# Drinks That Tinkle

An A. A. Wednesday Evening Radio Talk Broadcast From WEAJF

**D**RINKS that tinkle—any drink that doesn't is not very appetizing these hot mid-summer days. I have been going over my collection of recipes for home-made beverages and it surprised me to find how long the list was. I must confess that many of them made my mouth water, and I hope that just listening to the recipes will cool you off.

First, I want to speak of the two most obvious drinks—obvious, but few of us get enough of either. The first is water, the most refreshing drink there is. You can't have too much of it, though many people think that drinking it to excess at meals is bad. If you drink between mouthfuls, however, and don't use it just to wash down half-masticated food, it will do no harm. But be sure to drink more between meals than you do at meals. Keep a jar in the ice to cool, but don't swallow down quantities of real ice water, because too intense cold will only make you hotter. Stick to well chilled water rather than water with ice in it.

Now as for milk—of course there have been many radio talks and articles on the subject of milk as a beverage and as a food, so I won't go into any great detail about its value. Just remember, though, that it is the one thing you can drink that is also actually a food, and that instead of ordering sweet syrupy drinks which contain nothing but water, glucose and flavoring, you can cool off just as well by drinking a glass of cold milk, usually at less cost and always with more benefit to yourself.

"We get tired of milk," people sometimes tell me. Well, I suppose a person could get tired of anything, even nectar and ambrosia. But there are many simple ways to vary the taste. Several families I know keep a small stock of flavors on hand in the kitchen and "mix the drinks" just as a soda fountain clerk does when you order a flavored milk shake at the counter. To supply enough for the family, beat two or three eggs in a bowl. Flavor with sugar, maple syrup, molasses, vanilla, chocolate or bottled fruit juice, add the milk and beat again with the egg beater. If it goes with the flavoring, sprinkle a little nutmeg on the milk when it is poured into each glass, and *serve immediately!* If you add a couple of straws you will find the children even more entranced with the home-made milk shake.

Iced tea, coffee and chocolate are standbys in most American homes. So is good old-fashioned lemonade, made with an allowance of one lemon to each large glass, or three to four ordinary water tumblers. In sweetening any of these iced drinks, always dissolve the sugar in a little hot water to make a thick, intensely sweet syrup. I'm sure most of you have tasted and had to gulp down sour lemonade or bitter iced tea, seeing all the time a white layer of undissolved sugar on the bottom of the glass. No matter how you stir it up, it simply will not melt and sweeten the drink.

## A Few "Fancy" Concoctions

Now for a few "fancy" concoctions, particularly good for company but worth trying on your family too. Remember that they like tinkling, tempting, icy drinks just as well as your neighbors and that home-made ones are always more delicious than anything in a bottle.

For instance I suggest:

**Ice Cream Coffee.**—Four tablespoonfuls of finely ground coffee, one pint of boiling water,

one fourth cupful of rich milk, one fourth cupful of cream. Allow the boiling water to drip through the coffee either in a percolator or in a drip coffee-pot, scald the milk and cream and add to the hot coffee.

**Russian Tea.**—To one pint of tea infusion add one pint of lemonade. Ice and serve.

**Coffee, Egg and Milk.**—Two eggs, 1½ teaspoons instant coffee, 2½ tablespoons sugar, few grains salt, three cups milk. Beat the eggs until light; add the other ingredients, and strain into glasses. Serve very cold. (This recipe fills four tumblers.)

Combine the two and add the juice of four lemons, and half a cupful of currant juice. Pour in a pitcher with a quantity of cracked ice and add one pint of charged water. In the mouth of the pitcher put a bunch of fresh mint which has been lightly dipped in the beaten white of an egg and then in powdered sugar.

**Plum Amber.**—Whip to a froth a half glass of plum jelly and mix slowly with one cupful of boiling water. Strain and when cool add a bit of nutmeg and one quart of loganberry juice. This may be garnished with the stiffly beaten white of an egg, which makes a pleasing color contrast.

**Cold Chocolate.**—To make the chocolate syrup, mix half a cupful of chocolate or cocoa, with two cupfuls of sugar, then add gradually one cupful of boiling water and cook in the upper part of a double boiler for ten minutes. Place the syrup in a small glass jar and keep in the refrigerator. To serve, place a little cracked ice in a glass, add two tablespoonfuls of chocolate, one cupful of cold milk, little cream.

**Raisin Lemonade.**—Chop one pound of seeded raisins; put into a stone jar with the thin-shaved rind of three lemons, the juice of the lemons, one pound of sugar, and four quarts of boiling water. Cover close, and let stand in a cool place for a week, stirring twice every day. Strain and bottle, keep in the ice until it is used.

**Honey Lemonade.**—To one quart of lemonade add one cupful of strained pineapple juice and one cupful of strawberry or red raspberry juice. Add four tablespoonfuls of strained honey and a few drops of vanilla. Serve ice cold.

For a summer porch party, fruit punch is a standby. It can be made a dozen ways, depending on the fruit you have on hand, but this is a pleasant variation of it and will serve a porchful:

**Fruit Punch.**—Three cupfuls of sugar, two cupfuls of water, juice of nine lemons and five oranges, one cupful of cherries, one cupful of shredded pineapple, one glass of currant juice, one cupful of raspberry juice. Combine the sugar and water and stir until the sugar is dissolved, then boil for ten minutes with the rinds of one lemon and one orange. Strain and while hot add the currant jelly or juice. Set on ice and when ready to serve add the fruit juice and fruit. Pour into punch bowl and add crushed ice and charged water to dilute. A bottle of grape juice adds color and flavor.

Ginger ale punch is always popular:

**Ginger Ale Punch.**—Three quarters cup mint leaves, one cup boiling water, 1¼ cups sugar, two pints ginger ale, juice of three lemons, one pint grape juice. Pour boiling water over mint leaves, sugar and grated rind of one lemon, and let stand until cool; strain into a punch bowl containing ice, add ginger ale, grape juice, and strained lemon juice; garnish with sprigs of mint.

## A Real "Farm-Grown" Drink

Many families make their own grape juice and it is so rich and satisfactory that I can heartily recommend it. The process is simple.

**Grape Juice.**—Pick over and wash grapes, barely cover with water, and cook until soft, drain through cheesecloth, and to each quart of juice add one cup each of water and sugar; bring to boiling point, skim, bottle, and cork tightly. When cold, dip corks into melted paraffin.

**Grape Eggnog.**—One egg, one teaspoon powdered sugar, ⅓ cup grape juice, ¼ cup milk, nutmeg. Beat egg until very light, add grape juice and sugar, and beat again, add milk, beat well, pour into glass, and dust with nutmeg.

**Grape Nectar.**—One pint of grape juice, two of lemon, one of orange, one small cupful of sugar, one pint of water, a pinch of nutmeg and a few sprigs of mint. Bruise the mint leaves and add to the grape juice, lemon, orange, sugar, water and nutmeg. Let stand for one hour or two for the flavors to blend. Strain and serve in tall glasses with a quantity of crushed ice.

**Pineapple Lemonade.**—Make a syrup by boiling one pint of water, and one cupful of sugar for ten minutes. Add the juice of three lemons, and one chopped pineapple. Cool, strain, and add one quart of ice water.

**Mint Drink.**—Pour one cupful of boiling water over five or six sprigs of mint and let stand ten minutes. Boil together, one cupful of sugar and one cupful of water until it forms a thick syrup.

## Farmers on the Broad Highway

*Adventures of the Sanders Family Through New England and Lower Canada*

By W. H. SANDERS

**B**ACK in August our family got the "camping out" fever. As many of you know, it is right in style. It has a great lure. A breakfast of bacon and eggs cooked in the open with the tang of the woods mixed in, and the smoke of the camp fire in your eyes while you eat it, can't be beat. I decided so one morning after moving our folding table for the third time, and we all decided gas masks should be added to next year's equipment.

City folks say "you're only camping out when you leave old Broadway," but even as farmers we felt we wanted to get back to nature a bit.

For such a trip there was much talk and deliberation as to what should go and what should not. A bit of care had to be taken here, as a car is soon loaded, especially when there are five in the family.

Mrs. S. busied herself in packing the many suit-cases. Some were clothing, others dishes, and still others food stuffs. Helen, our 16-year-old "girl scout," made the blanket rolls, while Walter, who is thirteen, packed our twenty gauge shot-gun to keep the "bears" away. Mildred, who is seven, pondered over the doll family, as only one member was invited, while it was my job to give the "Franklin touring" the once over to see that all grease cups were full.

When finally loaded, I am sure we had any band of gipsies beaten for luggage. Our running boards were covered with suit-cases, bags, blanket rolls, and tent poles. One of our neighbors asked how long we were going to camp out. I said in a joke, "Maybe one night will reduce the camping fever." I little realized how nearly this was going to come true.

We made our start on August 21st and from Westchester County, New York, made directly for the New England States, entering them at Danbury, Connecticut, the hat city. From Danbury we passed through the village of Brookfield. This town has many old-fashioned houses that once sheltered Connecticut's early settlers, and was on the stage-coach line between Peekskill, New York, and Hartford, Connecticut. Here we began seeing tobacco fields. Much land in the Connecticut River valley is given to tobacco growing, and the crop now extends into lower Vermont. The cutting had begun and the long-leaved plants were being drawn from the fields to be hung bottom up in especially ventilated barns.

Our next town was New Milford, and from here we bore to the left or west on a brand new cement road. We followed this for some ten miles, and were marveling at such a fine road in a wild wooded country when all at once the concrete stopped. We now had twenty miles of dirt road to get to Lakeville where roads were roads again. We had been misled. In other words, look before you leap. Of course, they told us the road would be finished all the way "some time," but we could not wait.

From Lakeville we soon hit the Massachusetts line. Now came Great Barrington, Pittsfield, and North Adams. Here we came upon the Mohawk Trail, and were in the heart of the Berkshire Mountains. We climbed the mountain trail and gained the highest point, Whitecomb's Summit. At this place we decided to camp where the exalted bronze elk stands with head so high overlooking the valley to the east. This elk statue is a war memorial to fallen heroes of that order.

The wind was high and gray clouds were settling. I was a bit worried, but as five other parties had tents up, we risked it. We dared not build a fire, so ate leftovers from our noon lunch. When blankets had been spread and we had had possibly an hour's sleep, the rain started. The wind increased and so did the rain. Now the tent fairly jumped up and down. Soon water came through, and there was just one thing to do—

spend the night in the car. Mildred, our youngster, began to cry when she woke up, saying, "Let's go home, I don't like camping out anyway." She had sympathizers. All night the wind rose and the thermometer fell. In the morning Whitcomb's Summit was a sorry place,—everybody nearly frozen and more or less wet. Some tents were torn to shreds. Ours had stood for a wonder. The rain had stopped, but the "low-minded" clouds were scudding over our heads. We picked up our belongings, rolled up the wet blankets and wetter tent, helped our neighbors as much as we could, and followed the trail down off the mountains to Greenfield where a hot breakfast could be bought. In descending

"At Franklin we stopped two miles off the main road to see the Daniel Webster birthplace . . ."

we passed a sign at the roadside which read, "1,060 feet below this spot is the Hoosac Tunnel." The Hoosac Tunnel is a two-track railroad running four and three-quarter miles under the mountains. It is the longest in the United States.

A few miles out of Greenfield we stopped to dry out tent and blankets as the sun had now come out, and life seemed worth living again. I lay down to try a bit of sleep. This was short-lived, however. Mildred had been attracted to the woods by golden rod and wild asters. Yellow jacket hornets claimed that part of Massachusetts and drove her out, but the poor kid got eight stings about her bare knees. We packed up again, and went on to the next town. Here we got camphor for the stings, and ice cream for the mind.

Now we set sail once again, and in this country we saw many more tobacco fields with their long ventilating barns. At Winchendon and Gardner they have a novel way of advertising their wares. Winchendon is the toy town of the United States and has a large rocking-horse in the town square. Gardner claims to have the largest chair factories in the world, so in their town square is a high wooden chair some fifteen feet high, awaiting "Jack the Giant Killer." The story goes that once a drummer came to Winchendon and upon seeing the mammoth wooden horse asked if it was a one-horse town. It is safe to say his line of goods had a poor sale in that town.

From Ayer Junction we cut across country to Nashua, New Hampshire, and at Manchester, New Hampshire's largest city, we decided to spend the night. At Manchester are some of the country's largest cotton mills. The Amoskeag mills employ several thousand hands and make the famous "Amoskeag Gingham." The Merrimac River, where water power is available for miles up and down, has many mills. Cotton, woolens, pulp and paper are the foremost industries.

We had run only one hundred and twenty-five miles for the day, but with hanging out our wash, fighting bees, and the like, I had become tired. We were

scheduled to reach Laconia, my home land, that night. That would have been sixty miles more.

We found a smooth little field beside a pine grove just out of the city. A brook was near by, and no wind was blowing—what more could we ask? Up went the tent, our girl scout member laid a camp fire, and Mrs. S. began boiling sweet corn that we had purchased at a farmstead on our way; and after a supper of hot frankfurters and boiled sweet corn, we watched the embers of the camp fire glow in the twilight, and the second day of our pleasure "exertion" was ended. Furthermore, let it be said that none of our party had to be sung to sleep that night.

In the morning when the bacon and eggs had become history we broke camp and rolled to the north. Just above Concord, New Hampshire's capitol, we passed a little island in the Merrimac River. On this island is a monument to the memory of Hannah Dustin. History tells a thrilling story of how Indians in 1698 captured Mrs. Dustin, her babe, and a nurse girl at Haverhill, Massachusetts, and paddled them seventy miles up the river to this island. During the night, while the Indians slept heavily after their up-stream canoeing, with the help of her nurse girl, Mrs. Dustin tomahawked the Indians, ten in number, thus escaping with other white captives back to Haverhill.

At Franklin we stopped two miles off the main road to see the Daniel Webster birthplace—a little two-room house with some of the original furniture. This little house is known the country over. It has many visitors, as the register shows. While we were there a car pulled in from the State of Illinois.

Laconia came next. Here we stopped off on our trip for two days with an uncle of mine and some cousins. Our tent needed

a rest, and some good beds were as welcome as the flowers in May to our party. We had a fine time swapping stories with old friends and neighbors, also drinking in the fine lake and mountain scenery of this country. Laconia is known as the City of the Lakes. There are two large lakes, Winnepesaukee and Winniesquam, also a smaller one, Opechie. These are Indian names, as is the nearby river, Pemigewasset. They all have a meaning. Winnepesaukee is the "Smile of the Great Spirit." It is twenty miles long and has three hundred islands in its crystal waters. One island is inhabited only by rattlesnakes. They are supposed to have been brought there by the Indians to poison their arrows. I guess it is so, as the rattlers are still there, and there are scarcely any others in New Hampshire. This region was undoubtedly a great

hunting ground of the Indians as many relics have been found—arrowheads, tomahawks, and the like.

Pine trees grow as if by instinct here, and from one grove on the south shore of

Our party near the top of Mt. Washington. Note the absence of roadside shrubbery at this high altitude.

Winnepesaukee the White Mountains, sixty miles to the north, can be seen. Around in view of this lake one can also see the Ossipee Mountains, and some of the nearer peaks are Sandwich, Chocorua and Belknap.

The White Mountains were our next point of interest. There we pitched our tent in the orchard of a friend farmer who has a fine farm of intervale land in

(Continued on page 6)

### Stop the Fraudulent Seed Sales

THE time has come to call a halt in the tragic exploitation of farmers in the purchase of their farm seed, particularly that of clover and alfalfa. We charge, with definite proof to back it, that at least one-half of the clover and alfalfa seed now being sold is not as it is represented, is of Southern origin, and will not stand the rigors of our Northern climate. Without any doubt one of the chief reasons for the failure of alfalfa and clover stands is the poor seed, seed which farmers have bought and paid good prices for, believing it to be Northern grown.

This season New York State bought for the state institution farms thirty-six lots of seed. The purchase specifications called for domestic clover and alfalfa. In spite of this an investigation showed that 55% of the alfalfa and 40% of the clover was imported. The firms who sold this seed violated their contract and we are waiting with interest to see whether they are prosecuted by the state attorney general. If not, we are going to ask why not? If seed companies openly dare to sell such seed to the state institutions, any individual farmer can see where he stands in buying a small lot where there is not much danger of its being checked up.

AMERICAN AGRICULTURIST is collecting evidence on this great fraud on farmers and we are going to publish the facts and tell the truth, no matter where the chips may fall, until the farmer can buy grass seed and be reasonably sure that he gets what he pays for. In the meantime, we think the situation is so serious that the State Department of Farms and Markets ought to start an investigation with the view to getting the facts and prosecuting the guilty parties.

### Nominating a President

DOWN the avenue a few blocks from the office of AMERICAN AGRICULTURIST where this is being written is Madison Square Garden where sits one of the largest and most remarkable gatherings in American history, The Democratic National Convention is holding its session in New York for the first time in more than half a century. A few moments ago we came from a seat in the press gallery in this convention where we listened to Franklin D. Roosevelt, of Dutchess County, New York, formerly Assistant Secretary of the Navy, place the name of Alfred E. Smith in

nomination. The pandemonium that broke loose at the end of Roosevelt's speech is beyond the power of words to describe. It started over an hour ago. When we stop to listen, we can still hear it several blocks away. Yesterday, a similar although not so large a demonstration followed the speech placing the name of McAdoo in nomination.

Around and around the great center aisle which divides the delegates from the visitors marched two or three bands all playing "The Sidewalks of New York," followed by thousands of wild men and women carrying huge pictures of New York's governor. In the march were delegates carrying over their heads the names of the states which favored the Smith nomination. For over an hour screeching sirens, bells, horns and shouting human voices added to the bedlam of noise in the efforts of Smith's thousands of friends to proclaim him their favorite.

If you have never seen such a demonstration, you can have no idea of the intensity of sound when 20,000 people all shout together. Your eye can see a band, standing within twenty feet of you, going through the motions of blowing their horns, and pounding the drums, while your ear will not catch a single note above the other noise.

As we stood watching the great crowd which seemed to have gone entirely mad, we could not help thinking what a wonderful people these Americans are. A few minutes before at the beginning of the session, a minister of the gospel had stepped forth on the speaker's rostrum and raised his hands. Instantly all the noise of visiting and talking stopped, and the immense audience rose as a unit to their feet and bowed their heads in silent prayer. So quiet was it that not a sound could be heard throughout the vast auditorium. Yet a few minutes later when the nominating speeches began, these same people were engaged in a contest of noise that could be heard for blocks, in honor of their favorite candidate for the highest nomination in the land. A few days more and they will have decided upon the one candidate and all quarreling among themselves will cease, while they engage in a greater quarrel with the opposing party.

If we are to believe their statements, or the statements of the Republicans on the other side, the country will come to utter ruin if their candidate does not win at the polls. Then a few months will pass, elections will come and go, one or the other of the candidates will win, and both sides will all settle down again, forgetting all of the animosity, bitter hatreds, and unkind words of the campaign, and remembering only that they are all good American citizens.

Today we heard a reporter say at the convention to another, "What a strange way to nominate a man for the greatest office in the world!"

"Yes, it is strange," said the other. "But the strangest part of it is that it seems to work, for whether Democratic or Republican, no country of the world has had a better list of chief executives than has the United States of America!"

### Dean Mann on Leave of Absence

FRIENDS of Dean A. R. Mann of the New York State College of Agriculture will be interested in the announcement in our news columns of his appointment by the International Education Board to carry out a project for the promotion of agricultural science and education through an international exchange. To do this job Dean Mann has been granted a leave of absence by Cornell for an approximate period of two years, most of which will be spent in Europe.

More and more thoughtful Americans are coming to see the need of better understanding and working agreements between our country and the other great nations of the world. Rapid transportation and communication are constantly making the world smaller. On June 22, for instance, Lieutenant Maughan of the United States Army flew from the Atlantic to the Pacific coast in an aeroplane from dawn to dusk, covering in one day a distance that it used to take years to go. This annihilation of distance has made distant strangers our near neighbors, creating a

crying need for a better understanding. We are no longer isolated. Therefore every work like that which Dean Mann will carry out is a step in the right direction.

### Who Is the Champion Barnyard Golfer?

ARE you going to enter the Horse-shoe Pitching Contest? If you are interested, get in touch with your county agent. County contests will be conducted in most counties either at the Grange, Farm Bureau or League picnics, or at the county fair. The winning teams will go to Syracuse to compete for the state championships there for AMERICAN AGRICULTURIST prizes of \$100 for the best team in the state, \$50 for the second, and \$25 for the third. Full rules and regulations as to weight of horseshoes, pitching distance, etc., will be published in an early issue. But they will be very simple. In the meantime, get busy after supper and practice up. There is going to be a lot of interest and a lot of fun in this contest.

### The Essay Contest

LET us call your attention again to AMERICAN AGRICULTURIST essay contest on the subject, "The Most Neighborly Act I Know." Letters should not be more than two hundred words in length, should be about some actual experience you have had or know about and should be in this office not later than July 15th. We have received a nice lot which effectively prove farm people are just as neighborly as they ever were.

### A Suggestion

BECAUSE of the heat and heavy lifting, haying and harvesting is the hardest job of the year on many farms. But a great many men have made such use and application of the principles of machinery and the laws of mechanics that they have reduced to a minimum the man power required for handling the hay and grain. It is perhaps unnecessary to say that a little extra time keeping the mowing machine properly oiled, the guards in place, and the knives sharp is the first fundamental in starting the haying job right.

Not all farmers can afford hay loaders, but more and more are finding what a tremendous labor-saver a hay loader is. Perhaps where the job is not too big and there is only one man to do the work on each farm, two neighbors could arrange to cooperate and buy a loader to the advantage of both. But when it comes to getting the hay into the barn, there is not much excuse in unloading it all by hand. Horse forks, rope and pulleys are not too expensive compared to the tremendous amount of work and energy they save. A lot of men hesitate to use a horse fork or do not get the most out of it when they do have one because they do not understand the principles of operating the rope and pulleys to the best advantage. We can sympathize with this because the proper arrangement of the pulleys used to puzzle us. If they bother you, why not ask your county agent, or some handy neighbor to take a couple of hours to help you to get the fork to operating right?

### Eastman's Chestnuts

I HEARD this one the other night when I was listening in over the radio. The speaker said he stole it from the Narcotic Enforcement Squad.

Two tramps were walking along a city street when one of them spied a paper containing a little white powder. He picked it up, and took a good long smell of it.

Then he said to his friend: "Excuse me, but I've got to leave you."

"Where ya goin'?"

"To Mexico to buy a gold mine."

Then the other tramp took the white powder and also took a long smell.

Then he replied: "Ain't no use your goin' to Mexico to buy that gold mine. I WON'T SELL IT."

# What Is Happiness?

## Can You Give a Better Definition in Fifteen Words?

By MRS. EMILY GOODRICH

**T**HERE are two ways of getting a thing done: do it yourself, or get some one who can," said Jake Armstrong, machinery salesman.

"Now I do one thing; I sell machinery, but I work for a man, a queer old duffer, who calls himself a philosopher. He expects many things from the same man.

"Maybe you'll understand what he is like, when I tell you the motto that hangs over his desk, 'While You Grow a Business Grow a Soul.' Um, grow a business is alright, but that grow a soul gets us into all kinds of trouble.

"What do you think he said to us at the end of a salesman's meeting? 'A hundred dollars' bonus to the man that sells the most machinery in a time, and another hundred for the best fifteen-word definition of happiness!'

"Gosh! Of all the fool notions. Well, I had been married six months—and—well—I voted for Roosevelt—if you know what that means—and I needed the money.

"Anyway I went out hammering my brain on this happiness game, and for two days I sold—nothing—and then I quit. 'To thunder with happiness,' said I. 'I sell machinery.'

"Coming back I stopped at Sioux City, and went out to see an old Irishman; a gardener; a fine character and a thinker. To my world I am Jake Armstrong, but to Mr. Kenally I'm 'Me b'y.'

"His wife was away and we went into the garden to smoke our pipes. 'Uncle Mike,' I said, 'what's happiness?'

"An' what do you say it is, me b'y?'

"It's too darned many things,' I answered thinking of those two first days out.

"What for ninstance?'

"Oh, health and wealth, freedom from worry, and the right kind of work.'

"Me b'y, me b'y, 'tis noon of them things.'

"Then I got a hunch that I had found what I wanted, so I stirred him up with a stick as you might say. 'Look here, Uncle Mike, I travel the earth, you understand. Last week I saw old Liberty ablaze in New York Harbor, and a month from now I'll be dropping into Frisco. And you, you work in your garden. In twenty-five years you have not been outside the county. What do you know about happiness?'

"I know all about it—um—happiness is the ability of your mind to find its own happiness, and to know how to fidget your own unhappiness. A few of us is born with the abilitee, and few of us figure out the proocess, and that's all the happy people there are in the wurd, me b'y.

"I'll till ye what I mean. Look at me gardin—'tis nit very big—an' 'tis all growing somethin' thet cannit be walked on, except this clover patch, an' thet corner over there where I work up my wood with the tool-house beside it.

"Into me gardin comes Terry, me son Pat's b'y—to make me a visit—and what does he do? In two minutes he looks over the whole gardin, then he comes an' asks me to make him a wagon—an' I can't I'm thet busy—then he wants to play in the tool-house—an' he can't—so he looks over into the next yard, sees a coaster, an' wished he had it. He pulls the cat's tail, peels an orange thet his grandmither gave all over the walk—well—'tis a sigh of relafe I'm havin', when he is gone, Jakie.

"Wull thin—comes Tim—his own brither, about a year younger. He looks the gardin all over like Terry, thin he goes to the wood-pile, an starts buildin' an' fixin', an' by an' by I gets hoein' anear

him. "I'll put these all back, grandfither, but I'm playin' I'm goin' to build a wheel-barrow, an' me manual-training teacher says the first thing is to selict me material, now this would do fer the handles, an' this fer the sides an' ends of the box,"—an' the first thing I knew I'd dropped me hoe an' wint for a hammer an' nails, an' a wheel I had in the tool-house, an' I spint the forenoon hoein' an' makin' suggistions—an' the finest wheel-barrow he wint home with. Wull now—do ye see it—two b'ys from the same home—in the same gardin—one can make his own happiness and the ither can't!

"Thin how to forgit yer own unhappiness—ye

when I had kissed her she called me a dear ould Irishman. An' we spint the rist of the day like a couple of lovers.

"Wull thin—makin' yer own happiness—fergittin' yer own unhappiness. Thet's the whole of life, Jakie, whither ye travil the earth, or work in a gardin.'

"Well, I went home and told wife about it, 'now put it into fifteen words.' 'Happiness,' said she counting on her fingers, 'the power of the soul to create its own joy and heal its own misery!'

"Well, the old man shook hands with me—actually—when he gave me the two hundred. 'Jake,' he said, 'you're a good salesman, and you are getting to be a philosopher!'

"Ye-e-es?" says I, real modest.

### The Eternal Quest

**I**F it were possible for me to have a wish come true for all of my farmer friends, I know without hesitation what it would be. I would ask that all of you be successful in your quest for happiness. When those wise forefathers of ours founded this great nation and wrote down on the nation's birthday in the Declaration of Independence those principles on which the nation was to be established, they said that the three fundamentals were life, liberty, AND THE PURSUIT OF HAPPINESS.

Few of us often stop to think about it, but it is true nevertheless that directly or indirectly all of our work, all of our play and all of our actions are directed toward the single purpose of trying to be happy. Sometimes I think what a tragedy it is that so few of us come to learn the real ways of happiness and apparently obtain so little.

When I became editor of AMERICAN AGRICULTURIST, I established the goal or ideal of bringing a little more happiness into farm homes. I like to feel that in every issue of the paper there is a smile or two for everyone, and maybe a hearty laugh for some, for in humor there is always a touch of happiness. I like to feel, too, that in every issue there is at least something that will inspire our people to a hope for better things or to action that will conquer their troubles and lead to pleasanter times. I like to feel that we are keeping the old AMERICAN AGRICULTURIST in the front line for such things as good schools for our kiddies, the preservation of our country church, proper medical attendance for our sick, and less oppressive taxes for us all, for these things all make for happiness.

But after all, the most powerful influence for happiness lies within our own hearts. If the seeds of happiness do not lie within us, no amount of pleasant external conditions will be of any use. The pot of gold at the end of the rainbow could shine without avail in our front yards. If you do not believe this, read the little story on this page—one of the finest we have seen in a long, long time.—E. R. Eastman.

remimber me sister—she's thet high-falutin', an she came into me gardin all dressed for the city, an' I'd been thet intint on the plantin' I'd paid attintion to noothin', an' she was thet disgusted with the sight of me, an' she called me a durr-ty ould Irishman—an' ragged—an' if our mither was alive she'd been ashamed of me entoirely, an' nit a grain of the sinse of dacincy did I have to lit meself go thet way—whin I had money to buy better!! Wull—she lift me thet hot under the collar thet before I knew it I'd hoed up ivery one of me young cabbages thet I had tinded from seed like babies—an' thin I put me hoe straight in the tool-house for fear I'd kill somebody!

"Thin I took me pipe an' set me down on the binch here an' began thinkin'. Was it true what she said—an' I knew thet it was. It was time me ould overalls was in the fire—I'd more in the closet—so I made up me mind to simply forgit it—an' it came to me—I'd not been spakin' a swate word to Maggie for days—I'd been thet takin' up with plantin'—so I wint to find her—an' ye should have seen her—aw—I know ye young fellers—the tales ye told me of yer new wife, the last time ye were here, she must have come straight from hiven—but whin ye are seventy an' over—'tis a wonderful thing if yer wife looks as swate as when ye first found her. Wull, there was Maggie with her hands full of violets, an'

ardly soldier is in time of war.

6. To stand for honest election laws impartially administered.

7. To obey all laws whether I deem them wise or not, and to uphold the officers in the enforcement of the law.

8. To make full and honest return of all my property and income for taxation.

9. To be ever ready to serve my country in war and in peace, especially in such inconspicuous capacities as juror and election official.

10. To acquaint myself with the functions of the various departments of my government and to spread the knowledge of them among my fellow citizens in order that they may enjoy to the fullest extent the advantages offered by the government, and may more fully recognize the government as means of service to the people.

11. To encourage good men to enter public service and remain therein by commending the faithful performance of their duties and by refraining from criticism except such as is founded on a knowledge of facts.

12. To seek to promote good feeling between all groups of my fellow citizens and to resist as inimical to public welfare all partisan effort to excite race, religious, class and sectional prejudice.

13. Not to think alone of what my country can do for me but more about what I can do for it.

14. To inform myself with respect to the problems which confront my country in its foreign relations, and to support policies which safeguard its legitimate interests abroad and which recognize the responsibilities of the United States as a member of international society.

### The Citizen's Creed

**T**HE College of William and Mary has evolved a citizenship creed which might well be adopted in every State in the Union. During the month which commemorates our birth as a nation, this document is commended to all citizens, whatever the party or private creeds, for careful study and self-examination.

#### My Duties as a Citizen

1. To acquaint myself with those fundamental principles embodied in our constitution and laws which experience has shown are essential to the preservation of our liberties and the promotion of good government, and to defend those principles against all attacks.

2. To inform myself on all public issues, and on the character, record and platform of all candidates for office, and to exert actively my influence in favor of men and measures in which I believe.

3. To vote in every election, primary and general, never using my vote for personal or private ends, but only for the public good, placing the welfare of my country above that of my party if the interests of the two should ever conflict.

4. To connect myself with the political party which most nearly represents my views on public questions, and to exert my influence within the party to bring about the nomination of good men for office and the endorsement of measures for the public weal.

5. To have the courage to perform my duties as a citizen regardless of its effect upon me financially or socially, remembering that a cowardly citizen is as useless to his country in time of peace as a cowardly soldier is in time of war.

# An Ancient Tale With a Modern Moral

## Fool Nostrums That Failed To Solve Surplus Problems

I HAVE just been reading a big book—Bruce's "Economic History of Virginia in the Seventeenth Century." The book runs into two volumes aggregating more than twelve hundred pages and constitutes a most exhaustive commentary on a period which by our American standards of age seems far off and misty. The writer is that type of research scholar from whom it is literally true that "nothing is too insignificant to be noted." It would seem that the larger part of the history of a struggling English colony three centuries ago must be buried and lost forever and yet by patient research, by delving in the long forgotten archives of the Colonial Legislatures, by painfully deciphering faded family letters and yellowed diaries and going over the old wills and property inventories decaying in the vaults of Virginia Court Houses he has found it possible to reconstruct the life of that period even to the days of Capt. John Smith and Pocahontas and to make clear to us the founding of those great feudal landed estates which although they came to an end suddenly and totally in the cataclysm of the Civil War will nevertheless remain forever as the one inexhaustible mine of romance in America.

I think it was John Wise, son of the war-time Governor of Virginia, who says that the wealth, the education, the culture, the political power and influence of the Old South was held in the hands of about 8,000 great, powerful hereditary families. It was a strange, picturesque, baronial agricultural civilization of which the glamour still remains, although the substance has perished. But the moralist can not but remark that in the end the triumph in our national life has been to the stern Puritan on his stone strewn New England hillsides rather than to the southern Cavalier.

But what I began to set down is some thought and comments upon the story of tobacco in Virginia as told by Bruce. Some of us may remember the old rhyme

"Tobacco is an Indian weed  
That from the Devil doth proceed."

Whether or not it be true as generally stated that it was Sir Walter Raleigh who first brought the knowledge of tobacco to Europe, at any rate the white man found the habit one that was very easy to acquire because it seems that only

By JARED VAN WAGENEN, Jr.  
fifty years later there was a large and eager market for the weed. Almost from the very beginnings of Virginia in 1607 and even until to-day, tobacco has been the one great money crop of the State. Lying a little too far north for cotton or indigo or cane, tobacco was the one thing that the State had for export to England. The crop had a long—sometimes palmy—sometimes very depressed history. There were periods when it sold for more than three shillings a pound and three shillings was a large sum of money 300 years ago. Those were the days when even the streets of Jamestown were given over to the cultivation of the plant. It was for the sake of this crop that the black man was stolen from Africa—openly and legally until 1808—secretly and unlawfully, occasionally at least, until the last days of the Confederacy.

My first thought is this—that the story of Virginia tobacco is an impressive warning concerning the evils of one crop farming. The State had no real live-stock husbandry, it had of course no commercial fertilizers, there was no knowledge of legumes or cover crops and no understanding of the advantages of returning vegetable matter to the soil. The crop was one that always and everywhere has come to be recognized as especially "hard on land." So finally Virginia tobacco growing became a rather highly organized system of soil robbery—clearing the land—growing the one crop until the yields were no longer profitable and then at incredible expense and labor clearing new lands for the golden plant only to have them become worthless in a dozen years. Thus the State was overrun and her forests destroyed out of all proportion to the permanent agriculture that was established. It was a singularly improvident and wasteful type of husbandry.

We generally think of the farm labor shortage as essentially a very modern phenomenon. As a matter of fact, it seems to have existed in Virginia in an acute form 300 years ago. A crop which constantly demanded new areas of virgin soil, which could be cleared and prepared only by the expenditure of vast labor and which was cultivated mainly by the use of the hoe and mattock rather than any horse-drawn implement, demanded a

great labor supply which seems never to have been sufficient. Indeed, Bruce remarks that the system of slavery "sprang up under the operation of an irresistible economic law."

But what I began to write was about the part played by tobacco in Virginia for a century. To an extent probably true of no other crop, it constituted other crop agriculture. It was practically the one source of revenue and dominated everything. It was not only as might be expected, a medium of local trade and barter but it was absolutely and officially legal tender in the Colony. Taxes, court fees, inheritances under wills and debts of all sorts might be paid in this leafy currency. Probably there is no other example in history where a single crop so dominated what was in some respects a highly developed and cultured agricultural civilization. The financial transactions and the bookkeeping of the time were reckoned not in the pounds "sterling" of the mother country but in "pounds" of tobacco.

Now here is the matter which has suggested to me the title of an ancient tale with a modern moral. Unfortunately tobacco fluctuated in price—sometimes very wildly. At times it sold as high as three and one-half shillings a pound and at other times it fell as low as one-half pence. Under the former conditions the planters thrived wonderfully and lived like feudal barons on their thousand-acre estates—but when tobacco fell the whole economic system of the colony collapsed. What wonder then that these Virginia planters, many of whom were among the most intelligent and best educated men of their time, deemed that above everything else there was needed some method of taking care of the surplus and stabilizing the industry. For a full hundred years or more the laws passed by the Colonial Legislature are full of efforts to do just this thing. It was easy to try out what could be done by legislation because the House of Burgesses was made up of the ruling class of planters and there was surely no difficulty to form an "agricultural bloc" which was eager to do anything that promised to be of aid to the one great industry. These men seemed to perennially hope wonderful things from law, being if anything even more childlike in this respect than

(Continued on page 8)

## Farmers on the Broad Highway

(Continued from page 3)

the Saco River valley. The Saco River runs high in the spring-time, and is the scene of many famous log drives. It starts in the White Mountain range and finds its way to the ocean across the State of Maine.

Our business of the next day was to climb Mt. Washington, the king of the range. Other peaks are also named for our presidents, such as Mt. Adams, Mt. Jefferson, and Mt. Madison. Luckily it was a fairly clear day, but it was pretty cold for mountain climbing. This mountain is up-to-date, having both rail and auto road to the top. The toll was pretty steep, and so was the grade. We put the Franklin in low gear, and at five miles an hour made the climb in an hour and a half. We just looked wise at the "Water here" signs along the trail. It sort of gets you to keep going up so long. The climb is 6,292 feet in eight miles. Figure the grade—it is up, up, then some more. It is a wonderful sight to start at the bottom where the trees are tall and stately, and see them gradually get shorter and shorter. At two-thirds of the way the trees give it up, being only weather-beaten scrub spruces, firs and mountain ash a foot in height. Then there is just rocks with a very little grass. The auto road is very expensive to keep up, there being so much wash from bad thunder showers. Dirt is very scarce here. Crushed stone constitutes the road at the very top. From the "tip-top house" can be seen the Atlantic Ocean at Portland, Maine, Mt. Mansfield in Vermont, Lower Canada to the north, and Lake Winnepesaukee to the south, sixty miles away, which we had left the day before. Great views can be had of the moun-

tains all about, and the lakes, rivers, and villages in the valleys below. There is quite a hotel at the top, and many people spend the night up there to see the sun rise the next morning, weather permitting. The mountain is very treacherous, as to storms at any time of the year. There have been people frozen to death on the foot trails even in the month of August. There is a sort of awe attached to

being up there so high, dodging the stars and shaking hands with the clouds. Anyhow, we all took a long breath when the foot-hills were ours once again. Mrs. S. said, "Never again."

Forty years ago when the State department at Concord was asked for a charter to build the railroad, there was great scoffing. One man said, "Why not a charter to the moon?" The road was made feasible by a third rail of cogs. The gearings of the engines are so low that they make only three miles an hour.

The following day we took a ten-mile run over to the Maine State line, and entered the little town of Fryburg. This "burg" is noted for three things. First, Daniel Webster taught school there once upon a time; second, the beautiful elm trees that shade its streets; and third, the "Argue-not" hotel. They set the price—you say not a word.

Our next move was toward the Canadian border. From the White Mountains on to Colebrook the farming land is very good. Farm buildings are in good shape for the most part, and many farmers exhibit the Farm Bureau sign. There was real New Hampshire farming land, the home of stone walls and blue dump carts. Good crops of grain and potatoes were in evidence, but corn was poor; cold, wet weather told the story. At Dicksville Notch we saw corn frost-bitten on August 28th. Dicksville Notch is a real beauty spot. The balsam trees around a small lake there all shut in by mountain sides have a beauty that is beyond my descriptive powers. At this lake there is a very large summer hotel, named "The Balsams."

# Fruit Men in Annual Meet

## Western New York Association Growing

THE fourth annual meeting of the Western New York Fruit Growers' Co-operative Packing Association, Inc., was held in the Hotel Rochester, Rochester, New York, on Saturday, June 21st. President W. J. Hall of Lockport presided, and in his opening address reported to the Board of Directors, calling attention to the many difficult situations which have presented themselves this year due largely to the utmost demoralization of the apple markets. He said in part—"Dealers bought early last fall a small portion of the apple crop at prices which later proved to be the highest which any growers received. When they had bought probably about 10 to 15 per cent. of the crop, it developed that they had paid too much. They stopped buying immediately and completely. Unorganized growers put their fruit into storage three-run. From then on the market showed a gradual decline clear through to the end of the deal in May. Even delivered prices dropped steadily while costs increased from common storage to cold storage rates; the later months of cold storage taking an additional storage charge.

### "Widest Price Range We Have Ever Seen"

"The result has been the widest variation in returns to the apple growers that Western New York has probably ever seen. Those who sold early got as high as \$2.50 per barrel tree-run without the barrel. Dealers lost heavily on these purchases. Some dealers reporting a loss as high as \$100,000 on the small quantity that they bought. Many growers later shipped their fruit on consignment and received absolutely nothing for it above freight charges. For such men the story does not end there because they had their storage and barrel bills to pay, showing them a total loss of around \$1.50 a barrel. There are many growers in Western New York who not only got nothing for their fruit but had to pay freight charges as well. For these the loss ran as high as \$2.50 per barrel; we then having difference in price for the same goods of \$5 per barrel.

### Situation Similar to 1922 Peach Deal

"This situation which bears the same marks as the peach deal of 1922, confirms our belief that whenever a perishable crop, for any reason, goes out of control (and neither of these were ever under control) everybody loses, growers, dealers, railroads, storages, destination buyers and the retailers. It is not a pleasant prospect but it is probably true that in the future under similar conditions the same thing will happen. The only preventive is organized marketing. This has been the keynote of our membership campaign and it is most satisfactory to say that unorganized growers who heretofore have been watching the association with little sympathy are coming to believe this as sincerely as we do. Because of this it is perfectly evident that the membership of this organization will continue to grow from now on."

C. S. Wilson of Hall, secretary, reported twenty-eight Directors' Meetings with a full attendance of the entire board at all but two meetings.

W. M. Carr of Albion, treasurer, presented a financial statement showing the organization to be in good condition with a modest surplus.

L. S. Benham, auditor, supplemented the report with charts showing how well the financial policy of the organization had worked out. This policy had been developed by a Finance Committee composed of: H. E. Wellman of Kendall, Fred Tanner of Albion and J. L. Salisbury of Phelps. As a result of it, growers received on December 1st, 80

per cent. of the full value of their fruit.

R. W. Rees, Manager of Operating Department, called attention to several improvements which have been worked out during the year, and looking forward to next year, urged a fewer number of grades and a larger amount of local initiative in determining how cars should be loaded, especially during the packing season.

G. I. Blades, Sales Manager, reported a total of 1466 carloads of fruit shipped during the year to 163 carlot markets in 25 States, besides Canada and Great Britain. One of the most impressive statements of the whole meeting was his report that 91 per cent. of all the shipments had been sold this year f. o. b.

General Manager N. R. Peet reported 143 new members with the campaign still incomplete in 10 local associations. He said in part: "There is definitely under 5-year contract growers who in 1922 produced 2500 cars of fruit. We compare with 1922 because present crop prospects indicate about the same volume in Western New York as in that year. By the time this campaign is completed, there will probably be between 2500 to 4000 cars to ship this fall. If so it will mean a volume about two and one-half times what we had this year."

### Burritt Talks on the Federated

M. C. Burritt of Hilton, who is one of the directors and who is also the representative of this organization in the Federated Fruit & Vegetable Growers, Inc., a national co-operative sales organization, gave a lantern slide talk on the Federated, through which this organization shipped last year. His talk was largely devoted to showing the history of the Federated as well as its national character and results in securing distribution. "Last year," said Mr. Burritt, "which was the first year of the Federated under co-operative ownership, they handled 33,510 cars of fruit and vegetables, which originated in 39 States, and sold 93 per cent. of these f. o. b. in 772 cities located in 46 States, District of Columbia, Canada, besides such export markets as Mexico, South America, Cuba, Great Britain, Holland and Scandinavia." At the conclusion of his remarks, Mr. Burritt announced that the Western New York Fruit Growers had just signed a three (3) year marketing agreement with the Federated, thus carrying co-operation direct from the grower through the local, central and finally through a national sales organization clear through to destination.

### Ruralisms

E. L. VINCENT

PLANTING corn is not much of a job. The job comes in afterward, running the cultivator up and down the long rows. That is work, but without work there can be no corn crop.

Most cows have a batting average of 100 per cent. They can hit a fellow in the face every clip.

Hay cut early does not weigh quite as much as does that which is put in later, but the cows like it lots better and eat every spear of it. It makes more milk, too.

Sunshine can scour some things out of the milk pails and things that you never can reach with scrub brush and water. After every washing these things ought to be turned up toward the sunlight.

The place in the fence that you forgot to fix is just the place where the sheep and the cows get out. Pays to make the round of the fences once in a while and have your eyes open when you go, as well as some things to fix the fence with.

It is not half as smart to know how to pick out good tools as it is to know how to use them.

"That's right, John, lead him away from the lunch."—Life.

## Ship now—and insure against a car shortage

IDLE freight cars in the spring are no guarantee against a car shortage at crop moving time. But the use of available equipment now to make shipments in anticipation of fall and winter needs will insure against the costly delays that are the inevitable result of the periodical harvest time traffic congestion.

The railroads were never better equipped. They have made heavy outlays for new cars, engines and facilities. Operating morale is at a high level. Performance records reflect high credit on men and managements.

But railroad men are not supermen—and there is a limit to the amount of traffic that can be promptly handled in yards and terminals. Car shortages are the result of the slow movement of cars rather than the lack of cars.

Shippers who take advantage of the present ease of transportation to move fuel, raw materials and finished products that will be needed later in the year will not only protect themselves against business losses due to traffic congestion, but will help to insure the prompt movement of the crops to market.

# News from Among the Farmers

## Dean Mann Heads Mission to Foreign Lands—County Notes

### Dean Mann Heads Mission to Foreign Lands

DEAN A. R. MANN of the New York State College of Agriculture has been granted a leave of absence for two years to organize a movement for the promotion of agricultural science and education through international exchange. Dean Mann will sail some time in the latter part of August. It is expected that the work will require at least two years. Headquarters will be established in Paris or Rome, although most of the time will be spent in travel or in consultation with scientists and officials in the countries of Europe.

### Cornell Poultry Judging School, July 7-12

THE Seventh Annual Cornell Poultry Judging School, which has become a fixed event for poultrymen of New York and nearby States, is scheduled for July 7-12. Last year 126 students and instructors attended the school.

Poultrymen who have attended the school in the past have found it a decided benefit in their business. The course includes the study of egg production and how egg producers are identified from the various physical characteristics. It has enabled these men to discard the unprofitable birds from their flock and select for breeding the most productive individuals, which is the best way to meet low egg prices and mounting expenses.

### Among the Farmers of New York; County Notes

**Nassau County.**—Potatoes are looking fine and Long Island growers in general are looking forward to another good potato year. Of course no one knows what is in the offing, because blight comes quickly. On the afternoon of the 25th we had a very severe thunder storm that supplied much needed moisture to many crops. Long Island sandy soil doesn't hold water very long. Corn has not grown very well up to within the last week. The weather has been too chilly but just before the storm we had intense heat. Tent caterpillars are still on the rampage. Early green peas are now being picked. The crop is not very promising. Indications are that the potato acreage this year is slightly larger than normal.

**Jefferson County.**—Ruth A. Prittie of Natural Bridge, a student in the high school at Carthage won the championship of the eastern district in the National Meat Store Contest in which nearly 12,000 high school girls competed. The winning of the championship carried with it a cash prize of \$100 award by the National Live Stock and Meat Board.

### Along the Southern Tier

**Tioga County.**—We have been having a great deal of rain and cool weather continues although the past few days have been passably warm. Very few days, so far, but what fires were needed for comfort and only during the middle of the day were the fires allowed to go out. A great deal of planting is yet to be done at this writing (the middle of June). In fact our gardens are not yet planted and many seeds that were planted rotted in the ground. Even grass and winter grains have not developed as usual at this time of the year but grass stands thick if not high. The old saying "cold wet May, barn full of hay" may be true.

Some people from the west have been in this section looking over eastern farmers with a view of settling in this section. Letters from friends in Ohio state that the season there is about the same as here and fears are expressed that there will be "nothing to winter on."

Eggs are low, selling at the store at 23 to 24c a dozen. Butter delivered to customers from the makers, 40c a pound.

Some are getting 45c. Many farmers are seen hauling bailed hay to their homes with empty milk cans. Considerable property is changing hands but most of it is village property. Farm sales are few with some auction sales of personal property including tools and stock.—C. A. B.

### In Western New York

**Ontario County.**—We are having fine growing weather. Grass and wheat are looking very good. Some potatoes and corn are still being planted. The weather has been quite cool most of the time with enough rain to keep things growing. All are hoping for a good year.—H. D. SEELY.

**Chautauqua County.**—All crops are in at last, except buckwheat. Quite a few farmers have sold their cherries. Grass is growing fine with a promise of a fair hay crop. Fruit trees have set a fine crop of fruit. A heavy storm hit this section of the county on the 20th and did a considerable amount of damage blowing down a barn and several silos. Apple and forest trees were also blown down.—P. S. SCRIVEN.

### New Jersey County Notes

**Hunterdon County.**—We have had the wettest early season ever known. Corn is only half planted and here it is with June almost over. Many fields of oats have been destroyed due to the wet condition of the soil. Lots of plowing of corn has got to be done even at this late date. Cherries are rotting on the trees. Everything is late. Gardens are ruined and the hay crop will only be fair. Wheat is making lots of straw but the heads are not filling out very well. Lots of land is lying idle. Many farms have no one on them, some being sold for taxes. The unnecessary drop in the price of milk is discouraging. Dairymen are turning more to the hay business which will flood that market no doubt. Good hay is bringing \$30 a ton; wheat, \$1.10; oats, 60c; potatoes, \$1.50 a bushel; veal calves, 11c; eggs, 26c a dozen; butter, 50c; spring lambs, \$9 to \$10; wool, 40 to 50c. It seems that no help is to be had for farm work at any price.—J. R. FOSTER.

**Mercer County.**—Potatoes look fine despite much and many rains. Weeds starting well too. Tent caterpillars very bad in apple orchards and along roadsides. Corn well planted, some fields well up. Grain looks fine.—J. E. H.

### Central Pennsylvania News

J. N. GLOVER

EARLY planted corn on low land did not germinate well. Late planted corn has come along rapidly though cut worms are doing much damage.

Continued rains each week have helped along the growing grass very much and a good crop will follow where the stand is fairly good, which it is not in many fields. Potatoes are still being planted though not as many acres will be put out as was intended. More acres of buckwheat will be seeded than has been in this section for many years as this is no buckwheat section. Apple orchards are being sprayed as the weather permits.

Fresh cows are selling lower due to less demand for them on account of low prices for milk.

Veal calves are more in demand and eggs are advancing a little.

### Eastern Pennsylvania News

O. D. SCHOCK

CORN has not had the good start anticipated by the early planting. Wet weather caused some rolling in the ground and in other instances germination was poor.

The rainfall during May exceeded every year since 1889, the year made memorable

for its Johnstown flood, when thousands of lives were lost and millions of dollars worth of property destroyed. Winter cereals, however, are growing finely and promise an average yield of wheat and rye.

The Japanese beetle situation remains practically unchanged, so far as eastern and south-eastern Pennsylvania counties is concerned. A cooperation of State is assured in making the fight against its further spread, but extreme vigilance and activity is essential just at this period. The incalculable loss inflicted by the chestnut bark disease left a salutary lesson.

The 600-acre fruit farm established at Leesport, Berks County, in a limestone district about five years ago has just been sold at private sale by the owner, Wilson E. Schmick of Hamburg to a Reading syndicate, for a sum said to exceed a quarter of a million dollars. The buyers expect to realize a crop of 125 carloads of peaches alone this season. Mr. Schmick formerly established a fruit farm near Hamburg which realized \$115,000 when sold to a fruit corporation.

Pennsylvania officials distributed an extraordinary large number of young trees of various commercial varieties, such as pines, hemlock and spruce, this season and weather conditions being favorable, the loss through shipping and transplanting was very small.

### An Ancient Tale With a Modern Moral

(Continued from page 6)

we are to-day. I cannot even begin to enumerate the various plans that were tried out.

Great efforts were made to limit production. For example at one time it was decreed that no man might grow more than 1,000 tobacco plants for each one of his household including his servants—a provision that proved so easy of evasion that it accomplished nothing. Then again it was ordained that only twelve leaves could be retained from any one plant, the rest of them being destroyed. Then again Virginia and her sister colony of Maryland tried to agree that no tobacco might be transplanted after June 25 only to lead to a bitter outcry on the part of the Marylanders because with their later season it gave the Virginians an unfair advantage. Again and again and many times legislation was passed providing for the inspection of the crop and the public burning of that which fell below a certain grade—a provision that would lead to the improvement of any planter who was so unfortunate as to produce an entire crop of inferior leaf. Time would fail me to set down the many and strange measures that were undertaken in the effort to stabilize the industry although it is only fair to say that I do not remember that any one suggested the pooling plan.

But worse than all—certainly the most discouraging and disheartening was the fact that even when Virginia did succeed in some measure in reducing the surplus, then the planters of the Bermuda Islands who were their worst competitors, promptly and thankfully increased their acreage and profited in the English market. I suppose they were the "riders" and "slackers" of that time. It was a long, long struggle against economic law which Bruce sets forth with much minutæ and at great length. I think it has in it a lesson for some of our organization wizards of to-day. I say this with regret, but it is a creed that has grown out of my own thinking that upon the whole there is more to be hoped for in striving for an economy of production than shall meet the established markets than there is in efforts to limit production or to arbitrarily raise prices as fixed by the law of supply and demand. Some day we shall learn the hard, almost cruel law that eventually every man will buy in what is the most advantageous market.

# GUARD

Against  
the  
Unexpected

One Thousand Dollar  
Accident Insurance  
for 75 cents

AS a part of our broad policy of service to our readers, we now offer you a \$1,000 Travel Accident Policy for one year with a three-year subscription for AMERICAN AGRICULTURIST all for only \$2.75—just 75 cents more than our special price for a three-year subscription alone.

You May Be Hurt or Killed in a Train or Auto Accident Tomorrow

Don't make the mistake of neglecting your family's financial welfare in case the unexpected accident comes to you. Is not your own peace of mind worth the small amount of our accident policy? You need protection. Tomorrow may be too late. Order one of these policies today.

This Tells You What the Policy Will Pay

The North American Accident Insurance Company will pay the following amounts, subject to the terms of the policy, for death or disability on a public carrier, due to its wrecking or disablement while the insured is riding as a fare-paying passenger, or due to the wrecking or disablement of any private horse-drawn or motor-driven vehicle on which insured may be riding or driving, or by being thrown therefrom.

# We Need Competent Judges at Our Fairs

*Livestock Men Look to Them for Ideals of Type—Room for Improvement*

By MARK J. SMITH

EXHIBITORS of livestock are now making plans and looking forward to the time when they shall hear the clicking of the steel rails under them as they sit on a water-barrel and gaze out upon the country through the box-car door. It has been my privilege to cross the continental divide when on an eleven-day trip in a "side-door pullman" and I hope that I may be permitted to do so again.

Fortunately for the fairs, the showing of livestock is a fascinating business. With the approach of loading out time—to the man who has exhibited stock, there comes a desire to go that is hard to resist. "Showing" is a year-around job—no sooner is the exhibitor home than he starts planning his next year's show. To onlookers the premiums often look large but when it is realized that the remuneration is for a year's work and often longer the show-ring from a financial standpoint becomes less interesting.

Breeders exhibit their stock at the fairs for several reasons—no doubt the leading one is for the purpose of advertising and selling stock. Another benefit, if not purpose, is to keep posted and learn what people want in the way of type. It serves also to take the conceit out of a man when he sees what the other fellow has—after believing for several months that his stock would be hard to beat. I recall hearing A. J. Lovejoy, the man who showed the Champion herd of Berkshires at the World's Fair in Chicago, say that to most people their ducks looked like swans.

So we will say that stockmen, in the main, exhibit in order that they may improve and progress. On the other hand fairs are held to entertain, to educate and to serve as an inspiration to the public. In this country our general public is woefully ignorant with regard to types and breeds of livestock. This is best observed

by a person who sits alongside a pen of livestock at any of our leading State fairs and who listens to the comments and the nature of the questions asked by the rank and file of well-dressed American citizens as they pass through the barn. A well-informed stockman once brought out this fact and stated that this ignorance regarding livestock of the general public was greater in this country than is the case in England. As an illustration he cited an incident which he claimed would have been impossible in England because of the greater general knowledge along such lines. He said that a fashionably dressed woman was inspecting some

We will say that a breeder of registered sheep has fitted a commendable show but on show day it is revealed that the judge is a versatile man, who judges all classes of sheep and perhaps the poultry and one or two other classes of livestock.

After the first class is shown the exhibitor who is a keen judge of judges has sized up the judge and thereafter shows his animals regardless of merit as he himself knows it but brings them out as he thinks the so-called judge will like them. In such a case as this what benefit or education are the onlookers to receive? It seems hardly possible but I have been reliably informed, that at a New York fair a Southdown ewe lamb won a prize in a Delaine ewe lamb class and the lambs

were shown and "judged." This was surely highly instructive for the members of the ring-side, who were striving to add to their pure bred livestock knowledge.

The State appropriates money to foster agricultural fairs and I have long felt that if prizes offered by fairs are too small, the real object for the appropriation of this money is defeated. Insignificant prizes do not attract good stock that is worth inspecting and that will have an inspiring effect upon the spectators. Very often the pens will be

filled with mediocre stock owned by local people who wait to see if there is to be competition and if not they can bring in their stock at small expense and receive the premiums, around 70 per cent. of which is paid by the State to foster and improve the livestock of the State. A farmer does not care to go to a fair and spend time looking at sheep or other livestock that is no better than the stock he has at home. State fairs have competent judges as do the better class of County fairs nowadays but there is great room for improvement among many of the lesser fairs that are attended by thousands of people.

"Breeders exhibit their stock . . . for the purpose of advertising . . . and to keep posted and learn what people want in the way of type."

Shorthorn cattle at a leading show, she stepped up to the herdsman in charge and asked what breed of cattle they might be; the herdsman replied, "Buff Cochins, Madam, Buff Cochins," and it was said the lady proceeded on her way entirely satisfied that she now knew.

The point that I have been coming to is that if our fairs are to do justice and serve their purpose both to the exhibitors and to the general public—as outlined above, competent judges in all classes of livestock must be employed. The judge should know, at least, as much about the breeds he is judging as do the exhibitors.

## Clippings from the Sheep Shearer's Bench

"I PRESUME Mr. Seely sees some very tired nights," observed a neighbor as he watched Mr. Albert Seely as he sheared sheep for me this spring. Mr. Seely, veteran sheep shearer of this section, replied that he had not experienced them as yet. Each morning, before breakfast he was out and sheared a sheep or two and did not stop until the daylight was gone.

It is crowding along toward sixty years since Mr. Seely's grandfather taught him to shear but he has shorn sheep each season regularly for the past forty years. In the season of 1923 he clipped 4210 head. On his week-end trips to his home he finds his mail piled up like a bank president's—everyone wanting their sheep shorn within the next few days. His dates, however, will take him through June and probably some of July.

Some sheep shearers shear sheep throughout their lives and yet know no more about sheep husbandry than a dry-good's clerk but not so with Mr. Seely—he has been a close observer and has a good memory. A much-discussed subject is the number of sheep that a good man can shear in a day—Mr. Seely said that the most he ever sheared in one day was 86 head—in two lots owned by different men, Shropshires and Southdowns.

It is a fact that all men do not want their sheep shorn at the same time—the

time that the lambs come and the amount of feed and facilities for keeping the sheep comfortable all have to be considered. Some very prominent sheep men will not have their sheep shorn until June as they say they lose money by early shearing. It takes warm days to bring the oil up in the fleeces—on the other hand the lambs do not do as well when nursing ewes in warm weather that are carrying long fleeces. In the case of my yearling ewes Mr. Seely thought they would have shorn a pound more a head if they could have gone a month longer. All sheep were inclined to shear dry this spring because of the lack of warm days.

Along in February and March Mr. Seely goes out and tags ewes for sheepmen that intend to shear late after the lambs have come. Unshorn sheep when turned out on soft grass will become very filthy and maggots will often cause trouble. Mr. Seely believed that of all remedies for maggots that had come under his observation, oil of tar and chloroform to be the most effective. Sometimes in a brush pasture the backs of the sheep will not dry out after rains and maggots will hatch out.

So-called grub in the head in sheep is caused by the gad-fly depositing the young larvae on the nostrils of the sheep—the young grubs crawl up into the sinuses

of the head and the irritation results. In fly time sheep are restless and bothered trying to dodge the flies. It is an old rule to put tar on the noses of the ewes to repel the fly for this very reason—Mr. Seely said to take a piece of two by four and nail a board on each side of it so as to make a little trough two inches wide and deep enough so that the sheep's noses will about touch bottom—place salt in the bottom of the trough and smear tar along the edges of the boards—in this way the placing of tar on the sheep's noses will be taken care of by the sheep.

Mr. Seely believes that the wool-box is the neatest way to do up wool and especially so for use with fine wool fleeces—wool from sheep like Oxfords and Shropshires can be rolled up very nicely. The wool trade likes what they call a "lofty" fleece—lots of wool for the weight of the fleece. Wool when tightly packed in a bin or box will often gain in weight—in that respect wool is not like some farm products. If packed in too damp a place it will discolor and mildew. Wool absorbs moisture. I have seen the figures regarding the increase in weight of a large shipment of wool from the arid western States to the seaboard. I believe it was enough to practically pay the transportation.

Mr. Seely shears on a bench and shears by the head—MARK J. SMITH.

Ship Only to Recognized, Reliable Dealers

IN SPITE of all that has been said about dealing with recognized commission houses, nevertheless some folks still insist on taking the chance with unknown houses with the idea in mind that possibly they can beat the market by a few cents.

The New Jersey Produce Company has been referred to in our columns several times. In individual letters we have advised our readers against doing business with this company but complaints still come in that the company fails to make payment for shipments and ignores follow-up letters asking for payment.

One of our representatives was sent over to see this firm and found it operating in a small store. It had previously been doing business just around the corner. There was nothing about the place of business that would indicate a man with good business instinct was at the head of it. It was nothing more than just a hole in the wall. As is usually the case with this kind of house, the head of the firm "was not in, but will be back in a minute." The directing genius (?) was said to be one Theodore Cohen. It is reported that this same concern has been doing business under different names. In fact the entire atmosphere surrounding this firm puts it in a class which is commonly referred to by reputable men in the commission business as "a gyp outfit." This concern belongs to that class of fly-by-night dealers who rent a small store or cellar, receive farm produce on consignment, sells it and takes French leave with no forwarding address.

AMERICAN AGRICULTURIST has not been the only one to receive complaints about this concern. In a recent issue of the *New York Produce News* there are several instances given where farmers are having trouble with produce shipped from the South. The representatives of the *Produce News* has had a great deal of difficulty getting any information out of them at all.

There is no use trying to beat the game. If the market is over-burdened with a certain line of goods, it is a pretty hard job to get a price higher than the freight will bear. If eggs are a drug on the New

York market it is rather useless to expect that you can find a dealer who is going to be so charitable as to give you several cents above the market. The only safe procedure to follow is to deal with the well-established and thoroughly reliable concerns.

If you are not acquainted with some of these reliable houses write AMERICAN AGRICULTURIST or the Department of Farms and Markets at Albany for a copy of the list of certified and bonded commission men operating in various New York cities. If a man wishes to deal with a house outside of New York City where commission men are not bonded and licensed, the first thing to do is to get bank references and we, on our end, will try to get additional references from various sources.

### Real Estate Title Cleared

DON'T forget that among the helps which the Service Bureau gives our subscribers is the advice of a skilled lawyer, who is constantly giving A. A. readers assistance and legal information. We cannot refer to him cases of personal difficulties between families or neighbors, because such disputes need the presence of some one who can interview both parties to the discussion in order to effect a fair settlement. But more general cases including, for instance, requests for information on fence and road laws, liability of railroads and tax information, can be most helpfully answered by the A. A. legal adviser.

Mr. J. P. S. of Pennsylvania referred to us a case which involved the confiscation of property for unpaid taxes. Mr. S. had never received notification that they were due or the amount. Our lawyer arranged that Mr. S. be re-instated as owner and wrote him as follows:

"Concerning your property, lot No. 35, Block 16, Map 555, in the tract known as Villa Park, Town of Southampton, which was confiscated for taxes due and unpaid for the year 1921, I am pleased to report that this property has been redeemed, a certificate to that effect being enclosed, and title again is vested in you. All taxes have been paid to date, and in order that the confiscation may not happen again, I wish to suggest that notice of any change in your present address be given to Mr. Allan C. Dalzell, Esq., Receiver of Taxes, Southampton, New York. I have given Mr. Dalzell your present address so that the bill for the current year will be mailed to you there. Should you not receive said bill during the year, I would suggest that you write for same somewhere around November or the early part of December."

### Questions About Investments

I put \$100 in the Carlisle Tire Corp (papers attached) I have never received any dividends. Will you please look into the matter and see if there is any prospect of my getting anything.—H. J. H., New York.

We doubt if you can recover anything on your investment in Carlisle Tire. In any case we advise you not to put up any more money. Buying stock of salesmen is taking a desperate chance, as a rule.

\* \* \*

I wish to ask if you can give me any information about the Consolidated Leasing Co., Pittsburgh, Pa. This company was formed for the promotion of oil leases in the Webb Company of Texas.—J. W. M., Pennsylvania.

We have no information regarding Consolidated Leasing Company. It is, in our opinion, the height of folly to put money into any such enterprise. Total loss is almost certain.

\* \* \*

We have 50 shares of Belmont Motor Corporation stock. The factory is at Lewistown, Pa., main office Harrisburg, Pa. Any information you can give us concerning this company will be appreciated.—J. H., Md

We regret to say we have no information about Belmont Motor Corporation. Financial manuals do not list it. Keep away from it.

### REAL ESTATE

**SUPERBLY LOCATED** loamy soil farm, seventy-one (71) acres; 11-room house, bath, electric lights, hardwood floors; barn, silo, tool house, hen house, all in good repair; small farm implements; cares for 20 head of cattle; good water supply, 100 fruit trees; 10 minutes to all-year round market for milk; considered one of the best farms in Southborough; selling to settle estate. E. REAPE, Ex., Southboro, Mass.

**OXBOW FARM**—95 acres level meadowland, also 50 acres pasture; 150 foot barn; two story white house attractively situated with view of Connecticut River and mountains; on State Road; one mile from post-office and stores. Liberal terms. E. W. LANG, Newbury, Vt.

**FOR SALE**—Fruit and Grain Farm on Lake Ontario, Niagara Co., N. Y. Ninety acres fruit. Thirty-three Hundred Apples, Sixteen Hundred Peaches, remainder in Pears, Prunes, Plums, Quinces, and Cherries. All bearing. Indications full crop this year. Two houses, fine barns and other buildings in good condition. OWNER, General Delivery, Lockport, N. Y.

**ATTENTION FARMERS**—Is there one among you who would trade your farm for a good paying hotel in a small town on State Road? Lunch room, barber shop, billiard room, ice cream parlor and gas station. All under one roof. A money maker. If interested, write me, stating your particulars. E. M. CURTIS, Rushford, N. Y.

**FOR SALE**—219 acre fruit and dairy farm located in Hudson River Valley. BOX No. 44, R. F. D. 1, Stuyvesant, N. Y.

**14 ACRES**, center live village, 20 minutes auto to Springfield, Mass. Splendid for Summer or farm home, poultry, berries, tobacco. State roads, electricity. BOX 75, Southwick, Mass.

**MONEY MAKING FARMS FOR SALE** in central New York State. For sizes, descriptions, price and terms, write PERRY FARM AGENCY, Canajoharie, N. Y.

### PRINTING

**150 NOTEHEADS**, 100 white envelopes printed and mailed \$1.00. Samples printing free. SUNCO, Mohawk, New York.

### WOMEN'S WANTS

**PATCH WORK**. Send fifteen cents for household package, bright new calicoes and percales. Your money's worth every time. FATOWORK COMPANY, Meriden, Conn.

# Changing Woods—

By E. J. Rath

(By arrangement with William Gerard Chapman)

*Lost and frightened, Margaret stumbles in the heart of the woods upon Billy Lloyd, trapped with a broken leg. He tells her that she can save both their lives, but that they are too far from help to get out of the woods that night.*

"YES," she answered. "But I've stopped being afraid."

"It's a good twenty miles to the nearest place," he added.

"As far as that?" Her eyes showed surprise.

"For purposes of travel, yes. You'll find a map in my coat. If you'll get it and poke up the fire a bit, I'll show you."

She brought the map and they spread it out together.

"Now, here's us," he said, laying a finger on a little point of land that thrust its way into a body of water. "This is Tramp Lake. Just below it is Little Tramp. That's the way I came through. Your lake, Round Island, is here—" and he showed her, while she nodded. "Your lake belongs to a different system entirely. It can be reached over this route, but you've got to go away above here to do it, and then there are three portages—hard ones, too. This is the way you came." He drew his finger across a strip of land.

"But you've got to go out the way I came in. Can you paddle much?"

"I'm pretty strong," she answered.

"Here's your course, then. Afterward I'll write it out for you, so you can't possibly lose it. You follow this shore until you reach this little river. That's about three miles. The river takes you straight into Little Tramp Lake; there's two miles of it. You'll find a beaver dam about half-way down, but you can push over it without trouble. The current is with you. When you get to Little Tramp, you must take a straight course across it—south. I'll mark it—so. You'll have my compass, anyhow. It's a mile across and an easy paddle if the wind isn't against you. If it is, you'll have to plug some. Now on the other side of the lake you hit a portage. You can't miss it; there are two big logs in the water and you can see the path. Did you ever carry a canoe?"

If it is, you'll have to plug some. Now on the other side of the lake you hit a portage. You can't miss it; there are two big logs in the water and you can see the path. Did you ever carry a canoe?"

"I'll write it out for you, so you can't possibly lose it. You follow this shore until you reach this little river. That's about three miles. The river takes you straight into Little Tramp Lake; there's two miles of it. You'll find a beaver dam about half-way down, but you can push over it without trouble. The current is with you. When you get to Little Tramp, you must take a straight course across it—south. I'll mark it—so. You'll have my compass, anyhow. It's a mile across and an easy paddle if the wind isn't against you. If it is, you'll have to plug some. Now on the other side of the lake you hit a portage. You can't miss it; there are two big logs in the water and you can see the path. Did you ever carry a canoe?"

Follow this creek three or four miles more and you're at Joe Station. That's a sort of headquarters for guides; it's two miles from the railroad. When you get to the station, ask for Jim McLean. Don't expect to find a Scotchman; he's a half-breed Indian. If he's out, get anybody else. There's pretty sure to be somebody there. They'll have to send two men. Tell them where I am, and any of the guides can find me. If they know of a doctor camped anywhere in the neighborhood, tell them to send for him and have him at Joe Station when I come out.

"At Joe Station there's a telephone, and you can get word to your party at Round Island. Then somebody can drive you out to the railroad, and you can get back to your camp. Will you be ready to start early to-morrow? I'm figuring you to make it by sundown easily."

SHE sat silently studying the map when she had finished speaking, and then made him go over the directions again, while she penciled them along the margin. He showed her how to use the compass, how to set the map on the thwart in front of her, how to fix a landmark on the shore ahead when she had laid her course, and keep the canoe pointed steadily toward it.

"It's the only way, isn't it?" she commented. "I see it now."

"You'll enjoy the trip," said Lloyd. "Honestly. You'll feel so free and independent and self-reliant. There's nothing like it."

And he fell to talking of the woods and the summers he had spent paddling through the still places of the forest. The girl presently divined his purpose and now and then she smiled, faintly and seriously. He was putting heart in her; explaining by simple stories the ease and safety of travel in the wilderness; giving her some of his own faith and courage. The littleness of her own view faded, and as he talked she began to sense something that even a summer in camp had been unable to make her feel.

"You love the woods, don't you?" she ventured.

"I suppose I do; I guess it must be that. Somehow, I drift back every summer. I've been doing it ever since I was a kid."

"And do you come like this—alone?"

"Oh, no; only once before. I planned this trip with my side partner, but, as I said, he was called home. So I came ahead. I've just been loafing along. I was out three days when this happened. I was expecting to follow this chain up to White River, and then loop back by way of the Sister Lakes. You never got over there, I guess? You must, some time; they're wonderful."

"You said you were lost once; tell me about it," she said.

The firelight warmed his pale features as Lloyd plunged into a story of boyhood foolishness. He tried to make it funny, but her hand stole unconsciously into his as the simple, vivid tale went on, and at its close her fingers were gripping his tightly.

"It's imagination that bothers us," he

was saying. "We don't train it to help us; we imagine the wrong things. I was bothered with it yesterday and the day before, although I knew it was foolish."

"But suppose I hadn't come?" she said, softly, staring into the flames.

"Well, of course I figured some on that. But somebody was pretty sure to be coming through, although it's getting late for campers. Probably a ranger or a guide would have found me sooner or later. I'm pretty well fixed for grub. I'd have got out myself if it hadn't been for those two portages. I knew a guide who paddled over fifty miles after his leg was broken, and shot three rapids in the bargain. But they'd have been looking for me in a couple of weeks, anyhow. My clothes are at Joe Station, and I had to go out that way."

He smoked a while in silence, and then added, as if his thought had been interrupted: "But I'm mighty glad you came, girl."

"You found me," she said simply. "I should have died."

"Well, you were badly fixed," he answered, thoughtfully. "You had no outfit at all, no grub."

"It wasn't altogether that. I'm so incapable."

"You'll forget that word to-morrow," said Lloyd. "And that reminds me that you need sleep—a good sleep. Crawl into the tent, for I shall get you out early, I promise you."

The girl demurred, but Lloyd shook his head.

"The tent for you," he said. "I'll be right here alongside of it. Besides, I don't want to move unless I have to. I'll be plenty warm. You're dog-tired, Margaret. Turn in."

She brought fresh water to him, wet the bandages, and made him promise to summon her if he needed anything. A few minutes she called softly from the tent:

"Billy!"

"Yes?"

"I'm going to learn to be brave in the woods."

"Good night, little girl," he answered. "And thank you."

"Good night, Billy."

HE slept after a while, and the fire died down to glowing coals. It was daylight when Lloyd glanced at his watch. He hated to wake her, but she had much ahead of her before sundown, and time counted. Three times he called before she answered.

"Did you sleep, at all?" she asked anxiously, kneeling at his side and touching his forehead softly to see if the fever had left him.

"Actually, I slept well," he answered. "And I know you did."

She laughed and ran briskly down to the lake, filling the big pail and bringing fresh water to him. Then, without a word, she gathered sticks and leaves, started a fire, and began to get breakfast. His eyes watched her approvingly.

"You'll be a guide some day," he laughed. "You're picking up fast."

That pleased her—she smiled brightly

at him as she looked up from her task. "The city isn't everything," she answered. "I used to think so."

"Well, you see you've been caught young enough. You're saved," he said.

But they fell silent during the meal, as if each read the other's thoughts. Lloyd hated to send the girl, but there was no other way; it seemed brutal to leave a helpless man, yet she knew that he was right.

He made her repeat her directions, and she went over them without a slip. Then he had her prepare two meals for herself to be taken in the canoe. She filled the water pails and set them beside him, gave him new bandages for his leg, and then, at his direction, dragged all of the camp belongings within his reach. When there was nothing more to do, she still lingered.

"TIME to start, Margaret," he admonished. "Now, listen: don't paddle too hard. Take it easy, because you've got quite a road. Keep your eye on the map; remember that you're moving south all the time. Don't get rattled. It's a straight course, but if you should get puzzled at any time, stop right where you are and think it over slowly. You'll be at Joe Station before dark; don't fret about that."

"It isn't about me I'm fretting," she said slowly. "It's you."

"Oh, I'm fine," he said, smiling. "Why, Jim McLean is likely to find me turning handsprings when he gets here. The men'll come through to-night. They won't lose any time. And if you're lucky about trains, you'll be back in your own camp to-night. Now go, sister."

She held both his hands for a minute and tried to force back the tears that threatened.

"I won't be afraid, Billy," she said. "I'll get through before dark. And I'll remember you saved me—always, and that you taught me something. Good-by."

"Good-by, Margaret."

He watched her wistfully as she pushed the canoe into the water.

"Take both paddles," he called. "And put a stone in the bow. Otherwise she'll be too high in the head, and the breeze will spin you around like a top. Got everything now? Compass? Map? Lunch?"

She took a last look around and nodded. Then, as she leaned over to push off, she hesitated, turned, and walked back to where he lay. Without a word she dropped to her knees, bent forward, and kissed him on the lips. Then she left him.

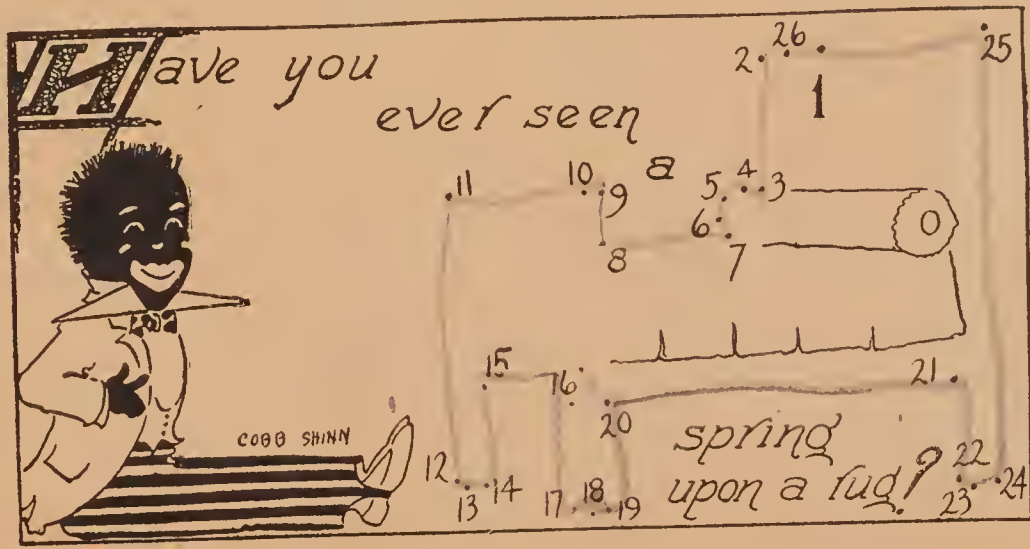

"Good luck!" he called, when the canoe was a hundred yards off. She turned and waved her paddle, and said something he could not catch. A moment later the canoe was lost to sight around a wooded point, moving swiftly under her steady strokes.

Lloyd lay alone with his pain. Once or twice he ate a little, but his appetite seemed to have deserted him again. It was a friendly day, yet the woods seemed strangely lonely. That was a new sensation to him, and he futilely tried to analyze it. Part of the day he worried about her, although he knew that was childish. It wasn't a hard trip, yet she was such a pathetic tenderfoot. Game, though, he admitted—after she began to understand about things. "Poor kid!" he said, aloud, as he thought of her night alone in the forest.

When the sun had passed the ridge opposite his camp and begun to sink among the pines, he wondered if she was at Joe Station. Darkness came slowly, and Lloyd watched the stars appear. Now she must be on her way to the railroad, he thought, and the men were coming for him. She would probably be in her own camp by midnight.

And then in a flash he realized that he did not even know who she was! Just Margaret! Just a chance comrade of the

To finish the question, draw through the dots from 1 on.

# Summer Means Picnics and "Vacations"

*Some Aren't as Jolly as They Seem in Advance, But Still We Like 'Em*

HAVE you ever really planned on a nice, restful vacation where such a thing as time was unknown, with no alarm clock to break in upon your morning slumbers? So have I, and when hubby announced his intention of going to Dyke's Channel, to fish and loaf around for a week, I decided to go too. I wanted to buy a good tent by mail order but he said no; that he knew where he could borrow an old one which could be patched up to do just as well as a new one.

So I found him one morning sitting on the back porch with the tent, or the remains of one, while strips of white material were scattered far and wide.

"What on earth are you up to now?" I asked, as I picked up a piece of his patching material and examined it.

"Patching this tent up," he mumbled between his teeth.

"Where did you get this white goods?"

"I found it in the bottom drawer of the chiffonier in the dining-room."

I looked at him fiercely. "Do you know what you've done? You've torn up one of my grandmother's best linen sheets."

Then he began to tell me that he hadn't watered the pigs yet, that the back fence needed fixing and that there were a dozen things he hadn't done but must do at once—if I would only fix the tent!

Well—I fixed it, only to discover that he had been sitting on the front gate, talking to his brother-in-law and hadn't been near the pigs nor the fence.

### "Don't Take Many Clothes"

When it came time to pack, he said: "Now, don't put in any finery for me. I'll just take a couple of overalls, one colored shirt and two sets of underwear." I followed his orders.

Dyke's Channel is an island, of possibly five acres, the river surrounding it on three sides and a large swamp on the other side. It is covered with timber and grass and is a pretty place to survey from a distance.

So we started out, in a little old low-wheeled wagon and soon arrived at the ford. The water wasn't very deep and I was looking down at some pretty shells when an exclamation from my husband reached my ears.

In some way, he had dropped the lines and in trying to recover them, frightened the horses (one of them a skittish young colt) and they had broken the double trees and had walked upon the bank, leaving us sitting in the middle of the river. But when I laughed it made Jack angry! At last for the lack of anything better he removed the strings from his shoes and mine and fastened the double tree back in place, waded ashore, caught the horses, hitched them up again and we were pulled safely over.

He selected a camping site, put the tent up and turned the horses loose. A little to the right of the tent door were two holes in the earth, apparently rabbit burrows. After supper and when Jack had set his lines, he came back and sat down in front of these two dens. The mosquitoes got so bad he decided to build a little fire. Then I heard a yell, followed by some sulphurous language, together with an unmistakable odor. After the smoke cleared a little, I saw several black-and-white "wood pussies" large and small, disappear in the underbrush.

### He Drowned Those Clothes

The fire, built so close to their dens, had driven them out, perfuming husband nicely as they departed. He made a hurried dash for the tent, but I met him at the door with an axe.

"You're not coming in here," said I.

"Yes—but I must change my—"

"Take those clothes off and throw them in the river," I ordered.

"I can't do that! Somebody might see me."

I flung out the only pair of under-

garments he had with him and gently shooed him to the river.

"Oh, Didn't It Rain!"

Later at night it began to rain—not a gentle, little sleepy rain, but a regular downpour, and that tent leaked worse than a sieve.

Some few of my garments escaped, but the only clothes Jack had he had on and they were soaked. He demanded dry clothes. "That's all you have with you," I reminded him. "I packed just what you told me to."

So, at last, he put on one of my bunga-

wouldn't tell anybody about the unpleasant details of our little camping trip.—PAULINE CARMEN.

### A July Picnic

ANY lake is a charming spot for a picnic, but if there are no amusements already there, one must plan all fun beforehand. Even old games take on a new interest in the out-of-doors.

A very simple game will start the fun. The crowd may be lined up while a slip of paper is pinned on the back of each person (old and young) on which is

rose or other flower decorations, napkins and plates to match and sanitary drinking cups. In the center, a small "well" could be made of rough stones on a center piece of ferns or easily gathered leaves.

The napkins at each place may be folded so that each holds a small iced cake. Small fern or maple leaves are arranged under the plates, each one of which holds a bit of "sardine relish" to begin the meal. Then have—

- Individual Chicken Pies
- Lettuce Sandwiches
- Coffee
- Pickles
- Jelly
- Olives
- Deviled Eggs
- Cart-Wheels
- Berries and cream
- Cakes

### Packing the Fourth of July Picnic Basket

OF course there will be a picnic on the Fourth, and on such a very special occasion it pays to take a little extra trouble to have things not only good to eat but good to look at. A stout, substantial basket, with compartments for the different edibles, is worth the investment. Cold milk and iced drinks, or hot coffee if desired, should be taken in generous quantities. The inevitable picnic hard boiled eggs are wrapped in red, white and blue tissue paper, each home-made cup cake has a gay little paper flag for decoration, and a big crepe paper or bunting bow on the handle of the basket completes the patriotic effect.

The sardine relish consists of a toasted saltine spread with melted cheese and a sardine on top, moistened with a few drops of lemon juice. These can be made at home, and if carefully packed, transport in good shape.

The cart-wheels are large cream crackers covered with peanut butter and decorated with a ring of sliced stuffed olives. The eggs may be in parafin paper and covered with gay colored tissue tied and fringed, and the dish decorated with ferns.

After supper if it is too warm for a fire, light some tallow candles, stick them on plates and have the guests sit in a circle on the grass toasting marshmallows, and telling stories and jokes until it is time to go home.—H. A. LYNAN, Pittsfield, Mass.

### Preparing Plants for Winter

A BEAUTIFUL window this winter depends on our preparation this summer. We may pot plants from outside in the fall or buy some from the greenhouse, but if we want nice young plants of our own favorite bedders we should make cuttings in midsummer. This applies to geraniums, begonias (semperflorens), impatiens sultana (zanzibar balsam) and our choicest annuals.

July is the month to take cuttings of geraniums. A few of each kind you can root in sand in a flat coffee can. Make holes in the bottom and fill nearly full with clean sharp sand. Set the cuttings an inch deep. Water enough so the leaves will not wilt nor the stems wither but keep moderately dry. There is danger of watering too much. Geraniums will rot readily if kept wet. Cuttings will root in a few weeks. I use three or four inch pots and repot later to five or six inch. Let these fill with roots, for geraniums must be root-bound to bloom. Cuttings of snapdragons, begonias, petunias, verbenas, and a host of others of our garden flowers can be rooted the same way but most of these will need the sand kept fairly moist.

Cuttings of coleus make fine winter plants and are pretty from the start. This is true also of begonias and sultanas. They are always in bloom from time the cuttings are growing until planting out time again in the spring.

The violet is a pretty winter bloomer. The clumps should be grown during the summer. Set small plants in the garden. The longer they have to grow the larger the clumps will be, but small clumps bloom.—RACHAEL RAE.

### About the Canary Bird

SEVERAL of our readers, wrote asking where the Canary Bird Flower could be obtained and the author of the article writes as follows:

"All the larger seed houses catalogue the Canary Bird Flower I think. You can probably get it from the Vaughan Seed Store, Chicago or New York. It belongs to the tropaeolum family but grows much faster and ranker than the tall nasturtium, but with fine cut foliage. The flowers are not showy but bear a fancied resemblance to a bird flying, which accounts for the name. I have never had them ripen seeds at all, but they will not self-sow even if they did. They make a nice annual porch vine."

low aprons and went out to see if he could kill a squirrel for breakfast. After he had been gone a couple of hours, he came back without the squirrels, but he had the nicest looking face you ever saw. He had run into a hornets' nest and they certainly did enjoy his morning call. His eyes were almost swollen shut. If he'd looked that way the first time I ever saw him, I doubt if I would have married him. I told him so, with a laugh.

"If I were dying, you'd laugh about it," he snapped.

"Well," said I, "I am ready to go home; if something is going to happen all the time—"

"You go down to the river and look at my lines."

So I went.

Just one line had anything on it and it was a job for me to haul it in, for a big yellow catfish was on the hook. But after a great deal of puffing and pulling I got him out on the bank and half-carried, half-dragged it to the tent.

Jack was just tickled to death about that fish. I hitched up the horses, packed everything up and we started out for home, taking a back road for fear someone would see Jack's face or his pink-and white apron.

He put his fish (it weighed 12 pounds, and had tried to swallow a little 3-pound fish and got fast on the hook and couldn't get loose) in the horse trough and exhibited him to the whole neighborhood for a week.

But he didn't tell them anything about the skunks or the hornets or the gingham apron. He's advised everybody, from the doctor down to the blacksmith, to be sure to spend a vacation camping on the island, but he gave me a new angel-food-cake pan and a new percolator if I

written the name of a familiar song. The object is to guess the name of your slip as you move around and hear a phrase of it whistled by some one. So many strains whistled at once make it confusing, but only add to the merriment.

When all succeed, an old-fashioned "Track Meet," may be announced. Sides should be chosen, captains and referees appointed and the sides presented with their colors—strips of ribbon. Programs of the events should be prepared in advance, the entries to be filled in by members from each side before the game starts. Nobody will dream that the events are all jokes.

1. A relay race. Five people may be chosen from each side, lined up facing each other and a cracker handed to each. At a signal, No. 1 on each side has to eat his cracker and whistle a recognizable tune before the one beside him can begin. The side finishing first scoring a point.

2. One yard dash, 2 entries. Push a penny a yard with a match.

3. Tug of war, 2 entries. A long string with a raisin in the center. Contestants to strive to reach it first—by chewing the string.

4. Hurdle race, 2 entries, men only. Threading twelve needles each.

5. Drinking race, 2 entries. Drinking a glass of water with a teaspoon.

Other events can be added or substituted. The side having the greatest score wins the trophy (a "cup" made of tin-foil and reposing in a satin lined, leather case, or in a box stuffed with tissue paper).

### Take Pains Preparing the Supper

Supper should be as attractive as possible. If you use a picnic table, set it with a crepe paper cloth having wild

# Tomatoes in Various Ways

Recipes for the "Love Apple"—About Our New Serials

THE "Love Apple" seems to be the most adaptable of the vegetables. Served in various combinations cold, it is relished in hot weather and no other vegetable admits of so many combinations for winter use. The following recipes are tested.

**Tomato Jelly Salad**—To 1 quart stewed and strained tomatoes, add 1 teaspoon each of salt and powdered sugar, and 1 package of gelatine which has soaked 15 minutes in ½ cup cold water. Pour in small cups and chill. Remove from molds, add salad dressing and serve on lettuce or with cold meat cuts.

**Rice and Tomato**—2 cups cooked rice, 1 cup of tomato sauce (like medium white sauce, using cup of tomato juice in place of milk), chopped green sweet pepper. Mix thoroughly and bake.

**Ripe Tomato Pickle**—Wipe, peel and chop 3 pints ripe tomatoes and put in a stone jar. Add 1 cup chopped celery, four tablespoons chopped red pepper, four of onions peeled and chopped, four tablespoons salt, six of sugar, 6 of mustard seed, ½ teaspoon ground cinnamon and two cups vinegar. Mix and cover. Will keep months.

**Tomato Butter**—10 lbs. peeled tomatoes. Make a syrup of 1 quart of vinegar, 2 lbs. sugar, 2 tablespoons of salt, 3 of cinnamon, 1½ of cloves, 1 teaspoon of pepper. Pour over tomatoes and cook until thick.

**Tomato Fritters**—Pare ripe tomatoes, chop fine, season with salt and pepper and stir in flour containing 2 teaspoons baking powder to make a thin batter. Drop in spoonful of hot fat and serve at once.

**Escalloped Tomatoes**—In a greased baking dish, slice peeled tomatoes. Season with butter, pepper and salt. Over this spread a layer of bread crumbs or crushed crackers. Continue to alternate until dish is filled, having crumbs on top. If tomatoes contain much acid, sprinkle with sugar. Bake ¾ hour.

**Panned Tomatoes**—Cut large tomatoes into halves, put them in a baking pan, dust with pepper, salt, and put a tiny lump of butter in the center of each tomato. Bake for one-half hour at a low temperature. They need a very mild heat. When done lift carefully and put on a platter. Add a teacup of milk to the pan, then a tablespoon of flour mixed with a little cold milk. When it boils season with salt and pour over tomatoes.

**Green Tomato Pickle**—Slice the tomatoes and cook in salt water until done, not allowing the water to boil. Drain. Make a syrup of 1 pint of vinegar and 1 lb. sugar with spices to suit taste. Pour over tomatoes. 1 lb. of sugar makes very rich, ¾ of lb. is good.—MRS. GEORGE GRAY.

## Gelatin Is a Real Food

ALMOST everybody has always liked dishes containing gelatin, particularly in summer when coolness and pleasant flavor are so desirable, but few of us have ever given much thought to gelatin as a real food.

A long investigation of the food value of gelatin has recently established some interesting facts. Chemists have found that babies and adults alike are better for its use, and that it is actually a valuable addition to the diet.

Gelatin is one of the easiest proteins to digest, according to the report. It is most beneficial when combined with other foods, such as cereals, bread, milk, eggs and ice cream. A small quantity of gelatin added to ice cream not only makes it more palatable but increases its food value and digestibility.

Experiments carried on in cooperation with baby clinics, says the report, have shown remarkable results from the use of gelatin in infant feeding. Babies who lost weight on the usual milk formulas recovered when 1 per cent. of gelatin was added. Its value in the diet of invalids and convalescents is also said to

be great, particularly in cases of fever, tuberculosis and diabetes.

So serve jelly dishes and add granulated gelatin to ice cream, breads and even oatmeal! It is not just something that makes other dishes more palatable but it is actually nutritious in itself. The American-made gelatin is the best that comes, according to the chemical tests, and as it has the great virtue of costing very little, it should be kept handy by every housewife. Use more gelatin this summer, for all members of the family!

## Hints on Rag Rugs

I READ recently that "Jane" wanted to know if she could make braided rugs from carpet rags. Yes, you can, but you will do better to double the rags. You can have two long strands, but you will have to have one short or you will get the rags tangled. You can use any kind of rags, but cotton washes better if you want to wash it. I have just made a rug of old coats and a red tam 'o shanter that is very pretty. When you sew the braid you will find that if you use a lap board or put it on the table, it will be flatter when done. I wish I might show you! —MRS. C. H. AMES, Williamsburg, Mass.

## Changing Woods

(Continued from page 11)

woods, stopping for a while by his campfire and then journeying onward. A farewell wave of the paddle and she had gone. He understood at last why the woods were lonesome.

Well, he would stay awake until the men came, anyhow. He smoked steadily, watching the coal in his pipe glow and fade. There was no fire tonight. Finally he became drowsy. At last he slept.

A LIGHT flashed in his eyes roused him with a start. "It's Jack Burns," called a familiar voice. "Are y'all right?"

Burns. "Never saw a girl so bent on travelin'."

"Did she get word to her camp?"

"Not tonight. 'Phone's busted."

"But she could have caught a train."

"Yes. She could have—but she wouldn't. She left a message to be sent through from the station. Didn't seem to care much when it went out. But she sure did hustle us."

"You shouldn't have let her come," said Lloyd weakly. "Why, Jack, she's just been through an awful experience."

"That's funny, now. She never said anything about that. Just said she'd leave a message. I didn't know what it was. She talks like she was clean nutty

## A New Departure in Serials

THE BROAD HIGHWAY, with its romantic leisurely atmosphere of old England, made many friends. Now we are going to print several short, exciting stories of modern American life. Some will run only two installments, others will be slightly longer. They are by well-known writers and up to American Agriculturist standards of excellence. Older folks and young people will like them equally well. *The Changing Woods* is finished in this issue. Following it will come *Swift Currents* by Edwin Balmer, a popular modern writer. Don't miss any of our summer fiction numbers!

about the woods. Never heard a girl ask so many questions."

They heard the grating of a canoe against the shore, and the guide went down with the lantern to meet it. A moment later Lloyd saw the tattered skirt flash past the light and she was kneeling at his side.

"All right?" she whispered.

"Yes; but why did you come?" he said protestingly, as he groped for her hand and found it.

## COMFORT FOR JULY AND AUGUST DAYS

"OBEY that impulse," buy the pretty piece of soft silk or cotton that you fancied and make this little dress in a hour or so's work. It will well repay you in serviceability and attractive summery style No. 2061 cuts in sizes 16 years, 36, 38, and 40 inches bust measure. Size 36 requires 2½ yards 40-inch material with 1½ yards of lace. Price, 12c.

No. 2064 features the tunic style in a two-fabric dress for either new materials or a make-over. It comes in sizes 14 and 16 years, and 36, 38, 40 and 42 inches bust measure. Combine 3 yards of one material with 1½ of the other. Pattern, 12c.

TO ORDER: be sure your name, address, pattern numbers and sizes are clearly written, enclose the proper remittance in stamps and send to Pattern Department, AMERICAN AGRICULTURIST, 461 Fourth Avenue, New York City.

Don't forget to add 10c. for the big summer catalogue.

"God bless her! She got there!" exclaimed Lloyd. Then he fell back with a groan, for he had forgotten the leg.

"Got there before sundown. It's only about ten now," said the guide, setting down his lantern. "How's the leg?"

"Fine! You're not alone?"

"Jim'll be along in a minute or so. They're in another canoe."

"They?"

"Sure! She's with him."

"Why? Because I chose to."

"But I thought—I told you—"

"Billy, be quiet! We're to start back at daylight. There'll be a doctor at the station."

"But you shouldn't have come, child. It was too much."

She leaned closer to him and stroked his forehead. "Hush! Did you think that I wouldn't see you through? Why, Billy!"

Next week:—"Swift Currents," by Edwin Balmer.

# Reviewing the Latest Eastern Markets and Prices

## MILK PRICES

**T**HE Dairymen's League Cooperative Association announces the following prices for milk during July in the 201-210 mile freight zone, for milk testing 3 per cent.: *Class 1*, used chiefly for fluid purposes, \$1.86 per hundred pounds; *Class 2-A*, used chiefly as fluid cream, \$1.70; *Class 2-B*, used chiefly in the manufacture of plain condensed milk and ice cream, \$1.85; *Class 2-C*, used chiefly in the manufacture of soft cheese, \$1.85; *Class 3*, for milk used chiefly in the manufacture of whole milk powder, evaporated whole milk and sweetened whole condensed milk, \$1.55; *Classes 4-A* and *4-B*, based on butter and American cheese quotations in the New York market.

### Sheffield Producers

Sheffield Farm Company Producers announce that the price of 3 per cent. milk in the 200-210 mile freight zone is \$1.70 1/2.

### Non-Pool Cooperative

Non-pool Assn. prices are: *Class 1*, fluid milk for city consumption, \$1.86; *Class 2*, milk for cream, plain condensed and ice cream, \$1.70; *Class 3-A*, milk for evaporated, condensed, etc., \$1.55; *Class 3-B*, milk for fancy cheese, \$1.45; *Class 4*, determined on butter and cheese quotations on the New York market.

### Interstate Producers

Interstate Milk Producers' Association (Philadelphia plan) June receiving station prices, 3 per cent. milk 201-210 mile zone, \$2.19; 101-110 mile zone, \$2.20.

### Platform Prices

The N. Y. platform price is \$2.30 per can for pasteurized milk in shippers' cans F.O.B. New York City; where an allowance of 10c per can is made city dealers furnish can, making it \$2.20. Competition from unorganized milk has forced the price lower in many instances.

## BUTTER MARKET UP AND DOWN

During the past week there was a slight rise and fall of the butter market. On Monday the 23rd, the market was firm and trading was steady although not quite as brisk as when prices were on the upward trend during the previous week. However, the improvement in the market was well sustained until Wednesday when the fractional advance up to 43 1/2 cents on 93 score and 42 1/2 cents on 92 score caused the market to break under its own weight.

High butter prices in New York have caused heavier shipments from other cities, especially Chicago, on account of the heavy differential.

It was quite evident on Tuesday that the position of the market was strained and by the 25th indications were clear that the receivers were willing to accept slightly lower prices. The market went down a full cent leaving it the same as last week. Supplies are coming in freely and good production is reported in nearly all sections of the country. We are undoubtedly in the high point of production and although the outlook for the "make" is favorable, hot weather will undoubtedly create a large increase in the consumption of fluid milk and ice cream which will undoubtedly reduce the quantity of cream going into butter, which means strong butter market.

The "short" interest on June contracts has been a strong factor in shaping the course of

the market during the past week. In fact it was due to this "short" interest that the market went through the fractional advance on Monday and Tuesday. Just what will come of the market in the near future is very difficult to predict especially since the June deal is not over. Reports coming in indicate that pastures are thin and it may be that we will see the high tone again. Perhaps some guess may be made on the action of the market this week when it settled on Wednesday and Thursday but came back late Thursday with a half cent gain. A great deal depends on the quality of arrivals. There have been some very pronounced defects, some marks showing acid flavor and oily character. These defects are going to create a spread between fancy marks and ordinary stock.

## CHEESE MARKET FIRM

There is every reason to believe that we are going to have a firm cheese market for a while especially on the higher grades of New York State flats. Most of the trading reported on the 27th ranged from 20 to 21c on fancy special, fresh, State whole milk flats. However, the amount of business going on at the outside figure is relatively small being confined to a few pet marks. Most fancy goods are turning at 20 cents. The coming of warmer weather has helped the demand for market milk and as a result cheese production has been reduced in some sections of the State. In the West the make is running along about on par with last year. Most of the full grass cheese that is offered is classed as fancy and is quoted anywhere from 20 to 20 1/2c. Offerings of average run are light being made up chiefly of fodder or part grass.

## FANCY EGGS HIGHER

There has been a slight increase during the past week in the price of fancy eggs that grade as "Jersey and other nearby hennerly whites, closely selected extras." The receipts of this grade of goods have been arriving rather light and the market has been strong for such goods. However, as we go to press there seems to be some disposition on the part of some operators to shade a little. The market is not settled on present prices. If there is any reduction it will be very slight and if our guess is right, prices will hold. Receipts have continued to show a decrease especially in the case of fancy fresh goods and there is little likelihood of a reverse setting in. This has not been true of the more ordinary stocks and with a gradual rising toward accumulations with a result that prices on these average goods have eased off slightly.

During the hot weather, in fact right through the summer shippers will have to pay a great deal of attention to the quality of their eggs. Quality is just as strong and important a factor as is size, shape and color and if eggs are held any length of time poor inferior quality is going to cut their value and lower prices are going to be received. The man who can ship eggs every day or so and who stores those which he holds in a cool place, will not have so much trouble. The fellow who stores in a cellar that has a musty odor is going to lose out also. In other words ship your eggs as

quickly as you can. Avoid overnight delays by choosing an express route that goes direct to the market. Where eggs must be held keep them in a cool well ventilated cellar. We expect there will be a lot of complaints this year due to the low price paid for shipments that were apparently of fancy appearance.

## ACTIVE DEMAND FOR BROILERS

There has been an active demand right through the entire week for live express broilers both white and colored. The warm weather has naturally helped the sale of broilers while the market on live fowls has been more or less slow. The market on fowls arriving via freight has been particularly slow and the freight market has had a certain effect on the express market. The express broiler market is holding firm. Colored marks are bringing anywhere from 40 to 43c with White Leghorns, over 2 pounds, bringing from 35 to 37c. Average run White Leghorns are 32 to 34c while small stock is down to 26 to 30c. With the coming of warm weather people in the Metropolitan district have taken to the "open spaces" by automobile and fried chicken constitutes an important part of the lunch. That is one reason why broilers are overshadowing fricasse stock.

Fresh killed broilers are in good demand and the market is ruling steady and firm for fancy, both dry-packed and iced. However, many offerings lack quality and naturally these are shaded and have to take a lower price. Fresh killed fowls are going into storage chiefly because full prices cannot be realized.

## POTATO MARKET FIRM

The market has turned very firm on fancy Southern potatoes, due primarily to temporary light receipts of North Carolina and Virginia stocks. For a while receipts from these two States sold as high as \$5.25 to \$5.50 a barrel. However, these prices did not hold long, soon dropping to \$5.00 on No. 1 stock. Lower grades down to poor and wasty stock ranges from \$4.00 a barrel down to \$1.50. Some receipts are in such poor condition that they are being dumped. South Carolina is done. New Jersey and Long Island may be expected to break into the market with their early Cobblers in the near future.

The Long Island potato crop looks good. Much needed rains came on the 25th and 27th. In some sections there is complaint of very heavy damage from the Colorado potato beetle, or common potato bug. Your reporter was in one field in Valley Stream section of Nassau County where the vines were red with bugs. This however, is not general throughout the county, most fields showing an unusually healthy condition. Potatoes in the Hicksville section on the plains look especially fine.

## POOR HAY FLOODS MARKET

Arrivals during the past week have been heavy. Every day has seen between 80 and 90 cars arriving and some receipts by boat. The majority of these receipts are made up of small bales of lower grade stock from the West and Canada. There is not enough demand for this low grade stuff to absorb the supply and as a result the market is dragging and naturally

pulling down quotations on top grades. The Brooklyn market is also weak, but prices are slightly better on the better quality hay, even to that in small bales.

## FRESH VEGETABLES

Fresh green peas from Long Island made their appearance during the past week. Receipts have been liberal, both from Long Island and New Jersey. The market is weak and prices have declined, ranging from \$1.25 to \$2.25 per bushel hamper for Telephones. Fresh vegetables coming into the market from Long Island and other nearby sections are as follows:

ASPARAGUS, per bushel bunches, white, fancy \$2.50 to \$3.50; prime, \$1.50 to \$2.25; green, fancy, \$3 to \$4; prime, \$1.50 to \$2.50. BEET TOPS, per 30 qt. crate, 25c to 50c. BEETS, per bunch, 4c to 5c. CARROTS, per bunch, 3c to 4c. CELERY (soup stock), per bunch, 2c to 2 1/2c. HYMICHA, per bunch, 1 1/2c to 2c. KAIL, per slat barrel, 50c to 75c. KOHL RABI, per bunch, 2c to 3c. LETTUCE, per 32 qt. crate, big Boston, 75c to \$1.00. LEEKS, per bunch, 2c to 2 1/2c. ONIONS, per bunch, washed, 3c to 4c. PARSLEY, curly, per bunch, 1 1/2c to 2c. PEAS, per bushel bag, best, \$1.75 to \$2.00; few fancy, \$2.25; ordinary, \$1.25 to \$1.50. RADISHES, per bunch, red tip, 1 1/2c to 2c; white tip, 1 1/2c to 2c; 2c to 3c; black, 3c to 4c. RHUBARB, per bunch, 1 1/2c to 2c; fancy, 2 1/2c. ROMAINE SALAD, per 32 qt. crate, best, 75c to \$1.00; ordinary, 50c. SPINACH, per 32 qt. crate, savoy, \$1.00 to \$1.25; flat leaf, 75c to \$1.00.

## GRAINS AND FEED

According to New York State Department of Farms and Markets, the following prices prevailed, through billed from Western points:

The quotations given in this report show the approximate prices at which feed can be purchased per ton, and grain per bushel, in straight carlots delivered on tracks at points in the different freight zones as indicated. Mixed carlots cost approximately \$2.00 per ton more.

Retail feed and grain prices vary with different local dealers, depending upon their individual costs of doing business, volume handled, etc. In the case of feeds the retail price may sometimes be as high as \$5 per ton above the wholesale prices given in this report. Wheat market has declined slightly from high point of recent advance but market continues generally firm. Weather more favorable in both spring and hard winter wheat belts. New wheat being marketed in Southwest. Quality of shipments good. Corn reaches new high price level. Good demand, receipts light. Oats firm. Advance in grain prices and continued light offerings of feed rather than increased. Demand has caused the feed market to continue strong. Because of light country demand for bran jobbers are now holding off. Linseed and cottonseed meal market firm, offerings small. Very little hominy feed being offered prices higher, movement very light.

Beet Pulp	37.50	38.10	37.10	36.80	35.40

Since Buffalo is an important milling center for wheat feeds and linseed meal, quotations are given for this point on both a through-billed and a local bases. Ground oats \$37.50; spring wheat bran \$26; hard wheat bran \$27.55; standard middlings \$25.50; soft wheat middlings \$31; flour middlings \$31; red dog flour \$35.50; dry brewers grains \$30; white hominy \$36; yellow hominy \$35.50; corn meal \$34.50 gluten feed \$38.25; gluten meal \$43.50; 31% old process oil meal \$41.50, 34% old process oil meal \$42.50.

## MEATS AND LIVE STOCK

During the early part of the week ending June 28 the live calf market was fairly firm. Prime veals were selling up to \$11.50, some reaching \$11.75. However, by the middle of the week receipts began to pile up with the result that on Wednesday the trading, which due to the hot weather turned slow, the market weakened with a reduction of about 50 per cent., placing prime veals at \$11 with most sales ranging from \$9.50 to 10.50. Live spring lambs have been selling well, which marks have not shown top grades. However, only a few fancy have been received and are generally quoted at \$11.50. The market is dull and very weak on common to medium stock.

The market on country dressed veal calves is about the same as the live calf market. Trading is dull and unsatisfactory. With a fair supply there is not much hopes of conditions bettering inasmuch as many of the arrivals are more or less musty and unattractive. In this heavy weather shippers should ice more heavily.

Over 50,000 pounds of milk were produced during the month of May on the farm of Henry Morgenthau, Jr., publisher of AMERICAN AGRICULTURIST. Mr. Morgenthau's dairy herd is made up of pure bred Holsteins, several of the individuals being daughters of the famous bull, Dutchland Colantha Sir Inka. The farm is located at Hopewell Junction, Dutchess County, N. Y.

## Quotations From Eastern Markets

The following are the prices at which farm products of special interest to Eastern farmers sold on June 26:

Eggs, Nearbys (cents per dozen)	New York	Buffalo	Phila.
New Jersey hennerly whites uncandled, extras	40 to 43		
Other hennerly whites, extras	36 to 38

Chewing five pounds \$1.75; ten \$3.00. Smoking five pounds \$1.25; ten \$2.00. Pay when received. Pipe and recipe free. Cooperative Farmers, Paducah, Kentucky

# Common Flock Troubles

## Dampness and Poor Ventilation Hardest on Hens

**D**URING the months of June, July, and a part of August last summer I was doing the commercial poultry culling in Steuben, Livingston, and Schuyler counties under direction of the farm bureaus. During that time I examined approximately 35,000 hens, in flocks ranging from a couple dozen to over 2000, but the average was from 150 to 300. I was inside of all conceivable types, sizes, and conditions of hen houses.

Although it would do the average flock no harm to import some high blood cockerels or in other way, improve the blood and breeding of the stocks, I think it would do the most of us more good to use that same time, energy and expense, to the housing and management of the flock.

Dampness is the greatest enemy of egg-production, and can be combated by proper ventilation and floors.

### Too Much Glass Not Good

As for the housing I think that the greatest mistake is to use too much glass and not enough muslin, in fact the correct regulation of ventilation is the most serious of all the poultry keepers' troubles. Of course this can be overdone but very seldom is. Cornell finds that the best results are obtained when using equal amounts of glass and muslin about 1 square foot of glass and 1 square foot of muslin to every 20 square foot of floor space. Overcrowding is another fact that does not pay. There should be from three to four square feet of floor per bird according to the size of the house, the larger the house the less floor space is required per bird.

The type of roof that seems to have the least objections and the most advantages is the shed roof. It is cheaper and easier to build, provides excellent ventilation, keeps the air content low, does not interfere with the light and provides plenty of head room for the keeper. With a hinged board just under the roof, front and back, for summer ventilation this type is as cool as any, and is easy to keep the dampness drained out.

### Dirt Floors Are too Damp

Dirt floors are always more or less damp, impossible to get really clean, provide a breeding place for diseases and parasites. Furthermore, the litter gets dirty very quickly. Board floors are, in most cases, either cold, a harboring place for rats, or rot out quickly, and if too near to the ground are damp. Concrete seems to be the nearest perfect of all floors, provided it is properly made. The floor should be made on a bed of stone, from 18 to 30 inches deep, according to the kind of soil, but in all cases the foundation trench should be deep enough to give perfect drainage. When the floor is made there should be included as an insulation, one-eighth of an inch of tar or a double layer of tarred or roofing paper. I have yet to see the concrete floor that is dry when not insulated. The usual method is to lay 2 inches of a 1-3-5 mixture then put on the insulating material and drive roofing nails in the cement to help hold the top layer, leaving the heads projecting one-half inch. The top is usually 1 inch of 1-3 mixture.

### Feed Heavier at Night

Most farmers have the right idea as to the feeds, but many make a mistake by feeding as much in the morning as they do at night thereby forcing the hens to eat less mash. Best results seem to be had by feeding about 2 quarts in the morning and 6 quarts at night per 100 hens in the winter. And don't be afraid to get too much litter in the coop.

Last but not least, in over half of the cases where the hens do not lay as well as they should, the reason is lice and mites. A piece of blue ointment and vaseline 50-50 the size of a pea under the wings and around the vent, is as good as any louse powder. Used or "dead" motor-oil

and kerosene, mixed in equal parts and painted on the perches and other breeding places will get the mites.—I. C. LAFEVER.

### Better to Prevent Gapes than to Wait to Cure Them

**R**EFERRING to Elmer Whittaker's letter in the AMERICAN AGRICULTURIST, I think the best plan is to prevent gapes rather than to cure them after the chicks have got them. The West Virginia experiment station publishes a bulletin on the prevention of gapes by the use of creolin put in the drinking water.

The creolin causes the worm to loosen its hold and it is thrown out before it gets to where it does the damage. The method of administering this remedy is very simple. Just drop three drops of creolin in a quart of water and keep the chicks from getting other water until they learn to drink the water with creolin in it. Give the creolin from the very start and keep it up until the chicks are large enough that the gape worm will not bother them as the remedy is a preventative rather than a cure.

We have tried dusting the chicks with slaked lime and it helps to save the chicks from death from gapes.

Creolin can be bought at almost any drug store, put up in bottles with a cork convenient for dropping it and I think that it will prove a valuable remedy for ridding the poultry yard of gapes. But anyone trying it for the first time should not expect it to cure every bad case of gapes after the chicks have the gapes, but they should remember that it is a preventative rather than a cure.—A. J. LEGG.

### Get Rid of the Young Roosters

**W**E all know that it is a mighty good thing to get rid of the old roosters or at least isolate them after the breeding season is over. Sterile eggs are much preferred as far as their marketability is concerned, because a sterile egg will keep a whole lot longer than a fertile one.

But along with the "old boys" should go the youngsters. These young fellows, from the time they are hatched, can get rid of a pile of feed. If they are allowed to run wild, they have just so much opportunity to run off weight as fast as they put it on and that seems like a whole lot of waste.

It is fairly early in the chicks' life that the cockerels can be identified from the pullets and the sooner they are put aside, just so much sooner has a man the opportunity to start these fellows toward the market. They should not be confined to the detriment of their growth. They should have ample room for enough exercise to keep them healthy and should have plenty of green food, grit and the like, but they should be confined so that they are not running helter-skelter, here, there and everywhere.

### Why Broiler Prices Vary So

I notice on the market page of recent issues of AMERICAN AGRICULTURIST, that colored broilers are meeting a good market right along and that those that are bringing the lowest prices are the White Leghorns in poor condition. In fact "condition" caused a wide range of prices. Nine chances out of ten if these birds had been confined and fed a conditioning and fattening ration, they would have been worth at least 15 cents more per pound, which means an average increased return of about 20 to 25 cents per head and where a fellow is handling several dozen, those extra dollars count up.

I doubt very much if it pays to caponize Leghorn cockerels, because the mature cockerels are not usually as heavy as the market prefers. The yellow skin birds are more desirable for that purpose.—FRED WILLIAMS.

# B A B Y CHICKS

## 30,000 CHICKS WEEKLY for June and July Delivery

**BRED RIGHT, HATCHED RIGHT, SHIPPED RIGHT**  
Hatched by men with 14 years' experience in one of the largest, finest and best equipped hatcheries in the state  
Order early. **\$1.00 WILL BOOK YOUR ORDER**

Prices	Each	Per 1000
S. C. WHITE LEGHORNS	10c	\$90.00
S. C. BROWN LEGHORNS	12c	90.00
BARRED PLYMOUTH ROCKS	12c	110.00

**WORTH \$3.00**

Here's wonderful news for you. Now, wherever you live, wherever you go, no matter how far you get away from doctors and drugstores, you can have the expert advice—immediately—of Dr. Royal S. Copeland himself. Just like having America's most famous physician always at your elbow, ready to help you no matter what happens. Read how you can now get his great new Health Book (worth \$3.00) and his compact, portable, first-aid kit (worth \$5.00) both for ONLY \$4.98 plus the few cents delivery charges.

## Offered by the American Agriculturist

You can't afford to take chances with health! You never know when an accident will happen. You never know when someone will fall and break bones, or receive a deep wound, or be badly burned. You can't know beforehand just when the children will come down with measles, or when baby will get the croup, or when your wife will have a sudden attack of faintness.

Only one thing you can be sure of—and that is **THE DOCTOR WON'T BE HANDY!** You must be prepared for every emergency—no matter what it is, no matter when it happens.

Of course the first thing to do is to send for the doctor. But very often the first-aid you give, the treatments you apply, *before the doctor comes*, may mean all the difference between quick recovery and long illness or perhaps even death!

Take no chances with disease or injury. Be ready for them—always! Know what to do, and how to do it.

Now you can have the priceless advice of **Dr. Royal S. Copeland** instantly available at all times in almost every con-

ceivable emergency or sickness, for Dr. Copeland has written a remarkable new Health Book that brings to your home the benefit of his wide knowledge and experience. He has written down specific directions for dealing with every trouble, ailment and disease that you are ever likely to encounter. It is all told so simply and so clearly that even a child could understand and the subjects are arranged alphabetically so that you can refer instantly to the material you need.

And with this wonderful, helpful, book you can also obtain Dr. Copeland's new compact Emergency First-Aid Kit which contains everything you need to treat almost every kind of trouble, and yet is so small, so handy that it will fit easily into a bureau drawer, in a suitcase, or in the side-pockets of your car.

### SEND NO MONEY

You don't need to send a single penny now to take advantage of this amazing, health-saving, money-saving offer made to you now by the American Agriculturist. Just mail the coupon below—or a postcard—and we will send you by parcel post Dr. Copeland's great new Health Book and his new Emergency First-Aid Kit. When you receive them just pay the postman the special low price of only \$4.98 plus the delivery charges. Then, if you're not satisfied that in the Health Book you get medical information that may prove priceless in some desperate emergency; if you don't believe that this offer is worth many times what we ask for it; if you don't believe that your health and the health of your family is safe in Dr. Copeland's hands, simply return the book and the emergency kit, and your money will be refunded immediately.

But no matter what you think now, you owe it to yourself to at least examine Dr. Copeland's Health Book and his First-Aid Kit, and to see exactly what you get at this **AMAZING BARGAIN!** Mail the coupon NOW!

The Outlook for Wheat—By Gilbert Gusler

# The Tragedy of Acadia Repeated

*Helping a Hundred Thousand People to Help Themselves*

By HENRY MORGENTHAU

*Ex-Ambassador to Turkey*

FOR centuries and centuries people have read and listened to many sermons on the contents of the five books of Moses and have studied with keen interest the story of the Exodus of the Jews, their migration from Egypt to Canaan, and have deeply sympathized with all their mental and physical troubles and tribulations. Most of us have all through our lives been conscious of, and have severely condemned, the gross impropriety of the conduct of the Egyptians. This feeling has been kept alive more amongst the Jews than the Christians because the Orthodox Jews have so arranged their religious service that they read through the entire five books every year.

All readers of Longfellow have been deeply moved—and frequently to tears—by his touching description of the sad plight of Evangeline and her companions of Acadia, who were violently removed from their homes, and carried into different directions. Yet, in spite of all the pathos which the poet with his magic art has put into their story, how small does the misfortune that befell that little colony of settlers appear to us in comparison with the appalling tragedy that took place in Western Asia Minor about a year and a half ago!

It is difficult in the ten minutes allotted to me, to give you an adequate description of one of the greatest damages done by the World War: the complete uprooting and expulsion of an entire people from a country which they have occupied almost from the dawn of history in that section of the world. During the last five centuries, although under the dominance of the Turks and subjected to all kinds of tyranny and exactions, the Greeks living there had nevertheless been prosperous and comparatively happy. Smyrna was practically a Greek city. In fact, the Christian element was so predominant there that the Turks called the city "Infidel Smyrna!" Next to Constantinople it was the most important harbor of Turkey. The rug and silk factories, the farms, and the majority of the buildings were owned by the Greeks who had always, and particularly after the establishment of the Kingdom of Greece, hoped to secure their own freedom from the Turkish yoke. In 1919, when under the Treaty of Sevre, the mandate was given to Greece, which was

followed by the entrance of the Greek troops, there was great rejoicing among the Greeks of Western Asia Minor that at last their fondest hopes of reunion with their brethren in the fatherland was to be completed and that their dream of redemption was to be realized. Their joy was to be short-lived, for in September, 1922, the Greek army, which had so confidently invaded the hinterland, was beating a hasty retreat which was

A Bird's-eye view of Constantinople, for generations a sore spot in Europe's civilization

accelerated by the Turks who, again supreme in the land, were following them in mad pursuit and finally drove them out of the country, and with them the entire Greek population. So that instead of freedom, prosperity, and self-government, there came expulsion, death and desolation. Instead of a happy, united people, there was a distracted mob, shorn of all their possessions, struggling against all kinds of odds for mere physical self-preservation!

Like you and I they loved life, so that when thousands of them were huddled into ships that could only hold hundreds, when they were compelled to abstain for days from any opportunity of sleeping, when the food that they received was barely sufficient to keep them alive, there was no complaining, they rejoiced at having escaped their bloody pursuers.

When this tremendous mass of people landed in old Greece, bedraggled, sick, impoverished, undernourished, many of them possessing only the garments on their bodies, they had to be taken care of by the Greek government and its people. It was a fearful task to put upon a people that itself had just been deprived of so many of their fine young men and they were completely bewildered at the terrible catastrophe that had befallen them. But the Greek Government and its people arose to the occasion and never winced at the great task that confronted them. They promptly arranged all the abandoned barracks around Salonica, the warehouses, the churches, the schools, the theaters at Athens and all other cities, and placed these people therein. They communicated with all their Governors and demanded how many could be billeted in the various districts and cities. They requisitioned over five thousand rooms in Athens alone and immediately proceeded with the erection of small one and two room houses, some of which were frame, others built of mud bricks. They utilized all the old army tents, so that these people had to remain unsheltered but a very short time. Even to-day the National Theater of Athens still holds 1,300 refugees, twenty of the Athens schools are still similarly occupied. On their arrival, and after months thereafter, the Government gave to each person four cents a day to keep them alive. When the Government and the private Greek charities had almost reached

the limit of their capacity, they did not ask for assistance but it was volunteered. Dr. Nansen, of the League of Nations, made an investigation and when he found that here was a condition where 1¼ million of people had been bodily lifted from their moorings and imposed upon a country that contained about five million people, who themselves were struggling for existence and who had bravely attempted the terrific task of giving shelter and finding new employment for these new comers, he worked out a plan that Greece was to supply 1¼ million acres of land, and that in return the League would secure an advance of sufficient money to Greece to buy the material for and to build the required houses, to supply seeds and animals and agricultural implements to the peasants and the neces-

## The Hard Road to Farm Success

*A Plow Handle Talk Broadcast from WEA F*

By H. E. COOK

WHILE my experience dates back over a period of fifty years either directly or indirectly related to the farm and dairy I feel myself less qualified than ever before to advise or even suggest any standardized methods of administration or procedure that will bring success.

Markets and soils are so varied that personal ingenuity, judgment and adaptability must govern. It is rare to find two farms adjoining, or even one single farm, that does not contain within its area a variety of soils and subsoils. The clay portions demanding drainage and the addition in some form of organic matter and

perhaps lime, the loams calling for fertilizers and humus and maybe lime and all of them a maximum of cultivation.

The technique of soil management can be studied and general principles worked out by experimenters and student minded farmers but their application must be the business of an artist who has the point of view of an executive and the ability to combine these principles and methods as an artist combines colors. One may plow loam in a rain storm but clay only afterwards and so it is with countless practices that call for wise application.

The rural sections are dotted with misfit farmers who fail themselves and bring competition to others through over production at a loss and of inferior quality. In some cases education will give these men a helpful understanding and a safer outlook but unless farmer and student minded, education will be wasted fragrance on a desert air. Fortunate it is indeed that we are surrounded by a varied industrial life with its almost

human machinery under the direct supervision of a trained foreman and an administrative genius at its head, where these misfits can find employment at a living wage.

The rural people should have an interest in the manufacturing city second only to their own farm and

### No Universal Prosperity

IN Dean Cook's plowhandle and radio talk given on this page, he has emphasized two thoughts that we wish could be shouted from the housetops, and particularly into the ears of the politicians and the demagogues who are constantly preaching that the royal road to success on the farm is by way of tool laws and uneconomic schemes.

Mr. Cook, says: "We shall not, in my opinion, ever reach a period of skillful production and thorough organization which will guarantee universal farm prosperity. No more disastrous event could happen. . . . Hard, persistent mental and physical effort in the past has been the only road to success and none other can take its place."

And the other thought he well emphasizes when he says: "The rural people should have an interest in the manufacturing city second only to their own farm and community. Only the misguided and ignorant or the out and out demagogue will play these great and vital interests against each other. . . . It is important instead that each one of these great classes, producers and consumers, should study to understand and respect the viewpoint of the other and not to judge each the other from their own viewpoint."—THE EDITORS.

community. Only the misguided and ignorant or the out and out demagogue will play these great and vital interests against each other. These problems are for the diplomat and humanitarian and not the law giver. City folks may be quicker to grasp the situation than we of the farm and sometimes they hasten in a patronizing fashion to teach us social and business methods thereby arousing our vocational dignity.

It is important instead that each one of these great

classes, producers and consumers, should study to understand and respect the viewpoint of the other and not to judge each the other from their own view point.

We shall not, in my opinion, ever reach a period of skillful production and thorough organization which will guarantee universal farm prosperity. No more disastrous event could happen. Indifference and slack procedure would become universal and the most radical socialism would be tame in comparison.

Hard persistent mental and physical effort in the past has been the only road to success and none other can take its place. We say much these days against the individualism of the farmer. God forbid that any government action or organized movement shall make us weaker or less pronounced individuals, giving unscrupulous leadership of whatever name or location a chance to absorb our substance.

I am frightened at the urgency of our leadership for direct government support and the willingness of superficial politicians to espouse their cause. Not only must these things fail in the end but they with other class demands will eventually undermine the foundation of our government.

Class legislation is minority rule and minority rule is not synonymous with a democratic form of government.

If these class demands continue I shall think that farmers are being over organized and that our leadership has run away with itself and actual conservatives rural opinion has lost its representation.

The type of farming followed must necessarily depend upon adaptability and location and then it won't make much difference.

Probably 100 men will succeed on a small farm to one on a larger farm, partly because there is no cash paid labor involved or if any the percentage becomes a negligible one in comparison to the whole, the family, and partly because the wife becomes a much more

## The Outlook for Wheat

What the Wheat Producer May Expect

By GILBERT GUSLER

**A**T LAST it can be said with fair assurance that the wheat situation has turned in favor of producers. For four years, wheat prices have been declining and American growers have received less than the cost of growing the crop, even if they had given the use of their land rent free. Widespread distress in the wheat belt with bankruptcy for many hard-working farmers has resulted.

Better days seem to be at hand, however. The 1924 wheat crop may not pay the full cost of production, but it promises to come nearer that point than either of the last three crops.

The heart of the wheat problem has been overproduction. The United States has had too much wheat to sell for export in competition with huge surpluses from other exporting countries. To make matters worse, Europe, the chief buyer, has been on the verge of bankruptcy. The improvement which seems to be in view is due to the following:

1. The prospect of lighter production both in this country and elsewhere.
2. The surprising disappearance of the excess from the large world crops in the past year.

Besides the United States, the chief wheat exporting countries are Canada, Argentina, Australia, India, Russia and Rumania. From the outbreak of the war until a year ago, Russia and Rumania, which formerly supplied one-third of the wheat entering international trade, were practically absent from the exporting list. Foreign needs were supplied, however, by increased production elsewhere.

Greatest expansion occurred in the United States. At the maximum in 1919, twenty-eight million acres more were harvested in this country than the prewar average. This was an increase of 60 per cent. Even in 1923, after several years of gradual reduction and with a heavy winter abandonment, we harvested eleven million acres more than prewar. Canada increased about twelve million acres.

While wheat available for export has been abundant in each of the last several years, the world's bread-grain supply looked particularly ample when the 1923 harvest in the northern hemisphere was in progress. To begin with, the combined carryover of old-crop wheat in the United States, Canada, Argentina, Australia and India appeared to be 75 million bushels above normal. The new crop in Canada promised 370 million bushels for export, the United States, 175 million bushels, India, Russia and the Balkans together, 40 million bushels, and the new crops in Argentina and Australia looked good for 200 million bushels more. This made a total of 785 million bushels, to which could be added the excess carryover of 75 million bushels, or 860 million bushels altogether. From the standpoint of prices, Argentina made the statistical balance sheet look worse by coming through with a record harvest in January.

Appraisal of the prospective demand ten months ago furnished but few crumbs of comfort. The chief wheat-importing area in western and central Europe, which has a big industrial population that cannot be fed from the limited local land area devoted to wheat, was suffering from industrial depression, varying in degree from country to country, but with the general level of industrial activity only about 60 to 70 per cent. of prewar. Obviously, their current income would not suffice to maintain the pre-war level of consumption and their credit with the storekeepers of the world seemed to be running out.

Furthermore, the wheat crop in Europe in 1923, exclusive of Russia, was estimated at 240 million bushels more than in 1922. The rye and barley crops also were large. The natural conclusion was that European needs would

be materially smaller than in the previous year when the total amount of wheat taken by importing countries, including European and non-European, was the largest on record. World's shipments, which are the best current measure of international trade in wheat, and which amounted to about 700 million bushels in the year ending July 31, 1923, promised to show at least a moderate reduction. On the other side of the market equation was the huge world's surplus of 860 million bushels already referred to. The outlook for wheat prices, therefore, appeared extremely gloomy.

As time passed, however, purchases of wheat by European countries showed no such falling off as was expected because of the increase in its 1923 crop of

furnish. India, particularly, appears inclined only to sell abroad when prices are quite attractive. Otherwise, nearly all of her wheat is consumed at home.

The net result of all these changes is that the world carryover of wheat on August 1 this year will not be much different than a year ago. At that time, it appeared that the crop year then starting would see a further piling up of unsold wheat in exporting countries.

The new crops everywhere are still in the lap of the gods. Taking things as they stand, there are strong indications of lighter production, not only in this country but in Canada and in Europe.

The Department of Agriculture forecasts a crop in the United States of 693 million bushels. Not since 1917 have we harvested a smaller amount. Since 1911 only two crops have been smaller. Most significant of all

is the fact that it compares with an average crop of 690 million bushels from 1909 to 1913. It means nearly 100 million bushels less than in 1923, and nearly 200 million bushels below the average from 1917 to 1922. The reduction in the crop is due primarily to the smaller area planted compared with last year. The spring wheat acreage is the smallest since 1900. In addition, the condition of the crop was low, spring wheat on June 1 making the poorest showing ever known for that time of the year.

Nothing official is available as to the acreage in Canada, but good evidence is at hand of a reduction of 5 to 10 per cent. The condition of the crop is about normal, but growth is much behind last year and, in general, there is little indication of a duplication of last year's high yield per acre.

European crop prospects are hardly as favorable as a year ago, although but few definite forecasts as to yields have been made thus far. The Chinese crop is as bad as a year ago. Russia has increased her acreage materially, but drought is reported in parts of the wheat-belt. The German rye crop is much less favorable than a year ago.

Argentina presents a contrast with most of the other countries in that an increase of about 10 per cent. is expected in the acreage recently planted. If the yield per acre is not above normal, however, the crop harvested next December and January will be smaller than the last one.

We can summarize all these conditions as they appear at this time in broad terms by saying that the prospective carryover on July 1 in various exporting countries will be 75 to 100 million bushels less than expected eight months ago when the outcome of the harvest for 1923 was becoming known. New crop prospects promise considerable less wheat for export than has been available for the last twelve months, not only in this country but in other exporting countries. The requirements of importing countries will not be much less and they may be greater.

Subsequent changes in weather and crop conditions in this country and abroad may modify the present outlook either on the side of higher production with lower prices or lower production with higher prices. There are some indications, for example, that the July 1 forecast for the United States will show an increase over June. A big European potato crop might reduce the amount of wheat needed just as the small potato crop seems to have had the opposite effect in the past year. But, it will require an extremely drastic change to prevent wheat prices in the next twelve months from averaging higher than in the last twelve.

So far as the United States alone is concerned, if the present crop forecast is fulfilled, the calculated surplus after allowing for only a normal carryover on July 1, 1925, will be about 100 million bushels. The United States has certain well established markets for wheat such

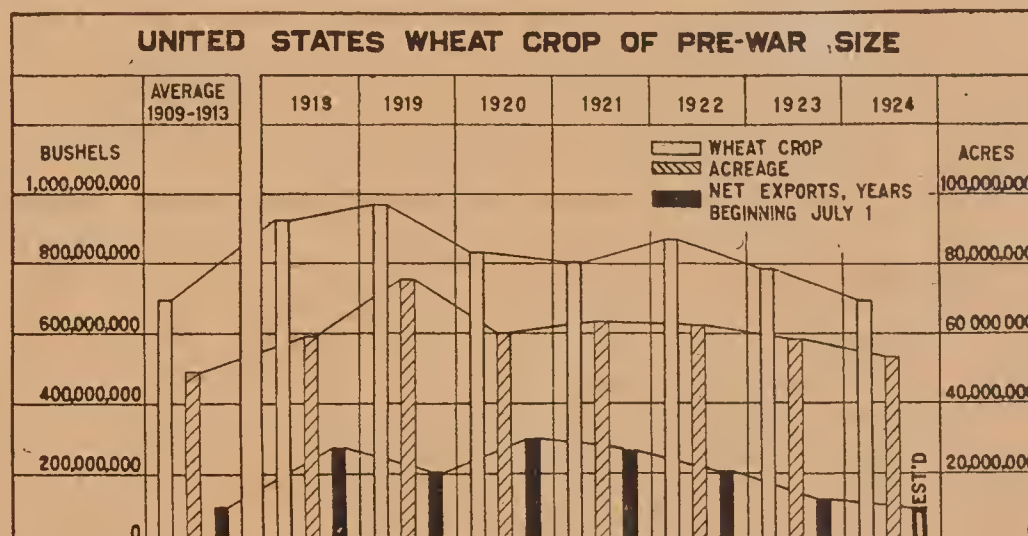

### The Facts About Wheat

**O**N this page is another one of those fact articles, this time on wheat. It will be of great value to both wheat and milk producers. These economic surveys which we are passing on to our readers are attracting a large amount of attention. They are in line with our policy that if a farmer knows the exact facts in regard to production and marketing, he can draw his own conclusions himself and act accordingly.—The Editors.

bread grains. Two factors seem to be responsible. The 1923 crop of potatoes in Europe was 800 million bushels smaller than in the preceding year. In addition there is a strong suspicion that the wheat crop in some European countries was considerably overestimated.

Not only has Europe taken as much or a little more wheat in the last twelve months than in the preceding year, but Oriental countries have bought considerably more because of a small crop in Manchuria in 1923. As a result, the amount of wheat absorbed by all importing countries is setting a new high record.

Besides the enormous absorption of wheat by exporting countries, the exportable surpluses have disappeared in other ways. Low prices in the United States have increased domestic consumption and a net export of 125 million bushels has taken care of the surplus from our 1923 crop, originally calculated at 175 million bushels. Canada shows a similar increase in domestic disappearance. Such miscellaneous exporters as India and the Balkans also have not come forward with the amounts they were counted upon to

This graph shows clearly that the 1924 wheat crop will be practically the same as the average from 1909-1913. In other words, the crop is back to normal.

### Introducing the Staff

**E**DITING a paper is like milking the cows. They are both hard jobs to get away from for, rain or shine, both have to be done, and done on time. But I have solved the puzzle, both to my own benefit and to all those who read the paper.

I told our folks here in the office that I was going to get out and do some real farming for a few days for a change, and that they would have to write the editorial page while I was gone. They agreed, and their editorials are on this page. Personally, I think every one of them is well worth reading.—E. R. EASTMAN.

### The Present Egg Situation

**A**BOUT a week ago Mr. Eastman and I were talking over the market situation and he suggested that possibly an editorial on the present egg deal would be very timely, especially when we consider the firm tone in the egg market.

The state of affairs seems to strengthen the warning sounded by economists that the poultryman must watch his step lest his industry become over expanded. Irrespective of what may happen in the future the fact is that right now the poultry business is about the healthiest of all farm enterprises. Milk is way down. The potato market during the entire winter and spring was a decidedly dull affair and the apple men know only too well what a disastrous turn their market took.

In my mind there are three reasons why the egg market has been strong and those three reasons do more to keep prices right and farmers happy than all the legislative panaceas to boost farm prices put together. First, the June 1 report of the Bureau of Agricultural Economy of the United States Department of Agriculture shows that cold storage holdings total approximately 950,000 cases below holdings on June 1 a year ago. The men in the market have not forgotten their 1923 experiences when accumulations ruined many of them. These 1924 storage figures have acted like a tonic.

The second factor to keep the market in a uniformly healthy condition is the ease with which clearances have been effected. Only occasionally during the past few months have accumulations piled up and put a temporary damper on trading. Chain stores are heavy buyers for immediate retail trade needs and I believe they are responsible for smoothing out a lot of low spots in our

price curve. They have been putting a good quality product before the consumer at a price that makes the consumer eager to buy.

And finally for the past few weeks advices state that collections and arrivals especially on nearbys are falling off. It is pretty hard to say how long this strong condition will last but I don't think we will have to worry a great deal about over-production until our next flush period. Of course, over-production is almost bound to come with prevailing high prices over a considerable period and since folks are only human, it is quite natural that they will flock to the business that promises most.

We are apt to see a wide variation in prices. When the market is strong some folks have the fault of getting careless. Complaints have been made that some nearbys are showing the effect of heat, no doubt from standing out on a sun-beaten railroad platform or from being exposed too long on the hind end of a buggy on the trip to town. Inferior quality pulls down the value of eggs just as much as mixed colors and mixed sizes. It is the "year-round quality" man who is getting the cream of the market right now, for fancy nearbys are especially strong and wanted. And he will continue to do so. The shipper of mixed colors is safe when the market goes up, but look out when the crash comes. Poor marks suffer first. But right now when the condition is healthy, little Biddy, be she white or brown, is making the coin jingle. Eggs, handled right, are a mighty good side line.—FRED. W. OHM.

### One Day a Year

**B**Y the time you read this, we will have celebrated our Glorious 4th of July which should be held so dear and sacred to us Americans. Many times I thought that perhaps we make too much noise and do not show enough real thought over what this day really means to us and it is on that I want to say just a word.

The greatest blessing that anyone can have in this struggling world today is to be born an American and live under the American flag. Yes, the world does face gigantic problems and our country has its share, but they are nothing like what others had and still have to solve. I wonder sometimes if we half appreciate our country, its size, its resources, its record and its place in the world to-day. To live and work here is both a privilege and a blessing. No other place gives as many opportunities.

July 4th to me is really a sacred day. God gave us our religion and one day a week to reverence Him. Surely, we owe at least one day a year to honor and reverence our country. America gives us the chance to live and work and play as we think best. As long as we have patriotism, we will have the brotherhood and fellowship of man and as long as we have that, life here will be worth working and living for.—BIRGE W. KINNE.

### Pros and Cons of Hospitality

**S**OMEONE recently asked "is it truer hospitality to guests to treat them as members of the family or to make an occasion of their coming?"

The answer may seem easy, offhand, but the longer you think about it the more uncertain you are.

"Treat a guest as one of the family," says one woman to whose home we love to go. "Take it for granted that the family circle can always be easily and happily enlarged; that there is no trouble involved in welcoming another to the household. If your guests feel that you are taking extra pains, that your work is increased and your mind burdened by their presence, they are made uncomfortable and avoid coming again even though you urge them to do so. If on the other hand, they are 'adopted' at once into the family, given what the others have, even to sharing the routine of your family duties, they are freed from the burden of uncomfortable gratitude which treating them as 'company' entails."

But another woman sees it differently. "I don't argue for 'fuss and feathers,'" she says, "but I believe that the guest should be treated as

though his coming were indeed an honor. There is little extra trouble and great extra satisfaction in seeing that the spare room is not only fresh and dainty but that some bit of added beauty shows your appreciation that your home has been chosen for the visit. Then too, it doesn't do your family one bit of harm to be a little on their best behavior. It is valuable training in consideration and self-forgetfulness for the children. I notice the good effect of 'having company' on my family for days after the guest departs."

During the summer the farm woman's hospitality is often taxed almost to the breaking point. If any one is an authority on what makes an ideal hostess she should be. What do our readers think about this question?—GABRIELLE ELLIOT.

### Be an Individual Farmer

**T**HERE has been a lot of horse play about "farming the farmer," "the 33 cent dollar," "cost of production plus," and the like, yet we are about where we started excepting the progress that time usually brings. These may seem cruel words. They are true words.

The man on the farm, old or young, who is making money and happy with his family seems to be taking some part in the new things yet does not see the "cure" in any of them. He is right.

Progress in any business including farming depends upon strong individual effort. Farmers who are succeeding, measured by the yard stick of the neighborhood, have and are using their individuality.

So we are about where we were many years ago. Farming is a business. It cannot be made so much better by more legislation or a lot of the "new plans" we hear or read about. The land responds to the man who knows how to farm. He is a man who does things himself. He is a fellow with head and hands. He uses both. There are a lot on the land who cannot qualify as farmers.—E. C. WEATHERBY.

### Eastman's Chestnuts

**I**N ONE of his lectures Opie Read tells a story about Lincoln which he says he had never read in any of the books about him. It was told to him he says by an old friend of his in Springfield, Ill., who had known Lincoln.

While Mrs. Lincoln was always spoken of as a sweet woman, she was possessed of a peculiar temperament. One day as Mrs. Lincoln was sweeping the porch a neighbor was walking by on the street. He stopped and spoke to her, "Fine day Mrs. Lincoln." To his surprise she advanced upon him with the broom stick and hit him over the head with it, exclaiming angrily, "L. teach you not to speak to me."

Josh backed away in indignation. "Look here Mrs. Lincoln," he began, "Because you're a woman I won't touch you, but Lord how I do wish right now that you were a man. I know what I'll do though. I'll find Abe and if he comes home to-night with one tooth missing, why you'll know what's happened to him."

Then he quickly walked down the street to find Abe. He heard them laughing inside at the corner drug store and he knew that Abe was in there telling some of his yarns.

He opened the door and called to him. "Abe come here a minute, I want to see you."

Abe walked out and kindly looking into his face asked, "Josh, what can I do for you?"

"Well," Josh began, his anger mounting as he proceeded. "This morning as I was passing by your place Mrs. Lincoln was out there sweeping the porch and when I spoke to her as any respectable gentleman would she hauled off and hit me over the head with the broom. Now I couldn't hit her because she was a woman, but I'm a-goin' to even it up with you."

Putting his hand on his shoulder Abe bent down and looked into his face and said, "Look here, Josh, can't you stand for just once what I've had to put up with for so many days?"

Josh looked up and started to laugh as he said. "Gosh Abe, you're right! Why I guess I can all right. Sure."

# Leaves of Memory

## And Other Interesting Letters and Comments

We scatter memories everywhere  
Like leaves upon the grass,  
Sweet, fragrant, childish memories  
That rustle as we pass.

**W**HAT would be our impression, I wonder, if to-day some of you could set down with me in the little old log house in which I was born.

"What would I think of the single living room—heated by a queer little cook stove—which served as sitting room, dining room, library and kitchen? During the day this room was lighted by two or possibly three windows, and at night by one or possibly two smelly kerosene lamps.

"When we ran out 'of oil'—and that frequently happened—my mother would bring out a homemade candle or two; and in the absence of candles, she would fashion a tallow dip, as it was called. In this case, as I recall it, melted tallow or lard was poured into a saucer, and into this a flannel rag was thrust and lighted. Then the room would be so flooded with light that one person could distinguish another at a distance of several feet! It was a great little illumination, that tallow dip.

"Our library contained several volumes, including the Bible, Weem's 'Life of George Washington,' Will Carleton's poems, 'Swiss Family Robinson' (I read that seven times hand running), a book on Mormonism and three or four works of fiction, among which were 'The Lady in Black' and 'Jane Eyre'! By way of current literature we 'took' a splendid magazine called 'Godey's Lady's Book' and the 'Alexandria Post'. What more could one want?

### Plenty of Hazelnuts

"And then there flashed upon the silver screen of my memory a picture of winter evenings in that little old log house down there in the Arkansas woods. We always had a supply of maple syrup for 'taffy pulls' and hazelnuts and popcorn. Along about 9 o'clock of a cold winter night, when the wind whistled through the gaunt tops of the old oak trees which flanked the house, and the snow crystals glittered in the moonlight, the festivities would begin.

"Father would go down the cellar after apples and cider, while mother poked up the fire, 'greased' the big iron kettle and set it on the stove to heat. That meant popcorn! And how that corn did pop! First there would be a few desultory pops, then an increasing rattle and finally a regular roar of musketry. My greatest difficulty, as one of the youngest of the family, was to secure a receptacle anywhere near large enough to hold the portion of corn I thought I wanted.

"As a 'wash' for popcorn, sweet homemade cider isn't half bad, I'll tell the world! And with an apple or two to top off on, a boy of 6 or 8 or 10 could manage very well until breakfast time. Family prayers, which my father conducted with the splendid rigor and fine simplicity of those days, closed an evening of pleasure as one would find it hard to equal in these days of jazz and radio, automobiles and flying machines, hard times and bunk.

### That Homemade Sausage

"But what I miss most of all in these winters of my discontent is the heavenly home made sausage and hominy my mother used to fabricate. Why has sausage making become a lost art? Of course, one can buy hominy in cans, and something called sausage is still to be had at the butcher shop; but what travesties they are on the real thing! Why can't a modern sausage maker take a piece of fresh pork, a pinch of salt, a bit of paper and a sprinkling of sage and turn out some real sausage? But it simply isn't done.

"The old days! The trunk in my room in my house—which sadly needs refurbishing—cost more than the entire furnishing of that little old log house; my children spend more money—or have more money spent on them—in a week than I did in a year; in place of a creaky little melodeon we have a piano, and the old buckboard has given place to a six-cylinder automobile. But what boots it all?"—C. L. EMERSON, Missouri.

### By OUR READERS

EDITOR'S NOTE:—We confess that we cannot agree at all with those who are always saying, "That there is nothing so good in the present that will compare with the good old times." Fifty years from now our present young folks, then grown old, will be telling in exactly the same way how everything has gone to the bow-wows and that as for them, give them "the good old times."

Memory has a habit of forgetting the unpleasant circumstances and remembering only those that are pleasant. Also, things seen through childhood's eyes are

side, they are black balled. I wonder if the car standing by the road means any worse thing than the old horse, creeping over the road? You know the horse can take care of himself fairly well, although he used to sometimes have a bad habit of losing the road and often took a long time to find his destination. I'll wager that some of these same folks who are having such a fit about the idle cars have had horses that didn't know any more than to lose the road.

On our farm is an evergreen woods of two or three acres with a small brook running through the corner of it; to me, and I believe to many others, it is a beautiful place.

People come sometimes especially single couples and picnic in these woods. My neighbors have suggested to me that I ought to stop it, and some have intimated that some pretty bad things were going on there. Nevertheless all last summer I had to water my stock at a spring at the edge of these woods. In addition to this I have watched more or less to see if what they were saying was true and never once have I seen any sign of any questionable conduct. I am afraid, no, I hope that a large share of the terrible things we hear about, are simply someone's imagination which has been running riot in an evil corner of his brain.

There are altogether too many people who are seemingly anxiously awaiting the opportunity to smear the path of the respectable young man or woman and jump on them like a pack of wolves when they see them slipping and howling their misfortune to the skies.

Who is the worse, the one who falls or the one who pushes him down? and why isn't it just as easy and a great deal more satisfactory to hold out a helping hand to another when we see him falter as he reaches that fatal chasm leading to the depths of ruin and destruction. The world is already far too full of knockers, it would be a wise plan to exchange some of them for boosters. Gossip and scandal are poor assets to real civilization.—By H. C. McCORMICK, New York.

### "The Fate of the '54"

ON my desk is a miniature of a statue with the above title. The artist, Mr. Humphrey, moulded a man sitting upon a box, bowed down, with his hat between his feet, his shoulders stooped and discouragement in every feature.

The thought back of the statue is the series of figures gathered by an insurance company, showing how few men succeed financially. One hundred men start into business between the ages sixteen and twenty-five. These same men go on for forty years, and, at sixty-five, the facts about them are: sixty-four, only, are living, one is wealthy, three are well-to-do, six are still working for their support, and the remaining "54" are DEPENDENT, entirely, or in part, for their support.

The moral is plain. Save, and your savings will save you. Lay aside for the rainy day that is sure to come. Take the waste out of our wages, or someone may have to feed us when we're old.

Yet, I confess that I do not believe the artist has touched upon the whole truth about living. We cannot put the WHOLE OF LIFE into material figures.

Bank books do not hold half the facts of the glory of life. There are many great successes that have had empty pockets.

The gospel of Thrift ought to be preached more than it is. Keeping money is more difficult than earning it. But the gospel of Truth is vastly more thrilling than a bank balance.

You cannot pillory all the moneyless people on the artist's box because their pockets happen to be empty at sixty-five.

Suppose we younger people do have to help take care of some one, is that a bad thing? How about all the dear old fathers and mothers, and grand-parents, who, all during their younger lives were giving their all to help rear a family? Would you count them failures because they happen to be among the "fatal 54?" I tell you, Nay!

(Continued on page 24)

### IN GOOD OLD U. S. A.

An orphan at eight is now one of the world's greatest mining engineers and economists whose ambition is to eliminate depression and unemployment.

The son of a plasterer is now the world's greatest neurologist and his hobby is good health for poor children

A printer's apprentice is now the Chief Executive of the United States

But they didn't get there by hanging around the corner drug store

Copyrighted 1924 by the New York Tribune, Inc.

—Darling in the New York Tribune.

(This cartoon by Jay N. Darling, printed in the New York Tribune May 6, 1923, won the Pulitzer prize of \$500 for the best cartoon of the year)

the pleasantest and most wonderful of all a lifetime. The bitter experience of age too often brings disillusion and loss of faith, resulting in longing for other and pleasanter days. In reality the pleasant things of the world have not changed so much, except for the better. It is ourselves that change, so that we cannot recognize them.

\* \* \*

### A Good Whack at the Gossips

THERE seems to be a general idea that if a car is standing still beside the road it must have a sinister meaning.

There is I believe a bill out which is supposed to stop such a terrible crime (hope they don't get it through, mine might balk on me and I couldn't pay for the fine).

It seems as though our older people are taking the fact for granted that our young people are of course terrible sinners; if a girl's hair is bobbed she is pretty bad.

If a young couple's car is seen standing by the road

### Destroying Wild Carrot

C. H. CHESLEY

THE wild carrot is one of the most serious weed pests over a considerable area of the country. It is particularly serious in old fields and permanent pastures, nevertheless it is not particularly difficult to get rid of if proper measures are used. There is a widespread opinion that the plant is poisonous, doubtless due to the similarity of the plant when in bloom to the notorious Water Hemlock. However, it has been proven beyond question that wild carrot is not poisonous either to man or beast.

At any rate, it is nothing more or less than the common domesticated carrot run wild. Left to itself the plant soon reverts to the original type. It is essentially a poor land plant and is never found in any quantity with clover, alfalfa or a heavy stand of timothy. In cultivated fields, where a rotation is practiced, it seldom gives much trouble, but in permanent meadows and pastures the story is different.

I have found that it can be crowded out by top dressing, which induces a strong growth of the beneficial grasses. Sheep will eat the plant when it is young and before blossoming. Cattle will leave it untouched. In this connection, it should be mentioned that the belief is rather common that it is poisonous to sheep. Sheepmen tell me, however, that such is not the case. Sheep eat it readily in the younger stage but will not touch it when the stems become hard and woody.

In fields that are mowed it is usually cut off before the blossoms form, then shoots come out and new heads appear, so there is a fall crop of seeds. These are blown about by the wind during the winter and the plants spread rapidly. A second mowing, with the cutter-bar of the machine set low, will destroy the chance of forming seed. The plant is biennial, so the process has to be repeated the following year, even though no seeds are allowed to form. The seeds, also, remain in the ground for several years, so it is not possible to entirely eradicate the plant in one or two years. The seeds of the carrot are of a kind that stick to sheep, also to birds, so the plant spreads rapidly. First, it usually appears along the roadsides and from there it soon overruns the fields and pastures. If a few plants appear in fields and cultivated grounds, they may be pulled out without much difficulty but once they have become plentiful, other measures have to be adopted. Taken in time, it can be destroyed, but allowed to run on unchecked, the story is a different one.

### How to Control Devil's-Paintbrush

Will you kindly tell me which is the best way to control Devil's-Paintbrush.—G. D. E., New York.

DEVIL'S-PAINTBRUSH, or Orange Hawkweed, is a perennial and is one of the worst offenders in our eastern weed family. It can be effectively combatted by the use of salt, more so than by any other chemicals. Salt is applied when it is very dry and in a fine state, being broadcast on a bright hot summer day so that it covers all of the plants uniformly. It kills chiefly by drawing water from the leaves. According to Bailey, one to four quarts of salt can be used per square rod with little or no permanent injury to the grass, that is on a strong soil in our northeastern States. Local conditions are so variable that it is not advisable for you to treat a large area at the very beginning.

Perennials are destroyed by preventing the weeds from going to seed and destroying top growth which will finally destroy the underground parts. In the case of hawkweed, clean cultivation or summer following will destroy the hawkweed, later followed by the cultivation of a close growing crop such as buckwheat.

The use of lime, acid phosphate and manure will enrich the soil and stimulate the growth of desirable plants later on and thereby give the Paintbrush little opportunity to become established.

## A Scene in Bossie's Parlor

DON'T GET EXCITED. THAT'S A MILK RECORD SHEET. THE FELLOW THAT SOLD ME COW CHOW GAVE IT TO ME

HURRAY! WE'RE GOING TO GET COW CHOW ON PASTURE!

YOU BET YOU ARE! I'M NOT GOING TO STAND FOR ANY MILK SLUMP THIS YEAR. THE SERVICE MAN WANTS ME TO KEEP A RECORD OF THE EXTRA MILK I GET FROM COW CHOW. THERE MUST BE SOMETHING TO IT.

THERE'S A WHOLE LOT IN IT! COW CHOW WILL MAKE PLENTY OF EXTRA MILK ALL RIGHT, BUT WE WERE AFRAID YOU WOULD THINK YOU WERE GETTING OFF CHEAPER, BY GIVING US NOTHING BUT GRASS.

THAT'S WHAT I THOUGHT LAST YEAR, BUT YOU GOT OUT OF CONDITION AND HARDLY PAID FOR YOUR FEED IN THE LATE SUMMER AND FALL

MILK SCALES TOO? SUFFERIN' SILAGE, GIRLS, THE BOSS IS GETTING PARTIC'LAR

RIGHT YOU ARE. OUR FRIEND THE COW CHOW MAN GAVE THEM TO ME AT COST, THAT'S HOW ANXIOUS HE IS TO HAVE ME PROVE TO MY OWN SATISFACTION THAT COW CHOW WILL MAKE MORE MILK!

2 WEEKS LATER

GATHER AROUND PRODUCERS, HERE'S NEWS, JUST HEARD THE BOSS ORDER TENTONS OF THAT SMACKING GOOD COW CHOW. SAYS EVERY ONE OF US MADE HIM MONEY, COW CHOW ON PASTURE BEATS ANYTHING HE EVER SAW

COME ON GIRLS, THREE LONG MOOS FOR COW CHOW

MOOO!

MOOOOO!

### You Can Tell GLOBES by Their Roofs

WHEN you buy a GLOBE SILO you know you are getting a silo which is durable and gives perfect service. But more! You know that it will save you money. The exclusive GLOBE extension roof gives 100% storage space—takes care of settling—and reduces the cost per net ton capacity.

GLOBE SILOS are made of high quality fir and spruce. Heavy matching, double spline, sealed joints and our flexible door combine to make it absolutely airtight. Swelling and shrinking are taken care of by hoops easily adjustable from ladder on door front.

Write today for our catalog and prices. Address **Globe Silo Company** Box 104 Unadilla, N. Y.

# Farmers on the Broad Highway

(Continued from last week)

In last week's installment of Mr. Saunders' chronicle, the tourists had reached Dicksville Notch and were headed toward Canada. It was at Dicksville Notch that the party saw frost bitten corn on August 28th.

At Colebrook we were again on the Connecticut River. In this section there are lots of paper mills, and we saw mountains of pulp wood awaiting the grinder.

We got our permit to enter Canada at a custom house in Canaan, Vermont, and soon reported under the British flag at the Canadian custom house. At first we found poor roads and poor farming conditions; but after we left Sherbrook there was a great change. Much of the land between Sherbrook and Montreal is level, and here we saw some very fine farms. The buildings were good, and fields of oats and second cutting clover were just wonderful. There was no corn to speak of. The fields were fenced by wire and averaged only about eight acres to a field. This seemed strange as the ground was so level there could have been readily one hundred acres to a field. A lot of farmers keep cows, but the chief cash crop seemed to be hay.

We saw many one horse two-wheeled wagon loads going to market in Montreal. In this country it was hard to find people who could talk English. Even boys and girls fifteen years old talked French, or French-Canadian as it is called. This is also the language of their school, we learned. It was quite a foreign land to us, as we would see the word "Relentissoz" instead of our auto sign "Slow down." Over the railroad crossings the signs would read "Traverse Du (Chemin de Fer)." Usually both French and English were given.

In this level land we always could spot the next town, a mile or two ahead, by the tall church spires towering above the tree tops. They were wonderful big churches, and many were built of marble. One would wonder how small towns could support such buildings. Not only this, but for fear someone would be neglected religiously, away out in the country were shrines at the cross roads. The shrines were generally a statue on a pole, fenced in nicely, with a flower bed, and a locked coin box in readiness.

At Richelieu we came to the large canal that connects the Hudson and St. Lawrence Rivers, by passing through Lake Champlain. The Richelieu locks make one think of a young Panama. They are operated by electricity and pass boats up to seventy-five feet in length. The canal is maintained by the Canadian and United States governments, and is free to all. So any of you farmers having yachts up to seventy-five feet can connect with the Atlantic Ocean that way.

As we neared Montreal we saw a large Dominion tire advertising board that read, "Montreal is the largest grain-handling port in the world, and is second greatest port in North America in total imports and exports." Montreal connects with the Great Lakes by water, and thus calls much grain shipping. We crossed the St. Lawrence River over the Victoria Bridge, which is a mile and a half long, and were in Montreal. We spent a night in a Montreal hotel as it was too wet for camping. Here we handled strange money, and bought gasoline by crown measure, one-third more than our measure, also more in price. The red royal

mail wagons were a curiosity to me. They seemed all wheels and no body. They were about as much adapted to carrying mail as a wheel barrow would be to a load of hay.

On the way from Montreal to Rouses Point, New York, we stopped at a "hot dog" sign and were served with French sour bread rolls and frankfurters about the size of a rat's tail, and I am sure they were as hard to chew. We decided they were really "rabbit sausage," fifty-fifty—one horse, one rabbit. At Rouses Point we returned our papers to the custom house, after hunting all over town for it, and stood the liquid test.

From here we crossed a rickety wooden bridge over the head waters of Lake Champlain, and I would like to say this is one of New England's beauty spots. It was a calm

"We saw many one horse two-wheeled wagon loads going to market in Montreal."

day, and the crystal waters of the lake coming to a shore of good farming land, with here and there a splash of green cedars, made a landscape that was a feast to the eye.

We bumped over some of Vermont's poor roads, going southward, and here began seeing dairy farmers that belonged to the Dairymen's League. The land was good all the way to Brandon. At this place we stopped to call on friends, but found them also off on a camping trip. We camped in their yard, and in the morning, after seeing the birthplace of Stephen A. Douglas, went on to Rutland, the marble country. These marble quarries are great sights. We saw one by the roadside that was ninety feet deep. Ton upon ton of the white soft stone had been removed.

From Rutland we headed west, and at Castleton were told that just north was Bomoseen Lake, the most beautiful in the world. We wanted to be sure, so went up there. The lake was very nice, and we all enjoyed a swim, as the weather had gotten back to summer mildness by now.

Fairhaven is a fine town in the Vermont slate regions and boasts that all houses have slate roofs. A little farther on was Whitehall, and our own New York State. We pushed on through Saratoga Springs and the free camping grounds at Balston Spa, where we put up for the night.

At Saratoga we saw the State forestry nurseries, where there are millions of young evergreen trees. The trees ran in size from a tooth pick up to a foot in height. This great nursery is maintained by the State to promote re-foresting our natural timber lands.

Since so many people are camping out, many towns are making an effort to induce the rovers to stop over night. Their purchases amount to a whole lot of money. There is one

large camp in the Adirondack section that has twenty-eight open fireplaces, and has on record that over two thousand people have camped there of a single night. It is similar to the passenger pigeon of old. Flocks, yes, multitudes are on their way in July and August.

Our next door neighbors were three young lads from Brooklyn. Quite early in the morning they were busy tearing their Ford to pieces. They said they were going to treat "Lizzie" to a new set of speed bands, and then they would be sure to reach home that night. They had never done the trick before, but knew "just about" how it was done. I saw there was a garage near by. So we wished the boys good luck and made our get-away.

At Schenectady we crossed New York State's great waterway, the barge canal. Our young folks were much interested to see the WGY sign over the General Electric Company shops. We all well knew the strong WGY radio voice.

From Schenectady we went southwest into Schoharie County. In this thrifty farming center we found much evidence of the Dairymen's League, and had a good fill of real ice cream. As many know, the Dairymen's League has the last word in commercial ice cream.

At Schoharie, the County seat, we stopped to see the old stone fort. It was built in 1772 and is now used as a museum. In this stone building are many relics of Revolutionary days.

I had been attracted to this country mostly to see the village of Gilboa. This village is about to be obliterated that New York City, a hundred miles away, shall not die of thirst. A great dam is being built, and soon millions of gallons of water will be stored from the Schoharie River. It was a mystery to me at first how this water running north from the Catskill Mountains, and directly away from New York City, was ever going to be returned. But I was shown how the cunning of man had planned a huge tunnel seventeen miles long under the mountains that would cause this water when dammed up to change its course, and flow directly back under the very mountains it had run down from. When once on the other side of the mountains the water would find its way on and on to the world's greatest city through other channels already prepared.

The rest of our journey was accomplished by passing through the heart of the Catskill Mountains to Kingston, and across the Hudson River to Poughkeepsie, then home to Westchester County.

We had been gone twelve days, traveled fourteen hundred and forty miles in six States and Lower Canada, and had seen automobiles from thirty-six States and from several of the Canadian provinces. Our vacation for 1923 was over.

- A few "don'ts" for campers:
- Don't start with poor tires.
- Don't carry unnecessary luggage.
- Don't camp without the permission of the owner of the land. Special camping grounds are best.
- Don't drink water from brooks. Get your supply from the larger towns. It is guarded and clean.
- Don't build fires carelessly.
- Don't, above all, camp on mountain tops.

## Tragedy of Acadia Repeated

(Continued from page 18)

sary assistance to the artisans, and that such fund should be administered under the League's supervision by a Commission, consisting of two Greeks, a Britisher, and one American, and that the American was to be chairman, and as such have two votes and thereby really controlling the Commission.

When I was selected to be the American on the Commission, I was genuinely delighted that in the evening of my life, I should be offered such a wonderful opportunity to serve an entire people.

When the Commission took charge of the matter, the National Bank of Greece put at our disposal one million pounds sterling, which had been advanced by the Bank of England and the Greek Government transferred to us the settlements she had started, and also those of her

governmental offices and employees that had charge of this work.

We decided that in order to demonstrate definitely that this problem could be solved, we should use this money in such a way as to show within six months how many people we could actually make self-supporting both as peasants and artisans with that sum. We found that for every fifty pounds expended, we were able to take care of a family of 5, and now that our first million is spent, we can point with great satisfaction that our accomplishments are within our calculations, and that over 20,000 families, or a trifle over one hundred thousand people have already been placed beyond the needs of any further assistance from anyone.

Fortunately the Bank of England has

agreed to advance another million pounds so that the activities of the Commission can continue until the end of the year, and in the meantime a larger loan of six to eight million pounds can be secured.

What a splendid thing it would be for the Greek nation, as well as for the soul of America, if a number of Americans would volunteer to assist in this beautiful task of piloting these people through the perilous sea that they now find themselves in, to a safe haven of prosperity! There may be amongst my listeners to-night men or women who often have dreamt great dreams and hoped for chances to abandon their selfish careers of mere money makers or pleasure seekers and do something worth while. Here is your chance! Will any of you take it?

**UNADILLA SILOS**

**Let This Book Help You Decide the Silo Question**

**BUYING** a silo means making an important investment. You want the most in silo service for every dollar you invest.

There must be good reasons why dairy owners in the East choose the Unadilla more often than any two others together.

These reasons—of big, important value to you are thoroughly explained and brought out in our catalog. Before you decide on a silo, and in the interests of getting the most for every dollar.

## The WINDMILL with a RECORD

The Auto-oiled Aermotor has behind it 9 years of wonderful success. It is not an experiment.

The Auto-oiled Aermotor is the Genuine Self-Oiling Windmill, with every moving part fully and constantly oiled.

Oil an Aermotor once a year and it is always oiled. It never makes a squeak.

The double gears run in oil in a tightly enclosed gear case. They are always flooded with oil and are protected from dust and sleet.

The Auto-oiled Aermotor is so thoroughly oiled that it runs in the slightest breeze. It gives more service for the money invested than any other piece of machinery on the farm.

You do not have to experiment to get a windmill that will run a year with one oiling. The Auto-oiled Aermotor is a tried and perfected machine.

Our large factory and our superior equipment enable us to produce economically and accurately. Every purchaser of an Aermotor gets the benefit from quantity production. The Aermotor is made by a responsible company which has specialized in steel windmills for 36 years.

## League Quits Committee

Resolution to Increase Price Causes Break

THE tense situation in the dairy industry came to a rather dramatic climax at what is probably the last meeting of the Committee of 15 representing all of the milk organizations in the New York territory, held at Utica on June 30, when the three members representing the Dairymen's League got up and walked out of the meeting. The withdrawal from the Committee on the part of these men followed the reading of a resolution by S. A. Piszczek of Newport, an independent, to fix the price at \$2.33, and amended by C. W. Newton of Buffalo, a non-pooler, to read:

*Resolved that this committee urgently recommend that the members of the groups request their executive committees to use their best endeavors to obtain an increased base price for Class 1 milk on and after July 10, 1924.*

At the annual meeting of the Dairymen's League Cooperative Association on June 19th, Mr. John D. Miller, speaking for the League, stated that any attempt on the part of the Committee of 15 to set milk prices would be unlawful and impractical and that if the Committee continued to attempt to fix prices, he would advise the League representatives to withdraw.

### Tuck's Proposal Tabled

The first indication of an impending break came when the non-league members of the committee voted to table, until the next meeting, a resolution submitted by Mr. Charles Tuck, representing the League. This resolution suggested, as the committee's next move, a "survey of the needs of the New York milk market and the production of the so-called Metropolitan Milk Shed" to be made under the direction of Dr. G. F. Warren of the New York State College of Agriculture. The non-league men argued that what they wanted was quick action for the relief of the dairy farmers. Mr. Tuck's plan was to first get the facts.

The crisis of the meeting came after Mr. Piszczek's resolution, Henry Burden of Cazenovia, representing the League and chairman of the committee, asked the committee to select another chairman, saying he could not remain in the chair as long as the question of price fixing was up. Secretary C. W. Halliday of North Chatham, representing the Sheffield Farms Producers group, urged Mr. Burden to remain, and, if he so desired, vote against the resolution. This, the chairman declared, he could not do and keep his self-respect. The League men stated that they were not authorized to discuss prices and if price discussion was continued they would be forced to withdraw. "The Dairymen's League will see the price advanced," he stated, "as soon as it can be. The League is anxious to advance the price, but we know the conditions." He added that last year when the price was advanced, unorganized milk poured into New York from all parts of the State, and from outside of it and the same thing would happen again. A vote of confidence was passed after Mr. Burden resigned and Mr. Roscoe Sargent of Sandy Creek, representing the Eastern States group, was chosen chairman.

### League Members Leave Meeting

It was at this point that Mr. Newton offered his amendment to the original resolution eliminating any reference to definite price figures. This amendment had no effect in changing Mr. Burden's action and the new chairman called for a discussion of the amendment. Mr. Tuck then took the floor. He said, "You gentlemen have deliberately pushed this matter where I have to repeat what I have said kindly and forced to say kindly again. . . . We have asked you to consider carefully the plan I offered and have tabled it. You will not face the issues of collectively bargaining. These are the issues at stake." He said that he would be false to the industry if he did

not know that what was being proposed was false and fundamentally wrong.

Upon closing his remarks the league representatives consisting of Mr. Burden, Mr. Tuck and L. H. Thompson of Holland Patent, as well as about forty league member spectators, left the room in a body, much to the apparent amazement of the others present. One league-member spectator remained, B. A. Capron of Boonville, who was accorded the floor. He urged the committee to consider their action carefully, vote down the resolution and then urge the League men to return. During his remarks he mentioned how more milk flowed into Boonville when the price was advanced. Nevertheless the resolution was unanimously adopted. The committee then voted to adjourn until July 12.

AMERICAN AGRICULTURIST will discuss the situation editorially next week.

### New York County Notes

Warren County.—The hay crop is very late and the prospects are for a light crop. All crops are late and not looking any too good. A cold May and a dry June have put vegetation way back. Many fields had to be replanted the second time and seeds of all kinds did not germinate well. Farmers are putting in fodder corn and late oats for fodder to save the poor hay crop. The farm and home bureau is holding semi-monthly meetings, which are well attended. The prices of farm products are about the same as last year. There are evidences of the white pine blister rust in all parts of the county.—R. J. ARMSTRONG.

Ulster County.—The annual farm and Home Bureau picnic will be held at Forsyth Park, Kingston, on August 28th. There will be barnyard golf, baseball, speeches and eats. As in other years, the Home Bureau will have charge of refreshments. E. W. Hathaway, of Port Ewen, is chairman of the picnic committee. Serving on the committee with Mr. Hathaway are Mrs. William Warren, Hurley; Mrs. Charles Smith, Asbury; R. J. Harder, Lake Katrine; Mrs. G. F. Rice, Kingston; A. E. Jansen, New Paltz; Fred DuBois, New Paltz.

### Leaves of Memory

(Continued from page 21)

Financial success is often the result of discovery, patent, monopoly, accident, or trickery. The homage we pay to the man who has "made money" is out of all proportion to his value to society.

The great benefactors of the earth have been mostly poor men.

Jesus was poor, but He bequeathed Joy to others.

Socrates was poor, but gave an exhibition of fearless death.

Emerson was poor, but he has enriched the world.

Nancy Hanks was almost in penury, but she gave the world Lincoln.

I call you to think of the army of teachers who are doomed to remain poor, but who are making the earth rich in good things.

If you can love and unselfishly serve, anywhere in the world, you are not a failure. If you can put the glow of one rosy-sunrise of hope in the heart of a child, you do not belong to the "54."

Doubtless all of us, whether we live in country or in town, want to be independent in our old age. Let us save while we are young to that end. But if through sickness, loss of fortune, or any of the accidents of life, we come to sixty-five with little laid away, if we live to make the world better every day, we will have much to live for and be glad about.

Anyway, however the bank balance is, if we have tried, God will be in His heaven" and all will be right with us.

Let us never despair!—DR. J. W. HOLLAND, Minnesota.

# Are Goats Profitable?

## And an Opinion on the TB Question

MANY questions come up for advice on how to start in with milk goats, whether it is a profitable business and so on.

Any one wishing to start in the venture should subscribe for the "Goat World" and obtain all literature possible on milk goats and acquaint himself somewhat with the business before he starts in if possible, unless he has to start like I did with one plain goat.

In the East it makes a good sideline with farming, especially where the land is rough or in need of being cleared of brush. Unfortunately, like any other farm enterprise, it is no get-rich-quick business, but it can be made to pay, and of course the animals will respond to good care as would cows.

It is slower to begin with native or grade stock than with purebreds; however, you are gaining experience all the time with less expensive material, but one point I would emphasize is to always use a purebred sire.

### Be Sure of Market

If one wants to keep goats and sell milk they must be in a reasonable distance for manner of distributing to a city or sanitarium. Before undertaking such a venture I would advise getting in touch with physicians in such places to ascertain what the demand would be, as the milk is used largely for infant and invalid feeding. Personally I can not say how this would work out; I have had some inquiries for milk, but am not near enough to any city to make it a profitable venture, but there are many goat dairies in the West. People in the eastern States are just waking up to the value of goats' milk in the past few years, although the foreigners here could tell us its virtues, as in many foreign countries the goat is the dairy animal, and in some of these countries the herd is driven from door to door and milked for the customers.

I prefer breeding goats for sale, and the sales have been largely to people wanting milk for babies and children and at summer camps. The demand for castrated grade bucks for drivers is so small we do not bother with them, selling them for "roasters" when a few weeks old. To market stock we advertise in the "Goat World," reliable farm papers, and locals.

### Easily Shipped

It is a small task to ship goats by express. The crates can be easily made from light material and when shipping in cold weather covered with burlap to keep out drafts. We find they don't get milked en route, however, and many a fine doe has had her udder injured during transportation. So a fresh doe should have kids shipped with her to be shipped later in the lactation period. I have never had trouble disposing of stock and have shipped to several different States. I have received requests from many parts in the United States that I have had to refuse.

Success in any business depends upon what you put in it of cash and energy. It is a business you can not go to your neighbors for advice—you have to learn from experience and reading or seek advice from those who have been in the business.

In figuring the cost of keeping a herd of goats the comparison figured by breeders is that as an average eight goats can be kept for the cost of keeping one cow.—F. B., New York.

### TB Develops in Damp Weather

AT the Ayrshire show in Boston, your representative handed me a copy of your magazine and I was much interested in an article "How Shall We Control TB?" From that article I drew the conclusion that eradication of tubercular animals will result in an endless amount of money being expended unless concerted action be taken to find the cause of tuberculosis in animals.

Is this possible or not? I have been an inspector of foods for years and when younger served for U. S. Government on bench, in one of the largest slaughter houses where thousands of animals were killed daily. It was my duty to detect and mark diseased animals, so I became interested in the course or manner in which disease invades the animal system.

I noticed the following facts: Between May and September very few animals were infected, possibly as low as 3 or 4 per cent., and those which were, were only slightly stricken in the more exposed portion of the animal's body, the submaxillary gland. When the frost and dampness came around the percentage of those infected increased greatly, as high as 40 per hundred in some lots killed. About 80 per cent. of these, if not more, were infected primarily in the submaxillary gland. This infection appeared as a minute caseation, the size of a millet seed.

It seems to me, that what first is necessary, is to find out what causes this granular substance to appear and then to find out what will dissolve it. If allowed to remain in the gland it appears to irritate it and causes suppuration, disintegration and spread of infection.

To study this matter further; let us consider the following: fowls are subject to tuberculosis and their produce, an egg, by incubation will develop into a live body. This egg has an oily outer coating, a shell, two inner membranes, a white, yolk and nucleus, thus resembling animal structure. I think it is fair to assume that, whatever affects an egg, likewise may affect animal structures.

A round fertile egg may be kept from April to January in cold, dry storage; during the hot, moist days of August and the shell slightly broken, within two days it will become totally decomposed and is known as a "black rot" owing to its being attached or invaded by a fungus micro-organism.

(Continued on page 30)

## What's Wrong with this Picture?

SIMPLY THIS: THERE SHOULD BE NO COWS IN IT. If your pasture gets dry and short like this in July and August, put your herd in the barn and feed a grain ration in liberal quantity with hay and soiling crops or summer silage. Leaving your cows to graze on such poor grass is risking a severe slump in milk flow from which they are not likely to recover until the next freshening. For summer feeding a productive ration can be made up of *Buffalo Corn Gluten Feed* and wheat bran, supplemented with a good feed of beet pulp night and morning. To know how profitable such a ration can be—figure the cost of a ton at your local prices; then figure the receipts from 3 tons of milk which this ration will produce.

SHROPSHIRE RAMS—Yearling rams for sale, bred from the best stock in America that are regular in every way. Estate of ARTHUR S. DAVIS, Chili Station, N. Y.

### SWINE

DUROC'S FOR SALE—Bred gilts, cows, also young pigs, either sex, from prize-winning boar. ARTHUR E. BROWN, Nottingham, Pa.

DUROC-JERSEYS. Registered 6-weeks-old pigs. The kind that pay. Satisfaction guaranteed. Write for prices and list. C. A. KEZER, Massena, N. Y.

DUROC JERSEY SOW PIGS. Select, well grown of finest breeding. \$10.00 and up. Write for particulars. GLENROAD FARM, Bloomsbury, N. J.

### DOGS AND PET STOCK

STAHLs—Pedigreed Flemish Giants and Belgian Hares. Tested breeders and young stock. Satisfaction guaranteed. Reasonable. R. PAINE, 1364 Randolph Rd., Plainfield, N. J.

COLLIE PUPS—From good working stock. Shipped on approval. Five months old. Males \$8.00; Female \$5.00. WM. W. KETCH, Cohocton, N. Y.

TRI-COLOR, also Sable Collie puppies. JOHN D. SMITH, Walton, N. Y.

AIREDALES—The all-around dog. Special offering of puppies 4 months old. Will ship C. O. D. E. G. FISHER, Madison, N. Y.

SIX Walker Fox Hounds, males and females. 15 months old. \$25.00 apiece. Three-month-old pups \$10.00 apiece. None bred any better. Also want to buy young Red Foxes. D. C. KALTREIDER, Red Lion, Pa.

ANGORA—Long-haired kittens of pure bred stock. Maine grown pets, male or female. ORRIN J. DICKEY, Belfast, Maine.

FOR SALE—Coon hound. JAMES PETERS, Cambridge, N. Y., R. D. No. 2.

JUST ARRIVED from Canada, the finest bunch of English and Welsh Shepherds I ever had. I will sell at reduced prices, while they last. GEORGE BOORMAN, Marathon, N. Y.

### MISCELLANEOUS

LATEST STYLE SANITARY MILK TICKETS save money and time. Free delivery. Send for samples. TRAVERS BROTHERS, Dept. A, Gardner, Mass.

HIGHEST CASH PRICE paid for wool hides, calf skins, tallow. Write ALVAH A. CONOVER, Lebanon, N. J.

BEST EXTENSION LADDERS made 25c per foot. Freight paid. A. L. FERRIS, Interlaken, N. Y.

EASY DIGGING with Iwan Post Hole & Well Auger. Sizes 3 to 16 inches. 8-inch most popular. Try local dealer first. IWAN BROTHERS, 1505 Prairie Ave., South Bend, Ind.

WANTED—Wool in grease for making blankets, if you have five sheep or more write for particulars and prices. ROCHESTER FUR DRESSING COMPANY, Rochester, N. Y.

### SEEDS AND NURSERY STOCK

8,000,000 Cabbage, Celery and Cauliflower Plants—Field grown, highest yielding strains of seed only. Cabbage—Copenhagen, Glory, All Head, Danish Ballhead, 1,000, \$2; 500, \$1.50; 300, \$1.20; 200, \$1.00; Cauliflower plants, Long Island Snowball, Catskill Snowball, Extra Early Erfurt, 1,000 \$5; 500, \$3; 300, \$2.25; 200, \$1.75, not postpaid; Celery plants, Golden Self Bleaching (French seed), Easy Bleaching, White Plume, Winter Queen, Giant Pascal, re-rooted plants, 1,000, \$3.50; 500, \$2; 300, \$1.50; 200, \$1.25; 100 postpaid, \$1. 27th year. No business done on Sunday. F. W. ROCHELLE & SONS, Chester, N. J.

CABBAGE, Cauliflower, Brussel Sprout and Celery plants, 8,000,000 now ready. Cabbage—Danish Ballhead (from strain yielding 26 tons per acre), Copenhagen Market, Enkhuizen Glory, All Head Early, Succession, Flat Dutch, Surehead, Wakefield, Savoy and Red Rock. \$2 per 1000; 5000, \$9; 500, \$1.25. Re-rooted Cabbage plants, \$2.25 per 1000; 500, \$1.50. Cauliflower (all re-rooted), \$4.50 per 1000; 5000, \$20; 500, \$2.50. Snowball. (Grown from Long Island Association Seed.) Brussel Sprouts—Long Island Improved. \$2.50, per 1000. Potted Tomatoes, \$3.25 per 100. Celery plants (Ready July 5th), 3,000,000 Golden Self Blanching (French Seed), White Plum, Easy Blanching, Winter Queen, Golden Heart and Giant Pascal \$3 per 1000. Re-rooted \$3.50 per 1000. I have nearly doubled my business each year for 8 years by selling only "Good Plants." Send for free list of all plants. PAUL F. ROCHELLE, Morristown, N. J.

PLANTS—Leading varieties, celery, \$2.50 per 1,000; \$11.25 per 5,000; \$21.50 per 10,000; celery, \$3.50 per 1,000; cabbage, \$2.25 per 1,000; \$10 per 5,000; \$18.50 per 10,000. Asters 65c per 100. WM. P. YEAGLE, Bristol, Pa.

CELERY—We can supply you with all varieties. 100—50c; 300—\$1.35; 1000—\$4. Satisfaction or money refunded. E. M. FETTER, Lewisburg, Pa. R. 1.

STRAWBERRY PLANTS—Pot-grown, Howard, Dunlap, Success and Sample. \$4.00 per 100; Progressive, \$5.00 per 100. Order early for August planting as supply at this price is limited. GEO. D. AIKEN, Box R, Putney, Vt.

CABBAGE PLANTS—Fine field grown Cabbage and Collared Plants for Late setting. Special prices for two weeks' root, \$1.00; 1,000, \$1.75 mailed prepaid. Expressed \$1.00 thousand; 10,000, \$7.50 Cash. Good Order delivery absolutely guaranteed. J. P. COUNCILL CO., Franklin, Va.

CHOICE PLANTS, postpaid, Beets, Mangels, Cabbage, Copenhagen Market, Succession, Danish Ball Head, hardy field grown, 50, 30c; 100, 45c; 1000, \$2; 5000, \$8.50; 10,000, \$15. JOSHUA LAPP, Honey Brook, Pa.

HOLLAND BULBS—Order now, our supply is limited. Tulips, Giant Darwin or Early; mixed or separate colors, 40 for \$1; 100 for \$2; Narcissus, Single or Double, 30 for \$1, 100 for \$3; Hyacinths (Bedding), mixed or separate colors, 20 for \$1, 100 for \$4. Hyacinths, Giant, top-size, 12 for \$1; Crocus, 100 for \$1. Special prices on large lots. All orders sent post-paid. C. O. D. if desired. R. J. GIBBINS, Mt. Holly, N. J.

FOR SALE—5 solid acres Early Glore, Copenhagen Market and Danish cabbage plants grown on old pasture lands, \$1.50 per thousand. C. J. STAFFORD, R. 3, Cortland, N. Y.

CABBAGE, celery—Ready for field, \$1.25 per 1,000; beet, lettuce, strong plants, \$1 per 1,000; tomato, all kinds, \$2 per 1000; cauliflower, peppers, egg plants, \$3 per 1000. J. C. SCHMIDT, Bristol, Pa.

ORDER NOW. For Planting time. Low Prices for early orders. Gorgeous peonies. All Colors. All bloom next Spring, 3 for \$1.00. 12 for \$3.00. R. J. GIBBINS, Mt. Holly, N. Y.

### FARM IMPLEMENTS

CORN HARVESTER cuts and piles on harvester or windrows. Man and horse cuts and shocks equal Corn Binder. Sold in every State. Only \$25 with bundle tying attachment. Testimonials and catalog FREE showing picture of Harvester. PROCESS HARVESTER CO., Salina, Kansas.

### REAL ESTATE

MONEY MAKING FARMS FOR SALE in central New York State. For sizes, descriptions, price and terms, write PERRY FARM AGENCY, Canajoharie, N. Y.

FOR SALE—64-acre poultry farm, in good buying condition. Buildings good, good location. Good water. Will sell any amount of stock and tools desired. C. E. LINDSEY, New Berlin, N. Y.

FARM FOR SALE in Chautauqua Co., N. Y., near high school and church, 148 acres beautifully located in Cassadaga Valley; some timber; new barn 40 x 90; stanchions for 40 cows with all modern equipment. New 7-room house, pipeless furnace; running water in house; hog house, 20x40; new chicken house, 16x20; new milk house, 8x12; 26 head of pure bred Holstein cattle, horses, hogs, turkeys and chickens and all farm implements including tractor and milking machine. For particulars address, E. C. TOWER, 313 Prendergast Ave., Jamestown, N. Y.

83 ACRE FARM, fine building, suitable for truck, poultry, home market. Macadam road, 14 cows, fine crops. \$5,000. Write. C., BOX 54, Troupsburg, N. Y.

# Service Bureau

## Look Out for the Orange Produce Company

LAST week the Service Bureau told you in this column about the New Jersey Produce Company, warning shippers against sending stuff to that concern on consignment. Now comes a number of inquiries regarding the Orange Produce Company of Orange, N. J., and complaints of non-payment.

This concern has been broadcasting literature all over the country that they will give one or two cents above market quotations. A firm making such an offer is worthy of very, very careful consideration and will bear close watching. The Orange Produce Company has been sending out their propaganda on cards, one of which reads as follows:

"Do you know that: Orange, East Orange, West Orange, South Orange, Montclair and Bloomfield have a population of about 250,000; that they are practically one large consuming center; the bulk of their supplies is obtained in Newark or New York City? We are handling live poultry and eggs and must buy them in New York City or Newark, paying market prices with an additional cost to us of our time spent buying and expense of delivery from either of those cities.

"We want to save our time and part of cost of delivery from purchasing points by buying your live poultry and eggs, having them shipped direct to us, for which we will pay a premium of 1 at 2c a lb. on poultry and 2c doz. on eggs, over market quotations day delivered us. We want good stock. You will be satisfied with our prices and early remittances. We make no charges against your shipment, except express delivery. See address side of card for few prices paid to-day. "If not interested, pass this card to a neighbor."

A man would be a poor neighbor indeed who would pass on such a card. The company gave as reference the Second National Bank of Orange, N. J.

### Bank Does Not Endorse the Company

The Produce News of New York, a market trade paper, sent a representative down to this bank and interviewed the cashier. He was told that the firm had opened an account a few weeks previous and was carrying a small balance. The cashier urged caution in extending credit to the Orange Produce Company. He stated that the firm had not been given permission to use the name of the Second National Bank as reference and that it had been notified to stop the practice.

As we stated last week, it does not pay to try to beat the market unless you have especially fine connections. At any rate it certainly does not pay to hook up with an outfit that floods the country with this kind of literature. If you want to ship produce to New York on consignment, AMERICAN AGRICULTURIST or the New York State Department of Farms and Markets will gladly send you a list of the bonded and licensed commission men. If you want to do business in a city that has no listing or wish to deal with a firm in another State, ask them for bank references and then be sure to write to the bank.

### Have You Been Dealing With Hodupp-Evans?

IF YOU have been shipping produce to Hodupp-Evans Company, lately doing business as commission merchants at 7-9 Harrison Street, New York City, you will be interested in the announce-

### HELP WANTED

ALL MEN, WOMEN, BOYS, GIRLS—17 to 65, willing to accept Government positions, \$117-\$250; traveling or stationary, write MR. OZMENT, 258 St. Louis, Md., immediately.

### WOMEN'S WANTS

PATCHWORK—Send fifteen cents for household package, bright new calicoes and percales. Your money's worth every time. PATCHWORK COMPANY, Meriden, Conn.

### PRINTING

150 NOTEHEADS. 100 white envelopes printed and mailed \$1.00. Samples printing free. SUNCO, Mohawk, New York.

ment of the New York Commissioner of Farms and Markets to the effect that all persons having claims as consignor creditors against Hodupp-Evans, must file a verified statement of their claims with the commission of Farms and Markets, Albany, N. Y.

This statement must be filed before July 28. The statement should include the name and post-office address of the consignor creditor with the amount due him and owing to him by Hodupp-Evans and the description of the produce. Claims that are not filed before July 28 will receive no consideration.

Hodupp-Evans have been listed under the Licensed and Bonded Commission merchants by the New York State Department of Farms and Markets. Fortune has evidently been against them and Commissioner Pyrke has taken action to protect shippers. This instance shows how the State Department of Farms and Markets is protecting farmers shipping their produce into New York.

### Hard Road to Farm Success

(Continued from page 18)

important factor both in judgment and labor.

Where much labor is employed the business takes on more of the form and function of a manufacturing plant and the methods employed; with a possibility perhaps of larger net returns and also a possibility of much larger losses.

Because of the low cost production of the family conducted farm in the output of staple goods the large farm must necessarily produce higher priced specialties and have in its organization an organizing farm minded man who can adapt well-known labor requirements to farm operations. Under these conditions labor will come to the farm and be as contented as in town.

Cooperative marketing of farm crops has come to stay. Whether or not present methods as adopted in the East will be found the best I am not sure. Fruit growers of the Pacific have succeeded. In the East we are in formative period. Our efforts to adopt the western method may not prove the best.

Formerly the manufacturing and handling of milk products was a neighborly affair and done at a minimum cost. Goods were sold and clerical work done by competent persons who did not place a high value on their services. Now the very opposite has taken place and when charged against a comparatively low-priced commodity the charge seems excessive.

It remains to be seen whether or not gains in general administration will overcome these charges.

Agricultural education is important and with most young men and women necessary. The farm minded genius will win out generally against all odds because he is always a student, and a trained mind will function whatever process is involved. Good judgment fortified with necessary information and observation is a safe bet as against a mind overtrained in the class room and laboratory but lacking in judgment. Farming is not an exact science and specific formulæ cannot be generally applied. Homemade people, however, do not appear in sufficient numbers to supply the demand and so our schools and colleges have come to supply the demand, and while misfits are graduated the number of real farmers are steadily increasing.

Probably the larger number of failures is due to the belief that their heads alone will save them. Poor deluded mortals.

In conclusion I shall expect that the qualities of the pioneer, sturdiness of mind and body, farm mindedness, devotion, economy to which shall be added so much of modern science as can be made available will be as it always has been the cornerstone of successful farming.

# Swift Currents — *By Edwin Balmer* (By arrangement with William Gerard Chapman)

FELICIA SHELBY was standing alone on the rocks before Mt. Mower lookout-station, gazing steadily off to the south to make out the source and character of the smoke rising above the trees on the flank of Muleback Ridge five miles away. The morning, almost windless and sunny, had followed a clear, still night, free both from thunder-showers and from those lightning-storms without rains which are the particular terror of forest officers in the dry season.

The smoke, therefore, arose from a fire lit by hands—in all likelihood by the hands of campers following the trail from Acheron to the Snake River. But campers, even with the best intentions, were apt to be careless, and if from the East, as most campers were, they would underestimate the tinder-like inflammability of the Idaho forest after a season of drought. The time was past when the supervisor and his deputies and the rangers and lookouts of Milliard National Forest credited all fire-lighters with innocence.

This summer dangerous and violent people had seemed dismayingly numerous; so Felicia was keeping very close watch indeed when the telephone jangled in the cabin behind her, and she hastily put down her binoculars and went in.

When the Government took over this end of the forest and chose the summit of Mt. Mower for the forest-fire lookout-station, carpenters had first built this tiny cabin at a shop in Acheron twenty-eight miles away; then the forest officers had taken it to pieces and packed it to the foot of Mower; for the last two miles they carried it piece by piece on their backs, to reassemble it finally upon this pinnacle, nine thousand three hundred and eighty feet above the sea, a mile higher than its immediate valley and two thousand feet or so loftier than any neighboring summit till Lassiter Mountain, sixteen miles westward, topped it.

FELICIA, upon lifting the telephone-receiver, found that the call came from Lassiter, where was a similar Spartan-like station, the nearest in that direction. A young man, Howard Dwyer, was on duty there, as a man should have been on duty at Mower.

Accordingly, Felicia quickly explained: "It's Felix, Howard. Mr. Shirley needed Griggs for the fire over on Kingdom. I'm up for the day."

"Hello, there, Felix!" Howard then hailed heartily. "Glad to hear your voice. D' you spot something back of Puma Ridge?"

"Yes, it's on Muleback."

"Reckon you're right; you're nearer. What do you think about it?"

"I see it pretty plainly now. Camp-fire."

"All right, if you've spotted it. Say, how're they making out at Kingdom?"

"Cleaned out headquarters and getting more men from Acheron this morning."

"Thought the town already was busy down in the lodge-pole beyond the creek?"

"They are. These were men on a train going through."

"Where from? Seattle? A fine bunch, I bet. Start more fire'n they'd put out. Got a gun there, Felix?"

"Yes."

"That's good. By the way Felix, there's cars on Crandall's road this morning. You can't see 'em yet. Four cars; that's all I can see, but they're by the crossroad and keepin' on. They're sure makin' for the camp. Thought you'd want to know."

Felicia's hand trembled so that she almost lost the last words in the receiver she held to her ear. "Thank you, Howard," she managed, and Dwyer considerably hung up without demanding other conversation.

Felicia stared out unsteadily for a moment before she recollected her duty, returned to the sunlight on the bare rocks and, picking up her glass, dutifully leveled it first on the spire of smoke wafted above

Muleback. With a sigh of relief she observed that it had not thickened and then, more hurriedly scanned the southern slopes for traces of other fires. At last she turned away from the government-owned forest to the pine-clad slopes which were the property of Jared Crandall, and searched the endless expanse of blue fir and pine for the gray crack, winding up and down the valley of the Acheron, which was the road to the camp.

The Crandalls meant by a camp a great, log mansion forty by sixty feet, outwardly rough-hewn from yellow Idaho pine and red fir from the lower slopes of Kingdom; the interior also was in wood from their own forests—mostly cedar from the marshes beyond Acheron Lake. It had a great, antlered double-hearthed room running the whole width of the house which they called the lounge; it had a monstrous dining-room and kitchen, billiard-room, music-room and den; and besides the dozen or so bedrooms and baths in the main house, there were half a dozen little cottages scattered about near by for the entertainment of guests. For the Crandalls were Eastern people—Jared being of the branch of the family which lived in Stamford, Connecticut; and when they came to the camp, they usually brought a house-party of twenty or thirty friends with them.

When they first arrived in the West—that was ten years ago—they had come quite differently, seeking not diversion, but life itself. For Winthrop, the elder of the two sons, was threatened with tuberculosis; so Mr. and Mrs. Crandall had come alone with Win and his brother Tony, leaving the girls in school in the East. Felicia vividly recalled to herself the first encounter with Tony.

IT was April, a sunny, still day, warm even under the trees of the valley, though half-way up the slope of Mower white snow still glistened; Felicia, who was just twelve years old, was on her way home from the little school in Acheron.

She had heard that day that the rich Eastern people who had bought the old Crowder place by the river and had been fixing it over, had arrived; so she was going up the river trail to have a distant peek at them when suddenly a boy of about her own age stepped into the path before her.

"Hullo!" he hailed her with belligerent friendliness.

"Hullo!" Felicia returned; and each stopped and looked the other over.

She saw a straight-standing, well-built and reckless-looking boy with brown hair and blue eyes of the sort which seemed to say, "Take a dare?" He had a particularly nice brow, she noticed, when with a reluctant recollection of formal courtesy, he dragged off his cloth cap and stood bar-headed; he had nice, well-shaped hands, which very evidently did many things.

He was better dressed than any other boy she had ever seen; but he was not at all conscious of it, as other well-dressed boys always seemed to be. Indeed, he

was not conscious of himself at all, but was absorbed in her, staring at her coolly from head to foot, and evidently liking her; when he returned to other considerations, it was not of himself but of the bow which he held that he spoke.

"This is a rotten bow!" he showed it to her accusingly. "I thought you had decent Indian bows in the West."

Felicia looked it over with defensive scorn quite equal to his. "Huh! I bet you bought that at a railroad station. No Indian made that. Some Yankee made it to sell to Easterners."

THE boy stared hostilely for an instant, and then laughed at himself pleasantly and fairly; he broke the bow over his knee and hurled it away. "What's your name?" he demanded.

"Felicia Shelby. What's yours?"

"Tony Crandall."

"Oh, you're not the sick one, then!"

"No, that's Win," Tony said. "He studied too hard, I think. Wanted to stick around the house all the time. Thought he'd get into Harvard next year. He's fifteen."

"How old 'r' you?"

"Fourteen in seven months."

"Weren't you in school?"

"Sure I was in school—on the second nine and the hockey team, I tell you. They wouldn't 've got me to leave, but I wouldn't throw down Win. He's got to stay here all the time for five years, maybe, they say. I'll stay with him—outdoors mostly. Father's got a tutor for us—don't care much for that. But I like it here—" he looked about at the woods, breathing deep with his pleasure. "What d' you call that river?" he asked, looking down at the torrent below them. "The Acheron."

"What?" And when Felicia repeated, he commented—"Funny name. How'd it get it?"

"It means," said Felicia, "River of Grief."

"Oh, now I get you! Thought I'd heard it somewhere. Greek history stuff, Pluto and all that. What'd they call it that for?"

"You ought to see it five miles below here."

"Faster than this?"

"Faster? I should just say! No one dares try to go down it."

"Bet I would!"

"Bet you wouldn't!"

"Bet I will! Where do you live?"

"Over there," Felicia pointed into the forest to the right.

"Got any brothers?"

"No."

"What have you got?"

"My father."

"What's he out here?"

"Just Mr. Shelby," Felicia explained.

"He's sick, but getting well."

"That's good. That your land that way?"

"No; we haven't got any land. We came two years ago from Chicago. That's government land, anyway; that's national forest. Father's working there now; he's forest clerk for Mr. Shirley."

Felicia found no different expression in the rich boy's eyes after this confession of her humble station. "Can you ride?" he demanded.

"Of course; but I've no pony of my own."

"We've two. I'll take Win's horse—he won't ride yet; you take mine. Will you show me that fast river to-morrow?"

Thus the next day she rode with her new friend down beside the torrent of the Acheron, and she showed him the deadly run—the mile and more of hurtling, tossing, sucking cascade and whirlpool which had destroyed every one caught in the swift current above and swept down to the gorge. Felicia saw Tony's eyes light and sparkle at the sight.

"Some river you have got here!" he admitted ungrudgingly. "But I bet a good man with the right boat can go down. I bet I will—some day!"

Felicia's impulse was to defy him, but her instinct forbade the taunt. She was beginning to understand that this nice boy very likely might try it; not then, but "some day." So she said, half-frightened, "Let's look at the mountain road."

There were climbs of all sorts there to allure him, some safe enough, others dangerous; but at worst, less deadly than the river. He made most of those climbs in the next few years, either with Felicia or with boys from Acheron Lake, and in the winter skated and played hockey with them. But always Felicia, though a girl—or was it because of that?—was his especial confidant.

MRS. CRANDALL often invited her to the house on snow-bound days to help interest Win, who was not gaining strength as rapidly as he should; so they'd play authors and checkers. Then, while Win slept, Tony and Felicia would read Henty, and "Treasure Island," and "Huck Finn," or Tony would "imagine" things with her, and tell her hopes and ambitions of his own which he would not have dreamed of telling any one else.

Tony went East every now and then with his father or with his mother, who journeyed back and forth often, but Win always remained; so Tony soon returned, and their father purchased additional tracts of the wide woodland and ordered the building of the camp for a home for all the family from June to October. And the girls, Barbara and Charlotte, came also and brought their friends from the East.

Felicia, after a few encounters with these guests, learned to keep away from camp, so Tony would hunt her up.

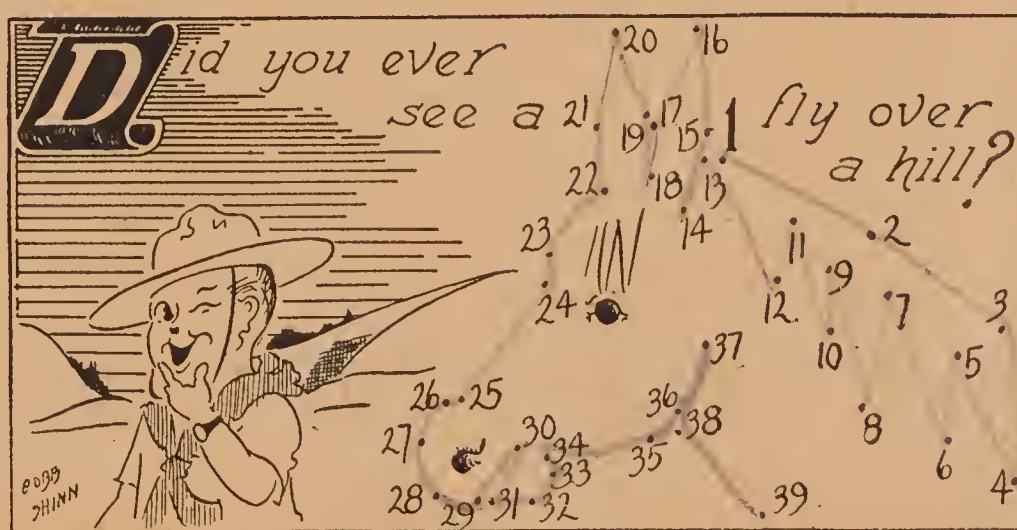

"See here, Felix," he once demanded, "why didn't you come to Charlotte's birthday party yesterday?"

Felicia tried to make evasions, but her eyes filled in spite of herself, and Tony seized her arm. "Who hurt you, Felicia? Charlotte? Barbara? I guess I'll fix them? Now you look here, any place that's good enough for me's good enough for you."

Which was not at all what he meant; but Felicia knew what he meant and why Mrs. Crandall did not ask her to the house. She was seventeen and Tony eighteen and a half—almost a young man, and she was rounding into young womanhood. Gone was her straight, lithe, boyish figure; gone her straight doubled braids of dark hair; gone her child's bold gaze and quick, thoughtless speech; gone, indeed, was the little girl; and in her place had come a maiden who surprised herself with awareness of her sex, who at first opposed such consciousness, but had to submit at last.

So, with her money earned by working in the supervisor's office, she bought by mail pretty feminine blouses; she learned to "do up" her hair, which became beautiful and lustrous without need of Charlotte's hundred nightly brushings; her blue eyes seemed to deepen a little in hue and to soften, though they looked at one

(Continued on page 28)

Draw through the dots in sequence to complete the question.

# How I Canned Fruits, Vegetables and Meats Last Year

Readers of the Household Page Give Helpful Suggestions—Midsummer Patterns

UNTIL three years ago I used wash-boiler and wire rack for lifting jars and cold packed all meats, fruits and vegetables.

Then we bought a steam cooker, holding fourteen jars, and canning products of the farm has been a joy ever since. It is imperative that rules for various steam or pressure cookers be followed, but a few general rules obtain. A cheesecloth sack is best to blanch in. Berries and soft fruits need no blanching, but all other fruits and vegetables should be immersed in boiling water from 4 to 5 minutes, then in cold water, drain and pack in clean hot jars. (I rinse and stand jars in hot water while filling.) Add boiling syrup or water, dip rubbers in boiling water and place on jars; partially seal. Place in boiler (on wire or wooden rack) or steam cooker, sterilize by boiling required time, remove and seal.

Although jars are cleansed when emptied and put away clean, it is necessary to re-wash them when preparing to can, and covers must be boiled at least one half hour to insure killing germs and spores that cause fermentation.

To each quart of meat or vegetables add one teaspoon of salt, half spoonful to a pint, before cooking. The first spring delicacy canned in our farm kitchen is dandelion greens—instead of blanching I clean and boil them until wilted, pack in jars, add teaspoon of salt and steam or boil three hours, then seal.

Asparagus, corn, peas, lima beans and okra string beans seem to keep best when canned in pints—all requiring three hours cooking. Succotash, also Dutch corn (corn and tomatoes) are sure to keep if corn and beans, also corn and tomatoes are boiled in open kettle separately, 5 minutes, combined and steamed three hours, always adding a teaspoon salt to each quart.

## Rhubarb the Base of Conserves

Rhubarb is cut in small pieces, packed in hot clean jars and boiling water poured over, then seal. Keeps perfectly. Three parts rhubarb and one part pineapple, sweetened and boiled till thick, results in a delicious conserve. Mulberries three parts, sour cherries one part are fine for pies—either canned with or without syrup.

Cherries are canned, spiced, dried and preserved in our kitchen. We also dry our own prunes. Tomatoes for winter slicing are prepared thus: select ripe, firm tomatoes that will slip in mouth of jar easily, scald, slip skin off and pack in jar—pour boiling water in, seal partially; after 10 minutes empty and refill with boiling water, repeat third time and seal.

Grapes and plums are canned this way, and the last filling is boiling syrup, two cups of sugar to two of water. Consult your own taste as to sweetness. No further cooking is necessary. Peaches are pared by immersing a few minutes in boiling lye (one tablespoon lye to each quart water) drain, plunge in cold water, slip skins, discard pits, pack in jars, add hot syrup and steam or boil 20 to 30 minutes.

## Plan Ahead for Winter Supplies

Fruit syrups, jellies, butters and conserves of most fruits add variety to the farm menu. Pimentos ground through food chopper, scalded in weak vinegar, drained, packed in small jars and covered with sweetened hot vinegar, then processed one hour, make delicious sandwich fillings and salad flavoring.

We can cucumbers in six different ways, aside from common, everyday pickle. Stone jars of spiced apples, pears, peaches, grapes, cherries and mangoes may be put up to save canning in small quantities. Various fruits are nice dried; apples, cherries and apricots are tasty.

With pork, beef and chicken canned, the winter months hold no terror for the farm housewife and her family. Thus it is possible to enjoy succulent, tender

young fruit and vegetables throughout the winter instead of a few days or weeks when they are in season.—Mrs. H. I. KRABILL.

## More Recipes for Yeast

FOUR large, mealy potatoes peeled, 2 quarts of cold water, 1 teacupful of loose, dry hops or half a cake of the pressed hops put up by the Shakers and sold by druggists, 2 tablespoonfuls of white sugar, 4 tablespoonfuls of flour, 1/2 a cup lively yeast or a yeast cake dissolved in a little warm water.

Put water, potatoes and the hops tied up in a bit of coarse muslin over the fire in a clean pot or kettle. Boil until the potatoes break apart when a fork is stuck into them. Take out the potatoes, leaving water and hops on the range where they will boil slowly. Mash the potatoes smooth in a wooden or crockery bowl with a wooden spoon and work in the sugar. When these are well mixed wet

ary, usually bring this to pass. Pour the yeast into glass fruit jars with close covers, or stone jars fitted with corks trying the corks down with twine. Keep in a cool, dark place and do not open except to draw of the quantity needed for a baking. Shake up the bottle before pouring out what you want into a cup.

This is the kind of yeast I make and my neighbors say they never had its equal. About 1/2 cup will make four loaves. This is a reliable recipe for home-made yeast, requested by Mrs. C. I. P. of Pennsylvania in the AMERICAN AGRICULTURIST, May 17, 1924.—M. A., Pa.

Mrs. L. E. C. of N. Y. sends a recipe that she says has given splendid results for many years:

## A Recipe Using Spices

Into 3 pints of boiling water stir 1 tablespoonful each of salt and ginger and three of sugar (brown preferred) then add enough grated raw potato to make rather a thick batter. Set on stove and stir constantly to prevent scorching, until it boils up well, then set off to cool.

Put a small handful of hops in can or dish (kept for that purpose), cover with boiling water and let stand

they said to her, proud of her as one of themselves. Felicia said nothing aloud, but to herself admitted, "No girl at the camp wants to."

And Tony, when he came for her to ride with him, began formally to seek her handclasp and to require it again at evening before they parted. She found him flushing, as she found warm blood flowing within her when, on their climbs, he lifted her in his arms from one foothold to another which she could not quite reach. He took in his pocket to read to her on the mountain-tops the "Rubaiyat," and "The Seven Seas," and "The Five Nations."

This was all delight until, when he took her home and they passed Acheron Run, she saw him look down defiantly at that torrent which had always fascinated him.

"I bet a man can go down the run," he said. And now, more than ever before, the thought that he might try it excited her.

"Don't you ever try it!"  
"Why not? What do you care?"  
Which reply made her so angry that she cried when she was alone at last.

HE was at Harvard now in the autumn, winter and spring; one summer he went abroad, but the next he returned to the camp; he was in higher spirits, more daring than ever, and now, when he looked upon the run, he talked about it no more, but she saw his eye gleam in his estimation of it. So all that first month she was afraid to delay longer, she invaded the domains of the Crandalls.

She followed a new path down the river to a well-hidden ravine, where she discovered a shed within which Tony was working at a boat which he had evidently built there—a cedar kaiak, sealed over bow and stern, with a cockpit amidship to hold one man. The craft was complete, and its purpose so plain that Felicia went white, and trembled as she advanced.

He heard her and turning, he attempted to hail her as usual, but he started guiltily when he saw her paleness.

"Tony, when were you going to do it?" she asked.

"I was going to do it to-morrow morning, but I'm ready now!" he replied, recovering himself to defy her.

"Tony, you'll kill yourself. I'll not let you," her voice said quite calmly; while passions which she did not dream she possessed rose within her.

"I can make the run all right! If I don't, what do you care?"

This maddened her, so that she bent and snatched up an adz and raised it, when he sprang upon her.

"You smash my boat and I'll go down the run on a log, do you hear?" and his breath was hot upon her face as she struggled. She dropped the adz and fought him only a moment more, for she believed him. He released her then and she backed away from him. She could have killed herself when she realized the mistake she had made. For if he had possibly hesitated before, now he would go down the run on a log, as he said; he would kill himself!

Words of hers, arguments, appeals, would mean nothing. She did not try them. Subconsciously her senses worked for her. She saw overhead a block and tackle rigged to the roof of the shed to lift the boat while he worked, and without being aware of what her mind was doing, she planned to use it.

A bit of loose line lay on the boat, and only waiting until Tony ceased to confront her, and until he had turned to continue his work on the boat, she snatched up the rope, she sprang forward and looped it about his wrists; she caught the loop in the hook of the pulley and, springing to the tackle before he could free himself, she put all her weight on the rope and, with her strength trebled by the blocks, she raised his arms above his head.

(To be continued)

## FOUR PRACTICAL STYLES FOR THE FARM WOMAN

No. 2155 will look cool and comfortable when small sister wears it, but it also is pretty enough to make mother feel she looks "just right." It is suitable for gingham, voile or any cotton material. No. 2155 cuts in sizes 2, 4, 6, taking for the 4-year size only 1 1/2 yards of 36-inch material. Price, 12c.

No. 2041 is that all-important garment, the romper! Nothing more useful for the small child has ever been invented. No. 2041 will appeal especially to the mother who has little time for sewing. It cuts in sizes 6 months, 1, 2 and 3 years, taking 1 1/4 yards of 36-inch material for size 3. Price, 12c.

No. 2051 is the famous no-seam apron. Notice in the diagram how the entire garment cuts in one piece. You gather the fullness at each side, join the slashed ends, apply the braid, sew on the pocket and there's your apron! It cuts in 3 sizes—small, medium and large—and takes 2 yards of material. Price, 12c.

No. 1802 is extremely becoming to the woman of plump figure. The long collar and side panels give a slim effect. No. 1802 cuts in sizes 36, 38, 40, 42, 44, 46 and 48 inches bust measure. For size 36, use 5 yards of 40-inch material with 3/4 yard contrasting. Price, 12c.

TO ORDER: Write name, address, pattern numbers and sizes very clearly, enclose proper remittance in either stamps or coin (stamps are safer) and send to The Pattern Department, AMERICAN AGRICULTURIST, 461 Fourth Avenue, New York City. Add 10c for our interesting catalogue of summer styles.

the paste with three tablespoonfuls of boiling hop tea then stir in a tablespoonful of flour. Do this four times beating and stirring to get rid of lumps. When the flour is all in, add a little at a time, the rest of the hop tea, squeezing the bag hard to get every drop. Throw the boiled hops away and wash the bag well before putting aside for the next yeast-making. Strain the thick grayish liquid through a colander into a bowl and let it get almost but not quite cold before you stir in the half cupful of made yeast to raise it. Set aside out of dust and wind, put a sieve or mosquito netting over it and leave it to work. Set bowl in a large pan or dish to catch what runs over the sides. When the yeast ceases to sing or hiss and the bubbles no longer rise and break on the surface the fermentation is complete. Four or 5 hours in July, 8 hours in Janu-

on back of stove while preparing the above. Drain off tea from hops and when cool enough, soak a cake of "yeast foam" until it can be mashed fine and add to first mixture.

After a day or so, or when fermentation begins to subside, put in glass fruit cans and keep in cellar. Do not seal tight until fermentation ceases or there will be an explosion. A teacupful will raise a good-sized batch of bread.

## Swift Currents

(Continued from page 27)

as directly and frankly as ever, and her voice softened. She grew, but did not become really tall; she was rather a little person; and men who used to hold her before them on their horses when she was a child, dismounted when they met her and awkwardly pulled off their hats and delayed her in talk.

"No girl at the camp can touch you,"

**File Cases for Records**

"MOTHER, where's that copy of the AGRICULTURIST that had the article on whitewash in it? I was going to save that piece and now when I want it it's gone."

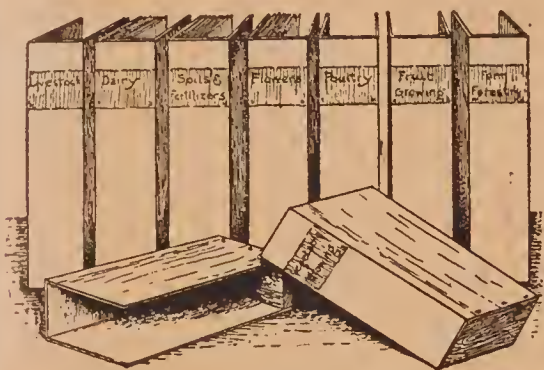

How many times a day is such a query heard around your house? Haven't you wished for some simple way to keep track of things printed in the paper so you could use them when you need them? Some folks keep all the copies of the paper in order, but they take a lot of space and it's hard to remember just when the particular thing you want was printed, so you usually have to look through several numbers to find it.

One easy and sure way to keep information you want to save is to cut it out and file it in pamphlet boxes made of cardboard, a piece of soft wood, and a few tacks.

Put pencil marks around articles that you want to save when you read them, and once a month or so go through the papers and cut out what you have marked. Fold these clippings once if they take a whole page, put a word or two on the outside that will tell you what they are about, and put them into their own filing boxes, made as follows:

**To Make File Boxes**

Cut a piece of heavy cardboard 17 inches long and 10 inches wide, and a piece of soft wood 1/2 inch thick, three inches wide and 7 inches long. Measure seven inches in from each end of the cardboard and put pencil lines across the

The File Boxes in Working Order

short way parallel to the ends. Bend the cardboard at right angles on these marks, and tack the edge around three sides of the piece of wood, which should just fit inside the cardboard. This will make a box shaped like a book with the top and one edge open. Set up on edge it takes three inches of shelf space seven inches deep, and is ten inches high. It will hold fifty or more single pages of the AMERICAN AGRICULTURIST folded through the middle, together with bulletins and other material you collect.

**Label Them Clearly**

A piece of white paper pasted on the front makes a place to label the box so you will know what particular branches of knowledge it holds. When one box is full, make another, subdivide your classifications, labeling each with the general topics it holds, such as "Machinery," "Spray Mixtures," "Household Hints," "Patterns" or any other subject you want to keep information on.

Passe-partout tape to bind the corners gives the boxes a finished look and longer wear, or you can buy them ready made and nicely finished in this size for about thirty cents apiece.

Smaller boxes that hold fewer clippings may be made from common cigar boxes. Nail down the cover and remove one side and one end. Paste paper for labeling along the edge where the cover hinge is fastened, and stand them upright on the shelf.—H. A. STEVENSON.

**Cockscombs Still Popular**

I HAVE always liked the cockscomb. Big, odd-shaped, bright red combs of such mammoth size for such short stems always appeal to people, I guess, for I saw them growing from Kansas to Minnesota last summer. There are some very desirable new sorts, and all colors are represented now. The Chinese woolflower is a novelty recently introduced and one

There are thousands of women who are literally slaves to their kitchen because the food upon which they lavish so much care and attention is likely to spoil if the fire is too hot, or not hot enough.

Coal and wood stoves require endless attention. They make every kitchen hot and difficult to keep clean. They mean the heavy hauling of coal or wood and ashes.

The New Perfection Oil Cookstove burns kerosene—clean and odorless. It is practically automatic in its operation, and delivers a wide

range of heat—bakes, broils, boils, roasts, and toasts.

It eliminates coal, dirt and ashes. It adds immeasurably to personal comfort because it keeps the kitchen cool.

Ask your dealer to demonstrate the particular model which you like best, and which you will find displayed in his store. Remember that each New Perfection model, whether it be the famous Blue Chimney, or the fast-as-gas Superflex, represents the utmost in cooking satisfaction at its price.

# Reviewing the Latest Eastern Markets and Prices

## MILK PRICES

**T**HE Dairyman's League Cooperative Association announces the following prices for milk during June in the 201-210 mile freight zone, for milk testing 3 per cent.: *Class 1*, used chiefly for fluid purposes, \$1.86 per hundred pounds; *Class 2-A*, used chiefly as fluid cream, \$1.70; *Class 2-B*, used chiefly in the manufacture of plain condensed milk and ice-cream, \$1.85; *Class 2-C*, used chiefly in the manufacture of soft cheeses, \$1.85; *Class 3*, for milk used chiefly in the manufacture of whole-milk powder, evaporated whole milk and sweetened whole condensed milk, \$1.55; *Classes 4-A* and *4-B*, based on butter and American cheese quotations in the New York market. Prices for April were: *Class 1*, \$2.33; *Class 2-A*, \$2.00; *Class 2-B*, \$2.25; *Class 2-C*, \$2.25; *Class 3*, \$1.95.

### Sheffield Producers

Sheffield Farm Company Producers announce that the price of 3 per cent. milk in the 200-210 mile freight zone is \$1.70½.

### Non-Pool Cooperative

Non-pool Assn. prices are: *Class 1*, fluid milk for city consumption, \$1.86; *Class 2*, milk for cream, plain condensed and ice-cream, \$1.70; *Class 3-A*, milk for evaporated, condensed, etc., \$1.60; *Class 3-B*, milk for fancy cheese, \$1.45; *Class 4*, determined on butter and cheese quotations on the New York market.

### Interstate Producers

Interstate Milk Producers' Association (Philadelphia plan) June receiving station prices, 3 per cent. milk, 201-210 mile zone, \$2.19; 101-110 mile zone, \$2.29.

## BETTER TONE ON BUTTER

The butter market has settled down after the flighty and more or less unsatisfactory condition of last week. Trading has been falling off slightly and there has been less speculative buying, but the short interests of June contracts have had a strong influence in shaping values. On the 30th the market was still weak and prices declined three-quarter cent. Quite a good deal of stock had been carried over and with fairly liberal arrivals there was just enough pressure to sell to give buyers slightly more advantage than they have had for some time. This situation was short lived, for by Tuesday the market again developed a better tone and as buyers tried to secure further concessions receivers began to tighten up. Chain stores were anxious to stock up heavily for the approaching holiday trade so that by the middle of the week trading developed quite heavy and it may be that we will not only see the recovery of a three-quarter-cent loss but a very slight advance before the week closes. This may not be the best thing for the butter market in view of the fact that the exchange closes on Friday and Saturday. Right now the trade is taking stock fairly well. A good deal of butter is going into storage on receivers' and shippers' accounts so that fresh arrivals are being taken care of in reasonably good shape. It is quite evident that while the peak of production was probably reached last week,

the make will keep up for a couple of weeks. Cable advices from Denmark, Holland and the Argentine report quite strong markets with price above par compared with the ruling rates of this country. This means that after shipments now in transit arrive, there will be no further foreign arrivals before fall.

## CHEESE MARKET EASIER

A comparison of holdings in public warehouses of the four main cities gives a pretty good clue why the cheese market is ruling slightly easier. The 1924 figures show that there are something over 600,000 pounds above those of last year. Furthermore, there are indications that the make is quite heavy. However, present receipts in New York City of State cheese have been relatively light and the market has been holding firm. On best full grass stock, prices have advanced slightly. Fancy State whole milk flats, fresh, fancy, are bringing from 20 to 20¾ cents with average run goods quoted at from 19 to 19¾c. It may be that we will see a slight shading in the cheese market for just before the holiday. Trading seems to have quieted down and the demand up-State was not quite as brisk. Prices have not been shaded up to the time we go to press, but it is reported that sales were difficult to effect at outside quotations.

## NEARBY EGGS STEADY

The general egg market seems to be slightly easier. On the 30th the market opened with a firm tone. Advices from principal producing sections and arrivals indicate that high grade eggs are decreasing in supply and prospects of a growing scarcity of high quality fresh goods has cut down the pressure to sell. However, by Wednesday a little easier sentiment was beginning to creep in, although some stores reported very active trading. The market on nearbys, however, is steady with a fair movement. One of the outstanding features on nearbys is the fact that a good deal of stock lacks quality, so that it is out of the question to expect anything near top quotations. A good deal of stuff is coming in that will hardly grade better than nearby undergrades. The shippers are warned to exercise caution in holding eggs and care in shipping. Hot weather and exposure to direct rays of sun causes shrunken eggs and when interior quality is poor, it is just as bad as badly mixed sizes and colors. Do not leave eggs stand in an open wagon without being well protected and do not leave them on the sun-beaten express platform. As quality decreases we are almost sure to have a wider range of prices.

## HEAVY BROILER RECEIPTS FOR 4th

On the 30th express broilers were in rather light supply and the market held very firm. Tuesday receipts were heavier and although clearances were satisfactory, nevertheless there seems to be an inclination to shade prices to insure a sufficient outlet to take care of the heavy anticipated receipts of the 2nd and 3rd. By Wednesday, arrivals were very heavy and the market turned in the buyer's favor. Only fancy colored birds and White Leghorns of large size have maintained a steady tone. Express fowls have been working out slowly. On the

2nd, 7,000 Long Island spring ducks were received in the market and met a good outlet at 23 cents.

## POTATO MARKET LOWER

Heavy arrivals and slow clearances have brought the potato market into a rather unsatisfactory condition. First hand receivers report stocks fairly well cleaned up, but speculators are holding considerable goods. The unsatisfactory condition in the market has forced values down so that now the best Eastern shore marks are selling from \$3.00 to \$3.25 per barrel with average run goods from \$2.50 to \$2.75. Norfolks have been working out at about \$3.00 for the best marks and anything above \$2.00 for undergrades. North Carolina cobbles are still in heavy supply, but they are meeting a weak market. A very small percentage is worthy of a top quotation of \$3.00 to \$3.50 and most of the business is being done at \$2.75 to \$3.00. South Carolina is about done. Norfolks of real good quality are bringing \$3.00 to \$3.25 and a few reaching \$3.50. Most business is being done at the inside figure.

## GRAINS AND FEED

According to New York State Department of Farms and Markets, the following prices prevailed, through billed from Western points:

The quotations given in this report show the approximate prices at which feed can be purchased per ton, and grain per bushel, in straight carlots delivered on track at points in the different freight zones as indicated. Mixed carlots cost approximately \$2.00 per ton more.

Retail feed and grain prices vary with different local dealers, depending upon their individual costs of doing business, volume handled, etc. In the case of feeds the retail price may sometimes be as high as \$5 per ton above the wholesale prices given in this report.

Wheat future prices about one cent higher for week, and corn about six cents higher, but market has developed weaker tone because of profit taking and hesitancy on part of cash grain to follow advance. Receipts increasing at principal markets. Oats steady three to five cents higher for week.

Wheat millfeeds slightly stronger, prices firm with practically no pressure to sell. Hominy feed offerings very light, especially for early delivery. Market firm account upward trend of corn prices. Cottonseed meal and linseed meal offerings light, demand light.

	Albany	Ogdensburg	Utica	Rochester Syracuse	Buffalo
No. 2 W. Oats	.66	.67	.65½	.65	.62½

Beet Pulp	37.00	37.60	36.60	36.30	34.90

Since Buffalo is an important milling center for wheat feeds and linseed meal, quotations are given for this point on both a through-billed and a local bases. Ground oats \$40; spring wheat bran \$25.00; hard wheat bran \$27.25; standard middlings \$25.50; soft wheat middlings \$33; flour middlings \$31.50; red dog flour \$37; dry brewers grains \$31; white hominy \$39.25; yellow hominy \$39; corn meal \$41; gluten feed \$40.25; gluten

## HAY MARKET UNCERTAIN

A rather peculiar situation exists in the hay market, trading is light and buyers are evidently trading as lightly as possible, evidently holding off until after the holidays in anticipation of lower prices. There is a heavy accumulation of Canadian hay in small bales. The market on this line of goods is very weak and dragging. Large bales, No. 1 stock is scarce and wanted. The market in this quality is firm, but with so much poor hay on hand it is quite evident that the entire market is more or less depressed. Less hay has been going into Brooklyn, with a result that the market there is slightly above Manhattan, especially on small bales, but even there the market is more or less weak.

## MEATS AND LIVE STOCK

The live calf market has turned steady. Prime veals are selling up to \$12. Common and medium stock, of which there is a greater proportion, is bringing from \$10 to \$10.50. Receipts during the early part of the week have been light and have caused the upward turn in the market. It is hard to predict how prices will fluctuate on account of the holiday, the heavy arrivals no doubt caused a slight downward turn. Live lambs are meeting a steady, firm market and good demand. Prime marks are selling up to \$15 and \$15.50. Common to good stock is quoted anywhere from \$11 to \$14.50. Country dressed calves are meeting a weak market. The supply has been liberal and trade is none too good. In general the market is weak. Rather than cut prices to force sales, some stock is being placed in storage for a later market. Prime marks are bringing anywhere from 12c to 14c with common to good running over a wide range of prices from 6c to 11c, depending on quality.

## Milk Marketing Study Made in New York State

WHAT consumers pay for milk, in comparison with the prices paid for the same milk by wholesale dealers, in nine New York State cities, is shown in a report recently published by the New York State Department of Farms and Markets, Albany. The study also includes three cities in Massachusetts and four cities in Pennsylvania. The average retail price during 1923 was 13½ cents a quart.

New York cities included in this study are, New York, Buffalo, Rochester, Syracuse, Albany, Binghamton, Utica, Troy and Schenectady. Of these the lowest retail price was in Buffalo and the highest in New York City, while the lowest spread between wholesale and retail prices was in Rochester and the highest in Albany. The number of dealers per thousand population ranges from .06 in New York City to 1.85 in Troy and that it is smallest in the cities such as Rochester, Buffalo, Binghamton and New York where sanitary requirements are most strict.

## TB Develops in Damp Weather

(Continued from page 25)

If the shell is not broken, condensation takes place, the oily outer coating is washed off and a like effect takes place. The white sours, but the process is slower. If the process be reversed and a warm, moist egg be taken into a cold dry atmosphere, a similar result is obtained. During the transformation, the white and yolk becomes watery, the nucleus dies, putrefaction causes a stench, etc. If the shell be broken open, of an egg which has become a total black mass, the sunlight and air by oxidization destroys these micro-organisms. These fungous growths are parasites, having subsisted upon and destroyed the animal structure which they attached.

Is a TB caseation, a dry deposit, the result of pus formation, or is it the result of another product carried in lymph vessel being chemically acted upon? I think the latter. Will not frost plus dampness kill or transform products carried by lymph? I think so.

The preventative methods should I think, be as stated above, obtain a dissolved for those caseations which first appear in submaxillary and which won't be harmful. Secondly, to avoid overheating of animals in damp, frosty weather. The oft-repeated quick-chilling or subjecting animals to quick changes in temperature is the cause of this disease, I think.—J. J. M., Massachusetts.

## Quotations From Eastern Markets

The following are the prices at which farm products of special interest to Eastern farmers sold on July 3:

	New York	Buffalo	Phila.
<b>Eggs, Nearbys (cents per dozen)</b>			
New Jersey hennery whites uncandled, extras	40 to 42

# Chicken Chatter

## Fighting Mites—Something About Ducks

THE red mite is a small insect that feeds by sucking the blood of chickens, attacking them at night while roosting. Sitting hens, however, are liable to depredation any time, day or night. During the day these mites live in crevices in the hen house or under the roosts. They are very hardy and are active all the while except in very cold weather. Mites have been known to live three months without food.

Naturally the poultryman whose houses are infested with these larvae wants to rid himself of them. Out of every conceivable control measure tried by the Poultry Division of the U. S. Department of Agriculture not long ago, but two or three were at all effective.

### Fumigation Not Entirely Effective

Fumigation failed. In a house of average construction, the burning of sulfur at the rate of 6 pounds per 1,000 cubic feet availed but little or nothing. Medicated roosts were all right for that particular locality of the hen house, but such treatment had no effect upon the remainder of the building.

Most of the better known and oft-tried dusts were proved useless.

### Oils Best Means of Attacks

Oils showed themselves to be the best mode of attack. Heavy oils, both pure and slightly diluted with water were good. A 5 per cent. to 10 per cent. solution of cresol in whitewash brought excellent results. Pure, heavy coal tar cresote oil was very efficient. Kerosene oil lacked the permanency of the heavier ones, though its killing power was nearly as good.

"Heavier oils from coal tar and wood tar, or such oils diluted with a lighter oil, such as kerosene, so not less than 20 per cent. of the mixture is heavy oil, will successfully control chicken mites, provided the premises are thoroughly sprayed and the material not stinted."—PAUL GILLETTE, New York.

EDITOR'S NOTE.—Incidentally we have never seen any thing to beat a lubricating oil that has been drained from automobile engines, when its lubricating powers are gone. If applied liberally and in every crack and crevice mites and lice can't exist. Furthermore whitewash containing carbolic acid is very effective. For one who does not wish to bother mixing this, commercial preparations are very convenient, it being necessary to merely mix with water and apply.

### Ducks More Profitable than Chickens

I AGREE with W. H. Da Ball in every particular in regard to raising ducks. I think every farmer should raise ducks as they are far less trouble, less expense, and usually net a larger profit than chickens. Again, ducks generally lay better and longer than hens, and their eggs sell higher and always command a ready sale. Very often ducks sell for nearly double the price of chickens, and hens and are always in good demand. I personally consider duck meat far superior in flavor to chicken.

I believe the one who raises ducks this year will no doubt get good money for them, as there are comparatively few ducks raised annually, and we can see now that the chicken and egg market is going to be glutted this summer, as everybody seems to be going "wild" on the poultry subject. Poultry products have been extremely high and an oversupply will mean low prices again.

If you are just going into the duck business and haven't selected your breed, take my advice (which is from long experience) and get the Pekin breed. We have raised ducks for a number of years and have tried all breeds, and in every case secured far better results from the Pekin. We find this breed to be healthier and hardier in every way.

We find that ducks are unlike chickens and turkeys, in that they are not subject to certain diseases such as roup, scaly leg, sorehead, cholera, gapes and diarrhoea and also keep quite free from mites and lice. A good-sized flock of ducks (Pekin) should be on every farm, as they are money-makers. These ducks are very large, lay well, and are good sitters, though I find it is not advisable to set a duck, but use the chicken hen for this purpose, putting 14 eggs under her. The young ducklings are large and healthy, therefore grow off very rapidly.

They should be kept warm and dry the first two weeks, not given either food or water the first 36 hours after hatched. We give them water in tin plate or shallow dish four or five times a day for the first two weeks and feed them dough made of corn meal three or four times a day. Wet bread of most any kind is also a very good feed. Be sure and give them water every time you feed them, as they run for water to wash the food down. After they get large enough to eat corn we only give them two feeds a day, morning and evening.

After the first two weeks they should have a good supply of water at all times to wash and play in, which is very essential for their health and growth.

We find that ducks thrive well when allowed free range of a grass plot, such as clover or alfalfa. After they get six or eight weeks old, are usually large enough to eat or sell. We find that it is best to sell ducks alive, not dressed. The meat of the Pekin duck is not coarse, but fine, juicy and tender, having a high, rich, duck flavor.

For the amateur or beginner, it is always the best and cheapest plan to buy two or three settings of eggs and start in a small way first.—W. H. HARRISON.

### Poultry Cuts Down Our Expenses

I HAVE always been enthusiastic about chickens and turkeys as they are a source of pleasure as well as profit for me. I raise Barred Rocks. They are beautiful chickens, and good layers and nice size for the table. The young chicks are strong and vigorous. I raise 300 chicks each year, and very seldom lose one. I feed them wheat in the morning, sorghum seed at noon and corn at night. I keep oyster shells before them all the time, plenty of water and buttermilk.

I have my chicks early, as the early pullets are needed for good winter layers. I raise over \$100 worth of turkeys each year. Turkey eggs are generally incubated with turkey hens. When the hatch is over and the young turkeys are strong enough to run about, I remove them from the nest. For the first few days I give them hard-boiled egg sprinkled with black pepper. After this cornbread crumbs and lettuce. When they are old enough, if they are allowed to roam over the fields, they will make their living on bugs and insects.

About Thanksgiving they are ready for market and bring in a nice sum of money for the farm wife. My chicks and turkeys have helped cut down expenses on our farm.—MRS. HORACE JOHNSON.

## Outlook for Wheat

(Continued from page 19)

as the West Indies and some American millers have foreign outlets for their flour brands. As a result, part of our wheat and flour will be sold for export even at prices above the world level. The spring wheat crop includes around 50 million bushels of durum, most of which is sold for export. Inferior varieties and low grade wheat and flour also may be sold for export at the world price level without great detriment to domestic prices for good milling wheat.

### Year 'Round Harvest Continual

The United States also has a definite period in which it has been the main reliance of importing countries. While most of the world's wheat is harvested during the summer and fall months, the harvest is under way in some part of the globe every month of the year. New crop Canadian wheat is not available in quantity until October. Argentina and Australia usually dispose of the bulk of their surpluses by July and shipments from their new crops harvested in December and January can not reach European ports until around the first of March. As a result, the United States always has a chance to sell to advantage for export during the summer and early fall months. It does not seem difficult to dispose of such a surplus as we will have this year based on present crop conditions. This means that prices in this country most of the year should be above the world level and, in view of the change that has taken place in the general situation, the world level should be higher than it has been during the last twelve months.

In still another direction there is room for some optimism. Events are moving slowly but inevitably toward an industrial revival in Europe which will increase European buying power. This should help to lift the world price level for wheat.

### How High Should Wheat Go?

All this is not to be construed as a forecast of highly profitable prices for wheat producers in the United States. A crop failure may occur, of course, and put the market up to an exorbitant figure. Barring such an accident, however, the market will have responded most admirably to the changes now evident in the world's situation if wheat prices average 25 to 35 cents higher in the next year than in the last one.

### Further Curtailment in U. S. Justified

Taking a longer distance view, there are still a number of cautions which should be kept before the American wheat grower. Canada, Argentina and Australia have not yet exhausted their possibilities for expansion of the wheat industry in the natural growth and development of their lands. Russia, Siberia and the Balkan States will gradually restore their wheat production and furnish the pre-war amounts for export. That means that some country must export less or all must lower their prices. Production costs in all these countries are lower than in the United States. Transportation costs to Liverpool are much the same from Kansas, Saskatchewan or the wheat growing provinces in the Argentine.

### Justification for Lower Acreage

There is justification for reducing the acreage in the United States to a point where with average yields per acre there will be only a small surplus for export. This surplus can be used to take care of occasional low yields per acre, our natural export markets, the durum wheat produced primarily for export, and the low grades not suitable for milling. This will remove the function of making our prices from the international market where values are established by competition between countries whose costs of production are lower than our own and where the buying power of the principal purchasers is much below that of our domestic consumers.

# The New OLIVER Plow for the FORDSON

Fordson plowing was a step in the elimination of plowing drudgery. In the new Oliver No. 7-A you will find another important forward move in better plowing, easily accomplished.

You will find the Oliver No. 7-A different—so simple in construction, so easy to operate. It will penetrate in hard soils as in more favorable conditions.

When you see this plow, note the exceptional clearance which permits good plowing in trashy fields. See how a powerful screw sets the depth and allows the

bottoms to be raised clear of the ground even with the plow standing still. Grasp the handy controls which permits all adjustments from the tractor seat. There is a power lift, of course.

Wheels, not landsides, carry the weight of the plow, making lightest draft and even depth furrows so desirable for a good seed bed. The hitch can be rigid or flexible as your field requires.

As for the work of the plow itself—we ask you to see it and compare it with your exacting standard of quality plowing.

See Any Authorized Ford Dealer

## The Low- Priced **MONEY MAKER** ENSILAGE CUTTER Built for the Fordson

A LOW-PRICED, highest-quality, self-feeding dependable cutter. Fills your silo quickly with fine ensilage with a "Fordson" for power. Has satisfied Fordson owners everywhere. Find out about it now. Sold by all Fordson Distributors. Get our catalog of silo fillers to fit all powers and pocketbooks.

## Growing Gin-Seng—Talking United States—Plucking Geese

IN a little hamlet named "Moon," a few miles from the village of Daney, Marathon County, Wis., a man by the name of Claude Neault moved his family and started to make a living, cultivating the wild gin-seng for the market. In less than three years he owned a very attractive and comfortable home with modern conveniences and had money in the bank. I visited this gin-seng farm last August and it was with much enthusiasm that he showed me the great beds and explained to me all about the growth, cultivation and care of gin-seng.

The seeds can be purchased for 75 cents a thousand, or you can raise your own seed by procuring the wild plants, which grow in shady places in hardwood soil. When the seeds are planted, they are thrown broadcast, then transplanted when large enough.

If the seed is scarified, it grows right away. This is done by first planting a layer of seed, then a layer of river sand. Then seed again, and then sand, etc. This is done in a box eight or ten inches high, until the box is full. The scarifying takes one and a half years. When the seeds

are all ready for planting, they are placed in beds six feet high, four feet wide and any length (usually about thirty feet). They must have shade, so a slat fence six feet high is built and covered with lath. The plants are of a very dark green color and sell for one-half a cent apiece when one year old. A branch resembles a man's hand, three large leaves and two small ones. The matured plant has twenty leaves or four hands. The leaf resembles an elm leaf.

The flower of the gin-seng is white and turns to a fiery red. The matured root looks like a parsnip and is close to the surface. The plants are subject to disease, such as fiber rot, soft rot and black rot. They have to be sprayed for blight, too, every ten days during growing season. A hand sprayer and Pyrox is generally used. It is important to keep the beds free from weeds also.

When getting ready to ship, the gin-seng has to be dried in kilns or trays, made of cheese cloth, on frames and then placed on shelves. It takes six to eight weeks to dry. The roots have to be washed thoroughly and dried and fiber must be separated from the main root. It is then packed in barrels and shipped to New York to Chinese buyers for from \$5 to \$12 a pound.

An acre sometimes produces \$25,000, but it requires quite a little care. A mulch of rotten sawdust is used for covering to protect it from the winter's frost. The Chinese esteem the gin-seng root a remedy for all diseases of the body or mind. The taste is sweetish, though slightly bitter and aromatic.—Mrs. HOWARD R. MAXWELL.

### Why Don't They Talk United States

BY LESLIE HARRISON

IT has long been a favorite sport to bait the bulletins of federal and state agricultural agencies. Persons write protests to the authorities, and these protests are passed on down the line to some one who writes a wordy defense or a polite letter of thanks for the criticisms. Even though the protests are justified, that method of bringing about a change seldom works, and the governmental mills go right on grinding out more of the same old stuff.

Here is a protest right out in the open.

Recently the United States Department of Agriculture at Washington sent to newspapers thirty-three pages of close-space manuscript,

typed on both sides of the sheet, about the agricultural outlook for 1924. The Department had the right idea that farmers might read what the newspapers printed. There was good stuff in it, too. But what editor would or could wade through it, or even through the four-page summary at the start? For it was all written in

words which may have meant something or nothing, and they started with the dullest part of the whole business. Any one used to words meant to convey ideas, and who managed to struggle through the first page, must have had either of two impressions: first, that the writer couldn't "talk United States"; or that he was trying to conceal his meaning—was "pussy-footing," or using "weasel-words."

#### The Deadly Parallel

Here are the first few paragraphs done into plain talk:

In 1924 farmers plan for normal output, even though farming will have high labor and other costs, loss of farm workers, and low prices as compared with those for city-made goods.

America can and will buy. City folks want good clothes and fancy foods and have money enough to pay for them. Other lands still take the American farmer's cotton, pork, wheat and tobacco.

But the costs of labor, machinery, fertilizer, and credit ought to make the farmer go slow on extra outlays to raise more crops.

The foregoing statement of the agricultural Outlook for 1924, issued by the U. S. Department of Agriculture, is based on general information and on specific reports from 43,000 farmers, representing every agricultural county in the country.

And next comes the stuff as originally issued:

The following statement of the Agricultural Outlook for 1924 based upon current information and upon specific reports from 43,000 farmers, representing every agricultural county in the country, stating their intentions regarding the planting of spring crops, has been prepared by the Bureau of Agricultural Economics of the United States Department of Agriculture to provide a basis upon which producers may make readjustments to meet economic changes.

The general agricultural outlook for 1924 indicates that farmers are undertaking a normal production program. It is apparent, however, that agricultural production this year will still be attended by the difficulties arising from high wages and other costs, loss of farm workers, and the general disparity between prices of farm and urban products.

Domestic demand for agricultural products is at a low level. Urban prosperity is reflected in a heavy current consumption of fibers and high quality foods and this may be expected to continue into the summer.

Foreign markets, on the whole, seem likely to maintain about the present level of demand for our cotton, pork, wheat and tobacco.

The situation this season with respect to labor, machinery, fertilizer, credit and other cost items is not such as to favor any expansion in production.

Read 'em and weep!

"To provide a basis upon which producers may make readjustments to meet economic changes," means what, if anything? Does it mean that farmers may plant or raise less or more, as they see fit, if farm labor gets dearer or farm products get cheaper? If that is what is meant, why not say it? Better still, why say anything if that is all that is meant? Why not give the farmer, who gets too much advice already, credit

for being able to draw his own conclusions and to do at least a little of his own thinking after he has been given the straight facts in clear words that say what they mean and mean what they say?

\* \* \*

#### How to Pluck a Goose

SEVERAL weeks ago AMERICAN AGRICULTURIST received a request from a subscriber for information about plucking geese. Since that time we have received several inquiries about that practice, especially with reference to the method of holding the bird. We are printing the picture of a farm woman who is in the midst of the task of plucking a goose. Note particularly how she is holding the goose on her lap, especially keeping the goose's wing beneath her left arm.

There is only one detail in this picture that we could comment on and that is an absence of a hood over the goose's head. If the bird is particularly friendly and not subject to a great deal of excitement, it is perfectly all right to proceed with the operation as in the picture. However, if the goose is inclined to be rather fractious and excitable, or vicious, as is very often the case, it is usually a good idea to slip a stocking over the bird's head.

\* \* \*

#### Nothing Like a Gas Engine to Keep the Boy Interested

THE best way to keep a growing boy on the farm is to keep him interested in farm work and farm life. Young lads are keenly imaginative, and up to the age of 20 or 25, the outside world has a strong appeal to them. They hear about mechanical jobs in the cities and this brings to their minds an imaginative picture of city life.

They feel an urge to expand and develop their latent talents, and they imagine that the city affords them a better opportunity to realize their ambition.

If the farm does not provide the means of satisfying this desire, the boy is likely to seek the opportunity elsewhere, in the city. But give that boy an engine to tinker with—so that he can satisfy his craving for mechanics to his heart's content—and he will be more willing to stay on the farm.

Nothing serves this purpose better than the all-around type of farm engine. This is because an engine of this type can be used on almost all kinds of farm work, the year around—for such things as pumping water, grinding feed, shelling corn, sawing wood, running a lighting system, cream separator or churn—and scores of other uses.

## Why Solomon's Temple Was Safe

### Some Interesting Facts About Lightning and Lightning Rods

ASK the question of a hundred leading citizens of any large city, if there is any virtue in a lightning rod and ninety-nine of them will either think you a fit subject for the insane asylum or that you are propounding a huge joke, but they will all answer, "Lightning Rods—do they use them yet?"

The history of the lightning rod reads like the pages of fiction and we do not know of anything to-day that affords the safety and protection to life and property, about which the public in general is so little informed.

Mankind has been thrilled by the flash of lightning and awed by the ravages of the thunderbolt through all ages. Scientists of the early ages did not understand the phenomena of lightning and electricity, and no means was known to prevent the destruction from this cause.

Solomon in all his wisdom did not understand this great mystery of nature, yet Solomon provided the first protection from lightning of which we have any record. The Temple at Jerusalem was never struck by lightning in the course of a thousand years, although thunderstorms burst incessantly over the Holy City, creating immense havoc and destruction. In this instance, the explanation is simple. It is stated expressly in the biblical description of the building of the world-famed temple (1 Kings, xl: 21-22): "Solomon overlaid the house within with pure gold and he made a partition by the chains of gold before the oracle; and he overlaid it with gold until he had finished the whole house, also the whole altar that was by the oracle he overlaid with gold."

If the wise king had known of the protection against lightning, given by metallic conductors, he could not have guarded this magnificent edifice better than he did by having the whole house overlaid with gold, as stated in the Bible. According to the historian, Josephus, the roof of the temple was ornamented from end to end with sharply pointed and thickly gilded pieces of iron in lancet form. This was an exceedingly expensive way of protecting this great structure from the ravages of lightning, but since the entire building cost about \$190,000,000, it is probable that a good large per cent. of this sum might have been well spent in protecting it in the manner stated.

#### Franklin the First "Lightning Rod Agent"

It has only been within the history of our own country that any steps were taken to prevent damage from lightning. It remained for Benjamin Franklin, in June, 1752, to discover by his famous kite experiment that lightning and electricity were identical. In the summer of 1753 he erected on his house in Philadelphia, the first lightning rod. This rod was of iron and extended five feet into the ground and had a sharp point seven or eight feet above the roof. When Franklin felt that the usefulness of his invention had been fully established by experiment and observation, he began at once to devote a great deal of his time to advocating the use of lightning rods as a means of protecting buildings against lightning. Thus Franklin was the first "lightning rod agent."

Because of the fact that the new invention of

the Philadelphia printer was looked upon with little favor by the Royal Society of London, very little general notice was taken of the lightning rod and many representatives of religious orders regarded Franklin as an infidel, because they claimed he interfered with the operations of what they imagined to be a Divine instrument for the punishment of sinners. Because of this religious prejudice a great many years passed

up bravely under it, for they had been equipped with lightning rods and insulated with all the skill of the laboratory and were not even scorched.

It had been the intention to take the lightning rods off the little village in the last experiment, but it was decided to preserve it for future use. Blocks of wood were substituted, twelve- and eighteen-inch pieces of maple that were torn apart with one resounding crash. Down the center of each ran a long indented mark where the current had torn its way through. In most cases the wood was not burned at all. The test completely vindicated the virtue and efficiency of the lightning rod.

The tests at the General Electric Company's plant at Pittsfield were made in a huge brick room, completely lined with steel. The spectators stood on a steel platform, halfway between the floor and ceiling. All openings were closed by movable steel shutters. This was done, it was explained, to safeguard the plant and persons outside the room.

It is no longer a question as to whether lightning rods protect, but what capacity should a lightning rod have and what are the most important rules to observe in installing the material to give the best protection.

There are some points upon which all scientists agree and these are that all high points, such as chimneys and the ridge of the roof, ventilators and cupolas, should be supplied with air terminals, and all connected in one complete circuit.

Another and possibly the most important feature is to have this circuit well grounded. There is no part of a system of lightning rods more important than the groundings. There should be at least two groundings to even the smallest building and many ordinary residences and barns require three. These groundings should extend to permanent moist earth; not less than eight to ten feet deep. If it is impossible to get this depth, then it is necessary to dig a trench as deep as possible, three or more feet, and out from

This visualizes in a graphic manner the discharge of the earth's "electrical field." It shows graphically the reason for greater electrical intensity on the earth's surface, around the tree, along the wire fence and the oil pipe line, than elsewhere and why a lightning flash occurs. Cattle are struck dead near a wire fence, while other cattle out in a field are not affected. Petroleum tanks adjacent to the pipe line are ignited. An unprotected barn is in flames; but the dwelling, properly rodded, is immune.

before lightning rods were used to any great extent for the protection of church buildings, although during the same time the ringing of bells was recommended by certain of the clergy as a means of dispelling thunderstorms and warding off lightning strokes.

It is reported that in France a certain Englishman erected a lightning rod on his residence. A great public disturbance arose when this fact became generally known and the populace tore the rod from the building. The persevering Englishman took the case to court and was defended by a young lawyer named Robespierre, then very young and unknown to fame. The French Court decided that inasmuch as there was nothing in the statutes prohibiting the attachment of metal rods to buildings, such rods might be attached, provided that certain precautions were observed in so doing.

Many years have elapsed since Franklin's "kite experiment," but probably no experiment in the field of electrical research has caused the widespread interest as that held in Pittsfield, Massachusetts, recently by the General Electric Company. Over 2,000,000 volts were used in a stroke of "man-made" lightning. A miniature village was constructed; a country church house with its white spire reaching up to invite the first destructive bolt; the country store, and homes and beautiful trees decorated the streets of this model village. The lightning flashed, the thunder rolled, and even rain was made to fall, but the little village was unscarred. Although the jagged flame hit the little church and little house again and again, the little church and house stood

How a barn with silo at side is rodded, grounds being at diagonal corners and at center. The cable is attached to the hay fork track at both ends.

the building ten to fifteen feet. Dr. Steinmetz says, "the best grounding is an iron gas pipe set in the ground as deep as possible, and in addition a connection to the water pipes, if there are any available. A copper plate may be used, but is (Continued on page 39)

### The Milk Situation

OUR news columns last week carried an account of the meeting of the Committee of Fifteen at Utica on June 30th when League members withdrew because a majority of the committee persisted on passing a resolution recommending an increase in milk prices. Unless the League can be induced to reconsider its action, this committee can accomplish little.

Statements have been made that from the start there was no sincere purpose back of the organization of this committee and that its real purpose was to put somebody or some organization in a hole. We do not believe that such statements are true. In our opinion, all parties were to blame for the failure of the milk organizations and dairymen in this territory to get together and stop the foolish price war; and we believe further that there was a lamentable lack of leadership on nearly everybody's part to make the committee at least a partial success. After the first meeting, it seemed to us, as an impartial observer, that there was a very evident tendency by nearly everybody to advance the interests of their particular organization and groups rather than to think and work constructively for a plan that would relieve the man back on the farm who does the milking.

Make no mistake in the attitude of AMERICAN AGRICULTURIST toward farm organization. We believe in it thoroughly. Cooperation is the only way by which farmers can help themselves, but organization must always be the means to an end, and never the end itself. The organization exists for the farmer, and not the farmer for the organization.

No one who attended the meeting of fifty or sixty representative men at Utica when the Committee of Fifteen was formed can truthfully say that there was not an enthusiastic and sincere desire very evident to really stop the quarreling and get together. At that meeting, we emphasized several times in different talks the need of going slowly. "Learn to creep before you walk," we said. We did not think that the committee was ready to talk price, neither then nor at later meetings. Before price talk there must be a constructive plan based upon surveys which will give the real facts about surplus and other problems in the territory. The League and some others were absolutely right when they insisted upon this,

but it was the determination on the part of most of the committee to rush through a recommended price. This proved to be a mistake just as we said it would be. If merely "resoluting" a price was all there was to it, we would all be rich.

But on the other hand, we do not think that the host excellent gentlemen from the League on the Committee of Fifteen had proper backing from their organization, nor did the League act with enough forbearance and enough cooperation. What good can be gained to anybody by a speech such as that delivered by Mr. Miller at the annual meeting of the League at Utica when the Committee of Fifteen was condemned and some of the other milk organizations were singled out for attack? If we are ever to get anywhere in this business of cooperation, we must stop accusing the other fellow of bad faith. Maybe the other milk organizations are small; maybe some of them do not amount to much; maybe a lot of folks do not like the way some of them do business; but the fact remains that they are here on the job doing at least enough business to produce satisfactory returns to their members and to bring real competition into the markets, and as such they must be recognized and cooperated with. However much you may disagree with them and their principles of operation, they constitute an existing condition and not a theory. They can not be dismissed with a wave of the hand. Of course the job is hard; but this is all the more reason why it must be done.

And moreover, while the League is the largest milk organization, it is by far in the minority when the number of its members are compared with the whole number of milk producers in the territory. This is another grave reason why the League for its own good should reach out the hand of friendliness to the non-member so that while they may not be able to work together in the same organization, there can at least be some cooperation instead of constant fighting which results in benefit to no one except the dealer.

The constantly reiterated statement that the committee should not fix prices because it would be illegal is in our opinion a mighty poor excuse for withdrawal from the committee. As we have stated, the attempt to recommend prices was a mistake, not, however, because of illegality, but because there was no practical plan worked out first to obtain the prices after they were recommended.

AMERICAN AGRICULTURIST is the first to recommend obedience to the law, but we confess we are a little tired of this illegal argument stuff advanced by some one every time farmers try to do anything. There are upwards of three hundred different milk dealers in New York City alone. *Yet the retail bottle price of milk in New York City is always the same no matter what dealer you buy it from.* They do not fix prices, oh no! Yet we have not heard of any of them going to jail. Dozens of similar examples of price fixing can be pointed out in almost every industry, except farming. The League farmers themselves got together in 1916 and fixed prices. Then they stood together, fought the dealers to a finish and won. To-day milk prices are as bad, or nearly as bad, as they were in 1916. In reality, they are much worse because the buying power of the dollar is much less. Yet the only effort to get together to work out better conditions went up in smoke through the failure of farm-leaders—not the farmers themselves, mind you—to cooperate.

As a constructive suggestion, we believe this committee or a similar one should be continued. Perhaps the basis of representation can be changed to make it more satisfactory to representative conference board. We believe that the League representatives should come back on to the committee. On the other hand, all talk and resolutions on price fixing should be discontinued at least until such time as a proper economic basis or plan for pricing can be determined.

Then the committee should make its first work determination of the actual situation in this territory and secure and publish information regarding the conditions under which milk is being

produced, manufactured and marketed and the value of milk and its products throughout the country so that the producer can negotiate on even terms with the organized buyers of his products. Just this information alone will do much toward equalizing price. An actual study should be made of the surplus problem and if possible an equitable plan found for handling it, not from the standpoint of one organization, but from that of all the dairymen in the territory. After this is done, the committee will perhaps be ready to determine some proper basis for pricing milk and secure its uniform adoption.

### The Nation Sympathizes

A FEW days ago an old New England farmer went sadly down the road to the little country cemetery on the hillside at Plymouth, Vermont, and made the arrangements for the burial of his sixteen-year-old grandson, Calvin Coolidge, Jr., the son of the President of the United States. As the father of a sixteen-year-old boy, we can realize, as every other father and mother in the land can imagine, what the old man and what President and Mrs. Coolidge were suffering as they went through the ordeal of burying their boy.

We can perhaps imagine something, too, of the President's thoughts as he stood by his son's grave and looked through tear-dimmed eyes off across the familiar Vermont hills of his own boyhood. From those hills he had gone forth to hold in the course of time the most powerful position in the world. But his thoughts, we believe, were not of the power of that exalted place. His thoughts were instead on what every good man in public position comes sooner or later to know, that is, how insignificant, how futile, are the affairs of men, even their mightiest affairs, beside the grim inevitableness of time, of Nature's inexorable laws, and of Death, that supreme arbiter of human destinies.

"The boast of heraldry, the pomp of power,  
And all that beauty, all that wealth e'er gave,  
Awaits alike the inevitable hour:  
The paths of glory lead but to the grave."

How well Lincoln knew that. His favorite poem was:

"Oh, why should the spirit of mortal be proud?  
Like a swift-fleeing meteor, a fast flying cloud,  
A flash of lightning, a break of the wave,  
He passeth from life to his rest in the grave."

It must be a comfort to President and Mrs. Coolidge in their grievous affliction to know that they have the heartfelt sympathy of a hundred million people, irrespective of politics, of race, or of creed. And it should be comforting to them also to know that waiting somewhere in the Unknown Land to welcome their boy is Lincoln, that greatest of Americans, who also buried a son from the White House, and who understood so well how hard it is to be happy in places of great responsibility.

### For Barn Yard Golfers

READ the rules, printed on the next page, for the County and State horseshoe pitching contest and then practice up and let your farm bureau man know that you are getting ready to throw a ringer every shot.

### Eastman's Chestnuts

UP in the Northwest a very keen rivalry exists between the twin cities of Minneapolis and St. Paul. Here is one that we heard somewhere which expresses this competition in terms of the farm.

A fellow from St. Paul came over to Minneapolis one day just to look around and find fault. He approached a fruit stand, picked up a large watermelon and asked with a sneer:

"Is this the largest apple you have in St. Paul?"  
"Hey!" bellowed the owner of the fruit stand.  
"PUT THAT GRAPE DOWN!"

# Rules for the Barnyard Golf Contest

## Big Interest Already in County and State Contests—Better Get Busy

THE horseshoe pitching contests to determine the champion teams of each county and later the state champions at the State Fair are already attracting a lot of attention. Farm Bureaus in a large number of counties are making arrangements for the county contests to be held either at large county-wide picnics sometimes during the summer, or at the county fairs. Winners of these contests will go to the State Fair where they will compete on Farm and Home Bureau Day under the auspices of the AMERICAN AGRICULTURIST and the New York State Federation of Farm Bureaus to determine who are the best barnyard golfers in the Empire State.

R. H. Hewitt, Jay Coryell, W. L. Norman and E. V. Underwood, a committee representing the Farm Bureau, met with E. R. Eastman, Editor of AMERICAN AGRICULTURIST, on July 5th, to formulate the rules and regulations under which the county and state contests will be conducted. These rules are printed below:

### National Rules

The national rules will be used in all contests, state and county, with exceptions as noted below.

#### Entries Limited to Amateurs

The entries to contests both county and state

are limited strictly to amateurs. An amateur for these contests is defined as the individual or team who has not won either first, second or third place in a contest at a state, sectional or national tournament.

Entries to the state contest are limited to the winners of county contests. Not more than the two highest teams will be eligible.

#### Prizes

Prizes for the winning team and grand championship individual prizes are to be made and awarded by the AMERICAN AGRICULTURIST. These consist of first, second and third prizes of \$100, \$50 and \$25 cash for the winning teams and a silver cup for the grand champion of all the State.

#### Time of State Contest

It is recommended that the state contest be held at the State Fair on Farm and Home Bureau Day, Tuesday, September 9, 1924.

#### Other Regulations

The grand championship contest shall be between the individuals of the three winning teams. It shall be decided by the best two games out of three, 50 points each.

County and state contests shall consist of three games of 21 points each. Best two out of three are winners.

All teams to be shifted to opposite pitcher's box at end of each game.

Local contests shall be held under the direction of the County Farm Bureau agent. All agricultural organizations are eligible to enter teams in county contests, and any individual not professional is eligible to enter the county contests.

Each county entering the state contests is requested to furnish one man for referee or score keeper. Each county to furnish calipers and a set of regulation shoes.

The Farm Bureau Federation will cooperate with the AMERICAN AGRICULTURIST in holding the state contest. This cooperation will be in the matter of publicity, the holding of the contest on Farm and Home Bureau Day and in other ways as opportunity permits.

#### State Committee in Charge

The State committee having general charge of the State contest will consist of E. R. Eastman, R. H. Hewitt, W. L. Norman, E. V. Underwood, J. Coryell, and Henry Morgenthau, Jr.

The national rules are printed in their entirety below:

Watch your Farm and Home Bureau News and AMERICAN AGRICULTURIST for further and complete details, and for the names of winners in these horseshoe pitching tournaments.

Then get out your horseshoes after supper and begin to practice up. The contests are going to make a lot of interest and a lot of fun, and somebody is going to win some valuable prizes as well as the state championship.

## Official Rules of the National Horse Shoe Pitchers' Association

The following are the official rules of the National Horse Shoe Pitchers Association.

**GROUNDS AND COURTS—Rule 1.**—The grounds shall be as level as possible. Pitcher's box shall be filled with Potter's clay or any substitute of a like nature; the clay must be kept moist and worked to a putty-like condition and to a depth of not less than six inches and at least 18 inches around the stake.

**PITCHER'S BOX—Rule 2.**—The pitcher's box shall extend three (3) feet on either side to the rear and front of the stake. Said box shall be constructed of material 2 x 4 and shall not extend more than one inch above the level of ground. Where several courts are constructed a 2 x 4 shall be laid full length of such courts three feet in front of the stakes. In delivering the shoe into the opposite pitcher's box a contestant may stand anywhere inside the pitcher's box. For indoor pitching the boxes shall not exceed six inches in height above the adjoining grade.

**STAKES—Rule 3.**—The stakes shall be of iron, one (1) inch in diameter, perpendicular, inclined one (1) inch toward the opposite stake and extending eight (8) inches above the ground in the pitcher's box. On single courts the stakes shall be set in the center of the pitcher's box. Where several courts are constructed the stakes shall be not less than eight (8) feet apart, in a straight direct line where possible.

#### The Standard Horseshoe

**HORSESHOES—Rule 4.**—No horseshoe shall exceed the following regulations: seven and one-half (7½) inches in length, seven (7) inches in width, two and one-half (2½) pounds in weight. No toe or heel calk shall measure over three-quarters (¾) of an inch in length. Opening between the calks shall not exceed three and one-half (3½) inches, inside measurements. No horseshoe constructed in a freak design will be considered regulation.

**REGULATION GAMES—Rule 5.**—A standard regulation game shall consist of 50 points and the contestant first scoring this number after all shoes have been pitched, shall be declared the winner. In all match or exhibition games between two contestants, eleven (11) games of 50 points each shall be an official series, the one winning six (6) games shall be declared the winner. —See modifications above.

**PITCHING DISTANCE—Rule 6.**—The standard regulation distance shall be forty (40) feet from stake to stake, measuring where the stake enters the ground. For women in contests and tournaments the distance shall be thirty (30) feet.

**PITCHING RULES—Rule 7.**—No contestant shall walk across to the opposite stake and examine the position of his opponent's shoes, before making his first or final pitch. All contestants shall pitch both shoes from the pitching box, into the opposite pitching box or

forfeit the value of one (1) point to his opponent. All contestants shall, when having first pitch, after delivering both shoes, stand back of a line even with the stake and out of the pitcher's box. Any contestant failing to comply with this rule shall forfeit the value of such shoes pitched. Any contestant delivering his shoes landing outside of the opposite pitcher's box shall forfeit the value of his pitch. Wrapping the fingers with tape, or the wearing of gloves shall be permitted in any or all games. If at any time a shoe is broken, such as striking another shoe, the frame of the pitcher's box, the stake or other cause, such shoe shall be removed and the contestant entitled to another pitch.

#### What Constitutes a Ringer

**RINGERS—Rule 8.**—Any shoe to be scored as a ringer shall encircle the stake far enough to permit a straight edge to touch both heel calks and clear the stake.

**FOUL LINES—Rule 9.**—A foul line shall be established three (3) feet in front of the stake and any pitcher stepping over the foul line in delivering his shoe shall lose the value of his pitch and no score shall be credited to him.

**FOUL SHOE—Rule 10.**—A shoe that does not remain within six (6) inches of the stake, in all National Tournaments and match contests, shall not be entitled to score. (This does not apply to informal pitching or games where the players decide otherwise.) If a shoe strikes the frame of the pitcher's box or other object such shoe shall be considered a foul shoe and shall not score.

**POINTS—Rule 11.**—The most points a contestant can score in a single game shall be fifty (50) points. A pitcher shall be credited with all ringers pitched. If a shoe when thrown moves another shoe, both shoes are counted in their new positions.

**TIES—Rule 12.**—All equals shall be counted as ties. If both contestants have one shoe each an equal distance from the stake, or against the stake or ringers, they shall be counted tie and the next closest shoe shall score. In case of all four shoes being tie or equal distance from the stake, or four ringers, no score shall be recorded and the contestant who pitched last shall be awarded the lead.

**MEASUREMENTS—Rule 13.**—All measurements shall be made by the use of calipers and straight edge. **COACHING—Rule 14.**—No contestant during the progress of a game, contest or tournament, shall coach, molest or in any way interfere with a pitcher in any manner, except that in four-handed games, partners shall have the right to coach each other.

**FIRST PITCH—Rule 15.**—At the beginning of a game the contestants shall agree who shall have the first pitch either in single, three or four-handed games by the toss of a coin, the winner to have his choice of first pitch or follow. At the beginning of the second game the loser of the preceding game shall have the first pitch.

**NATIONAL AND STATE TOURNAMENTS—Rule 16.**—In all championship tournaments, the Rotation

Group method shall prevail. In each group each pitcher will pitch each other one game. Same procedure shall prevail in the finals. All tie games shall be pitched off. No championship shall be won or lost, only in a legal tournament.

**DISPUTES AND FINAL JURISDICTION—Rule 17.**—In case of any dispute, or where the rules do not specifically cover a disputed point the referee or committee in charge shall have full power and final jurisdiction.

**SCORING RULES—Rule 18.**—Any shoe that does not remain within six (6) inches of the stake shall not be scored or counted. The closest shoe to the stake (within six inches) shall score one (1) point. If both shoes are closer than the opponent's they shall score two (2) points.

A ringer shall score three (3) points. A ringer and a closest shoe shall score four (4) points. A double ringer shall score six (6) points and is the highest score a contestant can make.

In case of each contestant having a ringer, the next closest shoe shall score and all such ringers shall be credited as ringers pitched but not counted as a score. If each contestant has a double ringer, both double ringers are cancelled and no points scored. If a contestant shall have two ringers and his opponent one, the pitcher having two ringers shall score three (3) points.

In case of a tie of all four shoes such as four ringers or all four shoes an equal distance from the stake, no score shall be recorded and the contestant who pitched last will be awarded the lead.

Where ringers are pitched and cancelled, they shall be credited to the contestant who pitched such ringers and no score shall be credited as point scored. All equals shall be counted as ties and no points scored. Any shoe leaning against the stake shall have no advantage over a shoe lying on the ground and against the stake; all such shoes are ties. If a contestant has a shoe leaning against the stake it shall count only as a closest shoe.

#### Where Three are in a Game

**THREE-HANDED GAMES—Rule 19.**—In three-handed games where two contestants each have a double ringer and the third contestant no ringers, the two contestants having double ringers shall score their closest shoe. If all three contestants each have a ringer they shall score the closest shoe. If two contestants each have a ringer and the third contestant no ringer, the two contestants having ringers shall score their closest shoes.

In all three-handed games the contestants having ringers shall at all times score their closest shoes over their opponents who have no ringers, whether it be two contestants with double or single ringers each.

In any and all games the contestant scoring shall have the lead or pitch.

## Its Extra Years of Service Brings the Cost A Way Down

The few extra dollars you pay for a John Deere Spreader will come back to you many times over in extra years of low cost service.

The first John Deere Spreaders built more than thirteen years ago, are still spreading manure, and, apparently, will give several more years of service—you will find proof of this right in your own locality.

The low repair expense is another item well worth considering. In April, this year, J. P. Jacobson of Old Albuquerque, N. M., bought his first repairs, at a cost of \$2.70, for his John Deere Spreader which he bought nearly twelve years ago. Mr. Jacobson runs a dairy farm and spreads lots of heavy manure.

The reason for this better spreader service is quite evident when you make strength comparisons—when you put the John Deere on the scales. It has the

strength to stand up day after day under most severe spreading strains. Make your own comparisons.

Besides, the John Deere is easier on you, easier on your horses, does better work and lasts longer because—the beater is on the axle.

It's to your advantage to know all about the John Deere before you buy. Look it over at the store of your John Deere dealer.

"SOIL FERTILIZERS" Free—a booklet that contains a world of information about manures, their uses, and how to get the most out of them. Also free spreader booklet. Write today to John Deere, Moline, Ill., and ask for Booklet SE-43.

**JOHN DEERE**  
THE TRADE MARK OF QUALITY MADE FAMOUS BY GOOD IMPLEMENTS

### SELLING A. A. SERVICE

GREAT service is rendered agriculture and homemaking by AMERICAN AGRICULTURIST. This service is local and practical. It applies.

If you would like to help extend this service write me.

E. C. WEATHERBY, Circulation Manager  
ITHACA, NEW YORK

### COME TO VIRGINIA

Now is the time to buy a farm in Virginia. Prices are reasonable. You can grow fine crops of corn—all grain and grass crops and fruit growing. Live stock and dairying unexcelled. Virginia offers more advantages to the farmer than any other state—variety of soil, mild winters. Why farm where you can grow only two or three crops and be far away from good markets, when you can grow a variety of crops in Virginia and be near the great consuming markets. The healthiest climate in America. Write now for Hand Book, Maps, etc.

G. W. Koiner

Commissioner of  
Agriculture  
RICHMOND, VA.

## SLUG-SHOT

USED FROM OCEAN TO OCEAN FOR 35 YEARS.

Sold by Seed Dealers of America.

Saves Currants, Potatoes, Cabbage, Melons, Flowers, Trees and Shrubs from Insects. Put up in popular packages at popular prices. Write for free pamphlet on Bugs and Blights, etc., to

Hammond's Paint and Slug Shot Works, Beacon, New York.

# Elderberries for Profit

Turning a Hedge Row Shrub Into Money

THIS is the story of a young man who found opportunity in his front yard—and almost turned it away! If F. W. Stillman, who has a place down in Middlesex County, near Rahway, N. J., hadn't put off cleaning up a chicken yard he might never have recognized his opportunity. In the corner of the poultry run was a clump of wild elderberry bushes and he had made up his mind that "one of these days" he would clean them out and give the chickens more room.

Then he drove to town with some farm produce and happened to see some elderberries on sale. He inquired whether there was a market for them, discovered that there was, and drove home to pick his own crop. When he brought the result of his picking in to market, he realized \$25 or \$30 from it.

"So instead of cutting out the bushes to give the chickens more room, I drove home double quick to fence in the elderberry bushes to protect them from the chickens!" says Mr. Stillman.

### Ideal for Beverage or Jelly

That was early in 1920. Since then, Mr. Stillman has worked up a trade which over-buys him every year, has done some remarkably successful experimenting with his bushes and is going ahead with other experiments to increase the yield and lower the labor of picking. So far as he knows—and he has tried to garner all possible knowledge on the elderberry—no one has made any researches to compare with his in detailed observation, and he believes that a new and extremely profitable product is in the course of evolution from the sour old wild elderberry.

"For years, elderberry wine has been a popular country beverage, especially among farmers of German birth or their descendants. It is also used in jellies, in combination with pectin-bearing fruits such as apples and grapes. With apples the taste is similar to plum jelly and with grapes resembles a huckleberry flavor. So far the elderberry has had no distinctive taste of its own."

The first year of his "find," Mr. Stillman sold all his berries through nearby stores. He made up his mind that thereafter he would observe the farm-marketing law that all products ahead of the season, or late, obtained better prices. He determined to "force" his bushes if possible, and to that intent examined them. He found that certain ones were well ahead of others, ripening while their neighbors were still in blossom, and this gave him an excellent range.

### Demand Is Good

His demand increased considerably. The fact that the berries were on display sold many through the factor of suggestion. Customers of the previous year came back and friends who had tasted the jellies also determined to try their luck. All he could pick sold readily, the late berries being particularly in demand, for early-season customers came back to report that the first jellies had been devoured by their families and more glasses were needed for winter supplies.

"Early in the spring of the following year, I trimmed some of the bushes for greater ease in picking," says Mr. Stillman. "I did not get the result I expected—a clear path—but the pruning changed the yield most surprisingly, making much larger individual

bunches, which were far more readily picked than the small scattered groups. I also found the characteristic bearing tendencies to hold over from year to year and had early, mid season and late-bearing bushes.

### Apparently Many Different Varieties

"The third year I also noticed a great deal of difference in individual berries, their growth, color, leaves, and stems, as occurs in other fruits. One clump of bushes interested me especially. It produced small clumps with berries of a genuine red, the shade of a rich strawberry preserve, not the deep purple-black berry we usually see. I had supposed it retarded and that the red berries were not fully ripe, but this year I was convinced that they represented a distinct variety, which I found to be larger than the other berries and distinctly sweeter—the only one in fact which has any apparent sweetness. This is to my mind a variation to be closely watched and cultivated."

Mr. Stillman divides elderberries into several distinct varieties or species: One, the earliest, is green stemmed at the head, giving a dark berry clump of medium size. Two others have respectively red and green stems, the green berry the larger of the two. These come at the same time, a little later than the first.

Then comes the large red stemmed berry, with prolific, heavy heads, the berries "simply bursting" with rich juice. Quite late in the season comes a green stemmed berry, medium to small in size, which holds the fruit without dropping.

The red berry, which interests Mr. Stillman most, comes in toward the latter part of the season, and does not hold quite to the end. It is large, round rather than oblong, extremely juicy and gives promise, he believes, of developing into a new eatable berry, which will rival the huckleberry in taste and popularity.

### Cultural Methods Improve Berries

"I have not yet experimented intensively in propagation," says Mr. Stillman, "but expect this year to carry on several experiments, using various known methods. I have experimented in pruning, to which the wild bushes respond amazingly, and shall go farther. It takes a period of years to achieve the best ultimate results, for weather conditions, for instance, often set one back a whole season.

"All my berries, however, are larger this year than the natural wild elderberry of even a very good season. Pruning has not noticeably increased the size nor yield but has given instead of scattered, small clusters, extremely large clusters which cut down the time of picking. These big clusters average 5 to a pound.

"I am trying setting out some in the fall and some in the spring. The plants are set out like rose bushes.

"The sales problem as regards elderberries is one on which I am frequently questioned. The natural wild growth of elderberries offers me no competition. The berries grow in low, damp ground and are hard to pick because of the small clusters. Also the time of picking makes a difference, so that many amateur pickers lose their berries by being too early. Mine come along all season; are well picked over, and carefully boxed. I

## Long Island Potato Tour Brings Visitors From Many States

PAUL WORK

THE world is getting to be very full of inspection trips, field days and similar events. Many of them are of only local interest and in some instances they become little more than sight-seeing parties. Such was not the case down in Nassau and Suffolk counties. For some years the two farm bureaus on Long Island have made an annual event of their potato tour held during the latter part of June. Long Island is a great buyer of seed potatoes and many demonstrations are conducted to bring out the relative merit of seed from different sources, both certified and not. For this reason official inspectors, dealers, officers of associations, pathologists and others are wont to journey to the Island for this tour. The crowd varies from 75 to 250 at different stages of the trip and of this number 40 or 50 are from other States and provinces.

Late June is a good time to examine the quality of potato foliage and to seek indications of the less tangible troubles which have occasioned so much difficulty of recent years—such troubles as mosaic, leaf-rot, spindle-tuber and others. The Long Island farm bureaus have learned well the management of inspection tours. The schedule is thoroughly worked out as evidenced by the fact that the party was never more than thirty minutes late during the three days. There is something definite to be seen at each stop and there is some one ready to call attention to it. The subject matter discussions are distributed among the different stops so that there are no long-drawn-out sessions. Recreation and good-fellowship have been well blended with education. This year's party was entertained for a banquet, lodging and breakfast at the New York State School of Agriculture at Farmingdale. It is a pleasure to record the hospitality that radiated throughout the institution under the guidance of the new head, Director H. B. Knapp, and it is equally pleasant to note the cordial response on the part of the farmers of Long Island. Other stops were made at Massapequa Grange, Southampton Grange, and Arshamomoque Inn.

### Sulphur for Scab

The New Jersey station, under the guidance of Dr. W. H. Martin, who was one of the visitors, has made extensive study in the control of scab. Where land is badly infested the use of inoculated sulphur at the rate of from 300 to 600 pounds per acre seems to be the best treatment. This material acts by increasing the acidity of the soil and excessive applications should be avoided. The treatment increases the percentage of clean stock and reduces the amount of unsalable scabby stock. The material is best applied after plowing and before harrowing, where the infestation is not so bad, the use of ammonia sulphate instead of part of the other ammoniates in the fertilizer is effective. The use of cover crops also helps.

### Supply of Certified Seed

Some seem to have the impression that the supply of certified seed is closely limited. This is no longer true. Mr. J. L. Scribner, speaking for the Maine Potato Growers' Association, pointed out that an abundance of well grown and properly inspected seed stock is now available. Some dealers do not hesitate to buy table stock of fine appearance and sell it for seed. The Maine association, which is organized under the Sapiro plan, represents about 3,100 members and nearly 61,000 acres of potatoes.

One of the outstanding features of the tour was the activity of farmers in directing the whole course of events. The county agents in these counties have done wonders in developing the leadership of their farmers. At one stop Mr. E. W. Van Brunt, of Suffolk County, led the discussion during which 30 or 40 seed sources were brought up one by

one and growers who have used these sources were asked about results. Mr. Fred Taber, of Orient Point, can handle a crowd with all the vigor and tact of the best trained county agents. Mr. E. V. Titus, of Nassau County, told of the losses due to growers buying fertilizer and credit at the same place. One man of his acquaintance follows this policy at the annual cost of \$300. Some growers are paying as much as \$41.00 for a 5-9-5 fertilizer. Through the Farm Bureau Purchasing Service it has been possible to buy the materials at the cost of \$28.00 per ton. Of course a little would have to be added to this for mixing and handling, but even so the saving is important. Mr. Titus thinks that growers ought to borrow money at the bank and pay their supply bills, taking the discounts that are available.

### Elderberries for Profit

(Continued from page 38)

now have a 'front gate' trade, selling all I can possibly supply to people who come to me for them, and our place is not on the main road.

"I believe that elderberries may easily

come to be a standard fruit. They grow where other things can not, bear liberally and stand a great deal of neglect. They combine well with other farm products, except poultry. They can be trained into extremely pretty hedges—though the bad roadside manners of passing automobilists makes this rather impractical. If this red berry can be developed to produce a characteristic flavor, it will rival the huckleberry.

"The question of transportation is, as the berries are now sold, a difficult one. At present, it is not feasible to move them any great distance. If sold unstemmed this will be cleared up, and I am working on a device to unstem and grade the berries according to size."

### Why Solomon's Temple Was Safe

(Continued from page 35)

much more expensive and for the cost of such a buried copper plate, two or more gas pipes can be set; and two or more gas pipes give a materially better grounding than one copper plate."

Where a heavy iron or steel rod is used as the conductor the rod itself makes an excellent grounding as it would be equal to two or more gas pipes, but with copper cable it would be

better to use the copper plate as a grounding.

Lightning protection for an ordinary farm building costs about the same as a new set of tires for the pleasure car. The farmer does not hesitate to replace the tires on his automobile at least once a year, yet many will risk their life's savings (including the automobile) and the lives of his loved ones while he hesitates to buy lightning protection. The lightning rods he will probably be called upon to buy but once in a life time, and during all that time he will spend very little for upkeep "and repairs." For this reason he should realize that economy in buying lightning protection means to spend sufficient in the first investment to get ample protection.

Don't let some one sell you a light-weight fancy woven conductor because it costs less and the agent claims the air space in the fancy weave offers more protection. If air protected, it would not be necessary to have any metal.

Don't insist that two ground rods will be sufficient if your building requires three or four, and stay on the job and see that the groundings are made to perpetual moisture.

People in the rural districts can not avail themselves of the protection offered by a steel cage or a steel frame building and they do not care to become cave men, but they can buy good lightning protection for a nominal sum, and the time is not far distant when insurance companies will hesitate to take the risk on rural buildings unless they are well protected with good lightning rods.

# Do You Know About the Power Take-Off?

## The Greatest Improvement in Ten Years Is a Feature of the McCORMICK-DEERING Tractor

THE Power Take-Off helps you use the McCormick-Deering Tractor not only to *pull* your machines but to *run the mechanism of the machines* by power conveyed direct from the tractor through a revolving shaft.

This feature opens up great new possibilities for more efficient and bigger-scale operation behind McCormick-Deering Tractors. It does away with such well-known troubles as slipping bull-wheels, clogging and stalling where the ground-gripping action of the machine is not sufficient to run it.

The corn picker is one of the machines that demonstrates the value and efficiency of the Power Take-Off. Many corn fields will see its use this season. Grain binders [the new McCormick-

Deering 10-ft. tractor binder which cuts 30 to 40 acres in 12 hours], rice binders, spray pumps, etc., may all be run under difficult conditions, when the tractor power *runs* them as well as *pulls* them.

McCormick-Deering 10-20 and 15-30 are especially designed so that this useful equipment can be added. You may not need it right away but it is ready when you want it in years to come. Make sure the tractor you buy is made for the power take-off and you will find it has all these things, too—crankshaft and crankshaft ball bearings guaranteed for life, removable cylinders, unit main frame, ball and roller bearings at 28 points, throttle governor, belt pulley, platform, fenders and brake. Write for a catalog or see the dealer.

1. The Drawbar
2. The Belt Pulley
3. The POWER-TAKE-OFF

## The Spirit of Pioneering

Impatience with present facilities, a restless searching for perfect things—these have driven men to discovery and invention. They possessed the early voyagers who turned their backs on the security of home to test opportunity in an unknown land. They explain the march westward that resulted in this settled, united country. And they have inspired the activities of the Bell System since the invention of the telephone.

The history of the Bell System records impatience with anything less than the best known way of doing a job. It records a steady and continuous search to find an even better way. In every department of telephone activity improvement has been the goal—new methods of construction and operation, refinements in equipment, discoveries in science that might aid in advancing the telephone art. Always the road has been kept open for an unhampered and economic development of the telephone.

Increased capacity for service has been the result. Instead of rudimentary telephones connecting two rooms in 1876, to-day finds 15,000,000 telephones serving a whole people. Instead of speech through a partition, there is speech across a continent. Instead of a few subscribers who regarded the telephone as an uncertain toy, a nation recognizes it as a vital force in the business of living.

Thus has the Bell System set its own high standards of service. By to-day's striving it is still seeking to make possible the greater service of to-morrow.

## Among the Farmers

Big Fruit Meetings Coming—County Notes

PLANS for the summer meeting of the New York State Horticultural Society to be held on the Wilson and Jones Locust Hill Fruit Farm at Hall, N. Y., on Wednesday, July 30, were announced recently by Chas. Wilson, President of the Society. About 1,500 western New York fruit growers are expected to be present, and the day's program will include something of interest to everyone.

Among other things to be seen on the Wilson and Jones farm will be an extensive experiment on spraying and dusting for apple pests, including scab, aphids, and red bugs, which is being conducted by the entomologists from the Experiment Station at Geneva. These experiments have been under way for three years now and many interesting things can be learned from them, according to the Station workers. The College at Ithaca will also give a demonstration on pruning and will have other features relating to fruit growing.

The time-honored ballgame, tug-of-war, and other diversions will be staged in the afternoon under the direction of R. W. Pease of Canandaigua, and Professor Salton of the College at Ithaca.

### American Pomological Society Tour to Cover 17 States

THE American Pomological Society is planning the biggest horticultural tour in its history. The tour will cover seventeen states and these are cooperating so that the meetings which have been arranged for every two or three days will not conflict and each follows in geographical order.

The tour starts in Kentucky on July 14. The following day will find the party entering Indiana, and then comes Illinois, Michigan, Ohio, Maryland and West Virginia. By the 2nd of August the party expects to be in Virginia. On the 4th they plan to visit orchards in Pennsylvania.

### In Our Territory in August

The New Jersey State Horticultural Society has planned to hold its summer meeting and automobile tour in cooperation with the American Society on August 7 and 8. The famous Seabrook orchards will be visited as well as the farms of Minch Bros. Each of these farms includes about 1,300 acres of orchard. On August 8 the party will visit the Camden Packing House of the Jersey Fruit Growers Association.

The Hudson Valley will be the center of attraction on August 9. Through New Jersey the party will also have an opportunity to observe the cranberry bogs and blueberry plantations near Browns Mills.

The balance of the trip after the Hudson Valley tour, will include Connecticut on August 11 and 12, Rhode Island on August 13, Massachusetts, August 14, Maine, August 15 and 16; New Hampshire, 18 and 19; Vermont 21 and western Massachusetts, August 22 and 23.

### New York County Notes

Nassau County.—The other evening we took a drive across the Hempstead plains through the vast potato fields in that section. In several stops we saw unmistakable indications that blight

had started. There is no doubt but what this is due to the weather we have been having. It has been extremely hot and muggy, ideal for the development of blight. In the morning it has been very sultry and when the sun did come out the humidity was intense. On the 11th the weather turned clear and brisk and the chances are that this will have a tendency to check the spread of the blight. Those farmers who are spraying regularly need not expect very extensive developments of the disease.—F. W. O.

Essex County.—A drouth that has prevailed in this section for several weeks was broken during the last week in June by rains that benefited crops greatly. Meadows are looking 50% better than they did June 1 and corn fields are beginning to show up well. Summer boarders are beginning to reach the Adirondacks. Some farmers are taking a few to help piece out a scanty income. Eggs are now 35c a dozen, veals 9c live weight.—Mrs. M. E. Burdick.

Wyoming County.—During the latter part of June, Wyoming County was visited by a severe electrical storm accompanied by wind and rain. Three barns were burned, 2 were blown off their foundations, killing three horses and smashing machinery and tools. One house burned. Nearly all silos were moved or torn down. Many forest trees were broken or uprooted, also shade and fruit trees damaged. No damage to crops except some washouts. Potatoes, corn and beans are all ready for the cultivation. Weeds doing fine. Spring grain and hay coming on rapidly. TB testing going on, a large number of dairies are clean. Fruit trees bloomed very late and have set full.—O. F. R.

Ontario County.—We have been having lots of rain, a shower most every day. Not much hay made as yet. Things are growing fine. Cherries are now ripe. Grass and wheat are looking good.—H. D. S.

### Central Pennsylvania Notes

LEE HERMAN bought the Alfred Schoch farm of 220 acres for \$8200 at public sales to settle the estate. The barn is a large new bank one and the house is brick. The farm has plenty of pasture, which makes it a good stock farm.

Haymaking is in full blast, but the weather has not been favorable for curing heavy green grass. The hay crop will be better than early indications, as the weather has been favorable for a rank growth of clover and timothy. Garlic and wild mustard are more in evidence this year than formerly, and the former will require more attention to keep it in check than heretofore. Corn is growing rapidly with warmer weather and is being cultivated when weather permits.

Wheat harvest will be ten days later than usual. Sour cherries are a good crop and so are strawberries, but apples and plums will be only half crops. Corn needs to be cultivated, but weather conditions have been such that low fields of corn have not been cultivated at all. Wheat is very rank and has lodged on many farms, so as to make a harvesting a hard job. Oats are heading out well and promise to be a good crop.—J. N. GLOVER.

A part of the Otsego County, N. Y., Pomona Grangers who met at the Grange Hall at Westville, on June 11

# One Way to Market Milk

*Why Crowd It All on the Fluid Market?*

THE low prices for milk have got all of us thinking. The other day I was visiting with an old friend of mine in another community, and he told me he thought he had at last partly solved his milk marketing problem. After he explained what he was doing, I did not know but what he was right. It set me wondering if I could not work it out myself and if maybe a lot of other farmers could not.

He has a small dairy and had to draw his milk a long ways to the shipping station. Some months ago when the price for fluid milk began to go down, he said to his wife,

"I've been sick of drawing milk a long time, and here's where I quit."

He bought a cream separator, a churn, and hooked them up with a small gas engine which he already had. Then he got some bulletins and books on butter-making and hired an old creamery man who lived in the neighborhood to come over and show him how to make real quality butter. He doesn't live far from a small city, and as soon as he got so he could make a quality of butter that he knew was good, he began to work up a trade for it in his nearby city. After the first month, he has succeeded in getting a little better than the highest market quotations. The fact that in spite of the low prices for milk butter has maintained a constantly strong position this spring helped this man in his new venture.

I said to him that not all farmers live near cities so that they could work up their own markets.

### Makes Use of Other Factors

"No," he said, "but a lot of them live on state roads where automobiles are passing all of the time and about the hardest thing to buy anywhere is butter which is not strong enough to do house-work; so I figure that if I did not sell my butter in the city, I could build up a pretty good trade for it on the state road, after folks once found that it was the real stuff."

"But the best of it is," he continued, "selling the butter is only part of the story. Since this fluid milk business came along farmers in dairy sections have forgotten the value of real skim milk. This used to be quite a hog-raising country when farmers had skim milk, but now it has got so a lot of us don't even raise our own pork. We pay retail prices for it after it is hauled in from the west somewhere. A few hogs to sell once in a while, especially as they don't cost you much of anything but a little corn and skim milk to grow them, is a pretty good side line."

"Then, too, there are the calves. I haven't tried to do anything with them yet, but I believe with the good skim milk and the careful use of grain, that I could study up so I could fat some veals without having to use a lot of whole milk. Maybe I couldn't; but I have been reading lately, and I know that it has been done."

"But best of all, skim milk is great stuff for hens. Our hens haven't laid in years the way they have this summer, and we managed to get a pretty good price for the eggs. Haven't never kept many hens, but wife and I are figuring on doubling the flock next year. They will just about take all of the skim milk I have."

"Yes, sir, I'm glad I quit being everybody's slave in the market milk game, and went to work for myself again. Make just as much, or more, money out of the dairy, and get a darn sight more satisfaction."

Not every man has either the skill or the opportunity to make the change that this friend of

mine did. It would take considerable more management and figuring to produce good butter and to sell it right than it would to dump the milk in the cans and haul it to the station. But all the same, I am wondering if it would not be more of a chance for the right kind of man with a few cows, and even a large dairy, to stop over-loading the market with fluid milk and to go making butter, figuring, at the same time, to use his skim milk so as to get the most out of it.

—E. E. ROE

### League Buying Certificates

THE Dairymen's League Cooperative Association is calling the attention of its members to the fact that it is offering to buy certain of the certificates of indebtedness if offered by the holders before August 10, 1924. Although the offer has now been made some time, comparatively few have taken advantage of it. The treasurer of the Association will purchase all certificates of series A whose number have zero as their final digit. All persons holding certificates bearing these numbers wishing to dispose of the same can receive 95 per cent. of the face value and accrued interest to July 1, 1924. Certificates not presented within the time limit as stated will not be purchased until maturity and will not be considered in further purchases.

If you wish to dispose of your certificates, look at them carefully to determine first if they are of series A and then see if their serial number has zero as the final digit. If so, send them to the treasurer of the Dairymen's League Cooperative Association at 120 West 42nd Street, New York City, immediately. It is strongly advised that they be sent by registered mail. The certificate must bear endorsed across the back of it the name of the person offering same for purchase. Upon receipt, the treasurer of the Association will mail a check to the holder.

### New Plan Insures Steady T B Eradication Progress

THE continuation of tuberculosis eradication work throughout the entire year beginning July 1 is practically insured by the recent action of the State Department of Farms and Markets in allocating the appropriation for tuberculosis eradication among the counties on the basis of cow enumeration, and percentage of reactors. This belief was expressed by members of the tuberculosis eradication committee of the New York State Farm Bureau Federation, when announcement of Commissioner Berne Pyrk's action was received at Ithaca.

The allocation plan was suggested by the federation committee after a long study of the tuberculosis eradication situation in this state. The committee, which originally included H. E. Babcock, Ithaca, chairman; Jay Coryell, Ithaca, Secretary; L. A. Toan, president of the New York State Guernsey Breeders Association; M. E. Buckley of the Lincoln School of Agriculture; and M. O. Bond, then secretary of the New York State Holstein-Friesian Association, met several times last winter to work on a plan for ridding New York's herds of tuberculosis which would be practical and as inexpensive as possible to the state and to dairymen concerned.

The committee reported to leading farm organizations and to the Department of Farms and Markets. (Contin'd on page 46)

## Sign Your Inquiries—Questions on Investments

ALMOST all magazines know the annoyance of the anonymous letter which asks for "an answer in your columns," and the writer who is unwilling to sign his name often specifies "next week" or "at once." The AMERICAN AGRICULTURIST has repeatedly stated that all letters must be signed, that no names will be used in reprinting a letter and that no letter will be used, even without a name, if request to withhold it is made. The writer of an unsigned letter surely cannot ask us to open our crowded columns to answer a question which may be of interest only to him; we receive hundreds of letters a month and select a few to print because they are of general interest.

Recently we accidentally included in the mail sent to our attorney a letter signed only by the initials "T. M.," and our attorney returned to us an answer which we thought put the matter very neatly. As the question is in regard to banking practice, which affects almost all our readers, we are reprinting it in its entirety:

"Dear T. M.:

Why not identify yourself? It is much easier to correspond with a person than with initials. Concerning your inquiry as to the safety of banks, we wish to say that because of the strict examinations to which banks are now-a-days subjected, all are more or less safe. The only advantage in depositing with a national bank is that in case of failure the stockholders are liable for bank debts to the extent of the par value of stock they hold. That is a provision in the National Banking Act and does not apply to other banks. It is our opinion that membership in the Federal Reserve System, while it is desirable, adds nothing to the safety of the bank."

### Questions About Investments

Can you give any information on an investment in the Pennsylvania Power & Light Co.? I have some \$7,000 worth of Government bonds which pay 4 1/4% and this company pays 7%. Would you advise changing to this stock and do you think it safe? Attached circular.—S. W. H., Pennsylvania.

If the security to which you refer is the 7 per cent. bond of the Pennsylvania Power & Light Company due 1951 and selling about 105 1/2 we consider it a good investment. Of course paying that price you would not get quite 7 per cent. return and it would be foolish to dispose of all your Liberty bonds in order to buy this utility issue attractive as it appears. Perhaps you mean the 7 per cent cumulative preferred stock of the Pennsylvania Power & Light Company. This seems reasonably good but not, of course, as high grade as the bond. The same objection to selling Libertys to buy this stock applies as in the case of the Pennsylvania Power & Light bond and in greater degree. Do not put all your funds into any one security unless it is a government bond. If, however, you choose to buy a small block of the stock or one of the bonds we see no objection.

I am thinking of investing some money in the New York State Gas and Electric Company, with offices in Ithaca, N. Y. They pay 7%. Is this a safe investment?—C. D. L., New York.

Presumably you refer to the 7 per cent. preferred of the New York State Gas & Electric. This is such a small issue that there is little or no market for it in New York City and information regarding it is difficult to obtain. If, however, it is an established public utility operating in your immediate neighborhood and they publish regularly earning statements with which you are in position to keep in touch, the chances are it is good. The outlook for all gas and electric companies is very favorable. On the other hand for most people a preferred stock of a larger company and one better known is a better investment. It is always easier to get your money if you want to sell, such as Consolidated Gas,

Electric Light & Power of Baltimore which recently offered a new 6 1/2 per cent. preferred issue at 101. This is a good investment and has a good market. Even higher in grade is New York Telephone 6 1/2 per cent. preferred selling about 110.

### Keep Away From Oil

Please advise me of the reliability of the Penna Oil and Development Co., of which I was induced to take \$30 worth of stock. I am attaching circulars and letters.—W. B., Pennsylvania.

We have no information about the Pennsylvania Oil & Development Co. Financial manuals at our disposal do not list it. Stock in all oil companies even of old established companies is speculative in greater or less degree. In new and unknown companies it is a gamble with all the chances against you. The only safe rule is to leave all oil securities entirely alone.

### New Motor Law Effective in New York

MORE than 20,000 owners of taxicabs or automobiles for hire upstate in New York will be affected by the provisions of the Joiner bill passed by the last legislature, which requires that every automobile operated for hire on the highways or streets of the state of New York must be covered by a bond or policy of insurance against liability and property damage in an amount not less than \$2,500. The law was effective July 1 and merely extends to the entire state the same requirements that have prevailed in Greater New York, Buffalo and Rochester for the past several years.

The law was the subject of much discussion in both houses of the legislature during the last session, its sponsors arguing that it filled a long felt want for the protection of the pedestrian, the owners of private cars and those riding in taxicabs; the chief contention being that a considerable percentage of the ownership of upstate cars offered for hire is beyond the law as to the actual recovery of damages to the same extent as is the case in cities of the first class.

The law provides that these policies of insurance or bonds must be filed with the commissioner of motor vehicles on or before July 1 in order to legally use the vehicle for hire anywhere in the state after midnight of June 30. Failure to comply with the law in this respect will make the registration plates issued for the vehicle subject to revocation.

### New York Milk Laws Amended

CHAPTER 48 of the Laws of 1922 of the State of New York has been amended by the New York State Legislature in two instances, the bills making the amendments being approved by Governor Smith the last week of March.

Section 46, which defines butter, has been amended as follows, the portion in italics being recently enacted: "The term 'butter' when used means the product of the dairy usually known by that term, which is manufactured exclusively from pure, unadulterated milk or cream or both with or without salt or coloring matter, and containing not less than 80 per centum by weight of milk fat."

Section 50 of Chapter 48 has been amended to read as follows: "No person shall sell or exchange or offer or expose for sale or exchange any product as and for 'ice cream,' which does not contain at least eight per centum of milk fat and at least eighteen per centum of milk fat and milk solids and fat combined." This amendment increases the percent of fat from 6 1/2 to 8 and increases the percent of milk fat and milk solids from fifteen per centum to eighteen per centum.

When good oil is applied to bearing excessive wear slips out.

## AMERICAN AGRICULTURIST WILL QUICKLY FIND A BUYER FOR WHAT YOU HAVE TO SELL

Read the following letter and then turn to our classified page. If you do not find what you want, advertise for it.

AMERICAN AGRICULTURIST,  
461 Fourth Avenue, New York City

Gentlemen:—

Sold \$1200 worth of stock from a classified ad placed in your paper.

Very truly yours,

CLARE GREGORY, Mount Vision, New York

FOR only 5c a word, you can place your message before 130,000 up-to-date farmers in the Eastern States, within easy shipping distance. If you have anything to sell, trade or buy, try our classified columns.

# Swift Currents — *By Edwin Balmer* (By arrangement with William Gerard Chapman)

*Felicia, watching for forest fires from a lonely tower, remembers how she and Tony Crandall first met and became friends years before, when as a boy he came to shoot the rapids of the Mcheron, an impassible river, and discovering him at work building a boat. Felicia trapped him with his own tackle to make him promise to abandon the attempt.*

HE saw her stratagem now and he shouted a threat at her, but she pulled harder on the tackle and had him helpless.

"Am I hurting—hurting you, Tony?" she besought.

"No—you—you—no! Let me go!"

"Not till you promise never to go into the run."

"Let me go, you little devil!"

"Do you promise?"

"No."

"Oh, Tony—Tony, then I'll have to hold you here till you do."

"I'll not!"

"You'll have to—"

So for an hour, and then for another, they defied each other. Many times she almost broke down, but she knew that she had to go through with it now; yet she thought he would faint and she would collapse first. Then fortune helped her. She heard a party of guests from the camp passing on a trail above the ravine and she threatened to call them down to see him; so, furiously, he gave in.

He left her at the door of the shed, refusing to let her start home with him, and she never spoke to him or saw him again after that, for the summer was 1914. Within the week, the war was on; in September he was driving an ambulance in France; in 1915 he was training at Pau for flight; the next year he was in combat over Verdun; then America came in; he was with his own army. All these things Felicia found out from others; in five years she received no word from him.

But now she knew he had been again at home in Stamford; this morning motor-cars, four in number, were on Crandall's Road, passed the crossroads, and were making for camp.

She could see a speck crawling up the gray crack through the pine six miles away; a motor-car. Another followed it—two more—but the first was far ahead. They all dropped out of sight; appeared again with the first one leading by a greater gap. Tony! Was he in that party and driving that first car? Once more, after a climb, they dropped out of sight, and before them the road was lost from her sight all the way to the camp.

FELICIA turned tremblingly, and leveled her glass again at the smoke over Muleback—spreading smoke, and leaping upward into flame. She could see the red and the flash as the crown of a tree caught. Swiftly she sprang into the cabin and called headquarters.

"Fire on Muleback—88-36," she designated it by the forester's numbered divisions.

Julia Shirley at the forest supervisor's headquarters acknowledged the call and repeated it formally.

"There's no one here to go, Felicia," she said. "They're all at Kingdom; it's jumping over there."

"I just saw," said Felicia, "some people going to the camp."

"Did you? Then I'll call them. Thanks."

"Would you mind," asked Felicia, "plugging this line through so I can talk to them and know at once if—anybody's there?" And she heard on her line the ringing signal calling Crandall's.

"Hello! Hello!" a man's voice said, and Felicia shut her eyes and fought for calm breath.

"This is Mt. Mower lookout!" she said at last. "There's a fire broken out on Muleback—88-36, and all our people are working on Kingdom. Can you go?"

"Yes," the voice said with queer suddenness, and then halted. "Of course." Then, "Who are you?"

"How many men can go?" asked Felicia.

"Eight; I'll take 'em. Who are you?"

"Felicia Shelby."

"I thought so."

"You're?"

"Tony Crandall. Seven men with me; we start at once. Muleback—88-36. That right?"

"That's right. Good-by."

"Good-by."

Felicia stepped out into the sun with her glass again to her eyes as she watched the spreading fire on Muleback.

He had returned to her again, and she had heard his voice and had spoken to him! It had seemed to Felicia, during those terrible, endless years of the war when he had been throughout in the thick of it—particularly during that frightful month when her New York newspaper (which she took because it told most about such men as he) reported he had been seriously wounded—it had seemed that knowledge that he was no longer to be in danger would be happiness complete. But for many months he had been "home"; and she, though joyous at that knowledge, yet was not happy. She was joyous, exultant, this morning, but not happy.

Though she repeated to herself again and again just what he said to her, and tried to recollect exactly his tone when he had hailed her, still she reckoned, against her exultation, the guests who had come in those cars. Four cars, she had counted; and he had said there were eight men. Even supposing that they had brought a few extra servants to reinforce the people always at the camp, yet many of that party must have been guests beside the seven who were men. So he had returned. But to her?

SHE watched the fire on Muleback. Witnessing it spread and flare and spread again under its smoke until slowly something seemed to choke it. She could not see at such distance and under the smoke, but she knew what was happening. Tony and his men had cut a fire line before it, back-fired and beaten it. At sunset it was only a charred, smoldering patch; and over on Kingdom, though the fire was not yet out, still the rangers had stopped calling for more men, and in the lodgepole, too, the flames diminished.

Yet no one came at night to relieve Felicia. Julia Shirley telephoned that the men on Kingdom who had fought the fire all day were still at work, or sleeping exhausted where they dropped; Julia was remaining at the switchboard at headquarters. That morning Felicia had expected, merely as a matter of course, to stay on duty thirty or forty hours, if needed; but she had not expected, then, to see at night the far-away glow of the lounging-room windows in the camp, and to know the girls from the East were waiting there to welcome the return of Tony and his men from the fire on Muleback.

She tried not to look too many times toward those bright windows; night offered the best opportunities to those who,

as yet undiscovered, set fire to the forest; every minute gained in sighting the first flare of a blaze meant many acres saved, perhaps. Felicia put on her heavy coat, for it was bitter on the summit of Mower, and paced in the starlight over the cold rocks.

"When the golden sun sinks in the hills. And the toil of the long day is o'er—"

she sang to herself while she peered about in the darkness.

"Far away where the blue shadows fall,"

she continued the verse of the last song he had brought West and sung to her just before the war. It recalled memories almost unbearable with those lounging-room windows so bright; but she sang the verse to the end.

"There are hands that will welcome me in—"

Did she hear a sound as of some one climbing up from below? No, of course not; it was only a rock slipping as the night cold cracked it off; a mountain is always falling to pieces.

"And a thousand things other men miss—!"

SHE started—that was no echo of her own voice! She had not yet reached that line of the song; besides, a man had sung it. Did she imagine—Tony's voice?

"Hello, Felicia!"

"Tony?"

"Who'd you suppose?"

"Tony!"

"Say, who changed this path?"

"Tony, be careful; it turns right, not left, after the boulder!"

"So I've just found out!"

"Oh, you're hurt!" Her momentary paralysis of joy was over, and she was rushing down to him in the dark.

"Hurt! Think I've forgotten how to tumble ten feet?"

His voice was fuller, more mature; a man's voice, yet so surely Tony's; he was bigger, firmer as she felt him with her hands, but he was Tony; hardly a stranger at all! He laughed in the same old way; his hands caught hers and held hard in the moment of meeting, just as they used to do.

"Hello, Felix; you're just the same size!"

"Inch and a quarter taller, Tony!"

"All of that? Then you're not any heavier."

"Hundred and seven now."

"That's five pounds put on!" So he remembered her old weight five years ago! "I bet it's becoming. Where's your light, Felix? I want to see you."

She did not answer that demand except by leading him, still clasping his hand, up toward the cabin. Her heart was pounding shamelessly with pulse so wild that she felt it in her palm, and he must feel it, too; she could feel his. But he had the excuse of a mile's climb.

"Tony, what brought you up here to-night?"

"Why, Shirley asked for volunteers, Felix, and we all drew lots for it; and I got stuek. I tried to get out of it particularly hard when I heard it was you I had to relieve," he taunted her, but could not keep it up when they stepped into the cabin. "Where's your light?"

She unclasped her hand to strike a match; her intention when she scratched it was to light the wick of the cabin lamp, but when the tiny flame was in her fingers, she got a glimpse of him and forgot the lamp and held the flare toward him. So, for an instant, she saw him—saw his eyes intent upon her; saw his lips press tight before he smiled and thrust the light back so he could see her better. He struck the next match and lit the lamp.

"Tony, why didn't you send me word—one word in five years?" she cried; and the next instant she could have bitten out her tongue for saying it. This was the one thing which, during those five years, she had determined never to say.

"How many times did you write me, Felix?" he demanded quietly.

"Eight times."

"I got all but one, then."

"You did?"

"And wrote you each time in reply."

"I never got one!"

"You wouldn't. They never started to you; they weren't to go unless I went West. If I had, you'd have heard, Felix."

"Oh!" she gasped for breath. "I'd have heard what, Tony?"

He shook his head. "What's the odds now? I came here, so you could go to sleep. You're tired, Felix."

"You are, too." She traced consciously the lines of soil and sweat on the corduroys he was wearing. "You must have worked awfully hard over on Muleback to get that out."

"Some one set that fire, Felix."

"Yes, people seem to be setting fires this year."

"All right; I'll watch for 'em now. You go to sleep!" he commanded peremptorily and pointed her to bed: he picked up her glass and, turning his back, he went out to the rocks.

FELICIA blew out the light which, instead of disclosing him, now blinded her against the sight of his figure in the starlight. She lay down upon the bed and pulled a blanket over her, but her head was so propped by the pillow that she could watch him out of the low window. She had no thought whatever of sleep. He had come to her—her—her this night, leaving them all who were there beside those bright lights down in the valley!

So he had written her—each time he received her letters; but his were to be sent only if he died. What did that mean?

What did he mean now by coming to her this night? That he had forgiven her? She saw him move from the edge of the rocks nearer to the cabin and stand, listening; then, very softly he whispered, "Felix?"

"Oh, I'm awake; what is it?"

"I could have made the run!"

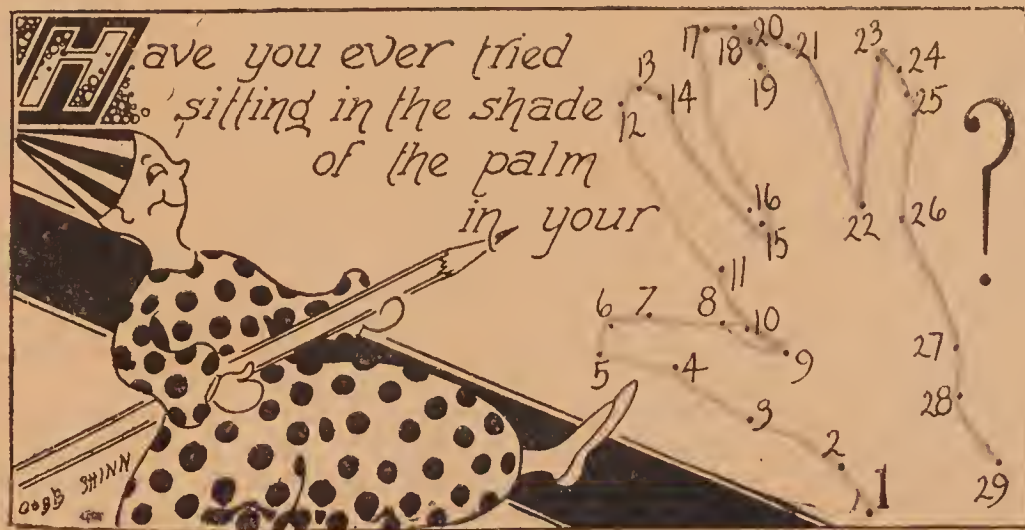

"You couldn't!"

He turned away without further word; and she lay miserable, so wretched that whereas the moment before sleep seemed forever impossible, now exhaustion mercifully stupefied her and she slept.

The clear, bright shafts of the eastern sun were above her when she awoke with a start. A breeze was blowing, and there was a hand upon her shoulder, a familiar, thrilling grasp. Tony's. How did he get there? Oh, yes; he was back! She remembered.

"Sorry, Felix!" he apologized to her, as she sat up. "Shirley wants me pronto. They've just lit up Puma. I've been thinking, last night standing out there, Felix, how to get those birds!" he stared vengefully at the new flame

To finish the question, draw through the dots from 1 on.

# Serve Soft Pies this Summer

*Simplify Cooking, Housework and Living Habits for the Hot Days*

**I**F YOU and your family are fond of the one-crust pies, or "soft" pies as they are often called, the following recipes may be of interest to you and will provide a variety in this line.

As for the crust, I have tried out a number of so-called "best" ways, but I have the most satisfactory results with the plain old-fashioned method, having the lard and water very cold and handling the crust as little as possible.

The meringue is, of course, the crowning glory of many of the one-crust pies. Some do not like it browned, but I think a pie is so much more attractive with the frosting a delicate golden brown. One tablespoonful of sugar should be allowed to each well-beaten egg white. Then I beat it until very smooth and creamy, spread it on evenly and do not have too hot an oven. If it bakes rather slowly it will not fall nor shrivel away from the edges. It should not cling to the knife when the pie is cut.

The first five recipes are for filled pies, the crust being baked and cooled before the filling is added. The base recipe is as follows:

½ cup sugar                      1 pint hot milk  
1 egg yolk (or 2)                2 tablespoons cornstarch

Stir sugar, eggs, and cornstarch together with a little water and when smooth add slowly to the milk. Stir until smooth.

## Cocoanut Filling

Add to the above recipe 1 large teaspoon vanilla flavoring and one package shredded cocoanut, after removing the custard from the fire.

## Banana Pie

After the plain custard, flavored with 1 teaspoon vanilla, has been poured into the crust, cover the top closely with thick slices of banana. Press these down into the filling. Then frost as usual.

## Orange Pie

Flavor the plain custard with orange extract, then cover the filling with diced oranges, pressing the pieces down into the custard. Now cover thickly with whipped cream, instead of the meringue. This is delicious.

## Chocolate Pie

While the plain custard is cooking dissolve 2 tablespoons bitter cocoa in a little hot water and add slowly, stirring the custard to smooth out all lumps. After it is taken from the fire, add a few drops of vanilla. Cool, fill the crust and add the meringue.

## Lemon Filling

1 tablespoon cornstarch    Stir all together with a little  
1 large cup sugar            water and add slowly to  
Grated rind of 1 lemon      1 large cup boiling water

Drop in a small lump of butter. Beat up the yolk of 1 egg with the juice of the lemon and stir this into the rest of the filling last. Cook slowly until thick. The filling has a clear almost transparent appearance when the egg yolk is added at the last.

In the next five recipes the filling is poured into the crust and both are baked at the same time.

## Mock Lemon Pie

Cut up fine enough pie-plant to fill a crust. Add 1 large cup sugar, 1 tablespoon flour, yolks of two eggs. Stir all together well and fill crust. Bake until filling is set and pie-plant tender.

## Currant Pie

This is made exactly like the mock lemon pie, using instead of pie-plant, a quantity of large red currants that have been washed and stemmed. These two pies should have meringue on top.

## Chocolate Custard Pie

Stir together:

2 large or 3 small eggs    2 heaping tablespoons  
which have been beaten    sugar  
well with an egg beater    A little salt, and nutmeg  
1 generous pint rich milk

Add last 2 tablespoons dry cocoa. Bake slowly and the cocoa will rise to form a thin chocolate coating over the top of the custard, imparting a delicious chocolate flavor to the pie.

## Maple Custard Pie

Use the same recipe as before, omitting the cocoa and substituting one-half cupful of soft maple sugar for the 4 tablespoons of white sugar. Our "men folks" consider this a great treat.

## Carrot Pie (Mock Pumpkin)

(Canned carrots may be used in this

away from home. The next day we tackle our work with fresh enthusiasm and accomplish twice as much as we would had we remained at home and stayed in the same old rut.

This time of year most housewives are busy with their housecleaning. While you are doing this, you will find many opportunities to arrange your house to make housekeeping easier. Take down some of your old-fashioned and unattractive pictures and put away some of your useless ornaments, which will lighten your work and improve the appearance of your house at the same time.

"THE prettiest centerpiece in the house" is what one reader said after making up the cross-stitch design of the picture. She made it in Dutch blue on oyster-white linen. The transfer pattern of E 7 is 15c—Order from Embroidery Department.

way). Cook carrots until tender, drain, mash fine and force through a collander. Then proceed as you would for a pumpkin pie. I use about

1½ cups carrot pulp                      A little salt  
1 tablespoon flour                        Spices to taste  
3 or 4 tablespoons maple    1 or more cupfuls of milk  
syrup or sugar

This can scarcely be told from a pumpkin pie. It is a good way to use up the last of the winter carrot supply and makes a change in the pie line.

Serve all of these pies after they have been chilled well, and they will taste almost as good as ice cream on hot summer days.—MRS. F. L. BLOUNT.

## Spend Your Summer Out of Doors

**I**AM sure that we are all delighted to know by these early spring days that summer is on its way once more. We farm people are so isolated in our homes during the long winter months that we ought to make the most of our lovely, but far too short, summers.

To enable housekeepers to get the greatest pleasure out of the summer months they must arrange their work in such a manner as to give them time for outdoor recreation and social pleasures. There are many dutiful housekeepers who seldom leave home because they are so tied up to their household routine. No one can give their best effort to their job without some outside interests and diversions. We all know how refreshed and encouraged we feel after a day spent

If you are unfortunate enough to be burdened with carpets, as many of us are, take them up and replace them with rugs as fast as you can afford to do so. Linoleum rugs are good for bedroom floors as they always look neat and attractive and are a great labor-saver. They are also suitable for dining rooms and sitting rooms that receive hard wear.

Save yourself work by ironing as little as possible during the warm weather. Use an oilcloth or Sanitas cloth for everyday to save laundering tablecloths. Plan to have the summer underwear of your family of gauze or crepe so they need not be ironed. After washing sheets put them back on the beds without ironing. You need not iron the pillow cases either, though it is rather more satisfactory to do so, as the beds look better when made. Do not iron everyday towels or the men's shirts and overalls.

Unless your family is large perhaps you can save labor by washing your dishes only twice daily. I know a good many families who always leave their supper dishes until morning. On Sunday you might pack your dinner dishes in the sink, thus leaving you an afternoon free for rest. Sunday nights your family will probably only care for a lunch, which they can get themselves without using many dishes.

## Use the Porch More

Get the good of your porch through the warm weather. It is much more healthy for your family than sitting indoors and it will save endless dirt and disorder in the

house. You can prepare vegetables, do your mending and other tasks on the porch. For the sake of your health it is worth your while to do every job that you can out of doors. I know some families who do not seem to get any good of their porches. I have often wondered why they didn't use them. Perhaps they think they must have expensive wicker furniture in order to enjoy them, but it really is not necessary. Others say that their porches are so sunny they can't enjoy sitting on them. It seems to me that in most cases this could be easily remedied by climbing vines for a curtain to shut the sun out. By the way, you need not buy an expensive awning. For several years we used an awning of bran sacks sewed together and dyed green. Later we used a pair of discarded door draperies. By exercising your ingenuity you can probably make a satisfactory awning out of old material.

For furnishings you will need a table, some comfortable chairs and if possible two hammocks, or you can use an old couch if you have it and one hammock. Don't overlook the possibilities of cretonne for cushions and a table cover. By all means serve your meals on the porch during the pleasant weather unless it is so situated that it is too great a distance to carry food from your kitchen, in which case it would probably make you too much work to be feasible.—S. GWENDOLYN SPINK.

## Something About Cyclamen

**T**HE beautiful cyclamen (or rabbit's ear or Persian violet, as it is often called) is not so difficult to raise as many people imagine, though it requires quite a period of time to bring into healthy bloom. The seed, being very hard, should be soaked twenty-four hours in warm water to hasten germination, then planted in soft soil, and kept moist and warm. A south window is a good location. Sometimes the seed appears in six weeks, but very often requires two and a half or three months, especially if planted in cold weather. A tiny white bulb is formed before the seed comes over ground and as soon as large enough to handle should be transplanted into soft mellow soil with good drainage and kept growing as rapidly as possible. It requires about fifteen months to develop into blooming plants. After plants are through blooming they should be set in a cool shady place and given just water enough to keep alive. When time to repot (I usually do it about September 1st) use new soil and bring indoors to a sunny window. The blooms keep a long time either on the plant or as cut flowers, and very often a plant will bloom for three successive seasons.—A. L. L.

## Oil Cloth Telephone Book Cover

**A** "BEST SELLER" for bazaars is a black oil cloth cover for a telephone book. These render inconspicuous an unsightly but necessary object, and may be lined with sateen and decorated with small, bright conventional designs, or with wool embroidery or left plain. Such covers also can be made for other books most used, as children's school books, thus enabling the children to sell their books second hand when they are through with them, also for the family Bible, the dictionary, and the family account book, etc.—Z. I. DAHRUS.

## Shade-Loving Flowers

"**W**HAT flowers grow well in the shade?" asked one of our readers recently.

"Please tell your correspondent that begonias do well in the shade and the Rex begonia is large flowered and brilliant. Any seed catalogue will tell her more," writes R. B. H. of N. Y.

# What Other Home-Makers Have Discovered

Short Cuts to Economy and Efficiency Contributed by A. A. Readers

**SUET** is a good substitute for lard in making pie crust. Try out the suet, then work into the flour and if the suet drippings are cold, use boiling water. The pie is better if it is served the same day that it is made.

Fruits that require sweetening should be cooked in the sugar. To do this, takes much less sugar and is therefore more economical. Also, the sugar is apt to cause fermentation after being eaten raw, and cause indigestion if it is not boiled before using. The flavor of coffee will be greatly improved if sufficient sweetening is put in it when it is being boiled. A can of pure white sugar syrup, made by boiling sugar and water together until the right consistency is reached, may be kept in store for sweetening egg nogs, cream, dressing or desserts. It also can be used for sweetening cocoa, postum, chocolate, orange juice and other beverages, also lemonade, grape juice, cherry juice, etc.

Materials for pie crust should always be cold to start with. Then when the paste is mixed, chill it before rolling it out. It will be easier to roll and the crust will be flakier. If the crust, before being baked, is placed in the ice box or other cool place, it will keep for several days.—**Z. I. DAHVRIS.**

### To Take Dents from Furniture

Wet the part with warm water. Fold a piece of brown paper five or six times and soak in warm water; then lay it on the place. Set a warm (not hot) flat iron upon it, the warmth and moisture causes the wood to swell and fill the dent.—**L. T. GARLAND.**

For mending valuable glass objects, which would be disfigured by ordinary cement, chrome cement may be used. This is a mixture of five parts of gelatine to one of a solution of acid chromate of lime. The broken edges are covered with this, pressed together and exposed to sunlight; the effect of the latter being to render the compound insoluble even in boiling water.—**MISS LILLIAM V. SMITH.**

Don't use tobacco, or the ill-odored moth balls to keep moths from woolens during summer. Use whole cloves. Have them everywhere and insert some in every one of the men's pockets. Make little bags and fill them with whole cloves and hang in the closets, and sprinkle in boxes, trunks, etc. Ground cloves leave an indelible stain on all garments so be sure to use the whole ones.—**MRS. C. A. B., N. Y.**

If you have no lids that fit your apple butter jars, a little heated paraffin run over the apple butter while still hot and then a clean cloth or a waxed paper tied or stuck with sealing wax over the top of the jar will keep it very nicely.

Save all orange and lemon peelings, dry them thoroughly and when you tire of apple pies seasoned with cinnamon or nutmeg, scrape some of either the lemon or orange peelings in and note the delicious new taste.

### More Berry Recipes

#### Loganberry Batter Pudding

Fill a small granite pudding dish about half full of fresh loganberries, cover with 2 cups sugar. Dot with butter. Cover and set in oven while preparing the following batter: One egg; 1 cup sugar; 1/2 cup milk; 2 tablespoonfuls butter or other shortening, 1 1/2 cups flour, 2 1/2 teaspoonfuls baking powder. Remove fruit from oven, spread this batter over the top and bake until a rich brown.

Try loganberries in ice cream, added to tapioca, as jelly, with strawberries in jam, to give color to junket, as a sauce for puddings and custards, and in cake filling. For the latter, beat half a cup of butter

and 1 cup sugar to a cream. Add the stiffly-beaten white of an egg and a cup of crushed loganberries.

Here are two rather unusual recipes. The one for Blackberry dumplings is, of course, applicable to other berries as well, but the gooseberry charlotte I have never tried in any other flavor:

#### Blackberry Dumplings

Soak 1 cup dried blackberries in 3 quarts of cold water for 3 hours. Bring to

into individual dishes, sweeten the berries and juice to taste, and pour over dumplings. Will serve five people.

#### Gooseberry Charlotte

Boil, in a porcelain kettle, one pound and one-half of gooseberries, heads and tails cut off, and one pound and one-half of sugar until the berries are soft. Press all through a colander. Line a plain circular mould with ladyfingers, or slices of sponge cake, or line it with light pie crust dough and bake. Pour in the cooked fruit mixture, and fit over it a circular slice of cake, or a baked cover of pastry. This cover should be well pressed down over the fruit. Let the whole become completely chilled, and at serving time invert on a platter, and pour over the whole a pint of soft custard.

It has been calculated that a family of five requires 250 quarts of fruits and 40 quarts of preserves and jellies in a year. Berries should form a large part of this reserve supply. They come along through the summer in such orderly sequence that it is easy to put up a few jars every so often. You'll be glad you did, next winter, for they preserve well, and some times it almost seems, as you eat raspberry conserve, strawberry jellies, or canned blueberry pie that after all the berry patch is bearing all year round, right outside the kitchen door.

### Swift Currents

(Continued from page 43)

leaping up the side of the tinder-dry distant ridge. "Airplane's the way; get you over this forest in ten minutes. I'll wire for a 'ship' this morning. Get it here in express car! Good-by, Felix!" And so, in the next moment, he was gone.

FOR five days thenceforward she never saw him close enough to distinguish his form in the ranks of the specks which passed by Mower, now to the east, now west, now north or south as men shifted back and forth from the fires. All during the week Felicia remained at the summit of Mower, sharing the cabin with Julia Shirley, who, relieved of switchboard duty, had arrived to stand alternate watches day and night; for the forest fires now were blazing ceaselessly, and every man who could be mustered was kept at work until he dropped.

Dwyer long ago had gone from Lassiter, leaving two women in his place; girls stood sentinel upon Mt. Kenton and on Blackbear Butte, and a girl's voice telephoned in from Salishan Peak the alarm which first warned of the outbreak of the blaze on Kalispel. This was down the river, in thick jungle-like lodge-pole pine, dry as kindling, and so situated in the valley that the southwest wind which was blowing fanned the flames as in a furnace, with the gap between Salishan and Kalispel for a flue.

This fire was as near to the Mower as to the Salishan lookout, but so thick about Mower was the smoke from fires further south that Felicia could not certainly locate the position of the new blaze even after it was reported; so thick, indeed, was the smoke, that when an airplane passed by in distinct hearing, Felicia got not a glimpse of it.

"It passed half a mile north, I think," she estimated in reporting it. "Went out of hearing to the West."

"Lieutenant Crandall has volunteered to fly for us," forest headquarters informed the lookouts then, restoring Tony's military rank for the occasion. "He hopes to catch and cut off any one setting fires; he has wireless-telephone equipment by which he will report at once location of any new blaze. To assist him and identify your post, you will spread strips as follows." And headquarters detailed the distinguishing marks for each station.

Felicia and Julia spread on Mower

summit their "strips," composed of blankets and bedding arranged in a big V and weighted down with stones.

The best prismatic binoculars no longer offered any useful service. Pungent, yellow haze rolled up over Mower, eddied and streamed before the sharp round disk of the rust-red sun, and flowed into the valley, dimming and obscuring. And upon the smoke rode silence; ordinarily with such a wind, the rustle of the dry pine branches down on the flanks of Mower would have been plainly audible; frequently, too, the far-away roar of the cascades of the run reached to the mountain-top; but today the smoke seemed to smother all usual sound—or was it Felicia's ears which shut out all but the distant thrash of airscrew and the drone of motor explosions?

TONY had passed in the direction of Kalispel, and long after she could argue to herself that she yet heard the sound of his engine. Felicia sat gazing to the Northeast and straining to hear. He had passed over the fire, she was sure; now was he on his way back? Or did her fancy supply that hum? At any rate, it was gone again; he had returned over the burning area.

Dangerous duty he had undertaken, but invaluable, she knew, if he did no more than discover and report the progress and limits of the fires; for the other lookout stations already were, or soon would become, as useless as Mower; but Tony, flying freely everywhere, instantly could call men to flames which could still be controlled, and prevent the dispatch of the forest forces to districts which no human power could save. But the peril to him was great.

When Tony was away at war, Felicia had learned enough about flying to understand that such a pilot as he had little to fear, even though his engine failed, if he were flying about aviation fields or over ground where a man might make a forced landing with success.

But the forest and mountains offered no one such landing-place within many, many miles. Indeed, Felicia tried vainly to think of more than one suitable place; besides the leveled green of the camp's tennis-courts, from which Tony undoubtedly had "hopped off," she could think of only the streets of Acheron and small rough patches here and there where only a desperate pilot would land. There was direct danger to him, accordingly, if he were lost in the smoke and could not return to the camp. Forest headquarters realized this when it ordered the mountain tops marked to guide him.

(To be continued)

TO THE left, No. 2133, an attractive morning frock for percale or gingham with bindings of plain material. Sizes 36, 38, 40, 42 and 44 inches bust measure. For size 36, use 3 1/2 yards of 36-inch material. Price, 12c.

Below, No. 1493, a one-piece dress with set-in sleeves. An ideal summer style. It cuts in sizes 34, 36, 38, 40 and 42 inches bust measure. Size 36 requires 3 1/4 yards of 36-inch material with 1/2 yard contrasting. Price, 12c.

TWO summery styles for children are shown below. No. 1858 is an easily-made, comfortable little union suit which can also be used as a pajama pattern. It comes in sizes 2, 4, 6, 8, 10 and 12 years, using 1 1/4 yards of 36-inch material for size 8. Price, 12c.

No. 1928 is just right for the little girl's white "best" frock. It cuts in sizes 2, 4, 6 and 8 years. For size 4, the dress and bloomers take 2 3/8 yards 36-inch material. Price 12c. Embroidery pattern 650 is 12c extra.

TO ORDER: Write name, address, pattern numbers and sizes and enclose proper remittance in either stamps or coin (stamps are safer) and send to the Pattern Department, American Agriculturist, 461 Fourth Avenue, N. Y. City.

a boil and let boil 30 minutes. Then add dumplings made as follows: Into 1 cup of sweet milk, stir 1 heaping teaspoon baking powder and a little salt. Add flour enough to make a very stiff dough. Roll into 5 dumplings and boil 25 minutes, turning kettle gently once or twice so all parts will cook evenly. Sometimes the water boils away fast; in that case, add hot water enough to cook dumplings without burning. Remove dumplings

# Reviewing the Latest Eastern Markets and Prices

## MILK PRICES

**T**HE Dairymen's League Cooperative Association announces the following prices for milk during June in the 201-210 miles freight zone, for milk testing 3 per cent.: *Class 1*, used chiefly for fluid purposes, \$1.86 per hundred pounds; *Class 2-A*, used chiefly as fluid cream, \$1.70; *Class 2-B*, used chiefly in the manufacture of plain condensed milk and ice-cream, \$1.85; *Class 2-C*, used chiefly in the manufacture of soft cheeses, \$1.85; *Class 3*, for milk used chiefly in the manufacture of whole-milk powder, evaporated whole milk and sweetened whole condensed milk, \$1.55; *Classes 4-A* and *4-B*, based on butter and American cheese quotations in the New York market. Prices for April were: *Class 1*, \$2.33; *Class 2-A*, \$2.00; *Class 2-B*, \$2.25; *Class 2-C*, \$2.25; *Class 3*, \$1.95.

### Sheffield Producers

Sheffield Farm Company Producers announce that the price of 3 per cent. milk in the 200-210 mile freight zone is \$1.70½.

### Non-Pool Cooperative

Non-pool Assn. prices are: *Class 1*, fluid milk for city consumption, \$1.86; *Class 2*, milk for cream, plain condensed and ice-cream, \$1.70; *Class 3-A*, milk for evaporated, condensed, etc., \$1.60; *Class 3-B*, milk for fancy cheese, \$1.45; *Class 4*, determined on butter and cheese quotations on the New York market.

### Interstate Producers

Interstate Milk Producers' Association (Philadelphia plan) June receiving station prices, 3 per cent. milk, 201-210 mile zone, \$2.19; 101-110 mile zone, \$2.29.

## BUTTER SLIGHTLY EASIER

It is quite evident that the short interest on June contracts had an important bearing on the market, and have been a real factor in holding offerings steady. Were it not for these interests the butter market would have eased off considerably more than it did in view of the heavy available supply. In spite of the fact that the general tone of the market is somewhat easier and prices are from ¾ to 1 cent lower than last week, nevertheless the market can still be considered firm. Advices indicate that production in some sections is beginning to fall off slightly and these would naturally have a tendency to keep the market in a fairly firmer condition.

On Monday, July 7, on firm western advices, prices advanced to 41½ to 42c on 92 score and 42½ to 43c on marks scoring higher than 92. However, this advance seemed ill-timed, for on the day following prices began to recede and continued to ease off until the latter part of the week, when quotations dropped back a full cent and a half. This slight concession in price was also yielded on the part of the sellers in order to move current arrivals as freely as possible. All during the week receipts have been heavy and advices indicate large supplies coming this way. The decline has created a strong buying interest. The chain stores are operating freely and buying heavily for immediate trade needs as well as taking on supplies for storage. In spite of the fact that arrivals this week are outdistancing those of last week, nevertheless it is quite evident that the peak has been passed, taking the entire country as a whole. In some sections conditions are favorable for a reasonably good make this month; in fact, any indications that the supply is falling off are only very slight. The chances are the supplies will be ample to meet the trade needs but not heavy enough to create a weaker condition. In other words, indications are that butter will continue to hold a reasonably firm tone.

## CHEESE MARKET QUIET

There is nothing exciting in the cheese market. The demand has not been over-active. A fair amount of stock is moving, but buyers are confining their purchases to immediate trade needs. There is not near the speculative interest that was evident during

last month. There is a little larger proportion of average-run marks arriving. Seasonal defects have caused a slight falling off in quality, in many instances the effect of heat being evident. Buyers demanding very high grade State flats, where real quality is desired, are paying from 21 to 21½c. Some of the average run stuff is turning at 19¼c, but as a rule it is pretty difficult to find many heavy transactions above 19c. Many arrivals show greater faults and range lower in price.

## EGGS QUIET; QUALITY IRREGULAR

We have had a rather inactive egg market this week. Undoubtedly the heavy exodus over the week-end has had a considerable effect on the consumptive demand. But in spite of this values have been sustained and on some marks have advanced slightly. One outstanding feature of the market is the irregularity of arrivals, especially as to quality. Fancy marks have been meeting a fairly firm demand and, with advices stating that receipts are slightly below last week, the market maintains its strength. During the middle of the week there seemed to be a few more fancy eggs coming in than the trade could readily absorb. However, what receipts did not move were immediately put in storage.

Nearby white eggs that grade as Jersey hennerly whites, closely selected extras, are now up to 40 to 42c. However, the majority of the business is going on within the range of 28 to 33c. This is pretty conclusive evidence that poultrymen who are paying especially close attention to quality are getting the cream of the trade. There is a spread of 10 to 14c in the market now between average receipts and real fancy marks. The slight falling-off of arrivals is not enough to boost the market in view of some of the low quality marks that are coming in. To put it short, the market isn't strong enough yet to pay the shipper of average to common stock a high price. The fellow who is waiting for the time for average run eggs to bring a high price in order to make money in the poultry business may as well quit.

## GOOD DEMAND FOR BROILERS

Express broilers have been arriving in rather light supply, especially colored stock, and with the hot weather that has prevailed in the Metropolitan section there has been created a rather strong demand. The market is not only firm but higher on quality broilers, which is also true of White Leghorns of larger sizes. Small White Leghorns are somewhat inclined to drag. With short supplies, the situation has been in the sellers' favor for several days. In making shipments, particular attention should be paid to the time birds are expressed. Shippers should plan to have their birds arrive in New York sometime near the middle of the week. Those arriving on Saturday are running the chance of meeting the market on a downward trend or even reaching the market after business is closed. As a result, these birds must be carried over Sunday and invariably meet a more or less inactive, if not dull, market on Monday.

Fancy colored broilers are steady at 38 to

40c, while White Leghorns weighing 2 pounds and over are bringing 35 to 36c. Average run White Leghorns are in the neighborhood of 1 to 2c lower while small White Leghorns of the pigeon class are anywhere from 28 to 31c.

When erating birds, it is a good idea to so separate them (especially if you have more than one erate) that one erate will contain birds weighing 2 pounds or over at least. Where a mixed lot is sent in, a consignment usually goes through as average quality. Even if there are only a dozen birds over 2 pounds, it will invariably be better to ship them separately and let the average run and small stuff go separately.

Fresh killed broilers are in light supply. They are meeting a good outlet, with the result that the market is firm especially for top grades. Strictly fancy box-packed marks, weighing 18 pounds to the dozen, are going into the coolers at 38c to be held for a later market. Large boxed broilers are in better demand and the situation favors the sellers.

## POTATO MARKET STEADY

During the entire week the potato market has been slightly irregular with short spurts up and down. On Thursday, the 10th, the market opened rather quietly as usual and buyers were rather firm in their opinion of \$3 for best stock. However, the tone soon strengthened and the market closed for Friday largely in the seller's favor. Stocks were well cleared and indications are that Eastern Shores will maintain values.

Most of the arrivals are now coming via Old Dominion steamers. There has been considerable confusion and delay lately getting steamers unloaded. Early in the week it was necessary to stop unloading in order to enable the receivers to make deliveries. As a result in many cases the potatoes were not unloaded until after the market closed and arrivals had to be carried over to the following day.

Virginia Eastern Shore Red Star brand are bringing anywhere from \$2.75 to \$3.50 a barrel for No. 1 grade. Other marks, grading No. 1, are bringing anywhere from \$2.50 to \$3.25. There are some arrivals still coming in from North Carolina, but these are showing wide range in quality. South Carolina is practically done.

## HAY MARKET FIRMER

With lighter receipts the hay market has turned decidedly firm, especially in the face of active demand for hay of good quality. No. 1 in large bales is now up to \$32. Receivers are holding firmly at the prices quoted, except on poorer grades of Canadian hay. This Canadian stuff is dragging and has had a continually demoralizing effect on the market. The situation in Brooklyn is about on par with that in Manhattan. No. 1 Timothy in small bales is quoted at \$31. No. 2 varies from \$26 to \$30, depending on the size of the bale and slight variations in quality. No. 3 hay varies from \$24 to \$37 for the same reason.

## SHORT CORN CROP FORECAST

Indications are that the corn crop this year will be over 500,000,000 bushels smaller than

last year's. This and better prospects compared to a month ago for the wheat crop are the outstanding features of the report of the Department of Agriculture based on July conditions.

Taking these figures into consideration, the corn crop will be the smallest since 1913 with the exception of 1918. The forecast estimates that the crop will total approximately 2 billion bushels. Last year's crop totaled slightly over 3 billion bushels. These reports have had an immediate effect upon the market. Prices have continued their upward trend. Wheat has taken another jump as well as corn. On July 9, No. 2 red wheat is quoted at \$1.32 compared to \$1.23½ a year ago. No. 2 yellow corn is quoted at \$1.22½ whereas a year ago brought \$1.05¼. Oats, No. 2 white are now 64 to 64½c compared to 52c a year ago.

The total wheat crop is estimated at 74 million bushels, the smallest since 1913. A month ago forecasts estimated slightly less than 700 million bushels. Last year a crop of 786 million was harvested. In other words, it looks as though the wheat crop will be something like 50 million bushels below last year's. Wheat that remained on farms July 1 is estimated, according to the Government reports, at slightly over 30 million bushels or 3.9 per cent. of last year's crop. This is about 5 million bushels below the carry over on July 1 for the five years 1918-1922. The oats crop forecast estimated a total yield of 1,356 million bushels. The report states that the condition of the crop is about 86.9 per cent.

## MEATS AND LIVE STOCK

Trading in live calves has been fairly steady during the past week with indications that before the week is over the market will turn slightly easier. By Thursday, trade had turned somewhat quiet, especially on veals of medium grade. In spite of the easier tone, prices were not affected at all and best veals were turning at \$13½ with other qualities ranging downward to \$6 for Buttermilks.

The live lamb market has been fairly strong and very active under light receipts. Practically all qualities have been selling up to \$16, although some States have been selling considerably lower.

Country dressed calves have been meeting more or less of a quiet, although steady market. Receipts have not been over heavy and there were ample to handle all requirements. The demand has been rather limited. City folks are buying more broilers and lamb at this time of the year. Top grade stock is bringing 16c with primes varying from 14 to 15c. Indications for the next few days are that the market on this commodity may ease off.

## RADIO MARKET REPORTS RESUMED

During the Democratic Convention, American Agriculturist Radio Market Reports were discontinued. Service has now been restored at the regular time, 10:50 A. M. from WEAf.

## Nothing Like a Gas Engine to Keep the Boy Interested

(Continued from page 34)

If your boy is beginning to show signs of a desire to leave home for the city, just try getting an engine. And when you get it, give it to the boy to run. Let him feel that it is his own. He'll take real interest in it then, and will take genuine pride in turning out work with it.

Do not make the mistake, however, of buying an unreliable engine which is made by some unknown manufacturer. Buy it from a well-known reliable concern. It will cost you far less in the long run—it will be something your boy will be proud of, and also will prove a source of real profit for you year after year.—H. H. WEBB.

## Plan Insures T B Eradication Progress

(Continued from page 41)

recommending closer cooperation of state officials and farmers in tuberculosis eradication. The active support of farmers in the eradication program through local organizations of breeders was strongly recommended. The report also recommended to the State department that the appropriation, which is \$2,500,000 for this coming year, be allocated among counties on the basis of cow enumeration and reactors. The department has accepted the recommendation and is now putting it into action.

## Quotations From Eastern Markets

The following are the prices at which farm products of special interest to Eastern farmers sold on July 10:

Eggs, Nearbys (cents per dozen)			
	New York	Buffalo	Phila.
New Jersey hennerly whites uncandled, extras	40 to 42		
Other hennerly whites, extras	37 to 39		
Extra firsts	34 to 36	30 to 32	30½
Firsts	31 to 33		27½
Gathered, whites, first to extra firsts	31 to 35		
Lower grades	29 to 30		
Hennerly browns, extras	35 to 40		
Gathered browns and mixed colors, extras	30 to 32	29 to 30	
Butter (cents per pound)			
Creamery (salted) high score	40 to 41½	45 to 46 (prints)	41½
Extra (92 score)	40½	43 to 44	
State dairy (salted), finest		40 to 41	
Good to prime		32 to 39	
Hay and Straw, Large Bales (per ton)			
	U. S. Grades	Old Grade	Standards
Timothy No. 2	\$30 to 31	\$20 to 21	\$24 to 25
Timothy No. 3	27 to 28		21 to 22
Timothy Sample	16 to 21		
Fancy light clover mixed No. 1	29 to 31		23 to 24
Alfalfa, second cutting No. 1	31 to 33		
Oat Straw No. 1	16		15 to 17
Live Poultry, Express Lots (cents per lb.)			
Fowls, colored fancy, heavy	24 to 25	23 to 25	25 to 27
Fowls, leghorns and poor	20 to 22	22 to 24	20 to 22
Chickens, colored fancy			
Chickens, leghorns			
Broilers, colored	38 to 40	38	42 to 45
Broilers, leghorns	28 to 36	28	
Live Stock (cents per pound)			
Calves, good to medium	12 to 12½		
Bulls, common to good	4½ to 5		
Lambs, common to good	13½ to 14½		
Sheep, common to good ewes	3½ to 5		
Hogs, Yorkers	7 to 7½		

## Farmers-Growers-Poultrymen and Shippers

We ship in cars and small lots, once used Barrels, (apple, potato, slat, etc.) Baskets, Butter Tubs, Carriers, Crates and Egg Cases. Also all varieties of new and used Fruit and Vegetable Packages. Our used egg cases are a special feature. Satisfaction guaranteed or money refunded. Write or wire at once.

# Fattening the Surplus

## It Pays to Put "Finished" Poultry on the Market

ONE of the most perplexing poultry problems at this time of year is the disposal of all kinds of surplus stock, from the old hen and rooster down to the broiler. The question that arises in connection with any market birds whether they are sold live or dressed, is, whether to fatten them or not. Is there actually a profit in the fattening of birds? Shall I sell them live weight or pick and dress them?

As a general rule it pays to take pains in fattening any chickens, old or young, before disposing of them. How much profit there really is in the process is dependent largely upon two factors: the length of the fattening period and the method used in the course of actual fattening.

### A Bit of Experience

Not long ago the writer was going through the same problem: does it pay to fatten broilers? To satisfy my own curiosity and to simplify the problem as much as possible, I bought sixty-six broilers that weighed 152 pounds from a friend of mine. They cost \$57.76. I put the birds in crates to fatten them and began disposing of them slowly at the end of ten days; they were all sold at the end of a month; all birds were killed and sold in New York dressed at sixty cents a pound. The cost of the feed was \$8.90. The combined weight of the birds sold was 174 1/4 pounds, or a gain of 22 1/4 pounds, an average of a third of a pound per bird. The actual labor income (I made no charge of the labor involved) was \$37.05; or practically fifty-six cents a broiler.

It may seem as if I had neglected one of the most important cost items when I failed to keep an itemized account of labor. As a matter of fact, the main part of the labor in the experiment above was in the picking of the chickens. The broilers were fattened in crates which involved the mixing of a sloppy, wet mash twice a day and the cleaning of dropping pans. The actual time involved was fifteen minutes. Birds fattened in crates require no grit, green feed or water.

### Crate Fattening Most Efficient

Of all fattening methods, crate fattening is the most efficient. It produces the best gain and the best quality birds, birds which really should bring better prices, although often it is necessary to convince a buyer by a trial shipment. These crates are simple affairs to make, the frame being three feet long, fifteen inches high, and twenty inches deep. The top and one side is covered with lath or slats; the back and one end may be solid boards with the opposite end containing a door. The bottom is covered with one inch wire mesh, the purpose of the wire being to keep the birds from moving around, while the slats on the one long side should be placed far enough apart to permit the birds to put their heads through to eat. Along this side fasten a wooden trough a couple of inches high.

In regard to rations in the experiment already mentioned above, I used those recommended by the Cornell University experiment station: fifty pounds of corn meal, twenty pounds of white middlings, and ten pounds of finely ground oats. To feed this ration mix it to about a pancake batter consistency with buttermilk, sour, skimmed or whole milk. If milk is not available, the

L. H. HISCOCK

same ration can be used

by adding twenty pounds of beef scrap and mixing it with water. In either case it should be fed sloppy, the purpose being to make them eat it and drink it both, which saves watering the birds. Grit, of course, is not necessary. Starve the birds a day before feeding them and then feed them regularly morning and night all they will eat up in half an hour. Any surplus feed should be removed, as it will tend to destroy their appetites. If, for any reason, the birds fail to eat well, omit a feeding. Broilers will stand this process for ten days or two weeks; old hens two weeks or longer. As the birds will shrink it is wise to be able to market them immediately when the fattening period is up.

So much for the concentrated fattening. It is an excellent method where a good market is handy, and especially where birds are to be sold dressed. The softness of the legs from lack of exercise and of the flesh in general is enough to satisfy a customer. Once a customer, always one.

### Where Pen Fattening is Practical

In many cases, however, such a method is not convenient, because market facilities are uncertain. It will pay in this case to pen fatten birds. Simply confine them to a very limited area and use the rations above mentioned. To carry the birds over an indefinite period it is wise to make a few changes. Instead of feeding the fattening ration in batter form, feed it mixed real stiff. See that the birds have water, grit, and some form of green food. Often times a big box affair with wire top can be made so that it can be moved about the lawns, thus insuring the birds fresh ground and a liberal amount of green food. If the birds seem to go back on their feed, vary the ration. To do this, give them grain for a day or two, or give them a feeding of moist, stiffer mixed growing or laying mash. These little changes will keep them in good condition, and with a keen appetite, and will enable you to have good, marketable birds on hand all the time.

So much for some of the factors in poultry fattening. It is all right to mention methods, but, after all, the best check on this particular problem is a pair of scales. Weigh the birds when you shut them up and again before you dispose of them. If the gain they have made does not offset the cost of the feed by a liberal margin, then check up on the details, for there is profit in this part of the poultry business.

### Fresh Ground to Avoid Trouble

STARTING and growing chickens on the same ground year after year is a fertile cause of disease and trouble in chicks. The farmer does not put the same field in oats year after year. He rotates his ground. The colony houses for chicks should be moved to fresh ground every second year at least. The soil of the old run should be broken up and a crop grown on it.

Many brooder chicks that are started and kept confined in a very small run contaminate the ground in a very short time, and by the time that they are eight weeks old, droop their wings and fail to make a satisfactory growth in response to the feed they consume. The trouble lies in the fact that every time they pick up a grain of feed they take into their system the infection of the soil. Get them on fresh ground and feed them on fresh ground.—ELMER WHITTAKER.

"I wonder how she gets the shell on."  
"I guess she lays the egg first and then plasters it."—Life.

# B A B Y CHICKS

30,000 CHICKS WEEKLY for July and August Delivery

BRED RIGHT, HATCHED RIGHT, SHIPPED RIGHT

Hatched by men with 14 years' experience in one of the largest, finest and best equipped hatcheries in the state. Order early. \$1.00 WILL BOOK YOUR ORDER

# How to Splice Rope

*The Long Splice Will Pass Through Pulleys Easily*

ONE of the uncertainties of hay-

ing is the possibility of the hay rope breaking. On a busy day, with hay out and the possibility of a storm coming, the breaking of a rope does not add to the peace or tranquillity of a man's mind. It must be repaired. Some one must do the job. Why not be able to do it yourself and do away with that constant fear of delay in case the rope should break? The general belief that the job is difficult and can be done only by a so-called expert is ridiculous. The job is not difficult, is not hard to learn and is not hard to do.

There are two kinds of splices, the short splice and the long splice. The former, which is, when completed, twice as large as the original rope, is objectionable for hay ropes which must pass

Figure 1

through pulleys. It is a strong splice, though bulky, and very desirable for towing ropes where the extra size is not objectionable. The long splice is, when completed, but slightly larger than the original rope. In fact, it is nowhere one full twisted strand larger. It is strong, small, easily made and can be used without the purchase of knot passing pulleys.

There are several methods of starting the long splice—Some will unwind the three strands from each rope end, interlock them and thus start. With this method, there are six (6) loose ends to work with. For the beginner, because there is less chance of becoming confused, it is suggested that but two loose strands at a time be worked with.

Unwind one strand from one rope end

Figure 2

nine or ten turns. This rule will apply to any three-strand rope regardless of size. Next unwind one strand from the other rope end the same number of turns (nine or ten).

It is suggested that the ropes be laid on the floor. Slide one along the other. Stop when the point in each rope, where the single strand which was unwound enters the rope, is opposite. Lock and draw the ends of the rope tightly together. See Fig. 1. Be sure strands (A and B) are side by side. Hold the ropes so that the ends will not separate. Unwind strand A from its rope one turn

Figure 3

and follow it with strand B. Keep B twisted up tightly and pulled down firmly into its place. Continue unwinding strand A from the right hand rope and winding in strand B from the left hand rope. Continue this procedure until only six to nine inches of strand B is left out. (Fig. 2.)

What has been done so far? A strand (B) of the left hand rope has been crossed

By F. G. BEHREND'S

over and wound into the right hand rope.

See Fig. 2. Room for strand B was made by unwinding strand A.

What is to be done? We now wish to take a strand from the right hand rope and wind it into the left hand rope.

Figure 4

Unwind each of the two pairs of strands left at the center. Be sure they are completely unwound. It will be noted that the two strands of each pair lay side by side. Now place one of the center strands between the other pair. See Fig. 3. Be sure strand C is between D and F, and F between C and E.

Unwind strand D from the left hand rope and follow in its place strand C from the right hand rope. Do not mistake and unwind F instead of D. Keep strand C twisted up tightly and pulled down firmly in its place. Continue winding in C until only six to nine inches of strand C is left out. Fig. 4.

Figure 5—Tying the Strands

The rope will now be as shown in Fig. 4. Do not work with the center strands E and F. Simply tie them at the center with an overhand knot. Then tie C and D, then A and B. See Fig. 5.

The rope, which is now spliced, is the same size throughout. Three knots have been tied, one at the center of the splice and one at each side. If the ends were now cut off, the knots would untie and the splice would unravel. The next job then, is to secure the ends.

To begin with, some of the ends are too long, as at 1 Fig. 5. Cut all strands to the length of the shortest, that is to say, six to nine inches. Now select any one loose end, say at 4 Fig. 6. Pass this strand over the first strand of the long rope and under the next strand. Unwind the strand before pulling it down into place. One tuck has now been

Figure 6—Tucking the Ends

made. Take the same strand and again go over the first strand of the long rope and under the second. Two tucks have now been made. Tuck it once more and cut it off leaving from one-half to one inch. Now tuck each of the remaining five strands in a similar manner see Fig. 7. With a round stick, pound down each part of the splice and roll it on the floor under the foot.

The question of splicing a four strand rope often arises. The procedure is just the same as described, except that

Figure 7—The Splice Completed

when finished there will be four knots instead of three. The rope where spliced will be but little larger than the original. If you are interested in definite instructions for splicing a four strand rope communicate with the AMERICAN AGRICULTURIST or write the State Agricultural College at Ithaca for bulletin No. 62 "Hitches, Knots and Splices."

## Introducing the NEW Kelly Cord

*For Commercial Use*

*—an extra rugged tire that will stand up under the rough all-around service tires are called upon to give on the farm*

It doesn't need much examination of the new Kelly Cord to convince a car-owner that here is a real tire.

The new Kelly Cord has all the good qualities of the famous Kelly Kant-Slip, plus extra strong sidewalls and a much more massive tread, with reinforced shoulders that add to the life of the tire.

Developed originally to meet the need for a dependable pneumatic truck tire, the new Kelly Cord has been giving such phenomenal service that our dealers and the public alike demanded it in sizes suitable for passenger cars and the smaller trucks.

Now you can get it in all sizes from 30 x 3½ up to 40 x 8.

Whether your driving is done over "hard" roads or rutted dirt roads, the new Kelly Cord will give you unequalled service.

Try one on your car or truck.

**Kelly-Springfield Tire Co.**

# What Makes Cooperatives Successful?

## We Can Take a Lesson from the Old Fire Insurance Cooperatives

By R. W. BARTLETT

WHEN a farmer for the first time gets an automobile, with its smooth-running engine, its spic-span upholstery, and its glistening paint, he often forgets his old dilapidated surrey which has served him for years, stored away in a leanto back of his unpainted cow-barn. His thoughts are naturally with his newest purchase, which has not yet weathered any storms, but for which he has the greatest hopes.

The majority of cooperative companies now operating in New York State have been organized within the last five years, and for this reason but few permanent fundamental cooperative principles can be learned from a study of their operation. Cooperative fire insurance companies have continually operated in New York State for over seventy years, and 135 assessment companies have averaged forty years of operation. About \$450,000,000 insurance, which is approximately 90 per cent. of the total insurable farm property in the State, is written by cooperative fire insurance companies. The strength of these companies is shown by the extent of their scope, and the length of their operation. In the enthusiasm of forming new cooperatives, and getting them started, these older companies are often forgotten.

The question is often asked "What makes cooperatives successful?" Cooperative companies are successful when they successfully perform the principal functions for which they were organized. Cooperative fire insurance companies are successful because they have given their members reliable protection against fire losses at reasonable costs. Assessments to pay for

losses and expenses of cooperative assessment companies during the period 1910-1922 averaged \$2.82 per \$1000 insurance.

The reason why cooperative companies can give reliable protection at a low cost is because they have kept management costs low, and because they have

Homestead of Mr. N. F. Webb, Cortland. Mr. Webb has been an officer in the Cortland Patrons Fire Relief Association for over twenty years. At the present time he is president of the New York State Central Organization of Fire Insurance Companies.

greatly reduced moral hazards through the elimination of the poorer risks. In other words, farmers who organized these companies entered into a business world and made good. Some factors as to why these companies have made good may be applicable to other cooperatives.

The "good will," which is the greatest asset of these cooperative insurance companies, has been created by giving their members a complete knowledge of the facts connected with their business plans and practices,

and a square deal at all times. In the early days of their existence, mistakes were sometimes made which were costly. These mistakes were admitted by the managements of these companies, explanations given as to why they were made, and provisions made so that they would not be repeated. This frankness, and complete lack of concealment resulted in making the members feel that they were "truly" a part of their particular company, and in return they backed the management with their confidence.

The pursuance of definite, long-time business policies which have proven economically sound, has been a basic factor underlying the success of these companies. The original farmer-managements of these companies believed that the prevention of fires was the best way to keep costs down. Consequently, only farmers known to be thrifty and honest were admitted as members.

Those who were known to be careless in looking after their buildings were considered bad moral risks, and were refused membership. As each member had to pay his pro rata share of all losses occurring in his company, a mutual

interest was created not only in keeping fire hazards of his own buildings to a minimum, but in making sure that his neighbors kept the fire hazards of their buildings that way.

The directors were usually farmers who looked after the company's business in their vicinity when they were not busy with their own work. By this method management costs were kept down. These business practices, originating over seventy years ago, are substantially the same today.

## The Farmer and His Schools

### Why He Is Cautious—What Should Be His Attitude?

By H. L. COSLINE

IT sometimes seems that schools are teaching a lot of things that are of little use to boys or girls after they leave school, and at the same time, perhaps from lack of time, are failing to teach a lot of things that boys and girls should know if they are to make a success of life. I have known teachers who object to giving the time of the school for the purpose of allowing a lecturer to speak to them during school hours, because "there was so much work to cover that we really couldn't afford the time." I wondered if we weren't putting the least important things first. I often feel that it would be profitable to stop, often, and ask ourselves just what it is that we are trying to accomplish in our schools, and whether we are making any progress toward our goal.

In the first place, I think we are all too much inclined to think that attending school is "Getting an Education." Consequently, when schools fail to teach what we as individuals think they should teach, we are inclined to conclude that "an education isn't necessary." I like to think of an education as having three sides, what one knows, what one can do, and how one thinks or the attitude one has toward life. It then follows that any one may get a good education without attending school at all or that they may attend school and fail to secure an education. Why, then, should we have schools? Simply because a school is supposed to be a place where an individual can obtain knowledge, skill, and right attitudes, more quickly and with less likelihood of learning the wrong things, than they could any other place. Admitting their faults, I believe our school system provides such a place.

#### Suppose We Had No Schools

I sometimes try to realize what would happen if we had no schools. I am inclined to believe that if each generation depended on what it could learn from its parents, each generation would know less, because of the fact that not all of the knowledge of the parents would be passed to the children, and we would go backward, instead of progressing. It seems to me that we are constantly depending upon the school to teach more of the things that were formerly taught at home. Boys were apprenticed, in years past, and learned a trade, now they attend a technical or trade school. Girls formerly learned what they knew of house-

keeping and sewing at home. Now we have Domestic Science taught at school.

I do not believe that schools are meeting the need for taking the place of the home as a teacher, to the extent that the situation demands. It seems that schools first taught facts, or knowledge. Recently, schools have begun to teach skill, or how to do things with one's hands. Perhaps in time we will come to believe that the school should also teach something about the proper attitude to have toward other people, toward government, and toward religion. In fact we already have made a start in that direction, because the study of civics in our schools, deals more with the proper attitude toward government and less with cold facts, than it did when I wrestled with the subject years ago. And yet the peculiar thing about the situation, to me, is that some teachers regret the change, and long for "the good old days."

#### Do Our Children Lack Practical Application?

During the recent activities of the Committee of 21 and the Downing Porter bill, one might conclude that farmers were sincerely opposed to any change in our present school system, and yet a few days ago at a farmers club meeting, one man said that it seemed to him that the boys who had been through school, weren't able to do anything. They seemed to know plenty of facts but they didn't make good help on the farm. I wonder if the attitude of farm people isn't that they want to be sure what they are doing before they make changes.

I have also heard some discussion regarding the cost of schools in the rural districts, particularly, where new schools are being built. The majority of the taxpayers in these districts apparently feel that the buildings that they are required to build are too elaborate and costly. Again, I hear parents discussing the advisability of sending their boys and girls away from home to attend High School, especially when it means that they must stay in the village during the week. Many parents seem undecided as to whether the advantage they will receive will pay for the bad habits they are likely to form.

All these questions leads me back to the original question, "What should be the attitude of farmers

toward our school system?" In the first place I firmly believe that this attitude needs to be a very tolerant one. We cannot get anywhere by saying that the results at present are not good, and at the same time objecting to change of any kind. If the results are not what we want, I expect that we will do a lot of experimenting, and make a good many mistakes before we solve the problem, but it won't help any to go back to the old system as soon as we make the first mistake.

#### Greater Interest in Schools is Good

I get a lot of enjoyment from reading in some farm papers, concerning the remarkable interest that is being taken by the people in some districts of late, in some schools in the State. It reminds me some of the interest that a child takes in a toy when brother or sister wants to play with it. I hope the interest continues, because it is the second point in the right attitude toward schools; more interest. As I remember it, the principal reason for attending the district school meeting, was in order to decline the office of trustee, and to help elect someone who wasn't present. A district superintendent of schools told me that he didn't sympathize with the difficulties of some districts, because they failed to keep a good teacher, that was willing to stay. A change in trustees nearly every year, helps, along with other causes, to make a change in teachers nearly every year. Perhaps one trouble is to really know whether a teacher is a good teacher or not. When we use most of the time teaching facts, and neglect the other two sides of our education, namely skill and attitude, it becomes difficult to be sure whether the teaching is effective or not, and this difficulty is greater, when the facts that are taught are not used much outside the classroom.

#### The Question of Expense

What should be our attitude regarding expense? Perhaps that is particularly important at the present time. I know of no attitude that is satisfactory except to realize the importance of good schools, insist on good schools, and the efficient administration of funds, and then pay the price. I know of one school a few years ago, where the tax money for the year was worse than wasted, because the results were worse than nothing.

## The Great Challenge of the Times

An A. A. Wednesday Evening Radio Talk Broadcast from WEA F

By DR. C. E. LADD

Director of Extension, New York State College of Agriculture

FOR three years, New York State farmers have been going through a period of depression. Food crops bring the producer only 18 per cent. above the pre-war price. These same crops bring the wholesaler 40 per cent. above the pre-war price, and at retail are sold for 50 per cent. above the pre-war price. The spread between producer and consumer has increased until the price received by the producer is only a small proportion of the retail price of that food, while the wages paid for services in transporting, wholesaling and retailing the food amount to a very large proportion of the retail price. Seemingly, city wages and city industries have gained much in prosperity and agriculture has been left behind to occupy a position relatively much less profitable than was its position before the war.

This condition is not the fault of any particular class of people, but rather the result of over stimulated production in a great industry made up of a large number of small independent business units which are not well enough organized to adjust their production to market demands.

Our fathers or grandfathers farmed through similar conditions in the 80's and 90's. Then, beginning about with the new century, we had fairly prosperous times on farms for a twenty year period or up to the year 1920-21. Now, American agriculture and New York State agriculture is faced with this challenge. Can it emerge within a short time from this period of depression and again become established upon the basis of 1900-1920, when it was possible for the efficient farmer, on a fairly good farm, to maintain a good standard of living

for his family, educate his children, pay for the farm within a reasonable length of time and maintain or improve the producing power of the farm? Or, must we go through another generation of hard times as did our fathers?

We have to meet this problem on equipment which the farmers of the 90's did not have, for within the past fifteen years, we have developed and built up great agricultural extension and cooperative agencies. To-day, we have a farm bureau organization and a county agricultural agent in each of the 55 agricultural counties of the State, home bureaus in 37 counties and boys' and girls' club work organized in 22 counties. We have a large College extension staff of men and women, who are constantly at the service of the farmers whom these organizations serve. In addition, we have in the State a number of State-wide cooperative marketing or purchasing associations organized on a commodity basis, owned and controlled entirely by farmers and secondary to those of no other State in efficiency. None of these agencies were in existence in the period from 1880-1900.

We have this new equipment, these new tools. With them, we must meet the challenge. Can American agriculture maintain its standard of living? Is farming as a business to become so unprofitable that again for a whole generation it

will cease to appeal to the young men as a life time business? We need the best efforts of all farmers and men interested in farming in meeting this problem. If we are to meet the challenge, we must do it ourselves. We cannot depend upon State or Federal Governments, colleges or institutions, although all of these will be helpful. The guidance and the final decisions must be made by farmers.

The farmers of this State have attacked their

### "They Also Farm with Overcast Skies"

**"IS FARMING as a business to become so unprofitable that again for a whole generation it will cease to appeal to the young men as a lifetime business?" This vital question is asked by Dr. C. E. Ladd in his radio talk printed on this page, and as he suggests, the best efforts are needed of all farmers and men interested in farming in meeting this great problem.**

There have been few times in American history when the farmer has had to meet the challenge that faces him to-day. But on the other hand, as Dr. Ladd states, "no other generation has ever had the machinery of organization for meeting the great problem that we have to-day." Always back of the overcast skies and discouragement, back of the machinery and other agencies for correcting evil, stands the man himself, the American farmer who has always won through undaunted, and who will come through this time. In fact, there are signs that the dawn is already at hand.—THE EDITORS.

problems best and fought most effectively when the road was rough and the going was hard. Let the dairymen go back to the fall of 1916 and recall that one of our greatest and most effective cooperative associations flourished and developed with amazing rapidity because of opposition.

Farmers do not farm in fair weather only. They also farm when the skies are overcast and the rain falls. Farming is not only an occupation; it is a mode of life. Our fathers or our grandfathers met much this same problem and many of them solved it and many more of them failed to solve it.

We must make the greatest use of our farm and home bureau system and our cooperative associations. They cannot perform miracles, they cannot change economic laws but they can use economic laws and, if they function as they should function, then they can make conditions on farms very much better than conditions would be without these organizations. These organizations are not perfect and they will not be perfect for many years, but they can serve us greatly and they are being constantly improved by constructive work. During the past year mistakes have been found, faced squarely, presented to the members frankly and corrected. In this period of rapid development it was inevitable that mistakes should occur. The very hopeful sign is that they are being found and corrected. In New York State

our cooperative associations have definitely taken the stand of resting this work upon good sound business rather than upon blind faith in the magic word cooperation. We need in these agencies a greater membership and above all, a greater number of members with a real sense of ownership and responsibility for these associations. If we are to meet our problems and solve them, we must have this large, interested membership in all farm organizations.

As farmers, we believe in cooperation. We believe in that sort of intelligent cooperation that mixes with cooperative effort, good sound horse sense, and business management. We need to be sure that cooperation is carried to the extent of good cooperation between our own cooperative organizations. The cooperative associations and the farm and home bureau systems are working for the same ends. They have the same purposes and aims. The failure or success of any one of them injures or helps the whole movement.

They are working in fairly close harmony now but it is not enough. We must have closer cooperation between all our cooperative marketing associations and with the farm and home bureaus and the Extension Service at the State College of Agriculture. If in cooperation there is strength so in a very full cooperation of all these well organized forces there will be a great strength.

The challenge of the times is a big one. It is impossible to go through such a period of depression without tremendous losses. But, no other generation has ever had the machinery for meeting the problem that we have to-day. With strong membership

in numbers, with strong membership in sense of ownership, with strong cooperation between organizations, with a welcoming of constructive and building criticism, the problems can be met with a minimum of loss.

Let us all put our shoulders to the wheel, get into our farm bureaus and cooperative associations, give service to these organizations, own these organizations, and meet the greatest challenge that agriculture has known in a generation.

### The Farmer and His Schools

(Continued from page 50)

They were bad. I know that many teachers do not feel inclined to make changes, or try out new ideas, because they feel they will be criticized if the results are not good. They prefer to take the easy way, and who can blame them? Here is where interest in the school, from the parents gets results, because teachers will try anything, if they know the district wants it.

I cannot see how all our wealth and opportunities, can help this country, unless the boys and girls who are to be its citizens are taught something regarding their relations to other people, and to their government. Of course it costs, but we all know many things that cost this country more, and give less returns or no returns. Let's realize the importance of the schools, take more interest in our school system, and work together to make it more effective.

### The July Outlook

At least once a month, AMERICAN AGRICULTURIST will summarize the general market and crop situation, both for the East and for the entire country. For details which are not found in the summary, we suggest that you read our Market Page carefully every week and also reports from our farm correspondents in our news columns. The entire staff of AMERICAN AGRICULTURIST spends a great deal of time in studying the market situation in order to place the facts before you, always believing that if farmers have the facts, they can draw their own conclusions.

THE United States Department of Agriculture makes the statement that there now exists in agriculture the best state of balance since 1920. Thousands of farmers reading this statement will say, that if this is so they would like to see the evidence. Nevertheless, there are many signs that farm conditions are improving, that the farm dollar is a little more plentiful, and has a little more purchasing power, and that we have reached the bottom of the farm decline and are headed slowly, if painfully, back the other way. In making judgments of any situation, it is incorrect to estimate from the standpoint or experience of any individual or of any community, or even section, of the country. We must take the whole country and sometimes the whole world into consideration. If the general average of all the country is better, in time every community and individual will be.

The Department report shows that the index of purchasing power of the farmers' products has advanced from 74 on the first of January to 77 on the first of June. The basis of judgment is not so much on the amount of money we have as on its purchasing power. The boom in the cities is declining and the decline has been unusually rapid since the middle of April and this decline has helped to decrease costs on things farmers buy.

Railroad expenditures and city building operations, which have had much to do with the business boom for the last two years, have begun to slacken. Employees on payrolls of factories reporting to the New York Labor Department numbered 503,000 in May 1924, as against 524,000 in April 1924; and 560,000 in May 1923.

Reports show that there is for the first time in years plenty of farm labor in many states, and the labor situation on farms is easier in all states. Therefore, we caution our farmers when hiring help against paying the same prices that have been prevailing, at least until a decided effort has been made to hire that help for less money.

In addition to the easier labor situation, another effect of the industrial decline in the cities should be the cheaper supplies for the farm. The farm dollar will buy a little more. This will be somewhat offset, however, by the failure of the consumer to purchase as much of certain foods such as dairy products and eggs as he did when he had plenty of money.

Another indication of the slight improvement in the farm situation is the small increase in the farmers' labor income. The United States Department statement, based upon a survey of thousands of farms, showed that the farmer's net return in cash over expenses plus the increase in inventories for 1923 was \$1,020, as compared with \$917 for 1922.

The best increases in prices of farm products have been in wheat and corn. July wheat sold on Chicago market on July 14th for \$1.23, and July corn at \$1.10. On July 16, reports of a Canadian drouth jumped the price to \$1.27. Oats are up 8 or 10 cents a bushel. Butter is much stronger than it was last year. The *New York Produce Review* has this to say about butter:

"Foreign markets are not the menace that they were a year ago. Conditions in Central Europe have improved so much that those countries have taken a good deal of Denmark's surplus, reducing the supply available for the British markets and maintaining a considerably higher level of values than last year."

In the eggs and poultry market, the situation is excellent when compared with prices for other farm products.

Wool has had a temporary set back, falling something like 20 cents a pound on the scoured basis. In spite of short supplies the trade is dull, due to several causes, which are discussed on the market page.

With the exception of butter, not so much can be said for the dairy situation. There has been an over-production and some mismanagement in marketing. Higher prices of the grains will also make feed higher. However, this may be a good thing in the end for there is a certain solidarity about agriculture. When some products begin to go up in time all the others do, and vice versa. Moreover, dairying was comparatively prosperous after wheat and the other grains had declined, so it may be a little time before dairying follows the grains in ascending prices. But with the coming of fall months, and the falling off of production, dairy prices are sure to increase. They may make a quick recovery to somewhere near where they ought to be, particularly if dairymen can in some way stop their foolish fighting among themselves.

Although the spring was backward, in the East crops in general made a fairly good recovery in June. Hay bottomed in fast just before haying, pastures have continued good, corn is late but hot weather in the next six weeks will bring it along all right. A summary of the fruit prospects is printed on another page, and potato prospects in the East indicate about the same yields as last year, if anything, the total yield may be slightly lower, which is well.

### Fruit Exhibits at the State Fair

THE announcement of the New York State Fair Commission that the Manufacturers' and Industrial Arts Building on the State Fair grounds will be devoted entirely to exhibits of fruits, vegetables and flowers will be received with satisfaction by the horticulturists of the State and is a step in the right direction. In spite of the legitimate protests of fruit and vegetable growers who have wanted to exhibit at the Fair, their exhibits have been more or less sidetracked and the fruit growers have a feeling, which in our opinion is just, that not enough attention or consideration has been given to them at the Fair. Part of their exhibits has been in the old wooden structure while the balance has been shoved up in one end of the Manufacturers' Building, in which there was a conglomeration of pianos, phonographs, grape juice, shoes, clothing, stoves, furnaces, washing machines, candy, NUT BUTTER, syrup, raincoats and lastly (emphasis on the lastly) coffins.

Nothing that can be exhibited at the State

Fair is of any more interest or beauty or value than a show of what the State can do in the production of fruit. Therefore the fruit men should be given every opportunity to bring out their exhibits.

We also believe that the fruit growers ought to be allowed to recommend a man to have charge of the exhibits at the Fair instead of having someone appointed who they feel is not qualified or not particularly interested in the fruit interests of the State. In our news columns this week we publish an item by the New York State Horticultural Society stating that the fruit exhibitors are thinking of changing their exhibit at the State Fair to the Rochester Exposition. While there is some cause for their complaint, it would be bad for the interests of everybody if they should make this change, and every effort should be made to create conditions at the Fair which they can approve. The State Fair Commission has made a commendable move in providing better quarters for the fruit men. We suggest that the Commission should go a step farther and appoint a man to have charge of the exhibits who is acceptable to the State Horticultural Society.

### A. A. Family All Getting Married

WE are pleased to announce another marriage in the AMERICAN AGRICULTURIST staff. Readers of the household pages will be interested to know that on July 19th, Miss Gabrielle Elliot, Household Editor, was united in marriage with Mr. Arthur Forbush. Mr. Forbush is a writer and advertising expert. This is the second marriage within the year on our staff; the first was that of Mr. Birge Kinne, Advertising Manager of AMERICAN AGRICULTURIST.

There must be something in the atmosphere here where we are trying to serve you that makes for happiness. But don't look for any more, for most of the rest of us "have gone and went and done it" before.

The congratulations of AMERICAN AGRICULTURIST staff and readers to Mr. and Mrs. Forbush are all the heartier when we know that while Miss Elliot has changed her name, she has not changed her occupation so that she will continue as your editor, and there will be no change in the interesting and practical material which AMERICAN AGRICULTURIST womenfolks look for each week.

### Eastman's Chestnuts

P. T. BARNUM, the grand old showman, used to say that the American people liked to be humbugged and then he would add with a twinkle in his eye, that he liked to do it.

He once told a story of his experience along this line that is worth repeating.

He was conducting in New York City a show and museum in the early part of his career and on one of the holidays observed chiefly by his good friends, the Irish, he was surprised to see his building filled early in the morning to overflowing with Irish families—Pa, Ma and all the kids. This was all right, but what wasn't, was that they had come and brought their dinners with every evident intention of staying all day, so that while they were there, there was no room for those who waited on the outside at the door to pay their good money and come in too.

After thinking about the problem for several hours, Mr. Barnum suddenly hit upon an idea. Calling his sign painter, he had him paint in great big letters over a door "THE EGRESS." When it was done, the crowd took one look and with a "Begorra, what kind of a new craiture is that?" they started as one man for the door, so that when they went IN to The Egress, they found themselves OUT, thus allowing the great showman to admit a new bunch ready for the humbugging process.

"A man ought to read just as inclination leads him; for what he reads as a task will do him little good."—SAMUEL JOHNSON.

"The true university is a collection of books."—CARLYLE.

# Temper Farm Work with Recreation

*Then the Family Won't Slip—Other Good Letters*

By A. A. READERS

IS the American family slipping? I look at some people I know and say, "Yes, unquestionably it must be"; but when I observe the great majority of my friends and acquaintances, I say, "No, I can't believe these girls ever will allow it to slip far." Perhaps the ones we know are above the average—in many ways I think they are—but they are as their mothers have taught them to be, and in their mothers' day there were many other nice girls throughout the country; will they not have taught their daughters well, also?

Chautauqua County should be fairly representative and, looking back twenty years, I can't recall any rural section that could boast as many good, morally upright, symmetrically educated girls as we have in our home neighborhood to-day. Certainly we didn't have so many *here* at that time, nor yet in the village where I attended high school. I do not know about city girls, but I believe country girls are not degenerating.

Perhaps a part at least of my cause for optimism may be due to the way in which our girls spend their evenings. No doubt they sometimes attend movies—all of them—and good movies have their place and a distinct value of their own, but there are so many attractive things for them to attend right in their own community that the temptation to go elsewhere for their amusement is reduced to a minimum. Our greatest problem is not to find entertainment but to find time to indulge in the many forms we have close at hand. Our summers are filled to overflowing with picnics, parties, and other outings, though the winter blizzards do sometimes check these social functions. Do not imagine that our youth is a lazy bunch either. These things mean work and they do the work, and incidentally grow into healthy, normal, self-reliant citizens.—E. M. ANDERSON, Chautauqua County, N. Y.

## Before the Revolving Rake

I WAS very much interested in your description of farm implements of bygone years, in the AMERICAN AGRICULTURIST of June 28. In reference to hay-rakes I can state that prior to the one you pictured, The Revolving Rake, there was one of similar type with handles about the same, but with teeth on one side of the head only, and drawn in the same manner as the revolving rake, but when the rake was full the horse was stopped and the rake lifted up to drop "dump" the hay, then the rake set down in front of deposited load and the horse started again and so on to the end of the job.

It did good work, but was hard on the man handling it. Still it was a greater aid to the farmer over the hand rake than any improvement since made on that crude affair. The earliest use of this rake, to my knowledge, was in the early '40s—1841 to 1845.—HENRY A. BROWN, Suffolk County, N. Y.

\* \* \*

## "Dey Vas All On to It"

NO farmer can carry on a set of expensive painstaking experiments, in order to start something revolutionary in the farming line. Neither can he depend on the experiment stations—for what the experiment stations have for the farmer is, to the farmer, very much like what the cow has for the calf is to him; no matter how pure

and sweet the milk may be, the calf must digest it all over again before he can adapt it to his needs, otherwise he will have pains. Likewise the farmer when he gets material from the experiment station, must digest it all over again; if he does not he also will have pains. But if a farmer does undertake to carry on experiments, in nine cases out of ten, he will find himself in the same position

year, "But you all know how it iss, dey vas all on to it."

Let a manufacturer discover some means whereby he can manufacture some article better or more cheaply than it has ever been done before and, for seventeen long happy years, he may reap his reward; but let a farmer discover some means by which he may grow some crop more quickly or better than it has been grown before and, for one short miserable season, he may reap his reward and then, "Dey vas all on to it."

One of the greatest obstacles to a great step in agriculture is the almost universal reluctance to pay even a fair price for raw material. A lady may go into a store and pick out a pair of the most impossible shoes, shoes embodying neither comfort nor durability, neither grace nor beauty, and she will willingly pay an almost unheard of price for them; but on going down to the market after this and finding a farmer offering some good wholesome potatoes for sale, she will haggle with that farmer over the price of a half bushel of potatoes that she knows have already cost him more to grow than he has asked her for them, if she considers his wages at half what her husband is getting. I am not throwing slurs at the ladies. The men are quite as bad.

There came a time years ago when, because of the increasing population of our eastern cities, it seemed probable that the time was coming when the demand for farm produce would so nearly equal the supply, that the farmer would be able to obtain a fair price for his produce. This was unthinkable, so our Government offered foreigners

and others free land in the West if they would come in and develop it. Later the eastern farmer, as well as others, was taxed that great reservoir might be built, so that more produce might be grown and the same low price level maintained. Many farmers are saying hopefully that we are near the end of this, but are we? Experts claim

WHERE LAND AND FOOD ARE SCARCE

IN many parts of the Orient, particularly Japan, Korea, and China, there is very little land that can be cultivated. The bread of the people is "rice," which requires much water and rich soil. The ingenious natives have "terraced" the high mountainsides, planted the rice, and conduct the water by bamboo pipes. Very often these terraces will cover the entire side of a great mountain. The reader might ask, "How high are the mountains in the picture?" While it cannot be stated positively, we do know that they are less than 6,000 feet above sea-level, otherwise the principal crops cultivated could not be grown.

as the small boy who when at a neighbor's was offered a piece of cake, which he nibbled pretty gingerly and finally asked how it was made. The lady of the house being very proud of her cooking, gave him the recipe at length, and finally said, "Now, Johnny, I suppose you are going right home to tell your Mamma just how my cake is made so she can make one just like it." "Not on yer life," says Johnny, as he grasped the door knob, "I'm goin' ta tell 'er just how it's made an' tell 'er never to make one like that for I can't eat the stuff."

## "A Rose By Another Name"

But, on the other hand, if the farmer does strike something worth while, he will find himself no better off than Mr. Schoenfeldt was, in that little story he used to tell. It seems that one year there were no flowers for Memorial Day. This must have been in times when wild flowers were the only dependence, and it was a serious question with him what to do, but a happy thought struck him. He had been one of the very first in Western New York to sow a field of crimson clover, which he had done the season before and it was now in full bloom, and as the inspiration came to him he called to the children and, seizing their baskets, they all hurried to the field and picked a quantity of the beautiful flowers which he shipped to a Buffalo florist. Now it would have been no use to ship clover blossoms to a Buffalo florist, any fool would know better than that and Mr. Schoenfeldt was no fool, so he billed it as trifolium and, to use his words, "There came back promptly the message by wire, 'Send some more dose trifolium. What der iss it?' Well, they went out again and in the short remaining time picked all they possibly could and shipped to the same place, and they received a good big price for it. Then he said they tried the same thing over again the next

THE PATRIARCH IS GONE!

THIS large Mission grape vine was a reminder of the days of Padres and Missions in Alta and Baja, California. It was without doubt the oldest and largest grape vine in the State and during its lifetime spread over almost a quarter acre of ground. Due to inattention and the insidious work of termites, commonly and mistakenly called "white ants," it at last gave up the struggle and about three years ago was grubbed up and removed.

that only about one-half of the tillable land of the country is yet under cultivation and probably even this does not include the great possibilities of Alaska, so do not look to the Government for help, for our Uncle Sam is, in such matters, very much like an old hen with a litter of chicks. He learns only the one that yaps the loudest, which

(Continued on page 64)

**New York Horticultural Society Makes Fruit Crop Survey**

THE New York State Horticultural Society, through Secretary Roy P. McPherson, has announced its fruit prospects of July 1 which is given below. On the market page you will find the analysis of the fruit situation by counties, showing the percentage crop of the various varieties in each county.

The summer meeting of the society will be held at the home of S. C. Wilson, of Hall, N. Y., on Wednesday, July 31, 1924, and at the home of Mr. Clifford L. Miller, Claverack, N. Y., on Saturday, August 9, 1924.

Mr. McPherson's report is as follows: "During the last week in July, 250 members of the Society submitted reports on the condition of various fruit crops. These reports indicate that at that time prospects were for a better than average, but not unusual, crop of fruit in this State.

"The condition of APPLES was reported as one-fifth higher than at this time either last year or the year before, and nearly twice as high as at this time in 1921. Fall apples appear to be a particularly good crop in all parts of the State and Greenings and McIntosh show up fairly well. The bloom on Baldwins was very spotty and the crop may be no heavier than at this time last year but one-fifth below the condition in 1922. The general report is that pears bloomed well but that no varieties have set heavy. The condition of PEACHES was reported as one-tenth higher than last year but only three-fourths as high as in 1922, early and late varieties being about equally promising. Prospects for PLUMS were for about an average crop but the condition of both QUINCES and SOUR CHERRIES was higher even than at this time in 1920. SWEET CHERRIES and GRAPES will be only about average crops.

**Reports Not Reliable Due to Seasonal Conditions**

"Although these reports indicate the prospects for fruit crops the last week in June, they are less reliable for showing prospects than estimates made at this season in previous years. The cool weather of May and the first half of June so greatly retarded the blooming and development of all fruits that the July 1st figures are hardly comparable with those of previous years. Recent reports indicate that the droppings of cherries, apples and other fruits may be considerably heavier than was expected at the time these reports were mailed, and the storm of June 28th is reported to have reduced prospects for grapes in the Chautauqua belt by 10 per cent. On the other hand, practically every important fruit section of the State reports a fair prospect for nearly all tree fruits, and when this is the case a substantial improvement in the prospects for apples and other late fruits must be considered as a possibility.

As in previous years all reports that were received were used in preparing the estimates for the various districts and for the State, but county figures are published only for those counties from which three or more reports were received. The figures were tabulated under the supervision of John B. Shepard and Roy L. Gillett, Agricultural Statisticians at Albany, New York, and represent only the reports from members of this Society combined in proportion to the usual quantities of the various fruits produced in the various counties of the State.

**Horticultural Society at the Rochester Exposition**

The following letter, which explains itself, has been sent to all the members of the New York State Horticultural Society.

THE New York State Horticultural Society has for many years tried to improve the exhibits of fruits, flowers and vegetables at the State Fair. The Society has never been met halfway by the Fair authorities in its endeavors.

**for the FORDSON**

Fordson power is the modern farm power.

Put behind it an Oliver No. 7-A plow or an Oliver FDH Disc Harrow and you are using the most modern outfit designed to help you toward bigger crop yields.

You will find the No. 7-A a pleasure to operate. Plowing depth is set by a powerful screw which will raise the bottoms completely out of the ground even with the outfit standing still. Each adjustment of the plow is conveniently made from the tractor seat. Of course there is a power lift.

Equally convenient to operate and capable of equally good work under varied soil conditions is the Oliver FDH harrow. Here, also, a quick acting screw control, operated from the seat, permits the gangs to be angled with the tractor moving or standing. The flexible construction permits short turns, gives lightest draft and even depth penetration.

Experience of three generations in the making of highest grade, practical farm implements, and in more recent years, close cooperation in the building of equipment for the Fordson, has made possible the development of these new Fordson tools.

See and compare their work with your own exacting standard of quality soil preparation.

# Why Fordson Tractors cost so little and give so much

Between the American farmer and the Ford organization, there has always been the closest understanding.

By continuing its service to the farmer from year to year, the Ford organization is realizing the Ford ideal—"greatest service to the most people".

To accomplish this, the Ford organization has acquired and controls vast timber lands, coal and iron mines, transportation routes, and channels of distribution; built giant factories, mills, foundries, furnaces, warehouses, docks and power plants. Without these vast Ford resources, the Fordson Tractor could not be sold for so little, could not give so much in superior quality and service.

The Fordson Tractor does more, for less money, than any other farm power unit. It is a practical, time-saving aid in plowing, harrowing, planting, mowing, harvesting, threshing, road-mending and scraping, timber-cutting and sawing, hauling, pumping, excavating—in fact every duty the farmer must perform which requires power.

The Fordson Tractor makes farming easier and more profitable. The Fordson Tractor enables more work to be done in less time, thus permitting the farmer to have more leisure for making his life and the lives of his family happier and more abundant. By thus lightening the farmer's burden, the Fordson Tractor renders its great service to the American farmer.

## Fordson TRACTORS

*Ford Motor Company*

Owning and operating coal and iron mines, timber lands, saw mills, coke ovens, foundries, power plants, blast furnaces, manufacturing industries, lake transportation, garnet mines, glass and wood distillation plants and silica beds.

Among the Farmers of New York

“What should I insure it for?”

When you stand back and look at a new building remember that the Hartford Fire Insurance Company will help you with all your insurance problems. For practically every risk the farmer takes there is a Hartford policy. The Hartford and its local agents specialize in insurance for farmers.

A Seal of Certainty on an Insurance Policy

As a part of the Hartford's service it publishes an inventory book, called "My Property." This makes it easy to list everything you own, and to see if you are properly protected by insurance. Write for your copy. It is free. Use the convenient coupon, or ask the local Hartford agent to get a copy for you.

Tioga County.—The Tioga County Picnic will be held on the fair grounds at Oswego on Saturday August 2. The committee found it necessary to set the date ahead because of conflicting dates. The picnic this year is being fostered by the Farm Bureau, Home Bureau, Junior Projects, Poma Grange and clubs, and Chamber of Commerce throughout the county. Each of the cooperative organizations are putting forth every effort to make the day worth while. We have had a few hot days but for the most part the weather has been rather cool for this time of the year. We have had but few days or nights without a shower. Most hay has been cut but it has been very cool to cure it. All crops are way behind in growth. Prices of corn and potatoes is good.

Grass is conceded to be rather light in yield. On a trip to the southern part of the county I saw one enormous field of timothy but it was the finest I had ever seen. It was absolutely clean of weeds and stood thick and tall and headed nicely. Quite an acreage of buckwheat has been sown. In fact the acreage seems a little greater than usual. Because the early season was so wet other crops could not be put in. The abundance of showers and the presidential campaign seemed to have a rather depressing effect on farmers and people in general.—MRS. DANA BURCHARD.

\* \* \*

Franklin County.—Farmers in Franklin County are busy haying with about an average crop reported. All of the crops are coming on but they are very late. Cows are commencing to dry up somewhat and the milk prices have been most discouraging to farmers. Help on farms is hard to get and wages are high. Help for haying are demanding \$4 to 4.50 per day. The T. B. test in dairy herds has been commenced in this county. Dr. Mulvey of Moors is in charge of the work. Eggs are bringing 25c a dozen, old potatoes \$1, hay \$16 a ton and oats 55c.—H. D. J.

\* \* \*

Wyoming County.—I recently crossed the county from north to south and east to west. It is wonderful to see how much work a few farmers can do. But they are going to get into trouble in the fall unless they have more help. Haying started during the second week in July. Timothy has just started blooming. Not much buckwheat was planted this year. The stand of corn was light but not as bad as it might be. Early potatoes are in bloom. Apples will be a light crop. Cherry trees are hanging full. There are not many pears. The best beans seem to be in the eastern part of the county and the best wheat is in that section also. The milk situation is rather bad. One small factory sent back 200 cans one day and 80 cans the next. It seems to come back for no reason at all. Sometimes one can is bad and the rest is sent back because they come from the same farm. Some low test milk is bringing less than \$1 a hundred after paying for the haul. I have met farmers in different sections of the county and they all tell the same story and ask how long this will last. Nearly all admit that they are behind in their payments. Some are borrowing money for taxes.—O. F. R.

G. L. F. Pays Dividends

THE Cooperative Grange-League-Federation Exchange has declared a dividend of 6 per cent. on its stock for the year July 1, 1923, to July 1, 1924, and has been engaged in issuing checks for this dividend to its approximately 38,000 farmer members in this territory. The receipt of this money, particularly in these hard times, is receiving favorable comment among farmers and they are also favorably impressed with the good management of a farmers' cooperative which is able in spite of many difficulties to declare a dividend.

Post Your Farm

and Keep Trespassers Off

We have had a new supply of trespass signs made up. This time they are made of extra heavy linen on which the lettering is printed directly. There is no card facing to be water-soaked by the rain and blown away by the wind. We have had these new signs made up of extra heavy material because severe storms will tear and otherwise make useless a lighter constructed material. We unreservedly advise farmers to post their land and the notices we have prepared comply in all respects with the law. The price to subscribers is 95 cents a dozen, the same rate applying to larger quantities.

# Demand for Better Milk

*People Drink More When They Know It's Clean*

JUST as soon as consumers appreciate the difference between good and poor milk, just so soon will they pay enough extra for good milk to yield the dairy farmer a handsome profit in producing it.

More people would drink milk if they knew exactly the conditions under which it was produced. This is illustrated by the following incident:

A farmer and a professional man were dining together. The professional man ordered milk, the farmer coffee. The former lifted his eyebrows in surprise.

"It really seems a little odd to me that you, a dairy farmer, do not patronize your own industry."

"A very natural feeling," returned the farmer. "You see it's like this. At home I produce a special grade of milk for the fancy trade. Our milk is always as clean and pure as it is possible to get it. I have grown to like that quality of milk. But I have also been in so many barns and dairy houses where it is manifestly impossible to produce good milk. In fact, many farmers don't come up to my standard in sanitation. Result, when I don't know where the milk comes from, I lay off it."

"Now if this restaurant had placed before me a half pint bottle of milk with the producer's name on the cap, the chances are I would have tried the milk at least once. Any farmer with gimp enough to brand his milk usually has gumption enough to produce it right."

"If everybody practiced as you did," laughed the professional man, "you dairy farmers would soon be out of business."

"Yes and no," was the reply. "The quality of the milk sold in our larger cities is usually above suspicion. The boards of health maintain a strict inspection of the dairy farmers who ship milk. The distributors clarify and pasteurize; they know their business so well that when the milk comes upon the market it is both pure and wholesome. As for myself, I prefer an unpasteurized milk coming from a herd whose owner is particular. But I realize that in the large cities the milk supply is, by the force of circumstances, limited pretty severely to pasteurized and certified milk."

"It is in these small cities and villages, such as we are in to-day, that I have found it hard to get a dependable milk. Many of the dairies which maintain milk routes are not adequately supervised by health officers, and most anything goes. The milk doesn't taste very good, with the result that only as little as possible is used."

"Now take my own experience in producing and selling milk. When I started my route there was no first grade of milk being sold. The price was way down. But I figured that a good product would win its way in the end, and it did. I not only get two cents a quart above market for all I can produce, but the quality of my milk has forced my competitors to set higher standards. This has resulted in increasing the per capita consumption of milk in my own city very materially."

"Some of my customers who started out with a one quart order, now buy five

or six quarts daily. They have learned to like the milk so well that they keep it on ice and drink it freely, both at meals and between meals. The children particularly are encouraged to drink it liberally. This family now enjoys better health than ever before, and the good words they have spoken about my milk have caused other customers to increase their orders. I tell you, if we are ever threatened with an over production of milk, we can reduce some of the surplus by increasing the quality of the milk delivered to the consumers, so as to encourage more liberal consumption."—W. A. FREEHOFF.

## The Only Test Is The Test

THE only true test of the value of a cow is the test. The accompanying photograph below points this moral. The cows were pure-bred Jerseys belonging to Kinsley Brothers, dairy farmers of Clayton County, Iowa. They were half-sisters and as the picture shows of nearly the same appearance and weight.

At the end of one year in a cow testing association it was discovered that the cow on the left had produced 288 pounds of butterfat and earned \$43; the other had produced 520 pounds of butterfat and earned \$182.

Mr. R. G. Kinsley in speaking of the results of the test said, "It showed me that no matter how good a judge of cows you may think you are, you can be fooled. There is only one sure way, and that is the test. Think what it has meant to us to find out about those two cows, for we considered both of them among our best ones and were using both to build up our herd. We were right about one but were actually lowering the standard of our herd by using the other."—F. L. CLARK.

## Feed Calves Enough But Don't Overfeed

FEED the calves enough but don't overfeed them. They will do better if kept just a little hungry. Overfeeding causes digestive troubles.

It is best to let the calves stay with their mothers for two or three days after birth. Then they should be taught to drink from a bucket. Care should be taken to see that the pail is clean, for, as every farmer knows, calves are subject to digestive disorders.

The calf should get from six to twelve pounds of whole milk daily for the first three weeks and then maybe gradually switched over to skim milk and a little grain. Most farmers find it best to give the calf its grain immediately after it has finished drinking the milk. A good concentrate allowance will contain muscle and bone building nutrients and will contain some fat to replace a part of that abstracted from the milk.

Here are three rations recommended by the New York State College of Agriculture.

Corn 3 parts, bran 3 parts, oats 3 parts, oil meal 1 part; corn 5 parts, oats or bran 3 parts, oil meal 1 part; or oats 3 parts, bran 1 part, oil meal 1 part.

# Only proper summer feeding

*can make many winter eggs*

"I have been using Fleischmann's Pure Dry Yeast in the diet of my poultry for the past five months," writes Mrs. Arthur Preece, of Houston, Tex., "and I am greatly pleased with the results obtained. An increase in egg production occurred within a few weeks after I began feeding yeast, and a general improvement in the condition of the entire flock was noticed almost immediately."

"I have used Fleischmann's Pure Dry Yeast for a period of four months," writes Burton Steere, of Springfield, Mass. "The birds have shown a larger egg production than in previous years and the whole flock were kept in the pink of condition. Also, the fertility tested out higher than formerly."

"Fleischmann's Pure Dry Yeast has increased my egg yield over 25% and the hatchability 32%. I have never seen anything produce such growth as Fleischmann's Pure Dry Yeast. I shall always recommend your product most highly." (From a letter from John H. Jones of Seaules, Ala.)

THE heaviest layers next winter will be birds that are carefully nourished now.

That is why poultrymen have always sought something to improve the feed—to make their fowls turn it quickly into bone, flesh, and energy before the "forced" laying season in winter.

Thousands have found it. Fleischmann's Pure Dry Yeast makes it easier for fowls to di-

gest and assimilate the mash. It enables each bird to get greater nourishment from what it is fed.

Fleischmann's Pure Dry Yeast comes in 2½ lb. cans. It will keep indefinitely. Full directions with every can. Your dealer should be able to supply you. If not, order direct from us. Send check, money order, or cash, or pay postman on arrival. (Free booklet on request.)

#### SEEDS AND NURSERY STOCK

CABBAGE, Cauliflower and Celery plants—All field grown. Safe delivery guaranteed. Cabbage (re-rooted), Danish Ballhead, Enkhuisen Glory, Copenhagen Market. All Head Early, Succession, Surehead, Early and Late Flat, Dutch, \$2.25 per 1,000; 500, \$1.50; 300, \$1.20; 200, \$1; Cauliflower (re-rooted) Long Island Snowball. Extra Early Erfurt and Catskill Snowball, \$5 per 1,000; 500, \$3; 300, \$2.25; 200, \$1.75; 100, \$1; Celery Plants, (re-rooted) Golden Self-Bleaching (Originators seed imported from France by us), Easy Bleaching, White Plume (French Seed), Giant Pascal (French Seed), Winter Queen, \$3.50 per 1,000; 500, \$2; 300, \$1.50; 200, \$1.25; 100, \$1. 100 any kind of plants postpaid \$1.00. Price list free. No business done on Sunday. F. W. ROCHELLE & SONS, 27th year. Chester, N. J.

CABBAGE, Celery and Brussel Sprout plants—8,000,000 ready now. Cabbage—Danish Ballhead (from strain yielding 26 tons per acre) Copenhagen Market, Enkhuisen Glory, All Head Early, Succession, Flat Dutch, Surehead, Savoy and Red Rock. \$2 per 1,000; 5,000, \$9; 500, \$1.25. Re-rooted Cabbage plants, \$2.25 per 1,000. 500, \$1.50. Celery plants (ready now) 3,000,000. Golden Self Blanching (French Seed), White Plume, Easy Blanching, Winter Queen, Golden Heart and Giant Pascal. \$3 per 1,000. Re-rooted \$3.50 per 1,000. Brussel Sprout plants, Long Island Improved. \$2.50 per 1,000. I have nearly doubled my business each year for 8 years by selling only "Good Plants." Send for free list of all plants. PAUL F. ROCHELLE, Morristown, N. J.

CELERY AND CABBAGE PLANTS postpaid. Leading varieties. Celery 50 for 35c; 100 for 50c; 1,000 for \$3.25; Cabbage 100 for 40c; 1,000 for \$1.75; 10,000 for \$15.00. MR. M. D. MUSSER, Honey Brook, Pa.

CELERY AND CABBAGE PLANTS, all leading varieties, strong plants ready for field. \$1.25 for 1,000. \$10.00 for 10,000. J. C. SCHMIDT, Bristol, Pa.

100,000 CELERY PLANTS, postpaid, leading varieties, 100, 40c; 500, \$1.75; 1000, \$2.50. Liberal count. IRVIN MILLER, Norristown, Pa., R. D. 1.

PLANTS—Leading varieties, celery, \$2.50 per 1,000; \$11.25 per 5,000; \$21.50 per 10,000; celery, \$3.50 per 1,000; cabbage, \$2.25 per 1,000; \$10 per 5,000; \$18.50 per 10,000. Asters, 65c per 100. WM. P. YEAGLE, Bristol, Pa.

STRAWBERRY PLANTS: Pot-grown Howard, Dunlap, Success and Sample. \$4.00 per 100; Progressive, \$5.00 per 100. Order early; for August planting as supply at this price is limited. GEO. D. AIKEN, Box R, Putney, Vt.

HOLLAND BULBS—Order now, our supply is limited. Tulips, Giant Darwin or Early; mixed or separate colors, 40 for \$1; 100 for \$2; Narcissus, Single or Double, 30 for \$1, 100 for \$3; Hyacinths (Bedding), mixed or separate colors, 20 for \$1, 100 for \$4. Hyacinths, Giant, top-size, 12 for \$1; Crocus, 100 for \$1. Special prices on large lots. All orders sent post-paid. C. O. D. if desired. R. J. GIBBINS, Mt. Holly, N. J.

CABBAGE, celery—Ready for field, \$1.25 per 1,000; beet, lettuce, strong plants, \$1 per 1,000; tomato, all kinds, \$2 per 1,000; cauliflower, peppers, egg plants, \$3 per 1,000. J. C. SCHMIDT, Bristol, Pa.

ORDER NOW. For Planting time. Low Prices for early orders. Gorgeous peonies. All Colors. All bloom next spring 3 for \$1.00, 12 for \$3.00. R. J. GIBBINS, Mt. Holly, N. Y. FARM IMPLEMENTS.

CORN HARVESTER cuts and piles on harvester or windrows. Man and horse cuts and shocks equal Corn Binder. Sold in every State. Only \$25 with bundle tying attachment. Testimonials and catalog FREE showing picture of Harvester. PROCESS HARVESTER CO., Salina, Kansas.

#### SITUATIONS WANTED

YOUNG MAN would like to operate a farm for someone who is unable to operate it alone. Salary no object, but will purchase a farm if the community is all right. State location, size and condition of farm; size of family, nationality, etc. Box 328, AMERICAN AGRICULTURIST, 461 Fourth Ave., N. Y. C.

#### HELP WANTED

WANTED: A housekeeper for gentleman. CHAS. BADMAN, Moravia, N. Y. R. D. No. 3.

ALL MEN, WOMEN, BOYS, GIRLS—17 to 65, willing to accept Government positions, \$117-\$250; traveling or stationary, write MR. OZMENT, 258 St. Louis, Md., immediately.

#### AGENTS WANTED

MEN'S SHIRTS. Easy to sell. Big demand everywhere. Make \$15.00 daily. Undersell stores. Complete line. Exclusive patterns. Free Samples. CHICAGO SHIRT MANUFACTURERS, 229 W. Van Buren, Factory, 222, Chicago.

#### WOMEN'S WANTS

PATCHWORK. Send One Dollar for 18 Quarter Yards bright New Percales. PATCHWORK CO., Meriden, Conn.

# Service Bureau

## Standard Carbide Holds Meeting of Stockholders

The following is a report of the recent meeting of the Farmers Standard Carbide Company held at their mill near Plattsburgh, N. Y., on Wednesday morning, July 16, 1924. This report is written by the attorney representing the AMERICAN AGRICULTURIST, working in behalf of our subscribers.

THE meeting assembled promptly at 10 o'clock at the company's mill near Plattsburgh, N. Y. There were upwards of 50 persons present, probably half of them stockholders in person, and from 20 to 25 attorneys representing a large number of stockholders from New York, Pennsylvania, and Maryland. Practically all of the attorneys present expressed themselves that the meeting was not legally called, but everyone was anxious to hear report of the President, Samuel Null, of 215 West 101st Street, New York City, as to the condition of the company.

#### President Gives Oral Report

Meeting was organized by selection of Hon. V. F. Boire of Plattsburgh as chairman, and George S. Bixby of Plattsburgh and Wilson H. Means of New York City as Secretaries. Roll was called and the proxies presented, and a record taken of the stockholders present. It later developed that there was not a quorum of the stock of the company present and voting.

At request of the stockholders, Mr. Null, President of the Farmers Standard Carbide Company, gave an oral report. Mr. Null stated that the Farmers Standard Carbide Company was under investigation by the U. S. District Attorney and that they had all the books of the company; consequently a large portion of his report must be from memory. One gentleman present reported that the District Attorney's office stated that they had requested Washington for an appropriation to employ accountants to go over the books. The Secretary who counted the stock reported that there were upwards of six thousand stockholders scattered over four or five States.

#### Plant the Principal Asset

Mr. Null, stated that the principal asset of the company was the mill near Plattsburgh which their auditors had appraised at \$600,000 and a plant for the manufacture of acetylene gas at Lincoln, near Bound Brook, N. J., which was carried on their books at \$75,000. Against this was a mortgage indebtedness on the Plattsburgh plant of \$55,000 and interest, and about \$18,000 owing on various accounts and notes. A payment is past due on the mortgage as well as the interest. Mr. Null stated that they had about \$100,000 or more worth of machinery in the Plattsburgh plant which was new carbide machinery. The valuation stated above is the valuation on the company's books, and may or may not represent the real value of the plant. The writer believes the sum to be greatly in excess of its real value.

The company has three classes of stock outstanding. Class A common

#### MISCELLANEOUS

FOR SALE. All machinery and equipment of Pomeroy Creamery. Used three years. In first class condition. An unusual bargain. POMEROY CEMENT BLOCK CO., Pomeroy, Ohio.

KODAK FINISHING—Trial offer. Any size film developed for 5 cents. Prints 3 cents each. Over-night service. Expert work. YOUNG PHOTO SERVICE, 409 Bertha St., Albany, N. Y.

stock to which there was authorized 1,000 shares, and there is outstanding about 150 shares. This has no par value. There is authorized 90,000 shares of preferred at \$10.00 per share, outstanding 75,875. Class B common, no par value, sold at \$100 per share, authorized 50,000, outstanding 14,750 shares. The Class A stock by the certificate of incorporation has the sole power to elect directors.

The President reported that two or three years ago four cash dividends of \$3.50 each was paid upon the preferred stock, and one stock dividend paid in the stock of a subsidiary company known as the Acetylene Gas Company, and which company made a contract with the Carbide Company to purchase the New Jersey plant. This contract, however, was never carried out. Stock in this company was issued as a dividend to the holders of preferred stock. There were four dividends paid on the common stock Class "B" of about the same amount.

At the time the dividends were paid or just before, the statement issued by the company as of December 31, 1922, showed cash assets of about \$42,000 in cash and liberty bonds, and a surplus upon the books of \$586,370.48.

At the present time the plant is not in operation. There are only two or three employees who are only caretakers of the plant and doing a little work on the machinery. Mr. Null, the President, stated that no officers were receiving any salary at the present time; in fact the treasury is empty. This year's taxes have not been paid.

#### Stockholders Appoint Committee

There has been about two million dollars' worth of stock sold, and the President stated that the cost of selling ran from 35 to 50 per cent. of the amount received for the stock.

After a long discussion, the stockholders appointed a committee of seven members to go thoroughly through the matter and to ascertain whether it is possible to manufacture carbide at the company's plant at a profit, and how much it would cost to put the plant in operation, it being conceded that a few thousand dollars should be put upon the plant in minor alterations. This committee was to report back upon September 6 or some other date their conclusions. Another committee of two members was appointed to whom Mr. Null, the President, transferred his stock and they to act as a voting trust to vote his stock in behalf of the recommendations made by the committee of seven. The committee of seven consists of the following persons: Elton H. Miller, Watertown, N. Y.; Geo. S. Reynard, Kingston, Pa.; W. H. Mandeville, Elmira, N. Y.; Homer T. Kalor, Hagerstown, Md.; Wilson H. Means, New York City; Judge Edgar S. Mosher, Auburn, N. Y.; Victor F. Boire, Plattsburgh, N. Y.

#### Committee Studies Affairs

The committee had a two hours' session in the afternoon discussing ways and means and especially whether they shall recommend the raising of some additional funds and the continuation of work at the plant. Meantime the mortgage on the property is in danger of foreclosure.

Upon receiving these and other reports, the committee will make their recommendations. The writer believes that the stockholders are fortunate in the selection of the committee, and a fair and impartial investigation of the whole matter will be made. If the capitalization of the company was a half million instead of two millions of dollars, it seems there might be a possibility of putting the concern on its feet and making returns for its stockholders. With two millions of stock outstanding, there are grave doubts as to the advisability of any further investment.

# Swift Currents — *By Edwin Balmer* (By arrangement with William Gerard Chapman)

*Felicia Selby and Tony Crandall were boy and girl friends until she prevented his daring attempt to shoot the rapids of the Acheron in a boat he built. Then Tony went east to college and to war as an aviator and Felicia stayed in her mountain home. One summer forest fires are very severe and she watches in a government tower. Crandall, just returned to his old camp, volunteers to fly over the range and send back wireless information to the fire fighters. His greeting to Felicia is friendly but the old argument springs up.*

**A** DRONING, undeniable, rose out of the north, and Felicia stood up. It diminished, increased, lessened again. Tony was returning, but he was swinging back and forth, "feeling" his way through the smoke. The droning ran with staccato interruption; a cylinder or so of the engine was missing, but he veered closer. Felicia stifled her will to shout; he seemed now to make out the mighty bulk of the mountain and steer directly for the summit.

She could see the doubled line of wings appearing, now the whirring of the propeller, and behind it, Tony bent. He circled low and close, not merely to make certain of the distinguishing mark of the mountain. He could have seen the V with its point to the south, from much higher up; he seemed to wish to make certain of her, at least he waved an arm.

Did he see her and know her from Julia? She raised her arm to him, not thinking, then she turned and pointed to the camp. "That way; east; that way, Tony!" she cried, and she shook in impatience to make him go away, for, with his engine throttled down, the halt of the motor was dismayingly plain.

He waved once more and was off, flying up-wind now so that she heard him long after he disappeared, and when the last sound was gone, she went to her telephone and reported; "Mr. Crandall passed here, and went on in the direction of the camp."

"Yes," said headquarters. "He has just landed there. Keep your strips displayed; he will fly again as soon as he has got gas."

Half an hour later, motor explosions drummed down the wind. "He's fixed that miss," Felicia said; but before he was beyond hearing, "There's that cylinder gone out again, but he's keeping on. He would." And she sat on the rocks again, helplessly listening. Now the wind from the southwest was stronger; he remained far down the wind and she could hear nothing at all; she could see barely a few hundred yards, for the smoke from the fires to the south had doubled in density; and north and east, by Kalispel, the fire was far beyond control.

"It's burning on a five-mile front with a depth of about two miles now, Mr. Crandall reports." So said headquarters when Felicia took up her telephone again. "Everything's going—ground, brush and crown."

"Where's Mr. Crandall?" Felicia demanded.

"Oh, he's all right; we talk to him every few minutes."

Felicia hung up. "I'm not doing anything here, Julia," she announced to her companion. "I'm going down to headquarters."

**S**EVERAL times during the hour it took her to scramble down the mountain path she wished she had not started, for at the telephone on the summit she at least was in touch with knowable events, but during the hour nothing happened except the spread of the fire.

At the supervisor's office she found a ranger who had been burned so as to be temporarily laid up, sitting beside a metal box with wires going to receivers clamped to his ears and to a transmitter before his lips; and she knew it was the wireless telephone, and that when he spoke it was to Tony, and when he listened it was to Tony's voice.

Perhaps the ranger actually was weary, more probably he saw the yearning in Felicia's eyes. "Want to take a trick?"

It's just like any other telephoning."

Felicia put on the harness. "West of Salishan," said Tony's voice presently, "the wind backs from the mountain, and a few men might cut a line which would save the stand of fir to the west. Farther north it's no use; it's jumped both 'breaks,'" and his voice went on: "Did you get all that?"

"Yes," said Felicia. "West of Salishan—" and she repeated.

"All right. Hello, Felix!" said Tony's voice.

"Hello, Tony. How's the engine?"

"All right; why?"

"I heard it missing when you passed."

"I'm all right, I tell you. Give that back to Henderson, Felix. I'm working."

"Tony, take care of yourself!"

Then she obeyed him; but all the same she remained very close to the metal box.

**F**OR half an hour more Henderson took reports and directions which Felicia helped to record. Then the reports ceased.

"Hello!" called Henderson. "Hello, Crandall! Hello! Hello!"

"Let me try!" Felicia begged; and so she tried and tried until Henderson mercifully stopped her.

"His phone's out of order, that's all, Felicia. It's a new-fangled contraption."

Felicia looked up, calm but very pale. "He's down," she said.

"Salishan reports," announced the girl at the forest-line switchboard, "that up to ten minutes ago they heard faintly the noise of Mr. Crandall's engine, which was not running very regularly. And about ten minutes ago it suddenly ceased; they have not heard it since."

Felicia went back to the forest map. "He made his last report from right off the river. He's down there; down!" And she went out of the office into the smoky air. Between her and Tony lay probably eight miles of forest, five of it safe and unkindled, protected by fire-breaks and the wind; then lay a great band all burning—ground, brush and timber—and beyond this, straight in the sweep of the wind, lay dry lodge-pole pine, into which Tony must have fallen.

Perhaps already he was dead; but though terror of that flashed over her, yet her mind told her it was not most likely. A pilot such as he, even though falling into forest, would be able to save himself somewhat. Possibly—just within the range of chance—he had saved himself whole and free; but that was even more unlikely. What she knew to be most sure was, that falling in his "ship," he was living but injured; how badly it was useless to wonder. In any case, he was before the forest fire.

A view from a war-time photograph visioned before her; it showed a pilot who had fallen in a forest, with limbs broken and helpless under the wreck of his plane. She saw Tony, with the leaping, gale-blown blaze of the timber fire licking toward him, helpless, unable to move.

A man on horseback—Henderson, now disregarding his hurts—galloped by. "I'll tell the boys!" he shouted to her. He meant the men in the parties following the fire and trying to beat it back upon

its nearer edges—men all on this side of that tremendous two-mile-deep mountain furnace.

Felicia knew what they would try to do—the only thing they could attempt; that was to work around the fire five miles out and five miles back up and down rough mountain trail around Salishan; miles that would take—hours!

She ran to the corral and caught a horse, galloped to the bridge over the Acheron, crossed and rode through the camp. She saw girls gathered on the porch—girls in light, cool summer things, trying to stare through the smoky sky. Alarm evidently had spread to them.

Felicia pulled up only long enough to call to a servant to fetch her an axe. She took it, and cried her horse on down the river road. For five miles it was clear—the five miles to the top of the run; then the burning band began—blazing ground, blazing bush and flaming trees—four miles away to the right and nearly as far to the left, all consuming, impassable save for the gorge of the river dividing it and through which dashed the whirling, leaping cascade of the run. Far-away mountain snow, still melting in the summer sun, fed the River of Grief even through drought, and fed it deadly full.

Felicia was riding now with the river beside her, with the roar of the nearing run loud in her ears; but above the noise of the waters rose the blazing, bellowing fury of the forest flames. She could feel the heat in the smoke through which she galloped; gases, evil and stifling, eddied upwind, and the pall of smoke thickened and blinded her, blinded and frightened her horse, so that he reared and turned when she urged him on. She leaped down, and let him run away on the river road.

Axe in hand and head down against the heat and smoke, with her aching eyes streaming tears, she reached the top of the ravine where Tony had built his boat. She found the shed under the trees at the water's edge, found the door still latched and padlocked, just as he had left it five years before; she raised her axe and smashed in the door.

**T**HERE lay his boat; dry in seams, she knew, but air-tanks of tin were in bow and stern. She knew that, though the boat filled, these would keep it afloat. From the hook in the roof of the shed hung the block and tackle by which she had strung Tony up. She lowered it and passed a line under the hull, which she raised and thrust out over the water. She snatched up the paddle, launched his boat and leaped in, pushing out from the edge to the full catch of the swift suck toward the cascades.

Smoke shut the rapids from her sight; the frightful crackle and roar of the blazing pine dulled the tumult of the waters; she drifted and swirled, spinning dizzily; heat assailed her, now on one side, now on the other; there ceased to be respite from the heat, though still she spun and turned. The flames no longer were only ahead; they were on both sides, behind her; water filled the boat up to her waist; but she thrust herself farther into it, curling down in the cockpit till the water covered

her to her throat. In this position she could not possibly use her paddle, yet she clung to it. The boat spun on, sodden, sunken almost to the water's level, only the air in the metal tanks keeping it afloat.

Flame-darting red fire, not merely heat, flashed at Felicia; she saw the flare through her closed eyes and she shrank down farther, with her head under the water.

Some sudden power tore the paddle from her hand; some tremendous violence drew her and the boat down, drew her under, and turned the boat above her; it released her suddenly for a catch of half a breath; it gurgled into her mouth with the hot gasp of gaseous air, a tremendous blow battered it out of her and she sucked in against all her will.

**W**ATER choked her; but now air—hot, burning fumes, but air! air! The water leaped by her; its crash and suck became again audible as something outside of herself, like the bellow of the forest fire. The boat had grounded upon a rock on the edge of an eddy of the run.

She lifted her head and instantly shrank down to the water; a rill of air, bearable to the throat, followed the current; above it were yellow fumes, through which the ground glared; the bush glared and the crowns of the blazing pines crashed conflagration onward.

She thrust her hand against a rock to push the boat again into the river, and the heat of the stone seared her palm and fingers, but the water whirled the boat out and carried her on.

As she crouched under, she began to believe, for the first time, that she would survive the run. God was guiding her, she thought; God, the giver of Destiny, had prepared it all long ago. She felt understanding, at least, of that wild, seemingly senseless fascination of self-destruction in the run which had seized Tony when a boy.

God had foreseen this day, and so had prepared rescue for him. The idea gave her comfort and confidence, not only that she would get through, but that she would find Tony alive—then the cascade drew her under, overturned her, sucked down, down; released and spewed her up to half gasp for breath and catch her, with lungs empty and draw her down; batter her; bruise her—something drummed, drummed in her head. Not the forest; not the river; her own pulses were shutting them out; her head seemed bursting.

"He couldn't have made it," the thought spread through the drumming. "He'd have killed himself; I'm glad I stopped him—"

The river bore her unseeing, unhearing, through the burning furnace of the pine forest; on past the edge where the ground fire at last ceased and only the brush and the timber blazed; on past the edge where the brush had not yet caught and only the pine-crowns flamed; on, at last, past the leaping, roaring line where the blaze jumped from pine-crown to pine-crown yet unconsumed and before which blew the gases and the smoke.

**T**HESE in themselves threatened death; and Tony, breathing them, well knew the danger. The fire itself was yet more than a mile away, though its heat made such calm estimate incredible.

He was beside the river, lying on the rocks with his face over the water; his head was cut and still bleeding a little; his right arm was "dud"; but only a strain, he thought. His right leg plainly was broken between the knee and thigh, and dragging himself over the quarter-mile of forest from the point where he had fallen, had not eased the pain.

He really had no idea that he could succeed in standing, one-legged, in the water when the flames came closer, but that offered his only chance. This was below the run, but the current was more than swift enough to sweep him down; of

# Aunt Janet Talks of Several Things

## That Question about Pictures—A Worried Mother Answered

WHAT pictures shall we hang on our walls?

I asked this question recently and some very thoughtful (and thought-inspiring) letters reached me. As in the case of the

© Campbell Prints, N. Y.

"My songs will never die while mothers sing and babies cry," says the legend under this delightful picture of no less a person than good old Mother Goose herself. An imaginative Jessie Wilcox Smith print which would add charm to any child's room.

choice of an ideal book-shelf, tastes varied greatly, but every letter showed that the writer had carefully thought out the reason for her preferences.

The three illustrations on this page have been chosen for definite reasons. All may be obtained at a reasonable price, within the reach of the average farm family. In colors they are of course much more attractive.

*Mother Goose* by Jessie Wilcox Smith is an excellent print for nursery or small child's bedroom. For even very young children take a surprising amount of notice of the pictures on the walls, especially if, like this picture, the subject is within their grasp. Sometimes we relegate to the children's rooms ugly or marred old pictures which we are not quite ready to throw away. I remember to this day the huge oak-framed picture of a great stag attacked by savage hunting dogs which disfigured the walls of a nursery to which I used to be taken as a child to visit. Much better bare clean walls than depressing pictures in gloomy and antiquated settings!

Then there is the *Harp of the Winds*, painted with imagination which in its turn stimulates the imagination of the person who sees it. It is admirably simple, without crowding detail to tire the eye. Even in a sepia print the effect is of real water, sky and foliage. An American artist painted *The Harp of the Winds*, which would hang well in living room, hall or even a bedroom.

### Child Subjects are Attractive

The *Shepherd Boy*, painted by an Austrian, is the type of dreaming, teenage boy the world over. This is an example of the picture that you see with "the inward eye," for though I had not seen a copy for some time, it followed me about as I thought over my answer to "Mother G's" letter, printed on this page. This reproduces beautifully in colors, and like the other pictures can be obtained in excellent prints at moderate prices.

I think all who wrote me about their favorites will agree that these three modern paintings would add to the decoration of any home, for they fulfil the different requirements my readers have mentioned—subject-matter, the way the artist handles the subject and the quality of the reproduction, for instance.

"L. L." makes a good point about the subject-matter.

"The most important thing," she says, "is to have pleasant pictures. I am glad the pictures I knew in my childhood home were joyful ones.

"Don't you always shudder when you see a copy of 'Sheep in a Storm'? Whistler's *Mother* is a wonderful picture. Children like the animals of Sir Edward Landseer. Very few Bible pictures are happy. Our dreams and ideals are fairer than the sacred pictures of many of the old masters. I remember with joy a little picture I saw at Vassar College years ago of New York City at night. One cannot select pictures for others very well, but do have pictures that make one happy—a beautiful landscape, happy children, some Wallace Nutting photos. Discard the old family portraits—no one cares about them but the relatives." (And not always the relatives, if the truth were known!)

Mrs. E. M. Anderson speaks first for religious subjects and praises the *Angelus* as an inspiring influence. She also urges historical pictures and votes against any war picture of any sort, particularly if there are children in the home.

### Frames Should Not Fight for Notice

"Special care should be taken in the selection of our frames," says Mrs. George Gray. "We should remember they are used to contain the picture that we may be able to look at it; so they should be plain and neat, harmonizing with the colors in the picture. Wood moldings of a tone a trifle lighter than the darkest tones in the picture are best. The width of the frame depends somewhat on the subject of the picture.

"The simpler the frame used for a masterpiece, the better. They need nothing to set off their greatness; they are great in themselves. It has been said that the cheaper the picture the richer the frame needed and the reverse is just as true. A collector of valuable pictures framed one of his best very effectively from a pine board left in the rough and darkened with lamp black."

\* \* \*

### What of the "Dreamy" Child?

DEAR AUNT JANET: I have hesitated to bring my troubles to you, because they seem so dull and ordinary and I feel as if I should solve the problems myself.

© Reinthal & Newman, N. Y.

"The Thoughts of Youth are Long, Long Thoughts." *The Shepherd Boy*, dreaming on the grassy hill-top, suggests all the peaceful magic of summer. Though a European picture it represents "just boy"—the same the world over!

But there's one I do need help on, and you seemed to me the best person to give advice.

I have two children, a boy and a girl, and except for this one thing, both are as fine children as any woman could wish. But lately I have grown more and more discouraged over a big defect they both seem to have—they just have a terribly lazy streak and I can't get rid of it!

We have a good-sized farm, not very large, but in a nice section and if I do say it myself, their father and I have made a fine thing of it. We bought it when we were married and worked like beavers to put it in good shape and make it pay. We still have to work hard, though now we can afford to have some help.

Ever since they were little I have trained my children to help us with the work, as much for their own sake as for ours, and now they are into their teens, I think it only fair they should take on more responsibility. They are dutiful about the work I ask them to do, but I cannot say they seem to want to help out—and so often I find the boy idling when his father set him a task he ought to do, or come upon the girl dreaming away time when I need her so much.

### So Much Good Time Wasted

Somehow I'd hardly blame them so much if I caught them actually doing something, whether it was wrong or not, but this lazy way of doing nothing sets me simply crazy. I have talked to them about how wasteful it is, and they've both promised to try to make better use of their time. Yet I still find them mooning about when they might be at a dozen different things. My patience broke yesterday when I asked my fourteen-year-old son how he'd spent an afternoon when we needed him and couldn't find him, and he answered "just doing nothing." What can I do with my children to teach them the value of time? It seems to me that the farm is the place to learn that, if any place is.

I don't want them to grow up lazy, dilatory, do-nothing humans. Boys and girls, it seems to me, have a much easier time now than when my husband and I were young.

What would you suggest, Aunt Janet, that has been wrong in my training and what should I do to cure them of the lazy streak?

Your devoted reader,  
Mother G.

Dear Mother G.:

Such a perplexed, conscientious mother! I can just see you worrying over those 'teen-aged youngsters whose "lazy streak" doesn't seem to have been inherited from their mother, or their father either, from what you tell me of your early struggles to make and keep your

home. I must confess I do think boys and girls have an easier time now than their parents did, but—wait till those fledglings of yours start making their own homes! You'll probably see them "work like beavers" then, for after all there's no thrill like that of starting the new home with the right person.

Do you remember that in a recent article in the AMERICAN AGRICULTURIST, a well-known psychologist, himself born and raised on a farm, stated that farm children often have to be taught to play? It was a sentence that stayed in my mind, and when I read your letter, dear troubled, hard-working mother G., I thought of what this wise man said and it gave me the cue as to how I should answer your puzzled query.

### Every Day Brings Its Duties

First, I want to remind you of something that not all parents take into consideration. The farm boy or girl is an asset to the family long before the city youngster is anything but an expense. It is usual—and only fair—to expect children and young people on the farm to do their share of the constant round of duties which make up the daily tasks of the home life.

But when labor is free, there is a constant temptation to overlook the right of the laborer, young or old, to a certain amount of unquestioned liberty from

"The Harp of the Winds," by Homer Martin, hangs in the great Metropolitan Museum of Art in New York. This striking picture of water, sky and trees contrives to be at once stimulating and restful.

supervision. Especially does the growing boy or girl need time for "doing nothing," as many an exasperated mother or father has expressed it.

"The thoughts of youth are long, long thoughts." When the boy lies on his back, chewing a piece of grass and watching the clouds drift across the sky, what tremendous, half-formed thoughts of deeds of valor, of some great future achievement, drift as slowly through his mind! Roused by a sudden demand for his services in barnyard or woodpile, he mumbles "nuthin'" when sharply asked what he is doing. He himself hardly knows; he is often embarrassed at his own soaring thoughts when brought back to the work-a-day world. He certainly cannot tell his critics that the future man is in the making, there in the sunny daisy field, when things are so quiet and peaceful that a fellow just naturally gets to thinking.

Or the girl "dawdles" over the dishes, falls suddenly idle and dreamy just when the work seems heaviest and her help is most needed. A brisk reminder brings her back with a start and usually she turns

(The prices of the pictures reproduced on this page range from 50c up, according to the size of the print. All are sold in small towns as well as the larger cities but if you can not find them, Aunt Janet will be glad to see that you get the name of a dealer who can supply you. Just address her in care of the AMERICAN AGRICULTURIST and enclose a stamp or stamped envelope for her reply.)

obediently enough to her allotted task. She does a good deal in the course of a day, when you come to think of it. You take her help for granted; do you also take it for granted that she has a right to some time to herself, just to dream and idle, if she so desires?

Let them alone occasionally! Let them loaf a little, even if the sight of anyone "just doing nothing" exasperates you.

**Storing Up Future Reserves**

You may not realize it, but it is partly because you are envious that you feel such irritation.

You once could relax utterly in the same way, but it is an unconscious art that we almost all out-grow. Responsibilities crowd in, driving mind and body to the utmost effort, and you become so used to pressure that you cannot just let go and rest. Except for a few wise, and philosophic souls, only the very young can attain that perfect repose in which identity is almost lost because it is so merged with earth and sky and

wind and sun. That is a very precious possession which your children have—something which they themselves cannot appreciate. Do not help bring it to an end by making them ashamed of "just doing nothing."

Please don't think that I would encourage laziness or ask you to free your children entirely from their share of farm tasks. Faithful performance of the daily routine of duties is not only a much-needed help to you, but carries a discipline which will mean much to them in future years. I only urge you to give some thought to planning their hours of work and leisure as I hope you do your own.

Let each child understand clearly just what he or she is responsible for. Work out with them how long each task should take and the time it ought to be done. Then see what time is left for the child to

read, to play, to "loaf," as he or she desires.

**Play is Serious to a Child**

You must expect the child to follow your schedule in the work, for farm work demands that everything be done at the right time or the whole day is thrown out of order. But do you on your side respect the child's free time and remember you have no claim to it? I have seen mothers who resented any interruption in their own scanty half-hour of leisure call upon their children three or four times to stop an exciting game or lay down an engrossing book for some small errand that could have waited or been planned for earlier. And remember, the mother chides the child for interrupting her, but at the risk of being punished for impertinence or bad temper the child cannot resent the mother's thoughtless demands. Even "grumbling" is sharply reprovved, and the child is left to pick up the thread of his broken play or his vague, wonderful dreams as best he can.

Be patient for a

while with the long, long thoughts of youth. Even the most matter-of-fact and hard-headed man or woman had youthful days of dreaming of which they are now somewhat ashamed, perhaps, but which they can never quite forget. Gilbert Murray, writing of the way life moulds and changes any group of people, no matter what the great dreams and aspirations of their youth, says, "but some, perchance, have caught the Gleam and held it." I like to think that many of those who, through song or story or uplifting thought, have brought the gleam to us more practically-minded mortals, caught it for themselves some idle, "wasted" afternoon, lying deep in the soft grass on a lonely hill-top, half-thinking, half just being, and wholly at peace with the world and themselves.

"Just doing nothing!" A little of it, properly applied, is good for all of us. *Aunt Janet*

**ROMPERS FOR THE YOUNGEST**

No. 2127 is a play romper for small boys or girls. Its good features are many and the fact that it cuts in one piece is not the least of them. Notice too how smoothly it can be laid out to iron. It is comfortable for the youngster to wear, too. Cut out several at a time, in gingham, chambray or linen. No. 2127 cuts in sizes 1, 2, and 3 years. Size 2 requires 1 3/8 yards of 36-inch material. Price, 12c.

Order from Pattern Department, AMERICAN AGRICULTURIST, 461 Fourth Avenue, New York City.

**Swift Currents**

(Continued from page 59)

course he could try to swim, one-armed and one-legged.

He looked about in the small circle where the smoke let him see, and hoped for a log, but there was none. He lowered his head to breathe, he looked up again. Any minute the stream might bring a log or something. But it didn't. That fire! Hear it! Feel it! Hotter; hotter!

"Some fire!" Tony said to himself. "Some fire, Felicia!"

It was his way, when talking to himself, to put her name like that. He had learned that trick when away at war.

Hello! Something was coming down the river! By God, a boat! His boat, and some one in it! Felix!

"Felix!" he yelled. He tried to stand up, forgetting all about that "dud" leg. "Felix! Oh, Felix!"

Was she dead? Drowned? Oh, Felix! No; she had life in her; but she'd fainted. His boat brought her through, righting in calm water as he had built it to do.

"Felix," he saw her jerk and straighten up; she saw him; she called. She tried to paddle the boat with her hands; the current swept her by; but twenty yards below, at a bend, she leaped out and found footing and dragged the boat aground.

Then she had her arms about him; displaying marvelous strength while she

helped drag him, but crying hysterically all the while till she got him in his boat and crowded in by him, and they let the smooth, swift current carry them down—down to safety.

"Do you care," said Tony, when they had passed far enough from the fumes to speak, "to know what I said in those seven letters? Seven ways of saying one thing, Felix. I love you; I always loved you!"

"Oh, Tony!"

"If I didn't come back, I wanted you to know."

"Why not, Tony, if you did?"

"If I did," said Tony, "I meant to make the run first and then ask you to marry me. Of course, now I don't care. Yct—" he looked in her eyes and smiled in his old way—"Wasn't I right? You came down the run."

"Yes, you were right, Tony."

"But if I'd been there, I'd never have let you."

"If you'd been there, I'd not have tried."

"Anyway, why did you do it? Oh, Felix, my Felix, I love you!"

If the children's blackboards always look dusty from chalk, take a piece of cheesecloth, moisten it in vinegar and rub it over the board.

**"For Better Heating" ANDES FURNACES**

The Andes Pipe Warm Air Furnace has a large one-piece ash pit. Its depth prevents ashes piling up under the grates and makes ash removal easy. This is only one of its many exclusive advantages.

Stove, Range or Furnace Catalogs on Request

# Reviewing the Latest Eastern Markets and Prices

## MILK PRICES

THE Dairymen's League Cooperative Association announces the following prices for milk during June in the 201-210 mile freight zone, for milk testing 3 per cent.: *Class 1*, used chiefly for fluid purposes, \$1.86 per hundred pounds; *Class 2-A*, used chiefly as fluid cream, \$1.70; *Class 2-B*, used chiefly in the manufacture of plain condensed milk and ice-cream, \$1.85; *Class 2-C*, used chiefly in the manufacture of soft cheeses, \$1.85; *Class 3*, for milk used chiefly in the manufacture of whole-milk powder, evaporated whole milk and sweetened whole condensed milk, \$1.55; *Classes 4-A and 4-B*, based on butter and American cheese quotations in the New York market. Prices for April were: *Class 1*, \$2.33; *Class 2-A*, \$2.00; *Class 2-B*, \$2.25; *Class 2-C*, \$2.25; *Class 3*, \$1.95.

### Sheffield Producers

Sheffield Farm Company Producers announce that the price of 3 per cent. milk in the 200-210 mile freight zone is \$1.70½.

### Non-Pool Cooperative

Non-pool Assn. prices are: *Class 1*, fluid milk for city consumption, \$1.86; *Class 2*, milk for cream, plain condensed and ice-cream, \$1.70; *Class 3-A*, milk for evaporated, condensed, etc., \$1.60; *Class 3-B*, milk for fancy cheese, \$1.45; *Class 4*, determined on butter and cheese quotations on the New York market.

### Interstate Producers

Interstate Milk Producers' Association (Philadelphia plan) June receiving station prices, 3 per cent. milk, 201-210 mile zone, \$2.19; 101-110 mile zone, \$2.29.

### League Pool Price for June

The Dairymen's League Cooperative Association, Inc., announces that the gross pool price for June for 3 per cent. milk in the 201-210 mile zone is \$1.42. From this, 8 cents expenses are deducted, leaving a net pool price of \$1.34. Ten cents is retained for Certificates of Indebtedness, leaving the cash pool price \$1.24.

## BUTTER TRADING IS GOOD

The heavy trading in the butter market is an indication of the healthy situation surrounding that commodity. According to Urner-Barry, the week ending July 12 saw heavier business than any other this year. Buying has been heavy for storage; reports have it that last week nearly 3½ million pounds of butter were put in cold storage houses. This week the market has seen active trading and buying interest has been good with the exception of Tuesday when confidence was shaken a little by heavy shipments from new territories. At that time a feeling of uncertainty pervaded the market. However, this has been overcome and as the week closes there seems to be a hardening tendency, especially on finer grades of creameries. One of the features

of the market in the past week is the wide variation in quality which has been responsible for the widening in range of quotations. Some marks are flashy and lack keeping qualities. Prices generally on par with last week.

## CHEESE BUYERS CONSERVATIVE

There is little to report in the cheese market. Trading has been fair, although tending to be a bit slow, much in strong contrast with the heavy movements a week or two ago. There is practically no speculative buying and current needs are keeping sales rather low. Arrivals of State cheese are not excessive and holders are carrying them along at steady prices. Fancy marks are bringing anywhere from 20 to 21½c. Very good stock is obtainable at 20c and 19c covers average runs.

## EGG MARKET DRIFTING ALONG

Like the cheese market nothing exciting has happened in the egg market. Arrivals are fairly liberal, although nearby whites are beginning to show a decrease in supply, with the result that arrivals are cleaning up more satisfactorily and prices are beginning to turn in the seller's favor. If nearby shippers will watch themselves their market is going to turn strong in the near future. The big complaint in the market right now is poor interior quality. Eggs are showing the effects of hot weather, yolks being shrunken. On account of poor quality quotations extend over a wide range. There has been quite a scarcity of extra fancy nearby hennery browns which have been meeting a greater demand than can be supplied with current arrivals.

## LIVE POULTRY EASIER

During the past week prices on live poultry have eased off. One of the causes for this was the heavy arrivals of fowls and broilers via freight from western points. A strike in Chicago was responsible for diverting many shipments to New York. Express broilers have been meeting a good demand and as a result prices are holding fair. Advices indicate that supplies may be a little lighter toward the end of the week and prices may harden. In view of heavy freight arrivals this may be discounted to some extent and no doubt we will see values just about sustained. All prices on par with last week.

## '24 POTATO CROP SHORT

According to the July forecast, the potato crop this year, it is estimated, will be something like 39½ million bushels below that of 1923. This year's crop, it is now estimated, will be 372,968,000 bushels compared with 412,392,000 bushels in 1923. Of the States producing late potatoes in commercial quantities, Michigan apparently suffers the heaviest reduction of approximately 12,000,000 bushels. The Maine crop is estimated at 2¾ million bushels below last year, while in New York

it is estimated the crop will be 4¼ million bushels short. The 1924 Jersey crop, it is expected, will fall something like to 1¾ million bushels below 1923. Wisconsin figures show an anticipated reduction of 2 million bushels, while Minnesota shows approximately 3 million, North Dakota 1 million and a half and Colorado 1½ million bushels.

Long Island put its first potatoes on the market this week, shipments arriving from the extreme east end. These arrivals are fairly steady at \$2.75 per barrel, very few sales exceeding that price. Maylands are the fanciest potatoes coming in. They have a good fresh appearance and have been taking well in the trade. They have been bringing anywhere from \$2.50 to \$3 a barrel, but in view of a threatened and slowly developing weakness, it may be that we will see a slightly lower price. In fact, at the close of the week it was pretty hard to get \$3, most of the trade going on anywhere from \$2.25 to \$2.75. The potato market in general has been more regular.

## SHORT APPLE CROP FORECAST

In spite of the fact that the Horticultural Society survey indicates a larger apple crop in New York, nevertheless the commercial crop of the country this year is estimated, according to July 1 reports, to be something like 2 million barrels below last year's. This forecast refers to the strictly commercial crop. The big reduction is in the northwest. Washington alone estimates that she will run 3 million barrels or nearly 10 million boxes below 1923.

According to the Pennsylvania State Department of Agriculture, there is little chance that the 1924 commercial apple crop of that State will equal 1923 figures. According to 147 reports received from the principal fruit counties in Pennsylvania this year's crop will average 34 per cent. of a normal or full crop. On July 1 a year ago, the same growers reported their prospects at 66 per cent.

New Jersey and Delaware, both important early apple States, expect to have larger crops than last year.

## WHEAT AND CORN UP

According to New York State Department of Farms and Markets, the following prices prevailed, through billed from Western points:

The quotations given in this report show the approximate prices at which feed can be purchased per ton, and grain per bushel, in straight carlots delivered on tracks at points in the different freight zones as indicated. Mixed carlots cost approximately \$2.00 per ton more.

Retail feed and grain prices vary with different local dealers, depending upon their individual costs of doing business, volume handled, etc. In the case of feeds the retail price may sometimes be as high as \$5 per ton above the wholesale prices given in this report of July 12.

During the past week the grain market has become extremely active. Advices from Canada have thrown quite a scare into the wheat market and sent prices into new high ground. Gloomy crop reports from American and Canadian Northwest, has resulted in rapid

advances. July wheat is now quoted at \$1.20. Indications are that prices will not only hold up, but possibly go higher in view of reports that even though rain does come to the drought-stricken areas of the northwest, it will be too late to repair the damages.

Corn has kept pace with the advances of wheat, July corn being quoted at \$1.11½. Unfavorable crop reports indicate that this crop will be very short and with a good demand, the market maintains its strong tone. Oats and rye are also firm in sympathy with wheat.

Since Buffalo is an important milling center for wheat feeds and linseed meal, quotations are given for this point on both a through-billed and a local basis. Ground oats \$39.50; spring wheat bran \$25.50; hard wheat bran \$27.50; standard middlings \$26.50; soft wheat middlings \$33; flour middlings \$31; red dog flour \$37.50; dry brewers grains \$32; white hominy \$38.75; yellow hominy \$38; corn meal \$42; gluten feed \$41.25; gluten meal \$47.50; 31% old process oil meal \$42; 34% old process oil meal \$43.

## THE WOOL SITUATION

There are a lot of factors that are operating at the present time to the detriment of the wool market, in spite of the fact that stocks are apparently short. To-day western wool is selling 20c per pound below that of last year, scoured basis. Furthermore, the price in Boston is approximately 18c a pound lower than the London price, if we take into full account the import duty on wool. The price in Boston right now for Ohio fine strictly combing wool is about \$1.27½ a pound, scoured basis. The price of Australian warp on the London auctions on July 1, clean scoured, was \$1.13, which leaves only a margin of 12½c to cover transportation and import duty into the States, which return amounts to 31c per pound.

About everybody has an opinion for the existing depressions from the textile man and clothing manufacturer to the consumer. Some of the important factors held responsible are: high cost of labor and overhead in the textile and clothing industry; over-production; under-consumption; backward seasons; high rents; forced purchase of real estate; unemployment and part-time work; changes in style, particularly in women's wear; the tariff; competition with cotton and silk goods; two-pants suits; automobiles; hand-to-mouth buying by the retailer and the general uncertainty prevailing during the presidential year. The excuse of automobiles is that a large percentage of the automobile sales are on part-time basis and the installment payments take precedent over new clothes.

Last minute Boston reports indicate a better tone in the wool market with more confidence being evident. Prices are firmer on domestic wools, having advanced from 1 to 2 cents on grease basis.

# It Was a "Do-Session"

## Poultry School Showed How to Weed Out Culls

**M**OST of us remember something that happened the first day we went to school, but I will wager it was not the thing that the teacher was trying to teach us. This is what came in my mind last Monday when I started back to school, it being ten years since I left the State Agricultural College at Cornell and went to pitching hay on the home farm. It was at Cornell that I went back to school to attend the Poultry Judging and Breeding School which closed at the end of this week as the most successful of these schools which had been held for the last seven years. The thing that I remember at the starting of the school was the earnest expression on the faces of one hundred and four people, ranging in occupation from poultry farmer to college teacher. Everyone in attendance wanted to do something.

When the final sessions were coming to a close there was an undertone of expression coming from the teaching staff and others that "we really have gotten somewhere this year."

### Proper Culling Will Reduce Costs

I believe if the principles taught as to culling out the low producer and selecting the high producer were understood and practiced more generally by poultrymen, we would not have occasion to be so worried about what seems to be a close-ness to the point of over-production in the poultry business.

Ten years ago there were two or three men from the Poultry Department at Cornell who were available to demonstrate methods of culling. Now there are eight men, and these men are compelled to hold their work to purely demonstrative business, that is showing poultrymen who come together in groups, how to cull, rather than going to individual farms and doing the culling for the poultryman.

### Paid Cullers Now Available

In visiting with Professor Heuser, he told me that in addition to his extension staff who do demonstrative work that there would be working in the State this fall twelve "paid cullers." I believe that all of the men who are planning to do this culling work were in attendance at every session of the judging school. These "paid cullers" are available to poultrymen within a county and details as to how and when they are available and the cost can be obtained at the county farm bureau office.

So I say the judging school is something that poultrymen are demanding, in order that they may have trained men come to their farms to help them eliminate the low producers and select the high producers which they would want to keep as breeders, this selection to be done by judging from external appearances, thus

By E. C. WEATHERBY

making unnecessary trap-nesting work.

It would be unfair for me as an amateur to attempt to write down here how to select high-producing birds. Of course, I was tardy and absent from some of the lectures and demonstrations, as the circulation manager of the AMERICAN AGRICULTURIST has to be awake and at his job most of the time if he is going to keep up with the fine and useful services that Editor Eastman and his staff are each week rendering AMERICAN AGRICULTURIST subscribers. But I did attend enough sessions and handled enough birds so that I know right now that within the next few weeks a number of hens in my own flock are going to have a nice long ride to market with the Express Company.

### Your Hens Should Keep You

This elimination of the low producers, the poorest of which are now going out of egg production, is the easy part, yet how little it is practiced. All the feed and the labor of handling the feed is being thrown away on the "hens that you are keeping." It should be the other way round, "your hens should be keeping you."

When the session was drawing to a close the twenty-four instructors who were in charge of the school got together and drew up a statement regarding the definite points to be considered in selecting birds for production, working from external appearances. This statement may be obtained from Cornell.

### Books Don't Make Judges

The judging of eggs from the point of quality, uniformity, and market demands was another feature of the school, also how to judge the good and poor meat types of poultry.

I would not expect anyone to get correct ideas on how to judge a bird for egg production by reading an article, because there are so many things to be taken into consideration. One, to be successful, must be able to know what to see and then to be able to see it. I think the fact that twenty-four teachers of poultry husbandry came together for a week to study with each other and the students who attended, the characteristics that are identified with high or low egg production, is an evidence of this fact.

The thing that impresses me is that this was a conference that can be measured in the terms of dollars and cents. It was not a talk-session but a do-session for the poultry industry, with every one present going back to his poultry-farm, or to his place in some line of teaching or instruction, and putting into practice, or helping others put into practice, the elimination of the low-producing hens and the selection of the high-producing hens that will stay in the breeding-pen this coming season.

# The WINDMILL with a RECORD

The Auto-oiled Aermotor has behind it 9 years of wonderful success. It is not an experiment.

The Auto-oiled Aermotor is the Genuine Self-Oiling Windmill, with every moving part fully and constantly oiled.

Oil an Aermotor once a year and it is always oiled. It never makes a squeak.

The double gears run in oil in a tightly enclosed gear case. They are always flooded with oil and are protected from dust and sleet.

The Auto-oiled Aermotor is so thoroughly oiled that it runs in the slightest breeze. It gives more service for the money invested than any other piece of machinery on the farm.

You do not have to experiment to get a windmill that will run a year with one oiling. The Auto-oiled Aermotor is a tried and perfected machine.

Our large factory and our superior equipment enable us to produce economically and accurately. Every purchaser of an Aermotor gets the benefit from quantity production.

The Aermotor is made by a responsible company which has specialized in steel windmills for 36 years.

**AERMOTOR CO.** Chicago Kansas City Dallas Minneapolis Des Moines Oakland

## CHEAPEST PER TON CAPACITY

YOU CAN TELL THEM BY THEIR ROOFS

YOU know when you see a silo with an extension roof that it's almost certain to be a GLOBE.

The extension roof is the greatest improvement made in silo construction. Every Extension Roof is a GLOBE or a poor imitation. Introduced by the GLOBE SILO COMPANY it reduces the cost per net ton capacity—for it always enables you to fill it clear to the top. And it adds to the silo's appearance.

Put up a GLOBE SILO for summer feeding, and avoid the losses caused by a late cold spring and severe summer droughts.

Send today for our catalog and prices on Silos, Tanks, Water Tubs, Portable Poultry Houses, etc. Write to the

GLOBE SILO COMPANY, Box 104, UNADILLA, N. Y.

# BABY CHICKS

## 30,000 CHICKS WEEKLY for July and August Delivery

BRED RIGHT, HATCHED RIGHT, SHIPPED RIGHT

Hatched by men with 14 years' experience in one of the largest, finest and best equipped hatcheries in the state.

Order early. \$1.00 WILL BOOK YOUR ORDER

## UNADILLA SILOS

### Read Silo Character As you do a man's

**YOU** read a man's character in his face. Look to the same features on a silo to judge its qualities.

In the front of the Unadilla Silo, you can see many practical, valuable advantages that speak of the thoroughness, care and thought with which every detail of the whole silo is worked out.

Its continuous opening; water-tight, air-tight, non-sticking doors; wide, safe, easy combination door fasteners and ladder; door front assembled at the factory; hoop ends adjustable from ladder, these and many other features of the front of a Unadilla are some indication of the bigger silo value the Unadilla gives you for every dollar.

Send for catalog. You'll find it full of silo information you shouldn't miss.

For the man who orders early we offer a special discount that makes a real saving in your silo purchase.

The Unadilla can be had on convenient terms.

UNADILLA SILO COMPANY  
Box B Unadilla, N. Y.

## "Dey Vas All On to It"

(Continued from page 53)

is almost invariably the strongest of the brood, kicking over and maiming a half dozen others, and the farmer generally gets the hardest kick of all. Few would consider, when shoes are high, the advisability of offering the free use of a factory to some foreign concern that would come in and compete with our shoe manufacturers or one that would make cheap commercial fertilizers.

Our children, what few there are, are being driven to the cities, in search of something better than a fifty cent dollar. In the face of all this, let us consider that "The farmer is stronger than all the labor organizations, stronger than all the armies of the world. If Henry Ford had been sincere when he went on that spectacular trip to Europe; why, he wouldn't have gone, that's all. He would have turned to the American farmer and he would have said, 'See here, Mr. American Farmer, come get into my Lizzie here and we will go for a ride. The war will take care of itself and without your work there won't be much more war anyway. Men may fight with sticks and stones but they can't fight with empty stomachs.'"

If present conditions continue for a few generations longer they will find American agriculture being carried on by a class of pcasants. Such a condition is not desirable, to even the meanest American. There is but one remedy. That one remedy is cooperation. When we have a good organized cooperation and not until then will agriculture take great steps in advancement.—A. W. GIBBS, Chautauqua County, N. Y.

### Horticultural Society at the Rochester Exposition

(Continued from page 54)

Efforts have been made for twenty years to have the horticultural exhibits properly housed, but without avail. Recently the Fair authorities have given the Society a rebuff that makes it hardly possible for the organization to continue its interest in the horticultural exhibits at the Fair.

Members of the Society will remember that last year the Fair authorities placed the fruit exhibit in charge of a man not connected with the fruit interests in the State, wholly inexperienced in putting up fruit exhibits, unknown to most of the fruit-growers, and without a single qualification for the position not possessed by any other intelligent man in the State. This man brought with him helpers who were as little experienced as he in matters having to do with exhibiting fruits. At both the Rochester and Poughkeepsie meetings resolutions were passed asking the State Fair Commission to appoint as Superintendent of the Fruit Department some man connected with the fruit interests, who has recognized qualifications for the position. This the Fair authorities have refused to do, and have appointed the Superintendent who held the place last year.

Under these conditions may it not prove advantageous to this Society to transfer its attempts to build up a fruit exhibit to the Rochester Exposition? Rochester is in the very center of the fruit, nursery, vegetable and flower interests of the State. This Society meets there every winter. The city, the hotels and the commercial institutions have given us every consideration possible. May it not turn out that the Exposition would furnish us better facilities for exhibiting fruit than the State Fair, and cooperate more intelligently, congenially and helpfully with us?

This is a matter that your President and Directors want the members of this organization to think over and discuss at the coming summer meeting. As a great fruit-growing State, New York should have somewhere each autumn a creditable exhibit of fruit. We have never had such an exhibit at Syracuse. May it not be worth while to try to make annually a great exhibit of fruit at the Rochester Exposition? Those in charge of the Rochester Exposition will meet us, it is believed, more than half-way.

If this Society recommends its members to exhibit at Rochester, vegetable-growers, florists and nurserymen, none of whom are well satisfied with their treatment at Syracuse, should be asked to join in making annually a great horticultural display at the Rochester Exposition.

## His expenses too low!

Wichita Falls salesman reports  
on Ford results from Gargoyle Mobiloil "E"

**A** SALESMAN employed by one of the big packing houses relates this experience:

His Ford is equipped with a hub meter. After running 31,130 miles, his employers asked why his maintenance expenses were so much less than those of any of their other salesmen in the territory.

His reply was that he had never used anything but Gargoyle Mobiloil "E" to lubricate his Ford engine. In over 31,000 miles of running he had experienced no serious trouble.

Which should again remind the Ford owner that "Give me a quart of oil" can never assure such protection or economy.

Gargoyle Mobiloil "E" has behind it more *lubricating experience* than any other lubricating oil offered to Ford owners. It is not a gasoline by-product, but a specialized lubricating oil. You will notice marked freedom from carbon and overheating when you begin to use it.

For the differential of your Ford car use Gargoyle Mobiloil "CC" or Mobilubricant as specified by the Chart of Recommendations.

The Vacuum Oil Company's Chart specifies the grade of Gargoyle Mobiloil for every make and model of car. Gargoyle Mobiloil "E" is the correct grade for Fords. If you drive another make of car, send for our booklet, "Correct Lubrication."

for your  
HOME GARAGE

The 5-gallon can or 15-, 30-, or 55-gallon steel drum of Mobiloil provides an ideal supply of lubricating oil.

for TOURING

The new sealed 1-quart can is ideal while touring. Carry two or three under the seat. Now on sale in many states. Prices, 35c or 3 for \$1.00.

### Tractor Lubrication

The correct engine lubricant for the FORDSON TRACTOR is Gargoyle Mobiloil "BB" in summer and Gargoyle Mobiloil "A" in winter. The correct oil for all other tractors is specified in our chart. Ask for it at your dealer's.

# Summer Care of Babies

An A. A. Wednesday Evening Radio Talk Broadcast From WEA F

By DOROTHY DEMING

Acting Gen. Director of Nurses, Henry St. Settlement

ALL who hear me to-night—men, women and children—are veterans of the world war; not the war of 1918, but the war of yesterday, to-day and to-morrow, the war between the forces of civilization and the baby! This talk is not purely for mothers. It is for every survivor of that war, for you, grandfather, grandmother, father, mother, son and daughter, for you were a baby once. You have by luck or good management won your war and are enjoying your war profit—life, health and happiness, I hope. How did it happen you were not one of the 85 who die out of every 1,000 babies born each year? How did you happen to pass through that first critical year of life? Did you ever reflect that someone—probably your mother, your aunt or your old nurse—actually kept you alive until you were at least two years old?

Babies do not "just grow" like plants and trees. Their care is the most delicate, the most exacting and usually the least appreciated of any in the world. They do not obligingly sleep half the year. They do not thrive on sunshine and water only. They do not even show their wants in the early months of life, though the watchful mother can interpret a few simple signs. A truly difficult problem, and if difficult in the winter, how much more difficult in the summer when the babies' enemies multiply, the heat brings bodily discomfort and the parents' patience is tried to the breaking point!

### Three Secrets to Remember

There are three secrets in the successful care of your baby during the summer months. They concern the feeding, clothing and airing of the

baby. Let us take the first. If your baby is breast-fed, it has six times the chance for life that a bottle-fed baby has. It is twice as cheap and three times as easy to feed him. The moral is plain. On the other hand, if the baby must be

### That Old-Fashioned Color Test

OUR modern babies are, we believe, happier and healthier than babies in any age the world has known, but even so any mother will tell you that bringing a baby safely through the summer takes all her skill and intelligent love. Especially does the young mother need to understand clearly the simple but important rules upon which her baby's health and, very life may hang.

You remember the old negro mammy who scorned the use of the thermometer in the baby's bath. "I'se done bathed babies by the dozen, 'thouten that lil glass straw," she scolded. "I kin always tell efn the water's jest right, case ef it's too hot they tu'ns red and if it's too cold they tu'ns blue."

Miss Deming, expert nurse, whose clear, understandable talk on the care of babies in summer was broadcast over WEA F, on July 30, gives much better advice on infant bathing, feeding and clothing. We hope to have her radio again on other child welfare subjects.

bottle-fed, the milk should be the best obtainable. It should be whole milk from clean, tuberculin-tested cows. The formula should be ordered by a physician. The milk should be chilled as soon as drawn from the cow, bottled and kept on ice until time to use. I say on ice—and I mean on ice in its original bottle. Do not let it stand in the sun after delivery. Milk sours quickly in warm weather and even if it does not taste sour to you, changes may have taken place which baby's digestion resents. In June, July, August and

September it is safest to bring the milk to a boil before using for the formula. Do not boil more than one minute unless the physician has told you to do so. Then cool the milk as rapidly as possible by setting the pan in a pan of cold water. Be sure the utensils used in making the formula have been boiled. When the milk is cool, make up the formula, pour into the baby's bottle, cork and place in the ice-box. The nipple for the bottle should be boiled three minutes before it is placed on the bottle for the baby. Never allow flies in your kitchen. They may light on the milk or bottles. Flies may carry almost every disease you ever heard of. The smallest fly may mean a big doctor's bill. Do not expect the baby to take as much food on very hot days as on cool ones. You are not very hungry yourself and the baby isn't, either. Do not forget to give him some cool, boiled water two or three times a day when the temperature is above 90 degrees. If he is getting other food beside milk—as a healthy baby should, after four months of age—see that the food is kept cool, covered and fresh until time to serve. Your baby should gain a little in weight each week, even in summer. A loss of

weight is serious. If his digestion is upset, if he has diarrhea, appears feverish, fretful or has no appetite, send for the doctor at once. Stop all food and give only boiled water until the doctor comes.

### Shed Unnecessary Clothing

Next in importance to food is clothing. A great deal of harm is done by overdressing the baby in warm weather. When you are too warm and uncomfortable to move, baby is, too. When baby

Wayside, N. J., Has Found That Community Organization Helps Answer Perplexing Questions

ELLWOOD DOUGLASS

ABOUT three years ago in the community of Wayside, N. J., things began to happen. A group of men, led by D. Battjer, decided to meet together to discuss their common problems, and for this purpose an abandoned farm-house was used. The county agent met with them and as they sat around an old wood stove with the smoke so thick one could hardly see eight feet away, the idea of a community house was born. J. J. Heerdt, a poultryman, and Mrs. Victoria Green, a local school teacher, also had visions of things that might be accomplished in the neighborhood.

Wayside is situated four miles from Asbury Park, and at the forks of five roads leading respectively in the direction of Eatontown, Red Bank, Asbury Park, Lakewood and Freehold, one sees today the community house. It is meeting an acute need as a firehouse and also as a center for various activities, such as discussing plans for better roads, more economical crop production, more efficient schools and more satisfactory home management. It is a most important factor in the Boys' and Girls' club work, led by Miss Edith Marion

The old farmhouse where the idea took form.

Battjer, and in Home Economics work. The boys and girls had no place to meet. And the parents realizing this felt that if ever their dream came true the coming generation should have a place in it.

The building is truly a monument to the people by whom it is surrounded. They conceived the idea and did the actual work of construction. The approximate size is 25 x 50 ft. It is built with two floors, the ground one being of cement, a fair sized cellar for the pipeless heater and a small but convenient kitchen. The metal work on the second story gives a finish equal to that of the average church. If one could examine the lumber and especially the joists, he would find that in some

instances larger joists were used than seemed necessary. The secret of this is that much of the lumber was bought second hand from old buildings that were built to last and it is guaranteed to last as long or longer than any lumber bought from the yards to-day. And it was all bought for a song—a song sung by the men as they hauled it to the grounds during the early evenings when the days were long.

The electric lights were installed by local men under the direction of Marion Ridgway, an electrician who had grown tired of his job and settled on the farm. The cement foundation and the entire first floor was mixed and laid under the capable leadership of Harry Bowne, a local farmer-mason. And so it goes. Many an afternoon after ten hours of labor had been given to the soil two hours more were given to the community house. More than once twenty farmers have worked shoulder to shoulder helping to realize their dream.

One striking feature of the building is the fire-house on the first floor. Perhaps the most unique thing in the fire protection idea was the gathering together of the parts that make up the engine. Portions of a Ford car were bought in different sections of the county and put together by skilled mechanics who lived on the farms. The tanks needed were bought at a reasonable price. And, in fact, every piece of the equipment will be respected by every man, woman and child in the community because of the way in which it was collected. Since the completion of the equipment the enthusiasm has in no degree waned. In less than two months fires occurred in the neighborhood and the response to the call was equal to that of a well organized fire depart-

The building the folks in the neighborhood built.

ment, with the result that hundreds of dollars were saved for the men who had helped to build the engine. The first floor is also used for suppers, festivals and social gatherings and at such times the fire engine is rolled outside away from the field of activity.

To round out the scope of the building, a large room on the second floor is used to take care of business and educational functions. Here road problems are discussed, a lighting system for the community was agreed upon, and the county agent helps to solve various agricultural problems.

Many incidents prove the effectiveness of organized effort. For instance, only a few years ago Mr. Battjer was told that the time for repairing roads in the community had not yet come. After talking the matter over with his neighbors and coming together in an organized way, they were able to convince the powers that be that the time had come for some of their roads to be taken care of. The community house, though not started when the first problem came up, has been used to discuss later road questions. Electric lights for the community were procured in a similar way. It seemed that some nearby communities had been better organized in asking for more up-to-date schools and had therefore taken some of the children from this district. It was becoming a serious matter. The upper room was again sought and results secured.

## The Harvest More Precious Than Jewels

A Frenchwoman Tells Americans What the Land Means to Her People

A FRENCHWOMAN, before the war one of the wealthy landed proprietors of the Aisne, was entertaining the women of the Good Will Delegation at tea. The tables were spread not far from the ruins of her former homestead. Looking about at the scene of desolation, the blasted trees, the wasted ground and the shattered farm buildings, this Frenchwoman spoke of the day in 1914 when news reached the Aisne that the Germans were coming.

"I lost all my jewels," she said. "We had only an hour's notice before leaving. I did not have time to get them."

Some of the Americans were puzzled. Finally one of them spoke.

"But you had an hour," she said. "Wasn't that time enough to get your jewels?"

The Frenchwoman looked surprised. "Why, that last hour," she explained, "we were all busy getting the harvest into the barn."

It was a new thought to the American women who were studying conditions in France under the auspices of the American Committee for Devastated France. They were silent for a moment, endeavoring to grasp the implications of what this Frenchwoman had said; that the fields and the harvest are to the country people of France, rich and poor alike, under all conditions, the things of supreme importance.

In their trip through France, the Good Will Delegates had seen much of the countryside. What they saw had impressed them deeply. In the faint evening light they had seen the men and women working in the fields, still seeking to catch a few more moments of daylight. In the roads they had met the peasants walking the long miles between their cottages and their fields. They had seen the women carrying on their heads or pushing in wheelbarrows the piles of fodder for the barns. Especially they were impressed by the thrift and the untiring capacity for labor. Every corner, every hillside was planted, exquisitely tended. They had been able to guess something of the passionate love of the soil which dominates the country people of France. After a week of observation one of the delegates put her feeling into words.

"I never realized before," she said, "that we are just colonists temperamentally. We can't know what it is to care for the land, our piece of land, the way these people do. I suppose it's because the tradition of change, of being uprooted, isn't more than three centuries old in any of us, and in most of us not a third so old. These people are as much a part of the land as their crops or their trees or their vines."

These impressions recurred to the women of the Good Will Delegation as, several days later, they drove through the Zone Rouge, the section of France condemned as irreclaimable after the ravages of four years' war. There are miles of French road along which no patient peasants trudge homeward in the evening light. The landscape is still unrecognizable. The beautiful

By MARGARET K. LEECH

French trees are dead, or slowly dying, blackened by gas. The fields were ploughed for the last time by shells and the deep, transverse alleys of the trenches.

### Sacrifice All for Land

The impression of desolation and disuse is terrible. But the French will not admit that the condemnation of the land is permanent. Wonderful things have been done in the way of reclaiming the areas devastated by war. To awaken the

Good Will delegates visiting farm of M. DeBussy near Anizy (Aisne), viewing the ruins of the home destroyed by the invading army. Four years ago the farm produced nothing, while now it is almost back to normal.

fields to life again the French peasant will sacrifice his health and comfort—everything—for years to come.

Wherever their limited resources permit, the peasants have returned to reclaim their land. It is a labor demanding devotion, skill and a great patience. First the shell holes and trenches must be filled in and the barbed wire combed from the fields. This last is in itself no unimportant task. Still, after four years of work, the job of clearing the barbed wire goes on, and seems to be without end. Along the roadside are ranged the bundles of wire, neatly coiled in great burrs for collection and removal. Trucks piled with these bundles passed the motors of the party of Americans, as they drove through the countryside. In the stations they saw them being loaded on the freight trains and carried away. The business of tearing down the appurtenances of war is in itself a tremendous task.

### Harvesting a Crop of Shells

When the land has been cleared and filled in, the farmer must wait until the dry season to burn the weeds from his fields. Then he is at last ready to till the soil and prepare it for planting. Slowly and laboriously every foot of the fields must be turned over by hand, for it is not possible to use a plough at first. The soil is still sown with

explosives. When his implement, delicately manipulated, strikes metal, the farmer stops and digs around the spot. He carefully removes the shell and sets it aside to be exploded later. On their drives through devastated France, the American delegates learned to recognize the significance of the rows of shells along the road. Sometimes they could hear the muffled reports of their explosions in some unfrequented valley.

The fields represent a triumph of the courage and devotion of the French peasant. In the country of the Aisne the American delegates learned of the help which the peasants have received from the American Committee for Devastated France. Through the initiative and help of this committee more than thirty agricultural syndicates have been formed. In these syndicates the farmers are united for the restoration of their land. American tractors have played an important part in this agricultural reconstruction.

The French peasants of the devastated regions did not need to journey for great adventure. They simply came home. The familiar place, in which before 1914 their roots had been, was unrecognizable. They found a place to live. Perhaps it was a dugout or a cave or a quarry, a hole in a cinder pile, a corner of a ruin. They cooked their first meals over a fire made in the ground, with a German helmet for a soup kettle. There was no privation that they did not suffer, but they resurrected their fields. Their little money, all their effort, went for that. They might eat and sleep in a damp cave, but the fields were cleared and the crops sown. All of them worked, the old women and the small children. All of them are working still.

For the simple duties of the routine of the fields, these peasants of France have endured perils and hardships indescribable. They are quite unconscious of heroism. They have no time for it, because they are too busy with their job. For them the important thing is getting the harvest into the barn.

### One Way of Solving Community Problems

(Continued from page 66)

One problem recently taken up was the support of a county travelling library. When such a proposition is to be put up to the voters, it is necessary that a petition be signed by a certain number before the Freeholders are authorized to place the question on the ballots. When the list of voters was counted Wayside was outdone by no other community in the county.

Two other small rooms on the second floor are used for committee meetings or for groups of Club or Home Economics workers; while not infrequently more than one meeting is in progress at the same time. Since the community house is the result of their combined ideas, labor and interest, each one feels a personal interest and respect for it. Consequently, they carry away from meetings held there many more facts than they would do from a building which meant nothing to them individually.

### Milk Prices Must Advance Immediately

**F**LUID milk in the New York City market may be roughly divided half and half between that which is sold in bottled form and that which is sold in cans from the wholesale market platforms. Nearly all of the fight for markets and the price-cutting which has made so much trouble and cost the dairymen of this territory so much during the last few months has been with this so-called platform milk. The greater part of this milk is furnished either by the League or by the other cooperative plants. Almost exactly the same situation has existed in New England between the independent cooperative plants and the New England Milk Producers' Association. It is a conservative estimate that in our territory alone this competition has cost dairymen at least a million dollars a month.

An effort was made through the Committee of Fifteen to bring the warring interests among the milk producers of this section together. The League withdrew from this Committee because it claimed that a majority of the Committee's members did not represent farmer-owned plants and therefore had no way of enforcing resolutions for higher prices. The League was at least partly right in this contention, but no one can deny that the plants of the Eastern States Milk Producers and of the independent cooperatives are farmer-owned. No one denies either that the chief trouble in the market is between the League plants and these other farmer-owned plants. **THEREFORE, A TREMENDOUS RESPONSIBILITY RESTS UPON THE DIRECTORS OF THESE PLANTS, BOTH WITHIN AND WITHOUT THE LEAGUE, TO BRING ABOUT AN UNDERSTANDING IMMEDIATELY.** There has been a lot of talking and casting of blame back and forth, but still the situation continues and still the farmers are getting the ruinously low prices. The surplus period is now passed, pastures are short, grain prices are climbing every day, the hot season in the cities is increasing the demand; **AND IT IS TIME, HIGH TIME, THAT THE PRICE OF MILK TO FARMERS BE SUBSTANTIALLY INCREASED.** It is time for action by those who are in a position to bring about results. Not very much action is needed, either. There is no immediate need of elaborate, complicated committees, milk exchanges, or conference boards. All that is needed is just a little plain understanding between the leaders of the Dairymen's League Cooperative Association and the directors of the Eastern States Milk Producers and other farmer-owned plants in this territory to respect each other's business and not to steal each other's markets.

### The Most Neighborly Act

**T**O anyone who says that the world is going to the bow-wows, we commend the letters about the most neighborly acts which we are

printing on the next page. Another page of these will follow shortly and we hope to find room later for several more of these letters. Not in our experience have we read anything that has been more of an inspiration than these letters. We received nearly a hundred of them, and they were all fine, so good in fact, that it was a most difficult job trying to determine which were best. We are not sure that the ones to whom we have awarded the prizes are the best. We know they were good, but so were the others.

But the matter of the prize was of small moment. The big thing is that these letters prove that, the pessimists to the contrary, the old world is still a pretty good place, a place filled with kind, sympathetic, loving folks.

### The Fruit Exhibitors and the State Fair

**T**HE New York State Horticultural Society is considering recommending to the fruit and vegetable exhibitors that they change their exhibits from the State Fair at Syracuse to the Rochester Exposition. The Society points out that Rochester, being located in the center of the great fruit and garden belt of Western New York, is particularly convenient for a large number of fruit and vegetable exhibitors.

But the chief complaint of the Society and of hundreds of fruit growers is the lack of cooperation from those in charge of the Fair. We confess to considerable sympathy with this complaint. Of all farm products, nothing adds more to a fair than the beautiful shows of fruits and vegetables. Yet it would seem that there has been the least consideration given to the exhibitors of these products. Year after year fruit and vegetable people have asked for a suitable building on the New York State Fair Grounds in which to make their exhibits. But each year something has come up to interfere and they have therefore been obliged to divide their exhibits and put them in unattractive buildings and spaces.

Last year some members of the Horticultural Society were encouraged to believe that at last the State was going to build a Horticultural Building on the fair grounds in keeping with the magnitude of that branch of farming in the State. But talk of getting the Dairy Show here was brought up, and the Dairy Show management would not come unless the State erected a coliseum. The coliseum was put up and again the fruit people took a back seat. Of course the responsibility for there being no suitable building did not rest on the Fair Commission but on the legislature.

There have been other grievances. It is claimed that the appointments of superintendents of the fruit exhibits have been made more from the standpoint of politics than from that of any real qualifications for this responsible position. It is stated that both political parties have shown little consideration for the wishes of the fruit people in the management of their department at the Fair.

It is, therefore, little to be wondered at that the horticultural interests are considering going elsewhere. Still, it is doubtful if such a move will result in benefit to anyone concerned. There can be but one big successful State Fair.

The State has a lot of money invested in grounds and equipment at Syracuse. To get returns on this property, all branches of farming in the State should use it. We, therefore, most respectfully suggest to our friends, the fruit and vegetable growers, that they be patient just a little longer, and to those who have the Fair in charge, that they leave nothing undone to welcome the horticultural interests at the Fair and to give them the accommodations they need and should have.

### When Farmers Come to Wall Street

**Y**ESTERDAY the Farm Bureau Agents of New York, together with a party of farmers, numbering nearly a hundred men in all, were the guests of the City of New York. No stone was left unturned to show these men that the city was appreciative of the farmers' efforts

to really understand how farm and food products were handled in this greatest market in the world.

The men were here at the invitation and under the auspices of the New York Central Railroad for a three-day trip to study the city markets. A full account of this is given on another page. Yesterday, the third day of the trip, the men were invited by the Dairymen's League Cooperative Association to visit their fine offices on Forty-second Street, to see how this cooperative organization actually operated under the pooling system. After the visit in the League's office in the morning, the men in big sightseeing buses were conducted by motor-cycle policemen from Forty-second Street downtown to WEA station, from there to the City Hall, and then to the docks at the Battery, where they took a boat furnished by the city administration to travel around Manhattan Island in order to study the terminal markets and the city's shipping facilities.

The most dramatic and impressive part of the whole trip was the stopping of all traffic by the motor cops while the buses carrying the farmers traveled with sirens screeching without a single stop from twenty-five to thirty-five miles an hour around either the left-hand or right-hand side of street cars and other traffic, while the gaping crowds, held back by policemen, wondered what notables were passing. We rode from the Battery to Fourteenth Street with the boys at five o'clock when the home-going traffic is the densest. It was a unique experience.

While traveling through the downtown crowded districts, including the passing of Wall Street, we were impressed with the progress farmers have made and the better appreciation city folks have of where the food comes from and of the men that produce it. On the other hand, these men will go back to the country after three days, including one whole night passed in the markets, with some real understanding of what the farmers' great marketing problem in so large a city is. When these men talk about the markets, they will have an idea of what they talk about.

The effort that the New York Central Railroad makes every year in bringing the large group of farmers to the city for this purpose is to be highly commended, and the enthusiastic comments of the men who have made the trip give full credit for its success to Mr. R. W. Quackenbush, General Agricultural Agent of the New York Central. Mr. Quackenbush carefully planned the schedule so that not a minute was lost by the group in getting about the city and in making the best out of their time to study those market activities which are the most important.

### Eastman's Chestnuts

**A**LONG about this time of the year or a little earlier, city folks begin to think about a vacation, and to wonder if it is not about time to go and pay their farmer relatives a good long visit. If there are no near relatives, cousins five times removed, or even casual friends, will serve, provided only that they live on a farm. I suspect that a great sigh of relief is breathed in many a farm home when the long-staying city friends finally have to tear themselves away and leave the farm to settle into its ways of peace and rest again.

Hospitality is all right, but there are limits, and when Mother sweats in the hot kitchen for weeks at a time to cook for her own family and as many more visitors, and when Father begins to wonder what he will have left to sell after he has fed all of his guests, the smile of welcome becomes rather forced.

One of these summer guests found her hostess sobbing one day violently in the corner of the kitchen.

"Oh, my dear," she said, "what are you crying so about?"

"I—I—I am c-crying because I'm f-fraid you'll never c-come to s-see me any more."

"Why, Mary," said her guest, "don't feel badly about that. You know I'll come again."

"But h-how c-can you come again, IF YOU N-NEVER GO AWAY THIS TIME?"

# The Most Neighborly Act I Know

By A. A. READERS

unbelievably on the counter of a Christian merchant, when changed into warm clothing and stout shoes. Many kindly deeds have been done in our community, but because of the youth of the participants and their tact and compassion this act is written large in our memories."—Mrs. M. C. S., Schuylkill County, Pennsylvania.

\* \* \*

## A Tragedy Brings Prompt Help

"BLACK night, rain in torrents, a deafening crash from the barn, a burst of flame. Jimmie, student farm-hand, getting out the horses; then—running, gasping men. The neighbors were coming!

"Morning. The machinery and tools gathered in over fifty years of farming all gone. Three dead animals, smoking ruins.

"Then the neighbors built us a big shed. Everyone scarce of help, time to begin haying, they shouldered our burden as well as their own. They helped cut and stack hay, drew lumber and cement, helped concrete, and for many days they worked side by side with the carpenters. They came two days with teams and drew the stacked hay to the new barn. I cannot begin to tell all the help they gave and we can never repay them. Is neighborliness dying out? I answer most emphatically no! 'A neighbor near by is better than a brother afar off.'"—J. Y., Delaware County, N. Y.

\* \* \*

## An Operation Under Difficulties

"I WAS called to my next door neighbor's one cold, wintry day, found the doctor there and his patient—a young married woman—at death's door with an internal hemorrhage.

"A surgeon and a nurse had been called from the nearest city at once. A neighbor started to meet them, another went for the priest and still another for a doctor to administer the anesthetic. By 6:30 all were in the house.

"Hurriedly the dining-room table was prepared for the patient. It was found to be unsteady and one neighbor, on his

hands and knees, held it steady through the operation, while another held the lamp for the doctor to see better. The operation successfully over, the surgeon said the patient had lost so much blood that only a saline solution in her veins could save her. At the last moment he broke the glass end to his syringe. I was sent in haste to find a medicine dropper; this was sterilized and used, a vein in her arm was opened and the prepared solution injected. The woman told me afterward that she was cold to her waist but that went through her veins like fire. As the surgeon took his leave he said 'without the neighbors' help this woman would surely have died.'"—S. H. R., Oneida County, N. Y.

\* \* \*

## Jitney Service for the Doctor

"A YEAR ago last February I was ill with pneumonia and my husband was also confined to his bed with the flu. Having five little children with scarcely any money to buy food for them, the oldest child being only eight years of age, what were we to do? The neighbors solved our problems for us. They brought food for ourselves and children. They took turns in bringing the doctor to and from our home. This was done through the doctor's and neighbors' kindness as the doctor's charges to us would have been much higher if he had had to hire a livery to make his calls.

"This all happened when the thermometer registered zero, but with so many warm hearts around us it sure took the chill off the weather and our appreciation is so great we are watching for a chance to help those that have been so kind to us."—D. L. S., Onondaga County, N. Y.

"NOT many miles from here a couple bought a farm shortly after their marriage, and began a life struggle in what was to be either failure or success. For several years they toiled; children came and with them came sickness. The crops proved a failure, money was very scarce, their buildings going to wreck, and bankruptcy staring them in the face. Finally death visited the family and took one of their little ones.

"Discouraged, broken-hearted, the winter facing them, hardly enough food to pull through, the wife needing clothes, the babies without shoes, the man considered himself down and out. One bleak November morning a neighbor looking out of his window saw the man loading his household goods on his wagon. He immediately went over to see him, and in a pleasant way he remarked, 'Moving, John?'

"Right there John sat down and opened his heart to the old farmer. He told him, 'It is either move or the poorhouse for me and mine.' 'Who told you to move?' the old man asked. The reply was, 'I'm done, what else can I do?' 'Put your things back in the house, then go over to my barn and get grain for your horses. I'll see you later.'

"About 4 P.M. the same day the slick team of the neighbor stopped at John's farm with a wagon loaded down with flour, shoes, boots, clothes—a supply that easily lasted half the winter.

"Take these things into your house,' was the order, 'and if you need more go to the store and get it. Your credit is good. Don't worry about your bills, they have been taken care of. There are some pigs at the farm; call and get them. And now, John, go to work.'

"That neighborly act put life into him and from that moment John became a different man. When I last heard of him he was supervisor of the town that he was running away from only a few short years before, a discouraged, broken-hearted young man. He offered to pay his benefactor back, but the old man shook his head and remarked, 'If you ever have the chance to do for another as I did for you, I will be more than paid.'"—W. P. H., Delaware County, N. Y.

\* \* \*

## This Neighborly Act Lasted Two Years

Second Prize

"SURELY the farmer who believed that folks nowadays were not so neighborly as they used to be, does not live in our neighborhood.

"One winter, a few years ago, a man that lives near us was taken ill with pneumonia. He did not respond readily to medical help and it was two years before he was again able to work. He was living on a large farm and had a twenty-five-cow dairy.

"Fortunately his wife and fifteen-year-old daughter could milk, for obtaining farm help at that time was almost impossible. During the farmer's two years of illness twenty neighbors coming from a radius of four miles held a 'bee' at frequent intervals. They cut and buzzed his wood, planted and harvested his crops and also did his haying for him. One near neighbor entertained the younger children at her home for a number of weeks. Another did the washings for a long time while others helped out with the milkings. All this was cheerfully done. Everyone seemed glad to have been able to help in their neighbor's time of trouble."—C. M., Cortland County, N. Y.

\* \* \*

## Where Neighborliness Flourishes

Third Prize

"AMONG these hills where neighbors are from a mile to three miles apart, mostly with strips of woods around, so we can't see distance

lights, we value a helpful friend who isn't afraid of germs or the loss of a night's sleep.

"A woman, mother of six little ones, had her twelve-year-old tend the brood by a warm fire, while for ten days she made a morning trip through drifts with three feet of snow on the level to care for an old woman ninety years old whom no doctor could reach and who had only a sixty-year-old son (not too wise) to care for her, and brought her through pneumonia. Not owning skis, it was just a case of wade and walk stone walls two miles and back.

"May I tell of this same woman who made a neat little coffin, laid a two-year-old baby in it and carried it on her lap to its last rest for a Hun-

What Was Left After the Storm

What Was Left After the Neighbors Got Through Helping

—See letter by J. Y.

garian family who spoke little English. That same season she helped care for the dying father and a few days after she saw him laid by his baby. She stood two nights and a day over the mother o welcome and save a new and fatherless baby boy. When you ask this neighbor if she is afraid she will catch disease or expects pay, her answer always is, 'What you do in Christ's name calls for no pay and knows no fear.'"—W. W. S., Chenango County, N. Y.

\* \* \*

## Even Children Are Neighborly

"A LITTLE country schoolhouse in our neighborhood furnished the setting for a very neighborly act.

"In a near-by home illness and inefficiency had brought suffering and want. The children came to school undernourished and thinly clad. The other pupils in the school sought a remedy. Children from twelve to fourteen years of age organized a secret society with mysterious password, grip, etc. Then the 'society' gave an entertainment. Hand bills announcing it were scattered over the township. A varied program was announced—solos and duets, clog dancing, negro minstrels, a funny little play—quite an imposing amount of entertainment for only a few cents.

"How the people responded! The wee schoolhouse overflowed. Several years later the actors would smile at the crudity of the performance but that night young hearts beat high with happiness as the shekels poured in. A committee waited on the parents in the unhappy home and were assured that their offer of help would not be offensive.

"The next day the 'gate receipts' stretched

## Your Boy Can Handle This Two-Way Plow

Your boy can take a man's place in the field with the John Deere-Syracuse Two-Way Plow. He will enjoy riding it and you will like the work it does. It is simple—easy to understand—nothing complicated or confusing.

### John Deere Syracuse Two-Way Plow Built in the East for the East

is self-guiding. The driver's hands are free to manage the team. Pressure of the foot on a lever angles the frame to the exact degree desired when plowing on hillside or in irregular fields. This enables you to maintain furrows of even width and relieves the team of side strain on the hills.

Equipped with right- and left-hand bottoms—all the soil is thrown the same way. No dead furrows or back ridges.

Extra wide bearing base prevents plow from tipping on the hills.

Automatic shifting hitch maintains the correct line of draft.

Automatic horse lift raises bottoms. Hand levers serve same purpose when operator is walking—handy when obstructions are encountered.

All steel and malleable frame gives lighter weight and greater strength. Riveted.

Designed especially for plowing in stony, hilly land. Does excellent work on the level, being especially valuable in irregular fields.

The mechanism cannot get out of order.

Let your boy try out this plow at your John Deere dealer's. Write today to John Deere, Moline, Ill., and ask for FREE BOOKLET ET-43. It tells all about the Two-Way Sulky.

**JOHN DEERE**  
THE TRADE MARK OF QUALITY MADE FAMOUS BY GOOD IMPLEMENTS

## Post Your Farm and Keep Trespassers Off

We have had a new supply of trespass signs made up. This time they are made of extra heavy linen on which the lettering is printed directly. There is no card facing to be water-soaked by the rain and blown away by the wind. We have had these new signs made up of extra heavy material because severe storms will tear and otherwise make useless a lighter constructed material. We unreservedly advise farmers to post their land and the notices we have prepared comply in all respects with the law. The price to subscribers is 95 cents a dozen, the same rate applying to larger quantities.

## With the Barnyard Golfers

Things Are Warming Up for the Contests

THE farm bureaus and the AMERICAN AGRICULTURIST certainly started something when we set out to find the best barnyard golfer in New York State. Many contests are already arranged in many of the counties, and interest is warming up among the horseshoe pitchers to win the county contests and then go to the State Fair to get the prizes of \$100, \$50 and \$25 offered by AMERICAN AGRICULTURIST for the teams who can pitch horseshoes better than anyone else in the State.

V. A. Fogg, county agent of Chenango County, claims he is going to have over 15,000 people this year at his coming county picnic on August 6. He sends us a picture which we publish on this page of Mr. Charles Merrill of Sherburne, who is on the County Big 4 Picnic Committee and chairman of athletic events. Mr. Merrill will be in charge of the horseshoe pitching contest and will have several men to assist him. Mr. Fogg writes:

"Mr. Merrill is a large farmer and a very busy man, but he finds time to work for the good of his community and county, and states that he is going to see to it that there will be fun and recreation throughout the day on August 6. "Our committee is well under way and men in charge of the contest are very enthusiastic. It has already created a lot of interest around the county and I am sure it will be one of the biggest drawing cards of the day."

Earl D. Merrill, county agent of Monroe County, is also enthusiastic about this good old-fashioned game of horseshoes. He writes:

"Our County Horseshoe Pitching Tournament is developing with much interest under the direction of Harold Barnum and Adams Basin, who is chairman of the committee in charge and an enthusiast of the sport. The contest will be held in connection with the County Picnic at Genesee Valley Park, south of Rochester, about August 22."

Harlo P. Beals, county agent of Otsego County, evidently is planning for a contest, but he does not say when. He wrote to us July 21 and asked us to send a supply of copies of the rules.

Charles L. Messer, county agent of Cayuga County, says:

"I am very much interested in horseshoe pitching and expect to have a contest at our county picnic August 27. Would appreciate it very much if you would send us copies of the rules for distribution."

W. C. Stokoe, county agent of Livingston County, writes as follows:

"Our County Picnic will occur on August 21 at Long Point. The custom in this county is to call the head of each of the agricultural organizations in the county into the farm bureau office where the work of putting on a good picnic is divided up into committees and the personnel of the committee is chosen.

"Thos. Burgett of Avon is Chairman of our Sports Committee. We have had two Horseshoe Pitching Contests to decide the individual championship of the county and both years Donald Black of Genesee has won. We haven't had any team pitching at the picnics. J. A. Reynolds, formerly county club agent here, had charge of the contest last year and ran it off under the same rules as published in the AMERICAN AGRICULTURIST. I have a note

in my field notebook which says, Get a picture of Donald Black, and as soon as I get one, I will send it in."

M. C. Hammond, county agent for Broome County, asked for copies of the rules so that he could send them to the Grange and the Dairymen's League locals, with the idea of holding county contests either at the Whitney Point Farm the week of August 11, or at the Farm and Home Bureau Picnic the following week. He says:

"I have hopes of being able to work up enough interest to make a good live county contest from which we can send a county team to the State Contest at the State Fair."

Mr. Charles Merrill of Sherburne, Chenango County, New York, who will have charge of the barnyard golf contest of the County Big 4 Picnic on August 6th.

### State Vegetable Association Tours Markets and Nassau

PAUL WORK

THE New York State Vegetable Growers Association has been for some years in the habit of holding summer field meetings up-State. In response to repeated requests a tour was planned for the New York markets and Nassau County gardens for July 14 and 15. The crowd was not large but those who made the trip were deeply impressed with what they saw and they will be boosters for the future. One visitor arranged with the County Agent for a bit of guidance for his two sons whom he expects to send

down shortly. The same grower picked up an idea which he plans to put to work and which he thinks will save him dollars in both cost and yield. He will plant his cucumbers in drills instead of hills in the future.

The trip began at 12:30 A.M. with a tour of the markets under guidance of Mr. S. G. Evans of the State Department of Farms and Markets. Up-State growers saw Oswego lettuce, Madison County peas and New Hampton celery at the produce houses and were able to tell the difference in the salability of different lots. The visit to the piers gave an impression of the vastness of the food-handling enterprise. On this morning there were 22,000 barrels of potatoes, 100 cars of muskmelons and 135 cars of peaches. Mr. E. A. Williams, foreman of the Pennsylvania piers, has been studying marketing as well as freight handling and he predicted that if the day's shipment of peaches, which broke all records, resulted in a serious price drop, there would not be over fifty ears on hand Tuesday morning. Diversion orders would catch the cars at the Potomac Yards near Washington and scores of cars would go to other cities. This ready response to conditions has developed only within a few years and is only possible with commodities that are graded and standardized so that they can be sold by wire. Another interesting exhibit on this pier was a car of melons on their way to the Jersey Meadows to be dumped. Probably the shipper will be peeved when he gets a freight bill, but the visitor could readily see the troubles—somewhat un-uniform fruit as to size and ripeness and also poorly made crates which were very easily broken.

After a brief rest and a short trip about town, the party in charge of

(Continued on page 72)

# Up-Staters Visit Markets

County Agents and Farmers Study Distribution

FROM beginning to end the marketing trip of the New York State county agents and their guests, held July 21, 22 and 23, was just brimful of interest. I accompanied the party on two days, and due to the necessity of getting the AMERICAN AGRICULTURIST out, I had to forego the last day's trip. Mr. Eastman was on hand on that day as per his editorial. Many times I could not help thinking what a wonderful opportunity it would be for our readers to take a similar trip through the great Metropolis and see what this party had an opportunity to study. It would take a whole lot more space than has been allotted me for this story to tell everything we saw. I must confine my story to a few high spots and leave the rest to the imagination of my good readers. A lot of credit is due the New York Central Railroad and its agricultural agent, R. W. Quackenbush, in particular, for putting on this excellent trip.

On Monday the first stop was made at the Hotel Commodore, where all hands visited the magnificent kitchens, pantries, and storage rooms to give the boys the chance to see first hand the vast quantities of food that such a gigantic hostelry uses in a day. From that visit they got a good idea of what the hotel trade demands in New York, considering the dozens and dozens of hotels that take care of the city's guests.

### On Board the "Paris"

The steamship trade was the next phase of the marketing business and to get an idea of this we all went down to the great transatlantic piers along West Street and, through the courtesy of the French Line, had the opportunity to inspect the gigantic "Paris," one of the largest steamers in the transatlantic service. During the visit the ship was being unloaded and loaded. While we were aboard a consignment of Swiss cheese was being taken off the boat.

From the "Paris" we went over to the store of the Nathan Schweitzer Company on 14th Street and got an excellent insight into the dressed poultry market. We were addressed by several members of the firm, on what New York City wants in the poultry line. It is their opinion that the average nearby farmer with a small flock can best market his poultry alive, shipping it in crates via express to the large receivers of such consignments. Mr. Will Schweitzer said, "The dressed poultry game is a business in itself which calls for expert skill. The average man cannot hope to compete with these feeders who supply the majority of the dressed poultry trade. The small man can best dispose of his surplus by shipping via express to the live poultry receivers in the Metropolitan market."

On Monday night the party visited the New York Central milk platform at 130th Street, the Borden's Plant at 127th Street, and the Dairymen's League Plant at 19th Street and Avenue B. A few of the problems of city distribution were studied at these places.

By FRED W. OHM On Tuesday we started off by going on to the Jersey City Terminal of the Lehigh Valley Railroad to see nearby eggs coming in. We saw a whole lot besides eggs. There were stacks upon stacks of crates of live poultry, grapes, country dressed calves, butter and other farm produce being unloaded from the cars. A representative of the Lehigh Railroad opened a number of cases of eggs and showed us why egg shippers get lower prices for their eggs and why the railroad has so many claims to take care of.

### Faults of Egg Shippers

As I said before, I could write a couple of columns on this subject alone, but to summarize it here are some of the outstanding high spots. Long eggs cause the greatest amount of damage. About a dozen cases were opened and the percentage of "cracks" was very heavy in some and in every instance they were the long eggs that stood above the others in the fillers. Another cause of broken eggs was second-hand fillers, resulting in damage to eggs on the outside as well as those on lower levels due to the contents of cracked eggs running through the crate, smearing eggs below. In addition to reducing the value of these eggs through smearing, a lot of damage was done to the fillers. Thin shelled eggs also were responsible for a lot of damage.

Another very important point brought out by the railroad people was the trouble experienced with old tags. When some farmers ship they do not remove the old tags or deface them sufficiently with the result that lots of times a case will go to the wrong consignee and that starts a lot of fun, with everybody getting mad at the end. Incidentally the eggs are held on the platform extra long and there is a lot of spoilage by overheating which means lower prices.

### Live Poultry Arrivals

It was interesting to see the methods employed by various shippers of live poultry, the majority of arrivals being broilers. We saw arrivals from Dryden, Ithaca, Moravia, Romulus, Ovid and dozens of other up-State towns. Some shippers used the greatest makeshift crates imaginable and a number of members of the party could not help remarking that it's no wonder that some farmers get little or nothing for their shipments when you see how they send their stuff in to market. Crates made out of old boxes contained dead birds. The best crates contained the most likely looking shipments of broilers. The men who ship these took just as much care building the coops for expressing the birds as they did in raising them and it was the consensus of opinion of the party that these shippers of good stuff were getting a price that made care, all around, worth while. Several of the boys remarked that if they were buying live poultry they certainly wouldn't be attracted by a crate that contained a couple of dead birds.

## Safety at the Crossing

**P**ROTECTION of life at railroad crossings is a work that the New York Central Lines, through its Safety Bureau, has been aggressively engaged in since the coming of the automobile.

While the records show that only a small proportion of automobile accidents occur at railroad crossings, loss of life at crossings is a cause of deep concern to railroad managements.

When it is realized that 70% of crossing accidents occur in daylight, that 63% are in the open country where approaching trains can easily be seen, and that the majority are at crossings with which drivers are very familiar—it is plain that the number of crossing accidents can be greatly reduced if automobile drivers will not attempt to cross the tracks until they are sure that it is absolutely safe to cross.

## Among the Farmers

### State Fair Secretary Endorses "Golf" Contest

**T**HOUSANDS of farmers throughout New York State who are becoming so enthusiastic over the good old game of pitching horseshoes will be interested in the following letter just received by AMERICAN AGRICULTURIST from Mr. J. Dan Ackerman, Jr., Secretary of the New York State Fair:

"Announcement that horseshoe pitching had been recognized to the extent that it would have a place in the program at the coming New York State Fair aroused considerable interest in Syracuse, and I have no doubt that state-wide elimination contests leading up to a championship contest at the Fair will awaken genuine interest wherever this game of skill is followed.

"Every organization picnic or outing now has this horseshoe pitching game and there is every reason to believe that the interest in the sport is general. I heartily approve of the AMERICAN AGRICULTURIST's project and predict that several thousand people will witness the crowning of the horseshoe pitching champion at the Fair.

"I can see nothing to prevent the holding of the grand finals in the ring of the new Coliseum, which, with its tanbark floor and large seating capacity, should prove ideal for such a match from the view-point of the contestant and spectator."

grubs last year. All crops are very backward and late. Corn is not looking well, while potatoes look fairly good. Most farmers have signed up to have their cows tested which will be done as soon as arrangements can be made. Farm and home bureau meetings are being held regularly every month. Summer boarding-houses report a poor year so far.—R. T. A.

**Suffolk County.**—The north side of Long Island is much in need of rain. The potato acreage is above normal. Blight in many cases has made its appearance and in some instances has been hastened by early morning fogs followed by hot sun and sultry weather later in the day. Corn is making fair growth. Haying is about completed with yield not quite up to last year. Less grain was harvested this year than usual. Cabbage is looking fairly well though much resetting has had to be done.

**Erie County.**—Farmers are busy haying. The crop is a good one. Potatoes are looking well. Lots of poultry being raised in this section. Small fruit will be plentiful such as cherries and berries.

### New York County Notes

**Delaware County.**—Farmers are making hay. Farm help is very scarce and demands high wages. As a result most farmers are getting along with little help. The hay harvest was good. The Ayer-McKinney Creamery at Delhi paid \$1.70 flat price for May and \$1.80 for June milk. The May price was 15 cents more than was paid by the Nestle's plant at Walton. Some farmers are selling their dairies but cows are so low that farmers cannot get their money out of them even when they do sell. Some farmers are taking city boarders to increase their incomes and apparently are making more at that than at dairying.—E. M. N.

**Alleghany County.**—We have had a very cold backward season. Very few oats were sown in this section this year and they are looking bad. Not as many potatoes were planted this year as usual. At present the ground is too wet to cultivate and on account of the cold wet weather the corn crop is very poor. More beans were planted this year than ever and as a rule they looked pretty fair. More cows are being kept around here than before. Veal calves are selling for 10 cents a pound on the hoof.—T. E. B.

**Chautauqua County.**—Farmers are busy. Meadows that have been well taken care of by seeding and fertilizing are producing a fine crop of grass. The last dividend from the condenseries netted us \$1.44 for 3½ per cent. milk or less than 3 cents a quart. Prices like this are going to cause the farmers to go out of the dairy business.—P. S. S.

**Warren County.**—As this is being written, July 21, farmers are busy haying. In general the report is that there will be a very light crop. Help is not very plentiful. Feed in pastures is poor as most ground was badly cut up with white

### State Vegetable Association Tours Markets and Nassau

(Continued from page 70)

Secretary T. H. Townsend made its way to the State School of Applied Agriculture at Farmingdale, where Director H. B. Knapp and his staff welcomed them and guided them about the place. The crowd was ready for early bed in the dormitory that had been assigned and was on its way by 8:30 the next morning.

Up-State gardeners were impressed with the condition of land and crops and also with the apparent smoothness of operation at the farm of John Boos at Hicksville. Mr. Boos moved two years ago from Forest Hills where suburban development had crowded him out. He now operates over a hundred acres. At the time of the visit, workers were digging every other pair of rows of potatoes, revealing Hubbard squash plants already well above ground. The remaining rows would be removed as soon as the vines begin to run. Thus two long season crops are grown in one year.

Schneider Brothers, Charles, August and Frederick, have developed an organization on a sixty acre farm to care for trade, both wholesale and retail, which comes to them to be supplied. Grocers from a distance of seven or eight miles are willing to come after produce and pay good prices because they can be assured of the quality they need, and get the goods fresh.

Dinner was served by Massapequa Grange and a brief session was held with President C. E. Haw of Syracuse presiding. Most of the discussion centered around the control of plant enemies, with Dr. E. E. Clayton and Dr. H. C. Hockett of the Long Island Vegetable Research Farm bringing the latest word from their studies. The afternoon was spent visiting some of the more intensive gardens in the vicinity of Valley Stream.

The above shows potatoes being dug on the farm of John Boos at Hicksville, Long Island, to make room for the growing squash plants, just visible at left of potatoes.

# Committee Should Continue

## H. H. Lyon Says It Can Work Without League

PEOPLE differ in their opinions respecting the wisdom of the League men withdrawing from the Conference of Fifteen. That will take care of itself, however, in time. So far as I can see there is no need of the other twelve discontinuing their efforts. There is a mountain of work for them right ahead if they really have the good of farmers of the territory at heart. They can oblige the League to come back into conference whether they (the League) desire or not, for public opinion will compel that once the others do their work well. I believe also that the League folks will desire to come into conference when this work is once begun. That work is presumably to formulate a plan to bring their fluid prices up to those announced by the League.

It seems to have been the desire of the "twelve" to work on the fluid price. The League will not dare to cut under them if once they elevate their price to that in the League schedule. Then they have the job of deciding how they can arrange to care for their share of the surplus milk. These pieces of work can as well be undertaken without the League as with it. Moreover as stated above such an effort honestly begun and continued will oblige the League to come into consultation with them if desired. I see no reason for the twelve members being discouraged by the action of the League men.

In my opinion all this will have to be done before any real good can come of a discussion of prices between the different groups. There may be other matters that the League can work on along similar lines at the same time that the others are working on these problems. Doubtless there are many things for them to be thinking about. We can all say something about these matters, but I believe that they are generally being considered by the League management. I will not try at this time to mention what seem to me to be some of these questions. It might be no harm if farmers would say what they think about changes so far as the League is concerned. Those mentioned for the others can hardly be objected to by any dairymen whether League members or not.—H. H. LYON, Chenango County, N. Y.

### How Jones Cares for His Bull

W. E. FARVER

MY neighbor, whom for personal reasons we will name Jones, keeps a pure-bred bull which is kept confined. That bulls require special care is self-evident, but just how becomes another story. Let's listen to the way Mr. Jones advises in his own words:

"You ask me for my methods of handling a bull. It's simple, like all other things are when understood. Well, here goes, if you can write fast enough to get all I say.

"The fact that most bulls of any age whatever must be kept confined practically all the time is reason enough why they should have comfortable quarters, clean, and well supplied with pure air and sunshine.

### Many Bulls Sacrificed Too Young

"The dairy farmer who invests a large sum of money in an improved sire to build up the milk-producing qualities of his herd can not be expected to bring about the desired results unless he gives him plenty of opportunity to perpetuate the good qualities he has inherited from his superior ancestry. There are enough examples of young bulls which were sacrificed before their owners were able to judge of their value. Instances are on record where young bulls were sacrificed for small prices and later became valuable specimens. It does not pay to sacrifice a young bull for which a handsome figure has been paid. If there is no breeding

back of him then I consider a man foolish to invest any money in him whatever. There is no more lamentable fact known to dairy farmers than that so much good blood has been lost by selling some of the best bulls before their breeding qualities were known.

### Needs Best Care from Calthood

"It is easily seen that most dairy farmers keep young immature bulls simply because they lack the necessary conveniences to handle an aged bull. Frequently it is because they fear results when obliged to care for and lead him out when his services are needed. This is the only reason I can see why so much of the good blood which might have been used to build up high-class dairy herds has been sacrificed through ignorance and neglect. "Experience has taught me that from the bull's calthood days on he should be well-fed, given good care and regularly trained. Good care and proper handling will do much to combat the tendency to become cross and unruly. When the bull is about a year old, I place a ring in his nose and the instant the wound is healed we start handling him. A halter is used and a staff is always handy. While the object in view is the training of the bull, I always manage to look out for number one,—myself. I find it pays to never permit a bull to get you in a tight place. Nearly all the accidents with bulls might have been avoided, if the man who handled the bull had taken proper precautions to protect himself.

### Value in Plenty of Exercise

"I give my bulls frequent and plenty exercise for I find it is one of the most important factors in the handling of breeding bulls, and also the one most sorely neglected. Any cross bull, or one hard to manage can easily be quieted and easily handled if given plenty of exercise on a tread power. With a tread power, a large bull can do many odd jobs, such as grinding, pumping, or running a fanning mill. I believe it pays every farmer who invests in a purebred sire to also invest in a good stall and tread-power. With these comfortable surroundings and means of working off his surplus energy he will be healthier and more potent, because of the enforced exercise.

"You ask how I feed my bulls. Well, I find that the bull should have an abundance of good palatable feed and my experience proves that such feeds as clover, alfalfa and mixed hay, wheat bran, and ground oats make an ideal combination. Some corn silage may be fed along with the above named feeds, but my experience tallies with that of many other breeders in that roots or green feeds are of greater value than corn silage. It has been found that the impotency of many breeding bulls has been due to feeding corn silage in excessive quantities and not feeding enough protein feeds.

### Teasing Invites Disaster

"Another matter worth mentioning is that no one should ever be permitted to tease a bull. Disastrous accidents may result from this practice. We tolerate none of it, and any employee caught teasing a bull, had better pack his clothes. Much strenuous training can be spoiled by thoughtless teasing.

"Keeping the stall free from an accumulation of manure is an evidence of the bull receiving the care due him. It is no mark of a good dairy farmer to have his herd traveling through the fields coated with manure. Nor should the bull be a walking advertisement of the best fertilizer known. We make it a point to keep the stall clean and an abundance of straw placed in for bedding regularly. This alone insures comfortable and clean quarters and a clean, presentable animal.

"Last but far from least is the water supply. No animal can exist without water and the bull is no exception. We

## Classified Advertising Rates

ADVERTISEMENTS are inserted in this department at the rate of 5 cents a word. The minimum charge per insertion is \$1 per week. Count as one word each initial, abbreviation and whole number, including name and address. Thus: "J. B. Jones, 44 E. Main St., Mount Morris, N. Y." counts as eleven words. Place your wants by following the style of the advertisements on this page.

### The More You Tell, The Quicker You Sell

EVERY week the AMERICAN AGRICULTURIST reaches over 130,000 farmers in New York, New Jersey, Pennsylvania and adjacent States. Advertising orders must reach our office at 461 Fourth Avenue, New York City, not later than the second Monday previous to date of issue. Cancellation orders must reach us on the same schedule. Because of the low rate to subscribers and their friends, cash or money order must accompany your order.

### EGGS AND POULTRY

100 APRIL HATCHED pullets. Black Jersey Giants and R. I. Reds, crossed. \$1.25 each. P. L. HOLTZ, Patton, Pa.

PULLETS—Eight to ten weeks old, Anconas, \$1.25 each; Leghorns, \$1.10 each; Reds, \$1.25 each. CARLTON NIPHER, Kanona, N. Y.

### PRINTING

250 GOOD business-size white envelopes printed and sent promptly, postpaid 80c. Samples free. WALTER G. COLLINS, Cohocton, N. Y.

# Service Bureau

## An Old Fraud Revived—Legal Questions

AGAIN the resurrection plant bobs up under various attractive names in tempting advertisements. Beware of them all, cautions the United States Department of Agriculture.

In past years various concerns have advertised this plant for sale under different names, and usually at prices far in excess of its market value. It is often sold by these concerns as "Rose of Jericho" or "Rose of Sharon" and said to be obtained from the Holy Land and to have been mentioned by "Solomon, Isaiah, and other prophets." The circular of one dealer, which calls it "Semper Viva or Rose of Jericho" and offers it for the modest price of 25c, describes it as "a deodorizer" and "a preventative of disease." Claims are also made that it is "a preventative of moths and that if a few are scattered about the house they will keep out mosquitoes."

Another concern attempts to illustrate its appearance by giving a very poor figure of some cultivated primrose. The plant is said to bloom every thirty days, bearing "the most fragrant flowers in existence." Resurrection plant, is of course, not a seed plant, bears no flowers and is odorless, although the specimens sold by such concerns are often artificially scented.

### "Special" Prices Much Inflated

A correspondent in North Carolina has recently sent the Department of Agriculture a specimen of this plant put up by an alleged "importing" company of New York, Jerusalem, and Montreal, and sold as "Genuine Rose of Sharon." After giving directions for growing the plant, the circular states: "Do not cut slips from these plants, as they propagate from seed. The roses go to seed only in Palestine." The regular price of this company is for plants "potted, in blossom, 25 to 22 inches growth, red, white, or pink, \$12.00; the bulb, dormant, red, white, or pink, \$2.75." As a special advertising offer, a set of three colors is sold for \$2.75, or one "bulb" for 95c.

The true "Rose of Jericho" is a small white-flowered annual of the mustard family, is a native of desert regions from Arabia and Syria to Algeria, and is supposed to be the "rolling thing before the whirlwind" mentioned in Isaiah. After flowering, the leaves fall off, and the branches become hard and woody and roll up into a ball, bearing the seed pods inside. Dried plants retain for years the property of opening when moistened, although they do not actually "come to life".

The resurrection plant bears no flowers, has no fragrance or insecticidal value, and is in no way connected with the Crusaders or the Holy land. Its sale under the name of "Rose of Jericho" or "Rose of Sharon" at exorbitant prices constitutes an evident fraud. Its proper market value is about 25c and it is well worth growing as a botanical curiosity. A relative of the ground cedar and ground-pine used in making Christmas wreaths, it is a native of the deserts from Texas southward into Mexico. In the dry state the branches, which are thickly covered with scale-like leaves, roll up into a brown ball, but when placed in water they expand forming a green, leafy rosette. The plant is offered for sale in curio shops, particularly in Southwestern States.

### Correspondence Course Refund

A REFUND of \$40 on a correspondence course that proved unsatisfactory to one of our subscribers recently was made at the instigation of the American Agriculturist Service Bureau. Our subscriber had claimed the refund on the satisfaction or-money-back guarantee of the company. The firm selling the course claimed that she had not completed it or complied with all their conditions. Upon our showing that she had, the check was sent, and we received this letter:

"Through your kind and patient ser-

vice I have finally received my \$40 refund. Why they suddenly changed their attitude, I do not know. However, I am sure that I owe the return of my money to you and that without your aid the company would still be owing me the forty dollars. I cannot thank you in words, because the service you have rendered me is not to be estimated in words. Will you kindly let me know at once the charges for your services?" E. C., N. Y.

There are no charges for any help the Service Bureau may be able to render.

### Receipts for Milk, but No Money

DID you ever hear of the Ice Cream Sales Corporation? Several Pennsylvania farmers, especially those around McKeesport, have learned of its existence to their sorrow. For agents of the firm have canvassed dairy farms along the road, taking milk and giving receipts, with the understanding that payment was to be made "the end of the month."

When one locality was pretty thoroughly covered, the traveling milk truck moved on and no more was heard. One subscriber who reported the case to us said that many farmers along the route were cheated out of milk to the tune of from \$25 to \$50.

We made inquiries of the Pennsylvania Department of Agriculture, but neither their Bureau of Markets nor the Dairy-men's Cooperative Sales Company, operating in that territory, could tell us anything about the Ice Cream Sales Corporation. No answer was received to our communication calling upon the Company to settle up its debts.

### Look Out for the "Cut Above the Market" Man

The men behind this scheme, having once found it profitable, may move on to another section and open operations under the same or a similar name. Look out for them and in general look out for anyone who offers to buy your produce at higher than market prices, but who fails to show ready cash or furnish irrefutable references. If you are solicited by firms making such glowing offers, report it to us and to the State Department of Farms and Markets. We can tell you whether the buyer is licensed and bonded, and you may be saved money and worry. In selling farm outputs it is pretty hard to "beat the game" and there's apt to be a hidden catch of which you are the victim.

### Questions About Legal Matters

"I took a little boy about two years old after his mother died and cared for him, clothed him, and educated him until he was fifteen, his father paying nothing for his care, clothes or education. Could his father have any hold on him now? Would we have more right to the boy's care than his father? He does not seem to like his father, and we are like a father and mother to him. I am the only mother he ever had, and he comes to see us twice or three times a year. He is married now and has a family. Could you tell me what the law is in a case like this?"—J. W. S., New York.

In reply to your inquiry we wish to say that unless you adopted the young man about whom you wrote, you have no claim upon him whatever. Even if you did adopt him, after he became twenty-one he became free and independent, and anything he might do for you afterwards would simply be in fulfillment of a moral as distinguished from a legal obligation. It would seem that your kindness to him should prompt him to care for you in times of necessity, and if he is unforgetting—as his visits would indicate—you should have no cause to worry.

\* \* \*

"Do farmers have to carry compensation on hired help? Have had insurance agents tell me they did not. Where could I get it and how much per year? Would one policy be accepted on more than one—say I changed men inside of six months or a year?"—M. K. O., Pennsylvania.

In reply to your recent inquiry concerning workmen's compensation, it is our opinion that the insurance requirement does not cover farm laborers nor domestic servants. However, you can provide for such insurance in one of the larger companies if you so desire, but it would seem to be unnecessary.

# "Masterful Men"—By Jesse Easter

GRANDFATHER Preble swept the change off the counter, hastily stuffed Grannie's crochet thread into his pocket and followed Sam'l onto the sidewalk. His eyes shifted from the dandelions to the ruddy street, across to the brown cottages with the starched curtains, and into the air.

"Old Hooper," he said casually, with a jerk of his thumb back toward Hinkensville's Grocery, "Seems to think a man's yaller if he lets a woman have her say-so."

"Wal, I dunno," said Sam'l like one not wishing to hurt another's feelings. "When it comes down to it, seems like womin generally likes to have a feller do what they pertend they don't want him to do."

"Tut, tut,—nonsense." "You jest perk up yer ears and yer eyes, Preble," Sam'l stopped to wave his can perilously near Gramp's whiskers. "You'll find its those 'masterful men' the novels are alwus cackling about that the womin folks respect, yes sir!" And Sam'l pranced off lifting his feet high and bringing them down ringing.

Grandfather Preble chuckled along the way at the unexpected foolishness of Sam'l. "Did Sam'l think then that Grannie didn't respect him? That she wished him more masterful?—after all these years with never a set-to? Dern foolishness!" And Gramp turned up the wooden walk hitching his arm comfortably over the purchases for Grannie.

BUT there are little shafts that persist, that nourish themselves in the dark and spread. For usually grandfather Preble's goatee faced the world at a notable angle and usually he walked with a jerky briskness up and down the garden paths that he and Grannie "puttered around in o' mornings an' odd times." With hands behind his back, one loosely catching the other that held a charred pipe, he would sniff the breezes that mingled the fragrance of the honeysuckle and wild currant, watch the round-bodied bees burrowing into the thick clusters of pink blossoms and twist a wrinkled finger under the white rose with the petals that clung.

Now he shuffled up and down the center path in a grumpy abstraction while a gopher kicked moist black earth into a little hill at the roots of the cactus. When his shoulders began to smart under the sun, he jammed the pipe into his mouth and pulled himself up the two back stairs, stair by stair.

At the kitchen door the odor of boiling soup, rich with garden carrots and green peas, made him raise his head quickly, then lift his feet with minute care and direction toward the magazine lying open at his breakfast place.

"Gramp, are you there?" came a voice serene with the placidness of years and full of that something that would give a tramp at the back door no hesitation in asking for a meal; a voice intangibly coaxing and hard to refuse.

But Gramp snorted, shoved a hand over to the range and gave the flame a twist down.

"Uh huh," he growled.

"Then please turn the gas low under the soup. It must be most done by now."

"Humph!" and Gramp switched his magazine off the table and into the dining room to his chair with its faded cushions worn thread bare where the head and shoulders rested, and placed by the window where he could watch "that college chap a trying to raise them fool chickens," and any chance peddlers or canvassers before they rang the bell. On the wall opposite was an enlarged copy of his and Grannie's wedding photograph now forty-

eight years old. He was sitting with conscious manliness, stiff and stern; while Grannie stood shyly by his side, one arm resting on the back of the chair.

In those days they had sung, "When You and I Were Young, Maggie," and walked by the "creek and the creaking old mill," and Grannie had said that she knew Gramp would never turn out like that shifty Tom Simpkins, and Gramp had told Grannie that she'd never be cantankerous like Sal Williams. No, they would always be just as they were. Well, Grannie had been a mighty bright housekeeper; the chair backs were never without their crocheted doilies, nor the table without its bowl of flowers, but—

Gramp twitched down into the hollows of his chair and as he shifted his glasses, shot an injured glance at the placid Grannie enjoying the morning's news. Then he sat glaring at the illustrated pigs, their arrested little eyes staring straight out of the picture, but with no appreci-

limits. She had asked, "Please, what time is it?" when she was right next to the clock!

"Cain't you see?" roared Gramp.

"Dear me," exclaimed Grannie, "Didn't Hooper sell you the right kind of tobacco?"

SOMETHING must be done, Gramp resolved. But how? Perhaps the best way would be just not to hear Grannie. Yes, when Sam'l came, he would fetch no shawl.

Soon the regular vibrations of Sam'l's cane sounded along the walk. Very softly Gramp raised himself out of the chair and started for the front door.

"Will you see if I left my shawl in the hall, please?" came Grannie's beseeching voice as her soft white ringlets appeared above the newspaper. "The air's still a bit chilly these mornin's."

Gramp shuffled straight on. When he came back he was talking with great emphasis on pig raising.

Gramp fidgeted. Belle was the youngest granddaughter and had just become a graduate nurse. Well, he could swear there was a pain and she couldn't say there wasn't. So Gramp kept to his chair that morning and when Sam'l came it was, "Please give this paper to Gramp." And when they were going out, "Mr. Snipe, jest see that the beans ain't burning, please." At which Gramp would beam, chin whiskers extended, as he watched Sam'l's stooped back.

But Sam'l's hands were large and awkward and the gas would go out altogether, or the water would spill all over the linoleum. He never could see the scissors if they were right under his nose; while his muttered cussing made Gramp's brows furrow unevenly, and he would give the door a quick shove, lest Grannie hear.

"Chuckle-headed," Gramp scoffed to himself, and took to wandering back and forth from kitchen to dining room. It was a nuisance, too, to keep his arms inert, or use them and make a wry face; he complained inwardly.

"Well if here ain't Mis' Snipe," Grannie broke in on his abstractions.

"Humph!" said Gramp. "I'll clear out. She's enough to drive a person deaf with her quacking." But her quacking became very interesting to Gramp when he heard "rheumatism." He stepped softly into the kitchen doorway.

"Yes, they do say that onc't a person gets the rheumatism they've got it fer good. And I always did think as how you and Mr. Preble got along so nice-like—he being such a help and all. My Sam'l never was much of a hand a helpin' around the house, and at the end o' the day I'm clean petered out. I says, 'If there were only a few more men like Mr. Preble,' says I, 'There wouldn't be sech a heap o' divorcees!'"

"Gramp," said Grannie in a soft and proud voice, "Is what I call a masterful man. He jest takes and manages everything,—jest like I alwus knew he would."

"That's jest it," sighed Mrs. Snipe, "If we only—"

But Gramp had heard enough. As Grannie took the biscuits out of the oven for dinner, he busied himself setting the table.

"Dear me," said Grannie, "Don't strain your arm, Gramp!"

"Humph! It was only a little cold—all gone. Jest look!" And Gramp swung his arms side ways, over head, and around Grannie.

"Dear me," gasped Grannie, and then, "Dear me, I forgot to bring in the cream."

"I'll fetch it," and Gramp pranced out with a jerky briskness.

## You Can Have Tea Roses

WE all want tea roses. We can have them too. Buy the small plants in pots of your favorite kinds and they will grow in a bed of good soil and bloom until frost, and along in the fall they will be fine. Feed them in the summer, first with a sprinkling of nitrate of soda and later with bonemeal; or you can water once every two weeks with liquid manure made by soaking a peck of mixed cow and poultry manure in a tub of water and diluting until the color of weak tea. Make a water tight box to cover them in winter and most of them will live over all right.—RACHEL RAE.

\* \* \*

Truths and roses have thorns about them.—PROVERBS OF SPAIN.

ANOTHER BROAD HIGHWAY SETTING

ANOTHER American Agriculturist reader who has lived in the Broad Highway country and knows the familiar spots mentioned in that delightful serial has sent us in an actual picture of the forge where Peter worked and the tavern called The Bull, across the roadway. Our readers will remember that Mrs. Hopkins of Cortland, N. Y. sent pictures of other spots, but did not have one of Sissinghurst. Mrs. Allen Albee of Hamilton, N. Y. has sent in this picture and writes:

"I too was interested in the story, The Broad Highway, having been born next door to the Forge where Peter worked and it was my home for twenty-nine years. The sign post of the Bull is to the right of the picture and the Forge is the low building across the road."

ation of their pork and bacon values. Soon Sam'l Snipe would totter along and "stop fer a bit" in his morning walk. Then they would argue awhile on how the Battle of Bull Run would have been fought if aeroplanes "had been thought of" or how the Bluecoats would have managed with submarines. And when Sam'l's voice ascended the cracking pitch, and he waved his cane along Gramp's whiskers, Gramp would suggest a walk in the garden. After that Sam'l would make a start for home, moving to the door by degrees.

But that was not all, not by a long shot. When Gramp got up to let Sam'l in, Grannie would probably say, "Will you see if I left my shawl in the hall, please? The air's still a bit chilly these mornins." And then before he sat down, "Please hand me the rest of the paper," or if she happened to be darning, "Dear me, I must have left the scissors in the kitchen! I thought sure I brought them in with me," and she would look earnestly around her chair and the floor until Gramp pranced after them.

Always Gramp had done these little errands with a sort of big brother pride and a certain unsuspected chivalry until lately he suspicioned a slight hiccupping chuckle from Sam'l. Then he found himself waiting for Grannie to speak as he moved from one place to another, and he began to wonder if there wasn't some part of the house that didn't hold something of immediate need. Once he had muttered and grumbled and Grannie had said, "Dear me, you h'aint got a toothache, Gramp? 'Cause there's a whole bottle of oil o' cloves in the pantry."

But this morning she had passed all

"Didn't you bring my shawl?" Grannie leaned her head around in searching surprise. For a moment Gramp hesitated, then banged out into the hall. And that morning it was Sam'l who suggested a walk in the garden.

Gramp followed him with ears alert.

"Just see if there's water enough in the soup, will you? It might be boiling away." Grannie's voice followed.

This time Gramp walked straight on out after Sam'l. He puttered around pointing out this flower and that, calling the hollyhocks poppies, and the blue marguerites for-get-me-nots; Sam'l correcting with patient regularity. Gramp rapped his pipe against a manzanita. The soup could boil to nothing for all he cared!

"Ha, jest look at this feller," called Sam'l pointing to the gopher hole. "Jest a minut," called Gramp, "and we'll fix him. Grannie has some gas balls that do the work." And he hurried into the house where he poured plenty of water into the soup. Then he went out with the gas balls.

"But something's got to be done, just the same," he kept muttering to himself.

"Well, they oughter do the work," said Sam'l peering over his glasses.

"Eh,—oh, yes, yes." The Gramp chuckled in an uncalled for way. "Yes that oughter do the work," he said.

That evening he complained of a pain in his arm. The next morning it was worse.

"Speck it's rheumatism," said Gramp with a twist of the mouth betokening pain.

"Dear me," said Grannie anxiously, "I'll jest write to Belle to be sure and drop in this week end. You'd best take care right at the start."

# Canning and Food Pointers for Summer Days

*Mrs. E. B. Terbush Gives Helpful Suggestions on the Proper Methods and Equipment*

SOMEONE once questioned "What is home without a baby?" and every housewife asks herself at this time of the year, "What is a cellar without plenty of canned fruits, vegetables and meats?"

Canning fills many with dismay, because the results are so often uncertain; and what is more of a catastrophe than to discover when you visit your cellar in the winter for a can of corn or peas or meat, that the liquid on the vegetables looks milky and has a vile odor, and that the meat is moldy? Then it is that a woman feels like sitting down on the bottom step, and weeping tears.

However this is just the crisis that calls forth every ounce of spunk and a determination to find out what is wrong with the methods used. Perhaps the result will be that the egg money will go for the buying of a pressure cooker or other more reliable sterilizer.

Without a question the pressure cooker is the most satisfactory piece of canning equipment for home use on the market. However, it is not the only safe and sure method for producing perfectly canned goods. There is a steam cooker with racks in, which requires only a small amount of water and then the old-fashioned big boiler in which the cans are covered with water and boiled. The nice part about the pressure cooker or steam cooker is that they may be used for preparing other foods as well as for canning.

## First Aid in Successful Canning

The accompanying illustration shows the pressure cooker in use. It is of cast aluminum with a pressure gauge and dial and a heavy ground top fastened with clamps. The twenty-three quart size cooker is the most satisfactory size for home use and will hold six quart or seven pint jars.

An alarm clock set to ring when the required time for cooking is up is a good reminder and does away with any possible error due to a much tried memory. Lacking an alarm clock, a pasteboard one with movable hands may serve the same purpose.

The colander is indispensable in the canning operation for washing and draining the fruits and vegetables before canning. For blanching purposes, a wire-mesh basket or a cheese cloth loosely held is best. A good sized wide-mouthed funnel makes for greater ease, cleanliness and speed in filling the jars.

## Have Equipment Ready Before Starting

Although any jar in good condition may be used, the snap-top jar is preferred by many canners. The covers of these are quickly and easily adjusted and are more sanitary than the screw top kind. If the bale is sprung so it does not "snap on" it may be sprung back by holding it in the hands, and pressing it down with both thumbs in the center. A canning fork which will lift out the cans and prevent burned hands is a big comfort.

Because many housewives enter upon a canning season with some uncertainty, a few canning hints passed along may help solve a problem here or there. I like by far the best the cold-pack method of canning. It is easier, requiring the handling of the fruits or vegetables but once, takes less time, and the chance of spoilage is greatly minimized.

In preparing the food for canning, only the best should be used. After it has been thoroughly washed, and blanched where needed, it is ready to go at once into the clean jars.

## Why You Blanch Some Things

It is not necessary to blanch all vegetables and fruits. In fact no soft fruits should ever be blanched. The purpose of this treatment, which consists of plunging the material into hot water, and boiling it for a few moments is to start the color,

reduce the bulk, and loosen the skin. It also helps to remove some strong flavors or acids that are not always desirable.

Immediately after the material is taken from this boiling water bath it is plunged into a pan of cold water for a moment. This will set the coloring matter, giving the food a good rich color, and hardening up the pulp. It is then ready to be put at once into clean jars. The packs should be loose so that the heat will penetrate easily to the center. Fill the can to about one-fourth inch from the top, add salt, water in case of vegetables or syrups for fruits, fasten the cover by the top bale, and the can is ready for the cooker.

In preparing vegetables for canning, only as many as can be processed at one time should be gotten ready. While the first lot is cooking, additional ones may be prepared. Especially is this true of greens, peas, beans and corn. Flat sour

**A**N EXCELLENT soup mixture is made by filling a jar with different kinds of vegetables, beginning with peas and adding diced carrots, corn, celery and string beans cut in small pieces. A diced green pepper and one small onion may be added to give flavor. Can the mixture under 10 pounds of steam pressure for 50 minutes. Be especially careful in preparing peas, which should not be allowed to stand after removing from pods.

loves to develop at this time, and if after a few weeks, we discover a slight sediment at the bottom of the jars, and bubbles coming up, we will know what is wrong. If peas are shelled at night, left in a dish until the next morning, heat will be generated, and flat sour will frequently show up after canning. The flavor is not greatly changed, but such foods should not be eaten. Flat sour will also show itself by causing milk to curdle, when heated with the food.

After the jars have been processed for the required time, they should be cooled as rapidly as possible guarding against drafts. To test the seal of the screw top jar after cooking, let it stand turned upside down for some time. If no small bubbles appear around the top, and no liquid runs out, the seal is safe. In the case of the snap top, a perfect seal is shown when the bale may be dropped down, and the can lifted by the cover. Now they are ready for labeling, and storing in a cool dark place.

## Keep Records of Canning

I find that keeping a catalog of canned foods is interesting and helpful. It shows what has been canned, and how much of each food. At the end of the season, it is surprising how much garden produce has found its way into the cellar ready for winter and summer use. And there is no limit to the food that may be canned, from all sorts of soups or roasts to mush-rooms, salad combinations and drinks.

Now for just a short review of the canning operation:

1. See that all equipment—your canner, jars, rubbers, colander, funnel, etc., are tested and ready to begin the operation.
2. Use only food that is fresh and in good condition. Prepare only as much as can be canned at one time.
3. Prepare carefully, following rules for blanching and sterilizing.

4. Be sure of perfect seals and cool quickly after processing.—Mrs. E. B. TERBUSH.

## Summer Care of Babies

(Continued from page 66)

is perspiring, he is too hot. On the hottest days, his band and diaper are enough clothing. Be careful, however, of sudden changes in temperature. A cooling storm, a draft from an open door or an electric fan, a motor ride or a sudden change in the night, call for more clothes. All his clothes must be kept dry and clean. It is well to boil the diapers regularly during the summer. Sun them well and always keep in a covered pail after use. A serious form of diarrhea may be caused by diapers left exposed to flies.

When baby seems very warm and restless, a warm (not hot) bath may be given in addition to the cleansing morning

nurse for advice at any time. If she is not listed in your telephone book under Board of Health, District or Visiting Nursing Association, you can find out about her from the Town Health Officer at the Town Hall or from the State Department of Health in your State Capitol.

I am a nurse, not a doctor, but if there are any questions I can answer or any books on the care of babies during the summer that you would like to read, let me know. Your baby is the hope of the future. Upon his strength may depend your own comfort and happiness in old age. Surely we owe it to those who nursed us through our own babyhood to see that the present generation has a goodly heritage.

## Oregon Pickle Recipe

- |   |  |
|---|--|
| 1 quart very small white onions                       | 1 quart very small cucumbers                               |
| 2 quarts of string beans                              | 3 quarts of green tomatoes, sliced and chopped very coarse |
| 1 head hard white cauliflower, torn into small pieces |  |
| 1 medium head of white cabbage, chopped coarse        |  |

When all is ready, mix through it  $\frac{1}{2}$  cup salt and set away for 24 hours. Then mix together 6 red peppers, chopped coarsely, 4 lbs. mustard, 2 lbs. allspice, 2 lbs. celery seed, 2 lbs. cloves, 1 cup sugar, 1 cup best ground mustard—after 24 hours drain the chopped pickles and stir the spices and the chopped peppers, all together. Cover with good, pure cider vinegar and cover and set on stove to simmer till tender. Stir to avoid sticking.—Mrs. J. W. RAY.

## Two Unusual Desserts

### Dessert Supreme

**BOIL** 1 can of condensed milk in the can for three hours, keeping the can covered with water. Set aside to cool. To serve, cut off top of can, slip contents on to a plate and cut in slices. Serve with fresh or canned fruit, or whipped cream. This makes a very rich dessert and will serve 6 to 8 people.

### Grape Fluff

- |                               |                             |
|-------------------------------|-----------------------------|
| $\frac{1}{4}$ lb. marshmallow | $\frac{1}{2}$ pint cream    |
| $\frac{1}{4}$ cup grape juice | 1 tablespoon powdered sugar |

Cut the marshmallow in small pieces and soak in the grape juice for 2 hours. Whip the cream stiff and beat it into the marshmallows with the sugar. Serve cold.—Mrs. ERY CAMP.

## To Keep Silver Clean

**PREVENT** silver from tarnishing and you'll save elbow grease cleaning it. The new Jersey College of Agriculture suggests these precautions:

- Keep your kitchen well aired. Metals soon become coated in a stuffy kitchen.
- Never let rubber touch silver.
- Do not wrap silver in bleached paper or cloth.
- To remove egg stains, rub silver with salt before washing, and rinse in ammonia and water.
- If silver is scratched, rub with a piece of chamois dipped in oil.

## The Help One Another Corner

**THIS** way of making "the best pie ever" is passed on to other A. A. readers by Jessie B. Acers: "Try putting about a cup of green currants with pie plant. Add enough to fill the crust using the sugar and thickening as for the pie plant alone. This is a delicious filling change."

# Teaching Children to Concentrate

*Suggestions for the Busy Housewife from Other Home Makers*

HOW long do your children keep at the things they are doing? Do they always finish what they start? Do they know how to concentrate?

Business men tell us that the one great trouble with the young folks they employ is their lack of the habit of concentration; they cannot get results because they have not learned to focus their attention.

Teachers find the same difficulty. Of course, they do their best to correct the fault, but this is not easy because the trouble started during babyhood.

Take the baby a year old, for example. Mother puts him on the floor and empties a whole box of playthings before him. What happens? The child grabs a fuzzy dog, turns it about in his hands once or twice and throws it down. Perhaps he stacks up two or three blocks and gives them a kick. Soon his resources are exhausted, and mother wonders why he can't content himself with his playthings.

The fact is, he is in the position of an adult who has been attending too many entertainments in succession; the program has proved too hectic for his nervous system. It is a case of too much happening at once and, as a result, nothing is enjoyed fully.

### No Three-Ring Circus

Give the baby one thing at a time to play with and make that thing interesting. If he has a dog, let him have a little blanket to wrap it in or a ring to slip on and off the dog's neck for a collar. There should be some association between the toys.

If he is playing with blocks, let him build a garage or a schoolhouse where brother goes to school or Daddy's office, or even the cupboard where mother keeps the cookies

In any case, if the central theme of playtime is to be "dog," insist that the child stick to the theme, or if "blocks," then keep his mind on that subject.

When Mary starts to color a picture in her drawing book, see that she finishes it before beginning another. If Bobbie decides to make a Noah's Ark menagerie with his modelling clay, encourage him to finish it before he makes furniture for sister's doll house.

Yet, while doing this, we need not force monotony into playtime. By merely keeping an eye open mothers may guide the children in such a way that without friction they will form habits of concentration even in their playing. "Finish what you begin" is a slogan every child should learn and follow, for it is the hap-hazard young folks who were the scatter-brain children.

### What Mother Heard

MOTHER had been very ill indeed. Now she was on the happy road to recovery and while she must remain quietly in bed for some time the stir and bustle of the household were entertaining and—as it happened—instructive.

She passed the otherwise tedious hours by following the familiar household activities by the various sounds and amused herself by her ability to discern whose step sounded on the walk, who closed the front door, who was setting the table for supper.

Steps, steps, steps! When she was up and about why had she never noticed the ceaseless round? How she wished she might be down there helping with the work which she knew was so hard for them all.

Jane had spent the morning ironing and now Linda was putting away the clean things—the length of the pantry with the towels, upstairs with the pile of starched aprons and housedresses. "How about a clean towel?" father inquired and then his slower steps traversed the length of the pantry and back again across the kitchen. In the interval before sitting down at the table Jane came rather slowly

upstairs for a fresh bungalow apron. Jane was tired and so was father. "What's the sense," mother suddenly wanted to know, "in keeping the towels at the end of that long pantry? Or the kitchen aprons upstairs?"

Morning, and Linda rested and energetic, was making beds. Clip, clip went her endless quick steps. "Linda," said mother, "when Nurse Hardy makes a bed she walks round it just once. Did you ever notice how she does it?" Yes, Linda had noticed and she'd try doing it that way.

Mother began to jot down ideas in a little memoranda book. And when she was back down stairs she started cutting down those endless steps.

"I felt so useless just lying there while my family worked so hard," she said. "But, after all, I doubt if I ever did more to help them than I did when I listened to the steps they took in doing their daily tasks!"—ALICE MARGARET ASHTON.

### Left-Over Pickle Juice

IT'S always a question with every cook, as to what to do with her left-over pickle juice. The juices are so rich in sugars and spice, it is almost a waste to throw them away. You can use the juices to flavor meat, to thin a thick salad dressing, to baste either a whole or a slice of ham, to flavor candy or baked beans, to change the color of your salad dressing, and to flavor cake fillings. A

Take a piece of tin, 5 or 6 inches in diameter and fashion into a fan-shaped wheel, put this wheel on a blade and spindle. Now push a stake about 5 or 6 feet long into the ground near a cucumber hill and put this little windmill on top. The wheel turns with the slightest breeze sending into the earth a strong vibration that a mole can feel for many feet around and Mr. Rodent loses no time in making his get-away!

Since moles are sightless, they have to depend upon the sense of sound for protection and they have developed this to a wonderful degree. You can demonstrate this by walking over territory where those animals are burrowing. Upon your approach they are gone in a moment and will not reappear for hours.

I stick several of those windmill stakes in my cucumber patch and I never have a hill damaged by moles.—D. C. RAY.

### Do You Know That—?

RUBBING fingernails full of soap before beginning to garden will prevent their becoming stained and discolored.

\* \* \*

Have you ever soaked silverware or tarnished copper and brass articles over night in buttermilk to make them clean and bright?

\* \* \*

Throwing away the water from cooked rice, macaroni, or vegetables isn't a state

### Easy Styles for Amateur Seamstresses

1716

2106

2070

An apron designed to please the beginning housekeeper and the expert too is No. 1716, which is easy to make or launder or wear. The pattern comes in three sizes, 36, 40 and 44 bust measure. Size 36 takes 2 3/4 yards 36-inch material. Price, 12c.

Another simple style for amateur dressmakers is No. 2106, small brother's play suit. It may be used for better wear, too, by using nicer material. No. 2106 comes in sizes 3, 4, and 6 years, size 4 taking 1 1/2 yards material with 3/8 yard contrasting. Price, 12c.

Becoming to the stout woman is No. 2070, which has long lines to give a slender figure. Little or no fitting is necessary because of its straight hanging lines. It cuts in sizes 36, 38, 40, 42, 44, 46 and 48 inches bust measure. Size 36 takes 3 1/2 yards 1/2 40-inch material with 1 1/8 yards contrasting. Price, 12c.

TO ORDER: Write name, address, pattern numbers and sizes and send correct remittance in either stamps or coin (stamps are safer) and send to Pattern Department, AMERICAN AGRICULTURIST, 461 Fourth Avenue, New York City.

10c brings you our helpful summer catalogue. Ask for it.

teaspoonful may be substituted for lemon or vanilla, when baking. Beet juice or beet vinegar can be used to prepare small, thin slices of ham. Fill the frying pan with the sliced ham and pour over enough of the beet or pickle vinegar to cover it well. Let it boil hard till the meat is tender.—PAULINE CARMEN.

### To Scare Away Moles

MOLES are usually very destructive to cucumber hills. I keep those little rodents scared away by a very simple method.

I have my son make a quantity of tiny windmills, the kind you have seen placed on top of poles about farmhouses.

prison offense, but it is an offense against the family pocketbook and nutrition.

\* \* \*

A new edition of "Household Insects and Their Control" has been issued by the State college at Ithaca. Want a copy? Ask for H 134.

\* \* \*

Those 1095 dish-washings a year will be less monotonous if the sink is the right height and set so you get a glimpse of the out-of-doors.

\* \* \*

Less sugar will be needed if sour fruits are first boiled only a short time with a good sized pinch of soda, and then this is drained off and fresh water put on them.

# Reviewing the Latest Eastern Markets and Prices

## MILK PRICES

**T**HE Dairymen's League Cooperative Association announces the following prices for milk in the 201-210 mile freight zone, for milk testing 3 per cent.: *Class 1*, used chiefly for fluid purposes, \$1.86 per hundred pounds; *Class 2-A*, used chiefly as fluid cream, \$1.70; *Class 2-B*, used chiefly in the manufacture of plain condensed milk and ice-cream, \$1.85; *Class 2-C*, used chiefly in the manufacture of soft cheeses, \$1.85; *Class 3*, for milk used chiefly in the manufacture of whole-milk powder, evaporated whole milk and sweetened whole condensed milk, \$1.55; *Classes 4-A* and *4-B*, based on butter and American cheese quotations in the New York market.

### Sheffield Producers

Sheffield Farm Company Producers announce that the price of 3 per cent. milk in the 200-210 mile freight zone is \$1.70½.

### Non-Pool Cooperative

Non-pool Assn. prices are: *Class 1*, fluid milk for city consumption, \$1.86; *Class 2*, milk for cream, plain condensed and ice-cream, \$1.70; *Class 3-A*, milk for evaporated, condensed, etc., \$1.60; *Class 3-B*, milk for fancy cheese, \$1.45; *Class 4*, determined on butter and cheese quotations on the New York market.

### Interstate Producers

Interstate Milk Producers' Association (Philadelphia plan) receiving station prices, 3 per cent. milk, 201-210 mile zone, \$2.19; 101-110 mile zone, \$2.29.

## BUTTER PRICES LOWER

Last week's business closed up very dull and receivers had to carry over a lot of stock. This and lack of interest on the part of buyers has had a considerable dampening effect on prices with the result that a lot of receipts have been going into the "Chambers of Hope," a market term for cold storage. Receivers prefer to store rather than sell at a considerable loss.

On Tuesday, the 22nd, prices were shaded at 38½¢ on 92 score butter, which had a stimulating effect on the market and buyers who needed stock for current use did not hesitate to fill up to capacity. At this point the buying trade took more active interest and speculators took hold. This activity continued on Wednesday and prices recovered a half cent. Although trading was not quite as brisk toward the end of the week, nevertheless a fair amount of business was done and prices seemed to be holding quite general. Speculative buying is strong enough to keep the market fairly steady and until this is satisfied there is not much chance of any change in prices. Advances indicate that the outlook for production in the near future is heavy. Storage holdings are beginning to reach figures that make the operators stop and think.

## CHEESE MARKET QUIET

There is nothing exciting in the cheese market. There is considerable firmness on the higher grades of New York State flats. There are a good many defective lots coming in and these are bringing from 18 to 18½¢. Good average run stuff meets a fairly good market at 19 to 19¼¢. Fancy marks are bringing anywhere from 20 to 20¾¢. A few pet marks of State flats are bringing as high as 21½¢, which seems to be the top.

## NEARBY EGGS IN LIGHT SUPPLY

During the entire past week, the market has been clearing up very well on nearby eggs. In fact, during the week nearby whites have fallen off in supply to such an extent and the proportion of strictly high grade stuff is so light that operators are having considerable difficulty in supplying the demand for really

fancy goods. As a result quotations are very wide and higher prices are being realized on fancy marks. Real good quality receipts are sharing in the improved price, but there is little or no change on average lots.

## HEAVY SUPPLY OF LIVE BROILERS

The extremely heavy receipts of broilers have had a dampening effect on prices. Arrivals continue to pile up and in order to effect clearance, prices have been shaded considerably. Real fancy colored broilers are bringing 35¢, though most sales are 34¢ or below. Quotations on Leghorns are wide, due to the extreme variation in the quality of arrivals. Last week we were over on several of the express piers and conditions of receipts were far from good. A lot of shippers are sending in birds in small tight coops with the result that mortality is heavy.

If a man is skilful enough to be able to dress broilers in a fancy manner it may pay him to market his stock in this fashion. Nearby dressed broilers are right now in rather light supply and are selling up to 40 cents a pound with a few extra pet marks from 2 to 4¢ higher. But the stock has got to be fancy, dry-picked and well iced.

## POTATO ARRIVALS HEAVY

After we went to press last week, on the 19th, the potato market took a sudden drop, with the result, due to heavy arrivals, that Long Island growers stopped digging. Hucksters on the streets of New York were peddling out potatoes by the peck or whatever measure was desired at the rate of 25¢ for 12 pounds or 75¢ a bushel. At this rate you can imagine what prices farmers get. As a result of the slow trade and the irregular market, the situation is much easier in spite of the fact that on some days the arrivals have been fairly light. Receipts are still coming in from the Virginia Eastern Short and Norfolk sections, North Carolina and Maryland. Prices from these sections vary all the way from \$1 to 2.25 a barrel, depending on quality. New Jersey Cobblers are bringing from \$1.50 to 2 per 150-pound sack, while Long Island's range from \$2 to 2.50. Only the very best marks are reaching the top figure and in view of the fact that supplies are increasing quite rapidly, it may be that we shall see a slight shading.

## HAY MARKET DULL

There is a very dull and uninteresting tone about the hay market, for the very simple reason that there is an over-abundance of low grade hay in small bales on hand that buyers are not interested in. There is practically no No. 1 hay to be had and if there were, it would move well, possibly above \$31. Advances state that there is more low grade stuff coming which will only add to the congestion and weakness.

During the past week a shipment of new hay was received in New York. It was in large bales, showing the effects of heating badly and contained quite a percentage of weeds. It graded around No. 3, and sales were reported at from \$23 to \$24. There is

absolutely nothing to gain in sending in new hay on the market unless it is a fancy quality.

## GRAINS AND FEED

According to New York State Department of Farms and Markets, the following prices prevailed July 19:

The quotations given in this report show the approximate prices at which feed can be purchased per ton, and grain per bushel, in straight carlots through billed from Western points, delivered on track at points in the freight zones as indicated. Mixed carlots cost approximately \$2 per ton more.

Retail feed and grain prices vary with different local dealers depending upon their individual cost of doing business, volume handled, etc. In the case of feeds the retail price may sometimes be as high as \$5 per ton above the wholesale prices given in this report.

Wheat hit new high ground on July 24 when May advanced to within a fraction of \$1.40. Wild trading marked the advance. How this price was not maintained for the edge of the market turned downward. Reports continued to come from Canada of heavy damage from rust.

Since Buffalo is an important milling center for wheat feeds and linseed meal, quotations are given for this point on both a through-billed and a local basis. Ground oats \$41; spring wheat bran \$27.50; hard wheat bran \$30; standard middlings \$29; soft wheat middlings \$34; flour middlings \$33.50; red dog flour \$39; dry brewers grains \$32.50; white hominy \$42.50; yellow hominy \$41.25; corn meal \$40; gluten feed \$41.25; gluten meal \$47.50; 31% old process oil meal \$43.50; 34% old process oil meal \$45.

For points taking New York rate add to Albany price ¼ cents on oats; ½ cents on corn; 10 cents on cottonseed meal; and 20 cents on other feeds.

## Up-Staters Visit Markets

(Continued from page 71)

From Jersey City we went back over to New York and visited the stores of Winfield H. Mapes at 176 Duane Street, receivers of nearby eggs. Here the party spent a very interesting half-hour watching the egg candlers at work examining recent arrivals of State eggs. Here it was we got an opportunity to see how quickly receivers detect inferior quality on the inside of the egg. These expert candlers handle hundreds of dozens of eggs a day and in the twinkling of an eye they can see just what is wrong with an egg. R. Q. Smith of Delaware County and I stood side by side with our eyes glued on

the lamp of the candler and in one case we stopped him and asked what was the matter with the egg that was put in the seconds. He said, "It's been sat on," and promptly broke it open. Sure enough, on the yolk were indications that the egg had started to incubate. On another occasion we saw little bubbles due to water in the egg. It was hard work to get the party away from the egg stores and candlers. We also visited the Pacific Coast Producers store, which was next door to Mapes, and then we went around to the Phoenix Cheese Company on Greenwich Street, where we went through the coolers. (It was so cold we needed overcoats and several of the boys got a severe chill.) These freezers were held at a temperature of 20 degrees above zero. We asked one of the men working in the cooler how cold it was; he said, "Not very, it's warm now." No one cared to hang around until it got cool. At the Phoenix Company's plant we had an opportunity to see the automatic machinery that portions out and wraps the small cream cheese, so common to the trade. Human hands do nothing with the cheese except to place the finished, wrapped packages in wooden boxes.

In the afternoon everybody piled on to the buses and went over to Long Island City and visited the monster factory of the Sunshine Biscuit Company. Here again a great deal could be written about the wonders of a modern cracker and biscuit baking establishment.

On Wednesday the party went to the Dairymen's League offices on 42nd Street and then were rushed downtown under special police escort to WEAFF. The boys were on hand at the broadcasting of AMERICAN AGRICULTURIST market reports. It was the first time a number of them had ever been in a radio broadcasting studio.

On Wednesday afternoon the party embarked on the "Colonel Clayton," a small steamer, as guests of the Dairymen's League and enjoyed a sight-seeing trip around Manhattan Island, the greatest market in the world. The evening trip started at the offices of the Federated Fruit and Vegetable Growers. By midnight they started to tour the fruit and vegetable market, going to the Erie Railroad Pier on the North River, where cantaloups were coming in by the car-load. From there everybody proceeded to the Old Dominion Steamship Company's pier on the North River to witness the arrival of fruits and vegetables from the South. New York and New Jersey fruits and vegetables were also examined on the Pennsylvania Railroad Piers No. 28 and 29.

By the time the boys got through with this trip they were a pretty tired lot and their feet felt as though they had been walking through miles of plowed ground. They were pretty heavy. One thing is certain, those who have never made the trip before can't help but realize and appreciate what an enormous market New York is. And they can't help realize that New York is a discriminating market, wants quality and at the same time will pay for it. It is too bad more farmers do not get an opportunity to see this part of the city when they make a trip to the Metropolis.

## How Jones Cares for His Bull

(Continued from page 73)

insist that the bull be led to water daily. This gives daily handling and in warm weather he is handled twice. Thus his water supply is not lacking and it tends to keep him used to being handled."

Mr. Jones's ideas on the care and handling of bulls sounded so good to us that we could not resist passing them on for others to profit thereby.

If more dairy farmers and others as well would follow the methods of Mr. Jones, greater profits would result and less accidents would take place.

## Quotations From Eastern Markets

The following are the prices at which farm products of special interest to Eastern farmers sold on July 25:

	New York	Buffalo	Phila.
<b>Eggs, Nearbys (cents per dozen)</b>			
New Jersey hennery whites uncandled, extras	44 to 46		
Other hennery whites, extras	41 to 43		
Extra firsts	38 to 40	33 to 35	32
Firsts	36 to 37		29
Gathered, whites, first to extra firsts	36 to 37	30 to 31	
Lower grades	33 to 35		
Hennery browns, extras	37 to 44		
Gathered browns and mixed colors, extras	33 to 35	31 to 32	
<b>Butter (cents per pound)</b>			
Creamery (salted) high score	39½ to 40	41 to 42	
Extra (92 score)	39	36 to 40	40
State dairy (salted), finest		39 to 40	
Good to prime		31 to 37	
<b>Hay and Straw, Large Bales (per ton)</b>	U. S. Grades	Old Grade	Standards
Timothy No. 2	\$28 to 29	\$20 to 21	25 to 26

# If Hens Could Talk

*The Cackle of Old Biddy Would Be Worth a Lot of Consideration*

GEORGE G. PORTER

BACK from the barns on the Robinson farm the pasture inclined to a small stream, along the banks of which grew a few old, twisted, neglected apple trees. Across the creek, the ground rose again to the dairy barns on the Brown farm. Some distance downstream, the poultry houses on the Jones's farm were visible.

The old trees had years since been passed by as a source of fruit for human use and the few apples that had appeared this year had fallen to the ground, where they lay unnoticed, except by small animals and by stray fowls from the nearby farms. Here, under the trees one sunny afternoon, three old hens met, quite by accident—one from Jones's, one from Brown's and one from Robinson's. A white leghorn of purest blood and teeming vigor, a white leghorn of blood not quite so pure but as vigorous as any, and a black hen of no purity of blood whatever and hardly more vitality. For the purpose of identification we will call the old hens by the same names as their owners, who were, respectively, Jones, Brown and Robinson. They fell to talking, as old hens will—

### Some Have Them—Others Haven't

Said Robinson, pausing from the business of apple eating to scratch her head, "Seems as if the lice are uncommonly thick this year." To which replied Brown, "I don't notice it; I've only seen a very few." And Jones agreed with, "I haven't seen any."

A little later Robinson again stopped to scratch, with the remark, "I'm getting pretty well tired out. Between scratching for something to eat and scratching lice, I don't get a minute's rest all day."

Brown and Jones raised their heads in surprise and Brown said, "But why do you have to scratch for something to eat? Doesn't your boss feed you?"

### Meals Come Into the Discussion

"Oh, yes, he feeds me—sometimes—just corn, generally toward night, only often he forgets to."

Jones asked, "About those lice—don't you have your house cleaned out often and sprayed to kill the things?" To which Robinson answered, "Yes, the house is cleaned out once a month or so, but this spray business—I never heard of it."

Brown shook her head. "Well! No wonder the lice bother you! And what a funny way to be fed—just corn and sometimes not that."

With the way characteristic of the manner that one old hen uses in commenting or commiserating on the appearance of another, Jones cackled, "It certainly is telling on you. You look so scrawny and stunted and droopy. My! I'm worried about you. (Which she was not.) Just look at Brown and myself—big and plump and healthy—you ought to do something about it."

"What can I do? All we old hens can do is just take the food and lodging that our boss gives us."

### How Some Hens Get Back

"Well, I know what I'd do," clucked Brown complacently; "I wouldn't lay any eggs for him if he treated me like that."

"I don't—not many—only fifty or sixty a year."

"Huh! Guess your boss don't make much money from you," remarked Jones, as she stretched her wings out in the sun. "How many of you hens does your boss keep?"

"About a hundred, I guess," replied Robinson, shaking the water from her beak after drinking in the brook. "But I don't think he will keep many next year, because I heard him say that 'we hens don't pay.' My, but that water is good, we don't find much around the barns."

"Say," exclaimed Brown, "you certainly got a funny boss; feeds you only corn, no water, don't spray, don't clean out your house. No wonder his hens

don't pay. Where does he sell his eggs?"

"Sells 'em at the store."

"Why don't he sell to a good egg dealer or send 'em away to a commission man, like my boss does?" asked Jones.

### Why Some Eggs Don't Sell

"Well, the dealer won't buy from him, because so many eggs were rotten and then there were all sizes and colors. The boss only gathers the eggs once in a while and I guess he keeps them in the kitchen till he gets enough to sell."

"It certainly is strange," Brown remarked, preening her feathers.

"What's strange?"

"The way men do things. Now look here," and she straightened up. "Here's your boss, Robinson. He keeps 100 of the likes of you and says they don't pay. Here's my boss, Mr. Brown—he keeps about 100, too, but he says we are a good paying side line. Here's Jones's boss, keeps three or four thousand hens and makes his whole living from them. Now your boss and mine, Robinson, both keep cows, both keep about the same number of hens and both have about the same kind of a hen house. My boss feeds us a good balanced ration, gives us plenty of fresh water, keeps our house clean and free from lice and generally looks after us in good shape. We are all alike—all white leghorns—not so high bred as the hens on the Jones's farm, maybe, but we lay anywhere from 140 to 170 eggs a year, more, some of us and those of us that don't lay are culled out pretty quick, you bet! Our boss gathers the eggs twice a day and keeps them in the cellar till he sells them and then he grades them and gets a good price. I know it don't cost my boss much more in labor and money to keep his hundred hens than it does yours and he makes between \$100 and \$200 a year from them, sometimes more."

"I reckon Brown is right," agreed Jones, who had listened carefully to this long speech. "Her boss takes care of his 100 hens in about the same way mine does of the four thousand of us. I heard my boss telling a visitor the other day that '90 per cent. of making money from hens was in treating them right.' He said

that if you didn't know how, that the agricultural colleges and extension services would give you all the information you wanted without cost. Say, Robinson, I wouldn't like to have your boss. He must be a queer cuss. Has two successful poultrymen right near him and a whole world of information that he could get for the asking—and then keeps hens like he does. And I thought humans were called intelligent."

"I repeat, it certainly is strange," said Brown, as she started back to her home roost.

"What is?"

"The way some men do things."

To all of which I add that the cackle of old hens often carries a lesson that is well worth considering.

### Guard Against Limber-neck

W. H. Harrison

IN many sections (due to carelessness or neglect on the poultryman's part) limber-neck is by far the most fatal summer disease known among poultry, though it can be easily eliminated if proper precautions are used. This disease, no doubt, is the cause of the death of more fowls and growing chicks in the months of July, August and September than all other poultry diseases combined. Limber-neck lurks in the fence corners, in the weed patches, around the house and barn, in the neglected and unexplored places, and its fatality is very great when we once give the matter serious thought. And yet, it is a disease that we may easily avert, for it does not creep in through the fence rails, nor the cracks in the poultry house.

### Caused by Decaying Carcasses

Limber-neck is caused by the hens eating dead animal matter lying festering and decaying somewhere close around the premises where it has become infested with live worms or "maggots," in which state it is a sure "death trap" to the fowl or chicken that finds it and pecks in it, because they will eat some of the decayed meat and maggots. And whether the maggots die or live after being consumed, the bird is almost certain to be affected inside of twelve hours by its unhallowed feast on things of the "dead," and its nerve force becomes of a weakened nature almost instantly. The fowl seems to lose entire control of the muscles of the neck, which causes the head to droop with closed eyes. Its legs also become weak and wings of a droopy nature, and the fowl flounders helplessly on the ground, being only a helpless, nerveless wreck. It is a case of paralysis.

The power of locomotion is gone, and in addition the poison it has consumed seems to affect the skin, and its feathers may be pulled out easily as if it had died at the hands of an executioner and had been scalded in the customary way. The fowl weakens at a rapid rate, death often occurring in twenty-four hours or less. After a fowl once catches this dreaded disease, not one in fifty will recover.

### Prevention the Only Safeguard

"Prevention" is the only safeguard; that is, prevention against it is the only cure. We have saved hundreds—yes, and probably thousands of grown fowls and chickens from limber-neck disease by simply keeping the premises or surroundings clear of dead animal material. Burn or bury deeply all dead fowls and other animals that die on the farm. This is the one preventive and cure, and this is about all there is to it. Limber-neck is not really a disease, properly speaking it is simply the "dead sure" effect of an immediate cause, and if the cause is not there the effect will not follow.

In Farmers' Bulletin 1337, the U. S. Department of Agriculture has the following to say about Limber-neck:

The condition known as limber-neck is a

The Pup: Well, I wounded him, anyhow!—Life.

F. B. LEISTER, Box 49, McAlisterville, Pa.

symptom of several diseases, among which are botulism and ptomain poisoning, which are characterized by a paralysis of the muscles of the neck, which makes it impossible for the bird to raise its head from the ground. This condition is due to the absorption from the crop or intestines of poisons which act upon the nervous system and cause paralysis. It is generally associated with the eating of spoiled feed or putrid meat in which certain poison-producing organisms are growing or of fly maggots which have bred on such material.

Treat.—The best treatment is to give a full dose or purgative medicine, that is, one-half teaspoon of Epsom salt, or three or four teaspoons of castor oil for a grown fowl. Unless treatment can be given very soon there is little hope of saving the bird. Spoiled canned goods should not be fed to chickens. Carcasses of fowls or other animals should be burned or buried deep as soon as found.

# The New Ward Catalogue Is Ready One Copy Is Yours—Free

One copy of this new 728-page Fall and Winter catalogue is ready for you. It costs you absolutely nothing. Asking for it puts you under no obligation.

You need only fill in and return the coupon. We will send the catalogue free.

We want you to find out how valuable this book will be to you. We want you to learn how much it will save you and your family.

*Our Force of Merchandise Experts  
and \$50,000,000 Cash Produced  
Thousands of Bargains*

Every buyer of ours is a merchandise expert. He knows quality and how to get it. He knows value and where to get it.

He is free to go anywhere—in America

or in Europe — anywhere to get the best goods for our customers at the lowest prices. Millions in cash are available. And his first consideration is — get the quality our customers want and get it at prices that give our customers most for their money.

*500,000 New Customers  
Won By Our Big Values Last Year*

500,000 more people bought from Ward's last year than ever before. In three years our customers have doubled their total purchases from Ward's! Why? Because Ward's prices brought them a saving. Because they got more in actual value. We never sacrifice quality to make a low price. We offer no price baits. We sell only the kind of goods that stand inspection and use.

*Your Order Shipped Within 24 Hours*

With a saving, with your satisfaction guaranteed, with the quality of everything you buy backed by a fifty-two year old reputation for selling honest goods—with these advantages you are also assured prompt service. Most of our orders are shipped within 24 hours, nearly all in 48 hours.

So use the coupon. Get the new catalogue. Investigate. Find out if it pays you to continue buying from habit alone. Compare prices on everything for the Farm, the Home and the Family. See for yourself the saving that may as well be yours.

A Weedless Hay Crop for Next Year—By David Stone Kelsey

# The Port Authority and Farm Markets

An A. A. Wednesday Evening Radio Talk Broadcast From WEA F

**M**ANY of the audience listening to these remarks are farmers, producers of the milk and eggs, the potatoes and cabbage which feed the millions of people in the Port of New York area. Many, many more are the consumers of these products. In the New York Port District alone there live about 8,000,000 people who must be fed. The greatest single interest of both producers and consumers alike is to keep down the costs of distribution. It is a known fact that the city distribution system takes a large part of the money paid by the consumer for perishable foods. Careful studies of the spread between wholesale and retail prices of 14 fruits and vegetables show that out of every dollar spent by the consumer 48 cents is absorbed in distribution after sale at the terminals. These studies, carried on jointly by the Port Authority and the Federal Department of Agriculture for more than a year under the direction of Mr. W. P. Hedden and the Staff of the Port Authority, involving collection of upwards of 10,000 quotations, are authoritative. Forty-eight cents out of every dollar for city distribution!

How can this spread be reduced and in what way can the farmers help? Only a few brief suggestions can be made here.

## Improved Grading and Packing of Perishables

If ever the terminal costs are to be cut, some of the handling and rehandling of the bulk of the produce in and out of congested centers must be eliminated. On that part of the stuff which is so carefully graded and packed that trading can be done by merely inspecting samples instead of the whole carlot, a real saving is possible in trucking and handling. Such stuff could be unloaded at a joint receiving terminal on cheap land, there broken up in accord with the result of sales from samples at central auction rooms, and finally gathered together for direct movement to outlying markets. The present practice of floating or trucking entire carloads into one congested district could be done away with to the extent that careful grading and packing insures a sample to be truly representative of the entire carlot.

## Organize for Marketing

Too much of the marketing of the past has been haphazard. This is especially true in the case of extreme perishables, such as lettuce, strawberries, watermelons and the like. Shippers have followed a strictly individual policy which has resulted in a widely variable supply and violent changes in price from day to day. For example, the wholesale price of lettuce at New York on April 16 of this year was \$7.00 per basket, an exceptionally high price due to a temporary shortage of receipts. Four weeks later it had dropped to 75 cents a basket down below the freight rate from shipping point, just because the shippers in their scramble to take advantage of the previous high price put 91 cars on track in a single day. The same thing has been true of watermelons this year. During the period from June 20 to June 25 the average price per car of 25 lb. melons was \$500, but suddenly over 1700 cars were shipped from Georgia alone in two days; 334 in all appeared on track at New York on July 14, and the price sagged to \$160 a car or about 14 cents per melon, a price below the freight rate. Such experiences are ruinous to everybody handling perishables.

By DEWITT VAN BUSKIRK  
Chairman, the Port of New York Authority

Growers, dealers, even the railroads, lose and the benefit to consumers is very slight because none but a few hucksters are willing to risk paying handling and trucking charges in such a glutted market. A good organization to direct the distribution to many markets, diverting from one to the other as the need arises, preventing both scarcity and glut, is a real necessity.

## Study the Needs of the Consumer

Having an effective organization it is to the farmers' advantage to employ able experts to study the needs of the consumers in each market. It is truly surprising how the demand for certain foods

It is, of course, obvious that the more units there are over which to distribute fixed costs of retailing, the less will be the cost per unit. The more you can sell the less will be not only your own costs per unit, but the fraction of the consumer's dollar taken up on the city margin.

I have mentioned briefly four methods by which the farmer may improve his market for perishable foods. How will these changes affect the consumer? They will all tend to cut down that large spread between farm price and store price, by reducing physical handling costs, by eliminating, as far as possible, extreme price fluctuations and physical waste of glutted markets, by bringing the right grade, size and variety in the right container to the right market at the time when it is most needed, and by increasing volume of sales and decreasing unit costs. All should benefit consumer as well as producer.

Although many improvements in terminal marketing can be brought about by concerted action of farmers themselves, as our investigations have shown, there still remain some badly needed changes which can be put into effect only by cooperative effort on the part of shippers, carriers, receivers and public administrative agencies. The establishment of adequate terminal facilities and the reorganization of handling methods is a case in point. There is no question that new market terminals will be constructed at various points in the New York Port area. The only question is whether those terminals when they are built will be properly designed and located so that real savings in handling costs will result. Just erecting piers and buildings will not solve the problem.

They must have inlets and outlets to freight carriers. They must be linked up with the trunk line railroads which haul produce to the city and with belt lines and motor highways which furnish the internal distributing system. Moreover, they must be designed in accordance with sound commercial and engineering principles so that the breaking up of carlots of cabbages and beans and the gathering together of the fragments, 20 crates of cabbage, 10 hampers of beans, 25 bags of potatoes and the rest of the day's supplies of carrots, grapes, oranges and what-not which go out to the suburban centers, can be accomplished with speed and saving.

Because of its general supervisory authority over port development and its intensive study of this problem, the Port Authority is well able to advise and participate in plans for market terminals. The intensive studies previously mentioned have yielded much valuable information on the whole marketing situation in the Port District, much more than can be mentioned here. Some of this information has been made available in public reports and more will be in the future. Persons interested in learning more of this subject may write directly to the office of the Port Authority, 11 Broadway, New York City, and may be sure that all available information will be gladly furnished.

\* \* \*

AMERICAN AGRICULTURIST, through the cooperation of WEA F, the New York Telephone and Telegraph Company, puts on a short program every Wednesday evening at 6:50 P.M. Standard Time, for the special benefit of farmers. If you like these talks write us—if you want more or any special subject, let us know also. It is our purpose to give our readers what they want.

This gives an idea of the congestion in front of the piers along West Street, New York City. One of our problems is to avoid this, which is an enormous expense to producer and consumer.

may change from day to day, depending on the season, the day of the week, and the weather. To know how many families will cancel the daily quart of milk because of a Labor Day holiday outing, or how many more half-pints of whipping cream will be needed on Thanksgiving Day, or how the consumption of lettuce will fall off as the temperature goes down 10 degrees, will be a real step in the direction of orderly marketing. Not only the quantity but the quality, the unit size, and the kind of container demanded by the consumer should be known. When the hotel stewards buy oranges they want only the large and above-medium sizes, while the push-cart men are quite sure of being able to dispose of the smaller sizes. The hotels want their baking potatoes specially sized, guaranteed and packed in boxes. The push-cart vendors want their apples in boxes so that they may be up-ended on the cart for display. An efficient selling agency must take these and many other facts into consideration when distributing to terminal markets.

## Reduce Spread by Heavy Turnover

Stimulate sales by moderate prices, publicity, attention to consumer's preferences and every other legitimate method. Our studies have shown that the volume of business or the turnover has a very great influence upon the spread between wholesale and retail prices. A staple commodity, such as potatoes, is distributed by city dealers with a margin of 40 cents for every dollar of sales. Western lettuce, a perishable semi-luxury, takes 56 cents for every dollar of sales. The volume of sale of the first is six times that of the latter. Hence, a pretty sure method of reducing the spread on any commodity is to increase the sales.

## A Weedless Hay Crop for Next Year

*It is Too Bad There is Not More Summer Following*

DAVID STONE KELSEY

During the past several months our market page has consistently carried the mention that No. 1 Hay has met a steady and firm market with good demand. At the same time the market was flooded with a superabundance of a common and poor grade hay in small bales. The quality producer has had things all his way. In the article Mr. Kelsey tells how the hay producer can get a crop of clean hay and crash into the No. 1 group.—THE EDITORS.

**B**IG BUSINESS" makes a fuss about small leaks—hires an efficiency engineer to find them quickly—but, well, they don't have any big leaks, such as a hay-crop fifteen per cent. weeds, for instance. They are not that foolish.

There is no surer, more profitable nor more valuable general farm crop than that of cured hay. Hay to feed and hay to sell, for hay is a legitimate money-crop. But perhaps because it is grown so commonly, it is usually the worst-grown crop on the place. Weedy meadows scowl at one from every side, whereas the hay-grass crop may easily be produced 99 per cent. pure, at the worst, and we have had many meadows where it was a practical impossibility to find one weed—the result of just plain, old fashioned summer fallowing coupled with intelligent use of modern tools at the right times.

The only new feature in these methods are omission of any nurse-crop. The best hay farmers today never sow grains with grass any more. The below way brings a heavy hay-crop in ten months without weeds—instead of a light crop in twenty-two months with weeds.

A wise old doctor once said to a young couple: "There is one inevitable blessing in marriage—it always leads toward housekeeping and home life." Similarly, farming of every sort, leads to some of the many forms of animal industries, and live-stock means lots of grasses, clovers and hay.

Again, no rotation is worth the name, with hay production left out. The grass-plant, root and top alike, is by far the cheapest road to abundant humus in all farm soils. The summer fallow followed by grass seeding is the best method ever found to cheaply clean a field of foul weeds and to subdue and reclaim abandoned or wild lands as well as reinoculate them for more intensive farm crops.

### One of Our Greatest Money Crops

And hay is one of our greatest, most reliable and most profitable money crops. Massachusetts for instance, last year sent about \$10,000,000 out of the State—just for hay! A crop we understand, which we could raise and should abound in. All Eastern States farmers need to do to pocket this monstrous sum is to grow normal, full crops upon their present acreage of hay-lands. They need not add one more acre to their usual grass fields. Figure it out for yourself. The present average production is 1½ tons per acre which is at the very least **ONE TON SHORT OF A NORMAL CROP!**

The most common objection—that selling hay amounts to sure soil-depletion—has been again and again exploded and proven untrue. Say one

ton of hay fed out on the farm is worth \$6 in fertility (an extremely high figure) and that it could have been sold for \$20 right at the barn. Omitting the labor-saving in the latter case, this \$20 judiciously expended for fertility will grow three tons more, under poor management, and five under the best. And don't forget the lime when buying "fertility."

"There is no surer, more profitable nor more valuable general farm crop than that of cured hay"—providing it is of high grade, the kind the market demands and wants

Even the worst objection to hay as a money crop—that timely harvesting of the entire production is impossible on most farms, most seasons—is now done away with. About all of June, the accepted month of good haying weather, is now utilized, and subsequent cuttings so well distributed, into September even, that every field may comfortably be cut at its peak of prime—when bloom is just beginning.

There are certain specifications, however, that are really vital and one of these—the bane of most farm operations too—is timeliness. Scarcely ever is hay-land seeded early enough, with seed provided early enough on land thoroughly enough prepared, and almost never is the crop harvested on time. One of the reasons for our failure is that our hay crop has been extensive rather than intensive. Hence a remedy is found in more intensive methods.

### More Intensive Methods Followed

For instance, after any hoed crop we seldom plow at all—just use the cutaway immediately,

three to five hours per acre, following every few days, or when any weeds show, with the Acme—set for deep work at first, then more and more shallow, so as never to turn up a new lot of weed seed from below.

For grass after grass—for a new crop of hay ten months after the last hay was harvested—we of course plow at once after mowing, and as thoroughly and smoothly as possible—though never until the weighted cutaway has been run over that stubble field (on both diagonals—never the direction the furrows run) several hours per acre. If the land be too dry to plow, always cutaway promptly, then wait a few days. This cutaway work will actually moisten it like a miracle, merely by almost wholly arresting evaporation. It has also done two other vital things—cut into bits (even though these results are scarcely visible) the stiffer side of the coming furrow-slice, so that the slice will crumble tightly into its place when turned over, and hard-hit every perennial weed-stock, turning it up to the burning sun.

And finally, it has also begun to make plant-food of the old turf. Especially if there comes a rain to wet this side of your furrow just before turning it, decay will be very rapid, rotting also most of the just germinating weed-seeds that were on the former surface.

The baby grass-plant is our very tiniest. It is far smaller than that from any other important seed used in farm practice, and infinitely slower and frailer in its growth.

This valuable baby needs and is entitled to all the comforts within our command to assemble—abundant, soluble food within easy reach, an environment wholly favorable and free from enemy plants, such as is provided only by the old-fashioned summer-fallow, a bed that is firm and warm as well as moist, never hot or dry. And finally, this tiny plant needs companionship, which is provided by

seeding very thickly.

Does all this sound too expensive and fussy? It is not, it means merely "taking pains." Any methods here advised will not add to costs, with the possible (and always profitable) exception of more and better plant-food and seed. Thorough methods should immediately increase your yield (if hitherto only around the above-quoted average) not less than 2500 pounds per acre per annum, about all of which will be clear profit.

### Follow Nature in Seeding

Follow nature—where seeds mature in August and immediately shell and fall as with timothy and redtop, seeding September 1 is exactly right, except that if the field is low land or poorly drained it is not safe to wait later than August 10 to 15, and the same is true on high, cold land, very poor soil, or for latitudes above 42.

The grasses, like all grains, require a firm, solidly packed-down seed-bed. We settle ours till the horse-tracks at final harrowing scarcely sink

(Continued on page 96)

### What is the Future of the Dairy Business for Me?

IN THESE times of low prices for milk, thousands of dairy farmers are beginning to look ahead and ask themselves the above question. To a good many dairymen, every year seems to be a little more difficult than the last, the competition seems to be a little more bitter, and the effort to make the milk check pay all of the bills and have a little left over seems to be a little harder. Many thought when cooperative marketing came that a solution of the difficulties was found, but while cooperation has helped some, too much was expected of it, and there has not been time or experience enough since it started for it to work the sand out of its machinery so as to help the farmer when he needs the help the most—that is, when milk prices are low.

On the other hand, while there is a temporary overproduction, and some mismanagement in marketing, yet the population in the cities is increasing and will continue to increase and people are learning to use more dairy products per capita, so that for the right kind of a dairyman, there is still some hope for the future of his business. What is the right kind?

There was a time when the country was new, when almost anybody who failed at every other business could still make a living by farming. That time is passed; especially is it passed for the dairy farmer, for dairying under present conditions is one of the most highly skilled businesses in the world. For a man without that skill or who is unable or unwilling to acquire it, there is no future, in our opinion, nothing but loss and disappointment. There may be a year once in a while when the unskilled dairyman will make a little money. But the competition is so strict that in most years he will not, and at times like the present, he will be mighty near, if not quite, ruined. Dean Cook, himself a very successful dairyman, said in a recent article in the AMERICAN AGRICULTURIST, "There never can be any universal prosperity for farmers." In other words, there never can come a time when prices will be high enough so that everybody will make money; and in the worst of times, there will be a few always who still will make a profit. It is just as important to make milk at low costs of production as it is to market that milk well. The average cow in the United States produces little better than 4,000 pounds a year. The owner of a herd of such cows is a curse to himself and to everyone else in the industry. He keeps the price

of milk down by increasing the production. He never can make money and the sooner he quits the better. One good effect of low prices is that they force such producers out of the business.

These are plain words, but it is time for plain speaking. The chief purpose of this discussion is to make the statement, call it a prophecy if you wish, that the man who stays in the dairy business during the next decade will be forced to know in some way what the record of each individual in his herd is AND TO GET RID OF EVERY ONE OF THOSE INDIVIDUALS WHOM THE RECORDS SHOW IS NOT MAKING HIM A PROFIT.

"What time have I," said the busy farmer, "to fool around weighing milk and feed? Can't get my milking done with the help I have now."

All the same, a little such "fooling around" would enable most farmers to cut their herd down about half and have considerably more money with a great deal less hard work at the end of the year. And we repeat that the man who is not willing to do some of this "fooling around" might just as well make up his mind to get out of the business.

### The New Dairy Bureau

DAIRYMEN of the whole country are approving the recent action of the United States Department of Agriculture in establishing a separate Bureau of Dairying. The policy of the Department heretofore in keeping the dairy work as a subordinate division in another bureau has been hardly fair to this great branch of farming. Under the new bureau all the old lines of work will be continued and some new projects begun. A great deal of emphasis will be placed upon market milk investigations.

Dairymen will also approve of the appointment of Dr. C. W. Larson as chief of the new Bureau of Dairying. While exceptionally well trained along technical lines for his work, Dr. Larson is also a very practical dairyman, following no fads and fancies, keeping at all times his feet upon the ground. Some years ago when Mr. Morgenthau, publisher of AMERICAN AGRICULTURIST, was starting his foundation herd at his farm at Fishkill, Dr. Larson designed Mr. Morgenthau's big new cowbarn along modern and scientific principles and then he personally selected the first twelve purebred Holsteins which Mr. Morgenthau bought. The records which these animals and their offspring are now making under test justify Dr. Larson's good judgment.

### A Good Time to Buy

NOT in many years have farms been so cheap, nor have there been so many farms for sale or at such low prices as there are now. The same statement is equally true of purebred cattle. In looking over the advertisements of farm real estate, it is perfectly astonishing what can be had in the way of a farm home, land and equipment for a few thousand dollars. And nearly every recent sale of purebred cattle has been an opportunity for those who wish to get started in the business or to add to what they already had at very low prices.

Strange as it may seem, these low prices for stock and for farm real estate are good signs for the real farmer who knows his business and intends to stick to it. Farming is a long time business. Results must be judged in periods of quarter of a century not in single years. Furthermore, farming is more than a business, it is an established home.

The pendulum of farming has swung discouragingly low, but it has done so many times before in the history of agriculture, and has always swung back again. Just as surely as the sun rises there will be eventually a swing back from the present hard times. In fact, the rising price of wheat and other factors are indications that the swing upward has already begun. People must eat, and people in this country are increasing all of the time. The last government estimate of the population showed over a hundred and twelve million people, while the farmers who feed them are growing rapidly less.

Universal prosperity on the farm would be a calamity. The time will never come when every-

body can succeed. But the time is coming when the good farmer will again be able to make a good living and some besides. Therefore, it seems to us that this is a particularly good time to buy either farms or purebred cattle, particularly purebred bulls. When we say this, we do not include everybody. We mean the man who is a good, careful farmer who has a little money to invest, who knows how to buy without getting in over his head, and above all, who intends to stick to his business through thick and thin.

### Vandalism

THE season has approached again when farmers have to be on the watch for the petty automobile sneak-thieves. It is hard to understand why some of those who ride the highways seem to think that all the earth and the fullness thereof belongs to them for the taking.

Mr. Morgenthau, publisher of AMERICAN AGRICULTURIST, had this fact recently brought home to him very disagreeably. On the farm house gate post at Fishkill, Mrs. Morgenthau had taken great pride in growing two fine crimson rambler rosebushes. One day when these bushes were in bloom and she was absent, some one in an automobile stopped, and not being satisfied with merely picking the roses, yanked the vine out by the roots so as to absolutely destroy the bush itself.

It is getting so that there are few farmers who have not had experiences of this kind. There has been a good deal of talk, and some farmers have gone so far as to take the law into their own hands. But still this sort of vandalism, destruction and stealing of farmer's property goes on. It should meet with the stiffest kind of jail sentence, but even then farmers cannot spend all of their time night and day watching their fruit and other property, so most of the thieves get away. It is unfortunate too, for the great majority of car owners who are decent and law-abiding, because of a few vicious criminals. It is getting so no one can stop for a few moments along the road to rest or to look at the summary without being under suspicion.

### A Billion Dollars More for Farmers

THE rapid increase in prices recently in wheat and several other farm products has been estimated to mean at least a billion dollars more for American farmers. When we stop to realize what these few extra dollars will mean in the thousands and thousands of farm homes in lessened worry and increased comfort, it does our heart good.

The best of it is that farmers themselves will actually reap the benefit of this increase. Very often a quick rise in prices of farm products has come at a time when most farmers had little to sell and the increased prices benefited only the dealer and speculator. This time the prices come right at the beginning of the harvest.

### Eastman's Chestnuts

IT has not been so many years since a feather bed was regarded as almost the last word in luxurious ease in most American families. With what great care mother would save and carefully dry the feathers from every fowl that was killed on the farm! But customs change, and while a good many folks, particularly the older ones, still like their feather bed, most of us have come to pretty well agree with the tramp in the following story:

Traveling along the road one morning, he picked up a feather. Looking it over interestedly as it lay in his hand, he said:

"Seems as though I've heard somewhere about folks sleepin' on feathers. I'll jest stick it in my pocket and try it tonight."

So that night after he had found a sheltered spot in the corner of a hedge, the tramp carefully placed the feather under him before he went to sleep. The next morning when he arose, he was lame, and stiff and sore in every joint. As he was rubbing himself, groaning and grunting, he suddenly caught sight of the feather.

"Dang ye!" he shouted at it. "I wondered what ailed me. If one feather can do this to me, what would a whole feather bed do!"

# Farm Machinery Our Fathers Used

## The Beginnings of Modern Agriculture—Equipment Used Before 1860

**A** FEW issues ago we ran a page about old-fashioned farm machinery which created so much interest that we went back to study the old volumes of AMERICAN AGRICULTURIST from 1842, when the paper was started, to 1860, at the outbreak of the Civil War, to get interesting pictures and descriptions of the machinery with which our fathers of those days did their work. If these pictures and descriptions

Hussey's "Reaping Machine"

are as interesting to you as they were to us, you will certainly like to read about them.

Probably in the great AMERICAN AGRICULTURIST family there are a good many readers who have seen and perhaps actually used some of the machinery and devices pictured on the page. If so, a letter from you about it will be very interesting.

No doubt farm machinery has been more responsible for the change in civilization which has taken place in the world in the last hundred years than any other one factor. Without it, the modern cities would be absolutely impossible, for the majority of the people would have to live in the country and raise their own food. This would change or make unnecessary all of our great transportation systems, all of our various marketing plans and devices, and would perhaps make competition on the land so severe, if the population kept increasing, that in time our standard of life would become as low as it is among some of the countries of Asia where great hordes work from dawn to dusk to keep body and soul together.

\* \* \*

### Hussey's Reaping-Machine

**I**N the issue of 1843 Abed Hussey wrote as follows about what he called his "reaping machine." His own description of it reads as follows:

"When it is in operation in the field, the horses travel on the stubble, and near the standing grain, drawing the machine behind them. That part which cuts the grain is a wide platform, and extends six feet to the right hand into the grain, and is capable of being adjusted as high or as low as grain is usually cut; say from five to fifteen inches from the ground. Along the forward edge of the platform where the grain is cut, is a row of strong iron spikes about the size of small harrow teeth. These spikes are formed of two pieces of iron, one above and one below, leaving a horizontal slit in each spike for the cutting-blades to play in. These blades are formed like lancet-points, being sharp on both edges, and several inches long. They are fastened side by side on an iron rod, as many blades as there are spikes on the platform; the iron rod with the blades upon it extends through all the spikes, and is connected to a crank, immediately behind the horses. This crank is turned by cog-wheels, connected with the main axle, and is moved fast or slow according to the speed of the horses, giving a horizontal, vibratory motion to the blades, causing them to move out of one spike into another, backward and

Pennock's Seed and Grain Planter

forward, there being as many blades as spikes. As the machine is drawn ahead in the grain, the stalks or straw is received between the spikes, while the vibrating blades cut it off as it enters; the straw being held by the spike both above and below the edge of the blade, while the blade passes into the spike—thus the cutting is made sure.

As the grain is cut, it falls back on to the platform. When the wheat is tangled, this falling back is aided by an instrument in the hands of a man who rides on the machine, whose business is to push off the grain in heaps as it accumulates on the platform. He is able to do this with great accuracy and neatness, leaving the heaps distinct from each other, and in line order for the binders.

"One machine will cut twenty acres per day with ease, if

ordinary diligence is used. The blades need no sharpening from beginning to end of harvest. Standing and tangled grain is cut perfectly clean; indeed, lodged wheat is cut better with the machine, than it is usually cut by the cradle, and if the lodged wheat be very heavy, it will be cut very clean, and nearly as fast as if standing."

\* \* \*

### Pennock's Seed and Grain Planter

**A** LONG about 1846 machines to replace hand methods got further consideration when Pennock's seed and grain planter was announced. The description of the machine in the AMERICAN AGRICULTURIST of that year read as follows:

"This machine will plant wheat, rye, Indian corn, oats, peas, beans, rutabagas, and turnips; and can be regulated to drop any required quantity on an acre. The drills can be thrown in or out of gear separately, so as to plant a field of any shape without seeding any part twice. They are so arranged as to operate equally well on all kinds of land—hilly and rough, as well as level and smooth."

\* \* \*

### Power Driven Separator of 1847

**I**N the issue of 1847 we begin to find the mention of threshing machines. The application of horse power in the form of a tread mill was one of the big influences in the development of machinery to replace the old flail. The description of a

Power Driven Separator of 1847

power-driven thresher of 1847 pictured on this page, reads in that volume:

"The simple contrivance called the 'shaker,' or 'separator,' which is attached to the thrasher, saves much labor in winnowing the grain, besides leaving it without waste, entirely free from straw. This horse-power is easily applied to various labor-saving machines, and is the kind mostly used at the New England railroad stations for sawing wood."

\* \* \*

### Washing Machines Before the Civil War

**A**S early as 1849 the back-breaking task of washing clothes called upon inventive genius for a device to spare the housewife its drudgery. In 1849 Sabin's machine was announced as "a truly useful machine to wash perfectly clean clothes, fine linen, etc. in three minutes time without the slightest damage."

Above—The Metropolitan Washer of 1859 and on Right—the Washing Machine of ten years before, 1849

In 1859 the Metropolitan washing machine, manufactured by David Lyman of Middlefield, Conn., came on the market. This machine, however, was considered, according to the manufacturer, "admirably adapted to the wants of the South."

\* \* \*

### Allen's Patent Mower

**T**HE history of the mowing machine goes back before 1843 and those old machines were very, very crude. However, in 1855 Allen's Patent Mower came on the market and apparently gave much satisfaction. Its outstanding features were said to be as follows:

"1. In perfectly cutting any kind of grass, whether fine or

coarse, lodged or standing, and salt meadows as well as upland.

"2. Owing to the form of the knife and its rasp patent, it does not clog even in the finest grass.

"3. The gearing being hung on horizontal shafts and justly balanced, enables the mower to run perfectly true in a straight or curved line and with one-third less draught than any other yet made. It also runs with much less noise, and with no jerking motion, in consequence of the knife being operated by a wheel instead of a crank. The knife can be taken off or put on in a moment, without the necessity of passing it through the

Allen's Patent Mower

arms of the driving-wheel. This is a very great convenience, and obviates a serious objection to mowing machines.

4. The superior gearing enables the knife to play with sufficient rapidity to do its work well, at a speed of not over two and a half to three miles per hour. Most other mowers require the team to walk at the rate of four miles per hour, which is very distressing to the horses.

"5. A smaller wheel is attached to this mower, by a spring axle, which runs parallel with the driving-wheel. This enables the machine when thrown out of gear, to be driven over the field or along the road as readily as if hung on a pair of wagon-wheels.

"6. A reaping-board can be attached when required, thus making it a reaper or mower, as desired."

\* \* \*

### The Buckeye Rotating Harrow

**M**ANY a farm boy has had the terribly painful experience of having his shins skinned dodging around a harrow. Just imagine, if you can, this same boy dodging around the old Buckeye Rotating harrow of 1858. As you will see by the illustration, a heavy weight was adjusted to one side so that the teeth on that side were pressed down deeper into the soil. As the draw bar was attached to the center or pivot point, the deepset teeth held fast allowing the teeth on the opposite side to rotate around. According to the editor of AMERICAN AGRICULTURIST in 1858 the advantage of his harrow was that it did not clog up with grass or clay and furrowing was avoided. The zigzag motion of the teeth was said to have pulverized the soil better than the smooth forward motion of the well-known spike-tooth drag.

The Buckeye Rotating Harrow

\* \* \*

### Joseph Sutter's Patent Gang Plough

**I**N 1859 Joseph Sutter announced his improved gang plough (observe the spelling in those days), the forerunner of the modern tractor gang plow, "made with from 2 to 6 or more shares,

Joseph Sutter's Patent Gang Plow

... requiring only the attendance of one man. The saving of Time and Labor and the excellent work it does, are the principal features of the plough, which, compared with the single plough, makes it one of the GREATEST IMPROVEMENTS OF THE AGE."

# Why do Moncriefs Heat Better?

Because Big Water-Pan and Big Casings Help out the Fire Pot -

THE size of the fire pot of a furnace alone is not an indication of heating power. Other parts must be in proportion.

Moncrief Furnaces deliver more heat at lower cost because all parts bear the right proportion to each other. The extra size casings, or air chambers, allow a large current of air to circulate around the furnace and take the heat up into the rooms as fast as the fire pot creates it.

Extra large water can supplies this circulating air with plenty of moisture. Properly moistened air at 55 degrees is more comfortable and healthful than dried-out air at 72 degrees, -and a lot cheaper.

Moncrief Furnaces are well made of the best grey iron and finest sheet metals. You can have your choice of Pipe, Pipeless or Majestic Moncrief, in the size exactly suited to your needs, -at a price suited to your pocketbook.

# Questions About Mechanics

Perhaps One Answers Your Problem

I would like to know if a sound clutch can be slipped by the throttle while it is in high gear without releasing the clutch pedal. This question has been under discussion for sometime in our neighborhood. One says it can, another says the contrary. We would like to know your opinion.—G. F. H., New York.

WE do not think that a sound clutch can be slipped by the throttle when it is in high gear and without releasing the clutch pedal. To strengthen our opinion we quote from an accepted authority—Dykes Automobile and Gas Engine Encyclopedia, which states, "A well-adjusted clutch takes hold gradually, does not slip after it has come to a seat and releases instantly when the pedal is depressed." It may interest you to know of the following reasons for a clutch slipping, after it has been engaged: burned or worn clutch lining, clutch leather oily and greasy, leather worn down, clutch spring tension weak, clutch shift out of line, ridge worn on the rear of clutch leather.—F. G. B.

## How Should a Battery Be Recharged?

I own a farm electric lighting plant. What I would like to know is, should the specific gravity of the electrolyte in the cells of the battery be allowed to run down to about the minimum before recharging or should it be recharged more frequently? Is it best to keep the battery fully charged or to let it partially discharge?—A. K. B., Pennsylvania.

THE battery is made for the convenience of the user. It is not necessary to recharge it every time it is used a little nor is it necessary for the user to wait until the battery is exactly discharged before starting to recharge. If it is your experience that the capacity of the battery is sufficient to last four or five days, it would be well to charge it twice a week, adding an overcharge about every two weeks. If you find that the capacity of the battery is enough for ten days use, it would be sufficient to charge up once a week adding an overcharge about every two weeks.

It is not necessary to keep the battery fully charged nor is it necessary to keep it partially charged. It should be used as required, taking care not to over discharge it, not to charge it at too high a rate, and that it receives an overcharge regularly.

## Measuring Power of Water

What size wheel and how much water would be required, or how many gallons a minute, to run a thousand or fifteen hundred watt 110 volt generator? Would a turbine be better than a steel wheel? I would appreciate any information that you could give about a water wheel.—S. F. S., Pennsylvania.

IN general, the turbine type of wheel is best adapted to medium falls and comparatively large volumes of water, the impulse wheel to the use of high heads and comparatively small amounts of water. The overshot requires very little water and uses falls down to four or five feet, the undershot is used on falls as low as three feet, and both types of wheels are used where there is insufficient water for the turbine and not enough head for an impulse wheel.

The size of overshot wheel necessary to generate 1000 to 1500 watts will depend upon the fall you have and the amount of water you have. A water-power equivalent to 2 1/2 horsepower will be required to generate 1000 watts and about 4 horsepower to generate 1500 watts. These figures make a liberal allowance for losses. The power of any stream is determined by the fall and the weight of the water.

A horsepower is equivalent to 33,000 foot-pounds a minute. Suppose a small stream has a fall of ten feet and that by measuring it is found that 400 gallons of water are flowing a minute. These 400 gallons of water will weigh about 3300 pounds, and since this weight is falling through a distance of 10 feet, the power of the stream would be 3300 pounds x 10 or 33,000 foot-pounds a minute. In a similar way, the power of any stream may be determined. The fall and the flow of water per minute must be measured.

Suppose you desire to generate 1000 watts. 2 1/2 horsepower should be available in the stream. 2 1/2 horsepower is equivalent to 82,500 foot-pounds. Suppose you have a fall of 15 feet. To obtain 2 1/2 horsepower, you would have to have 5500 pounds of water falling the distance of 15 feet each minute. Since 1 gallon weighs 8 1-3 pounds, 5500 pounds would be about 663 gallons. This example illustrates how you may determine the power of your stream.

## Galvanized Roofing a Lightning Protector

I would like to know if it is any protection from lightning by using galvanized roofing? If so, is it necessary to connect a ground wire to the roofing.—R. G. F., New York.

GALVANIZED roofing is a protection from lightning. Two opposite corners of the roof must be grounded. The ridge of the roof should be capped with a sharp edged piece and not a rounded piece. Any cupolas should be grounded to the roof and any chimney should have rods grounded to the roof. Galvanized roofing, if grounded and installed with a sharp ridge, gives good protection.—F. G. B.

## One Size of Pipe Preferable

In piping, from a spring to the house, is it better to use all 3/4-inch pipe or is it better to use larger pipe, say, 1 1/4-inch pipe reducing to 1-inch then to 3/4-inch and finally to 1/2-inch? Which is best?—A. S., New York.

IF you had mentioned the distance it is from your spring to the cellar wall and how much flow you have, it would have been possible to give you very definite information. As it is we will have to substitute conditions. The size of pipe used under any set of conditions will determine the amount of water available at the end of the pipe and the pressure that will be realized.

Suppose you had 50 feet of head and that it was 400 feet from the spring to the cellar wall and that you desired 5 gallons per minute to flow through the pipe. To force 5 gallons of water through 100 feet of 3/4-inch pipe will require 10 1/2 feet of head and for the 400 feet there would be used up 42 feet of your available 50, leaving you 8 feet at the cellar for pressure. If, on the other hand, you used 100 feet of the 1 1/4-inch pipe, 100 feet of the 1-inch, 100 feet of the 3/4-inch and 100 feet of 1/2-inch pipe, it would require nearly 56 feet of head to obtain 5 gallons per minute at the house. Under the conditions assumed above and using four different sizes of pipe, you would actually get less than 5 gallons per minute at the house and practically no pressure.

Try soaking a hard paint or varnish brush in hot vinegar to soften it.

"I thought I had this daylight saving puzzle solved by carrying one watch with standard and one with daylight saving time, and now I've forgotten which is which."—Life.

# Post Your Farm

and Keep Trespassers Off

We have had a new supply of trespass signs made up. This time they are made of extra heavy linen on which the lettering is printed directly. There is no card facing to be water-soaked by the rain and blown away by the wind. We have had these new signs made up of extra heavy material because severe storms will tear and otherwise make useless a lighter constructed material. We unreservedly advise farmers to post their land and the notices we have prepared comply in all respects with the law. The price to subscribers is 95 cents a dozen, the same rate applying to larger quantities.

# Vote to Leave State Fair

## Fruit Men Object to Past Treatment

IT takes more than a rainy day to mar the success of the annual summer meeting of the New York State Horticultural Society. In spite of the rain, several hundred fruit growers from every part of Western New York gathered at the farm of Charles S. Wilson at Hall, on Wednesday, July 30th, and everyone pronounced the meeting one of the most profitable and enjoyable held by the Society in years.

Because of the bad weather, it was necessary to hold the speaking and the business program in the rural church at Hall. So large was the crowd that there were many who were unable to crowd inside.

The speakers were Dean A. R. Mann of the State College of Agriculture, Dr. U. P. Hedrick, horticulturist at the Geneva Experiment Station, Prof. P. J. Panott, entomologist at the Geneva Station, and President Farrand, of Cornell University.

Professor Panott outlined briefly the experiments that were being made in the Wilson-Jones orchards and told the visitors what to look for on the trip through the orchards.

### President Farrand of Cornell Speaks

President Farrand of Cornell spoke briefly but as usual had a message well worth hearing. He said that one of the great dangers of the times was overspecialization not only in the fruit business but in all other walks of life. Overspecialization narrows the horizon or the outlook on life and tends to make individuals and nations narrow and selfish. President Farrand emphasized the great need in these troubled times of toleration and a sympathy and understanding of the other fellow's and the other nation's point of view.

After the speeches, President Wilson brought some matters of business before the convention. Secretary Roy P. McPherson read the following resolution, and after a brief explanation and discussion it was unanimously adopted.

Resolved, that the members of the New York State Horticultural Society approve the undertaking of a cooperative investigation of peach yellows and little peach by the U. S. Department of Agriculture, and by the Experiment Stations of those states in which the disease is of importance, and that we request our president to take such action as may be necessary to secure a federal appropriation for this purpose.

President Wilson then made a statement regarding the much discussed proposition of the Horticultural Society withdrawing its support from the State Fair at Syracuse and recommending that fruit and vegetable exhibitors go to the Rochester Exposition instead. The following statement issued by President Wilson before the meeting explains the position of the fruit men.

The New York State Horticultural Society has for many years tried to improve the exhibits of fruits, flowers and vegetables at the State Fair. The Society has never been met half-way by the Fair authorities in its endeavors. Efforts have been made for twenty years to have the horticultural exhibits properly housed but without avail. Recently the Fair authorities have given the Society a rebuff that makes it hardly possible for the organization to continue its interest in the horticultural exhibits at the fair.

Members of the Society will remember that last year the Fair authorities placed the fruit exhibit in charge of a man not connected with the fruit interests in the state, wholly inexperienced in putting up fruit exhibits, unknown to most of the fruit-growers, and without a single qualification for the position not possessed by any other intelligent man in the state. This man brought with him helpers who were as little experienced as he in matters having to do with exhibiting fruits. At both the Rochester and Poughkeepsie meetings resolutions were passed asking the State Fair Commission to appoint as Superintendent of the Fruit Department some man connected with the fruit interests who has recognized qualifications for the position. This the Fair authorities have refused to do, and have appointed

the Superintendent who held the place last year.

Under these conditions may it not prove advantageous to this Society to transfer its attempts to build up a fruit exhibit to the Rochester Exposition? Rochester is in the very center of the fruit, nursery, vegetable and flower interests of the state. This Society meets there every winter. The city, the hotels and the commercial institutions have given us every consideration possible. May it not turn out that the Exposition would furnish us better facilities for exhibiting fruit than the State Fair, and cooperate more intelligently, congenially and helpfully with us?

This is a matter that your President and Directors want the members of this organization to think over and discuss at the coming summer meeting. As a great fruit-growing state, New York should have somewhere each autumn a creditable exhibit of fruit. We have never had such an exhibit at Syracuse. May it not be worth while to try to make annually a great exhibit of fruit at the Rochester Exposition. Those in charge of the Rochester Exposition will meet us, it is believed, more than halfway.

If this Society recommends its members to exhibit at Rochester, vegetable growers, florists and nurserymen, none of whom are well satisfied with their treatment at Syracuse, should be asked to join in making annually a great horticultural display at the Rochester Exposition.

Mr. Wilson stated that a resolution had been drawn which met the approval of all the officers of the Society. He then requested Secretary McPherson to read the following resolution:

Whereas, the New York State Horticultural Society has for many years tried to have the exhibits of fruits, flowers and vegetables at the State Fair properly housed and better displayed, and has not been met half-way in its endeavors by the Fair authorities, and:—

Whereas, last year the Fair authorities placed the fruit exhibit in charge of a man as Superintendent not connected with the fruit interests in the State, wholly inexperienced in putting up fruit exhibits, unknown to fruit growers, and without qualifications for the position not possessed by any other intelligent man in the State, and after being asked at the Rochester and Poughkeepsie meetings through resolutions unanimously adopted to appoint a man connected with the fruit interests who had recognized qualifications for his work, have refused to do so and have appointed the same Superintendent who held the place last year:—

Resolved, that this Society transfer its attempts to build up a fruit, vegetable and flower exhibit to the Rochester Exposition, and that it recommend its members to exhibit at Rochester, and be it further resolved that vegetable growers, florists and nurserymen, none of whom are well satisfied with their treatment at Syracuse, be asked to join in making annually a great horticultural display at the Rochester Exposition.

This resolution was regularly moved and seconded and was then followed by a discussion.

It was stated from the floor that a superintendent had been placed in charge of the exhibits by the State Fair Commission last year who was totally inexperienced, that his assistants also knew little about fruit, and that the whole exhibit had been handled in a manner wholly unsatisfactory to fruit growers.

The Horticultural Society and fruit exhibitors made objections to the Fair Commission about the reappointment of the same superintendent for this year, but in spite of these objections, the Commission had appointed the same men. When the objections were made the Fair Commission asked the Horticultural Society to name three candidates from which the Commission would choose a fruit superintendent for the fair exhibits. Through a misunderstanding, the Horticultural Society named only one candidate. As soon as the Society learned that they were expected to name three instead of one, they named two

**BOGGS POTATO GRADER**  
Enables you to sort and grade 75 to 700 bushels of long or round potatoes per hour into the two Government sizes. Eliminates culls and dirt at the same time. Due to patented endless belt, there is less than 3% variation in size from Government grades. Can't bruise or injure potatoes. Thousands in use. Operates by hand, motor or engine. Price \$40 and up. Write for interesting booklet.  
**BOGGS MANUFACTURING CORPN.**  
20 Main St., Atlanta, N. Y.

### FOR THE FORDSON

This One-man Mower cuts 16 to 30 acres a day. Quickly attached to the Fordson—no changes necessary. Ball bearings—two speeds—automatically oiled—fool proof—guaranteed. Used on Henry Ford's Farm. Write for particulars.

**DETROIT HARVESTER CO., DETROIT, MICH.**

200-Acre Farm, Horses and 10 Cows, Poultry, Machinery

Young stock included by aged owner to settle quickly: 2 houses of 6 and 7 rooms, beautiful views, fine section for summer boarders; store delivery, close school, ready markets; 120 acres loam tillage, spring-watered pasture, woodland, variety fruit; ample barns, shop, poultry house. Income right from start and only \$3600 for all. Part cash. CHAS. G. TOMPKINS, 370 Main St., Catskill, N. Y.

OLD hay has been almost all cleared out of this part of the country, along the southern tier of New York. Wet weather has brought the new crop along well for the past few weeks.

Many fields which farmers intended to devote to oats never have been seeded in 1924. Some will go into buckwheat, some remain in the fallow furrow.

Some have begun haying and find the crop only medium in quantity but of good quality.

Farm wages are still high, men commanding forty cents an hour; but it does seem easier to get men that are willing to do farm work.

The shops at Endicott and Johnson City are all running light-handed, some not at all for a few weeks' vacation without pay. This makes a difference in the pay checks of the hands and secondarily affects farmers who sell produce.—E. L. V.

### New York County Notes

Oneida County.—The season has been several weeks late compared to normal in regard to practically all vegetation. Potatoes are making fairly rapid growth. Oats are looking good. Nights are too cool for corn which shows very uneven growth. Hay is a good crop as to quantity and quality. New seedings are heavy. This has been a good year for alsike clover which is plentifully mixed in the hay. Haying has been nicely started at this writing (July 26). The flow of milk is holding up very well for this time of the year. Small fruits have been plentiful. Early apples set quite good. Eggs are selling for 35c a dozen. Pork up to 200 pounds brings 11 to 12c per pound, dressed. Young pigs sold at \$5 each. Many farmers are working on the county roads.—E. N. A.

Steuben County.—Potatoes are looking fine here. Early peas were poor and all of them have been marketed. The prospects are much better for late peas than for the early crop.—N. Y. P.

Ontario County.—Everybody is busy haying, which crop promises to be a good one. Every one ought to be in wheat harvest by the first of the month. Some pieces look very good, while others are light. Lots of cherries.—H. D. S.

### Notes from New Jersey

Mercer County.—A dairy tour supported by the Mercer County Dairy Record Association, the Mercer County Holstein-Friesian Association and the Mercer County Guernsey Association will be run through Lawrence township of Mercer County on August 8. Visits will be made to several purebred cattle and alfalfa farms. Crops of soy beans will also be inspected. At noon the party will enjoy a basket lunch after which Professor Barland of the Pennsylvania State College will give an address. A purebred bull sale will be staged at J. W. Miller's "Province Line Farm" of 10 fine bulls which will be sold, half from Guernsey and half from Holstein herds. This will give farmers an opportunity to stock up with some good animals. It is expected that this will be the climax of the purebred bull campaign.—MRS. J. E. H.

Hunterdon County.—During the early part of July we had some very wet weather with very little sunshine. Haying is completed. The early part of the haying season was hard on farmers because of the little good curing weather we have had. The crop was very good, in fact the best in several years. Wheat is two weeks late. It is making heavy straw but it has not filled out as well as last year. Corn is not looking good. In some fields the grass and weeds are as high as the corn and the wet weather has made it impossible to do much cultivation. As a result there will be a poor crop. Quite a bit of oats rotted this year

and some plowed them under and sowed buckwheat, although this is not a buckwheat county. Hay harvest, corn cultivating and other work seems to all come at once and farmers cannot get enough help to do the work at any price. Wheat is \$1.40 a bushel; corn, \$1; rye, 90c; oats, 60c; eggs, 27c a doz.; butter, 47c. No one seems to know the price of milk. It looks as though it had none.—J. R. F.

### Eastern Pennsylvania Notes

OLIVER D. SCHOCK

THE Berks County cow testing association reports tests of all cows producing 1,000 pounds of milk or 40 pounds of butterfat during the month. Albert S. Savigs' best cow is credited with 1,905 pounds of milk for June. The average of the ten highest producers was 1,543 pounds, as compared with 1,567 pounds for the preceding month.

Chester County farmers report that the use of chemical weed destroyers has resulted in the death of several cows and other animals. These remedies are powerful in their action, killing roots as well as the tops of all weeds and vegetation, hence, extra caution is required. State authorities will investigate into the cause of the harm done by the remedy.

Eastern Pennsylvania harvested a heavy crop of hay, Timothy clover and alfalfa yields being exceptionally large and of excellent quality. The Philadelphia hay market averages about fifty carloads weekly at present, with cash prices of \$20 to \$28 per ton. Wheat, oats and rye straw, in carload lots brought \$15 to 17 per ton.

Many Central Pennsylvania apple orchards will produce yields far below the average, due to poor climatic conditions when the trees were in bloom. The Stayman Winesap, being in blossom at a late period, will be a very small crop. The Yellow Transparent escaped injury, because of its early blossoming.

There will be an unusual scarcity of turkeys on eastern Pennsylvania farms. Other varieties of fowls will be plentiful.

### Central Pennsylvania Notes

J. N. GLOVER

SOME Timothy hay is still being made by those who have a big acreage to cut. The hay crop was much better than the stand of grass a year ago would indicate. Pastures are short, due to no rain for nearly two weeks, but we have had fine weather for cutting wheat and hauling it into barns. Wheat handles as though it is well filled, and it is long in the stalk, making a big amount of straw to store in threshing time.

Threshing of wheat has begun already though only a few farmers thresh wheat from the field. Oats are turning yellow rapidly and some fields will be fit to cut this week. It promises to be a good crop for as late as oats were sown.

Corn is making a good growth, but will need many more warm nights and showers next month with no frost before October to make a crop of corn. But the color and the stand of corn are both good, though planting was two weeks late.

Early potatoes may be a better crop than late ones, unless we have rain.

A number of farmers are planning to have sales of their farm stock next spring, as the advance in the prices of wheat and corn has not helped them, unless this year's wheat crop sells much higher. Milk prices are discouraging compared with the price of feed, so sales and changes of tenants will continue until prices adjust themselves better.

Crawford County.—We have been having quite cool weather. Haying is in full blast and we look for a big crop. Wheat is also being cut. The crop looks good with the exception of those fields

which were sown late. Eggs 28c, butter 45c. Raspberries made a good crop and have been quite plentiful. Oats are looking good. Corn is very late. A great deal of it has been poorly cared for. Potatoes are coming on slow. They will be late. Pastures are good. Milk is holding up fairly well.—J. F. S.

### Vote to Leave State Fair

(Continued from page 87)

more, but by then the first named candidate, proving unsatisfactory to the Commission, it had reappointed the same man who held the position last year.

It was stated further that for years the horticultural interests had not had good cooperation from those in charge of the Fair and that the time had come to go where they would get such cooperation.

After the discussion, President Wilson called for a vote on the resolution. There were several ayes and some nays, so he called for a standing vote. Between forty and fifty members stood for the resolution and five or six voted against it. A large number did not vote and there was a considerable sentiment afterwards that the Society had made a mistake although all agreed that the provocation was great.

A cafeteria luncheon was served by the ladies of the Union Congregational Church on the beautiful lawns of the Wilson home after which there were plays and games and the inspection trip through the great orchards.

# A Way to Stay in the Business

## What Cow Testing Associations Do for Their Members

**I**F YOU have not read the editorial in this issue entitled, "What is the Future of the Dairy Business for Me?" I hope you will read it, for it expresses my sincere belief that a lot of men have either got to adjust their business methods of handling their dairy or else they cannot stand the prices or the competition which are going to prevail in the dairy business. The man who does not depend upon his cows for the main part of his living but only keeps them to have a little milk and butter for his own use and a little surplus to sell, need not worry so much as to whether those cows are good or poor, for his main living comes from other lines of farming. Of course, he would make more from the cows he has if they were better. But the real dairyman who depends upon his cows for his living must do some long thinking to meet the situation which is ahead of him.

### Dairying Meeting Heavy Competition

As we have stated in the editorial, dairying under modern conditions of producing milk for markets has become a real business. The dairyman is in competition with other farmers and with other business. Those who survive will have to meet that competition with the same good business methods that their competitors use. This certainly means the keeping of records. How to keep records on individual cows, as to what they eat, the pounds of milk they give, and the amount of butter fat this milk contains is a big problem.

For years there have been a few men in almost every dairy county in the big dairy states who have believed in the keeping of records, but who have not been able to get the time to do it themselves. Many of these men have joined with their neighbors in cow testing or dairy improvement associations. These associations have been an immense amount of help to farmers. They were just coming into considerable popularity before the war, but during the war, it was difficult to get men and the number of associations declined. Of late there has been a revival of interest which we have been glad to see.

### "Better Cow" Cooperatives

Each association is a sort of small cooperative organization working for better cows. Farmer members unite, hire a tester, who visits each member once a month, weighs the feed and the milk for each cow in the herd, tests the milk and butter-fat. All the records are kept in a herd book and at the end of the year every member knows how much each individual in his herd produced and what it cost him for her production. In other words, the cow testing association enables the dairyman to keep accurate records of his business in the same way that men in every other business, except farming, do.

Another result that nearly every member of a cow testing association will testify to is the removal of friction between dairymen and the milk dealers over the tests at the local milk station. A local dealer knows that the dairyman knows from his own records what his test should be.

But the cow testing associations have their limitations. It is rather difficult to get men for testers, and sometimes there are not enough dairymen in a community close enough for the tester to work efficiently. In this case, there are some modifications of the cow-testing plan which are worked successfully; for instance, the dairy improvement clubs. The general idea of these clubs is for the farmers to keep milk weights themselves and occasionally send a sample of the milk to be tested for butter-fat to the farm bureau office or to the local creamery or milk plant. Then the milk weight records are sent to the farm bureau office for tabulation. The county agent writes the individual farmer when he returns the

record, making such comments as he sees fit. Further information as to getting started with these clubs can be obtained from your county agent.

A good many dairymen in the last few years have obtained a Babcock tester and occasionally make a test of their cows themselves. Testers are not expensive and the operation can be easily learned by anybody by following the simple directions.

### Some Outstanding Reports

One of the interesting results obtained from the cow-testing work in New York State is the publishing of the names of the owners of the ten herds in the whole state who make the highest records for the month. Because we believe these men deserve some advertising for the effort they have made to improve their dairies and because of the growing interest in this excellent work, we hope to publish from time to time the names of the men in the cow testing associations who succeed in getting their herds into the list of the highest ten each month.

To give an idea of how interesting this work becomes to every member, we give below a few of the comments of the testers in some of the different cow testing associations. In these reports, which are given considerable circulation all over the state, notice that the members of the cow testing associations get considerable advertising and note also that they receive a lot of information as to what other good dairymen are doing. For instance, the report given below by agent Balch shows that farmers are not feeding as much grain as usual. Note too that almost as soon as the work starts, the poor producing cows start toward the butcher. Some of the reports follow:

#### Albany-Schenectady. Agent, E. J. Colliton

The two leading cows in this association this year (until May 1st) are: for milk, a grade Holstein No. 4, owned by Parker Corning, with record of 10,259.6 pounds milk and 342.7 pounds fat. This record was from Nov. 10, 1923 to May 1st, 1924. In butter-fat, a Jersey cow owned by Gladys Saddle mire lead with 6585 pounds milk and 368.5 pounds fat. The association year started last August. Corning Farms have a herd of 40 milking Holsteins.

Jasper Comstock of Altamont, R. D. No. 3, has a P. B. H. F. bull calf for sale that was born, March 10th. His dam was highest cow in this association for milk last year with record of more than 15,000 pounds milk with average test of 3.5 per cent and second in butter-fat. She was milked only twice a day for 10½ months. The calf is ¾ white, a fine individual and from an accredited herd. Anyone wishing more particulars should write Mr. Comstock or go personally to see the individual.

April 1st, I started two new association members, both with grade Guernsey herds; Joseph De Marco of Duaneburgh and Perry Lobdell of Rensselaerville.

For the month of April seven cows were culled and sold to the butcher. Culling the herd for both milk production and butter-fat is one of the benefits you will get from association work.

#### Western Allegany Agent, B. F. Mullaney

This month finished the year for some of the members. Mr. J. B. Harbeck of Black Creek, on a dairy of 24 cows, 7—2 year old; 7—3 year olds; 4—4 year olds, had an average production of 11,402 pounds of milk, 394 pounds of fat. His high cow, "Mutual Friend Aggie Johanna, a 4 year old, produced 16,439 pounds of milk and 552.5 pounds of fat. Her value of product above cost of feed was \$197.42, cost per cwt. of milk 91c; cost per pound butterfat 27c. Mr. R. W. Chamberlain of Caneadea finished some A. R. O. records, one 31.33 pounds of butter-fat on a 6-year old, on two junior 2 year olds, 20.45 pounds of butter-fat and 21.49 pounds of butter-fat respectively.

#### Chenango Valley—Unadilla—Agent, W. W. Sadler

Mr. Neidlinger & Son sold four poor testers and bought a two-year old purebred bull.

Mr. Friedel sold three poor testers and bought two cows.

Mr. Marshman let two cows go, one he thought was tubercular.

Prindle Bros. have sold three cows and have three two-year old heifers come in. They have purchased a purebred Holstein bull.

#### Sherman Agent, L. B. Mapes

Thirteen poor producers have been sold in the Sherman Association during April.

#### Andes Agent, J. J. Linehan

Next month starts the association for another year. This will make the third year of the association. The few herds which are dropping the work are only small ones, with most of the cows being tested for two years. The price of milk for March was \$2.50 per 100 pounds for 3 per cent. One purebred bull was brought into the association this month.

#### Ellisburg Agent, M. L. Balch

On account of the low price of milk the farmers are not feeding as much grain as they would like to.

#### So. Lewis Agent, H. L. Stahlman

There were 10 dairies tested during April containing 202 cows, 162 cows were milking and 40 were still dry. There are 36 cows on the honor roll which is quite an improvement over a year ago, when there were but 26 from just twice as many dairies. It is interesting to note that over one-half the honor-roll cows are from Mohawk Hill. Herds averaging 1000 pounds of milk follow:

Geo. E. Hayes, 1136.4 pounds milk, 36.9 pounds fat per milking cow.

J. W. VanZandt, 1018.6 pounds milk, 32.5 pounds fat per milking cow.

Earl Potter, 1009.0 pounds milk, 32.3 pounds fat per milking cow.

#### First Oneida Agent, C. J. Morrow

More milk is being produced this month, due to more cows in milk production. Most of the members are going to carry on the work with the association this year and several new ones wish to join. The majority of farmers are mixing their own feed and the average price is around \$1.90.

#### Schuyler-Seneca Agent, H. C. Hinsdale

Several rations have been changed for more economical production. No grade bulls in use.

#### Hamilton Agent, R. H. Bresee

We wish to call your attention to the honor list in the Garrod herd. These cows are not only high, this month, but are high yearly producers. The members of this association are going to have something to do, if they outclass this herd for the coming year. I expect this herd to average very close to 12,000 pounds per cow, as they are in shape to do business.

Out of 308 cows tested, 50 made the honor roll, this is not quite as large a proportion as we have some times, but it is due to the fact

# Save Your Corn

## Act Quick for a UNADILLA SILO

Spring was late. But nature often makes up for lost time. Corn's coming along fast—looks good. We'll have a full crop. What will you do with yours? Put it into your own silo. Get the benefit of its value—*this winter*.

You can get a strong, well-built, time saving, silage saving and *money making* Unadilla—in time to *save this season's crop*. Shipped within 24 hours after receipt of order. Make up your mind and act—*now*.

Write at once for prices and full information.

UNADILLA SILO COMPANY  
Box B Unadilla, N. Y.

NATURAL LEAF TOBACCO Chewing five pounds \$1.75; ten \$3.00. Smoking five pounds \$1.25; ten \$2.00. Pay when received. Pipe and recipe free. Cooperative Farmers, Paducah, Kentucky.

## The WINDMILL with a RECORD

The Auto-oiled Aermotor has behind it 9 years of wonderful success. It is not an experiment.

The Auto-oiled Aermotor is the Genuine Self-Oiling Windmill, with every moving part fully and constantly oiled.

Oil an Aermotor once a year and it is always oiled. It never makes a squeak.

The double gears run in oil in a tightly enclosed gear case. They are always flooded with oil and are protected from dust and sleet.

The Auto-oiled Aermotor is so thoroughly oiled that it runs in the slightest breeze. It gives more service for the money invested than any other piece of machinery on the farm.

You do not have to experiment to get a windmill that will run a year with one oiling. The Auto-oiled Aermotor is a tried and perfected machine.

Our large factory and our superior equipment enable us to produce economically and accurately. Every purchaser of an Aermotor gets the benefit from quantity production. The Aermotor is made by a responsible company which has specialized in steel windmills for 36 years.

**AERMOTOR CO.** Chicago Kansas City Dallas Minneapolis Des Moines Oakland

## GLOBE SILOS—THE MOST ATTRACTIVE AND THE MOST ECONOMICAL

You can tell them by their roofs

A GLOBE SILO will give you 100% efficiency. The extension roof—originated by the GLOBE SILO COMPANY—reduces the cost per net ton capacity. Remember every Extension Roof is a GLOBE or a poor imitation. This greatest of improvements ever made in silo construction combined with the other many GLOBE advantages makes the GLOBE SILO the most durable, convenient and economical silo you can possibly own.

GLOBE SILOS are made of high quality Canadian Spruce and Oregon Fir, with heavy matching, double splines, sealed joints, and flexible airtight doors. They are the best for keeping heat in and cold out. In them silage cures perfectly, keeps better and freezes less.

Send today for catalog and prices on Silos, Tanks, Water Tubs, Portable Poultry Houses, etc. Address

GLOBE SILO COMPANY, Box 104, Unadilla, N. Y.

Send for free loom book, it tells all about the weaving business and our wonderful \$9.90 and other looms. UNION LOOM WORKS, 332 Factory St., Boonville, N. Y.

# Service Bureau

## Some Experiences with Sharks—Legal Questions

I WANT to write just a few lines to let you and the A. A. folks know I readily endorse the articles on page 580 in the June 21st issue of The AMERICAN AGRICULTURIST.

There are all kinds of sharks and schemers around to get some money and even if one does try to be careful they may be taken in anyway. When I was a girl at home one day a smooth-tongued sugar-coated young man came through our neighborhood enlarging pictures at \$5 each. He showed us in the book he carried names of our neighbors who had contracted for the enlargements, so my grandfather gave him an order for three and paid him \$15. The enlarged pictures were to be delivered in six weeks, but it has been about fifteen years now and they haven't come yet. In about six months we and the rest of the folks who had signed up the contracts did receive our original pictures through the mail.

#### Be Careful What You Sign

On another occasion, about seven years ago, another man came through, saying

would cost him only the postage which he was to pay when he received the papers, but it finally came out that he was to receive the papers if he paid them \$1.00 for the purse which they had at first given to him. When he refused to do this the agents became angry and one of them, showing the notebook under Uncle Tom's nose, declared he had to pay the \$1.00 as he had signed up for the papers. My uncle then told them that he had signed nothing and the best thing they could do was to move on while times were good. It wouldn't surprise me to hear of his receiving a bill for almost any amount at any time through the mails.

#### Don't Carry Signed Blank Checks

Some people are so careless with checks, —for example, they sign a blank check and leave it lying around. I can cite two instances, or rather one and another similar incident of this kind. A stranger came through looking for work and a neighbor employed him. He remained a week, then left. When his check came back he found it had been raised from

#### WHAT ONE READER THINKS OF A. A. SERVICE BUREAU

MY DEAR MR. EASTMAN: Received Mr. W's check for the potatoes. I cannot find words to thank you for your kindness and promptness in getting this check. I never expected to get it.

Your paper is the best paper ever entered in our farm homes. I have taken it for many years. Nearly everyone that I know of takes it. It sure is a grand thing to be able to help us farmers to get our pay. When we sell we think we are selling to reliable people, and usually we are, but we get one once in a while who will not pay.

I thank you again, and just as soon as I find out someone who does not take your paper I will send in the name and pay for one year, in return for your kind favor. Thanking you kindly, I am, Yours sincerely, W. I. H., New Jersey.

that he represented a book company in Chicago which was making county maps and he wanted Grandfather to sign a paper. He refused, saying that he didn't want to buy anything, but the agent went on to explain that he merely wanted Grandfather's signature to show that he was the owner of the farm he lived on. Grandfather signed the paper. Within a very short time he received a notice that his \$15 note would be due, and when the book company's agent came to deliver the book he would collect the money. They brought the book,—a county atlas,—and left it, but failed to collect the \$15. They threatened to sue Grandfather and sent three different men, but he didn't pay one penny and the other neighbors,—well, they just told the agents that they would pay so much and no more and the agents accepted it. One man paid them \$3, another \$5, one \$7.50, and one a lone dollar, and the agents didn't kick on the money. One shouldn't sign anything, especially a paper or a contract, for a stranger.

#### The Old "Strong Arm" Game

A few weeks ago two young men came through our neighborhood in an auto. They didn't come to my home, but they did go to my uncle's and he told me about it afterwards. They asked his name and when he told them one of them wrote it, together with his address, in a notebook which he carried. They then wanted to present him with a purse, but he refused to accept it. Then they asked him to subscribe to three monthly papers which

#### MISCELLANEOUS

\$15 to \$115. Another friend of mine has a habit of leaving blank checks, with his signature attached, in his wife's purse for her convenience when she shops alone. While in town one day she lost her pocket-book, but thought little of it as she had no money in it at the time. However, she did think of it when two checks came in, one for \$15 and one for \$50. They never found out who presented the checks as they had been cashed at the grocery and the endorsement was a strange one.

In signing any kind of papers I believe it to be best to take them to a lawyer or a banker and consult them about them, as their advice may save several dollars. —CARMEN D. WELCH, Illinois.

#### Legal Questions

"How many feet of land can the State claim for a macadam road? The road was built ten years ago. The fences in some places are two rods apart, some places more. Some of the fence has been in the same place for fifty years. Can they force us to move back without pay?"—E. W., N. Y.

In reply to your inquiry concerning the macadam road, we wish to say that the State can compel the moving of your fence so that the road will be the width provided at the time it was originally planned. Under the law of eminent domain the State can take any property it desires for public use. Of course it must pay the reasonable value thereof to the owner, but if it has once been paid for, and we suspect that it has, no further payment can be compelled.

\* \* \*

"I have been wondering if one bank was safer than another. I have talked with some people who say that any National Bank is safe or that any bank which belongs to the Federal Reserve System is also safe, but that just a trust company of any kind is no good. Would you please tell me what you think safest? In case a National Bank goes under does the Government make it good to all the creditors? Also does it make a bank any safer if it belongs to the Federal Reserve System?"—F. A., New York.

Under modern supervision of banks by the State it is our opinion that trust companies and national banks are equally safe. In the case of national banks, however, there is the added feature that in case of failure the stockholders are required to assume liability for the bank's debts to the amount of their original investment in stock. The government itself does not assume to pay the obligations of a defunct bank.

# Rat Proofing—By Harry Harrison Kroll

"WELL, sir, I am willing to bet you a five-dollar hat, and a ten-cent cigar in the bargain, that that old blue Tom-cat of mine will clean your corn-crib of rats in two weeks at the outside."

The voice was my father's. He was sitting out on the front porch, his cob pipe in his mouth, arguing with Tidd Sikes, our neighbor, on the relative merits of our blue Tom-cat over Todd's personally invented rat trap. I couldn't see either of the old boys; but I had heard them argue before. The rag-chewing ended just as I thought it would.

"Very well, sir!" came Todd's high, cracked treble. "I take your bet. And I go you one better and make the seegar a twenty-five center!" He delivered this ultimatum with all of the dignity that an elderly, outraged gentleman may bring to a thin, antiquated treble.

Now, so far as the Tom-cat was concerned, I had never seen him catch a rat in his life. He had been part of the family circle for ten or twelve years; and to my knowledge had never manifested the least interest in anything dead or alive except the saucer of cream mother placed night and morning for him behind the stove. While not so well acquainted with the habits of Todd's rat-trap, I had my doubts about it. The contraption was made out of a goods box, with passages leading from the four sides into the center, where they terminated in a nail keg. This keg, according to Todd's formula, was filled with water when the machine was in action. The inventor averred that he had often taken the keg out, after a night in the crib, filled to the first rim with drowned rats.

PERSONALLY, I had always maintained that there is just one really efficient way of dispensing with rodent boarders, and that is to build rat-proof cribs. But father always said "Bosh" at the suggestion, adding, "Rats don't hurt us none to speak of. Old Tom always keeps the rats caught up, anyway."

"You mean he keeps a pint of cream a day caught up," I corrected.

"No," father would reply irritably. "I mean just what I say. Tom catches up all the rats, or most of them, on the place."

I had pooh-hoohed Todd about his invention, and the old man had swelled up like an insulted toad.

"Huh!" he snorted in his cracked treble, and glaring at me with his thin blue eyes. "These here young fellers nowadays think they are so turribly smart!" He stalked away disdainfully as if the present generation were the dirt of the earth. But somehow the outraged dignity of his face and manner did not get down to his knees—they were agitated, and I laughed.

Well, the bet was made. While there was "no money passed," and probably would never be, the winner nevertheless would derive a vast satisfaction from the outcome. That had always been the way with father and Todd. Father never did quite forgive his neighbor for being the first to get out and work for school consolidation. Father was trustee at the time, and he always felt that Todd put one over on him by riding the community day and night for a week and working up such a school spirit that when the question was voted, it carried five to one in favor. On the other hand, Todd had always been a "great hand" with chickens. It was father who brought the first pure-breds into the region, and again led in egg production by first feeding a balanced egg ration. Todd had never recovered from either of these affronts. He might have borne up under the pure-bred idea, but the year father sold more eggs per hen than any other farmer in the country, and beat Todd at least two to one, was a straw that not only broke the camel's back, but made the camel so mad that he never regained his temper.

The following night, father took old Tom over to Todd's crib and locked the

old lazy cat up with the corn. Todd, on the other hand, belligerently brought his trap over, filled the nail keg with water, and set it in dad's crib.

Along about dark, just about the time I was done with the feeding, dad came out to the barn and sat down in the door of the harness room while I finished tearing up hay for the horses.

"Son," he said thoughtfully, "darned if I know whether that old blue tom-cat will catch rats or not. Do you?"

"Never saw him catch anything but the drip of cream from his old lazy whiskers," I told dad cheerfully.

Dad was silent a long time. I poked about my work, waiting for him to say what he had come to say—he hadn't said it yet. I knew dad very well indeed.

"Tell you what I want you to do, son," he finally said. "I want you to go over with me along after bedtime—take your flashlight—and we'll see what that old tom-cat is up to."

"O. K.," I agreed.

"Todd never would get through laugh-

wall and made ourselves as invisible as we could under the circumstances. But it wasn't our ability to conjure ourselves out of sight that saved us—it was pure luck. For Todd turned off at the gate, and for some reason put his light out.

"He'll be back in a minute," whispered father. "Lay low, son. He'll go to bed when he goes back in the house."

We waited a full fifteen minutes, but Todd did not reappear.

"I reckon he must have gone out to the road, and gone back in the front way," finally father decided.

Working upon this hypothesis, which proved correct, we went about our job. I pulled away two or three boards, and finally evolved a crack large enough to admit dad's portly figure. I followed him, and then began our business of shining the eyes of the rodents and flattening their skulls with a section of broom handle. Along about three o'clock in the morning they began to take the hint and game got scarce from then on;

Old Tom never missed a chance to fill up on cream—but as for exerting himself to chase rats—: That was too much to expect of his royal cat-ship.

ing at me if his trap caught my rats, and old Tom didn't catch his," he added presently.

I nodded. "He would roast you to a fare-you-well, pop," I frankly agreed.

"Reckon he would?" Dad looked up at me quickly. I wasn't helping him very much.

I nodded again, more cheerfully than ever. "He'd rag you out of the country, pop. You'd have to sell out and go to Texas."

Mother was accustomed to going to bed shortly after supper; and as soon as possible thereafter father and I surreptitiously left the house. Arriving at Todd's without mishap, we sneaked down to the crib. I found a loose board, pulled it off, inserted my flashlight, and looked for old Tom. There he was in one corner, nestling in a pile of shucks. A mob of mice and rats scampered to shelter, but old Tom blinked his yellow eyes once or twice, then curled his paw around his lazy old nose and resumed his slumbers.

"Holy mackerel," groaned dad. "Son, this won't do."

"No," I conceded, "you'll never get a five dollar hat and a ten-cent cigar with this scheme."

"I'll tell you what we'll do, son," father said finally. "We'll just have to stay here till we are sure Todd's gone to bed, then get in there somehow and knock a lot of those rats in the head and have them ready in the morning as evidence."

"S-h-h-h!" I whispered warningly.

Todd had come out of the back door, carrying a lantern, and was bearing down upon us. We shrank up against the barn

but we managed to chloroform about fifty. Dad stuck his knife into the throat of each one, just behind the ear, to show Todd how methodical old Tom was in his methods; and just before day we pulled out for home.

TODD showed up shortly after breakfast. Then all of us went down to the crib to see how the trap had been working. I stopped amazed. The contraption had worked, sure enough. When we poured the water out of the keg, we found it was about half full of perfectly good rats, thoroughly and permanently drowned. Todd looked us over triumphantly, and his cracked treble filling the morning air in great guffaws of laughter.

"Whut'ed I tell you, hay, smarty?" he said to me, wagging his finger under my nose. It did him more good to have the joke on me than it did to have it on father.

"All right," said dad, blandly. "Now let's go down to your place of business and see what my old blue Tom-cat has been doing."

We repaired to Todd's crib. When I opened the door, Tom rose from his pile of shucks, just as if he had taken a short nap after a hard night's work, instead of rising from a scarcely interrupted night of slumber, and came yawningly up to me to have his back rubbed. It was Todd's turn to stare, and dad's turn to laugh. And dad laughed. He bent double and the clapboards rattled with his merriment.

"Look behind each ear, Todd."

Todd obeyed.

"Clean work, hey, Todd?" laughed

dad. "That's what I call spiking them dead as they come."

The work went on each night with unabated energy. The trap had its regulation supply each morning, while dad and I misspent the small hours in this fruitless and disgusting labor.

"I am about to get fed up on this thing," I finally protested. "I'm willing to help you out, pop, but along about a week of this thing is all I care to consume at one setting."

"Don't go back on me now, for God's sake, son!" dad pleaded. "There can't be many more rats over there, and if luck is with us we'll have the ups on Todd. We still have fifty to the good."

"Yes," I agreed, "that's so. But look at the catch last night. We smoked out every hole and didn't get but a dozen. While that infernal machine of Todd's produces its regulation thirty-five a night."

"We'll just have to go to Bill Simms' barn to-night," said dad desperately. "He always did have more rats than anybody, and we can get a barrel of 'em out of his crib."

"I'll work one more night, pop," I said dutifully. "Just one."

"One will be enough," said father nervously.

THAT night we sneaked over to Bill Simms' crib. It wasn't far from home, and the pickings were unquestionably good. By this time I had become an adept, and while dad operated the searchlight on the holes, I wielded the sawed-off broom handle. By midnight we had killed two hundred rodents, and dad viewed the carcasses, after stabbing them behind the ears, with unbounded gratification.

"We'll get a sack and take these things over to Todd's," he planned. "Then we'll hit the hay. Feel right good to get a half night's sleep. I tell you, son, this thing has had me under a terrible strain. I reckon I haven't been altogether fair with you in this thing, but I just couldn't let Todd get the ups on me. He'd gooly over me till he died."

"That's all right, Dad," I answered magnanimously. "I'm right behind you in this. But don't you ever tell me again that a tom-cat will catch rats. We've demonstrated that this one won't, at least."

"He used to be a mighty good ratter." Dad never went back on his prejudices.

I put the rats in a gunny sack, and shouldered them while dad closed the door to the crib and put the peg in place. I heard him give a muffled exclamation.

"Look, son!" he whispered in my ear. I followed his finger back over to our house. Down at the barn a light was covertly playing in and out between the barn and cribs. "It's them darned thieves!" he cursed. "That's where all of our eggs and those two young pullets have been going. Run, son. We can come back and get the rats later."

We ran. At the lot gate we paused, adjusted our forward movement to conform to the exigencies of the situation, and crept up to the crib. The light was plainly visible between the cracks.

I was the first to get to a point of vantage, although dad was right behind me, blowing violently—the run had winded him. Applying my eye cautiously to the crack, I looked inside the crib. There was Todd, craftily stirring the pile of corn for rats, and when one appeared, which now was seldom, he cracked it across the skull—if he was lucky and his aim were good—and heaved its still kicking carcass into the nail keg in the trap.

I watched Todd miss three big husky ones before I broke down and split the night with my laughter. Todd, caught red-handed, swore mightily and went off through the night vowing vengeance. He never fully recovered from his chagrin.

(Continued on page 95)

# What My Country Home Means to Me

*Contentment and True Happiness Found in its Familiar Scenes*

"I WILL lift up mine eyes unto the hills from whence cometh my help." So said the Psalmist and so say I, for in this home I cannot look out of my window east, west, north or south, without seeing those inspiring hills of Tioga County. The road past our house leads parallel with the creek toward the south, and between the road and creek is a wide fertile flat where my husband raises good crops of corn, wheat and oats. This same winding stream is no small attraction on the dear old farm I have learned to love so well. There my four rosy-faced youngsters fish and wade to their hearts' content on summer afternoons when the daily tasks are done.

Hills, valley and stream—all are lovable, but there is one particular hill which attracts me most and this rises immediately west of the house—a great friendly hill, partly covered with trees, some of which yield a sweet harvest every spring. This harvest my husband and I, with some help from the children, gather and boil. He furnishes the wood and I keep the fire. How I love those sweet spring days I spend throwing wood into the blaze under the sap pan and getting tired, so tired with the unusual effort of keeping the fire crackling to boil the sap, besides doing the housework for six! But the spring winds whisper strength to me and the energy of the trees seems to flow to me as I sit and watch the white clouds rise from the sap house. The hepaticas are the first flowers to answer spring's call and there among the lofty trees on the hillside, I go with my littlest one to gather the blue, white and pink messages from the Giver of all good gifts. With hands full of the blossoms, I hurry back to the sap house to see that my fire is going and if the syrup is not ready to be dipped off.

## Joys That Wait the Finding

This same kindly hill furnishes another joy. This is the arbutus lot, which is in the far northwest corner of the farm near a large hogsback. Here, too, is a grove of pines that shelters blackberries, huckleberries and wintergreens. The arbutus, of course, is the first attraction and the one which thrills me most with its pink fragrance. The whole family of us drive the team up there some April Sunday and gather a little and see the rest in bloom. How can any sane being fail to worship the Creator of such loveliness!

The children love the red wintergreen berries too, but give me the blue huckleberries which are ripe in the haying time. My heart just thrills with the memory of those warm days when we put up our lunc and taking pails and baskets climbed the long hill to pick huckleberries. I seem to have a sort of mania for gathering these delicious clusters of blue globules in the green grass. It takes a long time and a backache to get a quart and it does not matter if our shadows say it is noon by the time we have that many berries, for then we betake ourselves to our summer house, with an old stump in the center for a eupboard and pine needles for carpet. The wind in the pines furnishes our orchestra free. Jack, the dog, waits patiently or otherwise, for his share of the dinner and then scampers off with my boy to kill woodchucks.

When my three girls get tired of berry picking, they swing on the low boughs of the pines while I continue to scramble around after the precious fruit. How I wish the sun would stand still for me as it did for Joshua when the shadows begin to slant too much! Though my muscles ache, still I'm not satisfied as I start down the long trail for home. There are yet more berries to pick, but perhaps we can come again next week.

It would take too long to tell the charms

of the strawberry patch in the shady orchard, the hickory-nut trees, and chestnuts too, that we visit in the fall. I will let the reader imagine these and ask if anyone wonders at the fact that I do not care to move to the city?—Mrs. LAVERNE PALMER.

## Dressing Up Junket

JUNKET, once considered entirely an infant or invalid food, has gradually endeared itself to the housekeeper as a delicious family dessert which now, thanks to the commercial junket tablets and powders, can be very easily prepared. Even old-fashioned whey, reminiscent of Miss Muffet of Mother Goose rhymes, may be prepared with junket powders

syrup. Place half a peach cut side up, on one end of slice and carefully turn the junket out on the other end. Put a spoonful of the cream, which has been whipped, into the peach and pile some on the junket. Top it with bits of raspberry jam.

## Junket Rice Pudding

1 package vanilla-flavored junket powder  
½ cupful maple sugar

1 pint milk  
1 cupful boiled rice

Place rice in bottom of dessert glasses, sprinkling maple sugar over it. Dissolve powder in slightly warmed milk and pour into glasses. Let set until firm, then chill. Any left-overs of milk pudding—tapioca, cornstarch, etc.—may be used up in junket.

## Write the Story for This Picture!

WHAT happened before the photographer snapped this scene? And what will happen when the dog stops looking at the camera? There's a story here and the AMERICAN AGRICULTURIST will give prizes to the junior readers who think out the best one.

To enter the contest you must be under sixteen. Each story must be written without help. Use your imagination, write your story clearly and send it to the Boys' and Girls' editor.

This editor will award a handsome book to the writers of the three best letters. Please state whether you would rather have a copy of "Piggie," a story of the adventures of a western farm boy's pet pig, or "Team Play," a book of high school stories.

Letters must not exceed 250 words. Pay attention to spelling, grammar and neatness. State your age and give your full name and address. Letters must reach us on or before August 23.

and is sometimes prescribed by doctors for sick babies.

But for healthy, husky children and their parents, something with a little more decided flavor is usually desirable. Here are three recipes which use the nourishing junket as a base but add flavor and decorative effect to tempt older palates:

## Orange Junket With Walnuts

1 package orange-flavored junket powder  
1 pint of milk

Walnut meats  
2 fig newtons

Chop coarsely the walnut meats and place in bottom of dessert glasses. Then sprinkle the finely chopped fig newtons over nuts (or you may use any bits of cake). Dissolve the powder in the slightly warmed milk and fill the glasses. Let set until firm. Then chill. When serving, sprinkle nut meats on top of each glass.

## Peach Melba

1 package vanilla-flavored junket powder  
4 slices sponge cake  
Preserved peaches

1 pint milk  
1 cupful cream  
Jam

Dissolve junket powder in the slightly warmed milk and pour into small molds or glass cups. Let set until firm. Chill. When ready to serve, place a slice of cake on each plate and moisten with peach

## A Home-Made Memory System

AN aid to memory which our family has found invaluable is the family bulletin board which is prominently hung on one of the kitchen walls. It has proved so helpful that we feel we could not get along without it.

When the children have a multiplication table or a recitation for school or Sunday-school which must be learned, a copy is pinned on the bulletin board and is studied at odd minutes. The New Year's resolutions were plainly written on heavy paper and placed in a row along the top of the board where they have served as a constant reminder.

The children search the board for the lists of spelling words which have proved especially troublesome, and history dates, which are such a stumbling block to many youngsters, are here before their eyes—in red figures—and can be more easily memorized when both eyes and ears absorb them.

A list of tasks assigned to each child finds a place on the board and youngsters take considerable pleasure in crossing out the duties, one by one, as they are finished. When any errand is likely to be forgotten, a reminder in large letters, pinned on the board makes it practically impossible to accidentally neglect it.

## Pins Kept Handy

In the upper corner hangs a wall pin-cushion furnishing the pins needed to attach the various slips of paper, and it also saves many steps when a pin is needed in a hurry. A school lesson paper which has received an unusually high mark is also placed here and the proud recipient is delighted with the opportunity to display his accomplishments before the family. A well-drawn map hung in full view serves to refresh one's memory of far-away places, as well as to please the one who drew the map.

Jaek London, in *Martin Eden*, tells how he had his room filled with similar aids to memory and of the amount of good they did him. A person really desirous of learning constantly can acquire a surprising amount of information by the use of such a board. The busy housewife can memorize many an inspiring bit of verse or help herself to keep abreast of the times by studying a chart or map at odd minutes on the bulletin board when she is obliged to wait for the flatirons to heat or the pies to brown.

A schedule of the day's duties, jotted down with the time allotted for each, will assist materially in getting the work finished promptly. Or if mother is obliged to be away unexpectedly she can leave a notice on the board, sure that it will be discovered readily when the family comes in from school or work.

In fact the possibilities of the board are endless and after a family has once become accustomed to this willing servant there will be a loud demand for its continuance.—VINCY PRESTON LOOPS.

## Popular Berry Dishes

**Red Raspberry Pudding.** One-half cupful of sugar, two tablespoonfuls of butter, one egg, one cupful of sweet milk, two cupfuls of flour, one-half teaspoonful of soda, one teaspoonful of baking powder, and one-half cupful of red raspberries beaten in at the last. Mix these ingredients well, pour into a buttered mold. Steam one hour. Serve with a sauce made of two cupfuls of powdered sugar, one-half cupful of butter, one egg white, and two cupfuls of red raspberries.

**Blueberry Loaf.** Sift two cupfuls of flour, with two heaping teaspoonfuls of baking powder and a little salt. Cream one cupful of butter with two cupfuls of powdered sugar, stir in the beaten yolks of four eggs, add one-half pint of sweet milk, one-half teaspoonful each of powdered nutmeg or cinnamon, and the stiffened whites of the four eggs added alternately with the sifted flour. Last of all stir in lightly one quart of blueberries, thickly dredged with flour. Turn into a greased mold with a funnel in the center and bake.

## Raspberries With Rice

BOIL until tender one-half cup of rice in two cups of milk. Sweeten with powdered sugar and flavor with lemon. Turn into a border mold and when stiff turn into a shallow glass dish. Fill the center with sweetened raspberries and serve with cream.—Mrs. R. C. DELYNE.

Instead of spending hours of labor cleaning a greasy sink, especially one of glazed ware, a little paraffin-oil upon a piece of flannel will remove all grease. Afterwards wash with hot water and soap. Flush with cold water. This cleans the pipe at the same time.

\* \* \*

A box of growing plants intended for the house in winter should be started in August. Vines and slips take root more easily this month.

# How Beans Made My Fame and Fortune

As Told by Mrs. Ollie O'Day to Harry H. Kroll—Preparations for Baby's Room

**NECESSITY** is the mother of invention.

That is what I reply to people who ask me how I got started to canning green beans on the scale that I have. I did not invent the canning of green beans any more than I am the author of the above epigram; but I am familiar with both.

I suppose I have made a success of home-packed goods. A lot of people tell me that my beans are the best they ever ate, and for some years now I have been unable to supply the demand. I got started canning because hard times got me, and I had to do something to make a living. The beginning was no more romantic than that.

About five years ago I found myself a widow on a small farm. I didn't like live stock very well, so I didn't feel equal to trying to make that a part of my work. I can get along with cows fairly well, but deliver me from a mulc. I could not consider general farming because of lack of man-power on the place. I bethought me of canning, and bought a canner. Then I planted beans in the corn. That was the way I got started.

### Attractive Outside as Well as Inside

I had not been canning more than one season before I realized two things: I must not only turn out a superior product, but I must have some apt trade-name for it, and I must have an attractive, distinctive label for my cans. So for the following season I had my labels designed and printed expressly for my own use. I don't like the usual stereotyped label with a bunch of beans on it, or a red tomato, and a blank place for your name. The same article would do for John Smith or Bill Jones equally well—or equally badly, whichever way you look at it. So I had my labels designed especially for myself.

I stumbled upon the trade-name of Peep o' Day in a rather interesting way. One of my neighbors, who is my partner at times in the canning business, is an early riser, whereas I have never out-grown Harry Lauder's conceit—it's nice to get up in the morning, but it's nicer to lie in bed. Well, we had a big canning for the next day. We are on a party telephone line. So I told her to ring me when she got up. "Ollie O'Day, I'll ring you at peep o' day," she replied. It was a sort of inspiration. Being a play upon my name, it was the best thing, probably, that could have occurred to me. All of my canned goods bear that name, "Peep O'Day."

From the very start I determined to pack a superior product. I was not playing in a just-as-good crowd, I was after the better-than-anybody-else class. So I selected my bean with the greatest care. I packed only the old-fashioned White Creaseback cornfield bean—it's the best and tenderest and least stringy I know of. And I plant it the good old way—right out in the corn. And I never can a tough bean. I always take the greatest care when I string my beans to reject any which show the least tendency toward toughness. There is no need of packing such a bean and hoping by long processing to make it tender. A tough bean stays tough, and it means a lost customer. And another thing, I do all of my stringing myself. I could sell a lot more beans if I hired help in stringing—for that is the biggest and most tedious step in the entire process. But no one else would be as careful as I in selecting beans, or as critical of my pack as I am.

### Ordinary Process, Extraordinary Care

All of the Government recipes that I know of call for blanching. But I have found that blanching green beans gives them a faint raw, acrid taste which never comes out of them. So I pack cold. After stringing the beans and breaking

them into short pieces, I pack the can with all the weight I can with cold, raw beans. Then I fill the can with water. I do not put in any salt, for salt is an astringent, and makes vegetables tough. I have never salted any of my boiled food until it was cooked and ready to serve for that reason. Then I exhaust ten minutes, and afterwards process for two hours.

I use an ordinary cheap canner—nothing expensive or elaborate. Each year now for some seasons I have packed around 1,800 cans of beans. In addition I can some corn, tomatoes, corn and tomatoes, peas, kroust, and pumpkin. But my beans meet with the readiest sale.

### Built Up the Farm On the Profits

I have never kept very accurate accounts, so I do not know just what my profits might be each year. I have kept my farm and home going, built a barn and tenant house, added improvements from year to year and kept out of debt. That isn't getting rich, but for a widow fifty-four years of age it isn't so bad. I do a lot of custom canning for my neighbors in addition to my own, and one of my neighbors and I have a partnership arrangement in canning beans. She supplies the beans and I do the canning, and we split 50-50 on the proceeds. So I make a living and even have the time and inspiration to write a poem occasionally. I love the farm and the cackle of hens, and my canner helps me to stay in the environment I like best.

your goods. Quality is about the only formula I could name. Make a better mouse-trap than the other fellow and the rats and mice will make a beaten path to it and get caught. Can a better bean than the other fellow and your cans instead of your competitors' will ornament folks' back yards. Then have attractive labels, and you won't have to worry much about whether your pack is going to sell or stay on your hands and you'll have to get your profit by eating it yourself.

### Furnishing the Nursery

**IT PAYS** to plan ahead for the room where the wee newcomer will live. So many things there are which will make the mother's tasks easier and the baby's life happier.

A good-sized clothes rack may be made for holding and drying the baby's clothes. A shelf across the top of this will hold the baby's toilet tray or basket, patches, shoes, empty bottles, folded diapers, etc. This combination is a very great convenience.

A baby's dressing table is of great importance. It may be about three feet square, and made a convenient working height for the mother. Two or three drawers may contain the toilet articles needed after the bath and various items of clothing. The baby can be taken directly from his tub, placed on a soft mat of towels on the table and all dressing operations performed here. A corner, so arranged as to hold his bathtub, the dressing table and the clothes rack, will greatly

screen, and around it near the top at a convenient height for the mother, who may wish to sit or stand when dressing the baby, runs a strip of wood. This has hooks in to hold small garments. When the bath is over, this screen may be folded up and placed out of the way. The comfort of all these things is that any man who is at all "handy" with hammer, nails, and saw can make them at very little cost of time or money.

A cake of ivory soap is convenient for

### THE NEW BABY

**I HAD** not thought I wanted you,—  
so much,  
For a little baby's precious needs are such  
That I must give time that was others' due,  
I must tax energies yet greater,—  
and too few;  
I must whip up the steeds of strength,  
so prone to slack,  
I must coax lagging little bits of youth-time back;  
Not self alone deny but others dear,—  
Sing through the aching, smiling  
through the tear.—

And so, you see, I did not choose you,—  
But, oh, the heart-break should I ever lose you!  
—AMY W. EGGLESTON.

holding safety pins. It helps to keep them clean and prevents rust.

A white enameled tray takes the place very nicely of the basket for holding baby's toilet articles. This can be easily cleaned and will hold liquids without danger of spilling. The whole may be covered with a cloth to protect from dust.

White enamel adds so much to baby things in cleanliness and attractiveness and it is so easy to apply, that old things may be renovated by a couple of coats and baby's outfit greatly enhanced in beauty. And what is sweeter than a blue-eyed babe, all rosy and white, surrounded by everything clean and fresh!—  
MRS. TERBUSH.

### Buttermilk Useful, Too

**THICK** sour milk and buttermilk make fine biscuits, crusts for dumplings, puffs, chicken pie, beef pie, veal pie, or any of those things. The regulation proportion is to add to one cup of sour milk or buttermilk, one level teaspoon of soda, dissolved in a spoonful of water. Add one tablespoon of drippings and flour enough to make a thick dough, but add to the flour one rounding teaspoon of baking powder to each cup of the sour milk or buttermilk.

Sour milk or sour buttermilk is very efficacious in removing the tarnish from silverware. Simply warm the fluid and put the articles in it to soak an hour or two, according to depth of the tarnish. Then remove and wash in good warm soapsuds, rubbing briskly. If the tarnish is not all gone, put the articles back and let them soak a while longer.

I never have cleaned my tableware so easily, especially after they have been subjected to coal gas, as I have by using the sour milk method.—CLARICE RAYMOND.

### Boiled Pot-Pie

2 cups flour  
1 teaspoonful salt  
2 rounding teaspoonfuls baking-powder  
1 cup of water or milk

Stir stiff enough to make into balls size of an egg, handle lightly and drop in gravy, boil 20 or 25 minutes.—MRS. IDA A. BROWN.

### THREE DIAGRAM DRESSES FOR EASY SEWING

**THE** diagram tells everything. Just a straight length of material oddly slashed makes this delightful design. Pattern No. 2026 can be had in sizes 16 years, 36, 38, 40, 42 and 44 inches bust measure. In the medium size, 3 yards 40-inch material with 1/4 yard 27-inch contrasting and 6 yards of binding is required. Price, 12c.

**IT** is quite natural to want both style and simplicity in the frocks you make yourself. By examining the diagram of No. 2072, you can see how cleverly one straight length is used to make the dress. The pattern comes in sizes 14, 16 years, 36, 38, 40 and 42 inches bust measure. Only 3 3/8 yards of 40-inch material is required to make it in the medium size. Price 12c.

**HERE'S** a morning frock that can be "run up" in an hour, for it cuts in one piece as the diagram shows. No. 2082 is cut in sizes 16 years, 36, 38, 40, 42 and 44 inches bust measure. Size 36 takes 3 yards of 40-inch gingham, percale or chambray. Price 12c in stamps or coin (stamps preferred).

**TO ORDER:** Write name, address, pattern numbers and sizes clearly, enclose proper remittance and send to the Pattern Department, AMERICAN AGRICULTURIST, 461 Fourth Ave., New York City.

I have often been asked why I do not expand and get my canning upon a real commercial basis. My answer is that my product would inevitably suffer. As I said, I cannot get labor that would have the same interest in the thing that I have. So, while I might make some more money, and business would be large and impressive, I still would probably lose the kind of expression which frequently comes to me—"Your beans are the best I ever ate." That's worth more to me than quantity production.

I don't think there is any secret in canning and building up a good trade for

reduce the work and time required for keeping the small one clean and sweet.

An old family cradle—not the low, old-fashioned kind with the hood on—may be transformed into a most attractive crib. Remove the rockers and put on baby carriage wheels or wooden wheels. A canopy to protect small eyes against the light may be added. When this crib has been white enameled it is hard to find a daintier piece of baby furniture.

A bath screen has two purposes. It may hold the baby's garments and at the same time be a protection against draughts. It need not be as high as the ordinary

# Reviewing the Latest Eastern Markets and Prices

## MILK PRICES

**T**HE Dairymen's League Cooperative Association announces the following prices for milk in the 201-210 mile freight zone, for milk testing 3 per cent.: *Class 1*, used chiefly for fluid purposes, \$2.06 per hundred pounds; *Class 2-A*, used chiefly as fluid cream, \$1.70; *Class 2-B*, used chiefly in the manufacture of plain condensed milk and ice-cream, \$1.85; *Class 2-C*, used chiefly in the manufacture of soft cheeses, \$1.85; *Class 3*, for milk used chiefly in the manufacture of whole-milk powder, evaporated whole milk and sweetened whole condensed milk, \$1.55; *Classes 4-A* and *4-B*, based on butter and American cheese quotations in the New York market.

### Sheffield Producers

Sheffield Farm Company Producers announce the following prices for 3 per cent. milk in the 200-210 mile freight zone: *Class 1*, \$2.00 per hundred; *Class 2*, \$1.70; *Class 3*, \$1.55; *Class 4*, to be determined by market conditions.

### Non-Pool Cooperative

Non-pool Assn. prices are: *Class 1*, fluid milk for city consumption, \$1.86; *Class 2*, milk for cream, plain condensed and ice-cream, \$1.70; *Class 3-A*, milk for evaporated, condensed, etc., \$1.60; *Class 3-B*, milk for fancy cheese, \$1.45; *Class 4*, determined on butter and cheese quotations on the New York market.

### Interstate Producers

Interstate Milk Producers' Association (Philadelphia plan) receiving station prices, 3 per cent. milk, 201-210 mile zone, \$2.19; 101-110 mile zone, \$2.29.

## BUTTER MARKET WEAKER

Heavy receipts have been responsible for a slump in the butter market. New York has been a large amount of butter from the West during the past week from such far western States as Montana, Idaho and Utah. Prices in New York City are far enough above other points to attract shippers. As long as this continues we can expect to see heavy receipts. And as long as stock flows this way freely it is doubtful if we will see any higher prices. Advices indicate that we can expect heavy receipts for at least two weeks and maybe three. A great deal depends on the weather. Reports from some sections of the West state that they are experiencing hot, dry weather out there with a great deal of trouble from flies as well as labor interferences in connections

with the grain harvest. This will undoubtedly slow up production to some extent and the effect of this may be felt sooner than we anticipate, but it is doubtful if it will come within two weeks.

During the past week prices slumped to 38c on 92 score butter. This decline has attracted considerable out-of-town trade for storage, and a number of local operators are putting goods away. The storage trade is supporting the market to a considerable extent at the present time. Storage figures have assumed rather extreme proportions. During the past week local holdings increased over two million pounds. The storage holdings in the four largest cities report excess holdings compared with last year at 19,108,503 pounds, which means that there are nearly 20 million pounds more butter in storage at this time compared with last year.

## CHEESE MARKET FIRM

Although there is little improvement in the prices, nevertheless the tone to the cheese market has improved during the past week. Heretofore the market has been more or less idle with little or no activity. Average run, whole milk flats, are bringing up to 19½¢, although some are selling as low as 18½¢. Fancy marks are bringing from 20 to 21½¢, while a few pet marks go as high as 22¢. Indications are that with the present demand, the market will continue at least at its present condition.

## EGG MARKET STRONG

The recent attack of extremely hot weather has had a decided effect on the egg market, which has been responsible for a decided widening of quotations. Shrunken yolks and other faults due to hot weather have caused this condition, and buyers are very critical when it comes to fancy stuff. Too much cannot be said about protecting eggs against the effects of hot weather. It is especially true that they should not be exposed to the sun's rays at all.

In order to get the benefit of high prices, farmers have got to collect eggs at least twice a day and store them in a cool cellar. If the average producer were able to stand beside a candle he would realize what a little extra care would mean in getting better prices. In view of the fact that so many bad eggs are coming into the market, Urner-Barry, in the Producers' Price-Current, are running the following note:

### It is Illegal to Ship Bad Eggs!

"All shipments of eggs should be carefully candled, immediately previous to shipment, and all bad or doubtful eggs removed and destroyed. Careful attention to this requirement will insure against your eggs being seized and prevent possibility of your being prosecuted under a federal law."

The prices of nearbys compare very satisfactorily with those of last year. In our issue of August 11, 1923, quotations were as follows, and they may be compared with those of the present day in the box in the lower part of the page.

New Jersey hennery whites, closely selected, extras 44 to 47c; other hennery whites, extras, 43 to 45c; extra firsts 36 to 38c; firsts 32 to 35c; nearby gathered whites, firsts to extra firsts

32 to 37c; nearby whites, undergrades, 23 to 31c. In other words, all down the line we find a very satisfactory comparison with last year in the neighborhood of a 3 to 5 cent spread in favor of the present year.

## EXPRESS POULTRY EASIER

Heavy receipts last week were carried over and as a result the market has been weaker right along. Stock is moving slowly and prices have had a tendency to weaken. Only the fanciest stuff is getting any consideration. Express Leghorns of the fancier grades are moving a little better, but anything that tends to be small is being cut. Colored stock for the most part is turning around 28c, although a few fancy selected arrivals are reported sold at 30 to 31c.

Express fowls are poor and are not bringing much of anything. Especially is this true with White Leghorns.

## POTATO MARKET NO BETTER

There has been comparatively little change in the potato market during the past week and indications are that next week will find it the same. Long Island growers have got to get their Cobblers out, to make room for late summer crops, and it is a case of "have to dig to make room." The other night your reporter watched some of the Long Island trucks roll by to the Wallabout market carrying swinging loads of 250 to 300 bushels each. The situation in this early market is quite discouraging.

Long Islands are bringing from \$2 to \$2.50 a barrel and on the first of the month only the best marks are reaching the top figure. Jersey Cobblers are working out from \$1.50 to \$2.00 a barrel while receipts from North Carolina vary from \$1.50 to \$2.25, and Virginia shipments from Norfolk section carrying the same quotation. Virginia Eastern Shore vary all the way from \$1.50 to \$2.50, depending upon quality.

The continued dry and hot weather is giving many of the Long Island growers a great deal of food for thought. Many of them report that the crop is not bottoming out as it should and unless we get rain shortly, we will see a lot of small potatoes on the market.

## VEGETABLES

**BEANS:** Market steady, moderate demand. Hudson Valley, \$1.50 to \$2; Western New York, wax, \$2.; green, \$1.75 to \$2.00; Jersey wax, 75c to \$2; Jersey, flat, stringless, 75c to \$2; Long Island stringless, per bag, \$1 to \$1.50; Long Island wax, per bag, 75c to \$1.50.

**BEETS:** Market dull on slow demand. 50c to \$1, bushel; nearby 2 to 2½¢ per bunch.

**CABBAGE:** \$1 barrel.  
**CARROTS:** Demand for only fancy stuff; \$1 to \$1.50 per bushel hamper; 1½ to 2c per bunch.

**CAULIFLOWER:** Market steady; fairly good demand, especially for fancy stock. No. 1, Catskill, from \$3.50 to \$6 per crate; No. 2, Catskill, \$1 to \$2.50.

**CELERY:** Liberal receipts of rough. Orange County and up-State stuff meet a dull and weak market. Golden, self-blanching,

Orange County, per ⅓ crate, \$1 to \$2; Otsego County, \$1.75.

**LETTUCE:** Receipts heavy from up-State sections. Most offerings show tip burned. Fair demand for fancy stock. Market in general is weak. Oswego County Big Boston mostly \$1.25 to \$1.50; few fancy up-State up to \$1.75; poor stuff from 75c to \$1; Orange County 75c to \$1.25; Western New York \$1 to \$1.50.

**PEAS:** Arrivals light. Inactive demand makes market weak. Many shipments arrived too late; Madison County best from \$1.75 to \$2.50; ordinary from \$1.50 to \$1.75 per bag.

## HAY IN BUYERS' FAVOR

The hay market has continued weak and draggy ever since our last report. Accumulations have tended to depress the market especially in view of the fact that most of the arrivals and holdings in the sheds come under No. 3 and No. 4. There is a lot of Canadian hay of poor grade and low grade stuff in small bales on hand, which is always a bad influence. Furthermore, though the receipts have been light, nevertheless new hay coming in has been more or less poor grade. Very little of this hay will grade as high as No. 2.

Prices on new hay average from \$2 to \$3 a ton less for the same grade compared with old hay. There is practically no No. 1 hay in the metropolitan district and some No. 2 has been selling as high as \$29. The Brooklyn market is about the same as Manhattan.

## GRAINS AND FEED

According to New York State Department of Farms and Markets, the following prices prevailed July 19:

The quotations given in this report show the approximate prices at which feed can be purchased per ton, and grain per bushel, in straight carlots through billed from Western points, delivered on track at points in the freight zones as indicated. Mixed carlots cost approximately \$2 per ton more.

Retail feed and grain prices vary with different local dealers depending upon their individual cost of doing business, volume handled, etc. In the case of feeds the retail price may sometimes be as high as \$5 per ton above the wholesale prices given in this report.

The wheat market continues its activity and upward trend, mainly due to brisk export business on a cash basis, continued reports of spread of black rust from Manitoba and North Dakota, unfavorable foreign crop reports and prospects of a speedy settlement of the European controversy. Reports from the Argentine state that drought is on the increase. July corn has reached new high ground touching \$1.14.

Chicago cash prices, No. 2 hard winter at \$1.36 to \$1.37 New York cash prices on the same, \$1.40.

	Albany	Ogdensburg	Utica	Rochester Syracuse	Buffalo

Beet Pulp...	38.00	38.60	37.60	37.30	35.90

Since Buffalo is an important milling center for wheat feeds and lused meal, quotations are given for this point on both a through-billed and a local basis. Ground oats \$42; spring wheat bran \$27; hard wheat bran \$29.50; standard middlings \$29; soft wheat middling \$34; flour middlings \$33.50; red dog flour \$39; dry brewers grains \$33; white hominy \$42.75; yellow hominy \$41.75; corn meal \$46; gluten feed \$41.25; gluten meal \$49; 31% old process oil meal \$45; 34% old process oil meal \$45.50.

For points taking New York rate add to Albany price ½ cents on oats; ⅓ cents on corn; 10 cents on cottonseed meal; and 20 cents on other feeds.

## LIVE STOCK MARKET STEADY

The market has been fairly steady on live quotations, especially on the better grades. Hot weather is having the effect of spreading quotations over a wide range. Real top quality prime veals are bringing \$13 per cwt, although most sales are going on from \$10 to 12. Undergrades, including grass and butter-milk, are as low as \$5 per hundred.

The lamb market has turned weaker right along. During the middle of the week it was fairly firm but the arrivals of 35 carloads had the effect of softening prices slightly. Choice lambs are bringing \$14.50 per hundred, while most of the sales are turning at anywhere from \$11 to 13 with culls ranging down as low as \$8.

The market is firm on live hogs. Arrivals have been rather light and the market has turned decidedly firmer and higher. Real fancy first class stock will undoubtedly reach \$10 to 11, although hardly enough arrivals are coming in to warrant a quotation.

In this hot weather it is a good idea to pay very close attention to any kind of shipments. If hogs are to be expressed in shipping, it is a good idea to make liberal use of ice.

Lambs, common to good	10½ to 14		
Sheep, common to good ewes	3¼ to 5		
Hogs, Yorkers	11		

# Culling the Setters and Moulters

*"The Worst Loss in Any Poultry Flock is Through Poor Producers"*

THE summer months are the months of declining egg yield and profit in the hen house; they are likewise the foundation months for the chicks that will be raised next year. The strain of a year of laying begins to tell, and the best birds in the flock stand out, showing up the poorer ones that have not been able to stand the pace. Hens are beginning to moult, hens are setting, the entire flock begins to look ragged, but now is the time to give the flock a culling. A few minutes of observation every day will do much to lay a good foundation for spring next year. There are so many signs and symptoms, it is an easy matter to read a hen's fortune during this season.

Generally speaking the flock will represent two classes of birds: those still laying and those not laying, but in this

By L. H. HISCOCK

her breast bone and a narrow back. There is one other point that may help you. Often birds of this type have an overhanging eyebrow; the texture of the comb is sometimes coarse and leathery.

It is a good plan to band setting birds with different colored bands. By starting in the spring you can keep a history of every setter from beginning to end. Put a red band on for the first set, a green band for the second set, etc. Such information is valuable if you have enough birds.

### The Problem of the Moulter

The other non-layers, which will be made up mostly of moulters, form another problem, especially if illumination has been used heavily during the winter. The use of artificial light seems to have a peculiar reaction on some birds; they may moult early, but they are apt to start laying early, too. As I said earlier in this article a good bird lays late, and the later she lays, the better bird she generally is. The theory on the converse of this rule was that all early moulters were no good. It was supposed that an early moult began in June and shed her feathers very slowly to resume laying again in January whereas the late

"Depth between the back and breast bone at the rear of the bird and breadth of back are two essential points to consider in culling birds."

layer shed her feathers in October all at once and was back on the job also in January or the fore part of February. It certainly is true that late layers moult rapidly but so do some birds that start early. As a result it does not pay to discard a bird simply because she is a moult; she, too, should be checked according to the measures of breast and back.

### No Profit in Setters

In the non-laying class of birds, the setter and the moult deserve special attention. It is natural for a hen to set, and it does not mean that a hen is a poor producer just because she goes broody, but there are certain hens that are poor producers that set almost perpetually. For instance I had a leghorn turn broody the first week in February. As I was anxious to test some hatching eggs I set her. She stayed with her chicks until the first of April when I put a special band on her leg and let her go. She picked up rapidly and laid a few eggs. May first she was ready to set again. I was pretty certain she would because she was a poor bird; that is she did not have the capacity for laying. Her breast bone curved up toward her back, and her back was very narrow. In other words she had all the marks of a poor producer. Doubtless she would have set a couple of more times during the summer if we had wanted to bother with her. This is, therefore, an example of a good bird. On the other hand when a broody hen shows up on the nest late in the summer or even early, it does not pay to dispose of them just for that reason; they should be tested out for their capacity.

### The Frame and Eye as Indicators

Earlier in the year I spoke about the selection of breeding birds. Depth between the back and breast bone at the rear of the bird and breadth of back are two essential points to consider in culling birds. As I said above, the perpetual setter will generally have an up pitch to

you save will pay you for the time now while the extra eggs will be the dividends from the chicks you hatch next spring.

### Eggs Need More Advertising

C. S. PHELPS

PROBABLY no one line of farm products has been so little advertised as eggs. Every family uses eggs and so we often assume that everybody knows that eggs are good and wholesome food. All foods, however, should be judged not alone for their nutritive value but for their relative values. Some housekeepers consider eggs as an extravagant means of lightening a cake and forget that where three or four eggs are used to a cake, they add so much real food value over what one or two would give, instead of only adding lightness. You often hear a supposedly frugal housewife argue that she never uses over two eggs in a cake because to use more is to be extravagant.

The selection and grading of eggs according to standards of size and freshness is now doing much to call the attention of the public to the added value of "strictly fresh selected eggs." I recently saw, in the window of a fancy restaurant, an appealing advertisement evidently furnished by the poultryman who supplied the restaurant with fresh eggs. A neat sign with raised letters on display in the window read, "Crystal Lake Poultry Farm furnishes our strictly fresh eggs used for poaching and boiling."

Eggs like milk are almost 100 per cent. digestible when eaten in the raw state or slightly cooked, and thus if rightly used can be assimilated by almost anyone. Perhaps the best way to compare nutritive values is by estimating what can be bought in the way of real nutrient for a fixed sum of money. In our nearest city the following portions of animal foods have very nearly the same market value at retail, that is, 38 to 40 cents each—one dozen eggs, 3 quarts of milk, 1 pound of loin steak, 1 pound leg of lamb, and 1 pound of fowl.

At the market value of forty cents a dozen eggs will furnish more real nutrient than other common foods such as beef, lamb, and chicken when these meats can be bought for 40 cents a pound. Milk, only, on a market value of 13 cents a quart, will furnish more real food value than 40 cents worth of eggs. This is due mainly to the milk sugar as the other two important nutrients are furnished in nearly the same quantities as in the case of eggs.

What is needed is more effort to advertise the food value of eggs and especially the importance of buying strictly fresh eggs.

### The First Laying Pullet

MR. H. F. WARNER, proprietor of the Belmore Poultry Farm, Belmore, Long Island, writes that he gathered his first 1924 pullet egg on July 22. The pullet is 4 months and 3 days old. Who has a similar record?

### Rat-Proofing

(Continued from page 91)

For six weeks he evaded me—when he saw me coming along the road, he would dodge into the bushes, as if looking for a bee-tree, or the tracks of some varmint. At the post-office, he was always diligently and absorbedly reading his paper.

Finally one day I caught him dead to rights in the road.

"Whoa, Uncle Todd," I said with cheerful neighborliness. "I want to see a rat-proof crib down at your lot one day before long. You'd better build one," I warned him. "If you don't—"

Six weeks later Todd's new rat-proof crib was completed and dedicated. Dad's had been built and dedicated for more than two months.

### TIMES AND CUSTOMS CHANGE, BUT—

Judge: Uncle Rastus, you are charged with an attempt to break into Colonel Cabel's chicken-coop.  
Rastus: No, sah, jedge, dat ain't no chicken-coop no moah. Dat's de Colonel's distillery now, sah.—Life.

### A Weedless Hay Crop for Next Year

(Continued from page 83)

in at all. This is highly important, and yet almost invariably neglected. Notice in your former fields how much better the baby grass plants thrive in wheel and team tracks, unless washed under by rains.

It is an agrarian crime to plow or even deeply harrow just before seeding. Very thorough tillage there must be (beginning with plowing, if grass follow grass or grain other than corn) followed by many harrowings, each more shallow than the preceding, until, just before seeding (using Acme or Meeker) it is not deeper than two inches. We must not turn up ungerminated weed-seed now, to grow in our grass crop.

It is wholesale infanticide to seed these tiny plants into even the richest, warmest land that is still loose from deep tillage or filled with hollows and littered with lumps or elevations, where they will be washed out, drowned or buried alive by millions the first hard rain!

#### Clark's Method

Clark's method of grading has never been improved upon, nor his simple, life-lasting tool for this purpose. One horse and one man once over an acre in 20 minutes! Then repeat by going cross-wise, and it is done. Better allow one hour though, giving some extra attention to corners, edges and any old ridge or hollows, charging \$1 to costs, and mowing, on account of this one operation, not less than 1000 pounds more hay every year because your field is as level as a floor.

For food our little ones need the nursing-bottle, not corned beef and cabbage. That is, the necessary organic manures should have been applied to previous crops. We never use weedy, hay-seedy manures at seed time. Especially where grass follows grass (that is, with hay as a permanent money crop), where we mow in June, fallow in July and August, and reseed anew, any yard manure that can be spared should be top-dressed on before the last mowing. Plowed in and well fallowed turf furnishes an enormous amount of organic plant-food, in the best possible form for the new grass—provided the fallowing is well done.

For the newly germinated grass plant, use a few hundred pounds of the best chemicals, mixed with an equal amount of fine bone if obtainable, all to be applied at the time of seeding—right on top, and thus very shallowly harrowed in. If either lime, limestone, or phosphorous in any separate form are used, these should of course have been earlier and more deeply incorporated with the soil; and except in short rotations, a generous supply of these should be so included. But for the first growth, considered by itself 600 pounds of 4-8-6 is ideal, the nitrate to be part chemical and part organic.

#### Or Yard Manure

Notwithstanding all this, if farm-produced manure of any kind and properly prepared, is available at this time of year, it is equally good, though not better—as is still popularly believed. Properly prepared means composted always, with the single exception of well pulverized hen manure. Green manure is both unavailable and usually carries many foul seeds, besides being mechanically too coarse or lumpy. It must be black, fine and well mixed, for it must also go on the very last thing—right on top, to be fine-harrowed in with the seed.

And when you have thus provided plenty of the best of everything you can procure, then use at least twice as much seed as most people apply, sowing it twice too, half one way and half crosswise. Even so, these four harrowings (direct, crosswise and both diagonals, one horse and one boy) require but 90 minutes per acre, and like other points of thoroughness are a most excellent investment, insuring perfectly even distribution both of seed and plant-food.

(Continued from page 89)

that the fall cows are slacking off. I am glad to hear that we have another association in the county, and shall look forward to the first honor-roll report from this new association.

**Moñroe** Agent, Gerard Schmidt  
April brings out several high records. The best one is Virgil Peck's purebred Holstein. She made 95.7 pounds of fat and 2175 pounds of milk on two milkings daily; a real farmers cow. Geo. True has three high ones on three milkings daily. One of 94.2 pounds of fat and 2691 pounds milk. Another over 80 pounds fat and the third over 70 pounds. His seven cows averaged over 51 pounds milk and 1.86

pounds fat daily. W. E. Janes also has a Brown Swiss with over 70 pounds of fat on two milkings daily.

**Boonville** Agent, H. L. Stahlman  
During the past month, 422 cows were tested, 332 of which were milking and 90 were dry. There are 68 cows on the honor roll. I find there are 12 milking machines owned by members of the association. Five of these are not being used. There are seven different kinds of machines represented. Eight members are feeding ready mixed dairy rations and eight members are mixing their own rations. The following herds produced 1000 pounds milk per milking cow for the month:  
Donald H. Douglass, 1324 pounds milk, 41.2 pounds fat.

Leo A. Kotary, 1280 pounds milk, 40.4 pounds fat.  
Wm. Casbaker, 1180 pounds milk, 38.2 pounds fat.  
Chas. H. Lemon, 1056 pounds milk, 35.9 pounds fat.  
J. & E. J. Karlan, 1022 pounds milk, 33.9 pounds fat.  
**Dryden** Agent, W. A. Boyd  
Poor cows sold, 7. Good cows purchased, 4.  
Most members are feeding balanced rations with about 22% protein as silage is very low and of poorer quality than former years. New members had total of 41 cows milking.  
Average pounds of milk per cow, 753 pounds.  
" butter-fat " 28 "  
Average test 3.7 per cent.

# Some Facts About the Dairy Business

An A. A. Wednesday Evening Radio Talk Broadcast from WEAF

By MARK G. DuBOIS

Editor of Poughkeepsie, N. Y., Sunday Courier

WITH the fluid market in the cheese country (where costs of production are lower) higher than in our own Hudson River territory where costs of production are greater, and prices in both territories now and for months past, ruinously low, many students of milk marketing problems and tendencies are wondering if the time is not near at hand when it will become necessary to try to save the dairy industry from destruction at its own hands.

Every producer will tell you that it is impossible to make milk at a profit for three cents a quart or less, which is the net return today for three per cent. milk on many thousands of dairy farms that sell over four million quarts of milk a day in the New York city markets.

The Warren formula, which is standard, fixes the average cost of three per cent. milk at six cents a quart. Competition between marketing agencies of the producers is steadily driving prices down, while an unprecedented demand for fluid milk is keeping the supply up.

The basic price for milk is fixed in New York city markets. The most convincing explanation I have heard of the inflation in the cheese country, four hundred miles away, is that New York, Rochester and Buffalo dealers have been competing for milk there, while in the remainder of New York territory the producers have been doing the competing.

There is a market for every quart of milk offered. Fluid sales were never heavier or growing more rapidly than today except that the June supply this year showed a marked falling off of several million quarts. Strange to say in the face of this diminished supply, June price this year net at the farm was only \$1.34 per cwt., while last year with a heavier volume, it was \$2.00. Cooler weather this year may have lessened demand.

It seems casual and commonplace to say that it "No longer pays to produce milk." I have heard it often in the past and I have seen prices drop to what seemed ruinously low levels—yet the industry has marvelously survived and grown in service and value. Not in cash or property values, but in service to human welfare, which is the highest of all values.

Figures of milk production in New York, the Empire Dairy State, show an almost magical increase for the war-period and the interval following. Demand has kept pace owing to unprecedented educational methods to inform the public of the true value

of milk as a food. Fresh raw milk is the most popular soda fountain drink of the day. Truly we have discovered a fountain of eternal youth, for all great scientific authorities agree that milk has incomparable virtues as a builder of nerve force and muscular energy.

Dairymen in the last decade have kept pace with every demand for quality in the product of their herds. The type of cattle has been carefully selected for high production and increased butter fat; costly balanced rations are in general use. A pound of feed costs almost as much today as a quart of milk. Dairymen have met every demand of health officials and inspectors of the milk companies to safeguard milk and keep it clean and free from disease. Millions are being spent today to give consumers the finest milk supply in any part of the world for the cheapest price—much less than cost of production.

It is true that New York State dairymen are making today a magnificent contribution to the commonwealth and common welfare. They are giving more to humanity than any large group of

men in the universe. It is a real gift—if involuntary—they cannot afford to make it and if we cannot help to standardize prices and marketing conditions to insure them a fair return for their labor and investment, thousands of them will soon have to go out of business, which will be a great public misfortune.

It takes years to build a good dairy. The herd must be selected with skill and care; disease must be eliminated and kept out. No lout can produce milk of the standard to which our public is accustomed. Our best dairy farmers in New York State have earned prestige by years of

day when we may expect to buy a good article at less than it costs to produce it. Trusts and monopolies controlling all industry except agriculture will not sell except at a profit; they meet losses by stopping production.

The great volume of milk used in the New York market comes from a territory covered by one large farmers' marketing agency—the Dairymen's League. If the League marketed all milk or even the most of it for producers, the problem of standardizing conditions would be simple. It is confused by the introduction of competitive sales agencies representing both dealers and farmers' cooperatives. A study of this situation is being made by Prof. Warren of Cornell. It is also receiving attention from a group conference committee representing some of the competing elements which handle most of the milk produced. The future of dairying depends upon the ability and sincerity with which this work is done.

Such figures as I have quoted refer to three per cent. milk at present prices. Statistics for the whole year ending March 31, 1924, show return to the farmer for all milk of \$2.31 per cwt. This figure includes the butter fat premium of an average of 19 cents a year; obviously the return to the farmer for three per cent. milk was \$2.12 per cwt. The Warren formula shows the average cost of producing milk on the farm in New York State during the year 1923, as \$2.82 per cwt. Costs are higher this year. Comparing cost of production with the average pool price of \$2.31, shows that it cost 51 cents a cwt. more for production than was received by the farmer for nearly five billion pounds of milk. The outlook this year is much worse. No scheme of diversified farming can balance it.

In the matter of milk prices it is of the utmost importance that the New York farmer be protected in his market as a reward for modern methods of production, additional investment to protect health and efficient marketing through a farmers' organization. The building up of a market to meet potential conditions which we can see as of vast public importance in the immediate future should not be discouraged.

Better quality product is what we all look for. Dr. Monaghan, Health Commissioner of New York City, has written to me inviting producers to a conference to find if possible better ways and means of protecting quality production and insuring to producers a fair return for their efforts.

Referring again to higher prices paid for cheese milk in Lewis County. I have assumed that the cheese factories had sold some fluid milk to competing city dealers; but an expert informs me that a better price for cheese milk is determined by efficiency of cheese-factory operation and market price of cheese. However that may be the net price to farmers for three per cent. milk paid by cheese factories in Lewis County in June was \$1.57; League price, same place, \$1.17; Sheffield Farms, \$1.68; League and Sheffield deal in fluid milk and are manufacturers—but the League carried cost of surplus in fluid milk prices and Sheffield makes no deduction.

Differing market methods and their affect on prices at the farm may be illustrated by three years' return in the cheese section, where the average for the pool for the three June months shows a total of \$3,763,977.01 lower than cheese returns; during the same three months Sheffield paid \$2,932,736.21 more than cheese factory which estimated on volume of pooled milk shows

THE BULLISH CORN MARKET

—DARLING in the New York Herald Tribune

application to a business which keeps them hard at work from 12 to 16 hours a day, every day in the year. They know what good milk is and have no rivals or peers. The product they sell to the public they use on their own tables—fresh and delicious.

Now for some idea of the amount of milk produced on our farms and handled in the New York city markets:

In June, 1924, New York City took 3,758,745 forty-quart cans of milk and cream; this amazing total was exceeded in June, 1923, by 173,538 cans—milk enough to float the Leviathan and to make the Woolworth Building a very small island with a little spire sticking above the flood.

An idea of growth is given by figures in 1909 with a delivery of only 1,225,917 cans; 1915, 1,539,372; 1916, 1,589,281. The current year is the first to show a falling off for more than twenty years. We need more quality milk, not less. And also, I should say, both public and producers need education as to sound and correct methods of milk marketing. We have passed the

## The Climax of a Long, Hard Fight

*The Hill Farmer of the East Is Making His Last Stand*

**M**OST of us will remember the story of how the author of Pilgrim's Progress on seeing a man being carried in a cart to die on the gallows fervently exclaimed, "But for the Grace of God—there goes John Bunyan." It is an old story that for me never loses its appealing force. Even so I am tempted to paraphrase it by remarking that only by a narrow chance did I escape being a Hill Farmer. If my great-grandfather Jared, trekking along the trail of the Lunenburg Pike in July of the year 1800 had halted his ox team a few miles further east, then I suppose I would have belonged to the class of whom I write, but fortunately for me and for my children he was not moved to say "Whoa" until he came to a limestone valley lying in the lap of the hills. But I suppose this happy fortune was by accident or Providence rather than any particular knowledge or design upon the part of my great-grandfather.

I think it is John Fox, Jr., who in one of his books has made a striking epigram to the effect that the breaking of a linch-pin in the Cumberland Gap changed the course of History in America, because this little, almost insignificant accident, turned the band of Virginia pioneers into Kentucky and left Ohio to be settled by the men of New England with their very different ideals and their distinct culture. If the Virginians had carried slavery into Ohio then it is easy to believe that this "peculiar institution" might have attained an even far greater dominion in America. It is always most interesting and of course absolutely futile to speculate upon what might have happened if only some slight incident had occurred some other way.

But in any case I return to my original statement that I miss being a Hill Farmer by only five miles. Hillside Farm lies high and we have some steep hills and many stones. I suppose that when the typical Corn Belt farmer from Iowa sees it he shakes his head and in his heart pities me and wonders why we cling so persistently to a farm where there is need of side-hill plows and where it is necessary on some fields to "chain the wheel" when drawing off the hay. But I am willing to be pitied a little and am not greatly troubled in soul thereby because I remember that our hills are limestone hills and some of the steepest of them grow alfalfa splendidly, and a farm that will grow alfalfa easily is never a really bad farm, and today I look out upon a piece of wheat that under the July sun is becoming a billowing "field of the Cloth of Gold" (that lovely phrase of an early English chronicler), and I know that it will yield at least twice as much as the average of the world-famous wheat States. New York has a

By JARED VAN WAGENEN, JR.

large area of hilly and yet very productive land.

But I go due south and cross the valley and climb the steep, rough slope and within five miles I come into the typical Hill Country—where the valleys are narrow and the fields stone-strewn and worse—where the soil is made from shale instead of limestone, so that legumes find it hard to grow; and here farm life has been and is and always will

"Thus it has come to pass that some of the best blood in the world and some of the most dauntless men are Hill Farmers. Always these hill farms have been a breeding ground for famous folk."

be a hard and I fear a losing struggle. Understand me: Not for one moment in any way do I wish to sneer at the Hill Farmer. The finest racial stock the world ever knew—bar none—was the New England Puritan and the larger part of New York was peopled by a secondary New England emigration. As Abram went forth out of Ur of the Chaldees "not knowing whither he went," so these folk fared forth seeking a heritage for themselves and their children somewhere in the mythical West. There was nothing in New York that could have any terrors for men reared on the hard, thin fields of Vermont or Connecticut or Western Massachusetts. Some of them by happy chance chose the Genesee Road and pressed on into the lovely Finger Lake country or the fat Ontario Shore and here their descendants have reared what is one of the finest agricultural civilizations the world has ever known. That New England farmer was a mighty explorer—it would seem almost a nomad. It is said that during the first ten years following the close of the Revolution forty thousand New England families descended the Ohio. But some (knowledge as to where they were bound was very scanty and indefinite) failed of the fair and fertile parts of our State and found their Promised Land in the Catskills or the North Country or the Southern Tier. Nevertheless there was something

in the Puritan which enabled him to withstand agricultural adversity. He built his home in narrow valleys or on windswept hill tops, but he maintained his peculiar culture and ideals. He took along with him his church and his school—to some extent also he took his town meeting, although in New York the township and the town meeting do not have the same unique importance in civic life. A famous Professor of American History has declared that the Rhode Island town meeting still remains the world's best example of a pure democracy.

Thus it has come to pass that some of the best blood in the world and some of the most dauntless men are Hill Farmers. Always these hill farms have been a breeding ground for famous folk. I am thinking now of a little brown farm house snuggled in the elbow of the valley far up in the Catskills—a farm where life must always have been a stern struggle—a place of plain living even if of high thinking—but I remember that out of this farm house went a boy who became a great Bishop of a great Church—almost a national figure when he died a year or two ago. You may not lightly dismiss a civilization that can breed men like that.

So in short, my particular interest, my admiration, is with this type of farmer above all others. We do not really need to worry over the

man whose farm lies along the concrete highway in the broad valley. Doubtless he has his troubles along with the rest of us and grumbles over the price of milk, but after all his position is secure. Someone—he or his successors—will always farm these lands. But I do pay honor to the Hill Farmer because he has fought a good fight.

So sometimes when I have a friend who I would like to have know something of our farms, I leave the State highway and turn south and set the machine against the hills and go up and up to where the fields are little and steep and stone-strewn and fenced with the stone walls that an earlier generation of men built and all about are the tumbled billows of the noble hills with far-off horizons and blue distances—and then we talk together concerning what the future holds for these lands.

For I fear—yes, I know—that the Hill Farmer fights a brave, tenacious and yet losing battle. He has been losing steadily and consistently since the close of the Civil War. Every step in agricultural progress and method only increases the disparity between him and his more fortunate competitor. In the days of the cradle and the light side-hill plow he was less fatally handicapped than he has been since the coming of the grain-binder and the tractor. There are parts of our

### The Costs of Milk Production

DAIRYMEN will be interested in the statement of costs of producing milk in Mr. Mark DuBois's article on page 98. Mr. DuBois has studied the milk situation for years and has the facts. Dairymen do not need to be told that they are producing milk under the cost of production; they already know this from sad experience. But city people do not have these facts, and by broadcasting articles of this kind through the WEAFF Broadcasting Station, AMERICAN AGRICULTURIST gives hundreds of thousands of city folks the real situation with which farmers have to contend. Certainly the city consumer ought to know that the milk he pays 13 cents a quart for brings the farmer less than 3 cents.

In a recent issue, we said that if farmers were to continue in the business of producing milk, prices must be immediately advanced. We are much pleased that they have been. The League and the Sheffield producers have announced increases in milk prices for August. These better prices, while not what they should be, will bring a note of encouragement into many thousand farm homes throughout the New York milk territory.

With the price of grain and other costs advancing, we look to see a raise in the price of milk to producers every month until these prices are brought back to where they should be. We do not believe that there are now any good market reasons why milk prices should not continue to advance. If these increases are prevented by reason of foolish and unnecessary price cutting and unfair competition among farmer-owned plants, both in and out of the League, it is time that the dairymen who own these plants demand that their leaders end such ruinous competition.

### Cities Learning the Truth About Farming

MOTHER always used to be saying, "There is no great loss without some small gain." One of the small gains, which may not be so small in the long run, of the present hard times on the farm is the changed attitude of city people and city papers toward farming and farmers. It has not been so long since the majority of the people, particularly in the larger cities, openly accused farmers of being profiteers and thought of them as heartless wretches whose chief desire was to starve city folks. Such feeling of hatred between country and city is bad for both. It is bad economically, for under our present civilization it

would be impossible for either country folks or city folks to live without the other; and it is bad spiritually because class hatred is contrary to Americanism and to the teachings of religion.

It is therefore with a great deal of pleasure that we have noted a great change for broad-mindedness on the part of city people and city papers for the affairs that concern the farmer. A recent editorial in the New York American quotes Senator Copeland as saying:

"To assume the mills and factories can prosper when more than forty million persons who reside upon the nation's farms have been impoverished to such a degree that they are no longer able to purchase such merchandise would be the height of folly."

The New York Evening World recently said:

"What the farm country craves is a leveling up of crop and livestock prices to the general price index. Wet skies and chill winds are seeing to that leveling.

"If and as this leveling proceeds farm unrest will recede. With it will go the hedgerow preacher of class hate and the political 'dirt farmer,' who has more calluses on his tongue than on his hands. The law of supply and demand has been working against the farmer. When it begins to work for him the professional 'one gallus boys' who ride into office on the farmer's back may face the dread necessity of going to work and we can deal with the genuine farm problems with less hysteria and more common sense."

The New York Times said editorially in its issue of June 17th:

"They (the farmers) have reason to take courage from recent changes in the agricultural outlook. Tricky and insincere politics have failed the farmer, but nature and economic law now promise to do him a good turn. Dollar and a quarter wheat ought to save us from the worse consequences of demagogues and disturbers of the peace this year. . . . There is no secret about the crops. The estimate of the yield this year is that the total wheat crop will be something like ninety-three million dollars less than in 1923. These facts translated into terms of the market mean a smaller supply, a larger demand, and a consequent higher price."

The above are illustrations of what is now appearing in the large daily papers about farming. Farmers have always known these truths, and now that the papers are telling them to city folks, a better understanding will be created which will mean a lot to both.

### Quiet Is Pretty Good

THE other day in old disreputable overalls, cotton shirt, and straw hat, I took a milk pail and went off across the farm hills of my boyhood to pick wild strawberries. There were lots of them this year, and it was not long before I had my pail full. Then I hunted up the spring where the cold water bubbled out of the hill, and lying flat on the cobblestones, I drank and drank, as only one can drink after hours in the hot sun without water. Some way you never get so thirsty, nor water never seems so good in the city as it does when bubbling out of the earth from a cold spring.

From where I was, I could look off across the fields for miles without seeing human habitation or hearing a single man-made sound. Lying in the shade, with a few sunbeams peeping through the leaves and into the holes in the battered old straw hat over my face, and with nothing to disturb the quiet of the peaceful summer morning but the chirp of crickets and the distant caw-caw of the crows, I thought that there are lots of worse things than just good quiet rest and peace. The hurrying, hectic, so-called civilization of ours wears us out without giving us much in return.

I thought Spenser had about the right idea when he wrote so long ago:

"Sleep after toyle, port after stormie seas,  
Ease after warre, death after life, docs greatly please."

And then I got thinking how hard it is for most of us to get things just right. Always there is something to mar a little that which would be otherwise perfect. The city man gets too much city and the country man gets at times an overdose of country. Recently, I asked some of my city friends if they had ever eaten a real old-fashioned wild strawberry short-cake. They never had, did not even know what it was! What do you think of that? And they miss a lot of the other good substantial things of life, too.

But on the other hand, in the country there may be too much solitude, too much loneliness, too much work, and too little money. Things some-

how are out of balance, but still when it comes to the grand total of real happiness, and true happiness is what we are all striving for, I think farm people have a little the best of it.—E. R. EASTMAN

### When Farmers Advertised

THE experience of the California Fruit Growers' Cooperative Exchange in the last twenty years is one of the world's great examples of the power of advertising. In 1905, there was a great over-production of oranges and lemons in California and the groves were coming on so rapidly that the outlook seemed to be hopeless for the producers. Then they organized the Cooperative Exchange, provided an efficient sales system, and set out to tell the American housewife about the advantages of oranges and lemons.

They made no half-way job either in their publicity work. To spread their messages, they used yearly some 55 million magazine color pages, 206 million newspaper insertions, besides poster and street car advertising. More than 200,000 housewives write to the Exchange each year asking for recipe material. As a result of this campaign, the per capita consumption of oranges has increased from 20 oranges in 1907 to 40 oranges annually from California, plus 20 more per capita from Florida at the present time. Twenty years ago oranges were considered a treat, only to be eaten on rare occasions, such as at Christmas. To-day, they are a regular article of diet in most homes.

In 1905, the crop production in California was 11,500,000 boxes, and this was over-production; in 1924, the estimated production will be around 27,000,000 boxes, and they will all be well sold. Advertising and orderly marketing did the trick.

### Not In Politics

THE Washington office of the National Grange takes this opportune time to issue a little statement emphasizing the fact that the Grange is not in politics. Like in many other of its policies, the Grange is absolutely sound in this attitude. No farmers' organization which enters partisan politics can long endure.

Here is one paragraph from the Grange statement:

"Many others (farm organizations) have come and gone, wrecked by being led into political participation, back of which has always been personal ambition of leaders or would-be leaders. But the Grange has, with few exceptions, escaped this scourge, and still lives."

On being asked as to what planks the Grange had asked the parties to put in their platforms, the Washington representative of the Grange replied that the Grange did not ask any party to do anything for it, except to take notice of the platform which the Grange adopts each year in its own time and its own way and that the Grange then asked parties and all of the rest of the public to help it secure the proper recognition of its own platform.

This is exactly the attitude of AMERICAN AGRICULTURIST. We are for no particular party, but we are for those things in all parties which we think will work for the benefit of American agriculture.

### Eastman's Chestnuts

AN implement agent from this country was in England selling machinery, and while in the "Fen" country in Lincolnshire stopped to dinner one day at a farmhouse. In the family were the farmer, his wife, and their son. As it happened they had a boiled ham for dinner, and the boy, being pretty hungry, soon cleaned up his plate and, passing it to his father, said, "A little more am, please, father."

"You shouldn't say am," said the old man; "you should say am."

"I did say am," said the boy.

"You didn't say am. You said am," replied the old man.

The old lady, who was sitting next to the agent, nudged him, and with a sly wink whispered, "YOU KNOW, THEY BOTH OF THEM THINK THEY ARE SAYING AM."

# More About Neighborly Acts

*A Few More of the Many, Many Good Letters We Have Received*

By A. A. READERS

THE most neighborly act I ever saw occurred just last month. A family from Iowa consisting of father, mother and six children had saved some money and were traveling East to visit the mother's relatives. When they came to one of the mountains here close to the Mason and Dixon line where so many accidents happen to the West-erners unused to mountains, their car ran over an embankment fatally in-juring the mother and demolishing their car. The mother was sent to a hospital, the children and father were gathered up by a stranger who proved to be a real friend. When this man, Mr. F., first saw the distressed father and six little children they were standing by each other and they made steps, the children being two years difference in age. Mr. F. took out his checkbook, wrote a check for five hundred dollars, handed it to the father of the children saying, "Take care of these little ones," and with the kindest smile he bade them adieu and went on his way without waiting for thanks.—W. P. L., Fulton County, Pennsylvania.

\* \* \*

## At the Risk of His Own Life

MORE than 20 years ago (in March) there was a big snow storm, the sort that goes down in local history as the real thing. Roads vanished and everyone was snowed in for days. I was a young boy at home. A neighbor died, and a casket had to be procured for him. His wife attempted to persuade some of her neighbors to go for it but all said "Wait till the storm is over and roads are opened." Finally she asked my father to go and he consented at once.

At three the next morning he started, a team hitched to a light sleigh. My older brother accompanied him. They had a distance of perhaps nine miles to go. It had stormed for two days and was still storming and they reached the county house at about two in the afternoon. After resting the team and feeding them some grain, they started home about 3 P. M. and reached home with the casket about one the next morning, nearly frozen and covered with snow, which was still falling.

In searching my mind for the memory of neighborly acts, this one stands out as unusual in the suffering and discomfort involved and illustrates what some of the older people would do for a neighbor.—W. R., New York.

\* \* \*

## Money Help is Real Help

TWENTY years ago my neighbor said to me, "Why don't you own your own home?" I told him that I would like to but had no money. He suggested that I look around a bit and said that if I could find a place he would furnish the money. I bought and he furnished all the money not only for the place but for stock and imple-ments. Stock and implements were bought at public sales. By paying cash, he made a discount of 6%, which I got, he charging me only 4% for his money. He also helped me in many other ways.—I. D., Pennsylvania.

\* \* \*

## Gave Up Own Pleasure to Help Neighbor

I HAVE had quite an experience the past summer and autumn when my husband was seriously and critically ill. For many months hired help and neighbors were our only dependence "and the neighbors failed us not."

One neighbor especially (he being the nearest, ¼ mile distant) would come any time day or night. When we were unable to send for him, a

blast from the dinner horn would quickly bring him. He saw things that required attention and did not wait to be asked to do them.

Along towards the last, my husband had delir-ious attacks and despite all efforts of my daughter and myself, we feared that he would escape our surveillance, and go out doors, (though when not delirious he was too weak to get out of bed).

Late one evening he was taken with the first and one of his worst at-tacks. We sent for this neighbor. He came all dressed up.

"Were you going away?" I asked. "Yes," said he, "we were going to a dance, but the rest can go and I will stay with you folks," and he did. A young man of twenty-four, giving up his pleas-ure to stay with aged and infirm people! What we would have done without

him I know not. for we all passed a terrible night, and we appreciated his kindness more than we can tell. This is only one of the many kindnesses rendered by our neighbors in our affliction, for my husband later died but this act of a young man seemed so dear to us.—Mrs. D. B., New York.

\* \* \*

## Neighborliness in the City, Too

WHEN I was on the wrong subway train the conductor told me I must get off at the next station, cross over and return to where I

Mr. and Mrs. James Richards of Norfolk, N. Y., and their horse "Charlie." He was born May 27, 1888, making him 36 years old, the oldest horse of which we have any knowl-edge. If any of our readers have authentic information of any horse older than this one, we would like to have the facts and a picture. In the meantime "Charlie" holds the record as the oldest horse in the A. A. Family.

could get the line wanted. A newsdealer with a heavy bundle of papers who overheard the direc-tions given me said, 'Don't worry, lady, I'll see that you get all right.' So he did. Getting off at the same station, he left his papers in charge of a boy there and went with me up the steps across

the bridge, down to the other platform and left me only when the right train came along. This happened, not in the country where one expects neighborly acts, but in a busy city.—L. J. K., New York.

\* \* \*

## A Pastor Practices What He Preaches

I HAVE been a reader of the Agriculturist many years, having lived in a rural community nearly eighty years. Have seen many acts of neighborly kindness but taking everything into consideration the following excels them all.

A minister in charge of two churches, which obviously took most of his time, learned that one of his parishioners was ill. The latter owned a small farm and was unable to harvest his potatoes. The minister decided he would try to relieve the situation. Therefore, one fine morning he took out his wheel, not being the owner of a car, and went to the home, six miles away and with the help of the sick man's young son dug, picked up, and put into the cellar forty bushels, the entire crop, mounted his wheel and returned home, covering a distance of twelve miles over an ordi-nary country road, not a foot of cement. Un-accustomed as he was to manual labor, it took pluck, muscle and sweat of the brow to perform this neighborly act.—Mrs. P. A. G., New York.

\* \* \*

## "Women and Children First"

YOUR request for true stories of acts of friend-liness among neighbors brought to my mind at once an incident the story of which came to me not long ago from the little hill town in Vermont which was formerly my home.

John and Albert occupy adjoining farms and frequently work together felling trees. Albert being the older and more experienced naturally takes the lead. He is a man whose decisions are not to be taken lightly nor his motives questioned.

As they were working together one day, John said, "Albert, why do you always give me the safe side of the tree and take the dangrous side your-self?" Straight came the reply, given in a matter-of-fact fashion as if he were commenting upon the weather, "John, you have three little children and I have none.—L. K. G., Rhode Island.

\* \* \*

## The Man Who Does Good in Silence

I HAVE a pasture lot on the end of my farm, obscured from view of the house. I have there sheep and dry stock. Last year one of my neighbors, chancing to be driving past, noticed three head of cattle in the adjoining field of alfalfa. He stopped, drove them back into the pasture lot and fixed the gate. I did not know of his act until several days later. There is no question that had he not done this, the cattle would have bloated on the alfalfa and died; and probably some sheep, too.

Now, I have in mind what might seem to others greater neighborly acts, such as happening in my own neighborhood. In one case a farm building blew over, sixty men of the vicinity in one half day piled the wreckage. There are others, such as a neighbor helping another save a wheat crop from storm; or incidents of sickness. But this one above stands out in my mind not alone for the saving of needy dollars to me but the character of this neighbor.—W. D., New York.

The second generation.—Judge.

# How the Binder Ties the Knot

## F. G. Behrends Tells How to Overcome Common Knotter Troubles

IN the various binders, the knotter head is, with the exception of one make, very much like the one illustrated in fig. (1). In the following article, the principles discussed may be applied to the various makes of knotter heads. In each case the function of the bills and discs is the same and their operation very similar, altho with different makes they will vary somewhat in shape and position.

Previous to a discussion of the troubles,

disc. See fig. (4). As the bills further rotate, they will be closed thru the mechanism of the bill roller and cam. In closing, they will grab the double twine passing to the twine holder disc. See fig. (5). How firmly they will grab this double twine will depend upon the tension of the knotter bills spring fig. (5) against the cam roller. The stripper now starts forward, the knife severs the twine between the bills and the twine holder disc and the stripper pulls the looped twines off the bills. Since the ends are held, the pulling of the looped twines off the bills ties the knot. The bundle is now tied. The compressor hook drops from in front of the bundle, and the discharge arm kicks it from the binder head. The needle is now receded to below the table and the operation is again repeated.

If the function and the operation of the twine holder disc, the bills, the needle and the twine tension are understood, binder knotter troubles can be diagnosed from the condition of the bands.

### Binder Knotter Troubles

If the binder misses a number of bundles, stop the machine as soon as the next trouble bundle is cast and study it referring to the illustrations of Bands 1 thru 8 and the following explanations.

#### Band One

Upon examination, the band is found clinging to the bills with the loose end cut off square. The trouble is the twine tension is too tight and the twine disc too loose. When the needle rose from below the deck, the twine tension being too light, did not allow the extra twine that was needed to feed regularly from the ball. Not being able to pull the twine from the ball, the needle pulled free the other end which was held too loosely in the twine holder disc. The end being pulled from the twine holder disc was also pulled off from the top of the bills. The needle continuing to advance lays the end of the twine going to the ball over the bills into the twine holder disc. There is now but one twine laying over the bills. The knotter rotates, opens, grasps the single twine between the bills and the disc, the stripper moves forward and the knife cuts the twine, but since one end of the band is

loose, the stripper cannot pull the looped strand off from the bills. The grain is discharged and the twine is left hanging in the bill.

**Remedy:** Loosen the twine tension on the twine can. If this does not correct the trouble, tighten slightly the tension on the twine holder disc.

#### Band Two

Upon examination, the band is found clinging to the bills with the free end torn and ragged. Here again the twine tension on the twine can is too tight and the tension on the twine holder disc is too

tight. The explanation of the formation of band No. 2 is identical with that given for band No. 1 except that in this case, the needle can neither draw the twine freely from the can nor pull it from the twine holder disc; the result is that the end held in the tight disc, having been slightly crushed and weakened, is broken. The action of the bills and stripper is as explained for band No. 1.

**Remedy:** Loosen tension on the twine can and if this does not completely remedy the trouble, slightly loosen the tension on the twine holder disc.

#### Band Three

Upon examination, the band is found with the bundle instead of with the bills. A knot is tied in one end with the free end cut off square. Here the twine tension on the can is in correct adjustment. The twine holder disc adjustment is, however, too loose. As the needle rises from below the deck, the twine, pulling freely from the ball, is carried over the bills and placed in the twine holder disc. As the bills revolve, the necessary twine to make the loop around the bills is drawn from the twine holder disc. Under the conditions set forth for band No. 3, the disc is so loose that the free end of the twine slips completely out of the disc. The result is that a knot is tied in the long end of the twine around the free end. The

knot in the single twine is stripped from the bills and is cast with the bundle. The end may be pulled thru the knot either by the falling bundle or by someone picking up the bundle by the band.

**Remedy:** Tighten the disc spring.

#### Band Four

This band, like band No. 3, will be found with the bundle. A knot is tied in one end and the free end is broken and ragged. Here again the twine tension on the can is in correct adjustment, but the adjustment on the twine holder disc is too tight. The explanation of the formation of this band is identical with that given for band No. 3, except that as the bills rotate, the free end, which has been crushed by the tight disc adjustment, is broken instead of pulled from the disc.

**Remedy:** Loosen the disc spring.

#### Band Five

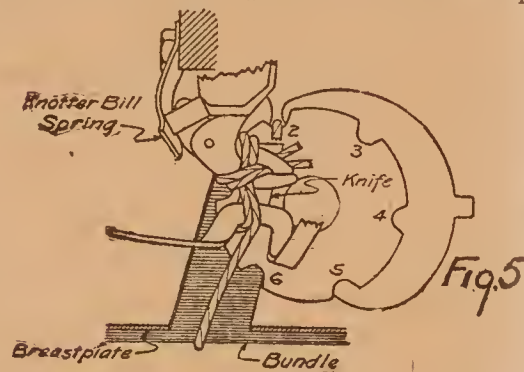

Upon observation, the band is found with the bundle with both ends crushed and ragged. The twine tension on the can is correct, but the tension on the twine holder disc is much too tight. As the bills rotate, the twine does not give at the disc and is consequently broken. Neither end of the twine being held in the disc, no knot can be tied.

**Remedy:** Loosen the disc spring.

#### Band Six

This band will be found with the bundle and both ends will be bent.

Trouble, knotter bill spring is too loose. The explanation for this band is as follows: As the bills rotate, the two ends of the band are looped around them thus bending the ends. The bills open, grasp the ends of the band and then close. The stripper moves forward to pull the looped twines off from the bill, but since the bills are not holding the ends securely enough, the ends are not pulled thru the looped

strands when the latter are stripped from the bills. Therefore no knot is tied.

**Remedy:** Tighten the knotter bill spring, see fig. (2).

#### Band Seven

This band will be found on the bills and will be broken. This is usually caused by having the knotter bill spring much too tight and having the machine set to produce very loose bundles. Under these conditions, the stripper, instead of pulling the knot off the bills, pulls the band up from below. When the discharge arms kick out the bundle, the band is broken, since the ends of the band are firmly held in the knotter bills.

**Remedy:** Loosen the knotter bill spring and set the machine to make tighter bundles.

#### Band Eight

This band is found with the bundle. Upon examination, it will be noted that a slip noose is tied around the bundle and twine extends from the cast bundle to the eye of the needle. The usual cause of this band is that the eye of the needle is badly worn back. This band may, however, be caused by the needle not advancing far enough. In either case, the formation of this band may be explained as follows: As the needle advances, the twine is not

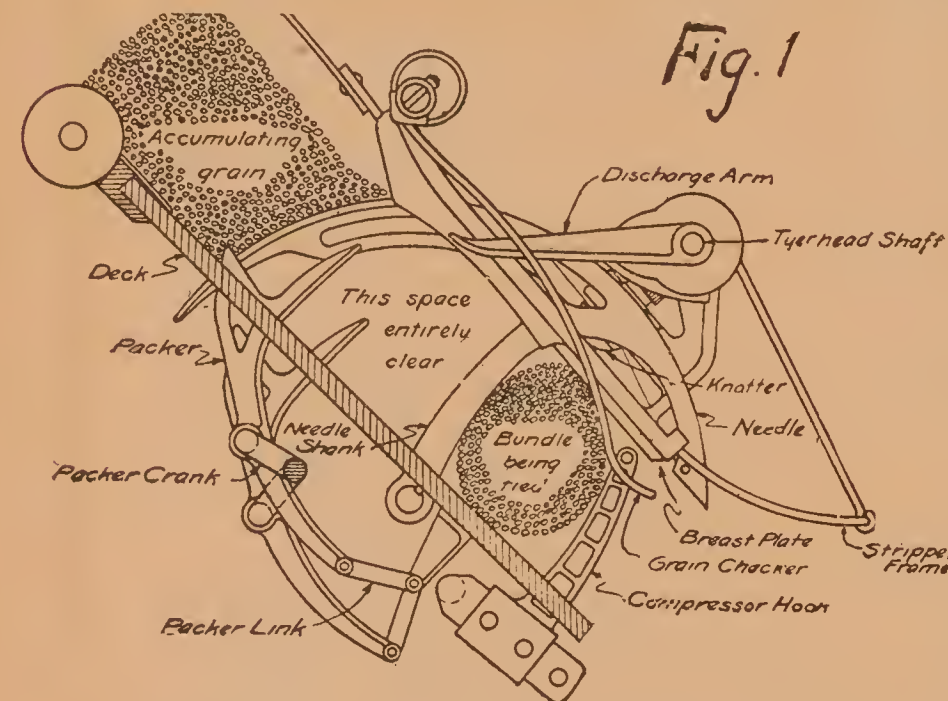

carried forward enough to catch in the twine holder disc. The bills tie a knot around the needle end of the band with the short end, thus forming a slip noose. Since the needle end of the twine, not being held in the twine holder disc, has not been cut, it is drawn out when the bundle is cast.

**Remedy:** If the needle does not carry a special wearing piece which can be renewed, a new needle must be supplied.

#### Cautions

Make all knotter bill spring and disc spring adjustments gradually. Each time when making a change, a quarter of a turn is sufficient.

Do not try to make a tight bundle by tightening the twine tension.

it would be well to run thru the steps in the tying of the knot around the bundle. Let us assume that the machine has been threaded. One end of the twine is held by the twine holder disc. From here, it passes back over the knotter bills thru the eye of the needle, along the needle, thru the twine tension and to the ball of twine in the twine can. As the grain slides down the deck, it falls on top of the twine. The packers, which are in continuous operation, form and compact the bundle between the compressor hook and

themselves. Soon sufficient pressure is exerted against the compressor hook to cause it to trip the mechanism and throw the knotter head into operation. The needle swings from below the deck, Fig. 1, carrying the twine over the top of the bundle and placing it in the twine holder disc. The shank of the needle further compresses the bundle while the back of the needle holds the accumulating grain while the bundle is being tied. It is quite obvious that as the needle rises from below the deck and places the twine over the top of the bundle, the twine must be free to slide easily thru the eye of the needle, the twine tension and from the ball of twine.

#### How is the Knot Tied?

The position of the needle just described is shown in fig. (1). In fig. (2) a close-up view of the knotter is shown corresponding to the position of the needle in fig. (1). The twine just brought forward by the needle is laid and held in the twine holder disc. In the picture, the twine at the left passes over the bills, over the stripper, around the bundle, again over the stripper, over the bills, thru the twine holder disc into the eye of the needle. Notice that the twine is doubled over the bills. The bills now make one-half of a revolution see fig. (3). It will be noticed that they must pull a little twine from the disc in order to form a loop about themselves. As the bills continue in their revolution, the bill roller riding over the cam causes them to open. This is shown in fig. (4). As the open bills continue to revolve, they will pass around the double twine going to the twine holder

## Barnyard Golfers Warming Up in Many Counties

EVERY mail brings more letters from all over New York State about the horseshoe pitching contests. The county contests conducted by the Farm Bureaus and the state-wide tournament to be held at the State Fair at Syracuse, are reviving the interest in this good old-fashioned farm game. Watch AMERICAN AGRICULTURIST for the names and pictures of farmers in your own county who are winning the local contests and who will go to Syracuse to compete for the cash prizes in the state championship.

We have just received a letter from Mr. R. B. Howard, secretary of the National Horseshoe Pitching Association, granting official approval to our contest to be held during the State Fair. You will be interested also in the letters which we print below giving the plans of the Farm Bureaus in different counties for their local barnyard golf tournaments. Unfortunately we are able to publish only a part of the letters, because some of them came too late, so that you would get them before the local picnics and fairs are held.

Judging by the interest already aroused, there will be nothing at the State Fair

The first prize winners in the 1923 Schoharie County contest and their prize

that will attract a larger crowd or more interest than the horseshoe pitching contest.

### Dutchess County Golfers Busy

A. L. Shepherd, county agent of Dutchess County, writes:

"We are planning to put on the Dutchess County Contest at the Annual Grange and Farm Bureau Picnic that will be held at Locust Grove, Pleasant Valley, New York, Thursday, August 14th. We hope to develop a good team to go to the State Fair."

### Golfing at Orange County Fair

L. D. Greene, county agent of Orange County, states that their horseshoe pitching is scheduled for the county fair the week of the 11th under the auspices of the Orange County Agricultural Society.

### Madison County Will Pitch On August 22

P. L. Randolph, county agent of Madison County, sends us the following news:

"Arrangements have been made to have a horseshoe pitching contest at the Madison County Farmers Picnic to be held on August 22nd. We wish to enter the winners of this contest in the State contest at the State Fair. Judd Brothers of Nelson, winners of last year's tournament at the picnic have stated that they will enter the contest again this year."

### Mr. Donaldson Will Direct Contest at Dresden

C. B. Raymond, county agent for Yates County, writes that their picnic is to be held at Dresden, Thursday, August 14th. Mr. George Donaldson of Penn Yan is acting as general chairman of the quoit tournament, and a committee will be appointed representing various sections of the county in hopes of helping to boost the interest in it.

### Schoharie County Will Pitch

Ray F. Pollard, county agent of Schoharie County, writes us as follows: "We are making careful plans for horseshoe pitching contests to be staged at our Schoharie County Farm Bureau picnic to be held August 14th (Thursday) on the Cobleskill Fair Grounds. In the morning there will be elimi-

nation contests and in the afternoon the two winning teams of the morning will pitch three games to decide on the team that will come to Syracuse. In addition to teams of men we expect to run a contest for the women.

"Last year we had 16 teams of men competing and gave three prizes having a total cash value of over \$40. The first prize was a small flock of purebred White Leghorns. This prize was won by Grover C. Guernsey and George Turner of East Cobleskill. The inclosed picture shows the men and the prize.

"Our contests are staged on the race track and we use four courts in front of the grandstand."

### Greene County Golfers Will Clash September 6

Mr. L. S. Kibby, county agent of Greene County, writes as follows:

"I desire to thank you, Mr. Eastman, on behalf of our picnic committee for your acceptance of the invitation to speak at the coming Pamona Grange Farm Bureau picnic to be held at Silver Lake, September 6.

"Our committees are quite active and can report that the grounds have been arranged for and provision made for having a band. The horseshoe pitching committee is provided with rules and regulations for horseshoe pitching contest and is soliciting the names of teams who wish to compete. The grounds provide a place for boating, swimming and

other amusements. The men's entertainment committee report that a good ball game is to be put on and one of the things which the ladies' entertainment committee is planning for is a nail driving contest for the women.

"While it is the first county-wide picnic held in Greene County, early indications are that it will be largely attended."

### Delaware County Will Be in the Scrap

Mr. Ralph Q. Smith, county agent of Delaware County writes:

"Enclosing copy of letter which I have sent out to our county Granges, Dairymen's League and Farm Bureau Committeemen concerning the Horseshoe Pitching Contest. We have a committee of six composed of Sheldon Brink, Walton, Chairman; Frank Dickson, Delhi; E. J. Turnbull, Andes; E. H. Dickson, Arena; Smith Lyon, Delhi, and George Tweedie, Walton. This committee have their plans for the County Tournament all arranged which is to be staged at the time of our County Picnic on August 21st. They have three courts made which are being filled with sand and will be ready for a first-class contest."

Milk is on the average about 87 per cent. water, and cows giving milk need to drink about four times as much as dry cows drink. See that they have plenty that is clean and fresh.

# These Machines Save Corn, Time, Labor, Money

## McCormick and Deering Corn Binders

FOR years these binders have made fast work of the corn harvest. They do the hand work of five to seven men, and at the same time they do the cleanest kind of job. They pick up tangled and down corn. They can be adjusted for tall and short corn and they make easily handled bundles.

Both McCormick and Deering Corn Binders have been popular with owners for many years but they are of different design. The McCormick binds the bundles while they are in the upright position, and the Deering ties them as they lie flat. Both binders have roller bearings. Both have channel steel frames, securely bolted and riveted together. Sensible construction for avoiding field difficulties. Can be equipped to load bundles onto a wagon. Be ready for corn harvest. Ask the McCormick-Deering dealer about these binders and any of the modern corn machines mentioned here, or write us direct for complete catalog.

## McCormick-Deering Ensilage Cutters

FILL your silo easily, economically, and at just the right time with a McCormick-Deering ensilage cutter. Built in five sizes. Capacities from 3 to 25 tons of cut fodder an hour. All sizes have reliable safety devices, force-feed, large throat, and heavy flywheels of boiler-plate steel. Cutting and elevating done in one operation, saving power. Power required from 6 to 25 h. p.

If you want to husk the corn and shred the fodder, look over the line of McCormick-Deering huskers and shredders. Made in 4, 6, 8 and 10-roll sizes, for individual and custom work.

## McCormick-Deering Corn Pickers

THIS is the day of the corn picker. The McCormick-Deering goes through a field and picks, husks, and loads onto a wagon the crop on a half-dozen acres a day without anybody doing any unusual work. The husking is cleaner than average hand husking and many times as fast. This big-capacity machine is of surprisingly light draft; it has 37 roller bearings. One man and a tractor or 4 or 5 horses handle it. Ask the dealer or write us for information about the McCormick-Deering corn picker.

## FOR THE FORDSON

This One-man Mower cuts 15 to 20 acres a day. Quickly attached to the Fordson—no changes necessary. Ball bearings—two speeds—automatically oiled—fool proof—guaranteed. Used on Henry Ford's Farm. Write for particulars.

DETROIT HARVESTER CO., DETROIT, MICH.

**CORN HARVESTER** cuts and piles on harvester or windrow. Man and horse cuts and shocks equal Corn Binder. Sold in every state. Only \$25 with bundle tying attachment. Testimonials and catalog FREE showing picture of Harvester. PROCESS MFG. CO., Salina, Kan.

# The Summit Pipeless Furnace

**No Cold Air Floor Drafts**

**Insures Better Heating With Less Fuel**

**Easy to Install in Old or New Homes**

The Special Summit Installation which prevents all cold air drafts over your floors is the big outstanding feature of this splendid heating plant.

There are two separate cold air return registers, and through these registers the cold air is returned to the furnace where it is heated, purified and re-distributed throughout the building.

This system of installation was originated and perfected by us—and it has gained for the Summit Pipeless the endorsement of experienced heating engineers and building contractors.

Summit Engineering Service is Free. Send us your problems and we will direct you to our nearest dealer where the Summit system of heating will be thoroughly demonstrated to you.

**Summit Foundry Co**  
Geneva, N.Y.

# Among the Farmers

*Where to Apply for Your Auto Operator's License*

A WORKING agreement has been established between the county clerks of New York State and Commissioner Harnett of the State Board of Vehicle Bureau to make it more convenient for applicants to get their drivers' licenses. The agreement was established at a recent conference held between Commissioner Harnett and the county clerks at the recent annual meeting of county clerks held in Mayville, Chautauqua County.

In the counties of Albany, New York, Queens, Kings, Bronx, and Richmond, the Motor Vehicle Bureau will issue licenses from its own offices.

In the counties of Erie, Monroe, Ontario and Onondaga, the licensing of all drivers will be under the jurisdiction of branch offices of the State Tax Department in the cities of Buffalo, Rochester, Utica and Syracuse. The county clerks in these counties will also act as an issuing agency.

In all other counties of the state, the office of the county clerk will be the central distributing agency for all transactions dealing with motor vehicle affairs.

poor. It looked good last spring and it is quite a mystery what happened to it. It seems to be thin on the ground and the straw is short. Barley and oats are making good growth, which is also true of corn and potatoes, especially considering the lateness of the season. Potatoes and beans are doing very well. The apple crop around Canandaigua will be light. Sour cherries made a good crop but in most cases the price did not warrant the picking.—E. T. B.

Chautauqua County.—Farmers are busy haying. There was quite a fair acreage of buckwheat sown this season and it is looking good. In fact all crops are doing well. The apple crop is about medium.—P. S. S.

## Pennsylvania Farmers Visit Long Island

A GROUP of farmers from Schuylkill County, Pa., made a trip by motor to Long Island on August 7, under the direction of W. B. Niesley of the State College of Agriculture of Pennsylvania.

It was the first time that many of them had ever had the opportunity to see the Atlantic Ocean, and the first time that most of the party had ever seen 100-acre potato fields. Most of the farmers in the section represented by the tourists grow less than 15 acres of potatoes and the vast areas of potatoes in Nassau and Suffolk counties were a revelation to them.

Another source of amazement was the size of Long Island. Many people have the idea that it is a small tract or territory.

In addition to visiting several potato and cauliflower farms, the party also visited some of Long Island famous duck ranges and poultry farms. Among the more prominent farms visited were those of Henry Talmage at Riverhead, R. M. Lupton at Mattituck, and the Hallock Farm at Orient.

## Eastern Pennsylvania Notes

OLIVER D. SCHOCK

TOWNSHIP officers of Tilden, Berks County, notified all owners or tenants of properties infested with Canada thistle, wild carrots, blue daisies (chicory), and other noxious weeds that the same must be destroyed, or prosecutions under an Act of Assembly will follow.

Yellow Transparent and Early Harvest apples are selling from orchards at \$2 to \$3 per bushel. Southern Pennsylvania growers ship to the Philadelphia and Baltimore markets while others find a satisfactory demand in the anthracite coal-field towns.

The customary barn fires caused by lightning are being reported in local newspapers. These are more frequent when barns are filled with newly harvested crops, thus resulting in heavy losses. Farmers' mutual fire insurance companies usually protect and insure owners at a minimum cost. One of the largest mutual companies covered all of last year's losses by levying an assessment of \$1.50 per \$1000 insurance for fire losses and 50 cents per thousand for storm damages to buildings.

Wheat and rye was harvested from ten days to two weeks later than last year, owing to a protracted season of heavy rains. The hay crop is being harvested under unfavorable conditions for its proper curing and storage. Alfalfa yields are phenomenally large and difficult to handle on account of excessive moisture.

Many agricultural communities are being visited by parties anxious to purchase antiques. In some localities such collectors are so numerous that they are regarded as unwelcome visitors. Pewterware, old dishes and glass, old shawls, grandfathers' clocks, samplers, woolen quilts, antique lanterns, bed-warmers, etc., are eagerly purchased and later reach city auction rooms.

## Big Dairy Exhibit Planned at State Fair

A MINIATURE Niagara Falls in the Dairy Building will give visitors at the New York State Fair this year a vivid and graphic idea of how much milk is produced in New York State. Over the brink of this miniature falls will flow the equivalent of the daily production of milk in New York State. It promises to be one of the features of the fair and is being planned jointly by the New York State College of Agriculture, the State Experiment Station at Geneva and the New York State Department of Farms and Markets. After the milk flows over the falls, it will pass through miniature milk factories, coming out of these little structures in the form of butter, cheese and other dairy products. In addition to the operation of the falls, a free motion picture show will be given showing features of the dairy industry. The entire dairy exhibit will be worth seeing.

## New York County Notes

Cortland County.—The hay crop at this writing, August 4, is about three-quarters harvested. It has been generally good throughout the county. The cabbage crop promises to be a good one, having made up for the early unfavorable weather. There is a large acreage of cabbage in this county this year. Oats are looking fine, much better than was expected some time ago. Potatoes are also doing well, no blight in evidence yet. Corn is still small for this time of the year. Eggs are selling for 32c a dozen.—G. A. B.

Dutchess County.—Farmers are about through haying and are getting into their oats. No rain during July is affecting the corn crop. City boarders are more numerous than in former years. From \$15 to \$20 is being paid at farm houses. Help on the farm is scarce. Women and children are working in the fields.—H. J. H.

Delaware County.—Owing to the late season and unfavorable weather conditions, only a few farmers are through haying. There is still a great deal of grass standing. Oats and corn are looking fine, although corn is very late. Farmers everywhere are having a hard struggle because of the low price for milk. Calf hides are 80c, butter 40c, eggs 30c at the farm. Feed is going higher.—E. M. N.

## In Western New York

Ontario County.—On the last day of July we had a very fine rain which was much needed. Farmers are about finished haying. It did not make a heavy crop, which was especially true of mixed hay. Wheat harvest is very late; but very little made as yet. The crop generally looks

# "DO-IT-ALL" TRACTORS

THESE tractors were made to export for \$319. Foreign exchange prevented their being shipped. We bought 325 and will sell them until gone @ \$99.50. It is a perfect new tractor.

**SPECIFICATIONS**  
Engine—2 H. P.      Holley Carburetor  
Water-cooled      Pulley—5" diam. x 6" face  
Berling Magneto      Weight—1800 lbs.

**\$99.50**  
F.O.B. BUFFALO N.Y.

It will pull an 8" plow  
It will pull a harrow  
It will do the work of a horse  
It will drive a saw  
It will drive a pump  
It will do everything a 2 H. P. Gasoline Engine will do.

# TB From a Breeder's Standpoint

## A Hard Road, But Worth While

A. A. HARTSHORN

EDITOR'S NOTE.—This very interesting article was read by Mr. Hartshorn at the recent Eastern States Conference, in Albany, on Eradication of Bovine Tuberculosis.

I AM asked to-day to discuss the subject of tuberculosis eradication from a breeder's standpoint. I am glad to discuss this question from that point of view, for although I have had much to do with the subject as an official of different Agricultural organizations yet my real knowledge and experience has been as a breeder and dairyman, and from this experience, broadened possibly by these various contacts, I wish to give to you a few impressions and conclusions which have presented themselves to me.

As this subject presents itself to the breeder and dairyman many questions arise in his mind. First: Is bovine tuberculosis as dangerous and insidious a disease as many would have us think? This question for many years was a very serious one but most people have come to recognize not only the great financial loss sustained on account

of it but they also realize that it is a great menace to the health of the human family. After the first question is answered the dairyman then asks himself: "How am I to rid my herd of this dread disease and can I do so without financially crippling myself?" In answering this question we are brought face to face with the whole program of bovine tuberculosis eradication and the dairyman is then confronted with far more perplexing problems than confronted him when he asked himself the first question. He wonders if signing the Accredited Herd contract and having his herd tested will free it of the disease. Will he receive pay for his reacting cattle so that he can go on with his business, or will he be forced out of business if a large percentage of them react? Will he receive fair and honorable treatment from those who have the work in charge? Are they men who are anxious to clean up the disease or are they merely trying to hold down a job? Will they cooperate with him in his attempt to free his herd of the pest or will they treat him as I was treated years ago before the Accredited Herd plan was adopted?

### An Overbearing Attitude

I had a reacting bull and two men were sent to my place, costing twice the necessary expense to the State, to see how I was keeping that bull, and when they arrived it was with an atmosphere of authority that made me almost wonder if I even owned the farm, to say nothing of the bull himself. I speak of this for I am convinced that the success of bovine tuberculosis eradication depends very largely on the cooperation and spirit of helpfulness on the part of dairymen, veterinarians, officials—and I might also add the Farm Bureau, for I am thoroughly convinced that the Farm Bureau is the machine which should be used very largely for the carrying on of the work.

I am glad to state that since the Accredited Herd plan was adopted in this State there has existed a splendid spirit and the work has progressed far better than our most sanguine expectations, and I wish to take this opportunity to thank those who have had the work in charge for their interest and cooperation.

We often hear the question asked: "What is the Farm Bureau's part in this work of bovine tuberculosis eradication?" I wish to take the most of the time

remaining to me in discussing this question which I believe to be most vital and important to the work. We are living in an age of machinery and before we attempt any large piece of work we install the proper machinery adapted to that work. An organization is merely a machine to perform certain kinds of work.

### How the Farm Bureau Helps

The Farm Bureau was organized primarily for the benefit of the farmer, but it is supported by the Federal Government, State, and County. Consequently the work it does should benefit not only the farmer but also the public, for they are taxed for its support. The eradication of tuberculosis is just that kind of work and not only that, but the Federal Government, State and County, are supervising the work. Consequently no organization is as well fitted for carrying on the work as is the Farm Bureau. It is the tendency of the times

the work. I have very definite ideas as to the best method of financing the work, and the reason I have those ideas is because it is working out so satisfactorily in our own County but there are other counties that are doing well who have other systems that feel that they could not adopt our plan and succeed. Now it would be very unwise to try to force them to change just as it would be almost ruinous to the work in our County to force us to adopt their plan.

I will, however, give some of the reasons I believe in our method,—not that I wish others to follow but that you may see the course of reasoning through which we passed in adopting our present plan. We have a committee of three appointed from the membership of our Farm Bureau and they, acting together with the President and Manager, have the work in charge. They hire a veterinarian that is approved by the State and Federal Government and every one who has his herd tested pays one dollar per head for the first ten and fifty cents per head for all over that number. This cares for his herd for one year.

Now the question arises,—“Why do we believe in financing the work in this way?” First of all, if any man is not interested enough to pay that amount he hasn't sufficient interest to be of any benefit to the Accredited Herd movement,—in fact we are better off without him. For what a man gets for nothing he is apt to place at the same value. Another very important feature of this matter is that our funds always correspond to the amount of work that is being done and the interest that is manifested. While if a Board of Supervisors appropriated the funds, the year when the farmers were

much interested there might be a stingy or disinterested Board of Supervisors and consequently have a small and inadequate appropriation and another year the opposite condition might be true. But the most important reason we believe in this method is the fact that everyone is served alike year after year. Nothing will breed dissatisfaction and discord quicker than a continual changing of cost of getting a test. I fancy I hear someone say that we could not carry on the work without its being financed by the Board of Supervisors. If this is true, a radical change would be unwise, as I have just said.

### The Danger of Politics

Another great evil which we felt threatened the appropriation plan is the fact that politics are so apt to enter in and of all the dangers that ever threatened the Accredited Herd plan this is one of the greatest, for when politics to any great extent comes in efficiency and accomplishment go out.

It was the fear of this threatening danger that made many of us very cautious and backward in endorsing the Accredited Herd movement. I am very glad that so far this element has not entered in and hindered the work as much as many of us feared. I feel that we have great reason to congratulate ourselves upon the progress of the work not only in the East but throughout the country. For although I was one of the Doubting Thomases yet I am frank to say that much more has already been accomplished than I ever thought could be accomplished by the tuberculosis test. I will say, however, that I still think, as I always have that no

(Continued on page 110)

### CATTLE TUBERCULIN-TESTED ANNUALLY IN THE UNITED STATES UNDER THE SYSTEMATIC PLAN FOR TUBERCULOSIS ERADICATION, 1918-1923

Increase in the size of these cows from year to year indicates increase in sentiments favoring Tuberculosis Eradication

to start a new organization as soon as we have a new piece of work to do when perhaps, as in this case we already have a machine far better adapted to the work than anything we can build. If we continue the forming of so many organizations it will not be long before many of them will have to go to the junk heap. We have no right to form an organization whose service does not far exceed the cost of its building.

I am convinced after close observation that a committee of three with a good, efficient chairman acting in cooperation with the Farm Bureau President and Manager can handle the work very efficiently and satisfactorily. I also very firmly believe that if the States doing tuberculosis eradication work would appoint a committee from their State Federation and also if a tuberculosis eradication Committee be appointed by the National Federation of Farm Bureaus to cooperate with the national and State authorities and the County committees that the result would be to greatly strengthen them, unify, coordinate, harmonize and make more efficient the work.

### Go Slow on Changes

Where the work in a County is moving on smoothly and satisfactorily any change should be made very cautiously and if that County has an organization separate from the Farm Bureau I think it might not be wise to make a change, but they can report and work through the State Committee just as well as they could through a separate State organization. In fact it is ruinous to the work to make radical changes not only in organization but in policies of carrying on and financing

### Embury SUPREME OIL LANTERNS

We think they are the best lanterns on earth. Next time you buy a lantern, compare every detail of the Embury with any other. Look for improvements like the solid dome, rain- and dirt-proof; the big brass oil filler; the short globe; the extra strong construction throughout.

No. 160 is a winner—improved burner gives 20% more light and burns 35 hours; dust, dirt, wind- and rain-proof; \$1.50, except in the far west.

There's an Embury for every purpose

ORDER FROM YOUR DEALER If he has none in stock, we will mail on receipt of price.

# Service Bureau

## Don't Buy "Charity Groceries"—Report Them

HAVE you been solicited to buy grocery supplies, the profits from which will go toward an orphans' home in New York? Don't! Buy your groceries when and where you will and make such gifts to charity as you can afford, but harden your heart against this combination of business and philanthropy.

This advice is called forth by a letter which just arrived in our Service Bureau mail. It says:

"Gentlemen: Yesterday a man came to our house soliciting orders for toilet articles and flavoring extracts, goods to be delivered and paid for within a few days. The profits from these goods is for the benefit of an orphans' home which has headquarters at 723 East 9th Street, New York City.

"I would like to know if there is such a place and if they gather funds in this way. I would like very much to know this before goods are delivered. Also any advice as to treatment of such fellows if they are fakers."

### Supervision Helps Detect Frauds

We immediately referred this matter to the Charity Organization Society of the city, which exists largely for the purpose of protecting sympathetic givers from unauthorized or badly conducted charities. Their answer was prompt and decisive.

"Have nothing whatever to do with it," said their secretary. "We have heard of the project and when we looked into it were not at all satisfied by what we found. As a result, the district attorney's office is investigating the home and is anxious for help from those who have been solicited."

To answer R. M. H.'s last question, therefore: Get the man's name, address and all other facts you can and communicate at once with Mr. Lehman, Criminal Courts Building, New York City. We are grateful to Mr. H. for reporting this matter and hope it will save others from having their sympathies exploited.

### Egg Money Arrears Collected

FOR some time our subscriber, Mr. F. W. B., N. Y., had been shipping eggs to a New York City firm and receiving his checks promptly; when none came in April he did not worry until a hasty calculation told him that the firm was more than \$80 behind. He then enlisted the Service Bureau to help him get his money.

Bit by bit the firm has paid up, until just recently Mr. B. wrote us that the last check had come. Eight checks in all were sent him, ranging in size from \$26.32 to \$6.58, but they totalled up the entire indebtedness. As the firm is not a licensed and bonded one, we have advised Mr. B. to sell his eggs elsewhere hereafter.

### Don't Say Yes; Say No!

"IT is now easy for you to say 'yes' and share with me in the profits of this business."

The letter from which that sentence is quoted leads off a long explanation of a profit-sharing scheme. One of our subscribers referred it to us, enclosing also a letter which was sent him to sign and return to the company. The latter pledged him to the payment of \$100 in installments for which he was to receive a certificate for 10 shares of 7 per cent. preferred stock and one for 5 shares of common.

We advised our subscriber that in the long run it would probably be easier if he said *no* rather than *yes*. Highly speculative, with no guarantee of a return and no apparent market for the sale of the stock if the owner wished to realize on it, the investment appealed to us as a very dangerous experiment.

Don't say *yes* to stock salesmen or persuasive letter writers until you have taken the advice of your banker, of the

AMERICAN AGRICULTURIST investment specialist, or of some equally reliable and disinterested person. It is cheaper in the long run to say *no*!

### How Is Manila Rope Identified?

Will you tell me how to tell a first grade Manila rope from an inferior article? One dealer tells me that there is always a red, white and blue paper twisted in the strands of pure Manila rope. Is that true in all cases or only in a certain make.—C. L. S., New York.

The red, white and blue label is the trademark of just one particular concern, the Columbia Rope Company. This indicates their products. The surest way to identify rope is to examine the burlap cover of the bale or roll. If the burlap covering is merely stamped "Manila rope" it is not pure. But if it is stamped "pure Manila rope," it is pretty reasonable to believe that it is pure. There are, of course, certain tests, but these can not be manipulated satisfactorily outside of a laboratory.

The rope with a red, white and blue label is put out by a reliable firm and you can rest assured that whether you buy Manila rope or pure Manila rope you are getting a good product.

### Legal Questions

"Last February I let my farm on shares, lease beginning March 1st, 1924, and expiring February 28, 1925, I to furnish seed, tools, stock, etc., the tenant to do all the work. He was to have one-third, and I was to have two-thirds. He worked very well, getting in oats, drawing and spreading manure, working in the vineyard, etc., until June 4, when he quit, taking his family on that date, but he did not notify me until June 6. He has since removed his goods from the house and apparently abandoned the job, but threatens to sue me for not fulfilling some minor points of the contract. Now what I want to know is this: What am I to do with the place? He has sown oats, the hay will soon be ready to cut, he has an interest in two calves and four pigs born while he was here, but he has just gone and left it all. Can I go on and work the place, harvest the crops, sell the pigs, etc.? I have been told that the failure of one party to perform the terms of a contract does not relieve the other party, and that I will have to have an order from the court before I can let the place, harvest the crops, or sell the stock in which he has an interest. Will you kindly advise me as soon as possible what course I had better pursue?"—H. H. T., New York.

In reply to your inquiry it is our opinion that your tenant has abandoned his contract and has hence committed a breach. We would suggest that you communicate with him, offer to perform your part of the contract in every detail and then get a statement from him as to whether he will perform or not. If he refuses, we can see no reason why you cannot enter upon and work the farm. Before a new lease can be made, however, it will be necessary to rescind the old one, unless it contained a provision making it void and of no effect in the event of his failure to perform as agreed.

\* \* \*

"Can a person force another person to build half of a line fence in New York?"—D. I. W., New York.

Replying to your inquiry concerning the building of line fences we wish to refer you to Section 360 of the Town Law, which reads as follows:

"Each owner of two adjoining tracts of land, except where they otherwise agree, shall make and maintain a just and equitable portion of the division fence between such lands, unless both of said adjoining owners shall agree to let the said lands be open, along the division line, to the use of all animals which may be lawfully upon the lands of either."

The duty imposed by this section relates solely to the owners of the field, and has no application to a lessee in possession.

\* \* \*

"Our neighbors, without speaking to us about it, plowed a ditch for about 15 or 20 rods into our field and threw the sods on to the meadow. The sods will be in the way when they mow the meadow. Has he a right to do that? There should be a ditch of about 80 rods to take the water off our land that comes from his farm. Should he help us make this ditch or must we do it ourselves?"—J. M., New York.

From the facts given in your inquiry concerning the ditch plowed by your neighbor on your land, it seems that an action for trespass ought to lie; but your neighbor is under no duty to help you make a ditch on your land to drain off water coming from his farm unless there is an agreement to that effect.

# The Cave Men—

By Ellis Parker Butler

(Author of "Pigs Is Pigs")

It happened I was down there in Carter County where the subterranean wonder known as Seven Echoes Cave is located. I was boarding with old Jed Measure at Seven Echoes Farm when the Bishop's Pulpit, in that part called the Gothic Cathedral, caved over on top of Jed and ended his mortal career in one-tenth of a second. That happened sometime in the afternoon, and, when supper had been ready and waiting half an hour, Abundant, his daughter, came to me where I was sitting in the rocking-chair on the front porch and asked me if I would go over to the cave and call Jed. I took an electric torch and went over to the cave and found Jed as dead as a door-nail. For about a month Jed had been talking about the crack that had appeared behind the Bishop's Pulpit and threatening to get cement and timber and shore up the pulpit and cement it up solid, so I guessed that when he began work at it the whole thing had skidded down, including about twenty tons of the ceiling and wall. A piece of pink stalactite had hit him and he was no more.

That was bad. It left his daughter Abundant a fatherless orphan and destroyed the Bishop's Pulpit, one of the showiest features of Seven Echoes Cave, but it did something else that was, perhaps, worse. It ruined Seven Echoes Cave entirely.

I discovered this even before I knew Jed was quite dead. When I saw him on the floor of the cave motionless I tried to get him to show signs of life and shouted "Jed! Jed!" at him, and no echo came back. Always, when a person stood there and even so much as whispered a word the echo would come back. If you said "Hello!" it would answer "Hello!" and "Hello!" until the last echo came back from far down the cave, a soft gentle "lo!" And now there was no echo; not a sign of one. Those tons of rock falling had changed the acoustics entirely; they had not only killed Jed but they had killed the whole seven echoes. Abundant was not only an orphan but a pauper orphan, too.

Even while I was kneeling by poor old Jed there I made up my mind what I would do. I would stand by Abundant. I don't say it wasn't pity, but I will say it was a good part love and liking. I was so sorry for the poor girl, singing away happily, maybe, in the kitchen up at the house while I was there on my knees by her dead father! My heart ached for her, and I guess nothing else would ever have given me nerve enough to think of offering to help her.

I'll say, straight out and frank, that if you took every man in every sort of show business and stood them in a row according to merit, I would be at the tail end. I'm about the worst drawing card of the lot, and I know it. My line is sleight-of-hand, but I'm no good at it and never was. I admit that. When I took it up I thought I was going to be a second Houdini, but in a couple of years, after I had been just about hissed off the stage of the cheapest two-a-day houses, I saw how I stacked up and I listed my name for engagements with clubs and for children's birthday parties. I got a mighty poor living out of it, and that was about all. No club ever had me back a second time, and I don't know that I blamed them much.

I was pretty well discouraged and downhearted when I had a little accident over on Long Island. I drew in my breath by mistake when I was doing my fire-eating act at a kids' party, and scorched my lungs bad. I was six weeks in the hospital and then the doctor said I needed some months in high air, with no worry and good food, or I might turn out to be a real "lunger" and be done for. That was when I thought of good old Jed Measure, who had been a friend of my father's and knew me when I was a kid. I got up nerve enough to write to him.

Old Jed was a fine old scout. He had been in the show business in one shape or another all his life and many a time I had heard him tell father what he meant to do when he got along in years and saved up enough money to retire.

"Barras," he used to say to father, "there's just one business for a retired showman to retire to and spend his old age in ease and comfort, and that is the cave business."

It sounded reasonable, too. The cave business is a good, steady business without any worry attached. If a man owns a nice, showy cave—not too big but well located on some main automobile route—he only needs a few signs along the road and he is sure of a steady income. You don't have to carry fire insurance on a cave, or carry a big payroll. A man may have to wash down the stalagmites and stalactites once in a while to keep them shining, and he has to take time to show visitors through his cave, but that is about all his trouble and expense. The rest is clear profit.

LONG before he retired Jed had pretty well selected the cave he meant to buy. He had looked at a couple of hundred caves in one part of the country and another and he thought the Carter County cave field was the best. There were eighteen or twenty caves in Carter County, and that advertised the county and made folks want to go there, and one of the neatest pieces of cave property in the lot was this Seven Echoes Cave. It was the only cave Jed knew that would echo back at you seven times, each echo distinct and clear. So, when he had saved up enough money Jed bought the cave and took Abundant down there and went into the cave business, meaning to spend the rest of his life in it, as he did, poor fellow.

When Jed got my letter saying I was hard-up and sick and all, he did just what you might expect any old showman to do—he telegraphed me money to take me to Carter County and said he wanted me to stay as long as I liked. He said there was work enough round the farm—easy work—to pay my board and lodging, and when I got off the train, all skin and bones and bent over like an old man and holding my chest against the cough with my hand, he made me feel like a long-lost child.

For a week or two I couldn't do anything but sit in the rocker on the front porch and let Abundant bring me broth or a beaten-up egg and fix the rug round knees, but in a week or two more I was able to move round and feed the chickens and pretend I was doing work. By the time a month was up I was able to work in the garden a little and attend to the cows and fences when Jed was busy taking parties through the cave. I guess I loved Abundant from the first minute I saw her, but what right had I to think of a girl like that when nobody knew how my lungs would turn out and I hadn't a cent and she was the daughter of Jed Measure, cave owner and all? I almost wept when I thought how sweet and gentle and loving she was and I such a busted wreck with nothing to look forward to.

Jed was mighty proud of his cave. He had put in new steps where you go down from the Fairy Drawing-room to the Giant's Cathedral and again where you go up from the Giant's Cathedral to the Palace of the Gods, and he kept the cave as neat as a pin. Abundant used to dust off the stalagmites and stalactites every day or two and once a week she washed them down with soap and water.

"It isn't as big as Hermit Cave or Submarine Lake Cave," Jed used to say, "but I will say I've got the transparentest and prettiest stalactites in Carter County. The Hermit Cave stalactites are muddy-like. And, when all is said and done, where is there a cave with seven echoes?"

The seven echoes—and this is the truth—were the making of Jed's cave. He had a Bishop's Pulpit and a Pipe Organ and all the other trimmings a good cave has to have, but every other cave in Carter County had the same, and it couldn't be disputed that Jed's cave was back off the main road quite a distance. People came to Jed's cave to hear the echoes and it was no use pretending anything else. With the echoes gone Jed's cave was nothing but a tenth-rate cave and not worth bothering about in a county that was full of caves.

When I had worked poor old Jed out from under the stalactites and had shouldered his lifeless form I carried him to the house, but I did not have the heart to tell Abundant about the dead echoes. I just couldn't do it while she was in her first burst of sorrow. I padlocked the cave door and put a sign at the gate of the farm, "Closed because of death in family," and did what I could about the funeral and all.

After it was all over I talked with Abundant. I asked her what she thought she would do now. It was pitiful to see her trying to be brave and cheerful. She said she thought she would just let things go along as usual. Probably, she said, she would have to get an extra hand to work on the farm and a woman to be a sort of chaperone, but she said she couldn't do anything but stay on the place and run the cave and the farm and live on the income.

HOW could I tell her how bad things were? The farm had never earned a cent and never would: Jed had told me that. The farm was nothing but local color. One of the first rules of the Carter County Cave-owners' Association was that every cave-owner must be a farmer or appear to be a farmer. The trade liked it. The cave-seeing trade was high class and liked to think of Carter County as plain farm country owned by plain farmers, sweet and unspoiled and unsophisticated, with nothing of the Coney Island thing about it. The minute Carter County began to be Coney Islandish the big-car people would pass it by. That was plain common sense; many a cave has been ruined by the owner putting in a soft-drink stand or ice-cream tables. The best cave-seeing trade likes the rustic line, with maybe the woman of the place coming out in a gingham apron and sunbonnet to offer a glass of buttermilk. Then the cave-seeing trade feels it has sort of discovered the cave.

When it gets to look like a regular side-show place a cave gets passed up.

For that reason Carter County cave owners all kept up the simple rustic stuff and had a few cows and chickens round, and wore blue jeans, but there was no money in the farms. Abundant Measure's farm was one of the worst of the lot, too.

There was another thing. Jed hadn't been able to pay cash down for the full value of his farm. He had given a mortgage in part payment and had let the interest payments get behind and the man that owned the mortgage was a fellow named Rance Titherweight. He had a bad eye. I did not like him at all, and I did not like the way he looked at Abundant when he came round. He was a big, fat man, almost fifty if not fully that, and I was afraid of what he might propose now that Jed was gone and he had Abundant more or less in his fat paws, so to speak.

In our talk Abundant told me about the mortgage and all, but it did not seem to worry her. She said Jed had expected to take in enough from cave-seers that season to pay up all the interest and something on the principal, and that he would have done it before but that he had spent so much repairing the house and out-buildings.

FOR two or three days after the funeral I walked around that farm like a lost soul trying to think of something I could do for Abundant, and Rance Titherweight bothered me a lot. He came to the farm every day, driving up in his glossy car and telling Abundant that she must not worry and holding her hand longer than necessary when he came and when he went, the fat snake! I could see she hated to have him touch her hand. After he was gone she would rush to the kitchen and scrub her hands as if he had left slime on them.

It couldn't go on long as it was. I kept the key to the cave in my pocket, but it stood to reason that a cave couldn't be kept closed very long on account of a death in the family, but if I opened the cave everyone would know the echo was dead, and that would be the end of Abundant. Either she would have to marry that fat lizard of a Rance Titherweight or let him foreclose the mortgage and turn her adrift in the world without a cent or any experience with the world or any way to make a living.

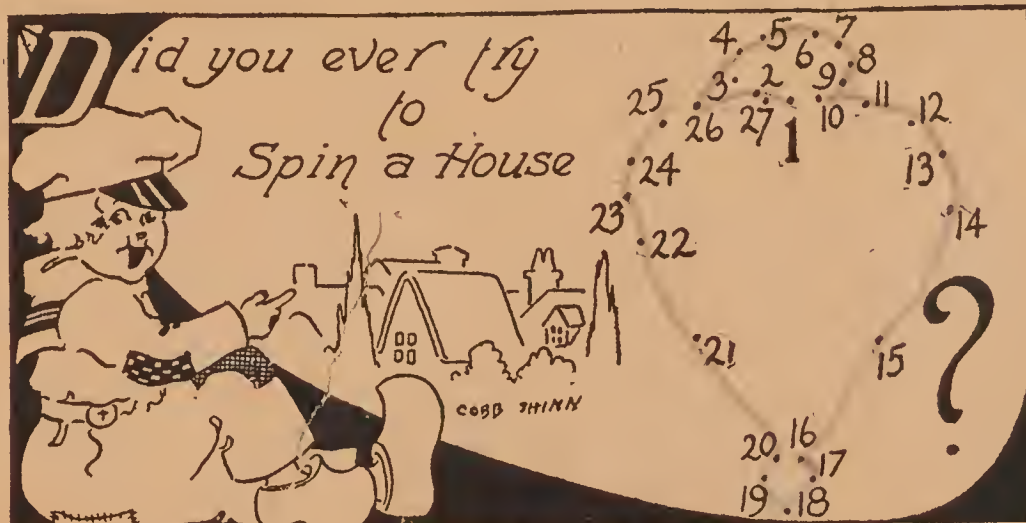

I took my torch and unlocked the cave and went in and sat down near where poor Jed had passed away. I tried the echoes but they were only too dead. While I was sitting there wishing I was a millionaire or a second Herrmann the Great, a name suddenly came to my mind. It came so unexpectedly and clearly that for a second or two I thought some one had shouted it—"Bare-lip Bill." It seemed to settle every trouble Abundant had. I went back to the house and told Abundant I must go up to New York for a couple of days to see my lawyer or something and that I would bring back a farm-hand for her, and she let me go.

I did not have as much trouble getting Bill come to Carter County as I had feared. It was summer and nothing doing in his line or any other vaudeville line and he jumped at the chance.

"Sam," he said, "it suits me! It surely suits Bill Saggerty. You could not have come at a better time, old pal, because I've been wondering where I could go to be among the cows and the pigs and the chickens. I've got the greatest idea for a new stunt."

Enthusiastic, you understand. You know how a two-a-day man is when he thinks he has caught hold of a great idea. Sam figured that if he went to the agents with a stageset showing the dear old farm-yard with its cows and chickens and dickybirds and ducks, he would be dated up for about ten consecutive years in about ten minutes. He was a ventrilo-

# Making Good Butter Is a Fine Art

*Why Certain Ways of Churning Give Certain Results—Many Uses for Your Old Newspapers*

PERHAPS some personal experiences in home buttermaking will help other housewives who want to improve the quality of their output.

Commencing at the first operation, the milking should be practiced regularly, and only absolutely clean vessels used, for unclean utensils are almost sure to give an undesirable flavor.

As soon as the milking is completed the best and by far the most feasible method of securing the desired cream is by the use of a good, reliable separator. Adjusting the machine to run out about a twenty-five to thirty test cream is what I prefer for churning. If cream is run too thin, too much undesirable milk and bulk are obtained. Screwing in the cream screw to obtain real thick cream is unprofitable, as too much butter fat is allowed to remain in the skim milk.

As soon as separated, I set our cream in the cellar. It should be in as cool a place as possible to allow it to retain its sweet flavor.

Under rural home conditions it is impossible to keep cream very long without souring, or in cases even moulding. To obtain fresh, sweet, appetizing butter the cream should be churned quite often, so now for the best and most suitable method for separating the butter from the cream.

## Why We Churn to Get Butter

Butter is the fat or oil contained in cream. Cream is merely butter fat in combination with curd from which the oil must be separated in order to secure the butter. Butter fat is contained in the cream as infinitesimally small, microscopic globules. To secure in the form of butter we must separate and collect these tiny globules into mass and remove from the resulting buttermilk. This we accomplish by churning.

As with all work, there is a right as well as a wrong way to do it. When moving on to our farm from the city a number of years ago, I followed the buttermaking practice of my neighbors, purchasing and using one of the too-common stone dasher churns. This separated the butter for me, though too many times the resulting butter was undesirably oily since in churning many of the globules had been broken. At times the churning process took an hour or so of tedious work before the separation took place.

Aside from this when too many of the butter globules were broken it meant a loss of butter yield. It was impossible to skim out a portion of the oil, which was finely mixed with buttermilk and so was lost.

## Glass Churn with Rotary Dasher Best

Not being satisfied with my results I procured a barrel churn which gave me somewhat better service. The barrel being made of wood, I found it hard to keep entirely clean and free from odor. It was some time later at one of our farm woman's club meetings that I was told about a still better churn, a square glass one with a rotary dasher. I purchased one, and have been well pleased with it ever since. I now use my glass churn, which holds around a gallon, altogether for small churning, although when I have several gallons of cream, I use a three-gallon metal churn built quite identical to the small glass one.

I have learned that to secure the best and most delicious butter the cream should be vigorously agitated, not pounded. Pounding breaks the globules, forming a greasy, oil butter. The agitation separates the globules of oil in an unbroken state and rolls them together into firm grains, at the same time forcing the churned cream to the top. This secures the butter in fifteen or twenty minutes, and often less time.

When through churning I strain out the buttermilk through a little strainer built in the top of my churn, when the

firm, grained butter is left in the churn. The butter is virtually washed while churning, but to cleanse and free it completely of all buttermilk and curd, I fill my churn almost full of cold water and by turning the handle a few times the churn washes the butter for me. Then when straining off the wash water the butter is held back and all I have to do is to open the churn and pour out the butter for salting.

## Waste in Too Much Washing

Butter that is made by pounding the cream requires considerable washing to free it from the buttermilk, and some of the oil and smaller particles of butter are lost in the washing process, meaning more waste, while the finest flavor too is lost.

I have been using my new churns a couple of years and have learned that by churning at a temperature of around sixty, which is about the temperature of our well water to which I cool my cream during the hot days, I get the very nicest and most tasty butter, which I am proud to be able to set upon the table—and my family bears me out in my belief that good butter is a real delicacy.—**MRS. RICH LUCAS.**

## Have You the Newspaper Habit?

I DO not mean the habit of sitting down and reading the paper from page one clear through as soon as the postman comes, regardless of whether the dinner burns or the baby swallows all the loose buttons he can find.

What I mean by the newspaper habit is the very helpful, economical and sanitary habit of putting all the newspapers to practical use. Those who have formed the habit could hardly keep house with-

when brushing crumbs from the table. They may also be used on the trays to protect the surface when carrying fruits or jellies. They should always be used under the incubator trays on the floor of the incubator as the machine can hardly be thoroughly cleaned after a hatching unless this precaution is taken.

Dampened newspapers, torn into bits and sprinkled over the floor on sweeping days catch the dust and brighten the colors in the rug.

To make sleeve protectors for the Sunday dress, take one sheet of newspaper, fold across, then lengthwise just as the papers come from the newsstand. Roll tightly around the arm and pin at the lower edge with a small safety-pin.

## Moths Don't Like Newspaper

Several layers of papers spread smoothly under the rugs will save much wear on the rugs, keep out cold in the winter time and help keep moths away, as printers' ink is said to be a moth preventive.

Try standing on folded papers instead of the bare floor when ironing. The feet will keep much warmer and will not feel so tired. The papers act as a cushion. A handful of coarse salt placed on a folded paper also makes a splendid iron polisher.

When baking cakes, puddings or bread a folded paper slipped between the top of the oven and the food that is baking will often prevent the top from burning until that in the bottom of the pan has a chance to cook.

Use old papers for cleaning the kitchen range, for scraping grease from dishes or the black from the bottom of pans and kettles.

A double thickness of papers placed near the door in muddy weather makes a good place for setting the dripping

have served their other purposes. "Briquets" of rolled, dampened newspapers, rolled into the shape of small logs and dried, burn an amazingly long time and are popular as kindling where fuel is scarce.—**MRS. L. E. B.**

\* \* \*

To make cut glass sparkle, wash in lukewarm water to which has been added a little bluing. Instead of a cloth use soft tissue paper, and when the piece has been carefully dried with another piece of soft crumpled tissue paper, you will be greeted with a brilliant polish.

\* \* \*

If you are troubled with a door hinge squeaking, take a soft lead pencil and rub over the squeaking place. It will stop at once.

## The Cave Men

(Continued from page 107)

quist, you understand, and a good one, that being how he got the name of "Bare-lip," being able to throw his voice without moving a muscle of his face, thus doing away with his moustache. And a good one, too. I mean Bill and not his moustache.

"Sam," he said to me, "the public is dead tired of the old stunt. It is sick of the ventriloquist sitting with Little Jumbo on one knee and Little Sambo on the other knee. My idea—"

His idea was to have a dummy dairymaid and dummy cows and chickens and ducks scattered round the stage, and he would come on with a hoe and whiskers and the cows would moo and the dairymaid talk and the chickens cackle. Then, maybe, he would slap the cow on the side and she would talk back to him, and the chickens and pigs and ducks and dairy-maid would all join in—regular ventriloquist back-talk stuff—and the act end with the wooden pig singing a song or something.

"It will be a riot, Sam," Bill said, but no matter about that. Here was his chance to get down on a real farm and study the voice of the pig and the cow at first hand, and catch the manner of the real rustie, and be paid for it! He came back with me on the first train.

"But, mind you, Bill," I warned him, "nobody is to know you are a ventriloquist—not Abundant or anybody. You're plain farm-hand."

When we reached the farm we found that Abundant had picked up her chaperone. She was a Mrs. Drobby from the village, and a pleasant old lady enough. We all got introduced to each other and then I took Bill out to show him the farm and the cave. He loved it.

He was good, too. Once through the cave was enough to teach him every feature of interest—"You now see on your left, ladies and gentlemen, the Giant's Jewel Box. Observe the rubies and diamonds, all true crystals, formed by Nature just where they lay. To your right—" and so on. Then we tried out the seven echoes. "Hello!" I shouted, and Bill echoed it back to me seven times, just as good and a little better than the original echoes had ever echoed it. As an echoer Bill was a wonder and no mistake.

"Fine!" I said, "you'll do."

"You bet I'll do!" he said. "I've got to do. And, oh! ain't she the loveliest thing man ever saw?"

"Who?" I asked.

"That Miss Abundant," he said, and I told him there would be none of that.

"You're a farm-hand and lecturer on the wonders of the cave," I said, "and you've got to know your place and keep it."

"Oh, sure!" he said. "I know that, Sam. I was just gassing. Don't get sore at a joke."

"I don't stand any jokes about Abundant," I said, and we let it go at that.

(Concluded next week)

## FOR THE COMING SCHOOL DAYS AND HOME DUTIES

No. 2141, which comes in large sizes, is becoming to the slim figure, too. It is suitable for heavy cotton or a fall cloth fabric. The pattern cuts in sizes 16 years, 36, 38, 40, 42, 44, and 46 inches bust measure. Size 36 takes 4 1/8 yards with 2 1/2 yards contrasting. Price, 12c.

No. 2121 is the "Jiffy Dress"—so-called because it is so easily made (see diagram). It is cut in sizes 16 years, 36, 38, 40, and 42 bust measure. Size 36 takes 3 yards of 36-inch material with 1/4 yard contrasting. Price, 12c.

Getting ready for school means washable, serviceable suits and dresses. No. 2188, a suit for small chaps, has short or long sleeves and cuts in sizes 2, 4, 6, and 9 years. Size 4 takes 3/4 yard for the trousers and 1 yard for the blouse. Price, 12c.

No. 2175, an excellent girls' school dress, is one-piece with kimono sleeves. It comes in sizes 4, 6, 8, 10, 12, and 14 years, the medium size requiring 1 3/4 yards of 32-inch material. Price, 12c. Hot iron transfer 706 (blue or yellow) costs 15c extra.

TO ORDER: Write name, address, pattern numbers and sizes clearly, enclose 12c for each dress pattern and 15c for each embroidery pattern desired, and send to Pattern Department, AMERICAN AGRICULTURIST, 461 Fourth Avenue, New York City.

And—don't forget to add 10c! For that will bring you a copy of our splendid big Fall and Winter Catalogue, filled with smart new designs, plenty of our famous one-hour diagram dresses, children's things, transfer embroidery patterns and Christmas gifts to make. Only 10c! It is worth many times that. So order it at once.

out them. The following uses for clean, old papers I have found very helpful:

Spread a double thickness of paper on the table before cleaning chickens, fish or wild game.

Empty the carpet sweeper and waste-paper basket onto one, roll neatly and tie with a string. The dirt can not scatter and can be easily slipped into the stove with the next piece of wood or coal.

A folded paper may be used as a tray

rubbers and umbrellas. Papers spread over the freshly scrubbed floor in front of the stove and kitchen table will also save much time and extra labor.

A paper placed under a child's plate will keep the tablecloth neat and clean and can be quickly removed when the meal is finished.

Papers used in many of the ways suggested may also be twisted tightly and used as torches for starting fires after they

# A Busy Mother's Sewing Short Cuts

*A. A. Readers Tell of Kitchen and Sewing Room Economics*

FOR busy mothers who do even a part of their own and their family's sewing, the following hints from the experience of a mother of three (who does all her own and the children's sewing) are offered.

First, in selecting patterns, whenever possible choose those of simple lines. They are easier to use, garments of this sort are quickly made up and they are not tired of so soon.

One can, unless in case of a style for very special occasions, choose patterns with a view to using them again and again. By a change of materials and trimming, the same pattern may be used for all the children's rompers. This will save time in cutting, too, as several garments may be cut at once, assembled and laid aside to be "run up" when convenient.

Mother's house-dresses may all be cut from one pattern; they'll scarcely show it if a little attention is given to details of finishing.

I like one-piece or two-piece patterns, and have a number of such dresses, a brassiere, step-ins, child's underwaist, rompers, overalls, etc.

A becoming dress style will not be out of date for several seasons, for with the simple pattern as a foundation one may add distinctive touches to bring it up to the minute.

### Think Before You Buy Patterns

The same is true of patterns for any of the other garments above mentioned. There seem to be a few styles that are more or less standardized; the raglan-sleeved coat for a child is a noteworthy example. This style of coat has many things to recommend it: it has simple lines, is casier for a home sewer to put together than one with "fitted" sleeves, and has a swagger air that is irresistible, whether worn by the small boy or his sister.

Besides all this, it is often better for a make-over than a pattern with the other style of sleeves, as the narrow part at the shoulder allows them to be cut from a better portion, perhaps, of the original garment.

After the patterns and the cutting comes the putting together. In this, creased hems, paper clips, and a warm iron always play an important part. I almost never baste a garment, unless one for "Sunday Best." The basting isn't so bad, but ripping bastings from an otherwise finished garment is a nuisance.

One of my greatest helps in sewing is a supply of bias-binding in white and in colors. It is always handy. The half inch width, or wider, is easiest to use, I believe. For a child's underwaist, for example, I use this binding on all raw edges except the lower, and stitch some over the shoulders to reinforce the waist where the pull of the hose-supporters come. I have found that two eyellets (with their connecting strip of cloth) cut from the lacing section of an old corset and attached with one such strip at each side of the waist for garter pins, will add to the life of the garment.

### Colored Binding a Pretty Touch

The binding at neck and armholes might be colored for a girl's underwaist. The colored binding is also a dainty and easy way to finish and trim the practical step-ins and brassieres that are so much worn. It is more lasting than lace for everyday wear, too.

In making a child's drawers, finish side openings with a continuous piece of the binding. It guards against tearing out at side seams.

For outer garments its usefulness is almost unlimited. It finishes and trims so nicely, and is appropriate for use on such a variety of clothing. Bind the neck opening of children's play suits and they will not tear down where fastened. There are many kinds and colors of this binding. Some is plain, some is folded and has a

scallop or other trimming on the fold. Once you get acquainted with it your work basket will never be without it, for its cost is small. A supply of elastic is needed, too. One will find many uses for it if some is always at hand. It may be bought by the reel, if desired.

Middy suits are cunning for the kiddies, and look all the more middy-like if braid-trimmed. The braid may be bought by the yard or piece and is sold by some concerns already stitched to a contrasting colored band, which is to be stitched to the middy and is a very effective trim. It takes but little longer to use a bit of braid or some bias-binding to make youngsters' clothes pretty, and they appreciate it, bless them! They love pretty clothes as well as we grown-ups and their instinctive good taste and liking for beauty may be developed or ruined by the way they are clothed. This is an important duty for us mothers, after all—let us not shirk it.—MABELLE ROBERT.

### Burned Granite Ware

MY favorite little granite kettle got badly scorched and I was very sorry, because granite ware doesn't stand burning well. One can clean iron and aluminum, but the process of cleaning usually starts granite flakes peeling off and the utensil is ruined. I washed vigorously with a metal dishcloth and plenty of scouring powder and finally boiled the kettle well in ashes and water, but nothing would fade the blackened bottom; the coating seemed as permanent as the kettle itself, so I gave up at last, thinking it could be used only for dry articles or dishwater.

When some wild strawberries were discovered in the orchard I snatched that kettle and started after them but, remembering how badly my roses needed spraying, I set the dish on the grindstone frame in the sun while attending to my rose bugs first. Two or three hours later I picked up the kettle and was surprised to see the burned bottom had risen in scales all over like blistered paint. I rubbed it lightly with my finger and, to my great delight, that scorched surface rubbed off like dust, leaving the granite clean and smooth underneath. Hereafter when my granite ware burns I shall simply wash it clean and put it out where the sun can do for me what I have no idea how to accomplish for myself. Simple, isn't it?—MRS. E. M. ANDERSON.

### Using Every Bit of Food

WITH the aid of an exceedingly capable mother-in-law, a natural ability to make things edible inherited from my own mother, and a reckless desire to prepare something new, I have during the past few years evolved the following dishes. The main idea of all of them is to use every scrap—to have no left-overs—utilizing every bit of everything.

#### Cabbage—"The Versatile Vegetable"

Cabbage Salad.—When cabbage is used alone in a salad I have found the following dressing makes it more palatable:

Melt 1 teaspoon butter in ½ cup vinegar and let come to a boil. Mix 1 teaspoon mustard, 1 teaspoon sugar, ½ teaspoon

salt and 1 tablespoon cornstarch. To this add 1 egg, well beaten. Stir thoroughly and add to the boiling vinegar. Let thicken, cool, thin to desired consistency with milk and add to finely shredded or chopped cabbage. *Always mix dressing for salad with a fork, using a lifting motion to prevent its becoming soggy and heavy. Never stir with or use a spoon.*

Cabbage and Apple Salad.—To finely shredded cabbage add an equal amount of diced apple. Use the dressing described above, substituting 1 tablespoon for 1 teaspoon of sugar. To the apple and cabbage may be added raisins and nuts, either or both, for novelty.

Cabbage, Peas, and Onion Salad.—To finely shredded cabbage add the left-over peas, well drained (any amount up to 1 cupful), and ½ onion chopped finely. Mix well with a fork and add the following dressing.

Dressing.—½ cup sour cream, 1 teaspoon sugar, ½ teaspoon salt, 1 tablespoon vinegar. Beat well and pour over salad. Serve immediately. This dressing may be used on cabbage and onion without the peas, or on cabbage, onion and celery. In summer this dressing is delicious on lettuce.

Macaroni Salad.—Two cups boiled macaroni, ⅓ cabbage shredded, ½ cup peas, ½ onion chopped. Mix well and use ordinary boiled dressing.

Cabbage as a Base for Salad.—Use cabbage in the place of lettuce. Place shredded cabbage on a salad plate. On this put two or three thin slices of Spanish onion on which a ball of cottage cheese is placed. Pour mayonnaise over the cheese. This may be garnished with slices of hard-boiled egg, or eggs may be used in place of the cheese.

### Tomatoes—They're So Good for You

Cream of Tomato Soup.—To one pint of tomatoes add 1 teaspoon sugar and let come to a boil. Put through colander and replace on stove. Let one pint of milk come to a boil and thicken with one tablespoon of flour in water. To this add salt to taste and 1 tablespoon butter. When the milk mixture is ready, add ¼ teaspoon soda to tomatoes, stir well and add the milk. Serve immediately with crackers or toast cubes.

Tomatoes, Rice and Cheese.—Boil ½ cup rice. Drain in colander. In buttered casserole place layer of rice, layer of finely cut cheese, layer of tomatoes and repeat. Place salt and pepper on top and pour ½ cup tomato juice over it all. Bake ½ hour.

Tomato Rarebit.—Melt 2 tablespoons butter in a spider. Add 2 tablespoons finely chopped onion and let it brown. Add 1 cup tomatoes and let the mixture come to a boil. Let 1 tablespoon butter melt in another dish and stir in 1 tablespoon flour. Add 1 cup milk and stir until it thickens. Then add ½ tablespoon mustard, mixed in little water, and ½ cup finely cut cheese. Stir well until cheese melts. Then add ½ teaspoon salt and put in tomato mixture. Stir well and serve at once on buttered toast.—MARION K. CLARK.

### Preserving Shoe Soles

AS soon as the glazing is worn off the bottoms of new shoes, paint the soles with hot linseed oil. It will quickly soak in and the soles should be given as much oil as they will absorb.

This method preserves the leather; it makes the leather hard and besides being waterproof, the soles will wear about three times as long as they otherwise would. The glazing can be removed by sand papering if preferred. The sooner the oil is applied, the less of the leather wears away.

A few cents spent should save many dollars on children's shoes and on those of the farmer who often has to walk on wet ground.—E. S.

"Mother, there's somebody at the front door."  
"Who is it?"  
"I don't know, but here's the seat of his britches."—Judge.

# SUNRAY FURNACES

*Built to Heat Every Room in Your Home at a Minimum Cost*

A BETTER FURNACE AT A LOWER PRICE

PIPE or PIPELESS

EASY TO INSTALL

All cast iron construction—self cleaning radiator—easy to operate—use any kind of fuel—fully guaranteed

These furnaces made by one of the oldest, largest and best known successful furnace manufacturers in the United States. Write for Illustrated Circular and our Exceptional Low Price Offer.

# Reviewing the Latest Eastern Markets and Prices

## MILK PRICES

**T**HE Dairymen's League Cooperative Association announces the following prices for the month of August for milk testing 3% in the basic freight zone of 201 to 210 miles from New York City: *Class 1* milk used chiefly for fluid purposes, \$2.06 per 100 pounds; *Class 2A*, used chiefly as fluid cream, \$1.70; *Class 2B*, used chiefly in the manufacture of plain condensed milk and ice cream, \$1.75; *Class 2C*, used chiefly in the manufacture of soft cheeses, \$1.75; *Class 3*, for milk used chiefly in the manufacture of whole milk and sweetened whole condensed milk, powdered, evaporated whole milk, \$1.55; *Class 4A and 4B*, based on butter and American cheese quotations on the New York market.

The League prices for August are the same as for July with the exception of *Class 1*. *Class 1* in July was \$1.86, having been increased to \$2.06 for August.

### Sheffield Producers

The Sheffield Farms Company Producers announce the following prices for August for 3% milk in the 201 to 210-mile freight zone. *Class 1*, \$2 per 100; *Class 2*, \$1.70; *Class 3*, \$1.55; *Class 4* to be determined by market quotations of butter and cheese.

The Sheffield Producers have recently adopted the multiple price plan. During July the flat price was \$1.70½.

### Non-pool Cooperative

In the absence of any information to the contrary, non-pool prices still remain the same as in July, namely *Class 1*, fluid milk, \$1.86; *Class 2*, for cream and ice cream, \$1.70; *Class 3A*, for evaporated and condensed milk, \$1.60; *Class 3B*, for fancy cheeses, \$1.45; *Class 4*, determined by New York butter and cheese quotations.

### Interstate Producers

Interstate Milk Producers Association (Philadelphia) receiving station price for August for 3% milk in the basic zone of 201 to 210 miles from Philadelphia is \$2.19. In the 101 to 110-mile zone the price is \$2.29.

## BUTTER MARKET FLIGHTY

Although, as we go to press, the prices we report are the same as last week, nevertheless the market has shown a very flighty tone all week. There are a number of factors that have kept the market more or less in this hectic state. The "into storage" movement has been heavy and accumulations are worrying many operators. There is talk in some quarters that prices are still too high while others have a more optimistic opinion. In spite of the fact that advices state that flies, dry weather, short pasturage and labor for grain harvest are cutting production in the West, nevertheless receipts continue to be heavy. In most quarters in the market there is a disposition to push sales to effect a clearance in some cases, business being done without profit.

On Tuesday the market took a downward dip. The declines were slow but every little dip that the market took brought out a new buying interest. However, as soon as a slight reduction took place a counter increase followed, so that the market has been up and down. Advices indicate further falling off in the make this week and if this materializes to any extent we may see a gradual strengthening of prices. Western weather advices from the Northwest dairy sections report cool weather.

The hot spell in the East has been responsible for a number of defects in receipts and only a small proportion of these will pass official inspection. This has had a tendency to strengthen prices on higher grades and from now on will be responsible for a gradual widening of the range of values.

## CHEESE MARKET FIRM

Reports of firm cheese market in the West and up-State have had a distinct influence in the

New York market. Although the New York market is quiet, nevertheless there is a decidedly firm undertone prevailing. Reports from up-State indicate that the make is shrinking and receipts of fresh State flats here are decreasing. Incidentally it might be stated that the quality of arrivals is running more or less irregular. Prices are about the same as last week, average run; State whole milk flats are 19½¢ with fancy marks varying from 20 to 22¢. Undergrades are running as low as 15¢.

## FANCY EGGS ADVANCE

The fact that receipts of fancy nearby whites have been light, has been responsible for a 2-cent increase. The hot weather has had a very decided effect on the egg market and because such a large percentage of arrivals are showing the effect of hot weather, the real fancy marks have advanced in price. Because there are so few of them coming in, they are held firmly.

In general, egg receipts have been on the decrease and there has been a heavier drain on storage houses. Of course storage stock is interfering with the prompt sale of competing qualities of fresh goods, however, the market is in a very healthy condition.

Where nearby whites are candled they are bringing anywhere from a cent to 2 cents above quotations given below. It certainly is a fact that right now a little extra effort is paying poultrymen handsomely.

## LIVE POULTRY UP A LITTLE

Express receipts of fowls and broilers have been rather light during the past week and consequently the market seems to be a little firmer. This is not quite as true with fowls as it is with broilers. Fowls are meeting only a mediocre demand. The freight market on fowls has been weak and the express market can't be expected to show much difference. However, prices have strengthened a full cent since last week. The hot weather is not conducive to higher prices, especially in the case of fowls.

The broiler market has been considerably better. Broilers are firm and toward the end of the week of August 9 efforts were made to reach 34 cents for fancy, selected, colored stock. Many receivers have been selling freely on account of the hot weather and this free-selling tendency has had the effect of keeping prices more uniform.

September 29 to 30 will be the Jewish New Year. The best market days are September 24, 25 and 26. At that time, fat fowls, turkeys and ducks are in demand. This is a good time for farmers to send in fat fowls that they have culled during the past months. This will be a good time to get rid of habitual setters.

## POTATO MARKET DULL

There are a number of factors that are working against a stronger potato market. For one thing, shipments from the South are too heavy and the quality of receipts varies so greatly that there are too many cheap potatoes coming in to help the price situation. Cheap southern potatoes are really responsible for the low price

that Long Islanders are getting. At the present time Long Island farmers are getting about 75¢ a bushel, whereas last year at this time they were getting anywhere from \$1.10 to \$1.30.

Growers in South Jersey are getting something like \$1.50 a barrel. It goes without saying that these men are getting a whole lot less than what it cost to produce the potatoes.

The situation is very unhealthy. Long Island potatoes on the market (which is dull) vary anywhere from \$2.00 to \$2.50 a barrel while Jersey potatoes vary anywhere from \$1.85 to \$2.00.

## GRAINS AND FEED

According to New York State Department of Farms and Markets, the following prices prevailed August 2:

The quotations given in this report show the approximate prices at which feed can be purchased per ton, and grain per bushel, in straight carlots through billed from Western points, delivered on track at points in the freight zones as indicated. Mixed carlots cost approximately \$2 per ton more.

Retail feed and grain prices vary with different local dealers depending upon their individual cost of doing business, volume handled, etc. In the case of feeds the retail price may sometimes be as high as \$5 per ton above the wholesale prices given in this report.

Latest Government reports from Washington indicate that the wheat and corn prospects are somewhat better on August 1 compared with July 1. According to the crop experts favorable weather conditions will be responsible for something like 60,000,000 bushel increase in the corn crop and a 70,000,000 bushel increase in the wheat crop.

The development of an active export demand for domestic wheat combined with the strong market in Liverpool and cable advices that Germany has decided to accept the Dawes Plan in full, resulted in a higher wheat market in Chicago on August 7. The foreign situation is steadily improving prospects of a satisfactory grain market.

### Local Buffalo Market

Since Buffalo is an important milling center for wheat feeds and linseed meal, quotations are given for this point on both a through-billed and a local basis. Ground oats \$42; spring wheat bran \$27.50; hard wheat bran \$30; standard middlings \$29.50; soft wheat middlings \$33; flour middlings \$34.25; red dog flour \$39.50; dry brewers grains \$33; white hominy \$44; yellow hominy \$43; corn meal \$47.50; gluten feed \$41.25; gluten meal \$47.50; 31% old process oil meal \$45; 34% old process oil meal \$46.

For points taking New York rate add to Albany price ¼ cents on oats; ½ cents on corn; 10 cents on cottonseed meal; and 20 cents on other feeds.

## LITTLE CHANGE IN HAY

There has not been a great deal of improvement in the hay market during the past week. For a day or so there was a little anticipation

about the immediate future due to the fact that the teamsters in New York threatened to strike, which had the effect of influencing buyers to hold off. It appears that the strike will be settled without any difficulty.

Arrivals consist mostly of very poor stuff. There is little No. 1 hay coming in and that is about the only grade that is holding firm. As a matter of fact it is pretty hard to find any real No. 1 hay. Choice hay has been selling about \$32.00, which is extreme, but the majority of receipts are undergrades, and the accumulation of this stuff keeps the market in poor shape. There is more or less new hay coming in now but buyers hesitate to take a chance because many of the receipts are showing heat. No. 1 new hay in small bales is quoted at \$26.00.

## Use A. A. Radio Reports for Vegetable and Small Fruit Markets

The vegetable market changes so rapidly, from day to day, that little can be gained from weekly price quotations. The only way to keep in proper touch with the vegetable and small fruit market is to get a radio report daily. If you haven't a radio try to get to a neighbor who has one, at least every other day. Reports are broadcast at 10:50 A. M. standard time from WEAF.

## Some Facts About the Dairy Business

(Continued from page 98)

that pooled milk at Sheffield prices would have returned to producers \$6,600,000 more than they received.

The margin against the poolers seems greater than it should be especially since there is a steadily increasing percentage of fluid uses of milk and a smaller surplus for manufacturing. In 1923 fluid consumption of milk increased from 44 to 48 per cent. of the total, making a substantial reduction in volume going into manufactures. Decreases were reported in the amount of milk used for making butter and all kinds of cheese except the Italian variety.

Total milk production in New York State in 1923 was 4,862,705,934 pounds, with increases in the cheese country; in the central section no change and decreases in the southern, southwestern and southeastern counties. The milk supply nearest New York City is steadily growing smaller, though it comes from fine herds under ideal conditions for health inspection and enforcement.

Such facts as are available seem to show that pooled milk converted into cheese by dealers and League plants could have earned 32 cents per cwt. more if handled in other plants. The League is compelled to operate some plants at a loss because of its slogan: "A Market for the Milk of Every Member." How important efficiency and economy is, however, is proven by figures that show that a gain of 32 cents per cwt. for cheese milk would have given poolers an additional sum of \$1,415,985.53.

The constructive suggestion I have to offer is that efficient marketing might be aided by a joint conference plan, WITH REGIONAL BOARDS TO PASS ON CONTRACTS, SHIPPING, TO EFFECT ECONOMIES IN MANUFACTURING AND DISTRIBUTION AND TO CONSTANTLY COMPARE RETURNS IN ALL BRANCHES OF THE BUSINESS OF SELLING AND MANUFACTURING. There is strength in conference especially where a natural community of interest exists as it does among milk producers.

## T B from a Breeder's Standpoint

(Continued from page 105)

very great progress could have been attained by using the old subcutaneous test alone. But by the addition of the more efficient and economic tests great progress has been made. During the past two years a large corporation in our county has been buying cattle from herds that had passed clean tests and when they recently had their herd tested it was found clean. Now it would have been impossible five years ago to have brought together such a large herd in our county with these results.

## Quotations From Eastern Markets

The following are the prices at which farm products of special interest to Eastern farmers sold on August 7:

	New York	Buffalo	Phila.

# August Chicken Chatter

## Save Labor With Feed Hoppers—Cull the Perpetual Sitters

WITH farm labor hard to get and harder to keep, poultrymen can profitably let the chickens feed themselves from a hopper.

"Put the grain, mash, oyster shells, water, and anything else you feed in hoppers, keep them filled, and don't worry," writes G. S. Vickers, poultry extension specialist at the Ohio State University.

"Hopper-feeding is one labor-saver," Mr. Vickers continues. "It gives good results. But be sure the hoppers are in cool, shady places and protected from rain so that no wet, moldy feed is before the chickens.

### Milk an Ideal Food

"Milk is the one article of feed that will help more than any others to keep your birds in production.

"Of course, hens will continue to produce in the summer just so long as they continue to eat large amounts of mash. At this time many birds cease to eat enough to keep them in production. Some means of keeping up the mash consumption must be used. The two most popular methods are (1) confinement until noon with little or no grain, and (2) feeding of moist mash, usually at noon.

"Last year we had one flock owner who fed no mash to his flock all year, probably because he doubted its value. His average production for the year was 49 eggs a hen. His profit was minus to the tune of 9 cents a bird."

### Leg-Band the Sitters

A FEW weeks ago we were out home and as is always the case with the children, our little youngster wanted to collect the eggs, but she was rather timid about tackling the job alone so we went along. At the very first nest she stopped short. There was a hen on it and it was a case of "Daddy, you get the eggs in that nest."

The old Biddy sitting there eyed me carefully and then made a break for the open country. I managed to catch her and put her in the cooler. As I locked her up I could not help but think of how many thousands of hens spend most of the summer doing that very thing, trying to hatch out a whole dinner set from an old china egg.

Many a time have I heard a poultryman say "That's about all that old hen

does" referring to a perpetual sitter. And then he continues to let her live. Those hens are absolutely good for nothing. They may lay 50 or 60 eggs a year and spend the rest of the time keeping the nest warm. They are a losing proposition and yet they manage to get away with it. One of the easiest ways to locate these perpetual sitters is to keep a supply of leg bands on hand, they are cheap, and attach another band to the leg every time the sitting stunt is repeated. At the end of the year a man can go through his flock and without the possibility of a failure, pick out those hens that are not worth their keep.

There are two ways of disposing of these birds. One is to use them on the home table and keep down the meat bills. The other way is to sell them all off either to the local poultry buyer or to express a crate of them to the live poultry commission men in New York City or the nearest live poultry market. Of course, this doesn't mean shipping them on while they are laying. You may as well get money out of them while you can. It is a better idea to wait for the time when fat fowls are in demand and the price is up. Usually you will find that the hen with all the leg bands isn't laying enough to pay when fat fowls are in demand to warrant keeping.

Incidentally, when the sitters are thus eliminated those remaining make a more desirable flock of breeders.—F. W. OHM.

### Whitewash for the Hen House

Will you give me a formula for making whitewash. Do you think whitewash worthwhile in the poultry house? We have used waste engine oil on the roosts and dropping boards but have been told the rest of the house should be sprayed.—A READER, New York.

WASTE engine oil is ideal on the roosts and dropping boards to kill lice and mites. Mites are in every little crack and crevice and unless a material such as heavy oil is used they will soon find a new place to multiply. The advantage in using oil lies in the fact that it is cheap, may be painted on and does not lose its strength right away.

It is a fact that the rest of the house should be sprayed with some kind of disinfectant and it all depends on local conditions whether it will pay you to bother making your own whitewash or buy a ready prepared material. There are materials on the market that are so made up that it is merely necessary to

add water and spray. Making whitewash at home is a lot of bother and if you have no other place to make it, except in the kitchen in the house, it causes a lot of mess for the housewife to clean up. That is only one instance where the commercial preparations are better.

Whatever you use, though, it is certainly wise to spray the rest of the house besides the roosts and dropping boards because lice and mites also find harbor there. Likewise other diseases may lurk in the house unless it is occasionally disinfected.

### How It Is Made

Whitewash is made by placing about 10 pounds of quicklime in a vessel, adding 2 gallons of water. It should be stirred if necessary to prevent burning. After the mixture is complete the vessel should be covered with an old piece of burlap and allowed to stand for an hour. If too little water is used the lime will be completely slacked or hydrated. Furthermore it will be burned and burnt lime is generally lumpy. Too much water on the other hand retards the slacking. After the mixture has stood about an hour it is ready for use.

A simpler way to prepare this whitewash is to mix ordinary commercial lime with water until the proper brush consistency is obtained. However this material will not stand the weather and will rub off easily.

Another interior whitewash is made by slacking 62 pounds (one bushel) of quicklime in 15 gallons of water. It is stirred occasionally to prevent scorching. The vessel is covered until the steam discontinues to arise from the mixture. Commercial hydrated lime may also be used, 80 pounds with enough water to reach a creamy consistency. Then mix 2½ pounds of dry flour with a half gallon of cold water, thinning this solution with 2 gallons of boiling water. Then dissolve 2½ pounds of common salt in 2½ gallons of hot water. Mix the rye flour solution and the salt solution and then add both of these to the lime solution and stir until the mash is thoroughly mixed.

After the whitewash has been made its disinfectant qualities may be increased by adding crude carbolic acid. This is obtained at the local drug store. It is added at the rate of about 1 part of crude carbolic to 20 parts of whitewash.

## The Climax of a Long, Hard Fight

(Continued from page 99)

State where what was once a slow and orderly retreat has become a veritable flight. Apparently there are other localities where things are even worse than in this State. The last Outlook is authority for the statement that there is a certain Ohio township of ten thousand acres once tilled by a contented (I would not say prosperous) farm folk and today there are left just three families still clinging to their homes in the wilderness. Things like this cannot happen without being attended by some social tragedies. I am sure that we have not in New York any township where depopulation is as complete as this. Still, our Schoharie County Farm Bureau Manager Pollard, a man with a peculiarly intimate and sympathetic acquaintance with marginal land agriculture, has a story which I hope he will some day print, "The Last Man in District 4."

If I had space I might wish to discuss the economic and more especially the social problems that grow out of farm abandonment. I do not believe for one moment that the emigrant will be the ultimate salvation of the Hill Country. In some cases he may hold the fort, but it will be for one generation only. His children will flee as did their Yankee predecessors and much more readily

because being without hereditary ties they will not even "cast one longing, lingering look behind." I confidently expect and predict that the next fifty years will witness the practical depopulation of considerable areas of the rougher lands of the State. It is time that we had a definite State policy regarding this matter. I do not believe the State should waste money or effort in trying to stem the tide. In the long run these changes make for the best good of every one although it is frequently an exceedingly painful process for some of the individuals concerned. I wish to make one concrete although not original suggestion. We already have a policy under which the State becomes the purchaser of lands lying within certain definite lines in the Adirondacks and Catskills and in this way there is being built up a State Park and Forest Preserve. Let this policy be broadened to cover the State everywhere, and let the State stand ready to automatically take over any land that may be offered at some small maximum price—say \$5.00 per acre. Even at this price the State would eventually find itself the proprietor of considerable land but not enough would ever be offered in any one year to constitute any appreciable burden upon the finances of the State. This

policy would hasten the clean-up of decadent districts. I would not urge the State to embark upon any ambitious scheme of reforestation but just to sort-of forget it and leave it alone. The fire hazard in young hardwood timber is not serious because the worst fires are the aftermath of lumbering operations. Nature as a tree planter works slowly yet after all wisely and efficiently.

The economic trouble with forestry is that it is a very long time proposition. Human life is relatively short and uncertain and no man can really be blamed for failing to become enthusiastic over forestry when it will be his grandchildren rather than he that will reap the harvest. But this does not really greatly matter with the State because the State, like a corporation, is immortal. It can afford to wait and not hurry. Some day we shall establish a policy along these lines.

Meanwhile I do reverence to the Hill Farmer, even if his end draws nigh. He has done Herculean labors and been an epic figure in the development of our State. He is the last of a line of brave and hardy and self-reliant men who reared a civilization under special difficulties. He passes and again repeats the cry of the gladiators of old Rome, "We who are about to die salute you."

# FREE Tapestry Table Scarf

This beautiful, richly colored large size 50x14 in. Tapestry Table Scarf comes to you absolutely FREE with the Library Set. It is prettily finished with fancy mercerized cotton edge all around. Accept this handsome Scarf as a gift from Hartman with the Library Set. Pay nothing for it at any time. Send today. Offer holds good for limited time only.

### Important!

Do not confuse this splendid Library Set with ordinary, cheaply constructed sets. Note the following features of superiority: 1—Auto-type spring seats with hand-tied coil springs. 2—Has upholstered backs. 3—Seasoned solid oak frames. 4—Has genuine Quarter-Sawed Oak Arm Rests on Arm Rocker and Arm Chair. 5—Racks for books, papers and magazines at both ends under large 42x26 in. table top. 6—Every piece full size. 7—Beautiful fumed finish. 8—Chairs and table have domes of silence.

## Pin Only a Dollar Bill to Coupon

That's all. Just pin a dollar bill to the coupon and back to your home comes this 7-Piece QUARTER-SAWED AND SOLID OAK Library Set and with it the free Tapestry Table Scarf in rich colors. No need to buy a post office or express order or to write a check. It's simple to buy at Hartman's. Just pin a dollar bill to the coupon, and pay nothing more for 30 days—then make small monthly payments if you decide to keep the set. This superb set includes 7 massive, durable pieces in Mission style and rich fumed oak finish—large Table with 42 x 26 in. top; Arm Chair; Arm Rocker; Straight Chair; Sewing Rocker; Tabourette and Book Ends—all full size. Arm Chair and Arm Rocker have genuine quarter-sawed oak arm rests. Furnishes an entire room elegantly and completely. Rockers and chairs have comfortable auto-type seats, with hand-tied coil springs resting on sagless stout steel bands and are beautifully upholstered in heavy imitation Spanish brown leather, noted for its beauty and durability. Chairs and table have domes of silence to protect rugs and floor. A value we challenge the world to equal.

## 7-Piece Library Set

### Quarter-Sawed and Solid Oak—Fumed Finish

See this splendid set, the table decorated with the rich Scarf, in your own home before you decide whether to buy or not. Just mail the coupon with a \$1 bill, and we ship all on 30 days' Free Trial. If not satisfied for any reason whatever, send everything back and we will refund your \$1 and pay transportation charges both ways. Otherwise, pay balance due on Library Set only—a little every month. Take nearly a year to pay. The Tapestry Scarf costs you nothing. It is FREE. Don't miss this sensational bargain. Mail the coupon.

# Selling Farm Produce By Letter

## And Suggestions About Roadside and Home Marketing

By A. A. READERS

many gallons to bring you. Or call Maple Farm on the farmers' telephone line. I deliver promptly.

With a can or two of this syrup you can have "warm sugar" whenever you want it.

Yours truly, JOHN HIGGINS

It will be noticed that the above and the other letters are addressed "Dear Madam." The woman of the house is the one to whom such letters should usually be sent, and in order to do this sort of advertising effectively, there ought to

be a mailing list of housewives made up, containing the names of all to whom the farmer has previously sold and such other likely people as he can learn about. And if each letter is written separately, so it can be done, the name ought to be used instead of merely Dear Madam. It interests the reader more quickly if called by name, "Dear Mrs. Johnson."

Not long ago I had occasion to buy some potatoes. I asked prices at the grocer's. He told me he was paying the farmers 75 cents a bushel

and selling them for \$1. The farmers who were taking the easy way, the way that was less bother, were getting 25 per cent. less for their potatoes than such farmers as sold direct to the consumer. The smaller grower could easily make it pay to go after the direct consumer business, and here is a letter that might be used for that purpose.

Dear Madam:—You know what a difference there is in potatoes. Some are soggy when cooked and the fault is not in the cooking. Some are just dry enough to be mealy and delicious. Some are not fitted for baking.

I have been raising potatoes for a good many years and there is something about the soil of my farm that seems to produce better potatoes than the average. And I think I know how to store potatoes, too, so they do not lose their quality.

My present supply averages good size, large enough to be fine baked, but not too large to bake through easily. They are about as good potatoes as I ever grew. My price is \$1.50 a bushel, delivered to you.

I have a few bushels of smaller potatoes of good quality but under the average size. They are equal to any for many purposes and the flavor is good. While these last you can have them for \$1.15 a bushel.

I sell no one less than a bushel at a time because it does not pay me to deliver a smaller quantity.

Until new potatoes are ready for market at a reasonable price I am sure you will want to use these. They cost you no more than grocery store prices and they are exceptionally fine.

You can mail me an order on the enclosed card, or you can telephone to Riverdale Farm.

Perhaps you will be going by in your car. Stop in and see how I store potatoes. You can buy a peck or any quantity if you will carry them home yourself.

Yours truly, JAMES HODGES.

To the farmer who wants to build up a reputation for supplying people with first-class farm products it is not necessary to say that any crop that is not up to first class might better be lumped off to some large buyer without trying to sell at

top price on a high quality basis. Each farmer acquires his reputation for the quality of his farm products just as a manufacturer does. Here is another letter to be used in calling attention to the crop of new potatoes when the digging of them begins.

Dear Madam:—My new potatoes are just right now and I can supply you with what you want. You needn't pay fancy prices any longer for potatoes brought in from another State. The home crop is ready.

If I do say it, I don't believe I ever raised a crop of better early potatoes than this year's. They are good sized, dry and mealy, cook up just right, fine taste. You will say they are as good as any you ever had.

A postal card or a telephone call to Riverdale Farm will bring you a bushel right off. Price \$2.

Or stop as you pass and get whatever quantity you want. Nothing less than a bushel delivered to town by me. You can take along a peck yourself.

Yours truly, JAMES HODGES.

There is one food product that everyone uses and that everyone wants absolutely fresh. People will pay the top price for eggs they know to be right from the poultry yard, not more than a couple of days old. With poultry becoming so important a line and receiving so much attention it is worth while to try for the best price on eggs and on broilers.

Dear Madam:—How could you keep house without eggs? Do you sometimes get eggs from the store that don't seem to be just the best in the world?

It is pretty hard for the grocer to know just how old his eggs are. I have a little the advantage of him there: I gather my eggs two or three times a day and I know when they were laid and I can swear to you that the eggs I bring you are not thirty-six hours old. They may not be half that.

If you want absolutely fresh eggs from hens fed on carefully selected, clean food, and laid in neat, protected nests, eggs that are fresh inside and clean outside, call me on the Farmers' Phone and I'll arrange to supply you with eggs. I bring eggs to town three or four times a week, sometimes oftener. A post card to me will make it sure that I will stop next trip.

My hens are White Leghorns, laying a fine, large white egg of delicious quality.

If you want eggs to put down in water glass for next winter, I can arrange to supply you several dozen at a time, but I must know in advance so I can plan it. Eggs to-day as I send this letter are from 50 to 70 cents a dozen, according to grade. I get the top price and give you top quality.

Yours truly, E. B. HAZZARD.

P.S. How about broilers for Sunday dinner? I have a fine lot now, weighing about 1½ pounds each. 11c lb.

Here is an apple letter. The use of such letters might in many instances bring money for apples that would otherwise be wasted. Early apples often go to waste on the farm, especially in a good apple year, just because it does not seem worth while to gather them at the prices they will bring. But it is usually the case, even at such times, that there are in town not far away many families who would like to have early apples, can pay for them, but have no convenient way of getting them.

Dear Madam:—This is a good apple year. Early apples are plentiful and of good quality. I don't know as I ever had nicer ones.

They are not bringing a very big price and, as you know, early apples will not keep long, so it makes it hard to sell them through stores or by shipping them.

I am picking some every day, picking them with care to get the sound ones so they

will last until used, and these fine flavored, sound early apples, red astrachans and early harvests, I am selling delivered in town for a dollar a bushel. And with each bushel I give away a good sized sack of apples picked up from the ground, good for cooking if used right away.

I don't believe you can get a better dollar's worth in fruit anywhere.

And I'll make you this proposition. If you will come

(Continued on page 119)

THE question with the farmer who has a little of this and a little of that to sell is how to find his market. The big producer knows who will take his entire crop off his hands. If he has a truckload or more of grapes to sell, there is a ready made market for it. If he has a thousand beef cattle, the market is waiting for him. But if he has a hundred baskets of grapes or if he has butchered a hog and wants to sell to the consumer in order to get a price worth while for his small quantity of product, then he has to search for a customer, and it may take more time in finding the buyer than the return warrants.

It is with a view to helping the farmer with a product he wants to sell direct to the consumer, that the letters given below have been prepared. If the farmer wants to do much of this direct selling business, he ought to have a typewriter on which to write his selling letters. If there is a boy or girl in the family, that boy or girl will quickly learn to operate the machine well enough to write the selling letters from a

ready prepared original. The trouble with pen-written letters is their unbusinesslike appearance, their frequent lack of legibility, the time taken to write them. Lacking a typewriter, it will pay to go to a public typist in town and have the letters written, paying the small fee necessary for the work.

The first step is to get a supply of good-looking letterheads, paper and envelopes bearing the farm name, if it has a name, the name and the post-office address of the farmer and the location of his farm. It is worth while to give the farm location because the development of consumer-buying will mean that some people will want to motor out to the farm to buy, or will be glad to stop there as they pass on other business. In this respect the farmer is in the same position as the merchant who must tell people where his store is located and make it easy to find him.

The quality and style of the farmer's letterhead will give an impression just as any business man's stationery does. It is worth while to have that impression as good as it can be made. People will judge the farm's products by the farm's appearance and by the appearance of its letters, before they have had an opportunity to judge by the products themselves.

Here is a letter for the use of the farmer who wants to sell maple syrup direct to the family trade instead of lumping it at a lower price to the merchant or produce buyer.

Dear Madam:—The delicious flavor you like in maple syrup is obtainable only in a product that is made with great care.

Nothing is a more desirable addition to your breakfast table than fine maple syrup. For use on pancakes or on hot biscuits it is unequalled. For making that wonderful cake, maple sugar cake, nothing can take its place. No artificial flavoring approaches genuine, first class maple syrup.

The children can have no candy as good or as wholesome as maple sugar candy, and maple sugar itself is the best of all sweets.

I have 100 gallons of as fine syrup as we ever made. It is from the earliest run of sap, the sweetest and best flavored. It is clean and clear and as heavy as it can be made without sugaring in the cans.

This syrup is in gallon cans and I am selling it on orders as fast as they come in, while it lasts. \$3 a can and every can full weight and perfect in flavor. It will keep indefinitely if kept cool.

Mail the enclosed postal card to me telling me how

This is the roadside sign used by James Gwin of Wisconsin, discussed on page 119. Its outstanding features are its size and substantial construction as well as the neat and easily read printing.

This is the roadside stand described by Lee McCray on page 119. The use of some characteristic construction as in this case has a decided advantage in establishing a reputation.

## The Man Who Buried Crockery

*The Story of John Johnston and a Farm That Has Made Good*

**EDITOR'S NOTE:** Some time ago in looking over a volume of *AMERICAN AGRICULTURIST* published in 1874, we found the picture of, and an article about, a man who was one of the most famous farmers of his time, and a man whose name has gone down in farm history as the one who first introduced tile drain in America. He was John Johnston of Geneva, New York. The article was so interesting that we wrote to our friend, Mr. Charles R. Mellen, who now owns the old John Johnston farm at Geneva, and asked him for further information as to what the old place is still doing.

Mr. Mellen replied briefly in a letter which we are also printing below. You will find that this material holds your close attention, not only because nearly every farmer wants to know about drainage problems, but because all of us are especially interested in men like John Johnston and Charles R. Mellen, whose lives have been productive of real accomplishments, and who have been real leaders for progress in their times and communities.

The following is the story written in *AMERICAN AGRICULTURIST* just fifty years ago of John Johnston, the man who insisted on "burying crockery in the ground."

John Johnston was born in New Galloway, Scotland, in the year 1791. Many of his early days—and nights also—were spent on the hills tending his grandfather's flocks of sheep. "Whatever I know of farming," he once said to us, "I learned from my grandfather." And right nobly have these early lessons been reduced to practice throughout a long and eminently successful life. "Verily all the airth needs draining," was a remark of grandfather Johnston in Scotland. We shall see how well the boy Johnston, some years later, in far distant America, applied the idea to practice on his recently purchased farm.

Mr. Johnston married in 1818, and came to this country in the spring of 1821. After looking about for a few months he selected and purchased a farm lying on the eastern shore of Seneca Lake, near Geneva, N. Y. The land lies on a high ridge, and a casual observer would not be likely to suspect that it needed draining. The soil is a rich, calcareous clay, but when he purchased was in a badly run-down condition. Mr. Johnston, being poor, had to run more or less in debt, and his neighbors predicted that he would soon be sold out. Here he commenced his life-work, and here he has lived for 52 years. "I have always been an anxious man," he once said to us, but his anxiety was of that kind which stimulated industry and quickened thought. He believed in hard work and good farming. He had his trials and discouragements like the rest of us, but when he stumbled he came up ahead. He had unbounded faith in himself. He was not afraid to run in debt for land or for the capital necessary to improve it. He did not believe in small farms. "I do not know how to manage a small farm," he once said to us. He was quite as capable of managing his farm of three or four hundred acres as one of fifty acres.

Mr. Johnston's leading crop has always been wheat. Everything else was secondary to this. But he has also made a good deal of money by fattening sheep and cattle in winter. "But," said he, "I never made anything by farming until I commenced to drain."

He commenced draining his land in 1835. He sent to Scotland for a pattern and got tiles made by hand. His neighbor, the lamented John Delafield, imported

a machine for making tiles in 1848, and from that time Mr. Johnston laid tiles as rapidly as he could get the work done by the ordinary labor of the farm. "It cost me more," he once said to us, "than it would to have had the whole work done as Mr. Swan did it, at once, but I had to get the money from the crop on the drained field to pay for draining the second field." In fact, his draining paid for itself as it progressed. The extra yield of one crop of wheat frequently paid the whole expense of the draining; and in no instance did he fail to get all his money back in two crops. In 1851 he had laid sixteen miles of tile drain on his farm.

as well as clover, as he thinks he gets more and better hay. He has used lime with great benefit on his wheat. He has also used salt—a barrel per acre on his wheat—with remarkable results; he has sometimes used as much as seventy-five barrels of it in a year. He has also used more or less Peruvian guano. But in all his operations he has never lost sight of the manure heap in his barnyard. He has raised great crops of clover and fed it out on the farm. He does not plow it under. His corn, stalks, and straw, are all consumed on the farm, and for many years he bought tons and tons of oil-cake to feed with his straw. In this way he made great quantities of manure—and it was rich manure, not rotten straw. He piles his manure in the spring and uses it as a top-dressing on grass in the summer or autumn, the land being plowed up the next spring for corn.

Personally, John Johnston is tall and fine-looking, every inch a gentleman. He is temperate in all things. He neither drinks spirituous liquors nor uses tobacco in any form. A stranger seeing him in a select company would pick him out as a gentleman of the old school—but perhaps a distinguished general or statesman. He would hardly suppose he was "nothing but a farmer"—that he had spent his life in a quiet farmhouse; that he had followed the plow, dressed hundreds of sheep for foot-rot, and laid fifty miles of underdraining tiles with his own hands. And the stranger would be right. John Johnston is a distinguished man. He has led a most useful and honorable life. He has made money—and made it solely by farming, not by speculation. He has lived comfortably and brought up and educated a large family. His children, grandchildren, and great-grandchildren, delight to visit the old quiet home on the borders of the deep and beautiful lake. Here, too, many of our foremost farmers like to go, as on a pilgrimage, to pay their respects to the man whom they have learned to honor. Here, respected and loved by all who know him, may his life long be spared, as a grand specimen of an industrious, intelligent, true, and independent American farmer.

John Johnston

In 1856, when we visited him again, he had between fifty-one and fifty-two miles of tile drains, and we believe nearly every tile had been laid with his own hands.

Underdraining was a new thing in those days. Some of the neighbors said, "John Johnston is gone crazy—he is burying crockery in the ground." But mark the result. When the so-called weevil, or midge, proved so destructive to the wheat of Western New York that nearly all the farmers thought they should have to abandon the crop; when on many farms the wheat would not yield ten bushels to the acre, we visited John Johnston (in 1856) and found he had sixty-two acres of wheat that almost bid defiance to the midge. He had that year twenty-five acres of Soule's wheat that averaged 33½ bushels per acre; and his red wheat was as stout as it could grow. In 1859 his crop of white wheat averaged over 41 bushels to the acre.

It would be an error, however, to attribute Mr. Johnston's success solely to underdraining. He has cultivated his land very thoroughly. He is a strenuous advocate for summer-fallows—plowing three, and occasionally four, times. He has made his land dry, clean, mellow, and rich. He grew great crops of clover for many years, dressing the fields liberally with plaster. After his land became rich he has grown timothy grass

Dr. Liberty Hyde Bailey, in an article in *American Gardening* of 1893, writes as follows about the old Johnston farm and its present owner, Charles R. Mellen:

"The old farm and the country are fortunate in finding an owner who is fully alive to the value of his charge. The estate is now owned by Charles Rose Mellen, a connection of the early occupants of Rose Hill, and no man could be prouder of his possessions. He lives in the old homestead, and crops the fields in the most approved methods. The drains are all in perfect condition, and the fields are still as productive as ever. Last summer he showed me a field from which, the year before, he had harvested an average of over forty-two bushels of wheat per acre; and the oat-field across the way was a miniature forest shoulder high. Below the house, next Rose Hill farm, a broad pasture, with trees here and there, contained flocks of sheep, as it did, no doubt, a generation ago. 'Young man,' said a neighbor recently to Mr. Mellen, as he admired the winter lambs, 'I don't give you a bit of credit for these fine, healthy sheep; it is the pure spring water you give them, and the high dry, underdrained farm.' 'Perhaps he was right,' Mr. Mellen said to me; 'at any rate, he spoke a good word for the dear old farm.'

"The late Joseph Harris was always a warm friend an ardent admirer of John Johnston, and a few sketches from his pen will portray the character of this sturdy pioneer: 'John Johnston talked of giving up farming

Subscription price, payable in advance, \$1 a year, \$2 for three years, \$3 for five years. Canadian and foreign, \$2 a year.

VOL. 114 August 23, 1924 No. 8

### Good News for Dairymen

THE Dairymen's League has just announced a raise in class-one milk to **\$2.60** per hundred pounds, effective August 18. This is an advance of 54 cents per hundred pounds, or a little more than one cent a quart over the present price. At the same time, the price of class-two milk, which is sold mostly in the form of sweet cream, was raised to **\$1.90** per hundred pounds. This is an advance of ten cents over the present price. The League states that the increase has been made necessary because of the unseasonal shortage in production owing to the recent protracted period of hot weather.

Other sales associations in the New York territory will undoubtedly raise their prices to producers. **This general upward movement of milk prices will bring more money and hope to farmers than they have had before in a long time.**

### The August Outlook

THE purchasing power of the farm dollar moved up to seventy-nine, as compared with a hundred for the year 1913, according to the United States Department of Agriculture report for June. This is ten per cent. higher than any other June in four years. Prices of farm products have been advancing some since this report, so that the purchasing power at the present time of the farmer's dollar is well over eighty and still slowly advancing. Certainly, the agricultural situation begins to look better.

There are two chief reasons for the improved outlook. The recent decline of business in cities has made many of the things that the farmer has to buy some cheaper, and at the same time increased the amount and lowered the cost of farm labor available. These good results, however, are somewhat offset, because when wages decline in the cities, the consumers have less money with which to buy farm products. The chief reason for better times is the increased prices for farm products. Grains of all kinds have made material advances, and farmers with wheat, oats, corn, barley, or buckwheat for sale this fall will without a doubt receive good prices for them.

Perhaps a word of caution is not out of place. The chief reason for better grain prices has been a smaller world production. We certainly hope that farmers will not increase their acreage and bring the prices down again. No one can prophesy future conditions of course, but there is talk among wheat growers of attempting to hold their wheat for \$2.00. It is our opinion that holding wheat for too high a price is dangerous, and if we had grain for sale at fair prices this fall, we would sell it and let the other fellow do the gambling. This is simply an opinion, however. Farmers must exercise their own judgment.

Of course, better grain prices mean increased cost of production for eastern dairy farmers, but milk prices have begun to advance and conditions

in the market, with the exception of butter, indicate that they should go higher. The receipts of butter during June on the four principal markets exceeded the previous June by over a million and one-half pounds. A survey completed by rural mail carriers, under the direction of the United States Department of Agriculture, shows that there are six per cent. more dairy cows, two years old and over, on farms in the United States this year than there were last year. Most of it was in the West. This increase is dangerous and should be watched by dairymen. On the other hand, there is at present a scarcity of market milk in New York and many other cities.

A large crop of hay was harvested this year and most of it is pretty good quality. In a recent trip across New York State we were impressed with the number of barns which were filled to the peak with hay. Even the barn floors were piled full. Corn will be a poor crop this year. The acreage, both of silage and corn for husking, is smaller because of the late spring, and the stand is poor and late. However, recent hot weather and rains have done much to improve silage corn.

The July estimate places potatoes at 373,000,000 bushels as compared with a production of 412,000,000 last year and with 391,000,000 as the average production from 1918 to 1922. Drought on Long Island has caused a great loss there.

The August estimate shows a decided falling off in the July estimate for apples. The August report estimates a commercial apple crop of fifteen per cent. smaller than 1923. Weather conditions in the North Central States have been unfavorable during July. Too much rain has increased apple scab and other diseases and made it difficult for orchardists to exercise control methods. Production in the New England States, New York, New Jersey and Virginia promises to be much greater than last year, whereas Ohio, Michigan, Illinois and Missouri report smaller crops. The Washington crop will be only about sixty-five per cent. of what it was last year. The Oregon crop will be about eighty per cent. The California crop will be about the same. Judging from present conditions, the New York crop will be considerably greater than last year, but somewhat less than in 1922. Peaches promise a big crop. The July estimate was 54,000,000 bushels as compared with 46,000,000 last year and 44,000,000 for the five-year average. The July estimate for tobacco is 1,294,000,000 pounds as compared with 1,491,000,000 pounds last year and 1,361,000,000 pounds for the five-year average.

The egg and poultry situation holds steady and good for the poultryman who ships a high quality product. Many eggs on the market show the effect of hot weather, and the lack of attention on the producer's part to keep the eggs fresh.

Field beans promise slightly better than a year ago, though the late planting brings greater danger than usual from frost injury before maturity. The condition and acreage, at the present time, indicate a probable total crop for the United States of 13,688,000 bushels as compared with 15,740,000 last year.

The outlook for cabbage in New York State, at the present time, depends largely upon the weather conditions between now and November. The acreage is slightly below that of last year. Through the Western New York cabbage section growing conditions have been good so far, but so much cabbage was set late that a late fall will be necessary to mature it.

As a whole, the season has been, and still is, very unusual, resulting in a lesser production with many crops. This and other causes bid fair now to give the farmer more dollars with more purchasing power than he has had in several years.

### The "Golfers" at the State Fair

IN almost every county all over the State of New York men are pitching horseshoes in local contests and getting ready to send teams from different counties up to the State Fair where the contest will be held under the auspices of the Farm Bureau and the AMERICAN AGRICULTURIST to determine the State Amateur Champion.

Plans are being completed for laying out on

the Fair Grounds the large number of courts which will be necessary for the elimination contests to determine the championship teams. The grand final contest will be held in the large new coliseum and the interest that is already evident indicates that this barnyard golf scrap for the AMERICAN AGRICULTURIST prizes will be one of the leading events of the State Fair, and will be witnessed by tens of thousands of people. Competing teams of the different counties will register at the AMERICAN AGRICULTURIST tent on the grounds, and there receive instructions and rules which will govern the contest.

### Poor Threshers Cost Farmers Money

Cleve Prather, living near Buena Vista, Oregon, claims that many farmers, in threshing their clover, lose from 25 to 50 per cent. of the seed, because of poor machinery, or because the clover is too green, or too ripe, or too damp, when threshed. A neighbor disagreed with him, and offered to sell him, for \$25, two stacks of threshed clover straw. Prather accepted the offer, rethreshed the straw, and sold the seed procured from the two stacks for \$1,356.20.—L. L. H.

THE above letter serves to illustrate and emphasize the need for every farmer to make sure, at threshing time, that the outfit he employs gets all of the grain. There are a lot of inefficient thresher outfits in operation, and the total loss to farmers caused by them is appalling.

After a farmer pays particular attention to getting good seed, properly preparing and fertilizing his ground, and devoting a whole season to raising a good crop, it is too bad to have to lose a considerable proportion of it because it is not properly threshed. Often it is not the machine that is to blame but the operator. The sieves may not be properly adjusted, or the grain may be fed into the cylinder too rapidly. We know of no way to prevent losses except vigilance on the part of the farmer by noting the threshed straw very carefully and by insisting that an efficient job be done.

### Eastman's Chestnuts

THE slowness of trains has always been a prolific source for jokes. Traveling men especially have rung almost every variation of humor possible on this subject. Somewhere recently I heard a pretty good one about a drummer who stopped a conductor on his way through a slow train and said to him with a perfectly straight face.

"Conductor, is this train properly equipped with safety appliances?"

"Why, yes," said the conductor, "certainly."

"Are its brakes all in working order?"

"Of course, why do you ask?"

"Is there a cow-catcher on the engine?"

"Yes," said the conductor, rather irritably. "Why?"

"And is there a cow-catcher on the rear car?" persisted the drummer.

"Of course not," snapped the conductor indignantly. "Cow-catcher on the rear car, who ever heard of such a thing!"

The drummer arose hastily from his seat and began picking up his things. "Stop this train immediately," he ordered. "I am going to get off. No cow-catcher on behind. The idea! Why at any moment, sir, a cow might overtake us, climb on the rear car and bite your passengers severely!"

\* \* \*

Over at Freeville, New York, there is a little junction where passenger trains from both north and south on two branches of the Lehigh Valley Railroad come in both night and morning and wait for one another. No train can leave until the others are in. This sometimes means very long, tiresome waits. Any of you who have travelled through Freeville, or who have waited for hours at some other little one-horse junction will sympathize with the traveling salesman who said that he had been on the road for forty years and spent thirty-nine years and six months of it waiting for trains at Freeville Junction!

## About Saving Dollars and Lives, and Farm Organizations

By A. A. READERS

SOMEONE has said, "A dollar saved is a dollar earned," and that someone was right. By saving I do not mean living in the kitchen all winter to save on coal bills, or making out your meals on cornbread and beans. For saving is not stinginess. They are as far apart as the east and west. But if you are on the lookout you will see ways of saving that the world's greatest spendthrift would hesitate to pass by.

Last spring a hardware store in a nearby town wanted to introduce a new type of corn grinder.

AN EGG WRAPPED UP IN A SHELL

On the 15th of April, 1924, a Rhode Island hen belonging to Frank Dixon, Walton, Nebraska, laid the remarkable egg shown in the photo. The egg was four and one-eighth inches long over all, and two and one-eighth inches in diameter the short way. It contained two very large yolks and one very small one.

But aside from this, one end of the shell is actually twisted three times and a portion of the shell extends beyond, giving the appearance of having been "wrapped up." Unfortunately, the shell at the interesting end was cracked when the egg was laid.

In an advertisement they offered to grind, free of charge, all corn brought to them on a certain Saturday. Just the thing for that corn I was going to pay Bill Gundrum to grind for me. When Saturday came I started to town an hour earlier than usual, carrying the corn with me. While I attended to a few matters of business the corn was ground. It paid me to read that advertisement.

I read in the Farm Bureau column of a local newspaper that the County Agent will be at the creamery next Tuesday. He will teach all who are interested how to dip Irish potatoes to prevent scab. Potatoes brought will be dipped free of charge. Tuesday I am scheduled to take in my cream. I shall put those sacks of seed potatoes in the back of my truck. It will be well worth the trouble.

In a school near my home there is a class in Farm Mechanics. The teacher is a strong believer in practical work. I recently contemplated building a new corn crib. Hearing of my intentions, the teacher asked if the class of boys might lay the foundation, their labor to be presented without cost. Of course I consented. I was not only spared the cost of hiring workers, but, as there were ten boys working, the job was finished in short order.

Perhaps these seem like little things, small points to be talking about. But remember "A dollar saved is a dollar earned"—and that it's the little things that count.—T. W. DUNCAN.

### Mark the Danger Spots

BY placarding the roads which passed their homes, a group of Washington county, Ohio, farmers have reduced local automobile accidents from twenty per year to five. Aside from rendering their community a splendid service, these men have saved themselves the expense of many costly wrecks, runaways, and property loss in general.

These roads, like many rural highways are narrow and winding, with steep grades and frequent curves. Despite ordinary precautions they continued to give trouble, especially through the marketing season when traffic was unusually heavy.

In 1921, E. J. Lokewood began the poster method. He called upon the neighboring farmers, and eight agreed to co-operate in the project.

Each member gave one dollar to defray his share of expenses. A meeting was held, wording was arranged for the posters, and Lokewood placed the order with a local show-card writer. When completed, the posters were distributed among the group, and each member was assigned three miles of highway to placard.

The cards warned the motorist by giving him real information about the road. At a narrow grade, this one appeared:

**A \$2000 Car Was Wrecked Here Recently because  
The Driver Forgot to Sound His Horn**

At an abrupt turn was another one:

**LOOK TO YOUR RIGHT  
There May Be A Car Coming**

Quite frequently, the motorist was given such warning as:

**Sharp Curve Ahead, Drive Slow;  
This Sand Is Tricky; Look Ahead,  
The Grade Is Narrow; etc.**

By these signs, any driver could make himself familiar with local conditions. They were not a bore to the eye, but were attractive and durable; and had been conspicuously placed with lettering large enough to be easily read from a moving vehicle. I noticed also, that automobile headlights would show them up even on a dark night. This was due to white letters upon a black background.

In explanation, Mr. Lokewood said: "The method cost us only \$8.40 in cash. The signs were all erected on idle days, and no time was taken from regular farm work. Each farmer keeps watch over his assignment, and as changes are made in the road, he arranges his posters accordingly. This is important, especially after a severe storm or freshet. Since many rural accidents occur by bridges being damaged in floods, we had a special sign made for the purpose. A lantern is placed above the warning signal at night, until the damage is repaired.

"We believe it to be our duty to mark the danger spots, and the results have amply repaid us for the time and labor involved."—F. R. COZZENS.

### A Plea for a Better Understanding

IT was somewhere in the sixties that my father bought a Buckeye mowing machine. It cost \$128 and was a horsekiller. Only a few farmers had mowers then and those of us boys who could tell about the wonders of the mower felt that we were somewhat superior to those who had to spread hay from the mown swath of the scythe. Nor was that all. Ours was as stated, a Buckeye, and another boy in our rural school boasted of a wood machine on his father's farm. It was something worth attention when we got into heated arguments as to the merits of our respective favorites in the line of mowing machines. Sometimes we simply presented the strong points as

we had heard them at home, and at other times there was what is now called bluff, used to the best advantage that we knew. It was one of the most interesting and exciting things that came into our somewhat restricted horizon, and it seems to me ranks well with the first trip to Barnum's show. I think that we were as nearly happy, unless the other boy got the best in bragging, as at almost any time in our rather uneventful lives. It was a great occasion when the machine was brought home in the edge of the evening and we delayed a little in starting for school the next morning to see the agent who would set it up and start it going. I remember him too—a pleasant man who had a farm near town.

Now I am inclined to speak pardonably of that bit of selfish enthusiasm on the part of the boys. It is a good spirit, not to brag to be sure—but to feel that we have something that is ours and that is worth while. We needed a little restraint of course and as we may not have properly restrained ourselves we got some of it from the other fellow. To appreciate the things that are ours if we do it in a sensible way, as we may when older, is proper.

Now this is something of a tale to adorn a moral. I wish that now as older folks we had a better appreciation of our cooperative associations in general. I am not speaking particularly of the League but especially of an experience through which I have just passed or trying to pass. Some farm supplies were bought cooperatively. I really think that some of them were not quite up to our standard of excellence but the manager of the association wishes to make that right and will. For the next part we got good service and any not good will be corrected. Some of the farmers stood up for the goods and the association just as well as did the boys in

It is not very often we hear of twin colts. Here is a picture sent in by W. H. Crottinger, of Ohio, with a pair of colts at 5 months of age. Twin calves are quite common, but such is not the case with colts.

discussing the superior points of the mowing machines, but there were others. Some really complained a good deal harder than they would have complained had they got the same quality from a dealer, and that is frequently the case.

In another instance last spring something did not go smoothly in the sale of produce and several members denounced the association and withdrew from it. It was evident that the association had rendered a real service but there was something not up to expectations and the whole association was denounced without much consideration. Many will do that for their cooperative when they will not in other cases. In that particular they seem to lack the loyalty that they displayed when boys over the possession of some trifle or that they now display in relation to some speculator who may pay a good price for the moment and, acting under the impulses of human nature, cut the price to the lowest cent the moment he sees the opportunity. Really I believe that we are slowly coming out to a better understanding and appreciation and possibly a return to some of our boyhood enthusiasm and that there will be less of this suspicion of our own associations. Let us hope so.—H. H. LYON.

That's no way to do! The man shoulda never started to build him a house if he didn't know how to finish it.—Life.

## The Kelly Commercial Cord

*—an extra rugged tire that will stand up under the rough all-around service tires are called upon to give on the farm*

Have you found a pneumatic tire that gives you the kind of service you'd like to get on your car or farm truck?

If you haven't, try one of the new Kelly Commercial Cords.

Extra sturdy, with a massive tread and added strength where strength is needed to make a dependable, long-wearing tire, this addition to the famous Kelly line is the strongest, most serviceable pneumatic tire that Kelly—or, so far as we know, anyone else—has ever built.

It is giving amazing mileage and we unqualifiedly recommend it, particularly for use under conditions where ordinary tires have failed to stand up.

Now made in all sizes from 30 x 3½ up to 40 x 8.

Get your local Kelly dealer to show you one.

**Kelly-Springfield Tire Co.**

250 West 57th St.

## When Bees Swarm

### Fall Pasture for Bees—Save Their Wings

NO matter how much you try to

By L. H. COBB

so badly that the colonies will become

prevent swarming by giving room the bees will sometimes refuse to stay at home. This picture was taken just the day before the smaller hive swarmed. Look how they are clustering out. Bees usually do this and I was intending to stop their swarming by shaking them in a few minutes when they started coming out. It was in the morning and I was expecting they would wait until afternoon. They were accommodating enough to cluster on a low apple-tree limb where we quickly returned them to a new hive on the old stand. They were in a ten frame hive and had a super of the same size given early but persisted in swarming anyway. The eleven frame deep hive

very weak and often die out entirely. If buckwheat or some other late blooming crop is provided it will keep them gathering some honey and they rear young bees until frost. Every bee counts big in the spring.

\* \* \*

#### Save the Bees' Wings

DID you know that the worker bees actually wear their wings out in summer? You can hasten this if you make them fly close to a wire, through a wire fence, or through a forest of weeds and grass straws. Their wings are very delicate and I have seen bees strike a wire and fall, which is very apt to tear a wing, and once torn it is never repaired. The front of the hive should be kept clear for a yard or so distant, and never should hives face a fence even several yards away unless it is covered with a vine or something else to prevent their seeing through it readily and trying to fly through.

#### Adventuring in Beekeeping

I KNOW a man who has a considerable apple orchard. He conceived the idea some years ago that bees would be of advantage in helping to fertilize the blossoms in this orchard. Accordingly, he procured a swarm and he also procured a good book upon practical methods in beekeeping. He really had no idea of ever keeping more than a few swarms. However, he found he had three swarms at the end of the season and he had learned that beekeeping was a very fascinating occupation. The next spring he made up his mind to increase the number of swarms, with the result that he had ten at the end of the season. Some were purchased, but he had learned how to increase and build up the colonies. He made a profit of something like \$50 the second year from the sale of honey, not a very large sum, but he was learning all the time.

It was five years ago that he started and now this man has thirty colonies and they are returning him a good profit. "The best of it is," he says, "there is very little labor involved in the business."

He places the hives in a long row, with openings to the southeast, when the cold weather comes on. Then he fills up the background with swamp hay, so nothing but the openings at the front are clear. A temporary fence is placed at the back, two feet from the hives and the intervening space stuffed with hay. Hay is also placed over the tops of the hives and held in place by chicken wire. In this way he winters the bees safely and cheaply.—C. H. CHESLEY.

#### An Ideal Roadside Sign

THE accompanying illustration will give beekeepers an idea of an attractive roadside sign as a means of disposing of their crop, or at least a part of it to passing motorists. Of

Just Before They Swarmed

beside it did not offer to swarm during the whole season.

When bees swarm in spite of precautions, or where you allow them to swarm, I think the best plan is to live them in a new hive on the old stand and put the old hive above them with its own bottom-board, so it will have a distinctive entrance. After a week the upper hive may be removed to a new location and allowed to build up, for most of the field bees from both will stay with the old stand and it will be in good producing condition. If you have used foundation in the new hive you can safely wait longer before removing the upper hive, for the bees in the lower will not have filled it so soon unless very active. The longer the old hive is above the more bees from it will stay with the new, and it is in the new hive the bees will count in honey production.

#### Young Queen Helps Colony

It is possible to strengthen the new colony still more and provide them with a young queen, which will help keep them from swarming again, by taking the old queen on a frame of her brood and bees and putting in another new hive elsewhere with part of the brood from the upper hive, and then putting two sheets of newspaper over the hive on the old stand and setting the original hive on it direct. By the time the bees gnaw through this they will accept the young queen above, as they will know their own queen is gone. Be sure that there is a young queen above that is laying before you make the change, for if not a strong colony like this will be pretty sure to swarm with a virgin queen on her wedding flight, especially if she hatches after the uniting and can leave a queen cell behind. If she is laying there will be almost no more danger of swarming that season. The colony as united will have nearly all the worker bees of both hives, but the old queen will build up a good colony out of the bees given her by fall if the summer is a fair one.

\* \* \*

#### Fall Pasture for Bees

IT does not pay to sow any plant especially for bee pasture, it has been demonstrated by experiments, except in the fall when the pasture has a value far greater than the honey secured. If bees do not have some honey coming into the hives during the fall months they will quit rearing brood and if they do this the bees that go into the winter will be old and before spring they die off

course, this is more applicable to a State road carrying more or less traffic, where an object display such as this creates more attention than a mere sign.

## Selling Farm Produce by Letter

(Continued from page 114)

out and pick up your own apples, I'll sell you apples from the ground, somewhat bruised, but good cooking apples at 25 cents for a half-bushel basket full. You furnish your own bag or basket. Yours truly,  
HENRY MABLE.

### Selling Late Apples

Here is another apple letter for use in selling the fall and winter apples, which are a different proposition.

Dear Madam:—No apples have a better flavor than those grown right around here. These apples will keep better too for winter use than apples joggled over a thousand miles of railroad.

Apples will keep a long time if handled with care and kept in a cool, moist atmosphere.

I've made a sort of specialty of my apples for years, and I don't believe any nicer Northern Spys are to be had anywhere. And Greenings and Baldwins too. For early winter use I have some Tompkins Kings that are the best baking apple you ever saw.

How many apples do you want for fall and winter? Have you a cool cellar where they will keep? If you have, you'd better buy two or three barrels. If you can't keep them, buy a couple of bushels at a time.

All my apples are carefully hand picked and delivered with just as little jolting and handling as possible.

\$4 a barrel, \$1.50 a bushel right now.

A good combination for a single barrel is one with a bushel of Spys in the bottom, a bushel of Baldwins on top of them, and a bushel of Kings on the very top.

I will sort up a barrel any way you say and bring you as many or as few as you want. Send me a card or telephone me on the Farmers' Line.

Yours truly, PETER BLACK.

### Change to Fit Your Needs

It is not expected that any of these letters will exactly fit any farmer's need. It will be necessary to change them to make them fit. But in the main they are adapted to general use, and a wise farmer, if he does not keep a file of these papers, will clip out the letters at least, and lay them in his desk where he can find them when he wants them.

The more letters a man writes, the easier it is to write them, and the more effective letters he can write. It is easily possible for a farmer to get into the way of selling his products by the help of such letters, and he will gradually accumulate a good list of people who have bought from him. He must, of course, use the same care a merchant does, to treat his customers well and give them satisfactory products and make good anything they think is not right. It is less convenient for housewives to buy from the farmer, and he must offset the inconvenience by making it as easy as possible and by giving superior products when he can.

### Letters Help Roadside Markets

The farmer who maintains a roadside stand can stimulate sales by the use of letters which tell people where he is, how to get there, and what his prices are. He may not deliver at all. It is possible for a farmer going into the roadside-stand business on a larger scale than some to get up a little card with a map on it showing the roads leading out his way. He can take pains to treat all comers hospitably. Showing them around the place if they will stop, offering them a drink of good spring water, sending them away believing that he is an up-to-date, intelligent grower and producer whom they will like to patronize.

Just how far this roadside trade is going it is hard to say, but it is certainly true that such selling can be

stimulated by the use of letters to good customers in towns within easy motor-ing distance.—FRANK FARRINGTON, NEW YORK.

\* \* \*

### This Sign Sells the Farm Products on the Gwin Farm

WITH road-building going on at a rapid rate in the Corn Belt, roadside advertising along the State highways has taken a start.

Pioneers in this in their neighborhood are Mr. and Mrs. James Gwin of Gotham, Wisconsin. Mr. Gwin is one of the prominent beekeepers of his State. Mrs. Gwin is specializing in White Leghorns.

Recently they put up a big sign at the farm gate, big so that the letters could be large and well-spaced on it, so that the motorist could take it in at a glance as he sped by. The photograph on page 114 shows the sign.

"We sold 70 pounds of honey the day after we put up the sign," says Mr. Gwin. A motor touring party from Illinois drove by, saw the sign and turned in the gate. The result as Mrs. Gwin gives it was the sale of a fine bunch of her fancy cockerels. There have been many other sales since which Mr. and Mrs. Gwin credit the sign with.

They believe that with the increasing volume of motor-touring traffic, western farmers are going to discover that roadside advertising pays, as New England and other eastern farmers have found.

Mr. Gwin puts it this way: "Too often we see a fine-looking farm, with excellent buildings, but no means of identifying them with their product or owner. The farmer allows fence manufacturers to ornament his fence with signs; cream separator concerns to put up posters on the farm, giving the information that such and such a machine is used there, while big posters advertise cigarettes, patent medicines and hundreds of products, but you can go for miles anywhere in the Middle West without finding a farmer's advertisement."—F. L. CLARK.

\* \* \*

### An Inexpensive Roadside Stand

ANYONE who wishes a distinctive stand along the highway from which to sell produce, especially sweet cider, homemade vinegar, grape juice or cold drinks, will do well to copy the "Barrel Inn," illustrated on page 114. Altho there are literally scores of fruit and food-selling stands along the road where this one was built about a year ago, it is rapidly drawing the trade. Every passer-by remembers it, and so many are stopping to patronize it that a real lunch-room had to be added recently to accommodate the comers.

Probably it is much less expensive than an ordinarily constructed house would be. The roof is of old boards covered with tarred paper and wide boards formed the walls. Both the constructing and painting were done by the enterprising young merchants themselves who had but a very small capital and this one bright idea for their stock in trade to open business.

The lights effectively placed around the upper rim of the Barrel make it a beacon along the highway all through the night, and bright-colored signs attract attention during the day. Some still more distinctive and alluring advertising is being planned by these young men, but they refuse to divulge it until completed. They deserve watching—and copying.  
—LEE McCRAE.

## Ever make an experiment like this?

James S. Morse, of Cayuga County, New York, made an experiment on his farm. He wanted to see whether a fertilizer with a higher percentage of potash than he had customarily used would pay.

He found out!

He applied a 3-8-6 (6% potash) mixture to one plot and put on a half a ton to the acre — 1000 pound application. Morse's soil is a deep clay loam. Then he fertilized another plot with 3-8-0, same mixture without the potash; also 1000 pounds to the acre.

The field which received the potash fertilizer yielded 45 bushels per acre. The other field gave but 39 bushels. The increased yield of six bushels per acre, even at \$1.10 per bushel is worth \$6.60—and if wheat goes higher, of course the six bushels are worth even more. But even at \$6.60 he paid for the 6% of potash \$3.00 in 1000 pounds of fertilizers and had \$3.60 per acre clear profit left over. Multiply this by a hundred acres and you'll see that \$360 extra money, with no more seed, no more labor, no extra output except the slight additional threshing charge is worth working for.

Ever make an experiment like this? You ought to try it. Ask your dealer for a fertilizer that has plenty of potash. Make a test. Perhaps your soil is one that will give splendid results with more than 6% potash. Potash pays—but many farmers do not use enough. The extra percentage costs very little. Why not use plenty this year, and get better yields from the same effort?

### The Bushels That Made Me Money

## My Engine Will Do the Work of 6

## Try This Remarkable Engine

# FREE

There is no other farm engine like it. Simple in construction and easy to operate. It is only one engine, yet it takes the place of six engines. It will give from 1½ to 6 H. P., yet it is so light that two men can carry it easily. Set it anywhere and put it to work.

### Change Power as Needed

It is a 6 H. P. when you need 6, or 1½ H. P. when you need only 1½, or any power in between. Fuel consumption in proportion to power used and remarkably low at all times. Adjustment from one power to another is instantaneous.

### Burns Kerosene

Operates with kerosene or gasoline. Easy starting, no cranking. The greatest gas engine

value on the market. And you can prove all of these statements to your own satisfaction.

### What Users Say

Ivan L. Blake, of Hannibal, New York, says: "Only engine economical for all jobs. I run a 28-inch cord wood saw, a 24-inch rip saw, a washer, a pump, and a grinder, and it sure runs them fine. It has perfect running balance, and it sets quiet anywhere."

Clarence Rutledge, of Manitoulan Island, Ontario, says: "Have given my Edwards four years' steady work and like it fine. It uses very little fuel. I run a 28-inch cord wood saw, also a rip saw, 8-inch grinder, ensilage cutter, line shaft for shop, churn, washer, separator and pump. Have had ten other engines and the Edwards beats them all."

Frank Foell, of Cologne, New Jersey, says: "It's a great pleasure to own an Edwards engine. I run a wood saw, cement mixer,

"I set out to build a farm engine that would have every feature the farmer wanted and none he didn't want. It has now been on the market six years. Thousands of satisfied users tell me I've succeeded. I'm proud to have this engine bear my name."  
—A. Y. EDWARDS

## EDWARDS FARM ENGINE

threshing machine, etc. Do work for my neighbors. Easy to move around and easy to run. I would not have any other."

## Rain Breaks Long Dry Spell—County Notes

THE rain of August 12th, which was quite general along the north Atlantic seaboard, saved farmers millions of dollars. According to Alva Agce, secretary of the New Jersey Board of Agriculture, farmers of that State were benefited to the extent of a million and a half dollars. The previous dry spell was beginning to show decided evidence of crop damage and if the condition continued it was very likely that loss would be heavy.

As a matter of fact, the loss to farmers of Nassau County, Long Island, will reach, it is estimated, close to a half million dollars, to say nothing of Suffolk County. The rain came too late to save the Long Island potato crop. Late potatoes will suffer the dreaded "second growth." However, the rains were of untold benefit to corn, cauliflower, Brussels sprouts and other late crops. However, in spite of the fact that corn will be helped to some extent, nevertheless the crop will not be up to normal. Some Nassau County farmers estimated only a quarter crop of sweet corn, one of the big cash crops of the county. The drought suffered by Long Island this year has been unusual and cannot help but be responsible for enormous losses.

### New York County Notes

Saratoga County—A much-needed rain has visited this section during the first week in August and it did a lot of good especially to corn and potatoes. A good crop of hay has been harvested. In spite of the shortage of farm help harvest is being accomplished. Oats are not making a good crop. Corn and potatoes are doing well. Potato bugs are giving but little trouble this season. Small fruits have yielded plentifully and have brought good prices. Cows have milked well but milk prices are not satisfactory. Eggs are bringing 34c a dozen with a strong trend upward in price. Hay is bringing a good price. There seems to be a demand for farms near the village at fairly good prices.—E. S. R.

Broome County—The season is still backward, crops are looking fine. Many farmers are still haying during the first week in August. Few early potatoes are on the market selling anywhere from 30 to 35c a peck, which is the lowest price in years for early potatoes. The yield is good. Oats look fine. Many have been cut for hay, while some are nearly ready to cut for grain. Corn is backward, but looks good. There is an abundance of fruit.—Mrs. L. K. C.

### Rain Needed in Suffolk

Suffolk County—The severe dry spell was broken on the 12th by an all-day rain just in time to save such late crops as cabbage, cauliflower, turnips, etc. It did not help potatoes, in fact it will injure them. Some late potatoes are about ready to harvest. The yield in Huntington township is way below that of any previous year in the last decade.—E. S. S.

Montgomery County—Spring grains, although they were sown late, promise to be a good crop. Corn is backward in growth. The acreage is below that of last year. Potatoes are making good growth and promise well. Haying season was two weeks late this year and even at this writing, August 9, much is still to be gathered. A large acreage will not be mown owing to scarcity of help. Milch cows and beef cattle are low in price. Eggs 30c a dozen, butter 50c a pound, broilers 35c live weight, veal 9c a pound live weight. The apple crop will be light and quality poor.—G. P. VAN V.

Genesee County—We had lots of rain during the month of June and July which is responsible for a good crop of hay. The "fly" got into wheat pretty badly and it went down. In most places

in the county it is very light. Oats and barley are looking fine.—J. H.

### Eastern Pennsylvania Notes

OLIVER D. SCHOCK

HARVEST of a phenomenal crop of alfalfa hay was followed by a season of drought which was disastrous to the plants, and anticipations of a large second cutting were quickly dispelled.

Lancaster county tobacco is maturing rapidly and some growers cut some of the earlier planted patches this week. It is claimed that its quality will be very good. There is every expectation that tobacco will command remunerative prices this season.

### Central Pennsylvania Notes

J. N. GLOVER

WITH the good rain on the 12th, corn, plowing, pasture and potatoes were very much helped, as the soil was too dry to do good work at plowing stubbles for wheat.

Oats are nearly all cut and much of the crop has been stored. They are long in the stalk and handle as though they will yield well. Wheat is being threshed and yields from 15 to 25 bushels per acre with plenty of straw to make 35 bushels.

Early potatoes are being dug and the crop is not big, but the stalks of late ones look well. Early mown fields of clover have made a good second growth which will be cut for hay or for seed, if the heads are filled.

Not many cows are changing hands at present, as milk is too low and pasture too short to add more cows to the herd.

Feed dealers or manufacturers have plenty of agents in the country selling feeds, and it may be a good time for one to buy his necessary feeds now.

### Pennsylvania County Notes

Crawford County.—Wheat all cut, most of it in barns. Threshing has started. Crop turning out well. Haying is not all over yet. It is making a good crop and it will all be needed as silos will not be full. Oats are turning mostly making a heavy growth of straw. We have had a good crop of campers and tourists this year.—J. F. S.

Tioga County.—Most farmers have finished their haying. Oats look fine, nearly ripe enough to cut. Recent rains have made buckwheat and late potatoes look like a big crop. Early potatoes look extra good. Early apples are very poor, very wormy. The corn crop is very uneven on the average and will make a poor crop.—W. C. G.

Cumberland County.—We have been having very dry and cool weather. During the first week in August corn has been showing extreme want of rain to say nothing of potatoes and garden vegetables. Harvest is about over altho some oats are still out. The oats crop was the biggest in this section in several years. Some wheat being threshed but the yield is poor in general. Hay made a heavy crop, some has been selling at \$10 a ton delivered. Apples are a failure through here. Wheat \$1.25, corn \$1.10, oats 55c, eggs 27c, butter 40 to 50c.—J. B. K.

### Mercer County, N. J.

Mercer County.—Up to the second week in August the weather was very hot and dry and crops need rain badly. Promised showers seemed to have skirted around Mercer County. Corn is coming along nicely. The fields were very uneven but till lately due to the cold spring. Good peach crop in view with fair early yield. Harvest, which was generally very good, is about over and potatoes look fine. Sale of pure bred Holstein and Guernsey bulls brought fair prices and will do much to improve herds of Mercer County.—Mrs. J. H. H.

## Moncrief Furnaces for Warm Homes and Fat Pocketbooks--

YOU can have your home heated as comfortably and healthfully as modern science can devise, at a cost so low as to surprise you,—if it is Moncrief Furnace heated.

Every principle has been utilized in Moncrief Furnaces to get every available heat unit from the fuel, and to distribute the heat efficiently throughout the house, especially in the far corners and near the walls,—that's where you need heat most.

## The WINDMILL with a RECORD

The Auto-oiled Aermotor has behind it 9 years of wonderful success. It is not an experiment.

The Auto-oiled Aermotor is the Genuine Self-Oiling Windmill, with every moving part fully and constantly oiled.

Oil an Aermotor once a year and it is always oiled. It never makes a squeak.

The double gears run in oil in a tightly enclosed gear case. They are always flooded with oil and are protected from dust and sleet.

The Auto-oiled Aermotor is so thoroughly oiled that it runs in the slightest breeze. It gives more service for the money invested than any other piece of machinery on the farm.

You do not have to experiment to get a windmill that will run a year with one oiling. The Auto-oiled Aermotor is a tried and perfected machine.

Our large factory and our superior equipment enable us to produce economically and accurately. Every purchaser of an Aermotor gets the benefit from quantity production. The Aermotor is made by a responsible company which has specialized in steel windmills for 36 years.

**Committee of 15 Meets**

And Other Subjects of Interest to Dairymen

THE dairy committee of 15 met at Utica on Saturday, August 9th, and was well attended by both members and many visitors interested in the milk situation.

The chief subject of discussion was the need for better prices for milk. Mr. Sargeant, chairman of the committee, and one of the representatives of the Eastern States Association, discussed the increased demand for milk in the markets recently. He stated that while he was visiting the office of a large milk handler in New York City, that they had telephoned all over the country to get more milk to supply their trade. Mr. Sargeant said that St. Louis is asking for milk, which is very unusual, and that a big demand existed in Boston, Philadelphia and Chicago. Mr. Sargeant was opposed to the resolution asking a specific price, because he said that conditions were such that the committee did not know what price they would be able to obtain. This resolution which Mr. Sargeant opposed called for a price of class one milk at \$2.33 per hundred, which is a rise of 47c over the price of \$1.86 which prevailed before recent increases.

Recommends Higher Price

Mr. C. W. Halliday, secretary of the committee, and representing the Sheffield group, said that the advance in price would probably cause the dealers to advance the retail price one cent a quart to the consumer in New York City. Mr. Halliday said that if the price of class one milk was only \$2.10 instead of \$2.33 the dealers would probably raise the retail price one cent a quart, or 47c a hundred, and therefore make a big profit on the difference.

Mr. Garlock, president of the Eastern States Producers, spoke for the Boshart resolution, which recommended a rise in prices without stating any specific price. This resolution follows:

"Whereas there has been a marked increase in the consumption of fluid milk in New York City, and a decided decrease in production with the price of grain steadily advancing,

"Therefore, be it resolved that it is the sentiment of this committee that all groups urgently recommend a decided increase, to date from August 15th.

This resolution was adopted unanimously.

At the preceding meeting of the Committee of 15, a subcommittee of 5 was appointed to make a study of the general situation and to recommend a plan that would help to solve the present problem of marketing milk in this territory. Mr. Fred Boshart, representing Sheffield producers, was made the head of this subcommittee.

"The subcommittee of 5 was to report at this meeting," said Mr. Boshart, "but this subject is so large and perplexing that it is not possible to make a report with recommendations to-day. It will have to be done at some future time."

Suggests Investigation

"I also think a subcommittee will have to be sent to some of the western States, perhaps Detroit, Milwaukee, Cleveland and Pittsburg, to see what they are accomplishing. Then we will have something substantial to recommend that will be beneficial.

"The New England situation is in confusion, and the western States as well as those in Poughkeepsie and Albany are above the New York market. You must take into consideration the situation in these different cities."

The committee instructed Mr. Boshart to go ahead with his investigations, but voted to continue their regular monthly meeting at Utica.

During the meeting of the committee, two plans involving centralizing sales control were submitted. These were referred to the subcommittee of 5 for consideration. Chairman Sargeant re-

ported that an invitation had been extended to President Slocum of the Dairyman's League urging the return of its three resigned members to the committee of 15.

"I am personally satisfied, however," said Mr. Sargeant, "that the pool has no intention of associating themselves with us any more."

The meeting and discussions were very harmonious and there seemed to be a very evident desire on the part of all members to try to work together to find some solution that would result in a benefit to the distressed dairy farmers.

A Good Home-Made Fly Chaser

THE common cattle flies which gather on the backs of cows and annoy them so that milk production is decreased, can be eliminated by a home-made spray mixture that costs only 1 cent a day for each cow.

A spray mixture recommended by J. W. Bartlett, professor of dairy husbandry at the New Jersey State College of Agriculture, consists of the following ingredients: 4½ quarts coal tar dip, 4½ quarts fish oil, 3 quarts coal oil, 3 quarts whale oil, 1½ quarts oil of tar, 3 pounds laundry soap.

Dissolve the soap in water and add the other ingredients. Mix the combination thoroughly and bring the whole up to 30 gallons by adding lukewarm water.

This spray will not injure the coats of the animals. It is well to spray twice daily; once in the morning after milking and again in the afternoon. Thirty gallons will spray 40 cows for ten days at a cost of one cent per cow per day.

DOES A SILO NEED A ROOF?

I have a silo, but as yet have no roof on it. My friends say that it is not good for the cows. Will you kindly give me your advice? I would also like to know what is the best variety of corn to drill for silage and how much to use per acre.—A. J. B., New York.

IN the first place this inquiry was not signed by the subscriber's full name. As a result we were unable to give him immediate and direct advice. It is not always possible to answer questions directly and immediately in our columns due to pressure of other subject matter and due to lack of space. If our readers have any questions whatsoever, we are only too glad to answer them immediately by direct mail. If it is desired on the part of the subscriber that the question do not appear in the columns, we will gladly oblige; however, SIGN YOUR INQUIRIES with your full name and address.

As far as feed value is concerned, there is no particular value in putting a roof on the silo. Silage is just the same whether it is covered or not. Where the value of a roof does come in, is the convenience in handling the silage. It was our experience several years ago after we had built two concrete silos, to go into the winter without having roofs on the silos. Pressure of work made it impossible to cover them. Before we could get at the job, a heavy snow-storm came and covered the silage. It made the nastiest mess you ever saw. It was bad enough when it rained and made the silage sloppy, but it was a whole lot worse when it snowed. After that experience we stopped all work on the place to get those silos covered.

Cornell 11 or Lucc's Favorite should make excellent silage corn for you in Niagara County. However, your soil and local conditions may alter this. Our advice to you would be to consult your county agricultural agent, whose headquarters are at Lockport and who will be able to tell you what variety of silage corn is giving the best satisfaction in your locality. The advantage of Cornell 11 lies in the fact that it not only produces a good percentage of dry matter but the silage contains a lot of ears and in that is where the value of silage counts.

**Save Your Corn!**

**Act Quick for a UNADILLA SILO**

Spring was late. But nature often makes up for lost time. Corn's coming along fast—looks good. We'll have a full crop. What will you do with yours? Put it into your own silo. Get the benefit of its value—this winter.

### FARM IMPLEMENTS

CORN HARVESTER cuts and piles on harvester or windrows. Man and horse cuts and shocks equal Corn Binder. Sold in every State. Only \$25 with bundle tying attachment. Testimonials and catalog. FREE showing picture of Harvester. PROCESS HARVESTER CO., Salina, Kansas.

### WOMEN'S WANTS

ALL WOOL YARN for sale from manufacturer, 75c to \$2.00 per lb. Free samples. H. A. BARTLETT, Harmony, Me.

## SELLING A. A. SERVICE

GREAT service is rendered agriculture and homemaking by AMERICAN AGRICULTURIST. This service is local and practical. It applies.

If you would like to help extend this service write me.

E. C. WEATHERBY, Circulation Manager  
ITHACA, NEW YORK

# Service Bureau

Over \$700 for Subscribers—Questions on Investment

ON four cases which have passed through the Service Bureau recently, checks totaling \$787.25 have been collected and turned over to our subscribers. In addition, of course, numerous smaller complaints have been satisfactorily adjusted, but these four were all for substantial amounts.

A firm located in upper New York State referred to us a claim against a railroad company for lost live stock. Soon afterwards they wrote:

"We have received a check of \$44.97 from the — Company in payment for our claim of calves lost in shipment. We hereby wish to thank you for collecting same for us." V. D. C. & Son.

### A Big Check for Milk

In another case a long delayed milk check finally found its way to Mr. F. L. M., N. J. It covered only one month's arrears, but the sum was \$263. We are now hopeful of collecting the arrears for two more months, each of which is a larger indebtedness.

Mr. M. wrote us: "In reply to your inquiry about the milk check, wish to advise that we soon received the check after I wrote you in regard to the matter. Hoping you may have them on the go, I remain yours with most respect for old reliable AMERICAN AGRICULTURIST."

Another railroad claim was settled for \$200 for four fresh cows killed by a train. A counter-offer by the company was not acceptable to our subscriber, who turned the case over to us. Shortly thereafter he wrote:

"The unexpected happened this morning. The — R. R. sent me a check for \$200. That was what I told them I would settle for. I think you made them come to time. I am very thankful for the favor and if there is any charge send me your bill."—J. W. G., N. Y.

The fourth check, for \$279.28, covered a shipment of two cars of hay to a New York firm which proved to be entirely able and willing to meet its obligations. Our subscriber, Mr. G. B. G. of N. Y. wrote:

"I am very glad to say that I received a check to-day from the D. Company in full payment of hay shipped them. Please accept my sincere thanks and appreciation of the service you so kindly rendered. Wishing you success, I am, very sincerely yours."

### Drugs in Drinking Water Fail to Kill Lice

MANUFACTURING and selling preparations for controlling lice, mites, ticks (blue bugs) and other external parasites of poultry by serving to the fowls in their feed or drinking water is a popular pastime of a number of concerns and one which the United States Department of Agriculture says should not be tolerated. A number of the mixtures advertised for use in controlling external pests by administering in the feed have been tested by the Insecticide and Fungicide Board of the department and all have been found to be ineffective.

Among the products which were offered as powders to be mixed with the feed are several containing mixtures of sulphur, charcoal, magnesium sulphate, ferrous sulphate, nux vomica, capsicum, sodium carbonate, naphthalene, lime salt, and sand. Some of the mixtures were lime-sulphur solutions to be added to the drinking water; some calcium sulphide tablets of various percentages and having quantities of other chemicals as well. All were tested and found to be ineffective for the purpose advertised.

### Violates a Statute

In view of these numerous tests the board has served notice on the manufacturers who may be selling or contemplating selling the above-mentioned products to be used in this manner for controlling external pests of poultry that they are guilty of violating the provisions of the

insecticide act of 1910, and that the products are misbranded. The board is of the opinion that these tests are sufficient to strongly indicate that such a method is ineffective and further that it is extremely doubtful if any substance will be found which will be effective when used in the feed, or drinking water. Tests have not been made of all of the mixtures advertised against all of the pests named, but, taking into consideration the tests which have been made and the anatomy and physiology of chickens, it is believed that it is unlikely that any of the substances proposed, or any combination of them, when fed to chickens will control any of the external parasites infesting them. These preparations are sold for the most part directly to consumers by parcel post.

### Something to Keep Shy Of

I am enclosing some literature and a letter from Alton P. Swoboda. Will you please give me an opinion on this man and his proposition?—J. A., New York.

Our advice to you is to leave Swoboda and his Valceniana Mine proposition alone. Mining stocks in the first place are of the rankest sort of speculations and unless you have some money to lose, keep away from it. This Valceniana mine is said to have produced millions of dollars and the shaft this Swoboda is back of is expected to produce millions more. Perhaps it will, but before it does, the chances are that you will lose your money. The stocks are not listed on the stock market and there is no market in case you wish to sell them again.

If you wish to invest your money to have your money work for you, put it in some good earning business and do not try to become rich in such a visionary proposition as Swoboda is putting out.

Swoboda is an old hand at the money making game. The Better Business Bureau of New York City has a very interesting history of him. It seems Swoboda has been an advertiser of some health cure. Years ago he was attacked by several newspapers for his advertising campaign. In spite of that, he has built up a clientele and obtained some 50,000 names. Undoubtedly he is using this list of names to float the stocks. His talk about not wanting to help rich men is a lot of idle chatter. It is ridiculous to think that a man would be so philanthropic as to scatter wealth broadcast. It is not reasonable to expect a man to divide his earnings with folks he doesn't know in the manner in which he describes. In fact, the very wording of his letter seems most ridiculous. When a man is selling investments and puts up the arguments that Swoboda puts up, it is a good idea to keep away from the proposition, unless you wish to lose the future use of your money.

\* \* \*

I am thinking of investing some money in the Frontier Mortgage Company of Buffalo, N. Y., and do not know if they are a good safe company or not to invest in. They claim to pay 8% interest on investments. Please let me know.—Mrs. W. J., New York.

We do not recommend this investment. Dealers in unlisted securities recently offered the units of one preferred and one common of this company at prices ranging from \$40 to \$60 while the corresponding bids were only from \$20 to \$54 a unit. You do not say what price is being asked by the people who are offering the stock in your vicinity. In any case we think you ought to take something more conservative.

\* \* \*

Will you please tell me if the Northwest Metals Corporation, E. A. Ward & Co., Buffalo, N. Y., is a reliable company and one safe for farmers to invest in? They sell stock in copper mines.—G. G. C., New York.

No, it is not safe for farmers or anybody else to buy stock in copper mines. This Northwest Metals Corporation about which you inquire is quoted in the unlisted market at 60c bid and 70c asked. The chances are the agent who is trying to sell it to you is asking a higher price than this. We do not recommend it at any rate.

# The Cave Men—

By Ellis Parker Butler

(Author of "Pigs Is Pigs")

(Concluded from last week)

THE summer moved along pleasantly enough. Bill kept the key of the cave and nobody was allowed in it without Bill in attendance, and nobody ever guessed the echo was dead, least of all Abundant. Two things worried me, however. One was that fat turtle of a Rance Titherweight, who kept pestering Abundant, and the other was the knowledge that in the fall Bill Saggerty would be going back to New York to put on his act.

About the middle of August I slipped up to New York again, claiming I had to see my doctor, and hunted around to find another ventriloquist to take Bill's place when he left, and I found an old man named Simeon Dearborn who was willing. He said he would come on the first of September, which was the day I understood Bill had set for leaving. When I reached our station in Carter County I picked up my grip and walked out to the farm. I cut across lots and went in the back way, and as I neared the house I saw Abundant on the side porch, her hands clasped on her breast and her eyes raised to a tree there. My, but she was a pretty picture! But that was not what stopped me short. A little bird—a sparrow, I guess—was hopping round on a branch of the tree, and every time it hopped it cocked its head on one side and looked at Abundant and said "Sweet heart! Sweetheart!" which is something a sparrow don't say. I wasn't fooled, I looked round the end of the kitchen and there was Bill Saggerty with a moon-calf look on his face.

"Enough! None of that!" I whispered, and I motioned him out to the barn to talk it out and have an understanding.

"Well, what?" he asked me, defiantlike. "I can't help what the little birds say, can I? If they think she is so sweet and lovely they just have to peep up and say so, how can I help that, Sam?"

"You'll help it," I said sternly. "Abundant isn't for the likes of me or you. She's a real girl. You get your pay this evening and you leave Carter County, Bill. That's the ultimatum with the bark on it."

"Why, no, Sam," he said. "No, it aint. Because I don't go. Because I stay right here. My act aint ready yet and I don't care if it never is ready. I may settle down here for good and all, with a farm and a cave and a wife—a wife, Sam—amongst the cows and the chickens and the little dickybirds that say what they might well please without any blue-gilled back-number sleight-of-hand in an butting in. You get the idea?"

"So that's how it is, is it?" I asked, getting red in the face.

"Just like that," a chicken answered, sneering-like, from where it was pecking seed on the barn floor. "Just like that, ain't it, Bill?"

"Seems so, chicken," Bill answered.

"Oh, well, if you've got all the livestock talking for you!" I said scornfully, and I turned away. "Only," I said, "I've hired a man to take your place down here, and you'll kindly hand me the cave key and go up and pack your trunk."

"Give him the key; what do you care?" grunted a pig, and Bill tossed me the key. I caught it on the fly and went on up to the house. Abundant was still there, looking at the little bird, and when she saw me she started and blushed.

"Why, Sam!" she said. "I didn't expect you!"

"I walked," I said.

Bill did not go. When I thought it over I saw he was right in one way, he had never said he meant to go before the first of September and I had no right to send him away; that was Abundant's business. Old Simeon showed up on the first of September and I gave him the key to the cave and explained the points of interest and tried him out on the echo. He did well enough. He was an old-styler and had a moustache to hide his lips, but he echoed as well as need be and I was glad

to see that professional jealousy made him sort of offish to Bill. They didn't mix.

"I thought Mr. Saggerty was going," Simeon said to me.

"Well, he said he was," I answered.

"Then he had better go," Simeon said dryly. "If he don't he will give this whole business away. Miss Abundant is likely to come on him any time. Just now he is out there making the ducks and the geese tell each other what they think of you and Rance Titherweight, and what a lovely person Miss Abundant is."

"Drat him!" I said. "He's in love; that's what is the matter with him."

You can imagine I was surprised when Bill came to me, not half an hour later, and held out his hand.

"Good-bye, Sam," he said. "I'm going. It is all off. I'm on my way. I asked her to marry me. Well, such is life!"

"No!" I exclaimed. "You don't mean you had nerve enough to ask her to tie up to a thing like you!"

"She thought the way you do, I guess," Bill said, with a sick grin. "She was sorry and all that, but it couldn't be. It's Rance Titherweight, Bill—no doubt of that."

"No!" I exclaimed again. "Not that fat slug! Did she say so right out?"

"More or less," Bill admitted. "I put it up to her and she would not deny it."

"Well, you just wait here," I said, "and don't you move until I come back. I'll settle this Rance Titherweight business. I know a thing or two about Rance Titherweight—"

I was off in a rush and I found Abundant without any trouble. I asked her

"Don't worry," I said sarcastically. "That's Bill. I'm going to tell you everything. And, first of all, I want to tell you that Bill is not half as bad as you may think he is."

"I don't," said Abundant. "I don't think he is bad at all."

"All right, then," I said. "First I want to confess that when that Bishop's Pulpit fell and killed your father it spoiled the seven echoes in your cave. It killed all seven of them; not an echo was left. And you know what that meant to the cave. It ruined it."

SHE simply stared at me.

"Yes," I said, "I know what you are thinking. The cave has kept right on echoing. That's right enough, but I'm to blame for that. I was a coward and held back the truth from you, and I went up to New York and hired Bill for you, and Bill is a ventriloquist."

"He is a——?" she asked.

"Ventriloquist," I said. "A voice thrower. And old Simeon is another. I thought I could keep the dead echoes from your knowledge and let Bill take the tourists through and do the echoes for them."

"But why?" she asked.

"On account of Rance Titherweight," I said, "and on account of you being alone in the world and unable to support yourself and all. I don't expect you to forgive me, but that don't matter. I thought I was doing right."

"But why should you do it for me?" she asked.

"Because," I said, right out flat, "this cave without the echo is not worth the powder to blow it up, and Rance Tither-

he would make all kinds of trouble for you. So I had Bill come and it all worked well. And it will continue to work well. Simeon is not as good as Bill at voice-throwing, but he makes a good enough echo. So why don't you just let things go on as they are?"

"Am I not going to?" she asked.

"Well, no!" I said. "I don't think you are, and that's the trouble. You're going to marry Rance."

"Who said that?"

"Bill did. He practically said you said so."

She did not deny it. She looked at the white hen and at the late-hatch chickens and said nothing.

"All right then," I said, taking a new grip in my courage, "I ask you not to marry that Rance fellow. He's a crook and a slimy character and you'll be unhappy every day of your life. Take Bill instead. I know Bill and I know he is better than most fellows. Give him a chance. Don't turn him down the first shake out of the box. Let him have a chance to show you what a real man he is."

ABUNDANT looked out across the grass patch. She let her hands rest in her lap. It almost broke my heart, she was so sweet and pretty and innocent. I could hardly bear to look at her pretty mouth with her lips just parted like two rose petals. And then that fool hen had to speak up again.

"Bill has no chance," the hen said. "She don't care for Bill at all. If I were a man——"

"Drat you!" I cried, and I raised up and felt for something to throw. I had nothing but my hat, and I threw that. The hen squawked and scattered away.

"I'll go round and paste Bill one in the jaw in a minute," I said.

Up in the tree a sparrow fluttered from one twig to another.

"Sweetheart! Sweetheart!" it chirped in real words.

I looked out and down the road, too far to throw his voice to us, was Bill—going to the station to buy a ticket, I suppose. Over in the cave lot, almost as far away, was old Simeon. I looked at Abundant again, and she was just as before, looking out across the lot, with her lips just parted. Then the old white hen came back a step or two and looked up at me doubtfully, not knowing whether I would throw another hat or not.

"Excuse me," said the white hen as meek as Moses, "I just came back to say that if I were a man and cared anything for a lady I would speak for myself."

I swear I was trembling all over. I turned to Abundant and put out my hand.

"Could you!" I stammered. "Could you love me, Abundant?"

She gave a sort of sob and put both her hands in mine.

"Oh, Sam? You are such a fool!" she said, and then we laughed and everything was all right forever.

"And how was I to know you had the voice-throwing trick yourself?" I asked her some time later, when things had loosened up so that I had only one arm round her.

"As if father would figure to leave me a cave as a legacy without preparing me to keep the echo going?" she cried.

That's all. Jed had never been a voice-thrower himself. There never had been any real echo in Seven Echoes Cave. It is simple enough when you know the trick; Abundant taught me in less than a week. Since she has the children to look after I show the visitors through the cave myself. We are prospering nicely and next year when I get the last of the mortgage paid off, I'm thinking of putting in an extra echo. I won't change the name of the cave but I believe in giving full measure and running over, my own blessings, so to speak, having been Abundant.

"Very well! Very well!" said the white hen. "Don't get excited"

if she could spare a couple of minutes and we went out on the side porch and I made her take a seat. I hesitated awhile, trying to get things straight in my mind, so I could say them in the proper way.

"It's like this, Miss Abundant," I said finally, "I've been cheating you. I've been fooling you and playing a trick on you. I'm ashamed of it and I confess it, but I did think I was doing the right thing and that is my excuse."

JUST then a chicken came along, pecking at the grass out in front of us. It was a white chicken, a hen, and along behind it came half a dozen chicks, a late season hatching of them. The hen started to come up on the porch.

"Shoo!" said Abundant.

"Very well! Very well!" said the white hen. "Don't get excited."

"My gracious!" Abundant cried. "Am I mad?" and she looked up at the tree where the little bird had said "Sweetheart!" the day I came back from New York.

weight was making eyes at you. Suppose you married him—he would find out the cave was worthless and he would treat you mean."

"Treat me mean?" she asked. "Don't you think he cares for me for myself, then, at all?"

I did not answer that; I did not like to. But the white hen did.

"Not a bit, the fat serpent!" the white hen seemed to say. "He don't care a darn for you."

"Excuse me a minute," I said to Abundant, "I'm going to find Bill and knock his head off. I won't have him butting in on this conversation."

Abundant put out her hand.

"No, don't!" she said. "What does it matter?"

"Very well," I said. "I'll go on with my story. I thought, if Rance married you you would be unhappy, and to marry him seemed the only thing you could do. If you did not he would foreclose the mortgage and throw you out, and then he would discover the echo was dead and

# Improvising Emergency Equipment for a Sick Room

*Make-Shifts that Aid Convenience—Child Training—Short Cut Hints from A. A. Readers*

WHERE illness occurs in the home, there are certain conveniences which may be very helpful and at times almost necessary, but which one does not feel like buying, especially where the illness is not expected to be of long duration. The following suggestions may be of help to many who are confronted with these sick-room problems, as most of us have been at some time or other.

An emergency table can easily be arranged where there is a sewing machine that has a drop-head. Open the machine and push the leaf over the bed and it serves as a convenient table for the invalid. A square of rubber or oil-cloth under a white cover will protect the wood from hot dishes or glasses and also make it look attractive.

For heating broth, milk or a small amount of water in the sick room, the following method will serve nicely. Make a wire frame, about four inches in diameter, shaped like a wheel, using a strong but light wire for the foundation and running across the circle both ways with lighter and finer wire, wrapping it firmly around once at each intersection. This device placed over the chimney of an ordinary coal oil lamp will allow of the placing of a tin or aluminum cup over the flame of the lamp where its contents will become heated.

Then you can also construct an emergency refrigerator. A flower pot wrapped in a wet cloth and placed over a plate or dish will keep the contents as cool and firm as if set on ice, and milk will not sour if the utensil containing it be wrapped in a wet cloth.

## Use an Umbrella to Avert Drafts

An improvised screen may be made of a clothes-horse with a blanket thrown over it; or an umbrella may be raised and so placed that it will quite effectually shield the patient from drafts.

In cases of sudden injury, if the patient must be put right to bed and a rubber sheet or large piece of oil-cloth is not at hand, try using old newspapers under the sheet to protect the mattress from blood and medicine stains.

A small cream pitcher is an excellent thing to use in giving fluids to patients who are too ill to be raised up.

Very often friends bring flowers to the patient. Sometimes the stems are very short as with pansies or violets. To arrange short stemmed flowers, cut a piece of wire netting to fit the top of the dish in which the flowers are to be placed and stick the stems through the meshes. With this arrangement the net may be lifted and the dish refilled with water without disturbing the flowers.

## Cooperate With Nature

"GOODNESS, taking care of children means spending all your time making somebody do something he doesn't want to do," exclaimed young Mrs. Lane as she took Daddy's letter-opener from the baby and motioned Billy and Sister to go on picking up blocks and toys.

"Oh, I hope it is not as bad as that!" her mother laughed comfortably.

"But how did you manage, mother, when there were six of us to get into mischief? It must have been Bedlam."

"I suppose it was noisy, and I don't doubt that I was sometimes worried—and cross. But I have forgotten that part of it. That is one of the nice things about growing old—you forget so much that is unpleasant."

"But about the children—I learned one thing, and it was that Mother Nature keeps a firm hand on all her babies and is quite determined they shall grow up to be normal, healthy human beings. So that working against Nature is very much like swimming up-stream, while cooperating with her makes the care of children comparatively easy."

"I don't know what you mean," the daughter confessed.

"Well," explained her mother, "I have decided that all children pass through certain stages of development, and during each stage it is especially easy to teach them certain things."

## How the Child Develops

"Of course, at first, the baby's attention is chiefly occupied with learning to manage his hands and feet. We do not usually interfere with the process, though sometimes people urge a baby to walk too soon."

"Usually the four-year-old has learned to use his hands and feet. Movement of the arms and legs is what he wants, and he imitates his mother as she works about the house. During this period children can be taught habits of order and cleanliness which will stay with them all their lives. Though too small to do actual work, they are pleased to do little, step-saving tasks for mother, if the task is a matter of imitation. This imitative age is a period of golden opportunity."

"Right on top of this lovable age comes the individualistic age, when, almost overnight, the child becomes distressingly selfish. He wants the best of everything for himself and will fight to get it. He wants attention and will try to gain it by showing off. He bullies the younger children and teases the older. He becomes a family nuisance, and his dis-

bility. The child asks innumerable questions, and your greatest possible mistake is to ignore, ridicule or evade these questions. Give truthful, serious answers, drawing him out when you suspect that some troubled thought lies at the bottom of the questions.

"Besides these there are other—but, mercy, child, see what time it is! If I sit here lecturing, James will find no dinner when he comes home."

## Uses for Left Overs

**Potato Nests.**—Take left-over mashed potato and form into nests, brush the outside and around the edge of each with melted butter. Into each nest put a mixture of ground steak left from dinner or any kind of meat will do. Bake about fifteen minutes, basting frequently with a little melted butter or dripping of beef. Carefully arrange around the outside edge of a platter and fill the center with peas, prepared in a thickened white sauce. This makes a good supper dish.

**Beef Patties.**—Take left-overs of beef, and run through food chopper. To one cup of beef add half a small onion chopped fine, one egg, two tablespoons of milk, salt and pepper to taste. Mix well and form into small cakes. Fry until nicely

seasoning on each layer. Cover with water and bake forty minutes.

**Eggs and Tomatoes.**—Take the tomatoes left over from dinner; add a good pinch of soda, a bit of butter, salt and pepper and a few cracker crumbs. Let them boil. Scramble six eggs, put on a hot platter and pour tomatoes over them. This is a delicious supper dish.

**Turnip Cakes.**—Mix well together equal parts of left-over mashed turnips and potatoes; season to taste. Allow one egg to each two cupfuls and one-half cup of bread crumbs. Form into small flat cakes, roll lightly in flour, spread with soft butter and bake in a quick oven to a pale brown.—Mrs. R. C. DELANE.

## Using Up Soap Scraps

THOSE untidy scraps of soap, too small to use and too large to throw away!

Put them all into a baking powder can and cover them with water. Perforate the cover of the can, fasten it on tightly, and set where it will be handy at dish-washing time. You will always have some nice soft suds to shake into your dish water, and you will be saved the "fishing around" for those elusive pieces of soap.

Always re-cover your soap with water after using the suds.—Mrs. L. H. BROWN.

## A. A. Readers Suggest That—

First aid to the home laundress is found in an old baby carriage or a child's express wagon. Use it to trundle the heavy basket of clothes which are being hung on the line.

\* \* \*

A moment spent in the preparation of the butter will save much time in the spreading of sandwiches. To soften the butter without melting it, pour hot water over a bowl and suitable earthenware cover. When these have been dried place the butter in the bowl and cover tightly. In a short time the butter has become softened. Stir it with a warm spoon until it becomes creamy, when it may be spread upon the bread evenly and without waste.

Not only is less butter required when handled in this way, but the sandwiches are better.—ALICE MARGARET ASHTON.

\* \* \*

If the waxed paper in a package of raisins sticks to the raisins, place them in the warm oven for a few minutes and the paper readily peels off.

\* \* \*

Peroxide will remove stains from white kid gloves and shoes.—Mrs. W. H. H., Va.

\* \* \*

Vegetable soup is a favorite. Season it with a piece of salt pork or smoked bacon and add a little sugar to soup. Very delicious prepared this way.

\* \* \*

Use for old felt hats. Never throw away a light colored old felt. It makes the very best of wicks for lanterns or lamps. Cut in strips the width best suited for the burners for which they are intended.—Mrs. R. V., N. Y.

\* \* \*

To sharpen the knives of the food chopper, run a few bits of sapolio through, as though grinding food.

\* \* \*

Lay a damp cloth over a jar containing cookies, doughnuts, bread, or any food you wish to keep from drying up, then put the jar-cover on. The food will be fresh-tasting until used up.

\* \* \*

When you break a spring clothespin save the pieces to use as dishscrappers. They do not scratch, but clean dishes nicely.

## INDOORS AND OUTDOORS, SUMMER AND FALL

No. 2118 is the sort of house dress that always looks presentable. Made of percale, trimmed with rickrack braid, it is perfectly suitable to wear into town or to the neighbor's. It comes in sizes 36, 38, 40, 42 and 44 inches bust measure. Size 36 takes  $3\frac{1}{2}$  yards 36-inch material. Price, 12c.

No. 2050 is another indoor and outdoor dress of simple lines and useful style. It also comes in a wide range of sizes—16 years, 36, 38, 40, 42, 44 and 46 bust measure. In a medium size the pattern uses  $3\frac{1}{4}$  yards of 40-inch material, with  $\frac{3}{8}$  yard contrasting. Price, 12c.

A new and attractive one piece apron is No. 2176, which has a loose sleeve effect that protects but does not crush the dress under it. This pattern cuts in one size and requires  $1\frac{3}{4}$  yards of 36-inch material. Price, 12c. Flat iron transfer 700 (blue only) 15c extra.

**TO ORDER:** Write your name and address clearly, also pattern numbers and sizes. Enclose correct amount in stamps and send to Pattern Department, AMERICAN AGRICULTURIST, 461 Fourth Avenue, New York City.

**FALL AND WINTER FASHION MAGAZINE.**—It will be the finest we have ever issued with hundreds of clothes designs, dressmaking lessons and Christmas gifts. Send 10c with your order and we will send you a copy as soon as it is off the press.

couraged mother wonders what she has neglected to do for Johnny that he should get so far beyond control. It is not her fault, though. Mother Nature is preparing him for the battles of life; she is teaching him to think and act for himself.

## Dame Nature Goes Right Ahead

"That the process is painful to his parents and friends does not influence the old Dame for one instant. She knows what she is doing. Soon his selfishness will be controlled by conscious self-denial, and Johnny will begin to show real character. His boastful contrariness, which challenges every statement, will soon be tempered by reason."

"There are many things you can teach him at this age. He appreciates praise and will spend tremendous energy to gain it. He can be taught to take responsi-

browned on both sides. Then slice the remaining half of onion into the dripping left in frying pan and a tablespoon of flour. Stir well into the dripping then add the liquid from one can of tomatoes; season with salt and pepper. Cook five minutes, pour over meat cakes and serve.

**Corn Fritters.**—Beat three eggs very light, and three-fourths cup of sweet milk, salt and pepper to taste; add 1 cup of left-over canned corn, 1 cup of stale bread crumbs. Drop by spoonfuls into smoking hot lard and fry a delicate brown and serve immediately.

**Rice With Meat.**—Two cups of cold boiled rice, 1 cup of ground left-over corned beef, 1 cup of hot water, 1 tablespoon of butter, salt and pepper to taste. Into a casserole put a layer of rice, then a layer of meat with small bits of butter and

# The "Dreamy" Child Again

An Answer to Aunt Janet—Save Mending Time

If my children showed signs of restlessness or "dreaming" I'd hunt around for something to interest them. And if children are brought up to be grateful for small gifts and favors and to appreciate what is done for them they will quickly respond. "The boy may detest the daily grind of putting in, caring for and the harvesting of crops—but give him an interest in the potato crop and note the change!" Dad should help him work his share as he is helping Dad, and when the crop is sold by no means have it "Johnny's calf and Pa's cow." The girl will sing gladly at the housework if a few cents are paid her daily. Try hanging a list in the kitchen for daily use something like this:—for every 15 dishes washed and wiped one cent, every 10 pieces ironed one cent, chimneys washed 2 cents, stove cleaned 2 cents, etc. Let her use this money for music books, ribbons and so on.

When she helps you with the sewing, give her a towel for every dozen she

oldest ones work here and there about the place much as they wish, and he finds the work accomplished just as well and plenty of interest. He also follows out their ideas in regard to seed sometimes and occasionally grins behind the ears when he gets a little advice. At my end of the partnership the housework goes along with plenty of interest and the extra meals outdoors and picnic suppers are as much a pleasure to us as a wayside inn to a weary autoist. Take the children along to town occasionally—anyway often enough to keep the rough edges smoothed off—and let them help do the trading, too. To keep their nature sweet we forbid tea and coffee until school days are past. We've told the boys we hope they won't smoke but if they want to, do so at home and not slyly behind the barn.—PATSY'S WIFE.

### On the Mend

WHEN overalls begin to wear thin on the knees, cut the legs off close to the body, and sew them on again on opposite sides of the seat, so that the back of the legs will come in front. The resulting seam will not shorten the legs appreciably, and will look much better than a patch. When the new front grows thin, rip the leg up the outside seam, cut away the thin and worn parts, and patch with a generous piece from the lower back of the legs of another old pair of overalls. Do the sewing on the machine, and stitch up the outside seam again. You will have added many days wear to the overalls, and also have saved yourself weary work, in addition to which, the overalls will not

### What Food for the Child?

**RIGHT:** Well cooked cereals, milk, eggs, except when over-cooked; ripe, clean, fresh fruits; stewed or baked fruits; bread and butter; simple puddings and desserts—junkets, corn-starch, tapioca; plenty of water; simple cake or cookies.

**WRONG:** Any poorly cooked food; fried food; pastry, strong vegetables; rich cakes and puddings; candy or sugar between meals; nuts unless ground to paste; tea, coffee, soda water, fresh rolls or hot breads.

### THE BETWEEN-AGE GIRL

No. 2104 suits the awkward-age girl to a T. If fact, she needn't appear awkward at all if comfortably and sensibly clad. Printed or plain voile, gingham or linen would make up prettily in this style. No. 2104 cuts in 4, 6, 8, 10, 12 or 14 year sizes, and the 8 year sizes take only 1½ yards of 36 or 40 inch material. Price, 12c.

Order from Pattern Department, AMERICAN AGRICULTURIST, 461 Fourth Avenue, New York City.

look so patchy as they would if mended by the old method.

If your family is not abnormally tender in the feet, you can save hours of darning by this method: draw the edges of the hole together with a smooth over and over stitch, using a medium darning needle and fine cotton. Take care not to pucker the ends of the seam, then darn back and forth across the seam until it is smooth and well covered with stitches. This is much quicker than filling the hole with solid darning, and to my mind, is not more irritating to tender feet. If a hole is too large to darn, patch with pieces cut from the tops of old stockings, whipping the raw edges down without turning them under, either on the right or wrong side. This will make them lie smooth, and look better than if the edges were turned.

### Darn on the Machine

To darn holes in table linen, sheets, aprons, or anything which can be sewed on the machine, baste a thin patch under the rent, then stitch back and forth over the rent with a loose tension. Tie the ends of the threads so there will be no ravelling, and it will look as well as

### Dad Can Play After Work Is Done

Back to that boy again—What boy doesn't love to fish, play ball and skate? Dad can practise with him a bit and help him to these ends after certain crops are cared for, wood cut, or whatever the work and season. And you parents of small children, pay them as they work. Give the little fellow a penny for every armful of wood, pail of chips, etc.—pay him daily and provide a good pocket book and note-book for his use. Then insist on his buying his own clothes and if there is any over let him buy a tool, ball, boat or whatever is uppermost in his childish heart. Some of you will say "Why I have to foot the bills anyway, why all this nuisance and bother? I had to work when I was young and I didn't get paid for it either." Just try it first and note how quickly the child will learn to count money and make change, keep accounts and furthermore take good care of what he gets. It will be no great pleasure for him to buy more shoes when he wants a cap—and if he is taught how to care for his shoes and to wear rubbers when necessary, he is going to do it, for he knows at what cost they were purchased. Then, after all, allow a little time for dreaming. Many great people were dreamers in their youth unsurrounded by luxury and begrudged their first efforts that have meant so much to mankind. And if something does develop, encourage their efforts and be glad you have an opportunity.

### They Even Give Good Advice

I might add, too, that we have worked up our farm also, and the growing interest of the children. Their father sometimes lets them plan the work and lets the

# "For Better Heating" ANDES FURNACES

The Andes 1-Pipe Warm Air Furnace has two water pans of 7½ gal. capacity that furnish genuine humidity to the home. Evaporation of 7½ gal. a day will save the furniture and protect health.

Stove, Range or Furnace Catalogs on Request

PHILLIPS & CLARK STOVE CO., INC., GENEVA, N. Y.

Manufacturers since 1868 of the famous Andes line of Coal, Gas and Combination Ranges and 1-Pipe, 3-Pipe and Pipe Furnaces.

though you had spent long hours darning it by hand.

Jagged tears in wool or heavy silk may be mended by the use of tailor's adhesive tissue, if the goods is dark enough to conceal the stain of the gum on the tissue. Follow directions on the package, placing a piece of the material first, then a sheet of the tissue, and last, the garment, with the rent drawn into place. Apply a warm iron, not hot enough to snap, until the gum is dissolved and the patch adheres. Do not attempt this with any save dark colored goods, such as brown, black, navy blue and very dark gray.—ADA CARROLL WORTMAN.

### Cretonne For the Bedroom

WHEN I was a girl I longed for a bedroom daintily draped with chintz that was strewn with moss rosebuds like those on the rosebush in grandmother's garden. Recently my longing was gratified, only instead of rosebud chintz it was cretonne, gay with impossible blue birds perched in bushes strange even to the imagination of a Burbank.

Of this cretonne I made short drapes across the top of the windows, a drape for a bookshelf, and a long strip to use for pillow shams. This was in one piece and was hemmed on both edges, the upper one being folded over the tops of the pillows. It harmonized with my white crocheted bedspread lined with blue, the color of the birds in the cretonne, and did not soil with the handling necessary in taking it off at night and replacing it the next morning.

But my cretonne-covered hand mirror was the thing of which I was proud. The mirror was obony-backed and did not match anything else in the room. The mirror was of good beveled glass and I kept it, a discord among my ivory pieces.

To cover the mirror I cut two pieces of the cretonne a seam larger than the frame of the mirror, using the cloth so that a blue-bird came in the center of the back of the hand-mirror. I sewed the pieces together on the machine, leaving an open space at the large end to slip the mirror in. This opening I sewed over and over. On the glass side I cut the cretonne away, leaving a width of a seam next to the frame. This I turned in and glued down so that the cretonne covered the frame only. Thus I converted an ugly toilette article into a really attractive ornament for my dresser.—JANE V. ROACH.

### Cheese Dream

CUT the desired number of thin slices of bread, trim off the crusts and spread half of them thinly with French mustard. Cover mustard with a thin slice of American cheese, sprinkle with salt, paprika and a few grains of cayenne; cover each with another thin slice of bread. Press together, cut in half lengthwise and saute a golden brown on both sides in equal parts of butter and lard.—MRS. J. W. RAY.

### Nut or Raisin Bread

¾ cup sugar 1 cup chopped nuts or raisins  
1 egg 4 cups flour  
1 cup milk 4 teaspoons baking powder  
1 teaspoon salt

Sift all dry ingredients. Then add milk, eggs and nuts or raisins. Put in pan and let rise for ½ hour before baking or put in gem pans and let rise five minutes and bake from fifteen to twenty minutes.—MISS ZEAH E. BERDAN.

When baking put some salt in the oven under your baking tin. It will prevent any sticking on the bottom.

# Reviewing the Latest Eastern Markets and Prices

## MILK PRICES ADVANCED

**T**HE Dairymen's League Cooperative Association announces the following prices for the month of August for milk testing 3% in the basic zone of 201 to 210 miles from New York City: *Class 1*, milk used chiefly for fluid purposes, \$2.60 per 100 pounds; *Class 2A*, used chiefly as fluid cream, \$1.90. If skim-milk is used for any other purposes, additional payment over this base price is added depending on use. *Class 2B*, used chiefly in the manufacture of plain, condensed milk and ice cream, \$1.95; *Class 2C*, used chiefly in the manufacture of soft cheese, \$1.95; *Class 3*, used chiefly in the manufacture of whole milk and sweetened whole condensed milk, powdered and evaporated whole milk, \$1.55; *Classes 4A and 4B* based on butter and American cheese quotations on the New York market.

The *Class 1* price becomes effective August 18 and represents an increase of 54 cents over last week's prices, an increase of slightly more than one cent a quart. At the same time *Class 2A* was increased from \$1.80 to \$1.90.

### Sheffield Producers

The Sheffield Farms Company Producers announce the following prices for August for 3% milk in the 201 to 210-mile freight zone. *Class 1*, \$2.10 per 100; *Class 2*, \$1.70; *Class 3*, \$1.55; *Class 4* to be determined by market quotations of butter and cheese.

### Non-pool Cooperative

The Non-pool Dairymen's Cooperative announced that the August price for *Class 1* milk is \$2 per 100 pounds. We have received no information that indicates any change in *Classes 2, 3A and 3B*. In July these classes were priced as follows: *Class 2*, \$1.70; *Class 3A*, \$1.60; *Class 3B*, \$1.45.

### Interstate Producers

Interstate Milk Producers Association (Philadelphia) receiving station price for August for 3% milk in the basic zone of 201 to 210 miles from Philadelphia is \$2.19. In the 101 to 110-mile zone the price is \$2.29.

## NO CHANGE IN BUTTER MARKET

During the past week there has been little change in the butter market. There has been more or less of an easy tone, with occasional flights up and down, but prices are about the same as they were last week. The few occasions when the stronger tone was in evidence were primarily due to the fact that offerings were showing poor quality and there was an apparent shortage of inspected extras for open market trading for that immediate moment. Consumptive demand right now is at low ebb. As soon as any heavy arrivals are reported, there is a general pressure to sell with the result that an easy condition persists and temporary weaknesses are soon felt. There has been some speculative buying during the week.

The butter that is going into storage now is record-breaking. According to the U. S. Department of Agriculture, the amount of butter in storage on the first of August was 133,402,000 lbs., while on July 1, there were 74,184,000 lbs., an increase of 59,218,000 lbs. On August 1, 1923, there were 101,774,000

lbs., in storage, 31,628,000 lbs. less than this year at the same time.

Production has been holding up unusually strong and receipts have been unusually heavy for this time of the year. Advices still indicate favorable conditions for production. There is one satisfactory outlook and that is that some invoices for the immediate market are lighter from some sections.

The foreign butter market is very firm. Foreign butter that is held in bond in New York cold-storage houses, is being exported to English markets. This foreign situation helps out local conditions materially. If the foreign situation were weak and we had to face the competition of foreign butter we would be taking lower prices for our butter now than we are.

## CHEESE MARKET FIRM

The cheese market has been firm all week. Trading has not been anything more than quiet, but conditions up-State show that the situation is very firm. Advices from up-State indicate decrease in production and a very few lots of New York State flats are coming through. The reduction in "make" and the firm condition at primary points in the East have created such a situation, that as soon as there is any demand we will undoubtedly see an increase in prices. Any revival in demand right now would force a demand on average run lots without a question, although there is still stock available at 19½¢. The demand is chiefly for strictly fancy stock. New York State whole milk flats, Junes, fancy to special are quoted at 21 to 22¢ for both white and colored, while anything that grades from fresh fancy to fancy special is quoted from 20 to 21½¢.

## FANCY EGGS IN DEMAND

All week fancy near-by white eggs have been in light receipt and consequently the market on this grade of merchandise has been strong. This grade of goods is in very light receipt, the majority of arrivals showing the effects of hot weather. Shrunken yolks are not the only complaints, some eggs even showing that they have been partially incubated. It is very evident that country production of very fancy eggs is falling off because summer resorts that formerly obtained their supplies from local poultrymen are now buying from New York's receipts.

As a matter of fact, receipts have been decreasing right along and are now running considerably behind those of last year. New York dealers are using a good deal of storage stock which is replacing some grades of fresh eggs, of which there are some accumulations.

However for fine to fancy quality there is a very strong demand and considerable inquiry and sales of such frequently made above top quotations, indicate that fancy goods will continue to advance.

This is a challenge to poultrymen to select their eggs extremely closely not only for size and shape but for interior quality. During these hot days eggs should be collected two and three times a day and stored in a very cool place. Eggs should be expressed over the shortest route and preferably at night to avoid

standing on platforms during the heat of the day. Another thing that poultrymen have ignored of late is the fact that because it has been cool up-State is no indication that it has been cool in New York City. On the contrary extreme heat has been the order of the day in the Metropolitan district.

Storage figures at this time are very interesting to compare with those of 1923. On August 1, 1923, there were 10,509,000 cases of eggs in storage. On August 1, 1924, storage holdings totaled 9,264,000 cases or 1,245,000 cases less in storage this year than last year. **This condition is healthy and is indicative of a good price outlook for this winter.**

## LIVE POULTRY MARKET STRONG

Receipts during the week ending August 16 have been unusually light which with an active demand has resulted in very strong situation ruling the market. The shortage of stock has advanced the market on fowls 3 or 4 cents during the week. Just how long this condition will exist is hard to say, but at the present time the situation is very favorable. Freight receipts have been in the main responsible for the situation. Daily carlot arrivals have not been too heavy but what they were all unloaded daily. Carryovers have been uncommon this week. As a rule values all along the line have been higher both on fowls and chickens, and stock has been clearing closely by each noonday.

## POTATOES SLIGHTLY FIRMER

There has been a slightly firmer tone to the potato market this week compared to that of last week. The firmness, however, is more in the sentiment and feeling in the market rather than in price. As yet there has been no material change in quotations. Long Islands did go up a little as well as receipts from the Freehold section in New Jersey. Freehold potatoes last week were \$1.50 f.o.b., while this week they are quoted mostly at \$1.80, although some figures are still below that. Loadings down there are light. Some Long Islands are bringing \$2.75, but very few others are found at that figure, most of them going at \$2.50. As a matter of fact, very few Long Island potatoes are reaching the market as the growers in Nassau and Suffolk Counties have about quit digging until they see a chance for slightly better prices.

The stronger feeling in the market is undoubtedly due to somewhat lighter receipts from points farther south. Maryland and Virginia shipments are lighter. Were it not more or less for the indifferent demand, which has been light all week, we would undoubtedly see a much better market.

## EARLY APPLES PLENTIFUL

Prices have followed a general downward trend on early apples due primarily to more liberal receipts. Dutchess are now in the neighborhood of from \$3 to \$4 per barrel whereas a week ago they were easily bringing \$5 a barrel. Basket stock is anywhere from \$1 to \$1.50. This decline is not alone due to heavier receipts, however, as quality has had a tendency to fall off as well as the average size.

New Jersey growers are getting the cream

of the market; in fact, they are getting a premium for their Jersey Jerry Brand apples, packed under very strict grading rules. The association is also merchandising their stuff very well. Jersey growers are giving fruit men in other parts something to think about.

The foreign market is offering a very good outlet for apples and the foreign situation in general is very healthy and the outlook particularly good. Advices state that the English crop of apples is a complete failure. Recent shipments to England have netted shippers \$5.50 a barrel f.o.b. New York for Dutchess. There seems to be a pretty good demand for Wealthy for export. Your reporter was talking to one of the large apple operators in New York on the 15th and he said that the entire foreign situation was particularly good and the outlook very favorable for the growers.

Pears have been in fairly light receipt from the Hudson Valley. Clapp's Favorite have been bringing anywhere from \$2.50 to \$3; small stock as low as \$2. Belles from \$1.25 to \$2. Clapp's Favorite by the barrel are bringing from \$6 for small stock up to \$7.50 and \$8 on better grades, while Belles are bringing anywhere from \$3.25 to \$4.50, depending on size and quality.

## HAY MARKET QUIET

There has been nothing unusual about the hay market this week. Prices and the market in general have been firm on high grades and easier on lower grades. During the week there has been a little better movement of low grade hay. New hay is selling anywhere from \$25.00 to \$27.00 a ton. Receipts of new hay still show the effect of heating.

## GRAINS AND FEED

According to New York State Department of Farms and Markets, the following prices prevailed August 9.

Corn again went up to new high levels on August 14. This sharp advance is due to reports from Illinois and Michigan that frosts have been experienced. Many sections report that the crop is not making progress. These reports induce heavy buying. Old corn continues to hold strong as farmers are not selling until they know more about the condition of the new crop.

New York cash prices f. o. b. on No 2 hard winter wheat \$1.42; No 2 red \$1.42.

The quotations given in this report show the approximate prices at which feed can be purchased per ton, and grain per bushel, in straight carlots through billed from Western points, delivered on track at points in the freight zones as indicated. Mixed carlots cost approximately \$2 per ton more.

Retail feed and grain prices vary with different local dealers depending upon their individual cost of doing business, volume handled, etc. In the case of feeds the retail price may sometimes be as high as \$5 per ton above the wholesale prices given in this report.

Beet Pulp...	38.00	38.60	37.60	37.10	35.90

Since Buffalo is an important milling center for wheat feeds and linseed meal, quotations are given for this point on both a through-billed and a local basis. Ground oats \$42; spring wheat bran \$27.50; hard wheat bran \$30; standard middlings \$29; soft wheat middling \$34; flour middlings \$34.50; red dog flour \$40; dry brewers grains \$33; white hominy \$44; yellow hominy \$43; corn meal \$47.50; gluten feed \$41.25; gluten meal \$49; 31% old process oil meal \$45.50; 34% old process oil meal \$46.

For points taking New York rate add to Albany price ¼ cents on oats; ¾ cents on corn; 10 cents on cottonseed meal; and 20 cents on other feeds.

## MEATS AND LIVE STOCK

The market on live calves has been fairly firm this week with the trend indicating an increase in prices. Prime veals are now selling as high as \$14.00 with fair to good stock turning at \$12.00 to \$13.00. This is on the average from \$1.00 to \$1.50 better than for the past several weeks. The market is also firm on live lambs. A few strictly choice lots reach \$14.50, although most sales are going at \$13.00 to \$14.00. Common to medium spring lambs are quoted at \$9.00 to \$11.50 while culls are down to \$8.00 and \$9.00. Live hogs are not turning rapidly. Light to mediums are quoted at anywhere from \$10.50 to \$10.85 per hundred pounds. Hogs are advancing on the Chicago market.

Due to the fact that the vegetable market changes so rapidly, about the only way to keep in immediate touch is to get a hold of a radio and get the daily market quotations broadcast by American Agriculturist and the Department of Farms and Markets from Station WEAF at 10:50 A. M. Standard Time.

## Quotations From Eastern Markets

# How Right Feeding and Culling Paid

The Experience of a Man Who Made a "Side Line" Into a "Main Line"

W. E. FARVER

SEVERAL years ago when the agitation for better poultry struck this section, our county agent made an attempt to interest a number of farmers and poultry-keepers in culling their flocks and keeping flock records. This proved to be slow work, but gradually more and more fell in line until to-day Holmes County is pretty well dotted with culled flocks and more modern poultry houses.

Dozens of good stories could be found, but I have just obtained the experience of Amos Heffelfinger, a farmer of this county, who kept a number of hens as a side line, and hoping his experience will serve to show some inspiration to others, I pass it along. According to Mr. Heffelfinger, this is the third year they are keeping poultry records. Through the efforts of our county agent he was led to begin keeping flock records and to cull his flock, "so as to get only the very best laying hens."

## Grew Into the Game

Poultry raising apparently looked good to Mr. Heffelfinger, as the first step consisted in purchasing 1000 baby chicks from a local hatchery. These were given a good start and well cared for along methods and systematized care, which will be given later in this article. Before this Mr. Heffelfinger had not given his attention so largely to poultry, but following this plunge with a thousand White Leghorn chicks, he "just grew into the game."

In the first four weeks about 35 chicks were lost which about constituted the loss for that season (1922). When the season was over there were 450 White Leghorn pullets ready for winter quarters and no place ready for them. There was a house on the premises but it was far too small and not up-to-date. There was only one thing to do and that was to build, and build the Heffelfingers did. By a lot of hustling and hard work a new house sprang up in time to shelter those 450 White Leghorns before the cold weather set in. It was built 22 feet wide by 80 feet long. Windows were used in part and curtains in part. In the 80 feet of length are ten windows 2 feet by 3 feet in size. These furnish sufficient light when the curtains need be lowered, which is done only in the most inclement and severest weather.

Water and milk are fed liberally from vessels placed on elevated stands. It has been the experience of Mr. Heffelfinger that by using the reel-type of mash hopper on a stand there is no waste, no clogging and no scratching of

dirt into the mash. The water and milk fed on the elevated water stands is also kept clean and the time and labor required to build these inexpensive hoppers and stands have been paid many times in the benefits received.

## Uses Plenty of Mash

Mr. Heffelfinger uses the Ohio dry mash ration which consists of a mixture of 100 pounds each of bran, middlings, tankage (60%), ground oats and cornmeal, all well mixed. This is kept before the birds in the feeders all the time. A slight amount of salt is added to the mash. Grit, oyster shell and charcoal may seem like very small things but Mr. Heffelfinger believes in taking care of the little things, for upon such are the bigger elements of success built. He believes like the business man who not long ago said, "It is a fine thing to land a big contract, but my books show that I have paid the butcher and baker and all the rest out of profits made on a large number of small jobs," so the small details are not overlooked.

In the morning Mr. Heffelfinger feeds a mixture of corn and wheat, the same at noon and evening, but the morning and noon feeds are quite light and the evening feed a heavy feed. All these grain feeds are given in deep litter, for his experience shows that the hen that works is the hen that lays, weighs and pays.

When he had his 1922 crop of 450 pullets well housed in the new quarters, gasoline lanterns were installed temporarily to see if there was really anything back of the much-heralded agitation for lights in the poultry-houses. Let Mr. Heffelfinger tell this: "Experiments with the gasoline lanterns during the winter of 1922-23 proved to us that it pays to feed under lights, so last fall (1923) we installed an electric light plant. We fed as usual, but omitted the late afternoon feed, permitting them to fill up on mash, feeding the grain at eight o'clock under the lights."

## Does Not Crowd Brooders

Four brooder houses are used on the Heffelfinger farm, of two coal brooders, and two wood stoves with hovers attached. All the brooders have a capacity of 1000 baby chicks, although they never are used to the limit of their capacity for he found through experience that crowding baby chicks is as detrimental to their welfare, as the crowding of laying hens or other mature stock is. So a

lesser number is assigned to each brooder.

In the spring of 1923, Mr. Heffelfinger obtained 1800 baby chicks. The fall of the year found them with about 800 pullets on hand. These pullets were culled severely, really too severe, but there were 150 choice year-old hens which he wished to retain for breeders, so the 800 pullets were reduced to less than half in numbers.

This year (1924) there were 1700 baby chicks at the Heffelfinger farm at the beginning of the season.

Readers will wonder how Mr. Heffelfinger cares for his chicks. One can realize in an instant that there is a vast amount of work connected, but when we obtained the story from him, he signed it "Amos Heffelfinger and Company," so we knew that Mrs. Heffelfinger was an ardent poultry enthusiast also. The farm work together with the poultry, is done by all members of the family and due credit is given to all concerned.

## A Summary of Methods

Anyway, here is what he gave me when asked for the method of caring for the baby chicks.

1. We don't feed the chicks for 48 hours.

2. We first feed sour milk. Sand is scattered on the floor of the brooder house so chicks can pick grit. It also gives them a place to take a dust bath and exercise.

3. We then feed them hard-boiled eggs, starting slowly. With the eggs we feed buttermilk starting-feed 5 times daily.

4. We gradually omit the eggs and at the end of four or five days omit them altogether. During this time dry mash is slowly started, using low self-feeders to permit the chicks to help themselves. Cracked corn and wheat is also started about this time. The mash and cracked grains with liberal supplies of water and sour milk are given all through the growing season.

5. We are feeding cod liver oil this year, as a trial and are having good results.

The total number of eggs for the twelve months November 1, 1922, to October 31, 1923 were 72,699. The total average number of hens for the year was 419, making an average production per hen of 147 eggs per hen, at a total feed cost of \$1.69 per hen. The total gross receipts from eggs and meat were approximately \$5.00 per hen.

"We don't consider our venture anything extraordinary. It simply shows what can be done by a lot of hard work," says Mr. Heffelfinger.

# The Man Who Buried Crockery

(Continued from page 115)

[1868]. He was over eighty years old and had no son, help scarce, and not trusty 'Had I not better sell?' he asked. I wrote him 'No.' Fancy John Johnson in a city! No under-drains, no growing crops of grass and clover, no wheat, no corn, no barley, no sheep! The last time I was there, when he went into the field his favorite cows came to be patted, and a splendid heifer calf put her nose into his arms. Shall he leave them? Those who say so know nothing of the pleasures of farming. He now writes me: The farm is not to be sold. I have let forty acres for five years for nursery purposes, at a yearly rental of \$1,000, payable semi-annually. This is a great deal better for me than selling. It would have been a great trial to have left my farm. I still have over fifty acres of cleared land, and you may be sure I will do my best with it. I have sold this year's crop of wheat for over \$1,500. I have 900 bushels of ears of corn from a trifle over eleven acres, and at least seventy tons of hay. I have bought 300 wether sheep and ten tons of oil-cake. Won't I make manure for my small farm! \* \* \* Twenty-five dollars per acre rent (5 per cent. on \$500 per acre) is not a bad price for a farm which was once said to be 'the poorest land in creation.' So much for thorough under-draining, good tillage, liberal feeding, and high manuring!

"I have visited John Johnston a great many times, and wish every young farmer in

the country could enjoy the same privilege. He is so delightfully enthusiastic, believes so thoroughly in good farming, and has been so eminently successful, that a day spent in his

Charles R. Mellen, the present owner of the old John Johnston place.

company cannot fail to encourage any farmer to renewed efforts in improving his soil."

"So John Johnston lived—upright, energetic, and a pioneer! His memory will grace our history."

\* \* \*

Mr. Charles R. Mellen who now owns and works the old Johnston farm writes as follows about it:

"I am working the farm myself, but my men have been with me fifteen years. We are milking 32 cows, the milk being sold by the Dairymen's League (of which I have been a member from its origin) to a Geneva distributor. I wish you could see our corn and alfalfa. We have 52 acres of the latter. Two big silos hold a lot of feed and the old farm shows that for nine years the manure from about 50 head of cattle has been judiciously distributed over the 300 acres. We are cutting wheat now with a seven foot binder, hauled by a tractor. It is a hot day, but we do not have to stop to rest, and cool three tired horses.

"Old Mr. Johnston would open his eyes some, could he look in upon us and see the wide swath cut, bundle carrier, tractor and neatly tied bundles of wheat. He might also wonder what the wonderfully thick covering was of delicate leaves, for the alfalfa seeding on this field is as fine as I ever had, and covers the ground completely. This is the Grimm alfalfa and I certainly like it."

# Poultry Disease Specialist Discovers Remedy for So-Called "Incurable Paralysis"

A famous poultry disease specialist, after examining hundreds of birds suffering from leg weakness (frequently said to be "incurable paralysis") is convinced that there is practically no such thing as paralysis in poultry and from his tests he finds that in most cases the reason birds go down flat is intestinal worms.

After 20 years of study this expert has discovered a remarkable new treatment; Happy Hen Worm Remedy; which for over 4 years has been used with startling benefit on poultry suffering from so-called paralysis. It expels worms like magic, removing the cause of the poisoning; makes the birds look better, feel better, and lay better.

If you think you have birds afflicted with coxitis or with paralysis, this specialist suggests that you make a post-mortem examination of a bird just killed, looking carefully into the blind intestines. If worms are found there, send at once for a package of Happy Hen Worm Remedy, only \$1.10 postpaid, and quickly restore the health and vigor of your flock. Satisfaction guaranteed or money back. Large flock sizes package. Write today to

HAPPY HEN REMEDY COMPANY  
36 SO. MARKET ST., Dept. 1109, BOSTON, MASS.

# WITTE LOG & Saw TREE Saw

Cuts down trees and saws them up FAST—one man does the work of 10—saws 10 to 25 cords a day. Makes ties. A one-man outfit. Easy to run and trouble-proof. Thousands in use. Powerful engine runs all other farm machinery. Uses Kerosene, Gasoline, Distillate or Gas.

Easy Payments Pay only a few dollars down and take a year for balance of low price. Make your own terms. FREE Just send name for full details, pictures and low prices. No obligation by writing. WITTE ENGINE WORKS  
6801 Witte Building, Kansas City, Mo.  
6801 Empire Building, Pittsburgh, Pa.

# Don't let "looks" rob your pocket-book

You can't choose oil or Black Valentine beans by "looks" alone

THESE bean seeds certainly look alike. They even come from the same family—Black Valentine. But one pile will grow fancy stringless beans which earn a good profit.

The other variety will grow just plain, stringy beans. It isn't safe to judge by appearances!

It costs even more to pick oil on looks alone. The poorest may look like the finest, and it is impossible to tell from appearance whether or not an oil is the right one for your motor. The eye can't detect the difference. But your motor can, and though it may not immediately complain, a poorer crop of power and a bigger crop of wear are as sure as tomorrow's sunrise.

Talk with any man, who doesn't judge by appearances, who buys *certified* seed and *pure-bred* cattle, and you'll find a man who uses good judgment in his treatment of automotive equipment. He will tell you that the cheapest oil may provide the most expensive lubrication, and that one unnecessary breakdown, one repair bill for prematurely-worn parts, will quickly wipe out any fancied saving.

A man of this type is very likely to use Mobiloil, because:

- 1 He refuses to be fooled by appearances.
- 2 He knows that no other company has *specialized in lubrication* as has the Vacuum Oil Company.
- 3 His judgment in selecting Mobiloil is backed by the approval of practically every manufacturer of automobiles, motor trucks, and farm tractors.
- 4 He is *sure* of getting the correct oil for each individual car, truck, tractor, or farm lighting unit.
- 5 He has proved that Mobiloil is the most economical oil to use.

\* \* \*

Gargoyle Mobiloil is not a gasoline by-product. It is refined from crude stocks chosen solely for lubricating qualities. The Vacuum Oil Company has specialized exclusively in lubricating oils for over 58 years, and its recommendations are accepted as scientifically correct by engineers all over the world. Make the Chart of Recommendations your guide.

You will obtain economical results from this certified oil just as truly as you obtain profit from the certified seed which comes from your experiment station.

## Chart of Recommendations

(Abbreviated Edition)

THE correct grades of Gargoyle Mobiloil for engine lubrication of both passenger cars and motor trucks are specified in the Chart below.

A means Gargoyle Mobiloil "A"  
B means Gargoyle Mobiloil "B"  
BB means Gargoyle Mobiloil "BB"  
E means Gargoyle Mobiloil "E"  
Arc. means Gargoyle Mobiloil Arctic

Where different grades are recommended for summer and winter use, the winter recommendation should be followed during the entire period when freezing temperatures are experienced.

The Chart of Recommendations is compiled by the Vacuum Oil Company's Board of Automotive Engineers, and represents our professional advice on correct automobile lubrication.

Should Women Help with Farm Work?—By E. R. Eastman

# Give the Child a Bank Account

*Or Rather, Encourage the Forming of Regular Habits of Thrift*

## The Child's Bank Account

THE boys and girls of today seem to have the fact of saving money impressed upon them more and more, and it is well that they should, for it seems as though the cost of living increases all the time. During the war big wages were earned and money was spent pretty freely, and the return to normalcy has not remedied entirely these reckless spending habits acquired during that time. So in many city schools they are trying to correct this situation by introducing a banking system to be used in all the grades to teach the rising generation the value of money and how to save systematically. My sister, who has charge of this work in a large city school, says the children just vie with one another to see who can have the most to put in the bank between one banking day of one week and the same day of the following week. Even if they have only a penny they bring it and it is entered as a deposit on their bank-books, made out in their own names and kept as their own personal property.

When I was visiting my home this spring they had started the system in the village school there. It had been in operation then only two weeks, but it really was amusing how the children reacted to it. They were suddenly very willing to do errands, chores, etc., without number if they could swell their bank-account for the next banking day. Several children were digging greens and selling them at 25c a market basket. The younger boys and girls would tease mother for a penny to get some candy, only to be reminded by an older brother or sister that too much candy wasn't good for them and that if they wanted to beat John Smith's bank-account they would have to save their money instead of

By ELLEN ACKERMAN ELLIOT

spending it for candy. Oh, competition is a great thing! It will accomplish the apparently impossible, sometimes.

### Practical Use of School Studies

It was enlightening, too, to hear those youngsters talk among themselves. They were quite little business men and women. It helps to put their arithmetic to actual practise. So many boys and girls say "I can't see any use in studying this

## Teaching Children to Take Care of the Pennies

How early do children begin to understand the value of money? Mrs. Elliot's experience, as set forth in her argument for the bank-account, indicates that the sooner they do learn to save and to spend wisely, the better. Although your school may not be ready to introduce the penny-saving system, why not start it in your home? Making thrift a game has proved to be a valuable way of training the child for adult responsibilities.

stuff anyhow. We'll never use it." And they are the very ones to leave school as soon as they are sixteen, only to regret it a few years later, whereas if they had been saving a little each week from the first grade up, when they become 16 years old they would have quite a nice little bank-account, and the desire to quit school to earn money wouldn't be so great. In fact, when they realized that they could earn and save while in school, I believe it would encourage them to graduate and perhaps go on to a higher education.

We haven't such a system in our school, but it seems to me it is a grand, good thing. I have been in a position for a few weeks where I have had the opportunity to observe some other young

boys who are beginning to earn money. Either they have finished high school, or else they have quit school to go to work, and it is positively wicked to see the way money just goes with some of them. And what a splendid idea this banking system is, that teaches even little first-graders the principle of saving toward some desired end. If the banking system is introduced in your school, think it over well before vetoing it.

### Mother May Be the Banker

But even if there is no opportunity to join with other children in saving, why not start a little bank-account system in your own family? If there are several children, the competition will keep it up briskly, but even an "only" soon gets the spirit of the thing and loves to watch the pile grow.

At first, especially with very little children, the stock of pennies will be so small that they can easily and safely be kept at home. This has one advantage in that the child can actually see his little pile grow. However, one of the helpful things about actually depositing in a bank is the keeping of a bank-book and it is therefore wise to start out the youngster whose pennies are kept at home with a bank-book in which deposits and withdrawals are regularly entered.

But if possible open a real account just as soon as the child begins to have any money of his own at all. Regular trips to the bank, where he himself puts the money in, will have a splendid influence. There is the feeling of security, the interest, small as it is, is something to work for, and also the money cannot be drawn out or begged back for some passing whim. The routine of a bank inspires respect and the fact that he is really a part of it all

(Continued on page 138)

# When You Come to Fix Up the Children's Room

*It Is Not a Catch-All for Discarded Pieces but a Place Which Repays Time and Thought*

YOU can tell a lot about a family when you see how much attention they have given to the rooms their children live in. It is an all-too-common practice to just tuck the youngsters in anywhere, especially where house room is limited. Even though two children or more must occupy the same room, it pays to make it attractive as well as clean and neat. A room in which they can take pride develops their tastes and cultivates the home-making instinct.

I saw a happy demonstration of this when on a visit a short time ago. One room was fitted for two little girls, aged 8 and 10, whose older sister, just returned from school, had brought with her some clever ideas. This room happened to be on the north side and the little sisters were dark-haired lassies, so the color scheme was yellow. The plastered walls had never been papered, so big sister went to work and made them light canary and the ceiling cream, using water-color. And I'll add here that the same result could be gotten over a foundation of any light-colored paper with the water-color. She used oil paint for the floor, of medium tan.

This was very light and cheery but a trifle monotonous. But the older girl was clever with a pencil, so she drew out a design of a rabbit, made a stencil and put a frieze of brown bunnies near the ceiling.

The window curtains were of unbleached cheesecloth just reaching the bottom of the lower sash and a few bunnies were stenciled there, also. An old splint bottomed chair was given a coat of canary paint and a cushion of brown and tan, making a very homelike accessory. A few braided rugs were used on the painted floor.

### Children Take Pride in Helping

The little girls, much enthused, had outlined bunnies on the dresser and table scarfs, their first

By MRS. R. G. ARMSTRONG

decorative efforts. When I left they were working on a change of covers, with an added touch of

"Little Sister," by Adam Emery Albright, is a charming example of the modern school of American artists. It has been reproduced in inexpensive prints and is an excellent subject for the child's room.

blue, but keeping to jonquils and daisies, to preserve the color scheme.

They were already planning ahead to still

another decorative scheme and it was surprising how quickly they had learned to handle brush and paint and needle and thread, under the incentive of having their own room.

Not everyone can stencil rabbits or other designs, but we can all use the scissors. One mother who could not afford the amusing nursery wall-paper displayed in a city store, bought a small piece of it for the Mother Goose figures it contained. After father had finished the walls with washable paint, she cut out Peter Piper, Miss Muffet and the other beloved figures and pasted them in a frieze around the walls. When the children grew older and the walls needed another coat of paint, she used a conventional flower design in the same way and this time she tried the experiment of pasting a narrow line of gay rose-buds down the sides and hem of white voile curtains. These were kept for "best" as the paper naturally washed off, but it was not hard to renew and the growing daughter loved to help cut out and paste. Another pair of curtains of rose-checked gingham proved very useful and extremely pretty, and a bureau scarf to match was soon added.

The problem of training children to keep their rooms neat and "picked up" is never so hard when the room is one worth the effort. On the other hand, furniture or hangings that must be treated respectfully are out of place in a child's room. Plain, serviceable articles, kept freshly painted and in order, a few good pictures, and floor coverings that can easily be taken up and cleaned are most suitable for the child's room. And don't forget in the pleasure of fixing it up, to give the child some say in the matter. It will help make the room, and the home too, doubly dear if the youngster's taste has been consulted (and probably skillfully guided in working out the plans.

## Should Women Help with Farm Work?

*Their Sacrifices, Sometimes Necessary, Have Not Always Paid*

By E. R. EASTMAN

IT was a cold, gloomy day in early winter. Already the dusk of the long winter evening had come, bringing with it all the chores that go with taking care of a good many head of stock on a dairy farm. Father had brought in several pails of the skimmed milk and Mother was busy pouring it out into pans and placing them on the top of the large kitchen stove to warm it for the calves. A little later Father picked up one of the pans of warm skimmed milk to dump it into the pail, found it too hot, and dropped the pan, milk and all, all over the stove and Mother's clean kitchen floor.

To this day, the smell of scorched milk always brings back that scene as one of my earliest memories which introduced me to the fact that the home and the farm are inseparable, that there can be homes without farms, but that no successful farm can exist without its home and without—if you please—a woman, whose energy and spirit is the constant mainspring of the whole farm enterprise.

Next perhaps in order of early memories is the recollection of riding down the road, then through the old back pasture to a meadow on the other side of the woods, and there riding with Mother on an old-fashioned hand-dumped horse-rake, all through one long hot summer afternoon. And then I remember, too, those innumerable times when Mother was to be found doing her full share in helping to milk both night and morning the long rows of cows that stood up and down both sides of the big stable.

From the time of the earliest pioneers in this country, farm women not only have done their full duty inside of the home, but they have found time also to do perhaps a little more than their share, and certainly more than their health should have permitted, of the heavier work in the barns and fields.

Nor is this outside work by the women confined entirely to the past. They still do it, and a lot of it. Particularly since the war when farm help has been so scarce, the work of the women has made it possible on thousands of farms to continue the business.

A few years ago there was a farmer up in Livingston County who had a farm which was heavily loaded with debt. His creditors were continually nagging him and the constant mental strain made life for him a pretty sad proposition. He finally went to the director of a local bank and asked for help. The bank sent representatives out to the farm. They found the house in good order, but the wife was out milking the cows. They went back and reported, the bank paid all of the debts, and loaned the farmer enough cash in addition to buy needed implements. Today the debt is paid off, the farm is free and clear, and the farmer and his wife are prosperous. Later, the director told the farmer that the bank made its loan on the report of its representatives which read: "If a man's wife takes as much interest in the business as that woman does, and at the same time has her own

affairs in such good shape, then it is a pretty good indication that there is a good team at work and we recommend them as a good risk."

How many thousands of farm women there are in the hill country of the East who are milking cows and tending hens to help make the old farm go! How many other thousands through the fruit belts make it possible to get the fruit

been crowded out of the lives, through generations of unremitting toil and hardship, of the peasant women of Europe and other races like the American aborigines where women have been made the beasts of burden.

The question I would like to raise in this little talk is, has all this work and sacrifice been necessary and worth while? Should women continue to help with the work on the farm that is strictly outside of the home? I shall endeavor to set down

a few of my thoughts and views on the subject, but I shall be much more interested in knowing what you who read this article think about it, so let us have for publication in coming numbers of AMERICAN AGRICULTURIST some good letters from both the men and women folks who may read this discussion.

Like a good many other important subjects, it is easier to theorize about them than it is to make practical suggestions which will help to correct injustice. Maybe you will not agree that there has been any such injustice done, maybe it is right for the women to work; but certain it is that the old New England saying, that "it took two New England mothers to raise one New England family" had much of truth in it. The chief reason was that those mothers not only devoted themselves to their full duty in maintaining a home, and fully cared for their large families; but in addition, they went forth into the fields and in many cases, did a man's heavy labor besides.

Too many farm women grow old before their time. Too many of them have too little recreation and too much isolation. Women are by nature more joyous creatures than men, but too often their environment on a farm has taken out of them much of the joy of living, so that not only have they suffered but the men and the children have lost that which God gave them in their women folks to cheer them in the many discouragements in life.

So much for the social side of too much hard work for the women.

Economically, there has, in my opinion, been much of wrong also. The cheaper free labor of women folks on the farm has been one of the chief reasons for the low prices of farm products. Our fathers have too often given away the fertile soil in the too cheap products which we sold to the cities. And to this gift, they have thrown in for good measure that more precious commodity, the free labor of their wives and children.

Yet before we criticize, let us ask what else could farmers have done? They had to live and eat—they still have to. Prices were then, as now, always too low. To live and eat, crops must be raised, so the women had to help. Today, with the young folks gone, with hired labor absolutely beyond the reach of the average farmer, and with the work always crowding, what can the conscientious wife do but try, in addition to carrying her own burden in the house, to relieve a little of the pressure on the outside? It probably has

(Continued on page 143)

WHERE WOMEN STILL DO MUCH OF THE FARM WORK

This picture was taken near Moscow, in Russia, and shows workers resting after the day's work in hay harvest. Primitive methods are still in use in that country, and the woman has to shoulder her burden, . . . "through generations of unremitting toil and hardship, the peasant women of Europe have been made the beasts of burden."

packed on time, and whose skill helps to sell the fruit at the best market price!

And then there are those others lately from the old countries of Europe in the vegetable gardening districts like Long Island, whose children have to entertain themselves as best they can in a nearby hedgerow while the women folks on hands and knees weed the carrots or pick up potatoes all through the hot day.

Perhaps we might pause to think for a moment that these foreign women, both in this country and in Europe, are nearly, if not quite, as strong as their men, that they are seldom if ever sick, even at childbirth, and that generations of outdoor work and in the air and sunshine seem to have given them something in the way of health and endurance that our own women do not have. But if we admit this, we must also say in the same breath, that neither do they have the beauty nor the brightness and joyousness of mind and soul that make our own women a joy forever. All we naturally look for in our women folks has

### Prosperity Will Follow Peace

AFTER six years of chaos, it begins to look as if peace in Europe was coming. Following several weeks of discussion, representatives of the great powers, meeting in England, have at last practically reached an agreement on the fundamental questions that have not been settled since the war. This includes the acceptance of the Dawes plan for working out their financial and other problems. The amount of reparations which Germany shall pay and how they shall be paid have been set, and Germany has agreed to them. It seems that at last she realizes the situation and that her only salvation is in accepting the results of her defeat, and in getting down to work to pay off her debts. France has agreed to evacuate the German Ruhr, and has already withdrawn some of her troops. No citizen of any country of the world, not even excepting Germany, can fail to be benefited by this agreement among the great nations to settle their differences and to get down to the business of peace.

The settlement will bring prosperity again to both Europe and America. Not the least of its effects upon us is that our country will be paid vast sums owed her by the other nations.

Some of the pessimists have suggested that increased prosperity in Europe will reduce ours in this country because the European countries will buy less of our exports and sell to us more imports. On this point, the Brookmire Forecaster says: "No country permanently runs a heavy export trade without having also a heavy import trade, and the reverse is also true! In other words, if Europe increases her prosperity so that her exports increase, she will have larger imports, many of which she will buy from America.

Putting it from another angle, humanity, particularly in these times when the world is constantly growing smaller, is more or less interdependent. If there is great misery in the world such as prevailed in Europe for years, then all of us will feel the effects of it to a greater or lesser extent; and conversely, if Europe becomes prosperous again, America is bound to share in that prosperity.

### Look Us Up

FOR weeks the staff of the AMERICAN AGRICULTURIST has been planning and working to make our tent and exhibit at the New York State Fair at Syracuse, September 8th to 13th,

a real surprise to readers and farmer friends who visit it.

You might almost say that in addition to publishing AMERICAN AGRICULTURIST on paper, we will publish it in visible form in our exhibit. Instead of writing articles and advertisements, we are going to show concrete examples of material advertised in our columns, and the men who write the articles and make up the paper will be on hand with charts and pictures to demonstrate how a farm paper is made, and especially to get acquainted with the folks who read it.

Nothing in the tent will be offered for sale, but we really think you will miss something, and we certainly will be disappointed, if we do not get the opportunity of greeting you and of showing you in this unique exhibit what we are trying to accomplish with the "OLD RELIABLE."

### Give a Thought to the Teacher's Health

WE hear so much about guarding the health of our school children—keeping them well rather than curing them when they get sick—that we sometimes forget one person who does a great deal to maintain the health of the youngsters, yet is not always so careful of her own—the school teacher.

A conscientious, devoted school teacher is apt to be one of the hardest working people in the community. She has both a mental and a physical strain to contend with. She feels her responsibility keenly and hard as her day in the school-room is sure to be, it is not always over when the door of the little building shuts behind her. She takes her responsibilities with her and though she knows how much depends on her keeping well, she often cannot avoid the extra work and worry which are a drain on her health.

Conditions are far, far better than they used to be in some places in "the good old days" when the task of boarding the teacher was shifted from one family to another and she often fared pretty badly in the essentials of room and food. We recognize now the poor economy of a method which served to drive the good teachers from us.

Still, the work remains arduous and the strain considerable. The teacher needs recreation, needs fun, companionship and carefree play just as much as anyone else. The teacher who can play outside school is the one who brings to your children the inspiration and enthusiasm for health which will last through their lives. Good living quarters, wholesome food, help in the school and out of it from the families behind the children, and a frequent chance to forget the school duties and be human are the right of every teacher. Start the new school year right by seeing that yours has them.

### A Commendable Job

IN November, 1922, the Bureau of Nutrition, under the direction of Laura A. Cauble, organized a two-year demonstration program to show the value of feeding milk to school children in New York City. The work was started in School No. 17, which has approximately 2000 pupils. The children were weighed and measured and their physical appearance carefully noted. An opportunity was offered each child to buy a half-pint bottle of milk at least once a day. Many children bought two bottles a day. The milk was furnished through the cooperation of the Dairymen's League at about 4c a half pint. In most cases the children brought the money from home to pay for it. They drank it through straws during the forenoon session. Each month the children were weighed and measured, and with the milk feeding they were taught the story of growth, the value of fresh air, of sleeping with open windows, and of a proper diet.

At the beginning of the demonstration, fifty-nine out of every hundred pupils were found to be under weight. A larger proportion showed signs of undernourishment, such as paleness, dryness of hair, bad posture and peevishness. Careful records were kept, and in June, 1923, only 22 per cent. of the children in this school were under-

nourished, and at the end of the year 1923 this had been reduced to 17 per cent. As a result of this remarkable demonstration, requests from other schools throughout the city were rapidly made to Miss Cauble, so that in May, 1924, a total of sixty schools were being served with 26,000 half pints of milk daily, and the work is still growing as rapidly as Miss Cauble can direct and take care of it.

Similar demonstrations are being conducted in schools in several up-State cities. Studies made by Miss Cauble in ten counties of New York State show that one-quarter of the elementary school children are using no milk, but take coffee or tea instead. This brings the problem of more milk consumption pretty close home to the farmer's own family.

We know of no educational or advertising effort being done anywhere that is more commendable or is doing more lasting benefit than this work of Miss Cauble. Not only are the children themselves being taught to use more milk, but they carry the good doctrine home with the result that the parents themselves are often converted to the knowledge that milk is the best and cheapest food in the world. When once a child has a principle thoroughly learned he never forgets it. Children taught the value of milk in the schools will be large milk consumers all their lives.

Not the least result of this work is that it confers benefit on the whole dairy industry, and is real advertising at comparatively small cost.

### Speaking of Hats

A VERY interesting report which the Department of Agriculture has just issued tells in brief about the progress of home demonstration work during 1922. It teems with figures that are impressive and stimulating, and tells of things accomplished both by States and local communities that make one very proud of the American farm woman.

But there was a certain statistic (if that word may be used in the singular) that particularly appealed to at least one reader. It is this: 57,221 hats were reported made with the help of home demonstration agents! Think of 57,221 hats lined up on as many heads, and each one different, individual and becoming, because it was made by the woman for herself, the way she liked it and the way it suited her! That, we believe, is something to boast about and is by itself a pretty good justification of Home Bureau work.

We feel sure there were more hats made in 1923. We hope there will be 100,000 in 1924. Not all will be successful, of course; not all will rival Paris bonnets or even the good "boughten" ones. But every woman's first home-made hat is just the starting point—she immediately wants to go ahead and show how much better she can do it next time. And all the women who took to millinery work learned, by the good old-fashioned method of doing, the important principles of selection, simple construction, renovation and good taste.

We like the thought of the 57,221 hats and take off our individual one to the women who made them!

### Eastman's Chestnuts

OUR household editor has given me very emphatic orders that the chestnut this time must be of particular interest to women. All right, here goes.

"My friend," remarked the physician, "you are suffering from a chronic complaint."

"I know it, doc," cautioned the patient, "but please lower your voice, SHE'S IN THE NEXT ROOM!"

### Quotations Worthwhile

A lie on the throne is a lie, and truth in a dungeon is the truth; and the lie on the throne is on its way to defeat, and truth in a dungeon is on its way to victory.—THOMAS B. REED.

\* \* \*

"He who has not a good memory should never take up the trade of lying."—MONTAIGNE.

# What the Parties Offer Farm Women

*Discussed by a Leading Woman from Each Political Camp*

**A**LREADY the political parties, as well as many non-partisan organizations, are urging the woman voter to come out and register her convictions at the polls next November. But not every woman knows just how to make her vote count, nor which party and candidate offers the nearest approach to her ideas of good government.

Believing that AMERICAN AGRICULTURIST woman readers want to vote intelligently, the editors have asked several women prominent in the different political parties to set forth briefly the points in the different platforms which have the most interest to farm women. We have simply opened our columns impartially for such arguments as each party may have as to why the farm woman should give it her support. We do not sponsor any particular party or platform.

Only a very brief statement can be made in our limited space, but the different party headquarters will of course be glad to furnish further information and literature to readers who ask for it. The League of Women Voters, which has headquarters in the Grand Central Terminal Building, New York, will also help from a non-partisan viewpoint, anyone who wants general information about the coming election.

\* \* \*

## What the Republicans Stand For

MRS. CHARLES H. SABIN

*Mrs. Sabin, national committeewoman for New York, and member of the Executive Committee of the Republican National Committee, who is in charge of women's activities in the eastern campaign headquarters of the Republican party, is the owner of a farm. She is the granddaughter of J. Sterling Morton, a former United States Secretary of Agriculture and the founder of Arbor Day.*

Mrs. Charles H. Sabin

**T**WENTY-FIVE million housewives in this country are directly affected by agricultural conditions. The housewives who live in great cities realize in a measure how basic an

industry is agriculture. Every woman who goes to market to buy food for the family table must depend upon the farm for what she finds there.

The pledges made by a political party to strive to secure an improvement in agricultural conditions are of vital importance to every man and woman in this country, whether they live in the cities or on the farms. The Republican party recognizes that in dealing with agriculture it faces a fundamental national problem and that the welfare and advancement of the nation as a whole are dependent upon the welfare and advancement of the conditions surrounding the pursuit of agriculture.

The farmer and the farmer's wife are not only the producers, they are buyers. But they cannot buy unless they are able to sell their farm products. Of the 105,710,620 persons living in the United States, exclusive of the territorial possessions, 54,304,603 live in cities and 51,405,017 live on the farms and in small towns.

Women in the cities do not realize how necessary are good roads for the bringing to them of the food they have upon their tables. Good roads mean not only greater and fresher food supplies for the housewives, but they mean better prices for the farmers and they are time savers.

The Federal Aid Road Act adopted by the Republican Congress in 1921 is one of the outstanding achievements of the Republican administration of the past four years. It will open up approximately 170,000 miles of road so located as to pass directly through practically every city and town of 5,000 population or greater and many of the smaller communities. More than 90 per cent. of the people in the United States live within ten miles of the roads of this system.

To the farmer improved roads mean not only easier and quicker communication with the market at less cost and money, but they mean the removal of barriers which have kept the farmer isolated throughout the winter season; they mean a share in the development of social relations in the rural community, better schools and better churches with better transportation, making consolidation possible, and the possibility of fire protection and of police protection by motorized State police.

The Republican party established rural free delivery of the mails and later installed the parcels post delivery system, primarily to benefit the farmer.

The marketing of products is one of the greatest problems facing the farmer. Good roads alone will not solve this problem. The Republican party realizes this and in its national platform it makes the following proposals for farm relief: lower freight rates, better marketing, field co-operative methods, a more scientific organization of distribution and a greater diversification of farm products. It promises every assistance to the reorganization of the marketing system on sounder and more economic lines and government assistance when needed to farmers who are changing from one crop to the sounder basis of a diversity of crops. It says that the vigorous effort of this Administration toward broadening our export market will be continued and it pledges

*(Continued on page 141)*

\* \* \*

## The Democratic Platform

MRS. FRANKLIN D. ROOSEVELT

*Mrs. Roosevelt, wife of one of the leaders of the Democratic party in New York, is herself active in the Women's Division of the State Committee. As chairman of the finance committee, she successfully holds a most important and difficult office. Mrs. Roosevelt's farm home is in Dutchess County.*

**T**HE Democratic party should appeal to the farmer's wife, it seems to me, for many of the same reasons that it should appeal to every woman who has come to realize that whatever her own particular conditions in life may be, she is in the long run bound to be touched in some way by the conditions under which the poorest people in the country have to live. You may not realize that on account of the lack of protecting laws in many States the dress sent home to you to-day may have been finished in a room where air and sunlight are almost as rare visitors as you yourself, but that dress may bring your child the same disease with which some little child was sickening in the crowded, smelly room. The Democratic party appeals, perhaps, most to women because, in its fundamental principles, it seems at least to try to put a little more heart in government.

The cardinal principle of the Republican party is that the big enterprises, the big industries, must flourish even at the expense of individuals here and there, for their success brings general prosperity—to be sure, the "big men" prosper vastly, but according to Republican tenets this prosperity filters down to all in a greater or lesser degree. Just here lies the difference, for the cardinal principle of the Democratic party is that every individual is entitled to his place in the sun. If through this more widely disseminated prosperity great industrial success comes and big enterprises spring up, then all is well, for no one has suffered on the way and the inalienable

© Underwood & Underwood

Mrs. Franklin D. Roosevelt

right "to life, liberty and the pursuit of happiness" has in no way been made difficult by favoring a few big people at the expense of the many.

## Conservation a Vital Necessity

The first interest of the farmer's wife all over this country is the conservation of our natural resources. Unless these are conserved and properly developed by nation or State, the outlook for the farmer and his wife is poorer and poorer. In the first place, the wholesale cutting down of forests without replanting tends, as we all know, to dry up the sources of our streams and eventually turns the neighboring regions into deserts, as has happened in vast areas of China where the horrible famines were year after year taking their tremendous toll of human lives. The Republican policy has been to sell or lease vast tracts of

*(Continued on page 141)*

\* \* \*

## The Third Party

MRS. GORDON NORRIE

**T**HE Third Party offers the women voters of the farm, what it offers the women of the city and what it offers to the men in town and country, an opportunity to put the control of the Government of the United States back where it belongs,—in the hands of the people. We shall hear very often in the next few months that it is the party of discontent. So it is; so are all parties of reform. The question is, who is discontented and why? There are special groups with special grievances and special remedies, and there is the more fundamental discontent of the general public.

© Underwood & Underwood

Mrs. Gordon Norrie

This last concerns itself with two points—the loss of control over the machinery of government and the appalling dishonesty in public matters. The connection between the two has become very apparent.

We have had the shocking examples in Washington and we have seen the desperate attempts of certain individuals and certain newspapers to shut off the investigations. We have even seen the Congress of the United States rebuked by the President for uncovering dishonesty.

We have seen things closer at hand. We all know the money spent at elections. Those of us who were working suffragists have seen the voters bought—bought and kept in the nearest saloon until the time came for them to cast their ballots. Now, who gives that money and why? A part comes from tribute collected from officeholders and the rest from people who have something and something tangible to gain or lose by the election.

## We All Want Majority Rule

The rules of our legislatures and of our parties seem to have but one object, that of thwarting the will of the majority. We know that it is not only by accident that it is made so difficult to get a real issue before the people. We know that it is not by accident that we are so often forced to choose between two candidates, neither of whom represent our convictions. We know why we can no longer choose our candidates for governor or senator in New York State. We know that there are people in this country sincerely believing that a small self-chosen minority should rule and that any devices to secure that authority are justifiable. These groups derive their power, not so much

## Ever make an experiment like this?

James S. Morse, of Cayuga County, New York, made an experiment on his farm. He wanted to see whether a fertilizer with a higher percentage of potash than he had customarily used would pay.

### He found out!

He applied a 3-8-6 (6% potash) mixture to one plot and put on a half a ton to the acre — 1000 pound application. Morse's soil is a deep clay loam. Then he fertilized another plot with 3-8-0, same mixture without the potash; also 1000 pounds to the acre.

The field which received the potash fertilizer yielded 45 bushels per acre. The other field gave but 39 bushels. The increased yield of six bushels per acre, even at \$1.10 per bushel is worth \$6.60—and if wheat goes higher, of course the six bushels are worth even more. But even at \$6.60 he paid for the 6% of potash \$3.00 in 1000 pounds of fertilizers and had \$3.60 per acre clear profit left over. Multiply this by a hundred acres and you'll see that \$360 extra money, with no more seed, no more labor, no extra output except the slight additional threshing charge is worth working for.

Ever make an experiment like this? You ought to try it. Ask your dealer for a fertilizer that has plenty of potash. Make a test. Perhaps your soil is one that will give splendid results with more than 6% potash. Potash pays—but many farmers do not use enough. The extra percentage costs very little. Why not use plenty this year, and get better yields from the same effort?

### The Bushels That Made Me Money

You should read this interesting story before you plant your winter wheat. Your copy will be sent free of all cost. Simply ask for booklet, "The Bushels That Made Me Money." But do it now!

## Post Your Farm

### and Keep Trespassers Off

We have had a new supply of trespass signs made up. This time they are made of extra heavy linen on which the lettering is printed directly. There is no card facing to be water-soaked by the rain and blown away by the wind. We have had these new signs made up of extra heavy material because severe storms will tear and otherwise make useless a lighter constructed material. We unreservedly advise farmers to post their land and the notices we have prepared comply in all respects with the law. The price to subscribers is 95 cents a dozen, the same rate applying to larger quantities.

# Pickling Pointers

An A. A. Radio Talk Broadcast From WEAF

THIS is the time of year when delightfully pungent and spicy odors come drifting through the farmhouse, and piles of brilliant red tomatoes or deep green cucumbers outside the kitchen door testify that fall pickling has started and the year's supply of relishes will be as plentiful and as delicious as ever.

I well remember as a child the time when "our pickle" was made. It had no other name, but it fully deserved one, for the old and complicated recipe which had come down for years in my mother's family would finally yield up a concoction that had no equal as far as my taste and judgment now go. Preparations began well in advance of the actual day when the first step was taken for the making of it and from then on for a week something new was done to that pickle every single day. I used to steal into the kitchen and gaze with awe upon the huge stone jars in which such mysterious processes were going on, and watch the solemn tasting by which its progress was determined.

No, I'm sorry, I can't give you the recipe, because it is still a strict family secret and I myself have never yet been initiated into its mysteries—perhaps that is why it still stands to me as the Perfect Pickle in a world of just very good pickles. But, after all, there are lots of most delicious combinations possible, and I'm going to tell you a few that will stock your shelves up nicely for the coming winter.

### Trouble Warnings

First I want to answer a question that sometimes comes in to me, as to why pickles shrivel in the jar. If they do, and of course they shouldn't, there may be several reasons.

Pickles should be fresh when used for canning, too much sugar should not be used, they should be blanched, and the vinegar must be thoroughly boiled before using. If pickles are placed in too strong brine, too strong vinegar or with too much sugar, as soon as the pickling has started, it will shrivel them. They should first be placed in a very weak brine and later more salt added, and the same is true with vinegar. Sweet pickles most often show shriveling because of too much sugar. If less sugar is used, then left unannealed for a day or two and more sugar added, this trouble often is not experienced.

Pickled fruits are always popular. There is something about the combination of the sweet and sour that seems to appeal to everybody. Their flavor depends much on using the right spices. Here are a few favorite recipes:

### Pickled Pears

Cook 1 gallon of pears until tender and cover with a liquid made of 2 pints sugar, 1 pint vinegar, 1 teaspoonful cinnamon or use cinnamon bark, 1 teaspoonful cloves. Cook in this for fifteen minutes and can. Peaches may be prepared the same way.

Apple chutney takes a good many different ingredients but oh, how the family loves it when it comes upon the table!

### Apple Chutney

1 lb. sour apples  
1 lb. white onions  
1 qt. cider vinegar  
1 lb. seedless raisins  
1/2 lb. celery  
2 large red peppers  
3/4 lb. sugar  
1/4 teaspoon tumeric  
1 tablespoon mustard  
1 teaspoon salt

Soak the onions in brine (1 tablespoon of salt to 1 quart of water) overnight. Drain them and put them through a food chopper. Pare the apples and put them through a food chopper. Pour 1 pint of vinegar over the apples and raisins and let them stand overnight. Add the onions and other ingredients, and cook the mixture until the vegetables are clear and tender. Seal it in hot, clean jars.

Did you ever hear of "cherry olives"? They are a firm salt pickle that goes very well with meats.

### Cherry Olives

Fill a quart jar with large sweet

cherries, leaving the stems on and packing the fruit as closely as possible. Mix 1 tablespoon of salt and 1 cup of cold vinegar, and pour the mixture into the jar of cherries. Fill the jar with cold water. Adjust the rubber and the cover, and seal the jar as usual. Turn it upside down several times. Allow the cherries to stand for at least two weeks before using them. These cherries are not heated. They make a firm salt pickle to be used with meats.

Crab apples pickle well, too:

### Pickled Crab Apples

Choose firm crab apples of uniform size. Do not pare them, but remove the blossom ends. Make a spiced syrup in the following proportions:

1 qt. vinegar  
2 lbs. sugar  
1 tablespoon cinnamon  
1 tablespoon cloves  
1 tablespoon allspice  
1 tablespoon mace

Cook the syrup until it coats a spoon, add the apples, and heat them slowly to avoid bursting them. Simmer them until they are tender. Pack them in clean, hot jars, cover them with syrup, and seal the jars.

And of course you must put up some watermelon rind, a distinctly American delicacy that has traveled from its native southland all over the country.

### Pickled Watermelon Rind

Soak two pounds of watermelon rind overnight in salt water (1/4 cup salt to 1 quart water). Drain off the brine. Cook the watermelon rind in clear water until it is tender.

Add the rind to the hot pickling solution made of the following ingredients, and boil it rapidly until it becomes clear. Seal it in clean hot jars.

2 lbs. sugar  
1 pt. vinegar  
1 pt. water  
1 lemon, sliced thin  
1 tablespoon cinnamon  
1 teaspoon cloves  
1 teaspoon allspice

Now to come to the vegetable pickles and relishes, which come in a thousand different variations. Tomatoes, corn and cucumbers seem to furnish the backbone of these, with peppers, onions and spices to add flavor and color.

### Pickled Beets

Pickled beets are easy to prepare. You first prepare a spiced vinegar composed of:

1 qt. vinegar  
1 pt. sugar  
1 tablespoon cinnamon  
1 tablespoon allspice  
1 tablespoon white mustard seed  
1 teaspoon cloves  
1 teaspoon salt

Then cook beets till they are tender, plunge in cold water and slip off skins and cover with the spiced vinegar. Simmer for 15 minutes and seal in clean hot jars. Golden wax beans, the stems of Swiss chard or very small carrots may be pickled the same way.

### Cabbage Relish

Cabbage relish is an extremely useful side dish:

1 qt. cabbage chopped  
1 qt. green tomatoes, chopped  
1 cup red pepper  
1 cup green pepper  
1 pt. white onion, chopped  
1 cup sugar  
1 qt. vinegar  
5 tablespoons white mustard seed  
1 tablespoon celery seed  
1/2 teaspoon tumeric salt

Soak the cabbage and tomatoes separately overnight in salt water (1/4 cup salt to 1 quart water). Drain the vegetables in the morning and add the other ingredients. Let them stand for 2 hours. Simmer the mixture until it is clear and seal it in hot clean jars.

Here are some recipes my readers have sent in:

### Corn Relish

5 pints sweet corn  
3 green peppers  
2 red peppers  
4 pints vinegar  
4 pints chopped cabbage  
1/2 lb. sugar (2 cups equal 1 lb.)  
1/4 cup mustard  
2 tablespoons salt

Seed and chop sweet peppers. Then mix all the ingredients together till the corn is well cooked. Seal tight in hot clean jars.

(Additional "Pointers" next week)

## Federated Growers Meet With Apple Shippers

M. C. BURRITT

A GOOD representation of members and a number of interested visitors attended the mid-year meeting of the Federated Fruit and Vegetable Growers, Inc., held at St. Louis, Mo., August 12-13, in connection with the twenty-ninth annual convention of the International Apple Shippers. Members representing Florida and Mississippi vegetables, Alabama and California citrus fruits, New Jersey, New York and Illinois apples and peaches, Michigan grapes, Tennessee strawberries, Texas and Indiana onions, Washington apples, New Jersey potatoes, and other products and states, together with Federated officials and salesmen from nearby markets were present and all participated in the program and excellent round table discussions. The meeting, in addition to hearing the reports of Federated officers, also listened to President O. E. Bradfute, of the American Farm Bureau Federation, and Gray Silver, President of the new Grain Marketing Company, both members-at-large of the Federated directorate.

General Manager Rule reported that the organization has handled in the first seven months of its second year more than 20,000 cars of fruits and vegetables, which is a growth of 50% over last year, with corresponding increase in revenue and surplus—a very satisfactory showing. Mr. Rule thinks the big problems ahead are increased volume especially from its present membership and better retailing methods in which he looks forward to the full cooperation of retailers themselves. The Department of Field Organization and Information has been fully established and some work with members has already been done. Dr. App was recently appointed head of this department.

### Quality First

Most of the discussions centered around improvement in the quality and grade of members' products, although most of these are already recognized as among the best in the market. The points of emphasis were better grades and standards, the exclusion from the markets of under size, green or overripe or otherwise poor quality products and shipping point inspection as a means of maintaining high standard. Many illustrations were given of the disastrous effects of indiscriminate consignment of quantities of low grade products by disorganized growers on the markets. Especially noteworthy examples of the folly of such action are the Georgia peach and watermelon deals, in which great quantities of small sized, inferior fruit which never should have been shipped at all, were rushed to market early in the season demoralizing nearly all markets and causing heavy losses to shippers, carriers and handlers alike, and almost ruining the later market.

### Aggressive Action for Improvement

Two resolutions looking toward aggressive leadership on the part of the Federated to remedy these conditions were passed. The first called for the active cooperation of the U. S. Bureau of Markets in the Department of Agriculture in seeking to impress upon growers the importance of high grades and standards, and for the establishment of courses in grading and standardization by the State Colleges of Agriculture to help to train inspectors to more intelligently interpret these grades and standards. The second urged growers to produce more of the best, to grade and standardize more thoroughly and, above all, not to send low grade, unstandardized products to market.

### Teachers of Agriculture From Three States Meet at Farmingdale, Long Island

THE first conference of its kind was held at the State School of Agriculture at Farmingdale, Long Island, on August 15-22, when high school teachers of agriculture in New York, New Jersey and Connecticut met for a week's con-

ference. It brought together some of the best thought in the country on vocational teaching, especially high school agriculture.

The conference was arranged through the cooperation of the University of the State of New York, the New Jersey State Department of Public Instruction, and the Connecticut State Department of Education. The meeting was not solely for professional people, but superintendents of schools, principals, members of boards of education, and farmers were cordially invited to attend the conference.

### Director Knapp Welcomes Conference

The meeting opened on Friday, August 15, with an address of welcome by Director H. B. Knapp of the State School of Agriculture. Walter P. Hedden, of the Port of New York Authority, fol-

lowed Director Knapp with a discussion of terminal market problems, who in turn was followed by R. W. Quackenbush, the agricultural agent of the New York Central Railroad, who spoke on the railroad as a connecting link between producers and consumers.

On Friday afternoon, members attending the conference visited New York City in a body to study the markets of the Metropolis. They visited the Dairy-men's League offices and plants, the hay market and freight yards, the milk station at 33rd St., wholesale butter and egg markets, and railroad produce piers, as well as the farmers' markets of New York and Brooklyn. This market trip lasted all Friday afternoon and evening and Saturday morning.

The conference was resumed on Monday morning with Director Knapp presiding. The speakers on that day were

Dr. T. N. Carver, of Harvard University; H. D. Phillips, of the New York State Department of Farms and Markets; L. S. Tenney, of the United States Department of Agriculture; and E. R. Lupton, a farmer of Mattituck, Long Island, president of the Suffolk County Farm Bureau and president of the Board of Trustees of the State School of Agriculture. Mr. Lupton spoke on the types of farming on Long Island, which was followed by a tour of Long Island farms. There were fifty-two cars in line on the tour.

On Tuesday, Mr. Weaver, of the New York State Department of Education, presided. In the morning, the speakers were Dr. Carver; Dr. E. C. Nourse, of the American Institute of Economics, Washington, D. C.; and Frank A. Horne, president of the Merchants Refrigerating

# More Milk now— more milk for years to come

Two things are necessary to make a dairy feed profitable—it must show you immediate results by making your cows give the most milk possible, and it must keep them in such condition that they will increase that production year after year.

Right from the start LARRO lays a sure foundation for consistent heavy milk production by first building up the health and condition of your cows. Continuous feeding of LARRO maintains health and condition, thus guaranteeing peak milk production, not only now, but month after month, year in and year out.

Actual figures prove this true in thousands of cases—among grade cows and thoroughbreds alike, regardless of breed, regardless of geography.

Cow No. 241 is an ordinary barn Holstein bought by the Larro Research Farm in 1922 for \$125. She had been milking 150 days when she arrived at the farm. Her production during the first 30 days thereafter was 724.5 pounds of milk. In her next lactation, during the corresponding 30 day period, she produced 1,173.3 pounds of milk—more than 50% increase. Her total milk production in the first full lactation period at the Larro Research Farm was 13,646.4 pounds—more than three times the average for all cows in the United States. Larro—maintaining health and condition—plus proper care, did it.

Prince's Rose of Meadowbrook is a Jersey who broke the Pennsylvania state record for 2-year-

olds in 1922 with 9,810 pounds of milk and 462.79 pounds fat. In 1923 she again became state champion with a record of 14,292 pounds and 639.05 pounds fat. As a calf she was started on a Larro grain ration and kept continuously on Larro throughout the milking periods mentioned.

Down in Florida, Ferndell, of the famous Lemon City White Belted Herd, produced 13,477.9 pounds of milk and 585.64 pounds of butter fat in her twelfth year—five or six years past the age of peak production for most cows. The herd she leads has been fed Larro for thirteen years and averages 9,998 pounds per year.

A feed that accomplishes such long distance results must be a feed that first builds health and condition—then positively maintains these two important requirements for profitable milk production.

Your cows should be on a grain ration now. There is no feed that will more surely guarantee future production and future profits than Larro.

See the nearest dealer, or write us direct.

### Embury SUPREME OIL LANTERNS

You will save money on Embury Supreme Oil Lanterns. They're so strong that only the roughest kind of usage can harm them, and they will outlast several "cheap" lanterns.

Ask to see No. 160, which costs \$1.50, except in the far west. Its improved burner gives 20% more light and burns for 35 hours. Wind-, dust-, dirt- and rain-proof.

There's an Embury for every purpose

ORDER FROM YOUR DEALER  
If he has none in stock, we will mail on receipt of price.

EMBURY MANUFACTURING CO.  
Warsaw Dept. 10 New York

### TREES AND PLANTS

Thousands of Fruit Trees, Evergreens, Shrubbery, Barberry, Privet, etc. Highest quality direct to you at materially reduced prices. Large assortment.

WESTMINSTER NURSERY, Desk 25, Westminster, Md.

NO GREATER measuring stick could be placed on the work done by New York in its campaign for the eradication of cattle tuberculosis than to compare the quickness with which cattle owners are paid now for their reactors with the way they were paid in years past. On the farm of the publisher of AMERICAN AGRICULTURIST at Fishkill one reactor out of ninety head was found. This animal was killed on July 7 of this year, and Mr. Morgenthau received his check on August 13, a little over a month later. Two years ago reactors killed on the same farm were not paid for until more than eighteen months after they were slaughtered.

### New York County Notes

Jefferson County.—Many farmers have not finished haying, due to the many rains. Farmers who wait for the hay to be "just right" when they start usually cut a lot of poor hay on the last end. Hay is of good quality and it is reported that some buyers are offering \$15 a ton. Eggs have advanced to 40c a dozen. Broilers are in poor demand, in fact poultry seems to be "of the market." Bob-calves are bringing anywhere from

\$4 to 5; veal, 9 to 10 cents. Oats will not be an average crop. Rust has struck many otherwise good fields. Corn is tasselling but most of it is rather short. A few good fields are to be seen. Potatoes are a fine crop. Ward Kissel of Evans Mills is digging a fine crop. Red clover seems to have killed out during the last fall and winter as it was a good catch but did not show up in the new seeding this spring. However, a few farmers were lucky enough to have some and by cutting it early while its feeding value was at its best now have good after-feed for their cows.—Mrs. C. J. D.

Ontario County.—We have been having fairly good weather for haying and harvest. Wheat made a poor crop while hay and oats are good. Cabbage is growing fine. Corn and potatoes are late but coming on in good fashion. Apples are not very good.—H. D. S.

Essex County.—Since the middle of July rains have come often enough to keep crops growing well and to bring up pastures considerably. Some meadows yielded a good crop, but on the whole hay was only about two-thirds crop, compared with that of last year. Eggs are now bringing 35c a dozen. Potatoes are looking good. Blackberries have been plentiful. Farmers have been cutting grain since the middle of August.—M. E. B.

Genesee County.—Since the middle of the month we have been busy harvesting wheat. It is much better this year than usual, but we have had so many rains that it has been difficult to get the wheat in the barns well dried. Potatoes are doing nicely and they will be a fine crop. Early fruits were very heavy, especially cherries and currants. Early apples and pears are doing nicely, but in this locality the late varieties of apples and pears are very short. We are hoping for good weather so that oats and barley may be harvested.—J. C. J.

Franklin County.—Haying was about over by the third week in August. The crop was good although numerous rains delayed harvesting to some extent. Crops on higher land were helped wonderfully by the rains. Even sandy ground has good crops this summer. In fact, low lands seem to be cold and are not doing so well. Early potatoes have been on the market and peddled by some growers for several weeks. They started at \$2 a bushel. The crop was good. Late potatoes are coming on fine. Corn in general looks good except on low lands. Tuberculosis testing is well started. Most farmers are interested. The farm bureaus and veterinarians are cooperating. Westville township was the first to be tested; had a sign-up of about 92 per cent. of the town's dairymen. It will be cleaned up in three or four weeks. Many reactors have been located and shipped away. Some farmers are now going into purebreds in place of old grade stock. Prospects seem fair for fall crops and work. Grain looks good; all crops somewhat late.—W. R.

### New Jersey Notes

THE copious rains of August 12 came just in time to save the corn crop here in Somerset County. It was mostly planted late and to all appearances will not make a normal yield. Just a month of dry weather gave farmers a good chance to gather their hay and grain. Hay making was delayed for three weeks on account of wet weather at the end of June and the first half of July. The quality is not of the best owing to late cutting. One tired farmer has been exhibiting specimens of alsike clover six feet six inches in length and says it was growing strong when cut. He stresses the point that it was that length, not high, for it had been growing along the ground for a month. Poultrymen have

had poor luck with chicks and are looking ruefully at their small flocks and the soaring prices of eggs. The berry and fruit crop has been and will be about normal. In some localities peaches, apples and grapes are reported nearly a failure. Other sections have an over crop of apples and a fair crop of peaches. Plowing for wheat has commenced and there is likely to be a slight increase in acreage. Very little buckwheat sown. Grain is scarce and there has been a sharp advance in mill feeds. The labor situation remains unchanged and farmers are doing what they can themselves and leaving many fields lying idle.—G. E. S.

### Pennsylvania County Notes

Erie County.—We have had a cold rainy season and crops to date are fully three weeks late. Very few farmers were through haying by the middle of August. By the 15th, some had started harvesting wheat, which is not a very good crop. Oats are looking good and potatoes are fair. Corn is not very good. Grapes are small for this time of the year; the apple crop will be light as we had frost practically every morning when the trees were in bloom.—M. E. M.

Westmoreland County.—September 4 will be Limestone Day at Greensburg. Over 100 carloads of Michigan Limestone will come into Greensburg on that day over the Pennsylvania Railroad. Alva Agce, Secretary of Agriculture of New Jersey, will address the farmers who will gather for the day, as will J. D. R. Dickey, of the Pennsylvania State College of Agriculture.—C. C. W.

### Teachers of Agriculture from Three States Meet at Farmingdale, Long Island

(Continued from page 135)

Company of New York City, who spoke on cold storage in the United States. On Tuesday afternoon the teachers of agriculture of New York, New Jersey and Connecticut held separate State conferences.

On Wednesday, August 20, the speakers were A. L. Clark, of the New Jersey Bureau of Markets; Prof. I. G. Davis, of the Connecticut Agricultural College at Storrs; and A. E. Albrecht, of the New York State Department of Farms and Markets. Elmer Wene, a prominent poultryman of Vineland, spoke on how he marketed eggs from his farm and community. Other speakers were Dr. J. W. Moore, of the Irving National-Columbia Trust Company of New York City, and A. R. Rule, manager of the Federated Fruit and Vegetable Growers.

Thursday's program included addresses by W. C. Hackleman, of the United States Department of Agriculture; Paul Bennetch, specialist in marketing dairy products, of the New Jersey Department of Agriculture, and a discussion of the milk situation by E. R. Eastman, Editor of AMERICAN AGRICULTURIST. Dr. C. E. Ladd, director of extension of the New York State College of Agriculture, discussed the use of price data. He was followed by Joseph Barton, president of the New Jersey Fruit Growers Cooperative Association, who told of the "Jersey Jerry" apples. Stancliffe Hale, an apple grower of Glastonbury, Connecticut, spoke on marketing apples from his farm. J. M. Borders, of the United States Department of Agriculture, spoke on grading and marketing eggs.

The conference closed on Friday. Mr. A. K. Getman, specialist in agricultural education, of the New York State Department of Education, presided. Dr. C. E. Ladd discussed research in marketing. He was followed by the Honorable H. C. Wallace, Secretary of Agriculture, of Washington, D. C. The closing address was made by Mr. Getman.

# Among the Cow Testers

## Dairy Improvement Work Gains Steadily

G. W. TAILBY, JR., who is supervisor of the Dairy Improvement Association work at the New York State College of Agriculture, sends us the following June reports from the various county association testers which gives an excellent idea of the progress of dairy improvement work through New York.

Albany-Schenectady Agent, E. J. Colliton

The honor roll contains 75 cows, the largest in this association since it was organized two years ago.

The honor of having the largest percentage cows on the honor roll goes to D. E. Wiltsey, Medusa, N. Y. He has 12 grade Guernsey cows, of which 7 were able to earn a place on the honor roll. The average production is 848 pounds milk, 38.9 pounds fat, average test 4.6 per cent. They are mostly winter milkers, freshening in the middle of the winter and early spring. At present they are not getting any grain.

Plans are under way to have a yearly business meeting for the association for the purpose of organizing for another year.

Sherman Agent, L. B. Mapes

Two purebred Holstein bulls have been purchased from Wisconsin by H. J. Einink, Clymer, and Thomas Williams, Clymer.

### Ten High Herds for the Month of April, 1924

Owner	County	No. Cows Tested	Average per cow Milk (lbs.)	production in milk Fat (lbs.)
Geo. True	Monroe	7	1478.6	54.1
H. E. Burrell	Schuyler	6	1378.5	48.4
Henry Peck	Saratoga	10	1012.4	46.6
James Rigney	Monroe	2	1057.5	45.5
V. Fulkerson	Tompkins	8	1175.2	43.5
Geo. Garrod	Madison	16	1227.0	41.9
Summit Farms	Monroe	6	799.5	41.7
A. C. Brown	Saratoga	6	998.5	41.6
Virgil Peck	Monroe	12	1134.5	40.6
C. E. Hess & Son	Oswego	16	1188.9	39.3

The above list includes the high herds for all associations for which the monthly association summaries have been received. The averages are computed for the cows in milk.

L. D. Gale and Son have purchased a purebred Guernsey bull from Babcock and Millard of Ithaca.

Andes Agent, J. J. Linehan

There were 26 herds containing 626 cows tested during the month, of which 179 produced more than 40 lbs. fat; eleven over 50 lbs.; four over 60 lbs., making a total of 194 honor cows. Fourteen produced over 1,200 lbs. of milk for the month. A grade Jersey, Daisy, owned by Ed. O'Connor, New Kingston, led the association with 72.6 lbs. fat. This is the highest fat for any cow since the start of the association. Susie, a grade Holstein and Jersey, was second with 69 lbs. fat. Old Tough, also a grade Jersey, was third with 67.5 lbs. fat. Robert Ingles of New Kingston had high herd with 21 honor cows; this is the most 40 pounders in any dairy since the start of the association. George Fenton, Shavertown, was second with 20 40-lb. cows. A. Van Benschoten, New Kingston, was third with 18 cows.

Essex Agent, E. G. Wolstenholme

One member sold eight low-producing cows to make room for higher producers. One member bought a purebred Guernsey bull to be used as herd sire.

No unprofitable cows were found this month, as feed costs were low due to pastures. The total production is lower this month, as there are less cows on the honor roll. Because so many members are doing winter dairying cows are shrinking to freshen in the fall.

Ellisburg Agent, M. L. Balch

At the low price of milk the farmers cannot afford to feed much grain. About half of my members were feeding four pounds per day to call the dairy to the barn.

So. Lewis Agent, H. L. Stahlman

The herds of G. W. Rook of Glenfield and the Walsh Estate of Highmarket started testing in the association this month. A total of 251 cows were tested, 235 of which were milking and 16 were dry. The herds of R. F. Hayes, Geo. E. Hayes, Wm. Myers and Earl Potter recently passed their first clean Tuberculin test. Wm. Long's herd has passed its second clean test and is now on the Federal Accredited list, making, with the Zimmer Estate, two accredited herds in this association. The following herds averaged 1000 pounds milk per cow for the month:—

J. W. Van Zandt	1124.6	lbs. milk	40.0	lbs. fat
W. H. Myers	1074.0	" "	35.4	" "
Zimmer Estate	1036.8	" "	31.4	" "
R. F. Hayes	1033.0	" "	34.1	" "

There are 47 cows on the honor roll. J. W. Van Zandt leads with eleven out of eighteen milkers.

Monroe Agent, Gerard Schmidt

Most herds have fallen off in production during the past month. I expect several records of over 500 lbs. of fat, a number over 400 and nearly half over 300 pounds.

N. A. Baker and Sons of Fairport have a purebred Holstein milking 60 pounds milk on two quarters.

Boonville Agent, H. L. Stahlman

During the past month in this association there were 385 cows tested, 365 of which were milking and 20 dry. F. H. Thomson and Son have sixteen cows on the honor roll, with six cows above 70 pounds fat for the month. Herds that average 1000 pounds milk or 35 pounds fat per cow for the month are:—

F. H. Thomson & Son	1253	lbs. milk	46.2	lbs. fat
Leo Kotary	1243.7	" "	42.8	" "
Grassy Brook Farm	964.5	" "	38.4	" "
P. Schneible & Sons	1218.2	" "	37.0	" "
H. C. Pohl	1004.3	" "	30.0	" "

C. H. Bronson recently purchased and installed a new Hinman Milker. F. H. Thomson & Son have high cow, with 865 pounds fat from 2276 pounds milk.

Warwick Valley Agent, H. P. Bull

Five members have made application for a Tuberculin test of their herds.

So. Oswego Agent, P. S. Landon

Thirty-two per cent. of the Jerseys in the association are in the honor roll this month. They have been milked on an average of four and a half months and the average production was 45.2 pounds fat and 849 pounds milk. Poplar Ridge Pontiac Rag Apple, owned by C. E. Hess and Son of Phoenix, heads the honor roll both for fat and milk production this month. The first 16 days in June on two milkings per day she gave 1465.3 pounds, averaging 91.5 per day. Best day 95.4. Best milking 51.6, June 14 P. M.

Kingsford Farm has purchased of C. E. Hess & Son a new herd sire, a son of the 33-pound, three-year-old Popular Ridge Fayne Cornucopia.

Ralph Owens has installed a new Empire milking machine.

Twelve boarder cows have been disposed of this month and six new cows purchased.

Plans are under way for the association picnic to be held in August; watch the papers for further information.

There is room for four or five more herds in the association.

Saratoga Agent, H. L. Barnes

Evert Wooley purchased a registered Holstein sire of Wm. Wilson, this calf's dam

### Five High Cows for Butterfat in the Dairy Improvement Associations of New York State for May, 1924

Owner	County	Breed	Age	Months Since Fresh		Lbs. Fat	Lbs. Milk
				1	2		
Geo. True, Adam's Basin	Monroe	Holstein	6	2	94.8	2709.4	
C. E. Hess & Son, Phoenix	Oswego	Holstein	3	1	94.4	2552.0	
J. M. Keeny, Chester	Orange	Holstein	.	.	89.4	2294.0	
Geo. True, Adam's Basin	Monroe	Holstein	6	2	88.3	2452.1	
D. L. Hayes & Sons, Montour Falls	Schuyler	Holstein	4	1	84.6	1838.0	

granddam and great-granddam being on the honor roll.

Schuyler-Seneca Agent, H. C. Hinsdale

H. E. Burrell of Watkins has had his herd on the honor roll for three consecutive months.

The Terry Berry Farm, owned by W. E. Leffingwell of Watkins, has the largest number of honor cows of any herd in the association. This herd is practically all purebred Guernseys. Improvements on the Terry Berry farm include the building of a new silo.

King's Grand View Stock Farm of Burdett has a fine young purebred bull (Holstein) of the Ormsby strain for sale, four months of age.

Fred R. Johnson of Seneca Falls has a purebred Holstein cow, Minnie Ophelia DeKol, which has produced over 6300 pounds of milk in the last three months on twice-a-day milking and with ordinary care.

The Yale Farm of Romulus is still holding its place in the association with eight cows on the honor roll.

D. L. Hayes and Sons of Montour Falls produced over 29,000 pounds of milk during the month of June from 30 cows.

J. V. Sommerville of Romulus is erecting a new dairy barn with Jamesway equipment.

(Continued on page 142.)

# How you feed your growing birds now determines how they will lay next winter

"I want to recommend Fleischmann's Pure Dry Yeast for developing birds quickly and keeping their vitality strong, also for better egg production," writes A. W. Haller, of Louisville, Ky.

"We feel perfectly satisfied," writes R. W. Kebler, of the County Agricultural School, Menominee, Mich., where yeast-feeding experiments have recently been conducted, "that the feeding of yeast to poultry is a paying proposition and can recommend it to farmers and poultry growers in general."

"Your Yeast," writes C. D. Handelong, of Bangor, Pa., "has doubled my egg yield and my flock is the picture of vigor and health."

INSTEAD of waiting till next winter and then depending on "laying" mashes and "forcing" methods to boost egg production, begin now to get your birds ready for winter laying!

No amount of "forcing" will make a productive pullet next winter out of a bird that fails to build bone, flesh, and vitality this summer.

Make sure that your birds get the last ounce of nourishment from the feed you give them.

Thousands of raisers have found Fleischmann's Pure Dry Yeast the way to do it. It makes the feed easy to digest—easy to turn into sound flesh and strength.

Fleischmann's Pure Dry Yeast comes in 2½ lb. packages. It will keep indefinitely. Full directions with every package. Your dealer should be able to supply you. If not, order direct from us. Send check, money order, or cash, or pay postman on arrival.

If your dealer cannot supply you, order from The Fleischmann Company's Branch Office in any of the following cities, using coupon below:

New York, Brooklyn, Chicago, San Francisco, Seattle, Los Angeles, Hartford, Conn., Portland, Me., Buffalo, Albany, Philadelphia, Pittsburgh, Baltimore, Boston, Birmingham, Cincinnati, Cleveland, Columbus, O., Dallas, St. Louis, Detroit, St. Paul, Newark, N. J., Toronto, Montreal, Winnipeg, Havana and San Juan.

MEN to train for firemen or brakemen on railroads nearest their homes—everywhere beginners, \$1.50, later \$2.50; later as conductors, engineers, \$300-\$400 monthly (which position?). RAILWAY ASSOCIATION. Desk W-16, Brooklyn, N. Y.

ALL MEN, WOMEN, BOYS, GIRLS—17 to 65, willing to accept Government positions, \$117-\$250; traveling or stationary, write MR. OZMENT, 258 St. Louis, Mo., immediately.

## Can You Talk to Farmers?

We want to hire a few more reliable men who can talk convincingly to farmers about their great need of AMERICAN AGRICULTURIST.

If you are a retired farmer or inactive for any reason, this is a real opportunity to make a permanent and profitable connection.

Details on request. Write to-day.

AMERICAN AGRICULTURIST  
461 Fourth Avenue New York City

# Service Bureau

## Invest in Your Own Farm, Not Someone Else's

I am sending a leaflet describing a proposition in which I have been asked to invest. It looks too good to be true. What is your advice? If it is fraudulent I wish to warn my friends.—N. C. H., New York.

THE proposition that N. C. H. sends in with his letter is a stock selling campaign being conducted by a western ranch known as Tomahawk Ranch of Kelton, Ariz. The proposition put forth in the circular is that the ranch "is offering for sale a limited number of pedigreed shorthorn cows at \$200 each, payable at the rate of \$10 a month—\$300 each if paid in cash, with immediate participation in profits—and agrees to care for, feed, breed, and milk the cow and her heifer progeny, to sell all milk products, to develop and sell to the best possible advantage all calves capable of becoming high-grade breeding bulls, to market all steers, and to replace the original cows, in event of death from any cause whatsoever, during a period of 10 years. At the end of ten years the original cows and half the unsold progeny are to be delivered to the purchaser, or sold for his account, or contract may be continued at his option."

The ranch operators then go on to give a mathematical analysis of their proposition under the heading of Estimated Income. They estimate their biennial earnings starting with 10 dual purpose Shorthorn cows they figure for the increase in inventory every two years to be \$4645 to be participated in by the share holder. They also estimate that the average annual earning of each cow is \$232, leaving for distribution to the owner of the cow \$116.

### "Too Good to Be True"

N. C. H. is certainly just in saying that "it is too good to be true" and our advice is to keep away from this proposition. The reasons for this advice are (1)—the seat of operations is too far away to know anything about the conduct of the business; (2)—when you wish to sell your shares in this proposition, the market for such shares is very very limited; (3)—the estimated earnings appear to us to be all out of proportion with any line of reasoning; (4)—in view of the nature of the business it does not seem wise to invest your money in a farm in Arizona when you can turn around and invest just as well in your own farm; (5)—if you have money to invest, invest it in a business of long standing, nationally known and of an earning reputation that stands above question or doubt; (6)—suppose disease should wipe out the herd—where would your money go? And so on. No! If you are going to invest, invest and don't speculate. Don't look for a good investment that gives such outlandish returns. They don't exist.

### Questions About Investments

I have some neighbors who are working in the Light and Heat Corporation in Ridgewood. They have been solicited to buy stock, and bought \$500 worth of stock and found after it was not worth the paper it was written on. They are hard-working men and they can't afford to lose. Can you advise them what to do to get their stock back?—Mrs. N. M. B., New Jersey.

Unless you can show actual fraud we know of no way you can recover money paid for stock which you later find to be worthless. We have no record of this particular corporation and so it is hard to advise you specifically. The only safe rule is never under any circumstances to buy stock of salesmen. Sound securities are not sold that way.

I am attaching a letter from the Pittsburgh Tin Plate & Steel Corporation in regards to some bonds they advise us to buy to save the stock we have bought several years ago. Would you advise us to buy the enclosed bonds which they advise, or is it best to lose that which seems to be lost?—S. E. MacC., Maryland.

The proper way to solve your problem is to disregard the fact that you have already lost money in the stock. The question for you now to consider is whether if you had new funds to invest you would take these bonds. Stated that way the answer is obviously—no. Assuming that you have no money with which to speculate we think you might better

buy something else of demonstrated investment value.

I am attaching papers of the Traders' Finance Corporation. Would you please advise me if this would be a good investment? If not would you please inform me of another reliable corporation in which I could invest \$1,000.—T. C., Pennsylvania.

We advise against investment in Traders' Finance Corporation by those unable to take large risks. Why not buy a good bond with your \$1,000. We suggest one American Telephone & Telegraph collateral trust 5 of 1946. It sells for about \$970 for a \$1,000 bond and pays you \$50 a year in interest annually. It is entirely safe and can be sold at any time or you can borrow on it at the bank as collateral.

### No Market for Oil Stocks

I would like to know if the San Antonio Oil and Natural Gas Company of Milwaukee, Wis., is any good and if their stock is worth anything? I have shares in this company and would like to know if I will get anything out of them. I would also like to know if the Deep Wells Oil Company of San Antonio, Tex., stock is worth anything.—C. S., New York.

As far as we have been able to find out there is no market for your oil stocks. A Milwaukee house offers San Antonio Oil & Natural Gas at 35 cents a share but makes no bid. As you probably know by this time there is no more dangerous and foolish speculation than to buy oil stocks of any kind.

Being a subscriber to your very useful paper and seeing your good advice on oil stocks and other questionable business I would like your advice on the following. I bought as a speculation some Jewel Oil stock, later transferred to Ziegler Oil Corporation as voting trust certificate due June 1, 1926, to receive stock in this company and I have not heard from this company since the middle of June. The certificate is signed by Victor Ziegler, William B. Lloyd, T. M. Pettigrew, J. Meyer, Louis Fredenberg and Empire Trust Co. of New York City. I am enclosing a circular. Their business address is or was 25 West 43d St., New York City—Lloyd, Pettigrew & Meyer.—C. C. M.

Aside from the fact that a Denver house offers Ziegler Oil at 25 cents a share but makes no bid, we have no information about your oil stock. You say you bought this stock as a speculation. We think speculation in oil stocks is foolish in the extreme. The chances are 99 out of a 100 that you will lose, but if you must speculate take listed issues with a ready market, shares in corporations with long established records. Even then do not put a dollar more into such stocks than you can conveniently afford to lose.

### Give the Child a Bank Account

(Continued from page 130)

himself, arouses a child's sense of responsibility.

The question of investing would formerly never have come up when a child's small savings were considered, but nowadays there are excellent opportunities for the wee investor. The wartime Thrift Stamps started many juvenile savings accounts. I wish there were something of the sort to enlist the quarters and half dollars now. But the Treasury Certificates are graded down to a low cost and the system is so arranged that any child could understand it and manage his purchases himself. There are also "baby bonds" and other securities which an older boy or girl might be able to achieve. At any rate, it is well worth the trouble of initiating the young folks into the principles of wise investment. Soon enough will come the time when if they have any savings at all, glittering inducements are held out to dazzle their vision, and if they are not forewarned they may lose the entire result of many years' patient saving by one foolish endeavor to "get rich quick." This may be a valuable lesson but it is too dearly bought, and one that, with its heartache and discouragement, is better avoided than experienced. A little of the right sort of investment practice in advance will counteract the effect of a great deal of persuasion toward the wrong sort.

# I Wonder—By E. M. Fruit

"WHAT was the joke on your Dad the other day? I heard the men at the Corners joshing him." It was Sunday afternoon and Sammy and I were sprawled on the grass in the shade.

"Aw, Pa's just been actin' foolish."

"What about?" I asked lazily. I might have added, "this time," but I knew better. While Sammy is perfectly willing to tell of his Dad's various mishaps and idiosyncrasies, he is mighty quick to resent it if anyone else says anything disparaging.

"A skirt!" There was such a volume of disgust in Sammy's usually placid drawl, that I looked up in surprise. I could scarcely believe the speaker was Sammy. Usually the mildest kind of disapproval of anyone or anything is all he exhibits.

"Why, Sammy," I exclaimed, "evidently you don't appreciate the joke either."

"Joke!" Sammy jerked himself up on his elbow and fairly flung the word at me. "Can you see any joke in a man as old as Pa making a fool of himself over a Jane young enough to be his daughter?" Sammy glared at me. His expression dared me to admit the joke.

"Tell me about it," I said rather meekly. This indignant young person wasn't my friend Sammy at all.

He dropped back into the grass and after a moment said, with a disgusted grunt, "I s'pose I might as well. You'll hear it any way; or part of it. The part that happened at home you probably wouldn't; but that doesn't matter so much." As a matter of fact, it was 'what happened at home' that gave me the most food for thought.

Sammy chewed thoughtfully on a blade of grass for a moment. Slowly a reluctant grin overspread his face. "I guess it was kinda funny. At least the fellows who were in on the joke seemed to think so." Sammy paused so long I thought he had changed his mind about telling me.

"Who was the lady?" I hazarded.

"Lady!" he snorted. "She ain't nothin' but a kid. It was that teacher at the Bend." As a matter of fact, she is twenty-five if she is a day, but with her bobbed hair and carefully applied complexion, I'll admit Sammy was justified in his assertion. And she is pretty. Her worst enemy, if she has one, would have to admit that.

"IT was that Harry Jennings that started it. He's always trying to make a fool of someone. The teacher had come into town with someone from the Bend and expected her folks to meet her. She was going home for over Sunday. You know she lives about four or five miles from the Corners. For some reason they didn't show up and she was waiting in Jackson's store for a chance to ride out with someone, when Harry saw Pa coming up the street. Pa had been down to the blacksmith shop and I was waiting in the store for him. 'There comes Bill Allen. He's a ladies' man. Just ask him to take you home in his flivver. If you smile at him and talk real pretty, maybe you can get him to come after you Sunday night and take you back to the Bend.' He looked at her real sassy like, as tho he was daring her to do it, and she stuck up her nose and said:

"'Maybe you think I can't.' He just laughed, the kind of laugh that would make you do a thing just to show him you could. I guess they didn't see me. Just then Pa came in and Harry said:

"'Hello, Bill, here's a fair damsel in distress. Don't you want to be a modern knight?'"

"'I'm not very well up on the Knight business,' laughed Pa, 'but I'm always at the service of ladies in distress.'"

"'Oh, Mister Allen,' chimed in the teacher, 'I really don't know what I am going to do. I expected my folks to meet me and they haven't come,' and she

clasped her hands and rolled up her eyes, kinda sick, like she'd e't something that didn't agree with her.

"'I told her she could depend on you and your trusty flivver to take her home,' said Harry, grinnin' at Pa—that same kind of 'dare-you-to-do-it' grin. Of course after that anyone could see that there wasn't anything for Pa to do but offer to take her home. So far it wasn't Pa's fault. It was after that he acted foolish. When he did offer to take her she said:

"'Oh, Mister Allen, it is perfectly splendid of you, but I couldn't think of letting you go to all that trouble just for me.' Just as though she hadn't meant to make him take her all the time. It made me sick but Pa fell for it.

"'Not a bit of trouble,' says he. 'I can do it just as well as not.' You wouldn't think to hear him that he had seven cows to milk when he got home, 'sides all the other chores. I followed them out to the car but Pa said, 'Sammy, you wait here till I get back.' I didn't see any sense of my waiting there, but I didn't care, so I went back into the store and Harry and all them other dumb-bells was laughin' fit to split.

"'I'm surprised at you, Sammy,' says Harry. 'You should not expect a brave knight like your Pa to be bothered with a small boy when he is escorting a fair lady. Now, the rôle of gooseberry—'

"'Oh, no, Sammy, not fat. Rather heavy set, perhaps, but not fat.' I didn't argue the question, but if Pa is thin I'd hate to be fat. He bought him a tie, a red one, real flashy. I thought it was awful pretty, but when he showed it to Ma she just looked at him with that funny twinkle in her eyes and the corners of her mouth sort of quirked up—the kind of look that always makes Pa mad—I don't know why.

"AT last we got started and when we got pretty near home Pa cleared his throat a time or two and said sort of casual like, 'Oh, by the way, Sammy, it might be just as well not to mention Miss Davis, that's the teacher's name, to your mother. Women don't always understand things of that sort like us men do. Here's a quarter for you.' I said 'all right' and took the quarter, tho I wouldn't have spilled the beans any way. Pa had let me off from hoein' that afternoon and took me to town and bought me ice cream and let me go to a picture show. Pa's kinda funny sometimes and awful quick tempered, but just the same when he takes a feller any place he's a mighty good old scout, and not a bit stingy.

"When we got home Ma had part of the milkin' done and she said, 'What kept you so late, Will?'"

"'Oh, I was detained,' said Pa, off-

lady?' and he chucked Ma under the chin, kinda playful, and beat it before she had time to say anything. She started to follow him out but before she got to the door he had the car cranked and was clinkin' in.

"'Sammy,' says Ma, pretty sharp, 'where is your father going?'"

"'Why,' I says, 'he said he was goin' to get gas.' She looked at me pretty straight for a minit and then she said:

"'Samuel,' and when she calls me 'Samuel' I know it's time to answer pretty straight. 'Samuel,' she says, 'did your father tell you *not* to tell me where he was going?'"

"'HONEST, Ma, he never said a thing to me. All I know is what he said to you just now,' and I was mighty glad he hadn't, for when Ma starts to find out anything you might just as well tell her, for she is going to know it before she gets through with you, whether you know you've told it or not. Of course, I could have made a pretty good guess—but I wasn't guessin'. But I could see trouble headin' in Pa's direction all right."

"He got home a little before milking time. 'Where have you been?' says Ma, awful icy.

"'Why,' says Pa, trying to bluster, 'I told you where I was going.'"

"'Yes,' answered Ma, awfully sarcastic. 'You said you were going to the garage to get gas, when you knew perfectly well, and so did I, that you had gas enough in the car to take you to town and back. What I asked you was, *Where have you been?*' Pa was gettin' mad too."

"'I told you,' he snapped. 'I guess a man can go to the garage and back without being quizzed to death.' Just then Ma spied somethin' in the back of the car. That fool girl had left one of her books, and it had her name in it."

"'Where did you get this?' Ma's voice made you feel like little chunks of ice was bein' dropped down your back."

"'Why that—why, 'er—that—Oh yes, Ed, over at the garage, loaned it to me. Thought I might like to read it, you know.'"

"'Since when, William, have you taken to reading Third Grade Arithmetic as a pastime?' asked Ma. Pa, he got red and stammered and didn't know what to say. 'I think,' says Ma, 'it's about time you were telling me the truth. How does it happen that one of Mae Davis's books is in your car?'"

"Pa, he started in brave enough to explain, but the more he talked the worse it sounded. I couldn't see anything to make such a fuss about myself. If he'd 'a' told Ma in the first place it would have been all right, and if Pa hadn't been so rattled he'd 'a' seen Ma was laughin' at him all the time. She wasn't half as mad as she pretended to be. I don't know how they settled it, for Ma sent me out to milk, but the next day Ma bought the new dining-room carpet she'd been wantin' for a long time. When I asked Ma why she pretended to be so mad, she laughed and said, 'For the sake of the future Mrs. Samuel, I am not going to tell you.' She needn't worry about any future wife for me. I've got some sense."

Sammy got lazily to his feet and strolled toward home; but he left me wondering. Years ago, when Minnie and I hadn't been married very long, there was a slight misunderstanding. I thought Minnie was a little unreasonable about it. Just a little harmless flirtation—nothing at all serious, you understand—but Minnie got a certain kitchen cabinet she had been wanting. I considered it a sort of peace offering. At the time, and many times since, to be honest, I have been a little puffed up to think that Minnie cared enough to be jealous of me. But I wonder—maybe all the time she was laughing—Oh, drat that boy and his silly story."

A RADIO TEA IS POPULAR WITH THE WOMEN FOLK

ALTHOUGH the boys and men folks like to sit up and tinker with the radio, the women get a lot of enjoyment from it, too. Some farm women have formed the habit of watching the programs until an especially good one comes along and then inviting the neighbors to drink a cup of tea while they listen to the lecture, music or speech. Meetings of the sewing circle, too, are often enlivened by outside "talent" broadcast from some distant point. "Radio parties" have infinite possibilities at whatever time of day the favorite feature may come over the air.

But I told him to shut his trap, and I beat it. That fellow gives me a severe pain.

"Pa was gone quite a little while, but I went to a picture show so I didn't mind. When he got back he seemed awful tickled with himself. He strutted around like he'd just been elected president, or something. He got the groceries and things Ma ordered and put them in the car. 'Sammy,' says he, just as we were ready to start home, 'I think I'll get me a new tie. My old ones don't look very fresh. If a man wants to be anybody these days he must be up to snuff in his appearance; and what do you think about one of those new style collars—one that comes up real snug under the chin. They make a man more distinguished looking.'"

"'Oh, the tie would be all right,' I told him. 'But I wouldn't get one of them choaker collars. You're too fat.'"

hand like, but he looked Shep when he's been stealin' eggs. Ma looked like sharp at him and then at me, but my face didn't tell nothin.' I could well believe it. A blank wall has nothing on Sammy when he wants his face to be expressionless.

"Ma didn't say anything more but all evening she kept looking at Pa kind of questioning, like she was trying to make out something. Long towards evening on Sunday, Pa began actin' kinda nervous. He washed the car all up, and then he went off up-stairs. When he came down he was all dressed up—had his new tie on and had put so much of Ma's perfume on he smelled to glory. Gosh, I wouldn't have any of that stuff on me."

"'I think,' says Pa, speaking in a hurry, 'I'll run over to the garage and fill the car up with gas. It's about empty and we don't want to run out of gas again when we are half-way home, do we, old

# When You Feel Like Embroidering

*Designs for Yourself or Your Family or to Work Because Christmas is Coming*

E 31-8. Vanity Set for Bureau

**A**N EMBROIDERED vanity set "dresses up" even the plainest bureau and on a new dressing table it looks even prettier. No. E 31-8 is unusual in design and remarkably easy to embroider. Darning stitches, long on the top with a short understitch, are embroidered in parallel lines for the border. For the border use black or the predominating color in the room decoration. Baskets may be brown, blue, or deep pink, depending upon the border. The flowers in various colors are worked in lazy daisy stitch and French knots. Center mat is 6 x 18 inches and end mats about 11 inches square. The set of pieces is 50c, stamped on linen-finished cotton. Embroidery floss 25 cents.

**N**O. E 336-8 is a serviceable around-the-house dress which, with a touch of embroidery added, is plenty nice enough for wear when friends drop in for a chat or a cup of tea. It comes in blue or gold Seville, all made up and stamped for embroidery, which is done in black and white.

Lines of black darning stitch are over-whipped with white to outline the yoke. Edges are blanket stitched over with white, taking white stitches between the black ones. The cost of the dress, all made up and including pockets and belt, is \$1.25. It comes in 34 to 42. Colors, blue or gold. Embroidery floss 30 cents.

**T**HE little girl needs a washable frock that is also a little extra nice, and No. E 335-8 is the design to choose. Pink cross-stitch flowers with yellow centers are embroidered in the front. Lines of blanket stitching on the skirt and edging on neck and sleeves may be black or white as you prefer. The dress in blue Seville is supplied all made up and stamped for embroidery and costs only 75 cents. Sizes 4 and 6 years. Embroidery floss 20 cents.

**F**OR the very youngest, a tray cloth and bib are a necessity. Set No. E 437-8 will fascinate the lucky baby who owns it. It is made of stout linen finished cotton and the edges are buttonholed with blue. The figures are outlined with two strands of cotton to make a fine line. The work may be all in one color or in pink, blue, yellow and black, using yellow for hair, pale pink for face, black for shoes, and any chosen color for the clothes. Fine white linen finished cotton for tray cloth and bib stamped for embroidery 60 cents; floss for working 25 cents.

E 336-8. A pretty house dress for the mother of the family.

E 335-8. Dress for the Little Girl.

E 437-8. A Present for the Baby.

E 505-8. A Stunning Buffet Cloth, 50 inches long.

**A** LONG buffet scarf is always a useful addition to the linen supply and No. E 505-8 is unusually effective in design. Yet you can see from the picture that it is not hard to work. Use bright, striking colors, and some black to set them off. The scarf is 17 inches wide and 50 inches long. Stamped on good grade cotton it is 75c; on linen \$1.

**TO ORDER:** If you want any of these articles to embroider, it is wise to send check or money order for them. We are not responsible when currency is enclosed in a letter. Be sure your name and address are legibly written, that you give the number of the design you want and that the right amount is enclosed. Address your order to: Embroidery Department, American Agriculturist, 461 Fourth Avenue, New York, N. Y.

# What the Parties Offer Farm Women

## What the Republicans Stand For

(Continued from page 133)

itself to the development of measures which will place the agricultural interests of this country on a basis of economic equality with all other interests.

Adequate tariff protection for such agricultural products as are always threatened by foreign competition has been a feature of every Republican tariff bill. Such protection is as necessary to the farmer as it is to the business man and to the worker in the factory.

Farmers who plant the full acreage of their land in such staples as wheat and cotton suffer when their crops are poor or prices are low because of overproduction. A farm with a diversity of crops, a farm supported by its own garden products and its own milk and butter and eggs and which is able to sell any surplus of these—here the problem of better marketing enters—such a farm offers the most stable form of existence, and it is such a farm that is the backbone of America.

The enactment of the co-operative market act into law has been one important step taken toward agricultural relief. The grain futures and packer control act gives to agriculture direct representation on the Federal Reserve Board and on the Federal Trade Commission. This was a necessary step. Agriculture should have a direct voice in these bodies.

The revival in 1921 of the War Finance Corporation with loans of over \$100,000,000 tided over the agricultural industry, averting a complete collapse. New intermediate credit banks for agriculture have also been established during the present Republican administration and the capital of the federal farm loan system has been increased. Drought stricken areas have been aided by emergency loans. The farmers, it must be remembered, receive no weekly pay envelopes. They must deal largely in futures and in case of crop failure and lack of ability to save for one year or for a period of years, they must have credit while waiting for their new crops to become marketable.

As President Coolidge pointed out in his first message to Congress, no one way offers a solution to the problems confronting the farmers. "Indirectly," said President Coolidge, "the farmer must be relieved by a reduction of national and local taxation." The Republican party in its national platform pledges a progressive reduction of the taxes of all the people as rapidly as may be done with provision for the essential expenses of the government. The high prices and the prosperous times now promised the farmer show that the Republican party has been right in its belief that many factors enter into agricultural relief.

All of this has to do with the prosperity of the American farm and of the nation. The United States Department of Agriculture has a much broader field than this, however. It is concerned with the well-being of the American family in the home and the improvement of the living conditions not only of those who live on the farms but in the cities.

The Department of Agriculture took a distinct step forward in service to the women of this country when a little more than a year ago it established the Bureau of Home Economics. This bureau on an equal footing with all other separate bureaus of the department, grew out of the former office of Home Economics. Secretary Wallace of the Department of Agriculture placed the bureau on an independent basis because he recognized the need of a more inclusive study of the problems of the home.

It is felt that economic investigations which will yield information as to how people actually live are fundamental to all the work of the bureau. This bureau finds out what the home conditions are in this country and studies plans for improving these conditions. Suggestions for improvements are put into effect

through the extension division of the department. The extension division in its encouragement of canning clubs for girls, and pig, corn and similar clubs for boys and girls, reaches the children on the farm as well as the adults.

The Republican party in its program for the improvement of agricultural conditions should have the support of all the voters, both men and women. It is a sane program, and it spells prosperity and general well being for the farms and the homes of this country.

## The Democratic Platform

(Continued from page 133)

public land to big companies to "develop" in the way described above, whereas, the Democratic policy has been to keep these vast tracts in the hands of

great possibilities for the man on the farm but life made incomparably easier for his wife by the many labor-saving devices which cheap electric power makes possible. To the western farmer's wife and to the woman whose husband is taking up land in the great Southwest this question of government or private control of your natural resources is of vast importance. Much as we may value private initiative it must be clear to all that where a man or a company is operating in their own interest, they are of necessity going to watch that interest primarily, whereas when it is a question of developing all the resources to the best future advantage of vast areas of land, the project should be handled as a whole for the good of all the people and not by individual enterprises.

During the past few years the farmer's wife of the great Northwest has at last

## AUTUMN IS ALMOST UPON US

WHEN fall draws near, every woman, whatever her occupation, begins to think of new clothes and to plan what she can afford to have. The AMERICAN AGRICULTURIST patterns shown here meet the needs of the stout woman, the slim woman,

For the Stout Woman

the home-maker and the young girl; they are the most economical patterns to be found, both in their own cost and because they cut the material so well. They are sealed to fit perfectly and are clearly marked for every step, so that the beginner can start on any one without hesitation. If you have never ventured on home dressmaking before, now is the time and these are the patterns!

No. 2184, dress for mature figures sizes, 36, 38, 40, 42, 44, and 46 inches bust measure. Size 36 takes 3 3/8 yards 40-inch material, with 3/4 yard contrasting. Pattern, 12c.

No. 2139, for the slim woman. A diagram dress with the popular side pleats. Sizes 16 years, 36, 38, 40, 42 and 44 inches bust measure. Size 36 takes 3 3/8 yards 40-inch material. Price, 12c.

No. 2177, for the home-maker. Sizes 36, 38, 40, 42 and 44 inches bust measure. Size 36 requires 3 yards of 36-inch material. Price, 12c.

No. 1861, for the young woman. A diagram dress requiring little sewing and less fitting. Sizes, small, medium and large. For the medium size, use 3 1/4 yards of 40-inch material. Pattern, 12c.

TO ORDER: Write your name, address, pattern number and sizes clearly, enclose correct remittance and send to Pattern Department, AMERICAN AGRICULTURIST, 461 Fourth Avenue, New York City.

And—don't forget to add 10c for our splendid new fall and winter catalog, the best of our many excellent style books in size and contents. It will go at once if you add its cost to your order. Patterns and catalogs are sent separately so if one arrives before the other do not think your order is incomplete.

The Morning Dress

The Afternoon Frock

the government or at least under government control.

A good illustration is the development of the water power in New York State which for some time has been one of the big issues between the Republican and Democratic parties. The power generated by Niagara Falls, owned on the American side by private companies, costs the consumer far more than that owned on the Canadian side by the government. There is in New York State, and in many other parts of our country, a vast amount of electric power latent in our rivers and streams, and if their sources are kept up by the proper care of the forests this may mean not only

come to realize one thing, which perhaps has not been clear before, namely that her prosperity is tied up with the possibility of markets in Europe and markets which can buy. No amount of protective tariff has helped the farmer when he could not sell his goods and had to buy in a protected market. The tariff has hindered, not helped, where he was concerned, because he could not sell and the large industries having succeeded in getting tariff protection sold to him at high rates. It is claimed that at present this situation is much improved but it is an artificial improvement, the fundamental cause of the trouble not having

No Cold Air Floor Drafts

## SUMMIT Pipeless Furnace

The Special Summit Installation which prevents all cold air drafts over your floors is the big outstanding feature of this splendid heating plant.

There are two separate cold air return registers, and through these registers the cold air is returned to the furnace where it is heated, purified and re-distributed throughout the building.

This system of installation was originated and perfected by us—and it has gained for the Summit Pipeless the endorsement of experienced heating engineers and building contractors.

Summit Engineering service is Free. Send us your heating problems.

Summit Foundry Co

# Reviewing the Latest Eastern Markets and Prices

## MILK PRICES ADVANCED

**T**HE Dairymen's League Cooperative Association announces the following prices for the month of August for milk testing 3% in the basic zone of 201 to 210 miles from New York City: *Class 1*, milk used chiefly for fluid purposes, \$2.60 per 100 pounds; *Class 2A*, used chiefly as fluid cream, \$1.90. If skim-milk is used for any other purposes, additional payment over this base price is added, depending on use. *Class 2B*, used chiefly in the manufacture of plain, condensed milk and ice-cream, \$2.05; *Class 2C*, used chiefly in the manufacture of soft cheese, \$2.05; *Class 3*, used chiefly in the manufacture of whole milk and sweetened whole condensed milk, powdered and evaporated whole milk, \$1.55; *Classes 4A and 4B* based on butter and American cheese quotations on the New York market.

The *Class 1* price of \$2.60 became effective August 18. At the same time, retail prices in the city of New York advanced one cent a quart on all grades. Loose milk is now selling for 10 cents a quart while bottled milk of Grade B is 14 cents. *Class 2B and 2C* have advanced 10 cents since our announcement last week. Before the next issue appears, there may be a change in *Class 3*.

### July Pool Prices

The League announces that the pool price for July for 3% milk in the basic freight zone is \$1.50 gross. Deductions include 8 cents for expenses and 10 cents for certificates of indebtedness, leaving net cash to farmers of \$1.32. The net cash price to farmers last month (June) was \$1.24. The July pool price in 1923, net cash to farmers, was \$1.81½.

### Sheffield Producers

The Sheffield Farms Company Producers announce the following prices for August for 3% milk in the 201 to 210-mile freight zone. *Class 1*, \$2.10 per 100; *Class 2*, \$1.70; *Class 3*, \$1.55; *Class 4* to be determined by market quotations of butter and cheese.

### Non-pool Cooperative

The Non-pool Dairymen's Cooperative announced that the August price for *Class 1* milk is \$2 per 100 pounds. We have received no information that indicates any change in *Classes 2, 3A and 3B*. In July these classes were priced as follows: *Class 2*, \$1.70; *Class 3A*, \$1.60; *Class 3B*, \$1.45.

### Interstate Producers

Interstate Milk Producers Association (Philadelphia) receiving station price for August for 3% milk in the basic zone of 201 to 210 miles from Philadelphia is \$2.19. In the 101 to 110-mile zone the price is \$2.29.

## SLIGHT CHANGE IN BUTTER

The change in the butter market from last week has been very slight. Prices have advanced to a small degree, but as we go to press the indications are that with the weakening market prices may be shaded slightly, so that undoubtedly the week will close about the same as it did on the sixteenth. Early in the week there was quite a bit of activity in the market. Buyers took hold very well, and a feeling of confidence was evident in the market, which was responsible for a slight upward turn on Tuesday. There was rather active buying for immediate trade needs on the part of chain stores, and some speculative activity was in evidence. As soon as this buying trade was satisfied, however, the market eased off, and by Thursday there was a weaker tone. The quiet trading on Wednesday afternoon resulted in ¼ to ½ cent falling

**FOR SALE** Egg Cases—Clean with whole fillers and flats. Butter Tubs—just like new. W. J. SCHINTZIUS, Inc., Elk St. Market, Buffalo, N. Y.

off in prices. This decline in price was due to the pressure to sell in view of light buying.

Advices still indicate that conditions are favorable for production, particularly in the West, although there has been a little more shrinkage in the make. Throughout the East heavy demands for market milk have caused quite a pronounced shortage and very little butter is being made. Shipments of Western cream for Eastern consumption have also increased. However, there is a feeling in the market that present prices are not out of proportion and that in view of the anticipated shrinkage we will see a gradual reduction in make, with the consequent ability of the market to at least hold its own. While a fair proportion of the butter coming in is of good quality for this time of the year, nevertheless a good many markets show characteristic summer defects. These defects are responsible for a wide variation in quotations. Creamery firsts are quoted anywhere from 36¼ to 37c; seconds, 34¼ to 36c; while lower grades are down to 33 and 34c.

## CHEESE SLIGHTLY WEAKER

During the past week the market has shown a rather weakening tendency all along the line, especially on grades of State flats. There is a disposition on the part of operators to shade asking prices, and on the 22d there was a buyer's market on all grades. This week this is primarily due to a similar condition in the consuming market. If there were any demand at all at the present time we would see a strong cheese market due to the fact that the heavy demand for market milk in the East has cut down the make materially. The market is working both ways to keep it fairly stable.

Whole milk, State flats, Junes, grade fancy to special, are now quoted from 20½ to 21½c; fresh fancy State flats, are from 20 to 20½c; while average runs seldom go above 19c.

## FANCY EGGS HIGHER

Eggs that grade very fine to fancy, especially on nearby whites form a comparatively small percentage of the supply at the present time. Eggs of this grade are "moving out" quite promptly at prices from two to four cents above last week. However, fairly good eggs of lower grade are more or less quiet, with considerable accumulation reported. The reason for this is that with a high market on strictly fancy quality eggs buyers are very critical and fussy. Rather than pay too high prices they have been taking fancy eggs out of storage, and these storage eggs are competing with average fresh grades.

All told, the egg market is firm, and for those who continue to ship closely graded eggs of high quality, it will continue so. In fact, indications are that with steadily decreasing arrivals, prices are bound to advance to some degree. However, we cannot avoid the competition that will exist between good storage eggs and fresh eggs of only average quality that have been "short held."

## LIVE POULTRY EASIER

The return of warmer weather in the metropolitan district has undoubtedly had an effect on the poultry market. The fowl market has

not been working right during the last week. Trading has been slower and much stock has been shaded in price even on the fanciest receipts. Express receipts have been quite liberal and the easier aspect of the market has been in evidence from the very beginning of the market on Monday, the eighteenth. As a result fowls have been trending downward all along, quotations eventually locating on par with the freight market. Express broilers and chickens are selling well, better than fowls, by a long shot.

Long Island ducks have been finding a ready outlet all during the week. Close to six thousand Long Island spring ducks were received this week. The tendency of the market on Long Island breeders is to strengthen and increase to a higher price. Breeders have been quoted in the vicinity of 21 cents, but this quotation is almost sure to go higher. Spring ducks are in the neighborhood of 25 cents with a firm market.

## POTATO MARKET WEAKER

Lack of a good buying trade and heavy digging in the country with consequent heavy shipments into the market have been responsible for a much weaker tone in the potato market. And if the feeling of the market is any indication, we will see it go still lower. At this writing, August 22nd, potatoes at Riverhead, Long Island, are quoted at 65c a bushel f.o.b., or \$1.90 f.o.b. per 150-lb. bag. The probability is that the price will go still lower. South Jerseys in 150-lb. sacks are quoted at \$1.80 f.o.b. while North Jerseys are \$1.75 f.o.b. with \$1.65 in almost immediate view. This is not at all satisfactory, but warmer weather has discouraged the consuming trade, and with consequent heavy arrivals, we are bound to see this weak situation exist.

## APPLE MARKET WELL SUPPLIED

Supplies of apples have been fairly free all the week and have met more or less of an irregular market, and an easier one, except on fanciest marks. As long as a lot of mixed goods are coming in, we can only report the same story. There is a lot of stuff arriving that should never leave the farm. The best of large-sized marks of most all varieties are meeting a pretty fair demand, and prices are holding fairly firm, but undergrade stuff is dragging, and prices are trending downward.

During the past week western New York apples appeared on the New York City markets for the first time this season. The shipments consisted of Dutchess and Yellow Transparents from Livingston County. Although the stock was generally of small size, quality and color were considered very good. Trading, however, was limited in face of the dull and weak market. Dutchess, 2½ in. are selling from \$1.25 to \$1.50 a bushel basket, while unclassified stock is in the neighborhood of \$1. Yellow Transparents are bringing from 50 to 75c a bushel basket, depending upon size and quality.

The pear market has turned weaker. The buying trade is dull due to this situation. Klapp's Favorites have been accumulating and prices have declined so that now they are quoted at \$1.50 to \$2.75 per bushel basket,

and from \$4 to \$7 a barrel, depending upon quality, size, etc.

## GRAINS AND FEED

According to New York State Department of Farms and Markets, the following prices prevailed August 16.

The quotations given in this report show the approximate prices at which feed can be purchased per ton, and grain per bushel, in straight carlots through billed from Western points delivered on track at points in the freight zones as indicated. Mixed carlots cost approximately \$2 per ton more. Retail feed and grain prices vary with different local dealers depending upon their individual cost of doing business, volume handled, etc. In the case of feeds the retail price may sometimes be as high as \$5 per ton above the wholesale prices given in this report.

There has been no material change in the wheat market during the past week. Prices have been somewhat flighty. As soon as any cables are received that indicate an upward market, heavy selling immediately develops with the result that advances soon calm down. Recent advices indicate that Western Europe is experiencing unfavorable weather for harvest. Argentine is having extremely dry weather and the Northwest is experiencing very heavy rains.

There has been no material change in the corn market. Weather conditions over the Belt are somewhat more favorable for growing. Other grains remain about the same.

### Local Buffalo Market

Since Buffalo is an important milling center for wheat feeds and linseed meal, quotations are given for this point on both a through-billed and a local basis. Ground oats \$43; spring wheat bran \$28; hard wheat bran \$30.50; standard middlings \$29.50; soft wheat middlings \$35; flour middlings \$34.50; red dog flour \$40; dry brewers grains \$34; white hominy \$45.50; yellow hominy \$45; corn meal \$50; gluten feed \$42.25; gluten meal \$50; 31% old process oil meal \$47; 34% old process oil meal \$47.

For points taking New York rate add to Albany price ¼ cents on oats; ½ cents on corn; 10 cents on cottonseed meal; and 20 cents on other feeds.

## TOPGRADE HAY SCARE

Top grades of old hay are scarce and the market for such is steady. As usual, lower grades are dragging, especially those of heavy pressed in small bales. These make up the bulk of the offerings at the present time. There is little or no real fine old hay coming in, and any that does arrive is easily bringing from \$30 to \$32 a ton. The market for new hay is the same as quoted previously. Complaints are still being made of heating, and much of the receipts are of more or less mediocre quality.

## Among the Cow Testers

(Continued from page 137)

The Garnsey Farm of Seneca Falls is building a new milk house and silo.

E. C. Jonas of Cayuta has recently completed a new milk house with ice house attached to the rear.

Herds producing above 1000 pounds of milk per cow for the month of June are:—

- H E Burrell, Watkins
- Ralph Beardsley, Odessa
- Lee Bales, Cayuta
- King's Grand View Farm, Burdett
- W. L. Hoogkirk, Hector

Dryden Agent, W. A. Boyd

The highest average herds were:—

Carl Mott & Son	32 cows	1093 9 lbs milk	37.0 lbs fat
Victor Wright	6 "	823.8 "	40.4 "

Whitewashing, the cheapest means to sanitation and lighter barns, was done by fourteen dairymen in the association last month.

Two more herds tested for Tuberculosis came clean. Six boarder cows disposed of and four new cows purchased.

Unadilla Agent, W. W. Sadler

Two out of the six dairies are feeding grain. The others think it is unprofitable for them to feed grain at the present price of milk. The two that are feeding grain believe that their cows will come thru the summer and pay more in the fall, even tho they do not make anything in June.

Chenango Valley Agent, W. W. Sadler

The general trend in the association is to improve the herds; two purebred bulls have been bought to head herds. One heads the herd of Neidlinger & Son, the other heads the Prindle Bros. herd.

Boarder cows are disappearing, several being sold this past month.

## Quotations From Eastern Markets

The following are the prices at which farm products of special interest to Eastern farmers sold on August 21:

Eggs, Nearbys (cents per dozen)	New York	Buffalo	Phila.
New Jersey hennery whites uncandled, extras...	54 to 56		
Other hennery whites, extras...	50 to 53		
Extra firsts...	45 to 49	39 to 42	
Firsts...	40 to 44		
Gathered, whites, first to extra firsts...	40 to 46	36 to 37	
Under grades...	34 to 39		
Pullets...	36 to 40		
Hennery browns, extras...	42 to 48		
Gathered browns and mixed colors, extras...	39 to 41	38 to 39	
Butter (cents per pound)			
Creamery (salted) high score...	39¾ to 40¼	39 to 40	40½
Extra (92 score)...	39 to 39¼	32 to 33	40
State dairy (salted), finest...			
Good to prime...			
Hay and Straw, Large Bales (per ton)	U. S. Grades	Old Grade	Standards
Timothy No. 2...	\$27 to 29	\$20 to 21	\$23 to 24
Timothy No. 3...	24 to 25		19 to 20
Timothy Sample...	12 to 19

Lambs, common to good...	10 to 14		
Sheep, common to good ewes...	3¼ to 5		
Hogs, Yorkers...	10 to 10½		

# My Fall Poultry Chores

Mrs. C. J. Doxtater Tells How She Controls Poultry Pests and Troubles

THIS is one of the most trying seasons of the year for the poultry raiser, especially when that party is a farm woman with all the extra work of haying and harvesting and the garden "sass" ready to be canned, etc.; then of course the weather is hot and mites breed especially well then, as do also the big turkey lice. Many a night it is past nine p. m. when I am "powdering" chicks, hens and turkeys after a full day riding a mowing machine and hay rake. But they will take their toll, so it is best to keep the quarters free from these things. Sometimes it seems almost impossible, so we must just fight them. We use the old oil from our car and tractor, and with a large paint brush, paint the roosts, coops, floors where chicks set, and the walls; we find it very satisfactory. Sometimes we add the kerosene the ear engines are cleaned with to make the oil a little thinner.

Then, too, the hens are beginning to moult and the dry mash must be changed, that is, some oil meal added to it to help make feathers. We do not agree with many who say discard the early moulters for ours have proved to be the best layers when eggs are high in price, and it stands

to reason the early moulter has her new coat of feathers and is ready to lay 80-cent eggs when her late-moulting sister is getting on her winter coat. The early moulter may not lay as many eggs in a year, but her eggs will bring the most money for a year, so what difference if she doesn't lay so many? She will last longer and you can board her cheaper during the summer if she is not laying so hard. Then give her that extra feed in late fall and winter and that hen will pay a profit. Of course, the lighter breeds may not do this, but we are breeders of pure bred Columbian Wyandottes, bred for winter laying and that one point is always kept in view.

It is all right to cull. However, I do not believe any one can cull a flock as successfully as the party that handles and lives with that flock. And they needn't trap-nest either. It is careful watching and knowing what is fed, as the feed plays an important part in the culling game. The best layer ever hatched will not lay eggs if she is not given the material to make them from. How often, in hot weather especially, we see a pan or jar the hens drink from refilled day after day without even rinsing

out. The same party may be buying a lot of expensive feed, when water is the largest part of the egg. But a hen will go without water or drink just as little as she can if it isn't good the same as a person. It only takes a few minutes each day to keep these dishes clean and the water pure. It is cheaper to keep poultry well than to cure them after they are sick.

Just as an experiment, if you happen to be one who does not wash out your drinking dishes every day, try it and refill with good clean water. Put it in the shade or building where it will be as cool as possible and watch biddy's surprise when she comes to drink and also see how much longer she will drink. Surely there is nothing cheaper than water.

Next, how is ventilating in the roosting quarters? Go through the pens every night. If the hens are too warm, open up so there is lots of air, but don't have drafts in summer any more than in winter. Try to make the quarters comfortable, provide shade of some kind if it is only sun flowers or a vine growing over a park. Trees are best, but everybody does not have trees.

All these things help save the feed bill and the cheaper we can produce anything of course the more profit there is in it.

## What the Parties Offer Farm Women

### The Democratic Platform

(Continued from page 141)

been removed. This will only be done when we return to a tariff for revenue only and decide to finish the job which we undertook when we entered the war.

The present administration has allowed private individuals to go abroad and try to help. It prides itself, however, on keeping, as a government, out of all European entanglements with the result of keeping out of world affairs. So it sends off unofficial individuals for which it assumes no responsibility although they have the "sympathetic support" of their government in their efforts, and when they succeed the administration takes to itself the credit of a "forward step" in the solution of the international problems.

This is not the Democratic policy. They believe in officially trying to eliminate the causes of war, and in helping to re-establish the European nations financially so that their markets may again be open to us in a profitable way. With this policy I feel all women in this country should be in sympathy, for they hate the thought of the useless waste of human life which they spend so much of their own lives in conserving. It seems to me that at the moment the farmer's wife has perhaps more things that intimately concern her at stake than at any time in my memory and I hope she will think seriously before she casts her vote on Nov. 3rd, weighing carefully which of the parties in their fundamental principles most nearly answer her needs.

\* \* \*

### The Third Party

(Continued from page 133)

from money belonging to them as from the control they possess over the money of others. If you are a small depositor in a bank, or a minority stockholder in a company, your money is often being employed contrary to your interests and your will. This is owing to the opposition between our political and our economic system. We have universal suffrage in our political life, but in our economic life we still have the ancient and discredited system of plural voting. It is not one man, one vote, but one share, one vote, which gives us minority control and dangerous power in the hands of a few.

What remedies does the Third Party offer? First, real support of co-operative enterprises, which are the only democratic corporations, and second, Government ownership or control of railroads, and

third, the submission of a constitutional amendment providing that Congress may, by a two-thirds vote, overrule a decision of the Supreme Court. Co-operation needs no defense, but it meets much dishonest opposition and needs public encouragement. We already have Government ownership in our highways, our schools, our post-offices and our water supplies. Would we return any of them to private ownership? Are teachers or postmen overpaid? Are we overcharged for stamps or water?

### What American Women Want

The Supreme Court has undoubtedly encroached on the power of Congress in a way not contemplated by the framers of our Constitution. We are the only country with a written constitution, yet fundamental rights are as thoroughly respected in England or France as here. Theodore Roosevelt saw no danger in such a limitation of the judicial power. Two-thirds of the States can call a Federal Constitutional convention to re-write the Constitution, and in about 1910 twenty-eight States had done so.

## Should Women Help with Farm Work?

(Continued from page 131)

not paid either socially or economically, but the work had to be done and theirs were not the hands to shirk the task.

In my opinion, the answer to the question, should the women do farm work, is the same answer for a great many other problems of life. It is, "keep to the middle of the road." If it is a question of laboring as peasant women have had to, the answer is absolutely No. It is No also, if working outside is an added burden to doing all the work in the house for a large family, or if it means working with no rest from dawn to dusk, as too many of women folks of the past, or even of the present, have done or are doing.

But on the other hand, a good many of the women folks like to do a reasonable amount of farm work, and if it is a substitution for house work, and not an addition, outdoor work is good.

"That's all right to talk about cutting out the heavy work," I can hear some of both the men and the women say who read this, "but how is it to be done? That's what we'd like to know."

I answer that by saying, more and more farm people are going to cut out unprofitable enterprises. There has been too much of a boast among farmers about

Further action was staved off by the passage of the Amendments for the Income Tax and the direct election of United States senators.

The women of the United States want two things before anything else, Peace and Prohibition. The enemies of peace are a minority of ambitious politicians and financiers, the enemies of prohibition are a minority of corrupt office-holders, who, both before and since the passage of the Eighteenth Amendment, have found their profits in the violation of the liquor laws.

The great and fundamental opportunity we are now offered is the possibility of a Third Party pledged to carry out the will of the people. It is nearly a hundred years since de Toqueville, after a visit to this country, warned his contemporaries that the principle of majority rule was established here and would prevail in all countries, that the path of wisdom lay, not in fruitless and contentious opposition, but in persistent education of that majority. His prophecies have been fulfilled and wisdom and patriotism urge us to follow his advice.

keeping a larger herd each year, or raising a larger and larger acreage. The boast in the future, for both crops and animals, is going to be not how much, but how well; to grow less crops and fewer animals, but to grow them better. In the future those who farm are going to keep records and by these records they are going "to make their heads save their heels."

Right there is where the farm women are going to come in. Business men who employ women know that they are invariably better than the men in keeping records and in working out details that save labor.

My suggestion is then that the woman can save more labor by keeping the accounts and by bringing her judgment to bear on the farm enterprises, than she can by working beyond her endurance in physical labor all of the time. Then in addition to this, outdoor enterprises, such as keeping poultry, working some in raising good stock or even in driving the hay rake in an emergency, are all right, if both the man and the woman remember that after all what counts in the long run is not so much making a living as living itself, and that all the details and the hard work of life are failures if we do not get some happiness out of them.

# Hay—Most Important, Gets the Least Attention

*A Plow Handle Talk by a Man Who Raised Over 500 Tons This Year*

CAN we safely say that our most important eastern crop, the grass crop, receives the least attention of any crop we grow? Somehow, because nature is so lavish in providing a covering, we forget that she will only give the covering and then ask us to provide ways and means if we want more.

H. E. COOK

Most of us want more, but not all of us are doing the things necessary to get more. Really the low prevailing prices of recent years have not given much encouragement for study and work. My experience has been that pretty well defined rules and methods must be followed if annual worth-while crops are to be harvested. This means that the effect of seasonable variations must be reduced to a minimum. All other things being under control, hay plants have an outstanding advantage over whole season crops that a safe growth can be made early before drouth can materially injure the plants. The year 1888 was the only exception to this rule in my memory, with practically no rainfall from April 1 to July 1st.

Most of us understand the dirt mulch value for cultivated plants. Hay plants need mulch just the same, but of a different kind and prepared the year or years before. Fortunately all of our grass plants are low temperature plants, growing early in the spring even under frosting conditions. Of course, frost usually lessens growth, especially of the hay plants, that must produce long stalks. Pasture blue grass which has a more leafy growth is less injured for the same reason that it withstands grazing better.

If these plants have a congenial home for the winter they will be as ready for action in the spring as a woodchuck. Land, therefore, must have

H. E. COOK

reasonable drainage. Grass roots will stand a lot of water but not standing water. I have grown splendid hay crops on a silt subsoil which to the eye seems quite impervious to water but there is enough filtration to satisfy the grass roots. If water does not drain off the nitrates will not form, bacteria will remain dormant and we lose the advantage of early moisture. Good farming, that is, profitable farming, means not much more than taking advantage of natural conditions by supplementing and working with them. Profits will otherwise disappear. Good cultivation and available plant food are necessary. Grass plants are not unlike potatoes and corn; they positively must have plant food in abundance.

## Summer Fallow a Safe Investment

A plant that grows rapidly and at low temperatures can't forage for its fodder. There are differing methods that may give this sort of preparation. I have not practiced the Clark plan of summer fallow and fall seeding independent of a grain crop enough to learn it, and few people have. I expect the drawback is that clovers do not respond to late summer seeding like redbud and timothy. I don't think we can afford to abandon clover sowing and so we continue seeding with grain in the spring. The summer fallow, however, is a safe and sure investment and should have a place on every farm.

Somehow, there is a disposition to put away the tillage tools after the spring's work has been finished—using present accepted methods of seeding with grain. We use approximately four quarts of timothy, three quarts of medium red clover, one quart of alsike and four quarts of alfalfa per acre. The first year the three clovers appear with timothy, the red predominating. The second year the red partly disappears and the alfalfa increases.

Top dressing with a spreader in the fall seems to be our best method of preserving the growth

and establishing the much-to-be-desired mulch previously mentioned. We have a six-acre field that has just yielded its eleventh cutting, in weight I should estimate about three tons per acre—my estimate made from a judgment formed from a number of years of weighing hay and other crops. Anyhow, the crop was sufficiently outstanding to attract observation and discussion as to how it was done. It is naturally good grass land to which there have been added, in eight years out of the eleven, seven loads of stable manure per acre but no chemical manures of any sort. This reference does not mean that I would always advise permanent meadows of mixed grasses, of alfalfa no one would differ. If the field is adapted, the plants fed and the plan is best for that farm, it can be done.

Back again to our meadow mulch—all hay plants have easily injured crowns and hay growers will profit almost in proportion to the way they protect these crowns. In earlier days I often wondered how hay farmers could grow crops without stable manure. Now I understand. On the hay farms, cows were not eating the second growth, thereby protecting the plants and forming a mulch by the decay of the aftermath. It seems beyond comprehension that dairy farmers will allow cows to graze the scanty second growth. When the growth is heavy, say 25 to 50 per cent. of the first crop, no serious damage will occur by pasturing a portion, if the animals do not poach the land. On meadows to be plowed the following year, cows may be allowed to run indefinitely, saving their droppings without much waste for a succeeding crop.

Two false notions prevail in regard to this second growth, one that it is wasted if not made into milk and the other that a heavy growth will smother and cause so-called winter killing of the roots. This is about as reasonable as it is to expect that a man will smother and die because he uses covering enough in bed to keep his body warm. Not only does the grass give protection to

(Continued on page 147)

## Buying Cooperatively Through Local Dealers

*How the Farmers of Waukesha County Save Money*

By W. A. FREEHOFF

THAT it is possible to buy at reduced rates and still patronize the home dealers, is being demonstrated by the Waukesha County Farm Bureau, Wisconsin. In some localities considerable ill-feeling had resulted on the part of home merchants because farmers' organizations bought everything over their heads, so the officers of the Waukesha association determined to try out a new policy.

"We felt that our own business men should be given first chance to do our buying for us," explained O. H. Cooley, Secretary of the Farm Bureau. "So we put our problem frankly up to them. We told them that we would insist upon very material reduction in prices, but in return for that we would buy in large quantities, and pay cash."

"See how that would benefit both farmer and dealer? The dealer was sure of his money on the spot, and would not have to charge off any losses. The farmer was taught the value of paying cash and getting his discount; he would be weaned away from the bad business policy of charging his purchases. Credit badly used keeps more than one farmer poor."

Take the matter of coal, for instance. The Waukesha members use about a thousand tons a year, so Secretary Cooley asked for bids from all the county coal dealers for the full thousand tons. The lowest bidder gets the business. Gasoline and oil is another proposition on which Cooley is working. He has already succeeded in getting the chief oil companies, through their local dealers, to sell at car-load rates, yet making individual deliveries in small lots to the participating members.

Grass seed is also an important item. One Waukesha County farmer gave the Farm Bureau

his check for \$5,000, to cover his purchases of Grimm alfalfa. There are five seed dealers in the county who gave a rebate of one and one-half cents a pound on grass seeds. About 1,000 automobile tires are handled per year, at discounts ranging from 15 per cent. to 20 per cent. A car-load of flour is ordered about every three months, at a saving of \$1.50 to \$2.00 per barrel.

Cooley's records show that the Waukesha Farm Bureau, in less than a year, sold \$80,082.25 worth of merchandise to its members at an estimated saving of \$12,177.25, or an average saving to each member of \$20.29—more than twice the annual membership fee.

The Waukesha County Farm Bureau has also been active in helping the milk shippers of the Milwaukee fluid milk territory get the best possible price for their milk. Ten farm bureau members, one from each town where possible, are on the milk shippers' board which meets with the Mil-

waukee distributors. This board, after conferring with the distributors, reports back to the producers, and then goes back and closes its deals. There are 1,500 milk shippers in the county, and the work of the farm bureau, it is estimated by Cooley, has saved them a good many thousand dollars in the past two years.

In order to get the reduced prices for quantity buying, the Bureau members are not required to buy more than they need at one time. Most contracts cover a year, and the farmers take their produce, and pay for it, as they need it. Reductions are often made in the form of dividend checks when the contract has been fulfilled; a good case in point being a check for \$800 recently distributed by Cooley to members on oil purchases.

Cooley also conducts an exchange department for the members. This has proved particularly useful in selling seed corn and grains, seed potatoes, etc. This spring he secured quite a little seed corn from Farm Bureaus in Minnesota and Iowa to eke out a short local supply. During the spring rush there were days on which over a thousand dollars' worth of this "exchange" business was done.

Since the Waukesha Farm Bureau has been adopting this business policy, of making memberships pay out in hard dollars and cents, there has been renewed interest in the Bureau, and many volunteer memberships are now coming in. Membership is now a business proposition in which direct and not intangible returns are guaranteed. Last year the Bureau treasury was empty, and this year it showed a balance of over three hundred dollars. Other Farm Bureau units have written Cooley and secured an outline of the plan, and the idea is spreading in a manner which indicates that the Waukesha Bureau has hit upon a workable, business program.

City Feller—Say! Is that bull safe?  
Rustic—Well, he's a dangsite safer'n you are!

## The New York State Fair and the Farmer

An American Agriculturist Radio Talk Broadcast from Station WEAFF

THE New York State Fair at Syracuse is one of the foremost instrumentalities for education along agricultural lines. Its primary purpose is to serve as a great outdoor university to which hundreds of thousands of our farmers and their families may annually come in order to gain helpful knowledge along every phase of farm life.

This is a distinct work of the State to help the farmer. The State Fair is but one part of our endeavor, for I am not unmindful of the fact that the State's greatest contribution toward the advancement of agriculture has been its establishment and maintenance of the New York State College of Agriculture at Ithaca together with other agricultural schools throughout the State. Many millions of dollars have been expended in this most worthy endeavor.

The advancement in knowledge and skill for general farm operation, and for the wide range of specializations in agriculture, and in public and private service dealing with agriculture are such as to place upon these institutions a very wide and exacting field of endeavor. From these institutions must come both farmers trained for their work and the educated leadership required in many of the farmers' societies and cooperative organizations and the businesses serving the farmers, as well as teachers and scientists to extend the boundaries of knowledge of agriculture.

Agricultural progress has been immensely accelerated since the organization of these agricultural colleges and experiment stations which bring the facts and methods of science to apply upon the problems of the farm.

The work which the State of New York is doing along this line is most commendable. Now, the State Fair at Syracuse supplements all this work. There are brought together thousands of farmers throughout the State bringing their exhibits and entering into friendly competition for premiums. The results of new methods are seen. The advantages of one method over another are demonstrated. There isn't anything connected with agriculture that is not exhibited at the New York State Fair. The whole purpose of the institution is to help the farmers in every way possible. No man or woman can visit the fair and give attention to the multiplied exhibits without going away with an increase of knowledge that is bound to be of inestimable value to them in their work.

While the primary purpose of the fair is to advance the farmer it gives large space for other lines of activity.

The average person living in the city is so busily engaged in his own affairs that he simply forgets the importance of agriculture until some sudden food crisis brings it forcibly to the front. So long as the individual city dweller can purchase his foodstuff he forgets the source from which it comes. The vital connection between the farmer and the city dweller is of utmost importance.

The more we can bring the producer and

By HON. GEORGE R. LUNN

Lieutenant-Governor State of New York  
Chairman New York State Fair Commission

consumer of foodstuffs together in intelligent conference the better it will be for all concerned.

While last year's fair eclipsed all previous exhibitions, the State Fair Commission this year looks forward to the greatest and most successful fair in the history of the State. Last year the splendid equipment of buildings was increased by the addition of a coliseum which will be available for stock-judging contests in the day time and for horse shows and other entertainments in the

### Is the State Fair Worth While?

WHETHER or not you are in the habit of attending the New York State Fair, you will be interested in reading Lieutenant-Governor Lunn's article on the State Fair, published on this page. This talk by the Lieutenant-Governor, who is by virtue of his office chairman of the New York State Fair Commission, was broadcast over station WEAFF Wednesday evening, August 27th.

The State Fair is an enterprise of the people of the whole State, held chiefly for the benefit of agriculture. A great deal of money in the shape of taxes is spent by the State to make it worth while. There are some who believe that the Fair costs more than it is worth; or putting it another way, that its possibilities for helping agriculture are not developed as fully as possible. Most of those who visit the Fair each year, however, seem to have both a pleasant and profitable time. Certainly the Fair is the one great opportunity of the year to advertise what the State is doing agriculturally. If it does not realize its full possibilities, it is in the end the responsibility of the farmers of the State to study wherein it fails and make suggestions to the Fair Commission for improvements.

evening. The grounds are to be kept open this year at night.

As an added attraction for the evening crowd, arrangements have been made with the General Electric Company to install one of the most gorgeous and beautiful lighting spectacles ever exhibited in New York State.

The farmers of the State have loyally supported this institution and we hope more and more to interest the city dwellers.

To those who are listening to me, who have never visited the State Fair at Syracuse, I urge you that if it is at all possible, you resolve this year to do so.

In addition to what I have had to say regarding the State Fair, I want to say a word regarding the need of greater organization among farmers, both in their own interest and to the better interests of the entire State.

We have not witnessed the advancement and development of agriculture as an industry in any such tremendous proportion as has characterized other lines of human effort. It was subsequent to the panic of 1875 that manufacturing plants began to multiply in America. During the forty years beginning shortly after 1873 manufacturing developed on the most colossal scale known to history. Men in that industry entered into the most intense competition, but above this competi-

tion there was a field in which they united for the common purpose of advancing their mutual interests. They never forgot the interests which they held in common. They forgot many times the interest of the people at large, so that the Government had to place them under regulation in many ways. In spite of this regulation they continued to advance and prosper. This same thing may be said of commerce and of general business and banking institutions. This cannot be said, however, of agriculture. Notwithstanding the fact that agriculture is the basic industry of every State and nation, it, nevertheless, remains true that the average person does not so consider it.

If it is easy for the city dweller to forget the farmer, it is pathetically true that in too many instances the farmer forgets his own interest. Agriculture does not begin to be organized on so efficient a basis as is manufacturing or commerce or banking. Only within recent years has there been any real attempt to emphasize the need of and bring about organization among farmers. We know something is wrong and decidedly wrong when the men and women who through hardship and toil produce necessary foodstuffs, are compelled, through lack of organization, to take whatever the market price may be, regardless of whether that market price pays even the cost of production. The various cooperative undertakings among farmers today should receive the hearty support of every farmer. It is well known that the beginning in organization among farmers, just as it was in manufacturing, will at first be attended by many discouragements and oftentimes

losses, but eventually it is the only way out toward successful agriculture. Cooperative marketing is the hope of the future for the farmers of New York State as well as the nation. Just what plan will be the most successful will be the result of practice and experience among the farmers themselves. While agriculture has been retarded in its advance at every step by reason of the intense determination of other groups to develop their own interests, there has been, nevertheless, encouraging progress.

### Hay—Most Important, Gets the Least Attention

(Continued from page 146)

the plants but there is plant food in it and its decay on the surface furnishes a home and environment for bacterial growth, so very important for the growth of plants. We have urged and practiced the growth of legumes as soil improvers until we forget that the decay in the soil, and with grass plants on top of the soil or any other plant growth, is not only very valuable as bacteria producers but also is making potential or inert plant food available, and is also a sort of first aid to the growth of legumes.

I wonder how many of our readers ever figured out how much real milk tonnage they ever got from the scanty aftermath grazed off by their cows. Cows will

### Can the Cows!

WE hope that every dairyman will give consideration to what we have proposed on page 155 for increasing the farm family's meat supply at low cost and at the same time reducing the surplus milk by getting rid of the main factor which is chiefly responsible for it. There is not a dairyman that does not know that the chief trouble with the dairy market is too much milk. There is not one either but who will agree that it is the cow producing four thousand pounds or less who is chiefly responsible for too much milk; responsible because there are many more such cows than there are better ones.

As we have suggested in the article, nearly every farmer knows of at least one cow in his dairy which is costing him more than she returns. We have been talking about cooperation to sell milk; all right, why not see if we cannot work together a little to cut down the costs of production? The plan we propose is simple. You elect no officers, pay no dues; all that is necessary is to agree to work together to eat the cow that is eating into your profits.

### What Credit Costs the Farmer

A RATHER striking proof of what it costs farmers for credit when they get it at other places besides the bank is shown by the figures recently compiled by the New York State College of Agriculture. During the fall of 1922, visits were made to farmers, bankers and country merchants in Tioga County, a dairy-farming region, and in Genesee County, a prosperous crop-farming region. Over one hundred farmers were visited in each county.

The study showed that 54 per cent of the farmers had checking accounts with banks in Tioga County, and 70 per cent in Genesee County; 14 per cent of the farmers in Tioga County and 31 per cent of the farmers in Genesee County borrowed from banks during the year. In Tioga County, 63 per cent, and in Genesee County, 66 per cent, paid their farm expenditures in cash without borrowing.

The most interesting part of the investigation showed that the credit at feed stores cost the farmers 13.4 per cent; at general stores, 19.6 per cent; at hardware stores, 14.7 per cent; at implement stores, 10.6 per cent; at farm supply stores, 13.2 per cent; and at blacksmiths, 21.8 per cent; making the average cost of credit to the farmer 13.8 per cent. In most cases, he could have

borrowed at six per cent at the bank in town. As W. I. Myers and L. Spencer, who wrote the report of the investigation, point out, it is the business of the feed store to sell feed. It is enough to do this work and do it effectively. And for the same reason, it is the business of the bank to sell credit. They are equipped to do this, and by exercising great care as to the character and resources of their borrowers, banks practically eliminate the costs of bad debts and of collection.

### "By Their Works—"

FIFTEEN years ago, T. B. Freestone of Seneca County, New York, determined to set an apple orchard and to enter the lists as a fruit grower. Shortly after his orchard was started, it was our pleasure to become acquainted with Mr. Freestone, and to watch during the years since the growth and development of one of the finest orchards of its size in the State.

The other day we called on him, and although it was raining, we could not resist his invitation to put on rubber boots and walk down the long rows of beautiful trees loaded full with unblemished fruit.

As we walked and talked with our friend and looked at the loaded trees, we recalled the years of painstaking care and work he had given to his orchard, the long years when it was growing, requiring labor and expense and making no return. We remembered going through the orchard many times with him when it was young and seeing him stop to pinch off an extra shoot here or to train a small limb in some other place.

And as we remembered all this care that "Tom" had given his apple orchard, and as we looked about us and saw his reward in the many barrels of perfect fruit which will bring pleasure to hundreds of consumers this fall and winter, we thought how much humanity owes to him and to thousands of other good farmers like him who are the world's real producers. The rest of us may have our doubts sometimes as to whether our existence is justified or our work worthwhile, but the man who grows the stuff that feeds and clothes the world never need have any doubt. Truly, "By their works ye shall know them."

### Time for Caution

THE Grain Marketing Company is the name of the new cooperative organization which plans to be the largest farmer cooperative in the world. This company will acquire elevators of the five largest grain elevator companies in the United States, and will have elevators placed in Chicago and in other centers with a capacity of more than fifty million bushels of grain. It will be financed by selling its stock to farmers. It contemplates taking over the control as soon as possible of 5000 more elevators already owned or controlled by the various cooperative farm organizations. The initial capitalization of the company will be \$26,000,000.

At the risk of being called reactionary by cooperative enthusiasts we must say that it is time for farmers to cease organizing these great companies until they have put in better working order those which already exist. There is great danger of over-organization. Among the many already organized there are some sure to fail, with the danger that their failure will make farmers lose confidence and cease to support the many good organizations that are doing very effective work.

Although it has been preached to the contrary, farmers' marketing companies are no cure-alls for economic troubles. Membership in them is not going to make any farmer rich over night, nor even save him from his own farming mistakes. The most that can be hoped for, and this is already being accomplished by some cooperatives, is increased efficiency in putting farm products on the market. It is possible that cooperatives may do away, in some instances, with middle-men, but most of the service that middle-men perform must always be rendered by some agency, and unless the cooperative can do this service cheaper

and better than the so-called middle-man, it will cost farmers more than the old system and will have no justification for its existence.

But results cannot be measured in a short time, and the cooperatives should have plenty of time and sympathetic support before they are judged. Some of them have already shown results. Others will do so if they have the same sound judgment and management that other big successful businesses have. It takes time to obtain and train great managers, and the bigger the enterprise, the more difficult it is to get sound management, and the more danger there is of possible failure. It therefore seems to us that the big job now before farmers in solving this market problem is to give especial attention to increasing efficiency and perfecting the management of those enterprises they already have. Until the cooperatives in which the farmer has already invested much time and money have returned results, caution and conservatism should be used in starting new ones.

### A Farmer's License?

As a subscriber of the AMERICAN AGRICULTURIST, I wish to bring to your attention my new idea in the nature of a "farmer's license." By this I mean every farmer would have to secure a license to farm. Every one desiring to farm who is not farming would have to take an examination before a board of farmers as to whether he would be qualified to farm before he could have a license.

A "farmer's license" would raise the ethics of farmers, promote cooperation, prevent the side line farmer from placing his small surplus on the market at any price and weed out that undesirable element.

Let me hear what your opinion is in this matter.—S. L. M., Luzerne Co., Pa.

THE above is a letter which we received a short time ago, making what seemed to us a very interesting suggestion. On first reading, we thought it just another one of the thousands of wild schemes that come to the office of AMERICAN AGRICULTURIST every year for helping farmers. But after reading it and rereading it, we are not so sure that it is entirely wild.

Farming of to-day is a different business than it used to be. It is getting more complicated, and takes more science and better business methods than it ever has before. We license our doctors and our lawyers. Would we be so far wrong in licensing our farmers? Not those that are already on the job, of course, but those who start new in the business. This, as our correspondent points out, would have a tendency to raise farm standards and crowd out those who never had any chance of succeeding, giving those who are efficient a real opportunity to make good. We are not advocating this scheme; we are just wondering about it. What do you think?

### Eastman's Chestnuts

C. E. LADD, Extension Director of the New York State College of Agriculture, has told this story around the State so many times that I think it is time to fix things so he cannot tell it any more. Therefore, in order to do this, and for the benefit of the two or three who may not have heard Dr. Ladd tell it, I am repeating it here.

A farmer took a calf to town in a lumber wagon with wide-tired wheels. He drove on to the scales and weighed the wagon with the calf, and then drove around to the yard and unloaded the calf. On his trip back to the scales, to re-weigh the wagon, he had to drive all the way through heavy clay mud.

After he had driven on to the scales, he waited a long time for the weigher who seemed to be puzzled over the result that he was getting. Finally, the farmer, becoming impatient, asked:

"Waal, what did he weigh?"

"By gosh, I dunno! 'CORDIN' TO MY FIGURIN', HE WEIGHS SIXTEEN POUNDS LESS THAN NO CALF AT ALL!"

The noisiest drum has nothing in it but air.—PROVERBS OF ENGLAND.

# Some of Those Who Will Pitch

## Barnyard Golfers All Set for A. A. Tournament at Syracuse

**S**ELDOM has there been anything that has created more interest and real fun in New York State than the horseshoe pitching contest conducted by the farm bureaus of the different counties, and by the AMERICAN AGRICULTURIST. We have already published some of

The Cattaraugus winners are John Emke and Roy Waldron of Eddyville, second and third from the left.

the winners in the local contests, and on this page are the names of the winners in several more. Because some of the contests are still to be held, we are sorry to be unable to publish the names of anywhere near all of those who will take part in the tournament at Syracuse, but full publicity will be given to all contestants later.

Arrangements have been made for the elimination contests at Syracuse, near the coliseum, where fine outdoor courts are being prepared, and the grand final to determine the State championship will be held within the coliseum and will be witnessed by a good many thousand people.

All contestants should register either Monday or as early Tuesday morning as possible of State Fair Week at the AMERICAN AGRICULTURIST tent where full instructions and information can be had. The rules which will govern the contest at Syracuse will be the same standard rules that have been used in the local contests. No one will be eligible at Syracuse unless he is a member of the teams which have won either first or second place at the local contests which were in charge of the county farm bureau agent. In other words, each county is privileged to send two teams, of four men, providing these men took part in the local contest and won first or second place.

R. Q. Smith, county agent of DELAWARE COUNTY, says:

"We are sending you under separate cover picture of our two highest teams in the barnyard golf contest taken after the ringers were made on the 21st—the day of our annual county picnic. The winners are: Fred Gray, George Tweedie, William Miller, Clyde Constable, all of Walton, New York.

"The contest continued all day. The committee did very good work and there were loads of folks that found pleasure and entertainment along the side lines. We had over 5,000 people out.

"The cup in the picture is one given by our committee to winners."

P. L. Randolph, county agent of MADISON COUNTY, writes as follows:

"We have completed our county horseshoe pitching tournament. George Philpot and Arthur Trew, both of Munsville, took first place and the Judd Brothers of Nelson, winners of last year's tournament, took second place. Judd Brothers represented Nelson Grange.

"Both of these teams will compete at the State Fair."

OTSEGO COUNTY will be there of course. Harlo P. Beals, county agent, says:

"The winners of the horseshoe pitching contest at the Otsego County picnic were Howard Brown and Clyde Wright, both of Oneonta. These men are young men and both are planning on attending the State Fair with the idea of working out in your contest there."

E. D. Merrill, county agent of MONROE COUNTY, writes that Lester Shockow and Roy Shockow of West Henrietta are going to represent their county at Syracuse.

J. C. Otis, county agent of LEWIS COUNTY, writes:

"The two men who had the highest standing in our horseshoe pitching contest at the farm and home bureau picnic are George Higby, Turin, and Solon Gordon, Lowville. These men will represent Lewis County at the State Fair tournament."

Southwestern New York is on the job too. CATTARAUGUS COUNTY reports through county agent O. H. Chapin, that the winning team in the horseshoe pitching tournament were John Emke and Roy Waldron, of Eddyville.

CHENANGO COUNTY will be there too. V. A. Fogg, county agent, says that over 8,000 folks attended the picnic.

The horseshoe pitching contest kept a lot of men busy, and a lot more people interested all day. The winners are Herbert Coxe, Norwich, and his son Alton Coxe, Norwich, Walter Sanford, Otselic, and Charles Humphrey, Smyrna.

William S. Stempfle, county agent of STEUBEN COUNTY, reports the following winners in his county: Allen Ball and Roy Clark of South Pultney.

It Appeals to Old and Young.

CHEMUNG COUNTY, represented by R. H. Hewitt, county agent, reports as follows:

"The two teams which will compete in the horseshoe pitching contest are as follows: Roland Rose and Charles Moore, both Horseheads, New York, John Monks, Pine City, N. Y., and J. P. Moran, Elmira, N. Y.

"Messrs. Rose and Moore won the contest at our picnic and were awarded a \$10 prize."

The good old dairy county of SCHOHARIE has found time to forget the cows long enough to try out some golfers for the Syracuse contest. Ray F. Pollard, county agent, reports that the winners are Grover C. Guernsey and George Turner of East Cobleskill for first place, and Alfred Rickard and Charles Salsburg for second place. They will represent Schoharie County at Syracuse. Third position was won by Clayton Mattice and Wade Mattice, of North Blenheim.

Harry C. Morse, county agent of FULTON COUNTY, announces that Clark Bennett and Floyd Fiske of Gloversville were their winners.

Last but not least, Chester M. Austin, county agent of MONTGOMERY COUNTY, sends us the following report:

"Our sixth annual picnic and field day was held on Saturday last near Fonda in which the Fulton County Farm Bureau joined. Previous to this year very little has ever been done with barnyard golf in this county. This year the farm bureau provided a contest between Granges, the winners to receive a banner which will be attractive enough to hang in the Grange hall. It is understood that the prize will remain with the winning team but one year unless it can be retained against oncomers at each succeeding annual field day. Each year it passes to the winner in the field and the trophy will carry record of the winners.

"We were especially pleased over the offer made by the AMERICAN AGRICULTURIST which has been an objective in our contests this year. Three Granges entered the contest, namely, Sprout Brook, Mohawk Valley and Palatine. Sprout Brook won first. The latter then tried with an independent team from Minaville, and was defeated. For this county, then, the Minaville team has the privilege of entering at Syracuse. The winners are Walter Wilkie and F. Robbins of Minaville.

"We can look upon this year's contest with real encouragement. A great deal of interest centered around the contests and no doubt another year will bring forth a greater number of Granges to participate. We wish to express appreciation for the sheet of rules which you forwarded for our use."

We repeat, these are by no means all of those who will compete at Syracuse. It is possible that some local contests have not been reported and several have not yet been held. Therefore, it is very evident that there is going to be a "hot time in Syracuse." We hope that we are going to be able to keep the contestants throwing the shoes at the pegs and not at each other's heads!

MEET US AT THE FAIR.

### Hay—Most Important, Gets the Least Attention

(Continued from page 147)

generally, if taken from a scanty dried pasture make a quick gain, but about one week will cover the time of increased milk flow. During this period, whatever its length, we are decreasing the hay crop for the following year to feed twice the time.

These are facts—not fancies. Hay should generally be fed in the fall, at least two months earlier than is customary, chiefly because the feeder hasn't got it to feed and have enough to last through the winter when no other feed supply is at hand. The combination of purchased grain and poor pasture is altogether too frequent in dairy sections. I am not talking about larger hay crops for baling alone but to feed our cows.

I know from our own plan of feeding hay every day in the year something about a cow's capacity for hay and she will show the good effects in the summer-time if we do not wait until the flow is down. Then there will be very little to the good. There is no use in discussing methods of securing better crops or better cows or better morals or anything else in this world until we are thoroughly

convinced that it is something we want and ought to have, and so concerning a hay crop on a dairy farm. If there could come over us a general conviction that a better market for hay is found on our own farms already established that would not call in the pressers or buyers or a second hauling, we would be interested and would find ways and means at once.

Delaware winners, left to right, Fred Gray, George Tweedie, William Miller, Clyde Constable, all of Walton, N. Y. The winners hold the cup.

NEXT to pictures of the children, pictures of farm pets are first in interest, first for the memories they bring back.

You'll make the pictures you want easily and well, the Kodak way.

FROM A KODAK NEGATIVE

## "Kodak on the Farm"

A new booklet, just off the press—and written just for farm folks.

It tells in story style about the fun side and the practical side of picture-making on the farm. Thirty-two pages, forty-three illustrations. It's interesting and entertaining—you'll enjoy reading it.

Call for a copy at your dealer's or let us send you one by mail.

Autographic Kodaks \$6.50 up

### Cooking and Baking NOW A PLEASURE

The most recent development in a RED CROSS Range for coal and wood; black or gray enamel finish; with or without hearth; cabinet or leg base; large fire box, roomy oven and scientific flue arrangement which guarantee perfect cooking and baking; hot water reservoir.

Since 1867 the RED CROSS trade mark has been a dependable GUARANTEE of perfection in design and construction—assurance of properly regulated heat, economy and long, satisfactory service.

It is a real joy to cook and bake with a RED CROSS Range. The extra large fire box for coal or wood and the roomy ovens and warming closets make it possible to prepare a large dinner quickly and with but little effort. And the bright, easy-to-keep-clean enamel finish of these wonderful ranges adds an abundance of cheer to the kitchen.

Sold by leading dealers. WRITE us for name of dealer in your locality. Booklet on modern cooking or heating science and illustrated folders free on request.

## How Jersey Peach-Growers Do It—A Radio Talk

"PEACHES is peaches," little Jerry once said when asked to define his favorite summer fruit.

By J. E. KLAHRE  
Manager, Jersey Fruit Growers' Cooperative Association

or redistribution. But that is not the story of the method used by cooperative marketing asso-

ciations, which are responsible to a large extent for the progress in marketing of food products. For example, the Jersey Fruit-Growers' Cooperative Association, which represents through its membership of eight local units, and in turn through its individual growers, practically half of the commercial peach crop of New Jersey and a third of the early apple crop. This organization of the leading fruit-growers in central and southern New Jersey's great fruit belt is geographically the peach-marketing association nearest to metropolitan New York at this season of the year, when the movement of New Jersey peaches is at its height, and practically all of the fruit upon these markets is from near-by territory.

Now, however, upon the markets we find baskets of peaches which are well-graded, carefully packed, officially inspected, and branded and labelled so that we know just what we are buying. Some are packed in the bushel baskets and some in the 24-quart carrier containing six 4-quart baskets, or tills. The peaches from leading growers or their organizations can be recognized by a certain handiwork which has come into their packing and marketing. The size of the fruit is practically uniform, the quality is even throughout the package, and in very many cases a brand label or poster drawing attention to the pack is displayed by the dealer.

The busy housewife needs no argument to convince her that a basket of well-graded peaches is economical for use in her household. Whether the fruit is to be eaten in the fresh form with the breakfast cereal or whether the peaches are to be used for canning purposes, a standard basket is her economy.

The advent of peaches, packed and standardized according to fixed grades, is not mere accident. It is the result of years of consistent effort on the part of the growers to produce the popular varieties of peaches which meet the consumer's needs and to offer those peaches in a package of known value to the consumer. In other words, it is the catering of modern peach-growers to the consumer's needs.

### Business Methods Bring Progress

This evolution in the marketing of peaches is a long story, and one filled with a record of failures as well as successes. We are all more or less familiar with the modern methods of peach culture to the point that the growers are renewing their orchards with varieties which meet popular favor—an example of keen business, the same as is found in the manufacturing industries. Modern methods in spraying have reduced the waste in damaged fruit from insect and fungous pests. More recently, the thinning of the growing peaches on the trees to throw the strength of the tree into the fruit left to ripen, has become a popular practice. All of these production methods, coupled with care in the gathering of the fruit at harvest time, have made for a quality product.

In the old days, and still to a large extent, the individual growers made one market contact and placed their peaches upon the nearest market for sale

or redistribution. But that is not the story of the method used by cooperative marketing associations, which are responsible to a large extent for the progress in marketing of food products. For example, the Jersey Fruit-Growers' Cooperative Association, which represents through its membership of eight local units, and in turn through its individual growers, practically half of the commercial peach crop of New Jersey and a third of the early apple crop. This organization of the leading fruit-growers in central and southern New Jersey's great fruit belt is geographically the peach-marketing association nearest to metropolitan New York at this season of the year, when the movement of New Jersey peaches is at its height, and practically all of the fruit upon these markets is from near-by territory.

### The Jersey Fruit-Growers' Task

The organized growers in New Jersey operate as follows: When the individual grower has finished his task of producing and picking quality fruit, his organization steps in and, through central packing houses, the peaches are graded by experienced workers, who follow rigid standards in sizing the fruit. The cull and damaged fruit is thrown out to be disposed of separately. The Jersey fruit-growers follow grades which have been established by the government in cooperation with the New Jersey State Bureau of Markets. As assurance to the consumers that the baskets of fruit are truly graded and honestly packed, the association makes arrangements for state inspectors at all packing-houses who officially certify to the state and government grades. The fruit packages are then marked according to the variety and the brand of the association, which, in this case, is the "Jersey Jerry" brand, and the fruit is ready for rapid distribution to a wide outlet of markets.

For example, Elberta peaches, which are now just beginning to move to market—you all know them, that large, yellow variety, so excellent for eating on your cereal in the morning and one of the best varieties for canning purposes—go through this same process of grading, packing, inspection and marketing.

This journey of the fruit through the packing-houses eliminates the poor peaches which formerly went into the consumers' package. The waste is disposed of at the point of origin and is not carried through to the consumer as in the old days. Through the development of wide market contacts through their association, the organized growers find a ready outlet for their fruit, breaking up, to a large extent, the old bugaboo of glutted markets, which are a loss to growers and consumers alike.

In New Jersey, the organized growers have taken several very modern steps to cut down the period of time between the packing of their fruit and the delivery to the consumer. A series of motor truck routes from the large producing area of central and southern New Jersey have been mapped out to reach northern New Jersey markets such as Newark.

"I'm going out to prune those apple trees."  
"But, Frank, you know I don't care for prunes."—Life.

# New York Farm News

## Vegetable Growers to Meet at State Fair

PRESIDENT C. E. HAW, of the New York State Vegetable Growers Association, has called a meeting of this organization to be held in the Horticultural (Old Manufacturers and Liberal Arts) Building at the State Fair grounds, at Syracuse, at 11 o'clock Tuesday, September 9. This meeting is for the purpose of bringing together those who are interested in the further development of the vegetable exhibits and to further the drive for a new horticultural building on the fair grounds. It will also afford vegetable men an opportunity to visit the exhibits in this department at the Fair. This display is, without question, one of the best in the country, and with improved labeling and skillful judging it now offers an unexcelled opportunity to compare variety types.—PAUL WORK.

Wherever taken off we find a fine seeding of clover and timothy. The moist weather has favored the growth of these grasses.

The Broome County Fair was held the week of August 12 to 16, and attracted the usual crowds. The display in many lines was better than was expected because of the unfavorable crop-growing season.

Frequent rains have kept pastures from drying up as much as in previous years. This has enabled cows to maintain a fairly good yield of milk. Some wells, however, have gone dry.

Eldon Rozelle, farmer, who was badly hurt when the ladder broke on which he was standing while painting his barn, is so he can get around again after being shut in several weeks.

Thieves recently went into a vacant house of the farm of L. J. Emerson, on the road from Delano's Corners to West Chenango and took some old furniture in broad daylight. Mr. Emerson placed the matter in the hands of State Troopers and it is expected that arrests will follow.—E. L. V.

### New York County Notes

Warren County—Farmers are nearly through haying and in general report more or less of a light crop. We had local showers during the second week of August. Potatoes are looking fine. Corn is very late and everything depends on weather conditions for a crop. We had a slight frost in some sections during the week ending the 16th. The apple crop will be poor. Milch cows are not doing well on account of poor feed. Pastures were damaged by white grubs last year. Grain and feed are advancing in price each week. The traffic on the state road is the heaviest it has ever been. We had a good attendance at the County Fair at Warrensburg. Summer houses were well filled during the last month.—R. T. A.

Franklin County—The season has been several weeks late compared to normal in regard to practically all kinds of vegetation. Potatoes are making fairly rapid growth. Oats and other small grains have been doing very well. Nights have been too cool for corn which shows very uneven growth in most fields. A good many farmers have just finished hay harvest, the delay being due to wet weather and lack of help. The harvest this year is not so heavy as last year. Cows are shrinking rapidly in milk flow, but there are prospects of a better price for this month. Mill feeds all remain very high in price. New potatoes are selling for a dollar a bushel; eggs 38c a dozen and butter 48c a pound. Farmers are getting their exhibits ready for the County Fair at Malone.—H. T. J.

Nassau County—A severe storm, the tail end of a hurricane, hit Long Island on Tuesday the 26th. We needed the rain for corn, young cabbage, etc. However, the wind put corn down almost flat on the ground.

### Among the Farmers

FARMERS in many instances in Lewis County were still busily engaged during the third week in August in harvesting the bumper hay crop which is quite general in Northern New York. They have been greatly delayed the past three weeks by frequent heavy rains with the result that large fields of hay have become over-ripe, with a resultant loss to the dairyman, as hay in that condition loses much of its milk producing qualities.

The frequent showers, though coming at this late season, are very beneficial to pastures and to early cut meadows. This means that they will produce an abundance of fall feed later on, as pastures seldom ever do more than just produce a bare living for dairy cattle at this season of the year. Therefore considerable benefit is derived from an abundance of rain in the latter part of the season.

### Grain Looks Good

Although grain was sown late and delayed by much cold and frosty weather it is making fine growth of late and promises a heavy yield in case the weather improves in the very near future. It seems to be very late in ripening this year. Few fields are ready for harvest.

Although corn and potatoes are maintaining a fair growth, it is a bit early to predict just what the outcome will be. An early frost, which often comes in September, would destroy the prospects of much of a crop of either commodity.

The price of milk, which was around \$1.70 per hundred pounds for the months of June and July, was very discouraging, and although dairymen have been promised a substantial increase for the last half of August, the marked shrinkage in the flow of milk at the present time means a depleted check at the end of the month.

### Along the Southern Tier

At the middle of August our farmers are mostly done with haying. The crop has been good in this section and most of it has been harvested in good condition in spite of the catching weather we have had for a number of weeks.

Robert Pitcher, a farmer living near Maine village was severely and perhaps fatally injured August 9, when a pulley broke while unloading hay with a team and struck him in the head, fracturing the skull. Mr. Pitcher is a most estimable man, with a wife and several children. It is the hope of all his many friends that he may recover from this injury.

The oat crop of this section is below the average in quantity, although it is believed that the quality of the grain will be better than usual.

Cattaraugus County Contestants in Action

## The State Fair

A STATE FAIR is an arena for friendly competition. It is an educational opportunity. It is a medium of exchange for ideas and property. It is a social event. It is a reflection of agricultural optimism. It is an annual census of progressive agriculture. It is a pageant of progress.

The crop and livestock products of a great commonwealth are on display. The best grains, the most nutritious grasses, and the finest farm animals on exhibition give evidence of man's progress in soil husbandry.

Ever keeping pace with the progress of the world's basic industry—agriculture—has been the development of the Nation's arteries of transportation. Interdependent as are agriculture and transportation, it is becoming more and more evident that the prosperity of one depends upon the success of the other.

Always in the lead to recognize the needs of the country, the New York Central Lines have spent millions upon millions of dollars in providing livestock cars, box cars for grain, and refrigerator cars.

When visiting the State Fair, consider also the fact that the progress reflected there is, in a large measure, possible through the foresight and progressiveness of the builders of our great railroad systems.

At the New York State Fair the New York Central will have on exhibition one of the latest type of heavy locomotives, under full steam, and also three fully-manned railway mail cars.

# Pennsylvania Farm News

*Berkshire Breeders Will Exhibit at Chicago*

IN keeping with the program outlined at their annual meeting at Harrisburg last January, the Pennsylvania Berkshire Breeders' Association has made much progress thus far during 1924.

The 1923 car-load of Pennsylvania Berkshire barrows, furnished by over 60 different breeders, made an enviable record at the 1923 Chicago International Livestock Show. The car-load was entered in the class weighing from 200 to 225 pounds and won second prize in one of the largest contests that has ever been held at Chicago. When the load of barrows were sold, they brought fifty cents per hundred more than the load placed first, and the Berkshires sold for \$10.25, or just one dollar less per cwt. than the grand champion load of the show.

This record the Pennsylvania Berkshire men hope to better at Chicago next December. Forty-eight breeders have donated eighty outstanding March and April barrows to be fitted at the Pennsylvania State College under the direction of the college herdsman, Guy Stearns, who fitted the last Pennsylvania car. Mr. Grimes, in charge of swine work at the college, says the barrows are a better lot than last year. The car-load this year shows better than ever the results of community swine-breeding work and proper selection of breeding stock in the uniformity and type of individuals.

This project, the major part of the Pennsylvania Berkshire Breeders' program for 1923, will mean much to promote Pennsylvania's most popular breed of hogs. The men who have donated the car-load and made the undertaking possible deserve much credit. Dr. Havner and Mr. Madison of the swine extension department at the college have done much toward the success of the car in their selection of the barrows and with their management through the feeding and showing.

The following Berkshire breeders have donated barrows to the 1924 Pennsylvania car-load.

October 18th has been set aside for the Berkshire Field Day at the Pennsylvania State College. The State Association will make an effort to have a real gathering of the Berkshire crowd to inspect the car-load at that time.—J. P. WINSLOW.

## Eastern Pennsylvania

OLIVER D. SCHOCK

THE annual picnic of farmers of the Susquehanna Valley, between Sunbury and Selinsgrove, grows in magnitude and attendance yearly, and this year proved no exception. Judge Miller of

Susquehanna county, vice-president of the Dairymen's League and chief counsel, was the principal speaker.

The drought of the past three weeks has offset the growth of many crops in a serious degree. Corn and potatoes, as well as pasturage, are affected by the dry weather. Apples show a sharp decline in the estimated yield, due to the heavy drop of immature fruit.

The Kutztown, Berks County, Agricultural Fair, one of the oldest organizations of its kind, attracted a large attendance. The farm and garden exhibits were splendid, but late varieties of fruit still lack color and size.

Shartlesville Grange members united in purchasing the fall supply of commercial fertilizers. They cooperate whenever any considerable quantity of farm supplies are necessary to supply their membership.

Russet varieties of potatoes far eclipsed nearly if not every other popular variety in point of hardiness and productiveness. Many varieties suffered from an attack of early blight.

Poultry is again proving to be a valuable adjunct of farm production. Dressed poultry (old) sells at 40 to 55c per pound; spring chickens, dressed, 50c to \$1.75 per head; eggs 40 to 50c per dozen. Young ducks are in special demand.

State authorities have decreed in unmistakable language that county fair managers will not be paid any appropriations by the Commonwealth unless the amusement features on the fair grounds are properly regulated. Gambling, immoral shows, sale of alcoholic drinks, etc., must be prohibited. It is but proper to add that there has been a very material improvement along this line within recent years throughout Pennsylvania, and agricultural fairs stand upon a higher educational plane than ever before.

Regardless of "blue-sky laws," questionable oil and stock investment schemes are again being largely exploited in farming districts through the medium of literature forwarded by mail. Some of our agricultural counties have been especially vulnerable and as a result, invested largely but not always well.

Grange picnics are popular in many localities, attracting large crowds. John G. McSparran, Master of the State Grange, is elated with the growth of the membership and is in continual demand as a speaker at these rural gatherings.

## Central Pennsylvania Notes

J. N. GLOVER

THE farms of the Frederick estate in East Buffalo Township, Union County, were sold on the 16th. The home farm of 82 acres was bought by Charles Frederick, the present tenant, for \$8200; and the 89-acre farm was bought by John M. Erdley for \$89 an acre. They are both good farms and the former is along the State road and near a school.

The Arbogast farm of 42 acres in Buffalo Township was bid to \$3800 at public sale on the 23rd, but not sold, as they want four thousand for it and it was appraised at \$4500.

The showers have put the soil in good condition for plowing and harrowing in preparation for wheat seeding. Warmer weather is helping corn to mature and make ears.

Some rural schools opened on the 25th of August for the eight-month term. The encampment and picnic at Centre Hall next week promises to have a large exhibit of implements and a good attendance. At the tri-county farmers' picnic at Rolling Green there were 10,000 persons present, and the display of farm machinery was very good.

Honey will not be so plentiful this fall as bees have not done as well at storing honey as usual. Prices: wheat, \$1.20; corn, \$1.15; oats, .55; potatoes, \$1; eggs, .30; butter, .42; chickens, .22; veal calves, .10.

# WOLVERINE

## The 1000 Mile Shoe

### CORDOVAN HORSE-HIDE

The "All Work" Just the Shoe You Want for Plowing to Keep Out Dirt

Versailles, Mo.  
March 3, 1924.

Wolverine Shoe & Tanning Corp.  
Rockford, Michigan

I have worn one pair of Wolverine High Top shoes for 27 months and they haven't any holes in them yet. I bought them in Tipton, Mo., and want to know if there is any place nearer me than Tipton and also want catalog.

Yours truly,

PAUL MERRIOTT  
Star Route, Versailles, Mo.

# 1,000 Miles Wear and They Always Stay Soft

—the Secret Is in Our Leather

In every mail we receive letters like the one above. Men write us that these shoes actually out-wear *three* ordinary pairs. There's a real reason why you get so much longer wear out of Wolverines.

They are made of a different material from any other work shoe we know. It's a genuine Cordovan horsehide. The toughest leather known.

They use the same leather on baseballs. It's the only one that can stand the terrific pounding. Cossack saddles, too, are made

of it. But, until recently it couldn't be used for work shoes. For it always tanned up too stiff.

Now by a process of our own we can tan it soft. Softer even than ordinary leathers. It is thick. But you can bend it in your fingers like oiled rawhide. And it always stays soft. Even after many wettings it dries out soft as velvet. Something you will find in no other work shoe.

Only the choicest horsehides are used in Wolverines. And only the tough, long-fibre butts of

these hides. That's why you can expect such different service from these work shoes. The secret is in the leather. We tan the hides ourselves. And we specialize only on work shoes.

### Wolverine Comfort Shoe

This Wolverine is so pliable and soft you can double it up like a moccasin. It wears like iron but you'll hardly know you have a shoe on, it is so soft and easy.

For tender feet, or where you do not encounter wet weather, wear this Comfort Shoe. A blessing to the feet.

For farm, shop, lumber camp, oil field or mines, and for every season, there is a Wolverine horsehide shoe exactly suited to your needs. Try it. You'll say there never was such a shoe for wear. And for comfort, too!

If your shoe dealer cannot supply you, please write us.

We'll send you a catalog and the name of the nearest Wolverine dealer.

## THE GREATEST EXPOSITION

OF THE YEAR

SYRACUSE, SEPT. 8, 9, 10, 11, 12, 13

# Getting Started with Sheep

Mark J. Smith Gives Advice to a Beginner

We would like some information about what kind of sheep would do the best here in northern New York. At present we have 70 head of stock in all and milk 50 to 55. Do you think sheep would pay here? What time of the year should we buy sheep and how many head of sheep would a 70-cow farm keep? We have 400 acres nearly all pasture and meadow.—D. W. J., Oneida County, N. Y.

It would appear to me that you are ideally situated to profitably engage in sheep raising, providing, of course, that your land is not low and wet. Judging from your location, as shown on the map, I would expect most of your land to be upland.

I believe that well-cared-for sheep will pay larger returns, in your section, than any other type of livestock considering the amount of feed and labor required. Regarding the time of the year to buy, that, of course, depends upon conditions and opportunities. I like to buy sheep in the spring that are nearly wintered, that are to lamb, and that are yet in their fleeces—this is the same as buying three articles in one. Last year sheep I bought in this way stood me practically nothing after the lambs were sold. I bought the best flock of grade ewes in this section in April last for \$16 a head. The price looked big at the time but the sale of wool and lambs per ewe for the season was \$14.50. The first bunch mentioned had been shorn and cost \$10.00 per head. I bought a deck of grade Delaine ewes this spring that were unshorn and heavy with lamb in Washington County, Pennsylvania. Although not public property, I am going to tell you what they cost me—about \$10.25 delivered here. I already have lambs from ten of them. I sold the \$16 ewes, bought last spring, in October for \$12.00. Locally such ewes as I bought in Pennsylvania are bringing \$15.00.

### Advantages in Fall Buying

There are advantages in buying sheep in the fall for most people. They can be bred as desired and when desired—usually more sheep are for sale in the fall. For most people the one best way to get a flock of sheep together is to save ewe lambs from their foundation ewes and raise them. Perhaps you can buy a few native ewes locally, buy a good ram and save the lambs. As to the number, that depends upon the man—in your case, knowing as you do how to take care of stock, perhaps about thirty would be a nice, practical flock for you to start with. The carrying capacity of land for sheep varies with the land. I have a 16-acre pasture that takes care of from 25 to 30 sheep and their lambs a season.

Best results are obtained when pastures are rotated—on two weeks and off two weeks. In the old country forage crops are raised and sheep hurdled, expensive

land is stocked with sheep four times as heavily as we do in this country—then when they plant a crop they get something. This requires shepherding. Two great health preservers of sheep are: large range on the one hand and the use of the plow on the other, the former system is our Rocky Mountain range method.

When you get your flock up to a hundred ewes you will be able to judge what you can do with regard to the possible number. Most people succeed best with sheep when they start in a relatively small way and grow into the business as their experience increases.

There is no type of breeding ewe that surpasses, for practical purposes, the half-blood Merino ewe—this is the type of sheep that most commercial flock owners are striving for. The Corriedale is practically that, only the type has been fixed by breeding operations in New Zealand over a long period of years. Constitution is first in importance in a sheep. Health precedes profit. Dorset-Merinos make good sheep. As your number increases the need for Merino blood to make them run together in large numbers and keep healthy, becomes more imperative. All Down breeds are good for their particular purpose.

### Veterinary Inquiries

We have a cow that had a teat bitten off by a shont. It healed all right but her udder has gathered and broken on that side ever since. Six months have passed since it happened. The milk from the other quarters seems to be all right but I have never used it. Can you tell me anything I can do for her?—W. S. B., New York.

It is most practical for you to have a good veterinarian come and examine the animal. There is no question but what a slight operation is necessary and it may be that it would be possible to regain the quarter again. The outbreak shows that pus is confined in that part of the udder and should have proper drainage in order to overcome this condition.

\* \* \*

Could you tell me how to cure one of my horses? We bought it last fall together with our farm, after it had been caught in a barb wire fence. But it did not look bad then. During the winter the owner never took care of the sore and in the spring when we took possession of the place, it had spread almost around the whole leg. It is just over the foot and full of proud flesh. If the horse works it does not seem to hurt much, but if he stands still he will bite on it until it is bleeding.

Wire cuts are usually very serious conditions to treat and often take a long time to heal. We would suggest that you have the following compounded at your local pharmacy: 1 pint raw linsced oil, 1 ounce potassium nitrate, 1 ounce lead acetate, 1 ounce sulphuric acid, ½ ounce carbolic acid. Apply this to the cuts with a small brush or feather once or twice a day.

FATTENING LAMBS IN THE CORNFIELD

THERE is no place where lambs will thrive better and do so little damage as in standing corn. They may be turned into the cornfield as soon as the roasting ear stage is passed and the corn has commenced to harden.

They strip the seeds from the weeds, thereby destroying the seed, as weed seed picked by sheep never grow. They remove the lower blades from the corn, thus making it more easily harvested either by hand or by harvester.

The lambs will not bother the ears as long as there is an abundance of weeds and corn blades within reach. When they have the rows well cleaned out they may be removed to other pastures. This method is practiced largely in some sections of the country, and has proved a very successful way of destroying the weeds and fattening the lambs.

—Lewis Dieffenbach, Pennsylvania.

# Help the Dairy Industry

## A Plan to Reduce Costs and Increase Prices

EVERY farmer knows that the success of his business depends upon two chief factors, economic production and good markets. So much has been said in recent years about the marketing problem that many of us have forgotten or lost sight of the fact that economic production, which means chiefly keeping the costs of production down, is **EQUALLY IMPORTANT**. We have perhaps expected too much of cooperative marketing. Let us by all means continue to cooperate, but let us at the same time never forget that the strongest cooperative organization never can save the man who does not raise his products by good business methods.

There is not much point in slaving long hours to raise stuff which is continually marketed below the costs of production. But it is equally true that sales prices will be determined on the production costs of good farmers and not on those of poor ones.

I have been connected directly or indirectly with the dairy business practically all of my life, and of late I have been giving a great deal of thought as to what could be done by dairymen if they would work together, even in a small way, to lower their costs of production in addition to marketing their products. Out of this thought I want to propose a plan which I believe workable, and which will, even if followed in a comparatively small way, be of a lot of help.

### The Plan in a Nutshell

In a word, the plan is this. To get at least ten thousand dairymen in the New York milk shed to pledge that, between now and April, 1925, they will get rid of at least one cow from their herd for meat purposes. This cow can be fattened and that part which cannot be eaten while fresh can be canned. In this way the family will be kept in meat all during the winter. A large number of farm women have learned the secret of canning meat so that when it comes out it is practically as good as when it is fresh. Many home bureau clubs have done a lot of good in putting on demonstrations showing how to can meat so it will keep well, and anyone who wishes may get complete information through the home bureau agents or the State Colleges of Agriculture.

There are also many fine possibilities in the formation of neighborhood meat clubs. A few families in a neighborhood

By E. R. EASTMAN could agree to each kill a cow at different periods so that fresh meat might be had by all of them practically all of the time. Of course, there is always the possibility also of selling the cow to the local butcher. The only reservation on the disposal of a cow is that she must be sold for meat purposes. It does not help the situation any to merely transfer a poor producer from one farm to another.

"That's all right," some who read this will say, "but what cow shall I kill? All of mine are good producers."

That might be true, for a comparatively few herds, but I know from my own experience that at least 90% of the dairymen have at least one cow in their herd that they know way down in their hearts is not paying her keep. They know this even though they have kept no records of any kind. She is so much poorer than the best cows in the herd that her deficiencies are well known, whether the farmer admits them or not. He simply has not gotten around yet to get rid of her.

### Ideal Winter Work

Now why cannot we all work together to eliminate these cows during the winter? What better job could we do in cooperation, for every individual and for the whole industry? It is this class of low producers that is not only keeping down the profits for the individual farmer, but it is her milk that makes the surplus and keeps down the prices for everybody.

If you stop and think about this plan, I think you will agree it has a great many good points. It is not hard to put into action, will not cost a single dairyman a cent; but on the other hand will put money in his pockets. It will help the whole industry and it will raise the standard of living by improving the diet of all those who consume a part of the meat at home.

It is too bad many of the old-fashioned practices of our fathers and grandfathers have disappeared from country districts. Then most farmers would kill a beef sometime during the fall and winter. It used to be a regular thing. We probably eat more meat now than they did then, but instead of raising it, and preparing it for own table, we sell it to the butcher and then buy it back in small quantities **AT TWO AND THREE TIMES THE ORIGINAL PRICE**, or else we buy western beef at the same hard retail prices.

I think that we are beginning to realize  
(Continued on page 162)

## Do You Milk Cows for a Profit or a Loss?

Not such a foolish question as it sounds. Thousands of dairymen are milking thousands of cows, twice every day, without realizing a penny in return for their trouble. They don't know it because they don't keep records of feed consumed and milk produced by each cow each day.

When you have your cows back in stanchions this fall, start keeping records. Get rid of the boarders if you have to give them away. Feed a ration built around **BUFFALO CORN GLUTEN FEED** or **DIAMOND CORN GLUTEN MEAL** as its protein basis. Unprofitable cows on such a ration are apt to be unprofitable on any ration.

Spend less for feed and boost the milk price by eliminating the costly surplus from boarder cows. Fewer cows, better cows and the right feed will do it—make up your mind to that this fall . . . . . We have a ration card that will help you. Write for it.

WORLD'S CHAMPION FOR REPRODUCTION DEAD

WORD has been received that Financial King's Interest, the pure-bred Jersey that holds the world's record for reproduction, all breeds, died at the Greystone Jersey Farm, Pennsylvania, on August 6th, at the age of 24 years and 7 months.

This marks the close of one of the most notable careers that is to be found in live-stock history, for during her lifetime Financial King's Interest was the mother of twenty heifer calves and one bull calf. Unfortunately she was not tested until she was in her nineteenth year, but even at that great age she produced, with calf, 401.09 pounds of butter-fat, and followed this with another official test in her twentieth year, when she again produced over 400 pounds of fat.

At the 1923 National Dairy Show she was exhibited with ten other of the greatest Jerseys that have ever been gathered together, and was the center of a great deal of interest.

Mr. Sharples, her owner, is having her head mounted, in recognition of her useful life and wonderful record.

## Dispersal Sale of Registered and Grade Guernseys

the property of Mr. A. A. Gillette

at  
Locust Grove Farm, Lima, N. Y. (19 miles from Rochester)

**Friday, September 12, 1924**

at 11 A.M. Eastern Standard Time

The offering is headed by

**Marshie's Moonlight May King 56887**

Sire: Moonlight King of Anna Dean Farm 29586 AR.

Dam: Marshie D.V. 67481 (A.R. 6858) 12038.70 lbs. milk, 691.61 lbs. fat (Class E); 14729.90 lbs. milk, 915.05 lbs. fat, 2nd cow Class B.

Included in the sale are several A.R. cows; some splendid heifers, fresh cows, a few choice calves, a well bred yearling bull ready for service and a number of choice high-class Grade Guernseys of the best dairy quality. A good, working herd, which has been regularly tested and bred for production.

# Fall Strawberry Hints

For the Man Who Grows Them in a Small Way

**T**he garden strawberry, like Indian corn, the potato and a lot of other good things, is 100% American. From its humble beginnings (about 1840) it has come to occupy, commercially, the most important place among all the so-called small fruits. And there is a double reason. It is the most popular as a fresh fruit for table use, and it is a profit-producing crop.

As a commercial proposition, however, late summer or fall is no time to start a plantation. This chat is meant for the farmer and suburbanist who grow strawberries primarily for their own use—to keep peace in the family. While the grape, on the table four months in the year, is a more important small fruit in food-value, it probably took a thousand years to get a hold upon popularity such as this humble first comer of spring already has in its eighty years.

The strawberry plant is so constituted that a bed may be started by transplanting any month in the year when the ground is not actually frozen. But there are two recognized seasons for this work: April-May and the present time, which is in some ways the better of the two, especially for the real garden "fan" with a liking for fancy work. Pot-grown plants that have been carefully selected will give a half crop next spring besides a bumper crop a year later. In case of the everbearing strawberry, fall is the better time to start them.

### Methods of Growing

For garden use, plants may be set in rows three feet apart every 15 to 20 inches—no closer, and these, after once fruiting, be allowed to make a few runner plants until these stand 6 to 8 inches apart, making what is called the narrow matted row, but retaining an aisle of one foot width. But if there is plenty of land, as in the usual farm garden, set them in four-foot rows, two feet apart. It will be easier work caring for them. This is the regulation field-culture distance.

Do not set other than new plants nor before about September first unless well potted. With any others there is great risk in August from the burning sun and less frequent rains. Careless work here will never win unless the season happens to be favorable.

Use rich garden soil only. Never set a strawberry on newly turned turf, on poor land or where so low or flat there is danger of mud in summer or flooding in winter. If manure is needed, let it be in the form of chemicals only. Any other will heap up trouble in the form of weeds—the constant bane of this relatively plodding plant. Acid phosphate, well incorporated with the soil before setting (1000 lbs. per acre) is almost a complete manure until near blossoming time, then, topdress a 4-10-6 liberally. Unlike most garden plants, they do not require the land to be sweet or limed tho there must be plenty of humus for best results, well rotted turf being the best.

### Giving Berries Winter Protection

Clean and frequent culture is the only other requisite until the ground freezes, then immediately apply a mulch that while always admitting air gives a complete shade from winter sun. It is not the freezing but sudden thawing that injures the crowns and heaves out the roots. Use any kind of clean straw, salt hay, pea-haulm, corn-stover or even pine needles—but never forest leaves, as these sometimes settle down air-tight.

Then, in March, or whenever the crowns begin to show signs of growing, rake the mulch into each aisle for later returning about the plants. If stover or rough haulm was used in winter, shorter softer stuff must now replace it. This is scattered lightly above the plants just before the blossom stems rise. With a

little hand help these will grow up thru it, protecting the fruit from the ground. Do not fear smothering now. The rains pound down and decay the stiffest straw. Use it freely. Never permit yourself to grow gritty fruit.

### Varieties That Are Desirable

The only safe rule is to plant the kind that others have succeeded with in your immediate neighborhood. With a few notable exceptions such as the recent Howard 17, the Chesapeake and Premier, which are so vigorous they are almost sure-fire everywhere, no expert feels safe to recommend by name. The wildness has not yet been bred out of this gamey plant. It has strong likes and dislikes not yet fully understood, every variety succeeding in this place and failing in that, and vice versa, without any apparent rule.

More than 1800 named "varieties" have been listed and offered for sale by reliable growers. Perhaps a hundred or more, now twenty years old, are locally still favorites. Here in the eastern States Sample, Abington, Glen Mary, Wm. Belt, Bubach, Late Stevens, Gandy, Dunlap, Marshall, Kellog, Heritage and Big Joe, with Progressive, Superb and others among the more recent everbearing. All these have their enthusiastic endorsers.

### Set Only Good, Strong Plants

No variety will satisfy unless good plants are set and then thoroughly cared for. Only the strongest plants should ever be used. Those first formed on a runner from the mother plant are far preferable to any farther away. Precisely like what we croneously term "seed" potatoes, the runner strawberry plant is but a "bud extension"—not a new generation at all. Yet people who would not plant potato parings or long-cut potato "seed" with spindling, secondary sprouts, will unthinkingly accept and transplant by the thousand the weak tip plants dug from the aisles by unscrupulous dealers.

The plant set should be big—fresh dug from strong, thick-stemmed runners and have stout crowns. Then clip off all but the two youngest leaf-stalks, set them at exactly the right depth and tramp firmly, following immediately by raking the surface soil loose again, unless too wet, and keep loose and cultivated till November.

### Getting Another Year Out of the Old Bed

The old bed may be made to bear one more year if at once handled thoroughly. If now a matted row, plow or spade up the aisles until the row remaining is not over 10 inches wide and then carefully cut out any old parent plants remaining in the row and fertilize liberally—at least at rate of one ton per acre. Thereafter cultivate and hoe clean of every bit of weeds and grass the same as for a new-set bed.

If, however, the old bed is badly leaf-spotted or rusted, this will hardly pay. Better turn it under or, if a small garden, first mow off the rusted foliage and burn it. The spraying of strawberries is not to be recommended. Better change the variety, and the location.

### Don'ts

Don't try to go into commercial strawberries by fall setting a large area. It won't pay. Set such in spring only.

Don't set any large area to a strawberry not yet tested thoroughly in your own neighborhood. Maintain an experimental plot.

Don't set any but fresh-dug plants that are big and strong. The tip-runners, such as the cultivator turns out, are worthless.

## Moncrief Furnaces— Make the Thermometer Jump—Not the Coal Pile!

**T**HE moment your Moncrief Furnace gets on the job, the thermometer goes up at once and everybody's spirits go up, too. Gloom finds no abiding place in a Moncrief Furnace heated home, not even when it comes to paying the fuel bill.

Big heating efficiency with low fuel cost is no accident with Moncrief Furnaces, but the result of rugged materials and honest workmanship, backed by thirty years' experience in furnace making.

Among the points of Moncrief merit are

- Fire pot,—in two pieces with perpendicular sides.
- Radiator—return flue type, extra large.
- Air chambers extra large,—insure full delivery of warm air and easy cold air return.
- Double inner casing with dead air space.
- Two Gallon Waterpan assures proper humidity.
- Roomy ashpit and door. All doors have beaded edges. All joints are grooved and fitted.

Write us for the name of the Moncrief Dealer nearest you

J. H. Nagle and his family with their Chevrolet

## “— a Chevrolet Would About Double My Working Hours”

“My farm is 6 miles from the town where we have to market our produce. This made it necessary for me to take my horses out of the field at least one day a week. If we went to church on Sunday it meant driving the horses most of the day instead of letting them rest. I figured if I had a Chevrolet I could go to the mill or blacksmith shop at noon while the horses were resting. It seemed as though the car would about double my working hours.

“We’ve had our Chevrolet four years and it has been a great benefit to us as well as a pleasure,—and at a cost of \$8.25 for repairs.”

J. H. NAGLE, Newton, Illinois

Ask your nearest Chevrolet dealer about the unusually easy payment plan.

This experience is typical of the use of Chevrolet cars by thousands of farmers. A Chevrolet is especially adapted to farm work and for traveling over the rough country roads because it is sturdily built with a deep 4½ inch frame with 4-frame cross members. It has a powerful valve-in-head motor with a strong, spiral-bevel gear rear axle.

The low purchase price includes complete equipment. The experience of thousands of users proves that Chevrolet averages the lowest cost per mile. The dependable performance of the car is backed by thousands of service stations operating on a flat rate basis.

# Early Fall Crop Notes

## Wheat Varieties Recommended—Curing Tobacco

THE New York State College of Agriculture in a recent release calls attention to varieties of wheat that are showing up better in A. A. territory. Among the red wheats *Forward* is undoubtedly the best yielder, according to the college, and should supplant other varieties of red wheat. It is beardless, resistant to smut, has a stiff straw, and has good milling qualities.

Of the white wheats *Honor* and *Junior No. 6* take first rank. *Honor* is a selection from Dawson's Golden Chaff and the latter is of the Gold Coin type. Both are stiff strawed and beardless and are recommended as the highest yielders of the white wheats.

Using varieties of wheat such as these is growing blooded grain just the same as is the growing of blooded live stock by breeders of pure blood cattle. However, few grain growers have put this into practice. By selection, wheat can be made to grow tall and spindley or short and rank. However, the plant breeders at the State College realize that these qualities are not desirable and have developed those varieties named above which are considered best adapted to New York needs. In buying these varieties be sure that the seed has been field and bin inspected. Crop specialists at the college will undoubtedly be glad to aid anyone buying this stock.

following factors have been held to be responsible for the premature development of the seed stalk of biennial vegetables; starting plants early in the winter, poor seed especially lacking in vitality, and a checking of plants due to freezing drying or any other condition retarding development.

"However, experiments which have been carried on for the past five years by the vegetable gardening department have shown that the earlier the seed was sown the earlier the plants went to seed and the greater was the number of seeds stalks developed. These experiments have also shown that the effect of withholding water and checking the growth of plants when they are small, delays the development of the seed stalk because such plants require a longer time in order to develop sufficient leaf surface to manufacture food enough to maintain growth and store a surplus for seed-stalk development than do similar plants not checked in growth. Plants not crowded in flats have a higher percentage of seed stalks than those where the growth was checked by crowding. Freezing apparently delays the development of celery-seed stalks because checking growth at this stage materially delays seed-stalk development.

"Plants started in December and January produce seed stalks in May, June and July regardless of the treatment they are subjected to in early life, while plants started considerably later do not normally produce seed stalks and are not stimulated to do so by any of the treatments tested, except that of subjecting them to relatively low temperatures, but not freezing, for two weeks or more while they are small.

### How My Father Cured Tobacco

W. H. DAVIS

FIFTY years ago my father, Daniel V. Davis began growing tobacco. A few years later he decided that there are better days than others for harvesting tobacco in order for it to cure up nicely and have a rich "waxy" and heavy body. To find the way to tell these days ahead was a hard job, but he was finally successful.

For some reason my father kept this information a secret from everybody even his own family until a short while before his sudden death last November two years ago. In August of that year he called a visiting sister and myself to the

table where he was doing some writing and explained it all to us.

I desire to pass this information to as many tobacco growers as possible. In explanation let me say that tobacco has an oily substance which is its natural possession. It has a sap (water) like other vegetation. When the sap rises it runs the oil out through the pores of the leaves on the principle that oil and water do not mix and oil being the lighter, is pushed out by the sap. Tobacco harvested in this state will be light and "chaffy" when cured. There being only (water) in the tobacco this evaporates in curing and leaves the

(Con. on page 168)

### Vegetables Going to Seed Prematurely

By I. W. INGALS

MARKET gardeners and truck growers in practically every county of this state have sustained considerable losses due to an abnormal tendency of celery, cabbage, beets and kohlrabi to go to seed prematurely this year, according to Prof. H. C. Thompson of the vegetable gardening department at the New York State College of Agriculture. In some cases in western New York losses of both early and late celery and cabbage through going to seed amounts to 25 per cent. of the crop. This percentage is so unusual that many growers have been alarmed and have reported to their local farm bureau office or have communicated directly with the state college for an explanation of this condition and for information regarding control measures for future crops.

Growers are asking why their plants are producing more seed stalks than normally and have been at a loss to understand why biennial plants, or those requiring two years growth to produce seed, are behaving like annuals and are producing seed the first year, making them unfit for market.

"It is fairly well known," said Professor Thompson "that plants go to seed when started very early in the season. There are several important factors that ordinarily cause a biennial plant to produce flowers and seed the first year. One of the more important factors causing the abnormal behavior this year is due to the low temperatures during the spring, which induced reproduction.

Disgruntled Gardener (to the tomato plants)—You've had bugs, slugs, worms—and everything else but growing pains!—Judge.

# The Connection Between Good Crops and Fertilizers

## Tobacco

The 5-8-5 "Tobacco Special" is growing one of the finest tobacco crops in the county on the farm of D. H. Landis, Windom.

## Potatoes

Levi H. Brubaker, near Rohrerstown, has an exceptionally fine stand of potatoes this season. He used the 3-12-5 "Potato Special" fertilizer.

## Wheat

High wheat yields and Farm Bureau fertilizers go together. Ask J. C. Brubaker, Lititz, M. G. Esbenshade, near Lancaster, or Ross Ulrich, Peach Bottom.

## Corn

Fine Corn Crops may be found on the Ezra J. Nolt farm, Quarryville, and the Masonic Home Farms, Elizabethtown. Both used Farm Bureau fertilizers.

## Cooperative Commodity Division of the Lancaster County Farm Bureau, Inc.

"The Highest Possible Quality at the Lowest Possible Cost"

### TRUE ECONOMY

True Economy must include the factor of Quality. This is achieved through the Farm Bureau's distribution—directly from the manufacturer to the farmer—of the highest possible quality fertilizers at the very lowest possible cost.

# "Timing" Gas Engines

It Calls for Head Work, Not a Hammer

THERE seems to be a popular belief that there is something mysterious about gas engines, but in reality they are extremely simple. The reason some people never get to understand them is that they never take the trouble to learn them. They will crank until they are black in the face when anyone should know that if the engine is right it will go. If it won't go it is not right, and cranking will not make it right. If one of my engines fails to kick the third time over I lay off from cranking and start looking for trouble. Of course in very cold weather it may take a little longer to arouse interest in the engine than when everything is warm, but the best way to warm a cold engine is to put a lot of boiling water into the radiator, rather than to try to furnish the heat by means of friction generated by cranking, plus the heated waters that frequently flow on such occasions.

By A. H. DE GRAFF

the other end of the stroke. One can simply

turn the engine over and watch when the push rod starts to open the valve and when it releases again and see whether it is in time or not. Then the piston starts out again, with the exhaust valve again closed but with the intake valve open. On most small engines this opens automatically against a spring. The engine is now "sucking" in the charge. At the end of this stroke the piston travels back again with both valves closed, and compresses the charge. Just before the piston reaches the exact end of the stroke, the spark should occur, and the whole thing starts over.

### Problem to Get Three Together

The spark is the place where there is the most trouble about getting out of time. With the ordinary type of magneto, there are three things that must be synchronized if the explosion is to take place. In the first place, the engine must be on compression. Then the igniter points must be pushed together an instant and then snapped apart, and at the same time the magneto must be itself in time. It would be a little too complicated to explain here just why the magneto only delivers a good spark at a certain time in its revolution, but it suffices to state that this is the case. Every magneto has on it a timing mark, and when the movable mark is passing the stationary mark, the magneto delivers its spark. To find this mark, look up the directions given by the manufacturer or get the agent to show you. To tell whether the machine is in time or not, turn it over slowly until the igniter snaps off, and then leave it right there. Look to see the position of the crank. This should be not quite to the inner dead center, in other words, the piston should not have quite reached the end of its stroke. Then look at the magneto. The timing marks should be opposite each other.

### Three Seats of Trouble

There are only three things that ever get out of order on such an engine, mixture, compression and spark. If there is good compression, which may easily be determined by turning over the machine, it must be either in the mixture or the spark. Sometimes one floods an engine, but if the spark is right one nearly always gets one or two kicks before this takes place. In the ordinary farm engine there is seldom any other trouble with the mixture, for there is nothing complicated to get out of order. About the only other trouble is dirt or water in the gas or kerosene or lack of gas.

I would say from my experience that probably 95 per cent. of all the trouble encountered is in the spark. There are several different sorts of ignition devices used. With batteries sometimes connections break or a cell will go dead. One can test this in no time by removing one terminal wire from the "make and break" igniter and scratching it across the post to which it is supposed to be connected with the points first held together and then when they are apart. If there is a spark with the points together and none when they are apart, the batteries are all right and the points are clean. Also the insulation on the fixed electrode is all right. This simple test is all that is required to test these points out.

### Save Your Temper

If either of these things are off much, there will be no spark. If the engine is firing late, that is after the dead center, it will fire all right but will lack power and will heat up. If the igniters do not snap when the timing marks are opposite, there will be little or no spark and you can crank till doomsday with absolutely no result except to your temper. If the timing is wrong, it is more likely to be the igniter than the "mag" unless you have taken the "mag" off. To correct this, there is on most engines an adjustment on the igniter trip which may be moved back or forward enough to make the correction.

The best thing to do is to look the engine over CAREFULLY when it is all right, observing just what the positions of these things are when the different stages are reached. Then you will know what is the matter when something is wrong. In conclusion I exhort you to use your head instead of a hammer and cold chisel. It will get you farther and is easier on the engine.

\* \* \*

### Watch the Oil Feed

Oil is cheaper than machinery. Excess of oil is also bad. Too much oil on a magneto may cause it to become dirty and fail to give a spark. An excess quantity of oil in the cylinder may form carbon and foul the spark plugs. Too much oil keeps the engine generally oily and dirty.

"Pants is pants and vest is vest,  
But never the twain shall meet."  
—Judge.

## Post Your Farm

and  
Keep Trespassers Off

We have had a new supply of trespass signs made up. This time they are made of extra heavy linen on which the lettering is printed directly. There is no card facing to be water-soaked by the rain and blown away by the wind. We have had these new signs made up of extra heavy material because severe storms will tear and otherwise make useless a lighter constructed material. We unreservedly advise farmers to post their land and the notices we have prepared comply in all respects with the law. The price to subscribers is 95 cents a dozen, the same rate applying to larger quantities.

# Building a Concrete Base

For a Farm Engine or Mill—Queries Answered

FROM time to time the necessity arises of mounting a gas engine, an electric lighting plant or other piece of machinery on some secure foundation. Of the various materials that might be used to construct such a foundation, concrete is unquestionably as satisfactory as any, and surely more permanent.

The size of the engine or machine to be mounted will, of course, determine the size of the foundation. For mounting small equipment the foundation may be constructed directly upon the floor. For larger machines, however, or under conditions where the ability of the floor to sustain the weight of the foundation and the machine is questioned, the foundation should be given a footing on some solid surface. If a concrete floor is already in the building and it is thought that the existing floor will not sustain the foundation and engine, a section of it, larger than the intended foundation, should be broken out. Just before placing the concrete, moisten the edges of this floor section and apply a paste of cement and

the bolt through the hole in the template and adjust for proper height. Place each bolt in a similar manner.

After greasing or oiling the form, mix up a batch of 1:2:4 concrete, using clean and well graded aggregates. When mixing add enough water to give the batch a quaky consistency. Place the concrete in the form and work or spade it well next to the form. Soon after the form has been filled, the templates can be removed, the top of the foundation leveled off and the surface finished with a float. The concrete will soon set sufficiently to allow the removal of the form. During the first few days while the concrete is curing, it should be sprinkled occasionally.

After the engine has been lined up and before it is finally bolted down, fill the spaces between the pipe sleeves and the anchor bolts with a cement mortar.

*Bolting an engine directly to a concrete foundation is less desirable, because of the rigidity of the concrete, than having wooden planks or pieces between the engine base and the concrete foundation. The installation*

water. This will make a stronger bond between the floor and the foundation.

When making forms for any kind of concrete construction, it should be borne in mind that the easier they can be dismantled the more satisfactory they will be. A form that may be easily dismantled after the concrete is hardened is shown in Fig. 1. It will be noted that the two end pieces are made enough longer than the foundation to allow for the two end pieces and cleats. These cleats are nailed to the side pieces only. The end pieces, the length of each of which is equal to the width of the foundation, are merely slipped in place and not fastened to any other part of the form. After the end pieces are slipped in position hold the side pieces in place against them by two braces, one at each end near the bottom. The two templates, each of which carries two bolts, by means of which the engine will be fastened to the foundation, will also serve as the two top braces for the form. It is very important that the two holes for the bolts in each template be accurately located and that the templates be placed in their proper position on the form.

### Center the Engine

Locate and bore the holes in each template for the anchor bolts for the machine. For an engine these measurements should be taken from a center line through the base of the engine. After obtaining these measurements, use a string and locate a center line through the form. Working from this center line of the form, locate the two templates the proper distance apart and then by measuring locate the bolt holes the required distance from the center line. Nail the templates in position.

In order to allow for a very slight movement of the anchor bolts after the concrete has hardened, it is often desirable to install them as follows: Slip a large washer over the anchor bolt and a short length of pipe for a sleeve. Slip

of such wood pieces allows for a certain amount of springiness, which is desirable in any engine foundation. The template will do well in this case.

### Concrete Drain Tile

A 13-acre field on my farm needs draining, and I am going to put in underground drain tile. I don't know where I can get clay tiles, so I plan to make my own of concrete. Will you please give me complete instructions.—G. E. F., Del.

IT is possible to make your own tile of concrete very readily, but you will want a first-class machine, and have facilities so the tiles can dry and cure properly in order that they may have maximum strength and durability. With this form of cement product, it certainly does not pay to overlook anything that will improve the quality of the finished material. Write to the Portland Cement Association, 111 West Washington St., Chicago, Ill., for a booklet that will give you all the details of construction. They will put you in touch with the most responsible manufacturers of tile-making machinery.

### No Chemical to Clean Cesspool

Do you know of any chemical that will clean a cesspool? If there is such a material will you kindly tell me what it is and where it can be purchased?—I. K., Dutchess County, N. Y.

THE principle upon which a cesspool works is that the disintegrated material will seep out through the walls of the cesspool and pass into the surrounding soil. In open porous soils this action will continue for a long time. In heavier soils, solids pass out from cesspool and gradually fill up the places in the soil surrounding it and it is only a matter of time before the soil becomes so filled that no more material can seep away.

Because of the reason of the failure of the cesspool to continue acting it will be seen that there is no chemical which can be put into it itself which will clean out the surrounding soil. The only remedy is to abandon the cesspool which has ceased to work and dig another.

## "A Hundred and One Farm Uses of Concrete"

Wouldn't you like to have more time for yourself? Wouldn't you like to know you were through fixing up fences for once and all? Wouldn't you like to know when you build a hog house that you will never have to repair or rebuild it?

You can be sure of these things when you build with Concrete. Concrete is not only sanitary and economical. It is permanent.

Send today for your free copy of "A Hundred and One Farm Uses of Concrete."

This practical little book has been especially prepared for you and other progressive farmers. It is well illustrated, and contains samples of blue prints which will help you in your building improvements.

It also gives you worthwhile information about Concrete silos, dairy barns, barn floors, feeding floors, hog houses, milk houses and many other forms of Concrete construction.

Finally, it tells you exactly how to make good Concrete; how to proportion and mix the materials, how to get the greatest values out of every sack of cement you buy.

You simply cannot afford to be without this practical little book. And remember, it is free. Write for it today.

## The WINDMILL with a RECORD

The Auto-oiled Aermotor has behind it 9 years of wonderful success. It is not an experiment.

The Auto-oiled Aermotor is the Genuine Self-Oiling Windmill, with every moving part fully and constantly oiled.

Oil an Aermotor once a year and it is always oiled. It never makes a squeak.

The double gears run in oil in a tightly enclosed gear case. They are always flooded with oil and are protected from dust and sleet. The Auto-oiled Aermotor is so thoroughly oiled that it runs in the slightest breeze. It gives more service for the money invested than any other piece of machinery on the farm.

You do not have to experiment to get a windmill that will run a year with one oiling. The Auto-oiled Aermotor is a tried and perfected machine.

Our large factory and our superior equipment enable us to produce economically and accurately. Every purchaser of an Aermotor gets the benefit from quantity production. The Aermotor is made by a responsible company which has specialized in steel windmills for 36 years.

## Classified Advertising Rates

ADVERTISEMENTS are inserted in this department at the rate of 5 cents a word. The minimum charge per insertion is \$1 per week. Count as one word each initial, abbreviation and whole number, including name and address. Thus: "J. B. Jones, 44 E. Main St., Mount Morris, N. Y." counts as eleven words.

Place your wants by following the style of the advertisements on this page.

### The More You Tell, The Quicker You Sell

EVERY week the AMERICAN AGRICULTURIST reaches over 130,000 farmers in New York, New Jersey, Pennsylvania and adjacent States. Advertising orders must reach our office at 461 Fourth Avenue, New York City, not later than the second Monday previous to date of issue. Cancellation orders must reach us on the same schedule. Because of the low rate to subscribers and their friends, cash or money order must accompany your order.

#### EGGS AND POULTRY

S. C. W. LEGHORN yearlings, \$1 each. 500 pullets hatched April 15, \$1.75 each. HILLSDALE POULTRY FARM, Hillsdale, N. Y.

WHITE LEGHORN PULLETS ready for shipment from eight weeks to six months old. Also five hundred yearling hens. OLIN HOPKINSON, South Columbia, N. Y.

PULLETS \$1 UP. Rocks, Reds, Leghorns, etc., White, Brown and Buff Leghorns, Ancona, yearling hens. Circular. GARDEN STATE CHICKERY, 329 Arch St., Camden, N. J.

FOUR PURE BRED (single comb) Black Minorca cockerels. March hatch, \$3 each if taken at once. MRS. BERTHA DEVLIN, Arcade, N. Y.

CHICKS—7c up. C. O. D. Rocks, Reds, Leghorns and mixed. 100% delivery guaranteed. 19th season. Pamphlet, Box 26, C. M. LAUVER, McAllisterville, Pa.

THOMPSON'S RINGLET Barred Rocks, also choice Rhode Island Reds, old and young stock, at attractive prices. 200 April hatched White Leghorn pullets, \$1.75 each. I guarantee to please. I. H. BACORN, Sergeantsville, N. J.

#### TURKEYS

A FORTUNE in turkeys properly managed. We are specialists and never lose a bird from blackhead or liver trouble. 24 capsules \$1; \$3.50, 100. Hundreds of testimonials. TURKEY HERBS REMEDY CO., 816 South Main, Santa Ana, Calif.

#### CATTLE

FOR SALE—25 head of heavy young Springer cows. They are all nicely marked Holstein cattle. I will help you buy cattle of any kind at a very reasonable commission. If you want the best write me for particulars. J. E. WHITE, R. F. D. 3, Cazenovia, N. Y.

PINE GROVE FARM offers 3 Registered Holstein heifer calves from real producers for \$100; bull not related, \$25. One year's time given or 5% off for cash. Write to the home of the first prize bull and champion heifer at New York State Fair. Will ship on approval. D. M. WHITE, Bath, N. Y.

REGISTERED AYRSHIRES—Young, good producing cows and bred heifers. Bred right, priced right. Accredited herd. RAY MEAD, Hornell, N. Y.

ORCHARD GROVE Milking Shorthorn. \$175 buys five month old bull and four month old heifer, beauties from heavy producers. L. R. HOTCHKISS, West Springfield, Erie Co., Pa.

#### SHEEP

SHROPSHIRE RAMS. Yearling rams for sale, bred from the best stock in America that are right in every way. Estate of ARTHUR S. DAVIS, Chili Station, N. Y.

#### SWINE

CHESTER, Berkshire and Poland China pigs for breeding or feeding. Male or female. 8 weeks old, \$5 each; 12 weeks, \$10 each. I. R. TANGEE, York Springs, Pa.

#### DOGS AND PET STOCK

THOROUGHbred COLLIE PUPS, White or Sable and White; Scotch Shepherd pups from natural drivers. F. L. SWEET, Smyrna, N. Y.

FOR SALE—English Shepherd pups, males, \$10, females, \$7. STUART PHELPS, Solsville, N. Y.

HUNDRED HUNTING HOUNDS cheap. Trial catalogue. BECK, W 14, Herrick, Ill.

THOROUGHbred COLLIE puppies, males, spayed females; all ages. ARCADIA FARM, Bally, Pa.

DON'T run your legs off chasing cows. English and Welsh Shepherds go for stock alone. Just in from Canada. Order quickly while they last. GEORGE BOORMAN, Marathon, N. Y.

ANGORA—Long-haired kittens of pure bred stock. Maine grown pets, male or female. ORRIN J. DICKEY, Belfast, Maine.

SABLE AND WHITE Collie Puppies, Males, \$6.00; Females, \$5.00. P. HAMILTON, Cochranville, Pa.

#### FARM IMPLEMENTS

FOR SALE—Boomer and Boschert knuckle-power press, reversible platform for 48-inch racks, in running order, good as new for \$300 cash; also 2 or 3 hundred used Cider Barrels, \$2 and \$3 each. JAY CARPENTER, 835 Cliff St., Ithaca, N. Y.

CORN HARVESTER cuts and piles on harvester or windrows. Man and horse cuts and chocks equal Corn Binder. Sold in every State. Only \$25 with bundle tying attachment. Testimonials and catalog FREE showing picture of Harvester. PROCESS HARVESTER CO., Salina, Kansas.

#### PRINTING

150 NOTEHEADS, 100 white envelopes printed and mailed, \$1.00. Samples printing free. SUNCO, Mohawk, New York.

#### SEEDS AND NURSERY STOCK

MONEY IN WHEAT—If you sow best seed, try Leap's Prolific, great stooler, stiff straw, red berry, much desired by millers; record, 46 bu. acre; 10 bu. lots, \$1.95; over ten, \$1.90. Bags free. Freight paid. E. E. WRIGHT, Holcomb, N. Y.

HAY AND STRAW—Number one, number two timothy, light and heavy clover mixed, alfalfa, wheat, oat and rye straw and baled shavings. Ask for delivered prices. Thirty years in the business right in our home town. SAMUEL DEUEL, Pine Plains, N. Y.

I BELIEVE these three wonderful strawberries will bring you the greatest profits in market fruit and plant trade. Beacon, best early; Boquet, greatest yielder; Bliss, highest quality. Originated at New York Experiment Station. Plants for fall setting; \$1 per dozen; \$5 per hundred; \$40 per thousand. Postpaid. Circular free. CERTIFIED PLANT FARM, Macedon, N. Y.

FOR SALE—Choice Gold Coin seed wheat, \$2.15 per bushel, bags included. JARED VAN WAGENEN, JR., Lawyersville, Schoharie Co., N. Y.

CELERY AND CABBAGE PLANTS, all leading varieties, strong plants ready for field. \$1.25 for 1,000. \$10.00 for 10,000. J. C. SCHMIDT, Bristol, Pa.

HOLLAND BULBS—Order now, our supply is limited. Tulips, Giant Darwin or Early mixed or separate colors, 40 for \$1; 100 for \$2; Narcissus, Single or Double, 30 for \$1, 100 for \$3; Hyacinths (Bedding), mixed or separate colors, 20 for \$1, 100 for \$4. Hyacinths, Giant top-size, 12 for \$1; Crocus, 100 for \$1. Special prices on large lots. All orders sent postpaid. C. O. D. if desired. R. J. GIBBINS, Mt. Holly, N. J.

ORDER NOW for planting time. Low prices for early orders. Gorgeous peonies. All colors. All bloom next spring, 3 for \$1.00. 12 for \$3.00. R. I. GIBBONS, Mt. Holly, N. J.

PEONIES, 12 mixed, at \$2.50. Prepaid at \$3.00. A card will bring our price list. Large acreage of peonies and many new sorts. Wholesale and retail. MUNSELL & TILTON, Ashitabula, Ohio.

HONOR WHEAT SEED—College Inspected. White, beardless, heavy yielding. Improved selection from Dawson's Golden Chaff. JONES & WILSON, Hall, N. Y.

#### REAL ESTATE

FOR SALE—136-Acre Delaware County Dairy Farm. Will keep 25 cows, complete farming equipment. A bargain for quick sale. MRS. A. D. HOY, Bovina, N. Y.

MR. FARM BUYER. Good farms for sale. Equipped, with small payment down on easy terms. Reason selling, old age, sickness. Estates settled up, etc. Let me submit your offer to Owners. Tell your wants to C. M. DOUGLAS, Herkimer, N. Y.

MONEY MAKING FARMS FOR SALE in central New York State. For sizes, descriptions, price and terms, write PERRY FARM AGENCY, Canajoharie, N. Y.

ALL WOOL YARN for sale from manufacturer, 75c to \$2.00 per lb. Free samples. H. A. BARTLETT, Harmony, Me.

# Service Bureau

## Recent Cases Up for Collection—Investments

THE Service Bureau recently unravelled a dispute over chickens delivered but never paid for. When the subscriber received his check he wrote:

"I received Saturday a check from Mr. F. B. P. for the poultry that I had not received pay for, and had put in your hands to collect. The check was \$15.58. Thanks, and many thanks to you for your kindness and services." P. H., N. Y.

\* \* \*

### Grape Cuttings Finally Paid For

LAST November a New England nursery ordered from Mr. J. W. F. of N. Y. a large number of grape cuttings. A check for \$50 on account was sent but not the full amount. A bank draft made by Mr. F. was not met and came back uncollected.

Mr. F. turned the matter over to us and after some little correspondence, he received a check for \$214.75. He wrote that it came with an apology for the company's negligence, and thanked us for our aid in getting it.

\* \* \*

### Egg Money Collected

A CHECK of \$38.72, covering four cases of eggs has just been received by a subscriber in Delaware who shipped to a New Jersey firm. It was a new company and the officers were not very experienced, so its affairs were somewhat tangled. "I give you people all the credit for getting my money for me, and I will do all I can to recommend the paper," writes Mr. M. R.

\* \* \*

### Incubator Sent At Once

AN incubator that had been some three months on the way was the cause of considerable trouble to Mr. L. L. of N. Y. and he asked the Service Bureau to take up the matter with the company. It transpired that the order had been promptly shipped but "lost" en route. Upon our request for a refund, the company sent Mr. L. his check, meanwhile filing claim for the loss with the railroad. A very courteous letter accompanying the check made us feel that the company were trying to give the service they advertised. Mr. L. was perfectly satisfied with their adjustment.

\* \* \*

### Refund for Unsatisfactory Stove

A PROMPT settlement of a claim for \$8.50 was recently made to a subscriber who had trouble with a stove sold on a money-back guarantee. It took only a reminder from the Service Bureau to bring the check by return mail, and our subscriber wrote thanking us for a perfectly satisfactory adjustment of her complaint.

### Questions About Investments

Will you please tell me about the International Nickel Co., also concerning American Tobacco stock and Universal Leaf Tobacco.—H. M. R., New York.

The only security among the obligations of the three companies you name, International Nickel, American Tobacco and Universal Leaf Tobacco, that we feel

#### HELP WANTED

FIREMEN AND BRAKEMEN—Men to train for firemen or brakemen on railroads nearest their homes—everywhere; beginners, \$150; later, \$250; later as conductors, engineers, \$300-\$400 monthly (which position?). RAILWAY ASSOCIATION, Desk W-16, Brooklyn, N. Y.

ALL MEN, WOMEN, BOYS, GIRLS—17 to 65, willing to accept Government positions, \$117-\$250; traveling or stationary, write MR. OZMENT, 253 St. Louis, Mo., immediately.

COUNTRY BUTCHERS WANTED—A man who can butcher all kinds of stock, and also do trimming and slicing of meats in meat market. Steady work and good pay to right party. Write experience, age and salary expected. Address WILLIAM KNIGHT, 115 N. Aurora Street, Ithaca, N. Y.

#### SITUATIONS WANTED

COUPLE, 40, highly intelligent, like farm position on shares or hotel. Will invest money. J. T. PROCTOR, Box 105, Newtonville, N. Y.

ready to recommend for conservative investment is the 6 per cent. preferred stock of the American Tobacco Company. This sells just about 102 to yield a little less than 6 per cent. and is very desirable. American Tobacco common sells around 147 and pays 12 per cent. but is more speculative. International Nickel pays 6 per cent. on its preferred stock but nothing on its common. Present earnings do not entitle even the preferred to more than a semi-speculative rating. Universal Leaf Tobacco appears prosperous but its stock, both the preferred and the common, lacks seasoning.

\* \* \*

Will you please tell your opinion concerning the following bonds: Penn Public Service Corp. 6's '29; Wills-Overland Co., 6 1/2's '33; Motor Wheel Corp., 6's '33; Grace Steamship Company serial 6's. The National City Bank of New York is Trustee of the last three and the National City reports very favorably of them. Do you consider them to be good safe investments?—A. L. C., New York.

Of the bonds you name we think the Penn Public Service Corporation 6's of 1929 the most desirable. The others undoubtedly have merit but are not high grade. It is difficult to advise you without knowing what other securities, if any, you hold. If you want a sound bond to yield about 5 3/4 per cent., we suggest Consolidated Gas, Electric Light & Power of Baltimore 6's of 1949, selling about 104. This company supplies electricity to the City of Baltimore and has a long and honorable record of meeting its obligations. It earns and pays dividends on its two issues of preferred stock and \$8.00 on its common stock. The bond is listed on the Baltimore Exchange and also on the New York Curb.

### Help the Dairy Industry

(Continued from page 155)

that the time has come when the man who is unwilling to cut out his poor farm practices and reduce his costs of production has got to go out of the business. Cooperation in marketing will help the good farmer; it cannot save the poor one. In the dairy business, the largest single cost factor with every individual and with the whole industry is the poor producing cow. Thousands of farmers have already begun to put their dairies on a business basis by keeping accurate records of the amount of milk the cow gives, and the amount of feed she consumes.

Belonging to a cow testing association is one way to do this, although cow testing association membership is impractical for a lot of farmers, and it is not absolutely necessary.

As I have suggested above, there are few dairies that do not have at least one cow that is so poor that the farmer needs no records to know it. The first step is to get rid of her, and the next is to begin to check up on the others by keeping feed and milk weight records.

Will you join hands, with AMERICAN AGRICULTURIST and with your neighbors in New York, Pennsylvania, and New Jersey, and Western New England, to get rid of the poorest cow in your dairy this coming winter? Killing a thousand cows in this territory will be a start; eliminating five thousand will begin to have an appreciable effect on the market, and if twenty-five thousand men will work with us, and eliminate just one cow, we know of nothing else that will have as much effect in raising the price of milk.

Will you not therefore sign and send in to the AMERICAN AGRICULTURIST, 461 Fourth Avenue, New York City, the following statement:

I hereby agree to kill or sell for meat purposes before March 1, 1925, at least one dairy cow from my herd.

It is understood that this is not a promise until at least one thousand farmers in the New York milk shed have agreed to do likewise

Signed.....  
Address.....

# Androcles Jones—

By Ellis Parker Butler  
(Copyright, McClure Newspaper Syndicate)

AS a matter of fact, his name was not Androcles but Orley Jones, and he was commonly called "Oily" for three reasons; "Oily" is not unlike Orley and made a good substitute for it in a company where substitute names were the rule. The old hands of the Hoggins-Weltz shows had an invariable method of hazing a newcomer—they called him out of his proper name. This had the effect of showing that the new hand was an unimportant bit of nothing-at-all and put him in his proper place at once. If his name was Mike they called him Algernon until he had writhed into a proper state of meekness or had objected and been beaten into a right state of mind. Then his new handle was softened to Algy, and if he proved to be a good fellow, he might become Al, but never—as long as he was with the Hoggins-Weltz bunch—was he Mike again.

Even Katie O'Hare, whose ring-name was Mile. Rosa Montmorency, was Susie to all connected with the show, and old Hoggins, safe in his office in the Metropolitan Tower in New York most of the time the show was on the road, was "Biff" Hoggins. The name had something to do with the fact that he had once owned a cheap Wild West show, a paltry imitation of Buffalo Bill's outfit, and had thus won the distinction of being dubbed "Buffalo Bull."

The two other reasons for the name were that Orley Jones had a certain gentleness that might, by extreme stretching, be called unctuous. "Orley, Hey?" said Codge Biggs, when he had asked the new man's name. "Well, you look Oily, all right!" And the name clung, and it clung the tighter because Mr. Jones had a way—due to his New York birth—of saying "I had to get up oily this mornin'," or "The oily boid gets the woin'."

The little man, with his eyes set too close together and his general air of having served a long term as a sweep-out in a cheap barroom, joined the Hoggins-Weltz crowd at Davenport, Iowa. How he ever happened to be at Davenport was a mystery, but he was down on his luck and ready for any kind of meal-ticket, and when Codge Biggs, our canvas-man, had knocked out three drunken rough-neck stakemen with one of the iron-capped blue tent-stakes, he took Oily and two other hungry-looking fellows to fill the vacancies. At Iowa City, Oily doubled with the camels, leading one of the tan-colored brutes in the parade, and the camel bit his arm. He had no luck with animals. If he stood in front of the cockatoo-cage for two minutes, the birds went crazy with rage. They seemed to take Oily as a personal insult of some sort, and screamed their heads half off.

YOU may have read of men who can go into the woods and sit down, and in a few minutes squirrels come up and kiss them, and dicky-birds come and roost on their shoulders, and beavers and badgers and things come and purr against their legs. Oily was just as different from this as he could be. Even pink-eyed rabbits tried to bite him. They say the reason some men make such a hit with animals is because they are innocent of heart and mind. If that is so, Oily must have been the toughest kind of a sophisticated criminal.

That was one reason Oily was assigned to the animal-tent. Nothing makes such a hit with the crowd as to have the animals yowl and jump at the cage-bars and show meanness, and all Oily had to do was to walk around inside the tent to have a wave of yowls follow him. Even the guinea-pigs in the Happy Family would try to bite the cage-bars when they saw Oily. And it takes something to make a guinea-pig show ferocity. Oily was the only thing I ever knew that could do it.

We had a Jap with the show once who used a kind of hair-oil that drove the

trained seals crazy. He was a little fellow and about fifty years old, and his star stunt was to go away up in the top of the big top and fasten his little wisp of hair to a pulley and slide down a long wire, hanging by the hair and whirling around and around until a couple of rough-necks caught him just as he reached the ground. Along in '98 his hair began to come out, and he wrote to an uncle of his in Vladivostok for some of this hair-oil. I guess it was one of the good old family remedies he knew about; anyway, it was so strong that if the Spaniards had heard about it in time they wouldn't have had to invent garlic.

The first time Yama Toy came into the big top doped up with the stuff, the eight trained seals were doing their stunt on the stage between the two big rings. They gave one whiff, said something that sounded like a seasick army and scooted! One of them went into a clown's giant fake tuba like a snail into a shell, and he went in so far and so hard that we had to cut the tuba off him with a can-opener. His head was jammed into the funnel of the tuba so hard that one of us had to hold down one of the keys of the tuba so the seal could get a breath. Every time

individual. I read a story some fellow wrote and got published in a magazine and although he changed the names, anybody would know it was about Pink and Morris (we used to call him Grunt, he was always so complaining), and it had a lot of stuff about how Grunt lay under the big stick, crushed and holding Pink's hand—you know, the "only a clown but human after all" stuff. That story would make a horse weep, but it wasn't any of it so. The big stick hit him on the head and he never knew what hit him. If he had known, his last words would have been "Sue the show! We can get damages for this!"

As I said, Grunt Morris was a good-enough clown, but he was not much of a husband. Pink gave him all the weeps he deserved, and I guess she didn't think much of marrying again until Oily Jones began to make up to her. Now, there's another thing not many people know or think about. The kind of man that makes the big hit with the innocent birds and beasts, like I mentioned, don't stand one-two-three with the ladies, as a general rule. You can take that or leave it, but it is so. Maybe the dames have an inside liking for killers—soldiers and

Some days one cat will be cross and all the rest will behave like little angels; another day they will all be cantankerous; another day they will all be good. Once in a while you'll find a cat that is good all the time.

I REMEMBER when I was a kid on my father's farm we had a bull that was so sweet-tempered a chipmunk could push it out of the way. Pink had one cat like that. It was a big he-lion with a mat of beard and mane and big yellow eyes and the sweetest temper any brute ever had. I'll tell you what he was like: he was like one of those big, heavy-haired orators they grow out West, who stand up on a platform and shake their manes and howl and look grand and ferocious and then go home and eat half a soup-plate of milk toast and call it a full meal. That was like old Leo. He was a star poser. He was the noblest cat I ever saw, did the lion-rampant act to perfection, yowled like a bloodthirsty hyena, and never even acted annoyed except when he had eaten too many chocolate creams and felt satiated. I believe that if he hadn't been ashamed to be seen doing it, he would have eaten hay instead of meat.

All this did not make Pink dislike Leo. He was the darling of her heart. You don't require a collie dog to be ill-tempered in order to love it, and neither was it necessary for Leo to be ferocious to keep Pink's love. She just about worshipped that dear old lion. She used to call him her big boy and her big baby and other pet names, and she always said that when she retired from the sawdust ring she would take Leo with her, no matter what happened to her other big cats. I told her a couple of things about Manhattan janitors and what they would think of a lap-dog like Leo, who was as big as a pony and looked as fierce as he wasn't, but Pinky said she had about as much use for a flat in Manhattan as for a submarine, and that when she retired she meant to have a nice little farm on a Catskill hillside with a good timber-lot where Leo could roam around—and eat beech-nuts, I suppose and lie down with Pinky's lambs, if the lambs were not too fierce for company for the dear old cat!

Yes, Pink was a nice girl, and the act she pulled off in the big ring cage at each performance was all it was cracked up to be on the big posters. She had all the big-cat stunts and some she had invented on her own hook, and when she stepped into the cage in her short spangled skirt and her ribboned sandals, with her short bull-whip in one hand and a reliable forty-four in the other, she always made a hit. She had a big lot of brown hair and a way of doing it up with a little red-and-gold turban on top of it that made her look like a real queen of beauty, and she was all that and more. She had a heart of solid gold.

I don't know just when Oily made himself prominent in her notice first. I think the first she ever thought of him was with annoyance. He worried her Leo terribly. Leo had the same feelings toward Oily that every other animal had, and when Oily would pass Leo's cage, the dear old thing would just yowl with rage. He would bounce around the cage and yawp and carry on in an awful manner. He would jump at the bars and bite them and get all worked up and nervous. He would get so mad he would fairly weep and the tears would run down his jowls, and Pinky said it upset him so that he would be like another lion for an hour afterward.

All this had one effect; it made Pinky notice Oily. They had one big row over it, and then Oily came and begged her pardon like a little man. From then on they were together a lot. Probably Oily fell in love when she gave him that rake-over. At any rate, we all knew, before long, that Oily was head over heels and that Pinky was favorably inclined. We

(Continued on page 165)

## Another Butler Story, by Request!

ELLIS PARKER BUTLER, one of the best known American humorist writers, made a hit with A. A. readers recently when they read his story "The Cave Men." "Give us more Butler!" came the request from our subscribers, so we have succeeded in securing another characteristic Butler story, this time of life in the circus. You all remember how the old Greek Androcles earned the friendship of a lion by drawing a thorn from his paw. The hero of this story tries the same experiment, but the result is not, perhaps, quite so satisfactory. You will find as many laughs in this as in "The Cave Men."

the seal drew a deep, frightened breath the tuba played a note. It was B flat below the scale, and whenever I hear that note now I can smell Yama Toy's hair-oil.

THERE must have been something about Oily Jones that had this effect on all the birds and beasts. I don't know what it was, and neither did Oily. Later on we tried every way possible to discover what it was; but that comes later in this story. It wasn't sophisticated criminality. Along about the time when Oily was dying of love, and when he used to tell me all his troubles, he told me with tears in his eyes he had never done a naughty deed, and I believe him. Maybe it was just that the animals did not like his looks. Perhaps they did not like his eyes. We tried to figure out that it was his scent—every man and animal has a distinctive one, as bloodhound-owners know. And we tried diet. Oily was fond of onions, and we thought maybe that was it. He went without onions for weeks, and it made no difference. We tried rubbing cotton on Oily and then putting the cotton in the cages with the brutes. You know how a dog or a cat or any other animal will go for anything scented with a scent they don't like. Well, they paid no attention to cotton scented with Oily. They just did not like him. During those days Oily just moped around the show and didn't care whether he lived or died. It was on account of Pink.

This Pink person was a widow, and a young one, and one of the finest girls with the show. I knew her before she married Morris, who was her first husband and who was killed in the big blow-down in Kansas in '11, and she always was just about as fine as they make them. Morris I had never cared much for. He was a good enough clown but a sour-tempered

big-game hunters and such always seem to make a hit with them, somehow. I give it up; I've got other things to figure out, at the end of a show-season when we've had rain once every day and sometimes twice, and then some.

Anyway, Oily seemed to stand in pretty well with all the dames in the show—Pink, especially. Come to think of it, he must have stood in with me pretty well, too, although I never thought of that until this minute! Come to think of it, I did push him along pretty fast, rushing him up from canvas-man to what you might call my general assistant in half a season. But Oily was a handy man, and he could get things done. He was oily, that way. He had a brain, and he greased the trouble-paths with it so things slid easily.

I've got to drive around the block like, and get back to Pink Morris. Maybe you'll bring her to mind without my telling you any more if I say her ring name is Princess Cara. Yes, I thought you'd remember her! She was just the best little handler of the big cats we ever had, and one of the best the world has produced. There's a lot of bunk about handling the big cats, and there's a lot that isn't bunk. Those who think anyone like Pink is in mortal danger every minute she is in the big cage have it all wrong, and those who think the trainers are as safe in the cage with the big cats as they would be at home in bed are just as wrong. You get one of the trainers to strip—get any of them to strip—and you won't find one that is not scarred up. The reason Pink wears her fleshings to her wrists is because one arm is so marred the public would turn sick to see it. One of the cats clawed her there. The truth is that the cats have their days. Some days they are as sweet as pigeons, and again they are as mean as rattlesnakes.

# Prize-Winners in Boys' and Girls' Picture Contest

Books Are Awarded to Those Who Best Describe This Photograph—Read the Winning Stories

WE asked the boys and girls who read the AMERICAN AGRICULTURIST to look at the picture of the two cats "treed" up a ladder by the dog and tell us what story it suggested. All sorts of adventures were imagined for those worried cats and the self-satisfied dog, and the boys' and girls' editor had trouble picking out the best ones. The prize winners are:

**First:** Mildred Caroline Dix, Everett, Mass. Age, 14.

**Second:** Marguerite Montgomery, Bainbridge, N. Y. Age, 13.

**Third:** Dorothy Louise Luce, Marion, N. Y. Age, 14.

All will receive a copy of the book "Team Play," a collection of stories of high school life. In awarding prizes, the excellence of the story was considered first, but spelling, penmanship and neatness were also taken into consideration. These are the stories, in their order:

## How Midgie Was Fooled

MILDRED CAROLINE DIX

WE were walking along a county road when Midgie declared she was thirsty. I felt that way too, so we stopped at the next farmhouse to ask for some water.

As we walked across the front lawn toward the door, however, two cats came dashing around the corner of the house and quickly climbed part way up a ladder which was being used in repairing the roof. Behind the cats came a good-sized dog. He sat down at the foot of the ladder as if to say, "Now you can't come down."

"Oh, that horrid, dreadful dog will hurt those kittens, I know he will," sobbed Midgie, who dislikes seeing anything harmed.

Just then a boy came out of the house with a camera in his hands. The dog looked at him expectantly and the boy quickly took the picture of the trio.

Then Midgie sputtered. She just told that boy what she thought of anybody who would stand there and take a picture of those poor pussies when they were in such a plight.

"Oh, they do that every day. Watch them now," he said grinning.

Sure enough, down came the cats and proceeded to take possession of the dog. He lay on his back and allowed them to bite his ears and play with him. Our fears and sympathy were in vain, for the three were fast friends.

## When Our Dog Learned a Lesson

MARGUERITE MONTGOMERY

ABOUT a week ago our dog was outdoors lying in the sunshine. All at once something began to pull at his tail. He kept his eyes closed and only moved his tail a little. Soon he felt it again. He raised up and looked. There were two little kittens. He jumped up and ran after them.

He made them run so fast that the little kittens ran up a cherry tree. It was a low tree and there was a box up to it so the dog jumped up on the box and cuffed them with his paw.

They jumped down and ran up a ladder that stood leaning against the house. The dog barked and jumped up at them. There was a pail of paint hanging on the ladder about half way up. He jumped up so high once that he scared the kittens and they ran up the ladder so fast that one of them hit against the pail and off it went, right on the dog's head. What a mess! He surely needed a bath! He rolled in the grass, shook himself and made such a racket that the whole family came running out to see what the trouble was. As the pail splattered back on the kittens too, we gave the dog and kittens all a good bath. It was a good lesson to

the dog. He never would go near the kittens again.

\* \* \*

## Kitten Kapers

DOROTHY LOUISE LUCE

MRS. BARNES, an invalid, looked about for some new amusement. She had long since grown tired of the day's usual routine. "What shall I do?" she murmured, as she gazed about her pretty room. Her attention was suddenly directed to a scene near her garden which she could see under her window.

Dempsey and Firpo, her little neighbor Peggy Ann's own especial property, were frisking about near a ladder which had been used for painting. Suddenly in kitten language, ending in a loud meow for warning, Firpo dashed up the ladder.

## What Story Does This Picture Tell?

The three prize-winning letters and the names of boys and girls who competed are printed on this page.

Dempsey soon followed, as he saw Smith's dog, Trix, dash into the yard. Trix frisked about several minutes intent on bothering his animal friends when he heard a low "Trixie."

Trix turned. There stood his mistress with a box-like object pointing at them. He then heard a click and all was over. With a leap and a bark Trix had soon frightened the prize-fighters from their perch. Down they flew. Dempsey and Firpo living up to their namesakes' professions. After several minutes of scrapping, Trix decided that the best place for him was home. With a final hiss and meow the kittens scampered away to play in the sunshine. Mrs. Barnes smiled as she witnessed the incident and finally dropped to sleep dreaming of the amusing scene.

\* \* \*

Here are two descriptions which are not so original as the prize winners, but tell a simple narrative very clearly:

\* \* \*

## One Moment to Pause

MARY D. VANDERBECK

GINGER, a little collie pup, belonged to Sammy Brown. He was a very playful pup and loved to chase cats.

Cindra and Puss were kittens belonging to Ann, Sammy's sister. These kittens ran away from their mother one day and

went to play on the velvet-like grass at one side of Brown's house. As they were tumbling about on the grass they heard a sharp bark. Four little eyes were looking immediately, trying to find from what source the noise came and who should they see but Ginger! They knew that their mother had often told them to run when a dog came near. There were no trees near and they would not have time to run to their mother. At last their eyes fell upon a ladder leaning against Brown's house. They climbed up the ladder just in time to escape danger. Ginger stayed there barking and growling for the kittens to come down. One of Brown's boarders happened to be taking pictures that day of the Brown place. He thought this would make a dandy picture. As he was taking it, Ginger looked up to see what

was going on. When the man left Ginger was back on the job.

In about an hour's time, how happy the kittens were when Sammy's voice was heard calling Ginger for his supper! When Ginger left, down came Cindra and Puss, and away they scurried as fast as they could go to their mother, never to run away again.

## An Exciting Adventure

HELEN DICKERSON

"OH, dear!" said Tiny. "It is so warm, I think I shall roast!"

"It is very warm, but there is no use complaining about it, it will not become any cooler," replied Tiny's sister, Molly. Soon the conversation launched into other channels.

"Where is Teddy?" suddenly asked Tiny. A howl of triumph sounded and Teddy sprang at Molly.

"Oh!" shrieked the bewildered cat.

"Run, run for your life!" shouted Tiny as she started to run. Round and round the house they flew, in and out of flower gardens. Finally Molly discovered a ladder standing against the back of the house.

"Up the ladder, up the ladder!" she shrieked as she ascended and Tiny followed. Teddy stopped short and stood staring up at them. He heard a whistle and as he turned his head the cats jumped to the ground and around the house they ran. Just then the door was opened and they reached the kitchen in safety and soon both were peacefully sleeping in a box in the corner.

When Teddy turned his head and discovered his prey had escaped he became furious. He hunted everywhere but could not find them, so he soon went off with other dogs.

\* \* \*

## Those Who Competed

Other good stories were sent in by Martha B. Lyman, Marshalltown, Del., age 12, to whom was awarded a consolation prize; Norma Hoffman, Parish, N. Y.; and Emma Green, Cooperstown, N. Y.

Several excellent stories had to be thrown out because they reached us after August 23, the closing date of the contest, or they exceeded the limit of 250 words.

Here are the names of others who tried for the prizes:

Amber Weeks  
Mahlon Weeks  
Emma G. Crumb  
Catherine Fleming  
Ruth G. Mason  
Ruby Alexander  
Alice Louise Bardo

George Fitch, 3rd  
Rosalie Estella Dann  
Eleanor Barringer

## Some Southern Hot Breads

**Madison Biscuit.**—These biscuits are delicious, and the recipe for them came through our fourth President's family, James Madison.

1 qt. flour, ½ pt. yeast, 1 egg, 1 large potato, 1 teaspoon sugar, 1 tablespoon lard. Beat yeast, egg and sugar together. Mash potato and mix it with enough milk to moisten. Work flour in as for rolls, add a little salt. They will rise in five hours. When light roll out ¾ in. thick and cut and place in pan to rise again. In placing in pan be sure to give plenty of space. Bake in quick oven 15 minutes.

**Maryland Biscuits.**—Two and one-half pounds of flour, 6 ounces of lard, 1 teaspoon salt, 1 teaspoon yeast powder, 1 pint water. Rub flour and lard together, add all other ingredients and beat 40 minutes. Cut into pieces the size of a walnut, shape into small cakes, flatten with base of the thumb, pierce with a fork and bake in a hot oven 20 minutes. Good hot or cold.

**Virginia Spoon Bread.**—1 cup of cooked hominy, 4 tablespoons lard, 1 cup of cream, four eggs, 2 cups cornmeal, 4 teaspoons baking powder, 1 tablespoon melted butter, ¼ teaspoon salt. Mix the lard with the hot hominy; when cool add cream, eggs well beaten, cornmeal mixed and sifted with baking powder, melted butter and salt. Bake in buttered agate or baking dish thirty to forty minutes.—Mrs. A. L. LYON.

## What One Reader Thinks

Dear Editor: Just a few words about some articles in recent numbers.

The secret of making yeast and good bread is well set forth by the "A. A. Reader." She states the case just as I have made bread for many, many years and have received many premiums from the local and county fairs. She is right "that practice makes perfect," also strict watch on the job every time. Keep the sponge or hard loaf out of all drafts, and the outcome will give perfect satisfaction.

And I can vouch for Hazel Harper Harris' way of recovering parasols and umbrellas, as I have done the same way myself, and although I always found it a disagreeable job—(or disagreeable to my feelings) I always had a good piece of work accomplished when I had done with it. She tells it plainly and to the point, and anyone following her directions cannot make any mistake.—CLARICE RAYMOND.

Tommy: Aw, pa, I wanta row!—Life.

## Androcles Jones

(Continued from page 163)

expected to hear any day that they had been married between the afternoon and evening performances.

THEN Oily came to me looking like a lost soul.

"Mack," he said (my right name being John Roger Weltz), "what would you do if you loved the nicest little goil in the world and she handed you one that put your hopes on ice?"

"What's Pink been handing you now?" I asked.

Oily seemed surprised that I had guessed the girl was Pink.

"How did you know she was the goil?" he asked, but without much spirit. "Well, no matter! She's the dame I mean. Mack, she's willing to marry me—"

"Oh, that part is fine enough!" Oily said. "Sure, the big show is all right, Mack. She's willing to be tied, Pink is: but—say, did you know Morris?"

"Like a book," I said.

"Say, is it a fact he stood for being married in the ring-cage with all them cats?"

Then I knew. Oily didn't have to tell me another word. Pink and Morris had been married at the evening performance one night when we showed at Dallas. It was a great stunt, and advance news of it had filled the tent so full we had to walk the elephants single file in the grand entry to keep them from stepping on the Texans who were sitting on the sawdust at the foot of the blues. It was a great stunt, and Pinky never tired telling about it; and it was such a good stunt that every cat-trainer that got married after that had the wedding pulled off in the ring-cage. I could see why she had suggested the same thing to Oily. It was professional pride. It was her own stunt, and if the other cat-trainers were stealing her stuff and being married in the cage, Pink wasn't going to pass the chance to make good at it again.

(To be continued)

## Pickling Pointers

(Continued from last week)

### Green Tomato Pickles

Slice one peck green tomatoes and six large onions and sprinkle over them 1 cup of salt and let them stand overnight. In the morning drain and put over them 1 quart of vinegar and 2 quarts of water. Place on stove and boil the tomatoes for 15 minutes, then remove the liquid and throw away. Then pour over them 6 cups sugar, 2 tablespoons ground cloves; two of ginger, cinnamon and mustard, and 1/2 teaspoon ground red pepper. Mix the dry ingredients and pour over them 2 quarts cider vinegar. Boil for 25 minutes, then the pickles are ready to can.—PAULINE CARMEN.

### Mustard Pickle Sauce

1 1/2 quarts vinegar	6 tablespoons yellow mustard
1 lb. sugar	2 tablespoons tumeric
1/2 cup flour	1 teaspoonful salt

Place the vinegar, sugar and salt in agate or aluminum pan, over the fire. Mix together (dry) the flour, mustard and tumeric. Then mix smooth with enough water to make the right consistency and add to the boiling vinegar and stir thoroughly until well cooked.

This is nice to pour over raw cabbage, chopped raw onions, or freshened and sliced brined cucumbers, or turnips and carrots.—C. A. B.

### Oil Pickles

Twenty-five medium sized fresh cucumbers, slice thin without peeling. Let stand six hours with 1 full cup salt stirred in and stir frequently during the time.

Then drain well. And add one quart cold boiled vinegar, 1 tablespoonful each of white mustard seed, yellow mustard seed, and celery seed, and 3/4 cup of pure olive oil. Stir thoroughly, when well mixed seal in glass jars.

# A "gas-well" in your yard

BURIED, out of the way, claiming little attention—and yet playing a vitally important part in your life—the J. B. Colt "gas-well" not only brings comfort, convenience and safety, but better health, better morale, better home-life, better habits.

Light given by the Colt Carbide-gas system is recognized by science as being nearest to actual daylight of all artificial illuminants. Thus it protects eyesight, and encourages reading, and cleanliness.

By making the home as attractive as the city's glitter it keeps the younger generation on the farm; and by affording cooking and ironing facilities it lightens the burden of the hard-working farm wife. No fires to build for light cooking, no changing of irons or waiting for them to heat—no lamps to clean or fill.

Actual tests have proved that stock can be stabled and fed under Carbide-gas light in one-third less time than under lanterns. In the henhouse increased egg production, due to Union Carbide-gas light, has often been sufficient to pay for the entire system.

The J. B. Colt generator is perfectly automatic and requires no attention except recharging (average: two or three times a year) with Union Carbide and water, and removal of residue, which then gives useful service as a whitewash, soil corrective, or germicide.

From this "gas-well" the Carbide-gas is carried throughout buildings and grounds by concealed iron pipes. In spite of its greater capacity and safety the genuine J. B. Colt generator costs no more than inferior systems. Write today for complete information.

N. B. Do not be deceived by inferior imitations of the Colt plant. Representatives for the genuine Colt system can furnish credentials.

Union Carbide for use in the Colt system is distributed from more than 150 conveniently located Union Carbide warehouses throughout the country—direct to the user at factory prices. There is one near you.

The beauty of this recipe is that the brined and freshened cucumbers make just as good oil pickles as those fresh from the vines. But be sure to omit the salt when using the brined cucumbers.—C. A. B.

### Black Chocolate Cake

MIX together 3/4 cup cocoa, 1 cup sugar and 1/2 cup water. Set on stove, and remove as soon as mixture begins to boil.

2 tablespoons shortening	3 cups flour
1 cup sugar	1 teaspoon salt
2 eggs	1 teaspoon baking powder
1 cup sour milk	1 teaspoon baking soda

Cream shortening and sugar, add well beaten eggs; add milk; add sifted flour, salt, and baking powder. Stir the cocoa mixture in. Dissolve soda in a little hot water and add. Bake in moderate oven.—MISS FRANCES WALDRON.

### Blanching and Storing Celery

CELERY for winter use need not be blanched in the garden but can be placed in a deep trench and the blanching will take place and it will be stored at the same time. Dig the trench two feet deep if the large late celery is to be blanched, and see that it is six inches

deeper than the height of the plants when you dig them. Make a six inch bed of good soil in the bottom and set the celery in this and water well, being careful to get none in the foliage. Keep rains from falling in with a shelter above, but give ample air. Cover with straw when weather becomes severe.—L. H. COBB.

Cover the frying pan with a perforated lid to prevent grease spattering.

# What's New In Fashion

## A Review of Styles for This Fall

COLORS, materials, trimmings, lines—they all change from year to year, even though certain styles, like the one-piece dress remain in favor many successive seasons. So we are all interested in "what's new" for the coming year, and the Household Editor has been doing a little advance investigating to find out.

I spoke of the one-piece dress as still being in the style. I wonder if they will ever go out? Surely not if the women who wear them have any say! These comfortable frocks have changed very little in style this season. They are still loose fitting, generally slip-over models, with a tie belt and perhaps a touch of lace at the neck. Sleeves are short, many of them kimono. The favorite materials are the soft, rather clinging ones—jersey cloths, knitted fabrics, soft satins and crepes. There are a few new weaves, given fancy names by the manufacturers, but they really are very little different from fabrics of last winter and spring.

Our patterns this week show three variations of the one-piece dress. No. 2120, which comes in sizes 16 years, 36, 38, 40 and 42 inches bust measure, shows the "shirt front" which is a new feature of the somewhat tailored dress. This pattern takes only 3 1/2 yards of 36-inch material for the smaller sizes. It

would make up well in challis, poplin, twill or a figured cloth. Stripes, incidentally, are very good this year.

No. 2145, a slightly more dressy model, shows the new flounces at the side and the use of passementerie or embroidered trimming in panel style. It would be charming in black satin or navy blue crepe, with gay-colored trimming bands. It comes in sizes 36, 38, 40, 42 and 44 inches bust measure and you will need 3 5/8 yards for size 36, with 5 1/2 yards banding.

No. 2182 proves that the surplice closing has not gone out of fashion and also that the coat-dress is still good. It has possibilities for a make-over, too, in case a last year's frock is worn in places, or outgrown. The pattern comes in sizes 16 years, 36, 38, 40, 42 and 44 inches bust measure. Size 36 takes 2 7/8 yards 40 inch with 1 1/8 yard 36-inch contrasting material.

All our patterns are 12c. They are seam-allowing and fit perfectly. You will want our big new Fall and Winter Catalog too. It is only 10c. and is invaluable for the home-sewer. To order, send correct amount for patterns and catalogue to Pattern Department, AMERICAN AGRICULTURIST, 461 Fourth Avenue. Be sure name, address, numbers and sizes are written clearly.

1973  
No. 1973—The smart hat for fall wear—high crown, narrow, slightly drooping brim, simple, trimming on one side only. Cuts in ladies', misses' and girls' sizes. Price 12c.

## Some Fall Garden Suggestions

### Late Fall Salads

LETTUCE may be sown in the fall and be excellent for salads, for it grows well in the cool fall weather. Another good fall salad is the Chinese cabbage, which has a sprightly flavor that is much relished. Mustard grows very quickly if the Southern curled is sown and it is good used with lettuce to give it a spicy flavor. These plants are not strong or bitter at this time unless the fall is very hot and dry, and may be sown as late as September, as they grow much more rapidly in the fall, due to the greater supply of nitrogen in the soil at this season. The Chinese cabbage may be used as leaf salads, or it may be allowed to head and blanch.—BERTHA ALZADA

grass had taken them. The ground was full of grubs, and many of my plants were practically killed, for their roots were kept eaten off until they made no growth. I found grubs in almost every hill. Keeping ground free from grass and then plowing the garden late in the fall to expose the grubs to frost will get rid of many.—L. H. COBB

### Saving Horseradish Sets

THE new method of growing horseradish calls for as many sets for spring planting as we want mature roots for marketing in the fall, or for digging for home use. These sets are pieces of root averaging the size of a lead pencil and from six to eight inches long. They should be cut to the right length when you dig the horseradish and tied in bundles, twenty-five is a good size, and then packed in boxes of sand if but a few are to be kept. If many, then you can bury them outside, for freezing does not hurt them. If kept inside, store in a cool cellar and pack them with the large end down, just opposite to the way they are to be planted.—L. H. COBB

### Ridding the Garden of Grubs

WHITE grubs are very destructive of plant roots where ground that has been very grassy the year before is planted and cultivated, leaving only the crop to furnish grub food. One year I planted my garden where potatoes had been planted and not kept clean and the

# Health Helps to Mothers

## Miss Deming Answers Questions About Babies

Our girl baby is seven months old and has no teeth as yet although her gums appear to pain her. Any further help you can give on the care of infants will be appreciated.—Mrs. J. A. W.

I THINK you will find the Government pamphlet entitled "Summer Care of Infants," which can be obtained from the Children's Bureau, Department of Labor, Washington, D. C., of help. Some babies are very slow in cutting teeth. It is nothing to be worried about if the baby appears perfectly well in other respects. If your baby girl is gaining each week, has clear, pink skin, clear eyes, sleeps well, cries little, has a normal bowel movement every day, and acts well, then the teeth will take care of themselves. She should be getting orange juice each day and if the doctor has no objection, she may have a little well cooked farina thinned with milk each day. Not more than one tablespoonful of the cooked cereal should be given to start with.

If one or two teeth do not come through in the next two months, you had better take her to a baby specialist.—D. D.

My baby girl is six and a half months old and weighs nineteen pounds. I take her to a nearby public health nurse every week. For the last two months she doesn't seem to have regular bowel movements. For about a month I've been feeding her one cereal a day. She also gets orange juice and is a nursing baby. The other day the nurse told me to give her oatmeal as a cereal and not farina. Kindly give me your advice.—Mrs. M. K.

I think I would try increasing the orange juice which you are giving the baby, also giving her two ounces of cool boiled water morning and afternoon and I would do as the nurse suggests, giving her a little well cooked oatmeal once a day. The oatmeal should be very soft,

fine may also be given. Start any new food in very small quantities at first, increasing if it agrees with the baby.—D. D.

Miss Dorothy Deming, R. N., recently spoke over the radio for the AMERICAN AGRICULTURIST on the care of babies through the summer. Her advice to mothers who wrote of their problems has helped many of them during the hot summer months.)

### Greens—Greens—Greens

THE ever-healthful greens! They commence in the early spring and continue throughout the entire summer and fall. Just now we are having milkweed, horseradish leaves, and mustard greens. These are fine if parboiled and well cooked. Look them over thoroughly, eschewing all wilted or eaten leaves and all stalks. Wash until the water is clear. Never drain the water from greens of any kind, but remove the greens from the water, as there are always grains of sand or some sediment in the pan. Rinse this out and keep washing until there is none. Dandelions are fine in early spring, also now and in the autumn. If kept cut off (and not into the root) they will keep growing out and up and one can have them right along.

Always put a little baking soda in the water in which you cook greens of any kind. Dandelions require more than mustard. Cook them until they are done. The common weeds—red root, pigweed, pusley, (not parsley)—make the best of greens and every family should have greens once a week at least. They are health producing and give the body a certain rebuilding that other vegetables fail to do.—CLARICE RAYMOND

### Motherhood

NO CORONET of gems have I,  
And yet I wear  
A crown of regal splendor  
On my hair.

No limousine or yacht have I,  
And yet I ride  
The noblest steed of Heav'n,  
And earth besides.

The crown? The gray of motherhood  
Is in my hair;  
The steed? It is, forsooth, a  
Rocking-chair.

ESTHER HULL DOOLITTLE

### Good Uses for Salmon

#### Baked Salmon With Potato

Put a layer of mashed potatoes into a baking dish, next a layer of salmon. Make a gravy of two tablespoons of flour and a little milk. Pour this over the salmon and potatoes and on top slice four or five hard boiled eggs, and bake until a nice even brown.

#### Creamed Salmon and Rice

One can salmon, chopped fine and seasoned and half cup of bread crumbs, one tablespoon of lemon juice and two beaten eggs. Put in two molds, one oval and the other a small round one. Let them stand in hot water in the oven until browned over. Cover them with rice and place them on a dish, the small one on top. Decorate with slices of olives and strips of green pepper.—Mrs. R. C. DELYNE.

#### Salmon Pie

Make a cream sauce with 1 cup milk, 1 tablespoon each flour and butter. Cook till smooth; season to taste, and add contents of 1 can salmon. Pour into buttered baking dish, cover with rich biscuit dough (which may or may not be cut into biscuits) and bake to a golden brown in a moderate oven.

#### Salmon Cutlets

To 1 cup boiling milk, add 3 tablespoons flour rubbed smooth with a little cold milk, 1 tablespoon butter, yolk of 1 egg, salt, pepper and cayenne to taste. Cook till thick, remove from fire, add 2 cups salmon, and let cool. When cold form into cutlets, dip into beaten egg, roll in cracker crumbs, and dry in hot fat till crisp and brown on both sides. Serve very hot.—MRS. E. M. ANDERSON.

Serving larger portions of food than can be eaten is not politeness; it smacks more of foolishness.

\* \* \*

Small potatoes boiled and mixed with a bran mash make a fine feed for the laying hens in the winter.

# How you feed your growing birds now determines how they will lay next winter

"I want to recommend Fleischmann's Pure Dry Yeast for developing birds quickly and keeping their vitality strong, also for better egg production," writes A. W. Haller, of Louisville, Ky.

"We feel perfectly satisfied," writes R. W. Kebler, of the County Agricultural School, Menominee, Mich., where yeast-feeding experiments have recently been conducted, "that the feeding of yeast to poultry is a paying proposition and can recommend it to farmers and poultry growers in general."

"Your Yeast," writes C. D. Handelong, of Bangor, Pa., "has doubled my egg yield and my flock is the picture of vigor and health."

INSTEAD of waiting till next winter and then depending on "laying" mashes and "forcing" methods to boost egg production, begin now to get your birds ready for winter laying!

No amount of "forcing" will make a productive pullet next winter out of a bird that fails to build bone, flesh, and vitality this summer.

Make sure that your birds get the last ounce of nourishment from the feed you give them.

Thousands of raisers have found Fleischmann's Pure Dry Yeast the way to do it. It makes the feed easy to digest—easy to turn into sound flesh and strength.

Fleischmann's Pure Dry Yeast comes in 2½ lb. packages. It will keep indefinitely. Full directions with every package. Your dealer should be able to supply you. If not, order direct from us. Send check, money order, or cash, or pay postman on arrival.

If your dealer cannot supply you, order from The Fleischmann Company's Branch Office in any of the following cities, using coupon below:

# Reviewing the Latest Eastern Markets and Prices

## MILK PRICES

The Dairymen's League Cooperative Association announces the following prices for the month of September for milk testing 3% in the basic zone of 201 to 210 miles from New York City: *Class 1*, milk used chiefly for fluid purposes, \$2.60 per 100 pounds; *Class 2A*, used chiefly as fluid cream, \$1.90. If skim-milk is used for any other purposes, additional payment over this base price is added, depending on use. *Class 2B*, used chiefly in the manufacture of plain condensed milk and ice-cream, \$2.05; *Class 2C*, used chiefly in the manufacture of soft cheese, \$2.05; *Class 3*, used chiefly in the manufacture of whole milk and sweetened whole condensed milk, powdered and evaporated whole milk, \$1.45; *Classes 4A and 4B*, based on butter and American cheese quotations on the New York market.

Class 3 has dropped 10 cents per hundred beginning September 1. This reduction was due to and made necessary by, according to the League, unusually heavy stocks of condensed milk. Storage stocks are way above normal and dealers are cutting prices to reduce these stocks. This competition must be met. At the same time, buying interest is not keen, so all factors are working to a lower price.

Class 1 price is same as for the latter part of August.

### Sheffield Producers

The Sheffield Farms Company Producers announce the following prices for September for 3% milk in the 201 to 210-mile freight zone. *Class 1*, \$2.60 per 100; *Class 2*, \$1.70; *Class 3*, \$1.55; *Class 4*, to be determined by market quotations of butter and cheese.

In August Class 1 was \$2.10.

### Non-pool Cooperative

The Non-pool Dairymen's Cooperative announced that the September price for *Class 1* milk is \$2.40 per 100 pounds; *Class 2*, \$1.85; *Class 3A*, \$1.55; *Class 3B*, \$1.45.

In August Class 1 was \$2.00.

### Interstate Producers

Interstate Milk Producers Association (Philadelphia) receiving station price for September for 3% milk in the basic zone of 201 to 210 miles from Philadelphia is \$2.19. In the 101 to 110-mile zone the price is \$2.29.

## NO BIG CHANGE IN BUTTER

The situation in the butter market remains about the same as that of last week. On Monday and Tuesday, the 25th and 26th, there was quite a pessimistic tone to the market and prices receded to 38c for 92 score butter. The market has been weak and unsettled and prices yielded under the pressure of full supplies and in the face of inadequate outlets. In other words, buying interest has been slack and with heavy supplies coming in there is no way to move stocks except to shade the prices to a point that would induce buying. Speculators are not interested until prices begin to shade. Advices report splendid conditions for production. It seems quite certain that receipts will run way ahead of normal as well as ahead of consumption.

The consumption demand, as is expected, is not anywhere near up to normal. Summer vacationists do not return until just after Labor Day. When school begins we should see the old buying market back on its feet once

more and if the weather is anywhere right, we will see better buying. However, we cannot see any real material betterment until fall sets in.

On Wednesday the butter took a sudden upward turn that yielded a one-half cent advance all along the line. This is looked upon as only temporary, however, for buying has been stimulated in anticipation of requirements to carry over the holiday on September 1. As we go to press, creamery 92 score butter is 38½c with lower grades running correspondingly low.

## CHEESE MARKET QUIET

The quiet tone that exists in the cheese market is not helping prices at all. It is a good thing that the demand for market milk for the fluid trade is as great as it is. It is absorbing so much stock that there is little manufacturing going on in New York State.

The chief activity at the present time is in well cured cheese. This stock is selling in small lots only and at irregular prices. June State Flats are anywhere from 21c to 21½c. However, some stocks of Junes can be bought for less money. As a matter of fact, so few State Flats are moving that values are not very well defined.

## EGGS HOLD THEIR OWN

The egg market is about the same as it was last week. As we go to press, there is some indication that stocks are beginning to accumulate. This is especially true of stocks that fall below fancy grades. However, this was true last week, so as far as news is concerned it is nothing out of the ordinary.

The market opened on the 25th with a light supply of fancy quality eggs that met a firm market. In general the trade was in the seller's favor. However, as business progressed the stocks began to back up slightly and eggs in less desirable grades are in buyer's favor.

Closely selected nearby henery whites typical of the finest Jersey products are bringing from 53c to 56c with one cent or two premium for candled goods. Average extra nearby henery whites are bringing from 50c to 52c while extra firsts are from 45c to 49c, with first dropping down to 40c and 44c. Gathered nearby whites are running anywhere from 40c to 48c depending on quality, with pullets down as low as 36c and 40c. Extra fancy henery browns from nearby points are quoted from 44c to 48c.

## LIVE POULTRY

The live poultry market has been more or less unsettled during the week. Due to lack of advices on the freight market, prices were not established and quotations have been more or less flighty. As we go to press, the market on fowls is firm. Colored stock will bring anywhere from 23c to 27c, depending on quality. The freight market prohibits any further advance as receipts via freight have been liberal. However, there is a ready market for fancy colored stock. Leghorns that are poor and rangy are bringing as low as 20c to 22c, but good stock will find a one cent premium waiting. Broilers were meeting a fairly good market during the week, but by the 27th a weaker tone developed in sympathy with

the freight market. Labor Day will have some effect on the market.

## POTATO MARKET WEAK

The potato market took a temporary jump following the heavy storm on Tuesday which swept the entire Atlantic coast. The rain held up digging on Long Island and in New Jersey with the result that prices hardened more. However, with clear weather following, prices are tending downward. Prices at Riverhead, Long Island, are in the neighborhood of \$1.90 F. O. B. per 150 pound sack. It looks, however, as though they will drop at least ten cents and maybe fifteen cents. Farmers are now getting 65c a bushel and it looks very much as though they will be taking 60c before this issue reaches the readers. Jersey potatoes are bringing from \$1.80 to \$1.85 F. O. B.

With a weakening outlook Long Islanders are easing off digging in anticipation of a better market after Labor Day. This may have a tendency to harden quotations.

## APPLE RECEIPTS LIBERAL

Supplies of early apples from Jersey and up-river sections have been liberal. They have been fairly moderate from south and western New York. As a result the market has been slow and generally easier on everything except real fancy marks. Average grades and poor qualities of small and medium sizes have been working out slowly at steadily weakening prices. It is too bad that shippers are flooding the market with a lot of wind falls that only tend to knock the market off its feet.

There has been a little better demand for pears, especially for good stock coming from Jersey and up-river sections. As is always the case, poor grades are dragging badly.

## BEAN MARKET QUIET

The bean market is quiet and slow, and business is dragging heavily. However, values are holding firm and some varieties are even tending to harden. This is a very dull period in the bean market. Consumption is light as baked beans served cold are about the only dish that is at all common. We have got to wait for cold weather to speed up bean soup consumption.

Domestic pea beans vary from \$5.50 to \$5.75 for common to fair stock while choice marks will bring as high as \$6.25. Red kidneys are from \$8.75 to \$9 for common to fair while choice marks will bring 25c additional. White kidneys are anywhere from \$10.50 to \$11 depending on quality.

But little information is to be obtained from the market on the outlook for beans. Reports from producing areas vary so that it is impossible to draw any conclusions. Some growers report too much rain while others report not enough. We cannot get much of a line on the bean market until we get a little closer to harvest.

## HAY MARKET STEADIER

The hay market has been firmer during the past week. Supplies have been more limited and with the firmer tone the range of values narrowed. As August draws to a close there

is very little hay in New York City that is good enough to exceed thirty dollars. That figure represents the price of Number 1 stock. Number 2 hay is from a dollar to two dollars lower, depending on size of bale, et cetera. New hay is bringing about thirty dollars for Number 1 with other grades ranging lower in proportion.

## GRAINS AND FEED

According to New York State Department of Farms and Markets, the following prices prevailed August 23.

The quotations given in this report show the approximate prices at which feed can be purchased per ton, and grain per bushel, in straight carlots through billed from Western points, delivered on track at points in the freight zones as indicated. Mixed carlots cost approximately \$2 per ton more. Retail feed and grain prices vary with different local dealers depending upon their individual cost of doing business, volume handled, etc. In the case of feeds the retail price may sometimes be as high as \$5 per ton above the wholesale prices given in this report.

Since Buffalo is an important milling center for wheat feeds and linseed meal, quotations are given for this point on both a through-billed and a local basis. Ground oats \$41; spring wheat bran \$29.50; hard wheat bran \$31; standard middlings \$31; soft wheat middlings \$35; flour middlings \$35.50; red dog flour \$41; dry brewers grains \$34; white hominy \$46.50; yellow hominy \$46.50; corn meal \$49; gluten feed \$44.25; gluten meal \$56.25; 31% old process oil meal — —; 34% old process oil meal \$48.

For points taking New York rate add to Albany price ¼ cents on oats; ½ cents on corn; 10 cents on cottonseed meal; and 20 cents on other feeds.

## Catering to Consumers

(Continued from page 150)

Paterson, Hackensack, and also New York City. In some cases, the motor trucks loaded with peaches are going to points a distance of 120 miles from the point of production.

Elberta peaches picked from the trees in the morning, graded and packed, inspected and branded in the afternoon, are delivered by motor truck and are on the consumer's table within less than 24 hours. Peaches packed in solid carlots and sent to more distant markets by fast freight service are likewise delivered rapidly and in the refrigerated cars they carry with practically no deterioration. The motor trucks within the short-haul territory run right up to the retailer's door or to the chain stores, and there is little rehandling of the fruit with its consequent delays.

In a word, there is back of the honest pack of peaches of cooperating growers, an entire business in itself—a business which has called for the meeting of the same problems of executive direction, organization, financing, transportation and selling, as are involved in many other businesses. Modern fruit growers, through their cooperative associations, are building up an industry, if you please, whose avowed purpose is to place the growers' products on the consumer's table with the minimum loss of time or quality and in the best condition for the consumers needs.

## How My Father Cured Tobacco

(Continued from page 159)

tobacco light and worthless. But tobacco harvested when the sap is down and oil in the leaves renders it easily cured and makes it rich, oily and "waxy." This is because the tobacco is full of oil instead of sap and the oil being unable to evaporate remains to give the tobacco weight. I shall be pleased to answer any correspondence from tobacco growers who may desire to write me.—W. H. DAVIS, North Carolina.

# Go After Winter Eggs

*They Are the Ones That Pay—Other Seasonable Poultry Notes*

"WHAT'S the use in keeping on with raising chickens?" asked a farmer of me, disgustedly, a few days ago. "As soon as my hens begin laying good the price of eggs goes down, and the faster they shell out the eggs the lower goes the price." He was right, but the egg market simply follows the age-old law of supply and demand. When eggs become a glut on the market it cannot be expected that the price of eggs will stay up.

As is usual in such cases, there is a way around; a way by which the farmer can cash in on a high-egg market. Here is a plan that has been followed by some farmers, with excellent success, I know.

In the spring a thousand or more chicks, depending upon the size of the hen house on the farm, are purchased from a reliable breeder who is known to have heavy-laying stock. The chicks are fed the best possible growing ration to produce vigor and rapid growth.

As soon as the cockerels and pullets can be told apart, they are separated, the cockerels put on the market and the pullets quartered in the laying house. They are gradually put on a laying ration so that by the time they begin laying they

are on full laying rations. The important thing is to keep them eating. Sometimes when it appears that their appetites are jaded, they are tempted along with moist mash—anything to keep them eating.

Lights are used either morning or evening to lengthen the short days of winter and the pullet's period of activity. The greater success has been obtained with the morning lights. Where electricity is not available, lanterns are used. Lights to lengthen the working day have proved to be an unqualified success in securing a higher egg production.

Then, in the spring when eggs begin to flow in on the market in large quantities and the price slumps, the pullets that have been forced along begin to slow up, stop for a rest and are disposed of. Another batch of chicks is purchased and the round begins once more.

Of course, culling the flock is not overlooked. Every pullet that proves a non-producer or poor layer is put on the market, so that those pullets which consume the feed are paying a nice profit above the feed cost. The flock must have comfortable quarters. There must be plenty of ventilation, but no drafts. A fowl can stand a great deal of cold, but she cannot endure a draft. And it is well to remember that most of an egg is composed of water, and that without all the water she can drink, a pullet cannot produce eggs, no matter how much feed she consumes.

Chicks purchased from a heavy-laying strain will cost more than common chicks, but they are worth every cent of their additional cost because they'll shell out more eggs. By following the above plan, one farmer made a net profit per pullet of four dollars. Granted that such a profit is above the average, cut that in half and you'll have a profit that is larger than the average farmer is getting from his chickens.—W. C. MULLENBURG.

## Big Chicken House or Little

FROM necessity we have used small, cheap old chicken houses for many years. There were several small buildings on the place and as funds were not plentiful we used them and found we had just as good results as our friends with up to date lodgings for their chickens. I know the objection to the old house is that it is harder to keep warm in winter and harder to keep free from vermin in summer, but some of the snug and tight coops have shown no better results than ours. I'm not advocating the shack if a better one can be afforded, but a coop banked with corn fodder in winter, though it be of the shack order, will get results. One of the best women with chickens I have ever known started with two piano boxes backed together, and it was years before she had what the neighbors called a decent house, but she always made hens pay.

## The Advantage of Small Groups

But there is one thing and that is the small house does better than the big one, in our humble estimation. Chickens are more like pets if kept in the small group, and there isn't so much chance of disease. In one small coop we went almost a year without a single loss and then the two that died lost their lives through spoiled meat. Chickens like sheep do well in little bunches. Of course the big coop with its glass and its large run looks fine on a farm and the little coops shiftless, but just the same we'll take the small house every time. If I were a beginner I would start with a small unit and keep nothing but pure breeds, unless as a few scrub hens for mothering purposes, and then I'd build up to several units, but not one big house. Even a corner of an old barn is a good place for twenty-five or thirty hens. We used such a place more than a year and had good results.

The men folks say it is more pottering and more troublesome to clean several

small houses rather than one big one, and that is true, but where money enters into the consideration a little more trouble can be taken. Without trap nests it is easy to spot the boarder hen in the small flock and little chicks do better if kept a few on a grass plot rather than a large number. Our coops for little chicks are home made of store boxes and they are moved frequently to keep clean. Often when it is cool thick layers of newspapers are used under the coops and burned when soiled. Where there is no brooder the little bunch will not crowd and smother like the big flock.—MRS. W. C. K., Ohio

## More Early Laying Pullets Reported

THE announcement that H. F. Warner of Belmore, L. I., had a pullet that laid its first egg at the age of 4 months and 3 days, has evidently created some interest. Mr. T. E. Halbert of Ithaca writes that The Patch Poultry Farm of Ithaca, N. Y., has a pullet that laid her first egg at the age of 3 months and 17 days. She was hatched on April 21 and laid her first egg on August 7. She laid again on the 9th and 10th. "Beat that," writes Mr. Halbert.

This record was almost broken by Fritz Kunz of Broadalbin, Fulton County, New York. He writes "The first pullet egg was laid August 13. Pullet is a cross of Rhode Island Red hen and Brown Leghorn rooster. The pullet was hatched on April 25, making her 3 months and 19 days old, which I think breaks the record."

W. J. Winans of Belmar, N. J., writes, "I have a pullet that was hatched the 4th day of April and she laid her first egg the 5th day of August, laid her second egg on August 8th and the third on the 10th. She is a nicely developed White Leghorn and was 4 months and 1 day old when she laid her first egg."

Fred Hurlbert of Mineral Springs writes: "I have a Rhode Island Red pullet laying at the age of 4 months and 9 days, which I think is pretty good for a heavy breed." We agree with Mr. Hurlbert.

A. P. Newton of Greenfield, Mass., congratulates Mr. Warner on his success, saying that Mr. Warner beat him by only one day. The peculiar thing is that Mr. Newton and Mr. Warner's pullets were hatched on the same day, March 19.

EDITOR'S NOTE:—There is an advantage in getting early pullets, but the man who follows this practice must know his business, lest he get into difficulty. Early hatched pullets are apt to go into an early molt and they will not lay eggs at a time the price makes them desirable.

## Young Ducks Getting Wrong Ration

Do ducks ever have white diarrhea? I hatched a nice flock of ducks and they were doing fine until a week ago when they began to die off. At first they just seemed to droop and then I would find them dead. But the last day or so their heads seemed to draw back and their necks twist around. I have fed them mostly corn meal, just moistened enough to be crumbly with sand mixed in. This morning I started to put a few drops of carbolic acid in their mash. If you can give me any information it will be appreciated.

DUCKLINGS are subject to diarrhea. Undoubtedly your experience with ducklings, especially the loss of them, has been due to an improperly balanced ration. The ration about this time should consist of three parts of bran, one part each of corn meal and low grade wheat flour, with about 5% of beef scrap added.

What you are feeding now is purely a fattening ration and your ducks are undoubtedly suffering from that. There is a disease or a malady among ducks known as fits. With this disease they simply keel over and die. This is especially true if they are young ducks. It is thought to be due to digestive troubles. We would suggest that you give your birds a dose of oil or Epsom salts and modify the ration to contain more bran and flour.

# NEW LOW PRICE PLAN ON 2 H-P. WITTE ENGINE

The Famous Standard Witte Can Be Had Now For Only \$5.69 a Month —Low Price Sets Record.

With the need for cheap, dependable power more pressing than ever before, farmers everywhere will be glad to learn of the new low-price plan just announced by Ed H. Witte, world-famous engine manufacturer for 42 years.

Now only \$5.69 a month for a short time buys the standard Witte Throttling Governor Engine, fully equipped with the celebrated waterproof WICO Magneto. In spite of this low price which sets a record, the engine has nearly 40 new improvements, including a patented new device that makes starting easy at even 40 degrees below zero.

Long regarded as the cheapest and most dependable farm engine built, the WITTE develops 50% extra power on either kerosene, gasoline, distillate or gas. Operation on full load figures under 2c an hour. Trouble-proof and so simple that a boy can operate it. Easily moved from job to job. More than 150,000 WITTES are in daily use.

To introduce this remarkable engine to a million new users, Mr. Witte will send it anywhere, direct from factory, for a guaranteed 90-day test.

Every reader of this paper who is interested in doing all jobs by engine power should write today for a free copy of a remarkable new, illustrated book just issued by Mr. Witte, which explains the engine fully. You are under no obligations by writing. Just send your name, a post card will do, to the Witte Engine Works, 1803 Witte Bldg., Kansas City, Mo.; or 1803 Empire Bldg., Pittsburgh, Pa., and receive this interesting and valuable book that gives you valuable information about the application of engine power on your farm.

## Poultry Disease Specialist Discovers Remedy for So-Called "Incurable Paralysis"

A famous poultry disease specialist, after examining hundreds of birds suffering from leg weakness (frequently said to be "incurable paralysis") is convinced that there is practically no such thing as paralysis in poultry and from his tests he finds that in most cases the reason birds go "down flat" is intestinal worms.

After 20 years of study this expert has discovered a remarkable new treatment: Happy Hen Worm Remedy; which for over 4 years has been used with startling benefit on poultry suffering from so-called paralysis. It expels worms like magic, removing the cause of the poisoning; makes the birds look better, feel better, and lay better.

If you think you have birds afflicted with coccidiosis or with paralysis, this specialist suggests that you make a post-mortem examination of a bird just killed, looking carefully into the blind intestines. If worms are found there, send at once for a package of Happy Hen Worm Remedy, only \$1.10 postpaid, and quickly restore the health and vigor of your flock. Satisfaction guaranteed or money back. Large flock sizes package. Write today to

HAPPY HEN REMEDY COMPANY  
36 SO. MARKET ST., Dept. 1109, BOSTON, MASS.

# Renew Your Old Leaky Roofs

with

## SEAL-TITE

TRADE MARK THICK LIQUID REGISTERED

## ASBESTOS ROOFING

Guaranteed  10 Years

Cover All Your Roofs  
**DON'T PAY**  
 Until 4 Months' Weather  
 Proves All Our Claims

**Big Cleveland Bank Writes:—**  
 Monarch Paint Co.  
 It gives us pleasure to testify to your high moral and financial standing and your strict adherence to policies of clean and honest business.—  
 The Midland Bank  
 D. D. Kimmel, Pres.

**YES!** Old roofs made new—absolutely guaranteed to be water-proof and weather-proof under the severest weather conditions, for ten years—at an average cost of less than \$1.00 for every 100 square feet of roofing.

*Seal-Tite* is not a paint—not a roll roofing. It is applied right on top of any form of old roof material, making a flexible waterproof veneer that we can safely guarantee for ten years. *Seal-Tite* has been proved by many years' use on the roofs of hundreds of big industrial plants, and thousands of stores and homes, the country over.

Don't waste your time and money patching one leak today—a new leak next week—a third leak the week after. Don't submit to ruined crops and rusted machinery, and all the losses that come from a leaking roof. Get *Seal-Tite* right now. Apply it any time when the temperature is above freezing. It requires no heating or thinning. Use it just as it comes from the barrel. Just spread it on with a roofing brush—that's all. It penetrates every nook and crevice. Then it dries and cures,

forming a tough, flexible, smooth one-piece covering that will not crack or check, or rust, and that is guaranteed to withstand the most severe weather conditions for 10 years.

You do the job yourself in a few hours. You pay only the rock bottom manufacturer's price for the *original* Liquid Asbestos Roofing, instead of paying up to \$1.75 a gallon asked by itinerant salesmen for inferior imitations of *Seal-Tite*. *Seal-Tite* comes in steel barrels and half barrels, and one gallon covers about 75 sq. ft. of average old smooth surface roof. Instead of offering a small trial package, we offer you enough to cover your entire roof, on a positive guarantee that *Seal-Tite* will do all that we claim for it. Order plenty. A half barrel will cover an average smooth surface roof of a building 40 x 50 ft with average roof pitch. The cost is but a fraction of the cost of a new roof. If you have any *Seal-Tite* left over, you will find many uses for it about the farm. Order a barrel or half barrel on the following guarantee, with full intention of making us live up to it. We fully expect to do so—but you see, *we know Seal-Tite*.

# Don't Pay Bill Until Four Months' Weather Proves ALL Our Claims!

**Free Tools!** We give you free of charge the only tools you will need for this work, viz: a roofer's brush and a small pointing trowel. We also include free, 25 lbs. of patching cement for mending leaks around chimneys, flashings and in the valleys and gutters.

—that is our free trial offer. Order enough *Seal-Tite* to cover your entire roof. Put it all on. Wait four (4) months. Then decide if *Seal-Tite* has made good all we said for it. If not, you do not owe us one cent. We put it all up to you. Could you yourself, write an offer that would give you greater protection?

**MONARCH** Dept. 30-66—Cleveland, Ohio

PAINT COMPANY

Gentlemen: Please ship to the address below the following:

- .....steel barrels Seal-Tite (65 gallons to the barrel)
- .....steel half barrels Seal-Tite (40 gallons to the 1/2 barrel)

One gallon covers about 75 square feet of average smooth surface roof.  
 (Figure about 1/3 less coverage for shingles)

You agree to include FREE one Roofer's Brush, 25 lbs. of Seal-Tite Cement and a trowel for applying it. I agree to use Seal-Tite in accordance with directions, and will pay for same in four month's time from date of shipment, provided it proves to be all you claim. If not, I will promptly report to you and you agree to cancel the charge. (*Seal-Tite comes in black only.*)

# A Rural Tragedy of the Long Ago

*A Folk-Lore Story Where Justice Was Not Leaden-Footed*

By JARED VAN WAGENEN, Jr.

I SUPPOSE that I first ought to confess that I suffer from one very pronounced "weakness"—viz., a sometimes irresistible desire to haunt old, decaying cemeteries and to read all wayside markers and to do homage at any place that by any stretch of courtesy can be called an "historic shrine." My family recognize this weakness and deplore it so that if we are motoring they make haste to call my attention to some other feature of the landscape if a neglected burial plot appears within exploring distance. I frankly confess that a ruinous old family burying-ground, with fallen and only half legible stones, and with the lilacs and myrtle and old tea-rose bushes cropped by vagrant cows, is for me far more interesting than most movies. I have, however, small desire to wander in great city cemeteries with their beautiful mausoleums and the "storied urn and animated bust" that speak of pomp and power. But give me the spot

"Where heaves the turf in many a mouldering heap  
Each in his narrow cell for ever laid  
The rude forefathers of the hamlet sleep"  
There is no place like it for musing and dreams and memories.

It is a great library of biography, too, for all about you, you may read the short, concise, stern records which constitute absolutely everything which is known concerning the forgotten folk that lie beneath.

Possibly it is in recognition of my peculiar weakness that I am the recipient of a public office which, while it may be perfectly "honorable," is surely in no way "lucrative," for I am the Secretary and Treasurer of the Lawyersville cemetery which lies close behind the old Reformed Dutch Church and the folk who are quietly resting there make up a very much more numerous company than could possibly be gathered within the walls of the sanctuary for any occasion. Compared with them, those of us who are still hurrying and worrying about our little businesses seem very few indeed.

And close to the western line and hard by the plot where my people lie and wait, is set up a marble slab which always recalls a crime which something more than a century ago unspeakably shocked and aroused the people of Schoharie County and more especially of this hamlet in which the victim was a resident. The slab of which I speak has stood there now for a hundred and six years, but the marble is of good quality, for you may still trace sharp and distinct the hour-glass crossed with the scythe and below it the inscription that this stone was set up by "Morality Lodge of Free and Accepted Masons in memory of William Huddlestone, Esq., who was assassinated while in the discharge of his official duties, Oct. 9, 1818."

And because Huddlestone was at the time a resident in a house standing on this farm—a house that burned down within my memory and the cellar hole of which is to-day covered by a farm tenant house—and because my father as a boy heard all these tales from his grandmother who was of course very familiar with these events, I have felt that I would like to set down more fully than has yet been done the miserable, sordid, tragic story.

I do not claim to point a moral. I only know that always men have delighted to rehearse such happenings and that in more primitive times they have become the theme of song and story.

For example, there was Eugene Aram, the gentle and scholarly schoolmaster of Lynn, England, whose crime has been made the theme of a romance by Bulwer-Lytton and also of a most remarkable ballad poem by Thomas Hood. I

doubt if there are anywhere finer ballad lines than the closing stanza of Hood's

"And that same night when gentle sleep  
The urchin eye lids kissed  
Two stern-faced men set out from Lynn  
Through the driving rain and mist  
And Eugene Aram walked between  
With gyves upon his wrist"

Of Huddlestone I know nothing beyond the fact that he was a man of some standing and position and the deputy sheriff of the County of Schoharie.

John van Alstyne was the proprietor of a good farm some four miles distant—not a notably bad man perhaps, but one of violent and uncontrolled temper. He had run over and injured a child, had been sued for damage and judgment had been taken against him. A few days before the crime, while trading in the Lawyersville general store, he had vehemently declared with a sounding oath, "I will never pay it"—a statement that was remembered against him at the trial.

On the morning of October 9, Huddlestone in his capacity as sheriff started for van Alstyne's on horseback to collect this judgment and if necessary to levy upon property to satisfy it.

"There is no place like it for musing and dreams and memories."

He was never again seen alive. The two men conferred at the barn instead of the house. Just exactly what transpired can of course never be known. In any event, van Alstyne, losing all control of himself, caught up the heavy oak bar or pin used to keep shut the big barn doors and with it clubbed to death the older and probably less vigorous man. He was then immediately confronted with the problem which must have troubled every murderer of all time—the disposal of the evidences of his crime. There were no witnesses, so he concealed the horse in a swamp and buried the body in a field that had recently been sown with winter wheat and then harrowed the field (some say by night) to hide the exact spot where the earth had been disturbed. Within a day or two the alarm of his disappearance had been given and the whole countryside was aroused. Doubtless in that primitive time an occurrence of this kind caused even more public excitement than now. Everywhere men left the oxen in the stall and the plow in the furrow and gathered to the farm. Every bit of circumstantial evidence pointed in just one direction. It was of course known whither Huddlestone was bound and the nature of his errand. Several people had seen him riding west, but no one ever saw him after he reached the farm. When questioned, van Alstyne, unabashed, replied that he had paid the judgment in cash and doubtless the sheriff had run away with the money—perhaps the most ingenious answer that could have been devised. Men then asked him why he had harrowed a sown field. Some way suspicion centered upon that wheat field—a southern hill slope that my father has pointed out to me when I was a little lad. A large company of men

provided themselves with small sharp-pointed iron rods and went over the field systematically, jabbing the rods into every square foot of soil. It was our neighbor Dana who felt his rod pass easily downward through the freshly dug soil until it was cushioned against the body. Then in the eyes of the law the case was complete, for it is an ancient principle of the law that no man can be convicted of murder unless there shall first be produced the body of his victim.

Never was a more satisfactory chain of circumstantial evidence built up. Beneath the barn was found the bloody club with the hair of the dead man still clinging to it. Buried in the hay was found the warrant for the execution still without the sheriff's signature, although the defendant asserted that he had satisfied it by a cash payment. A sheepskin that Huddlestone used beneath his saddle was found concealed under a log.

Meanwhile between the time when suspicion became practically certain and the warrant for his arrest, van Alstyne fled the community in an effort to escape to Canada and was actually on board a lake vessel and apparently safe, but after sailing an unusual gale compelled the boat to return and seek safety, too, in the harbor and a passenger with a wandering newspaper containing an account of the crime caused his arrest. At

the trial the prosecuting attorney made much of the fact that the very elements by act of God had conspired that the guilty one might not escape.

Apparently Justice if not more blind was at least less leaden-footed than now. He was brought back to jail at Schoharie and four months later brought to trial, ably defended by the best legal talent of the time and with all the constitutional safeguards and privileges which our jurisprudence accords to the accused. Some seventy-five witnesses were called, but the entire trial lasted only nineteen hours and a jury of his peers, "twelve good men and true," quickly brought in a verdict of guilty. Doubtless, to-day,

the trial would have dragged through many weary weeks, would have cost the county many thousands of dollars and the chances are that the defense would have been able to have hired some smart experts to have testified that the defendant suffered from "brainstorm" or some "passion complex" and finally would have flimflammed an honest farm jury to bring in some sort of a verdict that in a few years would permit him to again endanger the world. Four weeks to a day following the trial he was properly hanged on the top of the hill behind the Court House at Schoharie in the presence of a vast gathering of people who came from far and near to make of it a Roman Holiday.

We now do things better than that, for our executions take place in the presence of only the official witnesses of the State and they are forbidden to give any details beyond the fact that the sentence was duly carried out—a provision frequently evaded but one which more and more the better class of newspapers are coming to obey.

There are just two other episodes of which I wish to speak. One of them I had from my father, who had it from the lips of his grandmother, who was of course near neighbor to the Huddlestones.

After van Alstyne's arrest, the way to Schoharie jail lay past the home of his victim. Then it was that Mrs. Huddlestone, the widow, came out to the road and halted the little procession and as only a fearfully wronged, distraught and half crazed woman could, she tongue-lashed him and cursed him—he and his and his children born and unborn until the guilty man cowered before her and the others shuddered at her unbridled speech.

The other incident is a far happier and more

## The Outlook for Purebred Live Stock

*Facts Indicate that Present is the Time to Lay Foundations*

By GILBERT GUSLER

**T**HE present situation in the purebred live stock industry is mixed. Producers of purebred hogs, beef cattle and draft horses, on the one hand, have had an unsatisfactory market for their surplus breeding stock for the last two or three years. Business with breeders of purebred dairy cattle, on the other hand, is good enough to make them quite cheerful, while rank optimism rules among most of the purebred flock masters.

These diverse conditions are due to the fact that periods of adversity and prosperity in purebreds tend to parallel the broad ups and downs of market prices for the corresponding kinds of live stock, but with a lag of several months to a year or more.

First, take the case of hogs. Prices of market hogs have been low compared with feed costs for the last year and a half. The incentive to produce better market hogs by increasing the tincture of improved blood in commercial herds has been lacking. Farmers have been curtailing production so that the number of purebred males wanted by them has been below normal and they have not been willing to pay good prices. Because of the temporary lack of profit in the purebred hog business, there have been few beginners added to the list of breeders. The established herds have not had the benefit of demand from such beginners for foundation stock.

Under such conditions, bargain days in purebred hogs have been inevitable. Sale prices covering the five principal breeds compiled by the United States Department of Agriculture show a reduction in 1923 compared with 1922 of from 13 to 40 per cent, depending upon the age and sex.

As adversity in the purebred hog business in the past has always been followed eventually by prosperity, it is logical to expect a similar sequence at present. Already, market prices for hogs have turned for the better as receipts have begun to reflect the curtailment that has taken place in production of commercial hogs. There is every reason to believe that values will average much higher in the next two years than in the last two.

### Good Prospects for Purebred Hogs

When higher prices for hogs begin to stimulate increased production again, the demand for improved blood to use in commercial herds will increase and purebred values are bound to advance. Breeders probably will have marketed their surplus closely so that a moderate shortage of breeding stock may appear. As hog growers get into easier financial circumstances, new breeders will come forward, men who desire to launch into the production of purebred hogs on their own account. Demand from this source, which is an important factor in all prosperity

periods in the purebred industry, is decidedly limited at the present time.

How rapidly such a change will take place no one can say. Unfortunately, the poor corn crop in prospect which is prolonging the period of an unfavorable feeding ratio compared with hogs, will also delay the time when growers will desire to expand production and the return of a broader demand for purebred hogs. It seems probable that enough change will take place to help the

have prevailed among beef cattlemen in the corn belt and elsewhere. Farmers have not had the funds to invest in purebred beef bulls for improving commercial herds and also the number of beginners in the business of producing purebred beef cattle has been very small.

Because of the slow demand, average prices have been at only a small premium and sometimes at no premium at all over market prices so that a great number of purebred males, and some females, have reached the open market as fat steers and heifers.

The turn in the road seems to have been reached, however. The range industry has passed the worst stage of readjustment and the status of the corn belt farmer has improved enough to increase his interest. Letters just received from the secretaries of the registry associations of the beef breeds indicate that the demand for bulls has increased. The fact that breeders have sold so closely via the steer market route has resulted in some strengthening of prices. One secretary expresses a belief that this will be followed by a better demand for females next year. Prices of both males and females are probably at the lowest point they will reach in a long time.

### Some Hope for Horsemen

The cycle of market prices in horses is longer than in other classes of live stock. The trend in this division has been down for practically a decade and prices of purebred draft horses have been unsatisfactory most of the time for several years. Competition from truck, tractor, and auto has been a new factor in the horse situation so that the depression has been unusually severe and prolonged. This competition will continue and will take the place of some of the power lost as horse production is curtailed. In consequence, such positive statements as in the case of beef cattle and hogs do not seem to be justified. But, there can be little doubt that a turning point for moderate improvement in purebred draft horses will be reached ultimately.

### Dairy Cattle in Favored Position

Turning to the silvery side of the present purebred picture, the favorable markets for dairy productions, especially in comparison with many other farm commodities, have strengthened the interest in pure bred dairy cattle. The situation is most clearly shown by contrast with beef cattle. Prices of dairy purebreds in 1923, as compiled by the United States Department of Agriculture, averaged from 50 to 125 per cent higher than purebred beef cattle of the same age groups.

Furthermore, the purebred dairy cattle business is still gathering steam. One dairy breed registry association writes that its business was

(Continued on page 185)

In this excellent article on "The Outlook for Purebred Live Stock," Mr. Gusler might well have added that much of the future success of the business depends upon the interest taken by the younger generation. The boys' and girls' purebred calf clubs are doing much for the industry. In the picture above, Peggy Keith, a calf club girl, of Warrenton, Va., is shown with her sisters Julie, Betsy and Helen, and their foundation herd of young Guernseys. Peggy, at the extreme right, is holding Golden Rose of Dunnottar, whose dam is a granddaughter of Murne Cowan, the world's champion milk producer of the Guernsey breed, the kind of purebred stock to start with.

brood sow sales of next spring and, if 1925 returns a normal corn crop, purebred hog sales next summer should be much more remunerative to the breeder than those held this summer.

### Good Time to Invest

From the standpoint of the investor in purebred hogs, it is doubtful if there will be another opportunity for several years to buy at such extremely low prices as those now prevailing.

The beef cattle business in the western and southwestern range states, which are the great breeding ground of commercial cattle, has been in the throes of liquidation since 1919. Each year many cattlemen have been forced to close out their herds to pay overdue bank debts and others have been able to survive only by dint of the strictest economy. Such cases are showing up this year, although the number of outfits that will have to be closed out promises to be smaller than last year if market prices hold up. Under such conditions of financial distress, the replacement of bulls has been neglected from necessity. Where purchases have been made, a lower grade of sires has been used than cattlemen would have taken if their finances permitted.

Similar conditions, although much less intense,

### The Dairy Markets

THOSE who have been following our market reports on the Market Page have noted the surprisingly large increase in butter in cold storage. The *New York Produce Review* states that there were about 150,000,000 pounds of butter in stock on August 16, as compared with 102,000,000 on August 16 of last year. The amount in storage last year was about equal to the five-year average of storage holdings. The trade reports that butter still is going into the warehouses rapidly. The chief dairy sections noted particularly for butter, such as Minnesota, Iowa and Wisconsin, have had good rains, pastures in fine shape, and the butter make is large.

Cheese holdings also are dangerously large. On August 16 holdings were 70,717,000 as compared with 60,000,000 pounds on the same date last year. Last year's holdings were above the five-year average. With cheese, there is a virgin opportunity for increasing consumption. In Europe the per capita consumption is many times greater in nearly all of the countries than it is in the United States. Cheese is one of the best foods in the world. Farmers themselves could materially affect the cheese market by eating more of it.

The canned milk market is also somewhat unhealthy at the present time. Storage stocks are considerably above normal. Consumption, due perhaps to the decline of the good times in the cities, is decreasing, and dealers are cutting prices to meet competition. These are the reasons announced by the League for reducing the price of Class 3 milk from \$1.55 to \$1.45 per hundred.

As noted on our Market Page, most of the milk prices remain the same for September as they were in August. The Sheffield Producers has raised the August price from \$2.10 to \$2.60, and the Non-pool from \$2.00 to \$2.40.

It will therefore be seen from the above analysis that the market for milk products is not particularly sound at the present time. Over-production is the chief reason for it. As pointed out in an article in AMERICAN AGRICULTURIST a short time ago, there has been a considerable increase in the number of cows in the United States and in countries which are able to ship manufactured products here.

This situation in the produce market, however, is somewhat relieved for farmers of the New York territory by the temporary scarcity of market milk. This scarcity led to a healthy increase in market milk prices for the latter part of August.

This improved situation is due to several different factors. Warm weather in New York City has increased consumption somewhat, temporarily at least, and the low prices that have prevailed for market milk during the last few months, taken with the increased prices for grain, have lessened the production to some small extent.

Let us hope that every dairyman will do his part in keeping the supply down.

### "Pop" Geers Drives His Last Race

EDWARD F. (Pop) GEERS, veteran light harness driver, and one of the most picturesque figures in the history of American trotting, was thrown from his sulky at the West Virginia State Fair at Wheeling on September 3, and killed. Geers, known as the "grand old man of trotting," was driving the famous Miladi Guy in the second heat of the 2:14 trot when the horse stumbled, the sulky overturned and Mr. Geers was thrown heavily to the ground, landing several feet in front of his prostrate horse.

A crowd of 30,000 witnessed the tragedy, having gathered to see the famous driver in an exhibition race in which he was to attempt to lower the world's mile record for a half-mile track, behind his champion trotter, Peter Manning. The exhibition was never run, for Mr. Geers elected to handle Miladi Guy in the trot called just previous to the exhibition race. In the fall he suffered a fracture at the base of the skull, a broken collarbone and shoulder bone. He died in the Ohio Valley General Hospital. It was only by a miracle that he was not trampled on by Lulu Wood, another entry. She shied to one side just in time to avoid trampling the old man.

Mr. Geers was seventy-three years old. He was born in Lebanon, Wilson County, Tenn., and started his career when he was hardly out of his 'teens. It is doubtful if any man has driven more famous horses than Mr. Geers in his time. He developed Brown Hal, Mattie Hunter, Napoleon Direct, Sonardo, Miladi Guy, and many others. In his sixty-fifth year Mr. Geers won the honor of driving a mile in two minutes or better. It was in a free-for-all race in Columbus, Ohio, when he drove Napoleon Direct in 1:59 $\frac{3}{4}$ . Six years later he brought out Sanardo with the same record.

Thousands of farmers in the East have seen "Pop" Geers drive and have cheered him on to victory. His name will go down in sport history as that of the greatest of Grand Circuit drivers, the peer of horsemen, and the very synonym of all that is clean and honest in racing.

### Of Doubtful Value

IN a recent speech, President Coolidge stated that he proposes to form a committee to make a thorough study of the agricultural situation, and from this study to recommend agricultural measures that will help farming.

There has been a good deal of foolish doctrines and many foolish schemes proposed to aid agriculture during the past years of hard times. Most farmers have come to believe that it is mighty little the Government can do to aid agriculture beyond the educational information furnished by the Department of Agriculture. Of the three big issues in Congress to help farmers during the past year, not one of them was sound economically. These include the McNary-Haugen Bill to artificially raise the price of wheat, the bill to sell the Government nitrate plant at Muscle Shoals to Henry Ford, and the proposition to improve the St. Lawrence waterway so that Western products could be shipped direct to the sea, instead of through the New York barge canal. None of these propositions passed; none ought to. Like most of the so-called relief measures, they would have done more harm than good.

However, we cannot know too much about our business or study it too well. Therefore, President Coolidge's proposition for a commission to find the real facts regarding the farm situation and suggest a remedy may do some good, providing the men on it are not politicians but are real

farmers with farm sympathy and understanding, who know instantly what is practical and what is not in the suggestions for agricultural aid. With the best of committees most farmers will still have little faith in it, believing that the only ones who can help farmers are farmers themselves.

### Interest Rates Affect Business

THE economists who spend their time making a study of the causes and effects of the ups and downs in business use as one of their chief measurements or barometers the rising or falling interest rates. As a usual thing, low interest rates mean plenty of money, which results in reasonably easy credit, and this is always a very decided factor in maintaining prosperous times.

For several months there have been indications of declining prosperity in the cities, but in spite of this, interest rates are now the lowest in a great many years; therefore, many believe that the present decline is only temporary and that after the election business will rapidly improve again. The Intermediate Credit Banks have lowered interest rates on loans to cooperatives and others to finance marketing operations from five and a half per cent. to four and a half per cent. The lower rates for money are helping to keep Wall Street stocks up, and some believe that for the same reason these lower rates will be a considerable factor in helping to maintain good prices for farm products.

### That Hot School Lunch

NOBODY argues any more about its desirability—but a good many communities still do not see their way clear to starting the practice of serving a daily hot dish in the local schoolhouse.

It means trouble for somebody. We can't deny that. Food just will not cook itself and clear itself up. But mothers who have helped put in the system of serving a hot dish at lunch hour in the schoolhouse would never go back to the easier way of doing without it.

A good plan is to make each child responsible for a given dish on a given day, and when there are, say, 15 children, each one takes a turn only once in three weeks. Cream of pea, vegetable or tomato soup, macaroni, creamed potatoes, baked beans and cocoa are among the dishes recommended for the hot lunch; and none of them is hard to prepare on a small two-burner oil stove.

If you can't begin by having a hot dish every day, try it once a week, then twice a week, until the teacher and the children establish a routine. It will pay in rosier cheeks, stronger bodies and brighter minds.

And don't forget to use plenty of milk, either raw or in appetizing soups, gravies and creamed dishes!

### Eastman's Chestnuts

HOW many good churches have been ruined by preachers who took an hour to say what better could have been said in fifteen minutes, and how many good magazines and papers have been consigned to the wastepaper basket for the same reason! Brevity is not only the soul of wit; it is, especially in these busy days, the backbone of all good writing and speaking. I am impressed constantly in my work as an editor with the large number of speakers and writers who would do very well to study Pat's style in the following story.

It seems that Pat was section boss and had greatly annoyed his superintendent by long-winded reports of unimportant events in his work. Finally the superintendent told Pat that if he did not cut down his reports he would be obliged to fire him. Shortly after this there came a great flood and washed out two or three miles of railroad in Pat's section. He looked it over and then sat down to write his report to the superintendent. After some reflection this is what he said: "DEAR SUPT.; WHERE THE RAILROAD WAS, THE RIVER IS. YOURS, PAT."

# A Page of Handy Devices

## Savers of Labor, Time, Money and Temper

**T**HERE is nothing like a handy device for conserving energy, saving time and maintaining an even temper and [frame of mind. Some are not altogether simple to make but they are more or less inexpensive, for in many cases they involve the use of odd parts that are usually stored away

in some remote corner of the wagon shed.

To our minds a

handy device, especially when it makes work easier and avoids the

riling of the spirits, is of the greatest importance for the very convenience of the thing. For instance, there is nothing more pesty to handle than a roll of wire, especially barbed wire. It is not only pesty, but it is really dangerous. Usually it is a case of slipping a broken handle through the reel and two men walking along with it to stretch the wire for some distance and many is the time we have carried deep scratches following the job. One of the simplest and most satisfactory ways to unroll barbed wire is the simple contrivance illustrated, one of which involves nothing more or less than a stone-boat with an upright stake fastened securely in the hole in the forward part. The two-wheeled contrivance is a little more elaborate, although very easy to make. The nicest part of this two-wheeled affair is that it is light enough for one man to push, while another man turns the crank and winds the wire on the reel when it is desired to remove wire from a fence. This is particularly handy when temporary fences are put up. When the wire is on the reel it can be stored very conveniently until needed for another occasion. Sometimes a handy device is just "handy," but this one is a convenience as well as a labor and temper saver.

\* \* \*

### A Handy Wire Tightener

**W**HILE we are speaking of wire, here is a device that is easily made and very convenient to use in tightening barbed wire. There are many different kinds of wire stretchers on the market and where a permanent job is done they may be more satisfactory. But where a temporary fence or a hurry-up job is desired this is about as handy a device as a man would want. A piece of inch board is cut out in the shape shown in the accompanying illustration with a notch so cut in the one side to permit the face of the hammer to fit in. Just in front

or the head of the hammer a long bolt is inserted through the board to prevent splitting. This could also be accomplished by thin strips of heavy tin around the outside. The hammer is fastened in place with leather straps. Along the face of the wooden arm, that part that touches the fence post, sharp brads are inserted to prevent slipping. It is more desirable to make the contrivance of a good tough hardwood.

\* \* \*

### A Wire Gate Fastener

**B**EFORE we leave the fence question, here is a good idea for fastening a wire gate. Many a time a meadow is fenced with barbed or plain wire and only a temporary opening is left to allow

wagons to go in and out. However, cattle may be in the adjoining field and in order to keep the opening as tight as possible, this device works very well. It is simply made of a piece of board, a hinge, a piece of heavy number 9 wire and a bolt. The board is cut in the shape shown in A. One end of the hinge is attached to the board end. The other end of the hinge is attached to the end fence post, the top of which is cut on the bias. The bolt is run through the board near the end of the hinge. Heavy screws can easily take the place of this bolt. The number 9 wire is bent into a loop as in the illustration. The wire is passed over the end stake of the gate, the handle is pulled down and drawn tight. Note that a wire loop is also placed at the bottom so that the end gate stake can be held firmly at the bottom. In order to avoid having the wire slip, the end gate post is notched.

\* \* \*

### Another Back Saver

**O**NE of the meanest jobs we can remember as a boy, as far as an aching back is concerned, was that of holding the potato sacks while some one else dumped in the spuds. As a matter of fact this was not so true of potatoes as it was of grain. As we grew older we were able to shake a bushel of potatoes into a bag very easily. When it came to handling grain it usually took one of us boys to hold the bag while one of the men shoveled in the grain. Either of these holders will prove itself a real labor-saver,

for the boy can shovel grain instead of holding the bag. In the device above and to the left, the arms are so constructed and bolted to the upright 2 x 4, marked C, that it can be adjusted to a bag of most any depth. Hooks are placed in the arms in order to hold the mouth of the bag open.

The bag holder at the right is not adjustable as far as height is concerned, but it holds the mouth of the bag open a little more perfectly. The construction is so simple that it really needs no specifications. Needless to say, the lumber should be well seasoned and should be heavy enough to withstand considerable weight. The braces should be well set and strong.

\* \* \*

### A Wheelbarrow Sheep Feeding Trough

**H**ERE is a handy device and labor-saver for the sheep man. It often happens that sheep are run on several different pastures during the season and if heavy feed racks are used, it is quite a task to move them. The illustration shows a rack that can be easily moved from one field to another by a single person and avoids the necessity of lifting it on to a lumber wagon and hauling it to the adjoining field with a team of horses. It is mounted on a pair of wheels and has handles attached to the other end. A couple of old wheel-

barrow wheels will usually suffice, although any kind of wheels will do the job very well. Where wheelbarrow wheels are used it necessitates the building of a frame to accommodate the wheels and carry a rack at the same time. If the rack is too heavy for one man to lift by the handles it can be easily hooked on to the back of a wagon and can be hauled from place to place, saving heavy lifting. Many a man has permanently injured his back

trying to lift a heavy trough on to a wagon. Old cultivator wheels are common around the farm and if the box is not too large, will serve the purpose very well.

\* \* \*

### A Homemade Jack

**A**BOUT every farm has a homemade jack on it, but here is one that may offer a suggestion to some man who has threatened to break up his homemade affair because it doesn't hold fast. Note the wire that runs from the base of the uprights to the notches in the handle. This wire may be placed in any one of the notches depending on the height to which the axle is to be lifted. If the boy likes to handle tools and wants to make something, here is a contrivance that is simple enough for him to tackle.

The base is made of a 2" x 4" for heavy wagons, 1" x 4" stuff should be heavy enough for a buggy jack. The upright pieces can be made of 1" x 4", with half-inch holes bored through every three inches. The lever should also have two or three half-inch holes in order to permit it to work under the wagon a little farther if it is necessary. As in the illustration, grooves are cut in the handle every couple of inches. The handle can be made of planed 2" x 4", or 1" x 4" if it is to be only used for light wagons.

\* \* \*

### Keeping the Rats Out of the Crib

**A** NEIGHBOR lost considerable corn last year from his crib because of rats. Though the crib was elevated on posts, and all parts of the floor were twelve or more inches above the ground, the rodents climbed the wooden timbers readily and took what they wished.

This summer the crib was made rat-proof in a very simple way. To have torn out the floor and put in concrete all around would have run into considerable money. Yet the "proofing" was done at a total expenditure of \$2.40 and half a day of labor for two men.

Twenty-four tin pans were purchased at the ten cent store for ten cents each. There were four rows of posts with six posts in each row.

The crib was raised a few inches (empty) and the pans set upside down on the posts as shown, each being carefully spaced. Then the crib was lowered again. And that was all there was to it. That provoking overhang thwarted the attempts of the most persistent rat, and so far this year not a sign of one has been seen. Moreover, those pans, while of light material and cheaply tinned, will probably last several years.—D. R. VAN HORN.

# How to Gas Peach Borers

*Now Is the Time to Apply Para-dichloro Benzene*

**T**HE peach borer is without a doubt the most destructive and most serious pest that attacks that fruit. Furthermore, it seems to be about the most difficult to fight. We have been getting a number of inquiries of late asking if there is not a method of control that is more simple than wiring. This method consists of removing the soil around the base of the tree and probing with a copper wire to extricate the larva or worm that is boring beneath the bark.

It is rather delicate with trees as young as this and some injury may occur. In experiments conducted by the New Jersey station, a few cases of serious injury were reported. The cause of this has not been discovered. This was also true where trees are treated in the nursery row. However, where there was some injury it was outgrown in most cases.

### Desirable Oat Varieties Narrow Down to Six

**T**HERE are six varieties of oats that are gradually establishing themselves in growers' favor in New York State and surrounding territory. The plant breeders at the State college at Ithaca and growers have been working with oats for so long, testing all sorts to find those best suited for Empire State conditions, that they do not hesitate to recommend Cornelian, Empire, Standwell, Comewell, Victory and Selection 343. Many varieties have been found that are not worth growing. One of the facts demonstrated is the poor yield obtained from the so-called "horse mane" or side oats and farmers are particularly warned against them.

The use of chemicals has developed to a large extent during recent years and now it is an accepted fact by large growers, as well as experiment stations and colleges of agriculture, that para-dichloro benzene is by far the most satisfactory. This chemical, although it is crystalline, rapidly turns to a gas when it is placed in the soil and being poisonous quickly destroys insect life.

It is particularly effective against young borers. One of the difficulties heretofore in controlling borers has been due to the fact that there are two broods and spring eradication was of little or no avail due to the fact that fall infestation would make useless all previous efforts.

### Now is Time to Apply It

Para-dichloro benzene is applied immediately after all eggs have hatched, which in our territory is about the middle of September. For southern Jersey this period is nearer the first of October. In making the application the soil about the base of the tree is cleared of all grass, weeds and all other debris. Furthermore, all excess gum is removed from the bark. The cleared area around the base of the tree is about two inches in diameter. The crystals are distributed in a continuous narrow band or ring about the trunk of the tree. The ring must be one and a half or two inches from the tree. In other words, after the chemical is distributed it forms a white collar around the trunk with about one and a half inches of soil between it and the bark of the tree. It is then covered with several shovelful of finely divided soil, which is packed down fairly firmly. No rubbish should be in this covering soil.

On trees that are six years of age or older, one ounce of chemical per tree is sufficient for either a short or prolonged treatment. On trees that are from three to five years of age it is necessary to use only half an ounce and the crystals should be permitted to remain around the tree only long enough to kill the borers. Three weeks should be sufficient in this case when the soil temperature averages between 55 and 70 degrees Fahrenheit.

For orchard trees only one year of age a quarter of an ounce is sufficient while two-year-old trees can stand three-eighths of an ounce. In these cases also three weeks is sufficient for the gas to destroy the insects, especially the young ones.

"These oats have very beautiful heads," says Dr. H. H. Love of the college staff, "but examine them and see how poorly filled they are. On close examination, many of the kernels that seem to be large are found to be not filled with meats at all but are large, coarse, empty hulls. Another point about these side oats is that they do not stool out much and therefore do not fill up the space where the seeding is thin. The heads are also easily broken off and many of them are lost at cutting time. Selection 343 is the one that has the stiffest straw and stands up very well."

### Has Allen's Mower that is Still Workable

**I**N your issue of August 9th I was very much interested in your article entitled "Farm Machinery Our Fathers Used." I was especially so in the Allen mowing machine. I have one all in running order when it is put together. I think it was bought in 1856. A few years ago we had it out and mowed with it. It cut fine and every one around here rode on it so they could say that they had mowed with the oldest mower in the world. The guards are fastened on a wooden bar with screws. I think I am safe in saying that this is the oldest mowing machine in running order in the world. Every one was surprised that it cut so well and ran so easy. I had it at the Fulton County fair and it attracted more attention than any other machine on the ground.—C. L. CODDING, SR., Perth, N. Y.

**T**HIS picture shows the teachers of agriculture from New York, New Jersey and Connecticut assembled in one of the fields of the farm of the New York State School of Agriculture at Farmingdale, Long Island, where the agricultural educators held their recent conference. There were approximately 250 attending the conference. In this picture, H. C. Odell, manager of the Nassau County Farm Bureau, is addressing the meeting.

# Buttermaking on the Farm

*Dairy Butter is Better Than Creamery When Made Right*

By MRS. THOMAS THOMSON

IN these days when there is so much "creamery" butter on the market, it is often difficult for the humble makers of "dairy" butter to get a good price for their product. City people's tastes are every year becoming more used to creamery butter, and the farmer finds it hard when he has to take 10 cents a pound less for his butter. Some farmers or their wives make such good butter they can find steady customers who are willing to pay extra for quality. If this is at all possible, it is the best way.

Making good butter is not easy. It is a long series of, many little jobs, and failure in any one of them will spoil the whole. I give my method which if followed will bring good results.

In the first place, the cows should be well fed and have access to good water. If turnips, cabbage or the like are fed it should be done after milking. The cows should, if at all possible, have plenty of bedding and be brushed down before milking. The hands of the milker should be clean, and tin pails are the best for milking in. Wooden or galvanized pails should not be used.

## Clean Separator Daily

Many farmers have their separator in the barn, which I do not think a very good plan. There will be a great temptation to let it go unwashed if it is not handy for the housewife to clean every day. It should be well washed and scalded every morning and dried on the shelf of the stove or in the sun before being put together again. If creamers are used the same care should be given them and they should be kept in as cool a place as possible in summer. Whatever method is used for getting the cream, one should endeavor to get it as thick as possible. If too thick it can easily be thinned out in the churn with water, but one can do little with too thick cream. The handiest and best vessel I have found to keep cream in is a large enameled pail. It is easy to wash, never rusts, and is not heavy to lift like the earthenware crocks.

## Handling the Cream

Cream from the separator should be cooled before it is added to the cream vessel. No fresh cream should be added for twenty-four hours before churning. As a rule, cream should not be kept longer than a week. Of course, if kept cold in winter it will keep longer. Churning twice a week in summer is best, I think.

The day before churning, if the cream is still sweet, some sour buttermilk, a cupful or more according to the thickness of the cream, is stirred well in and the whole brought to churning temperature or a little higher and kept there all day. If too cold next morning it can be heated by setting it in a larger vessel of hot water and keeping it stirred during the process. In summer the difficulty is to get it cool enough if one has no ice. I find that it's a good plan to watch the thermometer. Some nights it is much cooler out-of-doors than it is in the cellar, and then I set the cream out on a high shelf I have. By the by,

I always cover the cream with a clean cloth, not a close tight cover. Of course, it is covered up when set outdoors. Another good plan is to churn first thing in the morning before breakfast. It is a great help getting it over early, besides being cooler.

If the cream is rich and thick, 62 degrees is about right for churning. Very thin cream needs a higher temperature, especially in winter, when the cows are on dry feed. In hot weather it should be lower. Success in churning comes with practice and a thermometer is a great help. Save on anything you like, but don't try to save by doing without one.

## Barrel Churn is Easy

There are still people who think they can't get butter to come without the old dash churn. The barrel or "Daisy" type of churn is much easier to operate and a great improvement in every way. Before using, it should be well scalded with hot water and then cold afterwards. I use the milk-strainer pail and strain all the water used during the operation.

It is not easy to give any exact quantities for coloring. New milch cows and cows on rich pasture give cream that needs little if any coloring. The tendency is to have too deep a shade.

The churn should never be more than half full. One-third full is about right for ease and quickness of churning. After churning for a few minutes the lid should be opened to let off the gas. If the cream sticks to the sides and won't splash or move about it is too thick and water of the same temperature should be added.

## When Butter Comes

The butter should come in from twenty to thirty minutes. If it comes much quicker the temperature is too high and there will be a quantity of cream left in the buttermilk. If the cream is not sufficiently ripened, it will not churn all the cream out either and will most likely take a longer time to churn.

The butter granules should be about the size of wheat when the buttermilk is drawn off and a small quantity of water is then poured over the butter and allowed to drain off. Then strain in about as much water as there was cream and revolve the churn till the granules are about the size of large peas, then drain off immediately. The water should be 60 degrees in summer and a little

warmer in winter. If the butter has been churned into a solid mass, then the butter ladle scalded and dipped in cold water will have to be used in washing to get all the buttermilk out. Water must then be added until it is clear.

Some people salt the butter in the churn, but it is safer to lift it out and weigh it. If the butter is for immediate use,  $\frac{1}{2}$  to  $\frac{3}{4}$  of an ounce of salt is plenty for each pound of butter. If for large tubs, one ounce may be used, but the majority of people like butter mildly salted. If lumpy the salt should be rolled smooth and sifted evenly over the butter and worked gently in with the spade or in the case of a level butter worker with the roller till the butter presents a smooth solid appearance. It should be covered with a clean plate and cloth and set away for a few hours, when it should be again thoroughly worked over. If it is made up directly after salting the butter will be streaky. It should not be allowed to get too cold, as the labor is doubled in working it up again.

## Packing in Tubs

If wooden tubs are used for packing it in, great care should be used in having them as clean and white as possible, both outside and inside. A bench outdoors is the best place for scrubbing them. Plenty of boiling water should be used after the scrubbing and then cold water. Butter paper dipped in water should be used for lining the tubs and they should be weighed before putting the butter in. I find a wooden masher like a potato masher a great help in packing it firmly in. It is rather difficult for the beginner to get it all evenly packed down, and after one has worked hard it is rather discouraging on turning it out to find holes and large cracks.

This is almost sure to happen if the butter is rather hard, but on the other hand one must guard having it soft and greasy. As in most other things, there is a happy medium. The tub should be filled level with the top and some patten gives it an attractive finish. A sheet of paper should cover it before the lid is nailed on.

## Putting Butter Up in Prints

If the butter is put up in prints, the same care should be used in getting it packed in evenly and it should be carefully covered in a cloth-lined box so that no dust can get at it on its way to market. I find when the quantity of butter is not very large then an egg-crate is a fine

thing for sending it in. There are no lids to nail down, and the good man has no difficulty in getting it opened in the market. Some have boxes with hinged lids and a lock, which is the best way of all.

The main thing in putting it up is to have everything clean and attractive looking. Nobody wants to buy dirty butter and nothing is so easy to soil. I trust that this will be of use to some beginner in the butter-making business.

## ANOTHER HEAVY REPRODUCER

IN last week's issue we showed a picture of Financial Kings Interest, purebred Jersey, that holds the world's record for reproduction, with 21 calves to her credit, 20 of them heifers. The cow shown above is Jeanfield Fleckie Third, a 20-year-old Ayrshire, the dam of 18 calves. This 18th calf was dropped 43 days after Jeanfield Fleckie Third had completed an advanced registry record of 10,668 pounds of milk. She is owned by Bellefonte, Yorktown Heights, N. Y.

**News From Among the Farmers**

**F**ARMERS in most sections of Lewis County, N. Y., are in the midst of their grain harvest at the present time, which is much later than usual this year, owing to the cold rainy weather of early spring during seed time, but the weather of late August has been ideal for grains of all kinds and it looks now as if more than an average crop would be harvested.

The Lewis County Fair, which was held at Lowville, the county seat, during the past week, was very largely attended. It was estimated that on Wednesday, the second day, 15,000 persons were in attendance, the grand-stand and the new annex to the main building being filled to capacity, hundreds being unable to obtain seats.

Patrons of the fair are very enthusiastic in their praise of the attractions furnished, also in the dairy line, five of the leading purebred stock owners in this section of the county having exhibits on the grounds, which is the largest number in several years.

The frequent showers of the past few weeks have given an abundance of after feed and where fields are cleared of grain so they are available for stock, cows are keeping up a very good flow of milk for the lateness of the season.

Some are supplementing their pastures with the feeding of corn, also with the cutting and feeding of second crop alfalfa, which gives fairly good results, with less damage to the meadows.

There have been a number of sales of farms recently, which is rather unusual at this season.—CHARLES L. STILES.

**In Western New York Counties**

**Genesee County**—The weather has been very hot and dry for the past two weeks, but on the second of September we had an excellent all-day rain. Haying and harvest is all done with the exception of a few oats to be hauled in. Farmers are plowing for wheat. Threshing is in full swing and grain is turning out fairly well. Some farmers are selling their wheat as soon as it is threshed. It is bringing \$1.25 a bushel. New hay is worth from \$10 to 12 a ton, potatoes \$1 a bushel. Beans are bringing from \$4.50 to 9 a 100 pounds according to the variety. Butter is bringing 48c to 54 per pound; eggs 40c a dozen; live poultry 20c, dressed 24c; live calves 9 to 10c, dressed 15 to 17c; live hogs 10 to 11c, dressed 10 to 14c. Genesee County Fair at Batavia starts on September 15 and runs for the rest of the week.—J. C.

**Ontario County**—Harvesting is about over. Some oats are still out as well as a few pieces of late hay. We are having a dry hot spell. Corn and potatoes need rain and a few weeks of warm weather. Everybody is hoping for a late fall.—H. D. S.

**Steuben County**—We have had an extremely cold summer and about all crops are fully three weeks late. An early frost now would ruin buckwheat and would shorten the potato crop very, very much. Unless the weather changes soon, the chances are we will get frost. It looks as though corn fodder will be very light. Fruit is very small and late. Farmers in several communities are combining and buying threshing machines for their own use. This is due to the fact that owners have consistently refused to lower prices to a reasonable figure. Road building is being pushed along rapidly.—C. H. E.

**Pennsylvania County Notes**

**Snyder County**—We have been having ideal summer weather—plenty of rain and sunshine. Crops are looking fine. Oats are about all harvested. The wheat crop is fairly good. Corn is growing very rapidly. Some farmers will have a very fine crop of it. Pasture is plentiful. Stock looks fine. County fairs have begun. Some threshing has been done. Potatoes will yield half a crop in this county. People generally well. Very little sickness. Markets: Wheat, \$1.10 bu.; Corn, \$1.30 bu.; Oats, 60c bu.; Potatoes, \$1.25 bu.; Butter, 40c to 55c lb.;

**How Extra Milk is Made**

*“Why do I get two extra quarts of milk a day from every cow on Cow Chow?”*, wrote a well known milk producer.

**H**OME grown feeds are necessary for cheap milk production, but they contain too much of some milk materials and not enough of others.

Adding the right amount of Cow Chow rounds out the home grown feeds so that they make the most possible milk and still keep the cow in good condition. Every one of the different materials in milk is pro-

vided in Purina Cow Chow. That's why it makes a half a gallon more milk per cow per day.

We don't ask you to *believe* it. We ask you to *prove* it. We'll supply the record sheets free and we'll lend you the milk scales to weigh the extra milk.

Order Purina Cow Chow from your dealer. It makes more milk at a lower cost per gallon.

**Write for the 100 page Purina Cow Book—free**

**PURINA MILLS, 818 Gratiot St., St. Louis, Mo.**

*Eight Busy Mills Located for Service*

*Go to the National Dairy Show—Call at the Purina exhibit.*

Eggs, 28c to 30c doz.; Peaches, \$1.00 to \$1.25 per bu.—D. D. S.

**Fayette County**—We had rain during the third week in August, although haying was about all finished. Grass in the meadows and pastures is growing well. Some farmers have started threshing and oats and wheat are turning out well. Wheat will be light because some crops did not come through the winter very well. The oats crop is a good one. Corn is very green for this time of the year. The weather has been mostly cool. There is quite a bit of building going on but indications are that it will not last long. Not much doing in coal at present. Eggs 35 cents; butter 50 cents.—E. W.

Send for free loom book, it tells all about the weaving business and our wonderful \$9.90 and other looms. UNION LOOM WORKS, 332 Factory St., Boonville, N. Y.

# Service Bureau

## Three Billion Dollars for Fraud

IT is practically impossible for the human mind to measure any commodity in terms of billions. Yet last year, according to Mr. E. A. St. John, President of the National Surety Company, [the people of the United States lost three billion dollars through fraud and crime. At the head of the list stand stock frauds, a good part of which were oil stock frauds. These frauds alone cost the people a billion dollars.

Just try to measure what the loss of this money, taken mostly from people who could ill afford to lose it from their small lifetime savings, meant to those who were duped, and you will see why AMERICAN AGRICULTURIST believes it can perform no bigger service for its readers than to maintain a Service Bureau, which works constantly to show up fraud and dishonesty and to get refunds whenever possible for those who have been duped. Not a mail goes by without bringing letters asking our advice about investing in fool schemes that are wrong right on the face of them. It is hard to see why so many people allow themselves to be fooled into losing their savings in schemes that plain, ordinary common sense ought to show to be impossible.

### What the "Tribune" Says

The New York Tribune, on commenting editorially on these losses by fraud, says:

"The biggest item is charged to the confidence game, against which there is no defense save the education of the sort of people who are most easily victimized, and until greed can be educated out of human nature, the confidence man will always flourish. It is the desire to get something for nothing, or at least much for little, that brings people to his door with their savings."

When some bright-colored, sensational circular comes along offering twenty-five to one hundred per cent. profit, burn it! It is a lying sheet! When some smooth representative comes into your home and tells you that he can turn your meager savings into riches, kick him into the highway. He ought to be in jail. In many countries he would be. If we had a few less laws in this country, and enforced more of what we have, such swindlers would not be allowed nor would their lying propaganda be admitted to the mails. But when these criminals are brought to justice, their scheming shyster lawyers get them off entirely, or with very light punishment on legal technicalities.

### Farm Sopers on the Alert

So you have really no protection but yourself and the service AMERICAN AGRICULTURIST and other reputable farm papers are giving in their warnings about specific schemes for fleecing the unwary.

In this hard old world, there is no such thing as "something for nothing"; there is no "royal road to success." The only success, the only happiness, comes through hard work and careful savings wisely and conservatively invested. If you have money to invest, talk with your banker, or ask AMERICAN AGRICULTURIST. We know of nothing sadder short of death itself than for a man or woman who has worked for a lifetime and saved a modest

### AGENTS WANTED

MEN'S SHIRTS. Easy to sell. Big demand everywhere. Make \$15.00 daily. Undersell stores. Complete line. Exclusive patterns. Free Samples. CHICAGO SHIRT MANUFACTURERS, 229 W. Van Buren, Factory 222, Chicago.

AGENTS make money selling spark plugs. Write to RUSSELL DINGER, Melvina, Wis.

### HELP WANTED

FIREMEN AND BRAKEMEN—Men to train for firemen or brakemen on railroads nearest their homes—everywhere; beginners, \$150; later, \$250; later as conductors, engineers, \$300-\$400 monthly (which position?). RAILWAY ASSOCIATION, Desk W-16, Brooklyn, N. Y.

ALL MEN, WOMEN, BOYS, GIRLS—17 to 65, willing to accept Government positions, \$117-\$250; traveling or stationary, write MR. OZMENT, 258 St. Louis, Mo., immediately.

competence only to have it become a part of that great three billion dollars which the investment sharks are getting every year.

So, if you are tempted, will you not for your own happiness take plenty of time? Pay no attention to that argument used by all of the swindlers, "if you don't do it to-day, you never will get another chance." Advise with your friends, and then BEWARE! BEWARE! BEWARE!

### Questions About Investments

Have you any information on hand concerning the Ore Chimney Mining Co. of Northbrook, Ontario, Canada? If not I wish you would look them up and let me know what you find out. The company has a representative in my neighborhood now selling stock. The business conditions as far as they have gone look very good. They have offices also at 700 Main St., Buffalo, N. Y.—F. C. N., New York.

We strongly urge you to leave this mining stock alone. Dealers in unlisted securities offer the stock anywhere from 10 to 40 cents a share but there are no bids.

\* \* \*

Some time ago my wife and I took some stock of the Consumers' Service Stations, at that time located in Rochester, N. Y., and the salesman told us we could get our money when we needed it. They go by the name of Go Gas Company, 90 West Street, New York City. This company may be all right but we need our money.—T. A. W., New York.

We are unable to get any information about the Go Gas Company. If you buy stock the only way you can get your money back is by sale of the stock and when there is no market for the stock, there is nothing you can do. There is nearly always speculative risk about stock. For investment better buy bonds of old and prosperous corporations with national reputation.

### A Rural Tragedy of Long Ago

(Continued from page 172)

hopeful one. When van Alstyne died on the gallows he left a son—a lad named Nicholas, who grew to manhood and walked not in the evil ways of his father, but eventually became a widely known preacher of the Lutheran Church, finally dying at a great age and sometimes spoken of as the "venerable van Alstyne."

There is a dark saying that most of us have been familiar with from our early youth, "for I, the Lord, thy God, am a jealous God, visiting the iniquities of the fathers upon the children unto the third and fourth generation"—a hard saying but one nevertheless which modern biology is constantly emphasizing. In the case of which we are thinking this seems not to have been true.

Possibly someone will remember Philip Wieting, our great Schoharie County preacher, of whom I wrote a year or two ago. When Wieting died there was surely great desire to do him honor and to pay to him every tribute that the church could bring, and the man who was chosen to deliver the funeral address was none other than Rev. Nicholas van Alstyne. "Thus God fulfills Himself in many ways."

James Russell Lowell in one of his essays says that once in his youth he talked with a very old man who in his youth in turn had talked with an ancient man who with his own eyes saw the witches hung on Salem Hill—and then Lowell moralizes how only two lives lay between that time and his. So I may say that I once heard Nicholas van Alstyne (he was then an old and feeble man) preach and so he links me with the events of which I write.

I have no sympathy with crime or sensationalism. I do not feel sure that I have been wise to revive the memory of an almost forgotten event that shocked this hamlet more than a hundred years ago but I am repeating what I have from unbroken oral tradition and all sorts of stuff must go into the weaving of history:

"Old, forgotten, far-off things  
And battles long ago."

# Androcles Jones—*By Ellis Parker Butler*

(Copyright, McClure Newspaper Syndicate)

(Continued from last week)

Orley Jones, nicknamed "Oily" by the circus folk, is for some reason much disliked by all animals. This stands in Oily's way when it comes to marrying the beautiful lion-tamer "Pink," who is especially devoted to one old lion named Leo. She has insisted that the ceremony take place in the cage with all her pets.

OILY poked at the sawdust with his toe. "Say, Mack," he said, "she knows a preacher who thinks he's a regular Daniel. The beasts and birds all love him to that extent that they cry for him at night. He's willing to be inside the cage when he ties the knot. Nice little party, ain't it? Me and Pink and the cats and the preacher all caged up and saying the till-death-us-do-part stuff!" He smiled a sickly smile. "Say, Mack, you know how them cats love me, don't you? Death would us part just about the minute I stepped into that cage with them cats!"

"You let me talk to that Pink person, Oily," I said. "She's a reasonable creature, for a woman, and I guess I can fix this up for you."

He almost kissed my hands.

I had a long confab with Pink. She was a reasonable creature, as I had said, and before I had talked half an hour, she began to see that the marriage wouldn't amount to much in the end if the big cats ate Oily before he had time to say "I do!"

"I'll tell you, Mack," she said; "I'm not pig-headed. I'll say right now that when the tent-pole caved in Morris's head, I made a resolve that if I was ever fool enough to marry again, I'd be married in the ring-cage with all my cats right there as bridesmaids and ushers, but I'm no stubborn jade. I like Oily too well to chuck him just because he don't like my cats. Some of 'em are nasty brutes, Mack."

"All cats are," I said.

"Not Leo, Mack!" she said reproachfully.

"Well, I wouldn't hardly call him a cat," I said. "I'd call him a cottage cheese, except that that's a rather wildish thing to call Leo."

"You mean thing!" she said, pretending to pout. "I ought to spat your face for that, but I won't. Now about Oily: I'll give up the cat idea."

"Pink," I said, "you are just as white as they make them these days, you are!"

SHE smiled.

"I know I am, Mack," she said. "Maybe I like Oily, too. Maybe that has something to do with it. I don't suppose," she added as I was turning to hurry away and tell Oily, "that Oily would mind being married in the ring-cage if I had no cats in the cage?"

I stopped short and looked at her. She was as sober as a judge.

"Why, no!" I said. "Why should he? The cage won't bite him, will it?"

"Then it is all settled," she said gayly. "We'll be married in the ring-cage in the big top any night performance Oily chooses, just before the big cats are let into the cage. You can tell him."

I turned to go again. I was half-way out of the tent.

"Mack!" she called.

I turned back.

"Of course," she said, hanging onto the words as if she hated to let them slip from her, "Oily won't mind having a cottage cheese in the cage."

"A—a what?" I cried, and then I remembered what I had called Leo. I went right back to where Pink was standing. "Now, see here, Pink," I said severely, "a joke is a joke. You know as well as I do that that is all that old Leo cat is—a hunk of cottage cheese, if that's what you want him called; but you don't want to worry the life out of Oily just because I called that brute of a Leo a fancy name. Leo may be cottage cheese to me, but he's not that to Oily. He's a lion to Oily—a king of beasts."

I saw then I had offended her, right

enough, by calling the old animal a cottage cheese. It was one case of calling by a fake name that was a bad mistake.

"I cannot imagine any man being coward enough to be afraid of being locked in a cage with a cottage cheese," she said haughtily. "That's my ultimatum. You can carry it to Oily."

Well, I carried it and I give you my word it weighed a ton. I found Oily just where I had left him, and he looked up with hope in his close-set eyes. I had to blast it. I blasted as gently as I could.

"Oily," I said, "Pink is a fine girl. She's going to give up the idea of having the dangerous cats in the cage with you."

Oily looked at me suspiciously.

"She acted fine," I hurried on to say. "There isn't a mean bone in her body, Oily. All she wants now is to be married in the ring-cage—nothing in it but her and you and the minister and that old cotton-wool baa-baa lamb Leo."

"And I thought you were my friend, Mack!" Oily said in a tone that would have made an iron hydrant weep. It made me rather hot. I had fought it out with Pink and argued with her and all, and this was what I got for my pains.

I think Oily and Pink talked it over at full length after that. I dare say each was right from a personal point of view. Pink couldn't see how happiness could result from the marriage if Oily was always to be in mortal fear of Leo, and

pantomime, and he was the teacher; it was so good we gave him the big stage for his act and didn't run anything else at the same time except the eight elephants in No. 1 ring and the eight-stallion act in Ring 2. We had to keep the clowns off the hippodrome track while the stallions were in the ring, anyway, because the stallions are bad actors when the clowns are loose on the track. But Irish appreciated the stage privilege just the same, and he did all he could to build up his act and make it good. At the start he used any old property book in his act, but as it grew, he got particular about properties, and he dug up an old reading-book to use in the act. He was sitting in the dressing-tent one day reading this book when Oily dropped in.

"Oily," Irish said, "it's a pity you came from the Bowery instead of from the desert. You might have pulled this stunt on old Leo."

"What stunt?" asked Oily.

"What it says here about this old guy Androcles," said Irish, and he tossed the book to Oily.

I SUPPOSE you know the Androcles tale. He was an old Greek fellow, and he went out into the desert, picking cranberries I suppose, and up came a lion with a thorn in its foot, and Androcles took out the thorn and off trotted the lion. Probably he forgot all about it, for some years later

... and started after Oily on the lope!"

she could not think of giving up Leo. The old cottage cheese was almost like a brother to her, and I couldn't blame her for feeling as she did about the old beast.

If she did as she intended and took a farm in the mountains and expected Leo to roam around the place, Oily would have to get used to the lion or lead an unhappy and probably dismembered life.

As Pink looked at it, it was up to Oily to learn to love Leo and live in harmony with him. As Oily looked at it the marriage in the ring-cage would be all right for Pink and the minister: Pink was the lion's chum, and he would not hurt her; and the minister would be safe enough in the cage because Leo would be so busy rending Oily limb from limb that the big beast would have no time to pay attention to the minister. But Oily felt he would have a disagreeable and blood-soaked time in that cage.

That year we had one clown with us by the name of Sam Schmidt. His ring name was Shivers, and we called him Irish, and he had one act that was a hummer. It was a clown school, all

he turned Christian and was pulled for it and the king said he had to be fed to the big cats on whatever was the Greek Fourth of July. So all the steady show-patrons crowded into the big top, and Androcles was slung into the arena, scared stiff, and the cage was wheeled in and a big lion pried out by the rough-necks. Mister Lion gave one yowl and started for Androcles, saying, "Here's my breakfast-food all served on a china plate!" But just when Androcles shut his eyes and got ready to be eaten in two bites, the lion stopped short, laughed a merry laugh and walked over and kissed Androcles on both cheeks. It was the lion Androcles had unthorned. Of course they tried to make the lion nibble Androcles. They got pepper and salt and tried that, and then they tried to serve Androcles with powdered sugar. No use! Lion wouldn't eat Androcles.

Well, Oily read the story three times, and then he tore out the page and carried it away with him and studied it. It made a big hit with him. He would sit across the tent from Leo and read that

tale and then look at Leo and wonder how it would work. Finally he came to me. He gave me the tale to read and I read it.

"What do you think of it, Mack?" he asked eagerly.

"Well, Oily," I said, "I don't know! It seems sort of phony to me. You don't remember Bony Harger—he was with us before your time; he was the man that pulled the ulcerated tooth for the black panther when we were in winter quarters at De Soto. I never in my life knew a beast to suffer as that panther did with that tooth or to feel better than that panther did after the tooth was out. That should have been a grateful panther—but the first chance he got, he reached out of the cage and clawed all the meat off Bony's face."

"Leo is a naturally good-natured animal," said Oily.

"Oh!" I said, getting the drift of his meaning. "So that's it, is it? Well, Oily, to tell you the truth, I think this Androcles stuff is pretty steep. You can believe it, but I can't just see it. If that cottage cheese—"

"I'd rather you didn't call Leo that, Mack," said Oily gently. "Pink don't like that. I just thought that if, maybe Leo should get a thorn in his foot and I pulled it out—"

"Well, it wouldn't hurt to try it, Oily," I said doubtfully. "Maybe it would work."

So we tried it. We started with thorns. Oily would go out into the wood-lot nearest the show-grounds and get thorns—any kind he could get—and I scattered them in the cage. Then Leo would walk around on them and never know there were any thorns in the world. I suppose that treading the hard floor of the cage had toughened the old cottage cheese's pads until they were like sole-leather. So then we tried tacks—carpet-tacks and Swedish iron upholstery tacks and any kind of tacks that were guaranteed to have sharp points and to be tough and business-like—and old Leo just ramped around on them as if they were the flowers that bloom in the spring.

OILY was just worrying himself to death over it. A girl like Pinky isn't like a nun in a nunnery when she is with a big show, and there were plenty of men around who were willing and eager to take the widow curse off her if she would give them a chance. Every time Oily saw one of those would-be husbands talking with Pink he would simply writhe in jealousy and rush out and buy a fresh paper of tacks. The old he-cat seemed to be puncture-proof. But he wasn't. He stepped on a tack and got it between his toes along about ten o'clock one night when we were showing at a little place in Kansas well toward the end of the season.

Oily was worn down to almost nothing at all by that time, and he hardly cared whether he was alive or dead. Pink had put the big cats through their tricks about nine o'clock and had gone back to the bunk-car on the spur to get her beauty sleep, and when I heard Leo yowl, I guessed what had happened. The sides were up on his cage, and the menagerie top was down and the cage out on the lot, but I hunted up Oily and rushed him to the cage. We took down the sides.

Leo was sitting on his haunches holding up one fore-paw and licking it between yowls. When he saw Oily, he began bouncing around the cage on three feet, ten times as mad at Oily as he was at the tack in his paw. Oily was as white as a sheet.

"Go to it!" I said.

Love or something gave the little narrow-eyed man more nerve than I ever imagined he could dig up. He must have felt he was going to death or mutilation, but he walked right up to the cage.

"Come here, you brute!" he said and

**How to Weave a Basket**

*A New Use for Crepe Paper—Dressmaking Hints*

EVERY woman loves baskets and making of them is one of the easiest and most fascinating of the arts. There seems to be no end to the articles which an ingenious woman can create if she will give her imagination full sway.

It is no more difficult to weave with paper rope than it is with reeds or raffia. The paper rope can be procured at all reliable stores which carry crepe paper. It is easy to make it at home, if one prefers.

To make a basket you will need wire, rope and pliers. Also shellac to finish them so they will last indefinitely. Number 7 wires are the most popular for the foundation and number 15 for the handles. Sixteenth, quarter and eighth-inch rope is used for an average basket, beginning with the sixteenth in the center bottom and using each larger size as the bottom diameter increases.

Wrap the wires with the color paper used for the rope and lay six of them on the table. Place six more at right angles to these, having them cross in the center. Fasten them together where they cross and divide them into groups of two. Divide one group into single wires so as to have an odd number of groups.

Begin at the center with the finest wire and weave under one and over one around and around until there are six rounds. Now use the next size wire and go around

after separating the groups of two into single wires and cutting out one wire to leave an uneven number of wires. Weave six until as large around as desired and turn the wires up at right angles. Make one more round and insert the largest rope. Now weave around and around until the right size in height.

Finish the edge by inserting three more strands of rope—one in the same place with the one you have been using and two in the next space.

Clip the wire at the left of the rear strands, leaving it one-half inch above the work. Bend it over the rear strands in the direction of the work. Clip the next wire and bend down over forward strands. Pass the rear strands around over this second bent wire and fasten down with the next wire. Continue around the top.

Tuck the last strands into the work to hide ends. Make two of these twelve inches in diameter and three inches deep for a work-basket with cover. Make one of them twelve inches in diameter and ten inches deep for a waste-paper basket. With very little practice they can be made in different sizes and shapes.

Make them vase shaped and slip a plain glass into them for flower baskets. Long and shallow they are delightful trays. To shellac, secure some prepared shellac and paint them carefully with a small brush.—LELAH FOWLER.

**"THE PICTURE TELLS THE STORY"**

1882

HERE is an illustrated dressmaking lesson in making up pattern 1882, which comes in sizes 16 years, 36, 38, 40, 42 and 44 inches bust measure. When opened out, it looks like Figure 1.

Fold it over on the shoulder seams. (Fig. 2.) Run up seams, turn up and hem skirt, lay pleats at side seams. (Fig. 3.) Cut sleeve extensions and add if desired. The neck may be finished with a binding or a rolled hem. You will be in style whether you wear it plain or with narrow collar.

For size 36, 3 1/4 yards of 40-inch material are needed. Use narrow grosgrain ribbon at the dropped waistline, or a patent leather or soft kid belt in white, black, red or a fancy combination. Pattern, 12c.

# Androcles Jones

(Continued from page 181)

he reached between the bars and took Leo by his tack-infested paw. I had a tent-stake ready to jam into the big cat's face if he tried any ugly business, but the old cottage cheese was too cowardly and pain-frightened to make a mean move. He just put up his muzzle and yowled, and Oily took the tack by the head and jerked it out of the paw. For a moment Leo yowled; then he began licking the paw; then he went to the back of the cage and spread out ready to sleep. We put up the side of the cage. Oily sort of tip-toed away.

"I guess that will be all right," he said in a whisper, like a person in a sick-room. "If he sleeps well, he'll feel better in the morning."

I said I hoped he would and that I hoped the old grannie of a beast would have sense enough to know the kindness Oily had done him.

"I hope so," Oily said, but he hadn't any enthusiasm. "Somehow I don't feel the same way about that Androcles business, Mack. The more I think about it, the fishier it looks."

Well, one of the stunts of our parade was to have old Leo on top of his cage

collar had choked him, looked around for Oily, saw him and started after Oily on the lope!

Run? Oily went in at one end of the menagerie-tent and was out of the far end of the dressing-tent before Leo was fairly started. We saw him make for the fence at the far side of the show-grounds like a scared rabbit and take it in one leap and keep right on across a plowed field toward the tall timber in the distance. Old Leo went after him like a loping cow, not much for speed but a prize-winner for persistence. We all started after Leo.

I'll say right here that I had as mixed emotions as a man ever had. I didn't know whether Leo would catch Oily or not, and if he did catch him, I didn't know whether he would kill him or kiss him. I didn't know whether Oily would be Androcles II or plain raw meat. Nobody knew, not even Oily. That was why he ran. He had lost all faith in that Androcles business.

My gang of rough-necks found Leo somewhere near the middle of the patch of timber, sitting in the leaves and looking puzzled and surprised. When they led him away, he would stop and look around

## In Our New Fall Catalogue

Dresses, and dressmaking lessons too, in all the newest styles, calling for small quantities of material are one of the features of the book.

Underwear—pretty, dainty, practical things which the home dressmaker can sum up quickly and save money.

Aprons—a variety of them and of housedresses too, many of them on the simple diagram style that has proved so popular.

Children's Wear—everything for the baby or the older child, and all as sensible and yet attractive as the styles for their elders.

Thus, in brief, are the pages of our new Fall and Winter catalogue filled, and as the cost of the book is only 10c it should surely be in every A. A. home. Address the Pattern Department, AMERICAN AGRICULTURIST, 462 Fourth Avenue, New York.

with Pink sitting in a chair with one foot on his back. Of course, the old lion was chained to a ring in the cage-top, but it was a good stunt and made a hit with the crowds.

The day after Oily had done the Androcles stunt the parade started for town.

Oily was cutting across the show-lot on some business or other, and he passed near Leo's cage. The moment Leo saw him he pricked up his ears and yowled. Oily stopped short and looked, of course, and the next moment Leo made a leap for him. Pink shouted and struck at the big cat with her bull-whip, but she was either too late or the lion did not mind her blow, for he hurtled off the top of the cage toward Oily. He hurtled just exactly the length of the chain and stopped with a jerk and slammed back against the side of the cage, hanging there by the neck as if he was trying to commit suicide by hanging. He kicked and eluded and scratched. Pink yelled, and some of us climbed to the top of the cage and we all pulled on the chain and hoisted Leo to the top of the cage again. For a moment he shook his head and swallowed hard and panted, and then his gaze caught Oily's again, and zipp! over the side of the cage he went again, clawing and scratching and kicking.

Well, this time the chain broke! Down the old cat went to the ground, tail first, and fell head over heels. He got up and shook himself, pawed his neck where the

and then walk a short distance reluctantly and stop and look around again. He wanted Oily.

The next we heard of Oily was on a picture post-card showing a view of the Davenport railway bridge but mailed from Streator, Illinois. Pink showed it to us. It said:

You can catch me at Hogan's Lodging House, 38 Bowery, if you want to, but nothing doing in that cage business.

Yours till death,

O. Jones.

Well, I guess that's all. The next season Pink married a fellow named Murphy and went into vaudeville with her cats, and so you might say the story ends happily, but somehow I wish Oily had hung around the circus lot that day until we knew whether that old cotton-wool baa-baa of a lion was going to eat him or love him. We talk about it a lot, but we don't know yet whether that Androcles stunt would work or not. I guess we never will know.  
(The End)

### A. A. Readers Suggest—

Thicken any juicy fruit or berry-pie fillings with minute tapioca. It is better than flour and looks much nicer when the pie is cut.

Rub white spots on furniture with essence of peppermint.—MRS. G. W. GRAY.

# Reviewing the Latest Eastern Markets and Prices

## MILK PRICES

**THE** Dairymen's League Cooperative Association announces the following prices for the month of September for milk testing 3% in the basic zone of 201 to 210 miles from New York City: *Class 1*, milk used chiefly for fluid purposes, \$2.60 per 100 pounds; *Class 2A*, used chiefly as fluid cream, \$1.90. If skim-milk is used for any other purposes, additional payment over this base price is added, depending on use. *Class 2B*, used chiefly in the manufacture of plain condensed milk and ice-cream, \$2.05; *Class 2C*, used chiefly in the manufacture of soft cheese, \$2.05; *Class 3*, used chiefly in the manufacture of whole milk and sweetened whole condensed milk, powdered and evaporated whole milk, \$1.45; *Classes 4A and 4B*, based on butter and American cheese quotations on the New York market.

The League reports excellent demand for market milk, having to draw from all possible sources to supply it.

### Sheffield Producers

The Sheffield Farms Company Producers announce the following prices for September for 3% milk in the 201 to 210-mile freight zone. *Class 1*, \$2.60 per 100; *Class 2*, \$1.70; *Class 3*, \$1.55; *Class 4*, to be determined by market quotations of butter and cheese.

### Non-Pool Cooperative

The Non-pool Dairymen's Cooperative announced that the September price for *Class 1* milk is \$2.40 per 100 pounds; *Class 2*, \$1.85; *Class 3A*, \$1.55; *Class 3B*, \$1.45.

### Interstate Producers

Interstate Milk Producers Association (Philadelphia) receiving station price for September for 3% milk in the basic zone of 201 to 210 miles from Philadelphia is \$2.19. In the 101 to 110-mile zone the price is \$2.29.

## BUTTER SLIGHTLY STEADIER

At the close of the week ending September 6, the butter market had a slightly steadier tone about it. However, this doesn't mean a great deal. As a general run the situation is about the same as it was last week. On Tuesday there was a very dull and pessimistic tone to the market and prices declined from 1/2 to 3/4 of a cent per pound on fine and fancy grades. There is still too much butter coming on the market and with heavy stocks in storage, there is very little disposition to attempt to increase prices. As a matter of fact until more active buying takes place, we will see little or no advance. Prices are too high to do much storing. It was only in the face of advices indicating lighter receipts and a slightly better buying tone on Tuesday that the market recovered its loss so that now 92 score butter is 38 1/2 cents with marks scoring higher than that reaching 39 1/2. Very little business is being done at this latter figure however. The market is hoping that with the opening of school we will see a better consumptive demand. School started on the 8th in New York City and people who have been away all summer will have to return soon in order to start the children in school.

Buying has got to improve a whole lot in face of the enormous storage reserves that are now on hand. It looks as though the Sep-

tember 1 figures will total over 160,000,000 pounds. In view of these heavy reserves and in view of the liberal receipts buyers are very critical, which is only natural and many marks are selling below their normal classification. Advices from the West state that there is some shrinkage in the make resulting from the recent hot weather. Something like this has got to happen to help improve the situation.

## CHEESE MARKET INACTIVE

There is little or no activity in the cheese market and it is only this factor that is keeping the market anywhere near firm. The make is just heavy enough to take care of the demand. The receipts of better grades of fresh State flats are light and these are held with considerable firmness. Asking prices range from 20 1/2 to 21c and some pet marks are held at 21 1/2c. It is the quiet trading, combined with these short receipts that keep prices where they are. If the make were heavier we would see prices drop in a hurry. There is some demand for good average run cheese and stock of this quality is running as high as 19 1/2c but if stocks increase to any degree we are going to see a shading on these marks. The heavy demand for market milk to supply the fluid trade is keeping the make down. However, storage stocks are heavy.

## LIVE POULTRY FIRMER

Cooler weather and the gradual return of summer vacationists has naturally increased the consumption of poultry in the metropolitan district and is having a very decided effect on demand. On September 2 the market opened rather dull and uninteresting, but on Wednesday and Thursday the market picked up in an excellent manner and on Thursday the market advanced a full cent on both fowls and chickens. Express colored fowls on Wednesday had an excellent outlet and worked out for the most part at a cent over the freight market. On Thursday prices, as stated previous, advanced a full cent in addition. Leghorn fowls have not been selling as well, the demand being for colored, plump stock. Black Leghorns are down as low as 21c, while fancy colored stock is up as high as 28 and 29c. Broilers and chickens have been working out fairly well, although the market has not been quite as active as the fowl market. The top quotation is about 28c. White Leghorns are down to 25 and 26c.

September 29 and 30 will be the Jewish New Year. The best market days for this holiday is September 24, 25 and 26. At that time fat fowls, turkeys and ducks are most in demand. This is a good time for farmers to send in fat fowls that they have culled out during the past month. Do not hit the market too late.

Over 5,000 Long Island spring ducks were shipped in during the past week and these have been holding steady at 26c.

## EGG MARKET STILL STRONG

The egg market continues in its strong firm tone. Nearby white eggs of real fine to fancy quality are in light supply and stocks are

cleaning up closely. As a matter of fact some receivers are short on their orders with the result that prices are not only firm but tending strongly in the seller's favor. If this condition continues for the next day or so, we will undoubtedly see another advance on strictly fancy marks. This is naturally going to react on medium grades to some extent, although buyers are still inclined to use fancy storage eggs in the place of medium grade fresh stocks. The handwriting is on the wall for the egg man who is doing business in eggs of medium quality. He is not going to get the best business as present conditions prove. Held eggs, mixed colors and mixed sizes can't begin to compete with well-graded strictly fresh stock. In spite of this, however, when supplies are short nothing will keep the price down when demand is there. But the top price is going to be for the fancy goods.

## GOOD FRUIT IS SELLING

Trade has been improving in the fruit market especially for fancy stock, but small fruit is going begging. Dutchess from the Hudson Valley are bringing anywhere from \$1 to 1.25 a basket with Greenings at \$1.25 to 1.75 and Gravensteins, Alexanders and Wealthys at \$1 to 1.50. Small and ordinary stock are down as low as 50c a basket, depending on size and quality. Dutchess of A grade are bringing \$3.50 to 4 a barrel with Gravensteins at \$3.50 to 4.50 and Wealthy at \$3 to 4.

It is the same old story in the fruit market all the way through. There is a lot of poor stuff coming in and such is dragging.

## BETTER TONE TO POTATOES

There is a slightly better tone to the potato market in the country and indications are that prices will strengthen to a slight degree. The market in the city is weak. That is due to the fact that there are ample stocks on hand. However, due to a rainy spell, digging in the country has been held up and for that reason we have the stronger tone in that quarter. New Jerseys have gone as low as \$1.75 per 150-pound sack. This is true especially during the early part of the week ending September 6 when New York experienced another one of its brief but severe hot spells. Indications in the country now are that this price will jump to \$1.90 or \$2. Long Islands have been up and down, hanging around \$2 and \$2.25 per 150 pounds. The price on early stock will depend from now on on the rate of digging. If farmers hit the market too hard it is just wobbly enough to sag downward.

We have been trying to get some early information on the late crop but handlers of Green Mountains are quite cagey about committing themselves. Indications are that we will see a better price than last year without a doubt, but how much it is going to be, we can't quite determine at this time.

## MARKET AND KRAUT CABBAGE

Kraut cabbage is now bringing \$9 with operators of pickling houses offering \$8. Market cabbage is bringing from \$10 to 11 to

the grocery trade. During the few hot days in the early part of the week, \$8 was a big price. In fact it was hard for some farmers to give their stock away. With cooler weather it has taken a slightly stronger turn.

## NO CHANGE IN BEAN MARKET

There is no change in the bean market since last week. Prices remain about the same and the general tone is steady and unchanged. Domestic pea beans are bringing anywhere from \$5.75 to 6.25 depending on quality, while red kidneys vary from \$8.75 to 9.15 and white kidneys from \$10.50 to 11.

## HAY MARKET EASIER

In face of poor demand and moderate receipts, the hay market has taken on a barely steady tone. Receipts have been heavier in Brooklyn than in Manhattan with the result that prices have been about the same. \$30 is about the best price for real choice No. 1 timothy. No. 2 is anywhere from \$26 to 28 depending on size of bale and quantity, with other grades ranging downward. Fancy light clover mixed is worth \$24 and 25 in the market, but lower grades are dragging heavily. These prices are on new hay. Old hay, No. 1 stock, is bringing \$29 to 30, with No. 2 bringing \$27 to 28 and No. 3 from \$24 to 26.

## GRAINS AND FEED

The Cooperative Grange League Federation Exchange has announced its pool price for September tonnage. Based on a 20 per cent. protein dairy ration the price shows a saving of \$1.55 a ton on the price announced on its emergency dairy ration last year. This price, according to H. J. Hannon, manager of the grain and feed department of the farmers buying organization, has been made possible despite the very high prices on corn, wheat, and oats through changing the formulas for the feed.

According to New York State Department of Farms and Markets, the following prices prevailed August 30.

The quotations given in this report show the approximate prices at which feed can be purchased per ton, and grain per bushel, in straight carlots through billed from Western points, delivered on track at points in the freight zones as indicated. Mixed carlots cost approximately \$2 per ton more.

Retail feed and grain prices vary with different local dealers depending upon their individual cost of doing business, volume handled, etc. In the case of feeds the retail price may sometimes be as high as \$5 per ton above the wholesale prices given in this report.

Beet Pulp...					

Since Buffalo is an important milling center for wheat feeds and linseed meal, quotations are given for this point on both a through-billed and a local basis. Ground oats \$41; spring wheat bran \$29.50; hard wheat bran \$31; standard middlings \$31; soft wheat middlings \$35; flour middlings \$35.50; red dog flour \$41; dry brewers grains \$34; white hominy \$46.50; yellow hominy \$46.50; corn meal \$49; gluten feed \$44.25; gluten meal \$56.25; 31% old process oil meal —; 34% old process oil meal \$48.

For points taking New York rate add to Albany price 1/2 cents on oats; 3/8 cents on corn; 10 cents on cottonseed meal; and 20 cents on other feeds.

## MEATS AND LIVE STOCK

Prime veal calves have had a tendency to strengthen during the past week and if the weather we are at present having keeps up, we can expect the market to continue along the same line. Choice veals are bringing from \$14 to 14.50 per hundred and there seems to be a fairly good market for fancy stock. Ordinary veals are bringing anywhere from \$9.50 to 13.50 per hundred. Very few grasses or butter-milks are arriving.

Live lambs are meeting a pretty good demand and prices have advanced during the last few days with prime marks reaching \$14.50 to 15. Only a few sheep have been coming in and most of these in fact have been mixed with the lambs. Prime ewes right now would bring \$6 fairly easily.

With cool favorable weather the demand has shown improvement for country dressed veal calves and the market rules firm with an advance of a cent on fancy fresh grades. Old stuff on hand has not been turning well and undergrades are lower. At that they attract no attention. Country dressed stock covers a wide range of quotations from buttermilks and grasses as low as 6c, to fancy choice stock at 20c.

## Quotations From Eastern Markets

The following are the prices at which farm products of special interest to Eastern farmers sold on September 4:

Eggs, Nearbys (cents per dozen)	New York	Buffalo	Phila.

# Getting the Pullets Ready for Winter

## Housing and Feeding Must Be Right to Get Eggs

AS the pullets are nearing maturity and some are laying in the colony houses it is time to think about housing them properly.

The pullets that are matured should be culled, disposing of the poor ones, the good ones being put in their permanent quarters by themselves. The later hatched pullets that are not as far advanced should be left out on the range just as long as the weather stays nice, but just as soon as the weather changes, usually before November the first, cull out the poor ones and house the good ones by themselves.

### Separate According to Size

We do not house early and late hatched pullets together as the large pullets will fight and pick the smaller ones. They will also keep them away from the mash hoppers and water fountains. Under these conditions the smaller pullets will not get the proper nourishment as they would if housed by themselves.

The pullets having roosted in well ventilated colony houses, or out in trees should not be crowded in the laying houses, as this will invite different kinds of diseases. We leave the windows and curtains wide open until the weather turns real cold, unless it is storming hard. If they are shut up in poor ventilated houses they are liable to become too warm, and as they are used to fresh air the sudden change will have a bad effect on the birds, oftentimes developing distemper, eye colds and wheezing in the throat which leads to other diseases such as roup, etc.

We find it a good plan to go in the laying houses after dark and listen for any wheezing. If you find some of the birds wheezing put them in a coop or crate by themselves and doctor them for cold, in a few days they will be O.K.

If the laying houses are long and divided into pens and the housing conditions are so that you have to put yearlings in some of the pens it is a good

plan to leg-band the pullets so if they should get mixed up by some one leaving the door open between the pens you can easily tell the pullets from the yearlings. This also works out good in the fall when it is a good time to dispose of the two-year-olds.

We take it for granted that the laying houses have been thoroughly sprayed—the roost, dropping-boards, nest, etc., painted with some wood preservative such as carbolineum or creosote. One application of either will keep lice away for about one year.

By cleaning the dropping-boards every day, this will help to keep the lice down as much as anything. The birds will be healthier, too, breathing fresh air instead of foul air which rises from the old droppings.

After the pullets are once put in their permanent quarters do not let them out on the ground until next spring when the ground is dry.

The pullets will act afraid of the straw on the floor the first few days, and as they are not used to scratching do not put in over four inches of straw. But after they get accustomed to scratching add another four or five inches. With this amount of litter the birds will be kept busy scratching, giving them plenty of exercise.

### Must Have Right Feed to Lay

To insure success for high egg-production one must have the ability to make efficient use of raw material (feeds) so the pullets can manufacture the eggs continuously. We have to take in consideration when feeding that the pullet or hen can not produce a useful product until she maintains herself first, which requires about 75% of the feed consumed.

As the ground grains are fed dry, large mash hoppers are required having a large feeding surface. This way of feeding the birds can help themselves at all times.

One of the best dry mashes I know of for egg production contains the following ingredients: 100 pounds wheat middlings, 100 pounds oat middlings, 100 pounds cornmeal, 100 pounds gluten, 100 pounds beef scrap, and three pounds salt. You will note that this mash does not contain any wheat bran. The oat middlings contains less fibre than the bran making it more digestible and it has a more valuable feeding value.

The finer ground grains make the best mash, as the birds will waste the coarse-ground grains such as bran and ground oats.

### Ration Must Be Balanced

To give the birds a well balanced ration we have to feed some whole and cracked grains. In the cold weather it pays to feed plenty of corn as this produces heat units, and the fat in the corn will help offset the protein in the mash, helping to balance the ration. Do not feed the same amount of corn in the warm weather as they do not need it. The Mediterranean breeds can stand more corn than the American breeds. The American breeds such as the Barred Rocks, Wyandottes, Rhode Island Reds take on fat easier than the lighter breeds, such as the Leghorns, Minorcas or Anconas.

A good ration for the cold months to feed with the above-mentioned mashes is two parts corn, and one part wheat. In the warm weather cut the corn down to one part, making it half corn and half wheat. Feed twice a day, about one third of the amount of grain in the morning and the other two-thirds about one hour before the birds go to roost.

When feeding the morning grain, scatter it in the litter the night before after the birds are on the roost. Just as soon as it gets light the next morning the birds will get busy scratching.

Keep before the birds at all times in hoppers oyster shell, grit, and charcoal.

## The Outlook for Purebred Live Stock

(Continued from page 173)

never more active, even in war times, than in the last three months, that registrations and transfers have increased 30 per cent over last year and that average sale prices, with nearly twice as many cattle sold, have been \$28 higher than last year. Another secretary reports that the percentage of growth in the last twelve months has been greater than in any of the last ten years. This is a measure of the demand that breeders are finding for their surplus, and of the desire on the part of commercial dairymen to improve their herds. Some of the dairy breeds show less gain in activity than others but all are sharing in the sunshine to some extent.

### Bull Demand Improves First

Demand for purebred dairy bulls has broadened more than for cows. Cows will probably be wanted later. This is the usual sequence in periods of improvement. Bulls are wanted to improve grade herds in response to better market prices for the product. Later, as the business remains prosperous, the desire to start purebred herds spreads and cows find more ready sale.

Much has been said recently of the danger of overproduction in the dairy industry. It is quite possible that the business temporarily will become too popular for its own good, but the time required to increase our dairy stock, to produce good dairy cows, the dislike that many farmers have for milking, the high price of labor, the possibility that feeds may be rather costly in the next year, are factors that will tend to keep the industry within bounds.

The dairy business is known as one of the most stable branches of agriculture.

Cycles of ups and downs, periods of adversity and prosperity are not so conspicuous in its past history as in other classes of live stock. But, there have been some extreme booms in purebred dairy cattle which resulted disastrously. Some breeds have been much more guilty in this way than others. The memory of the collapse of the last boom is so fresh that it will probably be a long time before another such unhealthy situation arises. The improvement in prices thus far leaves values on a sound basis.

### Shepherds in Favored Position

Owing to high prices of lambs and wool for nearly 3 years, the purebred sheep men are probably in the most favorable position of any of the groups of breeders. On both the range and in the corn belt the tendency is to expand production and there is a broad demand for purebred sheep which flock owners find it difficult to supply. The situation varies according to the popularity of the breed but all breeds of sheep are participating. Even the dry weather beyond the continental divide, which covers some of the important sheep states, seems to have had no broad effect thus far on the western demand for rams.

So far as the future is concerned, this period of prosperity for purebred sheep seems to have a long time to run. There is the possibility of tariff readjustments, of course, but there is a world shortage in production of wool which it will take several years to overcome. Since the present price in this country is below the foreign level, plus the duty, the reduction of the tariff would not necessarily cut our prices materially. Nor is there any likelihood that production in this country

will be expanded to a point where we will be independent of outside sources of supply.

Lamb production has a greater chance to catch up with the domestic demand. Nevertheless, relatively high prices for lambs compared with other classes of live stock are to be expected for two or three years yet, and possibly longer.

Briefly stated, in purebred dairy cattle and sheep, where breeders are now enjoying relative prosperity, this prosperous state is likely to last for several years. In those classes where adversity exists at present, the indications are that the beef cattle breeders have already turned the corner and the purebred hogmen do not have much further to go before they will begin to come out of the woods. The draft horse outlook is not so clear-cut, but in that division also, breeders have probably plumbed the depths of adversity already.

### Buying Opportunity Presented

Success with any kind of purebred live stock is a matter of years because of the long time required to build up a herd. Farmers who are in position to take advantage of present prices will find that their dollars have high purchasing power when invested in purebred beef cattle, hogs and draft horses. A given expenditure of funds will buy much more than the usual number of good individuals with meritorious pedigrees. A start made under present conditions means the possession of a surplus of breeding stock for sale by the time conditions have improved enough to put values appreciably higher. Prices of purebred dairy cattle and sheep are not inflated and investments can be made with reasonable safety.

## EASY NOW TO SAW LOGS AND FELL TREES

WITTE Log-Saw Does the Work of 10 Men at 1/20 the Cost—Saws 25 Cords a Day.

A log saw that will burn any fuel and deliver the surplus power so necessary to fast sawing is sure to show every owner an extra profit of over \$1,000.00 a year.

Such an outfit is the Witte Log-Saw which has met such sensational success. The Witte, equipped with the celebrated Wico Magneto, is known as the standard of power saws—fast cutting, with a natural "arm-swing" and free from the usual log-saw troubles. It uses kerosene, gasoline or distillate so economically that a full day's work costs only twenty-two cents.

In addition to sawing from 10 to 25 cords a day, the powerful Witte Engine can be used to run all other farm machinery,—pump water, grind feed, and other back-breaking chores.

Mr. Witte says that the average user of a WITTE Log and Tree saw can make easily \$40.00 a day with the outfit and so confident is he that he offers to send the complete combination log and tree saw on ninety days' guaranteed test to anyone who will write to him. The prices are lowest in history and under the method of easy payments you can make your own terms. Only a few dollars down puts the Witte to work for you.

If you are interested in making more money sawing wood and clearing your place at small cost, write Mr. Witte today at the Witte Engine Works, 6802 Witte Bldg., Kansas City, Mo., or 6802 Empire Bldg., Pittsburgh, Pa., for full details of this remarkable offer. You are under no obligation by writing.

**Peach Tree Borers Killed by Krystal Gas**  
(P-C Benzene) 1-lb. \$1; five-pound tin, \$3.75; with directions. From your dealer; post paid direct; or C.O.D. Agents wanted.  
Dept. C, HOME PRODUCTS Inc., Rahway, N.J.

**PATENTS** Booklet free. Highest references. Best results. Promptness assured.  
WATSON E. COLEMAN, Patent Lawyer, 644 G Street, WASHINGTON, D. C.

## BABY CHICKS

**Chicks** BABY CHICKS C. O. D.  
S. C. Rhode Island Reds... 10 Cts.  
Barred Rocks... 9 Cts.  
S. C. W. Leghorns... 8 Cts.  
Mixed or Off Color Chicks 7 Cts.  
These chicks are all hatched from free range stock. Safe delivery and satisfaction guaranteed. Descriptive booklet free.  
W. A. LAUVER, McALISTERVILLE, PA.

BARRED PLYMOUTH ROCKS  
RHODE ISLAND REDS  
S. C. WHITE LEGHORNS  
Ready for shipment at \$1.00 each  
HECLA POULTRY FARM Bellefonte, Pa.

## CHICKS SEPTEMBER CHICKS FOR WINTER FRIES AND SPRING LAYERS

4,500 husky chicks per week from choice, heavy laying culled flocks. 4 hatches only. \$10.00 per hundred and up. Write for our circular and price list today.  
ATHENS CHICK HATCHERY  
BOX F, ATHENS, OHIO

**BABY CHIX** From heavy laying free range flocks.  
S. C. White Leghorns, 100, \$7; S. C. Brown Leghorns, 100, \$7; Barred Rocks, 100, \$9; S. C. R. I. Reds, 100, \$10; Broilers or Mixed Chix, 100, \$6.50. Special prices on 500 and 1,000 lots. 100% prepaid safe delivery guaranteed. Address  
J. N. NACE, Box 30, RICHFIELD, PA.

**PULLETS AND COCKERELS**  
Purebred Barron Pullets and Cockerels at \$10.00 each and up. Also breeding hens at moderate prices. Descriptive catalogue free.  
C. M. LONGENECKER, Box 40 Elizabethtown, Pa.

WE are NOW booking orders for 12 weeks' old White Leghorn Pullets. All Pullets farm raised, milk fed, hatched from extra heavy laying strain. 500 yearling hens for sale. Chicks and Ducklings at reduced prices.  
IDYDELLE FARM, Wolcott, New York

This superb 110-piece set, with initial in 2 places on every piece, decorated in blue and gold, with gold covered handles, consists of:

- 12 Dinner Plates, 9 inches
- 12 Breakfast Plates, 7 inches
- 12 Soup Plates, 7 1/4 inches
- 12 Cereal Dishes, 6 inches
- 12 Fruit Dishes, 6 1/2 inches
- 12 Cups
- 12 Saucers

- 12 Individual Bread and Butter Plates, 6 1/4 inches
- 1 Platter, 13 1/2 inches
- 1 Platter, 11 1/4 inches
- 1 Celery Dish, 8 1/2 inches
- 1 Sauce Boat Tray, 7 1/4 inches
- 1 Butter Plate, 6 inches

Your Own  
Initial  
in Gold

In Two  
Places on  
Every Piece

- 1 Vegetable Dish, 10 1/4 inches, with lid (2 pieces)
- 1 Deep Bowl, 8 1/4 inches
- 1 Oval Baker, 9 inches
- 1 Small Deep Bowl, 5 inches
- 1 Sauce Boat, 7 1/4 inches
- 1 Creamer
- 1 Sugar Bowl with cover (2 pieces)

# NO MONEY DOWN!

**No C. O. D.—Nothing to Pay for Dishes on Arrival**

Not a penny now. Just mail the coupon and Hartman, the Largest Home Furnishing Concern in the World, will send you this complete 110-piece Dinner Set, and with it, absolutely FREE, the handsome 7-piece Fish and Game Set. It's easy to get this set from Hartman. Nothing to pay for goods on arrival. No C. O. D. Use both sets 30 days on Free Trial, and if not satisfied send them back and we will pay transportation charges both ways. If you keep them, pay only for the Dinner Set—a little every month. Keep the 7-piece Fish and Game Set as a gift from Hartman. It is FREE. Only by seeing this splendid dinnerware can you appreciate its exquisite beauty and superior quality.

## IMPORTANT

Hartman guarantees that every piece in this set is absolutely first quality—no "seconds." This is a standard or "open" pattern. Replacement pieces may be had of us for 3 years. Each piece wrapped in tissue paper. Excellent packing to prevent breakage. Shipped at once.

# FREE

**Full Size, 7-Piece Porcelain Set for Fish or Game**

This beautiful 7-piece set of handsome, durable porcelain comes to you absolutely FREE, when you order the 110-piece Dinner Set. Includes one 11 1/4-inch platter and six 7-inch plates, all with assorted tinted borders and attractive colored designs in center. This complete set costs you nothing either now or later.

Send Post Card Today for Your FREE Copy

## FREE Bargain Catalog

Most complete book of its kind ever issued. Over 300 pages (of which 68 pages are in actual colors) of the world's greatest bargains in Furniture, rugs, carpets, draperies, aluminumware, sewing machines, silverware, watches, etc. 30 days' free trial. Easy monthly terms on everything you buy. Opening an account with us is like opening a charge account at your local store, but you have nearly a year to pay at Hartman's. Send post card only for Catalog No. E6790

## FREE GIFTS

Book also explains about Hartman's wonderful gift plan which brings you, absolutely free with purchases, many splendid articles such as glassware, dishes, silverware, toilet sets, jewelry, table linens, etc.—valuable things for which you would pay high prices at stores.

"Let Hartman Feather YOUR Nest!"

Every article in the Dinner Set has a clear, white, lustrous body, decorated with rich gold band edge, a mazarine blue follow band and two pure gold initials in Old English design, surrounded by graceful gold wreaths. All Handles Covered with Gold. Many expensive imported sets have not such elaborate decorations. Every piece guaranteed perfect.

## 110-Piece Colonial Initialed Blue and Gold Decorated DINNER SET

We will ship the Dinner Set complete, and with it the 7-piece Porcelain Fish and Game Set absolutely FREE. Use both sets 30 days on Free Trial. See these beautiful dishes on your table, show them to friends, use them—then make your decision. If not satisfied, send them back and we will pay transportation charges both ways. If you keep them, pay only for the 110-piece Dinner Set—a little every month. Pay nothing at any time for the 7-piece Fish and Game Set. It is FREE. Send the coupon—now.

Order No. 320FFMA25. 110-Piece Dinner Set. Our Bargain Price, \$33.85. No Money Down. \$4 Monthly. The 7-Piece Fish and Game Set is FREE.

# Why Connecticut Dairymen Believe in Cooperation

*An American Agriculturist Wednesday Evening Radio Talk Broadcast from WEA F*

By C. E. HOUGH

*General Manager, Connecticut Milk Producers' Association*

A LARGE majority of the milk producers in Connecticut believe in cooperative marketing, because they have learned from sad and costly experiences that it is not possible to maintain a permanent and successful milk-producing industry without being organized. Milk production costs in Connecticut have constantly increased with the increases in the price of grain which are partly caused by the higher freight rates on the transportation of grain from the West to the East, as well as increases in all other cost factors, so that it is no longer possible to produce milk in large quantities for the production of butter or other manufactured dairy products in the State. Inasmuch as 75 per cent. of Connecticut's milk is consumed as fluid milk, it became necessary for the producers to find a means of maintaining prices for milk that would cover the increased costs.

## Increased Population Brings Middleman

As the population of Connecticut cities has grown, it became impossible for producers to market their milk at retail except such producers as were located convenient to the markets. The middleman or milk distributor became a necessary agency for the distribution of milk, which must be shipped from areas many miles from the cities. In the absence of an agency to establish a uniform price on milk so handled, the milk distributor was obliged to offer to producers prices for milk that were frequently below production costs, each dealer realizing that he must buy milk at least as low as his competitor.

Individual producers found themselves in the position of having prices dictated to them on every item of production costs and also of having prices dictated to them on their finished product. It became plainly evident that the dairy business could not long survive under such a lack of system and the dairy farmer faced the problem of going out of business, or organizing. They

therefore followed the latter course and formed the Connecticut Milk Producers' Association in 1917. We have not been without our difficulties and troubles. For several years we were in constant conflict with milk distributors who looked upon us as a dangerous factor in their business.

Our production of milk was uneven in volume, often being far in excess of the needs of the market, with the result that the milk was not all salable in fluid form. Many producers would find themselves without a market at certain seasons of the year and as a result of the endeavors of these men to market their product the price of milk often fell below the cost of production. At other seasons of the year production would fall below the needs of the market and it became necessary for the dealers to import milk from distant areas to supply the needs of the markets. Under these conditions many producers criticized distributors for what seemed to them unfair practice, while the distributors were simply protecting their business in the only possible way.

On April 1, 1921, the Connecticut Milk Producers' Association, seeing the necessity of a more even supply of milk, devised a form of yearly contract which was executed between groups of producers and distributors that contained a penalty of two cents per quart that was charged against producers for fluctuations in the supply above and below contracted amounts of milk.

One year's experience with these contracts proved the value of the contract system, but also disclosed a weakness which was that it did not provide a market for all of our members for all of their milk all of the time.

On April 1, 1922, a pooling contract was devised in which the penalty clause was retained.

From that time on we have been able to maintain a market for all of our members for all of their milk all of the time. The money accumulated from the penalties charged against each group of producers is returned to them each month on a percentage basis, which constitutes a reward to the producers who most nearly fulfill their contracts. The use of this pooling contract for nearly two and one-half years has clearly demonstrated that its principles are sound, it having solved the greater part of the surplus problem.

## Pooling Plan Takes Care of Seasonal Surplus

We have found that it is possible to utilize seasonal surplus of milk for human food with advantage to both producer and consumer and our pooling system enables us to so merchandise our surplus milk that none is wasted. It has made possible the establishment of cordial relations between milk producers and milk distributors. It has enabled us to stabilize our price by having stabilized the supply. Milk distributors in our State are now able to secure milk to supply their customers at all seasons of the year without the necessity of losing money on seasonal surplus. Our members can depend upon a permanent market at all times and can, therefore, afford to produce an adequate supply of fine quality milk every day in the year.

The consuming public have confidence in the Connecticut milk industry because it never fails to supply them with an ample quantity of excellent quality milk at prices that are fair to producer, fair to distributor and fair to consumer. By cooperation we have been able to learn the needs of our markets and are thereby enabled to adjust milk shipments to each market in ample quantities by the most direct transportation routes and in large and economical loads so as to eliminate many wastes in transportation that were formerly a curse to the industry and a loss

*(Continued on page 196)*

## When You Speak In Public

*All of Us Cannot Be Orators, but We Can Learn How to Express Ourselves*

By EMMA G. WALLACE

A third pointer well worth remembering, is to avoid exaggerations of expression. As soon as the speaker indulges in these, he arouses suspicion of the accuracy or truth of what he is saying. Reasonable self-restraint, modesty in the putting forward of claims, accompanied by a real sincerity, will make a much better impression than an inclination to exaggerate or overstate.

### Public Speaking a Necessity

IT has been said that one reason why farmers have not obtained all that was their due is the fact that generally speaking they find it difficult to express themselves. Many people know what they want to say but they dread the thought of trying to say it in public, even though it may be just a simple business statement. Most people could stand up and say at least a few words in a pleasant way if they would just make the effort.

With the coming of fall, Grange and other local farm meetings will commence again. Therefore, we think you will be interested in the article on this page giving a few hints about speaking in public.

A fourth principle to remember is that oratorical effects are to be avoided unless one is really a finished and trained orator. Such attempts are likely to make the amateur speaker somewhat ridiculous. One very well-trained public speaker declares that he even avoids exaggerated inflections of the voice which would be intended to make his meaning clear, for he assumes that his audience is intelligent and able to follow a logical, plainly expressed discourse without the aid of verbal gymnastics on his part.

Mannerisms which distract the attention of the

hearer are to be avoided. These are usually the result of nervousness, although sometimes they are habit.

The writer recalls hearing and seeing a widely-advertised speaker who assumed the most distressing posture. With both hands, he clutched the back of the collar of his coat, and he clung to this part of his garment with frantic intensity throughout a long address. It made his audience very uncomfortable and amused some of them.

Some speakers rock back and forth from heel to toe in a sort of dizzying motion. Others scowl and never permit a really human or genial expression to flit across their countenances.

Thrusting the hands into the pockets, clasping the hands behind the back, or continually fumbling with some article like a handkerchief, are all mannerisms to be avoided.

A very good rule is to be simple, to be natural, to forget oneself, to have something worth-while to say, to say it clearly, and to support the saying with provable facts—then

when the message is finished, stop.

It is often remarked that certain speakers have poor terminal facilities. That is, they do not know how to close what they have to say. There is an art in starting with a striking sentence which will challenge interest, and there is an art also in closing before the audience is wearied or the impression of the message is blurred by unnecessary after-remarks.

The public speaker who is successful even in a small group, is clear-cut, straightforward, direct, and reasonably brief.

IF we have a message to deliver, or something to say which is really worth listening to, we ought to be willing to give a little attention to the manner and method of utterance or delivery.

Many a fine message is spoiled because the one who gives it is not plainly heard or clearly understood.

It is very tiresome as we all know, for anyone who sits in an audience to hear part of what is said and to lose the rest. The interest is broken and usually the finest points of all are lost.

Public speakers who are successful, nearly all cultivate the habit of clear—very clear, enunciation. This is absolutely necessary, because in a room large enough to accommodate a number of people, there are sure to be echoes or acoustic properties which will tend to muffle the voice or to make the words seem to run in together. Clear enunciation is the remedy for this.

Then we can not enunciate clearly if we indulge in rapid-fire speech. The successful public speaker, again, is inclined to talk slowly but without dragging.

There is a reason for this, and a good one. The listener in the audience does not know what is coming in the way of description, explanation, or statement of fact, while the speaker has all this worked out and ready to pour forth. If the speaker talks too fast, tumbling one idea rapidly on top of the other, the listener is bewildered, and while he is assimilating one idea, loses two or three others. The thoughtful speaker will consider his hearers in this regard, and will be reasonably deliberate in speech for his own benefit, as well as for that of the audience.

## How One Boy Changed His Mind

*The Big Problem—"To Be or Not to Be"*

By ARTHUR K. GETMAN

NO, I'm not interested in farming," said Henry, and he emphasized his words by firmly shaking his head and tapping the hay rigging against which we were standing. The director from the State school of agriculture in the adjoining county and I had just driven into the yard of Wm. Wilkinson, Henry's father, and had found Henry coming out of the house from supper. We introduced ourselves saying that we were looking for boys who were interested in farming. Henry was the eleventh boy we had visited that day and his answer to our first question was not the first of its kind we had received.

"Do you mean that you don't like farming or that you have made up your mind not to be a farmer?" inquired the director. "I like farming well enough but I can't see any future in it," replied Henry. "There's not much to attract a young fellow to a business where a man works for almost nuthin'. Pa's milk checks for the past six months have scarcely paid for the feed and labor, say nothing of other expenses. I thought when I quit school three years ago that I would stick to farmin', but what's the use o' sticking when everything is breakin' against us?"

"Farmers have been hard hit," I put in, "but every cloud has a silver lining. The August price of \$2.60 for milk, and the better prices for wheat, corn and hogs make things look a little brighter. The farmer has been at the bottom of the price scale before but he came back after a few years."

"What's that about prices?" broke in Mr. Wilkinson who had come up behind us. "We don't pose as farm price experts," I said. "We stopped for a chat with Henry and you and his mother regarding his wanting to farm and to see if he was interested in taking one of the courses offered at the State school. The director and I are interested in bringing home to the older farm boys of this region the opportunities which are open to them for training in farming. Henry had just said that he wasn't interested in farming because he couldn't see any future in it."

"Well, can you blame the lad?" asked Mr. Wilkinson, "with things stacked against the farmer the way they are?"

"You're right, Mr. Wilkinson," said the director, "these have been discouraging times but as Getman was saying as you came up, prices are looking up a little. Farmers have been in the slough before. I remember my father telling of selling as good corn as ever grew for 12c a bushel. Then in a few years came better prices."

"The price question is interesting and pretty well tied up with what we came here to talk about," I suggested. "As I see it, the young fellows with plenty of good farm experience have a lot to think about just now. The experts, the college professors, and the United States Department of Agriculture all seem to agree that conditions

MUST improve for farmers. Of course they can't say just when. No one can. But the outlook for better conditions is worth taking a chance on, since all business involves certain elements of chance. My point about the young lads is just this: In five or six years they will be stepping in and assuming more of the business responsibilities of farming. Some will be in partnership with their dads, others will be renting, while still others will be operating their own farms. A little look ahead now will enable them to profit by the misfortunes of others. The greatest difficulty now is that the farmer's dollar isn't worth only

Here is a class in mechanics at one of the New York State Schools of Agriculture, learning "how to do." There is no greater need on the farm than that of a handy mechanic, and it always seems that a job is twice as easy when you "know how."

about 70 per cent. as much as the laborer's and factory worker's dollar. The things the farmer buys are expensive and the things he sells are cheap. With better times in the open country, the farmer's dollar will again come back to its 100 per cent. purchasing power. The lad who gets ready now to farm a few years hence is doing what everyone wants to do on Wall Street, 'buy low and sell high.'"

"That sounds a lot like guesswork to me," said Henry. "How do you or anybody else know that's going to happen?"

"We don't KNOW for a certainty that Getman's statement will come true," said the director. "The only things we're sure of are 'death and taxes.' There are men, however, who make a business of studying prices and financial questions and with the facts which they have gathered over a period of a hundred years or more they are able to predict quite accurately what is likely to happen. On the point which Getman made, Dr. Warren of the State College of Agriculture has made some definite suggestions to young men, based on his careful studies of prices and agricultural conditions. Have you a copy of Warren's statement?" turning to me. I fumbled through my brief case and produced a recent issue of Farm Economics. "Here it is," said the director, and read the following:

"This is a good time for a young man to prepare for farming. One who studies agriculture now probably will be ready to start farming when he can buy a good farm business at a low price. From the long-time point of view farming promises as desirable a mode of life as ever. The present panic is causing the loss of the life-time savings of thousands of thrifty persons who happened to start farming too recently to be out of debt, but the man who begins when prices are at the bottom may actually profit by the disaster to agriculture."

"Well," said Mr. Wilkinson, "I haven't any way of knowing all the facts in the case but I have got faith in Dr. Warren. I heard him at Farmers' Week a few years ago, and he certainly knew what he was talkin' about then. You men have set me to thinkin' along a new line. Henry's mother and I had about made up our minds to help him get a job in the city, or possibly go to a commercial school. We have all talked about the occupation which Henry thought he ought to follow. He likes farming and he is a good hand with stock and a team. He didn't get along in the district school so he quit at 14. I wanted him to go on to High School, but he was convinced that there was nothing up there that would help him much in farming. At that time he figured on staying on here with me. I've got 200 acres here and a good start on a Holstein herd. His mother and I both want him to have more education than we had."

Discovering the ever-present parental concern for the welfare of a son, the director was quick to fan the spark of interest, by suggesting: "It is for just such boys as Henry that schools like ours were established. We take any boy 16 years old of good moral character who wants to be a farmer. We like to get boys of Henry's type because he has already had a valuable farm experience that will make our instruction mean so much more to him."

Henry rather reluctantly displayed a little interest by asking, "How long's the course?" "You can come for a short winter course of a couple of months, for a one-year course, or for a three-year course. We try hard to get the boys to stay for the three-year course because we can give them so much better training," replied the director.

"I hate to admit it, boys," ejaculated Mr. Wilkinson, "but we ought not to get too interested in this proposition because, to be honest with you, I haven't got the money to send Henry away, and besides if he went I would have to hire a man and that would mean extra expense and a good man is almost out of the question now anyway."

"You needn't feel badly," I said. "We have been visiting upwards of a hundred boys and their parents and the questions of hired help and financing are stumblers to most every one.

## School Days

"School days, school days,  
Dear old golden rule days,  
Reading, and writing, and 'rithmetic,  
Taught to the tune of the hick'ry stick"—

ALL over the land the school bells are ringing again after the long vacation. On our way to work into the fields or office, as we hear them ring, and as we see the thousands of little tots going down the street or country road, there will be some of us, as there always have been, who will wonder "if all this education business is worth while."

Certainly we have the right to do some questioning, when we come to pay our school taxes, for they are the largest single item of our tax bill. There is no doubt either that of all the millions that are going into education some of it is being misspent and some of it wasted. There is any amount of room for improvement.

But when it comes to the general question as to whether or not education pays, there can be but one answer. It not only pays, it is an absolute necessity. Without it, America could never have been possible. The building of the log school-houses by our pioneer fathers was second only to the building of the log cabins and the community church. Well they knew that a government of the people could not succeed if the people were illiterate.

Universal education is objected to by some because they claim there is danger that we will have nobody left to do the heavy work of the nation. Always in the old days the aristocracy fought any tendency toward the education of the masses. They knew full well that their own security depended upon keeping poor people in ignorance. This "mud-sill" theory was shown up by Lincoln years ago. He said:

"According to that theory, a blind horse upon a treadmill is a perfect illustration of what a laborer should be, all the better for being blind that he may not kick understandingly.

"According to that theory, the education of laborers is not only useless, but pernicious and dangerous. In fact, it is, in some sort, deemed a misfortune that laborers should have heads at all. Those same heads are regarded as explosive materials, only to be safely kept in damp places, as far as possible from that peculiar sort of fire which ignites them. A Yankee who could invent a strong-handed man without a head would receive the everlasting gratitude of the 'mud-sill' advocates.

"But free labor says No. Every head should be cultivated and improved by whatever will add to its capacity for performing its charge. In one word, free labor insists upon universal education."

Commenting upon this in *Harper's Monthly*, David F. Houston, formerly Secretary of Agriculture, says:

"I agree with Lincoln. I am not prepared to surrender my most cherished conviction that only through true education may the masses of men hope to attain higher levels of right living, efficiency, and well-being, and democratic institutions be assured of stability and permanence. The

people of the nation may be badly or wrongly educated, but they will never be over-educated."

So as the school bells ring and the young folks, big and little, go down the road to district school, high school or college, most of us will be glad to see them go. Most of us will try to give them an encouraging lift over some of the hard places; and the majority of us, knowing that we cannot leave our children much in the way of material possessions, will be glad if we can have a hand in leaving them something that neither moth nor rust can corrupt, nor thieves break through nor steal—a right education.

## The State Fair

AT the time of the World Fair at St. Louis, years ago, there was a song that grew to be quite popular that started off something like this:

"Meet me at St. Louis, Louie,  
Meet me at the Fair."

Sitting in the AMERICAN AGRICULTURIST tent at the New York State Fair this year, we were reminded quite forcibly of that old song. You will remember that in a recent issue we called attention to our plans for putting on a concrete demonstration of the AMERICAN AGRICULTURIST at the Fair. We had a very large tent, and in this tent were many of the samples of the merchandise which were advertised in AMERICAN AGRICULTURIST, together with charts and other display material showing what we are trying to do in the way of publishing a worth-while farm paper. Birge Kinne, of our staff, was responsible for the exhibit in the tent, and he and his assistants can feel fully repaid for all of their work by the large amount of interest shown by our friends when they visited the tent.

In spite of the rain and the cold, disagreeable weather, thousands of people visited us and a count showed an average on one of the rainy days of something like fifty people in the tent every ten minutes. We made no special effort either in the tent or elsewhere on the grounds to embarrass people by urging them to subscribe to the paper. We preferred to have the paper speak for itself.

It did give all of our staff an opportunity to renew old acquaintances and to make new friends. After all, that is the best part of any fair or picnic. Exhibits are worth while, but the real pleasure of such an occasion is in shaking hands with old friends and finding out how the world has been using them since we last saw them.

## Read This to Your Boys

PERHAPS the finest thing about this nation of ours is that it is, and always has been, truly the land of opportunity. Pick any ten leaders in any walk of American life, either in the past or present, and it will be found that more than half of them every time had no start in life except their own ambition and ability.

A few years ago a party of railroad presidents was on its way in a private car to attend a conference in Chicago. Looking out of the train in the early morning, one of them saw a boy starting a herd of cows from the pasture to the barn for the early milking. It was a cold fall morning, and the boy was barefooted. Every time he would drive up a cow from where she had lain during the night, he would stand on the warm place for a moment to warm his feet.

The railroad president called the incident to the attention of the other men, and it developed that some eight out of the ten had had a similar experience.

The Governor of the Empire State was once a newsboy on the streets of New York City. The President of these United States was born and raised in a little farmhouse where his father still lives, which is far more humble than most of the homes where AMERICAN AGRICULTURIST is read.

The man who perhaps has had more responsibility for bringing about world peace than anyone else, not excepting even General Dawes, is Owen D. Young. Mr. Young was born and reared on his father's farm at Vanhorns-ville, Herkimer

County, New York. He still runs the old place and returns there often. He says that he likes to get away to this farm and perch on a rail fence to think out his hard problems. With his characteristic smile, he says: "I sit and think, but mostly sit."

One of the newspapers of Germany has christened Mr. Young, "Owen the First." When General Dawes was making his study with the Reparations Committee he was closely associated with Mr. Young, and turned to him constantly for advice and information about the intricate problems of Europe and Germany's financial difficulties. It was General Dawes himself who said: "Go and talk with Young. He knows more about it than anybody else."

When it came to setting up the machinery which will practically rule Germany under the Dawes plan, it was agreed by all the Powers that Young was the one man who could do it.

But the interesting thing to farmers is that this man, regarded as one of the most powerful figures in the world, comes of a farmer breed. His family has tilled the same farm since 1750. His ancestors fought in the War of 1812. As a boy, Owen himself drove in the cows, helped to milk them, and took the milk to a cheese factory at Vanhorns-ville. It is said that, like Lincoln, he took books with him into the fields. One wonders which got the most attention, farm work or books.

One day he went to the county court at Coopers-town and became interested in studying law. But it was difficult to get money to send him to school and college. Finally, through the help of an uncle, he started school at the academy at East Springfield, and every morning his father took him to school with a cheese box containing food enough to last the week. Then the father borrowed a thousand dollars and sent Owen to St. Lawrence University. From there he went to Boston Law School, and on graduation, his advancement was rapid.

The name of Owen D. Young will go down in history as one of a few men who did so much for humanity by helping to bring to an end the European chaos following the World War. His name will also be pointed to with pride by American farmers as another of the many great leaders of American life who started their careers as barefoot farm boys, chasing the cows out of the hilly pasture lot.

## Eastman's Chestnuts

ONE of the things that used to be utterly discouraging to me as a boy was to work all day with a hoe in a corn or potato field chopping out quackgrass, then to lay off for a welcome rest on a rainy day, and return to find the quack showing between the hoed rows as green and as flourishing as ever. To me, there is something peculiarly eternal and persistently everlasting about the way grass, particularly quackgrass, always comes back. It is the irony of fate that the grass which we as farmers may tramp on for a lifetime or ruthlessly cut at haying time, always in the end turns the tables on us by growing over our graves.

"Ye were many, ye were mighty, and your feet they trampled hard.

They have trampled down the mountains and the sea;

Aye, the sea ye have conquered, but within this quiet Yard

It is I, the Grass, am master; hark to me."

Perhaps you will think that this is strange talk in a corner where you are supposed to get a joke, but maybe there is something of grim humor in the way grass conquers us all in the end. We can painfully grub it out with a hoe, bury it with a plow, starve it by fallowing, but if quackgrass is once well rooted, it will still show green between the corn rows, long after our hoe and plow have rusted out, and long after we ourselves have ceased to care.

The one and only remedy for quackgrass was well stated by the farmer who said that he had fought it, and wrestled with it, boy and man, for forty years, but at last he had concluded that "THE ONLY CURE FOR IT IS TO DIE AND LEAVE IT!"

# From Our Friends, Deliver Us!

## How a Friendly Law Has Become Unfriendly

**R**IGHT on the spur of the moment I can't just put my finger on the person who said, "Could I write the nation's songs, I care not who makes its laws," or words to that effect. But I wish to state most emphatically that that boy said a mouthful.

Of all the songs that ever came down the pike, including, "Yes, We Have No Bananas," "It's Night Time In Italy," and a few other classics, there has never been one that has had the far-reaching and demoralizing effects on the farmer as some of the investigations and "nut" laws that have been instigated and passed by the so-called friends of the farmer—Farm Bloc and blockheads in their various functions.

After divesting myself of such unpatriotic, seditious and anarchistic language, I expect that some one in the audience will arise, point the finger of scorn, and say in tones of biting sarcasm, "There is another of your unassimilated, foreign born."

Nothing doing, Son, you've missed it by a rod. My great-great-grandfather came over, not on the *Mayflower*, in fact there were no flowers on the old tub he sailed in, which was so slow that the old gentleman, then in the prime of life, used to jump overboard and swim alongside the ship for pas-time, so that's that!

### The Cause of the Tempest

But, what has caused this tempest in my "Teapot Dome," is the fact, that my brother and I have been holding a council over the remains of a once strong and robust grain binder. Whether it be the irony of fate or otherwise, in the dim outline of the gold letters, that once made it a thing of beauty, can be traced the awe-inspiring name "Columbia."

After applying the x-ray, we diagnosed the case as a diseased knotter and a germ-laden pinion. By performing a minor operation of removing the infected parts and grafting on the new ones, we could make the old binder physically fit to last out its allotted span of three-score years and ten.

But alack and alas! After having the various agencies at our command, on a "still" hunt of the State and a portion of the United States, they can not find as much as a guard bolt for the D. M. Osborne machinery.

Now, the aforesaid gentleman that pointed the finger of scorn, will rise again and remark in caustic tones, "What has all this to do with our various law-makers?"

Well, it has this to do with our law-makers. It is but a short time, as time goes, since the Osborne machinery was an integral part of the International Harvester Co. The extras were well distributed along with their other machinery. But, some well meaning but misguided official declared that The International Harvester Co. was a cruel octopus that was sucking the life blood from the farmer until he was a staggering wreck of anemia. Thereupon they ordered the International Harvester Co. to cast the Osborne Co. with its various parts into outer darkness. And with one raucous chuckle of glee, they cast—and with it, thousands upon thousands of dollars worth of Osborne machinery, that with extras, which all machinery requires, could be made to last for years.

This in no way hurt the International Harvester Co. But the Osborne, useful and otherwise, has passed into oblivion.

I wish to state right here, that I have yet to meet that farmer who cares three whoops in the "hot place," whether he has to pay five cents or

five dollars for an extra if he can get it when he wants it.

Now, this is what it is all about!—A. J. KELLY, St. Lawrence County, N. Y.

### "He is the Bulwark of the Nation"

**T**HE "Rube," the "Hick" and the "Hayseed" have almost passed into oblivion. These words, which used to be regarded by some city folks as typifying all farmers, are nowadays seldom employed, unless it may be in connection with the remembrance of some ancient, moss-covered joke, or called forth occasionally by an out-of-date, small-time vaudeville comedian.

Time was when a presumably intelligent city audience would collapse with mirth when ap-

bitter; unwilling to cooperate; a selfish impediment to progress.

It is easy to understand how these impressions have been brought about. The American farmer who has successfully survived the trying agricultural conditions since the War is of necessity a keen manager; long hours of hard labor and a sharp account of leaks have been his only salvation. But if the general public were aware that when they are paying, for instance, 12c a quart for milk, the producer is receiving only about 3c; that the farmer is practically the only salesman in the world who does not have the privilege of setting a price on his own goods, but must ask, "What will you give me?"—they would hesitate to place the blame for high prices at his door.

Those who have exploited the farmer, "skinned" him with sharp schemes and abused his confidence, have made him justly skeptical and suspicious of strangers. You have only to prove to him that you are sincere, however, when you find that his assumed exterior of suspicion melts away in the handclasp of a real, heart-warming friend.

The time will come, nay, is at hand when the tiller of the soil will be appreciated at his true worth. This country is full of boys grown to men, who possess the powers of health and character, the thought and expression of which have placed them in positions of highest influence. They are spreading the credit for what they have accomplished, to their beginnings back on the farm. They know that only from the land and growing things can boys learn the lessons which develop self-control, form honest, Christian character, inspire ideals of the love of God and the duty of daily, worthwhile service.

The typical American farmer is neither a fool nor a knave. He is the bulwark of the nation; the foundation of character; the embodiment of honest toil and peaceful progress.

The boy leaving High School now, or soon, who loves to work with nature and battle against the elements of destruction in plant and animal life; who can catch the vision of helping to feed and clothe the world, will read in the ever-changing attitudes and conditions of men that if he is prepared three or four years from now, the biggest opportunity for independence, influence and happiness will be his **ON THE FARM**. With agricultural education, modern machinery and methods he will stand on the shoulders of his fathers and realize as no generation has hitherto realized, that as George Washington said, "Agriculture is the most healthful, the most useful, the most noble employment of man."—L. G. THOMAS, St. Lawrence County, N. Y.

But There's Still More Tape Line

Capper's Weekly

peared before them the "Rube" characterization; awkward, gangling, rude of speech, lacking in brains; never complete without patched overalls hanging by one shoulder strap, a torn hay hat, and an elongated chin whisker bobbing with the rhythmic exercise of the huge "chaw of terbaccer." His steel "specs" must always needs be worn halfway down his nose and never used except to peer over. But the thing that never failed to bring down the house was the regularity with which he punctuated his patter, turned his head toward a knothole in the floor; emitted a squeak, and impersonated a fire hose. His expert aim naturally came (the audience supposed) from his long practice at the grate of the kitchen stove.

Lack of contact between city dwellers and farmers, before the advent of modern mediums of education such as reliable daily and weekly world news, automobiles, motion pictures, farm co-operatives, radio, etc., engendered an impression that the average farmer was a lazy, uncouth, no-account, good-hearted, easily led fool. They were partly right. His heart was big and tender, with few exceptions; it was easy to take advantage of his faith in human nature.

A similarly erroneous notion seems to exist to-day in the general city mind. The man who lives on the land is visualized as a hard worker but a sharp bargainer; a keen business man, prosperous, but never content with "awful prices he is getting for his products"; suspicious;

"Thought you said you could sail a boat!"  
"Well, we're over two miles from where we started, aren't we? What d'ye suppose I've been doin'—playin' golf?"—Humorist (London).

## Try one Kelly Commercial Cord on your car or truck

So far as we know, there never has been built another pneumatic tire with the wearing qualities of the Kelly Commercial Cord.

First developed to meet the need for a dependable truck tire, it gave such amazing service that people who were using it demanded it in passenger sizes, too.

It is now made in sizes from 30 x 3½ to 40 x 8 and in every size you will find the extra strong sidewalls, the tough, massive tread and the reinforced shoulders that have placed the Commercial Cord in a class by itself.

Whether your driving is done over good roads or bad, if you want a sturdy, rugged tire that will outwear any tire you have ever used, try one Kelly Commercial Cord on our recommendation.

### Kelly-Springfield Tire Co.

250 West 57th St.

New York

## Fall for Setting Trees

Locality Influences the Practice—Market Outlook

I NOTICED in the A. A. about a year ago David S. Kelsey states that fall is not "the best time," nor even as good as April for transplanting trees, but due to more "leisure time" to do a thorough job, seems to be his only motive for advocating fall-setting of trees.

Right here is where Mr. Kelsey and myself fail to agree. We have been in the fruit or orchard business for fifty odd years and I prefer fall setting to spring-setting, regardless of how "carefully or carelessly" the work may be performed. Under no circumstances would I discard fall-setting for spring-setting. Far more trees die when set in the spring than in the fall.

Common-sense or good judgment teaches us that fall is decidedly "the best" season for doing the above work, and again, we don't have to be so careful as to how it is done as we do in the spring. Just so the tree is stuck in the ground at this season you can count on 99 out of every 100 living, though, of course, it is always best to do the job properly. This is not the case with spring-set trees, as nine times out of ten when the work is "carefully" done at this season, at least one-third of the trees will die or get stunted so as they will never revive or amount to anything, as far as bearing fruit is concerned.

While trees may be set any time from September up to December, yet I prefer doing this work during the month of October. Trees set at this season seldom die, because the soil is usually of a wet or moist nature, therefore will make good root growth before cold weather sets in. Consequently it will be ready to start off and make a rapid growth when spring arrives and will also suffer far less if the spring should happen to be unusually dry.

On the other hand, when trees are not set until spring they are apt to die, at least a large per cent., from lack of moisture, as hot suns and warm drying winds before the roots take hold or get well established, prevent securing moisture from below. Consequently there is nothing left for the tree to do but die. Right here is one great advantage of fall setting over spring setting. I don't care what others may say, but give me the fall set tree every time. Let's hear from others.—H. H. HARRISON.

Yes, here is a good topic for discussion. Mr. Harrison comes from quite a bit farther south than most of our readers. He resides in West Virginia. Mr. Kelsey's practice would be more general for average New York conditions. Let's have some more opinions.

### An Orchard Doctor-Book

JOHN MANLEY of my vicinity is using a plan in fruit culture that is saving him a good many extra dollars each year. He calls it an orchard doctor-book, and was put into practice because Manley wished to grow his own fruit without a tedious course in orchard practice. Three years ago he bought a ledger, 10 x 12 inches for \$1.00, and upon the cover he wrote "Orchard Diseases—and Remedies." At the top of the first double leaf, he wrote "Peach," the next was "Apple," then "Pear," and soon. Under each variety he sets down from time to time different diseases common to that tree, and the remedy, if it is known.

"Now when a disease attacks my orchard, or the trees of my neighbor, I take down my ledger and can usually find a remedy without further trouble," Manley explained to me, recently. "The information is practical and has been tested out by a competent orchardist before being recorded in my book. I have all the common sprays listed, recipes for same, with dates for using each. Also items on grafting and budding.

"This information was added in various ways. Much of it was clipped from farm papers. My county agent has supplied a good part, and I have obtained some from talks with successful orchardists. When attending a farmer's meeting or institute, I always have a note-book with me, and if fruit-trees are discussed, I take down such items as might prove helpful in my own orchard. That night, the items are transferred to my ledger. Scarcely a week passes that I do not add something, and my list has grown without cost into a mine of reliable information.

"By the help of this book, I have been able to keep my fruit-trees free of disease and insect pests, so common in my community. I have nipped several tree-destroyers in the bud, by knowing just what to do at the start. Reading the book in spare moments has given me a good course in orchard culture.

"No time was taken from my regular farm work to prepare it, as much of the information was recorded during evenings, after the chores were done. So far, it has paid for itself many times over, and has furnished me a working basis for a better fruit grower."—F. R. COZZENS.

### The Fruit Outlook from the Market End

ALONG about this time fruit men are beginning to feel quite anxious for the outlook for the crop. The other day we were down in the market and had an opportunity to talk to one of the large operators in domestic and export trade. "In general," he said, "there is very good active demand for and fairly lively trade in good apples. The situation in general seems to be very favorable. There is good demand for both red and green varieties." To us this sounded pretty good.

Wealthy are bringing \$2 a bushel basket for good stock and are entering into active trade. Barrelled stock that is of good uniform pack has been bringing from \$4.50 to \$5 with ease. New Jersey is shipping Codingtons, a green apple that is bringing anywhere from \$1.50 to \$2 a bushel, depending on pack. Baskets that contain 2½-inch stock and are faced with 3-inch command \$2 readily.

### Future Buying Active

There is quite a little business being done in futures. Hudson Valley Greenings for future delivery are being quoted anywhere from \$4.50 to \$5 F.O.B. for 2½-inch A grade stock. There has been quite a little of this advance buying and the prospects are that trade will be good.

Some Baldwins have been bought, it is reported, at \$4.50 F. O. B. Advices from Western New York are conflicting. In general it seems that the Baldwin crop is poor, at least the pros- (Continued on page 200)

"S'matter wid de kid?"  
"Oh, he just eat some apples 'n they don't fit."—Life.

# What We Saw at the Fair

## Horseshoe Pitching Contest a Success

WE HAVE been going to the Fair at Syracuse for quite a number of years, and sometimes we are inclined to agree with the man who said the other day in reference to the Fair, "if you have seen one of them, you've seen them all."

But this depends upon whether you go to make a real study of the exhibits or to just walk around in a casual sort of way. There is a difference, and from the standpoint of the exhibits the State Fair this year was the best we have ever seen. This is true whether the exhibits were judged on the basis of quality, variety of products, or as representative of the agriculture of New York State.

In our opinion, the outstanding show from a farm standpoint at the Fair this

just a "bunch of good cows," and this has little value from either an interest or educational standpoint.

Not the least of the exhibits were the junior projects, put on by the boys and girls of the State who have excelled in home-making projects or in growing some very excellent crop or animal. This is the kind of work that will not only keep the children on the farms, but will give them an early interest in the business that will insure their economic success, and, better still, their happiness as farm people of the future.

One of the most interesting and worthwhile things at the Fair was the model rural school building, exhibited by the State Education Department, under the

### Individual High Scorers in the Finals

Roy Clark won the Silver Cup presented by Henry Morgenthau Jr. Publisher of American Agriculturist.

	Won	Lost	Pts.	Ringers	D. R.	S. Pitched	Pct.
1. Roy Clark	4	1	97	28	5	170	.165
2. Herbert Coy	3	2	87	23	3	154	.149
3. J. P. Moran	3	2	83	26	3	120	.217
4. Alton Coy Jr.	3	2	80	19	1	192	.099
5. John Monks	1	4	59	5	0	190	.025
6. Alden Ball	1	4	55	16	0	190	.084

year was the county agricultural exhibits put on by the farm bureaus. The farm bureaus have been going to the State Fair for several years with these exhibits, but this year they really outdid themselves. No one could make even a light study of these county booths without getting a good idea very quickly of the agriculture of that particular county. We think a lot of credit is due to the farm-bureau managers, and a lot also to E. C. Weatherby, whose long experience enabled him to superintend the staging of these county exhibits so that every worth-while point was brought out.

In the same building with the farm-bureau exhibits was the show of farm products of New York State. No farmer could walk through and note the great variety and high quality products of New York without being proud that he was a farmer and had a part in food-production. While we were looking over this display a little country boy and girl, not more than ten or twelve years old, came in lugging a pumpkin nearly as large as they were. "Say, mister," said the boy, "where can I put my punkin?"

We brought it to the attention of

direction of Mr. Ray Snyder. This one-room school was filled with interested visitors from the beginning to the end of the Fair. The building contained adjustable seats, an ideal heating plant, exactly the right amount of light, ideally colored walls, and was altogether a very attractive environment as an ideal place in which the youngster could spend the most of his waking hours. Perhaps the best part of this rural school-building demonstration was that it showed how a district at very small expense could redecorate the inside of a school building, changing it from a dull, dreary place to a very attractive one.

We think we may say without undue enthusiasm that about the biggest thing at the Fair this year was the AMERICAN AGRICULTURIST Farm Bureau Horseshoe Pitching Contest. There were over fifty entries coming from many different counties from all over the State, and each contestant had been a winner in a local county contest. In spite of the fact that most of the pitching had to be done outdoors, and that it rained so that the courts were in an almost impossible condition from the mud, the enthusiasm

Superintendent Riley, and although it was past time for the closing of entries, Mr. Riley entered the pumpkin. It was worth at least a small prize.

In our opinion, that is what the State Fair is for, to encourage folks, particularly the young folks, to grow farm products with enough pride to want to show their work at the agricultural fairs.

There was the usual fine array of cattle and horses of every breed. A list of leading prize-winners will be announced next week. Sufficient to repeat here a mild criticism we have made before. It is our thought that a large part of the value of the animal exhibits is lost because the individual animals are not described, and in the general show one means little more to the average public than another. As shown on the present plan, they are

of the pitchers could not be dampened. Finally, it got so bad, that upon insisting upon it, we were allowed space inside of the coliseum where the finals were pitched. Names of the winners together with their scores are shown in the table on this page. We expect to comment more upon this horseshoe-pitching tournament in a later issue, but we want to take this opportunity to thank all of those who took part and say to them that this was our first time, that we hope they will come again next year when there will be better weather and when we will know more about how to run such a big enterprise. Especial credit is due to G. E. Snyder, of Rochester, who acted as general manager and referee, and to D. D. Cottrell, of North Cohocton, who did such efficient work in keeping the records.

# LUMBER!

PER THOUSAND FEET \$9<sup>00</sup>

**LAST CALL!** This startling offer is made because we must vacate Government land. Price is for good sound seasoned lumber in carload lots of 16,000 feet or more to the car. Includes flooring, ceiling, drop siding, sheathing, 2x4, 2x6, 2x8's in lengths up to and including 8 feet. Fair proportion of each length guaranteed. No orders accepted for specified lengths at the \$9.00 price. This price good only while present surplus stock is on hand. Orders filled promptly as received. Suitable for all sorts of farm, out buildings, elevator cribbing and general repair work.

### Along with the Remarkable Value Above

We offer lumber in regular speckled lengths at the lowest prices. All sound, seasoned, southern pine guaranteed free from nails and full measure.

### 5% Discount

will be allowed on all carload Lumber orders of \$300.00 or more received during the months of September and October when cash in full accompanies order.

### The Last Call!

The last and best of our 12 large Army Campments. BUY NOW! Don't Wait! Prices on lumber are advancing.

### 2 x 4s 2 x 6s and 2 x 8s

# Among the Farmers

## Onondaga First in Farm Bureau Exhibits

ONONDAGA COUNTY was awarded first prize in the annual farm bureau contest at the State Fair, for the best representation of each respective county's agricultural resources. The ten highest, as rated by the judges, were: Onondaga, Seneca, Tompkins, Cayuga, Cattaraugus, Fulton, Clinton, Madison, Niagara and Sullivan.

## Farmers' Standard Carbide Committee Meeting Postponed

THE meeting of the committee appointed to investigate the affairs of the Farmers' Standard Carbide Co., scheduled for September 6th, has been adjourned to September 20th. Our attorneys who have been investigating this, advise us that they are informed a notice for a regular stockholders' meeting will be sent out for that date, and that this notice will ask for authority to sell or mortgage the property. It is possible that some report in connection with the proposed reorganization will be presented at this meeting. In view of the exceedingly large capitalization of this company and the great amount of stock outstanding, the reorganization will not be an easy problem, and careful consideration must be given to any proposed plan. Apparently, the committee is making a conscientious effort to serve the best interest of stockholders, but before the plan is presented, it is impossible to state whether it is for the stockholders' best interest to accept. Our attorneys believe that no hasty action should be taken and that the STOCKHOLDERS SHOULD NOT CONSENT TO ANYTHING until they have been fully advised as to all the facts. A further report will be given after the meeting of September 20.

## Western New York Fruit Cooperative Reorganization: Peet Resigns

THE Western New York Fruit Growers' Cooperative Packing Association is in the process of reorganization, both as to management and policy. The outstanding changes are the discontinuance of the operating department, the substitution of Government inspection for association inspection and the reduction of overhead. The discontinuance of the operating department means the resignation of Nelson R. Peet, general manager of the entire association and one of its organizers, as well as the resignation of R. W. Reese, manager of that department. Mr. Peet is succeeded by W. J. Hall of Lockport, president of the association, who will take temporary charge. L. E. Water of the Chicago office of the Federated Fruit and Vegetable Growers, has been made sales manager.

## New York Guernsey Breeders Appoint Business Manager

B. J. H. RIKERT of Schultsville, Dutchess County, N. Y., has been appointed business manager for the New York State Guernsey Breeders' Association, Inc., with office at 302 Fayette Park Building, Syracuse, N. Y.

Mr. Rikert was born and reared on a general dairy farm in Dutchess County. In college he specialized in Animal Husbandry. During his senior year he was student instructor in Animal Husbandry and also had charge of two classes of short course students. In the fall of 1920 he won both silver prizes in judging horses and cows at the State Fair.

## Veteran Driver Killed at State Fair

THE opening of the trotting program at the New York State Fair was marred by a fatal accident on Monday in which Tommy Hines, veteran driver, lost his life. The fatality occurred in the second

heat of the 2:05 trot, when Bonnie Dell, the horse that Mr. Hines was driving, collided with Tommy Murphy's Clyde the Great. Hines was thrown from the sulky, fracturing his skull. He died as he was being lifted into the ambulance.

Although Mr. Murphy was bruised and shaken up in the accident, nevertheless he returned to the track to drive in the third heat, winning the heat with Clyde the Great. The honors of the race went to Walter Sterling, a black gelding, driven by Stokes, winner of the first two heats. The feature of the opening day's races was the appearance of Tommy Murphy, a Syracuse man, who is the outstanding winner of the season. Mr. Murphy won the first race of the day with Hope Frisco.

## Vegetable Growers to Meet at Louisville, Ky.

A NUMBER of New York vegetable growers are planning to make the trip to Louisville, Ky., during the week of September 15, to attend the annual convention of the Vegetable Growers' Association of America, which is to take place in that city. The program is being shaped to interest growers in all sections of the country, and it is expected that the attendance from the South and West will be especially strong, thus affording New Yorkers a chance to learn how the other fellow does it. Special sectional meetings will be devoted to greenhouse operations, crops for shipment and other phases of the business. A tour of greenhouses and gardens is planned for one of the days. Detailed program may be had by addressing the local convention committee, 220 S. First Street, Louisville, Kentucky.

—PAUL WORK.

## New York County Notes

**Jefferson County.**—Rain and more rain. Farmers who were planning on threshing from the lot are not getting along very fast. Grain is rather light with plenty of straw, and many fields were struck with rust. Corn is coming on especially well, many fields having stalks measuring 10 to 15 feet and well eared. Sweet corn is also a big crop. There is promise of an advance of price in milk, which is surely good news. But there will be less milk, no doubt, for farmers cannot afford to pay for the advanced price in feed, especially tenants, and so they will make what milk they can on the feed they can produce on their farms. But with good sweet ensilage, alfalfa hay, and many are raising more of this valuable feed each year, ground oats with a little bran and oil meal for the grain ration, they can get safely through the winter, as there will be nothing to buy but the oil meal and bran. While this may not be a scientific ration, we can prove it is satisfactory from experience. The poultry-raisers are beginning to wonder what the prices are going to be for Thanksgiving. There seems to be a good crop of ducks, turkeys and chickens. The holiday price last year was such a disappointment many are anxious to know where they are this year. Skunks, foxes, crows and hawks have taken their toll. Eggs are 35 to 42c, butter 47 to 50c, veal around 10c, bob calves \$5, and scarce, owing to ill-health.—Mrs. C. J. D.

**Schenectady County.**—The weather in this section is very disagreeable and farmers cannot get their grain threshed. Butter is bringing 35c, eggs 40c, oats 68c, buckwheat \$1, hay from \$14 to \$18 a ton, calves 16c dressed. Farmers in this section have started to press their hay.—J. W. G.

**Erie County.**—Haying is about all over. It made a good crop. Harvesting is practically all done. Oats turned out particularly well. Corn is coming on nicely. Early potatoes are good. We experienced a light frost on the 4th of September. Eggs are bringing 40c a dozen, broilers 20c a pound.—A. C.

# The Dairy Outlook

## A Suggestion for Making It a Little Brighter

ALL of my life I have been intensely interested in the farmers' problem of trying to make a living by producing milk. I suppose this interest has been caused by association with cows directly or indirectly since the time I can remember anything, and I suppose it is the reason why I cannot talk with farmers for even a few minutes without the subject drifting around to dairying and to the prices—past, present and future—for milk.

By E. R. EASTMAN

In recent weeks I have had many opportunities to visit with farmer friends in communities in different parts of this great New York milk-shed. As usual, the subject that is uppermost in all minds is the outlook for dairying. In one of these conversations, a few days ago, an old friend reminded me of that momentous fight in 1916 between the dairymen of this section and the dealers, the first big milk strike, and of the fact that he and I had worked together for the common cause. I remarked that a good deal of water had gone under the bridge in the milk business since 1916.

"Yes," he answered, "and a lot of milk has gone over the dam."

### Cows Are Increasing

In the discussion which followed with this little group, I reminded them that there had been a six per cent. increase in dairy cows in the country during the last year, that there had been a larger increase in other countries which are able to ship their dairy by-products into our markets, and that as I saw it, there could not be much help for better prices until some method was found for cutting down production.

"That's all right," answered the farmer, "but we have to get hold of just about so much money to keep a-going at all, so when prices go down we are sort of forced to increase the production in order to get as much money as we had before."

I can see some point to this argument, but I tried to point out if such a practice were followed out to its logical conclusion, farmers would drive one another out of business.

"What is the answer?" someone then inquired. "Or isn't there any answer?"

I am very frank in my reply to this question, and I am very frank here, in saying that for a lot of men the situation is hopeless. There is no answer. I believe that for the men who have succeeded in the past in securing a very poor living out of scrub cows, and who are not willing to inject some better business methods in the conduct of their dairies, there is nothing but trouble, disappointment and ruin ahead. Lest I leave a too pessimistic feeling, let me hasten to add that there is as much, or more, hope for the dairyman who is willing to make a real business out of producing milk as there ever was.

### Consumption Not Increasing Fast Enough

Increased consumption will help some, and consumption is increasing, although it will have setbacks now and then when hard times come in the cities. Speaking generally, people have a better liking and appreciation for milk as a food than they

have ever had before. Children in the schools—thanks to such efforts as those of the Dairymen's League in teaching the children to drink milk—are learning its value and will be big milk consumers all of their lives. Increasing consumption will always help the dairymen in this territory also because they are near enough to ship fluid milk to the big city.

### Problem Must be Solved at Home

But more consumption is not the real answer to the problem. It will not come fast enough to keep up with production, nor will cooperation and better sales entirely answer the problem. Organization and better selling will help a lot, but the best selling system in the world cannot sell a market more than that market wants. The real answer must be made by the dairymen themselves and more and more of them are coming to realize that the problem of making a living out of milk must be solved right at home.

THE COSTS OF PRODUCTION MUST BE KEPT DOWN. I repeat what I have said several times lately, and what I have come to believe absolutely, that the day is forever gone when the dairyman with poor cows and careless methods can hope to make even a poor living.

The biggest answer to the problem of more money for milk lies in keeping a smaller dairy but a much better one, and with much better feeding methods. Grain is too high, and it always will be, to feed at all to poor producers, or even to feed to good cows, without the dairyman being absolutely sure that the grain is the right mixture and in right amounts for each cow. He cannot be sure of this without weighing both milk and feed and keeping at least some simple records.

That this solution is right, however much you may disagree with it, I can prove by giving the names of men who are making money from milk, even with the poor prices that are prevailing and have prevailed in recent months. You all know a few such men.

### Poorer-Than-Average Cows Cause Surplus

It is not the good cows or even the average cows that cause the great milk surplus and keep down the prices. It is the poor ones giving four thousand pounds or less of milk a year that are a curse to their owners and to every other dairyman in the business. These cows cannot be gotten rid of all at once, nor are they in the majority in every dairy. But there are mighty few dairies where there are not at least one to five such cows present. The strange thing about it is that the farmer himself in his heart knows that he owns at least one such cow, but in the pressure of work and with the habit which all of us have to procrastinate, he keeps her around year after year, while she eats her head off, decreases his profit, and increases the surplus problem for all.

In the September 6th issue of AMERICAN AGRICULTURIST, I proposed a simple plan whereby we might begin to get rid of some of these cows and actually profit by the

(Continued on page 200)

Can you pick out a good cow? These boys are learning how to do it at the New York State School of Agriculture at Cobleskill. Of course, the only way to really know is to use a pair of scales and the Babcock Test. But you can't use these when you are buying cows, so you have to depend on "the points of a producer."

**\$648** Buys the Lumber for this 36x40 Barn **FREE PLANS**

36 x 80 \$1175

# Why Connecticut Dairymen Believe in Cooperation

(Continued from page 188)

to the producers. By cooperation we are able to finance and conduct a publication which keeps our members constantly informed of market conditions and also furnishes us a medium through which we can give advice to producers regarding production problems that help producers in keeping down costs.

Cooperation also gives us the means of studying and interpreting the laws of supply and demand, in order that we can obey these laws, and thereby receive their blessings and escape many of the punishments. We believe that the laws of supply and demand must be enforced as well as any other laws, and an organization of producers of any commodity is the agency which should obey and enforce the laws of supply and demand in that commodity.

We consider that we are also charged with another great responsibility which is to see that the members of our Association receive payments for their milk at all times. Previous to the use of our contract system, there were in the industry many milk distributors who were either dishonest or inefficient, and as a result of their existence, dairy farmers in our State were in constant danger of suffering losses through dealers who did not pay their bills. By cooperation we have been able to eliminate this class of dealers from the industry, and up to the present time not a dollar has been lost by a member of our Association whose milk we have sold under contract.

Cooperation for us has developed a more friendly relationship among producers in our rural communities, by the elimination of jealousies and ill-feeling among farmers, than has ever existed. Much of the strife and competition for a market has been relieved by placing farmers on a basis of equality in the sale

of their products, at the same time developing for them opportunities for success by individual efficiency in the management of their herds and the production of crops for the fulfillment of their contracts, which they have voluntarily entered into.

By cooperation we have been able to obtain funds which we use in advertising the food value of milk and in advertising the quality of the milk which we produce. We know that good milk is the most necessary, most valuable and most economical food that is consumed by the human race. We know that the consuming public are not using enough of this important food for their own welfare. We feel that milk producers and distributors are largely responsible for the underconsumption of dairy products, and Connecticut milk producers who are affiliated with our organization are endeavoring to fulfill their obligation to the public through our advertising and educational program.

We have also learned by experience and observation that cooperative marketing can be of little value to the producers of milk unless the responsibility of marketing milk in a given area or market is concentrated into a single, efficient and purely cooperative organization. Competition between groups of milk producers in any market brings waste, inefficiency and discontent with unnecessary losses to producers and distributors and brings no ultimate gain to consumers.

Cooperative marketing has accomplished so much for Connecticut dairy farmers that there are no logical arguments against it and there is little if any danger of the Connecticut dairyman ever going back to the ruinous conditions that threatened the agriculture of Connecticut seven years ago.

# How One Boy Changed His Mind

(Continued from page 189)

The director and I feel that financing the boy is not a difficult problem. Where there's a will there's a way. The director and I both worked our way through college. I don't know about him, but I started with \$35.00 and came out square with the world. A good many boys attend the State schools and work enough to pay most or all of their expenses. The director and his staff are anxious to, and do help the boys find work in the town or on the school farm. Another great advantage in the State school is that the boys are actually at school only six months of each year, beginning in October and ending in April. For the period April to October, they work on the home farm or for wages on another farm selected or approved by the director. In this way, you see, you would have Henry's help for the growing season.

"That sounds pretty good, don't it, dad?" said Henry as he reached for the catalog which the director was holding

toward him and pointing to a picture of the basket ball team that had not been defeated the previous season.

"I'll leave this catalog with you," announced the director, as we picked up our brief cases. "We would like to enroll you, Henry. I know that you would never regret it. We hear grown men regretting many things they have done, but did you ever hear of one regretting that he had gone to school too long? I hope, Mr. Wilkinson, that you and Mrs. Wilkinson will think the matter over carefully. We feel that farm boys like Henry ought to think twice before deciding to cast aside all the valuable farm experience which they have had up to the age of 17, to get into a city occupation. Present indications seem to point to a condition in the near future when farmers will be better off and the average workers in city will be less well off. We're interested in helping Henry help himself."

"Quite right," I said as we shook their hands in parting, "the question of choosing a vocation is one that each one must decide for himself. It is one of the most difficult problems a young man faces, for his future success and happiness hinge in a real sense on a wise choice. If Henry finally makes up his mind that he wants to follow a farming occupation, he can't afford not to get ready for it."

As we stepped into the flivver and started down the drive, the director stopped long enough to suggest, "Harold Sanderson, over the other side of town, has already sent in his application for this fall. You fellows might find it to your advantage to room together in case you should decide to come."

"Thanks for calling," shouted Mr. Wilkinson as we drove on, "drop in again when you're over this way."

The last week in August the director received Henry's application with a letter asking him to help him get a job to defray part of his expenses.

#### SITUATIONS WANTED

SITUATION—As superintendent of dairy farm, near high school, good references. JAMES N. SIMMS, Ellicottville, N. Y.

MARRIED MAN, 35 yrs. old; American; experienced farmer, desires permanent position on up to date general or dairy farm. Hustler. State terms first letter. Box 334, AMERICAN AGRICULTURIST, 461 Fourth Avenue, New York City.

GIRL desires position at light house work. BOX 119, Esperance, N. Y.

#### HELP WANTED

FIREMEN AND BRAKEMEN—Men to train for firemen or brakemen on railroads nearest their homes—everywhere; beginners, \$150; later, \$250; later as conductors, engineers, \$300-\$400 monthly (which position?). RAILWAY ASSOCIATION, Desk W-16, Brooklyn, N. Y.

ALL MEN, WOMEN, BOYS, GIRLS—17 to 65, willing to accept Government positions, \$117-\$250; traveling or stationary, write MR. OZMENT, 258 St. Louis, Mo., immediately.

#### PRINTING

150 NOTEHEADS, 100 white envelopes printed and mailed, \$1.00. Samples printing free. SUNCO, Mohawk, New York.

# The Girl at Vacada—By J. Allan Dunn

VACADA—the word means a drove of cows—was well named. The railroad came streaking from the mountains that were so far and seemed so near, four parallel ribbons of steel stretching for mile after mile through a desolation of sage and alkali. Over it roared or rattled, according to speed and importance, freight, local, and limited; refrigerator cars packed with California fruit; stock cars filled with thirsty, lowing animals; box cars with mixed merchandise; passenger cars with mixed humanity; sleeping-cars and diners and observation cars occupied by lordly tourists gazing apathetically at the leagues of gray sage sea.

At Vacada the depot was a shack beside a water-tank and freight shed, of far less commercial importance than the corrals and loading chutes that made the place a shipping point fairly well known to stockyard dealers. Straggling out upon the plain were lowly buildings forming an irregular street: a general store, two blacksmiths, a garage and gasoline station. Four saloons, now fallen on evil days, two of them abandoned, the others selling soft drinks ostentatiously and fiery stimulants surreptitiously. A restaurant, with a laundry tacked on to it as lean-to—cooking and cleansing both attended to by Chinese. A dozen unpainted edifices that might be called houses but never homes. Half as many Mexican hovels, picturesque and dirty. And a cemetery.

The population of Vacada seldom varied; it was sufficient for the needs of the place, or vice versa, as you prefer it. The graveyard, with its sunbaked, cracking mounds and unpainted, splintering headboards, grew slowly, the census of the dead gradually outstripping the roll of the living. Vacada, under the glare of the pitiless sun by day, swept sometimes by dust storm and cloud-break, beneath the steely stars and burnished moon by night, siestaed and slumbered, awakening only when the ranch riders came charging in with pay-checks to cash and spend, or driving steers for shipment.

Then the saloons took on temporary, fictitious gaiety. The whine of fiddles filtered through the walls; frowsy dance-hall girls appeared upon the floor of El Solaz, and Juan Mandigo openly sold his hooch at bootleg prices under the patronage of "Bluff" Furniss, who also "entertained" at draw and stud poker upon such occasions. Furniss, of the hail-fellow-well-met variety, looked at from his own standpoint, had a nickname well bestowed. He was suspected of being interested in the sale of steers with uncertain brands and pedigrees, but the shafts of suspicion glanced from the shield of the star he wore below his suspender buckle, tribute of political chicanery, the badge of a deputy sheriff.
