is prevalent as to whether or not this shortage will mean an increase in local prices. The majority are skeptical.—D. V. RIVENBURG.

\* \* \*

**Greene County.**—The recent cold spell froze a lot of apples, coming as it did very unexpectedly. Corn was a little late and a lot of it froze before it was ripe. Buckwheat is bringing \$1.25 and corn \$1.55. The hay crop was light this year. Farm sales are bringing large crowds and offerings are bringing good prices with the exception of cows. Strippers are meeting poor sale and there is practically no demand for horses.—J. A.

# An Amazing Experiment

## Testing the Strength of a Harness Strap

**A** RECENT experiment in an engineering laboratory proved that thousands of farmers are buying harness with the straps robbed of half their strength.

Looking at the picture you would think the strap would surely break where it was cut away, but—it didn't—it broke at the buckle.

The test shows how buckles and buckle tongues tear and weaken harness, making it wear out long before it should, causing frequent and costly repairs.

The famous Walsh No-Buckle Harness does away with this weakness in harness—has no buckles to tear, no rings to wear, no buckle holes to weaken straps. It is the world's strongest harness.

Thousands of farmers in every state save money by using the Walsh No-Buckle harness. James M. Walsh will send you a set to use on your team thirty days free without obligating you to buy. After trial if you find it the best harness in every way you ever saw, you can pay \$5 down, balance in easy monthly sums.

Write today for big new free book, describing ten styles of Walsh 1925 No-Buckle Harness, telling about interesting tests, experiences of users, free trial offer and liberal long time terms. Address James M. Walsh, Pres. Walsh Harness Co., 513 Keefe Ave., Milwaukee, Wis.

# Reviewing the Latest Eastern Markets and Prices

## MILK PRICES

**T**HE Dairymen's League Cooperative Association announces the following prices that dealers will pay the League during the month of December for milk testing 3% in the basic zone of 201 to 210 miles from New York City. It is to be understood, of course, that the prices mentioned below are not received by the farmer but go into the pool. They represent the prices dealers pay to the League. *Class 1:* milk used chiefly for fluid purposes, \$3.07 per hundred pounds. *Class 2A,* used chiefly as fluid cream, \$2.10. *Class 2B,* used chiefly in the manufacture of condensed milk and ice cream, \$2.25. *Class 2C,* used chiefly in the manufacture of soft cheese, \$2.15. *Class 3A,* \$1.80. *Class 3B,* \$1.75. *Class 3C,* \$1.65.

*Class 4,* prices will as usual be based on the butter and American cheese quotations on the New York market.

The only increases over November prices are in *Class 2,* 20 cents per hundred in *2A* and *2B* and a 10 cent increase in *2C.*

### Sheffield Producers

The Sheffield Farms Producers announce the following price for 3% milk in the 201 to 210-mile zone: *Class 1,* \$3.07 per hundred; *Class 2,* \$2.00, *Class 3,* \$1.50, *Class 4,* determined by market quotation; on butter and cheese.

### Non-Pool Cooperative

The Non-pooling Dairymen's Cooperative prices for *Class 1* milk is \$2.80 per hundred; *Class 2,* \$2.00, *Class 3A,* \$1.60, with freight and fat differentials.

### Interstate Producers

The Interstate Milk Producers' Association (Philadelphia Price Plan) announces that receiving station prices, or the price to farmers in the 201 to 210-mile zone from Philadelphia for 3% milk, is \$2.19. In the 101 to 110-mile zone the price is \$2.29.

## BUTTER HOLDS FIRM TONE

The butter market holds the same firm tone that characterized it last week. In fact, prices are just a shade stronger. The strong advance of the week ending November 29, was due to the unusual differential in prices between prices in New York and Chicago with a consequent unprecedented movement of butter from the Atlantic seaboard back to the producing territory. Naturally, this turn in the market would strengthen conditions in the East and inasmuch as consumption channels have taken receipts right along, the condition of the market has not changed. The greatest activity is in the strictly fancy marks of creamery, although good feeling exists on undergrades. Trading is rather quiet on these lower marks, but values are not burdensome and, therefore, the market can be considered steady. In general, the butter market is in strong hands. Withdrawals from storage have been heavy and rapid and these have had a tendency to strengthen the situation and give support to the fresh market. The holiday trade will also undoubtedly hold the market for a week or so.

## CHEESE TRADING ACTIVE

Trading continues quite active in the cheese market, and there is a decidedly firm tone on practically all grades of cheese. States are entering into the transactions a little more freely. This firm tone is accompanied with a slightly firmer price with a tendency to increase. Latest advices indicate that more milk is going to creameries on account of the relatively higher prices of butter in New York State. The make of cheese is relatively light and it is closely absorbed by the market. As a result of this firm situation, fancy and special hold, whole milk State flats are now bringing from 23c. to 23½c., while average run marks are bringing from 21½c. to 22½c. Fresh whole milk State flats, fancy and special, are bringing from 22c. to 22½c., while average run fresh goods are worth from 21c. to 21½c.

**HOMESPUN TOBACCO** Chewing five pounds \$1.50; ten \$2.50; smoking five pounds \$1.25; ten \$2.00; pipe free, pay when received, satisfaction guaranteed. Co-operative Farmers, Paducah, Ky.

and undergrades are bringing from 19c to 20½c. These prices hold for both white and colored cheeses.

## EGG PRICES LOWER

The egg market has lost some of its strength during the past week. In fact, in last week's report, we indicated that the market was beginning to ease off a little bit. There are more eggs coming from southern points, including shipments from Texas, Tennessee and Kentucky. However, these goods are not a serious menace to fancy marks, for the quality is generally reported irregular with a lot of old stock mixed in with a sprinkling of fresh. Western receipts are light, while nearbys are holding up very well. In general, the tone of the market is irregular. This recent decline in the market has induced a more restricted trading in really fancy marks, as many operators feel there will be some recovery from the present quotations. This hesitancy has resulted in an undertone that indicates coming firmness. The consumptive trade is not taking as many eggs as is possible. There is no question but what retailers are way behind the wholesale market in cutting prices. Housewives have to pay enormously high prices for eggs and naturally, they are cutting down purchases, with a result that the market out-

little attention and stock has got to be fancy to bring top quotations.

## POTATOES ABOUT THE SAME

There is little change in the potato market as a whole, with one exception. The market is quite dull with the exception of Long Islands. Long Island potatoes are meeting a better market price and are apparently on a slight increase. There are not a whole lot of Long Islands rolling, due to the fact that growers are of the opinion that prices are going higher and are consequently, holding onto their stocks. Prices now vary from \$2.35 to \$2.40 per 150 pounds sack, F.O.B. east end loading points. This means from 80c to 85c a bushel to the grower. States are still \$1.70 per 150 pound sack, while Maines are worth from \$2.00 to \$2.10 delivered in New York City. Supplies are heavy and ample to take care of the trade, with a result that there is little likelihood of prices going much higher in the immediate future. These prices are general for the average run of stocks that are coming into the yards. A few growers who are making good contact in the market and who are shipping a very closely graded and strictly fancy product, are getting a slight premium; enough to pay for the effort. The recent freezing spells we have had, have been responsible for considerable frost complaint. It is a very good precaution for a shipper to watch weather reports closely and take every precaution in spite of what the weather looks like to guard against freeze. We know a couple of individuals personally, who, had they taken a little more care in loading, could have avoided considerable frost damage and saved enough on a car to pay a good portion of the freight bill.

## GRAINS AND FEED

According to New York State Department of Farms and Markets, the following prices prevailed November 29:

The quotations given in this report show the approximate prices at which feed can be purchased per ton, and grain per bushel, in straight carlots through billed from Western points, delivered on track at points in the freight zones as indicated. Mixed carlots cost approximately \$2 per ton more.

Retail feed and grain prices vary with different local dealers, depending upon their individual cost of doing business, volume handled, etc. In the case of feeds the retail price may sometimes be as high as \$5 per ton above the wholesale prices given in this report:

NOTE: Since Buffalo is an important milling center for wheatfeeds and linseed meal, quotations are given for this point on both a through-billed and a local basis.

No. 2 White Oats, \$59; No. 3 White Oats, —; No. 2 Yellow Corn, —; No. 3 Yellow Corn, —; Ground Oats, \$10; Spring Wheat Bran, \$30; Hard Wheat Bran, \$32.50; Standard Middlings, \$32.50; Soft Wheat Middlings, \$37; Flour Middlings, \$37.50; Red Dog Flour, \$44; Dry Brewers' Grains, —; White Hominy, \$46; Yellow Hominy, \$44.50; Corn Meal, \$46; Gluten Feed, \$43.75; Gluten Meal, \$52.75; 34% Old Process Oil Meal, \$46.

For points taking New York rate add to Albany price ¼ cent on oats; ½ cent on corn; 10 cents on cotton seed meal and 20 cents on other feeds.

## CABBAGE EASIER

It is practically impossible to say what a market is going to do a week or two weeks ahead. In fact, it is very difficult to surmise what will happen a single day in the future. The recent freeze is a demonstration of how quickly a market can turn contrary to the expectations of the most experienced. About the highest price we have record of being paid for cabbage in the country, is \$15.00, a sudden increase of \$10 or \$11 a ton. Some claim a higher price at present but lack confirmation. As this is being written at the end of the week ending December 6, the price in the country in general seems to be \$12.00. Supplies in the city are so liberal however, and indications all so strong that we will have milder weather, that it looks like a weaker market ahead of us and we won't be surprised to see cabbage down again to \$10, before many days elapse. The man who has a lot of cabbage in storage cannot afford to gamble a whole lot on that crop this year. If he knows what his cost figures are per ton, he will loosen up his holdings gradually with every improvement the market shows. This recent jump to \$12 or \$15 was a time to clear out some stock and when the market comes back again, which it undoubtedly will, for a short period, it will be a good idea to clear some more. Right now the condition

of the market is such that the man who hesitates is lost. It seems everybody is doing it, so that when we see prices begin to increase, everybody seems to be shipping and we have a flood. As a result, cabbage men have got to watch the market very closely and about the best way we know of is to study the market reports that come over the air, via radio, every noon time. At the same time it is a good idea to be in communication with a house at the New York end, to handle the shipment.

## BEAN TRADE DULL

Trading is exceedingly dull on practically all varieties of beans and as a result, prices have been shaded on most of these varieties in order to effect a movement of stocks. The feeling in general is easier. Really choice State marrows are generally held around \$11 with average goods naturally trending lower, reaching down to \$10. Pea beans are being offered freely at \$6 and marks have got to be extremely fancy to bring \$6.25. Red kidneys are weakening and the downward price is now centered around \$8.50 to \$8.75. As is the case with peas, red kidneys have got to be very, very fancy to reach \$9.

## What Is Silage Worth?

(Continued from page 411)

ing this way at present prices, silage would be worth about \$5.50. You will note that this agrees approximately with what the above-quoted authorities have estimated as a fair price; that is, a price somewhere between \$5 and \$6.

The silo mentioned above in this article, which was 12 feet in diameter, and 40 feet high, with 36 feet of ensilage, contained 87 tons before any ensilage was fed off. This 87 tons at \$5.50 per ton brings \$478.50.

We repeat that a dairy would have to be composed of very excellent cows which would give a lot of milk a long time to pay, at present market prices of milk, for a silo of ensilage worth in cold cash, \$478.50.

## Jersey Spud at the Bar

(Continued from page 413)

to end, the mock trials are replete with humorous situations, as well as serious implications surrounding the potato. The cast conducts its work with precision and talent, a credit to the best there is in rural dramatics.

## More Trials to Come

Within the ability of the Committee, the mock trials will be carried to all potato areas of the State. In early December, the Salem County Board of Agriculture will stage the trial as part of its annual meeting in Woodstown, N. J. Others will be held at Freehold, and Hightstown, N. J., and probably at several other points. During Agricultural Week at Trenton in mid-January, the "Supreme Court" will try all "appealed" cases to fix finally the responsibility concerning the New Jersey "spud."

## FARMS FOR SALE

Equipped Farm—Only \$2200 New House and 500 Fruit Trees. Popular resort district, excellent local markets; 100 acres close school, church, depot town; smooth loamy fields; trout stream through pasture, wood, timber; 500 acre maples, equipped sugar house; 500 apples, plums, cherries, grapes, recently built 6-room house in maple grove, 1 orch; barn, poultry house. Owner called away, low price \$2200, horse, cows implements, tools, crops thrown in. Details pg. 51 big Bargain Catalog, illus., money-making farms and business chances. Free. STROUT FARM AGENCY, 150 R. Nassau St., New York City.

## The Market at a Glance

The following are the prices on the New York Market, at which farm products of special interest to eastern farmers, sold on December 4.

Eggs, nearbys (cents per dozen)	
Jersey hennerly whites, closely selected...	73 to 74
Other hennerly whites, extras	69 to 72
Extra firsts	66 to 68
Firsts	60 to 65
Gathered, whites, first to extra firsts	60 to 67
Undergrades	52 to 58
Pullets	45 to 53
Hennerly browns, extras	66 to 75
Gathered browns and mixed colors	52 to 60

Butter (cents per pound)	
Creamery (salted) high score (93 score)...	47½ to 48
Extra (92 score) c.c.	47
Firsts (90-91 score)	43½ to 46½
Firsts (88-89 score)	39½ to 42½

Hay and Straw, large bales (per ton)	
Timothy No. 2	24 to 25
Timothy No. 3	21 to 23
Timothy Sample	16 to 20
Fancy light clover mixed No. 2	21 to 23
Alfalfa, second cutting No. 2	25 to 26
Oat Straw No. 1	14 to 18

Beans (domestic, per lb.)	
Marrow	10 to 11
Pea	5½ to 6½
Red Kidney	8½ to 9
White Kidney	9½ to 10
Yellow Eyes	—

Live Poultry, via express (cents per lb.)	
Fowls, colored fancy, heavy	20 to 27
Fowls, leghorns and poor	17 to 20
Chickens, colored fancy	24 to 25
Chickens, average run	19 to 22
Broilers, colored	32
Broilers, leghorns	28
Ducks, nearby	22 to 24
Ducks, Long Island	29
Turkeys	25 to 30

Live Stock (cents per lb.)	
Calves, good to medium	10 to 13½
Bulls, common to good	2½ to 4
Lambs, common to good	12½ to 14½
Sheep, common to good	3½ to 5½
Hogs, Yorkers (200 lbs.)	8½ to 9½

lets are more restricted and the needs of the retail market are somewhat limited. Right now, it looks as though the high point of the market has been reached, although weather conditions have a great deal to do with it. We still have January ahead of us when a lot of bad weather can send the market skyrocketing. At the present time, nearby whites are generally steady, although receipts are irregular in quality and very few show they have characteristics to reach top quotations. The very best price for the finest pack is around 74c, while most are bringing anywhere from 60c to 70c. Brown eggs have been very firm on the market and at the present writing, strictly fancy browns are worth as much or possibly a cent more than the fanciest whites.

## LIVE POULTRY NOMINAL

There is nothing exciting about the live poultry trade. The day previous and a few days after Thanksgiving, the market was extremely dead. Values took a decided tumble. The action of the market bears out our recommendation to shippers to get their stock in early. Shippers who are planning to send stuff in for the Christmas trade, will undoubtedly find it will pay them to get their stock off in order that it will reach New York by the 22nd. If it reaches here the 24th, chances are that it will meet a weaker market. As a matter of fact, express receipts have been more or less light. Express fowls have been most prominent in the change in the market, showing a better movement for the best colored stock. Chickens have been receiving relatively

## How Patent Medicine Sharks Prey on Sick Folks

EVEN worse than those who prey upon the widow and the orphan are the patent medicine sharks who give false hope to those who are ill. Every day brings to our Service Bureau pathetic letters from invalids among our people who ask about some patent medicine advertisement that promises in glowing terms to restore them to health and happiness. No matter what the disease is, the medicine "absolutely guarantees" to work a full cure. It would seem that all should recognize at the first glance these lying fakes, but when a sick person has suffered for months or even years, he or she will grasp at anything for help.

We know of nothing more pathetic than this constant dopping with expensive drugs in the eternal hope that sometime some of them somehow will work a miracle. If these words of warning would do any good, we would like to write them in red letters a foot high, "All the patent medicine fakes want is your money!"

NOT ONLY WILL MOST OF SUCH DRUGS NOT DO YOU ANY GOOD, BUT MANY OF THEM ARE POSITIVELY HARMFUL.

### "To Be Taken With a Grain of Salt"

The circular advertisements are very cleverly written. They are filled with dozens of recommendations and testimonials from sick people who have apparently been cured. But these testimonials are fakes, or else they were written by persons who would have gotten well anyway, not because of the medicine, but in spite of it. Other testimonials are written by people whose pain has been temporarily lulled by dangerous drugs and who will suffer all the more when the effect of the drug wears off. If space permitted, we could print dozens of letters like the one which follows:

"Could you inform me about the reliability of the people who write the enclosed circular? They have sent me two letters. I suffer with rheumatism all of the time and am confined to a wheelchair."

To this letter, the Service Bureau replied:

"I have had considerable experience with sickness in my family and I know how one who is ill is always longing to find something that will bring him relief.

"That is the reason that unscrupulous patent medicine companies make so much money. They prey upon people who are reaching out to get some relief for the sole purpose of getting their hard-earned savings. I am sorry to discourage you, but I have no faith whatever that if you were to spend the money for these patent drugs that they would do you any good.

"The ordinary physician's remedies are discouraging, particularly in chronic cases like yours, but they are much safer, and in the long run, if anything will do you much good the doctor's remedies stand a far better chance than do patent medicines. Permit me to express my personal sympathies for your trouble and I regret that I am unable to advise you that the drug advertised in the enclosed circular would do you any good."

The circulars which were enclosed were attractively printed in several colors. Here are just a few of the statements that they contained:

"Dear Friend:

"If you could be entirely rid of your pains and aches WITHIN 96 HOURS—by using a simple treatment that is GUARANTEED TO GET RESULTS—wouldn't you feel mighty good about it?

"Sounds impossible, doesn't it? . . . Yet thousands of folks who suffered with rheumatism and like diseases can now tell you that WITHIN 96 HOURS THEIR PAINS WERE GONE ENTIRELY!

"Some of their letters—all that we could find space for—are reproduced in the enclosed literature."

There was much more of the same kind which space does not allow us to publish.

Now, of course, there are some old-fashioned remedies and some standard drugs which, if used carefully and for certain diseases, are all right. Some

mothers who have raised large families are particularly good amateur doctors for the simple, common ailments. Such remedies as castor oil, lard and turpentine, the various herbs, camphor, and several others, are good, when rightly used, but when it comes to chronic ailments, or acute diseases, then the only safe remedy is the doctor.

### Remedy for Chilblains

AT this time of the year we always get inquiries for help for frostbitten feet and for chilblains. For instance, the following is a sample letter on this subject:

"Do you have anything among your records that would give relief or cure frostbitten feet. My wife suffers every winter with her feet. They were frostbitten several years ago, and each year when winter sets in, her troubles begin.

"Now if you have any remedy that you could send me, or if not, you may be able to obtain some remedy from some of the thousands of American Agriculturist readers. Among them may be some who have had frosted feet and have a relief remedy or maybe a cure."

We replied by letter to this inquiry by using the recommendation for frostbite or chilblains given by Dr. Royal S. Copeland in his Health Book. This book, by the way, should be in every home as an aid in emergencies and for elementary ailments where a doctor is not needed.

On the subject of frostbite or chilblains, Dr. Copeland says:

### What to Do for Frost-Bite, or Chilblains

1. Paint the chilblains with a solution of iodine crystals, collodion, and ether in the proportion of five grains of the iodine, to an ounce of collodion, and two drachms of ether.

Every mode of life has its joys and its penalties. There is a fascination about the desert with its open spaces and the wonderful colorings. The stars seem nearer and existence is like a dream. But there are vipers and poisonous insects to make life uncertain.

The mountains hold the eye, and to climb them is a privilege. But under that jutting rock may be a den of rattlesnakes.

The resident of a small town, or the rural inhabitant, has the joys of intimate friendships and the association of kindred minds. But there are defects in his manner of living and in his personal habits which are likely to lead to trouble.

Any house heated by stoves is sure to have cold floors. Having lived in the country and in a small town, I know exactly what it means to go into the kitchen in the morning to build a fire in the cook-stove preparatory to breakfast. Your breath makes a vapor as dense as the smoke which soon curls up the chimney. Your fingers tingle and your feet are like ice because the floor is like ice.

Even when the room is comfortably warmed by the general heat of the fire, the floor remains cold. The underlying basement is cold. More than likely the kitchen is a "lean-to," without basement, and possibly with scant foundation, leaving the space under the kitchen to be swept by the icy blasts of winter.

What happens to the poor housewife? She develops chilblains. Her heels and the sides of her feet are "frosted," and for the rest of the winter she must endure the torture of this miserable ailment.

The farm-hand who wears heavy woolen socks and boots which are too snug in their fit suffers from sweating feet, subsequent chilling, and the natural effects of the impaired circulation caused by the tight boots.

It is important to protect the feet by proper shoes and stockings. These should be suited to the occasion, because sweating feet and damp stockings are factors in the development of chilblains. Dress according to necessity. When you get home with thoroughly chilled feet, you probably stand over a hot register or stick your feet in the oven. This is not the thing to do. You should take off your shoes and stockings, put your feet in cold water, and then rub them with a coarse towel. This treatment will restore the circulation in the frosted tissues and spare you months of misery. If chilblains have actually developed here is a formula which will give you great relief:

Iodine crystals, five grains; collodion, one ounce; ether, two drachms. Paint this on the chilblains every day. This will stop the itching and protect the skin.

# The Trouble Maker—By E. R. Eastman

JIM went back to his wagon, while the men, all but Bill, began again to put on the corn. Bill sat on a bundle of corn, nursing his head for a few moments, then went down across the lots to the blower and a little later he went home to Ball's.

Reflecting bitterly on the scrap later, Jim decided that Fate seemed to conspire constantly to make him notorious in the eyes of his neighbors, and particularly in the opinion of Dorothy Ball. Certainly no one would be more condemnatory and disgusted with his fight with Mead than Dorothy.

In this he was right, for if one were to believe Bill's distorted account of the affair to John Ball and Dorothy a few minutes after he had reached home, Jim had conducted himself as no gentleman would.

As Ball and his daughter walked up the road together a little later, John to take Bill's place and Dorothy to help the Kortwright women folks wait on the big silo filling gang at dinner, John Ball said: "That Taylor is certainly gettin' to be a regular brawling bully," and as Dorothy made no comment, he took it for granted that she agreed with him.

AFTER ages of toiling back and forth across the cornfield, leading the never-ending wagons, ages in which the hot September sun grew hotter while the men longingly watched it climb slowly to the noon mark, ages in which sore hands and arms grew sorer still and lame backs lamer, the old traction engine blew for the noon shutdown, and with a "whoop" the men broke for the house and dinner.

Ranged on the long bench outside of the kitchen door by the pump, were the wash basins, and there was much blowing, snorting and splashing in the water as the men made sketchy toilets, filling in the waits with the bantering, joking and horse-play which usually takes place among gangs of American workmen when they get together.

Then came the dinner on the long extended table in the big farm kitchen—great platters of fried chicken, fried in real butter, too, were flanked by bowls of biscuits floating in thick gravy. Several dishes of mashed potatoes well supported with other vegetables of every kind and description, canned peaches, jellies, pickles and preserves; great pitchers of milk to be followed by generous supplies of apple and "pumpkin" pie, all melted rapidly away before the silent but effective onslaught of the men, hungry as only the open air and hard physical labor can make men hungry.

As Jim washed at the bench, he was wondering how in all the world he could get enough courage with his swollen nose and face to go in to dinner and face the women folks. But he knew that his absence would make more comment than would his presence. So he took his place at the table with the rest.

DURING the early part of the meal, he paid strict attention to his food, bending his face to his plate as did the other men. With the first pangs of hunger satisfied, the talk began to flow again and Jim looked up at somebody's remark addressed to him and met squarely the level scornful gaze of Dorothy Ball, who was standing at the rear of the room a moment in the lull of waiting on the table.

A long moment she looked fully at Jim, then with disdainful toss of proud head, she squarely turned her back.

Noticing that Jim had not answered the question asked him, two or three of the men followed his eyes and saw the little by-play. Now they looked curiously at Jim as he again tried casually to resume his eating.

As the men were leaving the table, one of the women told Jim that he was wanted on the telephone in the "settin' room." Glad of an excuse to retire from the room

in good order, Jim arose and went to the telephone.

"This is Albert Manning, secretary of the Dairymen's League, speaking," came the message. "The records show that you are secretary of your local League at North Speedtown. Is this right?"

Jim said that it was.

"Well, I am going to depend upon you now. Listen carefully. Can you hear all right?"

"Yes," said Taylor. "Go ahead."

"Beginning with Sunday, October 1st, the farmers are going to withhold their milk."

"The strike has come!" said Jim.

"Yes, we face the test now," answered Manning. "As you know, the League has stated the price at which it would sell farmers' milk and the dealers have definitely said that they will not pay that price. Therefore, we must prepare for trouble. Under no circumstances must there be any milk delivered after Saturday, September 30th, until it is released by your sales agent, the Dairymen's League. Get the word around. Make

OUTSIDE, the men were scattered under various shade trees getting a few moments rest before the afternoon toil.

Forgetting swollen face, forgetting even all his personal troubles, Jim rushed out among them.

"The fight's on, boys!" he shouted. "The League has called a strike! We've got to hold a big meeting at Speedtown as soon as we can get the word around."

"We can get everybody out by Thursday afternoon," spoke up Harry Bradley. "Let's set it for then."

"Good," said Taylor. "Let it be at two o'clock on Thursday. We will get together and find out what we are going to do with this milk and how we will handle it until the dealers are licked. Let's all be there, boys, and see that everyone else is there, too!"

"Now hold on a minute," said John Ball. "Not so fast. You fellers can't hold no meetin' on Thursday. You all promised to help me fill silo on that day."

"To blazes with your silo," excitedly interrupted one of the men. "We'd

followed Jim Taylor's father down the aisle, and signed up with Lincoln's gathering hosts "for three months or until the end of the war."

Now on this September day, 1916, the farmer hosts were gathered again, and would continue to gather in almost every farm community from one end of America to the other until they had set in motion those hundreds of cooperative organizations which they hoped would help solve their marketing difficulties.

They were gathered this time, not for a political, but for an economic struggle. Absent were all the fireworks and martial music of that other and earlier meeting; absent were the pomp and circumstance of war; but the same grim spirit of determination, the same tense atmosphere were there in that audience of earnest farmer men and women packing the Town Hall to capacity for the second time in its existence.

AS Jim Taylor stood watching the silent crowd file in and take their seats, he thought of similar crowds meeting that day for the same purpose all through the farm country. For a moment the curtain of the future raised and it seemed to him that this economic struggle to save and preserve the American farms through cooperation would go down in history as of the same far-reaching importance as that struggle of the Sixties which had called out the first great meeting of Speedtown farmers.

Farm bureau manager, Harry Bradley, called the meeting to order, asked for a chairman, and was himself elected.

"It is hardly necessary," he told them, "for me to state the purpose of this meeting. You know. Neither am I going to take up your time with a long speech."

"I have a letter here from Albert Manning, Secretary of the Dairymen's League, which I shall read, and then I shall introduce Mr. Manning's representative who will give you the facts as they have recently developed, and discuss with you plans to meet the situation. The letter is addressed to the farmers of Speedtown and vicinity, and it reads as follows:

"Fellow Dairymen:

"I am very sorry that I cannot personally attend your meeting, but I feel that my services are needed more here on the firing line face to face with the dealers. I have, however, chosen a representative, one who knows the facts, and one who can explain them as well as I. Moreover, he is one of your own number and I believe that if this fight which we have started is to succeed, it will be almost entirely through your own efforts. You must develop your own leaders and your own initiative. We, your officers, are but your servants. We can go as far, and do only as much as your personal support justifies.

"The man who will give you the facts has spent more time and money in this cause than any of you realize. He is one of the best informed farmers in our state on the present dairy situation. I have the utmost confidence in him.

"As to the present trouble, I feel that it is your opportunity. Farming today stands at a cross-roads and this contest will decide which road you will follow, and your future and your children's future on the farm.

"During the present struggle, accept no rumors, believe no propaganda, and listen to instructions only from your own headquarters. It is not necessary for me to say to American farmers that there must be no violence and that force will do us more harm than good. Nor should it be necessary for me to state that all of us must put our shoulders to the wheel and use every honorable means to win this fight.

(Continued on page 420)

## What Has Happened in the Story so Far

JIM TAYLOR, by espousing the cause of the Dairymen's League, a new organization which he believes will help farmers get better prices for their milk, seems to have alienated his best friends. Old Johnny Ball, his neighbor, is his bitterest opponent, while Dorothy, his daughter and Jim's childhood sweetheart, now is cold and distant to the unhappy young farmer. Bradley, the county agent, falls in love with Dorothy and Jim constantly sees them together. An unavoidable fight in which Jim takes the part of the under-dog, is reported to her as a disgraceful brawl and she is colder than ever. Jim tries to forget his heart ache in the stirring fight organized by the League and in the daily round of farm duties, and work exchanged with the neighbors.

arrangements for taking care of your milk at home. If there is a local cooperative creamery anywhere in your section, try to arrange to have this creamery separate your milk."

"How far shall I go in notifying the other locals in this county?" asked Jim.

B-r-r-r-r! B-r-r-r-r! B-r-r-r-r! Mr. Manning's voice became indistinct, then could not be heard at all.

"Wait a minute!" shouted Jim. "I can't hear you. Receivers are all down on the line."

There was a pause and then he heard Manning speaking again.

"Can you hear me now?"

"Yes, go ahead."

"Get hold of your county agent. I tried to 'phone him, but he is out of the office. Arrange to follow your meeting at Speedtown with a meeting of every local League in your county. Let me have the date of your Speedtown meeting as soon as you have it, and I shall send a speaker. Our bridges are burned. We have got to go ahead. But we are in good shape. Orange County is nearly solid for the League. Other of the big dairy counties are rapidly falling into line. Hundreds of applications for membership are pouring into this office every day. Can you hear me?"

"Yes," answered Jim. "I hear."

"Well, remember, my boy, this is the great crisis. We are depending upon you. Keep me informed, use all honorable means to stop the milk, but under no conditions allow any violence. That's all now. Good-by."

"Good-by," said Jim, and stood for a moment with the receiver in his hand, dazed by the news he had just received.

Then he began ringing frantically for central.

"Get me the farm bureau office at Speedtown."

After a few moments, the girl in Bradley's office told him that the county agent was out, but that she thought he was coming toward North Speedtown.

"Sure enough," said Jim. "We're in luck. He's out here now. He's just driven up."

better sell the milk we've got before we fill any more silos."

"Put it off another day, Johnny," said another, more kindly. "We'll all help you on Friday. But, by thunder, we're all goin' to this meetin' for this milk marketing business must come first."

"Brad," said Jim, turning to the county agent, "we're depending upon you to see that every farmer in this end of the county knows about that Thursday meeting. It'll also be up to you to arrange for meetings in every community following the big meeting at Speedtown."

"I'll go right back to the office now," said Bradley, "and get busy on the 'phone."

A few moments later, after the men had returned to their work, Jim noticed that Bradley was as good as his word, and had headed his car down the road toward town.

He also noticed that with him, and sitting closer to him than mere friendship seemed to justify, was Dorothy Ball.

## CHAPTER XII

THE old Town Hall at Speedtown had been built for an increased population that never materialized. Lumber, labor and hopes had been plentiful so the hall was built in spacious proportions. Once only in all the long years had a capacity audience justified the vision of the builders. That was on a memorable day in the early sixties when the young and old of Speedtown gathered to see what part Speedtown should play in the great undertaking Abe Lincoln had to prove the Union "one and inseparable."

Perhaps the early American farmers did not care for meetings, but they certainly turned out on that day. Moreover, most of them turned out for three years and some of them are still out with the sun, the wind and the stars of Southern battlefields. After the fife and drums had played and old Colonel Harris, the Mexican War hero, had made an impassioned speech, three hundred men, the best of all that section's young manhood,

# When Thought Means More Than Money

*Suggestions for Getting and Sending Christmas Gifts—Games for the Holiday Party*

IT is almost Christmas time once more and mingled with the season's good will is a little of the annual thinning of our purses for gifts we feel we must make, while we sacrifice the needed winter wear or table luxuries that we crave. While the season should be one only of peace and good will it is up to us as individuals to make and keep it so.

Let us resolve, first of all, to spend only what we can actually afford—and if we have fifty to give to and five dollars to spare, plan to use it only, but to the best advantage. I've seen housewives delighted over a cookbook that was nothing more than a 5c. note book spaced for different departments—half a dozen of the giver's favorite recipes in each group written in and the remaining pages left blank. Diaries are made from the same kind of books; the dates written with red ink making it more attractive. The annual Christmas letter to old friends full of cheerful news and humorous comment is sure to be welcome. A set of holders, dish cloths, bags, shopping list books, telephone pads and so on may be welcome gifts. If you make anything, make it neatly, enclose it in dainty paper, add a seal, a bow of ribbon, a sprig of holly or a bit of evergreen.

## Many Gifts Really Worth Money

For the one with plenty of leisure but little to spend, there are quilts, rugs, wristlets and mittens, any of which can be made of old goods beyond usefulness. The only cost is thread, but such gifts are valuable for it takes many hours to make them. City folks appreciate "a brace of chicken," fruit cake, jellies, etc. or mayhap a pot of butter or a basket of nice fresh eggs, but these are often the farm wives' income.

Let's all resolve then for hearty Christmas Greetings to all—good will and best wishes, and a gift to ourselves of freeness of worrying over our pocketbooks and of wrecking our nerves. As big a thing as I, myself, can do for Christmas is to send my best wishes to the staff of the "A. A." and to all its readers.—Patsy's Wife.

## Two Good Ice-Breakers

DO the children want to give a party during the holidays? It means lots of trouble, of course, but in the long run nothing pays better dividends than making the youngsters feel free to use their home as a gathering place for their friends. Simple—but liberal!—refreshments, an air of hearty welcome without the "don't" spirit in evidence, and some good hearty games to break the ice will make a success of any party.

These are two games which boys and girls alike enjoy. They are not too boisterous, although at any children's party it is well to stow breakables and ornaments out of the way. On the other hand, they are jolly and exciting, and not even the most active small boy could complain that they are "sissified." Try them out the next time your children give a party.

## Rainy Day Race

At one end of the hall, the end opposite that where the players stand, have arranged two mackintoshes, two sets of rubbers, and two umbrellas. Two players race at once, and when the signal is given, both walk, not run, towards the mackintoshes, which they are required to don in addition to putting on the overshoes and opening the umbrellas. So attired, each racer must go to the other end of the room and then back, after which he doffs the raincoat and the rubbers, placing them in a neat pile, and closes and leaves the umbrella, returning to the goal. The player who is first to get through all these maneuvers wins the race. This is even better as a relay race, each player after

performing touching off the next one in his line.

## Stride Ball

The players stand in a circle in a stride position, each player's feet touching his neighbor's. Each player is responsible for guarding the space between his own feet and between him and his right-hand neighbor. A player stands in the center of the circle and tries to roll or throw a basket ball or volley ball either between the feet of a player or between any two players. In the latter case, however the ball must not go above the player's waist. If the ball goes outside of the circle the player who let it pass must exchange places with the player in the center. Play should be rapid, and when an unsuccessful attempt is made the ball should be quickly batted back to the center for a new trial.

## Avoidable Mail Troubles

AT the dead letter office a curious medley of articles and letters which might all be at their proper destination if somebody had been careful, bears

papers register them. If you wish to send money remember that a check, a money order, a registered letter or an express money order will be far better than coin or bills dropped carelessly in an envelope. A money order may be lost but the money you spent for it can not be.

## Ask Before You Wrap

When you wish to send a parcel, inquire before getting it ready how it should be wrapped and avoid the trouble of re-wrapping it. Tell exactly what the contents are, and do not give the postal employees the trouble of examining it, as they are required to do in case it does not seem to conform to the rules and regulations. Many a person supposes that a bottle of liquid wrapped inside clothing or soft packing will get by safely, but the very sound of the shaking liquid gives it away. Do not tuck a letter in the center of a parcel and subject the whole parcel to letter postage. Be frank and teachable and you will learn some valuable facts about safeguarding mail at the post office. Remember, too, that rules are sometimes changed. Particu-

## The Cranberry Is a Favorite

**Scalloped Cranberries**—Moisten two cups soft white bread crumbs with one half cup melted butter. Butter a pudding dish, sprinkle in a layer of bread crumbs, add a layer of stewed and sweetened cranberries, twelve large seeded raisins, a little grated lemon rind and a little sugar, continue the layers until the crumbs are used, cover and bake for half an hour in a moderate oven. Serve hot with hard sauce.

**Cranberry Bavarian Cream**—Whip two cups double cream to a stiff froth, add one cup sugar and one tablespoon gelatine, which has been softened in four tablespoons cold water and liquefied over hot water. Keep the basin in a pan of ice until the mass begins to thicken perceptibly, then stir in one cup strained and sweetened cranberry juice to which has been added four tablespoonfuls cherry syrup. Fill a mould and pack in ice and salt for four hours.

**Cranberry Cake**—One and one half cups stewed cranberries, one and one half cups light brown sugar, one half cup butter, three eggs, one teaspoonful of powdered cinnamon, one half teaspoon powdered cloves, and one-half teaspoon grated nutmeg. Cream butter and sugar, add beaten yolks. Mix flour, soda and spices together and sift them into batter and sugar. Add cranberries and whites of eggs beaten to a stiff froth. Divide into two buttered layer cake tins and bake in a moderate oven. Put together with white frosting and decorate with nut meats.

**Cranberry Pudding**—One cup sugar, one cup sweet milk, two cups flour, three tablespoons melted butter, one large cup raw cranberries, two teaspoons cream of tartar, one teaspoonful soda. Mix and bake like loaf cake. Serve cold, cut in slices, with cream sauce.

**Cream Sauce**—Mix one pint cream with one half cup sugar, add the beaten white of one egg and continue beating till light.

**Cranberry Pie**—Use one cup cranberries, half a cup raisins, one cup sugar, one cup water, one tablespoon flour, one teaspoon vanilla. Chop the cranberries and raisins fine and stir in the sugar, flour, vanilla, and water. Bake with upper and under crusts.

**Baked Cranberry Dessert**—Pour boiling water over a pint of bread crumbs, melt one tablespoon butter, and stir in. When the bread is softened add two eggs, and beat thoroughly with the bread. Then put in a pint of the stewed fruit. Sweeten to your taste. Serve with cream sauce, using thick cream simply sweetened with plenty of white sugar and flavor with vanilla extract. Decorate with grated cocoanut.

**Sugarless Cranberry Sauce**—Cover one quart of cranberries with water and cook until well done, then strain. There will be from four to five cups of liquid. Add two and one fourth cups of any kind of white syrup, boil from eight to ten minutes, then let it simmer the same length of time, set aside to cool.

## For the Child Who Has Everything

IT was hard to know what to send my little niece Betty for Christmas, for she was always remembered with many and costly gifts. But to my surprise and joy I learned that the little evergreen tree which I sent, proved the "king pin" of her collection of presents. She had of course, a large, handsome tree, brilliantly lighted and beautifully trimmed. But it was a "musn't touch" affair, while the little tree which I sent occupied a corner of the playroom and was daily trimmed and untrimmed, until long after the holiday season had passed.—ELSIE DUNCAN YALE.

**FOR THE SCHOOL GIRL AND THE HOME WOMAN**

IF mother has a cape dress, daughter must have one too. And indeed they are very becoming to growing girls. No. 2238 has the recently revived Peter Pan collar and is pretty in plaid or striped woollens. It comes in sizes 6, 8, 10, 12 and 14 years. Size 8 requires 2½ yards of 36-inch material, with ½ yard contrasting. Pattern, 12c.

A SIMPLE dress for wool or cotton is No. 2248 which is planned for economy of material and effort. It cuts in sizes 6, 8, 10, 12 and 14 years. Size 8 takes 1½ yards of 36-inch material with ¾ yards contrasting. Price, 12c.

THE tight bodice and full skirt style is always a becoming one and this year is permissible for all sorts of dresses. No. 2211 may be made in cloth for everyday wear or in silk or velvet for more dressy occasions. It cuts in sizes 16 years, 36, 38, 40 and 42 inches bust measure. Size 36 requires only 2½ yards of 40-inch material. Pattern, 12c.

2248

2211

2226

**Many delightful gifts to make are shown in our catalogue—only 10c.**

**TO ORDER:** Write name, address, pattern numbers and sizes clearly, enclose proper remittance in either stamps or coin (stamps are safer) and send to the Pattern Department, AMERICAN AGRICULTURIST, 461 Fourth Avenue, New York City. Add 10c for fall and winter catalogue.

testimony to the failure of many people to observe simple rules.

First of all use good envelopes and not the cheap sort that burst easily. Do not be ashamed to put your return address on the outside. If you can not write plainly and do not own a typewriter, get some good scribe to address your missive for you. Sign with your name and address on the inside, so that if the envelopes should be damaged the sender's address will still be there. The government stamped envelopes are good, and so are the tough substantial ones to be had in all stores for a fair price.

When you send valuable letters or

larly should you send foreign mail and mail to the remote corners of our vast domain only after inquiring the rules and getting directions as to mailing.

Insist that all mail that comes to your home be properly addressed, even if you have lived in the county all your life. Postal employees change frequently and the new clerk or carrier may not know that you have arrived at the dignity of being the oldest inhabitant in your section. Be courteous and patient in your dealings with the faithful servants of Uncle Sam, and you will go year in and year out without any serious mail difficulties.—HILDA RICHMOND.

# Motion Pictures Worth Seeing

*A Selective List Helps You To Choose Good Films*

NOWHERE is the motion picture a more important agency for entertainment and enlightenment than in the rural districts. Recognizing this, the AMERICAN AGRICULTURIST wishes to bring to the attention of its readers the best pictures, so that in selecting their entertainment they can get the most value for their time and money.

We turned naturally to the National Committee for Better Films for this service, because that is the organization which helps in various ways to promote the better films movement and publishes the selections of the National Board of Review, with which it is affiliated; the National Board of Review itself being a volunteer citizen organization, not in any way connected with the motion picture industry, which reviews the pictures impartially in advance of release. Their selections of the better films are made, of course, with the realization that they cannot suit everybody, as opinions even of intelligent people differ widely on certain films. In general, however, the guiding principles of selection are that the films must be considered by a majority of members, interesting, well done and wholesome in general effect, and, furthermore, that they are to be selected from the standpoint of their audience suitability.

### You Can Get These Lists

Naturally it will be impossible to cover all the good films current in the small town theatres. Only some of the newer pictures can be reported on. The National Committee has, however, extensive back lists and reviews of selected films which can be obtained, along with its current publications, by application to headquarters at 70 Fifth Ave., New York City.

If you feel that your theatre has not been maintaining a high average of motion picture exhibitions, write to the National Committee for suggestions. It

is feasible wherever pictures are shown to organize an interested group of persons who will inform themselves on the good ones that are coming, spread word about them, and so influence attendance. This is the most effective and really the only way of making the exhibitor understand that "the best films pay best" and that you want more of them.

The following symbols are used to indicate audience suitability:

- j—for the family audience including boys and girls of grammar school age up (juvenile).
- hs—for the family audience including boys and girls of high school age.
- no mark—for the general audience, composed principally of adults; films of major interest to adults.
- m—for the mature audience. (These are in addition to films in preceding classifications which appeal also to mature audiences.)

### Keep This List for Reference

**j ABRAHAM LINCOLN** is a photoplay biography constituting drama of the most absorbing kind. George A. Billings has accomplished the seemingly impossible in giving us a characterization of Lincoln which satisfies in every particular, and the whole film is splendidly directed. Everyone should see this without fail. (First National, 10 reels.)

**THE BANDOLERO** is a tale redolent of Spain—of bandits and bullfights, of a lovely senorita and a siren who effects her own doom. Splendid scenery, carefully managed scenes of the arena, and an interesting plot. (Metro-Goldwyn, 8 reels.)

**BARBARA FRIETCHIE**—From the play by Clyde Fitch, in which Barbara is a young girl whose heart is torn by her devotion to the South and her love for a gallant officer of the Northern Army, and who by her bravery commands the respect of General Jackson when he enters Fredericksburg. Good Civil War atmosphere. (Producers Distributing, 8 reels.)

**j CAPTAIN BLOOD**—A thrilling picture from the Sabatini novel, of an Irish physician sold into slavery in the Barbados in the days of King James, who is forced to turn pirate and becomes the terror alike of Spanish privateers and of the arrogant Governor of Jamaica. (Vitagraph, 11 reels.)

**j CAPTAIN JANUARY**—Baby Peggy and Hobart Bosworth take the leading parts in this story of an old lighthouse keeper who adopts a shipwrecked waif. (Principal Pictures, 6 reels.)

**j CHALK MARKS**—The appealing story of a schoolteacher who, disappointed in love, devotes herself to the school children and the neglected little ones of the man she loved. Then when age overtakes her and she is in danger of dismissal, the community at last arouses itself to a sense of her value and makes amends. (Producers Distributing, 7 reels.)

**CHANGING HUSBANDS**—The story of an unsuccessful actress and a society woman with aspirations toward the stage, who, resembling each other, exchange places and find themselves in consequence with each other's suitor and husband. Done in a spirit of broad comedy with some absurd and many amusing situations. Leatrice Joy in a double role. (Paramount, 7 reels.)

**THE CLEAN HEART**—A remarkable psychological study in the form of a dramatic motion picture, of a man who, through worry and overwork, is brought to the verge of insanity and recalled to his true self only by the tragic sacrifices of others. Fine acting by Percy Marmont and rest of cast. From the novel by A. S. M. Hutchinson. (Vitagraph, 8 reels.)

**hs DARING CHANCES**—A thrilling Western, with a rodeo, horse race and beautiful scenery. (Universal, 5 reels.)

**EMPTY HANDS**—A spoiled but charming flapper, lost in a Canadian wilderness with her father's engineer, is brought to a realization of her uselessness in the struggle for existence. (Paramount, 7 reels.)

**hs FIND YOUR MAN** deals with the fascinating theme of a dog's devotion to his master. Interesting scenes of the lumbering industry, and fine acting by Rin-tin-tin. (Warner, 7 reels.)

**m FOOLS IN THE DARK**—A very entertaining comedy-mystery-melodrama, in which a crafty uncle, in testing the young man who woos his niece, unintentionally throws the lovers into real danger. (F. B. O., 7 reels.)

**HER LOVE STORY**—Gloria Swanson appears in this in a simple, charming role as an unhappy princess who is bargained off by her father, an impecunious archduke, to a royal suitor, while the one she loves is sent into exile. Beautiful settings, romantic atmosphere. From a story by Mary Roberts Rinehart. (Paramount, 7 reels.)

**j HIT AND RUN**—A delightfully humorous Big League baseball picture, with Hoot Gibson. (Universal, 6 reels.)

**hs IN HOLLYWOOD WITH POTASH AND PERLMUTTER**—These worthies leave their tailoring business to embark in motion picture production, in which they get into many difficulties. (First National, 7 reels.)

**j JANICE MEREDITH**—Vividly and thrillingly depicts the human side of the American Revolution while developing a romance in which Marion Davies enacts the part of heroine. From the novel by Paul Leicester Ford. (Metro-Goldwyn-Cosmopolitan, 12 reels.)

## An Appropriate Christmas Present and a Gift for You, Too!

Do your Christmas shopping at home—and at the same time send something to your friends that will be a pleasant reminder of your thought all through the year. The American Agriculturist comes fifty-two times a year, and you can make no more appropriate and welcome present to your friends and relatives. Take advantage of our special \$2 offer which brings the A. A. for THREE years. To add the Christmas touch we send to the recipient of your gift, a beautiful Christmas card, saying that the American Agriculturist is sent with your compliments.

### A Gift to You, from Us

And in addition we send direct to you, a copy of the most beautiful book ever written about Christmas—Dickens' immortal *Christmas Carol*, bound in leather and carefully packed—a book you should dip into often and read aloud to the whole family at least once a year.

Add only 12c to our subscription offer to cover the cost of packing and mailing this exquisite classic. It will be sent you at once, while the card will inform the new subscriber of your Christmas thought.

# Read These Classified Ads

## Classified Advertising Rates

ADVERTISEMENTS are inserted in this department at the rate of 5 cents a word. The minimum charge per insertion is \$1 per week. Count as one word each initial, abbreviation and whole number, including name and address. Thus "J. B. Jones, 44 E. Main St., Mount Morris, N. Y." counts as eleven words.

Place your wants by following the style of the advertisements on this page.

### The More You Tell, The Quicker You Sell

EVERY week the AMERICAN AGRICULTURIST reaches over 130,000 farmers in New York, New Jersey, Pennsylvania and adjacent states. Advertising orders must reach our office at 461 Fourth Avenue, New York City, not later than the second Monday previous to date of issue. Cancellation orders must reach us on the same schedule. Because of the low rate to subscribers and their friends, cash or money order must accompany your order.

### AGENTS WANTED

# The Lamb and Wool Market Outlook

(Continued from page 407)

United States consuming in its mills in the last three years about 2,200 million pounds of wool, grease equivalent weight, of which we produce in this country only

about 800 million pounds, or a little over one-third.

Both 1922 and 1923 were years of unusual activity in the wool manufacturing industry. As the rate of manufacture continued high for so long a time, moderate accumulation occurred in the hands of mills and distributors so that the industry passed through a period of depression last winter, spring and summer. With mills operating at only around 50 per cent of capacity and a new clip coming on the market during the spring, prices sagged for a time.

The situation has gradually strengthened, however. The letdown in manufacturing operations allowed the distribution of cloth and clothing to overtake the supply to some extent and whittle down the stocks on manufacturers' shelves or in merchandising channels. Domestic prices for wool were considerably below the level of foreign prices after counting the tariff, so that imports shrank decidedly and moderate quantities of foreign wool held in bond, were re-exported. This reduced the supply of wool pressing for sale. Finally, orders for woolen goods increased moderately in the last two months and mills began to speed up again. Foreign markets also displayed great strength under brisk buying by British and Continental mills. The result has been a resumption of the upward trend in wool prices. Boston quotations are now the highest they have been since early in 1920 just before the big break started.

### Domestic Prices Below Foreign

Domestic prices did not overtake foreign wools, however. Since there is less wool in this country than will be required to satisfy the mills until our next clip is available, so that substantial imports will be necessary, the question right now is, will prices reach a parity that will permit imports by an advance here or a decline abroad? At the moment, foreign markets are showing a little easier tone as American buyers are not giving any support. Some of the trade observers believe that foreign prices will decline to our level as the demand for goods is not brisk enough to induce mills to bid our prices higher.

This brings us to the international situation in wool. The annual clip in the principal wool producing countries is running about 10 per cent smaller than before the war. Meanwhile, the consuming population has increased materially. While there has been some decline in European buying power, and perhaps in European per capita consumption of wool, nevertheless, it seems rather clear that world consumption in the last few years has been overtaking production.

### World Consumption Outruns Production

The best evidence on this point is the fact that huge accumulations of wool at the end of the war which helped to depress wool prices back in 1920 and 1921, have all been distributed. Large stocks were held in the southern hemisphere, particularly, because of the fact that submarine warfare prevented shipment. The British Australian Wool Realization Association, formed to liquidate such wools produced in Australia and New Zealand, had about 900 million pounds on hand on August 31, 1920. This was enough to supply the entire world for over a third of a year. These have all been distributed. The same is true of the large South American holdings. In other words, in the last four years, we have been consuming not only the wool grown each year but much of this accumulated wool in addition.

Not all of these wools have passed to the ultimate consumer, however. Part of them are represented in increased mill stocks of wools, and part in larger stocks of woolen goods in various hands. But, after full allowance for such holdings, the conclusion remains that wool consumption has been overtaking production.

PATCH WORK. Send fifteen cents for household package, bright new calicoes and percales. Your money's worth every time. PATCHWORK COMPANY, Meriden, Conn.

# The Lighted Henhouse

How We Manage It for Best Results

THE use of illumination in the poultry house has become so universal in adoption that it seems a subject almost worn out. The dark days of fall arrive, we house our pullets, we give them light, we take up our eggs,—in short, one could go on just as if assembling an automobile, one mechanical part after another. Then one day there is a loud crash, bang! and our machine is badly broken.

This is not a blind proposition. Illumination is a great factor piecing out the weakness of a hen's physical make-up. Where she falls down and suffers because darkness prevents, artificial light comes to her rescue. If she is fed on these dark fall afternoons she is on the perch at five o'clock and she cannot eat again before seven in the morning. In other words she must pack her crop so full that it will nourish her body for a period of not less than fourteen hours. Physically, this is impossible. Her crop cannot hold this much feed, and as a result she uses it up during the course of the long winter night and then draws heavily upon her fat and bodily reserve to carry her until morning. Because she soon goes under weight from malnutrition, she cannot produce eggs.

### Why the Hens "Break"

Here then is a brief explanation of why the use of light has become so popular. The trouble does not, however, start from this source. It is not in the fall that we get into trouble but rather from now on. Pullets respond so well to electric light there is a great temptation to make the response even greater. It is just this desire to push the pullet or hen that so often undoes the good that illumination really ought to do. In other words, if the light is increased beyond a certain limit, the birds crack, shut down on their production, and very often, go into various degrees of moult. Birds will stand fourteen hours as a working day, that is fourteen hours of combined light and natural day light. If more than that is used, it takes an exceptional poultryman to avoid trouble. Likewise, the longer the day is the greater is the tendency for a bird to lay herself out.

To explain a little further. A pullet or a hen is capable of laying about so many eggs a year, according to her breeding. If she is urged by some stimulation such as an extra long working day, she will lay many more eggs during the fall and winter, there will be no heavy laying during the spring months, and by summer she will have produced according to her ability and will stop early. She might even do this on a fourteen hour day. If she was given more light she would probably go all to pieces physically before spring arrived or before she had laid her full quota of eggs.

### Let Good Enough Alone

For best results a working day of twelve or thirteen hours is sufficient. If your birds are laying steadily at twelve hours and the percent of production is good, let them go at that. Personally, birds under illumination are better off doing a production from forty to fifty per cent than they are ranging up around seventy. A cold snap, an accident with your lights, and there is apt to be a terrific set-back because the birds are going at such high speed.

Where the supply or source of illumination is limited, i.e., where storage batteries are used, the night lunch idea gives very satisfactory results. This plan permits the birds to go to bed at dusk. At eight or eight-thirty the lights are lighted and the birds given an extra feeding of grain. Some use the light for half an hour, others for an hour. With either length of time the plan seems to give good results. The birds give a good egg yield, and from one report I have, apparently stand up better when it comes to late summer and fall egg production.

In conclusion there are two classes of

birds that deserve special attention: immature pullets and hens. Too much illumination will stunt pullets that are not well developed. It is better to keep the lights off from them entirely, or else limit them to about one hour of light. From personal experience here this fall this little lighting seemed to be a distinct advantage in aiding the development and growth of late birds. Rather than give pullets of this class too much of a day, however, they might a good deal better be left to themselves.

### Moulters Need No Light

As for the hens when they moult, it is better to leave them without light. A moulting bird is in poor physical condition. She is not sick, yet she is certainly below par. She needs plenty of feed; not a stimulating egg mash which tends to push her beyond her strength but a mash relieved of some of its high protein content. Feeding a large amount of grain will also help, especially late in the afternoon before she goes to roost. As her feathers begin to come in she will pick up physically, and her appetite will increase. A little light at this time will help because it will give her a chance to consume a greater amount of feed and thus build up her body. A half hour at first is sufficient, and this may be increased to an hour and a half as she gradually goes in to a full laying condition. Too much light will make old birds crack very easily. It will also put so much strain on the birds that poor hatching will often result.

### Experimenting With Winter Layers

Mrs. W. H. SWOPE

DURING the past I have raised many kinds of chickens, and I have also fed many kinds of feed in the hope of getting better results. I am sure my efforts along this line have not been lost for I have found the right type of winter layers that fit our needs and the feeding problem has also been solved satisfactorily.

In experimenting with the various breeds, I have found that the Brown Leghorns are the heartiest and best layers among them all. The White Leghorn is a close second when it comes to laying but they lack that fiery Leghorn disposition which is a natural trait with Leghorns. I remember when I was a girl, we had the Black Leghorns and they were always the best layers and were fairly large, too, but my recent experiment with this breed proves to me beyond all doubt that the Black Leghorn is a fowl of the past. One disadvantage about the Leghorn is the fact that they are not a profitable table fowl so far as the meat problem is concerned, but the meat of a Leghorn is delicious and we kill several of them at a time when wanted for home or table use. The advantages to be derived from the Leghorn variety is due to the fact that they lay when all other varieties do not lay. Leghorns, therefore, become a profitable fowl to keep, for they lead the world in egg yields. A dozen of my winter layers will keep our wants supplied and the balance of the egg yield from the flock can be marketed and at good prices.

After summing up in the way of feeding, I find that the scratch ration is the best for Leghorns, one half wheat and one half cracked corn, which I feed in a deep litter of leaves and straw. Occasionally during the winter when it is very cold and for a change, I feed a dry mash. The hens do relish this change in early to mid-winter. After that for a change they are fed any green feed available, sometimes a wet mash (not too wet) moistened with skim milk or water. The hens do like this change in feed but I do not feed it often for it is conducive to laziness on the part of the flock and that will not produce eggs which to us is the important thing during the winter.

## KEEPS Hens LAYING

ALL Winter

A Glass Cloth covered scratch shed gives chickens balmy June weather conditions indoors during zero months. Hens lay more eggs. "Paid its cost ten times over," writes Iowa farmer, "by giving extra light and warmth, increasing egg yield remarkably during winter when eggs brought top prices." Greatest thing I ever heard of. Better than glass and cheaper, too. Also ideal for housing early hatched chicks in safe, warm, sun-lit scratch pens.

### Special Trial Offer

Big 15 yard roll, 35 inches wide, (will cover scratch shed 9 x 15 feet) mailed prepaid on receipt of \$5. 6 yards (54 sq. feet) for \$2.25. Use ten days, if not satisfied return and your money will be refunded. Common sense instructions, "feeding for eggs," with every order.

GLASS CLOTH is extensively used for all poultry house equipment as well as storm doors and windows, enclosing porches for winter, temporary green-houses, hotbeds, etc. Prepaid prices—single yd. 50c; 3 yds. at 42c; 10 yds. at 23c; 50 yds. at 36c; 100 yds. at 33c, per yd.

TURNER BROS. Dept. 441 Bladen, Nebraska

Special Trial Offer

## GLASS-CLOTH

W. F. YOUNG, Inc., 579 Lyman St., Springfield, Mass.

## The Trouble Maker

(Continued from page 415)

"Keep your milk home. Churn it, get something out of it if you can; but anyway, keep it at home until you have word from us that we have sold it at a living price.

"Sincerely yours,  
"DAIRYMEN'S LEAGUE, INC.,  
"ALBERT MANNING, Secretary."

WHEN Bradley finished reading the letter, there was a moment's pause and then a big outburst of handclapping and stamping of feet; then quiet again, as the crowd waited expectantly for the speaker of the day to be introduced. Few or none had any knowledge of who the man was whom Mr. Manning had chosen to give them the facts.

Bradley paused dramatically for a moment and then said:

"I now have the pleasure of introducing a man who needs no introduction, a man whom you all know, a man who has grown up with you, and knows through his own bitter personal experience the trials and tribulations of this milk game from the producers' end.

"I take pleasure in presenting to you," he paused and then said, "Mr. James Taylor."

Jim arose from his seat in the rear of the big hall, came down the center aisle, and turned to face his audience.

Perfect silence greeted him. For a moment as he looked at the hundreds of upturned faces, seemingly strangely hostile, he had a sickening sensation. His heart pounded, and his knees trembled; he swallowed two or three times in an effort to get words, but none came. He knew instinctively that while they were interested in the subject, they were much disappointed in him as the speaker. Most of them liked him, but he faced that age-old situation that "a prophet is not without honor save in his own country."

INSTEAD of the words that he should have said, all that Jim could think of were his friends that he saw in the audience, who seemed, because of that peculiar crowd psychology, to be more interested in his embarrassment than they were in his success.

Letting his gaze rove for a second over the audience to pick out a friendly face, they came to rest on a group of women-folks in one corner, among whom sat Dorothy looking straight ahead of her and paying not the least attention to the would-be speaker.

All of this hesitation was but the matter of a minute. The knowledge that he was there for a real purpose and had something worth while to say, even the knowledge of his apparently hostile audience, stiffened his backbone and loosened his tongue.

He began in a plain, matter-of-fact voice, not different than in an ordinary conversation, except that he spoke more slowly, in well chosen language.

"You folks are probably surprised and no doubt disappointed that I am to speak to you today. For both your sake and mine, I am sorry that Mr. Manning could not come.

"But my interest in the situation which we dairymen now face made it seem necessary for me to go to New York, and I spent some time yesterday with Mr. Manning, F. H. Thomson, R. D. Cooper and Frank Sherman, getting the facts about the coming milk strike. I tried to get Mr. Manning to come to this meeting, but there are literally hundreds of others all through the territory, all asking for speakers. None of the officers of the League could do any speaking because of the necessity of staying in New York to meet the dealers. H. J. Kershaw, of the Executive Committee, who is the only man that they feel they can spare to speak at meetings, is busy today. Because I knew the facts, Mr. Manning said it was up to me to give them to you. So here I

No apologies necessary," a farmer

interrupted. "What we want is facts, not speech-makin'."

"I have seen this trouble coming, folks, for a long time. As you know, I have talked about it with some of you and have been criticized for stirring up trouble. I love peace as well as any man, but there is no use shoutin' 'Peace, peace, when there is no peace'.

"I think that the farmer has a right to be happy at least part of the time, and for the last twenty-five years there has been no happiness in this milk production business for any of us. We have been hoping and hoping, and talking and talking for something better, but those better times have never come, and I tell you folks they never will come until we ourselves bring them about!"

BY this time, Jim had forgotten himself and his audience and was thinking only of his Cause. The audience, on their part, had also forgotten that Jim was just one of their boys, and were leaning forward to get every word. They, too, were thinking of the Cause.

"All of the progress in this old world of ours has been brought about by personal

struggle. For a thousand years our ancestors sought for religious freedom. The Pilgrims left their homes and country and their friends to settle in a barren and hostile land to get religious freedom; but for a hundred years or more we struggled for political freedom on the principles of which we fought Great Britain and built this great nation.

"The next great fight is now before us, and will start right here in Speedtown next Sunday, October 1st. This fight is not religious, nor yet political, but it is just as far-reaching importance. It is a struggle for economic freedom, the right of every man who works, whether with his brain or with his hands, to a just share of what he earns."

Several started to clap, but ceased immediately in order to hear.

"Yes," continued Taylor. "We have heard a great deal of talk about the farmers' problems—the problem of the abandoned farm, the small attendance at the rural church, the poorly trained teachers in the country schools, and the difficulty the farm people have in getting any real fun. But I'll tell you," and he raised his voice and shook his finger at his

beat down the price of labor but you can make that labor do two or three days' work in one!

To make money your farm must handle the most productive work in least time, with least labor. Increase your crop yield per acre. Cut down your labor costs. Diversify. Plow more furrows as you go along, cultivate more rows, cut wider swaths. Plant every hill full—the missed hills in a field have a big effect on the yield. Save extra pounds of butter fat by efficient cream separation. Spread manure by the load instead of by the forkful. Let tractor and engine power help you.

Never was there a better time for the use of good judgment, combined with practical vision. Put the right pieces of modern equipment on your farm, handle them well, and you can't avoid a profitable year.

The law of supply and demand is swinging back to the sunny side of farming. Let's be ready for 1925 and ready with equipment to fit these new times. Nature helps him who helps himself—and the McCormick-Deering dealer is ready to show you the very latest in time- and labor-saving, yield-increasing farm equipment.

## To Bring About A Happy New Year

WELL, here's the close of another year. It hasn't been the best kind of a year, but neither has it been the worst. And the outlook for the future is the best the farmers have seen for several years.

In the meantime, all your farm machines have another season's work to their credit. It's time to check them all over, now, while you remember just what they can do. Which machines are worn out? Which ones are losing you money? Which methods are behind the times?

Important changes have come to pass in ten years' time as every man knows. Good farming has had to change along with the rest, to a faster, more efficient, more economical pace—and that has been largely a matter of change in farm machines. Farm machines today must save more valuable time and take the place of more expensive human labor. Many of the old, small-capacity tools, made for a time when labor was cheap, are wasting profit. Sometimes they eat up the cost of new equipment in a single season. The time for slow work is past. Now is the day of 10-ft. binders, 2- and 3-furrow plows, 2-row cultivators, mechanical power and motor haulage. You can't

hearers, "that all of these problems are a result of the economic situation. Pay the farmer a decent price for the products he works from daylight to dark to raise, and you'll solve all the rest of your problems! He'll put more tile drains into his land, more paint on to his buildings, better teachers into his schools, and more folks into the church on Sunday."

#### Watch the Oil Feed

Many an engine or tractor is worn out long before its time, because of the lack of oil. In an automobile engine crank-case the oil should be replaced (the old oil taken out and new put in) at least every 1000 miles.

The tractor engine should have fresh oil after every six days of work. It pays to keep a record of the time run.

The stationary engine usually has a sight-feed oil cup. Oil passes through the cylinder to the crankcase. Many persons feed too much oil. Four to six drops per minute is enough for an engine with a 5-inch cylinder at 500 R.P.M. For higher speeds more oil should be given. Directions usually accompany the new engine.

# Surface Water—Good and Bad

## And Other Timely Farm Practices That Our Readers Have Liked

**D**URING the past fall, the streams in about every eastern State were so low that the volume of "water power" in most of them is negligible. Not for many years has there been such a universally small "delivery" of fresh water into such trunk water-courses as the Mohawk, the Hudson, and the Connecticut.

But notwithstanding that springs and wells are failing we have not suffered (except in small local areas) really severe surface drought. This apparent contradiction is due to the fact that we have had no "long soaking rains" for some time.

In other words, the precipitation records of State Experiment Stations tell one story, and the low streams tell another entirely different one—that we have had no rains to reach the springs—the source of their perpetual flowing—since the soaking snows of last winter disappeared into the ground.

From every indication we are booked for heavy, if not excessive, rains in the next few weeks.

A Permanent Creosoting Kettle

Rains that will reach these shrunken streams besides a surface surplus that will fill up the old swamps everywhere.

However, should these hard rainfalls be delayed until the ground is frozen solid, their falling will mean an excess of surface water which will not merely cause dangerous and damaging floods, even in small streams, but leave an accumulation of damaging ponds scattered over every level farm in the country.

Worse still, heavy rains falling upon an unyielding surface, in their mad race for the valley, cut terrible gashes in sloping land, especially if not protected by cover crops.

### How Some Farmers Minimize the Damage

It is the practice of many good farmers, under conditions such as confront us this season, to plow around the slopes of their hill land sown to winter grains and grasses, turning a medium furrow down hill and so following the contour that these furrows are nearly level, though really draining toward some chosen depression, where the rushing water they are designed to gather can be disposed of with the minimum of damage. To be sure these furrows are an injury which must be carefully repaired the following spring, but it is comparatively slight to what may happen in their absence. If the land is actually bare and the slope is more than seven or eight degrees, these furrows may well be every twenty-five or thirty feet—both for the above and for another quite as important reason:

Let us say that the field under consideration is a young orchard or vineyard, or an asparagus plantation, in fact assigned to any important perennial crop which requires a maximum amount of moisture ready to be delivered upward during

the growing season. The fact is not generally known, but is nevertheless true, that whereas our annual rainfall here in the East is some forty inches per annum, and whereas the lighter rains that fall during the growing season are practically all absorbed into the soil as they descend—the very opposite is true of winter rains, both what is popularly known as "storm" water and the March thawing from accumulated snows.

Under these circumstances, therefore, a field that is entitled to forty inches of rain, half of which should be in the form of soil water (that is, taken in and absorbed deeply into the sub-soil for subsequent delivery upward to the growing plants by capillary action) gets only or little more than half of this—the rest draining off immediately from the surface down the hill and being a total loss in nature's economy as far as that particular field is concerned.

It is our practice to terrace such orchards, vineyards, asparagus fields, and so forth, in such a way that this down-rushing surface water is held in numerous pockets and pools upon the slopes—all winter, if need be, so that it is ultimately absorbed for later use in the growing season—"soaked" into the ground.

This is done by running the rows of trees and other crops to conform to the contour of the slope—the exact opposite of up and down the hill. Where this is planned skillfully cultivation will naturally result in terracing and retarding this surface waste. Further, the accumulating ridge will protect each tree against all possibility of damage from the "squeezing" of surface water which often freezes solidly and suddenly.

### An Argument in Favor of Turf Mulch

The above is further aided as an orchard becomes mature by the "turf belt" which inevitably finds its place along the row of tree trunks. And parenthetically, this is one of the unnoticed arguments in favor of "turf mulch" in a bearing orchard. An acre of such turf mulch will absorb several inches of precipitation per annum than the same acre would if bare ground.

In certain geologic formations, not only in New York State, but on plains land everywhere there are found "sink-holes" which have no drainage, natural surface drainage. In times of drought like this they are dry as a bone. In times of flood they are sometimes yards deep in water, and whether this occurs in winter or summer, threatening disaster to everything so flooded. The best way to handle such situations is to take advantage of the present dryness and, digging down to the inevitable hard pan at the lowest point of these "sinks," dynamite through the pan, thus letting the bottom out so that this water will rapidly soak away.

We had a ludicrous proof of the practicability of the above when a few years ago a neighbor in a dry spell like the present tried to deepen a "spring" which he claimed was at the bottom of a sink hole in his pasture. Almost always there had been a little pond of water there, and he said he could make it flow by digging down—and he did—it has floated downward ever since! He punctured the bottom of his water-pail, despite our warning.—DAVID STONE KELSEY.

### A Creosoting Device

Back a year or so ago I saw a picture in AMERICAN AGRICULTURIST of a handy device for creosoting fence posts. Foolishly, I didn't keep that issue for future reference. Now I would like to know what it looked like and I am sure other readers would be interested, especially if they are up against the proposition of cutting post out of a wood lot that is rather skimpy. We have done some replanting in our wood lot, but it will be a good many years before those seedlings will be post-size or near it and we have got to make every new post that we set last a long time.—F. N. G., New York.

THE accompanying pictures were printed in the June 24 issue of AMERICAN AGRICULTURIST, 1922. They show two devices for creosoting fence

posts. One is a more permanent affair. A concrete firebox is just as good as one made of bricks. The other illustration shows a more temporary arrangement in which two tight barrels are used, connected by a pipe around which a fire is built.

There is no question but what creosote will add to the life of fence posts. Those that are treated in creosote will last three to five times as long as untreated posts. This is especially true of the softer varieties, such as willow, ash, elm, soft maple, white cedar and cottonwood.

It is better to use round posts for creosoting, rather than split ones, as the penetration will be more uniform. All bark must be stripped off and the timber well seasoned before treatment. The posts are immersed in the creosote, which is kept

A Temporary Creosoting Device

at a temperature of about 200 degrees or more for a period of two hours. The penetration should extend at least one inch. It is a good idea to dip the tops of the posts in the hot creosote to avoid rotting at the upper end. The end that goes into the ground should be creosoted at least eight inches above the ground line.

### Make Hog Feeding Easy

HERE is one of the greatest temper-savers a man can build. There is hardly a farmer living who has not wished that he could whale the life out of every hog in creation for climbing into the trough and making feeding or slopping practically an impossibility. We all know only too well how many times hogs, through their crowding, are responsible for half of the swill going out of the trough.

The device consists simply of hinging a panel in front of the trough high enough above to permit it to swing in. The details in the sketch are sufficient to show how this is accomplished. The panel is hinged on the inside and a lever is attached to swing it inward, and swill is poured into the trough from outside the pen. Notice that one side, the inside, of the trough is much higher than the other. This is not necessary, but is to the feeder's advantage. If too much space is allowed between the door after it is swung in and the inside of the trough, the hogs will get their snouts in the opening and make it practically impossible to close the trap down after the feeding has been accomplished. We have seen this in operation on many farms and believe it one of the handiest contrivances a man can put in.—F. W.

## "Maryland, My Maryland"

### A Fireside Reflection

By JARED VAN WAGENEN, Jr.

I hear the distant thunder hum,  
Maryland! my Maryland!  
The Old Line bugle, fife and drum,  
Maryland! my Maryland!  
Come! to thine own heroic throng,  
That stalks with liberty along,  
And ring thy dauntless slogan song,  
Maryland! my Maryland!

IT SEEMS to me that only once every several years do I actually take a formal vacation. I confess that for a good many years agricultural work of one kind or another has taken me off the farm at rather frequent intervals and sometimes for considerable periods; but, after all, trips of this kind are only part of the day's work. I restrict the term "vacation" to those rare occasions when on pleasure bent I travel with my wife, go whither the spirit calls me and do not feel obliged to be in any particular place at any particular moment.

We—my wife and I—had talked about such a vacation for a good while, and at last in late September the time seemed ripe for another debacle of this kind. It was not much of a trip for these days when men run to and fro over the earth so easily. Briefly—we were gone eight days, drove the trusty old car 1276 miles, and, wonderful to tell, had neither a puncture nor a blow-out on the trip. Let me say in passing that it was a really ideal vacation, because, after all, we hurried. One hundred and fifty miles a day is at least fifty miles too much.

We—I, at least—did not have much difficulty in deciding where to go. A good many years ago—so long that I hate to say just how many, I spent a long three months in Farm Institute work in Maryland, and the following winter I returned for a month of special agricultural train work, and I have never forgotten or broken away from the lure of that pleasant old state.

Maryland is a little Commonwealth—less than one-quarter of the land area of New York, but being of most irregular shape it sprawls over the map for surprising distances and it has an almost unbelievable extent of coast line. Naturally and in popular parlance it is divided into five geographical divisions. There is the "Eastern Shore"—the part of the State lying on the east and almost completely cut off from the rest of the State by the wide and sometimes stormy waters of Chesapeake Bay. The Eastern Shore is very level, in parts fertile and highly developed agriculturally. Moreover, it is well supplied with transportation facilities. I have intimated that I am not especially interested in a locality when it becomes too prosperous. Then there is "Old Maryland"—the country around Baltimore, but just why the name I do not know, for it is not the oldest part of the State. Then there is "Western Maryland," with Frederick County and Frederick City lying in the lap of the beautiful Monocacy Valley. This valley is so broad that you can hardly see across it and its floor is a residual limestone soil. It is a

land of cornfields and big stone barns with an "over hang" such as the Pennsylvania Dutchmen (and no one else) builds. You are in no danger of exaggerating the beauty and fertility of this famous valley. And then there is old Frederick City, where Barbara Fritchie lived and died. Where is the boy of my generation, at least, who in school has not declaimed and thrilled to those lines.

I have found these historic memories so interesting that I have almost forgotten to speak of its agriculture. It is preeminently a one-crop region and that one crop is tobacco. So far as I can learn it has been the one great crop from the very beginning and its supremacy has never been disputed by any other type of agriculture.

"Fair as the garden of the Lord  
To the eyes of the famished rebel horde."

"Up the street came the rebel tread,  
Stone Wall Jackson riding ahead."

"Halt!" The dust brown ranks stood fast.  
"Fire," out blazed the rifle blast."

\* \* \*

"Who touches a hair of yon gray head  
Dies like a dog." "March on," he said."

"All day long through Frederick street  
Sounded the tramp of marching feet."

"All day long the free flag tossed  
Over the heads of the rebel host."

"Ever its torn folds rose and fell  
On the loyal winds that loved it well."

Probably it is true that the pitiless light of historical investigation leaves only a little foundation for the legend, but, nevertheless, in a tiny walled cemetery in the heart of the town, Barbara Fritchie lies buried, and surely Whittier's poem has made that worn old woman immortal and heroic for ever.

Then west of "Western Maryland"—like a long, narrow fragment, barely hung to the rest of the State, lie "The Mountains," a region comparable to our roughest Catskills, but rich in that it contains some of the most valuable coal fields in the country.

But, after all, while I have been in every corner of the State, my Maryland dreams and memories have always clustered around the very definite

region, "Southern Maryland," meaning the peninsula lying south and east of Washington and separating the estuary of the Potomac from Chesapeake Bay. This is the oldest part of the State, and the romance of history, both of the early settlements and of Civil War days, lies thick hereabouts.

An early chronicler has set down the story of the first settlement thus, "Hither in 1634 came Leonard Calvert and twenty gentlemen and three hundred laborers." And all the twenty gentlemen were aristocratic English Catholics, and the three hundred laborers were largely indentured servants—practically white slaves—including many who had been, to say the least, strongly urged to emigrate for their country's good—a plan often followed in our early Colonial history.

The first settlement was made far down the peninsula at St. Mary's City. Today St. Mary's City is little more than a name and a memory. It is made up only of an aristocratic Episcopal boarding school, together with an ancient church set in the midst of an old, old cemetery. Perhaps it was because it was a lovely, soft, warm, hazy autumnal afternoon—the last day of September—but somehow this ancient burial-place appealed to me with a sense of rest and peace beyond any other that I can remember. The salt water comes up close on two sides of it and the little wavelets of the bay were softly lapping on the sand—a mocking bird was sounding its note in one of the

big cedars and all around, keeping company with us were the men and women who laid the foundations of this old State. Here, perhaps, one could understand the spirit of Stevenson's lovely lines:

"Here he lies where he longed to be,  
Home is the sailor—home from the sea,  
And the hunter home from the hill."

Here the State of Maryland has set up a monument to Leonard Calvert, the first Governor. The monument stands on the site of the "great mulberry tree, beneath which were held the sessions of the first Assembly of the Colony." Here also are markers indicating the corners of the first "State House"—but men have since been buried where the State House stood. What a long pageant has been played out since these men landed here that spring day from The Ark and The Dove and began a great adventure in an unknown land.

Leonard Calvert has other memorials. Over east across the broad Pautuxent lies Calvert County, while further north is Leonardstown, County seat of St. Mary's County, and largest village of the peninsula.

Eastern New York has a number of colonial churches, but in their setting and surroundings they are unlike the old churches of this region. Calvert County, which is perhaps the most remote and isolated region of Maryland, has four Episcopal churches, all organized in one year—1692—and each church stands absolutely in the open

### Our Christmas Message

PERHAPS the hardest fight which most of us have to make as the years come on is to keep untarnished and undiminished the simple faith in the fundamental beliefs and ideals of a little child. From our puny heights of knowledge, we grown-ups laugh in tolerant amusement at the baby's unshaken faith in Santa Claus. But if we think of God as the true Santa Claus, not only for the Christmas time, but for the whole year, the child in his beliefs is nearer to the truth than are we doubting grown-ups.

One of the sad things of life is that with the passing of childhood the belief in Santa Claus is not the only illusion, the only faith, that is lost. With it too often go also our faith in the eternal verities, and our love of and belief in our fellow men. In its place come a striving for material things, a lessening of the child's acute vision to see right and wrong, and a distrust of our fellows.

AMERICAN AGRICULTURIST WISHES YOU AND YOURS A MERRY CHRISTMAS in this year of our Lord, nineteen hundred and twenty-four. And may we also hope that you may slough off for a little time at least the burdens of the wearisome years and become again in spirit a little child, with the child's capacity for happiness and with his faith that all is right with the world and its people.

### State Should Aid Poor Districts

THE Supreme Court of Oklahoma recently handed down a decision of great importance to rural school education. The decision stated that appropriations of state aid to weak school districts are a part of the fulfillment of the obligation to maintain a system of public schools placed upon the state by its constitution. The limit of district school tax having been reached, the state must "carry on", to give the local school equal advantages with other and richer districts.

The decision came about through an attempt to stop an appropriation of \$650,000 made by the Oklahoma legislature last spring to aid poor districts. The greater part of these were small rural districts, with weak schools.

It is much more difficult to raise the necessary money for maintaining the right kind of a school in any rural district where the taxable valuation is small than it is in other districts and in cities where valuations are very high. Such districts,

therefore, should receive financial help to maintain their schools, and the decision by the Oklahoma Supreme Court establishes an important precedent for the appropriation of state moneys to help keep good schools in districts where valuations are low.

### The National Farm Commission

WHEN President Coolidge accepted the nomination of the Republican party, he promised that he would call on representatives of agriculture who could speak with authority on farm needs to serve on a commission to advise him in formulating his legislative program for agriculture. The commission was appointed and held its first meeting at the White House on November 17th. Former Governor Robert D. Carey of Wyoming was made the chairman of the commission. Dr. R. W. Thatcher of the Geneva Experiment Station of New York State is a member. Other members include: O. E. Bradfute, President of the American Farm Bureau Federation, Chicago; Charles S. Barrett, Chairman of the National Board of Farm Organizations, Union City, Georgia; J. Taber, Master of the National Grange, Columbus, Ohio; R. P. Merritt, President of the Sun Maid Raisin Growers, Fresno, California; Prof. W. C. Coffey, Dean of the College of Agriculture and Director of the Experiment Station, University of Minnesota, St. Paul; and F. E. Bixby, President of the National Live Stock Association, Long Beach, California.

At its first meeting, the commission called on many different agricultural experts and made it clear that they expected to conduct a conservative and thorough investigation of the whole agricultural situation. Among the subjects that will be given first and detailed attention are: cooperative marketing, including a study of the cooperative bills now pending in Congress; all phases of the tariff to see what protection, if any, it gives agriculture; the whole structure of transportation, involving highways, water transportation, freight rates and freight service; and many foolish reclamation projects that are now up for consideration.

As we have before stated, we do not have much faith in agricultural investigations, but if this commission, which seems to be composed of men whose views on agriculture are sound, keeps itself clear of politics, and through its recommendations discourages much of the absurd and unsound legislation concerning agriculture, it may do some good.

### Prizes for Letters

IN our December 13th issue, on Page 409, we offered prizes of \$5 for the first, \$3 for the second, \$2 for the third, and \$1 each for the next best ten letters on what you like and do not like in AMERICAN AGRICULTURIST. Letters must be written by men or women actually living on a farm. They should be from 200 to 500 words in length, and they should give your first, second and third choice of articles and features which you like best in AMERICAN AGRICULTURIST, together with your reasons. Letters may, of course, include any other discussion on the paper. We are already beginning to get some letters, but we would like to hear from a large number of our readers, believing that if we have your criticism we can give you a better paper in 1925.

Turn back to last week's issue and read the announcement; then write us.

### For Toleration

RECENTLY there was a very interesting organization started in the City of Utica, New York, called the Hamilton-Jefferson Association. This society, which is planned to be nationwide in its scope, is to be composed of an equal number of Protestants and Catholics, and has for its purposes, "to promote devotion to and understanding of the purposes of the founders of this Republic as expressed in the Constitution of the United

States of America and to foster a spirit of toleration in economics, politics and religion".

Among the founders of this organization is the statesman, Elihu Root, and he is associated with several other prominent men from the ranks of the Masonic Fraternity and the Knights of Columbus. The original idea for an association of this kind is said to have originally started in Elmira, N. Y.

In his opening address at the organization meeting, Mr. Charles A. Miller, the first chairman of the society, said:

"I would go to the extent of pleading with you for toleration of the intolerant. I would have you believe that even those who most thoroughly disagree with everything that you stand for and I stand for are still led to that agreement or disagreement with us by the same sort of love of country, and love of decency in their hearts that we have. I especially plead against the modern habit of classifying and generalizing and putting people in a great class and saying because they belong to that class they must all be treated as one, whether that class is made up by common prescription to a religious creed, an economic theory or to a political party. \* \* \*

"Not that I mean for a minute that toleration should be of the wishy washy indifference. The false doctrine that it makes no difference what a man believes will get no sort of countenance in this assemblage. Thank fortune we have strong beliefs and we are willing to battle valiantly for them; but let us concede that the other fellow may have strong beliefs, and when he girds his loins to do battle in their faith, let us give him the benefit of the doubt that he means in his heart to fight square."

We hope that this society and the principles that it stands for will live and grow. This country needs today more than anything else a little Christian charity, a little recognition of the other fellow's point of view, and a little less willingness to believe every absurd and preposterous lie that is being circulated. In these unsettled times, the nation needs the united counsel and support of a united people. Every influence which spreads hatred, intolerance and dissension is a menace to America, and to its ideals; and conversely, every movement, like that of the Hamilton-Jefferson society, which teaches us to dwell and work together for the real ideals of America and for the fundamental truths taught by Jesus of Nazareth, should be fostered, encouraged and supported. There is grave need this Christmas time of remembering that it was Christ himself who taught:

"Peace on earth, good will toward men."

### Curry Weatherby Ill

THE thousands of friends of Mr. E. C. Weatherby, better known as "Curry," circulation manager of AMERICAN AGRICULTURIST, will be very sorry to hear that at this writing he is very ill at his home in Ithaca. In some unknown way, Mr. Weatherby contracted typhoid fever, but he is doing as well as can be expected.

Probably no man in public work in New York State is better known or liked than Mr. Weatherby, and we know that we are expressing the best wishes of all of his friends for a speedy recovery.

### Eastman's Chestnuts

I am very sorry, but the blight has struck my chestnut grove. I have seen it coming for quite a spell.

### Quotations Worth While

"It is the way hours of freedom are spent that determines, as much as . . . labor the moral worth of a nation."—MAURICE MAETERLINCK.

A man may be strong, and yet not mow well.—PROVERBS OF ENGLAND.

\* \* \*

"I do consider that music is all the pleasure I live for in the world, and the greatest I can ever expect in the best of my life."—SAMUEL PEPYS.

\* \* \*

A poem ought to be well-made at first, for there is many a one to spoil it afterwards.—PROVERBS OF IRELAND.

# Farm Taxes Must Come Down

## Grange and Farm Bureaus Are With A. A. on Tax Reduction Program

**W**E ARE able to announce progress on our tax reduction program. The forces most interested in getting some relief for farmers have joined hands. The New York State Grange and the New York State Federation of Farm Bureaus will cooperate with AMERICAN AGRICULTURIST in all work for the same tax reduction principles. We are enthusiastic over being thus able to present this united front all the way along the line to fight the farmers' most important battle.

Master S. L. Strivings, of the New York State Grange, writes us as follows:

"Yes, we will go along and work with you in this matter, and you may assure your readers that the State Grange has a program akin to the proposals of your issue of the twenty-second of November."

(Notice the re-statement of these principles given below on this page).

"We shall be most pleased to cooperate with you in your plans for the betterment of tax conditions among our rural communities.

"We are having a confiscatory tax situation all over the State and ere long many, many farms will be for sale for taxes only. *When the taxes take all and more than the income, it is time to stop expenditures.*

"There must be a levelling of the nation's wealth to the burdens of government or there must be a drastic cut in expenditures, probably both. This tax discussion can ramify in so many directions that it is basically one of the most important matters just now before our people. *Governments can no more exceed the income than individuals, and when the income cannot be much increased, the expenditures must be adjusted accordingly.*

"Good as they are, and much as our people approve good roads, it is an important matter of how far counties and towns can go in mortgaging the property of taxpayers in the issuance of bonds even for road construction. When it is known that every farm in the State is mortgaged for varying sums either by local mortgages upon the farm itself or by bonds sold as townships, or as counties, by the State, the whole matter grows in importance and looms forbid-ingly.

"Our small County of Wyoming owes \$440,000 in bonds issued for road building. It has to borrow \$40,000 more this fall as an emergency fund and the end is not in view. How much more can be loaded before the breaking point is a very important matter."

President Enos Lee of the New York State Federation of Farm Bureaus, writes:

"I want to say that the Federation will be glad to cooperate with you and the Grange in anything reasonable regarding a tax reduction campaign. Mr. H. C. McKenzie has been and still is employed by the Federation and has been in close touch with all State tax research work during the past summer. He still represents us in Albany on tax matters.

"We held the annual meeting of the New York State Farm Bureau Federation, November 6 and 7, and passed resolutions on tax legislation. It was recommended that the Agricultural Conference Board give careful attention to the State and local tax system and that a united program of tax revision be agreed upon. Another resolution stated: 'We are opposed to any further issues of State or county bonds for road construction and recommend that the users of the roads be

taxed through licenses, gasoline, personal property tax or counties, in an amount sufficient to provide for the entire upkeep and from 59 to 75 per cent of the cost of new construction.'"

Mr. H. C. McKenzie, tax expert of the New York State Farm Bureau Federation, writes:

"The success last year in getting the reduction in the general property tax was due largely to your help and we will cooperate with you in every possible way this year to chop another slice off of it, and in any other way that we can also.

"Insofar as we have been able, we have kept in touch with developments during the summer and have been doing what we could with the limited funds at our disposal to prepare for

"If there cannot be something done soon, what will become of us poor farmers with large families? I have asked other farmers about this, and they all agree with us on your tax reduction program."—Mr. and Mrs. A. W. C., Pennsylvania.

We are particularly pleased when the letter or the postal cards are signed by both the farmer, and his wife. Certainly no one has any more interest in the welfare of the old farm than does the farm woman, and we are glad to see her taking more and more interest in the great farm problems.

Letters are the very best ammunition we can have in fighting your battles. If you are not interested enough to spend a two cent stamp to tell us you are with us, then we do not believe the tax problem is bothering you much. Sit down now and send us a postal saying you are back of our campaign.

More than this, we hope there will be a great study made of the whole tax proposition in every subordinate grange, and farm bureau and other farm meeting throughout the country. If there is no local organization, why not call a special tax reduction meeting and study the proposition, and then let us know that you are behind us? We will make no great progress by demanding something that is not right or that is not sound or based on common sense. Our program does not look toward cutting out needed work. Government must go on, and government activities must be carried on. We will always have to pay taxes, and we will do so cheerfully if those taxes are well spent, if they are equitably raised from all classes of property, and if unnecessary enterprises are cut out.

AMERICAN AGRICULTURIST will furnish to any grange or any farm bureau meeting or any other group of farmers information for a tax discussion. This information will have the approval of your own farm organization, or you can write them directly for it. We do not care how you work as long as you do your part and as long as all of us present a united front.

But we do need your help; first, to study the problem and get your neighbors interested by talking it over especially at meetings; and, second, to let us know you are behind us by dropping us a line.

Also, if we are on the wrong track in anything we say or do, do not hesitate to criticize.

The Grange, the Farm Bureau and the AMERICAN AGRICULTURIST are trying to serve you, but we cannot do it alone.

### Our Mission

"I take seven farm papers, but I think the AMERICAN AGRICULTURIST is the best."—W. E. F.

**T**HE number of letters that we are receiving expressing sentiments like the above encourage us to believe that the paper is meeting with the approval of our folks. There are a good many farm publications, many of them very excellent ones. Therefore, to justify the existence of AMERICAN AGRICULTURIST, the publisher and editor must feel that it fills a place in the work and life of our people that cannot be filled just as well by some other paper. This means that when you have taken up one of our issues and have read it carefully, we want you to lay it down again feeling that it has given you a little bit better and more pleasant and more worth while outlook on life than you had before reading it.

We, whose responsibility it is to get out the paper, think also that it is something more than a publication containing good articles and stories. We are trying to make AMERICAN AGRICULTURIST a great service institution, working on your individual and collective every-day problems, trying to help you find better markets, working to solve through our Service Bureau the thousand and one perplexing problems that you bring to us by letter; and, above all, laboring to bring you a little bit more happiness, the pot of gold at the end of the rainbow for which we are all striving.

### Christmas Everywhere

PHILLIPS BROOKS.

**E**VERYWHERE, everywhere, Christmas tonight!

Christmas in lands of the fir-tree and pine,

Christmas in lands of the palm-tree and vine,

Christmas where snow peaks stand solemn and white,

Christmas where cornfields stand sunny and bright.

Christmas where children are hopeful and gay,

Christmas where old men are patient and gray,

Christmas where peace, like a dove in his flight,

Broods o'er brave men in the thick of the fight;

Everywhere, everywhere, Christmas tonight!

For the Christ-child who comes is the Master of all;

No palace too great, no cottage too small.

*Taken from "Christmas Songs and Easter Carols," by Phillips Brooks. Copyright 1903 by E. T. Dutton & Co.*

the next session of the legislature.

"The Special Joint New York Legislative Committee on Taxation and Retrenchment has been sitting since October 1 and preparing suggestions which it will make to the next legislature. This Committee has just issued a report of its work last winter, and some of the findings are of much interest to agriculture. Among the most striking are these: First, farmers in New York are paying more taxes in proportion to their income than any other group." (This is true not only of farmers in New York, but also those of other states, and AMERICAN AGRICULTURIST's work will be devoted not only to reducing farm taxes in New York, but we are doing everything we can along similar lines in adjoining States.) "Second, that the other rural occupations, including lumber, logging, manufacturing lumber and wooden products, manufacturing pulp and paper products, quarries, transportation and forestry pay far less of their income in taxes than the farmers."

Not only are we enthusiastic over being able to join forces with the great organizations, but never in our memory have farmers themselves been so stirred over any issue as they are over this question of taxation. Letters are pouring into our office every day backing up our program. Here is a typical letter:

# Green's Trees Shrubs, Vines

## NEW Cortland Apple

The American Pomological Society awarded to the Cortland the Wilder Silver Medal. To qualify for this medal, a new fruit must exhibit superiority to all existing varieties with which it will compete.

**McIntosh Apple, Bartlett Pear  
Dwarfs and Standards**

Other apple, pear, peach, plum, quince, cherry and ornamental trees:

**Coco Grapes**, gooseberry, currant, raspberry, blackberry, and rose bushes. Strawberry plants, etc. All finest varieties—Green's high quality, full rooted, healthy, hardy, true-to-name stock—the kind thousands have found pays best. All at direct-to-you money-saving prices.

**C.O.D. or Liberal Discount for Cash**

We prepay transportation charges—see catalog.

# "Maryland, My Maryland"

(Continued from page 423)

country without the least suggestion of a village and each is set in the midst of its cemetery and shadowed by most magnificent oak trees. These folks understand the beauty of a great tree better than we do in New York. Around All Hallows church, south of Annapolis, I found the graves of men who died before 1690. Either there was a burial place here before there was a church or, more probably, the stones were set up in later years in memory of men who died long before.

We went to church on Sunday morning at one of those historic sanctuaries. It stood in a lonely spot, in the midst of a sparsely settled region of large farms, but the attendance was larger than is commonly found in country churches, and the rector preached with grace and dignity and force. I suppose that perhaps no where in America can be found a region where the white population is more nearly of absolutely pure English racial stock.

I have found these historic memories so interesting that I have almost forgotten to speak of its agriculture. It is preeminently a one crop region and that one crop is tobacco. So far as I can learn it has been the one great crop from the very beginning, and its supremacy has never been disputed by any other type of agriculture.

I am sure that "Herb" Cook and I hope some other one of my readers will remember dear, delightful, whimsical "Joe" Wing of Ohio, a man who walks the earth no

longer, but who I had the privilege of knowing very intimately, and whose personality was best characterized by the word "lovable." In his time he did a good deal of Farm Institute work in Maryland, and like every one else he marveled much at some of the things he saw in old St. Mary's County. He was a contributor to the Breeders' Gazette, and once wrote them in this wise, "I saw no green thing upon the landscape except tobacco. I saw, indeed, a few lean cows that looked as if they would desire to eat, and I fell to wondering if it might not be possible to educate these cows—a little at a time—to chew tobacco."

Well, tobacco still holds the stage. I am not personally a consumer of the Indian weed, but it is surely a most beautiful crop, with its scrupulously clean culture and its broad, vivid greenness. A man may almost walk out of sight in a well grown field of Maryland tobacco. The crop was very late this year, and October first saw less than half of it hanging in the barns. Prices this year are excellent—as high as 62 cents per pound for the choicest leaf, although there is an almost endless number of grades, depending upon many different factors, and ultimately most of all upon the skill of the grower. Just this year the Southern Maryland tobacco planter is not talking about the agricultural depression. On the contrary, his face wears a sunny smile. I, of course, cannot vouch

for the truth of the statement, but they tell me that this is the freest burning tobacco in the world and much in demand for blending with inferior tobaccos to increase combustibility. It is said that you make take a properly cured leaf and touch a spark to one end and it will slowly consume the entire leaf down to the midrib—a test that no other leaf can measure up to. A large part of the crop is still packed and shipped in great hogsetts—the form of package that has held its own for near three hundred years. In the early days a bar was put through the hogsett, projecting a little from each head and a mule or ox hitched to this rolled the package down to the market. This custom still survives in memory at least in the name of a certain highway, "The Rolling Road."

I have said that it is emphatically a one crop region. Of course there is a little grass and considerable good corn, but these after all are to feed the mule that will cultivate the plant for whose sake men toil and in the odor of whose sanctity they will die. Of course everybody agrees that a one crop husbandry in the end spells agricultural disaster, but here is a region where the tobacco plant seems particularly at home, and moreover the people—black and white alike—are skilled in its culture with the hereditary skill of many generations. I judge that the wisest agriculture is not necessarily less tobacco, but more of other things in addition. Only very slowly do people change their fixed agricultural habits. During the eighteen years since I was here before, there have been some changes. Notably the state has built some good roads into a region that before was cut off from all transportation, save the visits of the steamers that poked their nose up every little river at rather infrequent intervals. The spirit of progress is in the air. The infrequent and tiny hamlets show more paint and less whitewash. There are some attempts to grow legumes, and even an occasional patch of alfalfa, but I do not believe there is any attempt to displace the ancestral crop.

This is the "black belt" of Maryland. The tobacco counties have always required a large supply of field labor, and until the recent northern exodus, which threatens to bring about fundamental economic changes, there were large sections where the negroes outnumbered the whites. Riding through it today, one feels that the whites must be in hiding, while the blacks come out to show themselves. In Civil War days, the status of this section of the State was peculiar. Officially, Maryland was a loyal State, but on this peninsula almost every man of military age stole away some stormy, moonless night and crossed the Potomac to link his fortunes with Lee or Johnson. Just the other day I talked with a man—he was seventy-five years old—a Judge of the Maryland courts, with a life long connection with public affairs, and in the archives of whose memory is stored a vast mass of the unwritten history of his time. He told me that at the second election of Lincoln, he received just one vote in all St. Mary's County.

All this locality is very intimately associated with the assassination of Lincoln and the flight of his murderer. Men talk of it, not as some history that they have read in books, but rather as a neighborhood happening and a fireside tale. We passed over the highway, then as now, the main road leading south from Washington, down which Booth made his wild night ride following the fatal shot. Booth himself was a Marylander, born at Bel Air, near the Pennsylvania line, but nevertheless he sympathized most passionately with the Confederacy. The last days of his life were horrible enough. Escaping from the theater, he rode for many miles astride a galloping horse, although his broken leg must have caused him unutterable agony. Some considerable distance south we saw the old brick hotel, probably very little changed since that night where a halt was made and a country physician, Dr. S. J. Mudd, was summoned to set the leg "of a

(Continued on page 436)

## Insurance will pay for it if the old pump fails

There is no protection like Hartford Farm Insurance. It covers everything you own—your house, your furniture, your barn and other buildings, their contents, your crops, your implements, your animals—everything.

With a Hartford policy you have as your safeguard a Company that for more than a century has promptly paid every honest loss.

And there is no service like Hartford service. The Hartford Agent in your locality has been selected for his marked ability to serve you. Ask him for "My Property," a helpful little book that will enable you to make a good inventory of all you possess, or mail the coupon and we will send you a copy.

# Cows Sick?

## These Answers May Save One of Your Animals

**F**OLLOWING are a number of questions and answers about cow troubles which some of our readers have been experiencing in their herds. These inquiries are representative of hundreds which come to our veterinary advisor. We are publishing a few of the more common troubles with the idea in mind that they may be of benefit to our readers in general. Obviously we cannot publish all of the inquiries which come in. Some inquiries cannot be answered with any degree of definiteness due to the lack of adequate information to make an intelligent diagnosis possible or due to the fact that in many instances the animal in question must be examined for additional information before a thorough diagnosis can be made.

Only inquiries that are signed by the reader's full name and address receive consideration. All inquiries are answered by mail by our veterinary advisor. Many send in questions signed with initials asking that the answer be published in the columns of AMERICAN AGRICULTURIST. These questions receive no consideration. If your inquiry is used your name will be kept strictly confidential.

### Turnips and Tuberculosis

I would like to ask if there is any other way to find out if a cow has tuberculosis than the method which is used in testing. It looks as if they grafted the disease into the system and if they do it must be just as dangerous to use the milk as if the cow got it from some other source. I know they say you must not use the milk from the condemned cattle but isn't it in the milk from those that are strong enough to withstand the test?

Some of the cows tested in this neighborhood last fall lost their calves during the test and it does not look as if anything as deadly as that would be conducive to good health or to preventing the disease. It is directly opposite to the law they say they have in California which forbids the feeding of turnips to milch cows.—L. M. N., Chautauqua County, N. Y.

**T**HE test recommended by the Bureau of Animal Industry of the Federal Government, is the only true test for tuberculosis.

The condition of which you speak is abortion and we do not think it was caused in any way by the test.

Tuberculosis is a constitutional disease, specific and infective. That it is a blood disease is proved by the fact that it very frequently affects many organs of the body.

There is no law of any State that overcomes the Law of the Federal Bureau of Animal Industry.

The feeding of turnips has nothing to do with the disease, only in some cases it affects the taste of the milk.

\* \* \*

### Disinfect for Abortion

Will you please send me information in regard to a Guernsey heifer that lost calf at five months. Had veterinary take afterbirth, and heifer was in fine condition, but cannot get her with calf.—E. E. J., Orleans County, N. Y.

**F**ROM the description you have given it would lead us to infer that the condition was caused from abortion, which A-1 ensilage, a bushel to a feeding twice daily, frequently is due to the nature of the food and other influences, such as too frequently going to the bull, by various kinds of injury, by injudicious use of cathartics, by violent coughing, by drinking impure water or the presence of a fungi on the food.

Treatment after an abortion, first the sometimes stimulants and tonics are needed, the disinfection of all places where abortion has occurred.

It is sometimes better to fatten the animal for the butcher after an abortion.

Would suggest that you call your local veterinarian and have him examine the animal for any foreign substance that may be causing the condition of which you speak.

\* \* \*

### Inflammation of Milk Duct

We have a cow that has been fresh for three months. Last week she milked very hard on the left side, and then a little hard ring just above the left upper teat appeared, and then after a couple of days a hard bunch about as big as a fist appeared between the two left teats. I am rubbing it with a cow relief I have for caked udders and I give her a teaspoonful of salt petre at night once a day. We feed corn stalks and mixed hay for roughage and Union grain three quarts twice a day.—P. P., Chautauqua County, N. Y.

**T**HE trouble is caused by an inflammation of the milk duct and if not properly treated, usually becomes organized and forms tumors, which continue to enlarge and shut off the udder entirely.

Operations are recommended but are not always successful, due to the size of the tumor and the amount of tissue, which must be taken away while operating.

Another remedy is by passing a teat splitter which of course must be done by a veterinarian. Hot fomentations every half hour, for twenty-four hours, using a suspensory bandage to hold up teat, may help some. Also try the application of camphorated oil or belladonna ointment.

\* \* \*

### Trouble with Weathers

I have a fine young Holstein cow not quite three years old. She freshened in December, but since she came fresh she cast her weathers. I have put it back in place twice and tied down the tail. It stayed in place for two months after doing this.

She eats good and seemed all right every day, until this week. Now she seems to be in the same condition and I have again put it back and tied down the tail. Will you kindly let me know if there is any cure or anything more to be done or any medicine that might help her.—W. W. H., Pike County, Pa.

**F**ROM the description you have given it would lead us to infer that there is a foreign substance causing the animal to strain and the ligaments holding the organ in place.

Would suggest that you call your local veterinarian and have him examine the animal.

In a condition of this kind it is sometimes advisable to fatten for the butcher.

\* \* \*

### Treatment for Scours

Can you tell me what to do for the white scours in calves. I have been troubled with it for three or four years. As soon as it comes spring I cannot raise a calf or veal one, as they get the white scours and all I can do for them they will die in the end. Can you tell me what the cause is and what I can do to prevent this?—M. E. S., Susquehanna County, Pa.

**W**HITE Scours are caused from the improper feeding or from the drinking water.

We would suggest that you give the calves, one to two ounces of castor oil, depending on the size or age of the animals, then procure Salarabin from Ernest Bischoff Co., Inc., of New York City, and give the calves one to two tablespoonsful in their feed, four times a day.

We have used this preparation in our practice and find it wonderful for the condition.

### Kill a Kow!

I will be glad to cooperate, providing at least one thousand other dairymen will do the same, in selling or killing FOR BEEF PURPOSES at least one of the poorest producers in my herd between now and March 1, 1925.

# Let Your Cows Pay for That New Silo

They'll do it, and thank you for the chance. Here's how. You can fill a Harder Silo with succulent silage for less than the cost of husking, hauling and stacking the dry fodder. And when you come to feed it, it will be worth twice as much, to say nothing of being easier to handle. At the end of the feeding season your cows will have paid for a handsome new Harder-Victor Front Silo.

### Harder Easy-Payment Plan

Under this liberal new plan you can meet the payments out of the increase in your milk check and the saving in feed cost. You can't afford to go through another season without a silo when your cows will pay for the best silo ever put on a foundation.

Write for our free book, "Saving with Silos," and particulars of our easy-payment plan. Study the strong points of Harder construction. Learn how you can make bigger profits with a better silo.

HARDER MFG. CORP.  
Box F Cobleskill, N. Y.

## HARDER SILOS

# Just Like Having Green Pasture All Winter

Dry winter feeds are harder to digest, harder to assimilate than the tender, green food your cows enjoy in summer. The added strain on the milk-making function naturally reduces the milk yield in winter—unless something is done to invigorate these important organs.

**Kow-Kare** accomplishes just what is needed. It is a wonderful builder of natural vigor in the genital and digestive organs. A tablespoonful given with the feed twice a day, one week out of each month, will pay for its slight cost many times over in increased milk-flow. Besides, your cows will not become the prey of such ailments as Barenness, Abortion, Retained Afterbirth, Scours, Milk Fever, Garget, Lost Appetite, etc., all of which result from sluggish digestive and genital organs.

If you are troubled with any of these diseases in the herd, Kow-Kare will correct the trouble. For over twenty-five years it has been "The Home Cow Doctor" to many thousands of cow owners.

Let Kow-Kare work for you this winter. Start now; your feed dealer, general store or druggist has it—in 1.25 and 65c sizes. Or we will send by mail, postpaid on receipt of price.

Send for valuable free book, "The Home Cow Doctor". Cow owners use nearly one million copies of this book yearly. Thousands say they could not get along without its help.

Dairy Association Co., Inc.  
Lyndonville, Vt.

### CATTLE

## Guernsey Bull Calves

**Special Offer** We are offering choice of two bull calves about eight months old for Price \$100.00

Both bulls sired by May Rose bulls and out of cows either on test or with official records. Send for pedigrees and description, they are bargains. Herd officially tested for tuberculosis.

OAKS FARM Cohasset, Mass.

## HOLSTEINS & GUERNSEYS

250 head of fresh cows and close springers to select from. If you are in the market for fancy young cows that are large in size and heavy producers it will pay you to see this stock. Tuberculin test.

A. F. SAUNDERS, Cortland, N. Y.  
Telephone 1476

**I OFFER** Reg. Jersey bull 6 months old whose dams produced 18,050 lb. milk, 938 lb. fat, 12,000 lb. milk, 600 lb. fat each per year. Buy now for next Spring and save half cost of bull. Price \$75.  
S. B. Hunt Hunt, N. Y.

### SWINE BREEDERS

# Among the Farmers

## Western New York Notes—League News

AFTER a week or ten days of quite cold weather, during which the thermometer dropped as low as 14° above zero and three or four inches of snow fell,—a real taste of winter—the temperature rose again to 40° and a moderate rain fell all night of December 5. This removed what little frost there was in the ground and today it is a little muddy on top. This rain put a little water in dry cisterns, and with the melted snow brightened up wheat, but helped the low wells not at all.

Farmers are at work out doors again today after nearly two weeks of inside and yard work. Several neighbors are fall plowing, not a few are doing belated ditching out of wet fields. We used the day to get in a few bushels of carrots caught by the early freeze. They were apparently not injured in the least. Readers of previous notes may be interested to know, too, that the cabbage reported as frozen solid on November 18 and 19, not only went to distant markets in good condition after it had thawed out, but one car even brought a compliment from the buyer on its good quality. Of course, this frozen cabbage went immediately into consumption. Some that was stored is beginning to show a few black hearts. Incidentally, our co-operative membership netted us better than three dollars a ton more than we could have sold for locally. One car netted five dollars more. Here is a profit of considerably more than one hundred dollars due to good cooperative service.

One of the "chores" that has to be reckoned with this time of the year is getting the children back and forth to school. The roads and weather have compelled the putting up of bicycles, and while the children can drive a horse most of them are carried back and forth in autos. With an average of two and a half miles to drive not less than one half hour twice a day is required. Coming at different times and in the middle of the morning and the afternoon as they do, with the consequent interruptions of other work this "chore" takes at least two hours five days a week. By changing off with two neighbors this time is of course, reduced for each one. We have eight children of school age among us, four of whom are left at the district school and the other four are taken to high school two and a half miles away. If one were to compute the value of this time at current wages, he would find the cost of education in the country, still further increased. Many real advantages of farm and country life in training children may be cited to offset it, but the cost of an education for farm children is much greater than in the cities—often with much poorer facilities and teaching too—thanks to the enemies of better education.

—M. C. BURRITT.

### League Buys Clover Farms

THE Dairymen's League Cooperative Association, Inc., has purchased the properties and business of Clover Farms, Inc., an old established high grade milk distributing company in New York City, according to an announcement by G. W. Slocum, president of the dairy farmers' organization. The formal transfer will take place on Tuesday, Dec. 16. The purchase is in line with the League's policy to obtain more and more of the best fluid markets for the milk of its members.

The League will retain the country properties consisting of seven modern milk receiving stations in New York State. It has contracted to sell the city holdings and retail business to Borden's Farm Products Company, which is a 100 percent buyer of League milk.

The Clover Farms' city properties include a large distributing plant at 470 West 128th Street. Besides carrying on a retail business, the company is

serving milk to all of the City Department of Health infant feeding stations of which there are over 60. The company handles more grade "A" milk in proportion to its daily supply than any other concern in New York City.

The country plants which have been taken over by the League are situated as follows: Homer, Solon, and Preble, Cortland County; Afton, Chenango County; Rock Glen, Wyoming County; Shekomeko, Dutchess County, and Jacksonburg, Herkimer County. Four of these plants have grade "A" permits.

### Started "with One Lone Wagon"

Clover Farms, Inc., had its origin in November, 1891, as L. L. Campbell & Bro., starting in business with one lone milk wagon, the driver of which was Mr. L. L. Campbell. The first day's deliveries consisted of 68 quarts. The company now has 160 delivery routes. It was incorporated four or five years later as the Clover Farms Company. The name was changed to Clover Farms, Inc., in 1913, when the Dairy Demonstration Company was taken over. The Dairy Demonstration Company was organized in 1908 by a number of prominent New Yorkers interested in infant welfare work. A plant was built at Homer and after much educational work among farmers, the company began to supply milk to infant feeding stations which had been established by the New York Milk Committee. These stations were taken over later by the New York City Department of Health. Since 1913, Clover Farms, Inc., has continued this service to the city without a break, making the name of its Homer milk famous.

When United States Senator Royal S. Copeland was City Commissioner of Health, he said of the Homer plant: "This milk station in point of sanitation and the low bacterial count of its milk is one of the finest in the United States." Clover Farms, Inc., was built up by the efforts of two men—Luther Campbell, its president, and J. J. Weisenfluh, its treasurer.

### County Notes

**Ontario County.**—November was a fine month to get fall work completed. We had a very hard freeze the middle of the month that caught potatoes in the barn and cabbage in the fields. Of course, they were frozen but there is still enough left of both these crops to meet the trade needs. Corn is mostly in the field. Those who have been husking find a large amount of poor corn and little or none is good for seed. Red kidney beans have turned out rather poor in yield and quality. Some stock was still running on pasture at the first of December. There was very little fall plowing done on account of the ground being so dry.—E. T. B.

**Tioga County.**—Potatoes were all dug about the middle of November. The yield was excellent, although there were some reports of rot. Prices have fallen almost to zero. The very finest went as low as 30c a bushel at the cars. One farmer I know took a truck load to the market at Endicott and was able to sell very few. There was no sale whatever even at 50c per bushel. Several of our farmers have been going to the markets of Johnston and Endicott regularly, with their garden truck and have made quite a good thing of it. Honey has been selling well also. Fall work on the farms was well cleaned up. The fine weather gave ample opportunity for everybody to bring outdoor work up to schedule. We had a regular blizzard on November 16 with high winds. It brought us to the sudden realization that winter was here, much in contrast to the very mild weather that we have had. —Mrs. C. A. B.

THE  
HOOD  
KATTLE KING  
*fleece lined*

## Warm and Dry - quickly cleaned

The popular  
HOOD Red Boot

The Four  
Buckle Arctic

White Rock  
Rubbers  
-for all the family

Here's a wet weather shoe—the Kattle King. Husky tire-tread soles, built for wear under all conditions. Red all-rubber uppers, which established a new standard for life without checking or cracking—and without clumsy weight.

Being all-rubber, the Kattle King is quickly, easily, thoroughly cleaned—of all grime and soil—free from all odors.

Leave them in the shed at night—there's no cloth to soak moisture and freeze. You work in comfort, your feet are always dry, you get longer service.

The Kattle King is typical of Hood service to you in boots. The Hood Red Boot offers the same long wear and freedom from checks and cracks.

In White Rock Rubbers, the same "in built" service cuts down the rubber bills for all the family.

Hood values are sound, of practical every-day benefit. Use the name Hood as your buying guide. It is a time tested guarantee of design, material and workmanship.

# Reviewing the Latest Eastern Markets and Prices

## MILK PRICES

THE Dairymen's League Cooperative Association announces the following prices that dealers will pay the League during the month of December for milk testing 3% in the basic zone of 201 to 210 miles from New York City. It is to be understood, of course, that the prices mentioned below are not received by the farmer, but go into the pool. They represent the prices dealers pay to the League. Class 2A, used chiefly as fluid cream, \$2.10, Class 2B, used chiefly in the manufacture of condensed milk and ice cream, \$2.25, Class 2C, used chiefly in the manufacture of soft cheese, \$2.15. Class 3A, \$1.80. Class 3B, \$1.75. Class 3C, \$1.65.

Class 4, prices will as usual be based on the butter and American cheese quotations on the New York market.

The only increases over November prices are in Class 2, 20 cents per hundred in 2A and 2B and a 10 cent increase in 2C.

### Sheffield Producers

The Sheffield Farms Producers announce the following price for 3% milk in the 201 to 210-mile zone: Class 1, \$3.07 per hundred; Class 2, \$2.00; Class 3, \$1.50; Class 4, determined by market quotation on butter and cheese.

### Non-Pool Cooperative

The Non-pooling Dairymen's Cooperative prices for Class 1 milk is \$2.80 per hundred; Class 2, \$2.00; Class 3A, \$1.60, with freight and fat differentials.

### Interstate Producers

The Interstate Milk Producers' Association (Philadelphia Price Plan) announces that receiving station prices, or the price to farmer's in the 201 to 210-mile zone from Philadelphia for 3% milk, is \$2.19. In the 101 to 110-mile zone the price is \$2.29.

## BUTTER PRICES LOWER

The day after the A. A. went to press last week, the butter market suffered rather a decided setback. Prices dropped from 47½ and 48c on the highest grades to 40½ and 41c. The turn downward was quite

working against the market. In the first place there was considerable fresh stock received, and inasmuch as the trade was well supplied, a large proportion of these receipts had to be carried over. With advices indicating that additional supplies would be coming along immediately and with the demand apparently narrowed down due to the use of a great deal of storage stock, a decided weakness developed. About the middle of the week ending December 13, however, the market had recovered from some of the price slump and went back to 44½ to 45c on the highest grades. However, at that time fresh butter was still accumulating and the market continued in unsettled tones. Buying has been weak, and the trade finds it hard to recover to the position it enjoyed something over a week ago.

Indications are that the Christmas trade will bring the market up again. Fresh receipts, however, will determine just how it will hold up after the peak of the holiday buying is over. Storage stocks are too heavy to expect continued high prices. Just as soon as the market experiences a little accumulation, prices reflect the condition immediately. Receipts for the week ending December 13 were heavier than the week previous. This doesn't look like a very sudden advance of any magnitude. Medium grades of creameries declined in sympathy with fancier marks, while lower grades did not suffer near as much. Although the prices on these lower sources are slightly lower than last week, nevertheless the reduction suffered by these classes is only fractional compared with top grades.

## EGG MARKET HOLDS FIRM

The egg market is holding firm, due to a continued scarcity of high grade eggs. There is a good demand on nearby whites and these marks are holding steady. Practically all sizes of good fresh, well graded and well packed whites are selling rather freely. This is especially true of medium grades and pullets. Prices are about the same as last week, with little likelihood of any reduction coming during the holiday period. Mixed sizes and colors are moving slowly and prices are trending a little bit easier. There is no question but what the market absolutely demands quality pack. It is becoming more and more evident the man that ignores this fact is losing money. It is a whole lot better to keep these small or off-colored and poorly shapen eggs at home to be disposed of in a local market rather than ship them to the Metropolitan district at high express rates only to get a low price.

## FANCY POULTRY WILL SELL

As far as we make out the live poultry market is going to be fairly satisfactory for Christmas. According to the Producers Price Current, their records for the past several years show that when turkeys have sold well at Thanksgiving, poultry sells better at Christmas. This is no definite prediction, but is merely an indication. This deduction is quite reasonable, however. Consumers usually feel that if they have had turkey for Thanksgiving, that is enough and they will be satisfied with chicken at Christmas. When turkeys are poor at Thanksgiving they usually come back at Christmas time. In view of the fact that the freight market is so decidedly off, due to the heavy death rate among arrivals from the west, it looks as though express receipts that are fancy will enjoy a particularly strong position. There are reports current that there will be an embargo on certain freight shipments which will work to the advantage of nearby express poultry. Just because freight receipts are out of balance and because this is a holiday period, is no excuse for shippers unexpected. There were several factors to try and palm off a lot of undesirable birds on the trade. The holiday spirit will be tolerate to it. At least at advanced prices. Every holiday during the past fall has told the same story, common and undergrade stock has dragged badly and will drag undoubtedly badly at this time. The demand for fancys is going to create a good market. Naturally colored birds will take the preference, but unless these are fancy shipments cannot expect top prices.

The outlook for turkeys is problematical. Everything depends on the consuming trade, a rather unknown quantity. As stated above, the Thanksgiving trade was so good that there is a strong likelihood of turkeys weakening for this holiday. Actual conditions, however, are to the con-

on turkeys are advancing. Whether the eastern markets will support these advances remains to be seen, and this will not be known until just before the holiday. Texas and western states shipped heavily for Thanksgiving, and reports indicate that the supply out there is rather light. Operators are showing a great deal of caution in their buying. This, however, is truer for freight traffic than in the express market. If the consumptive trade shows the same preference as at Thanksgiving, there is going to be a stronger demand for heavier turkeys, with light ones tending weaker. The Thanksgiving trade developed a sudden appetite for heavy birds. Of course, the Christmas market has one favorable

and is the most dangerous kind of speculation outside of buying wildcat stock for cold cash.

## CABBAGE PRICES OFF

The cabbage market is in quite sympathy with the potato market. Trading is dull, due to the fact that stocks in the Metropolitan districts are ample and prices have eased off so that now \$10 or \$11 a ton F. O. B. is quite common. This bears out our surmise of last week when we said that we wouldn't be surprised to see cabbage down again to \$10. The cabbage market is the same as the potato market. Just as soon as the price seems at all reasonable it is going to pay growers to loosen up some of their stock.

## BEAN MARKET DULL

The bean market continues to drag heavily with prices showing an easier tendency. Domestic marrows are offered as low as \$9.25 for common stock, with choice marks bringing anywhere from \$10 to \$10.50. It is very rare that sales reach this top figure. Pea beans are also meeting a dull outlet and prices on this variety are easier. Common to fair marks average anywhere from \$5.50 to \$5.75, with a few fancy lots bringing \$6. Red and white kidneys are also dull and bringing easier prices. Red kidneys are bringing anywhere from \$8.25 to \$8.65, depending on quality, with a few real choice lots bringing \$8.75. White kidneys are worth about \$1 more all along the line, with the exception of real fancy qualities that are worth \$10, but few are turning at this figure.

## NO. 1 HAY SCARCE

The hay market has taken on a much firmer tone, especially on the higher grades. There is little or no No. 1 in the market, with the result that prices on this grade have a tendency to harden. In fact, lower grades in large bales are meeting a firmer tone, although the movement in these low grades is still rather slow. Low grade hay in small bales is moving slowly, especially in Brooklyn.

## The Market at a Glance

The following are the prices on the New York Market, at which farm products of special interest to eastern farmers, sold on .....

<b>Eggs, nearbys (cents per dozen)</b>	
Jersey hennerly whites, closely selected .....	73 to 74
Other hennerly whites, extras .....	68 to 72
Extra firsts .....	64 to 66
Firsts .....	58 to 62
Gathered, 1 whites, first to extra firsts .....	59 to 65
Undergrades .....	51 to 57
Pullets .....	46 to 53
Hennerly browns, extras .....	65 to 75
Gathered browns and mixed colors .....	51 to 60
<b>Butter (cents per pound)</b>	
Creamery (salted) high score (93 score) .....	44½ to 45
Extra (92 score) c.c. ....	44
Firsts (90-91 score) .....	41½ to 43½
Firsts (88-89 score) .....	38 to 40
<b>Hay and Straw, large bales (per ton)</b>	
Timothy No. 2 .....	24 to 25
Timothy No. 3 .....	21 to 23
Timothy Sample .....	16 to 20
Fancy light clover mixed No. 2 .....	21 to 23
Alfalfa, first cutting No. 2 .....	25 to 26
Oat Straw No. 1 .....	14 to 16
<b>Beans (domestic, per lb.)</b>	
Marrow .....	9¼ to 10½
Pea .....	5½ to 6
Red Kidney .....	8¼ to 8¾
White Kidney .....	9¼ to 10
Yellow Eyes .....	—
<b>Live Poultry, via express (cents per lb.)</b>	
Fowls, colored fancy, heavy ..	25 to 30
Fowls, leghorns and poor ..	15 to 19
Chickens, colored fancy .....	21 to 22
Chickens, leghorns .....	19 to 20
Broilers, colored .....	35
Broilers, leghorns .....	30
Ducks, nearby .....	22 to 23
Ducks, Long Island .....	—
Turkeys .....	25 to 30
<b>Live Stock (cents per lb.)</b>	
Calves, good to medium .....	10 to 13
Bulls, common to good .....	2½ to 4
Lambs, common to good .....	11½ to 15½
Sheep, common to good .....	5 to 6½
Hogs, Yorkers (200 lbs.) .....	8½ to 9¾

feature attendant to it in that the New Year follows one week later and there is always a good demand at this time. As we go to press, the price of turkeys arriving via express is about the same as prices just before Thanksgiving.

## POTATO MARKET STILL DULL

There is little life to the potato market just before the holidays. Potatoes can be easily stored and therefore retailers load up well ahead of the holidays in order to devote their time to more specialized commodities and to their local trade needs. As a result along just now the potato market is dragging and lifeless; \$1.65 to \$1.75 is about the range covered by State potatoes, while Maines will anywhere from \$1.90 to \$2.10 delivered. Long Islands are now in the neighborhood of \$2.25 F. O. B. east end shipping points. A few operators in the market have been able to get a premium price at one time or other for exceptionally well graded stock, but these occasions are rare. There are too many potatoes to warrant for any material improvement. There seems to be a general disposition on the part of many to hold stocks for higher prices. In view of this year's heavy crop and in view of the lack of interest in the buying market, there is little likelihood of much improvement being experienced. Obviously from time to time we are going to see a temporary price boost. These increases, however, are due for short lives, for this very simple reason that just as soon as the price improves a lot of shippers are ready to send on supplies. A man is skating on thin ice who is holding for a real high price. If he is able to get anything that is at all reasonable he will be a wise man to let at least some go. The actual circumstances determine what is reasonable. If a man has some strictly fancy, well graded stock that will naturally call for a better price than average field run. But to hold on to one's entire crop until the price goes up is entirely too risky

## Color Your Butter

"Dandelion Butter Color" Gives That Golden June Shade which Brings Top Prices

Before churning add one-half teaspoonful to each gallon of cream and out of your churn comes butter of Golden June shade. "Dandelion Butter Color" is purely vegetable, harmless, and meets all State and National food laws. Used for 50 years by all large creameries. Doesn't color butter-milk. Tasteless. Large bottles cost only 35 cents at drug or grocery stores. Write for free sample bottle.

# Service Department

Licensed and Bonded Merchants

HERE are the names of licensed and bonded commission merchants in New York State handling various commodities including butter, cheese, dairy products, hay, straw, etc. These names are taken from the lists of licensed and bonded merchants issued by the New York State Department of Farms and Markets. We do not stand sponsor for any of the firms and want it clearly understood that we do not care to be held responsible for their transactions. The fact that they are licensed and bonded, however, is, in some degree, an indication of their reliability.

Before doing business with any commission merchants it is always well to get in communication with the individual. Naturally it is much better to become personally acquainted but this is not always practical or possible. At any rate, it is always well to write first and have an understanding that a shipment will be accepted. Some dealers do not handle all commodities and it is well to find out if they handle the particular product that you wish to sell. We often have to handle cases in the service bureau that would never have come into being had a letter been written to the merchant in the beginning for instructions on the kind of commodity they handle or for the most opportune time to ship. A lot of misunderstandings can be avoided by a single letter.

CUT OUT THIS LIST AND SAVE IT.

# The Trouble Maker—By E. R. Eastman

CHEERING and stamping of feet interrupted Jim, and he waited for the noise to subside before he could resume.

Then, as he continued, his voice deepened, his face flushed, and his eyes flashed with his emotions. The earnestness, sincerity and truth of what he was saying reached and stirred the men and women in his audience so that they sat tense and perfectly quiet to catch every syllable.

"Sometimes I wonder if you folks realize what those starvation prices have done to you and yours. Look around you now; there are not a dozen young folks in this room. Where are they? Gone! Driven from the homes of their fathers—because no amount of toil on these farms could give them an honest living—"

"How about those that stayed?" exclaimed an excited voice.

"Yes," answered Jim, "how about them? Grown old before their time. How about our girls and our women? In the city a girl is a girl until she's forty; in this cow country a girl is an old woman at thirty. Why? What fun do they ever have? What fun do you men have? The settlers of this country said that the three aims of this life were: Life itself, liberty and the pursuit of happiness.

"But the milk farmers for a generation now have had to change that to life itself, labor and the pursuit of cows." (laughter). "I don't have to tell you people how much liberty you have tied to a cow's tail three hundred and sixty-five days in the year!"

AGAIN the crowd interrupted the speaker to relieve its surcharged feelings by cheering and stamping of feet.

"Let me take a moment to tell you the story of a little farm boy, because this story is also that of millions of other farm boys and girls throughout the land. This boy was born on a large dairy farm. One of the first things he can remember is going to the barn with his mother and holding on to the cow's tail to keep it from switching in her eyes while she milked. For years and years, one of his outstanding memories is that of his mother carrying two heavy pails of milk from the barn across the barnyard, up the stile that led over the fence, and into the little old milkhouse. For half a lifetime she did this, as well as all of the work in the home without any help, and found time besides somehow to raise her children.

"This little boy never went even to the county fair, and a show was a thing unheard of because both father and mother were too busy to go, and besides there was never any money to go with.

"The years went on, one much like the other, and out of them stands the bitter memory of the boy's father dying; a comparatively young man, killed, the doctor said, because he went back to taking care of his cows too soon after an attack of grippe. From then on the boy and the mother had to manage, until finally the mother's health broke down too, and for what should have been the best years of her life, she has had a living death as a bed-ridden invalid.

"That's what producing milk under our present system of marketing is doing for us dairy farmers—and that is what it will continue to do for us just as long as we ourselves let it!"

PAUSING for breath, Jim looked at his audience which had again become silent with the tense quiet that one feels in the air before a great storm, and out of all the faces only two registered on his subconscious mind.

One was Dorothy's. Did he imagine it, or was she no longer indifferent, no longer indignant? Instead, she seemed to be listening to every word intently.

The other was the face of John Ball. He also was interested, but only because he was mad. His face was red; black eyes under shaggy eyebrows flashed angrily; white hair was rumpled where in moments of exasperation he had run his hands through it; while his white beard seemed to stick straight out toward Jim, as if pointing accusingly at him.

It came to Taylor with a feeling of hopelessness and futility that usually it was the people most in need of help who stood vigorously in their own light by opposing those very things that would help them the most.

"Yes," he went on, "we farmers are mostly to blame for our troubles. We have done a lot of talking while the milk dealers have done the acting. But now we have a chance to act. The

it going to be? Dealer price or League price?"

THEN pandemonium broke loose. The staid old conservative farmers were on their feet, shouting, jumping, throwing their hats in the air, and pounding each other on the back. Bradley, the chairman, for a time made no effort to restrain them.

Finally, knowing that there was more business, they sat down, and it soon became quite again.

"Time enough to shout," said Jim, dryly, "when we get this price, and we've got to do something besides shouting if we do get it. We've got the fight of our lives before us."

"We're with you!" shouted a voice. "What shall we do?"

"The first thing is to join the Dairymen's League, and sign the contracts we have here. We've signed the dealer's contracts for a generation. Let's sign these contracts to stand by one another. The second thing is to make arrange-

Conservative farmers, these, who, ordinarily would never think of speaking in public. But Jim's speech and the grave milk situation had carried them all beyond the point of self-consciousness.

In the group trying to get recognition from the chairman was old John Ball, and because Bradley knew that Ball was more or less the leader of the group who were opposed to what the League was trying to do, he gave him a chance to talk.

The old man got up, and strange to say, he smiled.

"Boys," he said, "we've listened to a lot of hot-air oratory this afternoon, and a lot of us have got pretty much excited—too much so, mebbe."

"Set down!" somebody interrupted.

"That's right. Put him out!"

"Now hold on a little bit," said Ball, seeming to become calmer as the audience became more excited and antagonistic. "This is a free country, ain't it? Every man's got a right to his own think and say-so. I'm an old man, and I've made my little bit right here workin' with you other fellows for a lifetime, and they ain't no man here more interested in what's good for us than old Johnny Ball, if I do say so as shouldn't."

"Sign up and get in line then!" young Greene shouted.

"No, I ain't goin' to sign up, Dan Greene! I was workin' these hills and milkin' cows before most of you fellers were knee-high to a grasshopper, and when some of you get a little more experience, you ain't goin' to be quite so quick to get burned with every new-fangled notion that comes along."

By this time the crowd was getting out of control. Hisses and cat-calls were becoming common throughout the hall.

OLD John Ball appealed to the chairman.

"Mr. Bradley," he said, "do I have this here floor or not? As a farmer in this neighborhood whose business is likely to be ruined by this fool scheme we have heard here today, I demand to have my say-so."

"Mr. Ball is right," said the chairman, "He should have a courteous hearing."

"Let him talk sense then," sang out a voice.

"We've heard this kind of talk in this county for two or three years, and that's one reason why we ain't never done anything."

"That's right," said another farmer, "every time we try to do anything old Ball and other back-numbers like him throw sand in the machinery."

Jim Taylor slowly unwound himself from his chair, got to his feet, and held up his hand.

"Just a word, Mr. Chairman."

"Mr. Taylor is recognized."

"Two wrongs never make a right," said Jim. "This is America—supposed to be the land of free speech. No matter what we think of Mr. Ball's sentiments, and you know I don't agree with them, he still has a right to be heard. And if we use our common sense, his views, whatever they are, cannot alter our determination to do what we think is right. Let's give him a fair hearing."

"All right," said someone, "but let him hurry up."

Jim sat down and John Ball continued.

"It won't take me long to say my mind, and I know that you folks don't mean it to an old man's advice, but I mean it jest the same. It may be that the labor in the city is organized and gets high wages. Mebbe it's sooo that the capitalists have organized, but that ain't no reason why we farmers should. Them folks in the city are different."

(Continued on page 434)

## What Has Happened in the Story Thus Far

WHEN Jim Taylor was forced to lick Bill Mead, old Johnny Ball's hired man, it was the last straw. At least so thought pretty Dorothy Ball, who had seen her childhood sweetheart oppose her father on the issue of actively fighting for better milk prices and who heard Bill's distorted account of the scrap. So poor Jim determines to forget Dorothy—who is now often seen with young Bradley, the farm bureau agent—and to throw himself heart and soul into the farmer's battle.

The League calls a strike! Speedtown buzzes with excitement, and Jim is delegated to speak to the crowded Town Hall meeting. With burning words he paints the plight of the dairy farmer.

Dairymen's League is our own organization and is the weapon through which we can do something. Its directors and leaders are dairymen themselves, elected by us dairymen. It is at last in a position to do something. Whatever that something is will depend upon us and how well we stand back of it.

"As you know, the dealers have, as usual, stated the price they would give for October milk. This price is higher than it would have been if farmers' opinion had not been so aroused during the past summer over the situation. But still this price is far below what it costs to produce the milk.

"For the first time in the history of the milk business we farmers are in a position to refuse this price and to tell these dealers through our representative, the Dairymen's League, what we will sell our milk for."

"What do you want anyway?" yelled a farmer. "The price the dealers are offerin' is twenty cents a hundred larger than last year!"

"I want something more than this sop," answered Jim. "They are throwing this twenty cents to us because we are excited. Besides, you know they usually march us down to their station and sign us up for our milk for six months. They do not dare to do that this fall, and have only asked us to sign up for the month of October."

"We've won somethin' then," said another farmer. "Why not let well enough alone?"

"What we've won," replied Jim, "is mighty little, and unless we do something to clinch it, it also mighty temporary. These advances the dealers offer show we have them on the run. The question before the farmers of this territory is, are we going to take the sop or are we going to keep them running?"

"What are the League prices, boy?" shouted another man.

"I'm coming to that," said Jim. "Our Dairymen's League is asking \$2.15 per hundred pounds for 3% milk for October. Our price is \$2.15, and the dealer's price is \$1.65. Men, I ask you, which is

to take care of our milk until the dealers stand ready to buy it at our price. There ought to be several local committees appointed and a general organization countywide committee to have charge of the fight in the county. This general committee should also see that between now and Saturday night a local meeting of dairymen is held in every community in this county where the situation should be explained and local arrangements made for taking care of the milk."

"That's pretty important," said someone. "How are we to take care of our milk?"

"Every locality will have to figure that out for itself. There are three or four farmer-owned plants in this county. If you live near one of these plants, you can arrange to make butter. Then in some communities there are a number of cream separators where two or three neighbors can arrange with the owner of the separator to get their milk skimmed. But in most places you will simply have to put it into pans and skim it at home, and make up your own butter."

"This will mean temporary loss, sacrifice, and a lot of extra work, but I'm saying it to you, and saying it hard, that even if you have to dump the confounded milk into the ditch, it will be the best paid for milk that you ever sold!"

Again the crowd started to cheer, but Bradley pounded them down.

"That's about all I have to say to you," concluded Jim. "We now have an opportunity; to make the most of that opportunity, we must go about it in a businesslike way. I hope, therefore, that this meeting will not break up until your general county organization committee has been formed and until every man has signed this contract—and until all of us are ready to go forth, as farmers have gone forth in other great crises, to overthrow oppression and to fight for the right."

JIM sat down. Immediately a dozen men were on their feet, all shouting, "Mr. Chairman," "Mr. Chairman."

# A Poetic Plum Pudding That is Poetry to Eat

How to Save on Fuel Bills—Mid-Winter Patterns—The Exchange Corner

THERE are dozens of recipes for plum pudding, and many of them are excellent. The one below, being metrical, is easily remembered. My own improvement on the recipe is the substitution of half a pound of breadcrumbs for half the pound of flour.

### The Plum Pudding Song

If you wish to make the pudding in which everyone delights,  
Of six pretty new-laid eggs you must take the yolks and whites;  
Beat them well up in a basin till they thoroughly combine,  
And be sure you chop the suet up particularly fine.  
Take a pound of well-stoned raisins, and a pound of currants dried,  
A pound of powdered sugar, and some candied peel besides;  
Rub them all up well together with a pound of wheaten flour,  
And let them stand to settle for a quarter of an hour;  
Then tie the mixture in a bowl, and put it in a pot.  
Some persons like the water cold, and some prefer it hot;  
But though I don't know which of these two plans I ought to praise,  
I know it ought to boil an hour for every pound it weighs;  
And if I were the Queen of France, or better, Pope of Rome,  
I'd have a Christmas pudding every day I dined at home.—L. R. F.

promise of not being the last of the Duanes after all. (Fox, 7 reels.)

his LIFE'S GREATEST GAME—A baseball story with many scenes of real baseball. How a boy, through his playing of the game, is discovered by his father, a baseball manager, from whom he and his mother had been separated through a misunderstanding years before. (F. B. O., 7 reels.)

LITTLE ROBINSON CRUSOE—Jackie Coogan, shipwrecked on a cannibal isle, has some exciting adventures and finally rescues a white colony through his knowledge of wireless telegraphy. Far-fetched but

THE PRICE OF A PARTY—A girl, hard put to it to make enough money to help her family, gets involved in a shady deal but refuses to go through with it. (Associated Exhibitors, 6 reels.)

his RAMSHACKLE HOUSE is the name of an old Florida home where a New York business man goes to recuperate, but unjust suspicion pursues him and adventures start, leading to scenes in the Florida Everglades where he seeks refuge—and also to a mutual admiration between him and the charming daughter of the house. (Producers Distributing, 6 reels.)

J ROARING RAILS—The appealing story of a man's devotion to a child whom he has come to look upon as his own. An engineer, he wrecks a train to save her life and thus loses his job but finally redeems his reputation by making a run through a raging forest fire. (Producers Distributing, 6 reels.)

soaking the soiled spot with clean water until as much ink as possible is removed. If the stain is persistent, apply to it a little oxalic acid or salts of sorrel, or even a weak solution of ammonia. You will find that those prompt remedies will prevent a very nasty stain.

In cases of illness, when ice is not procurable for cooling the head of a feverish patient, cut a strip of cucumber peel rather thick and lay the inner part on the forehead. It is deliciously cool, and remains so for some time.

Before washing new lace curtains you should soak them all night in water in which salt has been dissolved. This takes out all the lime and saves much soap and labor.

Long book shelves are prone to sag in the middle, and look very untidy. A neat supporting strut can be made from a brass tube. Lift the upper shelf, place the strut in position, and then release the shelf.

An excellent substitute for a rubber mallet is a rubber crutch tip slipped over the head of an ordinary hammer.

Save and dry the corn cobs for the following uses: To clean damp clay off from shovels, shoes, rubbers, etc., also to kindle fires with, and soak up water in stock pens.

Sugar in water adds to life and beauty of cut flowers. A French florist uses sugar solutions of varying strengths to preserve cut blooms. Carnations last twice as long with 15% of sugar. Roses require only half that amount.—Z. L. Dahvice.

### For Thin or Stout

FOR the young girl or the woman with the girlish figure, No. 2117 is a becoming style. It opens down the front to the hem, making it easy to iron, and one of the new wide belts adds a smart finish. No. 2117 cuts in sizes 16 year, 36, 38, 40 and 42 inches bust measure. Size 36 takes 3 yards 40 inch material with 1 1/2 yards contrasting. Price, 12c

2117

### Cutting Down the Fuel Bill

DURING the cold weather months, every thrifty housewife plans how she can cut down the fuel bill and still get a maximum amount of heat. While the coal strike was in effect, some years ago, I practiced the following suggestions and found them so valuable I have used them ever since;

**Paper Balls.** Take several sheets of newspapers and soak them over night in the set tubs. Next morning roll the wet sheets into firm, hard balls and allow them to dry in the sun or on top of the stove. These balls are excellent to use in place of wood for the furnace and will burn fully as long.

**Refuse Basket.** There is no better fuel economizer than the refuse basket. An old basket should be placed in the kitchen and all odds and ends of waste thrown in, including nutshells, burnt match ends, dried corn cobs and dried vegetable parings. After the basket is full, it can be mixed with a hod of small coal, and the result is truly surprising.

**Cinder Balls.** This is a very popular way of saving coal and is very widely used. Purchase ten cents worth of oxalic acid crystals from the druggist and mix them with one bag of salt. Put the mixture in two gallons of water and stir until dissolved. Pour the combination over a hod of fine cinders and roll into balls.—Irma Hegel.

### More Recommended Films

LAST week we printed the names of several films recommended respectively for junior, high school and adult consumption. Here is another list worth saving. The fact that a film bears the letters "hs" or "j" does not imply that adults will not enjoy it. It simply means that it is one which parents may perfectly safe in taking the younger members of the family.

THE UNKNOWN—The story of an eminent surgeon, who, unjustly accused of criminal negligence towards his patients, seeks the solution of a small town but steps out of its obscurity there to save a life through his famous operation. (Universal, 7 reels)

THE LAST OF THE DUANES—A good Tom Mix Western in which he defeats cattle rustlers, was a girl and thus gives

And for the mature woman of full figure, No. 1981 is an extremely flattering design. The cross-over front and side cascade give softness and length of line. Suitable for almost any material. No. 1981 cuts in sizes 16 years, 36, 38, 40, 42, 44, 46, 48 and 50 inches bust measure. Size 36 takes 3 3/8 yards of 40 inch material with 7/8 yard contrasting. Price, 12c

1981

TO ORDER: Write name, address pattern numbers and size very clearly, enclose right amount in stamps (coins sent at your own risk) and mail to Pattern Dept, American Agriculturist, 461 Fourth Avenue, New York City.

entertaining. Thrilling typhoon. (Metro-Goldwin, 7 reels.)

LOVER'S LANE depicts the struggle of a young country doctor who wins out against the jealousy of an older, unscientific practitioner; human and charming. (Warner, 6 reels.)

his MONSIEUR BEAUCAIRE—A scintillating romance of the Court of Louis XV., with scenes also of English society in Bath. Splendidly produced and acted, with dash, verve and humor and Valentino in a part in which he distinguishes himself. From the story by Booth Tarkington. (Paramount, 10 reels.)

J THE NAVIGATOR—Hilarious Buster Keaton comedy, in which he and a young lady, alone aboard a ship in mid-ocean, have many misunderstandings and surprising adventures. (Metro-Goldwyn, 6 reels.)

OH, YOU TONY!—A young man, played by Tom Mix, is fleeced by some sharpers in Washington, D. C., but retrieves his fortune at a horserace where he also thwarts his enemies. Romance and satire, horse-play and play by real horses. (Fox, 7 reels.)

ONE NIGHT IN ROME—An Italian dutchess imagines herself pursued by a vengeful father-in-law after the mysterious death of his dissolute son, and so disguises herself as an Eastern mystic. Dramatic twist at end. With Laurette Taylor, who enacted the part in the stage play. (Metro-Goldwyn, 7 reels.)

### The Exchange Corner

A LARGE safety pin is a useful holder for old buttons or loose hooks and eyes. Slip on the buttons, etc., close the safety pin, and you have everything handy, easily seen and always in order, whereas these small articles get lost when loose in a work basket.

When a candle is too large to fit the candlestick, don't cut it down to the required size, but hold the end in hot water. This will soften the wax and the candle may easily be pressed down into the candlestick without any trouble.

Do you know that apples pared will not turn color, if you will add the juice of one-half lemon in the water they are cooked in?—Ida A. Brown.

Immediately after ink has been spilled take a sponge and mop up as much of it as possible. Have two bowls containing clear, cold water beside you—one to squeeze the inky sponge into, the other to dip it into when cleaned. Continue

### The Trouble Maker

Continued from Page 433

We're farmers. We've always been used to working alone. Course we change works a little, threshing and silo-fillin' and so on, but mostly we think things out for ourselves, and we work them out alone, with our women and children."

"Right you are," interrupted a farmer. "The farm women and children have to work all right."

"Well, that ain't what I meant. You folks know what I mean. It ain't all bad on the farm. I bet if you lived in one of those flats that workin' folks in the city have to live in, you'd holler just as much as you do now, and the women-folks would find it a mighty sight harder. We fellers in the country have to work, but we can do it outdoors." For a moment, the old man's earnestness held his audience. "Outdoors in God's sunshine, and the wind, and the rain, and the green things in the Spring, and the harvest time in the Fall. I don't know how to talk about them, but I can sorta feel them, and so can you."

"There's still a chance to get ahead and save a little on a farm, if a feller's careful and willin' to get along the way our fathers managed. Trouble is, we want to eat our cake and have it, too. We get along better than most of us admit, but if we go and stir things up, we may get somethin' a durn sight worse."

"Even if we should get a big price for milk, what'll happen? We'll all go breaking our necks to get a whole lot more cows, feed 'em heavier, and first thing you know, we'll have more milk than the market will take and down will come the price, and things will be worse than ever."

THE crowd began to murmur again, but quieted when Bradley pounded

his gavel.

"But what I'm afeared of is that you young hot-bloods will get into a fight with these dealers, and they've got all the money—"

"You bet they have!"

"And all the milk plants," continued John Ball, without noticing the interruption. "They even own the milk cans."

"We got the milk, Johnny," shouted someone, "and they can't do nothin' without the milk."

"The milk ain't any good if we can't sell it," said old Johnny, raising his voice, "and we can't sell it if we get the dealers mad! This cooperative stuff sounds good and it might work for a while, but I'm tellin' you that it's the long years that give the test. Ten years from now you'll look back and say that old Johnny Ball was right."

"That's enough of that!"

"Aw, cut it out! Let's get down to business," yelled a farmer in the front row.

Raising his voice to a shrill falsetto, old John turned on the man who had last interrupted him and shaking his finger at him, yelled:

"When ye get burned with this thing, George Pratt, ye and these other young fools, don't come whining and belly-achin' 'round me, fer I'm tellin' you once for all that you're makin' a mistake. Farmers won't stick together! We don't need any of this fool cooperation," and sweeping his arms over the entire audience, the old man concluded, "and I don't need you or any of the rest of you to hoe my corn, to feed my cows, or—by the gods," and he shook his fists at them, "to sell my milk!"

Trembling and shaking with rage, he strode out of the hall, followed by eight or ten other men, who evidently were in sympathy with his sentiments.

(Continued next week)

# A Middle Aged Party Can Be Lots of Fun

Mrs. E. M. Anderson Tells Some Amusing Games for a Crowd

OUR Sunday School class had a delightful little party last night, and this is the way we did it. The class meets each month, and several of the plans apply to each meeting, but the special entertainment features do not. The members do not entertain in routine, or necessarily at all for the class meets by special invitation only, but it is so nicely organized and runs itself so perfectly that someone is always ready to entertain. A committee for the purpose furnishes and serves the refreshments, and another committee prepares the evening's entertainment.

On this occasion we met about 7:30—part of us—and those that arrived in time listened to the market reports, and for some time after the company assembled it was entertained by other radio features. The class president called the meeting to order for a short devotional period, after which the social committee took charge. A debate on the question "Which is more dangerous, fire or water?" was announced, and three men were appointed on each side. Three women were appointed judges, and all were supplied with paper and pencils with which to tabulate the points made in the debate. Among other interesting items we learned that water is bad because in lukewarm state it forms an emetic, and when ice cold is indigestible; soda water wastes money and injures the stomach; "fire water" is notoriously bad; water caused the Johnstown flood; in case of fire the water used as an extin-

guisher is very harmful, and water once drowned the world. Fire is bad because when swallowed it, too, is injurious to the stomach; close contact with it is also bad for any part of the body; the Chicago fire was worse than the Johnstown flood; and the whole world is eventually to be destroyed by fire. I believe it was decided that what is already accomplished is more certain than any promise, so supposedly water is more dangerous; it has destroyed the world once.

### An Alphabet Game.

By that time we had laughed till we were tired, so pencils and paper were again distributed, this time with a list of articles to be named from one, or sometimes two, letters of the alphabet. Something to drink (T). Name of a

common bird (J). One of the human organs (I). Name of a creeping plant (IV). What is jealousy? (N. V.) Name of a kind of a pepper (K.N.) What is it to surpass (X. L.) A high school composition (S. A.) Condition of winter pavement (I.C.)

After guessing these things, we were given a list of Bible questions covering the work of the Sunday School quarter up to date. The entertainment closed with a "spelling bee," consisting of common words, none very long, but spelled and pronounced backwards.

### "Seeing Nellie Home."

Lunch consisted of warm sugar served with a dish of snow for wax, pickles and saltines. I'm not sure, but the most enjoyable part of the evening was the ride home, it was so unique and unusual in these modern times—a real old-fashioned sleighride with bobs packed full and we all went to the end of the trip with those who lived farthest away, and rode back to our own homes, and were distributed a few at a time, as we used to do twenty years ago. Everyone was hilariously happy and we went to bed tired, but satisfied about 12:15.

Our plans are so simple and easily carried out that no one is at all overburdened, and anyone can organize a similar crowd with perfect success. The members are supposedly married people between the ages of 25 and 40, but some are older, some are younger and not all are married.—Mrs. E. M. Anderson.

### On Christmas Day

WOULDN'T be a minister  
Or lawyer grave and sinister.  
I wouldn't be a soldier or  
A sailor or a tailor, for  
I'd rather be a merchant man, on Christmas Day.

Not wealth for me increasingly  
Or even play unceasingly,  
I'd buy just dolls and toys to give away;  
To every boy that sighed for them  
To every girl that cried for them,  
And so I'd have a perfect Christmas Day.

—L. M. Thornton.

## American Agriculturist Cross Word Puzzle Number. 4

©AMERICAN AGRICULTURIST

FIVE seven letter words in No. 41 Not so easy, but, then, not so hard! Read the lists of definitions before you start to write in your words. You can pick out the certainties that way and they will help you with the harder ones. Almost all the words are used in connection with the farm or the farm home. Remember that each word must completely fill a bar of white spaces, as black ones mark the beginning and the end of words. Remember, too, that words must "make sense" both ways. Every numbered block starts a word; the definitions are in the list under the same number. Some go across, some down; a few blocks start a word in each direction. The list is your key to the answers. We know that every small boy will

guess at once. That is No. 32, across; an Indian Tent. As for No. 16, down—The frost is on it! There are quite a few two-letter spaces to fill, which often means the use of abbreviations or initials. In each case, the definition states this. Do not send your solutions in to us. These puzzles are published for your amusement, and no prizes are offered for answering them. We would like to know, though whether you like them or not, so if you have a postcard handy, drop us a line. A new cross-word puzzle, with the solution to No. 4, next week. The small diagram is the answer to No. 3, printed last week.

### Definitions of Words for Puzzle 4.

- | DOWN                                     | ACROSS                                     |
|--|--|
| 1 A sheepfold                            | 1 A cabbage with open curled leaves        |
| 2 Abbr. for pound                        | 4 A beast of burden                        |
| 3 Elongated fish (pl)                    | 6 A red vegetable                          |
| 4 Low female voice                       | 9 Every school has one                     |
| 5 Close                                  | 11 A growth on one's head                  |
| 6 A tomb                                 | 13 A garden green used for salads          |
| 7 Suffix used to denote more             | 15 A prefix meaning "to"                   |
| 8 In that place                          | 17 More fleshy                             |
| 10 Allows                                | 18 Senior (abbr.)                          |
| 12 Famous aviators                       | 19 Carry                                   |
| 14 A vegetable root                      | 21 Monkey                                  |
| 16 A large vegetable used for pies       | 22 Small rug                               |
| 18 A vegetable green                     | 23 Limit                                   |
| 20 Entrance through a fence              | 25 A kind of snow shoe                     |
| 21 Related to                            | 26 Appropriate                             |
| 23 Before                                | 27 Before                                  |
| 24 Female deer                           | 29 Fluid used in writing                   |

## "Maryland, My Maryland"

(Continued from page 426)

traveler who had been hurt by his horse falling on him". For this professional act Mudd was sentenced for life to the Dry Tortugas, a Federal Military prison on an island off the Florida coast, but was subsequently pardoned. Not far from here at Surrattsville, we saw the house of Mrs. Surratt, where the meetings of the conspirators were held. Mrs. Surratt was a widow, who kept a boarding house, and she was probably as innocent of any part of the plan as the traditional new born babe, but she was hung, with attending circumstances which are not pleasant to rehearse. It is said that Andrew Johnson, probably the weakest of Presidents, demurred at signing the order for her execution, but finally yielded to his Secretaries, Stanton and Seward, who insisted that an example must be made of all rebels and traitors.

As has been noted, Dr. Mudd was pardoned after public passion calmed, but Mrs. Surratt had been sent forever beyond the reach of any clemency or reparation.

After his leg was set, Booth continued his flight south, and went into hiding in a dense pine thicket, where he lay concealed for more than week without shelter, exposed to the rain and without companionship. During this time thousands of Federal troops swarmed over Southern Maryland and every house was repeatedly searched. It seems incredible that no one chanced to pass where he lay. Two or three white men and at least one negro knew his whereabouts all that week. Finally by the aid of friendship that would have been worthy of a better man, he succeeded in crossing the Potomac into Virginia, but there he had short shrift. The barn where he was concealed was surrounded by troops and finally set on fire and the miserable assassin driven from it like a rat, was shot through the head, dying in a few hours, and thus cheating the court room and the gallows. Thus ended his poor, sordid story.

Down at Point Lookout, on the extreme southern tip of the peninsula, was a military prison for Confederate soldiers. The site is marked by an imposing granite monument, that in this flat country is a landmark for many miles. On it there is a great bronze tablet, with the inscription: "Erected by the United States to mark the burial place of Confederate soldiers

and sailors who died at Point Lookout, Maryland, and were there buried to the number of 3384, but whose remains were subsequently removed either to their respective homes or to other cemeteries, where their individual graves cannot now be identified."

It is just one more monument to the unspeakable folly and woe and wastage of war, for these 3384 were boys whom southern mothers loved, just as northern mothers loved the boys who died in Libby and Andersonville. Yet it is pleasant to remember that time is healing all these wounds, and that this monument, erected, not as might be expected by some Confederate organization, but by the United States itself, is a recognition of the fact that the sufferings and the valor of North and South alike has become the common heritage of both.

Probably more than any other state, unless it may be Kentucky, Maryland was torn by conflicting passions in the War. Nominally she was a loyal State, but a large share of her people felt that their duty lay with the Confederacy, and the War divided not State from State, but neighbor from neighbor, and even brother from brother. In many Maryland cemeteries you will find two soldier monuments—one to the men who wore the blue and one to the men in gray. There is a Confederate monument (at Hagerstown, in western Maryland, if my memory is accurate) which represents the sculptured figure of a beautiful woman stooping to comfort a dying soldier with an inscription whose lingering cadences seem to me to be the almost perfect expression of faith in ultimate recognition and undying fame:

"Their praises shall be sung  
In some yet un moulded tongue  
In the far off summers that we shall not see."

I think the North, as a whole, has come to give full meed of recognition to the dignity and paths of the Lost Cause.

\* \* \*

Thus, after many years, I renewed Maryland memories. We were fortunate in having for companions Mr. and Mrs. William Amoss. He was Director of the Farmers Institutes in Maryland for many years, and he knows the State—its highways and byways—its bays and headlands as a man knows the streets of his town. His relationship with the farmers of the State was particularly intimate and cordial and in a land where the traditions of hospitality are perhaps even more insistent than with us, there were homes when he went and even took his workers with him. One of the outstanding memories of my life is a January night, eighteen years ago, when we were guests of Philip Brisco, down in old Calvert County. His home is a great, roomy, old time country mansion, possessing that which only years can purchase—memories and traditions. From a little bluff it looks out over the gleaming Pautuxent—at this point some three miles wide. Across one end of the house is the big parlor, built in the palmy days before the war, with two big brick fireplaces. That winter night there was a little company of neighbors, and in each of these fireplaces there was a huge flaring, flapping fire of old field pine. There was also feasting and good cheer, with a black man to tend the fires, and it was the nearest I shall ever come to knowing what life was like in the old days. I suppose the romance and the glamour of the old regime will never be forgotten.

So, the other day, Amoss said again, "We will go to Philip Brisco's," and go we did. I think the years have brought few changes. The old house still stands with its stories and its memories. The tobacco was lush and shining green, and the corn was ripe and ready for the knife. The host and hostess seem no much older than before, but the youngsters have become men and women, and there are grandchildren playing in the storied old rooms. I wonder if I shall ever pass that way again.

### MISCELLANEOUS

**CANDY—Let me send you some of my high-grade chocolate or vanilla caramels, chocolate covered cream fudge or chocolate cream drops.** 1 lb., 45c; 2 lbs. 85c. Postpaid. **F. H. GERBERICH,** 537 North 11th Street, Lebanon, Pa.

**FOOTE PRINTS ANYTHING.** Mail copy for estimate. Free samples; price list. Large variety cuts; no extra charge. **FOOTE PRINTING,** Dept. P, 5702 Haltnorth, Cleveland, Ohio.

### REAL ESTATE

**MONEY MAKING FARMS FOR SALE** in central New York State. For sizes, description, price and terms, write **PERRY FARM AGENCY,** Canajoharie, N. Y.

**STORE PROPERTY FOR SALE:** 1½ acre land, store building with living rooms, barn and shop. **HENRY UTTER,** Kortright, N. Y.

Send for free loom book, it tells all about the weaving business and our wonderful \$9.90 and other looms. **UNION LOOM WORKS,** 332 Factory St., Boonville, N. Y.

**PATCHWORK.** Send fifteen cents for household package, bright new calicoes and percales. Your money's worth every time. **PATCHWORK COMPANY,** Meriden, Conn.

# Shipping Holiday Poultry

## What, When, How and Where to Ship

THE Christmas and New Year holidays mark what we may consider the last of the "specials" in live poultry shipping circles for sometime to come. There will be no more special occasions to cater to until March when the Jewish holiday, Purim, will be celebrated and when fat fowls and hen turkeys are most in demand. It is a long time until March and after that holiday we have a full month elapsing until the next special occasion comes when those of the Jewish faith celebrate the Passover.

### What Is Wanted

The other day we called up a few men in the market to find out whether there were any indications that the trade would demand something special, in order that we could tell our readers what kind of live poultry would sell the best. The unanimous answer was, "Anything, as long as it was fancy." It looks as though the market is going to be the same as on previous holiday occasions. Fancy poultry will bring a good price. Common stock and under grades will drag. This holiday season is not a good time to try to unload a lot of culls. Many shippers tried it during the Jewish holiday period and found their mistake. At holiday time consumers seem to forget their close watch on the purse strings and "open up" as the saying goes. They are willing to pay a few cents more but they want fancy and quality poultry in return.

### When It Is Wanted

Timing of shipments is very important. In our territory all poultry sent into the live poultry market travels via express. That makes it a very simple manner to time shipments almost to the hour, especially if you are on a direct or trunk line. Even if you are on a feeder line, a perishable product gets very prompt handling. You can almost count on the hour your live poultry will arrive in the New York market. If you are not acquainted with shipping practices, the best man to go to is your local express agent. He will tell you the most direct route and the best trains. There are some trains that delay along the line while others go right through. Some make better connections than others.

Above all, avoid late shipments. It is to no one's advantage to ship poultry that will arrive on the market on the 24th. Tuesday, the 23rd, should really be the last day for poultry arrivals. Retail dealers do their buying early so that they can take care of their local trade on the last rush day, which is the 24th. In fact, if we were shipping, we would try our best to have our poultry reach New York on Monday afternoon at the latest. Shipments that come into the market too late will have to be held over Christmas in the crates and naturally they are going to suffer a lot of shrinkage. It is almost as bad to ship too early, because if the birds are held over Sunday they suffer a great deal.

### How It Is Wanted

Now we come to the point of "How poultry is wanted" to get the best returns. In the first place, grading has a great deal to do with the price a shipper receives. Those who have been shipping for some time know that it pays them to grade according to breed or color and then as to size. If a man has a lot of Rhode Island Reds to send in, he will find it to his advantage to make two lots of them, one to consist of large fancy birds and the other to consist of the under sizes. His gross returns will be much better than if he were to mix the whole lot in one crate. They will also return more than if he were to throw in a couple of Rocks or white birds, even though these latter be fancy. Just picture yourself in the buyer's position. If you look at a crate of fowls that are uniform as to color, size and finish—real fancy—you will be immediately attracted

to them. Now take half of those birds and mix them with a lot of small, scrawny, average looking individuals and see how the value of that crate is pulled down. The way this mixing works on the market is that a mixed crate such as this brings little, if anything better than if the whole crate contained small common stock. Nine times out of ten the poorer individuals in the lot make the price on the whole and that holds true whether the commodity being sold consists of poultry or potatoes. If the flock going to market is of good size, it will pay to crate them into 3 sizes, fancy, mediums and culls. If there are only a few culls, it is best to keep them home and save on the meat bill.

### Do Not Crowd Birds In Crates

Another detail to watch in shipping is the attention that must be paid to the number of birds in a crate. It is bad, business to crowd, for crowding has a number of serious detrimental effects. Live poultry at the best does not meet any too gentle handling in transit and if there are too many fowls in a crate, there is likelihood of one or more being trampled on and killed. A couple of dead birds have a decided psychological effect on the buyer when he is examining crates. One glance at such a condition mars what might have been a perfect top. In addition to that crowded birds can never show themselves off to the best advantage.

There is considerable amount of shrinkage suffered by poultry in transit. The U. S. Department of Agriculture has conducted several investigations along this line and has found that on the average there is a loss of about 11% in weight suffered by birds in transit. This is under average conditions. Where poultry is crowded this percentage of shrinkage is a great deal larger. As a matter of fact a large proportion of the heavy recent losses in the express receipts in the live poultry market have been traceable directly to overcrowding in the crates rather than the presence of any mysterious disease that has the live poultry market so upset. Where poultry is real fancy, it suffers not only from this heavy shrinkage but from the lack of ability to show itself off and does not do itself justice when placed before a buyer. As is always the case the fanciest seem to suffer the most.

Last but not least, overcrowding often over-taxes the crate with the result that slats become broken and the birds escape. The additional expressage on an extra case is a good insurance on consignments reaching the market in a better condition. Incidentally, if you make your own crates, allow for plenty of ventilation.

### Where To Send It

Now we come to the last detail—where to ship. There are a number of receivers of live poultry in the New York market. Some are good and some are bad. About the safest guide there is to follow, especially where the shipper is not acquainted with the market, is to deal with the licensed and bonded commission merchants. There are a few of these who may be guilty of slight irregularities but they are few and far between and are soon detected. The old reliables are only too well known and the farmer who does business with them can feel pretty certain of getting a square deal. They will get about all there is in the market. These men are not in business for a year. In the issue of December 6 AMERICAN AGRICULTURIST published a list of these dealers. It is a good plan to get in communication with the man you are shipping to, first, to see if he is in a position to handle your consignment.

### Keep Shipping Receipt

The last detail to bear in mind is to keep all correspondence and shipping receipts. In case your poultry is lost in transit or goes astray you then have a record of what you sent and the acknowledgment on the part of the carrier of what the shipment consisted of. Recovery with such a loss, is a great deal easier where these receipts are in hand. If you meet the right train schedules you should have no difficulty in getting your birds to the market in time.

## RAISE MORE CHICKS

Your money back in 30 days if not satisfied

The Royal, with the largest fire pot of any brooder on the market at our price, holds more fuel and burns either hard or soft coal successfully. The chicks are cozy, happy and growing under a Royal, when the fire would be out in a small stove brooder. The hover is extra heavy, wirebound and one piece. Five inch flue pipe, and combustion chamber four times as large as other standard stoves. Both check and direct draft are automatically controlled. The grate is large and extra heavy. Fire-pot has straight sides; soft coal will not clog.

Your dealer should have a full line of Royal Poultry supplies. We make brooders, leg bands, chick feeders and waterers, non-freeze fountains and the other supplies needed on the poultry farm. If your dealer can't supply you, send your order direct.

# In 50 days I'll put you in a big pay job!

SERVICE MANAGER

IGNITION EXPERT

BATTERY EXPERT

TRACTOR EXPERT

GARAGE MANAGER

If you are earning less than \$50 a week, read every word. Why stay in the old job, with no future—no chance of ever earning much more than you are now? The Auto, Tractor and Electrical Business offers thousands of **BIG PAY JOBS**—jobs where you are the **BOSS**. Get out of the rut—be independent—be an Auto Expert.

**J. H. McSWEENEY—THE LARGEST OPERATOR OF AUTOMOTIVE SCHOOLS IN THE U. S. WILL TRAIN YOU**

I am the largest operator in the United States. I have completely equipped schools in Cincinnati, Chicago and Cleveland. Think a moment what it means to be trained by McSweeney—think of the prestige—the case of getting a big job when you can say "McSweeney Trained Me." That's the magic phrase that has opened the doors of thousands of big pay jobs to my students. You can go to any of my schools—the school nearest you or the school nearest where you want to locate.

**EIGHT SHORT WEEKS—AND THEN SUCCESS**

Think of it—eight short weeks in any of my schools—then a big pay job—success! You don't have to know a thing about cars—you don't have to have any education—all you need is the determination to get ahead. In eight weeks you'll be, not merely a garage mechanic, but an Auto Tractor & Electrical Expert—a Big Pay Man.

**McSWEENEY TRAINED MEN MAKE GOOD**

A. J. Beall, Jr., Morgantown, W. Va., made \$85,000.00 last year from his garage and Chevrolet Agency.

George Smith, W. Alexandria, Ohio, makes over \$800.00 a month clear with his garage.

Thousands of other students are now making from \$50 to \$150 a week. Before they came to school, they knew nothing about automobiles—now they are successful men. You, too, can have the same success—all you need is the Training—**McSWEENEY Training**.

**NO PREVIOUS EXPERIENCE NECESSARY**

Age or lack of experience is no handicap. I have trained hundreds of men with no previous knowledge of automobiles. I have successful graduates—men who are making big money—from 16 to 65. Age makes no difference to an employer if the man knows his stuff,—and he **DOES** when he completes my training.

**BE AN AUTO EXPERT**

Ordinary garage mechanics make good money. After eight weeks in any of my schools, you'll be in a position to boss ordinary mechanics, and to make more money than you ever dreamed of before you read this announcement.

**WRITE TODAY FOR THE BEST OFFER EVER MADE**

The leader sets the pace. I am the acknowledged leader in the automobile school business. Because I have three completely equipped schools, I can give more for less money than any one else. Right now I am making the lowest tuition offer ever made in the history of automotive schools—you'll have to act quickly in order to get in on this.

**Get This Big Catalog FREE!**

*My big 64-page illustrated catalog tells the whole story—I send it free if you act at once.*

**DECIDE TODAY—Your Entire Future Lies in the Balance**

The right decision today will either start you on the road to success—to big pay jobs—to being your own boss. The wrong decision will leave you in the ranks of the underpaid! Make the right decision now—today—Fill in the coupon and mail it at once.

## RING OUT WILD BELLS

Ring out, wild bells, to the wild sky,  
The flying cloud, the frosty light:  
The year is dying in the night:

Ring out, wild bells, and let him die

Ring out the old, ring in the new,  
Ring, happy bells, across the snow:  
The year is going, let him go;

Ring out the false, ring in the true.

Ring in the valiant man and free,  
The larger heart, the kindlier hand;  
Ring out the darkness of the land,

Ring in the Christ that is to be.

Alfred Tennyson

# Handling Sheep in Winter

## And Other Every Day Problems of the Farm

THE season for the conservation of ewe-lambs and of old ewes is past for this year. At this time efforts to conserve and increase our farm-flocks must be based on methods of flock husbandry that will tend to reduce the losses at lambing time and to bring about a general improvement in the condition and vigor of the flock.

Lambing time is literally the flock-master's harvest time, and the thrifty owner of sheep is now looking forward and planning for this most important season. At lambing there are often great losses, lambs die at birth or at a few days of age. The cause in many cases are lack of thrift on the part of the ewes and lack of care on the part of the farmer. With the present prospective wool and lamb prices, we must strive to reduce the size of the dead lamb pile and bring every ewe through the winter that is capable of raising a lamb and a crop of wool.

The winter management of a flock of breeding ewes should be accomplished with three main objects in mind, viz., the maintenance and increasing of the bodily vigor of the ewes, the development and delivery of a robust lamb and the growing of a fleece of wool that will in the main if not fully pay for the winter up-keep of the flock. The exact condition of a flock of sheep cannot be determined by merely looking at them, they should be handled and the degree of covering over the loin and back will speak eloquently of the difference between a flock of ewes properly fed and those wintered on oat straw. During the period of

against confinement, in cold, clear weather sheep often prefer spending the night lying out in the open to going under shelter. If ewes are not inclined to take the necessary exercise it is a good idea to scatter some form of roughage over the field at some distance from the barn in order to induce them to travel.

If good clover or alfalfa is available, very little grain need be fed until the near approach of lambing time. A mixture of two parts oats and one part bran by measure proves an excellent grain feed for breeding ewes, the addition of a little linseed oil cake to the mixture will make it still better. One-half a pound per head daily of this mixture with other feed will be sufficient until near lambing. Silage is a valuable sheep feed. My experience has been that it stimulates the appetite and aids in bringing the ewes to lambing with plenty of milk. It is a practical source of succulence. Two pounds of good silage fed in connection with a leguminous hay will go a long way toward fulfilling the daily requirements of a breeding ewe.

It is the little things that count in the winter management of a flock of sheep and the attention to details which will mitigate the probability of disastrous results is much more important and practical than any procedure designed to remedy the evil effects of lack of attention. The individual needs of no two sheep or two flocks are the same; it is "the eye of the master that fattens his cattle."—MARK J. SMITH.

their technical nature it is not surprising that this confusion should occur. It is, however, decidedly to the interest of the farmer to distinguish between the two. He should use the correct term in ordering, or he may not obtain the material that he desires.

As is well known, calcium carbide when acted upon by moisture gives off acetylene, the illuminating gas used in many farm homes, and the residue is ordinary slaked lime. Cyanamid when acted upon by moisture breaks down to form an organic nitrogen compound with valuable fertilizer properties.

Calcium cyanide, on the other hand, when acted upon by moisture gives off hydrocyanic acid gas,

### DEVELOPING A MINIATURE SQUASH

A squash, known as the Kitchenette, has been developed by the specialists of the department of agriculture of the University of Minnesota. The vegetable is a diminutive of the historic Hubbard squash and is so named because of its adaptability to the needs of the small family.

The outstanding characteristics of the Kitchenette are its small size, averaging from five to seven pounds, its uniformity, quality, good appearance, early maturity, good keeping and thinness of shell. The commercial Hubbard weighs from 10 to 30 pounds and because of being too large for the average family there is a consequent waste. This new squash is found easy to carry from the market to the home and is proving popular on this account. The Kitchenette Squash is seen on the middle shelf, while the regular Hubbard is on the lower shelf.—A. P. Child.

gestation every ewe should gain fifteen or more pounds in weight, because a ewe within a few hours of lambing loses about twice the weight of the lamb, therefore if she only maintains her weight while carrying the lamb, she is actually losing in weight. Another reason for bringing the ewes to lambing on the up-grade is to have the ewe in such a condition that there will be plenty of milk for the lamb. Much of the trouble with regard to ewes not owning their lambs is usually with ewes that come to lambing time in poor condition and consequently with little milk. A ewe with a full udder is very apt to own her lamb.

The main essentials in successfully wintering a flock of in-lamb ewes are: nourishing food, exercise, succulence, fresh water, plenty of fresh air and protection from cold rains and drafts. Exercise is imperative, ewes confined in tightly closed sheds or poorly ventilated barns and basements, come to lambing time in poor thrift and give birth to lambs of low vitality, among which mortality is high. The nature of a sheep rebels

### Best Time To Lime

Question: When is the best time to apply lime? If applied in the winter, is there apt to be any loss?—A. L. M., Pa.

THE best time to apply lime is when the farmer is most free to haul it and put it on the land. On most farms this is in the fall and winter when other work does not crowd. As to loss from applying lime in the winter time, there is none. In fact for many crops the best time to put lime on is in the winter. This is particularly true of grass, hay or pasture lands, for then there is no foliage to interfere with even spreading. Winter is the best time to take advantage of agencies which work the lime into the soil. Freezing and thawing does much toward imbedding the lime into the immediate surface where life processes first start and where most stimulation is needed in the early days of the spring. Spring harrowing helps this process along.

Surface dressing is the only recourse on much of our permanent grass land which is too hilly to permit of tillage or clover, alfalfa or blue grass. Top dressing of a lime material in an available form acts as a rejuvenator and stimulator for next spring's growth. Even timothy, supposedly a rather acid tolerant plant, responds properly to liming on lime deficient soils.

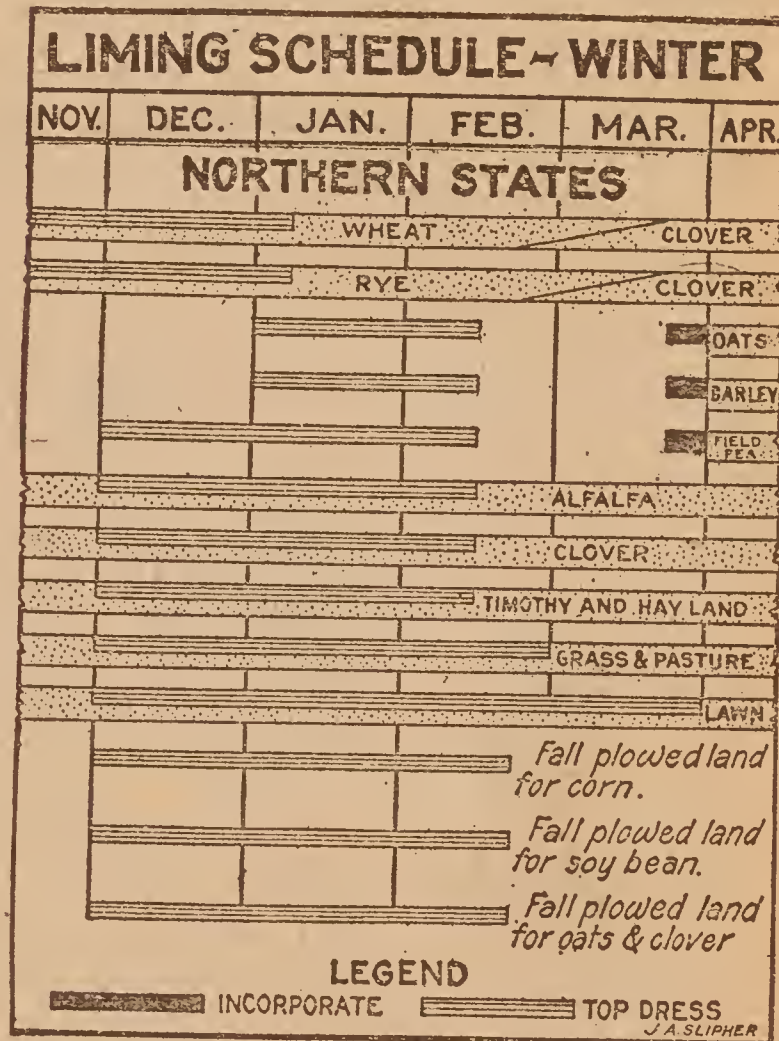

The tendency of clover to "run out" and of desirable grasses to give way to weeds is generally traceable to one of two causes: first, seed that is not adapted for our northern climate conditions; and, second, lack of sufficient lime in the soil. On sour land intended for spring clover seeding, winter liming comes in the nick of time to convert the otherwise inhospitable medium into a favorable one.

Fall plowed land offers a good place for lime. The tillage operations in the spring will completely incorporate the lime into the soil.

Then, too, as we have already indicated, liming in winter makes it possible to use farm labor at the slack season of the year, and also permits the purchase of lime when there is often a reserve supply on the market.

### The Difference Between Cyanamid and Cyanide

CYANAMID and cyanide are two words somewhat similar in appearance and pronunciation, but which designate radically different products. Because of the similarity of the two words and

a most effective insecticide and rodent exterminator.

Note, therefore that cyanamid is used as a fertilizer ingredient, and for that purpose is considered very valuable because of its high available nitrogen content. Calcium cyanide, on the other hand, is a poison, giving off a gas which is used to kill various insect pests and rodents, such as woodchucks, rats, moles and similar burrowing forms.

The residue left after all the gas has been evolved from calcium cyanide is non-poisonous and is made up for the most part of slaked lime.

The gas that is evolved from calcium cyanide has long been known and used in the fumigation of greenhouses, ships, warehouses and similar structures, and for many years has been the standard method of controlling insect pests of citrus trees in California. This same principle is now being transferred to the destruction of rodents and a number of insect pests attaching fruit trees, vines and vegetable crops. Each small particle of calcium cyanide gives off its small portion of gas and the destruction of the insect pests is thereby accomplished.

This rhyme will help you remember:  
Calcium cyanide, is an insecticide.

### Fall Plowing

ONE of the unfortunate results of the long drought this fall was the little plowing that was done. There is always some debate as to whether fall plowing or spring plowing is best for the crops, but there can be no argument over the fact that a lot of plowing done this time of the year helps to get the work well started in the spring.

To get things coming our way, it is first necessary to go after them.

## Pitfalls of the Young Breeder

By DeWitt C. Wing, Managing Editor of The Breeder's Gazette

SOME of my young friends have asked me to discuss this threadbare subject. If the reader's head is not already two-thirds gone to bed, I promise to keep him awake 17 minutes.

Most young farmers today are more cautious and keener in business transactions than their fathers.

In raising pure bred or improved livestock, middle-aged and elderly men fall into more pits and experience more difficulty in getting out of them than young men.

### All Fall Now and Then

"Old fools" head the long and ancient list of men who make and often repeat mistakes in business and matrimony.

But every man, whatever his business, falls or is pushed into pits throughout his career.

Falling is one of the things that we do when in infancy we learn to walk. It is an essential part of our training in the art of walking.

A neighbor's boy, 13, fell into a rock-walled well 50 feet deep. He was young enough to learn through that experience that he couldn't afford to fall into it again. He didn't. He was taught, but unhurt by the fall. It would have injured and probably killed a man. A farmer, 52, fell into a caved-in cellar, and broke a leg.

Falls damage and often permanently handicap mature men; they are rough, but effective teachers of boys and young men who are capable of learning anything.

Boys who never fall into anything rarely climb up to high places. The lad who is active, eager to learn, and full of the spirit of adventure, suffers many a fall. By falling he learns to walk with an ever increasing steadiness and surefootedness in his vocation or profession.

A sweet and tender motherliness would safeguard boys from all pitfalls, but he-boys glory in and grow by falling and getting up and going down again, and coming up stronger and wiser.

Far be it from me to urge a young man who aspires to be a stock breeder to shut his eyes and fall heels over head into every hole in the roadway to his goal, in order to train himself.

It is inevitable that he will drop into some of them, regardless of voiced warnings and conspicuous danger signals. In many instances he may be led or pushed into them by mercenary shylocks who infest all the highways and byways that humanity travels.

What the business world ought to be, according to our ideals, is one thing; what it is, as experienced, practical men know it

from day to day, is a decidedly different thing. One is ideal; the other real. The latter is full of pits for the soft-headed, the dull, the blindly trustful, and the reckless. Even the hard-headed, the keen-witted, the open-eyed suspicious and the prudent stumble into bogs and holes.

Modern shylocks and shysters always prefer some kind of alleged "personal service" to the young man whose money they covet. They are scattered along all roadsides, guiding him into pits by volunteering their "services," and taking his money as he goes down.

In the improved stock-breeding business these smooth scoundrels wear many guises. Many of them during the late "boom" days were "fieldmen," employed on a high commission basis by publishers of "breed organs."

A "breed organ" is a monthly or semi-monthly journal which plays for and preys upon farmers who raise any one of the leading breeds of stock. Some of these "organs" are reputable and useful; many are neither.

### Intellectually Inbred

Farmers who obtain information and news in regard to any bred from a "breed organ" are apt to be misled and deceived, because every "breed organ" exaggerates and "oversells" the merits of the breed that keeps it going, and directly or by implications condemns every rival breed. The man who supports a breed organ, and depends on it alone to sell his stock and keep him posted, becomes intellectually inbred and narrow.

A second class of shysters who feed on the financial fat that young men and beginners carry when they engage in improved stock breeding consists of dealers and speculators in animals for breeding purposes. Not all dealers belong to this class, but those who do are a

wily lot. When times are good, they buy a few fair animals and many that are inferior or diseased, or both, and sell them at a big profit to the uninitiated.

Parasites, middlemen, speculators and shysters are always numerous in any prospering business. Where treasures are laid up or in circulation, thieves always abound.

### Get Good Advice

Let the young breeder bear in mind, however, and be reassured by the fact that there are as many honest and square-dealing men in the United States as there are in any other business or profession.

Another point to be considered by young men headed toward stock raising is that for the asking they can obtain sound, practical advice in regard to breeding animals, bloodlines, health and other related matters from reputable breeders and many other sources in the trade.

Men who are competent and employed to render a real service to young breeders and beginners are accessible to them in person or through correspondence.

There is no excuse today for a beginner to go wrong or be misled by charlatans. If, however, he belongs to the gambling, reckless and uninformed class, and goes at high speed where he should stop, look, think and ask questions, he is in for trouble. A fool and his money are soon parted. No kind of protection can protect a fool from himself in matters of money or morals.

If, during the remarkable prosperity of the pedigree stock trade from, say 1910 to 1919, breeders had advertised in farm weeklies and the few weekly livestock journals which served and still serve all breeders, both sellers and buyers would have saved a pile of money.

Moreover, many young farmers who were inveigled by unconscionable fieldmen for one-breed hog journals in particular and some other breed organs in general into paying fabulous prices for animals with worked-up reputations as winners, sires or dams, would not have been led into the pits from which, in due course, they emerged broken or badly bent.

A son of one of my boyhood neighbors was victimized by a hog journal's fieldman to the tune of \$30,000. He is one of many young men who were swindled by fieldmen in the days of "\$60,000" boars.

In many cases these "busted" young men and their "I told-you-so" bankers, relatives and friends now regard the improved stock-breeding business as a "crooked game," or as a hobby for rich men who ride it as plug-hat gamblers, and have no interest in it as a practical farm enterprise.

The raising of improved live-

### Standard Farm Paper Editorial Service

THIS is the third of a series of special articles by the members of the Standard Farm Paper Editorial Board. The members of this Editorial Board are as follows:

C. V. Gregory.....Prairie Farmer, Chicago, Ill.  
D. A. Wallace.....The Farmer, St. Paul, Minn.  
H. A. Wallace.....Wallace's Farmer, Des Moines, Iowa  
Clarence Poe.....Progressive Farmer, Birmingham, Ala.  
Donald Keefer....Pacific Rural Press, San Francisco, Cal.  
E. R. Eastman....American Agriculturist, New York City  
T. A. Leadley.....Nebraska Farmer, Lincoln, Neb.  
John Cunningham...Wisconsin Agriculturist, Racine, Wis.  
A. J. Glover.....Hoard's Dairyman, Ft. Atkinson, Wis.  
DeWitt C. Wing.....Breeder's Gazette, Chicago, Ill.

DeWitt C. Wing, author of this article, is well known to live stock men as managing editor of the Breeders Gazette, which for more than a generation has been the leading livestock paper of the United States. The subject of this article is one of great importance just now, when we are recovering from the slump that has affected the purebred industry during the past four years. No one is better qualified than Mr. Wing to discuss this subject.

The next article in this series will be a discussion of "The Other Side of Farm Life" by Dan Wallace, editor of the Farmer, St. Paul, Minnesota.

### Happy New Year

The entire staff of AMERICAN AGRICULTURIST joins with the publisher, Henry Morgenthau, Jr., and the editor, E. R. Eastman, in wishing that 1925 may bring to you and yours a heaping measure of prosperity, contentment and happiness!

### Our Tax Reduction Program

- I. The abolition of a direct State tax on property.
- II.—No further reduction in income taxes until government taxes are reduced.
- III. Discontinuance of the issuing of tax exempt securities.
- IV. A carefully prepared detailed budget for every government unit from the nation to the county.
- V. Full publicity and information to taxpayers showing the exact purposes, with amounts, for which taxes are spent.
- VI. We are also in favor of:
  1. Larger taxation of personal property.
  2. Gasoline sales tax, and
  3. Taxing billboards along sides of State highways.

We are working for your relief on the above stated principles. Do you think they are right? If so, will you get behind them by dropping us a line?

### The Market Situation at a Glance

THE close of the year is a good time to take a glance at the farm marketing situation, both to dispose of any crops that you may have on hand, and as a basis of making plans for the coming season. Crops are all harvested and many of them have gone to market. The railroads are to be congratulated this year for the good service they rendered to farmers in moving a heavy volume of products on time. However, there has been a large hold over of many products that could be held in storage.

The outstanding development of this year's markets were the good wheat and other grain prices which prevailed and the good yields of these grains which most American farmers had. Whether the good times which came to the grain growers this year will continue is somewhat doubtful. There was a considerable increase in the acreage of wheat planted this fall, and if this acreage yields well, and if the world's supply of wheat is good for next sea-

son, we may look for much lower grain prices. Always we meet the same old problem of over-production. We farmers never seem to learn the lesson.

The frosts held off very well, giving corn an opportunity to ripen, although there was a large amount of soft corn and good seed corn is scarce and high.

Cotton was a big crop and brought the grower good prices.

hope for much better prices later on. In spite of the nice weather, many growers in the East were caught by the unseasonable spell of cold weather and thousands of bushels were frozen in the ground. This was bad for such growers, but good for the general potato market situation.

Cabbage was also a big crop, resulting in very low prices. There have been a few spurts—short lived—when there was an upward turn, but holdings are too heavy to warrant much higher prices, except for these temporary local increases.

Generally speaking, the fruit grower has had a pretty good year. Production was none too good, prices have been very fair, and have remained fairly steady throughout the season.

Poultry, too, in all of its branches, has been in an especially good position during the past year, and the prospects are still good.

Sheep raisers are in a very strong position. They have made money for two years, and the outlook for prices is still good. The world is short of textiles, resulting in a steady demand at good prices.

The hog situation is headed toward a higher price level. A large number of hogs went to market this fall, which may result in a general shortage with resulting good prices for the coming season.

Producers of beef cattle are having a discouraging period, and because of the high feed prices, beef producers have gotten rid of as many animals as possible. In commenting on the situation in the livestock and dairy industries, the United States Department of Agriculture states as follows:

"Broadly speaking, the livestock industry is traveling through the bottom of a price cycle. During the war, great effort was directed toward production of the major money crops. Severe post-war depression coincident with remarkable heavy yields of the main feed crops turned much productive effort back on the animal industries. Livestock helped to carry along and work off the crop surpluses. Now grain surplus has become shortage. Sheep have already recovered and hogs are next. The present lesson to stock raisers" (and to dairy-men) "is to improve their herds while improving is cheap."

The dairy situation, too, looks a little better. The Dairymen's League pool price for November was \$2.35, with 9 cents out for expenses and 10 cents borrowed for certificates of indebtedness. This is forty cents higher than October gross pool price. It is the highest pool price since November a year ago, when the gross pool price was \$2.43. Exclusive of October and November a year ago, it is the highest pool price since February, 1923.

One encouraging feature of the dairy situation is the way the butter market has held up. Fresh creameries have been in somewhat short supply. This greatly helped the dangerous butter storage situation, so that there has been considerable movement out of storage on to the market. Some improvement is to be noted also in condensed and evaporated milk markets.

The dairy situation, however, is still discouraging, but as has already been pointed out, it is taking its turn with the other farm products in the up and down cycle, and is sure to come into better times for those men who have cleaned out the poor producers and given close attention to getting their dairy on a business basis.

On the whole, there have been worse years for agriculture than 1924. For those general farmers who have had different kinds of products to market, the year has turned out pretty well. The situation has been nothing to boast

over, but it has been better for nearly everybody than has prevailed during two or three of the preceding years, and there are pretty good indications that this improvement is going to continue and grow stronger through the season of 1925.

### For Old and Young Breeders

THERE are few men in America who know more of the ups and downs, the joys and sorrows, of cattle breeding than DeWitt C. Wing, editor of Breeder's Gazette, who contributes the feature article this time, entitled, "Pitfalls for Young Breeders". This article is another contribution from the editorial board of the Standard Farm Paper Group, of which AMERICAN AGRICULTURIST is a member.

### "Kill A Kow" Klubs

THE "Kill A Kow" herd is still growing, and we receive every day suggestions from our readers on how to help this good work along. One of these suggestions was that there might well be a "Kill A Kow and Kan A Kow Klub" in every community. The formation of such clubs would help to solve the problem of what to do with the meat. Nearly every rural county has a home bureau and home bureau clubs, and many of these bureaus are provided with pressure canners. Why not ask your home bureau agent to arrange for a demonstration in your community with the pressure canner, showing how to can a cow so that you could have beef as good as fresh the year around?

We really believe that there are few things farm people can do that will help the dairy business along more than this reduction of production, by taking out the non-producers. And if a little cooperation among neighbors is shown a profit on the transaction can be realized both ways, first, by removing these worthless cows from the herds, and, second, by reducing the cost of living by eating the beef at home.

Why would not this "Kill A Kow and Kan A Kow Klub" idea be a good subject for discussion at your next home bureau meeting? Or at your Grange meeting? So many of our talks at meetings lead to nowhere. Here is an opportunity for some practical working together which will result in benefit to every dairy family.

### Eastman's Chestnuts

I HAVE been very busy fighting the blight in my chestnut grove, which I called attention to last week. Some of my over-frank friends had been unkind enough to suggest that I should have begun my fight against the blight some time ago, judging from the wormy chestnuts which the grove was turning out! On the other hand, many have seemed really concerned that the grove was disappearing, so I have renewed my fight and managed to save a few trees. Among these trees there is one that is bearing a pretty fair crop of Scotch chestnuts.

From time immemorial the Scotchman has had fun poked at him because of his excessive economy. But I sometimes wonder, particularly in these later days of extravagance, if the Scotchman is not right and the most of the rest of us wrong.

In Scotland there is a legend that if money is thrown into a certain river, it will bring good luck. So Sandy tried it, and later spoke of his venture as follows:

"Mon, mon, I nair lost my bonnie PENNY when the STRING got tangled with the rocks!"

### Quotations Worth While

To get things coming our way, it is first necessary to go after them.

\* \* \*

"Success does not depend so much on external help as on self-reliance."—LINCOLN.

# A. F. B. F. Makes Little Progress

## An Interesting Report of the Annual Meeting Held at Chicago

FOR THE third time, O. E. Bradfute, of Ohio, was elected President of the American Farm Bureau Federation at its sixth annual convention which was held at Chicago, December 8, 9 and 10. The administration was endorsed further by the returning of ten members of the old executive committee.

Although all campaigning was carefully kept off the floor, it was apparent that an effort was being made to agree upon a candidate agreeable to all the states. Before the convention, Indiana, which had failed to pay its dues for the current year, served notice that it would withdraw from the national organization if the old administration was retained. The sympathies of Illinois were generally believed to be with Indiana.

When Mr. Bradfute's name was placed before the convention, he was lauded for the completion of a successful year and as a man whose leadership had been recognized by his appointment by President Coolidge as a member of the Agricultural Commission.

George C. Jewett, of Spokane, Washington, former president of the American Wheat Growers, Inc., was nominated for the presidency by Ralph Snyder of Kansas. In presenting Mr. Jewett's name, Mr. Snyder scored personal ambitions, the secret caucusing, and politics which have characterized the conventions of the past few years. He nominated Mr. Jewett because he had not engaged in this factional, personal strife and was ably qualified to serve as president. Indiana, Illinois, Kansas, California, Arizona and Alabama were believed to support Jewett who received 11 votes against Mr. Bradfute's total of 35. Following his reelection, Mr. Bradfute declared that he would be glad to relinquish the position when the next election is held.

Edward A. O'Neal of Alabama, formerly a member of the executive committee, was elected vice-president to succeed J. F. Reed of Minnesota. S. H. Thompson of Illinois was nominated for the position but withdrew his name.

Members of the new executive committee are: *Midwest section:* C. E. Hearst, Iowa; J. F. Reed, Minnesota; S. H. Thompson, Illinois; M. L. Noon, Michigan, was elected as a fourth member, to become active on the ratification by the states of the new constitutional amendments. *Eastern section:* J. C. Brubaker, Pennsylvania; G. M. Putnam, New Hampshire; Enos Lee, New York. *Southern section:* E. P. Cohill, Maryland; H. Williams, Texas; W. T. Harris, Kentucky. *Western section:* A. C. Hardison, California; F. Evans, Utah; W. A. Hardy, Nevada.

The failure of some states to pay up, and the resulting handicap under which the organization has worked, was commented on by President Bradfute in his opening address when he said, "The A. F. B. F. cannot go forward without some definite knowledge and assurance as to what will be our income for the year. Faith in indefinite promises, which have not been fulfilled, has gotten us into debt which should be liquidated at once." Again in his acceptance speech, he said that the directions of the delegates would be carried out "if the funds are provided."

By GILBERT GUSLER

Indiana paid no dues last year except \$250 to seat W. H. Settle as a voting director. Indiana's refusal to pay its full dues of about \$20,000 was chiefly a protest against the administration's attitude toward cooperative marketing in general and its grain marketing program in particular. This was the rock which split the convention a year

ago when an endorsement of the work of the National Wheat Marketing Advisory Committee, headed by Frank O. Lowden, was refused. At that time, Indiana was already going ahead with plans to form a state wheat pool and Illinois apparently headed in the same direction. The Indiana pool is claimed by its sponsors to be working successfully.

arch enemy of the pools. Whether they are correct in this view or not is a matter that must be left to the realm of individual judgment. Except by inference, the Grain Marketing Company was given no endorsement by the convention. The fact that the old administration was returned, that one of the resolutions pledged support to cooperative marketing organizations already in the field, that the cooperative marketing feature of the convention program was devoted largely to the work of the Grain Marketing Company, leaves little doubt as to where the A. F. B. F. will stand in the coming year.

Under the circumstances, it is considered a settled matter that Indiana will withdraw from the Federation. What Illinois will do will probably not be determined until its annual meeting in January.

The Indiana Federation is definitely committed to the pool plan of cooperative marketing and Illinois has refused to approve the Grain Marketing Company. Both states fear that the prestige and resources of the farm bureau will be used to put over a campaign to sell stock in the Grain Marketing Company. They believe that this will bring discredit upon the A. F. B. F. and will cause it to lose its lofty position as a national farm organization.

The resolutions passed as a program of work for the ensuing year provided for no active procedure. The failure of the convention to adopt an aggressive program also was a great disappointment to those who see the farm bureau settling back from a position of prominence in agricultural affairs.

Support was pledged to cooperative marketing organizations already organized and a national wool terminal agency was endorsed, but no positive program of action in cooperative marketing was adopted. The Grain Marketing Company was not specifically mentioned although it was believed to be covered in the first resolution.

The McNary-Haugen bill was alluded to in endorsing of the "principle of a farmers' export corporation created with broad powers under government charter to preserve the domestic market for the American producer at an American price."

The action of some of the states in withholding part or all of the membership fees due the national organization was scored in a resolution which regarded such action as "misappropriation of funds" and believed that "The responsible officers should be held accountable therefor under the law."

Other resolutions reiterated the Federation's former position on Muscle Shoals, child labor, a truth-in-fabrics bill and certain tax legislation. Restriction of the issuance of tax free securities was recommended instead of their complete abolition as at former conventions.

Several amendments to the constitution, designed to enforce the payment of dues to the national organization by the states, were passed on by the directors and sent to the states for ratification. They require that state treasurers shall give bond to insure the payment of dues to the national federation; that the Federation shall have authority to audit the membership accounts of state organizations, and also the accounts between

(Continued on Page 452)

### The Bells Are Ringing

REV. J. W. HOLLAND.

THERE go the bells again. It is New Year. Little children are singing and dancing their glee. To them, Time merely crawls along. Young people are together love making and counting the slow passing years, till their dreams come true. To them, time moves slowly. The middle aged are quiet. Time, to them, is moving faster, and they know that each year brings its hardships as well as its joys. . . .

The aged sit in silence, and brush aside occasional tears, as the ghosts of half forgotten scenes rise through the mists of years. To them, Time flies in lightning wings.

So, each of us, in the time of his age, views the ever recurring sound of New Year Bells.

If we are sensible there are many things we want to happen to us and our friends in NINETEEN HUNDRED AND TWENTY-FIVE.

We want to be kinder! Faces are certain to wrinkle with time, but whether they wrinkle Up, or wrinkle Down will depend on whether we are kind or unkind.

This morning, I saw a man beating a poor horse because his feet would not catch in the snowy pavement. I am glad that my sister does not have to live with that man. In his heart he is unkind.

Kindness will pay bigger heart-dividends than most any attitude of mind we hold toward others.

I bought an article in a store today. The Christmas rush is on. A young, inexperienced clerk was trying to tie up my package. The floor-walker saw her dilemma, and "called" her in harsh words. As I left the counter I said to the floor-walker, "Treat that girl kinder and she will do better." He said, "Who the hell are you?"

That man will never succeed. In his heart he has the nature of an animal, and not a kind gentleman. He is not fit to handle cattle, let alone sensitive young women.

We are going to dig some new graves, this year, and bury our grudges there. Every now and then my good wife handles rather roughly the accumulated piles of papers and stuff that get on top of my desks. Sometimes I miss something that I wanted, but in the main, her work is best, for "JUNK" will smother us if we do not destroy and bury it. Our souls get piled full of memories of un-neighborly acts and words. The deeper the accumulation, the harder to really live. Dig out that old grudge, and while the bells are ringing, and the children singing, bury it deep in forgetfulness.

We are going to quit pitying ourselves, if we are wise. I have worse than wasted every hour that I have spent in pitying myself, because I may have had a hard time. Hardship is the compliment a wide Providence hands to the plucky souls.

The American farmer has, in the past four years, shown his ability to "dig in," and now he is going to show the world his equal ability to "dig out." Not self-pity, but a Chance, is the need of valor.

We are going to go right on working for bettered conditions of life. We are going to sin less, and repent more; pray more sincerely, and look up more often; visit the sick, and encourage the hopeless; add a word of reproof to the careless, and extend a hand to the lonely. If we do, the year opening, amid the bells, will not close with the knells.

In the meantime, the formation of the Grain Marketing Company by a combination of old line grain companies, under farm bureau auspices and with Gray Silver as president and John Coverdale as secretary, has complicated the situation. It has been endorsed by the A. F. B. F. executive committee. The Indiana farm bureau leaders, however, regard the Grain Marketing Company as the

New Jersey Agricultural Week  
January 13-16

THE agricultural interests of New Jersey have seen to it that every phase of the business will be represented at the New Jersey Agricultural Week, which will be held in Trenton, January 13 to 16. Agricultural Week includes everything from the Annual State Agricultural Convention, which elects two members of the State Board of Agriculture to the annual meeting of the New Jersey Federation of Town and Country Church Workers. In between those two organizations there will be represented the Federation of County Boards of Agriculture, the various livestock associations, the poultry producers, beekeepers, alfalfa and potato growers, and horticulturists. All told there are fourteen organizations that will conduct their annual meetings or important business conferences during the convention. The program has been so planned to be of interest to operators of every branch of farming. Never before has the State Department of Agriculture offered farmers such a varied farm program with features to interest every member of the farm household.

Farm Products Show Bigger Than Ever

The State Department of Agriculture has completed arrangements for the Annual Farm Products Show, which will be held in the Second Regiment Armory. The show will consist of the corn show, the potato show, commercial apple show, poultry show and milk show. The beekeepers and breeders of dairy cattle will have booth promoting interests in their respective subjects. The country church people will have their famous little brown church, to say nothing of the other enormous demonstrations and exhibits that will be included.

Agricultural week will start with the meeting of the New Jersey Association of County Boards of Agriculture on the afternoon of the 13th. In the evening the members of the Federation will hold their annual banquet, as will the members of the New Jersey Baby Chick Association.

Governor Silzer to Open Convention

Governor Silzer will open the convention on the morning of January 14 with an address of welcome in the Assembly Chamber of the State Capitol. President J. S. Frelinghuysen of the State Board of Agriculture will preside. Other prominent speakers present at the convention on Wednesday will be George E. Roberts, vice-president of the National City Bank, New York, and the Hon. Edward C. Stokes, ex-governor of New Jersey. On Wednesday evening the Federation of County Boards of Agriculture will meet to be addressed by George E. Roberts, who will speak on "The Post-War Crisis and Recovery." H. C. McKenzie, Director of Research in Taxation of the American Farm Bureau Federation, will speak on "Rural Tax Problems of New Jersey."

On Thursday, the various agricultural associations will meet. The New Jersey State Poultry Association will meet in the Y. M. H. A. auditorium and will be addressed by Professor Hervey of the New Jersey State College of Agriculture, Professor J. E. Rice of Cornell and A. L. Clark of the New Jersey Bureau of Markets. The Holstein Breeders Association will meet in the Moose Hall auditorium, as will the New Jersey Guernsey Breeders Association and the New Jersey Alfalfa Growers Association and the Ayrshire Breeders Association. The potato growers will meet in the Rider College Auditorium, while the beekeepers will hold their session in the Republican Club. These various associations will occupy different quarters in the afternoon for their individual association meetings.

Dairymen to Hold "Get-Together"

On Thursday there will be the dairy-  
(Continued on Page 446)

# A Promise to Dairymen

The quality of Larro will never be lowered so long as Larro is made. Regardless of what changes take place in the price of ingredients, Larro will always remain the same.

LONG ago we decided upon this policy, and wrote this pledge into our manufacturing creed.

There were two reasons for this decision—we knew it to be correct, both in theory and practice, and we knew we could keep the promise.

Years of experiment and practical feeding have proved that a dairy feed must be more than just "a good feed." It must also be absolutely uniform and its formula must not be changed.

Sudden changes in feed—putting in more of this, or less of that, the substitution of poorer ingredients, imperfect blending or mixing—result in lower milk yield and smaller profits for the farmer.

Your cows do not eat a printed formula. They are not concerned with price changes. Whether the market is high or low they need a feed that will build condition and keep milk flow at its peak.

The Larrowe Milling Company is able to keep its promise of uniformity and unchanging formula because it has the experience and equipment to manufacture a feed that never varies. It has a formula that can be depended upon to produce milk profitably. This formula will never be changed unless the Larro Research Farm proves that a better one has been found.

LARRO is more than a good feed; it is always the same feed.

We repeat that we shall continue to manufacture LARRO on this basis—the basis of more profit to those who buy it.

THE LARROWE MILLING COMPANY  
DETROIT, MICHIGAN

# Larro

THE SAFERATION FOR DAIRY COWS

## POST YOUR FARM KEEP TRESPASSERS OFF

WE have had a new supply of trespass signs made up. This time they are of extra heavy linen on which the lettering is printed directly. There is no card facing to be water-soaked by the rain and blown away by the wind. We have had these new signs made up of extra heavy material because severe storms will tear and otherwise make useless a lighter constructed material. We unservedly advise farmers to post their land and the notices we have prepared comply in all respects with the law. The price to subscribers is 95 cents a dozen, the same rate applying to larger quantities.

AMERICAN AGRICULTURIST 461 4th Ave., New York City

# Dairy Savers

## We Pay a Dollar Each for Experience Letters

OUR greatest saving was the year we froze our potatoes. We had expected to sell about 100 bushels of potatoes and buy dairy feed, but they froze in the cellar.

We had been reading in the AMERICAN AGRICULTURIST about the Canadian who liked hot tea on cold mornings himself, and didn't see why his cows wouldn't appreciate a warm drink also.

That gave us the idea, and twice a day while they lasted we cooked a boiler full of the frozen potatoes. We mashed them up, skins and all, in the water in which they were cooked, added enough feed (bran, ground barley and a mixed feed) to make a thick mush. The hot potatoes partly cooked the feed. We put a good shovel full of this in each pail and filled it up with water, stirring it well; each pail full should be about milk warm. The cows had had two pailfuls apiece and the best milkers had two more apiece. How they did enjoy it! They could hardly wait until it was ready after they first smelled the steaming boiler being carried into the barn.

They gained in milk, too, more than on any feed we have used since. Maybe we only imagined it, but it seemed as if the milk was better. The children drank a lot more of it and said it was so much sweeter than usual.

Of course all this was a lot of hard work, a regular feed cooker would have made it easier, but with only an old wash boiler and the kitchen stove we turned the dead loss of our frozen potatoes into quite a saving.—Mrs. J. V., Lewis County, N. Y.

\*\*\*

### Skim Milk Is Very Valuable

NATURALLY the surplus from a big dairy would be a problem, but it is rare indeed that we have any skim milk to spare. With the big dairy should come also the big poultry plant, and the hens would soon turn the surplus curd into eggs.

We can use a surprising amount of milk in cottage cheese, and during the summer my table is never without a big salad bowl of luscious, crumbly cheese for both dinner and supper—we do not care for it for breakfast, because we always have either muffins or griddle cakes, but we never seem to tire of it with potatoes. Of course we do not always have a surplus of milk, but when we do, there is no question about what to do with it.

Every woman knows how very valuable skim milk is for cooking, in pancakes, johnny cakes, brown bread, steamed puddings and dozens of other delicious foods practically impossible without it. An excellent cook in this town also makes all kinds of cream soups with sweet skim milk and a little butter, and they are fine.

We hardly think we can raise pigs at all without milk, and we know it is indispensable for calves. Indeed, wherever a large dairy is kept there should certainly be enough pigs, hens and calves to use up every bit of the milk not needed for table use—and by "table use" I mean all the culinary purposes to which it is adapted.

My neighbor, who raises many young turkeys and chickens, thinks it cannot be done without plenty of scalded curd, and its uses are too many ever to waste a bit.—Mrs. E. M. A., Chautauque County, N. Y.

\*\*\*

### Winter Handling of Manure

IF POSSIBLE, I find it is always the best plan to haul out and scatter all kinds of manure as fast as it accumulates. A good idea (especially in winter) is to have a particular day set in each week for doing this work. A good many farmers haul it out to the field and pile it, then scatter it some time during the spring, which is only a waste of time and labor. This also means the loss of a large per cent of its strengthening qualities; as left in this condition any great length of time it will generally be washed to death, therefore, most of the strength will be in one spot, just where the pile was.

When manure is applied during winter, it gives the rains a chance to soak the strengthening contents into the soil, instead of washing and leaching it away around the barnyard, which is the case when allowed to remain outside not sheltered. I also have found that the fresher manure is applied, the more valuable it is. When it is piled out in a large heap to rot, a large portion of it will be almost worthless by leaching and washing, and the center being "burnt," therefore, having very little strengthening qualities.

Now, I am not speaking against the old-fashioned compost heap when made properly, for I think this is one of the best ways to make and secure manure. What I am speaking against is throwing it outside in a large heap or mound without any shelter whatever, and left in this condition until spring. It is best to put coarse manure on stiff and clay soils, as this helps to keep it loose and mellow, as well as to enrich it. It is a good idea to apply a light dressing of manure on wheat and oat fields not so fertile, during early winter. If it is a little coarse, this doesn't matter, just so it is put on thin. It will be a great benefit in several ways.—W. H. H., Prince George County, Va.

\*\*\*

### Feeding Turnip Tops

WHERE turnips are grown in any quantity the tops are rather difficult to handle, so as to get the most out of them. The best method I have found so far is to spread a thin layer of dry tops in an empty mow, then a layer of clean oat straw, next another layer of tops, then straw, and so on until the whole is about two feet deep.

The straw prevents heating to any great extent, absorbs moisture, takes the flavor of the tops, and makes a very palatable feed from what is often wasted. The tops should be hauled when dry and before being frozen. When tops are fed in any quantity alone, they have a very loosening effect and are apt to taint the milk when frozen.—T. T., Kings County, N. B., Canada.

\*\*\*

### REUBEN, REUBEN

Reuben, Reuben, I've been thinking Our old scrub stock is no good. Why not get some pure bred bossies, As our neighbors say we should?

Rachel, Rachel, you've said something; Our darned cows don't pay their keep; Eat up all our surplus money, All the crops that I can reap.

Reuben, Reuben, there's our neighbor Got a brand new Henry Ford; Used to ride to town as we do Settin' on a hard, old board.

Rachel, Rachel, he was telling How he raked the money in Sellin' pure bred bulls and heifers; Says it almost is a sin.

Reuben, Reuben, take the check book, Buy the best that you can find, When it comes to pure bred bossies They will find we're not behind.

Rachel, Rachel, let me hug you; I will buy some cows today; Sell the darned old good for nothings. Get some stock that's sure to pay. (Words by R. H. HEWITT, Chemung County Farm Bureau Manager.)

# News From Among The Farmers

## Short Courses Announced For Farmers--County Notes

DIRECTOR H. S. Knapp of the State Institute at Farmingdale, Long Island, announces that two short courses will be given at the school this winter, one in poultry and one on general farming. Both will begin on January 5 and continue through the month of February. A tractor school is scheduled for January 19, 20 and 21. Thirty farmers enrolled in this course last year. It is not a white collar course by any means but one in which the students learn about doing the same things that he will have to do later on his own farm and with his own tractor.

After the tractor school one day will be devoted to each of the following subjects: blasting and use of explosives on the farm; concrete mixing; soldering; saw filing and care of tools; framing and construction of small farm buildings; farm water supply and sewage disposal; rope splicing, knots and belt lacing; electric lighting plants for the farm; use of the forge on the farm.

It is believed that this is the first time that such courses dealing with one specific subject and covering such a short period have been offered. This should appeal to busy men. Persons may come in for one or more days, selecting only the subject about which they desire information. Descriptive circulars can be obtained by writing Director Knapp.

### New York Horticultural Society Announces Meetings.

THE New York State Horticultural Society through Secretary Roy P. McPherson of LeRoy, N. Y., announces that the annual meeting of the Society will be held in Rochester on January 14, 15 and 16. The guest of honor at the annual meeting will be Lieutenant-Governor Seymour Lowman.

Secretary McPherson calls special attention to a radio address by C. S. Wilson, President of the Society on December 29. This radio talk will be broadcast from station WGY, Schenectady.

The Eastern meeting of the New York State Horticultural Society will be held at Poughkeepsie on February 18, 19 and 20, according to advice from T. E. Cross of LaGrangeville, N. Y.

### New York State Breeders to Hold Annual Meeting

The New York State Breeders Association will hold its annual meeting in Rochester on January 6 to 8.

### New York County Notes

THERE was no evidence here in Columbia County of the rain that helped out other sections of the state a week or so ago. Streams and wells are very low. Many have been forced to carry water for a considerable distance for their stock. Several men have been drawing water to fill their home cisterns. A couple of weeks ago we experienced a severe change in temperature together with very high winds. Little provision was made for the lowest temperature of the year thus far on account of this wind and as a result split cylinder heads were numerous as well as damaged radiators. Many fruit growers who were just finishing up their crop lost heavily. The lowest temperature reported for the county was zero and the average about 7° above.

Similar to all sections of New York State, those who have a potato crop, are mightily discouraged. The men were in hopes of at least a dollar but local concerns are buying and delivering locally by auto truck in large or small amounts for seventy-five cents per bushel. Offers on the basis of an entire crop range around forty-five to fifty cents with some sales. Offers as low as thirty cents have been reported. In general the farmers are holding their stocks believing that colder weather and the holi-

days will relieve the congestion in the market. The dairy demonstration train which made two stops in the county recently, was well received. A goodly number of farmers and their families visited the train and many favorable comments were heard. Corn husking is well under way and the more progressive have taken advantage of the favorable weather and have completed it. Little or no fall plowing has been done because of the dry season. The usual number of post-season products being harvested have occurred this fall. The latest one is that of a farmer in the southern part of the county who indulged in green sweet corn for dinner and a strawberry shortcake for supper. The origin of the same was asserted but not verified.—D. V. Rivenburgh.

**Greene County.**—The recent cold spell froze a lot of apples, coming as it did very unexpectedly. Corn was a little late and a lot of it froze before it was ripe. Buckwheat is bringing \$1.25 and corn \$1.55. The hay crop was light this year. Farm sales are bringing large crowds and offerings are bringing good prices with the exception of cows. Strippers are meeting poor sale and there is practically no demand for horses.—J. A.

### In Central New York

**Cortland County.**—Practically all the cabbage in this section was cut before the freezing weather came last month. Many farmers have stored their cabbage at home as dealers up to the cold spell were offering \$5 to \$6 a ton and some less. Some farmers had a few apples unpicked and these are now worthless as they have been frozen on the tree. Farmers have been unable to do much fall ploughing due to the lack of rain. During the latter part of the month we got a shower that helped a little.—G. A. B.

**Oneida County.**—October was a wonderful month as was November up to the 16th. As a result farmers were able to fill silos and harvest their potato crop. On heavy soils potatoes rotted quite a bit, while on other fields they were quite free. The yield was good. Potatoes have been bringing any where from 75c to 95c a bushel for good quality at stores and individual homes. We had an abundance of cider apples and a fair supply of good apples that brought anywhere from \$1.25 to \$2 a bushel. We had no rain at all during October and during the first part of November it was pretty dry for plowing. The Karlen Cheese Company offered \$1.75 a hundred for milk for November. There are many farmer auction sales but cattle is selling at a low price. Pork is now selling in the neighborhood of 14c dressed.—E. N. A.

### In Western New York

**Erie County.**—Farmers are all busy sawing wood. Some are even doing some fall plowing. At least that was the case up to the middle of November before the frost set in. We have had some excellent weather. Our first snow came the 16th. The potato crop was a bumper. Not many farmers have sold any to speak of. Roads are fine. Butter is bringing 42c a pound and eggs 63c a dozen.—Mrs. T. C.

**Chautauqua County.**—We have had a wonderful fall since the first of October, for finishing up farm work. Most of the threshing and silo filling has been done since that time. Corn in general was a poor crop, while grain was fair, oats averaging about 40 bushels per acre and buckwheat around 30. The potato crop turned out more or less good, but is hitting a poor market. At Jamestown and Dunkirk the price started at

\$1 a bushel and has gradually dropped to 75c and in some cases 50c and less. At the present there is little demand at any price. Cabbage has been selling to stores at \$1 a hundred. Eggs are very scarce and the stores are paying 65 to 75c per dozen. Milk is shrinking rapidly. Farmers are not buying much grain. At the Sinclairville Borden condenseries, poolers receive 30c per hundred more for 3% milk than the non-poolers. Some League members who had decided to cancel their contracts changed their minds. At an auction recently 60 dairy cows were sold at an average of \$40 each. High taxes are causing the farmer a lot of worry.—A. J. N.

**Ontario County.**—We had some very mild weather during the second week in December, after a hard freeze. Some farmers are still plowing and there is quite a lot of corn stalks in the fields to be hauled in. Good apples are scarce while potatoes and cabbage are quite low.—H. D. S.

### Central Pennsylvania Notes

CORN is nearly all husked, with very much soft corn which is being fed as fast as possible. Corn stover has been housed in parts as it is too green or heavy to store in large quantities. Potatoes have been mostly marketed the price being only 45 cents now.

A good part of the wheat crop has been sold, since it reached \$1.50 though some wheat is being held for higher price. Manure has been hauled to sod for corn and some sod has been plowed for corn, though the ground has been too dry to do much plowing until recent rains fell.

Winter wood is being hauled and saved for future use. A number of farmers have had sales of stock and implements this fall, due to lack of grain and financial shortage. Very little clover seed was made in this section of the state, and it is a good idea to buy seed this fall. The farm bureau of Union county will be held on the 30th of this month when a talk on tuberculosis will be given by a Mercer county man. Some townships of this county have their cows all signed up for testing by spring.

Mifflinburg has completed a nice and convenient high school room with a large auditorium and gymnasium in the basement. The writer wishes a Merry Christmas and a pleasant and prosperous year for 1925 to AMERICAN AGRICULTURIST readers.—J. N. GLOVER.

### New Jersey Agriculture Week

Jan. 13-16

(Continued from Page 444)

men's get-together banquet at Hildebrecht's.

On Friday morning the New Jersey State Horticultural Society will open its meeting at the Y. M. H. A. auditorium. The swine breeders will meet in the Squad Room of the Armory, and the beekeepers will get together at the Republican Club.

The Fourth Annual Rural Church Conference, conducted under the auspices of the New Jersey Federation of Town and Country Church Workers, will be held in the State Street M. E. Church in the Sunday school room.

As was said above, the Farm Products Show will be held in the Armory. Taking all in all Agricultural Week has become a real institution in New Jersey. It embodies all the different industries and ramifications of the business. In short, it meets all of the agricultural interests up into one grand get-together and display reflecting the progress which the Garden State farmers are making from year to year.

## Dollars in your Pocket!

It pays to own a Craine Triple Wall Silo. Its three wall construction insures exceptional strength and durability! Once up you can forget it; no lugs or hoops to tighten. It makes good silage and keeps it good! You get more beef and more milk for less feed money.

You can rebuild your old stave silo into a handsome, strong, durable Craine. Our catalog is worth dollars to you. Write for it TODAY!

# Reviewing the Latest Eastern Markets and Prices

## MILK PRICES

**T**HE Dairymen's League Cooperative Association announces the following prices that dealers will pay the League during the month of December for milk testing 3% in the basic zone of 201 to 210 miles from New York City. It is to be understood, of course, that the prices mentioned below are not received by the farmer, but go into the pool. They represent the prices dealers pay to the League.

Class 1 Fluid milk.....	\$3.07
Class 2A Fluid cream .....	2.10
Class 2B Ice cream .....	2.25
Class 2C Soft cheese .....	2.15
Class 3A Evaporated whole milk Cond. whole milk.....	1.80
Class 3B Whole milk powder....	1.75
Class 3C Hard cheese other than American .....	1.65

Class 4 price will be based on butter and American cheese quotations on the New York milk.

### Sheffield Producers

The Sheffield Farms Producers announces the following prices for 3% milk in the 201 to 210-mile zone:

Class 1 .....	\$2.80
Class 2 .....	2.00
Class 3 .....	1.50
Class 4 price determined by butter and cheese quotations on the New York market.	

### Non-Pool Cooperative

The Non-Pooling Dairymen's Cooperative announces the following prices for 3% milk in the 201 to 210-mile zone:

Class 1 .....	\$2.80
Class 2 .....	2.00
Class 3A .....	1.60

### Interstate Producers

The New York State Milk Producers Association (Philadelphia Price Plan), announce the receiving station prices or the price to the farmer in the 201 to 210-mile zone from Philadelphia for 3% milk is \$2.19. In the 101 to 110-mile zone, the price is \$2.29.

### November Pool Price Announced

The Dairymen's League Cooperative Association announces the pool price for November is as follows:

Gross pool price .....	\$2.35
Expense of administration .....	.09

Net pool price .....	\$2.26
Certificated of indebtedness.....	.10

Cash price to farmers .....	\$2.16
-----------------------------	--------

The Sheffield Farms Producers announce that the weighted price for 3% milk in the 201 to 210-mile zone for November is \$2.69

## BUTTER MARKET HOLDS STEADY

Since our report last week, the butter market has held fairly steady. In fact it is a little stronger than it was a week ago and, as we surmised, the price has advanced slightly. There has been a tendency on the part of chain store operators and retailers in general to work on storage stocks. This has had the effect of depressing prices on fancy fresh arrivals. However, as might be expected as soon as prices eased a little on these fancy marks, buying by the speculative trade developed, with a consequent activity on these leading grades of fresh creameries. Prices on fresh and held goods are relatively close as a result. The fluctuations in the market are slight, but operators are following them very closely and a fractional price change will influence trading one way or the other on fresh or storage butter. The strong tone in the market is confined more to the better grades. Intermediate grades

of fresh butter which come more directly in competition with storage stocks are not selling very promptly. In fact, there are indications that these intermediate and lower grades are becoming a little weaker with easier prices in prospect. There is a general tendency in the market on the part of operators to sell higher priced storage butter. With this pressure in evidence, although the market is firm, the situation is slightly in the buyer's favor.

## CHEESE MARKET STILL FIRM

The firmness in the cheese market and the activity in the trade continues about the same as it was a week ago. The movement out of storage continues liberal according to reports from the four leading cities, and stocks on hand are now considerably lighter than they were a year ago. On December 1 storage stocks were approximately 3,500,000 pounds below those on the same date in 1923. This situation has caused a very confidential feeling in the trade and as a result fancy stocks are held firm. Prices have been gradually advancing with the market, taking on a decidedly strong tone. The make is running no heavier than a year ago. In fact it is reported that Wisconsin is producing less cheese than last year, and New York is producing comparatively little cheese. Only a small part of this up-State make is reaching New York City. High grade New York State flats are meeting a very firm market. Fancy whole milk State flats, held, have advanced to 23½ and 24c, while average run goods are now selling around 22 and 23c. Fancy fresh flats are bringing 22½ to 23c, while average run fresh goods are selling at 22c. Undergrades are bringing anywhere from 19½ to 21c. Six or eight weeks ago prices on these marks were about 4 or 5c a pound lower.

## EGG MARKET STEADY

The egg market is holding its own, although prices are not as high as they were at the peak several weeks ago. Receipts from the west are light, while arrivals from southern points, particularly Kentucky and Tennessee, are increasing slightly. These are showing very mixed qualities. Reports from the heavy producing western and northwestern territory state that cold weather is being experienced out there that will naturally cut down production. In view of that the market is well sustained and firm. Nearby whites are cleaning-up satisfactorily at steady and firm prices. Medium grades have had a tendency to harden and in some cases advanced. This is true where marks show good quality and size. Brown eggs have been selling right up with the very fanciest white eggs. Reports from some quarters in the market indicate that there is not quite the movement in brown eggs that was in evidence a few days ago. Nevertheless trade quotations indicate that prices have suffered little, if anything. This situation is rather unusual, as New York City is primarily a "white egg market."

## LIVE POULTRY MARKET DEAD

The live poultry market has apparently died in sympathy with so many of the poor birds that have "gone West." There is no question but what the consumers have become panicky following the announcement of the embargo declared by the Board of Health and the State Department of Farms and Markets. It seems that they fear that they will contract the disease from the birds. The sensational daily newspapers have only added to this chaotic condition by printing pictures of truck loads of poultry crates with the heads of dead birds protruding from them. This sensationalism has had a tremendous effect upon the class of people that are most effected by the embargo and they have stopped buying almost entirely. There is nothing moving in the live poultry market and sales are so light that it is practically impossible to establish any quotations.

We asked several men in the market what the prospects were for the holiday trade, and they were absolutely at sea as to what the market will do. One poultry shipper from up-State telephoned to New York, at great expense, to find out whether he should ship in stock. He was advised to hold in view of the uncer-

tain conditions at the present time. No man on earth can tell how long it will continue. By the time this copy is off the press, the market may be decidedly strong. It may change over night. The embargo has stopped all shipments from North Dakota, South Dakota, Missouri, Kansas, Illinois, Indiana, Iowa and Nebraska. These states furnish 90% of the live poultry consumed in New York City. If the trade does come back to its normal buying power, prices are going to sky-rocket, for the only poultry coming in is that being received by express from nearby points in New York, Pennsylvania, New Jersey, New England and adjacent States.

## POTATO MARKET INACTIVE

There is practically nothing doing in the potato market and the chances are that conditions will remain the same until after the first of the year. Long Island farmers around Riverhead are receiving \$2.25 to \$2.30 for 150 pound sacks. Some are holding for \$3.00. Maines are being delivered in New York City at \$2

## The Market at a Glance

The following are the prices on the New York Market, at which farm products of special interest to eastern farmers, sold on December 18.

<b>Eggs, nearbys (cents per dozen)</b>	
Jersey hennerly whites, closely selected .....	73 to 74
Other hennerly whites, extras .....	70 to 72
Extra firsts .....	68 to 70
Firsts .....	61 to 65
Gathered, whites, first to extra firsts ..	61 to 67
Undergrades .....	53 to 60
Pullets .....	51 to 58
Hennerly browns, extras .....	70 to 73
Gathered browns and mixed colors ..	55 to 65
<b>Butter (cents per pound)</b>	
Creamery (salted) high score (93 score) .....	45 to 45½
Extra (92 score) c.c. ....	44½
Firsts (90-91 score) .....	41½ to 43½
Firsts (88-89 score) .....	38 to 40
<b>Hay and Straw, large bales (per ton)</b>	
Timothy No. 2 .....	24 to 25
Timothy No. 3 .....	21 to 23
Timothy Sample .....	16 to 20
Fancy light clover mixed No. 2 ..	21 to 23
Alfalfa, first cutting No. 2 .....	25 to 26
Oat Straw No. 1 .....	14 to 16
<b>Beans (domestic, per lb.)</b>	
Marrow .....	9¼ to 10½
Pea .....	5½ to 6
Red Kidney .....	8½ to 9
White Kidney .....	9 to 9½
Yellow Eyes .....	—
<b>Live Poultry, via express (cents per lb.)</b>	
Fowls, colored fancy, heavy .....	—
Fowls, leghorns and poor .....	—
Chickens, colored fancy .....	—
Chickens, leghorns .....	—
Broilers, colored .....	—
Broilers, leghorns .....	—
Ducks, nearby .....	—
Ducks, Long Island .....	—
Turkeys .....	—
<b>Live Stock (cents per lb.)</b>	
Calves, good to medium .....	10 to 13
Bulls, common to good .....	2½ to 4
Lambs, common to good .....	11½ to 15½
Sheep, common to good .....	5 to 6½
Hogs, Yorkers (200 lbs.) ..	8½ to 9¾

to \$2.10 for 150 pound sacks but there is little stock moving, as most operators and shippers are holding until after the first of the year. The same holds true with State potatoes which are still quoted around \$1.65 to \$1.75. Most all shippers are holding for higher prices which are expected after January 1st. Incidentally stocks are so ample we cannot see where the market will improve to any great extent just because it happens to be the month of January. It reminds us of the opinions expressed by some Maine growers after the election of President Coolidge. They thought President Coolidge could help the potato market. Nothing in the world will help it as long as stocks are so heavy, unless the consumptive demand increases to a point beyond what it is now. Any temporary advances should be taken advantage of in part, at least, for stocks are so heavy that a marked increase will induce increased movements all along the line.

## CABBAGE MARKET DULL

There is no change in the cabbage market from last week. Country prices are quoted anywhere from \$10 to \$11 F. O. B. Present supplies are up to the market needs and we look for no improvement, during the coming week, unless weather conditions change radically from what they are at the present time. December 17 was as balmy as a spring day in New York City, and that kind

of weather is not conducive to the consumption of corn beef and cabbage.

## NO CHANGE IN BEANS

The bean market as a whole is no different from what it has been during the past several weeks. The only fluctuation that has taken place is the slightly firmer condition in Red Kidneys. This variety is meeting a firmer trade and quotations are slightly higher.

## ONION MARKET SLOW

The onion market is slow and unsettled. Receipts have been more or less plentiful and in view of the fact that trade is of very small proportions, conditions in general can be summarized as weak with an easier tone prevailing. Fancy marks are held at higher prices than buyers are willing to pay and higher than can be obtained at the present. Western New York Yellows are bringing anywhere from \$2 to \$2.75 a hundred, while Western New York Reds are just a slight bit firmer. Orange County Yellows are bringing only \$2 to \$2.50 a bag, with Reds quoted at \$2.50 to \$2.75. However, whites are worth anywhere from \$1.75 to \$3 a hundred, which indicates that quality is irregular.

## HAY MARKET FIRMER

Navigation has closed for the winter months on the Hudson River. The last barge arrived in New York on the 13th. This leaves a little less hay around the harbor and a consequent steadier tone to the market. As yet prices have not improved, but with the river traffic at an end, the chances are we will see improved quotations in the near future.

## GRAIN AND FEED MARKET

The cash grain market at Chicago is as follows: WHEAT, No. 2 red, \$1.79¼; No. 2 hard, \$1.65¾; No. 2 mixed, \$1.70¼. CORN, No. 2 mixed, \$1.20½; No. 2 yellow, \$1.27 to \$1.28; No. 2 white, \$1.26. OATS, No. 2 white, 61¾c to 62¾c. RYE, \$1.42.

Cash grain prices in New York: No. 2 hard winter, \$1.82¼; No. 2 red, \$1.87; No. 2 mixed dudum, \$1.81. CORN, No. 2 yellow, \$1.44. OATS, fancy white clipped, 74½c to 76c; ordinary white clipped 70c to 72c; No. 2, 70c to 70c. RYE, \$1.54¾. BUCKWHEAT, sound milling, \$2.20.

The local Buffalo feed and grain market quotes as follows, according to the N. Y. State Dept of Farms and Markets:

No. 2 oats, 65½c; No. 2 yellow corn, \$1.34; No. 3 yellow corn, \$1.30; ground oats, \$42; spring wheat bran, \$33; hard wheat bran, \$37; standards mids., \$37; soft wheat mids, \$42; flour mids, \$43; Red Dog flour, \$45; white hominy, \$51; yellow hominy, \$50; corn meal, \$56; gluten feed, \$43.75; gluten meal, \$51.75; 36% cotton seed meal, \$41.50; 41% cotton seed meal, \$43.50; 43% cotton seed meal, \$47; 34% O. P. meal, \$46; beet pulp, \$36.

## MEATS AND LIVE STOCK

The market is fairly strong on live veal calves from up-State. Prime veals are bringing as much as \$14.75 per hundred and a few pet marks going out even at \$15. Most of the business is being done at \$12.50 to \$14.25.

Country dressed veal calves are in moderate supply and the market is little better than moderate, trading is slow and things in general are quiet. There are comparatively few strictly choice veals available and such are worth 19c. Most of the business is being done at anywhere from 14c to 16c a pound.

## Live Poultry Shippers

IF YOU WANT HIGHEST PRICES returned promptly—market reports and information—free use of coops AND SERVICE UNEXCELLED—SHIP TO:

**BERMAN & BAEDCKER, Inc.**  
West Washington Mkt., 28 Thirteenth Ave.  
New York City

## SHIP YOUR EGGS

WHITE AND BROWN  
**To R. BRENNER & SONS**  
Bonded Commission Merchants  
353 Greenwich St., New York City

## Cash for Old Bags

Turn your old bags into money. We buy them in any quantity, sound or torn, at liberal prices and PAY THE FREIGHT. Write for prices. Reference Peoples Bank.

### IROQUOIS BAG CO., Inc.

652 Clinton St. Buffalo, N. Y.

NATURAL LEAF TOBACCO. Chewing, 5 lbs. \$1.50; 10 lbs. \$2.50. Smoking, 5 lbs. \$1.25; 10 lbs. \$2.00. Pay when received, Pipe and recipe free. Farmers Tobacco Union, D1, Paducah, Ky.

# The Trouble Maker—By E. R. Eastman

JIM watched John Ball go away from the meeting with real regret. He was genuinely sorry, for he knew that the valley held no better citizen nor kinder-hearted man.

He was also sorry on account of Dorothy, because he thought that she must be terribly embarrassed. Stealing a glance at her, from time to time, however, as the meeting progressed, it seemed that she was holding her own. Her cheeks were flushed, to be sure, but she sat leaning forward a little, as much interested apparently in the developments of the meeting as anyone else in the room.

The business of the meeting was soon completed. Several of the men spoke briefly, but the discussion was confined to ways and means of taking care of the milk. No one questioned the necessity of going ahead. Copies of the Dairy-men's League contract were circulated and at the close of the meeting a majority of the men came forward to a table at the front of the hall and joined the League. Others stated their intention of signing up later. All agreed to withhold their milk from the market on the coming Sunday.

Jim Taylor was made chairman of a county organization committee of five members, consisting of prominent dairy-men from different sections of the county known to be in favor of the League, and the county farm bureau office was made the meeting place of the committee. It was expected that this group would be in almost constant session for several days. Arrangements were made to call meetings in the different communities, and then this historic meeting came to an end.

For once the lifetime habit of "hurrying home to milk the cows" was broken. Both men and women gathered in little excited groups to discuss details, and all of them showed a desire to talk to Jim Taylor.

Finally they began to thin out until at last only Harry Bradley was left. As he and Jim stood talking Jim noticed Dorothy coming back through the door at the end of the hall toward him and the county agent. He waited until Dorothy was nearly up to them, and then, thinking that she had come to speak to Bradley, and not wishing to embarrass them, he turned abruptly and strode off to the other end of the hall and out of the side entrance.

Dorothy hesitated for a second, looking at the door through which Jim had gone, and then she turned to Harry and asked him if he would not take her home.

If Jim could have known that Dorothy had stood outside of the door for a quarter of an hour ostensibly talking to a group of women, but really fighting a great battle with herself to conquer her pride and to get the courage to come back in to congratulate Jim Taylor for standing for what he thought was right, how different the future might have been for both of them!

## CHAPTER XIII

WHEN the men came in to supper from the milking, after their return from the Speedtown meeting, the early dusk of the fall evening had come, and the light of the shaded lamp reflected from the red cloth on the big table gave a pleasant and cozy glow to the dining room. This cheerful feeling of comfort and well-being was increased by the steaming dishes which Mother Ball and Dorothy were hastening to put on the table, while old John Ball and Bill Mead washed themselves at the kitchen sink with much loud splashing, snorting and blowing.

But in spite of the cheerful room, supper that night was a subdued affair. All, except Mother Ball, seemed absorbed in their own thoughts, and, judging from

their faces, those thoughts were none too pleasant.

Mrs. Ball wanted to talk. She usually did. She was one of those people to whom silence is always oppressive, and her pleasant, intelligent comment added to the feeling of optimism and homeliness which one always felt in her presence.

But even the most cheerful of conversationalists begin to lose enthusiasm when there is no response. Mother Ball had not been able to attend the meeting that day and naturally was curious as to what had happened, but whether she addressed her question to John or to Dorothy, she was answered in monosyllables or not at all. Sensing finally that something was out of tune in the atmosphere, she stopped and devoted her attention strictly to the business of eating.

THEN Bill Mead tried his turn. He, too, had been unable to go to the meeting because he had to prepare for

## What Has Happened in the Story Thus Far

THE great milk strike is on! Jim Taylor, forgetting his own troubles in his enthusiasm for the cause, leads the fight in Speedtown. Jim speaks at a farmers' meeting, but is opposed from the floor by old Johnny Ball, father of Dorothy, Jim's childhood sweetheart. Dorothy is there, but for days has been coldly polite to Jim and gone everywhere with young Bradley, the young farm bureau agent. After a hot discussion which shows the great majority of the farmers to be with Jim, Johnny Ball stalks angrily out of the meeting followed by a few sympathizers.

the silo-filling which would start on the Ball farm on the morrow.

"Big meeting today, Johnny?" he asked.

"Yes."

"Who was there?"

"I dunno. Fellrs from all over the county."

"Many women folks?" asked Mrs. Ball.

"Some."

"Queer that you should want to go, Dorothy," said her mother. "You've been telling me how much you hated this whole milk business and then all of a sudden you're up and all possessed to go to that meeting."

Dorothy smiled absently at her mother, but made no reply.

"Who did the speech-makin'?" asked Bill.

"That young Taylor idiot," growled the old man.

"He didn't do it all by a long shot," spoke up Dorothy.

Her father glared at her.

"What do you mean?"

"I mean that I am sorry that I went to the meeting at all."

Old John's beard began to quiver in characteristic fashion.

"Do ye mean by that that ye were 'shamed of your old dad?"

"Yes, I do," snapped the girl. "When they didn't want you to talk, why didn't you sit down instead of disgracing yourself?"

"Don't talk to me about disgrace, young woman. All's the matter with you is that young Taylor. All you went to the meetin' for anyway was to hear him make a fool of himself."

"No such thing! Besides, Jim Taylor was not the one who made a fool of himself. If you had any shame, Dad, your ears would be burning now. I get warm all over every time I think how you acted. I bet every family in the county is talking about you tonight."

"Let 'em talk!" stormed the old man, his beard sticking straight out from his chin. "I don't need 'em in my business; and I'm tellin' you somethin' else, young lady. I don't even want to see that

young whipper-snapper of a Taylor around these here premises agin. And I don't need any daughter, either, that can talk to me the way you have to-night. All you young folks think that you know more'n your fathers and mothers afore ye."

Shoving back his chair from the table with a bang, the old man rose to his feet and shook his finger at Dorothy.

"And I'm tellin' you somethin' further, too. An long as you stay in this house, jest remember that I'm your dad, and neither you nor that Taylor, or no one else, can tell me how to run myself or my business."

"Oh, now, now, John dear," fluttered his wife, "set down and eat your supper, and don't get all het up. Dorothy didn't mean anything."

"Johnny's right," put in Bill. "That young Taylor's gettin' too smart. Needs 'nother lickin' like I gave him in the cornfield."

This directed Dorothy's attention to

time he had. . . Now he's changed—and grown sort of hard.

"Oh, well," and she threw her shoulders back and looked reprovingly at the girl in the glass, "he'll have to go his way while I go mine."

TURNING from the mirror, she slipped off her blouse and with white arms over her head, began to let down her hair. With the pins out, down it cascaded over white neck and shoulders, crinkly, silky, brown and long, reaching well below her waist, and making a coat that shone and gleamed in the lamplight. Slowly and absent-mindedly she brushed it, while in a sort of confused medley her tired thoughts went over and over again the milk situation, Harry Bradley, her quarrel with her father, and Jim Taylor.

The hair-brushing slowed up, and stopped, while tears glistened for a moment in the brown eyes of the girl in the glass.

"Jim was always such a dear when we were kids. . . Probably I bothered him a lot tagging him around, but he never let on if I did. . . Then there was that night when he kissed me goodbye before I went away to school."

The hair-brushing began again.

"But he's changed since I came back, or else I have. All he thinks of and talks about is that League business"—and then face and neck in the glass turned red, as she thought how Jim had turned his back on her that day when she had humbled her pride to come back to talk with him after the meeting.

With a final fling of long woven braids Dorothy laid down the law to the girl in the glass:

"When you talk to Jim Taylor again, Mr. Jim will do the first speaking!"

SHE stopped, as if struck with another thought.

"Now Harry doesn't get up in the air so. Sort of comforting, too, when one is all wrought up—decent, ambitious, considerate, always just the same, one day with another," . . . a long look at the girl in the glass, then "and the other night, he told you he loved you. I wonder—"

But what she wondered, she did not even admit to herself.

The little room was stuffy and hot, and the oil lamp made it hotter. So after she was undressed, instead of going directly to bed, Dorothy went over to sit on the little stool at the open window. It was a childhood habit, followed when things had gone wrong. After a while the gentle breeze, the stars and the calm night soothed and quieted her.

Over the Eastern hills climbed the silver moon. In the swamp at the foot of the pasture where the cows were turned for the night, a hoot owl gave voice to his mournful meditations. Somewhere a dog barked occasionally, and when Dorothy listened, she could just hear the faint jingle of a sheep bell on some distant hill. But the few lonesome sounds accentuated rather than broke the silence.

As she watched the rising moon, picking out the shadows of the familiar landscape, Dorothy was startled for a moment to see a man's figure and the glow of his pipe as he sat on a chopping block in the wood yard south of the house. Then she knew it was her father.

"Dad," she called softly.

"Yes, Dot."

"Wait a minute. I'm coming down."

Slipping on a warm coat, she tiptoed down the stairs, out through the kitchen, and across the yard, to old John Ball. She hesitated a moment and then put her hand on his shoulder. For a time the spell of the night and their own thoughts held them silent.

(Continued on Page 454)

# "Leave It To The Ladies' Aid"

## Suggestions For Group And Individual Money Raising Efforts

WELL, why not? Haven't they been the minister's mainstay through uncounted years? Perhaps in the days of the apostolic church there was no Ladies' Aid, but beyond possible doubt, there was some faithful little band of women, to put shoulder to the wheel, and help however, whenever and wherever needed.

So when it comes to providing clothing so that the destitute little Smiths can come decently clad to Sunday school, or sending a barrel to the Reverend Brown and family far on the frontier, or raising money to get a new carpet to replace the one that's a "disgrace" why "leave it to the Ladies' Aid!"

First, a word in confidence to you, Madame President. It is easier in many cases, to do work yourself than to get others to do it, but yet the really successful organization is one in which the individual members feel a keen sense of responsibility regarding the work. So even if you do have to prod along the indifferent, it's really worth while.

You're going to raise money for a new church carpet? Well, instead of asking "how much will you give?" get some High School boy or girl to make a plan of the space to be carpeted and then marked it off into square feet. Figure the price of each square foot, and then ask the folk to buy a square of carpet, writing the name upon the portion that they buy. That is something definite and will bring results that a subscription list would not. Follow the same plan if walls are to be painted or floors laid.

### Contributions By The Calendar

"Will you give a penny a day for the church building fund?" Now nobody is going to refuse you that! They'd feel like a piker! But if you enlist every member in the Calendar plan contributing a cent a day, you'll be surprised at the result. Briefly this is the plan:

The president of the Aid represents the "Year." She appoints twelve assistants, the Months. Under each "Month" are four "Weeks." Each "Week" secures seven subscribers of a cent a day, and collects from them every month. Then the "Week" turns in the money to the lady representing the "Month" over her, and the "Months" return the collections to the president, the "Year." The success of this plan is that there is a definite system for the collection of the pennies. In all sincerity persons may pledge a cent a day, and mean to drop it in an envelope, but forget it. But when the "Week" calls for it in person, it will surely be on hand.

An enterprising Ladies' Aid solicited from the congregation old newspapers and magazines, storing them in a shed. When a goodly quantity had been assembled waste dealers in a nearby town sent their truck and O joy! There came a check for \$70! Sold in quantity this way, a much better price was secured than by small lots to traveling junk men.

### Commissions On Sales Add Up

Another Aid has taken a magazine agency, and the congregation dutifully takes out its subscriptions or renewals through the energetic ladies. Food sales, held in a grocery, have been a source of profit to many societies.

Give a little play and charge admission. No, not the young folks, we mean You! Why, surely you could. There are number of little plays especially suited for Ladies' Aids. You'll have jolly times at the rehearsals and you'll find that your families will joyously turn out in full array to see "Mother in a play." (See the list of suitable material, given below.)

"Leave it to the Ladies' Aid?" Of course! Folks always have and always will, for you dear, loyal tireless souls,

they always can depend on you to put it through."—Elsie Duncan Yale.

### Plays Suitable For Ladies' Aid Societies

- How The Story Grew..... 11 ladies
- A Business Meeting ..... 11 ladies
- Our Church Fair ..... 12 ladies
- Women of the Bible..... 21 ladies
- How the Club was Formed.. 18 ladies
- A Mothers' Meeting ..... 10 ladies
- The Peak Sisters ..... 10 ladies
- A Gentle Jury ... .. 12 ladies
- The Sweet Family ..... 8 ladies
- Those Husbands of Ours .... 7 ladies

These may be obtained from Eldridge Entertainment House, Franklin, Ohio or Walter Baker Co., 5 Hamilton Place, Boston, Mass. The price being twenty-five cents except when noted.

### Money in Pickles

EMERSON said that the world would make a beaten pathway to the door of a man who produced a superior article, and I believe he mentioned mouse-traps. But my story is of a woman who produced a superior article, and it was pickles. And along with some enterprise and initiative it began a lucrative little business, which I feel proud of because I discovered her and helped start her on her way.

During a period of convalescence when I had gulped down beef tea and weak tea until my stomach was like a floating island, and one member after another of my family barred every eatable thing that I desired, a little neighbor came over with a covered tray which aroused some happy expectations.

"I have some very nice chocolate cake," she said, and my spirit went down to zero. Then she uncovered the tray. It was lovely to look at, but the very thought of eating chocolate cake put all my inner tubes revolting.

"But, Oh"—I told her, "If you'd just slip me one of those pickles!"

"I'll have to ask some one first," she said, leaving the room. But she failed to put the dish out of reach and never in my life did I taste anything so delicious as those little, green, forbidden things. Nor did they retard my recovery, but they lingered in my mind. A sour cucumber never appealed to me, but there was something hauntingly persistent about the flavor of those pickles that I did not think was due to an unnatural appetite or a fevered imagination. As soon as I was able to get about, I went over to see her, and tried them again. They measured up to my first estimate.

"It's all in the spicing," she told me, "The flavor is cooked in."

### All in the Preparation

The cucumbers were soaked over night in a solution of salt and alum water. She uses the prepared spices, tied loosely in a cloth, one package to 1/2 gal. of vinegar, which she boils for twenty minutes. She then drops in the cucumbers and allows them to boil five minutes, actually cooking in the flavor, which lingers so pleasantly, then packs them firmly in well sterilized fruit jars, pours the boiling vinegar over them and seals while hot.

"Why don't you establish a market for them?" I asked. She objected that there were so many kinds of pickles on the market.

"Not like yours," I told her, and as she was getting a dinner for some city acquaintances, I suggested that she serve pickles and give each guest a small jar to take home. She got an order from each of those and from that her business grew. Last year she put about half of her garden in cucumbers, this year she used about the space of half a city block. She uses only the very small kind, selects them herself, with especial care given to uniformity of size. She expects to double her output

next year, and is getting out attractive labels for her jars. She has been using the pine glass fruit jars and in each one she drops some whole cloves and a few of the tiny "red hot" peppers, which gives them a very attractive appearance.—Mrs. R. G. ARMSTRONG.

### Home-Made Baking Powder

"Somewhere I have seen a recipe for home-made baking powder. I would like very much to have it again and would appreciate it if you would tell me what proportions to use."—Mrs. I. W., N. Y.

ALTHOUGH it is perfectly possible to make baking powder at home, one must be very accurate in measuring and very thorough in mixing to secure good results. Most baking powders are a mixture of cream of tartar and soda, with enough corn starch to keep the ingredients from collecting moisture and losing their strength. The proportions are as follows:

If you measure the materials, use 2 1/2 cups of cream of tartar, 1 cup of baking soda, 1/2 cup of corn starch. If you weigh the materials, use 4 2/5 ounces of cream of tartar, 2 ounces of soda and 1 ounce of corn starch. Sift the ingredients together several times to make sure that they are thoroughly mixed. Keep in tightly covered tin cans and use in same proportions as other baking powders, that is, about 1 level teaspoonful to each cup of flour in baking.

### Economy With Apples

THE farmer can feed successfully cull apples to almost any animal except milk cows. Although our apple crop is not large, as a housewife I can economize by the use of the apple. First, I can the earlier varieties, both with and without sugar. I dry them by picking, slicing and placing in a peach basket which I suspend in an inverted barrel over a pan of sulphured coals. In the morning I place them on screens or plates and dry where it is warm. The cores and peelings are used for making apple jelly and as a foundation for many other kinds of jelly. They can be made into cider, which is an excellent unfermented drink, and fermented is our essential vinegar. I also boil it down when sweet to use in mincemeat. Of all farm products, I believe I can use the apple most successfully to economize.

—Mrs. H. L. C.

### Roasted Venison

SPREAD meat liberally with fresh butter, dredge with flour and put on rack in roaster. Add three slices of onion, a sliced carrot, three stalks of celery; cut in pieces and a seasoning of salt and pepper. Serve with a sauce made from the liquor in the bottom of pan.—L. M. THORNTON.

### Three Seasonable Patterns

AFTER the holiday rush is over, most women start in on their own neglected wardrobes and usually need to give first attention to the problem of underclothes. No. 2200 is an ideal costume slip, suitable for dark silk, lingette, white longcloth or almost any material you wish. It may be enhanced by a touch of embroidery and made with round or square neck. No. 2200 cuts in sizes 16 years, 36, 38, 40, 42, 44 and 46 inches bust measure. Pattern 12c. Hot iron transfer No. 709 in blue only, 15c.

Have you had an unexpected invitation to a party during the holidays? Here is a diagram dress for a soft silk which will just meet the need. It may be beaded or embroidered if you have a little more time to put on it, but is so gracefully cut that it is very pretty when entirely untrimmied. No. 2253 cuts in sizes 16 years, 36, 38, 40, 42 and 44 inches bust measure. Price 12c. Hot iron transfer No. 710 (blue and yellow) 15c.

This cunning little bloomer frock may be made with long or short sleeves. It is pretty and comfortable in a plaid woolen material or soft challis. No. 2166 cuts in sizes 2, 4, 6 and 8 years. Size 8 requires 2 1/2 yards of 36 inch material. Price 12c.

TO ORDER: Write name and address, pattern numbers and sizes clearly and send with correct amount in stamps to Pattern Department, American Agriculturist, 461 Fourth Avenue, New York City.

Prince Mixmillian but bartered off by her father for reasons of state to the idiot son of Louis XI. Beautiful scenes, marvelous costuming, fine acting and absorbing plot interwoven with some authentic history. (Metro-Goldwyn, 10 reels.)

When gravy does not brown, try a tablespoonful of coffee, it will not taste and you will have immediate results.—Ida A. Brown.

# Teaching Thrift to the Child

## The Value of a Bank Account---Making Emergency Bandages

IT requires rather a delicate distinction to teach children the value of money and avoid over-emphasizing its importance but I believe it is fundamentally essential that the growing child learn to handle and use it wisely, because without that knowledge men and women are handicapped for life.

Our school has one custom that seems to me most excellent. At the beginning of each term every pupil is requested to bring all books used the previous year that are in good condition and that he wishes to sell. These are held by the faculty and sold to other pupils as the need arises. The selling price is fixed by the teachers and is governed by the condition of the book and the price of a new book of similar kind. By following this plan year after year it is usually made possible for each pupil to sell discarded books for enough to almost if not entirely purchase those needed for the coming year, and obviously much expense is saved. Last night my eleven-year-old girl came home with the money her teacher paid her for two of her books just sold and I said, "That will, nearly, pay for the book you bought, won't it?" Of course the new book, being more advanced, costs more; but the child said, "Yes, and I've sold another so that will more than pay for it."

It made a liberal price. Last summer we sold cherries for a much lower price when the purchaser picked them than when we picked them ourselves, so when daughter picked for me I allowed for picking but it was only fair to pay her as well as we did other people and she earned quite a bit. She said if cherries lasted the year around she could buy all her own clothes.

She helps me with the regular housework free of charge of course, but while she knows how to do most things, I try not her the difference between the picked and to burden her with work especially while

she is in school and when she does extra things like picking fruit I always pay her for it. She has her own bank account and when she goes to town, if she hasn't been for sometime and has accumulated enough money to be worth while, she adds to the account, her usual (and entirely original) custom being to bank the even dollars and spend the cents.

In common with our neighbors, we have always felt obliged to economize and the practice when kept within reason doesn't hurt children a bit.—Mrs. E. M. Anderson.

### Homemade Bandages

LAST summer, when little Jimmie cut his hand so badly with a hatchet, and I had to dress it every day for several weeks, I learned something about bandages that I had not known before. An occasional roll of sterile surgical bandage costs only a few cents, but when it comes to using a roll every day or so it soon counts up to an astounding sum. Now I always keep a plentiful supply of bandages on hand, and in every needed width. They are made of worn sheets, pillow cases, night dresses and tablecloths. And because I am careful in making them, and sterilizing them, they are as good as those purchased at the drug store.

The old linens are torn in the desired widths, and sewed together to make strips about 5 feet in length. In sewing the ends, they should be laid with one end overlapping the other, and stitched flat so there will be no danger of a seam bearing pressure on a wound or sore spot.

A homemade bandage is a failure if it is not rolled tightly, as it is impossible to make a neat, firm dressing if the bandage is loosely rolled. After the length of bandage has been rolled as tightly as possible, the end may be secured with a tiny safety pin. The finished roll should then

be placed in a sterilized fruit jar, and placed in a hot oven for half an hour. Then the sterilized lid is screwed on, and you have a jar of sterile bandage ready for emergency case.—Nelle Portrey.

### Odd Moment Occupations

Get out the old worn sweaters and make the best of them into caps, mittens or leggings for the children to wear when the cold days come. Dip in dye if you want them to look really new. Unravel the scraps and make the little boy's heart glad with a new ball.

\* \* \*

Disappointed in the window draperies? It might have been avoided if a large sample had been hung in the window. The color effect is often quite different when the light shines through the material; it may make black look gray and dingy, and give green tone to materials with blue and yellow threads.

\* \* \*

Take all heavy underwear that has accumulated, too worn to wear, too good to throw away, cut best parts into odd shapes and sizes, fit together, sew and make a comfort filling instead of buying cotton. From the small pieces, make iron holders and pot lifters.

\* \* \*

Corn meal, graham, and coarse wheat meal not only offer a pleasant variety for breakfast foods, but they are cheap and healthful.

\* \* \*

Hang the clothesline in a sunny spot. Sun gives the white clothes a good color, and a fresh, sweet odor.

\* \* \*

When the metal tip of a shoestring pulls off, roll the tip in a little glue or shellac.

©AMERICAN AGRICULTURIST, INC.

DID you have any trouble with the puzzle last week? If so, the answer, printed in the small diagram, will straighten out your difficulties.

The diagram this week is not one that will wreck your disposition. There are a few fairly hard words, but then, who wants a puzzle too easy? On the whole, this is a puzzle of moderate difficulty, and should not take a long time to solve.

The list gives definitions of every word included. You remember that the words must completely fill the white spaces and that they must read both across and down, corresponding to the definitions. Black spaces mark the beginning or the end of words. Each number indicates the start of a word, either across or down and some are on both lists.

PURE WHITE SUGAR — \$6.50 hundred pounds. SOUTHERN WAREHOUSES, Rockmart, Georgia.

PATCHWORK—Send fifteen cents for household package, bright new calicoes and percales. Your money's worth every time. PATCHWORK COMPANY, Meriden, Conn.

# Pitfalls of the Young Breeder

(Continued from page 441)

stock is not a "game," nor a rich man's hobby; it is a practical farmer's business necessity. Purebreds are 40 to 50 per cent more profitable than scrubs, according to the established facts of experience.

### A Sound, Practical Business.

The registered livestock business is as sound and practical as the growing of a crop from improved seed. Crooks discredited it to a considerable extent while they were active in the trade. Their operations drew into it numerous farmers and others who, in the spirit of gamblers, plunged into it for the sole purpose of making "easy money" in a jiffy. They were assured by fieldmen that they could do so. Some of them worked in collusion with their deceivers.

Despite the crass and thievish abuses to which the stock-breeding business during its late "boom" was subjected by some breed organ fieldmen, a few auctioneers, and many farmers who bought or sold as gamblers, it is stronger, cleaner and more useful to practical farmers than it has ever been before. Conservative men who were in it then are in now. They did not lose their heads when the temptation to speculate was well-nigh irresistible. Prosperity is a more searching test than poverty of the character of men. Breeders who stood the test came through the deflation, and are the bulwarks of the industry today. They are in the business as practical farmers. They like it, stick to it, make money, and own the best farms in their communities. The coming demand for breeding stock will be so strong and widespread that they will be abundantly rewarded.

### Room for More.

It is obvious, therefore, that there is room in the business for hundreds of new men, who like it and are circumstanced to get into it. Now is the most favorable time that I have known for young farmers modestly and prudently to get in and grow up with the business, whether they desire to conduct it as a practical sideline or as a major farm specialty.

It is never a good time for a man of moderate means to jump or plunge into any business. Our most successful and constructive breeders are men who when young began in a small way to build up purebred herds, flocks and studs. Their experience is the lamp by which young beginners today may safely be guided.

### Some Pertinent Questions.

Every young farmer who aspires to be a stock breeder would do well to ask and answer several questions. Do I like the work connected with the personal handling and management of purebred stock? Am I qualified by experience, training and temperament to engage in it? Is my farm, with its equipment, crop production, pastures and water supply, adapted to the carrying of a purebred herd, flock or stud? Am I in a favorable location to market purebred stock? Could I do much business in my own community, county or state? Can I grow plenty of feed every year in my climate? Am I likely in a few years to be in a position to exhibit stock at the fairs and shows, advertise in the livestock and farm press, and handle business correspondence in a businesslike way? What do I know of animal diseases? What would I do and whom should I consult in cases of accidents and outbreaks of disease? What do I know about breeds, breeding, feeds and feeding? Should I raise hogs, beef cattle, dairy cattle, sheep, horses, mules, or goats?

### Selecting the Breed and Stock.

The beginner, young or old, is wise who selects his foundation stock from an established breeder in his own county or state. He is wiser still if he chooses a breed which predominates or is gaining the ascendancy in his own community. By so doing he can progress more rapidly in the business, get advice more

quickly, learn more rapidly and market his stock more satisfactorily than would be possible if he were to choose a locally unpopular breed.

The most successful purebred stock raising in the future will be a community enterprise. It doesn't pay to be an individualistic crank in the selection of a breed, and to ignore community sentiment in conducting a business. If a man has plenty of money and egotism, he may raise Zebus in a community where most farmers raise Jerseys or Herefords. But what's the use? It's all right to be an individual with a will, convictions, ideas and ideals, "but don't be a fool."

An honest, energetic young breeder endowed with brains, courage, faith and guts is not likely to fall into many pits, and there is no pit, outside of a cemetery, that he cannot get out of if he should fall into it. Business life is a process of struggling out of pits in order to know how to stand firmly for brief moments on an endless series of peaks when they are attained. When we are content to stand or sit, and quit struggling for higher peaks, we are ready for the cemetery pit.

### A. F. B. F. Makes Little Progress

(Continued from Page 443)

the state and county organizations, and further, that no state should be entitled to voting delegates until all membership dues have been paid.

Other changes provide that, beginning with next year, the President and vice-president and members of the executive committee shall be elected for a member of this committee shall be allowed any region for each 100,000 paid-up members. This will give the middle west an additional representative.

While the income of the federation for the year 1924 will probably be \$48,427 short of 1923, rigid economies have allowed the expenses to outrun the income by only a small amount. Practically the entire debt at present consists of current obligations. For the fiscal year ending October 31, income from the six states which furnish practically 80 per cent of the total, as compared with 1923, was as follows:

	1924	1923
Illinois	\$30,501.28	\$35,541.21
Iowa		19,627.50
Ohio	24,087.00	30,843.12
Michigan	500.00	11,948.64
California	10,465.12	12,791.62

New York paid \$10,074.52, as against \$9,314.19 in 1923; Pennsylvania, \$404.60, as against \$346.33; Nebraska, \$677.50, as against \$568.02. The payment of \$250 by Indiana was made after the close of the fiscal year.

Contrary to the regular general program followed in preceding conventions, the program during part of the sessions was broken up into six sectional conferences on cooperative marketing, legislation and taxation, transportation and research, organization and finance, publicity and home and community. This allowed a more detailed study of the various problems than was possible under the old plan. However, it failed to produce a better program of action for the coming year.

In addition to these sectional programs, the general assembly was addressed by W. S. Hill of the United States Shipping Board, C. W. Hunt, of the Federal Trade Commission, George N. Peek, of Moline, Illinois, E. H. Cunningham, of the Federal Reserve Board, and Mrs. Charles Sewell, vice-president of the Indiana Farm Bureau Federation.

After the convention closed, the executive committee went into session and appointed a sub-committee, to choose the secretary to replace Mr. Coverdale. It is understood that Chester Gray of Missouri, has the inside track for the position.

# Embargo on Live Poultry

## Does Not Affect Express Shipments

COMMISSIONER Berne A. Pyrke, head of the New York State Department of Farms and Markets, has issued two quarantine notices. The first deals with shipments of live poultry from those western states that have shown an unusually high death rate during the past couple of months. This is in fact an embargo and the orders reads as follows:

WHEREAS, it has been determined that a dangerously infectious and contagious disease exists among hens, roosters, capons and chickens which are arriving in New York City markets from points without the State of New York, and,

WHEREAS, there is danger that such disease may be brought into the State of New York;

Now, therefore, I, Berne A. Pyrke, as Commissioner of Farms and Markets of the State of New York under the authority given and the duties imposed upon me as such Commissioner to take measures to prevent such disease from being brought into the State of New York, do hereby make the following order, namely:

The movement of any live hens, roosters, capons or chickens from the States of Missouri, Kansas, Illinois, Indiana, Iowa, Nebraska, North Dakota and South Dakota, into the State of New York is prohibited.

Witness my hand and the seal of the Department of Farms and Markets of the State of New York.

(Signed) BERNE A. PYRKE,  
Commissioner of Farms and Markets.

### Shipments from New York Barred

The second quarantine notice deals with the reshipment of poultry from New York City as well as the forwarding of any coops or crates from New York to country points.

WHEREAS, it has been determined that a dangerously infectious and contagious disease exists among hens, roosters, capons and chickens in the City of

WHEREAS, there is danger that such disease may be communicated to the flocks of the State of New York:

Now, therefore, I, Berne A. Pyrke, as Commissioner of Farms and Markets of the State of New York, under the authority given and the duties imposed upon me as such Commissioner to take measures to prevent such disease from spreading in the State of New York, do hereby make the following order, namely:

1. The movement from the City of New York of any live hens, roosters, capons or chickens is hereby prohibited, unless accompanied by a special permit issued by a duly authorized representative of the Department of Farms and Markets.

2. The movement from the City of New York of any coop or crate which has been used for the shipment of any hens, roosters, capons or chickens is hereby prohibited.

Witness my hand and the seal of the Department of Farms and Markets of the State of New York.

(Signed) BERNE A. PYRKE,  
Commissioner of Farms and Markets.

This embargo is the outgrowth of a conference held in the New York City office of the Department of Farms and Markets recently that was attended by representatives of the New York City Board of Health officers of the State Department of Farms and Markets and members of the live poultry trade. At that time it was brought out how enormous the losses have been in the live poultry shipments arriving from the west and the seriousness of the situation in view of the fact that the dead birds found in the cars are being sold to the consumers of New York. This feature of the situation has been especially noted by the city health bureau.

### Embargo Does Not Affect Our Territory

As far as shipping live poultry is concerned, it does not affect poultry producers in New York, New Jersey, Pennsylvania and New England. Practically

all poultry from this territory is shipped by express and invariably comes directly from the farm. At one time there was talk of creating an embargo on all poultry outside of New York State. AMERICAN AGRICULTURIST protested vigorously against this as it would create a hardship on New Jersey and Pennsylvania producers and penalizes them for something that was entirely out of their control.

The disease that has been causing so many losses, however, has not missed our eastern territory. Express shipments have been hit to some extent and we have had a number of complaints of farmers that sent in stock only to hear from the receivers that the majority of the birds were found dead or in a dying condition. Whether or not these birds were infected at the farm with the disease that is taking such a heavy toll will never be known. It is to be expected however, that express shipments will suffer to some extent due to the fact that they come in contact in wholesale stores with freight poultry.

### Do Not Crowd Birds In Crates

There are a number of factors that may be held responsible for the death of poultry in transit. Over-crowding is one of the most common shortcomings on the part of express shippers that we have to contend with. After a crate of poultry is made up it is a very easy matter to throw in a couple of extra hens or roosters and these extra two or three are just enough to pack the birds so closely that they either trample one another to death or die through suffocation. It is poor practice to crowd poultry in view of the fact that if the crate does contain fancy stock, the stock does not get an opportunity to show itself off to an advantage.

There is no question but what poultry shippers who are sending consignments via express are suffering due to this disease that is so prevalent in the West. Some authorities claim that it is something new and foreign. We really cannot reconcile ourselves to the fact that it is anything new. It looks as though it is nothing more than pneumonia, resulting from the fact that undernourished birds are brought from the farm, placed under more or less unsatisfactory conditions in forcing batteries and then shipped out into the elements on the way to market and in the market naturally contract in their weak and tender condition a fatal disease such as pneumonia. Several stations are working on the problem at the present time and the result of their diagnosis is being awaited with much anxiety.

### To Eastern Producers Advantage

In the meantime shippers of live poultry in the eastern territory will have to take extreme pains in selecting their shipments, sending only perfectly healthy birds. They will have to guard against overcrowding and disinfect the crates before the birds are put into them. It is an extremely difficult proposition to recover losses from the express companies in view of the present condition that exists in the market.

Just how long the embargo is going to last no one knows. There is no question but what the embargo on Western shipments is going to create a shortage in the live poultry trade in New York City and this may have the effect of increasing prices to some extent with consequent benefit to eastern shippers. The States affected by the embargo furnish about 85 or 90 per cent. of the live poultry coming into New York. It is a situation that is to be made the most of but it carries with it the additional hazards of losing birds, due to the contraction of the disease from infected fowls in the market.

# PAN-A-CE-A

## puts hens in laying trim

Put your hen in laying trim —then you have a laying hen

YOU WANT music in your poultry yard—song, scratch, cackle.

You want an industrious hen—a hen that will get off her roost winter mornings, ready to scratch for her breakfast.

A fat, lazy hen may be all right for pot-pie, but for egg-laying—never!

Add Dr. Hess Poultry Pan-a-ce-a to the ration daily, and see the change come over your flock.

See the combs and wattles turn red.

See them begin to cheer up and hop around. See the claws begin to dig in.

That's when you get eggs.

### Costs Little to Use Pan-a-ce-a

The price of just one egg pays for all the Pan-a-ce-a a hen will eat in six months.

There's a right-size package for every flock.

- 100 hens the 12-lb. pkg.
- 60 hens the 5-lb. pkg.
- 200 hens the 25-lb. pail
- 500 hens the 100-lb. drum

For 25 hens there is a smaller package

REMEMBER—When you buy any Dr. Hess product, our responsibility does not end until you are satisfied that your investment is a profitable one. Otherwise, return the empty container to your dealer and get your money back.

DR. HESS & CLARK, Inc., Ashland, Ohio

Dr. Hess Instant Louse Killer Kills Lice

### We Want Your Cow or Horse Hide

And we will tan and make you a beautiful Coat, Robe or Mittens to order. We make and remodel ladies' furs. Prices reasonable. Samples and Price List FREE. Galloway Coats and Robes for Sale at Wholesale Prices. All work guaranteed. References—Citizens State Bank, Milford, Ind. Milford Robe & Tanning Co. 237 Elm St., Milford, Ind.

**TRAPPERS** Money counts. Better prices—better grading—reliable quotations means more money. We need your Furs—You need us. Free bait. Price lists, tags, etc. O. FER-RIS & CO., Dept. 17, Chatham, N. Y.

### JONES' BARRED CHICKS

Owing to the great demand for chicks, will start incubator Nov. 17. Breeders strictly culled by State Board of Agriculture. This combined with New Incubator 150,000 eggs and 10 years' experience in baby chick business puts me in a position to sell you Good, Strong, Pure-Bred Chicks at reasonable prices. Pedigreed Certified Stock, Contest Records: 313, 288, 268, 251. Catalog. A. C. JONES GEORGETOWN, DEL.

### HAMPTON'S BLACK LEGHORN CHICKS

Our 14th season hatching this wonder breed. Hardest, Handsomest, Greatest Layers, Most Profitable of all breeds. Catalogue free. Write today. A. E. Hampton, Box A, Pittstown, N. J.

**TURKEYS, Ducks, Geese,** Breeders at special prices. Write your wants. Satisfaction guaranteed. Highland Farm, Box G, Sellersville, Pa.

**Large stock** Poultry, Turkeys, Geese, Ducks, Collies, Hares, Pigeons, Chicks, Eggs, low. Cata. PIONEER FARMS, Teiford, Pa.

## LET US TAN YOUR HIDE!

Horse or cow hides, calf, dog, deer, etc., made into coats (for men or women), robes, rugs or gloves. Or we tan your hides into oak tanned harness, sole or belt leather; your calf skins into shoe upper leather. Any desired color. FINE FURS, such as fox, coon, skunk, mink, muskrat, etc., made into latest style coats, muffs, vests, caps, neck-pieces or other garments.

### No Middleman Needed In Dealing With Us

Factory prices mean a big saving to you. Write for free CATALOG and STYLE BOOK. Tells how to take off hides, about our safe dyeing process on cow, horse and calf skins. Gives prices on all work. If you haven't enough pelts for garment you want, send what you have and we will supply the rest; or garment can be made complete from high grade skins we carry in stock. Furs repaired or remodeled. Estimates if desired. Automatic cold storage. Taxidermy and Head Mounting. Write today.

**The Crosby Frislan Fur Company**  
Largest custom tanners and furriers in the World  
560 Lyell Ave., Rochester, N. Y.

**We Tan Them, You Wear**  
any tame or wild animal hide  
Cow, Horse, Deer, Bear, mink, muskrat, skunk, coon, fox or other skins, tanned, mounted or made into fur auto robes, rugs, coats, caps, vests, gloves, muffs, scarfs, stoles. Blankets made from your own wool.

### FREE-BIG CATALOG-FREE

Illustrated by living models. How to prepare hides for shipment. Prices for tanning, making garments from your own furs and complete garments. We will save you money on tanning, taxidermy and \$10 to \$50 on beautiful fur clothes.  
**ROCHESTER FUR DRESSING CO., INC.,**  
74 Crescent Street, Rochester, N. Y.

## The Trouble Maker

(Continued from page 449)

"Daddy," she said finally. "I—I— think, Dot, that Taylor's a trouble maker. Don't know but, what you're well quit of him."

"That's all right, little girl. 'Spee I'm gettin' to be a cross-grained old critter anyway."

"You're no such thing."

"Yes, I guess I am. Been out here thinkin' tonight that I've lived more'n sixty years and ain't learned the most important lesson yet—"

"What's that, Dad?"

"Nothin' really matters enough to get all het up and sayin' things we're sorry for afterwards."

THE old man took his pipe from his mouth and tapped it reflectively on the block at his side.

"Yes, sir; young Taylor was right about one thing he said today, that nothin' matters but bein' happy. I don't know jest how to say it, but when I looked up at the sky tonight and saw that old moon looking down so sort of calmly, jest as he's looked these thousands of years, I thought how he must smile in pity to see how we poor human fools do mess up things by quarreling and fightin' all the time 'bout something that don't amount to nothin'." Folks have been walkin' this earth since the beginning of time, thinkin' that their little goings and comings were so all-fired important, when the only thing at all that counts is happiness."

"Oh, I know it, Dad, and I'm—I'm so —so unhappy!"

The old man reached up an arm around the slim girlish body and pulled her down on his lap, and she became a little girl again, sobbing out her troubles in the arms of a father who had never failed her in sympathy and understanding.

The old man said nothing, until the girl had had her cry out, and then:

"Tell Dad what's the matter, Dot."

"It's—it's Jim Taylor, Dad. You know I've always played around with him—and ever since I was a little girl—I've dreamed and dreamed that some day— Jim and I would get married—and make a home, and be happy like you and Mom."

"Your old dad wants you to be happy, daughter, more'n he wants anything else in the world."

"But since I got back from school, Jim's different. He—he—don't like me any more—and all he thinks of is this old milk business—and he's nasty to you, and I hate him for that, and—"

"You don't have no call to take on my battles," interrupted the old man.

"Speet I can hold up my end when it comes to quarreling. But I wonder, Dot, if Jim is worth a girl like you. I too used to think he was quite a feller, but I'm beginnin' to think different. And if so, you might better a good deal find it out now than after it's too late. Married life is a long time when you're hitched with the wrong team-horse, and a mean horse can spoil the team, just as a mean cow can put the devil into the whole herd."

"Oh, Jim isn't mean, Dad. And he has had such a hard time of it."

"Makes things hard for himself," said John Ball. "There are quite a few critters, including humans, who are just naturally born trouble makers. Some otherwise perfectly good folks rile up everything and everybody wherever they go. 'Cordin' to them, nothin' as is, is right. Always got to be changing somethin'. Trouble makers, that's what they are. Mebbe they're right sometimes, too, for I 'spect some things ought to be changed, but change stirs things up and makes trouble, and a trouble maker, whether he is a critter leading a herd over a fence into a cornfield, or a man always tryin' to change somethin', will make things bad for himself and for everybody else. And I'm beginnin' to

think, Dot, that Taylor's a trouble maker. Don't know but, what you're well quit of him."

"Now, there's that young Bradley. Noticed you riding 'round with him lately. What do you think of him?"

"Harry's a nice boy."

"Yes, sir; he is."

"He's against you in this milk League business, just the same as Jim," said Dorothy.

"Yes, he's agin me, but not like Taylor. I don't mind a man disagreein' with me, if he's fair. Young Bradley's fair. Ain't no trouble maker, either. Able to size up the pasture on both sides of the fence. Taylor always thinks the other feller's pasture is the greenest. But there's two sides to most everything, daughter, 'specially to marriage."

"Daddy, tell me something. You *have* been happy with Mom, haven't you?"

The old man hesitated and stroked his beard a moment before answering.

"Why, yes, Dot, I 'spec I've been as happy as an old grampus like me has any right to expect. Anyway, if I haven't been jest as satisfied sometimes with the way the team was pullin', it ain't been your Ma's fault."

The girl was quick to catch the reservation in the old man's voice and speech.

"What did you want that you didn't get, father?"

"Well, I dunno. I remember I told you once that young folks is always wantin' something darn hard, but they don't know what they want. Fact is, young folks always have wanted too much. They're sure to be disappointed, and I was no different from the rest. I dunno how to say it, but I guess I wanted what your story-books call romance, and mebbe there ain't a lot of romance in the world anyway, 'specially on a farm."

For a while there was silence between them and then Dorothy said:

"But why don't you and Mom ever kiss each other, Dad?"

"Can't say. Did at first, but there was always so much to do, we sort of got out of the habit. Then, too, I got the idea somehow that Ma thought I was a leetle silly when I wanted to kiss her. Anyway, it ain't the kissin' that counts in the long haul of marriage. It's havin' a team-mate that's steady and dependable, and that never rears up or gigs back in a pinch, a team-mate that saves trouble 'stead of makin' it. Don't you think so, Dot?"

"Perhaps you're right, father, but I think the kissing is nice, too."

"All right, kiss the old man good night, then, and we'll turn in. It's gettin' late, and I'm gettin' old, and I've got to fill silo tomorrow."

(Continued next week)

### City No Place For Bees

THE city council of Petaluma, California, widely advertised as the world egg capital, has decided that bees and hends do not mix and has passed an ordinance forbidding the keeping of bees within the city limits.

Residents of the city had found bee keeping a profitable industry that could be carried on in back yards because of the profusion of blossoms and flowers hereabouts. Hundreds of hives were distributed about the city. The bees led to the filing of many complaints with city authorities. Children, women and men were severely stung. In several instances the bees swarmed in automobiles parked on down-town streets and caused trouble before they could be hived.

City authorities said they could not determine ownership of bees which stung the citizenry nor could the bees be ordered muzzled as in the case of dogs. The anti-bee ordinance resulted.

Inefficiency may be the result either of too much or no motion.

## Hens lay—

only when they get proper nourishment from their food

"I regard Fleischmann's Yeast as the best food I know of for egg production," writes Mrs. S. S. Spell, of Forestville, N. Y. "My pullets have done fine, and the old hens better than usual the past winter. I notice, also, the germs in the hatching eggs seem much stronger than in the other eggs, from hens not fed yeast."

"The birds showed a higher egg production than in previous years," writes Burton Steere, of Springfield, Mass. (One of his yeast-fed flock is shown here.)

"Ever since I started feeding Yeast," writes H. Borden, of East San Gabriel, Calif., owner of these fine yeast-fed birds, "my flock has been in a very healthy condition. Mortality has been nothing to speak of."

A HEN cannot even begin to make eggs until her body is nourished. Whatever you feed your birds, it must be such that their delicate systems can assimilate it easily, or your egg record will be a disappointment.

Fleischmann's Pure Dry Yeast will make any ration you feed easier to digest and assimilate, easier to turn quickly into sound flesh and healthy energy—and into eggs! Yeast-fermented feed is prepared for quick absorption even before the fowl begins to eat.

Fleischmann's Pure Dry Yeast can be bought in 1 lb. or 2½ lb. packages, 25 lb. cartons or 100 lb. barrels. It will keep indefinitely. Full directions in every container. Your dealer should be able to supply you. If not, order direct from us. Transportation charges prepaid.

### Now—this trial package for \$1

So you can thoroughly test for yourself the amazing results of Fleischmann's Pure Dry Yeast, a special trial package is now ready. One dollar brings it to you. Enough Yeast to ferment the feed for 100 hens for a month and a half or 5 pigs for 20 days! Send today—enclose check, cash, or money order with the coupon below.

To the dealer: Progressive retailers the country over have stocked Fleischmann's Pure Dry Yeast—to supply the fast-growing demand for this remarkable food adjunct. Poultrymen and stock-raisers who can't get it from their dealers send their orders direct to us by the hundreds. You should be getting your share of this business! Be the first in your town to have it on your shelves! Send today for our plan of cooperation. It shows how you can add to your profits with Fleischmann's Pure Dry Yeast.
